The Florists' Exchange

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 8. NEW YORK, FEBRUARY 24, 1900. One Dollar Per Year.

CARNATIONS.

We offer Strong-Rooted Cuttings of ALL THE NOVELTIES OF THE SEASON and OTHER EXTRA CHOICE SORTS.

Mrs. Thomas W. Lawson. The celebrated $30,000 Carnation.
$14.00 per 100; $120.00 per 1000.

Olympia. A grand, fancy Carnation. While fully as large as MRS. GEORGE M. BRADT, or larger, it is said to produce 25 per cent. more flowers than that p pular variety.
$12.00 per 100; $100.00 per 1000.

The Marquis. This Carnation has had a phenomenal sale, and is without question the finest light-pink Carnation introduced up to this time. Those who have not ordered should place order without delay, if they wish early delivery. We have sold more of this variety than of all the others combined, which is an index of the esteem in which it is held.
$10.00 per 100; $75.00 per 1000.

Ethel Crocker. One of the best all-round pink Carnations ever offered to the trade.
$10.00 per 100; $75.00 per 1000.

Genevieve Lord. As a Carnation for retailing nothing can excel this variety, on account of its beautiful color—light silvery pink—and fine stem One of the very finest introductions of the season.
$10.00 per 100; $75.00 per 1000.

We can also supply all the best of the recent NOVELTIES and STANDARD SORTS as follows:—

	Per 100	Per 1000
G. H. Crane, General Maceo	$6 00	$50 00
General Gomez, Mrs. George M. Bradt	5 00	40 00

THE ADJECTIVE NEW

Correctly Qualifies Our Goods.

THEY ARE NOT A CONTINUATION OF FORMER YEARS.

The motive, the goods involved, the source from whence they came, and the conditions that regulate prices are wholly different.

"GET YOUR MONEY'S WORTH" and send for our Wholesale Catalogue of New Seeds, Bulbs and Plants, just issued.

MEASURED BY FORMER PRECEDENTS, as well as current standards, the values recorded therein are truly interesting.

As before said, we shall continue to appear in this corner each week, with our specials in NEW SEEDS, NEW BULBS and NEW PLANTS, **but our much appreciated phenomenal success and the steadily increasing business has forced us to put our many specials in book form.**

DON'T SEND FOR IT if you expect a book for adorning the parlor table.

Asparagus Plumosus Nanus.

Nothing will pay you better to grow—it can be put to so many uses—try a thousand seeds for $9.00; every one grows and makes a plant worth a quarter before Summer.

342 WEST 14th STREET, Telephone 461 18th. **N. Y. CITY.**

Importers, Exporters and Growers' Agents of SEEDS, BULBS and PLANTS.

NEW CARNATIONS

We are now ready to take orders for Strong-Rooted Cuttings.

Mrs. James Dean Color clear silvery pink, delicate and chaste, yet brilliant and effective under all lights. Flower large, very full as season advances, and borne on long wiry stem, calyx perfect. Habit similar to Scott, with the same healthy glaucous foliage as Scott. About 6 inches taller than Scott. A free bloomer, but spreads its crop evenly over the blooming season. There is no healthier carnation grown, and we believe it to be the ideal light pink. The merit of this variety is conceded alike by growers, dealers and the flower-buying public. Has proved a prize-winner whenever shown this season as well as last. A fine, healthy carnation that every grower ought to succeed with. One of our favorites. To grow this variety to advantage take strong February struck cuttings; pot in 2-inch pots, shift to 3-inch as soon as needed, plant in field as early as is safe, pinch back every week only such shoots as distinctly show bud formation. Lift August 1st to 10th. Dont pinch back after lifting, save such shoots as show premature, short-stemmed buds, give lots of air and a temperature of 52 to 54 degrees at night. Syringe thoroughly once in 10 days with fine spray and strong pressure. Treated in this way it commences flowering with us October 1st and continues constantly till August. Giving nearly as many blooms as Scott. This is one of the best selling varieties grown, and we are not yet prepared to replace it by any variety of its class yet in sight **$3.00 per 100; $25.00 per 1000.**

White Cloud White, habit same as Daybreak, but taller, stronger, more vigorous and an earlier, freer bloomer. It commences blooming among the earliest, and throws a fine, long, stiff stem from the beginning and continues its crop through the season. Flower large, excellent form and finish, good substance and very full. Strong, fruity fragrance. Calyx strong and holds the full bloom well in hand. We consider this the best white we have ever grown. Our record of blooms cut the past season show it to be the most productive of all white carnations. This is distinctively a winter bloomer, and in the early fall months if fed highly before the plants are well established it will give many deformed buds. It needs to be well established and the cool weather of winter to bring it to perfection. The grandest white yet grown. **$4.00 per 100; $30.00 per 1000.**

Mrs. Geo. M. Bradt The most distinct, largest flower and most sought after fancy carnation yet out, blooms always sold ahead at the highest prices, ranging from $1 to $2 per dozen wholesale on the New York market; color clear white, heavily edged, and striped with bright scarlet; flowers enormous, very full, high rounded center; habit strong, vigorous, but dwarf enough for side benches; constant bloomer from early to late; unquestionably the best of all variegated carnations; this variety does not produce cuttings freely, consequently stock will always be scarce and high. **$5.00 per 100; $40.00 per 1000.**

25 at 100 rate; 250 at 1000 rate.

We have fine, large, healthy stocks, and will deliver only fine, strong, well-rooted cuttings.

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT McCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

H. J. Goemans and H. P. Hugenholtz, representing K. J. Kuyk, of Hillegom, Holland, arrived on S. S. "Lahn," February 15. Their New York address is care of J. Ter Kuile, 33 Broadway. J. H. Böckmann arrived Sunday last on the St. Louis.

Columbus, Neb.—The Western Seed & Irrigation Company, of Waterloo, Neb., has purchased a farm of 400 acres, near Monroe, for seed growing purposes. This is said to be the result of a favorable test made in growing seeds under irrigation.

Sun-Bleached Sheaves of Wheat.—In a case recently decided by the United States Circuit Court, sun-bleached sheaves of wheat, classified as natural flowers, were held to be entitled to free entry under the provisions of paragraph 566, act of 1897, for "textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for."

New York.—James B. Kidd, formerly with J. M. Thorburn & Co., and later with the Sunset Seed & Plant Co., of San Francisco, is now with Wm. Elliott & Sons.

European Notes.

The snow reported last week has been followed by a sharp spell of frost, and as these notes are being penned the thermometer is registering from 20 to 30 degrees Fahr. below freezing point, with every probability of a continuance. As the snow that remained has been turned into solid ice the outlook for all but the very dwarf plants is very unpromising. Happily few if any Spring sowings have been made, neither has the work of Spring transplanting been begun, so that practically no harm has been done in this connection.

The cold spell has given a much needed spurt to the trade in boiling peas, Haricot and Lima butter beans. The former article has been practically taken out of the hands of the legitimate seed trade by speculating dealers. It is reported that some of these gentry are paying rather dearly for their experience.

The great demand for spinach from your side last year has caused growers, who are in a position to fairly guarantee early delivery, to advance their prices almost out of reach, and should the demand during the coming Fall be equal to that of last year, there will be some difficulty in filling orders, as the stock of first quality seed on hand is very limited. The most complete clearance of the season is cabbage, and it is doubtful if the stocks left over have been so small during the past twenty years.

We are accustomed to see the name of Eckford in American papers sent us by friends, when mention is made of the sweet pea, but an illustration of the maxim, "Westward the Star of Empire, etc.," is furnished by the fact that in an article on the Sweet Pea Bicentenary, published in an English variety journal named Tit Bits, the name and work of the American firm of Burpee is associated with the English celebrity.

EUROPEAN SEEDS.

BRIEFS FOR BUSY FLORISTS.

GERANIUMS.—The main batch of these are at present in 3-inch pots, and any that are large enough may yet have a cutting taken from them which will make a fair-sized plant by bedding out time. As a limited number can always be sold as pot plants it is well to set aside a number and grow on specially for that purpose. Take some of each variety, choosing the most forward plants; pot them into 4-inch pots, and if they have a little warmer location so much the better.

DOUBLE SWEET ALYSSUM does best from cuttings, and from the stock plants carried over the main crop should be taken this week, if this has not already been done. Cuttings of heliotrope also should go in without delay.

SEED may be sown of salvia, campanula, single dahlia, gaillardia, musa and nicotiana.

AS A FREE FLOWERING hardy perennial we can confidently recommend Rudbeckia Golden Glow. All who tried this last year were more than satisfied with it, and it should have a place in every garden, being a good subject either planted for effect or for cutting purposes.

SHOW PELARGONIUMS are about ready for their last potting, and, with this shift, a more liberal use of well-rotted manure in the soil will prove beneficial. Let the compost have at least one-fourth of manure in it; drain the pots well and pot the plants quite firm.

ASPARAGUS PLUMOSUS NANUS is one of the most useful greens we have for cut flower work, and in a good many instances is to be preferred over smilax. It is easily raised from seed and should be sown as early as possible now in order to have them large enough to plant in the bed during the coming Summer or Fall.

WHERE THERE IS A DEMAND for choice table plants for Summer use, fancy-leaved caladiums could be grown and sold very profitably. The bulbs should be potted in small-sized pots, using a coarse, well-enriched soil, and placed in a temperature of 65 degrees. When sufficiently started pot into larger pots, being particular to provide plenty of drainage, as they need lots of water. As growth develops they thrive best in a moist, warm atmosphere, and an occasional wetting down of the paths and benches is absolutely necessary.

MUCH is now being said about getting young carnations planted outdoors early and getting them back into the greenhouse early, some growers lifting as early as the beginning of July. Where the greenhouses are of modern construction and the modes of ventilating are perfect, this early housing is all right, but where old style houses prevail, it would be somewhat difficult to keep the temperature down low enough to suit the carnations during July and August. Have the young stock planted outdoors as early as possible by all means, but unless the houses can be perfectly ventilated it will be well to be a little chary about housing as early as the first of July.

Analysis of soils in order that the owner may know just how to return to the soil what was taken from it is impossible. The millennium of agriculture must come before that is possible.—DR. W. H. JORDON.

The American Rose Society.

Editor Florists' Exchange.

Having received many inquiries from your subscribers as to dues, etc., of the American Rose Society, brought forth by my appeal to growers of roses, it would confer a favor upon me, and I think do the cause much good, if you would publish the following information in your next issue:

The dues to the society are, for active membership, $3 per year; for life membership, $50 in one payment; for associate membership, $1 per year.

All that is necessary to become a member is to remit dues to John N. May, Esq., treasurer, Summit, Union Co., New Jersey; or to Leonard Barron, Esq., secretary, 136 Liberty street, New York. The latter will only be too glad to send the constitution and by-laws to any one asking for same.

Who will help us to keep the ball rolling?

BENJAMIN DORRANCE,
President American Rose Society.

(35) **Heating by Steam.**—1. I desire to heat by steam 1500 square feet of glass six houses 20 feet wide, 10 feet ridge, and all connected, even span. Stand exposed to all storms and wind. Will use 1¼-inch pipe underside benches, with plenty drop for returns. 2. What kind of boiler is the most economical? 3. Would not two be better, more economical and safer than one? I would like to use one during early Fall and late Spring and connect the second when needed. If two are used what grate surface would I need in each? My houses are to be used for palms and ferns.

—1. The question speaks of heating 1,500 square feet of glass, but as there are six houses 20 feet wide, I infer that the area should have been 15,000. 2. Some of the forms of tubular boilers will probably be more satisfactory. 3. For 15,000 square feet of glass it will be best to use two 20-horse power boilers, each of which should have about 15 square feet of grate, unless a night fireman is employed, when 12 would answer.—L. R. T.

(36) **Crippled Rose Shoots.**—I have two benches of Bridesmaid, old bushes, which are throwing out very strong shoots from the bottom; but quite a number of them are crippled by the time the rose is matured. I remove the crippled buds as fast as they come on the stem. Please tell me the cause of them being crippled?—J. G.

—We are unable to grasp just what the inquirer means by the shoots being crippled. If he means that the shoots die by the time the flower is matured, and that they become of no further use, seeing that the plants are in the benches two years the effect is no doubt caused by insufficient watering and feeding. Try a twice-a-week watering with liquid manure, and, when watering, at all times see that enough is given to wet every portion of the bench.

(37) **Drying Aster Flowers.**—The demand for prepared flowers is so small that we do not think it would pay any one to try and preserve asters so as to make them last for years. Fresh flowers are what the people want, and, as so many are growing these, any attempt to sell dried or cured flowers would prove a failure. We do not think your liquid would be profitably introduced to the trade, with respect to the asters, but if it is as effective on cycas or palm leaves there might be a field for it in that line.

(38) **Black Specks on Rose Leaves, etc.**—I submit herewith samples of rose leaves upon which there is a small deposit-like scale which has created some surprise and much comment among a few of our local growers who never saw it before and could not attribute its cause or suggest a remedy. As it may be of some interest to a few readers of your esteemed paper, I respectfully give details for what they are worth, so far as I know. On January 11 a mulch of fresh cow manure was applied to the bench of Bride and Bridesmaid, which were somewhat difficult to reach with liquid feed. On January 23 scaly deposit was first noticed on upper side of leaves, and by the following morning on both sides, and everything else in the house, even the woodwork, was covered and an increase was plainly noticeable. A spray of whale oil took no effect, so the mulch was removed and the house fumigated with tobacco. While some of the deposit remains, a decrease is now noticeable, and no perceptible injury seems to have resulted thus far.

I also send some young leaves from same rose bed which are yellow. The soil is rather light, and owing to construction of house, air has to be given very cautiously and sparingly, though lack of iron in soil has suggested itself as probably the cause. Whether or not this be true, could not a very suitable remedy and stimulant be found in liquid form of citrate of iron and ammonia? I have never heard of its use upon soils, and would be pleased to know your opinion of a cautious trial.—J. L. C.

—The black specks on the rose leaves sent in by J. L. C. in letter of February 9, are the sporangia or spore capsules of a little fungus known as *Pilobolus*, one of the black molds. This fungus is very common in manure, especially when fresh. The mulch of fresh cow manure which J. L. C. applied to his roses was undoubtedly the source of the trouble. The mold is very small and can be observed only by careful examination. It resembles slightly the black mold on bread. The little black spore-bearing heads are produced in the night, and during the day they are shot off from the mold threads with great force and stick to anything they may strike. They are sometimes thrown a foot or more from where they are produced. They can often be washed off by syringing the plants disfigured by the specks with water under a pressure of 25 to 30 pounds, or the trouble can be prevented by covering the manure with something which can catch the spores as they are thrown off. They do no harm to the plants which they strike except to disfigure them, but this is of course an important matter in crops which are to be marketed. The removal of the manure mulch is another remedy.

The yellowing of the rose leaves indicates starvation of the plants. This may be due either to lack of proper soil nourishment or to some injury of the roots which prevents them taking up the nourishment in the soil. We have observed the trouble often where excessive quantities of leaf mold have been added to the soil, or where the soil has been made too rich with quickly soluble chemical fertilizers. In both cases the young feeding roots are injured, thus causing starvation of the plant. It is very doubtful if the cause is due to lack of iron, but of course this may be the case. We would hardly recommend the use of citrate of iron and ammonia in this case. Iron sulphate would be better, and it should be applied in a weak solution—say one part of the sulphate to 100 parts of water, but the preferable method is to sprinkle the sulphate thinly over the surface of the ground.—ALBERT F. WOODS, Division of Vegetable Physiology and Pathology, U. S. Department of Agriculture.

(39) **Fly on Violets.**—The fly alluded to is undoubtedly one of the aphis family, and when once they have obtained foothold on a bench of violets are very difficult to get rid of. Hydro-cyanic gas is recommended, and used by many violet growers and it is sure death to the flies, but unless one is familiar with chemicals it is dangerous to handle. We believe that tobacco used persistently, that is, to fumigate every other day, will eventually rid the house of every green or yellow fly in it.

(40) **Carnation Buds Drying Up on Plants.** (W. A. H.)—An examination of the stems does not enlighten us as to the cause. It is the first case of the kind I have seen, and from merely seeing the stems would not like to pass an opinion. If one has not had a similar experience, or at least an opportunity of seeing it on the plants, he is not in a position to judge. The writer does not say whether it is merely a local case or is general with the plants. If the former, it will probably not amount to anything serious. If it is an isolated case I would advise that it be closely watched, and if there are any indications of its spreading, remove the affected plants, as well as those next to them, and burn them. Or, if the case is already general, try to think what all had been done them in the way of culture—applications of fertilizer or stimulants of any kind, etc. There must be a cause, and thought along this line is all I can suggest with the information at hand.—H. WEBER.

(41) **The Aster Beetle.**—This is evidently the aster beetle, and if Hammond's Slug Shot be applied to the plants with a bellows early in the morning, while the plants are wet with dew, the beetles can be kept down.

(42) **A Troublesome Insect.**—W. H. P.—The small white fly submitted is rarely found numerous in the greenhouse except where decayed leaves are allowed to remain and the atmosphere is kept too dry. We would suggest that the house be filled with vapor by wetting the heating pipes and creating steam twice a day for two or three days. The reason dipping the plants in tobacco water does not exterminate the fly is because as quick as the plant is touched the flies leave it, and the only way to get rid of them is by having the air discharged with moisture.

(43) **Consumption of Fuel.**—Is there any difference in the amount of fuel used when heating a rose house to a given

temperature, between running four or five pounds of steam and 12 or 14 pounds of steam, and which is the most economical? The boilers can carry 12 or 14 pounds with bottom and side doors closed.—SUBSCRIBER.

—The best results so far as coal consumption is concerned will be secured when a maximum of four to five pounds of steam is carried, and it is always best to have the piping sufficient to maintain the desired temperature with that pressure, except in extremely cold weather, when a pressure somewhat higher may be used to keep up the heat.—L. R. T.

NURSERY DEPARTMENT.

Plant Diseases in N. Y. State.—At the recent meeting of the Western New York Horticultural Society, Professor L. H. Bailey presented the following report on this subject:

Your committee on plant diseases is able to report that many of the most serious fungus enemies have been comparatively slight in New York during the year 1899, but there have been some serious incursions of special troubles.

The most widespread injury appears to have been caused by the pear blight, which seems to have been abundant in most parts of the state. It has been very destructive in many of the nurseries of western New York, thousands of the trees being ruined by it. The Idaho is one of the varieties which seems to be particularly bad in this regard, but there are other varieties which perhaps have been equally affected. Even pears and quinces have not escaped.

Peach yellows has been very prevalent in a few places, particularly in Niagara County. There does not seem to be the same sentiment demanding the destruction of affected peach trees, as there is for the destruction of blighted pear trees.

The disease known as "little peach" is apparently gaining headway in the peach areas of the Ontario shore.

The apple tree canker, which has been studied by one of your committee, Mr. Paddock, seems to be widely spread, and in some places is doing serious damage.

The black rot of grapes has been serious in a few localities of western New York.

The apple scab has done very little damage. Apples have been more free from injury, even when not sprayed than for some years.

The fruit rot of plums and cherries has also made comparatively slight injury. Cherries have been particularly free. The blight of potatoes, mildew of gooseberry, leaf curl of peach, and similar diseases have also been very slight in nearly all parts of the state. There are many complaints of serious difficulty with the black rot of cabbage and with the mildew of melons and cucumbers.

The past season's experience has emphasized again the great necessity of spraying with Bordeaux mixture. None of the newer compounds has made great headway, largely because they are injurious to foliage or do not adhere so long as Bordeaux mixture. One of your committee, Professor Beach, finds that the pure sulphate of copper solution, in the proportion of 1 to 1,000, materially injures the foliage of cherries. A solution of 1 to 3,000 shows little injury. At the Cornell Station, the effect of copper sulphate on foliage has been tested on apple, pear, peach, cherry, and the different types of plums. On all of these trees there was more or less injury when the copper sulphate was used as strong as four ounces to the barrel of water (48 gallons.) When lime was added, however, the injury was averted. All stronger solutions than four ounces to the barrel gave considerable injury. From the present experience it is doubtful if it is wise to advise the use of copper sulphate and water for application to trees which are in an active condition. Trees when are dormant can, perhaps, be treated with safety and efficiency.

Rose Growing With Chemical Fertilizers.

This is the title of a most interesting pamphlet—an extract from the Twelfth Annual Report of the Indiana Agricultural Experiment Station for 1898-9—in which Mr. Wm. Stuart, assistant botanist, gives in detail some experiments conducted by him, under the supervision of Dr. J. C. Arthur, in growing roses with chemical fertilizers. Following are Mr. Stuart's conclusions. Further details will be given in a future issue:

There is every reason to believe from the results obtained in the several experiments enumerated that chemical fertilizers when properly used may be made to serve every need of the rose plant so far as food is concerned.

The use of raw bone meal in every instance gave an increased yield over that of the control plants, as well as giving a greater percentage of gain than did those receiving other forms of phosphoric acid.

Pure bone meal is not injurious to rose plants, even when applied in amounts largely in excess of the requirements of the plant.

The acidulated bone meal which has been used by florists and supposed to be harmful did not produce any noticeable injury, even when used in large amounts.

As a rule, a combination of phosphoric acid and nitrate of soda gave better results than one of phosphoric acid and muriate of potash.

Two or three applications of potash during the season was found to be preferable to a single application, although in some instances no injury from the single application was apparent.

A larger number of Perle roses were produced from plants grown in a black than in a clay loam, while the Kaiserin gave reverse results.

The sub-watering method proved an efficient means of supplying the plants with moisture.

The only insects that were at all troublesome to the roses were thrips. These mites invested the young buds, being found safely ensconced between the unfolded petals of the flower. Their presence could always be detected in the opening of the bud, by the brownish discoloration of the injured petals. When the thrips were present in large numbers this injury was sufficient to cause the petals to adhere to each other and thus prevent the bud from expanding. During the first season they affected the plants but little, while in the succeeding two seasons they were present in large numbers on two or three separate occasions. Generally these visitations occurred during a long period of hot, dry weather. It must be remembered that the plants were in the open air most of the time, and at all times were subject to the prevailing atmospheric conditions.

Frequent spraying of the plants with a weak solution of Rose Leaf Extract of Tobacco, one part of the extract to 75 parts of water, proved efficacious. The spraying was done in the evening, and followed up in the morning by a hard syringing with water. Three or four applications were generally sufficient to destroy or drive away the thrips.

SITUATIONS WANTED.

SITUATION wanted by young man as driver or on general greenhouse work. Henry Bauer, 385 East 10th St., New York.

SITUATION wanted by German florist, single, 27 years' experience in all branches, competent can take charge. M. P., care Florists' Exchange.

SITUATION wanted as gardener and florist, thoroughly experienced in the open and under glass, expert grower of ferns, palms and orchids. J. L., care Jackson, Florist, 151 E. 73d St., N.Y. City.

FIRST-CLASS decorator and maker-up wants situation; worked in England, France, Germany, New York, and now engaged in Pittsfield; can furnish references. Lars Goranson, 811 North St., Pittsfield, Mass.

GARDENER and florist, 32, single, 18 years' experience in first-class private and commercial places, understanding roses, carnations, violets, chrysanthemums and general stock, wants situation on private or commercial place; first-class references; well recommended by present employer, Albert Schultz. Mr. Paul Burgevine, Commercial Place, Port Chester, N. Y.

NURSERY FOREMAN.

Situation wanted as foreman on nursery, 20 years' experience, best references. M. M., care Florists' Exchange.

WANTED—POSITION.

First class landscape gardener; can project plans, surveying, leveling,; first-class handler of men; thorough knowledge of hardy trees and shrubs and every branch of horticulture; can produce irreproachable references as to character and ability.

M. Y., care Florists' Exchange.

SEEDSMAN

With practical experience of many years in seeds, bulbs, and all lines of the business, wants situation where a trusty man is needed in a store or to travel. Best of references.

M. T., care Florists' Exchange.

SITUATION WANTED

By thoroughly competent man in seed store, also good maker-up and first-class decorator. Best of reference. Address

M. V., care Florists' Exchange.

HELP WANTED.

WANTED, a young German florist and gardener; good home and steady place, boarding and room furnished by employer. M. R., care Florists' Exchange.

WANTED March 1, good all-around grower and propagator of general stock, especially roses; state wages and reference. J. E. Jackson, Gainesville, Ga.

WANTED first-class salesman familiar with all branches of the retail business. Address, with references, particulars and salary expected Room 65, Atlantic Building, Washington, D. C.

WANTED, a man that has had experience and is quick at planting Lily of the Valley crowns, in a forcing house. Apply with references and wages expected, to E. G. Asmus, West Hoboken, N. J.

WANTED a young man, German preferred, one who understands roses, carnations, violets, and general stock; must be sober and a good worker; wages $16.00 per month and board to start, permanent place. Answer to N. A., care Florists' Exchange.

WANTED—A good man to work in rose houses; one that is not afraid of it; must understand propagating and the general care of roses; must come well recommended; wages $9.00 to $10.00 per week, according to ability; steady job to the right man. A. R. Sampson, Summit, N. J.

WANTED—Working foreman to take charge; must be competent to handle men, and be thoroughly posted on growing of roses. Send names of former employers so I can look up record. Salary $75.00 per month. Married man preferred. Geo. Reinberg, 301 Balmoral Avenue, Chicago, Ill.

WANTED, for roses and general stock, a married man; wages, free house of five rooms and $10 per week; good references required; also an assistant for carnations, wages $5 per week, board and room. Give references. Address John Reck, Bridgeport, Conn.

WANTED at once, an experienced man, single, who understands the growing of general greenhouse stock, including roses, palms and ferns; must have experience in making up designs; one who is honest and willing to work; none need apply except those who can fill the position. Wages $25.00 to $35.00 per month and board. State experience and reference. Address Wm. A. Bock, North Cambridge, Mass.

BOWLING

St. Louis.—Florists' Bowling Club scores for February 19, 1900, were as under:

	1	2	3	4
F. C. Weber	153	113	127	132
C. A. Kuehn	139	161	146	175
J. W. Kunz	131	169	112	148
J. J. Beneke	163	130	125	156
C. C. Sanders	158	107	130	152
E Schray	..	113	115	134
F. J. Fillmore	..	110	117	114
A. L. Vaughan	159	190	145	137

Philadelphia.—On Friday, February 16, Florists' team rolled a match with the Century Wheelmen, and while we were beaten it was with honor. Century score, 3,107; Florists' score, 2,831. This was on regulation alleys. Each team now has won a match, and a third on neutral alleys will be arranged. D. R.

CHANGES IN BUSINESS.

OXFORD, MICH.—O. A. Stoll is now owner of the Oxford greenhouses, formerly belonging to H. J. Serrell.

LITTLE FALLS, N. Y.—Miss Holmes is moving her florist business to the store on Second street, recently vacated by the Crescent Cycle Company.

BROOKLYN, N. Y.—The greenhouses of the F. A. Schroeder estate have been sold to William Von Drothen.

STONEHAM, MASS.—M. W. Griffith has sold his business to E. H. Howland.

MARRIED.

Lexington, Ky.—Ollie Honaker and Miss Dora Morgan were married February 8 last.

William Bryson McCrea, Jr., formerly of Pittsburg, but now of Altoona, Pa., and Miss Bertha Miesse Barclay were married at the home of the bride's parents, February 16.

GREENHOUSE PLANT FOR SALE AT A BARGAIN

LOCATED in center of town 25 miles from New York City, and 4 miles from Long Branch, with superior train service.

Property consists of 3 acres of land in a high state of fertility. Twelve greenhouses (over 20,000 feet of glass) of the most improved style, heated by steam and in perfect condition—not a pane of glass out or anything out of order. A large ice house filled, a cold storage house 100 feet long, and a dwelling house. Complete water system with ample facilities for supply.

Houses are now filled with plants and are in full operation, and there is a large quantity of pots, potting soil, etc., on hand. Will sell property and stock with goodwill in large trade of ten years' standing in cut flowers and bedding plants, at a very low figure, or land and buildings alone.

Everything new and in perfect order. The greenhouses are adapted for growing either roses and carnations or plants for bedding purposes.

Reason for selling, ill health of owner.

For map of property and further particulars call upon or address **HENRY DECKER, Temple Court, NEW YORK**

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best selling pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate notice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a striking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply.

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

PRICE, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones."

Also Best NEW and STANDARD CHRYSANTHEMUMS.

Our Catalogue is now ready and will be sent to all who ask for it.

H. WEBER & SONS, Oakland, Md.

Mention the Florists' Exchange when writing.

A Carnation Show.

The annual trade exhibition of novelties and standard varieties of cut blooms of carnations, roses and violets, will be held under the auspices of the Boston Co-operative Flower Growers' Association, on Saturday, March 3, 1900, at the large salesroom of the Flower Market, No. 1 Park street, Boston, Mass., at 10 a. m. The great success of these exhibitions has made it an annual event which is eagerly looked forward to by the members of the florists' craft throughout New England, and prospective investors now await this opportunity to see what they are going to invest in, while introducers of novelties are given a chance to meet personally and to exhibit their novelties to the lovers of well-grown flowers.

There is no better market in the country than Boston to take hold of a new thing. The growers in this vicinity are enterprising and mean to keep up with the times, a fact which can be substantiated by exhibitors in former years. So, if you are looking for business, send on your flowers, and the advertisement will reach every live florist in New England.

The Market Association has this year decided to give certificates, as follows: One for the best vase of carnations in the exhibition, whether a novelty or an established variety. Fifty blooms and foliage must be shown. For the most decided carnation novelty not yet disseminated; for the best cut flower novelty, outside of carnations; for the best vase of white carnation, 50 blooms; for the best vase of red carnation, 50 blooms; for the best vase of light pink carnation (lighter than Scott), 50 blooms; for the best vase of dark pink (Scott or darker), 50 blooms; for the best vase of crimson carnation, 50 blooms; for the best vase of variegated carnation, 50 blooms; for the best vase of yellow carnation, 50 blooms; for the best vase of roses (any color), 25 blooms; for the best vase of violets, 50 blooms.

The Committee of Arrangements is the same as last year:—Wm. Nicholson, ex-president of the American Carnation Society; Wm. Stickel, president of the Boston Co-operative Flower Growers' Association; John Walsh, manager of the Cut Flower Market; W. S. Phelps, Jr., of Hingham, secretary of the Committee.

Full instructions regarding the shipment, care and disposal of cut blooms can be had by addressing the secretary,

W. S. PHELPS, JR.,
Hingham, Mass.

VERBENA KING.

The largest Verbena grower in the world. Say, boys! we have them, too. None finer, the very best mammoth named vars. on earth at the following prices: 60 cents per 100; $5.00 per 1,000; 5,000 for $22.00; 10,000 for $40.00.

IMPERIAL VIOLET

Color—The darkest blue grown.
Form—The largest and most double.
Fragrance—Strong and lasting.
Health—The most vigorous.
Productiveness—Last season from 4000 plants I picked 281,700 No. 1 blooms; average per plant over 70; this year the blooms from November to February have averaged me $2.00 per 100, wholesale.

If you have got enough of raising run-out stock, weakened by unskillful methods of culture, get a stock of this magnificent strain, and my book on Violet Culture, and you can find out the possibilities of profit in growing a **GOOD** Violet.

You don't have to hunt a market for these flowers, it hunts you.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade.

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

Buffalo, February 15 and 16, 1900.

Continuation of Report.

Owing to the shortness of time at our disposal, and the distance from seat of action, we were able only to furnish a short summary of the society's proceedings in last week's issue. Following is a detailed report of the most important matters, that came up for discussion:

Sub-Irrigation.

Fred. Dorner, Jr., Lafayette, stated that he had tried sub-irrigation on a bench about 125 feet long and 4 feet wide, with the object of getting a good test. He found that some varieties would do better and others not as well as those grown in the ordinary way. Gold Nugget was about equal to those that were planted in the old style bench. Crane was not as good as those planted in the old way, while Bradt gave a larger flower and a stiffer stem, and seemed to be improved. A bench of Morning Glory appeared to be somewhat better than in the old style bench; the flowers were larger and the stem longer, and the plants seemed to make a nicer growth. Maceo was also better on the sub-irrigated bench. The only thing one had to be careful about was over-watering, which could be easily done. Considering the cost and the trouble of putting in sub-irrigation, Mr. Dorner did not think he would do any more with it.

W. Weber, of Oakland, Md., had the past Summer made a bench of brick and cement. It was too late to give it a good test. The bench was not planted until the latter part of October; the results, so far, considering everything, have been very good, but not sufficient to warrant an extension of the system. He expected to plant a bench in August the coming year and see what could be done.

Mr. Rudd—I spoke on this subject a year ago. We had an 8-foot section of a bench which was arranged for sub-irrigation, and another, immediately adjoining it, arranged with brick bottom in the same way without sub-irrigation. Along side of these we had an ordinary bench. We tried it last year and the plants in the brick bottom without sub-irrigation were better than the others. I think that was largely due to the fact that we went at the thing with the idea that sub-irrigation was a very easy way to avoid a lot of care in watering. The first thing we did was to sadly over-water; we found that every drop of water put into the bench would go up into the soil and you had to figure out how much water you wanted to give and put it in there. This year we have been continuing it, and although the conditions have not been favorable in the house, there is nothing particular to be seen—the three benches are about equal, planted with the same variety—Cerise Queen. For a while, in the sub-irrigation portion, we thought we could see quite a little difference in its favor, the color of the variety was a little better and the plants seemed to be a little firmer, but at the present time there is very little to choose; yet I do not think we have given it a fair trial. We shall continue it another year and hope to have the conditions more favorable. The only thing I would like to say in regard to sub-irrigation, indoor growing, and all these matters, is that local conditions vary so much, as well as the personal equation of different men, that the only way for any man to test these new schemes is to try them on a small scale until he feels sure he has it right for his conditions.

Harry Dale, Brampton, Ont., had tried sub-irrigation in a small way, planting 12 feet of a bench with Scott. They did just about the same as that variety planted on either side of them without the sub-irrigation. He had to be very careful in watering. This year he planted 12 feet with Mrs. Joost. The difference also was so small that it could hardly be detected. Looking to the extra expense in putting in sub-irrigation, Mr. Dale did not consider that it would pay. He tried it on roses also, and the plants did not seem to like it at all.

Mr. Witterstaetter, instead of the ordinary board benches, uses three or four runs of 1½-inch pipe on supports 8 feet apart, on these are placed 3-inch side strips, the whole being overlaid with common brick. The heating pipes are 18 to 24 inches below these benches, and when the heating was on he had noticed that the soil in the bottom of the bench was entirely dry, although the top soil was moist enough. When no firing was necessary he had no trouble in keeping the bottom moist. He would endeavor to obviate the difficulty by inserting flower pots between the rows at sufficient intervals so as to afford the necessary quantity of water.

Flower of Carnation Ethel Crocker.

Mr. Rudd—A large part of the brick is exposed to the action of the heat. The brick bench I have prepared is of the ordinary board bench bottom with the bricks above it, not exposed. Where the drying out trouble comes in is that the bricks are great conductors of heat.

Mr. Ward stated that bricks will absorb all the moisture out of the soil, and keep it out; and it would be necessary to get some bricks that would act as a reservoir for the soil to draw from.

Mr. Rudd remarked that at one time some gentlemen had tried a certain tile for the bottom of their rose benches, much to their sorrow, as the results were similar to those of Mr. Witterstaetter, the tile being such an excellent conductor of heat that it kept the bottom of the soil dry.

Mr. May thought Mr. Witterstaetter could get around the difficulty very easily by using a thin board under the brick so as to avoid the direct action of the heat on the brick. The speaker could root cuttings from five to eight days quicker on a brick bottom with boards underneath them, laid close, so that the bricks did not get the direct action of the heat. Where bricks are left exposed they dry up the soil very quickly.

Mr. Dunlop, after visiting Mr. May's place, had been impressed with his idea; but Mr. Dunlop used a slate bottom underneath the bricks, and with that had been more than successful in propagating. It was very noticeable that the sand in the propagating houses with such a bench would remain sweet the best part of the season.

Mr. Hartshorne had had excellent results with a batch of Bradt propagated in a bench with a brick bottom—and Bradt is one of the worst varieties to root there is.

Amalgamation With Rose Society.

Following is committee's report on this subject:

The committee appointed by you to investigate this matter beg to submit the following for your consideration: As the only feasible way in which a union of interests can be effected between the American Carnation Society and the American Rose Society, by which both societies can hold their annual conventions at the same time and place, saving the members of both societies the expense and time necessary in attending two distinct conventions, held as they often may and will be in two widely separate cities, this committee respectfully suggests that the time of holding the annual exhibition and convention of the American Carnation Society be changed to the third Thursday in March each year, which date will insure the convention always coming during the Lenten season. At this date flowers will certainly be cheaper than at the dates on which the convention is now held; they will be equally good in quality, and, as a general rule, more abundant; and, we think, the time above named equally convenient for all to attend the meetings. Furthermore, we think if the date is left as it is now the Rose Society cannot entertain any proposition to join issue with this society, for the simple reason that not enough roses could be gotten together during the month of February to make a creditable show, more particularly of all the finer varieties of hybrid remontants, etc. If this society thinks it wise to change the date as above suggested, we think a committee from the American Carnation Society should be appointed to confer with a like committee from the American Rose Society, to arrange all details, etc. And we feel morally certain the American Rose Society will meet us in a fair spirit and be pleased to join with us, which we think can be done without either society's interest conflicting with that of the other. Furthermore, we think it will be to the mutual benefit of both.

JOHN N. MAY.
(Signed) ARTHUR HERRINGTON.
WM. NICHOLSON.

Mr. Rudd—At first glance it would seem an exceedingly desirable thing to have these two societies meet at the same time and at the same place, with the idea that many of our members, who are members of both societies, could take in both conventions with the same expense. When one stops to think a moment, however, it will become evident that the two societies will be in session at the same time, and those of our members whose sympathy runs a little stronger to the rose than to the carnation will be attending the session of the Rose Society; and if the carnation interest is a little stronger they will be sitting with us. I do not believe it is policy—I do not believe it is a good thing—for either society to attempt to hold sessions at the same time and at the same place. I think it will result in a loss of attendance and a loss of interest, and a loss in the value of the work of each society. Of course, a joint exhibition would be a very desirable feature indeed; but I thoroughly believe that the work of each society will suffer by the proposed arrangement.

Mr. May thought that the sessions of the Rose Society could be held on the Tuesday and Wednesday of the week, so as not to conflict with those of the Carnation Society.

Mr. Dailledouze remarked, one feature that would kill the American Carnation Society would be that of making an exhibitor show his novelties in March. Such a late date would hurt carnation interests. This view was indorsed by Mr. Hartshorne.

Mr. Ward—This is absolutely new to me. A question that was brought up shortly after the organization of this society and overwhelmingly defeated was to change the date of our meeting. We were all carnation men at that time. The rose men did not think we were of sufficient interest to attend our meetings. We hammered that out among ourselves, and we came to the conclusion that any time after March 1 was too late, for many reasons, for the carnation men to hold their meeting. I fully agree with Mr. Dailledouze that an amalgamation of this kind means the wiping out of the American Carnation Society, and I promise this body faithfully that if the date be set to the third Thursday in March I will not show one single flower at the society's meeting at that time. It is utterly impossible for me to leave my business at that period, and it is all I can do at the present time to get away. It seems to me we cannot make as good an exhibition of our flowers during the month of March as during the month of February. We all know that we can have the best display of carnations at the present time. I may go to the latter end of February, but to go to the latter end of March I simply will not do it under any circumstances. Mr. Rudd has brought up a very patent objection—it is a valid objection—I do not care what ways and means you may take to overcome it. The carnation men would have four days to cover; it is hard enough to keep the exhibition in order for two days. I do not think that any of us who grow novelties would wish to keep the exhibition going for more than two days. Continuing, Mr. Ward said, this was a business society, the members of which came here for the purpose of displaying their products and for advertising them. The last of March was too late, so far as the carnation men were concerned; the present being good enough for them. The carnation men, of course, could put forth no objections to the rose men holding their meeting at any time the latter saw fit. He would be willing to subscribe to offering rose prizes to be competed for at the carnation meetings, but he was decidedly opposed to changing the date to the latter end of March.

Mr. Dorner was in favor of changing the date to a little later, simply on account of the weather conditions being likely to be more favorable; and also that during the early part of March a great deal of sunshine was available that would produce somewhat better blooms. He was in favor of the Rose Society's meeting being held at the same time as that of the Carnation Society, providing that it did not in any way interfere with the interests of the latter.

Mr. Dailledouze thought that an advancement of the date earlier into February would be better. Many varieties showed up beautifully in early Fall and early Spring, but failed in midwinter.

F. R. Pierson would like to see the two societies consolidated if it could be advantageously done. He could see that it was disadvantageous to hold the rose meeting at this early date, and by the holding of an exhibition later in the Spring for carnations there would be a great many kinds exhibited that would be very poor as midwinter sorts. He was afraid the two interests could not be harmonized.

Mr. Hill—If an arrangement could be made whereby the two societies could meet at the same date and place it would enhance the interests of both, I believe. I never knew before that the history of the Carnation Society did not include some rose growers. I believe Mr. Craig and Mr. Lonsdale and others were in at the organization of the Carnation Society and supported it right from the start. That assertion I do not think will hold water, but whether it is desirable from a carnation standpoint to have the societies meet at the same time I do not know. I am not overparticular which way it goes, so far as I am concerned.

Mr. May pointed out the advantages that would result from a larger meeting in the way of getting cheaper transportation, and that a combination of rose and carnation interests would certainly make a very instructive show.

Mr. Dailledouze stated that there was no objection to the rose men showing at our meetings or of the carnation men showing at the meetings of the Rose Society.

Secretary Herr thought that the matter should lay over until a conference had been had with the Rose Society people, which was agreed to.

A motion for the Carnation Society to offer premiums for roses at the annual meeting of the former society failed to find a seconder.

The Ideal Flower.

Mr. Dailledouze thought that a semisphere was very near the ideal, or a slight deviation from that would not be detrimental.

Mr. Rudd—It seems to me the ideal to be aimed at in a carnation is to get a flower that will make the best showing, with the least amount of labor imposed upon the plant in producing it; that the petals shall be so arranged as to give the best effect with the smallest number. I have a theory that every additional petal which a flower produces takes that amount of strength out of the plant. For instance, take some of those flowers which are very full with a large number of petals in them, but with the petals not quite at right angles with the stem; they do not make the show that a really smaller flower, with fewer petals, weighing much less, and when the lower petals stand out at absolutely right angles with the calyx, does. It seems that in all of the former flowers the plant is called on to produce an amount of petal uselessly. However, it has always seemed to me that the ideal form for a carnation bloom will approximate a half sphere, and any deviation from that form I would prefer to be a trifle flatter than the half sphere rather than in excess of it. Of course, the main point when you get size is to hold the lower petals straight out instead of reflexing. That is as near as I have got on the way to an ideal form for the carnation.

Mr. Weber did not think it advisable for the society to commit itself to any definite policy in regard to form. He thought anything that caught the public fancy was what the grower had to cater to.

Mr. Ward did not agree with Mr. Weber. A carnation might catch the public eye and might sell for a certain period upon color alone, with no form whatever. In a large bunch it may make a very artistic effect, and one might be able to dispose of it. In selecting seedlings at Cottage Gardens, Mr. Ward stated that he had paid particular attention to form, and had adopted Mr. Rudd's plan—as near the hemisphere as possible, preferring, however, those slightly flattened to those that were too high built; in other words, he liked the form that produced the best effect and still kept as near to the hemisphere as possible. His best formed flower, in his opinion, was Governor Roosevelt—that was as near perfection as anything he had ever had. He thought the society ought to have some standard for form just as it ought to have a standard for color.

Mr. Witterstaetter said Buttercup had a form nearly perfect, in his estimation; Olympia was also very good; Pingree would be, if it had not incurving petals.

In regard to form, Mr. Hartshorne did not think there was any ideal at present. He had never seen any; there may be some. His idea of good form was a high built flower, not too high, but built according to its breadth. One may get a small flower, not more than 2½ inches in diameter; if it is high in proportion to its breadth he thought it would be all right. He thought No. 666, according to the breadth of it, should be built at least an inch higher in the center. The flower, at a distance, appeared flat. He thought the lower petals should stand out at right angles and not turn down at all. The flower should be built more round at the top.

Mr. Rudd—Here is a national society having in charge the carnation. We have our exhibitions here. We take some judges and turn them loose in the hall; tell them to go in there and judge these things. We do not give them anything in the way of instruction, except a scale of points, and have it understood that if they work a variety up to 85 it gets a certificate. We never have gone on record as to what our idea of a good carnation is; we never have gone on record in any way as advising or instructing the judges how that scale of points shall be applied; whether they shall try to formulate their ideal of a perfect flower, and apply the scale of points as a measure of value, put in comparison with their ideal of a perfect flower; or whether they shall take the best existing variety of a color, compare with that, take the largest in size and compare with that for size, and so on, or whether, if it is a light pink, they shall take the best existing light pink and compare the variety with that. We simply turn these gentlemen loose and let them take any course they choose. Well now, it is evident the result depends entirely on what standard they set for themselves, and it seems to me that it is time we gave as far as we possibly can some indications of the standard that we desire to have these things judged by. I do not know that I can say to-day definitely what standard I think is the best. Some people will say to you, if you are judging a pink one, when you come to the points for size, "Well, compare it with No. 666, and score it way down;" another will say, "Three Sixes is not a pink." There is at present a chaotic state of affairs. It seems to me that we should formulate some ideas in regard to this standard and give some instructions, and have them printed, which would also be valuable to the exhibitors, as they would know upon what basis their flowers are to be judged.

A member asked, Mr. Rudd what he was going to do when his standard had been obtained. The speaker thought that no definite standard should be set, because the purpose of new varieties in carnations was to give variety—variety in form and color, and he did not see how any definite standard could be set. We had not reached the standard in size. What would Mr. Rudd make his standard in that attribute, and what in color, and what would he do when he gets these?

Mr. Craig—I was about to ask Mr. Rudd if he had settled definitely in his own mind whether the standard should have an objective foundation or be simply subjective. I should like to know whether he thinks we should take the best flower that we have of a given type and reason from that, or whether we should have something imaginary, something ideal, something subjective, and reason from that.

Mr. Rudd—The ideal scheme is very pretty, and until you sit down and figure out how you are going to apply it through a series of years it is very attractive. But suppose we fix an ideal form, an ideal size, what shall that size be? Fix your ideal definitely and make it rigid. Suppose you say 6 inches for size. What are you going to do when a 6½-inch flower comes along? The ideal scheme won't work. The only scheme that will work is a standard based on our present knowledge, as that standard will of itself change year by year as we progress. When we get one that exceeds our present standard in any way we are going to score that up and then you have a new scale for next year. Working on that scheme anyone can readily see how there is a possibility of scoring a carnation 100 points, and yet never for a moment think that means perfection. I believe most of our judges do work in that way—by comparison with the best existing specimens. Where a judge finds a variety excels all existing specimens in all of its attributes there is your 100 point carnation. There is nothing left for him to do, and if the judge takes the other standard, takes the best pink, and compares the specimen with that pink, then from his point of view, if the specimen he is at work on is better in every way than the best pink he knows, there is your 100 point carnation again from his point of view. I am not saying he is right, but if right, he is correct in awarding the 100 points. The general impression among the public seems to be that the score given a carnation is a measure of its value compared with absolute perfection. That is an absurdity on its face. We do not know what absolute perfection is, therefore we cannot compare anything with it. The points given any variety are simply given in comparison with something else that we know, that we have seen, or possibly that we have built up in our mind's eye.

Robert Craig—I am glad I asked Mr. Rudd this question, because it has brought out just what I wished brought out. He says there are two ways: He drops the ideal foundation as a standard very properly. The only standard that is safe to take is one that is objective; that we know something about, can talk to each other about. However, Mr. Rudd concludes very properly that the only standard that we can have is one of an objective character; one we can look at and consider about and compare, and he says he thinks it is a proper thing for a man, when judging a pink carnation, to compare it only with the best existing pink one, in all the points, because, as a pink one, it may be deficient in some points; it may lack in stem, size or color, or something, but taken as a whole it is the best we have got. I think in judging a carnation we should take the best carnation in each point; that is to say, when we are discussing the point of stem, we should take a carnation out of the whole lot that we know has the best stem and judge it from that. We should take the one that has the best form, and reason from that, and so on. That is where I think the judges giving the 100 points to Mr. Witterstaetter's very lovely variety had a wrong standard. They probably compared it, as Mr. Rudd has suggested, with the best existing pink one, and reached their marvelous conclusion in that way. Now, we know very well lots of carnations have a better stem than that one, while it excels most in some lines very much; so that I think the judges may very properly take, in considering the point of stem, the best we have any knowledge of, the best form we have any knowledge of, and so on. Somebody has said that Olympia has a good form, that they knew of nothing better. I am inclined to agree with him, and am very much in love with that form. And so on all the way through you can take what is the best carnation for form, the best for stem, best for color, and so on down the list, and in that way reach your conclusions; and this is what I think the judges should adopt as a standard.

Mr. Ward—It has occurred to me that in the case of size it is particularly easy to lay down a rigid standard for judging a carnation. It will not be so easy perhaps to cover the other points in question. Now, supposing size at the present time is represented by 5 inches. A carnation 5 inches would then carry 10 points for size; one measuring 4½ inches would carry 9 points, one 4 inches carry 8 points, one 3½ inches carry 7 points, and one 3 inches carry 6 points. I believe that the only point for which a fixed rule can be laid down is that of size alone.

Mr. Rudd here moved that a committee of five be appointed to formulate instructions to the judges and make suggestions in regard to the standards to be used in judging, that committee to report at the next annual meeting.

Carnation Enquirer.

Grown by R. Witterstaetter, Sedamsville, O.

What is a Disseminated Variety?

Mr. Dailledouze stated that the question had arisen as to whether a variety sent out this Spring was qualified to compete in the undisseminated class; such varieties as the Lawson, Marquis, Olympia, Crocker. Was a variety disseminated when it was sent out as a rooted cutting? It occurred to the speaker that once a variety was sent from one's place it was disseminated.

Mr. Ward—A strictly technical view would be if the variety has once been sold it had become a disseminated variety; in other words, when it had passed out of the hands of the originator. Take Three Sixes: I think that has been sold and gone into commerce. I think some decisions in the United States patent cases cover that point.

Mr. Craig—It seems to me that Mr. Ward's idea that No. 666 has been disseminated is wrong. It is not. It is yet in the hands of one man. It is not disseminated or sent out; but in the case of Olympia or Lawson or Crocker, these have been disseminated, some as early as December last year, and they would really be debarred in the strict interpretation of that clause. I have no idea at all that No. 666 has been disseminated yet, and cannot conceive it in that light.

Mr. Rudd—We had this same matter up in Chicago in connection with certain varieties and it was laid down there, after a good deal of discussion, that any variety which the grower might have been able to purchase and had in his greenhouse in flower at that time should be considered a disseminated variety, but if it was a variety that a grower could not have obtained, could not have in flower, it was to be considered as still in the seedling class, and it seems to me that that is about the only fair decision you can arrive at on that point. It would be well, though, if the society could go on record definitely.

Mr. Hill—In Class A it says "regardless of variety." The point came up with me yesterday morning as to whether I could enter Crocker in that class, and the secretary ruled I could. I do not know whether there is any objection to varieties being entered in that class that are not disseminated at the present time. I would make a class for a number that are being sent out. I should favor leaving the class open, because the hundred blooms are really the mainstay of the exhibition, and perhaps the most interesting portion of the exhibition, and I think the staging of 100 blooms in a vase should be encouraged rather than otherwise.

Mr. Scott thought the class was well enough as it stood. The Marquis was entered against an unnamed seedling by Dailledouze. "We considered that the Marquis is an undisseminated variety, because I could not have bought and produced a flower of it and put it in competition with Mr. Marquisee."

Mr. Rudd thought that the words "regardless of variety" made the class open to all varieties. He would like to make a motion that no variety shall be considered by the judges unless it bears a conspicuous label with the name of that variety or its seedling number.

Mr. Hill brought up the question as to whether the variety capturing the silver medal this year could enter next year for same premium if the variety was still undisseminated.

Mr. Witterstaetter and Mr. Pierson were of the opinion that it could, the latter remarking that the society would stultify itself if it awarded the medal to an inferior variety than that which had already obtained the medal.

Express Companies.

The committee appointed to consider the matter of taking cognizance of the keeping qualities of carnations, and also to suggest measures to secure better attention from the express companies, reported that they believed it to be impracticable to include in the present scale any recognition for keeping qualities and suggested that the scale be allowed to stand unaltered. They also suggested that the society establish in the following cities: Chicago, Cincinnati, Philadelphia, Pittsburg, Boston and St. Louis, a standing committee of three competent judges, after the manner of the Chrysanthemum Society, these committees to be members of the florist clubs of the various cities and to act in connection as far as practicable with the different clubs. That they arrange to receive exhibits from growers on the date of the regular monthly meetings and judge same by the society's scale. Also, that they make some arrangements whereby the keeping qualities of the flower can be ascertained. Growers to send six blooms to each committee during the months of December, January, February and March, the exhibitors being required to exhibit in three at least out of the four months and in at least four of the above-named cities; reports of the judges to be forwarded to the secretary of the society, together with a report on the number of points obtained by each variety on the keeping qualities of each exhibit.

As regards express company matters the committee could not in the time allowed formulate any practical remedy for losses resulting from carelessness or negligence on the part of the various express companies.

Considerable discussion followed as to the best methods to insure satisfactory service from the various express companies. Mr. Dillon suggested the use of the red label by all shippers, and the calling of the local agent's attention thereto, and also to the fact that the goods contained in the packages were perishable. Mr. Ward referred to the very satisfactory service rendered him by the National, United States and American Express Companies; on the other hand, he had found the Adams Express Company the most undesirable one to handle his goods, and that company he always avoided. Defining the responsibilities of the express companies, Mr. Ward said a common carrier is responsible for the goods in his possession; if they are plants that are liable to be frozen, and if the carrier receives these plants and receipts for these plants he is responsible if he allows them to become damaged while in his possession. He may write on his receipt, may make you release him from damage and ship them subject to owner's risk; but, at the same time, that does not do away with his liability if these goods are damaged through the fault or carelessness on the part of his agents. The only way to cover the thing is to take it through the courts and have the liability thoroughly fixed by a decision.

Several instances of attempts to shirk liability in case of damage were instanced by some of the shippers, the general feeling being that the society should put itself on record as being willing to push the claims of its members to a satisfactory conclusion whenever sufficient proof of negligence or carelessness on the part of the express companies was available.

Some further discussion occurred on the committee's suggestion for the appointment of local committees, but the matter was finally laid on the table until next year. In the course of the discussion Mr. Ward remarked that the best test of the keeping qualities of the carnation was to go down to market every day where the flowers were sent under average conditions. If he were to ship carnations long distances he should take particular care to have them keep. One could also treat carnations with certain chemicals and make them keep a good long while. He did not think that the plan proposed by the committee would result in any practical benefit.

Mr. Rudd did not think any proposition relating to the judging of carnations or to the handling of the business of the Carnation Society by parties outside of the membership of the society should be entertained. "This Carnation Society is not to be at the say-so of any florist club or body of men outside of its own members. I do not say but what it is a good thing to have different committees in different cities, but they must be members of this society." He was inclined to think that it would not be a bad idea to have exhibits in various cities, but let the whole thing be voluntary. He thought the society was perhaps imposing too much of a task on the seedling man, especially if he happened to have a very small stock. He was also of opinion that the society was trying to do something that it could not do—and that was to solve the commercial all-round value of the carnation. The only legitimate test of the value of the carnation was to grow it and see it growing during a long space of time, and find out what it will do under different conditions. "In trying to investigate the keeping qualities or the growing qualities of a carnation you are simply going to burn your fingers."

Mr. Ward—To buyers of new carnations I would say this: If you will pay more attention to learning how to grow the new things than to judge them, you will come out a great deal better in the long run. Let the seedling man alone; he is judging the thing pretty close and doing the best he knows how.

Cutting Prices.

The question having come up as to what was the best remedy to prevent the cutting of prices, both of flowers and rooted cuttings, Mr. Rudd stated he knew of only one sure method, and that was to kill off all the fools. Mr. Ward: "In some lines of business there has been a successful method employed to prevent that, and that is to shut off the supplies of the most desirable articles from those who persist in cutting prices. A movement of that kind among the producers of the most desirable new things might have some effect, if it could be conscientiously carried out. One of the great difficulties is that there is always some Judas who will turn round behind your back and knife you." Mr. Ward was of opinion, however, that any combination to maintain prices would be wiped out by the courts as coming under the law dealing with trusts.

The Use of Side Ventilation.

Eugene Dailledouze—We were probably the first to discontinue side ventilation. We have side ventilators and keep them closed for the simple reason that we cannot keep the atmosphere moist enough—too much evaporation. We have not used the side ventilators except for emptying the houses. I think anyone trying the two methods will soon be convinced.

Mr. Ward—We have side ventilation on every house and we use it. We find there is rapid evaporation; that is what we like, especially in the hot days in August. Rapid evaporation means cooling, and if you will open your side ventilators and use the hose freely under the benches you can keep your temperature lower than that outside. In our houses last year we had the temperature below the outside temperature, and that was done by evaporation of the water on the paths and under the benches. You have got to keep your hose going with side ventilators.

Eugene Dailledouze—We found it necessary to use so much water on plants inside with side ventilation that we were inclined to have the soil sour. Where we tried the two side by side we had very much better results the other way. Too much evaporation means an over-hardening of the plant and a checking of the growth. We found the temperature one or two degrees lower in the houses with top ventilation without side ventilation. Of course, we moisten under the benches.

Partial View of Buffalo Exhibition of American Carnation Society.

Some Corrections.

The telegraph recorded a few things last week that need correction: In sweepstake competition third prize was won by Mr. Witterstaetter with "Adonis," not Maude Adams. The name of Dailledouze Bros., light pink, which received a preliminary certificate, is "Delight," not White Delight. Mr. Dailledouze's remarks regarding side ventilation are given in full above.

Insects Infesting Carnations.

Read by Professor F. A. Sirrine, of the New York Agricultural Experiment Station, before the American Carnation Society at Buffalo, February 16, 1900.

Florists in general are not only familiar with all the insects infesting the carnation, but also with the whole category f remedies; hence, it appears like a waste of time to devote a few minutes to the above subject. Yet, when one can cull from florists' periodicals such statements as: "Lack of ventilation favors the development of the red spider;" or, "It resents light almost as much as fresh air;" also, "Give as much fresh air as possible—that is what the red spider does not like;" a few facts regarding the habits and life history of this and other carnation pests will bear consideration.

Before taking up the subject of habits and life history a portion of another statement requires notice. It is "Water is the remedy for thrips or red spider. Select some bright morning and syringe heavily, and later see that the roots of the plants never get dry, for drought nt some time or other, or too much fire heat, is the source whence both pests originate." Note that the latter portion of this statement conveys the idea of spontaneous generation. The days of spontaneous generation, if they ever existed among insects, passed away long before Adam was a gardener. We often hear the expression "a new insect" used. A new creation is not intended by such a statement. This term is used either when a long-established insect adapts itself to new conditions, or it has succeeded up to the present time in keeping out of the way of a "Bugologist" with his long label and his still longer name with which he burdens it.

The insects infesting carnations may be separated for convenience into two groups: first, those which are nearly always to be found on the carnation, and second, those which occur on the plants only occasionally, and then usually by accident. That is to say, we have resident and transient insect pests of the carnation. A sub-division of each of the above groups into "forcing-house," and "field" pests could easily be made, but all divisions are empirical and of value simply to avoid a discussion of each species alone. At this time only the "forcing-house" pests of the carnation will be considered.

In the first group may be classed the greenfly, red spider, and thrips; while in the second group we have the cutworms, cabbage looper, an undetermined webworm, the rose-leaf tyer, the chrysanthemum-leaf skeletonizer, Fuller's rose beetle, white grub, white ants and a few others.

THE "GREENFLY" (Rhopalosiphum dianthi).

As the specific name indicates this aphid was first found and described as infesting Dianthus. At present it might be called polyphagous, as it is known to feed on nearly one hundred different varieties of plants.

This pest is so well known that a description is not needed, but a few words on habits will not be out of place. Under natural conditions this species of aphid, like most other aphides which feed upon deciduous plants, deposits its eggs late in the Fall, in which form it passes the Winter, but, under forcing-house conditions this habit is entirely lost. Instead of the young hatching from eggs, they are produced year after year by a process of internal budding which we call "agamic reproduction." That is, certain cells separate from the abdominal walls of the mother and develop the same as plant buds develop. These buds grow into small aphides and are deposited alive by the parent. No fathers are needed in this process and they are rarely produced. With one exception, viz., as far as known, the greenfly never degenerates by being reproduced from buds, like strains of plants degenerate. We have the same kind of propagation in an insect as a florist practices with the variety or strain of a carnation. As most of you are aware, in the case of the greenfly this is not a slow process of reproduction. One mathematician has estimated that the offspring of an individual aphis can in one year amount to 210 raised to the 15th power, a number which is almost impossible to express in figures. If there were no checks to this method of reproduction "there would be room in the world for nothing else but aphides."

I have said that as far as known there is no loss of vitality on the part of the greenfly by the above method of reproduction. At times the older specimens, which usually live only about three weeks, become inert and reproduce very slowly. Whether this is due to exhaustion or is a provision to carry them through unfavorable conditions is not known. Possibly it is a form of hibernation. This much is certain—tobacco smoke will not kill these individuals and they will stand hydrocyanic acid gas better than will the plants. Conditions which bring about this inert state are: exhaustion of the plant on which they are feeding, and frequent fumigation of the plants with tobacco smoke.

Not all the individuals of each brood develop wings, but under forcing-house conditions, winged females are produced in nearly every brood. This is necessary to prevent overstocking a plant. It also allows them to spread to all parts of the house more rapidly.

RED SPIDER (Tetranychus telarius).

Here we have another pest which needs no description, as it is already well known by all. The red spider differs slightly from the greenfly in its methods of reproduction. Each brood hatches from eggs which are deposited on nearly all kinds of plants during every season of the year except Winter, but, as with the greenfly, males are not always needed. The red spider belongs to the true mites, such as sugar and cheese mites, itch mites, etc.. The red spider spins webs, the same as all spiders, which are of special use in fastening the eggs to the leaf.

Judging from the clipping previously quoted which claimed that the red spider originated from too much fire heat, or drought, the life history of this pest is not well known. Under natural conditions, at this season of the year, they are to be found on plants in the egg stage only. Their eggs can be discovered at the present time on many plants, both annual and perennial, living and dead, looking like mere red dots. The parent spider deposits these eggs in the Fall, around the buds, under rough bits of bark, and even on the leaves which drop. During the latter part of April I have seen newly hatched young swarming over the grass under chestnut trees and traveling up the body of the tree in such countless numbers that the bark appeared to be in motion.

Ten days to two weeks are required before the first brood is developed enough to commence to lay eggs. After this period there is a new brood about once in every three weeks throughout the whole season. They thrive and increase rapidly while there is plenty of wind and bright sunlight. Excessive rains in May and June do not injure the eggs but they have a bad effect on the young or newly hatched red spiders. They appear to get tangled in the wet webs and are not able to survive the chill which they receive. During extreme heat of mid-summer, the egg laying is sometimes checked, but usually they can stand plenty of heat combined with sunlight and air. Hence you see that naturally this insect thrives under conditions which are supposed by some to be adverse to them, especially in forcing-houses. I have yet to see it proven that syringing plants with water has any effect on the adult insect. A few of them may be knocked from the plants by the force of the water, but they soon crawl back. I have observed that the best time to have apparent success with syringing of plants with water is to wait until a good many eggs are deposited, then apply the water with force. The old red spiders are knocked from the plants and the result is that the plants will appear clean for a week or ten days, that is, until time for the new brood to hatch from the eggs.

The immature red spider can be distinguished from the adult by the fact that they only have three pairs of legs, while the adult has four pairs.

It is not known how many distinct broods of the red spider occur out of doors each year. In October, when the leaves commence to fall, males occur in the brood and the Winter eggs are deposited. It is not known how often males occur under forcing-house conditions. Their rate of increase is equal to that of the greenfly.

THRIPS.

Several species of this pest occur in greenhouses and attack nearly all kinds of plants. The species which causes the injury shown on Plate III. and is usually found on "twittered carnations," has been described as an "onion thrips," "cabbage thrips," and a "tobacco thrips." In the vicinity of New York City carnations are usually infested with this species. Before it was noticed injuring onions and cabbages in this country it was called thrips tabaci by an European entomologist.

As this pest and its work is not well known, a full description will be admissible. Furthermore, from recommendations given in FLORISTS' EXCHANGE for 1898, p. 1124a, quoted from Peter Henderson's "Practical Floriculture," this pest has apparently been confused with the so-called "rose-thrips," which is not a thrip at all, but a leaf-hopper, one of the Jassidæ.

The tobacco thrips (the species which infest carnations) is shown on Plate III. Fig. 1, with wings expanded. A related species (Heliothrips hæmorrhoidalis) which occurs on ferns and other conservatory plants, is shown in natural position on the same plate, Fig. 2. As shown by the illustration, the adult insects are winged and have six legs. Their wings, of which there are two pairs, are very thin, delicate membranes, fringed with long hairs. They are not able to hop, but they make short flights, which give them the appearance of hopping like the rose-leaf hopper. The larvæ or immature thrips, both males and females, are wingless. They are of a light-yellow color, while the adults closely resemble the soil around the plants.

The adult females deposit their eggs within the tissues of the plants upon which they feed. The time required for the eggs to hatch and the number of broods occurring each year is not known. This insect probably hibernates as adults and not in the egg state. They hide away under rubbish and under the rough bark of the plants on which they feed.

They usually attack carnations in the Fall while the latter are in field. Feeding as they do on the tender unfolding leaves of the plant, they may, in some cases, cause the twisting that is called "carnation twitter." The chances are that "carnation twitter" can be produced by any cause which checks the growth of the plant and is rarely the work of thrips.

When the plants are transferred from the field to the forcing-house the thrips are taken along. As soon as the plants commence to throw flower buds the thrip works its way into the latter, where he will be safe from all human attacks. Here it feeds upon the partially developed petals, not only distorting them, but robbing them of their coloring pigment, so that the flowers not only have irregular white blotches on the petals, but often they do not open properly. In some cases the petals bleed to such an extent that the flowers rot before they open. Not satisfied with making the flowers appear as if affected with leprosy they deposit their eggs in the tissue of the inner or upper surface of the calyx.

Seedling Exhibit at Buffalo Show of American Carnation Society. No. 666, Winner of the Lawson Gold Medal in Foreground.

Before taking up the subject of controlling the three pests discussed thus far, we should know how they feed and breathe, also how they get into the forcing-house.

The greenfly is provided with a proboscis, or beak-like mouth parts, similar to that of the bed bug. With this it punctures the plants and sucks the clear sap or liquid from all the surrounding tissue. Usually the tissues of the plant are only slightly broken by the feeding process of the greenfly. The red spider and the thrips are both provided with

Fig. 1. Fig. 2.

PLATE I.—"Greenfly" (*Rhopalosiphum dianthi*) Fig. 1, Wingless Adults and Young. Fig. 2, Winged Adults With Honey Dew Adhering to Wings, also Drops of Honey Dew on Plants. All Enlarged.

biting mouth parts. They first bore open the cells of the leaf tissue and then proceed to lap or suck up not only the juices but also the coloring matter from the broken cells. These broken, empty cells give the whitish appearance to the plants on which the latter pests feed. Hence, the small size of these pests combined with their method of feeding makes the use of poisons impossible.

All insects breathe by means of small openings called spiracles, which are arranged in rows on each side of the body. The spiracles connect with small tubes or arteries which divide and penetrate to all parts of the insect. Therefore, insects have air instead of blood circulating to all parts of their bodies. The closing of the spiracles with powders, washes, or with fumes of any kind suffocates the insect, and this is the only way we have of combating the above pests. With such small insects this is easier said than done. It is almost impossible to make the treatment thorough on such small objects.

All three pests can be carried into the forcing-house at the time the plants are taken in. The greenfly and thrips both produce winged individuals, which can find their way into the houses by way of the ventilators. Red spider can be carried into the houses on cannas, dahlias, or any other plants or bulbs which have some tops on them when stored under the benches.

METHODS OF CONTROLLING OR REMEDIES.

The oft-recommended remedy for greenfly and thrips is fumigation with tobacco or steam from tobacco extracts. Water is the standard remedy for red spider, aad is often assumed to be good for thrips. I have yet to find the forcing-house which has once become infested with greenfly and afterward fumigated weekly with tobacco in some form until it shows signs of nicotine poisoning in which I cannot still find the greenfly hidden away in out of the way corners. I doubt if ever an adult thrips was killed by fumigation of any sort. Unless the latter are very thick and crowded for feeding ground, they are hidden away in the folds of the leaves too well protected to be reached even by tobacco smoke. Up to the present time we have no safer method of controlling the greenfly on carnations than fumigation with tobacco smoke at time the plants are flowering.

Fumigation with hydrocyanic acid gas has been recommended for violets and in a few cases for carnations. This gas is so much lighter than air and compresses itself into the upper spaces of the house to such an extent that, even though only one-half ounce of 98 per cent. cyanide of potassium was used for every 1,000 cubic feet, it banked enough to cause the injury shown on the above plate. The injury was not noticeable until about two weeks after treatment and consisted of a whitened ring around the buds and a few white spots on the upper leaves. The former did not appear to interfere with the perfect development of the flowers. In the above case, where only one-half ounce of the cyanide of potassium was used, the gas was allowed to act all night. Although the plants were slightly injured further work by the greenfly was stopped. Three days after treatment a few specimens were found still living. These apparently were old females that were through budding and in time died a natural death, as two weeks later not a living specimen could be found in the house.

As previously stated, syringing with water is usually recommended for red spider and thrips on carnations. Sometimes such substances as salt and water, also soap suds are recommended. In addition all patented insecticides, such as "Thrip Juice," "Nikoteen," "Rose-Leaf Extract," "Antipest," etc., are warranted to kill both red spider and thrips. Nothing is ever said about the effect on the plants of the latter substance.

I think you will all agree with me that heavy syringing of carnations, which stand 18 inches high, with water, is anything but beneficial to the plants. If each grower would take the time to test water and some other substances side by side on the same bench of carnations on which the red spider has become established, he would prove to his satisfaction that such quantities of water injured the plants nearly as much as does the red spider.

I can see no difference in results between salt and water, and pure water. Both substances act, as previously described, on the young at the time they issue from the egg; at the same time both substances favor the development of the rust and spot diseases on the plants.

Notice, it is not claimed that water, salt and the proprietary substances are of no use on any plants. Some may answer fairly well on plants other than carnations. I have used "Nikoteen" at the rate of one teaspoonful to a gallon of water, as a wash for thrips on ferns, with excellent results. But "Nikoteen" is vile stuff to put on any plant and should never be used on plants which, like carnations, have the foliage covered with a "bloom." Besides, no substances can be made to reach the thrips after they have got into the carnations buds.

I have used hydrocyanic acid on this pest, when on ferns, as strong as three ounces to 1,000 cubic feet of space, allowing it to act all night without injuring the thrips in the least. (We will say nothing about the condition of the plants.)

As far as tested, the best results from treatment of red spider have been obtained from the use of a soap solution made by dissolving one ounce of ivory soap in one gallon of water, or in that proportion. All individuals struck with this solution were killed, and if the plants were not too heavily drenched, the bloom on the foliage was discolored but little. (Open flowers should be gathered before attempting to use the soap solution.) A home made soap made of clean lard and the best potash lye would answer just as well as ivory soap. Fish oil soaps will kill the red spider but they have the disadvantage of discoloring the foliage, and in addition give the plants a bad odor.

The Ohio Agricultural Experiment Station has shown that good potash soaps are fungicides, preventing "leaf curl" of the peach. (In Bulletin 103, page 186, also Bulletin 104, page 220.)

Another measure which is absolutely safe to use on the carnation, when flowering, and just as destructive to the red spider as water, or salt and water, is the ammonical solution of copper carbonate, called "Cupram." This is a valuable fungicide which does not soil the foliage in the least. By syringing the plants twice a week with this solution the required amount of moisture to check the development of the red spider can be furnished without supplying a forcing bed for rust and the spot diseases. It is made as follows: To one volume of 26 degrees ammonia add seven volumes of water. If one quart of ammonia is used suspend five ounces of copper carbonate in the mixture of water and ammonia; cover and allow to stand over night. For use take one quart of the clear solution and add four gallons of water.

Where the thrips has once gotten a foothold in the buds of the carnation the only method of controling him is to carefully gather all the buds which show his work, before they open, and destroy them. No old soiled flowers should be left in the benches.

In conclusion, I would recommend the following measures to prevent and control the three worst pests that trouble carnation growers: If possible select land that has grown corn or potatoes one year after being in sod. Avoid having old hedges and rubbish patches on the margins of the carnation field. (These harbor red spider and greenfly.) Never plant carnations under or around trees. (The latter harbors red spider.) Do not grow cabbage or related plants by the side of the carnation. (These furnish abundant crops of thrips.) At time of transplanting use heroic measures. First dip the plants in a soap solution, being careful not to get the solution on the roots. This solution can be made as already recommended from ivory soap or from Good's potash soap, Owen's U. S. standard caustic potash soap, or even from a home-made fish oil soap. Of the latter use one gallon of soap to 32 gallons of water. The home-made fish oil soap is made as follows:

Caustic potash	1 pound.
Fish oil	3 pints.
Soft water	2 gallons.

Dissolve lye in the water, then add oil and stir. Boil from 20 minutes to one hour.

As soon as plants are established in benches syringe thoroughly with the ivory soap solution, giving a second treatment ten days later.

The above treatment should free the plants of all three pests, but a later treatment may be needed for greenfly which have found their way into the house through the ventilators. If these are discovered while the plants are short and not flowering to any extent, fumigate with hydrocyanic acid gas, using one half ounce of 98 per cent. cyanide of potassium, one ounce of sulphuric acid and three ounces of water to every 1,200 cubic feet of space in the house. Allow gas to act all night. A week or ten days later repeat the fumigation. Remember that this gas is one of the most deadly poisons known; be sure the workmen realize this fact. After all the above precautions have been taken, do not store any plants under the benches.

The florist who becomes convinced that he must fight these three pests each Fall from the start, will be the one who will have the best success.

TRANSIENT PESTS.

The worst of these is the "variegated cut-worm," (Peridroma saucia) and the "cabbage looper" (Plusia Brassicæ, The former, while small, is a climbing cut-worm which feeds at night and hides in the loose soil during the day. This is one of the most common of the cut-worms. It is found in nearly all countries, and usually occurs in forcing-houses more frequently than other cut-worms. In color it is a sooty brown with a yellow stripe mottled with red on each side of its body. The head is reddish yellow. The adult insect, or moth, is very indistinctly marked. Many writers have assumed that this cut-worm is carried into the house in the soil. The fact that they occur in forcing houses more frequently than other species of cut-worms, combined with the fact that they are often found in considerable numbers in spots throughout a house, indicates that the eggs are deposited on the carnations by the parent moth, or "miller" after transplanting. The latter can easily fly into houses on cloudy days and early in the evening during the months of September and October. The young worms climb to the buds, eat holes through the calyx and then devour all the floral parts.

THE CABBAGE LOOPER.

Is shown in the adult and caterpillar stage on Plate IV. The caterpillar is a light green worm about 1½ inches long, when full grown, which can always be recognized by its habit of looping the body when traveling. The moth or miller has mottled dark brown head and wings. Two white spots on each forewing sometimes resembles the figure 8. The hind wiugs are slate color varying to tawny, while the body is covered with gray and tawny red hairs. This pest, like the variegated cut-worm, feeds usually at night on the buds and in the same manner. During the day they attach themselves to a stem of the plant by means of their caudal legs and stand at the same angle as do the leaves. This habit requires sharp eyes to find them. They

PLATE II.—Red Spider (*Tetranychus telarius* on Leaf of Carnation. Shows Adults, Young and Eggs. All Enlarged.

can be carried into the house on the plants, but usually the female moth finds her way into the house through open ventilators. They are on the wing all the Fall, especially on cloudy days and late in the afternoon. Like the cut-worm moth they are able to lay two or three hundred eggs—hence one fertile moth can very thoroughly distribute eggs to all parts of the house.

The best means of combating either or

both of the above pests is to hunt for the caterpillars at night with lanterns and hand pick them. Although some have recommended the use of Paris green, it is impossible to get enough poison on the buds of the carnation to kill the worms. After the cut-worms get too large to climb, a poisoned bait, made by mixing one part green arsenite with 15 parts of middlings or dry bran, can be used to advantage. This should be distributed in small heaps around the plants where the cut-worms are at work.

THE WHITE GRUB.

As far as known the white grubs never occur in forcing-houses except as they are carried in with the soil. The only way to get rid of them is to dig them out.

THE ROSE-LEAF TYER (Cacoecia rosaceana)

And the "chrysanthemum leaf-skeletonizer" (Phlyctaenia ferrugalis) sometimes occur on carnations where roses and chrysanthemums have been grown in the same house. These pests will attack the carnations after the other plants have been removed. When they are found working in a house hand picking must be resorted to.

A small green worm, probably a tertricid, which ties a number of leaves together with a web, is sometimes carried from the field into the house with plants. The adult of this worm has not been bred, hence its scientific name is not known, nor do we know what other plants it feeds upon in the field. Thus far it has been gotten rid of easily by hand picking.

A fly, about one-half as large as the house fly, is frequently seen in carnation houses during the Winter. This has been reported as feeding in the maggot stage on the roots of the carnation. I have seen flies very numerous in houses but have been unable thus far to prove that they feed in the larval or maggot stage on the living roots of the plants. It seems more probable that they feed on the decaying roots only.

WHITE ANTS OR TERMITES (Termes flavipes).

This pest is apt to occur in old style houses in which the woodwork has been allowed to become partially rotten, especially if worm eaten locust posts are used to support the benches. White ants have the peculiar habit of keeping away from daylight. They always make covered runways and usually find their way to the bench through a rotten or worm-eaten post. Houses that have brick or stone foundations and iron posts for the benches are not troubled with "white ants," unless the latter are accidentally carried into the house in the soil—a thing that rarely happens. When once established in a house the only method of getting rid of them is to throw out the soil and remove all rotten woodwork. Creosotes and other wood preservers can be used on the posts and bottoms of the benches, but such substances should be used with care on the outside of benches. I have seen houses of chrysanthemums severely injured by fumes given off by wood preservers. Probably this would only occur where such treated wood is subjected to considerable heat from too close contact to pipes.

FULLER'S ROSE BEETLE.

I think this insect has never been reported as feeding upon carnations. In October of 1899 I received specimens of this beetle from Little Falls, N. Y., accompanied with the statement that they were feeding on carnations. At first it appeared a difficult matter to account for their presence in the carnation house and at that season of the year. Inquiry developed the fact that in 1897-1898 the house had contained roses in solid beds. During Fall of 1898 the roses were taken out, six inches of the old dirt removed and replaced with new soil, after which carnations were planted in the beds. In 1899 benches were built over the old beds without removal of soil from latter. When first noticed the beetles were always found feeding on the plants along the margin of the benches. Probably the beetles fed during the grub stage on the roots of the roses, this being their proper food plant. In 1899, when they issued as adult beetles, they found nothing but carnations to feed upon. From all reports they were satisfied with the change. It was found that the beetles feed principally at night and hid away under the foliage of the plants during the day. They were gotten rid of by hand picking at night.

Discussion.

William Scott detailed his experience with hydrocyanic acid gas, which applied according to the formula given had been efficacious in killing greenfly and black aphis without any injury to the plant, except where the fumes came directly from the pot. He asked whether a milder mixture allowed to act all night would not be as effective. Professor Sirrine recommended half an ounce of cyanide of potassium, one ounce of sulphuric acid and three ounces of water for every thousand cubic feet of air space, the mixture to be allowed to operate all night. Low-growing plants, such as violets, were less liable to suffer from its effects than carnations and chrysanthemums, on account of the tendency of the gas to bank. In answer to a question the Professor thought that the gas would be sufficiently dispersed in the morning to allow safe entry into the house.

Mr. Ward told of some experiments with hydrocyanic acid gas at Queens, where the fumes had descended into the heating pit, through the passage for the steam mains, with some evil results to the foreman on the following morning, also remarking that the strength of the gas was sufficient to kill the greenhouse cat. He had not noticed any damage to the flowers, excepting little white rings on those buds which were still in the "cup" shape, and these rings were not noticeable until four weeks after the fumigation had occurred. Perhaps 15 or 20 per cent. of the plants were affected altogether.

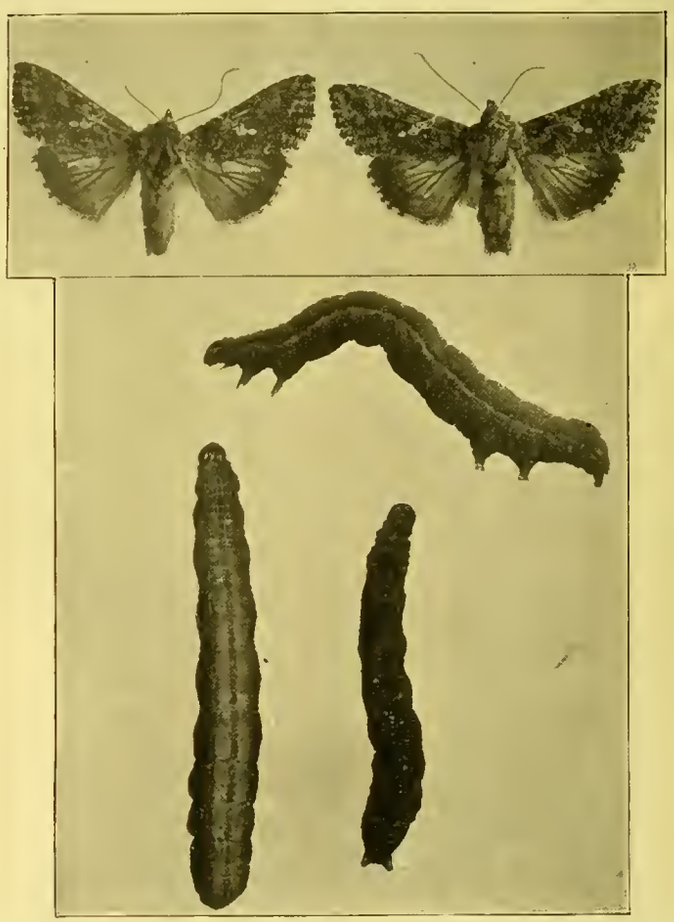

PLATE IV. Cabbage Looper (Plusia brassicæ). Adult Moth and Worms. All enlarged.

Aphis Punk.

Mr. Scott asked whether any of the gentlemen had used the new article known as Aphis Punk. While it was more expensive than tobacco, he had proved it for the last three months as very efficacious for greenfly, and it had not left any nauseating odor on the flowers and had done but very slight injury to the plants.

Mr. Ward—I want to disagree with Mr. Scott just as pointedly and as radically as I do on the butted glass question. (Laughter.) The Aphis Punk man was down at our place the other day. I ordered a barrel and told our man to try it and report. (Mr. Ward repeated his foreman's words regarding the odor, his expression being more forcible than choice). Continuing, he said: "There may be a great variation in the Aphis Punk. I have found in using the various nicotine preparations, whether painted on the pipes or evaporated from Lonsdale's paas, that they leave the least odor of any of the tobacco preparations."

Mr. Scott had tried Aphis Punk on Daybreak, a variety which was very susceptible to greenfly; had used it once a week, and all the fly had disappeared. The flowers from that house had been sold at his store and he could not detect any bad odor. He was inclined to think that Mr. Ward's foreman had smelled the odor of the dead cat and not of the Aphis Punk. (Laughter.) Mr. Ward reiterated that that cat had had a decent funeral about three years ago, and still stuck to his statement that the odor from the Aphis Punk was very strong.

Mr. Weber inquired if Aphis Punk was as cheap as tobacco stems, when one had to pay $6 to $8 per ton for the stems. Mr. Scott remarked that it was a little expensive, costing about 5 cents a small roll. His houses are 125 feet long and he uses four rolls to the house, or 20 cents' worth. That would be considerably more than tobacco stems at $5 to $6 a ton, but Aphis Punk was much easier applied. Its greatest drawback was possibly the expense.

Mr. Kasting referred to the good success which Mr. Guenther had met in growing roses by the use of Aphis Punk. It had left no deleterious effects whatever on the rose buds. Mr. Hagenburger, of Mentor, Ohio, had used the Aphis Punk in fern houses for greenfly, without injuring the young foliage even in fresh growth. Mr. Graham had used it in a palm house without any fear of damaging the leaves. He had not tried it on carnations for the simple reason that it was expensive. Mr. Scott had used it on violets also with very good results in the removal of greenfly. Mr. Hagenburger had also used it on violets in sash houses, but it did not work so well there as in the fern houses, probably owing to the house not being so close.

Mr. Ward asked if anybody had tried ordinary paper soaked in nicotine and burned that. Mr. Kasting remarked that the paper used in the manufacture of Aphis Punk was made especially for the house selling the insecticide. Mr. Ward stated that tobacco-soaked paper was not a new thing at all; it had been used in the old country many years ago. Mr. Scott pointed out that tobacco-soaked paper was a different thing. It was coarse, coming in large rolls, was of different texture and burned quickly. Perhaps the idea came from that paper, but the Aphis Punk was manufactured in this country.

Mr. Nicholson intimated that perhaps tobacco paper treated with saltpeter, as is done in the case of "match paper" in the old country, might prove efficacious.

A vote of thanks was passed to Professor Sirrine for his admirable paper.

The Banquet.

The banquet given by the Buffalo Florists' Club was one of the most enjoyable experienced in the history of the Carnation Society. A tastefully gotten up menu card, designed by Daniel B. Long, showing a bunch of red variegated carnations on a green background at left-hand corner, and a bison embossed in gilt at lower right corner, set forth the following details:

Entertainment—des Dianthus, la divinite.

An Attempt at Hybridizing.
Wit and Common Sense Crossed with Gastronomy.
Informality the Rule.
Everything ad. lib.—No Restrictions.

IRRIGATIONS.

May-flower Beer—Onlyx Tap.
Cerise Bloom Rhine Wine—Nugget Blend.
Marquis High Notch Punch.
Irene and Genevieve Cigars.

The toastmaster, William Scott, having been introduced by President Kasting, made a few happy remarks, asserting his belief that there was seated at the tables "the best lot of men ever assembled at a carnation convention." He had great hopes all would return to the Pan-American Exposition in 1901, and pointed out several attractions by way of inducements that would be forthcoming at that time.

President William Craig responded for the American Carnation Society, expressing high appreciation of Buffalo's hospitality. His remarks were couched in well-chosen language, causing Mr. Scott to state: "You all know what an eloquent orator Robert Craig is. I believe if the boy is spared he will beat his father." (Laughter and applause.)

William Weber replied for the meeting in 1901, foretelling success and a satisfactory augmentation to the society's membership.

John N. May spoke for the S. A. F., telling how proud the mother was of her flourishing offspring, and predicting great things for the carnation and a grand successful meeting at Baltimore, where the well-known Southern hospitality would surely assert itself.

E. G. Hill, in a patriotic manner, responded to "America," commenting humorously on the low scaling given Indianapolis in the contest for a meeting place for 1901. "The State of New York and Governor Roosevelt" was assigned to Mr. Ward, who spoke eloquently on the bravery, good sense and sound judgment of the Governor, adding, "the gentleman who can stand the name of a carnation so good as Governor Roosevelt without getting a swelled head is no ordinary man."

W. N. Rudd felicitously referred to the scoring of 100 points made to Enquirer, and his alleged misquotation of Scripture, and pointed out that the value of these conventions was to know the gentlemen with whom one is dealing, to know what other centers of trade are doing, and what others are thinking. The man who grows carnations and has not enterprise enough to attend these conventions is "mighty small potatoes."

Wm. Gammage, of London, Ont., told of the progress making in carnation culture in Canada, the launching of their new trade paper, and expressed the hope that some Canadian point would be selected as the society's meeting place in 1902.

The toastmaster then presented the various trophies to their respective winners. Eugene Dailledouze, the recipient of the Lawson gold medal and Chicago Carnation Company's cup, and Richard Witterstaetter, winner of the Lawson silver medal, each responding in a befitting manner, and promising to be out for blood again next year.

Mr. Marquisee spoke on behalf of "The Marquis" in an eloquent manner. He was followed by Charles Keitsch, to whose untiring energy and that of his assistants the success of the exhibition was due. Mr. Keitsch received modestly the well-deserved encomiums that were heaped upon him. George E. Funcourt created some merriment by the reading of several "cablegrams" and "telegrams" from notable personages, among them Admiral Dewey, Oom Paul, "Bobs" and Joe Chamberlain, the latter promising to discard orchids and turn his attention to carnations. Mr. Miller, of Bracondale, Ont., made a very neat little speech, treating on the grand display of carnations, and touching on the most cordial relations existing between the United States and Canada.

During the evening a host of talent kept the company in the best of spirits. Steve Brodie's appearance on the platform and his brief address was a feature of the night's enjoyment.

The assembly broke up at the "wee short hoor," and everybody voted that Great Scott and his hospitable colleagues had "vindicated their characters as entertainers" in a measure full to overflowing.

President-Elect Robert Halliday.

Robert Halliday, the newly elected president of the Carnation Society, is a man among men. Hereditary traits from both his father and mother have developed our worthy craftsman into an ideal gardener. He is the grandson of that stalwart, noble Robert Halliday who established himself in Baltimore in 1839; and on his mother's side is a grandson of John Dick, of Philadelphia, whose establishment dates back to 1837. His friends hailed with delight his election, especially as he was not present at the convention.

ROBERT HALLIDAY,
President-Elect American Carnation Society.

Robert was born at Philadelphia on July 21, 1865. He attended the private schools of Baltimore, and when ready to venture upon a calling selected the one which his father, Robert J. Halliday, had chosen. He entered his father's establishment, in which he was a faithful worker. In 1889 he, with his brother, started on their own responsibility, and under the firm name of Halliday Brothers have conducted a successful business, both from a grower's and a dealer's standpoint. In 1899 Mrs. Mary J. Thomas retired from business and Halliday Brothers succeeded her.

"The boys," as all popularly call them here, have taken a great interest in carnations. Bob is the controlling spirit, as far as the carnation is concerned; he makes them "talk"—a view of his houses will easily demonstrate this fact.

Mr. Halliday is naturally a retiring man, unassuming in manner, stands over 6 feet in his stockings, and is as straight as an arrow; and his firm handshake betokens the true, friendly heart that beats within him. E. A. S.

Vice-Pres.-Elect William Weber.

William Weber is the son of that well-known carnationist, Henry Weber, of Oakland; he was born near Mount Savage, Alleghany County, Maryland, November 5, 1869, and removed to Cumberland with his parents when but a year old. He grew upon the farm after the manner of most country lads, with the exception that he was always getting into trouble and had to be frequently disciplined. From his earliest days he evinced a love for flowers and spent many hours gathering such from the fields.

Later, when he had his own little garden, he eagerly took all plants given him to raise, as well as all those he could get his hands on when the foreman was not in sight. He proved an obstinate pupil in the greenhouse, and many were the trials of the foreman who was charged with the difficult task of making him an obedient and capable florist.

At the age of 13 he removed with his parents to Oakland. Here, at the age of 15, he was given a small greenhouse, 60x12 feet, and the real work of developing into a florist was begun. Houses were added from time to time, and gradually the carnation became uppermost in his mind; and he is now paying more attention to this plant than to any other, although the establishment of about 65,000 square feet is devoted to general stock.

He attended the public schools until he was 15 years old; this constituted his education, and what else he has acquired has been from observation, books, papers, etc.

Upon attaining his majority he was admitted into partnership in the firm of H. Weber & Sons, and has direct charge of the greenhouse department. He is a member of the American Carnation Society, Society of American Florists, Gardeners' Club of Baltimore and the newly organized American Rose Society.

FIRES.

WOLLASTON, MASS.—Fire in the greenhouse of Samuel Brown did damage to the extent of $500, February 14.

Box Factory Burned.

The Dayton Paper Novelty Co., at Dayton, Ohio, recently met with a serious loss by a disastrous fire which completely destroyed their factory. This will prevent the filling of orders for the present, but they expect to be in shape again within ninety days.

Concord, N. H.

During the recent flood the greenhouses of J. A. Littlefield were submerged so as to extinguish the fires, freezing all the plants and causing a damage of several hundred dollars.

ATHOL, MASS.—During the recent storm the greenhouses of James Sutherland, Jr., were partly under water, many plants being ruined.

FOUNDED IN 1888.

THE FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO., LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.

To foreign countries in postal union $2.00. Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.

No advertisement less than 75 cents.

Discounts on continuous advertising.

For rates, on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.

Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

Several communications on the subject of charges for packing are unavoidably held over till a future issue.

Town Topics, of Cleveland, describes in glowing terms some recent wedding decorations executed by Mrs. Ella Grant Wilson.

Firms Who Are Building.

LOCKLAND, OHIO.—W. K. Partridge will build two new greenhouses, each 400 feet in length, for roses.

EAST WEYMOUTH, MASS.—Ryan Bros. are putting up three greenhouses.

WEST LAFAYETTE, IND.—H. Roth will build two new greenhouses the coming Summer to meet his increasing business demands.

BANGOR, ME.—A. J. Loder will build a greenhouse here.

With its first issue of January last Indian Gardening (Calcutta) entered upon a new phase of its existence by the addition of a planting and agricultural section. The paper has been considerably enlarged and improved in appearance, and is up to date in every particular.

A CHANCE FOR THE YOUNG MAN.

With a view to encouraging the "art of writing" articles; in other words, the expression of their views on paper, among the young men employees in our florist establishments, the FLORISTS' EXCHANGE, with last issue, instituted a series of competitions, and as an initial step offers the undernoted prize for the best written paper on the following subject:

Care of a Hot Water Boiler.

The contestants are requested to give their ideas on the subjoined points:

What is the best way to care for a hot water boiler in order to get the most heat with the least fuel?

How to have the pipes cool through the day when there is plenty of sun heat, thus saving fuel at the same time and still have the fires in such condition that they may be rushed quickly should it be necessary to do so.

Give a résumé of how to manage such a boiler for 24 hours, beginning at 7 a. m.

PRIZE.—$4 worth of books or magazines; or $3 in cash.

CONDITIONS.

(1) Each MSS. submitted must be written by an employee, without assistance, and the authenticity of these facts attested by the employer.

(2) No employee now contributing, or who has at any time contributed to any florist trade journal, will be allowed to compete.

MSS. must not exceed one thousand words in length.

All MSS. submitted in this competition to become the property of the publishers of the FLORISTS' EXCHANGE.

The awarding of the prize will be based on the practical knowledge exhibited by the writer in the treatment of his subject.

Competition will close March 7 next. Write plainly on one side of the paper only.

Address all communications,
EMPLOYEES' COMPETITION, FLORISTS' EXCHANGE,
Box 1697, New York City.

American Carnation Society.

The Buffalo meeting of the American Carnation Society has passed into history and will rank as one of the most succesful of the society's gatherings, both from the standpoint of attendance and also the high standard of quality of the flowers shown on exhibition. The number of papers read before the society was comparatively few, but the subjects dealt with were extremely interesting. One of these papers, namely, that of Mr. Hartshorne, on "Indoor Culture," and the discussion which followed thereon, has already appeared in our columns. Professor Sirrine's paper on "Insects Infesting Carnations," together with the discussion upon it, appears elsewhere in this issue. Growers should pay particular attention to what the Professor says regarding the generally accepted theory that water is a sure cure for red spider. The Professor stated: "I have yet to see it proven that syringing plants with water has any effect on the adult insect; a few of them may be knocked off the plant by the force of the water, but they will soon crawl back." Mr. Sirrine also points out that the spider luxuriates in fresh air and sunshine, conditions which are considered by some to be inimical to its welfare. The paper is worthy of careful perusal.

* * * *

The sparsity of the essays this year allowed time for considerable discussion of other important matters. While no definite conclusions have been arrived at regarding the use of sub-irrigation, the consensus of opinion, as expressed, was that the method was too costly when compared with the resultant benefits.

* * * *

A spirited discussion took place regarding the proposition to amalgamate the meeting of the Rose Society and the Carnation Society. The matter is still undecided, and we would respectfully call the attention of the members of the two societies to the views of the different gentlemen who spoke on the subject. The history of joint meetings of national societies does not show that such are conducive to the welfare of some. We will instance the Chrysanthemum Society of America, the interests of which have been decidedly impaired, in our opinion, by the annual meeting of the society clashing with that of the Society of American Florists.

* * * *

We would have liked to have seen the subject of cutting prices more fully dealt with. Mr. Ward's proposition to shut off the supplies of the most desirable new articles from those who persist in cutting prices is a good one, and might tend to help matters, provided those who supply are not guilty of the same practice.

* * * *

The discontinuance of side ventilation by one of our best growers, namely, Dailledouze Bros., is a point that should be carefully studied out, particularly with those who have adopted the comparatively new method of indoor culture. Mr. Dailledouze asserts that the side ventilation necessitated a too frequent use of the hose, thereby souring the soil. He had also found that the temperature in the houses was lower with top ventilation only than when both top and side ventilation had been applied.

* * * *

The express companies came in for a share of attention, and we would ask our readers to note those companies which have rendered the best service to some of the shippers, and who are reported as being amenable to reason in the case of damage or loss. There is no question but what considerable annoyance is caused by the position taken by some of the express companies, and a test case, as proposed, might have some beneficial result. We were glad to note the feeling that existed among the members, that the society as a whole should take up the cudgels in this respect, to fight the oppressors.

* * * *

It is gratifying to observe that the society is endeavoring to come to some understanding as to what is the ideal flower. When this has been arrived at the work of the judges will be simplified and probably more uniform decisions rendered.

* * * *

The perennial attempt to discover the growing qualities of a carnation was again made and resulted, as usual, in nothing tangible being done. It would be well if the members would pay particular heed to the advice of Messrs. Rudd and Ward, printed elsewhere in this issue, regarding this subject. It has been time and again pointed out that the only way to come to a true knowledge of the growing qualities of a carnation is to grow it, and any discussion tending to saddle the American Carnation Society with this work is, in our opinion, simply time wasted.

LEGAL NOTES.

Too Much Light.

In the case brought against Daniel E. Gorman, Williamsport, Pa., on the complaint of a neighbor who alleged that the front rooms of his dwelling house and the porch were made uninhabitable by sunlight reflection from the greenhouse glass of Mr. Gorman, the judge has delivered his decision, giving the defendant until May 1 to remedy the matter, failing which an injunction will be granted.

A Question of Responsibility.

Will you please have the following situation explained: A is a greenhouse man who rents out palms to any one who has the price; he does so for several store men who have no plants of their own, on commission of 80 per cent. of the price of the decoration. B, a store man, recently got some plants on these terms to decorate a lodge hall. A delivered 31 plants, with pot covers, in the building, and sent back the next day to get the plants. There were three plants and two covers missing, value about $6. A looked to B for their value. B refused, saying he could not stand and watch the plants and was not responsible; but he appealed to the lodge, which disclaimed any responsibility, on the same ground that B took. The question is, Who is to stand the loss?

—The facts as stated above make up a case which is embodied in the Law of Bailments. A is the bailor and B is the bailee for hire. B was bound and obliged to use an ordinary amount of diligence and care to protect the plants while in his possession, and was liable for greater than slight negligence. However, in the absence of an absolute agreement to return the goods at all hazards, the failure to return is excused by the loss of the property by theft or by accident, without B's, the bailee's, fault. It is oftentimes a difficult thing to determine what constitutes an ordinary amount of care, but, from the facts given in the above question, I would say that A would have to stand the loss in the absence of an express agreement on B's part to return the goods; B was not under a duty to keep watch of the goods continually while they were in the lodge room. If the goods were stolen, and there is no proof but that B used an ordinary amount of care for their protection while in his custody, A, the bailor, has no redress against B or against the lodge. The title of the property still remained in A, and his only redress, in my opinion, is against the party who stole the goods.

Since B used the amount of care which the law requires of a bailee for hire, for the protection of goods which are hired or rented by him, a bailee for hire is not bound to use the amount of care which is required of a party to whom goods are loaned gratuitously. [E. F. E.]

ROBERT G. PERRY,
Attorney for National Florists' Board of Trade.

Seed Testing Indorsments.

Editor Florists' Exchange.

I have been very much pleased at a departure apparently inaugurated by Messrs. Templin & Sons, Calla, O. They print on the backs of their packets of vegetable seeds the following:

"1900. The seeds from which this packet was filled have been carefully tested at the Blythedale Seed Testing Laboratory, the result of which shows that under favorable conditions 90 per cent. will grow. 1900."

They also guarantee that their seeds shall be true to name, pure and of the strongest germinating quality, and offer to refill an order if satisfactory proof is furnished that the guarantee has not been lived up to.

The practice of printing the percentage of germination on the authority of some good seed testing establishment seems to me to be a highly commendable one. I believe that the time is coming when the seedsmen can no longer afford to shield themselves behind their absolute non-warranty clause. That they cannot guarantee a crop every intelligent person will admit, but they should have sufficient confidence in the seeds for which they usually claim superior excellence to be willing to share the risk with the planter.

I think Messrs. Templin & Sons are to be commended for their stand.

A. J. PIETERS,
In Charge of Pure Seed Investigations.

Horticultural Orthography.

Editor Florists' Exchange.

The good, all-round scolding administered by the American Florist to catalogue-makers on the subject of incorrect spelling of plant names, and the accusation of carelessness and ignorance thereby displayed, is timely, and will no doubt have a salutary effect on the perpetrators. But when one assumes the position of a faultfinder, or critic, along any line, others are apt to look whether he keeps his own doorstep clean in this same respect. On a cursory glance among the advertisements appearing in the same issue that the above-referred-to "laying-out" occurs, I come across the following errors: In rose nomenclature: Baron Bonstettin for "Bonstetten;" Anna de Diesbach for "Anne, etc;" Coquette des Alps for "Alpes." In palms: Cocos Wedelliana for "Weddeliana (Weddel's palm)," etc. Why, in his own article, he even misspells the word misspelled thus: "mispelled" and talks about the feeling of disgust which every well-informed person "fells" at such an exhibition.

But, of course, these appearing where they do, must be errors on the part of that much abused individual—the printer, and not the result of "carelessness" or "ignorance," as are "popaver," "rubbeckia," and other "atrocities" so unmercifully scored by the writer of the scathing article in question.

I am inclined to believe, Mr. Editor, there is really some truth in the old saying: "Those who live in glass houses should never throw stones."

SPELLING BEE.

New York.

The Market.

The first snow storm of the season arrived last Saturday, and, it came with enough wind accompaniment to give a severe check to business in cut flower lines. The receipts of roses are not very heavy, however, and dealers have been able to hold the price of top-grade flowers very close to the figures obtained last week. But lower grades have perceptibly weakened, and at this writing (Wednesday) it is apparent that a general slump in prices may occur at any time, seeing that the Lenten season is so near and society events are about over. Usually Bride and Bridesmaid roses sell at the same values as each other, but this week such has not been the case; the demand for the white is much smaller than for the pink variety, consequently values for Bride have ruled somewhat lower than Bridesmaid.

Violets always suffer when the weather is too cold or too stormy for the street vendor to handle them, and, as the severity of the storm kept the peddlers off the streets from Saturday until Wednesday, violets accumulated to a very great extent. On Wednesday, however, the weather had moderated enough to enable the peddlers to resume business again and violets began to move, though at a much reduced figure than that which obtained one week ago.

Carnations continue in good demand, especially for fancy and special varieties.

Bulbous flowers are plentiful in all lines. Single tulips, either in pink, or yellow, can be had at $2 per 100. Double pink ones bring $4; Narcissus Poeticus, $1; daffodils, $1.50 to $2.50, according to quality. Valley can be had at from $1.50 to $4 per 100.

Lilac is not moving so freely, and a falling off in price is observed; fine white sprays that recently brought $2 per bunch now hang fire at $1.25. Purple sprays are offered as low as 50c. per bunch.

The only flower for which there is a a demand over the supply is the cattleya; more of these could be sold at present were they obtainable. Some short fronds of adiantum are coming in, for which only 75c. per 100 is realized; for some weeks past adiantum has remained steady at $1.

J. H. Small & Sons have a choice collection of cinerarias in one of their windows. This firm reports heavy business in decorations all through the season.

C. Schenck, secretary of the sporting committee of the Florists' Club, has, up to the present time, received but one communication in regard to the bowling tournament to be held here in August next during the convention of the S. A. F. O. H. Captains of teams that intend entering the tournament should notify Mr. Schenck at their earliest convenience. The club already heard from is Philadelphia.

Eugene Dailledouze recently showed us the silver cup won by No. 3 in Buffalo last week, and it is a beauty—so is No. 3.

Chromley & Perkins have rented the store at 57 West 28th street, and will occupy the same about March 1.

At the Japanese sale held by Cleary & Co. this week, the rarest plant of the collection, a Chabo-hibo, was knocked down to Wm. Plumb.

Visitors: J. C. Vaughan and J. D. Thompson, Chicago, Ill., and C. Fleming, Bridgeport, Conn.

Boston.

The Market.

Business has shown a slight improvement this past week. Beauty are a little more plentiful; still, good ones are short enough, and sell fairly well at $25 to $35, smaller grades ranging in price from $4 to $20 a 100. Bride and Bridesmaid of best quality are scarce; in fact, all grades are, but naturally the finer ones more so. Best quality now realize $16 to $20 a 100. Meteor are in fair supply. The first Jacqueminot of the season were brought in by Henry Cartwright on Wednesday. They were cut from pot-grown plants, and though short stemmed were pretty good flowers. The first dozen brought $2.50.

The scarcity of fine white and Daybreak carnations continues, and these kinds do very well, averaging $3 a 100; smaller grades make $2 and $2.50. Colored sorts are more plentiful and ordinary kinds bring $1.50 to $2 if of good quality; fancies make $3 to $4.

The quantities of bulbous stock on the market increase daily, as does the variety. Von Sions and Trumpet narcissus are very plentiful at $1.50 to $2 a 100, while Princeps make $2.50. Poeticus is now coming in quite plentifully at $1.50 to $2 a 100; Campernelles make 75c. to $1 a 100. Paper Whites are a drug at 75c. to $1 a 100. Tulips also are quite plentiful, and are in greater variety. This week Tournesol, Murillo and other double varieties appeared. Prices on the common ones average $2 to $2.50 a 100, while the double sorts make $3 to $4 a 100. Hyacinths, both Dutch and Roman, are in good supply, the Dutch ones selling well at $3 to $4 a 100, while Romans go rather slowly at $1 to $1.25 a 100. Valley, too, is plentiful, at rates from $2 to $4 a 100. Harrisii and callas are abundant, and do well at $6 to $8 a 100.

Jottings.

President E. M. Wood has returned from a very delightful cruise in Southern waters.

The Boston delegation to the convention of the American Carnation Society has returned, and report a splendid convention and exhibition and a hearty welcome on the part of the Buffalo florists. Several took a trip to see "The Marquis" at the houses of the originator, L. E. Marquisee, and think highly of it. From there the journey was continued to New York, where the carnation houses of Dailledouze Bros. and C. W. Ward were visited and found to be in excellent condition.

Wm. H. Long started Thursday week in charge of the Thorndike Floral Co.'s store on Boylston street.

Mrs. Rogers opened her store on Summer street Monday, February 19; Charles Knowles, formerly with J. Newman & Sons, is now associated with Mrs. Rogers.

WILLIAM WEBER.

Vice-President American Carnation Society.

We are advised by Wm. H. Elliott, of Brighton, who was reported last week as having undergone an operation for appendicitis, that he is getting along very nicely, the operation having been quite successful.

Wm. A. Bock, of North Cambridge, has a fine lot of Boston ferns, azaleas, lilies, rhododendrons, hydrangeas, etc., and has prospects of an attractive showing for Easter trade. He has been kept very busy the past weeks packing ferns for the Western States.

Philadelphia.

The Market.

Evidently the social season is over, not waiting for Lent to come, as the past week has been an unusually quiet one with most of the stores. Many families have already gone to Europe, and others are in the South; as a consequence flowers are not selling freely. Roses are rather more plentiful than last week, excepting Beauty; these are yet short of the demand. No advance in price has been made, the call not being brisk enough. A few extra selected Beauty have sold at $7.20 per dozen, but $6 is about the regular price for the best.

There is yet a demand for red and pink carnations; other colors are in plentiful supply. Yellow is over abundant just now, no doubt owing to non-consumption, there being lots of narcissus to be had. Bulbous stock is still not selling well.

Of the retail stores H. H. Battles has had a very busy week, working late every night—dinners and receptions being the chief functions. On Thursday he had the dinner decorations for the Bar Association function at Horticultural Hall; 650 covers were laid, there being eight tables. Both flowering plants and cut flowers were used.

Jottings.

The theatre benefit of the Bowling Club has been arranged for March 16 at the Walnut Street Theatre. Tickets are now on sale. If a member of the committee doesn't call upon you, ask for tickets at the club room.

Wm. Sutherland is home again from a trip to Great Britain, after passing through many thrilling experiences.

DAVID RUST.

Chicago.

State of Trade.

A week of real Winter weather, lowest temperature 8 degrees below, has not stopped a good business all along the line. It has been a little tough on shipment of plants, out of as well as into the city, but still it goes right on without very serious damage reported. What a change in this respect from old times.

We also note the grumbler is the exception, which is pretty good evidence of a better condition of things this Winter. If the grower's cut is not what he thinks he has a right to expect he has no kick as to the price for stock he does bring in, at least in the staples of roses and carnations. The whole season through has been good, from Thanksgiving to Lent, for we are now near enough to that once bugbear of the flower man, to be certain that no great drop in prices nor unwieldy glut will befall us in this city before that time.

As one grower observed this morning, with the Spring warmth and sunshine, a heavier crop of flowers is sure, hence, if prices do drop a little the total sum obtained will more than make up for the loss.

Roses may be said to be all cleared off at good prices. Meteor, possibly through extreme cold, hard to find enough to fill demands the past week. Bride and Bridesmaid a trifle more plentiful and a shade lower in prices, if any are left over after orders are filled. Good Beauty still below demand, except shorts and culls, which, however, move with concessions. Perle less in evidence than in former years, and often more could be sold if extra fine. Price: Extra long stem Beauty, $6 to $7 per dozen; mediums, $4 to $5; Bride, Bridesmaid and Meteor, best selected, $8 to $10; firsts, $6; short or weak stemmed, $3 to $4; Golden Gate, $10.

Carnations in good supply, but still excellent sellers from the fancies down to common; rarely any necessity to job lot off. Bradt seem to move better again than awhile back; at any rate they are not so much in evidence after the morning sales. Fancies sell at $3 to $4, very few at $5; best whites not above $3; standards, $2; common stock, $1 to $1.50, and not a great deal of this grade.

Violets plenty for all demand, the cold weather always affecting their sale. Last week a speculator came to grief in attempting to corner for Valentine's Day. Choice fresh stock, doubles, $1 to $1.25 by the 1,000; last week lots sold at $3.50 to $5 per 1,000. Singles and common stock, 40c. to 60c.

Lilies not so plentiful again, selling at $1.50 to $2. Callas, $1.25 to $1.50 per dozen.

Tulips, of prime quality, yellows and reds, sell readily at $4; the so-called Novelty hardly as good as in former years, best sell at $3 to $4; inferior stock something of a drag. Daffodils now abundant, much used in the retail windows for display, which give a Spring-like appearance; price, $1.50 to $3. Romans and Paper Whites, $1.50 to $2. Azaleas are going to be hard to keep for Easter this year if grown in the warm or ordinary greenhouse. Colored sell very well now, however, but in whites there is little demand, though it pays to use the flowers in funeral work. Some good cinerarias in, and pots and pans of Spring bulbs showing that Spring is near upon us.

Club Meeting.—No Quorum.

Owing to absentees at the National Carnation meeting at Buffalo, the below zero weather and absence of several members, who took in Henry Irving's rendition of Robespiere, Vice-president Benthey found no quorum present at the regular club meeting, hence the questions arranged for that particular meeting had to be laid over until the first Friday in March. The committee on entertainment has taken the alleys at Kinsley's for the bowling tournament, the date being February 28, and, as the place is unexceptionable it is expected a good turn out of ladies will be present, both to take part in as well as witness the fun.

Jottings About Town.

Kennicott Bros. Co. had, on Saturday, fine examples of yellow and white Marguerites, still in excellent condition, purchased one week before by one of the firm sojourning there, in the San Francisco market.

Fred. Hills, of Maywood, arrived home from England on Monday, and states was glad to get into sunshine again, as, while in London, he saw that luminary but two hours.

The Deutsche Gärtner Zeitung, copies of which are now being received from Germany, has long reports and photographs of the monster greenhouse establishments of Bassett & Washburn and the Reinberg Bros. of this city. Ess.

St. Louis.

Market News.

At this writing, February 20, we are just at the breaking up of the coldest spell of the Winter—zero, or a little below, was reached; retail business in consequence has been quite slow. The coming week a number of big jobs, in the way of weddings and receptions are on. The situation as regards supply remains practically the same, with prices firm or higher, Bride and Bridesmaid bringing 12c; best carnations, 4c.; valley, 4c.; bulb stock, 3c. A good many violets are in selling readily at 40c. to 50c. per 100. No Beauty are in this market.

We have spent considerable thought and made many inquiries as to the cause of this prolonged shortage that seems to exist all over the West, and have about come to the conclusion that better business is partly responsible; but the principal cause is that the same area of glass has not produced as much, generally, as in previous years. We refer to roses in particular, the quality is certainly much inferior to that of last year, good stock being an exception. Carnations have produced well, and we believe every one growing them this year has done well; certain it is that the call at retail has increased. The carnation is without question the most satisfactory flower for general use.

New Firm.

John M. Hudson & Co. started in the commission business last week. Mr. Hudson was the original commission man in this city, and he says he is now in it to stay. He reports very good business for the first week, and will shortly send men out over the circuit to solicit consignments.

Visitors.

W. Rolker is in town, in the interests of his New York house. Lloyd Vaughan is here again, after a long absence, representing Hageman & Meyer, New York. Mr. Vaughan is very popular with the craft in this city. For a long time he has contended that St. Louis needs a 50,000 or 100,000-foot range establishment to supply it with roses, and we do not doubt but what it would be a success—for if our sister city, Chicago, can support so many vast places we surely ought to use the product of one.

Notes.

The city awarded last week contracts to C. Young & Sons Co., H. J. Weber & Sons Co., and Sander's Nursery for furnishing trees, shrubs and plants, to improve the grounds around the water works, amounting to about $600. Some tree planting will also be done in the parks, but owing to lack of funds it will be limited. C. C. S.

Cleveland.

Trade Notes.

There is little, if any, change in the condition of the flower market since former writing; storekeepers report a brisk business, and flowers are closely cleaned up every day, but little stock being carried over from day to day. Funeral work and decorations form the principal part of the business of the present time and furnish an outlet for the bulk of the product of the growers. Cut flower trade is lively as a general rule, but is affected considerably by weather changes, which at this season are very frequent.

The demand for plants, especially flowering plants, is better than at any previous writing since the holidays, and trade in this line is stimulated largely by moderations in the weather. Azaleas, which a few weeks ago were a glut, find quick sale, and growers have no difficulty in disposing of their plants as soon as they are fit to market; at times retailers find it a hard matter to get enough plants to fill orders. In the line of cut flowers, roses seem to be in very short supply, and all available stock is closely used up. Prices remain unchanged, and $4 to $5 is the present rate for lower grade flowers, while the better stock brings $7 and $8.

Carnations are offered more freely than at time of last report, and present figures on ordinary stock are $1.50 and $2.50; best grades bring a little more, $3 being the ruling price; extras and fancy reach $4 and $5, but few of the latter is offered.

Harrisii lilies are coming in a little better, and prices remain the same as last quoted, viz.: $1.50 per dozen at wholesale, retailing at $3.

Some very fine valley is brought in, and fetches $5 per 100 for extra quality; ordinary moves at $3, retailing at 75c. and $1 per dozen.

Bulb stock is becoming plentiful, and at this writing is quite abundant. Dutch hyacinths are much improved in quality; tulips also are far better than they were a week or two ago, and present prices on the run from $2.50 to $5 per 100, according to grade.

Paper Whites and Romans are on hand in large quantities, and present market values do not vary from quotations contained in former letter.

G. A. T.

Cincinnati.

Trade News.

Business still remains good, with stock not equal to the demand. Carnations are a little off crop. Prices remain about the same as last week.

After the Convention.

Witterstaetter, Murphy and Sunderbruch have returned from Buffalo with glowing accounts of the fine display staged there. We are also glad to note that Cincinnati was well up in the front rank, so far as carnations are concerned. That some of them are pretty good poker players is evident from the fact that they came out second in the "Jack pot." Adonis is a hard one to beat, and will surely be heard from later. But the most remarkable thing that I have noticed, after reading all the reports is, that neither Crane nor America was staged, and Jubilee carried off the honors. What's the matter with the two record-breakers?

C. J. Jones is on the sick list.

Rochester, N. Y.

Those who did not go to Buffalo are sorry and ashamed. Richard Salter, Ferd. J. Keller, J. M. Keller, George J. Keller, Fred. Vick, Fred. Schlegel, Chas. Suhr, Walt. Salmon and Stephen Barry looked at the big carnations Thursday. E. R. Fry went down Thursday evening and remained to represent Rochester at the banquet.

The number of carnations grown about Rochester diminishes yearly. The quality we will not discuss.

We looked in at a few greenhouses last week and found the growers all cheerful. At Schlegel's we found some fine violets—regular Hudson River style. They intend to rebuild part of their houses the coming season and to put up some new glass. A variety of stock is grown, including a few carnations for retail trade. At Keller's we found neither carnations nor roses, but everything else we could think of. Considerable rebuilding was done last year and more is planned for the near future. Mr. Suhr put up a neat display house for retail trade last season. He also is giving less room than formerly to carnations and more to bedding plants, with which he is very successful. At Wilson's we found most of the 30,000 feet of glass in roses—Bride and Bridesmaid—which were in very nice shape. A few carnations are grown "on the side," but most of the room, aside from the roses, is given to plants for the store.

We reached Vick & Hill's extensive place at Barnard Crossing in time to glance hastily through before closing for the week. A new palm house was put up last season, and all looked well kept and prosperous. Catalogue plant trade is a leading feature here, and the carnation houses had been nearly emptied to make room for young plants.

Jas. Vick's Sons are having new and more convenient quarters prepared in the Alliance Bank Building, Main and Stone streets. The move will be made as soon as the Spring rush is over. We noticed in the seed house a neat carton containing 40 varieties of sweet peas in separate packets, with booklet of directions and descriptions. We wonder, now, that some one did not do this before. G. A., JR.

Nymphæa Zanzibarensis.

Mention paper.

Water Lilies.

We are headquarters for Water Lilies and Aquatic Plants of all kinds. SOW NOW SEEDS OF

Victorias, Nelumbiums and Nymphæas.

Intending planters will gain a long start and early blooms by procuring dormant tubers of the tender Nymphæas now, and starting same indoors, thus securing strong plants for planting at proper season, and also save the expense of heavy express charges.

We shall be pleased to furnish estimates, and our specialist, MR. WM. TRICKER, will be glad to offer practical suggestions to those intending planting either large or small ponds.

Buffalo.

The Carnation Convention Locally.

The recent convention of carnationists here might have been termed an exciting absorbent as regards the personality of many of the local craftsmen. What an eight-year growth this society has made. Several years back at the meeting in the Tifft House here, a 20-foot square room held the exhibit. Another, but a bit larger, accommodated the business. Daybreak carnation was then first beheld by some, and what a revelation in color in carnations it was. The Scott, on its first exhibition, was christened. The judgment was done by a hasty look at the stocks. No points business considered. Trnly, things move.

The method here inaugurated by local management of admitting the public free, but under ticket admission, these procurable at the various florist stores, operated nicely in a way that discriminated in favor of those who wished to put themselves out of the way to procure admissions. It resulted in the same flower-lover classes of people attending that we see at paid flower shows, and the wandering, ill-mannered riff-raff that follow crowds, if it's free, were nicely absent. The weather was cold but pleasant.

Money still talks! "Which is the Lawson flower that was bought for $30,000?" This was the continually repeated question that curiosity had provided for so many tongues. No. 666 is a bumper for size, while its beauty is not to be lightly treated.

What an attraction the natural Niagara has. Seems every out-of-town person was bent on visiting there. A bit strange to us here who consider Niagara too cold and bleak in Winter to visit more often than at decade periods.

The local stores had frequent visitors. Miss Rebstock pays a compliment to the good looks of the out-of-town boys, but found fault with their calling in such decided "bunches."

Entertainment, we termed it, and not a banquet. Dress suits seemed hardly *de rigeur*, and were not expected.

Charles Keltsch's perennial smile stood him clear through the managing ordeal, even when authority was necessarily exercised to stop a beginning of giving away of exhibit blooms to pretty covetous visitors.

Robert Kilts' suspenders seem not such a slow article.

Demonstrator Scott knows when a man may be called down—and does it, too.

Trade Notes.

There has been a good call for funeral work on a number of days recently, and which helped a trade that otherwise inclines quiet. Flowers are becoming more plentiful, usually ample for the demands.

It is now announced that F. H. Taylor, at present manager of Concessions for the Pan-American Exhibition, has been appointed Chief of Horticulture, and Wm. Scott his assistant, the latter, however, to be given direct supervision and management of the floricultural department. Congratulations are in order on all sides.

NOTES BY THE WAY.

GENEVA, N. Y.—W. and T. Cass report a good season, both in nursery and plant branches. They have a grand lot of Dracæna indivisa, grown especially for vase work. This plant does finely in the rich soil hereabouts.

AUBURN, N. Y.—The ravages of the eel worm will cause Alfred Patrick to throw out one house of roses, clean out soil, kerosene benches thoroughly and plant grafted stock, which he hopes will resist the pest. It is not often one hears of too much business, yet the record of funeral work and weddings surpasses anything ever before experienced, and a corresponding shortage of roses made the task of giving satisfaction more difficult. Carnation White Cloud is fine. I noted a grand house of this variety at Mr. Marquisee's.

WATERTOWN, N. Y.—Greene & Underhill are much pleased with a light pink seedling carnation, Ma Belle; it originated with Mr. Marquisee, but was not placed upon the market. It is an improved Daybreak. The demand for begonias exceeds supply. A. Stoeckle showed me the prettiest Marie Louise violets, blooms possessing that rich color and fragrance so essential to this flower. He is picking 1,000 per diem and has no difficulty in disposing of them at home. He is cutting fine Bride and Bridesmaid from those new houses he recently built, and which are equal span, 220x20 feet each.

OGDENSBURG, N. Y.—Situated at the extreme northwestern end of the Empire State is a snug concern which well represents our business. Here I learned something that will interest those who are ever anxious to get Lilium Harrisii in at Christmas and force out what little use they now possess in the endeavor. Mrs. Lawrence never keeps the house above 50 degrees night, and had a handsome crop in easily and with little disease. This lady has, in Spring, quite a sale of carnations in pots, which reminds me that Houghton & Clark, of Boston, had a fine lot for the holidays. They sold better and higher in proportion than any other blooming plant.

OTTAWA, ONT.—The Imperial violet is a favorite here. Edward Mepsted, foreman for Chas. Scrim, thinks the new house well adapted to this variety. Marie Louise and California are in prime condition. I noted a grand house of roses—Sunsets—very fine.

Graham Bros. have added considerably to their plant since my last visit. They have a well equipped range and grow for both store and catalogue trade, which is extensive. They report seed business as opening up most auspiciously.

W. M.

Newport, R. I.

The Horticultural Society's annual ball was held Wednesday evening, February 7, at the Masonic Hall, and proved an unqualified success, the society netting over $120 on the affair. The hall was beautifully decorated with plants, flowers and electric lights. The grand march was led by floor director Alderman Louis Shanteler, with Miss Laurie, daughter of the society's president, Robert Laurie, followed by over 100 couples, the fun being kept up until the "sma'" hours of the morning. The premier award in the prize cake walk was made to Messrs. Meikle and Casey. During the intermission supper was served in the upper hall.

The committee of arrangements were: Messrs. A. E. Burland, Louis Shanteler, William T. Libby, Simon Koschny and W. H. Maher, and the Reception Committee: Robert Laurie, Robert Johnston, Alex. Ogg, Richard Gardner and Bruce Butterton.

At the society's meeting on the 14th inst. a schedule for the Rose and Strawberry Show was approved; it will be issued shortly.

At several public entertainments given here recently we have noticed large hanging baskets of Begonia Gloire de Lorraine used to good effect in the decoration.

ELECTRIC FERTILIZER

GUARANTEED TO CONTAIN

PHOSPHORIC ACID, 9%; SULPHATE OF AMMONIA, 5%; SULPHATE OF POTASH, 7%; also SULPHATE OF MAGNESIA, LIME, SODA, SULPHURIC ACID, Etc.

This product is a complete fertilizer for all Greenhouse Plants, Fruits, Vines, Flowers and Farm Plants. Ten days after use it will show its beneficial nourishing action on the plants. It contains ingredients, which, by means of a chemical treatment, will continue to benefit the plants for a whole year.

Among the Many Testimonials Received We Submit the Following:

TO THE ELECTRIC FERTILIZER CO.:

GENTLEMEN—After a thorough analytical examination of your "Electric Fertilizer" I find that it possesses the following advantages over all other brands:

1. The proportion of the several ingredients to one another I consider wisely selected.
2. All microbes and vermin which threaten to destroy the roots and the young shoots of plants are exterminated by the use of the Electric Fertilizer, and the formation of new insects absolutely prevented.
3. The existing plant foods contained in your Fertilizer become by your special treatment readily absorbed.

I am convinced that the Electric Fertilizer, after its introduction upon the market, will find ready purchasers.

Most respectfully signs,
PROF. L. DELMARS, Physiological Chemist,
874 Lexington Avenue, New York.

PRICE, $38.00 per ton. Single Bags of 167 lbs., $3.50.

I have given my exclusive attention to and carefully watched the results of the **Electric Fertilizer** on every plant and am now convinced that it is of a far superior quality to any fertilizer I have ever used before. The results obtained from its use on both flower and vegetable plants surpassed by far my expectations. After a thorough trial I sincerely recommend the **Electric Fertilizer** to all Florists, Gardeners and Farmers.

JOSEPH SKLENKA, Florist and Gardener,

Principal Agent for the ELECTRIC FERTILIZER. 279 Lockwood St., Long Island City, N. Y.

FINE NEW PLANTS

Ready for Immediate Shipment.

Russelia Multiflora A splendid **vase plant,** strong, vigorous grower, producing immense sprays, 3 feet or more in length, literally covered with coral red flowers; also very effective in baskets and window boxes; easily grown; extra strong plants from 3½-inch pots. $1.25 per dozen; $8.00 per 100; small plants, $5 per 100.
See cut on page 215.

Russelia Elegantissima Similar to above but stronger grower. Same price as above.

Browallia Gigantea A fine blue flowered plant, valuable for bedding; never out of flower Winter or Summer; blooms with great profusion in beds in Summer and covered with flowers the entire Winter in the greenhouse. We have kept single plants two years and they were never out of flower during the entire period. Fine, strong 2½-inch stock. 75 cts. per dozen; $5.00 per 100.

Tropæolum Phœbe An attractive, strong growing, novel flowered nasturtium; free bloomer, producing fine long strings. Very effective as a greenhouse climber; also for vases, trellises or pillar work. Strong plants from 3-inch pots. 15 cts. each; $1.00 per dozen; $8.00 per 100.

Calla Fragrans A strong growing, free blooming, dwarf compact growing calla, producing large fragrant blooms; decidedly the best of all callas for house culture. Fine strong plants from 4-inch pots. 20 cts. each; $2.00 per dozen.

Baby Primrose (Forbesii.) We have a fine stock of this useful little plant, which blooms continuously with us in greenhouse or cold frame. Strong 2-inch stock. 75 cts. per dozen; $5.00 per 100.

Acalypha Sanderi Fine strong, cool-grown plants, from 3-inch pots, well furnished with tails. If grown properly this makes a striking decorative plant. 15 cts. each; $1.50 per dozen; $10.00 per 100.

Nephrolepis Cordata Compacta
Extra strong 4-inch plants. $1.25 per dozen; $8.00 per 100.

Asparagus Plumosus Nanus
Extra strong 3-inch stock. $1.25 per dozen; $8.00 per 100.

Asparagus Springeri
Strong 2-inch plants, with firm bulbs. $4.00 per 100; $37.50 per 1000.

The above plants are well established, thoroughly hardened, and ready for immediate shipment. Also see our advt. on page 215.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANNER RODGERS, Chicago, Ill., President; ALBERT McCULLOUGH, Cincinnati, First Vice-President: F. W. BOLGIANO, Washington, Second Vice President; S. F WILLARD, Wethersfield, Conn., Secretary and Treasurer.

New York.—R. Buongiorno, who kept a seed store in Middle Village, N. Y., died suddenly on Tuesday last.

W. A. Prosser, until lately manager for Vaughan's Seed Store here, has severed his connection with that concern.

Rochester, N. Y.—During the past two weeks the following persons called on the several seed firms here: Chas. P. Braslin, representing several California firms; H. Cheeseman, representing Cox Seed Co., New York; H. H. Harries, of the firm of Goodwin, Harries & Co., Chicago, Ill.; John Barclay, of Vaughan's Seed Store. They all report lots of business from all sections. Many lines of stock are already sold out; some varieties could not be obtained at any price. Wholesale houses anticipate a general rush in March for filling in orders. It may be noticed that nearly all firms are contracting at higher prices than they did last season. There seems to be quite an advance in contract prices for peas, beans, onion seed and other stocks that were short the past season.—B.

Clover Seed.—A recent bulletin issued by the Vermont Experiment Station states: "Clover seed absolutely pure is an unknown quantity in this market. The station made a number of examinations last year. Twenty samples of red clover seed showed an average impurity of 1.8 per cent. by weight. Twelve samples of alsike clover showed an average impurity of 3.2 per cent. By actual count in small samples the seeds of noxious weeds averaged about 300 to each ounce of the clover seed. These were principally sorrel, plantain, goosefoot, quack grass, pig weed, wild carrot and kale, in the order named. Besides these there was more or less mixture of other seeds like timothy, herds grass, etc., and of other species not counted as weeds. These samples were all secured of dealers in Vermont."

Our Paris Letter.

CROP REPORTS.

The seed stocks have been slightly injured by frosts which occurred in December. Late seedlings of beets, carrots and marigolds which were not in the pits were killed. Cabbages, Winter lettuce, etc., were much injured. The vegetable and flower seed trade in this country is good, and most of the available stocks will be exhausted this season. But there has been little demand up till now for field seeds; crops of Lucerne and Sainfoin have been large in France, and a high price is asked for clover of first quality.

No damage from frost to trees and shrubs is reported from the nurserymen at such commercial centers as Angers, Orleans and Ussy, but in the north of France, especially around Lille, shrubs such as aucubas, euonymus, ligustrum, laurus, cotoneaster, etc., and tea roses were much injured, standard tea roses being completely killed.

THE EXHIBITION.

Preparations for the Universal Exhibition here are progressing favorably, and horticultural matters are now completed. Undernoted is a list of the classes and places where the various exhibits will be held:

The section of horticulture begins with Class 43, which is devoted to horticultural implements and sundries. These will be exhibited under the Horticultural Palace. The greenhouses, frames, etc., belonging to same class, will stand on isolated sites, part in the Champs Elysées Gardens and part at Vincennes.

Class 44—Vegetables, will occupy several hundred yards at Vincennes.

Class 45 for fruit and fruit trees. The position for these has not yet been decided on. It appears, however, that they will be located at Vincennes, also, except those under the title of "formed and standard fruit trees," which will be planted on the banks of the Seine on each side of the Alexander III. bridge, 9,000 square yards being devoted here for that purpose.

Class 46 includes ornamental trees and shrubs, everlasting and deciduous, conifers, roses, etc., perennial and annual flowers. These will occupy about 4,000 square yards in the Trocadero's Gardens; 2,000 square yards on the Invalides Esplanade (more especially the roses), the non-decorative exhibits of same class being at Vincennes.

Class 47 is set aside for stove and greenhouse plants. These will occupy a big house on the right of the group of large greenhouses, and the houses included in Group 43.

Class 48 for seeds, stocks and seedlings. The seeds will be exhibited in a large house of the group of houses. At Vincennes will be shown the stocks and seedlings.

The lawn competitions will take place in the Champs-Elysées.

Carnations will have no permanent exhibition, only temporary shows.

At Vincennes, the Horticultural Exposition will occupy two isles in the River Marne, containing about 30,000 square yards. The Horticultural Palace is composed of two large houses, and will be devoted principally to plants of Class 47, including foreign exhibits belonging to that class.

In the Champs de Mars quantities of Spring bulbs, such as hyacinths, tulips, anemones, ranunculus, crocuses, etc., were planted last Autumn. The bedding Spring flowering plants, such as hellisperennis, myosotis, pansies, silenes, stocks, etc., will be planted this Spring. The Dutch bulb growers also planted, in Autumn, their lots for competition, in the Trocadero's Gardens, and it is certain that this show will be a splendid one.

The new Champ de Mars Park was completed last Autumn, all the trees and shrubs, very well assorted, having been planted in good condition and remained uninjured by the frost.

The rose exhibition, belonging to Class 46, will provide a splendid display on the Invalides Esplanade, being disposed in six French gardens, especially made for that purpose, upon the West Railway Station.

In Paris, an International Horticultural Congress will be held in the Exhibition Congress Palace on the 25th and 26th of May. Particulars may be had from Mr. Ern. Bergman, secretary, 84 Rue de Grenelle, Paris. There will also be an International Rose Congress, regarding which I shall give further information, the date being not yet fixed.

Among foreign exhibitors the most advanced are the Japanese, under the direction of a manager of the Imperial Gardens of Tokio. The principal things to be exhibited will be, during the season, bulbs of lilium and iris, old plants, 40 varieties of Japanese acer, chrysanthemums, etc.

The past frosts have only slightly retarded the general horticultural work of the exhibition, and it is hoped by the official staff that they will be ready for the date of opening, which is fixed for April 15. T.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAEE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

In opening the bids for the nursery stock required for the different parks of Pittsburg, it was found that Thomas Meehan & Sons, the nurserymen and landscape engineers, of Germantown, Philadelphia, Pa., were the lowest of all bidders. This firm was awarded the contracts for every section, amounting in all to nearly 10,000 hardy trees, shrubs, vines and evergreens.

J. S. Kerr, proprietor, Sherman, Texas, reports that nursery trade is the best on record.

The Southwestern Nursery Association.—The nurserymen of Oklahoma and Indian Territory perfected an organization to be known as the Southwestern Nursery Association. The following officers were elected: President, J. A. Taylor, Wynnewood; vice-president, J. W. Stevens, Yale; secretary and treasurer, J. W. Preston, Kingfisher. The association will hold its next meeting at Oklahoma on the second Wednesday in January. A semi-annual meeting will be held when the Executive Board makes the enll.

Nursery Legislation in New York State. F. W. Kelsey, New York, has addressed the following letter to Hon. A. W. Litchard, chairman Assembly Committee on Agriculture, Albany, N. Y.:

"The principle involved in the practical application of Assembly Bill No. 901 would be class legislation pure and simple. A contingent of fruit growers having apparently just reached the panic stage of the insect injury scare, rush to the Legislature to compel another most important contingent—the producers of the material upon which fruit is grown—to be at great loss and expense to protect them, the first contingent, so that they may be relieved from any necessary effort in protecting themselves.

"Granting that costly and dangerous fumigation by hydrocyanic gas would be a preventive against dissemination, which is questioned by some of the ablest entomologists, what equity or fairness can there be in attempting to benefit one

class, mutually interested, solely at the expense of the other? This principle, or rather lack of principle, would of itself be sufficient to remove the bill from the possibility of public favor or approval by the Legislature.

"In cases where the fruit growers or others desire fumigation of nursery stock or vegetation generally, there can hardly be objection to their applying gas in any form, degree, kind or manner they desire on their own premises, or of their recommending legislation for themselves that does not encroach upon the equal rights and privileges of other classes of citizens. But what justification can there be for the attempt to use the power of the state to injure others for their special benefit?

"In this respect the bill in question appears entirely unjust, surprisingly inequitable, wholly impracticable, and if enacted into law will inevitably result in great injury to a very large and important state industry; will necessarily result in sectional antagonisms, and must, from the necessities of the case, fail in accomplishing the results desired.

"According to such unquestioned authorities as Dr. C. L. Marlatt, Entomologist of the Department of Agriculture, and Professor John B. Smith, State Entomologist of New Jersey, than whom no scientists of the country have had broader experience or more thorough knowledge of the whole insect pest question and the practical remedies, it is about as practicable to undertake to eradicate, exterminate or to effectually prevent the dissemination of such minute pests as the San José scale by legislation as to legislate against the rays of the moon, the action of the tides or the laws of gravity.

"Permit me to express the conviction that the injury already resulting from the panic and legislation thus far enacted has been the occasion of greater loss to the horticultural interests of this state and this country, as a whole, than the loss by the insects themselves, large though that may be.

"Assembly Bill No. 901 not only tends to accentuate this unfortunate situation, but in its burdensome and inequitable provisions is perhaps the most objectionable measure yet introduced for consideration before a legislative body."

Rare Evergreens.—The Cedar of Lebanon is a tree that would find ready sale were some one to take hold of it and push it a little. The name connected with Biblical history naturally attracts every one, while the plant of itself has considerable attraction. It is not unlike the larch in appearance, but of course without the ever-present cones of the larch, and entirely evergreen. One drawback is its lack of great hardiness. Near Philadelphia it does very well, and some large old specimens may occasionally be met with. It has been grown farther north, but may be termed decidedly rare. Protection from the sun and strong winds for the first couple of years after transplanting is at least desirable.

Another cedar that is generally associated with the other, to some extent, is the Deodar cedar. It is considerably more attractive than the Lebanon, being of a very pretty grayish color, and graceful in every branch. Of the two, it is least hardy. Its growth is more compact from the start, that of the Lebanon being usually rapid and sparsely furnished with branches.

The blue Atlas cedar closely resembles the Lebanon except in color, this one being a beautiful light blue. Botanically, it is known as Cedrus atlantica glauca.

Kalmia angustifolia is a species of laurel rarely seen in cultivation. It suffers in comparison with the other well-known species, latifolia, in having smaller flowers and narrower leaves; though in its favor may be mentioned its greater abundance of bloom and extreme hardiness. The last is not a very strong point, as latifolia does well pretty far north, and seems to answer general requirements. Broad-leaved evergreens are always greatly sought in this country, these and the rhododendrons being most popular.

The Mahonia is a broad, holly-leaved evergreen plant of dwarf habit, and used quite extensively for massing in dry and poor soil. Mahonia japonica occasionally produces remarkably large leaves—dark green and of curious shape. Mahonia aquifolia has smaller and narrowing leaves which turn reddish brown in the Fall and Winter. Both produce showy racemes of yellow flowers in early Spring. They belong to the family of Berberis, which name they frequently bear.

AZALEAS FOR EASTER

We offer a very fine lot of AZALEAS, comprising the most distinct and best varieties in cultivation, embracing all shades of crimson, white, pink and rose color. They are shapely specimens, well "headed," double and single flowered, and will make splendid plants for Easter decoration. It is almost impossible to ship Azaleas when in bloom and have them arrive in good condition, hence the necessity of procuring them in advance before the buds open.

ORDER EARLY. NOTE THE SIZES.

Prices of Azaleas:	Per doz.	Per 100
10 to 12 inch heads, established plants, in pots	$5 00	$40 00
12 to 14 " " " " "	6 00	50 00
14 to 16 " " " " "	9 00	70 00

Six sold at dozen rates, 25 at 100 rate.

WANTED—1,200 feet of 1¼ second-hand gas pipe; also 6,000 feet 14-inch second-hand D S glass, A or B quality. Address J. S. L., Box 903, Hartford City Ind.

WANTED—To rent or lease, commercial place fully equipped, in good tenantable condition, within reach of Boston. State full particulars to N. E., care Florists' Exchange.

WANTED to rent, 8000 to 12,000 feet of glass, must be in good condition, suitable for roses and carnations; near New York State. Full particulars, address John Davie, Westhampton, L. I.

BUSINESS OPPORTUNITIES.

FOR SALE. A florist business in New York City that has been established many years in its present location; a fine opportunity for the right party. N. F., care Florists' Exchange.

TO LEASE.—12 greenhouses, about 60,000 feet of glass, within 50 miles of New York City, filled with palms, roses, carnations and other miscellaneous stock; business established 17 years and will be leased to responsible party from April 1st, stock to be sold on inventory. Address John Young, 51 West 28th Street, New York.

FOR SALE. The best greenhouse property in the New England States. On account of death it must be sold, it is a chance of a life-time; established 30 years; here a fortune is to be made; it is a rare chance. I will let it go at a bargain as I am too old to run it and I have other special reasons. For information address P. Gormley, Worcester, Mass.

FOR SALE or rent. Greenhouses and 8 acres of land, within five miles of center of Philadelphia, in an improving district; 45,000 feet covered with glass, steam heated, stocked with roses, carnations, asparagus, smilax, violets, etc.; 12-room dwelling, stable, 7 tenant houses. For further particulars address Evans' Rowlandsville Nurseries, Station F, Philadelphia, Pa.

FOR SALE, at Contentment Island, Darien, Conn. Two greenhouses, one 175 feet long, erected last summer at a cost of over $3000; apparatus capable of heating four more houses; water supplied by new hot air engine; nearly eight acres of most fertile land, much of it well planted in fruit trees and small fruits; barn, horse, wagon, etc. Death of owner cause of selling. Terms $6000, part cash. For full particulars, address H. E. Ferris, Administrator, South Norwalk, Conn.

SALE OR RENT.

Eight Greenhouses, fully equipped with steam. Apply H. W. BOUREAU, 420 Sansom St., Philadelphia, Pa.

MISCELLANEOUS.

TYPEWRITER for sale. First-class machine Address, Gardner & Son, Osage Nurseries, 125 N. 7th St., Osage, Iowa.

STEAM and hot water boiler for sale, as good as new; has been used less than one winter; good reason for selling. For price, etc., address Hopp & Lemke, Paul P. O., E. Grand Rapids Mich.

FOR SALE. 100 boxes 10x15 double thick glass; 25 boxes 10x12 double thick glass; 2500 ft. 1¼ in. wrought iron piping; lot of valves, tees, ells and fittings; one 16 horse upright boiler; one 45 horse upright boiler; one steam pump (Dean). Washington Place Greenhouse, Newtown, Bucks Co., Penn.

GREENHOUSE PLANT FOR SALE AT A BARGAIN

LOCATED in center of town 25 miles from New York City, and 4 miles from Long Branch, with superior train service.

Property consists of 3 acres of land in a high state of fertility. Twelve greenhouses (over 20,000 feet of glass) of the most improved style, heated by steam and in perfect condition—not a pane of glass out or anything out of order. A large ice house filled, a cold storage house 100 feet long, and a dwelling house. Complete water system with ample facilities for supply.

Houses are now filled with plants and are in full operation, and there is a large quantity of pots, potting soil, etc., on hand. Will sell property and stock with goodwill in large trade of ten years' standing in cut flowers and bedding plants, at a very low figure, or land and buildings alone.

Everything new and in perfect order. The greenhouses are adapted for growing either roses and carnations or plants for bedding purposes.

Reason for selling, ill health of owner.

For map of property and further particulars call upon or address **HENRY DECKER, Temple Court, NEW YORK**

Greenhouse Heating by Steam.

Editor Florists' Exchange.

In question (43) by Subscriber the answer might have been made plainer by giving the following facts so that Subscriber and others could see where the economy comes in. Steam is made from water and weighs the same as does the water evaporated. One pound of water makes one pound of steam at any pressure and requires one pound of water to be evaporated to make it, but heat required to make one pound of steam varies with the pressure, as also does the space filled with one pound of steam. At 5 pounds pressure 228 degrees Fahr. is required to make steam, or, rather, is the boiling point of water, and 1 pound of steam will fill piping at that pressure to the extent of 19.72 cubic feet; at 10 pounds pressure, 240 degrees Fahr. and 15.99 cubic feet; at 15 pounds pressure, 250 degrees Fahr. and 13.49 cubic feet; at 20 pounds, 259 degrees and 11.65 cubic feet. Subscriber and others can see that as pressure increases the degree of heat is necessarily increased, and that means firing (coal and labor), while the area in cubic feet of pipe filled decreases. Therefore pressure requires more firing to fill a certain amount of piping from these two facts, viz., a greater degree of heat and more water to be evaporated at this increase of temperature. A. T. HOYT.

Canna Italia.

Editor Florists' Exchange.

I note with surprise in February 17 issue of the FLORISTS' EXCHANGE, page 164, a statement relative to Canna Italia, viz., that a writer in December 30, 1899, page 1297, claimed that Canna Italia is simply a cross between Mme. Crozy and C. flaccida.

I am not a hybridizer, but I bought Italia, Austria and Burbank same season, and was told the first two were of the Crozy type, while the Wizard of Floriculture, Burbank, of California, had secured Burbank from fertilizing with our native C. flaccida on a Crozy canna. While Austria and Italia are distinctly Crozy types, most assuredly my plants of Burbank are scarcely distinguishable from C. flaccida, the only difference being that they have a very few specks of red in center and produce a much larger bloom, which is firmer in texture than C. flaccida. My flowers remain open or fresh in cloudy weather often three days, and often I gather spikes with from three to seven open fresh blooms on one stem. This, to my taste, is the grandest of all cannas ever grown, producing flowers often 6 to 7 inches in diameter by 4 to 5 inches in length. M. I. T.

Editor Florists' Exchange.

On page 164 you have a few lines from Messrs. Dammann & Co., stating that the Italian type of cannas are "absolutely sterile." We have had Italia and Burbank produce seeds. We feel that if we thoroughly understood the organisms of flowers we could have them seed freely. BETSCHER BROS.

Editor Florists' Exchange.

Dammann & Co., Italy, were, I believe, the first to improve the orchid flowered canna in that country, but it is just so much humbug when they say the process is far from simple. Their cannas may be sterile, although I prefer finding that out for myself; but in the experiments noted it was not stated that their cannas were used as seed bearers. G. W. O.

Reports on Carnations.

Through the courtesy of C. W. Ward, Queens, L. I., we present the following communication to our readers, together with Mr. Ward's reply thereto:

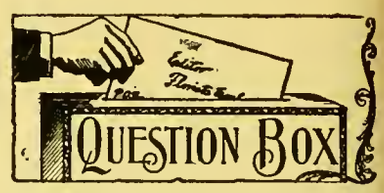
MR. C. W. WARD.

Dear Sir: I was a little amused, and still provoked, when reading the different growers' opinions on carnations in the FLORISTS' EXCHANGE of February 10. I think some of the writers had better give up trying to grow carnations if they have such success as they say with some kinds. I got a few plants of John Young from you, the first sent out. I have a bench now of 200 plants, and I can safely say, up to this time, I have cut 1,000 flowers from them and they are just as full of buds as they can be. The one who described the variety as requiring a surgical operation to open the flowers needs to study a little more about carnations, I think. I never saw any plant open its flowers quicker. Another good quality it has, is that you can cut the flower with an 18-inch stem. I have them break with two and three shoots and all come along together and bring out good flowers. My plants will now average 20 flowering stems. They may not be those fancy, large blooms, but such solid, sweet fringed blossoms, and stems like pencils! They always sell for good prices.

One person says "C. A. Dana makes too much grass." With me it is very profitable grass, for every shoot throws such a handsome flower in a short time. I am wondering what kinds some of those men are looking for for profit. True, Scott is a little old, but it will not do as badly as it is described, as regards bursting, etc., if grown properly. Bon Ton, with me, is a picture of health; such handsome blue healthy foliage, and a good bloomer! The grower is to blame for its ill health. What a pity to call the good Eldorado a rusty, busty, knock-kneed grower. It is subject to rust, but if a grower has a liking for his plants he will find out they are often not to blame as much as himself, and by using copper-solution ammoniated, with a little fostile, rust can be kept down.

I have several kinds I got from you, and when they don't thrive well I know it is my fault, and it would be a mistake to write and put in print the bad qualities of the plants when they are not to blame. I have been in carnation houses where no supports were used; the growers said it did not pay. Then one said it did not pay to disbud; then the next thing was that the plant was no good. It is a pity such people ever tried to grow flowers, for they missed their calling. GEORGE LISBURG.

Dear Sir: Yours of 24th at hand. I am pleased to know that you are succeeding well with carnations. I am inclined to think your climate materially aids you in carnation cultivation, as you have cool Summer nights and a moist atmosphere to assist your Summer growth. Many of those who fail in growing carnations have to contend with adverse soil and climatic conditions; and in some localities few varieties succeed. There is, however, as you suggest, plenty yet to learn, and the grower who studies the needs of his plants and succeeds in growing what others fail to grow, will win out in the end. More knowledge of growing, less criticism of varieties, is what is most needed. C. W. WARD.



(44) **Carnations for Name.**—The flowers sent to us were very poor specimens. No. 1 is evidently Jubilee, No. 2 Mrs. G. M. Bradt. Both are good bloomers and are as free from rust as any other varieties.

(45) **Substitute for Carnation Victor Wanted.**—What carnation will take the place of Victor—color and habit. Our Victor did fine until January, then the ends of the flowers became impaired. We find other florists have the same trouble. —READER.

(46) **To Germinate Holly Seeds.**—Soak the seeds in water until the pulp can be removed, then dry them and sow in the Spring, covering the seeds about one inch. Another method is to gather the seeds in Autumn when they are ripe, store away in sand until Spring and then sow in the ground one inch deep.

(47) **Treatment of Seed of Red Cedar and Holly before Sowing.**—Red cedar does not ripen its seeds until the second year; after the seed is sown it will often lay dormant one year. This, however, can be avoided to a certain extent if the seeds are soaked and the pulp removed before sowing, or the pulp can be removed by covering with ashes for a few days. Seeds of holly also need to have the pulp taken away, and may be treated same as those of the red cedar.

(48) **Bottom Heat for Callas.**—I was thinking of heating the soil under callas in a solid bed, by placing a drain or sewer pipe of 2 or 3 inches diameter about 1 foot under the ground, and running a 1-inch steam pipe inside of the drain pipe. Would that be advisable?

—The method suggested for giving bottom heat to callas in a solid bed is practical, but the same results can be obtained by planting the callas on a raised bench, under which heating pipes are run.

(49) **Height of Bench.**—Can roses or carnations be grown successfully in a house 14x200 feet; walls 5 feet high, two 4-foot benches, with walks in center and around outside, even-span roof, of 60 degrees? If so, how high should top of bench be from floor of house. Continuous ventilator, 30 inches deep, open rom ridge.—B. B.

—Roses and carnations should do fairly well in a house such as is described. Have the top of the bench 4 feet from the floor, this will give the surface of the bed all the advantages of light and air to be gained.

(50) **Growing Asparagus for Market.**—Am going to try to grow asparagus for market, and am in a town where I can get heavy meadow, much that is composed of old leaves and trees decomposed for centuries. Now, what I would like to know is, will that be a good soil in which to grow asparagus, or would about the same soil as is adapted to smilax be preferable?—J. F.

—In preparing the beds for the asparagus to be grown indoors, soil similar to that used for growing smilax is the best to use, and will give far better results than the muck mentioned could afford.

(51) **Greenhouse Heating.**—Will a Weathered No. 6 hot-water conical boiler heat one greenhouse for carnations, 20x50, and one 18x50 feet? What size main, flow and return, pipes to boiler are required? If I use two flow pipes, what size should they be, and how many 2-inch returns for the house 18x50 feet? —H. W. M.

—The No. 6 Weathered boiler will heat two carnation houses, 20x50 feet and 18x50 feet respectively, and will have sufficient surplus power to heat another carnation house 18x50 feet. Figuring for New York and vicinity, I would say a carnation house 20x50 feet should have two flows 3½ inches and nine returns 2 inches; carnation house 18x50 feet should have two flows 3½ inches and eight returns of 2-inch pipe. The main flow and returns from boiler should be two 3½-inch flows and two 3½-inch returns.—S. BURNS, of T. W. Weathered's Sons.

E. G. HILL & Co.

Richmond Indiana

NEW ROSES ...FOR 1900...

FRENCH GERMAN ENGLISH AND IRISH

WE have a large stock of these novelties of the year, which are especially recommended to catalogue men and growers of general collections of roses. Our stock is in the very finest condition and consists of strong grafted plants. Those wishing full descriptions send for "Special Novelty Price List."

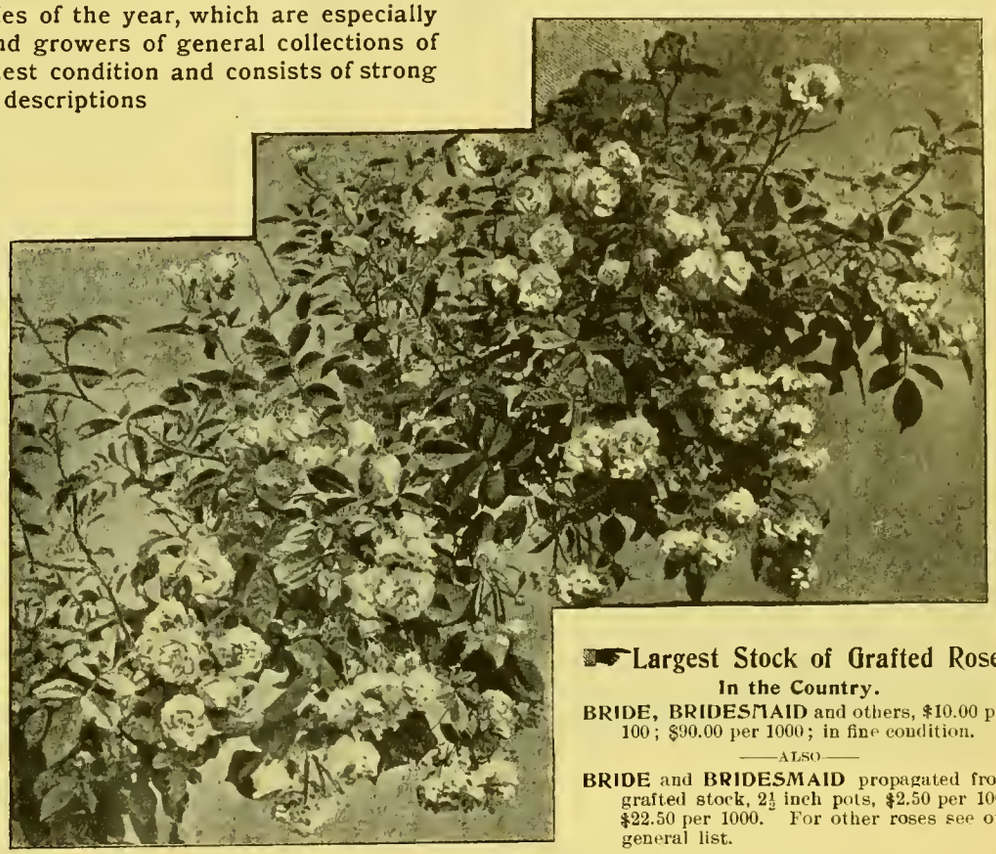
New English Rambler Rose "PSYCHE"

This is a seedling from the celebrated Crimson Rambler, and a fit companion for that most useful of climbing roses. Here is the raiser's description:

"We are particularly glad to be able to offer to the public what we believe to be the **first** English raised seedling from *Turner's Crimson Rambler*. This new seedling is peculiarly distinct and beautiful. As has been happily said, *Psyche* is the old-fashioned rose modified to meet the more exacting requirements of to-day. There are many traits in its habit and growth to remind us of the most beautiful old garden roses, but as will be seen by the accompanying illustration, the exquisite form of the blooms is well suited to please the more fastidious taste of modern rosarians. In foliage *Psyche* closely resembles *Turner's Crimson Rambler*. The growth is vigorous, long and healthy.

"The bunches of flowers are produced freely and contain from 8 to 35 blooms, the color is pale rosy pink suffused at the base of the petals with salmon and yellow. In the bud stage the flowers much resemble those of *Golden Fairy*, the seed parent."

We offer magnificent young grafted plants with 10 to 12 inches of growth, well established, or own rooted plants, if preferred. $9.00 per dozen; $50.00 per 100.



New English Rambler Rose "PSYCHE."

The New Forcing Rose (Tea) SUNRISE

The most gorgeous rose of its class yet introduced. This has made a sensation in England and taken first honors wherever shown. In close bud form it shows the high, brilliant colors, seen only in the "Austrian Copper," scarlet and yellow. As it opens, the color deepens, the scarlet turning darker red, the yellow to orange and copper, the inside of the petal golden yellow. The open rose is large, perfectly double and of grand form. The foliage is glossy and thick, the new growths being the darkest and most beautiful found among roses. The form and color of bud, its freedom of growth and bloom, will give *Sunrise* a high place among forcing roses.

Strong grafts ready now. $1.00 each; $75.00 per 100.

"The table at N.R.S. annual dinner was prettily decorated with roses, the most attractive being the bowls of Mr. Piper's gold medal rose *Sunrise*, which looked perfectly charming with its blooms in all stages, shading from orange-red buds to the pale-orange full-bloom flowers. This rose is just the thing for table decoration, its bronze foliage showing off well on the white cloth."

"**Tea-Scented Rose Sunrise.**—We are reminded of the great value of this exquisitely beautiful rose for the supply of flowers during the Winter months by a box of blooms which has been received from Mr. G. W. Piper, who had the good fortune to secure this fine novelty. Not only are the flowers bright and effective in coloring, but they pervade the editorial sanctum with their delicious perfume."—*Gardener's Magazine*, Feb. 10, 1900.

Baldwin (H. T.). Grand red rose; large; double; very fragrant; one of the very freest bloomers extant; easy to propagate. $15.00 per 100 (own root).

Grus an Teplitz (H. T.) Has the color and freedom of Agrippina; the rose is a large, bushy, free grower, literally covered with bloom for market use and the catalogue trade this will take first rank; very fragrant. $10.00 per 100 (own root).

Besides these we have the following collection.

Send for full descriptions and prices.

THIRTEEN TEA ROSES.

A. Foures. Red, yellow and orange.
Ant. Weber. Rosy pink.
F. L. Segers. (Safrano × Adam).

(52) **Carnation Mrs. James Dean.**—Is it profitable to grow Mrs. James Dean carnation for $3 per 100, by good care; and which pink would fill the place better?—SUNSCRIBER.

—I cannot answer, as I don't know what it costs the questioner to grow his carnations. It pays us at $2 to $6 per 100, according to New York market changes. I cannot tell what new one will take its place, as we have yet to test the novelties of this year. Mrs. Dean needs early planting (August 1 to 15) and not too late pinching. It comes into bloom with us October 25 to November 1, when treated right, and continues to flower without interruption thereafter. If planted late, or pinched too late, it will not come in flower till Christmas.—C. W. WARD.

Vase of Carnation The Marquis.

(53) **A Geranium Trouble.**—I send you by this mail a geranium plant. Can you tell me what is the trouble with it and how to remedy it? I built a small house last Fall. The house is heated by a No. 2 Weathered Sons' heater, which is situated at one end of the house. I do not think the trouble is gas, as the draft is perfect. I keep the temperature at night at from 50 to 60 degrees, during the day from 55 to 65 degrees; have a continuous ventilator and give air every day when the temperature goes to 65 degrees. I fumigate once a week and am not troubled with insects.—W. H. F., Rhode Island.

—The leaves of the geranium appear to be burned, either by gas escaping from the boiler or by too heavy fumigating with tobacco. Seeing the house is so small, the latter might easily occur, and it would be advisable to reduce the quantity of tobacco used. As the boiler is located in the house it is just possible that an escape of gas, when fuel is being added or when the ashes are removed, is the cause of the injury. Due care in fumigating and looking after the boiler will no doubt remedy the evil.

(54) **Longiflorum Lilies for Easter.**—I have a batch of Japanese longiflorum lilies that have been potted and growing since early in the Fall. I have not forced them since January 1. They have been in a temperature of 55 to 60 degrees with full sun all day. They are now about 8 inches high and showing from four to eight buds each; stem ¾ to 1 inch in diameter, with hard foliage, strong, and furnished from bottom to top. No red spider or aphis. No fertilizer has been given the lilies; they are in 6-inch pots, of good, rich soil. How can I draw them up to 15 or 20 inches? Will they develop the buds by Easter—seven weeks from now? The buds have not yet left the leaves, but are plainly seen without parting any leaves.—SUBSCRIBER.

—Keep the temperature near the 60-degree mark and the flowers will be in all right for Easter. The stems will, of course, be longer than they now are, by the time the blooms open, yet, to have them as long as possible, they will require to be put further from the glass; this can be done either by lowering the bench or putting the plants into a higher house.

(55) **Rose Golden Gate.**—Can you tell me whether it is worth while to grow many Golden Gate roses next season? My experience with this rose has been this: Last year I bought 25 of the rooted cuttings for trial. The 25 plants have afforded me more blooms than any other 25 rose plants in my houses. (Last week I cut 18 flowers). They are planted in a small bench across the east end of one of my houses (end furthest from the furnace). The conditions may be exceptionally favorable for them. I grow Bride, Bridesmaid and Beauty in the same house. The minimum temperature at night has been 54 to 56 degrees, until the last few weeks, when it has been raised to 58 to 60 degrees. One rose grower told me that his Golden Gate all showed weak stems. My experience has been the reverse, weak stems having been the exception. Many of my blooms were borne three or four feet above the bench, rendering it easy to cut 20 to 24-inch stems.—E. W.

—Seeing that the varieties of roses grown in quantities are so few, we would not hesitate to devote more space in the greenhouse to Golden Gate. It is a beautiful rose, and with stems such as are mentioned, it would no doubt prove profitable.

Boston.

Market Notes.

Business holds about the same as last reported, but with a prospect of slackening up somewhat with the advent of the Lenten season. Good roses are becoming more plentiful, and since Saturday have been in sufficient supply. Beauty are still of rather poor quality. There are, however, a few fine ones which do fairly well, at 35c. to 50c. a 100. The supply of Bride and Bridesmaid has increased quite perceptibly within a week, and, as a rule, these varieties have improved in quality. Prices now range on these roses from $3 to $8 and $10 for common grades, No. 1's and extras going at from $12.50 to $16. Meteor are fairly plentiful, but move slowly. Jacqueminot are a little more in evidence this week than last, and the quality is improving. They are still held at $2.50 to $3 a dozen.

Carnations are yet rather short in supply, especially the fine grades, though they move a little morwe sloly this week than last.

Bulbous stock is very plentiful and increasing in quantity. Von Sion, Trumpet and Princeps now make $1.50 per 100, with choice stock at $2; Paper Whites make $1 to $1.50; Poeticus and Campernelles, $1.50 a 100.

Tulips are in great variety and, as a rule, have been of very good quality. Single varieties make $2 and $2.50 a 100, while the doubles easily fetch $4 a 100.

Dutch hyacinths are quite plentiful, at $3 to $4 per 100, and sell well. Roman hyacinths continue very abundant, at $1 to $1.50 a 100.

Longiflorum lilies, of good quality, just now bring $2 a dozen, and are rather scarce at that figure. Callas are in good supply, at 75c. to $1.25 a dozen. Valley is very plentiful, and the best of it, outside of a limited supply of extra stock, is selling for $3 a 100. Violets are in very good supply.

Here and There.

That patriotic body, the "Old Guard," was again summoned to celebrate Washington's Birthday at "The Windmill," Wenham, Mass., under command of Capt. Edward Hatch. In spite of disagreeable weather nearly every member answered at roll call. A very enjoyable day was spent and a hearty vote of thanks extended to Mr. Hatch. The Department of Co-Operative Purchase of the S. A. F. O. H. being luckily represented in the party, received quite an extensive order for "glass."

Fred. L. Harris, gardener for H. H. Hunnewell, Esq., has the sympathy of his many friends in his affliction occasioned by the death of his wife, which occurred on Saturday, February 24. At the funeral, held on Tuesday, many prominent gardeners and florists were present.

Welch Bros. are receiving shipments regularly of that fine red carnation, Fred. King, for which they find a great demand.

A cablegram has been received announcing the arrival of N. F. McCarthy at Belgium, whither he has gone on a business trip. F. J. N.

Buffalo.

Market News.

Several days of zero weather, beginning Friday last, accompanied by a severe gale and snowfall, stagnated business to quite an extent recently. Aside from this it has kept up very fair. Flowers for funerals have been in steady call. Some decorating for reception and dinner affairs was called for on Washington's Birthday, on the occasion of Gov. Roosevelt being here at the unveiling of a tablet in the arsenal of the 65th Regiment, N. G. S. N. Y., placed to commemorate victims of the Spanish War.

Flowers are neither scarce nor plentiful. L. Harrisii and calla blooms incline to accumulate somewhat.

Jottings.

Wm. Scott, as manager of the floricultural features of the Pan-American Exposition, has been duly installed in office, at No. 726 Ellicott Square Building.

A feature that is novel, locally at least, is the refrigerated air method of cooling in the daintily constructed cases of Rebstock's branch in the Hotel Iroquois. Always clean, no ice to handle, it seems another decided advancing step.

Prof. J. F. Cowell is on a Southern trip.

E. H. Giesy, of Lockland, O., paid us a pleasure visit on Tuesday, and last week Mr. Smith, of Smith & Fetters, Cleveland, and Walter Mott, were in town.

VIDI.

Carnation The Marquis.

Our illustrations, presented herewith, show a vase and house of this grand new variety, the greenhouse having been photographed during the week of Buffalo Convention of American Carnation Society. As an indication of the estimation in which The Marquis is held, we are informed by the originator, L. E. Marquisee, of Syracuse, N. Y., that 150,000 have already been sold, and orders are constantly coming in. The Marquis was one of the great attractions at the recent carnation exhibition at Buffalo. It was constantly surrounded by large crowds of people, the lady visitors being very enthusiastic; and, as Mr. Marquisee remarks, "the ladies are the final judges after all." The variety has also wonderful vitality.

House of Carnation The Marquis.
[Photograph taken February 15.]

RUSSELIA MULTIFLORA

RUSSELIA MULTIFLORA.

A splendid **vase plant,** strong, vigorous grower, producing immense sprays, 3 feet or more in length, literally covered with coral red flowers; also very effective in baskets and window boxes; easily grown.

Extra strong plants from 3½-inch pots. $1.25 per doz.; $8.00 per 100; small plants, $5.00 per 100.

Russelia Elegantissima.

Similar to above but stronger grower. Same price as above.

NEW AND RARE

GERANIUMS

All orders where cash is sent with order are entitled to 5 per cent. discount.

Now is the time to send in your orders.

THE COTTAGE GARDENS, C. W. WARD, Manager. Queens, N. Y.

Grand Rapids.

Cold waves are causing the mercury to jump around zero. It is a little too hard on the coal bin, but there is nothing like getting used to it. Everybody is busy; funeral work has held out very persistently. Shipping is still as brisk as at any time this Winter, taxing the ability of the growers to properly fill orders as received.

All flowers, save violets, are scarce, but white and pink roses and white carnations seem to be in shortest supply. Beauty will be more plentiful if this bright weather continues. Roses bring $1.50 per dozen, selected blooms, $2; not many are sold though at the latter figure. Perle is not first-class, and bring only $1 per dozen. Carnations realize 35c. and 50c. per dozen, while a few extra sized Bradt and Mary Wood, with Ireue, bring 75c. per dozen. Lilies are not plentiful, bringing $1.50 per dozen. Complaint is heard on all sides as to the awful mixture sent out as Harrisii this year; there are many rubrum and speciosum among them, one florist having several hundred and no earthly use for them. He is awaiting the arrival of the bulb agent, with a rod behind the door.

What a tempest has been aroused by the discussion of the points awarded "Enquirer" at Cincinnati and Chicago. The discussions on this subject are as eagerly looked forward to as are evening papers for the latest war news. Opinion is about equally divided here between Bock and Rudd, but in a general way the discussion is productive of much good.

B. Eshner, of M. Rice & Co., and J. E. Killen were recent visitors.

G. F. C.

Toronto.

Trade Notes.

Business has been fairly good, with stock plentiful. Roses are getting more abundant and carnations and violets are in over supply. Daffodils, both single and double, are very plentiful and cheap, $2 per 100 being the standard price on the street. Tulips are also in large supply, and unless special stock or varieties they sell at about $2 per 100.

Association Meeting—A Carnation Show.

The meeting of the Gardeners and Florists' Association was held Tuesday last. The Executive Committee reported that the annual supper had been a great success. John H. Dunlop gave a very interesting account of the Carnation Society's Convention at Buffalo and a description of many of the varieties on exhibition, and he said he had asked most of the exhibitors to send a few specimens of their varieties to our carnation meeting on March 8. Arrangements were made for that meeting, and a good committee appointed to receive and stage the blooms. Any flowers sent will be well looked after, and should be shipped so as to reach here by the evening of the 7th inst. Packages should be marked "flowers for exhibition," and addressed to C. W. Irwin, Custom House Broker, Toroto, Ont. It is expected that many members of the trade from outside points will be present, and the meeting will no doubt be a first-class one.

The weather just now is very cold—about 10 degrees below zero—and that is hard on the coal eap.

THOS. MANTON.

Montreal.

Trade News.

The close approach of Lent has had a slight temporary effect for the better; but on the whole trade is as slow as it is possible to be without being utterly stagnated. The postponement of the many big social affairs usually held has ended in abandonment, the subscriptions instead being poured into the patriotic funds. The present prospects for trade during Lent are anything but encouraging.

The Canadian Trade Journal.

The first number of our Canadian paper is to hand, and has proved rather a disappointment to the many who were expecting a paper of interest to the private gardener and amateur. A memorial on the matter is being sent from this city to the publishers, and no doubt a change will soon be effected.

Club Items.

At a committee meeting, held in Messrs. Wilshire Bros.' store, Tuesday evening, it was decided to give a chrysanthemum show next Fall, and a committee was appointed to secure $300 as a guarantee for success of same. A permanent ribbon badge was selected for the use of the members; the same will be issued at the next regular meeting.

B.

YELLOW COLEUS (Good variety). 2 inch, $1.50 per 100.
PETUNIAS, DOUBLE FRINGED 2 inch, $2.00 per 100.
E. I. RAWLINGS, - Quakertown, Pa.

ROSE BUSHES

FIELD-GROWN. OWN ROOTS. FIRST-CLASS.

MANY SORTS BEING EXTRA FINE.

OUR BRIDES and HENRIETTES we might term "fancy" stock. Bride will run close to two feet, which is prime for that sort. Henriette, heavy, running two to three feet. Most Teas and H. T's will run close to two feet, some sorts even larger, while a few of the poorest growing sorts will not run much over one foot. The Hybrids will of course average up heavier than tender varieties, all being very fine. Leading sorts we can do in quantity, being especially heavy on such as Bride, Henriette, La France, Bon Silene, Brabant Soupert, Devoniensis, Safrano, Wootton, Carnot, White Rambler, etc. La France in grades from 7 to 9 cts.; the 7-cent grade being about 12 to 15 inches high, and woody.

An average assortment of these ROSES will weigh in neighborhood of 300 pounds to the 100 plants, packed light, not including weight of packing case, while a selection of all heavy sorts will weigh more. This stock is freshly dug, grown in our virgin soil of Southern California, free from disease and insects, and will give you and your trade satisfaction. We have sold thirty thousand roses during the past sixty days, but have twenty-five thousand more which must be sold—hence, extremely low prices appended.

Prices will apply to not less than 10 of a variety, properly packed, f. o. b. Los Angeles.

$7.00 per 100—Bon Silene, Dio more, Duch. de Brabant, Duch. of Albany (rather light), Fr. Kruger, La France, Lady Pezzaace, Lord Pezzaace, Marie Ducher, Mogoubette, Mme. G. Fruaat, Marie Lambert, Mme. Bravy, Parquerette, Reichow, Souv de Wootton, Wabash, White Bath, White Rambler, Devoniensis.

$7.50 per 100—Alf. Colomb, Clo. Soupert, Coq de Lyon, Earl of Dufferin, Empress of China, Dr. Grill, Fisher Holmes, Homer, La France, Bar. de Rothschild, Belle Siebrecht, Bride, Beauty of Glazenwood, Capt. Christy, Crimson Rambler, Gen Jack, Gen. Washington, Hermosa, Jules Finger, John Hopper, Jas. Sabonnand, La Reine, L. Y Houtte, M. P. Wilder, Marg. Dickson, Mrs. J. Laing, Paul Neyron, Prince Camille de Rohan, R. M. Henriette, Safrano, Pres. Carnot, Folkstone, White La France.

$9.00 per 100—La France, Malmaison, Ulrich Brunner.

$10 00 per 100—Isabelle Sprunt, Cath Mermet, Cecile Brunner, Duch of Albany xxx, Etoile de Lyon, Dijon, Magna Charta, Mme Watteville, Papa Gontier, Perle, White La France xxx, Yellow Rambler.

$15.00 per 100—Cloth of Gold, Climbing Wootton, Climbing Safrano, Kaiserin, Testout, Mrs Rob. Garrett, Princess Beatrice, Gen. Robt. E. Lee.

$25.00 per 100—Climbing Kaiserin, Mamau Cochet xxx

JAPANESE IRIS **$7.00 per 100.** These are grown from plants of our own importation, and comprise the best named varieties grown in Yokohama; they are field-grown and well rooted

OWN ROOT plants **LEAD.** The only place in U. S. where you can get good stock of own root, field-grown roses in variety, including tender sorts.

Shipments by freight must be prepaid here, and we require at least 25 per cent. cash with all orders; balance payable on arrival of stock. Less than five hundred plants, cash with order. A few hundred plants can be shipped by express, packed light, so that considering our extremely low prices, plants will not come high laid down at most any point.

Come at us quickly and make sure of 'em.

We beg to acknowledge receipt, from the publishers, The Macmillan Company, New York, of a copy of the first volume of the Cyclopedia of American Horticulture, embracing the letters from A to D inclusive. A review of this very valuable work will appear later. The Cyclopedia will be issued in four volumes, the price of each being $5.

The Man With An Ad.

There's the man with the pick and the man with the hoe,
And the man with the horny spade,
But the man with the "ad," is the man ever glad,
For he collars his share of the trade.

There's the man with the frown, and the man with the sigh,
And the man of perpetual grief,
But just make up your mind that no man of that kind
In an "ad." has the slightest belief.

For the man of the East or the man of the West
With a smile and a face all aglow,
Is the man who has had, by the aid of an "ad,"
A trade that has brought in the dough.

—BOOT AND SHOE RECORDER.

Perfection Reached?

We have read Mr. Rudd's explanation of his amended rendering of Holy Writ and accept the amendment because he is the author it. We are, of course, not accountable for his inability to comprehend our meaning—others seem to have grasped it. After all is said and done we are still of the opinion that the scale of points of the American Carnation Society is "a standard to judge by," notwithstanding Mr. Rudd says "the scale of the American Carnation Society is not a standard to judge by—never was a standard to judge by—never will be. It is a numerical statement of the society's idea of the relative value of the attributes of the carnation (as what? A perfect flower, or an article of commerce?) and can only be used in estimating the total value of any flower by comparing that flower with some standard, either existing or ideal." But do not the points in the scale stand as the equivalent for that standard, either existing or ideal, and is not the value of the flower on which comparison is made judged by that standard? It may be that it is an undescribed or undefined standard to judge by, but we cannot see otherwise than that it is a standard.

In another portion of his communication appearing in our contemporary of February 17, in response to Mr. Bock's letter, Mr. Rudd registers "emphatic protest" against the use of the word *perfection*. That, of course, is his privilege. It seems to us, however, that the gentleman is confounding perfection with the highest attainment of cultural skill in the development of the flower. We should like to quote for his edification the following from the "Philosophy of Florists' Flowers," to show that there really does exist a degree of perfection so far as it is possible for mortal man to comprehend it. The author of the work referred to states:

"In every species of flower, even though we should never reach it in practice to see it, there certainly is an external standard of perfection; because care and cultivation uniformly develop certain qualities, differing in each species, which are only dimly, and perhaps not at all, seen in their wild or natural state."

It appears to us that the society's scale should aim to analyze the uniform qualities developed by care and cultivation each one of which should have an equal value, presenting as a completed whole "an external standard of perfection." That, however, does not seem to be the case. Irrespective of *perfection* in its truest meaning, the society, by its scale, separates the qualities of the carnation by certain relative divisions that will demonstrate which attributes are necessary to be developed in order that the flower, when put before the public, will appeal as a selling commodity to the public. This view of the situation we obtain from a careful reading of the discussion at Philadelphia when the scale of points, as it now stands, was formulated and adopted by the society. In that discussion occur such expressions as these: "If a lady walks into a greenhouse, or up to a counter, and she sees a beautiful color and it suits her, and it (the flower) is of a good fair size, that settles the matter. There is not one in a hundred that will ask whether the flower is fragrant, or investigate whether it is fragrant." If that be so, then we should have it understood that the analysis demonstrated by the scale shows the component parts, and their relative value of a *commercial variety* of *excellence only*, and such values liable to be altered by the caprice of fashion. Viewed in the latter light our ideals of perfection, external or otherwise, so far as that condition in the carnation as indicated by the Carnation Society's scale is concerned, are brushed aside.

Mr. Rudd asks as regards perfection in this discussion, "Who can tell the limit for size?" We are of opinion that grossness never yet formed "perfection" in anything, unless the ensemble were in complete symmetry, and a large bloom thus formed, while it may show a high degree of cultural skill in the attainment, has but the same status of perfection, artistically, as the small flower built equally symmetrically. It would seem that "perfection," as the society's scale measures it, is synonymous with grossness, length and thickness of stem, lack of fragrance, and any color that will sell. But is that perfection? It will be well, however, that the society make it clearly understood what is really meant by the acquisition of 100 points secured under its scale.

We believe that it is possible for a "perfect" flower to be described, so far as man is capable of comprehending it, just as it is possible to stipulate as to what constitutes a perfect man or animal. Judges of carnations must have had in their mind's eye an ideal of perfection in every case when seedlings seeking recognition were brought before them. It would be quite easy, then, for these gentlemen to describe, either by scientific rule or otherwise, the basis upon which their decisions were awarded. We hope they, individually, will do so.

But even after the various attributes have been defined, both scientifically, and, let us say, commercially, the factor of good taste still enters into the question. On this point we should like again to quote from the "Philosophy of Florists' Flowers," as follows: "When the rules of science have defined what is invariable and necessary, a large field will still remain open for individual taste to luxuriate in without reproach; limited, indeed, on all sides from transgressing its proper bounds, but within its ample space unfettered. This is the region of taste, to which belongs whatever is not claimed by the more rigid exactness of scientific rule. But beyond its legitimate sphere it can have no jurisdiction. Whatever nature (which is the law of our Maker) requires, taste cannot dispense with it as out of fashion; whatever it rejects, taste cannot patronize into a beauty. It may prefer color to color, at its pleasure, and dispute over the rival claims of its several favorites, which have naturally an equal claim to admiration; but it is out of place when it demands precedence for an angular over a flowing outline, or for a disproportionate or unmeaning shape over one of which every part has reference to the whole; nor ought it to be allowed to stamp a conventional value upon an incongruous assemblage of colors.

"A cultivated taste does not often err thus. And by a cultivated taste, I mean simply one that is conversant with a flower in its varieties, and takes an interest in their observation. It is curious to observe the fact a person rapidly acquires in discerning anything that is a natural defect, or the parent of a natural advantage, merely by frequent, unconscious comparison. And this is the origin of the agreement there is between florists in the 'points' of flowers. And the reason it is not more perfect is because the faculty is not equally cultivated in all, nor is it perfect in any."

We think the last paragraph furnishes a very good explanation of the judgment of the Chicago gentlemen, which has given rise to this interesting discussion.

Cut Flower Prices.

In our issue of February 17, page 164, we publish a communication from Frank P. Myers, Philadelphia, regarding cut flower prices. Mr. Myers' letter shows an unaccountable unfamiliarity with the workings of the cut flower market in this particular, and the purport of his averments appears to be to throw a suspicion of dishonesty on commission dealers in general and to accuse the trade papers, for the purposes of gain, of collusion in the wholesale men's alleged nefarious scheme in particular. This is a little rough, and so far as the latter inference is concerned has no foundation in fact. (We will let the commission man answer for himself if he think it necessary). Even Mr. Myers himself unconsciously helps us out of the fix into which he would so rashly plunge us. He says: "As I understand it, prices are intended as a guide for the storekeeper as well as the grower," and he intimates cases where he had to "reduce prices on the foundation of those quoted in the trade papers the previous week."

Now, supposing every purchaser of cut flowers assumed the position taken by the parties cited by Mr. Myers, and insisted that the (low) prices quoted in the trade papers should be held to be arbitrary values and compelled the wholesale man to sell at these as Mr. Myers' customers did him, presumably, how in the name of all that is beautiful could the commission man be "made happy" by such deals, seeing his income materializes from the prices he obtains for the stock he sells? The trade paper would, in such instances, prove very much of a foe rather than a friend or accomplice.

Another assertion of Mr. Myers that is untenable is the one wherein he asseverates that it is a question whether the trade papers, for an alleged mercenary purpose, have not helped to get prices of flowers down to "the starvation line." If Mr. Myers has been in the business long enough, he should know that the average prices of cut flowers are to-day higher than they were a decade ago, and that in spite of the disproportionate increase in the supply, as compared with the augmented demand in that time, his unfounded allegation to the contrary notwithstanding!

Our correspondent, in his zeal to secure redress for a supposed wrong, has allowed his common sense to run riot. He fails to grasp the fact that the trade papers do not make the market prices; that they simply record the values that are fixed by the men handling the commodities sold; that these values fluctuate daily, as do those of many other articles, and are regulated by the law of supply and demand.

In a previous issue we have defined our position and our aim in the matter, and to that we can add nothing more. It is unfortunate, of course, that Mr. Myers judges us so harshly; but that is often the reward of a good intention faithfully and conscientiously carried out. Were we to quote the prices daily, which by the way would be an utter impossibility, we could only present what our weekly report aims to and does convey—an idea, approximately, of how the market stood for the dates given; and because we do so that does not necessarily imply connivance with dishonesty for personal gain—an imputation, however, which we can afford to pass over with the contempt that it deserves.

And if we were interrogated on the subject we should answer without the least hesitation that we believe the trade press (and the commission men, too) do much more to "help the grower" than Mr. Myers seems inclined to admit, and that notwithstanding the imaginary shortcomings of each, related with so much acerbity by the Philadelphia gentleman.

The American Rose Society.

The completed schedule of premiums for the exhibition of the Rose Society to be held in Eden Musee, New York, March 27-29 next, is now ready, and should be distributed in a day or two. The number of special premiums has been greatly augmented by cups and cash prizes, many of the local horticultural societies making contributions of premiums. The event is being most favorably received in fashionable circles in New York City, and a number of distinguished visitors to the exhibition is already assured. There is every likelihood of a first-rate display.

The schedule will be sent to those making application to the secretary, Leonard Barron, 136 Liberty street, New York City. Members' tickets for admission to the exhibition have been distributed to all who have paid their dues.

The annual general meeting of the society will be held in the Fifth Avenue Hotel, Fifth avenue and Twenty-third street, New York City, on March 28, 1900, the chair to be taken at 2 o'clock p. m. Officers will be elected, meeting place for next year considered, and other business transacted. Professor Byron D. Halsted will lecture on "Some Diseases of the Rose."

The Pan-American Exposition.

The announcement of the appointment of William Scott, of Buffalo, as assistant superintendent of horticulture, with immediate charge of the floricultural department of the Pan-American Exposition, 1901, will be received with pleasure by Mr. Scott's numerous friends in the trade. We would bespeak for Mr. Scott that assistance in the way of trade firms making exhibits, to which he himself and the importance of the occasion is entitled and demands; in other words, do all you can to enable Mr. Scott to keep his end up, which he undoubtedly can and will do with proper encouragement afforded.

Symbiosis of the Heather.

In the bright Autumn days the Scottish moorlands are covered from end to end with crimson heather in full bloom. The heather is one of the hardiest of plants, and is so well adapted to its growing place that we cannot imagine the moorlands without it. It looks as if it belonged to the bleak, mist-drenched soil and grew out of it of its own accord. We naturally suppose that each heather bush of the myriads upon which we gaze supports itself by means of its own roots, taking out of the brown peat by their own vital powers, in the exercise of their own special functions, the nourishment which it needs. Of all plants, the heather, we should suppose, would be the most independent and self-sustaining, growing as it does so luxuriantly in such desolate situations. But science tells us that this is not the case. The heather is rooted not in the dead peat, but in the living mycelial material in which its rootlets are wrapped up. It cannot nourish itself, but must be nourished by a foster-parent, so to speak, which prepares its food for it, and reduces the peat on which it grows to a condition which it is able to absorb and circulate as food throughout its system. If you dig up carefully a heather bush by the roots and examine the finer fibres at the end of these roots, you will find that they are covered with a thin, whitish mantle or cobweb of delicate threads. This is not a part of the roots; it does not belong to the heather at all. It is a separate living plant growing on the heather roots—the spawn of a minute fungus. It is found upon every heather bush, and spreads from root to root, causing all the wide acres of bright moorland vegetation to flourish from year to year by its living action. The connection between these two organisms is not only of the closest character; it is also life-long. When once the partnership is formed it continues uninterruptedly as long as they both exist. As the roots grow and spread, the spawn of the fungus grows and spreads with them. Were this living fungous growth to be taken away from the roots of the heather, the bush, even if supplied with every other requisite, growing in its own proper soil and furnished with its own suitable food, would soon wither and die. And the true secret of the failure, which so often attends the transplanting of heather, is, that in the process this fungous growth is torn away from the roots, and it takes some time to form a new growth of it in the new soil, while in the meantime the heather, bereft of its accustomed partner, languishes and dies. The first Scottish emigrants to Canada took with them some heather bushes to plant in the new country in order to remind them of the dear old Highland home. But they did not know that they had broken off the strange association of the heather plants with their fungoid friends in their native peat mould; and therefore the experiment necessarily proved abortive, and the poor Highlanders had to weep over the sad failure, naturally attributing it to a sentimental cause.—Rev. Dr. Hugh MacMillan, F. R. S. E., in The Quiver.

The Rev. Hugh MacMillan states that the roots of a fungus prepares food for the heather, and that the heather roots furnish dead material as food for the fungus. I am asked whether this view is sound. It has been found that many plants do live in companionship in this way, and the term symbiosis has been coined to represent the phenomena. But I have not heard that the heather is one of this class. The article, on the whole, is written very intelligently, and seems to have been founded on well-recorded facts. On my grounds the heather thrives as in its native wilds, but I have never suspected it of this habit. When the frosts of Winter have passed, I shall have pleasure in examining the roots.

THOMAS MEEHAN.

We are in receipt of the first number of our Canadian contemporary, "The Canadian Gardeners and Florists' Exchange," published in London, Ont. The ambition of the paper as outlined is "to grow not only in size and circulation, but also in usefulness, and to become an indispensable adjunct to the Canadian trade." The first issue gives evidence that no effort is being spared toward the attainment of this ideal. It carries a very representative showing of advertisements, and the reading matter is bright, newsy and up-to-date. We wish the new-comer every success.

BOOKS RECEIVED.

BOTANY, THE STORY OF PLANT LIFE. By Julia Mac Nair Wright. Publishers The Penn Publishing Company, Philadelphia. Cloth 50c.—The author has divided her book into twelve chapters, the title and subject matter of which is made to fit each month of the year. Every chapter contains in itself a "Story of Plant Life," plain, charmingly told, and easily understood. The work is designed for general reading, but also serves a useful purpose as a text book on the subject upon which it treats.

FLOWERS AND HOW TO GROW THEM. Eben E. Rexford. Publishers The Penn Publishing Company, Philadelphia. Price 50c.—This little work, intended for the amateur, gives some very good instruction regarding the selection of plants for the house, and how to care for them.

PAMPHLETS RECEIVED.

VEST POCKET GUIDE TO CULTURE OF FLOWERS, W. Atlee Burpee & Co., Philadelphia, Publishers.—A very serviceable booklet, giving cultural directions for the most popular flowers, together with planting tables for the Spring months.

A HAND-BOOK OF LOUISIANA, issued by the Louisiana State Board of Agriculture and Immigration.—This pamphlet, for a copy of which we are indebted to Harry Papworth, of New Orleans, gives some interesting facts relative to the geographical and agricultural features of the state, together with the crops that can be grown. Copies of the book may be had from Professor W. C. Stubbs, Louisiana State Experiment Station, applicants inclosing a 2-cent stamp.

FLOWER FANCIES, a 32 pp. booklet, issued by the Booklet Publicity Co., 208 Summer street, Boston.—Here is a taking brochure which retail florists could well use as an advertising medium, it having been prepared specially for that purpose. For prices in quantities, terms, etc., address as above.

Two very useful pamphlets, by Warren H. Manning, secretary of The American Park and Outdoor Art Association, have just appeared. One is entitled "A Handbook for Planning and Planting Home Grounds," the object of which is to induce people to study and plan the arrangement of their home grounds, however small these may be. The pamphlet gives many serviceable hints as to how the work can best be done, and furnishes a classified and descriptive list of subjects to be used, and which are best adapted to the purpose in view. The other pamphlet is entitled "Directions for Surveying and Arranging Home and School Grounds." The known ability of the author is a guarantee of the soundness of the instruction conveyed. The pamphlet contains many helpful illustrations.

Among the Magazines.

THE FORUM for March contains its usual array of timely and interesting articles. No dull contribution graces its pages. Among the 12 papers to be found in this number are "Government Deposits in Banks," by George E. Roberts, director of the United States Mint. Mr. Henry O. Dwight discusses "Our Mohammedan Wards;" George F. Becker, United States Geologist, portrays "Rights and Wrongs in South Africa;" F. Cunliffe-Owen writes entertainingly of "Englishmen in the United States;" William Ordway Partridge, the celebrated sculptor-author, contributes an article on "The True Relation of Sculpture to Architecture;" Ho Yow, Chinese Consul-General to the United States, gives his views concerning "Western Benefits Through China's Development," and Prof. W. P. Trent furnishes a review of "Mr. Stephen Phillips's Play."

GOOD HOUSEKEEPING for March presents a choice variety of contents. "Talks with Fathers and Mothers" is the caption of a new and important department by Margaret E. Sangster, whose pronounced opinions regarding parental duty are freely and convincingly expressed, and there are many other articles of interest to the housekeeper. A new feature in this magazine is the illustrating in half tone a number of fancy dishes, with full description how to prepare them, while there is the usual wealth of brief articles, departments, original verse, and sound editorial comment on vital topics of the day. The magazine is worthy of the careful reading of all who aspire to the best in home life. $1 a year; single copies 10 cents. George D. Chamberlain, publisher, Springfield, Mass.

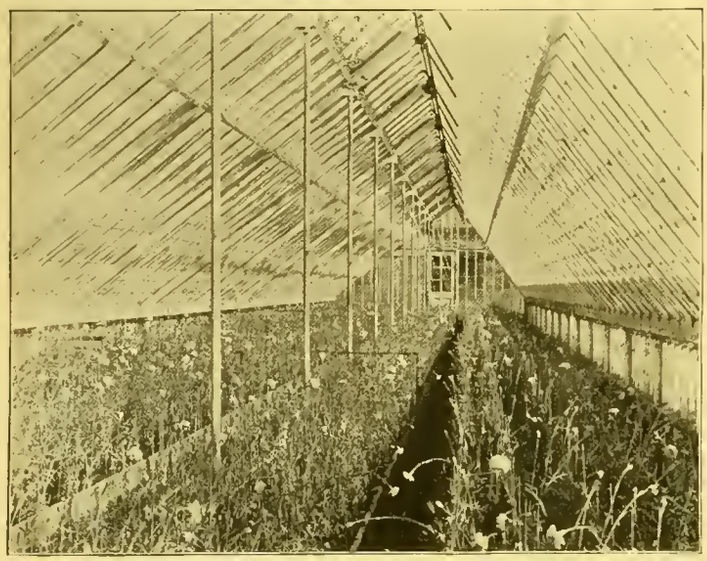
HINTS and HELPS.

Trillium grandiflorum being offered at $8 per 1,000 presents a good opportunity for this beautiful native being given a test for forcing. The bulbs should have been prepared for forcing some time ago, but it is not too late yet if they are in anything like good condition. But even if it is too late for this season, the plants will keep in the pots during the Summer and be all the better for it next year. Trillium grandiflorum has the largest and showiest flowers of the family, being pure white; those of T. stylosum are smaller and tinged with bright pink when they get well developed.

Two Good Calceolarias.—Where an easily got up plant is wanted to make a display in Winter, few things are better than Calceolaria scabiosæfolia and C. pinnatifida. They are not miffy by any means. Seed may be sown at any time of the year and in less than three months' time we have bushy plants from 2 to 3 feet high covered with light yellow flowers. The pouches of C. scabiosæfolia are longer than they are broad, and in C. pinnatifida the reverse is the case. They have, of course, much smaller flowers than those of the common greenhouse calceolarias, but the number is much greater and the colors of the flowers and foliage harmonize well. One thing must be kept in mind: they must be kept growing right along from the seedling stage to the fully developed specimen 2 or 3 feet high. They will flower themselves to death in a 2-inch pot if not shifted on. Very rich, sandy loam, and the coolest house suits them. They both set seed very freely.

Fern Balls.—It is said these are made up of several species of davallia, such as D. Mariesii and D. bullata. I have, however, only seen one species of davallia in them, and that is D. Mariesii; there may be other species, but this is not likely when the supply of rhizomes of D. Mariesii is plentiful. The latter is deciduous, losing its foliage in the Fall of the year and lending itself well to the fern ball idea. D. bullata is evergreen; furthermore, the fronds are not produced on the evergreen species until the rhizomes are well developed, several of the species forming rhizomes several inches long before the fronds start growing. D. Mariesii, on the other hand, keeps on developing fronds along with the growth of the rhizomes, so that we see them during the growing season furnished with fronds almost to the point. In the Fall of the year, when the foliage begins to turn brown, the water supply should be curtailed and the plants given a period of rest until February, when an increase of temperature and water may be given to start the foliage. Odd effect may be obtained with these structures, especially with those which are round and flattened, by stringing three or four on a wire stake, after the manner of Japanese gongs, and hanging to the roof of the greenhouse.

Asparagus Sprengeri set seeds so freely, and they germinate so well that there is little need of dividing the old plants to get up a supply, especially for pot or basket plants. This species is extremely useful in a variety of ways, even in 2-inch pots; it comes in well for mixing with ferns in small pans, or it may be used for providing the green where Caladium argyrites, peperomia and other variegated foliage plants are employed in filling dishes for temporary use. For these purposes A. Sprengeri may be employed over and over again, as it takes little hurt from frequent handling.



House of Daybreak Carnation at S J Reuter's, Westerly, R. I.

Cyclamen Seeds in the process of germinating, if sown thickly, are apt to disturb the surface soil when the first leaves are being developed, therefore sprinkle a little finely sifted soil among the seedlings to fill up any irregularities on the soil in which rootlets and the small bulb-like formation may be exposed. It will be noticed that the swollen root stocks are formed before any of the leaves make their appearance, even before the first leaf is free from the seed. Belonging to the primrose family one would expect an entirely different method of germination. It is a question with some which is the best method of procedure—to prick off the seedlings into boxes, or directly into pots. If the seedlings can be kept in a uniformly moist condition, that is, neither too wet nor too dry, there is no question about the pot method being the best for the preservation of the roots. A first-class plan which I saw adopted last season, consists of having a suspended shelf about a foot from the glass. The part on which to stand the pots has a piece of wood nailed on each side, high enough so that the shelf will hold about two inches of cocoanut fiber. The pots are pressed into the fiber when arranging them on the shelf with a side motion, which presses the fiber against the ones in place and at the same time makes room for itself among the fiber. The fiber helps to keep up an equal state of moisture and temperature for the roots of the plants.

Alternantheras, old plants, which were lifted in the Fall for propagating purposes, cut back and boxed, should now be fixed up. The boxes should be placed where the plants will get an abundance of light and heat. Some very sandy soil should be thrown among the crowns to induce the plants to throw out roots previous to division. After dividing the pieces may be put in 2 or 2½-inch pots, and treated similarly to cuttings. This is a much better method of getting up large quantities of the dwarf-growing varieties of alternanthera than from cuttings.

Cuttings of such plants as alyssum, ageratum, heliotrope and double petunias may be put in now, as bench space will admit. When quick propagation is necessary in order to get up a large stock in a short space of time, the back and front boards of the propagating bench may be heightened above the sand about six inches, and panes of glass stretched across above the cuttings; or, better still, sash may be made for the purpose and hinged at the back. In this way, by keeping up a humid atmosphere among the leaves, and a fairly good bottom heat, cuttings will root much quicker than when on the open bench.

Mignonette.—When the seeds of this plant are sown in thumb pots and left to develop instead of using the pricking-off process, the pots should not be left undrained just because they happen to be small. Put some finely broken pots in the bottom or some substance which will drain the surplus water quickly from the ball. In sowing, fill the pot only partly with soil, as the seedlings will have long stems to them. The further from the glass the longer the stem. After they are germinated, and the first leaf has been made after those of the cotyledons have fully developed, add a little soil around the necks of the seedlings to keep them secure in the soil, so that they will not be liable to be twisted around every time they are watered.

Azalea Buds.—Plants of the Indian azalea put in to force will sometimes push out the foliage buds at first instead of those of the flowers, and sometimes they will start simultaneously. If allowed to go on, the foliage buds will rob the flower of some of the sustenance intended for it, and weak, undeveloped, or fewer flowers will result. These foliage buds should be carefully removed as soon as they can be got at.

The Tuberous-Rooted Ipomœas, such as I. paniculata, I. scabra and I. Hardingei, which are intended to be planted out for the decoration of the home ground and for the production of seed, should be started shortly. This treatment is meant for the very large tubers. These may be placed in shallow boxes and given a position in the carnation house, where they are allowed to make the long, wiry shoots. As these shoots are produced almost without leaves, they do not interfere with the welfare of the carnations.

Aralia papyrifera is superior to the castor bean for bold foliage effects, growing not quite so tall and more bushy than any of the species and varieties of Ricinus. It is also hardy in many places, coming up year after year and forming colonies when thoroughly established. It is hardy south of Philadelphia and will stand out much further north if the crowns are protected with litter. To propagate, dig up the root, cut both large and small into pieces about two inches long, and put in boxes of sandy soil. As soon as the sprouts are of sufficient length they may be put each in a 3-inch pots, when at the end of three months they will be sufficiently well established to be planted out.

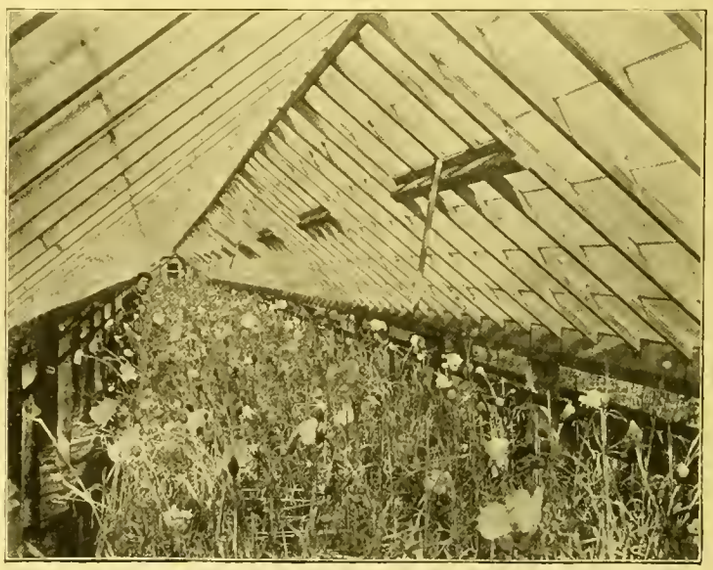
The Sedums or stonecrops are among the toughest subjects handled by the plant grower. Rain or shine, frost or snow, seems alike to them. On a well prepared border, or among rocks, where other things would die, they thrive luxuriantly. Any of the free-growing kinds are useful for furnishing a carpet of green in varying shades among the dwarfer-growing herbaceous plants, keeping the soil open and robbing them of little or no moisture. For increasing the stock of the rarer kinds fill boxes with loam and sand, not too firm, and pull the plants into pieces of three or more growths; make a hold with the end of the forefinger, putting the pieces in by their bases, firming around them. Put in a sunny, cool house and water only sparingly.

Bougainvillea Cuttings.—Plants which have been in the forcing house for some time will be sending out many shoots which do not have any prospects of being furnished with bloom, and by their removal the plant will be benefited all the more. These shoots make very good material for cuttings to supply small plants for next season's use. They had better not be put in a close frame, as they take their own time in rooting and are rather liable during that period to the damping-off process. Shade the cuttings when necessary, to keep them from wilting.

G. W. O.

BRIEFS FOR BUSY FLORISTS.

LILIES will need watching, and probably changing over a little to have the most of them in flower at Easter time. Longiflorums that are just showing the buds nicely will be about right, and will come along without any hard forcing. Those that are not yet showing buds will need all the heat they can get to have them in flower on time. Harrisii lilies are proving a greater dissappointment than they did last year even; fully 50 per cent. of the bulbs seem to have produced plants that are diseased and practically worthless. Japan longiflorums, however, so far, are giving the best of satisfaction, and the difference in cost of the two is a mere nothing as compared with the difference in the results obtained. When the buds are just beginning to show on the lilies, then is the time to look after the green fly. Whatever the method used to keep these pests down, do it persistently about this period; then, after the buds are large enough to stand away from the foliage, the rest will be easy, the force of every syringing tending greatly to keep the fly down.



House of Carnation White Cloud, grown by S. J. Reuter, Westerly, R. I.

POINSETTIAS that were put away to dry down at New Year's time may be taken and cut into suitable lengths and rooted, leaving two eyes on each piece. Although this can be done at a later period the bottom heat that is available at this time makes the rooting process much more certain. The old plants may be kept over if desired and planted outdoors when the weather is warm enough, when a crop of cuttings may be afterward taken that will make short, stocky plants, suitable for using several together in one pot or pan.

ALTERNANTHERAS that have been kept in flats through the Winter should be

potted up at the earliest convenience and given a good light position—as near the glass as possible. If stock is at all short they should be induced to grow as rapidly as possible by gentle forcing, so as to produce a crop of cuttings that can be rooted before the time for Summer planting arrives.

THE PROPAGATING BENCH must be kept busy from now on. Iresines, or achyranthes as they are called, acalyphas, salvias, coleus, and all such soft bedding plants, should be got in without delay.

SEEDS OF ANNUALS for early planting, such as asters, stocks, zinnias, celosias and phlox, may be sown this week, though the main batch should not go in for a couple of weeks yet.

CHARGES FOR PACKING.

As the values on everything have gone up we think a charge for boxes and packing should be made, at the rate of 25c. each, and we are in favor of this.

THE MORRIS FLORAL CO.

We believe that if the rule could be established between the principal shippers, a charge for box and packing would be both fair and proper. We believe the charge should be actual cost of material and time used.

THE GEO. WITTBOLD CO.

In regard to charging for packing palms and other plants I never charge, and do not think it right or fair to do so. I make a price on plants that includes packing and delivering to express or freight office, then the buyer knows what he is paying. I cannot see the advantage of making a low price on plants, then adding to it by charging for packing. Make a price that covers all such every time. W. J. HESSER.

In reference to the article of W. H. Taplin, on page 133 of the FLORISTS' EXCHANGE of February 10, I would say, that we think it but right that the charge for packing should be paid by the purchaser, and have considered this matter many times, although we advertise packing free. Our packing, including boxing, cotton and paper, costs us more than our coal bill, which, as every one knows, is a big item. Our packing costs us about 5 per cent. of our sales.

J. L. DILLON.

We do not hesitate to say there should be a charge on packing—and not less than 5 per cent. of the invoice in ordinary florist and nursery stock. It is a custom among nurserymen to charge for packing. Why should the same not exist among florists? We pay out large amounts for packing on goods received and at the same time are compelled to purchase packing material to ship goods to our customers who, we trust, will eventually appreciate the situation and share our opinion, and at least a portion of the expense. F. L. ATKINS.
Of Bobbink & Atkins.

Referring to Mr. W. H. Taplin's article on page 133 of the EXCHANGE of February 10, we must admit that the cost of lumber for boxes, etc., is a serious item of expense to us, but as the great majority of growers continue to advertise "packing cases free of cost to purchaser," we do likewise. We believe that a nominal charge should be made for packing; but wishing for such a charge and having it are two separate items. So long as there are some growers who are thoroughly willing to furnish cases free, the others will have to follow. It is a part of the competition of trade, and we accept it as a matter of course. This question will probably adjust itself in due season. H. WEBER & SON.

We certainly think that wholesale men are entitled to charge for packing plants and other stock sent to florists, which is a very heavy expense to all wholesale men. We do not see how anybody could say in advance just what the charge would be, as it will vary according to the quantity of goods and character of the order. However, we doubt if it would be possible to make such a change. Florists' goods have been packed free for so many years that it would be next to impossible to bring about such a charge for packing plants, unless the entire wholesale trade would agree to it and stick to it, and we fear the latter would be impossible.

THE STORRS & HARRISON CO.

It is my opinion that it would be proper and right to charge actual cost of packing, now that plants, as a general rule, are sold so cheap; and first-class plants which, of course, bring a better price, require so much more careful handling and packing. I think it is in the interest of the buyer to have his plants properly packed, and I can see no reason why he should not be willing to pay actual cost for it. Furthermore, it requires a trained, and consequently more expensive, man to properly select and pack the plants; and, of course, the material for boxes, etc., cannot be gotten for nothing. I think a charge of 10 per cent. of the price of the plants ordered would be about right. N. STUDER.

In our business we have never made any charge for packages and packing in any way, shape or form, for one or two particular reasons:

In the first place we think it is antique and out of date, and we have on several occasions felt like returning the goods to the parties, especially when packed in green, heavy lumber, as good kindling is cheap in our section of the country. In the second place we advertise for cash, and the party purchasing sends just money enough to cover the price of the goods wanted. Your charge for packing is sent along; there is an account on your books, then that is apt to stay there in some cases for a long time with some parties. In the third place we think that if a seller wants to be up-to-date he ought to figure the cost of packing in the prices of goods offered, then the purchaser knows just what the goods will cost him at the shipping point.

RICHARD VINCENT, JR.

In regard to packing plants and charging for same, I hardly think it would be wise as the competition is too great in this country. In Europe they charge for packing, and if they do not the price is put on the plants; and if the plants cannot be sold here they can be there, especially azaleas and palms. The plants we raise here we have to sell here, as very few go to Europe. I know it is outrageous and expensive to pay for packing and pay duty also on the box, and it would be well for the Society of American Florists to look into this matter, as I have heard them calling for protection. They thought they could raise the azaleas and the bulbs here, as they had the soil, but they omitted to state that the climate would have to be imported to do so; and the very persons that stood up for protection then do not now want it, as they had to pay 140 per cent. duty on glass and 25 per cent. on articles imported this present day, whether these can be raised in this country or not.

WM. A. BOCK.

We would think it most desirable if nurserymen and plant growers could agree to do away entirely with the custom of making extra charges for boxes and packing, but unless it can be universally agreed upon it is difficult for any one firm to take the initiative, for the reason that in considering and comparing prices a purchaser scarcely ever takes into consideration the cost of packing, and the firm who makes quotations inclusive of all packing charges is therefore at a disadvantage. It would be especially desirable if this custom of making an extra charge for boxes could be done away with among nurserymen, for upon some of the more bulky kinds of trees and shrubs, the cost of packing is often equal to a very high percentage of the cost of the stock itself and sometimes even equalling same. It is absolutely impossible for one to make a close estimate upon a bill of stock which includes goods that he is able to purchase elsewhere, even though he may be provided with a good assortment of price lists from other growers, for until the stock is packed and the bill for boxes ascertained, one cannot tell at all closely what is to be the actual cost of the stock.

JACKSON & PERKINS CO.

Mr. Taplin's article in regard to shippers of plants making a charge for packing is one that requires the attention of all plant growers. Either the prices of trees and plants must be advanced sufficiently to cover the cost of packing material, or first cost of same should be charged. Mr. Taplin states that many of our European friends are experts at packing plants for export, which is in the main true; but their charges are frequently beyond reason. Labor for packing should not be charged, but first cost of material should in every instance be added to the invoice. For instance, many small orders are received by all nurserymen who grow both greenhouse plants and fruit trees, necessitating frequently a box which will cost from 50c. to 75c. for an order that will net less than $5 in the aggregate. In this instance the cost of packing is often more than 10 per cent. of the price of the goods, taking into consideration that within the past six months the price of lumber has more than doubled. Rope, bagging, wire, nails, moss and every other material required for packing has advanced from 50 to 150 per cent. in value. Nurserymen frequently quote trees and plants at the nursery at a certain price. If a customer comes individually and carries off the stock without packing, he is charged the same price that another has to pay whose bill of trees and plants frequently entails an expenditure of a dollar for packing. This is onerous to the nurseryman. Let the man who buys his trees and carries them off himself be charged a certain price, but let the one who orders plants sent by freight also be charged the same price, but in addition at least for the first cost of the material required to prepare the trees and plants for careful carriage.

As to the schedule of prices for packing, this depends entirely upon the size of the package, and should be from 25c. to 50c. for small bales and boxes, up to $2 and $3 for the largest-sized packing cases for fruit trees and palms.

We have been large importers of European stock for more than 40 years past, and have never objected paying for packing when it was done in such a manner as to insure the good condition of plants in transit. On the other hand, we export perhaps as large a quantity of nursery stock to foreign countries as any other firm in America, and our customers never object paying a reasonable charge for careful packing.

P. J. BERCKMANS.

Prospect Park Greenhouses, Brooklyn.

There has just been added to the range of greenhouses in Prospect Park a new conservatory 50x100 feet, and 45 feet in height. Lord & Burnham had the building contract and they have made a perfect job, and turned over to the park authorities a conservatory that is a beauty and a pleasure to the men who have to operate it. Head Gardener Thomson is to be congratulated upon the quality of the large palms and other decorative plants with which the older houses were overcrowded. He was at once able to fill the new structure with large specimens in perfect health and vigor and numerous in variety. Through the center of the house a group of magnificent specimens of cycas are placed, among the largest being C. circinalis and C. revoluta. There are also many fine specimens of caryota and phœnix, together with latanias' kentias, seaforthias, pritchardias, etc., many of which did duty at the World's Fair in Chicago and are still as beautiful as ever.

In the show houses adjoining flowering plants hold full sway, cinerarias, azaleas, rhododendrons, acacias and genistias, all in full bloom, are a picture to look upon. Several plants of the Bird of Paradise (Strelitzia reginæ) are in full flower, some having as many as five or six spikes each.

In the houses devoted to the growing of the bedding plants for the park, everything is in good shape, reflecting great credit on the foreman, J. Whalley, and the staff of men under him.

At the meeting of the Central New York Horticultural Society, held at Syracuse, N. Y., February 27, Mary Rogers Miller, of Cornell University, delivered a lecture on the subject of "Nature Study."

The briskness in other lines of business, particularly iron, is making it hard for the florist to secure good help, the iron makers offering better inducements in the way of wages.

TOBACCO STEMS
"Good Strong Kind."
60 CTS. PER 100 LBS.
BALES WEIGH 500 LBS.
TOBACCO DUST
"THE BLACK STUFF."
Fine or Coarse to Your Order.
50 to 1000 lbs., 2 cents per pound.

Tobacco-Whale Oil Soap for syringing for washing plants. We Know its Goodness. All Seedsmen Keep it

OBITUARY.

Elbert S. Carman.

Elbert S. Carman, formerly editor-in-chief of The Rural New-Yorker, died at his home in New York City, Wednesday morning, February 28, after a short illness, of pneumonia.

Mr. Carman was born in Hempstead, L. I., in 1838. His early education was obtained in a private school in Brooklyn and a boarding school in New Canaan, Conn. He entered Brown University in 1854. After graduating his first venture was in the wholesale woollen business as clerk for Abernethy & Co., in New York, with whom he remained eight years. During all this time he wrote for the daily papers and for such periodicals as Turf, Field and Farm, and Forest and Stream. Subsequently he took to horticultural writing. His articles were first written as a pastime and published by Moore's Rural New-Yorker. The editor recognizing merit in these productions made Mr. Carman associate editor, and finally, in 1876, the latter purchased the paper and the entire business. He changed its name to The Rural New-Yorker, and by years of faithful, hard work was largely instrumental in bringing it up to a standard of excellence that ranks it as one of the leading agricultural and horticultural authorities in America. During all his years of journalism he kept up the study of horticulture. One of his early acts was to acquire a small country place at East Rockaway, and subsequently at River Edge, N. J., where he built him a home, and there, on a few acres, made valuable progress in solving the questions of tillage, fertility and hybridizing, and improvment of varieties; and where nearly all of the recently introduced varieties of fruits, vegetables and flowering, ornamental and useful plants suitable to the climate were tested side by side with older sorts. The conclusions formed from these investigations were published in The Rural New-Yorker.

Mr. Carman was very successful in his attempts at hybridizing various plants, among them potato and wheat; also the blackberry and raspberry, having obtained several valuable results in each case. Particularly serviceable was his work in the hybridization of roses upon the Rosa rugosa, the best of the resulting kinds being roses Agnes Emily and Cerise Carman. His valuable paper on cross-breeding and hybridization, read before the Society of American Florists, at Boston, in 1890, will yet be fresh in the memories of many of our readers. Mr. Carman was also the author of some publications, among them "The New Potato Culture." He retired from The Rural New-Yorker last year.

For a man whose name was so constantly before the public the deceased was of a singularly retiring disposition, and he was seldom seen at meetings of agriculturists or exhibitions. His life was in his work and in his home, and it was only by contact with the man in his daily walk and work that one could learn the breadth and simple honesty of his character, his lack of ambition save to do good work, his indifference to public judgment on his acts, yet sensitiveness to criticism of his motives and the charity of his feelings toward rival workers.

Mr. Carman married in 1873 Miss Agnes E. M. Brown, daughter of Professor D. F. Brown, in whom he found a valuable helpmeet, who rendered him very material assistance in his various pursuits and contributed much toward his success and renown. His widow, with one son, Travers D. Carman, now a student at Princeton, and a daughter, Cerise, a senior at Barnard College, mourn his loss. The funeral took place on Friday.

Mrs. R. J. Mendenhall.

Mrs. R. J. Mendenhall, wife of the well-known Minneapolis florist, died recently at her home in that city, of pneumonia. Abby G. Mendenhall was the daughter of Captain Silas Swift, a merchant tailor of West Falmouth, and was born August 19, 1832. She was married to R. J. Mendenhall, of North Carolina, February 11, 1858, and in April the young couple came to Minneapolis. From the pioneer days Mrs. Mendenhall had always been a friend to those needing help. The Friends' Society of Minneapolis counted her as one of its efficient members, and she represented it at the national meetings on several occasions. Much sympathy is felt for the aged husband in his sad bereavement.

George H. Bender.

George H. Bender, a florist of Louisville, Ky., died suddenly at his home, February 24. The coroner pronounced death due to diabetes. Deceased was 48 years old.

New York.

The Market.

The Lenten season is here, and the flower market is already feeling some depression on account thereof. Whether the dullness will prevail right through to Easter remains to be seen; judging by the experience of the past year or two the slackness will be only temporary, and business will resume its normal condition in the course of a week or ten days.

The season, so far, has been satisfactory; prices of flowers of all sorts have kept up well, and the supply of higher grades of roses and carnations has not been in excess of the demand, except on one or two occasions. This week special Beauty, Bride and Bridesmaid have gone down a few points, but the demand is still large enough to use up the quantity coming in. For the top grade of Bridesmaid $12 per 100 ruled at the beginning of the week, but by Thursday this had settled down to $10.

Carnations remain almost stationary in values. There was an increased call for fancy Bradt Monday and Tuesday, and some close cutting had to be done to fill orders.

Washington's Birthday proved a good thing for the violet men, the day being mild made it possible for the street peddlers to use up the accumulation that had taken place. Since then, however, the weather has not been favorable, and at this writing there are many thousands of violets in the hands of the commmission men; and some sales have transpired at as low a figure as $10 per 1,000.

Bulbous flowers are not coming in quite as heavy as they did, still there are plenty to supply all wants. From the great differences in quality it would seem that the day is not far distant when the stock will have to be graded as fancies, extras, No. 1's and No. 2's, and so on. Romans can be had at from 75c. to $1.50; narcissus, $1 to $2; tulips, $2 to $4; lily of the valley, $1.25 to $3; Harrisii and longiflorum lilies, $8 to $12.

Smilax is somewhat scarce and prices have jumped upward, extra long strings fetching as high as 20c.

Cattleyas remain steady at 50c. Some dendrobiums are coming in that are cut with short stems; these find but a very meagre demand. There are few dendrobe growers that like to cut much wood away, however.

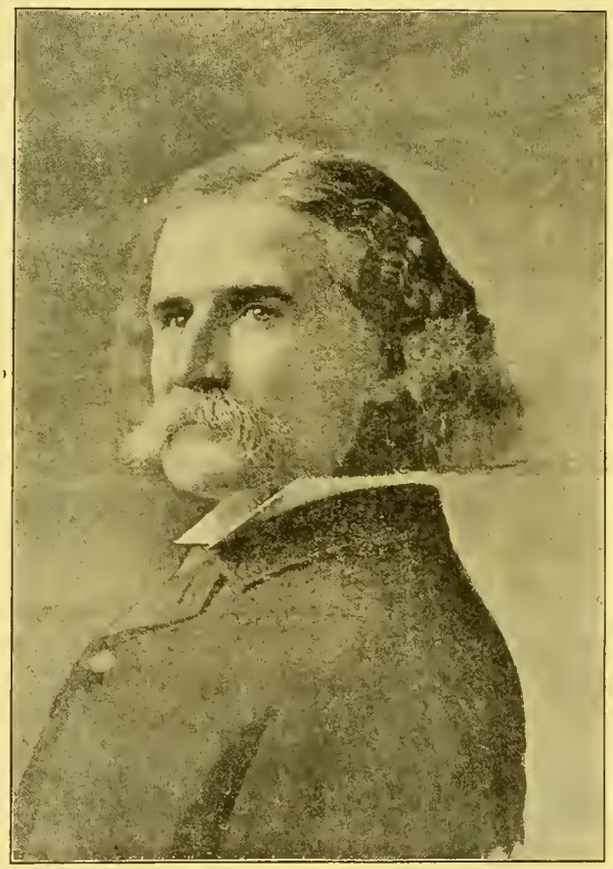
Among the Retailers.

A new retail store has been opened at the corner of 46th street and Fifth avenue. The style is Aldred & Co., the firm being composed of O. H. Aldred, M. F. Huss and E. W. Weimar. O. A. C. Oehmler, late with Z. D. Blackistone, of Washington, D. C., is manager.

The electric fountain and basin in Alex. McConnell's window has been especially effective this week, being surrounded with yellow tulips, daffodils and genistas, the whole having a Spring-like appearance.

Potted violets and Dutch hyacinths are a feature just now and fill the bill to perfection as Spring plants.

W. J. Brower says the blush seedling carnation of Dailledouze Bros. is the most perfect and wonderful carnation he has ever seen. This is the same variety that won the silver cup at Buffalo, and was exhibited as No. 3.



THE LATE ELBERT S. CARMAN.

Round About.

The new Botanical Museum in the Bronx Park will be completed and turned over to the city about the 10th inst. Early in April the Museum will be given by the city to the Botanical Society, which will at once fill it with a valuable collection and open the building to the public. Besides the Museum, the city has nearly finished for the society a large horticultural hall, and will build two greenhouses, which will cost about $40,000 each.

Gus. Bergman, one of John Young's employees, who has been seriously ill since Christmas, is again well enough to get outdoors, but will not be able to attend business for some time yet.

At the meeting of the New York Gardeners' Society, Monday evening, it was decided to hold their carnation show on the 27th inst. The location has not yet been decided upon. Unfortunately, the date conflicts with that of another exhibition, it being the first day of the show of the American Rose Society. Judging by past experience it does not seem that this city can give two flower exhibitions on the same day, and do them both full justice.

Thos. W. Weathered's Sons report an unprecedented busy season in prospective in the greenhouse building line. C. B. Weathered has returned from a successful tour in western New York, after taking in the Carnation Society's meeting in Buffalo.

Lehnig & Winnefeld, Hackensack, N. J., are, as usual, turning out some grand cyclamen plants. A recent production of theirs measured 42 inches across, and bore 181 open perfect flowers, netting the high price of $15. It was only one year from seed, and was in the condition named by January 15.

New York Market Florists' Association.

The first meeting of the season of this association will be held March 15. When a meeting place has been decided upon; notice will be mailed to the members.

A. D. ROSE, Secretary.
Montclair, N. J.

St. Louis.

Weather and Trade Notes.

We have had all kinds of weather the past week—rain, sunshine, cloudy, finally winding up in one of the worst blizzards of the season, with the thermometer down below 10 degrees, making it about the hardest spell of the Winter. So far we have not heard of any losses, but it is not improbable that some have occurred. The condition of the cut flower market is practically unchanged; not nearly enough stock is received to supply the demand, which has been very good. A few Beauty are coming in now and sell readily at $5 to $6 per dozen. Carnations still bring 2c. to 4c.; violets, $3 to $5 per 1,000; roses, 4c. to 10c.; Von Sion, Romans and narcissus at 3c.; Harrisii, 12c. to 15c. Smilax, same price.

A Euchre Party.

This took place on the evening of the 23d ulto., a very inclement one indeed. Still, a crowd of about 200 braved the elements and played for the 60 prizes donated by the florists. These prizes consisted of palms and boxes of cut flowers, ranging in value from a 25c. mignonette to a $5 palm. Azaleas and other blooming plants were also given. Under the excellent management of Messrs. Weber, Kunz and Beneke, the affair went off very smoothly; everybody had a good time and the prize winners were delighted, the ladies especially. The disappointed looks on the faces of the losers made us wish they could all have prizes. One curious feature was very noticeable, and that was the small attendance of the florists themselves. The crowd was made up of outsiders principally. Among the ladies present were Madames Weber, Young, Kunz, Beneke and Meinhardt. Miss Lulu Beneke entertained the company during the evening with select piano music.

Visitors.

Martin Reukauf, representing Bayersdorfer & Co., Philadelphia; Charles A. Stevens, manager for Geo. A. Kuhl, of Pekin, Ills. C. C. S.

Watertown, N. Y.

On the 9th, and also on the 13th ultimo, our fires in all the boilers were put out and remained so for about 10 hours, caused by the inadequate system of sewerage and the water backing up and coming above the fire pots. In order to maintain the fires for some time after we could start them we were obliged to have a force of men pumping. The loss to us has been very great, and in consequence thereof we have been unable to fill orders as we had expected to, as thousands of plants have damped of.

We shall, however, be in a position very soon to take care of all back orders and hope those who are waiting will be as charitable as possible.

GREENE & UNDERHILL.

St. Joseph, Mo.

The past week has been almost too cold for business—mercury from zero to 8 degrees below several mornings. None of the florists has reported any serious losses from frost. Flowers have been scarce, with fair demand for small decorations. Several funerals in and out of the city used up all the surplus stock in light colors. American Beauty are scarce, outer petals curled and off color. The supply of teas is light, all off crop, with good prospects for heavy cutting later. Violets are also scarce; Romans plentiful. X. X.

BOWLING

New York.—Monday evening a semi-annual business meeting of the Bowling Club was to have been held, but owing to the absence of A. S. Burns, through sickness, no business was done. Those present rolled a few games; the scores made follow:

	1	2	3
Hafner	158	126	140
Traendly	134	137	150
Marshall	115	160	141
Siebrecht	147	150	142
Lang	129	170	136
Schenck	108	141	..
Withers	112	..	..
Manda	152	..	..
Butterfield	123	129	119
Moody	180	126	170
Donlan	103	..	..

St. Louis.—The Florists' Bowling Club scores were as under for Feb. 26:

	1	2	3	4	5
C. A. Kuehn	124	166	176	165	148

Philadelphia.—Following are the scores in the game played on February 26:

CENTURY WHEELMEN, SECOND TEAM.

	1	2	3	Total
Benson	130	165	136	431
Kimball	102	134	116	352
Gulager	100	100	116	316
Richman	134	108	104	346
Jones	138	106	117	361
Fitler	163	179	132	474
Total	767	792	721	2280

FLORISTS', SECOND TEAM.

	1	2	3	Total
Kift	134	151	135	420
Westcott	115	130	158	403
Harris	135	142	143	420
D. Scott	154	128	118	400
Kuester	130	166	128	424
Walker	150	157	165	472
Total	818	874	847	2539

High score on Philadelphia Florists' Club alleys last week—Kuester, 245.

The Bowling Tournament.

NEW YORK WINS BY 221 PINS.

The final games in the tournament were played on the Flatbush alleys, Thursday evening last. New York put up a big score and succeeded in winning the prize (six regulation balls) by 221 pins. Flatbush was second, being 259 pins ahead of the Hudson County boys. The total number of pins down for the full series is: New York, 5,001; Flatbush, 4,777; Hudson County, 4,518.

Good fellowship prevailed throughout, and the wish was expressed by many of the players that more of such matches occur.

The scores made Thursday evening were as under:

NEW YORK.

	1	2
Traendly	124	128
O'Mara	142	136
Hafner	123	166
Manda	110	151
Roehrs	145	159
Lang	163	166
Totals	807	906

FLATBUSH.

	1	2
Riley	164	155
Raynor	136	84
Schmutz	141	119
Prosser	118	112
Zeller	109	152
E. Dailledouze	150	124
Totals	818	746

HUDSON COUNTY.

	1	2
Hansen	132	143
Kogge	111	120
Fisher	131	128
Hillebrech	122	121
L. Hansen	121	96
Brown	121	140
Totals	738	746

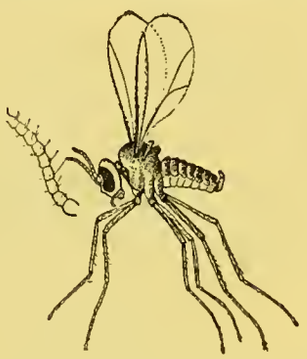
After the match the Flatbush team took the entire crowd to Prospect Park Hotel, where a good substantial dinner was served. When the cigars were reached short talks were made by Papa Zeller, Captains Dailledouze, Traendly and Brown, and other gentlemen. The songs of Schmutz and Stewart proved entertaining, and the speech of L. Hafner was fitting and to the point. The gathering was a pleasant social affair, and it adjourned at a seasonable hour.

Some New Plant Pests.

A pamphlet just issued by the U. S. Department of Agriculture, Division of Entomology (Bulletin No. 22, New Series), entitled "Some Miscellaneous Results of the Work of the Division of Entomology," contains two or three articles of especial interest to greenhouse men. These are: "Two New Cecidomyians Destructive to Buds of Roses;" "A New Violet Pest;" and some detailed experiments with hydrocyanic acid gas in greenhouse work.

As regards the rose pests in question the pamphlet states:

"At intervals during the past 12 years complaints have reached this office in regard to certain kinds of insects which infest the buds of roses grown under glass, causing them finally to wither and turn black. The blossom buds, as well as those for the production of wood and foliage, are thus attacked, and in several instances during an entire season not a single flower of certain varieties was produced in some of the rose houses owing to the depredations of these pests. For some curious reason the only varieties of roses known to be subject to these attacks are the Meteor, Wootton, La France, and a sport of the latter known as the Duchess of Albany. No other variety of rose has been known to be attacked, although frequently grown in the same house side by side with plants of the kinds mentioned which had in some cases lost all of their buds.



Neocerata rhodophaga.
Adult much enlarged, antenna more enlarged at left (original).
[Reproduced from Bulletin 22, Division of Entomology, U. S. Department of Agriculture.]

"The pests in question are small legless larvæ, which are to be found within the buds at the bases of the outer scales, or sepals, if a blossom bud is examined. These larvæ are of a white color when young, but become orange red in the latter part of their larval periods. Their manner of transformation is at present not known to the writer, but it is probable that they enter the earth and pass through their various changes in a cell or cavity formed just beneath the surface. So far as I am aware, they have never been known to attack roses grown in the open air, and this would seem to indicate that they were originally natives of some tropical region, from which they have been imported into this country, either upon plants, cuttings, or in the soil in which the plants were imported."

The one species, which is named Diplosis rosivora, is fully described in the bulletin, as is also the other—a new genus and species which has been named Neocerata rhodophaga. As regards remedies the pamphlet states:

"Some of the rose growers whom I have visited inform me that they exterminated these pests in their rose houses by a continued and liberal use of Persian insect powder, and Mr. L. E. Wood writes that he has complete success in the use of California buhach, a very similar product, which has been recommended by this Division against this pest for years past. One grower assures me that he accomplished the same thing by a liberal use of refuse tobacco stems obtained from a cigar factory. These stems were placed beneath the benches on which the infested roses were growing, and some were also placed on the heating pipes. The stems were quite moist when obtained, and the heat of the rose house caused a constant evaporation, which was sufficiently deadly in its effects upon these fragile insects as to result in their death, without at the same time producing a perceptible injury to the rose bushes. The same grower also informed me that when these pests first made their appearance in one of his rose houses he had all of the rose bushes in that house cut off close to the ground, only to find that when these bushes began to grow the pests were soon apparently as abundant as before."

The new violet pest referred to is what has already been treated upon in the FLORISTS' EXCHANGE as the "gall fly" (Diplosis violicola). It is pictured and fully described in the bulletin, which adds: "The remedy generally employed against this pest consists in picking off and destroying the infested leaves. It is also amenable to the hydrocyanic gas remedy, as detailed in Circular No. 37, 2d Ser., of this Division, and undoubtedly also to the buhach insect powder, recommended as a specific against the 'gall flies' on roses. Tobacco, however, cannot be safely used to any great extent on violets grown under glass."

Cleveland.

Trade Notes.

Within the past week we have experienced many changes in the weather, and since the last writing we have had the coldest spell of the Winter, the thermometer registering four degrees below zero on Tuesday morning. At the present time a driving rain, following a 4-inch fall of snow, makes things most disagreeable. In spite of such unfavorable conditions our florists report a fairly good trade; decorative and funeral work has been coming in freely, and this constitutes the principal part of the business doing at this time. With the advent of Lent a change for the worse is looked for, and will no doubt cause a decided falling off in the line of decorations.

Market conditions do not show any change from those of last week; good stock is in demand, at the same prices as last quoted. Bulb stock is offered more freely than at any previous writing, and shows considerable improvement in quality; but on account of the increased quantity offered prices have not advanced. There seems to be plenty of good flowers to meet the demand, but no overstock is noticeable. Several large wedding decorations during the early part of the week consumed a large amount of the best stock brought in by the growers.

G. A. T.

Philadelphia.

Market Items.

The early part of the past week business was very good, there being but little stock left over in the cut flower commission houses; but from Wednesday on trade slackened. Flowers are not over-plentiful. Roses are still in good demand, Beauty being in better supply than last week, but more long-stemmed flowers can yet be used. Prices range from 75c. to $6 per dozen, a few extra selected for shipping reaching $7.20 per dozen. Of tea roses white flowers are in most demand. Bulbous stock is selling fairly well; anything white going off best, white tulips, $3 to $4 per 100, being used when roses are not obtainable. Carnations are selling well, fancy flowers bringing $4 per 100; average stock $1.50 to $2 per 100. The best violets are going well, but at 75c. per 100—there are too many on hand of inferior grades.

Jottings.

H. P. Hugenholtz, representing K. J. Kuyk, of Holland, is in town this week, and speaks well of the condition of business.

Isaac Kennedy, for the past six years foreman for John Burton, has left that position and gone to Cleveland, O., to take charge of the greenhouse establishment of J. M. Gasser.

DAVID RUST.

Woburn, Mass.

The Cummings' greenhouses were flooded February 25, the work of picking violets having had to be done in rubber boots.

CORNING, N. Y.—A. H. Woeppel reports very satisfactory returns from Daybreak, Jubilee and White Cloud. He grows these kinds first-class. Roses in solid beds are in constant crop. Business is reported good.

HORNELLSVILLE, N. Y.—For the first time Daybreak is not satisfactory with W. A. Wettlin, who has hitherto had remarkable success with this carnation. A bench has been thrown out to make room for Spring stock, among which are several thousand geraniums, nice stocky plants. Crane, Gomez and White Cloud carnations are very satisfactory. Seed trade is opening up well.

ALBANY, N. Y.—John Dingwall has a fine batch of flowering stock, chiefly azaleas, for Easter. His supply of bedding plants is as large as usual, in anticipation of a good demand. H. G. Eyres says he is kept ever busy. Lent will bring the first breathing spell since Christmas. F. A. Danker notes an increasing demand for choice stock. Goldring Bros. dissolve partnership on March 1. Fred. will retain the houses at Slingerlands. W. M.

Gloversville, N. Y.

During the past cold snap someone carelessly left the door of E. T. Denham's greenhouse open, and before it was noticed quite a number of ferns and palms were ruined.

G. W. Pool has purchased two lots near the centre of the city, and will build in the Spring two or more 17x84-feet houses for carnations and roses. He has again received the city order for ornamental trees, etc., for the parks. It is said there was quite a spirited contest, as the order is larger than in former years.

There is a rumor that another florist will build a carnation house, 25x300 feet, the coming season, and, if true, we wish him success, as there is no reason why a house of these dimensions should not be a success here. We have 18,000 inhabitants at present and not enough carnations to fill orders. E. T. C.

FIRES.

HOPKINSVILLE, Ky.—Through a fire which occurred here, February 17, J. T. Savage lost part of his greenhouse and stock, the damage amounting to about $750, with no insurance. The house was heated by brick flue.

CHANGES IN BUSINESS.

GALT, Ont.—A. Young has purchased the greenhouses of William Wray, and will shortly take possession. Mr. Wray has been in impaired health for some time.

ELWOOD, Ind.—W. H. Woerner has purchased the property and greenhouses of Mrs. W. E. Goode, and will add another rose house.

CONCORD, N. H.—F. P. Main and Chas. H. Barrett have established a new flower stand at No. 1 Blanchard's Block.

PLANTS and FLOWERS.

CHINESE PRIMROSES.—I send by this mail a few sample blooms of our improved strains of Chinese primroses. These are from our seed plants and are not quite as fine as they had been a month ago, but we think they are about as good as any produced. JOHN F. RUPP.
Shiremanstown, Pa.

[The flowers of the primulas received show the strain to be a very pleasing one. The colors are desirable, some of the pink shades being especially fine. Quite a few of them were semi-double, and all were of a good size. This strain of primula cannot be too highly commended for its uniformity of size and its choice shades of color.—ED.]

PANSIES.—We have been favored by H. Beaulieu, Woodhaven, N. Y., with sample blooms of the new Mme. Perret strain of pansies. The flowers are large, the stems strong and of good length, and the markings are very pretty. The plant shows great vitality.

IMPERIAL VIOLET

Color—The darkest blue grown.
Form—The largest and most double.
Fragrance—Strong and lasting.
Health—The most vigorous.
Productiveness—Last season from 4000 plants I picked 281,7 0 No. 1 blooms; average per plant over 70; this year the blooms from November to February have averaged me $2.00 per 100, wholesale.

If you have got enough of raising run-out stock, weakened by unskillful methods of culture, get a stock of this magnificent strain, and my book on Violet Culture, and you can find out the possibilities of profit in growing a **GOOD** Violet.
You don't have to hunt a market for these flowers, it hunts you.

Firms Who Are Building.

PADUCAH, Ky.—The work of repairing the greenhouses of C. L. Brunson & Co., damaged a few days ago by fire, is progressing rapidly. In the reconstructing Mr. Brunson planned for increased facilities, rendered necessary by the growth of patronage.

STOUGHTON, Mass.—H. W. Mann is building a greenhouse, 18x50 feet, for carnations.

Oceanic, N. J.

The third annual ball of the Monmouth County Horticultural Society was one of the greatest events of the season. There were over one hundred couples in the grand march, and some of the most prominent people of Oceanic and neighboring towns were present. At 12 o'clock supper was served, and before the regular order of dancing began again an Irish breakdown and also a cakewalk were presented, in which Hugh Birch showed his ability as a clown. At about 4 o'clock the orchestra played "Home, Sweet Home." Much credit for the success of the affair is due the Committee of Arrangements, which consisted of George Kuhn, Robert Murphy, Thomas Macintosh and Albert Brighton. B.

Bloomfield, N. J.

Ernest Petzold, a florist of Mill street, suffered a severe loss Wednesday last, when some one smashed 48 of his sashes. Under the glass were many violet plants, and those that were not destroyed by the falling glass were killed by frost.

GEO. L. MILLER, - Newark, Ohio.

Mention the Florists' Exchange when writing.

Portchester, N. Y.

The Westchester County Gardeners' Association held its regular monthly meeting Saturday, February 24, with President Shore in the chair. Messrs. Fremd, Williamson, Anderson, Smith and Duncan were appointed Executive Committee for the present year. There was an excellent exhibition of carnations on the tables. Geo. M. Hay captured the prize for best collection, in which he had some 60 blooms in 10 varieties. Mr. Hay was also first for best 18, and Wm. Anderson second. Joseph Dexter was awarded a special prize for his collection of California varieties. These were certainly a revelation in carnation growing. For size of flower and rigidity of stem they have seldom been equalled in this section. The varieties were Iris Miller, Grace Runyon, Leslie Paul, Helen Dean and John Carbone.

Very noticeable was the large vase of Olympia exhibited by John N. May.

Robert Williamson exhibited a collection of vegetables, including cauliflower, tomatoes, beets, mushrooms, lettuce and escarole. Other exhibits included cinerarias by John Fraser, anthurium seedling by Geo. Draycott and carnation seedlings by John Harper.

The prizes included some beautiful glass vases, the gifts of Frederick Fremd, of the Rye Nurseries.

This was the first of a series of monthly exhibitions, and if the good work goes on every meeting will prove a gala night for the gardeners of Westchester County.

Messrs. F. R. Pierson Co. have offered $15 in prizes for chrysanthemum Col. D. Appleton, and Messrs. Peter Henderson & Co. have offered $10 in prizes for six distinct "Ostrich Plume" and six distinct anemone—flowered chrysanthemums at the Fall exhibition.

The society meets again March 24, in Irving Hall, Porchester, N. Y.

JOHN W. DUNCAN, Secretary.

Tarrytown, N. Y.

The regular monthly meeting of the Tarrytown Horticultural Society was held Thursday evening, 22d ult., President Turner in the chair. A letter was read from the secretary of the American Rose Society asking our society's cooperation at their forthcoming exhibition. The society unanimously agreed to donate $15 as a special premium. The following gentlemen were elected to membership: Jas. Clark and Michael Ward, Irvington; Theodore Dinkle, Peter Smith and Wm. Kearney, Tarrytown. The following were proposed for membership: J. J. Doulan, New York; Eli Jago, Irvington; Wallace Odell, John Whalquist, R. W. Husted, Tarrytown.

E. A. Neubrand reported that the dinner given by the Dutchess County Horticultural Society was a complete success, that our representatives thoroughly enjoyed themselves.

The vice-president, Wm. Stevenson, had a most excellent table of plants, including finely grown specimens of azaleas, cinerarias, primulas, Spiraea astilboides, Adlumia cirrhosa and a nice lot of Paper White narcissus, for which he was awarded a certificate of merit. A similar award was given to P. M. Pierson, Briarcliff Greenhouses, Sing Sing, for a vase of "Defiance" mignonette. The flower spikes averaged 15 inches in length and the foliage was like monstrous chrysanthemum leaves. Honorable mention was awarded to L. A. Martin, for a vase of violet Princess of Wales, also to John Bosbard, for a vase of Marie Louise.

The Executive Committee reported upon the schedule for the next chrysanthemum show to be held in November. It was ordered to be printed and preliminary copies put in circulation.

L. A. Martin read a lengthy paper upon vegetable growing. He gave some good advice regarding soil, manuring, situation, etc., also a complete calendar of operations for the vegetable garden, with very full instructions regarding species, variety, dates of sowing, etc.; quite a lively dicussion followed.

The following syllabus was announced:

March—Chrysanthemus, Jas. T. Scott.
April—Indoor Roses, A. A. Taaffe.
May—Small Fruits, Thos. Cockburn.
June—Outdoor Roses, Wm. Turner.

JAS. T. SCOTT.

James. T. Scott left Tarrytown March 1, and has accepted a position as florist at the House of Refuge, Randall's Island, N. Y.

East Haven, Conn.

The recent high winds and storm damaged the greenhouse of John Long & Bro., and plants to the value of $75 were destroyed.

C. MERKEL & SON, Mentor, Ohio

Mention the Florists' Exchange when writing.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade.

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4.00 per 1000.

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best selling pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate notice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a striking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply.

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

PRICE, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones."

Also Best NEW and STANDARD CHRYSANTHEMUMS.

Our Catalogue is now ready and will be sent to all who ask for it.

Pittsburg.

Market News.

Since writing my last notes several weeks ago, trade has been fair, society affairs numerous, with also an unusual amount of funeral work. Stock is abundant and good, with prices very little changed. Roses are somewhat lower, but carnations hold their own, at from $1.50 per 100 up; the quality is all that could be desired. Tulips and narcissus move somewhat slow; Harrisil lilies are in good demand, and not any too plentiful.

The weather the past week was the worst we've had so far this Winter—very trying for greenhouses, and the strong wind did some harm. The cold was intense, the thermometer being below zero for several nights in succession, with a sharp wind blowing through the smallest opening. The Phipps' Conservatories in Schenley Park suffered a little from broken glass, the wind blowing out any loose lights; otherwise we did not hear of any material damage.

Jottings.

One of the greenhouses of O. Heids, in Reserve Twp., was destroyed by fire during the cold spell.

Mrs. A. C. Patterson died last week. She was the mother of R. C. and Nathaniel Patterson, the well-known florists, who died within the past few years.

George Oesterle, who had charge of Randolph & McClement's conservatories for many years, has resigned his position, not being in the best of health.

W. Rolker, Henry Dreyer, of A. Hermann, New York, and S. S. Skidelsky, of Philadelphia, were recent visitors.

E. C. R.

Chicago.

State of Trade.

As we predicted the demand for flowers up to Lent kept pace with the supply, and prices were, if anything, slightly better, shipments for the New Orleans market for Mardi Gras, contributing largely to this condition. In fact, at all times this southern demand for northern-grown flowers is quite a factor, one house alone consigning to New Orleans, on Sunday, 21 packages. Most of the firms doing a shipping business have a southern trade. The keen, Wintry weather has continued all week; but this means plenty of sun, hence supplies are improving, especially in Beauty, which are now coming along finely.

In carnations the trade still keeps good, and in spite of the increased quantity planted last Fall, so far few have gone to waste.

Among Growers.

M. Wieland, Evanston, will, after this year, discard Daybreak carnation and in its place grow Genevieve Lord and Melba more extensively; also Lawson and other new ones. America will also be planted. Mary Wood is a favorite white, the suffusion of pink on it occasionally proving no objection to its selling qualities. Evanston is still a money-maker, and is always well loaded with buds and flowers. As a yellow Goldfinch will be dropped, Gold Nugget taking its place. Mrs. Frances Joost behaves very well. Violets that at one time did so well here are a failure, and carnations will hereafter be substituted. A general assortment of bulbous stock is grown and is now coming in good.

Jottings.

Wieland & Reich, of Evanston, closed up their store March 1, and will hereafter attend to their retail orders from the greenhouses. They have now a fine grade of tea roses and carnations that easily command a market. Beauty also are fine.

W. R. Roach, with Jerome B. Rice & Co., Cambridge, N. Y., was in the city this week, leaving again for the West. He reports a lively and very satisfactory business. Neal Jacobson was also a visitor looking up his old friends and calling on the big places before leaving for Philadelphia and his new position on Friday.

The sky-scraping Masonic Temple, when the wind is raging, is responsible for all kinds of accidents. On Saturday last, as August Jurgens was passing the alley, with his covered delivery wagon loaded with plants and flowers, the wind caught the wagon and turned it clean over, the wagon heater setting fire to the paper. August, who was not hurt, extinguished the blaze. The wagon was righted and the cut flowers delivered not much the worse, but $25 worth of plants were destroyed.

C. W. Johnson, formerly with W. N. Rudd, was in the city this week on his way to his new position in Seattle, Washington.

Paul Berkowitz, of H. Bayersdorfer & Co., Philadelphia, was also a caller, and reports very good trade. Ess.

Baltimore.

A Successful Show.

Baltimore has solved the exhibition question. To have a successful show, do not charge an admission fee. Our carnation display on Monday last, at the Royal Arcanum Hall, was a great success. There being no admission fee lots of ladies and gentlemen took advantage of viewing this fine exhibition. The advertisement the growers and dealers received was sufficient recompense for their trouble.

Carnations were in abundance—fine stock, grand flowers, demonstrating good culture. I. H. Moss's Mrs. Bradt were great; he received a certificate for same. White Cloud and Melba, from the same exhibitor, vied with Jubilee in the strength of stem and size of flower.

Halliday Brothers made a large showing, for which they received a certificate. Their America were finest in red; Gold Nugget and Scott also showed up superbly, while Mack Richmond, with its intensity of color, proves itself a seller of the first order. Gomez, shown by Halliday Bros., is a splendid dark variety. Jubilee, from some growers, made one think that, despite adverse criticism, Jubilee must be a good variety after all.

Woodfall Bros. had some good seedlings. They love this work and no doubt before many moons Anne Arundel County will show that she produces as good seedlings as can be found anywhere. Lehr Bros., also from Anne Arundel County, showed fine Jubilee and Daybreak, for which they received a certificate. Their violets were of fine color, with strong stems.

Fritz Bauer was ready to scent the hall with mignonette—good stock grown by a good grower, just as are his carnations in pots.

Halliday Bros. have been growing C. M. Wagner's carnation seedlings; these are fine flowers, but lack somewhat in carriage. The stems no doubt will improve with culture. Awarded honorable mention.

John Cook's large white carnation seedlings showed what can be done with a flower by a careful hybridizer. The habit and size of blooms are grand. Certificated.

The new rose Baltimore showed up well; a delicate light pink *a la* Captain Christy, should make it a favorite. Awarded a certificate.

The Ruxton Floral Co. showed cucumbers, and Henry F. Michell, Philadelphia, brought us his new plant stand, for which he received a certificate of merit. The same exhibitor also showed carnation Mrs. Bertram Lippincott, receiving honorable mention for it.

Mr. Holden, for Mrs. Robert Garrett, showed some wonderful cinerarias; they were the attraction of the show. Why can't the florists sell these fine things when in bloom; rich colors, seen in no other class of plants! Mr. Holden's exhibit was awarded a certificate of merit.

Halliday Bros. had some fine large Boston ferns and palms on exhibition.

Among late comers were Weber & Sons, Oakland, with Genevieve Lord and others. Sorry they were not present earlier in the game.

The American Rose Co., Washington, showed the Ivory rose in perfection. It is a go.

The club meeting at night, with a general good time, ended a successful exhibition day. May they come often!

Business Satisfactory.

Business during the past week has been all that one could desire; stock has been fairly good, but somewhat limited. Carnations have held up fairly well and prices are up to the top notch, fancies selling at $4 and $5, ordinary at $2. Roses still remain scarce. Lily of the valley is plentiful, at $4. Tulips are coming in and fetch $3 and $4; narcissus, $3.

We are now passing through another cold spell; the thermometer registered 10 degrees below zero Sunday morning. So far I have not heard of any damage.

I am also glad to report that the new carnation "Enquirer" is not splitting the calyx so badly, and Mr. Witterstaetter informs me that he thinks the cause was the brick in bottoms of benches drying out too fast;, that since he made this discovery and gave the bottom a good watering the splitting has nearly stopped.

H. H. Ritter, of Dayton, O., was a caller Saturday.

Carnation growers take notice that our next meeting is for your benefit, and occurs Saturday, March 10. At this meeting we expect a fine exhibit, and will look for many novelties.

George S. Bartlett was in Sandusky, Saturday, on business.

The floral work at the funeral of the late A. W. Whelpley, public librarian, was the best I have seen in this city for some time. One specially fine piece was a crescent wreath made of bronze galax leaves; on base of same was a large bunch of Meteor roses. It was the work of Miss Critchell. A wreath of palm leaves on an easel was another fine design.

E. G. GILLETT.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 10. NEW YORK, MARCH 10, 1900. One Dollar Per Year.

Having Purchased the Entire Stock of the

New Chrysanthemum Col. D. Appleton

We Are Now Ready to Book Orders For It.

This is a magnificent yellow variety of immense size, and is equally desirable for commercial purposes or for exhibition. It is the most valuable chrysanthemum, all things considered, that has been sent out for some time. In 1898 it was exhibited before the New York Committee, when "American Gardening" stated that it was the best seedling brought before that committee that year. "Gardening" stated in 1899, that the Chicago Committee, before which it was exhibited, considered it one of the best chrysanthemums seen in Chicago for a long time. The high value placed upon it by the several committees before which it was exhibited last season will best be shown from the fact that it was awarded not less than 91 points on both commercial and exhibition scales, scoring as high as 95. It is a phenomenal record for any chrysanthemum to score so high both for exhibition and commercially, and **Col. D. Appleton** certainly has a great future.

The flower is a magnificent Japanese incurved, bright yellow, of immense size, measuring 22 in in circumference, with a depth as great as its breadth, not showing any center, lower florets reflexing to the foliage. Besides its immense size and beautiful color, another point in its favor is its almost faultless stem and foliage. Stem is strong, carrying the flower erect; foliage strong, but not too large, and grows fully up to bloom. An idea of the great value of this variety can best be obtained when it is stated that the flowers were sold to one of the leading New York florists last season, who paid $5.00 a dozen for the entire crop.

STRONG PLANTS, 2¼ inch pots, $3.50 per doz.; $25.00 per 100.

We have a very fine collection of **CHRYSANTHEMUMS.**

Among other sorts we can offer as follows:

Silver Wedding, Mlle. Lucie Faure, Polly Rose, **$6.00 per 100.**

G. J. Warren, Mme. Ferlat, Mme. Edmond Roger, Adele, Robt. Owen, Jr., Pride of Ryecourt, Mrs. F. A. Constable, Meta, Pride, Mme. Georges Bruant, Pres. Nonin, etc., **$5 a 100.**

Pres. Graham, Mrs. Perrin, Peter Kny, Vivland-Morell, etc., **$4.00 per 100.**

Mrs. O. P. Bassett, Mrs. H. Weeks, Black Hawk, J. H. Woodford, Mrs. M. A. Ryerson, Evangeline, Eureka, George W. Childs, Pink Ivory, Glory of the Pacific, Lady Fitzwygram, Mrs. S. T. Murdoch, Modesto, Mutual Friend, Mrs. Jerome Jones, Ivory, W. H. Lincoln, Maud Dean, Major Bonnaffon, Culliugfordii, etc., **$3.00 per 100.**

Complete list of the above and also of all other new varieties will be found in our descriptive catalogue, which will be sent on application to any one who may not have received it.

WE ARE ALSO AGENTS FOR THE **LIBERTY ROSE**

This is having a phenomenal sale. Customers wishing early delivery should place orders without delay. Strong plants, 2¼ in pots, **25 plants at 50 cts. each; 50 plants and less than 100 at 30c. each; full hundred lots and up at 25c. each.**

LILIUM LONGIFLORUM BULBS COLD STORAGE.

GUARANTEED IN PERFECT CONDITION.

The keeping of this variety of lily bulb dormant in cold storage is a success. Florists who planted them last year in the months of March, April, May and June received very fancy prices for the flowers and are planting on a larger scale this year. We have reserved a limited quantity for this purpose, and offer them until sold for delivery during Spring and Summer months as follows:

			Per 100	Per 1000
6 to 8 in. bulbs,	400 in a box ...	EVERY FORCER OF BULBS SHOULD	$6.00	$50.00
7 to 9 " "	300 "		9.00	80.00
8 to 10 " "	250 "	TRY SOME OF THESE.	15.00	

Tuberoses.—Double Pearl.

Bulbs measuring 4 to 6 inches in circumference,
25c. per doz.; **75c.** per 100; **$6.50** per 1000.

3 to 4 inches in circumference, **15c.** per doz.; **50c.** per 100; **$3.75** per 1000, or bbl. of 2,000 bulbs for **$6** Every bulb can be depended upon to flower.

Gladiolus.—First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least.
Per dozen, **15c.**; 100, **75c.**; 1000, **$6.50.**

Begonias—Tuberous Rooted.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each, **5c.**; per doz., **40c.**; per 100, **$2.50**; per 1000, **$20.**

Double Flowers. Each, **10c.**; per doz., **65c.**; per 100, **$5**; per 1000, **$15.**

Caladium, or Elephant's Ear

Sound bulbs, with good, live centre shoots.
5 to 7 inches in circumference,
40c. per doz; **$2.25** per 100; **$20** per 1000.
7 to 9 inches in circumference,
60c. per doz.; **$3.75** per 100; **$35** per 1000.
9 to 12 inches in circumference,
$1 per doz.; **$7** per 100; **$60** per 1000.
12 in. and up circum., **$1.50** per doz.; **$10** per 100.

Gloxinias.

Bulbs of large size, measuring 1¼ to 3 in. in diameter.
Finest Mixed.
50c. per dozen; **$3** per 100; **$27.50** per 1000.
Separate Colors. White, red, blue,
60c. per doz.; **$4** per 100.

Richardia alba maculata. (Spotted Calla.)
45c. per doz.; **$3** per 100; **$25** per 1000.

Dahlias.

Dry Roots, Field Grown.

Storm King. Best white for florists. Perpetual bloomer. **30c.** each; **$3** per doz.; **$20** per 100.

Choice Named Varieties. Pompon, Cactus, Show and Fancy. (*See Catalogue, page* 24.)
10c. each; **$1** per doz.; **$8** per 100.

Cocos Weddeliana Seed.

New Crop Now Ready
Per 1000, **$7.00**; 5,000 seeds, **$30.00.**

Latania Borbonica.

New Crop Seed.
$2.00 per 100; 5,000 for **$9.00.**

European Notes.

The cold wave has left us, at any rate for the present, and once more we are having a soft time, which has a relaxing effect upon everything and everybody. It is not, of course, possible to form an accurate estimate of the injury done by the frost to the growing plants, but already we find that yellow-fleshed turnips and rutabagas have suffered severely.

The effort to eliminate the neck and develop the lateral growth of Swedes appears in some of the most extensively cultivated varieties to have rendered the young plants more susceptible to the ravages of frost, and if we add to this the fact that owing to the prolonged drought of last year the plants were very imperfectly developed, it is easy to understand why they have suffered so severely.

The Sweet Pea Bicentenary bids fair to be a great success, and although it is primarily to celebrate the introduction of the sweet pea into Great Britain, it has already assumed an international character. Mr. R. Dean, V. M. H., the courteous secretary, is of a very optimistic disposition, but he admitted to the writer to-day that the support the scheme had received already exceeded his most sanguine expectations. Something like £200 has already been subscribed and the list of donors is increasing every day. Benary, Burpee, Carter, Cooper, Taber & Co. and Hurst & Son are well to the fore, and the success of the celebration is already assured.

What splendid decorative plants the improved hybrid strain of Primula stellata furnishes? Under the name of the The Lady and seedlings therefrom, Cannell has recently exhibited a very splendid collection, including most of the best colors of the fringed section, with plants full of bloom and vigor growing quite two feet in height. Seedsmen should boom this line. EUROPEAN SEEDS.

CATALOGUES RECEIVED.

FLORILEGIUM HARLEMENSE.—Part II of this publication is to hand. It contains beautiful colored representations of hyacinth Queen of the Blues, tulips, Imperator rubrorum and Couronne des Roses, also of various Ixias, together with descriptions thereof.

The VALUE OF SEED SELECTION

Is shown not only in the IMPROVEMENT of standard strains, but occasionally also in the development (by selection of a single plant) of what is practically a new variety.

The letter published below is from the winner of the **SEVEN HUNDRED AND FIFTY DOLLARS** in **CASH PRIZES**, in the great *American Agriculturist* contest for the **BEST AMERICAN GARDEN OF 1899.**

The Value of Seed Selection.

One of the most, if not *the* most, essential factors in the successful garden is the selection of good seed The richest soil and the most thorough cultivation can in no way compensate for the losses occasioned by the failure of the seeds to grow; and money unwisely expended for seeds whose only recommendation is their cheapness is worse than thrown away.

In the great National Garden Contest of the *American Agriculturist* of 1899 it was evident from the first that nothing short of the very best seeds could answer the requirements. Our long and always satisfactory experience with W. Atlee Burpee & Co. fully convinced us that their seeds could be relied upon; fortified with this knowledge, we entered that contest fully assured that in so far as the factor of good seed could contribute to success theirs would in no way be found wanting. This assurance, together with an abiding faith in the truism that "blood will tell," induced us without any farther consideration to place our entire order with this reliable firm The results more than justified our highest expectations, as the Grand Prize-Winning Garden was planted exclusively with Burpee's "Seeds that Grow."

With always a hearty recommend for your firm and its seeds, I have the pleasure to remain, Very truly,

J. E. MORSE,
DETROIT, MICH.

Feb. 21, 1900.

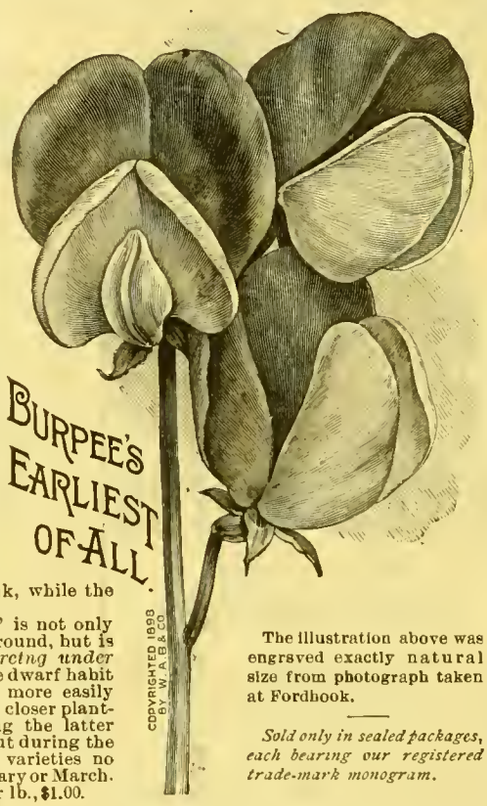
A notable illustration in this line is the

Sweet Pea—Burpee's "EARLIEST OF ALL."

Notwithstanding their dwarf habit and neat, slender foliage, the plants are of vigorous growth and come into bloom **always ten days to two weeks in advance of the Extra Early Blanche Ferry,** which has been heretofore a week ahead of all all other varieties. Growing only two feet in height, the plants do not require the support of brush or trellis. As an illustration of its extremely early-flowering habit, we would state that October 15th we had plants in fine bloom *from seed gathered from our spring planting* and sown during the latter part of August. A constant succession of bloom may be had from June until November by making sowings about one month apart. Its extremely early-flowering habit makes it most satisfactory for the Southern States, as it may be easily had in full bloom before the hot summer weather. The flowers are as large as those of the regular strains of *Blanche Ferry*, and have long, stout stems, making them entirely satisfactory for cutting; they are borne in close clusters of three, all facing one way. The standards are a bright, rich pink, while the wings are nearly pure white.

BURPEE'S "EARLIEST OF ALL" is not only the earliest to bloom in open ground, but is also *the most desirable for forcing under glass for winter cut flowers.* The dwarf habit of this variety renders it much more easily grown on the benches, admits of closer planting, and from seed sown during the latter part of August blooms may be cut during the holidays, while with the taller varieties no blooms could be had before February or March.

Per oz., 10c.; per ¼ lb., 30c ; per lb., $1.00.



The illustration above was engrsved exactly natural size from photograph taken at Fordhook.

Sold only in sealed packages, each bearing our registered trade-mark monogram.

Burpee's "Blue List."

Burpee's Farm Annual

Written at FORDHOOK FARMS—the largest trial grounds in America. Tells about all the BEST SEEDS THAT GROW, including some valuable "NEW CREATIONS" for 1900. Liberal Cash Prizes. Useful Leaflets and New Vest Pocket Guides to Success, free to all customers.

The National Prize Garden (in Michigan), that won seven hundred and fifty dollars cash prizes in the great *American Agriculturist* contest, was planted exclusively with BURPEE'S SEEDS, which are always THE BEST THAT GROW!

☞ Every one who would grow choice vegetables or most beautiful flowers should carefully study **"The Leading American Seed Catalogue." Write TO-DAY** (a postal-card will do). **It is FREE!**

W. ATLEE BURPEE & CO.

PHILADELPHIA.

☞ In writing for "BURPEE'S BLUE LIST" ask also for THE FARM ANNUAL, if not already received.

IN THE OPEN GROUND

we recommend the planting of BURPEE'S EARLIEST OF ALL for first cutting. The season of these popular "pink and white" Sweet Peas can then be prolonged, by *planting at the same time* the EXTRA EARLY BLANCHE FERRY, which will come into bloom ten days to two weeks later. This in turn can be followed by the regular stock of BLANCHE FERRY, which will begin to bloom about ten days later than the EXTRA EARLY BLANCHE FERRY.

For true stocks of the above and all other Sweet Peas, please consult **pages 92 to 107 of**

Burpee's "Blue List" for 1900

which tells more about Sweet Peas than any other catalogue published.

A NEW FEATURE

in **Burpee's "BLUE LIST"** that will be of special interest to growers who **plant for profit,** is the "plain talks" we give at the head of every department, as to **just the best varieties** for different purposes.

W. ATLEE BURPEE & CO.

Producers of Only THE BEST Seeds that Grow,

BURPEE BUILDING, PHILADELPHIA, PA.

Mention the Florists' Exchange when writing.

Two Comparative Reports from well-known Seed Growers in California.

VENTURA, CAL., Feb. 8, 1900.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

Gentlemen: Replying to yours of January 29th requesting me to note differences I have found between the "*Extra Early Blanche Ferry*" Sweet Pea and "BURPEE'S EARLIEST OF ALL," will say that I have grown the two in comparison in the years 1896, 1897 and 1899, procuring the first mentioned pea from D. M. Ferry's packets so marked, and have in these years found the **"EARLIEST OF ALL," TRUE TO NAME, coming in general bloom fully ten days before** the other mentioned pea showed scattering flowers. This pleasing *peculiarity* of such *general* early blooming, together with its uniform dwarfish habit has made my fields of this pea conspicuous to many visitors. I append a record from my diary as follows:

1896.....planted March 6. Full Bloom May 19th.
1897..... " January 26. " " April 14th.
1899..... " February 1. " " " 9th.

The year 1898 Mr. Alvord grew the stock, and failed to keep a record as desired, or to grow the Blanche Ferry's for comparison I sent him. I think this pea should be closely grown yearly for sure typical results. There can be no question, I think, of the appropriateness of the name of your pea when properly grown, nor of its described habit.

Yours truly,
THOMAS GOULD.

GILROY, CAL., Feb. 12, 1900.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

Gentlemen: My attention has been called to the claim that "BURPEE'S EARLIEST OF ALL" Sweet Pea is the same as the *Extra Early Blanche Ferry.* This is far from my two years' experience of these two varieties.

In 1898, when "EARLIEST OF ALL" was introduced, it was by far the earliest blooming Sweet Pea we had; it came into bloom *two weeks earlier than Extra Early Blanche Ferry.* In 1899 my experience of 1898 in regard to early blooming was again verified. Last summer I sowed seed harvested from plants which were sown in spring. The "*Earliest of All*" came into bloom in fall, while *Extra Early Blanche Ferry* did not bloom at all. The "*Earliest of All*" were the only Sweet Pea flowers we had last fall.

Besides this difference in time of flowering, the "EARLIEST OF ALL" is dwarfer in growth, and foliage is more refined and graceful. There is no foundation to the claim that these two varieties are the same.

Yours respectfully,
WALNO ROGNEET.

Four Recent Letters from Florists who have grown "Earliest of All" under glass.

WASHINGTON, D. C., Feb. 5, 1900.

W. ATLEE BURPEE & Co., Philadelphia, Pa.

Gentlemen: We are more than pleased to testify to "BURPEE'S EARLIEST OF ALL" Sweet Peas. The variety blooms under glass fully ten days earlier than any *Early Blanche Ferry* we have ever used, and those we have used were direct from the Western originators. Very truly yours,

AMERICAN ROSE CO.

We have experienced great satisfaction in forcing "BURPEE'S EARLIEST OF ALL SWEET PEAS." The bed is a mass of color and this is a house where other varieties failed to bloom at all.

BOLLET & HOSNADAY, Ponca City, Oklahoma.

MOORESTOWN, N. J., Feb. 3, 1900.

W. ATLEE BURPEE & Co., Philadelphia, Pa.

Dear Sirs: Yours of 2nd inst. received. As to the BURPEE'S EARLIEST PEA I can say: Your claims for it are fully borne out by my experience. It is dwarfer, bears earlier, and is truer to type than the Extra Early Blanche Ferry. The last time I planted Extra Early Blanche Ferry they were sown in house by September 1st, and only a few bloomed before latter part of March; the few that bloomed were true; the remainder were apparently just the same as the old Blanche Ferry in foliage, bloom, etc. I have noticed this year a very slight tendency to rogue or revert in your stock. I will moreover say that the stock of the Extra Early Blanche Ferry I mention above was highly recommended by a prominent Philadelphia seedsman as being absolutely true and reliable. Relying on this I planted them under the proper conditions for the true Extra Early, and consequently the crop was almost an entire loss.

I hope there may soon be some other colors as good for forcing as your Earliest.

Yours very truly,
EDWARD HABEIS.

[NOTE—Our crops the past season were again carefully rogued of all the taller growing, thicker stalked plants of the *Extra Early Blanche Ferry* type.

The seed this season we feel sure, will not throw more than 2 per cent. of the E. E. B. F., all balance being of the distinct, dwarfer *Earliest of All Type.*—W. A. B. & Co.]

MISS ELLA INSLEY, Naouet, N. Y., Feb. 14, 1900, writes: I planted your EARLIEST OF ALL SWEET PEAS in my greenhouses about the middle of August last, under different conditions. They began to flower about November 25th, and have continued to bloom steadily ever since.

I planted a few *Extra Early Blanche Ferry* about a week later under conditions not quite as favorable, and they have not bloomed, but are just beginning to show buds.

The latter is a rank grower, although the *Earliest of All* are about six feet tall in one house, yet in the other house they are dwarfer. The "EARLIEST OF ALL" produces the flowers with long stems; the color of the flower is brighter and deeper than in the *Blanche Ferry*, while the flowers are more lasting. When they fade they do not have a purple cast, but a soft pink.

I have had no experience as yet with the *Earliest of All* out of doors, but shall be glad to report results when I do.

I should have mentioned that the house where the *Earliest of All* are dwarfer did not begin to bloom until the first of January; they were planted a week later than the other house, and it is a very much cooler house and does not have as much sunshine.

Notes from Europe.

ORCHIDS.

European growers are giving much attention to chemical fertilizers, basic slag especially being much used as a phosphate, without danger, in all soil for potting and other purposes. American reports on experiments are eagerly studied here (perhaps more so than at home?). For orchids the famous "terre de bruyère" of the Belgian growers is in many establishments very largely used. This is the surface soil that is naturally formed in the woods—leaves more or less decomposed, with fine sand that the wind carries from the adjoining very sandy grounds. The Belgians use this material for everything in the garden, from azaleas to vandas, bay trees to palms, etc. The growth of oncidiums, odontoglossums, etc., is enormous, and the flower spikes correspondingly so. At De Langue—Vervæne's, Brussels, I noticed especially Oncidium sarcodes with branched stems of 4 feet and more. This grower is the introducer of the Papilio cyclamen—a fine thing, more floriferous than the older forms but not as yet sufficiently fixed. A. A. Peters, Brussels, grows Vanda cærulen splendidly in leaf mould. This old master grower told me he is not carrying out the resting of orchids so severely as used to be the case—his success supports his theory well. A well-known and excellent grower in Hamburg seems, in some cases, at least, to be of the opposite opinion. He told me that to grow Oncidium var. Rogersii well he "reimports" them every year, meaning that, the growth finished, he allows them to get as dry as an imported plant is, and practically re-establishes them every season. His results are good, too, but, of course, his plants don't look so fat as those that are less severely treated.

A good hint from a specialist of cypripediums: Don't grow them in pots; they don't like the coolness that is caused by the evaporation through the porous earthenware. His experience is of long standing, and the difference of the growth in pots and boxes is all and very strongly in favor of the boxes. These he makes himself of peak pine, thin boards. The boxes have much the shape of the usual flower pots, perhaps a letter deeper, and are eight-cornered. The same specialist said, "The value of my flowers is much enhanced by their long stems (insignes are referred to). Just as the bud pushes up I shade a little and give a little more heat.

Apropos, coolness of the pot, Linden, at Brussels, has adopted open benches for his orchids altogether—narrow wooden strips, 2 to 3 inches apart, form the bottoms of the benches; the pipes being below them, of course, the pots and root material are always fairly warm.

GREENS.

From a specialist of greens I took a hint in growing Asparagus Sprengeri like Asparagus plumosa, on strings. The result two or three years after planting out: Fine shoots, up to 8 or 10 feet in length. Lygodium scandens (perhaps also the palmatn of North America) is useful grown on quickly in a similar manner during the Summer, to string the shoots singly, or two together, otherwise they will be too heavy; and when the shoots are finished slowly dry off the benches altogether and gradually lower the temperature to 40 degrees. They will then, in December, be ready to keep well a couple of days in a cut state. The plants keep for months while perfectly dry at the root.

CARNATIONS.

I have seen American varieties of carnations here, grown in the American way with good results, but I think the finest South of France and Italian varieties are still finer than the American. Soleil de Nice and Comtesse de Paris are free-blooming and fine yellows. The English Malmaison crosses are decidedly fine. The new set introduced by Sander & Co., are a splendid little collection. Should they not be useful for hybridizers?

PALMS.

Nothing can beat the Linospadix Petrickiana as a decorative palm "solitaire." I notice Geonoma intermedia and G. gracilis in large quantities about the leading nurseries. These palms are much more graceful than Cocos Weddeliana, according to my taste, and I am assured quite as hardy as the little cocos. Livistona rotundifolia has ever been my favorite as a small palm for decorative use; it wants a good temperature, though.

I will say something about the lilac and its culture in my next. T. E.

AMSTERDAM, N. Y.—J. C. Hatcher is expecting to occupy, within a short time what will be, when finished, the most handsome store between New York and Chicago. He hopes to be settled in it before Easter, at which time a full description of the store and conservatory, with view, will be presented to the readers of the EXCHANGE. M.

THE SUGAR MAPLE

Is a beautiful tree at all seasons, and no better variety can be used for **Street, Park, or Lawn Planting,** as its growth is rapid and straight, its form symmetrical, and it does not have the objectionable density of foliage possessed by the Norway Maples. For this reason it is well adapted for planting near buildings, as it does not obstruct light or air, and being **deep rooted the grass will grow up to its very trunk, which is a very strong point in its favor.** No tree has more gorgeous Autumn coloring, as it varies in all shades of yellow, orange and scarlet until the leaves finally fall. It was a sagacious popular instinct which selected this as one of our best trees for ornamental planting, and in some of the old places on the Hudson River long avenues were planted with it three quarters of a century ago, and they are now worth a long journey to see. We have an extra large stock of magnificent trees, many times transplanted, which we know offer at the following low prices:

	10	100	1000
10 to 12 ft. In height, 1¼ to 1½ inches in diameter . . .	$5.00	$33.50	$290.00
12 to 14 ft. " 1½ to 1¾ " " . . .	6.00	35.00	300.00
14 to 15 ft. " 1¾ to 2 " " . . .	10.00	75.00	500.00

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

The Deming Company, Salem, Ohio, make more than a dozen kinds of sprayers with brass working parts, patent automatic Kerosene Emulsion Sprayers, the wonderful Bordeaux Nozzle, Deming Vermorel Nozzle, etc. The Century Sprayer is one of their latest productions.

The Pinehurst Nurseries, Pinehurst, N. C., send us a copy of an illustrated pamphlet, entitled "Pinehurst, a Winter Resort in North Carolina for Health Seekers and Golfers," containing, among other things, an account of the firm's business.

The Vermont Experiment Station, after investigation, remarks that the simple conclusion may now be accepted as settled that sap of the maple at sugaring time flows both up and down, but not laterally around the tree trunk.

Government statistics show that the annual average value of nursery stock exported from the United States to Japan, from 1894 to 1898, was $335. In 1897 the yearly value had reached $1,051, and in 1898 only $2. Our imports from Japan, during the same period, show an average annual value of $17,564.

Nurserymen For and Against the Litchard Bill.—On February 28 there was another animated hearing before the Assembly Committee on Agriculture at Albany, on Mr. Litchard's bill to compel all nursery stock to be fumigated with hydrocyanic acid gas before it is sold or shipped. William L. Pitkin and Irving Rouse, representing the Eastern Nurserymen's Association, made strong arguments against the bill, while S. D. Willard and other fruit growers spoke in its favor. Mr. Pitkin said the bill was unnecessary and would greatly hamper the nurserymen without the positive assurance that it accomplished any good. He urged the committee to delay action on the Litchard bill until Congress had acted on the pending federal legislation, so that there would be no conflict between state and federal laws. Two years ago the New York Legislature passed a bill providing for the state inspection of all nursery stock. That law had worked well and to-day the nurseries of the Empire State were practically free from the San José scale. Mr. Pitkin asked the committee if it thought it would be fair to subject New York State nurserymen to restrictions that were not imposed on nurserymen in other states. In other words, trees could be shipped into the state that were not fumigated, while all trees shipped or sold in New York State would have to be. Besides, the nurserymen now have certificates from the State Department of Agriculture that their stock is in a healthy condition. Why should they be asked to submit to a second inspection. Mr. Pitkin also attacked the bill on the ground that hydrocyanic acid gas was a highly dangerous substance and there were those who declare it is explosive. Its use would mean risk to their employees and increase the liability of the employers. He did not believe its use should be made compulsory until its nature was better known. Mr. Willard then made a formal argument for the bill, which he alleged was absolutely necessary for the protection of the fruit growers.—Post Express.

CHANGES IN BUSINESS.

HAVERHILL, MASS.—E. W. Pearson, Newburyport, has been compelled to give up his branch here, owing to the local demand exhausting his supply.

SALT LAKE CITY, UTAH.—The Morris Floral Company has been incorporated, with a capital stock of $9,000.

NASHUA, N. H.—George E. Buxton has moved his store into Benson Block.

HARTFORD, CONN.—Edward Welch has purchased the Tunnel greenhouse, 14 Windsor avenue.

Symbiosis of the Heather.

Editor Florists' Exchange.

The foreman in charge of the department having oversight of these matters in the nursery of Thomas Meehan & Sons, places the following note on my table: I have no doubt but that the doctrine of symbiosis, sound in some degree, is, like many other scientific discoveries, pushed to the verge of absurdity. I have little idea that it has a place in the economy of the heather; but as we have it growing as if at home, I gave the writer the benefit of that little, by deciding to examine the roots for myself in the growing season. THOMAS MEEHAN.

DEAR SIR: After reading your communication to the FLORISTS' EXCHANGE, regarding symbiosis of the heather, I thought perhaps you would like me to call your attention to the fact that, in your lower greenhouses, there is a batch of C. vulgaris cuttings that were put in last October in pure sand. Over 90 per cent. have struck and are growing.

The Rev. Hugh MacMillan's fungus is evidently not necessary to the heather in the young state, or else it is a constitutional matter without which the heather would not be in existence.

ERNEST HEMMING.

Trade Notes.

Business remains good, and with stock not nearly equal to the demand. Roses are very scarce and carnations are now being reported off crop by the growers. Possibly this is a good sign, as Lent is upon us; but for the past few years this particular season has made very little difference in the cut flower trade. Prices on all stock are still firm. The month of February shows larger sales than any February in my recollection.

This section of the country escaped the heavy snows that are recorded in other portions of the state, but we are now in the midst of a rain, with the promise of a cold wave. The Schmidlapp funerals, an account of which has been widely published in the daily press, used up all the roses and white stock there was in this market; J. A. Peterson and B. P. Critchell had the greater portion of this work.

Wm. Murphy is now very busy filling orders for rooted cuttings of carnations, and the writer has seen testimonials from his customers saying that they had never before received cuttings that were so satisfactory—all well rooted and choice stock. This is more than can be said of many growers. I have this season seen cuttings that were shipped to this market, 26 to the bundle, and out of the 26 only 23 or 24 would have roots. These were cuttings, too, from new varieties, that are selling at $10 per 100. Why will growers do this? It certainly is no credit to them and in many cases is quite a loss to the buyer.

Buffalo's Pan-American authorities have done well in securing the services of Wm. Scott. We shall now expect to see the late World's Fair excelled floriculturally.

IMPERIAL VIOLET

Color—The darkest blue grown.
Form—The largest and most double.
Fragrance—Strong and lasting.
Health—The most vigorous.
Productiveness—Last season from 4000 plants I picked 281,700 No. 1 blooms; average per plant over 70; this year the blooms from November to February have averaged me $2.00 per 100, wholesale.

If you have got enough of raising run-out stock, weakened by unskillful methods of culture, get a stock of this magnificent strain, and my book on Violet Culture, and you can find out the possibilities of profit in growing a **GOOD** Violet.

You don't have to hunt a market for these flowers, it hunts you.

ROOTED CUTTINGS.

BRIEFS FOR BUSY FLORISTS.

ROSES.—The increase in the amount of sunshine that is now beginning to be felt makes ventilating one of the chief items to be looked after. Where the ventilators open at both sides of the ridge, the task of having enough air on without getting a dose of mildew is very much simplified; but where air can only be given from one side, a constant watch for a change of wind has to be kept, as it is preferable to have a house two or three degrees too high at this time of the year to having the cold wind playing among the, as yet, tender foliage. Benches that were not treated to a mulch of manure will be much benefited by regular applications of liquid manure; once a week will be none too often from now on. Young stock, after being well established in the small pots, will make just as good plants for putting in the benches if they are kept in a cool house and as near the glass as possible. Cuttings only just rooted and potted, or those still in the sand bed, will, of course, have to be grown right along.

CARNATIONS.—Beds that are showing signs of exhaustion will be materially benefited by a weekly watering with weak liquid manure. The surface of the soil should not be disturbed any more than is absolutely necessary; the weeds (if any start) should be pulled out and the soil rubbed over with the fingers if any green appears on the surface. No doubt next year's stock is all rooted by this time, or if not already rooted, at least the cuttings have been taken and are in the sand. There are, however, several improved varieties being sent out this year, and as we all want the best we have to try some of the new ones, even if they do come rather high. Judging from the qualities of the flowers seen thus far one will be perfectly safe in trying such varieties as Genevieve Lord, The Marquis, Ethel Crocker, Mrs. Lawson and Governor Roosevelt; and of those previously sent out, such kinds as Mrs. Joost, G. H. Crane, General Maceo, General Gomez and Governor Griggs have already become standard sorts and are here to stay.

CHRYSANTHEMUMS.—The time for propagating the main batch for bench work is not here yet, but in order to have the cuttings just right when needed the old stools must have some attention. If a section of a bench can be spared, the best plan is to plant in the old stools, and with a night temperature of about 50 degrees they will produce all the cuttings required. If a bench cannot be had for the purpose, then boxes may be used and set on the tables of an ordinary greenhouse. Care will have to be exercised in watering, as too much would soon ruin the semi-dormant stools.

EASTER is but five weeks away now, and potted plants intended for that occasion will need to be governed accordingly. Hydrangeas should have the buds well in sight, or they will be too late. Lilac may yet be started, but will need lots of heat. Deutzias may be brought in now; and pans of lily of the valley put in gentle heat by the last of the week. Fern balls and fern wreaths that seem backward should be given a warmer temperature and frequent syringings to bring them on quicker. Boston fern proved a good seller last year and there will be, no doubt, a great demand for it this Easter. Genistas and many of the azaleas will have to be held back rather than hurried; pot roses with their buds already in sight will also need to be kept rather cool.

DAHLIAS are generally conceded to be too stiff for many uses by the average florist, yet there is one section of these vari-colored flowers, that from their beauty of form may be used in almost any floral arrangement. We refer to the cactus-flowered varieties. A collection of these, planted in the garden, will yield a supply of blooms in the late Summer months that can be used equally well in bouquet and design work.

ROSE BUSHES
FIELD-GROWN. OWN ROOTS. FIRST-CLASS.
MANY SORTS BEING EXTRA FINE.
OUR BRIDES and HENRIETTES we might term "fancy" stock. Bride will run close to two feet, which is prime for that sort. Henriette, heavy, running two to three feet. Most Teas and H. T's will run close to two feet, some sorts even larger, while a few of the poorest growing sorts will not run much over one foot. The Hybrids will of course average up heavier than tender varieties, all being very fine. Leading sorts we can do in quantity, being especially heavy on such as Bride, Henriette, La France, Bon Silene, Brabant Soupert, Devoniensis, Safrano, Wootton, Caroot, White Rambler, etc. La France in grades from 7 to 9 ots.; the 7-cent grade being about 12 to 15 inches high, and woody.
An average assortment of these ROSES will weigh to neighborhood of 300 pounds to the 1000 plants, packed light, not including weight of packing case, while a selection of all heavy sorts will weigh more. This stock is freshly dug grown in our virgin soil of Southern California, free from disease and insects, and will give you and your trade satisfaction. We have sold thirty thousand roses during the past sixty days, but have twenty-five thousand more which must be sold—hence, extremely low prices appended.
Prices will apply to not less than 10 of a variety, properly packed, f. o. b. Los Angeles.
$7.00 per 100—Bon Silene, Dismore, Duch. de Brabant, Duch. of Albany (rather light), Fr. Kruger, La France, Lady Penzance, Lord Penzance, Marie Ducher, Mignonette, Mme. G. Bruant, Marie Lambert, Mme. Bravy, Parquerette, Rainbow, Souv. de Wootton, Waban, White Bath, White Rambler, Devoniensis.
$7.50 per 100—Alf. Colomb, Clo. Soupert, Coq. de Lyon, Earl of Dufferin, Empress of China, Dr. Grill, Fisher Holmes, Homer, La France, Bar. de Rothschild, Belle Siebrecht, Bride, Beauty of Glazenwood, Capt. Christy, Crimson Rambler, Gen Jack, Gen. Washington, Hermosa, Jules Finger, John Hopper, Jas. Nabonnand, La Reine, L. V. Houtte, M. P. Wilder, Marg. Dickson, Mrs. J. Laing, Paul Neyron, Prince Camille de Rohan, R. M. Henriette, Safrano, Pres. Carnot, Folkstone, White La France.
$9.00 per 100—La France, Malmaison, Ulrich Brunner.
$10.00 per 100—Isabelle Sprunt, Cath Mermet, Cecile Brunner, Duch. of Albany XXX, Etoile de Lyon, Dijon, Magna Charta, Mme. Watteville, Papa Gontier, Perle, White La France XXX, Yellow Rambler.
$15.00 per 100—Cloth of Gold, Climbing Wootton, Climbing Safrano, Kaiserin, Testout, Mrs. Roh. Garrett, Princess Bonnie, Gen. Robt. E. Lee.
$25.00 per 100—Climbing Kaiserin, Maman Cochet XXX.

JAPANESE IRIS $7.00 per 100. These are grown from plants of our own importation, and comprise the best named varieties grown in Yokohama; they are field-grown and well rooted.
OWN ROOT plants **LEAD.** The only place in U. S. where you can get good stock of own root, field-grown roses in variety, including tender sorts.
Shipments by freight must be prepaid here, and we require at last 25 per cent. cash with all orders; balance payable on arrival of stock. Less than five hundred plants, cash with order. A few hundred plants can be shipped by express, packed light, so that considering our extremely low prices, plants will not come high laid down at most any point.
Come at us quickly and make sure of 'em.

What Has the Twentieth Century in Store for the Queen of Flowers?

Read before the Florists' Club of Philadelphia, Tuesday, Feb. 6, by John N. May, Summit, N. J.

After some felicitous introductory remarks Mr. May continued: We have three or four varieties (of roses) now being rather extensively cultivated by the growers of cut flowers for commercial purposes throughout the country to the exclusion of nearly every other variety, no matter how good and beautiful it may be. In the future, we may have to boil these down and still grow fewer varieties, yet, mind I do not assert that we shall, and possibly as a better knowledge of the merits of others becomes more general among the flower buyers we may have to increase the number by one or two varieties. Personally, I think it would be a step toward advancement if we could multiply the present varieties by at least ten; then flower buyers and flower lovers would have a chance to choose something more diversified in color, form and artistic beauty than they have ever seen up to the present time. Size seems to be the main object sought for now; this is very unfortunate, as it excludes so many of the real gems of the rose family. No one would like to be confined to beef for breakfast, mutton for dinner and pork for supper, without any change, for 365 days in the year, and the same diet for the next year; no matter how good the beef, mutton or pork may be, they will soon begin to think a change would be more agreeable —something more in variety will be greatly appreciated. So it will be in flowers; the same everlasting red, white and pink may be and is undoubtedly very handsome, but there are those who will appreciate some other tints, variety in size, form, fragrance, etc. Why should their wishes not be gratified? It certainly will be greatly to the florist's benefit, whether he be grower, dealer or retailer, to cater to the public taste at large—yes, and to elevate that taste by the introduction of a much greater variety. Very many of the most charmingly beautiful roses are comparatively small buds, such as Ma Capucine, Mme. Falcot, Safrano, La Sylphide, Isabella Sprunt, Bon Silene and dozens of others, perfect gems in form, color and fragrance. All these, and many more, are at command ready for the twentieth century, and there will undoubtedly be many new ones, not yet introduced, which will be placed before the public for popular indorsement.

Our home productions in this line in the past have been somewhat limited, though we have some sterling varieties of American origin, which have not met with the indorsement their merits deserve. From present indications we should soon see some extra choice seedlings, distinct and beautiful things, which are now being produced by careful and expert hybridizers. All hail to these children—may they become illustrious citizens, winning fame and glory in every civilized country.

But we are not yet quite out of the nineteenth century, and ere we bid goodbye to it, "The Queen of Flowers" will have made its first debut in this country on its own responsibility as an independent factor for public patronage and support under the title of "The American Rose Society." It will give its first exhibition on the 27th, 28th and 29th of March next, at the Eden Musee, New York, where her majesty will hold a goodly court, when a very large number of her courtiers will attend this, her first levee, arrayed as befitting the occasion in all their most gorgeous uniforms.

Her majesty will give a second reception in June next, which is the month of roses; at this levee all her subjects, from those dwelling in glass houses to the humble occupants of a few feet of common garden soil, and exposed to all the changes and vicissitudes of the elements, without even the friendly shelter of a thistle, will be received with all due courtesies. Those from the humble cottage garden will be on equal footing with those coming from the richest homes. Her majesty is no respecter of persons, but welcomes all with queenly dignity, and all are invited to come.

Thus the long delayed inauguration of crowning Queen Rosa is to be a fitting closing of the nineteenth century. We, who have long paid court at her feet, trust the beginning of the twentieth century will see the American Rose Society placed on such a firm foundation that it will be second to none in the world. With our thousands of florists, for whom the rose has done more in their business than any other flower ever can, the society certainly ought not to lack patronage; from our tens of thousands of amateurs, who will grow and love the rose for the rose's sake, we shall certainly get an army of supporters.

This I consider the greatest thing the twentieth century has in store for the "Queen of Flowers." The liberal support of it will do more to advance the florist interest than we can possibly imagine at this time, and this is not prophesying anything either. If it can be done in England, and it has been, it certainly can be accomplished in America, with all its wealth and daily growing taste for the beautiful creations of nature. Only show the people how to grow roses in their gardens and tens of thousands of them are ready to plant roses who now are only deterred because they do not know how to treat them. Look at the villa homes, the cottage homes—yes, and the grounds of the wealthy—throughout this entire continent, and in how few of them is cultivated the rose (or hardly any other flowers for that matter), except the very commonest; compare this with the homes in any European country, and the difference will be all the more apparent.

I think you will all agree with me that the American Carnation Society has done more for the advancement of the carnation during its existence than a whole century had done for it previously. Why should not the "Queen of Flowers" be equally advanced if well supported? Yes, and to a much greater degree, as the field for the rose has a very much wider scope than the carnation. The last three decades of the present century have seen immense improvement in the varieties of roses; that the improvement will continue there is not, I think, a shadow of doubt. Hence we may hope in the near future to see "Queen Rosa" in greater glory than ever before.

NOTES BY THE WAY.

OLEAN, N. Y.—Mrs. Fred. Johnson had a nice lot of Cattleya Trianæ in bloom at St. Valentine's Day; they all sold at a good figure.

ELMIRA, N. Y.—Outside the thermometer registered 10 below zero when I called on Grove P. Rawson, and with a drop in temperature of 50 degrees in 13 hours it was expected something would suffer, but one end of a violet house slightly touched by frost was the only damage done. These houses of Marie Louise are a sight to behold; plants are crowded with fine blooms of intense color. A crop can now be figured on for Easter. Golden Gate is grown largely as a Summer rose, although it has proven a profitable all-season variety. The scarlet sport from Tidal Wave is a fine carnation highly satisfactory in every respect. Triumph is not the most graceful plant in appearance, but is a profitable variety to grow. Mr. Rawson considers it his best pink. The thorough reports of the Carnation Society's meeting have been doubtless read with interest by the numberless readers of the EXCHANGE, among whom was our friend, who has been seriously sick, but who, I am happy to report, is improving rapidly.

At Hoffman Bros. I met the worthy secretary of the Elmira Horticultural Society, R. R. Stockdale, an enthusiast on gladioli. His description of a seedling from Shakespeare, with from 12 to 16 all outer petals a rosy pink, bespeaks a grand departure in this vari-colored and noble flower. As a result of the convention Messrs. Hoffman's grower has the seedling fever. Immediately upon his return he commenced manipulating, hoping to produce something to surpass anything seen at Buffalo.

BINGHAMTON, N. Y.—Mrs. Barnes reports a very fair season. She is just now a sufferer from la grippe, which we hope will soon loosen its hold. Veteran Anton F. Spofford is also under the weather; he has had quite a long spell of sickness. W. H. Graham reports a very busy time with funeral orders.

BRAMPTON, ONT.—Not to be outdone by our worthy President Wood, in the erection of lengthy houses, Harry Dale has prepared for two houses, each 880 feet long, and would even make them longer but the turnpike calls the limit; 35,000 square feet of glass has been purchased for these leviathans. Glass will be butted; nothing better, says Harry, for his purpose. There is room for eight more boilers; already there are 24; steam water tube, 15x360 feet, fed by an automatic stoker, which is the first of its kind I have seen used by the craft, and deserves a description of its working and as a labor-saving piece of machinery. Soft coal is used and is conveyed from a bin 240x22 feet in size, by means of a conveyor that places the fuel in small bins above each boiler, from which it is fed by an automatic stoker by means of a shute fed direct to the fires without the aid of a shovel. In this way, it is a comparatively easy matter for one man to keep everything in good shape. Arrangements are being perfected by which the ashes may be taken away without manual labor. In the handsome new office are plans for the new houses already mentioned, also for more similar to the two erected last Summer, 18x175 feet, open at gutter, for roses, the stock of which is as fine as ever.

In carnations Crane, Glacier and Bradt are among the winners. Propagating beds are filled with healthy young stock. A novel idea is a bed of sweet peas grown to single stem, sown in November in pots, planted out in an old smilax bed. A great crop of bloom is promised—buds are now appearing. While Marie Louise is in demand, Princess of Wales, being such a beautiful violet, has increased the call

Tubular Geranium Leaf.

for singles. I saw some grand beds of Marie Louise in the houses of Wm. Findley, who has also Scott carnation of exceeding beauty. This sterling variety is grown here to perfection.

TORONTO, ONT.—Visitors to the carnation show who viewed the houses of John H. Dunlop could not fail to be favorably struck with the splendid White Cloud and Bradt, particularly the latter —as fine stock as one could desire to see, grown inside all Summer, a bright, clear silvery white strain with faint markings —a new departure in this charming variety. Glacier is splendidly grown here. I noted some grand beds of rose Mrs. Morgan and Mme. Cusin, on north benches, in houses built short-span to south, and was informed they have done well all Winter—sold well—in fact, could sell more, so a larger area will be planted next season probably in the four new houses under consideration, which are to be open at gutters. Lady Dorothea is increasing in popularity; it is a charming rose. Beauty are grand. Underneath the Beauty benches are mushrooms, some 500 feet being cut over, yielding a profitable crop. Grainger Bros. raise a crop in a similar manner, their returns, for 148 square feet, from January 6 to March 4, being 72 pounds—a profitable and interesting record. Mr. Dunlop thinks highly of the new plant box of Ewing & McNaughton for cuttings. The bulk of his carnations are grown in these. His pink seedling and Ontario are profitable sorts. It does not pay the grower to raise all varieties that produce big blooms and small crops. One of the sights is a side bench of Allen's Defiance mignonette; a selected strain—the finest thing I have yet seen. Some supposedly select Machet in the same house is as a weed in comparison. Double violets are fine, but Princess of Wales is very popular; in fact, it is the first single that has attracted any notice among the lovers of violets. Young stocks are in first-class condition, some 60,000 roses alone being ready to pot off. W. M.

Chicago.—The bowling tournament at Kinsley's, in spite of the heavy snowstorm, was well attended, the ladies present pronouncing it a grand success. In fact, the bowling club is so well pleased that they are making arrangements to repeat the affair, obtaining a still larger place and not less than six alleys to play on, with an invitation to the St. Louis team to join them.

As will be seen by the scores below the wholesalers were too much for the retailers, and the married for the single ladies. Besides the regular bowlers a scratch game between eight others present was played, and a sweepstake game gotten up by the wholesalers and retailers and the ladies—Mrs. Winterson and Ed. Winterson raking off the pots respectively.

St. Louis.—A heavy rainstorm accounts for the small attendance at the alleys on March 5. A challenge has just been received by J. J. Beneke from A. Henderson, secretary of the Chicago Bowling Club, inviting the St. Louis bowlers to visit Chicago in the near future, to roll a few games. The matter will be taken up at the next meeting of our bowling club and acted upon, with the probabilities of challenge being accepted.

A Tubular Geranium Leaf.

I send you a curiously formed geranium leaf, of the variety Mrs. E. G. Hill. Its peculiarity struck me so that I thought it might be of interest to your readers, and to the trade generally.

JOHN F. RUPP.

Shiremanstown, Pa.

[The leaf is trumpet-shaped; something which occasionally happens, and is supposed to be due to an abnormal growth of the marginal cells; the leaf in question showing that that of the inner cells had been somehow arrested in its development.—ED.]

New York.

Market Report.

The market, so far as cut flowers are concerned, has been in a very unsatisfactory condition the past week. Despite the fact that shipments are not large, and pleasant weather has been the rule, there is a dragginess in the business that makes itself felt in a manner that is most provoking to the dealer, who has his counters full of choice stock and cannot dispose of it, except at prices made low enough so that store men will buy on speculation.

Speaking about prices, it is the unanimous opinion of dealers that there are no fixed figures; it is a question of how much can be got. We hear of special American Beauty being offered at 50c. each, but they can be had at from 35c. to 40c.; and they don't all clear out at these prices. For Bride and Bridesmaid roses $10 per 100 is asked for specials, and they move very slow. Contrary to what has been the rule for some time, the cheap grades are meeting with a better demand than those of higher quality; this is no doubt brought about by the weather being so mild that the street peddler can ply his vocation from morn till night.

Excepting for a slight drop on fancy blooms, prices of carnations remain the same as last quoted.

Violets are mostly of an inferior quality, and although from 25c. to 75c. per 100 is the asking price, they hang fire long, and many are sold off in job lots at any old price.

Lilies are quite plentiful and so far have brought fair values; the best realize $1.50 per dozen, and it is found much easier to sell them than the poorer blooms at $1.

Sweet peas and lilac are finding very little favor with buyers these days; the season when these flowers are in demand is a very short one indeed.

Smilax is still selling fairly well, but maidenhair fern has become more plentiful and the price has dropped materially.

E. C. Horan is receiving some choice moss roses.

J. K. Allen is handling the first Jacq. roses of the season.

Ghormley & Perkins are making elaborate improvements in their newly acquired 28th street store. Mr. Ghormley has not been identified with the trade before, but J. A. Perkins is well known among flower buyers, having conducted a store in 29th street for some time. American Beauty is one of the firm's specialties, and the stock handled is of the very best quality. A full line of general seasonable material is carried. No expense has been spared in the fitting up of the store, and the new firm will no doubt command a fair share of the business.

John Young is receiving shipments of choice cattleyas.

Traendly & Schenck were the first to receive Bruaner.

Thos. Young, Jr., is showing fine gardenias.

Cusin roses can always be seen at Julius Lang's store in 30th street.

Young & Nugent handle a few special Bridesmaid that bring a fancy price. These are grown on solid beds; the plants are several years old, and the blooms have stems three feet in length.

Among the Retailers.

Business is somewhat quiet at present, but great efforts are made in keeping up fine window displays. Spring plants are the principal features in many of the large stores, and the old-fashioned cowslip and polyanthus are to be seen in some of the windows. Crepe paper is being used extensively for covering flower pots, and it is a question with some store-men whether the employment of the paper so much at this time does not tend to make it obnoxious to many customers by the time Easter arrives.

News.

From appearances, to date, it would seem that Bermuda longiflorum lilies are little better than the Harrisii from the same locality. Some growers have found that 50 per cent. of the former have had to be thrown away on account of the disease.

A meeting of the New York Market Florists' Association will be held in the Clinton restaurant, adjoining the Clinton Market, next Thursday, the 15th inst., at 7:30 p. m. Every member is particularly requested to attend, as the season for opening the market is almost here.

Anton Schultheis, of College Point, L. I., is using electric light in his greenhouses with a view to hastening the flowers.

C. W. Ward, of Queens, N. Y., delivers a lecture to-day, Saturday, before the Massachusetts Horticultural Society, on the subject of "Carnations and Their Development."

At the Florists' Club meeting, on Monday evening next, several important matters relative to the S. A. F. Convention will come up for discussion. A large attendance of the members is requested.

The plant auction Spring season will open Tuesday, the 13th inst. Sales of imported shrubs, roses, etc., will take place at Wm. Elliott & Son's, Dey street, and Cleary & Co.'s, Vesey street.

Cleveland.

Rough Weather.

The severe storm of last week was pronounced by many old settlers to be the worst ever experienced in this part of the country. The heavy rain mentioned in my former letter turned into a driving sleet storm, forming a heavy coating of ice on everything that was exposed, doing damage that is almost incalculable. For two days after the storm business in all lines was practically at a standstill. Telegraph and telephone service was so badly crippled that it will be several weeks before the damage can be repaired. In spite of the severity of the storm, the many greenhouse establishments in this vicinity were but little damaged, and so far as the writer has been able to learn, none of the growers sustained any serious loss, but it would be a hard matter to estimate the large amount of damage done to trees and shrubs in the city parks and boulevards.

Lent Affects Trade.

For the first week in Lent a general depression in the floral business is quite noticeable, and all of our florists report a decided falling off in trade, but taking all things into consideration, a considerable amount of stock moved at much the same prices as before; but the wholesale market shows a tendency to weaken a little. Choice stock is offered freely and there is no shortage in any kind of flowers. Bulb stock is becoming plentiful, and on account of the limited demand for tulips, daffodils and hyacinths large quantities are on hand; $2 to $3 are the present rates obtaining for the former two varieties. The sale on tulips and narcissi, in flats, is brisk, and growers find no difficulty in placing their stock, when offered in this shape, if the flowers are choice and of desirable color, at $3 and $4 per 100 blooms.

Rose prices remain at $3 to $8, according to grade. Beauty is reported somewhat lower; $5 is the outside figure now paid for best blooms. Violets are in abundance; local growers quote these at 50c. per 100 for single, 75c. for double. Carnations bring $1.50 to $2.50 for ordinary, and $3 to $5 for extras and fancy. Harrisii lilies remain at the same figures as formerly quoted—$1.25 and $1.50 per dozen.

At the Market.

Last week was a very quiet one for stall keepers at the Sheriff Street Market, and sales were reported slow until Saturday. A slight moderation in the weather on that day stimulated trade at this place a little, and large stocks of plants that had accumulated during the early part of the week found an outlet, and moved at fair prices.

Notes.

Will Rock, formerly of this city, but who is at present in the florist business in Kansas City, was called to Cleveland last week by the death of Florence Rock, his sister. Miss Rock was a young woman, 24 years of age; she was a niece of J. M. Gasser and leaves a host of friends to mourn her loss. Her death was caused by typhoid fever.

E. A. Fetters, of Smith & Fetters, left the city, Wednesday, for a week's visit at Detroit, his former home.

B. Eschner, of M. Rice & Co., Philadelphia, was a recent visitor.

G. A. T.

PELARGONIUMS

in bud; forty of the choicest varieties, many newly imported.

Stationery for Florists.

Every florist in the land should have a complete supply of printed matter wherewith to conduct his business in befitting style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

$5.00 Combination offer includes....

250 Noteheads, 5⅛x8¼ ins.
250 Envelopes, size 6¾.
250 Billheads, 7 ins. wide, 5⅝ ins. deep.
250 Business Cards, 2¾x4¼ ins.
250 Tags, size 2⅛x5¼ ins.

Cash with order. Delivered F. O. B., N. Y.

$10.00 Combination offer includes....

500 Noteheads, 5⅛x8¼ ins.
500 Envelopes, size 6¾.
500 Billheads, 7 ins. wide, 5⅝ ins. deep.
500 Monthly Statements, 5⅛x8¼ ins.
500 Business Cards, 2¾x4¼ ins.
500 Tags, 2⅛x5¼ ins.
One Day Book. } If these are not wanted
One Ledger. } subtract $1.50.

Cash with order. Delivered F. O. B., N. Y.

PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article wanted.

Noteheads will be furnished in smooth writing paper with ruled lines. Linen paper, ruled or unruled, can be had instead if so ordered.

Envelopes are full commercial size and of good quality.

Billheads will be furnished as above, but size 8½ ins. wide and 4¾ ins. deep will be substituted when so ordered.

Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 200 accounts.

Special designs, trade marks, etc., engraved to order. A rose, violet, or other flower can be printed on your letterheads and billheads, plain or in color, to order.

The quality of all the above work is guaranteed.

We can forward any of these combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.

Address all orders to

Carnation Show at Boston.

The fifth annual trade exhibition of carnations and novelties, given by the Boston Co-Operative Flower Growers' Association, was held at the Flower Market on Saturday, March 3. The committee in charge, comprising Wm. Nicholson, W. C. Stickel, John Walsh and W. S. Phelps, Jr., were greatly hampered by the late arrival of quite a few of the newer carnations, which were anxiously looked for by the many visitors. The snowstorm throughout New York, Pennsylvania and farther West, not only delayed the exhibits but many of them on arrival were in too poor condition to stage. The boxes from R. Witterstaetter, Sedamsville, O., on the way since Thursday morning, did not reach Boston until late Saturday afternoon, and the flowers were in no condition for exhibiting. The boxes contained blooms of Enquirer, Estelle, Elinora and seedling No. 550 A. The box of Ethel Crocker, from Robert Craig, Philadelphia, arrived Friday afternoon, but the flowers were all closed up and not fit to stage. The boxes of The Marquis, from L. E. Marquisee, Syracuse, N. Y., did not arrive until quite late Saturday afternoon; but through the courtesy of the committee the judging was properly postponed in order to enable exhibitors from a distance, whose exhibits were received late, though no fault of theirs, an even chance in competition for the certificates.

The Marquis was the chief attraction, and it certainly made a fine appearance. L. E. Marquisee was awarded three certificates for this fine variety as follows: One for best vase of carnations in the show; one for the most decided carnation novelty not yet disseminated, and one for the best light pink carnation (lighter in color than Wm. Scott).

The Cottage Gardens, Queens, N. Y., made a nice display of the following named varieties: General Gomez, General Maceo, G. H. Crane and Mrs. Geo. M. Bradt.

Chris. Besold, Mineola, L. I., also had a good exhibit of new varieties, some of rather peculiar shades, among them being Admiral Cervera (in true Spanish colors)—a good yellow variegated variety with heavy red pencilings. Goethe, a light pink variety shading to nearly white on the outer petals; Eunice, a bright cerise color, and Roslyn.

Among the other kinds staged were a handsome vase of Genevieve Lord, from H. Weber & Sons, Oakland, Md., and fine vase of Mrs. Bertram Lippincott, from John Kuhn, Olney, Pa., which showed up very well. Both of these varieties drew forth expressions of praise.

Wm. Nicholson, Framingham, Mass., showed a fine vase of mixed carnations of exceptional size and a finely grown lot of John N May's red seedling. He also had a few white Mrs. Bradt.

M. A. Patten, Tewkesbury, Mass., exhibited a fine vase of General Gomez.

Donald Carmichael, Wellesley, had on exhibition his two seedlings of 1896—Eleanor Ames, a dark pink, and May Whitney, a white variety, both of which showed up well.

Wm. Sim, Cliftondale, showed a fine vase of Eldorado and two of his seedlings No. 1, of the Scott shade of pink, but a much fuller flower, and a No. 25, a variegated variety, white with pink pencilings. Mr. Sim also had some good Princess of Wales violets.

Thos. Capers, Wellesley Hills, demonstrated that Scott can still be grown of excellent quality, his vase of that variety being the best seen here in some time. He also showed a white seedling, Conquest; a handsome flower and very fragrant, but much too heavy for its stem.

J. A. Macrae, Providence, R. I., staged a white sport from Eldorado, the flower being of about the same form and the pencillings similar to those of the parent.

Fred. King, Providence, R. I., exhibited a vase of the handsome red variety, Fred. King, and A. Christensen, Stoneham, a vase of Mrs. Fisher.

J. L. Dillon, Bloomsburg, Pa., had a fine white variety in Queen Louise.

Among the novelties outside of carnations J. W. Howard, Somerville, staged a vase each of Bride and Bridesmaid, and Mrs. P. Morgan roses of superb quality. Anderson & Williams, Clematis Brook, a vase of good Bridesmaid; E. N. Pierce & Sons, Waverly, a fine lot of Boston Market mignonette, together with well-grown azaleas and lily plants in all stages of development. Chas. Evans, Watertown, also had mignonette of good quality.

Lady Hume Campbell violets were finely shown by H. H. Southworth, Stoughton, and S. J. Goddard, Framingham. W. L. Minor, Brockton, had a magnificent bunch of his Imperial violets, and S. J. Goddard and Frank White, Holbrook, nice vases of antirrhinum. Antoine Lenthy, of Roslindale, made a nice display of palms, ferns, etc., and Dan'l Iliffe a display of modern greenhouse fittings.

The judges, Messrs. Wm. Nicholson, M. A. Patten and W. S. Phleps, Jr., made the following awards, a full list of which is given, except those already noted in the case of L. E. Marquisee, for The Marquis.

Certificates were given for best vase white carnations, John L. Dillon, Bloomsburg, Pa., with Queen Louise.

Best vase red, Cottage Gardens, Queens, L. I., with G. H. Crane.

Best vase dark pink (darker in color than Wm. Scott), Donald Carmichael, Wellesley, with Eleanor Ames.

Best vase crimson, M. A. Patten, Tewkesbury, with General Gomez.

Best vase variegated, Cottage Gardens, Queens, L. I., with Mrs. G. M. Bradt.

Best vase yellow, Wm. Sim, Cliftondale, for Eldorado.

For best cut flower novelties, other than carnations, E. N. Peirce & Sons, Waverley, for Boston Market mignonette; J. W. Howard, Somerville, for Bridesmaid roses; William Sim, Cliftondale, for single violet, Princesse de Galles; W. L. Minor, Brockton, for double violet Imperial.

Honorable mention was awarded to H. Weber & Sons, Oakland, Md., for Genevieve Lord; John Kuhn, Olney, Pa., for Mrs. Bertram Lippincott; Thos. Capers, Wellesley Hills, for exceptionally well grown William Scott; William Sim, Cliftondale, for seedling No. 1; Chris. Besold, Mineola, L. I., for seedling carnation Goethe; Fred King, Providence, R. I., for Fred. King; J. A. Macrae, Providence, R. I., for sport from Eldorado; Wm. Nicholson, Framingham, and M. A. Patten, Lowell, for displays of carnations; S. J. Goddard, Framingham, and Frank T. White, Holbrook, for antirrhinum; Wm. Capstick, Auburndale, for sweet peas; Dan'l Iliffe, Melrose, for greenhouse fittings, and Antoine Lenthy, Roslindale, for palms, ferns, etc.

F. J. NORTON.

Carnation Leaves Affected with Fusarium Leaf Spot.

Scales.

Scale is a horticultural insect that often needs doctoring, and 'tis no wonder that when novelties and new varieties are scaled a diagnosis and council of plant pathologists is a *dernier resort*. Really you cannot determine the usefulness of a novelty by mere arithmetic, and when it comes to judging the intrinsic merit and commercial value of n variety experience alone will present growing facts.

No scale of points can be evolved that will pre-destinate the fate of a novelty. And what is the scale of judging by points but the perspective of comparative analogy! It actually does not prove anything. You simply pass an opinion of what is before you—presumably the highest grade of its cut blooms, as applied to carnations. Its calyx will be intact as seen on exhibition, but a large proportion as growing may "bust their biler." If a "scale" was reliable, no blunders like Empress and Evelina would be recorded. Size may be satisfactory, but then its calyx may be stuffed, as a turkey's crop is crammed just before Thanksgiving. As to color, you can more easily judge perhaps, and yet both color and form are simply matters of individual taste. Schuyler Matthews speaks of "the glowing tones of magentas." Now both the Lawson and Enquirer are deemed "off shades" by many. Neither the fragrance nor keeping qualities implied by substance can be practically judged at exhibitions. Any scale of judging will be both elusive and delusive as an infallible rule and guide. Therefore don't lay too much stress on any scheme that must of necessity employ more or less guesswork for its substantiation.

GROVE P. RAWSON.

Points in Winter Potting.

In one of the large Western greenhouses, making a specialty of plants for the mail and express trade, considerable loss was experienced among newly potted palms, no one knew why. Where a large number of plants, particularly rooted cuttings, were potted off the loss was invariably greatest among the ones first potted and gradually diminished toward the last, where, as a rule, the loss was trifling. When only a few plants were freshly potted or shifted, marked losses were not noticed. My observations, which continued over a period of several months, led to nothing at the time, but I have recently stumbled, I may say, upon the causes of failure.

Where newly potted cuttings were the sufferers I at first surmised that they were poorly rooted, but this was not the case because the propagator was very particular, as I proved to my satisfaction, to have only well-rooted cuttings sent to the potting bench. Then I thought that the man that did the potting was careless and broke the roots. This was not the case, because the loss was fully as great when I did the work myself. The quality of the soil was tested to no purpose; it was good. In like manner other possible causes were investigated with unsatisfactory results.

In that establishment everything was crowded and many things were not properly cared for. Owing to this bad management and want of proper space, all potting soil, sand, etc., had to be stored out-of-doors, and when needed, they had to be dug out from under the snow and their crust of frozen surface. The unfrozen, and often frozen, soil was then wheeled in and screened upon the potting-room floor. Potting would commence as soon as sufficient soil had been screened and prepared to last for the day or for the quantity of plants to be potted. This was the cause of the trouble; the soil was cold, very cold. Often the men at the potting bench would stop to warm their hands at the steam pipes. When this cold soil was forced into contact with the tender roots fresh from the propagating bed it chilled them to such a degree as to bring their vital forces to a standstill, and before they could recover the soil would have become sour and the surface covered with the green algæ that every florist knows will thrive where the roots are not active. The only wonder in the matter is that so many lived after such treatment.

It is of the utmost importance that soil for potting plants, especially rooted cuttings, be warmed to nearly the temperature of the air of the potting room, or if that be a chilly place, warm enough to be handled without discomfort to the men working with it. When the storage of the soil cannot be arranged where the temperature is moderate, the soil needed for a day's potting should be hauled in from outside, at the latest on the evening before, and left in shallow piles during the night to become warmed. With soil of proper temperature, difficulties and losses should be greatly reduced, and only a normal or reasonable loss expected.

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best sell ing pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate no ice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a striking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

PRICE, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones."

Also Best NEW and STANDARD CHRYSANTHEMUMS.

Our Catalogue is now ready and will be sent to all who ask for it.

Ethel Crocker

Absolutely the best Pink CARNATION ever offered the Trade. . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞**PRICE LIST FOR STANDARD VARIETIES READY NOW.**

Erratum.

In advertisement of Harry A. Bunyard, 42 W. 28th St., New York, on page 217, last issue, read price of Manetti, $12.00 per 1000, not per 100.

A citizen of New Haven, Conn., who has just returned from a trip to Cuba, states that the growing of Easter lilies is becoming an important industry in the island; and that these bulbs are supplanting potatoes, formerly raised quite extensively by the Cuban farmers.

A Chance for the Young Man.

The competition announced in previous issues of the EXCHANGE closed, as stated, March 7. The various papers submitted are now in the hands of the judges, whose decision will be made known to our readers in an early number. Meantime we thank all the contestants who have entered.

The Question of Size.

"You have heard of a sensible proverb, no doubt,
Which observes, 'Many men, many minds;'
We have, most of us, met in our travels about
Funny fancies of numberless kinds.
But I never dispute what my neighbor may say;
Nor think it absurd or misplaced,
But mildly remark, in my own quiet way,
'It's purely a matter of taste.'"

—OLD SONG.

In these columns Mr. Gillett, of Cincinnati, recently made the following comments on the subject of size, as pertaining to the carnation: "I believe that the carnation has arrived at a size large enough, and that what the growers want, what the retailers want, and what the trade in general wants, is a fancy type of carnation that will produce two-thirds as many blooms as the ordinary commercial sorts, and that will sell for one-third more money. When this is done, the fancy carnation will be on a paying basis."

Here is a statement from a gentleman who is in close contact with the selling end of the carnation, and whose opinion is, no doubt, well grounded. It seems to us that it contains "food for thought," and is worthy of some consideration by all interested.

The question of size in any flower is, of course, largely "a matter of taste," and it is peculiar to observe the different values placed upon it, as a desirable quality of the carnation, and as forming a factor in the excellence of that flower, in this country and in England. Here we are apt to look upon it in the light of a *sine qua non* as an indication of the progress making in the carnation. This is how our English confrères view it: "Size, as a point of excellence, deserves the least consideration. Any limit between 2¼ inches as a minimum and 3½ inches as a maximum will be found to afford ample ground for admiration. In competition, *other points being equal*, of course, the larger size would win."

Those who favor a large flower in our American carnations advance the statement that an equal or better effect can be created with a less number of blooms; and as it is the effect produced or impression made thereby that constitutes the measure of beauty of the individual, the larger flower, from the florist's standpoint, is preferable. They add that Nature herself promulgates this doctrine of grossness, in that where she has endowed species of flowers with the restricted faculty of producing small blossoms, she sees to it that these are furnished in quantities in order to create impression. But as Nature has not granted to all mankind a similar individual "taste" in such matters, we have among us those who prefer, for instance, the bunch of violets to the single American Beauty rose or the 21-inch-in-circumference chrysanthemum, and so it goes.

Without wishing to be controversial, it would seem at first sight that, as there are different tastes in this as in everything else, no arbitrary standard should be placed on any attribute, the aim being more to cater to each individual predilection; and largely so to that one which the greater demand demonstrates as being the most pronounced—something that will assert itself in our every-day business relations with a purchasing public. Yet we cannot afford to set aside the artistic ideal which the cultivated taste has placed before us; that must ever remain. And while it may, perhaps, be unwise to condemn totally what the cultivated taste may consider a vulgar predilection, as the measuring of beauty "by the yard stick," it might be well to stop and consider how far we can safely go in our endeavor to pander to the latter, without reflecting on our own art or profession, or hurting our commercial interests even, for the contingency of removing, by increased size, the carnation from the class and position it now holds and placing it in greater competition with other flowers, must ever be borne in mind.

We may have arrived at that condition which our friends across the water style one of "super-excellence," and the same advice thereanent, as has been provided in the case of the English carnation grower, will not be out of place when applied to ourselves at this time. Here it is: "Day by day as the sands pass, that super-excellence is being surely, if slowly, unfolded to our gaze. Let us make sure of its form and feature, its every line, before we begin to discuss its parts. It is the mistake of many, perhaps of most florists, to think of excellence as embodied in some more or less gifted variety; and thus they flounder in a bog of error, forgetful that the ideal alone is permanent. But that ideal is no creature of the imagination. It rests upon immutable law, ever open to the reverent student and leading through every successive step to higher and nobler things. Classification has its useful place among flowers, beyond all doubt; but far more important to the florist is the cultivation of the artistic element. The more fully they realize the 'joy forever' involved in the 'thing of beauty,' the more they go to Nature and note her glories and simplicities, the more will they turn from dogma and ignorant formulas in which, as a rule, it revels. Form, with its infinite expression; color, with its glorious harmonies; contrast, in its masculine force; and combination, in its enchanting results—will be ever an informing study, always enlarging, never restricting; and minds so formed will not peddle as to a shade of color, the breadth or direction of a stripe, or as to varying form."

All very pretty, you will say, but hardly suited to this intensely practical age and generation, and less so to a body of men who grow the carnation from the bread and butter standpoint; yet it is worth reading, as showing how, in the exercise of our beautiful calling, we should hold as near to the innate attributes, constituting perfection, of those subjects of Nature, the care and development of which we have assumed as a trust.

Rose Society's Special Premiums.

Subjoined is a list of the special premiums to be offered at the exhibition of the American Rose Society, which occurs March 27-29 next, in the Eden Musee, 55 West 23d street, New York City. In addition to these, prizes and certificates for 162 classes are included in the schedule, which has now been distributed. John N. May, Summit, N. J., is exhibition manager, and all entries must be made at least 24 hours before the opening of the show. Leonard Barron, 136 Liberty street, New York, is secretary.

The Mason Cup, valued at $100, offered by Mrs. T. H. Mason, for the best display of roses, of any variety, in any shape or form, and containing not less than 100 nor more than 200 blooms.

The Stoeckel Cup, valued at $100, offered by Carl Stoeckel, Esq., for the best 36 plants of hardy garden roses, in pots, in not less than 12 varieties.

The Bliss Cup, value $50, offered by C. N. Bliss, Esq., Oceanic, N. J., best 50 blooms, any variety.

The Trevor Prize, offered by Mrs. John Trevor, for the best arranged vase of roses, not less than 100 blooms. (Exhibitors may provide their own vase.) One prize, $25.

The Joline Cup, offered by Mrs. A. H. Joline, for the best vase of La France roses, not less than 36 blooms. (To be shown in exhibitor's own vase.)

The Fitzgerald Prize, value, $10, offered by Mrs. Louis Fitzgerald, for best vase 36 roses of any one variety, not American Beauty.

The Sturges Medal, offered by Mrs. S. S. Sturges, for the best vase of Lamarck rose, silver medal.

The Thorley Cup, value $150, presented by C. Thorley, Esq., New York City, for the best display or collection of named roses, not less than 12 nor more than 50 blooms of any one variety, to be competed for at the March Show of the American Rose Society, and to be held in trust for one year by the party winning it, when it will again be offered in competition until won twice by any one exhibitor, when it becomes his absolute property.

The Siebrecht Cup, value $150, presented by Henry A. Siebrecht, Esq., New York City, for the best display of hybrid perpetual rose plants in bloom, grown in pots of not less than 8-inch size. Twenty-five varieties, not less than two plants of each. To be competed for at the March Show of the American Rose Society, and to be held in trust for one year by the party winning it, when it will again be offered in competition until won twice by any one exhibitor, when it becomes his absolute property.

The Wood Prizes, offered by E. M. Wood, Esq., for blooms of Marechal Niel rose; three prizes. For best 50 blooms, $30; for best 25 blooms, $15; for best 12 blooms, $5.

The Pierson Cup, value $50, offered by F. R. & P. M. Pierson, Scarborough, N. Y., for best 100 blooms red.

The Asmus Prizes, offered by E. G. Asmus, Esq., W. Hoboken, N. J., for best 50 blooms, American Beauty, with stems not to exceed 48 inches. First, $30; second, $20.

The Taylor Cup, value $25, offered by J. H. Taylor, Esq., Bayside, L. I., for best 25 blooms, Admiral Dewey.

The Hoffmeister Cup, value $5, offered by Hoffmeister Floral Co., Cincinnati, O., for best 25 blooms, Maid of Honor.

The American Rose Co.'s Cup, silver cup, offered by American Rose Co., Washington, D. C., for best 25 blooms, Golden Gate.

Best collections of cut roses, 36 blooms (commercial growers excluded), in not less than six varieties; two prizes offered by the New Jersey Floricultural Society. First prize, $10; second prize, $5.

Best 18 blooms of Bride, and 18 blooms of Bridesmaid roses, open to all, offered by the Morris County (N. J.) Gardeners and Florists' Club, $25.

The Hill Vase, a Rockwood vase, offered by E. G. Hill, Esq., Richmond, Ind., for the best collection of named roses.

Best two vases of Bride and Bridesmaid roses, not less than 25 blooms of each. (Private gardeners only.) Offered by the Lenox (Mass.) Horticultural Society. $10.

The Young Cup, value $50, offered by T. Young, Jr., New York City, for the best mantel decoration. Roses to be the only flowers used. (Entries in this class must be sent in by March 24.)

The Craig Cup, value $50, offered by Robert Craig, Esq., Philadelphia, Pa., for the best mirror decoration. (Entries in this class must be sent in by March 24.)

The New York Florists' Club Medals.—The gold and silver medals given by the New York Florists' Club are offered for the best 100 roses, in four varieties, from growers residing outside a radius of 150 miles from New York City, as measured by the distances shown on the railroad tables. First prize, gold medal; second prize, silver medal.

The Lincoln Co.'s Prize, presented by the Lincoln Co., Hartford, Conn, consisting of an enameled white and gold plant stand, will be awarded to the exhibitor having the finest roses in the show. Independent of any premium the same exhibitor may win in any class in which he enters.

If, in the opinion of the judges, any of the exhibits competing for the foregoing awards are not deemed sufficiently meritorious, the prizes will not be awarded, but will remain in the custody of the American Rose Society to be offered again at a subsequent show.

OBITUARY.

Robert C. Brown.

Robert C. Brown, the well-known nurseryman of Rochester, N. Y., died on February 27, after little more than a week's illness. Mr. Brown was one of the most highly respected citizens of Rochester. He was born in the eastern part of the city in 1864. Upon concluding grammar school he entered business. At the age of 20 years he formed a partnership with his brother, Charles J. Brown. The two started in the nursery business under the name of Brown Brothers. In 1890 the company was incorporated with Robert Brown as treasurer.

The development of the Canadian business of the firm took Mr. Brown to the Dominion for a great deal of his time. In the early nineties he made his residence for two or three years at Toronto. Here he made many friends with whom he kept in touch after his return to Rochester, through frequent visits. In 1895 Mr. Brown married Miss Helen May French. One of his greatest pleasures was the beautifying of his residence. On the lawn he planted many rare shrubs in the care of which he found the greatest delight.

Mr. Brown was the treasurer of the Herrick Seed Company and the Perry Nursery Company. He is survived by his wife and one daughter.

John G. Glen

John G. Glen, of the nursery firm of Glen Bros., Rochester, N. Y., died at Atlantic City, N. J., Tuesday, February 27. He had been in business in the Flour City since his fifteenth year. Three brothers survive him—Frank W. Glen, of Brooklyn; Alonzo P. Glen, of Medina, Ohio, and Gerrit S. Glen, of New York.

William D. Perry.

William D. Perry, a gardener at Brooklawn Park, New Bedford, Mass., died suddenly, February 26, aged 62 years. He belonged to Post 1, G. A. R., and leaves a widow and three children.

Socrates Lewis.

Socrates Lewis, a resident of Wellsville, Ohio, died Saturday, March 3, at the age of 88. He had been a resident of the town for 46 years, and for sometime followed the occupation of florist.

New Jersey Floricultural Society.

Mr. Samuel Henshaw, of the New York Botanical Gardens, gave an informal talk upon the flora of the West Indies on March 7, at the society's rooms in Orange. Mr. Henshaw's interest centered chiefly in Grenada or Trinidad, probably because his early associations were English, and while the science of botany has been carefully fostered in the possessions of Great Britain in the West Indies, it has been as persistently discouraged in her former possessions by Spain. Five years before Mr. Henshaw's visit, which took place a year ago, the botanical gardens were founded upon the island of Trinidad. The curator pointing to two magnificent palms which form the gateway to the approach, explained that five years before he had grown them in a thumb pots. Their diameter now is two feet six inches, as also a Eucalyptus globulus of splendid proportions, and an Acalypha tricolor measuring 18 feet in diameter, grown in the same manner from equally small beginnings. This will give an idea of tropical growth. The very weeds one treads upon are a revelation; Tradescantia tricolor and discolor and oxalis in quantity. At Port-au-Spain Mr. Henshaw counted six varieties; 21 varieties of begonias, but not one rex. Guava, bread fruit and pineapples abound. There are whole fields of Caladium esculentum, which are eaten very much as potatoes are here, but the speaker likened their flavor to Jerusalem artichoke and soap. The native laundress starches your shirt with maranta and returns it to you as stiff as a board.

Among water plants is Victoria Regia, which is a weed here. Of orchids the speaker met but few. The feature of the tropical mountain is the growth of palms to the very summit.

The difference in vegetation is strikingly apparent in the English and Spanish possessions, all the trees, save in inaccessible places, having been removed to make room for the growing of sugar in the former possessions of Spain. In Puerto Rico the tree-ferns are beautiful and fringe the banks of streams. Bananas have been cultivated so long as to have spread and are found wild. Tobacco is seen in every available spot, being grown even on the precipices. Sugar cane at present is a drug, due to the loss of the home market in Spain and the embarrassing tariff, and there is no application for it save to make rum. Coffee of fine quality is grown, but much goes to waste for want of a market. Latania, sensitive plant, ipomœa and thunbergia are as weeds. A fence warranted to be hogtight is made of euphorbia, the aloe being used for the same purpose; hedges of crotons, six feet high, beautify the landscape.

The public square is the best part of the towns of Puerto Rico; the climate is delightful—particularly at this season, it is a perpetual "midsummer night's dream." In a private garden Mr. Henshaw saw pineapples growing, of the Queen and Smooth Cayenne varieties. The Spaniards have exhausted the soil, and it will be long before Puerto Rico will compete with other tropical countries in growing food products, but its future to this country is as a Winter resort.

In order to interest the school children in floriculture, the society appointed a committee, consisting of J. B. Davis, John Hayes and J. C. Williams, to devise a plan for the gratuitous distribution of plants, these to form a feature of the society's Fall exhibition, when premiums will be offered. The committee reported favorably, and the distribution will take place in May. D.

Irondequoit, N. Y.

Several of William Raynor's greenhouses collapsed under the heavy weight of snow during the recent storm, doing considerable damage.

Philadelphia.

Lenten Season Affects the Market.

The cut flower market is now feeling the effect of the Lenten season. All kinds of flowers are selling slower, and considerable are now being carried over. In consequence prices are much easier than last week. White flowers continue in fair demand, on account of funeral work. So far the stores do not feel the Lenten season only in the case of decorative work. Transient trade has been very good the past week. Commission men say shipping trade has fallen off considerably, and if this continues a glut of most flowers will result.

Sales of flowering plants at retail have been very good. Azaleas have, so far, gone very well.

Among Growers.

Godfrey Aschmann is, as usual, growing a large quantity of Easter stock—much more than last year—and has his plants in good condition, and all about right as to time. He has two houses of azaleas, some 1,500 plants in all, of sizes 12 to 14 inches in diameter. It will be difficult to hold some varieties, but most of the plants are all right. Lilies are in fine shape, and the 7 to 9 size are well budded; the 5 to 7 size have fewer buds than last year. The plants also are not so true this season, many bulbs sold as Harrisii are turning out to be longiflorum. Spiræas are very good, and show plenty of flower. DAVID RUST.

Montreal.

Trade Notes.

With cheerful news from abroad trade during the past week has improved, but even now it might be a great deal better. Funeral work has been fairly plentiful.

With two of the largest establishments destroyed by frost and fire respectively, lately, it looks as if plants at Easter were going to be scarce.

A Record Storm.

The terrible storm of Thursday last, during which day the observatory here recorded a snowfall of 53 inches, with the wind blowing 60 miles an hour and the thermometer near the zero mark, played havoc with the greenhouses.

The roof of one of the big city conservatories was crushed in and many valuable plants frozen. Colin Campbell's smokestack was wrecked and much glass was broken. McKenna & Sons had several sash bars broken and much glass destroyed. The snow was packed to the depth of 12 feet on the sills of Bennett's ridge and furrow houses, where they connect with the potting shed. A lot of broken glass was the extent of the damage; in fact, no place escaped serious injury.

Fires.

During the morning of the 5th inst. the splendid greenhouse establishment of S. S. Bain, at Verdem, was totally destroyed by fire, together with all contents, with the exception of one small detached house planted with carnations. It is understood that his new dwelling house, standing at a distance from the greenhouse, also escaped. The fire originated in one of the boiler rooms and had made considerable headway before it was discovered.

Notes.

Jos. Bennett has a very fine lot of Bougainvillea glabra Sanderiana in flower just now and coming in for Easter. They are from cuttings struck last March, planted out in Summer, lifted in the Fall, and planted two or three plants together, in 5 and 6-inch pots. Many were sold at Christmas, but the plants in flower at present, being cooler grown, are much finer in every way. They are 6 to 9 inches in height, 1 to 2 feet in diameter, and a mass of flowers. No tying, staking or feeding has been resorted to, the straggling shoots only being cut back before the plants were started.

A small lot of cinerarias here are also of extra quality. They are an entirely distinct strain to any seen here before—very dwarf, with foliage completely covering the pots; spendid heads of flowers, the whites especially deserving mention. In 5-inch pots and pans they retail readily at $2 to $3 each. Messrs. Ewing, of this city, supplied the seed.

Club.

At the meeting on Monday night McHugh, the cyclamen specialist, will read a paper on cyclamen.

(56) **Disease on Carnations and Chrysanthemums.**—I take the liberty to ask you to examine the inclosed leaves. This disease is prevalent in our neighborhood, and some of the gardeners say there is no cure for it. Kindly let me know what the disease is and if you know of any remedy. I have been growing fine carnations and chrysanthemums for the last 18 years and never had this disease before.—FAR ROCKAWAY.

—The whitish discoloration on the surface of the carnation leaves is due to the work of the red spider, and some of the small circular translucent dots are also caused by spider punctures. The larger circular translucent spots in the leaf are produced by punctures of aphides. It is the disease commonly known as bacteriosis, but later investigations have shown that it is not due to bacteria but to insects. The treatment, therefore, is to keep the plants free from aphides by occasional light fumigations with tobacco, or, preferably, with some of the purer forms of nicotine. The spider, of course, can be kept down only by syringing the plants with water under a pressure of 25 to 30 pounds. This should be done only on clear days of course, and if carefully attended to spider can be kept down. This treatment will also keep off thrips and reduce to some extent the number of aphides, although, as before stated, fumigation must be depended upon to destroy them. In the hands of some growers light fumigations with hydrocyanic acid gas have proved effective, but we can scarcely recommend the use of the gas on carnations, at present, except to those who have experimented with it.

The chrysanthemum leaves have also been injured by some surface working insect or mite—possibly red spider. The larger brown spots are produced by a fungus. For the surface-working insect or mites syringing the plants, as suggested for carnations, is the best remedy to apply, but great care must be taken that the syringing is done so that the plants may dry off by night, and plenty of air must be given to the foliage. The light and air will also prevent excessive development of spot in most cases. Fungicides like Bordeaux mixture can be used for prevention of spot, but usually it is not necessary to resort to this means if careful attention be given to affording the plants plenty of light and air and keeping them in good, healthy condition.

ALBERT F. WOODS.
Assistant Chief of Division of Vegetable Pathology and Physiology.

(57) **Temperature in Rose Houses.**—We would like to know if it is a custom to allow the temperature to run anywhere from 60 to 100 degrees in rose houses, and not give air, regardless of temperature, until after the sun shows on the houses? If such should be the case would it not produce very weak flowers and stems?

Should Easter lilies and Rambler roses be kept in very low temperature now? They are showing bud.—LAKEVIEW, KY.

—To allow the thermometer to register 100 degrees before putting on some air is certainly wrong and would result in a weak growth. When a house becomes too warm air should be given whether the sun is shining on the glass or not, or for that matter whether it is day time or night time.

The Easter lilies if just showing bud will have to be kept in a warm house to be in on time. The roses will require to be kept cool and held back, as the buds develop, ordinarily, in 28 days.

(58) **Phormium Tenax variegatum.**—Subscriber.—To work up a stock of the variegated Phormium tenax there is no better or cheaper way than to divide the crowns into single pieces before growth commences; that is supposing one has a number of old plants with plenty of crowns. If, however, there are no old plants at command seed should be procured and sown at once. Sow in a pan, place in a moderately warm house; pot when large enough and grow along in the warmest house, shifting into larger pots as required, using a light, rich soil with plenty of sand in it.

(59) **Size of Greenhouse.**—I want to build greenhouses enough to be able to cut 600 to 1,000 carnations blooms weekly. Would you kindly tell me, through your valuable paper, about the size of greenhouse or houses required? Also about what number of plants, as I would like to raise my own, in such varieties as Scott, Daybreak and McGowan. —A. J. P.

—To insure the cutting of from 600 to 1,000 flowers per week it would be necessary to plant 1,000 plants, providing that number of flowers is wanted from the beginning of the season, say in November. About 1,000 feet of bench space would be required; this could be obtained in one house measuring 100 feet long by 14 feet wide, or a house 50 feet long by 28 feet wide.

(60) **Various Rose Inquiries.**—I have two greenhouses filled with roses. The houses run east and west; they are ventilated on the south side. Just at this season the sun is strong, the atmosphere is cool, the wind is blowing half a gale from the south, coming in direct contact with the ventilating sash. The thermometer registers 100 degrees in the rose house. Outside in the shade it registers 12 degrees of frost with a heavy wind as above stated. If I raise the ventilators the cold air strikes the roses badly; would it not subject them to mildew? What temperature would you recommend during the day; also night? Should roses be sprinkled every day? How often should the soil on the benches be watered?

I am thinking of planting a house of Beauty. Please advise me the best time to plant them. What distance would you set them apart? Do the benches require drainage? What depth of soil is required, and in preparing the soil for planting how much manure should be added? Please advise me as to their general treatment throughout the season after planted.

(61) **Carnations.**—I have two carnation houses; they look fairly well. Perhaps I keep them a little too dry. I water them once a week in fine weather, and during the Winter season every two weeks. What temperature do they require at night?—SUBSCRIBER.

—To have the cold wind coming in direct contact with the rose foliage will surely induce mildew and must be avoided if possible. The house in question must be air tight, or else the pipes are kept very hot, in order to have a temperature of 100 degrees when a strong, cold wind is blowing—even though the sun is shining. The only way out of the difficulty on such a day would be to let the pipes cool off and give the merest crack of air; the ventilators can be opened an inch or two without letting in much of the cold. The temperature for roses should be 58 degrees at night, with a raise of 10 or 12 degrees through the day time; though if it goes a few degrees higher in the middle of the day, should the sun be powerful, no ill effects will result. Roses should be syringed every day, providing they are growing right along and the weather is clear; in dull, cloudy weather syringing is not necessary, and if done regularly during such weather it would be more harmful than beneficial. Watering cannot be done methodically; the time to water is when the plants need it, and this can only be learned by experience.

Plant the American Beauty in May; have the boards of the bench bottom one inch apart. Place the roughest of the soil in the bottom and the drainage is then provided for. Plant in rows across the bed, 16 or 18 inches apart, with 20 inches between the rows. Five inches of soil will be sufficient and one-fifth of well-rotted manure should be used. Treat the Beauty similar to other rose plants; maintain a night temperature of 60 degrees; keep them tied up so that the flower stems will be straight. Syringe only on such days in which the foliage will become dry again before sundown, as having moisture on the leaves over night is bad for them in many ways.

—The carnations, like the roses, have to be watered when they are dry. Once a week would hardly be enough. When the soil is crumbly on the surface it is a fair indication that water is needed. A little patient observation along the line of watering will soon show one how and when it should be done. The temperature for carnations should be about 48 degrees at night, and 10 or 12 degrees higher through the day.

New Begonia, Caledonia, White Variety of B. Gloire de Lorraine.
Reproduced from a colored Plate, furnished by the introducer, John Forbes, Hawick, Scotland.

New Begonia Caledonia.

Our illustration is reproduced from a colored plate of this novelty, sent us by the introducer, John Forbes, nurseryman, Hawick, Scotland, who furnishes also the following particulars regarding the variety: On its introduction Begonia Gloire de Lorraine carried every one captive at first sight, and as it became better known has steadily increased in popularity, until now it forms for six or eight months of the year the leading feature in every well-appointed collection of Winter-flowering plants. "If only it were white," has been the one regret, and ever since the introduction of Gloire de Lorraine it has been the highest ambition and chief aim of every hybridist and vendor of new plants to produce a pure white form. Caledoula has decidedly achieved that distinction; it is simply a pure ivory-white Gloire de Lorraine, possessing every trait of that popular variety to the most minute degree. It has the same beautiful foliage, the same habit, the same height, the same marvellous floriferousness, the same persistency of petal, the same continuity of flowering, while it has proved itself of even more vigorous and robust growth. In the matter of culture it requires precisely the same treatment as Gloire de Lorraine. As a plain matter of fact Caledonia is simply a pure ivory-white variety of Gloire de Lorraine, which constitutes it not only a charmingly fit companion to that inestimable variety, but enhances its character and value as a decorative plant beyond comparison or description.

A Visit to Jamestown, N. Y.

The establishment of the Lakeview Rose Gardens has added additional interest to this busy town. A. N. Broadhead, the generous and energetic founder, saw that the building of a plant, such as is under construction, would be an added attraction to the charming lake region of Chautauqua, of which Jamestown is the head. While yet in its infancy, so to speak, as the plant is but one-half the size it is ultimately proposed to make it, Chas. H. Roney, the genial manager, has given an illustration of what can be accomplished in so short a space of time. Next year, at which time it is hoped the members of the craft will decide to hold the annual convention at this charming resort, a model establishment will be seen. I am inclined to the opinion that the less said at present about this plant will create a greater desire to see it for one's self, so I will not go into much detail. Several houses are ranged in fours, open at gutter, 33x240 feet; smilax house, 240x21 feet; packing room, 40x 23 feet; additional floor space, 66x33 feet; a double-deck vault below ground; roof houses for raising young stocks; a mammoth chimney stack—everything complete. A few notes made in passing through: Dewey may be a good rose for Summer but is not doing well here as a Winter sort. Golden Gate and Mme. Chatenay are thought well of, and will have a greater area another season. Maid of Honor is a failure. The eel worm has done damage in one bed, which was immediately cleaned out. Lilies will be placed in the space vacated—a grand lot, with very little trace of disease in them. Mr. Roney plants the bulbs, covers pots with ashes, bringing them in before the bulb has fairly started, but when pots are filled with roots. Mr. Palmer, of Buffalo, has a different method, and is highly successful, bringing in Harrisii from November 1 until after Easter. He grows 5 to 7's only, which size is reported to contain most disease, but he is not troubled with it to any extent. The bulb is potted and pots placed on boards, then excelsior put on top, which is kept damp. Mr. Palmer is one of the very few successful forcers of Harrisii in continuous crop.

Returning to Jamestown and carnations, all the newer kinds are being tried. Bradt is behaving splendidly; White Cloud is now at its best. Cerise Queen and Crane are largely grown. The propagating house presents a healthy appearance, some 50,000 each of roses and carnations being prepared to ship. Mr. Broadhead keeps four windows in different parts of the town filled with cut flowers and flowering plants, which must enhance the value of flowers to the thousands of Summer visitors. His principal store, which is in charge of Mr. Thrall, is a dream of beauty. W. M.

HINTS and HELPS.

South Side Ivies.—Ampelopsis Veitchii and A. Roylei differ from each other only in that the former is the smallest of the two in leaf and fruit. A. Roylei is, perhaps, the more rapid grower. They are both ideal vines for covering brick walls, not only for ornamental appearance, but what is of more importance, in warding off rain from the walls. It may be noticed that the foliage is imbricated; that is, the lowest leaves, the blades of which hang almost perpendicularly, are covered for nearly half of their length from the base by the ends of the leaves immediately above. Thus the water drips from one to the other instead of being absorbed by the bricks or stones. Another good reason why ivy should be planted much more freely is that it keeps the sun from the walls, making quite an appreciable difference in the temperature of the interior of the dwelling. Seeds of these vines which were sown in November should be looked to now and then with the watering pot and weeds removed, they will soon begin to show signs of vegetating.

The Abyssinian Banana.—Seedlings of this elegant foliage plant which have germinated in sand should be transferred to pots just as soon as they will stand the operation. If allowed to remain in the sand until the first two or three leaves are formed the roots get very thin and thread-like for want of proper nourishment. Last year's seedlings, which were kept over in small pots will, by this time, be in a somewhat dilapidated condition for want of food. The discolored leaves should be removed and the plants given a shift, using soil well enriched with decayed manure so as to have them in good shape by planting-out time.

Justicia Calytricha, or, as it is given in Nicholson, Schaueria calycotricha, is one of the old-time greenhouse plants which make a good display of bloom during the Winter months. It is not a free-growing plant by any means, but each shoot can be depended upon to give a large panicle of bright yellow flowers. As the plants will be done flowering shortly, they should be cut over, just beneath the flower, to promote growth, which, when developed, should be secured for cuttings, as young plants always make the finest specimens. The cuttings should be rooted singly in small pots so as not to disturb the roots in potting off. Mealy bug is the great enemy of this plant; but it can be syringed off the twigs and leaves as it makes its appearance.

Raising Carnations from Seed.—The apparently rapid development of the carnation from a comparatively small flower a few years ago to its present dimensions is due as much as anything to a greater knowledge of its cultural requirements. Varieties will run out, but I think there can be no doubt that if we had some of the old varieties in the same state of vigor as when introduced, and subjected to the methods of cultivation of to-day, there would be some surprises. There is no doubt that when the finest varieties of the present day are grown in the old-time greenhouses, with small panes of glass and three times the woodwork necessary, the resulting flowers are far from being first-class. Growers, especially those who do not go into the business extensively, should give some attention to the raising of new varieties. Take half-a-dozen kinds, representing so many colors, which are suited to the soil used; set apart a few flowers of each and pollinate them, using pollen from different individuals of the same variety, and the chances are if this practice were carried out extensively high-priced novelties would be less heard of.

Musa superba, one of the finest of the ornamental leaved bananas for subtropical planting, has been in a dormant condition for some months. Some of the soil should be removed from the roots, the plants repotted and put in the warmest house to develop some leaves before planting out. If put out in a dormant state the Summer is well advanced before much of a display is made.

Chrysanthemum cuttings for specimen plants, that is, the exhibition specimens, will be rooted and potted off some time ago; but there is time enough yet for cuttings to provide plants which are to make their growth in the open ground and to be lifted and potted in the Fall. Wonderfully good plants are produced in this way, and if proper care is taken of them after they are potted they will not lose a leaf. Late flowering sorts grown to single stems on benches—and these are usually greatly in demand—are made later still by delaying the period of taking the cuttings. Some taken off and rooted during the first half of last August were the best paying of the entire crop.

Seedling Carnation No. 16, grown by C. Merkel & Son, Mentor, O.
[See page 129, Feb. 10, issue.]

Carnation Dellhurst, grown by C. Merkel & Son, Mentor, O.
[See page 129, issue of Feb, 10, 1900.]

Labels for Flowering Shrubs.—A cheap label for this purpose will, at the most, last for only one or two years. Hand-painted zinc labels look well, but they cost too much and one can never tell just how long they withstand the assaults of the weather. A hanging wooden tag, say three inches long, an inch and a half wide and one quarter of an inch thick, will be about the proper dimensions. For hanging, punch two holes half an inch apart at one side, through which the two ends of a piece of copper wire is put from the front; twist this at the back, leaving enough wire to fasten to the bush. The wood should get a coat of paint, and the pencil work done while the paint is wet, as it is then not so easily removed when dry.

Grafting Aralias.—The finer growing kinds of stove and greenhouse aralias, such as A. Veitchii and A. gracillima, may be grafted before starting into robust growth. The long canes of plants which were worked last season are the best for the purpose, as the leaves are usually a sufficient distance from each other to allow of taking a piece of stem of necessary length to tie on to the stock after being properly prepared. The stocks should be young plants of Aralia Guilfoylei; either the green or the variegated form will answer. Cut the plants down to as near the surface of the soil as possible, so as to hide the place where the union occurs in future shiftings. The cion may be shaped at the base like a wedge and pushed into a suitable cut made across the top of the stock and bound moderately firm with raffia; or, side grafting may be the method employed. Put in a close propagating frame until the union has taken place. There is no necessity for grafting the so-called Aralia Chabrieri, as it roots freely and forms well-developed specimens from cuttings. The lateral shoots will make heads or leaders without any disfiguration.

Lachenalias.—If these plants were as famous in song and story as the primrose and daffodil we would see many more of them in flower at this season of the year; but they are comparatively unknown, and they well deserve to be popular. I know of no other bulbous plant so easily grown, not only easily grown from the bulbs but easy to increase. L. tricolor, L. t. lutea and L. Nelsonii are among the best. We have now some plants in 6-inch pots and none of them has less than 20 racemes of flowers to each pot. The racemes are about 10 inches high, the flowers pendulous; color green yellow, and red. After the plants go to rest the bulbs should be sized and repotted, and placed under a bench until ready to start growth. G. W. O.

Canna Italia

Editor Florists' Exchange.

Noting the articles about the Italian race of cannas, in your issues of February 17 and March 3, I would like to state my experience with this interesting section of the canna family. I have grown all of the named Italian kinds from the time of their introduction. As I was hybridizing cannas at this time I naturally attempted to produce seed on these new giants, but I soon found that they were sterile; although the seed pods were large they would only contain the ovules where the seed should be. Once only had I anything resembling mature seeds (on Borussia), but they were not perfect and did not germinate.

I would like to ask the Messrs. Betscher Bros. if they planted the seeds produced on Italia and Burbank; if they germinated, what the resulting plants were like.

G. W. O. evidently has not experimented with this race of cannas, or he would know whether they are fertile or not.

H. O.

How Stories Grow.

In writing a carnation article for the illustrated Buffalo Express, apropos carnationists' convention, referring to the Lawson carnation boom, I stated that it was expected that before the season closed the sales of young plants and rooted cuttings would reach 500,000. Typo prefixed the dollar sign and made the story exaggerated and sensational.

An editor poet addressed some verses in his paper to his fair inamorata, one line of which read, "He kissed her sub rosa," but was horrified to see it printed that "He kissed her saub nosa."

GROVE P. RAWSON.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

Cut Flower Prices.

Editor Florists' Exchange.

No doubt the subscribers to the FLORISTS' EXCHANGE, after reading the article, page 218, of March 3 issue, under the above title, may imagine I have a grievance against the commission man and the correspondents of the trade journals. I will say with respect to this, that we handle our own product of roses, and being under no obligations whatever to the trade journals, I felt that, as an advertiser occasionally, I had the privilege of entering into a discussion in regard to rose prices—a subject on which I claim to be as well posted as the FLORISTS' EXCHANGE, here in our market, as I have been in touch with the market daily for the past eight years. So, as your paper was launched in 1888, you are only four years my senior. But a newspaper man might gain much knowledge in that time in his line.

Any suspicion I, or any other reader of your paper, may have of the dishonesty of the commission man, was brought about by the claim of several writers in your columns, who were protecting your correspondent and saying that the high prices should not be quoted (and on the dates mentioned your paper did not quote them, either), because parties who did not grow fancy stock would expect to get these prices. One correspondent even went so far as to say that the party getting the high price (to quote your correspondent's own words) "should shake hands with himself and keep mum." Is that deception or not? This I will leave for your readers to decide.

I deny that the average prices for roses to-day are higher than they were a decade ago. Will anybody who knows anything about the trade deny that the grade of roses is far superior to-day than it was, say eight years ago? and while the few extras may bring a higher price, will the cut of any rose-grower average the same per bud as it did five years ago? I think not, but would like the opinion of the veteran rose-growers on this subject.

It is true, that the trade papers should not make prices; but when we read the three trade journals and find a discrepancy of 25 to 33 per cent. in the same week, we, the readers, have a right to form our opinion as to who made the prices. I still claim, without any fear of contradiction, that prices quoted lower than they existed for the period stated is an injury to the grower and is misleading—and somebody is responsible for it.

FRANK P. MYERS.

[Our opinion of our correspondent's "well postedness" on the operations of the cut flower market was based on his familiarity with these as displayed in his communication. Our previous gauge of his knowledge in this particular, or lack of it, obtains so far as we are concerned. However, an explanation of Mr. Myers' position is afforded by his statement, that he handles his own rose product.

We still maintain that sales of limited quantities of stock at extraordinary prices do not constitute regular market values. Any grower receiving higher figures than those quoted should certainly congratulate himself; and as he is the actual recipient of the increased values there is no dishonesty or deception in the matter.

We were not discussing grades, but prices. The higher grade as a factor in determining increased values now is nullified by the disproportionate increment in the demand as compared with the supply. Despite that, the records in the trade papers show that average prices are higher now than they were a decade ago.

We are only responsible for one trade paper—and we do not make the prices, but record them, faithfully, honestly, and after much careful investigation.

Our correspondent's unsubstantiated allegation of injury resulting to growers through prices being quoted lower than some figures obtained, is hardly worth considering. Injury might result, providing every grower sent to market the grade of stock bringing the higher price; but as that is not the case, and as growers *do get* the extra values when entitled to them, as was proved by Mr. Thorne's letter, the grower does not suffer in the least.—ED.]

Hardiness of Victoria Regia.

Editor Florists' Exchange.

In a report from the Horticultural Society of Natural History (Dr. L. Herault, France), just to hand, it is stated that so far the attempts to cultivate Victoria regia in the open air outside of the basin of the Amazon River have completely failed. Furthermore, the author states that "no plant can be acclimated, except there, where are found, as near as possible, the conditions of climate and soil adapted to the plant in its own country of origin." This is the verdict of scientific professors of botany and horticulture, and, I may add, of the majority of horticulturists in the United States. In fact, no person has ever proved anything to the contrary.

Mr. Oliver is entitled to his funny notions, and his originality in picking and finding flaws, but he has not proved that V. Trickeri is a species, or a variety. If he has proved anything, it is that he knows nothing whatever about V. Trickeri, and he is furthermore in error when he surmises that it had its origin in some garden, and that recognition of it as a species was desired from Kew.

Mr. Oliver would make the readers of the EXCHANGE think, even believe, that I had robbed some person of the honor and credit that I assumed, but was not entitled to. Be that as it may, I am free to say that the foreign house which sent out the seed substituted something else and knew of the occurrence. I also knew that I was growing another Victoria, which was neither regia nor Randi, and I would ask the readers of the FLORISTS' EXCHANGE which was the most honorable (or criminal)—to distribute a plant that I knew was under a false name as such, or allow the same to be called Tricker's variety? The facts are fully known to the foreign house before alluded to, and I trust Mr. Oliver will set his mind at rest that the firm will get justice. But for the present, this veil of mystery that he cannot see through will continue down. As to this Victoria being called Trickeri, if I have robbed any person of any just claim that person is at liberty to enter a protest. With regard to the fact that a plant so named implied that I *discovered* or raised the same, I think I have a fair claim, but I am ready to waive that if Mr. Oliver is ready to correct the many plant names of a similar character, of which all growers are cognizant, and which are so frequently met with. And, by the way, there are other aquatic names that Mr. Oliver may find objects of his censure. I would ask him why the plant or Nymphæa is named *N. Robinsoni*, and is recognized by learned men—professors, editors, F. R. H. S., etc.—when such plant is known to have been raised by Mons. B. Latour-Marliac in France? I may go further. I know an instance where another plant was so named, and the act not only was approved, but the plant was actually named at the instigation of Mr Oliver himself. W. TRICKER.

More Light on Carnation Culture.

Editor Florists' Exchange.

Referring to S. S. Bain's letter in your issue of February 17, in which he asks for more details in the articles on carnation growing contributed by different writers to your valuable paper, while the new and different methods of culture brought out by our Yankee cousins can be, and are applied here to advantage, the question of soil is one that, in a great measure, we have to determine for ourselves. In this connection I have found the information dispensed by the members of the Montreal Gardeners and Florists' Club, by papers and discussions at its meetings, to be most valuable. All the latest varieties of carnations are grown here in different soils, both on benches and in solid beds, and the results, as given, of the various treatments of several varieties under our own climatic conditions, should be more valuable to Mr. Bain than results of tests in the States, for Mr. Ward is right when he says that growers must test the different varieties to ascertain which will succeed the best in their locality.

I have not yet had the pleasure of meeting or seeing Mr. Bain at our meetings, and I do not write this to hit at him in this respect, but to show how valuable our meetings are becoming for cultural ideas, and to say that there are not enough florists of Mr. Bain's standing and experience in the club, or in Montreal, so that one name may be left off the list of members without mutual loss.

Montreal. W. C. H.

The Ideal Carnation.

Editor Florists' Exchange.

What constitutes the ideal carnation? And by what standard should it be judged? Taking the last question first, it seems to the writer that the scale of points as established by the American Carnation Society for the guidance of the judges of new varieties at the society's exhibitions, comes as near as possible to giving a means whereby one can arrive at a standard by which to measure the claims of aspirants to the right to be called "perfect" carnations.

The use of the scale brings the duties of the judges to this, viz., the intelligent and honest answering of a certain number of stated questions, as follows:

Root Galls on Violet Plant.

What is your opinion of the color of a given carnation flower? of its size; its calyx; its stem, substance and fragrance? And right here, in the intelligence and honesty of the response, lies all the difficulty.

Color: Certainly there is great room for honest difference of opinion as to the desirability of almost any given shade. If in an exhibition a shade of scarlet could be found, so bright, so glowing, that no desire to add to or take from it a single shade could be felt, such might be called perfect, and might score the full number of points. This color should probably allow of less difference of opinion than any other.

In crimson, Governor Roosevelt comes nearest the ideal shade for that color, at least, in my opinion.

In white, it seems there can be but one standard, namely, the purest possible.

To arrive at a correct conclusion as to the merits of the various shades of pink is more difficult. There seems to be places for three shades—a cerise pink, a light pink of about the Daybreak quality, and a third one about intermediate between these two. It seems to me that in passing upon the merits of the various shades and colors the question of popularity as to selling qualities should be taken into consideration.

As to size, it appears evident that the largest known variety should score the full number of points until some other is found that exceeds it.

Calyx should be firm enough and extend far enough out around the base of the lower petals to hold them out in a horizontal position without splitting. No carnation with a rubber band about it, or that shows sufficient evidence of ever having had one, can be called ideal.

The stems should be long enough so that in a vase of four or five dozen each flower will stand out firmly and independent of its neighbor.

Substance of the flower should be sufficient so that the color will appear solid and the petals not transparent or flabby.

Form should be full and rounding in the center, outer petals regular; but a little irregularity in the arrangement of the inner petals would not be objectionable.

Fragrance has always been an important consideration, but has not usually been much in evidence in the exhibition flower, to the best of my knowledge. It appears to be difficult to maintain for any length of time after maturity and separation from the plant. For this quality I do not recall more than one or two sorts that scored the full number of points. The average would probably be nearer two or three.

It will be seen that the keeping qualities and the profitableness of a variety are not provided for. These can never be satisfactorily settled by judges of exhibitions.

It seems to me that under an intelligent and proper use of the scale it can never be possible for any one variety to score 100 in an exhibition, including other meritorious sorts meritoriously grown.

Perhaps it might be a good idea, before intrusting the use of the scale to judges, to first subject these judges to the operation of another scale, whereby those who fell below a certain percentage in ability and experience might be dropped. But even that could not be relied on to eliminate the seedling man with a grievance.

ADAM GRAHAM.

What Constitutes a Species.

Editor Florists' Exchange.

E. H. has my sympathy when he says Dr. Gray's Introduction to the Study of Botany is of no use to him in naming a plant. If he refuses to digest those lessons, or if he cannot digest them, he will never be able to identify a species through a published description, much less publish a new one. G. W. O.

Violet Root Galls.

In reply to the query concerning the tubercles upon roots it is written that one of the most serious pests of the violet is the eel worm, or nematode. These microscopic worms multiply in the substance of the violet roots, and cause enlargements called galls, that may be very numerous and sometimes of considerable size.

The engraving is from a photograph of a diseased violet plant. The nematodes seem to poison the tissue, and induce an abnormal growth similar to that which takes place upon many sorts of leaves when stung by gall flies and other insects. Many plants have their roots affected in this way, and the same species of nematode that was dead, and from all appearances fell a victim to the nematodes. The foliage was all gone, while the roots were badly knotted and distorted from the presence of multitudes of the galls of the eel worms.

These worms enter the tender roots from the soil, and there increase rapidly. Their presence probably inhabits scores of kinds of plants.

So far as known, the gall trouble of the roses is the same as that of the violet, and if this be true it follows that the infection may pass from one kind of plant to another. It would not be well to grow violets in soil where roses had been galled, or vice versa. Violets could probably be grown profitably with no manure. With the soil free from the worms, and the plants also, there ought to be no trouble in having violets exempt from the nematodes. In setting out plants it is well to look at the roots and reject all with galls. Underground troubles are the least readily investigated, but none the less fatal. If the plant looks pale, and there is a drying of the edges of the leaf, it is always well to look for mischief at the roots. All that has been said upon the treatment of soil for nematodes in roses, in previous numbers of the FLORISTS' EXCHANGE, applies with full force for the violets.

[PROF.] BYRON D. HALSTED.

Experiment Station, New Brunswick, N. J.

The Montreal florists are waging war just now against the practice of the public parks of that city loaning plants and flowers for decorative purposes to private parties.

Chicago.

March Weather.

March is coming in truly like a lion, with storms of snow and rain, but as yet with slight frosts. Prices are a trifle more erratic—nothing to complain of—and, generally speaking, business continues very good for the season. The prices for lower grades of stock are below former figures, although the sacrifice mornings sometimes calls for a raise in values on what is left later. Violets and inferior grades of bulbous stock are hard to move, although a good deal of the latter goes for cheap funeral work. Shorts and culls in tea roses have touched as low as $2 to $3; firsts, $4 to $6; extras, $8, with a small proportion still at $10—which is certainly a good value for this market the beginning of Lent. American Beauty of the higher grades still keep up well—$5 to $6 per dozen; but shorts and culls, plentiful enough, go as low as $2 and $3. Lots of violets are sold at $3 to $4 per 1,000; best singles, 50c. per 100; doubles, $1. Carnation stock is fairly plentiful, but not especially so, as most of these flowers get cleared off.

Club Meeting.

The regular club meeting on March 2 was fairly well attended and considerable interest manifested. The following new members were elected: Peter Reinberg, Wilson Toplady, O. P. Bassett and Otto Benthey. Changes in by-laws were agreed on and new copies ordered printed and mailed to members.

A motion was made by W. N. Rudd that the club extend an invitation to the S. A. F. to meet in this city in 1901. In the discussion that followed G. L. Grant spoke for Buffalo; but the opinion was unfavorable to meeting in any city where a general exposition was being held, and the final vote supported the resolution. The question then came up relative to the club's visit to New York in August, when, after some discussion, a committee on transportation, consisting of G. L. Grant, W. N. Rudd and Walter Kreitling, was appointed to start the ball a-rolling.

The subject for the next meeting is "Bulbs," and several short papers are expected. C. J. Strombnck, of Lincoln Park, is in hopes of having samples of the Washington State grown hyacinths on exhibition. He remarked that the plants are very promising, and will be a surprise, he has no doubt, to many. It is also expected the Klehm Bros. will have on exhibition their home-grown lily of the valley that this year is showing up in fine shape and selling in the markets each day equal to the imported stock.

Snow, and Iron Gutters.

One of the heaviest snowstorms in this locality in 16 years, fell in 24 hours the past week. It was a good test for the Garland iron gutter, which did its work perfectly. As soon as snow begins to fall thawing sets in until there is a good stream of water flowing steadily. Mr. Stromback, of Lincoln Park, has his new plant houses all fitted with iron gutters, of the old Garland pattern. We saw the snow piled up the morning after the storm, but fast disappearing by a regular stream of water below. Mr. Stromback told the writer the second day after, that the snow had all gone off naturally, and no trouble whatever was experienced. The new rounded gutter, however, is a decided improvement on the old form, for convenience in walking therein.

Fire at Brant & Noe's.

On Wednesday, February 28, at 8:30 a. m., during the bad snow storm, one of the men at Brant & Noe's, Forest Glen, discovered fire in the extreme rear of the boiler and coal shed. Before help could be obtained the fire had made considerable headway and soon reduced the shed to ashes, carrying the ends of three of the greenhouses with it. The fire was quickly controlled, the wind, fortunately, being away from the houses. Through the burning of the stack the hot-water system was rendered useless for about four hours and recourse had to steam, both being in service. In less than three hours the ends of the houses were boarded up and lined with building paper, an improvised smoke stack installed, and the hot-water boiler made available again, as soon as needed in the afternoon. The cause of the fire is a mystery. The loss is covered by insurance, except on the plants, and these were not damaged to any great extent.

Jottings Around Town.

George Reinberg planted 1,500 one-year-old Kaiserin roses March 2. They had been taken from their Winter quarters six weeks ago, potted up and given heat. They are in the finest possible condition, and will give cuts in a month. These will be followed by other plantings in a couple of weeks, as room for them materializes.

Poehlman Bros. have Narcissus poeticus in. Stollery is cutting excellent tulips. Southern single narcissi are also arriving.

McKellar & Winterson are selling at the rate of a quarter of a million hardy ferns a week.

Spring bulbs are arriving in car-load lots, some Japan lilies being badly rotted.

The Dutch bulb men from the other side are here again on time.

W. E. Lynch is moving to 64 Wabash avenue, and George Piepgrass has secured room at Amling's.

J. B. Demaud is receiving some fine Harrisii and tulips from Stollery Bros.

J. V. Merrion, at Union Stock Yards, is now offering dried and pulverized sheep manure to the trade.

J. C. Vaughan and wife returned to the city Monday morning. Ess.

St. Louis.

Market Conditions.

The past week stock has come in much more plentifully, the increase being 30 to 50 per cent., and that, too, under most unfavorable weather conditions, St. Louis having been in the center of the recent storm that swept over the country. Roses have improved both in quality and quantity; some very fine stock is now to be seen, with white very scarce. Carnations are good, and none too many to supply the market. Violets are quite plentiful, at 40c. per 100. Some very fine white and Klehm's Novelty tulips were seen, which sell pretty well at 3c. to 4c. Quite a few Beauty are also obtainable.

Wholesale men report good, clean sales in spite of bad weather and Lent. The weather for a few days here was something fearful—telephones out of order, wires down, and people warned to stay indors, all of which was not calculated to help business. Snow and sleet were mostly responsible for this state of affairs, the ice being so heavy as to do great damage to shade trees. F. W. Pape, superintendent of the public parks, is reported through a newspaper item to have estimated the damage to the parks at $20,000, though we can hardly see how this can be correct, the damage, so far as we have observed, being confined to loss of limbs. Certain it is, however, the weather is interfering with greenhouse work, as no hot-bedding can be done, and many complain of the crowded condition of their houses in consequence.

Greenhouse stock is generally reported in good shape; Harrisii are rather too forward, while longiflorum have to be hustled a little to be in for Easter.

Notes.

Henry Emmons, the Belleville carnation grower, has had great success with White Cloud, and is looking for a red and pink that will equal it as a producer and all-round good carnation.

A visit to the C. Young & Sons Co. revealed things in a little better than their usual good shape. Their roses are in the pink of condition. Here we saw grafted and own root Bridesmaid, side by side, and if there was any difference it was imperceptible to the writer. They still grow Lizzie McGowan carnation in quantity, as a good and heavy-producing white; it certainly looked fine here. They also have several newer ones, but, so far, do not seem to want to tie to them yet. A batch of extra well grown cinerarias was noticed now in full bloom. The fine lot of Crimson Rambler will be just right for Easter. This firm does not expect to grow Harrisii in lilies again, having lost literally all they planted. Their longiflorum are in fine shape, but a trifle backward. The thousands of pot roses of all sizes were all in good condition. They have quite an extensive stock of orchids that have paid well. Altogether, the place reflects great credit on its manager, Harry Young, when it is considered that everything, from pansies to palms, is grown here—a much more trying situation than a range of rose or carnation houses to keep right. C. C. S.

Louisville, Ky.

Since my last report we have had some miserable weather—either the temperature was around the zero mark, with heavy winds, or it was snowing or raining. Lack of sunshine has caused the supply of roses and carnations to shorten. Bulbons stock is coming better and in greater variety every week. Violets have been surprisingly good and plentiful.

In plants, besides the usual run of bulbous stock, azaleas, rhododendrons and lilacs are shown and disposed of very nicely, but only at medium prices. Owing to an unusual run of funeral work, well distributed among all of the retailers, there has as yet been no complaint of Lenten dullness.

Retail Prices of Cut Flowers.

Roses, other than Beauty, $1 to $2; Beauty, $3 to $6; carnations, 50c. to $1 per dozen; violets, $1 to $1.50 per 100; lily of the valley, 50c. to $1; jonquils, 50c. to 75c.; narcissus and Romans, 50c.; Harrisii, $2 to $3 per dozen.

The first of the Holland drummers that I have seen this Spring was here this week—G. Kronchell, representing Warnaar & Co. J. S.

Boston.

Trade Notes.

Business has held up fairly well the first week in Lent, and the quantity of stock has shortened somewhat. Roses are in pretty good supply, but good ones are not over-plentiful and do well. Beauty of best quality range in price from $35 to $50 per 100. Bride and Bridesmaid are now in sufficient supply to meet the demand. The good grades clean up well daily at $16 a 100, a few extras making $20. Meteor are in fair supply but the demand is rather light. Jacqs. are still scarce, and maintain the prices formerly quoted. Elijah Cartwright has been cutting a few Ulrich Brunner; very good for so early, and which have sold well at $3 and $4 a dozen.

Carnations are again becoming more plentiful, but still the fine grades are not too much so, especially fine white ones. Good Scott now average $1.50 a 100, best stock making $2, while the other colors easily fetch $2, some going to $2.50 for better grades. White and Daybreak, of good quality, average $2.50, extras making $3, fancies holding at $4.

Bulbous stock is in ever-increasing supply, with a proportionate decrease in value.

Longiflorum lilies are still scarce, and sell very well at $2 a dozen if good. Callas are in fair supply and make $8 to $10 a 100. Valley is plentiful at from $2 to $3; extra grade going at $4. Violets, too, are very plentiful, at 40c. to 60c. per 100, extras making 75c.

F. J. N.

Pittsburg.

Lent Does Not Affect Market.

During the Lenten season a little dullness in trade is always expected, but up to the present time trade has remained fairly good. Although there is an abundance of stock it is used up pretty well. Carnations are at their best and very plentiful; at prices from 35c. per dozen up they are cheaper and sell more readily at retail than other stock. Roses hold up a little better in price. Violets are in good demand. Bulb stock moves slow.

A good many blooming and decorative plants are in the market, but the weather is yet unfavorable for the sale of them.

Jottings.

At the meeting of the Botanical Society of western Pennsylvania this week an interesting subject is up for discussion—"Japan and Its Flora;" but as the Florists' Club meets on the same date many will not be able to attend.

C. S. Van Waveren, representing Segers Bros., bulb growers, Lisse, Holland, is in town. E. C. REINEMAN.

Toronto.

Market News.

Business is still fairly good, with plenty of stock. Bulbous flowers are very much in over-supply, and the prices at which some of these are retailed make many wonder what the bulb man will get for his share. When good daffodils sell at from $1 to $2 per 100 somebody must be the loser. Roses are coming in fine now—splendid blooms on good stems; the longer days and the flowers not being cut so close make quite a difference in the appearance of the stock. Carnations keep improving also, and from the look of the local stock we will have a fine show of these flowers in St. George's Hall, Thursday.

We had, last week, a full share of the general snow storm which started on Sunday and kept up the greater part of the week. Some of the boys thought seriously of digging out their houses; several old houses had to be propped up, and on many of them the snow still lays and will likely do so until we get warmer days.

Walter Mott, of Philadelphia, and Mr. Palmer, Jr., of Buffalo, were in the city last week. THOMAS MANTON.

Buffalo.

Distinctive and Demonstrative Weather.

A spell of weather both distinctive and demonstrative has been experienced during the past week. It included snow to the depth of several feet on the level, with some wind and sleet as variations. Altogether, it is being summed up locally as one of the worst storms in memory. With conditions unfavorable for shopping it naturally made retail business slow. Some funeral work has, however, helped materially.

This dark weather inclined to reduce supplies of flowers somewhat, hence the lots coming in were generally disposed of. Harrisii lilies are noticed a bit plentiful at Kasting's just now.

In the interest of supplying trees to the Pan-American Exposition Albert Wadley, of New York, was a visitor on Tuesday. C. D. Zimmerman did the honors of entertainment in a sleigh ride over the snow banks to the new South Park Conservatory. We are pleased to learn that the general appearance and character of this new local feature of our park system was given emphatic praise by Mr. Wadley.

At Wm. Scott's Cold Spring greenhouses a good variety of Easter stock is now in sight. It includes some things out of the ordinary that must call forth pleasing comment later. A bench of mignonette is conspicuous for good quality, hence good looks.

Palmers carry off the local honors to date on their showing of daffodils.

R. L. Greenlaw, of Boston, called on Saturday last. VIDI.

A Snow Storm.

During the past two weeks we have had our full share of Winter weather, one night especially fully testing all heating apparatus, the thermometer registering 23 below zero and the wind averaging 30 miles an hour; then following the cold snap the greatest snow fall that I have ever seen. But no greenhouse casualties are reported. Stock is looking good. Carnations are somewhat off crop; violets are more than plentiful, and roses of very good quality. Plant stock for Easter is very promising; good lilies and azaleas will be plentiful.

Business has been very good in spite of the great military excitement that has pervaded the city for the last two or three months, and which is now at its height with the Strathcona Horse quartered here.

Jottings.

On February 14 C. Scrim boomed up the violet trade by advertising violet valentines at bargain prices. He sold some 6,000, and this seems to have created an increased demand ever since. Mr. Scrim is preparing to visit Toronto this week for the carnation show, and we hope on his return he will be able to tell us of some of the wonders that were exhibited at Buffalo, and which I expect will be duplicated at Toronto.

Speaking of carnations, I would like to say a word for Glacier. Our plants, while suffering somewhat from stem rot (which I hope is due more to conditions of culture than constitution), have produced some grand flowers, in my estimation, even better than our White Cloud; and as Glacier seems prolific and quick to mature, if it can be grown healthy, it must become a favorite.

The Horticultural Society has issued its premium list for the season, with liberal prizes; but it has done away with the chrysanthemum show, as last year's was a failure.

The Canadian Trade Journal has arrived, and promises to be a success, which the business-like tone and appearance of the first issue warrant. E.

RESIDENTIAL SITES AND ENVIRONMENTS

IN THREE PARTS:

Part I—Residential Sites
Part II—Planting and Introduction to Undulations
Part III—Villa Gardens and Public Grounds

All contained in One Royal Quarto Volume. Full Cloth. Plain Edges, $2.50; Full Gilt, $3.00.

Illustrated with over fifty Plans, Diagrams and Illustrations, with lucid descriptive text and all necessary information for the development of Home and Public Grounds, showing principles and adaptations of planting suitable to all requirements from Villa to Mansion. Superbly printed, in new clear type, on the finest wood-cut paper.

For Sale By

A. T. DE LA MARE PTG. & PUB. CO. Ltd., P. O. Box 1697, New York.

NEW YORK HERALD — The author is an expert on his subject, hence the advice which he gives may be regarded as authoritative. * * * In every way the book has been made suitable for those who are interested in landscape gardening.

BOSTON GLOBE — The main subject of gently assisting nature, rather than denuding and mutilating, * * * is the underlying principle of this admirably printed and illustrated volume.

FLORISTS' EXCHANGE — The author has imparted the knowledge he has acquired, during many years of careful and painstaking study, in a clear and succinct way that cannot fail to be of immense service to all concerned.

COUNTRY GENTLEMAN — An elaborate volume, * * * illustrated by large plans of house grounds, gardens and parks, showing not only the general scheme of arrangement, but the positions of the various trees and shrubs adapted to harmonious collocation.

Rochester, N. Y.

Apologies are due the three representatives of Vick's Magazine, and Messrs. Chas. H. Vick and Al. Salter, who attended the A. C. S. meeting at Buffalo, for omitting their names from the Rochester notes. The associate editor of the magazine, who was "the sole feminine representative of the press," came back "thoroughly saturated" with carnation lore.

Mrs. E. R. Fry, who has assisted at the Main street store for several years, is still confined to the house as the result of a severe attack of pneumonia last November.

Following the sudden zero wave and high wind of February 25 there were several narrow escapes in places where there is no night man. E. R. Fry found the fire out and the mercury at 33 degrees. A few minutes' sunshine while getting up heat saved all but a corner of one house.

At Arnold's, on Chili road, a boiler that went through last year's fire sprang leaks on Sunday evening that ran out 30 barrels of water before they could be checked. Fireman and windmill were busy for 15 hours, keeping temperature above 40 degrees. Following the shoveling caused by our late snowfall of 44 inches, the long-distance connection between well and tank was interrupted by frost. The forces are still dividing their time between getting water into the tank with buckets and digging down to the frozen water pipe. G. A., JR.

Springfield, Mass.

The greenhouses which have been on the roof of the Morgan Envelope Co. for some time have been taken down and sold to Mr. Baker, of Stafford Springs, Conn.

Wm. Schlatter, of Schlatter & Son, has been confined to the house some time, with the grip but is now at business.

The stores are showing good flowers and making fine displays; all report business quite good. G.

Columbus, O.

The fourteenth annual police ball held February 22 was a decided success; the hall was tastefully and artistically decorated by Mr. Charles.

Mr. Nienhearte, formerly with S. F. Stephens, has left for California, where he expects to start in business.

HEADQUARTERS FOR EASTER PLANTS

Blooming Easter week!

Time is money! Lose no time! Order your supply now!

I have an immense stock of the choicest in the market. You would be astonished if you could have a peep into seven large greenhouses which are crammed full, and devoted to the cultivation of Easter plants alone, and therefore, I will be prepared to fill all orders, if ordere in time, as far as the supply will reach.

AZALEA INDICA

I am a very large importer of this choice Easter plant. have erected two new houses, 20x100, for the cultivation of them alone. These Azaleas were selected by myself last fall, on my trip to Ghent (Belgium), and as I am Agent for a large concern in Belgium, it gives you a chance to buy your goods first hand and not through middleman.

I can offer you plants in bloom or in buds, blooming Easter week, **6 inch pots, 50c., 75c., and some for $1.00.** Most of them are Mme. Vander Cruyssen and some other choice varieties, which will be selected by myself.

SPIRÆA, Compacta and Floribunda, fine bushy plants, my own importation, a perfect gem. **$3.00 per doz. Specimen Plants, $1.00 per doz.**

HYDRANGEAS (Pink), 6 inch pots, bushy plants, **$3.00 to $5.00 per doz.**

CINERARIA Hybrida, choice colors, **$2.50 to $3.00 per** [illegible] in bloom now or at Easter [illegible] house full of them.

BEGONIAS, Presi[illegible] 6 inch pots, **$3.00 per** [illegible] **Vernons,** 4 inch pots, **$1.2[illegible]**

DAISIES (White), **Marguerite,** inch pots, **$2.00 per doz.** inch pots, **$1.00 per doz.**

CYPERUS (Umbrella Plants), very fine bushy plants, 4 inch pots, **$1 per doz.**

HYACINTHS, 4 inch pots, best varieties of my own importation), **$10.00 per 100.**

TOURNESOL TULIPS, three in a pot (double red and yellow striped), beautiful, sells at first sight, **$1.50 per dozen pots.**

DAFFODILS, Von Sion, three in 5 inch pot, **$1.50 per dozen pots.**

LILIUM HARRISII, 6 inch pots, nice foliage (bulbs 7x9), 5 to 8 buds on a plant, **10c. per bud.**

No Lilies sold by themselves; other Plants must accompany them.

CHEIRANTHUS (Wallflower), 5 inch pots, in bud, **$2.00 per doz.**

LILIUM LONGIFLORUM BULBS

COLD STORAGE.

GUARANTEED IN PERFECT CONDITION.

The keeping of this variety of lily bulb dormant in cold storage is a success. Florists who planted them last year in the months of March, April, May and June received very fancy prices for the flowers and are planting on a larger scale this year. We have reserved a limited quantity for this purpose, and offer them until sold for delivery during Spring and Summer months as follows:

			Per 100	Per 100
6 to 8 in. bulbs,	400 in a box ...	EVERY FORCER OF BULBS SHOULD	$6.00	$50.00
7 to 9 " "	300 "		9.00	80.00
8 to 10 " "	250 "	TRY SOME OF THESE.	15.00	

Tuberoses.—Double Pearl.

Bulbs measuring 4 to 6 inches in circumference,
25c. per doz.; 75c. per 100; $6.50 per 1000.

3 to 4 inches in circumference, 15c. per doz.; 50c. per 100; $3.75 per 1000, or bbl. of 2,000 bulbs for $6. Every bulb can be depended upon to flower.

Gladiolus.—First Size Bulbs.

Gladiolus. All colors, mixed. This mixture will be found to contain a liberal percentage of white and light kinds and equal to some some of the best mixtures sent out. The bulbs are a little irregular in shape, which does not interfere with their flowering qualities in the least.
Per dozen, 15c.; 100, 75c.; 1000, $6.50.

Begonias—Tuberous Rooted.

Single Flowers. White, pink, red, yellow and scarlet; separate colors or mixed. Bulbs 1¼ in. and up in diameter. Each, 5c.; per doz., 40c.; per 100, $2.50; per 1000, $20.
Double Flowers. Each, 10c.; per doz., 65c.; per 100, $5; per 1000, $45.

Caladium, or Elephant's Ear

Sound bulbs, with good, live centre shoots.
5 to 7 inches in circumference,
40c. per doz.; $2.25 per 100; $20 per 1000.
7 to 9 inches in circumference,
60c. per doz.; $3.75 per 100; $35 per 1000.
9 to 12 inches in circumference,
$1 per doz.; $7 per 100; $60 per 1000.
12 in. and up circum., $1.50 per doz.; $10 per 100.

Gloxinias.

Bulbs of large size, measuring 1½ to 3 in. in diameter.
Finest Mixed,
50c. per dozen; $3 per 100; $27.50 per 1000.
Separate Colors. White, red, blue,
60c. per doz.; $4 per 100.
Richardia alba maculata. (Spotted Calla.)
45c. per doz.; $3 per 100; $25 per 1000.

Dahlias.

Dry Roots, Field Grown.

Storm King. Best white for florists. Perpetual bloomer. 30c. each; $3 per doz.; $20 per 100.
Choice Named Varieties. Pompon, Cactus, Show and Fancy. (*See Catalogue, page* 24.)
10c. each; $1 per doz.; $8 per 100.

Cocos Weddeliana Seed.

New Crop Now Ready.
Per 1000, $7.00; 5,000 seeds, $30.00.

Latania Borbonica.

New Crop Seed.
$2.00 per 1000; 5,000 for $9.00.

Asparagus Plumosus Nanus.

Plants from Seed Bed. (Now ready.)
$25 per 1000; $3 per 100.
Seed, $9.00 per 1000; $1.00 per 100.

Caladium—Fancy Leaf.

PRICE, dormant tubers, choice named kinds, about 10 distinct new sorts,
$12 per 100; $1.75 per doz.; 20c. each.
Mixed, Fine Varieties..... $7.50 per 100; $1 per doz.; 12c. each.

SEED TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

New York.—Stumpp & Walter Co. have had their front signs newly painted in white and gold on a red ground—very brilliant and visible for a block or more. The front of the store will also soon be done over new.

Houston, Tex.—The new building of the T. H. Thompson Seed Co. is approaching completion. It will be the handsomest business block in that city, and the best fitted up seed establishment west of the Mississippi River. This house has made rapid strides during the past year, since H. C. Johnson, the last addition to the firm, has had the management.

Rochester, N. Y.—Rochester seed firms are all cheerful in anticipation of a good season. Jas. Vick's Sons are having an unusually good trade from the South, and so look forward to an increase in their main catalogue trade. There has been an annoying shortage in contract crops in several lines.

THE ELIZABETH NURSERY CO., Elizabeth, N. J.

Mention the Florists' Exchange when writing.

There is no movement yet at Crosman Bros.' retail store. Out at the Monroe avenue warehouse they were found in the Spring rush. Nearly a car-load a day is sent out at this season. Advance orders in the wholesale department are considered very encouraging, especially in view of the higher range of prices in several staples, notably garden beans.

Mandeville & King do not expect definite results from their line of flower seeds for some time, but a careful survey of the general situation leads them to take an optimistic view of the season's work. Their shipping, which was somewhat retarded by the big storm, is now well advanced. A couple of show cards seen here are a commendable departure from the too prevalent circus poster style. The pictures were painted by a Rochester artist and lithographed by Stecher, St. Paul street. There has been so much call for them that Mandeville & King have decided to offer the cards for sale, without printing, at a nominal price.

Briggs Bros. have about completed their extensive commission shipments. In view of the general condition of the wholesale trade they look forward to a good season. Their wholesale trade for 1899 was largely in excess of previous years.

Frank H. Battles reports out-of-town wholesale orders, especially along lines of market gardeners' supplies, as showing a considerable advance over former years.—G. A., JR.

Seeds Under the Microscope.

At a recent meeting of the St. Louis Academy of Science, several practical, as well as interesting, uses of the microscope were demonstrated for examinations of seed. The first, and perhaps most practical use, would be for detecting impurities. In this connection were shown, among other things, glasses of "fancy" and low grades of Kentucky Blue Grass seed, petunia and contents of a packet labeled: "Beautie's Flower Garden, 300 Varieties, 5c.; an every-day Bouquet," sent out by a Boston firm last year, and which proved to consist mainly of red-top grass, with a large proportion of weeds and a dozen of the commonest flower seeds.

The second use and one that could be of assistance to the florist's seedsman, is for counting small expensive seeds. Tuberous-rooted begonia and gloxinia were exhibited to exemplify this, and while they can be seen with the naked eye the foreign matter they contain cannot be, nor can the seeds be counted so quickly or easily. The third use in importance, is as a means of knowing the existence of immaturities. This was evidenced by the great number of immature seeds seen in samples of lobelia and poppy, but, of course, it is impossible to have these sorts absolutely pure. (The plate of lobelia proved to be composed of fully 50 per cent. hulls and immature seed).

From an artistic view many seeds under the microscope reveal to us some of Nature's most beautiful forms and colors.

I am aware that the microscope is seldom used by florists or seedsmen, and yet a small tripod simple microscope is to be found in the desk of many good seedsmen, and perhaps it would be more in demand if its utility were better known. The instrument to which I have referred is the small stand glass that may be purchased in any city for a nominal sum, as the compound microscope is only valuable for examining seeds individually.

I do not presume to point out the microscope's value to others, but rather to give a brief outline of the exhibit made at the above-mentioned meeting, where 15 plates of seeds were shown, and its uses as suggested to me at that time.

F. W. MAAS.

European Notes.

The Winter which appears to be now fairly closed has been one of the wettest on record. Already the deficiency in the annual rainfall has been made up and we are 3½ inches to the good, with no prospect of a cessation of the almost continuous downpour.

One effect has been a check to the trade in peas and beans, for much of the land on which these are sown is now lying under water, and by the time it is fit to be cultivated the sowing season will have passed. It is fortunate for some of our merchants that heavy shipments of peas have been made to your side.

The trade in market seeds has also been brought almost to a standstill for the same reason, and while holders of clover seeds are nominally holding out for higher figures, purchases are reported to have been made on more favorable terms. The spurt in haricot beans and blue boiling peas has also collapsed for the same reason. Natural grasses move very slowly, but perennial rye grass is in demand with an upward tendency.

For the first time during several years we have quite a famine in parsnip seed; but as the sowing season is now nearly over we shall perhaps be able to pull through. A variety named "Tender and True," which was exhibited before the Royal Horticultural Society at its last meeting was as near perfection as possible. At the same meeting a two-year-old plant of Cyclamen grandiflorum album was exhibited, bearing 140 perfect blooms, although the plant had not been repotted since it bloomed 12 months ago. This surely is a record. The pink variety of the crested Bush Hill Pioneer will be offered this season.

EUROPEAN SEEDS.

Import and Export Statistics.

The dutiable imports of plants, shrubs and vines amounted to $47,666 in January, 1900, against $35,702 in the same month of 1899.

The free imports of seeds amounted in January, 1900, to $182,622, against $107,657 in January, 1899.

The dutiable imports of seeds amounted to $121,317 in January, 1900, against $67,401 in the same month of 1899.

The exports of seeds to other countries amounted to $435,103 in January, 1900, against $301,103 in the same month of 1899. The countries to which the United States exported seed were the United Kingdom, which received shipments to the value of $145,730 in January, 1900, as against $125,872 worth during the same month of last year. Shipments to France amounted to $21,679 in January, 1900, as against $3,658 in January last year. Germany imported seeds from the United States to the value of $170,703 in January, 1900, against $62,616 in January, 1899. Other European countries received shipments to the value of $50,869 in January, 1900, as compared with $49,980 in January of the preceding year. A decrease is to be noted in the exports of seeds to British North America, being valued at $37,650 against $48,306 in January, 1899.

BEFORE PLACING ORDERS **SECURE OUR PRICES** ON ALL LINES OF STOCK.

THE SUGAR MAPLE

Is a beautiful tree at all seasons, and no better variety can be used for **Street, Park,** or **Lawn Planting,** as its growth is rapid and straight, its form symmetrical, and it does not have the objectionable density of foliage possessed by the Norway Maples. For this reason it is well adapted for planting near buildings, as it does not obstruct light or air, and being **deep rooted the grass will grow up to its very trunk, which is a very strong point in its favor.** No tree has more gorgeous Autumn coloring, as it varies in all shades of yellow, orange and scarlet until the leaves finally fall. It was a sagacious popular instinct which selected this as one of our best trees for ornamental planting, and in some of the old places on the Hudson River long avenues were planted with it three quarters of a century ago, and they are now worth a long journey to see. We have an extra large stock of magnificent trees, many times transplanted, which we know offer at the following low prices:

		10	100	1000
10 to 12 ft. in height,	1¼ to 1½ inches in diameter	$5.00	$33.50	$290.00
12 to 14 ft. "	1½ to 1¾ " "	6.00	35.00	300.00
14 to 15 ft. "	1¾ to 2 " "	10.00	75.00	500.00

Mention the Florists' Exchange when writing.

St. Louis.

Market News.

Business has been right good during the past week; stock much more plentiful, but by no means a glut so far. Red roses are a little over abundant, also violets, which have gone down in price again, selling in some cases as low as $20 per 1,000; the general figure is, however, 30c. to 50c. per 100. Carnations are holding up well, still bringing 1½c. to 4c., with no overstock. Beauty sell for $1 to $3 per dozen, with supply rather short. Callas and Harrisii are worth 10c. to 12½c.; smilax is in good demand at same price. Bulb stock, consisting of Von Sion, Paper Whites, valley, etc., has sold well, at about 3c.

Club Meeting.

The regular meeting was held on the 8th; attendance only fair, the main attraction being the announcement that the Liberty rose would be exhibited; in this we were not disappointed, it was there in all its glory, and notwithstanding its long journey from Hoboken, N. J., it had all its fragrance, and, we presume, its true color with it. The expectations of those present were fully realized; all pronounced it a splendid thing, and it was immediately awarded a certificate of merit. Compared with a vase of very good Meteor it out-classed the latter in all points. For the prize of $5, offered by the club, an elegant vase of Bridesmaid, shown by Messrs. Vesey, was first; they also exhibited very fine Bride. Mr. Amman showed Meteor and Mr. Fillmore a vase of mixed roses. Liberty was not placed in competition for the prize. Edward Waters was duly elected a member of the club. Resolutions on the death of J. M. Jordan were read and adopted, and a copy ordered sent to the family and spread upon the minutes of the club.

The profits on the recent euchre party will be added to the cash on hand, and affairs of last Fall's show will soon be settled up.

Notes.

A new floral store has recently been opened up by a Mr. Potts, of Chicago.

The weather here lately has been very warm and Spring-like; prospects seem good for a fine Spring trade.

C. C. S.

Cincinnati.

Business, so far this month, has been exceptionally good in all lines for the florist. Stock has been more plentiful and has sold at fair prices. The outlook for Easter is very bright and there promises to be plenty of stock at reasonable prices. Roses will be the scarcest of all flowers used at this time. Carnations will be in good supply. E. G. G.

AZALEAS FOR EASTER

We offer a very fine lot of AZALEAS, comprising the most distinct and best varieties in cultivation, embracing all shades of crimson, white, pink and rose color. They are shapely specimens, well "headed," double and single flowered, and will make splendid plants for Easter decoration. It is almost impossible to ship Azaleas when in bloom and have them arrive in good condition, hence the necessity of procuring them in advance before the buds open.

ORDER EARLY. NOTE THE SIZES.

Prices of Azaleas:	Per doz.	Per 100
10 to 12 inch heads, established plants, in pots	$5 00	$40 00
12 to 14 " " " " "	6 00	50 00
14 to 18 " " " " "	9 00	70 00

W. Weathered's Sons; all heated by hot water, with one No. 17 Corrugated and one No. 4 Hitchings Conical Boilers, and one Weathered No. 6 Improved Double Dome Boiler. Thos. W. Weathered, 103 Taylor Street, Brooklyn, N. Y.

Chicago.—The regular bowling club lately has not been doing much, but George Stollery in the Summerdale team is keeping his end up. He is second high man in the North Shore League of eight clubs, has played 24 games, 201 high score; total 4,002, with an average of 166 18-22.

New York.—The winning of the late tournament seems to have had a cheering effect on the New York boys, and to have given an added zest to the sport. Monday afternoon the alleys were crowded, and when treasurer A. S. Burns, seated at the table in the corner, notified the members that monthly dues would be received, the members almost fell over each other while trying to see who would be first to respond. The following scores were recorded, but the boys can do better than this when rolling a match.

Knoxville, Tenn.

The florists here have had a very heavy trade all through the Winter, and the supply has fallen short of the demand. The deaths of some prominent society people have called for a great many flowers. Set pieces are still the favorites here, although a great many flat bouquets are used. Easter lilies will be scarce, as many were badly injured by the hard freeze early in the year.

Charles Baum has made himself a new double manifold coil boiler which heats his whole plant. It has proved highly satisfactory and he can burn either wood or coal in it. He is a carnation enthusiast and has some very fine seedlings which he is thoroughly testing.

H. Y.

BUSINESS OPPORTUNITIES.

FOR SALE, at Contentment Island, Darien, Conn. Two greenhouses, one 175 feet long, erected last summer at a cost of over $3000; apparatus capable of heating four more houses; water supplied by new hot air engine; nearly eight acres of most fertile land, much of it well planted in fruit trees and small fruits; barn, horse, wagon, etc. Death of owner cause of selling. Terms $6000, part cash. For full particulars, address H. E. Ferris, Administrator, South Norwalk, Conn.

MISCELLANEOUS.

STEAM and hot water boiler for sale, as good as new; has been used less than one winter; good reason for selling. For price, etc., address Hopp & Lemke, Paul P. O., E. Grand Rapids Mich.

GLASS.

A large quantity of 7x9 glass for sale cheap. Robt. Williamson, New Durham, N. J.

COUNTERS, FOR SALE,

Ice boxes and fixtures suitable for florist business. Alex. J. Guttman, 36 West 29th Street, New York.

Montreal.

Trade Notes.

The weather during the past week has been much brighter, and consequently the supply of flowers has increased. Trade still remains very quiet, but there has been a large quantity of funeral work. The stores were all closed Monday and the city *en fete* over the visit of the 500 soldiers from the wild and woolly West, known as the Strathcona Horse. We were all very proud of this, our Honorary President's latest gift to the Empire. The floral decorations at the banquet in the evening, in the Windsor Hall, under the supervision of City Gardener Pinoteau, were highly artistic.

The Fire at Mr. Bain's.

In the light of farther particulars it is found that Mr. Bain's establishment is hardly as completely destroyed as was at first supposed. Two more of the houses, making three in all, were damaged by smoke only. As each had a separate hot-water system the frost got no chance to complete the devastation. Mr. Bain considers this a practical illustration of the superiority of independent hot-water heating, of which he is such an ardent advocate. Had the houses been heated from one common center, the ruin would have been complete. In Easter stock Mr. Bain lost over 700 lilies, 1,000 azaleas, the whole of his very large supply of spiraea and lilacs, with a great deal in other lines; also all his immense stock of bedding plants, and the whole of his palms and ferns. Two fine elevated water tanks, steam pumping plant and wind pumping apparatus are also lost. There is a small insurance on both houses and stock, but insignificant in comparison with the losses.

Club News.

The features of the meeting Monday evening were the superb plants and flowers on exhibition, of which Mr. McHugh's cyclamen was the center. A white variety, in a 7-inch pot, with a crown of immense flowers on stiff stems about one foot in length, the flowers touching each other, measured 4 feet 6 inches in circumference. The plant, a three-year-old bulb, bore 130 fully developed blooms, 60 more having been removed early in the day that were showing signs of age. Mr. McHugh was awarded a certificate of merit for the specimen, being the second lately awarded this gentleman for cyclamen. The paper on the subject read before the club by Mr. McHugh was of a very practical nature.

A splendid plant of bougainvillea, grown by Joseph Bennett, was much admired, as was also a lot of new geraniums exhibited by Mr. Robinson, the president.

A splendid compliment to the energy of the Toronto Club was the vase of new carnations and Liberty rose, brought from the carnation show held by that organization by Messrs. McKenna and Bennett who were enthusiastic in its praise. Of the carnations The Marquis was perhaps the most admired.

It is said that no plants of the Liberty rose can be imported into Canada, as there is an embargo, on account of the San José scale.

I would remind our enterprising importers that perseverance has been known to bring even custom officials to reasonable conclusions. It is such a pity that this gem should be debarred from Canada.

B.

BOOKS RECEIVED.

PRINCIPLES OF PLANT CULTURE. By Professor E. S. Goff, University of Wisconsin, Madison, Wis. Published by the author.

While intended as a text book, and extensively used as such in our agricultural schools, this work, of which a new and revised edition has just been issued, from its exceeding practical nature, will be found of immense service to the general reader. The author has given a clear and comprehensive history of all relating to plant life, from the germinating of the seed to the maturing of the plant. The effects of cold and heat on plant life are fully explained, also feeding, watering, etc.; thoroughly lucid reasons are afforded why the plant requires certain elements to perfect itself, and how they can be obtained. Propagating, budding, grafting and potting are all dealt with in a masterful manner, and the operations rendered clear by numerous illustrations. The book will prove instructive to all interested in plant life, and should be in the library of every florist. It can be obtained from the FLORISTS' EXCHANGE. Price $1.

HEADQUARTERS FOR EASTER PLANTS

Blooming Easter week!

Time is money! Lose no time! Order your supply now!

I have an immense stock of the choicest in the market. You would be astonished if you could have a peep into seven large greenhouses which are crammed full, and devoted to the cultivation of Easter plants alone, and therefore I will be prepared to fill all orders, if ordered in time, as far as the supply will reach.

AZALEA INDICA I am a very large importer of this choice Easter plant. I have erected two new houses, 20x100, for the cultivation of them alone. These Azaleas were selected by myself last fall, on my trip to Ghent (Belgium), and as I am Agent for a large concern in Belgium, it gives you a chance to buy your goods first hand and not through middleman.

I can offer you plants in bloom or in buds, blooming Easter week. **6 inch pots, 50c., 75c., and some for $1.00.** Most of them are Mme. Vander Cruysen, and some other choice varieties, which will be selected by myself.

SPIRÆA, Compacta and Floribunda, fine bushy plants, my own importation, a perfect gem, **$3.00 per doz. Specimen Plants, $4.00 per doz.**
HYDRANGEAS (Pink), 6 inch pots, bushy plants, **$3.00 to $5.00 per doz.**
CINERARIA Hybrida, choice colors, **$2.50 to $3.00 per doz.** In bloom now or at Easter. I have a house full of them.
BEGONIAS, President Carnot, 6 inch pots, **$3.00 per doz.**
Vernons, 4 inch pots, **$1.20 per doz.**
DAISIES (White), **Marguerite**, 5 inch pots, **$2.00 per doz.** 4 inch pots, **$1.00 per doz.**
CYPERUS (Umbrella Plants), very fine bushy plants, 4 inch pots, **$1 per doz.**
HYACINTHS, 4 inch pots, best varieties (of my own importation), **$10.00 per 100.**
TOURNESOL TULIPS, three in a pot (double red and yellow striped), beautiful, sells at first sight, **$1.50 per dozen pots.**
DAFFODILS, Von Sion, three in 5 inch pot, **$1.50 per dozen pots.**
LILIUM HARRISII, 6 inch pots, nice foliage (bulbs 7x9), 5 to 8 buds on a plant, **10c. per bud.**
No Lilies sold by themselves; other Plants must accompany them.
CHEIRANTHUS (Wallflower), 5 inch pots, in bud, **$2.00 per doz.**

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere. Only 25 minutes' ride from City Hall.

Take 13th Street Car to Rising Sun Avenue and walk two squares east; also Germantown Car at 8th and Market Streets (North) to Ontario Street and walk one square east.

Cash with order, please. Money can be sent safe by Express, Postal Money Order, Registered Letter, or Drafts on Philadelphia Banks. Goods shipped at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Rising Sun, Philadelphia, Pa.
IMPORTER AND WHOLESALE GROWER OF POT PLANTS.

PLEASE NOTICE TESTIMONIAL BELOW:

"Mr. G. Aschmann has very fine healthy Azaleas, Hydrangeas, Easter Lilies, Spiræas, Tulips, Hyacinths and other plants in bloom and bud. We can very highly recommend our customers to Mr. Aschmann for fair, reliable, business treatment."

Mention the Florists' Exchange when writing.

(62) **Chrysanthemums Grown to Single Flower.**—To grow chrysanthemums for single blooms, root the cuttings in April or May, plant in the benches in June. The young plants should be in rows 8 or 10 inches apart with 14 inches between the rows.

(63) **Heat for Violets.**—For growing violets in a house of the size mentioned (10x30 feet, even span, 3x6 sash, running north and south), a straight flue the full length of the house will give all the heat required, and no return flue is necessary.

(64) **Malformed Rose Buds.**—The roses sent for examination show a good stem and foliage, but the flower is deformed and has a wilted appearance. This has no doubt been caused by the temperature of the house going down too low when the buds were about ready to unfold.

(65) **Trouble with Chrysanthemum Leaves.**—We fail to find any insects on the leaves submitted. There were some indications that thrip had been at work, but had been destroyed by the rose-leaf extract. Perhaps the reason the foliage has been burned, was owing to the solution being used too strong. We would recommend that it be diluted more.

(66) **Wood Lice in Mushroom House.**—We do not know of any insecticide that will exterminate wood lice; these thick-skinned creatures are not easily disposed of when once they have obtained a foot-hold, especially in a mushroom house. We find that the best remedy is to keep the house clear of any harboring places for them. Have every part of it thoroughly cleaned; all old woodwork, if decayed, replaced with new, and the same kept clean by being whitewashed with hot lime. Clean under the benches also; do not allow a crumb of filth of any description to accumulate. Constant and thorough cleaning is the best up-to-date remedy for keeping wood lice down.

(67) **Germinating Palm Seed.**—To germinate palm seed a temperature of 70 degrees will be found the most satisfactory, though they will germinate in a lower one, but are much slower. Sow the seeds in flats using leaf soil and sand. Place the flats under a bench where the heating pipes are run, and keep them moist. Be sure that the seeds never once become dry after being sown. When the seeds begin to germinate, pot them and place upon the bench in an ordinary greenhouse temperature. It is well, in raising palms from seed, to bear in mind that those grown in a cool house make much finer plants than when grown in a too warm house. By a cool palm house we mean one where the night temperature runs between 58 and 60 degrees.

(68) **Syringing, and Scale on Palms.**—How often should I syringe my palms in the Winter? The water is very cold, often 32 degrees. The plants are all very crowded, almost pot on pot. Some latanias are affected with scale. How shall I get rid of it, and what is the cause of it? The houses are all moist and kept cool.—SUBSCRIBER.

—Palms that are grown with a night temperature of 58 degrees or over, with a corresponding raise through the day time, should have a syringing every morning unless the weather is dark and cloudy. If the palms are kept in a cooler house, then syringing every day would be unnecessary—once or twice a week would be sufficient. Water at 32 degrees is too cold; this can be avoided by having a tank or barrel in the greenhouse, and if kept full, the water would be of the same temperature as the greenhouse, or nearly so. Of course, a hand syringe would have to be used. The scale mentioned is probably the common brown scale and must be washed off. There are many insecticides advertised in the FLORISTS' EXCHANGE. Procure one of these, and, with the help of a sponge, the scales can easily be eradicated.

Easter Advertising.

Dan'l B. Long, Buffalo, N. Y., sends us a very appropriate line of folding and other cards, designed especially for Easter advertising purposes. Advertising is always effective when the proper material is used, and Mr. Long appears to have it.

All packages sent to this office, containing either specimen flowers for examination, or diseased subjects for diagnosis, should in every case be fully prepaid.

At the annual meeting of the Nursery and Seed Trade Association (Ltd.) of England it was decided that a fund should be raised to enable the association to take the opinion of counsel upon questions affecting the trade, and to contest or support any action for their mutual benefit.

Rose Society's Special Premiums.

The value of the Hoffmeister Floral Company's Cup, offered for 25 blooms Maid of Honor, is $50, and not, $5 as printed last week.

Peter Henderson & Co., New York, offer a silver cup valued at $50, for best 24 pot plants, 12 distinct varieties, H. P.'s, in section F., open to private gardeners and amateurs only.

A CHANCE FOR THE YOUNG MAN.

We announce, as under, the decision of the judges in the recent competition, the subject being "The Care of a Hot-Water Boiler." We are gratified at the interest shown by the boys in the contest, and congratulate all upon the high degree of intelligence manifested in the papers submitted, both from a practical and a literary standpoint. There is evidently some latent talent existing among the young men of our profession, which needs only to be drawn out to be of service both to themselves and their fellow-craftsmen. It has been remarked that writers, like varieties, "run out." However this may be, a diversity of reading matter is always welcome; and any effort that conduces to the presentation of fresh views upon a given subject will no doubt find favor with subscribers. If the present series of competitions be the means of "discovering" some one or more individuals, who are capable of taking the places of those who now so ably supply literature for the reading horticultural public, when the pens of these writers shall have become inactive, then we shall consider that our endeavors have not been in vain.

Among the many papers submitted in the present instance were several well written, but the authors had overlooked the fact that economy both in fuel and labor are, next to heat, the most important features in handling a boiler. We offered only one prize, but the judges considered that a second paper should be recognized, and its writer awarded a premium, hence we announce the names of two winners as follows:

FIRST PRIZE.—Wm. M. Taylor, 50 Oak street, Bridgeport, Conn.

SECOND PRIZE.—Arthur Taylor, Onaway Greenhouses, Boonton, N. J.

Our Next Competition.

SUBJECT: **What I learned during my first two years in the florist business.**

PRIZE—$1 worth of books or magazines; or $3 in cash.

CONDITIONS.

(1) Each MS. submitted must be written by an employee, without assistance, and the authenticity of these facts attested by the employer.

(2) No employee now contributing, or who has at any time contributed to any florist trade journal, will be allowed to compete.

MSS. must not exceed one thousand words in length.

All MSS. submitted in this competition to become the property of the publishers of the FLORISTS' EXCHANGE.

The awarding of the prize will be based on the amount of the practical knowledge acquired by the writer in the period stated as exemplified in his paper.

Competition will close April 7 next.

Write plainly on one side of the paper only.

Address all communications,

EMPLOYEES' COMPETITION FLORISTS' EXCHANGE,
P. O. Box 1697, New York City.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

Chatterton Warburton registers new carnation "Cressbrook," a seedling from Mrs. G. M. Bradt × William Scott. Color bright pink; size of flower 3 to 3½ inches; stem strong and wiry; plant a strong grower, ready rooter, and having no surplus foliage.

WILLIAM J. STEWART, Secretary.

American Dahlia Society.

An effort is to be made to reorganize this society, and a meeting for the purpose is called for Tuesday, March 27, at the rooms of the American Institute, Berkeley Lyceum Building, West 44th street New York, at 1 o'clock p. m. J. W. Withers, 136 Liberty street, N. Y., is acting as secretary.

Cyclopedia of American Horticulture.

As previously announced the first volume of this Cyclopedia, issued by the Macmillan Co., New York, under the direct editorship of Professor L. H. Bailey, with Mr. Wilhelm Miller as associate, has appeared, and comprises over 500 pages. The only work published within recent years, with which it may be compared, is Nicholson's Dictionary of Gardening, an English book, which, while treating exhaustively of European horticulture, leaves much to be desired concerning the horticulture of North America. In a great many respects the Cyclopedia is an improvement on the Dictionary, the principal one being that each specific name is followed by the authority for the same, thus preventing much confusion. Nicholson, for some reason, omitted the authorities for the names. Another great improvement noted in the Cyclopedia, and one which will appeal forcibly to those who wish to verify the names of their plants, is, that the species of those genera, which are more than 15 in number, are arranged according to their horticultural characters or botanical sequence, along with the botanical description, instead of alphabetically. The last named method is, of course, the handiest when the descriptions are exhaustive, which is far from being the case in the Dictionary. A list of the species in alphabetical order, with the number of each corresponding to that beginning the description, is also provided, making an exceedingly convenient arrangement.

As might be expected in a work of such magnitude some mistakes crop up here and there. It is stated in the preface that "proofs of every article in the work have been read by experts in that subject." But it is inconceivable how some very apparent errors could have escaped those experts. Some questions which have been in dispute for a long period are sometimes summarily disposed of. In the latter category we have, in the description of Adiantum Farleyense, the statement that it is "apparently a good species." It will be readily admitted that every species has some means of reproducing itself, but we have not found any in this fern up to the present time.

Adiantum gracillimum is given as a species, although it should be well known that seedlings revert to A. cuneatum. Mention is made of a plant named Darlingtonia Courtii, said to be a hybrid between a nepenthes and Darlingtonia californica. Such a cross is, of course, impossible, as the plants are not related in any way.

Of the charming American cowslip, dodecatheon, no mention is made of the peculiarities in the germination of the seed. Has not the want of information on this point contributed largely to the state of matters which the editor deplores in describing the genus?

The definitions of and directions for growing Alpine plants will hardly be followed by lovers of these subjects. The nomenclature of the allamandas is a perplexing one, and in this condition it is further perpetuated in the Cyclopedia. Ceratostigma plumbaginoides is said to be a hardy bedding plant producing the flowers late in the Fall.

In the article on carnations, the line between American Winter flowering and the European Summer race is too finely drawn. The only difference between the two is that the carnation of Europe is but little grown for Winter-flowering, but not because it won't flower in Winter. The illustration showing the doubling of the carnation is misleading in that it shows only malformed stamens.

Notwithstanding these defects the value of such a work to American horticulture is inestimable, bringing together, as it does, the heretofore fragmentary literature on the subject, and affording a work of reference, both from a practical and botanical standpoint, far surpassing anything previously existing here.

The book is well printed, profusely illustrated, and handsomely bound. As before mentioned the Cyclopedia will appear in four volumes, the completion of which, it is expected, will be reached by the end of the present year. The price of each volume is $5.

Among the Magazines.

THE AMERICAN KITCHEN MAGAZINE. The Home Science Publishing Co., Boston, Mass.—The up-to-date housekeeper will find many useful hints in this interesting publication. The March number has two important articles—Housekeeping in the Twentieth Century, and a Symposium on Mastery of the Science of Housekeeping.

OBITUARY.

Isaac Hicks.

Isaac Hicks died Tuesday last, March 13, at his home in Westbury, L. I., from paralysis. He was 85 years old. Mr. Hicks was the head of the nursery firm of Isaac Hicks & Son. He was born on Long Island, and came of Quaker stock, being noted as a preacher among the Society of Friends. He had retired from active business some years ago, the concern now being conducted by his son and grandson. The firm is one of the oldest in the country; it has been very successful in the transplanting of large trees, for which work it has patented a tree-mover. The deceased gentleman was of an artistic turn, and portions of his latter days were spent in painting birds and maniac subjects for the delectation of his young relatives.

FIRES.

INDIANAPOLIS.—Fourteen greenhouses belonging to the Indianapolis Flower and Plant Company, at Central avenue and 34th street, were badly damaged by fire that started in the potting sheds March 6. How the fire originated is a mystery. When the blaze was discovered it had gained considerable headway. The flames swept north toward the tower in which three men, employed in the greenhouses, were sleeping. One of them, William Graham, inhaled the smoke and it awakened him. He called his companions. They had a narrow escape from being burned to death. The entire stock of the greenhouses was ruined by heat and water. The loss is estimated at between $5,000 and $6,000. There is $1,000 insurance. The company will rebuild at once.

CHANGES IN BUSINESS.

UTICA, N. Y.—Frank J. Baker has entered into partnership with his father, C. F. Baker. The new firm will be known as Baker & Son.

MIDDLETOWN, CONN.—F. B. Fountain will shortly open a flower store at 226 Main street, here.

DERRY, N. H.—Mrs. M. E. Cullen, who conducted a greenhouse establishment at West Derry, has sold out her interest and removed to Lowell, Mass.

MIDDLETOWN, N. Y.—William Gray, who for the past 16 years has been florist at the State Hospital, has tendered his resignation, to take effect April 1. Mr. Gray will hereafter give all his attention to the truck farm and greenhouse which he has near this city. His successor has not yet been appointed.

NO. VERNON, IND.—S. V. Williams will shortly establish a greenhouse at Bedford.

SALT LAKE CITY, UTAH.—With a capital stock of $6,000 in $1 shares, the Sugar House Floral & Seed Company has been incorporated in this city, to conduct the business indicated in the corporate name. Leo Danaenfelzer is president, Herman Schwarz treasurer and secretary, Simon Heinecke vice-president and manager, and John A. Peters and Martin Grimm are the other directors and shareholders.

Business Difficulties.

ATHOL, MASS.—James Sutherland, Jr., has filed a voluntary petition in bankruptcy. His liabilities amount to $6,228 and he has assets amounting to $325. The unsecured claims against him amount to $1,923, and the secured to $4,185.

In a Greenfield, Mass., cemetery was recently seen a new made grave, with a floral tribute upon it, bearing the word "Ante." Sporting men who saw it wondered how much they must "ante" up for the sight. On inquiry it was found that a florist had been instructed to prepare an emblem with the word "Auntie" upon it; and this was the result, which he brought at too late a moment to rectify, but claimed that it was all right, as he had "looked in two dictionaries and they both spelled it that way."

OUR GREAT

Special Spring Trade Edition

WILL BE ISSUED

Saturday March 31 1900

TWO WEEKS BEFORE EASTER

OUR "SPECIAL" will be one of rosy possibilities to all enterprising advertisers. It is to be issued at just the nick of time, March 31. It's right for Easter, it's right for the grower, the seedsman, the nurseryman; in fact, it's just the fit time in the season to strike all buyers most favorably.

Not less than 10,000 copies will be mailed out—may be more—all to selected names.

This is the last year of the century. It is beating the record of all recent business experience. You can beat your own record by advertising in THE FLORISTS' EXCHANGE, Special Edition and all other editions.

Every effort on the part of the publishers will be exerted to make this Business Edition a paying investment to all who patronize its columns.

Soliciting your generous support, and asking that you please send in your "copy" early, we are,

Yours very truly,

Publishers **THE FLORISTS' EXCHANGE**

Nos. 2 to 8 DUANE STREET, NEW YORK.

Baltimore.

Market Conditions.

Stock cannot be called over-plentiful; Lent does not seem to influence trade as it did. Violets are the only flowers that appear to be a glut at times. Stock for Easter seems to be in good shape, except lilies, which are as poor as they have been for the last few years.

Club Meeting and Banquet.

The club elected for its president the president-elect of the Carnation Society—Robert Halliday. The club is to be congratulated in having selected this gentleman for the office. All the members of the Carnation Society who attend the convention next year can rest assured that, under the leadership of Mr. Halliday, the Gardeners' Club of Baltimore will endeavor to make the meeting an epoch in the society's history.

N. Flitton, vice-president-elect, has faithfully served the club as its president the past year; and it is to his spirit of progress that the club to-day stands on a firmer basis than ever before, good fellowship and harmony being the password of all the members.

Fred. Burger was elected, like the other officers, by acclamation, as treasurer-elect. Mr. Perry succeeds himself as secretary, and H. Ekas, as financial secretary, was also re-elected. John Wagner as librarian still holds on to this very important position.

The annual banquet, after the election, was a grand success. No colors blended more harmoniously than did the spirits of the craft. The oratory of the members was replete with wit and wisdom, touching both a melancholy and joyous chord. There was one speech which surpassed all others—one that was filled with truths which were undeniable—Mr. Rider distinguished himself by the remarks he made. The oratorical effort of Brother Graham brought down the house, while his neighbor, Mr. Christy, made the boys smile with a breadth which could not be mistaken. Mr. Brown's poetry was apropos.

Jottings.

Growers who are cultivating the plants for the public squares are kept busy propagating their stock.

There are many applications for positions under the new Park Board.

EDWIN A. SEIDEWITZ.

Syracuse, N. Y.

We were never more surprised than when nine staunch and true Uticans alighted from the Empire State on Wednesday afternoon, to try conclusions with us on the alley, and our victory of the three straight games. They were evidently overtrained, evidencing as they did superior work, but the pins would not fall to a liking, gates ajar and so forth. The Utica party consisted of Peter and W. J. Crowe, Frank Baker, J. C. Spencer, W. Kauffer, Harry and Chas. Matthews, Doc. Rowland and A. C. Brown; Syracusans, Alfred Burt, T. Bishop, David Campbell, C. A. Fox, George Ham, Joe Huller, W. Smiley, W. H. Dow, A. Davis and R. Bard. Scores: First game, Syracuse, 1005; Utica; 964. Second game, Syracuse, 1044; Utica, 967. The third—well, they had to catch the 12:20 home. Highest score of the evening, A. Davis, with 180.

A sleigh ride was enjoyed in the afternoon, 20 inches of the beautiful making it good running, stopping first at Marquisee's to see the famous Marquis—a wonderful sight indeed, thousands of these massive and finely formed flowers in full blow among a sea of buds. The Syracuse, too, was in fine array, the flowers being far superior to those shown at Buffalo. White Cloud was also good.

Proceeding to Henry Burt's we found that great old florist and market gardener, now in his 75th year, around just the same as ever. After partaking of his hospitality a hurried visit was made to Quinlan's, to see Golden Gate and Dunlop's beautiful new rose, Lady Dorothea, Wing R. Smith of this firm receiving the boys courteously. A supper was served at the Bastable.

The florists' trade has been quite a little brisker since Lent began. Flowers of all kinds are plentiful, with the exception of roses. Bulb stock goes rather slow, yellow tulips, daffodils and valley being the best sellers. It's more yellow teas and functions this season than the red of last year. Golden Gate roses are fast becoming favorites, the extras on long stems bringing 75c. each at retail.

R. B.

LITTLE FALLS, N. Y.—J. O. Graham reports excellent business. In addition to his own supply he takes the product of the Overlook greenhouses.

Grove P. Rawson gave a talk before the Elmira Horticultural Society Monday last, on the subject of carnations.

Supt. Wm. Falconer, Schenley Park, Pittsburg, has returned from a very successful trip to California.

CARE OF A HOT-WATER BOILER.

First Prize Paper

By WILLIAM M. TAYLOR.

The first principle in running a hot-water boiler is to have a thoroughly clean fire. A clean fire will give more heat and burn less coal than one only half cleaned. A half-clean fire requires more draft, for the same amount of heat, than a clean fire does, and the more draft a boiler has on, the more coal it burns and the more heat goes up the chimney.

To cool off the pipes quickly on a day when you are sure of plenty of sunshine, about 6 a. m., shake, or rake, the fire at the bottom, then put in two or three shovelfuls of coal; place the coal on the center of the fire only, putting cinders over the coal so as to form a cone-shaped pile. The reason for making the pile cone-shaped is, that it does not take as much coal or cinders as it would if the fuel were put on level, and it covers over the hottest part of the fire to the depth of 5 to 7 inches, allowing very little, if any, heat to come through; besides keeping the fire away from the sides. Leave the damper in the chimney open just enough to allow any gas that may arise to escape, and the fire-box door open also. If the fire is wanted in a hurry, level it off a little, pushing the cinders to the sides and give it full draft. In half an hour you have almost a white heat, the cinders making it much hotter in a shorter time than would coal alone. Then put on enough coal to form a good body, so that when raking you will have plenty of coal left to bring the fire up well.

Having your fire, at 7 a. m., clean and properly shut off, you are ready for any kind of weather. If it looks as though it were going to be cloudy, I would not put on any cinders, shutting off with fresh coal; but, as I am prescribing for a clear day, with plenty of sunshine, the fire should be shut off with a supply of cinders and can be left alone until the temperature in the houses begins to drop, with full air on; then close the fire-box door and open the "star" not over half way. If your chimney has a good draft—and if it hasn't it should have—leave the damper in the chimney as you have had it all day.

The object in starting the fire at this time is to have it come up as the sun goes down. In this way air can be kept on much longer. By starting the fire slowly you are getting all the heat out of the coal; whereas if you let your fire stay shut-off until all the air has been taken off you will have to drive the fire along pretty lively, and a goodly part of the heat will be lost through the chimney. If by 5 or 6 o'clock the fire has burned up fairly well, it can be raked; if it has burned up too much, put on some fresh coal and leave it for a while, until the coal has got pretty red, then give it a good raking. After clearing the fire cover it over with 3 or 4 inches of coal, making it level; also watch that you don't leave any holes in levelling it off, for the draft will come through wherever it has the smallest resistance. A hole left when putting on coal means a dead spot in the fire in a very short time. Give full draft until you have thorough combustion, then regulate according to the temperature outside.

This fire should last, if it is not too cold outside, until 10 or 10:30 p. m., when it should be shaken down and the fire box filled up. Pay particular attention to have the fuel all around the sides well packed; heap up the coal a little in the center and give full draft until combustion starts, then cover over with cinders, regulating the quantity, also the draft and damper, according to the outside temperature. This fire should remain good till 6 a. m., when it can be treated as before described.

Second Prize Paper

By ARTHUR TAYLOR.

About 7 a. m., if the prospects are for a bright day, or as soon as the sun shows itself, the drafts on the ash pit door should be closed, and the fire-box door opened wide. If the coal has all burned out a couple of shovelfuls should be scattered over the surface, covering this with fine coal dust or ashes, which keeps the fuel from burning up; and the fire will then be ready to start up and can be rushed at a moment's notice. The window, or door, of the boiler room should be opened, so that a current of cold air can pass through, which will soon cool off the water in the pipes. It can be left thus until the temperature begins to fall in the afternoon, and the sun gets over to the west, so that it is necessary to lower the ventilators. The fire should be started so as to hold the temperature at the point desired as soon as the sun disappears. It is easier when the fire is started early to keep up the temperature than if the fires are left until the houses are closed up and the temperature falls a few degrees below the desired point, then rush the fire for all it is able to do, which will consume more fuel in getting up the heat again. The fire should be shaken up, the fire-box door closed, the damper in the flue opened; also the bottom draft so that the fire will burn up thoroughly. When this has been done the bottom draft should be closed, leaving the damper in the flue open; then with a long poker the fire should be well cleaned of all ash and clinkers through the fire-box door, and the grate shaken well with the lever. The surface of the fire should now be covered evenly with clean coal, the fire-box door closed and the drafts opened, until the fire burns up. All ashes should be removed from the ash pit. As soon as combustion is properly secured the damper in the flue should be regulated so that the heat will not go up the chimney; the draft should also be regulated according to the heat desired. After getting a good body of fire the fire box can be filled with coal, and with the draft regulated properly the fire will run automatically for eight or ten hours.

In very cold weather, when it is necessary to keep the water boiling, the fire should be kept clean. When putting on coal just enough to cover the surface evenly should be afforded. When making it up for the night the fire should be cleaned, the fire box filled with coal, which should be spread evenly; the damper left only open enough to allow gas and smoke to escape, and the draft regulated according to the weather, to maintain an even temperature in the greenhouse.

The first thing in the morning the fire should be looked after, more coal being put on if necessary and the ashes shaken down; then when the sun rises the fire should be banked. If it be a cloudy day the fire will have to be kept going all day. The flues should be given a good cleaning out every week through the firing period. Several times in the season some water should be drawn off the boiler, by the draw cock, in order to get all dirt from inside of the boiler.

McMillen's New York Market Mignonette.

N. Y. Market Mignonette.

Our illustration shows samples of McMillen's New York Market mignonette, grown by Robert McMillen, of Pearl River, N. Y. As will be seen the spikes are very large and dense; in addition they were deliciously fragrant. Mr. Macmillen has been growing this strain for the past five years, and every year it has shown an improvement. He informs us that the spikes have realized in the New York market $2 per dozen at wholesale.

Mr. McMillen furnishes the following particulars regarding the strain: "I bought seed of George Bennett some five years ago, and one plant came up among the others so much superior to them that I decided to save seed from it and perpetuate it. I have improved the strain every year since, until I have brought it up to the present standard.

"The most important factor in growing mignonette for market is good seed saved from specimen spikes grown indoors especially for seed purposes. The plants should never be cut from, as it is important to save seed from the first spikes. The seed pods should all be set by March 15, then there is no chance for hybridizing being done by bees.

"Next in importance is soil—a good, turfy loam, with one-sixth of well decomposed cow manure added, is an excellent compost. Keep the night temperature about 45 degrees, with a rise of 10 degrees in the day time, affording plenty of ventilation when the weather will permit. Almost any kind of structure will suit mignonette. I grow mine in north and south houses, and find these suit it very well, as the accompanying photograph will show."

Exhibitions.

The second annual show by the Horticultural Society will be held in Colorado Springs, Col., in the first week of August, 1900. Liberal cash prizes are offered for the best displays of all varieties of flowers, fruits and vegetables. Classes are provided for amateurs, professional gardeners and commercial florists, and classes are also included in which children only may compete for the prizes. Special prizes are also offered for the best kept and most attractive home surroundings. A full schedule will be soon issued, and upon application will be mailed by H. I. Bennett, secretary, 322 West Kiowa street.

Members of the Massachusetts Horticultural Society are preparing for the annual Spring exhibition, which will be held at Horticultural Hall, Boston, beginning Tuesday, March 20, at noon, and closing at 9 p. m. of Friday, March 23.

Owing to the mildness of the season, the conditions are unusually promising for a fine exhibition this year. The amount to be given in prizes is nearly $1,100, and there will be classes for ericas, orchids, greenhouse plants, climbing roses, shrubs, primroses, polyanthuses, cyclamens, cinerarias, hyacinths, tulips, narcissus, jonquils, lilies, crocuses, freesias, tritonias and ixias. In cut flowers there will be prizes for hybrid perpetual roses, tender roses in vases, carnations, pansies and violets. There will also be displays of fruits and vegetables. This is the first formal exhibition of the year, and is one of the two principal shows given by the Horticultural Society.

Pan-American Exposition.

Henry A. Dreer, Inc., of Philadelphia, offers to put in 100 beds of flowers, each bed to average 400 square feet, and to consist of a solid clump of one particular flower, at the Pan-American. Besides this, Mr. Dreer has volunteered to fill both the basins with aquatic plants. These basins, the Court of Cypresses and the Court of Lilies, will each be 120 feet in diameter, and in one of them the water will be kept warm in order to permit the magnificent Victoria regia to thrive.

Another proposition has been received from J. C. Vaughan, of Chicago, which is almost as generous as that of Mr. Dreer. Both of the offers will be accepted and will, without doubt, be followed by others similarly magnificent. Both F. Taylor and William Scott, who is in direct charge of the floricultural department, are much elated over these offers of co-operation on the part of these famous growers.—Enquirer.

HINTS and HELPS.

Drainage and Covering for Seeds.—Seedlings, which from their nature, require pricking off shortly after the seed leaves are developed, should be raised in boxes or pans which have at least half their depth devoted to drainage. Even in very shallow boxes the bottom part should be covered with rough screenings overlaid with fine soil pressed moderately firm. In covering, the old rule is to cover the seed to its own thickness in soil, and if followed out in sowing ordinary flower seeds few mistakes will be made. The covering should not be of such a nature as to cake readily. Finely screened sphagnum moss mixed with sand is a good substance. Finely screened Jadoo is another excellent medium, both retaining moisture without imparting too much to the soil below. Very small seeds, such as begonias and gloxinias, do not need any covering of soil, but to preserve a humid atmosphere around them they may be covered with a pane of glass until the seed leaves appear. In such cases it is necessary to water the soil before sowing.

Fuchsias which were put in at the proper time are now too large to be left longer in 3-inch pots with safety. Any variety will bloom in 3-inch pots, but by keeping them in a growing state, with abundant root room, they can easily be grown, according to the variety, from 2½ to 4 feet high, before the flower buds make their appearance. If wanted to bloom in 5-inch pots pinch back the leading shoot, and when the pot is well filled with roots, give clear, weak liquid manure frequently; this will prolong their blooming season. For the tall plants a single supporting stick for the main stem will be all that is necessary, with perhaps a few supporting strings for the lateral shoots in the case of those having large double flowers.

Temporary Shelves.—For a great many plants in the seedling stage at this season, a position as near the glass as possible is an absolute necessity. When the back part of the bench is used for this purpose it is a case of sacrificing just so much space which might as well be utilized with other material. A useful shelf can be erected in a very short time, which will add just so much extra space less than half an inch in thickness, to the proper shape. Arrange the hooks at the ends of the two legs so that they will catch the staples easily, and be as easily removed when not in use. Through the loops formed by these iron rods slide a board of the proper width. This will be an ideal place for seeds after germination. If the rafters are of iron, holes can be drilled for the supports to the boards.

Starved Palms.—Some rare stove palms are apt to become yellowish in the foliage, owing to the food in the soil having become exhausted. When it is not desirable to shift into new soil, the trouble may be remedied, to a great extent, by sprinkling some bone meal on the surface of the pot. Gradually, through watering, this will be conveyed to the roots and the foliage will resume its healthy appearance if it is not too much discolored. Licuala grandis and the green form of Stevensonia grandifolia, and sometimes Verschaffeltia splendida get in this condition, and may be helped as above. The yellowish condition of the foliage resembles that put on by many palms when allowed to stay out-of-doors rather late in the Fall, and which is replaced by a healthy green after being taken indoors.

Poinsettias.—The first batch of dormant wood cuttings may be put in now while the bottom heat in the propagating house is brisk. Cut into lengths of about four inches. Wash the milky sap from the ends which are to be inserted in the sand, using warm water. After drying they are inserted in the sand for half their length. Very little water is necessary until they show signs of growing. As soon as roots are three-quarters of an inch long, they should be potted in thumb pots, using soil only fairly moist; and only enough water given through a fine rose to settle the surface of the soil.

Justicias.—Two of the finest Summer flowering plants for the conservatory are to be found in this genus. They are J. carnea and rosea, old timers, true, but hard to beat. Put in the cuttings now. Good sized pieces may be taken as they root freely; after they are well rooted in their first pots they need very little shade. From 3-inch transfer to 4½-inch pots and then to 6-inch, in which they will bloom shortly after mid-summer. They are not particular as to soil.

Chrysanthemum White Bonnaffon.

and interfere with nothing. If the rafters are of wood two stout staples may be driven in each about 12 or 14 inches apart, according to the width of the desired shelf. Next bend pieces of iron rods'

Cinerarias which are now coming into flower should get a position in the coolest house. Give an abundance of air and not too much exposure to the sun's rays. Greenfly, slugs, and cut-worms are their worst enemies. If the plants are standing on inverted flower pots, sprinkle some salt among the tobacco stems; this will effectually dispose of the slugs. The cut-worms should be sought for after dark with the aid of a lantern.

IN THE CARE OF SEEDLINGS we always prefer to transplant into wooden flats rather than into pots, this being much more economical, both in space required on the benches and in time needed in the operation. The flats need not be more than 2½ or 3 inches deep; and one-half-inch thick lumber is plenty heavy enough of which to make them.

Chrysanthemum Gold-Mine.

Asters and Stocks.—The old method of raising these in quantity for early Summer flowering has not been improved upon in recent years. This is to put from 6 to 8 inches of stable litter in the bottom of a frame, then a few inches of soil on top of this. The seed is then sown thinly and the seedlings are allowed to grow until large enough to be transferred to their flowering quarters. A frame with a southern exposure should be chosen. With attention to the airing of the frame, nice stocky plants will be the result. Neither stocks nor asters are what we would term tender plants.

G. W. O.

BRIEFS FOR BUSY FLORISTS.

FLORISTS that are located near cemeteries, and consequently have a steady demand for funeral flowers, can provide longiflorum lilies for an indefinite period by using cold storage bulbs and planting now. This is not new by any means; still we believe that there are many florists that think there is no use for the lily after Easter has passed, which is a great mistake. Last June we had occasion to visit a florist establishment located near one of the largest cemeteries in the East, and in the greenhouses were several thousand lilies in all stages of growth. We were informed by the proprietor that the demand for these flowers was always good; they could be grown cheaper through the Spring and Summer than in the Winter, and they were much more profitable. Cold storage bulbs were used and they were very satisfactory.

GERANIUMS that were struck last Fall should now go into 4-inch pots. To hold them any longer in the smaller size would stop their growth for the time being, and render them of no more value than similar plants rooted in January. In potting these it is not necessary to use the best soil from the compost heap; that taken from an old rose bench, and which has been exposed to the weather during the last few months, is well suited for the purpose, providing some well-rotted manure is mixed with it. Do not pot the geraniums when they are at all dry; if this is done, the plant is likely to remain dry for many days, as the water given percolates through the new soil around the edge of the pot before it can penetrate the dry ball, which is full of roots and quite hard.

WELL-FILLED PANS of pansy plants in full bloom make one of the choicest gifts for Easter, and this is a good time to prepare them. Select the strongest plants from the frames and fill the pans, planting rather close together, as a mass of flowers is wanted. Give them a light bench in the greenhouse, where they will receive all the sunshine possible, and they will come in in good shape for Easter. In filling the pans it is well to have some with mixed colors, and others massed with separate colors.

PANS OF VIOLETS can also be sold well at Easter, but these need not be potted for two weeks yet.

Some New Chrysanthemums.

Our illustrations, which are presented by the courtesy of Nathan Smith & Son, Adrian, Mich., show the following varieties. The descriptions are those of the introducers:

GOLD-MINE.—(Exhibited as Stelleta.) (H. L. Sunderbruch × Modesto.) Unsurpassed in size, having been grown 11 inches in diameter. Foliage and general habit resemble Sunderbruch. Planted June 20 it attained 3 feet in height. Color rich golden yellow; outer petals reflexed and center incurving in a whirl. In perfection November 20 to 30. Best flowers were from buds taken October 10. We predict it will depose Modesto and Golden Wedding, being more dwarf, surpassing both in size, a rival in color, and having better stem than the former. Certificated by the Chrysanthemum Society of America at Chicago in 1898, scoring 93 points, and averaging 93 points before four committees in 1899. Also winner of the C. S. A. silver cup offered for the seedling scoring the highest average before three or more committees.

WHITE BONNAFFON.—(Mrs. H. Robinson × Mrs. H. McK. Twombly.)—A commercial variety of great promise, which we predict will become as popular as the typical Major Bonnaffon. Color pure white; form identical with Bonnaffon; growth very short-jointed, not 3 feet in height. Foliage large and very dark green. Its lateness (November 20 to 30) greatly enhances its value. Take terminal bud about October 10. Certificated by four committees of the C. S. A.

New York.

Club Meeting.

At the club meeting on Monday evening last, Vice-President Arthur Herrington proved a most acceptable presiding officer, in the absence of Mr. O'Mara through indisposition. The various committees reported progress. On motion a reconsideration of the form which the $100, offered by the club to the society winning the most prizes at the forthcoming exhibition in August, should take, was laid over till next meeting. The club also decided to offer three gold medals, as first prizes, one each in the classes for group of foliage plants, not exceeding 200 square feet; same display, not exceeding 100 square feet, and for group of flowering and foliage plants, not exceeding 100 square feet. It is expected that the schedule will be issued in the course of a few days. A recommendation to include a class for ornamental evergreens was left in the hands of the exhibition committee.

A vote of thanks was passed to the Buffalo Florists' Club, for courtesies extended to visiting representatives from the New York Club to the late Carnation Convention, accounts of which were given by several of the gentlemen there present.

A meeting of all the committees will be held, at 7 p. m., in the club rooms, Monday, March 26.

Ex-Alderman John Morris exhibited a bunch of single violet, Princes of Wales, that were remarkable for both size and fragrance. The appointed committee awarded honorable mention. Max Richter, of New Springville, Staten Island, is the grower, and Mr. Morris declares they overtop any violets he ever handled for retaining their fragrance.

Market Notes.

Business continues in a desultory state. The snowstorm of Thursday almost stopped trade entirely, putting, as it were, a finishing touch on a quiet week. Roses and carnations are coming in in very light quantities, consequently prices have not decreased so much as one would expect; still there seems to have been some slaughtering occasionally in fancy carnations, as we have seen bunches of good Bradt and other similar grades offered by the sidewalk florists at extremely low figures. The value of American Beauty roses is hard to determine at present. For special blooms 50c. is asked, and no doubt, in some instances, obtained; at the same time some buyers are able to get specials at 25c. each. Bride and Bridesmaid are offered in straight slips at lower figures than have prevailed previously since before the holidays. Graded stock prices seem to have a downward tendency, yet while the demand is light the crop is light also, and considering the season of the year, roses are doing fairly well. Lily of the valley can be had at any figure ranging from $1 to $3 per 100, according to quality. The latter price may seem rather high, but the quantity fetching it is only limited, and is of a very special grade.

Violets are very poor and very numerous. The way these flowers have been pouring into the city during the last few weeks would indicate that, owing to mild weather, plants have been in full crop several weeks before their usual time; if this is so we may look for a general shortage by the time Easter arrives. To mention prices on violets here would be a difficult matter; they have been sold in bulk at $1.50 per 1,000. A push cart, such as the fruit peddlers use for bananas, was seen loaded up full with violets, and being pushed along 42d street one day this week.

Southern-grown yellow narcissus have begun to arrive in quantities, and the prices of the local output will no doubt soon feel the influence of the competition. Romans and Paper Whites are not so plentiful as they were; tulips also are not so much in evidence, still there are enough to meet all demands.

Azaleas and other flowering plants are coming to the city in vast numbers; it seems difficult to hold some of the stock back till Easter, and retailers are enabled to get plants from growers on the understanding that any that are not sold may be returned. This should be a good thing for the retailer.

Thos. Young, Jr., keeps a full line of decorative and flowering plants on hand in his enlarged store.

Besides being a specialist in orchids, valley and maidenhair fern, W. S. Allen handles some good quality carnations.

Walter F. Sheridan has handled an enormous number of Beauty this season, and it is a coincidence that when high figures prevailed the crop was just in.

G. E. Bradshaw reports good business since moving into 28th street; in fact, it has been so good that a new safe with larger capacity than the old one had to be purchased this week.

H. A. Bunyard is kept busy filling orders in the manetti and green goods lines.

James MacManus receives choice orchids, besides a full line of general stock.

Fitzgerald & Hammond are making a specialty of potted violet plants aside from the regular cut flower lines.

A visit to Ford Bros. always reveals a good supply of everything in season.

Koffman is going out of the cut flower business, but with the two new men starting in that street, 29th still has its full quota. C. Millang and G. Saltford occupy the same store and carry on their separate businesses in perfect harmony. Mr. Saltford's specialty is violets, while Mr. Millang carries a general stock.

M. A. Hart receives extra fine roses and violets, together with other seasonable flowers.

W. H. Gunther's greatest line is violets, and many thousands go through his hands daily. Carnations and lilies are also handled extensively.

Blauvelt & Guttman, wholesale commission dealers, 36 West 27th street, dissolved partnership by mutual consent on the 12th inst. Alex. J. Guttman retains the business and will move April 1 from the present location to No. 52 West 29th street—the store now occupied by Koffman, the smilax king. J. H. Blauvelt has taken the store at 49 West 29th street, formerly occupied by J. A. Perkins. Mr. Blauvelt has had electric light and other improvements added to the store, and a full line of seasonable stock will be carried.

S. J. Limprecht journeyed to Boston with some of his 30-feet high made-up palms this week. These were to be used by Wadley & Smythe at a large decoration done by them in that city.

Frederick N. Muchmore has retired from the firm known as the Short Hills Rose Company. The business will be continued as heretofore by John Wilson and Wm. H. Miller. Mr. Muchmore's retirement dates from March 6.

Shaping for a General Market.

The most interesting topic in cut flower circles just now is the probable amalgamation of the New York Cut Flower Co. and the Cut Flower Exchange. The Smith & Gray Building, Broadway and 31st street, is very suitably located for the cut flower business, and we understand one of the floors in this building is being discussed as a favorable place should the two companies unite. So far as we know, at this date, nothing definite has been decided.

News Jottings.

Peter McDonald is filling the position of foreman in one of the departments in Central Park.

A. Dimmock arrived from England last Sunday morning on the S. S. Etruria.

The plant auction season opened Tuesday. Although the weather was cold and raw a fair gathering of bidders was observed, both in Wm. Elliott & Sons' and Cleary & Co.'s. These sales will be held regularly twice a week right through the Spring season.

Dailledonze Bros. displayed a bunch of No. 666 carnation at the meeting of the American Institute Wednesday. A silver medal was awarded the variety. Lager & Hurrell exhibited orchids at the same meeting.

Visitors: John G. Bahret and C. J. Knauss, Poughkeepsie, N. Y.; G. Thompson, Lenox, Mass.; W. J. Crowe, Utica, N. Y.; Carl Jurgens and Son, Newport, R. I.

J. Austin Shaw has been appointed sole agent in the United States and Canada for Edw. Van Coppenolle, of Ghent—a firm that is this year celebrating its fiftieth year in the palm business.

Wm. Hughes, although not fully recovered from his accident, is again back at Clucas & Boddington Co.'s. John Ringler is now with this firm.

In order to encourage the boys to sell his "tobacco whale oil soap" and tobacco dust, H. A. Stoothoff offers a prize of a bicycle, or any article which can be purchased for $25, to the one selling the largest quantity before July 1. The prize is in addition to a commission on sales.

Philadelphia.

Market News.

The stores have had rather a quiet week. Transient trade has been fairly good some days, but many of the large flower buyers are out of the city. There has been considerable funeral work during the week, a large number of choice orders being given.

The cut flower market is in fairly good condition for this season of the year. The quantity of flowers is not quite so large as last week, and prices are holding better than usual during Lent. There has been a slight drop in roses, perhaps in many cases the price per dozen is the same, but a generous count has been given. There has been a good demand for the medium size of Beauty; of other sizes there are plenty for all calls. Bulbous stock is selling slower, white tulips going the best of anything. Valley has also not been in good demand, and has to be very fine to bring over $3 per 100.

Carnations, while not exactly scarce, are sufficiently so to keep prices firm; $1.50 to $2 being obtained for general stock, while fancies run up to $4 per 100. White has been most in demand. Violets are very plentiful, the very best are selling at 75c. per 100.

News Items.

Wm. J. Moon has just installed a new refrigerator in his wholesale establishment; it is 12 feet long by 4 feet deep and 11½ feet high. He reports business as very encouraging, and an increase in the number of consignors.

Edw. Reid, taking advantage of the dull spell, has gone on a business trip to visit some of his shipping customers.

Visitors in Town.

A. N. Pierson, Cromwell, Conn., and Adolph Gude, Washington, D. C.

Among the Growers.

Robert Scott & Son have been very successful with Crimson Rambler roses in pots for Easter; they have, without a doubt, the best house of these roses, in all sizes, ever seen in this locality. The house is 200 feet long. The plants are grown in several ways—some were cut back, others trained fan-shape, and some balloon-shape; others are grown in pans. A novelty in this line is that some plants have a 6-inch pot in the soil; this will be taken out and a lily in flower inserted, in some cases the plant being grown so that at the top it can be tied down to form a wreath, the lily coming up in the center, and in plants just bent over the lily will fill the opening in center. All other stock on this place is looking good. The chief object is still the Liberty rose, the shipping of the first lot of young plants of which will begin March 20. They are in splendid condition. Mr. Scott has not paid so much attention to cut flowers as he has to raising good plants, thus keeping up his reputation in this line, and his patrons will certainly get plants that will give satisfaction. Lilies for Easter are in good condition, the Harrisii and longiflorums both being well budded and sufficiently advanced.

Robert Craig, wife and daughter, are visiting E. G. Hill, Richmond, Ind.

DAVID RUST.

The Spring show of the Pennsylvania Horticultural Society occurs at Philadelphia, March 20 to 23 next. Certificates of merit are offered for nine carnation classes—new varieties not disseminated previous to January 1, 1900; also a silver medal for best vase of 25 blooms in these classes, and a silver medal for best vase of 100 blooms, any one variety. Copies of the schedule may be obtained from Secretary Rust, Horticultural Hall.

Taunton, Mass.

W. N. Craig, who has had charge of the Clemson greenhouses for some time, will at an early date leave for a position in the Ames' greenhouses at North Easton.

N. Y. Market Florists' Association.

This association held a meeting in the restaurant adjoining Clinton Market, Thursday evening. In spite of the very inclement weather a goodly number of the plant growers attended, and in the absence of the president, H. C. Steinhoff occupied the chair. After some deliberation it was decided to open the plant season in the market on Saturday, March 24. A committee of three was appointed to wait upon the market authorities in regard to securing the stands for the coming season—R. Leach, R. Dryer and G. Brown forming the committee, who will report at the next meeting, Thursday, March 22, in the market restaurant.

About 16 members were present, and the probabilities are that about 35 stands will be taken. Every member is urged to be present at the meeting next Thursday evening.

Grand Rapids.

A Spell of Bad Weather.

We are going through the worst spell of bad weather of the Winter—snowstorms coating the houses until you can hardly see, followed by cold waves, fierce winds and rains. In consequence of the severity of the elements trade has slackened somewhat, allowing roses to catch up with the demand, while carnations are still scarce and need a little longer rest to get a few flowers ahead. At the present time the white which shows up best and will be the favorite for next Fall's planting is White Cloud, of which some magnificent blooms are being cut. Flora Hill will rank next; its stems are getting much stiffer and the plants promise a fine Easter crop. Two other whites will be planted in medium quantities, viz., White Daybreak and Evelina; yes, and John Young will get one more chance to open freely.

G. F. C.

Holyoke, Mass.

The Holyoke, Springfield and Northampton Horticultural Societies held a union meeting in Holyoke, on March 7, at which John N. May, of Summit, N. J., read a paper on the rose. About 150 members of the three societies was present.

G. H. S.

PLANTS and FLOWERS.

We are in receipt from L. Ussing, New York, of a bunch of flowers of the improved cowslip (Primula veris). The flower stems are exceptionally strong and carry large clusters of good-sized white blooms with yellow centers. The stems were all of 10 inches in length and as thick as an ordinary lead pencil. This variety would be useful either for pot work or for cutting purposes.

Carnations at Cincinnati.

The event of the week was the carnation exhibit at the club rooms in the Flower Market, Saturday afternoon last. The blooms staged there, taken as a whole, were the finest I have ever seen. All were unusually well grown. Weber & Sons, of Oakland, Md., made a fine showing with Genevieve Lord, No. 11, Bradt, a dark crimson seedling, No. 126, No. 250, No. 110, white (this seems to be quite a good sort); No. 115, pink, near the shade of Bridesmaid; Mayor Pingree, Hector, No. 40, light shade of pink, and No. 30, dark pink. Wm. Murphy staged commercial sorts. George & Allen had a vase of Jubilee which was very well done.

L. E. Marquisee had a vase of the celebrated Marquis in charge of Mr. Skidelsky. This is certainly a very pleasing shade of carnation, and will undoubtedly have a large sale.

Mrs. Graves, of Richmond, Ind., staged her pink seedling, Dorothy Test. This is a decidedly improved Scott, and will no doubt be heard from later.

E. G. Hill & Co. staged Leslie Paul, America, Ethel Crocker and Olympia. All were magnificently grown, and are fine carnations. The vase of America was especially good, and I believe this variety will win out and be one of the best commercial reds. So hang on to your cuttings.

Richard Witterstaetter made a great showing with Enquirer, America, Roslyn, Estelle, Adonis, Elinore, Opal, No. 503E, crimson; Bradt and Rosamund.

Other exhibitors were: Wm. Rodgers, Corbett & Wilson and A. Sunderbruch's Sons.

The prizes awarded were as follows: The John R. McLean gold medal, to Enquirer, Weber & Sons No. 11 not being able to compete. Fifty blooms seedlings, any color, R. Witterstaetter, with Enquirer; 100 blooms mixed varieties, same exhibitor, who also won on best separate display. Fifty blooms mixed varieties, Wm. Rodgers; four vases of commercial varieties, 25 blooms to vase, Wm. Murphy; twenty-five blooms Daybreak, A. Sunderbruch's Sons.

But the most interesting part is to come—the seedlings entered for a certificate. These were scored under the scale of the American Carnation Society, and the verdict is as subjoined:

Crabb & Hunter's Irene, and Weber & Sons' Genevieve Lord are two varieties that the general public do not want to loose track of. I believe these two sorts to be money-makers. Estelle is another sort that all can grow and cut some blooms from. Of course, Adonis is a beautiful flower, the best scarlet as to size and all good qualities I have ever seen; but the blooming and bursting qualities are yet to be determined. Olympia showed up well, and through an oversight was not entered for a certificate; but at a former meeting it passed muster, and the vase being better in every particular than the former the society voted to issue a certificate to the variety.

The judges on seedlings were: Wm. Murphy, Albert Sunderbruch and E. G. Gillett, and you will take notice that the scale is given complete, thereby showing the weak as well as the strong points in the varieties in question. I also think that the National Society should adopt this same method of judging, thereby showing to the public the strong and weak points of the carnations judged. [This is done.—Ed.]

Our visitors upon the occasion were Messrs. E. G. Hill and John A. Evans, of Richmond, Ind.; John Boehner, of Dayton, O.; S. S. Skidelsky, Henry Weber, of Oakland, Md., and J. M. Harbeson, of Danville, Ky.

April 21, Saturday after Easter, is the date of our next and last exhibition of the season, and it will be a special show of bulbous flowers and market plants.

Mention the Florists' Exchange when writing.

With the close of this exhibit we shall have finished the most successful season of the Cincinnati Florists' Society.

At 8:30 p. m. the society was called to order by President Murphy. Routine business was transacted and all delinquent members for more than a year were dropped from the roll. Short speeches were made by Messrs. Hill, Evans, Skidelsky and J. Boehaer, after which the society adjourned. E. G. G.

Louisville, Ky.

We have no reason to complain of the present weather, as we are having plenty of sunshine and warmth, which causes us to be afraid that we will not be able to hold our bulbous stock until Easter. The supply of all flowers has been of good quality but not too pleatiful to create any waste, except, perhaps, in violets, which are making up for the time they lost during the Winter months.

J. B. Heiss, Dayton, O., was a recent caller.

All of the regular Holland drummers were here during the past week.

Mrs. C. B. Thompson has disposed of the wire work department of her business to Geo. Borntraeger, who has had charge of the department since Mrs. Thompson secured it.

It has just been reported that Ed. Morat has quit his store and that Mrs. Watermaa, the owner of the building, has taken charge of the same. J. S.

Boonville, N. J.

E. G. Palmer and Frank Geiskopf sustained a loss recently by the snow crushing in parts of their greenhouses and the ruining of a large quantity of stock.

Brockville, Ont.

Hay & Sons have secured the contract for decorating the grounds for Senator Fulford's new residence here. The contract price exceeds $2,000.

Boston.

The Market.

Business has fallen off somewhat this week, and flowers have already become more plentiful, causing a general decrease in prices on everything. American Beauty are more abundant, with the advent of a little mild weather, and are not sought for so much. The finest special grade now brings but $35 and $40 a 100, with fair and ordinary grades at from $12.50 to $25. Smaller roses realize $6 to $10. The advent of Jacqueminot and Ulrich Brunner no doubt affects the sale of Beauty. The former variety make from $1 to $3 a dozen, while Brunner go at from the former price to $4 a dozen for fine grade. Bride and Bridesmaid are in nearly the same condition as Beauty—increasing in quantity, but with a decrease in the demand, and a consequent falling off in values. These roses, if of good quality, average $12.50 a 100, though a limited supply of extra stock goes as high as $16. Smaller grades range in price from $2 to $8 per 100. Carnations, too, are a little more plentiful, but there is a very good, steady demand for the finer grades, which clean up well daily, averaging $2.50 and $3 a 100. The ordinary grades, however, are more plentiful, and go at from $1 to $2 a 100, the latter price being a good average.

Bulbous stock is now becoming druggy and it is found to be very difficult to clean out the market of the heavy daily consignments. A few Golden Spur fetch $4 a 100, and Horsfieldii, which are in limited supply, make $5 and $6. Tulips are very plentiful and in great variety; single ones bring $2 to $3 a 100, while the doubles, which sell well, make $3 to $4. Dutch hyacinths do fairly well at $3 to $4 a 100.

Lilies are still scarce, and if of good quality easily bring $1.50 to $2 a dozen. Callas are plentiful, as also is valley. Violets are very druggy, making anywhere from 20c. to 50c. per 100, a few extras going to 60c. and 75c. a 100.

Wm. S. Ewell & Sons are now bringing in a fine lot of bulbous goods in pans, such as daffodils, trumpets, tulips of all kinds, hyacinths (Dutch and grape), crocuses, scillas, etc., besides a fine lot of azaleas in all sizes.

A Lecture on Carnations.

C. W. Ward, of the Cottage Gardens, Queens, L. I., delivered a very interesting lecture on "Carnations and Their Development," on Saturday last, at Horticultural Hall, before the Massachusetts Horticultural Society. He illustrated his lecture with lantern slides. There was quite an interesting collection of new carnations.

The Cottage Gardens showed vases of G. H. Crane, Mrs. G. M. Bradt, Maceo, Roosevelt and two of seedlings, one labeled selected seedlings, the other original seedlings. Among the other novelties shown were a fine vase of No. 666 from Dailledouze Bros.; Olympia, from John N. May, Summit, N. J.; Genevieve Lord, from H. Weber & Sons, Oakland, Md.; The Marquis, from L. E. Marquisee, Syracuse, N. Y.; Eleanor Ames and May Whitney, from D. Carmichael, Wellesley, Mass.; seedlings, from J. Tailby & Son, Wellesley, Mass.; mixed carnations, from M. A. Patten, Tewksbury, Mass.

On Saturday, March 17, the final lecture of the series will be delivered by Geo. S. Butler, Cromwell, Conn., on the subject of "Japanese Plums."

F. J. N.

Buffalo.

Market Notes.

Trade has gotten to a rather low ebb, with flowers amply plentiful or more. Some attempts are making of bargain lots on some days.

Jottings Here and There.

S. A. Anderson usually keeps a fairly arranged and liberally displayed window arrangement, generally in loose flowers.

Palmers' had a show novelty last Saturday in antirrhinums.—good, well-grown spikes on stems of about regulation size and growth. A fine pot plant specimen of bougainvillea in flower attracted a good share of attention. A Daybreak sport, grown by this firm, deeper than the ordinary shade, sells well.

Wm. Scott and W. J. Palmer, Sr., visited Toronto and the carnation show there last week, and reported a pleasant occasion.

W. C. Stroh, of Attica, N. Y., was a caller on Tuesday of this week. He makes a specialty of carnations. Several houses of violets are also grown. He reports favorable results now in whites, with Flora Hill and Storm King, and Genesee hardly holding its previous record in earliness. Crane is his red. He has a sport from Scott, deeper in color, which is being propagated on account of its favorable quality. Daybreak has also sported with him in a solid self-shade that is pleasing.

VIDI.

Pittsburg.

The Market.

Trade has been a little quiet the past week; funeral work helped to break the dullness somewhat. Stock is very abundant and of good quality. Prices remain about the same, excepting a slight drop in roses.

Club Items.

The monthly meeting of the Florist' Club, held last week in the Pittsburg Cut Flower Co.'s store room, was not so well attended as usual. Wm. Lanch exhibited a fine bunch of the two new carnations sent to him—The Marquis, from L. E. Marquisee, Syracuse, N. Y., and Genevieve Lord, from H. Weber & Sons, Oakland, Md. The flowers were exceptionally fine and much admired. It was decided that the club hold a smoker on the evening of March 22, in the large store room of the Pittsburg Cut Flower Co., on Liberty street, the invitations for which are already out and very unique—some of the secretary's handiwork. Pipes, tobacco stems and some light refreshments will be served and a pleasant evening may be anticipated, so let all members come.

Geo. Oesterle, assistant secretary of the club, will likely hand around genuine Havanas—another bouncing boy was added to his family circle, making George feel bigger than ever.

E. C. R.

West Hampton, L. I.

W. F. Jagger has just returned from Bermuda, where he has been for three weeks. He reports very little disease among the lilies. Crops are looking fine. He received a large order for rooted cuttings of carnations for the Public Garden, and shipped them by last steamer.

CHARLES LENKER, Freeport, L. I.

Mention the Florists' Exchange when writing.

Ethel Crocker Absolutely the best Pink CARNATION ever offered the Trade. . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞ **PRICE LIST FOR STANDARD VARIETIES READY NOW.**

HERR'S PANSIES—Good little plants at 75 cts. per 100; $4.00 per 1000.

C. MERKEL & SON, Mentor, Ohio

Mention the Florists' Exchange when writing.

Wm. Scott Carnation

Cuttings are going fast, every first order sent out has hatched another, so do not delay but order at once, as they will not last long, at **$6.00 per 1000.**

Mrs. Joost, Melba, $2.50 per 100; $20.00 per 1000.
Flora Hill, Daybreak, $1.25 per 100; $10 per 1000.
General Maceo, $1.00 per 100; $35.00 per 1000.
Victor, Mayor Pingree, $1 per 100; $9 per 1000.
Jubilee, $1.50 per 100; $12.00 per 1000.

10,000 PETUNIA CUTTINGS Well-rooted, double, of the best selected vars., $1.50 per 100; $12 per 1000. Cash with order.

CARL E. TAUBE. Trenton, N. J.

MERCER FLORAL CO.

Mention the Florists' Exchange when writing.

GRAND NEW CARNATION OLYMPIA

The largest, the most perfect form and the greatest producer of any large variety on the market. The number of blooms cut per plant for this season to date are more than twice that of Mrs. G. M. Bradt under the same conditions of culture.

Extra fine, strong, rooted cuttings now ready, **$12.00 per 100; $100.00 per 1000.**

All the new varieties of other raisers at advertised rates.
Also the leading standard varieties in selected stock.

JOHN N. MAY, Summit, New Jersey.

Mention the Florists' Exchange when writing.

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best selling pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate notice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a striking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply.

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

PRICE, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones."

Also Best NEW and STANDARD CHRYSANTHEMUMS.

Our Catalogue is now ready and will be sent to all who ask for it.

Chicago.

State of Trade.

As the weather gets more Spring-like a heavier cut of flowers is very noticeable. It is not so easy to keep the stock cleared off now, and the street men at last are having their inning. This is especially true of violets, carnations and bulbous stock. Even roses are, at last, equal to the demand, with prices somewhat lower, more particularly on shorts and culls. American Beauty have suffered with the others. There are now too many long-stemmed and too few medium flowers to suit the call. Meteor have not been selling so well lately as Bride and Bridesmaid, both of which are now coming in in fine shape. Perle are not over-plentiful. Some Papa Gonlier and Reinberg's Golden Gate add to variety. No hybrids are showing up in this market; in fact, few are grown at all, and none by the big growers. Carnations are now very abundant.

A notable feature of the gluts is less uniformity in prices among the different wholesale houses.

Lilies are in fair supply, callas being rather abundant. Sweet peas are in but are not proving very good sellers as yet. Dutch hyacinths, both in pots and cut, are more abundant; the quality is not high grade, except among those who buy the better class of bulbs.

Round About.

The worm in the rose bud, described in FLORISTS' EXCHANGE, March 3, page 223, tallies exactly with the one so destructive at times at the Reinberg Bros. The American Beauty is another variety attacked by the pest, but its first favorite is La France, then Meteor. It comes on in the Summer, when the young roses are ready to flower, and disappears when cold nights set in. So far, fortunately, it does not appear to have spread to other growers. It was thought to be encouraged by the use of well or slue water, and city water laid on, but that was found to be fallacious.

Adolph H. and John W. Poehlmann, on March 8, bought out the interest of August F. Poehlmann in the large florist establishment at Morton Grove, with salesroom at 51 Wabash avenue, and will hereafter run the business as of old under the firm name of Poehlmann Bros. The retiring brother, it is expected, will start a new florist business for himself.

J. W. Ensweiler, whose greenhouses are at 5325 Morgan street, opened, March 10, a retail store under the name of the Garfield Boulevard Floral Co., at 55th and Halsted street.

E. Wienhoeber and E. Buettner the past week took a trip to Richmond and other cities in Indiana, and while there W. G. Bertermann, of Indianapolis, came to this city especially to visit both these gentlemen.

A perfect specimen of chrysanthemum Minnie Wanamaker was sent to Kennicott's the past week from Wisconsin.

John Brod has purchased Herman Schiller's whole plant (22 greenhouses) at Niles Center. Part of the stock of flowers will find a market at Schiller's city retail stores. Mr. Schiller will by this move earn a well-deserved rest. In 1893 he made efforts to do so by selling out to Otto Mailander, who afterward absconded, and the property came back into Schiller's hands. An incurable infirmity rendered it hard for him to run both places; now, it is to be hoped, after upward of 30 years' close attention to business, some of his trials are ended.

C. L. Washburn has gone for a ten-day trip to West Baden, Ind., to recuperate—ready for the big Easter trade. His family is with him.

The Chicago Horticultural Society will hold the 1900 Fall show again at the Auditorium, same as last year, commencing November 6. The advance premium list will be immediately published. All committees have been appointed. Nicholas P. Miller will be the superintendent.

Ess.

Watertown, N. Y.

Westel W. Greene, a retired florist and nurseryman, was found dead in the cellar of his home, March 9. He was 80 years of age. Mr. Greene had been apparently well and while alone went to the cellar for wood and died, presumably of heart failure, due to old age. He had been in business here since 1853 and was well known and respected. He leaves a widow, two sons, William G. and J. Frank, of Watertown, and two daughters—Mrs. George N. Sayles, of Watertown, and Mrs. Trench, of Newark, N.J.

Cyclopedia of American Horticulture

THIS great work comprises directions for the cultivation of horticultural crops and original descriptions of all the species of fruits, vegetables, flowers, and ornamental plants known to be in the market in the United States and Canada.

BY L. H. BAILEY, OF CORNELL UNIVERSITY, ASSISTED BY WILHELM MILLER AND MANY EXPERT CULTIVATORS AND BOTANISTS.

In Four Quarto Volumes. Illustrated With Over 2000 Original Engravings.

VOLUME ONE (A TO D, 509 PAGES, 743 ILLUSTRATIONS, 9 PLATES) IS NOW READY FOR DELIVERY.

THOUGH distinctly an American work, not only plants indigenous to the North American continent are mentioned, but also all the species known to be in the horticultural trade in North America, of whatever origin. It is really a survey of the cultivated plants of the world.

The chief characteristics of this great work are comprised in our describing its source, scope, and general features. It is **AUTHORITATIVE** since its contributors are the best specialists in America, and there will be at least 5000 signed contributions from the best-known horticulturists, cultivators, and botanists in this country and in Europe. It is also most **COMPREHENSIVE** in that it presents for the first time in carefully arranged and perfectly accessible form the best knowledge of the best specialists upon greenhouse and garden practice, fruit growing, vegetable culture, forestry and the like. It is moreover fresh, entirely **ORIGINAL**; not a rehash of old material, old cuts, etc. The articles are specially prepared and illustrated for this work alone; while the trained botanist discusses the botanical features of the important commercial plants, practical cultivators submit observations on their culture, marketing, and the like, so that the reader has before him the very best practice in the most favorable localities for the perfection of any fruit, vegetable, or economic plant. The arrangement is very systematic, clear and convenient for ready reference.

THE CYCLOPEDIA is to be completed in four handsome quarto volumes, embracing about 2000 pages, with more than that number of original illustrations. It is carefully printed upon specially made paper of a permanent character, and the work will be completed this year.

This book is sold only by subscription, and orders will be accepted for the full set only. For terms of subscription and all further information, address

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT McCULLOUGH, Cincinnati, First Vice-President; F. W. BOLOIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

New York.—A. C. Topper, of Topper & Sons, Hillegom, Holland, arrived in the city this week, on his annual tour of the United States.

St. Paul.—The season's trade now drawing to a close has been one of the most prosperous on record, and stocks are being rapidly exhausted. There yet remains several weeks in which to ship "filling in" orders—field corn, grass seed, etc., and early inquiries indicate a very good demand for all field and grass seeds. Brome grass, owing to extensive advertising, has been in very great demand throughout the country. This grass combines so many good qualities that it is destined to become an important product in all future farming in the West and Northwest.

Catalogue sales for March are beating all previous records, though earlier in the season they were somewhat lighter.

John Sim, formerly with L. L. May & Co., of this city, is now with Wm. Elliott & Sons, New York.—VERITAS.

Award of Government Seed Contract.—Tuesday last Secretary Wilson awarded the contract for supplying the U. S. Department of Agriculture with garden, field and flower seed for the year 1901, to the New York Market Gardeners' Association of New York, at their bid of $68,874.12. The other bidders were the Ullathorne Seed Co., of Memphis, Tenn., $67,500; Charles Parker, Santa Clara, Cal., $75,000; The Henry Phillips Seed and Implement Co., Toledo, $77,696.01; J. M. Thorburn & Co., New York, $94,098, and Oscar H. Will & Co., Bismarck, N. Dak., $134,504.34. The bid of the Ullathorne Seed Co. was withdrawn and the award was made to the next lowest bidder.

The total number of packets of seed required is 15,086,968. Of this number 13,936,000 are vegetable seeds, 150,400 field and lawn grass seeds, and 1,000,568 flower seeds. The vegetable seeds comprise beet, cucumber, lettuce, melon, onion, radish, bean, pea and sweet corn, and the field and lawn grass seeds include cotton and tobacco.

The award was made in compliance with the provision of the Act of Congress making appropriations for the Department of Agriculture, which directs the Secretary of Agriculture to expend the amount of the appropriation (as nearly as practicable) in the purchase of and distribution of such valuable seeds, bulbs, trees, shrubs, vines, cuttings and plants, the best he can obtain at public or private sale, and such as shall be suitable for the respective localities to which the same are to be apportioned, and in which same are to be distributed as hereinafter stated, and such seeds so purchased shall include a variety of vegetable and flower seeds suitable for planting and culture in the various sections of the United States.

The amount appropriated was $130,000, but $20,000 of the appropriation is for purchasing seeds, trees and plants from foreign countries.

European Notes.

A very agreeable change has taken place in northwestern Europe, and a warm deluge has been replaced with a cold, drying easterly wind. This has put growers into better spirits, and quite a rush of orders has been the result. Peas are in particularly good demand, and all kinds of stuff suitable for Winter greens sell freely. Articles like the sprouting broccolis and Thousand-headed kail, which have been a drug for many years, are now nearly cleaned out. The northern markets are just now receiving an abundant supply of an Italian broccoli, known as Veitch's Self-protecting, a variety which should be of great service on your side. The London markets are also supplied with an excellent variety known as Early Cornish, which is produced in the county whose name it bears. The great success of this broccoli is due to its being grown in a district directly under the influence of the Gulf Stream, for it must have both heat and moisture to bring it to perfection. Although in England frosts have been very light, and planting out on the lighter and dryer lands has not been hindered by them, it has been very different in France, particularly in the west and south. In both sections the frosts have been too severe to admit of the opening of the pits, where the roots have been stored. Fully 15 degrees Fahr. have been registered, and the young growth on carrots has suffered considerably. Cabbages are also badly damaged; and other members of the same family need a genial spell to revive them.

It is also still very Wintry in Germany, and work is all behind. Down on the Mediterranean littoral Roman hyacinths and other French bulbs are having a rough time, and must suffer considerably. Only three days back a snowstorm of more than an hour's duration raged at Bordighera, and an almost equally inclement condition prevails all along the coast. Fortunately, the weather in the seed-growing districts round Paris has not been so severe, and everything looks fairly promising.

Sweet pea dealers will be interested to know that a new and very early white variety is to be offered to the trade by E. Benary next season. It is named "Mont Blanc," and is described as being equal to Blanche Burpee in form and substance, and as early, or earlier, than the extra early Blanche Ferry. Trial packets are in the hands of the principal firms, and if it equals the description furnished by the raiser, its success is assured. EUROPEAN SEEDS.

THE SUGAR MAPLE

Is a beautiful tree at all seasons, and no better variety can be used for **Street, Park,** or **Lawn Planting,** as its growth is rapid and straight, its form symmetrical, and it does not have the objectionable density of foliage possessed by the Norway Maples. For this reason it is well adapted for planting near buildings, as it does not obstruct light or air, and being **deep rooted the grass will grow up to its very trunk, which is a very strong point in its favor.** No tree has more gorgeous Autumn coloring, as it varies in all shades of yellow, orange and scarlet until the leaves finally fall. It was a sagacious popular instinct which selected this as one of our best trees for ornamental planting, and in some of the old places on the Hudson River long avenues were planted with it three quarters of a century ago, and they are now worth a long journey to see. We have an extra large stock of magnificent trees, many times transplanted, which we know offer at the following low prices:

		10	100	1000
10 to 12 ft. in height,	1¼ to 1½ inches in diameter	$5.00	$33.50	$290.00

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAEE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Baltimore, Md.—Owing to increasing business the Franklin Davis Nursery Company have had to acquire additional acreage and build new sheds, covering about fourteen thousand square feet of ground.

J. Van Lindley thinks there are splendid opportunities for the raising of export apples on a large scale in the mountainous portions of North Carolina. One of the latest additions to his place is a large greenhouse for the production of cut flowers.

The New York State Experiment Station at Geneva is planning for an exhibit at the Paris Exposition during the coming Summer, that will undoubtedly be of interest to French, German, Italian and Spanish wine growers, as well as others interested in grape culture. The exhibit will consist of a series of 38 wax models of grape clusters, which are intended to illustrate some of the results of investigations at this station concerning the self-fertilization and cross-fertilization of the flowers of grapes.

Some Large Orders for Trees.—Ellwanger & Barry, of Rochester, N. Y., were last week awarded a contract for furnishing several thousand dollars' worth of nursery stock for a gentleman's place on the Hudson. Over 30,000 trees, shrubs and plants are contained in the order. This firm has also received large orders from the Pan-American Exposition Company at Buffalo, and, so far, have shipped there ten car-loads of trees, shrubs, etc.

Rochester, N. Y.—Two Rochester corporations, the Ellwanger & Barry Realty Co., and the Ellwanger & Barry Nursery Co., filed articles with the Secretary of State March 14. The Realty Company has a capital of $500,000, and the Nursery Company a capital of $200,000. The directors of the companies are identical. They are: George Ellwanger, William C. Barry, George H. Ellwanger, Chas. P. Barry and William D. Ellwanger, of Rochester, and John H. Barry, of New York City.

Fire occurred in the large packing shed of Chase Brós., on March 16. The blaze was confined to a double wall and was extinguished without much trouble. The shed was filled with trees stored for the Winter; they were not damaged to any extent. The loss on the building was trifling.

The Japanese Plum.—George S. Butler, of Cromwell, Conn., delivered a lecture before the Massachusetts Horticultural Society Saturday last. Among other things he said:

About thirty years ago the Kelsey plum was introduced into California from Japan, and after fruiting was propagated and disseminated quite largely. Not proving hardy in the North and East the Japan plum was condemned for cultivation here, thus hindering the introduction of other varieties.

Subsequently other parties, particularly Luther Burbank, of Santa Rosa, Cal., made other importations of Japanese plums, and these varieties have been widely disseminated over the United States and Canada, and have been found adapted to a wide range of territory.

For the past decade interest in the Japan plum has steadily increased and, although many of them are inferior in quality to some European varieties, their great beauty, freedom from disease, ability to resist the attack of the curculio and heavy cropping qualities, have brought them into favor with growers; some are proving of fair to good eating quality and superb for canning or preserving.

Nearly all the Japan plums are vigorous growers, with long forked branches, the fruit buds setting in clusters instead of singly or in pairs, as with the European plum.

These plums are nearly allied to our native plums, and we may the more reasonably expect them to do well on that account, on the theory that similarity of environment has produced similarity of attributes. Doubtless better varieties will be produced by hybridizing these Japan plums without native sorts.

There is need of earnest work in revising the nomenclature of our Japan plums, and we are glad to note the hearty co-operation of our pomological societies, experiment stations and best nurserymen in this endeavor.

The culture of this fruit is hardly a matter for discussion here, as it is universally conceded to-day that the best crops of any fruit are only secured by constant and thorough tillage; and the question of tools is only a question of adaptability to soil.

Set first-class trees; the thriftiest tree in the nursery is inclined to be the thriftiest tree in the orchard; the tree which only develops to a cull in the nursery will probably die a cull in the orchard. Prune young trees as heroically as you desire, and if the desire is lacking, create it.

The propensity to overbear must be continually guarded against, as the quality of the plums on an overloaded tree is very inferior, and having neither quality nor size they will be difficult to dispose of, and of very little value to fatten swine. If two-thirds of the bearing wood is trimmed off from the tree, and the plums which set on the remainder are thinned to about four inches apart, we shall have on a mature tree from one to two bushels of plums from 2½ inches in diameter, and as attractive as they are large. California never shipped to New England plums as large, handsome, or of as good quality as we have placed upon our markets the past four seasons. But I have seen the same varieties sent here from Michigan; yes, and grown in Connecticut, too; that proclaimed the doctrine of 16 to 1 more loudly than William J. Bryan or George Fred. Williams were ever able. There were 16 times as many stones in every basket, 16 times as much plant food sucked from the soil, the flesh was one-sixteenth of an inch thick, and as eatable as 16 corks.

The rot is the most troublesome enemy of the Japan plum, unless it be its tendency to overbear. Eternal vigilance is the price of plums, picking off and burning the rot whenever it appears.

The yellows of the peach is also able to thrive on the Japan plum and should be guarded against. Some trees die from unknown causes each year, probably 1 to 2 per cent. The same habit is noticeable on Japan ornamentals. The black knot and curculio are not serious enemies of the Japan plum, the knot only occasionally attacking the tree, and the eggs of the curculio seldom hatching.

For market and amateur planting the Abundance, Burbank, Chabot, Wickson, Red June and Satsuma seem best suited, while Ogon, Berckmans, Earliest, Bergen, Kerr and Willard have no place except the brush heap. Lutts and Hale and Normands might also find a place in large collections.

THE "NOVELTY" OF NOVELTIES FOR 1900
NEW—"MRS. KATE GRAY"—CANNA
A MAGNIFICENT HYBRID RESULTING FROM A CROSS OF ITALIA×MAD. CROZY

The Color is a rich shade of orange scarlet overlaid with gold, a superb coloring which in open sunlight is simply dazzling. The Form is an ideal of the Crozy type of bloom, the petals being very broad and overlapping, measuring 2½ to 3 inches wide, while the individual flowers are from 6 to 7 inches across. The Texture of the flowers is all that could be desired; they partake of the nature of the pollen parent or Crozy race in this respect, and withstand our hottest summer suns without wilting. The Foliage is a bright glossy green, equal to a Musa in size and substance and forms a beautiful foil to the gigantic trusses of bloom. The Height of the plant is 6 to 7 feet, the growth is luxuriant to a degree, but very compact; the massive foliage, giant trusses, and enormous individual flower give the plant a noble tropical appearance. It is the Only Canna of its kind in existence, and absolutely surpasses all others; its intrinsic value will make it a leading standard sort for years to come.

PRICES.—Strong roots, 35c each; $3.50 per dozen; $25.00 per hundred. Terms strictly cash with order, no exceptions. Stock limited; orders filled in strict rotation. Address,

Palms in Europe.

Of kentias, almost exclusively Belmoreana, with only a small addition of K. Forsteriana, is grown in immense quantities, increasing every year. Thus a plentiful supply may be looked for unless the demand be very very large. English and Belgian greenhouses are full of them. Of course, they never get bottom heat, and they should not be too much crowded, lest they become too long and be infested with scale, mealy bug, etc.

Latanias are still grown in goodly quantities, but are decidedly less in favor, except, perhaps, in Germany. With good bottom heat they will make fine leaves during the warm season.

Latania rubra is grown by a few specialists, and for a collection of decorative plants it is a distinct and good palm, though expensive. The leaves are narrower than those of L. borbonica, and the ribs red. Phœnix, excepting canariensis, seems to share the lot of the Latania borbonica; it is not quite so much grown as it was eight to ten years ago, relatively speaking. Phœnix Roebelenii is a palm of very elegant form, but appears to be difficult to grow well. I noticed a few lots of 100 to 200 plants about Belgium and in France. Especially as specimens of 4 to 5 feet in height, this palm is extremely fine, being of slender and elegant habit. P. rupicola is perhaps the next in gracefulness, and well deserves its favored position as a seller. P. reclinata and tenuis are well known, and are to be had in all marketable sizes everywhere.

P. canariensis is grown in the south of France and Italy by the acre, and from there, as three to five-year-old plants, finds its way over Europe and to America. These out-of-door-grown plants are very hardy, rather too clumpy, but one Summer's growth in the palm house or pit brings out three good elongated leaves, which much enhance the beauty of this species. It is the hardiest of all, and I daresay on that account most valuable for decorators, who have to take their plants from place to place and from heat to cold.

Corypha australis is discarded by many growers, though a few think they are doing wisely by getting up a good little stock of them again. I never liked them much and do not think they will have another go. Livistona rotundifolia is still gaining in favor; undoubtedly it is not so hardy as its sister, the Latania borbonica (Livistona sinensis). It demands more heat, but it is of extremely neat growth, of fresh green color, quite round in shape, and should sell on its appearance as a small palm for the table, or as a *solitaire* on a stand in the dining-room, library or boudoir. It is to be had from all the exporting growers in good quantity and quality, especially around Ghent.

Rhapis flabelliformis is too slow in growth, and except as a hardy decorator it is slow in finding purchasers, too. It has been discarded by many. R. humilis is too scarce to play any part in the general trade, the foliage being of a brighter green and more finely divided makes this species prettier than the former.

Large clumps of either species in the open, as seen about the Riviera, are an impressive decoration. If there is anything in the rhapis, I dare say they will find their way to America, via 'Frisco.

Cocos Weddeliana, single or three in a pot, is cultivated *en masse* in England and on the continent. Its merits are well known and quite enough appreciated. For my taste it lacks grace and is too short-lived. As a center plant for small jardinieres it fills its place well for a short time. Old plants are rarely fine, and the cocos is certainly not of too easy culture. One of the earliest and formerly quite successful growers in Belgium has given it up, because it would get yellow and diseased with him in spite of increased watchfulness.

Kentia Sanderiana is still quite scarce, but its merits being well proved its introducer will, I daresay, see to it that it will be in everybody's reach before too long. As a small plant it is very elegant, if I may compare it with Cocos Weddel-

FERNS.

A fine assortment for florists use, from 2¼ and 3 inch pots. Also

Selaginella Emmeliana, Cyperus Alternifolius, $3.00 per 100.
BABY PRIMROSES, from 3 inch, $4.00 per 100; from 4 inch, strong, $8.00 per 100.
PELARGONIUMS, 6 best varieties, mixed, from 3 inch, $5.00 per 100.

J. G. EISELE, - Philadelphia, Pa.
20th AND ONTARIO STS.

Mention the Florists' Exchange when writing.

lana. I must note that the leaves are beautifully arched, the individual pinnæ being longer than those of the cocos likewise. It has a much neater appearance, being more glossy and lacking the silvery coating on the lower side. As an older plant it has a tendency to become too thin; thus, it should be planted, three in a pot, choosing three plants of different age.

Geonoma gracilis and G. intermedia are, somewhat, the link between the last two pretty palms; both have their special cultivators and may be found about Ghent in goodly numbers. Also as larger plants they are useful and very pretty. The Euterpe edulis approaches these again; it has its advocates as a plant from 2 to 4 feet in height, but I think it is a little too tender. A large stock is not to my knowledge grown in any one place.

Areca Baueril is a noble plant and quite a hardy one. As a large subject it is very useful for decorating; its very gracefully arched rachi and the broad, clean dark green pinnæ make it a most imposing character. It is evidently not needed in quantity, but rather in good sized specimens. A. lutescens appears to me the ideal decorative palm, though it should be more kindly handled than the former. This areca is cultivated in large quantities by a few growers, and is to be had in fair size at acceptable prices. Areca rubra is certainly pretty and should find a place as an apartment plant; it has a foreign appearance among other palms, on account of the reddish venation. Areca Verschaffeltii, with its yellow stalks and ribs, and clean, glossy surface on all parts, is very distinct and a good house plant. Both the last two are rather expensive.

Among the caryotas, or fish tail palms, C. Cunninghami, C. sobolifera and the newly introduced C. Kirsheniana may be useful to diversify the collection. The two first-named ones are to be had from nearly every grower I have seen; the latter, a suprisingly elegant plant, only at Sander's, at St. Albans.

The chamærops seems to have lost its prestige, though as a hall plant or for permanent decorations in public places it is very good. Southern grown plants seem to be preferred on account of their resisting power.

Among the cocos I must mention the C. Bonaetii as a very robust plant. This cocos is also largely grown in the south of France and Italy, and sent abroad through all the exporting nurseries of Europe; it is of round shape and quite distinct from other palms, and well adapted for large grouping. I find the C. plumosus and Romanzoffiana two of the most beautiful palms for decorations. They are of very airy gracefulness, quite different from all other forms of palms; for high groups or specially those that need be of very restricted depth they are ideal plants. As they grow so well out-of-doors at the Riviera, where the arecas and kentias will not thrive, I should consider that they have good resisting power. Their culture merits much more attention.

They may be had in quantities from 8 to 15 feet in height from the south of France, and I daresay through the best part of the northern growers. I have seen a group of them used in a funeral decoration at the head of the coffin, and I could not imagine anything of more impressive beauty for that occasion; for all church altar decorations they seem to be the ideal palm.

Of the newer palms that have made a mark, and which are being taken in hand as sure sellers, I must still mention the grand Licuala grandis. It is a luxuriant grower, like the latania, keeps splendidly in a dwelling house, its large bright green leaves, of which as many as four may be produced in a Summer, have an appearance of health and vigor. The habit of growth is rather upright, thus the plant is rather high than large, but keeping the older leaves well it is always furnished with foliage down to the pot. In some places lots of from 200 to 500 may be found in England and Belgium.

Another palm, *sans pareil*, is the Linospadix Petrickiana. I may say that this one also, with its large pinnate leaves, its bushy growth, conveys the impression of an abundance of vigor. It is always clean, the leaves are stout, yet very elegant. It is one of those introductions that will conquer the first rank among decorative plants. It is not yet to be had in large quantities, but a few plants, even at a high price, are not dear, and will ever remain a precious acquisition. T. E.

BRIEFS FOR BUSY FLORISTS.

YOUNG CARNATIONS that are well established in the flats can be put into cold frames and thus make room for Easter stock. While the carnations are in the frames they must not be neglected in any way or they will soon become worthless. Look them over every day, paying just as much attention to watering and airing as was done when the flats were on the greenhouse bench.

PALMS.—There is always a fair demand for palms at a holiday season, and Easter being so close upon us the saleable sizes of palms should be over-hauled and if possible, arranged in groups of separate varieties and sizes on the benches. Have the boys sponge every leaf clean, and if the pots can be washed, so much the better. It is far preferable to have these little details attended to now than to wait until the plants must be delivered, and then have them washed and cleaned at the last moment. At that time there is so much to be done that the cleaning process might be overlooked, and to send out a dirty pot or plant is but a poor advertisement.

THE BULBOUS FLOWERING STOCK intended for Easter will have to be got into the houses this week. If the weather is bright shade will have to be given for several days; and, if the flats or pots show signs of being infested with worms, give them all a good soaking with lime water and the worms will disappear quickly. No forcing will be needed to have the plants in on time. A house where the night temperature goes down to 50 degrees will be warm enough for them.

HYDRANGEAS that are showing color well will come along all right in a rather cool house from now on; any that are well in bud but not showing color will have to be forced quite lively. A daily syringing should also be given them, together with a plentiful supply of water, otherwise if they once get dry and wilted the heads of bloom would not be so good.

HYBRID AND RAMBLER ROSES in pots or boxes should now be well budded, and applications of liquid manure every few days will be beneficial to them. Syringe regularly and keep greenfly away, either by fumigating or vaporizing with tobacco. The tea roses planted in the benches will stand liberal feeding now, which may be given either by mulching with manure or by applying liquid twice a week.

PROPAGATION of all bedding plants should be pushed from now on. Coleus of the Golden Bedder variety particularly, should be got in at once, if not already put in the sand.

Watering.—It has been said that only about ten in a hundred know when and how to water a plant. Perhaps that is placing the average a little too high. Watering is one of the most important items in the work of the plant grower. Too much or too little given to a plant is equally hartful. Too little is often the case when we see a plant evidently wet on the top of the soil, and near the bottom dust dry. This state of matters is brought about by leaving too little space for water and going over the plants carelessly with can or hose. As a rule, when this happens, the plants do not show the effect by wilting, but ultimately they show it in their starved appearance. Too much water sours the soil and fills the feeding roots, bringing about the same condition. Rules can not be laid down for watering plants, and an expert waterer can only be found in a man who carefully studies the conditions under which plants grow in their native haunts; also the condition of the plant at time of watering, whether newly rooted and potted, or newly shifted, in full vigor of growth, going to rest—sub-aquaties or succulents, drainage, and the constituents, etc., of the soil. These are all to be taken into consideration before intelligent watering can be done.

Gloversville, N. Y.

R. E. Loeben, who makes a specialty of roses and carnations, reports an extra demand for his products, necessitating the enlargement of his facilities the coming Summer to supply same.

EASTER! EASTER!

AZALEAS FOR EASTER

We offer a very fine lot of AZALEAS, comprising the most distinct and best varieties in cultivation, embracing all shades of crimson, white, pink and rose color. They are shapely specimens, well "headed," double and single flowered, and will make splendid plants for Easter decoration. It is almost impossible to ship Azaleas when in bloom and have them arrive in good condition, hence the necessity of procuring them in advance before the buds open.

ORDER EARLY. NOTE THE SIZES.

HEADQUARTERS FOR EASTER PLANTS

Blooming Easter week!

Time is money! Lose no time! Order your supply now!

I have an immense stock of the choicest in the market. You would be astonished if you could have a peep into seven large greenhouses which are crammed full, and devoted to the cultivation of Easter plants alone, and therefore I will be prepared to fill all orders, if ordered in time, as far as the supply will reach.

AZALEA INDICA I am a very large importer of this choice Easter plant. I have erected two new houses, 20x100, for the cultivation of them alone. These Azaleas were selected by myself last fall, on my trip to Ghent (Belgium), and as I am Agent for a large concern in Belgium, it gives you a chance to buy your goods first hand and not through middleman.

I can offer you plants in bloom or in buds, blooming Easter week. **6 inch pots, 60c., 75c., and some for $1.00.** Most of them are Mme. Vander Cruysen, and some other choice varieties, which will be selected by myself.

SPIRÆA, Compacta and Floribunda, fine bushy plants, my own importation, a perfect gem, 6 inch pots, $3.00 per doz.
Specimen Plants, $4.00 per doz.
HYDRANGEAS (Pink), 6 inch pots, bushy plants, $3.00 to $5.00 per doz.
CINERARIA Hybrida, choice colors, 6 inch pots, $2.50 to $3.00 per doz. In bloom now or at Easter. I have a house full of them.
BEGONIAS, President Carnot, 6 inch pots, $3.00 per doz.
Vernons, 4 inch pots, $1.20 per doz.
DAISIES (White), **Marguerite,** 5 inch pots, $2.00 per doz.
4 inch pots, $1.00 per doz.
CYPERUS (Umbrella Plants), very fine bushy plants, 4 inch pots, $1 per doz.

HYACINTHS, 4 inch pots, best varieties (of my own importation), $10.00 per 100.
TOURNESOL TULIPS, three in a pot (double red and yellow striped), beautiful, sells at first sight, 4 inch pots, $1 50 per dozen pots.
DAFFODILS, Von Sion, three in 5 inch pot, $1.50 per dozen pots.
LILIUM HARRISII and LONGIFLORUM, 6 inch pots, nice foliage (bulbs 7 to 9), 5 to 10 buds to a plant, from 1½ to 2½ feet high, at the rate of 10c. per bud.
No Lilies sold by themselves; other Plants must accompany them.
CHINESE PRIMROSES, 4 inch pots, $1.00 per doz.

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere. Only 25 minutes' ride from City Hall.

Take 13th Street Car to Rising Sun Avenue and walk two squares east; also Germantown Car at 8th and Market Streets (North) to Ontario Street and walk one square east.

Cash with order, please. Money can be sent safe by Express, Postal Money Order, Registered Letter, or Drafts on Philadelphia Banks. Goods shipped at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Rising Sun, Philadelphia, Pa.

IMPORTER AND WHOLESALE GROWER OF POT PLANTS.

PLEASE NOTICE TESTIMONIAL BELOW:

"Mr. G. Aschmann has very fine healthy Azaleas, Hydrangeas, Easter Lilies, Spiræas, Tulips, Hyacinths and other plants in bloom and bud. We can very highly recommend our customers to Mr. Aschmann for fair, reliable, business treatment."

Memphis (Tenn.) is to have a floral parade on the occasion of Admiral Dewey's visit to the city in the near future.

Penna. Hort. Society's Spring Show.

The Spring show of the Pennsylvania Horticultural Society opened on Tuesday last. Like those of the past few years the number of entries was small, but this was made up in quality. The bulbous plants were all in fine condition; in fact, in the classes for hyacinths the judges had some difficulty in making their decisions, all the blooms being good, and the exhibits evenly balanced as to variety and color. The principal exhibitors were: Joseph Hurley, gardener to James M. Rhodes, Esq.; Joseph McGregor, gardener to Mrs. Thos A. Scott, and John McCleary, gardener to Wm. Weightman, Esq., the first and second prizes being evenly distributed.

The classes for cinerarias brought out 12 exhibitors, the first prize going to George Graham, gardener to Chas. Hartshorne, Esq.; second to J. H. Jones, gardener to Mrs. Mathew Baird. Both exhibits contained fine plants. The display of cyclamen was small, but good, well flowered plants, J. F. Whittaker being first, John McCleary second. In narcissus Joseph McGregor was first for singles, staging the best lot seen here in some time. Joseph Hurley took first for doubles. Tulips were scarcer than any other bulbous stock; Jos. McGregor was first in this class. George W. Brown, gardener to Robt. N. Carson, Esq., Chestnut Hill, took first for genistas, Joseph Hurley second. In the azalea classes John Hobson, gardener to Edw. A. Schmidt, Esq., was first for six plants, and also for best two, John McCleary being first for single specimen. Primulas were rather too far gone, yet some good plants were staged. For P. chinensis John McGowen, gardener to W. M. Bayard, Esq., was first, and J. F. Whittaker second. For P. obconica grandiflora, Wm. Robertson, gardener to J. W. Pepper, was first, John McCleary second. Wm. Robertson was also first for callas.

The show was a week too early for Lilium Harrisii, there being only two exhibitors—Jos. McGregor was awarded first prize for best specimen, and Jos. Hurley first for best six.

Thomas Long, gardener to Geo. W. Childs Drexel, Esq., took the prizes both for six and best specimen ferns, with some grand plants—the best seen here in a long time.

Jos. McGregor was a very large exhibitor in the geranium classes, taking first for six plants and first for specimen; also first for six new varieties. These plants were quite a feature of the show, being very well grown—about 3 feet in diameter and well flowered.

Geo. W. Brown exhibited a well-grown plant of Bougainvillea Sanderiana, and was awarded a certificate for culture.

Jos. Hurley staged a large group of flowering plants, including several varieties of abutilon, Cineraria stellata, marguerites and begonias, and got a certificate for culture.

Joseph Heacock put up a group of palms of all the best commercial varieties in various sizes, and was awarded a certificate for culture, which he certainly deserved, as the plants were a grand lot, well grown, in the best of condition; in fact, without a blemish. John Westcott, as of old, was on hand with a large group of decorative plants, including Boston ferns, araucarias, pandanus, dieffenbachias, etc., and was awarded the society's silver medal. Hugh Graham added glory to his many triumphs, and built a floral bower in the center of the hall, which was brilliantly illuminated and greatly admired. He also captured the silver medal of the society. Joseph Kift & Son made a large display of their new flower holders in many styles, from the small spiral stands for table use, also mantel, mirror and wall rods. Then, to show the individual bottles with rubber cap, for single flowers, they fastened wire netting to the wall; in this were put laurel branches, and the small bottles holding short Beauty were fastened all over, giving the effect of a large climbing rose.

The competition for cut roses was very keen; the class for 25 long-stemmed Beauty brought out seven entries, Myers & Samtman being first, Jos. Heacock second. Other entries were those of John Burton, G. C. G. & L. Pennock, A. Farenwald and George Anderson. The contest was close, and took much deliberation on the part of the judges. Jos. Beavis was first for Bridesmaid, also for Bride, Myers & Samtman and Jos. Heacock being second in the classes given above. John Burton was first for Meteor, Jos. Heacock second.

Robt. Scott & Son received a silver medal for Liberty, and the certificate of the society for their new rose Robert Scott. The latter is a hybrid tea, and will prove a grand acquisition.

The carnation classes were not well filled. In light pink H. Weber & Son took the certificate, with Genevieve Lord. Robt. Craig & Son took the silver medal in the class for 100 blooms, with Ethel Crocker. J. L. Dillon sent Queen Louise, but unfortunately it came a day too soon, and did not show up well when the judging took place on Wednesday. The Marquis arrived three hours late, after all the awards had been made, or no doubt it would have been counted in the winning list. DAVID RUST.

New York. — Last Monday evening the under-noted scores were rolled:

Firms Who Are Building.

TALLMADGE, N. Y.—Thomas Rhyme will build another greenhouse this Spring.

GARDNER, MASS.—Arthur F. Johnson is building another greenhouse for lettuce growing.

CHANGES IN BUSINESS.

BRIDGEPORT, CONN.—The West End Floral Garden will shortly remove into the Masonic Temple.

NEW ROCHELLE, N. Y.—Peter H. Curren has opened a flower store here at 315 Main street.

BATAVIA, ILL.—Clark & Palmer, florists, have dissolved partnership.

WESTERLY, R. I.—Cynthia A. Sisson has sold her greenhouses; they will be taken down and removed.

GLOVERSVILLE, N. Y.—George Main has purchased the stock of Scheffler & Stout. Mr. Main will take possession April 1. Mr. Scheffler has gone to Great Falls, Mont., as manager for Mr. Kraus; Mr. Stout remains here until the first of next month.

WESTFIELD, N. J.—Felix Bridger has taken the place formerly occupied by Alfred Bridger, on Central avenue. He carries on a wholesale and retail business in general stock.

QUEENS, N. Y.—Alfred H. Walker, late foreman to J. Roscoe Fuller & Co., has leased the greenhouses of Mrs. Hermann Sherber here, and will grow plants for the trade.

BOSTON.—The firm of N. S. Wax & Son, florists, has been dissolved by mutual consent, Henry Wax retiring; and the business will hereafter be carried on by N. S. Wax, at the old location, 56 Winter street.

The BEAUTIFUL and RARE **AZALEA (Rhododendron) VASEYI**

Introduced by us, is planted by thousands in Franklin Park, Boston, Prospect Park, Brooklyn, and other leading parks of America. A mass of pink and white flowers in early spring. Unequalled in Cemetery Work. It can be seen now in every large cemetery.

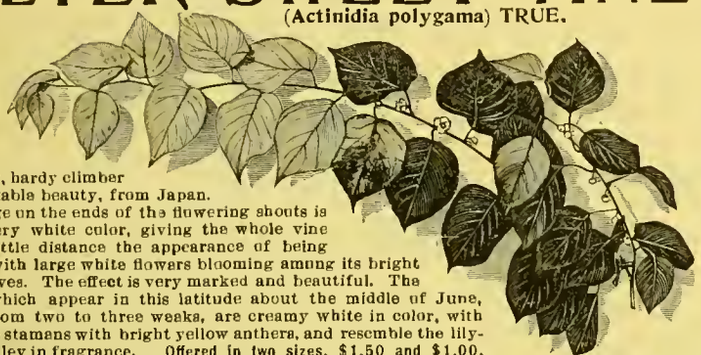
SILVER-SWEET VINE

(Actinidia polygama) TRUE.



A new, hardy climber of remarkable beauty, from Japan. The foliage on the ends of the flowering shoots is of a silvery white color, giving the whole vine from a little distance the appearance of being covered with large white flowers blooming among its bright green leaves. The effect is very marked and beautiful. The flowers, which appear in this latitude about the middle of June, lasting from two to three weeks, are creamy white in color, with numerous stamens with bright yellow anthers, and resemble the lily-of-the-valley in fragrance. Offered in two sizes, $1.50 and $1.00.
Send for Circular. Discount to the trade.

Unless otherwise specified all stock is from 2½ inch pots.

THE NATIONAL PLANT CO., Dayton, Ohio.

(69) **Plants Sent for Name.**—S. Bros.—(1) Nephrolepsis sp., probably tuberosa; (2) Russelia juncea; (3) specimen not in good condition.

(70) **Rooting Cuttings of Bougainvillea.**—To root cuttings of bougainvillea no unusual treatment is necessary. Take the wood while in a young state and place in a brisk bottom heat.

(71) **Name Wanted.**—Will you tell me through Question Box the proper name of the plant called Baby's Breath? I have heard it called "Mist," but cannot find it in catalogues.—J. S.

—Gypsophila elegans.

(72) **A Question as to Rent.**—What would be a fair rent to pay per 1,000-foot floor space for rose houses, iron frame in good condition, city water but no stock; about one hour by train from New York City. Is there any standard rate?—E. A. S.

(73) **Adiantum as a House Plant.**—S. P. B.—Adiantum cuneatum never gives much satisfaction as a house plant, as the atmosphere of a living room is too dry for it. There is a variety that withstands the dry heat much better and will prove more satisfactory for that purpose, viz., Adiantum Capillus-Veneris.

(74) **Topping Carnations.**—The best way to top carnations is to pinch the lead out just below the topmost joint, with the finger and thumb. If the center leaves are pulled out there is danger of pulling up the young plants if the lower part is not held firmly by one hand while the operation is being performed.

(75) **Propagating Lilies by Scales.**—How are scale lilies propagated in commercial quantities. Are the scales separated from the bulbs as soon as taken from the ground, or after the bulbs have rested? Are the scales placed in flats immediately upon separation? Are large old or small young bulbs used? Are bulbs divided very closely, or are just a few scales used from each? Any information on this and also on the growing of bulbous oxalis (Bermuda buttercup) will be greatly appreciated.—F. J. H.

—The bulbs should be given a period of rest before the scales are separated and placed in flats. If the bulbs are sound it matters little whether young or old ones are used. Only those scales that can be pulled off easily should be taken, the remainder of the bulb can be planted after such scales have been removed. The oxalis bulbs should be separated from each other before starting if it is desired to increase the stock. Small pots should be used to start them in, and any ordinary greenhouse temperature is suitable for them. Use a moderately rich soil, with a liberal sprinkling of coarse sand mixed with it.

(76) **Boiler Generating Gas.**—I have a No. 15 Hitchings hot-water boiler which generates gas in such quantities that it sometimes explodes with considerable force. The explosions usually occur after the last firing at night, and always when the wind is high. The chimney has an 8x8 flue and good draft, and is 4 feet above roof. I have tried stove, nut and pea coal, all to no purpose. If you can suggest a remedy I should be obliged.—W. H. P.

—Replying to your favor of the 9th inst., regarding the No. 15 Hitchings boiler, which you state generates gas in such quantities as to explode during high winds, we would say, that without making an examination we cannot decide the cause of the trouble. It may be that the flue or smoke pipe is clogged with soot, or possibly there is an accumulation of soot or coal on the extreme back portion of the bridge wall. We have known cases where coal and soot have been packed in there so firmly as to check the draft and cause trouble with gas; or it may be that there is some outside obstruction near the chimney, which would cause a down draft during high winds. If neither of the causes mentioned exists, we are unable to locate the trouble without examining the premises, which we would be pleased to do without charge if your correspondent is located near this city. Regretting we cannot give you any definite information,

HITCHINGS & CO.
Per C. A.

A Flower Show for Brooklyn.

Brooklyn may at last have a flower show worthy of the name. Park Commissioner George V. Brower, of the Boroughs of Brooklyn and Queens, is enthusiastic over the idea of having one at the new greenhouses in Prospect Park next November. Chrysanthemums will be the special feature, but other flowers and plants will be well represented. A liberal list of prizes will be offered, and from the favor with which the idea is received in all quarters there is every promise of success. All entries will be free and the exhibition will be open to the public as long as the flowers remain. Further particulars will be given as soon as the details are arranged.—Eagle.

The florists of La Crosse, Wis., are considering the subject of organization for advancing an interest in the culture of flowers.

Pittsburg.

The Market.

Trade remains about the same; always something doing, and no complaints are heard. Stock is all that can be desired as regards quantity and quality. Roses, perhaps, are a little scarce at times, but better weather can soon be expected, which will produce more satisfactory results. Carnations still hold up in price; good ones easily fetch from 75c. per dozen up, at retail, and the keeping quality seems much improved. Mignonette is fine and in fair demand. Sweet peas go slow—too high in price. Tulips are doing well, but Dutch hyacinths are not in great demand. Violets go fairly well. Harrisii lilies are coming in very slow, and will not be plentiful for Easter; prices will be away up.

The weather is still against plant sales—snow on the ground the first day of Spring, March 21.

Visitors during the week were: Robert Greealaw, N. F. McCarthy & Co., Boston; J. B. Begbie, of Lucas & Boddington Co., New York; also Hageman & Meyer's representative of same place, and from Philadelphia, Ed. Reid.

E. C. REINEMAN.

Ethel Crocker Absolutely the best Pink CARNATION ever offered the Trade. . . . .

A fact fully borne out by its record, being equally good with Craig, Hill, and myself. (An assurance that it is not a success in one soil and a failure in another.) By its having been shown at the Flower Shows and Clubs since early in September. (An assurance that it is not a good late carnation, but an all season variety.)

In color, size, fragrance and stem it is just what the "storemen" want.

In habit, constitution and freedom of bloom, it is just what the grower wants. It produces more flowers to the square foot than any other known variety, and is never out of crop from September to July.

With 18,000 stock plants to work from there is no danger of it being over-propagated, and all orders intrusted to me will be filled with cuttings selected from the plants and the order filled by myself, thus doubly assuring good stock.

Honest sample blooms furnished, prepaid, at $1.00 per dozen. Amount deducted from all orders for 100 or over. Up to date, every sample excepting one out of several hundred sent, has brought an order.

PRICE—Per 100, $10.00; per 25, $2.50; per 1000, $75.00; per 250, $18.75.

☞**PRICE LIST FOR STANDARD VARIETIES READY NOW.**

CHICAGO CARNATION CO., GREENHOUSES AND ADDRESS, **JOLIET, ILL.**

GENEVIEVE LORD

The Peerless New Light Pink Carnation.

THE demand has been such that we are compelled to announce that stock for delivery prior to March 20 is all sold. Experts agree that it is the best selling pink yet produced. The color is just right, the ladies say, and they surely know. We know, too, that its stems are the grandest of any carnation, quite a factor, too, and more particularly so since it also possesses a size which entitles it to a place in the front row, an odor so sweet as to cause immediate notice, a growth and freedom of bloom which delights the grower; an individuality incomparably its own. This is a a riking feature in any carnation, and Genevieve Lord possesses it to a greater extent than any other carnation; this is why it sells so readily and makes the demand for blooms far greater than the supply.

If you want this record-breaker in your list next winter, order at once. If you delay it may be too late.

PRICE, $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We can also furnish at introducers' prices all of the "big new ones."

Also Best NEW and STANDARD CHRYSANTHEMUMS.

Our Catalogue is now ready and will be sent to all who ask for it.

H. WEBER & SONS, Oakland, Md.

John Scott, Keap Street Greenhouses, Brooklyn, has distributed, for Easter, a neat calendar.

Wm. Fendley, Brampton, Ont., grows mostly the Farquhar violet, with which he has grand success.

Professor Beach, of the New York Agricultural Experiment Station, at Geneva, delivered a lecture Friday, March 23 last, before the Central New York Horticultural Society, on the subject of "Fertilization of Self Sterile Grapes."

Germol.

This insecticide has been used with good satisfaction on ferns, small palms, orchids and bedding plants. The formula used was about half a gill of the insecticide to a pail of water for palms, dracaenas, crotons, roses, etc.; but for ferns, orchids, marantas, and other fancy and foliage plants, a smaller quantity of the compound was employed, or more water added.

A CHANCE FOR THE YOUNG MAN.

SUBJECT: **What I learned during my first two years in the florist business.**

PRIZE—$4 worth of books or magazines; or $3 in cash.

CONDITIONS.

(1) Each MS. submitted must be written by an employee, without assistance, and the authenticity of these facts attested by the employer.

(2) No employee now contributing, or who has at any time contributed to any florist trade journal, will be allowed to compete.

MSS. must not exceed one thousand words in length.

All MSS. submitted in this competition to become the property of the publishers of the FLORISTS' EXCHANGE.

The awarding of the prize will be based on the amount of the practical knowledge acquired by the writer in the period stated as exemplified in his paper.

Competition will close April 7 next.

Write plainly on one side of the paper only.

Address all communications,

EMPLOYEES' COMPETITION FLORISTS' EXCHANGE,

P. O. Box 1697, New York City.

The "Leading Flower Sellers."

In a recent article appearing in the *New York Times*, dealing with the nationalities of the individuals who control the different industries of the United States, appears the statement that "The Greeks are getting to be the leading flower sellers." This remark is misleading, and has evidently been made at random, the foundation of the writer's utterance being apparently based on the conditions existing within his range of vision obtained from the editorial sanctum, where probably a dozen or more street peddlers can be seen plying their calling in the vicinity of the Brooklyn Bridge; some of an itinerant character others, stationary. It is a noticeable fact, however, that the Greek is assuming an important place in the flower industry—the retail branch of it at least—as evidenced by the yearly increasing number of people of that nationality engaging in the business—particularly in New York City, which a glance at the Directory will confirm. But, from appearances, it will be many moons yet before the Greeks become the "leading flower sellers" of America, unless, by the word "leading," our contemporary means aggressiveness in the purchase and disposal of stock, in which the Hellenes excel.

It is also worthy of remark that, with but few exceptions, the more recent augmentations to the retail florist trade of New York City have come from the ranks of the Greeks. First, a street peddler; second, a street-corner-glass-case owner; thirdly, a store-man, seems to be their process of gradation.

This naturally leads us to inquire into the reason why more Americans do not engage as retail florists—a business that presents, apparently, inducements equal to any, judging by the evident "well-to-do-ness" of some of those who have made a success of it. It cannot be that the especial training required for its proper conduct is a deterrent, seeing the ease with which some jump into the business in a state of practical unpreparedness—and stick to it, too. It does not appear, either, that lack of capital proves a barrier; present and past experiences do not justify that supposition. The onerous character of the work entailed cannot be set down as the cause, for the average American loves hustle for its very self; nor can we look upon it in the light of being too effeminate for the American man to engage in it. There is as much play for the exercise of the merchant faculty as is afforded by any other business. It is said to be "the loveliest calling on the face of God's earth;" and with all these factors in its favor again we wonder why more Americans do not adopt the retail florist business as a means of earning a livelihood—and let us say, a good one at that. Can you inform us?

Chrysanthemum Society of America.

It is seldom that the readers of a floricultural journal are treated to so wonderfully frank an expression of opinion as that appearing in our contemporary relative to the recent efforts of President Hill, of the Chrysanthemum Society of America, in his endeavor to create a greater interest in that society and its work. The writer of the article in question, C. B. Whitnall, asseverates that apathy by the florists' trade in the society "attests the good sense and sound judgment of the florists at large," and goes on to state that the work done by the society has been accomplished by the commercial interests for their own especial advantage (more or less), with particular reference to the prevention of the distribution of inferior varieties, adding that were not this done the commercial men's own interests would suffer. But in thus safeguarding his own interests is not the commercial man at the same time saving the money of every one who buys and grows chrysanthemums? Nay, is he not even legislating against himself, so to speak, for the especial benefit of his fellow man? Remove the Chrysanthemum Society and "the work that should be done by the commercial interests," and the general weal of chrysanthemists would suffer, proportionately.

There is an element of selfishness, or self-interest rather, that enters into the life of every society; and it is no more pronounced in the Chrysanthemum Society of America than it is in others. People join these bodies for the real or supposed good they do in the promotion of some particular object, and the benefit individually obtained thereby; and according to the extent of the promotion, so is the actual beneficial result, either financially or morally, to the members. But the Chrysanthemum Society's work is not confined to advantaging its own members; it is helpful to those outside its fold likewise; and whether is it more noble to aid the association, both by your contribution to its funds and your presence at its meetings, than to accept the benefits that accrue from its labors, without money and without price, and in doing the latter to cynically sneer at its workers and accuse them of simply doing a duty they owe to themselves?

Apathy in any movement having for its object the general benefit of any trade whatsoever never did display "good sense and sound judgment;" it does not even display horse sense, for, according to the *laissez faire* spirit shown, so is the usefulness of the body impaired.

For all that, the society in question has, through lack of judgment, placed itself in the position where the accusation of selfish interest in the few can be made, by reducing its scope to one particular line, when there are so many avenues open to it to expand its usefulness. The officers of the society have evidently now realized their position, hence the president's sound sense in trying to create an enthusiasm in the association and the good that it could do were greater encouragement afforded.

Mr. Whitnall further remarks: "The S. A. F. can do it (prevent inferior varieties being sold for good ones) for the protection of its constituents, but we do not care to join a separate society for the purpose of carrying a few specialists on our shoulders." But so long as the S. A. F. has not and doesn't do "it," what then? Have not these other societies been the outcome of necessity? It is a question, too, whether the S. A. F., as at present constituted, could, with impunity, advance the interests of any special flower at the expense of the whole gamut of commercial floriculture. For instance, the palm man, the florists' supply man, the bulb man, etc., all members of the national body, might each take exception to a general effort being made to further the welfare of any specialty outside his own, unless he was accorded an equal service. We do not believe the S. A. F. can do anything of the kind. Its real work lies more in the line of furthering the general weal; and the care of specialties is and will continue the especial province of separate societies, whose whole time and effort are devoted to these specialties. It is more as a moral factor whose influence might be made felt in any subject of national import affecting the trade that the S. A. F. is especially valuable, and for their own benefit it might be well for the members of the various so-called auxiliary societies to allow themselves to be considered as bodies affiliated with the S. A. F. and ways and means devised to establish the connection. The latter part of Mr. Whitnall's remarks about "carrying specialists on our shoulders," is the outgrowth of the narrow view he takes of the matter in presuming that specialists alone are benefited by the work of the Chrysanthemum Society; in other words, he fails to detect the difference between perfectly legitimate self-interest, and illegitimate selfishness.

Furthermore, Mr. Whitnall adds: "A large flower show is a good idea, but admitting that all flowers are necessary to make it a success, why should chrysanthemum growers make use of the flower to build up an organization when the organization is not needed to build up the flower?" Yet Mr. Whitnall admits "the society has done work that should be done by the commercial interests," and that these interests would suffer were that work not performed. Does this mean building up the flower, or letting it "go to grass;" and what flower other than a chrysanthemum could a Chrysanthemum Society make use of to exemplify the particular work in which it is engaged? Are not our Fall shows generally termed "chrysanthemum shows," and rightly so, even with other flowers necessary to make them a success?

"A one flower society is not democratic for successful floriculture," adds Mr. Whitnall. It may not be, and yet when we see the extent of the good work done by some "one flower" societies, each in its degree tending to the general success of floriculture, we are inclined to the belief that these bodies are of more practical utility, consequently "more democratic for successful floriculture," than a many-flowered society incapable of intensiveness along any one particular line.

Summing it all up we do not consider that Mr. Whitnall has solved the problem as to the lack of interest in the Chrysanthemum Society of America in particular, or in our other national societies generally. We believe the gentleman's own response, given in reply to the inquiry as to how the retailers could best be interested in the S. A. F. and its work, will better fit the case of each one now outside the fold of our existing associations (though benefiting by their labors), than mere cynical innuendoes. Here it is: "Convince him how little he knows."

The American Rose Society.

Next Tuesday, Wednesday and Thursday will be held, in New York City, at the Eden Musée, 55 West 23d street, the First Annual Exhibition of the American Rose Society. Every effort for a successful exhibition has been made by the officers and promoters of the Society, and the inducements in cash prizes and trophies alone should make glad the heart of every rosarian and lead to a most spirited contest.

The still more important phase in which we must look at this matter, however, as tradesmen, is in the effect which this inaugural show will have upon the country at large. If unsuccessful, through lack of competition and interest on the part of the growers (which is the vital part we have to deal with—the managers of the Eden Musée having made strenuous efforts to interest the great public), it will simply mean that the rose, as the people's flower, will have a tremendous setback, while on the contrary, a successful issue will give the rose a popular boom, which, like a pebble thrown into the water, will create wave circles that will widen, and still further widen, until every town, village and cross-roads throughout our country will boast of its local rose society, and the rose be implanted in popular favor where it most deservedly belongs—as second to none.

Therefore, rose growers, send in your best, and let all rosarians attest by their presence on one, or all three days, the interest which this memorable occasion has excited in them.

Of a failure there can be no thought. The Society makes its entry into full publicity with a membership verging closely on 200, of whom 29 are paid-up life members—a showing at once reassuring and brilliant, while the list of patronesses

is a voucher for the intense interest which the Rose Society has already secured from our best classes.

INTENDING EXHIBITORS PLEASE NOTICE.

The hall will be open for the reception of exhibits at 5 a. m. on Tuesday; at 10 a. m. the judging will commence; at 11 a. m. the admission to private and press view; at 12 noon the admission of the public. These hours are positive and absolute, and no exhibits will be received after the latter hour.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

Lager & Hurrell, Summit, N. J., register Cattleya Trianæ, Nettie Martin; flowers of medium size and well balanced; sepals and petals light lilac; lip very large and open, somewhat flattened; throat with a large blotch of straw buff color, encircled with a broad band of lilac.

C. H. Gerbig registers geranium A. N. Gerbig, single zonale; flowers bright apricot salmon, shaded much deeper toward center, with distinct white eye; truss large, foliage deep green, with dark zone; growth strong and compact.

WM. J. STEWART, Secretary.

OBITUARY.

A. W. Dunks.

A. W. Dunks died at his residence in New London, Ohio, March 16, at the age of 65 years, of Bright's disease. He had, until recently, been in the florist's business, from which he retired on account of ill health.

Mrs. Bertha F. Miller.

Mrs. Bertha F. Miller, retail florist at 730 West Madison street, Chicago, died the past week, the remains being sent to Philadelphia for interment on the 15th. Mrs. Miller came to Chicago ten years ago, to manage Schiller & Mailander's flower store, afterward buying it out, and had run it under her own name for some years. She was the daughter of an old-time florist in West Philadelphia, Pa.

James B. Seward.

James B. Seward died at his residence, 190 East 47th street, Chicago, March 17, of pneumonia. He was second cousin to President Lincoln's secretary, William H. Seward, and was born in Montgomery County, N. Y. He went to Illinois in 1830. Deceased was 70 years of age. He was well known, in old times, among the retail florists, when all kinds of Summer garden flowers found ready sale. These he used to grow and peddle by basket to the retail florists. For the past seven years he had been seldom seen. He accumulated considerable real estate.

Archie Middlemass.

Archibald Middlemass, one of Milwaukee's well-known florists, died at his home, on March 15 last, of pneumonia, at the age of 58 years.

Mr. Middlemass was born in Edinburgh, Scotland, where his father was a miller. His father died when Archie was 9 years of age, and the family moved to Brooklyn, N. Y. In 1859 Mr. Middlemass went to Milwaukee and took charge of the private greenhouses and gardens of David Ferguson. A few years thereafter he formed one of the firm of Dunlop & Middlemass, florists and nurserymen, who conducted the Rose Hill Nursery. This arrangement lasted for five years, after which Mr. Middlemass located next to Mr. Dunlop and opened the Sunnyside Nursery, where he remained in business until his death. The deceased was twice married and is survived by his widow, two daughters and two sons.

On the ice Mr. Middlemass was a good curler and was one of the veteran skips of the Milwaukee Club. He was interested in all athletic games, and in the old days took part in the quoit games at the Scotch picnics. Very fond of Scotch music he sang at Scoteh gatherings himself, some of his renditions being famous among his friends. Of a jovial disposition Mr. Middlemass was quite popular, and deep regret is expressed among his numerous friends over the news of his death. He was an active member of the St. Andrew's Society, the Milwaukee representatives of which attended the funeral in a body.

Government Seeds for the South.—The Fall distribution of seed is becoming a great thing in the South. The seeds are of no value whatever here, for by the time they arrive most of our crops are being cut.—H. P.

Carnations and Their Developement.

"Carnations and Their Development" was the subject of the weekly lecture in Horticultural Hall, Boston, Saturday last. The speaker was C. W. Ward, of Queens, N. Y., who illustrated his talk with lantern slides. Mr. Ward said in part:

The carnation which we grow in America to-day differs from the pink. The latter is a hardy variety of the dianthus family, which lives all Winter and was grown in America 150 years ago. The carnation is a native of southern Europe. The original flower grew 2 feet tall, was flesh colored and had five broad petals. The carnation has been in cultivation for over 2,000 years. Since 1600 its cultivation has been prominent enough to attract the attention of historians.

We have in this country the American Carnation Society, an organization of about 400 members, to whose energies the present type of carnation in America is due. The carnation commonly grown here was derived from the French strain, known as the remontant, monthly, or perpetual flowering carnation. This distinct race was originated about 1840, and was sent out about 1844.

We find from the ancient description that the wild carnation was a five-petaled flower, about one inch in diameter, of a flesh or lavender color. Some of our hybrid seedlings are identical with the original type.

After the carnation hybridizer had succeeded in producing a double bloom his next aim was to strengthen the stem and improve the colors. We now have blossoms from three to four inches in width, and of every shade of color but a true blue, to obtain which is now the aim of American hybridizers.

The seeds are sown and cared for in a manner similar to those of any greenhouse plant. When the seedlings have developed for ten days they are placed an inch apart in beds, are then potted and afterward treated similarly to other plants. While the growth is an intensely interesting work, it is very expensive, and the successful grower of a new strain well deserves the plaudits of flower lovers.

The most delicate, purest carnation which we have to-day is Mrs. James Dean. The largest and most striking variegated carnation to date is Mrs. George M. Bradt, introduced in 1896. This, however, has several rivals, notably, Olympia. The most advanced step in the development of the flower is achieved in Governor Roosevelt, a seedling introduced in 1897, of symmetrical form. A new departure has been secured in a flower composed of a center of feathery blooms similar to the anemone chrysanthemum, but the freak cannot be propagated, as neither seed nor pollen can be obtained of it. It is the most elaborate carnation curiosity which has been secured.

Preparatory to shipping the cut flowers are stored in a cool room. The worst possible treatment for cut carnations is to take them into a warm room immediately after cutting. Blossoms treated thus will last but four or five hours. The most successful way to treat a carnation, and this statement is now made public for the first time, is to plunge a carnation after cutting into luke-warm water, after which it should be placed in a room of a temperature similar to that in which the flower was grown, gradually cooling the room. Carnations thus teated may be kept from three to five weeks. Never place the flowers on ice. Sudden changs of temperature are sure-death for carnations.

Probably in America $2,000,000 are invested in carnation growing, and 5,000 people are employed in the business. About 2,500,000 plants are produced annually, and a similar number are grown by florists for their own use and about 60,000,000 blossoms are marketed each year. The carnation's wide range of pleasing colors, its lasting qualities and fresh, rich, clove-like fragrance combine to make it one of the most popular, as well as one of the most sought for and profitable of the florists' flowers.

Carnations at Toronto.

The carnation meeting of the Gardeners and Florists' Association and Canadian Horticultural Society, held in St. George's Hall, Thursday, March 8, was a great success. The public was admitted free during the afternoon and evening, and hundreds of our people took advantage of this opportunity to see the best show of carnations ever witnessed in Canada. A string band was in attendance in the evening. The public dearly loves a free flower show, not only in Baltimore, but also here in Toronto.

The arrangements made by the committee were all satisfactory. The exhibits arrived in good condition, and they were all well handled and staged. The Park Commissioner and Mr. Watkins, of the Horticultural Gardens, sent along a few nice palms to help to decorate the hall. The bulk of the blooms were well arranged as to color, all the flowers from a distance being placed in such a way that their beauty could be seen. In the center of the hall, on a small table, was placed a fine vase of E. Asmus' Liberty rose. It was the center of attraction, and certainly is a splendid variety. Some of the boys think there is too much of the hybrid perpetual about it, but all want to try it; and were it not for our absurd customs regulations Mr. Asmus would certainly have many orders for it from here.

Among the carnations, the one that was most fancied by the trade here was The Marquis. The blooms were in fine condition, and made a splendid show. Of the other new ones, Morning Glory (Dorner), pink sport of Daybreak (Palmer), and Genevieve Lord (Weber & Sons), were most fancied. Olympia, although very fine, did not meet with so much favor from the boys, because Mrs. Bradt was shown in such extra fine form. Ethel Crocker was thought much of, as also was Enquirer; but so much has been written about the latter and Mrs. Lawson, which was also shown in excellent form, that we expected to see something more wonderful, and when the flowers only came up to the best of their company we were disappointed.

A meeting of the Canadian Horticultural Society's Executive Committee was held in the evening and arrangements made for their convention in August. It was decided to hold it the week prior to the S. A. F. meeting in New York. A program was arranged and, I think, the success of the meeting is assured.

The meeting over about 65 sat down to a little supper, and a very pleasant time was spent. Mr. Scott, of Buffalo, was in fine form, and with Mr. Boddington, of New York, well represented the land of the Stars and Stripes. The party broke up about two o'clock, after singing "God Save the Queen."

Among the visitors from out-of-town were: Messrs. Scott and Palmer, of Buffalo; Boddington, of New York; J. McKenna and Wm. Bennett, of Montreal; Scrim and Wright, of Ottawa; Gammage and Dicks, of London; Ewing, of Berlin; Townsend, Hamilton; E. Dale and Wm. Findley, Brampton.

Our local exhibitors fully held up our end with their exhibits. J. H. Dunlop, H. Dale, Miller & Sons, all having fine exhibits. Geo. Mills, who acted as superintendent of the show, came in for many eulogiums for his hard work and general good management.

Carnation Gold Nugget.
Grown at Briarcliff Greenhouses, Sing Sing, N. Y.

Among the exhibitors were: Miller & Son, F. Dorner & Son, The Cottage Gardens, W. J. Palmer, J. H. Dunlop, John N. May, John Kuhn, A. M. Herr, Peter Fisher, R. Witterstaetter, L. E. Marquisee, H. Weber & Sons, E. G. Hill & Co., W. Fendley, Brampton; H. Dale, W. Scott, Buffalo; F. Dicks, London; J. Gammage & Sons, and C. Scrim, Ottawa. Ewing & McNaughton exhibited their patent plant boxes. The judges were: Messrs. Gammage, Scott, McKenna and Jos. Bennett. T. M.

Elmira Carnation Show.

The carnation show of the Elmira Horticultural Society was a success in every way. The display was excellent, attendance unusually large, and it was plainly evident by the interest manifested that the carnation is the people's own flower. As the novelties were admired and praised one heard the natural expletive accredited to carnationists, "By jove, aren't they fine!" The Marquis showed off as attractive as ever, and is easily a winner. It is a fine shipper and always travels on its "shape." From recent reports they must like it at Boston. A variety that receives three first-class certificates "all to wonst" would surely stand some show with exclusive Boston society.

Genevieve Lord is also superfine. The ladies said the handsome vase was a "dream of loveliness." One would judge it to be a profitable variety to grow. The Marquis and Genevieve Lord are so distinctive, individually, that up-to-date growers will want both.

As to Morning Glory I am not enough posted to venture a pronounced opinion. Before stating what you don't know, count ten! Queen Louise was sent in by J. L. Dillon, Bloomsburg, Pa. It is white enough and is claimed to be a good thing. Time will tell. Personally, I do not fancy Ethel Crocker as well as some others. Individual taste has its likes and dislikes. I heard a buyer of fancy articles say that he was often deceived in his personal judgment as to what sold best with general trade. Olympia and the Lawson were conspicuous by their absence!

The public is being educated as to the names of novelties. The old idea that a carnation is simply a carnation is being exploded, and exhibits of this kind will develop a demand for the new varieties from a retail standpoint, and better prices will more easily be obtained.

America was shown in fine form by E. G. Hill & Co., and Crane from Fred. Dorner & Sons' Co., but on exhibition the brighter color of Jubilee wins out. Jubilee seems to be improving in constitution. Mrs. Bradt was grand in both exhibits from Dorner and Hill & Co.

Local exhibits were made by florists and private gardeners rounding out the general display.

Carnation Mrs Bertram Lippincott did not arrive until after the meeting, too late for exhibition. In color it is between Daybreak and Victor, with the general characteristics of Daybreak. If the variety is free and continuous as recommended it will prove popular.

Apropos of judging, opinions certainly differ. At Boston No. 666 apparently was not in high favor. It is also said that had Governor Roosevelt the requisite number of blooms to enter for the Lawson gold medal at Buffalo it would have secured the prize. There is more or less lottery connected with prizes and premiums.

The representative audience was a pleasure to stand up to, and the speaker was enthused to offer a votive offering, to horticulture. A synopsis of the development of carnations was given, supplemented with humorous experiences along the line of general horticulture.

The very successful meeting, largely augmented membership, and timely displays of flowers and fruit will be a feature of the monthly meetings.

Systematic work of this kind will be more valuable to a society's usefulness, than a larger flower show but once a season, that usually evolves more or less friction. When you are after premiums, pure and simple, it is a sort of football scrimmage—and the devil take the hindmost! GROVE P. RAWSON.

New Jersey Notes.

The Essex County Park Commission have just completed their plant at Branch Brook Park, Newark, for the propagation of bedding plants, at a cost of $12,000. It consists of two houses of equal span roof, floor space 20x100, placed at right angles to a potting room 64x20. The heating is accomplished by two Hitchings boilers, Nos. 54 and 55. Houses are already partially stocked. The frames, which have hitherto been the main dependence, contain 40,000 pansies and 10,000 each of daisy and myosotis, which show considerable skill in their cultivation. The whole is under the superintendence of Wm. S. Manning, formerly of Twombly's; and Theodore Holecke, formerly with Pitcher & Manda as head gardener, and James Burns as under gardener, formerly with Mr. Marcy, of Orange.

MONTCLAIR, N. J.—J. C. Williams, the proprietor of the Chestnut Hill Nursery, is contemplating the erection of a fumigator, 16 feet long; not that he is troubled with that terrible scale, for his stock is all certified, but for the reason that "an ounce of prevention is worth a pound of cure." He reports a large demand for ornamental shrubbery.

A. S. Wallace is supplying valley in quantity to the local and New York markets; these, with flowering bulbs and primulas, form the best part of present trade.

SOUTH ORANGE.—W. A. Manda reports an increase in the season's trade, and a continued demand for dracænas and other ornamentals. The Harlequin and other new begonias are in fine shape. His example of the Cherokee rose in full bloom presents a beautiful spectacle. J. B. D.

HINTS and HELPS.

Cyclamens which are wanted for seeding will not "set" the seed so well in an atmosphere charged with moisture as they will when kept where the air is dry and in the full sun. To facilitate fertilization artificial pollination should be brought about with the aid of a small camel's-hair brush. Select a few plants showing desirable qualities in the flowers —color, size, etc. Mix the pollen of the separate plants, but of the same color, and the results will be so satisfactory that every flower will set seed. In ripening the stalk of the flower bends over, coils spirally, bringing the capsule near the surface of the soil in the pot. Home sown seed should be kept during the Summer in dry sand, in an open wide-mouthed bottle.

Potting Up Tea Roses.—Where it is necessary (owing to want of room for young stock) to throw out bench roses prune some of them back severely; put in 6-inch pots; keep in the house until they make roots, then remove them to a frame. They will come in all right for disposing of for planting outside later on in the season. There is no appreciable difference between cool-grown plants and those which have been forced during the Winter in their frost-resisting qualities; that is, after having been planted out for the Summer.

Seedling Herbaceous or half-hardy plants which are Wintering in boxes, thickly together, will by this time sometimes show a somewhat starved look—as if they were impatient of their limited root accommodations. Turn them out with little balls to them and give fresh and slightly enriched soil; put the seedlings back in boxes, giving them a little more room than they formerly occupied. With most things this will be a distinct benefit, but those having only one or two long roots had better not be touched. These are the plants that should occupy pots instead of boxes. The operation may be done quite rapidly, as there is no necessity for firming the soil in the boxes to the same extent as is done when potting.

Phloxes.—Nearly all of the members of this genus are popular border plants. Those most widely grown are varieties of P. maculata and P. paniculata. They are strictly herbaceous plants, and are useful for cutting in Summer, or for the decoration of borders or planting among shrubs. They are propagated from cuttings either in Fall or Spring; from division in early Spring or from seeds, or pieces of the large roots cut into short lengths. They will thrive in almost any kind of soil. The ground should be covered with manure during the hot months, to preserve moisture at the roots. Phlox Drummondii, with us a hardy annual, is offered by seedsmen in many varieties. The white flowered kinds are useful for cutting. Seeds should be sown early enough to have plants ready to be planted out as soon as freezing has gone. Later sowings may be made to keep up a succession of bloom, as the first batch is apt to run to seed shortly after midsummer. Another useful species is the moss pink, P. subulata, of which there are a number of varieties, having pink, red and white flowers. They bloom in April and are easiest propagated by division during the early part of October.

Cuttings of American Beauty.—If the cuttings of this rose are to be propagated in the same bed with the same heat given teas, the wood intended for cuttings should be thoroughly free from red spider and fungoid diseases, or else the leaves will drop from the cuttings before they have developed roots of a sufficient length to be transferred from the cutting bench to pots. The better plan is to root them in sand having a lower temperature, because it is necessary to the health of the young plants that they retain the leaflets while undergoing the process of rooting. Take the cuttings during dull weather, or early in the morning, and only when the soil is moist. Shade the cuttings with slats or cloth on the roof, and only have sufficient atmospheric moisture to keep the leaves from wilting.

Starting Nymphæas.—Where it is intended to grow the tropical water lilies they should be secured very early instead of near the planting season, when the tubers have started and the leaves have formed. It is much more satisfactory to procure dormant tubers. In the first place they carry better, and in the second, a dormant tuber, if started early, will, according to the kind, gain sometimes as many as 20 plants after early starting and before planting-out time. All of the night bloomers, excepting N. Sturtevantii, increase very rapidly in this manner. The day bloomers will give several plants from each tuber, no matter how small.

Ricinus.—The castor bean is one of the largest of annual plants. It comes in useful for filling up large spaces, being a very ornamental foliage plant with palmate-shaped leaves. Some of the varieties grow over 15 feet in height before the flowers appear. R. zanzibarensis, a green-leaved form, is one of the tallest. R. Gibsoni has bronze colored foliage. Although a hardy annual in most places, the seeds when left to germinate naturally come up late. They should therefore be sown simply in small pots about the beginning of March; they will thus reach maturity quicker after being planted out.

Out-door Tea Roses.—As many kinds as possible should be given a trial out-of-doors, and those which succeed best among the colors wanted, of course should be planted in quantity. A great many of the kinds are apt to suffer above ground very severely, but this wont matter much as teas need more pruning than other classes. In the late Fall cover the ground on which they are planted with several inches of rough stable litter, pushing it up against the necks of the plants. Teas give a great deal more satisfaction than other classes, which are gay with bloom only for a short period. La France, Kaiserin, Bridesmaid and Carnot all do well here without protection.

Ixoras.—From the manner in which Ixora alba has flowered during the last two or three seasons I see no reason why it shouldn't be a popular Easter plant. It blooms very freely; the flowers are snow white. The red and scarlet varieties are worth growing for Summer flowering. They are plunged out in 5-inch pots grown on from Autumn rooted cuttings. I. blanda, I. coccinea, I. Chelsonii and Prince of Orange are all good for the purpose. Firm potting and a considerable quantity of peat in the soil are necessary. Full sunlight may be given.

Rudbeckia Golden Glow.—The plants outdoors will soon show a mass of young growths. Before these get far advanced the stock may be increased by lifting the largest clumps and separating into pieces small enough to go comfortably into 4-inch pots. When potted they may go into a cool frame until fresh roots are formed, and afterward planted out where they are to bloom. Divided pieces are always more satisfactory after being treated as above. This holds good with many other herbaceous plants valuable for cutting from in Summer.

Gladiolus.—In sections of the country, where the thermometer seldom indicates the zero mark, the gladiolus usually grown are perfectly hardy if given a covering with stable manure. This indicates that in other sections the bulbs should be in the ground early to produce the first crop of flowers, planting others later for a succession. It is good policy to pay a little extra for the good kinds, as the cheaper grades contain so many forms which, owing to the colors, are entirely useless as cut flowers.

A Hardy Clerodendron.—Clerodendron fœtidum, sometimes called C. Bungei, is quite hardy South of Maryland, also much further North if the roots are given protection by being covered with decaying leaves or manure. This is a good season to propagate; the plants provide a large number of underground stems. Dig up a quantity, cut in 2-inch pieces, sow them in a box and cover with an inch of sandy soil. Put in 3-inch pots shortly after they appear above the soil. We treat this plant as herbaceous much in the same way as caryopteris is treated in the North, but further South its wood will stand unhurt. It is one of the best shrubs for the South, flowering in very large panicles. The flowers are bright pink in color. G. W. O.

LEGAL NOTES.

Damages for Leak in Gas Pipe.

AUBURN, N. Y.—The case of Carl Armbuster against the Auburn Gas Light Company was heard in the Court of Appeals, Albany, on March 12. The action was brought to recover $2,000 for injuries sustained by the plaintiff through the escape of gas into his place of business. The Supreme Court gave plaintiff a verdict for $2,000. The case was then taken to the Appellate Division, which affirmed the judgment on plaintiff's stipulation to receive $1,500.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

Dahlia Camelliaeflora.

Editor Florists' Exchange.

As I am receiving quite a number of inquiries as to how I grow Dahlia camelliæflora, for the benefit of all the readers of the EXCHANGE I will give my experience in growing this dahlia, both for pot plants and in the field for cut flowers. D. camelliæflora makes very few tubers, and its height does not exceed 2 feet. About February 1 I plant the tubers on a bench in about 4 inches of soil, and keep them on the dry side until they begin to send up new growth. When large enough I take the cuttings and put them in the sand in a temperature of 50 to 55 degrees, and when rooted (which they do very easily, one ought not to lose more than 5 per cent.) I pot in 2½-inch pot and by April 15 place them outside in a frame, giving as much air as possible, so as to harden them off, otherwise, if kept in the house, they will get too soft and spindly. By the first week in May the small plants will begin to show buds; they should then be shifted into 5-inch pots, and will take two to three weeks to come into full bloom, making very fine pot plants for Spring sales. I do not let the plants get dry, as they can stand plenty of water; also a little liquid manure will help improve both the plant and size of flower.

For cut flowers out-of-doors I plant both divided tubers and plants grown from cuttings. In my experience I find that the latter plants produce larger and longer stemmed flowers, while those grown from divided tubers make more of a bushy plant, and produce more flowers, but smaller. I plant them 1½ to 2 feet apart in rows, and as they grow hill them up. They require no staking. A. L. MILLER.

Brooklyn.

Canna Italia.

Editor Florists' Exchange.

We note in your issue of February 17, page 164, the remark of Messrs. Dammann & Co., relative to the sterility of Canna Italia, and desire to take an exception to same, and a strong one at that.

An absolutely successful cross, Italia × Mme. Crozy, was made at the nursery of F. Edward Gray, Alhambra, Cal., three years ago, wherein a single seed was obtained from Italia by the above pollen parent after an entire season's work. The seedling now known as Mrs. Kate Gray, and which we have the pleasure of offering to the trade this season, has proved to be, without any exceptions whatever, the grandest canna in existence. This is certainly a sweeping assertion, but the sterling qualities of the plant in question more than bear it out. Notwithstanding the fact that this canna is a seedling from Italia, the flaccid character of the latter is entirely lost, the infusion of new blood having entirely obliterated this unpardonable fault, which the flower of Italia and its kindred varieties possess to such an extent as to render them worthless as bedding plants.

We in no wise desire to belittle the work of Messrs. Dammann, and doubt if any one more fully appreciates the wonderful work they have accomplished than ourselves. The fact remains, however, that a cross is possible and that improvements over either the Crozy or Italian types can be made, as is well illustrated in the production of this magnificent hybrid, which, of all the millions of canna seedlings raised since attempts on their improvement first began, stands to-day at the head, a triumph of the hybridist's art (we might well mention California climate) and the end not yet in sight.

HOWARD & SMITH.

Editor Florists' Exchange.

Some doubt is expressed in the FLORISTS' EXCHANGE whether Dammann & Co. were not in error when they stated that the Italian type of cannas is "absolutely sterile." Two years in succession I crossed the Italian cannas with many of the Crozy type, also with their own pollen. The work was performed out-of-doors, also in the greenhouse. I entirely failed to produce a single fertile seed. In gathering the large fine pod you naturally thought a good harvest was the result of your care and labor, but not a seed—nothing but enlarged ovules was the reward. All these experiments are interesting, but not profitable, though a delight if the mind runs in that way.

Previous to the introduction of the Italian cannas I had been crossing Canna flaccida with Paul Marquant, with the object of producing a pure yellow canna without spots; and now I am happy to state I have succeeded. It took six years to get the petals broad enough; the increase was about one-eighth of an inch a year. I sent out Golden Scepter. The segments are about 1½ inches broad. I have many pure canary yellow seedling cannas, petals 1⅝ inches broad. All this type of cannas seed freely with large seed like Paul Marquant and root like C. flaccida. A. GILCHRIST.

Sun-Bleached Sheaves of Wheat.

Editor Florists' Exchange.

We cut the item relative to this matter from one of your previous issues, and gave it to our Custom House broker to investigate; he reports the decision refers to "fibrous grasses," and not to sun-bleached sheaves of wheat. If you have different information we should like to hear from you, otherwise it might perhaps be good to let your readers know the correct state of affairs.

WINFRIED ROLKER,
Of Aug. Rolker & Sons.

Reports on Carnations.

Editor Florists' Exchange.

The criticisms of George Lisburg in a recent issue, on the reports of carnations, is both amusing as well as instructive. It is rather difficult to reply to one who considers himself "perfection" in their cultivation. As I am the guilty one who remarked "that it almost requires a surgical operation to open it" (John Young) he has politely requested me to study a little more about carnations. Thanks, I will, but no amount of study, I am afraid, will avail for climatic conditions and soil. John Young is all that he pictures it; we like it; it is fine, yet that does not alter the fact, that it is late in coming into bloom and slow in opening, and that not on our individual premises alone, but the report covers this locality. Every florist in this vicinity, and in some other localities, says the same of Bon Ton as we do, and around here a measlier growing, more stunted variety cannot be found, all of which goes to show that Mr. Lisburg's soil and climate are materially different. He evidently is located somewhere in the East, possibly within the tempering limits of the sea breezes. He infers, because we cannot do John Young and Bon Ton equal to himself, that, like some whom he has interviewed (presumedly his neighbors), our plants are sprawling all over the benches, that the reason is we don't disbud, don't properly tie them up, for if we did we certainly would be able to grow those varieties as well as himself; and, like others, grow C. A. Dana and Eldorado to the scale of 100 points. We have discarded those two varieties as being behind the times here.

According to the strictures of "G. L." every Grand Rapids florist should go out of business on the ground that we have all missed our calling! We all disbud, would never think of anything else: we all tie our carnations up very carefully, and pride ourselves on having as modern built houses as can be found anywhere, unless those possibly built of iron. The house in which we grow those two varieties is 37½ feet wide by 150 feet long, 18x20 glass, inch gas pipe supports, north and south continuous ventilation at the ridge, Evans' ventilating apparatus, also below the front plate 14-inch glass for front light. John Young and Bon Ton occupy the best and lightest bench in the house, yet they are as we have said: 'Tis such a pity we ever tried to grow flowers!

We extend a cordial invitation to Mr. Lisburg to visit Grand Rapids. We think he will enjoy his trip and return home with a better appreciation of the efforts of others in growing the popular flower, and a better understanding of what ground a carnation report covers—simply the success or failure of certain varieties in that particular locality.

Mr. Ward's reply was considerate and instructive; yes, more, it was ably worded; for the grower who scores the best success is he who by close study and attention to business acquires the best knowledge of the requirements of the varieties he grows, and grows them to a greater degree of perfection than his competitors. We differ on one point, however. Mr. Ward says "less criticism" of varieties. We say "more criticism"—bring out all the faults and all the good qualities of a variety the public will know more about it. If it is good it will profit by discussion; if poor, its death knell is sounded. G. F. CRABB.

Spring Exhibition Mass. Hort. Society

This exhibition opened at noon Tuesday and continued four days. The many exhibits were of a very high standard of quality.

The large center table in the lower hall was filled with carnations, also holding three handsome vases of roses from Wm. H. Elliott, Brighton—of Bride, Bridesmaid and Meteor. At the end of the table were three fine vases of mixed carnations—one from Col. Chas. Pfaff, one from J. W. Howard, and the other from M. A. Patten. Mr. Patten also showed vases of Mrs. G. M. Bradt, John Young, White Cloud, Mrs. Frances Joost, G. H. Crane, Mangold and Walter. He captured first prize for the vase of 100 blooms, and his exhibits of Joost and Mangold took the premiums in their respective classes. Briarcliff Greenhouses, Scarborough, N. Y., sent in five vases, one each of Mrs. James Dean, G. H. Crane, White Cloud, Gold Nugget and Mrs. G. M. Bradt. All five captured first prizes in their respective classes. R. Cushing showed Mrs. G. M. Bradt and White Cloud in fine condition, and Geo. M. Anderson had a vase of good Scott.

There were few roses shown other than those of Wm. H. Elliott, which captured three first prizes. F. R. & P. M. Pierson had a very fine dozen of American Beauty, which were awarded first premium. J. W. Howard and Miss M. L. Walker showed vases of mixed roses, including Bride, Bridesmaid, Morgan, etc., capturing the prizes in the order named.

In the hybrid perpetual rose classes there were two fine collections staged—one by Col. Chas. Pfaff, and the other by C. H. Souther, and in the two classes both exhibitors won—one first and one second prize. Mr. Souther also showed a lot of cut cinerarias.

H. A. Wheeler made a pretty display of orchids in variety, and W. C. Ward showed a very fine lot of pansies. Norris F. Comley staged violets in variety, including Lady Hume Campbell, Marie Louise, Imperial, Princess of Wales and California, winning all the prizes offered.

In front of the stage a few very fine plants were shown; James Garthley, gardener to H. H. Rogers, Esq., Fairhaven, had a handsome Indian azalea, pure white, which captured first prize, and a fine specimen of Rhododendron Camille de Rohan. Mr. Souther showed two climbing roses, which captured first and second prizes, Paul's Carmine Pillar being awarded first, and a fine specimen of Crimson Rambler, second.

Collections of hardy-flowering shrubs and hardy greenhouse plants, including acacias, ericas, etc., were shown by Mrs. J. L. Gardner and Dr. C. G. Weld. Dr. Weld won first prize for acacias, with A. pubescens and Mrs. Gardner was awarded second with A. heterophylla.

The upper hall was filled to overflowing with one of the finest exhibits of Spring flowering bulbs, etc., that has ever been seen here. Just inside the door was an exhibit of curiously grown and trained trees from Yamanaka & Co.'s Japanese nursery.

Perhaps one of the finest exhibits was that of exceptionally well-grown cyclamen, shown by John Barr, gardener to Mrs. B. P. Cheney. He was awarded the three first prizes offered, and two of the second prizes, only failing to take all the premiums in the class for specimen plant, C. H. Souther being awarded second. This exhibit was banked by a fine lot of hybrid roses in pots, from the same place. On the table next to Mrs. Cheney's display J. S. Bailey showed a few good cyclamen. Kenneth Finlayson, gardener to Dr. C. G. Weld, staged very fine cinerarias, and Walter Hunnewell a few plants of Begonia Gibsoni. Cinerarias were also finely shown by Mrs. J. L. Gardner and Chas. H. Souther; the latter captured the lion's share of the prizes, but Mrs. Gardner's and Dr. Weld's displays also received quite a few.

The remaining tables were pretty much devoted to hyacinths, tulips, narcissus and such like bulbous stock. Mrs. John L. Gardner, E. S. Converse, the Bussey Institute, and Wm. S. Ewell & Son were the principal exhibitors in these classes, Dr. Weld's collection being as fine as, if not finer, than any ever shown at the hall. He captured all the first prizes awarded for tulips, and all but one for hyacinths, besides a large percentage for narcissus, lilies, crocuses, freesias, ixias, etc.

The Bussey Institute showed quite a few flowering shrubs in variety, and Norris F. Comley violets in pots. E. N. Pierce & Sons had finely grown longiflorum lily plants, capturing both prizes. J. Burnett showed a few good pots of freesias. James Comley made quite an interesting exhibit of odd things.

Two very fine orchid plants were shown by James Brydon, gardener to Mr. Bayard Thayer, capturing first prize with a handsome specimen plant of Cattleya Schroderæ, having 49 blooms. Mrs. John C. Whiten was awarded second for a very fine Dendrobium nobile.

Quite an interesting feature was the exhibit of three plants of "Little Tot," a seedling from the Dawson rose, the small flowers being of a light shade of pink and quite double.

Messrs. Welch Bros. arranged and staged the exhibits of F. R. & P. M. Pierson and Briarcliff Greenhouses.

One missed at the exhibition this year was Jos. H. Woodford, chairman of the Committee of Arrangements, who is confined to his bed with a very severe cold, and had been threatened with pneumonia. It is good news to hear that he is improving somewhat. F. J. NORTON.

LA CROSSE, WIS.—Supt. Paul Jollner has a fine batch of pot roses at the cemetery greenhouses, also some well-grown pelargoniums for Easter, in addition to the usual general stocks of a retail establishment.

Salzer Bros. report an exceptionally busy seed time; mail and express orders are heavier than usual. A shipment of 750 packages in one day was a record breaker. This department is in charge of a typical Western business lady—Miss Ida Smith.

New York.

The Market.

The cut flower business has been quieter this week than for some time past and, with roses, a general depreciation of values is noticed. Roses are becoming much more plentiful daily, while the demand seems to have fallen off considerably. At this writing (Thursday) commission men have piles of stock on hand, consequently prices are very erratic. Special Beauty are sold at 25c., and they can also be had at 15c. and 20c.—it depends a good deal upon how many are wanted. The same discrepancy can be found in Bride and Bridesmaid, and the prices of special stock range anywhere from 5c. upwards.

A peculiarly strange feature of the rose market just now, is the manner in which some growers are flopping from one dealer to another, obtaining higher prices, perhaps, while at the same time the market is over-stocked, and values are on the decline.

The supply of carnations has fallen off considerably from some cause or other, and these flowers, therefore, are about the best selling commodity coming in.

Lily of the valley is plentiful and there is quite a lot of short-stemmed flowers that go as low as 50c. per 100. Tulips go fairly well, at $2 and $3 for singles, doubles of some shades realizing $4. Daffodils average about $2, though a few extra fine ones have fetched $2.50.

Cattleyas of various grades are on the market; some are sold as low as $3 per dozen, the best, however, bring $6.

Violets show no improvement in quality, and really first-class blooms can hardly be found. Of ordinary stock there is always a surplus; and in thousand lots they go at extremely low figures.

Smilax continues in good demand, good strings bringing $2 per dozen. Sweet peas and lilac go very slowly, maidenhair fern also being hard to dispose of.

Among the Retailers.

Thorley has on view in his window a magnificent specimen rhododendron in full flower. The variety is Madame Cavilhoe, a beautiful light-colored kind. The plant is about 6 feet through, and as its face is tipped toward the front every flower is in sight, the whole making a splendid display.

Jottings.

At the meeting of the stockholders of the Cut Flower Exchange held last Saturday, a vote was taken to determine whether the association should join hands with the New York Cut Flower Co., and do business under the same roof. The voting resulted 186 for and 198 against; thus, by only 12 votes the motion was lost. It was the sense of the committee appointed to look into the matter of consolidation, that stages would transfer growers' baskets from both ferries, should the two concerns agree to amalgamate; and it is thought that if this fact had been better understood the motion would have carried.

The New York Cut Flower Co. will remain in its present quarters in 23d street for one more year.

W. S. Allen will handle some choice potted violet plants for Easter.

John I. Raynor is receiving heavy consignments of tulips, besides a full line of other seasonable stock.

The New York Gardeners' Society will hold its carnation exhibition on the 27th inst., in the rooms of the Press Club, No. 34 West 26th street. Flowers sent to this address, care of J. I. Donlan, will be properly cared for and staged. Among the premiums offered are: A silver cup by C. W. Ward, for the best collection containing not less than five varieties, twelve blooms of each, three of the varieties to have originated either with C. W. Ward or F. Dorner & Sons Co.; F. R. & P. M. Pierson offer $5 in cash for the best display. The Florists' Review will give a copy of the Florists' Manual for the best fifty blooms. J. W. Withers gives two years' subscription to American Gardening for the best seedling. The A. T. De La Mare Printing and Publishing Co., Ltd., offers a copy of "Residential Sites and Environments," for the best vase of carnations, any variety or varieties. Dailledouze Bros. give $5 in cash for the best twenty-five blooms of seedlings raised by a private gardener.

In the commercial classes certificates will be given to meritorious seedlings shown.

The plant auction rooms were well attended this week and a large quantity of nursery stock has been disposed of. There seems to be an increasing demand for rhododendrons and h. p. roses.

Hitchings & Co. have secured the contract for the new greenhouse to be erected at the Hillside Home, Scranton, Pa.

The various committees of the Florists' Club meet in the Elks Hall, 19 West 27th street, Monday evening next, at 7 o'clock. Every committeeman is expected to be present.

C. W. Ward, of Queens, N. Y., is just recovering from an attack of la grippe, which confined him to his room for several days.

Fred. Boulon, Sea Cliff Nursery, has acquired an additional six acres of ground adjoining his present place. This will be devoted to violet growing. He also contemplates erecting thereon a greenhouse, 300 to 400 feet in length, for carnations. Mr. Boulon considers La France the best single violet up to date.

Market Florists' Association.

On Thursday evening the members of this association held a meeting in the market restaurant. The principal business done was the selecting of stands for the coming season. One side of the market is not available for plants this Spring; and other parts were selected. Those whose last year's stands were obtainable secured the same ones this year; others chose stands in the center of the market—and everybody was satisfied. The collector, Mr. Barnett, was on hand, and 36 stands were secured from him by the holders paying in advance.

The retiring secretary, A. D. Rose, received a vote of thanks for his services during the past year; and R. Leach was elected to fill the vacancy.

The market opens this (Saturday) morning, though, being the first day of the season, it is not expected that more than five or six loads of plants will be on hand.

Cleveland.

A Backward Spring.

Weather conditions prevailing do not furnish many indications of the approach of Spring. The present month has been the worst of the Winter; rough weather has prevailed ever since the first, and at this writing does not show any signs of letting up.

Trade News.

Although the weather remains so unfavorable dealers report a fairly brisk business, and stock is pretty well used up. Stock is not offered so freely as a few weeks ago, and prices hold at about the same figures as last reported. Choice roses bring $7 and $8; lower grades, $4 and $5. Carnations, $1.50 and $2 for ordinary stock, extras and fancy varieties go at $3 and up. Choice bulb stock is reported in short supply, but prices remain the same as formerly quoted, $3 being the outside figure for ordinary grades of tulips and daffodils. Harrisii blooms hold at $10 and $12 per 100. The sale of violets is very quiet, and in consequence prices show considerable decline. The rates now ruling are: 50c. per 100 for single, 60c. and 65c. for double.

Easter Predictions.

It is a little early yet to judge what the Easter season will amount to, but many of the dealers are looking for an unusually good trade. Some of the growers seem to think bulb stock will not be so abundant as it has been for several seasons past; this is quite probable, as many of the smaller growers who make a practice of forcing large quantities of this stock for the Easter trade are not growing nearly as large quantities as common. On account of the unfavorable weather at Easter time last season, but few, if any, of the growers escaped heavy losses on Dutch bulb flowers, and this, coupled with the advanced prices on much of the stock, quite discouraged them from planting the usual quantity of bulbs.

It is thought at this time that an unusual shortage in Harrisii blooms will be felt; the crops of most growers have suffered severely from disease; one of the largest growers here reports a loss of 20 to 30 per cent.

Notes.

F. M. Smith, of Smith & Fetters, left the city on Sunday last for an extended trip through the East.

Mr. H. Cheesman, representing Cox Seed Co., N. Y., and J. E. Killen, representing C. H. Joosten, New York, were visitors. G. A. T.

Boston.

Business Bits.

The latter part of last week trade was pretty quiet, though Saturday showed a slight improvement. This week started with a very lively demand, and stock was well cleaned up. Roses are in very good supply, but are not much sought for. American Beauty move more slowly as the supply of Jacqueminot and Brunner increases. The finest Beauty could be bought Wednesday for $25 per 100, other grades ranging from $4 to $16 and $20. Bride and Bridesmaid are in good supply; prices hold about the same as last reported.

Carnations are again shortening, and clean up well daily at very good figures. There is a heavy demand for fine white carnations, which are not in nearly sufficient quantity to meet it. Fine Daybreak, or carnations of that shade, are eagerly sought for; these easily bring $3 per 100, fancies fetching $4. Colored shades are more plentiful, and average $2 to $2.50 for good ones, with poorer grades at from $1 to $1.50.

Bulbous stock continues druggy, and prices gradually suffer from the effects of the present heavy supply. Tulips average about same prices as last quoted.

Lilies are a little more plentiful, but keep up to $14 to $16 per 100, if fine.

F. J. N.

Philadelphia.

Easter Plants.

S. J. Bunting, at 58th and Elmwood avenue, has the past season added some glass, put in steam heat in place of hot water, and now has the place in first-class working order. He has in fine condition 5,000 lilies, mostly Japan longiflorum. Mr. Bunting says little or no disease has shown in this lot. They are not so short as seen elswehere, and will measure for 2 to 2½ feet, with 4 to 6 flowers—nice, clean foliage. This lot of lilies was potted late, started outside and then placed in a moderately cool house; and are now with buds 3 inches in length. Growing along in a cool temperature they will be just right for Easter. A large lot of azaleas, hydrangeas, daffodils and hyacinths are grown. Some large Rambler roses were noticed in good shape, Kaserin, Bridesmaid and Bride promise a large cut for Easter. Another feature of this place is grafted roses; several thousand are now out of the grafting beds. Kaiserin, Bridesmaid and Bride are propagated in this way. About 3,000 grafted Kaiserin are now in 4-inch pots and will be planted after Easter for Summer cut flowers. D. T. Connor, who is now foreman for Mr. Bunting, was one of the first florists to grow grafted roses in this section; and is a firm believer in grafted stock for quick results and a greater percentage of first-class flowers. DAVID RUST.

PLANTS and FLOWERS.

SEEDLING CARNATIONS, I send you today some of our new carnations. While these are not as good as some growers have, they are not so bad for carnations grown under our common way of cultivation. We planted them in the house October 1, gave them ordinary soil, stirring the surface once only. We used no stimulants whatever.—CHAS. BLACK, Hightstown, N. J.

—Of the seedlings submitted three have decided merit. All of them are results of crosses between Daybreak and Scott. No. 6 is a soft pink color with good calyx and a fair stem, but it is somewhat lacking in both form and size. No. 19 is a good-sized flower, with good, long stem and perfect calyx, very full in the center with the edges of the petals fimbriated; it measures 3 inches across. The color is several shades darker than Scott. No. 5 is a deep rose pink, full center, with the outer petals inclined to go upwards, giving the bloom a rather flat appearance. The stem is of good length and carries the bloom reasonably erect. The calyx shows little sign of bursting.

VIOLETS.—G. T. Schunemann, Baldwins, N. Y., sends us a bunch of his Marie Louise violets, which are very fragrant; also some flowers from his selected stock. These are large and fragrant, and are a decided improvement

NOTES BY THE WAY.

LONDON, ONT.—Commenting upon the Carnation Convention at Buffalo, and the show held at Toronto on the 8th inst., William Gammage noted the large number of sleepy blooms staged at the former city. He had a grand lot of that beautiful flower Mary Wood on exhibition, a variety that is far too little known. The flower is as pure and brittle as that of Glacier and much freer; habit of plant perfect. This is the last season for McGowan. Genesee will be grown in its stead. The last-named variety does well here; propagated late and planted where it can get the most sun it is a success. Joost will be grown in place of Scott. Lady Van Horn will be more extensively planted next season. Victor is a standard and Jubilee the best scarlet. Roses look well, Wootton and Meteor being of very fine color. Success is had with Begonia Gloire de Lorraine, and Spring stock for bedding plants is finer than usual. A good batch of geraniums is a profitable corner in the market this season.

HAMILTON, ONT.—E. G. Brown has a mixed house of Wootton, Bride and Bridesmaid that will compare favorably with the finest in the Dominion. I understand both crops of roses and carnations Gov. Griggs, Jubilee and Flora Hill have been fine all Winter; the demand has been very satisfactory. They grow a big lot of geranium Hermoine. It is a grand variety, both for design work and as a pot plant.

DETROIT, MICH.—Philip Breitmeyer reports being unusually busy these days. At time of my visit he was engaged upon one of the best wedding events of the season. The house was transformed into a perfect floral bower, the effect being white and pink.

Robert Flowerday, of the Detroit Floral Co., has taken a hurried trip across the pond to settle up an estate left by his respected father, recently deceased.

Harry Baisley has been reappointed upon the Park Commission. The local press gives him a great send off.

George Rackham returned from the Buffalo Convention in good shape, and tells those who desire to know "all about it" to go and see for themselves.

Gus. H. Taepke was well pleased with the trip, and is now figuring how to get those longiflorums in for Easter. He has a sure thing in a house of hybrid roses, pot grown.

Asman & Dunn are beginning to feel the advantage of an up-to-date plant. The fire fiend came as a blessing in disguise just after the time of our very enjoyable visit to the convention.

George Leadley has plans recorded for a handsome four-story building upon the site of the store occupied by John F. Sullivan for so long and now taken by Mr. Leadley for a number of years. The plan includes a good-sized conservatory at the rear.

Mr. Sullivan is located near by and reports a very good season.

Bruno Schroeter has had a big run on funeral work.

S. Taplin has had no trouble in keeping up steam by the aid of his all-consuming boilers. The severest weather has no terrors for him.

Gus Knoch is increasing his supply of bedding plants for cemetery trade, and reducing fancy stock.

Chas. Warneke says he never met a jollier crowd than he became acquainted with at Harmonie Hall. He learned much, and will be one of the sure delegates at New York in August.

DUBUQUE, IA.—The Harkett Floral Co. has invested in most of the newer kinds of carnations, having had excellent returns from such as Crane, Mary Wood and Joost. The demand for bedding stock promises to be as good as usual, and a large stock is being prepared to meet it.

MADISON, WIS.—Victor Wagman planted out on a bench the bulk of his 5x7 Harrisii and made a total failure. He attributes the loss to the bad bulbs, as previous to the last two years he had splendid success.

Fred. Rentschler will have a batch of pot-grown lilies for Easter. He grows a general assortment for retail trade and ships considerable to surrounding towns.

ROCKFORD, ILLS.—H. W. Burkbee reports a bright outlook for Spring, both in seed and plant business. W. M.

NEW CHRYSANTHEMUMS FOR 1900

BONITA Beautiful deep, golden orange; a bold, handsome flower, with good stem and foliage. 50c. each; $4.50 per doz.; $30.00 per 100.

The Monmouth County Horticultural Society held its regular semi-monthly meeting, March 16, President H. A Kettel in the chair. The ball committee reported all bills paid and a surplus of over $40 on hand. Short speeches were made by Professor C. H. Walling, J. S. Barkuloo, H. A. Kettel and others. J. S. Barkuloo was appointed a committee of one to take steps looking to the incorporation of the society. The secretary was instructed to notify every member to be present at the next meeting, April 6, as some very important business will then be transacted. B.

Madison, N. J.

Morris County Gardeners and Florists met in Masonic Hall on the 14th inst., President Duckham in the chair. Charles Jones, of Convent, was elected to membership. The secretary announced receipt of a check for $15 from the F. R. Pierson Co., Tarrytown, in accordance with the terms of their offer of special prizes for chrysanthemum Col. Appleton. The president asked all members who grew chrysanthemums to be sure and procure this fine new variety so as to insure a spirited competition for the prizes next November.

A. Herrington had been announced to speak on "Giants I saw in Buffalo," and to substantiate the announcement he came prepared to show members that there were "giants" in these days—thanks to the kindness of C. W. Ward and the Dailledouze Brothers, specimen blooms of novelties, seedlings, including No. 666, No. 3 and others, as well as blooms of new and old standard varieties were on exhibition, and aptly served to illustrate the speaker's remarks, which were all along the lines of recent progress and marked high development. He thought the American Carnation Society had been a great factor for good, and judging from the earnestness of purpose that characterized the recent Buffalo meeting the good work would still go on, and a decade hence we should be commenting on the passing of the very varieties we were lauding to-day.

An interesting conversation followed which brought out the strange fact that Madison, with all its many establishments, does not contain a single grower of carnations beyond one or two florists who grow a few for their local trade.

MADISONIAN.

Toronto.

Business Rather Slow.

General business during the past week was rather slow. There was, however, considerable funeral work, and Saturday, St. Patrick's Day, was a regular boom for the retail trade. The order of Queen Victoria, that her Irish soldiers should wear a bunch of shamrock on that day, caused a big boom all over the Empire for the little green leaves, and the call for them in Toronto was enormous. Little bunches for buttonholes brought, in hundreds of cases, 15c. each, and good 5-inch pot plants all prices, from 3½c. to $1.50 each. The King street stores appeared to have the best of the trade; but all had a share. The growers generally did not benefit much, for the wholesale prices were low. I heard of one lot of plants, in 3½-inch pots, being bought for 40c. per dozen, and sold at 75c. each—a profit that would satisfy the most grasping surely. The day was very cold, or I expect the demand would have been even greater. All sorts of trifoliate plants were sold for shamrock, and all alike went, for no one can tell which is the real thing. Most of the boys had several varieties in stock, so that all tastes could be suited. A small dark-leaved clover, two varieties of trefoil, and several others were all in good demand.

The stock coming in now is generally of No. 1 quality, the poorer grade finding its way to the department stores.

The cold weather of the last two weeks has made plant sales slow, but I fancy a few warm days will alter this condition, and the demand will be lively.

The floral committee of the Industrial Exhibition met last week and revised the prize list for this year. The principal change made from last year's list is, that the 50 specimen foliage plants are to be shown in pots that are not to exceed 16 inches, and the insertion of a section for three specimen palms.

W. Houston, the Government gardener, is planning to have a fine lily pond in front of the Parliament Buildings this year. He is very successful with aquatics, so there is no doubt these will be a great attraction in the park this Summer.

At John H. Dunlop's.

A visit to John H. Dunlop's fine place last week showed nearly everything in fine order. The carnations, of which there are several houses, are in splendid condition—all clean and healthy. Mrs. Bradt, as grown here, is certainly one of the finest carnations up to date. Maceo and Gomez were also doing very well, while Crane was quite up to the standard seen anywhere, and that is saying much. The young stock, both in the cutting bed and in flats, is in spleadid order, one house of plants in flats being, I think, as good as they can be. The roses are all looking well and the young stock is in fine order. There are large batches of Easter lilies coming on just right, and some good lilacs and azaleas, with valley and tulips, are here in unlimited quantities. T. M.

Cincinnati.

Business Still Good.

Business still continues good, with fair stock to meet the demand, although there is no surplus, excepting in violets, which are much more abundant than required. Prices remain about the same as former quotations. Millinery openings are now using some flowers, but funeral work is the principal business with the stores. The Lenten season has made very little difference so far.

The News.

Articles of incorporation have been signed by Albert Sunderbruch, W. A. Mann, Frank Ball, Gus. Myers and Ben George, for the purpose of building six large greenhouses. Capital stock $10,000, $100 a share It is understood that Albert Sunderbruch will be president of the company and W. A. Mann secretary and treasurer. Frank Ball will have charge of the wholesale end of the business.

The writer received a telegram from LaGrange, Ill., Monday morning, stating that John J. Ring, florist, of this city, had been killed by a passing train. Some years ago Ring's father, who was in the employ of McFadden, was killed in a similar manner while crossing railroad tracks in this city. A brother and sister still reside in Cincinnati.

Mr. and Mrs. E. G. Hill, of Richmond, Ind., and Mr. and Mrs. Robert Craig, of Philadelphia, were callers Friday. Lloyd Vaughan, of Chicago, was in the city Saturday. Mr. Vaughan reports business excellent, and says that florists who are growing lilies should buy 5 to 7 Harrisii for forcing at Christmas and longiflorum for Easter. In this way the disease will be side-tracked and the flowers will then net the grower a good profit.

Invitations have been received from Mr. and Mrs. J. A. Peterson as follows:

"'The House in the Woods,' March 21, 1900, from 2 to 5 p. m."

E. G. GILLETT.

Ithaca, N. Y.

Trade has held remarkably good all through the Winter. There has been a very noticeable increase in the demand, both for cut flowers and flowering plants. The prospects for a very heavy Easter trade are very bright. The Bool Floral Co. will have a very large stock of everything. Primula obconica, as done here, is simply grand, and a good demand is found for them. A pink seedling is a very fine thing and will, I feel sure, prove a good seller. Fully 25 per cent. of their Harrisii has been lost through disease. The whole place is one of the best equipped with water that I have ever seen, and the plan of having a hose attached to each faucet is worthy of imitation by every florist. It has proved a very good paying investment, and the hose lasts for years, as the dragging of hose from house to house soon wears it out.

Foote is building a greenhouse on State street, to be used as a store and show house, and will occupy it about Easter.

Very cold weather prevails just now, the glass on the 11th registering zero.

H. Y.

Buffalo.

Market Report.

Trade has assumed a seasonable, nevertheless a noticeable, dullness, with news items scarce. Flowers are naturally plentiful on all sides, and low-price-offering placards are freely observable in some windows on divers days.

The downtown floral "Rialto" knows the Wm. Scott flower store no longer, that branch being removed to, and, as it were, merged into his Cold Spring business. The locality of this place, in its steadily increasing resident population, must afford him ample field for operations.

Philip Scott bids adieu to fill a manaaging position in the store of the Park Floral Co., of Denver, Col.

The oncoming of Easter is verified by the window showing at Rebstock's of a large genista plant or tree in full flower. It spreads 8 feet in diameter, fairly filling the large window space.

J. Austin Shaw was a visitor this week. VIDI.

Florists' Club Meeting.

The regular meeting, held March 16, was very well attended, President Hartshorne in the chair. W. F. Timme and Frank Fisher, of Joliet; Charles Hughes and Martin Magnuson were elected members. Several exhibits were on the tables, the most interesting being 11 pots of hyacinths in bloom, grown by C. J. Strombaek, of Lincoln Park, from bulbs furnished last Fall from Mr. Larabee's grounds at Puget Sound, Washington State; grower, Mr. Canfield. The varieties shown were Marie, King of the Blues, Gertrude, General Pelissier and Norma. They were stout, strong flowers, most of them having two open spikes, and several with three or four others showing. An example of one of the same varieties, imported, exhibited by A. McAdams, although from first-class bulbs, was inferior to the American-grown. B. D. Kapleyn, a bulb man from the other side, being present, was appointed on the committee on examination. He admitted he was surprised to see so fine a class of bulbs. On the question being asked as to the multiplicity of flowers, Mr. Kapleyn remarked that in his opinion the bulbs were one year too old and that experienced bulb growers were required to grow the bulbs to the best advantage. He said two kinds of soil were necessary—the first year a heavy soil, and the second, a lighter, sandy soil. The kinds shown were the easiest to grow, and he doubted if the same success would be obtained with some of the more important varieties. Andreas Simon being present told of the conditions as to soil, growth, etc., at the Sound. The club voted a certificate of merit for the exhibit.

From the Chicago Carnation Co. came four of their seedling carnations, No. 44, a fine-built scarlet, 3½ inches in diameter. It scored 86 points and received a certificate. No. 82, white ground, lightly striped red, scored 88; also certificated. No. 64, a quite conspicuous salmon red variegated, scored 70; Chicot, a light striped on white ground, scored 64 points.

Albert Fuchs sent two flowers of a deep pink sport of Daybreak.

John Reardon exhibited Western King chrysanthemum in a pot, having five open flowers and one bud, the blooms being of fair size, but short in stem.

Geo. T. King, of Nicholson's Dictionary of Gardening fame, was present and made a few remarks.

The subject selected for next meeting is "Plants and Flowers for Easter," George Asmus and J. T. Kidwell being requested to open the discussion.

Among the Growers.

Samuel J. Pearce will this year have a fine lot of lilies for Easter. A few Harrisii of the earlier crop are still flowering, but those for Easter are mostly longiflorum. The disease has not been prevalent with him. He also this year has a batch of Ramblers and hybrid roses that at present look promising. His bulb stock generally has returned a better average price this year than last, but he did not grow so many. A house of callas has paid well, and is still flowering.

August Juergens has not been so successful with his lilies as is usual with him. He grows a great many bulbs, including valley, and so arranges the crops as to have regular cuts all Winter through.

Round About.

O. W. Frese, who left the wholesale for the retail business, establishing the Bay State Floral Co. on State street, has returned to the wholesale branch as managing salesman for George Reinberg's city place, at 51 Wabash avenue. H. C. Frese, his brother, now owns and runs the retail store at 73 State street.

At 5:30 Monday morning fire broke out at Charles T. Niegliek's retail store; cause unknown. The damage done was not extensive. Insured for $1,000.

State of Trade.

Although a cold, wintry week the thermometer on the 15th reaching zero (very rare for these parts), stock generally has kept well cleared off at good prices; in fact, some of the dealers complain of too few Bride and Bridesmaid roses to supply the demand. Violet stock is abundant, and prices even for the best quality are very low. This week opens more favorably. Monday morning white carnations were much called for, and not in sufficient supply for the demand, hence prices again stiffened. Sweet peas are scarce and in demand.

Later, all kinds of carnations appear to be short, but white especially so.

Ess.

St. Louis.

Market News.

In the early part of the week it looked as if the long-looked for glut was about to arrive; stock came in in much greater quantities than common. A spell of low weather set in, but with quite a brisk demand the surplus was cleared out, the only stock in over-supply being Bridesmaid and Meteor roses. Beauty sells at 5c. to 35c. each. Carnations, supply rather short, go at 2c. to 4c. Carnations have sold remarkably well this Winter. Bulb stock, with Dutch hyacinths a little too plentiful, is worth 2c. to 3c. Harrisii lilies, few in the market, bring 10c. to 12½c.; valley, 3c.; violets, 30c. per 100. Large quantities of the latter are on the market, the crop from cold frames now being in. St. Patrick's Day the demand was excellent. The last of the week white stock was quite scarce.

The street fakirs, of which there have been very few here this Winter, are asking 5c. each for very indifferent-looking carnations.

After several days of almost hot weather, which made everybody think Spring was here for good, it suddenly changed around to cold, the thermometer going as low as 10 degrees. Indications are for a very good trade in nursery lines—we think better than for some years past.

Notes.

S. S. Skidelsky is in town and reports business very good, especially in sales for The Marquis carnation, which he is handling.

The millinery stores are all having their Spring openings this week, which help out those who cater to that trade.

J. J. Beneke, treasurer of the euchre party, requests those having tickets to make their returns to him at an early date.

H. G. Ude, of Kirkwood, reports his violets through blooming, and while his carnations have done well, violets have paid him best. Mr. Ude makes a specialty of these two things, and his products are among the best that come to this market.

C. C. S.

Germantown (Pa.) florists and others in that district have recently been victimized by bogus-check swindlers.

FLORISTS' MANUAL

BY WM. SCOTT.

IT is a whole library for commercial florists in one volume, containing 200 comprehensive articles on important trade plants and subjects, illustrated by 224 handsome half tone engravings, the articles arranged alphabetically, encyclopædia style. It is a complete Reference Book for Commercial Florists, written by a thoroughly practical man who is in daily touch with every department of the business.

Price, $5.00, by prepaid express or mail, to any point in the U.S. or Canada.

New Orleans, La.

The general depression in business during Lent is noticeable. We are right into Spring and not so much planting is going on as usual. We have had a fair, open Winter, with just enough frost to keep things back. Fruit will be plentiful this year. Spring plants are in full bloom; and a few weeks from now we will bed out crotons, caladiums, etc. This Spring has been dry up to date.

Our Mardi Gras lasted one week this year. Most of our florists report that trade was only fair. We had thousands of visitors, but few of them spent much money in flowers; at the same time there must have been a big lot of flowers shipped here.

Our State Fair promises to be a success, most of our florists will take part in it. Liberal prizes are offered. Any one having anything to introduce in the South should take this opportunity of doing it. All plants and flowers will be looked after by the committee in charge. We are to have another grand floral parade this year at the fair; artificial flowers will be used.

J. B. Heiss, of Dayton, Ohio, took in Mardi Gras and was very pleased with his first visit. He stayed here two weeks and took many orders. He said plants ought to be shipped from the South to the North, instead of vice versa.

H. P.

St. Paul.

Trade News.

The Winter, which was very mild at the beginning, seems long drawn out. Jack Frost has been very much in evidence of late—16 below zero, with a strong northwest wind, being the record on Friday night, March 16.

Trade has been very good since New Year's, though the lack of snow and its accompanying enjoyments seem to have deprived society of much of its usual life and the florists of some possible trade.

Flowers have been of fair quality and in quantity nearly equal to demands. Gradually the growers are beginning to raise what the trade demands, though there is still a shortage of good roses, especially Beauty, and of carnations. While there has been a fair supply of Romans, Paper Whites, daffodils and valley, but very few Dutch hyacinths and tulips have been forced this season. The tendency is to do away entirely with Dutch bulbs.

Easter stock is looking fine, and will be abundant for all demands. Coming late this year gives stock ample time to develop, and delayed Harrisii should be in good shape.

Considerable building has already been projected for the coming Summer, the high price and scarcity of glass deterring many from building who otherwise would.

There is a great abundance of violets now on the market, and prices have dropped correspondingly low; 30c. per 100 has been the figure in large lots.

The annual Spring-time flood of travelers has arrived, bringing the following gentlemen and others whom we do not now recall: Mr. Scott, with J. C. Vaughan; Mr. Schucht, representing C. C. Pollworth; Walter Mott, Mr. Goemans, of Ghent; Jos. Rolker, A. L. Vaughan, et. al.

Jottings Here and There.

The Twin City florists gave a very enjoyable hop and entertainment in this city a few weeks since. Such gatherings are conducive to good feeling and should be held much more frequently.

Our local Florist Society seems nearly dead; more's the pity.

Several of our progressive growers are purchasing new carnations and Liberty rose for next year's blooming. Frank Berry, of Stillwater, has been sending in some of the finest Jubilee ever seen in this section, with stems 30 to 36 inches long, and blooms 2½ to 3 inches in diameter, of a clear, scarlet color. When such fine flowers can be grown it is almost needless to look for any better. In the new varieties, Crane will be planted more extensively than others, while Maceo, White Cloud, Crocker, Olympia and Marquis will also be given a trial.

Harrisii lilies are freer from disease than in many years past.

Aphis Punk has been used by some of the growers with very gratifying results, the only objection to it being its cost.

Commercial Plants

THEIR PROPAGATION AND CULTURE.

BY GEORGE W. OLIVER, PROPAGATOR TO THE U. S. BOTANIC GARDEN, WASHINGTON, D. C. AND LATE OF THE ROYAL BOTANIC GARDEN, EDINBURGH.

A working Hand Book of Every-day Practice for the Florist or Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experiences of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include **Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines,** and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is to be found in much more pretentious works costing ten and twenty times as much money. Strongly bound to stand rough handling and plenty of it. **Price, $1.00 by mail, postpaid.**

N. B.—As we expect a large sale for this valuable book, we would take it as a favor to have your order now, and you can remit when notified that the book is ready.

ELECTRIC FERTILIZER

This product is a complete fertilizer for all Greenhouse Plants, Fruits, Vines, Flowers and Farm Plants. Ten days after use it will show its beneficial nourishing action on the plants, and it contains ingredients which will continue to benefit the plants for a whole year.
PRICE, $38.00 per ton. Single Bags of 167 lbs., $3.50.
The results obtained from the use of Electric Fertilizer on both flower and vegetable plants surpassed by far my expectations. After a thorough trial I sincerely recommend it to all Florists, Gardeners and Farmers

Mention the Florists' Exchange when writing.

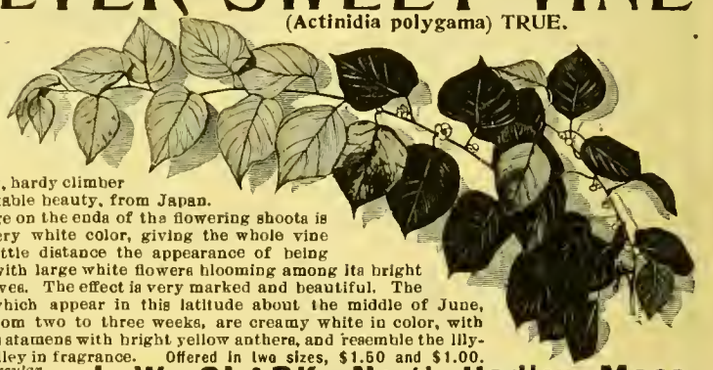
SILVER-SWEET VINE
(Actinidia polygama) TRUE.



A new, hardy climber of remarkable beauty, from Japan. The foliage on the ends of the flowering shoots is of a silvery white color, giving the whole vine from a little distance the appearance of being covered with large white flowers blooming among its bright green leaves. The effect is very marked and beautiful. The flowers, which appear in this latitude about the middle of June, lasting from two to three weeks, are creamy white in color, with numerous stamens with bright yellow anthers, and resemble the lily-of-the-valley in fragrance. Offered in two sizes, $1.50 and $1.00.

Send for Circular. Discount to the trade. **J. W. CLARK, North Hadley, Mass.**

Mention the Florists' Exchange when writing.

BEFORE PLACING ORDERS **SECURE OUR PRICES** ON ALL LINES OF STOCK.

THE SUGAR MAPLE

Is a beautiful tree at all seasons, and no better variety can be used for **Street, Park,** or **Lawn Planting,** as its growth is rapid and straight, its form symmetrical, and it does not have the objectionable density of foliage possessed by the Norway Maples. For this reason it is well adapted for planting near buildings, as it does not obstruct light or air, and being **deep rooted the grass will grow up to its very trunk, which is a very strong point in its favor.** No tree has more gorgeous Autumn coloring, as it varies in all shades of yellow, orange and scarlet until the leaves finally fall. It was a sagacious popular instinct which selected this as one of our best trees for ornamental planting, and in some of the old places on the Hudson River long avenues were planted with it three quarters of a century ago, and they are now worth a long journey to see. We have an extra large stock of magnificent trees, many times transplanted, which we know offer at the following low prices:

		10	100	1000
10 to 12 ft. in height,	1¼ to 1½ inches in diameter	$5.00	$33.50	$290.00
12 to 14 ft. "	1½ to 1¾ " "	6.00	35.00	300.00
14 to 15 ft. "	1¾ to 2 " "	10.00	75.00	500.00

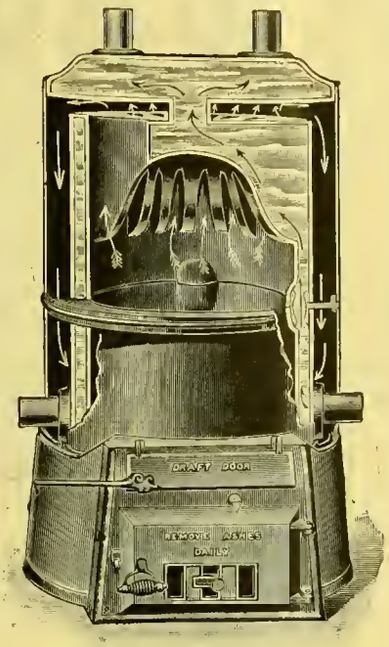
YOU CAN'T TELL



how much money is lost by using a poor boiler until you compare its work with a good one. A poor boiler wastes fuel and time, and is the cause of a large decrease in the profits of a florist's business.

POOR BOILERS

are innumerable, while good ones are scarce. That our boilers are good is proved by the testimoney of those who have used them and compared them with others. They are modern, up-to-date, and with little fuel produce great heat. They are made in all sizes and many styles, but they are

ALL GOOD.

We favor florists to this extent, that we know one boiler set in a town where none are in use will sell many others, and to introduce this first boiler we will make a special allowance of

25 PER CENT. on the net price. The

FLORISTS PROFIT by this,

but we profit also by using no more advertising in that town. The boiler advertises itself and we sell many others.

Our catalogue "A" explains everything and tells by original letters what purchasers have found our boilers capable of doing. The amount saved will pay for more than one year's fuel.

HEADQUARTERS FOR EASTER PLANTS

Blooming Easter week!
Time is money! Lose no time! Order your supply now!

I have an immense stock of the choicest in the market. You would be astonished if you could have a peep into seven large greenhouses which are crammed full, and devoted to the cultivation of Easter plants alone, and therefore I will be prepared to fill all orders, if ordered in time, as far as the supply will reach.

AZALEA INDICA I am a very large importer of this choice Easter plant. I have erected two new houses, 20x100, for the cultivation of them alone. These Azaleas were selected by myself last fall, on my trip to Ghent (Belgium), and as I am Agent for a large concern in Belgium, it gives you a chance to buy your goods first hand and not through middleman.

I can offer you plants in bloom or in buds, blooming Easter week. **6 inch pots, 60c., 75c., and some for $1.00.** Most of them are Mme. Vander Cruysen, and some other choice varieties, which will be selected by myself.

SPIRÆA, Compacta and Floribunda, fine bushy plants, my own importation, a perfect gem, 6 inch pots, **$3.00 per doz.**
Specimen Plants, $4.00 per doz.
HYDRANGEAS (Pink), 6 inch pots, bushy plants, **$3.00 to $5.00 per doz.**
CINERARIA Hybrida, choice colors, 6 inch pots, **$2.50 to $3.00 per doz.** In bloom now or at Easter. I have a house full of them.
BEGONIAS, President Carnot, 6 inch pots, **$3.00 per doz.**
Vernons, 4 inch pots, **$1.20 per doz.**
DAISIES (White), **Marguerite,** 5 inch pots, **$2.00 per doz.**
4 inch pots, **$1.00 per doz.**
CYPERUS (Umbrella Plants), very fine bushy plants, 4 inch pots, **$1 per doz.**

HYACINTHS, 4 inch pots, best varieties (of my own importation), **$10.00 per 100.**
TOURNESOL TULIPS, three in a pot (double red and yellow striped), beautiful, sells at first sight, 4 inch pots, **$1.50 per dozen pots.**
DAFFODILS, Von Sion, three in 5 inch pot, **$1.50 per dozen pots.**
LILIUM HARRISII and LONGIFLORUM, 6 inch pots, nice foliage (bulbs 7 to 9), 5 to 10 buds to a plant, from 1½ to 2½ feet high, at the rate of **10c. per bud.**
No Lilies sold by themselves; other Plants must accompany them.
CHINESE PRIMROSES, 4 inch pots, **$1.00 per doz.**

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere. Only 25 minutes' ride from City Hall.

Take 13th Street Car to Rising Sun Avenue and walk two squares east; also Germantown Car at 8th and Market Streets (North) to Ontario Street and walk one square east.

Cash with order, please. Money can be sent safe by Express, Postal Money Order, Registered Letter, or Drafts on Philadelphia Banks. Goods shipped at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Rising Sun, Philadelphia, Pa.
IMPORTER AND WHOLESALE GROWER OF POT PLANTS.

PLEASE NOTICE TESTIMONIAL BELOW:

"Mr. G. Aschmann has very fine healthy Azaleas, Hydrangeas, Easter Lilies, Spiræas, Tulips, Hyacinths and other plants to bloom and bud. We can very highly recommend our customers to Mr. Aschmann for fair, reliable, business treatment."
Philadelphia, March 6, 1900. HENRY F. MICHELL, 1018 Market Street.

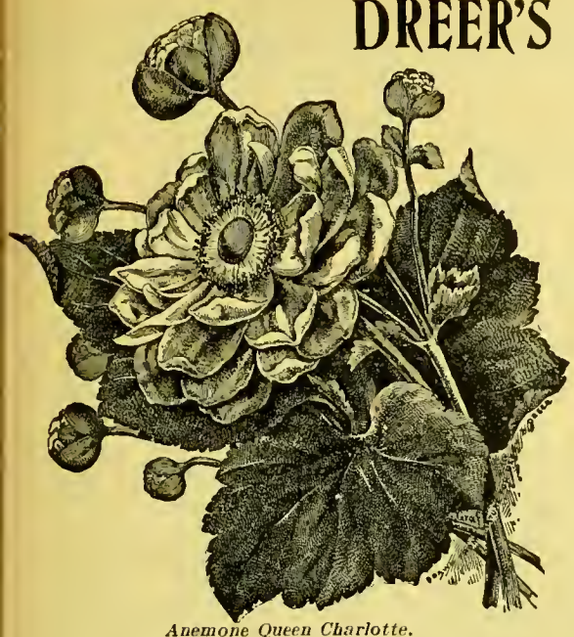
DREER'S SEASONABLE OFFER OF HARDY PERENNIALS



Anemone Queen Charlotte.

THE increased demand for this class of plants, not only by the amateur for the planting of private grounds but also for florists' use for cutting during the Summer and Fall months, has induced us to greatly increase our plantings of this stock. Our grounds at Riverton, N. J., being especially suited for the growing and quick development of most perennial plants, we are in a position to supply first-class stock at low prices.

BEGONIA—"GLOIRE DE LORRAINE"

We are now booking orders for May 1st delivery for FINE STRONG PLANTS from 2 inch pots, which can be grown into Handsome Specimens (as shown in cut), in 6 inch pots, in full bloom for CHRISTMAS SALES.

BEGONIA, "GLOIRE DE LORRAINE."
Specimen Christmas Plant, from which our stock is propagated.

Price, $2.50 per doz.; $17.50 per 100

THIS is one of the most striking plants that has been introduced for many years. The habit of the plant is compact and dwarf, making handsome specimens 14 inches in height and breadth. Its chief attraction is its extreme floriferousness, the entire upper part of the plant being literally covered with its brilliant clear pink flowers, to such an extent that the foliage is usually hidden. It has been grown extensively around Boston, New York and Philadelphia, and brought in in splendid shape for Christmas sales, and the entire stock grown was sold at prices ranging from $2.50 to $4.00 each, wholesale, the same plants retailing at from $5.00 to $10.00 each. It promises to be more extensively grown than ever for that purpose and is undoubtedly one of the most useful Christmas plants now in existence. Owing to the strong demand our April stock is now sold; orders must be sent in early in order to secure stock for May delivery.

We have one of the finest and largest stocks of this **RARE BEGONIA,** and will endeavor to fill all orders in rotation, as received.

HEACOCK'S PALMS

Awarded Certificate of Merit, Penna. Horticultural Exhibition at Phila., March 21st, 1900, for Choice Areca Lutescens, Etc., Etc.

Choice ARECA LUTESCENS, KENTIA BELMOREANA, and LATANIA BORBONICA.

All perfect and symmetrical plants, alike on all sides, with every leaf perfect from the pot up. Grown especially for the decorator. They are as good, if not better, than any I have offered before. Prices are as follows:

ARECA LUTESCENS.

	Each
9 inch pots, very bushy, 5 feet high	$5 00
12 inch pots, very bushy, 6 feet high	$10.00 to 15 00
14 inch pots, very bushy, 6 to 7 feet high	20 00
15 inch pots, very bushy, 7 to 8 feet high	25 00

KENTIA BELMOREANA.

	Per Doz.	Per 100
3 inch pots, 4 to 5 leaves, 10 to 12 inches high	$3 00	$25 00
4 inch pots, 5 to 6 leaves, 15 to 18 inches high	6 00	50 00
6 inch pots, 6 leaves, 20 to 24 inches high	18 00	150 00

LATANIA BORBONICA.

	Each
8 inch pots, 8 leaves, 24 inches high by 36 inches wide	$1 50
10 inch pots, 9 to 10 leaves, 30 to 36 inches high by 42 inches wide	4 00

My packing is done in the best possible manner, and shipping facilities for both freight and express are unsurpassed. **A TRIAL ORDER IS SOLICITED.**

JOSEPH HEACOCK, Mention this paper. **Wyncote, Pa.**

Hardy ferns for cultivation. Try them in your planting, they will thrive and increase in size and beauty where other plants fail. Catalogue of these and other herbaceous perennials.

Plants. Cut Flowers.

SAMUEL S. PENNOCK,

We are offering a Very Choice Stock of

Plants for Easter Delivery,

Among them the Following:

AZALEAS, 12 in., 15 in., 18 in., 24 in. heads, 50c., 75c., $1.00, $2.00, $2.50.
HYDRANGEAS, 5 inch and 6 inch pots, 75c., $1.00, $1.50.
KENTIAS, 5 in. and 6 in., 50c., 75c., $1.00.
GENISTAS, 5 in., 75c.
SPIRÆA, $4.00 per doz.

Crimson Ramblers,
(Fine Specimen Plants.)
6 in. and 7 in. pots, $2.00, $3.00, $4.00, $5.00.

Wholesale Florist

AMERICAN BEAUTY ROSES
OUR SPECIALTY.

We will have a large stock in the best grades.

Also a full line of all other Roses, including the new rose, **LIBERTY.**

Wild Smilax, Galax Leaves, Fancy and Common Ferns, Etc., In Quantity.

Easter Lilies,
PLANTS AND CUT.
In Large Quantity.

Also a Full Assortment of Bulbous Stock,

Valley, Narcissus, Tulips, Etc.

All Other Flowers in Equal Proportion.

OUR SHIPPING FACILITIES ARE UNSURPASSED.

1612=14=16=18 Ludlow Street, Bet. Market and Chestnut Sts., PHILADELPHIA.

Open 6.30 A. M. to 11 P. M.

ALL PACKING CAREFULLY DONE.

Bermuda and its Floral Products.

BY M. G. KAINS.

After a two days' generally rough passage by steamer to the southwest of New York, the green hills of Bermuda, dotted with snow white cottages and rain sheds, rise with the dawn out of the sea. About noon the vessel arrives at the wharf and the sea-sick voyager looks forward to a meal.

He soon discovers that, though in a strange land, he is among old friends, for where can the florist not find acquaintances? Here is a lantana growing by the roadside. Another, hundreds of them! That old wall is crested with bryophyllum in full blossom. Here is a hedge of oleander, single, double, red, pink, white, cream and deep crimson. Beyond this he sees phœnix, cocos, latania, kentia, cycas, banana, crinum and amaryllis growing in a garden surrounded by hedges of acalypha and hibiscus—the latter a blaze of scarlet glory. The house is half concealed, but through the openings he sees a wide veranda draped with the purple velvet of bougainvillea, pilea, pelargoniums, coleus—a whole florist's establishment has escaped from the bitter North and grown ten times more beautiful in this "Land of the Lily and the Rose."

Since Bermuda furnishes nearly all our Easter lilies, the florist naturally turns his steps toward the fields. He has not far to go. Ten minutes walk from the wharf will suffice. He passes very few pieces of available ground that are without a crop; if not lilies, then onions, potatoes, bananas, grass—something. If he happens to be there about Easter the fields will look like that shown in Fig. 2, a sea of blossom. And nearly always, as in this picture, he may obtain a glimpse of the green Atlantic glistening in the sunshine.

Our florist enters into conversation with the grower, who, like all his neighbors, is glad to talk with any interested listener. He is told that shipment of lily buds is growing in disfavor among the growers, and that each year sees a decline in consignments. The risk is too great and the injury to the plants is coming to be better understood. He is also pleased to hear that the efforts of Mr. G. A. Bishop, superintendent of the public gardens, are being appreciated by the people in general, farmers as well as lily growers. Mr. Bishop's suggestions, at first tried doubtingly and experimentally, have more frequently resulted in improved crops than otherwise. The result is more consultation and less adverse criticism than when he first arrived to preach the gospel of scientific husbandry.

The improvement in the lily crop has been most marked. More careful selection of stock has been practiced; the sets are now rather generally treated with one of several mixtures to kill mites and diseases; the problems of fertilizers and humus supply are more carefully considered; the plants are now being sprayed with Bordeaux mixture, to prevent disease rather than being dribbled upon after the diseases have gained a sure footing, and are therefore beyond the reach of fungicides; and cultivation itself is receiving closer attention. All this is very satisfactory.

The informant is curious to know the florist's opinion as to the growing of lilies in the United States. He declares it will be impossible; that is an article of his creed. No sun, no soil, no seasons upon the mainland to compare with Burmudian ditto. He feels secure. Our florist delivers himself somewhat as follows: Whether Bermuda will always continue to supply the American markets cannot be predicted. There are still wonderful improvements possible in the lily, improvements that would mean much to the florist consumers. In the one matter of time necessary to produce blossoms from the bulbs as received there is ample opportunity for scientific selection. The most casual glance at the fields or the benches of lilies in a greenhouse will show that some plants blossom several weeks before their neighbors. Selection of these toward the establishment of a variety that could be counted upon to come off the benches within a few days of one another, like a lettuce crop, seems the most promising opening for improvement. At the same time care exercised in breeding from only the most robust, healthy stock would work greatly to the advantage, not only of the florist but of the grower. Many of the plants are less subject to disease than others, and advantage should be taken of this to produce disease-resisting strains. Had selection toward these ends been practiced by the growers they would not now be asking questions as to the possible success of experiments in growing the lily in the United States; the florists would not have had to make complaints of poor stock and the growers would have enlarged rather than contracted their market. As to the United States developing this industry within its own borders, such a thing, if possible, must be expected, and for this reason the Bermudian growers, the best of them, have been roused through the fear of such an event, to an appreciation of their situation, and, as has been said, are improving their methods.

Up to the present time attempts to grow this bulb in America have not been very successful, probably on account of lack of cultural knowledge on the part of the experimenters, unsuitableness of soil or climate and such like. But if the Easter lily can be grown in this country at a lower cost than in Bermuda or of such superior quality as to take precedence of Bermudian bulbs it will, like the tuberose and gladiolus, find a commercial home and the present growers will lose their market. But should the experiments now being conducted in the Atlantic and Gulf States by the Department of Agriculture prove a failure, the outlay will not be a loss since the mere knowledge that such trials are being made have had their effect already upon the present growers and our florists even now obtain better stock. Greater improvement may be expected.

The methods of growing these bulbs have already been discussed at length in the FLORISTS' EXCHANGE, and improvements in cultural practices do not seem to deserve a more extended notice than has been given above. It will interest the reader, however, to see a picture of the planters at work. Fig. 1 not only shows this but gives a very fair idea of the nature of the country. A piece of land as large as an acre that does not tilt in some direction is hard to find, and cultivated fields as large as five acres are very rare. Some of the lily "plantations" are so small that an active man could jump across them in any direction, crop and all. Cultural operations are all manual. Plows are light, one-horse and reversible harrows and cultivators almost unknown. Lilies and onions are grown in beds about four feet wide and weeded with finger and thumb.

When one considers the small size of the fields, learns that arable land seldom rents for less than $50 an acre, and that rock is very close to the surface in many places, he understands why hand labor is so generally practiced. Every inch of ground must be made to produce its crop, and horse cultivation would mean needless loss of space around and through the field. Hand labor admits of very close planting.

The photo also shows a common method of fencing. All fences in Bermuda are stone. In this case the stones are merely piled up and given no further attention. Being very soft they are easily acted upon by rain and soon dwindle away. At the left is seen a small row of shrubs, where a wall has almost disappeared. In order to preserve these stone walls, the best are made of rectangular blocks and whitewashed twice a year like the houses, which, roofs and all, are of stone. Sometimes a man will excavate a cellar, sawing out the stone, using the sawdust for sand, the broken stone to make lime, and with the perfect blocks make his walls and roof—a house built out of a cellar, the only articles purchased being the hardware and the wooden parts.

Another thing exhibited by both the photographs is the nature of the tree growth, a gnarly juniper, commonly called cedar, grows everywhere, serving the necessary purpose of windbreaks but affording very poor shade. Indeed, some Bermudians claim that the air is hotter under a "cedar" than out in the sun.

Besides the lily, Bermuda sends us quantities of freesias. These are grown to a much less extent, of course, than lilies, but are none the less interesting on that account. They grow readily from seed and small bulbs, one year being sufficient to produce a marketable crop. They are very prolific, in fact so much so that when a grower propagates from bulblets he may often produce two or three times as much stock as will plant the area they have grown upon, and these in addition to a heavy crop of marketable bulbs of first quality. The florist that grows only a few flats of freesias can form but a faint idea of the appearance and the fragrance of these flowers from a field in full blossom. The freesia is unlike the lily in two ways: its odor is always pleasing, never overpowering, and it perfumes the air for rods around the patch. The lily does not give its fragrance to the breeze. Standing upon the leeward side of a blossoming lily field it is possible to be unaware of its presence by any information that the nose might give. The air is not perfumed to a noticeable degree.

No other crop that the florist is specially interested in is now exported from the islands. At one time there was a fairly good trade in cycas leaves and plants, the former particularly. This is now practically extinct, since in the West Indian islands the plants grow more rapidly and can be placed upon our markets at lower prices. Roses of all kinds grow out-of-doors and during the tourist season may be bought for 20c. to 25c. a dozen. At other times they cost much less. Being grown in the open air they are generally more lasting and more fragrant than ours grown under glass.

Bryophyllum and cacti grow upon every old wall and when in flower are very beautiful. Various species of agave may be seen upon all sides, many in blossom. Poinsettias are in every garden, accentuating with their scarlet bracts the beauties of the scene. They are not, however, to be compared with plants grown in the greenhouse. They are large, almost leafless shrubs, and out of several thousand it would be impossible to select more than one or two tops that would stand comparison with average hothouse specimens. Acalypha and hibiscus are marvels. In one instance the former produced from rooted cuttings a hedge nearly 4 feet high in 13 months. Opposite this was a hedge of hibiscus about 12 feet high that blooms profusely during the whole Winter.

Fig. 1. Lily Planting in Bermuda—Rolling nature of the Land—Small size of Fields—Poorest method of Fencing—Utility of Woods as Shelters—Everything Hand Labor.

With such material the Bermudians surround their homes, a good idea of which may be obtained from the accompanying photo. Fig. 3. Here are several of the subjects mentioned above. By the gate is a pomegranate which produces its waxy pink blossoms in profusion, and were it not for the attentions of rats, would yield plenty of fruit. Upon the terrace is a growth of sansseveria and geranium; below are bedding plants in variety and abandonment.

Yes, Bermuda is a florist's paradise, full of beautiful flowers and plants; peaceful, restful, cheerful. The only drawbacks are the getting there and the coming away. The passage is one of the roughest on the globe, and passengers the least subject to seasickness are sure to have a visitation. But the visit more than compensates; climate, air, surroundings, people conspire to please. M. G. KAINS.

The Making of a Cyclopedia.

It is a simpler matter to make a cyclopedia than to tell how it is done. To make it is only to work out detail after detail, taking up the tasks as they come, not caring nor daring to look at the work which piles mountain high farther down the alphabet.

The most difficult part of the making of a cyclopedia is to project it. Its scope and point of view must be determined before a stroke of actual work is done. This much done, the remainder is labor rather than difficulty. The lay-out of the enterprise cannot be made in a day. It is a matter of slow growth. One must have a mental picture of the entire field, and must calculate the resources.

So far as the Cyclopedia of American Horticulture is concerned, the editor has resolved and reviewed the enterprise for more than ten years. The first suggestion was a vague idea that a comprehensive work was needed. There were more than 500 special works on American horticulture. Some subjects were well worked; others were untouched. There was no means of determining the extent of our wealth in cultivated plants. There were no suggestions, even, as to what that wealth might be. No survey had been made. Only a full inventory can tell us whether we are rich or poor; it gives us a scale by which to measure progress.

The first tangible result of this desire for some comprehensive view of American horticulture was the publication of "Annals of Horticulture for 1889." Some years before this time, an endeavor had been made to interest a publisher in this project. This annual volume was designed to be "a witness of passing events and a record of progress." Five years these annual volumes were issued, the last one containing a summary sketch of horticulture at the World's Fair, at which was made the greatest single effort to display our horticultural achievements and possibilities. In these annual volumes all the new plants and tools and movements of the year were intended to be recorded. Special investigations were made for some of the volumes. The issue for 1889 contained a list of all the kitchen garden vegetables sold in North America in that year; that for 1891 contained a census of all the native plants which had been introduced into cultivation, showing that 2,416 species had become known to the horticulturist; that for 1892 made an annotated inventory of the varieties of apples which had been and were in cultivation in North America, showing that 878 varieties were actually offered for sale by American nurserymen in that year. But these volumes were isolated; they picked up the work piece by piece. An inventory of the whole field, critically and laboriously made, was needed before mere annals of yearly progress could mean much. We needed to know our status; thereafter chronicles would have a meaning.

From 1893, attention was given to the larger and comprehensive effort. A garden herbarium had to be made, for there was none in the country. The first plant had been put into this herbarium in 1889; it was a mere sprig of the greenhouse shrub, Boronia megastigma.

BERMUDA AND ITS FLORAL PRODUCTS.

Fig. 2. Lily Field in Bloom—Atlantic Ocean in background—Open, Straggling Nature of Tree Growth.

There are difficulties in making a garden herbarium; there are no professional collectors and one cannot buy specimens; many of the plants are too valuable to allow of specimens to be made. This herbarium now has over 12,000 specimens. Although small, nevertheless it has been invaluable. If it does not show nearly all the species, it shows the range of variation in some and thereby suggests what may take place in all.

Trial excursions were made into the evolution of various perplexed garden plants. Some of these essays have been published. The study of garden plants is a different subject from the study of wild plants. Mere descriptions are often of little value. The plant may have been bred away from the description within a decade. Specific descriptions of many of the common garden plants do not exist in books; the plants are not species in the book sense.

American horticultural books must be collected, for the comprehensive work, if it came, must contain American advice. One must know the range of New World experience and the occidental point of view. It has been the misfortune of many American writers that they have drawn too heavily from the experience of the Old World. This was necessary once, but now it is time to break away. Fifty authors have written on viticulture in America, yet scarcely one has caught the spirit of the American grape growing. Nearly twenty years of collecting has brought together the completest collection of American horticultural books.

The details entering into any comprehensive dictionary of horticulture are astonishing in number and variety. Consider some of the items: More than 10,000 species of plants in cultivation; almost every important species phenomenally variable, sometimes running into thousands of forms; every species requiring its own soil and treatment, and sometimes even minor varieties differing in these requirements; limitless differences in soils and climates in our great domain, every difference modifying the plants or their requirements; a different ideal in plant growing and plant breeding in the mind of every good plant grower; as many different kinds of experience as there are men; many of these men not facile with the pen, although full of wholesome fact and experience; the species described in books which deal with the four corners of the earth; very few botanists who have given attention to the domestic flora.

It was desired that the cyclopedia be new—brand new from start to finish. The cuts were to be first-hand; the cultural suggestions written directly for the occasion from American experience, and often presented from more than one point of view; few of the precedents of former cyclopedias to be followed; all matters to be worked up by experts and from sources as nearly as possible original. Of course, it has been impossible to reach the ideals. There are limitations of expense as well as of capability, for it is yet a question whether our new country is ready for such an expensive work.

That feature of the lay-out of the work which seems to the editor to be of primary importance is the fact that the plants which are described are those actually in commerce in North America. It is comparatively easy to make a cyclopedia from the literature of the subject, selecting those species which have been described in cyclopedic or accessible standard works. In our case, however, we want not only a cyclopedia, but an inventory of our horticultural wealth; we want to know where we stand, before matters have become still more confused by the progress of years. We must take account of stock. All the important catalogues of seedsmen, florists, nurserymen and plantsmen have been clipped; horticultural periodicals have been indexed; experts have furnished lists. A species name, which occurs in trade lists, must be run down and inserted. Not knowingly has any been omitted.

It is singularly gratifying that horticulturists and botanists have responded with the greatest goodwill to the repeated calls for help. Their inspiration has saved the book. The botany of large and difficult groups has been placed bodily in the hands of specialists. The number of contributors is large and grows with each volume. It is hoped that the names of the collaborators, as they finally appear in the fourth volume, will make a roster of the leading horticulturists and botanists of North America. The great number of signed articles gives the work a somewhat heterogeneous character, and this may be considered to be a disadvantage; but the editor has not accepted the current idea that a cyclopedia must necessarily be uniform and consistent in its treatment of various and unlike subjects. The articles have been edited rigidly, but it is hoped that they still have individuality.

If any reader has been patient enough to follow this sketch thus far, he will have sufficient fortitude to read some of the office details. The type matter is first seen in galleys, with the cuts separate. Six proofs are received by the editors, who send five of them to specialists on the various subjects. Every line in the work has been read in the proof by experts. It requires from a week to ten days to get back the proofs from the various readers. The matter is then made up into pages and read again. It is then cast and the final proofs are placed on file. The galley proofs are gone over several times by the editor aside from the regular reading, each time for a specific purpose; once for alphabetic order of the entries, once for spelling of names, once for accent marks, once for signatures to the articles, once for references to the cuts, once for legends to the cuts, once for general style. A clerk is employed to verify all references by hunting up the references themselves. It has been necessary to have some of these verifications made in Boston.

In the "make-up" it is an inviolable rule that wherever the book opens an engraving will be seen. Adherence to this rule has made trouble in some cases. In one instance it was necessary to have a new cut made after the forms were made up, and to renumber the legends of more than one hundred pictures.

The editorial force at Ithaca regularly consists of but two persons, the editor and the assistant editor, the latter devoting his entire time to the work. Aside from these persons, an expert in trees and shrubs, Alfred Rehder, with his headquarters at the Arnold Arboretum, near Boston, gives all his time to the cyclopedia. All manuscripts are inspected or edited by the editor, who also reads all proofs. The printer receives copy for one letter at a time. When the manuscript is all received from the various writers all cyclopedic works are consulted to see that no entries are omitted. The titles of all entries are copied when the manuscript goes to the printer, and the articles are checked off when they appear in galleys and pages. Failure to do this in the letter A resulted in the loss of the article "Aubrietia," and the plate had to be torn up in order to insert it.

In America there has been but one cyclopedic work on horticulture, Henderson's "Handbook of Plants," 1881; second edition, 1890. This is in one volume. The most popular similar work in the English language is Nicholson's "Illustrated Dictionary of Gardening," four volumes, 1884-1887. It is the work of the talented Curator of the Royal Botanic Gardens at Kew, England. Mottet's French edition of Nicholson, five volumes, 1892-1899, is the largest modern cyclopedia of horticulture, and the only one which excels in size the present American venture. Another popular English work in one volume is Wright & Dewar's revision of Johnson's Gardener's Dictionary, 1894. Another recent French work, also in one volume, is Bois' Dictionnaire d'Horticulture, 1893-1899, with colored pictures printed in the text. In German is Rumpler's Illustrirtes Gartenbau Lexikon, in one volume, with a recent new edition; also Siebert & Voss' Vilmorin's Blumengartneri, one volume of text and one of plates, 1896, the most critical of all similar works.

In judging the American work the reader must bear in mind that there is really no critical horticultural botanical writing in this country back of the present decade. The present cyclopedia reflects the imperfection of our literature as well as the shortcomings of the editor. The editors know its imperfections, however, and they will be its severest critics. They will naturally challenge every statement, and desire to verify it.—[PROF.] L. H. BAILEY in Book Reviews.

Retailers as Educators.

BY SAMUEL BATSON.

With nearly every store business window decorations are now a most important part. Even a passing glance in any city, small or large, shows the average storekeeper is alive to the necessity of making an attractive display, and it is clear to the most careless observer that much time and money are used for this purpose. Somehow, however, the retail flower store seems to be lacking in progress in this direction, and those windows that should be the most attractive are passed by without notice. With the material on hand the entire season through, there is no good reason why the retail florist's store should not always be decorated well enough to catch more than a passing glance; and the fact that the druggist or even shoe store can make a more effective display seems to cast a reflection on the decorative ability of the retailer of flowers—"or an object lesson on lost opportunity."

It will be said, perhaps, that the goods he handles are not staples, or an article in every-day use; but this is not so in the present times, when flowers are disposed of by the million every week in every large city. The call for them has become a certainty, and sales are almost as sure as those in any other line.

He may say they are too perishable to place on display in quantity. The fakir and his display, even if crude and startling in its combination, is sufficient reply to this, for he does it and thrives. Flowers were never better in quality or supply than at the present time, while as to cheapness they are as often sold below cost as above.

In order to do business some outlay must be made to attract custom, and the possibilities for effective display are as cheap to-day for the retail florist as for any other business man. The advantages already to his hand are excellent. Always an abundance of flowers, etc., lie ready at the commission houses; he can depend upon enough stock for any purpose nearly any day of the year, yet he utilizes it only as a means of saving, carrying his own stock, and consequently buys only as orders come in, except for his meagre display, leaving the commission man and grower to stand the entire loss of the waste barrel. Yet he exacts and expects the same old-time profits. His usual idea seems to be about 100 or more per cent. In these times of intense competition it is unreasonable to expect to make large profits; the time has gone by for them, and we must either adapt ourselves to the new conditions or get out. There is no alternative. The fact of the fakir disposing of from 50 to 60 per cent. of flowers sold in the large cities tells its own story.

Neither is there any reason why the retailer in the smaller towns should not keep in line with progress. He cannot be expected to be quite metropolitan, but he ought to keep up-to-date, and if he has a greenhouse plant it is quite easy for him to keep a constant display, either in his store window or greenhouses.

He should take the lead in matters floricultural and be always on the lookout for interesting things and chances for displaying his goods whenever and wherever possible, for in many cases the indirect returns are greater than the direct ones. It always pays a business man to have his business advertised by being talked about. Don't consider it enough to exhibit a few scaly palms and dissipated-looking primroses, or a few roses and carnations the worse for wear, to draw custom. Relegate your artificial designs and show goods to where they belong—which is not in your window, except, perhaps, on a special occasion. If your business is to sell fresh flowers, keep the artificial ones out of the way.

Be original in your designs and window displays if you can, but if you cannot originate, imitate; anything is better than stagnation. "But take care from whom you copy."

Those with greenhouses can at little cost produce attractive displays by devoting a little time to the production of a few of the old-time pot plants, and create interesting as well as profitable results. A well-grown plant of allamanda, stephanotis, clerodendron, lapageria, or bougainvillea in a 12 or 16-inch pot will make a change in your window worth while; and a few pans of eucharis, or a shapely grown camellia, would be a novelty at the present day.

Do you remember the interest taken in Chicago a year or so ago, over specimen-grown geraniums exhibited at the show there? How would a pyramidal grown fuchsia, about 6 feet high, in full bloom, look? Fresh attractions are demanded by the purchasing public nowadays.

BERMUDA AND ITS FLORAL PRODUCTS.

Candalabra Cactus, 18 feet tall.

for decorating your windows for helping out also at spurts of trade; in fact, you could do lots of things easy with an organization that as individuals you have to put up with.

Don't say, well, we are as progressive as any other line; look at So and So on Broadway, Chestnut, State, or any other street. There are in many towns pro-

BERMUDA AND ITS FLORAL PRODUCTS.

A Century Plant in Blossom—Date Palm in right foreground—Grapewood Tree in left background.

Are not the table and mantel decorations one of the taking features at the exhibitions? Why not put up a moderate-priced mantel, table center piece, or even full table display? Don't be afraid to mark the price up also, as education in prices is as necessary as any thing else. Do not fear your brother florist down the road copying either your designs or prices; some day, perhaps, you may get a pointer from him.

Many people call for the same thing over and over again, because oftentimes they are unacquainted with a wide range in regard to flowers and dislike to admit ignorance in floral matters. Would not the names and prices plainly marked help these customers and be appreciated by them, and at the same time create a wider range for the retailer's art?

Don't be afraid to push the thing along; the grower and the commission men are both a few years ahead of you, and will always be glad to do or grow anything for you if you will only put a hustle on and create a demand.

Novelties are being offered thick and fast enough to please anyone, and all you have to do is to step into your rightful place and become in fact the educator of the great public, whose cash you, I and the commission man so badly need. Place your goods artistically and make your prices moderate, and the fakir will not be your bogey man for long.

To those of you in large cities the benefits of organization should be plain. Almost every line has its association, but if you have one it is most unobtrusive. Think how much could be accomplished with a good, live, co-operative organization. You could give public exhibitions or views free, and show what could be done with even a few flowers and a little skill. Buying supplies, flowers, everything in fact, in large quantities by your own agents, would give you all a chance to purchase at lowest rates, and being all supplied at uniform prices the opportunity for establishing a staple price list greatly enhanced. As your organization would also act as a guarantee for you, mushroom stores would be largely done away with and the wholesale trade brought down to a cash basis—a most beneficial state of affairs for the grower and commission man, besides yourself. You could also employ a few specialists gressive men whose places are most artistic and a liberal education, but they are not ordinary retailers; they are floral artists in the highest sense, and a credit to the trade at large. They are a shining example of the results of a combination of business ability and artistic skill, and richly deserve the financial success they have apparently achieved. But they are a minority; yet it is a satisfaction to know that there are some progressive men in all the larger cities, and are also occasionally to be found in even very small ones.

How many, though, are there on the other list, taking no apparent interest in anything outside themselves, belonging to no clubs and taking no part in exhibitions (not even as spectators) etc., and it would be surprising if they even subscribe to a trade paper, whose windows are decorated with straw goods, artificial designs and flowers of an ancient date; chronic kickers are they on prices, inveterate foes to progress and whose only idea of competition is cutting of prices!

There is no reason why even the smallest business should not be made as attractive as possible, and to fill its place as a public educator.

Between the floral artist on the one side and the fakir with his bold displays and business-like ways there is a great gulf which should be bridged by the up-to-date retailer. When will he awake from his lethargy and become the educator? S. B.

PLANTS and FLOWERS.

CARNATIONS.—Max L. Hess, of Wheeling, West Va., sends us a bunch of his carnations, and, considering the distance traveled, they arrived in fair condition. Gold Nugget, White Cloud, Flora Hill, Jubilee and Mrs. Bradt are quite well grown and would sell as fancies in any market, having good, long stems and averaging well in size. Scott, Triumph and Daybreak arrived somewhat "sleepy," and were of only ordinary size.

Floriculture as a Profession.

Read before the Pennsylvania State Board of Agriculture at Harrisburg, Pa., by Edwin Lonsdale, January 25, 1900.

Floriculture is a branch of horticulture, and horticulture is a branch of agriculture, and agriculture is the foundation of all industries. It is somewhat difficult to determine just where horticulture begins and agriculture ends, so closely are their interests interwoven. The farmer is more or less interested in horticulture, and the gardener is more or less interested in agriculture, and floriculture lays claim to its share of attention also.

While agriculture is the oldest among the professions, and horticulture comes in a good second, floriculture is possibly the most recent of all. Everyone connected with any of these three professions, however, can without hesitation be pronounced tillers of the soil.

Our grandfathers and grandmothers would have scouted the idea of offering for sale their beautiful and fragrant blossoms, though as gifts nothing would be more freely given or better appreciated or give more gennine pleasure, but to barter them for gold or silver would to them have been sacrilege in the extreme; and as nothing is so appropriate for gifts as flowers or gives more pleasure, and because everyone who desired to have flowers to give and could not have them without buying, this was, in this commercial age, the foundation of floriculture as a profession.

Twenty-five or thirty years ago nearly all the retail flower stores in Philadelphia had a greenhouse establishment of their own for growing cut flowers for sale, and when additional flowers were needed, the retailers often found it necessary to buy from each other or from greenhouses in the suburbs; and the gardeners and proprietors of amateur establishments were frequently tempted by coin to help out when the demand for flowers was superior to the supply.

The greenhouse establishments in the suburbs of Philadelphia in those days, where cut flowers were more or less a specialty, and where the florists yet did a general retail business, found, after a few years' experience, that the wholesale part of their business, where they disposed of their surplus among the city retailers, was very much the most satisfactory. And that was the cause of establishments being started about twenty years ago, both outside and inside the city limits, for the purpose of growing cut flowers to sell exclusively at wholesale to the city retailers, and since that time numerous places for the same purpose have been started, which have met with encouraging success.

It was found that where a retail and a wholesale business was conducted jointly there were conflictions. When the suburban greenhouses needed the most flowers, the city florists could use them in greater numbers also.

About the time stated above, namely, in the year 1880, many flowers found their way in regular shipments, both from New York and Boston, but at the present time there are more Philadelphia grown roses sold in Boston than there are Boston roses sold in Philadelphia. Boston and New York were both in advance of Philadelphia in the production of cut flowers in those days, and possibly they are to-day in many respects. The growers for both those cities have a distinctly different way of disposing of their flowers at wholesale than they have in Philadelphia. For instance, the majority of commercial florists growing flowers to be disposed of among the retailers in the Quaker City have their own salesmen, and some of the proprietors even sell their own product, delivering the flowers at the different stores daily; whereas, in both Boston and New York, wholesale markets are established where the retailers buy early in the morning what they expect they may need during the day.

It is only a few years ago that nearly every florist built his own greenhouses. He was a carpenter, steam fitter, painter, glazier, and florist in combination, and the materials used in the course of construction were of the very cheapest possible character. He tried to cover as much ground with a given piece of glass as possible; and in many cases it was questionable economy, though, as a rule, in those days it was the only way open for an ambitious young man, with very little cash capital, to start into business for himself.

This is certainly a commercial age, and the rapid development of the business of flower growing for sale has been enormous, almost beyond belief during the past few years. In the ages to come, when an adequate history of the development of commercial floriculture shall be written, it may be made to appear as though it had almost sprung up in a night.

It seems only the other day that a greenhouse 100 feet long was considered the correct and extreme length practicable in which to grow plants and flowers, but a week or two ago, in the floricultural trade papers, there were illustrated articles published, giving plans, etc., of two rose houses in course of erection at Natick, Mass., 700 feet long. It would seem that now surely the limit had been reached, but when we realize that in comparison with the days (only a short time ago) when greenhouses were heated by what is known as the old-fashioned flue system—which means that a fire was built in a furnace at one end of the greenhouse, and terra cotta or glazed drain pipes of suitable size, or brick flues, were used to conduct the heat and smoke to the other end, and that heat sufficient would sometimes be radiated in transit, or en route, so to speak, to keep out frost and incidentally to grow plants and flowers for sale—that to-day we hardly know what is in store for us, or what to expect in the future, especially when we consider how electricity has displaced the horse in methods of transportation on the streets of cities and towns and upon the country roads; then why may not electricity be applied in some of the routine and laborious work necessary in a large establishment where flowers are the staple articles grown?

A Typical Bermuda Residence.

Bermuda and its Floral Products.

Pandanus utilis in Fruit.

The primitive method of heating plant-growing structures above referred to was only once removed, as it were, from the window garden of the dwelling house. The window gardens of our great grandmothers were the forerunners of our modern, up-to-date, steam-heated greenhouses of to-day, and woman was the first to assume the care of plants and flowers in an artificial way. She would take up in good time the sensitive exotic and tenderly care for it long before the chilly northwest wind swept o'er the snow-clad hills and breathed the frozen tokens of nature's enforced rest!

The rapid development of floriculture as a profession is largely due to an organization known as the Society of American Florists, and to the trade journals which, as a consequence, followed in its wake. The S. A. F. meets in convention in a different city in the month of August for three or four days every year, and papers appertaining to floriculture and discussions thereupon form the greater part of the proceedings. It was organized in the year 1884, for the purpose of developing commercial floriculture and bettering the condition of florists, as the Farmers' Institutes, State Boards of Agricultnre, and U. S. Department of Agriculture, and kindred organizations, were originated for the purpose of benefiting the farmer and improving agriculture.

Farmers and florists have some things in common, as, for example, food for plants. Phosphoric acid, potash and nitrogen are just as necessary and essential to produce a crop of flowers as they are to produce farm crops. The farmer has an advantage over the florist to a great extent. Special fertilizers are prepared for him for the various crops he grows, whereas the florist is largely in the dark in this respect at the present time. Much money is annually wasted by florists, I am sure, in the purchase of fertilizers. Bone is one of the most popular fertilizers with them, and its chief ingredient is phosphoric acid, but whether it is as essential, as a plant food, to the production of flowers as it would be with a crop of seed, as corn, or wheat, or any other similar crop, where grain is the object in view, is a problem not yet solved. Potash, as used by the florist, is furnished through wood ashes principally, and the bulk of the nitrogen comes from farmyard manure, that from the cow stable being at the present the most preferable. Nitrate of soda and sulphate of ammonia have to be used with great caution, for so much damage has been done to crops in the past under glass, through the indiscriminate use of these salts, that in many establishments the use of them has been abandoned entirely. This state of affairs has been brought about largely through the erroneous idea that because a small quantity of the essential plant foods should prove beneficial, a larger quantity ought to prove more so.

The Florists' Hail Association is an offshoot of the parent society, and would not have been organized, nor could have been operated successfully had not the S. A. F. been at the head of it. I have no means of knowing how many feet of glass in this country there are devoted to the growing of flowers, but up to August 1 last 11,209,865 square feet of glass were insured in the said association. It originated among the florists and is managed entirely among themselves. During the past year claims for losses by hail have been paid amounting in the aggregate to $5,337.39. It is understood, of course, that all the glass devoted to commercial horticulture is not insured in this very useful association, but it is rapidly becoming more popular on account of its excellent management and by the prompt payment of losses after they have been reported and duly verified.

The Chrysanthemum Society of America is another offspring which has done good work. The nature of its duties so far has been confined to the protection of the buyers of new chrysanthemum plants from purchasing novelties of the popular Queen of Autumn of doubtful value. Committees are appointed annually to meet once in each week during the chrysanthemum season in the larger cities, as New York, Boston, Philadelphia and Chicago, and to examine seedlings or sports. No less than six flowers must comprise an exhibit, if to be considered by the committee. Two dollars is the entrance fee, and this has the effect of simplifying the committees' work, for no matter how enthusiastic the owner of a new variety may be, he becomes immediately critical of his own production when cold cash must accompany his entries for exhibition. These new candidates for public favor in seedling chrysanthemums are judged according to a scale of points, and when 85 or more are awarded out of a possible 100 a certificate of merit is granted by the society.

The American Carnation Society is another child of the S. A. F., and is run upon somewhat different lines than are those of the Chrysanthemum Society. An annual meeting and an exhibition of new and meritorious varieties of carnations is held in connection therewith the third week of February in the different cities.

Wonderful strides have been made in the improvement of the carnation since the society was organized in the Quaker City in the year as before indicated. Thirty-five cents per dozen was the prevailing retail price in those days, but during the past year the new Boston variety, "Mrs. Thomas W. Lawson," led in price in that market at $9 per dozen. The premium price, however, has been reached by a variety which, so far, has no other name to designate it from other varieties than "The Three Sixes," (or No. 666). "The Lawson Pink," which the Boston variety is commonly called—which, by the way, is cerise in color—was boomed into prominence largely by the name which was given to it, namely, that of the wife of one of Boston's leaders in social and financial circles, which in itself ordinarily would have been thought sufficient to attract public attention; but other superior business methods were made use of in bringing it before the public that has enhanced its value until orders for plants during the past three months have aggregated the enormous number of 315,000.

It is stated on authority, which cannot be disputed, that $30,000 was paid to the originator of that variety for the entire control of the output of both flowers and plants, until the end of the year 1900 of this famous "Boston pink." The purchase money has already been secured even if the average price was only 10c. per plant. By referring to the advertised prices, quantities of 5,000 and over have to be ordered before so low a price as 10c. each has been conceded.

The time for the dissemination of plants of the New York variety, known up to the present time only as the "Three Sixes," or No. 666, before referred to, has not yet been decided upon, so that the fixing of the price of the flowers is entirely in the hands of the owners. At the present time it is selling wholesale in New York City at $5 per dozen. The first five dozen, which were sold to a retail florist in that city, were disposed of

at retail, a few moments afterward, for $60, or at $1 for each flower! Not such a bad price for carnation blooms.

A florist cannot protect his floral productions by patent, no matter how meritorious they may be. When he once sells plants of a new variety, he at once puts the purchasers thereof in direct business opposition to himself, giving opportunities to cut prices if they feel so disposed.

Philadelphia has no phenomenal varieties among flowers at present which it can claim as being its very own, and in which no other city can share its glory, but the Quaker City has the distinguished honor of being the first city to start the upward tendency of prices among fancy carnations, when the variety Helen Keller sold at retail, in the year 1894, at $2.50 per dozen. Immediately prior to that time $1 per dozen seemed a very high price, even for the most select.

A rose society now seems to be assured of ultimate success, after various ineffectual efforts to establish it. It deserves the sympathy and support of every commercial florist in the country, for the rose is the queen of flowers, and has had more influence in elevating the profession than any other one flower, or, I may say, than all the other flowers combined. It was the bright, crimson and fragrant rose, General Jacqueminot, commonly called "Jacque," which first sold at what was considered at that time extravagant prices among flowers. When it was first offered for sale, in the Winter season, all that was asked for it was $1 per dozen, but a genius with the commercial instinct highly developed quite commendably succeeded in bringing the price up to $2.50 each.

A year or two ago, and for several years past, begonias could be bought at Christmas for 50c. a piece. The past Christmas, that of 1899, begonias growing in the same amount of soil, less than half a peck, were sold at $8 per plant. Some plants of the same variety in smaller sizes were selling as low as $2 each, but none sold lower. In explanation: It was not so much that times were better than last year to warrant the increase in price, nor was there that much difference in the method of culture, but it was the offering of a *new* and very meritorious variety that caused the difference in price. The variety referred to is of French origin, and is a cross between two distinct species, namely, Socotrana and Dregii, and it is so nearly what may be termed a mule in floriculture that seed bearing flowers are very rare indeed; so much so that instead of forming seed it goes on producing its beautiful pink mule flowers in vast numbers, and remaining cheerful and bright much longer than it would do if the usual number, for begonias, of seed bearing flowers were produced.

Floriculture has become firmly fixed as one of the recognized industries, and will continue to be so for all time; but the difficulties to succeed will grow greater with each succeeding year, especially does this apply to the grower of flowers. It is not only necessary to know the necessities of plant life as thoroughly as it is possible to know them, but it is also necessary to have a thorough business training, with the commercial instinct well to the fore, and an abundant amount of executive ability to carry out every essential detail in a growing establishment to a successful conclusion.

The retail florists in the larger cities are aristocrats in their bearing and methods, with their tastefully embellished delivery wagons, their automobiles or teams of high steppers, and with their assistants in livery emulating that which is worn by those occupying similar positions with their customers: all of which has been brought about within the past ten years by superior business ability, and by being strictly abreast of the times.

An intelligent, well educated boy raised on a farm, and who is not afraid of work, and has the right stuff in him to make a good farmer, will make a first-class florist. Some of the best and most successful florists to-day are those who were raised on a farm.

Many of our most successful florists have the commercial instinct more highly developed than they have an innate love for flowers, and this essential characteristic for commercial purposes must be more pronounced in the future than it has been in the past, because the competition is sure to become keener. Well do I remember the time when it was stated with great assurance that no person who had not a natural and real love for flowers could ever succeed as a grower thereof. This may have been true before commercial floriculture had assumed its present proportions, but it is not true to-day.

Diseases of the Rose.

Read by Professor B. D. Halsted before the American Rose Society, March 28, 1900.

The earliest trouble of the rose to engage my attention ten years ago, when I first went to the New Jersey Experiment Station, was that due to nematodes. In the report of that year it is recorded that "Sickly stunted greenhouse roses have been sent to the station, and the cause for the lack of vigor was not far to seek. The roots of the plants were badly knotted, and the whole root system infested with gall worms."

In the report for the next year (1891) the following is found recorded: "Complaints have come to the station from various quarters of a shortness in the hothouse rose crop, and a visit made to Madison and other rose-growing localities convinces me that the trouble is not due to any one enemy. The affected rose plants have a stunted, sickly appearance; they fail to send up strong shoots, and only develop short stems, bearing pale, sickly leaves. Such plants fail to produce good flowers, and are comparatively worthless.

"The roots of such specimens may be swollen in places, and the knots contain multitudes of nematode worms. It is of great importance to have the soil used for potting plants or the greenhouse bed free from the worms, and, of course, only plants with roots free from knots and galls should be used. The greatest trouble with the rose-plant soil is probably the manure that is used in great abundance by the growers. It is likely that this manure is infested with the worms. An experiment in raising roses in a soil where stable manure is replaced by a judicious mixture of commercial fertilizers is well worth trying. It has been shown, for example, during the present season, that sweet potatoes can be grown to great profit without the city manure that has been the standard source of plant food among truck farmers. Also, it has been demonstrated that potatoes thus grown are less liable to attack of the various rots and decays. If the right mechanical consistency for the roses can be obtained in connection with the commercial fertilizers, it is quite evident that the soil would be under better control and less liable to various infections."

Fungous Diseases of the Rose.
a. Black Spot; b. Black Speck; c. Powdery Mildew; d. "Browning;" e. Rose Leaf Spot; f. Rose Rust.

(The speaker here repeated his article appearing in FLORISTS' EXCHANGE of January 27 last which please see.)

THE BLACK SPOT (Actinonema rosæ Fr.)

The most widespread and conspicuous of the one hundred or more fungous diseases of the rose is the black spot, due to the Actinonema rosæ Fr., and first described in 1826. It is seen that this is an old enemy and has long been known to the rose growers of Europe. The foliage, when attacked, soon develops the characteristic black spots, and the leaves become elsewhere pale, and shortly fall to the ground. As a result rose houses badly infested with the black spot show but few leaves and fewer blooms. The microscopic structure of this fungus has been fully considered, with plates, in the first annual report made by Professor Scribner, as Chief of the Section of Vegetable Pathology of the United States Department of Agriculture, for the year 1887. It only needs to be said here that experiments with this fungus have been carried on sufficiently by the New Jersey Station to warrant the assumption that it can be controlled by the proper use of fungicides. This trouble may be held in check by the carbonate of copper compound (cupram), using 5 ounces of the carbonate of copper to 3 quarts of ammonia, and 60 gallons of water. The spraying should be done once a week, using a hose with a nozzle that gives a fine spray. The point should be to wet every part of the plant, and yet not drench it. If many leaves have fallen from the plant they should be gathered up and burned.

Some varieties are more liable to the black spot than others. When possible, that is, when all other things remain the same, it is, of course, wise to grow those least susceptible to the disease. It may be said, in passing, that during the year 1892 the black spot was observed by the speaker upon a species of wild rose (Rosa humilis), where it was causing the leaves to become spotted and yellow. It is not surprising, for the wild plant was growing but a short distance from a neglected estate where garden roses were badly spotted.

The actinonema is a small genus, and some of the species are parasites upon the basswood, beach, ash, viburnum. The one upon the rose is not found upon plants outside of the genus rosa, and there has its favorite species and varieties. This is shown in a remarkable manner with some of the cultivated sorts grown side by side in the same house. It is often very bad upon the American Beauty.

THE ROSE LEAF BLIGHT
(Sphærella rosigena Ell.)

A fungus that disfigures and injures the rose leaves almost as badly as the black spot is the Sphærella rosigena Ell., and commonly called the rose-leaf blight. A thoroughly diseased leaflet has large, irregular blotches of gray color surrounded by a margin of dark purple. The gray dead center of the spot bears a number of dimples or specks—more numerous and conspicuous near the center, and in these the spores are produced.

Under the microscope the fungus is very different from the black spot, and instead is closely related to the leaf blight of the strawberry, which is due to Sphærella fragariæ Tul. In other words, the two blights in question are as closely related as any two species of the genus rosa. It is important to know these relationships between the various plant diseases, for it is helpful in the struggle in overcoming them. The leaf blight of the strawberry is very much more common than that of the rose, and any effective remedy found for the former may be of value in checking the ravages of the latter. Fruit growers have found this strawberry leaf blight a hard one to check, perhaps because of its many forms of spores and the low habit of the plant and the consequent difficulty of readily spraying the foliage upon the underside. This difficulty does not obtain with the rose, and it may be controlled more easily. There is no question but that the standard fungicides should be used when this fungus is at work.

The black rot of the grape, due to Læstadia Bidwellii (Ellis), is a first cousin of the rose disease in hand, and the fact is mentioned because the grape rot trouble is one of the most common and destructive of the whole list of fungous diseases. There is a stubborness met with in attempts to control this decay that almost baffles some vine growers, especially during moist months in the growing season.

THE ROSE MILDEW
(Sphærotheca pannosa Wallr.)

The most familiar fungous enemy of the rose is the mildew (Sphærotheca pannosa Wallr.). This disease has been known for a long time and is quickly recognized by the powdery coat it develops upon the affected parts. It is so rapid in its development that rose growers are sometimes inclined to assign the cause of the growth to that which is in reality only the condition or conditions favoring the appearance of the mildew. It comes from spores, which falling upon

the surface of the plant will quickly germinate and produce a cobwebby coating to the foliage. This fungus is so different from the others that have been mentioned that a word is needed in way of explaining the habit of the parasite, as this lies at the foundation of the rational treatment of the pest. In the first place the rose mildew is a surface feeder and only attaches itself to the epidermis of the host, through which by means of small suckers it derives its nourishment from the deeper-seated substance. Being therefore entirely upon the surface, the fine threads of the fungus may grow rapidly and make a mildew patch in a very short time that is easily seen. The exact conditions that favor this development of the spores are, of course, better known to the rose growers than to me. Some of them claim that they can develop the fungus at will by omitting some essential point in heating, watering, or ventilation, particularly the last. If a certain current of air is sure to produce the mildew, and of this I am not fully able to say, it follows that the spores of the mildew were widely scattered through the house; and they started into vigorous growth at those places where the conditions were supplied for such activity.

The superficial nature of the mildew is of great importance when the matter of remedies is considered. It is a fungus that is in the air, as it may be termed, in contrast with most of the rose diseases that when active are deeply seated in the plant. The spores are produced as minute delicate cells upon upright filaments that arise from the web of horizontal vegetative hyphæ. They are easily reached by fungicides and apparently destroyed without difficulty. Any of the ordinary sprays will answer for the mildew, but even these need not be resorted to, provided spraying is uncalled for by the presence of other rose fungi. In short, if the mildew is the only enemy at hand it may be kept in check by the use of flowers of sulphur, either dusted upon the plants or even the pipes of the greenhouse, the point being to produce a gentle fumigation of the plants and the whole house with the fumes of the sulphur. Professor Maynard, of the Massachusetts Experiment Station, finds that a small kerosene stove is most convenient for this purpose, and the sulphur, by means of it, is boiled in a kettle for two or three hours twice a week, the house being closed during the operation. The only precaution is to use no more heat than is sufficient to boil the sulphur, for should it catch fire it might damage the plants. Mr. John N. May writes that the best way to get rid of the mildew is to close the house about 8 o'clock in the morning, run the temperature up to 75 degrees, then, with a bellows, fill the house full of sulphur. Let the house remain closed till it reaches 85 or 90 degrees, and afterward let air in gradually. A constant circulation of air is likewise recommended for roses at all times. Potassium sulphide, one ounce to two gallons of water, sprayed upon the plants, has proved an effective remedy. Massee states that "flowers of sulphur mixed with about one-third of its volume of slaked lime dusted on the foliage prevents the spread of the disease." Gardeners, from long experience, have come to the belief that rose mildew is induced by a weak condition of the plant, resulting from partial starvation, irregular or excessive watering, and undue exposure to drafts of cold air. The best success in rose growing, as in all other things, attends those who give constant intelligent care to the many details.

The rose mildew has its close of kin in the mildew of the chrysanthemum, the phlox, pea, gooseberry, grape, cherry and apple, and many forest trees, as oaks and chestnuts. Some of them are very injurious; but all can doubtless be controlled by fungicides.

The Downy Mildew of the Rose.
(Peronospora sparsa, Berk.)

A second form of mildew is sometimes troublesome to rose growers. This is a close relative of a similar one upon the greenhouse lettuce, and another is often destructive to spinach, while a third is the cause of a soft rot of potatoes. It produces downy or velvety patches upon the leaf, quite unlike the form above described, and the threads run through the substance of the leaf. In this case the fungus will have vegetated for a considerable time before it appears upon the surface, which is entirely for the purpose of producing its multitude of spores borne upon the tips of the many aerial branches.

It is evident that the sulphur fumes may cause the destruction of the spores, but may not reach the hyphæ that are vegetating with the substance of the host. Such treatment, while tending to check the spread by means of the spores, will not be sufficient to arrest the growth of the fungus that is already in the tissue of the host.

There is also a second form of spore that is produced beneath the skin of the leaf and out of reach of fungicides. As a precaution it is therefore well to destroy any mildewed leaves, or else when they fall the spores may be set free. It may be said that the careful rose grower will gather up and destroy the dead foliage and reduce as far as possible thereby the chances of his plants becoming diseased from spores that are formed upon or within the old leaves.

The Rose Rust
(Phragmidium subcorticum, Schr.)

There is a genuine rust of the rose similar to that of the wheat, oats and other grains, but it is a pleasure to note that it is not common upon indoor roses in this portion of the country. It has been sent to me at various times as a troublesome pest upon roses grown for ornament in the flower garden and lawn. In "Plant Diseases," by Massee, a new book just published in London, this rust is figured and described as follow: "A troublesome pest to cultivators of roses, attacking more especially hardy hybrid varieties. All three forms of the fungus are produced on the same host. The scidia appear in late Spring on the leaves and young shoots, forming powdery, orange patches, and often cause distortion of the shoots. About midsummer the patches become deeper in color, owing to the formation of uredospores. Finally the teleutospores or resting spores are produced as minute black dots on the under surface of the leaves.

"The appearance of the disease in Spring depends entirely on the presence of teleutospores in the neighborhood; it is therefore necessary to collect and burn all fallen leaves in the Autumn. Plants that have been attacked the previous season should be thoroughly drenched with a solution of sulphate of copper in water—two ounces in three gallons—in early Spring before the buds expand. The soil round the plants may also be sprayed with the same solution. Dilute Bordeaux mixture, or ammoniated carbonate of copper solution, checks the aecidium and uredo stages.

"The fungus also grows on wild roses, and these may become a source of infection unless precautions are taken."

American rose growers are doubtless familiar with the orange-colored powdery masses in early Summer, which accompany the malformations of stem and leaf followed by the dark, almost coal black, patches later in the season. When a shrub is badly infested there is little better to do than cut the whole plant away close to the ground. This fungus is closely related to the one upon the blackberry and raspberry, causing the destructive rust of those plants. It has been shown that the fungous hyphæ penetrate all parts of the blackberry plant, even the roots, and the rose grower may not find that severe pruning will rid a plant of the pest when it is thoroughly infested. Therefore, as with the raspberry rust, it may be necessary to root out and destroy the rose bush and start again with a healthy plant. This rose rust is a good illustration of the great depth to which a fungus will penetrate in the host and the difficulty of eradicating the same. It goes without saying that ordinary sprays will be of little curative effect upon a plant when the living vegetative threads of its fungous parasite penetrates to all parts.

In California the reader has seen the rust upon roses much worse than here—when every leaf upon some shrubs was badly affected. In such a warm climate, when the plants retain their foliage throughout the year, the dark Winter spores, not being needed, are omitted; and the orange colored form of Summer is perennial. There are many of the rusts in the warmer parts of the earth that grow continuously, while the same kinds of plants with us are exempt, presumably due to the uncongenial nature of our climate. In passing, it may be said that the chrysanthemum rust produces only the Summer form in the greenhouse, and the hardy out-of-door sorts seem to be exempt from the disease.

The Rose Anthracnose
(Gloeosporium rosæ, Hals.)

The chief feature of this disease is the scarcity of leaves. Instead of a plant with foliage upon all the canes, there are but few leaves upon some stems, while others are entirely defoliated. The whole plant is infested with the fungus, and this parasite so saps the vitality and interferes with the processes of growth that the leaves, even if they were healthy in themselves, are unable to perform their work. The fact is, that the leaves are infested with the anthracnose filaments, and soon after falling, if not before, they will show the spore formation of the anthracnose fungus, Gloeosporium rosæ, Hals. In general appearance and habits of growth this fungus is quite similar to the one causing the anthracnose of the raspberry named, Gloeosporium venetum: possibly it is identical, and if so the presence of the one is a menace to the host of the other.

The rose plant is most likely attacked while young, or at least it is to be presumed that the young portions of a plant are most susceptible. The attack is from without, and the spores falling upon the surface of the young, tender canes, and leaves as well, there germinate and produce, in a short time, an affected spot. If this takes place in a cane, it is natural to suppose that the portion above the infested part will be girdled, in so far as the attack is great; and this will interfere with the direct support by the whole plant of the part beyond the diseased place. Besides this, the fungus spreads, and more rapidly in the direction toward the tip of the cane. It is not unusual for a diseased plant to send up apparently healthy shoots from near the base of the stem, these in turn to become infested.

Roses that have a sickly color to the foliage, with the leaves falling prematurely, especially from the tips of the canes, may be suspected as victims of the anthracnose. A hand lens should be sufficient to assist in finding pinkish blotches upon the leaves, particularly those that lie upon the moist earth beneath the half-defoliated plant. Similar, but better defined, pimples usually occur upon some portion of the cane.

It will be gathered from these remarks that the rose anthracnose is a specific disease, caused by a well-defined fungus that grows rapidly from spores, penetrates the substance of stem and leaf, and finally causes defoliation and death of the cane. The anthracnose, because of its multitudes of spores produced in pimples on leaves, particularly fallen ones, and the canes, and the ease with which they are transported by water, also rapidity of germination, all combine to make this fungus enemy of the rose very contagious.

This class of fungi, to which the gloeosporium belongs, is amenable to treatment by fungicides. A coating of the Bordeaux mixture or eurpram upon the leaves and stems prevents, in large degree, the entrance of the germs. Therefore, all rose houses, where there is any anthracnose, should be sprayed with one of the above compounds. It goes without further saying, that all plants that are nearly leafless from this cause should be either cut down close to the soil or thrown bodily into the burn heap.

The Rose-Leaf Spot
(Cercospora rosæicola Pass.)

Somewhat similar to the leaf blight previously mentioned is the leaf spot, due to the fungus Cercospora rosæicola, Pass. This produces spots that are of a gray color with a dark purple border, and the spores are long and borne in little tufts upon the surface of the central portion of the dead areas. In microscopic structure the leaf spot and the leaf blight are very different, the former having the spores upon the tips of threads, which previously have grown through the stomates. The leaf blight has the spores borne internally in small pits and are poured out in a viscid coil when the part is moistened.

These facts are given to show that while to the naked eye the differences between the two herein named fungi are not apparent, under the microscope they are widely unlike, and the treatment that will work admirably for one may not answer for the other.

As yet this leaf spot is not common, but when found at all is often quite destructive. From the nature of fungus it is inferred that it is to be easily controlled by fungicides. For example, its cousin, Cercospora beticola Saec., is the common beet-leaf spot, with which there have been many experiments; and it is found very amenable to treatment with the Bordeaux mixture and other standard fungicides.

Black Speck of Roses
(Pilobolus crystallinus, Tode.)

Complaints have come to the reader from time to time with regard to a speck upon the rose plants. "This trouble is due to the indirect, and not the intentional, action of a fungus, and in this respect is quite unusual and merits a word of consideration. The fungus that is the source of trouble is somewhat closely related to the coarse one that thrives upon bread, and is very damaging to sweet potatoes in the storage bin, causing the soft rot. In short, it is one of the molds grown upon organic substances, and not, as before stated, upon the rose.

The fungus in question is Pilobolus crystallinus, Tode, and forms in large numbers upon the manure used to cover the bed where roses are growing. As it matures a dark oval ball or sac is produced filled with spores of the pilobolus. This black sac is supported upon a swollen stalk rising from the surface of the manure, and when mature the enlarged portion filled with liquid, suddenly forces off the spore sac and collapses, throwing the ball of spores into the air. These dark spore sacs are covered with moisture as they are discharged, and will adhere to any object which they may strike in their flight.

The writer has examined houses where this fungus has developed extensively upon the manure, and counted as many as a hundred specks to the square inch upon the white wood work surrounding the bed. An examination of the perpendicular sash in divided walls in greenhouses will show, from the numerous spore specks adhering, that the height to which the dark sacs are thrown is full 10 feet; but there is a rapid falling off in the number upon any given area when the height of two or three feet is reached.

These specks, of course, from what has been written, may be upon any plant that is within range; but they do no further harm than the disfigurement thereby produced. They are more often met with in rose houses, because there the manure is more frequently left upon the surface than with other kinds of plants.

If a remedy is sought it may be found in dispensing with the manure on the surface, stirring it at frequent intervals to prevent the fungi from having time to mature their dark shells containing the "shot" in the form of spores, so to speak, or by using some fungicide as a spray upon the manure that will kill the mold. However, as a rule the bombardment does not last long and no vigorous mensures are generally called for in this case.

Bronzing of the Rose.

As a last trouble to be mentioned at this time attention may be called to a peculiar discoloration of the leaves that has been termed "bronzing." The affected foliage takes on a brown hue and the leaflets may fall away. With some varieties as La France it is much more frequently met with than upon most other varieties. It is not demonstrated as being of fungous origin, and probably is due to a structural weakness permitting the skin to become scalded or at least injured by too great exposure to the sun.

If this be the fact the remedy seems to lie in a more complete shading of the plants. Of two varieties equal in all other points the one that is most nearly free from the "bronzing" should be chosen.

In conclusion, it may be said that the purpose of this paper has been to point out some of the characteristics of the leading fungi injurious to the rose, with remarks upon the remedies for the same so far as they have been determined. As a rule, these diseases thrive best under conditions of too great moisture accompanied by ill ventilation and drafts of cold air. One cannot say that they are entirely creatures of neglect, but frequently they come in their greatest strength when culture has not been according to the sound principles of healthy vegetable growth.

Let it not be forgotten, however, that fungous diseases are contagious, and the virus for inoculation passes from plant to plant by the currents of air and may drip from leaf to leaf in the water that falls from the nozzle of the hose. Great care needs to be taken not to introduce an enemy with new stock, and the grower should be swift to discard or destroy that which is not healthy.

The true rose grower will make it his highest ambition to grow superior plants, for the profit it may be, but first of all because his heart is in his work; and I do not know of anything one can be more proud of than roses, the queen of all the flowers, which, as loved pets, have willingly and generously produced objects of the highest beauty and excellence in response to tender, sympathetic and loving care.

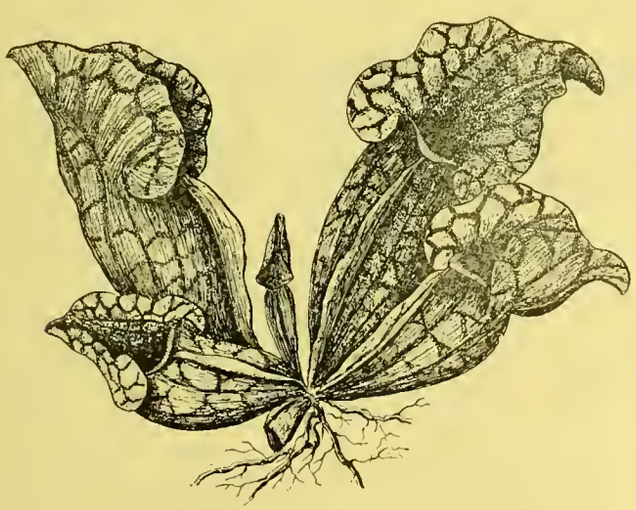
Insect-Eating Plants.

There are no more wonderful plants in the vegetable kingdom than those which catch, kill and eat insects as part of their daily food. It has been shown by experiments, extending through a long number of years, that certain kinds of insectivorous plants continue in healthy growth under cultivation so long as they are allowed a supply of insect or other animal food; but just as soon as the supply is cut off for any length of time they begin to deteriorate and assume a sickly appearance.

Insect-eating plants belong to several different families between which there is

Dionæa Muscipula, Venus Fly Trap.

little relationship other than the similarity in their carnivorous natures. They are widely scattered throughout the tropical and temperate zones, inhabiting regions which are continually marshy. In the East Indies, Madagascar and North Australia we have the grotesque looking plants with urn-like appendages to the leaves, known as East Indian plants (nepenthes), which, in greenhouses, are usually grown in company with orchids and other rare exotics. South Australia, India and South Africa furnish some dwarf-growing kinds known as sundews (drosera). In Europe, they are represented by only a few small but pretty species of the same genus. North America is the home of several of the most interesting of the many kinds. In the swamps near Mt. Shasta, California, there lives a plant which is quite unique



Common American Pitcher Plant, Sarracenia Purpurea.

in its general appearance. It is known as the Californian pitcher plant, Darlingtonia californica, the leaves of which resemble nothing so much as a snake with its head uplifted ready to strike. In the Eastern States, what are known as American pitcher plants, form no small part of the low growing vegetation. In the swamps of New Jersey the mosquito would be much more abundant were it not for several humble species of sundews which abound there. North Carolina has the proud distinction of being the only State where the Venus' fly trap, Dionæa muscipula, perhaps the most wonderful vegetable creation, is found in a wild state.

NEPENTHES.

The nepenthes is sometimes called the "vegetable distillery," because while the urn-like appendages at the ends of the leaves are in process of development, a clear oily fluid is secreted in the cavities of the pitchers. While this is going on, the lid or covering of the pitcher is tightly closed until it has attained its full size when the lid opens and the distillery is ready for its victims. The liquid has no attraction for the insects; it only serves to drown them when they are caught. The rim around the orifice of the pitcher and also the lid is covered with glands which secrete a honey-like substance; this attracts the insects, and those that venture on the interior surface of the pitcher quickly lose their footing, owing to the immense number of microscopical hairs which cover the upper part of the interior of the pitcher, the insects fall among the oily fluid and their struggles to regain their liberty only hasten their end.

It is very remarkable that different species of insects visit separate kinds of nepenthes; thus, the well-known N. distillatoria proves quite an attraction for the little red ants; N. Rafflesiana captures house and blue-bottle flies, while the large-pitchered N. intermedia is seldom without a supply of roaches. There is a species found in Borneo, called Nepenthes bicalcarata, which instead of insects, catches tree frogs. The entrance to the cavity of the pitcher in this instance is guarded by two strong spines resembling the tusks of a walrus; these spines point downwards into the pitcher; the frogs easily squeeze past to quench their thirst in the liquid secretion, but on attempting to withdraw their bodies they get hooked on the spines where they die of starvation. Their bodies, in decomposing, fall to the bottom of the pitcher where the juices from them are eventually absorbed by the plant.

VENUS FLY-TRAP.

The Venus fly-trap is rather startling in its method of catching the insects which venture on its leaves. The leaves may be roughly compared to the old-fashioned rat traps. Each leaf has two divisions which are hinged together at the base, the outer edges are bordered with stiff hairs, which, when the divisions come together, interlock exactly after the manner of the teeth in a rat trap. The moment a fly alights on a leaf, it closes the two divisions tightly together with a spring almost as quickly as a real trap, crushes the fly to death so that in a few days all that is left of the victim is a little mass of indigestible material, such as the wings, segments of the abdomen, etc. On each of the two blades of the leaf there are three sensitive hairs; these hairs, when touched by a very small insect, cause the blades to come together rapidly enough to ensure the capture of the insect. The margins of the leaf-blades then open slightly and in a few hours, if examined, the insect will be found completely coated with a thick fluid secreted by the plant. This fluid serves as a gastric juice to enable the plant the more readily to digest its

Sarracenia Drummondii.

food. If a small piece of wood or stone be put into the trap it will close on them, but in a few hours will open again; in course of time the material will be freed from the traps by the action of wind or rain. On the other hand, when insects are caught the leaves never open until all the nutriment is absorbed from their bodies, leaving only the parts which cannot be absorbed into the tissues of the plant.

AMERICAN PITCHER PLANTS, SARRACENIA.

The native pitcher plants are no less interesting than their tropical relations, the nepenthes. They inhabit marshy districts, from Maine to Florida, and are only found in the Eastern States. There are five species confined to the States south of Maryland, and only one in the Northern States; this is called Sarracenia purpurea, ordinarily known as "huntsman's cups" and "side-saddle flower." The leaves are in the shape of pitchers, each one is so formed as to hold a considerable quantity of water which collects during rainy weather. During the latter part of Summer insects of many kinds may be found drowned in the water which more than half fills the pitchers. The arrangement of hairs on the upper surface of the pitcher is quite remarkable; they are rather wide apart and all pointing toward the interior of the leaf. This is to induce the insects which alight on the lid to walk in the direction of the aperture, as it is rarely the case that a fly will walk across the points of the hairs or against them. The "parrot's head" pitcher plant, Sarracenia psittacina, is more fastidious in its selection of animal food. The aperture of even the largest pitcher is quite small, too small in fact to admit the entrance of the common house fly. Its favorite insects are the smaller species of ants and gnats, which may be found in great numbers in some of the larger pitchers. The commonest of the sarracenias in the Southern States is S. flava, popularly known as "trumpets." It is a tall-growing species with very curious aromatic smelling yellow flowers which, as a rule, open before the leaves are developed. Blue bottle flies are the principal animal food of this species; they are attracted to the trumpet-shaped leaves by a sweet, viscid secretion around the orifice. Any person in the immediate vicinity of the plants about the month of May can quickly tell when a blue bottle fly has been newly caught as it makes a buzzing sound which is accentuated by the trumpet-shaped leaf. The inner part of the leaf is a perfectly designed insect trap, so perfect that I have yet to witness a fly making its escape from one. The inner walls of the tube are clothed with an immense number of hairs from one-sixteenth to one-eighth of an inch long; all of them point to the bottom of the tube so that it is quite an easy matter for the blue bottle to reach the bottom; but with the points of thousands of miniature spears turned against him, escape is an impossibility.

Sarracenia Drummondii is the showiest of all the native pitcher plants. There are in fact but few plants which possess such gorgeous markings in the leaves. A well grown specimen never fails to draw forth expressions of wonder from those seeing them for the first time. This species is a native of the marshy districts of Florida. Under cultivation it makes two sets of leaves yearly, one in March or April, the second, and by far the prettiest, in November and December. The color of the top part of the tube is crimson spotted with pure white, the lower portion of the tube is green. The flowers are very similar in appearance to those of the Northern species, S. purpurea being dull red in color.

THE SUNDEW, DROSERA.

The droseras are popularly known as "sundews" from the leaves appearing as if covered with dew. The leaves are thickly studded with bright colored glandular hairs; on the extremity of each hair there is a little drop of gummy fluid which gives to the plant quite an odd and beautiful appearance, especially when the sun is shining. The insects which come in contact with this gummy substance soon get entangled in it and the long hairs of the leaves being irritable, very quickly make it impossible for the insects to regain their freedom. The hairs on the outer edges of the leaf serve only in the capture of its prey and actually convey the gnats and mosquitos to the shorter hairs in the center of the leaf where decomposition rapidly takes place.

In attempting the cultivation of any of the insectivorous plants, and there are no difficulties in the way of their successful culture, it must be borne in mind that they all require a very humid atmosphere during the period of growth. The soil in which they grow must be of a very

Darlingtonia Californica.

porous nature, such as rough peat moss and small pieces of charcoal. With the exception of the nepenthes, which require a hothouse, they may be grown in a cool greenhouse or frame. G. W. OLIVER.

How to Improve Present Methods of Landscape Gardening.

Prepared and read by J. Franklin Meehan, Germantown, Pa., before recent Farmers' Institute in Philadelphia.

Landscape gardening in this country is yet largely in its infancy, and just as the human infant is taught to acquire its knowledge, step by step, so must the people be taught, step by step, the fundamental principles of the question involved. To appreciate any profession and improve thereon, we must first learn the foundation on which it is built, for if familiarity with the foundation is lacking, the building of the necessary knowledge is at least faulty and laborious.

To treat our subject properly, let us, therefore, get at the basis of landscape gardening, considering the following questions: What is landscape gardening? What is its object? How can we appropriate it to our pleasure? How can we improve upon the present methods? and what are these methods?

Landscape gardening is an art—not necessarily a study only. I care little how much a person may know about trees and flowers, their growth, foliage and habits, if he has not the appreciation for a purely natural piece of landscape, nor the feeling and instinct to construct similar effects, he can never hope to be successful in the higher art of landscape gardening. Do not understand me to say that study and knowledge of the character of plants are not necessary; far from it, for without this knowledge the construction of a pretty landscape would be impossible, as one of the most important things is that we must picture in our minds what the effect will be, not this year, or the next, but when the trees shall have eventually come to maturity. This would of necessity be impossible without a thorough knowledge of every plant and tree used.

It cannot be too strongly emphasized that landscape gardening is an art and, like all other arts, a talent which must be exercised—not buried—to be brought to its highest state of perfection.

What is the object of landscape gardening? You may infer from what has been said that it may be practised only in the country, where unlimited space abounds; therefore, what can it mean to those who may be within the limits of a large city or who simply own an acre or two? In these days of progression man stops at nothing. He has caged the lightning of the clouds and brought it to our cities for light and transportation. Even the mighty Niagara has been bridled to man's wants. So in landscape work we must try to bring Nature's beauty right to our homes and cities. Of course, not in its entirety, any more than we could bring the waters of Niagara actually to our doors; but we must bring its powers —its Summer combination of color in foliage effect, and its berried effects of Fall, not forgetting the warm and bright Winter appearance of the various colored barks of many trees and shrubs. Take these powers and use them to relieve the monotony of bricks and mortar. In other words, let landscape gardening mean the reproduction of Nature's work where ever possible.

As we proceed with the next thought, How shall we appropriate the beauties of landscape to our pleasure and comfort? the subject begins to take a more active form. If we take a stroll along the lovely drives and walks of our famous Fairmount Park, and especially by the Wissahickon, we can get no more forcible illustration of this thought. I doubt very much if before the land for this park was taken there were more than a few hundred persons in Philadelphia who really supposed there was at command such a wealth of Nature's most costly gifts. But the land was condemned, and in course of time roads laid and paths made to interesting points; and thus was opened to thousands the opportunity for examining the beauties of Nature.

We may say, therefore, that the practical way to gain appreciation of the beauties of Nature is to open up the natural gems so that they may be appreciated with comfort and please the eye.

We now come to the more serious part of the subject—the present methods and their improvement. As stated, landscape gardening in this country is yet in its infancy, and we must, therefore, be prepared to excuse, though not overlook, the present methods; or, speaking from a purely scientific standpoint, the lack of method.

Perhaps landscape gardeners generally may not agree on this point fully, but nevertheless my experience has shown it to be a fact. Of course, there are exceptions, and happy ones, too, but as a rule, when there is anything to be done in the line of landscape work, there is absolutely no method in the undertaking.

Take, for example, you who claim appreciation for a beautiful landscape or snatches of nature, when you bought land for your farm, did it occur to you to locate your house in such a way as to make the surroundings add to the beauty of the house? Did you so locate it that from your windows you could look down over yonder meadow, just beyond the white oak, whose massive horizontal limbs stand out like individual trees, to that lazy stream where the cattle enjoy the cool of the waters and the shade from the trees by the water side? Did you use the same care that you did when you considered the housing of the cattle, the land which you had put in wheat or that which you would clear for timber or fencing?

Take another illustration: A gentleman purchases ten acres to build a country home, a place where he may rest from the toil and tumult of city life and business. When he is contemplating the building of his home, he has some idea of the style and character of the structure he intends to erect, so he instructs his architect to rough out plans on the line of his suggestions. The architect, with due consideration and study, works these suggestions into such form that they will agree with one another to give convenience, comfort and beauty, and his sketches, with possibly some minor alterations, are adopted. Now mark the continuation of the method. Bids are requested, and after healthy competition the work is awarded and the building begun. Let us suppose that in the course of construction the owner suggests some alterations that will materially interfere with the architectural beauty of the whole structure. Is it likely to be done? I venture to say no! The architect explains the result of such work as his experience foretells it, and the suggestions are most likely dropped.

Now here we have a man who, having mastered his profession, apparently, is practically in authority, and his work is carried out according to well laid plans, methodically.

What of the landscape work? What method here? As remarked, there are exceptions, but as a rule there is a confusion of ideas, including perhaps those of the owner, his friends, the gardener, the grader and the one supplying or planting the trees. Each may have good ideas regarding the parts of the landscape work with which he has to deal, and could possibly outline the whole to some degree, but it is hardly possible that each may have his ideas carried out, and yet make a harmonious landscape.

The roads and grading have a direct bearing on the rest of the ground, yet ideas at variance may lead a road up to the residence with a startling directness, instead of gracefully and easily approaching by natural lines and curves. And the contours of the grading, will they appear as in beautiful nature, or as a bare, level plain—or in the other extreme, like the fortification of a battle-field?

In planting will there be any consideration to leave a long, open vista to that large, grand old apple tree down on the hillside, or to that pretty little pond with the willows dipping gracefully in the water? Then, again, from the front of the place, looking toward the house, will there be appreciation of the possibilities of a long vista over the green lawn, with the limbs of that massive oak throwing shadows in the sun and inviting you to stroll over to that pretty Summer house, whose roof may be seen peeping over the tops of the beech trees? Will there be method in considering these questions? A definite idea or harmonious collection of them from first to last?

Unless one has a great deal of leisure at command the thought necessary for the details cannot be given, any more than the details of a house could be worked out. A man has a point of law, he takes it to his lawyer; when he desires medical advice he goes to a physician; when he is ready to build a house he seeks his architect, and also so when he purchases his land, he desires to lay it out properly and secures a landscape gardener. In each case the ideas or advice should be carried to completion. The work of the architect and the work of the landscape gardener being similar, in that the work should fully accord, it is well that they should go over the land together to select a possible site for a house, the architect with a view to architectural beauty and the landscape gardener with a view to landscape effect, that the results of both may fully accord with natural surroundings.

The site being selected, and the plans of the house fully accepted, the landscape gardener turns his attention to the most natural way to secure access to the surrounding thoroughfare and conveniences of travel. Straight lines will be the shortest distances to these points, but will it accord with the architecture or will it necessitate an enormous amount of grading, or perhaps it will cut up the entire lawn in such a way that it will be impossible to make any other effect than a stiff, geometrical net work of straight lines.

With limited time it is impossible to point out but a very few suggestions that must be considered. While some reasons may exist for a curved road, such as an easy grade or the avoidance of some particular large trees, it may be just as far wrong as the straight one. At times it is even correct to make a curve without an immediate apparent reason, such as the directing of the eye to some particular view of the distance. It is here that the landscape gardener must make an excuse for the curve. Here in this spot is the place for some mass effect or foliage of flowering plants, or possibly a collection of some specimen and rare evergreens, as his fancy suggests.

The roadways being laid out, he turns his attention to such paths as may be necessary for convenience. Here again his art is called into play. Unsightly buildings, places of domestic work, etc., are to be screened. Effects are here to be constructed that will, in a measure, turn these paths of necessity into pleasant and cheerful walks. At other times it is advisable to arrange walks other than those of convenience to points of particular interest—the croquet and tennis courts and points looking out to views of interest and beauty off the ground, or possibly to a secluded spot where a Summer house may be erected. But in such cases it is usually unwise to have other paths than the natural turf, as it is apparent in bad weather there is no necessity or desire to reach these spots, and in favorable weather there will be no necessity for artificial walks.

In the planting and location of trees he must naturally be guided by the character and location of the land under consideration. Here a knowledge of the nature, growth and habit of the tree is absolutely necessary. Few trees that grow naturally in a low, moist situation will grow well on high and dry land, and the same may be said of those that grow on high lands that they will not thrive in very wet situations, though, even to this rule there are many exceptions. Trees of slow growth and habit are not to be planted back of others that at maturity will be much larger, even though they are of the same size when planted.

In planting, the points of view, vistas, lawn surface and specimen tree must receive deep consideration to secure desirable effects. All these things are details, making up one harmonious subject. Is not method essential?

Passing rapidly over the planting let us suppose that the original work is finished. The system does not end here. The ideas must be maintained. A practical man is secure to keep the roads in order, dead wood trimmed from the planting and to note and replace any tree or shrub that may have died. A new road after construction is not necessarily or usually perfect. No matter how well it may have been made, regular attention is necessary. A few loose stones here and there will eventually result in a bad spot in the road, unless it receives immediate attention. It must be kept well shaped and well rolled, and eventually the labor expended will be repaid by a good hard and clean drive.

In the planting of trees it has been found necessary to prune them to a greater or less degree; and after they have made new growth all the dead spurs and weak wood should be again pruned away. This care will frequently save the life of a tree that is somewhat backward, and is beneficial by lessening the demand of the roots, which have not yet recovered from the transplanting. And here it may be well to call your attention to the struggle a tree must make after transplanting. It may be well compared to an operation upon a human being. If it becomes necessary to amputate a person's arm, no matter how well and strong the person may be, the operation is attended with great danger. So with a tree, it is really an operation, removing temporarily the sustaining power.

It is reasonable to suppose that some of the stock will die, and as each tree and shrub was planted for some particular use or effect, care must be taken to have them replaced with exactly the same as those used at first, so that the trees will eventually work out the picture that was in the mind of the landscape gardener when he first planned the place.

There is great room for improvement in the planting along the city streets, and a practical knowledge of trees with a definite plan is of equally great importance, yet it is rarely met with. Trees are planted promiscuously, two or three here and several there, while a combined effort of property owners would bring beautiful, shaded streets, of uniform or harmonious growth.

The choice of trees is important, as may be seen by the ill effects of the surface-rooting silver maple which usually in course of time raise the pavements; or by the short-lived poplar, whose rapid growth tempts the tree purner to offer his services year after year, whether needed or not. And the pruning, such as it is, is nearly always open to criticism. The limbs are frequently improperly sawn away leaving short stumps, which decay and finally weaken and destroy the whole tree. Tall growing trees are planted on the sunny side of shorter ones, making one side of the latter weak and sickly. Many are left unguarded and have their barks stripped by horses. This, however, might not result fatally, were the trees afterward cared for, the wounds regularly painted until healed over.

It is a grevious thing to have a weakness, but it is a blessing to know of that weakness so that we may profit by past experience and make such improvement as may lie in our power. Therefore, I repeat that with a few exceptions, which only prove the rule, we seldom see any positive method in our landscape work.

It may possibly appear that this discourse does not fully answer the question suggested by its title, but my endeavor has been to show that landscape work of all kinds must be put on a firm basis first of all, upon which everything will naturally develop by study and artistic instinct.

The tardy improvements in what are called "present methods" are solely due to the lack of system and broad conceptions, coupled with the absence of artistic instinct. When these obstacles are removed, landscape gardening will surely reach as high a plane in this country as in any other.

Publishers' Announcement.

COMMERCIAL HOME GROUNDS.

Arrangement, Planting and Maintenance.

The publishers of the FLORISTS' EXCHANGE, firm in the belief that the home surroundings of America's multitudes can only be made beautiful through force of example, and that these examples must be set and maintained by the florists and nurserymen themselves and, further, that the more attractive and numerous these examples become the more prosperous will be the business of the industries this paper represents, are now making arrangements, and expect shortly to publish the terms and conditions of a

Commercial Home Grounds Competition, open to all subscribers commercially interested, for which liberal prizes will be offered. It is to the best interests of florists and local nurserymen themselves to give an object lesson to the outside world by making the surroundings of their homes, greenhouses and nurseries beautiful so far as the planning, arrangement, planting and maintenance are concerned. And it is this spirit which the FLORISTS' EXCHANGE will endeavor to foster by means of the institution of an annual competition, the announcement of the forthcoming inauguration of which we now make, and which endeavor will, we sincerely trust, meet with a hearty response.

Roses, Clematis, Rhododendrons, Etc.

ROSES.
Strong Two Year, Field Grown.
Crimson Rambler, 4 to 5 feet canes, $15. 2d size, 2 to 3 feet canes, $8 per 100.
Yellow Rambler, $8 per 100.
Hybrid Perpetual, in fine assortment $10 per 100.
Wichuraiana, Japan Creeping Rose, $6 per 100.
Wichuraiana Hybrids, 4 varieties, $8 per 100.
Tree Roses, fine heads, $30 per 100.
Liberty, New Red Forcing Rose, from 2½ in. pots, 12 plants at 60c. each; 25 at 50c. each; 50 at 30c. each; 100 at 25c. each.
General Assortment of Everblooming Roses, from 2½ in. pots $3 per 100; $25 per 1000.

CARNATIONS.
Rooted Cuttings.
Mrs. Thomas Lawson, $14 per 100.
The Marquis..... $10 "
Ethel Crocker..... $10 "
Olympia..... $12 "

Rhododendrons. Large stock of best hardy varieties, 15 in. to 2 ft. high, clean, bright foliage and well set with buds, $45 to $150 per 100.
Azalea Mollis. Strong bushy plants well set with flower buds, $35 per 100.
Hydrangea Paniculata Grandiflora. 2½ to 3 feet, $10 a 100. Tree form, 4 to 5 ft., $25 a 100.
Fruit and Ornamental Trees, Shrubs, Etc., in large assortment.
THE STORRS & HARRISON CO., - - Painesville, Ohio.

ROSE BUSHES
FIELD-GROWN, OWN ROOTS, FIRST-CLASS PLANTS.
THIRD AND LAST CALL These are the Sort of PRICES that TALK and Get Your Order, even if you do not particularly need the plants at this time.
Many of the varieties are extra fine plants, notably Bride, Henriettes, Climbing Wootton, Climbing Kaiserin, Hermosa, Soupert, and all of the Hybrids. Our La France, listed at $6.00 and $7.50 per 100, are worth $10.00. An average assortment of these plants will weigh about 300 pounds to the thousand; all Hybrids, more. You can well afford to order by express, considering low prices. We reach most distant points in six days.
Not Less than 10 of a Variety and Cash with Order.
BE QUICK OR THE OTHER FELLOW WILL GET THEM.
$5.00 PER 100. Baron de Rothschild, Soupert, Devoniensis, Duchess de Brabant, Duchess of Albany (rather light), Earl of Dufferin, Fisher Holmes, Hermosa XXX, Homer, John Hopper, La France, Dinsmore, Beauty of Glazeowood, White Moss, White Bath, Dr. Grill, Jas. Nebannand, Lord and Lady Penzance, Sweet Briars, Marie Ducher, Mignonette, Parquerette, Mrs. J. Laing, Marie Lambert, Snowflake, Mme. Bravy, Queen Scarlet, Safrano, Reine Marie Henriette, Souv. de Wootton, Waban, White Rambler, White La France.
JAPANESE IRIS Best named sorts, $5.00 per 100.
$6.00 PER 100. Anne de Diesbach, Belle Siebrecht, Bride, Capt. Christy, Crimson Rambler, General Jacq., La France, Louis Van Houtte, Magna Charta, M. P. Wilder, Margaret Dickson, Paul Neyron, Prince Camille de Rohan, Pres. Carnot, Ulrich Brunner, Folkstone, Wichuraiana, Yellow Rambler.
$7 50 PER 100. La France, Cecile Brunner.
$10 00 PER 100. American Beauty, Climbing Wootton, Papa Goutier.
$15.00 PER 100. Kaiserin, Climbing Safrano, Marechal Niel XXX.
$25.00 PER 100. Climbing Kaiserin.

The Question Box

(77) **Greenhouse Heating.**—How many 1-inch steam pipes will it take to heat a greenhouse, 25x150 and 14 feet pitch; house runs east and west, three-quarter span, long span to the south. What size main will it take to feed the pipe. The main will have to go overhead to get a proper return.

What horse-power steam boiler will be required to heat the house just mentioned, and two other houses, 20x80, and 11 feet pitch, and 75 violet sash, the large house to 65 degrees, and last two to 50 degrees, with zero weather; the violet sash to have 2-inch steam pipes through them. The violet sash lie against south of said houses, and I want to do away with handling mats and also buying or making them. I was thinking of running a 1-inch steam pipe on the front and back of said sash another season. Is this practicable?

What is the best and cheapest way to build a boiler pit to keep out water which rises in every hole around in wet weather; and all my cellars are filled with water.

—Sixteen 1-inch pipes in addition to a 2½-inch main will be required for the rose house. A 30-horse power boiler will be desirable; although one slightly smaller might answer, it will be at a sacrifice of fuel and labor.

When steam is used in a violet frame there is often trouble from red spider. If the sides of the frame are well protected two 1-inch steam pipes will give the necessary heat. If the south side of the frame is low it will be well to place a narrow board on edge between the pipe and the plants. If this extends about 2 inches above the pipe it will throw the heat up toward the glass; and the danger of injury to the plants will be lessened.

A water-proof boiler pit can be made by laying up brick walls in cement and then plastering the inside with cement. This should be done during the Summer, when there will be no trouble from water until the cement has had time to set. Another way is to excavate 9 inches deeper and 18 inches wider than the pit is to be and build up a wall of grout. Prepare this by thoroughly mixing one part of Portland cement, two parts of sharp, coarse gravel, and two parts of broken stone, or small cobbles about the size of a hen's egg. Then add water enough to barely moisten the mass and give it another mixing. Place enough to make 8 inches, after it is compacted, in the bottom of the excavation and give it a thorough packing. Make a framework of boards to hold the sides, in place and then fill in the grout and compact as before. After a day or two take out the framework and plaster the sides and bottom, using one part of Portland cement and two parts of sifted shark sand. If in a dry place, or where the sun can strike it, there is danger that it may dry out too quickly, and if it begins to becomes white within a week it should be frequently wet down.

(78) **Compost.**—I want to make my compost pile for roses soon. Will you tell me whether the following compost is right or not: To 45 one-horse cartloads of sod add 10 cartloads of pure cow manure, 200 pounds pure bone, 150 pounds tobacco dust, 10 bushels of stove lime. Would green manure hurt? What is the best soil to make a compost of, for Bridesmaid and Perle roses—R. L. I.

—The proportions mentioned will make a good compost for roses, if the sods contain the right kind of clay. There would be no objection to doubling the amount of ground bone if it is free from acid; and the addition of 10 or 15 bushels of wood ashes would also be desirable. I would prefer not to add the tobacco dust until the soil is placed on the benches. The proportion of manure is fully large enough, as it is generally best not to use more than one-fifth or even one-sixth as much manure as sods for the compost; and after the plants have become established supply the plant food needed, either in top dressings or liquid manure. —L. R. T.

I have a greenhouse 17x100 feet and 9 feet to ridge; double boarded, paper between; butted glass running east and west. I want to heat it with hot water and have on hand 1,050 feet of 1-inch, and 300 feet of 1¼-inch pipe. Will this amount of pipe be sufficient to maintain a temperature of 60 degrees in zero weather?—SUBSCRIBER.

—One-inch pipe is rather small for use in a greenhouse, especially when the house is more than 50 feet long, and unless the boiler is well below the surface, and overhead flow pipes are employed, it will be better to use the small pipe for other purposes and put in 2-inch pipe for the coils. If the 1-inch pipe is to be used there will still be need for about 250 square feet of radiation more than will be furnished by the pipe of both sizes on hand, and I would suggest that four 2-inch overhead flow pipes be put in and the return pipes grouped into four coils. If three coils can be used to better advantage than four put in three 2½-inch overhead flows to connect with the corresponding number of coils. Unless the boiler is sunken below the surface it will probably be necessary to use a closed system, but if a good circulation can be secured it will be best to have an open expansion tank.—L. R. T.

SPECIAL NOTICE
The unprecedented demand for the new and beautiful
ROSE LIBERTY
Has made it necessary for us to announce all stock for March delivery has been sold and orders hereafter will be taken and filled in their order of receipt, until further notice. To be sure of any of this stock for April and May delivery it will be necessary to order early. One quarter of the stock is controlled by us and no one has authority to sell in the New England States except by our permission.
Prices are as follows: Best stock grown.

GENEVIEVE LORD.

The Peerless New Pink Carnation.

IN all of our long experience we have never had a Carnation produce as many first-class, high-grade blooms to the square foot as Genevieve Lord. It blooms early and the year round. Its color is just right; "beautiful," "lovely," "exquisite," "perfectly charming," are some of the adjectives used by some of our lady customers in describing it. With all its good productiveness, size is a leading feature, large enough to put it away up front. Its grand stem is perhaps its crowning feature. What is a flower without a stem? Genevieve Lord stands up straight twelve months in the year. When you think of all this, and a non-bursting calyx thrown in for good measure, there is little left to be desired. We are pleased to announce that we can fill orders promptly after April 10th, but do not know how long we can promise this, as stock is going rapidly. To clinch matters and drive a good bargain, order at once.

Price, doz., $2.00; 100, $10.00; 1000, $75.00.

WHAT GROWERS THINK OF THE CUTTINGS.

Genevieve Lord cuttings arrived in good order.
H. DALE, BRAMPTON, ONT.

Your Genevieve Lord cuttings are the finest I have ever received of a new variety. If all others were as good I would have no kick coming.
GEO. R. GEIGER, NAZARETH, PA.

The best Carnation cuttings (Genevieve Lord) I have ever received.
A. HERRINGTON, MADISON, N. J.

Genevieve Lord cuttings arrived safely, none the worse for their long journey.
J. GAMMAGE & SONS, LONDON, ONT.

Carnation cuttings received. They are extra fine, especially the Genevieve Lord. If I can only grow them as well as they look, I will be satisfied. Next time I want good stock I will know where to send.
W. H. VANCE, WILMINGTON, DEL.

Justice as well as gratitude demands my informing you that the carnation cuttings arrived 16th inst., proving most satisfactory in every respect. I have yet to see as fine healthy a lot of plants anywhere as these, and you have insured my future orders, so long as you continue to send out this high grade of plants. These cuttings are so far superior to those received from other growers, that comparison can hardly be made, they are in a different class altogether. JAMES L. LOMERSON, Phillipsburg, N.J.

Can also furnish all of the big new ones at introducers' prices, as well as the best standard varieties. A complete list of the best new and standard **CHRYSANTHEMUMS.** Catalogue free to all applicants.

WHAT EXPERTS THINK OF THE BLOOMS.

CINCINNATI, OHIO, January 16, 1900.

MESSRS. H. WEBER & SONS, Oakland, Md.

Gentlemen:—I want to congratulate you on being the introducers of Genevieve Lord, your new pink carnation. Although I have not seen it growing, I have seen it exhibited at nearly all seasons of the year, and, taking all its good qualities into consideration, I believe it to be the best pink of its class in the market to-day. It is strictly a commercial flower, and will produce the dollars and cents. I predict for you a phenomenal sale for this carnation. Yours very truly,

[Signed] E. G. GILLETT.

H. WEBER & SONS, Oakland, Md. ST. LOUIS, Mo., January 24, 1900.

Dear Sirs:—In regard to what I think of Genevieve Lord, and what I heard spoken about it at the meeting, is this: Color just right and what is wanted and will sell. Shape and size as good, if not better, than any carnation ever sent out; very sweet; stems the best ever seen on any carnation sent out. In keeping and shipping qualities it beats any carnation that I have ever seen; as I mentioned last time in my letter to you, they looked as fresh as if they had just been cut. Yours very truly,

[Signed] E. SCHRAY, Secretary St. Louis Florists' Club.

WASHINGTON, D. C., January 12, 1900.

MESSRS. H. WEBER & SONS, Oakland, Md.

Dear Sirs:—We have handled your new carnation, Genevieve Lord, for the past year, and beg to state that it is one of the finest carnations we have ever handled. It has become very popular here in Washington, its beautiful color making it a ready seller. Together with color its most distinct points are its extra long stems and perfect, erect habit. It has a marked individuality, enabling customers to recognize it at a glance. It is one of the few new carnations that have so many good points, and we feel satisfied that it has a great future before it. It is some little trouble to educate the people up to paying $3 and $4 per dozen for carnations, but if any carnation will bring the price, it is Genevieve Lord.

[Signed] Yours very truly, J. H. SMALL & SONS.

H. WEBER & SONS, - - OAKLAND, MD.

Photography for Florists.

BY L. V. HALLOCK.

The very important part which photography is playing as an adjunct in the florist's and seedsman's business, and the imperfect work accomplished as exemplified by the specimens submitted in many instances, has suggested the idea of obtaining from a practical photographer, an exhaustive article giving valuable hints as to how photographing can best be done in order that the reproductions will show to greatest advantage; also to demonstrate that a skilled commercial photographer is not a *sine qua non* in the operation, for with some knowledge of photography nearly as good work as can be turned out by the artist photographer can be produced by the enthusiastic amateur endowed with the necessary faculties of patience and perseverance. Therefore, in order to assist the latter to a clearer insight into the subject we subjoin the undernoted article by Mr. L. V. Hallock, who has had much experience in the photographing of flowers, plants, greenhouse interiors and exteriors, etc., and whose work in this line is of the highest caliber.

How often it is that a grower has a specially fine specimen plant or flower and wishes that he could photograph it, either to insert in a catalogue or to use for future reference. Often in such a case, before he could send for a photographer, the flower would be past its best. Again the photographing of flowers is out of the line of the general photographer; it is a distinct branch by itself, and to do the work well one must have a taste for flowers and know something of their habits.

CAMERAS.

Of course, it is understood that the more high-priced the camera the better the work to be expected—all other things being equal—but it is not absolutely necessary that a costly instrument be used, as passable work can be done with the ordinary 5 to 7 long focus folding cameras, fitted with rectilinear lens. The 5 by 7 size is recommended, as it gives the engraver a chance to reduce the picture in making the half tone; this is desirable, as any defects in the photograph will be thereby lessened instead of increased, as would be the case were the picture taken on a small plate and then had to be enlarged—something often necessary. A long focus camera is preferable, as it allows the taking of a single flower "life size," and to do this the bellows must be drawn out much further than the focal length of the lens.

THE BACKGROUND.

The color of the background depends on the color of the subject to be photographed. For light-colored flowers a medium shade of gray is better than black, especially if the picture is to be reproduced in half tone, for the reason that, in order that the printer may get the background "solid," he has to carry so much ink and pressure that in a short time the cut is filled up, thus destroying the fine work. For dark flowers use a light shade of gray. Always have the background far enough in the rear of the subject that no shadows are cast on it. It is sometimes possible, however, to have the flowers close against the background and still not cast shadows that will mar the effectiveness of the finished print; this must be governed by the lighting. As a background for palms and large plants, if nothing else is available, a large piece of cotton cloth will be found satisfactory; but for single specimens we prefer felt. When photographing plants out-of-doors try to avoid, as far as possible, the background of other plants, because they often blend one with the other, detracting, in a measure, from the form of the one it is desired to show.

TIME AND PLACE TO DO THE WORK.

Never photograph flowers or the interiors of greenhouses in bright sunlight. This is the fatal mistake which amateurs too often make, as, to them, it lessens the time of exposure, thus decreasing the possibility of blurred pictures. Always take single blooms or plants in the shade; by this is meant any bright light out of the direct rays of the sun. A north light is preferable, as it is the most steady.

Chrysanthemums Photographed by Welsbach Light.
(Reproduced by courtesy of "Photo-Beacon.")

PHOTOGRAPHING GREENHOUSE INTERIORS.

In photographing the interior of greenhouses always choose a cloudy day if possible. Otherwise do it early in the morning, or late in the afternoon, and always be sure to have the sun at the back or side; never in front.

TAKING SINGLE FLOWERS.

To photograph a single carnation to show the strength of the stem and the character of the flower and calyx, take a bottle and place the stem of the flower in it, cutting off the support in the finished print, unless it is desired to show the full length of the stem also. Arrange the flower so as to show it to best advantage; if it will not retain the position desired, hold it in place and fill the bottle with sand. In arranging, do not touch the part you wish shifted, but some other part, until the coveted end is attained. If the flower still persists in moving tie a fine thread to it, as near the bloom as possible, and then fasten the thread to a tack in the background, but be sure that the flower is in line with the tack and string so as to hide these from view. In arranging bear in mind that the flower is being photographed for record rather than pictorial effect; still, the latter should not be entirely overlooked. A rather careless arrangement, too, tends to bring out the beauty of the flower better than a rigid setting.

To photograph a single flower face on, take a piece of rather thick greenhouse glass—the larger the better—have a hole about three-quarters of an inch in diameter bored in the center of it, and add some arrangement so that it will stand up perfectly straight. Stick the stem and calyx through the hole, leaving only the petals of the flower showing; fasten the stem straight out, possibly, as above explained, with a string and a tack to the background. The better thing to do is to cut off the stem, and then if the flower wiggles, wrap some paper around the calyx until it becomes steady. Focus on a point midway between the center and the top of the flower, and see that there are no reflections from the glass; i. e., that nothing can be seen on the ground glass but the flower and the background. Place the latter sufficiently far behind the glass that no shadows fall on it. If it does not cover the entire plate get a larger background; never try to "make it do." Always remember to have the light come from the side.

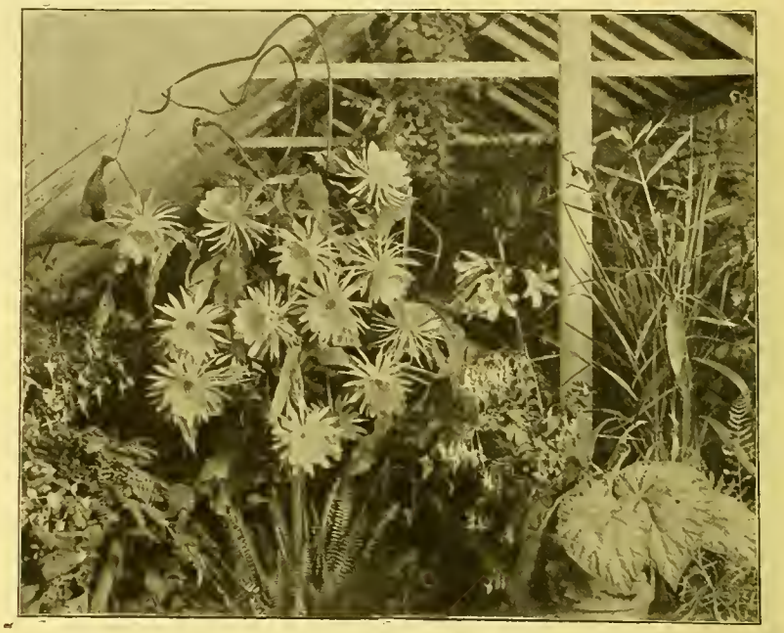
Instead of glass, wood may be used, but the objection to wood is that the lighting will have to come from directly in front, resulting in a flat negative, in order to avoid shadows of the flower.

FOCUSING.

An explanation of how to focus is somewhat difficult. Focus so that the flower covers as much of the ground glass as possible. Take time and do not give up until satisfied the result will be perfect. Have the light fall on the flower at an angle of about 45 degrees, and from the side. If the flower is light in color, with dark foliage, the latter may be brought out better, without the flower having to suffer for it, by placing a lamp (bicycle lamp preferably) so that its rays shine on the lower half of the background, but so arranged that they do not play on the foliage itself.

PLATES AND PRINTING.

Use isochromatic plates, medium in Summer, instantaneous in Winter. If the color of the flower is yellow or violet use a color screen in addition to the isochromatic plates. Stop the lens down to 32 or 64, and expose for the shadows in the flower; the high lights will take care of themselves. An actinometer will give the correct exposure. A lengthy washing after development tends to bring out detail. Print on Special Portrait Velox paper and manipulate according to the directions furnished with each package, with the following additions: After the prints are thoroughly washed and freed from hypo, remove them to a bath of one drachm of formaldehyde to 16 ounces of water—a solution to prevent the prints from adhering to the ferrotype plate. It does not matter how long the prints remain in this. From this bath remove them without further draining or rinsing to the tray containing the ferrotype plate and "squeegee" in the usual manner. This gives a finished print that cannot be excelled.



Night Blooming Cereus—Photographed by Flashlight

LEAVE RETOUCHING ALONE.

Do not meddle with retouching. If you think it is necessary take the negative to an expert in that line, but as photographs of flowers for reproduction in the trade press or catalogues are taken for "record," do not let him tamper with the flower itself (confine his work to spots on the negative, etc.) as, with a few touches, he can make the flower appear different from what it really is in life, and so, of course, spoil the purpose of the photograph.

TAKING BUNCHES OF FLOWERS.

In photographing a bunch of flowers use a long, narrow vase and an odd number of blooms, 3, 5, 7, or 9. An even number is difficult of arrangement and a greater number of blooms than 9, except in rare instances, will appear too crowded to be of any practical advantage. Arrange the flower to show its various parts—one placed face on, one side, one back, etc; of course, having in mind the remarks regarding apparent carelessness in the arrangement. Focus with a medium opening and stop down until the picture is sharp all over, and expose accordingly.

For the interior of greenhouses, focus to get the middle sharp, then stop down to the smallest opening and give ample time; this can be done, as there is no chance of movement with the ventilators all closed. For this work it is desirable to have a good wide-angle lens—a No. 5, series IV., Bausch & Lomb, as it defines the near objects as well as the distant ones.

THE USE OF THE FLASHLIGHT.

The flashlight is a useful adjunct in photographing any of the interior

arrangements of the boiler house or stoke holes, or some of the night-blooming flowers. We reproduce a picture of a night-blooming cereus, with 13 open flowers, taken by flashlight; and the plant and surroundings are as fully timed as if made in daylight

There are several kinds of flash compounds used, most of them explosive mixtures, and great care must be exercised in the use of them. They are usually spread on a suitable support and fired by means of a fuse. We much prefer the storage flashlamp, as with it the light can better be held under control; and the flash can be prolonged several seconds if necessary. The lamp used by the writer is the Prosh storage flashlamp. Be sure to use only pure magnesium powder in any storage flashlamp, or serious accidents may follow. One may as well fill the reservoir with gun powder as with any of the explosive compounds, which only should be used on an open support.

In making a flashlight exposure, be sure to have the source of light at the side or back and above the camera so as not to have the flame strike the lens. Our experience has been that it is best to place the flashlight above and a little at one side of the camera.

DEVELOPERS.

This is a debated question and hard to solve. Every maker of plates has his special formula, and there are no two alike. Then again, many old workers have their own pet developer. We belong to the latter class, and for those who wish to try making their own we give the formula below, as follows:

No 1 solution:

Water,	64 ounces
Sulphite of soda granular,	4 onnces

Dissolve and make slightly acid with sulphuric acid, C. P., adding a few drops at a time, until a piece of blue litmus paper turns slightly red, then add

Eikonogen,	320 grains
Hydrochinone,	320 grains

No. 2 solution:

Water,	64 ounces
Sulphite of soda crystals,	2 ounces
Carbonate of potash,	8 ounces

It is best to keep the developer in small bottles, say 4 ounces, filled full and well corked. In this way it will keep until used up, but if left in a large bottle, where it is only used occasionally after the bottle is partly empty and allowed to stand for some time, it will oxidize and spoil, owing to contact with the atmosphere.

For use take equal parts of No. 1 and No. 2, adding at the time about one drop to the ounce of developer of 10 per cent. solution of bromide of potassium. This is to act as a restrainer and to keep the shadows clear.

If a negative of more contrast is desired use more of No. 1 than of No. 2, and if a plate is known to be over-exposed it is better to take half the quantity of No. 2—the accelerator; at the same time weaken the developer still more by adding about one-half the quantity of water. If the plate is then found to have had a normal exposure, or has been undertimed, pour off the developer and flow the plate with water while a new developer is being made up. When one has a number of plates to develop it is a good plan to use part new and part old developer.

Developers, all ready for use, can be had at any of the stock houses, either in solution or dry form, so that all that is necessary to be done is to add the required amount of water.

The cheapest way is to get the chemicals and mix your own developer.

It may be well here to state that any of the developers work well when properly handled, and we would strongly advise the beginner to choose one developer and stick to it until mastered. The whole secret lies in giving the plate the right exposure, and if this is done any developer will work well.

We would add here that the best negative is one of medium density, that will give a brilliant print full of detail. This should be aimed at more than one of very strong contrasts, which are of no use for half-tone work.

PRINTING.

The kind of paper to print on depends on the use to be made of the picture. If for half-tone plates there is nothing as good as Solio paper, or Special Portrait Velox. They are easy to work, and by squeegeeing the finished prints on ferrotype plates they will come off with a smooth, glossy surface when dry—just what is needed by the photo engraver. If one wants prints for the artistic effect, and that are as permanent as a steel engraving, there is no paper that can compare with Platinotype.

PANORAMIC VIEWS.

If at any time it is wished to make a photograph of the outside of a greenhouse, or a number of houses, and it is impossible to get them all on one plate, this can be overcome first by having the camera level, which is quite essential, and focusing carefully, beginning at one end of the view. After making the first exposure note carefully the object that is on the right of the picture (if you begin at the left end), then carefully, without moving the tripod, but by loosening the screw, turn the camera until the point of view that was on one side of the ground glass is transferred to the other, allowing one to lap over the other about one-half an inch. Continue the operation until all the field desired in the picture is taken. Then after printing they can be cut and joined in one continuous picture. With a little skill, by being careful to have the negatives and prints as near the same density and color as possible, and by scraping the edges of the prints thin, and allowing them to overlap slightly, one would scarcely notice where they were joined. The reason for lapping instead of butting the prints is that on drying butted prints would draw apart slightly, leaving a white line; whereas lapped prints would scarcely show the joining if the edges were scraped thin. The view of greenhouse establishment shown on this page, was taken in the way just described.

Excellent photographs can be taken by Welsbach lights, as the accompanying picture of chrysanthemums plainly shows. The flowers were white, with yellow center. One lamp was used at a distance of 3 feet from the subject; the lens was stopped to 8 and the exposure 5 minutes on Stanley plate.

A Panoramic View of Greenhouse Establishment—Taken in different parts with ordinary Camera, then joined.

THE EXPERIMENT STATIONS.

NOTES ON VARIOUS PLANT DISEASES. Bulletin 164, New York Agricultural Experiment Station, Geneva. By Prof. F. C. Stewart.—Treats upon a Bacterial Rot of Onions; Powdery Mildew on Field-grown Cucumbers; Dodder on Cucumbers Under Glass; Spot on Fruit of Baldwin Apple; a Fusarium Leaf Spot of Carnations, and Chætomium Contortum on Barley Seedlings.

SALT BUSHES. Farmers' Bulletin 108 U. S. Department of Agriculture, Washington, D. C.—This plant will grow on strong alkaline lands, and is said to be useful as forage.

BUR, OR GLOBE, ARTICHOKES. Circular 22, Division of Botany, U. S. Department of Agriculture.—Deals with cultivation, varieties and methods of cooking.

GRASSES AND FORAGE PLANTS.—Bulletin 2, Vol. XI, University of Tennessee, Knoxville, Tenn. Treats on domesticated grasses, which are fully described and illustrated; also leguminous plants, and meadows and wild pastures.

SCALE INSECTS, San José and other species.—Bulletin No. 4, Vol. X, of same station. Furnishes descriptions and illustrations; also suggests remedial measures.

PERSIMMONS.—Bulletin No. 1, Vol. XI, same station. Illustrates and describes the best varieties; also furnishes cultural requirements, and discusses the commercial aspect of this fruit.

THE APPLE IN NORTH CAROLINA.—Bulletin 149, North Carolina Agricultural Experiment Station, Raleigh, N. C. A bulletin of practical information for the apple growers of the State.

THE HOME VEGETABLE GARDEN AND ITS PESTS.—Bulletin 132, same station.

RICE CULTURE in the United States.—Bulletin 22, Division of Botany, United States Department of Agriculture, Washington, D. C.

CULTIVATION OF THE PEACH TREE.—Bulletin 120, same station; including the peach tree and its parasites; the planting, pruning and cultivation of the peach.

SMOOTH BROME GRASS.—Circular No. 18, Division of Agrostology, Department of Agriculture, Washington, D. C. This grass is valuable alike for hay and pasturage. It has remarkable drought resisting qualities, and is the most suitable grass yet introduced for the dry regions of the West and Northwest.

SEED AND SOIL TREATMENT AND SPRAY CALENDAR FOR INSECT PESTS AND PLANT DISEASES; Bulletin 102, Ohio Experiment Station, Wooster, O.

HOME MIXING OF FERTILIZERS; Bulletin 100, same station.

BOOKS RECEIVED.

HOT-WATER HEATING, STEAM AND GAS FITTING. ACETYLENE, HOW Generated and Used. By James J. Lawler and George F. Hanchett. Publishers the Excelsior Publishing House, 8 Murray street, New York. A knowledge of the fundamental principles of heating, both by steam and hot water, fitting, etc., forms an essential part of the education of every greenhouse owner. In this work the authors present the subject in a popular style, divested of all scientific technicalities, thus enabling the average mechanic to familiarize himself with and put into actual practice the latest and best methods. A chapter is devoted to greenhouse or conservatory heating by hot-water circulation. The book is profusely illustrated, with serviceable diagrams, and contains 320 pages. Price $2.

Publishers' Announcement.

PRIZE PHOTOGRAPHIC COMPETITION.

The publishers of the FLORISTS' EXCHANGE offer special inducements in the endeavor to encourage the practice of the art of photography, as relating to their industry, among its readers, with the aim that this may lead to a more thorough understanding of what constitutes desirable photographs for reproduction, either in the trade press, catalogues, or for advertising purposes generally.

The competition herewith inaugurated will be open for the five months of **May, June, July, August and September**, and the awards will be made at the close of each month on the pictures submitted during that month.

The Prizes For that photograph which shall be adjudged the best received during the month of May, a prize of **$5.00 in cash** (or $6.00 in books, at winner's option) will be paid. For all other photographs received and retained, prizes of 50 cents and $1.00 each will be paid, according to their merit. In the competitions of June, July, August and Sept. similar awards will be made.

The Conditions The months named comprise the open or outdoor season, hence preference will be given to pictures of specimen Shade, Ornamental and Flowering Trees and Shrubs, Climbing Vines, Hardy Herbaceous Plants, and outdoor planting generally. Other factors being equal, sharpness of finish and clearness of detail will decide the order of merit.

Size of pictures submitted should be not less than 4x5; smaller sizes, however, will not be barred. This competition is open to every subscriber to the FLORISTS' EXCHANGE in good standing, and all photographs submitted must be of their own unassisted taking; the mechanical portion, however, may be done by professionals.

Competitors must indorse name and full particulars as to size, locality, etc. of subject and date taken, on the back of all photographs, and these must be most carefully packed so as to avoid cracking or breakage in the mail.

The FLORISTS' EXCHANGE to reserve all rights to all such photographs as the publishers may award prizes to; others will be returned if accompanied by sufficient stamps to pay postage. Photos may be taken wherever a subject presents itself.

The publishers also reserve the right to withhold the first prize should none of the subjects offered be deemed worthy thereof. Address all communications,

PHOTOGRAPHIC COMPETITION,

The Florists' Exchange, Rose and Duane Streets, New York.

Easter Prospects.

That the supply of plants and flowrse for Easter for the New York market will be ample for all demand there is no doubt. Cut lilies might fall a little short, at least there will be considerably fewer than growers in this neighborhood intended, for out of all the Bermuda bulbs planted at the least calculation 40 per cent. have failed to produce flowers. Whether lilies will actually be scarce or not in this city is hard to determine, as our Connecticut friends have got such a habit of sending in a few carloads just previous to Easter, and we do not know how many they have in store this year.

Next to lilies Crimson Rambler roses are the most important, and we do not believe there has ever been a year when these were so plentiful or in such fine condition as they are this year. Of all the forms they are trained to none is so beautiful as those allowed to grow in bush form, and that growers have already realized this is apparent by the great number grown in this way. Hybrid roses, also, are plentiful. The leading varieties grown are Brunner, Rothschild and Magna Charta. These can always be depended upon, both for coming in when wanted and for satisfactory colors for Easter time.

Hydrangeas are probably not so plentiful as last year, but spiræas are more so. Azaleas of some varieties have been hard to hold back (especially the larger specimens), and the supply in for Easter will probably be early disposed of.

Dutch hyacinths are much below the average in quality, and will no doubt have to be sold cheaper than is usual to clear out. Ericas are getting more popular all the time with plant buyers, and those having stock in good condition will find no trouble in disposing of it.

Wistaria is not being forced much this year; but of lilac, bottle brush, acacias and genistas there will be plenty on hand.

Among Growers.

C. Woerner, grower and manager for Mrs. P. B. Meissner, Clarkson street, Flatbush, has the greenhouses filled to overflowing with a lot of seasonable stock. Pans of Boston fern are to be seen in quantity, as also is a lot of well furnished fern balls. In flowering plants there is a fine collection of rhododendrons, azaleas, genistas and spiræas that will be at their best for Easter time. A house of h. p. roses is in good shape; every plant is nicely budded, and they are a clean, well-grown lot. Longiflorum lilies are also in good condition; Bermuda grown bulbs of the same, however, have proved very unsatisfactory, 50 per cent. of them being no good. Pandanus utilis and Dracæna indivisa are grown in large quantities here; of the latter there is an excellent batch of two-year-old stock that is of extraordinary size and vigor. Kentias and arecas are also seen in numbers, and as the majority are from seed sown on the place they are to be had in all stages of growth. Some of this home-grown stock that has already become large enough for decorative purposes is, through being grown cool, particularly stocky and well furnished.

Chas. Zeller & Son, as usual, have a choice line of flowering plants that will be eagerly sought after by Easter buyers. Genistas in different sizes are particularly good, being a mass of yellow buds. Acacia paradoxa is in the same splendid condition, medium-sized plants especially showing elegance in form and freedom in blooming. The hydrangeas are coming along in a cool house, and will be just right when wanted; no signs of undue forcing are displayed, short-jointed plants, stocky, with leaves clear to the rim of the pot, and every plant showing from seven to ten cymes of bloom. The stock of ericas is rather limited, but they are good-sized plants and a sheet of bloom. There are about a thousand pots of Japan longiflorum lilies, and we are safe in saying every plant will be in flower at Easter time. A batch of the new spiræa, S. superba, is well filled with flower heads; this variety is much more expensive than the old one, but the extra size and quality of the flower will create a demand for it when once seen. Azaleas are in various sizes, and the varieties are of the best. A bench of Lemoine's new deutzia is also going to be about right, and is fine as a white plant for basket work. Of bulbous stock there is a grand collection. Special attention has been given to the potting of the bulbs in pots of three or six bulbs together, this mode having proved to be the most in favor among Easter buyers. Besides the excellent stock of palms, etc., there is a bench of pot-grown carnations in full flower and bud, among them being such kinds as Mrs. G. M. Bradt, Mrs Frances Joost, Cerise Queen and others.

Anton Schultheis, College Point, N. Y., has his houses replete with choice Easter plants. Here we find the Crimson Rambler and h. p. roses done as near to perfection as possible. The Ramblers are grown to many different forms, but all are alike well filled with flower buds. Some are in natural bush form, others trained to the shape of baskets, fans, wreaths, etc. The Rothschild, Brunner and moss roses, in boxes, are exceptionally thrifty and full of buds. Ericas are in several varieties and all are in fine condition. E. Cavendishiana, with its bright yellow blossoms, is in grand form; E. mediterranea, E. transluscens and E. melanthera are also all of them full of flowers, and are certainly among the very choicest of flowering plants. Genistas are on hand in several different sizes, and Acacia paradoxa is represented by a lot of splendid plants about 5 feet high. All are well filled with buds, and are of symmetrical form. The stock of azaleas, rhododendron and potted lilac is extremely large and in good order. There are also 5,000 Japan longiflorum lilies, clean and budded all right for Easter. Hydrangeas are mostly of the larger size, and many very fine specimens are to be seen among them. Spiræas and metrosideros (bottle brush) are also grown in quantity, besides which are thousands of lily of the valley, hyacinths, tulips and daffodils.

Mr. Schultheis has lately had his range of glass strung with wire and electric light supplied; this does away with the night men carrying kerosene lamps about, and is up-to-date. His recent appointment to the Board of School Commissioners was an honor unsought, but the Board is to be congratulated nevertheless.

John Scott, besides his Keap Street Greenhouses, at Brooklyn, has the three new ones, built in Flatbush last Summer, well stocked with desirable plants for Easter. At the Flatbush place the lilies and the hydrangeas are being grown. It is expected that about 10,000 blooms of the former will be cut. In the Keap Street houses there is a splendid lot of azaleas and rhododendrons—all nicely shaped plants and profusely budded. There is also an immense quantity of spiræas—the largest batch we have seen so far. The foreman, A. Kerschner, told us there were 5,000; and they will all be in bloom at Easter time. There is also a thousand pots of yellow and white marguerites in nice flower. Azalea ponticum is being forced extensively, also pans of daffodils and lily of the valley, the latter numbering 40,000 pips. A house full of genistas of a medium size is also looking especially fine.

C. E. Koch, Clarkson street, Flatbush, is making a specialty of geraniums for Easter; and his stock is in very fine condition. Dutch bulbs are grown extensively, but they have been brought along in batches; and the last of them will be gone before Easter arrives. A house full of potted marguerites is in fine shape, as also is another house filled with azaleas. Longiflorum lilies are coming in all right so is several benches of spiræas. Hydrangeas are not forced for Easter, but there is quite a stock of them grown for use later in the season.

H. C. Steinhoff, Hudson Boulevard, Jersey City, has several houses of pot roses that are in excellent condition. The majority of them are of the Crimson Rambler variety, and although several different modes of training have been employed, those allowed to take the regular bush form are thought by Mr. Steinhoff to make the finest looking plants. There are somewhat over 2,000 of the Rambler, and they range in size from 2½ to about 6 feet in height. They have all budded very freely, and a finer looking lot of roses would be very hard to find. About 15,000 pots of lilies will be ready for Easter, also a magnificent stock of hydrangeas; these are particularly good. After the flower buds were formed they were all given a shift into larger-sized pots. This method has proved to give

Galax Leaves
CHAS. H. RICKSECKER, Linville, N. C.

Mention the Florists' Exchange when writing.

the hydrangea such lasting qualities as are not to be obtained in any other way, and, when thus treated, the sudden wilting of the flowers when introduced into a dwelling never occurs. The hydrangea has become unpopular in some localities as an Easter plant, owing to its short-lived existence after leaving the greenhouse. As repotting after the flower heads are formed gives such beneficial results with the plants grown here the plan is certainly worth copying. There is also a choice collection of azaleas and rhododendrons, nearly all of which are of the medium size. Other years more of the larger specimens were grown, but this year it was thought better to keep to the medium sizes, as they are generally more satisfactory. Acacia paradoxa is well represented, and as also a repans of tulips and hyacinths. A new office, with conservatory attached, has been built, facing the Boulevard.

At Peter Henderson & Co.'s large establishment the stock of Easter flowering plants is something immense. A full line of everything is carried here, from the choicest decorative plant down to the humble lettuce plant. Azaleas are probably in the largest supply, that is of stock intended for Easter, but these must be going at a great rate, as in several houses we noticed cards tacked on the bench edge which read: "All the plants on this bench are sold." A little sign like that on the bench tells more about how business prospects are for Easter than a whole column of opinions.

NOTES BY THE WAY.

MINNEAPOLIS, MINN.—Jacob Hartmann reports highly satisfactory sales of blooming plants, the taste growing larger in this direction. L. L. May, at St. Paul, has a grand stock for Easter—clean, well-shaped hydrangeas, several thousands of Lilium Harrisii—one of the healthiest stocks I have seen! Jas. Sowden, the successful raiser of this high-class stock, tells me he places a 5x7 bulb in a 5-inch, a 7x9 in a 6-inch pot, partially covers with soil, places under sash kept well shaded and ventilated, and sees the bulbs are kept on the dry side. When roots have started and bulb commences to shoot he fills up the pot with soil and flowers the plant in the same pot. He has a less percentage of disease than usual. In case of inability to handel the bulbs on arrival they are unpacked and set in trays in moist sand. One house of hybrid roses in pots for Easter is very interesting, as are also houses of Jubilee, Flora Hill and Bradt carnations, each variety in a separate house. Mr. Sowden says they can grow Bradt as easily as Scott but cannot root it. Grafted roses will be grown almost exclusively for early cropping, although the stock of Bride, Bridesmaid and Meteor on own roots is, to use Mr. Sowden's own description, "Cracker Jacks." Mr. Dysinger tells me the mailing branch of this mammoth establishment has taxed them heavier than usual, notwithstanding the late severe weather. Mr. May wore a happy smile and hopes very shortly to open up a source in the Transvaal for Northern-grown seeds.

Chris. Hansen is troubled with the eel worm, and will grow grafted roses entirely to evade the ravages of that pest.

Henry Krinke has had exeellent returns from that fine three-quarter-span rose house he built last Fall. This Summer may see more like it. Miss Krinke, who has charge of the store, says the call for choice stock is very encouraging.

Hohn & Olsen report the biggest decorative business of any season. Special days' sales are a feature with them, but not at cut prices. At time of my visit (Saturday) they were bunching up 5,000 Marie Louise violets in bunches of 25 at 50c., and cleaned out in the day.

Otto Heiserkorn says he sold more shamrock than any previous St. Patrick's Day, and will increase the stock for another season.

An echo from the Carnation Convention was, "Did you see Palmer's houses of Daybreak and the seedling from that old favorite?" Those who did were well repaid for the visit to Lancaster, had they seen nothing else, but we had the pleasure of meeting the veteran grower, who is more at home among his Outcasts and Meteor roses than anywhere else. His aide, Barney Myers, is one of the few successful all-round growers, who can bring in a crop of roses and a flat of those famous La Reine tulips just when they are needed most. W. M.

THE "NOVELTY" OF NOVELTIES FOR 1900

NEW—"MRS. KATE GRAY"—CANNA

A MAGNIFICENT HYBRID RESULTING FROM A CROSS OF ITALIA×MAD. CROZY

The Color is a rich shade of orange scarlet overlaid with gold, a superb coloring which in open sunlight is simply dazzling. **The Form** is an ideal of the Crozy type of bloom, the petals being very broad and overlapping, measuring 2½ to 3 inches wide, while the individual flowers are from 6 to 7 inches across. **The Texture** of the flowers is all that could be desired; they partake of the nature of the pollen parent or Crozy race in this respect, and withstand our hottest summer suns without wilting. **The Foliage** is a bright glossy green, equal to a Musa in size and substance and forms a beautiful foil to the gigantic trusses of bloom. **The Height** of the plant is 6 to 7 feet, the growth is luxuriant to a degree, but very compact; the massive foliage, giant trusses, and enormous individual flower give the plant a noble tropical appearance. **It is the Only Canna** of its kind in existence, and absolutely surpasses all others in its intrinsic value will make it a leading standard sort for years to come.

PRICES.—Strong roots, 35c each; $3.50 per dozen; $25.00 per hundred. Terms strictly cash with order, no exceptions. Stock limited; orders filled in strict rotation. Address,

SEED TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLOGNO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

New York.—Mr. H. Cheeseman is no longer connected with the Cox Seed Company.

Philadelphia, Pa.—H. G. Faust & Co. have again secured the contract for supplying Fairmount Park (2,740 acres) with grass seeds.

J. Blaauw, of Boskood, sailed per S. S. Rotterdam for this city, March 22. His address to May 10 next will be care of Mr. Schroeder, 45 William street.

Lawrence, Kan.—Fire broke out about 10 o'clock, March 22, on the second floor of Barteldes' seed store, and it was not controlled until the entire stock was badly damaged by fire and water. The loss is estimated to be about $20,000.

European Notes.

At last we appear to be in fairly smooth water once more, and things generally are going on as well as we could desire. The frosts have broken up the land in fine shape, and the Spring sowings are being made under very favorable conditions on all but the heavy low lying lands. If we get a genial and showery time when our radishes are being transplanted, we shall not be so far behind after all.

The injury to the plants of rutabaga caused by the severe frosts becomes more evident every day, and we have to face not only a limited acreage, but a prospect of a very small yield per acre. The plants appear to have become prematurely woody before sending out a vigorous shoot, and consequently they seem to be "stunned and stationary." Turnips, especially the extra early kinds, look very sickly just now, and there is every probability that the recent advance in prices will be fully maintained next season. Every year the legitimate seed grower has to meet the unfair competition of seed saved from chance crops that could not profitably be used for the purpose for which they were sown; but as sheep feed is scarce, and turnip tops are commanding a good price in the green market, there is every probability of a limited supply of the voluateer article next year.

The mid-March exhibit of the Royal Horticultural Society held during the present week has been fully equal to any of its predecessors. The most interesting exhibits to seedsmen were the magnificent cinerarias of James, and Sutton & Sons. Never has James' strain been seen in such perfection, in size of bloom, brilliancy of color or beauty of markings. In the case of one plant at least some new descriptive adjective is needed, for giant does not sufficiently express its proportions. The imposing displays of light blue and pink varieties, made by Sutton & Sons is a step in the right direction, for there is little doubt that florists and others would gladly purchase seed saved separately from good and distinct varieties. About 60 years ago it was the custom to name varieties in much the same fashion as sweet peas are named to-day, and now that a growing interest is being manifested in this beautiful and valuable decorative plant, it will be wise to revert once again to the old custom.

The writer often urged upon Mr. James, Sr., the desirability of adopting this course, but the old gentleman hardly thought the work would be appreciated. The son, who has not only fully maintained the grand quality of the strain, but also immensely improved it, may perhaps see things in a different light.

The Value of Seed Selection

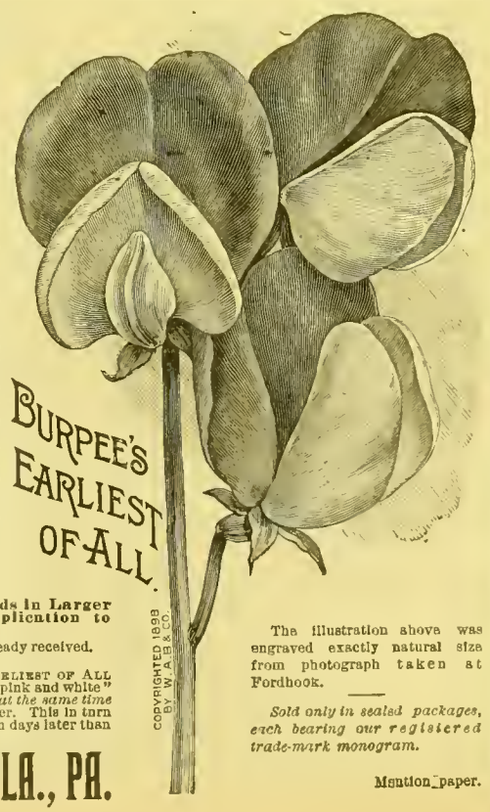
Is shown not only in the IMPROVEMENT of standard strains, but occasionally also in the development (by selection of a single plant) of what is practically a new variety.

A NOTABLE ILLUSTRATION IN THIS LINE IS THE

Sweet Pea, Burpee's "EARLIEST OF ALL"

Notwithstanding their dwarf habit and neat, slender foliage, the plants are of vigorous growth and come into bloom **always ten days to two weeks in advance of the Extra Early Blanche Ferry,** which has been heretofore a week ahead of all other varieties. Growing only two feet in height, the plants do not require the support of brush or trellis. As an illustration of its extremely early-flowering habit, we would state that October 15th we had plants in fine bloom *from seed gathered from our spring planting* and sown during the latter part of August. A constant succession of bloom may be had from June until November by making sowings about one month apart. Its extremely early-flowering habit makes it most satisfactory for the Southern States, as it may be easily had in full bloom before the hot summer weather. The flowers are as large as those of the regular strains of *Blanche Ferry*, and have long, stout stems, making them entirely satisfactory for cutting; they are borne in close clusters of three, all facing one way. The standards are a bright, rich pink, while the wings are nearly pure white.

BURPEE'S "EARLIEST OF ALL" is not only the earliest to bloom in open ground, but is also *the most desirable for forcing under glass for winter cut flowers.* The dwarf habit of this variety renders it much more easily grown on the benches, admits of closer planting, and from seed sown during the latter part of August blooms may be cut during the holidays, while with the taller varieties no blooms could be had before February or March. **Per oz., 10c.; per ¼ lb., 30c.; per lb., $1.00.**



The illustration above was engraved exactly natural size from photograph taken at Fordhook.

Sold only in sealed packages, each bearing our registered trade-mark monogram.

Mention paper.

Burpee's "Blue List"

Our Wholesale Price List of Seeds in Larger Quantities is mailed free on application to GARDENERS AND FLORISTS.

☞ In writing for "Burpee's Blue List" ask also for **The Farm Annual,** if not already received.

In the Open Ground

We recommend the planting of BURPEE'S EARLIEST OF ALL for first cutting. The season of these popular "pink and white" Sweet Peas can then be prolonged, by *planting at the same time* the EXTRA EARLY BLANCHE FERRY, which will come into bloom ten days to two weeks later. This in turn can be followed by the regular stock of BLANCHE FERRY, which will begin to bloom about ten days later than the EXTRA EARLY BLANCHE FERRY.

Our Competitions.

The attention of our readers is called to the following competitions inaugurated by the FLORISTS' EXCHANGE, and which we hope will receive cordial support from our subscribers:

A Chance for the Young Man: page 298 last week's issue.

Commercial Home Grounds Competition: page 336 present issue.

Prize Photographic Competition: page 341 present issue.

Our 1900 Spring Special.

The publishers of the FLORISTS' EXCHANGE have every reason to feel gratified with the patronage accorded this, their eleventh consecutive Spring Special, and that the advertisers, whose offerings are contained within its pages, will be able to feel equally pleased with the results which accrue to them from their enterprise, we have every reason to expect.

Quite evidently this time of year is always a good stocking-up season, while this year the evidences of unusual activity in the purchasing of plants and all other material necessary in a very diversified industry, is easily apparent; so much so, in fact, in some lines as to make it unnecessary for holders of certain stocks to advertise at all, they keeping closely sold up all the time.

For the benefit of those who have not given it a thought, or who may not fully realize the importance to the country at large of that industry of which they form a part, we wish to say that this 56-page and cover issue alone will consume nearly three tons of white paper in the printing of the 10,000 complete copies (full count) of the FLORISTS' EXCHANGE, which we promised in our announcements would be distributed.

There are comparatively few strictly trade journals that ever print as large an edition as this, or even as our regular issue of 7,000 copies, hence our florist, nursery and seed business can rightly be classed among the important industries of the day.

And our columns show that the business is still growing and developing. Even to our veterans in the trade, who have witnessed the marvelous developments of the past twenty years, a conception of the conditions which will exist at the close of another score of years, is well-nigh impossible.

The American Rose Society.

The success of the revivified American Rose Society is assured. Society has said so. The trade has demonstrated its interest in the great work that the association has undertaken. The private gardener is equally interested therein, and the public has testified by its presence, in unexpectedly large numbers, its appreciation of the grand exhibition staged by the society at the Eden Musée the past week. The daily press has taken up the cry of the unqualified success of the society's initial effort, and spread the good tidings to the uttermost ends of the earth—and the promoters of the society and its first display are jubilant and happy over the congratulations they are receiving on every side.

As was to be expected, there was very much of a sameness in the exhibits; but this is something that the passing years will remedy, as our hybridizers get to work in earnest and the results of their painstaking labors appear from year to year on the exhibition boards.

It was unfortunate, also, that the exhibition room was so small—a contingency, however, that could ill be guarded against in view of the uncertainty prevailing as to the number of exhibits to be expected up to a date close upon the opening of the show. This limited space marred somewhat the effect of a most magnificent exhibition of Winter-forcing roses.

A most gratifying fact in connection with the displays made was the large number of outside competitors—and what adds to the gratification, so far at least as they are concerned, is the excellent success which attended their efforts. Philadelphia, Toronto and western New York demonstrated to our local men the high quality of the stock that is grown in other sections of the country, in competition with which some of that displayed by our nearby growers had to take a back seat. This, however, is more of a stimulating than a depressing feature; and, too, exemplifies one very commendable influence that the shows of the Rose Society will exert in leading to greater effort on the part, both of the conquerors and the vanquished, thus advancing still further the high standard of excellence in the flower already reached.

One thing is needful, and that is, that the trade shall not relax the hold it has secured upon our leading society people in particular, and the rose-loving public in general, in connection with these rose shows. To that end every encouragement and support should be extended to the American Rose Society, in its membership and otherwise. Given such assistance, and who can measure the value to rose culture in the United States that will assuredly follow in its train?

The meeting of the society held Wednesday afternoon was fairly well attended. The proceedings showed that but little forethought or prior consideration had been given to some matters that seemed to be of considerable importance. It might be well, too, another year to have the annual meeting the first day, or evening of the exhibition, so as to insure a larger attendance, as many interested visitors return home after viewing the exhibits on the opening day.

The decision to hold next year's meeting and Spring exhibition in New York was not unanimously arrived at, several prominent members being opposed to it as likely to militate against general interest in the society. However, the gentlemen favoring such a course seemed to have a reasonable ground in support of their predilection; their desire being to first let the metropolis of the country see what can be done in the way of a rose show, with plenty of time provided for preparation for same—something that was lacking in the present instance—and thus lend prestige to the society's efforts along this line, as a commencement, furnishing also an emulative example for other cities. The selection of New York once more should not therefore be considered in any light other than as an act committed solely for the best welfare of the American Rose Society.

The righteous indignation of the president over the allegation of a Western trade paper, to the effect that the society was a mutual admiration one, run in the interests of Eastern rose growers only, was shared in by many, and his statement that growers in those sections, alleged to have been slighted as regards offices, etc., testify to their enthusiasm in the movement, both by tangible demonstration thereof and their presence at the meetings, met with general approval. If one cannot or will not help a good cause, honestly and earnestly fostered, it will display much better judgment and more common sense to remain silent regarding its workings, especially when nothing better than groundless sneers is the full extent of critical efforts.

With all due respect to the wisdom of the society, and the efficiency of its president-elect, we believe it would have been much better to have chosen a president from outside the ranks of the trade proper. The association's prestige, so far, has been built upon the eclât lent to its work by "society," the support of which class is most essential to the well-being of the association. With an influential society person at the head of the Rose Society, that desirable and desired interest by the better class is more likely to be secured and retained, besides affording proper recognition of the amateur's claims. This need not impair the energy and internal working of the society, provided "workers" constitute the executive, and it often yields an immense power for good. We believe that would be the case in this instance, and that the creation of honorary vice-presidents will not fully meet the requirements.

After 1901, the Trade or leading Show, each year, where you will, but a Rose Show for the people, each year, in every prominent center, under the auspices of the National Society if possible; if not, then to be undertaken by the trade clubs or local societies, is what the trade must work for.

The Portrait in Advertising.

In a recent issue of *Agricultural Advertising* Messrs. Johnson & Stokes, seedsmen, Philadelphia, touch on a phase of poultry advertising, which that journal characterizes as "at least interesting, if inexplicable." The firm in question says:

"In this connection there is a psychological study that we would like to have you investigate as to why it is when a man goes into the poultry business it seems to become his ambition to have his own photograph put on all his letter heads and bill heads and advertising, and in the poultry papers and everywhere else that he seems able to get it. We do not think it adds any dignity to the business, and would like to see it frowned upon."

The practice spoken of by Messrs. Johnson & Stokes is not confined to the poultry industry, but is prevalent in many others, including our own. It would be somewhat difficult, though, for us to indorse the statement that, by the appearance of a man's portrait either on his letter head or in his advertisement, the business in which he is engaged is shorn of any of its dignity. There is many a man who is an "ornament to his profession," personally, and why may not his counterfeit presentment add a similar lustre thereto?

It may be, too, that the use of one's portrait in that way has some advantages, when viewed from a business standpoint. Next to a man's financial standing and business dealings those who barter with him are anxious to know what manner of man he is, especially on a first venture, and to readers of character the portrait should prove of immense service in this connection, although we are told that "appearances are often deceptive," even though "the camera never lies."

Sometimes we hear it remarked that there is an element of vanity in the make-up of those who employ their portraits, in the manner which has called forth the protest from our friends. Well, granted the correctness of the presumption, such an inheritance is perfectly harmless; in fact, it is more often than not a blessing and a necessary requisite that a man should think something of himself. Why, then, should he not give ocular demonstration that he does?

No, we cannot see that the use of a man's portrait, either on his stationery or in his advts., is an evil; it is simply his way of showing that he is willing to "face the world," and to others it is, or should be, entirely innocuous. Some authors of books are guilty of the same innocent transgression; but why condemn them, or adjudge them as detracting from the dignity of their profession, so long as their work is satisfactory, and they are giving vent to a natural impulse, which harms no one?

There are occasions, however, when a portrait is "like a bull in a china shop." We refer to the unforgivable habit of parties obtruding their "physogs" in pictures of interiors of greenhouses, or of individual plant specimens, often thus destroying the effect sought, which is to show the object, the photograph of which is desired, to the best advantage. That is a practice we cannot too strongly condemn and should like to see abolished—as being unnecessary and uncalled for.

ADVERTISING CORRECTIONS

Received After Early Forms Had Gone to Press.

John F. Rupp, page 320, change price of heliotropes from $2.50 to $3.00 per 100.

George Reinberg, page 322, for changes in prices of rose plants in pots, see special advertisement, page 363.

Godfrey Aschmann, page 318, omit Chinese primroses; also omit "No lilies sold by themselves, etc.;" for additional items, see special advertisement, page 365.

Whitton & Son, page 318, omit genistas; for change in azaleas, see special advertisement, page 364.

S. J. Bunting, page 318, change lilies to read 3 to 8 flowers.

Wm. Stuppe, page 339, for changes, see special advertisement, page 365.

Philadelphia.

Market News.

The condition of the cut flower market is very good for this season of the year. Most stock is nearly sold out every day, and prices keep up well. The demand has been satisfactory and the supply not very heavy. Carnations in all colors, except yellow, have been scarce on several days; and flowers of good quality sell very quickly, prices ranging from $1.50 to $4. Bulbous stock is selling fairly well. Violets are not, and are piling up, finally going to the street men.

Retail stores have all had a good week; transient trade has been fairly brisk, and many stores have been busy with large funeral orders.

Jottings.

Rupert Kieule has rented the store at 30 South 17th street, now occupied by Alfred Hong, who will move shortly around the corner to Chestnut street.

Bayersdorfer & Co. report large demands for Easter baskets; from present indications the handle basket and hampers with pans inside for plants will be more largely used this year than ever before.

Easter Stock.

The growers in this vicinity, as usual, have a grand lot of plants for the Easter trade. All the stock is in splendid condition. Many growers have been disappointed with lilies, there being a lot of poor plants around, and, strange to say, the bulbs sold with guarantee are the worst! Even the best batches of lilies do not come true to name, there being many varieties, or rather seedlings, among them. This is seen in the Harrisii to a great extent. From present indications many growers will go shy on Harrisii next year, it being out of the question to rely upon bulbs being free from disease and true to name.

Few new things are seen. There are some new azaleas being tried, but as yet they are not sufficiently advanced to pass an opinion upon.

Robert Craig & Son have a very fine display of plants all about right as to time. They have 8,000 azaleas in various sizes, principally of the older varieties. Spiræas are unusually good this year—compacta and floribunda are mostly grown. Some are in 16-inch pans, 8 or 10 clumps to a pan, and make grand specimens done in this way. Hydrangeas are also a feature on this place; most of the stock grown is Monstrosa, with a few Thos. Hogg. There are about 1,500 plants in from 6 to 10-inch pots. Crimson Rambler roses are, as usual, grown largely, and this year are done well, foliage being good and plants well flowered. There are about 800 plants in from 8 to 12-inch pots. The lilies are looking well and are of good salable sizes; there are, in all, about 7,000 plants, mostly longiflorum. About the only new things seen here are some ericas in 4-inch pots, which will sell well for basket work. Bulbous stock is in large quantities, and taken altogether the place is worthy of a visit next week, when everything will be in full bloom.

Wm. K. Harris has a grand lot of Easter stock. Bougainvillea is a specialty here, and is done well, some fine specimen plants being seen. A bench of lilacs are also good, well set with flower. He has a nice lot of the large specimen plants of Crimson Rambler, 6 to 8 feet in height, and well flowered. Spiræa Anthony Waterer is being grown this year and promises well. Deutzia gracilis is seen in quantity here, the plants being lifted and potted in the Fall. Valley, in 6-inch pans, is done well and finds ready sale. A large quantity of hydrangeas are grown, mostly Otaksa. These all promise well, being set with large heads of flower.

J. W. Colflesh has a general stock of Easter plants. Spiræas and lilies are in good shape. Here we saw a grand lot of cinerarias, colors good, and many flowers being 3 inches across. Mignonette in 3 and 4-inch pots is a feature for Easter, and always finds ready sale.

George Anderson is known as a rose grower, but he always grows a few lilies and hydrangeas for Easter. His stock of longiflorum is very good, plants being hardy and well budded.

Begonia Gloire de Lorraine has been tested and found to be as good for Easter as for Christmas. Edwin Lonsdale had a grand plant at the Spring show last week, and Robert Craig has several plants that were not sold in the stores at Christmas. These were cut back, for a test, and are now one mass of bloom.

Success in New York.

The rose growers of this vicinity, and in fact all others in the trade, are delighted at the success of Philadelphia roses in New York the past week. We go along quietly, but get there with both feet. The boys were looking for Wm. Scott, but found he was not on hand; anyhow that "Quick and the Dead" story is no good any more. Some of the New York growers were hard to find after the awards were announced, and one tried to walk through a mirror. The only regret is that the prizes were not silver cups, then we could have placed them in our show case for a lasting remembrance of the occasion.

Annual Meeting of American Rose Society.

The annual meeting of the society took place in the Fifth Avenue Hotel on Wednesday afternoon, President Benjamin Dorrance in the chair. Among those also present were Treasurer John N. May, Secretary L. Barron, Assistant-Secretary A. Herrington, and Messrs. Siebrecht, Butterbach, De La Mare, Withers, Dillon, Welch, Robert and W. P. Craig, F. Mathison, Peter Crowe, Edwin Lonsdale, G. Fancourt, S. J. Reuter, P. M. Pierson, E. G. Asmus, Hentz, Moore, J. L. Powell, Jos. Heacock, R. J. Halliday, L. M. Noe, J. H. Taylor, J. H. Dunlop, Harry Dale, Dr. Halsted, S. J. Betts and others, with a sprinkling of ladies.

The president made a neat address, reviewing the work of the society up to date, and touching on the great evolution going on in rose culture. "Who can look back over even the short space of 30 years and not feel a pardonable pride in the advancement made—from Bon Silene to American Beauty, from Safrano to Golden Gate, from Souvenir d' un Ami to Bridesmaid, are leaps that only giants make—and the end is not yet." He complimented the good work done by the Executive Committee, and closed by wishing further success to the rose.

The report of Secretary Leonard Barron showed that the membership now embraced 35 life members and 169 active ones, a total of 204. The first bulletin of the society had been issued.

The treasurer's report showed a very healthy condition.

A committee, consisting of Messrs. Withers, May and Craig, was appointed to get up a form of certificate for life membership.

SELECTION OF PLACE OF MEETING.

An invitation was extended to the society by the Central New York Horticultural Society through its president, Mr. S. T. Betts, also from the Chamber of Commerce and the Mayor of Syracuse, asking the society to hold its next annual meeting and Spring show in Syracuse, N. Y. The invitation was fully deliberated upon; but it seemed to be the consensus of opinion that New York should be selected as the next meeting place, in order that a still more satisfactory exhibition be presented, more particularly in the hybrid perpetual classes, which, on the present occasion, were not in the numbers desired, or capable of being shown. There was a very strong feeling prevalent that the society should go further afield next year, and thus possibly create a more widespread interest in its work; but a vote on the subject resulted in the selection of

New York City for 1901.

In the course of an able plea on behalf of the metropolitan city, Robert Craig incidentally remarked that he had heard the wish expressed by several ladies that the Waldorf-Astoria Hotel would be a fitting place to hold the next show, a comment which drew forth the expression that such palatial quarters were none too good for a display of the "Queen of Flowers."

A vote of thanks was passed to Syracuse for what the chairman characterized as "the only invitation the society has had."

The Executive Committee was instructed to select three delegates to discuss subjects pertaining to the rose at the forthcoming convention of the S. A. F. in New York in August next.

ASSOCIATE MEMBERSHIP ONLY FOR AMATEURS.

On motion of Mr. May the associate membership was restricted to amateurs only, commercial greenhouse men and their employes, and private gardeners and their assistants not being eligible in this class. This ruling will take effect a year from now.

The election of a Board of Trustees for the investment of the permanent fund of the society was deferred till the next annual meeting, as also was the appointment of honorary vice-presidents.

ELECTION.

The election of officers resulted as follows: President, Benj. Dorrance, Dorranceton, Pa. (re-elected); vice-president, John H. Taylor, Bayside, N. Y.; secretary, Leonard Barron, 136 Liberty street, New York (re-elected); treasurer, John N. May, Summit, N. J. (re-elected), and two members of Executive Committee, Messrs. H. A. Siebrecht and N. Butterbach, also re-elected.

President Dorrance made a short speech thanking the members for their renewed confidence, adding "it makes no difference what officers you elect, or how much money you have, if the members of the Society do not back you up with work, the Society cannot succeed."

Dr. Halsted then read his paper on "Some Diseases of the Rose," which appears elsewhere in this issue, and after which the meeting adjourned.

Toronto.

Trade News.

Business continues fairly good, with plenty of cut stock coming in. There is a little scarcity of fine, salable plants, but I fancy plenty will be along by Easter.

The prospects for Easter trade are very good. Bulbous stock is likely to be plentiful; lilies will be in fair supply, but not so abundant as to be cheap. Most of the plants around are stocky, healthy and well grown. Azaleas will be a little short, owing to the lateness of the season. Roses will be in good supply, and carnations somewhat scarce. Nice ferns are not plentiful, but I think there will be enough to go round. Good salable palms are a little scarce. Valley will be good and plentiful; smilax and adiantum, cut, rather short.

A Visit to Brampton.

Harry Dale's fine place at Brampton is now in splendid order, roses being especially good. This establishment grows at such a rate that an ordinary florist wonders where all the stock goes to. Mr. Dale is building several large houses this season.

The writer was at Brampton last week and met S. S. Bain, of Montreal, looking for pointers on building. I must say that I think there is no place in this country where the inquiring grower will meet with more courtesy, when looking for information, than at Harry Dale's. A walk through his structures is a treat to any observing florist. Mr. Dale has a fine stock of nearly all the new carnations and standard varieties of roses. He has thousands of the latter grafted on the manetti doing well; also a splendid stock of Farquhar and Princess of Wales violet. He has, just now, the finest sweet peas I have ever seen under glass.

Mr. Fendley has several very fine houses of carnations and violets.

Association Meeting.

The March meeting of the Gardeners and Florists' Association was a fairly good one. It was decided to send certificates to the owners of the new carnations exhibited here, as recommended by the judges. A short paper was read by George Mills on heating that brought out considerable discussion. The writer also read a short paper on violets. Mr. Bain, of Montreal, attended and took part in the discussions. T. M.

Montreal.

Trade Notes.

The most notable feature of the past week has been the great scarcity of shamrocks. One of our leading dailies bought, for giving away on St. Patrick's Day as souvenirs, all local as well as all available supplies in eastern Canada; also importing several thousand small plants in pots from the United States. The price paid here for average stock was $20 per 100, the result being that very few of the stores secured sufficient supplies; and as the demand was general, irrespective of nationality, other greens, such as smilax, had to be substituted.

Until the last couple of days the weather has been of the most discouraging description—more like December than March. Even with a continuation of mild and bright weather a considerable time must elapse before the immense quantities of snow can melt away. A very late Spring is a certainty.

Funeral work continuing fairly plentiful has helped to make up for the small call in other lines. Flowers of all descriptions, with the possible exception of good carnations, are sufficient for every demand. First-class Beauty bring 75c. each, while $2 per dozen is about the top price for extra teas. Carnations run through all grades, from 30c. per dozen to $1 for a few special Jubilee grown by a local firm. There is a scarcity of good flowering plants at present, and this is likely to be felt with increasing effect until after Easter. The quantity of lilies that will be available is at present in doubt, and will largely depend on weather conditions. Other seasonable plants are reported at about the average. No novelties are seen in the store so far, but one or two are promised.

Notes.

Bertie Graves and family have returned from their trip to the Pacific Coast. Mr. Graves is delighted with climatic advantage of that section of the country, but considers the business opportunities are decidedly scarce.

Mr. Bain has just returned from a Western trip, taken to secure pointers for the reconstruction of his establishment. While in Toronto he was fortunate in being present at a meeting of the Florists' Club of that city. He was much impressed by the energy and enterprise that characterized the proceedings, as well as the good fellowship prevailing among the members.

A few plants of Lilium longiflorum albo-marginata are being grown by Jos. Bennett this year. It is a decidedly pretty plant; is dwarfer and seems to be quite as floriferous as the green variety. B.

OBITUARY.

Thomas Pattison.

Thomas Pattison, florist, of West Haven, Conn., died March 20. He had been ill for some months with the grip, which developed into pneumonia.

Joseph A. Lewis.

Joseph A. Lewis died at his home at Willimantic, Conn., March 18. He was born at Lebanon, January 5, 1829, and when 15 years old entered the employ of a Rhode Island nursery concern. Subsequently he went to Willimantic, where he engaged in the nursery and vegetable business. He was a prominent leader in the Prohibition party of his state. A widow and three children survive him.

William B. McCrea.

William B. McCrea died at his home in Altoona, Pa., last week, of kidney trouble. Deceased was a son of William B. McCrea, Sr., of Pittsburg, and was assistant to A. Wohlert, florist, Altoona, at time of his death, having previously been in the employ of several Pittsburg florists. He leaves a young widow, to whom he had been married but five weeks. The funeral was held Thursday, March 29.

Thomas Goode.

Thomas Goode, brother of John Goode, formerly a noted florist of Chicago, now in Florida, died at his home in Chicago, March 25, aged 84 years. He came from Ponder's End, near London, in 1845, and carried on gardening work until 1851, when he purchased a considerable tract of land and began market gardening. In this he was very successful for many years, which, together with his land, rendered him quite wealthy when he retired. In his young days he was a hard-working man and highly respected by all who knew him.

He leaves a widow, two sons and two daughters.

John Boetcher.

John Boetcher, superintendent of Oakwood Cemetery here for many years, died March 12. Mr. Boetcher was born in the province of Brandenburg, Germany, March 11, 1841. His father was a prominent gardener, and Mr. Boetcher became at an early age thoroughly acquainted with that vocation. In 1865 he emigrated to America and settled at Cincinnati, Ohio, where he perfected his knowledge of landscape gardening and all branches of cemetery work under Adolph Strauch, late superintendent and landscape gardener of Spring Grove Cemetery. In 1871 Mr. Boetcher came to Troy, N. Y., and assumed the duties of superintendent of Oakwood Cemetery.

The deceased was prominent in local German organizations and in the Masonic fraternity. Besides his widow, two sons and a daughter survive him.

FIRES.

WOBURN, MASS.—The greenhouse of Mr. Richwagen was partly destroyed by fire March 23. Damage $500.

HINTS and HELPS.

Rose seeds secured as a result of hybridizing, which were put between layers of damp sand in seed pans and sunk in the open ground, should be examined shortly, for as soon as the ground is in a favorable condition germinating is likely to begin, even although the seeds are moderately deep in the ground. Those germinating in this position are, of course, useless unless carefully dealt with. The seeds, or rather the vessels containing them, should be washed clear of the decaying matter which surrounds them, and sown without being too long exposed to the drying influences of the atmosphere.

Planting shrubs.—The best time to plant is when the shrub is in a dormant condition, and when the soil will allow of it. When the soil is frozen it cannot be done, and when wet it should not be done. In transplanting shrubs the fibrous feeding roots should be saved as much as possible, but considerable loss will be sustained in this respect, and the top part of the shrub must be treated accordingly. No matter in what season it is planted the bush must be pruned back, and in some cases severely. Nothing will sicken a shrub quicker than having more branches than the roots are able to support for the time being.

Pruning.—To be able to prune a shrub the operator must know it and all about it—when it blooms, on young or old wood, and so forth; generally speaking the best time is after the shrub is done blooming. Take for an instance the philadelphus: It blooms at a time when the plant is in active growth, making the wood for next season's flowering after blooming. The flowering wood is of little use to the plant, and by removing it light and air are admitted to the developing growth. Late bloomers may be pruned in Spring before the growth commences. A plant of this nature is Hydrangea paniculata. Early bloomers should not be touched in the Spring because of the danger in depriving the plant of its flowering wood. Such plants are represented by the forsythias, viburnums and shrubby loniceras; all of these, however, and others of their class, should be shaped, not sheared, after the blooms have gone. Roses may be gone over twice a year after blooming. If there be a profusion of young wood, part of the old material may be dispensed with; this will strengthen what is left, and in Spring the previous Summer's growth should be shortened so as to throw strength into the lateral growths on which the flowers are produced.

Anthericums.—The old flowering stems which showed small growths, and which were laid flat on damp sand as directed some time ago, will now be rooted and ready for 3-inch pots.

Hydrangea cuttings.—The end growths of Hydrangea quercifolia which were put in last Fall with foliage attached should now be ready for potting off. Put in light, sandy soil and keep close for a few days. They should occupy a position in a cold frame before starting into growth.

Cannas.—The principal batch should be started by this time. Shake off all the old soil from the rhizomes; trim off the decayed parts; cut in suitable sizes; prepare shallow boxes by putting about a couple of inches of sand and moss in the bottoms; put the pieces rather thickly together on top of this; cover them with a similar mixture, and water sparingly. In a short time they will be ready for pots. The smallest pieces should go into not less than 4-inch; 5-inch is a good size pot to plant from. Boxing the rhizomes will be found a convenient method of conveying them to and from the potting shed.

Herbaceous pæonies, especially those planted last season, will be benefited by a heavy mulch at this time, when the roots will soon be most in need of the ingredients which are washed into the soil by heavy rains; and, later, it will keep the surface soil moist and cool. Herbaceous phloxes may be treated in the same way.

German irises, which have grown into very large clumps, may safely be divided at this season, unless for increasing desirable varieties to the utmost, the clumps should be divided into smaller ones, 6 or 8 inches across. This will interfere very little with their blooming the coming season. The ground should

BRIEFS FOR BUSY FLORISTS.

CANNAS that were placed on the benches to start into growth will by this time have made sufficient headway to be potted up. A 5-inch pot is the best size to use for this purpose, and any ordinary soil will suit the plants. It is better to get them into the pots before much growth has been made, for when they once start to grow on the bench roots are made very rapidly and would soon be so large that it would be impossible to get them into the pots without mutilation.

CALADIUM ESCULENTUM is also starting well and has to be potted up before many roots are made. These, if convenient, should be given a somewhat warmer house than the cannas. We want to have them as effective as possible by the time when they are required for use outdoors.

VERBENAS from the earliest sown lot should now be got into 3-inch pots, especially if a large stock is needed, and all the cuttings possible taken from them. In potting up these it will be found advantageous to give them just as rich a soil as is obtainable. Generous treatment along this line makes a great difference with verbenas, more so perhaps than with any other of our common flowering plants; and if good stock and plenty of it is desired, do not think that any old soil is good enough to grow them in.

WHERE HOTBEDS can be made and frames used the greenhouse can be relieved of a quantity of plants, such as alternanthera, iresine, or achyranthes, acalypha, centaureas, pyrethrum, etc. Just at this season every foot of bench room has to be utilized, and the more use we make of our hotbeds and frames the less crowding together on the benches is required.

LILIES—Owing to the large percentage of disease among the Bermuda lilies there will no doubt be a shortage of these flowers for Easter in many localities, and other things will have to be substituted. High handled baskets with zinc linings can be used probably to greater advantage than any other form of basket. These, when filled with low growing plants and a spray of green over the handle, have always proved among the best sellers. Any kind of Spring plants is suitable, and a mixed collection is not at all objectionable. Violets, pansies, hyacinths, tulips and daffodils can all be used, and when nicely put together, one of these baskets makes as pretty an Easter piece as can be devised.

Port Chester, N. Y.

The chief attraction at the meeting of the Westchester County Gardeners' Association, Saturday, March 24, was the excellent exhibition of roses and violets. James Patience, gardener to Mr. W. Hoyt, Stamford, Conn., was awarded the three first prizes for Beauty, Bridesmaid and Bride. These were probably the finest roses of their class ever seen here. They were all from budded stock, in which Mr. Patience is a firm believer. Other exhibitors of roses were John Shore, William Anderson and Robert Williamson.

James Wilson was first for double violets and Wm. Anderson first for single. Robert Allan exhibited some excellent tomatoes—Sutton's Best of All.

JOHN W. DUNCAN.

Buffalo.

Some of the store men are inclined to complain a bit, others call business good. Decorating for Spring openings recently created some fair orders.

Flowers seem not so plentiful as usual at this date. Carnations are not in over supply at all just now. Roses and violets, however, are amply plentiful.

S. A. Anderson is improving his window by laying a tile floor in the same.

John R. Frotheringham, representing F. R. Pierson Co., Tarrytown, was in town Friday of last week.

Wm. H. Long, of Boston, visited D. B. Long on Monday.

F. W. Taylor, Director of Horticulture of the Pan-American Exposition, will deliver a lecture on "Real Russia" before a local church audience on Tuesday next.

VIDI.

Boston.

The Market.

Business held up very well this week and there was a good, lively demand for most kinds of stock. Good roses now are in plentiful supply. American Beauty are coming in of fine quality, but do not move very fast, as the supply of Brunner is increasing. They realize about the same figures as last quoted. Brunner, too, average about the same prices as American Beauty for corresponding grades, though a few specials are held at $3.50 and $4 a dozen; but these are of exceptionally fine quality. Jacqueminot are still scarce.

There is a noticeable decrease in the quantity of fine carnations arriving, with a marked scarcity of good white kinds, and a good return in price. Finer grades easily fetch $3 per 100, while extra Daybreak, Bradt, Eldorado and such choice varieties make $4.

Bulbous stock is greatly in excess of the demand, especially daffodils, Trumpets and other varieties of narcissus. Tulips and hyacinths, though plentiful enough to supply the call, are not in oversupply. Lilies are becoming more plentiful, but prices still hold up to $2 for best stock. Valley is very abundant.

Jottings.

George A. Sutherland is receiving some very fine Brunner roses. Welch Bros. are to have a fine lot of Easter lilies this season, as well as some choice spiræas. The general quality of all the other Easter stock which this firm will handle, promises to be exceptionally good this year.

Thomas Roland, of Nahant, has worked up a large lot of home-grown stock of Begonia Gloire de Lorraine which he is to put on the market, to be delivered about the first of June.

Lieut. E. N. Peirce, of E. N. Peirce & Sons, Waltham, was present Tuesday, March 13, with a handsome gold Waltham watch suitably engraved, and a pretty chain.

Easter Prospects.

At William W. Edgar's place, at Waverly, a fine lot of Easter stock was seen. Mr. Edgar is around again after quite a severe siege of the grip. His lilies are an exceptionally clean and healthy lot. Acacia armata is finely flowered, the plants being well shaped. Genistas, too, are finely grown here. Azaleas and rhododendrons are also very good, especially the specimen plants. An excellent lot of spiræa, mostly floribunda, is coming along, and much of it is being cut daily. Hydrangeas, mostly fairly good-sized plants, and all pink, are in fine condition. Mr. Edgar has about 4,000 small hydrangeas already potted. The houses of ferns are in good shape. Adiantum tenerum is quite extensively grown and found quite profitable. Great attention is being given to the growing of about 35,000 or 40,000 small ferns for ferneries. A very fine selection has been made of the hardy and best adapted varieties for this use. The capacity for carnations is to be about doubled for next year. A pink seedling of Mr. Edgar's, of good form, fine stem and dark pink color, is to be grown almost entirely for a pink, and three white ones —seedling No. 1, No. 2 and Ladysmith—are to be put in. All are showing great promise.

We found E. N. Peirce & Sons, at Waltham, celebrating the birth of a son to Allan Peirce, which occurred on Sunday, March 25. At this establishment Easter stock is grown in huge quantities, principally lilies, azaleas and spiræas. Twenty-two thousand lily bulbs were started this year, and it is expected, and certainly appears, that by Easter every one will have flowered and have been disposed of. The quality of the stock is above criticism. About 1,500 azaleas were grown this year, many of which were brought in at Christmas and since; but there is still a quantity to be flowered for Easter. The plants are mostly of the smaller sizes. Only about 400 pots of spiræa will be forced for Easter. As soon as the Easter stock is cleaned out it will be followed by spiræa and other stock for Decoration Day, May 30. The two houses—each 200 feet—of Boston Market mignonette are in excellent condition, and give promise of an extra cut for Easter. Carnations are also grown to some extent—Scott, Joost, New York, Melba, Maceo, White Cloud, Young, Bradt, Freedom and Crane being some of the varieties. Freedom is here considered the money maker, having been in excellent crop all Winter, and even now the beds are covered with blooms and buds. Ethel Crocker and The Marquis are to be put in next Fall.

Anderson & Williams, at Clematis Brook, have a fine house of Crimson Rambler, all two-year-old plants. The plants this year seem a great deal stronger than formerly, and have many more flowering shoots. The houses of Bride and Bridesmaid are in first-rate condition, and give promise of a very good cut for the Easter trade. A new house is to be erected in which quite a batch of Liberty will be grown, the young plants having arrived this week.

At E. S. Whitten's, in Dorchester, Lawrence Cotter has one of the finest lots of lilies ever grown at this place. There were 5,700 grown, and nearly all will be marketed before April 15. The Crimson Ramblers are done again in fine shape, most of the plants being one-year-old and trained in pyramidal shape. Mr. Cotter had about 700 plants. A few pink and white Ramblers were tried, but with only fair success. The Yellow Rambler, of which about three dozen plants were grown, responded well to Mr. Cotter's treatment. He had them well flowered, and good shaped bushes; but the bloom is of a rather poor color to be much of a favorite. A very fine lot of moss roses were grown this year, also spiræa. The houses of Bride, Bridesmaid and Beauty give promise of a good cut for the holiday.

At William H. Elliott's establishment, at Brighton, the houses of asparagus are in first-class shape. Mr. Elliott is prepared to ship fine, full strings of almost any practical length, for the Easter trade. The rose houses of Bride, Bridesmaid and Meteor are in splendid condition, and yielding a good crop. The house of Jacqueminot, which will be in prime shape by the fifteenth of next month, and from which a very few have already been cut, is a handsome sight, and should yield a fine cut of this great favorite. The usual house of Papa Gontier has been given up to Bridesmaid this year. Mr. Elliott is convalescing favorably at Old Point Comfort, whither he went shortly after undergoing an operation.

F. J. N.

Newport, R. I.

The social session at the Horticultural Society's meeting on the 14th proved a great success; music, vocal and instrumental, was the leading feature. Soloists, Messrs. Galvin, Maher and J. T. Allan took the lead. At the business meeting two new members were elected.

T. W. Weathered's Sons are putting up a new range of glass for Mr. T. K. Gibbs, and Messrs. Lord & Burnham are shortly to commence work on a new palm house for Mrs. Wm. Astor.

On account of sickness (la grippe) among the craft the bowling match arranged to take place on the 26th, between the Gardeners' team and the Newport Artillery picked team, had to be postponed.

The Marguerite carnations, which have been grown outdoors in large quantities for cut flowers during the Summer season for some years, are proving unsatisfactory, on account of the large percentage of singles, and are being superseded by Scott and McGowan.

MAC.

Pittsburg.

The very unfavorable weather the last few weeks has at various times caused a scarcity of good stock of roses and carnations, and at the present time they are not any too plentiful. Good roses command higher prices than at the same time a year ago, and the same can be said of carnations. What the prospects are for Easter is hard to tell. Trade has been fair right along, and flowers generally used up pretty well. With the heavy trade expected for Easter it looks as if stock will be mighty scarce.

Not much is doing yet in the plant market, and it will require some fine weather to bring stock into good blooming condition. From appearance the number of plants will be quite large, and no doubt will sell well, as cut flowers will likely be high in price.

John Bader visits the East this week, to look around and pick up some stock; he will be accompanied by Mr. Koerbel, of Jeanette, Pa.

E. C. REINEMAN.

Cincinnati.

Business still remains good. American Beauty in good stock is scarce. Carnations do not equal the demand, while being sold up close at all times.

The informal reception at "The House in the Woods," residence of Mr. and Mrs. J. A. Petersen, March 21, was a grand success; their new home is very handsome in all its appointments. Among those present were Mr. Salway, superintendent of Spring Grove Cemetery, and R. H. Warder, superintendent of parks; Mr. Francis Pentland, Mr. Herman Herlein, Hon. Howard Douglas and ex-Postmaster Chas. Brown, E. H. Gelsy, Wm. Murphy, R. Witterstaetter, Frank Ball, Geo. S. Bartlett, Mr. Pfeiffer, gardener at Longview Asylum; Dr. Murphy, Thomas Jackson and Anthony Wiegand and wife, of Indianapolis. Refreshments were served during the afternoon, and a visit to the greenhouses found everything in apple-pie order. Mr. Petersen is known to be among the most successful growers of Adiantum Farleyense in the country, and his young stock is now in fine shape. Pandanus Veitchii and dracænas are also well done here.

The Beachwood Band, consisting of all florists, Geo. Murphy, director, will give a minstrel entertainment Friday evening. A large audience is expected and a good time all round.

E. G. GILLETT.

Grand Rapids.

Mild Wintry weather has prevailed until quite recently. Violets took a slump and seem buried deep under the huge snow drifts. Funerals have been numerous and all surplus flowers are kept from accumulating. One of the most elaborate weddings ever celebrated here was the Ambert-May wedding of the 14th. It took 2,100 roses, pink and white, besides large quantities of asparagus, wild smilax, laurel and plants. Crabb & Hunter had the order, and had to get most of the material from Chicago, flowers being so scarce in the home market.

As for a Lenten lull in business we have ceased expecting it, and are now anxiously figuring out what will we have for Easter. Carnations promise to be very scarce, particularly white and red. Roses will also be in short supply. There promises to be plenty of bulb stock, azaleas, flowering shrubs, pot roses—even to a fine stock of Crimson Ramblers and Easter lilies. While Harrisii is a practical failure there are large quantities of longiflorum being grown, which will be sufficient for all demands. Prices remain unchanged.

Recent visitors: A. L. Vaughan, Chicago; A. Boddington, New York; also G. Kroeschell and Herman Vlasveld, of Holland.

A. W. Tweedie, of Cadillac, is in town getting pointers on building, etc. He reports trade exceptionally good. He removes to a piece of land purchased for the erection of new houses to meet the demands of his increased business.

American Rose Society's Exhibition.

This society has great reason to be proud of the results of its work so far. When the doors of the Eden Musée, New York, were opened to the public on Tuesday last the grandest collection of greenhouse roses ever seen in this country was on view. But if the exhibition room had only been twice as large the effect would have been much more gratifying. Everything had to be staged close together, and many of the exhibits were shorn of much of their beauty by being crowded. Such stock as came from Wood, Dunlop, Crowe, Myers & Samtman and others, was a revelation.

This exhibition will undoubtedly give a boom to the rose, and will mark a beginning in the seeking of new varieties by hybridizing.

As we said before the quality of the exhibits was a revelation; but how much better they could have been seen if the tables had not been so high. With these about 30 inches in height and the flower stems averaging from 30 to 50 inches long, some blooms were well above the line of vision and did not show to the best advantage. A range of height of the tables, according to the length of the exhibits, has long been considered the best possible way of exposing flowers to view. It was certainly rather hard on the judges to make them climb to the top of the tables, when inspecting those big vases of American Beauty.

The judges are to be complimented on their decisions; theirs was no small task, and their awards gave satisfaction. The judges were: Edwin Lonsdale, Philadelphia, Pa.; Robert J. Halliday, Baltimore, Md.; Sam Goldring, Albany, N. Y.; W. I. Brower, New York; G. Hay, Stamford, Conn., and I. L. Powell, Millbrook, N. Y.

In the competition for the Mason Cup, Peter Crowe of Utica, N. Y., was victorious, with a vase of Bridesmaid that for length of stem, size of bloom and coloring were unequaled. This class called for an exhibit of not less than 100 nor more than 200 blooms of any variety. In the winning vase there were 105 flowers all told, and although they had traveled some 300 miles they succeeded in carrying off one of the principal prizes offered.

The Bliss Cup was offered for the best 50 roses, any variety. E. G. Asmus, West Hoboken, carried off this prize with an excellent vase of his new rose Liberty.

The Trevor prize for the best arranged vase of roses, 100 blooms, went to Benjamin Dorrance of Dorrancetown, Pa.

T. J. Kelly, Madison, N. J., captured the Fitzgerald prize, for the best 36 roses, any one variety, winning with a vase of Bridesmaid.

The Thorley Cup was for the best collection of named varieties. In this class competition was keen; E. G. Asmus was victorious. Mr. Asmus showed a wonderful variety of blooms; also capturing the Hill Vase, which, too, was for a collection of named roses. Not only was there great variety, but all were grown to the highest state of perfection. Among the kinds shown were several American seedlings of promise, notably Lilipntian, Maryland, John Doe, Cerise and Prince of Bulgaria. There were also in the exhibit vases of Mermet, Bon Silene, Mlle. James Phillips, Sappho, Perle, Morgan, Meteor, Luizet, Sarah Nesbitt, Rouge de Lyon, Innocence, Princess Bonnie, Bridesmaid and Rothschild.

View showing use of Kift & Son's Flower holders in Mirror Decoration.

Prize Mirror Decoration of E. G. Asmus, W. Hoboken.

The first prize in the class for Marechal Niel, $30 cash, offered by E. M. Wood, was won by O. Mackintosh.

The Pierson Cup, for the best 100 red roses, was won by L. M. Noe, Madison, N. J.

For the Asmus prizes, for the best 50 blooms of American Beauty, J. Heacock, Wyncote, Pa., took first, and L. M. Noe second.

The Taylor Cup, offered for the best 25 blooms of Admiral Dewey, was captured by John H. Taylor, Bayside, L. I.

The American Rose Co. Cup, for the best 25 blooms of Golden Gate, was won by R. Simpson, Clifton, N. J., with a very fine bunch of this variety.

The New Jersey Floricultural Society's prizes, offered for private gardeners only, six varieties to be shown, went to J. Dowlen, first, and Wm. Turner, second.

J. H. Dunlop won the prize offered by the Morris County Gardeners' Society, with some magnificent specimens of Bride and Bridesmaid.

T. J. Donohue captured the prize offered by the Lenox Horticultural Society, for the best 25 Bride and 25 Bridesmaid.

The Young Cup, offered by Thos. Young, Jr., for the best mantel decoration, was won by E. G. Asmus.

The Craig Cup, offered by Robert Craig, Philadelphia, Pa., for the best mirror decoration was also captured by Mr. Asmus. Both effects were arranged by James I. Donlan.

For the best 25 American Beauty, the first went to Myers & Samtman, Chestnut Hill, Pa., the second going to J. Heacock, Wyncote, Pa.

E. M. Wood was first in the class for 25 blooms of the Bride; Jos. Heacock second. H. Hentz, Madison, N. J., took first for 25 Bridesmaid, J. Heacock being second.

For 25 Meteor, J. H. Dunlop was first, and L. B. Coddington, second. Mr. Dunlop also took first honors in the class for Mrs. Pierpont Morgan.

In the Cusin class E. G. Asmus was ahead. J. H. Dunlop carried off the prize for Mme. Hoste. He also was first for Perle, L. M. Noe being second. Peter Crowe was first for Golden Gate. E. G. Asmus was first in the Watteville class. E. Brant, Madison, N. J., was first for Lady Dorothea.

In the class for 12 American Beauty, stems not to exceed 4 feet, H. Weber &

Partial View of Exhibition of American Rose Society, held at Eden Musee, New York, March 27-29.

Sons, Oakland, Md., were the prize winners. In this class also T. J. Kelly was first for 12 Bride, J. F. Ryan, Madison, second. Mr. Kelly was also first for 12 Bridesmaid, Mr. Ryan second. H. Weber & Sons captured first for 12 Kaiserin Augusta Victoria, and a similar honor for 12 Perle.

In the classes open to private gardeners and amateurs only C. Pertanzel, Great Neck, N. Y., took the first for American Beauty; C. T. Talbot, Rhinecliff, N. Y., was second. N. Butterbach, Oceanic, N. J., was first on both Bride and Bridesmaid, F. Heather being second for Bride, and A. A. Taffe second for Bridesmaid. J. B. Colgate, Yonkers, N. Y., captured first for Souv. de Wootton.

In the class for climbing roses in pots H. C. Steinhoff, West Hoboken, N. J., carried off first honors—both for single specimen and the best six plants, Crimson Rambler being shown for both entries.

The Hoffmeister Floral Co., Cincinnati, O., was awarded first for Maid of Honor.

There were many excellent displays that were not entered for competition. Lager & Hurrell, Summit, N. J., had a beautiful exhibit of orchids, among them being many rare specimens and new hybrids.

J. Kift & Son, Philadelphia, had a splendid arrangement of new style flower holders. As demonstrated by the exhibit the decorating of a mirror or a table is much simplified by using the small glasses with the wire holders. Many different designs for table work were shown filled with choice flowers, the effect being exceedingly graceful; the large mirror also was encircled by a row of them, showing up to excellent advantage.

H. Siebrecht & Son, New Rochelle, N. Y., besides having a very handsome mantel decoration, made a miniature rose garden. Ramblers and hybrid perpetuals were used. This was directly in front of the orchestra, and was a very pretty piece of work.

John N. May, Summit, N. J., showed a large vase of his new carnation Olympia.

Dailledouze Bros. staged a fine bunch of No. 666, and H. Weber & Sons had a vase of Genevieve Lord carnation.

W. A. Manda, South Orange, N. J., displayed the Cherokee rose.

E. G. Asmus had a Liberty cap, composed of the Liberty rose; also a tree of the same flower.

Exhibited by E. M. Wood & Co., Natick, Mass.

SOME NEW VARIETIES.

The new rose, Queen of Edgely, a sport of American Beauty, similar to the type in everything but color, drew a crowd of admirers continually. This variety originated with the Floral Exchange, of Philadelphia, and was exhibited by them. It is a fine pink American Beauty, and when introduced will surely meet with great favor. A certificate of merit was awarded to it.

A certificate of merit was awarded to Robert Scott & Son, Sharon Hill, Pa., for their new h. t. rose, Robert Scott. This is a large pale pink bloom, built somewhat in the form of La France.

John Cook, Baltimore, also got a certificate of merit for a very fine light-pink rose named Baltimore.

H. Weber & Sons showed their pink sport from Bride. Only 10 blooms were to be had, so no award was given. This is delicate pink in color and has a very heavy bud and full center.

St. Louis.

Trade Notes.

Business here the past week has been rather slow; nothing but the usual run of funeral work going on, and not any too much of that. Stock in consequence has been piling up a little, all but carnations, the demand for and supply of which is now about equal. Prices have weakened somewhat, especially on large lots, wholesalers having to make inducements to buyers. Roses are quoted at 3c. to 6c., and are quite plentiful. Carnations bring 1½c. to 3c. Harrisii, with few in the market, go at 10c. to 12½c. Valley is plentiful, at 3c. for good; Beauty rather scarce, bringing $1.50 to $3 per dozen; violets, 30c. per 100. There are great quantities of the latter coming up from farther South, grown outdoors; they often arrive in bad shape, and sell at $2 to $3 per 100 bunches, these in turn being disposed of on the streets at 5c. per bunch, hurting the sale of home-grown flowers.

Stock for Easter is somewhat uncertain as yet. There are lilies in cellars and in hot beds, in the greenhouses and in all stages between. What the crop will be is rather hard to say. The plants seemed to develop the disease this year when they were supposed to be safe. Hydrangeas will be in good supply; azaleas and hyacinths, we think, will be pretty well gone.

The weather has at last settled into Spring, neither hot nor cold, with very little rainfall, putting the ground in excellent condition for all garden work, which is now being pushed rapidly. Especially are the nurserymen busy; we cannot remember when conditions were more favorable for planting at this season of the year than at present, the principal drawback being inability to get Eastern stock here to finish up orders, as it seems to be frozen up as yet.

News Items.

J. M. Hudson recently received the finest lot of carnations ever exposed at public sale in this city. They sold on arrival at 4c. each. Variety or name of consignor could not be learned.

Walter Mott, representing H. A. Dreer, Philadelphia, is in town, and reports excellent business—fully equal to, or better than, last year's. C. S. Ford, representing A. Herrmann, New York, is also here, and C. L. Brunson, of Paducah, Ky., was a visitor, looking around for stock.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN

WILSON J. PETERS, Troy, O., President; D. S. LAKE, Shenandoah, Ia., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

New York.—Of the large orders for nursery stock placed this season Fred'k. W. Kelsey, of this city, has been awarded two orders aggregating nearly 40,000 trees, evergreens, hardy shrubs, etc.

Escondido, Cal.—The Sunnyside Nurseries have succeeded J. W. Jobes and Jobes Bros. J. W. Jobes will remain as manager.

Windsor, N. S.—The Newport Nursery Co., Ltd., has been incorporated. The provisional directors of the company are John Keith, Esq., banker, and A. P. Shand, manufacturer, both of Windsor, and J. J. Salter, nurseryman, Newport. The principal place of business is at Stanley, Hants County, where the company owns 172 acres of nursery grounds.

Jackson & Perkins Co., of Newark, New York, have still further increased the extent of their nurseries by the purchase of another farm, adjoining one which they acquired and planted only a year ago. The new place is 120 acres in extent, making a total of some 350 acres, of which about 50 are devoted to field-grown roses—the firm's leading specialty

Fumigation of Nursery Stock.—The New York Agricultural Experiment Station has issued a bulletin (No. 174, March, 1900), prepared by Professor Beach, on this subject. Directions are given as to the materials and equipment necessary for the work. The bulletin states:

The entomologists who have investigated this subject are not yet agreed as to the length of time which should be recommended for the fumigation of dormant nursery stock, but they generally give from 30 to 50 minutes. Sirrine advises that, when using the formula given below, the stock be fumigated for one hour. In Johnson's tests, well-matured stock of apple, plum, etc., stood treatment one hour with gas at a strength far above the standard used; so that in general with the standard strength no damage need be feared from an over dose with well-matured stock. It is well to be on the safe side and continue the fumigation long enough to secure the full benefit of the operation.

After the stock has been fumigated the room must be ventilated for at least ten minutes before entering it. This rule must be strictly enforced, because anyone who enters the room before it has been properly ventilated endangers his life.

THE FORMULÆ.

The following formula is recommended by Sirrine for general use in fumigating well-matured dormant nursery stock. For each 100 cubic feet of space in the room use:

Formula for well-matured Stock.

Potassium cyanide, (98 to 99% pure)	1⅛ oz. (avoir.)
Sulphuric acid.....	1⅜ to 1½ fl. oz.
Water.....	4½ fl. oz.

Fumigate for one hour and then ventilate the room ten minutes before entering it.

Sirrine's experiments with different amounts of the cyanide lead him to the opinion that for general use with well-matured nursery stock the amount should not be less than 1⅛ ounces per 100 cubic feet, which is the amount given in the above formula. (Other entomologists recommend less amounts of the cyanide. Johnson's formula calls for approximately 9-10 ounce per 100 public feet; Alwood uses 1 ounce, Marlatt 1 ounce and Webster 4-5 ounce per 100 cubic feet for well-matured stock). Sirrine finds, however, that stock, under some conditions, is injured by even as small a quantity of the cyanide as this. Johnson reports similar results and recommends for peach whips, June budded peach trees, bud sticks and in general all stock which is not well matured, that the amount of potassium cyanide be reduced to 18 grams (approximately ⅝ ounce) per 100 cubic feet. When stock is to be fumigated which is not well matured it is doubtless best to reduce the amount of the cyanide as Johnson recommends, even if it is necessary to lengthen the time of fumigation to get satisfactory results. Following Sirrine's ideas in regard to the proportionate amounts of sulphuric acid and water the formula for each 100 cubic feet of space would be as stated below.

Formula for immature stock, bud sticks, etc.

Potassium cyanide, (98 to 99% pure)	⅝ oz. (avoir.)
Sulphuric acid.....	¾ fl. oz.
Water.....	2½ fl. oz.

As regards refumigation Johnson finds that the peach will not stand a second fumigation. Apples, pears, etc., are not injured by it, but it is well not to expose stock a second time to the gas after it has been once properly fumigated.

Stock which has passed out of the dormant condition cannot be safely fumigated with gas at the strength given for dormant stock, neither can it in the Fall before the leaves have dropped.

Instructions are then provided for the construction of fumigating houses.

ORANGE.—John Hayes, superintendent of the estate of O. D. Munn, has started a frame of crotons which present a fine appearance already.

Peter Duff, president of the New Jersey Floricultural Society, among many other things in his new house has a bench of grafted rose cuttings on manetti stock, which does credit to this skillful propagator.

SURPLUS FOR SPRING 1900

New York.

Committee Meetings.

Despite inclement weather and the nearness of the date to Easter, a very gratifying attendance of committee men was present at the club rooms Monday evening last. As a committee of the whole the members listened with interest to President O'Mara as he announced in detail the satisfactory progress making in all directions connected with convention matters. A statement received by the Sports Committee, with pleasure that was participated in generally, was to the effect that the Lord & Burnham Co. had offered a $100 trophy to the club scoring the highest number of pins in the bowling tournament in August next. It is probable that the rules governing this contest will necessitate the trophy being won twice by the same club before becoming its absolute property. Other prizes are in sight. The schedule of premiums for the horticultural exhibition is now ready, and is being distributed by Secretary Jos. A. Manda, South Orange, N. J., from whom copies may be obtained. Ex-President Plumb is hopeful of securing $150 as the prize or prizes to be given to the individual exhibitor securing the largest number of premiums at the show.

Market Notes.

There has been very little change this week in the cut flower business, either in regard to prices or qualities and quantities. Hybrid perpetual roses are, perhaps, more plentiful, still there has not yet been enough of them to create any enthusiasm. Rothschild, Brunner and Jacq. compose the list so far; and they have brought prices ranging from 25c. down.

Three dollars a dozen will buy the top grade American Beauty. Special Bridesmaid can be had at $8 and $10 per 100, and some stock, that grades considerably higher than specials, has realized 18c. each. We cannot mention these by the hundred; they don't come in that way. Extras and No. 1's have not been in such good demand, and a slight falling off in values has been noticed in these grades.

Carnations continue to sell first-rate, and prices remain stationary. Fancy varieties are in great demand. Orders are already being booked for Easter, and from the present outlook it would seem that there will be a shortage, and high prices will prevail at that time.

There are various qualities of lilies around, and the best are fetching $1.50 per dozen; others sell at $1 and $1.25. Callas realize from 5c. to 8c. each. Sweet peas bring $1.25 per 100; daffodils, $2; tulips, from $2 to $4, according to color; Roman hyacinths, $2; valley, $1 to $3. Orchids are quite scarce. Smilax is selling fairly well, the best strings bringing $2 per dozen.

Violets are still very plentiful, and the low prices of last week yet prevail. Asparagus plumosus, Dutch hyacinths, pansies and lilac do not seem to be in good demand, and there are no fixed values on any of them.

This has been a notable week for New York; the show of the Rose Society has fully demonstrated why the shipping trade of this city has gradually dwindled to almost nothing, compared to what it used to be. Other cities and towns are producing better roses. Cases are on record where choice stock has been shipped from here to certain cities and the flowers did not give entire satisfaction; dealers in this city failed to account for this, but, after seeing the quality of the roses sent for exhibition from those same cities, they understand it much better now.

Jottings.

C. W. Ward journeyed to Philadelphia this week.

W. A. Prosser has opened an office at No. 57 Maiden lane, to deal in bulbs and other specialties.

H. W. Wipperman, of Brooklyn, had the misfortune to fall and break his leg while alighting from a trolley car a few days ago.

Dailledouze Bros. will erect another large carnation house the coming Summer.

Charles Thorley, the Broadway florist, has just returned from a visit to Hot Springs, Va.

A Carnation Show.

In the rooms of the Press Club, No. 34 West 26th street, the New York Gardeners' Society held their Spring carnation exhibition. There was quite a display, most of the leading varieties of the day being represented. G. M. Hay took the De La Mare Publishing Co.'s prize, with a vase of excellent Bradt; the same gentleman also got the Florists' Review's prize, with well grown blooms of Jubilee, Bradt, Flora Hill and White Cloud. The Ward Cup was won by W. C. Duckham, with a very fine assortment. The varieties shown were America, Maceo, John Young, G. H. Crane, Mrs. James Dean, Maude Adams, New York, Blush, Melba, Bradt and Glacier, all of which were very well grown.

The Pierson prize was awarded to Wm. Russell, he showing well grown blooms of White Cloud, Mrs. James Dean, John Young, Meteor, Albertini, Bradt, Scott, Portia, New York and Turner's seedling. The prizes offered by American Gardening and Dailledouze Bros. were not competed for.

Commercial growers were well represented, Robert Craig & Son sent a vase of Ethel Crocker, which was awarded a certificate of merit. H. Weber & Sons received certificates of merit for No. 11, pink; No. 40, pink Genevieve Lord; No. 10a, large white, and No. 126, a good dark red; another pink variety, No. 30, also received honorable mention. The fine keeping qualities of Genevieve Lord were well displayed on this occasion.

Lehnig & Winnefeld received certificate of merit for their white seedling, and H. Michell, Philadelphia, got honorable mention for Mrs. Bertram, Lippincott. H. A. Molatsch showed a good scarlet, Mrs. Bird S. Coler, which received an honorable mention. From Flint, Michigan, Mrs. McIntyre sent a red variety named after that state; these arrived in poor condition.

C. W. Ward received a certificate of merit for a vase of Roosevelt; Dailledouze Bros. also got a certificate of merit for their No. 666. Honorable mention was given to John H. Taylor for a vase of Scott. The Dexter Co. showed a fine vase of California varieties, and E. Banyard & Son had sample blooms of their Pink Perfection petunia.

A light collation was served by the society, and at the quarterly business meeting held there was some talk of having a strawberry show at the next meeting in June, but definite arrangements were not made.

A vote of thanks was tendered J. I. Donlan for his efforts in arranging the carnation show. Robert Craig spoke a few words, gave lots of good advice, and related how slow New York was as compared with Philadelphia. Philadelphia men come to New York and carry away the first prizes for American Beauty.

The gardeners are enthusiastic over the forthcoming exhibit in August. There may also be a chrysanthemum show under their own auspices this Fall.

Providence, R. I.

Farquhar Macrae has decided to build two new houses, one 18x170 feet, one 22x200 feet, and is laying his plans for several more new houses later on. Heretofore he has heated his houses by hot water, but will take out his old boilers (four), building a new boiler-house complete, and will heat by steam. He has placed his order with the Dean Boiler Co. for boilers. This firm will make plans and superintend the necessary changes.

St. Albans, Vt.

Charles H. Cooke, who has been in Boston the past year, returns to this city as assistant to his father, George Cooke.

CHANGES IN BUSINESS.

McGREGOR, IA.—Robert Gugler will open a flower store here.

TOPSHAM, ME.—Herbert Merion will open a flower store on Main street.

LAWRENCE, MASS.—Herbert Swan and J. Berndtson have bought the greenhouses of James Madding, of Jackson street, Methuen, and will move them near to the corner of Berkeley and Jackson streets.

DOYLESTOWN, PA.—George Carver has sold his interest in the greenhouses of Schmutz & Carver, and Mr. Schmutz will hereafter run the business himself. Mr. Carver will take a position in Andre's rose houses.

ALBANY, N. Y.—The firm of Goldring Bros., composed of Samuel and Frederick Goldring, doing business as florists at 30 North Pearl street, has been dissolved. Samuel Goldring will continue at the North Pearl street store, and his brother will engage in the wholesale business, with greenhouses at Slingerlands.

IRON GUTTERS

Parties contemplating using Iron Gutters will do well to note the following extracts from Patent No. 616,781, issued to George M. Garland:

The object of the invention is to provide a valley-gutter for greenhouses which will be so constructed as to combine a stop for the glass and a drip-conductor.

Another object of the invention is to so construct the gutter that the devices for fastening the gutter to supports will be below the weather-face of the gutter, thus avoiding perforations of the weather-face and consequent liability to leakage.

The nails, screws or other fastening devices are passed through the drop flanges and into the lower ends of the roof-beams, so that these fastening devices for connecting the valley-gutter to the roof structure are below the weather-faces of the valley-gutter, and consequently the weather-faces of the valley-gutter need not be perforated, insuring against leakage.

Miami, Fla.

The cold wave of February 18 sent the mercury tumbling down with a rush, and we poor "crackers" hunted for overcoats for ourselves and canvas for our tender plants. It was all over in a few minutes, but it spoiled the tender plants that were not protected. Dickerson & Belden had nothing damaged in their slat houses. The little "cracker kids" found it very amusing to break thin ice in tubs and pails. Not so the poor truckers, who, when they saw the mercury going down to the danger line, rushed to their tomato fields and covered all the plants not too large to bend down. Large plants bearing fruit were left to themselves, and some of them fared badly, being chilled so they are worthless. Fifteen miles south of Miami are over 500 acres planted to tomatoes, 250 acres being in one field; these were unharmed by the cold. Some cucumber fields were ruined, others are producing plenty of fine fruit for shipping and the Winter hotels. Orange, grape fruit, lemon and lime trees were unhurt, the cold only affecting very tender plants that were not protected. Pineapples that were shedded were unhurt, but those not protected will lose some of the foliage. But it is not thought that fruit buds are hurt.

Although it is rather early for shipping plants North, Dickerson & Belden are making some large shipments of orchids, Epidendrum venosum, the butterfly orchid, also Cyrtopodium punctatum, the palm orchid.

The Winter hotels are beautifully decorated with growing palms, ferns, crotons, dracænas and other foliage plants.

Cut flowers, such as roses, carnations and narcissus bring a fair price, and are in good demand. The most profit is in pot plants, which the tourists buy and have shipped North for themselves and friends.

Carnations and roses in slat houses are a big success here; the climate seems to suit them. Bride makes a lovely bud, but will show a shade of pink on the outer petals. Bridesmaid is big and full but of very poor color if picked too soon. The bud requires a day after it is matured before being cut, then it is a magnificent rose. PHYLLANTHUS.

Ottawa.

The Market.

Plenty of sun has had a good effect on all crops. Roses are now very good; the only short crop in view for Easter is the carnation.

Pot plants will be just right. Azaleas are almost too numerous for home consumption, but it promises to be a good plant for Easter, so I suppose there will not be many left. Business has been very good; roses bring $1.50; carnations, 50c., and violets, $1.

A great boom in shamrock on St. Patrick's Day was somewhat of an agreeable surprise, but as Ottawa is quite a shamrock city there was a fair stock, although not enough. By 10 a. m. on St. Patrick's Day Scrim had sold out his stock of the "genuine" 450 in 4-inch pots, and then had to fall back on oxalis. Others, also, sold out early in the day.

Our carnationists have now settled down for another year. The Marquis seems to carry a great load on its shoulders; I hope it will not disappoint the many.

The bulb men are now to be seen frequently. E.

Jamaica Plain, Mass.

M. J. Killion, the florist, has temporarily moved his stock into the building occupied as the Cyclers' Cafe, pending the renovation of his own premises.

Chicago.

State of Trade.

Another week of Lent has passed, with stock well cleared off and prices good for the time of the year. Roses are now in fine shape, Beauty arriving in increasing quantities—sufficient for the demand; same in the medium lengths. Bride and Bridesmaid are the best sellers among the teas. Meteor is harder to move, and concessions have to be made to clear out. The present week opens with heavier supplies, owing no doubt to the few warm, sunny days experienced last week; but as it is now cloudy and threatening, the spurt will likely be temporary.

Prices for extra long Beauty will not go beyond $4; the best Bride and Bridesmaid above $8. Good roses are now at $4 to $6, with shorts bringing $2 to $3.

In carnations the stock coming in is still short of the demand, especially of white, and prices are well maintained. Violets do not go above 75c., lots being sold by the thousand at from $2 to $4.

Lilies are not abundant, at $1.50 to $2 per dozen; callas are in fair supply, at $1.25 to $1.50. Narcissus is not so plentiful, and very few Romans are coming in now—some Dutch hyacinths are fairly good, bringing from $4 to $8 for fancy. Valley is in supply sufficient for demands, Kiehm's home-grown stock being still good. Sweet peas are yet scarce, at $1.50 to $2. Smilax is dropping off in supply, the price ranges from $1 per dozen for short to $1.50 for good.

Easter Prospects.

A good Easter trade is confidently predicted, and reports generally indicate a plentiful supply of flowers. Lilies, of course, are a prime factor, both cut and as pot plants. Since the downfall of Harrisii extra fine, tall, many-flowered plants will surely be scarcer than in old times. Most of those to come in will be longiflorum, except from Bassett & Washburn's place, where only Harrisii is grown. There are some lots that will scarcely be ready, even though Easter is late; but there is enough in sight to make lilies a factor of prime importance. Prices anticipated are from $10 to $15 per 100 in first hands. Bassett & Washburn have about half of 30,000 planted yet to flower. E. Buettner is a heavy grower, and a list of ten others before me, growing from one to six thousand plants, should alone furnish a quarter of a million blooms, with smaller quantities grown by hosts of others. Then there are outside shipments, the extent of which it is impossible to estimate.

Rose growers, generally, have good expectations for Easter, some particularly so; hence the outlook for this flower is promising.

Reports anent carnations are slightly more conflicting, but the generality of the big growers say the supply is all right. Peter Reinberg expects to cut 20,000 Easter week. He has high praise for Flora Hill as a white; it is still doing splendidly. Evanston, as usual, is loaded with flowers.

Wietor Bros. say their crop will be good. Triumph, Armazindy and their pink sport will be plentiful. Argyle is never out of crop.

C. L. Washburn, of Bassett & Washburn, is not so sanguine of a big crop; fearing it to come a little after Easter.

All classes of bulbous flowers will be in fair supply, although less than in other years; but no doubt Southern outdoor grown material will be heard from by then. Violets will be abundant.

Flowering plants should be good sellers, and, if rightly managed, should help the smaller growers, as it is a notorious fact that all the big places go into cut flowers exclusively. We repeat what we have often said: The best openings in this city to-day, in a florist's way, are for specialties in up-to-date establishments devoted to growing flowering plants in pots, with side issues in cut flowers, as circumstances might dictate.

Palms will sell well. There is no overstock of azaleas, and none too many good pot roses. Begonias, astilbes, a few benths (don't know of any good hydrangeas), and a few primulas, cinerarias, cytisus, etc, comprise the balance of the goods offered.

Among Growers.

Stollery Bros.' Lilium longiflorum show good growth, but a number of them cannot be got to grow tall. George Stollery says the dwarf strain has a red stem. They are all well budded, with from three to eight flowers on a stem, and are being hurried along irrespective of Easter, as the price is good and room is wanted for bedding plants. This firm has a nice bench of sweet peas for Easter. Argyle carnation is in good form, and seems to do well here.

August Dressel has about 6,000 plants of Lilium longiflorum, not equal to what he used to have, but still fair, as things go. He is just starting up dormant hybrid roses, in readiness against Decoration Day. Carnations are off crop, and will hardly be in good shape for Easter.

Round About.

George M. Garland is having quite a demand for his iron gutters, sending them to all parts of the country, thus showing a briskness in greenhouse building.

The Wieland-Risch Co., of Evanston, will open up, April 2, a wholesale florist's place, at 59 Wabash avenue.

Deamud is receiving some very good Goldfinch carnations.

McKellar & Winterson's is a busy place in the florists' supply line just now. They have issued a complete catalogue of their wares.

The firm of Poehlmann Bros., of Niles Center, is now composed of August F. and John Poehlmann, Adolph H. having retired (not August F., as given in our previous notes). Their salesroom is at 51 Wabash avenue.

J. A. Budlong will begin building three new houses as soon as frost is out of the ground.

Fred. Hills, of Maywood, is sending in some fine sweet peas, and Bride and Bridesmaid roses. He will shortly begin building, including a mushroom shed.

Gus Lange left for New York in time for the rose show, and to obtain some new ideas for Easter.

Vaughan's seed store is showing signs of Spring; buyers are flocking in.

Stationery for Florists.

Every florist in the land should have a complete supply of printed matter wherewith to conduct his business in befitting style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

$5.00 Combination offer includes....
250 Noteheads, 5½x8½ ins.
250 Envelopes, size 6¾.
250 Billheads, 7 ins. wide, 5½ ins. deep.
250 Business Cards, 2¾x4½ ins.
250 Tags, size 2½x5½ ins.
Cash with order. Delivered F. O. B., N. Y.

$10.00 Combination offer includes....
500 Noteheads, 5½x8½ ins.
500 Envelopes, size 6¾.
500 Billheads, 7 ins. wide, 5½ ins. deep.
500 Monthly Statements, 5½x8½ ins.
500 Business Cards, 2¾x4½ ins.
500 Tags, 2½x5½ ins.
One Day Book. } If these are not wanted
One Ledger. } subtract $1.50.
Cash with order. Delivered F. O. B., N. Y.

PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article wanted.

Noteheads will be furnished in smooth writing paper with ruled lines. Linen paper, ruled or unruled, can be had instead if so ordered.

Envelopes are full commercial size and of good quality.

Billheads will be furnished as above, but size 8½ ins. wide and 4¾ deep will be substituted when so ordered.

Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 200 accounts.

Special designs, trade marks, etc., engraved to order. A rose, violet, or other flower can be printed on your letterheads and billheads, plain or in color, to order.

The quality of all the above work is guaranteed.

We can forward any of these combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.

IT has all the habits, grace and fragrance of

THE AMERICAN BEAUTY

(of which it is a sport)

But has the fine

Pink Color

Of MME. TESTOUT

WHO IS THE

QUEEN OF EDGELY?

It is the famous NEW ROSE—the long-looked for

PINK AMERICAN BEAUTY

which has been so favorably received at the exhibition of the **American Rose Society, Eden Musee,** New York, March 27, 28, 29, 1900, having won the only distinction to which, as a new comer, it was eligible, viz.:

A CERTIFICATE OF MERIT.

This is what the New York Press has to say about it:

N. Y. Herald.

There was the new American Beauty, a rose as large and as well formed as its darker sister, and of a delicate pink color. Many of the patronesses stopped before the great clusters of this new flower and expressed the greatest admiration for its beauty and its gracefulness. There are many who regard it as more beautiful than the well-known rose from which it has developed.

N. Y. Times.

The novelty of the exhibition was the long-looked for pink American Beauty, of which so much has been said, and which has never been shown before. Its history is an interesting one, and shows how fortunes come accidentally to the rose grower as they do to some other toilers. Four years ago, in a house devoted to the propagation of American Beauties, at Edgely, Penn., by the Floral Exchange Company of Philadelphia, a freak made its appearance. To rose growers it was called a "sport," and its growth was carefully watched.

Soon a small pink bud made its appearance, the only blonde in that household of lovely brunettes. Modestly it unfolded, and then its growth for four years under special conditions was as carefully looked after as the most delicate child. It grew and thrived, and last night the queenly blonde received homage from her courtiers. The American Rose Society awarded it a certificate, which means that she is lovely as well as a debutante. She will not stoop to trade until next Spring, when in the busy marts she will vie for favor with her brunette sister. All this is the result of an accident that even the growers do not attempt to explain. It was their luck, they say, that is all.

N. Y. World.

The Queen of Edgely, a cousin to the American Beauty, has created a furore. Mrs. Morris K. Jesup, Mrs John Trevor, Mrs. A. A. Jolline have all sworn allegiance to the reigning sovereign, which bids fair to hold unquestioned sway. The rose is of a pale pink hue, infinitely soft in effect in decorations. It is a baby queen, a novelty, without a rival and therefore not eligible for a prize.

N. Y. Sun.

A vase of huge pink Queen of Edgely roses, the biggest rose shown, and a variety of the American Beauty.

New Yorker Herold (German).

The highest triumph of the exhibition was the new pink American Beauty "Queen of Edgely," from the nurseries of the Floral Exchange, Philadelphia and Edgely, Pa. This rose, when fully expanded, measures 6 to 7 inches, and is queen of queens among roses.

This Rose originated at the nurseries of THE FLORAL EXCHANGE, EDGELY, PA., four years ago, and has been under careful and continuous observation since that time. This Rose we can strongly recommend, and we will be ready to distribute it in Spring of 1901.

The Ideal Carnation.

Editor Florists' Exchange.

The ideal carnation has not yet been produced. We are all striving for this end; but should our ideals be fully realized, would we be content to stand still and be satisfied with the results achieved? I think not. Should my ideal of a perfect carnation be fully realized, I would at once set up a higher standard, and strive as hard as before to attain it, and having reached it again, would shift it still higher.

Everybody, I presume, has an ideal, and mine of the carnation is a stem ranging in length from 3 to 4 feet, strong enough to carry a 4 to 5-inch flower perfectly erect. In form, the perfect hemisphere seems to be the standard of most judges, yet I would not be adverse to a deviation from this rule, so long as the artistic aspect of the flower, and its popularity, would make the deviation no hindrance to its selling or shipping qualities.

Color is to a very large extent problematical, and affords certainly a wide field for honest differences of opinion to exist. After all, however, we must be guided by the popularity of any color, according to the esteem in which it is held by the buying public.

The calyx should break evenly at every point, but it need not necessarily be of the Albertini type. We have many examples of a good calyx, just as good as that of Albertini, yet differing very much in appearance. I believe that any calyx which breaks evenly at every point, and confines the petals firmly and in good form, should be entitled to a high score. It was on this point that the Chicago judges erred most in awarding 100 points to Enquirer. Any one could tell at a glance that it should not have received more than three points for calyx.

A 4-inch flower on a 3-foot stem would indeed be beautiful, providing other points were in keeping with stem and size. A 5-inch flower on a 4-foot stem would be more beautiful, but both these are still in the distance. We have not attained Thorpe's ideal. Four-inch flowers have been produced in plenty, but they always lack the 3-foot stems and other features in proportion.

I believe that too many points are awarded for substance. Those varieties which score high on substance are usually the ones which are the first to go to sleep. This has been my experience in noticing seedlings, and doubtless others have observed similar traits in the work of raising seedling carnations. There are a few exceptions to this rule, however, but in the majority of cases the very heavy flower will be the first to go to sleep, other things, such as cutting, development, etc., being equal. Ten points could be taken from substance and five each be given to odor and calyx; this, I believe, would make our scale more perfect, and bring out the essential points of the carnation better than is done by the present one.

In conclusion, I believe it to be quite impossible for a variety to score 100 points if judged rigorously by our present scale. Furthermore, I believe that after 90 points have been fairly allotted additional points should be awarded with great care and deliberation. There is plenty of room to go on into decimals at this stage, and the nearer to 100 we come the greater should be the consideration before awarding points.

WM. WEBER.

The Dutchess County Horticultural Society meets at Poughkeepsie, N. Y., Wednesday, April 4. The schedule for the Autumn exhibition will be submitted. Subjects for discussion are: Grafted Roses for Inside; Pruning and Spraying Fruit Trees and Violets. Clarence Reynolds will talk on "Some Experiences in the West Indies."

BUSINESS OPPORTUNITIES.

FOR SALE at Great Neck.—If you are a florist looking for a fine piece of land not very far from the station and within 40 minutes of N. Y., you should come to Great Neck and look at a 6¼ acre plot which I have for sale. This piece of land is well situated for a florist's place. It is sheltered in the north and northwest, and is as level as a pancake, and has a fine sub-soil suitable for carnation growing especially. Call or address John J. Mathews, Great Neck, L. I.

MONOPOLY! A genuine bargain for a live wholesale grower; 15,000 sq. ft. glass (six houses), long established and favorably known; practically no competition in the cut flower specialties grown; eastern New England the market; sales limited by production only; 50 miles from Boston, in a very attractive town, grand rose and carnation soil, 50 acres tillage land; large slate-roof 12-room dwelling; hot-water heat, etc., etc. Large slate-roof barn, carriage house, carpenter shop, etc. All in good condition and to be sold with contents, live stock, etc. A beautiful estate and a money maker. Easy terms. Price greatly reduced. Send for descriptive and illustrated booklet. O. T., care Florists' Exchange.

Mention the Florists' Exchange when writing.

BUSINESS OPPORTUNITIES.

TO LET or lease, two greenhouses, 20x100, and one 10x75, potting house and land. Long Island, 20 minutes from city. For terms, address 124 E. 27th Street.

FOR RENT. Four iron-frame rosehouses, 100x18 ft. 6 in., glazed, 16x24 glass, joined to one full spanhouse, 53x18 ft. 6 in., with potting shed; built by Hitchings & Co., and in first-class condition; 30 minutes by train from New York. For particulars address Florist, 5 Park Ave., Paterson, N. J.

FOR RENT—STORE

At 2783-2785 Broadway, between 107th & 108th streets, junction of West End avenue and Broadway; good location for first-class florist, being on a thoroughfare; in the "Tronville," a handsome new apartment building. Rent right. Apply on premises.

FOR SALE.

650 feet 4-inch hot-water pipe, valves, fittings and two tanks; 2000 feet glass, 6x8, 8x10, 10x12; one No. 3 Hitchings saddle boiler; one No. 3 Weathered boiler; 40 hotbed sash, 3x6 ft.; will sell all in one lot only; price, $300. Also place suitable for florist or nurseryman, with good Spring trade, no florist within 8 miles; house of nine rooms, barn, windmill, two acres good land, fruit, near depot; all the above for $2,500. Charles E. Price, Smithtown Branch, Long Island, N. Y.

MISCELLANEOUS.

GLASS.

A large quantity of 7x9 glass for sale cheap. Robt. Williamson, New Durham, N. J.

Baltimore.

The Market.

Carnations are scarce, roses and violets plentiful, and trade not half bad for Lent. Spring snow worries the tillers of the soil, and nursery shipments have been belated by the weather conditions.

The Club.

Robert J. Halliday, the president-elect of the American Carnation Society, and of the local club, is surely an inspiration, or rather the cause of one, as far as relates influencing the members of the Gardeners' Club to feel the necessity of becoming members of the Carnation Society. With great pleasure I inform the carnation world that the 26 members have been gained for the society. Much interest has already been developed in the meeting for next year; we are beginning with force.

Notes.

Wm. P. Binder and R. J. Halliday are off to New York, to gaze at the Queen of Flowers—one with an eye that loves beauty, and the other with a critical eye, in the capacity of judge.

Charles M. Wagner has taken a position under the city at Drexel Hill Park.

The weather is brightening up and is giving the man late with his lilies a slight chance to breath in hope.

EDWIN A. SEIDEWITZ.

Chicago.—Philip Scott, on his way to Denver, stayed over and made a call on the boys, when a game was gotten up for his benefit with the following scores:

	1	2	3
Philip Scott	169	182	176
Ed. Winterson	151	183	151
Geo. Asmus	205	172	161
Joe. Degnan	153	122	141

CHICAGO VS. JOLIET.

On Saturday evening, March 24, six bowlers, with John C. Hildebrand, of Holland, and C. W. Scott, of J. C. Vaughan's, went to Joliet to play a game with a team of the Chicago Carnation Company's men. On arriving at the depot Ed. Winterson invited the crowd to the dining car to accept his hospitalities, and a joyous hour was spent.

After the three games were played, with scores as under, witnessed by a crowd of people gathered to see the sport, the hosts and their guests repaired to a room where a right royal time was had, with songs and music, until the hour of departure arrived. The Chiengo boys are loud in praise of their reception.

BUFFALO, N. Y.—Pan-American topics will be in order now that William Scott has received his commission as Chief of the Bureau of Floriculture. I called on the versatile gentleman at his new office in the Ellicott Building and found him engaged in the perusal of a letter from a Manila correspondent—A. H. Macbeth, M. D., U. S. Army, offering a collection of phalænopsis and the Manila bean and chenille plant. Mr. Scott is anxious to see the houses up. As yet they are on paper, but with such a combination (Professor Taylor having charge of the entire horticultural department) the public will see a result surpassing anything hitherto accomplished at any previous American exposition. Mr. Taylor is well known to members of the S. A. F., and has established an enviable reputation by his showing at Omaha. It is superfluous to speak of Great Scott—the critic of dialects as well as successful floriculturist.

STILLWATER, MINN.—Frank Berry notes a decrease in funeral orders compared with previous years, otherwise business is fully up to usual mark. W. M.

NOVELTIES OF THE SEASON

CHRYSANTHEMUMS.

MONROVIA—Early yellow, of commercial value.
ORIZABA—Midseason pink. Incurved form.

Greenhouse Heating and Ventilating

WE WOULD CALL YOUR ATTENTION TO THE FOLLOWING LETTER IN REFERENCE TO OUR NEW SECTIONAL BOILER.

KEAP STREET GREENHOUSES,
BROOKLYN, NEW YORK, March 23, 1900.

MESSRS THOS. W. WEATHERED'S SONS,
46 and 48 Marion Street, New York City.

GENTLEMEN:—I purchased from you last September, one of your Sectional Hot Water Boilers for my greenhouse at Flatbush, and was so well pleased with the results, that I bought another one for my Keap Street Greenhouses, taking out another make.

Anything I might say would not be too high praise for your boilers. They work perfectly, and I am pleased to say that so far I have saved in coal one-half of the cost of the boilers. They will therefore pay for themselves in another year, a result which I consider remarkable. I would be pleased to reply to anyone desiring the actual proof of above.

Your very truly,
Signed, JOHN SCOTT.

P. S.—Kindly book my order for another boiler. I will let you know later when to deliver it.
J. S.

NEW CARNATIONS READY NOW.

You Need Not Be Afraid to Plant.

G. H. CRANE — THE BEST SCARLET CARNATION EVER INTRODUCED.

We have the finest and best selected stock of this Carnation in the country. We have 25,000 selected cuttings now ready, and can ship promptly on receipt of order.

Price, $6.00 per 100; $50.00 per 1000.

GENERAL MACEO — THE BEST CRIMSON CARNATION.

Pure, Rich, Clear, Effective Color, the Best Keeper of all Crimsons. The Most Profuse Bloomer of all. Produces 25 per cent. More Flowers than any other Carnation we have ever grown. Sells Out Clean in Quantity. Is Liked by Everybody.

Don't be discouraged by croakers who have had no experience with Maceo. We have 30,000 cuttings all selected, ready for immediate shipment.

$6.00 per 100; $50.00 per 1000.

GENERAL GOMEZ Some growers who have not grown Maceo think this is the best of the two varieties. Our experience shows Maceo to be the most profitable of the two. Gomez has a longer stem, is lighter in color and sells at 20 per cent. higher price than Maceo.

If you are in doubt as to which to plant, buy an equal quantity of each variety. That will enable you to determine which is best suited for your requirements.

15,000 Cuttings ready, $5.00 per 100; $40.00 per 1000.

MORNING GLORY, The Daybreak Colored Scott, $6.00 per 100; $50.00 per 1000.

WHITE CLOUD, Fine, strong stock, $4.00 per 100; $30.00 per 1000.

MRS. G. M. BRADT, 5,000 fine cuttings for April delivery, $5.00 per 100; $40 per 1000.

MRS. JAMES DEAN, Ready now, $3.00 per 100; $25.00 per 1000.

Remember, he Above Are Selected Cuttings Propagated from Selected Strains of Each Variety.

AMERICAN SEED TRADE ASSOCIATION.

ALEXANDER RODGERS, Chicago, Ill., President; ALBERT MCCULLOUGH, Cincinnati, First Vice-President; F. W. BOLGIANO, Washington, Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

The Bartelides Fire.

Editor Florists' Exchange.

The statement in your latest paper that our entire stock was damaged by fire and water is incorrect and misleading, and we want you to make a correction. Our office and retail department were damaged by water and fire, but our wholesale department and our warehouses were never touched; and we were doing business and filling orders the next morning after the fire, and are doing so yet. F. BARTELDES & CO.

Bulb Exporters' Association.—We learn that an association under the above style has been formed by the bulb exporters of Holland in order to protect their mutual trade interests. A status inquiry department and another for the collection of debts are special features. The managing director of both these departments is Dr. J. Spoor, solicitor, Haarlem Court of Justice, who acts also as secretary to the association.

The association is divided into six sections, according to the principal countries where bulbs are being exported to, viz.: United States of America, with Canada, Great Britain and Ireland, Germany and Austria, France and other French-speaking countries, Russia, Scandinavia and Denmark. Each section has its own committee and management, the United States section being a continuation of the late Exporters' Association at Lisse.

T. Van Waveren is president, Ernst H. Krelage vice-president, and J. H. Wentholt treasurer.

The association, which was started in February, now consists of 115 section members. The seat of the association is at Haarlem, and all correspondence should be addressed to Dr. J. Spoor, 24 Wilhelmina street, Haarlem.

Our Holland Letter.

Going around the fields of our bulb growers it is possible, now the reeds have been removed from the hyacinths, to see the results caused by the frost of the last few weeks. The foliage of all early kinds of hyacinths is heavily damaged, and, like last year, the early white varieties, such as Baron von Thuyll, Mina, L'Innocence and Blanchard, have suffered most. Many growers traveling in the United States now will be surprised when they return home again. The bulbs of the kinds of hyacinths mentioned will remain small the whole season through. The cause of the damage can be easily explained. The varieties referred to died very early last year, consequently had a long time for rest, and have shown their foliage very early. Some other early varieties, such as single blue Emlins, Baron von Thuyll, Rose Maria Cornelia, etc., have also suffered heavily.

Tulips and narcissi promise good plants unless damaged by frost later on.

J. B.

European Notes.

A decidedly cold wave has reached the whole of northern Europe, and cutting winds from the east, combined with several degrees of frost almost every night, are playing havoc with the young shoots of cabbages and other brassicas, and plowing up is the order of the day. Holders of reliable stocks should guard them carefully, they will be worth more money next season.

At this date last year the spinach plant was well up in many districts, but this season we are only now able to sow. It is probable that deliveries will be later this year. Fortunately, last year's seed was of very strong growth, and can confidently be relied on for early Fall sowings.

Owing to a great falling off in the demand for pole beans the prices have dropped considerably; if, however, we are favored with a few May frosts, sellers of to-day may be buyers at considerably advanced prices.

ANDORRA NURSERIES, Chestnut Hill, Pa.—Wholesale Trade List of Nursery Stock, also Price List of Trees, Roses, Fruit, etc.

A Morning at Council Bluffs.

J. F. Wilcox has made such a radical change in his plant that those of us who saw it some two years since, when at Omaha (and retain many pleasant recollections of our visit), would hardly recognize the place. New structures have taken the place of old; the range extending to the crest of the hill (where grew those luscious grapes) will consist of eight houses, each 200x25 feet, three-quarter span, so situated that they will catch the sun all day. The grade averages 5 feet to each house or 20 to the hundred. These houses are for roses, Beauty, Golden Gate, Meteor, Bride and Bridesmaid being equally grown, with a full measure of success. At time of my visit stock was in excellent shape, houses and plants clean, no undergrowth being allowed. The block of ten houses, same size as the new ones, is on the lower slope, and is used chiefly for carnations, of which White Cloud, Daybreak, Scott, Crane, Maceo and Mrs. James Dean are the leaders. Flora Hill is grown for an early crop. Bradt is very fine, two houses in full crop being a beautiful sight. The new rose Liberty will find a place here.

Easter stock is very promising; this is grown chiefly for retail, which branch is extensive. At the same time Mr. Wilcox is devoting considerable attention to wholesaling, establishing a shipping trade both East and West.

Spring plant business is important, a separate range of glass being set apart to handle this branch. One hundred thousand pansies for instance are raised in addition to numerous other stocks. Garden truck is produced at another and what was the original plant.

Mr. Wilcox attributes his success largely to the beneficial influence of the several trade gatherings, where the intermingling of bright lights cannot but diffuse knowledge, of which the smart, up-to-date grower or retailer is ever ready to take full advantage. W. M.

CALIFORNIAN SEEDS

Contract Prices for 1900 Harvest on Application.

WHOLESALE ONLY.

PERRY WATSON & CO.,
SACRAMENTO, CAL.

Mention the Florists' Exchange when writing.
