THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 1. NEW YORK, JANUARY 6, 1900. One Dollar Per Year.

If you have not already done so, you should plant now

FOR EASTER FORCING

Spiræa Compacta Multiflora and Astilboides Floribunda,

The two finest varieties for this purpose. We offer fine, strong clumps, at $4.00 per 100. Case lots, 350 clumps to the case, $12.00 per case.

We still have on hand a FEW CASES of **Lily of the Valley.**

We offer two grades of this, viz:—Extra quality three-year-old German Pips, in case lots (2500), $20.00; in less quantities, $10.00 per 1000.

PIERSON'S PREMIER, a fine selected Valley, well worth the difference in cost, in case lots (2500), $25.00 per case; in less quantities, $12.50 per 1000.

We also have a few thousand exceptionally fine, extra selected

Mammoth Double-Nosed, or Top-Root VON SION **Narcissus,**

Which we are offering at $20.00 per 1000. While this price may seem somewhat high, we are certain that our customers who are buying the stock will be more than satisfied with it, as it is gilt-edged stock in every respect, and cheap at the price quoted, viz., $20.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

BRAND-NEW

Florists' Flower Seeds for Present Sowing.

ASTERS

Semple's and Vick's Branching, to color or mixed, red, white, pink, purple, lavender, large trade pkt., 25c.; oz., $1.00; 4 ozs. for $3.50.

European Notes.

A miserably cold and wet thaw has followed the sharp touch of frost, reported in last week's notes, and at the time of writing we are enjoying very seasonable weather, in the form of snow. This will not do the plants any harm, but it hinders other and very important work, in connection with the dispatch of goods, and the lack of steamers is now causing serious delay.

It is to be regretted that not one of the many American sweet pea experts is included in the committee for the 1900 Exposition and Conference; if this be not remedied it will be a case of "Hamlet" without the leading character. The work to be done is of such an important character that it should be done in the most complete manner possible.

EUROPEAN SEEDS.

Appraisement of California Privet.

Editor Florists' Exchange.

I dislike extremely to be drawn into a newspaper discussion, and would not except for the fact that the comments of Mr. Cornell in your issue of December 30 call in question the veracity of the statement made by me in my letter to the National Nurseryman. Permit me to state that my authority for making the statement that I did in regard to Ligustrum ovalifolium, is Examiner C. S. Lersner, who informed me personally in conversation that he had decided to classify Ligustrum ovalifolium as an evergreen, and consequently subject to the rate provided for by the Dingley Tariff bill upon evergreens. I was not directly interested in the ruling given, but as a nurseryman was interested that our trade should have proper treatment, and it would seem as though my efforts in the press and through the tariff committee of the American Association of Nurserymen had had some effect already.

I do not care to enter into a discussion as to the advisability of importing this plant or any other; but so long as foreign grown nursery stock is subject to a duty upon entering our ports, there can be no question but that every nurseryman is interested in having the laws properly executed. This is not the first instance in which I have known the appraiser at the port of New York to reverse his ruling, and indeed to reverse them again within a very few weeks.

HIRAM T. JONES.

Secretary Smith's Report.

Editor Florists' Exchange.

I notice the American Florist publishes the résumé of the Chrysanthemum Committee's work in its last week's issue. I was very anxious to get these matters closed up before the New Year, and did not take into consideration there would be time for that issue. All the reports were mailed together, and each was accompanied with a letter similar to the one sent you, suggesting the report be issued the first week in January, for which I had allowed ample time for the compositor. I trust this explanation will be satisfactory.

ELMER D. SMITH, Sec'y C. S. A.

[Certainly, the explanation is quite satisfactory This is only one way of our contemporary showing how far its enterprise is ahead of that of its competitors, and the manner in which it gets ahead. We withheld publication of the report in deference to your suggestion. However, it is in good time this week, we think.—ED.]

The Home of Primroses.

Mention the Florists' Exchange when writing.

(1) **Roses Not Making Blooming Wood.**—I have a house of roses containing 1000 plants of Bride and Bridesmaid that are not doing as they should; they make very little blooming wood, but a great deal of blind wood. I run the house 58 degrees at night, and 10 to 15 degrees higher in the daytime. The plants are clean and bright. I put a mulch of well-rotted manure on them about six weeks ago, and used liquid manure three times. Two weeks ago I put 25 lbs. of bone meal on them and worked it in the soil. The last week I put another mulch of manure on them. Up till the present I have picked 1000 flowers beginning November 6. Now there are no buds in sight, nor any blooming wood. Oblige by informing me of the cause.—W. S. E.

—That the roses are looking clean and bright and producing wood (even if it is blind) is more than really ought to be expected from them after the over-feeding they have had during the darkest days of the year. We would recommend that the last mulch of manure be taken off again, and nothing but clear water supplied for the next four weeks, as the plants have been undoubtedly over-fed.

(2) **Greenhouse Heating by Exhaust Steam.**—We have between 14,000 and 15,000 feet of glass and at present are heating with steam. Now we have an opportunity of getting exhaust steam from a large pumping station located directly under our ground, in a coal mine. The mining company assures us that this steam will condense 5,000 gallons of water in 24 hours. What we want to know is, will this amount of steam heat our place? If so, how can we control and use it successfully to that end without confining the steam too much, so as to press back to any extent on the pumps. Could we by elevating a tank and passing the exhaust steam through it circulate the water successfully by gravitation through our pipes as at present located, or would we need a specially constructed system of pipes? All our radiating pipes (except one house, which is 2-inch) are 1¼-inch. If this hot water will be sufficient to heat our place with the pipes as now located, would we have enough pipes to do it, or would we have to put in more, and if so what per cent. additional? —B BROS., Pa.

—Any attempt to use the water from the condensed steam would probably result in disappointment, as it would be insufficient to provide the necessary heat, even though a considerable increase in the radiating surface is made. It would also be difficult to control The use of the steam itself would be more satisfactory, but this would probably requrie the use of larger mains and returns, as well as an increase of 25 per cent in the radiating surface, although this cannot be determined without knowing the temperature desired in the houses. The pipes should all run down hill, and a trap and valve should be placed at the end of each return, unless they can be connected, when only one trap will be required.—L. R. T.

Among New York Growers.

Among the foremost wholesale plant growers surrounding New York is Anton Schultheis, whose greenhouses are located at College Point, L. I. Although it is only some two or three years since Mr. Schultheis decided to change from the wholesale growing of cut flowers to that of flowering and decorative plants, such has been his success (through growing good stock and judicious advertising) that his plants are eagerly sought after by the largest retailers in the country, and, previous to a holiday, everything salable is disposed of beforehand. College Point being within 40 minutes journey of the central part of New York City, makes it very convenient to buyers who wish to inspect plants before purchasing.

At the time of our visit, January 2, we found that the holiday trade had been well up to expectations, and everything prepared for that period had been cleared out. The number of azaleas, ardisias, heaths, oranges and cyclamens grown had been quite large, but all had been disposed of. Preparations are already under way for Easter with regard to lilies and other bulbous flowers, but in hard-wooded plants a constant supply has to be kept, and these are to be seen in all stages of growth. Some choice colors in heaths are showing bloom; these are the result of careful personal selection on the other side of the Atlantic and will be heard from later.

For the Easter trade, the collections of azaleas and rhododendrons show some fine specimens, and the heaths are in several varieties and colors. Hybrid roses in vast quantities are, with small-sized heaths, located yet in frames, and will be housed within the next few days. Hydrangeas are just breaking, and most of these are large specimens. The extensive palm house contains many fine plants, and on the side benches are seen many thousand seedlings. Genistas and acacias are grown in numbers also, but are being kept in check for Easter.

In Dutch bulbs 100,000 are planted, and, instead of burying outside, are stored away on shelves in a storage house built specially for the purpose. This house, or shed, can be kept at the required temperature, and the boxes or pans are always accessible. The plan is much to be preferred over the old method of burying the bulbs in trenches outdoors.

Winter Protection for Herbaceous Plants.

A large majority of our perennials may endure the severest cold without suffering, but oft-repented alternate freezing and thawing acts destructive on the dormant crowns and buds. The delicate and lovely alpines, in their native habitat, are provided by Nature with a lasting covering of snow from November to March or April; this protecting sheet is removed only slowly and by degrees with the approach of Spring, when the sun gradually gains in power. The soil in which they grow is frozen hard and solid; the plants are perfectly dormant; no great or sudden changes in temperature set in from first to last; once at rest they remain dormant throughout the long Winter, and they come out strong and vigorous as soon as their tops are exposed to sun and light. With us conditions are quite different; we have snow and cold weather for a few days or weeks at one time; the ground is frozen and covered with the protecting sheet, which should preserve them from all harm, but unfortunately a change sets in, a few milder days will cause the melting of the snow and thaw out the soil. If this mild spell continues for a week or so, the buds, crowns and roots will begin to show unmistakable signs of life; another subsequent hard frost will destroy these premature efforts of growth, the vitality of the plants is weakened, and the too frequent repetition of such trying changes in temperature may kill all crowns and buds, and often also the roots, of the most hardy plant.

It is an established fact that in shaded positions the plants do not suffer seriously in Winter, even if fully exposed to our most rigorous and drying winds; but the same class of plants would often be injured beyond recovery in another part of the grounds, where the sun is liable to thaw out the soil surrounding them, though the Winter may not have been a very severe one. It is, therefore, principally the repeated thawings which we should try to prevent, not the actual freezing of our plants or their roots; and Nature points out to us the means by which we may preserve them under all conditions. Shading the ground in one way or another is usually an ample protection; under bulky or heavy close packing coverings they are liable to decay—a light application of straw, long strawy manure, or any kind of light loose litter spread evenly over the ground, will, in most cases, effectually prevent frequent alternate freezing and thawing. During the first half of the Winter plants rarely suffer; it is after January, when the sun's power is on the increase, that the injury is wrought. The protection is most needed on the approach of Spring, and therefore we are not wrong to delay the application of a covering until mid-winter or even a later period.

Mulching and covering the plants is usually considered as part of the regular Fall work, but a safer plan would be to delay this performance until the ground is frozen quite hard—not merely to the depth of an inch or two, but real solid—because the warmth of the lower soil, together with the applied coat of unfrozen covering material, would often be sufficient to thaw out what little frost there is between them, especially when the work has been performed during a spell of moderate weather. Thick covering should be avoided on all plants which show above ground; the evergreen class of low and spreading perennials rarely require any protection whatever, except in positions fully exposed to the sun; and here evergreen boughs of some sort are superior to any other material, admitting a free circulation of air at all times. Creeping and densely tufted evergreen plants afford their taller neighbors, in a border or bed, an effectual protection after being well established, by keeping the ground close up to them shaded; it takes some days of mild weather to soften the soil beneath these dense mats. Wherever possible these dwarf creepers and trailers should be introduced. Some of our so-called half-hardy perennials will Winter safely over in a thickly carpeted bed of cerastium, aubrietias, arabis, or erysimum, etc., without additional covering, while under ordinary conditions we should be obliged to afford them the protection of a cold frame or house.

A large number, we may say even the majority, of our hardy perennials do not need artificial protection under ordinary and natural surroundings; the old foliage and broken-down flower stems, together with a few leaves which the wind chances to scatter and lodge between them, is amply sufficient for their safety; but in a well-kept garden we remove all decaying foliage and stems for the sake of neatness, robbing the plants thereby of their means to protect themselves against the rigors of the Winter, and we should therefore provide them with a Winter protection similar to that which we have removed, and which is in no case a very heavy or bulky coating.

Experience also teaches us that a very large number will safely go through the Winter even though the ground be left bare and the crowns fully exposed to changes and extremes in temperature; but we are inclined to advocate a slight covering for all such stock, as it acts beneficial in preserving the roots and prevents premature starting of growth; but it should not be overdone or administered too early in the season.

DOUGLASS HILL.

Packing Violets.

Dorsett Leatherette Shipping Box open.

Packing Violets.

It is customary in shipping to pack either in return or gift boxes. Great care must be exercised to make the packages attractive, both on the outside and inside. The more common practice is to use return wooden boxes with hinged lids, each box holding from a thousand to one thousand five hundred flowers. The bunches as they are taken from the water have the stems wrapped in soft tissue paper. The stems are then dipped in water again and the bunches packed closely in the box, stems down. When properly packed the flowers should not shake or mash. Finally the boxes are sealed and are labeled with the grower's name and address.

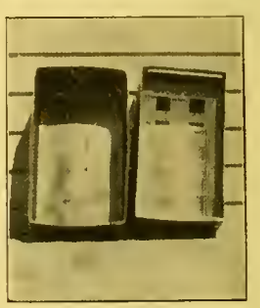
Before beginning the packing, the boxes are lined with newspapers, with oiled paper next to the flowers. In Winter great care has to be exercised to keep the flowers from freezing. It is often necessary to line the boxes with six or seven thicknesses of newspaper in order to keep out frost. In some cases felt is used, but newspapers, being always at hand, are more convenient, and besides are just as serviceable, and in some respects more desirable.

In some cases a plan of packing flowers in wooden boxes provided with trays is followed. Such trays are made about 2 inches deep and have wire netting on the bottom. The mesh of the netting must be of sufficient size to allow the stems to project through. These make excellent shipping boxes, and by arranging two trays in a box, from one thousand to twelve hundred flowers can be shipped in one package. The same precautions to prevent frost injuries must, of course, be exercised in this case. At this point it is well to emphasize the fact that no matter by what railroad the flowers are shipped, extra precautions must be taken to keep out frost. Although the packages may start out in a well heated car it is always difficult to foresee what will happen to them before they reach their destination. It is, therefore, necessary to keep a close watch on weather conditions and make the packing in accordance with what the best judgment is in regard to the likelihood of a cold snap.

Another very satisfactory means of packing flowers has been recently devised by Mr. P. H. Dorsett. Instead of the wooden boxes, he uses ordinary leatherette telescopes, which he has made to order. These are 18 inches long, 10 inches wide, and 7 inches deep. The cover fits over the inside box, and the whole is fastened by a strap at each end. A handle is put on the top so that the package is very easily looked after by the expressmen and others who have to handle it. A wire frame is made to fit inside the box, the meshes of the wire being about half an inch square. Ten holes are cut in the wire, each 2 inches square, to take the bunches of violets. The frame is made 17 inches long, 9 inches wide, and 4 inches deep. The stems of the bunches are inserted into the holes and the 500 flowers packed neatly into the box. These packages save considerable expense in express charges. They are, of course, returned, and, with good usage, will probably last for several seasons. The cost of these telescopes complete, including wire, is about $2 each.

In cold weather a second covering, which slips over the entire box, is used. In addition to this quilts made of cotton batting are used, so that there is about an inch of frost proof material protecting the flowers. As in other cases, the stems of the violets are wrapped in moist tissue paper, and a layer of oil paper, which is put into the box before the flowers are inserted, keeps in the moisture and odor. It has been found by experience that such packages are handled more gently by express men, and the flowers in all cases reach their destination in excellent shape. Once in a while some are lost through frost, but this seldom occurs, except through the carelessness of the railroad people.

The gift boxes, which are not returned to the grower, are usually made of three-eighth-inch pine. They are deep enough for the bunches in an upright position and hold from eight hundred to one thousand flowers. After being packed and carefully nailed they are wrapped with newspapers or other coverings to exclude the frost. These boxes have some advantages, but they also have many disadvantages, chief of which may be mentioned the fact that the violets in them never make as good a showing as where they are in neat packages, such as already described.



Packing Violets.

Shipping Box showing wire screen for holding bunches.

Throughout the entire work every precaution must be taken to keep the flowers away from all foreign odors. A new pine box, for instance, may cause trouble. Any objectionable odor, in fact, either in the box, the paper, or the room where the work is carried on, is apt to be taken up by the flowers and to destroy their sweetness.—From "Commercial Violet Culture," by Professor Galloway.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

White Caryopteris.—Those familiar with and fond of the blue-flowered caryopteris, which came forward into extensive cultivation several years ago, will be interested in knowing that there is now being offered a white form. Very little is known of it yet, generally, whether or not it is a pretty, clear white and as hardy as the blue (which usually gets cut back more or less in Winter, but without injury to root, and eventually flowering). The caryopteris, by-the-way, is one of those plants which do not improve with age, and one should provide himself occasionally with new stock. It strikes readily from cuttings, and makes an exceedingly pretty, bushy growth the first couple of years, flowering perfectly on small plants. By reason of its bushy, symmetrical growth and late Summer flowering, it is an admirable thing for bordering beds of shrubbery; but in this case especially should plants be renewed occasionally.

Hardy Hedges.—From the coldest localities of the United States complaint comee that the osage orange is not sufficiently hardy, and another deciduous hedge is demanded. The honey locust is quite largely used, and proves to be very hardy; but it is not alwnys satisfactory in a general way—frequently, no doubt, because it lacks experienced handling in pruning. It forms a rather graceful hedge, but some consider it too light. In addition, it is occasionally attacked by a leaf-roller, which shows a preference for it and reduces it very quickly to a sorry state. The English beech would doubtless prove one of the best and hardiest. Naturally of compact and rather slow growth, it adapts itself readily to hedge purposes. In England, it vies with the hawthorn in popularity. The purple-leaved beech has been used and considered very effective in the United States. The English hornbeam, somewhat resembling its relative the beech, also makes a very desirable and novel hedge. My earliest recollections of our old homestead contained one of a fine, large hornbeam hedge.

The Spring Catalogue.—It is advisable that the dealer commence, now, to consider what steps he shall take the coming Spring in selling his goods. Foretbought and thorough preparation are the forerunners of success. If one has first-class goods to offer, reasonably priced and put before the public in a proper manner, he will find a ready sale for them in these prosperous times. The various classes of goods should be separately considered and carefully arranged to suit the requirements of the sections where they will be mostly disposed of.

Shade trees are perhaps most important as being in most general use. Every resident feels grateful for a shady street in the heat of Summer, though the difficulty is to make him recall his gratefulness during the planting season. A little circular with a pretty half-tone cut illustrating a shady avenue will go a long way toward reminding the desired customer of whnt he will later on be thankful for. But the salesman or dealer needs to post himself on the subject of street trees. Those familiar with it will agree with me that perhaps no line of goods brings out a less-informed people as customers. What kind of trees seem to thrive best in your section? Note their habits of growth—their ultimate development, for some will want a tree of little height, others medium and tall; while some will care more for rapidity of growth than anything else. But the best man to deal with will be looking for the future. He will sacrifice general appearances for a few years to get a tree of lasting beauty and strength. The oak, for instance, would receive attention from this man—and he would make no mistake thereby, as there is probably none more satisfactory if properly moved and sharply prnned at the transplanting.

Besides counting or using those known to be desirable, it is always profitable to experiment a little—not with something entirely unknown, but something that from doing well elsewhere under similar conditions ought to prove desirable. A large list for a dealer is not desirable, which makes it all the more necessary that the selection ehould be a choice one while yet sufficient. As time and spnce will permit, I hope to continue the subject of preparation for business in the various lines of goods, especially considering the demands of the public.

S. MENDELSON MEEHAN.

Isaac Hicks, of Westbury, L. I., is known locally as the "Quaker Nurseryman." He is almost ninety years of age.

The Newport Nursery Co., Newport, R. I., made an assignment of all its property for the benefit of its creditors, on December 29, 1899. D. F. Easterbrooks is assignee.

A horticultural society, in affiliation with the Ontario Fruit Growers' Association, has been organized at London, Ont. Meeting for the election of officers occurs Jannnry 10.

Francis G. Butler, of Hartford, Conn., who of late years has been a traveling salesman for a Syracuse nursery firm, died December 27. He leaves a widow and two children.

The program has been issued for the meeting of the State Horticultural Association of Pennsylvania, which occnrs at Pittsburg, January 16 and 17. E. B. Engle, Wnynesboro, Pa., is secretary.

Springfield, Ill.—The Illinois State Horticultural Society has re-elected its old officers as follows: President, Henry M. Dunlap, Savoy; vice-president, H. A. Aldrich, Neoga; secretary, L. R. Bryant, Princeton; treasurer, J. W. Stanton, Richview. The place of the next meeting was not decided upon, but is left in the hands of the Executive Committee.

NEW **TOMATO** FOR 1900
Livingston's MAGNUS
This very distinct and most promising new variety, of the color of BEAUTY and ACME, is the latest addition by Livingston to the Tomato family. It is thicker, heavier, and more solid than either of the above, making it easily the most handsome sort in cultivation. The form is perfect, uniform, large and attractive. Flesh very firm. It is a robust grower, with short joints, setting its fruit clusters closer together than most varieties, and is therefore a heavy cropper. We have tested it for several years for forcing in greenhouses, and it has excelled all other varieties for this purpose.
PRICES:— Per Pkt., 20c; 3 Pkts. 50c.; 7 Pkts. $1.00

LIVE PLANTS CUT FLOWERS LABELS

When you ship a Box, Crate or Package of **PLANTS** or **CUT FLOWERS** you want a label to place thereon—not a plain, ordinary, everyday tag, but a characteristic card of good size, bearing a design or emblem in red ink, which will at once draw the attention of handlers to the contents thereof, and give the expressman or carrier to understand the nature of the goods he is handling, and that there must be no delay or monkeying with same. We have prepared these labels in Two Appropriate Designs, one for Live Plants, one for Cut Flowers, and offer them in five sizes, and printed in Two Colors on various qualities of cardboard for tacking on, or of paper for pasting on. We quote prices as follows, Cash with Order, F. O. B. N. Y.:

We print in following sizes. In Two Colors.	On White Cardboard. (To be nailed on package.)		On Manilla Cardboard. (To be nailed on package.)		On Fine White Bristolboard. (To be nailed on package.)		On Good White Book Paper. (For pasting on.)

DE LA MARE PRINTING AND PUBLISHING COMPANY, LIMITED.—The annual meeting of the stockholders of this Company will be held at the office of said Company, Nos. 2 to 8 Duane street (Rhinelander Building), in the Borough of Manhattan, City of New York, on the eleventh day of January, 1900, at 12 o'clock noon, for the Election of a Board of Directors and two Inspectors.

J. H. GRIFFITH, Secretary. A. T. DE LA MARE, President.

A. T. DE LA MARE PRINTING AND PUBLISHING COMPANY, LIMITED.—By order of the Board of Directors the Transfer Books of the above Corporation will be closed on and after January 4, 1900, at 12 o'clock noon, to January 12, 1900, at 12 o'clock noon.

JOSEPH MAGILL, Treasurer. A. T. DE LA MARE, President.

Philadelphia.

Club Notes.

New Year's Day was appropriately observed at the Florists' Club room, the various games being in full swing during the afternoon and evening.

The club meeting on Tuesday evening was poorly attended, two nights in succession being too much for the majority of the members. Albert M. Herr read an interesting paper on New Carnations, which will be given in full in our next issue. The exhibits of the evening were a vase of Olympia carnations from John N. May, and a vase of Ethel Crocker from Robt. Craig & Son, each of which received proper notice by the committee on exhibits. Many of the flowers of Olympia were 3½ inches in diameter, and the committee thought it the best variegated carnation ever shown before the club. Mr. May, who was present, made a few remarks about new carnations seen in the West, as also did Wm. P. Craig, who has also recently made a trip through the West. Both reported many new varieties of prominence, but none of which would yet be introduced. From remarks made Mrs. Bradt appears to be on the decline, as both in the West and East growers cannot obtain such good prices as formerly. No explanation could be given for this, except it is too much mottled. The essay for the February meeting will be one by Mr. May on "What Has the New Century in Store for the Queen of Flowers?"

January 24 has been selected for the next ladies' night at the club.

Members of the trade in this city are much gratified at the appointment of A. B. Cartledge on the Executive Committee of the S. A. F.

New Year's Day made most of the retail stores very busy; in fact, some of them worked all day Sunday preparing for the many orders for early delivery. Dinner parties were numerous and, together with boxes of cut flowers, made much business.

There is not much change to report in cut flower circles. All choice stock is selling well, but there is a large surplus of poor stock coming to this market just now, for which there is but little demand. Carnations are piling up in large quantities. Hugh Graham relieved the smilax market by using over 2,000 strings at a large ball this week.

Miss E. M. Wood has taken charge of her retail store again, at 235 South 15th street. DAVID RUST.

Newport, R. I.

At the meeting of the Newport Horticultural Society on the 27th ultimo, the members presented James McLeish, retiring president, with a "Morris chair." The presentation speech was made by his successor in office, Robt. Laurie. At this meeting seven members were elected.

Our first snow storm of the season came on New Year's Day, causing a suspension of outdoor work all round. MAC.

West Hoboken, N. J.—The bowling scores of the North Hudson Florists' Club for this week are as follows:

Paul Stricker	134	152	142	108	150
M. Hansen	158	113	121	127	110
Chas. Heintz	104	96	115	100	110
Geo. Brown	155	148	130	158	160
L. Hansen	122	151	154	187	120
Chas. Washe	168	144	120	132	160
T. Fiesser	101	141	132	120	100
Chas. Dietz	178	134	145	147	130
W. Hillebrecht	129	112	133	107	170

Flatbush.—Thursday, December 28, the annual rolling for concealed prizes took place, and when each had taken his choice of the various packages, it transpired that E. Dailledouze had a box of cigars; Louis Schmutz, a tobacco jar; T. Lang, bottle of rye; D. Y. Mellis, a handsome pipe; Papa Zeller, a smoking set; A. Zeller, box of collars, 5-inch high, and a tie; W. Prosser, a German stein; C. Wocker, tobacco jar; P. Dailledouze, box of cigars; H. Dailledouze, an inkstand; C. Woerner, a fountain pen, and J. P. Cleary, a silver match-box. A case of champagne was given by a friend to the bowler making highest average for the evening; this went to E. Dailledouze. The scores were as under:

	1	2
E. Dailledouze	156	165
D. Y. Mellis	137	137
W. Prosser	154	142
H. Dailledouze	151	127
Papa Zeller	83	161
L. Schmutz	106	129
C. Woerner	91	100
A. Zeller	103	141
P. Dailledouze	121	166
C. Wocker	146	115
T. Lang	147	140
J. P. Cleary	114	86

New York.—The following are the scores rolled Tuesday night last:

	1	2	3
T. Lang	121	129	125
W. H. Siebrecht	125	130	120
P. O'Mara	139	129	139

MRS. THEODOSIA B. SHEPHERD, Ventura-by-the-Sea., Cal.—Wholesale Trade List of New and Rare Seeds.

The beautiful Nelumbium speciosum is usually distributed by florists as the sacred lotus of the Egyptians. But this is a mistake. This is the Chinese lotus. The sacred lotus of the Egyptians was a relative of our sweet water lily, a Nymphæa—Nymphæa Lotus. It was held sacred as being the representative of Isis in the annual festival.—*Meehan's Monthly for January.*

New York.

Market Reports.

In our effort to obtain information regarding the condition of business during this, the first week of the year, we were much impressed by the wide difference of opinion between the wholesalers and retailers' view point. The former did only an ordinary business, at prices way below Christmas figures, while the retailers had a fine trade and are extremely well satisfied. The reason, however, is not far to seek; plants are yearly gaining in favor by the buying public, and flower producers are doing their full share toward making plants popular by flooding the market with a lot of poor flowers whenever a holiday arrives.

Of course, no held-over stock is sent in for New Year—there has not been time for that—in fact, shipments were rather light; but with the exception of violets prices along all lines had to be cut down considerably in order to make sales; and as the week progressed buinesss became more quiet, and on Thursday we found special American Beauty at 50c. each, and very few wanted at that. Special Bride and Bridesmaid bring 12c. and 15c., and they have to be very select when they realize the 15c.; extras fetch 8c.; No. 1's, 3c. and 4c., and No. 2's, 2c.

Carnations are selling very slowly, and as low as 75c. per 100 for standard grades is recorded; from that figure to $2 for the colored varieties being the ruling prices. Fancies bring 6c. each, some Gov. Roosevelt going as high as 15c.

The supply of Roman hyacinths and Paper White narcissus has fallen off quite considerably, and a little stiffening in price has resulted. Valley brings from $1 to $2.50, and Harrisii lilies from $1 to $1.50 per dozen.

Violets are clearing out much better than last week; specials bring $1.75, ordinary, from 75c. to $1.25 per 100, according to quality.

Plenty of callas are now to be had, but the demand is meagre; first-class ones are offered at $1 per dozen. Marguerites are offered at 50c. per 100 and white camellias at 4c. each.

Among retailers trade is very satisfactory, but the inflation of prices in flowers is much deplored. It is the firm belief of many of the most prominent store men that if the price of special Beauty did not exceed the dollar mark, that figure could be maintained sufficiently long to give the growers a better average for the flowers than they do under the present method, as the abnormally high price only prevails for such a short time. This point is worthy of consideration by those interested.

Jottings.

Friday afternoon, December 29, fire was discovered in the basement of Traendly & Schenk's commission house; it had started from defective insulation of electric wires, but was found before much headway had been made, consequently the damage was slight.

Monday evening next, January 8, the regular monthly meeting of the New York Florists' Club will be held in their rooms, corner of Broadway and 27th street. Installation of officers takes place at this meeting.

The delivery of manetti and other nursery stock is being unavoidably delayed, thereby causing much inconvenience. French stock cannot be dug, owing to the heavy snows that prevail, and the English shipments cannot be forwarded on time, owing to so many of the steamships being used by the Government for carrying supplies to Africa.

We believe a wrong impression is current among the gardeners in regard to the coming horticultural exhibition at the S. A. F. Convention in this city next August. J. P. Cleary is appointed manager of the trade exhibit only.

Gus. Bergmann has been ill with pleurisy since Christmas Day, and will be confined to the house for some time yet.

The Morris County Gardeners' Society will hold its annual dinner in the Masonic Hall, Madison, N. J., Wednesday evening next, January 10.

Mrs. Russell, Seventh avenue, Brooklyn, has made improvements in her store, by adding a mirror the whole length thereof, and changing the position of the counters, creating a neat and attractive appearance. She reports a very satisfactory Christmas trade.

A Thing of Beauty

New Jersey Floricultural Society.

Wednesday evening, January 3, this society met in the club rooms, 240 Main street, Orange, to install the newly elected officers and enjoy their annual dinner. The tables were spread in the meeting room and the sight of the various good things displayed had a very material effect in shortening the business part of the meeting.

In the installation ceremony, Malcolm McRorie acted as master, and filled the post to perfection.

The incoming officers are: P. Duff, president, re-elected; J. B. Davis, vice-president; Geo. Smith, secretary; Malcolm McRorie, treasurer.

The treasurers' report showed that the society is in a very healthy condition financially; and that of the secretary that the society is gaining in membership.

About 60 people sat down to the dinner. Vases of carnations, roses and bougainvilleas adorned the centre, including a beautiful bunch of Olympia carnations. After full justice had been done, Pres. Duff acted as toastmaster, and called upon Dr. Ward to speak for horticulture. He was followed by W. J. Stewart for the Society of American Florists. Then came a cornet solo by Mr. Taylor, after which W. Duckham spoke for the private gardeners, John N. May for the commercial florists, and J. B. Davis for the ladies. Mr. Bennett then gave a violin solo; he was followed by G. Bird, who spoke on ancient florists. Geo. Smith sang "The Tinker's Wedding," which was followed by remarks on the horticultural press by J. W. Withers. Visitors from New York were, J. Lang, W. J. Stewart, J. W. Withers, J. I. Donlan and S. S. Butterfield. A most enjoyable evening was spent.

FIRES.

ST JOSEPH, MICH.—During a northwest gale which struck this vicinity December 24 the greenhouses of August Loeffler was destroyed by fire. The origin of the fire is unknown. It was first discovered in the engine room The loss is $5000, with no insurance.

KENNETT SQUARE, PA.—A small fire in Burgess Pennock's greenhouse, December 25 was extinguished before any great harm was done.

COLUMBUS, O.—E. T. Effieck had the misfortune to lose four of his houses and barn on New Year's morning by fire. One house of roses is left which he will be able to save. The loss is $7000, with but $500 insurance on the barn. He will rebuild at once and bridge over with vegetables.

FRITZ.

Firms Who Are Building.

TRAVERSE CITY, MICH.—F. M. Paine has recently added a room for storing cut flowers and made other improvements on his greenhouse establishment.

WARSAW, N. Y.—H. S. Baker is building a greenhouse, 14x50 feet, for bedding stock.

Nephrolepis Washingtoniensis "ERECTA"

There is no other fern in its class so distinct and majestic and sure to have a great future as well for a pot or decoration plant, or for cutting of its grand fronds of 5 to 6 feet length. Its only rival will be the variety

Nephrolepis Washingtoniensis "PENDULA,"

Of which a halftone cut appears on page 1253, December 16 issue of the FLORISTS' EXCHANGE, and of which all the stock is in my possession and will be offered for sale next Summer. Of the first-named variety I have the best and largest stock, several thousand plants of different sizes **Prices for $1.00,** free by mail, **5 well rooted runners,** or **4 strong, 2½ inch pot plants;** strong, 4 inch pot plants, 3 feet high, **50c. each**—larger ones, **$1.00** to **$5.00 each.** For other stock see former ads.

Mention this paper. **N. STUDER, Anacostia, D. C.**

PTERIS DEWEYANA.

A MOST desirable new fern, now offered for the first time, by the raiser, J. H. Ley. It is a most distinct cross between P. Cretica Albo-lineata and P. Serrulata. Habit dense and very dwarf; fertile fronds, erect, smooth and narrow, barren fronds very bright and beautifully undulated; produced in quantity, never rusts, hard, and grows very freely from spores.

12 fine plants, 3 inch pots		**$3.00**
100 " "		**20.00**
12 good plants, 2 inch pots		**2.00**
100 " "		**15.00**

Six latter mailed, $1.00. With balls of roots undisturbed.

JOHN H. LEY, Good Hope, - - WASHINGTON, D. C.

Mention the Florists' Exchange when writing.

Bangor, Me.

The new year in Bangor opens auspiciously. Everything, to my idea, in the florist's line, is flourishing. Adam Sekeoger reports business very good and Spring orders already arriving in quantity. Buckley & Pribble, agents for F. H. Moses, of Bucksport, reports a good business and Spring outlook good. A. Noyes, Mrs. Allen and others take a similar hopeful view. Carl Beers says business was never better. At the funeral of a leading taxidermist, S. L. Crosby, his employes and friends obtained as a floral piece one of his best representations of his art—a picture 3½ by 4½ feet, in which are, in a large convex glass frame, two white ptarmigan stuffed. This in its entirety was reproduced in flowers by Beers.

Hartford, Conn.

Christmas trade here was a record-breaker, and all of the dealers are satisfied with the results. Stock in most cases was first-class; but there was a shortage of all kinds, especially in carnations and violets. A marked increase in the sale of plants was noted. The weather was all that could be desired. Some extra fine roses were received, but not nearly enough to supply the demand. There was a big call for Meteor, but the supply was very limited. Bridesmaid sold the best, followed by Bride and Perle. The best grades brought from $2 to $3 a dozen, while the poorer ones went for $1.50. Some very fine carnations were in the market; in fact, some of the best we have had this season. The common varieties sold at from 50c. to 75c. a dozen, while some extra fine ones brought $1—the highest price carnations ever sold for in Hartford. Violets were very scarce and thousands more could have been sold; they went at $2 a 100, and were generally good in quality. In the plant line Boston fern went remarkably well; some of the growers sold completely out of them. Palms rubber plants and blooming plants sold much better than ever before There where a few white azaleas to be had and they sold readily. Hundreds of Chinese primroses in 4 inch pots were disposed of at 25c. each. Baby primrose, made up in flat pans, sold well. Most of the florists were afraid they would get stuck on Christmas greens, so much of this stock being sold all over the city by the grocery men, meat men, etc.; but by Saturday night scarcely any greens could be found here More holly was sold than ever before, but the holly wreaths did not go as well as usual. There seems to be a dropping off in the sale of these the last year or two and more call for the wreaths made of green and holly mixed. All the stores had extra help.

Connecticut Horticultural Society.

The annual meeting of this society was held Wednesday evening It was decided to give but three shows the coming year, viz., a sweet pea exhibition in July, fruits, vegetables and dahlias in September, and chrysanthemums and carnations in November. The September show will be given in South Manchester, and the others in this city. Officers elected were: President, J. T. Withers; vice-presidents, R. A. Griffing, A. C. Sternberg and Theo. Wirth, of Hartford County; Robt. Veitch, of New Haven County; T. S. Gold, of Litchfield County; D. A. Lyman, of Windham County; Robt. Coit, of New London County; S. Hoyt, of Fairfield County; A. N. Pierson, of Middlesex County, and Prof. L. P. Chamberlin, of Tolland County; secretary, W. T. Gardner; assistant secretary, L. Mead; Executive Committee—G. S. Osborn, John Coombs, A C. Sternberg, H. J. Koehler, R. A. Griffing, C. M. Rogers and F. W. Davis; Committee on Awards and Premiums—Executive Committee and T. J. McRonald, Robt. Patchet and W. B. May.

The secretary's report summarized the work of the society during the year. The bulb show was a good one, but it had few exhibitors, and there was a small attendance, and it was recommended that it be discontinued. The June show of rosea was not very good on account of the season being so dry. The sweet pea show in July was slimly attended because of the hot weather. The September show of fruits and vegetables was very successful. The report said that there appeared to be a lack of love for horticulture among the citizens of Hartford, and the members were urged to help the officers to make future shows of the society a success. J. F. C.

Louisville, Ky.

Christmas Trade.

Christmas business was very good; total sales will show an increase over last year. Noticeable was the increased demand for plants, both blooming and ornamental. Prices were about the same as last year. Romans and narcissus were plentiful. Good roses and carnations equalled the demand, only Beauty being short. Violets were very scarce. Greens were nearly sold out. Until Saturday the weather was fine; on that day it rained all day, but this seemed not to affect business. Sunday it was colder, and Christmas Day very cold, causing much extra work in wrapping plants to be delivered.

Trade since Christmas has been surprisingly good, and prices have held up very nicely. For New Year's trade there was an increased demand over last year, especially for good roses and carnations. The supply was about equal to the demand, and the prices received, while not very high, were satisfactory. J. S.

A FEW GOOD THINGS YOU WANT.

New Ever-blooming Geranium

AMERICA

SEEDLING OF MARS.

An Ideal Geranium for pot culture and bedding. It is of a stronger growth and larger foliage than Mars, retaining the dwarfness and floriferousness of that parent. On opening the flowers are white with salmon center; once open they shade through all salmon and rose tints, until they become deep, pure rose, when fully open. As all color shadings appear at one time on each truss, the effect is unequaled in the class of geraniums. The trusses are as large as Mrs. E. G. Hill, under good culture. This variety will become even more popular than its parents. **50 cts. each ; $5.00 per doz.**

CASH, PLEASE.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.

No advertisement less than 75 cents.

Discounts on continuous advertising.

For rates, on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.

Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

CORRESPONDENTS.

The following staff of writers are regular contributors to the columns of the FLORISTS' EXCHANGE.

[Any items of news, subscriptions, or advertisements, handed to these gentlemen will by them be at once forwarded to headquarters and will receive our careful attention.]

The Prize Competition.

Our prize competition for suggestions for an improved service on the part of The FLORISTS' EXCHANGE to its readers closed last week. The result of the contest will be announced in the near future. We thank those who have proffered their good services on the present occasion, and feel confident that from the various helpful suggestions submitted much mutual benefit will result.

When do you receive your Florists' Exchange?

Each subscriber is particularly requested to drop us a postal card stating what is the usual day and hour at which his copies of the FLORISTS' EXCHANGE reach him, and whether he has free delivery or calls at post office for his paper; also, if possible, at what day and hour the papers reach his post office.

With this information at hand, the publishers will be in a position to make the necessary changes in the method of mailing papers to better serve all subscribers.

Please attend to this at once.

A Living Profit and a Living Wage.

In the current issue of the *Forum* appears a very suggestive article on this subject, in which the writer furnishes some particulars regarding a scheme that has worked out very advantageously in England with some trades and through which "a living profit" is secured to the producer and "a living wage" to the employee. The cardinal principles of the scheme are: (1) Selling from the well-ascertained cost of production; and (2) co-operation with the work-people in securing a fair profit. The first thing to be done looking to the carrying out of the plan is to persuade the members of a trade to form an association; the next is to get them to form a large and representative committee to assist in working out the cost of production of every article that the association is intended to cover.

We quote briefly from the article in question, as follows:

"The conclusions arrived at are those which suit the trade as a whole, not those that would suit any individual member. As the benefit to a community only can be considered, there are compromises to be made, special advantages to be given up. In other words, instead of securing more trade to the ruin of some less privileged competitors, special advantages in the shape of large capital, and others too numerous to mention, have to be used for the purpose of making more profit. There is no restriction of enterprise, ingenuity, practical knowledge, or energy; nor is there any limit fixed on selling prices. The best quality may command the best prices. The only limit relates to the minimum profit, on cost, that must be obtained. The profit may be made as low as the association pleases, to suit the circumstances of a trade; but no one can sell without it. On some goods a larger profit may be fixed than on others; but nothing may be sold without a profit, unless by decision of the association, and for temporary fighting purposes only. In different trades this system operates differently.

"In the metallic-bedstead trade, for example, there are no association price lists. Each member sells at his own prices, and is at liberty to cheapen the cost as much as possible, within the association regulations, and to lower his prices accordingly; but whenever called upon he must be able to show that, after making out his calculations on association lines, there is still the minimum margin of profit provided in his selling prices. Consequently, each one competes with the others as to the cost of production. When unnecessary, bulk is avoided, as the prices of material are fixed for the time being. The wages for each process are scheduled, and cannot be set down at less; but processes may be omitted and not charged for. Cheap articles may, therefore, be made and sold at their true value; but they cannot be sold without profit. It thus becomes a race of ingenuity and of practical knowledge. If a maker rises to the top it is not by means of those advantages of fortune by which he has in the past been able to crush others, but by the proper exercise of his faculties. Wherever this method of individual selling prices can be adopted the articles sold will vary in price as much as ever, but they will also vary in quality, and they must stand on their merits. The result is that, although the manufacturer obtains fair profits on all he sells, the public is in many instances able to buy his productions as cheap as before. Moreover, the lowering of the cost of production, instead of diminishing, often increases the real value of the article sold.

"There are, however, some trades in which an association selling price is a necessity. The cost of production has to be made a fixture, as no variation is possible except in the matter of working expenses. A uniform list is therefore adopted. In some of these associations there is no need to grant special privileges to any one. One maker's article will sell as well as another's; and nothing but business faculty and attention to business will give an advantage. In other associations it is found necessary to allow special privileges in the way of larger discounts off selling prices to those members who are handicapped in the race for equality. This is done by a system of grading. As the arrangement is automatic, adjusting itself every half-year, the privilege cannot be used for the purpose of stealing the trade of another member. It is simply a means by which each member may retain the trade he had before the association was formed. Should he wish to increase it there is nothing to prevent; but he cannot be allowed to undersell. There is sometimes added a system of compensation for any loss of trade caused by the association. In some associations both the grading and the compensation rules are adopted. Up to the present no member of any association has ever claimed compensation. Of course the schedules prepared for taking out costs include equal charges for carriage, allowances to merchants, agents and large buyers, as well as all the other matters incident to trade.

"This, then, is the foundation of the system. Each member is compelled to learn how to take out the cost of his productions. It instructs ignorance, corrects carelessness and prevents recklessness; and each business is conducted on true business lines. It will be naturally and correctly assumed that the code of rules under which such associations work provides for penalties for underselling, for the establishment of an investigation department and for the formation of a guarantee fund to prevent breach of faith. This fund is formed, I think, by an original method: the money is not found, but merely guaranteed to a banker, who can call it in at the request of the association. Thus, each member is liable, but does not have to take the money out of his business, unless by his own infidelity he gives to the trustees the power to demand it. Every precaution is taken to secure for each member such safeguards as will make it impossible for him to be unjustly convicted."

The writer then proceeds to show how labor troubles (fortunately absent in the florist trade) are averted through doing away with underselling and the maintenance of a remunerative wage for services performed.

Of course, as pointed out, such a policy, once adopted, must be pursued with faith and determination, otherwise the plan becomes abortive.

It appears to us that the scheme, as herein outlined, presents great possibilities for the florist, nursery and seed trades, and that each of these bodies should give the matter the consideration that, in our opinion, it deserves. The day has passed when a trade can afford to allow to go unnoticed the matter of securing for those engaged in it "a living profit," and our respective associations could bend their energies to no more useful work than the securing of such to their own members at least, which include the bone and sinew of the business.

Our columns are open for a full discussion of this very important subject.

To Whom Belongs the Credit?

Editor Florists' Exchange.

Supposing an employe in a florist's concern, by means of hybridizing or cross-fertilizing, secures a new variety of a plant, is he entitled to the credit of originating such variety, and should that credit be accorded to him when first public mention of the new variety is made? WORKMAN.

—In many of the first-class concerns in the old country men are kept for the especial purpose of securing, if possible, new varieties; these workmen are generally styled "hybridizers," and as far as we understand no effort has ever been made by their employers to deprive them of any credit that may attach to their successful work. Take, for instance, the case of the late John Seden, as an example, whose efforts in connection with the breeding of the begonia and other plants is well known. His employers did not hesitate to accredit him with his productions, even to the extent of attaching his name thereto, in several cases. There are in the old country many examples similar to that of Seden.

Now, if men employed and paid for the special service of obtaining new varieties, have not been denied the credit of their work, it would seem but justice that those who may chance to originate a meritorious new plant should be granted a like acknowledgment, providing the work producing the novelty has been entirely original with the performer, and not the fulfillment of instruction from somebody else. We think this is an act that every employer owes to his talented help, in order to encouragement along the same lines; and we are not in possession of any data to the contrary. Employers, as a rule, are sensible men, and whatever they may be in other matters we don't think they err in this particular.

In connection with this subject the question of ownership of the new variety may arise. That, we think, is easily settled. The result of work done for, and with the material of, an employer, and performed during working hours, is assuredly the possession of such employer. He may place the new plant so obtained on the market in his own name, and to attach the facts concerning its origination by an employe, would not detract in the least from his own reputation, or impair the inherent merits of the novelty. In several catalogues we find the practice common of furnishing information relative to the origin of new stock, and that, too, where a bonus has been paid for such goods. That the appearance of the names of employes as originators of new varieties is not more general in America is probably owing to the fact that the work of cross-fertilization and hybridization has been almost wholly performed by employers themselves or under their immediate direction.

American Carnation Society.

The premium list for the ninth annual meeting and exhibition of this society, which occurs on Thursday and Friday, February 15 and 16, next, at Buffalo, N. Y., has just been issued. The meeting will be held in "Morgan Hall," Huron and Main streets, round the corner from the Genesee Hotel. The exhibition will be held in the same hall. Attention is called to the opportunities these shows afford the introducers of new varieties, in bringing them before a goodly number of buyers. Tables are provided for a display of varieties not intended for competition. Exhibits can be addressed to Chas. H. Keitsch, 495 Washington, street, Buffalo.

At this meeting a paper is expected from Professor F. A. Sirrine, of Jamaica, N. Y., on "Carnations Pests;" one from Peter Fisher, Ellis, Mass., on the "The Hybridization of Carnations." A discussion on "Sub-Irrigation" will be opened by C. W. Ward, of Queens, N. Y. A discussion on "The Merits of Indoor Culture" will be opened by Jas. Hartshorne, of Joliet, Ill. The question box is opened for inquiries at all times, and if they are forwarded to the secretary not less than two weeks before the meeting an effort will be made to get them answered by the most competent party.

The scale of points to be used for judging all carnations at this exhibition is as follows:

Color, 25; size, 20; calyx, 5; stem, 20; substance, 10; form, 15; fragrance, 5. Total, 100.

To secure a certificate or preliminary certificate a carnation must score 85 or more points.

In the general classes a score of 85 or more will be required to award a carnation first premium. This is made a rule so as to bring and keep the shows up to the highest possible standard.

The regulations governing the competition for seedlings for the certificate of merit are:

(1) The variety must have been bloomed not less than three years.

(2) Not less than 50 blooms must be shown.

(3) Exhibitors entering for the certificate are required to pay an entrance fee of $5 for each variety so entered. Those varieties entered in the class for preliminary certificate at Philadelphia will be entitled to compete for the certificate upon the payment of $3 for each variety entered.

Two-year-old seedlings can compete for a preliminary certificate by exhibiting 12 blooms and the payment of $2 for each variety so entered; this payment entitling them to compete for the certificate at the next exhibition, upon the payment of $3 for each variety, from this class.

A very large number of premiums is offered. Among special prizes are the following:

The Cottage Gardens, Queens, N. Y., offers a silver cup to the value of $25, open to all, for the best crimson seedling carnation which has not yet been distributed, judging to be according to the rules of this society.

In competing for this premium each vase contesting shall consist of exactly 24 perfect blooms, 6 buds showing color, and 6 buds half open. By a perfect flower shall be meant one that has not a bursted calyx, has a stiff stem at least 15 inches long, and otherwise reasonably perfect in form. No premium shall be awarded to a variety that possesses a weak neck, that is, one that does not hold the flower reasonably erect. No premium to be awarded to a seedling of the commercial class which shall be inferior to the best variety of its class now in commerce, and no premium to be awarded to a seedling, the flower of which shall be less than 2 inches in diameter.

The Chicago Carnation Co., Joliet, Ill., offers a silver cup valued at $25, for the best light pink seedling not yet disseminated; 50 blooms to be shown.

E. H. Michel, St. Louis, Mo., offers a fine silver cup to the individual or firm making the largest and the finest display. Entries in any of the classes are to be taken into consideration in the award, and the cup must be won twice out of three competitions to become the property of the winner.

The American Carnation Society offers a fine silver cup for the best arrangement of carnation blooms, with their own or other foliage, but no other flowers to be used in the arrangement, and the design or arrangement must be such as to offer some new use for carnation blooms to have the cup awarded.

The Lawson gold medal will be award-

ed for the best vase of 100 blooms, any variety or any color. Medal valued at $60.

A silver medal will be awarded for the best vase of 25 blooms of a seedling carnation undisseminated.

The rules governing the Sweepstake Competition are as follows:

(1) Each competitor shall deposit with the treasurer in advance of the meeting a deposit of $5, and an additional $5 when he stages his flowers.

(2) Any competitor may enter one or more varieties by paying the entry fee for each variety.

(3) The number of blooms exhibited shall be 12.

(4) No first year seedlings shall be allowed to compete.

(5) The judging shall be according to the scale of points adopted by this society. Size shall be determined by a measurement of the largest diameter and the length over the top, dividing the product of these measurements by two.

(6) The premiums shall be two in number first and second; the first to be two-thirds of the amount subscribed, and the second premium, the remaining one-third; and in addition the society shall give its silver medal as a third premium.

(7) No competitor shall be allowed to serve as judge.

The schedule is a neatly printed pamphlet, and contains full particulars regarding the meeting and exhibition. Every carnation grower should be represented at the Buffalo gathering, which bids fair to be the largest in the society's history.

Send to Secretary Albert M. Herr, Lancaster, Pa., for a copy of the Premium List. He will be glad to answer all inquiries.

The American Carnation Society.

Mr. James Allen, gardener to A. C. Lambert, Paterson, N. J., registers Belle Vista, a cross between Scott and Daybreak; in color a light pink, petals large and broad; a clean, strong grower, habit and growth resembles Scott, and it is a very free bloomer.

J. E. Sibley registered by Philip Heilig should be J. C. Sibley.

ALBERT M. HERR, Secretary.
Lancaster, Pa.

Society of American Florists and Ornamental Horticulturists.

President Wood has appointed Messrs. J. D. Carmody, Evansville, Ind.; J. F. Sullivan, Detroit, Mich., and A. B. Cartledge, Philadelphia, Pa., members of the Executive Committee to serve for a period of three years from January 1, 1900.

WM. J. STEWART, Secretary.

The program of the Worcester (Mass.) County Horticultural Society, for the Winter season, 1900, has been issued. Among some of the subjects to be discussed are:

January 11—The justification of the flower grower, or the reasons why people grow flowers and the good they do generally. Rev. Mages Pratt, Hartford, Conn.; January 25—Budding and grafting and the influence of stock upon cion and fruit. Arthur J. Marble. To be followed by several prominent fruit growers; February 8—Home grounds, adornment with native trees, shrubs and plants. W. E. Britton, Professor of Horticulture, Connecticut Agricultural Experimen Station, New Haven; February 15—Remunerative out-door occupations for women. Mary E. Cutler, Winthrop Gardens, Holliston, Mass.; February 22—The relation of good roads to horticulture and agriculture. B. W. Potter, Esq.; March 1—My flower garden. Hon. Alfred S. Roe; March 8—Horticulture and education. Homer P. Lewis, Principal English High School, Worcester. On Wednesday and Thursday, March 14 and 15, occurs the Massachusetts Fruit Growers' Association Convention.

OSHKOSH, WIS.—Christmas trade was a little better than last year. The best selling plants were azaleas, poinsettias, primroses, palms and ferns; cut flowers, roses, carnations and hyacinths. Roses brought $1 to $2 per dozen; carnations from 50c. to 75c. per dozen; supply of stock was insufficient.—F. M.

Washingtonville, N. Y.—Fred J. Merritt was married to Miss Edith L. Hawxhurst on Wednesday, January 3.

LEAGAL QUESTION.

Breach of Contract.

On December 4 we were advised that on the Friday preceding Christmas we would be shipped 1,500 carnations; 400 roses at the market price, per our request; also on the 20th, 48 hours before shipment, we were advised that our order would be cared for. We heard nothing more from the growers until Thursday, when we received a wire stating that they could fill only part of order, *but they never sent a flower.* The damage to us is considerable in disappointing our trade, and as our order was solicited, and as we have been buying from these same parties, we feel somewhat put out. We were never treated so before in our 25 years of business. Is there any recourse? GROWERS.
New York.

—I would say that you have good chance of recovery against the parties who agreed to ship the goods mentioned but failed to do so, for breach of contract. The amount which you can probably recover will be your prospective profits on these goods. However, the law of New York, and in most States, provides that prospective profits cannot be recovered unless both contracting parties are aware, at the time of making the contract, that in all probability a loss would occur in case the contract is not fulfilled.

You do not state in your letter where the consignors are engaged in business, and as that place is the place where the contract was made, the law of that State as to recovery would govern; but since the laws of most States as to the amount which can be recovered for a breach of contract are in substance similar, I can say that in all probability you can recover in this case the difference between the contract price of the goods and the price for which you were to sell them to your customers.

The law in most States is that the contract for the sale of goods for the price of $50 or more shall be evidenced by writing. Since the contract in this case was made by letter, you will have no difficulty in proving the same. I have given you the general law on the subject, and have stated to you what your chance of recovery is, from the facts presented in your letter.

ROBERT G. PERRY,
Coun. for Nat. Florists' Board of Trade.

An Index to Vol. XI, of the FLORISTS' EXCHANGE, for the year 1899, accompanies this issue.

The trade at New Year's is generally reported satisfactory, Christmas prices, in many places, being well maintained.

We have received from H. Beaulieu, Woodhaven, N. Y., a colored plate of the Mme. Parret novelties in Giant Pansies, for the sale of which Mr. Beaulieu is American agent.

We are in receipt from Benjamin Hammond, Fishkill-on-Hudson N. Y., of a memorandum book for 1900, which also contains some facts regarding slug shot, putty and paints.

In the article on Dipladenia Mrs. George McWilliam (p. 1297, FLORISTS' EXCHANGE, December 30 last,) the size of the flowers is given as ¾-inch in diameter; this should, of course, read 3 to 4 inches.

The annual meeting of the State Florists of Indiana occurs at the horticultural rooms, State House, Indianapolis, Tuesday, January 9, 2 p. m. E. G. Hill is president and R. A. McKeand secretary.

Congressman O'Grady, of the Rochester district, is reported to be in correspondence with the Department of Agriculture at Washington relative to the matter of extending the trade mark or copyright laws so as to cover new plants, the result of which, it is said, will doubtless be a bill to be introduced in Congress.

There are said to be in Japan 269 color varieties of the chrysanthemum, of which 63 are yellow, 87 white, 32 purple, 30 red, 31 pale pink, 12 russet and 14 of mixed colors. A fancy prevails that in this flower the same tint is never exactly reproduced, and that it thus suggests the endless variety of the human countenance. *Flowers of Japan.*

ELMER D. SMITH, Sec'y.

This report was held for the current issue of the EXCHANGE, in accordance with the suggestion of Secretary Elmer D. Smith.

KALAMAZOO, MICH.—Christmas trade is pronounced satisfactory here. The call for cut flowers was very brisk at the following prices: Beauty, $3 to $6; teas, $1.50 to $3; carnations, 40c. to $1; violets, 25c. per dozen. Plant trade and holly dragged somewhat. Chinese and baby primroses, with palms and ferns, seemed to have the call in plants. A demand for the best grade of roses and carnations was quite noticeable, and for fancy carnations specially so. The weather was delightful all the week previous to Christmas, but on Christmas morning a small blizzard commenced which hampered deliveries considerably.

W. C. Cook, who recently started a store on Main street, has closed it and left the city.

John Calder has a sport, of the Daybreak type, from Armazindy, which promises to be of value.

Van Bochove & Bros. are very successful this year with Beauty. They are also trying most of the newer varieties in carnations; thus far, G. H. Crane and Mrs. Joost are the most satisfactory.

Fraser was elected to half a dozen different offices in the various Masonic lodges in the city. New Year's business will probably be about as usual, with present prices ruling.—B.

PLYMOUTH, MASS.—Christmas business showed a decided improvement over last year's. Prices ruled about the same. Carnations sold best at the uniform price of 60c. per dozen. Violets were in pretty good demand at 2c. each. Roses went very slow at $2 per dozen for Bridesmaid, the only variety I handled. White Roman hyacinths in pots, with Chinese and Baby primrose and cyclamen were the best sellers. Among the pots of bloom Asparagus Sprengeri and maidenhair ferns for 25c. and 50c. sold well. On the whole something for 25c. suited the trade better than anything higher priced.—F. H. L.

HINTS and HELPS.

A Good Bedding Plant.—One of the very best and easiest to get up in any quantity is the Madagascar periwinkle, Vinca rosea. To have the plants large enough, say in 3-inch pots, and in flower by the beginning of May, put in the seed now. The seedlings do not need to be pricked off when very small if not too thick in the seed box; they may remain until large enough to be potted off singly in thumbs, after that a shift into 3-inch will be sufficient. It may be well to bear in mind that there are three kinds commonly grown—one with rose-colored flowers, one pure white, and another white with pink center.

Cosmos Klondyke.—The yellow-flowered cosmos, Klondyke, whether as an early or late bloomer, should be grown. When for the latter purpose only a few plants may be experimented with, for if they behave like those I grew last season they will have to be lifted and flowered indoors. I am not satisfied that its reputed early flowering character has been permanently fixed, because all of the plants I raised last Spring from seed were late in showing buds, and not one of them developed in the open air, notwithstanding the very mild weather of the Fall months. But those which were lifted, potted and put in a cool greenhouse produced an amazing number of flowers, the last few fading only a week ago; and if for this use alone the variety is valuable. If it can be got to flower with the same profusion outside earlier in the season, it must be the most showy of all the composites; and that is saying a great deal.

Rooting Genista Cuttings.—Now is a good time to take cuttings of genistas, in order to have plants in 5-inch pots by this time next season. Select those shoots for the purpose which are perfectly dormant; if with a heel so much the better. Cut the bottom leaves off with a pair of scissors, and have the cuttings at least two inches in the sand. They should be put in bottom heat, covered with glass and shaded enough to prevent wilting. After rooting, put in the smallest sized pots, shifting on as they need it. Loam, peat and sand make a good compost for growing them in.

Ardisia crenulata continues to be one of the most attractive Christmas plants. It can be recommended as a first-class window plant, owing to its apparent indifference to a little cold or dryness at the roots. The ardisia will sometimes be seen with three crops of berries on the same plant; but more often with two crops, and the plant in bloom at the same time. When there is any choice in the matter the crop nearest the base of the plant should be chosen for seed; they may be known not only by their position on the plant as the oldest berries, but by their larger size and rather dingy appearance. As the season of their greatest usefulness is now past, seed should be sown immediately so that no time may be lost in getting the plants to a marketable size. Use porous soil in sowing and dress the surface firm.

Banana Seeds.—Ornamental bananas, such as Musa ensete and M. superba must be sown now if the plants are wanted to make any kind of a show the coming Summer. Cover the seeds with sand to the depth of about an inch, and give them the warmest part of the propagating bench. As soon as they make their first leaf pot in thumbs, using two-thirds leaf soil and one of sand. They luxuriate in this material.

Fuchsia cuttings.—Old plants of fuchsias should be under way by this time to provide wood for cuttings. The plants should be knocked out of their flowering pots, the balls reduced and given fresh soil; place them in heat and syringe freely. The growths for cuttings will start almost immediately. Do not take growths for cuttings which have been on the plants all Winter, as the wood is bound to be a trifle hard and does not turn out the best plants.

Bedding Begonias.—Seeds of these should be sown now, to have the seedlings in good shape for Spring sales. Cuttings may be put in, but they do not make anything like as good plants as those from seed. The seed should be sown in boxes or pans; firm the soil, scatter the seed thinly without covering it, or if it is necessary to cover, do so only with a very small quantity of fine sand, covering the box with a pane of glass until the seeds vegetate.

Maranta Massangeana.—Most of the marantas are looked upon with suspicion when offered as house plants. A great many of the species are worthless for this purpose, as they wilt on being exposed to a temperature a few degrees lower than that in which they have made their growth. There are a few of them, however, which stand the conditions of an ordinary dwelling room exceedingly well. The above is one of the best for the purpose named. They are hardly suitable as specimen plants, but for mixing with ferns in pans they come in very useful. When a few old plants are around there is usually abundant material for cuttings. In growing on plants for this purpose, they should be put in shallow pans and kept in a warm, moist, shaded part of the greenhouse; or they may be planted out under the benches in a place where the drip will not spot the foliage.

Short Stemmed Tulips at this season of the year may be avoided to a certain extent, if the bulbs are put in early enough, and the boxes lifted before they are frozen and put in a dark structure where a low, moist atmosphere is maintained. Afterward, when put in heat and kept dark for a time, the flowers will have sufficient stem to be handled successfully.

First Prize Floral Design at Galveston (Tex.) Show.

Primulas, such as P. obconica and P. isabellina, which are showing flower in 4-inch pots, will increase in size very materially if shifted into larger-sized pots. This may be done all the more successfully if good drainage be given and the soil used is largely composed of leaf mold. After this operation, and to bring them on quickly, they should be given a sunny position on a warm bench. To have large sized plants by the holiday season seed should be sown very early in the year, as the plants make little headway during the very hot months.

Adiantum cuneatum plants which have been damaged by continued use in decorating, or having had the fronds cut off, should not be started again right away. They should, if possible, be given a season of rest, and allowed to become almost dry under a bench before being divided and potted. G. W. O.

Flowers Sent from New York to London Exhibition, 1851.

In a book called "January and June," by Benjamin F. Taylor, published in New York in 1854, occurs the following, at page 244: "Triumphs! You need not look for them where men are binding broad continents with clampings of iron. You can find them in the veriest trifles. Here now, they tell us, a bunch of flowers was sent from New York in a case to the World's Fair in London, and after a lapse of three months were as beautiful as when they bloomed in the Eden of the West. This statement met your eyes; you passed it over, forgot it. But here is the same fact, in another expression: Time challenged man to preserve even the flowers unwithered, and from month to month they had faded and faded, in mockery of human power. It was even deemed a wonder when an American lady in London decked her hair with leaves flushed with the sunset of the year, in the forests of the New World—withered leaves and nothing more. Space interposed his waste of waters, and said: 'Remove these flowers from their parent stems, and if Time does not wither them at first, yet you shall bear them to their destination, dead flowers at last.' Man accepted that challenge, and he has came off victor. Here is now a bouquet sent from the New World to the Old—nothing more—and yet how many hours of thought, and years of toil, were necessary that it might be done.

"How the chemist sought to unweave the blue robe of air; how the philosopher proved it an ethereal sea, and manned the pumps in its clear depths, and created a vacuum, Nature's old abhorence. How the miner delved, the furnace glowed, the blacksmith wrought, until that human engine waved round the steamer's wheels with its iron wand, and all this, before that floral gem plucked from the bosom of the New World, all warm and fragrant with her breath, could bloom awhile in the Crystal Palace of the British Isles. Oh! this is a trifle, indeed, but it reveals the tide and turn of the battle."

The late B. F. Taylor, for many years, and during the time spoken of, was the literary and poetic editor of the Chicago Evening Journal, and the collection called "January and June" was the republishing of his daily delightful labors for his paper. I wonder in whose New York greenhouses those flowers were cut. Ess.

BRIEFS FOR BUSY FLORISTS.

THE TAKING OF CARNATION CUTTINGS will now be receiving some attention from such growers as raise their own stock, and as some varieties always give more trouble than others in rooting a few hints on taking cuttings and putting them in the sand will not be out of place at this time. In the first place never take cuttings from plants that are dry; nor from any that are weakly. Selection of stock means a good deal, and if we would have, good, strong, vigorous plants next Fall, now is the time to insure such by propagating only from the most vigorous and robust of our present stock. The side shoots from the flower stems make as fine cuttings as can be procured, and may be taken when 2½ or 3 inches in length. These require no trimming if they are taken carefully. Cuttings can also be made from any other part of the plant, and they will root almost as quickly as the last mentioned, excepting those thick, fleshy shoots that are usually found directly around the base. These latter are, in the main, unsatisfactory, requiring a longer time in the sand, and a good many will fail to root at all. Before placing the cuttings in the sand have it well firmed down and moistened. Pot them in as close together as their size will allow of, then give a thorough watering and cover with a single thickness of newspaper. This will give all the shade needed, and prevent a draft of air striking the cuttings when the ventilators are opened. The paper should be taken off at night and replaced each morning. A temperature of 50 to 55 degrees is plenty warm enough, and if kept within that limit stocky plants will result and there will be no trouble with cutting bench disease.

LILIES INTENDED FOR EASTER should be kept growing right along from now on. We notice the disease is still with us in the Bermuda bulbs, and when a plant shows it the best remedy is to throw that plant out. Fumigate at least once a week now to keep the green fly down.

STOCK PLANTS OF ALTERNANTHERA should be given a position which will induce growth. If the stock is scarce they may be divided into very small pieces, potted or boxed up and put into a good heat and a batch of cuttings can be taken from them later. By this method a good supply can be had from a small number of old plants.

COLEUS.—Some attention is due the coleus stock about this time, and if a good supply is rooted now they will make fine plants to propagate from later.

SEEDS that should be sown this week are, among others, gloxinia, cannas, verbenas, pansies, lobelia, centaurea and stocks (for early bloom.)

Galveston Flower Show.

Editor Florists' Exchange.

The first attempt at a chrysanthemum show in Galveston has been quite a success, and I think enough interest has been aroused to make the exhibition a yearly feature. The proceeds went to the prominent charities of the city. All of the chrysanthemums entered for competition came from the mainland, as our climate and soil make it impossible to grow them here to perfection. Most of the flowers came from Alvin, Tex., and compared very favorably with those sent by Nathan Smith & Son, of Michigan, and Jas. Morton, of Clarksville, Tenn. Our judge, S. J. Mitchell, of Houston, said he had been judge in ten other shows of the kind, and the flowers compared very favorably with those staged at any of these exhibitions.

Most of the florists of Galveston and vicinity exhibited under the four classes—ferns, palms, a growing centerpiece and best emblem or design made of chrysanthemums. Otto Fehrlin carried off the first prizes in all four groups. I inclose you the picture of the design that we exhibited, the bird carrying the blue ribbon it won. O. F.

List of Officers of National Horticultural Associations and Local Florists' and Gardeners' Clubs.

National Bodies.

Society of American Florists.

President, E. M. Wood, Natick, Mass.
Vice-president, F. R. Pierson, Tarrytown, N. Y.
Secretary, Wm. J. Stewart, Boston, Mass.
Treasurer, H. B. Beatty, Oil City, Pa.
Annual meeting and exhibition, New York, August, 1900.

American Association of Nurserymen.

President, Wilson J. Peters, Troy, O.
Vice-president, D. S. Lake, Shenandoah, Ia.
Secretary, George C. Seager, Rochester, N. Y.
Treasurer, C. L. Yates, Rochester, N. Y.
Meets in June, at Chicago.

American Seed Trade Association.

President, Alexander Rodgers, Chicago, Ill.
First vice-president, Albert McCullough, Cincinnati, O.
Second vice-president, F. W. Bolgiano, Washington.
Secretary and treasurer, S. F. Willard, Wethersfield, Conn.
Meets second Tuesday in June.

American Carnation Society.

President, Wm. P. Craig, Philadelphia, Pa.
Vice-president, Wm. F. Kasting, Buffalo, N. Y.
Secretary, Albert M. Herr, Lancaster, Pa.
Treasurer, Fred. Dorner, Jr., Lafayette, Ind.
Annual meeting in Buffalo, February 15 and 16.

Chrysanthemum Society of America.

President, E. G. Hill, Richmond, Ind.
Vice-president, E. Lonsdale, Chestnut Hill, Pa.
Secretary, Elmer D. Smith, Adrian, Mich.
Treasurer, John N. May, Summit, N. J.
Annual meeting in New York, August, 1900.

American Rose Society.

President, Wm. C. Barry, Rochester, N. Y.
Vice-president, Benjamin Dorrance, Wilkes-Barre, Pa.
Secretary, Paul M. Pierson, Scarborough, N. Y.
Treasurer, John N. May, Summit, N. J.
Exhibitions March and June, 1900.

American Dahlia Society.

President, Henry F. Michell, Philadelphia, Pa.
Vice-president, A. Blanc, Philadelphia, Pa.
Secretary, A. M. Peacock, A tc. J.

Florists' Hail Association.

President, J. C. Vaughan, Chicago.
Vice-president, E. G. Hill, Richmond, Ind.
Secretary, John G. Esler, Saddle River, N. J.
Treasurer, Albert M. Herr, Lancaster, Pa.
Annual meeting New York, August, 1900.

American Pomological Society.

President, C. L. Watrous, Des Moines, Ia.
Vice-president, Thos. B. Meehan, Germantown, Pa.
Secretary, Wm. A. Taylor, Washington, D. C.
Treasurer, L. R. Taft, Agricultural College, Mich.
Next meeting, 1901.

Western Association of Nurserymen.

President, A. L. Brooke, North Topeka, Kan.
Vice-president, R. H. Blair, Kansas City, Kan.
Secretary and treasurer, U. B. Pearsall, Leavenworth.
Semi-annual meeting at Kansas City in June, 1900.

Nurserymen's Protective Association.

President, C. L. Watrous, Des Moines, Ia.
Vice-president, G. E. Meissner, Bushberg Mo.
Secretary, Thomas B. Meehan, Germantown, Pa.
Treasurer, A. R. Whitney, Franklin Grove, Ill.

American Park and Out-Door Art Association.

President, Charles M. Loring, Minneapolis, Minn.
Secretary, Warren H. Manning, Tremont Building, Boston, Mass.
Treasurer, O. C. Simonds, Chicago.
Next meeting will be held at Chicago, Ill.

American Society of Landscape Architects.

President, John Charles Olmsted, Brookline, Mass.
Vice-president, Samuel Parsons, Jr., St. James Building, New York.
Treasurer, Chas. N. Lowrie, 156 Fifth avenue, New York.
Secretary, Daniel W. Langton, 115 East 23d street, New York.

Association of American Cemetery Superintendents.

President, Wm. Stone, "Pine Grove," Lynn, Mass.
Vice-president, George M. Painter, "West Laurel Hill," Philadelphia.
Secretary and treasurer, H. Wilson Ross, "Newton," Newtonville, Mass.
Annual convention will be held at Cleveland, O.

National Florists' Board of Trade.

President, Alvin Thomas.
Vice-president, Chas. D. M. Dougall.
Secretary and treasurer, Cornelius S. Loder, New York.

Local Clubs.

Baltimore Gardeners' Club.

President, N. Flitton.
Vice-president, C. M. Wagner.
Secretary, J. J. Perry.
Financial secretary, H. Ekas.
Treasurer, Wm. B. Sands.
Meets second and fourth Monday of each month.

Boston Gardeners and Florists' Club.

President, Wm. H. Elliott, Brighton, Mass.
Vice-president, Robert Cameron, Cambridge, Mass.
Secretary, Wm. K. Wood, West Newton, Mass.
Treasurer, Edward Hatch, Boston.
Meetings first Tuesday of each month.

Buffalo Florists' Club.

President, Wm. F. Kasting.
Vice-president, Chas. D. Zimmerman.
Secretary, William Legg.
Treasurer, C. H. Keitsch.
Meets second Tuesday of each month.

California State Floral Society.

President, E. J. Wickson.
Secretary, Emory E. Smith, Palo Alto.
Meets second Friday of each month.

Chicago Florists' Club.

President, James Hartshorne, Joliet, Ill.
Vice-president, F. F. Benthey.
Recording secretary, C. W. McKellar.
Financinl secretary, John Degnan.
Treasurer, Edgar Sanders.
Meets first and third Friday of each month.

Cincinnati Florists' Society.

President, William Murphy.
Vice-president, R. Witterstaetter.
Secretary, George S. Bartlett.
Treasurer, E. G. Gillett.
Meets second Saturday of each month.

Cleveland (O.) Florists' Club.

President, E. H. Cushman, Euclid, O.
First vice-president, Wm. Brinker.
Second vice-president, James Eadie.
Secretary, A. H. Graham.
Treasurer, H. A. Hart.
Meets second and fourth Thursday of each month.

Evansville (Ind.) Florists' Club.

President, J. D. Carmody.
Secretary, J. A. Howsley.
Meets third Thursday of each month.

Grand Rapids (Mich.) Florists' Club.

President, N. B. Stover.
Vice-president, Wm. Cunningham.
Secretary, Henry Smith.
Treasurer, Henry Van Valden.
Meets first and third Tuesday of each month.

Indiana State Florists' Association.

President, E. G. Hill, Richmond, Ind.
First vice-president, J. C. Power, Indianapolis, Ind.
Second vice-president, Herbert Heller, New Castle, Ind.
Secretary, R. A. McKeand, Indianapolis.
Treasurer, J. T. Huntington, Indianapolis.
Meets first Wednesday of each month.

Kentucky Society of Florists.

President, C. F. Wood.
Vice-president, T. P. Rudy.
Corresponding secretary, H. Lichtefeldt.
Financial secretary, J. Coenen, Louisville.
Treasurer, C. Kunzman.
Meets first Tuesday of each month.

Society of Minnesota Florists.

President, E. Nagel, Minnenpolis, Minn.
Vice-president, James Souden.
Secretary, A. S. Swanson.
Treasurer, F. Busch.
Annual meeting second Thursday in September.

Montreal Gardeners and Florists' Club.

President, Alfred C. Wilshire.
First vice-president, George A. Robinson.
Second vice-president, A. Pinoteau.
Secretary, Fred. Bennett.
Assistant secretary, W. Horobin.
Treasurer, Walter Wilshire.
Meets second and fourth Monday each month.

Morris County (N. J.) Gardeners and Florists' Society.

President, Wm. Duckham, Madison, N. J.
Secretary, Chas. H. Atkins, Madison, N. J.
Treasurer, W. Charlton.
Meets second Wednesday of each month.

New Bedford (Mass.) Gardeners and Florists' Club.

President, A. J. Fish.
Vice-president, Thomas White.
Secretary, Peter Murray, Fairhaven, Mass.
Assistant secretary, S. S. Peckham.
Treasurer, T. H. Dahl.
Meets second Monday of each month.

New York Florists' Club.

President, Patrick O'Mara.
Vice-president, Arthur Herrington.
Secretary, John Young.
Treasurer, C. B. Weathered.
Meets second Tuesday of each month.

New York Gardeners' Society.

President, Wm. Bartholomæ.
Vice-president, A. Welsing.
Secretary, J. A. Manda, Orange, N. J.
Treasurer, Frank Piorovsky.
Meets second Saturday of each month.

North Hudson (N. J.) Florists' Club.

President, Ch rles Dietz.
Vice-president, Fred. Engeln.
Secretary, George Kogge.
Treasurer, H. Steinhoff.
Meets second Tuesday of each month.

Philadelphia Florists' Club.

President, Wm. K. Harris.
Vice-president, John Westcott.
Secretary, Edwin Lonsdale, Chestnut Hill, Pa.
Treasurer, J. W. Colflesh.
Meets first Tuesday of each month.

Pittsburgh (Pa.) Florists' Club.

President, E. C. Reineman.
Vice-president, E. C. Ludwig.
Secretary, T. P. Langshans.
Assistant secretary, George Oesterle.
Treasurer, James Semple.
Meets fourth Monday of each month.

Providence (R. I.) Florists and Gardeners' Club.

President, William E. Chappell.
Vice-president, James Hockey.
Secretary, Alex. M. Rennie.
Treasurer, Farquhar Macrae.
Meets fourth Friday of each month.

Toronto Gardeners and Florists' Association.

President, Wm. Jay.
First vice-president, E. Grainger.
Second vice-president, G. Pragnell.
Secretary, Wm. Jay, Jr.
Treasurer, E. Collins.
Meets third Tuesday of each month.

Westchester County (N. Y.) Gardeners' Association.

President, John Shore.
Vice-president, William Anderson.
Secretary, John W. Duncan.
Treasurer, Charles Adcock.

Eastern New York Nurserymen's Association.

President, Wm. C. Barry, Rochester, N. Y.
Secretary, Wm. Pitkin, Rochester, N. Y.

Massachusetts Horticultural Society.

President, Francis H. Appleton.
Vice-presidents, Chas. H. B. Breck, Walter Hunnewell, Benj. P. Ware and Samuel Hartwell.
Secretary Robert Manning.

Monmouth County (N. J.) Horticultural Society.

President, H. A. Kettel.
Vice-president, O. McIntosh.
Recording secretary, N. Butterbach.
Financial secretary, George Kuhn.
Treasurer, W. Kennedy.
Meets first and third Friday of each month.

Nebraska Horticultural Society.

President, George A. Marshall, Arlington, Neb.
Vice-president, J. H. Hadkinson, Omaha, Neb.
Secretary, T. B. Barnard, Table Rock, Neb.
Treasurer, Peter Younger, Geneva, Neb.

New Jersey Floricultural Society.

President, Peter Duff.
Vice-president, J. B. Davis.
Secretary, George Smith, Orange.
Treasurer, Malcolm McRorie.
Meets first Wednesday of each month.

New Jersey Horticultural Society

President, S. B. Ketcham, Haddonfield, N. J.
Vice-president, D. Baird, Malapan.
Secretary, H. I. Budd, Mount Holly.
Treasurer, Charles L. Jones, Newark.

New Orleans (La.) Horticultural Society

President, Emil Valdejo.
Vice-president, C. R. Porter.
Secretary, D. Newsham.
Treasurer, John Eblen.

New Orleans (La.) Gardeners' Mutual Protective Association.

President, Louis Kienz.
Vice-president, John Renther.
Recording secretary, Phil. Renther.
Financial secretary, Joseph W. Orth.
Treasurer, John Kuhl.

Newport (R. I.) Horticultural Society.

President, Robert Laurie.
First vice-president,
Second vice-president, Alexander Ogg.
Financial secretary, Bruce Butterson.
Treasurer, Richard Gardner.

Pennsylvania Horticultural Society.

President, James M. Rhodes.
Vice-presidents, Robert Craig, Dr. George Goebel, Henry F. Michell, and Edwin Lonsdale.
Secretary, David Rust.
Treasurer, Sidney W. Keith.

Rhode Island Horticultural Society.

President, Jos. E. C. Farnham.
Vice-presidents, Col. Robert H. I. Goddard, Hon. Robert C. Taft and Edwin H. Burlingame.
Secretary-treasurer, Charles W. Smith, Westminster street, Providence, R. I.

Tarrytown (N. Y.) Horticultural Society.

President, Wm. Turner.
Vice-president, W. Stevenson.
Secretary, W. McCord.
Treasurer, E. W. Neubrand.
Meets last Thursday of each month.

Toronto Horticultural Society.

President, H. Lucas.
First vice-president, Wm. Tyrrell.
Second vice-president, T. W. McQueen.
Secretary-treasurer, C. Chambers.

Westchester County (N. Y.) Horticultural Society.

President, A. L. Marshall, Pawling.
Vice-president, George Burton, Mt. Kisco.
Secretary, H. Spavins, Mt. Kisco.
Treasurer, M. Green.

Western New York Horticultural Society.

President, Wm. C. Barry, Rochester, N. Y.
Vice-presidents, S. D. Willard, Geneva, N. Y.; George A. Sweet, Dansville; W. R. Smith, Syracuse, N. Y.
Secretary-treasurer, John Hall, Rochester, N. Y.

Worcester County (Mass.) Horticultural Society.

President, O. B Hadmen.
Secretary, Adin A. Hixon, Worcester, Mass.
Treasurer, Nathaniel Payne.

Secretaries of clubs and societies not mentioned in the foregoing list, will greatly oblige us by forwarding the necessary information regarding their respective associations, for publication in a later issue.

Chestnut Hill (Pa.) Hort. Society.

On November 14 a preliminary meeting was called at Chestnut Hill, Pa., to consider the advisability of organizing a horticultural society. The movement met with much favor and the "Chestnut Hill Horticultural Society" was organized. Officers were elected to serve until January 1, 1900, at which time the officers for 1900 will be elected. A committee on by-laws was appointed and reported at the meeting held December 21, at which time the by-laws were adopted. At the December meeting a committee on schedule was appointed, which will report at the January meeting.

Boston.

Trade News.

Although little notice is taken here of New Year's by the flower-buying public, it was expected that some little extra demand would be felt on Monday, but the New Year was ushered in by the first real snow storm of the Winter, and this may have been responsible for the dearth of business on that day. The change in weather has as yet had very little effect on the supply of stock, which is quite heavy just now. Roses of all kinds are plentiful, even Beauty and Meteor, which are, as a rule, so short in our market just at this time, are now plentiful enough. Bride and Bridesmaid are also in good supply, the latter being improved somewhat by the cold, bright weather, both as to size and color. Prices range from $4 to $12.50 a 100 for smaller and ordinary grades of these roses, No. 1's and extras making $2, $2.50 and $3 a dozen.

Kaiserin, though scarce, are in very good supply for this season, and clean up well at about the prices that rule for Bride. Carnot are still very short, being bought in quantity only by Lawrence Cotter and W. H. Elliott. These flowers are eagerly sought for, however, and bring from $1.50 to $4 a dozen, a limited number of extras reaching $5.

The supply of carnations continues very heavy, and the only lively demand is for first grade stock which, as a rule, cleans up daily at from $2 to $3 a 100, quality governing the price. However, $1.50 to $2 is a better average, for the quantities of stock bringing these prices are greatly in excess of the choicer grades. Inferior grades are sold at various figures, from 75c. to $1.25 a 100.

Violets are becoming more plentiful, and values are dropping gradually, none but a very few select flowers make $1.50 a 100, which was easily obtained the last three or four weeks for any kind of violets, regardless of quality; $1 to $1.25 are the ruling figures for most good violets.

Bulbous stock is becoming more plentiful, though the supply of Paper Whites has shortened up somewhat, but is still in excess of the demand. Roman hyacinths continue very plentiful. Von Sions and Trumpet narcissus are becoming much more abundant, the former making $5 and $6 a 100; the singles, $3 and $4. Valley is plentiful at usual prices. Harrisii and callas are also in very good supply, and make $1 to $1.50 a dozen.

Jottings.

Chas. W. Fohn, who recently opened a retail store, at 396 Boylston street, gave up the last day of the year after about two months' trial. Mr. Fohn intends going back to the gardener's end of it, and thinks that he will very likely leave this locality, having set his mind on trying Oregon on the Pacific Coast.

Mrs. Rogers, who has had the flower store at the Adams House, has given it up; but is to start in the Hotel Reynolds directly.

Mass. Hort. Society's Awards.

At the last meeting of the Massachusetts Horticultural Society the report of the Committee on Gardens was presented, which embodied the following awards: The H. H. Hunnewell triennial first prize, for the best laid out and planted estate of not less than three acres, and kept in best order for three years, to A. F. Estabrook, Esq., Beach Bluff, Swampscott; best house of chrysanthemums, Mrs. B. P. Cheney; best house of chrysanthemums grown on benches, Col. Chas. Pfaff; best carnation house, Francis A. Blake; best of roses, Edmund M. Wood & Co.; best vegetable gardens, first, Col. Fred'k. Mason; second, S. & F. E. Coolidge; best house of tomatoes, first, Wm. Nicholson & Son; second, W. C. Winter; house of foreign grapes, second, W. C. Winter. Gratuities to David Nevins' estate; Warren H. Heustis, for strawberry garden F. J. N.

John C. Meyer & Co. began the new year by moving to new quarters, at 82-86 Kingston street. The building is a new one, and better adapted to the business of the firm than their former location on Summer street. Messrs. Meyer & Co. report an increasing business in their specialty, "Silkaline," which is made in green for stringing smilax, asparagus, evergreens, etc., and also in fancy colors for bouquet purposes.

Chicago.

New Year's Trade.

Prices were well maintained during holiday week, partly owing to no great crop being in rather than to any unusual demand. Violets sold as high as $3 during the week; $2.50 was a common price. We heard of Crane carnation going at wholesale at $10. A few freesias were in, selling at $5. It was, however, more difficult to maintain prices for white than for colored stock.

We are having steady zero weather—no snow but plenty of sun; keen, cutting winds causing the coal pile to shrink badly.

A tour among the wholesale houses Saturday showed no great quantity of stock on hand, buyers not very pressing, and shipping trade falling off.

From this on usual Winter prices may be expected, which in this market will be: For extra fine Beauty, say $4 to $5 per dozen; mediums, $2 to $3; shorts, $1 to $2; fancy teas, $6 to $8; Meteor, possibly $10 down to $3, and $4 for seconds, $2 or below for left-over stock. Carnations bid fair to be in fine form this Winter, with a very liberal supply of the newer varieties. These will range in price between $4 and $6, except for special fancies that may reach $8; the best standards, $2 to $3, with common, $1 to $1.50. Violets, except all signs fail, will be well sold; best doubles bringing $1 to $1 50; singles, 75c. to $1. It was in violets the greatest trouble occurred at New Year's, and this Tuesday morning they were selling at $1. Most of the poinsettias got cleared off. White bulbous stock is selling low.

Round About.

E. C. Amling opened his new quarters on New Year's morning, as did George Reinberg.

Wietor Bros. will shortly begin the erection of a block of five houses, 20x250 feet, filling up the lot where their present plant is located; and on a new 10 acres east, from 15 to 20 houses, 20x250 feet, will be erected, all for roses, to be finished and planted in time for a June crop of Beauty, Meteor, Bride and Bridesmaid.

Ess.

Grand Rapids.

Trade News.

Since Christmas the weather has been very severe, the thermometer dropping to 16 degrees below zero, curtailing the supply of cut flowers, but on the other hand helping to maintain Christmas prices so firm that they promise to continue the balance of the present week. The local demand is good, shipping excellent, and funeral orders plentiful. Although New Year's is past, carnations remain firm at 50c. to 75c. per dozen; Irene still bring a quarter more than the best. Roses go at $1.50 to $2; Romans and narcissus, 75c.; violets, 2c. to 30c. per dozen Beauty roses are fetching 20c. to 30c. per dozen.

The new year starts in well.

Saturday, at midnight, fire destroyed the greenhouse establishment of Charles Chadwick, on Burton avenue, 10 houses with their entire contents being ruined. What the fire left was destroyed by frost. Cause of the fire is unknown; damage $6,000, no insurance. GEO. F. C.

Buffalo.

Market News.

In floral lines, the plant trade for the holiday season was practically done at Christmas, and since which time interest has centered largely in the cut flower trade. A good and improved increase over the mid-winter holiday's trade was noted at New Year's. Since Christmas flowers kept up in fair supply and quality at reasonable prices. Bridesmaid roses of good quality were retailed at $2.50 to $3.00 per dozen. Beauty is hardly a Buffalo flower, when above $1.00 each has to be gotten for them, and at the holidays are invested in sparingly. Violets were fairly abundant during the past week. Carnations were probably the scarcest staple on the list, with Paper Whites and Romans quite plentiful, and valley of medium quality rather free.

Greens generally were all cleaned up and sold to an advantage, except Christmas trees, which were in surplus.

Notes.

The marriage of Arthur Beyers to Miss Deninger occurred on December 27. Mr. Beyers is looked upon as "the decorator" at Palmer's. Best wishes to the new voyagers on the marital seas.

VIDI.

Montreal.

The New Year.

Business was not of much importance; in fact, in several cases reported it was very little better than any other day. No doubt the inclement weather prevailing on Saturday was largely to blame, but if detrimental to the retailers, it is hailed with delight by the grower; for the cold has brought bright weather, and already roses are looking a great deal better, and carnation stems are stiffening up considerably. Prices are still up at the Christmas level, and the stock offered is rapidly increasing in quality. Plants are yet in good demand; the same may be said of smaller ferns made up in pans and used for filling jardinieres. B.

Hamilton, Ont.

The holiday trade was very satisfactory. Cut flowers of all kinds were in active demand. Roses and violets were particularly short for Christmas. Carnations were in better supply; there seemed to be enough to go round for New Year's, the few bright days seeming to tell quickly upon the pickings. Prices have been firm, averaging as stated in last writing. The plant sales have shown an improvement even over last year; a demand for a better class of plants was also a pleasing feature. Begonia incarnata was not asked for as much as last year; palms and azaleas sold very briskly.

Thomas Kilvington had a bench of Araucaria excelsa plants with four and five tiers; not many of these are to be seen now. A few fine camellias here attracted much attention. George Sones cut a nice lot of chrysanthemums, large, fine-looking flowers. Waban is a favorite late sort. A fine lot of the Boston fern were seen at E. G. Brown's; this variety seems to take the place of old N. exaltata. The new Washingtoniensis has not found favor with growers here.

The weather up to Christmas Day was decidedly unwinterlike. We are all trying to persuade ourselves that we have trimmed our coal bills down for this Winter. BEAVER.

Toronto.

The fine, soft weather we had at Christmas was followed by sharp frost. Several days last week we had zero weather and sharp winds to contend with. Stock was cut so close at Christmas and the subsequent demand has been so good that there is no surplus on the market yet, Roman hyacinths being about the only stock seen around in quantity. Prices for all classes of stock kept up to top-notch until January 2; they are lowering a little now, though with no extra supply in sight. Valley has been very good and somewhat plentiful Roses are still scarce; carnations are not abundant. Harry Dale is sending in extra fine ones; some of his Edna Craig sold at retail at $1.50 per dozen last week; they were excellent blooms on good stiff stems.

All are well satisfied with the holiday trade; everything was sold out and prices were generally very good. T. M.

CHRISTMAS TRADE.

Later Reports.

HACKENSACK, N. J.—Our Christmas business was more than double last year's. Greens and plants sold well, and cut flowers were in great demand at good prices.—RED TOWERS GREENHOUSES.

MANCHESTER, VT.—There is but little trade for plants here in Winter, the call being for cut flowers, of which carnations take the lead. Prices this year ruled 20 per cent. higher than last, and there was not nearly enough stock to go around.—G. S.

NASHVILLE, TENN.—We found the Christmas trade 50 per cent. better than in the last few years, especially on potted plants. Violets were very scarce. The other florists in our city also speak well of their trade, all having plenty of flowers.—J. & SON.

FOXBORO, MASS.—Prices were somewhat better than those obtained last Christmas. The biggest call was for carnations and violets in cut flowers, and in plants Asparagus Sprengerli, primulas and cyclamen sold the best. We could not give away the baby primrose.—A. F. B.

SYRACUSE, N. Y.—Christmas trade was good and prices higher than in former years. Carnations sold at $1 to $1.50 and were scarce; roses, at $2 to $3 for Bride, Bridesmaid and Meteor; Beauty, $1 to $1.50 each; violets, $3.50. The call for plants hardly up to that of former years.—L. E. M.

NEWBURYPORT, MASS.—Larger quantities of Christmas greens were used this year than ever before. Milkweed flowers, partly artificial, were used for the first time here. They were all highly colored. Trade in general was better, and there are good prospects of a healthy business condition next year.—J. A. K.

PLAINFIELD, N. J.—Christmas trade was better than usual—100 per cent. better than last year. The best selling stocks this season have been small ferns, palms, Boston fern, Christmas trees and green. It was impossible to meet the demand for holly. Red and Scott carnations sold best in cut flowers.—L. J. D.

SPRINGFIELD, MO.—Christmas trade showed an increase of 25 per cent over last year's. Bridesmaid and Bride sold at $2 50 per dozen; carnations 75c to $1 a dozen. The supply of roses and carnations was not equal to the demand There was littl call for bulbous stock. The quality of the roses and carnations was the best in several years.—C.

DENVER, COLO.—Our Christmas trade was 25 per cent. better than in the previous year, the increase being due to sale of plants, mainly ferns, cyclamen, cinerarias and azaleas. In cut flowers the call was largely for carnations. Beauty were also in demand, but the supply was short. Prices same as in former years. We might have gotten more, but did not care to ask it.—C. F.

WILMINGTON, DEL.—Owing to the mild weather our Christmas trade was double that of last year. Carnations sold at 50c. per dozen; double violets, $1.50 to $2 per 100; California violets, $1 per 100; Paper Whites and Romans, 50c. per dozen. Potted plants sold better than last year; Solanum capsicastrum, in 7-inch pots, going very well at 75c. each.—G. W. B.

TRENTON, N. J.—Christmas trade was far better than last year. Palms and ferns sold for about the same price. Rubber plants were in greater demand than last year; cut flowers sold better at an advance in price, and Beauty roses were not in sufficient supply for the demand. Hyacinths, narcissus and valley moved slowly. In general the trade was the best we have ever had.—C. R. & SON.

BIRMINGHAM, ALA.—Trade this Christmas was much heavier than in any previous year. I could have sold many more roses and very many more carnations, for which latter flower the demand was heavy, especially in red. I sold at least 100 per cent. more flowers, but prices were about one-half those of previous years. There was an unusual demand for holly and mistletoe; little or no demand for plants. American Beauty and other high-priced flowers were not wanted.—L.

TOLEDO, O.—We had an excellent Christmas trade. Calls for plants in bloom and others were numerous and showed an increase over those of last year. The cut flower business was also ahead of last Christmas. I am decidedly sorry that grocers and butchers take our green trade out of florists. Dealers in articles like holly, ground pine, etc., ought not to sell to any other firms, except florists and dealers in florists' goods at wholesale. Wishing you and all your employees a very Happy New Year.—E. S.

COLUMBUS, OHIO.—The holiday trade this year was exceptionally good, the demand and prices being better than a year ago. Carnations went up to $1.50 per dozen, and some very fine blooms were put on the market. Roses brought $3.00. Palms sold at from 40c. to $2.50; a little larger size brought $4. Cyclamens ran from 75c. to $1 50. Nephrolepis bostoniensis went readily at from 40c. to $2 50, while Asparagus plumosus in 6 and 7-inch pots reached $1.50. Violets were sought at from $3 to $4 per 100. A few azaleas were brought in, and were in great demand at $2 and $4 each. Many more of them could have been sold had they been in stock.—FRITZ.

DAVENPORT, IA.—My trade showed an increase of about 10 per cent. above the holiday business of 1898; prices were about the same and about everything sold out. There was an extra call for red carnations, poinsettias and Beauty. An increase in call for plants was noted; everything good in the blooming plant line selling readily, especially Begonia Gloire de Lorraine, dwarf poinsettias and cyclamen. Carnations brought from 50c. to $1 per dozen for some Crane; poinsettias, $3 to $5 per dozen; roses, $1.50 to $2; Beauty, $8 to $12 per dozen; violets, $3 to $4 per 100.—J. T. T.

LINCOLN, NEB.—Christmas of 1899 will long be remembered—weather fine, flowers beautiful; prices about 20 per cent. better than ever before, and customers till there was no rest for the weary. Trade will run 40 per cent. better (for the week) than ever before. There was a fine sale of palms, azaleas, ferns, hyacinths, freezias, cyclamen—everything in bloom went and at good prices. Carnations brought 75c. to $1.50; Romans, $1.50 to $3; Beauty, $5 and up. While all the florists in Lincoln had built the past season, yet I venture to say this town will have more glass put in greenhouses the coming season than ever before.—C. BROS.

KNOXVILLE, TENN.—Beautiful bright weather favored us the week preceding Christmas, which helped bring on the stock in fine shape. The supply was equal to the demand in everything, with the exception of violets, for which there was a large call; California is the favorite here. Hyacinths and Paper White narcissus sold remarkably well. There was a heavy call for Beauty; C. W. Crouch alone sold 40 dozen. Carnations were in good demand and sold well. Prices for everything were high and very few complaints were made at those asked. Beauty sold at from $3 to $5 per dozen; Bride, Bridesmaid, Perle, Golden Gate, $2 per dozen; carnations, $1; Romans, 75c.; violets, $2.50 per 100. The market was overstocked with well berried holly and mistletoe, which grows abundantly on the mountains about here. There was a very noticeable falling off in the sale of palms and fern dishes. Nothing out of the common was to be noticed. C. W. Crouch had some nice Deutsche Perle azaleas, which went well. C. Baum had some late stock—Jerome Jones, Frank Hardy, Mayflower and Robinson chrysanthemums.

Many orders are already booked for New Year's, and a heavy trade is anticipated. No very cold weather here yet and no snow to speak of.—H. Y.

LIBERTY! LIBERTY!

Being all sold out of grafted plants of Liberty rose, I hereby announce that after January 8, 1900, no more orders for grafted plants can be taken for this year's delivery. Only a limited supply of our own rooted plants left to sell. Order quickly if you want any for this season. Price for own rooted plants, out of 2½ in. pots, for April delivery, as follows:

12 plants	60 cts. each.
25 plants	50 cts. each.
50 plants	30 cts. each.
100 plants	25 cts. each.
1000 plants	20 cts. each.

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

DELIVERY FEBRUARY 15.

We can also furnish first delivery, the following varieties, at introducers' prices: **Olympia, Mrs. Thos. W. Lawson, The Marquis** and **Ethel Crocker.**

Ethel Crocker.

Absolutely the best pink carnation ever offered the trade. Grown equally successfully by Messrs. Hill, Craig, and myself. You are not buying it on a venture, but knowing that it is not a success in one soil and a failure in another.

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants, never out of crop from Sept. to July, more flowers to the square foot than any other known variety, and practically no seconds. With 18,000 stock plants to work from there is no danger of over-propagation, and you are not asked to wait until planting out time for your cuttings, but can have them whenever wanted. Orders intrusted to me will have my personal attention, both in the selection of the cuttings and the filling of the order. Price, per 100, $10; 25, $2 50; 1000, $75.00; 250, $18 75.

HERR'S PANSIES at $4 per 1000 now, and a regular assortment of carnations in a list ready Jan. 1st.

An Average New Year's Trade.

The New Year's trade averaged with other years, and with nearly enough stock to fill all orders. Taking the holiday trade as a whole, I think it will average with that of former years, considering the quantity and quality of stock we had to sell. Strictly first-class roses, such as are found in New York, Chicago or Philadelphia, were not to be had in this market, and for what we did have, the grower cannot or wont understand why they should not bring the top-notch price. Many writers, in reporting the sales at special times, year after year, with an increase of 10 to 25 per cent., don't stop to figure and see what an immense trade this kind of figuring would lead to. Of course, the increased business with some may be, as in a case I have in mind, where one stated his sales were 90 per cent. ahead of 1898. But how do you account for such an extraordinary gain? Simply this: Last year he was entirely off crop and had nothing to sell; this year he was right in crop, and I think this will hold good with about nine-tenths of the people over the country That the year just past has been a prosperous one for the florists none of us will dispute. Business has been good and there is always a demand for first-class stock, in roses and carnations especially. But these we have not been able to procure in quantities to make it profitable, and even second-class stock has been scarce and not equal to the call for same at all times.

Our visitors were John Evans and two brothers, Richmond, Ind.; Meyer Keller, New Castle, Ind., and Harry Bonner, of Dayton, O. E. G. GILLETT.

Cleveland.

Good Holiday Business.

A most satisfactory holiday business is reported by every one. The weather up to Christmas Sunday was very favorable, and the bulk of plants and flowers were handled without difficulty until that time. The volume of business, as near as can be estimated, exceeded that of any previous year. Not alone was the increased demand for cut flowers, but in plants as well, and retail stores report a splendid trade in the latter. Bright weather during the early part of the month afforded large stocks of choice plants and equally large quantities of cut flowers; at no time was there any over-supply of flowers, and all available stock was used up.

Prices were advanced early in the week and good figures were reached, but show no increase over those of the previous Christmas season. Choice roses retailed at $2.50 and $3 per dozen; Beauty, $12 to $20 per dozen; carnations, ordinary, 75c. and $1; extra and fancy varieties, $1.50 and $2 per dozen; Paper Whites and Romans, 75c. per dozen; violets, $3 and $4 per 100. A few chrysanthemums were offered, and these fetched from $3 to $6 per dozen.

Wholesale men report an excellent trade and feel that more good stock would have found ready market had they been able to get more. Roses sold well at $10 and $12 for best stock; carnations, $2, $3 and $4 for ordinary; Romans, $2 and $3; violets, $1.50 and $2.

Christmas Greens.

The demand for Christmas greens and all holiday decorative material was unprecedented. The demand far exceeded expectations, and seedsmen and florists all report a complete cleaning up. One particular feature in connection with this line was the great demand for scarlet immortelles and the various designs made up from them. Never before were so many used at Christmas time, and the increased call for them can hardly be accounted for. Dry flowers of all kinds were in brisk demand, and the depleted stocks of the dealers here are best evidence of this. Holly cleaned up fairly well, considering the vast quantity which came into the city, and if any was left on hand after Christmas, it was on account of poor quality.

Notes.

E. J. Paddock is cutting a few single tulips, the variety being Proserpine. These are the first offered by local growers, but are not of much value for floral work, as they are so short in stem.

Many department, dry goods and clothing stores were extensively decorated during the holiday season. The materials used were principally laurel roping, wild smilax and palms. Ella Grant Wilson had several of these decorations.

The Union Club and Chamber of Commerce decorations were very elaborate affairs and were handled by Smith & Fetters. This firm has had on an average two and three decorations a day for the past two weeks.

Present Market Conditions.

The dull weather of the past ten days has had a tendency to shorten up the supply of flowers. Prices obtaining at present writing do not vary much from holiday rates, but the market is inclined to a gradual decline. Trade continues brisk.

G. A. T.

St. Louis.

The Market.

Trade during the past week has been very slow all along the line; wholesale men report plenty of stock with poor outside demand, as compared with last year. The only material at all scarce is first-class roses, with plenty of medium to poor, as roses seem to run in this locality this year. Beauty have been rather short in supply and find poor sale owing to the high price asked—50c. to 75c. each. These figures have been lowered, however. Violets are in short supply at $1.50 per 100. Carnations, especially, white, are plentiful at 2c. to 4c. The price in roses is 10c.; medium goods, 4c. to 6c. Harrisii lilies are finding poor sale. Bulb stock moves very slowly, although the quantity coming in has shortened up.

Taking it altogether, the demand and prices are away behind this time last year. The weather here has been steady cold for a week—lowest temperature 4 degrees above zero.

The retail men are complaining of poor business, although the usual number of weddings, receptions, etc., are on. Most of the decorations consist of holly and Christmas stock, which cuts off the flowers used.

An Enterprising Firm.

We recently visited the place of business of the Ostertag Bros., in which great improvements have taken place. The floor has been relaid with new tiling, new marble counters, with glass fronts put in, exceedingly neat and tasty in effect; an elegant new $500 ice box added—one of the finest we have ever seen, which not only keeps and shows off the flowers to best advantage but uses very small quantities of ice. The Brothers are also very well supplied with outfits in the way of cut glass, etc., for the best table decorations, of which they get their full share. They enjoyed a fine Christmas trade, using 10,000 yards of green and holly and other things in proportion. They got up a Christmas bell made of wood this year, which comes cheaper than other materials, besides making a neat and perfect subject. They sold an enormous quantity of these. This firm is about the pioneer in the manufacture of prepared palms, of which they have made a great success. The quantities they have sold are wonderful; they ship to every State and Canada. Henry, the head of the concern, is a great hustler, and we would not be surprised to hear of him taking a trip to the Philippines to work up trade, for if there is anything about he will have his share, which he surely deserves. Ottawa.

Christmas weather here was g
delivery, but poor for helping ot
cut flowers; the thermometer kep
close to 32, sometimes a little abov
others below. Business was very good, the demand for plants being away ahead of other years. Azaleas were the best sellers, C. Scrim and Graham Bros. got rid of close on to 500; everything went, even very indifferent Vervaeneana, which seems to be the general run of that variety this year. Palms sold well and everything in the shape of poinsettias was quickly snapped up. Scrim had some good heaths; but the public have hardly caught on to the good qualities of these yet. Cyclamen and primroses were very good this year, and there was quite a boom in them; pans of P. obconica took well. Bulbous stock went slow. All were well satisfied with plant sales. The demand for cut flowers was great, and many customers had to be refused, which fact sent them to the plant store and so helped along that branch. Scrim had a bonanza in the shape of a house of good chrysanthemums—Lincoln, Rieman, Golden Wedding, Maud Dean, Queen, Jones and Wanamaker. These were all sold at an average of $2.00 per dozen. Carnations were good and sold at 75c. and $1.00. Violets were in limited supply, going at $2.50 to $3.00 per hundred. Roses were very short; home-grown ones very good; imported ones not so good. The best brought $3.00. Hyacinths and narcissus were good and plentiful, and with stevia filled up quite a gap.

Taking weather into consideration I think Ottawa had more than its share of flowers to sell, and all are satisfied with results.

Christmas week brought a good many funerals, which kept stock down, and on New Year's Day everything went, but as the thermometer registered 15 below zero there seems to be a chance for some bright weather to stock up again with.

With best wishes for a successful year 1900 for the EXCHANGE. E.

Pittsburg.

New Year's Trade Good.

Trade after Christmas slackened up a little, but it was not dull by any means. New Year's trade, like the Christmas one, was far better than last year. The Saturday previous was rather discouraging, but Monday, January 1, was all right and stock was in good demand. Prices for good flowers were almost the same as at Christmas; the supply was also sufficient in spite of the severe Winter which has been prevailing ever since December 25, the thermometer not having been above 20 degrees in all that time, and for several nights hovering a little above zero, with sharp winds blowing. At present roses are shortening up a little, but other stock is abundant. Carnations are doing excellent. Tulips are coming in, but are rather short-stemmed. Harrisii are good, in fair demand, and will be more plentiful from now on. Romans and Paper Whites are a drug; I don't think there is a grower handling this stock who realizes enough to pay for the bulb. Valley is just about as remunerative, but in better demand.

The News.

One of our wealthiest citizens, Capt. Vandergrift, who died a week ago, in his will bequeaths $500 to his gardener, Thomas Lynass, who was in charge of his fine conservatories for a number of years.

The next meeting of the Florists' Club takes place January 11, at the store room of the Pittsburg Cut Flower Company on Liberty street. Every member should try to attend, as important matters in connection with the annual meeting of the State Horticultural Society will be discussed and all arrangements that the members desire to make must be completed. So far, Professor Shafer, of the Botanical Society, has promised to give something of interest, and P. S. Randolph, for the Florists' Club, will speak on the progress of floriculture in Allegheny County the past forty years, a subject he can well handle, being one of our oldest growers, not in age but in experience. Supt. Falconer has also promised to do what he can, and Messrs. Dunlevy and Handenshield, of the Fruit Growers' Association, are working hard to make the meeting a success. Nomination of officers for the new year also takes place at the forthcoming club meeting.

E. C. REINEMAN.

Butted Glass
This is no longer an experiment, it has come to stay There are various ways of making Butted Roofs, but the best way is with the
Clipper Bar.
With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the ly bar we sell, for it is not; we furnish what people want and here is nothing in greenhouse material that you cannot get fro us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 2. NEW YORK, JANUARY 13, 1900. One Dollar Per Year.

If you have not already done so, you should plant NOW

FOR EASTER FORCING

Spiræa Compacta Multiflora

and Astilboides Floribunda,

The two finest varieties for this purpose. We offer fine, strong clumps, at $4.00 per 100. Case lots, 350 clumps to the case, $12.00 per case.

We still have on hand a FEW CASES of **LILY OF THE VALLEY**

Extra quality three-year old German Pips, in case lots (2500), $20.00; in less quantities, $10.00 per 1000.

FINEST NAMED HYACINTHS $5.00 per 100; $45.00 per 1000.

Bulbs are in first-class shape, and if potted now will make first-class stock for Easter forcing, as Easter is late this season. We can supply at the above named price the following varieties, viz., Gigantea, Gertrude, Nurma, Grand Maitre, Grandeur a Merveille, Baron van Thuyl, pink, Mme. Van der Hoop, La Peyrouse, Pieneman, etc.

We have also a large variety of **NAMED TULIPS** For Easter and Late Forcing.

As it is late in the season, we offer these at greatly reduced prices in order to close out surplus stocks remaining unsold; can supply fine varieties as low as $5.00 per 1000. List of varieties and prices of same on application.

We also have a few thousand exceptionally fine, extra selected

Mammoth Double-Nosed, or Top-Root VON SION NARCISSUS

Which we offer at $20.00 per 1000. While this price may seem somewhat high, we are certain that our customers who are buying the stock will be more than satisfied with it, as it is gilt-edged stock in every respect, and cheap at the price quoted, viz., $20.00 per 1000.

Send for our list of surplus stock, which we are offering at very low prices to close out what we have left on hand—in many cases for less than cost. Stock is a bargain at prices offered, to any one who has use for same.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

ORDERS BOOKED NOW

In order of receipt, for Rooted Cuttings of the Famous....

Mrs. Thomas W. Lawson,

The $30,000 Queen of **CARNATIONS** FOR SPRING DELIVERY.

SEED TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLOIANO, Washington, Second Vice-President; S. F WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Nashville, Tenn.—J. H. Frith & Co. have removed to Market street.

Calvert, Tex.—On January 3 a fire destroyed a quantity of seed in the warehouse of Gibson Bros. The loss is covered by insurance.

Government Free Seeds.—In the Spring the Congressman sends out the seeds, and in the Fall he gathers the votes.—Baltimore Sun. A rich harvest for him; but a profitless one for the country.

John Lewis Childs, Floral Park, N. Y., issues this year a 25th anniversary catalogue, having 156 pages, some 500 illustrations, and 9 or 10 colored plates. Eight pages are devoted to his 25 years of business, with detailed illustrated sketches of Floral Park, and his establishment.

Wants Seedsmen's Catalogues—The Department of Agriculture often receives letters asking where the seeds of certain varieties of vegetables and flowers can be purchased. In order that these questions may be readily and accurately answered the Division of Botany is preparing a list of dealers and varieties offered, and would request that all seedsmen forward their catalogues to the division as soon as issued, so that the list may be made as complete as possible. The varieties they offer can then be included in our list and inquiries regarding them promptly answered.

Seedsmen are requested to send catalogues to the Seed Laboratory, Division of Botany, U. S. Department of Agriculture, Washington, D. C.

A. J. PIETERS.
In charge of Pure Seed Investigations.

Grasses Suitable for Lawns.

In a bulletin on the subject of Grasses and Forage plants, published by the Agricultural Experiment Station of the University of Tennessee, at Knoxville, J. B. Killebrew, A. M., Ph. D., grass expert of that institution, recommends the subjoined mixtures, with the amount of seed to be sown per acre, as suitable for lawns.

If it is intended to mow the lawn or yard frequently the following mixture may be used:

Kentucky blue grass	10 lbs.
Hard fescue	5 lbs.
Wood meadow grass	5 lbs.
Sheep fescue	2 lbs.
Meadow fescue	4 lbs.
Sweet scented vernal grass	2 lbs.
Red top	15 lbs.
Yellow oat grass	4 lbs.
Crested dog's tail	6 lbs.
Orchard grass	5 lbs.
Meadow foxtail	5 lbs.
	63 lbs.

Flint recommends as a mixture for permanent lawns and pastures lying within the vicinity of dwellings or public highways the following, to which I have added one or two other grasses:

Meadow foxtail	3 lbs.
Sweet scented vernal	2 lbs.
Orchard grass	3 lbs.
Hard fescue	2 lbs.
Sheep's fescue	2 lbs.
Meadow fescue	2 lbs.
Italian rye grass	3 lbs.
Perennial rye grass	4 lbs.
Timothy	3 lbs.
Red top	3 lbs.
English blue grass	5 lbs.
Rough stalked meadow	3 lbs.
Yellow oat grass	1 lb.
Red clover	2 lbs.
Perennial red clover	2 lbs.
White clover	4 lbs.
Fowl meadow grass	3 lbs.
Kentucky blue grass	14 lbs.
	61 lbs.

In the selection of these grasses for lawns the idea of beauty should be preserved as well as the nutritiousness of the grasses. Some grasses will grow and maintain their verdure throughout the dry season, giving a freshness to the lawn, and yet will be of but small value for the grazing of stock.

The following mixture is also suggested, which will probably do better on argillaceous soils thinly shaded than the first mixture named:

Tall oat grass	1½ lbs.
Tall fescue	1¼ lbs.
Meadow fescue	1¼ lbs.
Meadow foxtail	1 lb.
Orchard grass	2 lbs.
Hard fescue	1 lb.
Sheep's fescue	2 lbs.
Quaking grass	½ lb.
Comb grass	½ lb.
Sweet scented vernal	1 lb.
Timothy	½ lb.
Kentucky blue grass	14 lbs.
Red top	10 lbs.
Tufted hair grass	¼ lb.
Red clover	5 lbs.
White clover	3 lbs.
Fowl meadow	2 lbs.
	44¼ lbs.

For orchards and shady places the following mixture of grasses and the quantity of seed per acre will be found suitable:

Orchard grass	20 lbs.
Hard fescue	2 lbs.
Tall fescue	2 lbs.
Italian rye grass	3 lbs.
Perennial rye grass	3 lbs.
Timothy	6 lbs.
Red top	10 lbs.
Wood meadow grass	4 lbs.
Rough stalked meadow grass	2 lbs.
English blue grass	4 lbs.
Perennial red clover	3 lbs.
White clover	4 lbs.
	63 lbs.

For rocky or gravelly lands the following mixture is recommended:

Red top	2 lbs.
Tall oat	2 lbs.
Crested dog's tail	3 lbs.
Orchard grass	3 lbs.
Red fescue	4 lbs.
Meadow soft grass	2 lbs.
Perennial rye grass	6 lbs.
Timothy	6 lbs.
Wood meadow grass	3 lbs.
English blue grass	2 lbs.
Rough stalked meadow grass	2 lbs.
Black edmic	3 lbs.
White Clover	8 lbs.
	46 lbs.

Land liable to be overflowerd with fresh water will do best if sown with the following mixture:

Fioria	4 lbs.
English Bent	3 lbs.
Tall fescue	5 lbs
Slender fescue	2 lbs.
Manna grass	5 lbs.
Reed canary grass	3 lbs.
Timothy	4 lbs.
Red top	3 lbs.
Rough stalked meadow grass	4 lbs.
Fowl meadow grass	6 lbs.
White clover	3 lbs.
	42 lbs.

Prof. Beal, of the University of Michigan, recommends the sowing of two bushels of Kentucky blue grass and two bushels of small bent grass, known as Rhode Island bent, brown bent, or creeping bent, or red top, to the acre for lawns. He thinks a few ounces of white clover seed might be added, but it is by no means important. The bent grasses, so called, correspond with our herd's grass. He, as well as Prof. Scribner, objects to the sowing of orchard grass in a lawn. My observation and experience convince me that when orchard grass is sown at the rate of three or four bushels of seed per acre in a woodland pasture where most of the trees are oak it does better than the finer grasses, because it is a stronger grower and is able to withstand the damaging effect of the heavy oak leaves. Being sown thickly it covers the ground completely and will not appear in a tussocky form for two or three years. My opinion is that orchard grass in such situations is to be preferred to any other. Lawns should be sown with about double the number of seed that is used for a pasture. The object is to have the ground covered. The seed should be sown without any "nurse crop."

In the preparation of lands for a lawn the greatest care must be taken to have the soil enriched and raked until it is as fine as garden mold. No clods or stumps or rocks should be left on the surface. After the seed is sown the lawn should be rolled and, as far as possible, all the little inequalities in the surface filled. Frequent mowing of lawns is the only method of preserving their attractiveness and beauty. The grass should never be permitted to seed.

Bermuda grass makes a beautiful lawn, but is apt to turn brown the latter part of the Summer. Where there is a sufficient supply of water to keep the ground moist by sprinkling it forms a beautiful covering for the yards and lawns of the Southern States.

Imports and Exports Statistics.

The following exports and imports of plants, shrubs, seeds, etc. are for the month of November, the latest period for which the official figures have been compiled by the Treasury Department.

The dutiable imports of plants, shrubs and vines amounted to $95,887 in November, 1898, against $90,557 during the same period of last year. The free imports of seeds amounted in November to $70,648 against $37,075 during November, 1898. The total for the 11 months amounted to $116,562 during 1899, as compared with $556,075 during 1898.

The dutiable imports of seeds amounted to $80,150 in November, 1899, as against $50,840 during November, 1898. During the 11 months ending with November, 1899, the imports amounted to $418,928, as compared with $264,862, the value of the imports during a like term of last year.

The exports of seeds to other countries amounted to $1,814,419 in November, 1899, as against $1,164,487 a year ago.

The countries to which the United States exported seeds were the United Kingdom, which received shipments to the value of $585,339 in November, as against $243,899 worth during the same month of 1898.

Shipments to France amounted to $52,269 in November, 1899, as against $7,862 during the corresponding month of the previous year.

Germany imported seeds from the United States to the value of $328,287 in November against $222,161 worth during November of a year ago.

Other European countries received shipments to the value of $778,547 in November, 1899, as compared with $567,938, the value of the exports of seeds during the corresponding month of the preceding year.

A decrease is to be noted in the exports of seeds to British North America, being valued at $54,514 in November, 1899, as compared with $109,583, the value of the exports during the same month of 1898.

Seeds were exported to British Australasia to the value of $10,283 in November, 1899, as compared with $11,111 during November a year ago.

Flushing, N. Y.,—A spark from a passing locomotive set fire to a cedar hedge on the nurseries of Keene & Foulk, Saturday evening last. Through the effective efforts of the Flushing Fire Department, adjoining buildings were saved, and the damage confined to the hedge. The loss is estimated at $250.

NURSERY DEPARTMENT

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Myron S. Green, a prominent orchardist of Sacramento, Cal., died December 29 last. He was born in Richmond, Vermont, May 17, 1838.

A prominent nurseryman says, anent the San José Scale legislation, "I would like to see nurserymen and all interested take a hold of this matter, and get some good, common-sense worked into it."

The fourth annual meeting of the Eastern New York Horticultural Society will be held on February 7 and 6, at the rooms of the American Institute, No. 19 West 44th street, New York City. The American Institute will offer $250 in prizes for exhibits of fruits, vegetables and flowers.

At the recent meeting of the New Jersey Horticultural Society, held at Trenton, it was stated that during the past year a Burlington farmer raised 95,000 baskets of Kieffer pears, from which the net proceeds were $28.500. The Kieffer pear crop has been so large that, as an experiment, some farmers are having the pears canned for export purposes.

Nurserymen and fruit growers are taking great interest in the patented tree protector manufactured by the Expansive Tree Protector, Co., Rochester, N. Y. This protector, on account of its efficiency, may be well termed a veritable dead line across which none of the pests that infest and destroy the trees can possibly pass. Durability is also to be added to its other good qualities.

Winter Colors of Evergreens.—Very few evergreens maintain their Summer colors throughout the Winter, and while the question will rarely arise at selling time, he who wishes to please his customers in selling them stock that will suit their tastes all the year round, will do well to make some observations, at this time, of the condition of various evergreens. The tendency, on the arrival of cold weather, is to take on a brownish cast, which earns for some evergreens the sarcastic designation, by dissatisfied patrons, of "everbrowns." On the other hand, when such evergreens are arranged with others to contrast in colors, the effect will most likely be pleasing to every one. Perhaps the brownest of all is the Chinese golden Arbor vitæ, which turns from an exceedingly pale golden shade (scarcely sufficient to warrant the name it bears) to a very reddish brown. To the novice it is not unlikely to appear to be in a dying condition, jnpging by the color above; while to the trained eye it may appear rich. This evergreen, by the way, comes in for a large share of appreciation because of its dwarf, regular growth. As compact as can be, the growth is imperceptible—the plant seems simply to swell. Approximately, it will never grow over four or five feet in height, shaping slightly conical or semi-globular. All arbor vitæs have a brownish tinge at this time, more or less. One of the least is Thuja pyramidalis, which has a pretty, bright green color in what might be termed its normal condition.

Retinisporas Sieboldi and Veitchii are well known for their Winter coloring, which is blue, sometimes rather rusty. Being unobtrusive plants, small and chiefly useful for diversity of coloring in groups, they are generally found desirable.

The Colorado blue spruce, unless of the best blue normally, loses much of its color in Winter. Grafted plants, because of selected color, are always the best to use.

The common Norway spruce remains perfectly green, for which character it deserves credit; but it is not a desirable thing for many purposes. The yew has a perfect dark green color all the year round, except when "burned" brown by the Winter sun. Lawson's cypress, Retinispora squarrosa, and most junipers carry their color perfectly, the Chinese and Swedish junipers being particularly attractive. Pines are very satisfactory in every respect.

Columnar Growing Trees.—Notwithstanding there are proper objections to the use of poplars of all kinds, as a rule, the Lombardy has a character of growth which makes it better adapted and more effective for special purposes than anything else among deciduous trees. According to the situation, some houses do not require trees around them for the purpose of giving shade, but solely to produce a natural landscape effect. They are the combining feature between Nature and the architectural arts of man. For the same reason we arrange our bouquets to contain spikes of flowers, breaking into regular lines to form a graceful bunch. And in like manner an architect keeps an eye open to the perspective. How effective is the church spire, clean cut against the sky!

Then, again, as a side-walk tree, occasional ones of erect character relieve the eye of the monotony sometimes induced by similarity of form and those trees ravished by the "butcher." Shade is not always required, especially on one side of a street—the desire is largely to draw a little more of nature closer to the home. In such cases they may be planted about twenty feet apart. On lawns they may be planted singly or in groups of three, according to the openness of the place. In groups, 10 feet apart would be close enough.

The Lombardy poplar was mentioned because so long as it remains vigorous and healthy its growth is much handsomer than any other. Then, too, it grows with great rapidity. Lasting powers are perhaps less to be considered here than where permanent trees for shade and massive effects are needed. A Lombardy eight or ten years old is already filling an important place, which another would not in five years more. Yet there are others very desirable for their uniqueness and uncommonness. These are the pyramidal oak, pyramidal birch and the maidenhair tree, salisburia. The latter is the more interesting, making a very rapid growth, but with few twigs and branches. Its leaves are unusually formed like a fan, or the leaflets of a maidenhair fern, from which it has received its popular name. A Japanese tree is as hardy as a rock, and suits itself to almost any condition. As a street tree, it has a future before it, lending itself readily to pruning into a bushy headed tree. S. Mention the Florists' Exchange when writing

NEW **TOMATO,** FOR 1900

Livingston's MAGNUS

This very distinct and most promising new variety, of the color of BEAUTY and ACME, is the latest addition by Livingston to the Tomato family. It is thicker, heavier, and more solid than either of the above, making it easily the most handsome sort in cultivation. The form is perfect, uniform, large and attractive. Flesh very firm. It is a robust grower, with short joints, setting its fruit clusters closer together than most varieties, and is therefore a heavy cropper. We have tested it for several years for forcing in greenhouses, and it has excelled all other varieties for this purpose.

PRICES:— Per Pkt., 20c; 3 Pkts. 50c.; 7 Pkts. $1.00

Hardiness of Deciduous Trees.—Minnesota Agricultural Experiment Station enumerates the following list of trees as having been found hardy at that station: White or soft maple (Acer dasycarpum); cut leaved maple (Acer dasycarpum var. Wierii); European birch (Betula alba); cut leaved birch (Betula alba var. laciniata); purple birch (Betula alba var. atropurpurea); canoe or paper birch (Betula papyracea); yellow birch (Betula lutea); American white birch (Betula populifolia); American hornbeam (Carpinus americana); hackberry or nettle tree (Celtis occidentalis); cockspur thorn or thorn apple (Crataegus crus-galli); white ash (Fraxinus americana); green ash (Fraxinus viridis); Kentucky coffee tree (Gymnocladus canadensis;) butternut (Juglans cinera); European larch (Larix europea); tamarack (Larix americana); box elder (Negundo aceroides); ironwood (Ostrya virginica); white or silver poplar (Populus alba); bolleana poplar (Populus alba var. nivea); Russian poplar (Populus Wobsky); Russian poplar (Populus certinencis); Russian poplar (Populus sibirica pyramidalis); Russian poplar (Populus betulifolia); Russian popular (Populus laurifolia); cottonwood (Populus monilifera); golden poplar (Populus monilifera var. Van Gerti); black cherry (Prunus serotina); chokecherry (Prunus virginica); bird cherry (Prunus pennsylvania); European or mountain ash (Pyrus aucupaira); native crab apple (Pyrus coronaria); weeping mountain ash (Pyrus aucuparia var. pendula); American mountain ash (Pyrus americana); burr oak (Quercus macrocarpa); white oak (Quercus alba); red oak (Quercus rubra); scarlet oak (Quercus coccinea); Russian willow (Salix cutifolia); laurel-leaved willow (Salix laurifolia); royal willow (Salix regalis) Russian golden (Salix aurea); Napoleon's willow (Salix Napoleonis); Wisconsin weeping willow (Salix); white willow (Salix alba); Spindle tree (Euonymus atropurpureus); hardy hydrangea (Hydrangea paniculata grandiflora); St. John's wort (Hypericum kalmianum); tartarian honeysuckle (Lonicera tartarica); tartarian honeysuckle (Lonicera tartarica var. splendens); syringa or mock orange (Philadelphus coronarius); syringa or mock orange (P. grandiflorus); syringa or mock orange (P. Gordonianus); nine bark (Physocarpus opulifolius); golden spiræa (Physocarpus opulifolius var. aurea); shrub cinquefoil (Potentilla fruticosa); common buckthorn (Rhamnus catharticus); common smooth leaved sumach (Rhus glabra); cut leaved sumach (Rhus glabra var. laciniata); yellow flowering currant (Ribes aureum); common elder (Sambucus canadensis;) red berried elder (S. racemosa;) cut leaved elder (S. nigra var. aurea); Buffalo berry (Shepherdia argenta); Van Houtte's spiræa (Spiræa Van Houttei), Spiræa obovata; Douglas spiræa (Spiræa Douglasi, Spiræa lanceolata); plum leaved spiræa (Spiræa prunifolia); ash leaved spiræa (Spiræa sorbifolia); snowberry (Symphoricarpus); common lilac (Syringa vulgaris); Persian Lilac (Syringa persica); Josika's lilac (Syringa Josikæa); high bush cranberry (Viburnum opuus); snow ball (V. opulus var. sterilis), Viburnum lentago, Viburnum dentatum; prickly ash (Zanthoxylum Am.); basswood or American linden (Tilia americana); American or white elm (Ulmus americana); red or slippery elm (Ulmus fulva); weeping slippery elm (Ulmus var. pendula); rock elm (Ulmus racemosa).

Also the following ornamental shrubs and vines: Common or European barberry (Barberis vulgaris); purple leaved barberry (Barberis vulgaris var.); Thunberg's barberry (B. Thunbergii); Siberian pear tree (Caragana arborescens); red-twigged dogwood (Cornus sanguinea), Cornus stolonifera; Virginia creeper (Ampelopsis quinquefolia); bitter sweet (Belastrus scandens); European sweet clematis (Clematis virginiana), Clematis viticella; honeysuckle (Lonicera Sullivani); moonseed (Mentispermum canadense); wild grape (Vitis riparia).

Western New York Horticultural Society.—The forty-fifth annual meeting of the western New York Horticultural Society will be held in the city hall, Rochester, N. Y., January 24 and 25. Contributions of new and rare fruits are solicited for exhibition, also new tools and implements and other articles used by horticulturists and tree growers. Competitors are asked to enter the contest for the cash prizes offered by George Ellwanger, and the medal given by the late Patrick Barry. Ladies and delegates from kindred organizations will be welcomed. On the certificate plan reduced railroad rates on all trunk lines, as far as West Virginia and Ohio, good on all roads in the East except in New England, can be had. Among the papers to be presented are: The Present Status of the Fruit Growing Interests of New York and its Relation to Land Values, George T. Powell, Ghent, N. Y.; The San José Scale, from a Horticultural Standpoint, S. A. Beach, New York Agricultural Experiment Station, Geneva, N. Y.; Comfort and Plenty, Prof. I. P. Roberts, director College of Agriculture, Cornell University, Ithaca, N. Y.; Some Thoughts on Strawberry Culture, L. J. Farmer, Pulaski, N. Y.; Soiling Crops as Related to Fruit Culture, Prof. H. E. Van Deman, Parksley, Va.; Experiments with Commercial Fertilizers, Dr. G. C. Caldwell, Cornell University, Ithaca, N. Y.; Some Insect Experiences of 1899 (with lantern slides), followed by slides showing the method of pear tree pruning adopted by a member of the society, Prof. M. V. Slingerland, Cornell University, Ithaca, N. Y.; The Commercial Fertilizer Situation, Prof. W. H. Jordan, director New York Agricultural Experiment Station, Geneva, N. Y.; The Fertilizing of Orchards, Prof. S. T. Maynard, Massachusetts Agricultural College, Amherst, Mass.; Shade Trees for Avenues and Streets, John Dunbar, superintendent of Highland Park, Rochester, N. Y.

WANTED.

At once an experienced man, single, that understands the growing of general greenhouse stock, including roses, palms and ferns; must have experience in making-up; one who is honest and willing to work; none need apply except those that can fill the position; wages $25 to $35 per month and board; state experience and reference.

J. H., care Florists' Exchange.

MISCELLANEOUS WANTS.

WANTED. A few more customers for No. 1 Carnations at wholesale; can furnish from two to three hundred twice a week; write for prices. E. B. Beals, Greenfield, Mass

WANT TO RENT

A range of glass about 20,000 to 30,000 feet, for growing roses and carnations. Houses must be in good condition. Give full particulars. K. G., care this paper.

BUSINESS OPPORTUNITIES.

FOR SALE, Well established small florist, doing good cash business; first-class location; moderate rent. K. K., care Florists' Exchange.

FOR SALE or rent. A five-room dwelling, barn, small patch of ground, and greenhouse, 20x70, partly planted in lettuce and radishes. Florist, Box 761 Muncie Ind.

TO LET. Four acres, house, barn, etc.; soil particularly adapted for growing violets; fine plants can now be seen under cultivation; plants and frames can be bought. Address Box 45, Larchmont, N. Y.

FOR SALE cheap. Two greenhouses, 20 x 100 each, well stocked, steam heat, houses 3 years old and all right; 3 acres market gardens; no opposition; good chance for right man. Write for particulars to H. F. Serrell, Oxford, Mich.

FOR LEASE, $10.00 per month, near Balto, Md., 6 greenhouses, land for stock, steam, cheap coal, steam pump, well stocked; telephone connects Balto; suitable for wholesale carnations or roses. Address H. S. Rowe, Westminster Md.

AMATEUR or professional. Well built 20 ft. double greenhouse, 100 ft. violet house, propagating house and work room; 14-room modern house, barn, garden and orchard, all in running order; six acres, high ground, exposure and soil exceptionally favorable; within 45 minutes of New York. For sale on easy terms. Room 144, 39 Cortlandt St., New York.

FOR SALE. 400 Geraniums, stock plants, full of cutting, best and latest varieties; 200 Primroses and Cinerarias in bloom, 25 varieties; finest Coleus stock plants; 500 Carnations in 5 in. pots; Palms, Ferns, Canna Bulbs, Easter Lilies. Glass, rafters, pipe coils, pots and a Gorton boiler used two winters. The above will be sold cheap. Ed. B. Weber, 400 North 9th street, Reading, Pa.

FOR SALE.

A Greenhouse Plant of 36,000 square feet, situated between two flourishing cities of 37,000 and 166,000 population, respectively. Four lines of electric cars pass the door. Houses are equipped with Herendeen Boilers and have every modern appliance, all stocked with roses, carnations, ferns and all plants pertaining to this business. Will be sold at a great sacrifice, as owner has outside business interests and cannot give Greenhouses personal attention. Address J. V., care Florists' Exchange.

Mention the Florists' Exchange when writing.

New Seedlings at Chicago.

On Friday, January 5, a batch of 14 seedlings was sent up to H. N. Higginbotham, Esq., Chicago, by James Hartshorne, from the greenhouses of the Chicago Carnation Co., at Joliet, Ill., and were christened by the receiver with the following distinguished names: Mrs. John J. Mitchell, a large deep scarlet; Miss Florence Higginbotham, a light pink; Miss Alice Higginbotham, a pure white; Mrs. Potter Palmer, a deep pink; Miss Hortense Miller, a light pink; Mrs. H. N. Higginbotham, an unusually light pink; Byron L. Smith, a variegated; Chicot, white, red tint; R. T. Crane, Jr., variegated pink and white; Halowhaarden, a deep scarlet; Mrs. John J. Shed, a deep red; Nydia, variegated pink and white, and Mrs. J. K. Robinson, a light pink. Ess.

Some Fine Blooms.

Some of the finest carnations seen in Washington for some time come from the greenhouses of A. B. Davis & Son, of Purcellville, Va. The blooms are phenomenal in size. The climatic conditions and soil in that part of the country are said to resemble the conditions prevailing in the carnation belt of Pennsylvania. Be that as it may, the plants which I saw recently did not show a trace of disease of any kind. Gold Nugget looks as if there were a gold mine in it as a yellow. Daybreak is in fine trim, so is Flora Hill, about which complaints have recently been chronicled. There are three houses, each 125x25 feet, devoted to these and other kinds; and it is contemplated to build another this season, 300x50 feet.

G. W. O.

To Prevent Bursting.

In spite of contrary statements, often seen in these columns, it seems that some carnations will burst, no matter what the culture. Your contributors have advised tying the calyx and wrapping with rubber bands, both very unsatisfactory methods. The plan I have used for the past two years may be of use to some one. I take sheet copper of a thickness of about one-fiftieth of an inch. From this I cut strips about one-quarter of an inch wide and two inches long, more or less. These strips I bend into rings, which are slipped over the carnation buds when they are nearly full grown. If the bud be a little smaller than the ring a slight squeeze makes the ends of the ring overlap so that it fits. The soft copper has strength enough to prevent the bursting of the calyx, though it does not prevent the swelling of the bud. When the corolla is fully protruded the calyx is no longer distended, and the ring usually slides down the stem to the first leaves. It is then bent open, removed, bent into ring form again and put on another bud, all with the fingers. I can make about 200 of these rings in an hour from the sheet.

GEO. A. BATES.

Highwood, N. J.

Originator of Carnation No. 666.

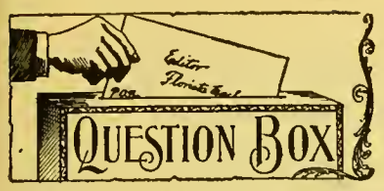
Editor Florists' Exchange.

In justice to the originator, we would state that carnation No. 666 was originated by F. W. Miles, of Plainfield, N. J., to whom great credit is due. We have purchased the entire stock and are sole owners. While the above information was known by most of the craft, this statement will enlighten the balance.

DAILLEDOUZE BROS.

Flatbush, N. Y.

The Indiana Horticultural Society has elected the following officers: President, C. M. Hobbs, Bridgeport; secretary, Prof. J. Troop, Lafayette, Ind.; treasurer, Sylvester Johnson, Irvington.



(3) **Ferns for Name.**—Pteris serrulata and Pteris serrulata-cristata.

(4) **Time to Sow Fern Spores.**—Fern spores should not be kept too long after they are ripe; the sooner they are sown the better, after being gathered and kept in a paper bag for a few days. Pure leaf soil is the best to sow fern seed in.

(5) **Roses in Bride and Bridesmaid Temperature.**—For commercial purposes such varieties as undernoted may be safely relied upon: Perle des Jardins, Bon Silene, Kaiserin Augusta Victoria, Golden Gate, Liberty, Niphetos, Mme. Cusin, Mrs. J. Pierpont Morgan and Mme. Hoste.

(6) **A House for Roses and Carnations.**—In building a house that can be utilized either for roses or carnations, put in sufficient piping to meet the requirements of the roses, and place valves on some of the lines of pipe; so that while the house is used for carnations these may be shut off entirely. If the pipes are thus arranged no trouble will be found in changing from one crop to another.

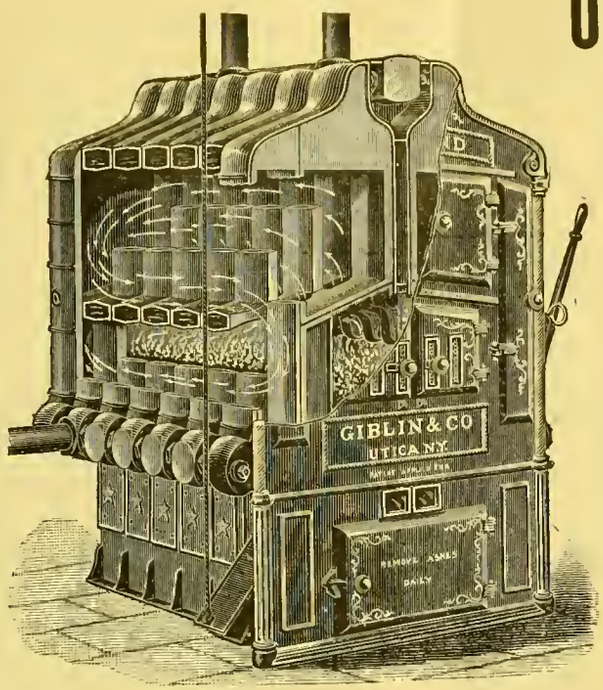
(7) **Ferns Turning Brown.**—The cause of the Polypodium aureum turning brown is that the plant has been watered too much. A little care in this particular will soon result in perfect fronds. During the Winter the plants should be kept quite on the dry side, watering only when really necessary. The temperature (55 to 60 degrees) and the compost (leaf mold, sod and sand) are all right, but the ferns will not bear much water when not making their growth.

As the fronds of the maidenhair fern are full of spores, we presume the plants are grown as specimens and not for cutting purposes. Remove the fronds as they become unsightly, and dry the roots down gradually. In a short time new growth will start and the plants should then be repotted, and the supply of water increased.

(8) **Making a Coil Boiler.**—Kindly tell me the best way to make and set a coil boiler of sufficient capacity to heat a house 20x100 feet. How should the flows be run and of what size; also the size of the returns to heat the house to 60 degrees in zero weather. The house runs east and west; short slope to the south; no glass in the sides, only on one end. Walls 4 to 6 inches high of brick.—SUNSCRIBER.

—While the cost of a coil boiler, especially if the florist can do most of the work himself, is less than that of a cast-iron or tubular boiler, it is not always cheapest in the end, as, unless properly made, it is likely to leak and is certainly much less durable, especially when the threads are exposed. A boiler for a house 100x20 feet should have about 6 square feet of grate surface and 150 feet of fire surface. If made of 2-inch pipe, cut to lengths of 6 feet, it will require 36 pieces, which can be arranged in six coils of six pipes each. The main headers should be with 3-inch openings and the pipes may be connected by means of return bends, or 2½-inch headers. The boiler should be bricked in the same as a steam boiler, and, in addition to doors to the fire pot and ash pit, there should be others that will permit the cleaning of the tubes. A 3-inch flow pipe should be placed upon the ridge posts and another upon the row of purlin posts. Twelve 2-inch return pipes will be required, four of which may be on the south wall, and the others upon the north wall and beneath the benches.—L. R. TAFT.

UP-TO-DATE FLORISTS



know that more is gained by preventing the increase of the out-go than by increasing the income. Wasteful methods of doing business will destroy all

PROFIT

and prevent the commercial florist keeping up to the times and to his competitors. The expense for heating is a large one, and where a florist secures proper heat; economizes labor; economizes fuel and has no repairs, he is in a much better position to meet the demand of the times for popular prices from florists.

Some boilers have the sole merit of being **cheap** and

CAN BE

bought at a low price. One winter's use shows that while the price is low for the boiler it is high for scrap iron, which is about all such boilers are good for.

Our boilers are

DISTINGUISHED

for their success, and we have had no failures. Every florist who has used our boilers finds all anxiety about heating entirely removed. We have sizes in steam and hot water for any demand and can name a price delivered at any station in the United States, and a special price is given where we have no boilers in use.

NOTES BY THE WAY.

RICHMOND, VA.—W. A. Hammond added four houses, each 22x200 feet, during the Summer, and with this addition finds the supply unequal to the demand, particularly in carnations, of which Scott and Flora Hill have been the most profitable. Four hundred and sixty dozens were disposed of at retail during the holidays. Beauty sold well; the supply is kept up the whole year round. Kaiserin and Testout are grown for Summer use. Perle will be discarded after this season, Golden Gate being more popular and as easily grown. It is a profitable rose. I noted a fine bed of mignonette growing in a back bed of the house, upon the ground, and was told this method is most successful here. The propagating house is a model and is part of the new range built—15 feet at back, 12 feet at front. The benches are heated by a course of 2-inch pipe, upon which is placed wire of half-inch mesh. Upon this is placed a layer of ashes topped with sand and is found to answer admirably. Mr. Hammond is of the opinion that with the temperature ranging 3 below zero, causing a consumption of 12 tons of coal nightly for several nights, he should be included in the Northern belt.

Mann & Brown report very satisfactory business. They also have added to their plant four houses, each 200 feet, and intend building two more this Spring, chiefly for Beauty, which they grow successfully and for which there is a profitable demand.

Harry Harvey is well pleased with holiday business, especially in the sale of potted plants.

WILMINGTON, N. C.—Mrs. Henry Rehder reports an unusual demand for southern smilax; the shipments have been much heavier this season. After being actively engaged in the business here for 23 years, assisted by her husband and son, Mrs. Rehder contemplates making some changes. A new plant may be the outcome.

Miss Fanny Johnson is happy, as a result of the season's business; one of her best hits was the decoration of and sale at the Masonic Fair held recently.

CHARLESTON, S. C.—W. McIntosh & Son report a good demand for both cut flowers and plants during the holidays. The seed branch is in a very healthy condition. The islanders had a prosperous season and are planting more extensively in anticipation of a favorable harvest.

SAVANNAH, GA.—All report a good season. A. C. Oelschig says he has not had time to total up the profits, having been busy ever since the holidays with funeral work. At time of my visit he and his staff were working at an all-night order.

Geo. H. Wagner had a good sale of Adiantum rhodophyllum potted up. He grows this plant upon the solid beds among the roses, of which La France is the best and most profitable.

Gus Keitling has retired from business.

John Wolf had a big run on carnations. He stands by Albertini and Flora Hill, and intends adding another house for their culture.

While hardly in the line of floriculture, I would like to mention the great success achieved by Hop Lima Bean, a Chinese trucker, who commenced here two years since, and has a model truck farm—the cleanest and most prosperous appearing I have seen. W. M.

EXTRA VALUE! LAST CHANCE! H. P. Roses, mixed, 2 year, 60c. and 75c. a doz. Ramblers and Named H. P. XX, strong, $1.25 a doz. Hardy 'Mums, pink and white, large flowering stock plants, 45c. a doz. Dahlias, Agnew, Bruton, Nymphea, 75c. a doz; Snowclad, 50c. a doz. Cash, please.

W. D. BUSSING, Westfield, N. J.

D. & C. ROSES

are the cheapest because they are the best. We have in stock over 1000 varieties on own roots, including nearly 200 New Roses not offered elsewhere, as well as all the old favorites, at prices that make it worth your while to send us your list for quotations before buying elsewhere. All sizes from 2½ in. pots up.

Send for a copy of our New Guide to Rose Culture for 1900, a handsome book of 134 pages, illustrated with hundreds of half-tones and numerous colored plates. It is really a work of art and free for the asking.

THE DINGEE & CONARD CO., Rose Growers, West Grove, Pa.

Mention the Florists' Exchange when writing.

Poughkeepsie, N. Y.

The fifth annual meeting of the Dutchess County Horticultural Society was held January 3. The reports of the secretary and treasurer were read and accepted.

The secretary's report showed that the society had now 107 members in good standing, an increase of three for the year. There have been four resignations —14 names were dropped from the roll, and 13 new members have been elected; one member, Michael J. Moore, has passed from his earthly labors. The treasurer's report showed that the society's income had been sufficient to meet all expenses.

The motions to alter the time of meeting to 7 p. m., instead of 1:30 p. m., and to change the meetings to quarterly instead of monthly, were laid upon the table until the next regular meeting.

The annual dinner will be held February 7. Messrs. Clarence Reynolds, Richard Connell, Wm. Schickle and W. G. Gomersall were appointed a committee to arrange for same. It was resolved that two delegates be invited to the dinner from the Tarrytown Horticultural Society, two from the New York Gardeners' Society and two from the New York Florists' Club.

A letter was read from Messrs. F. R. Pierson Co., in answer to a request for a premium offering $25 for 12 blooms of Col. D. Appleton chrysanthemum.

The following gentlemen were nominated for the respective offices for the ensuing year:

President, F. R. Newbold, renominated; James Blair renominated for vice-president, W. G. Gomersall for secretary, and Charles Mitchell for treasurer. They will be elected at the next meeting. Thomas Emerson was named as member of the employment bureau. W. G. G.

St. Louis.

Market Notes.

A week of open, mostly drizzling and cloudy weather, has had a depressing effect on business. Most all complain of slow trade; some of the wholesale men say they can sell out tolerably close, but in other cases stock seems to pile up. Certain it is, prices are terribly low for this time of year—we think about one-half of what they were a year ago. They are about as follows: Roses, 2c. to 6c.; Beauty, $2 to $4 per dozen; carnations, 1c. to 3c., with occasionally 4c. to 5c. for extra fancy stock; violets (California), $1 per 100, the latter are much more plentiful; callas and Harrisii bring 10c. to 12½c.; bulb stock has no price. There is plenty of everything to go around.

Round About.

Mrs. Vesey, of Fort Wayne, Ind., spent several days in town last week. A. Ringier, of Barnard & Co., Chicago, made a flying visit, and departed South this week. Richard Frow, the well-known florist, met with a painful accident by being run into by a street car. His head was badly but not seriously hurt, and his buggy broken.

C. Young & Sons Co.'s delivery wagon was also run into by a car, and the driver injured.

Julius Koenig, North Broadway, reports his stock in first-class shape for Spring. He grows principally bedding stock, which finds ready sale in the near-by cemeteries.

Theo. Klockemkenper's greenhouse stock looks remarkably well, especially his carnations. White Cloud, so far, has been the leading kind for general results. C. C. S.

Chestnut Hill, Pa.—At the regular monthly meeting of the Chestnut Hill Horticultural Society, January 9, the following officers were elected for the year: President, John T. Morris; vice-presidents, J. Howes Humphreys, Fred. J. Michell, Alex. Stewart, and Frank Gould; secretary, Robert C. Carey; treasurer, Wm. H. Houston. It is the intention of the society to hold regular monthly exhibitions of flowers, fruit, and vegetables, etc., and a chrysanthemum show during the Fall. A printed schedule will be out within the next two weeks. —J. H. H.

LIBERTY! LIBERTY!

Being all sold out of grafted plants of Liberty rose, I hereby announce that after January 8, 1900, no more orders for grafted plants can be taken for this year's delivery. Only a limited supply of our own rooted plants left to sell. Order quickly if you want any for this season. Price for own rooted plants, out of 2½ in. pots, for April delivery, as follows:

12 plants	60 cts. each.
25 plants	50 cts. each.
50 plants	40 cts. each.
100 plants	25 cts. each.
1000 plants	20 cts. each.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade.

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞**PRICE LIST FOR STANDARD VARIETIES READY NOW.**

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

DELIVERY FEBRUARY 15.

We can also furnish first delivery, the following varieties, at introducers' prices: **Olympia, Mrs. Thos. W. Lawson, The Marquis** and **Ethel Crocker.**

The names of the prize winners in the recent competition of the FLORISTS' EXCHANGE will be announced in next week's paper.

The census schedules relating to the floricultural interests of the country have been prepared, and will be issued to all concerned in the near future.

In next week's issue we will publish a very interesting communication from C. W. Ward, on the subject, "A Living Profit and a Living Wage," appearing in last number of the FLORISTS' EXCHANGE. Opinions on this matter from other growers are respectfully solicited.

Flower Shows Again.

We have often suggested the value of flower shows for educational purposes, and if it were possible to measure the results we should undoubtedly recognize the truth of the suggestion. It is a pity, however, that the managers of these annual exhibitions appear to see only trade benefits to be derived, and consequently, in their efforts for success, ignore the more important considerations involved; considerations, indeed, that are likely to have more effect on the permanence of their endeavor than the immediate trade benefits to be achieved. The love of flowers in the general public mind is a far more potent factor in the increase of flower cultivation than the caprices of fashion, to which the promoters of flower shows more particularly bend themselves, for in the endeavor to make a financial success, the prices of admission are generally prohibitory to a large attendance and seem chiefly to aim for the presence of the wealthy classes only. This is a very narrow view of the question, not becoming to the men trading in nature's choicest products. A thousand admissions at ten cents would unquestionably offer better prospects for the trade than one hundred at one dollar, and there should now be more patriotism among the promoters of flower shows looking to combining the welfare of the trade with the welfare and the enlightenment of the people. The time is here when we should expect as much philanthropy in the pursuit of business as we expect from those who have acquired wealth; when the almighty dollar should not be the only thought we have in every public effort that is made.—*Park and Cemetery.*

Our esteemed coatemporary's opinion of the flower-show matter accords in part with our own. It is a fact much to be regretted, however, that so far as the trade is concerned it has found, or evidently believes it has discovered, that the part of an educator for the general public is unprofitable, and the florist is unwilling to pursue further a losing venture. And yet, putting ourselves in his place, for this he can hardly be blamed. The florists' trade, as a rule, is not yet in a position where sentimentality can wholly govern any one of its transactions, and when we take into consideration the immense sacrifice of time and money—the latter represented in products displayed and ultimately rendered valueless—necessary for the proper conduct of a flower show, and with little or no direct compensation therefor, no great astonishment need arise at the florist demurring to a continuance of these conditions. It may be, however, that the price of admission has been held too high, for the best welfare both of the trade and the exhibition, although where small sums have been charged the attendances have not increased proportionately. Flower shows, as at present conducted, would seem to have their quota of patrons which the price of admission does not influence one way or another, and, as direct money-making ventures they are, and are likely to continue to be, failures.

Their greatest and most lasting benefit arises from the educational and refining purposes they serve, and on that account alone their continuance is desirable. But it appears somewhat hard that the florist should be called upon to bear the whole burden which the act of educating imposes. It occurs to us, in view of the influence that could be and is exerted by flower shows on the public at large, that they are institutions deserving of both State and municipal financial support that is, as separate and distinct undertakings. Against this statement may be set the assertion that states and communities cannot afford to favor one industry at the expense of all the others therein, but we hold that whatever tends to ennoble, to elevate and to ameliorate the condition of the people—which flower shows certainly do—is worthy of, and entitled to, encouragement from the people in general. The rich can help along the movement from a philanthropic point of view, and the florist, for whatever increment in business may result therefrom, which is his only profitable recompense for assisting a good work.

The trend of the times is toward a cessation of floral exhibitions unless the promoters thereof receive greater outside financial assistance than has been forthcoming heretofore. It requires money to promote and further all educational movements; many of these receive state and national appropriations, why not include flower shows in this category? Their moral influence surely renders them worthy of consideration along this line!

We should deplore the discontinuance of exhibitions, even on trade principles, and if the florist *must* have immediate results from his participation in shows, in order to guarantee his doing his part, then convert the flower exhibition into a great mart where everything on display can be disposed of on demand. There are periods when such would be exceedingly profitable, and perhaps their after influence from a trade standpoint would be equally as advantageous as that resulting from a purely philanthropic and patriotic display for the purposes of education, provided free admission to all such were granted.

An Unusual Request.

We lately received from a subscriber a request so unusual in its nature that we think it deserving of more than a passing notice. It read somewhat as follows: "Please send my FLORISTS' EXCHANGE in a separate wrapper, as I do not wish my employes to see the paper."

Now, while we concede to the party his legitimate right to do as he pleases with his own; and without any data explanatory of his request, we think the withholding of the FLORISTS' EXCHANGE from his help is anything but conducive either to the welfare of himself or of those he employs. The cry of non intelligent help in the florist trade is, alas, a too common one, and everything that tends to the betterment of this condition is worthy of encouragement. Whatever assistance the FLORISTS' EXCHANGE and other papers of its class renders to employes should surely be made available to them, and the educational force of such publications thereby felt to its fullest extent. Happily for the large majority of employers and employes the narrow spirit shown in the request referred to is generally wanting. Free access to all publications bearing on the interests of the trade is given to employes; and, too, in several establishments, libraries of useful books are at their service. We would advise the writer of the requisition touched upon, and others as well, to encourage the boys to read all available and helpful literature. If a copy of the EXCHANGE is desired for the exclusive use of the employer, subscribe for one or more for the employes, something that is done in many cases to our knowledge, and, in addition, secure a handy binder or binders to file away each number for future reference. The cost is practically nil, when measured with the resultant benefits to all the parties concerned. In fact, we should like to see horticultural libraries established and maintained in every trade establishment where several young men are employed. This is one of the things that "pays."

Custom-House Matters.

Early in January W. F. Wakeman, appraiser for the port of New York, addressed a letter to the importers, inviting them to be present at a conference to be held at his office on the afternoon of Tuesday, January 9, to discuss the question of improving the customs service as applied to the handling and examination of plants and nursery stock. Preliminary to the conference a number of the largest importers met at Vaughan's seed store, to determine just what suggestions they could offer and the arguments to be used in favor of their adoption.

At the time appointed the following men waited on the appraiser: W. J. Prosser, P. O'Mara, Wm. J. Elliott, L. C. Bobbink, A. Hulsebosch, P. Ouwerkerk, C. E. Runyon, F. W. Kelsey, H. A. Siebrecht, H. Berkhans and Mr. Darrow.

The appraiser explained that the call for the conference had been made in response to requests of certain importers, and that it was his desire to meet every reasonable request which was not inconsistent with the interests of the Government. He stated that if it was not possible to arrive at satisfactory conclusions at the present meeting he was perfectly willing to have a further conference later.

One matter complained of was the delays in carting plants from the docks to the appraisers' stores, and it was suggested that if necessary the importers be allowed to do this work. To correct this the appraiser stated, was not within his jurisdiction, as all trucking was under the supervision of the Collector of the Port. The appraiser, however, proposed that a letter be drafted to the Collector, and said he would be glad to recommend for consideration any suggestions offered.

It was also complained that the holding of goods at the stores while discrepancies in the invoices were under consideration was the cause of great inconvenience and loss; and the statement was made that, inasmuch as the importers all had bonds filed to protect the Government in the event of the invoices being advanced, the goods should be released pending the consideration of the case by the Board of Appraisers. It was argued that the detention of the goods was no additional security to the Government, for by the time the case was decided the goods would have very much deteriorated, if not become entirely worthless. This matter the appraiser stated would also come within the jurisdiction of the Collector.

The discussion also brought out the fact that much of the stock suffered from careless repacking at the public stores; several instances being cited. The appraiser stated that he would immediately take steps to correct this matter.

The appraiser intimated that it would be possible to classify plants, bulbs and seeds as "special and perishable," thus securing for these goods precedence in handling over ordinary merchandise, and that he was willing to issue an order to this effect. One of the importers was very much in favor of securing a wharf examination. The appraiser remarked that this was practically impossible, owing to the insufficiency of the force for the work.

After the conference the importers determined to draft a letter to the Collector, embodying the matter under his control, but before this is done the importers will hold another meeting to further discuss the subject.

The exhibition and meeting of the American Carnation Society will take place in "Morgan Hall," Huron and Main streets, Buffalo, N. Y., February 15 and 16 next. The schedule has been issued; copies may be obtained from Secretary Herr, Lancaster, Pa.

On January 19, the Chicago Florists' Club will hold a special carnation meeting and exhibition; the latter will be held in Room 204, Masonic Temple. C. W. McKellar, 47 Wabash avenue, is in charge of the exhibits. Messrs. W. N. Rudd, Emil Buettner and Andrew McAdams will be judges.

The last volume of The Garden, London, to be edited by Mr. William Robinson, that for 1899, is dedicated to the memory of the late Henri L. de Vilmorin. The first volume was dedicated to the memory of the late J. C. Loudon. Mr. Robinson will give more time to "The English Flower Garden" and other work.

The Putnam County (N. Y.) Chrysanthemum Society, at its annual meeting held January 4, elected the following officers: President, Herbert H. Vreeland, Brewster; vice-president, James Cassiday, Garrisons; secretary, John. A. Connolly, Cold Spring; treasurer, William J. Buckley, Garrisons. It was decided to change the name to the Putnam County Horticultural Society, so as to enlarge the scope of the association.

A recent bulletin of the Department of Agriculture (Circ. No. 20, Division of Botany) gives an interesting account of Horse-radish Culture in Bohemia. The best variety is known as Maliuer, or Maliner Kren, regarding which it is stated in the circular referred to:

"There is every reason to suppose that the Maliner Kren variety of horse-radish can be cultivated as successfully in America as in Bohemia, if the hand labor entailed by the removal of the small roots from the cuttings is not too great. But even should this additional expenditure of care prove unprofitable the selection to which this variety has been subjected will probably render it superior even under the methods now practiced by growers in America. Whether the variety, when introduced, will retain its superior qualities can be determined only by experiment. A quantity of cuttings has, therefore, been imported for distribution to the State Experiment Stations, and to special growers who are already familar with the culture of horse-radish and are willing to take the pains necessary for a careful experiment."

OBITUARY.

John L. Galloway.

John L. Galloway, of Terrace Park, O., died January 2, 1900. Mr. Galloway was born at Paris, Ky., February 6, 1824. In 1839 the family removed to Montgomery, O., where the deceased was educated. He was married December 17, 1851, to Miss H. S. Highlands, of Terrace Park, O., where he built a home and engaged in the nursery business extensively, gradually merging it into that of florist, in which latter occupation he was engaged at his death. He was of Scotch descent. He leaves a widow, three sons and one daughter to mourn his loss. Mr. Galloway was a member of the Presbyterian Church, and an earnest worker in church affairs. G.

Mrs. Harry Dale.

I am sorry to have to announce the death of Mrs. Harry Dale, of Brampton, Ont., which occurred on Wednesday, January 3. Mrs. Dale had been ailing for some time, but had been up and around until quite lately. A short time ago she took to her bed, and though everything was done for her that science and loving care could suggest, she died, after an operation, on the above date. Mrs. Dale was an exceptionally kind-hearted woman, and will be very much missed by all who knew her. The funeral, which took place on Friday of last week, was one of the largest ever seen in Brampton; all the stores were closed and the whole place appeared to be in mourning. The designs and flowers were very beautiful. Many members of the trade were present to testify to the respect and esteem in which the deceased lady was held.

T. M.

William C. Chipman.

William C. Chipman died at Spring Hill, Sandwich, Mass., January 9, aged about seventy-five years. While he always lived there his name became known extensively in this country, and in some cities of Europe, in connection with the pink pond lily, which he first put on the market. The output of his ponds during one season was about fifty thousand lilies, all of which were sold at a price that netted a good profit. He also did quite a business in the sale of the plants, some of which were sent abroad. Of late years Mr. Chipman's health did not permit him to carry on his business on a very extensive scale. He was always interested in the affairs of his town, and an active worker in the cause of temperance. He was a member of the M. E. Church. Mr. Chipman is survived by two sons and two daughters. One of his sons, Mr. H. L. Chipman, is the editor of the Sandwich Independent.

Wm. F. Eaton.

Wm. Freeman Eaton, a member of the Philadelphia Florists' Club, died on Tuesday afternoon last, of Bright's disease. The members of the trade were much surprised and sorry to hear of his sudden death, there being only a few of them who knew that he was suffering from that dreaded disease. The deceased was greatly respected by all with whom he came in contact, being of perfect character and of amiable disposition. He was born in 1865, and at the age of 10 began work in the florists' business with F. Lucking, at Fifth and Fairmount avenue. Leaving here in 1885 he worked two years with Wm. Wagner, and in 1887 bought out the retail store of Conrad Bell, at 1108 Girard avenue, where he had since built up quite a nice business. He was persevering and up-to-date in his profession. He leaves a widow and four children. A special meeting of the Philadelphia Florists' Club was held on Wednesday, when appropriate resolutions were prepared and arrangements made to attend the funeral on Friday, the interment being in Northwood Cemetery.

D. R.

Michael Butler.

Michael Butler, of the firm of M. Butler & Son, died at his home on Berkeley avenue, Newport, R. I., January 6, aged 71 years. He was born at Blackwell, County Kilkenny, Ireland, in 1828, and came to Newport, R. I., June 7, 1848, where he has since made his home. For many years he was employed as a private gardener; the first place held by him in that capacity was on what is now known as the "Burke Roach" estate, being then owned by Mr. Andrew Robinson. He afterward spent 14 years as head gardener in the employ of the late Governor Morgan, on Narragansett avenue, on the property that is now owned by Mr. R. T. Wilson, and later was for several years in charge of the "Paine" place, now owned by ex-Commodore Gerry. Seeing a good opportunity was offered for establishing himself in the florist and landscape business in Newport, he many years ago abandoned the private gardener's profession, and in company with Samuel Smith, now of Jamestown, established the florists' firm of Smith & Butler; but for the past 17 years he had conducted the business along with his son at their present establishment, under the firm name of M. Butler & Son.

Since his establishment in business he has laid out the grounds around the homes of many of Newport's Summer residents; in fact, he has had much to do in developing Newport during the past 50 years.

The deceased was a public spirited man and took a great interest in the young, always joining in Arbor Day and like exercises, not infrequently reciting an original poem of his own composition on such occasions. He was a strong temperance advocate and favored moral reform generally. His chief pleasures were in writing poetry and in the study of astronomy; in fact, these were blended, many of his best verses written being on that subject.

The funeral took place on Monday morning, January 8, services being conducted at St. Mary's Roman Catholic Church, Rev. Father Meenan officiating, who paid a well deserved tribute to the memory of the deceased. The Father Matthews Total Abstinence Society, of which the deceased was a member, and was for 13 years its respected president, attended in a body. The Newport Horticultural Society, of which he was the first president, also turned out in a body. The floral tributes were many and beautiful. One son, John J. Butler, who is to continue the business, and one daughter, Mrs. C. J. Moore, and 12 grandchildren survive him. His wife died a few years ago. MAC.

New York Botanical Garden.

The trustees of the New York Botanical Garden held their annual meeting at No. 11 West 29th street. Dr. N. L. Britton, the secretary, made a report upon the year's work on the Bronx Park Gardens. It showed that the plants now exceed 4,000 and that the museum building is practically completed. The entire herbarium of Columbia University has been sent there, and the museum now has 115,600 mounted specimens. More than 1,000 volumes were added to the garden library last year. The report of the Membership Committee showed an increase of 165 annual members and 67 life members. The corporation re-elected all of its officers. They are: President, D. O. Mills; vice-president, Andrew Carnegie; treasurer, C. F. Cox, and secretary, Dr. Britton. Andrew Carnegie, John I. Kane, Dr. W. Gilman Thompson and Samuel Thorne were elected managers for three years. Mr. Thorne was chosen in the place of the late Judge Charles P. Daly. The successor of Cornelius Vanderbilt was not chosen. Resolutions in memory of Cornelius Vanderbilt and ex-Judge Daly were adopted. The corporation may send a vessel of its own to the West Indies in the Spring for the purpose of collecting specimens for the museum. The specimens desired are those of tropical flora, and the Botanical Gardens at Jamaica and Trinidad have splendid collections. The directors of those gardens are willing to give those specimens of which they have duplicates to the museum here. If the vessel is sent it will be in March. The treasurer's report shows a balance on hand of $283,-389.75. This includes the endowment fund of $264,750. During the year $39,-591.24 was paid for development and maintenance.

The local papers speak highly of a wedding decoration recently executed by W. M. Lindsey, Birmingham, Ala.

In a review of the year's work in Owosso, Mich., the Evening Argus of that city gives an account of the business of John S. Schleider's Sunnyside Greenhouses, together with two illustrations of his establishment. Mr. Schleider started here six years ago, and his place now covers 15,000 square feet of glass. A store and conservatory adjoining, 22x60 feet, were built the past Fall.

The New York Florists' Club meets the *second Monday* of each month, and not Tuesday, as stated in the list in last week's issue.

The appointment by President Wood of two retail men—Messrs. Sullivan and Curtledge—on the Executive Committee S. A. F., is a timely recognition of retail interests by the society. We hope the appointees may aid in the solution of the vexed question, "How to interest the retailer in our society," and thereby in our florists' clubs.

Sam. A. Hamilton, the sweet pea expert, of Roaring Spring, Pa., has entered the ranks of the novelists. The Abbey Press will issue February 1, a novel by him entitled "The Vengeance of the Mob," dealing with the subject of "Cracker" life in the South, and outrages upon negroes. The thread of a tragical love story runs through the book, keeping up the interest to the end.

Floral Calendars.

D. B. Long, Buffalo, N. Y., forwards this office several choice examples of "Daisy" Calendars, in various sizes, which he is offering to the trade at quite moderate figures. These form good advertising matter for the use of the enterprising florist.

Latest Facts About New Carnations.

Read before the Philadelphia Florists' Club, by Albert M. Herr, January 2, 1900.

The term "new carnations" has considerable latitude to it, and I will start with the introductions of last season, and those on my own place:

G. H. Crane seems to stand out as the most prominent of last season's new ones, and perhaps deservedly so. It is a good scarlet, apparently, from the first to the last flower produced, and in this respect it supersedes that grand variety Jubilee, which is the scarlet for the months of December, January, February and March, but not of much value for any other portion of the season. From all that I have seen of Crane, up to this date, it does not look as if it would produce any more blooms to the plant, than well grown Jubilee. It is not to be classed as a cheap scarlet, although I have yet to see the first flower of this variety that was not saleable; and this is another point it possesses that few scarlets can lay claim to. Quite a lot of stem rot seems to have developed among it for a first season carnation, and if this proves to be characteristic of the variety it is doomed. It is to be hoped that selection and care will rid it of this trouble.

America lacks some of the good qualities of G. H. Crane as a scarlet, although with me, and the few places where I have seen it growing, it promises to outbloom Crane by a good, big percentage. As an offset to this, however, is the fact that it is not quite so uniform in quality, and a portion of the flowers cannot be classed as firsts; also early in the season a considerable portion of the cut comes under this class. With me it is rather a brighter scarlet than Crane, but not so full a flower; in growth it is somewhat stronger, and taken all in all, it looks to me as if it might prove a rattling good thing in places where it can be well grown.

Maceo, a rich dark maroon, very pretty in good light, but said by most growers to be too dark, is proving a good producer and a nice healthy grower; so it is to be hoped that it is not too dark in color.

Gomez, its companion, is of a lighter color, of the same shade, and seems to hit the popular fancy better than the dark one. It also has freedom of bloom, length of stem and good growth in its favor, but has been a disappointment in the size of its blooms. It has, however, been improving slightly the past few weeks, and even with the medium-sized flowers produced early in the season, it is worth a place, on account of its color and other good points.

Melba has also been a disappointment on account of its size, but it is better today than many varieties considered a fair size.

Governor Griggs, the rival of Daybreak, falls a little short on some points, but looks to me as if it might be with many growers a good one to have in stock, as there are some buyers who cling to this shade of pink and have little or no use for any other.

Glacier, the new white, has not been as extensively tried as it really deserved to be, although it falls short of the ideal white by a number of points. This ideal white may be in the houses of one of the hybridizers to-day, and it is to be sincerely hoped that it is; for a good commercial white is badly needed. Since making this statement a few months back, I have received some plants of an ideal white, in the grower's estimation; but they are, up to date, badly lacking in the points I am looking for. I also have received a number of sample blooms, but to a grower the flower is only an introduction to the variety, and about as much use, in judging the merits of a variety commercially, as reading an introduction to a book is toward forming an idea of its literary merits. I would rather have a thousand plants of a white carnation, that could fill the want in this color to-day, than the best $5,000 bond ever put on the market. Before putting it on the market I would want to be sure it did fill the bill, for the great majority of growers are getting tired, and justly so, of filling their houses with varieties that do not pay them, in dollars and cents. The lack of this important feature was never more forcibly impressed upon me than in a recent conversation with a grower who raises good carnations, and apparently is as successful as the majority of growers. He claimed that they figured on an actual loss in their carnation house every season, by carefully kept accounts, and only grew them to supply their customers, who buy roses and other cut stock, with a complete assortment of flowers. There is some food for reflection in this.

Iris Miller, an offence of my own, is not doing so well with me as it did last season, and while it is a magnificent large flower, it is too grassy in growth, and lacks blooming qualities.

Elsie Ferguson, a burnt orange in color, has all the commercial points necessary to make it a paying variety. The store men declare it to be no good as a seller. Some day the buyers will get tired of the old round, red, white and pink, and then a really beautiful odd color, such as this is, will command a good figure.

Leslie Paul is almost an ideal flower—form, substance, calyx and stem being just about perfect; and the color is the brightest I have ever seen in the Tidal Wave shade, red or dark pink. It is, however, late in coming into bloom, and requires special culture to bring it into flower for the holidays—a fact that may prevent its becoming popular. Growers who can procure fancy prices for fancy stock do well to take it up, and my own experience lends me to consider it a good sort for almost all growers.

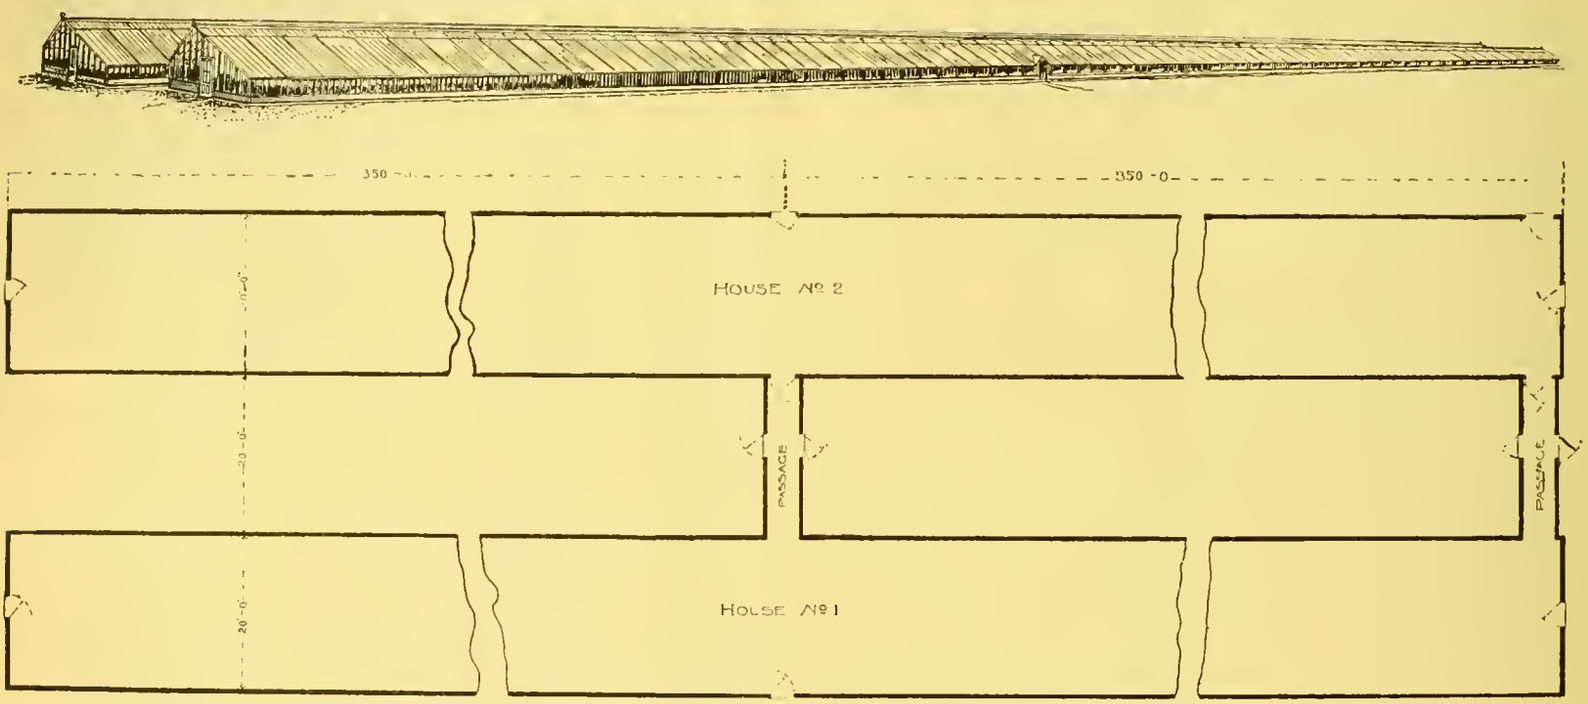
Evanston, Uncle Walter, and several other scarlet sports from Tidal Wave, are scarlet waves and nothing more; in fact, they being Scarlet Waves is sufficient recommendation for them, as Tidal Wave was in its time a rattling good sort, and to many growers is just as good to-day.

There are some other varieties of last season that should be reviewed in this paper, but not having seen them, nor tried them, I am not in a position to form an opinion.

Among real new sorts I am also at some disadvantage, although I have seen No. 666 and wished I were the owner of the stock, not alone on account of its size than is claimed for it, and that it stands a good chance of being a second Scott, with its merits not fully recognized until next Winter.

New carnations are getting to be a serious question with growers, and it is to be hoped that the American Carnation Society will take some action relative to bringing out their good points, and incidentally their bad ones. In a paper read by Mr. Fred. Dorner, at the Chicago meeting of this society, a series of exhibits was recommended, that it would be well for originators to carry out. The main points of the paper were: to have an exhibit of the cut blooms of a variety being introduced, once a month, at some point in the United States; have these flowers judged according to a scale of points adopted by the society, and these reports all filed with the society in February, and consolidated with the report on the variety in question at that meeting. This would give buyers an idea as to the merits of the flowers in the earlier parts of the season; and while, as said before, flowers alone are a poor thing to judge a variety from; they are an introduction. No honorable grower will refuse to truthfully answer any questions asked, as to the growing and blooming qualities of the variety; and the two would save many a dollar being invested in good Spring varieties.

Sometimes it seems a pity that the trade papers, and papers of this sort—the one I am now reading—are not more outspoken as to the faults of some of the newer carnations, and yet when we see the occasional gross injustice done a variety, by some one who has made a failure of it, we are glad that condemnation is witheld in most cases.



Plan of E. M. Wood & Co.'s (Natick, Mass.) Two Rose Houses, Each 700 feet in Length.
Lord & Burnham, New York, Builders.

Two 700-feet Greenhouses.

Our illustrations show the exterior and ground plan of E. M. Wood & Co.'s two 700-feet greenhouses at Natick, Mass., being erected by Lord & Burnham Co., New York. Mr. Wood furnishes the following description of the houses: "The two new houses being erected by us are each 700 feet long, three-quarter span, glass walls on the side, front walls 4 feet high, rear walls 5 feet high. A passageway of glass connects them in the center and at one end of the house. Sash are hinged upon the purlin and open from the top.

"These houses are built upon our most modern plan, the ridge being placed to the rear of the house as far as possible to avoid any shade being thrown upon the plants. The houses are 21 feet wide and are adapted to either solid beds or benches. It is intended to have the ventilators operated by electricity."

Grafting Roses on Manetti.

Please give particulars as to the best way of grafting roses on manetti stocks, ready to plant by September and the treatment after grafting. Should the stocks be potted before grafting? When would you recommend that the operation be performed?—G. A.

—The stocks upon which roses are grafted should be potted at least five or six weeks before the operation is performed, and kept in a temperature of 40 degrees or below; but not as low as freezing point. Stocks of one-eighth of an inch in diameter are about the best size, and when they have been in the cool house the length of time mentioned, they are ready for grafting. What would make a good cutting is the right wood to use for the cion. The side grafting method is believed to be the best. Make a clean slanting cut across the cion, running about three-quarters of an inch, and make a similar cut across the stock, as near to the soil as possible, and upwards; place the two cut places together (and they should be cut so as to fit pretty close) and bind them firmly in place, but not too tight. They should then be placed in an air-tight frame, where a temperature of 80 or 85 degrees can be maintained. This frame should be constructed inside the propagating house, where plenty of heat is available. Have the bottom of the frame well covered with sand and thoroughly soaked when the plants are put in; this will hold moisture enough to make it unnecessary to open the frame during the first few days, as no ventilation will be needed. If any plants become dry they must be watered, however, and care must be taken that the roots only are wet; not a drop of water should be allowed to touch the grafted parts.

When the two parts are united (which is easily told by their general appearance) they must be hardened off gradually, by giving air in small quantities, say for about two hours the first day, increasing the length of time gradually, so that in about two weeks' time they are fully exposed to the temperature of the house in which the frame is located. The tying material should be taken off after the union is assured, and when the hardening off process is concluded they should be treated like newly rooted cuttings, and potted after they have been exposed to full light and air for two weeks or so. The month of February is probably the best time to do the grafting, and by potting along the plants can be kept in good shape until wanted for the benches.

BRIEFS FOR BUSY FLORISTS.

ROSES.—Ventilating is one of the most important points to be looked after at this season of the year, and if one has ventilators on both sides of the ridge, it is possible to have a little air on during all bright days and not run the chance of a good dose of mildew. But where ventilators are only on one side of the ridge then watchfulness is needed; and, when air has been put on, the ventilators should not be left open just so many hours, but be governed by the weather. If a change of wind brings a cold breeze playing among the foliage, mildew will soon follow, as at this season of the year the rose is at its tenderest. Give air at all possible times, but don't think it is absolutely necessary to open up a house when the thermometer outside is down in the tens and a strong gale blowing.

POINSETTIAS that were cut down for the holidays, and from which next year's stock will be raised, may be laid away under a bench in any warm house. Do not shorten back the canes any more than they are; this would only be reducing the supply of cuttings with no benefit to the old plant.

AS THE HYDRANGEAS break into growth syringe them regularly and there will be no visits from red spider. These plants should be kept growing right along to be in for Easter—April 15.

A FEW POT-GROWN LILACS should be put into heat, at intervals, from now on. These make pretty saleable plants, but, of course, only a limited number should be started at a time. Having too many in the store at once soon tends to cheapen them in the eyes of the buyer.

BOSTON FERN still keeps to the fore as a seller, and if sufficient young stock is not already on hand it would be advisable to plant a bench with such as have been left over from the holidays. When planted out on a bench runners that form take root very quickly and make the best of stock for potting along.

JOHN SPAULDING.

ASPARAGUS SPRENGERI can be grown to strings, like the other varieties of asparagus, and for certain forms of decoration, such as draping pillars or pictures, it is most useful when it can be had in good lengths. Seeds sown now will make good stock for planting next August or September, and a part of a bed thus planted will be found as profitable as either A. plumosus or smilax, as it can be cut and used for so many different purposes, the short sprays of the first growth being excellent for bouquet work.

THIS IS A GOOD TIME to put in cuttings of bouvardias; the root cuttings are the best. Dig carefully down to the roots and select one of medium size; take it out its full length, cut into pieces about 2 inches long; lay these close together in a shallow box or pan, cover with sand, place them on the warmest end of the propagating bed and keep moist. When they have made a growth of about 2 inches pot into small-sized pots.

DOUBLE PETUNIAS—If special varieties of double petunias have been saved from last season, cuttings from them may be taken and the stock increased as much as possible. Double petunias come very good from seed, however, and the same should be sown at an early date.

OTHER SEEDS that should go in now are: Musa, cosmos, maurandya, Dracæna indivisa, smilax, Grevillea robusta and gloxinia.

HINTS and HELPS.

Alternantheras.—The slower growing alternantheras, such as brilliantissima and paronychioides are unsatisfactory from cuttings unless taken early in the Fall and kept growing. If this is not done the cuttings taken during Winter are apt to be weak and take too long a time in making a display after being planted out. It is a saving of time and productive of superior results to lift the old plants, cut them over severely, put them as thickly as they will go in boxes and keep rather dry until early Spring, when, say two weeks before being divided, they ought to be watered and given a place where the light will play on them. In this way each plant will give from 20 to 40 plants, which can be depended upon to make a good display in a short time after being put out. A further advantage in this method over that of cuttings is that they take up less room than cuttings in pots or boxes.

Hydrangeas.—To have the forms of Hydrangea hortensis in bloom early, those plants which have been kept cool will by this time have lost their foliage, but if any remain cut off to within a short distance of the stem. The plants, whether in 4, 5, or 6-inch pots, which show that an increased size may be given, will stand the operation better if the roots are disturbed as little as possible. The same size, or those larger, which cannot be shifted and the ball preserved intact, are best reduced when the soil is dry. Put in a cool house after potting, watering only to settle the soil, and syringe in order to start into growth. After a start has been made the heat and watering may be increased, and as the growth increases weak manure water may be given frequently.

Hybrid Roses.—Where a house is devoted to Jacqueminot roses, either planted permanently in solid beds grown in pots or boxes, and which are intended to bloom along about Easter, they should get attention now. The pruning, if it has not already been attended to, is an important item. Useless, weak wood should be removed, and the strong shoots of last season's growth shortened back and bent over if necessary. The soil should be loosened slightly on the surface, and a mulching of manure given. Watering should be delayed, if the soil is not dust dry, until the growths begin to break; this should be encouraged by syringing. After the plants begin to move more water and heat may be given.

Begonia Gloire de Lorraine.—Provided that the plants of this begonia are in fair health to start with, and not sickly looking material with the large leaves taken off for propagation, there is no more difficulty in its cultivation than there is in the majority of the species and their forms. The plant has been pretty freely distributed by this time, some very handsome specimens being seen at Christmas in most of the flower stores. About this time the foliage is at its best, being mature, and, as a rule, hardened off. The quickest way to propagate, as in the rex section, is by leaves; each leaf may be cut in two or kept whole and inserted in the sand with a piece of stem attached. Several little growths will make their appearance shortly after the roots are formed. These shoots may be allowed to gain considerable headway before being put in pots. Given a light, porous soil they soon form sturdy plants, which are given larger pots as necessary. The white sport of this variety is spoken of highly; it has been named "Caledonia" by the raiser.

Allamanda Cuttings which were taken from outdoor plants and rooted, should be encouraged to make growth from now on. If in 2 or 3-in. pots, they should be given a shift, using soil in which there is a considerable quantity of vegetable matter. The roots of the allamandas are large, and in this rooting medium they luxuriate. Frequent syringings and nipping out the ends of the shoots to make stocky plants, with a temperature ranging from 60 to 85 degrees, will hasten their growth.

Poinsettias.—The plants of these from which the flowers have been taken, if without foliage, may be placed under the bench and left there for a resting period. Those having foliage may be gradually dried off and rested until the time arrives for starting into growth either to supply young growths for propagation, or for making the usual flowering wood. Cuttings of the matured canes will root best when the supply of sap is diminished.

Cineraria maritima, and the white foliaged centaureas, such as C. candidissima, should be sown now in order to have fair-sized plants for Spring sales. C. candidissima is the handsomest of the number. They may be sown in boxes and the seedlings pricked off three in a 3-inch pot. Later on each plant may be given a separate pot.

Flamingo Flowers (Anthuriums).—With increasing sun heat these plants will soon commence active growth for the season, and the present is the best time for repotting or for rooting any tall or straggling growths which have grown away from the sphagnum in the pot. In this condition the roots, which are formed at the bases of the leaf stems, shrivel up for want of moisture, and the plant becomes shy in blooming. Cut off the shoots that are in this condition and put in a mixture of sphagnum and sand in a warm part of the propagating bench; keep moist and roots will form in abundance in about three weeks, when they should be potted up in the usual way. Old plants should have the lower part of the stem and roots removed and sunk lower in the pot, using a mixture of fibrous peat, sphagnum, well decomposed cow manure, charcoal and sand. This treatment applies only to such kinds as Andreanum, ornatum, and their numerous hybrid progeny; all of which produce very showy flowers which may be used to advantage associated with those of orchids. Their cultivation is exceedingly simple where sufficient heat is at command, a minimum temperature of 60 degrees F. being necessary.

G. W. O.

A Veteran Florist.

We have much pleasure in presenting this week the photograph of one of the veterans of the trade—John Spaulding, of New London, Conn., who at the advanced age of 85 years is still in the harness and as vigorous and active as many younger men.

Mr. Spaulding was born on Christmas Day, 1814, in Perthshire, Scotland. He served his apprenticeship with his father at Arthurston, and after remaining a number of years in Scotland and England, acquiring a knowledge of his business, he drifted to Ireland, where, as he says, he spent "fifteen years of my best days in good positions in gardens. In 1860 I became dissatisfied, not with my position, but with the pay I received, and came to America." After knocking about a year he finally settled down as gardener to the Hon. John Allen, Saybrook, Conn., with whom he remained for seven years. He then went to New London and commenced business on his own account, "beginning small and poor, going on the slow but sure plan, until I have now 1,700 feet of glass and a good retail trade, which I am, thank goodness, at the age of eighty-five, yet able to manage."

View of John Spaulding's Greenhouses

We also show a view of Mr. Spaulding's establishment. His dwelling-house is 162 years old.

The old gentleman is a member of the S. A. F., and attends the meetings which are within easy reach of his locality. He takes a lively interest in the society and his quaint sayings in the meetings have often been creative of great merriment.

Indiana State Florists' Association.

The thirteenth annual meeting of the State Florists' Association of Indiana was called to order at the State House, by President E. G. Hill, at 2:30 p. m., Tuesday, January 9. The president in his opening remarks thought we could not afford to drop the Fall flower shows, and after a discussion it was almost unanimously voted to hold our usual chrysanthemum exhibition next November.

Mr. Hill invited the association to visit his Richmond plant on February 10, which invitation was accepted.

The society passed a resolution instructing E. G. Hill to invite the American Carnation Society to hold its meetings in Indianapolis, in 1901. The sympathy of the society was sent to ex-President J. S. Stuart, of Anderson, Ind., in his illness, with hopes for his speedy recovery. At 6 p. m. the society participated in a banquet, given by the florists of Indianapolis, at the English Hotel.

Officers elected for 1900 were as follows: President, J. E. Haugh, Anderson; first vice-president, Wm. Langstaff, Indianapolis; second vice-president, W. W. Coles, Kokomo; secretary, Robert McKeand; treasurer, J. I. Huntington. All outside florists were royally entertained by the local florists.

The following exhibits were staged:

Stuart & Haugh, Anderson, Ind., new carnation Avondale, a pink sport of Armazindy, awarded honorable mention. The same firm also showed some fine White Cloud. Special mention was given to J. B. Bernard, Marion, Ind., for five vases of Flora Hill, Triumph and G. H. Crane. Berterman Floral Co. showed well-grown plants of ericas, cyclamen, cinerarias, Begonia Gloire de Lorraine and azaleas. Henry Rieman had several novelties in the new butterfly cyclamen, also cypripediums and a vase of pink and white carnations; the latter a promising variety. Sonnenschmidt & Junge were awarded honorable mention for a superb bunch of Marie Louise violets. The committee of judges were: W. W. Coles, Herbert Heller and John Hartje. C.

FIRES.

SUMMIT, N. J.—The Kent Place Nurseries (W. H. DeForest) were almost totally destroyed by fire Tuesday night, January 9. The loss on buildings is estimated at $50,000, with $20,000 insurance, and on plants at $75,000, with no insurance. It is believed that the fire was of incendiary origin. The night man discovered about 9 o'clock that the potting shed was burning, and promptly gave the alarm. For some unaccountable reason the fire department was slow in responding, and it was half an hour after the first company had arrived on the scene before the first stream of water began to play on the blaze. This was because so many of the fire hydrants in the neighborhood were frozen up. An hour after the first line of hose started to play on the fire, one of the hydrants was thawed out sufficiently to enable another line to be put in operation. It was too late, however, to do any good. It was after midnight before the fire was under control. The main structure and the adjoining greenhouses were totally wrecked. A few greenhouses lying at a greater distance were saved, but the plants therein perished on account of the cold. As fast as the water fell it froze.

The greenhouse buildings were owned by Frank A. Potts of New York, and were leased by W. H. DeForest, who owned all the plants. Mr. DeForest made a specialty of growing roses, and shipped immense quantities of those flowers to the New York and Brooklyn market. The place was at one time famed for its collection of cattleyas, and was also noted for Adiantum Farleyense. In addition to the roses there was a very valuable collection of ferns, palms and tropical plants, many of which cannot be replaced. The buildings spread over almost four acres, and a large number of men were employed therein. It is stated that in all probability the structures will not be rebuilt.

What lends strength to the incendiary theory is the fact that the place where the blaze broke out was remote from any other fire kept in the nursery and was not heated. The authorities are making a careful investigation. Mr. DeForest is a member of the family owning the Summit Silk Mills, many of whose former weavers are now on strike.

POONTON, N. J.—A slight fire in the greenhouse of Benjamin Lester, January 2, was extinguished before much damage was done.

THE EXPERIMENT STATIONS.

FALL ARMY OR GRASS WORM.—Illustrated circular, issued by the University of Nebraska, Agricultural Experiment Station at Lincoln, Neb.

HOMEMADE WIND MILLS.—Bulletin 59 of the foregoing station, contains illustrations and descriptions of the various homemade wind mills found throughout the state. A very serviceable bulletin.

EXPERIMENT STATION WORK, Farmers' Bulletin 103, United States Department of Agriculture, Washington, D. C.—Contains articles on excessive irrigation, cross-pollination of plums, root-pruning of fruit trees, the Oxeye daisy, etc.

CEREAL RUSTS of the United States, Bulletin 16, Division of Vegetable Physiology and Pathology, United States Department of Agriculture, Washington, D. C., with four colored plates.

DISEASES OF CUCUMBER, MELON AND TOMATO.—Bulletin 105, Ohio Agricultural Experiment Station, Wooster, O.

The practicability of saving the late crop of cucumbers from downy mildew, by use of Bordeaux mixture, is fully demonstrated by the experiments made. Spraying for this purpose need not be begun earlier than July 25 to August 1. If a crop of pickles or cucumbers is harvested by August 15, spraying for downy mildew is not required.

Spraying for anthracnose, downy mildew and leaf blight of muskmelons is still recommended, although some failures are recorded.

Previous recommendations as to the treatment of late tomato plants with Bordeaux mixture to prevent tomato leaf blight, Septoria Lycopersici, are again repeated.

STRIPED BEETLE ON CUCUMBER.—Bulletin 158, New York Agricultural Experiment Station, Geneva, N. Y.—Also, "Spraying Will Save the Pickle Crop," Bulletin 156 of same Station. Spraying the vines with Bordeaux mixture (1 to 8 formula), beginning about July 20, and repeating the application every eight or ten days until frost, is recommended as preventing mildew and allowing the plants to mature the best crops the soil and surroundings will produce.

INSECTICIDES, FUNGICIDES, SPRAYING CALENDAR; Bulletin 60, Hatch Experiment Station, Massachusetts Agricultural College, Amherst, Mass.

THE TARNISHED PLANT BUG.—Bulletin 47 of the Agricultural Experiment Station of the State of Missouri, Columbia, Mo.—As regards remedies, spraying with kerosene emulsion, the use of fresh and pure pyrethrum—one pound to every fifteen gallons of water, have been found effective. The bulletin states "our experiments with the 'Rose Leaf Insecticide' applied against the Tarnished Plant Bug have proven its value in this case above our expectations."

THE GRAPE.—Bulletin 46 of the same station. A most useful pamphlet embracing a study of types and varieties, a study of the pollination of cultivated grapes, and methods pursued by practical growers.

MUSHROOMS.—Bulletin 168, Cornel University Experiment Station, Ithaca, N. Y., in which three edible species of coprinus are fully described and illustrated, viz.: The Shaggy Mane (Coprinus cornatus); the Ink-cap (Corprinus abramentarius); and the Glistening Coprinus (Coprinus micaceous).

TENT CATERPILLARS.—Bulletin 70, same station, being an emergency report on the subject by Professor M. V. Slingerland.

NATIVE AGRICULTURAL GRASSES OF KANSAS. Bulletin 87. Kansas State Agricultural College Experiment Station, Manhattan, Kan. Illustrated and descriptive.

SOIL MOISTURE. Bulletin 89. Same station. Experiments with soil in pots, tried under the most rigid conditions available, showed that the rate of evaporation of water from soils is not sensibly affected by the addition to the soil of relatively large amounts of the substances ordinarily used as fertilizers, nor by certain others.

Bench of New Pelargonium America. Grown by H. Eichholz, Waynesboro, Pa.

In Time of Peace Prepare for War.—Insects and plant diseases have temporarily withdrawn from the conflict and rest during Winter's cold in egg mass or cocoon, in conidium or spore. The warmth of Spring will again waken them to activity, and unless their coming has been prepared for they will, as before, claim too large a share of many a grower's crop. The fruit grower may well spend some of his Winter leisure in freshening up his knowledge of fungicides and insecticides. A new publication along this line is Bulletin 161 of the New York Agricultural Experiment Station at Geneva. This gives details of experiments with gooseberry mildew and offers the grower a remedy cheap and effectual. A potassium sulphide solution does the business and costs less than half a cent a bush for materials. The station will send the bulletin to any one who requests it.

Bulletin No. 159 of the same station deals with the forest tent caterpillar, the given measures for the eradication of which include destruction of the egg masses in the Fall and Winter; spraying with arsenicals while the caterpillars are at work in the Spring; swabbing with kerosene when they are collected in groups or in the nests, and jarring from the trees; banding the trees to prevent access of wanderers and invaders; and destruction of cocoons in June and July. This bulletin may also be obtained from the station.

St, Louis.—Quite a party of bowlers showed up Monday night, January 8, but owing probably to their long rest, were a little wild, as scores show:

	1	2	3
Chas. Beyer	115	160	131
C. H. Kuehn	198	166	142
J. W. Kunz	145	156	145
E. Schray	125	129	119
C. C. Sanders	130	114	160
J. J. Beneke	128	135	148
F. C. Weber	141	128	142
John Young	..	110	134
F. J. Fellows	96	107	106

New York.—Monday being the day of the Florists' Club meeting the bowling took place in the afternoon. The scores are as under:

	1	2	3	4	5
L. Hafner	187	125	137	126	107
F. H. Traendly	122	156	173	169	..
T. Roehrs	138	114	91	139	171
F. L. Atkins	..	137	144	154	149
P. O'Mara	..	..	118	121	..
J. H. Troy	..	..	126	108	..
T. Lang	..	..	128	165	163
J. I. Donlan	..	..	144	172	171
A. S. Burns	..	..	158	124	137
S. S. Butterfield	104	125	86	..	..
W. H. Siebrecht	..	..	139	120	151
A. Herrington	..	..	90	111	94
J. Lang	..	..	88	73	107

CHANGES IN BUSINESS.

MANCHESTER, N. H.—F. J. Bixby, who has heretofore operated a greenhouse only to supply his general store with plants and flowers, has given up the store and will this season conduct only a florist business.

WILMINGTON, DEL.—Robert Lockerbie has rented the greenhouses here formerly conducted by the Pennrock Co., who have gone out of business.

GREAT BARRINGTON, MASS.—W. S. Ferguson, who has purchased the Fuller Farm in Van Deusenville, intends to engage in market gardening on a large scale.

WHITMAN, MASS.—R. E. Moir has opened a flower store here.

Firms Who Are Building.

BALLSTON SPA, N. Y.—Edward Sheak has commenced the erection of another violet house. Other violet growers in this locality will make additions the coming Spring.

LYONS, N. Y.—Peter Salter is about to build another greenhouse.

What Constitutes a Species.

Editor Florists' Exchange.

G. W. O.'s answer in last week's EXCHANGE, after his criticism of Mr. Tricker's letter, is, to say the least, very unsatisfactory. His positive assertion regarding the Victoria regia surely was not the result of digesting "Dr. Gray's First Lessons in Botany"!

During the past Summer, while attempting to decide if a new aster found in the vicinity of Philadelphia was a true species or only a variety, I was left in much the same condition as Caldwell the Woodman's secretary. One eminent botanist to whom the plant was sent for identification pronounced it a species, while another said it was only a variety. Now, if G. W. O. will allow me to refer him to "Darwin's Origin of Species," the generally accepted theory among scientific men, he will at once admit, until there is a better definition, that his criticism of Mr. Tricker's letter was uncalled for.

E. H.

PANSIES.—E. B. Jennings, Greens Farms, Conn., sends us some sample blooms of the well-known Jennings' strain. The flowers are large, with good stems, and embrace many beautiful markings.

New York.

The Market.

Business along all lines has been very quiet this week. From the 2d of January to the 15th there has always been a great falling off in the amount of business done, and this year is proving no exception to the rule. Stock is coming in quite plentifully, and it accumulates rapidly, consequently prices are on the downward grade, and all efforts of the dealers to clear out daily prove futile.

Special Beauty are going at $3 and $4 per dozen, and there is more coming in than the demand needs. Other grades have gone down in price proportionately; Bride and Bridesmaid bring from $2 to $10 per 100, according to quality. In one thousand lots they can be had even cheaper than that.

Carnations, also, in thousand lots, can be bought for $5; by the hundred they realize from 75c. to $2, according to quality and color. Fancies bring from $3 to $5 per 100. Roman hyacinths and Paper White narcissus are not being received in such vast quantities as they were, and the asking prices is the same as last week—ranging from 50c. to $1.50. Yellow narcissus and tulips are beginning to arrive, but only in limited quantities as yet, the same may be said of lilac and sweet peas.

Lily of the valley brings from $2 to $3 per 100, but goes slowly. For orchids there is scarcely any demand. Cattleyas may be had anywhere from 35c. to 60c. each, according to size and quality.

Violets are in good supply, too good in fact to be cleared out daily; for ordinary flowers the asking price ranges from 40c. to 75c.; for specials, from $1 to $1.50. Callas can be had at 8c.; Harrisii lilies, 10c.; smilax and asparagus, though not coming in very heavily, are still plentiful enough to meet all demands.

Pansies, stocks and bougainvillea are on the market occasionally, but the supply of these not being regular no standard price can be quoted.

Among the retailers a general quiet prevails, but as this is customary at this particular season of the year no uneasiness is felt.

Jottings.

Poultry was the subject of discussion at the meeting of the Farmers' Club, which was held at the American Institute in the Berkeley Lyceum on Wednesday, the 10th inst. At the February meeting the horticultural section of the institute will entertain the Eastern New York Horticultural Society.

With two of his salesmen on the sick list, John Young is kept hustling nowadays.

Mrs. J. B. Nugent is seriously ill at her home, 73rd street and Park avenue.

John Hart, salesman in Young & Nugent's, is laid up with pleurisy.

Wm. Hughes, one of Clucas & Boddington's employes, had the misfortune to have his leg broken last Monday. A barrel fell upon him.

A meeting of the New York Gardeners' Society will be held this (Saturday) evening, at the Grand Central Palace, at 8 o'clock.

Visitors in New York this week were: Richard Vincent, Jr., White Marsh, Md.; Alex. McLellan and Carl Jurgens and Son, Newport, R. I.; Robt. Craig, Philadelphia, Pa., and J. L. Dillon, Bloomsburg, Pa.

St. Paul.

Holiday Trades.

Holiday trade was fully up to the average in volume and might have been larger had not the growers pickled their stock and demanded enormous prices. How long this outrage on retailers and the public will be tolerated remains to be seen, but the sooner the store men unite to put down the evil the sooner its downfall will be accomplished.

Christmas sales were very good, with a fair supply in most lines.

In cut flowers carnations and roses sold well, the greatest demand being for red. Carnations retailed at $1 per dozen; for common and for fancy stock, $1.50; roses at $3 per dozen; Beauty at $10 to $20 per dozen, and hard to obtain even at that figure. Violets retailed at $3 to $4 per 100; valley at $1 per dozen; Paper Whites at 75c. per dozen; Romans, 50c. to 75c. per dozen.

Owing to favorable weather the week before Christmas the home cut was larger than anticipated, and the quality better. Shipped stock, however, was in bad condition, much of it being unfit for use.

Plants sold well, especially those in flower. Azaleas were in good demand, with cheaper plants selling equally well. Baby primrose was offered for the first time, but like many other meritorious novelties did not sell particularly well. A few well grown poinsettias were seen, reminding one of the times a dozen years ago or more. As several of the large grocery stores handled greens quite extensively, the florist trade in this line was cut short somewhat. Holly was well cleaned out, but there was quite a quantity of bouquet green left over. Mistletoe was of good, bad and indifferent quality, and sold with a rush. Some remarkably fine stock was shipped in from western Texas and New Mexico.

Country trade was even better than the city, and those who did a shipping business report the best trade ever recorded.

The weather was perfect up till Sunday, when the wind veered and a cold wave swept in from the Northwest. A few frozen flowers were noted in consequence.

New Year's trade was fairly good, though we think there is a slight falling off from year to year. Stock was more plentiful and of better quality than at Christmas, while prices were a shade lower. Since New Year's quiet has prevailed, but society will soon be in full sway and ought to increase trade quite materially.

St. Paul is to have a Winter carnival, with an ice palace and its accompanying sports, which should make business hum for a time. Whether this will help the florist business or not remains to be seen.

We are now enjoying the most perfect weather—no snow, no cold, plenty of sunlight and an abundance of good bloom coming in. If such weather continues our ice palace cannot materialize.

There has been a big demand the past week for funeral work, especially from the country towns.

Seed Notes.

The wholesale shipping trade has fairly commenced and from present indication will be the best in many years. Orders and inquiries are coming in very freely and are being placed earlier than usual, showing that the stocks of country merchants are well cleaned out, and that the scarcity of many varieties is well known. Catalogue trade has scarcely begun; the first "feelers" in the way of orders just coming to hand. Retail trade will undoubtedly be heavy, though it is too early to make this assertion with full confidence.

Recent callers were: Alex. Rodgers, of Chicago, president of the American Seed Association; W. H. Small, of Evansville, Ind., and C. P. Braslau, of New York and California. VERITAS.

Pittsburg.

Trade conditions remain about the same as the week previous; stock in plenty, prices moderate. At a banquet given in Hotel Schenley by the officers of the Carnegie Steel Co., the decoration was in the hands of Randolph & McClements. The banquet hall was arranged in the form of a Summer garden, with trees and plants in fruit and bloom. The tables were decorated profusely with cut flowers.

L. I. Neff has purchased the land and greenhouses of Ziegers, at Aspinwall, and has placed a good man in charge.

W. G. Duff is engaged at Ferguson's wholesale cut flower store, and says things are moving along satisfactorily.

The Pittsburg Cut Flower Co.'s new place is now in splendid shape for their trade, which is steadily improving.

Allegheny City is talking about erecting a new conservatory in Riverside Park, as the present one is not in the best place for the production of plants and bloooms. It is in the heart of the city and the smoke and dirt keep the glass in bad shape. E. C. REINEMAN.

Oceanic, N. J.

At the meeting of the Monmouth County Horticultural Society, on January 5, the secretary was instructed to notify every member of the society to be present to hear the lecture of Professor Byron D. Halsted, of the New Jersey Experiment Station, which he will deliver January 19, at 7:30 p. m. The subject will be on Rust on Chrysanthemums and Mildew on Roses. There will be refreshments served and a "Robert Burns" or a "Lilian Russell," for every one present on this occasion. George Kurkington was nominated for active membership. A communication from the Morris County Florists and Gardeners' Association was received, inviting our society to a smoker. B.

Louisville, Ky.

The market during the past week has been rather quiet, with prices remaining firm. The supply has been equal to the demand, with the exception of violets.

On January 2 the Society of Kentucky Florists held its monthly meeting, with President Woods in the chair. A fair number of members was present. After the regular business the members listened to Jacob Schulz, who told his first year's experience in hybridizing carnations. C. H. Kunzman and Jacob Schulz each showed several seedlings.

Friday, December 29, George Schulz had the misfortune to have a tube in his boiler spring a leak, but he managed to stop it enough to fire that night. Saturday morning he at once had the defective tube removed, but while refilling the boiler another tube began leaking, and while this was repairing Mr. Schulz built charcoal fires in his house to keep out the frost. While these fires were going Mr. Schulz was called away for a short time, and Mrs. Schulz being afraid the fires would burn too slow went into one of the houses and was overcome by the fumes of the charcoal. Mr. Schulz returned in a few minutes, and going into the house found his wife unconscious on the walk. He took her out into the open and sent at once for doctors, who after three-quarters of an hour's hard work brought her to. She has now entirely recovered. While some of the foliage on several of Mr. Schulz's plants was touched by the frost, not much damage was done.

Nanz & Neuner brought the first single jonquils into this market.

During the past week F. Malher & Co. have displayed some extra good Bridesmaid roses.

Jacob Schulz had a large plant of Magnolia soulangeana in full bloom, displayed in his window; it attracted much attention. J. S.

Philadelphia.

Market News.

For this season of the year business is somewhat quiet; none of the stores is busy—just a fair average trade going on.

All kinds of flowers are in over-supply, and with no indications of any large shipping orders to relieve the market. The over-supply must be the same in other cities; as shipping orders have fallen off very much the past week. Under existing conditions it is useless to quote prices; they would only be misleading, as many flowers are two and three days old when sold. Beauty roses are selling fairly well, better than other varieties, yet there are too many of this variety on hand. Carnations are quite a glut; a few fancy sell fairly well, but of other grades everyone is stocked full up, and cannot move any quantity; even the street men are not buying freely.

Notes.

Members of the trade were very sorry to learn of the death of Wm. F. Eaton.

Mrs. Magee has at last decided to make a change. She was married on New Year's Day to Mr. Savage, of New York City, where she will in future reside. The store and business at 20th and Bainbridge streets is to be offered for sale.

H. Bayersdorfer & Co. have issued a very pretty calendar, which they are sending out to the trade on application.

Adolph Farenwald is doing very well with Beauty this season and is sending S. S. Pennock some good flowers. The cut, so far, is grading very high. His tea roses are also fine.

Our bowlers are doing telling work again; in two matches this week they beat the Columbia Club by over 300 pins, and the Maennerchor by 36 pins.

DAVID RUST.

PERSONALS.

Reader, this is *your* column. Let us know what you are doing. It will keep your name before your fellow-craftsmen and interest many.

Warsaw, N. Y.—D. W. McKinley has given up business on account of poor health.

Jersey City, N. J.—About 307 chrysanthemums were stolen from the greenhouse of Louis Hansen last week.

Plainfield, N. J.—Mrs. L. J. Denton has rented a store in the best part of the city, making a specialty of decorations.

Nyack, N. Y.—Jos. Hilbert, whose lease of the Blauvelt place here expired on December 14 last, has retired from the business.

Pine Bush, N. Y.—Mrs F. T. Howell has secured the services of William Marshall, who has been foreman for E. Koffman the past nine years.

Parkersburg, W. Va.—G. A. Hiehle was recently married to a Baltimore young lady. Mr. and Mrs. Hiehle have returned from their honeymoon trip.

Norwich, Conn.—Charles H. Osgood, brother of the Mayor, has purchased the extensive greenhouses of Wm. A. Slater and has transferred them to his spacious grounds.

S. Crane, the nurseryman, says he has sold more Christmas trees this season than for five years past. He sent nearly a car-load to one city.

Mayor F. S. Osgood has erected fine green houses and engaged the services of Robert Revell, who was florist for Gov. Buckingham many years ago.

CATALOGUES RECEIVED.

A. BLANC, Philadelphia.—Catalogue of Electrotypes of Plants, Flowers, Fruits and Vegetables.

J. A. STECKLER SEED CO., New Orleans, La.—Catalogue of Vegetable, Flower, Field and Grass Seeds, etc., Illustrated.

J. M. THORBURN & CO., New York.—Trade Price List of Seeds, Bulbs, etc., very complete, including seeds of trees, shrubs, grasses, etc.

HENRY NUNGESSER & CO., NEW YORK.—Wholesale Price List of Grass and Clover Seeds.

EVERYTHING FOR THE GARDEN.—Annual Catalogue of Peter Henderson & Co., New York. The 1900 edition of this always beautiful catalogue is more handsome, complete and interesting than ever before. As a frontispiece the firm has selected the new rose Admiral Dewey, which is elegantly reproduced in color, associating therewith a representation of the Dewey arch and columns in New York City, with Madison Square Garden in the background. The back cover illustration represents Grant's Tomb, and furnishes a bird's-eye view of the naval parade, encircled with a wreath of sweet peas. Colored plates of early Leviathan pole lima bean, Henderson's Bountiful bean, Metropolitan sweet corn, Heart o' Gold squash, and the world-famous Ponderosa tomato, in vegetables, stocks, pansies, etc., in cut flowers, colored representations of the "Admiral" collection of ever-blooming garden roses, and of Henderson's "Dazzling" collection of ever-blooming cannas, in which the best of the novelties are included, go to enhance and help constitute a book that for profusion of illustrations, comprehensiveness of subjects offered, fullness of description and consequent general instructiveness, places "Everything for the Garden" as one of the leaders in the catalogues of the country for general distribution. An insert pays a well-deserved tribute to the memory of the late lamented Alfred Henderson, who passed away September 5, 1899.

TOBACCO STEMS
"Good Strong Kind."
60 CTS. PER 100 LBS.

Tobacco-Whale Oil Soap for syringing for washing plants. We Know its Goodness. All Seedsmen Keep it

New York Florists' Club.

The meeting of the club on Monday evening last was well attended. Retiring President Plumb occupied the chair and introduced the officers-elect in a few well chosen words, paying a high tribute to the sterling qualities of his successor in office, Mr. O'Mara. Mr. Plumb stated that during his own tenure of office the membership had increased from 140, about 80 of which were in good standing, in 1897, to 169 with 121 in good standing at the present time. Referring to the coming S. A. F. meeting he remarked that he hoped every member of that body in attendance at New York "would leave us regretfully and every moment they were with us be stored away in their memory." He thanked the members and committees for the support given him during his presidency. Messrs. Allan and Nash then escorted Mr. O'Mara to the platform. The president-elect delivered a most practical address, outlining the work before the club the present year. Adverting to the horticultural exhibition to be given in August next, Mr. O'Mara stated that it had been decided to give the private gardeners the center space in the Grand Central Palace Hall, comprising about 10,000 square feet, for their displays, leaving 30,000 square feet for the trade exhibit. The committee to be appointed for the horticultural exhibition will be composed of private gardeners only, and their displays, including those of amateurs, will be separate and distinct from the trade exhibit. After touching on the great enthusiasm manifested by the private gardeners in the forthcoming undertaking, and the anticipated success of the convention generally, the president named the following standing committees for the ensuing year:

House or Entertainment Committee—F. L. Atkins, J. P. Cleary and Wm. Marshall.

Committee on Awards—W. I. Brower, C. H. Allen, Henry Dailledouze, A. L. Miller and John E. Lager.

In connection with S. A. F. matters committees on press, advertising and printing, reception, ways and means, horticultural exhibition and sports were also named, for all of which a judicious selection of members has been made.

Suitable remarks were also made by Vice-President Herrington, Treasurer Weathered and Secretary Young.

The Annual Dinner.

The president intimated that the annual dinner will take place at the St. Denis Hotel, 799 Broadway, on Wednesday evening, January 17, at 7 o'clock. The Executive Committee S. A. F., which meets in New York, January 16, will be the guests of the club on that occasion, which it is hoped will be graced by a large attendance of members, out of respect to the executive officers of the national society. It is also expected that some of the municipal dignitaries will be present, as well as prominent members of the trade from outside cities. Tickets will cost $5 each, and cash must accompany all orders for same. The tickets can be obtained from Treasurer C. B. Weathered, 48 Marion street. Donations of the "finest blooms possible" for table decoration are solicited; these sent to W. F. Sheridan, 39 West 28th street, between 12 and 2 o'clock, on January 17, will be taken care of in proper form.

New Members.

The following gentlemen were nominated for membership: Messrs. H. W. Gibbons, S. S. Butterfield, Jas. Beghie, C. F. Meyer and E. S. Miller.

Invitations.

Invitations to the annual dinners of the Dutchess County Horticultural Society and the Morris County Gardeners and Florists' Club were received. The president named as delegates to the former Messrs. Stewart and Wallace.

Treasurer's Report.

Mr. Weathered's report showed the financial condition of the club to be healthy, and was accompanied with the hopeful announcement that the majority of the arrearages would be paid up shortly.

Exhibits.

A vase of carnation Genevieve Lord was exhibited by H. Weber & Sons, Oakland, Md. It scored 86 points, and was certificated. Carnation Roslyn, a dark pink, large flower on a good stem, from C. Besold, Mineola, N. Y., was awarded honorable mention.

After some discussion on the necessity of amending the existing rules governing exhibits, and the intimation that the various committees would meet in the club rooms, Monday, January 22, the meeting adjourned.

Chicago.

State of Trade.

Business can hardly be said to be satisfactory, the reaction from holiday prices and trade being too great. Except in long-stemmed Beauty and Meteor of top grade, stock moves slowly, even at half Christmas prices. Very few Beauty go beyond $6 per dozen; medium, $3 to $4; teas, best, $8, but mostly $4 to $6, with lots of shorts at $2 to $3 per 100 to fakirs. In carnations fancies bring $6, with plenty of good stock at $3 to $4. Standards, $1 to $2 per 100; Crimson, by the thousand at $5 to $6. The weather is both sunny and Spring-like, which is bound to bring forward increasing supplies.

Callas are plentiful; the best bring $2 per dozen; lilies are also equal to the demand, going at same price. The first white lilac is in; rather small sprays, which go slow at $1 per dozen. Violets fetch 75c. to $1.50.

Club Meeting.

The Florists' Club held its regular meeting January 5, President Hartshorn in chair with Alexander Henderson secretary pro tem. Peter Hemer and Edward Tauch were elected members. Edgar Sanders, for the committee, reported good success in obtaining the signatures of growers in favor of upholding the Fall flower shows here. By resolution he was requested to lay before the Horticultural Society of Chicago, at its annual meeting, January 9, such information as he possessed. The president drew attention to the desirability of having the next meeting, January 19, declared a carnation night, which, after considerable discussion, was so ordered. The secretary was instructed to send out notifications to that effect to the principal growers, with a view to obtaining meritorious new and seedling exhibits. In order to accommodate those living at a distance, the show will be open in the afternoon as well as the evening. All exhibits should reach this city on the morning of January 19, addressed C. W. McKellar, secretary, 54 Wabash avenue. Edgar Sanders, G. L. Grant and P. J. Hauswirth were appointed a committee to revise the constitution and by-laws.

The Chicago Carnation Company had on exhibition two fine seedlings with 30-inch stems. No. 16, a dark pink, scored 86 points, and was awarded the club's certificate. No. 48, a fringed white, scored 84 points. Both varieties are noted for the number of flowers each plant produces. We recorded last year No. 16 as then having 16 open flowers and 14 buds on the plant at the same time.

Chicago Horticultural Society.

The annual meeting of this society took place January 9, Ernest Wienhoeber, vice-president, in the chair. Fifteen new members were proposed. The report of the secretary-treasurer showed a balance of $700.66, which, considering the great expense of the November exhibition—some $8,722.65—may be looked upon as highly satisfactory, and with the dues of the 278 members composing the society will give a good round sum by the time the Fall show again takes place. By resolution, the Executive Committee was empowered to hold a Fall show for the year 1900.

The following officers were elected for the ensuing year: President, William H. Chadwick; first vice-president, E. G. Uihlein; second vice-president, H. G. Selfredge; third vice-president, Emil Wienhoeber; secretary and treasurer, W. N. Rudd. Executive Committee for three years—W. C. Egan, Edgar Sanders, P. J. Hauswirth.

Greenhouses Lighted by Electricity.

Peter Reinberg has now installed, and has in full operation, an Edison electro-motor and string of incandescent lights of 16 candle power each along the main central passage ways of his immense establishment. The motor is run by a new 12-horse power engine, and the system is working to a charm. Mr. Reinberg considers the whole outfit cheap (something less than $1,000), considering the great conveniences. The cutting business here in carnations and roses is carried on to an enormous extent, two long houses being already filled with them in process of rooting, and others benched out already rooted for future stock. There is a marked change in the quality of carnations grown here from last year. The Bradt are a sight of buds and flowers. Triumph is a genuine money-maker, as is Evanston, although not of the fancy class. G. H. Crane is good, but America, as showing here, is a very close second. Argyle is all right; Joost, excellent; Gold Nugget the best yellow, Mayor Pingree being hardly satisfactory. There are altogether some two dozen varieties grown. Among the best, besides those named, are Melba, Leslie Paul, Governor Griggs, Jubilee, Victor, White Cloud, Flora Hill, Armazindy, Evelina, Nivea and Morello, and old standbys. It is a veritable carnation farm.

The rose houses are now in prime shape. Golden Gate is very satisfactory, as is Perle. Cuttings of roses are already being potted off for future stock.

George Reinberg is this year also a heavy propagator of both roses and carnations; over two houses are already full of cuttings and rooted stock.

Jottings.

Mrs. Amelia Shaefer, 277 Balmoral avenue, has bought out the business of Charles Shaefer. The plant consists of three houses, 250 feet each, all in carnations. Mrs. Shaefer hopes to double the capacity in the near future.

The Garfield Park Floral Co. on W. Madison street has had a splendid sale of plants this Winter. They grow largely for sale to retail florists, and find the most useful size plants of primroses, cyclamen, etc., 4 to 5 inch, these being wanted for filling pans, baskets, etc. Their lilies are late, but will soon be in abundance. They also grow small ferns largely.

Eli Hobbs, Indiana avenue, is well content with trade this Winter. He has a fine stock of palms, ferns, azaleas and other plants for his retail trade.

The Central Floral Co. are well satisfied with their Winter business so far.

Geo. F. Allen has opened up a retail store at 2138 Michigan avenue.

W. N. Rudd's home was burglarized a week ago, money and jewelry being taken.

A. Lange has a new junior partner—a fine baby boy. Omaha papers please copy.

The price of glass is dropping; now look out for greenhouse construction. Brant & Noe and Damm Bros. are on the list.

McKellar & Winterson sold to one retail house last week 60,000 hardy ferns.

Ess.

Boston.

The Market.

Trade has been rather slow the past week, there being very little outside of a few small dinner decorations in the way of business. The heavy supply continues, and there has been quite a drop in prices. Roses, carnations and violets all have suffered, the two former being in over-supply. With the drop in the price of violets a better demand has been experienced.

Beauty roses are plentiful and of good quality, but move slowly being held at fairly good figures. Bride and Bridesmaid are also in good supply and move at prices ranging from $2 to $12.50 per 100 for the best. Kaiserin are short, but the deficiency is easily made up by the large stock of Bride. Carnot, however, continue short and are the only roses really sought for just now; they sell quickly at prices from $1 to $4 per dozen. Carnations do not make as high prices as last week, and move rather slowly even at reduced figures. Finest grades average but $1.50 per 100, a few extras making $2 and $2.50; but quantities of smaller grades bring but from 75c. to $1.25 a 100.

Bulb stock continues plentiful, with an increase in the supply of the varieties of yellow narcissus. Prices on this stock have changed very little from last week's.

Violets are now quite plentiful, and average 75c. to $1.00 per 100 for good stock; smaller grades selling cheaper, and a limited quantity reaching above the dollar mark.

Massachusetts Horticultural Society.

The annual meeting of the Massachusetts Horticultural Society was held Saturday at Horticultural Hall, at which the officers for the present year were installed. The first prize exhibition of the year was given in the lower hall. The primulas were very fine, especially the lots of Primula obconica shown by John Barr, gardener to Mrs. B. P. Cheney, and Wm. Thatcher, gardener to Mrs. J. L. Gardner, who captured all the prizes in this class, and in the classes for P. sinensis and P. stellata as well. There were many other choice and finely grown plants displayed, which were not called for by the schedule. Mr. Jas. E. Rothwell made a fine showing of Cypripedium insigne in variety, including var. Sanderæ, var. Sanderianum, var. Youngianum, var. Ernestii and var. Laura Kimball. For this fine display Mr. Rothwell was awarded a silver medal. Mr. Oakes Ames also showed a fine Cypripedium insigne var. Sanderianum. Dr. C. G. Weld staged a good seedling amaryllis, and the Harvard Botanic Garden a nice Platyclinis uncata. R. & J. Farquhar exhibited Begonia Gloire de Lorraine var. compacta.

In cut flowers, Mrs. John A. Gardner made a nice display of Primula sinensis, capturing first prize. W. E. Coburn also showed primulas of good quality. Freesia was well shown by W. N. Craig and Mrs. E. M. Gill. Mr. Craig also exhibited a nice vase of cypripediums, and J. M. Howard one of carnations.

Jottings.

The Calder Floral Co. is now in the store formerly occupied by Chas. W. Fohn, at 396 Boylston street.

President Wood and Secretary Stewart, of the S. A. F. O. H., have gone to New York for the Executive Committee meeting to be held next week.

F. J. N.

Thomas F. Galvin reports that orders have been received for over 315,000 rooted cuttings of the famous $30,000 Mrs. Thomas W. Lawson carnation Considering the fact that it is barely three months since the announcement was made that the cuttings would be placed upon the market, the number of orders received to date is phenomenal. The plants will be ready for delivery after February 1.

Morris Country (N. J.) Gardeners and Florists' Society.

A smoker was given by this society Wednesday evening, January 10, and was enjoyed by over 30 people. Previous to the affair a short business session was held, and officers for the ensuing year elected. A section of the by-laws was amended, relating to the annual election of officers, which hereafter will take place in December instead of January. The reading of the reports of the secretary and treasurer showed the society to be in a very healthy condition, with a balance of $466.12 to face the year 1900. That the society reposes great confidence in its officers was shown by an almost unanimous vote for their re-election; the result being as follows: President, Wm. Duckham; vice-president, C. H. Totty; secretary, C. H. Atkins; treasurer, W. Charlton.

During the after proceedings a colored orchestra rendered selections of vocal and instrumental music, from the old plantation melodies and the rag-time up-to-date favorites. The Florham Quartette of stringed instruments also rendered many enjoyable pieces, which were received with much applause. Three of these boys are employed under Mr. Herrington on the Florham estate, and the manner in which each acquitted himself on the platform showed that their leisure evenings are being well spent in acquiring a knowledge of music. Auctioneer J. P. Cleary, New York, gave a vivid impersonation of Fagin's soliloquoy in the death cell, from Dickens' novel, "Oliver Twist." P. O'Mara made a short address, speaking mainly of the great horticultural exhibition to be held in New York next August. He hoped that out of that gathering an organization would come that would have a monster yearly show in the metropolis, which would be a credit to our country. J. Austin Shaw read an original poem, parodied after Tennyson's "Excelsior." W. J. Stewart told how when he and New York commission men went on to Madison the fire alarm was sounded when they arrived. W. I. Prosser and J. I. Donlan both had neat speeches memorized; but J. W. Withers was called to the floor and when he was through praising Morris County, and Madison in particular, the 11:19 train was due. The singing of "Auld Lang Syne" by the entire company brought one of the most enjoyable evenings of the season to a close.

On the table was a beautiful bunch of Olympia carnation, brought by John N. May, of Summit, N. J. Among the visitors from New York were P. O'Mara, J. W. Withers, W. J. Stewart, J. A. Shaw, J. I. Donlan, W. I. Prosser and S. S. Butterfield.

A FEW GOOD THINGS YOU WANT.

Extra fine 3 in. **Chinese Primrose** in bud and bloom, $4.00 per 100 **Asparagus Sprengeri and Plumosus,** 3 in., $8 00 per 100. **Rex Begonia,** 3 in., mixed $4.00 per 100. **Marguerite Daisy,** large flowering white, 2 in., $3 00 per 100. **Nephrolepis Cordata Compacta,** 2½ in., $4.00 per 100. **Kentia Belmoreana and Forsteriana,** 4 in., nice plants, 40c. each.

Geraniums, double granl, S. A. Nutt, Mrs. E. G. Hill, and Bonnaft, nice 2 in. stock, $3 per 100. **Brnanti,** single Grant and **La Favorite,** 2 in., $2.50 per 100.

New Ever-blooming Geranium

AMERICA

SEEDLING OF MARS.

An Ideal Geranium for pot culture and bedding. It is of a stronger growth and larger foliage than Mars, retaining the dwarfness and floriferousness of that parent. On opening the flowers are white with salmon center; once open they shade through all salmon and rose tints, until they become deep, pure rose, when fully open. As all color shadings appear at one time on each truss, the effect is unequaled in the class of geraniums. The trusses are as large as Mrs. E. G. Hill, under good culture. This variety will become even more popular than its parents. **50 cts. each; $5.00 per doz.**

MARS 2¼ inch pots, $5.00 per 100.

CASH, PLEASE.

CHRISTMAS TRADE.

Later Reports.

GALVESTON, TEX.—Christmas trade this year was better than last. In plants it was confined almost entirely to ferns in jardinieres or baskets. Blossoming plants were scarce and palms did not take as well as usual. Prices ranged about the same as last year. Cut flowers sold well, but were rather hard to get, and prices were high.—O. F.

DAYTON, O.—Christmas trade here was about 25 per cent. better than that of last year, with quality of stock good. The supply of standard varieties of roses was equal to the demand, but there was a scarcity of Beauty, carnations and violets. Prices obtained about the same as last year, with a marked increase in the call for Meteor roses, also for palms—J. B. H.

BRADFORD, PA.—Trade exceeded by 50 per cent. all former years. The main call was for flowering plants, ferns and palms, of which we were well stocked. Cut flowers were in moderate demand; there was a scarcity of these, but we managed to fill all orders. A large amount of holly was sold in Bradford, exceeding four-fold all former years. Good prices were obtained for everything.—W. C. R.

NEW BEDFORD, MASS.—Christmas trade was 10 per cent. better than last year's. Carnations, colored roses and violets were the flowers mostly called for. In plants azaleas, colored primroses, cyclamen, solanums, with Begonia Gloire de Lorraine; all sold well and at good prices. I had a good clean stock, which brought the following prices: Tea roses, $3 a dozen; carnations, 75c.; violets, $3 per 100.—E. Y. P.

SAVANNAH, GA.—Trade with us in comparison with that of our more fortunate brothers in the East and West was very insignificant; not one single flower was left unsold, and what we call good prices here were obtained; that is, Beauty, $4; La France, Kaiserin, Bridesmaid, etc., $1.50 to $2; carnations, 50c. to 75c.; hyacinths, 50c. per dozen. I don't think that in the plant line there were ever as many sold as for Christmas, 1899. Particularly noticeable was the call for higher-priced, that is, larger plants—palms and araucarias especially—but the prices for same were low.—G.

LEXINGTON, KY.—Our holiday trade, as compared with that of former years, went far beyond our expectations. The demand for greens in roping and wreathing was unusually large. The best selling plants were cyclamen and Pteris tremula ferns, Areca lutescens, Latania borbonica and small rubber plants, potted Roman hyacinths and narcissus, also a great many mixed fern pans for table decorations. In cut flowers carnations took the lead, and Roman hyacinths and narcissus were in great demand. Roses brought good prices and were in good supply. Poinsettias were scarce and in great demand. All our florists report a flattering increase in business over former years.—A. & Co.

ST. JOSEPH, MO.—Christmas trade was all right. The supply of cut flowers was about equal to the demand. Some few Romans and white carnations were to be found after the wind up Christmas night. Bride, Bridesmaid, Perle and Meteor roses sold at from $3 to $3.50 per dozen; Beauty, $6 to $12; carnations, $1 to $1.50 per dozen. There was a good demand for holly and holly wreaths; wreathing and ground pine was rather slow sale, very little wild smilax was disposed of. Potted hyacinths, azaleas and primroses were in demand. Many bought plants because they were cheaper than cut flowers. Everybody seemed satisfied with the week's sales. New Year's sales were very light. Little better than those of an ordinary day.—J. N. K.

NEW ORLEANS, LA.—Christmas and holiday trade was very satisfactory. Good flowering and foliage plants sold well; there is always a demand for first-class plants at Christmas. Christmas trees sold fairly well. Carnations and roses were too dear for our people, very few of whom can understand the Christmas prices asked. Living in this climate, with Spring weather, one does not think much about the zero temperature, where most of these flowers are grown. One of our leading florists remarked that he hoped the people here would soon get on to it, as there is very little in the business, when one has to help pay for the large coal bills North, by buying stock for this climate. Beauty was scarce. Bride and Bridesmaid, best stock, brought $2.50 to $3.50; carnations, $1 to $2 per dozen. Holly sold well; mostly Southern grown. Bulbous stock is just coming in.—H. P.

Montreal.

Trade Notes.

Business during the past week has been dull, probably the reaction of the holiday trade. Cut flowers plentiful and are now of very good quality—thanks to the bright weather prevailing, but the variety is very limited, roses, carnations, Romans and a few Paper Whites being about all in sight. In flowering plants there is a scarcity just now; but the demand also is very light. Prices have fallen considerably below the Christmas level.

A Deplorable Accident.

During the night of December 30, while the temperature was away below zero and a strong wind blowing, the boilers on Harris & Hopton's place gave out and everything was frozen. George Hopton, the active member of the firm, was himself on duty at the time, which was about 9 o'clock at night. The establishment, which was erected by A. Marten & Sons a couple of years ago, consists of seven houses, each 100x20 feet, and was taken over by Harris & Hopton last Spring. Two of the houses were planted with roses; two with carnations; one with violets; one contained about 5,000 lettuce, just ready for the market; the other 700 spleadid strings of smilax and 10,000 geraniums in thumb pots, with a great deal of stock in the propagating bed. The night was so cold that 20 minutes after the leak opened everything was frozen. The only thing saved was a few cut flowers—roses and carnations. At present it is their intention to leave all closed until early Spring and then start with young stock. One curious feature of the affair was that the boiler was tested only three weeks before up to 90 pounds, while at the time of the burst the boiler was only carrying 20 pounds of steam. Messrs. Harris & Hopton have the practical sympathy of the entire craft in this vicinity.—B.

Toronto.

Trade News.

Business continues very good, with stock a little more plentiful, a little cheaper and considerably better. Harry Dale and John H. Dunlop are sending in some fine roses, and Miller & Sons fine carnations from their new seedling varieties. Violets are coming in better, Princess of Wales and California being very good. Some very fine valley is arriving and a few tulips, the latter being of rather poor quality. There appears to be too many Roman hyacinths and Paper White narcissus around; they are not much called for except for funeral work. T. M.

Syracuse, N. Y.

The Central New York Horticultural Society had a complimentary entertainment on Friday evening, January 12. R. B. Bard, of Quinlan & Co., read a paper on rose culture. The officers of this society are: S. T. Betts, president; N. H. Chapman, secretary; David Campbell, treasurer. Vice-presidents—A. C. Fobers, A. D. Perry, M. E. Driscoll, E. A. Powell, C. W. Snow, A. C. Chase. Executive Committee—L. E. Marquisee, C. A. Phillips, George Ham, Peter Kay, P. H. Ebeling and John Roberts.

Washington.

W. R. Smith has been confined to his house for the last ten days. He is now on the mend.

J. H. Small, the senior member of the firm of J. H. Small & Sons, recently suffered a severe stroke of apoplexy. His many friends will be pleased to learn that he is now out of danger.

Trade Conditions.

Although in the height of the season, there is no more work doing than what will keep the flower dealers ordinarily busy. Violets are said to be scarce and all other flowers plentiful.

G. W. O.

Baltimore.

The Market.

There is a decided dullness in trade; carnations are very plentiful and roses of medium grade are also abundant. Stock moves slow.

Club Meeting.

A very enthusiastic club meeting was recently held. Some enterprising restaurant keeper had offered the club the use of a hall, free of cost, in consideration of the patronage supposed to result therefrom. One esteemed member placed himself on record in a great oratorical effort against such a suggestion, and in consequence the proposition died a natural death. The show committee made its final report, and announced that we had come out even in our finances. The boys at once settled upon holding a Spring show.

Notes.

It is rumored that one of our wealthier citizens intends to embark in the growing business. Success to him.

Charles Seybold, as laudscape architect, of Baltimore, is receiving the indorsement of the craft. No better man could have been selected.

There seems to be a general demand for positions under the City Government. All sorts of democratic gardeners are applying for appointments.

The Park Board will soon be changed, with full power to act on all parks and squares, as against the past custom, where each square had its particular commissioner, all of whom had their say.

I. H. Moss is considered now an expert carnationist.

The Florists' Exchange did its largest business this year. The following are its officers: I. H. Moss, president; Wm. Fraser, treasurer; Edwin A. Seidewitz, secretary. EDWIN A. SEIDEWITZ.

Cincinnati.

Business Quiet.

Business experienced the usual slump after the holidays, and everything has been very quiet during the past week. Stock was sufficient to fill orders. A few of the poorer grades of carnations went to waste.

The News.

W. A. MacFadden has reported to the police that an emerald ring, valued at $150, has been stolen from his residence.

George S. Bartlett has gone to Chicago on business for a few days.

R. A. Betz & Co. have opened a shop in the city for the manufacture of wire work for florists. James Griffith, who for years has been engaged in this particular business here, has been obliged to retire for a time at least, owing to failing health.

The next meeting of the Florists' Society, will occur Saturday, January 13. The exhibition will be a violet exhibit, with cyclamen, roses and carnations in connection. E. G. G.

Buffalo.

Trade News.

Matters have taken on a normal condition very decidedly. Some moderate-sized social functions, as the use of flowers go, have materially helped business from being dull in some lines. With carnations still showing a comparative scarcity the supply of flowers is materially improved both in quality and quantity, and the store windows are being decked prettily.

Adams had a window display of primroses on Saturday, with placards freely drawing attention to a special price on them. A few cyclamens of medium character are seen in bloom here and there.

The Carnation Convention.

A lively interest will no doubt be taken, locally, in the coming convention of carnationists here next month. We understaud a well adapted hall in one of our office buildings has been secured. It is provided with both freight and passenger elevator, service and is centrally located. VIDI.

The Right Cypress for Greenhouse Material.

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we cannot afford to jeopardize We send out the best only.

Nephrolepis Washingtoniensis "ERECTA"
For Half-tone Cuts and Description see page 1200, December 2 issue.
There is no other fern in its class so distinct and majestic and sure to have a great future as well for a pot or decoration plant, or for cutting of its grand fronds of 5 to 6 feet length. Its only rival will be the variety
Nephrolepis Washingtoniensis "PENDULA,"
Of which a half-tone cut appears on page 1253, December 16 issue, of the FLORISTS' EXCHANGE, and of which all the stock is in my possession and will be offered for sale next Summer. Of the first-named variety I have the best and largest stock, several thousand plants of different sizes. Prices for $1.00, free by mail, 5 well rooted runners, or 4 strong, 2½ inch pot plants; strong, 4 inch pot plants, 3 feet high, 50c. each; larger ones, $1.00 to $5.00 each. For other stock see former ads.
Mention this paper. N. STUDER, Anacostia, D. C.

PTERIS DEWEYANA.
A MOST desirable new fern, now offered for the first time, by the raiser, J. H. Ley. It is a most distinct cross between P. Cretica Albo-lineata and P. Serrulata. Habit dense and very dwarf; fertile fronds, erect, smooth and narrow, barren fronds very bright and beautifully undulated; produced in quantity, never rusts, hard, and grows very freely from spores.

12 fine plants, 3 inch pots		$3.00
100 " "		20.00
12 good plants, 2 inch pots		2.00
100 " "		15.00

Six latter mailed, $1.00. With balls of roots undisturbed.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 3. NEW YORK, JANUARY 20, 1900. One Dollar Per Year.

If you have not already done so, you should plant NOW

FOR EASTER FORCING

Spiræa Compacta Multiflora

and Astilboides Floribunda,

The two finest varieties for this purpose. We offer fine, strong clumps, at $4.00 per 100. Case lots, 350 clumps to the case, $12.00 per case.

We still have on hand a FEW CASES of **LILY OF THE VALLEY**

Extra quality three-year old German Pips, in case lots (2500), $20.00; in less quantities, $10.00 per 1000.

FINEST NAMED HYACINTHS $5.00 per 100; $45.00 per 1000.

Bulbs are in first-class shape, and if potted now will make first-class stock for Easter forcing, as Easter is late this season. We can supply at the above named price the following varieties, viz., Gigantea, Gertrude, Norma, Grand Maitre, Grandeur a Merveille, Baron van Thuyl, piuk, Mme. Van der Hoop, La Peyrouse, Pieneman, etc.

We have also a large variety of **NAMED TULIPS** For Easter and Late Forcing.

As it is late in the season, we offer these at greatly reduced prices in order to close out surplus stocks remaining unsold; can supply fine varieties as low as $5.00 per 1000. List of varieties and prices of same on application.

We also have a few thousand exceptionally fine, extra selected

Mammoth Double-Nosed, or Top-Root VON SION NARCISSUS

Which we offer at $20.00 per 1000. While this price may seem somewhat high, we are certain that our customers who are buying the stock will be more than satisfied with it, as it is gilt-edged stock in every respect, and cheap at the price quoted, viz., $20.00 per 1000.

Send for our list of surplus stock, which we are offering at very low prices to close out what we have left on hand—in many cases for less than cost. Stock is a bargain at prices offered, to any one who has use for same.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

PLUMP BULBS AT PLEASING PRICES FOR PRESENT PLANTING.

No Juveniles but fully matured Seniors.

Gladiolus.—All First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least. Per doz., 15c; a 100, 75c.; 1000, $6 50.

American Hybrids. Mixed. This mixture is grown especially for us and can be recommended for florists' use. The bulbs are all selected and contain at least more than 50 per cent. white and light types. Per doz., 20c; per 100, $1.15; per 1000, $9.50.

White and Light Varieties. Mixed. There is no better mixture of white and light Gladiolus than this sold, no matter what price is paid. The bulbs are all selected and large and the varieties the best and most suitable for florists' use. Per doz., 25c.; per 100, $1 50; per 1000, $12 50.

Begonias—Tuberous Rooted.

The fact of our being the American agents for one of the most important European growers of this useful bulb, enables us to offer the choicest stock at figures unapproched by dealers.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each 5c.; per doz., 35c; per 100, $2; per 1000, $17.50.

Double Flowers. Each, 10c; per doz., 65c.; per 100, $5; per 1000, $45.00.

Richardia alba maculata. Spotted Calla 45c. per doz.; $3 per 100; $25 per 1000.

Amaryllis Johnsoni. Very large bulbs, 7 to 9 in. and over. $1 50 per doz.; $10 per 100.

Amaryllis Rosea. Large bulbs. 35c. a doz; $2 a 100; $15 a 1000.

Hyacinthus Candicans. Large bulbs, 20c. per doz; $1 50 per 100.

Madeira Vine Roots. 25c. per doz; $1 50 per 100; $10 per 1000.

Cinnamon Vine. Mailing size. 30c. per doz; $2 per 100. Extra size. 40c. per doz.; $2.50 per 100.

Caladium, or Elephant's Ear.

Sound bulbs, with good, live centre shoots.

Caladium Esculentum. 5 to 7 in. in circum. 40c. per doz; $2 25 per 100; $20 per 1000. 7 to 9 in. in circum. 60c. per doz., $3.75 per 100; $35. per 1000. 9 to 12 in. in circum. $1. per doz; $7. per 100; $60. per 1000. 12 in. and up, circum. $1.50 per doz; $10. per 100. **Fancy leaf** varieties, fine assortment, $1 25 per doz.; $7 50 per 100.

Cannas—Dormant.

We are Headquarters.

All leading and popular varieties. Full list on application. 5c. each; 35c. per doz.; $2 per 100; $15 per 1000.

Tuberose Double Pearl.

Bulbs measuring 4 to 6 in. in circumference, extra quality, 75c. per 100; $6 50 per 1000. 3 to 4 in. bulbs. 50c. per 100; $3 75 per 1000, or barrel of 2000 bulbs for $7.

Dahlias.

Whole Dry Roots, Field Grown. Double mixed varieties, dwarf and tall. $5 per 100; $42 50 per 1000.
Double, named, assorted $6 a 100; $55 a 1000.

Cloxinias.

Bulbs of large size, measuring 1½ to 3 in. in diameter.

Finest Mixed. 50c. per doz.; $3 per 100; $27 50 per 100.

Separate Colors. White, red, blue and spotted. 60c. per doz.; $4 per 100.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice-President; S. F WILLARD, Wethersfield, Conn., Secretary and Treasurer.

The Executive Committee of the American Seed Trade Association will meet in Buffalo, at Hotel Broezel, on Thursday, January 25, to arrange the program for the next annual convention, and to decide upon a place of meeting in June next.

European Notes.

How this wearisome season drags its slow length along! Already it is time that some of our earlier sowings had been made, but our time is fully occupied in endeavoring to get the balance of last season's crops into fit condition for travel; while labor on the land has been rendered impossible by the almost continuous rains of the past three weeks. All fear of a water famine is at an end, and the water courses are filled to overflowing. The difficulty in finding accommodation on steamers for your side has become acute, and there seems no probability at present of any amelioration. Rates have also been advanced all round, which makes an inferior service less endurable.

The extraordinary activity in all branches of trade has caused a congestion of traffic on both rail and steamers for European transit; and those houses which have growing arraagements in different countries have been considerably hampered in obtaining possession of their goods. Add to this the fact that many articles, such as capsicum, canna, sugar beet and parsley did not ripen until fully six weeks after the usual time, and a very reasonable excuse for any unusual delay becomes apparent.

As relief to the gloomy picture presented in the foregoing remarks, the enclosed extract from Eckford's new retail catalogue is worth perusal, and will doubtless afford as much pleasure to some of Mr. Eckford's friends on your side as it does to those who on this side have helped to give his unquestionably valuable work a world-wide celebrity:

"The demand for Eckford's Giant sweet peas having increased to such an extent, and having noticed with much regret the hopeless mixture and wrong naming of varieties on exhibition at the principal flower shows in the kingdom, I have decided to grow seed only for my retail patrons, and for future Eckford's seeds are only genuine direct from Wem. It is well known that the cheap foreign seed so freely offered (really, by comparison, dear at any price), is produced in hot countries, lacks constitution, and does not give, by any means, the same splendid results in this country as British grown seed."

Bearing in mind the fact that the sweet pea is a native of hot countries, i. e., Sicily and Ceylon, the cheap sneer at seed produced in hot countries is playing a little low down. EUROPEAN SEEDS.

Our Belgian Letter.

Since my letter of September last the packing and shipping season has passed, and, taken all in all, it was one of the busiest in years. Nearly everything of any value has been sold. There was a considerable shortage in Kentias, in sizes at from 75c. to $1.50 each. Latanias, also araucarias, were in abundance; of the latter the smaller sizes were in greatest demand at from 50c to 75c. and $1.00 each. Araucaria excelsa, ranging in price from $1.50 to $2.00 seem to be ordered in less quantities than in former years. In azaleas, all salable plants have been disposed of, very few fine plants being left for Spring trade. Rhododendrons, especially fancy varieties for pots and forcing, have sold very well; still many thousands of well-budded plants were left over for the Spring, on account of the large quantity budded the past year. It is useful to importers to know that rhododendrons do not set buds so easily as azaleas. When the season is on the rainy side, from July 15 to August, many plants instead of setting bud make a second growth. Such did not happen this year, the Summer being very dry, consequently most rhododendrons are well budded.

On October 6th we had two nights' frost, just enough to kill the azalea buds, which were not covered in time.

Tuberous begonias have been sold by the 100,000 this year, but prices are so low that it is hardly worth the trouble raising this stock.

Most of the exporters have experienced less trouble with the custom authorities this past fall than formerly; still some damage has been reported from parties whose cases were examined by the officers. We here do not see why we should suffer any loss in that direction. We think when the Custom House has the right to inspect the goods it should also be its duty to repack the plants properly and with care. There was much reason for complaint along this line last year.

AUGUST HAERENS.

Publications Received.

The PEACH, compiled by the Kansas State Horticultural Society, Wm. H. Barnes, secretary, Topeka, Kan., tells how to grow your trees; how to plant and care for them; how to fight the enemies of the peach; to gather, pack and market the crop, and how to enjoy peaches in the home.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Sheuandoah, Ia., Vice-President; GEORGE C. SEAGEN, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Augusta, Ga.—At time of my visit to P. J. Berckmans Co. they were in receipt of a large order from Natal, which is not an unusual thing, their foreign shipments being on the increase and domestic business far in advance of anything yet experienced. The demand for fruits and roses is unabated; evergreens also, particularly their specialty, Biota aurea nana—for one may term this plant such—as I understand close upon 15,000 were sold during this season. The extent of range—Jamaica, West Indies to Wisconsin; it also thrives upon Long Island—showing the general adaptability of this handsome conifer to our soil and climate. Another very handsome species is B. filiformis, being, as its name implies, of a filmy form, giving the plant a graceful appearance. Cedrus deodora is another charming conifer; it is unfortunate our severe Winters affect it as they do. Camellias suffered badly last Winter, but were not killed; this season the trees are laden with buds. Hybrid tea roses are grown in vast numbers and variety. The trial grounds are interesting. Out of several hundred varieties but a few of the new sorts are found worth perpetuating. All kinds make exceedingly strong growths, particularly the climbers. The past dry Summer does not seem to have retarded the plants, but has made them stockier, if possible. Every tree is dug with a machine which raises the roots entire with the smallest fibres; they are then puddled in wet clay in a long trough built for that purpose, then wrapped in moss securely tied, thus insuring almost certain success in transplanting.

Among the large assortment of sub-tropical plants raised under glass, crotons, camellias and fancy-leaved caladiums are done fine; the demand for the latter plant for bedding purposes last season was phenomenal and bids fair to increase. I especially noted two kinds, Sieboldi, green, with predominance of red, a very sturdy grower, and Diaharas, green, with abundance of white. There are also many others worthy of note, being highly colored and very effective.

Greater facilities will soon be effected for shipping, the Seaboard Air Line having located a station in the heart of the grounds, a desideratum long anticipated by Mr. Berckmans, Sr., who, I am glad to say, has fully recovered his former state of health and activity. Louis Berckmans has been very ill, but at last reports was on the road to recovery, after a long siege, which news will be received with pleasure by his numerous friends in the trade. W. M.

Standard Hardy Roses.—The value of any saleable article is largely measured by its degree of attractiveness. In the nursery and florist business this will be found to apply quite as much and more than in other businesses. A plant or flower in particularly nice condition appeals to everyone; and if in some uncommon, yet desirable form, it will find more ready sale. I have in mind the training of roses, such as the Wichuraiana and Crimson Rambler in standard form. In the Old World, standard or tree roses are familiar things, but they are not suitable in this country. The Crimson Rambler makes a heavy growth, suitable for making standards without top grafting. But it is the Wichuraiana that particularly suggests itself as very desirable, although its growth is slender, and would require staking. By nature a trailing rose, it can be readily imagined how graceful and charming would be the drooping branches, falling from a stem 6 or 7 feet in height and trailing the ground. The Rambler is already in use as a standard; but it is safe to say the other has not been attempted commercially. In a measure, the Wichuraiana flowers would prove just as attractive, especially the hybrids, with flowers double and colored.

A Choice of Shrubs.—In previous notes I have taken occasion to speak of the desirability of close preparation for Spring trade in relation to the kind of plants he would handle. Very rarely does it pay the florist to grow his own nursery stock, and he must depend largely on the nurserymen to supply his needs. First, then, what kinds can be had, and what kinds will better suit his trade. One of the first things to have a thought for is a selection that will give flowers blooming at different periods throughout the year. Where only a bush or two are wanted it makes little difference to the purchaser, as a rule, when it blooms. But an assortment of eight or ten and upward, should surely cover the Summer in flowering. How seldom is but secondary attention given it. One could quickly name choice Spring flowers, for they are many—the forsythia, showing for its profusion of yellow flowers preceding the leaves, accompanied by the double-flowering almonds, pink and white; the Pyrus japonica, lilacs and nevinsia (this white, fringe-like flower is not yet known as well as it should be); the silver bell, halesia; fragrant bush honeysuckle, its fragrance and lasting green leaves being its chief and great recommendations. Later come the showy white eochorda, the snowball, weigela, mock orange and deutzia; the rhododen-

WANT TO RENT

A range of glass about 20,000 to 30,000 feet, for growing roses and carnations. Houses must be in good condition. Give full particulars. K. G., care this paper.

Mention the Florists' Exchange when writing.

dron and azalea, Spiraæs Van Houttei, Reevesii and Thunbergi. Then follow Spiræas Bumalda and Billardi, both valuable pink flowers. The many varieties of althæa appear in late Summer, in bright colors, filling what would otherwise be a considerable gap. The hydrangea, desmodium and caryopteris, all so different and independently valuable, finish out the season. Just as a number of low growing shrubs are needed, provision must be made to include some of large growth for screening purposes, and the background of shrubbery borders. The following may be named for the purpose: Common and Japanese snowballs, wiegelas, halesia, California privet (makes a pretty specimen as well as a good hedge plant), mock orange, althæa, red-flowered dogwood, Siberian pea, laburnum, smoke bush, lilacs, etc.

Where but two or three specimen shrubs are wanted nothing pleases much better than the following: Spiræa Van Houttei, Japanese snowball, Japanese hydrangea, Desmodium penduliflorum, caryopteris, flowering almonds, weigelas and deutzias. Some with the showiest flowers are not of good appearance, and rarely strike the customer favorably, such as the exochorda, common snowball, mock orange and smoke bush.

S. MENDELSON MEEHAN.

President O. B. Hadwen, of the Worcester (Mass.) Horticultural Society, remarked in his annual address that the taste for shrubs is growing; and this is bound to increase as people see well-planted grounds and learn what can be done in the use of shrubbery.

The New Jersey State Horticultural Society elected the following officers for 1900: President, Henry E. Hale, Princeton; vice-president, W. H. Reid, Freehold; secretary, Henry I. Budd, Mount Holly; treasurer, Charles L. Jones, Newark. Executive Committee—Dr. J. B. Ward, Lyons Farm; E. P. Beebe, Elizabeth; D. A. Vanderveer, Freehold; I. J. Blackwell, Titusville; S. B. Ketcham, Pennington; delegate to the State Board of Agriculture, Jacob B. Conover, Baird, Monmouth County; delegate to National Pure Food Congress, S. B. Ketcham, Pennington. The chairmen elected for the various committees were: Legislative committee, J. B. Ward, Lyons Farm; fruit committee, Charles Black, Hightstown; flower committee, F. C. Goble, Verona; vegetable committee, J. B. Rogers, Newark.

MISCELLANEOUS WANTS.

WANTED, 300 to 500 American Beauty, 50 Testout, 50 Kaiserin, 50 Duchess Albany, 50 E. de Lyon, 50 M. Guillot, all thrifty young 2 to 2½ in. stock Address, with price, Sander's Nursery, 5600 Delmer avenue, St. Louis.

WANTED.

Two hot water boilers, second-hand, in good condition, of 1200 to 1500 feet size. Send price and cut of same. For Sale—One Hitchings boiler of 600 feet capacity, cheap. L. E. HITZ, Madison, Ind.

BUSINESS OPPORTUNITIES.

FOR SALE or rent. A five-room dwelling, barn, small patch of ground, and greenhouse, 20 x 70, partly planted in lettuce and radishes. Florist, Box 761, Muncie Ind.

CHEAP on account of ill health, 6000 feet glass, free fuel; big chance for lettuce or flowers; only $800 cash; balance time. K. J., care Florists' Exchange.

FOR SALE. 400 Geraniums, stock plants, full of cutting, best and latest varieties; 200 Primroses and Cinerarias in bloom, 25 varieties; finest Colens stock plants; 500 Carnations in 5 in. pots; Palms, Ferns, Canna Bulbs, Easter Lilies. Glass, rafters, pipe coils, pots and a Gorton boiler used two winters. The above will be sold cheap. Ed. B. Weber, 400 North 9th street, Reading, Pa.

THE CHANCE of a lifetime.—To let in Newark, N. J., store and four greenhouses adjoining, with a business established nearly 40 years; the whole plant, including store, is heated with Hitchings boilers; trolley cars pass the door every three minutes; small capital only needed, as the business is paying right along. To the right party this is an opportunity that seldom offers. For further particulars apply to Henry Bird, 144 Belleville ave., Newark, N. J.

FOR SALE, very reasonable, the Staatsburgh Greenhouses, one of the finest violet growing plants in this country; the houses are well built with the best cypress wood, glazed with best quality double thick glass, well heated and ventilated; fine supply of water pumped by windmill and steam pump; about 10 acres of fine land, good dwelling house, 8 rooms, well built and heated by hot water; property in center of village, 5 minutes walk from Hudson River R.R. depot. A good chance for one or two live men. I have other interests and will sell very low; the property can be paid for with proper management in 4 or 5 years. Don't inquire unless you mean business. Wm. A. White, Staatsburgh, N. Y.

FOR SALE.

A Greenhouse Plant of 36,000 square feet, situated between two flourishing cities of 37,000 and 166,000 population, respectively. Four lines of electric cars pass the door. Houses are equipped with Herendeen Boilers and have every modern appliance, all stocked with roses, carnations, ferns and all plants pertaining to this business. Will be sold at a great sacrifice, as owner has outside business interests and cannot give Greenhouses personal attention. Address J. V., care Florists' Exchange.

Mention the Florists' Exchange when writing.

California Privet.

Editor Florists' Exchange.

For the purpose of encouraging the growth in the United States of such shrubs for which there is a steady and increasing demand, and which can be grown here as easily as in foreign countries, I desire, in your columns, to call to the attention of the American Association of Nurserymen the fact that large importations of Ligustrum ovalifolium, commonly called California privet, are made yearly, generally being sold as being of native growth, and as this shrub in particular grows here so readily, is comparatively so hardy, so free from infestation, in such great demand, and is being planted so largely by our nurserymen and others, its continued importation is detrimental to the interests of the nursery business, and I therefore bring to your notice this fact, hoping that you will bring to bear your influence on Congress to increase the tariff sufficiently to make impossible its further importation.

California privet is as yet comparatively but little known ontside of the States bordering on the Atlantic. The demand for it therein has increased very largely during the past few years, and for private grounds and large estates it is conceded that there is no other shrub to approach it for ornamental purposes in hedges, clumps, etc., and all landscape gardeners are compelled to use it to a large extent in laying out and adorning grounds. It is also being largely used to beautify small city lots, and the time may be expected when most of them will have a hedge around their borders.

California privet is propagated from cuttings taken in the winter or early spring before growth commences. The cuttings are usually about seven inches in length, and planted in rows about five inches apart and as early in the spring as possible. They are generally allowed to callous, although at the seashore they can be planted at once, if not cut until spring, as they grow readily. It is common to cultivate the growing plants the first year by hand, and when this is done, as they are planted in rows, it will be seen that a great many can thus be raised the first year on one acre. A plot of ground 120 feet wide and 363 feet long contains an acre, and 87,000 cuttings can be planted on it, and as not one-half of one per cent. of suitable cuttings fail to grow, at the end of the fall season, the planter has over 86,000 year-old plants, superior to the imported one year old. Plants of this age are generally sold to nurserymen for planting out, and there is a steady demand for them, otherwise there would be no profit in importation. Of course most nurserymen raise their own year-old plants.

For planting hedges the two-year-old plants are mostly used. To obtain these it is considered necessary to take up and replant the one-year plants. These are set out in rows about eight inches apart, and the rows just far enough apart to admit running a cultivator through, giving the same cultivation as for potatoes. When thus planted, they are all cut down to within about four inches from the ground. The transplanting gives them better roots and the trimming causes them to grow more stocky. Set out in this manner, it will be seen that our 86,000 and odd one-year plants will take up the room of about three and a half acres, and in the fall the planter will have that number of two-year-old plants suitable for ornamental hedges, etc., the market value of which now is $30 per thousand on the average, equal to $2,580 for less than two years' planting, cultivation and sale from one to three and a half acres of land. I have known farmers to sell out their plants standing in the field at price named. About eight years ago they brought $50 to $75 per thousand. Importation has reduced the value.

I think what I have shown will justify an increased rate on imported stock and should indnce our nurserymen to increase their plantings.

JAMES H. CORNELL.

Chicago.—The Florists' Club tried conclusions with the Summerdale League Club, of which the Stollery Bros. are members, and got beat by a total of 111 pins. The following are the scores:

	1	2	3
Asmus	140	182	143

The National Florists' Board of Trade intimates that on and after March 1 next the Board will withdraw the offer made by Secretary Loder to the members of the S. A. F., at the Omaha meeting, setting forth that the Board would accept from members of the Society of American Florists, who were in good and regular standing, their subscription to the Monthly Credit and Information List, issued by this Board, at the rate of $8, or in other words, $2 less than the regular subscription rate, which is $10 per annum. This is the result of so few S. A. F. members having taken advantage of the offer. It is further stated that present members of the Board, whose subscription expire before December 1, 1900, will be permitted to renew at the reduced rate.

New York.

Market Notes.

There is a slight improvement in the general tone of the market, and flowers are clearing out somewhat easier than they did one week ago. With the enormous quantities of stock that arrive in this city every day, it is almost an impossibility to clear out daily, and when mention is made in this column of certain stock being sold at ridiculously low prices in one thousand lots, it most usually refers to flowers that have been left over in the hands of the dealers when the supply has been in excess of the demand.

High grade roses are disposed of without much trouble; in fact, that is a condition which prevails most of the time in this market, and although we often have to refer to an overstocked condition, in nine cases out of ten it applies only to the cheaper grades. The grading of roses is rather complicated, under present conditions, and no doubt it will always remain so, for what one grower terms a No. 1, another might call an extra or a No. 2.

As we said before, the special and extras find ready buyers, as a rule, but grades one and two are always the most plentiful and have to be sold at prices more in proportion to their numbers than to their relative values to the better grades. We find this week, for instance, that special Bride and Bridesmaid have ranged around 12c. and 15c. each, while No. 1 has been at from 4c. to 6c., and No. 2 at 2c.

Carnations have done better than last week, that is, there have not been so many carried over from day to day, and prices have stiffened just a little.

White lilac has become plentiful all at once; this stock is handled in bunches only, and as these are of variable sizes the price ranges from 75c. to $1.

Freesias also are plentiful and the quality is very variable; from 10c. to 25c. per bunch is the asking price. Tulips are coming in regularly, and the red varieties have brought the highest figures thus far. There is a fair demand for lily of the valley, and there is plenty in the market, consequently the lower quoted prices prevail when large quantities are needed.

Smilax is rather a drug this week, but other greens, such as asparagus and maidenhair fern go fairly well.

Among the retailers business shows a slight improvement, and, from now until Lent, a brisk demand is anticipated. Cinerarias are to be seen at a few stores, but this plant appears to be losing favor every year. Fern balls are a valuable aid to a window display when suspended from the ceiling, and they are also proving good sellers.

Theo. Lang has quite an assortment of different designs hanging in his windows, and they add greatly to the general effect.

In C. A. Dard's window an arch composed of cattleyas and ferns was an imposing feature this week.

M. H. Beumont, late of Cleveland, O., is with J. Fleischman, corner 25th street and Broadway.

Jottings.

J. K. Allen, wholesale commission dealer, No. 57 West 28th street, will open a new store at 106 West 28th street, on or about February 15. The old stand, at No. 57, will be retained until May 1, though after February 15 business will be transacted chiefly at the new quarters, which are very suitably located (a few doors west of Sixth avenue), and present increased facilities for handling Mr. Allen's immense consignments of flowers.

The New York Gardeners' Society met last Saturday evening at the Grand Central Palace. It was decided to hold future meetings quarterly and to give a carnation show in March (possibly in conjunction with the American Rose Society's exhibition). C. W. Ward made the generous offer of a silver cup to be competed for at this exhibition.

Mrs. J. B. Nugent, mother of Mr. Nugent, commission dealer, died Thursday, the 11th inst. The funeral took place on Sunday last.

Mrs. Ernst G. Asmus suffered a painful accident a short time ago by falling from a chair.

Peter Fisher, of Ellis, Mass., and Mr. Rowland were visitors this week. There was also a goodly number of out-of-town friends here to attend the club's annual dinner, the names of whom are enumerated elsewhere in these columns.

The store of Stumpp & Walter was closed Monday, owing to the funeral of Mrs. Phelan, a sister of Mr. Stumpp, who died Friday last, January 12.

Lehman Bros., 10 Bond street, report an increasing demand for their wagon heaters among the florists. This article is effective in keeping the temperature of wagons high enough to prevent the freezing of plants, it is neat, economical, and takes up very little room, and the patent fuel used does not give forth smoke or gas. The new design is an improvement on the one sent out last year.

John Lassen and E. Wagner have begun business at 513 West 25th street, under the firm name of Lassen & Co. They will handle a general line of decorative supplies for florists.

Philadelphia.

Business A-gley.

Something appears to be wrong; here we are in the middle of January and everyone in the trade that you meet says business is quiet. Some stores certainly are doing a fair trade, but no one is rushed or working overtime. The condition of the flower market is about as last reported. It is true, not nearly so many flowers are coming in, but the stores are buying slowly, and shipping orders are few. There appears to be a fair amount of work going on—many large dinners, several balls and smaller entertainments—this week; but the flower market does not feel these events, and if flowers are used in connection with them it must be in small quantities.

The latest in dinner-table designs is to have the table laid out as golf links. Jas. Kift & Son had such a decoration this week, and the results obtained were very pleasing.

Ladies' Night at the Club.

Next Wednesday evening will be "Ladies' Night" at the Florists' Club room, and a very enjoyable time is anticipated. There will be a short concert, then light refreshments, and after that bowling and shuffleboard contests for the ladies. Don't miss it, or you will be sorry.

Jottings.

Mrs. Hugh Graham died on Tuesday night, after six weeks of very severe illness. Much sympathy for the bereaved family has been expressed by the trade.

H. Baydersdorfer & Co. have for some time past been robbed of tinfoil, and last Friday the affair was unearthed. The street fakirs had formed a combination, and had drawn into the scheme a boy in Bayersdorfer's employ, who took the foil out one and two pounds at a time and delivered to his partners in the scheme. Now some six or seven of these parties are held for court.

DAVID RUST.

CHARLOTTE, N. C.—E. I. Bush has added one rose house, 100x20 feet, and intends taking advantage of the drop in price of glass to build more. The demand for cut flowers is so encouraging; and he runs his plant well. W. M.

CARNATIONS

STRONG PLANTS FOR SUMMER BLOOMING.

New Ever-blooming Geranium

AMERICA

SEEDLING OF MARS.

An Ideal Geranium for pot culture and bedding It is of a stronger growth and larger foliage than Mars, retaining the dwarfness and floriferousness of that parent. On opening the flowers are white with salmon center; once open they shade through all salmon and rose tints, until they become deep, pure rose, when fully open. As all color shadings appear at one time on each truss, the effect is unequaled in the class of geraniums. The trusses are as large as Mrs. E. G. Hill, under good culture. This variety will become even more popular than its parents. **50cts. each; $5.00 per doz**

MARS 2¼ inch pots, $5.00 per 100. CASH, PLEASE.

Cincinnati.

Market News.

City trade is not rushing, owing to the extremely bad weather experienced during the past week—rain most of the time, intermingled with snow. Shipping trade remains very good, and we now have plenty of stock to fill all orders, with the exception of Beauty, and Bridesmaid, the supply of both of which is not equal to the call. This market can use more good quality roses of all kinds. Carnations are quite plentiful, and of good quality, selling at prices ranging from $1.25 to $4 per 100. Good medium stock brings from $1.50 to $2. Bulbous stock is not called for much at any price; good Paper White narcissus sold this week at $1 per 100; Romans at about the same figure. The dark weather will reduce the cuts of roses and carnations, and prices of bulb stock will probably advance to 2c. Lily of the Valley still sells at 4c. A few Trumpet Major narcissus are coming in and fetch 3c. Harrisii is to be had at 10c.

Club Meeting and Exhibition.

The regular monthly meeting and exhibition of the Florists' Society occurred Saturday afternoon. It was strictly speaking, a "violet exhibition," and the exhibits staged were very creditable indeed. Corbett & Wilson won the first prize, $10, for best general display, having four varieties staged in quantity. The new violet, Imperial, introduced by W. L. Minor, of Brockton, Mass., is the best double I have seen; it carries a flower that will cover a half dollar, has fine color and long stem. Mr. Corbett tells me this variety is very free from disease. Crabb & Hunter, of Grand Rapids, Mich., won second prize, with a nice, clean exhibit, but they lacked in quantity. J. A. Goldman secured third prize with a still smaller quantity.

The seedling carnations exhibited for certificate, comprised two kinds, sent by R. Witterstaetter—Elinore, white, which scored 85 2-3 points; Opal, pink, scored 74 points. Crabb & Hunter's Irene, a dark pink, on the order of Bridesmaid, scored 83 points. Irene is not a fancy sort, but it is a commercial variety, one that will produce dollars and cents. I consider a flower of this kind far more valuable to the general florist than a fancy sort. I believe Ethel Crocker is another of this kind, also Witterstaetter's Estella, scarlet, and Elinore, white. Mr. Witterstaetter's display of carnations was a most creditable one and comprised the following sorts: Estella (scarlet), Enquirer (striking shade of pink), No. 555 (a large white), Opal (cerise), Melba (light pink), Roslya (dark pink, very large), G. H. Crane and Elinore, a good sort, fine stem and calyx, size, substance and fragrance.

Henry Renke, gardener for A. T. Goshorn, staged a nice bunch of Marie Louise violets.

The prize offered by Hon. Albert Fisher, for four plants cyclamen, was not competed for. George & Allan won all the prizes for roses. They also had on exhibition Scott, Flora Hill and Jubilee carnations, and lily of the valley. The prizes offered for commercial carnations won out as follows: Pink, Melba, A. Sunderbruch's Sons; varicgated, Bradt, same exhibitor; white, Flora Hill, W. K. Partridge; red, Crane, same exhibitor. Much has been said regarding the deterioration of Flora Hill, but if the readers could have seen the vase staged by W. K. Partridge they would be willing, at least, to think, if they did not change their minds. The stems were good, and viewed from every point this was a very handsome vase of flowers. When I asked Mr. Partridge how he did it, he replied that he took his cuttings only from the most vigorous and healthy plants, and that his whole stock is in fine form. If others would be as careful in selecting their cuttings there would, I think, still be no cause for complaint with Flora Hill. He also had two vases of the now

ROOTED CUTTINGS AND DAHLIA ROOTS

All stock enumerated below sold with the express understanding that if not satisfactory they are to be returned at once, when money will be refunded.

At 100 rates rooted cuttings will be shipped prepaid; at 1000 rates at purchaser's expense by express. **25 of a kind will be sold at 100 rates; 250 at 1000 rates.**

CARNATIONS ROOTED CUTTINGS

Our stock of Carnations is free from stem rot and other disease, and in a healthy, vigorous condition. Flora Hill leads here as a white, doing better than ever before, and entirely free from stem rot. Genesee is a little later than Hill, and is at its best when Hill is off crop, and a good one, we find, to grow with Hill. If you have a warm end to your carnation house with a night temperature of 58 to 60 degrees John Young (or White Scott), will be a good one to plant, as it gives a shower of large, full flowers, on long stiff stems, if grown warm.

celebrated rivals, G. H. Crane and America; these were exceptionally well done, and it would simply be a matter of choice in color to say which is the best; both being good and decided acquisitions to their class. Other flowers of special merit staged for display by Mr. Partridge were Bride and Bridesmaid roses; Jubilee, Scott, Bradt, Gold Nugget and White Cloud carnations; Primula obconica fimbriata grandiflora (this is a beautiful flower and should be more largely grown by florists; for funeral work especially it holds well and adds very materially in finishing set pieces). Mr. Partridge's display was awarded special mention by the judges.

Wm. Murphy had his usual good showing of carnations. I noticed in his collection a very pretty lot of Helen Keller, a variety that has almost been lost sight of.

Jottings.

Chas. Schweizer was robbed of some flowers at his greenhouses Saturday night, January 13. The thief has been caught and jailed.

Our next show will be a rose exhibition, on February 10.

AZALEAS FOR EASTER

ALTHOUGH our stock of Azaleas this season is larger than ever, we strongly recommend early orders. Many of our customers were disappointed last year in not being able to procure stock several weeks before Easter, and we have taken more than ordinary precautions to prevent a repetition of this the coming season, but all indications are that the demand this year will be greater than ever; besides this the plants can be transported with so much greater satisfaction while they are still in a semi-dormant condition, that this point alone should be sufficient to induce early orders, for no matter how carefully packed the plants are certain to receive some check when turned out of pots after the buds have developed, and we assume no responsibility for injuries arising from late shipments.

We can still supply full assortments in the following sizes:

	Inch Diameter.	Per Doz.	Per 100
5 inch pots, nice bushy crowns.....	10 to 12	$5.00	$40.00
5 and 6 inch pots, nice bushy crowns.....	12 to 14	6.00	50.00
6 and 7 inch pots, nice bushy crowns.....	13 to 15	9.00	70.00
7 inch pots, nice bushy crowns	15 to 17	12.00	100.00

ALSO A GRAND LOT OF SPECIMEN PLANTS OF

MME. VAN DER CRUYSEN of exceptionally good value, at $1.50, $2, $2.50, $3 and $5 each.

C.—Treats on the imported elm leaf-beetle, the white-marked tussock moth, and the Fall web-worm, with suggested remedies. The bulletin is fully illustrated.

Our Prize Competition.

We have pleasure in announcing as under, the names of the successful competitors in the contest recently inaugurated by the FLORISTS' EXCHANGE, looking toward the improvement of the service to be rendered by this journal to its subscribers in the year 1900.

The comparatively limited number of competitors, although disappointing at first sight, on second thought furnish the comforting yet silent assurance that the efforts of the FLORISTS' EXCHANGE, as now put forth, stand in little need of improvement, being satisfactory to the great majority of our patrons. We, however, thank those gentlemen heartily who think they see room for betterment and who have provided us with ideas which, in their opinion, will serve to make up the existing deficiency.

Many of the views submitted were unfortunately impracticable, for reasons that need not be explained; others were beyond our control to adopt, while those which we are able to take up and put into practical operation have been adjudged by the publishers as entitled to our most serious consideration.

In instituting this competition we were impelled by an earnest desire to make the FLORISTS' EXCHANGE of the greatest possible utility to its patrons—subscribers and advertisers—to inject, if possible, a little diversity of subjects and methods from those now appearing and prevailing; to keep as far as we could, and as has always been our endeavor, out of the ruts and at the top; and while our Question Box plainly indicates "if you don't see what you wish, ask for it," and is largely taken advantage of, we were of the opinion that better results would ensue from individual effort, stimulated somewhat by a prize offer; reversing our positions as it were, and making our readers their own purveyors, for the time being; for it is only by each one announcing his wishes that his tastes can be ascertained. As before intimated, we are gratified at the comparative fewness of the competitors, a fact which we accept as the handsomest testimonial we could receive. We acknowledge the assistance rendered on this occasion, and that our patrons will profit therefrom we believe future issues of the FLORISTS' EXCHANGE will testify to.

The four gentlemen submitting the most valuable suggestions are as under, and to whom we have pleasure in making the awards:

FIRST PRIZE—A $10 Gold Piece.—Chas. E. Nealy, 193 Lincoln street, Greenhill Conservatory, Worcester, Mass.

SECOND PRIZE—A $5 Gold Piece.—Samuel Batson, Kalamazoo, Mich.

THIRD PRIZE—A Copy of "The Water Garden."—Grove P. Rawson, Elmira, N. Y.

FOURTH PRIZE—A Copy of "Commercial Violet Culture."—Chas. Johnson, 1226 Spruce street, Philadelphia, Pa.

And, gentlemen, we once more thank you.

A Living Profit.

In glancing over some of the early reports of the American Carnation Society one comes across remarks in the papers then read that, although they were at the time passed over without full discussion, would seem to tend more to the real welfare of the members of the society, and the carnation industry generally, than some of the subjects dealt with in later years. There is a proneness in our societies to dwell upon a discussion of cultural methods year after year, and to neglect the very important problem of the disposition of our products, i. e., how this can be done to best advantage. A bugbear, in this as in most every other business, is the pernicious practice of cutting prices. Much of this is due to an erroneous conception of sound business principles; a habit, when simmered down to a fine point, which is as unnecessary as its retarding influence to the welfare of all concerned is harmful. We quote from the paper of James G. Hancock, of Michigan, read by him before the Carnation Society at its initial meeting in New York, in 1891, the following significant passages, and ask for them the earnest consideration of every carnationist, and for that matter, every plantsman, doing a wholesale trade:

"In the subject of rooted cuttings of carnations it may not be out of place to consider if the business principles applied in other branches of industry might not apply here. Can the florist who roots carnations by the hundreds of thousands produce cheaper than the one who produces only a limited quantity? In either case can the limited grower or the extensive one afford to place his products upon the market at prices which will not allow of a fair profit? A little experience of mine might not be out of order right here. Very early in the season some growers quoted prices lower than I could afford to sell, properly valuing my stock. After debating some time as to whether I should adopt the motto, 'I shall not be undersold,' or whether I should ask a fair price, I decided upon the latter, sold my entire stock of the varieties in question, then bought more from the Atlantic Coast, paying high express rates and reshipped again to the East, still making a small margin."

A business sermon in a few words; lay it well to heart.

And, again, from C. W. Ward's paper on "Business Methods," read at the same meeting of the Carnation Society: "You should never engage in an injudicious cutting of prices below market values, in hopes of increasing your business or getting an undue advantage of your neighbor. The most foolish thing a grower or dealer can do is to attempt to run out his competitor by selling goods below cost. This, with the improper extension of credits, has ruined more business houses than any other cause."

In connection with the foregoing, read also Mr. Ward's most interesting communication on the subject of "A Living Profit and a Living Wage," appearing elsewhere in this issue.

It seems to us these topics will bear further discussion, both by the Carnation Society and the trade generally. Send us your views.

A Census of Floriculture.

Owing to the fact that the statistics of the florist business which the Census Office requires relate almost entirely to the year 1899, a plan has been formed for taking an early census of floriculture by mail, on special schedules, and to tabulate and publish the returns thereof early while other branches of the great work of enumeration are in progress.

There are approximately 10,500 florists in the United States. The names and addresses of a majority of them have been secured and classified by the Division of Agriculture in the Census Office, and each known proprietor will soon receive a copy of the special schedule devoted to this interest. It will be accompanied by a list (so far as ascertained) of all the florists in his section, to be by him corrected, added to and returned to the department for use in making the record complete and reliable.

This special schedule is not elaborate or complicated. It may be filled out easily and quickly by any florist who keeps a reasonably accurate run of his business. It asks for the (1899) acreage devoted to floriculture, and of each crop or variety of plants and flowers; the total area in square feet under glass, and the area of each crop or variety of flower or plant raised thereunder; the number of persons employed and the total wages paid to them; the amount expended for catalogues, postage, and fertilizers respectively, and the gross receipts from the sales in each sub-division of the business.

No private individuals will be permitted to have access to the schedules after they have been filled out and returned, nor will the names of persons or firms giving information be published in the census report. Figures only will be used and published, and the entire process and record of gathering information will be confidential.

As the law requires the regular enumerators to obtain certain information as to tenure, value, etc., during their visits in June, the next Census of Floriculture, if the florists themselves shall be prompt and conscientious in filling out and returning the special schedules soon to be sent to them, will be the most perfect in history.

The trade will be put to no expense, as the necessary stationery, with envelopes properly franked, will be provided for its use.

Annual Dinner of the New York Florists' Club.

About ninety people assembled in the dining hall of the St. Denis Hotel, 11th street and Broadway, New York, on Wednesday evening last, to participate in the thirteenth annual dinner of the New York Florists' Club. The guests included the president and members of the Executive Committee of the Society o American Florists and Ornamental Horticulturists. The tables were elegantly decorated by some of the choicest plants and flowers obtainable at this season, the work being performed by W. 1. Brower in his usual masterful manner. A list of the donors is subjoined. The menu was of the high standard for which this hostelry is famed. An orchestra provided charming music throughout the whole of the proceedings.

President O'Mara occupied the chair and John N. May acted as toastmaster in their wonted able style. Mr. O'Mara, in a few well selected words, welcomed the visitors and extended the hospitality of the club. He said it was very seldom that the president of the New York Florists' Club had the pleasure of looking down such a board as was there that night, something which augured well for next August in connection with the grand horticultural show and trade exhibit, and, he trusted, the greatest convention of the S. A. F. O. H. ever held. (Applause.)

Mr. May read letters of regret, for inability to be present, from ex-presidents S. A. F., Gude, Jordan, Norton and Anthony; also from R. G. Homer, J. M. Keller, Henry Hobart, John H. Starin, Ernst Asmus (who was detained on account of an accident to Mrs. Asmus), and F. W. Bruggerhof. In introducing President Wood of the S. A. F., Mr. May referred to the commemorative character of the dinner, which was the last the club would hold during the present century. He wished an era of success for all present during the year just entered upon, and for many more to come.

President Wood, who was received with great applause, adverted to the very harmonious meeting of the Executive Committee, the work of which was all but completed at that time. The officers of the S. A. F. are going to use their individual efforts in making the convention in New York not only the largest, but the grandest the S. A. F. has ever seen. He saw indications around him that the New York Florists' Club would also do its share in bringing the next meeting of the society to a successful termination. Referring to the committee on Co-operative Purchase, Mr. Wood stated that it had now been established on a firmer basis than ever before, and while all were not satisfied with the exact condition of it at present, still, it was going to exert a creative and stimulative influence in the S. A. F., to the membership of which, he believed, there would be a large acquisition the present year. Touching on the homelessness of the society, the president remarked that he wanted to see a home established for the S. A. F. O. H. in the great city of New York, that "would cost not less than $1,000,000 above the ground," and he hoped that a committee would be appointed to commence work, and see what could be done during the year; a statement which was received with great applause.

The next toast was "Horticulture on the Schuylkill Fens," which was replied to by Wm. K. Harris, of Philadelphia. He made a very humorous speech. Robert Craig, of Philadelphia, replied eloquently to the toast of "The American Rose Society," touching on the sentimental side of the rose, and also on its commercial aspect. He gave a brief sketch of the history of the Rose Society, stating that 50 of the leading rose men in the country had already identified themselves with the movement, and urged the necessity of every one interested in the rose joining the society's ranks. "We ought," he said, "to have 5,000 people in this country who will pay three dollars a year willingly to inaugurate this movement." Mr. Craig referred to the useful work which the National Rose Society of Great Britain is doing in the dissemination of helpful information concerning the rose and its culture. This is accomplished by means of a year book furnished to the members. This book contains the latest and best thoughts in connection with rose growing. He believed that there was room for the publication of a rose journal in this country under the auspices of the American Rose Society, in order to secure the greatest benefit to its members; but it required money to do this, and there-

fore an increased membership was particularly desirable. He spoke of the forthcoming exhibition of the Rose Society, to be held on March 27 of this year, in the Eden Musee, New York, and dwelt upon the necessity of the greatest variety of roses possible being shown at that time. He believed that although the American Beauty had supplanted the hybrid varieties, which heretofore had been grown extensively, the latter should receive more attention from rose growers than is now the case.

The next toast bore the rather unique title of "Saints and Sinners," and was replied to by J. D. Carmody, of Evansville, in his usual felicitous style. He dwelt lovingly on the numerous "earthly saints" which the State of Indiana had given to the country, both politically and commercially, mentioning the names of Hill, Dorner and others in the floricultural line. His idea of a saint was one who has made the world better in some respect by having lived; therefore all florists were saints on that account. A Southern anecdote was a fitting peroration to his speech.

Ex-President W. N. Rudd replied to the toast "The Prairie State and Horticulture," mentioning his first experience in connection with the trade. In the course of his remarks Mr. Rudd called attention to the fact that in the endeavor to advance the interests of what he called "the other little dinky societies," those of the mother society should not be forgotten, and he made an eloquent appeal for the support of the S. A. F., predicting that Mr. O'Mara would be its next president, and that the convention for 1901 would be held in the City of Chicago, because when Chicago went for anything she wanted she generally got it, and "don't-cher fergit it."

The toast "Horticultural Sports," was the one alloted to John Westcott, of Philadelphia. Mr. Westcott entered into the subject with his usual enthusiasm, and demonstrated that sports, such as bowling and shooting, were necessary concomitants of the meetings of the Society of American Florists. He stated that the Philadelphians were coming to New York in August next in larger force than ever before, and that if there were any trophies for shooting or bowling in sight that had not silver cords attached to them, the Philadelphians expected to have them. (Laughter and applause.) Mr. Westcott traced the origin of the Gun Club to Mr. Lonsdale's having shot a crow in Philadelphia; the origin of bowling was unfortunately lost.

John P. Cleary then gave a recitation, "Fagin's Soliloquy," and also a rendition on the piano. Arthur Herrington, of Madison, N. J., vice-president of the New York Florists' Club, replied to the toast of "Ornamental Horticulture," dwelling somewhat on the recent attachment to the title of the S. A. F., which he characterized as "a tail to the tailless horse." He thought the cognomen as it now stood was absurd, and that the name "florist" was all-embracing.

"Beantown Kopjes" was the subject allotted to Wm. J. Stewart. He treated it in his usual style, and assured his hearers that horticulture was flourishing in Boston, and that that city would be heard from in August. C. W. Ward replied to the toast of "The American Carnation Society," paying a high tribute to the recent acquisition in the carnation No. 666. Mr. Ward wanted it to be generally understood that there was no rivalry between the Carnation Society and the Society of American Florists. He believed that every member of the former was also a member of the latter, and if there was any carnationist not now a member of the Society of American Florists, he would do his best endeavor to have him straightway join.

"The City of New York" was the theme assigned to John Morris, who eloquently dilated upon the greatness and grandness of the Empire City, touching upon the huge welcome that would be extended to the delegates next August. Mr. Morris's words were loudly applauded.

Joseph Forsyth Johnson replied to the toast of "Suburban Horticulture." He stated he had dined with princes, dukes and lords, but the present dinner was one of the grandest and most enjoyable he had ever attended. He made an earnest appeal for more extensive cultivation of the monthly roses for garden purposes, dwelling on their magnificence and beauty, and the lengthy period in which they could be had in flower.

Charles F. Plumb then rendered "Love's Sweet Song" in a very acceptable manner. "River and Prairie Horticulture" was replied to by J. F. Sullivan, of Detroit. Mr. Sullivan wished the Florists' Club great success in connection with the work it had in hand, associated with the S. A. F. meeting. Benjamin Durfee, of Washington, made a few remarks on the future of the florist business in America, of which he took a very optimistic view. J. Austin Shaw read one of his original poems, a parody on Poe's "Raven," and entitled "The Rooster," in which he made some humorous references to the members of the Executive Committee and those of the Florists' Club.

Votes of thanks were tendered to the donors of the flowers and plants used in the decorations, and also, by the visitors, to the New York Florists' Club for its hospitality.

Among those present from outside were E. M. Wood, Warren Ewell, Fred. Mathieson, of Boston; Benj. Durfee, of Washington; Peter Duff, Orange; W. Duckham, Madison; Wm. Turner, Tarrytown; J. F. Sullivan and G. A. Rackham, Detroit; Messrs. Harris, Westcott, Cartledge, Burton, Lonsdale and Craig, of Philadelphia; W. N. Rudd, of Chicago; W. J. Palmer, Buffalo; J. D. Carmody, Evansville; E. H. Cushman, Euclid; W. W. Coles, Kokomo; F. R. Newbold and W. G. Gomersall, Poughkeepsie, James Dean, Freeport, L. I., and J. A. Pettigrew, Boston.

The list of donors and their donations included: Cattleyns from Lager & Hurrell, Summit, N. J., heaths and azalea, Anton Schultheis, College Point, L. I.; cypripediums, W. A. Manda, South Orange, N. J.; carnations from J. H. Taylor, Bayside, L. I., and J. G. Esler, Saddle River, N. J.; white lilac from C. W. Ward, Queens, L. I.; anthuriums and oncidiums from H. A. Siebrecht; Liberty rose from Ernst G. Asmus; mignonette from C. H. Allen, Floral Park. Carnations No. 666 and J. Whitcomb Riley from Dailledouze Bros., Flatbush; mignonette and Olympia carnations from John N. May, Summit, N. J.; asparagus from W. H. Siebrecht, Astoria, L. I.; cattleyas and cypripediums from A. Herrington, Madison, N. J., mignonette from Rudolph Asmus, New Durham, N. J.; bignonia cut sprays from David Gindra, Poughkeepsie, N. Y.; mignonette from R. McMillan, and galax leaves with other Southern greens from H. A. Bunyard.

The Executive Committee at Cottage Gardens.

On Thursday afternoon, 18th inst., the members of the Executive Committee S. A. F., and invited guests, to the number of twenty, were entertained to a dinner by Mr. C. W. Ward, at his home, Cottage Gardens, Queens, N. Y. Before the function an instructive tour of the greenhouses was made, and much information gleaned by the visitors as to the success of the sub-irrigation system, now in operation here, the many promising seedlings inspected, and much praise bestowed on the thriftiness and general air of prosperity and progressiveness which marks this large, modern establishment. A unique menu card was retained by the guests as a souvenir of a most enjoyable occasion. After the dinner, the Executive Committee held its final session, closing up the unsettled matters of its three days' meeting, and adjourning until next August.

CATALOGUES RECEIVED.

ALLEN L. WOOD, Rochester, N. Y.—Wholesale Catalogue of Small Fruits.

MCGREGOR BROS., Springfield, O.—Wholesale Price List of Plants for Florists.

J. H. H. BOYD, Gage, Tenn.—Price Lists of Tree and Shrub Seeds and Forest Seedlings.

C. W. EICHLING, New Orleans.—Illustrated Seed and Floral Catalogue. Everything for the Southern Gardens. A very complete catalogue.

THE GOULDS M'FG. Co., Seneca Falls, N. Y.—"How, When to Spray, and What Pumps to Use," contains valuable information as to formulæ for insecticides.

T. W. WOOD & SONS, Richmond, VA.—Descriptive Catalogue of High-Grade Seeds and Guide for the Farm and Garden. Contains a planting calendar and a list of novelties.

JOHN N. MAY, Summit, N. J.—Wholesale Trade-list of Roses, Carnations, Chrysanthemums, etc., including all the newest and best. A neat, well-printed, and finely illustrated catalogue.

HENRY F. MICHELL, Philadelphia.—Illustrated Catalogue of Seeds, Plants, Implements, etc. Contains a very complete list of novelties. Illustrations of Michell's mammoth strain of sweet peas, and of the "Superfine" flowering cosmos, make handsome covers for this pamphlet. Also Wholesale Price List of Seeds, Bulbs, Plants, etc.

J. M. THORBURN & Co., New York.—Annual Catalogue of High-Grade Seeds, Plants and Implements. A very comprehensive catalogue, important features of which are the condensed cultural directions for various subjects; also tables setting forth the hardiness, color, height, time of flowering, etc., of many of the plants offered. A color-plate of the new Salvia splendens, "Silverspot," accompanies the catalogue. A practical pamphlet in the strictest sense of the term.

HENRY A. DREER, Philadelphia, Pa.—Garden Calendar for 1900. A handsome publication containing a full list of novelties in vegetables, flowers and plants, with very comprehensive enumerations of standard kinds, embracing full collections of aquatics and greenhouse plants not generally catalogued. The covers are beautifully embossed, giving life-like representations in color of royal exhibition pansies and the new single dahlias. Also Dreer's Quarterly Wholesale Price List of Seeds, Decorative and Hardy Plants, etc.

Rusts of Horticultural Plants.

Professor Byron D Halsted of the New Jersey Agricultural College Experiment Station, New Brunswick, N. J., delivered a lecture before the Massachusetts Horticultural Society Saturday morning last, January 13, on "The Rusts of Horticultural Plants." After introductory remarks he said in part:

Let us go to the vegetable garden and select one rust there for a brief consideration. That of the asparagus will perhaps be most to our interest, as it is very destructive, a new comer, and has certain points of importance not previously mentioned. It was in August, 1896, that the first specimens of American grown asparagus rust came to my notice, having been brought to the New Jersey Experiment Station with the statement that the beds from which they were gathered had ripened prematurely and the condition was alarming. A circular, stating the nature of the trouble and suggestions for preventive measures, was sent to the agricultural press and to all experiment stations, and from these sources it was determined that the asparagus rust was seen that year for the first time in New England, Long Island, New Jersey and Delaware. In 1897 it spread along the Atlantic coast as far south as South Carolina, where it became a genuine source of alarm in the large asparagus fields around Charleston. In 1898 the disease spread westward as far as Michigan and southward to Georgia. During 1899 Ohio, Indiana, Illinois and Kansas have been added to the infested area, and within the past month it has been reported from North Dakota. From recent personal observations in the field it has been found that the infection is aerial and not through the roots. This leaves it easy to see how the disease may be carried for long distances by the wind. It has been frequently observed that a bed of asparagus standing alone and surrounded by forests is much less likely to be badly rusted than those in the full open.

The asparagus rust fungus (Puccinia asparagi D. C.) introduces us to a species of rust which, while having its full list of forms, namely: teleuto, accidial and uredo stages, has them all upon the same kind of plant, and therefore its spread is in no sense dependent upon any other host. The cluster cup stage has not been at all common in America, but wherever occurring has been upon plants in the fence row or upon uncut beds. When an ordinary plant is first attacked the genuine yellow rust is only in evidence, but shortly after in the same pustules the darker final spores are developed, and in this stage the fungus hibernates. There are many sides to a question like that of spraying with fungicides. The asparagus has a different foliage from ordinary plants; in fact, the brush is made up of needle-shaped branches with a very smooth surface, to which the Bordeaux mixture does not closely adhere. More than this, the tips of the branches are so fine and delicate that they are burned to some extent by the ordinary mixtures. From various experiments in spraying the conclusion seems warranted that spraying with the standard Bordeaux mixture is not entirely satisfactory.

The chief information of value in connection with the study of the asparagus rust in New Jersey has been the determination of the greater resistance of the Palmetto variety, and also of a French stock, grown as yet only in a very limited extent. Growers are noting the good effect of clean, high culture upon the vigor of the plants, and are using considerable quantities of commercial fertilizers, particularly nitrate of soda, to produce a strong growth of top that insures a crop when the absence of it might result in a failure. Asparagus growers are working for a more vigorous but shorter life of the bed and a better rational treatment generally. There is a hope of a natural enemy coming upon the rusts and checking them. There are insects that feed freely upon the spores and sometimes clean out the minute pustules of their dusty spores. Certain species of fungi are parasitic upon the rusts, and in the study of the asparagus rust two were met with, one of which (Darluca filum, Cast.) was so abundant as to make it possible that it will prove a material check to its fungus host and possibly remove any anxiety connected with the ravages of the rust.

There are at least three rusts that have made themselves prominent among ornamental plants during the past few years. A leading rust in the flower garden is that of the hollyhock (Puccinia malvacearum Mont.) which came into this country in 1890, and spread with remarkable rapidity and fatality. It develops upon all parts of the hollyhock, as the leaves, stem and floral parts, causing them all to sicken and die. This rust is a good illustration of those that have only the teleuto form of the spore and the sporidia that grow directly from it. In other words, the cluster cup and uredo stages are omitted, and the first stage becomes the last, so far as spore development upon the host is concerned. The great rate at which the fungus spreads is to be accounted for largely because it hibernates as the living mycelium in the hollyhock, the young leaves of which exist as a rosette through the winter. As the warm, moist weather comes the orange patches upon the foliage enlarge and quickly develop spores that almost at once form the sporidia, which rapidly spread the rust to other parts of the hollyhock. Another observation that may be made in connection with the hollyhock rust is its scarcity at certain times. For example, in 1898 there was an abundance of hollyhock rust, while a year later there was almost none upon plants badly rusted the year before. It may be said in explanation that the conditions were unfavorable for the disease, and the health of the plants was restored. Good growing weather, with no excess of moisture, is the best ally of the victim, and if it comes in time many kinds of plants will recover from an attack that might be otherwise disastrous.

Another new rust is that of the carnation (Uromyces Caryophyllinus Schr), which reached us, probably from Europe in imported stock, in 1891, and is still in evidence in nearly all parts of the country. The conditions here are quite different from the open garden, for heat and moisture and a more or less confined air in the greenhouse supply the surroundings favorable for the growth and spread of the rust. The spray from the hose in watering, for example, is one of the best means of carrying the spores from a diseased to a healthy plant. The experiments that have been made with this disease are somewhat limited, but they go to show that preventive measures are better than attempted cures. From the fact that the carnation is largely an indoor plant and propagated by cuttings, it goes without saying that the stock should be healthy from which the cuttings are taken, and no rusted plants should be introduced into a house previously free from rust. One rusted plant under the circumstances of greenhouse growth may be ample to inoculate a whole bed, and this accounts for the sudden outbreak of the rust in houses hundreds or thousands of miles apart. Carnation growers are gradually acquiring a knowledge of the susceptibility of varieties, and are finding some sorts in this respect much more valuable than others.

The latest claimant for our attention among the greenhouse rusts is that of the chrysanthemum. As yet the advent of this importation from Europe has not been traced back of 1896, when it was found by Mr. Hastings of Fitchburg, Mass., and reported by Dr. Stone in the ninth annual report of your experiment station. From foreign correspondence it is gathered that it was rampant in France and then spread throughout England, where it was very destructive, particularly in 1898. With us it has increased quite rapidly during the past three years, and during the last one it has become decidedly troublesome. Up to the present time only the uredo form has been met with upon American plants, and therefore it is impossible to be sure of the species. While this is interesting from the standpoint of the botanist, it may be of no great economic importance. However, if the other forms are associated with the dandelion or similar related common wild species, the bearing of this knowledge upon the checking of the rust is at once apparent. This disease is so recent with us that there is very little in the line of remedies that has been determined experimentally. It being a greenhouse plant, propagated by cuttings, the precautionary measures are practically the same as with the carnation. The two rusts are, however, very distinct, belonging to different genera of fungi, and not transmissible from one host plant to the other.

In the treatment of our subject we have made a few selections of typical rust plants from widely separated host plants, and have endeavored to bring before the hearer some of the more important points connected with one of the leading groups of destructive fungi. We have seen that rusts infest herbs, shrubs and trees. The forests are not exempt from them, and even the giant pines are destroyed by them. The blackberry and raspberry rust is one of the most serious pests to growers of bush fruits. It shows itself in early spring, dwarfing the cane and ruining the foliage. When such an infected plant is cut to the ground the new shoots springing from the stock will also become rusted like the first growth of the year. Actual microscopic examination of the tissue of the root demonstrates the presence of the perennial mycelium. With these facts before us it is not strange that the multitudes of experiments made to eradicate the disease by spraying the plants result in failure. The Bordeaux or other mixture, when upon healthy plants, may help to prevent the spread of the disease; but when once within the tissues of root and stem it is out of reach of spraying compounds. It goes without any argument that all such rusted plants need to be dug up and destroyed, root and branch, and the earlier this is done the less likelihood there will be of the infection spreading by means of the spores. The burn heap is one of the best adjuncts of a well-equipped horticultural establishment. It excels greatly the rubbish pile. Ashes may be blown about by the winds, and no serious inoculations follow from them.

The "seed treatment," so called, for the prevention of diseases in grain fields, while of great value with the smuts, is not effective with the rusts. The oat or wheat smut spores are produced in the grain itself and healthy grains become smeared and dusted with the spores. The last resort in all cases when rust is suspected is to furnish the best possible conditions for the growth of the crop, bearing in mind that vigilance is especially demanded when the foe is at hand. Any neglect, as lack of light, air, food or water, or a surplus of the same, may engender a weakness that will cause the plants to fall a victim at the first opportunity.

House of Rawson's Hot House Lettuce.

Photo Taken Five Weeks from Planting Out.
Grown by E. Merritt, Monroe, N. Y.

Lettuce Under Glass.

In commencing operations for my crop of lettuce I first plant seeds in a flat 12x24x2 inches. When the plantlets have two leaves and the third one just showing I transplant them into 1¾-inch pots (thumb pots, as we call them), and when they have filled the pots with nice roots, enough to hold the dirt (am very careful not to have them rootbound), if we are ready for a crop to be planted, we set the lettuce out. If not ready for this operation we put them in a 2½-inch pot. We always use potted plants, and think this gives us a better plant and quicker results. We put our lettuce between our violet plants first, getting in a small crop to start with. Just as soon as we make the last shipment of violets, say Easter Sunday, out go the violet plants and then the lettuce business commences. We fill the houses with plants from 2½-inch pots, and in five weeks this crop is ready to sell. We always classify our plants, taking the largest and setting them out first in the bed; then the next size and so on, so when we clean the bed we are sure to have ready another lot in 2½-inch pots for the succeeding crop, and so on through the season.

Of course, this method takes lots of patience, but we think we are fully repaid in the quickness of getting in the crops so close together for market.

The illustration herewith shown is from a photograph of a house of Rawson's Hot House Lettuce, taken five weeks from planting out; but the picture does not give any idea of the size of the plants. I consider Rawson's Hot House and Boston Market the best paying varieties for forcing; but expect to put in a small quantity of Rawson's Crimpled Leaf also.

E. MERRITT.

EXPERIMENT STATION WORK.—Farmers' Bulletin 107, Department of Agriculture, Washington, D. C. Including fertilizer requirements of crops; persimmons, forcing rhubarb, etc.

HINTS and HELPS.

Nepenthes Propagation—The best material for cuttings is to be had now, and it should be taken off before the plants start fresh growth. Where the stock is not over-abundant, single eye cuttings may be taken, but these take a longer time to make satisfactory plants than do entire shoots with from three to six leaves. I always prefer cuttings of this nature, for, if the wood is at all ripe, they are almost certain to root. Take off enough leaves from the cutting so as to have the bottom part go easily through the hole of an inverted thumb pot; enlarge the hole if necessary, and plunge in sphagnum moss, in a propagating frame in which a temperature of at least 80 degrees F. can be kept up. Have the mouth of the pot placed in moss, and cover the pot closely around the neck of the cutting with the same material. Keep moist so as to have the space inside the pot saturated with moisture. With care, not a single root need be lost in potting.

Grafting Clematis—The large flowering sorts of clematis may be grafted successfully at the present time and onward, using pieces of the roots of such kinds as paniculata, viticella, vitalba, flammula, virginiana, and ligustrifolia. The roots for stock should be taken off at one time, and tied in bundles, with the thick ends together, placing them in moss till wanted. In grafting, the pieces of roots used for stocks should be cut off as wanted, so as to make certain that the cion is put on the proper end. Whip grafting will answer best, tie the stock and cion together with raffia, and place them in a box of chopped moss, standing the box in a propagating frame with a temperature of from 65 to 70 degrees. After they show that the graft has united they may be potted and gradually hardened off.

Oriental Poppies—Papaver bracteatum and P. orientale, with one or two other varieties, which vary in the color of the flowers, all of them first-class herbaceous plants, which were sown when the seed ripened last season and left out in a cool frame, may be brought indoors now, given a place in the coolest house, where they will shortly start into growth. If not sown too thickly nearly all of them will be fit to go in thumb pots, and some probably large enough for 3-inch. Keep the soil only fairly moist and they will make plants large enough to send out when the time arrives for planting out-of-doors.

Gloxinia Tubers which have been left under the stage to dry off in their flowering pots should be looked after, because when they get too dry they shrivel and are in danger of rotting. Shake out from the old soil and range in boxes of sand; those which show signs of growth should be boxed by themselves, and those which are dormant likewise. They may be kept dormant by withholding water and keeping them in not too high a temperature. For starting now, place the ones which show life in a min. temperature of 65 degrees, and give a slight sprinkling overhead now and then. When the growths are an inch or so high the tubers may be put in pots, according to their sizes, using soil in which there is a considerable quantity of Jadoo or leaf mould; about a fourth of the whole should be well rotted cow manure. Seeds of gloxinias should be sown without delay. Sow thinly in boxes; have the soil light and firm. Water well a day or two in advance of sowing. Cover the seeds, and no more, with finely sifted soil, and cover the box with panes of glass until germination takes place. The seedlings may be allowed to grow until large enough to be put singly in 2-inch pots. These seedlings should flower before midsummer.

Habrothamnus as a Christmas Plant.—There are two or three red-flowered species of this genus which make quite a creditable display of showy flowers for this purpose. One feature in their favor is the easy manner in which flowering plants can be got up. The old plants are put out in the border in late Spring, and allowed to grow all they want to. As soon as cool weather approaches the tips of the growths are rooted and put in 3-inch pots. After having been grown a while in a warm house they are put three together in a 6-inch pot to flower. Being principally Winter-flowering plants the ends of the shoots which were rooted is the flowering material; this only should be taken for cuttings to make sure of bloom.

Protecting Spring Bulbous Plants.—In places where bulbs are permanently planted, the past few months have been exceedingly favorable to their growth, so much so that bulbs of scilla, chionodoxa, narcissus, muscari and hyacinths have their growths above ground by this time. Where the snow covers them they will take no hurt, but otherwise they must have a covering of old manure or half decayed leaves at least an inch or two deep, so as to prevent rapid thawing and freezing.

Acalypha Sanderii, or hispida, as the correct name appears to be, does not seem to produce any male flowers; perhaps they are only borne on large-sized plants. However, the flowers seem to be capable of setting seed after the application of pollen from some of the gaudy leaved kinds, such as Musaica and Wilkesiana. The seeds on the plants here are not yet mature, and perhaps the seedlings may not amount to much, but it is not unlikely that a hybrid may be had having the showy flowers of one species combined with the handsome foliage of others. Those having plants of the different species should give this matter attention.

The Papyrus, after being lifted from its Summer quarters, where the growths made are usually very strong, usually gets into a half sickly state during the Winter months from which it takes it some time to recuperate after being replanted outside. In Winter the growths are grassy and spindling. By the way, I doubt very much if the true Cyperus papyrus is in common cultivation, the one generally grown under that name being an entirely different species. However, that is a small matter, as the one commonly grown under the name of Cyperus papyrus answers the purpose for which it is used, quite as well, if not better, than the true species. What I started out to say is that if the old plants are taken in hand now and split up into the smallest pieces and put in the sand bed of a warm house, they will, in a few days, push out fine, healthy roots, and when potted in a mixture of equal parts of moss, sand and manure, will grow very vigorously, and will be in splendid trim for the planting-out season. If it is desired to increase the stock, the young plants, after being in the pots for a few weeks, can be re-divided and the operation of rooting gone through as at first. In the absence of a propagating bench a box of sand placed on the hot water pipes answers the same purpose.

G. W. O.

BRIEFS FOR BUSY FLORISTS.

CARNATIONS.—Watering is one of the most important items at this season of the year for the successful production of good flowers. While the roots of carnations revel in a moderately moist soil, they resent any attempt to keep them unduly saturated, and fail to give good results when constantly over-watered. They are also very quick in showing a lack of moisture in the soil, by the foliage wilting if the sun's rays strike upon it when the benches are on the dry side. We find that in watering roses, extremes may be approached much closer than is the case with carnations. For instance, the rose, with its much stronger roots, may be given a thoroughly good soaking, and then allowed to become quite dry again, before further watering is necessary; in fact, before the plants show signs of wilting, the soil would have to be almost dust dry. On the contrary, the carnation requires a more even state of moisture in the soil, and has to be watered accordingly, thus necessitating closer attention in this respect than roses. Full directions for watering can not be explained on paper, as each different soil has to be treated according to its own requirements; but, if the same man be put to water the same benches all through the season, he soon gets to understand the nature of the soil, as regards its needs for water, and governs himself accordingly. The principal feature to be observed is, that a closer line must be drawn to an even state of moisture with carnations than is necessary with roses and various other florists' flowering plants.

DUTCH HYACINTHS will force reasonably well now, and a few should be brought into the house at intervals.

IF THE RAMBLER AND H. P. ROSES are not already in the cool house get them in without delay. Syringe every day to induce the buds to start, but water sparingly. As the leaves develop more heat and water should be given.

POT-GROWN STOCK OF CLEMATIS can be had from nurserymen, and these are elegant subjects for forcing for Easter. In potting, etc., do not give them too large pots. Afford them an intermediate temperature until growth is fairly started, say from 50 to 54 degrees. When fairly in leaf they will stand a higher degree of heat, and can be had in flower easily when desired.

ANOTHER USEFUL FLOWER that may be had in time for Easter is the paeony. Plants of these should be potted up now, and where the clumps are too large they can be divided to suit the size of the pots. Let the forcing commence gradually, increasing the heat as growth develops.

FERN BALLS.—These come in all shapes, but the ball-shape seems to be the greatest favorite with the public. We can recommend them as being profitable to grow, and every owner of greenhouses doing a general trade should, at least, have a few of them. No special treatment is required to bring them to perfection, and as they can be suspended from the rafters in a palm or fern house they take up no valuable space. An occasional dip over-head in a pail of water is all the care needed, and they last indefinitely.

CORN FLOWER (CENTAUREA CYANUS).—To have this in flower early sow seed now, and when large enough to handle transplant the seedlings into thumb pots. Stand them close together in a warm house, and each plant will throw up a straight shoot with a flower at the top. Of course, each plant only produces one flower, but the seed is cheap, and the plants occupy but little space compared with the value of the flowers when sold early in the Spring.

In Remembrance of the Maine.

In the Michigan Central's depot garden at Ypsilanti, Mich., a floral monument, formed of over 20,000 plants, was in full splendor last season. It was designed in memory of the battleship Maine by the road's gardener, John Laidlaw, who last year made a floral battleship for the same purpose. The monument was 22 feet high and 20 feet across the base, surmounted by an eagle 2 feet 7 inches high, standing upon a globe 2 feet in diameter. Below this was an octagonal cone, 14 feet in height, resting upon an ornamental base, at the eastern and western extremities of which, upon a gable peak, a miniature battleship Maine was set. In dark red lettering near the base the words "Erected by the Michigan Central R. R., in Remembrance of the Maine" were plainly set out. The following plants were used in the design: Alternanthera versicolor, 1,820; A. aurea nana, 3,010; A. spathulata, 980; A. paronychioides major, red, 2,200; Echeveria metallica, 2,985; E. secunda glauca, 365; Sedum variegatum, 8,540; Oxalis corniculata, 400. Or, in other words, 20,300 plants were required for the monument. This is only one of the handsome floral designs erected along the line of the Michigan Central Road, which for nearly a quarter of a century has been beautifying its station grounds more elaborately from year to year.—Chicago Times-Herald.

For the accompanying illustration of this monument, we are indebted to Mr. O. W. Ruggles, general passenger and ticket agent of the Michigan Central R. R.

Floral Monument Erected at Ypsilanti, Mich., in Remembrance of the Battleship Maine, by Michigan Central R. R. John Laidlaw, Gardener.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

A Living Profit and a Living Wage.

In response to your request regarding the article "A Living Profit and a Living Wage," I would say that in a country so large as the United States, with the members of the craft so widely distributed and separated from each other, I do not think that an effort for association on the lines laid out in the article would meet with success. In order to accomplish anything of this kind it would be necessary that each and every member of the craft would adhere to a fixed minimum price. Thus far all combinations or agreements to sell goods at a fixed price have resulted in failure, and have also resulted in the larger concerns getting the advantage of the smaller. In some instances, where a combination to fix prices for a certain period exists, the stronger members of the combination lower the price to the minimum at a certain period of the year. This lowering of price by the large concerns of course forces the smaller concerns to follow suit, and orders are stimulated while the prices remain low. The large concerns at this time will turn off a great portion of the orders upon the ground that their production is sold ahead, and they will accept only such orders as they deem necessary to accept, in order to hold certain lines of trade, the result being that the stimulated buying at the low price is turned into the smaller concerns who accept the orders at the lower price. When these smaller concerns are filled up to the extent of their production the larger concerns then get together, and up goes the price, the result being that the large concerns get the trade that goes at the profitable margin. This, of course, results in the financial weakening of the small concerns and the strengthening of the large ones.

There is another feature that would prevail largely in the florist business and that is, some are so situated that their fuel expenses, wages, etc., are much less than other members of the craft, and these members would insist upon placing the price so low as to give them the bulk of the trade, and even if they made an agreement to maintain higher prices, this agreement would be broken whenever they saw the trade leaving them. Another feature that would have to be taken into consideration, and which I think would effectually dispose of the plan, and that is, the National Anti-Trust Legislation. As I understand this law, any combination to maintain prices, or to do away with natural competition, is illegal.

Anything that could be done, however, to induce the producers of any species of merchandise to keep close track of the cost of production and to sell only at a profit should be encouraged. Unfortunately, a large proportion of the manufacturing producers in all lines of merchandise are not given to a close reckoning of the costs. Many of them are engaged in business in a small way with limited capital, and are making simply a living and produce no surplus from their business. Such, of course, are frequently forced into distress by the exigencies of their business and many times are forced to cut prices and move their goods, in order to get money to meet pressing obligations, and of course a combination to maintain prices or to influence prices utterly fails when men of this description actually need money. This state of affairs probably prevails to a greater extent in the florist business than in any other trade; as we all know, a large proportion of the year the florist's receipts are almost nil, while during that time he is obliged, through depreciation of his plant and other causes, to lay out large sums in repairs, production of stock, wages, etc., consequently, when the selling season arrives he is usually out of funds, frequently in debt and hard pressed, and at such period he welcomes the first sale, even though the price be not what it should be. In order to make such a combination successful it is necessary that there be a continuity of understanding between all the members of the craft, a difficult thing to bring about in the florist business, on account of its members being so widely separated.

The combination of growers to maintain the prices of cut flowers some few years ago was not highly successful, and, in my opinion, a combination among the 10,000 or 15,000 florists who comprise the florist trade of America would not be any more successful than was the combination of the 100 growers to control the prices of cut flowers in the New York market. However, the discussion is timely and the matter should be threshed out. There is no question but what a large proportion of the plant product of the United States is being sold at much less price than need be. Prices are fixed by a great many plant growers without any reference whatever to the cost of production. I have no doubt that many florists, in fixing their prices for plants, do not reckon their own labor nor do they reckon interest on the capital invested, nor do they reckon the depreciation of their greenhouse plant, and the cost of keeping the same up, in addition to the cost of rebuilding the same when it has become practically obsolete; so that the chances are that a great many florists, after spending their lives in hard labor, will find that their earthly possessions have not been increased, owing to the fact that they have sold their output at a price below the actual cost of production should such costs have been properly ascertained. C. W. WARD.

Queens, N. Y.

Replying to your inquiry of the 6th, inclosing copy of a clipping from another paper, I cannot see how this can have any bearing upon our business whatever. It may be all right for the manufacturer of staple goods, but ours are of such a perishable nature they must be sold the day they are put on the market; so it's an impossibility to control prices or anything of the sort. JOHN N. MAY.

The Position of the Hybridizer.

Editor Florists' Exchange.

I was much interested in your answer to the query of "Workingman," in your issue of January 6, page 10. Being a hybridizer myself, I consider the question and answer timely and proper. I wish to say I believe you to be correct in your conclusions, that the stock and the profits belong wholly to the employer, while the credit or honor of having produced a valuable novelty belongs wholly to the employe or originator. I never could see this matter in any other light.

As to the concluding sentence of your reply, I beg to differ from you; and may I ask, in support of my belief that Mr. G. P. Rawson, Smith & Son, H. A. Molatsch, W. P. Binder and John N. May state through your paper if they individually, personally, with their own hands, have done the hybridizing, the results of which have made them so famous as originators of new chrysanthemums within the last few years? I have certain positive knowledge in regard to this matter, but it would, I think, be interesting to many of your readers to have a statement direct from the pens of the above mentioned growers, whose names I have copied in regular order from the last printed report of the secretary of the C. S. of A. E. S.

Potting Genista Cuttings.

Editor Florists' Exchange.

In your practical Hints and Helps, issue of January 6, G. W. O. does not make himself clearly understood in reference to the genista cuttings. After trimming them up with a pair of scissors he advocates putting them two inches in the sand. How much ought to be left out? Then he goes on to say they should be potted into the smallest size pots, which would necessitate putting the cuttings through the bottom of the pot; that is, if they were potted as deep as they were planted in the sand. A. H.

Germantown, Pa.

—Why pot so deep? G. W. O.

(9) **Worms in Rose Soil.**—If you could give any information regarding a small white worm, of which there are hundreds in our rose soil, we would very much appreciate it. The worm is from ¼ to ½ inch long, somewhat similar in appearance to our common grub. On close examination a small, apparently black head is perceptible. As you know from previous communications our roses have not been a success, although they are improving now. We laid the fault to the soil, and do not know whether the worm has been the cause of any trouble. A. D.

—The worm mentioned is probably one that has been introduced to the soil when stable manure was mixed with it. From the description given we cannot tell just what worm it is, but we think a good application of lime water to the soil will destroy them.

(10) **Forcing Spiræas for Easter.**—How soon should I pot up spiræas to force for Easter—April 15, 1900. After potting, what temperature should the plants be subjected to? Should they be put on benches at once, after potting? A. J. S.

—Pot up the spiræas at once and place them in a temperature of 50 degrees and after growth has started give them a temperature of from 55 to 58 degrees at night. Soak the clumps in water a few minutes previous to potting them.

(11) **Carnations for Pots.**—There are so few carnations tried as pot plants, that a list of what the best varieties are for that purpose might be misleading, as with fair treatment one variety will do as well in a pot as another. The shorter-growing kinds are to be preferred for pot work, and the selection of what to grow should be made along that line. A list of the best up-to-date varieties follows:

WHITE.—Flora Hill, White Cloud and John Young.

PINK.—Mrs. T. W. Lawson, Ethel Crocker, The Marquis, Mrs. F. Joost and Governor Griggs.

SCARLET.—G. H. Crane, America and Jubilee.

CRIMSON.—General Gomez and General Maceo.

CERISE PINK.—Maude Adams and Tidal Wave.

(12) **Early and Late 'Mums for Pots and for Cutting.**—Best six early chrysanthemums for pots are: Bergman, Montmort, Midge, Mrs. Robinson, Polly Rose, Yellow Monarch. Best six late: Yanoma, Bonnaffon, Mrs Jerome Jones, J. Shrimpton, W. H. Lincoln and Maud Dean. For cutting, the same varieties will be found among the best, if planted out and disbudded in season.

(13) **Leaves of Roses Dropping.**—Bride, Bridesmaid, Perle and Wootton, in same house that were planted in coarse sod and old cow-manure in August, produced a fair crop up to Christmas. They are now losing their leaves. They acted in the same manner last year about the same time. The night temperature 60 degrees; day, with sun, 70 to 80 degrees. I saw in the Montreal Herald and Star that it may be a worm that is eating the young roots as fast as they are made, and thus the effect. Is there anything in this theory? CANADIAN.

—We would suggest that one or more of the plants be dug up and the roots examined. If you find galls attached to the roots then eel worms are the cause of the trouble, and the remedy is hard to suggest. Should there be no galls we would advise a more liberal use of water at the roots than has been given heretofore; it is just possible that the bottom of the bed does not get all the water needed.

Carnations at St. Louis.

The annual carnation meeting of the St. Louis Florists' Club was held January 11. Those who did not attend missed a treat in the way of a fine show of that popular flower. The new varieties were all from out-of-town growers, namely, the Chicago Carnation Co., Witterstaetter, Cincinnati; E. G. Hill & Co., Richmond; H. Weber & Son, Oakland, Ind.; Fred Dorner & Sons Co., Lafayette, Ind. Witterstaetter made an extra fine showing of several varieties, some of which, without question, must become standard sorts, especially his large pink, Enquirer, which measured 4 inches across, with stem, calyx, color, etc., also in its favor. The white variety, Elinore, is a splendid carnation, and it will no doubt find a ready sale when placed on the market. Ethel Crocker and Genevieve Lord held their heads high; both are elegant pinks, though the former, owing to close cutting, lacked considerable of being full size, as explained by Messrs. Weber & Son, who exhibited the variety. Hill Co.'s Indiana seemed to us about the finest red we have yet seen. Their J. Whitcomb Riley is a grand variety; extra fine in general appearance.

A committee consisting of Messrs. Kunz, Guy and Ude was appointed by the chair to pass upon the exhibits; they reported as follows: In the Chicago Carnation Co.'s exhibit Maceo, G. H. Crane, Gold Nugget, Bradt and Red Bradt, or Chicago, all very good; H. Weber & Sons' seedlings Nos. 30 and 111, extra fine; seedling No. 111 worthy of mention. Genevieve Lord, extra fine pink. Witterstaetter's Rosamond, worthy of mention; Rosylyn same; Elinore, white, worthy of further trial; Estelle, worthy of mention; Enquirer, certificate of merit. Opal was also shown. E. G. Hill & Co.'s Ethel Crocker, one of the best pinks; J. Whitcomb Riley, worthy of mention; Indiana, certificate of merit. F. Dorner & Sons Co.'s White Cloud, Crane, Bradt and Morning Glory, all good. The delicate color of the latter took the fancy of many present, who pronounced it an excellent variety, though its size was not large.

Vases of well-grown standard varieties were shown by Messrs. Joblauski, Connon, Emmans and others.

The club desires to return thanks to the exhibitors for their grand and instructive displays. C. C. S.

OBITUARY.

George W. Houghton.

George W. Houghton, a pioneer florist of Long Branch, N. J., died at Red Cloud, Neb., January 9, aged 80 years. Five children survive him.

Tobacco-Whale Oil Soap for syringing for washing plants. We Know its Goodness. All Seedsmen Keep it

Boston.

The Market.

Business has continued very quiet during the past week. The demand at the wholesale markets is light, except for the finer grades of stock.

American Beauty are abundant, and though there is some demand for the better grades, yet it is insufficient to clean up the daily consignments. Prices are dropping every week and now but $35 to $40 a 100 is realized for fine grades. Bride and Bridesmaid, too, are very plentiful; in fact, in overstock. Kaiserin and Carnot continue scarce, but for the former there is little demand. The latter, however, do well, but not at such high prices as heretofore.

Carnations are very plentiful; the great bulk of them make but $1 a 100 and move slowly, many of the smaller grades selling at 50c. to 75c. Choice grades now average $1.50 a 100, and extras and fancies go to $2. The better grades clean up fairly well.

Violets are becoming much more plentiful and prices are lowering. Valley is plentiful at usual prices.

Bulbous stock is increasing in varieties and in quantity. Yellow narcissi do fairly well at about the same prices as last quoted.

Mass. Horticultural Society.

The society's schednle for the year 1900 shows, the following appropriations for prizes and gratuities: For plants, $2,000; flowers, $2,531.50; native plants, $186.50; fruits, $1,732; vegetables, $1,200; gardens, greenhouses, etc., $500.

The Committee on Lectures and Publications have submitted their program for the year 1900 as follows:

January 13—The Rusts of Horticultural Plants. By Prof. B. D. Halsted, New Jersey Agricultural College Experiment Station, New Brunswick, N. J.

January 20—Half a Century's Experience in Ornamental Tree Planting. By O. B. Hadwen, Worcester.

January 27—The Procession of Flowers. (Illustrated). By Miss Mira Loyd Dock, Harrisburg, Pa.

February 10—Gardens, Fields and Wilds of the Hawaiian Islands. By John K. M. L. Farquhar, Boston.

February 17—The Future Outlook for the Fruit Grower. By S. D. Willard, Geneva, N. Y.

February 24—Stereopticon Lectures on Massachusetts Forestry. (Under the auspices of the Massachusetts Forestry Association.) By Mrs. Mary Lathrop Tucker, Newton.

March 10—Carnations and Their Development. By C. W. Ward, Queens, N. Y.

March 17—Japanese Plums. By George S. Butler, Cromwell, Conn.

Jottings.

Messrs. F. R. Mathison and Warren Ewell have gone to New York.

Messrs. Norton Bros. had a large decoration on Friday for a private subscription party on that evening.

Welch Bros. are receiving shipments of orchids quite frequently. I saw a choice box of cœlogyne opened there last week.

Charles S. Cooper, of Brockton, is also bringing in some fine cattleyas, but the demand for them is not very brisk. Mr. Cooper intends going into orchid raising much more extensively next season, and no doubt could, with a fairly steady supply, find quite a market for them. The main trouble has been that retailers were never sure of a steady supply of orchids, and, when these flowers were ordered at short notice, were very often forced to refuse orders rather than disappoint customers. F. J. N.

Newport, R. I.

The Newport Horticultural Society continues to prosper; at the meeting held on the 10th inst. it was voted to hold two shows this year—a rose and strawberry show in June, and the annual chrysanthemum show in November. At this meeting eleven new members were elected. The annual ball is to be given at Masonic Hall, February 7.

Charles Harn, formerly gardener for Hon. Perry Belmont, has taken a five-year lease of the Wm. Findlay place on Bliss Road. MAC.

Chicago.

State of Trade.

The early part of last week it was hard to dispose of all the flowers coming into this market and maintain prices. Toward the end, owing to dull, cloudy, weather, and a shortening up in the supply, a change took place, which the succeeding days seem so far to intensify. There was nothing left over on Monday or Tuesday in the way of roses, even shorts fetched $3 to $4 without difficulty; fancy Bride and Bridesmaid, $8, and for choice Meteor, $10. American Beauty still keep up well, long stem, choice, bringing $5.50 to $6 per dozen; medium, the best sellers, $3 to $4.50.

As regards carnations they are more abundant, and it is hard to hold up prices, this being true of all grades; $4 to $5 is as high as the very choicest blooms will bring, with $2 to $3 for such as a year or two ago would have been called fancies. Lilies are in heavier supply. Jonquils are selling freely at $2.

Prepared palms seem to be quite a fad nowadays. Some contend they interfere with the sale of natural plants; this, however, is questionable, as their use is mostly confined to decoration in store windows, in restaurants and places where, at present high prices for growing stock, the latter would hardly be employed.

News Notes.

L. A. Vaughan started out on an extended trip the past week.

Charles Shafer, formerly of Rose Hill, is settled now at Kankakee, with the expectation of building greenhouses the coming Spring.

The Vermont Fern Co., G. N. Worth, manager, has opened a depot at 51 Wabash avenue (Deamud's).

The C. B. and Q. Railway has now, at Aurora, near its car shops, seven greenhouses, in charge of Anthony Warnemont. Flowers, mostly roses, are grown for distribution in the dining cars, and plants for decoration of the stations.

The J. C. Moninger Co. has the order for the cypress for the Wietor Bros. big range of new houses.

C. W. Scott, representing Vaughan's seed store, is making a Western trip. Vaughan's store took in half a car-load of Japanese fern balls the past week.

J. A. Budlong has changed his plans, and is now preparing to build five houses, 300 feet long, instead of three. He has purchased 750 boxes of glass. The new houses will be planted with American Beauty roses; part of the present Beauty houses (three, each 300 feet) will be put in Bride and Bridesmaid. The new houses will be heated by steam.

J. C. Vaughan and O. P. Bassett leave this week for New York.

E. C. Amling has now finished, in his new quarters, a splendid office, and a cooler, 12x8 feet.

Visitors—C. H. Frey, Lincoln, Neb., and F. A. Belt, Sterling, Ill. ESS.

Montreal.

The Market.

Business continues very quiet and prices are about 50 per cent. below the Christmas level. Flowers are very plentiful and of extra quality. The now customary "please omit flowers" after the death notice of prominent citizens is being emphasized, and is having a very depressing influence on this class of work. Bulbous stock is making its appearance in small quantities, but at present the quality is below the average.

Notes.

The feature at the Forest and Stream just now is McHugh's cyclamen. A pair of whites in 8-inch pots have over 200 perfect flowers each. The head of the flowers is 2 feet in diameter, while the flower stems are about 1 foot to 15 inches in length. A lot of plants ranging in color to deep crimson have 100 to 150 flowers each; the whole present the appearance from a distance of an extra quality lot of azaleas. A fine lot of heaths at Campbell's, which were tied up with red tape until after the Christmas rush was over, are now moving very slowly.

Logan Girdwood has some very fine specimen cœlogynes in his window; they are in little demand. B.

St. Louis.

The Market.

Business has been only fair in the retail line since last report, and notwithstanding the very mild, open weather (we had bees flying around January 15) stock is in rather short supply. Roses are off crop. There is no surplus of anything, except, possibly, violets, which are now arriving quite plentifully, and sell for 75c. per 100 for California; 45c. for small single. Roses go at 4c. and 7c., according to quality. Carnations bring 2c. for common and 4c. for fancy; callas and Harrisii, 10c. to 12c.; bulb stock is selling better than it has done, at 3c. for Romans and Paper Whites. Beauty is scarce and of poor quality—at $5 per dozen for the best.

Club Meeting.

At the meeting held on the 11th inst., the report of the chrysanthemum exhibition committee showed some outstanding premiums, which will be collected as soon as possible, when a final settlement will be made.

Friday, February 23, is the date set for the club's euchre party; tickets will be ready soon and the committee given full power to act.

Chas. Connon was elected an honorary member by a unanimous vote of the club. The applications for membership of Henry Blixter, Edwardsville, Ill., and H. C. Irish, of Missouri Botanical Garden, were presented.

A Co-operative Purchase Plan.

Max Herzog made a suggestion, which met with unanimous and immediate approval, to the effect that the club unite, and through a purchasing agent, who was appointed by the chair, buy collectively such stock as each member required, thus getting the benefit of the lower prices made by the 100 and 1000 rates, and insuring better attention as to quality from the seller. C. A. Kenhn was selected as agent, and time, until February 1, given for members to make up their orders.

News Note.

We understand that John M. Hudson, the original wholesale cut flower commission man, of St. Louis, is about to open up again in the same line. C. C. S.

Louisville, Ky.

There has not been much improvement in business during the past week. Prices remain the same. Carnations and roses are plentiful; violets are improving and coming in more freely. For several days past the weather has been very mild, as a day temperature of 55 to 60 degrees would indicate. We have also had some sunshine and no doubt the quality and quantity of flowers will improve.

Jacob Schulz has a beautiful rhododendron in full bloom displayed in his window

C. W. Reimers has some good Harrisii lilies in flower. J. S.

Grand Rapids

Trade Notes.

For the past two weeks the weather has not been very good for growing purposes. Roses are now too plentiful. Carnations are now getting a chance to improve in quality, and get ahead a little in quantity, as they have been kept picked so close that it was hard to give them time to open properly. Business has been sound as a dollar. Some fine azaleas and Romans are seen at the stores, the latter are mostly in pans and make a fine selling plant. Harrisii are becoming more plentiful, and violets, with some, are all that could be desired, while others are picking next to nothing. C.

Toronto Junction, Ont.

The Toronto Junction Horticultural Society was organized recently, and the following officers elected: Honorary president, A. Gilchrist; president, Mr. F. C. Clobeck, B. A.; first vice-president, Mayor Laughton; second vice-president, Mrs. Gilchrist; secretary, Mr. W. H. Post; treasurer, Mr. R. C. Jennings, with nine directors and two auditors.

Mr. Gilchrist outlined the work considered necessary for the society to take up.

A resolution was adopted in favor of affiliating with the Ontario Fruit Growers' Association. Regular meetings of the society will be held on the fourth Tuesday of each month, and if the consent of the Council be obtained the meetings will be held in the Council Chamber.

Madison, N. J.

Rose growers around Madison are likely to keep their end up for some time yet in producing good stock—if the few we were enabled to see during a recent visit to that town give a fair idea of the quality of the stock grown by the majority of those located there. Madison is such a rambling place, and the growers are so widely separated from each other, that only a very small proportion of them can be seen in one day. There is about one million square feet of glass in the town devoted to roses, and the annual output is something enormous. Marmadnke Tilden's place is under the management of J. McNulty, and the 20,000 feet of glass is devoted to Beauty, Bride and Bridesmaid. A few Bon Silene are grown on a side bench, but these are only for domestic use. The crop of Beauty had been heavy for the holidays, and the plants are again breaking strongly from the bottom.

At the old Slaughter place the greenhouses are now leased by E. Brandt. There is about 44,000 square feet here and Beauty are grown principally, though one house is devoted to Meteors. The Beauty are looking very fine and show promise of an abundant crop in the near future. These houses are somewhat old style, yet Mr. Brandt succeeds in producing large cuts of first-class roses.

L. A. Noe has ten houses of Beauty and one house of Meteor, with Bride and Bridesmaid planted on the side benches—altogether about 45,000 feet of glass and a new house in course of construction. The Beauty and Meteor are in excellent condition and are producing heavily, but the Bride and Bridesmaid have suffered from eel worm to quite an extent. J. J. Ruzicker is foreman here and has reason to be proud of the excellenee of the Beauty marketed.

J. M. Noe's establishment is also devoted to roses, excepting one house, which was filled with well-grown Adiantum cuneatum. There are about 50,000 feet of glass here, with a new house almost completed. The foreman, Mr. Laesser, informed us that it was intended to double the size of the range this coming Summer, which is a most convincing fact that growing good Beauty pays.

Springfield, Mass.

The new officers of the Hampden County Horticultural Society are: Jacob C. Lutz, president; Adolph Miellez, first vice president; Joel H. Hendrick, second vice-president; Hon. L. D. Robinson, third vice-president; J. Stewart Kirkham, treasurer; William F. Gale, secretary. The Board of Managers recently appointed a committee to confer with a like committee to look into the matter of uniting this and the Amateur Horticultural Society as one. This committee reported a plan which was adopted by a unanimous vote at a meeting of the society. The committee from the other society made a like report, which was adopted by a majority vote of that society. On account of this lack of unity the Hampden County Horticultural people, at an adjourned meeting, voted to rescind their former votes, and so will continue in the same high path as of old. New life will be introduced, and plans are already under way for the exhibitions of the year. The society has never been incorporated, although it has entered its thirty-ninth year. The life membership is now $5, but an effort will be made to increase this to $25.

W. S. Chapell has sold his florist store, Main street, to Wm. Schlatter & Son, who will conduct it in connection with their greenhouses, at Oak Grove Cemetery. Mr. Chapell will devote his time to his drug business in the western part of the state. Mr. Knox, who has been Mr. Chapell's manager, has engaged with Mark Aitken.

L. D. Robinson, Jr., has leased the greenhouse of J. F. Wright, and will conduct it in connection with his new place, built last Fall. Mr. Wright will retire from the greenhouse business.

A new chimney is going up at Mark Aitken's place, a high wind having toppled over the old one, fortunately without breaking any glass.

Bucklington & Chetam have bought one of the boilers from B. J. Shaw's place recently destroyed by fire, their heating apparatus not being sufficient to carry the new glass added this season. This firm had several hundred lilies pinched by Jack Frost during the first of this month. W. F. G.

SCHMIDT'S PANSIES Have no Equal.

Comprising the cream of all the Leading Strains, Large, stocky plants, 50 cents per 100; $3.00 per 1000; 10,000 for $25.00.

Pittsburg.

State Association Meeting.

The forty-first annual meeting of the State Horticultural Association of Pennsylvania was held here January 16 and 17. The meeting was in every way a most successful one, and well attended. The Fruit Growers' Association of Allegheny County and the Florists' Club did their best to make the meeting as interesting as possible to all. The exhibition of fruits, flowers and vegetables, although not very extensive, was much appreciated. Plants and cut flowers predominated. Messrs. John Bader, Blaha & Foss, and Randolph & McClements furnished decorative plants for the adornment of the hall and large stage, and Messrs. T. Ulam & Co. and the Pittsburg Cut Flower Co. supplied green and wreathing. G. & J. W. Ludwig had the best display of cut blooms—in roses, fine Bride and Bridesmaid, Golden Gate, Meteor and extra long Beauty. In carnations a choice bunch of Ethel Crocker was much admired; Thos. Cartledge, Annie Pixley, Mrs. Fisher, Albertini, Mary Baker, Bounty, Mrs. Bradt, Jubilee, Scott, Uncle Walter and "1776," also a white seedling of Murchie, of Sharon, named Recorder. Of other flowers they had pansies, mignonette and a few sprays of orchids. L. L. Neff exhibited a nice lot of blooming single primulas, cut blooms of Bride and Bridesmaid roses, Roman hyacinths and narcissus. Ernst Fischer, of Castle Sharon, Pa., showed three fine vases of freesia, the best ever staged in our city. E. C. Ludwig had Meteor and Bride roses, also several varieties of carnations, and a small collection of decorative plants. T. F. Galvin, of Boston, Mass., sent on a bunch of Mrs. Thos. W. Lawson carnation for exhibition, but they arrived in bad shape—had been overheated and were spoiled.

In the plant line Randolph & McClements made a fine exhibit of well-grown stock, such as ferns, crotons, marantas, dracænas, pandanus, ficus, arecas, Primula obconica, Asparagus Sprengeri and others, also a well-arranged group of larger plants. John Bader had two choice lots of decorative plants arranged in two groups at either side of the entrance into the hall. Messrs. Blaha & Foss, of Etna, Pa., also had several groups arranged along the side of the room.

At this season of the year good fruit is hard to get, so the display was not a very large one. Among those who exhibited fruit were Engle & Son, C. W. Good, J. E. Haudenshild, Wm. Wild and H. A. Chase.

The display of vegetables was extensive and very good, in the hands of G. H. Beckert and G. B. Robinson & Co., who exhibited vegetables of all kinds, mushrooms and Southern fruits from Florida, such as oranges, tangarines, pineapples and strawberries. Wm. Loew, who is an artist in carving flowers from vegetables, showed some of his handiwork, which drew lots of attention.

The business sessions were well attended and interesting. The speakers were able men, handling their subjects thoroughly. Prof. S. B. Heiges, of York, Pa., president of the association, gave a splendid address, and Prof. John Hamilton, Secretary of Agriculture, was also a foreible speaker. P. S. Randolph handled his subject, "The Advancement of Floriculture in Allegheny County the Past Forty Years," very well. A pleasant feature at the meeting was, that no essays were read, all being extemporaneous speeches.

The Beauty and Bride roses mentioned as being in G. & J. W. Ludwig's display were exhibited by M. W. Woodroffe & Co., of Philadelphia.

The meeting was pronounced to be the best ever held. The next one takes place in Harrisburg, January, 1901.

Club News.

The January meeting of the Florists' Club, held last week, was well attended. One new member was elected. Messrs. Oesterle, J. W. Ludwig and John Bader were appointed to help complete arrangements for the Horticultural State meeting. It was decided that all the old officers of the club be renominated for the ensuing year.

Jottings.

M. J. Fisch, of M. W. Woodroffe & Co., wholesale florists, of Philadelphia, spent a week in our city on business.

John Edlefsen, who was in the florist business in Millvale for many years, died last week.

Trade was somewhat slack the past week, the first dull time in the new year. Stock is abundant.

E. C. REINEMAN.

CARNATION CUTTINGS.

We are booking orders for Lawson, Olympia, Marquis Ethel Crocker and Genevieve Lord at introducers prices. List of standard varieties ready now. Send at once for an estimate on your order.

WM. MURPHY,

Sta. F., Cincinnati, Ohio.

Mention the Florists' Exchange when writing.

ELM CITY

A Grand New White **Carnation.**

Seedling of LIZZIE McGOWAN and MME. DIAZ ALBERTINI; in its fifth year.

The Flowers are large, finely shaped and of strong fragrance.
Petals are heavy, of good substance, and nicely fringed.
Calyx is very strong, after the style of Albertini, and non-bursting.
The Stem is strong, holding the flowers erect.
The Plant is a good grower and free bloomer, not subject to stem rot or any disease.

Rooted Cuttings, Ready Feb. 1, at $1.50 per Dozen, $10.00 per 100, $70.00 per 1000. Cash with order.

We shall prepay the express charges where money accompanies the order. Orders filled in rotation.

M. E. KRAUS, New Haven, Conn.

320 Davenport Avenue.

Mention the Florists' Exchange when writing.

100,000 Rooted Cuttings CARNATIONS

5 Cuttings at 100 rates.

THE MORRIS FLORAL CO., Morris, Ill.

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

DELIVERY FEBRUARY 15.

We can also furnish first delivery, the following varieties, at introducers' prices: **Olympia, Mrs. Thos. W. Lawson, The Marquis** and **Ethel Crocker.**

H. WEBER & SONS, Oakland, Md.

Mention the Florists' Exchange when writing.

Peter Reinberg, 51 WABASH AVE., Chicago.

Mention this paper.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade.

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ PRICE LIST FOR STANDARD VARIETIES READY NOW.

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4.00 per 1000.

American Carnation Society.

Carnations Registered.

By H. B. McKNIGHT, Jersey City, N. J.

SIR THOS. LIPTON, color same as Scott, flowers measuring from 3½ to 3¾ inches across, and with a calyx that does not burst in any temperature; stems 18 to 20 inches long. A cross between Scott and Tidal Wave, resembling the latter in growth but taller.

By M. E. KRAUS, New Haven, Conn.

ELM CITY, color white, flowers are large, finely shaped and with strong fragrance; petals heavy, of good substance and nicely fringed; calyx strong and never bursting; stem strong, holding the flowers erect. Plant a good grower, not making unnecessary grass; and it is now in its fifth year. ALBERT M. HERR, Lancaster, Pa. Secretary.

The large number of premiums, medals, cups, and the sweepstake competition, in connection with the coming meeting of the American Carnation Society, are likely to draw out the biggest exhibition, as well as the largest attendance, in the history of the society. The meeting occurs at Buffalo, February 15 and 16. No carnation grower can afford to miss it.

Ottawa.

Business since New Year's has been fair; supply also fair. Carnations are of good quality and retail at 50c.; roses, $1.50; violets, $1.50; the latter are now plentiful. Plants are not in much demand, a palm or azalea filling the bill.

Wright, of Aylmer, has ordered glass for four large houses, to be commenced in the Spring. On Wednesday the Horticultural Society held its annual meeting and elected officers as follows: President, R. B. Whyte; vice-presidents, Stewart and Graham; secretary-treasurer, J. Watson. Executive Committee—Messrs. Fletcher, Macom, Black, Cummings, McCann, Keyes, Ellis, Dayley, and Snelling. The financial report showed a good balance in the treasury and a membership of 140. The advisability of holding a chrysanthemum show was discussed and left in the hands of the directors.

J. Pape, of Toronto, was a visitor, being here to see his son off, in the second contingent for South Africa. E.

Buffalo.

Trade Notes.

Though some daily trade is going on, even some stores declaring it good, no rushing business is visible. Society is quiet, in fact. Flowers are in fair supply for demands, though not plentiful. Carnations of not the best quality range from $2 to $3 per 100, wholesale. Beauty roses, from New Jersey, good, long-stemmed ones, begin to be seen here and there. Being put into the retailer's hands so he can serve customers at a dollar each, even if his profits are not of regulation gauge, these flowers again get a show from buyers.

Exceptionally attractive primula plants in flower are seen in some stores, the output of Schwerdt & Berner.

Sam Smiley, of Lancaster, concluded his heating apparatus was not properly fitted for this season, so took advantage of the recent warm atmospheres to change his hot water system to that of steam. He reports a healthy, if bloomless, carnation growth. Low temperatures did it.

Carnation Society Meeting.

The carnationists next month here will find "Morgan Hall" an ideal show room. It is 50 feet wide by thrice as long, broad, window-lighted on two sides, elevators with entrance opening direct into the hall, and centrally located. Chas. H. Keitsch will have charge of receiving the flowers for exhibition. A meeting of the Buffalo Florists' Club was called Wednesday evening to act further on matters pertinent to this coming affair.

Mr. Palmer, Sr., accompanied W. N. Rudd, of Chicago, on Monday night to New York City, in attendance of the latter at the S. A. F. Executive Committee meeting. Vim.

Clear Cypress Greenhouse Material.

This *with us* means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

Write for Circulars or Estimates.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XII. No. 4. NEW YORK, JANUARY 27, 1900. One Dollar Per Year.

Having Purchased the Entire Stock of the

New Chrysanthemum

COL. D. APPLETON

We Are Now Ready to Book Orders for It.

This is a magnificent yellow variety of immense size, and is equally desirable for commercial purposes or for exhibition. It is the most valuable chrysanthemum, all things considered, that has been sent out for some time. In 1898 it was exhibited before the New York Committee, when "American Gardening" stated that it was the best seedling brought before that committee that year. "Gardening" stated in 1899, that the Chicago Committee, before which it was exhibited, considered it one of the best chrysanthemums seen in Chicago for a long time. The high value placed upon it by the several committees before which it was exhibited last season will best be shown from the fact that it was awarded not less than 91 points on both commercial and exhibition scales, scoring as high as 95. It is a phenomenal record for any chrysanthemum to score so high both for exhibition and commercially, and **Col. D. Appleton** certainly has a great future.

The flower is a magnificent Japanese incurved, bright yellow, of immense size, measuring 22 in. in circumference, with a depth as great as its breadth, not showing any center, lower florets reflexing to the foliage. Besides its immense size and beautiful color, another point in its favor is its almost faultless stem and foliage. Stem is strong, carrying the flower erect; foliage strong, but not too large, and grows fully up to bloom. An idea of the great value of this variety can best be obtained when it is stated that the flowers were sold to one of the leading New York florists last season, who paid $5.00 a dozen for the entire crop.

Strong Plants, 2¼ in. pots, $3.50 per doz.; $25 per 100. Ready for delivery March 1st.

WE ARE ALSO AGENTS FOR THE **LIBERTY ROSE**

This is having a phenomenal sale. Customers wishing early delivery should place orders without delay. Plants ready for delivery March 20th. Strong plants, 2½ in pots **25 plants at 50 cts. each; 50 plants and less than 100 at 30 cts. each full hundred lots and up at 25 cts. each.**

Grafted plants, 25 plants at 60 cts. each; 50 plants and less than 100 at 50 cts. each; full hundred lots and up at 40 cts. each.]

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

PLUMP BULBS

AT PLEASING PRICES FOR PRESENT PLANTING.

No Juveniles but fully matured Seniors.

Gladiolus —All First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least. Per doz., 15c.; a 100, 75c.; 1000, $6 50.

American Hybrids. Mixed. This mixture is grown especially for us and can be recommended for florists' use. The bulbs are all selected and contain at least more than 50 per cent. white and light types. Per doz., 20c.; per 100, $1.15; per 1000, $9 50.

White and Light Varieties. Mixed. There is no better mixture of white and light Gladiolus than this sold, no matter what price is paid. The bulbs are all selected and large and the varieties the best and most suitable for florists' use. Per doz., 25c.; per 100, $1 50; per 1000, $12 50.

Begonias—Tuberous Rooted.

The fact of our being the American agents for one of the most important European growers of this useful bulb, enables us to offer the choicest stock at figures unapproched by dealers.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each, 5c.; per doz., 35c.; per 100, $2 ; per 1000, $17.50.

Double Flowers. Each, 10c ; per doz., 65c.; per 100, $5 ; per 1000, $45 00.

Richardia alba maculata. Spotted Calla. 45c. per doz.; $3 per 100; $25 per 1000.

Amaryllis Johnsoni. Very large bulbs, 7 to 9 in. and over. $1 50 per doz.; $10 per 100.

Amaryllis Rosea. Large bulbs. 35c. a doz ; $2 a 100; $15 a 1000.

Hyacinthus Candicans. Large bulbs, 20c. per doz.; $1 50 per 100.

Madeira Vine Roots. 25c. per doz.; $1 50 per 100; $10 per 1000.

Cinnamon Vine. Mailing size. 30c. per doz.; $2 per 100. Extra size. 40c. per doz.; $2.50 per 100.

Caladium, or Elephant's Ear.

Sound bulbs, with good, live centre shoots.

Caladium Esculentum. 5 to 7 in. in circum. 40c. per doz.; $2 25 per 100; $20 per 1000. 7 to 9 in. in circum. 60c. per doz., $3.75 per 100; $35. per 1000. 9 to 12 in. in circum. $1. per doz; $7. per 100; $60. per 1000. 12 in. and up, circum. $1.50 per doz.; $10. per 100. **Fancy leaf** varieties, fine assortment, $1 25 per doz.; $7.50 per 100.

Cannas—Dormant.

We are Headquarters.

All leading and popular varieties. Full list on application. 5c. each; 35c. per doz.; $2 per 100; $15 per 1000.

Tuberose Double Pearl.

Bulbs measuring 4 to 6 in. in circumference, extra quality, 75c. per 100; $6 50 per 1000. 3 to 4 in. bulbs. 50c. per 100; $3 75 per 1000, or barrel of 2000 bulbs for $7.

Dahlias.

Whole Dry Roots, Field Grown.

Double mixed varieties, dwarf and tall. $5 per 100; $42 50 per 1000.

Double, named, assorted, $6 a 100; $55 a 1000.

Cloxinias.

Bulbs of large size, measuring 1½ to 3 in. in diameter.

Finest Mixed. 50c. per doz.; $3 per 100; $27 50 per 1000.

Separate Colors. White, red, blue and spotted. 60c. per doz.; $4 per 100.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Dunkirk N. Y.—The South Shore Seed Co. has been organized by John M. Hackett and James L. Droben, who have formed a co-partnery.

Warren, O.—S. C. Templin, of Calla, was in Warren, January 18, conferring with members of the Merchants' Association relative to establishing a flower seed industry near this place.

J. E. Morse, of Detroit, is the winner in the recent garden contest, originated by the American Agriculturist, the aim being to bring out "most clearly and fully the actual product and returns from the garden, receipts and expenses and methods pursued." Mr. Morse's garden was planted entirely with Burpee's seed; and he gets $750 for his efforts.

The Florida Seed Law.—An act passed at the session of the Florida Legislature last May, making it unlawful for any person or persons, firm or firms, or any one doing business in Florida, to sell or offer for sale any garden, melon or vegetable seed, unless the original package in which the same is inclosed or in which the seed are sold shall have written or printed thereon on the outside, in plain letters, a guarantee as to when, where and by whom all such seed were grown, is having an unfortunate, not to say disastrous, effect upon the wholesale and retail dealers in seeds throughout the state. It is said that one large seed firm has been driven from the state, through this legislative measure, "which," says a Southern paper, "is proving a source of confusion and trouble to drug stores and merchants who buy seed in bulk at wholesale from Northern and western seed houses, by whom the seed are secured from numbers of different growers, so that in the very nature of things it is next to an impossibility to honestly comply with the provisions of the statute."

Grasses for Lawns.

Editor Florists' Exchange.

We notice in your last issue is recommended several mixtures for lawns, and among all of them is included orchard grass seed, and in one of two timothy as well. Neither orchard nor timothy are suitable for any first-class lawn, where it is expected to use a lawn mower, from the fact that they grow in stools. Our experience is that you cannot keep a first-class lawn without using lawn mowers, and a roller is also very desirable; but above all, it requires a first-class mixture, and first quality of seeds, and we would never think of recommending orchard, timothy, Hungarian or millets in any form. J. CHAS. MCCULLOUGH.

Cincinnati.

Horticultural Advertising.

In a recent issue of Agricultural Advertising, J. C. Vaughan, Chicago, discusses the above subject, treating it under the following heads:

Scope—geographically; Duration—how spread over the years; Season of the year; Class of mediums; Size of advertisements; Frequency of insertion; Change of copy; Matter advertised; Illustrations used; Relative size of illustration and reading; Types; Use of priced offers; Use of a standard specialty for pushing general lines.

(1) Scope.—This, to some extent, is to be determined by the nature of the stock handled. If a man offers standard seed only, which can be had in every country town, it would seem that unless his catalogue contained some other specialties well displayed and of much merit, his advertising should be at least limited to his state or a radius of a few hundred miles. It would hardly be wise for an Ohio man to spend much money to place such a catalogue in other well-covered states. It is the specialty catalogue at light postage, or the large general catalogue containing variety in many lines not readily obtainable locally, that will bear advertising over all the country. The economy with which the articles offered can be delivered at destination must be carefully considered in these lines.

(2) Duration.—The day for building up a permanent seed business in a year is possibly over, and it is doubtful if $20,000 put into "Welcome" oats or any other in 1900 would bring with it as much permanent business for the advertiser as it did 20 years ago. All things considered, that splurge necessary to double a business annually must be considered as decided in the nature of a speculation. The safer conservative course would doubtless be to lay out a five-year plan of approximate uniform expense.

(3) Season for publication.—With a wide range of latitude from Texas to California, to Maine or Minnesota, and an early printed catalogue, the advertising season is necessarily longer than otherwise. Speaking in a broad way, it is probably well to strike when the iron is hot. Let advertisements appear not sooner than two or three weeks before a fair percentage of the mail order buyers are beginning to order. This, in the months of a large national circulation, would mean February numbers, or, if only one issue is wanted, that which is likely to be read by the largest number of buyers, though at the same time crowded, with most seed and plant advertisements, the March issues must be taken. This applies to all central latitudes—not to the South or the Pacific Coast. The older method with weekly papers has been to use 13 issues, three

JOHN F. RUPP, Shiremanstown, Pa.

The Home of Primroses.

months. Those who wish issues likely to give the highest percentage of results usually run from February 15 to March 25 for seeds. Plant advertisements may begin two or three weeks later.

(4) Class of mediums.—In recent years the range of mediums for seed and plants advertisements has narrowed very much. Formerly the weekly newspapers of large circulation, like the Detroit Free Press, Kansas City Star, Chicago Inter-Ocean, and that class were freely used by large advertisers in our line, recently but little. All ladies' papers, some of the magazines of large circulation, most agricultural and horticultural, and quite a percentage of religious papers are used.

(5) Size of advertisements.—Here is a proposition on which doctors do disagree. It is very like the question of what type to use. Much depends on the size of the page of the publication in which the advertisement is inserted, also the number of insertions and the effectiveness of the picture, if any, used in the advertisement. A striking or showy picture, though small, would permit of the use of less space and attract more attention than if a mass of plain type were used. If the advertiser engages but few insertions he may naturally use considerably larger space with the same appropriation than when his card must run twice as long. The writer believes that a fair display can be made, if the type and cuts are carefully selected, on the basis of expending, say $5,000 in advertising during the season, in a space of 50 lines single column, or 25 lines double column.

(6) Frequency of insertion.—Experts disagree as much on this topic as the preceding one, but most admit that it is unwise to run the same advertisement, if it is one containing special offers, more than twice in succession in one medium, and recommend a change every issue.

(7) Advertising copy.—Up-to-date advertisers all agree that a plain business card is of little value. Some strong plain, conversational argument or talk, clearly setting forth the advantages claimed by the advertiser should occupy, say one-fifth or one-eighth of the total space in the card, in every advertisement. An offer giving the prices of some specialty or novelty controlled by the firm or owned at low cost is undoubtedly of great value in seed and plant advertising. The mention of catalogue to be supplied is also necessary. Some advertisers are reported to have used as many as three special offers in a single advertisement, and found them profitable.

(8) Illustrations.—This question is one of the most subtle and difficult of all plant and seed advertising problems, and he who successfully illustrates his offers by attractive cuts with pertinent meaning and application to the card which it is in and generally to the man's own business, may make many other blunders and still achieve a great measure of success, for an effective cut is the life and force of an advertisement.

(9) Relative size of illustration and reading matter.—Of course, all of the statements made in this connection must be understood to be very general and subject to wide difference in interpreting the same when adapted to different needs. A good general rule would perhaps give two-fifths of the advertisement to illustration and three-fifths reading matter.

(10) Type.—The matter of type can probably be left safely to expert printers, who are acquainted with the requirements of this class of advertising, but the larger head lines should be carefully studied, and for the purpose I believe the upper and lower case letters are strongest.

(11) Specialty.—The use of a specialty to advertise a general line of business is more valuable than many people think. It is said that customers who are attracted by a good novelty or specialty frequently order other standard articles at the same time.

(12) Use of priced offers.—An offer with price is a very desirable feature of every advertisement; I may say almost a necessity to a profitable one.

In conclusion.—Advertising must be backed up and followed by much careful detail work in handling orders, stock supplied, and all the routine of a well equipped business house.

Of more direct application in this connection, however, I should mention the need of carefully assorting the answers received and following them with one or two well-worded letters asking for the applicant's regular business, and why it is not given.

Lexington, Ky.—David Boone Honaker has been elected a director of the Chamber of Commerce of this city. He was born here on March 9, 1870, and after receiving his education entered the florist business. He is a member

CATALOGUES RECEIVED.

JOHN PEED & SON, West Norwood, London.—Seed Catalogue for 1900.

WOOD & STUBBS, Louisville, Ky.—Descriptive Illustrated Catalogue of Seeds, Implements, etc.

J. M. PHILIPS' SONS, Mercerburg, Pa.—Illustrated Catalogue of Garden, Farm and Flower Seeds.

THE CAESEL NURSERY CO., North Clayton, O.—Price List of Fruit Stocks, Apple Grafts, Fruit Trees, etc.

F. BARTELDES & Co., Denver, Colo.—Illustrated Descriptive Catalogue of Seeds, with a List of Novelties.

THE COTTAGE GARDENS, Queens, N. Y.—Trade Price List for 1900. This catalogue is particularly valuable for the very full descriptions of the subjects enumerated, and the beautiful half-tone illustrations which it contains. The geraniums, of which a most extensive collection of the newest and best kinds is listed, are all classified by sections, while the chrysanthemums, including all the novelties, are grouped by colors and period of flowering. The cannas are likewise classified by color, thus making reference easy. As is well-known, Cottage Gardens is headquarters for the leading carnations grown to-day, a very full enumeration of which is included in the catalogue, accompanied by useful illustrations from life. In addition, the list contains collections of the newest in begonias, dahlias and other miscellaneous florist stock. It is well printed.

BURPEE'S FARM ANNUAL FOR 1900.—This welcome annual visitor is more interesting than ever. While performing the duties of a catalogue, it serves a far more useful purpose, being really a compendium of instructive information on all that is newest and best in the horticultural line; it tells just what the firm has discovered relative to the subjects enumerated, besides furnishing the opinions of others on a large number thereof, either after practical test or personal inspection. The annual itself is more attractive than ever, in a particularly dainty cover. Nasturtiums, new sweet peas, and the famous "Rocky Ford" or Burpee's Netted Gem Melons, are shown in colors, painted from nature, the latter, and a slice thereof, being so natural as to make the "mouth water," while the book is full of life-like illustrations from photographs. Of particular interest is the new feature for 1900 of giving "plain talks" as to the relative value for different purposes of all varieties of vegetables. Another interesting feature is the remarkable record of prizes won by the products of Burpee's seeds at leading State Fairs in 1899. "New creations" of intrinsic merit are offered in both vegetables and flowers. Altogether the catalogue shows most painstaking care in the effort to "tell the plain truth about seeds" as proved at Fordhook Farms—the largest trial grounds in America and elsewhere. It will be mailed free to any of our readers who mention this paper, when writing to the publishers, W. Atlee Burpee & Co., Philadelphia, Pa.

200 Pounds CANTALOUPE SEED
For sale. Improved, netted Gem, single pound, by mail, 50 cts. Special price on 50 lbs. or more.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Rochester, N. Y.—C. H. Hawks, A. A. Mohera and T. J. Ferguson have organized the Hawks Nursery Company.

The Vermont Experiment Station, at Burlington, will shortly issue its Annual Report, in which will be included a study of the hybrid plums.

The "Sterns" is the name of a new seedling apple obtained from seeds of the Spitzenberg. The fruit is large, color red, streaked with darker red. The variety is said to be worthy of extensive trial.

West Plains, Mo.—The Smith Nursery Co. has been sold to P. P. Smith and Dr. C. R. Wade, of Mountain Grove. All the movable stock will be taken to the latter place, and a big nursery established there.

The testimony recently given by J. H. Hale, of Connecticut, before the industrial commission at Washington, to the effect that "he finds the colored farm labor of the South more satisfactory than white labor of the same class in Connecticut," is causing some stir in the Nutmeg State.

State Horticultural Society of Pennsylvania.—This society has elected the following officers for the current year: President, Howard A. Chase, Philadelphia; vice-presidents, Calvin Cooper, Bird-in-Hand; Daniel K. Herr, Lancaster; M. C. Dunlevy; recording secretary, E. B. Engle, Wanyesboro; corresponding secretary, William P. Brinton, Christiana; treasurer, Samuel C. Moon, Morrisville.

According to a recent bulletin (176, Cornell University Agricultural Experiment Station) Prof. Mark V. Slingerland has found that gas tar gives the best results as a remedy for the peach tree borer; but it must be used carefully and intelligently, as trees have been injured by its use. The bulletin also enumerates suggested remedies that have been found dangerous, ineffectual or useless, and partially effective.

Nebraska State Horticultural Society.—At the annual meeting held recently in Lincoln, among the papers read and discussed were: "Plants Suitable for the Farm House," J. H. Hadkinson, of Omaha; "Bulbs," L. C. Chapin, of Lincoln; "Pæonies," C. L. Harrison, of York; "Care of House Plants," L. Henderson, of Omaha; "Propagation of the Plum," G. A. Marshall, Arlington. The following officers were elected: G. A. Marshall, Arlington, president; J. H. Hadkinson, Omaha, first vice-president; W. J. Hesser, Plattsmouth, second vice-president; C. H. Barnard, Table Rock, secretary; Peter Youngers, Geneva, treasurer; L. M. Russell, of Wymore; G. S. Christy, of Johnson; Louis Henderson, of Omaha, Board of Directors.

Eastern New York Horticultural Society.—The program has been issued for the fourth annual meeting of this society, which will be held at the American Institute, Berkeley Lyceum Building, 19-21 West 44th street, New York, February 7 and 8. Among the papers to be read and discussed are the following:

"Fruit Diseases in the Hudson Valley in 1899," F. C. Stewart, State Experiment Station, Geneva; "Legislation on Fruit Packages and its Results," W. D. Barnes, Middlehope; "Historical Sketch of the Dissemination of Improved Fruits in Eastern New York," by the president; "New Varieties of Fruit not yet Generally Introduced," Prof. S. A. Beach, State Experiment Station, Geneva; "Domestic and Foreign Markets for American Fruits," Geo. T. Powell, Ghent; "New Injurious Insects and Remedies," Prof. M. V. Slingerland, Cornell University, Ithaca; "Irrigation," Walter F. Taber, Poughkeepsie; "Cold Storage; Its Advantages and Disadvantages," A. W. Williams, Highand; "Fruits and Vegetables Under Glass"—fruits, Wm. Turner, gardener to W. Rockefeller, Tarrytown; vegetables, C. E. Hunn, gardener at Cornell University. The officers of the society are: President, James Wood, Mt. Kisco; vice-president, Walter F. Taber, Poughkeepsie; secretary-treasurer, Edwin C. Powell, Ghent, N. Y.

AZALEAS FOR EASTER

ALTHOUGH our stock of Azaleas this season is larger than ever, we strongly recommend early orders. Many of our customers were disappointed last year in not being able to procure stock several weeks before Easter, and we have taken more than ordinary precautions to prevent a repetition of this the coming season, but all indications are that the demand this year will be greater than ever; besides this the plants can be transported with so much greater satisfaction while they are still in a semi-dormant condition, that this point alone should be sufficient to induce early orders, for no matter how carefully packed the plants are certain to receive some check when turned out of pots after the buds have developed, and we assume no responsibility for injuries arising from late shipments.

We can still supply full assortments in the following sizes:

	Inch Diameter.	Per Doz.	Per 100
5 inch pots, nice bushy crowns	10 to 12	$5.00	$40.00
5 and 6 inch pots, nice bushy crowns	12 to 14	6.00	50.00
6 and 7 inch pots, nice bushy crowns	13 to 15	9.00	70.00
7 inch pots, nice bushy crowns	15 to 17	12.00	100.00

ALSO A GRAND LOT OF SPECIMEN PLANTS OF

MME. VAN DER CRUYSEN of exceptional good value, at $1.50, $2, $2.50, $3 and $5 each.

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

BUSINESS OPPORTUNITIES.

FOR SALE or rent. A five-room dwelling, barn, small patch of ground, and greenhouse, 20x70, partly planted in lettuce and radishes. Florist, Box 761, Muncie, Ind.

CHEAP on account of ill health, 6000 feet glass, tree fuel; big chance for lettuce or flowers; only $800 cash; balance time. K. J., care Florists' Exchange.

FOR SALE. Two and four-fifths acres good soil dwelling house, 6 rooms, 240 hotbed sash, stable, shed, 3 brand new greenhouses, 21x101 ft., 16x24 glass, all locust posts, equipped with Hitchings & Co. improved No. 57 Boiler and Hitchings ventilating apparatus, steam pump and boiler, and all implements and stock; cause for selling, death in family. Has to be seen to be appreciated. Any one who wants to take advantage of a good opportunity address Nicholas Rothar, Central Ave., cor. Moffat St., Brooklyn, N. Y.

FOR SALE.

Well-established small florist, doing good cash business; first-class location; moderate rent. K. K., Florists' Exchange.

FOR SALE CHEAP.

Three Greenhouses, 20x80 feet, all improvements, and residence on property. Good location, near New York. Three minutes from R. R. Station. Rare chance, liberal terms. Address MILLER & CHRIST, New Hyde Park, L. I., New York.

FOR SALE.

Greenhouses that cover over one-half acre, to be moved this coming summer. The glass is nearly all 16x24, double thick, first quality, capable of covering 15,000 Roses, besides several thousand feet good for growing Violets or Carnations. Boiler power can heat one-half as much again; all the pipes and valves that heat them now by steam, ventilators and lifting apparatus; iron columns and iron frames. Most of the sash bars are as good as new. All for $2,500. A stock of young Roses can be got here for one-half price. Owner will give valuable advice and assistance in moving them. This ad. may appear but twice.

Address L., C. care Florists' Exchange.

Mention the Florists' Exchange when writing.

Magnolias—Few flowers are better appreciated by the public generally, than the magnolia. Such a display of large flowers is seldom seen on a tree of any other kind. Coming early, before the leaves, of fine form and strong, sweet odor, they are indeed attractive. To many persons a magnolia is simply a magnolia, varieties or species disregarded. But some consideration of the kinds is quite to be desired. To me the prettiest, Magnolia Soulangeana, popular taste or knowledge usually puts aside. It is intermediate between the purple and the pure white, having a deep suffusion of pink at the base of the petals, shading out to clear white. It is in less of a hurry to blossom in the Spring than the white, M. conspicua, therefore less likely to be frozen in the bud; although if planted on the eastern side of buildings or sheltered from the sun there is less tendency to blossom too soon. M. Soulangeana makes a handsome growth, rapid and strong, with large leaves. In this respect it is quite unlike the purple, which makes numerous slender stems, suckering from the base to form a large clump. The purple color is, of course, a good one, especially in contrast with the white. Magnolia Lennei is a very dark purple, of better form as regards the petals, which have more rounding tips and last longer. The growth is heavier than that of M. purpurea. These three are the better known of the shrubby magnolias; but there is another more rare, yet well appreciated in certain quarters. It is M. stellata or Halleana, a dwarf species, quite distinct in habit, leaf and flower. Four to five feet is the approximate height, though I have seen some old specimens quite 7 feet in height, and very broad. The leaves are rather narrow, not unlike in shape to those of M. glauca. The flowers are earliest of all, yet seldom injured by frost, being better protected by its dwarf habit. The petals are very narrow and numerous—it might be termed a semi-double flower. It is a bush that will be found just suitable for many positions, and very interesting in every way.

S. MENDELSON MEEHAN.

What Constitutes a Species.

Editor Florists' Exchange.

When E. H., with the old of two "eminent" botanists, tries to name a plant from the woods, and the task gives him, as he says, a violent headache, would it not be better to eschew Darwinian literature lest it place him permanently in the predicament of the gentleman he names? Let him, at least, lay Darwin's books on the shelf, taking an occasional peep at the covers, but regarding them only in the light of a future inheritance, until a study of Prof. Gray's "First Lessons" will help to an intelligent appreciation of Darwin's hypotheses.

FOR SALE.

A Greenhouse Plant of 36,000 square feet, situated between two flourishing cities of 37,000 and 166,000 population, respectively. Four lines of electric cars pass the door. Houses are equipped with Herendeen Boilers and have every modern appliance, all stocked with roses, carnations, ferns and all plants pertaining to this business. Will be sold at a great sacrifice, as owner has outside business interests and cannot give Greenhouses personal attention. Address J. V., care Florists' Exchange.

MISCELLANEOUS.

FOR SALE, 160 ft. 4-inch cast iron pipe for hot water heating. Samuel J. Buntieg, Elmwood Ave. and 58th St., Philadelphia, Pa.

FOR SALE.—A 15 horse power upright, stationary return 3 inch. due, steam boiler, separate ash pit and patent shaking grate, for steam and hot water; boiler is in first-class condition. Address Geo. Steffinger, Springville, Erie Co., N. Y.

Flatbush—At the alleys Thursday evening, Captain Eugene Dailledouze read a communication from the secretary of the New York Florists' Bowling Club relative to entering a bowling tournament in the near future. On motion the captain was instructed to express to the New York Club their willingness to take part, and also to suggest that the first series be played on the Flatbush alleys next Thursday evening. John P. Cleary was proposed for membership and unanimously elected. The following scores were made:

	1	2
D Y. Mellis	182	146

J. J. Beneke	142	148	114	158
C. C. Sanders	138	142	186	137

The Rhode Island Experiment Station has been experimenting with the forcing of rhubarb. In these experiments plants grown in light developed much more leaf and grew much more slowly than plants grown in darkness, and freezing the roots had a marked beneficial influence on rapidity of growth and total yield of product. The work seems to show that if rhubarb plants are frozen and then planted in mellow earth in a frost-proof cellar a product can be secured in February or March rivaling in texture, color and quality that usually secured from the open field from six weeks to two months later.

Tarrytown, N. Y.—Alex. Hogg, gardener to Henry Villard, Esq., Dobbs Ferry, has had a very severe spell of sickness, but is now convalescing favorably, and is able to be around again.

NOTES BY THE WAY.

ATLANTA, GA.—The C. A. Dahl Co. report an increase in out-of-town shipping, which, with a first-class local demand, makes Mr. Williams, the busy salesman, feel happy. One of the prettiest sets of calendars was sent out this year illustrative of the choice stocks grown here.

At the West View Floral Co. roses and carnations are looking fine. Crane is the best scarlet; Scott and Flora Hill best pink and white respectively. While satisfactory, I shall be surprised if the enterprising grower, Mr. Burford, has not several of the new kinds on the bench next season.

Wachendorff Bros. have no complaint to register, both season and stock have been all they could wish, with bright prospects for an early Spring business.

KNOXVILLE, TENN.—Being very successful with Daybreak, Armazindy, Scott and John Young, C. W. Crouch is wary about trying the new claimants for favor, yet has sufficient confidence to set aside a couple of houses next season for their use. Craae is doing beautifully, and beautiful are the Beauty, of which there are several houses planted, one house standing four years and yielding heavy crops. One hundred dozens of this rose were sold here at retail at Christmas, showing its popularity. An additional house will be devoted to it next season on the solid bed plan. Two houses, each 150x20, glazed with double thick butted glass, was recently added to this extensive establishment.

NASHVILLE, TENN.—Mr. Joy has also some fine carnations—White Cloud, Scott and Triumph, with Mrs. Joost, all firsts, and bringing no more than 75c. per dozen; 60c. being the average. The sale of the Beauty rose keeps up well, and some of the finest stock grown, either in the North or South, may be seen at this place. Mr. Joy, Jr., expects to be at the carnation meeting at Buffalo in February. W. M.

New York.

The Market.

Business in several lines of flowers shows a little improvement over last week and there is also a marked falling off in the quality of many roses that are coming in. Good Bridesmaid are in fair demand, and are being eagerly sought after as compared with Bride of the same caliber. Since Monday Beauty have gone satisfactorily and prices maintained have been somewhat stiffer. Short stemmed Bride and Bridesmaid have not advanced any in value, those classed as No. 2 selling at 2c. and 3c., and of all the roses coming into the market these are the slowest to move.

The situation with regard to carnations has now got to be very similar to that of roses. Fancy grades find a ready sale and at profitable prices, but the medium and poorer grades meet but a slow market. Whatever the colors, if the flowers are not above the average grade, the figure obtainable is very unsatisfactory; still they go at some price or other, though $5 per 1,000 for carnations in January seems pretty cheap, and we saw some sold as low as that.

Violets are coming in heavily and the mild weather we are having enables the street sellers to handle them in vast quantities, which means that a great majority of them are disposed of at the 35c. mark.

Tulips are becoming more plentiful; the yellow ones are bringing the highest values. One week ago red tulips brought the top price, but they now hold second place.

Narcissus Von Sion is in in limited quantities and realizes 6c.; other yellow narcissi are arriving, such as Golden Spur and Campernelle, the latter bringing $1.50 and the former $4 per 100.

Lily of the valley meets with an erratic demand and averages about $2. There are three distinct grades on the market, consequently three prices—$1, $2 and $3 per 100.

Callas seem to be in excess of the demand, and they dropped considerably from last report. Harrisii is plentiful and a lot of them are only of medium quality. Orchids are not meeting with a very brisk demand and no change in values is noted.

White lilac is taking favorably this week, and the best brings $2 a bunch; shorter stock can be had as low as 75c. a bunch.

Smilax continues a drug, but maidenhair fern is going steadily at $1 per 100.

Jottings.

The sporting committee of the New York Florists' Club will meet at Traendly & Schenck's store at 5:30 p. m., Monday, January 29.

Visitors this week were: Wm. P. Craig and H. C. Geiger, Philadelphia, Pa.; J. L. Banner, Montezuma, N. C., and H. Weber, Oakland, Md.

The American Institute will hold an exhibition of flowers, fruits and vegetables, in the Berkeley Lyceum Building, 19-21 West 44th street, on February 7 and 8 next. The schedule includes prizes for flowering plants, orchid plants in bloom, cut roses, carnations and violets; also medals for new roses and carnations. Copies may be obtained from Dr. F. M. Hexamer, 52 Lafayette Place, to whom notice of intention to exhibit should be given as early as possible.

The various committees of the Florist's Club, established to further S. A. F. matters, met in full force Monday evening last. Each committee went to work with a vim, on the subject assigned to it, all bending their energies toward a successful culmination, which is assured. President O'Mara rendered able assistance in the way of suggestions and advice.

Philadelphia.

Trade Improves.

There has been an improvement this week in the cut flower business; that is, the conditions have been better than for the past fortnight, yet sales are not as they should be at this season of the year. Over-production can only be the cause, as all the stores have been doing good business—balls and large entertainments having been numerous. We have also had several large weddings; in fact, enough functions have been going on to clean up the flower market in ordinary times. Hugh Graham has had a very busy week—three large ball decorations, several small ones, two large weddings and several dinners have kept his force working steady night and day.

Pennsylvania Horticultural Society.

The meeting of the Pennsylvania Horticultural Society, on Tuesday last, was well attended; the exhibits were very good. Alphonse Pericat, gardener to Mrs. Geo. B. Wilson, was awarded a silver medal for a well bloomed plant of Lælia anceps Gouldiana, and a certificate of merit for Cattleya Louis Charton. The same exhibitor also had a fine plant of Lælia anceps stellata. M. Punch, gardener to R. Le Boutillier, Esq., staged two interesting seedling cypripediums. C. W. Cox exhibited a new form of cyclamen, the plant being of very compact growth, heavily flowered and many of the blooms being feathered.

John Kuhn was awarded a certificate of merit for his new carnation, Mrs. Bertram Lippincott—a perfect flower of the Daybreak type. Francis Canning, gardener to Mrs. Chas. F. Berwind, exhibited a well grown plant of Begonia incarnata. Adolphus Bingham, Camden, N. J., gave an interesting address on "How to Produce a Crop of Lettuce in December and January." He explained his system of constructing houses and exhibited drawings thereof. He prefers a three-quarter span house running east and west, south span of sash that can be lifted off; back of house of boards covered with roofing paper, sections of this to be hinged for ventilation; beds to be solid, with hot water pipes, flow and return, in each bed 18 to 24 inches below surface. No other heating in such a house. He has successfully headed crops of Boston Forcing Lettuce and California Forcing Lettuce in December and January.

A party of florists from Baltimore paid us a visit on Wednesday. It came as a surprise to most of us.

A bowling match had been predicted, but the limited time only allowed an informal game.

The "Ladies' Night" on Wednesday evening was a grand success, the attendance being beyond expectations. The entertainment opened at 8 p. m., with a concert lasting 40 minutes; then came refreshments, and after that the games. All had a real good time, and hope for more such evenings. DAVID RUST.

Firms Who Are Building.

WEST WARREN, ME.—Starret Bros. are building a large greenhouse.

HARFORD, PA.—J. W. Bolles is building a greenhouse.

BORDER CITY, N. Y.—The Union Street Greenhouse Co., Geneva, N. Y., erected two carnation houses on their new place here last Summer. One house 18x150, the other 10x100 feet.

NASHUA, N. H.—August Gaedeke & Co. have purchased an additional tract of land and will erect thereon a store, office and salesroom; also one greenhouse, 100x25 for palms, and another, 100x15 for violets.

NEW ALBANY, KY.—Mrs. Charles W. DeHauw is arranging to build several large greenhouses here for rose culture.

Literary Notes.

"The First Stage of the Boer War" (the first of the articles on the war to appear in Scribner's Magazine) will be published in the February number. It is by H. J. Whigham, who made his reputation as a correspondent in the recent war with Spain (before which he was well-known as the golf champion of America). Mr. Whigham is following the column which is marching to the relief of Kimberley. His photographs along the route are very interesting, and will add much to his graphic narrative of the campaign.

Barrie's "Tommy and Grizel," recently begun in January Scribner's, is being widely praised.

SAYVILLE, L. I.—The greenhouse of Seymour Barr, at Oakdale, was burned January 18. It was well stocked and the loss is considerable.

State of Trade.

The most notable feature of the trade this week is the remarkable shortage in the rose cut; this has kept prices well up, anything in the way of a rose selling at sight. Fourteen days of cloudy, rainy, foggy weather no doubt have had much to do with this state of things. If the truth were known there is hardly any doubt but the cut is from 15 to 25 per cent. smaller than last year's. First-class shipping stock has been exceedingly hard to get in anything like the quantities wanted.

While carnations are in better supply the rose shortage has helped them, so that at present prices are stiffer. Bulbous stock is in fair demand. Violets are going at from 30c. to $1.50 for the very prime. Sweet peas are beginning to show up, but hardly enough to afford quotations.

New Buildings.

Peter Reinberg will build 12 new houses, each 25x265 feet, on a plot of land away from his present location. These houses will be devoted to Beauty and Meteor roses. He will use the Garland gutter.

Wietor Bros. will also use 7,000 feet of this new gutter, and design a new departure by having two iron posts to support the same, with the walk under the gutter, thereby obtaining 5-foot in place of 4-foot benches, with one more row of roses to a bench, thus obtaining the extra room of a full house for every 100 feet covered.

Jottings.

Fred. Hills, of Maywood, left for New York Saturday last, for a six weeks' trip to his old home in the Isle of Wight.

The wife of Arthur Smith, assistant to Mr. Stromback, at the Lincoln Park Greenhouses, died on Saturday last. He has the profound sympathy of the craft. He was married less than a year ago.

The Lawson carnation cuttings are beginning to arrive, and those we have seen are certainly grand stock.

Ess.

Hartford, Conn.

A large amount of funeral work has been done the past week, which has used up a quantity of flowers. Stock is not over-plentiful. Some very fine Bridesmaid and Bride are received, but not enough to supply the demand. Carnations, all colors, are a trifle more plentiful than they have been, and good in quality. Violets, which have been very scarce all Winter, are now being received in larger quantities, but the blossoms in most cases are small and the stems short. The supply is about equal to the demand. Romans and Paper Whites are plentiful. A few daffodils are to be had, but not in very large numbers as yet.

Azalea plants are seen in most of the florists' windows and find a ready sale at $1.50 and $2 each; primrose plants and cyclamen also sell well.

John Coombs has been confined to his house for a few days, but is expected around again in a day or two.

Visitors the past week were: Mr. Rolker, of New York; Paul Berkowitz, of H. Bayersdorfer & Co.; W. Mott, of Henry A. Dreer; Mr. Greenlaw, of N. F. McCarthy & Co.; Mr. Skedelskey, of M. Rice & Co., and Mr. Thomson, of Thomson Bros., East Haddam. J. F. C.

Cincinnati.

Trade Notes.

Business with the commission houses has improved very materially during the past ten days, but most of this trade done is in the shipping line. City business has not opened up as yet, and the stores are not so busy as they should be at this time of year. Stock of all kinds seems moderately plentiful, although at times it takes some skirmishing to fill orders. We could use more roses. Carnations are equal to the demand. Bulbous stock is shortening and prices are a little better.

Carnation Obtains a Century of Points.

We were somewhat surprised, yet pleased to see that a Cincinnati production, Richard Witterstaetter's carnation Enquirer, had scored 100 points. I say surprised, not because the variety was produced in Cincinnati (for I think the Queen City stands head and shoulders above any other in the universe), but that any committee of judges would award 100 points, which would seem perfection itself. I will admit that Enquirer is a grand sort, but I will not admit, neither will Mr. Witterstaetter (with all due respect to the Chicago judges) that it is worth 100 points. The only other flower that I call to mind now, scoring the phenomenal 100 points, was Mme. Felix Perrin chrysanthemum, and how many growers throughout the world to-day will say that this variety is worth anything like such a mark!

Carnation Society Matters.

As the time draws near for the Carnation Society's annual meeting in Buffalo, one hears a little buzzing; but I think five will be about the number in attendance from this city. It seems to me that the society should have by this time 100 members, who would buy railroad tickets to attend the convention; in that case a rate of one fare and one-third could be procured by the secretary, and it would certainly beat paying full fare all to pieces. Suppose you canvass this a little at Buffalo, and see if something of the kind cannot be accomplished! Next year Indianapolis sends a bid for the gathering, and I am sure more than a hundred will attend the meeting.

E. G. GILLETT.

Oceanic, N. J.

At the semi-monthly meeting of the Monmouth County Horticultural Society, Prof. Byron D. Halsted delivered his lecture on "Parasitic Fungi Under Glass, and Rusts." Although the weather was stormy, 94 members were in attendance. The Professor stated that carnation rust was an old pest in Europe, and doubtless came to us on imported stock about 1889. Within the last ten years it had spread throughout the country. He showed by illustrations how rust can be quickly distinguished by the plump gray blisters produced upon the leaves and stems, also how it spreads after the epidermis is broken, the brown rusty spores escaping in great numbers; how the fungous sends its slender threads in all directions through the leaf or stem of the plant. The fungous diseases on violets and their remedies were very well ventilated. Mildew on roses was discussed and shown, by illustrations, as a surface feeder which does not send its filaments deeply into and between the cells of the leaf. Rust on chrysanthemums was also illustrated, and I am sure that everyone present will know this pest hereafter as soon as he sees it.

A very lively discussion followed, which was taken part in by Dr. W. Whitmore, Rev. Dr. Kneip, Prof. Walling, Messrs. Frank McMahon, A. Stewart, Philadelphia; H. H. Kettel, N. Butterbach and others.

One new member was elected. After the lecture refreshments were served, followed by a wholesale smoker.

The report of committee of the society on carnation seedling No. 11, grown by N. Butterbach, gardener to Hon. C. N. Bliss, was as follows: Color a beautiful deep yellow, lightly blotched and penciled with a red orange shading to white. The flowers are full and double, measuring from 2½ to 3 inches, with large, broad petals, the upper part twisted, which gives the flower a very heavy appearance. The plants are vigorous and bloom continuously; much the habit of Maceo, with good strong stems, measuring from 16 to 20 inches, and a good calyx. This we consider to be the grandest of all yellow carnations for Winter blooming, and a valuable addition.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade. . . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞PRICE LIST FOR STANDARD VARIETIES READY NOW.

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4 00 per 1000.

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

DELIVERY FEBRUARY 15.

Errata.

In advertisement of Peter Reinberg, page 65, last issue, the prices of Mrs. Bradt should have read, $4.00 per 100; $35.00 per 1000.

The advertisement of George Reinberg should have appeared in last issue same as in this issue.

The schedule of premiums offered by the Worcester County (Mass.) Horticultural Society for 1900 has been issued. The secretary is Adin A. Hixon, 18 Front street, Worcester, Mass.

In a recent interview Mrs. Langtry, the actress, in telling the story of her career, says that her friends were divided on a choice of a life-calling for her between market gardening and acting, and, she says, she has often wished she might have chosen the other alternative. The "Jersey Lily" is passionntely fond of flowers, and remarks that botany was the one study in which she was invariably perfect.

Cut Flower Prices.

In your report of the New York cut flower market, on page 7, issue of January 6th, you quote the market as follows:

"On Thursday we found special American Beauties 50 cents each, and very few wanted at that. Special Bride and Bridesmaids bring 12 and 15 cents, and they have to be very select when they realize the 15 cents. Extras fetch 8 cents, No. 1, 3 and 4 cents, and No. 2, 2 cents.

Your reporter must have been very much misinformed or he did not take the trouble to get at the facts.

On Thursday, January 4, the day he makes the report, I sold fancy Bride and Bridesmaid at 15 cents; extras, 12 cents; No. 1 Bride, 7 cents; No. 1 Bridesmaid, 8½ cents; No. 2 Bride, 4 cents; No. 2 Bridesmaids, 5½ cents; the same on the 5th and 6th, all sold on the wholesale market—28th street.

If we are going to have the market reported, let us have it reported correctly, impartially and fairly. I will venture to say that No. 1 Bride and Bridesmaid have not sold in the wholesale market within 30 days at 3 and 4 cents, as stated, unless they were stale flowers or out of condition, and I think if your reporter will take the trouble to look up the facts he will find the average prices for the last 30 days for Bride and Bridesmaid No. 1 have been double the figures quoted.

A. L. THORNE.

Flushing, L. I.

If our correspondent received the prices given by him he is exceedingly fortunate. Our reporter's remarks, so far from being the result of "not taking the trouble to get the facts" are based on two days' work of careful investigation, and are not, as our correspondent imputes, the outcome of mere hearsay. There are, of course, cases where the stock of some growers will realize more than the highest market price quoted by us; but these instances are exceptional, and the stock of limited quantity; and to quote them as a general market figure would be misleading to the majority of consignors and unjust to the salesmen. What we endeavor to furnish is the general run of values, a by no means easy task when is taken into consideration the numerous variations, both in the grades of stock and prices obtained therefor, ruling in the New York market, and to which the wide range shown in the column giving the wholesale price list of cut flowers testifies.

We do not doubt for a moment that Mr. Thorne obtained the figures given by him; and there are various reasons why it was possible for him to do so. Among these his proximity to the point of distribution, thus enabling early delivery, contributing to freshness of stock and consequent first call. It may have been that the supply of the particular quality of his flowers was limited on the date in question, with a good demand therefor, conducive also to higher values being obtained, and much may also depend upon the ability of his salesman.

His letter is but another evidence of the truth of the oft-repeated assertion that first-class stock will always find the readiest sale at highest prices, the better the grade and the more advantageously the consignor is located to his market, also acting in his favor. But Mr. Thorne's case is one among several hundreds less fortunately situated, and, perhaps, with the drawback of inferior quality; and we think that the values he received can hardly be taken as indicative of those for the general run of material, and for which, it being in the greatest abundance, it is our aim to supply.

We may add that we always take the opportunity of recording exceptional prices when such present themselves, believing that these have an educational value far beyond mere word-teaching; yet any one outside of a commission house, or the office of a florist's trade paper, has but a faint conception of the commotion among consignors that such quotations cause. It is a failing of human nature to believe that one's stock is as good as that of his neighbor, and, though "figures never lie," they more often than not fail to bring about conviction in this particular case, even though accompanied by what ought to be a convincing explanation.

We most emphatically refute the imputation of our correspondent that our reports are either unfair or partial; or that they are given haphazard. If he himself will take the trouble to call on, as we do, every commission man of any consequence in New York City, he will find the statements as to prices of specific stock, vary as many times as there are salesmen; and still each one may be stating the truth. This may arise from the lack of uniformity or a fixed standard in the grading, each middleman being a law unto himself in this respect.

Before we gave "the facts," questioned by our correspondent, we, as stated, "took the trouble to look them up," and a further investigation only serves to their corroboration. Our correspondent must and should not pass judgment simply on the knowledge born of his own particular case, which may be, and possibly is, an isolated one. Snap sales do not constitute, nor can they ever convey, the run of prices for the majority of the stock received and which it is our object to present.

Chrysanthemum Society of America.

We are pleased to note, in a contemporary, President Hill's confession of the "sins of commission and omission of this society," and also his pleading for better recognition of the society's services than is now generally accorded by those interested in the plant for which the society stands sponsor. We confess to being numbered among those "horticultural litterateurs" who have been "quite diligent in their prodding and free with suggestions"—a disposition into which the President himself seems to have now likewise fallen—and our object was also similar to his own, viz., the betterment of the society's condition and a greater interest in its work.

It has been our claim right along, to which we still adhere, that the Chrysanthemum Society of America is a mere nominal organization, its interest in the chrysanthemum and the cultivators thereof ceasing with the inspection of new varieties and an award of a silver cup, consequent upon the work of inspection and certification. Its annual meetings have all but been fiascos. We have yet in mind the earnest but futile efforts of the worthy secretary at Detroit to bring together a quorum, and the impressment of individuals necessary to this accomplishment. The work done on that account, from the summary nature of the proceedings, fell far short of what might be and is expected of a national body at its annual gathering. We have suggested a change of the date of the annual meeting of the society to a more opportune period, when interest is centered almost exclusively on the flower that the society seeks to advance, looking to greater success both as regards attendance and work accomplished, and we have yet to hear any tangible objection to this proposition. We have made the plea, now put forth by President Hill, that the society should recognize to a greater extent than it now does the amateur cultivator. As an example of how valuable he is to the society, may be cited the fact that the changing of the society's scale of points last year was the outcome of an amateur's suggestion! The proposition of an annual exhibition—under the society's auspices—a most excellent one—is not new by any means, though, up till now, it never has been considered by the men "holding the rudder" worthy of carrying out.

It is to be hoped that the list of names for officers, executive committee, etc., which the President has in mind will, when brought to light, result in those being chosen who will readily absorb and assimilate whatsoever tends to progress and advancement of the society's interests. While several of the President's "pricks" are more or less cynical, they are nevertheless suggestive and helpful, and we trust they will lead to acceleration toward a "consummation devoutly to be wished." There is much truth in the saw that, "The Lord helps those who help themselves," a maxim which the Chrysanthemum Society of America should lay to heart.

Meantime, let us keep on "prodding."

Our Prize-Winners Acknowledgments.

A. T. DE LA MARE PTG. & PUB. CO.:

Your letter of 20th at hand informing me that my article in prize competition secured the first premium. The money came duly to hand.

Permit me to thank you very much, and I trust that any suggestion that was made in the article will be of as great benefit to your readers as have been many of the timely and well-written articles that have helped the craft thus far in your valued paper. No well-regulated business man could afford to do without the paper, if once accustomed to reading its pages. Again thanking you, Sincerely yours,

CHAS. E. NEALE.

Worcester, Mass.

A. T. DE LA MARE PTG. & PUB. CO.:

I am in receipt of yours containing the pleasing information that I was a prize winner in the recent competition; the prize money is also to hand, with thanks.

In offering the suggestions my object (and doubtless those of the others) was to assist you, by showing the reader's point of view, and had not any other reasons beyond trying to win the prize—certainly not because of dissatisfaction. We all like the paper we subscribe to and think it the best. The way to find out what the people want is to ask them, as you did; and the fact that there should have been so few replies is justly to your credit and proves you to be turning out a very satisfactory journal. Possibly, however, you would have received a greater number of responses had it not been just at the average florist's busiest season when the contest was called for.

Thanking you exceedingly, and trusting you will continue to progress and succeed, Yours truly,

SAMUEL BATSON.

Kalamazoo, Mich.

Grove P. Rawson, Elmira, N. Y., winner of the third prize, writes: "Thanks for 'The Water Garden.' One cannot always expect to win first premiums."

A. T. DE LA MARE PTG. & PUB. CO.:

I beg to acknowledge receipt of your kind letter of the 20th inst., advising me of my having been awarded fourth prize in your recent Prize Competition. By the same mail came the prize, which is a beauty, is greatly appreciated, and for which please accept my best thanks.

That any suggestion of mine should have proven acceptable to the FLORISTS' EXCHANGE is sufficient honor and glory, without any reward. However, for the pleasure it renders, this method of winning a prize takes the palm. Progressive euchre is not in it.

Congratulating the gentlemen who won the other prizes and wishing you continued success and prosperity, and again thanking you,

Yours very truly,

CHARLES JOHNSON.

Philadelphia.

Commenting on the forthcoming exhibition to be given in connection with the New York Convention of the S. A. F., in August next, the Philadelphia Telegraph remarks:

"It is indeed surprising that when innovations in the exhibition line are already so scarce as to make the holding of snake and fashion shows a possibility, plants and flowers have not ere this come into their share of attention. With dog fanciers' clubs galore there certainly ought to be room for a live organization that would foster the growing of rare plants and flowers among the rich women and men of this country by an annual competitive exhibition."

It is sincerely to be wished that the New York show may be but the initial step toward an annual competitive exhibition "among the rich men and women of the country," at the meetings of the S. A. F. Much, then, very much depends on the success of the New York show in the bringing about of this.

The Harvard faculty has voted to give from the Lawrence Scientific School a new degree in landscape architecture. The course is to require the taking up of a series of studies in landscape gardening and architecture, and is offered in response to many recent demands for men versed in this line of study.

OBITUARY.

Joseph Nicol.

Joseph Nicol, after a year's sickness, passed away at his home, at Cataraqui, Ont., January 16. Deceased was born in Montrose, Scotland, 63 years ago. He came to this country when quite young, and was for many years in business with Benjamin Chaffey, of Brockville. About thirty years ago he went to Kingston, and had been engaged in business as a gardener and florist ever since.

Mrs. Henry F. Michell.

Henry F. Michell, seedsman, Philadelphia, experienced a sad bereavement on the 18th inst.; his wife died at 6 a.m. on that day, after four days' illness. The trade in general has expressed much sympathy with Mr. Michell in his sorrowful loss. He has always been kind and attentive to his customers, and has endeared himself to the trade in many ways. Mr. Michell had been married about five years, and although his wife had been ailing at various times, all symptoms were, to appearances, overcome, hence this sudden blow was the more severe. D. R.

John Pearson.

The trade in Memphis, Tenn., has lost one of its most useful and valued members in the death of John Pearson, which occured January 19. Mr. Pearson was ill from pneumonia less than a week, and his death was unlooked for, as he was a sturdy, strong, energetic man. He endeared himself to all by his courteous manner and kindly disposition. Mr. Pearson was an Englishman and was an apprentice at famous Chatsworth; after that going to Veitch's, then coming to America, where he engaged in managing private places, finally coming to Memphis and embarking in business for himself, which he had conducted for the past 20 years. He leaves a widow, but no children. C. H. H.

Alfred Neuner.

Alfred A. Neuner, formerly of the firm of Nanz & Neuner, florists, Louisville, Ky., died recently near Stuttgart, in Germany. Mr. Neuner had been in failing health for some time, and last March left Louisville for Germany, in the hope that the change of climate would benefit him. For a time he rallied, but his malady proved fatal, and he sank steadily until his death.

Deceased was born in Germany. When 17 years of age he came to this country and soon settled in Louisville. He formed a partnership with Mr. Nanz, which continued until 1898, when it was dissolved. Mr. Neuner was then for a short time in Vaughan's seed store in Chicago.

Mrs. Neuner, who survives, is a sister of Mrs. Louis Stein, wife of the city editor of the Louisville Anzeiger. There are four children—Harry, who is now in Jersey City; William, who was with his father, and Misses Emma and Alice. Mr. Neuner will be buried near his boyhood home.

John M. Hodgson.

John M. Hodgson, one of the pioneers in the retail florist business, died suddenly at his home, No. 30 Central Park South, New York City, of apoplexy, Wednesday evening, January 24. The deceased was the first to open a flower store in the fashionable Fifth ave. of the metropolis, starting in 1861 with a modest shop at the corner of 37th street in the plant and rustic work line. Occupying a part of the old Murray mansion he began building up a business with a class of customers among whom were numbered some of the richest people in the city. Subsequently Mr. Hodgson had a store at 45th street and Fifth avenue, where he remained for 25 years, removing in 1898 to 46th street and Fifth avenue. His latter store was on the coraer below, opposite the Windsor Hotel, until he was forced to move by the fire which destroyed that building. His business was then established at the corner of 56th street, where it is at present located.

Mr. Hodgson also conducted a branch store at Newport, R. I., in the season of fashion there for the past 20 years.

Deceased was born in Durham, Eng., 73 years ago. He was in his usual health Wednesday, going out for a walk, then remaining with his family until after 8 o'clock. He was stricken with apoplexy about 9 and died at 11 o'clock. He leaves three daughters, and a son, Chas. F. Hodgson. Mrs. Hodgson died six years ago.

His son and sons-in-law, A. W. Spalding and R. A. Merritt, have been associated with him in the business for some years, though having no interest therein. The store will be continued under its present title of J. M. Hodgson & Son.

The interment will be in Newport today (Saturday). Rev Dr. D. Parker Morgan, rector of the Church of the Heavenly Rest, one of Mr. Hodgson's many friends, will conduct the funeral services in the morning.

Rules in Granting Credit.

(1) Open accounts only with persons of known responsibility.

(2) Take title notes for one-half bill, demanding half in cash. Always have note recorded.

(3) Trust no strangers unless account is guaranteed by some responsible person known to you.

(4) Avoid opening accounts for less than one dollar.

(5) Always set a day for payment.

(6) Collect promptly as agreed.

(7) Avoid long time sales.

These rules strictly followed would undoubtedly lose you about one-fifth of your trade, principally the undesirable filth. If business men would follow such rules, it would tone up trade, make their daily life pleasanter, stop aggravating losses and be better for customers as well.

Finally: Controlling credit is a matter for individual action, and no information will benefit the merchant who cannot say No, or who insists on making such unsafe sales for the chances of making a profit, which is as often as bad speculation as bucket-shop deals.

The real and only safe way to control credit is to sell for cash. Hasten the arrival of that day.—Metal Worker.

The Shaw Garden.

The annual meeting of the Board of Directors of the Missouri Botanical Garden was held January 10, 1900. The financial affairs of the Garden are in a first-class condition. The officers of the Board are R. J. Lackland, president; Henry Hitchcock, vice-president; A. D. Cunningham, secretary; Prof. William Trelease, director of the Garden. The report of Director Trelease shows that the collection of living plants now numbers 9,127. The record of attendance shows that 54,429 persons visited the Garden on week days, 7,755 on the open Sunday in June, and 8,837 in the open Sunday in September; a total of 71,021.

The California State Floral Society, at its annual meeting held January 12, elected the following officers: President, Prof. Emory E. Smith, of Berkeley; vice-president, Mrs. L. O. Hodgkins, of San Francisco; recording secretary, Mrs. H. P. Tricho, of San Francisco; corresponding secretary, Mrs. M. Grothell, of San Francisco; treasurer, John Henderson, of Berkeley; accountant, Mrs. A. R. Gunnison. The directors are John Hinkle, of Berkeley, and Mrs. John Martin, of San Francisco.

The dates of the general exhibitions of the Massachusetts Horticultural Society, for 1900, have been fixed as follows:

SPRING EXHIBITION.—March 20, 21, 22 and 23.

MAY EXHIBITION.—Saturday, May 5.

RHODODENDRON EXHIBITION.—Wednesday and Thursday, June 6 and 7.

PEONY EXHIBITION.—Saturday, June 16.

ROSE AND STRAWBERRY EXHIBITION.—Friday and Saturday, June 22 and 23.

EXHIBITION OF AQUATIC PLANTS AND FLOWERS, ASTERS, ETC.—Saturday, August 18.

ANNUAL EXHIBITION OF PLANTS AND FLOWERS.—Wednesday and Thursday, September 5 and 6.

ANNUAL EXHIBITION OF FRUITS AND VEGETABLES.—Thursday and Friday, September 27 and 28.

CHRYSANTHEMUM SHOW.—November 6, 7, 8 and 9.

EXHIBITION OF WINTER FRUITS AND VEGETABLES.—Saturday, November 17.

The schedule has been issued, and copies may be obtained of Robert Manning, secretary.

American Society of Landscape Architects.

The American Society of Landscape Architects held its annual meeting and dinner at the Hotel Martin, New York City, January 9. A majority of the members, many from distant cities, were present. The officers elected for the ensuing year were: President, John C. Olmsted, Boston; vice-president, Samuel Parsons, Jr., New York; secretary, Downing Vaux, New York; treasurer, C. N. Lowrie, New York. William H. Manning, of Boston, was elected a member-at-large to constitute, with the four officers, the Executive Committee. A feature of the occasion was a discussion of the relation of the society to Municipal Art.

HINTS and HELPS.

Winter Blooming Begonias—Gloire de Sceaux is a hybrid between B. subpeltata and B. socotrana, the latter being one of the parents of the wonderfully floriferous Gloire de Lorraine. Gloire de Sceaux is a trifle miffy and that is probably the reason we see less of it grown than we did a few years ago. Flowering wood is not the best for cuttings. Young plants are best started from the leaves. When well flowered it is a wonderfully effective plant for decorations, owing to the brouzy color of the foliage and bright pink flowers. Paul Bruant is one of the best flowering of the genus, and one which does well in a house window; the foliage slightly resembles that of B. Gilsonii, another good Winter bloomer, with double flowers, said to have been raised before the War of the Rebellion by a colored man named Gilson. Its history would be interesting, seeing that it is a shrubby kind with the flowers double. President Carnot, after having grown this hybrid since it was sent out a few years ago, I have come to the conclusion that the best way to manage it, in the absence of a place in the greenhouse, where it can be planted out, is to put it out in the open lot in the Summer, where it is encouraged to make all the growth possible; lift with a good ball, pot carefully, when it will flower in mid-winter most profusely. The large clusters of female flowers are one of the most attractive features in the greenhouse at present. Two other good Winter blooming species suitable for house culture are B. manicata aurea and B. acuminata; the former has light pink flowers and yellow spotted leaves; the latter small, crisp looking foliage and pure white flowers.

Pampas Grasses—Last Winter, contrary to expectations, we did not lose a single plant of any of the forms of the pampas grasses, which makes me think it is not so much the cold as it is dampness which is fatal to this the handsomest of all the grasses grown for their flowers. None of the plants were protected by the usual method of boxes or barrels with the ends knocked out, placed over the plants and filled with leaves or straw. Winter propagation of these plants is the most successful, and the way in which we go about it is as follows: A large clump is dug up in the Fall, chopped up into pieces small enough to go easily into 6-inch pots. Use stiff loam and pot firmly, standing the plants under benches, watering occasionally until the beginning of February, when they are knocked out of the pots and divided up into the smallest possible pieces; shorten the leaves back to half their length, put in the sand bed for a couple of weeks to start new roots, then put in 3 or 4-inch pots, and they will form well furnished plants in a short time.

Flowering Shrubs—The wood of these intended for cuttings taken after the leaves were shed, and which were stored in a damp place, out of the reach of frost, should be attended to shortly. Where only a limited number is wanted for local trade, the cuttings may be made and put thickly together in boxes of sand; these boxes may be placed under the benches of a rose or carnation house, where a large percentage will root. After they are rooted bring them to the full light for a few days previous to potting off or shifting to cooler quarters, preparatory to planting in rows outside. When wanted in large quantities, the usual custom of putting the cuttings in rows, ontside, later in the season, is advisable. Some of the most popular shrubs amenable to this treatment are as follows: Deutzia scabra, D. Lemoinei, Forsythias viridissima and suspensa; the species of philadelphus, Hibiscus syriacus and its forms; Lonicera odoratissima and L. Standishii; Staphylea pinnata and S. Bumalda, Syringa persica, S. p. laciniata, Viburnum macrocephalum, V. plicatum, Punica Granatum nana, and the species of tamarix, which root very quickly, and are highly useful as seaside plants.

Vase Plants—When vases have to be filled with only one kind of plant hardly anything will be found more appropriate than the Rnsselias. The branches are erect in a young state, eventually becoming drooping. If the plants are put in a light, rich soil, with abundance of water during the growing period, they will be in bloom most of the time. Only one-year old plants should he used for large vases; that is, plants in 6 or 7-inch pots, as when of that size they soon become furnished with good sized branches. The old and well-known Russelia juncea is the best for the purpose, although sarmentosa and Lemoiuei are both good, giving a greater number of flowers which, however, are smaller than those of juncea.

Double Pink Hibiscus—This plant I grew for the first time last year, and it turns out to be one of the finest of the rosa-sinensis section. It looks as if it would be a first-class plant for those doing a general trade, to handle. Even if each plant in a 5 or 6-inch pot should have only one open flower it would be a good seller. Plants for market should be grown to one stem. The cuttings root in the open beach without much trouble, and after they have taken with 3-inch pots they may be shifted into 5 or 6-inch, using lumpy, rich soil. Keep in a growing state until they get to be one foot or more tall, when they will flower freely.

Bedding Crotons—The principal batch of the commouer kinds of crotons for planting out may be got up now, by pruning back the plants which were lifted from the beds last Fall, and all the growth available for cuttings put in. Where the propagating house is not suitable for the purpose put a frame of wood on the warmest part of the bench, and cover with glass. The top and bottom removed from a large shallow box will do when covered with panes of glass. A humid atmosphere is necessary to root the croton at this time, as the wood is not apt to be so ripe as it is in the Fall. Let the cuttings he well rooted before potting. Good plants, with leaves well colored, and which have lost their lower leaves through continued service in decorating, had better be mossed about this time to preserve the tops; good sized pieces may be treated this way. Take out a section of the bark all round the stem, tie some moss firmly on, keep the plants shaded, and in a warm house; when roots appear through the moss break a small pot in two and place round the stem, tying it in position; fill with peat, loam and sand, and when this is filled with roots the top may be cut off, repotted and placed in a frame, where they should only get water by the aid of the syringe for a few days.

Mossing Palms to produce roots high up on the stems exactly as we would do in the case of Ficus elastica or other plants, so that good sturdy tops may be obtained, is an operation which, I think, few have heard of, and fewer still would advise as an alternative to throwing the plant away when it becomes too tall. Several species of Chamædorea, such as elegantissima and graminifolia, when they get beyond a certain age, have reed-like stems out of all proportion to the size of head. These heads can be successfully rooted by making an incision in the stem and placing a wad of moss and peat over it, and subsequently a 4 or 5-inch pot, broken in two, clasping the stem and filled with soil. This operation has been successfully performed lately by Mr. Henry Pfister. G. W. O.

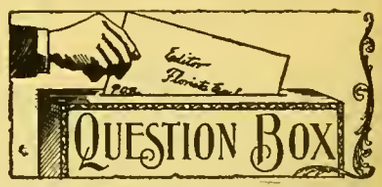
Nematodes in Roses—Rose Root Galls.

The Orchid Market.

In reply to your favor in regard to the market for orchid flowers this season we would say that, as a whole, prices have ruled higher and firmer, so far, compared to last season. The reasons are probably various: In the first place the demand for orchid flowers in other cities outside of New York has increased at a rapid rate—so fast, indeed, that this year shipping will probably double that of last year; and last, but not least, the "good times" undoubtedly are responsible for the better prices obtained.

As to orchids for Easter we will have Cattleya Trianæ, C. Mossiæ and C. Mendelii. We grow most of our cattleyas comparatively cool, consequently our Trianæ extend over a season, say from Christmas to Easter, which, however, we find is the extreme limit for C. Trianæ, while somewhat early for C. Mossiæ and C. Mendelii; but by selecting the most advanced of the two latter varieties and placing them in a somewhat warmer position, they should come in right for Easter.

JOHN E. LAGER,
Summit, N. J. Of Lager & Hurrell.



(14) **Rats Eating Carnations.**—We are greatly annoyed with rats eating our carnations. At first we caught a few with poison and traps, but now they are too foxy for either, and are worse than ever. What is the best remedy to get rid of them?—S. BROS.

—There are many ways of giving poison to rats, and when it is found that they refuse to take it in one form, some other has to be tried. We would suggest the following plan: Have a good-sized dish of oatmeal cooked and placed in the carnation house in the evening for the rats to feed upon; repeat this every evening for a week or so, by which time all the rats will be eating it greedily every night. When it is found that the dish is empty every morning, then is the time to introduce the poison into the oatmeal. Get pure strychnine and mix a good dose of it thoroughly with the oatmeal, placing the dish in exactly the same spot as before. This method has been known to clear out hordes of rats, and will, if adopted, no doubt help you.

(15) **Taking Carnation Cuttings.**—The tops of all the growths of a carnation plant make good cuttings, though the medium-sized ones will root better than the thick heavy shoots that are found near the base of the plant. To prevent the grassy growth mentioned is rather a broad question; some varieties are given to coming in crops, and perhaps those referred to are of this class. Then, again, too low a temperature will retard any varieties from flowering freely, although the plants thus kept will have fine foliage, be in a healthy condition, and will produce plenty of bloom later in the season.

(16) **Antirrhinums Not Flowering.**—I have a house planted in antirrhinums. These plants were raised from seed sown about April 15. The plants were potted in 4-inch pots and plunged outside during the Summer, being pinched back and watered well all the time. About October 21, when the weather was getting cold, I took the plants inside, but as at this time the house was planted in chrysanthemums, it was about November 15 before I could plant the antirrhinums in the benches. Now the plants are looking nice and vigorous, but only make a few flowers occasionally, though they are making plenty of flower shoots. What can I do to hasten flowering? The temperature of the house is about 45 degrees at night. I did not change the soil in the bench after the chrysanthemums came off. Can this be the reason? Is there any way of getting a full crop about Christmas next year, and is it better to raise plants from seed again for next year or to take cuttings from my best plants?—L.

—That the antirrhinums are making plenty of growth is proof positive that planting them in the old chrysanthemum soil was all right. The cause of flowers being hitherto so few is due to the low temperature the house is kept at during the night. If this be raised from 5 to 8 degrees higher, and an occasional watering of liquid manure applied the plants will soon flower abundantly. To have a crop for Christmas we would propagate in May, selecting the best colors, and grow them outdoors through the Summer, pinching out all flowering shoots that may start. When the nights begin to get cool in the Fall transplant to the bench in the greenhouse, and keep a night temperature of about 50 degrees. Plants thus treated will furnish flowers from November on through the Winter.

Eel-Worms in Roses.

During the past few months there have been many complaints on the part of rose growers because their plants failed to produce a healthy growth and a good supply of blooms. While there are several causes for this sad state of things, one of the leading reasons for distress is a microscopic worm that works principally at and in the roots. These worms are in form like that of an ordinary eel and under the microscope are seen in

almost constant motion. These cause an enlargement of certain portions of the roots, which swellings are sometimes called galls. These galls or knots are easily detected with the naked eye when a plant is removed from the soil and carefully washed of the adhering earth. Figure 1 shows the general appearance of a portion of root of a rose that had sickened from the inroads of these worms. As the minute animals are not unlike the worms found in vinegar, they are sometimes spoken of as vinegar eels. The term nematodes is also given to them, but whatever name they go by, there is no doubt as to their injuriousness.

The point that most interests rose growers is how to get rid of the pests. In order to do this it will be of much assistance to know where the worms come from—how they propagate and get into the roots of infested plants. These eel worms are much more abundant than generally supposed, and it is only when they are numerous that their mischief becomes apparent. In looking up the subject of tomato blight in the South, some years ago, it was observed that the tomato plants were, almost without exception, more or less affected with the root galls, and the same is true for a large list of plants, both herbaceous and woody. The nematodes are, as a rule, much more abundant in warm climates than elsewhere, and the unusual abundance of these pests in Northern gardens, is likely due to the lack of freezing of the soil.

The greenhouse furnishes the proper condition for the propagation of the eel worms, provided they are there to begin with, and this naturally raises the question of how they first get into the bed. This may be in one or more of several ways. They may be already in the roots of plants, but in small numbers, when the plants are placed in the house. To guard against this, the roots should be examined as closely as possible for the galls, when the beds are set. All galled roses should be excluded. The nematodes may come in with the earth. As before stated, the worms infest a large number of kinds of plants, and it is an easy matter for them to come with the soil. Soil that has not been used for growing plants in the garden is not necessarily free, but if taken from a pasture or meadow may contain many nematodes. Then, again, they may be taken with the manure that is used.

Just what may be the best precaution remains for the practical rose grower to determine. Cold in excess will probably destroy the worms, and likewise a high temperature is inimical to them. Both these conditions may be impracticable to apply to the soil, the one being impossible in some cases, and the other too expensive.

Recently Drs. Stone and Smith, of the Massachusetts Experiment Station, have made extensive tests with nematodes, and they conclude their report by stating that while many solutions are capable of killing the mature worms the strength and amount necessary to add to the soil is great. "The most effectual, complete and practical method at the present time of exterminating nematodes in greenhouses is by heating the soil by means of steam. This can be accomplished without much expense, providing proper attention is paid to the method of applying the steam." They find the minimum amount of heat necessary to kill the nematodes is 140 degrees F. Rose growers might make the experiment of heating the soil of a small portion of the bed before setting the plants, and satisfy themselves if such treatment will pay. If manure is the chief vehicle of the worms, it may be possible to grow roses without so much of this constituent of the rose soil. It may be that roses can be grown with a formed soil, to which all of the necessary elements of plant food have been added in the form of commercial fertilizers. It may be, however, that the pampered rose will not perform its part unless fed in the ordinary way, to which its ancestry had been accustomed.

The fact is that the worms are doing much damage, and when they are once in a plant there is no known way of driving them out. New conditions may induce the formation of new roots, and a sickened plant may revive, but this is not to be expected under such circumstances.

With roses the writer has not found the eel worms in other than the roots, and it is not thought that cuttings from galled plants will carry the trouble.

BYRON D. HALSTED.

Experiment Station, New Brunswick, N. J.

Custom-House Decisions.

ROSA RUGOSA DUTIABLE AS A BRIER ROSE.

The species of rose plant known as Rosa rugosa is dutiable at 25 per cent. ad valorem as a brier rose, under paragraph 252, act of July 24, 1897, and not as a rose plant budded, grafted, or grown on its own root, under said paragraph.

The following is the opinion by Fischer, general appraiser, on the subject:

"The merchandise in question was returned by the appraiser as 'rose plants,' and duty was assessed thereon at 2½ cents per plant under the provision of paragraph 252 of the act of July 24, 1897. It is claimed to be dutiable at 25 per cent. ad valorem under said paragraph as 'brier rose.'

"The pertinent part of paragraph 252 is as follows: 'Rose plants, budded, grafted, or grown on their own roots, 2½ cents each; stocks, cuttings and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, manetti, multiflora and brier rose, and all trees, shrubs, plants and vines, commonly known as nursery or greenhouse stock, not specially provided for in this act, 25 per centum ad valorem.'

"The testimony of a number of witnesses was taken before the Board, and from that testimony we find:

"(1) That the term 'rose' as used in trade and commerce signifies a rose plant, and does not mean the cut flowers or blossoms known by that name.

"(2) That rose plants are of two classes, namely: (*a*) Such as are budded, grafted, or grown on their own roots, that is to say, roses grown exclusively for the bloom, and propagated either by budding or grafting them on to the stock of some wild rose grown from seed, or by cutting a slip from the parent plant and planting it to form an independent plant. Such roses can not be grown from seed, as they are not species and would not come true from seed. They are known as named roses, from the fact that, being produced by artificial means, each new variety, as it is produced, is given some name by its producer, such, for instance, as the General Jacqueminot (commonly called Jack) rose. (*b*) Brier roses, which are true species propagated from seed, and always coming true from seed. These are grown mainly for the purpose of serving as the stock on which the named roses are grafted, and are less expensive than the artificially produced roses.

"(3) That 'grown on their own roots,' as applied to rose plants at the time of the passage of the tariff act of July 24, 1897, and prior thereto, means roses grown from slips or cuttings, and not budded, grafted, or grown from seed.

"(4) That the merchandise in question is a brier rose plant of the species known as Rosa rugosa; that it has been grown from seed, and is not budded, grafted, or grown on its roots, and that it is commonly known as nursery stock.

"We hold that the article before us is dutiable as a brier rose at 25 per cent. ad valorem, and accordingly sustain the protest in each case."

ROSE PLANTS.

The Treasury Department is in receipt of a report of the United States attorney for the southern district of New York dated the 29th ultimo, in which he states that the case of Cleary & Co. vs. The United States, was recently decided in the United States Circuit Court for that district in favor of the Government. The merchandise in suit consisted of certain roses, which had been assessed for duty at the rate of 10 per cent. ad valorem under paragraph 234½ of the act of August 28, 1894, under the enumeration for "plants used for forcing under glass for cut flowers or decorative purposes." The importers protested, claiming free entry as nursery stock under paragraph 587 of the same act.

The decision of the United States Circuit Court, affirming that of the Board of Appraisers in the case, is as follows:

"The merchandise herein comprises certain roses claimed as free under paragraph 587 of the act of 1894, as 'plants, trees, shrubs, etc., commonly known as nursery stock,' and assessed for duty under the provisions of paragraph 234½ of said act as 'plants used for forcing under glass for cut flowers or decorative purposes' at 10 per cent. ad valorem.

"The appraiser reported the merchandise as forcing plants. The single witness produced on behalf of the importers admitted that he knew nothing about this specific importation. Upon the report of the appraiser the Board overruled the protest. The decision of the Board of General Appraisers is affirmed."

A Model Rose Establishment.

The range of glass owned and conducted by Henry Heutz, Jr., at Madison, N. J., can truly be quoted as a model establishment. Here everything pertaining to the building of the place has been done according to the latest improved methods. With such facilities as this range of houses affords, together with the competent foreman in charge (J. E. Milton), it is no wonder that many of the finest roses seen in the New York market are sent from this place.

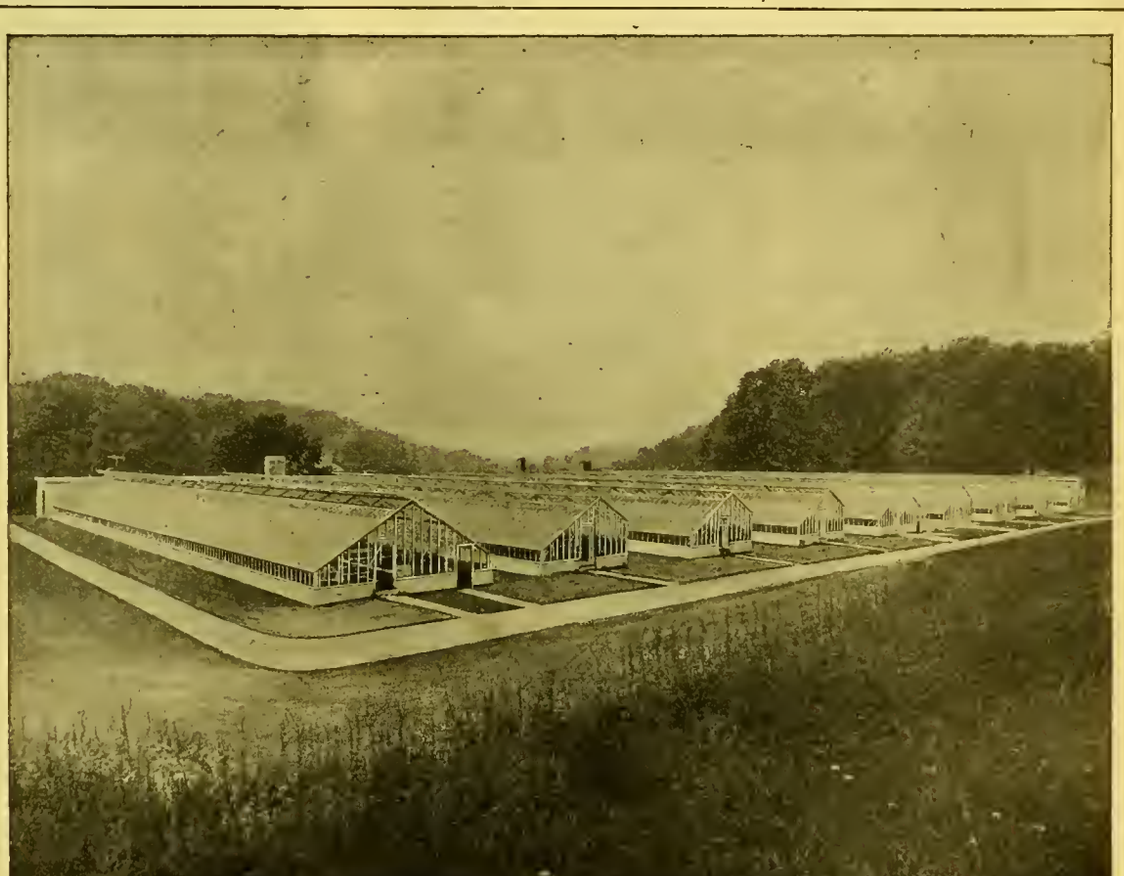
The houses are nine in number, all are of the same size, and measure 175 feet by 20 feet. Seven of the houses are planted with American Beauty in the centre, and Bride or Bridesmaid on the side benches. The other two houses are planted with Bride and Bridesmaid throughout. At the time of our visit—January 10—the houses were off crop, but the abundance of new wood in sight was direct evidence that that condition would not prevail very long.

We noticed among the teas that some of the benches of plants were doing duty for the second year, and to an inquiry as to which method was the best, planting new stock every year or growing on for two or more years, we found that both methods did well, but that the young plants furnished the greatest number of special flowers.

Suspended underneath the benches, and just inside the posts is wire netting in which tobacco stems are placed to keep down green fly. Although this plan of using the tobacco is in vogue at some other places, it is not so universally practiced as it ought to be, and if adopted would certainly be much more comfortable for the men employed where the old idea of strewing the stems on the paths still prevails.

Running parallel with the ends of the houses is the shed, which in its appointments is as near perfect as anything that ever came under our notice. It is about 25 feet wide and over 300 feet long; every house opens directly into it. Underneath is located the boiler sheds, packing rooms, carpenter shop, etc.

The heating of the plant is done by four boilers, hot water through 2-inch pipes being the system.



Range of Rose Houses of Henry Hentz, Jr., Madison, N. J.

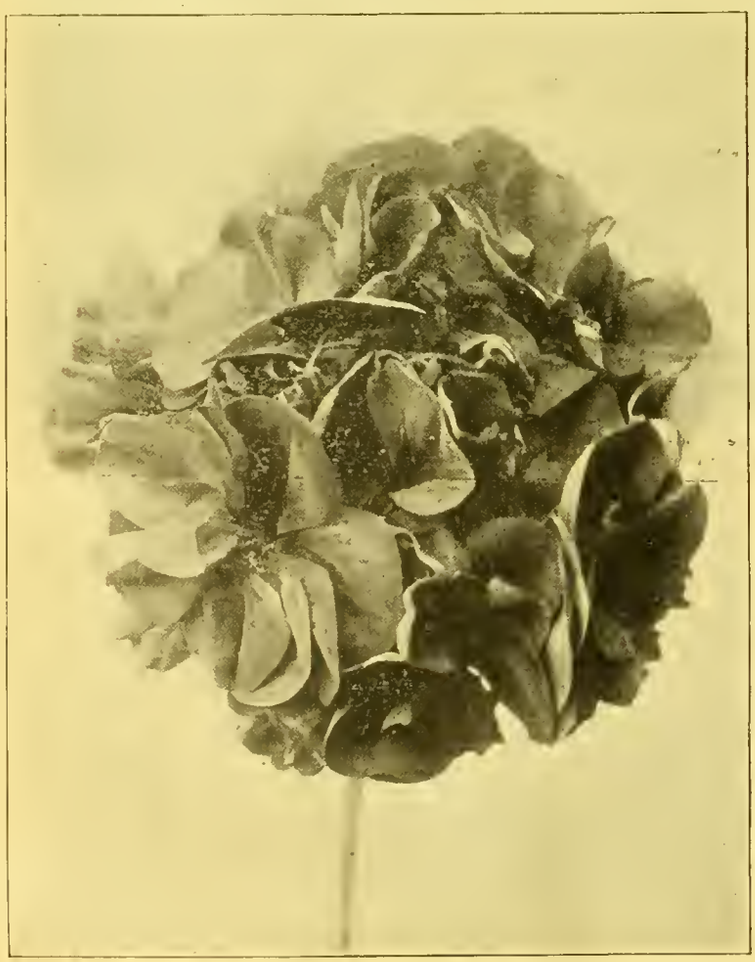
Carnations at Cottage Gardens.

A visit to this well kept establishment will always repay the lover of high grade flowers and plants, let it be made at whatever season of the year one chooses, and a tour through the extensive greenhouses at this particular season (the last week in January) gives one a grand opportunity of seeing many new and interesting things, not alone in the way of plants, but also in new methods of cultivation. When we speak of new cultural methods, we refer chiefly to sub-irrigation; and although this subject is not ripe enough to be fully gone into here, there is no doubt in our mind, after seeing the results obtained at the Cottage Gardens, that sub-irrigation in carnation culture will in the near future have a good many more devotees than it has at the present day. At the present time the house devoted to seedlings is a mass of flowers in great variety. Of the many novelties in sight in both white and colored varieties, there are a number that will prove acquisitions to existing kinds when the time comes to disseminate them. Governor Roosevelt, a deep scarlet, has already made a hit in the New York market, and a large stock of it is being worked up. Another kind that will surely make a hit is a white, full fringed flower, measuring well over 3 inches and now known as No. 70. This is a magnificent variety in every respect, and as a good all-round white is badly needed for commercial purposes, there should be a great future for this particular one, owing to its remarkable freeness and general good qualities.

Next in importance to the house of seedlings is the large house that was erected last Fall; its dimensions are 245 x28 feet, built equal span, running east and west, double row of ventilators at the top, which work automatically; also ventilators on both sides and both ends. This house is the most satisfactory of any that Mr. Ward has hitherto built, and the returns from the stock planted therein mark it as the ideal house. But two varieties of carnations are planted —General Maceo and G. H. Crane, and their floriferousness has exceeded all records. Maceo is noted for its free-blooming qualities (which we had occasion to notice a year or more ago in these columns), but in this even span house, and with sub-irrigation, the average yield per plant up to the last week in January is close to 40 flowers. G. H. Crane is almost as free; there are, altogether, 5,500 plants in the house, and it is a picture.

In the remainder of the houses devoted to carnations we find the stock all in excellent condition and producing heavily. General Gomez, the brilliant maroon, is the most satisfactory of all, being a steady producer and realizing fancy prices in the market. A sport of Flora Hill, of the same color as the type, but showing improved stem and general habit, is also taking a prominent position in its class. Morning Glory is an elegant flower of the Daybreak shade, and with Mrs. James Dean takes first place among the light pink colors. The house of White Cloud is in strong vigor and throwing innumerable fine flowers. Brower, Gold Nugget, Melba, Governor Griggs, Joost and Cerise Queen will all be discarded another year, as their respective places can be filled to better advantage.

The stock plants are kept from blooming after being tried, and these are all in the best possible condition for furnishing clean, strong cuttings. The propagating house is also filled with as fine stock as can be produced, and a cleaner or healthier lot of cuttings than they are it would be hard to find.



Truss of Double Bedding Geranium M. Canovas.

Truss of Single Bedding Geranium De La Vigne.

Another strong feature at the Cottage Gardens is the geraniums. The stock plants are all in the benches, and the different varieties can be seen to advantage as they are allowed to produce some flowers, although the main object in planting them is for cuttings. Among the best of the geraniums the following may be named as leaders in their respective classes:

John Doyle, with its splendid habit, heads the list of the scarlets, as does J. P. Cleary among the single scarlets; Mme. Jaulin and Beaute Poitevine in semi-double pinks are good, while in double pinks come Miss Frances Perkins, Mme. Guevellet and Mme. Barney. In the pure double scarlet varieties Raspail improved is very fine. Among the giant flowered singles that were introduced last year Hall Caine, a bright cherry red, gives a very large flower and is exquisite as a pot plant. Ian Maclaren is of the salmon shade, deepening toward the center, and makes a very large truss. Rudyard Kipling has a dwarf habit, with flowers of a rich crimson color. Pierre le Brun has a strong and vigorous habit, and is very free blooming, having large trusses of rose colored flowers blotched with carmine.

In the double crimson section Ryecroft Pride and Kleber are both of perfect habit, the latter with its rich, almost purple, coloring, being very desirable for massing purposes.

Among the novelties for this year Aquarelle, Grandville and La Fraicheur are very fine, as also are Mme. Landry, Mme. Charotte and Jean Viand. In the double bedders M. Canovas and Richelieu, both of the scarlet order, are to be commended; for an orange scarlet Pasteur is superior, while Malgache may almost be termed a yellow variety. For single bedders C. W. Ward, a round flowered and deep salmon colored variety is an advance in its class, and should become popular. Chateaubriand, a crimson scarlet, and De la Vigne, a deep red shaded with scarlet, are very fine varieties.

For pot culture—single varieties, Andrew Lang, scarlet with a white eye; Dorothy Burroughes, a delicate soft pink, and Oliver, a glowing scarlet with white center, can all be recommended. In the ivy leaf section Leopard stands out very distinct; the color is lilac pink and the upper petals are blotched with crimson, giving the flowers a very orchid-like appearance.

Mr. Ward is also making specialties of several desirable plants, some of which will be useful for commercial growing. Russelia elegantissima and R. multiflora are good subjects for large basket or urn planting in sheltered locations; they will also do well planted in a corner of a greenhouse or conservatory, where they may remain permanently, as they are perennial.

Browallia gigantea is another prettily flowered plant which should be very useful, either for the flower bed or for baskets and vases.

The yellow calla, Richardia Pentlandi, is well represented here, many flowers being in sight. Calla fragrans is also in fine shape, showing that dwarf free-blooming habit which makes it so desirable for house culture.

There is also a new asparagus which, for decorations where a Japanese effect is desired, will be invaluable; it is named A. retrofractus arboreus.

Carnations at Dailledouze Bros.

As to carnations, their correct cultivation, and to grow them to the full extent of their blooming qualities and still maintain in the plants their most healthy condition, one has but to see the carnation houses of Dailledouze Bros. at Flatbush, N Y. There are twenty-eight houses, most all of which are entirely devoted to the carnation. The varieties grown in quantity are Bradt and J. Whitcomb Riley, fancy; White Cloud and Flora Hill, white; G. H. Crane and Hector, red; Eldorado, yellow; Daybreak, Joost, Scott and Mrs. Jas. Dean, pink. A few others are also given a trial. There are several hundred seedlings of the firm's own raising, among them a white in its second season, which, if it retains its present good qualities, certainly has a great future.

And now as to No. 666. The color of this carnation may be described as the center being a mottled or flaked pink, shading to white; the petals are large and fringed, the center of the flower full and round; the stem is strong and well covered with foliage, the habit of plant all that one could wish, as also the blooming qualities, judging from the appearance of flowers and buds when seen on January 11, and they had been picked that morning. We must also say that it is the largest carnation we ever saw. Looking over the benches where it is growing the blooms seemed like medium-sized chrysanthemums. Many of these largest flowers are fertilized, crossed with some of the better varieties now growing, with the hopes of securing more colors with as good or even better qualities. We noticed, just coming up, some seedlings of this monstrous carnation, the seed of which had been gathered this season. Visitors are always gladly received and courteously treated, and, it being so near New York City, it will repay any one interested in these flowers to see the carnation farm of Dailledouze Bros.

D. B. V.

The American Carnation Society.

New Varieties Registered.

By TOM GREAVES, Montello, Mass.

THE CRAWFORD, in color variegated red and white, a sport from McGowan; has been growing four years and keeps getting better every year—a fine, clean grower, blooming all the season through.

THE COPLEY, a rich cerise, a sport from the Crawford; grown two years and has proven a splendid grower, being more robust than the Crawford.

ALBERT M. HERR, Secretary.
Lancaster, Pa.

Carnations at Chicago.

The carnation show held on the 19th inst., by the Chicago Florists' Club, was a grand success, there being staged no less than 125 vases of the divine flower. Taken as a whole, a marked improvement was noticed in the character of the new kinds exhibited, as well as in the very liberal display of the sorts now generally grown for the public market. It was a wise move to have the flowers staged by noon, so that those who live at a distance could see them, besides giving the judges a chance to pass on the exhibits by daylight. Visitors flocked in from the hour the exhibition opened to the close. The meeting was called to order at 8:30 p. m., when at least 100 florists were present.

Among visitors from out-of-town were: F. E. Dorner, Jr., Lafayette, Ind.; Mrs. John Taylor, Minneapolis, Minn.; H. J. Millatt, Kansas City, Mo.; W. B. Cresco, Ia; W. T. Symonds, Decorah, Ia.; Geo. A. Kuhl, Pekin, Ill.; W. R. Ferris, Princeville, Ill.; Wm. Dittmar, New Castle, Ind.; G. F. Crabb, Grand Rapids, Mich.; James G. Hancock, Grand Haven, Mich.; E. G. Hill, Richmond, Ind.; M. Zweifel, Milwaukee, Wis., and J. M. Smelly, Aurora, Ill.

Many notable exhibits of flowers other than carnations were also staged.

The new varieties attracting the greatest attention were E. G. Hill & Co.'s Mary Hill, a beautiful clear pink; Indiana, a grand full flowered red; J. Whitcomb Riley, California Gold and Ethel Crocker. Miller & Son, Toronto, Can., showed Lady Minto, a light variegated, and Lady Van Horne, a deep pink. John N. May's Olympia was notable for its size. Weber & Son's Genevieve Lord is a useful pink. From four different persons came pink sports of Armazindy that are likely to cut quite a figure in the market. Bassett & Washburn's seedling No. 1 is a very large white, with ear marks of its hali parent, McGowan; this firm also staged Chicago, or Red Bradt, in fine shape. Crabb & Hunter's Irene is a good thing. R. Witterstaetter's Estella is a grand dark red; Elinora, a white; Enquirer a pink that will go down to fame as having scored 100 points, and Opal, a shell pink—certainly a notable quartette of blooms.

F. Dorner & Sons showed Mrs. Bradt, White Cloud, Maceo, G. H. Crane, Morning Glory, a delicate pink, and seedling No. 18, a fine, clear deep yellow; No. 92, a large white; No. 100, a clear pink; No. 26, light pink; No. 68, a yellow striped; Nos. 6 and 7, red; No. 4, yellow, with purple stripes; No. 6, large white; No. 29, white shaded yellow; No. 58, deep pink, fine form; No. 13, white, long stiff stem, also a vase of mixed seedlings. J. F. Wilcox, Council Bluffs, Ia., staged American Beauty roses with 5-foot stems; also Bride, Bridesmaid, Meteor and Golden Gate, with 30 to 36-inch stems—a grand lot of flowers; besides 18 varieties of commercial carnations. J. C. Murray (Jas. Reeve, grower), Peoria, Ill., had six varieties of carnations and Princess of Wales violets. H. D. Rohrer, Lancaster, Pa., exhibited carnations—New York, Albertini and Lily Dean. Brown & Canfield, Springfield, Ill., had three dozen very fine Albertini. H. N. Bruns, a flat and vase of 14-inch stem lily of the valley, also samples of his pips. Mrs. E. T. Graves, Richmond, Ind., sent some noble White Cloud. Joseph Heinl, Jacksonville, Ill., had on exhibition a dozen large bulbs of Ismene calanthina, a white Summer blooming amaryllis, and said to be an excellent plant for florists to grow. The Chicago Carnation Co., Joliet, Ill., staged about 20 vases of grand flowers, including their Mrs. Potter Palmer, a cerise pink; Mrs. John J. Mitchell, large red; No. 48, a fine white; No. 55, a shell pink; Chicot, a delicate pink striped on white; No. 99, a vivid red striped; No. 32, Jubilee color; No. 99, improved Daybreak; No. 106, a large scarlet, the taking Genevieve Lord and Miss Higinbotham, a dark Daybreak color, the best of the whole bunch of seedlings; Crane, Maceo, Mrs. J. R. Robinson, Bradt, Chicago, Gold Nugget, Argyle and Byron L. Smith, which has been grown to 5¼-inch, a seedling pink very delicately penciled.

A. McAdam had exhibits of cattleyas in pots and vases; Schramm Bros. violets; Crabb & Hunter, Grand Rapids, Mich., Irene carnation and double white and blue violets; Anton Then, a large exhibit of well-grown carnations—Jubilee, Daybreak, Triumph, Chicago, White Cloud, Flora Hill, Evelina, Argyle, Scott, Tidal Wave and Lizzie McGowan; also a very fine group of six Primula obconica and twelve Baby primrose. John Felke sent carnations Argyle, Bradt, Melba, Armazindy, and a bunch of sweet peas.

The Lake Geneva Floral Co., of Lake Geneva, Wis., staged carnation Cathird. Stuart & Haugh, Anderson, Ind., sent a pink sport of Armazindy named Avondale. Wietor Bros. also had a pink sport of same variety; as also had M. Becker, and the Guardian Angel Orphan Asylum. J. B. Goetz, Saginaw, Mich., exhibited carnation seedling No. 1. The Logan Avenue Greenhouses, Danville, Ill., sent a sport of Rose Queen carnation; Philip Heilig, Jr., carnations Christmas Rose and J. C. Sibley. Ernst Asmus, West Hoboken, through J. C. Vaughan, staged Liberty rose.

G. A. Garland sent his greenhouse gutter; Vaughan's greenhouses, four seedling carnations—No. 1, a cerise pink; No. 2, a deep pink; No. 3, a yellow variegated; No. 4, of Mrs. Bradt type, but lighter.

The judges were E. Buettner, A. McAdam and F. F. Benthey, who awarded the club's certificate to Chicago Carnation Co.'s No. 55, a pink, which scored 85 points; Weber & Son's Genevieve Lord, 85 points; J. N. May's Olympia, 85 points; Weber & Son's pink seedling, 88 points, and a white, 87 points; Wietor Bros.' sport of Armazindy, 90 points; E. G. Hill and Co.'s California Gold, 85 points; Mary Hill, 95 points; Ethel Crocker, 88 points; Indiana, 90 points; J. W. Riley, 86 points; R. Witterstaetter's Enquirer, 100 points; Opal, 93 points; Estella, 93 points; Elinora, 93 points; Rosamond, 91 points; The Orphan Home's sport of Armazindy, 90 points; H. Becker's similar sport, 90 points; Crabb & Hunter's Irene, 92 points; Stuart & Haugh's Avondale, 90 points.

Honorable mention was awarded to Anton Then for carnations; to Fred. Dorner & Son's Co. for carnation Morning Glory, also for collection of seedlings; Chicago Carnation Co.'s seedling No. 48, white; No. 64, pink; Mrs. J. J. Mitchell, No. 106, red; to J. F. Wilcox, for carnations and roses; Omaha Florists' Club, for carnations; Lake Geneva Floral Co., Improved Tidal Wave; Brown & Canfield, for Albertini; H. D. Rohrer, for carnations New York, Lily Dean and Albertini; Miller & Son for carnations Lady Minto and Lady Van Horne; H. Weber & Son, for Genevieve Lord and seedling No. 30, pink, and No. 100, white; to J. C. Murray, for carnations and Princess of Wales violets; Philip Heilig, Jr., for six seedlings and vase of Christmas Rose carnations; to Bassett & Washburn for red Bradt and seedling No. 1, scoring 80 points; The Bohemian Cemetery for a seedling from Tidal Wave; Logan Avenue Greenhouses, sport from Rose Queen; J. B. Goetz, for red seedling; Mrs. E. T. Graves, for White Cloud; H. N. Bruns, for lily of the valley; A. McAdam, for orchids; John Felke, for four vases of carnations and vase of sweet peas; Schramm Bros., for violets, and Vaughan's Greenhouses, for vase of seedling carnations. ESS.

Chrysanthemums for Christmas.

Will the chrysanthemum ever become an important factor in the list of cut flowers for Christmas trade? This question suggests itself, on seeing them quoted in several cities during Christmas week at good, but not by any means phenomenal, prices.

I do not believe they will ever be grown in any great quantity, for the public see so much of chrysanthemums all through October and November that they begin to be tired of them before the season is over. Again, roses and carnations are offered in good condition by Christmas, making a greater variety of good flowers to choose from. Still, there is probably demand enough at Christmas to take care of all the chrysanthemum flowers that can be kept for it.

To get good flowers so late in the year requires rather different treatment than is given to earlier flowering stock. Cuttings may be rooted in July, or even August, and planted out in the usual manner. The object should be to keep the plants in a soft growing condition as long as possible. When they produce a terminal bud it must be "taken," because nothing else will come if it be rubbed off. A terminal bud will develop in a temperature anywhere above the freezing point, while a crown bud must not run below 45 to be safe. Take, then, the terminal bud and keep your house as cool as you possibly can.

If the flowers are fully developed by the first week in December, it will be the best plan to cut them and keep in a dark room in a low temperature. By changing the water frequently and taking a little off the end of the stem the flowers can be kept three weeks easily enough. The petals on flowers so treated are crisp and stiff and will often give more satisfaction than flowers cut directly from the plant.

In growing for late work it is most important to get naturally late varieties. In yellows, Bonnaffon, Lincoln and Bleman are most suitable; Bonnaffon for choice. In white, I would take Merry Christmas, and for a very late pink (which has hitherto been lacking) Smith's new Superba seems to fill the bill. It is useless to try and keep back early varieties, though I have taken cuttings of early kinds when they were flowering in October, rooted them and grown them on all Winter and had good flowers in April and May.

The chrysanthemum can be grown as a Christmas flower, or an Easter flower, but I am not prepared to say with how much financial success. IOWA.

A Florist's Automobile.

BRIEFS FOR BUSY FLORISTS.

A GOOD COLLECTION OF VINES or drooping plants is an absolute necessity where a general line of bedding is done, and if the stock of these is at all short they should be looked after at once, for, however well planted a vase or veranda box may be, if the drooping plants along the edge are not in keeping with the rest of the make-up, the whole effect is spoiled to a certain extent. Therefore, see that a choice lot of drooping plants are on hand when the time for planting arrives.

Among the suitable plants for low-standing urns, or medium-sized baskets, the following are the most useful: Ivy geraniums, double sweet alyssum, Abutilon vexillarium and lobelias. For larger effects there is a great variety—vincas, German ivy, Cobaea scandens, ipomoeas, maurandya, thunbergia and the tall-growing nasturtiums. All of these can be made useful and effective, and the majority of them can be had from seed.

WHERE FUCHIAS are still grown for Spring sales the last lot of cuttings should be put in now, otherwise only small flowering plants will result.

THE GERANIUM is yet the old stand-by for general bedding, and we cannot afford to neglect these any from this date until May. All the Fall rooted ones will now be in 3-inch pots, or if not, they ought to be. The stronger growers may be put down and a cutting made of the top; these will yet make nice stock by the first of June.

FANCY PELARGONIUMS must not be allowed to get root bound in the small pots; pot them on as they need it, and a much richer soil should be used than that given to the ordinary geranium. If green fly has attacked them get rid of it immediately or it will soon get such a foothold that eradication will be impossible without injuring the foliage. Fumigating with tobacco stems is about as effectual a remedy as has yet been found, as there are no flowers to be spoiled by the smoke.

A Florist's Automobile.

Our illustration shows a photograph of the automobile which Robert Crawford, Jr., Philadelphia, is now using, and which is probably the first auto in the retail florist's business. The machine is working very satisfactorily, and proving a great factor in the quick delivery of retail orders.

The two persons seen in the picture are Robert Crawford, Jr., and his son, Wm. Warren Crawford, who runs the auto. The photograph was taken in front of Crawford's store. DAVID RUST.

Buffalo.

Trade News.

In floral circles a very modest quietness prevails; trade may honestly be called dull—no spurts whatever. The weather is aught but regular, being still mild, with mercury above the freezing mark quite continuous day and night, and rainy days alternating with pleasant ones. Flowers are not in any unduly large supply, though amply plentiful for all needs. The variety is good and improving.

Carnation Society Preparations.

Last week's club meeting, held on Wednesday evening, at Kasting's store, was given largely to pro and con discussions and action regarding the coming carnation meeting. The Genesee Hotel will be made headquarters, and the business meeting will undoubtedly be held there.

President Kasting has appointed the following committees: On arrangements: Cowell, Scott, Sr., Palmer, Jr., Keitsch and Adams. On entertainment: Kasting, Scott and Keitsch. Reception: Scott, Sr., Palmer, Sr., Anderson, Legg, Urban, Taylor, Long and Rebstock.

VIDI.

St. Louis.

Market Notes.

Business in general is not over fair, but the scarcity of stock is still on; this has been quite serious in some instances, retailers having hard work to fill orders, they having had to resort to borrowing from one another in some cases. Prices have gone up a point or two and are about as follows: Roses, 4c. to 10c.; carnations, 2c. to 4c.; Beauty, $6 per dozen; callas and Harrisii, 12½c.; valley, 3c.; smilax plentiful, at 12½c.; violets in good supply and go as low as 40c. per 100.

The weather now is bright and Spring-like.

Notes.

One of our wholesale men is puzzled at results of recent shipments of carnations to Texas. Using perfectly fresh stock and packing with more than ordinary care, it was reported from destination that the flowers arrived asleep. This state of affairs seems most common where goods are not sent C. O. D.

Tickets are out for the euchre party which will take place on the evening of February 23; 100 prizes are to be offered. Tickets may be had from the committee or the trustees of the Florists' Club. All florists and their friends are cordially invited.

C. C. S.

Boston.

Trade Items.

There is a great abundance of all kinds of seasonable stock and rather a limited demand. The finer grades move well at fairly good prices, but the poorer sorts, which are in much greater supply, do not clean up nearly so well, and many have to be sold at low prices.

American Beauty are very plentiful and, as a rule, very good, ranging from $4 to $16 a 100; No. 1 and extras go to $20 and $25, and specials, in limited supply, make $35 a 100. Bride and Bridesmaid, too, are plentiful and of good quality. Extras go as high as $12.50; Kaiserin and Carnot making about the same prices, the latter cleaning up well daily.

Carnations continue very plentiful and average about $1 a 100 to $1.50 for ordinary grades; choice stock bringing $2, and a few extras and fancies, $2.50 and $3. Narcissi are becoming quite, though not overplentiful, and prices hold up to $3 and $4 a 100 for single and double. Tulips are coming in with longer stems and better flowers, selling well at $1.50 to $3 a 100.

Violets are more plentiful and now make 75c. a 100 for good stock; extras, $1. Lilies are in good supply but do well at $8 and $10 a 100.

Delegates to Carnation Society Meeting.

William Nicholson, of Framingham, Mass., is now figuring for reduced rates for the Boston delegation to the Buffalo Convention of the American Carnation Society. The party is to leave on February 14, on the 3 p. m. train, over the Fitchburg R. R. Any one intending to take in this convention, with its exhibition, should write or see Mr. Nicholson with regard to joining the party.

COMMERCIAL VIOLET CULTURE *Now Ready For Delivery.*
See Advt., Page 92.

Hamilton, Ont.

Cut flower business has picked up again since the holidays, and the quality in all lines averages very good. There has been considerable design work lately using up all the odds and ends. On the 18th inst. the Central Market presented a rather unusual appearance for this time of the year; three or four of the growers were on hand with palms, ferns, bulbons stock, etc. The remains of the snowbanks on one hand and the fresh flowering plants on the other was unique; the glass was all right, however, nothing suffered and business was very fair. At John Morgan's I saw a fine batch of kentias. John Fox is well stocked with suitable goods, all in good shape. G. N. Sones has some belated chrysanthemums; they are selling still. A yellow sport from Waban seems extra fine for a late variety. At E. G. Brown's they are flowering the new rose Lady Dorothea; it is troubled with a form of blight, as Perle is affected in exactly the same way; however, the trouble is attributed to conditions not to the constitution of the Dorothea, which is giving good accounts of itself in other places.

At E. J. Townsend's, geranium Hermine, double white, is a prime favorite for Winter flowers. Mr. Townsend has been ailing since Christmas, and is at present but very little improved in health. Ed., Jr., has his hands full, working up the Spring stock. BEAVER.

Montreal.

Trade Reports.

The past week has been of the dullest description; with the exception of a few small teas there has been nothing to clear up the surplus stock. All big social affairs are being postponed until the present critical stage of the proceedings in South Africa is passed, but a revival in trade activity is confidently expected very soon.

Club Notes.

The annual meeting of the club was held Monday evening, and a most encouraging number of members was present. Reports of the treasurer and secretary were favorable only, with regret they reported a shrinkage of membership during the past two years; but the zero point has now been passed, and a rapid rise to the old position is assured. A hearty vote of thanks was accorded to Alfred C. Wilshire, the retiring president, for his untiring efforts on behalf of the club during his term of office. After six years in harness the secretary, who has removed from the direct center of the club's activity, was reluctantly compelled to retire. The club will suffer no loss from this change as W. Horobin, Jr., three years assistant secretary, was unanimously elected to the position. The new Board is as under: President, Geo. A. Robinson; first vice-president, A. Pinoteau; second vice-president, Walter Whiting; treasurer, Walter Wilshire; secretary, W. Horobin, 130 Tupper street; assistant secretary, Fred. Bennett. Executive Committee—John Walsh, James McKenna, John Eddy, William Wilshire, C. A. Smith and W. Hall. B.

Washington.

At the cabinet dinner given by Secretary of the Treasury to the President, the decorations were composed of the rose Ivory (the American Rose Company's sport of Golden Gate) and their new winter-blooming coral-red begonia. This begonia is one of the most effective flowers for table decoration, and is receiving a flattering reception in social circles.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,
Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 DUANE STREET, NEW YORK.

We can supply any book or magazine, no matter where published.

Send for New Catalogue of Books for Florists, Seedsman and Nurserymen.

Toronto.

Trade is Rather Slow.

Business has been rather slow, with stock coming in quite plentifully. Roses and carnations seen in many of the stores are very good, but there are also many poor carnations around. Violets are in good supply, many of them of very fine quality. The Princess of Wales is certainly the best single seen here yet, and though not perhaps quite so prolific as California, it sells so much better that all growers who want to be up to date must have it. Tulips in several colors are seen around, but the greater part of them are not of No. 1 quality. The plant trade is fairly good for this season of the year.

Society Meetings.

The January meeting of the Gardeners and Florists' Association was a good one, about 40 members being present. Mr. Joy, the new president, was in the chair. The Executive Committee reported that J. Chambers would be their chairman for the year; that it was advisable to have the annual banquet on February 7; that they had arranged a program for the meetings for the year, which was now printed; and that a deputation of the members had attended the funeral of Mrs. Dale at Brampton. The report was adopted. A vote of condolence to Mr. Dale was passed and a committee appointed to draw up and send to Mr. Dale and his family a resolution embodying our sympathy with them in their great loss.

It was decided to hold a carnation meeting in March, and it was thought advisable to invite the Horticultural Society to take part in it also. By so doing we can have the big hall and put up a first-class show. John Riggall read a very instructive paper, setting forth the necessity of watching the benches, for what is profitable and what is unprofitable to grow in our business, advising all to go over their stock oftea and throw away non-paying material. Mr. Riggall was tendered a hearty vote of thanks.

John H. Dunlop was appointed the association's representative to the Industrial Exhibition, and the secretary was instructed to ask the directors to allow us in future two representatives.

The annual meeting of the Toronto Electoral Division Society was an event that was of considerable interest to a good many of us. The society has been practically doing nothing to justify its existence for some years, except to send its directors as delegates to the Industrial Exhibition Association. We think something more should be done, so at the annual meeting there was a large turnout of members, and the directors got quite a shake up. A ticket was quietly agreed on and we succeeded in electing all but one of our men. We expect the new blood on the Board will stir up things a little and that considerable good will result from the change. The officers elected are: President, P. G. Close; first vice-president, B. Saunders; second vice-president, R. J. Scoor. Directors—J. J. Withrow, J. Chambers, Alderman Dunn, G. Gooderham, G. Leslie, Jas. Oliver, H. Simmers, R. Davies and T. Manton. A motion that the directors should draw up a constitution and by-laws, and report the same to a meeting of the society in less than two months, was adopted.

The annual meeting of the Toronto Horticultural Society was held on the 10th inst. The treasurer's report showed the society to be in a good financial condition. A notice of motion was discussed to the effect that the constitution be so altered that the president and vice-presidents hold their offices for more than one year. The motion was defeated. The officers elected for the coming year are: President, E. Tyrell; first vice-president, T. McQueen; second vice-president, E. Collins. Directors—Mr. Ross, Dr. Orr, Dr. Hamilton, Mr. Watkins, Mr. Lucas, A. G. Chambers and H. Simmers.

T. M.

Paterson, N. J.

In extinguishing a blaze in an adjoining building last week the firemen found it necessary to break the glass in Ed. Sceery's store.

Trade Notes.

A very fair trade has been doing since last writing, and the supply of flowers has not been more than enough to meet requirements; dealers reported a very good business for last week, and from reports gathered to-day (Tuesday) trade is fully up to the average for the present season of the year. There is considerable demand for funeral work, and this, with many small decorations, consumes pretty much all of the stock offered by local growers. The dull weather of last week shortened up the supply to a great extent, and at this writing all good stock finds ready market; choice roses in particular are in good demand and the market is firm; present quotations are: $4 to $6 for ordinary, $7 and $8 for best stock, the former being the ruling price; fancy stock has within the past few days brought as high as $10. Carnations are offered freely, but there does not seem to be any overstock; prices now ruling are $1.50 to $3, according to grade; fancy varieties are in short supply and move readily at higher figures. Romans and Paper Whites are seen in large quantites and form an important part of all made-up work, and although this stock is offered in abundance, there is none that goes to waste; $2 and $3 are the ruling prices for good stock, while poor grades do not bring over $1.50. Violets are not offered very freely by local growers; what is brought in by them moves at about $1; most of the stock used here is the product of Eastern growers. Tulips are coming in in small quantities, but are still short in stem, and on this account are not much sought after; there is not, as yet, any established price on them. Valley is offered in limited quantities, and sells at $4 per 100. Sweet peas are offered by a few growers, but as is the case with tulips there is no established price on them. Freesias are coming in in small lots, and growers realize $3 for best blooms.

Plant sales are quiet; azaleas are in good supply, but meet with slow sale; those now offered are not of extra quality. Retail prices range from $1.50 to $4 per plant.

Retail Prices.

Retail prices of cut flowers are as follows: Roses, $1 and $1.50 per dozen for ordinary, $2 and $2.50 for best. Carnations, 35c. to 50c. per dozen; extras and fancy varieties, 75c. and $1; violets, $2.50 and $3 per 100. Romans and Paper Whites, 60c. to 75c. per dozen; sweet peas, 35c. per dozen.

Notes.

Several dozen cattleya blooms formed a part of J. M. Gasser's window display this week and attracted considerable attention. Mr. Gasser reports increased sales on these flowers this season, the retail price at this time being $9 to $12 per dozen.

Among the many unique and novel designs for table decorations brought out by Smith & Fetters this season is one composed of an open head of Savoy cabbage with a spray of cattleya blooms or sweet peas of a delicate shade laid over it, with a little adiantum or asparagus worked in, the combination of colors producing a very pretty effect.

Arnold Ringier, representing W. W. Barnard & Co., Chicago, was a visitor this week. G. A. T.

West Hoboken, N. J.

John Birnie has commenced operations on a new house for the growing of carnations. Flora Hill is producing heavy cuts of flowers, as also are the two other varieties grown—Wm. Scott and Daybreak. A few White Cloud are undergoing a trial, but up to the present they have not been so satisfactory as Flora Hill. The houses that were utilized for chrysanthemums are being rapidly filled with Spring plants, to be disposed of later at the Clinton Market, provided that edifice is available for that purpose when Spring comes. Verbenas, geraniums and heliotrope are grown extensively, and the young stock of the two former is plentiful and in good shape; heliotrope is somewhat scarcer than usual. Cupid sweet peas are being tried in pots, but the germinating qualities of the seed have not been satisfactory, a large percentage having failed to come at all. Several houses are planted to Jacqueminot roses and from the appearance of the wood there should be a wealth of extra fine flowers about Easter me.

Greenhouse Woodwork

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 5. NEW YORK, FEBRUARY 3, 1900. One Dollar Per Year.

CARNATIONS.

We offer Strong-Rooted Cuttings of ALL THE NOVELTIES OF THE SEASON and OTHER EXTRA CHOICE SORTS.

Mrs. Thomas W. Lawson. The celebrated $30,000 Carnation.
$14.00 per 100; $120.00 per 1000.

Olympia. A grand, fancy Carnation. While fully as large as MRS. GEORGE M. BRADT, or larger, it is said to produce 25 per cent. more flowers than that popular variety.
$12.00 per 100; $100.00 per 1000.

The Marquis. This Carnation has had a phenomenal sale, and is without question the finest light-pink Carnation introduced up to this time. Those who have not ordered should place order without delay, if they wish early delivery. We have sold more of this variety than of all the others combined, which is an index of the esteem in which it is held.
$10.00 per 100; $75.00 per 1000.

Ethel Crocker. One of the best all-round pink Carnations evsr offered to the trade.
$10.00 per 100; $75.00 per 1000.

Genevieve Lord. As a Carnation for retailing nothing can excel this variety, on account of its beautiful color—light silvery pink—and fine stem One of the very finest introductions of the season.
$10.00 per 100; $75.00 per 1000.

We can also supply all the best of the recent NOVELTIES and STANDARD SORTS as follows:—

	Per 100	Per 1000
G. H. Crane, General Maceo	$6 00	$50 00
General Gomez, Mrs. George M. Bradt	5 00	40 00
White Cloud, Gold Nugget, Melba	4 00	30 00
Mrs. James Dean, Mrs. Frances Joost, John Young, New York, Jubilee	3 00	20 00
Mayor Pingree, Flora Hill	2 00	15 00

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

PLEASING PRICES On Plump Bulbs for Present Planting

No Juveniles but fully matured Seniors.

Gladiolus.—All First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least. Per doz., 15c.; a 100, 75c.; 1000, $6 50.

American Hybrids. Mixed. This mixture is grown especially for us and can be recommended for florists' use. The bulbs are all selected and contain at least more than 50 per cent. white and light types. Per doz., 20c.; per 100, $1.15; per 1000, $9.50.

White and Light Varieties. Mixed. There is no better mixture of white and light Gladiolus than this sold, no matter what price is paid. The bulbs are all selected and large and the varieties the best and most suitable for florists' use. Per doz., 25c.; per 100, $1 50; per 1000, $12.50.

Begonias—Tuberous Rooted.

The fact of our being the American agents for one of the most important European growers of this useful bulb, enables us to offer the choicest stock at figures unapproched by dealers.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each, 5c.; per doz., 35c.; per 100, $2 ; per 1000, $17.50.

Double Flowers. Each, 10c ; per doz., 65c.; per 100, $5; per 1000, $45.00.

Amaryllis Rosea. Large bulbs. 35c. a doz.; $2 a 100; $15 a 1000.

Hyacinthus Candicans. Large bulbs, 20c. per doz.; $1 50 per 100.

Madeira Vine Roots. 25c. per doz.; $1.50 per 100; $10 per 1000.

Cinnamon Vine. Mailing size. 30c. per doz.; $2 per 100.
Extra size. 40c. per doz.; $2.50 per 100.

Caladium, or Elephant's Ear.

Sound bulbs, with good, live centre shoots.

Caladium Esculentum. 5 to 7 in. in circum. 40c. per doz.; $2 25 per 100; $20 per 1000. 7 to 9 in. in circum. 60c. per doz., $3.75 per 100; $35. per 1000. 9 to 12 in. in circum. $1. per doz; $7. per 100; $60. per 1000. 12 in. and up, circum. $1.50 per doz.; $10. per 100. **Fancy leaf** varieties, fine assortment, $1.25 per doz.; $7.50 per 100.

Tuberose Double Pearl.

Bulbs measuring 4 to 6 in. in circumference, extra quality, 75c. per 100; $6 50 per 1000. 3 to 4 in. bulbs, 50c. per 100; $3.75 per 1000, or barrel of 2000 bulbs for $7.

Dahlias.

Whole Dry Roots, Field Grown.
Double mixed varieties, dwarf and tall. $5 per 100; $42 50 per 1000.
Double, usmed, assorted, $6 a 100; $55 a 1000.

Gloxinias.

Bulbs of large size, measuring 1½ to 3 in. in diameter.

Finest Mixed. 50c. per doz.; $3 per 100; $27 50 per 1000.

Separate Colors. White, red, blue and spotted. 60c. per doz.; $4 per 100.

Richardia alba maculata. Spotted Calla. 45c. per doz.; $3 per 100; $25 per 1000.

PETER FISHER, Ellis, Mass.

Address all correspondence and make all checks, money or express orders payable to

Thos. F. Galvin 124 Tremont St., BOSTON, MASS.

NEW CARNATIONS

We are now ready to take orders for

STRONG ROOTED CUTTINGS.

General Maceo "Very full, deeply fringed flower, 2½ inches to 2¾ inches in diameter, on stiff, wiry stems, 12 inches to 18 inches long under ordinary culture. Under extra culture blooms 3 inches in diameter, on 18 inch stems, may be grown. Ground color deep brilliant scarlet, heavily overlaid with maroon, making one of the darkest and richest shades yet seen in carnations, fully as rich and striking as the Meteor rose. Habit erect, stiff, wiry—of the McGowan type, but with stiff, stronger stems. Foliage covered with rich glaucous bloom. Cuttings produced as freely as with McGowan and root fully as easily as that variety. The most profuse and abundant bloomer we have ever grown, outblooming every other variety. Flower an excellent keeper and can remain on the plant six to eight days, and we have kept it three and a half weeks in a cool bedroom." The above, copied from our last year's catalogue, has been more than proved the present season. It is now conceded by all those growing it to be the most profuse blooming carnation ever introduced. The color has proved very popular and is having a great sale at high prices. It is certainly the first good keeping dark carnation thus far introduced, and the stock of no florist is complete without it. We have a fine stock of plants and will send out strictly selected cuttings. **$6.00 per 100; $50.00 per 1000.**

General Gomez Brilliant cardinal maroon, 2½ inches to 2¾ inches in diameter, fine stems 16 inches to 24 inches long. Strong, vigorous, very healthy habit; blooms fully as freely as Portia, resembles Scott in habit and seems to have fully as good a constitution as that variety; calyx is strong; flower is full and well fringed and of a pleasing form, good fragrance; the color is magnificent, fully as rich and brilliant as the Cardinal flower; in fact, no crimson carnation has ever come to our notice possessing such a vivid brilliant shade of color; has proved freer and earlier in blooming than the past season; it sells at the highest prices, the color is exceptionally popular, and it promises to be as profitable as Maceo.
$5.00 per 100; $40.00 per 1000.

25 at 100 rate; 250 at 1000 rate.

We have fine, large, healthy stocks, and will deliver only fine, strong, well-rooted cuttings.

Send your Orders early.

C. W. WARD, Manager. **THE COTTAGE GARDENS, Queens, N. Y.**

VAUGHAN'S FLOWER SEEDS..

FOR PRESENT SOWING

Strictly high-class, new crop flower seeds of choicest, most carefully selected strains for florists' use.

PANSY, VAUGHAN'S INTERNATIONAL MIXTURE, which is better now than ever. Trade pkt., 50c.; ⅛ oz., $1.50; ¼ oz., $2.50; oz., $10.00.

PANSY, VAUGHAN'S GIANT MIXTURE, contains all the separate colors of Trimardeau, Cassier, Bugnot and a number of new colors. Trade pkt., 25c.; ⅛ oz., 60c.; ¼ oz., $1.00; oz., $4.00; ¼ lb., $14.00.

PANSY, TRIMARDEAU, mixed. Trade pkt., 10c., ¼ oz., 30c.; oz., $1.00; ¼ lb., $3.00.

PANSY CHICAGO PARKS MIXTURE, trade pkt., 10c.; ⅛ oz., 30c.; oz., $1.00; ¼ lb., $3.00.

BROWALLIA SPECIOSA MAJOR (Giant Browallia). Trade pkt., 25c.

DAISY, VAUGHAN'S MAMMOTH WHITE, MAMMOTH PINK AND MAMMOTH MIXED. Each, trade pkt., 25c.

DAISY, SNOWBALL AND LONGFELLOW. Each, pkt., 15c.

CENTAUREA GYMNOCARPA. Trd. pkt. 10c.; oz. 40c.

CENTAUREA CANDIDISSIMA. 1000 seeds, 25c.; oz., $1.00.

ORACAENA INDIVISA. Oz., 30c. lb., $2.50.

FERN SEEDS, Adiantum, Nephrolepis, Pteris, etc. Trade pkt., 50c.

HELIOTROPE, LEMOINE'S GIANT. Trd. pkt., 25c.

LOBELIA SPECIOSA. Trade pkt., 10c.; ¼ oz., 25c.

" **CRYSTAL PALACE COMPACTA.** Trade pkt., 25c.; ¼ oz., 50c.

LOBELIA BEDDING QUEEN, deep blue. Pkt., 25c.

" **WHITE LADY.** Dwarf white. Pkt., 15c.

" **SUTTON'S GEM.** White, pink or blue. Each, trade pkt., 20c.

MIGNONETTE MACHET, true. Pkt., 10c.; oz, 40c.

" **BISMARK,** new. An improved Machet. Pkt., 15c.; ¼ oz., 75c.

PETUNIA HYB., BLOTCHED AND STRIPED. Trade pkt., 10c.; ¼ oz., 25c.

PETUNIA, "VAUGHAN'S BEST" Mixture of large-flowering, none better, includes all the fringed sorts, as well as Giants of California and other choice strains. Trade pkt. (1000 seeds), 50c.; 3 pkts. for $1.25.

PETUNIA, VAUGHAN'S DOUBLE MIXED, extra fine, 600 seeds, $1.00.

PETUNIA, DOUBLE WHITE AND DOUBLE FRINGED WHITE Each, 250 seeds, 50c.

PRIMULA FORBESI. "Baby Primrose." 500 seeds, 25c.

PRIMULA FORBESI COMPACTA, new, 500 seeds, 35c.

SALVIA SPLENDENS. Clara Bedman. Pkt., 25c.

" " Drooping Spikes, ¼ oz., 50c.

" " New Crimson. Pkt., 25c.

PRIMULA OBCONICA GRANDIFLORA AND ROSEA. Each, trade pkt., 25c.

STOCKS, large flowering, ten-week, white, pink, blood red, crimson, light blue, purple, canary yellow and extra choice mixed. Each, trade pkt., 25c.; any 5 for $1.00.

THUNBERGIA, mixed. Oz. 30c.; pkt., 10c.

TORENIA FOURNIERI COMPACTA AND WHITE WINGS. Each, trade pkt., 25c.

VINCA ROSEA, Alba, Alba Pura and mixed. Each, trade pkt., 10c; oz., 60c.

VERBENA, MAMMOTH MIXED. Trade pkt., 10c.; ¼ oz., 25c; oz., $1.00.

VERBENA, white, scarlet, striped, purple. Each, trade pkt., 10c.; ¼ oz., 25c.

VERBENA, "VAUGHAN'S BEST" MIXTURE contains all the best colors and strains of Verbenas that are in existence. It is one of those mixtures like our International Pansy, Best Petunias, etc., that cannot be duplicated elsewhere. Trade pkt., 25c.; ¼ oz., 60c.; oz., $2.00.

We allow a discount of 10 per cent. on orders for flower seeds for $2.00 and over for cash with order. For other seeds, send for our complete Flower Seed List.

SEED TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Chicago has been selected this year as the meeting place of the American Seed Trade Association, on the second Tuesday in June.

Providence, R. I.—A. M. Rennie has severed his connection with the Walter A. Potter Co., and in company with W. G. Pino, now associated with Wm. Elliott & Sons, New York, will conduct a general seed, florists' supplies and horticultural sundries business at corner of Washington and Eddy streets, this city, opening soon after February 1.

European Notes.

Orders keep dropping in by every mail—a certain sign that business on your side must be in a good condition. Quite a brisk demand for peas is one of the most prominent features, and stocks are already in small compass. As the European demand for some varieties is rather under the average this season outside orders are welcome.

Judging by numerous and repeated inquiries for the most popular varieties of peppers the crops all round must have been very disappointing. The same is true of the ordinary variety of sugar beet, for which the demand is simply overwhelming. At the same time it is a pleasure to know that the valuable feeding properties of this root are now so generally recognized in America and Canada. The splendid strain of this article, which has been developed in Denmark, has made the fortunes of hundreds of intelligent dairy farmers in that prosperous little country. In America it would no doubt prove of even greater value.

A "proof" copy of the schedule of prizes for the proposed Bi-century Exhibition of Sweet Peas is just to hand. The premiums are fairly liberal, but it is a matter for regret that some sweet pea expert on your side was not invited to send along a few "points" in the arrangement of the various classes. It is a far cry to July, so something may yet be done.

EUROPEAN SEEDS.

Sweet Peas for Florists' Planting

Cupids and Burpee's Bush.

These most distinct types have greatly increased and widened the area of successful Sweet Pea culture, as the low compact growth and wonderful root-system of the plants enable them to resist heat and drouth to a much greater extent than the tall-growing sorts, which, under similar unfavorable conditions, are apt to suffer from the red spider and other troubles, the vines drying up after only a brief period of bloom. These new types are not so well adapted for growing in cool, moist locations; the dense, compact growth of foliage being quite apt to "damp off" under such conditions, so that the two distinct types of tall or running growth and the low bush-like and spreading growth should be used to complement each other.

The flowers of the CUPID type are borne on stiff stems, too short for bunching effectively, but quite desirable for boutonnieres and design work, strikingly resembling rosebuds when freshly opened. It is as a border of bedding plant that they develop the greatest beauty; the rich, dark-green carpet of foliage being literally hidden by the clusters of lovely flowers. The new BUSH SWEET PEA has flowers of large size and fine form, borne on long stems, equally as well suited for bunching as those of the tall-growing varieties, and from present indications we shall soon be able to offer quite a complete assortment of shades and colorings, so that florists having light soils or very dry locations will be able to grow a supply of Sweet Peas for summer cut-flowers quite as readily as those situated in cool, moist locations.

The Best for Forcing Is Burpee's "Earliest of All."

For planting under glass we recommend only the tall or running varieties, which can be trained to strings or other supports, although some growers have succeeded splendidly with the Cupids as pot-plants under glass. Our new variety, BURPEE'S "EARLIEST OF ALL," is distinctly the finest and most profitable Sweet Pea for forcing, by reason of its extremely early flowering and beautiful coloring. From seed planted in raised beds the last week in August, the vines began blooming the last of October, and continued to flower until cut off by the heat of the late spring months. The seed is sown thinly in drills twelve inches apart running across the beds, and the vines supported with light wire stakes. The vines branch freely and furnish a profusion of fine large flowers on long stems, usually three in a spray. The standards are a rich, bright rose, well expanded, and the wings of a creamy white, frequently tinged or spotted with rose, identical in all respects with the popular *Blanche Ferry*. In the open ground the growth is quite dwarf, only eighteen inches to two feet in height, and the plants are in full flower from a week to ten days in advance of even the *Extra Early Blanche Ferry* or *Emily Henderson*, while under glass no other variety at all approaches it in earliness, the ordinary varieties seldom flowering before February, even from seed planted in the fall.

The Best Pure Whites.

Pure white is also a most useful color for florists. The *Emily Henderson* is the earliest flowering, but rather delicate in texture and with distinct notch at the top of the standard. BLANCHE BURPEE blossoms later, is of very strong growth, and continues longer in flower; the flowers are of very large size, grand form, and good substance, lasting a long time when cut. "SADIE BURPEE" is considered by Mr. Eckford his finest variety, "*absolutely the grandest white.*" The vines are of very strong growth, the flowers of extra large size and beautiful shell-like form on long stem. One type of "*Sadie Burpee*" is distinct in having black seed, so that it can be planted earlier in the spring. Under exceptionally favorable conditions the standards of the longest flowers are "notched" near the base as in *Butterfly*.

BURPEE'S MODESTY is a creamy white with only the faintest tint of delicate pink, black-seeded and hardy, and would answer well as a white sort.

Popular "Pink and White."

As stated before, the combination of Pink and White, as in the Blanche Ferry, is the most popular coloring in the Sweet Pea. For outdoor planting we recommend that BURPEE'S "EARLIEST OF ALL," *Extra Early Blanche Ferry*, and the regular strain of *Blanche Ferry* should all be planted, as they will flower in succession in the order named, giving the longest period of bloom.

Clear Light Lavenders.

In lavender we recommend BURPEE'S NEW COUNTESS, *Lady Nina Balfour* and *Lady Grisel Hamilton*, all of the most soft and pleasing shades, differing slightly in tint.

Pinks of Several Shades.

In pink we recommend *Lovely*, a soft shell-pink with creamy border; *Prima Donna*, beautiful light blush-pink; *Prince of Wales* (an improved *Her Majesty*), very large, finely hooded flowers of a rich, glowing rose-pink; *Hon. F. Bouverie*, soft flesh-pink tinted with buff, a most distinct shading; *Royal Rose* (an improved *Apple Blossom*), a bright flesh-pink, grandiflora size, and beautiful form.

The Best Two Scarlets.

In scarlet, *Salopian* is the most glowing in shade. BURPEE'S BRILLIANT and the improved "SUNPROOF" SALOPIAN will best resist the strong sunshine, being free from the blackening of the standard so troublesome with the other scarlet varieties.

Creamy Yellow or Primrose Tints.

In creamy yellow or primrose tints *Mrs. Eckford* is the deepest in shade, while *Queen Victoria* is the largest in flower and of finest form. STELLA MORSE is of a rich apricot tint bordering on buff.

Two Bright Blues.

The rich BURPEE'S "NAVY BLUE," introduced last year, is most distinct and one of the finest for cut flowers; vines of strong growth, wonderfully free and continuous bloomer, with three and four large flowers on a long stem. The flowers are of very large size, fine, open form, and a rich violet-blue or purple. Extremely rich, it should be planted by every florist, as it will be, without doubt, the most popular dark-colored variety.

Eckford's *Countess Cadogan*, also introduced last year, is a most charming bright blue of a lighter shade. It is vastly superior to *Captain of the Blues*, and is sure to become very popular for cut flowers.

The Most "Gorgeous" of All.

For a rich glowing orange we recommend BURPEE'S GORGEOUS and *Lady Mary Currie*, which are quite similar in shade, but distinct in form, the latter having a tall, pointed standard. Both are of a rich orange-salmon tint, with darker and richer veinings. A most distinct and striking shade.

The Best Orange-Pink.

Lady Penzance has been for years a great favorite, but is now surpassed by BURPEE'S ORIENTAL. This is the largest and finest in coloring of this type (unless we place *Lady Mary Currie* in the same class), and it does not fade under the hottest sun.

The Best Very Dark Varieties.

For the darkest and richest colors aside from *Navy Blue* we would plant *Othello*, a beautiful dark brown satiny finish; and *Duke of Westminster*, a deep maroon, both of the largest size.

All the above are self-colored flowers of the largest size and finest form in their respective colorings, these self-colored flowers being the most popular for bunching. Florists should include also the following fancy or variegated sorts to complete the finest assortment: GRAY FRIAR, violet-purple, watered veinings, and shadings on a silvery-white ground; PINK FRIAR, the same markings, but of a soft cerise-pink; AURORA, a grand, large, silvery-white flower, delicately striped and flaked with salmon-pink; WAWONA, white, striped with a beautiful heliotrope shade; LOTTIE HUTCHINS, daintily flaked with pink on a creamy-white ground; *Lottie Eckford* and MAID OF HONOR of the dainty "blue and white" blendings.

The above selections cover an extensive range of shades and colors, but our list of varieties offers many others of distinct shades, suitable for cut-flowers, from which florists can select those most desirable for their needs.

Burpee's Blue List for 1900.

A complete catalogue giving lowest prices possible for florists and market gardeners mailed free upon application. It is a book of 144 pages, giving much useful information and offering all the "Best Seeds that Grow."

JOHN RECK, Bridgeport, Conn.

Grasses for Lawns.

Editor Florists' Exchange.

In answer to Mr. J. Chas. McCullough, of Cincinnati, O., I beg to say that the best lawns which we can have on the red soil of the lithostrotion bed of the subcarboniferous formation, where there is a good deal of shade, is orchard grass sown thickly upon the soil. It suits our climate better than any other grass grown under the shade. Even blue grass yields to it. Hon. N. B. Dudley, of Logan County, Kentucky, thinks it is the only grass that can be relied upon for wood pastures or what, in the North, would be called lawns. Hungarian grass or millets in any form are totally worthless for the purpose of making a lawn, but I beg to differ from Mr. McCullough concerning the value of timothy. While a lawn sown with timothy alone would be undesirable, yet a little of it adds to its beauty. Flint recommends it, and it is recommended in nearly all mixtures that are on the market. The fact is, that the larger the number of grasses sown on a lawn the longer it will last in the State of Tennessee. In the North, where the weather is cooler, it is much easier to make a lawn than it is in the South, and it is very difficult to keep a lawn green in Tennessee during the months of July, August and September. Orchard grass during these months serves an admirable purpose. Nor does orchard grass grow in stools when sown thickly. I have had some most beautiful wood pastures in front of my dwelling by sowing from two to two and a half bushels of orchard grass seed to the acre during the latter part of March. Not a tussock would appear for two years or more. The soil rests upon red clay, which yields sufficient moisture to keep the grass growing throughout the Summer. No other grass, in my opinion, would keep green under such large oak trees.

Critics often apply experiences they have had on certain soils and in certain latitudes to the whole country. This will not do at all. A local knowledge is essential to success in all agricultural operations. J. B. KILLEBREW.

Tennessee.

Carnation Night at Tarrytown.

The regular monthly meeting of the Tarrytown Horticultural Society was held Thursday evening, the 25th ulto., and despite the somewhat unfavorable weather about 40 members were present. After the reading of the minutes Mr. Cockburn introduced the newly elected officers. President Turner, on taking the chair, in outlining his policy, said, among other things, that he hoped at our meetings good cultural subjects would be freely discussed; exhibitions would be a special feature, and an early preparation would be made for the principal show in November.

The evening was devoted to carnations and excellent exhibits were staged. The president was awarded a certificate of merit for a collection of six varieties, in the pink of perfection, including New York, Mayor Pingree, Gold Nugget, Mrs. James Dean, G. H. Crane and White Cloud. Honorable mention was given to John Egan & Son, North Tarrytown, for a vase of Albertini; also to Cooke & McCord for a vase of John Young.

Wm. Scott led the discussion. He said among other things that it was foolish for private gardeners to stick to the older varieties, and advised all to get into line or they would be out of the running. His choice of varieties was for pinks, Mrs. Lawson, Mrs. Jas. Dean and Cerise Queen; scarlet, Hector, for a bright glowing color, but Crane as the best all through. White Cloud was easily the best white at present. He was still looking for a good yellow, and personally he got more satisfaction from Eldorado than from any of the newer introductions. Streaked, Mrs. Bradt; Lily Dean would be superseded by J. Whitcomb Riley. No. 666 was a combination of color that might not suit everybody, but it appeared to be the forerunner of a class that we had not yet seen.

J. I. Donlan gave a very interesting retrospective sketch, dealing with the carnation from its known introduction (in official record) into this country up to the present time, and characterizing it as the most interesting flower to date. Since its introduction, in 1863, about 500 varieties had been in commerce, of which not 50 now survive.

President Turner spoke of the results he had obtained by growing his plants indoors all Summer. White Cloud and Mayor Pingree were decidedly better thus treated, but Bradt, Melba, Maceo and others, which he had tried, were more satisfactory when grown outside and transferred in the ordinary way.

P. O'Mara, New York, sent a donation of $5, which the society resolved to use as a special premium. F. R. Pierson Co. offered a special premium of $25 for the best 12 blooms of Col. D. Appleton chrysanthemum, to be competed for at the next chrysanthemum show. These the society gladly accepted.

Carnation Selling and Wholesalers.

Editor Florists' Exchange.

What would the cut flower business amount to without roses? When these are scarce, as they are at the present time in all the large centres of the United States, the sales for the week or month drop very materially. The carnation, in its class, is of just as much value as the rose; but it is not in the same class as the rose. I believe there is hardly a retailer who will not tell you that it is much easier to sell a rose that costs, at wholesale, 6c. or 7c. at a better profit, than it is to sell a fancy carnation costing the same money. I believe, too, that the carnation has arrived at a size large enough, and that what the growers want, what the retailers want, and what the trade in general wants, is a fancy type of carnation that will produce two-thirds as many blooms as the ordinary commercial sorts, and that will sell for one-third more money. When this is done, the fancy carnation will be on a paying basis.

I notice that A. M. Herr advocates making bargains with the retail trade to buy the fancy carnations at a paying price to the grower. I should like to know what Mr. Herr considers a paying price; and I should also like to know how much more it costs to grow Ethel Crocker than it does to grow Scott, Portia, Daybreak and other commercial sorts. Mr. Herr has always advocated selling cut flowers, and especially carnations, direct to the retailer, keeping these flowers out of the hands of the commission man. Let me ask where the cut flower business of the United States would be to-day if it were not for the commission man? Would these large ranges of glass that are continually building, would the rooted cutting business and numerous other branches, be carried on so extensively if you peddled your cut flowers from door to door, as you were wont to do before the advent of the commission man? Would you be getting as good prices for your stock? Who has built up and established uniform prices for cut flowers? Did the retailer do it? No, if he wanted your stock he would buy it at his price, or you could take it home and consign it to the dump. It is the wholesale man who has made the cut flower business what it is to-day, and if the wholesalers were to all drop out the growers of cut flowers would find that it would cost them much more than the 15 per cent. allowed commission to sell their product. Talk is cheap, but it takes money to buy diamonds.

Greenhouses that cover over one-half acre, to be moved this coming summer. The glass is nearly all 16x24, double thick, first quality, capable of covering 15,000 Roses, besides several thousand feet good for growing Violets or Carnations. Boiler power can heat one-half as much again; all the pipes and valves that heat them now by steam, ventilators and lifting apparatus; iron columns and iron frames. Most of the sash bars are as good as new. All for $2,500. A stock of young Roses can be got here for one-half price. Owner will give valuable advice and assistance in moving them. This ad. may appear but twice.

Address L., C. care Florists' Exchange.

MISCELLANEOUS.

FOR SALE, 300 boxes 10x12 double thick second-hand glass, at low price. Reed Glass & Paint Co., 436 West Broadway, New York.

Mention the Florists' Exchange when writing.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Bridgman, Mich.—R. J. Stahelin has sold out his nursery interests here to O. A. E. Baldwin.

The Eastern Association of Nurserymen, at its recent meeting in Rochester, N. Y., adopted a resolution deprecating any attempt to amend the New York State law relating to the inspection of nursery stock. The law is satisfactory they say, and they believe there has been too much scale legislation.

Virginia State Horticultural Society.—The annual meeting of this society was well attended, some 50 visitors being present. The annual election of officers resulted as follows: President, J. Van Lindley, of Greensboro; vice-president, Prof. W. F. Massey, of Raleigh; secretary, T. L. Brown. Executive Committee—President Van Lindley, Dr. George T. Winston and Prof. W. F. Massey. A committee was appointed to memorialize the General Assembly for an annual appropriation, with which to publish the proceedings of the society and papers presented. Another committee was named also to confer with the Board of Agriculture and secure financial assistance for the control of crop pests.

Nurserymen and the San Jose Scale—A principal topic of discussion at the meeting held at Rochester N. Y., last week, of the Western New York Horticultural Society, was the San José scale. S. D. Willard, of Geneva, said this scale is more generally distributed throughout the state than is supposed, including Wayne, Niagara, Chautauqua, Cayuga and other counties down the Hudson and on Long Island. The society passed the following resolution thereanent:

"*Resolved*, That the 500 members of the Western New York Horticultural Society, now assembled, would unite in urging the Legislature now in session to enact such laws as shall compel inspection and treatment or destruction of all infected trees, and to compel the fumigation of all nursery stock raised or brought into the state or offered for sale."

The valueless character of the present certificate of inspection as a guarantee of clean stock was testified to by the statement that stock had been received which was alive with the scale, although in a package bearing the inspection certificate.

The Western New York Horticultural Society held a remarkably successful meeting in Rochester on January 24 and 25. The attendance was large and enthusiasm was apparent in all the discussions. The papers presented were of more than the usual interest to fruit growers. At the opening session G. T. Powell, of Ghent, N. Y., read a paper on "The Present Status of Fruit Growing Interests of New York and Its Relation to Land Value." He advocated the raising of fruit instead of grain, and cited figures to show its greater net profit. In the evening Prof. M. V. Slingerland, Entomologist of Cornell University, read a paper on "Some Insect Experiments of 1899," which he made doubly interesting with fine lantern slides. In the same connection the exhibit of insects injurious to fruit trees, made by Prof. E. P. Felt, State Entomologist from the New York State Museum, attracted great attention. Probably the most important topic of discussion was the San José scale. After explaining many of the infection characteristics of the scale Professor Slingerland said he could not say positively whether fumigation would destroy the eggs of the scale. Professor Roberts, of Cornell, resented the insinuation that the experimental stations were not permitting it to be known where infested districts are, and asked for specific information in order that the scientists may co-operate to prevent the spread of the scale. He read a scientific paper in explanation of the soils and nutriment required by different kinds of plants and the treatment they should receive. An interesting paper on "Shade Trees for Avenues and Streets" was read by John Dunbar, assistant superintendent of parks in Rochester. Other papers were: "Some Thoughts on Strawberry Culture," by L. J. Farmer, of Pulaski, N. Y., and "The Fertilizing of Orchards," by S. T. Maynard, Horticultural Department, Massachusetts Agricultural College.

After full discussion resolutions were adopted, agreeing to co-operate with the Pan-American Exposition, to be held at Buffalo, this state, from May 1 to October 31, 1901, and asking that the management of the exposition make a class in the fruit department for exhibits by societies which have been established for more than two years. President Barry appointed as a committee, to take charge of and arrange for exhibit of fruit from Western New York at the Pan-American Exposition, Messrs. S. D. Willard, Geneva, N. Y.; H. S. Wiley, Cayuga, N. Y., and J. S. Woodward, Lockport, N. Y. The exhibits of fine fruit were specially fine. The list included: By Ellwanger & Barry, 40 varieties of native grapes, 70 of apples, 40 of pears. In grapes, the Columbian, a dark red sort noted for size of berry; Mills No. 1, Barry, Massosoit and Dinna, and among apples the Rose Beauty, Sutton Beauty and Stark attracted much attention. The Ballarat seedling has great promise as a late keeping cooking sort. By King & Robinson, Trumansburg, N. Y., a plate of especially fine Vergennes grapes; by W. A. Bassett, of Farmers, N. Y., Peck's Pleasant, Belmont, Greening and King apples; by Albert Wood & Son, Carlton Station, N. Y., a striking pyramid of apples and pears; a large display of 30 varieties of apples by the State Experiment Station at Geneva; by C. L. Sterns, of Syracuse, N. Y., a showy and promising seedling apple; by A. M. Smith, St. Catharines, Ontario, specimens of Princess Louise, a seedling resembling in flavor, color and size the Maiden's Blush; by James Craib, Brighton, N. Y., specimens of red Beltigheimer; by Luther Collamer, of Milton, fine King, Baldwin, Greening, Twenty Ounce and other apples; by Curtice Bros., Rochester, canned fruits; many mechanical appliances by the Deming Co. An exhibit that attracted great attention was the Expansive Tree Protector Co.'s new hand for keeping insects from going up trees. The poisonous insecticide put beneath the felt band around the tree was especially commended as effective for six months after it is put on.

The officers elected for the ensuing year are: President, William C. Barry, Rochester; vice-presidents, S. D. Willard, Geneva; George A. Sweet, Dansville; W. R. Smith, Syracuse; C. M. Hooker, Rochester; secretary and treasurer, John Hall, Rochester. Executive Committee—C. M. Hooker, Rochester; E. M. Moody, Lockport; Wing R. Smith, Syracuse; George D. Atwood, Geneva; H. S. Wiley, Cayuga.

C. P. W

Treatment of Shipments of Plants That Are Frozen.

It not infrequently occurs that plants shipped late in the Fall or during the Winter season, in mild weather, are caught en route by severe weather and become frozen. Many persons would think them perhaps fatally injured and of little value; but they should consider them as in about the same condition as any other plants which may be planted out and are subject to just as great frost. Exposure to frost is not harmful, provided the plants may thaw gradually, unexposed to light and heat. The best plan, therefore, is to let the box remain unopened, and put it in a cool cellar. It may take a week or more to thaw out, but under proper conditions there will be no harm done.—Meehan's Monthly for February.

Firms Who Are Building.

CHATTANOOGA, TENN.—John Evers has completed several greenhouses on his truck farm.

SUDBURY, MASS.—Fred. Eaton, who recently purchased a tract of land here, will build greenhouses and go into carnation growing.

CHANGES IN BUSINESS.

HUNTINGTON, PA.—The firm of Swivel Bros. was dissolved January 27, Thos. J. Swivel retiring. He has accepted a position in Los Angeles, Cal. The business will be conducted and controlled by J. E. Swivel.

SPRINGFIELD, MASS.—The Stafford Floral Company has bought three modern greenhouses. This addition to the company's plant will about double its capacity.

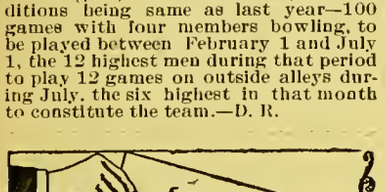
Flatbush, N. Y.—The members of this club will meet at 4 p. m., Wednesday the 7th inst., and go in a body to play in the tournament at West Hoboken, N. J. The scores rolled Thursday evening are as follows:

	1	2	3
A. Zeller	156	143	159
L. Schmutz	123	116	143
H. Dailledouze	68	101	134
Papa Zeller	97	79	87
P. Dailledouze	147	79	99
P. Riley	131	109	209
C. Wœrner	101	..	..
S. S. Butterfield	135	129	130

New York—The sporting committe of the New York Florists' Club would like to hear from all the captains of the bowling teams which intend to compete at the tournament to be held during the week of the S. A. F. Convention in New York next August before the first day of March. As the committee is anxious to have all details regarding the tournament regulated as soon as possible, captains of teams will greatly oblige by communicating at once with the secretary, Chas. Schenck, 38 West 28th street, New York City.

Next Wenesday evening, February 7, the first games of the three-cornered bowling tournament will be played on the alleys of the North Hudson Florists' Club, which, with the New York and the Flatbush Clubs, constitutes the trio. The prizes to be rolled for are six balls, one each for the winning team; the team making the lowest score to pay 60 per cent. of the cost, the second highest to pay 40 per cent. The place where the match will occur is Herflick's Alleys, near the corner of Sumuit avenue and Paterson Plank Road, West Hoboken.

Philadelphia—The tournament for the purpose of selecting the team for the bowling contest for S. A. F. Convention next August, started this week; the conditions being same as last year—100 games with four members bowling, to be played between February 1 and July 1, the 12 highest men during that period to play 12 games on outside alleys during July, the six highest in that month to constitute the team.—D. R.



(17) **A Whitewash for Palm Houses.**—The best shading liquid for palm houses is a thin mixture of naphtha and white lead.

(18) **Carnations Weak in Stem.**—Why are my Scott and McGowan carnations weak in stem—Scott is very weak. They are planted in old horse manure, with a little sand and other dirt mixed. Temperature 40 degrees at night; days it has been 70, and lately 70 degrees at night. I give air each day from two sash. I have just given a dressing of wood ashes.—ENQUIRER.

—Horse manure with a little sand and dirt mixed with it is not the right compost in which to grow carnations; neither is a night temperature which ranges from 40 to 70 degrees suitable for them. The weak stems can be traced to both these causes, and we would suggest that a top dressing of good fresh soil be put on the benches and made rather firm; that the night temperature be kept between 48 and 52 degrees, and that pleuty of air be given the full length of the house (instead of at two sash) when the weather will permit.

(19) **Diseased Latania and Pandanus Leaves.**—We have examined the specimens of pandanus and latania sent to you by Mr. A. L. Patch, of Rockledge, Florida, and find they are both affected by some fungus disease. The fungus on the pandanus could not be identified, as it was not in fruit. That on the latania was apparently a species of phyllosticta. It would probably not be advisable to attempt to spray these plants, as the effect of the various spraying compounds upon them has not been determined. Probably the best treatment would be to cut off and burn the affected leaves, as in this way the fungus will be prevented from developing its spores.—B. F. GALLOWAY.

CATALOGUES RECEIVED.

E. J. HOLL, Olyphant, Pa.—Price List of Strawberry Plants.

W. ATLEE BURPEE & Co., Philadelphia.—Wholesale Catalogue of Seeds.

JOHNSON & MUSSER, Los Angeles, Cal.—Illustrated Catalogue of Seeds, etc.

Florist Gets a Verdict.

ELIZABETH, N. J., Jan. 27.—A jury in the case of Henry Leahy, East Broad street, against the Central Railroad Company, returned a verdict last evening for $1,044. One evening last Summer, while a drill engine was switching some cars on the company's tracks, a car jumped the track and shoved a lot of empty gondolas into the Leahy greenhouses, completely demolishing the latter and ruining a great many plants and flowers.

A Florist's Suicide.

TRENTON, N. J., Jan. 27.—William L. Marshall, manager of the Floral Company, committed suicide to-day by taking carbolic acid. Marshall's affairs with the company are straight and no cause for the suicide is known.

New Orleans, La.

The Horticultural Society, at its recent meeting, discussed the advisability of holding the annual exhibition in connection with the State Fair. President Emil Valdejo and C. W. Eichling were appointed a committee to see the Executive Committee of the fair and call a meeting of the association at an early date to decide the matter. One new member was elected.

CABBAGE PLANTS

An Afternoon at Riverton.

Somebody told me that the best time to see the Dreer establishment was on a Sunday, when all is quiet, the army of employés absent, so that one can peep into the corners, stop and examine anything that strikes him as being new, without interruption. I did so recently, but found the ever-wakeful manager, J. D. Eisele, at his desk—a handsome one, consistent with the fine new office just built; a two-story structure. The upper contains his sanctum, and from which a view can be had of the whole place—an observatory, as it were. I was on the hunt for new things, and as Mr. Eisele is an enthusiastic botanist, together we made a tour among the novelties. Of the few newer kinds of ferns, Osmunda sempervirens is one that will add beauty to a collection. Other osmundas are deciduous, while this is evergreen and a handsome plant. Adiantum Charlottei, a beautiful maidenhair, between A. cuneatum and A. gracillimum, is a promising commercial variety, as also is A. capillus-veneris Mariesii, a strong grower, lasting long when cut, and is one of the best of the adiantums for cutting purposes. A. Bensonii is another fine thing. Blechnum rubrum and Doodia aspera multifida are not new but very worthy of note as specimen plants. In palms, Elaïs guineensis, or oil palm; Calamus intermedius, Chamædorea graminifolia are among the less common kinds. In the palm garden (by which term the immense range set apart for plants for commercial use is known) I saw innumerable quantities of the staple kinds in all sizes, and buy less. "The bane of my life has been removed," remarked my companion. "We have discovered, not the elixir of life, but an insecticide which effectually removes all insect pests without the slightest injury to the plant." Passing the golden hop (Humulus lupulus aureus) we came to a fine batch of Yucca filamentosa bicolor, a beautifully variegated variety, very uncommon and bound to attract, as it is adapted to any position.

On the way to the aquatic house we passed a pretty bromeliad, Pourettia mexicana, of which I took particular note, as bromeliads are becoming more popular. In the aquatic house a plant of Nymphæa pulcherrima was particularly interesting, as I was informed there had been a bloom upon this plant each day for four years without intermission. Mr. Tricker vouched for this, as he comes down on Sunday morning to see to his pet Victorias and ouvirandras, and can thus observe the nymphæa. I noted a fine lot of seeds of both V. Trickeri and V. Randii.

Nothing was to be seen outside, a mantle of snow covering the Alpinum, and the immense stock of perennials and herbaceous plants being under glass was less interesting than when one sees them in their full glory outdoors.

By this time my train was due; but before bidding my genial guide adieu, I made use of the long-distance telephone, which has recently been installed with the later improvements, and was informed it had already proved to be a great convenience, especially for rush orders from both the metropolis and Quaker City. The packing shed has been enlarged to an additional space of 2,000 square feet, with concrete flooring through the entire packing department.

The American Rose Society.

A meeting of the Executive Committee was held in New York on Saturday, January 27, when the arrangements for the approaching show on March 27, 28 and 29 were nearly completed. It has been decided, in order to make the work of the society more substantial, that a bulletin shall be issued containing notes of the society's doings and of progress with roses. This will be sent free to every member of the society, but will not otherwise be available. The number of premiums for the March show continues to grow in a most satisfactory manner, and there is every encouragement offered to growers in all parts to compete. The gold and silver medals given by the New York Florists' Club are offered for the best 100 roses in four varieties, from growers residing outside a radius of 150 miles from New York City, as measured by the distances shown on the railroad time tables. This should insure a representative competition from growers distant from New York, and will place their competition on an even basis.

LEONARD BARRON, Secretary.

136 Liberty Street, New York.

Society of American Florists and Ornamental Horticulturists.

The Executive Committee at its recent session in New York City approved the selection of the Grand Central Palace as headquarters for the convention and exhibition of 1900, and indorsed the selection of J. P. Cleary as manager of the trade exhibition. On being notified by the New York Florists' Club that it was their intention to present a grand horticultural exhibition at the time of the convention, under the immediate supervision of the private gardeners, it was voted that 12 silver and 12 bronze medals of the S. A. F. be specially appropriated for the use of the New York Florists' Club in this enterprise. A sub-committee was also appointed to arrange for the award of special S. A. F. medals at the exhibition of certain affiliated national organizations and leading horticultural societies.

It was decided that Prof. L. C. Elson, of Boston, and Dr. N. L. Britton, of New York, be invited to deliver lectures before the society at the coming convention. Other features of the convention program, as arranged, are a president's reception, a paper on greenhouse construction, from the open land to the finished structure, an illustrated talk on floral decorations, a discussion on the S. A. F. and its future welfare, and special talks on rose and carnation subjects to be selected and presented under the auspices of the Rose and Carnation Societies, respectively. It is expected that the afternoon and evening of the third day will be devoted to an excursion, on invitation of the New York Florists' Club, and that the fourth day will be assigned exclusively for sporting and entertainment features, with the possibility that some of the sporting features may be incorporated with the excursion of the third day.

Much of the committee's time was taken up with a very thorough discussion of the important matter referred to it by the last convention, viz., the establishment of a co-operative purchase corporation. President Wood, who has given much thought to this matter, presented a complete scheme for incorporation on the lines advocated by him at the Detroit meeting, but, finally, owing to the somewhat indefinite character of the society's vote, under which the committee were unwilling to assume a larger responsibility, it was decided to continue for the present the old plan of a purchasing committee, who shall purchase for cash for any member of the society, lumber, coal, glass, iron pipe, hose, oil and leads as may be required, but charging hereafter a small percentage on each transaction toward defraying the expenses of the necessary clerical assistance, the lack of which has greatly hampered the work of this department in the past.

The treasurer's report, as presented, showed that the life membership fund now amounts to over $600, and that the general fund in the treasury made a net increase of about $450 for the past year. It was voted that hereafter the treasurer present a supplementary report, for information of the society, at each convention, covering the period between January 1 and the time of the convention. It was decided to discontinue the nomenclature committee and to assign the duties of that committee to the registration department of the secretary's office and a botanist. Dr. N. L. Britton was then appointed as botanist to the society, and Prof. L. O. Howard was re-appointed as entomologist.

The fertilizer committee was reorganized by the addition of W. N. Rudd to its membership, and the appointment of C. W. Ward as chairman; and the necessary appropriations were made for the needs of this committee and the legislative committee.

A special sub-committee was appointed to report at the convention on the advisability of the incorporation of the society under the laws of some state, also a special sub-committee to consider the recommendation of President Wood, relative to the securing of a permanent home for the society.

President P. O'Mara, of the New York Florists' Club, and Messrs. W. J. Palmer, of Buffalo, and Geo. A. Rackham, of Detroit, were present at most of the sessions and rendered valuable assistance, to the committee.

The report of the committee on final resolutions extended grateful recognition of the hospitality of the New York Florists' Club, and Mr. and Mrs. C. W. Ward, and thanked the press for courtesies extended.

WM. J. STEWART, Secretary.

The following gentlemen are state vice-presidents of the Society of American Florists for the year 1900, having been either elected by their representatives at the Detroit Convention, or appointed by President Wood:

Connecticut, J. N. Champion, New Haven; District of Columbia, Philip Gauges, Washington (Bot. Gar.); Illinois, Edgar Sanders, Chicago; Indiana, H. W. Rieman, Indianapolis; Iowa, J. T. D. Fulmer, Des Moines; Kansas, M. J. Coventry, Ft. Scott; Kentucky, Jacob Schulz, Louisville; Maine, J. A. Dirwanger, Portland; Maryland, R. Vincent, Jr., White Marsh P. O.; Massachusetts, F. R. Mathison, Waltham, and Geo. H. Thompson, Lenox; Minnesota, S. D. Dysinger, St. Paul; Missouri, Emile Schray, St. Louis; Michigan, F. H. Beard, Detroit; Nebraska, L. J. Hess, Omaha; New Hampshire, August Gaedeke, Nashua; New Jersey, Jos. A. Manda, Jr., South Orange; New York, Alex. Wallace, New York City, and Phillip Scott, Buffalo; Ohio, C. J. Graham, Cleveland, and Robt. George, Painesville; Pennsylvania, H. T. Dumont, Philadelphia, and Gustav Ludwig, Allegheny; Rhode Island, Robt. Laurie, Newport; Wisconsin, H. V. Hunkel, Milwaukee; Ontario, P. Q., Harry Dale, Brampton.

Tobacco Stems and Fungi.

It would be of great interest to me, and possibly a good many others, to have an opinion on the practice of spreading tobacco stems on the walks and under the benches. From my own observation it is anything but a desirable thing to do. Were the stems thoroughly cleaned up and renewed about every two weeks, as they seem to lose their beneficial qualities in about that time, the practice would be a good one; but this is seldom done, as it would entail more labor and expense than the old method of fumigation. The result is the stems begin to decay and become a regular hotbed of fungus diseases. Perhaps the experimental stations could inform us if it is possible for mildew, black spot, stem rot, etc., to live on rotting tobacco stems. That cleanliness is one of the most important secrets of success is acknowledged by all, and this practice seems in direct opposition to it.

E. H.

—The question has been asked whether rotting tobacco stems may harbor parasitic fungi and whether these fungi might spread from the tobacco stems and infect healthy plants. The answer is a positive yes. Many of the worst fungous enemies of cultivated plants spend part of their lives as saprophytes in decaying vegetable matter. Nearly all of the Fusarium (stem rot) diseases, all diseases due to Botrytis (soft rots), most of the spot diseases (such as the one on violet), and many others, will grow luxuriantly not only in decaying tobacco stems but in most other decaying vegetable matter. It is certainly an axiom that cleanliness, especially in greenhouses, is one of the first elements of successful culture in plants. The use of tobacco stems is often necessary in fighting the green fly. The practice of throwing stems in the walks, however, is one not recommended by the best growers. It is better to give light fumigations with the stems, or discard them altogether, and use some of the more concentrated forms of tobacco, especially compounds which are more nearly pure nicotine. If tobacco stems are used at all as a mulch they should be removed before they have rotted; otherwise Botrytis, stem rots, etc., may be expected to develop.

In case of fumigation by burning tobacco stems it is necessary to be very cautious with such plants as the violet, and even with the carnation, not to overdo the matter. The oily sediment which may be observed on the surface of plants after quite severe fumigation in this way is very caustic in its nature. It does not contain a great deal of nicotine, but is rich in other caustic and practically non-insecticidal substances. These are very injurious to the cells of the plant, and even destroy many of the protective epidermal cells, producing many places where parasites may gain entrance to the tissues. We have seen whole houses of violets ruined in this way by epidemics of spot following fumigation with tobacco. In the case of the violet the use of hydrocyanic acid, as has been described in these columns many times, is an easy way around the difficulty; but in the case of other crops it is often necessary to resort to tobacco, though it must be used cautiously, as suggested.

ALBERT F. WOODS.

Division Vegetable Physiology and Pathology, U. S. Department of Agriculture, Washington, D. C.

[The practice of strewing tobacco stems on the paths is dirty and disagreeable at the best, and is being discarded by some prominent growers. Keeping the stems in wire mesh, suspended from the bottom of the benches, and just inside the posts, is much cleaner, has equally good results, and, not being continually trodden upon, the stems do not rot and become so offensive.—ED.]

Federal Legislation for Nursery Stock.

On December 4, 1899, Congressman Wadsworth, of Geneseo (N. Y.), introduced in the House of Representatives a bill (H. R. 96) to "provide rules and regulations governing the importation of trees, plants, shrubs, vines, grafts, cuttings and buds, commonly known as nursery stock, and fruits into the United States; and rules and regulations for the inspection of trees, plants, shrubs, vines, grafts, cuttings and buds, commonly known as nursery stock grown within the United States, which become subjects of interstate commerce or exportation." The provisions of the bill make it unlawful for any transportation company to offer for entry, at any port in the United States, nursery stock, unless accompanied by a certificate of inspection by a government official of the country from which the exportation was made, certifying that the stock has been examined and found apparently free from all insect and fungous diseases dangerously injurious to such nursery stock; also authorizing the collector to arrange for inspection of the contents of non-certificate bearing packages. Section 2 deals with the proper quarantining of fruit known to have been grown in an infested district outside of the United States or District of Columbia; and by Section 3 it is enacted as follows:

"That all trees, plants, shrubs, vines, and buds, commonly known as nursery stock, grown within the United States, may become subjects of interstate commerce under the rules and regulations as hereinafter provided. The Secretary of Agriculture shall cause to be inspected by a qualified entomologist and vegetable pathologist all trees, plants, shrubs, vines, and buds, known as nursery stock, which are subjects of interstate commerce, and which are about to be transported from one State or Territory or the District of Columbia into another State or Territory or the District of Columbia. This examination shall be made, so far as possible, prior to September 1 of each year, in the manner provided for and prescribed by the Secretary of Agriculture; and if such nursery stock is found to be apparently free from dangerously injurious insects or diseases, the certificate of the officer making such examination and finding shall be issued to the owner or owners of such nursery stock, a copy of which certificate shall be attached to and accompany each carload, box, bale, or package, and when so attached and accompanying shall operate to release all such nursery stock from further inspection, quarantine, or restriction in interstate commerce."

Section 4 makes it "unlawful for any person, persons, or corporation to deliver to any other person, persons, or corporation, or to the postal service of the United States (except for scientific purposes or by permission of the Secretary of Agriculture), for transportation from one State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or for exportation to any foreign country, any trees, plants, shrubs, vines, or other nursery stock which have not been examined in accordance with the provision of Section 3 of this Act, or which on said examination have been declared by the inspector to be infested with dangerously injurious insects or diseases. Any person, persons, firm, or corporation who shall forge, counterfeit, or knowingly alter, deface, or destroy any certificate or copy thereof as provided for in this Act and in the regulations of the Secretary of Agriculture, or shall in any way violate the provisions of this Act, shall be deemed guilty of a misdemeanor, and on a conviction thereof shall be punished by a fine not to exceed $500 nor less than $200, or by imprisonment not to exceed

one year, or both, at the discretion of the court.

"Section 5. That the rules and regulations herein provided for shall be promulgated on or before the first day of July of each year.

"Section 8. That the provisions of this Act shall not apply to florists' greenhouse trees, shrubs, plants, bulbs, and so forth, commonly known as florists' stock."

The object of this bill is to provide uniform regulations governing the inspection and transportation of nursery stock, these to supplant the varying conditions imposed by the different state laws. At a meeting of the Eastern Nurserymen's Association, in Rochester, N. Y., recently, a resolution was adopted indorsing this federal bill. Irving Rouse, of the association, was authorized to go to Washington in the interest of the bill. There he met members of the committee on legislation of the American Association of Nurserymen.

It will be seen that "florists' stock" is exempt from the provisions of the act, and the trade should use its every effort to have the bill passed, thus relieving themselves of the serious inconvenience and annoyance to which they are subjected under some of the prevailing state laws, which in a number of instances are grossly misunderstood, so far as concerns their application to the florists' industry.

Perfection Reached?

According to the judges of the carnation exhibits staged at the recent meeting of the Chicago Florists' Club, perfection, as set forth by the American Carnation Society's scale of points, has been reached by the new pink variety Enquirer, grown and exhibited by Richard Witterstaetter, of Sedamsville, Ohio. But the recipient of this high honor, it seems, is not inclined to accept the dictum of the Chicago judges. Our Cincinnati correspondent, in his last week's letter, remarks, "I will admit that Enquirer is a grand sort, but I will not admit, neither will Mr. Witterstaetter (with all due respect to the Chicago judges) that it is worth 100 points." We believe that the majority of expert carnation growers will be inclined to favor the opinion of the two gentlemen as above expressed, for a carnation that fully meets every requirement of the society's scale must indeed be a wonder, in view of the fact that so many grand things now in commerce, or to be introduced, have fallen short of it by several points. The same variety scaled 92⅔ points at the late carnation exhibition of the Cincinnati Florists' Society, held December 9 last, with the added advantage of being right at home; a gain of 7⅓ points, between that date and January 19, is truly phenomenal. Query: Where will it reach by the date of the American Carnation Society's meeting, February 15 and 16 next?

What we are most concerned about is not the reported century-reaching qualities of the Enquirer carnation, which is evidently a good thing, but the dilemma into which the Chicago judges have thrown, not only the American Carnation Society, but the whole carnation industry.

A Fusarium Leaf-Spot of Carnations.

A recent bulletin of the New York Agricultural Experiment Station at Geneva, N. Y. (No. 164, December, 1899, by Prof. F. C. Stewart), illustrates and describes, among other things, a species of Fusarium which has been found producing a serious leaf-spot disease of carnations at Syracuse. It occurred upon plants so situated that the direct sunshine could not reach them. The fungus gains entrance through breaks in the epidermis made by rust sori. Professor Stewart says it is not improbable that it may be identical with the carnation stem rot Fusarium, and furnishes the following particulars regarding it:

"A very unusual case of Fusarium attacking carnation foliage was observed in a greenhouse at Syracuse last November. A bench of carnations of the variety Emily Pierson was quite seriously affected with a peculiar leaf-spot. The spots varied in length from one-eighth of an inch to one inch. The smaller ones were elliptical, but the larger ones occupied the entire width of the leaf and were irregular at the ends. They were covered with a pinkish gray mold and irregularly dotted at the center with the light yellow spore masses of a species of Fusarium. Many of the worst affected leaves were dying. The Fusarium was evidently parasitic on the leaves, but a careful examination revealed the fact that in every case the spots originated in a rust sorus. It appeared that the Fusarium was unable to attack the uninjured leaf, but when the epidermis was broken by rust it was able to enter and bring about decay of the leaf tissue. It is improbable that the Fusarium is parasitic upon the rust.

"The writer has occasionally observed Fusarium attacking injured leaves and stems of carnations, and the spore masses of a similar Fusarium are common on the stems of carnations affected with that form of stem rot commonly known as dry rot or die back; but we have never before known Fusarium to produce a genuine leaf-spot of carnations. Inoculation experiments may show that this Fusarium is identical with the one causing carnation stem rot."

OBITUARY.

The wife of J. H. Dann, florist, Westfield, N. Y., died on January 26, after a sickness of about six months.

Mrs. Hill.

Mrs. Jean L. Hill, stepmother of E. G Hill, died at her late residence, in Richmond, Ind., January 26, 1900, and was laid to rest in Earlham Cemetery, Richmond, January 30. Mrs. Hill was born in Glasgow, Scotland, in the year 1818, and was married to E. G. Hill's father, Joseph Hill, in 1858. She had lived to the good old age of 81 years. The casket was covered with beautiful flowers sent by her friends. The deceased, who was a kindly old lady, was well known to a host of florists who had visited at her son's house during the past 15 years.

G.

Marcus Krohn.

The death of Marcus Krohn occurred in St. Anthony's Hospital in Rock Island, Ill., Sunday night last. Mr. Krohn was a well known florist, and his death was due to blood poisoning, the result of a peculiar accident. On January 9 he had a cut on the ball of his thumb, and in thrusting his hand hurriedly into his pocket for a match, the sulphur end of a match was run into the cut. Mr. Krohn gave little heed to the matter until the thumb begun to swell, and by the time he sought medical aid was suffering from well-developed blood poisoning, and his condition grew rapidly worse, resulting in his death at the time stated.

Charles Giles Foster.

Charles Giles Foster died in Chicago last week at the ripe age of 69. He was a veteran journalist, and was employed by Luther Tucker on the old Genesee Farmer and Gardeners' Journal, established in Rochester, N. Y., January 1, 1831, being afterward also employed on the staff of the Albany Cultivator and the Country Gentleman, established in Albany, N. Y., in 1857. Mr. Foster was born in Rochester, N. Y., December 14, 1831. His entire life was spent in newspaper work, and when only 15 years old he was connected with papers in his native city. He went West in 1849, and bought an interest in the Kansas City Journal in 1867. He had been a resident of Chicago since 1871, for many years conducting an advertising agency.

Ess.

BOOKS RECEIVED.

DIRECTORY OF FLORISTS, SEEDSMEN, NURSERYMEN, AND ALLIED TRADES FOR 1900. Publishers, the American Florist Company, Chicago. Price, cloth, $2; leather, $3. The present edition of this Directory has been considerably improved over former issues. The list of names has been brought down to the end of December, 1899, and, in addition to the previous handy features of the book, valuable augmentations have been made in the form of lists of head gardeners or superintendents of prominent private estates, landscape architects, experiment station horticulturists and horticultural supply concerns; the list of horticultural societies has also been large added to; the whole constituting a very serviceable reference book.

This Directory is for sale by the FLORISTS' EXCHANGE.

Business Difficulties.

BELMONT, MASS.—John Husband, florist, School street, Belmont, is bankrupt. Schedules show liabilities to be $1,661.79, all of which is unsecured to about 46 creditors. There are no assets.—Globe.

Errata.

In advertisement of H. F. Littlefield, page 81 last issue, the prices on Grafted Roses and New Yellow Fitzwygram 'Mum were transposed; the former should read $10.00 per 100; $90 00 per 1000, and the latter $7.00 per 100; $60.00 per 1000; 200 at 1000 rate.

Foliar Nematodes.

A lot of begonia leaves, sent from an anxious grower of ornamental plants, has recently been examined, and the cause of the disease seems unmistakably to be that of nematodes. The diseased leaves were brown in patches, and under the microscope the tissue shows a multitude of minute worms. These worms are found most numerous at the junction of the healthy with the watery diseased parts.

Other plants are infested in a similar way with the eel worms. In a mass of variegated pelargoniums perhaps half of the leaves over a square yard of space was brown, and has a disagreeable, slimy feeling. It was evident that when one such dead leaf had fallen on a healthy one the disorder was quickly communicated to it. No trace of fungus could be found in the blighted leaves, but instead there was an abundance of nematodes. The infested foliage was so transparent, due to removal of coloring matter, that by looking through the leaf with the microscope the worms could be seen in all parts of the tissue.

SALVIAS.—In the large beds of salvias the leaves were generally blotched, sometimes more than half being dead, but the living and diseased parts were in each separated by a well defined line; in other words, the blotches were angular and their shape was governed by the veins of the leaf. The dry, brown patches, under the microscope, yielded only eel worms as the cause of the decay. Salvia leaves in general appearance resemble those of the coleus, to which the species is closely related, and in which nematodes were found last year. The blotching of greenhouse salvia leaves is another serious case of nematode attack.

ZINNIAS.—Attention has been called a number of times to a trouble among zinnias, and particularly Z. elegans. The lower leaves prematurely die and hang upon the stems as crumpled, brown masses, giving the affected plants anything else than a handsome appearance. Above these the leaves are more or less blotched with light brown, the affected areas varying in size and color, but are usually quite angular in outline. A microscopic examination reveals the eel worms at work in the leaf pulp and in great numbers. They are probably of the same species as those of the chrysanthemum and other plants of that group.

MOON FLOWERS.—The moon flower, now a popular, rapid growing and profusely blooming vine, is another victim to eel worms. In the leaves of this plant the tissue is loosely placed, thus furnishing a fine feeding ground for the nematodes. Leaves that are infested turn brown in spots, which have the irregular outlines so well illustrated in the coleus and salvia. The variegated sort seemed to be the most susceptible.

FERNS.—The worst work of nematodes met with during the past few years was in fern-growing establishments, where they did a large amount of damage. While the young seedlings (sporelings) are in the prothallium state they may begin to die, the normal green color being replaced by a dull brown. Beginning at one side of the pot or box of ferns, for example, the trouble may spread quite rapidly over the whole.

There is a well defined line separating the dead from the living plants, reminding one of the demarcation between the burned and unburned portion of a wild meadow in early spring. Leaves containing these nematodes, and apparently free from fungi, were frequently employed to inoculate pots of healthy seedlings. The infected leaf plant was held in place with a piece of thin glass (cover glass) and kept moist, and in all instances the disease spread in radiating lines through the healthy parts, causing them to turn brown and die. These first leaves of the ferns are small and exceedingly delicate, and offer but little resistance to the passage of the worms. Two or three of the nematodes are sufficient to destroy a single plant, from which they can pass on to the next victim.

In connection with the diseased fern plant, some species of fungi were found, and among others the old form of "damping off" fungus (Pythium De Baryanum, Hesse). How much of the whole amount of the mischief must be ascribed to the fungi it is not easy to determine. Many of the forms, however, are no doubt secondary, and follow in the trail of the eel worms and the pythium. It is impossble in this case to suggest an absolute preventive. The conditions under which young ferns are grown are well suited to the development of the nematodes. All eel worms and their eggs are killed by high temperature. They are common root enemies of many kinds of plants, and most likely at the outset make their entrance into the ferns from the soil, while it has been shown by laboratory tests that, once in the tender foliage, they spread rapidly from leaf to leaf throughout the pot or box. Subjecting the soil to a high heat for a short time before sowing the spores should destroy all nematode life. Lastly, avoid as far as possible the dampness that is so favorable to the progress of eel worms. In Figure 1 a salvia leaf is shown at *a* with the infested areas shaded; *b* is a pelargonium leaf diseased, and *c* a bouvardia leaf infested. At *d* two worms are shown much magnified, and one in the left tissue at *e*.

The most striking instance of eel worms destroying the leaves of plants which has come to my notice was seen in specimens of an ornamental fig (Ficus comosa). When first observed nearly all the leaves were badly blotched, and several of the lower ones had fallen away. Upon the upper side the leaves have a bronzed appearance, while the lower surface is brown and somewhat rusty in color. As has been heretofore observed in coleus and salvia, the nematodes do not destroy the life of the leaf uniformly, but, instead, ruin it in spots that are decidedly angular in outline, the boundaries corresponding to the veins of the leaf. In the worst cases the whole leaf may become brown and dead. The engraving (Fig. 2) illustrates the appearance of a leaf that is attacked to only a moderate degree, and was selected for the photographs on this account. It will be noticed that the diseased area is the central portion of the leaf, and its position leads one to wonder if the worms may not have come up from the soil or roots, through the stem and leaf stalk. This seems to be the case with young ferns afflicted in a similar manner and recently studied. To cure such leaves seems out of the question, and what to do as a preventive is not easy to suggest.

[Prof.] BYRON D. HALSTED.
N. J. Experiment Station.

BRIEFS FOR BUSY FLORISTS.

CARNATIONS—We are now in the midst of the propagating and, if we fully appreciate the value of selected stock, we are taking cuttings only from the strongest plants. When rooted and ready to be taken from the sand, transplanting them into shallow flats is as preferable a methods as any, and consumes less time in the operation than potting. The flats also take up less space on the greenhouse bench. The above applies, of course, to that stock which is intended to be planted in the field during the Summer. Stock which will not be put outdoors, but planted direct on to the benches, when the present occupants are thrown out, had better be potted when taken from the cutting bench and shifted into larger pots later, getting them into 4-inch pots if necessary, rather than have them become pot bound before they are finally planted on the benches.

ROSES—All the available wood should be used for cuttings, and blind wood need not be despised, as just as good stock is produced from that as from one or two-eyed cuttings. Bride and Bridesmaid are giving good results where they are being tried grafted on the manetti, and this system is worthy of consideration by all who want to have the best. Manetti stock can be bought at reasonable figures, and an ordinary cutting makes the best eion. All the extra appliance needed is a close frame over a portion of the cutting bench, in which to keep the plants while the graft is uniting.

CUTTINGS OF HELIOTROPES and such begonias as can be used for early work should also be in now. The rex begonia leaves, that were cut up and put into the propagating bed, will now be sending up tiny growths from the base; when large enough to handle they may be pricked off into a pan, using a very light soil, or they can be potted up singly into the smallest size pots. After the first good watering they will need to be kept rather on the dry side, until a few of the young leaves are developed, as too much water given before that time is likely to cause them to damp off.

LILIES FOR EASTER will not require the hard forcing that they did last year, as the date of that holiday is somewhat later this year. To have the bulk of the stock in too early will be almost as bad as to have them too late. Try to have the buds in sight by the first week in March and the rest will be easy.

HINTS and HELPS.

Acclimatization of Plants—This is a subject which should get more attention than it does, as it is one of great importance. As an instance of what may be done in a year or two I would mention that a plant of Ficus repens, which was put out in a position sheltered on the north and east, is evidently getting hardier each year. The first season it had a struggle for existence, the growth being killed to the snow line; since that time most of the damage done by frost has been confined to the unripe growths. There is nothing unusual in the above, but here is the interesting part: Last Fall a year ago cuttings were taken from the plant out of doors; some were also taken from one which had been growing in a greenhouse for years. They were rooted under the same conditions, kept cool during the Winter, and both batches planted outside in the Spring. It is now about ten months since they were put out. The cuttings taken from the greenhouse plants are evidently dead, while those from the outdoor plant are only slightly browned.

The Floriferousness of the Lorraine Begonia may be partly accounted for owing to the fact of its being almost without female flowers, and also to the stamens producing little or no pollen. Among a large number of plants I have seen only a very few female flowers, and these are, so far as noticed, only produced at the very ends of the flowering stems. The pollen is produced exceedingly sparingly, many of the flowers having none at all. Another peculiarity in this plant is, that the male flowers are the most attractive, not necessarily because of their number, the male flowers being larger and better formed than the females.

Canna Rhizomes may be gone over and the decaying portions cut out. It is early yet to start the batch for Spring sales, but those which are intended to be in a forward condition for planting ont, for the purpose of increasing stock, should be cut up into pieces, which will ultimately go into a 5-inch pot. Before potting in well enriched soil the roots should be started in material suitable for the purpose. When potted without roots they are always unsatisfactory, some starting immediately, others remaining dormant. A mixture of sand and sphagnum moss will be found as good as anything. Use boxes to start the rhizomes in; place a little of the sand and moss in the bottom, then put in the plants covering with more of the mixture, and water only sparingly. Good, strong roots will start within a week in a moderately warm house.

Slow Rooting Rubbers, and there are several of them in common use for subtropical bedding in Summer, will now be found to be at rest; unless they are kept in a very warm house, and in this condition ringing and mossing, as the best means of increasing the number, had better be attended to. Those which are slow in taking root in the cutting bed, but quick to respond to the ringing process, are as follows: F. dealbata, F. Porteana (a shade tree from the Philippines, by the way,) F. nymphæfolia, F. macrophylla, F. ferruginea and F. eburnea. While on the subject of rubbers I may mention that for covering damp walls in greenhouses for ornamental effect Ficus repens has been employed for a long time, but there is a species, new to me, which is a better one for the purpose, judging by what I have seen of it. It is named Ficus falcata and is well named, as the leaves resemble nothing so much as a short knife blade. It grows very fast, has very dark green foliage and sticks close to the substance against which it is placed. A good way to start young plants climbing so that they may be easily transferred to permanent positions is to fix the end of a piece of board inside of a pot, allowing a space above the pot 6 inches broad and 12 inches long; then pot the young plants close against the wood.

Anthericum variegatum is a good all-round plant for vases, bedding, or potted for window decoration, although for the last named purpose it is surpassed by the variety known as A. media picta. If the plants which were lifted last Fall were allowed to bloom, and the flower stalks remained on the plants afterward a good opportunity to increase the stock of plants presents itself at this period. All along the flowering stems will be found a crop of small rosettes of leaves which, if cut off, stems and all, and laid on the sand in the shaded part of a warm house, will send out roots in a short time. Large clumps of A. variegatum, which have been hibernating under benches, should be broken up and potted in 3 and 4-inch pots. They may be placed under benches where the light will strike them for at least a portion of the day.

Chrysanthemum Hon. W. Q. Gresham.

Petunias—It is always advisable to sow the best strains of the double petunia seed, as the majority of the seedlings will furnish all the single flowered plants necessary for ordinary use. The doubles can easily be picked out from the singles before the flowering period. They are known by their stocky appearance, the singles having a decidedly "annual" look shortly after the seedling stage has been passed. In order to prevent washing of the soil after the seed is sown use boxes, say, three inches deep; put a shallow layer of sphagnum in the bottom, make the soil firm, give a watering sufficient to wet the soil through; then when the surface will admit of the operation roughen it with the ends of the fingers. Sow the seed thinly and smooth the surface with the end of a cigar-box without covering with soil. A pane of glass or a piece of damp cloth placed over the box will prevent a too rapid evaporation of the moisture till the seeds have germinated. Lobelia, begonia, mimulus and other minute seeds may be similarly dealt with.

Phlox Drummondii—The numerous varieties of this popular flower should be sown now. The single white and red, the latter in various shades make the best display. In sowing cover the seeds with some sphagnum rubbed through a No. 4 sieve; in a moderate temperature they will vegetate inside of a week. The best plan after the plantlets are large enough to handle is to prick off into boxes from which they should be transferred to pots later on in the season. When put in pots during the seedling stage they are apt to get leggy by the time they are in bloom.

Abelia rupestris—Cuttings of this shrub which were put in the bed of the cool propagating house a few weeks ago are nicely rooted by this time. In potting the cuttings those which have an abundance of roots may be placed in thumb pots in the usual way, but in cases where only one or two roots appear they are best placed in the sides of the pot, as in that position they make roots more freely than when in the center. In a short time they will have made growth enough to be shifted into 3-inch pots, and before the time comes when the houses are crowded with Spring stock they may be transferred to the cold frame. Abelia rupestris is reliably hardy south of Washington. The northern limit of its hardiness is probably much further north.

Chrysanthemum, Mrs. J. M. Wilson.

Primula obconica—The growing of this species, especially for cut flowers, a few years ago was conducted on rather an extensive scale in some localities, but owing to some irritating quality which the plant possesses when it comes in contact with the skin, its cultivation got a sudden check. Some say that the check was caused owing to the manner in which it hurt the sale of other things. Be that as it may, it is getting to be a popular Christmas plant, some of its forms approaching in size and color those of the well-known Chinese species; and so long as it is used as a pot plant there is little danger of its stinging hairs being heard from. Seed should be got in without delay to have good plants for next Christmas. Those to be had at this season will necessarily have to be from last year's crop, and as the seed of primulas germinates best when newly harvested, extra care will have to be taken of them; covering the seeds lightly with finely screened moss or Jadoo will hasten germination. The seedlings should be pricked off round the edges of small pots until large enough to be potted off.

Erythrinas—Bring in some of the old plants of E. crista-galli, or any of its forms; they are far the best for Summer work. If not in pots the old stumps may simply be covered over at the roots with moss and given a minimum temperature of 55 degrees. Syringe occasionally to encourage growths for cuttings. As soon as these growths are in the neighborhood of 4 inches in length, take them off with a heel, put in 2-inch pots, using a sandy mixture, and keep them confined in a warm propagating case until they root; shift into larger pots and gradually harden off.

Bedding Begonias—Almost all of the begonias can be bedded out when given shade and an abundance of water. The rex section thrive under these conditions wonderfully well, and if water can be given whenever they require it all of the slower growing forms can be plunged in their pots. These will make grand plants if lifted early and repotted. The best of all begonias for places free from shade is the well-known B. rubra or B. corallina; it glories in full sunshine. If healthy young plants are set out they flower luxuriantly, but old stumps have to make new growths from the base, and owing to the length of time elapsing before a display of bloom is made these plants had better not be used. Plants rooted from outdoor growth last Fall should give an abundant supply of cuttings at this time. As soon as rooted, pot in light rich soil, using as small-sized pots as possible, shifting later as required.

G. W. O.

A Late-Flowering Chrysanthemum.

F. J. Langenbach, Norwich, Conn., sends us some blooms of a late-flowering chrysanthemum, which has come into flower the latter part of January for the past two years. The color is a good deep pink, and the variety appears to be worthy of a place as such in any collection. From its general build it seems to be one that can be grown to a good size. Before sending it out as a new variety we would advise that it be submitted to the National Chrysanthemum Society for opinion as to its merits.

The Position of the Hybridizer.

Editor Florists' Exchange.

In reply to the request of E. S. in the FLORISTS' EXCHANGE of January 20, I wish to state that I personally do all hybridizing myself, and have always done so. In regard to the other points mentioned by E. S. I believe, as he does, that the credit belongs to the originator.

H. A. MOLATSCH.

Some New Chrysanthemums.

Our illustrations are reproduced from photographs of two chrysanthemums, the plants of which were raised at the Propagating Gardens, Washington. The varieties are the pick of a great number of seedlings.

MRS. J. M. WILSON is a cross between Gloriosum and Mrs. E. D. Adams; the color is a creamy white, large reflexed florets, never showing center; stem and foliage are good. Height 2½ to 3 feet. Ready to cut October 25.

HON. W. Q. GRESHAM (named by Mrs. Cleveland after Mr. Gresham's death) is a cross between Mrs. J. M. Wilson and Viviand-Morel; color pure white; flower of good size; reflexed florets, center builds up with interlacing incurved florets; stem and foliage good. Height 2½ to 3 feet. Ready to cut October 25.

The above are the descriptions furnished by Mr. Geo. H. Brown, who is superintendent of the establishment. The varieties are much thought of here.

Washington. G. W. O.

SUPERBA is a cross between Mme. F. Perrin and Maud Dean, a very late Japanese incurved pink, being in perfection December 10 to 30. The originators, Nathan Smith & Son, Adrian, Mich., describe it as follows: "A very double flower, 5½ to 6 inches in diameter, with high, rounded center. Color bright pink, intermediate between that of its parents.

Chrysanthemum Superba.

This we believe to be one of the best commercial varieties we have produced. Buds that were taken November 1 will not be developed for Christmas. Height 4 feet. Take only terminal bud. Certificated by the C. S. A. in 1898, and passing all of the committees in 1899."

LAVENDER QUEEN.—Mrs. Jas. Eadie × Thanksgiving; described by Nathan Smith & Son, the originators, as follows: "A large Japanese, outer petals reflexed and center erect, making a flower of great depth. In general habit resembles Thanksgiving. Height 3 feet. A new color, decidedly distinct from any in commerce, being a soft shade of lavender pink. Under artificial light is identical with the light colored cattleyas so much admired by all. The finest pink for Thanksgiving trade. Take bud about September 25. Certificated by the C. S. A."

Begonia Gloire de Lorraine.

Editor Florists' Exchange.

For general purposes, suitable for the florist, the amateur, and professional gardener, no plant excels this begonia. Its bright color, its wonderful floriferousness and greatest profusion during the short and dull days (more or less) during Winter adds immensely to its value and usefulness. During the past season we have heard of a pink sport, also a white one in England, and a dwarf compact sport known as erecta compacta in Massachusetts; also a pink sport of a lighter shade. This latter variety corresponds with the Gunnersbury sport, not only in color but in the size of the individual blossom. It also has an apparent advantage of lasting longer in better condition than the original. There is also a decided shade of green foliage and not the pale, sickly green changing to a deeper color; it is likewise a more vigorous grower.

How much difference of opinion there is among florists as to the method of culture, the soil and time to propagate, and what is best, leaves or shoots! What may suit one may be entirely wrong for the other fellow. In FLORISTS' EXCHANGE of January 13, page 37, G. W. O. says, respecting the propagation of Begonia Gloire de Lorraine: "The quickest way to propagate, as in the rex section, is by leaves; each leaf may be cut in two, etc." This is entirely at variance with my experience, and with most growers who have grown it in quantity. True, the plant can be propagated by the leaf, but by no means as readily as the rex section, and although the foliage is now mature, there is no season when so little growth is made; and to strip the plants of their leaves, or but partially, only tends to weaken the plants, and the leaves will take from three to four weeks to root; and instead of little growths making their appearance shortly after the roots are formed it will be several weeks. To cut up the plant, using a leaf with an eye, is almost as slow at this season. Hard, ripened or mature wood or leaves is not the best, or the present the most opportune season. The plants require a partial rest to recuperate, and as soon as new growth commences the plants should be encouraged, not defoliated, and when vigorous growth is obtained strong cuttings can be taken that will root easily in the cutting bench in about ten days. Leaves may also be used for cuttings when the plants are vigorous, although they take longer to root; but do not cut, as is usual with the rex varieties. C. B.

The Aster Disease.

Editor Florists' Exchange.

I was interested in the article on aster plants and the tarnish bug in a recent issue of the FLORISTS' EXCHANGE. While my experience with the tarnish bug confirms much that was said, I feel that the insect is not responsible for this wholesale aster blight, or fungoid disease which causes the plants to turn yellow. I think it may be in a measure inherited; that seed growers are not particular enough about destroying all affected plants before they come into bloom, and so the pollen from diseased plants gets on the seed stock! Four years ago we grew some nice Semple asters, with only a small percentage diseased; saved seed from a few of the best blooms and planted it the next season, when about half of the resulting stock was diseased. The next season we purchased seed, and the plants obtained were almost all diseased; the same last season. Now, the question is, who can say that their aster seed has been grown wholly free from this disease? I want to grow some more nice asters, but am really afraid to buy the seed. W. C. JENNISON, Mass.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

Hardiness of Victoria Regia.

Editor Florists' Exchange.

Schoolboy like, I have given too much time to vacation, and not attended to matters that ought to be strictly business. In my previous communications I took a schoolboy's place, desirous of securing all the information I possibly could on the subject in question. I had been told indirectly that I knew nothing, therefore I sought enlightenment as to the hardiness of Victoria regia or V. Trickeri; if the latter was a species, a variety or what, and as G. W. O. could so plainly point out my errors (?), I thought he, better than any one else, could give the readers of the FLORISTS' EXCHANGE the history of Victoria Trickeri and dispel at once all doubts as to its origin, etc., "whether a species or variety, and why it is hardy, which is not the case with the type and var. Randi." G. W. O. takes no notice of my request. If he did he simply turns it down, for obvious reasons; and, on page 1247, retorts by saying I've not complied with his request, etc., on page 1127, for the cause of the increased hardiness of Victoria Trickeri. I am not a botanical dominie; but I will here answer G. W. O.'s question to the best of my ability:

Victoria Trickeri was received by me directly from a foreign house, less than six years ago. I raised the first plant, grew and fruited the same, and from this plant all other plants known as V. Trickeri have emanated. I did not raise it from a Victoria regia, or V. Randi; neither did the seed come from South America. I was well aware that it was not Victoria regia or V. Randi, and I sent seed of V. Trickeri to Kew for identification; but it was unknown to the authorities there, and no one at any of the botanical gardens in Europe knew it, or had seen it, or had heard of it, only as being sent to Kew, by myself. True, in the Kew Bulletin, it was not described as a new species; its many good qualities, different forms from the original type, were given, but the authorities were unable to say or state anything as to its hardiness; that has only been proven here of late.

All that can be said of the hardiness is that it is inherent. It has been known to cultivators for but six Summers only. Now, if this peculiarity has been brought about gradually, as G. W. O. asserts it has, by being grown in water, the temperature of which is lower than that of the habitat of the type, will G. W. O. please tell us where this plant has been grown. If he does not, we may conclude that he can not tell. As I said before, I was seeking information; so far I've received none. I did not claim it to be a species or a variety; was ready to hear what others had to say.

I have asked G. W. O. several questions, but he has failed to enlighten the craft. I asked him to test the three kinds under the same conditions. He says there is no necessity. Well, how can he prove any identity without experiment? If, as he says, V. Trickeri is but a form of V. regia, why is it not possible to raise V. Trickeri from V. regia, seed saved from a plant that has been grown in water of a lower temperature than that of its native habitat; and if V. Trickeri is a form or variety of V. regia is it not possible that instead of plants of V. Trickeri he will get plants of V. regia, or at least, a proportion? Is that not the case with species and varieties of nymphæa and other orders of plants? I have found it so. I have raised thousands of plants of Victoria Trickeri, and I've yet to see the first variation, or a sign, or semblance of a V. regia; on the other hand, there is a greater similarity between V. regia and V. Randi. In fact, it is a hard matter to get either true; but this I've never beard of, that a Victoria Trickeri had been raised from a Victoria regia, or a plant showing any resemblance.

There is much more to prove that Victoria Trickeri is a species than there is that it is a form or variety of Victoria regia, and here I will stay until convincing evidence can be brought to the contrary. W. TRICKER.

Chrysanthemum Lavender Queen.

New York.

Market Notes.

The cold wave which struck here Thursday morning gave a decided check to the cut-flower business. Up to that time dealers had found a good demand for flowers along all lines, and in some cases an advance in prices had been obtained over those that ruled one week ago. The top-grade American Beauty are bringing 60c., and the quantity of those coming in is but small compared with the number of fancies and extras. Among the two latter grades there is quite a number of malformed or otherwise unsalable flowers (ringers is the class they belong to) that ought to be sent in under separate cover as it were, or, at least, kept separate from other grades for which a good average price is expected. Buyers of Beauty, or any other rose for that matter, are too critical nowadays to allow any chance of a few ringers being passed among their purchases.

Fifteen dollars per 100 is the top price for Bride and Bridesmaid, and from that down as low as $2 per 100. The demand has been good, and during the first part of the week dealers could probably have disposed of more flowers of the best grades had it been possible to get them. Extras brought from 8c. to 10c.; No. 1's, 5c. to 8c.; No. 2's, 2c. to 4c.

Carnations showed a little improvement in values in the early part of the week, and cleared out fairly well; they are going slower now, and prices are about the same as reported last Saturday.

White orchids are quite scarce, but the same cannot be said of cypripediums. Although the standard price of the latter is fixed (or supposed to be fixed) at 12½c. each, many of these flowers are reaching retailers at a figure much below that. Cattleyas go fairly well, and the best bring 50c.

Daffodils are now coming in plentifully and bring from $3 to $4 per 100. Tulips also are abundant at from $1.50 to $2, according to color, with yellow the favorite.

Lilac is not going so well as it did last week, good bunches of the pink stock being offered at 75c.

No change is noted in the value of violets, and the mild weather we had up to Thursday made it possible for the street men to handle large lots. It is feared, however, that the cold snap will close the outlet in that direction, and the flowers will not be cleared out of the market as satisfactorily as they have been.

The retailers are enjoying good business; decorations for dinners, etc., are much in evidence, and the orders for funerals are using up plenty of flowers. Sprays of forsythia are now being used for window decorations; it is a charming subject for this purpose.

The News.

Frank Sheehan has taken a position with Blauvelt & Guttman.

Felix Bernstein opened a retail store, Monday, at the corner of 92d street and Madison avenue.

J. K. Allen will be in his new location, 106 West 28th street, on or before next Saturday, February 10. The new store has been fitted up in first-class style, and the facilities for handling his consignments are all that could be desired.

Eugene Dailledouze made a trip to Cincinnati, January 30, to see the new carnation Enquirer.

Grand Rapids.

Dark, cloudy weather, snow storms and blizzards form our present weather diet. It is poor growing weather. Violets are not flowering as freely as last week, roses are off and scarce, while business continues good, particularly shipping orders. Roses still stand firm at $1.50 per dozen; carnations, 35c. and 50c. per dozen; Harrisii and callas, $2 per dozen; valley and Romans, 75c. per dozen. Beauty are too scarce to quote.

Repotting of Spring stock has begun.

At least two, possibly four, members from Grand Rapids will go to the Buffalo Carnation Convention. Crabb & Hunter will take Irene, which scored 92 points at Chicago, and see what those at Buffalo will do to her. G. F. C.

Buffalo.

Business Bits.

Trade continues but normal in a general way, neither good nor bad. Wintry weather is now with us. Roses are in fair supply. Carnations are amply plentiful, while violets seem over abundant.

Here and There.

Wm. Scott gives out that on May 1 he will retire from the downtown store location and concentrate his entire sales business at his Cold Spring greenhouses.

John G. Pickelman, of French street, recently disposed of his interest in his Chippewa Market stand.

A quartet of visitors were entertained by W. J. Palmer at his Lancaster Greenhouses on Friday last, and included H. J. Wise, of E. Aurora; Wm. Scott, W. F. Kasting and W. B. Scott.

Recent visitors included Joseph Rolker and John Barclay, of New York; Chas. T. Geunther, of Hamburg, N. Y.

Carnation Society Matters.

A meeting of the committee of arrangements pertaining to the Carnation Convention was held on Tuesday evening. The Genesee Hotel was formally decided on for headquarters, with the business meetings to be held there. Morgan Hall, where the exhibit will be held, is in the building next adjoining this hotel. Scarcely a single block distant the Tifft House and Groener Hotel also offer pleasing inducements to comers. All are moderate-priced hotels, and rooms may be engaged either direct or through W. F. Kasting or Wm. Scott, of the committee. A committee was also directed to arrange the matter of an informal entertainment for Friday evening in the exhibition hall. The inviting of the public to a limited number, by ticket, to the exhibition, is contemplated. VIDI.

Ottawa.

Weather has been seasonable—plenty of snow and a fair share of sunshine. Business has been fair; we are now looking forward to a considerable increase as Parliament meets at the end of the week, the drawing-room being next Saturday. Violets have been more than sufficient, both Graham and Scrim having very fine crops. Carnations are good with some, and indifferent with others. Roses are scarce, generally.

At last there are signs that our trade paper is to appear; the middle of February being the date. We shall give it a hearty welcome.

Mr. McHutchinson, New York, was in town on Saturday. E.

Philadelphia.

The Market.

The past week has been a fairly good one for florists; entertainments and balls have been in full swing, using up quantities of flowers. Transient trade has also been very good.

There is not quite as much surplus stock around this week, owing to the supply falling off. The chief demand for the past three days has been for tea roses, Bride and Kaiserin being much sought after. There is a special demand noticed for other stock. Sales so far this season are fully up to average; but there has been a much larger quantity of flowers coming in. Good carnations are selling fairly well, but prices are low for the quantity of stock. Violets also do not go well, only choice flowers being wanted. In bulbous stock yellow narcissus only are selling in any quantity. Tulips are difficult to dispose of. Smilax and asparagus have met with good demand, no doubt on account of decorative work.

The News.

Thomas James, an employée of Pennock Bros., died last week of pulmonary trouble. He went to Pennock Bros. as a boy, in 1876, and continued in their employ until his death. He was a faithful worker, and much respected.

The seed trade in general feel well satisfied with the first returns from the catalogues. Receipts are ahead of last year, and prospects look good.

DAVID RUST.

Chrysanthemum Society of America's Cup awarded to Nathan Smith & Son for seedling Goldmine, scoring highest average for 1899.

Boston.

The Market.

There has been a slight improvement in business noticed the past week. Stock has shortened up somewhat, although there is plenty for the demand. In roses Bride and Bridesmaid are becoming scarce, and though the scarcity is not felt yet there are very few in excess of the demand. They range in price from $1 to $10, a limited supply of extras making $12.50 a 100. Kaiserin and Carnot are scarce; the former, however, are not sought, while the newer rose does well at from $4 to $16 a 100, and cleans out every day.

American Beauty is about the only rose now in excess of the demand. This is mainly due to the falling off in quality which has been noticed for the past couple of weeks. Prices on these flowers vary, as does the demand; one day there is almost no call for them and on another they do very well at from $2 to $25 a 100 in the different grades. A few specials of select quality make higher prices.

Carnations, however, are still very plentiful, but the finer grades are not over abundant and clean up very well, especially fine white ones which are rather scarce. Prices range from $1 to $1.50 for good grades, a few extras making $2 a 100, and fancies $3.

Bulbous stock becomes more plentiful daily, but prices hold up about the same. Trumpets and Von Sion make $2.50 to $3 a 100 for good quality, and Campernelles $1 to $1.50. Paper Whites bring 75c. to $1 a 100, and are very plentiful, as are Romans at $1 to $1.50 a 100. Valley continues at usual price. Mignonette is becoming more plentiful, but does well at $1 to $2 a 100 for ordinary to good grades, and $3 for extra quality. Freesia is also very plentiful, at from 50c. for short-stemmed sprays, to $1.50 a 100 for the finer ones.

The retail stores are now ablaze with flowering plants of the various Spring tubjects. Warren Ewell is bringing in a fine lot of bulbous stock in pans, including tulips Duc von Thol, Proserpine, Keiserskroon, Yellow Prince and other varieties; daffodils and Trumpets in pans, Dutch hyacinths in pans and single bulbs in 4 and 5-inch pots. Pans either of tulips, hyacinths or narcissus average $7 to $7.50 a dozen; while crocus pans, which are not so plentiful, make $9 a dozen; hyacinths in the single pots fetch $1.25 to $1.50 a dozen.

William W. Edgar has one of the finest lots of specimen azalea plants, in all varieties, that one would want to see. They are in sizes measuring from one to four feet in diameter. Other lots of exceptionally fine plants are to be seen at E. N. Pierce & Son's place at Waverly, and W. S. Ewell & Son's greenhouses at Dorchester.

The failure is reported of John Husband, of Payson Park.

Miss Mira Loyd Dock, of Harrisburg, Pa., delivered an illustrated lecture on "The Procession of Flowers," before the Massachusetts Horticultural Society, Saturday last.

Saturday, February 3, will be held the second of this season's regular shows at Horticultural Hall. Prizes are offered for pots of freesias, and also for violets, orchids, carnations and camellias, as well as for vegetables. F. J. N.

GEORGE REINBERG,

Mention this paper. 51 Wabash Avenue, CHICAGO, ILL.

NOTES BY THE WAY.

WESTERLY, R. I.—It denotes a healthy condition of things, both in the market and stock, when Golden Gate, Bride and Bridesmaid roses bring $40 per 100 around the holidays and $20 before and since. Something in favor of grafted stock I fancy, and, of course, the house is a great factor. The houses this grand stock is growing in are each 200x21 feet short span to south, 14 feet to ridge, a difference of but 2 feet on either side; four walks in each house. The plants are grown both in solid beds and on the shallow bench, either way with satisfactory results. Mr. Reuter tells me the old favorites, Bon Silene and Papa Gontier, are in request; he has some benches of Bon Silene, own root stock, that are a picture. The Boston market calls for these, and a new house, 200x22 feet, will be built and planted with these two kinds this Spring. Golden Gate is becoming very popular; its vigor of growth, substance of bud, fragrance and color are everything in its favor. I expect to see this rose grown extensively next season, as everyone who has tried it speaks well of it. It is a good seller. Beauty and Kaiserin are grown for Summer trade at Watch Hill, which is about the only retail business transacted here. While roses are a leading feature, and the forest of growths shooting up bespeaks a strong one, carnations are strongly represented. Here may be seen Daybreak, house after house presenting a panorama of beauty. Several of the houses of this variety are under the charge of Louis Reuter, the son of the proprietor, and bear evidence of the young man's watchfulness and skill. White Cloud and John Young are the best whites. Flora Hill is not doing well this year, and Freedom has more or less stem rot. Victor is the best variety for Summer use, but it bursts badly. I notice this in several places. Scott will be discarded. Dexter Pierce is a good commercial scarlet. Most of the newer kinds will be given a trial. Mr. Reuter has recently built a snug office of North Carolina pine, with desk of same material to match.

PROVIDENCE, R. I.—T. O'Connor showed me a house of Scott just the opposite to what I saw at Westerly. It seems to have become vagarious with age. Joost is lovely, better this year than last. New York is grown extensively and is almost identical with Lawson, it is done so well here. Maceo is a favorite, owing to its excellent keeping qualities. Bon Ton, Jubilee, Melba and Mrs. James Dean will be thrown out after this season; they are considered unprofitable. Crane will be grown more extensively owing to its color. Jahn's Scarlet is used as a parent for many new seedlings being produced. There being less demand for smilax than formerly one house will be devoted to the rose Liberty, and, perhaps, Golden Gate. I noted a splendid tree of Acacia pubescens coming in fine for Easter, and a healthy lot of lilies.

William Hoffman has a batch of carnation seedlings among which are some fit for exhibition at Buffalo, but he will wait for further trials before exhibiting.

John A. Macrae has a pleasant surprise in store for lovers of a fancy carnation; it is a sport from Eldorado, with just the slightest trace of its parent, a beautiful creamy shade changing to pure white as the flower develops, with just enough penciling to give it a rich effect; it is even more vigorous than Eldorado, very floriferous and of clean habit; does not burst the calyx. It is an ideal fancy and has stood a test of four years' growth, improving each season. Other kinds well grown are Flora Hill, which, with Scott, is all one could wish, planted in some new houses built last Summer; even span, 130x27 feet—model carnation houses. A front house with office was added, to keep pace with the times.

Farquhar Macrae was putting in chrysanthemum cuttings at time of my visit. He hits it on chrysanthemums every season, and can speculate on knocking out the other fellow every time wherever he shows against him.

An increase in the demand for palms has induced Alex. Miller to devote a part of the Rhode Island Greenhouses to their growing. The houses are more suitable for this purpose than for flowering stock; he will no doubt make a success with foliage plants.

Store business seems good all through the city. Mr. Fairbrother reports first-class wholesale demand. Johnny Wood says there has been a big difference since he took hold of the new store on Mathlesen street. Alex. Miller has a young lady who is an artist on floral designs and reports a decided increase. George Johnson anticipates making his annual European tour after the Spring rush, to look out for new things. T. J. Johnston was too busy to express himself as to the estate of trade, and Alex. Rennie had just returned from a trip to his new warehouse, which, with a modern seed store, he will shortly open in conjunction with a well-known New Yorker under the firm name of Rennie & Pino, with the best wishes of all his many friends, made during a residence of 12 years in the Capitol City.

Owing to the open season the outdoor business was an unusually good one with M. Sweeney.

NEW HAVEN, CONN.—Smith T. Bradley has a dwarf compact form of Chinese primula which, as a novelty, takes precedence over the ordinary strain. The demand for flowering plants was never better than during this season.

At the Hubinger place John Doughty sprung a surprise with a fine crop of tomatoes, variety Best of All, for the Christmas market. These are grown at one end of a carnation house, run almost to the ridge from a side bench. I noted a similar instance at the Vanderbilt Garden, at Biltmore, recently, but Mr. Doughty deserves the palm for the largest crop in the smallest space.

Mr. Arthur, the vegetable gardener at Biltmore, has great success in raising water cress under cucumbers. This was new to me, and may be to others who desire to utilize spare spaces in the houses.

Mr. Rowe, at the Kendal place, proposes going more extensively into carnations, finding they succeed better than roses. This is a great town for the divine flower, which retails, as a rule, at a straight price of 25c. per dozen.

NEW LONDON, CONN.—One of the handsomest wreaths I have seen for some time was sent out to-day by John Spalding to a large funeral, and which was one of many pieces ordered, chiefly flat bouquets, which have taken largely the place of set pieces. This wreath was composed of bronze galax leaves with a bunch of Bride roses and valley—very chaste.

The types in THE EXCHANGE, in its interesting note of this versatile and venerable member of the craft and his establishment, made the area of glass read 1,700 instead of 17,000 square feet; it is not a large plant, but is an emporium, which has ample resources of supply outside.

RALEIGH, N. C.—Henry Steinmetz had a busy season with profits reduced, owing to high prices asked by the commission men around the holidays. He will erect more glass to raise his own stock to combat this. W. M.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade.

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4.00 per 1000.

ALBERT M. HERR, - - Lancaster, Pa.

Mention the Florists' Exchange when writing.

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

Please Note: Stock for delivery prior to March 15th, all sold. Are now booking orders for that date and later.
Stock is going fast, don't delay.

We can also furnish first delivery, the following varieties, at introducers' prices: **Olympia, Mrs. Thos. W. Lawson, The Marquis, Ethel Crocker, Jas. Whitcomb Riley, Chicago** and **Estelle.**

ELM CITY

A Grand New White **Carnation.**

Seedling of LIZZIE McGOWAN and MME. DIAZ ALBERTINI; in its fifth year.

The Flowers are large, finely shaped and of strong fragrance.

Petals are heavy, of good substance, and nicely fringed.

Calyx is very strong, after the style of Albertini, and non-bursting.

The Stem is strong, holding the flowers erect.

The Plant is a good grower and free bloomer, not subject to stem rot or any disease.

Rooted Cuttings, Ready Feb. 1, at $1.50 per Dozen, $10.00 per 100, $70.00 per 1000. Cash with order.

We shall prepay the express charges where money accompanies the order. Orders filled in rotation.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,
Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

State of Trade.

The cry of shortage in the rose cut is still with us, although a better state of things, that will be satisfactory all round, is promised by most growers. It goes without saying that with this general shortage everything that can be classed as good stock gets snapped up on sight, the best, especially Bridesmaid and Meteor, fetching $10 per 100 (which is a good price in this market), $6 to $8 for the next quality; shorts or off colors, $3 to $4. All get cleared off.

American Beauty, with extra long stems, bring $6 per dozen, occasional sales perhaps being a trifle better. There are some shorts and mediums of an inferior grade that naturally drag and fetch low prices.

Carnations seem to make up for the shortage in roses; there are lots, too—really magnificent flowers. Very fancy in colors bring $3 to $5; white, $1 less; good standards, $2 to $2.50; common, $1 to $1.50, with fair clearance.

Lilies are more abundant, but quite a number sent in are not extra in quality. They range from $1.25 to $2. Callas, sufficient for all demands, realize $1.25 to $2 per dozen. A few La Reine, Kelserskroon and other tulips are showing up, and if they only had better stems would be good sellers.

Bulbous stock generally is not so abundant as in other years. Are the growers holding back too much for later and Easter times, or was there less planted this year.

The demand for wild smilax is good, which would indicate work in decorations. Enormous quantities of hardy ferns are also sold daily to retailers. Orchids, mostly eastern grown, are moving very well. The call for violets is erratic; 15c. to 20c. per bunch takes the best singles; 25c. to 30c. the doubles; extra doubles bringing $1.50, and some are quoted at $2. Good smilax can be bought for $1.50 per dozen; asparagus, 50c. to 60c. per string; sprays, $1.50 per 100.

Among Growers.

Charles Swanson, Ridge avenue, is very successful with the older varieties of carnations. He expects to rebuild and modernize a part of his establishment this year, when he will try the newer sorts. McGowan, Tidal Wave and similar varieties, average, so far, $1.50 to $2 per 100. John Didier, also on the Ridge, has four houses, each 275 feet long, all in carnations. Twelve benches are in Evanston, which, so far, has averaged $2 to $3. Half his cut is sent to Milwaukee, and half to Chicago.

Jottings.

The death of P. D. Armour, Jr., has taken away a good patron of the Horticultural Society, and one who had a beautiful private place at Oconomowoc, Wis.

T. J. Corbrey, who opened a flower store on W. Madison street, last Thanksgiving, finds that his health compels him to seek the Coast again.

McKellar & Winterson are handling some splendid cyclamen plants, grown by J. A. Peterson, of Cincinnati, Ohio, who was in town the past week.

E. H. Hunt has issued a long list of the sweet peas he is handling.

J. C. Vaughan's seed store has been renovated in fine shape, ready for a big Spring trade.

Peter Reinberg and Henry Wietor are expecting to take in the carnation meeting at Buffalo.

A. Washburn, of Bloomington, Ill., was in the city the past week. Ess.

Society's Rose Meeting.

February 10 is the date of our rose meeting. We should like very much to see a vase of the Liberty. This variety has never been seen in this city and prospective buyers are anxious for a look at it. Messrs. Asmus, E. M. Wood & Co., or Robt. Scott & Son, please take notice. At this meeting we expect quite a delegation of florists from Indianapolis and Richmond, Ind.

We are now having zero weather here, but the weather man promises to have it moderate by Tuesday.

Wm. Nolan, on Walnut Hills, had a close call from fire last Friday morning, but fortunately the damage done was very small. Thos. Windram reported a leak in his boiler, and Chas J. Jones was routed out of bed early Monday morning by a stove box burning up next to his store.

J. A. Peterson has returned from a successful business trip to Cleveland, Detroit, Toledo and Chicago. E. G. G.

Cleveland.

Trade Notes.

At no time this season have good flowers been in such short supply as at present; some dealers say that the scarcity of good bloom is greater than it has been for many years at this time of the year. Retail trade in cut flowers does not amount to much, and but a few small decorations are on hand. There is, and has been for the past week or ten days, an unusual amount of funeral work, and this alone quite consumes all of the choice flowers offered by local growers, and in some cases retail dealers have found it necessary to send to out-of-town growers for stock to fill orders. It is in roses that the scarcity is more particularly felt, and while present prices do not vary from last week's quotations, the tendency of the market is toward higher values.

In carnations the shortage is not so noticeable, and prices remain much the same as those quoted in last report, namely: $1.50 to $3 for ordinary grade, and $4 to $6 for extra and fancy stock. Harrisii lilies are offered more freely than at any previous writing, but present offerings do not reach far. These blooms are eagerly sought after, and in some cases growers realize 15c. for best; the ruling figure is $1.50 per dozen. Retail prices are higher than in previous sensons, and retailers find no difficulty in getting $3 to $4 per dozen. Violets are not doing so well; the cold weather affects the trade in these, and for the past week the demand has been light; considerable quantities are on hand and retail rates show a drop from former quotations; $2 and $2.50 being the price now obtaining.

Bulb stock is seen in larger quantities than at any time before this season, and all desirable material finds a ready market. Tulips are improving in quality and growers experience no difficulty in placing all of their present cutting at $3.50 to $5 per 100, retailing at 75c. per dozen. Von Sion are becoming more plentiful, and are holding at 6c. J. M. Gasser offers the first blooms of Dutch hyacinths seen here this year, and those on hand, while not of extra quality, bring $2 per dozen at retail. There is no established wholesale price on them as yet, on account of the limited quantity. Valley is much improved in quality and fetches $1 per dozen at retail, and wholesale figures hold at $4 and $5 for extra quality. Romans and Paper Whites are in good supply, and the large amount of funeral work furnishes an outlet for most all of this stock; $2 and $3 are the ruling prices on same. Retail rates hold the same as last reported, viz., 60c. to 75c. per dozen.

Notes.

James Eadie and Miss Ada Wilbarn, of this city, were quietly married in December last. Mr. and Mrs. Eadie leave on Tuesday next for a six weeks' trip through the Southern States and California. They expect to reach New Orleans in time for the Mardi Gras festival. Their many friends in the trade wish them a pleasant journey and safe return.

E. J. Paddock had an extensive decoration at the University Club on Tuesday of this week; it was done in red, scarlet tulips forming the principal part of the table decorations.

H. H. Harries, of Goodwin Harries Co., Chicago, was a recent visitor. J. A. Peterson, of Cincinnati, was also in the city for a few days last week.

Cypress

Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 6. NEW YORK, FEBRUARY 10, 1900. One Dollar Per Year.

CARNATIONS.

We offer Strong-Rooted Cuttings of ALL THE NOVELTIES OF THE SEASON and OTHER EXTRA CHOICE SORTS.

Mrs. Thomas W. Lawson. The celebrated $30,000 Carnation.

$14.00 per 100; $120.00 per 1000.

Olympia. A grand, fancy Carnation. While fully as large as MRS. GEORGE M. BRADT, or larger, it is said to produce 25 per cent. more flowers than that p pular variety.

$12.00 per 100; $100.00 per 1000.

The Marquis. This Carnation has had a phenomenal sale, and is without question the finest light-pink Carnation introduced up to this time. Those who have not ordered should place order without delay, if they wish early delivery. We have sold mo e of this variety than of all the others combined, which is an index of the esteem in which it is held.

$10.00 per 100; $75.00 per 1000.

Ethel Crocker. One of the best all-round pink Carnations ever offered to the trade.

$10.00 per 100; $75.00 per 1000.

Genevieve Lord. As a Carnation for retailing nothing can excel this variety, on account of its beautiful color—light silvery pink—and fine stem One of the very finest introductions of the season.

$10.00 per 100; $75.00 per 1000.

We can also supply all the best of the recent NOVELTIES and STANDARD SORTS as follows:—

	Per 100	Per 1000
G. H. Crane, General Maceo	$6 00	$50 00
General Gomez, Mrs. George M. Bradt	5 00	40 00
White Cloud, Gold Nugget, Melba	4 00	30 00
Mrs. James Dean, Mrs. Frances Joost, John Young, New York, Jubilee	3 00	20 00
Mayor Pingree, Flora Hill	2 00	15 00

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

PLEASING PRICES On Plump Bulbs for Present Planting

No Juveniles but fully matured Seniors.

Gladiolus—All First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least. Per doz., 15c.; a 100, 75c.; 1000, $6 50.

American Hybrids. Mixed. This mixture is grown especially for us and can be recommended for florists' use. The bulbs are all selected and contain at least more than 50 per cent. white and light types. Per doz., 20c.; per 100, $1.15; per 1000, $9 50.

White and Light Varieties. Mixed. There is no better mixture of white and light Gladiolus than this sold, no matter what price is paid. The bulbs are all selected and large and the varieties the best and most suitable for florists' use. Per doz., 25c.; per 100, $1 50; per 1000, $12 50

Begonias—Tuberous Rooted.

The fact of our being the American agents for one of the most important European growers of this useful bulb, enables us to offer the choicest stock at figures unapproched by dealers.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each, 5c.; per doz., 35c.; per 100, $2; per 1000, $17.50.

Double Flowers. Each, 10c.; per doz., 65c.; per 100, $5; per 1000, $45 00.

Amaryllis Rosea. Large bulbs. 35c. a doz; $2 a 100; $15 a 1000.

Hyacinthus Candicans. Large bulbs, 20c. per doz.; $1 50 per 100.

Madeira Vine Roots. 25c. per doz.; $1 50 per 100; $10 per 1000.

Cinnamon Vine. Mailing size. 30c. per doz.; $2 per 100. Extra size. 40c. per doz.; $2.50 per 100.

Caladium, or Elephant's Ear.

Sound bulbs, with good, live centre shoots.

Caladium Esculentum. 5 to 7 in. in circum. 40c. per doz.; $2 25 per 100; $20 per 1000. 7 to 9 in. in circum. 60c. per doz., $3.75 per 100; $35. per 1000. 9 to 12 in. in circum. $1. per doz; $7. per 100; $60. per 1000. 12 in. and up, circum. $1.50 per doz.; $10. per 100. Fancy leaf varieties, fine assortment, $1 25 per doz.; $7.50 per 100.

Tuberose Double Pearl.

Bulbs measuring 4 to 6 in. in circumference, extra quality, 75c. per 100; $6 50 per 1000. 3 to 4 in. bulbs, 50c. per 100; $3 75 per 1000, or barrel of 2000 bulbs for $7.

Dahlias.

Whole Dry Roots, Field Grown. Double mixed varieties, dwarf and tall. $5 per 100; $42 50 per 1000.

Double, named, assorted, $6 a 100; $55 a 1000.

Gloxinias.

Bulbs of large size, measuring 1½ to 3 in. in diameter.

Finest Mixed. 50c. per doz.; $3 per 100; $27 50 per 1000.

Separate Colors. White, red, blue and spotted. 60c. per doz.; $4 per 100.

Richardia alba maculata. Spotted Calla. 45c. per doz.; $3 per 100; $25 per 1000.

NEW CARNATIONS

We are now ready to take orders for Strong-Rooted Cuttings.

G. H. Crane

We do not hesitate to recommend this as the most profitable scarlet carnation in cultivation to-day. Nothing will equal it. Tested four years, it has proven to be a most satisfactory commercial scarlet carnation. A large flowering sort, producing both quality and quantity. It comes into flower early and continues an even all-season bloomer. Produces an average 3-inch bloom, having smooth outer petals with a well-built-up center, a strong, well-formed calyx, a 16 inch to 18 inch stem of remarkable firmness, holding the flower erect in the early part of the season as well as the later spring months, a delightful fragrance, and in color a clear, brilliant scarlet, with no tendency to fade. Growth strong and robust, clean, hard, broad foliage, and makes a strong, well-formed plant. It lifts and transplants from the field without any noticeable signs of wilting. Model growth, stem, flower, color, and a most essential quality, being in full flower when most needed, recommends it to every grower. Another variety that is doing more with us than last season and we are more than ever impressed with its commercial value. We had two large houses of this variety in full bloom for Christmas, and every bloom was snapped up at the elegant price of $10.00 per 100 wholesale; therefore just now we believe we have the long-looked for money-making scarlet carnation. We have a fine, large stock of splendid healthy plants. **$6.00 per 100; $50.00 per 1000.**

Hill Sport

(Ward.) Two years since, noticing an exceptionally strong-stemmed plant of Flora Hill which seemed to be entirely free from bacteria, to which Flora Hill is especially subject, we saved the selected cuttings from this plant and propagated a stock from it; the variety is in every respect identical with Flora Hill, excepting that it has stiffer stems and the foliage is broader and rather deeper blue in color, and it is free from disease; it produces a well-formed flower from the start on a strong, stiff stem, which averages 16 to 20 inches long; this variety thus far has been free from bursting, and the flowers have remained pure white throughout the season. We shall offer only 5000 rooted cuttings of this variety, and will sell them in lots at the rate of **$7.50 per 100 net.**

Morning Glory

(Dorner.) A variety which will take the place of Daybreak, slightly darker yet brighter in color; habit much more desirable than Daybreak, as it grows more compact; a very free continuous bloomer, giving more flowers throughout the season than Daybreak; without any tendency to crop; stem of medium length but wiry and stiff; flowers medium to large in size; not overly full but not flat center; filled out in proportion, giving it a fine form; this is one of our 1898 seedlings; it is indispensable in our market and entirely taking the place of Daybreak, and giving much more satisfaction; although not large enough to be placed aside of our latest introductions as a fancy sort, the call for this variety by many growers that have seen it growing upon our place, coupled with its brilliant Daybreak shade of pink, always so much admired and called for in every market, and the satisfactory returns it has always given us, has induced us to list it at a lower price than that at which new varieties are usually sold. Price. **$6.00 per 100; $50.00 per 1000;** ready March 1.

25 at 100 rate; 250 at 1000 rate.

We have fine, large, healthy stocks, and will deliver only fine, strong, well-rooted cuttings.

Send your Orders Early.

Flower Seeds for Florists.

We are the Largest Growers of Flower Seeds of any American seedsmen, both at FORDHOOK FARMS, where large areas of flowers are planted in the open ground and where greenhouses and protected frames are devoted to the finest Florists' flowers, and by our contract growers in the most favorable locations in California and other States. Not only are all these grown under our own personal inspection, but frequent visits to the leading growers of Europe, combined with the most complete trials at FORDHOOK FARMS, where all our strains are tested each season in comparison with strains from other sources, enable us to know that our stocks of choice Florists' flowers are unsurpassed. They are equalled only in a few instances by specialists growing single varieties.

Both in Europe and America there are noted specialists growing a single variety of flower under the most favorable conditions, and our extended trials enable us to select the finest of these special products for our customers.

In the descriptive headings of the different flowers will be found suggestions as to the best varieties to plant for cut-flowers and to grow for flowering and ornamental potted plants for retail sales. We are glad to assist our customers at any time in the selection of the most suitable varieties for the above purposes, and shall cheerfully answer any inquiries in this line, from the experience gained in our extensive trials and familiarity with the cut-flower markets of Philadelphia and New York. We would request, however, that such inquiries be written separately from the order to secure prompt attention, as under our system the orders are filled at once on receipt and the answer to questions is somewhat delayed when written in the order.

It is hardly necessary for us to refer to the complete assortments of SWEET PEAS, PANSIES, and NASTURTIUMS offered by us, having so long held the leading position in these specialties. We can equally recommend our grand strains of ASTERS, BALSAMS, BEGONIAS, CINERARIAS, COLEUS, CYCLAMEN, DIANTHUS, GLOXINIA, HELIOTROPE, HOLLYHOCK, MIGNONETTE, PETUNIA, PHLOX, POPPIES, CHINESE PRIMROSES, STOCKS, SELVIA, and VERBENAS, all of which are of the finest types and richest colorings, and especially desirable for Florists' planting.

All Flower Seeds are **tested thoroughly** both for vitality and trueness to type, —just as thoroughly as are our Vegetable Seeds. There are so many "cheaply grown" California and European Flower Seeds upon the market that some of our prices may seem high—when for the quality, they are really moderate. Florists will find it more profitable to pay cash for **BURPEE'S SEEDS,** rather than to buy upon long credit, even at lower prices.

Burpee's Blue List for 1900.

A Complete Catalogue, giving lowest prices possible for Florists and Market Gardeners, mailed free upon application. It is a book of 144 pages, giving much useful information and offering all the "Best Seeds that Grow."

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLOIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

A comparative statement of the Distribution of Agricultural Exports, 1894-1898, prepared by the United States Government, shows the total values of clover seed exported for the year specified as follows: 1894—$4,540,851; 1895—$2,124,997; 1896—$437,493; 1897—$1,003,157; 1898—$1,999,720. Those of timothy seed are: 1894—$449,207; 1895—$277,160; 1896—$518,755; 1897—$574,457; 1898—$317,173. Grass seed, not elsewhere specified: 1898—$167,109. The exportations of seed not elsewhere specified are valued as follows: 1894—$484,013; 1895—$358,860; 1896—$382,941; 1897—$429,379; 1898—$149,845. Beans and peas: 1894—$576,657; 1895—$429,002; 1896—$632,073; 1897—$1,110,387; 1898—$1,094,094. Onions: 1894—$69,833; 1895—$46,703; 1896—$61,181; 1897—$60,088; 1898—$90,832.

W. A. Burpee & Co., Philadelphia, Pa., have issued their announcement of prizes offered by the firm for 1900. Excellent inducements are held out to competitors. Send for a copy of the circular.

St. Paul.—We are now in the midst of the shipping season, and each day the shortage in certain lines becomes more apparent. As one party remarked a few days since, "If I had 10,000 bushels of Valentine beans I could sell them before to-morrow." While there was a bountiful crop of most varieties, the increased demand for them has "bulled" prices along certain lines until they seem excessive. While higher prices tend to make trade better sharp advances without sufficient reason should be avoided, as in the end they are hurtful to the trade in general. Proposals have been received from the Department of Agriculture, Washington, D. C., for supplying seed for free distribution in 1901. If this farce continues during the centuries that are to come, why not place contracts two and three years ahead and give each representative an opportunity to place contracts for growing seed with his farmer constituency? Why beat around the bush at all? If, as has been announced, the Secretary wishes to reform by sending out "seeds of new and rare varieties," why not commence the twentieth century with the free distribution of such seeds?—VENITAS.

Our Holland Letter.

The bulb trade ended with high prices—a good indication for the growers for next season. In general trade was brisk last Summer, and there was almost nothing left. The combination of bad crops and great demand caused a scarcity of bulbs, consequently higher prices prevailed.

Almost every grower declares that his quantity of planted out bulbs is smaller. Hyacinths, tulips, narcissi, etc., are covered with reeds now, and so far the Winter has been very favorable for the plants. Every one, however, is very anxious for freezing weather, for if we do not get any frost this month we shall be obliged to remove the reeds from the plants, which would expose them to the rigors of February and March. This would be worse than last year, because many kinds of hyacinths are weak; they died down very early last Summer, and had a

long season of rest. Now they will display their foliage extraordinarily early. Freezing stops their growth for some weeks, affording them a chance of suffering less during the rough months. As soon as they show their leaves I will write you how matters stand.

In March of this year will occar the great quinquenaial exhibition of blooming bulbs at Haarlem. I am told there is quite a number of bulbs potted by growers and exporters, and keen competition is expected. B.

European Notes.

Although we are in midwinter it is hardly possible to believe it, as the weather over the whole of western Europe is quite open and mild, with an abundance of rain. So far as we can at present judge the frost we have experienced has been more severe and has done more injury in the west of France than in any other district. Beets that were too small to be lifted and stored, mangel wurzels that are usually left in the open, Winter radishes and early turnips, have all been badly frozen, and now look very sickly. Parsley and parsnip are not so strong as at this time last year. Leek looks moderately well. Of onion it is too early to judge. Carrot and cabbage are no worse than last reported; the same is true of kohl-rabi and savoy.

In Germany the continuous rains have had a very injurious effect upon all biennial plants, and very much bare land is to be seen.

Southern Europe has also had a few sharp spells of frost, which have done some harm to beets, cauliflowers and radish. At present the weather is soft, and if no fresh complications arise, not much harm will have been done.

The European trade is exceptionally brisk, but the interchange of produce between the various countries is sadly hampered by the difficulties of transport. The same remark applies in an even greater degree to the shipments to your side.

The Spring exhibitions of primulas have thus far been barren of any very striking novelty, the most noticeable features being the improvement of the new hybrid varieties, and the increased brilliancy imparted to some of the more important colors in the giant strains.

Cyclamens have not been exhibited quite so freely as formerly, but a batch of a beautiful rosy purple variety of the "Bush Hill Pioneer" attracted considerable attention. As the parent variety was one of the most successful novelties of recent introduction this new and very desirable color will no doubt be in demand. Those of your readers who have tried the Cyclamen papilio, and condemned it on account of the habit, will do well to give the improved strains a further trial. A fine collection of these plants was exhibited by Messrs. Low, on the 23d ult., and were as perfect in form as the best strain of C. p. grandiflora.

While on the subject of flower seeds mention should be made of the extraordinary popularity of the Emily Henderson sweet pea. While on account of the scarcity of seed other white varieties command a ready sale the general verdict is that Emily Henderson is the best all-round variety ever raised.

About a year ago some very severe strictures appeared in these notes respecting the questionable methods of competition adopted by at least three English firms. The Horticultural Advertiser, a usually well informed paper, ridiculed the idea, ascribing it to "a too vivid imagination, etc.," but in its latest issue it handsomely admits being a year behind the times, and prints the offending circular in full. The authorship of this precious document it is very easy to determine; still, let not the H. A. pour the vials of its wrath upon this one house alone, for in that classic Americanism (called doubtless from the Sanskrit) "there are others," one of the earliest offenders hailing from the county adjoining the home of the H. A.

To what are we coming, Mr. Editor, when one of the oldest English firms, well known on your side, in its catalogues for the present year announces that it has set aside for the convenience of its customers "a suite of rooms with lavatories attached, etc, and an assistant in attendance." After this the advertising grocer who gives away a wax doll to every purchaser of a pound of tea will have to take a very back seat.

It is only fair to add that the catalogue in which this offer appears is far and away the best that the firm has ever issued. EUROPEAN SEEDS.

The Aster Disease.

Editor Florists' Exchange.

The possible transmission of aster diseases by seed, referred to by a New England correspondent in the EXCHANGE of February 3, should, I believe, receive careful consideration. I felt quite sure, at one time, that some of my Comet asters were troubled with a fungous disease that was transmitted by the seed; but as that particular trouble has now practically disappeared I cannot positively decide the point. The branching asters, that with me have been considerably affected for several seasons, have always, so far as I have been able to trace them, made a healthy growth elsewhere. I have looked up dozens of customers who have bought plants of me in a single season, without finding a case where they were having the trouble that was annoying me. And so, while some of my plants bore the appearance of having a fungous disease of some sort, I feel at present forced to the conclusion that all of my troubles with the branching asters have been caused, directly or indirectly, by the insect injuries. Let us all watch the matter more closely the coming season. GEO. ARNOLD, JR.
Rochester, N. Y.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

The Conard & Jones Co., West Grove, Pa., registers seedling rose "New Century," a cross between Clothilde Soupert and Rosa rugosa alba. Described as an ever bloomer, hardy as rugosa. Flower pink, double; fragrance similar to that of the wild rose; foliage resembling that of ragosa.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

A combination of Belgian growers of palms, azaleas, etc., is being formed, to be known as the Syndicate of Belgium Growers, and a number of the largest firms have already joined it. J. C. Groenewegen is the manager. Messrs. Bobbink & Atkins, Rutherford, N. J., have been appointed general agents for the United States and Canada.

Elizabeth, N. J.—The third trial of a suit for damages brought by Elmer Runyon, of the Elizabeth Nursery Co., who was not allowed to ride on the Central Railroad of New Jersey because he carried packages, has been decided in favor of the plaintiff, who was awarded $1,100 by a jury in the Union County Circuit Court, February 2 last. Mr. Runyon's case against the Central Railroad of New Jersey was first tried in Elizabeth, in the Union County Circuit Court, in June of 1897, and Mr. Runyon was non-suited. It was then carried up to the Court of Errors and Appeals and tried in February of 1898, where the decision was reversed. The case was retried in January of 1899, and Mr. Runyon was awarded $1,000 damages. The Central Railroad carried it to the Supreme Court, and the case was decided in their favor the following November (1899), the courts stating that Mr. Runyon had not proved it customary that packages were allowed to be carried in the company's passenger cars. In the final trial Mr. Runyon had 13 or 14 witnesses, proving that nearly everything had been carried in the company's cars; some passengers carrying a whole sheep, some as many as four baskets of peaches, watermelons, flowers, fruit, etc.

Fruits for Vermont.—Professor Waugh recommends the following varieties as the best to plant in Vermont: For the warmer parts of the state apples—Early Harvest, Primate, Porter, Oldenburg, Lowell, Gravenstein, Fameuse, McIntosh, King, Spitzenburgh, Spy, Rhode Island Greening, Baldwin, Arctic, Golden Russet, Hubbardston, Seek-no-further, Belleflower, Tolman. For the colder parts of the state the following apples are preferred—Yellow Transparent, Red Astrachan, Oldenburg, Longfield, Wealthy, Fameuse, McIntosh, Scott Winter, Pewaukee, Arctic, Wagener. Among pears these varieties are favorably mentioned—Vermont Beauty, Flemish Beauty, Beurre d'Anjou, Winter Nelis, Onondaga, Tyson, Lawrence, Sheldon. The most promising plums are said to be Burbank, Lombard, Abundance, Bavay, Chabot, Pond, Golden Drop, Grand Duke, Wildgoose and Wayland. These, however, are not recommended for the colder towns of Vermont. The best cherries are Morello, Montmorency, Brusseler Braun, Bessarabian and Early Richmond. Grapes can be grown by planting Moore's Early, Worden, Moyer, Brighton, Wyoming, or Green Mountain. Various sorts of blackberries, raspberries, gooseberries, currants and strawberries are also recommended.

Ornamental Tree Planting.

O. B. Hadwen, of Worcester, read a paper before the Massachusetts Horticultural Society, Saturday, January 20, on "Half a Century's Experience in Ornamental Tree Planting." He said in part:

The better time to plant trees, whether in Spring or Autumn, is a question in which there is a wide difference of opinion. The Autumn is a favorable season for planting either deciduous or coniferous trees, provided it is done early and root growth thereby encouraged. When planting deciduous trees in the Fall the foliage should be removed. The leaves will then cease to draw upon the roots for nourishment, leaving them in condition to make new growth, which they readily do when the ground is warm and sufficiently moist. In the Spring the conditions are changed—the atmosphere is warm and the ground cold, and while the leaf will start, the roots remain dormant, and cannot supply promptly the nourishment required by the top. If trees are to be transported long distances, Spring planting has some advantages. It is facilitated by digging the holes in the Autumn; the action of the frost upon the earth renders it more friable and more easily incorporated among the roots. Thoroughness in filling the spaces among the roots is of essential importance in successful tree planting.

The constantly increasing variety of ornamental trees that thrive in the central part of the state is so large that I can but briefly allude to even the most prominent.

The maple, for a long time and now conspicuous in landscapes and streets, is a favorite tree, and well repays the attention it receives. I have more than 20 sorts, among them the sugar, Norway, Schwedleri, Reitenbachi, Geneva, cut-leaved Wier, sycamore, and the purple-leaved variety, tartaricum, Ginnala, pennsylvanicum, negundo, and the Japanese maples.

The magnolias are among the most magnificent trees for ornamental planting. Fifty years ago but few were considered hardy. I have some 15 varieties, all proving hardy save one. They are M. acuminata, M. glauca, M. macrophylla, M. tripetala, M. Alexandrina, M. conspicua, M. Kobus, M. Lennei, M. purpurea, M. parviflora, M. hypoleuca, M. Soulangeana, M. speciosa, M. stellata and M. Thompsoniana. Some of these trees are 30 feet high. The tulip tree is proving a great favorite on extensive grounds. I have one less than 40 years old 80 feet high. The only objection to this tree is its liability to break in severe storms of ice, but with its rapid growth it soon recovers its form. Its lumber is known as white wood, now so extensively used in inside finish. It is a difficult tree to transplant, and should be transplanted in the Spring. The beech in its variety forms a class of ornamental trees worthy of more elaborate consideration than time will permit. The American beech is esteemed for its neat and airy foliage, which remains on the branches during the Winter. The fern-leaved beech is perhaps the most shapely in its growth of any of the family. I have several, one of which is 30 feet high with 30 feet spread, and without question the most beautiful and symmetrical tree in my collection. All the birches are graceful trees. The canoe birch attains the larger size. I have one 40 feet high and 2 feet in diameter. The cut-leaved birches also attain a large size, and are, perhaps, the most beautiful of the family. The sweet gum tree, now being considerably planted, although not indigenous to the New England States, seems to thrive here where the situation is favorable.

The yellow wood (Virgilia lutea) is among the finest of ornamental trees, and is especially adapted to moderate-sized grounds, where but few trees are grown. But few trees can compare with the oak in its variety of beauty changing with the seasons. I have some, of Nature's planting, 4 feet in diameter and 60 feet spread. The walnuts are readily grown from seed and transplanted when young, or, when large, with a frozen ball of earth. The black walnut makes a fine vigorous tree—tall, with a spreading habit. The hickory is a stately tree, and is long lived. The linden or bass is becoming a popular ornamental tree. It is superior to the European sorts, and surpasses all others in size, foliage and abundance of flowers. I have some more than 60 feet in height. There are any other deciduous trees growing on my farm well worthy of planting. Among them are the mountain ash, oak-leaved ash, Catalpa speciosa, double flowering horse chestnut, Kentucky coffee tree, ginkgo, Koelreuteria, Aralia spinosa, Cercidiphyllum, Tupelo, Bolleana, Carolina and Lombardy poplars, Sophora japonica, sassafras, Syringa japonica, English, American and Scotch elms, and nettle tree. Coniferous trees for their symmetry of form, varying shades of everlasting green, and for the beauty and grandeur of individual trees, are enlisting increasing attention. My first planting of the white pine (Pinus strobus), in 1845, was made with the purpose of shelter rather than for ornamental effect. For the first 30 years they furnished both, but in later years have been much broken by storm and ice. I early planted the Scotch and Austrian pines, but both proved inferior to the white pine. The Swiss or Cembra pine proves the best of the pines; the boughs are of a tough fibre and resist the storms of ice. The Norway spruce I planted quite extensively. They have attained a height of from 60 to 80 feet, and remain unbroken even in old age. The Oriental spruce is a charming tree, differing from the other spruces with its compact form and dark, attractive foliage. The hemlock spruce, indigenous to the New England States, is perhaps the best of the coniferous trees. The white spruce is the most shapely of the spruces; its slow growth and compact form adapt it to small areas where primness is desired. Picea pungens, a Colorado blue spruce, is proving an attractive and desirable sort. Abies concolor, of fine symmetry, is one of the most attractive evergreens. Among other conifers growing on my premises are Abies Veitchii from Japan, Picea Alcocquiana from Japan, P. Engelmanni, P. Douglasi, P. Nordmanniana, P. Omorica and P. Fraseri.

In tree planting, no one rule can be applied to all kinds, but general rules are essential to success. In early life I made many mistakes. I had not learned the importance of digging generous holes, deep in well drained land, and shallow in wet places. I have learned to use an adequate supply of well composted material about the roots, and also have learned that an annual dressing should be applied to produce the finest effect, both in tree and leaf.

Nurseries and Cellars at Carlton Hill, N. J.

Mention the Florists' Exchange when writing.

Eastern New York Horticultural Society.

This society held a very successful meeting in the Berkeley Lyceum, New York, on Wednesday and Thursday, February 7 and 8; President James Wood, Mount Kisco, N. Y., occupied the chair. The forenoon of the first day was devoted to reports of the various standing committees and papers on plant diseases, and legislation on fruit packages and its results. In the afternoon the president gave a very interesting historical sketch on the dissemination of improved fruits in Eastern New York. He traced the origin of the nursery industry proper to the establishment of Prince's Nurseries, at Flushing, in 1737. Touching on the matter of the peach he stated that crossing with varieties now brought from northern China could be confidently expected to give good results. The raspberry industry was of quite recent origin, and in the course of the discussion the fact was elicited that this portion of the fruit growers' business had suffered materially from the influx of other Southern fruits. As regards plums, J. H. Hale remarked that the Japanese varieties had come to stay, and it only wanted men to demonstrate their ability to bring them to their highest possibilities, Mr. Hale stating that this fruit was one of the grandest that had come to the knowledge of the present generation.

S. B. Parsons, Flushing, L. I., gave some interesting reminiscences of the nursery trade. He believed the eradication of the San José scale an impossibility, even with the precautions now being taken to combat it. In 1838, when the Parsons Nursery was established, there were only four or five others in the country; now the number of nursery establishments reaches some 15,000.

Professor Beach, of the New York Experiment Station, Geneva, N. Y., read an interesting paper on new varieties of fruit not generally introduced. Among these he mentioned, in apples, the Arctic, the Bismarck, the Greenville, the Ingram, Livingston's Pride, The Milding, Rome Beauty, White Pippin and the Winter Banana. Among varieties of Japanese plums the Burbank and Wickson. In the European class of plums Grand Duke and Monarch. Among grapes he spoke a good word for the Vergennes.

Geo. T. Powell, of Ghent, N. Y., read a paper on domestic and foreign markets for American fruits. He condemned the present practice of shipping inferior grades of fruits to Europe, which was exceedingly detrimental to the industry. Sutton Beauty was a valuable variety of apple for foreign markets, bearing transportation well. He suggested that every shipper of apples should paste on his packages a full description of the varieties therein, pointing out also the various uses to which apples could be put. He commented adversely on some of the present methods of packing, which were more or less due to the fault of speculators, and recommended that apples grown in light soil should be sent to home markets; those grown in clay soil could be shipped satisfactorily to foreign markets. He advised dwarf growth as affording the best means of combating insect pests.

In the course of the discussion that followed it was suggested that some sort of legislative commission be instituted to inspect all fruits before exportation, in order to insure a better grade being shipped. This would seem necessary from the fact that the European buyers are becoming more critical every year, and they want to have the very best that can be obtained. The American fruit grower had too long been of the opinion that the people of Europe were fools, and would take anything that was sent to them.

Other papers read were, New Injurious Insects and Remedies, by Prof. M. V. Slingerland, Ithaca; Irrigation, by Walter F. Taber, Poughkeepsie; Cold Storage, Its Advantages and Disadvantages, by A. W. Williams, Highland; Fruits and Vegetables Under Glass: Fruits, Wm. Turner, Tarrytown; Vegetables, C. E. Hunn, Ithaca.

The election of officers resulted as follows: President, James Wood; vice-president, Walter F. Taber, both re-elected; secretary-treasurer, Chas. H. Royce, Rhinecliff, N. Y.

At the American Institute Exhibition held Wednesday and Thursday, in connection with the meeting, the display of plants and flowers was not large. Robt. McMillan staged mignonette. John Lewis Childs, Floral Park, had a few plants of Primula obconica. Violets, both double and single, were shown by G. T. Schunemann, who obtained second prize in each class. Thos. Talbot got first on singles, and G. W. Feeter first in doubles. Other violet exhibitors were C. J. Weber & Son and Herbert Spavins. Carnations were shown by J. G. Hayden, Floral Park, and G. M. Hay, gardener to J. T. Williams, Stamford, Conn. Inez Wood, of Mount Kisco, had a display of pansies; G. M. Hay also had some fine amaryllis spikes. Lager & Hurrell, Summit, N. J., had a collection of orchids, which were very fine; among the varieties were a white cattleya and Dendrobium granulosa superba. Ernst G. Asmus showed an excellent vase of Liberty rose; some of the flowers were of a remarkable size, with very long stems.

The Expansion Tree Protector Co., of Rochester, N. Y., had on exhibition samples of their protector.

There was also a display of fruit and vegetables, competitors in these lines being much more numerous than in flowers and plants.

Among exhibitors of spraying apparatus was the Goulds Manufacturing Company.

The Dutchess County Horticultural Society.

The regular meeting of the Dutchess County Horticultural Society was held on February 7. The following officers were elected for the ensuing year: President, F. R. Newbold, Poughkeepsie; vice-president, James Blair, Staatsburgh; treasurer, Charles Mitchell, Poughkeepsie; secretary, W. G. Gomersall, Fishkill Landing. Thomas Talbot, gardener to L. P. Morton, Rhinecliff, was nominated to membership.

It was resolved that the regular meetings of the society be changed from monthly to quarterly, the next regular meeting being April 4. From the commencement of the society a large number of ladies and gentlemen have subscribed regularly toward meeting the expenses of the exhibition. At this meeting a resolution was passed unanimously to elect these ladies and gentlemen to the honorary membership of the society.

It was announced that C. W. Ward, of Queens, had generously offered a $25 silver cup to be competed for at the November exhibition, for the best collection of six varieties of carnations, not less than 25 or more than 50 of one variety; three of the varieties at least must have originated at the Cottage Gardens.

A cash prize of $25 was also announced from E. G. Asmus, of West Hoboken, for the best vase of the Liberty rose, exhibited at the same exhibition. This generous offer was gratefully accepted. Other premiums generously offered and gratefully accepted were $10 from Peter Henderson & Co., for 12 blooms of the hairy or ostrich plume chrysanthemum, in six varieties; $10 from the German Kali Works, for best collection of vegetables, and one bag of potash for second prize; $10 from Wm. Elliott & Sons, for mushrooms and celery, and $5 from Benjamin Hammond for prize for apples.

Later in the evening the annual dinner was held at the Nelson House, when over 50 members and guests of the society sat down to a very enjoyable and excellent repast. The tables were elegantly decorated by Richard Grigg and his helpers, with carnations from C. W. Ward, Liberty rose from E. G. Asums, carnations from M. J. Lynch, roses and carnations from Sam'l Horn, Bignonia venusta, tulips, lilac, etc., from David Gindra, and carnations from Wm. Saltford. Among the notables from foreign parts were Samuel Henshaw, Patrick O'Mara, C. W. Ward, Walter Sheridan, Charles B. Weathered, J. I. Donlan, Wm. Turner, Wm. J. Stewart; and Messrs. Neubrand and McCord from the Tarrytown Horticultural Society. In the absence of the president, Mr. Gomersall welcomed the guests, and introduced Richard Connell as toastmaster. A number of letters of regret was announced, including those from E. G. Asmus, Leonard Barron, Wm. Bartholomæ and others. Very happy, humorous speeches were made by P. O'Mara, Sam'l Henshaw and C. W. Ward (Mr. Stewart and others had to leave by an early train). P. O'Mara took advantage of the opportunity to invite the co-operation of the Dutchess County Horticultural Society to make the grand horticultural exhibition in New York, at the time of the American Florists' Convention, a great success. Mr. Ward spoke upon the coloring and hybridizing of carnations. Mr. Henshaw invited this and any society to hold their flower shows at the Botanical Gardens, New York, without any charge.

Among the speakers were several ex-mayors of the City of Poughkeepsie, and the present Mayor, Mr. I. W. Sherrill, who, in a few happy remarks, spoke of the great industry of violet growing in and around the city, and to stimulate to greater efforts to keep up or raise the standard of the present high quality of the violet would offer a Mayor's prize of $25 for the best 200 violets, to be competed for at the November exhibition.

CLASSIFIED ADVERTISEMENTS.

These Columns are reserved for advertisements of Wants, and Greenhouses, Land, Second-hand Materials, etc., for Sale.

Rate 10 cents per line (7 words to a line), when set solid, without display.

Display advertisements, 15 cents per line (6 words to a line).

No advertisement taken for less than 50 cents, except Situations Wanted.

When answers are to be addressed care of this office, add ten cents to cover expense of forwarding.

SITUATIONS WANTED.

SITUATION wanted, good all-round man, 17 years' experience. Florist, 557 Greenwich street, N. Y.

FIRST-CLASS decorator and maker-up wants situation; first-class references. E. H., 203 W. 25th street, New York.

GARDENER and florist, experienced, single man, wants a position on a private or commercial place as assistant, good references. L. W., care Florists' Exchange.

SITUATION wanted by florist and gardener, age 32, experienced grower—carnations, greenhouse stock, etc.; by the week; good references. Address R. F., 92 East Fifth street, Brooklyn, N. Y.

SITUATION wanted by married man, German, 32, no children; has 18 years' experience in roses, carnations, chrysanthemums and palms. Henry Miller, 494 Second avenue, 2d floor, New York.

SITUATION wanted, by an experienced nursery man, can furnish No. 1 reference, age 25 years, single. Address John G. Kerns, Pitman Grove-Gloucester Co., New Jersey.

SITUATION wanted, by German florist; married; 19 years' experience, competent in all branches can take charge; Maryland preferred. Frank P. Tauser, care George M. Lorentz Marietta, Ohio.

SITUATION wanted, by an Englishman, 18 years' experience in growing of orchids, roses, ferns, palms, carnations, violets, 'mums, Easter and bedding plants; first-class decorator and designer good salesman. Age 32, total abstainer, good references. Address L. N., care Florists' Exchange.

GERMAN, 31, single, 17 years' experience, strictly sober all-around man, well up in cut flowers and general greenhouse stock, good propagator, wants situation; please state wages. L. T., care Florists' Exchange.

SITUATION wanted by young man, age 23, as assistant in nursery or cut flower place, with chance to work up; one year's experience; wages moderate; references Address E. J. Glasson, 70 First street, South Orange, N. J.

WANTED—Situation as foreman where roses, carnations, violets and general greenhouse stock are grown; 15 years' experience; American, 28, married, no family; first-class references, strictly temperance. Harry L. Rowe, 18 E. Concord street, Dover, N. H.

SITUATION wanted by a married man, German, as a working foreman on a commercial or private place; 19 years' experience in roses, carnations, chrysanthemums and general stock; last three years with John N. May, Summit, N. J. Address, stating wages, etc., L. Y., care Florists' Exchange.

WANTED.

Situation as foreman, well up in all branches; English; first-class reference. L. S., care Florists' Exchange.

SITUATION WANTED

By young man, aged 21, 6 years with present employers, as assistant cut flower grower; 8 years' experience. Apply to W. G., care Corbett & Wilson, Station K, Cincinnati, Ohio.

HELP WANTED.

WANTED—An assistant rose grower with good references, state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED—A good florist who understand carnations and violets, single German preferred; don't apply unless you want a steady position. Address N. M. Comly, Buetleton, Philadelphia.

WANTED—All-round man to help in greenhouse, must be a first-c ass hand at filling fern dishes and have some experience in store work. Apply in person. L. Hart, 1000 Madison ave, New York.

WANTED—An experienced rose grower to work under foreman; must bring reference from last employer; none need apply unless qualified to fill the position; wages, $10 per week. Thorne & Co., Flushing, L. I.

WANTED. Competent man for seed and bulb trade; some traveling in N. Y., Pa. and N. J.; must be a hustler, and also able to work market gardeners' trade. Address M. B., care Florists' Exchange.

WANTED well appearing man for store; must be first-class decorator and designer and must come well recommended. Good wages to right party. Smith & Fetters, 148 Euclid Ave., Cleveland, Ohio.

HELP WANTED.

WANTED.

Good all-round man, married preferred, to take charge; must be honest and sober. Address L. I.., care Florists' Exchange.

WANTED.

A thoroughly competent man acquainted with the seed, plant and bulb business, references required. P. O. Box 168, Providence, R. I.

WANTED.

Bright, clean boys to learn the seed business; wages to begin $4.00 a week. L. V., care Florists' Exchange.

WE HAVE AN OPENING

For a live man to assist in the managing, also the buying and corresponding. Must be experienced in handling a large volume of work. Wm. Elliott & Sons, 54 Dey Street, New York.

MISCELLANEOUS WANTS.

WANTED 25,000 chrysanthemums, rooted cuttings. Please write, stating lowest cash price and number of varieties. Fairview Floral Co., Beatty, Ohio.

WANTED to rent, 20,000 to 30,000 feet of glass that is in good condition, no old houses wanted; please state full particulars M. C., P. O. Box 400, Madison, N. J.

WANTED to rent between now and first of June, range of rose houses, not less than 10,000 square feet, in good condition; give full particulars. Ernst F. Hoehl, 55 Hillside Ave., Madison, N. J.

WANTED 140 locust posts, 8 to 10 feet long, 4x4, would prefer them square, but could use faced on one side. Also 2 and 3-inch steam pipes, second hand. Address Stafford Floral Co., Stafford Springs, Conn.

WANTED TO RENT.

Range of Glass 8,000 to 12,000 feet must be in good condition. State full particulars. C. Smith, 375 Arlington avenue, Brooklyn, N. Y.

BUSINESS OPPORTUNITIES.

FOR SALE Greenhouse, 10x60, heated by fine shed 10x15, frames, stock, furniture; to let house, 7 rooms, lease 5 years, rent $10.00, suit jobbing gardener. Childs, Clinton Avenue, Plainfield, N. J.

FOR SALE or rent. Greenhouses and 8 acres of land, within 5 miles of center of Philadelphia, in an improving district; 45,000 feet covered with glass, steam heated, stocked with roses, carnations, asparagus, smilax, violets, etc.; 12-room dwelling, stable, 7 tenant houses. For further particulars address Evans' Rowlandsville Nurseries, Station F, Philadelphia, Pa.

FOR SALE. Two and four-fifths acres good soil dwelling house, 6 rooms, 240 hotbed sash, stable, sheds, 3 brand new greenhouses, 21x101 ft., 16x24 glass, all locust posts, equipped with Hitchings & Co. improved No. 57 Boiler and Hitchings ventilating apparatus, steam pump and boiler, and all implements and stock; cause for selling, death in family. Has to be seen to be appreciated. Any one who wants to take advantage of a good opportunity address Nicholas Rothar, Central Ave., cor. Moffat St., Brooklyn, N. Y.

FOR SALE.

Large greenhouse plant, established wholesale and retail business, well-stocked and in good condition. Write for particulars, etc.

B. F. BARR, Lancaster, Pa.

FOR SALE CHEAP.

Three Greenhouses, 20x80 feet, all improvements, and residence on property. Good location, near New York. Three minutes from R. R. Station. Rare chance, liberal terms. Address MILLER & CHRIST, New Hyde Park, L. I., New York.

MISCELLANEOUS.

FOR SALE. The entire stock of electrotypes and wood cuts, also cuts and type set for printing seed and vegetable bags, formerly owned by F. E. McAllister Co.; cost some $3000; will dispose of same for $150. Full information and proofs of electros on application. Address Electros M. A., care Florists' Exchange.

MUST BE SOLD

at once, 2 hot-water boilers, No. 5 Weathered, and 1,200 feet 4-inch cast-iron pipe for hot-water heating. Wm. Schirrmeister, 3009 Fulton street, Brooklyn, N. Y.

CARNATIONS.

Notes on Recent Introductions.

District of Columbia.

Washington.

AMERICAN ROSE COMPANY.

Crane of the last year's introductions is the nearer to scarlet with us and is of fair size. America is proving much more vigorous and is certain to outbloom Crane for the season. It is, however, a reddish pink rather than a scarlet in color. Maceo is a very free bloomer, dark cardinal, a splendid keeper, too short in the stem. Gomez is not so free, but longer in stem and the color seems more salable. Both these are below the standard size. Liberty, Shelmire's seedling, is proving very profitable. It is of good commercial size, a dazzling pink, and will be largely grown by us another season, as will America. Glacier seems too dwarf and slow. Bradt does not seem to sell as well this year as last, the demand being more strongly for true scarlet. Siever's California seedlings are not proving very profitable. We grow about 20 of the standard varieties in small quantity for hybridizing purposes, but most of our space is filled with seedlings of our own origination. For white, we use 40,000 plants of Luna; for pink, 6,000 Potomae; for scarlet, 10,000 Mephisto, and, in addition, about 12,000 seedlings in their first or second year. We are not disseminating any of our own seedlings which we grow for cut flowers.

Illinois.

Joliet.

CHICAGO CARNATION CO., PER JAMES HARTSHORNE.

Replying to your favor of the 29th ult., asking for our opinion and experience with the varieties of carnations we are growing for commercial use, we will begin with the variety G. H. Crane, which is the best scarlet carnation on the market at the present time. If it has any bad points we have not been able to see them as yet. It is a very free and continuous bloomer, and the flowers always command the top figure. The Chicago or Scarlet Bradt is a very fancy variety, and good growers, or anyone who has success with Bradt should not fail to grow this sort, as the color is superior to Crane, and if the stems can be gotten stiff as we have had it, it will command a price from one to two cents higher than anything else. Next comes White Cloud, which has done phenomenally well with us. This season, for instance, we have a thousand plants, and they paid us at the rate of 27½c. per square foot of bench space during the two weeks of the holidays, and 47½c. per square foot up to the first of January. This is better than any white carnation paid us last year for the whole of the season. We did not have White Cloud then. We, however, think it is a cropper. John Young is a very good white, a free and continuous bloomer, a little late in coming in, but does not crop, and where a person must have some white all the time it would be well to grow a few of this variety. Evelina, we shall drop, but intend to grow it as a Summer bloomer, believing it is the best white variety for that purpose. In pink, we have good success with Mrs. James Dean. The flowers and stems are very fine, and always command a high figure in the market, the color being so much admired. It was very profitable with us last year, and is doing still better with us this year. We find, however, that we have to have a cheaper grade, and for this purpose we grow Mrs. Frances Joost, which is an improvement in every respect over Scott; commands a much higher price and is just as healthy a grower and as free a bloomer. In the dark pink, or cerise, Argyle is the best we have. It is a free and continuous bloomer, with good large flowers; the only fault with this variety is the stem is rather weak. The cuttings should also be propagated early, as it is not an extra strong grower. In variegated, we think there is only one, Mrs. Geo. M. Bradt. It is getting to be so well known that very little description is necessary. One of its good points is that it can be planted closely, and a great many flowers can be picked from a given space. It was the most profitable variety in any color we grew last year, and we are cutting more flowers from it this year than we did then. In yellow, Gold Nugget is our favorite. It is very profitable and the flowers always find a ready market. In crimson we are growing General Maceo and General Gomez, and it is a question which will pay us the best this year, although at the present time Gomez is ahead. It is a very strong grower, a very free bloomer, and a brighter color than Maceo. Maceo is rather a slow grower, but we think by propagating early that it will be more profitable than Gomez, as every growth brings a bud; and if we can get all of our plants to do as well as some of them have done this year, we think it will give us more flowers to the plant than any carnations we know of, barring none. We also grow Jubilee, Armazindy, William Scott, Victor, Daybreak and Flora Hill, but intend to discard them after this season. We would say that we are growing H. Weber & Sons' Genevieve Lord, and believe it will become a standard variety, as it is a very strong grower, a free and continuous bloomer, a very pleasing color and good, stiff stems. We shall grow quite a batch this next year. We are also growing a large house full of seedlings, some of which will be put on the market next year. We have them in all colors, and in our opinion they are so far ahead of the present standard varieties we have mentioned, that we shall have to cut down in quantity of the standard sorts.

Long Island.

Freeport.

CHARLES LENKER.

I hereby give you a synopsis of the carnations I grow for market: In pink, William Scott is the most productive variety to-day with me, and the most profitable. It has improved in flowering qualities about 20 per cent. in the last three years. Van Leeuwen never has any disease, is easily grown, its only fault being that it produces a crop of short-stemmed flowers in the Fall. Maude Adams, cerise, is a grand flower and a heavy bearer. It requires to be grown warm, with plenty of moisture both in soil and in foliage. It is a cropper. Mrs. F. Joost is a good all-round carnation, ranging second to Scott. In light pink Daybreak does with me as well as ever. Mrs. James Dean is a fine, healthy plant, producing fine flowers, but it does not give enough of them; I will drop this variety. Among reds I have Lady Emma, and some of the original stock obtained from Thorwald Jensen, Mamaroneck, N. Y. I am looking in vain for its equal in productiveness and profitableness. The flowers are a little small compared with those of the newer sorts. Bon Ton's stem is too short and it throws too few flowers. Jahn's Scarlet is too small, giving only one good crop for the season. The color, also, is too light. In white, Lizzie McGowan is the best all-round with me. Flora Hill produces a very good, large flower, is an easy grower, but it requires careful watering. If over watered it will not develop its flowers. Among variegated, Mrs. Geo. M. Bradt is good in every way—a grand variety.

Massachusetts.

Framingham.

WM. NICHOLSON.

In reply to your letter of inquiry regarding carnations and their merits commercially, for white we grow Flora Hill, White Cloud, Evelina, Edith Foster and Freedom. For a fancy carnation I think White Cloud stands at the head of the list; next comes Flora Hill, then Evelina, Edith Foster and Freedom. In dark red or crimson I think Maceo stands first for profit, Gomez next, F. Mangold and Sebec following. In scarlet G. H. Crane, in my opinion, leads, followed by America. For yellow, Eldorado is still the best we have tried so far. In the variegated class Mrs. G. M. Bradt has done exceptionally well with us this season. Mrs. Frances Joost, pink, is the best of its kind with us, and we still think lots of Daybreak and grow more of it than of any other one variety. We are growing very few Wm. Scott this year, as Joost has paid us much better. New York has done very well, only it gives too small a flower for a fancy carnation. We have a few new ones on trial, but it is too early to say anything in regard to them this season.

Springfield.

H. GROUT.

In answer to your inquiry as to what I grow in carnations, giving also the good and bad points of each, I would say, that owing to last Summer's drouth in the field my plants suffered from the lack of water to such an extent that at the time of taking them up they were no larger than plants ought to be when planted out six weeks in the Spring. They are now, at this late day, what they should have been last September. The carnation mainly grown by me is Conch Shell, which for freedom of bloom is way ahead of any of the existing kinds that I have tried, and sells the best of any. I have also planted out Flora Hill, which has done better this year than last, there being hardly any loss from stem rot. I think I shall try this variety another year. The next, in white, is White Cloud, which I will throw out, as also Evelina. They don't do anything with me. Lizzie McGowan I have grown ever since it first came out, with indifferent success, until this year, when it has flowered well. In pinks, besides Conch Shell, I have Mrs. Frances Joost, which does fairly well; of Scott, a few plants, but shall discard it. I bought a few plants of Bon Ton last Fall for trial; it will not pay me to grow it. Of the new ones that came out last year I have 50 plants each of G. H. Crane and America. They have both done well with me, the former being the best producer of long-stemmed large flowers, every shoot throwing a perfect bloom. I shall try it another year. America, with me, is a strong grower, with a little too much grass. I lost 14 plants of it from stem rot, and at first thought I would discard it, but think I shall give it another trial. My plants are all on raised benches, though I am of opinion some of them would do better on solid beds. I have quite a number of new seedlings of my own hybridizing, but desire to give them further trial before bringing them out.

Westboro.

ALBERT H. BROWN.

Among the newer carnations grown by me this year Melba has proved a strong, robust grower, a constant bloomer, with blossoms which average 3 inches across. Crane is the largest and best scarlet to date, but furnishes few cuttings. Gomez has good color but in size would have suited ten years ago. Progress and Liberty are not free enough for commercial sorts. White Cloud is a large white, on extra long stems; but as one person remarked to me, "The grower ought to get 50c. per blossom to make it pay." Emiline is one of the best I have tried, though some may not like the color; this variety is a strong grower and needs plenty of room; some blossoms have measured 3¾ inches across, on stems 20 to 30 inches in length. Maceo has taken well; the color attracts lots of attention. Of the old kinds Bradt stands at the head for freedom of bloom, and realizes the best price for cut blooms of any. Flora Hill has not done as well as last year. Victor, Daybreak, Albertini, Nivea, John Young, Anna Webb, Evelina, Mrs. James Dean and Empress have all done extra well. I shall discard as no good New York, Mayor Pingree and Minnie Cook. In seedlings I have a cross between Bradt and Albertini, with blossoms 3½ to 4 inches across; color white, edged and heavily striped with deep pink; also another seedling cross between Bon Ton and Red Bradt; color a glowing scarlet, a high built flower, 3 inches across. Both of these are in their first year. I have also some 25 other seedlings of different shades.

Michigan.

Detroit.

G. A. RACKHAM.

In whites, White Cloud is the best to date with me, but I find it better for Winter than Spring growing, for it does not seem to be able to bloom freely in the Spring months; Flora Hill is better in Spring than the former. In red, I have found nothing to beat Crane so far; but am pleased with Evanston, although the color is not as pleasing as that of Crane. In light pink Scott is still the money producer and all-round good carnation; but Cerise Queen, as a dark pink, has produced more and better flowers than any carnation, is always in demand, and I shall plant double the quantity next year, for it is a good one in every way.

Grand Haven.

GEO. HANCOCK & SON.

We give you very briefly our experience with some of the varieties of carnations which we are growing for commercial purposes. Our soil is quite light. We keep a night temperature of from 48 to 50 degrees.

White Cloud is our favorite white. Its size, color, form, fragrance and stem all combine to make it a leading variety. Glacier, introduced last year, promises to be a valuable acquisition; pure white, early and free, medium height, making it desirable for low benches. Flora Hill is an exceptionally fine standard variety, having many good points. John Young has flowers of medium size, but they are produced abundantly; are of good form and every flower perfect. Ivory has given us more perfect flowers than any other variety, of medium size, good form and substance. We have grown many other white carnations, but select the above five as our choice for leading commercial varieties. In pink kinds Daybreak still leads as the best of the very light shades. Governor Griggs is a little darker in color than Daybreak, and we shall give it further trial before passing our opinion upon it. Just now it seems to us a little small. Melba, still darker, a very pretty shade; early and free; flowers of medium size on long stems; plants subject to bacteria if not carefully selected. Mrs. Joost, clear pink, very productive, and will become a standard if not surpassed by this year's novelties. Wm. Scott has been one of our standbys, but must soon give place to the newer varieties. Argyle is a deep pink of large size, but we are afraid it is not going to be productive enough. Victor and Mme. Chapman are two sports from Daybreak, darker in color, similar to Daybreak in growth, but perhaps a little more vigorous and are both decided acquisitions. In red G. H. Crane takes the lead. It was introduced last year and we shall grow it extensively for commercial purposes. It is early, free, of good color, and has fine strong stems. America, larger in size and lighter in color than Crane, makes a fine companion variety. Jubilee, an old favorite, but not equal to the newer varieties in productiveness; also somewhat subject to stem rot. Chicago, the red sport from Mrs. Bradt, is perhaps the largest red variety in cultivation, and is very desirable where fancy carnations are wanted. Evanston, the red sport from Tidal Wave, makes a fine variety for low benches, being an early, free and continuous bloomer; flowers of medium size. Firefly, early, free and continuous; plants exceptionally healthy. In crimson varieties all others have given way to General Maceo, the darker crimson, and General Gomez only a shade lighter. Both are rich, glowing colors; very healthy, early, free and continuous bloomers. Gold Nugget is the only commercial yellow we are growing, and we have tried them all in their turn. We have some seedling varieties which are very promising. In variegated varieties Mrs. Bradt easily leads; its large size and distinct bold markings make it a general favorite. Armazindy is smaller in size, and has a little less color, but has a strong stem and is very productive.

Grand Rapids.

G. F. CRAND.

White Cloud is the best white to date, although there is still ample room for improvement. It has a fine stem, magnificent flower, which should be left on the plant long enough to thoroughly develop when it is of the purest white. It is a little slow in coming into bloom, but makes up for it when in. It is inclined to be a cropper; it is slightly addicted to bacteria and a few flowers come bursted, still it is *the* white. Flora Hill is a grand flower, free bloomer; last year the peerless one, this, on the toboggan slide, all on account of a weak neck and being in some degree addicted to stem rot. However, it will be planted in quantity next to White Cloud. Glacier is a beautiful white and very free; has a good stem and large flower, but lacking the substance one expects in such a flower. It will be given a more extended trial next season. White Daybreak has done well with us, and may, another year, stand along side of White Cloud. It seems to have a little better constitution than its parent, and is just as free; but like Daybreak is subject to rust. Evelina is the freeest blooming white we grow, and while not a fancy white and inclined to burst freely at times, it is a good commercial white with those who can do it. Freedom is free, but gives too many defective flowers; even a large fine bloom being too flimsy.

We shall discard it. John Young may be all right where it can be grown to open freely; it is too late in coming into bloom, which is to be regretted, considering its other fine qualities. With us, it seems as if nothing short of a surgical operation will open the buds. We will drop it, also Genesee, which is a disappointment, as we thought it would be a good commercial sort; it is very rusty and otherwise diseased and will be discarded. Alba Superba, fine, but too shy; will discard it. Melba is the best of the newer pinks, medium to large flower, stiff stem, beautiful shade of light pink and a very free bloomer. We will grow it more extensively next year; its grievous fault is bacterial disease, causing many of the plants to die out. Mrs. James Dean, similar to Melba, but higher built, and a shade brighter flower; strong grower, of good habit, but not nearly as free as Melba. Except at a high price it is not profitable. New York has medium to large flower, bright cerise pink in color; free bloomer, a little troubled with disease, yet is a profitable variety to grow and should be a favorite in its color. Governor Griggs, the rival of Daybreak, is a beautiful color, a shade brighter than the latter; the flower, though being evenly covered in its coloring; if it continues as free in blooming next year as this, it may displace Daybreak. It is a strong grower, with stiff stem and free bloomer. Daybreak needs no description; the people demand it and we must grow it, at least until we can offer a satisfactory substitute, which may be Governor Griggs. Scott, for a cheap, bright pink, must still be grown, it being so remarkably free, although the quality of the flowers is deteriorating. Mme. Chapman, the Grand Rapids sport of Daybreak, is a fine pink; a little lighter than Victor, and takes better. It has a stronger, more vigorous habit than its parent, and when grown cool is a really fine flower and as free as Daybreak. All the florists in this vicinity are heavily stocked with it, and it is so profitable more will be planted the coming season. Mrs. Frances Joost, while a fine, free blooming pink, will be dropped to make way for Mme. Chapman. Happy Day, from its large size, clean foliage, bright, cheerful color, will, in spite of its shy blooming qualities, be given another trial. Painted Lady has too much purple in the color; is a shy bloomer, weak stem, etc.; will be dropped. C. A. Dana makes too much grass, is late and shy; will be discarded as will also be Conch Shell, Argyle and McBurney, shyness in bloom being the principal reason.

Grandville.

THE STOVER FLORAL COMPANY.

We are growing about 10,000 plants of the following varieties: In white, White Cloud certainly is the best to date; it has all the qualifications of the ideal carnation —good size and stem, very seldom bursts, and has been, so far this season the freest white we have. Whenever you have White Cloud for sale you can depend on a fair price. Flora Hill, while it has the size, bursts very badly with us. We have 1,500 plants on a cool bench. We are of the opinion that this variety should be grown 5 to 10 degrees warmer than some of the other kinds, and in a clay soil; but think the same space planted in White Cloud would be much more profitable. Lizzie McGowan must go; we can do nothing with it. In pink, Mme. Chapman, a sport from Daybreak, originated in Grand Rapids, is the best pink for us; it is an improved Victor, of medium size, a good grower, never bursts, and is a money-maker. Wm. Scott we still find an old standby. Daybreak seems to be growing smaller each year, and must give way to the newer varieties of its color. For red, we have Jubilee, which is our standard red, and should be grown by every florist who wants an early variety. We consider it the best for all purposes. Emily Pierson is an old story, but a very profitable variety with us. Among variegated sorts Mrs. Bradt, of course, stands at the top; we cannot add more. Armazindy we are trying for the first time, and judging from what we have seen of it there is still a place for it.

New Jersey.

Hightstown.

CHARLES BLACK.

We are growing for white, McGowan for main crop, Flora Hill, but few; it gives us some good flowers, but the plants are not so healthy with us as they should be. In pink we have Scott; it is our most profitable variety. We also grow Victor and Daybreak with fair success. For red, we have tried several of the older varieties but have dropped them all. Portia did well, but was too small for present demand. In yellows we have been growing Eldorado with good success, but have dropped it now as we dislike its tendency to rust. Among new seedlings we have three that we have grown successfully for the past three years—No. 6 is a deep, rose pink, better than Scott under same conditions in every respect, except in size, which is about the same; stem 16 to 24 inches, strong, holding the flowers erect and does not burst the calyx. No. 5, extra strong grower, continuous bloomer; gives 3-inch flowers with ordinary treatment, very full; color very dark, almost crimson, ribbed stem, strong and stiff, 18 to 24 inches. No. 9, light rose pink, without purple, 2¾ to 3-inch flower, strong grower, stiff stems, 16 to 24 inches; free bloomer, but a little later than No. 6 or Scott. These three were from Daybreak × Scott. A sport from McGowan that we have grown largely the past six years is a strong, sturdy grower, with stiff stems that hold the flowers erect; flower similar to McGowan. This variety is excellent for low side benches; it is surpassing its parent with us this season. We have also a sport of Flora Hill same as parent, excepting in color, which is pure white, deeply flushed purplish pink, with white edges. Under gas light it resembles Daybreak. All the above are grown without any stimulants or disbudding. No. 6 and No. 9 are very fragrant.

Ohio.

Kenton.

W. SAURANSKY.

The best white carnation I grow is White Cloud; it is early and free, with long, stiff stems and good-sized flowers. It has one fault, however—it bursts its calyx under certain conditions. To avoid this I pinch out the center bud if it appears short and chunky; a side bud will always bring as good a flower without bursting. Flora Hill ranks second in my estimation; flowers are larger than those of White Cloud, but not of as fine shape. The stem is weak, and the variety is not so free in flowering as I would like it. By selection I have almost eradicated the bacterial disease. Evelina is a failure; it produced a lot of second-rate flowers in early Winter, but now it is running to grass. It will go on the rubbish heap if I need the space for something else. Crane is my best scarlet; it is early and free, makes very little grass, and can be planted close. America is not nearly as free as Crane, nor as early; I don't like it. Jubilee is a good one, if it would not throw so many single and off-colored flowers. It should not have a temperature of less than 55 degrees at night, which, unfortunately, I cannot give it, hence I get about 30 per cent. of poor flowers. In pinks I put Triumph at the head of the list; it has a fine color, a large flower, is a free grower and early. I never have seen a bloom of it with a bursted calyx. It is the most profitable carnation I grow, its only fault being that it makes too heavy grass. Daybreak is another good one with me; my soil (a heavy limestone) seems to suit it exactly. It is as vigorous and healthy as ever; I shall continue to grow it until I am thoroughly convinced I can get something better in its color. Melba is a beauty; full color and is free, with good stiff stem; flower rather under size, but I shall plant more of it next year. Mrs. James Dean is under size, with weak stem, but of good color. I shall discard it. Mrs. Bradt is the best variegated I have; it grows well with me outside, and if planted close on the bench and kept pinched back up to October 1, will give a continuous crop from December; it pays. Armazindy is also a good one. My experience with it is that it should not have too rich a soil to make it flower freely. Helen Keller is a beautiful flower, but shy in blooming and likes a high temperature. I have not said anything about rust, as it does not bother me; even Jubilee is entirely free from it. My most profitable carnations are Triumph first, Daybreak second, and White Cloud third, three-quarters of my stock consisting of those three varieties.

Mentor.

C. MERKEL & SON.

In regard to the varieties of carnations that we are growing, in white, we think Flora Hill O. K. for early blooming, White Cloud coming in immediately after; but both have their faults. Flora Hill has a weak stem and 50 per cent. of the flowers are bursted. White Cloud does not give enough blooms. A good all-round white is needed very much. Genesee is too small. Evelina we will discard, it being good for Summer use only. In pink, Wm. Scott is as productive as one would ask for, so we will still grow it. Mrs. Frances Joost does not produce enough blooms with us; it seems to be a little woody like. Alma, a rose pink, originated by C. Aul, Cleveland, O., is what every florist wants; it gives an abundance of first-class flowers, is a good, strong, healthy grower, and a continuous bloomer. We shall grow this variety extensively another year. Daybreak has taken a back seat with us; still our stock is as strong and healthy as ever. We have a seedling named Dellhurst, a shade or two deeper in color than Daybreak, that produces about 50 per cent. more blooms, is a good healthy grower, does not take rust, the flowers being much larger than those of Daybreak. This is its fourth season. We will disseminate it in 1901. In red, Jubilee has been our standby, but it does not bloom free enough. We think G. H. Crane will take its place. We are working up a large stock of our seedling No. 16, color and build of Portia, with stems 2 to 3 feet in length; flowers 2 to 3 inches. In yellow Gold Nugget, with us, is worthless. Eldorado seems to suit our treatment and soil, but comes about 50 per cent. bursted, so we would like to find something better. As a whole we think there is still plenty of room for improvement in the carnation.

W. Mentor.

CARL HAGENBURGER.

Of the carnations grown by us, in white, Mary Wood gives us more high-grade flowers than any other white we grow. It is not as free as Flora Hill, but has a better stem and produces better flowers. Flora Hill is a good white for floral work, but the stem is weak and the flowers burst. John Young is very shy and small with us. Glacier throws pure white, nice flowers, with short stems; is a good grower and quite free. Evelina is very free, with small short-stemmed flowers. This variety is improving every year with us. White Cloud produces good flowers on fine stems; is a good grower, but about 25 per cent. of the blooms burst. In pinks, Mrs. Joost throws medium-sized flowers, with good stem; is a good grower and quite free. This variety can be much improved by selection. Mrs. James Dean is a fine pink, having long stem and handsome flowers. It is a good grower and quite free. Wm. Scott is still one of the freest in the pink class. Triumph produces good flowers, on strong stems, but is shy and of very soft growth. Albertini is a fine clove-scented large flower; a good grower but rather shy. Alma is a fine grower, very free with good stem and very fine flowers, if given time to expand. Melba is a good grower, has a fine stem with a medium-sized flower of nice color. Among reds, G. H. Crane is all that was claimed for it—fine stem, excellent flower, a good grower, and quite free. America is no good with us—very rusty and throws poor flowers. Jubilee is still one of the best, produces fine flowers on good stems; but is not very free. General Maceo is very free, throwing good flowers, with strong stems. It is with us the best dark crimson. General Gomez is very free; a medium-sized flower, a good grower with a fine stem—all that was claimed for it. Red Bradt produces fine, large flowers on a good stem, but is rather shy. In the variegated class Mrs. George M. Bradt gives a very fine, large flower, with good stem; but is not free enough with us. Armazindy is a very good grower, with fine stem and medium to large flowers; quite free. Captain King is a good grower, strong stem, and medium-sized flowers; quite free. Sandusky is also a good grower, with desirable stem, but is rather shy with us; medium-sized flower. Mayor Pingree has a fine stem and flower, is a slow grower and rather shy.

Pennsylvania.

Clifton Heights.

GEORGE F. CHRISTIE.

In answer to your inqury regarding the merits and demerits of carnations grown by me, I state as follows: In red Crane is good, but does not give enough flowers. Among pink Triumph is the best standard; Mark Hanna is lighter than Triumph. We have grown this latter variety for six years, but never sold any of the stock. Daybreak is good yet. In white White Cloud is the finest, but does not give a big crop until after Christmas. Mary Baker is a good white, very prolific and early. Flora Hill is the largest white flower, but splits in Winter, and is weak in the neck. Evelina is no good. Gold Nugget is our best yellow. Eldorado is prolific, but splits badly. In the variegated class Bradt is slow in coming into flower and does not give enough blooms at the right time.

Philadelphia.

C. EISELE.

In the cultivation of carnations we have discarded all but two varieties of each color, after having for years tried mostly all the sorts offered. These are in white, Flora Hill and Lizzie McGowan. While they are far from being the ideal white carnations, yet they have proven to be the best and most satisfactory varieties. Both are inclined to burst in cloudy weather, and on account of weakness of stem in either variety we still look out for a real white Wm. Scott, which will surely come in the course of time. In pink we grow Wm. Scott and Victor. These are, in our estimation, the best pink varieties grown profitably in our soil. In red Jubilee, like so many other scarlet varieties, had to be discarded; we have now retained only Thos. Cartledge (red) and two other scarlet unnamed varieties of our own raising. Among the variegated kinds Eldorado and Mrs. Bradt are the best fancy sorts; they are most always perfect. The purchasing public are getting more critical in the selection of carnations, they want a large flower, erect stem, and non-bursters.

Waynesboro.

HENRY EICHHOLZ.

We are growing commercially Flora Hill, White Cloud and Evelina. The last named we like the best, as it furnishes the most bloom to the plant. In red Crane is the only one; America can't compare to it. The color of the former is better and it produces two to one flower of America. In pink Triumph and Joost are the only ones profitable. Maceo is the very finest carnation and greatest money-maker ever sent out. Daybreak we cannot dispense with yet, as nothing will take its place. Pingree is still better than Gold Nugget with us; and Bradt we grow for pleasure only—profit isn't in it.

Vermont.

Manchester.

GEORGE SMITH.

My trade does not call for the largest and finest varieties of carnations. Am growing this Winter for white, Alaska, Flora Hill, McGowan, Evelina and Genesee; the last two will be discarded. Flora Hill has a tendency to burst its calyx in mid-winter and is not a free bloomer; in early Winter what flowers there are cannot be beat. Alaska is my favorite, with large pure white flowers 2½ to 3 inches, and plenty of them. McGowan does well, but has to take a back seat for Alaska. For pink I grow Wm. Scott, Victor, Albertini and Triumph. I shall say good-bye to the last named, but ask the others to stay a while longer. For scarlet Portia and Elizabeth Skinner are grown, and although smaller than some others Portia is still the ideal scarlet. Flowers are cut with all the foliage on stem, as my customers positively decline to have the stems look like bean poles.

New Carnation Irene.

G. F. CRANE.

Irene is a cross between Daybreak and Albertini, possessing the strong, stiff stems and fragrance of Albertini, with the continuous blooming qualities of Daybreak and a most remarkable keeper. It has a strong calyx, never bursts, is free from rust, or any other disease; has strong stiff stems, so that when cutting the stems are laid on the arm and carried into the office for bunching. It is the most profitable carnation we grow, there being less waste than with any other kind. It is an early and free bloomer, being at its best during the holidays. It is still in full bloom, with no signs of abatement. We expect it will not let up until mid-summer. It is a bright pink, of great substance, yet not a fancy. It won a silver medal at the Chicago Horticultural Society's Show last Fall; a certificate at Cincinnati, December 13, and another at Chicago Carnation meeting, held January 19, 1900. It will be on exhibition at the Buffalo meeting.

The Marquis at Home.

GROVE P. RAWSON.

Seeing is believing. If the trade in general could view The Marquis carnation growing I doubt if there could be enough stock propagated to supply the demand. I understand sample stock was sent out last Fall to several of the prominent growers that was equally satisfactory. What impressed me most was that The Marquis is an all-round carnation. It is seldom indeed that any one variety combines so many good points—immense size, pure color, fine form, good stem and vigorous, healthy growth, making no grass.

Mr. Marquisee has another seedling that will come before the American Carnation Society at Buffalo, that will probably be named Syracuse, in honor of the saline city. The variety certainly makes a good showing in the houses. Its color reminds one something of Triumph—bright rose pink, the flower is large, 3 to 3½ inches, and more, with the petals slashed to one-third their depth, giving the bloom an exquisite outline; growth, stem and foliage good. Carnation experts pronounce in its favor as to distinctiveness commercially, and next in order will be the report of the Carnation Society.

I have a prediction to make for the coming white—that it will be a white Marquis, from the same source and parentage as The Marquis. So far, the general resemblance is striking as to growth and style of flower. A white Marquis, equally as good as the pink Marquis, would be head and shoulders above any other white to date. Let Mr. A. M. Herr get that $5,000 bond out at compound interest to secure this superlative white.

Mr. Marquisee is an enthusiastic hybridist. There are some 15,000 seedlings on the place to test for 1900. Contrast the requirements of a modern ideal commercial variety with those more generally grown, and would it not pay to restock with approved sorts of intrinsic value? The expense of growing would be no greater than with McGowan and Scott, and the first cost would be but a drop in the bucket as to actual returns. It is good stock that sells; the ordinary is usually in surplus, and hardly pays cost of production. A visit to the Buffalo Convention and Exhibition of the Carnation Society, February 15-16, would be an eye-opener to the majority of growers not familiar with the rapid strides of development of the newer varieties.

Carnation Mrs. Bertram Lippincott.

This variety was originated by John Kuhn, Philadelphia, Pa., and has been grown by him for the past four years. It is a cross between Daybreak and Scott. Its meritorious points are thus described by H. F. Michell' Philadelphia, who is introducing the variety:

"Form—The very acme of perfection; full, well rounded, and double, with a calyx that never bursts. Size—3 to 3½ inches in ordinary soil; with chemical fertilizers this size can still be increased. Color—A soft, rich piak, a shade darker than Daybreak—a color that 'takes' or sells at sight. Stem—Of the Daybreak type, averaging from 2 to 2½ feet. Habit—Exceptionally strong and healthy; has never been known to be a victim to rust or any other disease. Keeping qualities—No other carnation can surpass it in this respect. Its strongest point—It crops from the time it is housed until it is thrown out. No 'between seasons,' no 'let up.'"

New White Carnation Queen Louise.

This variety will be introduced by J. L. Dillon, of Bloomsburg, Pa., next year. It is described by him as follows: "A grand carnation, immense flowers, long, stiff stems; needs no trying so far this year; fragrant, continuous bloomer; no grass, no disease, and a strong grower. This is its third year, and it is away ahead of anything we have ever grown." A picture of this variety will appear in next week's issue.

The American Carnation Society.

New Varieties Registered.

Mr. A. R. Walker, Flint, Mich., registers "Michigan," color dark red, a seedling from McGowan, freer than Scott and blooms the whole season through, from time of planting in until thrown out; stem wiry and from 15 to 24 inches long; foliage dark green and healthy, the cuttings easy to root and the plants easy to lift in the Fall.

J. L. Dillon, Bloomsburg, Pa., registers "Queen Louise," a strong grower, no grass, every shoot producing a flower; very strong stem, an early and continuous bloomer, pure white, fragrant, does not burst, and as large as Bradt.

ALBERT M. HERR, Secretary.
Lancaster, Pa.,

Next week, February 15 and 16, will be held in Buffalo, N. Y., the annual meeting and exhibition of this society, and the promise is that it will be the banner meeting of the association. No matter what the promise is, we want every one interested in carnations to try and attend this meeting. If we can get the attendance as near the 200 mark as we usually have it to the 100 mark, we can by another season easily procure from the railroad companies the rate and one-third usually enjoyed by societies of this kind; and after the attendance from outside points is once brought up to the 200 mark the attraction of the meetings and exhibitions will easily keep it up to that standard. All that is necessary to insure a regular attendant at these meetings is to get him there once, and something very serious will have to interfere if he is not back the next year.

Carnations being such a prominent feature with so many growers all over the country there is no reason why the membership of this society should not be five times its present enrollment. All that is needed to get it up to this point is the proper presentation of facts by the members in their various localities, and the bringing along to the meeting of a few of the stragglers.

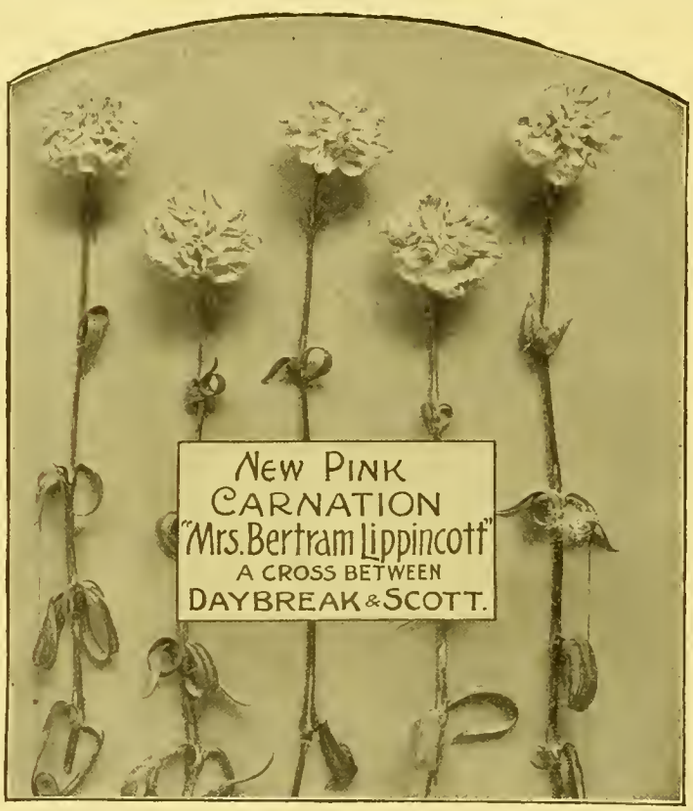
Retail men and commission men are quite as much interested in the wellfare of the carnation as are the growers, and should be well represented at these meetings to see that their end of the business receives proper attention. The silver cup offered by the society to the store men should bring out an exhibit worthy of the prize, and the Buffalo meeting will no doubt be the beginning of a new era along these lines.

It is too late now to get a premium list sent you for the meeting, but any grower who has an exhibit need not be deterred from bringing, or sending it along, and is assured that it will receive proper attention. Exhibits must be prepaid and addressed to Chas. H. Keitsch, 481 Washington street, Buffalo, N. Y.

The meetings will be held in the Genesee Hotel and the exhibition in a hall next door. ALBERT M. HERR, Secretary.

The carnation meeting in Buffalo will likely be attended by several Pittsburg growers, perhaps a party of six or eight will be gotten up. A few of our bowlers would like to meet the Buffalonians in a game. E. C. R.

The delegation from Detroit to the carnation meeting in Buffalo, will leave on the Wabash at 10:45 p. m., and we would like some of those who are to go to join us. RAG.



A club meeting was held at Buffalo on Tuesday evening and largely given to carnation convention subjects. All matters therewith showed progress as reported on by the various committees, and harmonious action is rife toward pleasing our visitors during their stay with us. The exhibition hall being engaged for three days, including Wednesday, early arriving blooms will be properly cared for. VIDI.

At the recent meeting of the Chicago Florists' Club on the question of attending the carnation society's coming meeting at Buffalo, Mr. Rudd suggested that an invitation be extended to all Western florists to join those going from Chicago by the Wabash Railroad, and that the Genesee Hotel be headquarters at Buffalo.

Quite a delegation will be in attendance at Buffalo. Those at present known are: W. N. Rudd, G. A. Garland, P. Reinberg, Henry Wietor, James Hartshorne, J. D. Thompson, O. P. Bassett or C. Washburn, G. L. Grant, J. C. Vaughan or J. S. Wilson.

SPRINGFIELD, MASS.—"If anything among the new carnations can beat our Joost I am anxious to see it," remarked Frank Burfitt, grower to Mark Aitken, upon my dilating upon the merits of the debutantes. "And here' is a seedling white which we think will attract attention later on." It is a beauty. Outcast is at home. Crane is near-by, but has not yet superseded it. The whole stock is in excellent order.

Solid Beds vs. Benches.

The method of growing roses and carnations in solid beds is one that should receive the serious consideration of every florist. A few years ago this plan was condemned by many, but I am glad to say that some of our larger florists are adopting the idea. Many a florist to-day knows that the keen competition now existing makes it a hard matter to make ends meet. The cost of new benches every few years is a very large item, leaving out the purchasing of new soil annually and the extra labor of refilling the beds.

Now the solid bed, if made properly, will last for years, the only thing required being a good coating of well-rotted manure. I am not an advocate of the so-called bone meal, as many disastrous results have arisen from its use. For roses I prefer cow manure, and for carnations, bone; that from a hotbed I have found to be highly satisfactory.

Now, a few words about making the solid beds: They may be made from 2 feet upward. I would not advise less. Care should be taken that no water lodges in the bottom, and if the situation be moist, a good lot of drainage, say 6 inches, should be placed evenly over it. This drainage may consist of stones or brick rubbish, over which should be placed a covering of sod, grass side down. This applies to roses and carnations alike. Then fill up with the proper compost. Some may demur at the trouble, but it should be borne in mind that the bed is not made for one or two years, but will last for several.

The idea that carnations need fresh soil each year has been exploded by many of our best carnation growers. All that is required is to dry out the bed thoroughly for a month before replanting, then fork the bed over thoroughly with a good coating of manure. Let me say here, that I have seen fine houses of carnations carried over for two years. These had been fed from time to time with liquid cow manure. Those having a house they would like to carry over can easily do so. Shade the house well with whitewash; keep on all the air possible night and day, and withhold water, giving only sufficient to keep the plants alive during the Summer. A good spraying twice a week will keep down red spider. At the end of August, or beginning of September, the beds should be well cleaned and the soil broken up. Liquid manure can be applied after the first watering.

With regard to carrying roses over for one or more years, I venture to say that if growers would only catch on to the very simple method, far more fine roses would be seen in our markets. Carrying over in benches is more difficult than in solid beds, from the fact that the roots of the plants are on the boards and are liable to dry out too much, unless great care is exercised; whereas in the solid beds the roots have gone down to the turf, are out of harm's way, and there is very little danger of their getting too dry.

Since writing the above I paid a visit to Ernst Asmus's fine place, and there saw a dozen or more houses of roses planted in solid beds, and the magnificent growth, foliage and flowers could not be surpassed. That grand new rose Liberty, too, occupied five houses, and was a revelation. The sides of the beds were made of brick, single thick, and presented a very neat and lasting appearance. I think any one who is at all sceptical, will conclude that the plan is worth a trial. H. YOUELL.

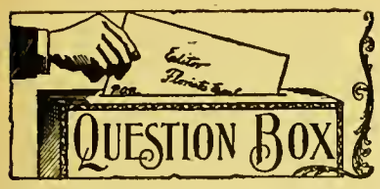
Rats.

Editor Florists' Exchange.

Replying to an inquiry in a recent issue of the FLORISTS' EXCHANGE, for a means of destroying rats in greenhouses, my experience is that a good cat will do the business. I used to think that a cat would destroy things in a greenhouse, but for the past eight years I have kept one in the houses, and if she is not allowed in the dwelling house, but made to stay around the stable and greenhouses, you will not be troubled with rats or mice, and will have no loss among the plants from the cat.

So much for the greenhouses. And now a little experience I had with rats in a store may come in here opportunely. A few years ago rats were so bad at my store that every carnation left at night was gone next morning, even in the show window, and finally the vermin made a way into the ice box. You may as well try to fill a sieve with water as try to kill off all the rats in a store with traps, and poisoned rats are pretty "loud;" so as a last resort I sent down a young cat, and in a short while, as soon as she got used to her surroundings, the rats disappeared, and I have not lost any flowers since. It must not be thought that all the rats were killed; they simply take lodgings somewhere else. I find the female cat most efficient, and would not give "Master Tom" room.

Kentucky. WM. WALKER.



(20) **Building a Violet House.**—Inclosed you will find two rough drawings of a small violet house. Please let me know if there is any advantage in one over the other. I shall have sunken walks through the middle, and solid beds for violets under the low part and chrysanthemums in the high part.—W. A. P.

—Plan No. 1 shows a three-quarter span house 9 feet wide, with its south slope formed of one row of 3x6 feet hotbed sash, and the north portion with a board roof. House No. 2 is 15½ feet wide with two rows of hotbed sash on the south slope, and a wooden roof on the north side. Of the two the wider house should give the best results, and besides it will afford nearly twice the available space, at a slightly increased outlay. A still better way of utilizing the hotbed sash for a violet house is to erect an even-span house about 10 feet wide, running north and south, and use the sash for covering the roof. When one has the means to erect such a house by far the best results can be obtained in one from 24 to 30 feet wide, with a roof of permanent sash bars. W. A. P. should send for "Commercial Violet Culture" before building a violet house.—L. R. T.

(21) **Geranium Cuttings Rotting in Sand Bed.**—My geranium cuttings rot off in the sand bed. Cuttings from outside beds do well all the Fall. Sand is washed and all right, I think.

Is it better to wet plants before smoking with tobacco?

—Either the geranium cuttings are taken from plants grown weak and soft or they are watered too much after they are put in the sand.

To the query regarding smoking, we suppose the inquirer means should the plants be syringed before fumigating. It is much better to have all the foliage dry when fumigating is done.

Double callas are not rare, neither can they be called very common. We see and hear of them occasionally, but they are looked upon more as monstrosities than as an improvement.

(22) **Growing Sweet Peas in the Greenhouse.** (A. T.)—For the treatment of sweet peas on benches, under glass, the benches should be filled with good new soil, using very little manure. Sow the seeds in drills across the bench 12 or 15 inches apart; fix a stake or wire at each end of the drill and run strings across to support the vines. Water well immediately after sowing, giving future waterings only when necessary. Keep a night temperature of 48 degrees only, with a raise of 10 degrees or so through the day. Syringing will not be necessary unless red spider appears, but this will not happen if the temperature is kept down. The time from sowing the seed to having flowers will be in the neighborhood of 14 weeks, according to varieties of peas and temperatures maintained.

(23) **To settle an argument** between two young men on the place will you please answer the following questions:

(1) What is the proper temperature for a rose house during the day? (2) During the night? (3) Carnation house during the day? (4) During the night? (5) Proper heat and arrangement for cutting bed for roses? (6) Carnation cutting bed?—A SUBSCRIBER.

—(1) Sixty-eight to 72 degrees, according to variety; (2) 58 degrees. Meteor, 8 or 10 higher; (3) 58 to 60 degrees; (4) 48 to 50 degrees; (5) three inches of sand kept at a temperature of 68 or 70 degrees. On a bench built over the pipes in a part of the house where the sun does not strike. (6) The same as No. 5, excepting that the sand may be from 5 to 8 degrees cooler.

(24) **Rooting Cuttings of Tea Roses.**—In rooting tea roses—Bride, Bridesmaid and Perle—if the cuttings drop their leaves, will they make as good plants as those that don't?—A. YOUNG FLORIST.

—If the cuttings referred to have good roots started, the dropping of the leaves will not materially affect them. In making rose cuttings but two or three single leaves should be left on, and these generally drop when new growth starts.

(25) **Rose Troubles.**—What is wrong with Bride and Bridesmaid roses? They produce small flowers, although making a good, strong stem and large foliage. They received a mulch of cow manure in October and again in January. I run the houses at from 55 to 58 degrees night, 66 to 70 on cloudy days, and 75 degrees when clear. The houses are old, low, and are glazed with small glass? Also what gives that delicate pink tint to the outside petals of the Bride?—ENQUIRER.

—The strong stem and large foliage seem so much at variance with the small flower that we think a better idea of the trouble could be given if some of the flowers were forwarded for inspection. The pink tint on the Bride is no doubt caused by a lack of light and sunshine.

I have some rose bushes of the following kinds in cold frames, put in in December: Perle, Hermosa, Maman Cochet, Marion Dingee and Wootton. I would like to bring them into bloom about the middle of April. Please tell me when to bring them in and about what heat and treatment to give them?—SUBSCRIBER.

—Put the roses into the greenhouse at once, in a temperature of about 48 degrees at night; syringe them every morning, but water rather sparingly until the growth starts. After they have started growing raise the night temperature gradually until 65 degrees is reached and water liberally. Keep the plants at 65 degrees at night until flowers are in sight. An occasional watering with liquid manure will help them after they are well started.

(26) **Bride Roses with Dark Deformed Center.**—The failure of Bride roses to come a clear white color or to form perfect flowers, can be attributed to several causes. If the glass of the roof is of small size, and the sash bars are heavy, a succession of cloudy days will sometimes cause it. Allowing the night temperature to go down too low, say, below 50 degrees, and then letting it run too high in the day time, through the want of proper ventilation, may also do it. Giving too strong or too frequent waterings with liquid manure during the short days of December and January will also contribute to the result complained of. We could tell better if we knew under what circumstances the plants were grown.

BRIEFS FOR BUSY FLORISTS.

TUBEROUS-ROOTED BEGONIAS should go in the pots now. In potting them avoid a soil that is heavy; half and half leaf mould and light loam with a good sprinkling of sand is an excellent compost for them. Pot firmly and leave the nose of the tuber just at the surface; give one good watering after they are potted, and stand them on a bench with a sand or gravel bottom. Keep them shaded and give no more water until growth has started.

GLOXINIA BULBS may be treated in a similar manner to the begonias, though a portion of the stock could be reserved and started a few weeks later, so as to give a succession of these prettiest of all Summer-flowering plants. If plenty of leaf mould is obtainable three-fourths of it may be used in mixing up the soil in which to pot the gloxinias. Pot firmly and do not use any fertilizer, either natural or artificial.

MIGNONETTE for early Summer use can now be sown, and where only a limited quantity is needed it can be handled the best by sowing in thumb pots, putting two or three seeds in each and pulling out all but the strongest one when sufficiently large enough. If necessary, however, the seed can be sown in flats, and, with care in handling, can be potted up afterward. But the plantlets must not be allowed to get more than two or three leaves before the potting is done, or they will go ahead very slowly. As mignonette roots are so easily killed after they have attained the thickness of an ordinary thread, they can hardly be potted off too soon after being large enough to handle.

CHRYSANTHEMUMS.—For specimen pot plants, the middle of this month is the best time to take cuttings. For plants for commercial and other purposes, cuttings need not be taken for some time yet, but in the meantime the stock plants need some attention. If kept in too warm a place, or, if they suffer for the want of water and the new growths become wilted, a decided weakening of cuttings will result and they will fail to make good, strong plants afterward. Keeping the old plants in as good shape as possible, until next season's stock is provided for, is the safest way to insure good, thrifty chrysanthemums.

Effect of Electric Light on Easter Lilies.

The florist will doubtless be interested to learn the results of recent experiments conducted by the writer with the electric arc light upon the growth and flowering of Easter lilies. The bulbs, mostly five to sevens, were potted in mid-October, removed to cold frames in late November, plunged in the solid bed in the greenhouse late in December, and the electric light started on the first of January. Up to this time the cultural conditions had been kept as uniform as possible, and the plants were divided up as evenly as could be judging from the development of the tops. At 5 o'clock in the afternoon the light, a globeless arc lamp, was started, and at 6 in the morning it was stopped. The bed was divided into three sections—one exposed to the full effect of the rays from the light, another still in the light but behind a pane of glass which cut out some of the ultra-violet rays, otherwise being the same as the first section; the third section was kept dark by means of an opaque curtain drawn across the house each evening when the light was turned on.

The Late John M. Jordan.
See page 135

At the time the light was turned on the plants were very uniform in each section, care having been taken to divide up the less uniform ones among the different sections. In about six weeks differences commenced to appear which became more pronounced as the experiment progressed. In the lighted sections the plants became leggy, the leaves very much curved, narrower than customary, a sallow green and far apart on the stems. Under the naked light these points were most noticeable. The plants in the darkened section were more stocky and robust, had a more pleasing appearance, better green color and seemed healthier and more evenly developed. After the formation of the blossom buds these differences seemed to increase less noticeably, but the buds on the plants in the naked light section began to develop an ugly brown streak or band from base to point upon the surface exposed to the light directly, generally the upper surface. This was of the nature of a burn and grew worse as flowering time drew near. The petals so afflicted were much curved, more than is usual with healthy blossoms. In some cases the stripes were a full quarter of an inch wide. In the second section, where the light had first passed through a pane of glass, no such effects were observed, and, of course, none in the darkened part of the house.

The effect upon the time of blossoming was also marked. The first flowers opened in the naked light, 4 days earlier than the earliest blooms in the second section and 13 days earlier than flowers in the darkened section. They lasted, upon the average, 9 days, those in the second section, 9½ days, in the third or darkened one, 11 days. These last, though later, were more robust, but somewhat smaller than the others, which, like the plants that bore them, were spindling, but, with the exception of the burned ones, not unsightly.

Fortunately for the experiment a plant with two remarkably evenly developed stems was found. This was placed so that the curtain could be drawn between the stems, thus shutting off the light from one of them. The other stem was in the second section under the light that came through the pane of glass. Another twin-stemmed plant almost as well developed as the one mentioned, was placed in the naked light section, and the larger of the stems covered each night with a large manila paper tube to keep it in the dark. In each of these cases the stem in the dark developed its flower a day later than the stem in the light.

Other plants of uniform development were selected from time to time, marked and placed in the different sections, with the results that those in the lighted sections were first to blossom, and that the plants under the naked light showed to a more or less degree the brown burn referred to above. Plants that were selected for this part of the experiment were carrying well-developed buds when removed to the lighted section. The ones under the strained light lasted as long, namely, 11 days, and were as well formed as the flowers grown in the dark. Moreover, they were from one to three days earlier.

From these experiments, which have not been conducted for a long enough period to warrant definite conclusions, it is advised that the use of the arc light, in bringing Easter lily buds into blossom, should be attempted upon only a small scale commercially until more fully investigated. From the above work it seems likely that the light might be used to advantage after the buds are an inch long, in order to make them expand sooner than they naturally would, but the light should always pass through a glass globe before reaching the plants. Probably an opalescent glass would be better than the one used in these experiments; this, however, has not been determined. M. G. KAINS.

Roses for a Penny-in-the-Slot.

A correspondent of La Nature describes in a recent number a new automatic distributing machine from which roses can be obtained. The idea originated in Germany, and the falling of ten pfennings insures the movement of a rose from its position behind a glass screen to a place where it can be reached and drawn out by the purchaser. The machine is stocked every day, or every alternate day, with fresh flowers placed on view in little tubes of water.

Tobacco-Whale Oil Soap for syringing for watering plants. We Know Its Goodness. All Seedsmen Keep it

HINTS and HELPS.

Fertilizing Primula Flowers.—Any extra good forms of Primula sinensis, or P. obconica, desirable on account of large flowers or color, should be set aside for seed. At this season of the year, when insects are scarce, fertilization will have to be done by hand, as it is rarely the case that a flower of primula is fertilized by its own pollen. For seed plants preference should be given to those having the pistil protruding from the corolla tube. It may be stated that primroses have two kinds of flowers, each kind on separate plants, one having what is called the style elongated until the stigma shows plainly from the mouth of the tube formed by the bases of the petals, while the stamens are attached near the bottom of this tube. In the other flower the positions of the organs are reversed, the style being shortened so that the stigma is more than half way down the tube; and the stamens are in full view near the mouth of the tube exactly in the position occupied by the stigma of the long-styled flower. The pollen of the primrose is ripe before the petals are expanded, but at this stage the stigma of the same flower is not in a condition to receive it. Those flowers having elongated styles are easiest to manipulate, and if I am not mistaken, they are the best seed bearers. Pollen, from either short or long-styled flowers, may be applied to the stigmas. When it is necessary to fertilize those with short styles it is, of course, impossible to get at the stigmas with a small brush, owing to the anthers filling the mouth of the corolla tube, but with a pair of small scissors the corolla tube may be snapped in two immediately below that part to which the stamens are attached, thus giving easy ingress to the stigma. Keep the atmosphere as dry as possible while the pollen is acting.

Fancy-Leaved Caladiums.—The first batch of these may be started about this time. Some of the dwarf growing varieties may be selected, such as Rossini, Dr. Lindley and Canærtii. These make well furnished plants quicker than some of the newer sorts with long Portuguese names. If the tubers must be started in pots, place a little screened moss on top of each tuber; this will force the roots to break out much quicker than when entirely in soil. It will be noticed that the roots of the caladium start out from the top of the tuber instead of at the bottom, so that the tuber must be planted much further down in the soil than we would put gloxinias or tuberous rooted begonias. The quickest and most satisfactory method of starting into growth is to place the tubers in boxes and cover to the depth of 2 inches or so with chopped moss, two parts, and sand one part, and when the roots are sufficiently advanced the tubers are put into pots according to their size.

Pennisetum longistylum, perhaps the finest of our dwarf grasses grown, principally on account of the very ornamental character of the flowers, is usually treated as a half hardy annual, owing to its liability to get Winter killed. It sometimes survives the Winter as far South as the District of Columbia, but it is always treated as a tender subject. Plants raised annually from seeds are satisfactory if sown early, but old plants, divided up, will give larger pieces, start into bloom earlier and do not take so much attention as seedlings. The old plants are wintered anywhere out of the reach of frost. They should be taken in hand now. Cut off the old foliage to within 6 inches of the crowns; divide into small pieces, trim the roots so that they will ultimately go into 3 or 4-inch pots, place the pieces thickly together in boxes of sandy soil, and keep in greenhouse or warm frame. Pot up as soon as the new roots have started. They may be removed to a cool frame long before the soft bedding material demands all the available room.

Plants in cold frames, especially those exposed to the sun for several hours each day, should get all the ventilation possible short of removing the sash. Even when we have freezing weather and the sun shining a little ventilation at the top will keep the temperature down and thus lessen the tendency of the plants to make long spindling shoots. Pansies, violas, moss pinks, dianthus, aubrietia and cerastium, besides hosts of other plants, are all liable to be unduly excited into a growth when the temperature is too high.

Caladium odoratum, or Colocasia odorata, is used much in the same manner for outdoor decoration in Summer as the well-known Colocasia esculenta. They are known from each other by C. odorata having thick fleshy stems above ground and the leaves pointing upward, or at least growing with the leaf blade horizontal, while that of esculenta has drooping leaf blades, and has no stem above ground. They are both wintered in the same way, that is, in a dormant condition, in a warm place, although C. odorata can easily be kept over Winter with the roots of the previous Summer preserved and the foliage green by storing the stems thickly together in boxes, keeping on the youngest leaves when lifted and storing them in a fairly warm house, giving water occasionally. Well furnished plants can be had quicker from the stems of this than from those of C. esculenta. The propagation of C. odorata should be attended to at this season. Cut up the long stems into pieces with a dormant eye to each piece, dust them over with powdered charcoal to prevent decay, and lay them in the sun to dry for a day or so; afterward put in moss, not too wet, in a warm frame, where they will sprout much in the same manner as stove alocasias. Pot as soon as the roots are sufficient in number.

Calceolarias and Cinerarias.—Some space will have been rendered vacant by this time by throwing out the old plants of stevia and eupatorium. This may be partly utilized by giving increased space to such plants as cineraria and calceolaria. If the bench is a consdierable distance from the glass, stand the plants on inverted pots so that they may be as near the light as possible. Both plants are particularly liable to aphides; these may be kept down by an occasional vaporizing. The cineraria and calceolaria should get abundance of air whenever the outside temperature will admit of it.

Dracæna Godseffiana was given a trial as a bedding plant last season, and the place for it, judging from the way the plants behaved, is a position partly shaded from strong sunshine, and where it can be watered when the soil gets at all dry. As a border for a bed of crotons it works in all right, but where exposed to the sun's rays the foliage is apt to get scalded, especially when the roots are in need of water. It grows freely and an abundance of shoots for propagating purposes are to be had from outdoor plants. It roots freely from every little twig when placed in sand with bottom heat.

Vase Plants.—Among those needed for centers Pandanus Veitchii and the numerous varieties of the grassy-leaved species of cordyline, such as C. australis and C. indivisa, are among the best. Last year's seedlings of the cordylines, if they have been liberally treated, will be large enough for the coming season for all ordinary purposes. They stand the hot sun well. Pandanus Veitchii colors well under full sunshine, but needs more water than the cordylines. P. Baptistii, of which much was expected as an outdoor Summer plant, is rather disappointing, as its foliage is too tender for exposed places. Other good things for vases and baskets, in the shape of flowering and trailing plants, are the three species of torenia, two purple and one yellow, besides the so-called white variety, and Maurandya Barclayana, all of which may be got under way from seed in a short time; Mesembryanthemum cordifolium, German ivy, all the trailing vincas and Abutilon vexillarium are indispensable. The variegated ground ivy will stand the sun well in exposed situations; it is dwarf growing and comes in handy for planting around the edges of vases and baskets, where its long hanging growths can be seen to advantage. Stock of it, kept in boxes under the cover of sash, should be cut up, and small pieces with roots attached placed in sandy soil in boxes, and either returned to the frame or brought into a cool house to be started into growth previous to potting.

Forcing Iris Into Bloom.—There is a variety of iris probably belonging to the Germanica section which blooms very early in the season—several weeks before the ordinary varieties of Germanica. The flowers are pure white and very large—by the way, resembling to a certain extent those of the new Iris Rosei, a species introduced lately from Mexico. The plant is quite common in cultivation, and it may not be generally known that it makes a very good subject for forcing. When the weather will permit it may be dug up in large clumps and put close together on a bench, with some well enriched soil between the clumps. G.W.O.

Vase of Daphne cneorum.

Hardy Spring Flowers.

It appears that dealers and growers alike have gradually come to the conclusion in late years that, as the public demand for perennial plants is so steadily increasing, it is in their own interest when they keep on hand a more or less varied assortment of the most popular species and varieties to supply the wants of their patrons. Collections of herbaceous plants are starting in many commercial places; with each year their number increases; older collections are made more complete by adding the rarer and newer species, and where a few years ago we had to rely on European growers for a supply of nearly all the rarer things, many, if not most of them, can now be procured in quantity from our leading growers at greatly reduced rates.

This revival of public interest in old-fashioned border plants could perhaps be traced back to the efforts of a few horticultural writers who were so persistent in keeping the subject agitated for years, yet my own humble opinion is that display of a few well kept beds of hardy Spring flowers in the front part of private grounds was a more important factor in the promotion of this public interest. The love for flowers of all kinds is quite universal, but doesn't it manifest itself more forcibly when the long, dull Winter months are behind us? The first Spring flowers are always welcomed with greater enthusiasm than the more gorgeous display of bloom coming on at later dates, the snowdrop, the scilla, the violet and primroses find such a kind reception because they are the prophets of the awakening of nature to new life, and a desire to surround our home with some of these harbingers of Spring is equally strong in the rich or the poor.

Bulbs of various kinds had been employed in Spring gardening, and in many places are they to the exclusion of everything else; beds of hardy Spring flowers were to a majority of people a distinctly new feature, a demand for them sprang up at once in the neighborhood where such beds had been seen, and it extended gradually along the line of the whole field of perennials. The plants which attracted the public eye at first and created the change in sentiment were not new introductions of recent years, but old, familiar subjects to most of us, though for years they had been neglected; and the private gardener has done more to bring them again to the front than the other members of the craft, in our opinion; his desire to change and vary the every-day style of bedding out has worked the revolution.

Some of the first creditable attempts in Spring display of this sort, which came under the writer's observation, were on an old rockery, some 15 or 20 years ago. I well remember the sheets of pink and white Phlox subulata, the ordinary varieties; the purple aubrietias, yellow Alyssum saxatile and a mass of white Iberis sempervirens, also Primula veris; but my recollection as to other subjects is blurred. Still, I know that nearly the whole of the large rockery was planted for Spring effect, and that it was a most complete success. We now have a vastly superior material to select from, not only for the rock garden but also for beds or borders. The plants may occupy their places either permanently or be removed when past their best, to make room for ordinary bedding stock if so desired; but Summer and Fall blooming subjects can easily be introduced among the Spring flowers, thus securing a successive display.

Of course, in introducing these plants we have to use our judgment in selecting the right thing for the right place, and not plant too closely. To name a complete collection of all desirable Spring flowering plants is not possible here, neither would all be suitable for planting in all positions, but a few which every dealer should keep on hand to supply his patrons, I will mention: Phlox subulata in variety, P. reptans, P. amæna, P. divaricata, primulas of several species and varieties, auriculas, Viola cucculata, V. cornuta, Caltha palustris fl. pl., hepaticas, myosotis, doronicums, epimediums, Alyssum saxatile, A. alpestre, A. argenteum, Arabis albida, several varieties of aubrietias, erysimum, Spring blooming anemones, uvularia, megasea, Mertensia virginica, Iris pumila, orobus, Polemonium reptans, æthionema of sorts, ajuga, aguilegias, the various evergreen iberis and armerias, dianthus of several species, Daphne cneorum, Lotus corniculatus, papavers, Centaurea montana, cerastium, helianthemum, corydalis and stellaria. All of these are profuse Spring bloomers and are in general demand, at home either in a rockery or in beds, intermixed or by themselves, excepting doronicums, uvularias, epimediums and anemones, which should be interspersed with plants of somewhat varied characteristics in foliage or bloom. All are easy to manage in ordinary soil; they bloom abundantly and some will last well into June, though they begin to flower in April or May.

The wealthy city residents, who flock to their Summer homes quite early in the season object to planting of beds in their yards, because no benefit is to be derived out of the ordinary bedding plants so early in the year, but we venture to say that a majority of them would be delighted with a bed or two of cheerful Spring flowers. It is not a very difficult task to persuade these people to invest a few dollars a year in such plants, especially when we are able to show sample beds actually growing and blooming profusely, as do the aubrietias, phloxes, iberis, arabis, alyssums, etc. The planting of these beds should be done early in Fall, thus allowing the plants ample time to establish themselves thoroughly before the approach of Winter, otherwise imperfect flowering and an uneven growth may result for the first season at least, unless the plants used have had preliminary special treatment to fit them for late planting, i.e., either by being potted up or by division and replanting during Summer. Sparsely rooted or newly divided stock should be avoided, if we desire a good show of bloom the following Spring.

DOUGLASS HILL.

Palm Prospects for 1900.

Business predictions are somewhat like the vest pocket voter in a political contest, in the fact that we cannot tell just how much strength is contained in them; but as there appears to be a generally optimistic feeling in business circles at the present time, there is reasonable ground for the poor florist to take courage also.

The reports of holiday trade throughout the country have an encouraging tone, and especially so for the plant growing section of the business, it being evident that the trade in plants of various kinds at the holiday season is advancing rapidly.

Much of this plant trade is naturally confined to flowering plants, and to those bearing ornamental fruits—for example ardisias, solanums and oranges; but a reasonable share of this trade also comes to the grower of foliage plants. The most important portion of the foliage plant trade being naturally confined to the palm section, on account of the adaptability of these plants for such use, has brought about a great increase in the quantities grown and sold each year, and with this increase in demand there has also been found an improvement in quality of the product.

The plant buying public is doubtless being educated, and the frequently indifferently grown stock of a few years ago would not command a ready market to-day, or at least would not do so in the neighborhood of our large cities.

But we would not be misunderstood in this matter as expressing the opinion that fine palms were not grown for the market in and about New York, and also in some other localities many years ago, for we have distinct recollections of the quality of stock grown by Bennett, Bush, Finn, Roehrs, Keller and some other well-known growers for a long series of years, and stock that in many instances would compare favorably with the first grades of to-day. But with the growth of the trade there has doubtless been a systematizing of culture, and a more careful attention to the details of production than was thought necessary in former times, and this care in small matters is gradually bringing about a more even grading of stock and resulting in a better average product.

Cull stock does not pay for the space it occupies, for while such stock may occasionally find a customer who will take it for cheap decorating work, yet the price given is far from a remunerative one, and it seems to be the wiser practice to promptly consign any unhealthy or imperfect plants to the rubbish heap.

First-class stock does not seem to have been in too great supply during the past season, there being no apparent surplus in ordinary trade sizes; and while it is always difficult to estimate probable stock of plants, owing to the great number of small growers, yet it would seem reasonable to look for a healthy demand during the coming season and to prepare for it accordingly. And from the fact that the prices of the most useful sizes of palms that are required for growing on have a bullish tendency in the European markets, it seems probable that importations will be proportionately less than in former years. The importing of plants is a rather uncertain matter at best, and includes many risks, among which are the uncertainties of quality, the possibilities of injury in transit, and the considerable additions to the first cost that arise from duties, packing, freight and other expenses.

It will be admitted that many of our European friends are experts at packing plants for export, but it will also be remembered that the cost of this expert work is charged to the buyer, and that the charge for packing alone is not an inconsiderable item on a large shipment. Possibly some time in the future this question of charging for packing may also come to the front among American dealers, for the Winter packing of tender plants in comparatively frost-proof packages frequently costs about 10 per cent. of the price of the goods, and the probabilities are that the price of lumber will continue to advance with the rapid reduction of the acreage of standing timber. But as the year 1900 may not mark any decisive steps in regard to the packing question, perhaps we had better return to our subject.

The kentias retain their great popularity—a popularity as deserved as it is widespread—and while it is less profitable to grow these useful palms in the form of compound or made-up plants than it is in the case of Areca lutescens, yet a considerable demand is found for plants of this character, from the fact that many plant buyers prefer a mass of foliage rather than one symmetrical single-stemmed plant. There is also some reason in this preference, too, for the compound plant may lose several leaves and still be quite a presentable specimen, while the single kentia becomes a sorry object when its lower leaves have been lost. Arecas do not seem to be over plentiful in fair-sized stock, and this palm being one of the few that may be grown much quicker and better here than on the continent of Europe, is not likely to be imported to any great extent, though always in fair demand. Latania seeds are so abundantly supplied and usually germinate so quickly and freely that a shortage of this useful palm is not likely to be felt, and though they are quite favorably offered on the other side, yet there are risks to be taken into consideration, both in quality of stock and in the marks of travel that may work to the advantage of the home grower.

Livistona rotundifolia has been more plentiful for a year or two, and it seems probable that but few of this palm will be imported this season, though meeting with quite a ready sale in small sizes especially.

Cocos Weddeliana has not brought a very profitable price of late, though used in vast numbers both by the retail-store florists and also by means of the catalogue trade, but will doubtless continue to be popular as the best dwarf, pinnate-leaved palm in the trade.

And in conclusion we may repeat that there seems to be a reasonably cheerful outlook for this portion of the trade, but the stock must be well grown to insure a fair profit in the face of a rapidly growing competition. W. H. TAPLIN.

[Mr. Taplin has touched on a point that has been, for some time, receiving the most serious consideration of our largest shippers of plants, viz., the advisability of charging for the cost of packing. This item in the aggregate, as he correctly intimates, is a heavy one in the course of a season, with the probability of this particular "white man's burden" being added to in the future. We should like to see a full discussion of the question, and invite those interested to favor us with their views.—ED.]

A Plea for the Rose.

It is to be presumed that most of the readers of the FLORISTS' EXCHANGE know that last March an attempt was made to organize the American Rose Society. Thirty or forty interested men met and went through the form of electing officers, adopting by-laws and a constitution, and further decided that two shows should be given in 1900—one in March, the other in June. These men so started this society, feeling that there is a necessity for a rose society devoted exclusively to the welfare of that flower. They further felt that they deserved the support, not nominal and subjective, but active and encouraging, of all who not only love the rose for the rose's sake, but especially of those who owe to that flower the foundation of whatever success they may have had in the florist business. Are they warranted in going on with this enterprise?

This is a question addressed directly to you as one for whom the rose has a special interest and claim. You are one who makes his living by either growing and wholesaling or by buying and retailing roses. It is no good to say that the rose is only a part of your stock, it always has been and always will be your one great standby. You have it, like the poor, always with you. No other flower is like it. The chrysanthemum is the flower of a day, it is showy but its perfume is not attractive; it has only color, form and size. The carnation is sweet, has color and form, but not size. Each has its own society, its own followers, its own advocates.

The rose has color, form, size, and fragrance; has been with us for years; the dear people buy it, want it, call for it, will have it; and it has heretofore had no adherents willing to devote time, money, energy and attention to its claims to improvement and advancement. (I am speaking only for America). Are you willing this state of affairs should continue? Do you want to desert this old, tried and true friend? Are you going to sit calmly down and permit the buyers to be refused roses, and be compelled to take some other flower instead, because you are too inert or careless of your own best interests to move at a critical time, to turn in and make a success of this society? I do not believe you are or can be so blind to your own advantage.

It is not the paltry sum for dues that will make a success of this society, but it is the encouragement of your names and your presence at the meetings and at the shows. If you want any one else to take an interest in your undertakings, you must show your own interest first. And this is what I want to impress upon you. You are in the florist business for success, not for amusement. You need to widen the scope of the business and do everything in your power to keep its lines from being contracted or limited. Has it ever struck you what an advantage it would be if you could double your sales of any one flower or plant? Then what greater good can you do your business than to make the rose so popular that two blooms may be sold, two plants put out, where now one is?

This can only be accomplished by your individual aid; uniting all the efforts of all at interest. Get at the public by bringing to their notice that you are working; and this you can best do through the channel of the American Rose Society. I beg of you to consider your own interests. This year the society will meet in New York. It will depend upon you where it meets, if ever again. Will you let it die or will you give it your support by your presence and by your exhibits?

BENJAMIN DORRANCE,
President American Rose Society

Ball Decoration by Hugh Graham in Horticultural Hall, Philadelphia, Pa.

The Hardiness of Victoria Regia.

Editor Florists' Exchange.

So the Kew authorities wouldn't make a new species out of V. Trickeri! Kew must be a conservative institution, and I guess one of their reasons for being so is that it would quickly spoil their reputation were they to cater to the wants of every individual who desires mere varieties and forms stamped with a Kew certificate as species. Does not Mr. Tricker spoil his chances of getting this plant recognized as a species when he says, p. 1206, December 2, that V. Trickeri is a variety, and further on in his communication disclaims specific honors for it? Mr. Tricker surely has forgotten having written the above, for on page 110, February 3 issue, he comes out strongly in favor of its being a species. When the Kew people refused to give this Victoria the desired recognition they missed a brilliant opportunity to do something extremely funny and out of the ordinary. They have never raised to specific rank a plant which had its origin in gardens, and it is to be hoped they never will.

Mr. Tricker refuses to uncover the mystery surrounding the origin of this water lily; he has a right to refuse of course, but his history of it is very defective in the light of its being claimed as a species. He says he got it from a foreign house; then why call it V. Trickeri without giving the foreign house credit? If he got the seed, did he not get it as V. regia or V. Randi? And if under another denomination, why not give due credit to the raiser? G. W. O.

FOUNDED IN 1888.

FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.
To foreign countries in postal union $2.00.
Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.
No advertisement less than 75 cents.
Discounts on continuous advertising.
For rates, on Wants, etc., see column for classified advertisements.
Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.
Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

Several interesting articles, among them an essay by John N. May, read before the Philadelphia Florists' Club, February 6, and one by Edwin Lonsdale on "Floriculture as a Profession" read before the Pennsylvania State Board of Agriculture, are unavoidably held over till a future issue.

SPRAYING FOR PROFIT.—This is a very useful pamphlet which the Deming Co., of Salem, O., is giving away with each spray pump of the firm's make. It contains hosts of information on the subject of spraying. A copy of the pamphlet may be had of the Deming Company on payment of 10c.

Firms Who Are Building.

DUNKIRK, N. Y.—Charles Secord and Mick Gage have added a new greenhouse.

ROCHESTER, N. Y.—S. A. Tuttle is at work rebuilding his greenhouse, which was recently destroyed by fire.

Reporting New Varieties.

Sometimes it seems a pity that the trade papers, and papers of this sort—the one I am now reading—are not more outspoken as to the faults of some of the newer carnations; and yet, when we see the occasional gross injustice done a variety by some one who has made a failure out of it, we are glad that condemnation is withheld in most cases—SECRETARY ALBERT M. HERR, American Carnation Society, before the Philadelphia Florists' Club.

We appreciate the point taken by Mr. Herr, and concede that conditions might be somewhat improved along the lines mentioned by him, although they have greatly changed from those of some years ago, when laudation only of new and old varieties permeated the comments thereon appearing in the trade press. The present issue of the FLORISTS' EXCHANGE is a good example of the mutation, for the better, along this line, and is only one of several that have gone before. There is no reason why the trade papers should be otherwise than "outspoken" in this matter; at least, those trade papers that are untrammeled, and the aim of which is to promote the general good, towards which a truthful account regarding any new plant surely tends. But a very great deal depends, as regards the expressions thus "outspoken," on the conditions under which they are uttered. As the Secretary rightly remarks, occasional gross injustice is done to a variety by outspoken statements, though these may arise from a desire to furnish the whole truth relative to that variety from the standpoint of the party disseminating the information; they may result from one's ignorance of the requirements of the new plant; indeed, may often be attributed to the fault of the grower and not of the variety.

As an initial step, much disappointment and regret would be obviated were the majority of growers of carnations to put themselves to the trouble to attend the various exhibitions of the Carnation Society, and judge for themselves of the qualities of the new kinds there shown; and should any "Doubting Thomas' thereafter exist, who questioned the other particulars vouchsafed by the exhibitors regarding such varieties, this dubiety can easily be swept away by a personal visit to the establishments where the stock is growing. In fact, it might be a profitable venture for clubs and other bodies to appoint expert delegates to the meetings for the purpose of securing just such information for the benefit of their respective members.

Upon reading reports regarding the behavior of new varieties, those interested should always have in mind, among other things, the source of information, the capabilities of the disseminator of the information, and his relationship to the variety either condemned or praised. Though the time has not yet come when we have ceased altogether to have faith in our fellowman, it may be here when some statements have to be accepted *cum grano salis*.

By all means give us "outspoken reports." It is only right that the bad points of a variety should receive the same publicity as its points of excellence, but let the statements made be truthful, unbiased, based on practical ability, and without ulterior motive other than the guidance and good of the general craft, or, in the words of Stevenson; "true to the fact, and with a good spirit in the treatment."

It should be borne in mind, however, that the introducer of a thoroughly tested variety, supplying good stock of same, cannot be held responsible for the incapability outside of his own domain; and unless "outspoken" adverse comments are general, they should not be accepted as indication of universal failure of any new variety. We believe greater justice would be done new kinds were adverse criticism confined to the simple statement that such and such sorts had failed to come up to their standard in the localities reported from; sweeping condemnation is misleading and harmful.

Perfection Reached?

In our contemporary we observe that W. N. Rudd assumes the rôle of "chief judge" for the Chicago judges in the matter of the awarding of 100 points to carnation Enquirer, and under the title of "Judge not, lest ye be judged" (which is evidently a Scriptural phrase misquoted, unfortunately), he endeavors to sum up in favor of the decision of the lower court, so to speak.

It has been generally understood that the American Carnation Society's scale apportions points to the various attributes possessed by the carnation flower of to-day, the whole going to form the ideal boom from the standpoint of the society, the advance made in certain directions necessitating the yearly amendment of the scale to meet the existing bettered conditions, real or fancied, the whole yet being confined within the limit of the 100 points, or the standard of perfection itself, as measured by the society's scale. The awarding of 100 points to a variety then, certainly either stagnates the whole carnation improvement, or demands a higher standard, represented by the scale.

Mr. Rudd believes it quite possible for a variety to score 100 points, yet that event he says must not necessarily be construed as indicating that perfection has been reached. Our only other deduction is that 100 points does not mean perfection; that a variety scoring this total can be superseded; in other words, that the society's scale means nothing in itself, as showing the points in an ideal carnation flower. What then does 100 points represent? Or of what particular value is the scale in measuring the nearness to perfection of a carnation? Or does it actually mean anything? If we are to advance beyond the standard reached by the carnation Enquirer, we have got to amend the scale to meet the improvement to be made, or to acknowledge the inutility of the scale as a guide in order to arrive at what constitutes the ideal carnation flower as viewed by the Carnation Society.

Mr. Rudd says of the Chicago judging: "It is fair to suppose that the judges had in mind the best pink variety of its shade, or nearest it, known to them, and after careful comparison found that Enquirer equalled or excelled it in color, size, form, stem, and all the other attributes on which points are awarded. From their standard they were perfectly justified in scoring the variety 100 points, this simply meaning that in all respects Enquirer is better than any other carnation of its color known to the judges." In other words, we are to believe that the total requirements of the national society's scale, as applicable to the whole country and to every carnation therein, has been fulfilled by a decision based on the circumscribed knowledge of a set of judges, their opinion being founded on what they alone are cognizant of, even although that knowledge may be limited. We hardly think the Carnation Society will accept such a construction of its scale—so very much depending upon the acquaintance of the judges with the highest standard previously reached under the scale by the carnation. The absurdity of the reasoning is at once apparent: For instance, in size No. 666 is admitted to be the largest so-called perfect carnation yet obtained; therefore, assuming the Chicago judges have not seen No. 666 they are justified in awarding the limit of points for size in the scale to a variety that in size falls short of a larger one. How many points for size will No. 666 be worth then when these same judges do see it? Supposing they give it the limit, would No. 666 not suffer, in the points given to that attribute, being larger than a variety already awarded a similar honor?

It seems to us that we can simply take the award in question as a Chicago one, which may either mean a great deal, or nothing, according to what has come under the personal scrutiny of the Chicago judges. We would be equally justified in applying the same rule to any other district, outside of Chicago, where judges of carnations had seen nothing better than Grace Wilder, and awarded 100 points to some new kind which was an improvement on "any other variety of its color known to the judges."

But how much value would be placed on an award made under such circumstances. This would certainly be limiting the value of carnations by the knowledge of the judges, and setting aside entirely the application of the scale, as, we think, it was intended to be applied.

The discussion is timely, however, and as Mr. Rudd suggests, should be "thrashed out." If the scale of the American Carnation Society is not a uniform standard to judge by (we had always supposed it was), let some other standard be set; and, too, if it be impossible to judge every color of carnation correctly by that standard, set up one for each color found in the flower.

It seems to us that some sort of classification of American carnations has now become an absolute necessity, either by color, by form, both, or otherwise. To know the best in its class would be of great assistance in judging, and simplify the task of discovering the actual advancement made each year. To arrive at what is the *most perfect* carnation by scales, and such like, would, in the light of present developments, seem impossible, and to scale one color in comparison with another, as, for instance, pink with yellow, seems also impracticable, and something not to be undertaken by any body of rational beings.

It is evident though, that the scale does not aim at *perfection*, or we should see the fragrance of the carnation better treated under it. After reading Mr. Rudd's remarks it would appear difficult to know exactly what the scale really does aim at.

Soda and Potash.

As bearing on the subject lately discussed in these columns, the following extract from a recent bulletin (18, Department of Agriculture, Division of Vegetable Physiology and Pathology), written by Dr. Loew, of that division, on "The Physiological Rôle of Mineral Nutrients," may prove interesting. Dr. Loew says, regarding the physiological rôle of alkali salts:

"The paramount importance of potassium salts for every living cell is firmly established. In green plants they are concerned not only in the synthesis of carbohydrates, but also in that of the protein bodies, since not only is there an increase of potassium salts in such parts of green plants as are devolping rapidly and consequently forming large amounts of protein, but most fungi, even in the presence of such a favorable nutrient as sugar, are found to require potassium salts for the production of protein. These salts can never be replaced by lithium or sodium salts, but in certain fungi they may be replaced to a limited extent by rubidium or cæsium salts.

"It is a well-known fact that plants cultivated in the presence of more sodium than potassium salts will nevertheless absorb a greater quantity of the latter than of the former, and some plants grown on soil very rich in potassium salts will absorb almost no soda. The amount of potassa annually required per hectare of pine forest is about 7.5 kilos; of wheat field, 37.5 kilos; of clover field, 102 kilos, and of potato field, 125 kilos. Other things being equal, an increase of potassa will increase to a certain degree the percentage of carbohydrates, and further, potassa is reported to be present in larger proportions in those parts in which the carbohydrates are transported, as in the parenchyma of the bark and pith.

"Secondary potassium phosphate possibly forms loose combinations with proteins more easily than does sodium phosphate, since an increase of potassium phosphate is generally accompanied by an increase of proteins, as in the seeds. Pollen grains also seem to be rich in this salt; at least Ramann found that of the ash in the pine pollen 50.74 per cent. was potassa and 30.08 per cent. phosphoric acid. Seeds always contain much more potassium phosphate than sodium phosphate, while on the other hand the proportion of soda to potassa in form of other salts than phosphates is often found to be larger in the leaves and roots.

"In some cases the amount of soda found in the leaves exceeds even that of potassa. Wolff's tables give for the leaf of Daucus carota a total ash content of 13.53 per cent. for the dry matter, and for 100 parts of this ash 19.83 parts soda, but only 11.26 parts of potassa. The occasionally rather large soda content in the leaves is due to the current of transpiration, containing sodium salts among other things."

Touching on the beneficial action of sodium salts he states:

"The fact that many kinds of plants have been raised to perfection in the absence of sodium salts proves that the latter have no indispensable function to perform in plant life. Stahl-Schroeder recently inferred from his experiments what others also had already observed, that is, that sodium cannot perform the

special part of the functions of potassium which relates to the preparation of organic substances in plants. Nevertheless, sodium salts may sometimes exert a beneficial action, and several observers ascribe to them a promoting action in the ripening process of the Gramineæ. Wagner and Wolff have each reported favorably on the application of sodium salts, pointing out that as regards osmotic and neutralizing functions a replacement of potassium by sodium compounds is quite possible which is of practical value since the sodium salts are much cheaper than the potassium salts. In a recent article Bassonville pointed out the beneficial action of sodium salts upon wheat. However, further control experiments along this line will be necessary."

Post Your Representatives.

In view of the increasing number of legislative measures, both national and state, affecting seed, florist and nursery interests, those engaged in these industries should lose no opportunity of keeping their respective representatives posted on the merits, or otherwise, of the legislation about to be sought or enacted. With a full knowledge of the situation a more intelligent consideration can be given such matters by our law-makers. This is a point that seems to be well attended to by our brethren in Great Britain. The seed trade there has lately been inconvenienced, relative to the sale of poisonous insecticides, the Pharmaceutical Society claiming that all persons handling these substances should qualify as chemists. At a meeting of his constituents the Lord Advocate, Q.C., M. P., was asked by a seedsman if he would be prepared to support a bill in Parliament making it legal for seedsmen and other agents to sell poisonous preparations, such as insecticides, weed killers, etc. The Lord Advocate replied that where poisonous substances were dealt with in the way of being dispensed it was quite right that this should only be allowed to be done by qualified persons. But in his view, where they did not need to be dispensed, and were supplied by the manufacturer in the final form in which they were to be applied, he did not see that a trade or profession should have a monopoly of selling them, provided proper regulations were made and precautions taken that they would not be supplied or used for any other purpose than those for which they were meant. Coming from a member of the Government the statement is considered a very important one.

Cut Flower Prices.

The very interesting communication and table, from a New York cut flower commission house, relative to this matter, appearing elsewhere in this issue, impresses one more than ever of the necessity of some radical change in the system of classification, or grading, of cut flowers sold on commission. One feature of the subject, and a very misleading one, so far as the grower is concerned, is, as our correspondents put it, "the fact remains an extra is an extra, and so forth to the end." Just why, after a certain standard has been set for "extra," anything coming short of that standard, in any item that goes to make up the requirements of that particular grade, should still be classed as an extra, is difficult of comprehension. For instance, the house in question received on the same day "extra" Bride from two separate consignors. One set of "extras" fetched 15c. and another 8c. This appears anomalous; and is certainly very misleading. The grower receiving the 8c. is still kept under the belief that his flowers are "extras," and no wonder he is astonished when other extras are reported as bringing double what was realized for his. Why should there be different grades of an extra grade anyhow?

It would also appear that the grower, whose grading is more often than not accepted, is guided by the length of stem more than anything else in his classification; and that the required length of stem for a certain grade entitles the bloom to recognition in that grade, although certain modifications regarding the flower itself, such as size, cleanness of foliage, color, etc., enter into the case.

It appears to us a reform in the system of grading, whereby flowers worthy of the name of "extra," on account of their meeting the requirements of that grade, could be kept apart from those falling short of it, is greatly desired, and so on through the whole scale. This would help not only the grower, but also the commission man himself. To have different grades of one grade is apt to create trouble, and certainly does beget dissatisfaction.

BOOKS RECEIVED.

IRRIGATION AND DRAINAGE. By F. H. King, Professor of Agricultural Physics in the University of Wisconsin. Publishers, the Macmillan Company, 66 Fifth Avenue, New York. Price $1.50. This is the latest addition to the very useful Rural Science Series now being published by this well-known house, under the editorship of Professor Bailey. The author points out in his Preface to the work, that "the effort is made to present in a broad, yet specific way, the fundamental principles which underlie the methods of culture by irrigation and drainage, and the aim has been to deal with those relations of water to soils and to plants which must be grasped in order to permit a rational practice of applying, removing or conserving soil moisture in crop production." The book will be found an admirable companion to "The Soil," also written by Professor King, and forms a most valuable aid to a fuller knowledge of the functions and the conservation of that all-important factor in plant growth—water—the importance of which may be gleaned from the author's statement that "as a matter of fact, water does contribute more than half of the materials which make up the dry matter of plants, and, as water, it constitutes from three-fourths to more than nine-tenths of their green weight."

Of special interest to our readers are the chapters on orchard irrigation, small fruit irrigation, garden irrigation, irrigation of lawns and parks, and subirrigation (field).

The book, which contains many serviceable illustrations, can be obtained from the FLORISTS' EXCHANGE, at the price quoted above—$1.50.

OBITUARY.

John M. Jordan.

John M. Jordan, a well-known St. Louis florist, died at his home February 4, after a lingering illness. Mr. Jordan was born in Vermont 71 years ago. His early life was spent on a farm. He began to maintain himself by his own efforts at the age of 12 years, spending some time under Francis Brill, of Astoria, L. I. He went to St. Louis, in 1859, as agent for F. K. Phoenix, of Bloomington Nurseries, Ill., in which position he remained for several years, afterward buying out the leasehold of Matthew W. Dick, brother of John Dick, of Philadelphia, whose florist business he continued. Mr. Jordan also went into the nursery trade quite extensively, but later paid more attention to the florist branch, soon building up a large and lucrative business. He opened and operated the second flower store in St. Louis, and for a period of about twenty years enjoyed the best patronage the city afforded. At one time he was at the head of the largest cut flower growing establishment in the West.

Mr. Jordan was a strong anti-slavery man, and once compelled a street-car conductor, at the point of a pistol, to permit a colored woman to ride inside the car. This was against the law in those days, and the act made him popular with the German element, which elected him alderman, in which capacity he served a term or two. He was a prominent man about town, was fifth president of the S. A. F., and president of the Florists' Hail Association, in both of which bodies he took great interest. His thorough acquaintance with parliamentary law made him an exemplary presiding officer. He was a member of several orders, including the Masons, under whose auspices he was buried on the 7th inst. C. C. S.

FIRES.

DETROIT, MICH.—The greenhouses of F. Kolbe, of Woodmere, were destroyed by fire, January 31, and all stock not lost by fire was frozen, entailing a loss of $2,000, which is a severe blow to Mr. Kolbe, as he had but just started last June, and by hard work had filled the plant with fine stock. The fire is supposed to have started from the connecting smoke pipe between the boiler and smoke stack, as it was an old one and full of holes.—G. A. R.

MASSILLON, O.—A fire in the greenhouses of J. J. Bowers, January 31, did considerable damage. The east half of one 100-foot house was almost destroyed. Fortunately, plants had been removed from this portion but the day before.

ELM CITY

A Grand New White **Carnation.**

Seedling of LIZZIE McGOWAN and MME. DIAZ ALBERTINI; in its fifth year.

The Flowers are large, finely shaped and of strong fragrance.

Petals are heavy, of good substance, and nicely fringed.

Calyx is very strong, after the style of Albertini, and non-bursting.

The Stem is strong, holding the flowers erect.

The Plant is a good grower and free bloomer, not subject to stem rot or any disease.

Rooted Cuttings, Ready Feb. 1, at

$1.50 per Dozen, $10.00 per 100, $70.00 per 1000. Cash with order.

We shall prepay the express charges where money accompanies the order. Orders filled in rotation.

A GRAND RECORD

Genevieve Lord

STANDS at the head of the list of light pink carnations. It is undefeated in its class. A commercial triumph, combining fine exhibition qualities. With its grand length and stiffness of stem, beautiful large flowers, grand color, general good habit, productiveness, etc., it cannot fail to win for itself a place in the front rank of the greatest money makers of to-day.

We will not over-propagate it; as soon as limit of healthy production is reached, our order book will be closed. Book is now open. All orders filled in rotation; bear in mind the importance of this fact. Send for complete description.

Price, $75 per 1000; $10 per 100; $2 per dozen.

Please Note: Stock for delivery prior to March 15th, all sold. Are now booking orders for that date and later.
Stock is going fast, don't delay.

We can also furnish first delivery, the following varieties, at introducers' prices: **Olympia, Mrs. Thos. W. Lawson, The Marquis, Ethel Crocker, Jas. Whitcomb Riley, Chicago** and **Estelle.**

H. WEBER & SONS, Oakland, Md.

Mention the Florists' Exchange when writing

THE NEW PINK CARNATION

MRS. "BERTRAM LIPPINCOTT"

(Originated and grown for the past four years by John Kuhn, Philadelphia, Pa.)

THE mere fact that this variety is a cross between "Daybreak" and "Scott" is a sufficient guarantee and should recommend it to every grower throughout the land as the **only** carnation that will be sure to yield good returns. Its pedigree, however, though much in its favor, is by no means its strongest point or recommendation. **"Mrs. Bertram Lippincott" is possessed of many good points** of its **own** and is being introduced upon **its own merits.** The meritorious points in its favor are:

FORM. The very acme of perfection. Full, well rounded, and double, with a calyx that never bursts.

COLOR. A soft, rich pink, a shade darker than Daybreak—a color that "takes" or sells at sight.

SIZE. 3 to 3¼ in. in ordinary soil—with chemical fertilizers this size can still be increased.

STEM. Of the Daybreak type, averaging from 2 to 2½ feet.

HABIT. Exceptionally strong and healthy. Has never been known to be a victim to rust or any other disease.

KEEPING QUALITIES. No other carnation can surpass it in this respect.

ITS STRONGEST POINT. It crops from the time it is housed until it is thrown out. No "between seasons," no "let up." In a word, it is the carnation you want to grow.

PRICES: $2.00 per doz.; 25 for $3.00; $10.00 per 100; $75.00 per 1000. 250 and over at 1000 rates.

STOCK READY NOW.

We control the whole stock of this valuable carnation. Orders will be filled in strict rotation as booked. Would be pleased to book your order.

Please look for exhibit of CUT BLOOMS at the Buffalo Carnation Show, February 15th and 16th.

Seeds, Bulbs, Plants, Etc.

Send for our Wholesale Catalogue of SEEDS, BULBS and SUPPLIES.

Cash with order.

CARL E. TAUBE, Trenton, N. J.
MERCER FLORAL CO.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade. . . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4 00 per 1000.

Cut Flower Prices.

Editor Florists' Exchange.

We read with interest Mr. Thorne's letter of protest as to your market quotations, in your issue of January 27, and think that it would be adding very considerably to the already difficult task of the commission salesman, to satisfy his shippers, if you were to publish (as Mr. Thorne advocates) the very top price for the very best goods, sold perhaps under favorable and exceptional circumstances. All salesmen know that there are few growers who ship such goods in such quantities, that enable them to keep their best buyers regularly supplied with the article that their trade requires, and thus command the best prices, and that most growers think their flowers are as good as the next; and when they read of prices far above that which their salesman is returning, then there is tronble, and nothing will convince them that they are being fairly dealt with.

If one of our shippers were to write you in the same strain as Mr. Thorne has done he could claim 20c. for fancy and 15c. for extra Bride and Bridesmaid for January 4; and 15c. for fancy and 14c. for extra for January 5 and 6, but he cannot get within 1c. and 1½c. on No. 1, and 1c. on No. 2 stock. So far as your reporter being in any way slipshod in his methods, we can bear testimony as to his carefulness in taking notes for reports, and we certainly think that any grower who is so very fortunate as to be getting more for his goods than your highest quotation should shake hands with himself, and keep his good luck to himself, and help his salesman very much by so doing, to satisfy his less fortunate shippers—and there are many such, unfortunately for themselves and the trade generally.

To further illustrate the salesman's difficulties we send you herewith a *bona fide* list for the three days in question, for four different lots of goods, which cannot do any harm now that the subject is under discussion; and it may perhaps do a little good, there being heaps of room for the "little good" in our "perfession." All these goods were received at the same time, graded under the same scale of grading; and all show on the respective slips as graded, and yet see the great difference in the prices realized, which were, high and low, really good prices for the stock they represent; and still the fact remains an extra is an extra, and so forth to the end.

MOORE HENTZ & NASH.

Klondyke Cosmos.

Editor Florists' Exchange.

Seedsmen and others who have tried this cosmos in the North, complain that it blooms too late to get the flowers there in the open air. It is evident that the variety is not well fixed in its early blooming habit. We had at this station quite a number of plants the past season. Some of them began to bloom when a few inches high and continued to flower profusely through the whole Summer; in fact, some plants bloomed themselves to death by September. Other plants grew to a height of 6 feet without a flower, but during October and November, and into December, till the frost stopped them, they were a mass of golden flowers. This late blooming section will only be valuable in the North, for taking into the greenhouse for flowering, and the plants will be valuable to florists for this purpose, for they lift very easily and will give an immense quantity of flowers that show better under gaslight than anything I know of.

The North Carolina Station will undertake the selection and development of the plant, as we feel sure that when properly rogued and separated into early and late blooming sorts the plant has a great value for the garden and the greenhouse. Its long stems and long keeping habit will make it of great value to the cut flower trade, as the flowers will add grace and lightness to the chrysanthemum flowers of the same period.

The work of improvement will be undertaken here in more lines than this, and we hope to add something of value in other lines for the florist. Early and profuse blooming in the Salvia splendens would be a disideratum, and we are working in that direction.

The experiment stations, as a rule, have paid too much attention to mere variety testing, when they, of all others, should work in the line of plant breeding. Plant breeding, both with vegetables and flowers, should have greater attention from station investigators who are required by law to disseminate information to cultivators of the soil. And this information and help is not confined to the farms altogether, but all cultivators have an equal right to have their interests studied at the stations. With increased facilities for doing this, the North Carolina Station hopes to do something, not only for the growers of vegetables for the market, but for the florists. Our climate gives us peculiar advantages with the late flowering plants, and as is well known, we are working in the line of producing the bulbs now imported so largely and with a good prospect for success. Of this we will have more to say later on.

W. F. MASSEY,
Horticulturist, N. C. Experiment Station, Raleigh, N. C.

PAMPHLETS RECEIVED.

JOURNAL OF THE NEW YORK BOTANICAL GARDEN Vol. 1, No. 1. Edited by Prof. D. T. Macdougal. This publication will appear monthly, and is issued free to all members of the Garden; to others, 10c. a copy; $1 a year. The January issue contains articles on The Museum Building, Co-operative Forestry, Etiolated Plants as Food; Mycorhizas of Orchids, colors, besides other contributions.

Chicago.

State of Trade.

There is no material change in this market as regards the price of flowers since my last notes, nor are roses yet much more in evidence. The market could easily stand a considerable increase to fill all wants, and yet not lower the price for best teas below $10, which, in spite of what a contemporary says on this matter in last week's issue, is a correct figure. One small retailer in this city will, if he sees a chance to corner, buy up good stock at market rates. These are allowed cold storage room in a wholesale house. Then comes along another retailer who must buy to fill an order. The flowers are shown him as for sale at at an advance of from $2 to $3 per 100, when there is an extraordinary demand, such as occurred last week for the funeral of P. D. Armour, Jr., thus causing now and again prices to be paid beyond market rates—and that is all there is to it. We, however, give the market price. Stock of roses, both of Beauty and tea, is certainly improving, but as yet there are too few of them, yet the retail trade, or shipping, will not warrant higher prices. Carnations are plentiful for all demands, with fair clearing out of stock. Bradt are much harder to move this year than last, owing to an increased supply; few sell beyond $3, often at $2. Crane, in scarlet, is also hard to move at $4; often at $3. Violets are abundant and low in price.

Florists' Club Meeting.

At the regular club meeting, February 2, W. A. Smits, J. A. Sikata, Ernst Rosen, Otto Bach, John Algots and Joseph Zwick were elected members. A communication was received from the Chicago Horticultural Society thanking the florists and the club for promised aid in connection with the success of the Fall flower shows. The committee on revision of constitution and by-laws reported, and after discussion the matter was laid over until next meeting and ordered made a special subject for final action. W. N. Rudd brought up the question of the club's making preparations for attending the S. A. F. Convention in New York next August. This matter was also laid over until next meeting, when a special call will be made to members in relation to it, as well as to that of the club's inviting the S. A. F. to hold its 1901 meeting in Chicago, when it will have been 14 years since the society met in this city. A committee was appointed, with power to act, to provide for a bowling tournament, when the ladies will be invited to attend.

J. A. Evans, of Richmond, made a few remarks, extending an invitation to the club to attend the Indiana florists' coming meeting on February 10, subsequently going with them to Cincinnati.

Jottings.

Mrs. A. E. McCrea has been appointed landscape gardener for Lincoln Park.

The George Witthold Floral Co. has a number of plants of the goose flower now in bloom in their palm house.

Henry Sieger's uncle, of the Singler Bros., and long connected with that establishment, died January 30, of dropsy.

James Hartshorne, of the Chicago Carnation Co., says the firm's sales of cuttings are away ahead of last year.

W. N. Rudd is off on a flying trip to New Orleans.

E. G. Eggerling, St. Louis, was a visitor this week. ESS.

A Realty Transfer.

PATERSON, N. J.—Elmer McCornac, the florist at Park avenue and East 33d street, has made an exchange of his property, perhaps best known as the "Chitty property," with Louis Dreyer, for his handsome brick and stone residence at the southeast corner of Broadway and East 26th street. This property consists of three and a half lots and the spacious dwelling. The McCornac property consists of a large frame dwelling, barn and the greenhouse plant, and between 45 and 50 lots. The Dreyer property was put in the deal at $35,000, and the McCornac property at $43,000. The parties in the deal will continue to occupy the properties exchanged until May 1, this arrangement having been made to enable Mr. McCornac to get out his stock of plants and flowers in the greenhouses. Mr. McCornac will seek less valuable land for his greenhouse plant.

Pittsburg.

Market News.

The florist's business has been moving along quietly, rather better than the same time last year. Funeral work has used up lots of stock. In spite of the changeable and severe weather flowers, so far, have been somewhat abundant, excepting roses, which were rather high priced and a little scarce for a time, but at present they are again plentiful, still a little high-priced. Beauty bring from $5 up per dozen, at retail: Bride and Bridesmaid, from $2 up for good stock; at wholesale, from $8 to $12 per 100. Carnations are abundant and the quality all that could be desired. Prices range from $1.50 up. In bulbous stock tulips are at their best. The Pittsburg Cut Flower Co. handled some very fine ones last week, the best seen so far. Valley is also good, and it seems strange that the demand for this choice bloom for general use is becoming smaller from year to year. Harrisii lilies, although not plentiful, are doing fairly well as regards quality and prices average about 15c. at wholesale. Wm. Lauch, who last year had the best success with Harrisii around here, is taking the lead this season; his blooms are fine and large with healthy foliage. The retail price holds up remarkably well, from $2.50 per dozen and higher; a better price than ever was paid for lilies at the same time of the year.

The News.

Chas. Harrison, who has been assistant superintendent of Schenley Park for many years, has been transferred to Highland Park as Superintendent of Construction. Mr. Harrison, who has been connected with the parks ever since their inception, is a practical worker and deserving of this promotion.

E. C. R.

Cleveland.

Trade Conditions Unchanged.

Trade conditions remain quite the same as at last writing; the shortage in good flowers continues, and all available stock finds a ready market. A considerable moderation in the weather within the past few days has resulted in an increased demand for cut flowers at retail, and very little stock is carried over from day to day. Wholesale dealers report a complete cleaning up each day, and growers find no difficulty in placing their entire cut. With the exception of a slight advance in carnations, prices remain the same as last reported; choice carnations bring $2.50 per 100, ordinary hold firm at $2, while extra and fancy reach $3 and $5. In roses, lower grades are a notch higher, and $4 is the lowest figure at this writing; choice blooms are quoted at $7 and $8, and are picked up quickly at these rates. Beauty is reported unusually scarce by dealers, and local growers are offering but limited quantities; some of the larger retailers find it a hard matter to secure enough suitable stock to meet requirements. Bulbous stock is coming in more freely than at any previous writing, and shows a great improvement in quality, Dutch hyacinths in particular; but on account of the limited quantity there is no established wholesale price on them; what few are in market fetch $2 a dozen over the retail counter. A few pot plants are offered and bring 25c. each for choice plants. Some very fine single tulips are seen, and these retail at 75c. per dozen. Most of the short-stem stock is used up in design work. Good quantities of Romans and Paper Whites are brought in, but there is no surplus. Harrisii, valley and violets show no change from former quotations.

Major Logan's Funeral.

Many very fine funeral pieces were sent from this city on Tuesday and Wednesday of this week to Youngstown, Ohio, for the funeral of Major John A. Logan. Smith & Fetters had the family order for flowers, and also had in charge the arrangement of all the flowers at the funeral.

Notes.

J. M. Gasser will leave the city in a day or two for a visit among growers in the East, returning by the way of Buffalo in time for the meeting of the Carnation Society.

John Barclay, representing J. C. Vaughan, Chicago and New York, spent a few days in this city last week.

Quite a number of local growers are making preparations to attend the carnation meeting at Buffalo, but up to this time the writer has not been able to ascertain the exact number who expect to go. G. A. T.

New York.

The Market.

Disagreeable weather has tended to keep the flower market somewhat uncertain this week. High-grade roses seem to be a little more plentiful and the values received for them have not changed from the prices obtained last week. Instances have been noted where 20c. and 18c. were asked for Bridesmaid of a special quality, but buyers refused them, and were not willing to go over the 15c. mark. No. 1's ranged from $5 to $8; No. 2's, $3 to $5. These figures speak for both Bride and Bridesmaid. American Beauty still fetch 60c. for the top grade, down to 8c. for No. 2's.

Carnations have met with a better demand, the standard grades especially maintaining more even values, few going below the dollar mark, as compared with last week.

Roman hyacinths and Paper White narcissus are coming in in quantities, more in proportion to the demand than they were, consequently the prices are not so variable. Tulips of excellent quality are to be seen at many of the commission houses, though the quantities received are not so large as prevailed one week ago. Double varieties realize 4c., singles $2 to $3 per 100, according to color. Daffodils fetch from $2 to $3, lily of the valley from $1.50 to $3. Callas and lilies remain practically the same as last quoted. Smilax is going better, there not being so much of it around.

There is no change in the prices of violets; it has been easier to make clearances owing to the mild weather, as the street peddlers have been able to dispose of large quantities.

In Brower's window, 23d street and Broadway, a beautiful bunch of wallflowers were to be seen one day this week.

Around Town.

Nikola Vallabach, who kept a retail store at 75 Avenue B., died recently, aged 37 years. His widow will continue the business.

Monday morning last the horse attached to C. A. Dard's wagon started on a run on 24th street without the assistance of a driver. The runaway was stopped, fortunately, before any damage was done.

At the Cut Flower Exchange, East 34th street, tulips, valley, narcissus and carnations are quite plentiful just now, but one has to be there pretty early in the morning to get first choice. Although the market hours are from 6 to 8 a. m., stock is usually cleared out pretty well by 7 a. m. Few roses are grown among the standholders of the Exchange, but Frank Millang (whose wholesale stand is on the same floor, just across the hallway) always has a supply and keeps open for business all day long.

James B. Neal, who some years ago ran a retail store on the Bowery, committed suicide by drinking carbolic acid Monday afternoon last, near the Obelisk in Central Park. The deceased had led a chequered career in the florist business, and had been a great sufferer from poor health. Theodore Lang gave him a few days' employment during the recent holidays; this, we believe, was the last work Neal did. He was 42 years old, and leaves a widow and one daughter.

Five members of the craft journeyed to Poughkeepsie Wednesday to participate in the Dutchess County Horticultural Society's annual dinner. They report having had an enjoyable time. Those who went were: W. F. Sheridan, C. B. Weathered, P. O'Mara, J. I. Donlan and W. J. Stewart.

The New York Florists' Club holds its regular monthly meeting Monday evening, corner 27th street and Broadway. Important business will be attended to; a large audience is requested.

A. S. Burns, Jr., has purchased three acres of ground at Springball, Rockland County, N. Y., including five greenhouses, four being filled with violets, and one, 200x20, with carnations, which are in fine shape; also a cottage built last year. He will build the coming Spring, but how much he cannot say yet, as he has only taken possession.

The firm of H. A. Stoothoff & Co., specialists in tobacco insecticides, has been dissolved, and the business will hereafter be carried on under the name of H. A. Stoothoff, at the new address, 116 West street.

Philadelphia.

Club Meeting.

There was a very good attendance at the meeting on Tuesday last, several new members were elected and some proposals received. The subject selected for the essay at the March meeting is "Begonias for Commercial Purposes," and it has been assigned to Edwin Lonsdale. John N. May read a paper on "What Has the Twentieth Century In Store for the Queen of Flowers;" and, while he did not keep to the title, many good points were brought out, and the paper was much appreciated. Following the reading of the paper came a good discussion on roses that became a debate between the grower and the retailer, and at times was quite lively. John Burton opened the ball by asking why it was that only four kinds of roses were now grown—Beauty, Bridesmaid, Bride and Meteor? There being only a very small demand for others, was it that flower buyers had become tired of artistic beauty in flowers, and only looked now for size, and wanted as much as possible for their money? Something is evidently wrong. Could some of the dealers explain this state of affairs, and the change that had occurred in the tastes of flower buyers? Robert Kift could not explain the matter, but he knew it was difficult to sell other varieties of roses. He had frequently had some flowers on hand, of other kinds, but the people passed them by. He thought that if the stores had good La France, these could be sold as readily as Bridesmaid, and he concluded by asking George Anderson why he had given up growing La France. The answer was, because the dealers refused to pay a profitable price for the flowers. In former times the figure asked was cheerfully given; now the grower has to accept what the dealer offers, and he could not grow La France at the prices stores were paying. A. B. Cartledge thought the stores could easily sell more varieties of roses if they could only get them. For instance, early in the season Pennock Bros. were receiving some good Perle, which were all sold; but finally they were compelled to stop taking orders, because the roses were no longer procurable. If growers would only give them more variety he was sure the public would buy. Mr. May said he must differ from the former speaker, as in his opinion the stores did not want a large variety. Now, when we have only four varieties, so to speak, many stores only have to buy, say, 100 roses each morning, 25 of each variety. Were they to carry four or five other varieties still, they must buy 25 of each. He had known dealers to turn customers away, saying no more variety could be had, when there were other sorts on the market. With the grower it was the price obtained. He knew one man growing good Perle, stem 18 inches, and yet this grower could not get over $3 per 100, and at that price he could not afford to grow them. The same thing applied to hybrids; the growers would be glad to send in more variety, but they must have a living profit.

Robert Kift said that now the store man, when wanting more than the four kinds of roses, was compelled to grow them himself, so to speak, by engaging a house and having that filled with varieties for his own trade.

Edwin Lonsdale agreed with Mr. May. It was right, the retailer must grow other varieties himself, for he would not take them steadily every day from the grower. The grower cannot afford to plant a house of roses, to supply the stores with a few once or twice a week, as they saw fit to purchase.

Robert Craig thought more effort was wanted on the part of the retailer. Surely the public would buy other varieties if these were placed before them in a proper manner. Take Bon Silene, or similar old varieties, and show the public how dainty and lovely they were; use more effort, and sales could be made. The Christian denominations had solved this problem; they pay one man $10,000 a year, because he can better explain the Gospel than a $6 a week man. Educate the public and more varieties would be used.

Benj. Durfee said let three growers combine and open a store, and not grow one of the four roses now mostly grown; but raise other varieties, and they would knock the life out of the other stores.

Joseph Heacock said a grower would plant such varieties as paid him best. He did, and he knew others would do the same. He now grew four varieties; next year he would drop one of these and grow but a few of two others. Beauty paid him best, and that was why he grew this kind extensively.

Benj. Durfee being asked as to the popularity of Golden Gate said it was increasing in sales everywhere but around this city, and he thought the trouble was that our growers cut the flowers too soon; the blooms require to ripen more on the plant, and if cut same as other varieties cannot be grown successfully by any one.

And so while the discussion went pro and con it is evident the grower is ready to raise whatever he can obtain a fair living profit for. Many good points were brought out that will cause some thinking. All went home glad they had attended the meeting, and feeling thankful to Mr. May for having brought out such a good and interesting discussion.

DAVID RUST.

Bowling Tournament.

FLATBUSH-NEW YORK-HUDSON COUNTY, N. Y.

On the alleys of the Hudson County team, situated at the corner of Summit avenue and Paterson Plank Road, West Hoboken, this triangular match was commenced at 6 o'clock Wednesday evening. The New Yorkers took their own balls with them, and this no doubt gave them a slight advantage, as those provided at the alleys were very much worn, and but illy met the requirements of the Flatbushites. Traendly and Riley sent the first balls of the game down the alleys amid breathless silence, but the first frame had hardly been finished before the lungs of the rooters were working as hard as the muscles of the bowlers. Several fouls were scored during this first game; Raynor got his thumb too far in the ball and the ball struck the ceiling instead of the pins, and Bunyard got down on his hands and knees in his anxiety to make a strike. The game finished with Flatbush victorious by 13 pins. This was a mighty close shave, yet it was a victory and was received with great cheers.

A light lunch followed for the next 15 minutes, when the game was again called, and the Hobokenites stepped to the front to meet the Flatbush men. The latter team was again victorious by 135 pins. It then remained for the New Yorkers and the Hoboken team to play the last game of the evening, and this was the liveliest one of all. Up to the seventh frame the Hoboken team had the lead, but the indomitable spirit shown when playing an uphill game, that the New Yorkers are noted for, was brought to bear to great advantage, and they managed to beat their opponents by 20 pins. This gives New York one victory and Flatbush two.

A bountiful hot supper was served at the close of the game. Traendly was called upon for a speech, but there are times in a man's life when he is too full of his subject for utterance, and the New York captain found himself in that dilemma.

The second series in the tournament will be played on the New York alleys, corner 57th and Sixth avenue, next Monday afternoon, the 12th inst., beginning at 3 o'clock.

As the under-mentioned scores show, Flatbush is just a little ahead of the game. It is not the club winning the most games however, but the one having the highest number of pins down through the whole series that will be considered the victor.

The officers of the New York Bowling Club have engaged the extra set of alleys at their headquarters, so that visitors who attend the tournament may have the privilege of rolling among themselves if they so desire; this being a legal holiday (Monday) visitors will no doubt be numerous.

Utica, N. Y.

Saturday week a party of florists from Syracuse visited this city and was entertained by Utica florists. An elaborate collation was served, and toasts were responded to by many of those present. Later in the evening the florists from Syracuse and their local brethren engaged in a bowling contest at the Maennerchor Bowling Alleys. After a close and exciting game the Uticans won by a small margin. Those present from Syracuse were R. H. C. Bard, David Campbell, George Ham, Richard Davis, Charles A. Fox, W. B. Dow, Joseph Huller, Henry Burt and Charles Smiley. The Utica florists will visit Syracuse in the near future.

Montreal.

Trade Notes.

Business continues very flat, but owing to dull weather prevailing stock of all sorts has shortened up considerably. About the only things, at least in several quarters, that are not dragging heavily are red carnations and daffodils, the latter of which are now coming in freely and of good quality. But there is again this year a marked deterioration in the type. Poeticus, also of very good quality, are arriving, and a few tulips are seen, but the quality is not very high.

The Banquet.

The annual dinner of the club, held on Monday night, 29th ultimo, was one of the best and most largely attended that the club has ever held, 50 members and friends sitting down to the excellent repast spread by Host McHugh, of the Lake View Hotel, Lachine. The arrangements in the hands of Charles Smith were well night perfect, the table decoration especially deserving mention. The place of honor was filled by a white cyclamen, from the Forest and Stream Club, that was beyond description. By unanimous consent the dinner was turned into a regular meeting to award a first-class certificate of merit to Tom McHugh for this specimen.

Among other noticeable contributions, Smith's pink obconicas were as magnificent in coloring as they were large in size. Retiring President Alfred Wilshire occupied the chair, supported on the right by Acting Mayor of Lachine Rothwell, the Mayor, A. Decarrie, Q. C., sending a letter expressing his deep regret that a prior engagement prevented his being present. Several of the leading men of Lachine also occupied seats on the right of the president, while on the immediate left was President Robinson, Secretary Horobin and W. Ewing.

The toast list was a long one, and was enthusiastically received. "The Queen," responded to by Frank Bennett, with "Rule Britiaunia," and Willie Hall with "Soldiers of the Queen," called forth a perfect storm of applause; "The Club and Sister Societies," was responded to by John Walsh, and Acting Mayor Rothwell, president for the Lachine Horticultural Society, respectively; Mr. Bowles, secretary-treasurer, for the Montreal Horticultural Society and Fruit Growers' Association of the Province of Quebec; Joseph Bennett, for the Society of American Florists, and in the regretable absence of President McKenna, also for the Canadian Horticultural Society; W. Ewing, for the Seed Trade and Agricultural Society. "Growers, Retailers and Gardeners," was responded to by Walter Wilshire with a neat speech; Alfred C. Wilshire, with "The Absent Minded Beggar," which, like all other patriotic pieces, received rounds of applause, and Mr. Whitney, for the private gardeners. "Our Incoming Officers" was also excellently received.

The song by Mr. Landsdell, the gentleman acting as pianist, "Here's to You (hic), John Brown," brought down the house, as also did recitations by the same gentleman, Mr. Vrengde and others. Tom McHugh's "Opening Time," in response to awarding the certificate of merit for his specimen cyclamen, was received in the usual way. Several very feeling references were made to the severe loss that not only the club, but horticulture and agriculture generally, had sustained in the sudden death of W. D. Ogilvie.

A special car leaving Lachine at 1 a.m. brought the members back to the city from what was undoubtedly the most successful dinner yet held by the club.

B.

Toronto.

The News.

Miss Browne, who has been connected with Dunlop's King street store ever since it was opened, was married last week. We wish her long life and happiness.

I am much pleased to be able to report that Mrs. Dunlop is again at home and doing well after a severe operation at the hospital.

J. McHutchison, representing Aug. Rhotert, was in the city this week.

Business still continues fairly good, with stock generally a little more plentiful and of better quality than last week. We have had a week of rather cold weather, and that has made violets scarcer than before. The roses coming in are of much better quality. Some fine tulips are arriving, and the demand for good ones is quite lively. Daffodils and Princeps and Trumpet Major narcissi are selling freely. Some very nice freesia also finds a good market. T. M.

Ottawa.

Business for the past week has been good, owing to the opening of Parliament and the Queen's drawing-room on Saturday. The latter occasion is a great day for the florist, as all the prominent ladies who go to make their bow to the Queen's representative, Lady Minto, carry elaborate bouquets. On the present occasion the demand was up to former years, and prices and quality better, violets, valley, roses, carnations and orchids being in demand. The florists were well up in everything, excepting roses, none being procurable in Canada, and New York having to furnish the shortage. Funeral work has also been very plentiful the past week. Crops are looking good. Violets especially are abundant. Valley this year seems extra good. Carnations are in excellent condition and flowers fairly plentiful. Roses are of fair quality but scarce.

We are now eagerly awaiting the meeting of the carnationists, and hope they will furnish us with recommendations that will enable us to order just the right thing, instead of having really to experiment ourselves and suffer disappointment, which lawfully belong to the seedling raising business. E.

St. Paul.

Market News.

Taken as a whole the Winter has been mild and open, which condition has not been conducive to the retail trade in any line.

Immediately following the holidays there was a big cut of roses, and prices dropped for a few days. But all roses are now "off crop" and very scarce, Beauty being remarkably hard to obtain. Carnations, however, are quite plentiful and of good quality. Violets, which for a time were very scarce, are now more plentiful, the first good crop of the season now being on the plants. Bulbous stock is very much in evidence and sells fairly well. But very few Dutch bulbs are being forced in comparison with former years. Romans and Paper Whites are still the mainstay for funeral work. Harrisii are looking remarkably free from disease, and are of much sturdier growth than heretofore.

Building News.

Some building has been projected for another season, though the glass men seem quite unable to accept orders at this time.

R. C. Seeger contemplates extensive additions to his range. He is cutting some very choice roses this season.

L. L. May contemplates the erection of an extensive range of modern houses on his farm several miles from the city. These will be devoted entirely to cut flowers for the retail trade.

Jottings.

Quite a good deal of club root has developed in some of the plants in this vicinity. Opinion, which has been divided, is not quite general that this disease comes in the soil and is not hereditary in the plant. Carnation rust seems to be a thing of the past, though more or less of it is still seen here.

Recent visitors: A. L. Vaughan, representing Hagemann & Meyer, and Robert Spero, with Chas. Zinn & Co., baskets, etc., New York City. VERITAS.

Oceanic, N. J.

At the regular meeting of the Monmouth County Horticultural Society one proposal for membership was received. It was decided to hold the third annual ball on February 22. A committee of five was appointed to take the matter in hand. B.

Boston.

The Market.

Business has been slightly improved by a week of good seasonable weather. The cold snap has had a little effect on the quantities of bloom; on Monday morning, at the market, there were not nearly so many good flowers as usual, but no very apparent scarcity.

American Beauty are in good supply, but only of fair quality The better grades do fairly well, at $25 to $35 a 100, with smaller grades down to $2 a 100. Bride and Bridesmaid are in supply about adequate to satisfy the demand, which is not over heavy.

Carnations still continue quite plentiful, though there is no overstock of the finer grades. Good white ones have been quite scarce.

Bulbons stock becomes more plentiful daily. Trumpets and Von Sion are in good supply and do well at $2.50 and $3 per 100 for best stock. Paper Whites are very plentiful, and tulips are coming in in greater variety and of better quality. Roman hyacinths, too, are very abundant. Valley holds on at about the same prices. Mignonette is more plentiful and does well at $1.50 to $2 a 100, extra grades making $3 and $4.

There is now a good supply of violets which average from 50c. to 75c. a 100; a few extras fetching $1.

The News.

President Wood, S. A. F. O. H., who is cruising in the South, writes from Palm Beach, Florida, in glowing terms of the climate and surroundings of that place.

Welch Bros. are receiving daily shipments of fancy carnations of exceptional quality; especially is this true of a lot of Daybreak.

Mrs. Rogers, formerly at the Adams House, will open a retail store near the foot of Summer street, very close to the South Station.

Mr. Scannell, for a time with M. B. Bunker, at the Parker House, is to return to the employ of Wm. E. Doyle.

Mass. Horticultural Society.

A very fine show was held at Horticultural Hall, on Saturday last, the orchids being exceptionally good. Mrs. J. L. Gardner sent in about a dozen plants of Primula sinensis alba florepleno, which were excellent. James Brydon, gardener to Mr. Bayard Thayer, exhibited a finely grown plant of Cattleya Trianæ, with about 25 fine blooms. E. O. Orpet, gardener to Mr. E. V. R. Thayer, made the largest exhibit of cut orchid flowers, including many varieties of Cattleya Trianæ, lælias, etc. John Mutch, gardener to James E. Rothwell, Esq., made a smaller display, also good, including a fine lot of phalænopsis. Other very nice orchid exhibits were made by Mrs. A. W. Spencer and H. A. Wheeler. Among the violets, too, some superb flowers were shown; James Comley had, besides the better known varieties, Lady Hume Campbell and La France, a nice lot of the new Luxonne. Morris F. Comley showed a collection, including Imperial, Lady Campbell and Marie Louise in double, and California and Princess of Wales in single. James Comley also had camellias, a few carnations, and rhododendrons. The only carnations entered for prizes were from M. A. Patten; they were very fine. Mrs. E. M. Gill showed carnations and freesia of good quality. A fine vase of Acacia pubescens was exhibited by John L. Bard, who also showed a dish of oranges grown at his place. F. J. N.

Pleasant Hill, Mo.

From flowers to music is not so very far, but in all probability the first florist to construct an Opera House is G. M. Kellogg, of this town. Mr. Kellogg is building a $15,000 Opera House, which will also contain a reading room and library. This enterprise is in addition to the management of greenhouses containing 140,000 square feet of glass, and a store in Kansas City. Mr. Kellogg may be truly styled the progressive florist of the Southwest. E.

Paterson, N. J.

The priests in two of the Catholic churches have begun a crusade against flowers at funerals, and their remarks reported in the public press of the city have not added to the volume of business done by the retail florists. E.

Buffalo.

Trade Notes.

Business is a bit uneven. Sunday saw the beginning of almost a rush of funeral work, and with which some stores were crowded. Tuesday saw all the white and light blooms available quickly picked up with not enough to go around.

Adams is renovating the interior of his store, work being temporarily done in adjoining quarters.

Palmer & Son now show fine La Reine tulips and daffodils, while a few rhododendrons, the acme of fine forcing, are noticeable.

Recent visitors included: Arnold Ringier, of Chicago; E. R. Frey, Rochester; W. M. Latt, Warren, Pa., and Thos. Mansfield, Lockport, N. Y.

VIDI.

Cincinnati.

Market Items.

Stock is still scarce and flowers of all kinds are in great demand. Funeral pieces galore are pouring into Covington, Ky., from all points in that state and in Ohio, for the funeral of the late Senator Goebel.

Roses still remain unusually scarce, while carnations are not a glut by any means.

News Notes.

February 10 is our rose meeting, and we expect quite a delegation of florists from Indianapolis, Richmond and New Castle, Ind. Look out for some phenomenal bowling scores!

The residence of James Allan was broken into last week and about $75 worth of goods stolen. Fortunately the thieves were captured and are now in jail awaiting trial. E. G. GILLETT.

St. Louis.

Market Notes.

Anything in the way of interesting news is very scarce from this location. Complaint of dull business is general, and in some cases bitter. Wholesale men sell out clean, but what they get in would be only a drop in the bucket if there were any activity in the retail line. Best roses bring as high as 10c. down to 5c. for common. Carnations come in quite freely, going at about 2c. to 4c.; some are very poor, selling as low as 1½c. Violets are firm, at 40c. per 100 for California. Harrisii bring 12c. to 15c.; Von Sion, 4c. Very few tulips are in this market so far. Best freesia is worth 4c. Romans and Paper Whites, reached 4c., but dropped again to 2c. and 3c. There are no Beauty on the market worth speaking about.

The Winter here, so far, has been comparatively mild; at no time has zero been reached, with a considerable shortage of rainfall to the inconvenience of those depending on ponds for a water supply. Notwithstanding the open, mild Winter, roses outside have been killed badly, probably owing to the almost growing weather we had late in the Fall, then suddenly turning to about the coldest spell of the Winter.

Notes.

There are some elegant plants of cyclamen about town grown by A. Jablonsky, of Wellston, who also is very successful with the Alaska carnation. As grown by him it is still a white hard to beat.

Geo. Windler is producing Jubilee that would make some of the new reds take off their hats to them. If this variety were a better producer and keeper we would not be in a hurry to change it for any other red.

The Plant Seed Co. and Shisler-Corneli Seed Co. were caught in a disastrous fire Sunday morning that swept over three blocks of business houses, destroying $3,000,000 worth of property. The Plant Co.'s place was partially damaged by water only; the amount could not be estimated at present writing. A large part of their stock was in warehouses, and all their garden seeds were uninjured, consequently they can go on with business and fill all orders with first quality seeds as usual. Loss is fully covered. Shisler-Corneli's stock was a total loss, amounting to between thirty-five and forty thousand dollars. They have opened up an office and will resume business at once, having large stocks in transit. They were also fully insured.

C. C. S.

Denver, Colo.

Isaac Stephenson, for years connected with the Gallup establishment here, is a very sick man.

Rochester, N. Y.

By the combined action of the retailers the last Mayor was finally induced to withhold a license from flower vendors, and the Greeks disappeared from the streets for a few months. With a change of administration they have again appeared, and their show-case bore a card, the other day, with the sign "Sweet Senate Violets, 25c. a bunch."

G. A., JR.

Syracuse, N. Y.

The eleventh annual meeting of the Central New York Horticultural Society was held January 30. President Betts, in his address, hoped the way would be open for the society to give a flower and fruit exhibition in November next. The reports of the secretary and treasurer showed the society to be in a prosperous condition.

The following officers were elected: President, S. T. Betts; vice-presidents, E. A. Powell, A. D. Perry, J. William Smith, L. E. Marquisee, C. W. Snow and A. C. Chase; secretary, N. H. Chapman; trasurer, David Campbell. Members of the Executive Committee for three years, S. W. Rose and C. A. Fox. It was decided that the Executive Committee shall arrange for lectures on horticulture during February, March, April and May, one lecture to take place each month. The principal feature of the evening's meeting was an address on "How Not to Do It," by Grove P. Rawson.

The Water Garden

BY WILLIAM TRICKER.

This work contains nine beautiful plates, eighteen full page descriptive views of leading Water Gardens and Ponds, and numerous smaller pictures prepared with special reference to this work. On heavy enamelled paper. Elegantly bound. Large octavo.

PRICE, $2.00.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of grounds, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details. Prospectus and Reviews free on application.

A. T. DE LA MARE PTG. & PUB. CO. LTD., P. O. Box 1697, New York City.

RESIDENTIAL SITES AND ENVIRONMENTS

IN THREE PARTS:

Part I—Residential Sites

Part II—Planting and Introduction to Undulations

Part III—Villa Gardens and Public Grounds

All contained in One Royal Quarto Volume. Full Cloth. Plain Edges $2.50; Full Gilt, $3.00.

Illustrated with over fifty Plans, Diagrams and Illustrations, with lucid descriptive text and all necessary information for the development of Home and Public Grounds, showing principles and adaptations of planting suitable to all requirements from Villa to Mansion. Superbly printed, in new clear type, on the finest wood-cut paper.

For Sale By

A. T. DE LA MARE PTG. & PUB. CO. Ltd., P. O. Box 1697, New York.

NEW YORK HERALD The author is an expert on his subject, hence the advice which he gives may be regarded as authoritative. * * * In every way the book has been made suitable for those who are interested in landscape gardening.

BOSTON GLOBE The main subject of gently assisting nature, rather than denuding and mutilating, * * * is the underlying principle of this admirably printed and illustrated volume.

FLORISTS' EXCHANGE The author has imparted the knowledge he has acquired, during many years of careful and painstaking study, in a clear and succinct way that cannot fail to be of immense service to all concerned.

COUNTRY GENTLEMAN An elaborate volume, * * * illustrated by large plans of house grounds, gardens and parks, showing not only the general scheme of arrangement, but the positions of the various trees and shrubs adapted to harmonious collocation.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,

Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 7. NEW YORK, FEBRUARY 17, 1900. One Dollar Per Year.

CARNATIONS.

We offer Strong-Rooted Cuttings of ALL THE NOVELTIES OF THE SEASON and OTHER EXTRA CHOICE SORTS.

Mrs. Thomas W. Lawson. The celebrated $30,000 Carnation.
$14.00 per 100; $120.00 per 1000.

Olympia. A grand, fancy Carnation. While fully as large as MRS. GEORGE M. BRADT, or larger, it is said to produce 25 per cent. more flowers than that popular variety.
$12.00 per 100; $100.00 per 1000.

The Marquis. This Carnation has had a phenomenal sale, and is without question the finest light-pink Carnation introduced up to this time. Those who have not ordered should place order without delay, if they wish early delivery. We have sold more of this variety than of all the others combined, which is an index of the esteem in which it is held.
$10.00 per 100; $75.00 per 1000.

Ethel Crocker. One of the best all-round pink Carnations ever offered to the trade.
$10.00 per 100; $75.00 per 1000.

Genevieve Lord. As a Carnation for retailing nothing can excel this variety, on account of its beautiful color—light silvery pink—and fine stem. One of the very finest introductions of the season.
$10.00 per 100; $75.00 per 1000.

We can also supply all the best of the recent NOVELTIES and STANDARD SORTS as follows:—

	Per 100	Per 1000
G. H. Crane, General Macco	$6 00	$50 00
General Gomez, Mrs. George M. Bradt	5 00	40 00
White Cloud, Gold Nugget, Melba	4 00	30 00
Mrs. James Dean, Mrs. Frances Joost, John Young, New York, Jubilee	3 00	20 00
Mayor Pingree, Flora Hill	2 00	15 00

Thos. F. Galvin

124 Tremont St., BOSTON, MASS.

NEW CARNATIONS

We are now ready to take orders for Strong-Rooted Cuttings.

Mrs. James Dean Color clear silvery pink, delicate and chaste, yet brilliant and effective under all lights. Flower large, very full as season advances, and borne on long wiry stem calyx perfect. Habit similar to Scott, with the same healthy glaucous foliage as Scott. About 6 inches taller than Scott. A free bloomer, but spreads its crop evenly over the blooming season. There is no healthier carnation grown, and we believe it to be the ideal light pink. The merit of this variety is conceded alike by growers, dealers and the flower-buying public. Has proved a prize-winner whenever shown this season as well as last. A fine, healthy carnation that every grower ought to succeed with. One of our favorites. To grow this variety to advantage take strong February struck cuttings; pot in 2-inch pots, shift to 3-inch as soon as needed, plant in field as early as is safe, pinch back every week only such shoots as distinctly show bud formation. Lift August 1st to 10th. Dont pinch back after lifting, save such shoots as show premature, short-stemmed buds, give lots of air and a temperature of 52 to 54 degrees at night. Syringe thoroughly once in 10 days with fine spray and strong pressure. Treated in this way it commences flowering with us October 1st and continues constantly till August. Giving nearly as many blooms as Scott. This is one of the best selling varieties grown, and we are not yet prepared to replace it by any variety of its class yet in sight **$3.00 per 100; $25.00 per 1000.**

White Cloud White, habit same as Daybreak, but taller, stronger, more vigorous and an earlier, freer bloomer. It commences blooming among the earliest, and throws a fine, long, stiff stem from the beginning and continues its crop through the season. Flower large, excellent form and finish, good substance and very full. Strong, fruity fragrance. Calyx strong and holds the full bloom well in hand. We consider this the best white we have ever grown. Our record of blooms cut the past season show it to be the most productive of all white carnations. This is distinctively a winter bloomer, and in the early fall months if fed highly before the plants are well established it will give many deformed buds. It needs to be well established and the cool weather of winter to bring it to perfection. The grandest white yet grown. **$4.00 per 100; $30.00 per 1000.**

Mrs. Geo. M. Bradt The most distinct, largest flower and most sought after fancy carnation yet out, blooms always sold ahead at the highest prices, ranging from $1 to $2 per dozen wholesale on the New York market; color clear white, heavily edged, and striped with bright scarlet; flowers enormous, very full, high rounded center; habit strong, vigorous, but dwarf enough for side benches; constant bloomer from early to late; unquestionably the best of all variegated carnations; this variety does not produce cuttings freely, consequently stock will always be scarce and high. **$5.00 per 100; $40.00 per 1000.**

25 at 100 rate; 250 at 1000 rate.

We have fine, large, healthy stocks, and will deliver only fine, strong, well-rooted cuttings.

Send your Orders Early.

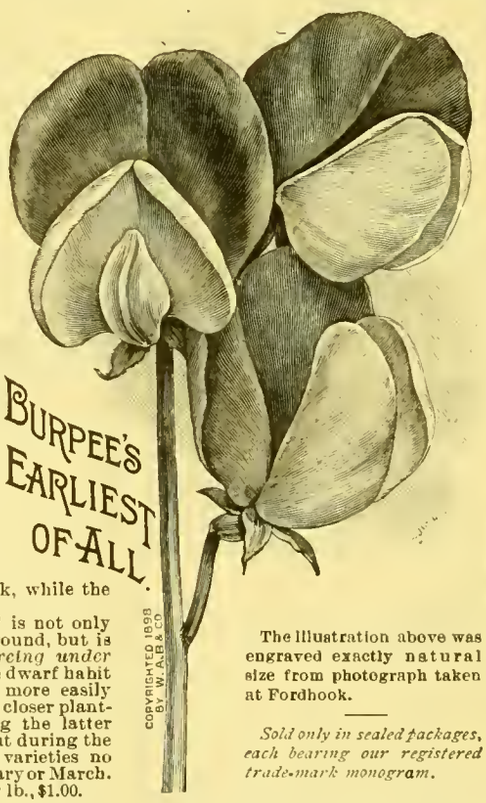
HELLER & CO., Montclair, N. J.

Sweet Pea—Burpee's "EARLIEST OF ALL."

Notwithstanding their dwarf habit and neat, slender foliage, the plants are of vigorous growth and come into bloom **always ten days to two weeks in advance of the Extra Early Blanche Ferry**, which has been heretofore a week ahead of all all other varieties. Growing only two feet in height, the plants do not require the support of brush or trellis. As an illustration of its extremely early-flowering habit, we would state that October 15th we had plants in fine bloom *from seed gathered from our spring planting* and sown during the latter part of August. A constant succession of bloom may be had from June until November by making sowings about one month apart. Its extremely early-flowering habit makes it most satisfactory for the Southern States, as it may be easily had in full bloom before the hot summer weather. The flowers are as large as those of the regular strains of *Blanche Ferry*, and have long, stout stems, making them entirely satisfactory for cutting; they are borne in close clusters of three, all facing one way. The standards are a bright, rich pink, while the wings are nearly pure white.

BURPEE'S "EARLIEST OF ALL" is not only the earliest to bloom in open ground, but is also *the most desirable for forcing under glass for winter cut flowers.* The dwarf habit of this variety renders it much more easily grown on the benches, admits of closer planting, and from seed sown during the latter part of August blooms may be cut during the holidays, while with the taller varieties no blooms could be had before February or March.

Per oz., 10c.; per ¼ lb., 30c; per lb., $1.00.



The illustration above was engraved exactly natural size from photograph taken at Fordhook.

Sold only in sealed packages, each bearing our registered trade-mark monogram.

Burpee's "Blue List."

Our Wholesale Price List of Seeds in Larger Quantities is mailed free on application to GARDENERS AND FLORISTS.

IF YOU PLANT FOR PROFIT you should write at once for this Wholesale List, BUT we cannot send it to private planters, even if requested to do so. ☞ The prices quoted in THE FARM ANNUAL are as low as we can afford on retail orders. Market Gardeners, canning establishments and Florists requiring large quantities of seeds are entitled to lower prices wherever possible.

A NEW FEATURE in Burpee's "BLUE LIST" that will be of special interest to growers who plant for profit, is the "plain talks" we give at the head of every department, as to just the best varieties for different purposes.

Boston.

Business continues about the same as reported the past two weeks, with a little extra stir to-day (Wednesday), Valentine's Day. The demand was, however, confined principally to violets, and great quantities of them were disposed of.

The weather of late has been entirely against flowers, and has caused a shortening up on most, especially roses, and also a little scarcity of good carnations.

Good roses of all kinds have been shorter this week than any time since just after Christmas. Beauty have not been very fine, as a general rule, but do fairly well at prices running from $4 to $25 a 100, extras making $35 a 100. Meteors are of fairly good quality, but not over plentiful, and make $3 to $12.50 a 100, the latter price being for good grades. There is, however, a limited supply of extra quality Meteors which make better prices. Bride and Bridesmaid, too, are shortening up considerably, and do very well at good prices. Bride make from $4 to $16 a 100 in different grades, while Bridesmaid make about the same prices, the finer grade making $20 a 100.

In carnations, fine white ones and Daybreak of best quality are scarce and do well, averaging $2.50 to $3 a 100. The other ordinary varieties are more plentiful, and make from $1 to $2 a 100. Fancies are in supply about sufficient to meet the demand, and Eldorado and other yellow sorts making $3 a 100; Bradt makes $4.

Bulbous stock is still increasing and values are proportionately decreasing. In narcissus, Von Sions and Trumpets are very plentiful, and do well at $1.50 to $2 a 100. Princeps are not quite so plentiful as yet and make better prices, going at $2.50 to $3 a 100, the latter for choicest stock. The small Campernelle makes 75c. to $1 a 100, and moves well. Paper Whites are very draggy, at 75c. to $1 a 100. Tulips are in great variety; Proserpine, Due van Thol, Keizerskroon, Yellow Prince, Lorraine, etc., being very plentiful, and, as a rule, of very good quality. Prices average on these varieties about $2.50 to $3 a 100. Dutch hyacinths, too, in the different colors of white, pink, purple, lavender, etc., add to the great quantity of bulbous stock now on the market. Hyacinths make $4 a 100 when of best quality, smaller grades going for $3. Roman hyacinths are very plentiful, at $1 to $1.25 a 100. Valley continues in good supply, at usual prices.

Lilies are becoming quite plentiful, especially Harrisii, which make $6 to $8 a 100. Callas are scarce and go as high as $10. There are a few candidums about, which do well to make up a variety, at $8 per 100. Mignonette is plentiful, at $2 to $3.50 for best grades, smaller ones making $1 and $1.50. Freesia are plentiful, at usual prices.

Violets continue in great supply and make from 50c. to 75c. a 100. A limited supply of extras go for $1 a 100.

Here and There.

J. T. Butterworth, of South Framingham, is cutting a fine lot of bulbous stock in great varieties, and disposes of quantities of it daily.

Wm. Nicholson is bringing in some stunning fine carnations—the finest, in fact, brought in to the market. His house of Daybreak is in excellent condition, as is also a house of fancy sorts.

This Saturday (February 17), at Horticultural Hall, Mr. S. D. Willard, Geneva, N. Y., lectures on "The Future Outlook For the Fruit Grower."

The following party left Boston Wednesday afternoon for Buffalo, N. Y., to attend the convention of the American Carnation Society: William Nicholson, M. A. Patten, Donald Carmichael, E. N. Pierce, Peter Fisher, William Spillsbury, S. Goddard, A. H. Lang, and Mr. Buxton.

Mr. William H. Elliott was taken to the hospital on Monday, to undergo an operation for appendicitis, with which he has been troubled for some time.

Lawrence Cotter has been confined to his home since last Saturday with quite a severe cold.

The sympathy of his many friends in the craft is extended to Mr. Fred C. Becker in the bereavement sustained by the loss of his father, a short sketch of whose life is found in this paper.

F. J. Norton.

Dundee Lake, N. J.

Higgins, the florist, had a boiler broken so bad as to be beyond repair. He is keeping the frost out of his houses with the help of stoves.

Brooklyn, N. Y.

The wholesale business of this city is again confined to but two establishments. For a few months there were three, but the firm of Perleman & Goldgarb, which conducted a wholesale house in Boerum place, have gone out of business.

Trade in general is good, stock of all kinds being readily disposed off.

H. W. Wipperman, 1389 Atlantic avenue, decorated the Union League Club rooms in grand style on the 8th inst. The occasion was the reception and dinner given by the club in honor of Admiral and Mrs. Dewey. The local press, in speaking of the decorations, said they eclipsed any of the fine displays that have hitherto been made there.

At the Emerald ball, held in the Academy of Music, on the 7th inst., Jas. Mallon's Sons put in a very pretty decoration. Besides palms and smilax in quantities, many flowering plants were used. Admiral and Mrs. Dewey occupied one of the boxes, over which the Admiral's flag, in immortelles, was to be seen.

Washington, D. C.

Mr. William Crawford, for many years with the American Rose Co., has started business for himself in a newly built store at the corner of 9th street and Grant place.

Small & Sons did an attractive piece of work for a luncheon given this week by Mrs. General Bates. On the centers of the two tables were heart-shaped pieces, about 6 inches high and 3 feet long, composed of maidenhair and small bunches of white and yellow daisies. Over each piece were three crossed arches of the same materials, standing about 2½ feet high. In the center of each and under the arches stood a golden figure of Cupid, holding a bunch of yellow ribbons, each ribbon being attached to a corsage bouquet at each plate. The flowers consisted of white and yellow Marguerites, tied with a bow of yellow satin ribbon.

O.

Springfield, O.

The Florists' Association met February 5 and organized. Only the catalogue houses are represented in the organization. The following officers were elected: President, John M. Good; vice-president, David McGregor; secretary, George H. Mellen; treasurer, Charles Schmidt. Executive Committee—George H. Mellen, Charles Schmidt and John A. Doyle.

Detroit.

There is a movement on foot in this city for the formation of a stock company, for the purpose of handling cut flowers on commission, together with a full line of florists' supplies, etc.

Wm. Dilger will be manager, and it is proposed to solicit consignments of cut flowers from the surrounding towns, and also orders for same. It is thought by the promoters that the undertaking will be a success.

PAMPHLETS RECEIVED.

Missouri Botanical Garden, St. Louis.—Eleventh Annual Report, contains, among other interesting papers, one on "Diseases of Taxodium and Libocedrus," and an exhaustive paper on Euphorbia, Section Tithymalus. Profusely illustrated.

Illustrated Catalogue of Economic Plants, Tropical Fruits and Trees in the Parc Leopo Co., Brussels, with many beautiful illustrations.

CALENDARS RECEIVED.

J. Gammage & Sons, London, Canada.—A large mercantile calendar with heading lithographed in colors, and views showing tasty store interior, interior view of palm house, also bird's-eye view of their range of greenhouses. This calendar is sure to be valued by all favored with a copy, and is as good an example of permanent valuable advertising as we know of.

The McCormick Harvesting Machine Co., Chicago.—The illustration, in color, represents an American scout in the Philippines, and the calendar bears the motto "Always at the Front," typifying that of the firm itself.

NOTES BY THE WAY.

Burlington, Vt.—John Wilson has had the best results this season with Lady Campbell violets carried over in the house; the plants seem to have made less runners, producing a larger crop of bloom. Business thus far has been very satisfactory.

Concord, N. H.—With the thermometer ranging 10 to 20 degrees below zero business is in sympathy, but such a condition will not last long, and W. M. Colby anticipates a return to the busy times preceding this cold snap. G. J. Benedict has plans for an additional house for general stock. W. S. Wilson reports a good season, and now that he has the houses of the late John Montgomery, at Wellesley, to draw upon, his business has much improved. His grower, W. P. Morris, shipped some of the finest Bride and Bridesmaid seen in the Boston market around the holidays.

Manchester, N. H.—A. G. Hood is the proud sire of a lusty heir and pauses amid busy moments to receive congratulations. Even his fine batch of seedling carnations seems to impart a more vigorous tenor, but Theo. Egger, the grower, assures me 'tis the result of many spare moments devoted to their care.

Nashua, N. H.—The finest lot of Bradt I have yet seen are on the benches at G. E. Buxton's—free, clean, absolutely perfect. Another house, 16x80 feet, Lord & Burnham construction, will be added this Spring for the accommodation of this splendid carnation.

Haverhill, Mass.—C. H. Kaulbach says he never was so short of good stock; the demand has been phenomenal.

Lynn, Mass.—Wm. Miller & Sons say their best carnations are Triumph, Joost, John Young and Daybreak, for the growing of which, and some of the new candidates, two houses will be added in the Spring, material for which has been secured during the temporary drop in the market. I noted two very fine pieces of work being made by artist James—a cross and crown, and standing cross a la D. B. Long.

Peabody, Mass.—J. M. Ward & Co. report experiments with Evelina in both light and heavy soil; while in the heavy it rusts terribly, in the light soil it is as clean and doing as well as McGowan, which is a constant success at this place. Anna Eastburn does best in heavy soil. One of their seedlings will probably be on exhibition at Buffalo; it is a white. Look out for it. La France is the favorite single violet; its intense shade and fragrance and adaptability as a pot plant being the reason.

Salem, Mass.—McGee, Geary & Co. report excellent plant sales, Boston fern predominating. They have but a few strong plants left. Several large funeral orders have kept them busy of late and they are figuring upon one or two big wedding decorations in the near future.

Memphis, Tenn.—Commenting upon the large stock of roses in pots, Mr. Hume, the genial manager of the Memphis Floral Co., tells me he cannot keep up the supply of such favorites as the climbing Kaiserin and Mrs. Robert Peary, two kinds well adapted to the South. A large general stock is raised for catalogue trade.

Olaf Johnson keeps up his reputation for La France roses, being one of the few who grows this old favorite at a profit. He reports a good demand.

Fall River, Mass.—Chas. Smith has been reappointed superintendent of Oak Grove, the leading cemetery in this city. He is brother to florist George, who has recently been elected Councilman in his ward. He intends to give his constituents as good government as he does roses and carnations to his customers.

Chatterton Warburton has named his Scotts "cut and come again," for he says there is no end to them. He grows Daybreak just as good as ever. Freedom and Alaska are the best whites, being the most useful for design work. His seedling is blooming up well; it will be on hand at Buffalo, perhaps, accompanied by Mr. Warburton, Sr., who has retired for the present from the road, and is devoting his energy to the growing of Beauty. He finds the shoots that are bent over and tied down make the strongest breaks.

W. M.

Paterson, N. J.

Ed. Sceery's flowerstore has been fitted up in fine style since the repairs were completed, which were necessary after the firemen ran a line of hose through the building to put out a big fire in the rear.

E.

Chicago.—George Stollery, of the Summerdale team, is second high man in their twenty games with the North Shore League, comprising eight teams, his record being: Games, 20; high, 201; total, 3,346; average, 167.6-20.

Ess.

A game was played on Tuesday night in which Wm. Clark, of Colorado Springs; J. F. Wilcox, Council Bluffs, Ia., and Mr. Joy, of Joy & Soo, Nashville, Tenn., who were in the city on their way to Buffalo, took part with the following scores. Mr. Clark claimed to be no bowler, but with a little practice he will do.

CHICAGO.

	1	2	3	4	5
Wm. Clark	111	164	110	117	95
J. F. Wilcox	191	174	161	140	124

The Bowling Tournament.

The second of the series of games in the tournament of the New York, North Hudson and Flatbush clubs, was played on the New York alleys, 57th street and Sixth avenue, on Monday afternoon. That the interest in the tournament is intense was shown by the number of visitors present. An extra set of alleys had been reserved for the visitors, however, and many who came to root were soon playing a spirited game.

The New York and Hoboken teams had the first round and the first-mentioned club proved the winner by 130 pins. Flatbush then took the place of the defeated team, and New York also beat them by 70 pins. Hoboken and Flatbush then came together, and after the ten frames were rolled Hoboken had lost by 85 pins.

A bountiful lunch was served by the New Yorkers at the close of the games.

NEW YORK.

	1	2
Traendly	185	159
O'Mara	143	177
Manda	129	103

FLATBUSH.

	1	2
Riley	128	138
Schmutz	107	152
Raynor	91	120
Zeller	172	170
Prosser	119	124
Mellis	132	121
Total	749	825

The number of pins down for each team thus far is:

New York, 3,286;
Flatbush, 2,213;
North Hudson, 3,032.

The next and final games in the tournament will be played on the Flatbush alleys Thursday, March 1, at 4 P. M.

Chicago.

State of Trade.

There continues a good market for nearly all flowers, last week's demand being quite brisk in the wholesale stores, as evidenced by the buyers for the large retailers, as well as outside orders for shipping. On Saturday nearly all stock cleared off well, and again on Monday and Tuesday of this week. There seems quite a spurt, partly possibly owing to Valentine's Day. Violets are getting a lift through this cause. Roses seem to be coming in a little more freely, but there as yet being no heavy cuts no trouble is experienced in selling all received; even the shorts and culls all go. These latter are used freely in cheap made-up work. What the common people want is a good show for a little money, and the enormous amount of wire work disposed of in this city shows there is plenty of it done yet; in fact, it is the bread, winner for hosts of retail florists out in the suburbs.

In roses, Beauty of long stem and mediums are still below demand and bring good prices; shorts are harder to dispose of. Extras bring $6 per dozen easily; 20 to 24-inch stem, $3 to $4; 12 to 18 inch, $1.50 to $2. Bride and Bridesmaid, extras, $8 to $10; firsts, $6; shorts, $4 to $5. Meteors are again called for; McKellar & Winterson had a heavy shipment of these on Tuesday; best, $6 to $8.

Lilies abundant, at $1.50 to $2 per dozen. Callas, $8 to $12. Violets, some very fine in. Demand was holding at $2, but $1.25 to $1.50 is as high as they will go freely; single and poor stock, 10c. to 60c. Some good tulips now coming in, best going at $4 down to $2; selling fairly well. Romans, $1.50 to $2; Paper Whites same. Dutch hyacinths, in pots, $2 per dozen, wholesale; retail, 25c. to 35c. Smilax, fine, at $1.50 per dozen; demand not brisk.

Jottings.

E. Krok, of Naslund avenue, is now sending in some very good Bride and Bridesmaid.

The Bay State Floral Co. has removed to a more convenient store, 2 State street, just one door north of the old place.

W. H. Chadwick has been elected president of the Commercial Association, which has for its primary object the construction of a permanent exhibition building on the Lake Front Park.

A section of the Garland Gutter has been set up in McKellar & Winterson's store.

Klehm's Nursery is supplying Kennicott with his home-grown lily of the valley, also his novelty tulip.

E. J. Batchelor, lately of Fort Dodge, Ia., is now on the road for McKellar & Winterson and A. Fuchs.

Carl Cropp, of Vaughan's seed store, has gone to St. Louis and Kansas City. Philip Hemer, of the same firm, left last week for the California coast.

The Wietor Bros. have a great show for long-stemmed Beauty in the near future.

The general stock of both roses and carnations coming from Bassett & Washburn's place is of a very high standard.

Herman Schiller, who was injured by a trolley car running into his wagon, is still a sufferer and cannot leave his room.

Kidwell Bros. have some fine pot hyacinths now coming in.

W. E. Lynch has taken the fine large basement, southwest corner of Wabash and Randolph streets, and hopes to move about April 1.

Visitors.

Wm. Clark, Colorado Springs, Col.; J. F. Wilcox, Council Bluffs, Ia.; Mr. Joy, Nashville, Tenn.; A. Knox, Franklin Floral Co., Columbus, O.; L. J. Stumpy, St. Joseph, Mo.; J. McHutchinson, representing August Rhotert, N. Y.; Henry Fabre, Kankakee, Ill., and L. E. Coleman, Belvidere, Ill. Ess.

New Haven, Conn.

The florists in the neighborhood of the Yale Campus have come to terms on the matter of closing their stores at 7 o'clock every week day evening except Monday and Saturday. That was agreed to at the meeting held a few evenings ago, when Messrs. John N. Champion, S. H. Moore, Robert Veitch, Jr., and Charles Monroe agreed on a uniform scale of prices for violets and the usual stock of flowers. The scale of prices will, of course, vary according to the season. However, the florists agreed upon uniformity.

Cincinnati.

Business has been very firm during the past ten days, and the market well cleaned up and at good prices. Roses are still scarce but will soon be more plentiful in the near future.

The American Carnation Society.

At present all eyes are turned toward Buffalo, and those who went from here were R. Witterstaetter, Wm. Murphy, Wm. Sunderbruch and E. H. Giesy.

Rose Day.

Saturday was "Rose Day" at the club rooms of the Cincinnati Florists' Society. The exhibit was very limited, only George & Allan entering; and, of course, carrying off all prizes. Corbett & Wilson had a nice display of violets, but the attraction was the new rose Liberty sent by E. G. Asmus, of Hoboken, N. J. This is a grand sort and is the finest all-round red rose I ever saw; everybody who saw it was delighted. It arrived Saturday morning in splendid condition, which shows it to be a good shipper. Meteor will surely have to go when Liberty become liberated.

A Dinner and a Bowling Match.

We expected many guests from Indianapolis, but Walter Bertermann was the only representative to arrive, accompanied by John Evans and Chas. Knopf, of Richmond. Twenty-four constituted the party, which included Jacob Schultz, Jas. Coenen and C. H. Kunzman, of Louisville, Ky. We immediately repaired to the Burnett House, where dinner was served, after which the party was escorted to the Flower Market and thence to the Highland Bowling Alleys. A box of cigars was up to be contested for between the visitors and a home team, with the following score:

Visitors: Evans, 141; Knopf, 86; Bertermann, 99; Adrian, 81; Sunderbruch, 213. Total, 620.

Home team: Witterstaetter, 96; Wm. Murphy, 133; Geo Murphy, 125 Jackson, 112; Gillett, 109. Total, 575.

Wm. Sunderbruch and Adrian were loaned to the visitors, and owing to Sunderbruch's score, won the game as follows:

1	2	3	4	5	6	7	8	9	10

New Carnation "Avondale."

Stuart & Haugh, of Anderson, Ind., exhibited their new carnation "Avondale," a sport from Armazindy; it looks very much like the parent but is pink in color; it scaled as follows: Color, 19⅓; size, 15⅓; calyx, 4⅓; stem, 20; substance, 8; form, 10⅔; fragrance, 3⅔. Total, 81⅓.

Death of Mr. James Griffith.

Many of the trade will read with regret the death of James Griffith, who died February 10, of kidney trouble, and was buried February 13. For many years he manufactured wire work in this city, and no doubt made the best work of any in the business. His trade was with the florists exclusively, and he was well known to the trade throughout the country.

Visitors in Town.

Our visitors during the week: Mr. Joy, of Nashville, Tenn., on his way to Buffalo; Mr. Jacob Schultz, Jas. Coenen and C. H. Kunzman, of Louisville, Ky.; Walter Bertermann, of Indianapolis; John Evans and Chas. Knopf, of Richmond, Ind.; J. R. Goldman, of Middletown, O.; Theo. Bock, John and Henry Lodder, of Hamilton, O.; E. H. Glesy, of Lockland, O., and J. T. Herdegen, Aurena, Ind.

Second Carnation Meeting.

March 10 is our second carnation meeting, and we expect it to be a banner. The following prizes are offered:

Best vase carnations, seedling, any color, 50 blooms, $10; mixed colors, 100 blooms, $5; Daybreak, 25 blooms, $2; mixed colors, 50 blooms, $5; mixed varieties, 1898 and 1899 introductions, 50 blooms, $5. Best four vases of commercial varieties, 25 blooms to vase, $5; best separate display of carnations, $10.

The gold medal donated by Hon. John R. McLean will be awarded at the meeting. Henry Weber & Son and R. Witterstaetter are the only competitors now entitled to exhibit for this medal.

All florists not members of the society are entitled to compete for the above money prizes by the payment of $1. Everybody welcome.

E. G. GILLETT.

* Denotes spares and † denotes strikes.

St. Louis.

There is little change in market in general; receipts have been considerably heavier, but the demand has kept apace with them, consequently stock is about as scarce as last week. Everything sells out clean, except possibly a little bulb stock. Roses are very scarce and bring 10c. for best. Carnations are also in excellent demand, bringing 2c. to 4c. Violets have gone up a point, and are quoted at 60c. per 100 now. Callas and Harrisii rather plentiful at 12c. to 15c. Weather now bright and pleasant again, with prospects of more abundant stock soon.

Notes.

One of our west end stores has been having a private carnation show this week; some good blooms were exhibited, it is reported, but it failed to attract more than passing notice, although quite extensively advertised.

Visitors.

B. Eshner, of M. Rice & Co., has been in town and reports excellent business.

Flowers are so scarce now that the store men order in advance—like at Christmas and Easter times.

All local florists will please remember that next week, Friday, the 23d, is the date of the euchre party. All and their friends are cordially invited. Tickets can be had of the trustees or at the wholesale houses.

Club Meeting.

The regular meeting of the Florists' Club, was held on the 8th. Attendance fair considering the weather was blustering and severe cold promised, which, by the way, did not mature as severely as was expected. Considerable business was transacted, among same was the report of Mr. Beneke on Chrysanthemum Show, to the effect that its affairs could not be closed up at present owing to some delinquent subscribers who would not pay up. Efforts would be renewed with them, and a winding up made as soon as possible. A vase of Lawson carnation had been promised us by the introducer, but they failed to show up, to the great disappointment of those present, most of whom have never seen a good specimen of that much-talked of flower. H. C. Irish, Henry Emmons, of Bellville, Ills.; J. W. Dunford, of Central, Mo., and Henry Blixen, of Edwardsville, Ills., were duly elected members. Mr. Irish is connected with the Missouri Botanical Garden. At this meeting several members were dropped, some for non-payment of dues, some for conduct inimical to the welfare and good of the club. A committee was appointed to draw up resolutions on the death of our late member, Mr. J. M. Jordan. Also one to look into the matter of holding a show this Fall, there being a reluctance on the part of the club to give it up. C. A. Keuhn, who was made purchasing agent, reported having quite a lot of orders, and hoped to do some good; but the idea was started almost too late, many having already placed their orders.

Next meeting, March 8, is to be a rose meeting. A prize of $5 is offered by the club for the best vase of any kind of roses, except American Beauty, in hopes that a vase of Liberty will be shown. C. A. Keuhn placed a vase of the new carnation, Peru, on exhibition. It was pronounced by the judges who passed on it to be a good kind—on the type of Flora Hill; its color is pearly white, good size and stem. The club some time ago was authorized to offer prizes for the best-kept grounds backing against the Suburban Railway; the matter was again taken up and will now be pushed.

C. C. S.

Buffalo.

With weather in a variety, generally inclined to mildness, it does not materially help business, which is medium of extent. Some funeral orders have lent a good help during the past week. Flowers are in fair supply only, with light colored stock short for the demand on some days, and colored carnations inclined to show plenty.

Jottings.

C. D. Zimmerman made a trip to New York City and vicinity last week.

John G. Pickelman has made application in bankruptcy proceedings.

Chas. L. Dale, of Lockport, was a caller on Saturday of last week.

A vanguard of Carnation Convention attendants arrived Monday, in the person of Walter Mott, who will see it through. Locally, we are anticipating a big half week, beginning Thursday morning. VIDI.

Pittsburg.

The past week's trade was rather quiet with stock in abundance.

The February meeting of the Florists' Club was held in the store room of the Pittsburg Cut Flower Co. last week, with a fair attendance. The report of the auditing committee shows the club to be in good condition financially. One new member was elected and one proposed—J. B. Ferguson. All the officers of the club were again re-elected for another year by a vote cast by the secretary as follows: President, E. C. Reineman; vice-president, E. C. Ludwig; treasurer, J. Semple; secretary, T. P. Langhans; assistant secretary, Geo. Oesterle. Executive Committee—P. S. Randolph, F. Burki and John Bader.

M. C. Dunlevy, president of the Fruit Growers' Association of Allegeheny County, extended a vote of thanks to the members of the Florists' Club for their assistance in making the annual meeting of the Pennsylvania Horticultural Society held, in January the best one on record.

Fred Burki and W. Lauch, with perhaps a few others, are going to Buffalo for the carnation meeting.

Visitors in town: Arnold Ringier, of W. W. Barnard & Co., Chicago; John Barclay, of J. C. Vaughan, Chicago; J. M. Gasser, of Cleveland, on his way East to Boston before going to the Buffalo meeting, and J. C. Vaughan, who also spent a day in town on his way East.

The fine conservatories in Schenley Park are to have one of the best collections of cacti to be had in the country. It is intended that a party, headed by Superintendent Falconer, shall go to the wilds of Arizona, where the finest specimens exist; the trip will likely be made the coming Summer. Superintendent Falconer left for California a few days ago, and will make a short stop in Arizona on the way. He will inspect the conservatories in Golden Gate Park, San Francisco, and expects to visit the lower part of California along the coast to pick up some valuable plants. There is now quite a large collection of cacti in the conservatory, but it is not as comprehensive as is desired. The Director of Public Works of Pittsburg takes great pride in the parks and conservatories, and his idea is to keep the latter up to the very best and in the lead of all others. E. C. REINEMAN.

New Orleans, La.

To Join the State Fair.

At a special meeting called by the Horticultural Society last week it was decided to abandon the Spring show by the society and go in with the State Fair that takes place April 14 to May 6. C. H. Eichling was appointed by the society to see the committee of the state Fair and ask for free space, and that the State Fair pay all premiums. This they agreed to do. The State Fair has appointed C. H. Eichling, chairman, Harry Papworth and J. Steckler on horticultural and agriculture. These three gentlemen are members of the Horticultural Society, and no doubt will look after the society's interests. This must be considered a good change. The past few years our flower shows have not been a success financially. The prize money paid has always been cut down to the lowest notch; but that is not the main point; if the public would only come and patronize us it would be more encouraging. Last year at the State Fair 20,000 people attended on one day, so we may hope to be seen this year. There is every prospect of a good show, so far. In looking around the florists' establishments the stock is in better condition generally than it has been for several years.

Trade Items.

Some say trade was never better for plants. Flowering kinds are still very scarce. Azaleas are just coming in. About a month from now we will have plenty of flowers, that is if we do not have another February like last year. We have had a little frost, but not enough to stop the roses from blooming in sheltered places. The weather has been very warm the past week, the thermometer going up to 75 and 80 degrees in the shade. Oranges are in full bloom; many thousands were planted the last Fall.

The J. Steckler Seed Company and C. H. Eichling have both sent out their catalogues and report excellent returns.

Violets in every yard and garden are just grand. The large Giant or Carolina is far the best we have. La France is good, but I cannot say if it will ever come up to the Giant for all purposes.

Mardi Gras will last one week this year. HARRY PAPWORTH.

Florists' Tested Flower Seeds and Bulbs

ASTER Imp. Victoria, mixed, large trade pkt., 25c.; oz., $1.25. Florists' Special Mixture, large trade pkt., 25c.; oz., $1.25. Semple's True Branching, mixed, large trade pkt., 20c.; oz., 50c. Semple's Shell Pink, white and red in separate colors, large trade pkt., 25c.; oz., 75c.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Seed Adulterations.—On Monday February 5, at the Academy of Science, St. Louis, F. W. Maas, of the Plant Seed Co., demonstrated the uses of the microscope in detecting impurities in seed, to a large and appreciative audience. He had 15 plates of seeds in all, in connection with which several interesting facts were brought out under the microscope.

The New England Farmer, of Boston, Mass., says the name of W. W. Rawson, of Arlington, is mentioned as a candidate for the Governor's Council.

Mr. Dooley says the "congrissman that sinds seeds to his constitutents will last longer thin the man that sinds them flowers of illoquence."

We do, however, decry and oppose the use of such illustrations and representations as are made in some catalogues which reach this office, and believe that seedsmen should place more value upon the intelligence of the farmer and gardener, instead of placing before them imaginative pictures an ingeniously written descriptions, which are indicative that the countrymen are more verdant than wise. The seedsman who uses such true pictures and such honest descriptions, that when the plants are harvested they are true to name, picture and description, is the man who will have in the farmer and gardener a solid customer, a satisfied customer and a staunch friend.—Up to-date Farming and Gardening.

[It is a noticeable fact that the "monstrosity" illustration in seed and plant catalogues is fast becoming a thing of the past, being substituted by the more common-sense and business-like photo-engraving from life. There is yet room for amendment in the case of the exaggerated description.—ED. FLORISTS' EXCHANGE.]

European Notes.

The past week has been rather more wintry than some of its predecessors, but as it has taken the form of snow no great injury to growing plants is anticipated. The dampness which has been practically continuous in Europe since the end of last September still holds sway; even during the severe spell of frost which prevailed in northern Germany during December the ground was covered with fully six inches of snow, and as a consequence all outdoor operations are suspended. This will retard somewhat the sowings of radish and spinach, but a genial Spring will easily put things straight.

On Tuesday the fields of Roman hyacinths and narcissi round Ollioules were also covered with snow. This may help to increase the size of these bulbs, as the growers hastened to cut the blooms and glut the Northern markets with them.

Market seeds are in the uncertain stage which precedes the regular season. Alsyke is undoubtedly scarce. White clover is dearer, and if there are any reserve stocks on hand they ought to be forthcoming at present prices. Trefoil is also up and will remain so, while red clover wobbles about like a politician trying to please both sides. If there be an average demand, prices must surely advance. In other market seeds there is no change of importance to record.

EUROPEAN SEEDS.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Root Killing of Fruit Trese.—Bulletin 44 of the Iowa Experiment Station, at Ames, Ia., deals with this subject. Preventives recommended are: Hardy stocks, deeper planting, and the modification of cultural practices in orchards by the introduction of a cover crop system.

George B. Wallace, a pioneer nurseryman of Salt Lake City, Utah, is dead, at the age of 83. He was born at Epsom, N. H., and became a convert to the Mormon faith, removing to Utah from Boston in 1847.

The House Committee on Agriculture, February 1, decided to report favorably Mr. Wadsworth's bill relative to the importation and traffic in shrubs, trees, etc. See pages 1067, for text of the bill.

The U. S. Department of Agriculture has issued a comparative statement of the distribution of agricultural exports, from 1894 to 1898, showing under the item of nursery stock the following figures: 1894—$140,415; 1895—$129,551; 1896—$133,735; 1897—$135,047; 1898—$96,330.

Text Books on Horticulture.

The Department of Agriculture has just issued a Farmers' Bulletin (No. 109), written by Professor Bailey, on the subject of Farmers' Reading Courses, in which the scope and operation of this method of teaching in the various states is dealt with. Professor Bailey enumerates the following list of text books on horticultural subjects as being used or recommended in these courses:

How to Grow Squashes, Gregory; Onion Raising, Gregory; Onions for Profit, Greiner; Cabbages and Cauliflower, Gregory; How to Grow Cabbages and Cauliflower, Gregory; Celery for Profit, Greiner; A Kitchen Garden of One Acre; How to Grow Melons for Market; Potatoes for Profit, Van Ornam; My Handkerchief Garden, Barnard; How to Make the Garden Pay, Greiner; Gardening for Profit, Henderson; Success in Market Gardening, Rawson; How to Grow Mushrooms, Falconer; Selection in Seed Growing, Burpee; Vegetable Gardening, Green; Garden Making, Bailey; Greenhouse Construction, Taft, Greenhouse Management, Taft; Lessons with Plants, Bailey; The Horticulturists' Rule Book, Bailey; The Nursery Book, Bailey; Principles of Fruit Growing, Bailey; Field Notes on Apple Culture, Bailey; American Fruit Culturist, Thomas; Practical Fruit Grower, Maynard; Amateur Fruit Growing, Green; Pear Culture for Profit, Quinn; Quince Culture, Meech; Peach Culture, Fulton; Success with Small Fruits, Roe; A B C of Strawberry Culture, Terry; Grape Culturist, Fuller; Fruit Culture, Strong; American Grape Training, Bailey; Cross Breeding and Hybridizing, Bailey; Principles of Plant Culture, Goff; Plant Breeding, Bailey; Propagation of Plants, Fuller; Ornamental Gardening, Long; Gardening for Pleasure, Henderson; Home Floriculture, Rexford; Practical Floriculture, Henderson; The Rose, Ellwanger; All About Sweet Peas, Hutchins; Pansies, Popples and Sweet Peas, Hutchins; Chrysanthemum Culture, Morton; American Carnation Culture, Lamborn; Bulbs and Tuberous-rooted Plants, Allen; The Beautiful Flower Garden, Mathews; Insects and Insecticides, Weed; The Spraying of Plants, Lodeman; Spraying Crops, Weed; Fungi and Fungicides, Weed.

As supplementing the foregoing list, and forming a valuable augmentation thereto, we would mention the following, all of comparatively recent publication, as being worthy of consideration by intending purchasers of books: How To Grow Cut Flowers, Hunt; The Dahlia, Peacock; Florists' Manual, Scott; How to Plan the Home Grounds, Parsons; Landscape Gardening, Maynard; Landscape Gardening, Waugh; Residential Sites and Environments, Johnson; Orchid Growers' Manual, Williams; Orchid Cultivators' Guide, Burberry; Ornamental Shrubs, Davis; The Water Garden, Tricker; Commercial Violet Culture, Galloway; Success With House Plants, Hillhouse.

All of the books herewith mentioned can be secured through the FLORISTS' EXCHANGE. We have others for sale, also; send for our Book List.

STEAM and hot water boiler for sale, as good as new; has been used less than one winter; good reason for selling. For price, etc., address Hopp & Lemke, Paul P. O., E. Grand Rapids, Mich.

Mention the Florists' Exchange when writing.

CARNATIONS.

Notes on Newer Introductions.

(Continued.)

H. WEBER & SONS, OAKLAND, MD.

G. H. Crane, all things considered, is the best scarlet we have ever grown—a continuous bloomer, good length and stiff stem, and always of a good color. America is scarcely inferior to Crane; will surpass Crane in vigorous growth and freedom of bloom, while the flowers will average quite as large, if not larger. In length of stem and point of color it is not quite Crane's equal. With Crane and America in the field Portia is now out of the race. Before the advent of Crane and America, Hector was the most satisfactory large scarlet we could grow. It will average several flowers to Jubilee's one during the season; in color it is several shades deeper than Crane, but will probably not withstand the competition of it and America, excepting, perhaps, with a few who grow it exceptionally well. Wellesley is outclassed by the new ones of last year, and will be dropped.

White Cloud unquestionably is the finest white now in commerce. Strictly speaking, it has no dangerous competitor. There is no white which will pay better. Flora Hill is the nearest approach to a rival of White Cloud. With us it is particularly valuable for early Fall blooming, and for late Spring and Summer; in this respect it is superior to the former, but in all else, save size, it is secondary. John Young, when a medium grade of flowers is wanted, is the kind to grow. In growth it is very vigorous and free in bloom. While it will not grade as a fancy in the sense that White Cloud will, it is nevertheless a profitable sort. Evelina certainly is the freest blooming white to date. Its dwarf habit makes it valuable to grow on side benches. It is the best white for designs. We find it valuable in its place. Storm King has always been a good thing with us—flower is very large, rather tall grower and good producer; stem stiff and wiry. We consider it the best of the old ones.

Wm. Scott is still a good all-round pink, but will not grade as a fancy. It suffers by comparison with the new ones, and is doubtless nearing its end. Daybreak we regard as still the best of its color. McBurney was to supersede it, or at least divide honors, but has failed, and Daybreak still reigns. Where a strong, thrifty, free-growing and prolific blooming deep pink, which will grade a good medium flower, is wanted, New York will fill the bill, but it cannot travel as a fancy. Cerise Queen is beautiful in color and of good size; a fair grower and bloomer, but lacks length of stem. Will not grade as a fancy. Argyle, if it had a better stem, could be called a good one, but lacking this, and not being over free, will cause it to be dropped. Mrs. F. Joost is a good all-round light pink. We regard it as a profitable variety. Its color is extra, size fair, growth vigorous; while it will not grade as a fancy, it comes very near it. Triumph is grand with those who grow it right. It is large, has a fine color, good stem, vigorous, thrifty habit, and free blooming. Grades easily as a fancy when well done. Its most serious fault is bacteria, largely the result of improper culture. Melba might be classed as a good, medium, light pink, but will not do for fast company.

In variegated Mrs. Geo. M. Bradt easily leads the procession. In a light house with good ventilation the stem is strong enough. Grades as a fancy without trouble, and is a continuous bloomer in every sense of the word. Very profitable. It is in a crowd all by itself.

Among the yellows Buttercup is the deepest and richest, but unfortunately it is not a vigorous grower in all sections. We find it does best with indoor culture. Grown in this way it produces many more flowers than either Pingree or Gold Nugget. Mayor Pingree is the largest and finest yellow; is easily a fancy, but requires good culture to make it produce paying returns. Gold Nugget approaches Buttercup in color, and is a much more vigorous grower than that variety. The flower is of good size, and with a little pushing can be graded as a fancy. Its most serious drawback is lack of freedom.

In the crimson class General Maceo is the leader; has become very popular, and is a paying variety. While it is not ideal in all respects it can be recommended as the best yet out. General Gomez in color is not quite as dark as Maceo, and for this reason is preferred by some; it lacks a little size, but is very free and profitable.

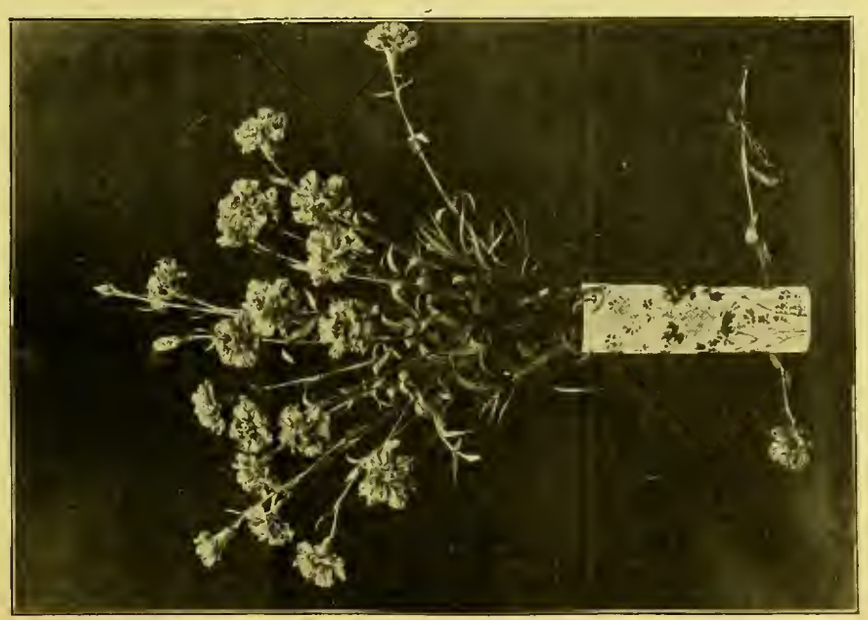
GROUP OF CARNATIONS—No. 110—1896.
H. Weber & Sons, Oakland, Md.



A BUNCH OF CARNATIONS—IRENE.
Crabb & Hunter, Grand Rapids, Mich.

Among our seedlings Genevieve Lord is a seedling of 1896 (Edna Craig × Scott). Some seed was raised during the Winter of 1895-1896, on a few exceptionally healthy, vigorous plants of Edna Craig, which had been propagated from one particular plant which seemed to be entirely free from the bacterial troubles peculiar to that variety. These few plants gave extra fine flowers on stems 2½ to 3 feet in length, strong and stiff. Among the crosses made on these were several with Wm. Scott. Genevieve Lord was the best of these seedlings. It has retained the good characteristics of both parents. The long stems, large flower, and beautiful color are taken from the seed parent, while the continuous and free-blooming habit is derived from Scott. In growth and habit it is midway between the two. It is an exceptionally healthy and vigorous grower and with us the most profitable pink carnation we have ever cultivated. No. 110 is a seedling of 1896; record lost. A white of large size, extra long, strong stems; very vigorous, strong grower; is very easy to handle and very profitable. Grades easily as a fancy, very few blooms being under 3 inches. No. 30, seedling of 1896 (Daybreak × Albertini), is several shades deeper than Scott, has proven a most satisfactory grower and producer. There is no variety which approaches nearer a continuous bloomer than this one. The plant is sturdy in growth—on the Daybreak order, but freer and more vigorous. The flower is large, very full and of fine form. Stems 2 to 3 feet, and strong, supporting the heavy flower admirably. No. 126, a seedling of 1896, is a crimson scarlet, and, with us, the best of its class. A vigorous, strong grower, and free bloomer. Does not start as early as some, but a strictly continuous bloomer when it does. Flowers 2½ to 3 inches, borne on strong stems 2 to 3 feet long. Strong, spicy odor.

Further Grand Rapids Notes.

G. F. CRABB.

G. H. Crane, darkish scarlet, strong, stiff stem, fine fragrance, free bloomer; with us inclined to crop, but the best red to date, every flower coming perfect and very profitable to grow. America is also a fine red, but much lighter in color, and goes Crane, in all particulars, a close second. They make a good pair. Jubilee is a strong, upright grower, fine flower when well done; free and bright, desirable color, but too many flowers come imperfect, and the variety is extremely rusty.

It is not profitable except a fancy price can be had for the perfect flowers. Firefly has bright clean foliage, strong grower, a free bloomer; flower a little small, yet for a retailer a very profitable variety to grow. Red Jacket is a large flower, of good substance, long stem, but not as free as could be desired. Bon Ton is affected with a disease that stunts its growth, so that it hardly flowers at all, and, here, is worthless. Evanston is a cerise scarlet, free bloomer, much liked around Chicago. It is a sport of Tidal Wave, and is identical with that variety in all except color. Profitable for the retailer, the flowers being a trifle undersized to make it a desirable shipper.

Mayor Pingree, large, fine flower, light yellow, with faint red markings, is fairly productive for so large a flower. The best yellow so far; a fancy, requiring a fancy price. Gold Nugget is the best color, being a bright shade of yellow, but, with us, not as free as Pingree.

Maceo is an acquisition in the crimson varieties; a fine flower of that deep velvety blood red shade that sells on sight; a free bloomer, no disease, strong growth. Will displace Meteor at once. It is a profitable variety. Our No. 6 seedling is identical with it in color and shape of flower, but has a trifle larger bloom, a longer, finer stem; but it must have a better trial before anything definite can be said about its freedom of bloom and profitableness. Empress is worthless here; not a flower to date, and hardly a sign of a flower shoot.

Mrs. Geo. M. Bradt, the phenomenal still among the carnations, the heaviest flower, which bears down with its weight what might otherwise be a stong stem; a continuous bloomer, and, at fair price, very remunerative. Should be grown by everybody. Psyche is a large, striped flower, very free indeed; weak stem; but from its freeness and size, a very profitable variety, particularly for the retailer to mix in with other kinds. Saginaw is another good striped kind, with strong stem, fine flower, but too shy to be profitable; will be dropped.

American Carnation Society.

NINTH ANNUAL MEETING.

Buffalo, February 15 and 16, 1900.

First Day—Morning Session.

Thursday, February 15.

After an interval of nine years the American Carnation Society again visited the Bison City under most favorable auspices. No better object lesson could be presented of the wonderful advancement made in carnation growing during the life of the society than was shown in the high quality of the flowers placed on exhibition as compared with those staged when the society first met here. The show was one of the finest ever put up at a Carnation Convention. The attendance was also most gratifying, large delegations coming from the middle West, and some even from Iowa and Nebraska. New York and surrounding districts sent but a small representation. Owing to a landslide, the Boston party was a few hours late. During the morning a heavy snowstorm fell, but mild weather prevailed later. The night previous to the meeting a fire occurred in the freight elevator shaft of the Genesee, somewhat hampering the arrangements for delivery of exhibits, but these, as a whole, were very satisfactory.

The exhibition was held in a large room in the hotel, the accommodation being ample and extensive. The flowers, notwithstanding the distance many traveled, opened up in very fine condition, and consignments continued to arrive up to the opening hour.

The first session began at 11 o'clock in the morning, President Craig in the chair. Wm. Scott, of Buffalo, introduced the Mayor of the City, Dr. Diehl, who made a neat address. He said in part: "I wish I could speak to you as well as my feelings are toward your flowers. It gives me extreme pleasure in welcoming you to our city. I am sure that your deliberations will be of benefit to yourselves and to mankind. You aid in creating a love for flowers and plants, you get the citizen to love them, and you make a better man of him." He spoke feelingly as a physician of the cheering influence of flowers, and especially of carnations, in the sick room, an influence which no words of his could properly convey. The Mayor extended an invitation to the society to visit the coming Pan-American Exposition in 1901, where it is proposed to make the Horticultural Department one of the leading features, and closed his words of welcome by extending the freedom of the city.

Mr. John May made the response to the address of welcome, commenting on the well-known hospitality of the City of Buffalo, and touching upon the increasing growth of its population. He showed, by comparison of flowers, the great evolution going on in carnation culture. He thanked the Mayor for his words of welcome, adding that the presence of the chief official of the city at the meeting lent éclat to the proceedings. The speaker heartily indorsed the Mayor's remarks regarding the benefit of flowers in the sick room.

Wm. Scott gave the welcome on behalf of the Buffalo Florists' Club, hoping that members would not too literally take the Mayor's extended freedom of the city. The speaker referred to the last meeting held here, and asserted that he desired to vindicate his own character and that of the local club as entertainers. He spoke hopefully of the success of the present gathering and exhibition.

President's Address.

President Wm. P. Craig then delivered his address, as follows:

Nine years ago, in the State of New York, was held the first regular meeting of the American Carnation Society. The society since that time has grown greatly in membership and in influence; the good it has done is apparent to all who have watched its workings; it has diffused among its members much valuable information and has greatly stimulated the production of new varieties, and among these new varieties there comes at rare intervals one which, in one or more counts, is superior to anything existing in its particular class, and while it is safe to say that on an average it is necessary to raise and test a thousand or more seedlings in order to secure one that will, by its own merits, secure a place more or less prominent as a commercially valuable carnation, our exhibition tables show that this year there have been put on the market at least half a dozen which promise to add to the already great prestige which the carnation has as a florist's flower.

I need not name these candidates for popular favor; they are here to speak for themselves, more eloquently than human tongue can, and to testify that the standard of culture is being raised higher and higher year by year. As a matter of fact, the culture of the carnation is being so rapidly improved that it is not possible to name a single variety that was largely grown nine years ago, when this society was organized. At that time such varieties as Grace Wilder and Portia represented the highest standard of culture, and what chance would they have in competition with the leading varieties of to-day?

It is a matter of great regret that there has not been more roses of import introduced in the last decade; while we have at least a dozen varieties of carnations which can be grown in quantity, and it has been said all at a profit, there are practically now only four roses in anything like common use. Let us congratulate our brothers, the rose growers, on the formation of their Rose Society, and express the hope that it will do for the rose as our organization has done for the carnation. And we feel sure that this will be the case now that there is such a society devoted to the interests of the rose; growers will be encouraged to devote time to the crossing of varieties, with a view of raising new shades of color which shall be fitting companions for the Bride and Bridesmaid, and perhaps it is not too much to hope that a white or pink rose shall be raised which shall be in the class with the magnificent and peerless American Beauty. The fact that there is now an official and powerful tribunal ready to recognize and give full publicity to any meritorious new comers, will certainly stimulate the production of new varieties. The Carnation Society extends congratulations to the young brother (or sister) and wishes it every success. How to conduct a carnation or a rose society that they may advance in power and influence can only be learned through experience, and the measure of the advance will be in proportion to the earnestness of its members, and to the faithfulness with which they shall apply themselves to the problems which arise from time to time. If we shall be able to improve the methods of conducting our society, as much as the growers have improved cultural methods, those who conduct our society a decade hence may look with a feeling akin to pity on our very feeble efforts.

I will not take up your time with an allusion to improved cultural methods, because those advances are made known from time to time in our trade journals, which are devoting more space to carnation matters than to the interests of any other class of flowers. The papers which are to be read, and the discussions which will doubtless take place during this convention, will also fully elucidate these points. I will, however, suggest what seems to me would be an improvement in our scale of judging by points. In our present scale there is no provision for recognizing the keeping qualities of a flower, which is very important. Many of our leading retail florists consider this the most important quality in the flower. No matter how developed the variety may be, if it goes to sleep soon after delivery to the customer, nothing but dissatisfaction can result. I would, therefore, suggest that we drop from the scale the 10 points for substance and the 10 for plant (which latter has already been done, said points being allotted to color and stem), and also the 5 points for calyx, and give these 25 points for keeping qualities. The flowers can be adjudged on the first day as to all the points, excepting those for keeping qualites, which latter would be determined just before the close of the exhibition.

And now, in closing, let me bespeak a full attendance at every session of this convention. Don't allow the attractions of this fascinating City of Buffalo to lead you astray, and don't forget that we want to increase our membership. Get your friends to send in their names; the greater our membership the greater our power will become.

Selection of Judges.

The judges selected were: For seedlings, Wm. Scott, W. N. Rudd, Adam Graham; for commercial varieties, J. M. Gasser, Fred. Burki, W. J. Palmer, Sr.

Discussion of President's Address.

A brief discussion on the matter of including points for keeping qualities in the scale took place. Mr. John N. May stated that retail men find the keeping qualities of a carnation a most important matter, and these men, growers have to consider; no matter how beautiful the carnation lacking lasting power, its value was impaired. Mr. E. G. Hill thought the subject involved many difficulties. He considered the matter involved one largely of growing and temperature, as well as in difference of soil. If the change proposed was made, the speaker said cognizance ought to be taken of the time at which the flowers were cut, and also of the length of time required in getting them to the exhibition room. He did not see that it would decide anything unless time allowance was made to the man shipping long distances, and advised serious consideration before taking any definite action. R. Witterstaetter believed very much depended on how flowers were cut and afterward handled. He referred to the variety Emma Wocker as being accused of going to sleep, yet he had had blooms of it that held in good condition for six days and longer. In his vases of flowers on exhibition to-day were many blooms that were cut in January. He supposed if somebody else had handled them they might have gone to sleep. He considered substance was the whole thing. Mr. E. G. Hill humorously referred to "ether" in Witterstaetter's cellar, proceeding from casks and barrels, as having a beneficial influence on the lasting qualities of Richard's carnations, although the same ether had made men inhaling it knock-kneed. (Laughter). The discussion was continued into the afternoon session. There were about one hundred members and others present.

Afternoon Session.

M. A. Patten reported for Committee on Lawson Medals that the design by Henry Mitchell, of Boston, was the choice of Mr. Lawson and also of the committee, who had procured one gold and two silver medals, Mr. Mitchell donating also one silver gilt and one bronze medal.

Renewed Discussion on Keeping Qualities.

G. F. Crabb opened the discussion on the incorporation of keeping qualities into scale, urging that at least 15 or 20 points should be accorded for this quality. He suggested that flowers be sent to some prominent commission house as a test, at least three days previous to the annual meeting, and that these then be put up for comparison alongside the fresh flowers exhibited. Mr. Crabb stated that he was growing most of the new varieties and that some of them do go to sleep too quick. In reply to Mr. Witterstaetter, the speaker stated that the sleepy flowers were poor in substance. Mr. Witterstaetter answered that substance was already covered in the scale.

Robert Craig thought that substance was pretty hard to define, and the only way to find out the lasting qualities was to put flowers in water and test them; after two or three days that quality could be better ascertained than at the moment of judging the carnation.

E. G. Hill replied that the society was treading on dangerous ground. He said the keeping qualities of a carnation where something anterior to their appearance on the exhibition table. He was pretty well satisfied with the present scale, and maintained the impossibility of framing one that would accurately determine the value of a carnation; the quicker we get that fact known the better for the florists' clubs generally, as well as for the Carnation Society.

G. F. Crabb also suggested personal inspection of plants at greenhouses by a committee.

J. L. Dillon thought photographs taken every two weeks for a certain length of time and placed on exhibition with seedlings would give considerable expense.

W. F. Kasting believed a great deal of the fault lay in the flowers not being cut at the proper time; many growers did not know when flowers were ripe.

Mr. Bauer remarked that flowers cut with a sharp knife had advantages two to one over those picked.

Mr. Mitchell stated that some flowers during the months of November, December, January and February would not last, on the plants, over three days, while in hot weather they stood for ten days; some varieties ripened pollen earlier than others, which might have some influence on keeping qualities.

Mr. Hill considered that an important point. He said that when pollenization occurs flowers go to sleep.

G. F. Crabb cited a case where flowers cut from a house fumigated the previous night went to sleep very early; on investigation it was found that inferior tobacco stems had been used, and these treated with sulphur. Mr. May stated that carnations will not ship well taken from houses fumigated the night before, whether the tobacco was good or bad.

John N. May pointed out how flowers suffered in transit, militating against lasting qualities.

This point was corroborated by W. F. Kasting, who asserted that shippers of carnations use too many old newspapers and other such material in the packages, thus overheating the flowers and absorbing the moisture.

Committee on Scale.

G. F. Crabb recommended a committee of five to revise the scale so as to incorporate all practical points brought out in the discussion and to secure better handling of flowers by express companies.

This was amended by Robert Craig, who recommended that if the committee cannot, in a practical way, determine the keeping qualities by means of a scale of points, it be instructed to report some other means. He thought some local committee might be appointed to test just this quality.

Committee on Expresses.

E. G. Hill suggested that the society make a test case against the express companies whenever clear evidence of negligence in handling flowers was procurable, and thought the S. A. F. should join in this. The following committee was appointed under the above resolution: G. F. Crabb, Fred. Dorner, Jr., J. L. Dillon, William Weber and James Hartshorne.

Committee on Premium List.

A committee to revise and provide for next year's premium list was appointed as follows: Wm. Scott, Adam Graham, E. G. Hill, J. N. May and Wm. Nicholson.

The secretary reported favorably on reduced railroad rates for next meeting, providing the attendance from outside points reaches 100.

Committee on Amalgamated Meeting.

A. Herrington brought up the matter of the Rose and Carnation Societies holding their meetings at the same place and time.

This was indorsed by Mr. Craig, who thought that such an action would benefit both the rose and carnation growers.

J. N. May, Wm. Nicholson and A. Herrington were appointed as a committee to consider the advisability of this.

A Talk on Hybridizing.

Mr. Fisher having been unable to prepare a paper on hybridizing, Mr. R. Witterstaetter gave a few general suggestions. He advised good quality in both parents, but said it was very much of a lottery and no definite rule could be set down.

In reply to a question by C. Besold, as to the statement that one cannot get from crossing any color other than that which existed in the parents, Fred. Dorner remarked that color could not be relied upon at all, two crimsons would sometimes throw a white. The only properties to be secured were blooming qualities and habit of the plant; the color has been improved in some instances, but these were more from chance than anything else.

The session here adjourned.

Visitors were now also present from Canada, with a fair attendance from New York, many arriving since the morning session.

Evening Session.

The evening session opened with the report of Treasurer Albert M. Herr, showing the society to be in most flourishing condition, as follows:

SECRETARY'S REPORT.

Your secretary begs leave to report having issued the proceedings of the meeting held in Philadelphia, Pa., in due time, and having mailed the same to all members not in arrears for dues.

The resolution of thanks to Professor Arthur was printed and forwarded to every Experiment Station in the United States, and a separate copy to a number of officials, state and otherwise.

Membership in the society has remained about stationary, the few dropping out having been replaced by about an equal number of new members.

Registration has been pretty generally followed up by members and by non-members, wherever a variety has been named with the view to introducing it to the trade, and thus quite a few cases of the duplication of names avoided.

This was followed by Mr. Jas. Hartshorne's paper, as follows:

Growing Carnations Under Glass All Summer.

What first induced me to try this method was the reading of some carnation notes by Edwin Lonsdale, of Philadelphia, some five or six years ago, telling of the success he was having with certain varieties, notably Buttercup and Helen Keller. I first tried it in a small way, planting about 100 or so of each variety, and on the first experiment secured blooms far superior to any that I had ever been able to produce from Fall-lifted plants. I became so convinced that I was on the right track that each year following I increased the quantity of plants for trial, so that now, the fifth season of my experimeat with this method, we grow practically all our carnations indoors. I feel that we have passed the experimental stage, and can conscientiously recommend this method to anyone who wants high-grade carnations from September to July.

My understanding of growing carnations inside all Summer, and that of others regarding the matter, undoubtedly makes the title of the subject a trifle misleading, as I do not think it practicable or advisable to keep the plants indoors entirely. They should be planted outside as early in the Spring as possible. Plant close together in the rows, say about 6 or 8 inches apart, and allow just enough room between the rows to work a hand cultivator. By July 1, if you have attended faithfully to the pinching process, you will have nice, bushy little plants. At this date, or as soon after as you can prepare your houses to receive them, they should be housed.

Allow me here to lay stress on the fact that the greatest enemy to successful indoor culture is red spider, and that the grower should thoroughly cleanse his houses of this pest before planting young stock in them. I also would advise giving the plants a good syringing before lifting, as some of the varieties get badly infested with spider in the field—at least, we find it so in our locality. The houses should be shaded during planting, unless you can get a few days of cloudy weather, which is seldom likely at this season.

Treatment after housing is much the same as that ordinarily practiced, except that the details of culture demand greater carefulness. The walks, walls and surfaces underneath the benches should be well syringed to keep down the spider. If this is given close attention, as it should be, it will not be necessary to syringe the plants more than once in two or three weeks. If done early in the morning I find it very beneficial, as it washes the dust off the plants and keeps the pores of the foliage open for action. It is also well to get the hose outside occasionally to wash the dust off the glass, as the more light the plants receive after they are established, the healthier and tougher will be their growth. The soil should not be too rich, or it will cause a too soft and spindling growth. If the soil is naturally good, rotted sod, etc., it is best not to add any manure whatever. Superfluous manure is one thing in particular which must be guarded against to insure success, as with such a high temperature and a regular supply of moisture at the roots the plants will grow fast enough without it. It means more labor feeding later in the season, but at the same time it is, in my belief, very essential for the health of the plants. One of the principal drawbacks to growing inside is the baking and cracking of the soil, conditions peculiar to our soil as soon as it becomes dry after watering. Where this happens it makes a great deal more work cultivating the soil by hand as against using a cultivator outside; but to do away with so much of this extra labor, when scratching up the soil between the plants, I find it a good plan to leave a ridge or elevation of the soil between the rows, thus affording for the rows of plants a sort of gutter, where all the water should be applied and not allowed to run over the surface of the entire bed. It is necessary not to use a too strong force of water or it will wash the loose earth in heaps. The ridges of soil between the rows are intended also to act as a mulch for the roots, which is better for the health of the plant than a mulch of manure, unless the latter be very fine and minus nutriment.

The ventilators should be left open night and day until the temperature gets down to 40 degrees at night. It is quite important to give them the benefit of this low temperature, if it can be done before the blooms appear, which for our market would be about September 15 to October 1, as it seems to give the plants a more vigorous growth, the foliage a nice bluish color, and the stems additional stiffness. As soon as the blooms appear, one can readily note the superiority of the flowers of inside stock to those from plants lifted only two or three weeks before. The former are in good demand, at some times double the price of the latter, which are often hard to dispose of at any price, owing to the large quantity of such stock in the market at this period. I do not believe that as good blooms can be produced by field grown plants until about February 1. At this date, the outdoor stock begins to catch up; but there are already gone four of the best months for marketing the product, and right here is where the indoor-grown stock gains the advantage over the outdoor, and the real reason why I advocate indoor culture in preference to Fall-lifted plants.

I notice that the majority of the growers around Chicago are planting a week or two earlier each year, so that now some of the most prominent growers are planting in July, and they keep making a better reputation each year for carnations.

To be as brief as possible, I might sum it up in this way: It requires more labor to care for the plants when grown inside, consequently it brings a higher cost on the product; but the grower will not have such a grassy growth of plants, thus enabling him to plant closer and to cut as many or more blooms from a given space than from field plants, and as I claim one can get a higher price for the blooms during at least a considerable portion of the four months already indicated, the additional receipts from the indoor method will be so much more than the extra cost of production as to still leave a very considerable balance in their favor.

Discussion.

In discussing the paper Mr. Rudd stated he had grown his stock indoors altogether for several years, unless some reason compelled outdoor growth, and he certainly would not do this unless he considered it the most profitable way to handle the stock. G. F. Crabb said he had planted Irene seedlings the latter part of June from 4-inch pots into bench; others he planted the forepart of August in the midst of warm weather. The bench planted and grown indoors did not produce one flower to three of those put out in the field, though having a little the best of it in stem and flower. Mr. Weber indorsed Mr. Hartshorne's plan. He could succeed with Buttercup only when grown indoors. In reply to a question by Mr. Scott, Eugene Dailledouze said he planted No. 666 both ways, and got about three blooms to one from those planted in the field, and saw very little difference in quality. Mr. Weber stated young plants propagated in May or June should not be compared with others propagated earlier, and kept growing on in pots. Mr. Dailledouze said he used the very best plants for inside culture, and the stock set early was 50 per cent. better in the field.

Mr. Ward asked Mr. Dailledouze if he grew plants inside all the time, and receiving a reply in the affirmative, Mr. Ward then remarked that his experience with plants grown inside was that he had not got as many flowers as from those grown outside. If he wanted to get large, strong plants he would leave them out late, say to the end of October, thereby getting a larger cut than when brought in the first of August, but the quality was not there. He intended to plant seven houses with stock to be grown inside all Summer. The idea of putting plants out a little while in the early part of the season, as suggested by Mr. Hartshorne, was a good one, and one he would adopt with three or four houses. He did not expect to cut as many flowers from inside plants as from those grown outside and lifted.

Mr. Dailledouze thought to grow carnations for exhibition entirely under glass was the best method. He grew all his novelties on a bench inside. Crane gave better results lifted; Gold Nugget about equal; Maceo a decided advantage in lifting from the field; Gomez about even results; with Eldorado he could not tell the difference. Mr. Ward stated a selection of varieties to grow under glass would have to be made. Mr. Dailledouze added Triumph as one variety that will do well inside. Mr. Hartshorne stated that Jubilee was a success under glass from the beginning.

He had also got good results from Mrs. James Dean, although he would not lay it altogether to indoor culture; it had given 25 to 35 per cent. more flowers up to February 1 than last year. Bradt has also given more flowers in indoor culture. Sometimes plants did better this year than last; in others the reverse was the case. He would not go on record that there was any variety that would do better under glass, neither would he contradict it. Had never seen a man unaccustomed to indoor culture handle plants so well at first as he did those from the field. Ultimately, however, success would come.

Mr. Hill remarked that Jubilee would do and pay well grown under glass in Summer. He referred to a fine batch of Evelina grown in that way by Mrs. Graves, a neighbor; she literally cut flowers from that variety by the thousand. He grew America two or three years ago inside and never got a finer growth, but did not get flowers until along about the first of the year. Last year he found America lifted from field started to bloom at once and kept on producing about three times as many flowers. He also spoke of fine Triumph grown outside by Peter Reinberg, Chicago. Some two varieties he had in mind one year refused to bloom early under glass, only producing a small number of flowers; the following year yielded a fair abundance. He would, however, prefer to put his plants outdoors.

Mr. May told of success with Maud Dean indoors; it was, however, a cropper. He then gave his experience with Olympia. On July 1, 2 and 3 he planted from 4-inch pots 3,000 plants in the house, selected stock, all propagated within a week of those placed in the field. The plants are fine, but the number of flowers per plant proportionately had not been one-half as many as from those lifted first and second week in September from the open ground. He could not say that indoor culture was an advantage either for early blooming or number of flowers produced. Mr. Scott thought that Mr. Hartshorne had struck the right idea, and if the plants are set out by the first week in April, it will have three months during which time plants will get rains which are of great benefit to them. Carnation growing inside altogether might suit where one got 10c. per flower, but for the every day carnation grower the speaker believed in getting plants out early and getting them in early.

Mr. Marquisee asked about the construction of houses for growing indoors all Summer. Where houses were low, old fashioned, with solid side walls, and ventilation only at the roof, could such a practice be followed? Mr. Ward said he would not attempt to grow carnations inside in what might be called old fashioned houses, preferring those with a ventilation at both ends, both sides and double ventilation at top. When he planted he expected to take off the side ventilators entirely and fasten up top ventilators. Mr. Hartshorne's said his houses were hinged at the roof, giving 4 feet ventilation all the time; he did not think it necessary to have side ventilation. He had noticed that at ends of houses, where the wind blows in, the soil gets dry, and the spider attacks plants. Mr. Marquisee had observed that where houses had ventilation at both sides and on top temperature had run up to 120 degrees, sometimes when south ventilators were open; he did not think such temperature conducive to the welfare of carnations. Mr. Hartshorne had never seen houses go over a hundred; the width of a house made great difference. With the long slope facing south, and a wide house with ventilation only on one side, he would not attempt to grow carnations inside on a large scale. His houses were 22 feet wide and open 4 feet at top.

Mr. Dailledouze had ceased using side ventilation for the reason that he could not get air. Mr. Ward had side ventilation, and where used found that there was rapid evaporation, which he liked, especially on hot days in August. Rapid evaporation meant cooling, and if side ventilators were opened and house hosed freely under benches, the temperature inside would be less than outside.

Mr. Dailledouze had tried both ways and found the temperature one or two degrees lower with top ventilation without side ventilation. Evaporation meant a hardening of the plant and a bringing on of insects. He moistened under the benches.

Selection of Next Place of Meeting.

The discussion here closed. The selection of place for meeting in 1901 was then voted on. Mr. Hill proposed Indianapolis, Messrs. Weber and May, Baltimore; Mr. Raekham, Detroit. The Business Men's League of Cleveland also sent an invitation. The voting resulted in favor of Baltimore.

Nomination of Officers.

The following officers for 1901 were then nominated: For president, Robert Halliday, of Baltimore; for vice-president, Wm. Weber, of Oakland; for treasurer, Fred. Dorner, Jr.; for secretary, Albert M. Herr. There was a spirited competition between Indianapolis and Baltimore for meeting place in 1901, Wm. Weber making a neat plea in favor of the latter, which captivated the meeting.

The meeting adjourned at 10 p. m.

THE EXHIBITION.

In Class A, for 100 blooms white, there was only one entry, that of J. L. Dillon's Queen Louise, a pure colored, very fragrant variety, but a little weak in the stem. In the light pink class there were several entries, L. E. Marquisee winning with a superb lot of the Marquis. E. G. Hill & Co. were second with Ethel Crocker. The Chicago Carnation Co. were first for 100 crimson with Maceo, and first for 100 white variegated with Bradt, E. G. Hill & Co. coming second with J. Whitcomb Riley. In red a second only was awarded to the Chicago Carnation Co., for Jubilee.

Class B—For 50 blooms light pink, there were two entries, but no awards made owing to short count, otherwise Genevieve Lord from H. Weber & Son was a certain winner. H. Weber & Son were awarded first for 50 yellow variegated, Mayor Pingree. R. Craig & Son showed America, in scarlet, but award was withheld for short count. In crimson the same exhibitors were awarded first and second, with Maceo and Gomez.

Class C—For 25 blooms in the eight classes provided, only one exhibit appeared, that of E. G. Hill & Co., which secured first in the dark pink class with Leslie Paul.

The Lawson Gold Medal was won by Dailledouze Bros. with No. 666, other fine vases in competition being Genevieve Lord, The Marquis and Mary Hill, the fine new pink of E. G. Hill & Co.

The American Carnation Society's Cup was not awarded.

The Chicago Carnation Co.'s Cup was awarded to Dailledouze Bros., for their No. 3, a beautiful variety, exquisitely fragrant, and with a perfectly erect stem.

The Lawson Silver Medal went to R. Witterstnetter, for Adonis. (See illustration of Adonis in this issue, page 156).

C. W. Ward, of Cottage Gardens, was finely represented with large vases of Maceo, Gomez, Bradt, White Cloud, Morning Glory, a pretty light pink; Governor Roosevelt, the new dark crimson; Mrs. Dean and many seedlings.

W. J. Palmer, of Buffalo, made a fine exhibit of standard varieties, especially fine being Daybreak and a pink sport of of the same, Flora Hill and Bradt.

F. Dorner & Son, of Lafayette, were represented by a large vase of Morning Glory and a fine lot of seedlings.

The Chicago Carnation Co. showed a nice lot of seedlings, some of which will doubtless be prominent later.

F. Burki showed White Cloud, Hector and others.

J. H. Dunlop, of Toronto, seedlings; T. J. Totten, of Saratoga Springs, showed his Young America in good form, and Wietor Bros., of Chicago, had a large vase of a pink sport from Armazindy.

Philip Heilig, of Franklin, Pa., ably demonstrated with his exhibit what the carnation was at one time. C. Merkel, of Mentor, Ohio, showed light and dark pink and red seedlings, and J. A. Macrae, Providence, a sport from Eldorado.

J. N. May and E. G. Hill both staged very fine vases of Olympia. H. Weber & Sons had several fine vases of seedlings, and Crabb & Hunter, of Grand Rapids, a good vase of Irene.

(*Continued on page 162.*)

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best selling pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate notice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a striking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply.

ST. LOUIS, MO., January 24, 1900.

H. WEBER & SONS, Oakland, Md.

Dear Sirs:—In regard to what I think of Genevieve Lord, and what I heard spoken about it at the meeting, is this: Color just right and what is wanted and will sell. Shape and size as good, if not better, than any carnation ever sent out; very sweet; stems the best ever seen on any carnation ever sent out. In keeping and shipping qualities it beats any carnation that I have ever seen; as I mentioned last time in my letter to you, they looked as fresh as if they had just been cut. Yours very truly,

[Signed] E. SCHRAY, Secretary St. Louis Florists' Club.

CINCINNATI, OHIO, January 16, 1900.

MESSRS. H. WEBER & SONS, Oakland, Md.

Gentlemen:—I want to congratulate you on being the introducers of Genevieve Lord, your new pink carnation. Although I have not seen it growing, I have seen it exhibited at nearly all seasons of the year, and, taking all its good qualities into consideration, I believe it to be the best pink of its class in the market to-day. It is strictly a commercial flower, and will produce the dollars and cents. I predict you a phenomenal sale for this carnation. Yours very truly,

[Signed] E. G. GILLETT.

WASHINGTON, D. C., January 12, 1900.

MESSRS. H. WEBER & SONS, Oakland, Md.

Dear Sirs:—We have handled your new carnation, Genevieve Lord, for the past year, and beg to state that it is one of the finest carnations we have ever handled. It has become very popular here in Washington, its beautiful color making it a ready seller. Together with color its most distinct points are its extra long stems and perfect, erect habit. It has a marked individuality, enabling customers to recognize it at a glance. It is one of the few new carnations that have so many good points, and we feel satisfied that it has a great future before it. It is some little trouble to educate the people up to paying $3 and $4 per dozen for carnations, but if any carnation will bring the price, it is Genevieve Lord.

Yours very truly,

[Signed] J. H. SMALL & SONS.

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

Price, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones." Also best new and standard Chrysanthemums.

Our Catalogue is now ready and will be sent to all who ask for it.

ETHEL CROCKER

IS ABSOLUTELY THE BEST PINK CARNATION ever offered the trade. This is none too emphatic, and there are many others who think as we do It will grow with you because it grows anywhere. This year it has been grown equally successful by Hill, Herr and ourselves. It will grow in any soil or location.

In COLOR, SIZE, FRAGRANCE, STEM and KEEPING QUALITIES it is just what the "storemen" want.

In HABIT, CONSTITUTION and FREEDOM OF BLOOM it is just what the grower wants; never out of crop from September until July.

We have 6000 plants, 3000 of which we are growing for cuttings alone.

WINNER OF CERTIFICATES at NEW YORK, PHILADELPHIA, BALTIMORE, CINCINNATI and CHICAGO.

Below are a few expressions of opinions from the knowing ones. After reading them there will be, we think, no doubt in your mind as to which is THE ONE to grow for pink next season.

ITS KEEPING QUALITIES.

The undersigned Committee, having examined the vases of the New Carnation, "ETHEL CROCKER," report as follows:

"There are two vases which contain seventy-five flowers. The water in the vases has not been changed for four days, nor have any flowers been renewed, and after being on exhibition the above length of time, we find fully ninety per cent. of the blooms salable; none of them show any disposition to go to sleep and only five or six are commencing to fade, and under these conditions we cheerfully recommend it as a wonderful keeper. (Signed) A. B CARTLEDGE, EDWIN LONSDALE, SAMUEL S. PENNOCK, DAVID RUST, Sec'y.

ROBERT CRAIG & SON, BALTIMORE, MD., Dec. 27, 1899.

Gentlemen: We had, however, the pleasure of seeing "Ethel Crocker" in all her glory. We wish you would book our order for 2000 rooted cuttings of this variety, and would be pleased to receive the stock out of the first batch sent off. We feel sure this variety will enjoy a large sale and predict for it a most brilliant future. For size, length of stem, color and fragrance it surpasses *anything* we have *seen growing.*

Yours very truly, HALLIDAY BROS.

ROBERT CRAIG & SON, PHILADELPHIA, Oct. 3, 1899.

Gentlemen: The new pink carnation "Ethel Crocker" which you have been sending us is most satisfactory. At this early date the flowers are up to the midwinter standard of the old favorites, in fact it is larger, the form is perfect, and the color, almost exactly that of the Bridesmaid rose, is ideal. The stem supports the flower admirably. We believe it will become very popular, as the few we have been receiving have been snapped up at once. We congratulate you on having such a good stock of this variety. Yours respectfully, JOS. KIFT & SON.

ROBERT CRAIG & SON, FRAMINGTON, MASS., Nov. 23, 1899.

Gentlemen: Kindly book my order for 500 rooted cuttings of "Ethel Crocker," as I think it one of the finest fancy carnations for commercial purposes.

Very truly yours, WM. NICHOLSON.

FLATBUSH, BROOKLYN, N. Y., Nov. 21, 1899.

MESSRS. ROBERT CRAIG & SONS, Philadelphia, Pa.

Gentlemen: After viewing your new carnation, "Ethel Crocker," we feel justified in ordering 2500. The color seems excellent and promises to be a free bloomer; the variety has apparently an exceptionally good constitution and stem, and the calyx is all that could be desired up to this date. The dozen plants we have growing are all that could be expected, having received them too late for comparison with other varieties, which we regret.

Yours very truly, DAILLEDOUZE BROS.

PHILADELPHIA, Oct. 18, 1899.

ROBERT CRAIG & SON,

Gentlemen: Your new carnation, "Ethel Crocker," is without doubt by far the finest pink carnation for Fall use that we have handled yet; in fact, the finest we have seen on the market anywhere. Very truly yours, PENNOCK BROS.

ROBERT CRAIG & SON, HAGERSTOWN, MD., Nov. 25, 1899.

Gentlemen: In my judgment "Ethel Crocker" is a star of the first magnitude, possessed of every good quality and sure to win admiration of every one.

Very truly yours, HENRY HOLZAPFEL, JR.

Extract from American Florist, Philadelphia Notes, Oct. 14, 1899.

I neglected, in my report of the Florists' Club meeting, to speak of a vase of "Ethel Crocker" carnation exhibited by Robert Craig & Son. It attracted a great deal of attention, and all the carnation experts present seemed to be of one mind in declaring it to be the finest pink they had ever seen. It was quite the equal of any of the present favorites in their best midwinter stage, which, when one considers the early date, Oct. 3, speaks volumes in its favor.

From Florists' Exchange, Philadelphia Notes, Oct. 7, 1899.

Robert Craig & Son exhibited a vase of the new California carnation, "Ethel Crocker," which created quite a sensation. The flowers are 2½ to 3 inches in diameter, stems stiff; in fact, the flowers are remarkable for so early in the season. The above firm has a house of this variety for flowering this season and it should certainly take well.

From American Florist, New York Notes, Oct. 14, 1899.

On the exhibition table Mr. Craig had a vase of the beautiful new pink carnation, "Ethel Crocker," which was highly commended by the exhibition committee and duly admired by all, the carnation giving every promise of being a winner.

From Florists' Exchange, New York Notes, Oct. 14, 1899.

The following exhibit was made by Robert Craig & Son, to whom a vote of thanks was tendered:

Vase of the new California carnation, "Ethel Crocker." The color of the flower showed up very prettily under artificial light, being a deep, salmon pink. The stems were of good length and held the blooms up well. The exhibition committee awarded the variety honorable mention, and expressed a desire to see it again later in the season.

Write to us about CROCKER, OLYMPIA, THE LAWSON, THE MARQUIS, GENEVIEVE LORD or any of the standard sorts you may want, of which we have a goodly number, including CRANE, AMERICA, MACEO, GOMEZ, MELBA, WHITE CLOUD, BRADT, ETC.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade. . . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

AMERICAN CARNATION SOCIETY

REPORT OF MEETING—Continued.

The Exhibition—Continued from page 159.

Mrs. T. W. Lawson was represented with a fine vase shown by Fisher, of Ellis, and E. Woodfull had Scarlet Cloud and other seedlings. Miller & Son, of Bracondale, showed Lady Van Horne and Lady Minto.

Craig & Son placed Melba, America, Ethel Crocker, Gomez, Maceo, Harry Dale, Crane and Cerise Queen.

Princess of Wales violets, shown by Chas. Cummings, of Woburn, Mass., were very fine, and the same variety was exhibited by W. Findlay, of Brampton, Ont. Violets Farquhar and Swanley White were shown by Eli Cross, of Grand Rapids.

Kift, of Philadelphia, had a sample of a flower holder, and G. M. Garland a section of Gutter, which attracted much attention.

The Cottage Gardens Cup was won by C. W. Ward with Governor Roosevelt.

A three years' certificate was awarded to C. W. Ward for Governor Roosevelt, which scored 93 points; also Dailledouze Bros. for No. 666, which scored 89 points. Full certificates were also granted to the following: Enquirer, deep pink, 88 points; Estelle, crimson, 86 points; Elinore, white, 89 points, all shown by R. Witterstaetter. To Mrs. Bertram Lippincott, 86 points, from J. Kuhn, Olney, Pa.

A preliminary certificate was given to Dailledouze Bros. for No. 100,87 points; also for White Delight, light pink, 88 points. To Peter Fisher for the Maine, white, 88 points, and to R. Witterstaetter for No. 550, 90 points.

In the Sweepstake Competition the first prize was captured by Dailledouze Bros. with Mrs. Bradt, the second by R. Witterstaetter with Enquirer; as also the third by same party with Maude Adams.

Second Day—Morning Session.

Friday, February 16.

The session opened with questions from the Box. For Summer blooming varieties outside, Mrs. Fisher and Portia were recommended, also New York. The matter of remedying cutting prices in plant and flowers was, under existing conditions, considered impracticable.

Sub-watering was then discussed by Messrs. Ward, Dorner, Weber, Rudd, Dale and Witterstaetter.

The matter of a union meeting with the American Rose Society was then considered, and the committee recommended a joint meeting and an exhibition to take place the third Thursday in March. The proposition was not favorably received and the committee was continued with the object of further conference with a committee from the Rose Society.

A lively discussion ensued as to the hour of closing the staging for exhibition, which was finally fixed at 1 o'clock. All entries must be made not later than the Saturday prior to the date of the annual meeting. For subsequent entries to the exhibition exhibitors must pay $1 each.

It was decided that E. H. Michel be asked to award his cup for largest display at Baltimore in 1901.

The Lawson Gold Medal will be competed for again next year, also the silver one, and one bronze medal will also be awarded for one dozen blooms, any seedling, not disseminated. The Sweepstake Competition feature will be dropped.

Mr. Dunlop extended an invitation to members to exhibit at the meeting of the Gardeners and Florists' Club of Toronto some time in March next.

Fifty dollars was appropriated for an assistant to the secretary at the annual meetings.

The officers put in nomination on Thursday were elected.

A lengthy discussion then ensued on setting up a standard for judging, and a committee was appointed to formulate one and to report next year.

The question as to what constitutes a disseminated variety is still under consideration.

The meeting then adjourned at 1:30 p. m.

QUESTION BOX. IMPORTANT!

Readers submitting questions on heating subjects are **requested to furnish diagrams drawn to scale**, this work to be carefully done, as the most important of these diagrams will, in future, be illustrated in this Department.

A CHANCE FOR THE YOUNG MAN.

With a view to encouraging the "art of writing" articles; in other words, the expression of their views on paper, among the young men employees in our florist establishments, the FLORISTS' EXCHANGE, with this issue, institutes a series of competitions, and as an initial step offers the undernoted prize for the best written paper on the following subject—

Care of a Hot Water Boiler.

The contestants are requested to give their ideas on the subjoined points:

What is the best way to care for a hot water boiler in order to get the most heat with the least fuel.

How to have the pipes cool through the day when there is plenty of sun heat, thus saving fuel at the same time and still have the fires in such condition that they may be rushed quickly should it be necessary to do so.

Give a résumé of how to manage such a boiler for 24 hours, beginning at 7 a. m.

Prize, $4 worth of books or magazines; or $3 in cash.

CONDITIONS.

(1) Each MS. submitted must be written by an employee, without assistance, and the authenticity of these facts attested by the employer.

(2) No employee now contributing, or who has at any time contributed to any florist trade journal, will be allowed to compete.

MSS. must not exceed one thousand words in length.

All MSS. submitted in this competition to become the property of the publishers of the FLORISTS' EXCHANGE.

The awarding of the prize will be based on the practical knowledge exhibited by the writer in the treatment of his subject.

Competition will close March 7 next. Write plainly on one side of the paper only.

Address all communications,
EMPLOYEES' COMPETITION, FLORISTS' EXCHANGE,
Box 1697, New York City.

Spring and Early Summer Flowering Phloxes.

The name phlox invariably suggests to the great majority of people, including many florists and gardeners, too, only one or two of the taller growing late Summer and all flowering species, and the varieties in their various shade and colors descending from these; their flowers are produced in more or less dense pyramidal panicles, and we find them cultivated in nearly every garden throughout the country. But it is not the purpose here to belittle their value, or to detract one iota from the justly earned reputation of the stately native P. decussata, paniculata or maculata, the successful improvement of which has occupied the time of English and French specialists for the last 25 years or more, so that we have now among them immensely broad and tall panicles, large and perfectly circular, broad petaled flowers and a great range in colors, where years ago the trusses were not over half this size, the petals narrow and the brighter shades almost missing entirely. But we want to say a few words in favor of the dwarfer early flowering species, which, although found cultivated here and there, are not generally known to the extent they deserve to be, and to which their high quality entitles them. Some of them are quite indispensable for Spring gardening; they are good in beds by themselves, interplanted with bulbs, or may be planted along the edge of shrubbery and in the rock garden; others may be better adapted for mixed borders or flower beds. Their free habit and profuse blooming qualities entitle them to a place in every garden. The florists should keep them because many of them are useful as cut flowers, even the dwarf subulatas and amœnas are frequently employed for this purpose.

Phlox amœna has small oblong or ovate leaves, lanceolate along the upper part of the stem, slightly pubescent; flowers most freely produced in compact, leafy bracted corymbs; their color varies from purplish red to a pleasing pink or nearly white; growth compact, stems numerous, branchy, semi-erect; blooms May and June, height, 8 to 13 inches; Virginia; when divided after flowering, a second crop of bloom can be expected; a capital pot plant for Spring sales.

P. carnea is a form of glaberrima suffruticosa described below. P. carolina, a taller, narrower leaved form of P. ovata. P. divaricata, syn. canadense, the blue phlox, leaves broadly lanceolate, slightly pubescent; flowers delicate bluish lilac, the blue predominating, very large, produced in loose corymbs, stems self-supporting, erect; 10 to 15 inches high; May and June; North America; a lovely and most desirable plant, unique in color, good for cutting. P. frondosa, a larger leaved and stronger growing variety of P. subulata. P. glaberrima, growth erect and slender, leaves linear lanceolate, glossy above; flowers reddish or pink in loose elongated panicles; June; height 12 to 15 inches; Southern States. P. g. suffruticosa, habit slender, erect, stem self-supporting, wiry; leaves linear lanceolate or in some varieties broadly lanceolate, shiny; flowers large, perfect in shape; color very variable, from pure pearly white to deep purplish rose and intermediate shades and combinations; panicles large and long, rather loose, graceful, branching; a successful rival to P. paniculata, even superior to it in many respects; an excellent cut flower and an ideal keeper; under liberal treatment the plants produce new flower stems constantly from May to November; height 15 to 24 inches.

The improvement of this dwarf and free flowering class of phloxes has not kept pace with the paniculata section, owing, perhaps, to their disinclination to produce seed as freely as the other species; varieties are not so numerous and the brightest colors are not as yet represented. The more delicate shades, however, have been developed to perfection; the trusses are of ample dimensions and the individual florets could hardly be improved either in size or shape.

P. Nelsoni, a form of subulata or setacea, very distinct, for it looks like a different species, being dwarfer and denser in growth, with bristly stiff leaves and blush white flowers marked with a faint small pinkish eye. The true variety is rarely seen. P. nivalis, a pure white variety of P. subulata. P. ovata, radical leaves broadly ovate, cauline ones narrower, rather fleshy; flowers freely produced, rich purplish rose, cymes crowded; June to July; height 12 to 15 inches. North America. P. paniculata (decussata) mostly hybridized with P. maculata, leaves oblong or oval lanceolate, cordate along thee rigidly stiff and stout stem; flowers very variable in color, panicles very broad and densely set with florets.

There are very numerous grand garden varieties and hybrids in this Summer and early Fall blooming group; it has received more attention than any other species of the family, and improvements are still going on. Some of the varieties flower in July, others as late as October; dwarfs have been produced only 12 to 15 inches high, while others grow to the height of 4 feet and over. Brilliant colors are not lacking, though the original native species, from which all these varieties have been developed, bear white or pale and dull purplish lilac flowers.

P. pilosa, leaves linear or lanceolate, taperiog to a point; flower stems semi-erect, flowers in loose corymbs, pink or rose, rarely white; May and June; height 12 to 15 inches; North America.

P. procumbens, leaves shiny, lanceolate, smooth, the edges somewhat ciliated; flowers rosy lilac, with darker eye, produced in terminal, few flowered cymes; a rather weak but pretty prostrate plant. Asa Gray says it is a natural hybrid, P. amœna × P. subulata; May to June; height 4 inches. P. reptans, leaves roundish oblong, downy, stems creeping; flowers purplish rose, bright and showy, cymes few flowered; May and June; height 4 inches; North America; a very pretty pot plant for Spring sales.

P. stellaria, the dense trailing growth is thickly covered with linear pointed leaves; stems are dark, flowers starry, white or pale lilac; the earliest bloomer of all; height 10 inches; United States.

P. subulata (setacea), ground or moss pink leaves linear or awl shaped, evergreen, growth densely matted, trailing; flowers in few flowered corymbs, freely produced from every point, pink, tinged light or dark purple; pure white or with pink center as to variety; May to June; height 4 to 6 inches; North America.

P. s. Vivid is a vastly superior variety, very distinct in many ways; growth is more tufted, very dense, not rambling, shorter, much branching and more erect; leaves are bristly pointed, almost spiny when full grown; flowers bright and clear pink with large brilliant eye, perfectly round, the lobes overlapping each other, produced in greater abundance and in larger cymes than in the ordinary varieties; flowering time a week or ten days later, continues in perfection for weeks, even in hot weather fully exposed to sun; this variety is far ahead of any of the subulatas, but also very rare.

All the phloxes succeed under ordinary treatment in any good garden soil. The taller, erect species prefer an open airy situation. The dwarf and creeping sections succeed also in more or less shaded positions; the blue P. divaricata is the only exception; it actually needs partial shade and also moderately moist ground to do well; uncongenial surroundings are liable to shorten its life.

In conclusion I may say that P. Nelsoni and Vivid are here mentioned as varieties of P. subulata; some years ago we classed them separately as P. setacea. Botanists have decided there is no difference, although our gardeners insist that there are distinct features in foliage and habit if not in the shape of the flower.

DOUGLASS HILL.

OBITUARY.

Hon. T. T. Lyon.

Hon. T. T. Lyon, formerly in charge of the Experiment Station at South Haven, Mich., died at his home February 6, at the ripe age of 87 years. He was born in western New York, removing to Michigan in 1828. In 1848 he turned his attention to experimental horticulture. When in his prime Mr. Lyon had no peer in that state as an authority on pomology. Early in the seventies he removed to South Haven, and bought 10 acres of land within the village limits, which had since been his home. Here is the only experimental station in the state, and is set ont to three or four species of each variety of fruit, from apples to strawberries. Mr. Lyon had been its superintendent since it was established—about 1890. In 1876 he became president of the State Horticultural Society. He was also second president of the South Haven Pomological Society, and was an early member of the American Pomological Society. He was the originator of the Michigan fruit catalogue, a schedule of fruits adapted to Michigan, which is the fruit growers' lexicon to-day, and is law at fairs in decisions of judges. The most complete horticultural history of the state came from his hand early in the eighties, and is a most valuable volume. He recently completed for the Government a card catalogue of American fruits.

The late John M. Hodgson.

See page 63. Jan. 27.

Frank Becker.

Frank Becker died at his home in Cambridge, Mass., Sunday, February 11, in the 70th year of his age. He had been in ill health for some time.

Deceased was born at Gonzenheim, in Hesse-Darmstadt, Germany. He came of agricultural stock and developed early a fondness for plants and flowers. At the age of 27 he came to America, his first position in this country being that of head gardener at Mt. Auburn Cemetery, Cambridge. A few years afterwards he established himself in business in that city and steadily built up a large trade, not only in the college community, but in Boston and its suburbs as well. He was one of the earliest florists in this neighborhood to import plants in quantities and the first to see merit in the now well-known Boston fern, the popularizing of which has been largely due to his efforts and those of his son.

Mr. Becker was a member of the S. A. F. O. H., being at one time state vice-president for Massachusetts, and for many years was a member of the Boston Gardeners and Florists' Club. Though he had retired from active business some years ago, handing over the management of same to his son Fred, the deceased gentleman continued to take a lively interest in all that concerns the craft. He was a man of practical common sense, unflagging perseverance and sterling integrity, with an ever-ready human sympathy that lay beneath a simple, unobtrusive demeanor.

LYNN, MASS.—Alfred F. Chatfield, who formerly conducted greenhouses in Albany, died here February 6, in the eighty-fourth year of his age. He was for many years an officer of the New York State Agricultural Society, and an active promoter and patron of the annual state fairs.

F. F. Merceron.

At Catawissa, Pa., on Thursday, February 15, Mr. F. F. Merceron, originator of the Sharpless and Gladstone strawberry.

Baltimore.

Club Meeting.

The Gardeners' Club, at its meeting on the 12th inst., had, as usual, an interesting time.

The landscape architect of the Park Commission had advertised in the daily papers for bids on supplying about 200,000 bedding plants for the various squares, etc., each bid to be made for 25,000. Some of the city florists contended that this proviso precludes the possibility of them putting in a bid, as none of them grow that quantity of any one variety, and that the fairer plan would be to let, by contract, the planting of each square according to specifications supplied by the landscape architect. They claimed that the city florists, with limited area of glass and unlimited area of city taxes, deserve an equal competitive chance with the country grower, with much larger space and very much lower rental and taxes; the matter was not definitely settled.

The carnation show will be held on February 26, and the annual banquet on the second Monday evening in March, when the election of officers also takes place.

Not many of this club's members belong to the Carnation Society; a movement was on foot to increase the number and to instruct Mr. Weber, of Oakland, Md., to try and induce the society to hold its next annual meeting in Baltimore, but the time was so limited and there was so much on hand that the subject could not be accorded the attention it merits.

Trade Notes.

Business is fair all around, and the supply generally about equal to the demand. The correct thing for a valentine this year was flowers, in one shape or another, and a brisk business was the result. Halliday Bros. made an excellent exhibit of carnations at their two stores on the 14th, the variety "Mat. Richmond" being in fine shape and quite conspicuous.

Julius Tischenger, of the Chestnut Hill Greenhouses, Waverly, was stricken with paralysis a few days ago while working in his greenhouses, one side being affected. He is somewhat improved at this writing. SAM BUCUS.

Montreal.

Trade Notes.

A few very bright and mild days following after a dull spell, and again followed by very wet and unseasonable weather, is developing a fine crop of mildew among the roses, which are just now in very short supply and in moderate demand. In other lines trade is unusually quiet for the time of year, with abundance of stock to fill all requirements. Dutch hyacinths and tulips are now seen in goodly quantities, but are in little demand. Daffodils of various varieties are still reported to be holding the lead in bulbous stock.

Notes.

The Bermuda grown Harrisii are particularly free from disease this year; but the Japanese longiflorums are seriously affected with what is apparently the same trouble as has affected the Bermuda grown bulbs in former years.

Club Notes.

The hand of affliction is resting very heavily on the club lately; at almost every recent meeting it has been our sad duty to extend our sympathy to some bereaved member. This time, the estimable and respected daughter of Mr. Perrin, one of our charter members, has been taken away after a lengthy period of suffering. Miss Perrin was for a considerable time engaged in Bennett's florist store. B.

The A. T. De La Mare Printing & Publishing Co., Ltd., have just issued a revised list of the books on the cultivation of flowers, fruits and vegetables and kindred subjects, which they have for sale.

SYRACUSE, N. Y.—Standing in the center of a bed of the pink seedling, which is intended to succeed the Marquis in distribution, is one solitary plant of a white Marquis, identical with that grand carnation, excepting in color, which is snow white. L. E. Marquisee has another prize-taker to launch upon the market, sometime hence 'tis true, but the advent of such a beauty is worthy of early notice. The magnificent exhibition of the Marquis made at Buffalo will have been fully noted elsewhere in the EXCHANGE.

Camphorated Earth.

Editor Florists' Exchange.

Some time ago there appeared in your paper an article regarding camphorated earth, and we sent to our Yokohama house to find out the truth about it. We have received a letter, under date of January 10, as follows: "We have no such thing, nor does anyone know what it is. What we use for growing chrysanthemums to perfection in Japan is prepared earth with well decomposed human manure, a preparation which must be at least two or three years old."

New York. SUZUKI & IIDA.

Cut Flower Prices.

Editor Florists' Exchange.

We note the correspondence going on in the FLORISTS' EXCHANGE relative to the cut flower prices obtained in the New York market the first week in January of this year, and the statement of Mr. Thorne (page 82, issue of January 27) that he got figures higher than those quoted by your representative in your issue of January 6.

For your information we would state that on January 4 the prices received by us, as shown both by our slips and growers' returns, were, for fancy Bridesmaid and Bride roses 20c. to 25c., and so on down.

Had these prices been quoted in your paper, what would Mr. Thorne and those other growers have thought, who, at that time, were not fortunate enough to have the finest stock? They can see, therefore, that your correspondent could hardly, in fairness, have quoted any but the average market price.

ALEX GUTTMANN,
Of Blauvelt & Guttmann, New York.

Editor Florists' Exchange.

Your cut flower price controversy certainly should interest every grower of cut flowers. I, like Mr. Thorne, insist that a trade paper ceases to be such when its functions are such that it uses its own discretion to quote prices that their correspondent thinks would not be agreeable to the commission man who is, of course, an advertiser in his paper; the grower is equally an advertiser, but his interests seem to have been entirely ignored, not only in this instance, but in many other, while they should have as much weight as the commission man's. Prices should be quoted as they exist from day to day, or not at all. I know this is not done, and know whereof I speak on this subject, and have on more than one occasion called the attention of the correspondents for the different trade papers here to this matter, and received the same excuse that your correspondent in the last issue of your paper offers, which any fair-minded man must admit is radically wrong and a great injustice to the grower. There are other people who have their troubles as well as the commission man. As I understand it, prices quoted are intended as a guide for the storekeeper as well as the grower. We have been compelled on more than one occasion to reduce our prices on the foundation of prices quoted in the trade papers for the previous week, when those quotations were fully 25 per cent. less than we had for the time stated, and I have seen them quoted as low as 50 per cent. This ought certainly to have made your commission man happy!

What is the consequence of such quotations? It naturally brings down all grades. For instance, if we have enough extras to meet the demand of our customers every day, and are compelled to drop our prices on these to the price of inferior grades, does it not compel us to reduce the next grade, and every other grower who is not fortunate enough to grow any extras? And so it continues all along the line until the price of cut flowers has got down to the starvation line, and it is a question whether the trade papers have not, in order to satisfy one of their sources of income, the commission man been instrumental in helping to get them there? I say, quote prices and quote them honestly or not at all, no matter who is hurt. When we look around and see all lines of merchandise advancing, and all lines apparently prosperous but our own, and with an allowance of 25 to 300 per cent. in all the purchases, the grower is compelled to make and then turn to his income and find his product selling at lower prices than previous years, the problem faces him—Where is the trouble, what is the cause of it? Let the trade papers help the grower as well as the commission man. There should be no secret prices, as your correspondent advocates. Storekeepers don't pay prices out of sentiment, and his method helps them to lower prices all the time.

FRANK P. MYERS.

Philadelphia.

Our Carnations as Others See Them.

Editor Florists' Exchange.

The following from the London letter that appeared in the pages of your contemporary, American Gardening, for February 3, and from no less an authority than Mr. Richard Dean, one of the "Victorian Medalists of Horticulture," would imply that at best our carnations lack fullness, and that this shortcoming is directly attributable to methods of culture: Mr. Dean says:

"One of your American carnations was seen at the last meeting of the Royal Horticultural, a variety named Olympia, and sent by Mr. John May, Summit, N. J. The flowers are white, with longitudinal bars of bright rose along the petals; the habit of growth good, and the calyx perfect. Olympia reminded me of an English variety named Alice Eyres. As compared with our newer English carnations the flowers were thin in petals, but what there were of them were stout and well formed. It was stated that the plants exhibited had been grown planted out in only 4 inches of soil, and this would account for the small number of petals in the flower. It was this last fact which prevented the committee from recognizing the variety in the form of award."

It is something entirely new to me to learn that the number of petals in a flower increases in a more or less direct ratio with the depth of soil in which the plant is grown, but here we have it stated as plainly as ever a statement was made, "that the 4 inches of soil" accounted for the small number of petals.

The day after reading the above critique on Olympia I called to see it at Summit, and what a picture it presented, buds in thousands, countless flowers in several stages of development; and just ready for shipment an average day's cut of 500 superb blooms. Lacking petals, forsooth! Perhaps it does from the standpoint that Mr. Dean judges a carnation, shown flat on a green board with a paper collar encircling it. And have I not seen florists of his school with tweezers in hand laying out the petals, round and flat, and not hesitating to extract a few, if by so doing they secured the desired conformation of outline and build!

I say again, as I have said before in English publications, that the greatest pitch of perfection in Winter flowering carnations has been obtained here. Our friends over the water have been surpassed, but they do not know it, and any one of our large carnation establishments is turning out more fine flowers daily than you could buy in the whole city of London on any day, from November to May. Their Malmaisons and Summer flowering kinds are peerless, but climatic conditions are against the carnation as a Winter flower in Europe.

It should, of course, be conceded that Olympia could only be shown at a disadvantage in London, but Mr. Dean notwithstanding, growers here will continue to do as they have so well done in the past in 4 inches of soil.

Madison, N. J. A. HERRINGTON.

More Light on Carnation Growing.

Editor Florists' Exchange.

In your last issue you have a very interesting article upon carnations as grown by various men. Allow me to compliment you for the way you are endeavoring to bring out matters of this sort for the benefit of your readers, but there is one point in which many of the articles seem to me to be wanting, and that is the little something which make all the difference in the world, the pivot upon which success or failure turns—the great thing lacking in the article is: What nature of soil was used in their growing? One or two of the growers gave the nature of soil, but as others did not, we cannot draw a proper conclusion as to the best soil for each variety. Might I be bold enough to ask that this be given to your readers. Again, the kind of house or houses in which the plants are grown, large, small, short span to the south or north, equal span, or whatever might make the difference. Also the day and night temperature, if grown on benches or solid beds, houses facing north, south, east or west, depth of soil, and how fed. To some this may seem a small matter, a trifle, but "trifles make perfection, and perfection is no trifle."

Besides this, I am satisfied that the grower who puts out a new variety makes a big blunder when he does not inform those who buy from him as to the nature of the soil in which such has been grown, for more of the failures may be traced to this cause than to anything else. Some people I have come in contact with seem to think that thus keeping back of the crucial point is smartness on their part, a preserving of their bread and butter, as they say; to me it is a most contemptible thing to lead one on to the difficult brink and then leave him in the dark. Remember, sir, I do not say that the gentlemen who have given their experience in the articles under consideration have done anything of the kind, but how much better would it be if we could have all the facts, and I am sure a great many of your readers would welcome such information from the master growers of carnations.

S. S. BAIN, Montreal.

Prefection Reached?

Editor Florists' Exchange.

A scale of points is but a means to an end, and cannot, or should not, be construed into an inflexible finite rule applicable with mathematical precision; therefore, I see no reason why any body of competent judges should hesitate to award 100 points if the subject is truthfully scaled to that limit, and the fact of such award being made does not "stagnate all carnation improvement," as it is only a truthfully expressed judgement upon a definite object of fixed characteristics, judged in the light of such characteristics as exemplified by other flowers of its kind. Of course, in originally drafting a scale for judgment we have to imagine a certain non-existent ideal, but can we imagine a finite ideal? In other words, given a carnation without apparent fault, are we to forego expressing the courage of our convictions because our imaginary ideal has no limitations in size? Shall the full number of points for size be withheld because a year, two years, or a decade hence, something very much larger may appear?

I see no need for withholding the limit in points, when it can be truthfully accorded, on the assumption that we close the scale or debar future improvement. If the opposite is true, what guide for judgment shall we seek?

Carnations that were certificated a few years back were adjudged to a rightful position then; but if we rejudge them to-day by existing standards of merit they fall hopelessly in the rear. The scale was then devised in view of certain constitutional defects it was sought to remedy, and if the new aspirant for honors meets the scale, why refuse to accord it full recognition of its merits? If otherwise, to follow out to a logical conclusion the position taken in the article on page 134, you must set up a final standard of impossible attainment and scale the subject as near thereto as the merits will justify. All this, of course, assumes competent judgment, as no permanent stability can exist in awards made upon lack of sufficient knowledge.

A. HERRINGTON.

Editor Florists' Exchange.

Your article under the above heading is interesting and important, for if the Chicago judges were right in awarding 100 points, denoting perfection, to a carnation, then what is to hinder other judges from awarding the perfection mark to the chrysanthemum or rose? But Mr. Rudd says that because 100 points was awarded it does not necessarily mean that perfection has been reached. I presume by that he considers some degree of allowance must be made for the judges being men and not gods. The old adage, that beauty is in the eye of the beholder, may apply to judges also.

I cannot conceive of any flower being perfect, nor that perfection can ever be reached in one variety. I can conceive of one variety possessing the ideal "form," another possessing the ideal "texture," another "stem," and another "perfume." Color must always be a matter of taste with the individual, and by selecting a number of varieties possessing each the most perfect, "one characteristic," make them the standard to judge others by, until others arise that are more perfect in some one of the various characteristics. I am of the opinion that we should hear of no more seedlings obtaining the high-water mark of perfection.

It may seem a long road to the star of perfection that one hopes to hitch his chariot to, but it is better to take time to get there than to hitch on to a meteor and call it a star. Mr. Rudd evidently thinks that if the star can't be reached, why the meteor will do.

W. G. G.

What Constitutes a Species.

Editor Florists' Exchange.

With your permission, Mr. Editor, I should like once more to intrude on your valuable space with reference to "what constitutes a species." In your issue of January 27, G. W. O. has so completely ignored the subject as to make the heading a farce. If he will read my letter again, on page 38, he will see that I did not try to name a plant by the aid of "Dr. Gray's First Lessons." The plant in question being a new one, such a procedure would have been useless. I merely tried to discover whether the plant was a true species or only a variety. Had it been the former, the discoverer would have the honor of naming and recording it, and if the latter, the variations of some species are so numerous as to be scarcely worthy of more than passing notice.

G. W. O. seems to be laboring under the delusion that species are clearly defined; when such is not the case. Had the classification of the vegetable kingdom been the work of one man we should know how much value to place on certain characters of a plant, and we could study his method and accept his decision. As it is, we have to read the opinions of various botanists, and form our own where these gentlemen do not agree. The result is all this confusion in the nomenclature.

At Kew Gardens not only is the name of the plant put on the label, but also the authority for the name. Among practical men a plant that will reproduce itself from seed, true to its kind, is considered a species; yet it is well known that varieties will become fixed. There is often more difference between a species and one of its supposed varieties than between two having distinct specific names.

It is easy to swallow a botanical work, but deriving a knowledge from it which you can apply is quite a different thing.

I shall be very pleased to submit the aster in question, also a vernonia, to the analytical judgment of G. W. O. if he would care to have them, on the condition that his opinion, as to whether they are true species or not, is published in the FLORISTS' EXCHANGE. E. H.

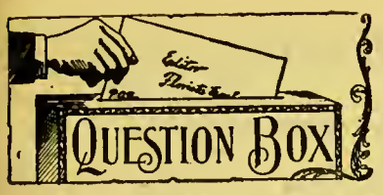
Canna Italia.

Editor Florists' Exchange.

In your issue of December 30, 1899, at page 1297, there is a note under the heading "Canna Italia," with regard to which allow us to make a few remarks:

The writer of the article says that Canna Italia is simply a cross between Mme. Crozy and your native species, Canna flaccida. From the word "simply" one would infer that it was a very easy thing to obtain the new race. This is far from being the case. We would tell your correspondent that it is quite useless to continue making any further attempts in that direction, as crossing Italia or any other of our orchid-flowered cannas, with any of the ordinary kinds, is quite a vain attempt, all the orchid flowered cannas being absolutely sterile. As the originators of this famous race we ought to know something about it, and we gave up all attempts in that direction several years ago.

DAMMANN & Co., Italy.



(27) **Cucumbers for Pickling.**—I wish to grow cucumbers from 1½ to 2 inches in length for pickling. Please state the best method of growing and the best variety.—SCOTT, Tenn.

—I presume the information required in regard to growing cucumbers for pickling refers to outside culture, as it would not be profitable to grow cucumbers under glass for that purpose. Several years ago, while in North Carolina, I had to grow a large quantity of cucumbers for this purpose. I found the Small Gherkin admirably adapted for that climate, and wonderfully prolific. These can be planted in hills 5 feet apart each way, any time in May, and by keeping the fruit picked off they are perpetual croppers. When full grown they are not over 2 inches in length, and oval shape. Small Gherkin would be my first choice for that climate. They should be planted in a medium soil; a very heavy soil would not suit them. In making the hills two or three shovelfuls of thoroughly rotted manure should be worked into the hills. I have also found helpful a good handful of cotton seed guano applied to each hill after the plants are up, say just as they are beginning to run. This is best applied when there is indication of a good shower of rain. Gherkins are longer in coming into crop than other varieties, but after they once come they are certainly profitable for pickling purposes. Next to the Gherkin I would recommend Everbearing. This variety also crops a long time, and may be planted in June, or even July; otherwise the treatment is the same as already recommended. Fordhook Pickling, Early Short Green and Nichol's Medium Green are all adapted for that work; the last named is an excellent cucumber for either pickle or table use.—WM. TURNER.

(28) **Stirring Carnation Soil.**—Stirring the surface soil of a carnation bed is not advisable now, as there are many roots right at the surface that would be disturbed or broken in the operation. Keep the weeds pulled out and rub the surface over with the ends of the fingers; that will keep the bed looking clean and fresh.

(29) **Plants for Name.**—The two specimens submitted are lifeless, and if the others are in the same condition no treatment given them will ever do them any good. Both of them are orchids—the larger one is a variety of lycaste, and the other a variety of dendrobium. As they cannot be grown well in a mixed collection of plants, and as they have probably been resting so long that they are past starting again, the best plan would be to discard them altogether, as under unskilled management they cannot be cultivated successfully.

(30) **Building and Heating Greenhouses.**—I want to build a three-quarter span greenhouse, 75 feet long and 20 feet wide, facing south; and I wish it high enough in front to have equal-span greenhouse, butting up against it, so the front must open into the span roof. House running north and south. What I want to know is the specification of the lumber (mine is spruce), the length of the rafters and thickness, size of plate, height of post at back and front, size of ventilators and where to put them—on the short span or on the top of the long span; size of inside rafters for stages and width of shelves for pot plants; also quantity of 4 or 3-inch pipe, or 2-inch, for heating same. What is the meaning of hot water under pressure? I intend making the walls of rough board covered with tar paper and clap board. I want a temperature of 60 degrees at night. Our glass goes down to 20 degrees below zero perhaps ten times during the Winter. I burn soft coal.—L. McL.

—It is rather difficult to tell from the above just what the arrangement of the house is to be, or what the height of the front of the house must be in order to allow the span roof house to open into it. I am also at a loss to know what is meant by "size of inside rafters for the stages," but I presume that by "width of shelves for pot plants," information as to the width of beds or benches is desired. The height and construction of the house would vary with the kind of crops to be grown, but it will be desirable to have glass in the south wall, at any rate, and for many purposes it would be desirable in the north wall. This glass could vary from 2½ to 4 feet in height. The south wall will then range from 5 to 6 feet in height, while the north wall should be 2 feet higher. The sash bars for the north and south sides should be respectively 8 and 16 feet, and should be about 1¼x2½ inches, varying slightly according to the size of the glass used. The plate should be 1¾x7 or 8 inches wide, and if only a single row of ventilators is used at the ridge, they should be 3 feet wide, and continuous along the south side of the ridge. They may be hinged either to the ridge or to the purlin, the latter generally giving the best results, unless the house is in an exposed situation, where there might be trouble from cold north winds. The width and height of the beds or benches will vary with the kind of crop to be grown, but for most purposes it will be desirable in a house of this kind to have walks along the walls about 2 feet wide, and another in the center with a width of 30 inches, although slightly less would answer. There would then be space for two beds or benches slightly over 6 feet wide which would answer for all crops except roses, for which a narrower bench is desirable, although well drained beds 6 or 7 feet wide give good results. A house of this kind can be heated with twelve 2-inch pipes in the coils as returns. These may all be on the side walls, or two or three may be placed under each of the benches to provide bottom heat. If the coils are distributed under the benches a 2½-inch flow pipe may be placed upon each of the plates to supply the wall coils. Two 2-inch flow pipes can be carried upon the ridge and purlin posts to supply the coils beneath the benches.

A hot water system is said to be "under pressure" when it is closed so that there would be no opportunity for the water to escape except through the safety valve. In a closed system the water can be heated considerably above 212 degrees, without forming steam. This both helps the circulation and decreases the expense of the heating apparatus, by lessening the size and the amount of pipe required.—L. R. T.

(31) **Heating Greenhouses.**—I am going to put a very small boiler in a new house that I am building. This house is for propagating, span roof, very small, 10x20 feet, 8 feet to ridge. What size pipe would be best to use, and how much? I have an old house, a very poor one, that will be near the boiler, and which I would like to heat just enough to keep out frost. The temperature never goes very low—about 12 degrees of frost is about all we get; never more than 15 degrees.—ABRAM CLEMO, Grass Valley, Cal.

—For small houses 1½-inch pipe will answer very well, and all of the heat desired can probably be secured if two pipes of this size are placed under each of the side benches, one of which is arranged to act as a flow pipe and the other as a return. It will probably be best to start the pipes at the boiler and carry them on the side walls of the old house into the new house. At the farther end of the new house the flows can be connected to the returns by means of elbows and nipples. Good results can be secured when the flow pipe is given either a slight rise or a fall, but the return pipes should slope toward the boiler. At some point in the system a small expansion tank should be connected with either the flow or the return pipe, and air valves should be inserted at the highest points in the system to permit of the escape of the air. —L. R. T.

We are about to build a house for carnations; three-quarter span, 100x20 feet, 13 feet to ridge, 4½ feet sides, with 2 feet of it glass; and want to heat it with hot water, using 3-inch boiler flues for heating pipes, flows and returns. Would three 3-inch flues for flows and six 3-inch flues for return be enough to maintain 50 degrees when the thermometer runs 20 degrees below zero? The bench under which the three flow pipes will be placed is to be 5 to 5½ feet high. Would this give too much heat under the benches?—R. W. W., Conn.

—The plan for arranging the houses as shown in the sketch should give good results, but, as in all cases where shallow beds are used, care should be taken that they are so watered as to prevent the drying out of the soil at the bottom of the beds. While good results can be secured with all of the pipes under the benches, the heat would be rather more equally distributed with one or two of the pipes under each of the raised walks. If the benches are already built it may not be worth while to change them, but even in a three-quarter span house it is a good plan to have a walk next to the south wall and then some of the pipes may be supported upon the wall posts. —L. R. TAFT.

My violet house is 2 inches lower at the further end from boiler. It is 70 feet long, 9 feet 6 inches wide, even span; 6-feet sash, ends glass, sides (of plank) 9 inches high. I have three 1¼-inch pipes on each side which are only 10 or 12 inches above boiler. All the pipes in other houses are much higher (say 10 or 12 inches) than those in violet house. In zero weather this house runs down to 33 degrees. The top of solid bed is 10 inches from glass, causing the return pipe on each side to go between bed and wall. Now, would two 2-inch pipes on each side give the required results, or would it need two 3-inch pipes on each side? Door at each end; feed pipe from main (main is 4 inches) to violet house is 1¼ inches, with three elbows or bends; length about 10 feet.—McG.

—It is always difficult to secure a good circulation where the pipes in one house are nearly as low as the bottom of the boiler, while those in other houses are considerably elevated, and, even where there is, as in the present instance, a difference of but 10 or 12 inches, the circulation is not likely to be uniform. A violet house 70 feet long and 9½ feet wide will require about 210 feet of radiating surface, when there is a good circulation, and this would hardly be furnished by two 2-inch pipes from each side, but it will be better to use an additional 2-inch pipe than to put in two 3-inch pipes on each side of the house, which would furnish more radiation than is required. It is not stated how many feed pipes connect the coils with a 4-inch main, but if there is only one upon each side of the house the circulation would probably be quite sluggish. In rebuilding a system it will be desirable to put in 2-inch flows and returns upon both sides of the house. The six 1¼-inch pipes at present in the houses do not provide more than about three-fourths the radiation needed. When the 2-inch pipes are put in they should be carried at as high a point as possible upon the walls, and whenever it is possible, which does not seem to be the case in the present instance, the placing of the flow pipes overhead will greatly improve the circulation when the returns are but little above the level of the boiler.—L. R. T.

Can 2-inch pipes be used for both flows and returns with satisfactory results. Have 2-inch pipes on hand; how many runs of same would be required for following houses: No. 1, 20x114, ridge 10 feet, north side 6 feet, south side 4 feet. No. 2, 24x104, ridge 10 feet, north side 6 feet, south side 2 feet. No. 3, 10x 104, ridge 6 feet, north side 4 feet, south side 4 feet. Sides all double boarded, paper between; temperature required 50 degrees; outside temperature sometimes 20 degrees below zero. Will 15-horse power boiler be sufficient?—J. S., Central, Mo.

—Very good results can be secured when both return and flows are of 2-inch pipe, but no more than two returns should be supplied from one flow in a house 100 feet long. If there is no glass in the side walls of the houses twelve lines of 2-inch pipe will answer in a house 20 feet wide; fourteen for a house 24 feet wide, and six for one 10 feet in width. A boiler that will furnish 15-horse power should be sufficient to heat the three houses, but for economy in fuel and labor there should be about 12 square feet of surface in the grate.—L. R. T.

(32) **Carnations Bursting Calyx.**—Please tell me why my carnations split so of late, especially Scott and McGowan. I try to keep the temperature about 50 degrees at night; one or two nights it has gone as low as 44 degrees. Also my Daybreak are getting bad with rust; temperature same as for Scott and McGowan. Soil is one-quarter good manure and three-quarters good soil.—W. H.

—Too low a temperature will cause the carnations to come with split calyx, and the occasional dropping down to 44 degrees is no doubt the factor in this case. Why the Daybreak have the rust and the other varieties are free is easily explained. Daybreak is very susceptible to the disease mentioned, and the McGowan and Scott are not so easily attacked. With good care, however, such as keeping diseased leaves picked off, discontinuing syringing, excepting when it is absolutely necessary, and then only doing it on bright mornings, Daybreak will outlive the disease and yield a good supply of flowers before the season is over.

(33) **Calla Flowers Not Opening.**—I would like to know why so many of my callas do not open this year. I treat them the same as I did last year—40 to 50 degrees at night; they are in solid beds. I started them August 1 and gave them a heavy top dressing of manure after starting.—CALLA.

—The cause of the callas not opening well is the low temperature in which they are kept in at night. To grow callas well and profitable the night temperature should be not less than 60 degrees.

(34) **To Kill Violet Pests.**—I would like you to tell me how to get rid of green and brown aphis in violet house. I have used hydrocyanic acid gas twice, but have not killed all the insects, though, I think, I have destroyed a good many of them, slightly injuring some of the plants. Would it lessen the danger to the plants to wet them before applying the gas? It seems to have injured the California plants more than those of Marie Louise.—G.

—We know of nothing that will so effectively destroy the green and the brown aphis in violet houses as hydrocyanic acid gas. We have used it in our violet houses during the past three years, and it has not only held the aphis in check, but has not caused the slightest injury to the double varieties. The amount usually recommended for fumigating violet houses generally injures the single varieties, however, to a greater or less degree, according to the growth of the plants and the condition of the weather. The amount of gas which can be used with safety will not entirely exterminate the aphides, but it will destroy more of them and injure the plants less than any of the other treatments recommended. The plants must not be exposed to the gas more than 30 minutes, and the utmost care must be exercised in determining the proper amount of cyanide of potassium to be used. Care should also be taken not to wet the leaves, as our experience shows that the plants are less liable to be injured by the gas if the foliage is kept free from moisture. The use of hydrocyanic acid gas is fully discussed in Circular No. 37, of the Division of Entomology. This circular will be sent to all applicants.—P. H. DORSETT, Division of Vegetable Physiology and Pathology, U. S. Department of Agriculture.

Tobacco-Whale Oil Soap for syringing, for washing plants. We Know Its Goodness. All Seedsmen Keep It

New York.

Club Meeting.

A well attended club meeting was held Monday evening last, President O'Mara in the chair. The various committees, the meetings of all of which have been very gratifying, reported satisfactory progress. A draft of the preliminary schedule for the forthcoming horticultural exhibition in August next was read, and, with several suggested amendments, adopted. The prizes to be awarded will be silver and bronze medals, together with certificates of merit and honorable mentions. The schedule includes fruits and vegetables. It was agreed that the club donate a trophy, valued at $100, to be given to the horticultural society whose individual members secured the largest number of prizes, a relative value being placed on each separate premium obtained. The S. A. F. has donated 12 silver and 12 bronze medals for the purposes of this exhibition, and others from the club will be forthcoming.

The exhibition committee, in its amended report from last meeting, awarded a silver medal to Dailledouze Bros., for carnation No. 666. The dinner committee reported a satisfactory conclusion of their labors, and together with Mr. Brower and the various donors of material for the dinner decorations, were heartily thanked. Mr. O'Mara and Mr. Ward told of the elegant time experienced at the Dutchess County Horticultural Society's annual banquet at Poughkeepsie.

The efforts of the club to obtain new members are meeting with encouraging success. A host of new names was proposed, and many more are expected to be as time progresses. The Ways and Means Committee is making good headway, but the hearty co-operation of every member is desired along this line.

It was announced that an endeavor would be made to have all S. A. F. work close with the forenoon meeting on Thursday of the convention, so that the afternoon of that day could be devoted to recreation, as well as the whole of the following day.

E. J. Norman and S. F. Butterworth, from Massachusetts, were present, and made a few remarks.

The State of the Market.

With the exception of Tuesday, which was a wet, miserable day, business has been fairly good all of this week. There is a scarcity of fancy Bridesmaid, but in all other lines there is ample supply.

Owing to washouts on the New York Central R. R., the Wednesday afternoon shipments of violets from Rhinebeck did not reach this city in time to be of any use that day, being about seven hours late.

The Poughkeepsie growers, however, fared much better, as a special train was made up, and their violets were in the city at the usual time.

In the market quotation column of this issue it will be seen that prices are given for Bride and Bridesmaid roses according to their several grades. It will also be seen that for No. 2's $3 per 100 is the lowest figure quoted. There are many roses coming in, however, that are too poor in quality even to be graded as No. 2's, and, when sold, do not realize more than $1 or $1.50 per 100—which, by the way, is all they are worth.

American Beauty are still bringing 60c. for the top grade, and the demand is about equal to the supply. The best blooms of Liberty fetch from 40c. to 50c. each, and some special Morgans and Cusins are bringing 15c.

Carnations are clearing out quite well and there is but little fluctuation in the values. Scotts are surely going out of favor in this market, what with the poor color of some and the bursted calyx of others they are fast being relegated to the rear.

Tulips are to be had now in a great variety, the best on the market is the Morello, which realizes $6 per 100. There is also a special grade of lily of the valley bringing $4 per 100.

Yellow Marguerites are quite popular and realize $1 per 100; the white variety can be had at 50c. Sweet Peas are in fair supply, and are mostly of the pink type.

Narcissus are quite plentiful and buyers can take their choice of several varieties. Roman hyacinths are also coming in somewhat heavier than they were one week ago, a limited number of the blue Romans are also offered. Maidenhair fern and asparagus are selling well. Mignonette is in heavy supply, and lilac has shortened up considerably. Freesias are plentiful but a good many of them are only of ordinary quality.

Shipments of violets are particularly heavy for this time of the year, yet dealers are able to dispose of them, and at fairly good prices.

Among the Commission Men.

Thos. Young, Jr., has leased the newly remodeled store, No. 41, next door to his own, and will connect the two together from the interior.

J. K. Allen has got settled in his new store and finds the roomy cellar connected therewith a great convenience.

J. Perkins is negotiating for J. K. Allen's old store, and will probably occupy it in the near future.

Much interest is displayed in 30th street at the present time relative to the locating of the individual who fixes the value of roses every morning. Who is he?

Among the Retailers.

Business on the whole is very satisfactory. Lent commences on the 28th of this month, and after that date trade is supposed to fall away considerably, but in the meantime social events which use up bushels of flowers and other accessories are quite numerous.

On the 9th inst. the annual Arion ball came off in Madison Square Garden. The elaborate decorations were put in by Hauft Bros., of Madison avenue, and were pronounced by all who saw them very beautiful.

Wednesday was St. Valentine's Day, and many of the tokens sent took the form of flowers. Thorley displayed three baskets in his window on that day, each with a broad ribbon on the handle and the words "February 14, 1900," printed in gold letters on the ribbon. One of the baskets was filled entirely with cattleyas and Adiantum Farleyense, one was filled with lily of the valley and the other with violets and Liberty roses. The handle of each basket had a small cluster of flowers attached of the same variety with which the basket was filled.

Some old varieties of acacias have been resurrected by some one of our growers. Bunches and long sprays of these really beautiful flowers were shown in J. H. Small & Son's window this week. Spiræas and rhododendrons are also being used for window display.

Here and There.

The Rosary Co. (J. H. Troy, manager), used 2,800 cattleyas at a recent decoration.

H. H. Berger & Co. have received a consignment of fern wreaths; they are made up of dormant roots, the same as fern balls but in the shape of a wreath, and make very attractive hanging plants.

Among the New Yorkers who attended the carnation meeting in Buffalo were: Alex. Wallace, C. B. Weathered, John N. May, A. Herrington, E. Dailledouze and C. W. Ward.

Cleary & Co. have on exhibition in their auction room a very fine collection of Japanese evergreen and flowering shrubs. The latter are in splendid shape for forcing, and are composed chiefly of wistarias, cherries and plums. There is also a choice assortment of antique jardinieres, screens, etc. These are to be sold on Monday and Tuesday next, Feburary 19 and 20, sale commencing at 2 p. m. each day.

The name of the firm commencing a decorative supply business at 513 to 519 West 25th street, which was mentioned in our issue of January 20, is John Lassen & Co., Mr. Lassen being the sole proprietor.

At the ten concert given by Mrs. Langtry at Sherry's on Tuesday afternoon for the benefit of the hospital ship Maine, Miss Helene Belfort Berger, daughter of Mrs. H. H. Berger, took a prominent part. A picture of the accomplished young lady appeared in the New York Journal on Wednesday.

CLEMATIS PANICULATA AND AMPELOPSIS VEITCHII

$40.00 to $70.00 per 1000. $35.00 to $50.00 per 1000.

GRASSES, $2.00 per 100. CAL. PRIVET, $12.00 per 1000.

Stock for transplanting. Shrubs in large quantities cheap. Send for wholesale list.

THE ELIZABETH NURSERY CO., Elizabeth, N. J.

Mention the Florists' Exchange when writing.

Madison, N. J.

The Morris County Gardeners and Florists' Society held their regular monthly meeting on Wednesday night last, all the officers and 19 members being present. A very interesting discussion was opened up by Mr. Duckham on the "past and future" of the carnation and rose, and it was unanimously hoped that the new American Rose Society would be able to strike the keynote of development like unto the Carnation Society. It was also moved that the sum of $25 be appropriated for 18 blooms of Bride and 18 blooms of Bridesmaid, to be competed for in open class at the coming exhibition of the A. R. S., in March next. An offer of $15 was also received and accepted with thanks from F. R. Pierson, of Tarrytown, N. Y., for 12 blooms of Col. D. Appleton, chrysanthemum ($10 first prize, $5 second), to be competed for at our annual flower show in Madison next November.

C. H. A. SEC.

Grand Rapids.

Flowers are scarce; in carnations the only variety in good supply is Scott. Roses are also scarce, although blooming more freely than heretofore. Violets are doing finely—one firm here picked 42,000 in three consecutive days. The demand for funeral flowers continues steady and uses up a quality of flowers that might otherwise find their way to the rubbish heap. Prices continue as last quoted, except some grades of carnations. Geo. Hancock, and Harry Balsely, were recent visitors.

The Florists' Club will, some time in March, hold a carnation meeting probably at the Eagle Hotel, although Geo. Hancock, of Grand Haven, has asked to have it held at Grand Haven. The only objection to that is, so few of the boys would be able to get to the meeting. It is a case of the greatest good to the greatest number.

GEO. F. CRABB.

PETUNIAS

Finest frilled double, Pink Beauty, Mrs. Sanders, Perfection, and others, 2½ in. pots, $2.00 per 100; extra strong, 3½ in. pots, $5.00 per 100; rooted cuttings, $1.00 per 100.

THE MORRIS FLORAL CO., Morris, Ill.

Mention the Florists' Exchange when writing.

Philadelphia.

It has been a long time since the cut flower market was unable to supply all demands, but evidently roses and carnations have bloomed themselves out. Flowers are now scarce, but there has not been, so far, any advance in price worth noting, still prices are firmer. Business with the stores is good, and flowers of average quality are early disposed of. Roses are in demand, as are also red and pink carnations; other colors are in sufficient supply, as also is bulbous stock, with not any brisk demand. Violets are quiet, the best doubles going at $1 per 100.

Most of the retail stores are doing a nice business, small decorations and dinners have been numerous, using large quantities of choice flowers. Transient trade is also very encourngng; several store men report this season the best they ever had.

Pennock Bros. made a specialty of fancy baskets on St. Valantine's Day, and did a large trade therein. Most of the baskets were small and dainty, and when filled with flowers, inserted in damp moss, looked very pretty and sold at first sight.

As carnations have been much written about lately, a few points obtained at Robt. Craig & Son's establishment may be in order. There we find the chief interest centered in Ethel Crocker, of perfect health, robust growth and freedom of bloom. No doubt this one will make money. Mrs. Frances Joost is doing very well here, being perfectly healthy and blooming freely, surprising all who have seen it. America is also doing well, is liked, and will be grown next season; the color is not exactly what everyone would wish, but it is a perfect flower—in substance and size, and of robust growth.

Wm. P. Craig has achieved great success as a carnation grower, and the rooted cuttings sent our from this establishment are grown cool, making sturdy plants; and, propagated in the famous rotten rock of this locality, they make strong roots, not one or two on one side but a profusion all around the cuttings.

The Pennsylvania Horticultural Society will hold its monthly meeting on Tuesday next, when John Hobson, gardener to Edw. A. Schmidt, Esq., will read a paper on "The Forcing of Vegetables."

On Saturday, February 24, an institute meeting, in connection with the Department of Agriculture of Pennsylvania, and under the auspices of the Pennsylvania Horticultural Society and the Florists' Club of Philadelphia, will be held at Horticultural Hall. Sessions begin at 2 p. m. and 7:30 p. m.; admission is free. Florists should attend these meetings; some of the papers to be read will prove of interest—and are there not some solutions regarding the chemical composition of the soil, some trouble about insects, or some points about fertilizers, you would like solved? Write out your query and put it in the Question Box, and it will be assigned to a proper person to answer.

DAVID RUST.

BRIEFS FOR BUSY FLORISTS.

CANNAS.—These should be started now if good-sized plants are wanted at planting out time. If a bench can be devoted to them, and it is desired to increase the stock of any of the varieties, we prefer to put in the clumps whole. Give them a light covering of soil, working it well among the roots with the fingers so that no cavities remain in the bottom. A temperature anywhere between 55 and 60 degrees will start them, and, as the growths get large enough to handle, break them away from the stool and put them into suitable sized pots. We find that by pursuing this method the eyes start much quicker than they do if separated while they are dormant.

CALADIUM ESCULENTUM bulbs require much more heat to start them than do cannas, and the operation may be deferred till the first of next month if necessary. Should room be at all scarce yet, if good big specimens are wanted, it will not be amiss to start them this week. Plant the bulbs in any light soil, using boxes about 3 inches deep, or deeper if the size of the bulbs demand it, and place the boxes where they will have a strong bottom heat. Water them often enough to keep them moist all the time, being sure that they never once become dry while on the bottom heat. After they start they may be potted and given a light position in a moderately warm house and re-potted again when necessary.

F. DORNER & SONS CO.,

LAFAYETTE, IND.

Mention the Florists' Exchange when writing.

CYCLAMENS that were sown last Fall should be now about ready for their first potting. Use plenty of leaf soil for them. If it is plentiful use nothing else for cyclamens, except enough sand to insure porosity. When potted give them a place as near the glass as is convenient, and by all means avoid over-watering.

DAHLIAS that were started some time ago will be throwing up shoots, and these should be taken as cuttings and rooted in the propagating bed, then potted and kept growing in a rather cool house. They should not be allowed to get pot bound, however, but be potted along as required, the object being to have a sturdy, well-hardened plant to put outdoors when Spring arrives.

THE POT ROSES intended for Easter sales can be given more water and more heat as their foliage develops. The syringing of them daily is an important matter and must not be neglected, for once the red spider gets a hold he clings persistently and will soon spoil the looks of a $5 plant and reduce its value more than half. Keep the foliage clean and free from both fly and spider by all means, as a pot rose with poor foliage is neither useful nor ornamental.

Among the most difficult photographs to take are those made at night. J. B. Carrington has for several years been making photographs at night of scenes in New York City, and a selection from these will appear in the March Scribner's, with an article by Mr. Carrington. At the present day there is a revival in landscape architecture as an art. It will be discussed in the March Scribner's by George F. Pentecost, Jr., who is a high authority on the subject.

New Seedling Carnation **MICHIGAN**

Cuttings Ready Now. Per 100, $6; per 1000, $50.

Color dark red, a seedling from McGowan, freer than Scott and blooms the whole season through, from time of planting in until thrown out. Stem wiry and from 15 to 24 inches long. Foliage dark green and healthy, the cuttings easy to root and the plants easy to lift in the Fall.

HINTS and HELPS.

Adiantum Farleyense.—The first batch of young plants of this useful fern should be started as soon as possible. Old plants from which the fronds were cut earlier in the season, and which show little colonies of small fronds, are the best for the purpose. There is little satisfaction to be got from dividing large plants into three or four pieces and potting up. Instead of this, wash every particle of soil from the roots, when it will be found there is a considerable quantity of dead but hard, wiry rhizomes just beneath the surface of the soil. This material, if pott d up with the pieces, hinders their growth and should be removed, selecting only the rhizomes which have life in them and which have a frond, however small, or a piece of frond attached. The work of separating should be done with the aid of a sharp-pointed pair of scissors. Next put the pieces in a mixture of sand and moss, the latter rubbed through a No. 8 sieve; have the materials in equal parts. Water should be given very sparingly. To start the pieces into growth under the most favorable conditions, they ought to be covered with glass until new roots and fronds push out. They may then be potted into 2-inch pots.

Fern Spores.—Many failures to germinate some of the rarer kinds of ferns may be set down to harvesting the spores at the wrong time. Many ferns are somewhat erratic in the manner of shedding their spores; sometimes we see young fronds with the spore cases burst and the spores gone, while the spore cases on some of the older fronds are in perfect condition with the spores yet in them. Spores should always be gathered with the aid of a hand-magnifying glass, which may be purchased for 25c. This should be used not only for gathering; but after the fronds are dried, the little pile of brown powder may, with its aid, be examined, so as to ascertain whether thick or thin sowing should be resorted to, as the brown powdery material which falls from the fronds may be all spores, and again contain but few. When the proportion of spores is known they should be sown so that when they vegetate the prothalli will not overlap each other before being large enough to prick off.

The Plumerias are a neglected class of plants somehow; we see them only in places where a general collection of stove and greenhouse plants are grown, and yet their flowers are large, showy and sweet smelling. The stems and foliage have an ornamental character of their own. They make very rapid growth in Summer, being well suited for tub culture. The plants should be kept dry during Winter. The leaves will fall off early, and the pots or tubs in which they grow may be laid on their sides under the bench of a greenhouse. In propagating, which may be done best during February, the cuttings may be taken from 6 inches to a foot long; stand them upright or leaning against the back part of the propagating bench, but not with the bases buried in the sand. Nor should they be allowed any water for a week or two. After the cut part is well healed over they may be potted in almost dry sand, in which they root quickly if put in a brisk heat.

Pricking off Seedlings.—A great many kinds of plants in the seedling stage, when pricking off becomes necessary, are not of sufficient size to go into small pots; even in these they take up too much room and are apt to suffer from too much or too little water. One may get dry here and there and the chances are that others in the neighborhood will get water when they do not need it. Putting several in a pot is just as unsatisfactory, as they must be divided up as soon as sufficient growth is made, and repotted. This applies especially to herbaceous plants which have a large number of fibrous roots instead of a tap root. I find the plan of putting the seedlings in boxes, when large enough to handle, to be the most satisfactory method. Watering is then an easy matter and the seedlings, when large enough, can be transferred to the open ground or potted up as required. Besides, the labor saved in transferring to cold frames is considerable.

Moon vines.—Plants from Autumn struck cuttings, which were given a shift a few weeks ago, will now be throwing out a quantity of shoots which are intended to be utilized for cuttings. When these shoots get a foot or more long, nip the ends out, as by doing so the remaining part will ripen more quickly and provide better material for single eye cuttings. The plants from these will be large enough by planting out time. Large flowering plants of the common moon flower will often ripen considerable quantities of seed; these, when gathered, are very large and rather soft, but when kept for some time they diminish in size and get very hard, so much so that they refuse to germinate under ordinary conditions. Put them into a flat of water and stand the vessel on a warm bench for a day or two when the seeds will soften. This condition will be indicated by their swelling to two or three times their normal size; they should then be sown singly in small pots, keeping the soil only slightly moist to prevent rotting.

Dahlias.—Seeds of these plants can hardly be sown too early in the season, because, should the seedlings get lanky, the tops can be taken off as cuttings and put in the propagating bench. The young seedlings form tubers very early in their career, and, if necessary, can be carried over a season in 3-inch pots. The old tubers which have been wintered over in a dry state may now be sorted up for propagation. They may be placed, according to their kind, in boxes, and covered with sand or soil, leaving the crowns exposed to view. Give a slight watering now and then to start them into growth. A position near the glass and exposed to the sun will give short, stocky growth for cuttings. When taken off close to the crown they make the finest plants. A little of the base may be left, however, to sprout a second time, should a large number be wanted. If rooted in rough-grained sand, kept only wet enough to prevent the cuttings from wilting, the roots will be thicker than if they were placed in fine-grained sand, and they can be potted without feeling the transfer in the least.

Farfugium grande.—This fine Japanese plant is now known as Seneclo Kæmpferi aureo-maculata. With Rhodea japonica and the aspidistras it is among the best constitutioned plants for the dwelling house. There is a beautiful kind with white spotted leaves which I have only grown for a couple of seasons; but I suppose it to be as hardy as the yellow one, which, by the way, has stood outdoors quite unprotected here for the last 15 years. Old plants with numerous growths will stand division better at this season than at any other previous to repotting. Give the pieces at least a week in the sand bed, to start new roots. They thrive well in a loamy soil, well drained.

Manettia cordifolia, one of our most showy slender growing vines too seldom seen in cultivation, is now sending up shoots through the soil from the pieces of roots which were cut up a few weeks ago. As soon as two pairs of leaves are developed, the plantlets should go in thumb pots, using light soil. Keep in warm house until they fill the pots with roots, when they may be put in 3-inch pots and gradually hardened off.

MAMMOTH VERBENAS, large rooted plants, 60c. per 100; $5.00 per 1000. Geraniums, S. A. Nutt, Hill, Grant, La Favorite and Pink, 2¼ in., $2.50 per 100; 3 in., $3.00 per 100. Cyclamen, 3 in., $5.00 per 100, in bud and bloom; 4 in., $1 25 per doz.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,
Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 DUANE STREET NEW YORK.

We can supply any book or magazine, no matter where published.

Send for New Catalogue of Books for Florists, Seedsman and Nurserymen.

The Water Garden

One Day Book. } If these are not wanted
One Ledger. } subtract $1.50.

Cash with order. Delivered F. O. B., N. Y.

PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article wanted.

Noteheads will be furnished in smooth writing paper with ruled lines. Linen paper, ruled or unruled, can be had instead if so ordered.

Envelopes are full commercial size and of good quality.

Billheads will be furnished as above, but size 8½ ins. wide and 4¾ ins. deep will be substituted when so ordered.

Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 300 accounts.

Special designs, trade marks, etc., engraved to order. A rose, violet, or other flower can be printed on your letterheads and billheads, plain or in color, to order.

The quality of all the above work is guaranteed.

We can forward any of these combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.

Market News.

Business during the past week has not been very good. Roses are still scarce, but carnations, violets and bulbous stock have been a little in over supply, and a good many flowers were sold last Saturday at very low prices. The indications are better for this week. The roses coming in now are generally of good quality. The same may be said of carnations. Miller & Sons, of Bracondale, are sending in some fine samples of their new seedlings, which meet with a ready sale.

A Combination.

The Gardeners and Florists' Association have combined with the Horticultural Society for a carnation meeting on March 8. The commodious hall on Elm street has been engaged, and there is no doubt there will be a large meeting of the trade. Exhibitors sending carnation flowers should address them to Wm. C. Jay, secretary Gardeners and Florists' Association, Toronto, marking them "flowers for exhibition," and they will be carefully looked after and staged. The flowers should be shipped so as to arrive in Toronto not later than noon of March 8.

Annual Banquet.

The annual supper of the association was held at Webb's, on the 7th, and was probably the most successful we have had. About 60 members and their friends were present, and all enjoyed themselves splendidly. The decorations were arranged by E. Collins and L. Goodier, and were a credit to these gentlemen and the association. The orchid plants used came from Exhibition Park and Horticultural Gardens and Manton Bros.; the azaleas, palms and other decorative plants, from Exhibition Park, Horticultural Gardens and Jay & Son; and the cut tulips, carnations, valley, etc., from J. H. Dunlop and Jay & Son. The musical committee—Messrs. Grainger, Lawrence and Dunlop—put up a fine program. The speeches were nearly all short and to the point. The principal speakers, outside the members, were Alderman Geo. McMurich, the chairman of the Parks and Exhibition Committee; Alderman Leslie, Mr. J. R. Scoon, Dr. J. O. Orr and Dr. Hamilton; among the members, Wm. Jay, the president; John Chambers, E. Grainger, H. Simmers, George Mills, J. H. Dunlop and others.

Trade News.

Business has been fair for a week past. Roses have been of good quality, but rather short in quantity. Carnations have been plentiful and of good quality, and the demand for them has been excellent. Violets have been plentiful and the call has been equal to the supply. Prices have remained very steady since the holidays.

News Items.

At the meeting of the Society of Kentucky Florists, on February 7, there were shown some extra fine flowers of the new carnation Olympia, grown and exhibited by E. G. Hill & Co.

Thos. F. Galvin, Boston, also sent some of the celebrated Mrs. Thos. W. Lawson carnation, but as they did not arrive in perfect condition they did not show up as fine as usual.

M. Renkauf, representing H. Bayersdorfer, and M. Escher, of Rice & Co., Philadelphia, were recent callers, as was also Mr. Stuart, of Evansville, Ind.

Messrs. Jos. Coenen, C. H. Kunzman and Jacob Schulz left Saturday for Cincinnati to view the carnations on display there. From Cincinnati they expect to go to Richmond, Indianapolis and Lafayette, Ind.

J. S.

Paterson, N. J.

With the exception of a few of our own seedlings still on trial, we have discarded all other varieties for Governor Griggs, as being the most profitable. It is free and continous blooming, has a long, stiff stem, good-sized flower with bright Daybreak color, and sells freely. When treated with ordinary intelligence and kept at a night temperature of from 40 to 45 degrees, it has proven all that has been claimed for it, and with us the best paying we have ever grown. Notwithstanding that it will not stand so high a night temperature as some others, it does well planted out in the house in Summer.
