I., nearly two acres of land, 3 greenhouses, large size, small dwelling, fuel enough for 5 years, 25,000 pots; fine, well-paying plant; $2000 a year has been, and more can be made; sold account of poor health; good home market; everything in working order. Address, one week, "Brooks," 152 Flatbush ave., Brooklyn, N. Y.

Mention the Florists' Exchange when writing.

OBITUARY.

B. R. Cant.

B. R. Cant, of Colchester, who has been styled the "champion rose exhibitor of England," died July 17, aged 73 years. His list of honors included 2,080 first prizes, cups, medals, etc. He introduced into England the varieties General Jacqueminot, Jules Margottin, and Gloire de Dijon. The business, which has been established 134 years, will be carried on by his two sons.

John Mitchel.

John Mitchel, who managed the greenhouses on his property on Town Hill, New London, Conn., died July 23, after a long illness, in the 71st year of his age. He had been a resident of New London for nearly seventeen years, going there from Yonkers, N. Y. Mr. Mitchel was a kind-hearted and considerate man, and he will be greatly missed by his immediate friends, as well as by his bereaved family. He leaves a widow, a son, and a daughter.

Charles F. Webb.

Charles F. Webb, of Denver, Col., died at his home, Thursday, July 26.

In the death of Mr. Webb Denver has lost one of its brightest and most popular young florists. He was but 27 years of age, but during his short life had worked himself up to a proud standing in his calling. On leaving school in 1893 he started to work at the florist business, and it was only a short while before he was taken in as partner in the firm of Glauber & Webb.

Mr. Webb was a Denver boy, and had never traveled out of the state. He was looking forward to an eastern trip, but was taken ill on the eve of his departure. He was sick but three days, when he succumbed. Charlie, as he was familiarly known by everybody, will be sadly missed by the trade in Denver, as well as by the Florists' Society.

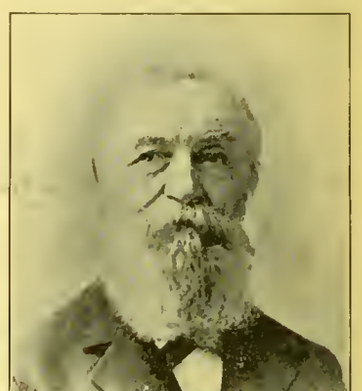
Charles H. B. Breck.

Charles Henry Bass Breck, the veteran Boston seedsman, died August 1, at the home of his son-in-law, Mr. Willard G. Brackett, 57 Bellevue street, Newton, Mass. He was 80 years old.

Mr. Breck was born in Pepperell, August 23, 1820. About eight years later the family moved to Lancaster, Mass., and there his education was acquired at the Lancaster academy. He began to assist his father at an early age, manifesting great aptitude for business, and possessing many of his father's distinguished traits. His progress was steady and substantial. In 1850 he became a partner in the "New England Agricultural Warehouse and Seed Store," established by his father, and of which he was the senior member and head since June, 1873, when his father died. During his long connection with the business it has developed and expanded to large proportions. In 1893, after having absorbed several minor concerns, Joseph Breck & Sons bought the stock and business of Parker & Wood, and combined the plants of the two houses, incorporating under the statutes of Massachusetts as the Joseph Breck & Sons' corporation, with Charles H. B. Breck president; his sons, Charles H. Breck and Joseph F. Breck, respectively treasurer and secretary; Edward O. Hatch, general manager, and Archibald Smith, manager of the seed department. The business now crowds the capacity of its four buildings, with their two acres of floor space. In addition to his business duties, Mr. Breck was called upon to fill many positions of honor and trust, and this he did with unswerving fidelity and indefatigable energy.

Mr. Breck was active and zealous in the affairs of the Massachusetts Horticultural Society, of which he was for many years a member, serving as chairman of the committee of arrangements for 17 years, and being vice-president to the close of his life. He was also a member of the New England Historic-Genealogical Society, and many other associations.

Mr. Breck was greatly interested in Masonry, and was the oldest surviving past master of Bethesda Lodge of Free and Accepted Masons of Brighton, of which body he had been a member about 55 years. He was also a member of the Boston Lafayette Lodge of Perfection.



The Late Hon. C. H. B. Breck.

In religious affinities Mr. Breck had always been connected with the Congregational denomination, being an attendant at the church in Brighton. For many years a director of the Metropolitan National Bank of Boston, it was only recently that warned by the failing strength of advancing years, he resigned the position in favor of his son, Charles Henry Breck, who was elected to succeed him.

A kind, thoughtful and helpful father and employer, Mr. Breck has always attracted youth, encouraged its confidences and aided its aspirations. His wonderful vitality and activity at an age when men are generally inclined to spare themselves, was largely due, as he believed, to the society of the young and cheerful, a vital interest in affairs, and a determination to remain young in heart, at least, to the last.

Mr. Breck always had a willing ear and sympathetic heart for those in need or sorrow, and was ever ready to assist, through personal effort or direct pecuniary aid, the necessities of those who called upon him. It used to be said of him that he would work harder to help a friend or a worthy applicant for his assistance than he would in matters wherein he was directly interested.

Since the destruction of the homestead by fire, April 19, 1896, Mr. and Mrs. Breck had resided with their daughter in Newton.

Mr. Breck is survived by his wife and three children, Charles H. and Joseph F. Breck and Mrs. Willard G. Brackett.—*Boston Globe.*

MISCELLANEOUS.

FOR SALE, some extra good second-hand 3-inch pipe, at 6c. per foot; also some 4-inch; secure it while it lasts. W. H. Salter, Rochester, N. Y.

J. Reardon	92	107	...
W. Tipisdy	121	85	...
Savage	176	163	167
H. Balsley	172	...	...

Ess.

Tarrytown, N. Y.

The Tarrytown Horticultural Society held its monthly meeting July 26. C. P. Johnstone, Wm. Hyland and Albert Griswold were elected to membership. Mr. Boschard put up a fine display of French gladiolus. Wm. Scott read a paper on "Points to Exhibitors," which was well received and thoroughly discussed. Jas. W. Withers, of New York, was a visitor.

R. A.

New Orleans, La.

Trade Notes.

There is very little doing just now in the way of business. Flowers are very scarce. We are having rains every day and foliage plants are growing fast. So far our Summer has not been so bad; the every-day showers cool us off, and stock is looking well in most places. Young roses are making good growth now. A great deal of tropical bedding is being done in Audubon Park. Our City Park Commission is spending thousands of dollars in making new canals. Ground was broken last week in Audubon Park for improvement making, according to Mr. Olmsted's new plans.

J. Steckler has returned from a visit to the East and West, taking in most of the principal cities. He was present at the Seed Trade Convention in Chicago. Since Mr. Steckler bought his new place last year, he has made great improvements. His firm is going in strong for raising fancy chickens; they also do a little in the plant line and have built one greenhouse.

H. P.

New York.

The Market.

This week's business has been smaller in volume even than last week's. There seems to be nothing doing, except the execution of occasional funeral orders; and, for the small demand thereby occasioned, there are scarcely enough good flowers to be had.

The supply of high-grade roses and carnations has been very limited, making it possible for those having such blooms to realize a good figure for them.

Ernst G. Asmus is sending in Kaiserin Augusta Victoria that are selling at $8 and $10 per 100, and some President Carnot that bring from $5 to $8 per 100. The best Bridesmaid arriving at present are from Peter Crowe & Co., Utica, N. Y., the selected flowers have brought 8c. each.

F. R. and P. M. Pierson, Scarboro, N. Y., is about the only firm supplying long-stemmed Beauty, and these, by the dozen, are realizing $4.

Good carnations are quite scarce, and when to be had they fetch $1.25; ordinary blooms are rather more plentiful (though not to any excess), and bring from 50c. to 75c. per 100—just the same price as No. 2 Bride and Bridesmaid roses.

Lily of the valley and orchids are in only moderate supply, and there is enough demand to keep them from accumulating. Gladiolus and asters are the principal flowers, however, and many more of the latter are coming in than can be disposed of satisfactorily. In bunches of 10 they go at 2c. and 3c. a bunch, in small lots; when quantities are wanted, almost any figure is taken. On Thursday morning one of Brooklyn's regular buyers secured a lot at 50c. per 100 bunches.

Aside from the asters and gladiolus, there is at present, a dearth of out-door flowers. Sweet peas are hard to find, and a few dahlias and rudbeckias are about the only other stock of this class to be had.

Smilax and maidenhair fern are in very poor demand, although there is plenty of good stock of both on hand.

Sports.

Another bowling team has entered for the coming tournament, making altogether eight in the list, the latest one to enter being Pittsburg. Secretary Chas. Schenck informs us that several inquiries are received from bowling clubs, asking whether there is any entrance fee in order to participate in the tournament, but he is unable to answer the query, as no information has been received as yet from the Committee of the National Bowling League.

Among the numerous prizes offered for the coming tournament is a silver cup from Traendly & Schenck, wholesale florists, to be awarded the individual making the highest score. Also a silver cup from Theo. J. Lang, retail florist, Sixth avenue, which will be given to the one making the highest average in the three games played.

Chairman Wm. J. Elliot, of the Shooting Committee, has secured a range at Dexter Park, Cypress Hills, L. I., where the shooting will take place. This will be more convenient than the McKnight Meadows, where it was at first intended to hold the contest.

Jottings.

John Young and his two brothers George and William, from Clifton, N. J., spent a few days together at Norwich, Conn., last week.

Philadelphia.

Sad Bathing Accident.

A most distressing and fatal bathing accident occurred on Tuesday last, at Ocean City, N. J., when two of the beloved daughters of Edwin Lonsdale were drowned. The sorrowful affair has cast a gloom over the entire trade in this vicinity, everyone feeling sad and sympathetic, and only wishing they could do something to relieve the heavy strain brought upon the bereaved family. The two young ladies who lost their lives were Miss Jennie Lee Lonsdale, 21 years old, and Miss Sarah Burton Lonsdale, 19 years old. They were staying at Ocean City, as the guests of Mr. and Mrs. S. Mendelson Meehan, of the firm of Thos. Meehan & Sons, nurserymen, Germantown, who had recently built a cottage at this popular seaside resort. The party, comprising six persons, went in bathing about 10:30 a. m., and only two were saved. Those in the party were Mrs. S. Mendelson Meehan, the Misses Lonsdale, Misses Virginia and Elsie Lowe, daughters of Prof. Lowe, of Germantown, 22 and 25 years of age respectively, and their brother, C. B. Lowe, Jr., 15 years of age. Mrs. Meehan and C. B. Lowe, Jr., were the two who were saved. The accident occurred shortly before 11 a. m. All were going farther out in the surf, the Misses Lonsdale leading, when they were swept off their feet by the swift undertow and carried into a recently formed hole or gully. Mrs. Meehan had presence of mind to float on her back until assistance came, but she was unconscious when carried out. C. B. Lowe, being able to swim a little, managed to keep afloat until rescued. When the life guards reached the Misses Lonsdale they had ceased struggling, but had not yet sunk, and just appeared as if unconscious. On being taken ashore medical aid was summoned, and the physicians tried every known device to restore life, but after working over the unfortunate ladies for one hour, all their efforts proved of no avail, and life was pronounced extinct. The Misses Lowe had sank and their bodies were recovered two hours later.

All the young ladies were prominent in social affairs and belonged to a church society. They were taking their Summer outing together. The Misses Lonsdale were quiet and reserved young ladies and commanded great respect. Miss Jennie had for the past two years acted as stenographer and typewriter for George C. Watson. Their home life was beautiful, and their accomplishments were many and varied; thus the blow is felt all the more. The hope is expressed on all sides that the bereaved parents and family may all be given sufficient strength to bear up under the heavy burden they have so suddenly and unexpectedly been called upon to bear. At present writing it is expected that the funeral will be held on Friday afternoon.

[The FLORISTS' EXCHANGE tenders to Mr. Lonsdale and family its heartfelt sympathies in the irreparable loss they have sustained; in which we feel sure the whole florist trade of America will join.—Ed.]

Toronto.

There is no change in the business situation. Roses from the new stock are improving. Asters are coming in more plentifully, and sweet peas are abundant, with a light demand.

There is likely to be a goodly number of the boys who will go to Montreal to the Convention, and the meeting there is sure to be a very good one. All members of the trade here should go if possible, for the Montreal florists are a bright, wide-awake body of men, whom it is a pleasure to meet; and they have a fine city to show the members.

I regret to have to chronicle the death of another of our prominent citizens, Mr. P. G. Close, president of the electoral district Agricultural Society and vice-president of the Industrial Exhibition Association. He was a popular and kindly man and will be much missed.

T. M.

Detroit.

We are having cool nights and plenty of rain, causing carnations to make a fine strong growth; and the growers are busy planting. The supply of cut stock seems equal to the demand.

RAG.

MONTPELIER, VT. — Ernst Jacobsen has built up a snug business in this, the home of the hero of Manila. Mr. Jacobsen is at present enjoying a vacation in Europe, leaving John H. Cox, who is well-known to a crowd of Bostonians, in charge. Mr. Cox has improved the place since he took it in hand.

BURLINGTON, VT.—Members of the craft will be glad to know that John Wilson has fully recovered from his recent severe illness. At one time the doctors bade him farewell, but his sturdy constitution carried him through. In the meantime, the business was well carried on by Mrs. Wilson, assisted by her daughters. As an acknowledgment of their success, Mr. Wilson proposes giving them a trip to the convention, feeling assured that both pleasure and profit will be obtained by so doing. Mrs. Wilson shewed me some of the finest plants of Asparagus Sprengeri I have ever seen grown by a lady of the craft.

ST. ALBANS, VT.—George Cook has plans for adding to his plant. The past season has been a good one.

PLATTSBURGH, N. Y.—William Cooke is rebuilding, and hopes to be through in time to attend the convention, which he is sure will surpass all its predecessors.

Plant Culture

NOW READY FOR DELIVERY.

FORMERLY ADVERTISED AS

COMMERCIAL PLANTS

THEIR PROPAGATION AND CULTURE.

BY GEORGE W. OLIVER, PROPAGATOR TO THE U. S. BOTANIC GARDEN, WASHINGTON, D.C. AND LATE OF THE ROYAL BOTANIC GARDEN, EDINBURGH.

A working Hand Book of Every-day Practice for the Florist or Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experiences of the writer.

The plants dealt with comprise those which are commercially handled by **Florists, Gardeners and Nurserymen,** and include **Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines,** and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is to be found in much more pretentious works costing ten and twenty times as much money. Strongly bound to stand rough handling and plenty of it. **Price, $1.00 by mail, postpaid.**

Growth of Florists' Business in Illinois and Chicago.

It will be recollected that in Professor B. T. Galloway's estimate of florists given in the Year Book just issued, there was, in Illinois, among the 600 to 800, as he gave it, 4,250,000 feet of glass. This estimate is too low. There is, without a doubt, easily a million more feet of glass in Chicago and its tributary towns than this total given for the State, of course, adding the increase this year, of which I have information to date, viz., 640,000 square feet of land covered with glass for all Illinois, with all but 30,000 feet to be credited to this city and towns contributory thereto.

Having spent a little time lately in going over this matter, more particularly to ascertain the growth in the last twenty years, I will give briefly the result of my inquiries:

I may here say that this is something more than a mere guess, because I have taken the pains to go back to documentary evidence for the figures of 1880. These I either have myself, or they are in some printed form, within my reach.

At that comparatively early date, I can put my hand on every name going to make up the 104 florists credited to Chicago and its vicinity, a large number of whom I knew and the places they had. Fifty thousand feet of glass was the very top notch at that time, and there are more in number to-day having from one hundred thousand feet up to five hundred thousand, than there were in 1880 that had 30,000 feet to an establishment.

Twenty years ago, in fact, was, out here, just the dawn of the rose and carnation era, that has now assumed such monstrous dimensions that it apparently, mainly, enables from fifteen to twenty wholesalers to make a good living in the selling of these flowers alone.

Recapitulated, the matter stands thus:

Population in Chicago, 1880, per United States census.....	503,185
Square miles in city limits at that time.....	37,000
Population in Chicago, 1900, estimated (supposed too high)..	2,000,000
Square miles in city limits, 1900.	186,000
Florists in city limits in 1880....	61
Outside contributory towns.....	43
Total, 1880.....	104

Estimated surface of glass among them.....500,000 square feet

Florists in city limits in 1900...	377
Contributory towns.....	140
Total, 1900.....	517

Estimated surface of glass among them.....5,500,000 square feet

Seven firms have not less than 1,725,000 of this quantity alone. In Illinois, outside of Chicago and contributory towns, my estimate for 92 towns and cities is 1,225,000 square feet, or a grand total for Illinois, say, of six million, seven hundred and twenty-five thousand feet of glass—a pretty good growth since I came to the city when it had three florists, each with one greenhouse, not exceeding 50 feet in length, heated by flues.

EDGAR SANDERS.

NOTES BY THE WAY.

SARATOGA SPRINGS, N. Y.—The steady sale of violets has induced T. J. Totten to build a house, on modern principles, as an experiment. If successful, he will add. The new variety Imperial is planted on one side, Marie Louise on the other. Plants were of equal size when set out, but the Imperial is now double the strength of the older kind. His carnation, Young America is a grand flower, in Summer as in Winter; at time of writing (July 20) crops are being picked of flowers as large and stems as strong, fully equal to many kinds at their best, in midwinter. Considering the heat, this variety has done remarkably well, but another week will see its finish. Beauty are rather later than usual in making their Summer growths, owing, possibly, tot he excessive drought and heat. No rain has fallen in this country of mineral springs for weeks past; all the moisture is underground. There is an abundance bottled up for the thirsty visitor, who has not put in an appearance as early as usual this season, nor in such large numbers; but their stay may be later to even up things. The floral parade promises to be as elaborate an affair as usual.

ALBANY, N. Y.—John Dingwall says, had he known what an enormous demand there would have been for geraniums he would not have so quickly sold out. Another season will find him with a bigger stock—no doubt they will be in as good demand. The drought is telling on carnations in the field; plants are making but little growth. The Marquis exhibits its vigor by surpassing all other kinds in the same patch.

L. Menand is investing some of the profits of the season in a new iron Hitchings house, 100 x 24 feet.

H. G. Eyres has purchased the Division place and is putting things into shipshape; this will give him excellent facilities for storage purposes, being very convenient to the store. I noted some exquisite designs in loving cups and rose bowls of dull gold color, and understand the design originated with Mr. Eyres, who is as original as he is progressive.

Fred. C. Danker has secured additional space that will greatly facilitate his business, which is progressing most satisfactorily. He reports a better demand than supply of good quality roses and carnations at the present time. Young America is the best carnation seen in this town at this season of the year.

Sam Goldring is in the Adirondacks recuperating.

Fred. Goldring has the place at Slingerlands in full working order; the houses are all planted. He is growing more roses and carnations than heretofore, and the same area of Marie Louise violets.

LITTLE FALLS, N. Y.—J. O. Graham has just returned from a trip to Kokomo, Ind., where he was the guest of his brother-in-law, W. W. Coles. This was Mr. Graham's first experience in the West, and its productions agreeably surprised him, although, as he says, he can also produce Kaiserin, with five-foot stems, if his patrons will pay the price.

AMSTERDAM, N. Y.—J. C. Hatcher has plans for two additional houses, but will wait until after convention time, expecting to get some new ideas at that gathering, which promises to take the banner.

UTICA, N. Y.—Wm. Mathews is rebuilding several houses. One can always see something interesting in orchids at this place. At time of my visit a grand lot of Dendrobium Dalhousianum was in bloom.

W. J. Crowe is summering in the Adirondacks for the benefit of his health which is causing his friends much anxiety. It is hoped the change will do him good.

The business of C. F. Baker & Son will be doubtless continued by the son Frank upon former lines.

CORNING, N. Y.—A. H. Woeppel has replanted a bed of Bride and Bridesmaid, from which there has been hardly a let up in seven years. He remains an advocate of the solid bed principle. W. M.

CHRYSANTHEMUMS Now is the time to plant them. We offer extra fine vigorous plants, from 2 and 2½ inch pots. Everybody likes them; they are so strong and healthy that they surprise all of our new customers; our old customers, of course, always know what to expect, but even they occasionally tell us that our stock is getting better all the time. Following is a partial list.

EARLY	100	MID-SEASON	100	LATE	100

PLANTS and FLOWERS.

ALBERT KNAPPER, of Frankford, Philadelphia, sends us some fronds of lace fern and leaves of apple and peppermint-scented geraniums, also an olive branch having green and yellow foliage.

PRIZE COMPETITIONS.

Photographic Contest.—The competition for August has now opened. Full explanatory particulars will be sent on application.

Commercial Home Grounds.—For full particulars of this contest, conditions, etc., see page 500, issue of May 12. The competition in Classes A and B are now open and will close October 31 next.

For shopping purposes New York leads the world. Let your wife, daughter or sweetheart prove the assertion on her visit here next August.

Prize Bedding Competition.

The publishers of the FLORISTS' EXCHANGE herewith extend an opportunity to all originators and makers of flower and foliage bedding designs to prove their skill before their fellow-workers. The season is well advanced, the beds have taken on their designated form and appearance, and now is the time to accurately describe them.

DESIGNS AND PRIZES.

Class A—For the best and most effective **Circular Bed**, planted in a design, with low growing foliage plants only—excepting in the center, where a taller plant may have been used in harmony with the rest.

Prize—A Five Dollar Gold Piece.

Class B—For the best **Carpet Bed**, any size or shape.

Prize—A Five Dollar Gold Piece.

Class C—For the best **Border, Scroll**, or **Ribbon Bed**; dwarf plants only, either flowering, foliage or mixed.

Prize—A Five Dollar Gold Piece.

Class D—For the best **Group of Beds**, any design or pattern, planted for foliage effect.

Prize—A Five Dollar Gold Piece.

Class E—For the best **Mixed Bed or Border**, planted for sub-tropical effect or otherwise.

Prize—A Five Dollar Gold Piece.

CONDITIONS.

This competition is open to all: employers, employees, subscribers, or non-subscribers; it is required, however, that competitors must have actually set out or planned the beds themselves.

The publishers reserve the right to withhold an award in any class unless there are at least three competitors in said class.

Competitors must send to this office a correct drawing to scale of each design submitted, in strong black ink (do not put more than one design on a sheet), together with full descriptions of how the measurements were taken, and the number and variety of plants used in filling them. This office will furnish sectional drawing paper free when requested.

Although not at all essential to winning a prize, we will be glad to receive photographs in addition to diagrams when possible.

Competitors may enter for one or for all five classes.

Diagrams and photos must be fully protected against being cracked or broken in the mails.

This competition is now open and will close Saturday, September 15.

Address all communications,

Publishers FLORISTS' EXCHANGE,

Bedding Competition. P. O. Box 1697, N. Y. CITY.

THE FLORISTS' EXCHANGE DAILY.

DURING S. A. F. CONVENTION.

Availing ourselves of the fact that the Convention this year is to be held in our own home, the publishers of the FLORISTS' EXCHANGE will issue a daily edition of this paper every morning from Tuesday to Friday, August 21 to 24, inclusive. This will be the first daily florists' trade paper to be published, and, while necessarily short-lived, will be none the less remarkable.

As the material contained therein will relate more or less closely to Convention matters and the doings of the delegates, we herewith solicit the good offices of our friends, asking them to keep us informed as to such news of public interest as may come under their notice. Our exhibit in the main hall of the Grand Central Palace will be headquarters, where all news notes, etc., intended for publication, may be left. The advertisement of the Daily will be found in another column.

BOOKS RECEIVED.

CYCLOPEDIA OF AMERICAN HORTICULTURE, second volume, comprising the letters E to M, inclusive. By Professor Bailey and Mr. Wilhelm Miller and others. Publishers, The Macmillan Company, 66 Fifth avenue, New York. Price $5 per volume.

The second volume of this valuable work has now been issued. It consists of 544 pages. Beyond adopting parallel columns for indexing the specific, varietal and synonymous names of large genera described in the book, the style is the same as in the first volume issued a few months ago. There are several lengthy articles of historical interest, particularly that on "Horticulture" by the Editor. In this article, after lamenting the absence of good books on floriculture, an opinion which will certainly not be shared by floriculturists, we are told that "the making of horticultural literature is passing more and more from the working horticulturist to the specially trained student and writers." This doctrine is not borne out by the Cyclopedia itself, for if the contributions by working horticulturists were omitted from the book, it would possess but little value to horticulturists and amateurs. On the other hand, we frequently see the work of trained students and writers, especially in the descriptions of the plants, in many cases, merely perpetuating mistakes in the original descriptions. The article in question cites also, that "American Gardening" passed into the hands of the present owners in 1893, but the then owners ceased to be such in 1898. There are some interesting figures on the plant and cut flower trade of the present day. It is estimated that there are from 9,000 to 10,000 floral establishments in the United States, representing a money value of $23,000,000, and the annual output from these establishments represent a sum of $25,000,000, giving employment to not less than 15,000 people.

A great deal of space is sometimes devoted to describing the species of some genera of little value in the United States, which might be given to others of more importance. Fifty-six species of Gentiana are described, the descriptions occupying several pages, and yet we are told that they do not thrive as well in America as in England.

The articles devoted to showing the horticultural possibilities of the several states and territories might have been of interest to others besides fruit growers had they contained some information concerning the hardiness of certain ornamental trees, shrubs and other plants. The information on this point throughout the work, so far, is very meagre; but will, doubtless, be supplied, as their importance demands, either in supplemental form or otherwise.

However, the second volume still further impresses one with the immensity, as well as the great value of the undertaking to American horticulture. Copies can be supplied through this office at the price named.

Firms Who Are Building.

CATSKILL, N. Y.—Henry Hansen will erect a greenhouse, 14x75 feet.

MYSTIC, Conn.—Horace M. Fitch contemplates adding a greenhouse, 20x40 feet.

NAPANEE, Ont.—George Lloyd intends enlarging his establishment in the near future.

ADAMS, Mass.—Lord & Burnham Co., New York, will build and heat a new greenhouse for T. D. Brown, of this place.

WESTERLY, R. I.—S. J. Reuter is making extensive additions to his already large establishment. Two new houses have already been erected, 200x22 feet, and ground has been broken for a third, which will be similar in size to those just mentioned. Besides these three, Mr. Reuter will erect three others before the cold weather sets in, one 150x20 feet, one 150x14 feet, and a third 100x12 feet. This will make a total of about 135,000 square feet of glass.

CONVENTION NEWS.

Chicago to New York.

The Chicago Florists' Club Committee on Transportation to the New York Convention of the Society of American Florists, to be held August 21, 22, 23 and 24, has arranged with the Lake Shore & Michigan Southern Railway for a special train, which will be vestibuled, and will contain as many Pullman sleepers as may be necessary—a buffet smoking car, a dining car and a day coach.

The running time of this train will be as follows:

Leave Chicago 3 p. m., Sunday, August 19. Arrive Niagara Falls, 7:30 a. m., Monday, August 20. Leave Niagara Falls, 9:30 a. m., Monday, August 20. Leave Buffalo, 10:20 a. m., Monday, August 20. Arrive New York, 9 p. m., Monday, August 20. (Grand Central Station.)

The railroad fare for the round trip will be $26.70 on the certificate plan. The sleeping car fare will be $5 for a double berth to New York. But if sleeper accommodations are desired to Buffalo only, sleeper tickets from Chicago to Buffalo may be had for $3 and the remainder of the distance traveled in the day coach.

At Niagara Falls an hour will be devoted to a trip around the Gorge Route Electric Line, which on the American side runs for miles below the Falls along the rapids, whirlpools, etc. Special trolley cars will await the arrival of our special train. Those not wishing to take the trip through the gorge can devote their time to seeing the Falls in any way they desire.

Returning from New York the members of the party have the option of returning by all rail route, or of taking the boat as far as Albany. And as a daylight ride up the Hudson is an exceedingly enjoyable trip, the majority will no doubt take advantage of it.

The boat leaves New York, foot of Desbrosses street, at 8:40 a. m., daily, reaching Albany at 6:10 p. m. A westbound train leaves Albany at 10 p. m., which arrives at Chicago at 9 p. m., next day. To any preferring the lake trip, Buffalo to Cleveland, the privilege of taking the C. & B. Transit Co.'s boat is afforded.

Berths may be reserved in the special sleepers by addressing L. F. Vosburgh, city passenger and ticket agent, Lake Shore & Michigan Southern Railway, 180 Clark street, Chicago, who will also supply any other information. Railroad tickets and certificates may be had at the above address, or at the Lake Shore Station, Van Buren street.

In reserving berths, be careful to state whether you wish a berth to New York, or to Buffalo only, and mention that you desire to travel in the Florists' Special Train.

By vote of the Chicago Florists' Club, the Committee was instructed to invite all florists in the West to travel with the Chicago party and to share the advantages secured by the Committee. We shall be pleased to have your company on this trip. The New York Convention promises to be a memorable one, and every florist who can possibly do so should go.

Please make your berth reservations as early as possible.

G. L. GRANT, W. N. RUDD, WALTER KREITLING,
Transportation Committee,
Chicago Florists' Club.

Buffalo to New York.

While we are assured of a good delegation from our city to the Convention, it will, from various causes, be unlikely that we shall all travel by one route. The N. Y. C. & H. R. R., the Erie, the Delaware and Lackawana, and the Lehigh Valley roads all have evening trains, which reach New York about 7 a. m., and all give the one-third rate on return, on the certificate plan. The fare-and-a-third on the New York Central is $12.33, on the other roads it is $10.70. Obtain your tickets a few hours in advance, as it takes time for the agent to fill out the certificate.

The Chicago delegation has chartered a special train, and has kindly invited the Buffalo delegates to join them. There will be a day coach attached to the train, which will leave Buffalo at 10 a. m., Monday, August 20, arriving in New York at 9 p. m. Anyone wishing to join the Chicago party will please notify William Scott, Main and Balcom streets, not later than Friday, August 17.

(Signed)
DAN'L B. LONG, WM. SCOTT,
Committee.

An Invitation.

TO THE SOCIETY OF AMERICAN FLORISTS:

We, the florists of Buffalo and vicinity, respectfully invite you to hold your convention of 1901 in the city of Buffalo, N. Y. We have many reasons to advance why you should come to Buffalo next year. A few of the first importance will suffice. It is now eleven years since the convention met here, and believing that we were not altogether unsuccessful in handling the convention, our past experience will help us to make your stay with us pleasant and profitable. We are the most centrally located city in the country, being within one night's ride of forty millions of people. We have no extremes of climate, being ten degrees cooler in summer than even neighboring towns in Western New York. Visitors from all quarters say we have the cleanest and best paved streets and the finest and best equipped street cars on the continent, all of which we modestly admit is true, and add that we have more miles of beautiful residence streets than any city in the world. This grand feature of our city appeals to all lovers of the beautiful in horticulture and is well worthy a visit alone. Our parks and Botanic Gardens are wide in extent, diversified in feature, and splendidly maintained. During the summer of 1901 will be held the Pan-American Exposition. The extent and object of this Exposition is doubtless well-known, but no verbal description can give you any conception of what its beauty will be. Though not aspiring to be a World's Fair in size, yet in actual beauty of the whole, in its landscape features, in its electrical displays, in its immense display of floral wealth, in all the arts and sciences and developments that man has produced as he steps into the twentieth century, this Exposition will eclipse all that the world has so far seen. In novelty of display and amusement, it will surpass even the great World's Fair of Chicago.

It is well known that many of our florists cannot spare more than one week from their business. They must see the Pan-American Exposition and they also want to attend the convention. The entrance to the grounds is but fifteen minutes' street-car ride from the hotel district and convention hall. There will be ample accommodation for all visitors. Contrary to what we hear from across the Atlantic, there is agreement that no charges will be raised for either the luxuries or the necessities of visitors, and railroads will run to Buffalo at reduced rates.

But aside from the Pan-American Exposition, we know that our city is such an ideal summer resort; that the great Niagara is within forty minutes' ride by steam or street-car; we are at the foot of Lake Erie and the rushing, sparkling waters of Niagara River; within a few miles of the broad bosom of Lake Ontario; two hours' ride from Lake Chatauqua, the greatest inland summer resort on the continent. Once more, we have the most salubrious summer climate. For these reasons, because you will enjoy yourself, be cool, contented and happy, and because we want your smiling faces and good will, we ask you to come to Buffalo in 1901.

(Signed) W. F. KASTING, President.
WILLIAM LEGG, Secretary.
WM. SCOTT,
J. F. COWELL,
D. B. LONG,
Committee.

Detroit to New York.

The Detroit Florists' Club will be on hand at the Convention, about 25 strong, and expect to bring home at least two of the cups given as trophies in the bowling contest—that is, if they can bowl good enough. We shall go via M. C. R. R. and New York Central to Albany, thence down the Hudson by daylight, arriving at Desbrosses street, at 6.30 p. m., on August 20, and will stop at the Murray Hill hotel.—R. A. G.

Milwaukee.

It is expected that there will be about seven or eight delegates from here to attend the Convention. A bowling team will also be entered in the tournament.

C. C. P.

CHANGES IN BUSINESS.

NORTH BEVERLY, Mass.—It is rumored that Charles Morrisey and another young man will build a greenhouse and engage in business.

SANDUSKY, O.—The greenhouse and stock of J. C. Gooding, who recently filed a petition in voluntary bankruptcy, has been sold by the trustee. The new purchaser is D. J. Mackey, and he will repair the greenhouses and put them in charge of a first-class florist.

WAVERLY, N. J. — And. Linsenmann has removed to this place from 13th street and Springfield avenue, Newark, N. J. He is building two greenhouses, 100x25 feet, and will grow carnations, chrysanthemums, etc.

St. Louis.

Market News.

There is nothing new in the matter of variety of cut flower receipts, except that hardy hydrangeas are coming in in limited quantities, and, so far, have sold well at 5c. per head. Asters are quite plentiful, and bring only 50c. to $1 per 100. Carnations are in sufficient quantity to supply the demand. Roses are still very poor; none from new crops as yet. There has been considerable funeral work lately. George Waldbart was very busy in this line, also Fred Weber. Miss Teresa also has had her share of funeral work, having executed orders for two 6-foot columns, with a vase on top, within the past few weeks. In fact, Miss Teresa is nearly always busy. She has worked up a fine trade, with funeral work a specialty, in which she does just about the best workmanship of anybody in town.

Building Notes.

Wm. Winters, of Kirkwood, has well under way two 150-foot houses, for carnations. J. W. Dunford, of Central Mo., is nearly doubling his glass, also for carnations. Theo. Klockenkemper has repaired and painted his range, remodeled some of his old houses, and given the place a general overhauling. The result is, he will have everything in first-class shape for the Winter. His stock is looking well. He has a lot of the newer carnations and his output will surely be in demand the coming Winter. Henry Berning has repainted his store. Henry is expecting a fine business this coming Winter.

Outing.

The annual outing of the florists took place on schedule time on the 25th ultimo. It was more in the form of a river excursion this time, and a very pleasant day was spent. A heavy rain the preceding night, and a cloudy morning, no doubt kept many away, but the weather cleared up, and it turned out an ideal day for the event; the grounds were bright and fresh from the recent rain. The spot was very close to Kinswick, where two old florist settlers have places—Messrs. Guy and Wilson. These gentlemen visited the grounds, and seemed to enjoy themselves.

J. Austin Shaw has been in town several days.

(154) **Carnation Growing for Market.**—How many square feet of glass is necessary to start with to grow carnations for the wholesale market?

—We would advise putting up about 10,000 feet the first year, and if the success accruing from that warrants an increase in area, build proportionately the following year.

(155) **Green Fly on Asters.**—We enclose an aster plant. It is infested with insects. Kindly tell us what it is and what will destroy them. They are on the roots of the plant.—M. B.

—When the aster plant arrived here the only insects to be found on it were green fly. These can be kept down either by spraying with tobacco water or by dusting with tobacco powder. If any insects are in the soil, try watering with lime water. Give a dose every three days for a while, and they will probably clear out.

(156) **Rooting Ficus Cuttings.**—I have a fine lot of ficus cuttings on some old stumps that I cut down, and they are now about four inches in length. Would you please inform me the best and surest way to root them?—N. R. G.

—The surest way to root the ficus cuttings at this time will be to moss them. Make an incision about three-quarters of an inch long, going about half way through the wood, insert a little sphagnum moss to keep the cut open, then tie a wad of moss, about as large as a hen's egg, around the cut. Keep this moist at all times, and when the roots show through the moss, cut the rooted portion away and pot.

(157) **Otaheite Orange.**—When is the proper time to propagate Otaheite orange, also temperature and general treatment while in cutting bench? Which cuttings are the best?—SUBSCRIBER.

—Wait until there is a good bottom heat under the propagating bed, which will be after firing has commenced, then take the young half-ripened wood (from any part of the plant will do), leaving two pairs of leaves after the cutting is made. Have a temperature of about 60 degrees, with the bottom heat 10 degrees higher; shade from the sun, and keep the sand just moist enough to prevent the foliage from wilting without having it too wet.

(158) **Insects and their Eggs in Carnation Houses.**—What is the best way to kill insects and their eggs in carnation houses before the young stock is planted. I have been troubled very much with red spider, and would like to know of some way to destroy their eggs.—W. B.

—To clean the carnation houses thoroughly, wash all the woodwork and repaint it if necessary. Clean away every particle of rubbish or dirt, both on the benches and the floor space underneath. Then give the benches a good painting with whitewash, made from newly slacked lime, and sprinkle dry lime underneath the benches. In whitewashing the benches, be sure to fill every crevice in the woodwork with the liquid, and if any eggs are there, they will never hatch out.

(159) **Hybridizing Gladiolus.**—I have a gladiolus which I do not know the name of. It is of sturdy growth—sometimes over five feet high. The florets are opposite on the spike, of good size, and pink in color, with purple and flake markings; but the plant never produces seed. I would like to cross this gladiolus on Lemoine hybrid, in order to have the tall straight spikes with the orchid-like coloring of the Lemoine hybrid; also cross it on Gladiolus Childsii. Please give details of the operation.—A SUBSCRIBER.

—Each flower of gladiolus has three stamens (male organs). The anther or pollen-bearing part of the stamen is about half an inch in length; they are attached by their filaments to the base of the perianth tube. The central part of the flower is occupied by the pistil, (female organ) which consists of, beginning at the base, first, the ovary, then the long style, at the end of which is the stigma. This is divided three times, and is the part which receives the pollen grains. The flowers, which are intended as seed bearers, should have the three anthers removed just as soon as they can be got at conveniently, so as to make certain that the seed-bearing flowers will not be fertilized by pollen from the flowers of the same raceme. After the stamens are removed, cover the flowers with very fine gauze, so as to exclude insects and humming birds, which in their search after nectar are almost certain to deposit pollen from other flowers on the stigmas, and so lessen the chances of cross-fertilization, as planned by the operator. When the perianth is expanded the stigma will be in a fit condition for the reception of the pollen. To perform the operation of pollination easily, with a pair of forceps take a stamen from a flower of what is to be the male parent, but only when the pollen is in a good condition, which it usually is about 11 o'clock on the morning of a sunny day, and rub the pollen on to the stigma of the emasculated flower. A very little will suffice. After this cover with gauze as before.—G. W. O.

Flowers of W. A. Manda's New Rose, Pink Pearl.

(160) **Building a Boiler Room.**—Which is the best way, and the kind of masonry work to be done to build a boiler-room perfectly waterproof. Size 8 feet by 20 feet and 8 feet deep. What kind of cement should be used? How has the mortar to be mixed? Is brick work or concreted walls preferable?—SUBSCRIBER.

—Concrete will give the best satisfaction, at least up to a height where the surface water can be taken care of. Use Portland cement and mix with one part of cement to five of coarse gravel. If broken stone, or cobble stones the size of hens' eggs, can be readily obtained, the proportion may be one of cement to three of stones and four of gravel. Thoroughly mix them before adding the water, which should be only sufficient to moisten the mass. The thickness of the wall will depend upon the weight of the building to be placed upon it, but if 12 inches thick it will probably be ample. To form a mould for the grout, a wall of plank should be put up. This should be firmly braced on the inside, to permit of the grout being thoroughly compacted. To lessen the danger of the water working through the wall, it will be well to have plank enough to make this box or mould at least four feet high, and care should be taken to have it so made that it can be readily taken out after the cement has hardened. The mould should be filled with grout in thin layers, which should be well pounded, so as to form a compact mass. For the bottom of the cellar a layer five inches thick will suffice. After two or three days the planks can be taken down, and the inside of the cellar should then receive a putty coat one-half inch thick, composed of one part of cement to two parts of sifted sand. This should be well mixed and made into a paste with water. If exposed to the sun, the cement should be occasionally wet down, to prevent too rapid setting. A wall made in this way will be water tight, and it will not crack unless exposed to severe changes in temperature. If desired, the upper portion of the wall may be built of hard burned brick, with a half-inch of cement inside.—L. R. T.

(161) **Heating.**—Will a two-inch steam main, well protected, running 225 feet before dropping to the circulation pipes, be of sufficient size to feed 1,700 feet of 1¼-inch pipe at low pressure, houses being 90 feet in length.—SUBSCRIBER.

—With 1,700 feet of 1¼-inch pipe there will be nearly 750 square feet of radiation, which is much more than should be carried from a two-inch pipe with low pressure, even though it is closely connected, but a 2½-inch main will answer very well.—L. R. T.

I have two houses, one 100 feet long and 16 feet wide, 9 feet to ridge, 2½ front wall and 5 feet north wall, no glass gable and all wood walls; also a house 100 feet long by 21 feet wide, 12 feet to ridge, 5 feet north wall, 3 feet front wall, no glass in walls, and one glass gable. The thermometer sometimes goes down to 26-30 degrees below zero, but as a general rule, 15 degrees below would be a fair average night temperature in Winter. Am going to use hot water under pressure, and 2-inch flows, with 1¼-inch or 1½-inch returns. I want to heat both houses for a general assortment of bedding plants, but the smaller house might be a little cooler than the other. Will Mr. Taft please advise through "Question Box" how he would pipe these houses and what size heater to use.—L. P. B.

—The boiler should be one that can handle 2,000 feet of radiation, and it will require three 2-inch flows and nine 1½-inch returns in each house. This should give 60 degrees in one house and 50 in the other. The flow pipes should be run downhill, with one on the purlin posts, if it is a three-quarter span house, or on the center posts if even span, and the other on the plates. Three of the runs can be on the side walls, or under the side benches, and the others under the middle bench. Another arrangement would be to use two 2½-inch flows and 10 1½-inch returns in each house, the flows and returns to be upon the side walls if the walks are outside the benches; or the returns may be under the side benches.—T.

Having a greenhouse, 100 feet in length, with only 60 feet piped, and wishing to pipe the remainder, I desire to find out whether my idea as here stated would work. The house is heated by a No. 4 Boynton hot water heater and is piped in this manner: The flow starts in four 1½-inch pipes, making two pipes for each side of house. These leaders at the end of about three feet enter a header having five 1½-inch pipes connected, and run the entire length—(60 feet.) The returns are the same in size and number. Now would it be practicable to take the flows (1½-inch) to splice out the returns and use one 3 or 3½-inch pipe on a side for flows?

—As now piped, there seem to be ten pipes on each side of the house, five being flows and five being returns. According to the proposed plan there will be a 3 or 3½-inch flow and five 1½-inch returns on each side of the house. The plan proposed would give a good circulation, although it would be better to have the returns connect with the boiler by means of a 2½-inch pipe, or by two 2-inch, rather than the two 1½-inch as now arranged. Without knowing the width of the house and the amount of glass it contains, it is not possible to estimate the temperature that can be maintained. Two 3-inch flow pipes are more than will be needed to supply 10 1½-inch returns, and two 2½-inch flows and 12 1½-inch returns will be all that will be required in a house 20 feet wide, for a temperature of 60 degrees in zero weather. For 20 below zero a temperature of 60 degrees in a house 20 feet wide will require three 2½-inch pipes and 14 1½-inch returns. The two 3-inch pipes and 10 1½-inch returns would probably maintain a temperature of about 50 degrees in a 20-foot house without glass in the side walls, in Central Vermont.—L. R. T.

Rose Pink Pearl.

Our illustration shows a bunch of flowers cut from the original plant of the charming new variety, Pink Pearl, raised by W. A. Manda, South Orange, N. J. Pink Pearl is the result of a cross between Rose Wichuraiana and Meteor, the latter variety being the pollen parent. The individual flowers are very double and are of heavy substance, ranging from 2½ inches to 3 inches in size. The coloring is of a pleasing delicate pink shade, the centre petals being slightly deeper than those on the outer edge. The wood is short-jointed and the foliage very dark and leathery, being almost proof against mildew.

For out-door work this variety is a gem, requiring no protection whatever through the Winter, nor any special preparation of the soil to grow it in. It has not been fairly tried as a pot plant, but the indications are it will make a desirable variety for forcing into bloom for Easter.

Central Park (N. Y.) Greenhouses.

Although midsummer is not the best time of the year for paying a visit to conservatories, the elegant structures that are located near 106th street are now in such excellent order that a visit to them at this particular period well repays any lover of plants. In the show houses there are many fine specimens to be seen, chief of which are noble plants of Pandanus utilis, Areca lutescens and livistona, the latter having just lately produced twenty fine bunches of seeds. There is also an extra large plant of seaforthia that has both clusters of flowers and seeds hanging from the trunk, just beneath the lowest set of leaves.

Commercial growers of palms rarely grow these a long enough time to have them bloom and produce their seed, and there is no doubt, that a majority of growers for the trade are unfamiliar with the graceful drooping flowers of the seaforthia, and to such we can say that it is worth a trip to Central Park to see this cluster of blossoms alone. There is also a fruit scape hanging from one of the big bananas as that will be of interest to many for the next few weeks.

An arch, composed of ferns chiefly, is formed over one of the conservatory doors leading to the court-yard, and it is a very creditable piece of work.

In one of the houses clerodendrons, aristolochias and ipomæas are trained ing already in bloom. One of the Ipomæas (I. Horsfallae) is of a beautiful up the rafters, some of the plants bepink color and seems of very free flowering habit. A plant of the Barbadoes cherry (Malpighia augustifolia) is at present in full flower, as is also some of the strelitzia regina, or Bird of Paradise flower.

The house containing the adiantums and the fancy caladiums is especially interesting. The caladiums are extremely well colored and many fine varieties are to be seen among them.

One of the conservatories which at present is empty, will, in the course of the next fourteen days be filled with annuals in blossom, all pot grown. Thousands of asters, stocks, companulas, antirrhinums, etc., will be used and the effect should be very brilliant.

On the lawns between the park entrance and the range of conservatories many flower beds are planted and are beginning to put on their Summer beauty. The canna, President McKinley, is proving a feature as a dwarf red, and F. Neuversal, a dark foliaged orange-flowered variety, is also very fine.

In closing, we cannot refrain from saying that the Superintendent, N. J. Morse, Foreman Frank Hamilton and the men under them deserve a word of praise for the work accomplished in such a short time. The houses were hardly finished when frost appeared last Fall and the grounds where is located the lawns and flower beds were not graded even at that time.

The old range of propagating houses is being town down and all traces of them will be removed within a few days.

Some New Geraniums.

Some of our progressive florists are wise enough to see great possibilities ahead for new and improved varieties of the geranium. Say what they may about its being "common," it occupies an important place in the floral world to-day, and as soon as the great merits of the newer varieties are fully understood, it will become vastly more popular than it has ever been before. It is the best all-around plant we have for everybody's use.

Last Winter C. W. Ward, of the Cottage Gardens, Queens, N. Y., sent me a lot of young plants, asking me to give them a trial. I have done so. Many of these have come into bloom the present season. They have surprised me with their many excellent qualities. Finer flowers I have never seen among geraniums than I have had on my plants. Some of them are of enormous size. It sounds like exaggeration to speak of flowers two inches and a half across, but several of the varieties average this and some flowers have been larger than this. The shape of the flower is also remarkable. Instead of three petals of good size and substance, with two narrower ones, such as the best of our geraniums have heretofore produced, these have petals so wide that they overlap each other, thus giving us a perfectly round flower, with not a break in it. And the colors! No words can do justice to them. There are scarlets of the most intense tone, deep crimsons, pure pinks, rich rosy salmons, and some with lower petals of most dazzling vermillion, the upper petals heavily washed with white. One pink sort has its lower petals thickly freckled with red, more after the fashion of a tiger lily than any geranium I have ever seen. Some of the deep, velvety scarlets have a veining of mahogany in the upper part of the flower, and several have an eye of pure white, contrasting charmingly with the body color of the blossom. There are several sorts in which pink, carmine and violet are combined with pure white in such a manner as to give us most beautifully variegated flowers. These new varieties are truly wonderful.—EBEN E. REXFORD, in *The Farmers' Review*.

Varieties and Descriptions.

Hall Caine is a rosy scarlet, of immense size. Its individual flowers are an inch and a half across, by careful measurement, and the petals are so wide that they overlap each other, thus making a circular flower.

Lord Kitchener is a dark crimson with white eye, a superb flower in all respects.

Chauser is of soft salmon-rose, quite as large as Hall Caine, and equal to it in form and habit. I am not sure but this is my favorite. It is certainly a magnificent specimen of the geranium family, and must create a furore as soon as it comes into general cultivation.

Mark Twain is something like the well-known Souvenir de Mirande, being rosy-salmon and white, but it is in every way a much finer flower than the old sort named. It is one of the finest "fancy" geraniums I have ever seen, but Dryden is more magnificent, because of its richer coloring. Its salmon shades into softest vermillion-rose, against which the pure white on each petal shows with vivid effect. Both these varieties are large and of superb form.

Crabbe is much like Hall Caine in all but color, which is a soft, rosy scarlet, very light in tone.

Gertrude Pearson is the most perfect pink geranium I have ever seen. We have had several quite similar in color, but never any with such broad, overlapping petals. Its pure white eye makes it a most attractive flower.

Dorothy Burroughs is an exquisite sort, of palest apple-blossom pink, marked with white.

Pierre le Brun is of vivid carmine rose, washed with soft pink at base of petals

Ian Maclaren is a rich, soft salmon. The noted divine ought to be proud of so charming a namesake.

Chateaubriand is a deep scarlet, of great size and perfect form.

J. P. Cleary is of intense vermillion, its upper petals veined with mahogany. Its rich, intense color dazzles the eye like a flame.

I wish those who call the geranium a "common" flower could see my collection. It would be a revelation to them.

EBEN E. REXFORD.

BRIEFS FOR BUSY FLORISTS.

CARNATIONS.—The transferring of the plants to the greenhouse bench from the field should be commenced during the coming week. Those that were put out in the field early, have made an excellent growth this season, and, these will, if placed on the benches now, produce much finer flowers than if left to get well budded in the field before being brought in. When planting on the benches, see that every plant is perfectly free from decayed leaves; that is, leaves that are turning white or are curled up in any way. By removing all such before planting a vast number of insects, or their larvæ, will be kept out of the greenhouse and thereby save much trouble later. Plant firmly, but do not bury the plants. Try to have them about the same depth as they were in the field. Shade them for four or five days after planting, giving an occasional light syringing overhead at intervals through the day, should the weather be very warm. Keep the greenhouse temperature as near like the outside conditions as possible, by having the ventilators open both night and day. Moisten the paths and underneath the benches once or twice a day, but avoid overwatering the plants. After the first watering they will need very little, until they have taken good hold of the soil.

CALLAS that have been resting outdoors through the summer should now be shaken out of the soil and re-potted. A five-inch pot will be large enough to use for them, and the soil can hardly be made too rich, though the manure used must be well rotted. New bulbs are arriving now, and they should be potted as soon as received. After the operation is completed, they can be put either outdoors or under a bench in the greenhouse. If the former, a shaded position should be given them.

CYCLAMENS are claiming lots of attention just now, and it will not do to neglect them at all. In giving them the last potting, add about one-fifth good compost to the leaf soil, and be sure to provide good drainage. While taking care of the cyclamens, do not overlook the fact that this is the time to sow the seed for next year's stock. Procure the best seed possible, and sow in pans or flats, using pure leaf soil and sand.

GERANIUMS.—A crop of cuttings taken now will strike readily (providing the soft growths are not taken) and as so many of these are always needed, it is well to start stocking up as soon as the cuttings are fit to take. Prepare a good batch now, and another can be taken later.

New Conservatories in Central Park, New York.

[By permission of Lord & Burnham Co., New York, Designers and Builders].

Bicentenary Celebration of the Sweet Pea.

In the year 1699, Cupani, who had in 1695 discovered the purple Sicilian sweet pea, sent seed of the same to Dr. Uvedale, Enfield, England. In the following years these seeds were sown by the worthy doctor, who was so much struck by the beauty of the flowers produced that he called the attention of his numerous botanical friends to them, and in this way the sweet pea was introduced into Great Britain.

So widespread an interest is now taken by the British public in the sweet pea, and so much truly remarkable work has been done by Eckford and others in its development, that it occurred to some of our more enterprising workers in the domain of horticulture that a special effort should be made to celebrate the bi-centenary in an appropriate manner. An exhibition at the Crystal Palace and a conference for the reading and discussion of papers bearing on the subject, together with the indispensable banquet, were the proposals put forward, and the scheme at once obtained hearty and generous support, not only from the British people, but from America, France and Germany.

The subscription list assured the promoters of the financial safety of the undertaking, and a very liberal prize list, quite international in its composition, was the guarantee of spirited competition and, if nature lent her aid, a magnificent display. In the exhibition which has just been opened the most sanguine expectations of the promoters have been more than realized and the full success of the scheme assured. The sun shone its brightest and gave the devotees of the sweet pea such a warm welcome as they are not likely to forget. The Crystal Palace is an ideal spot for such an exhibition, and as the exhibits of competitors are largely supplemented by the displays of all the most prominent members of the trade, an immense, grand and beautiful display is the result.

Commission Men and Growers.

When you find a good commission house, one that tries to do right, stick to it, and do not lose confidence in it if it happens to make you a poor sale once in a while, for I can tell you that there is no commission house in existence that can so regulate the markets as always to make good sales. We always strike days in every season when the market is overloaded, and those are the days when we commission merchants work the hardest and get the least praise, or rather, get the most curses, and it is not an uncommon thing for us to get letters telling us what poor sales we made on goods (which we very well knew before being told) and threatening to ship no more goods, but to ship to some house that will give an honest sale. Now, this is very consoling after you have got up in the morning before daylight, worked hard and in all ways you could think of to dispose of your shipments to very best advantage. But we get used to all such letters, or, I suppose we get hard-hearted, and are not troubled so much by such letters as you might think we would be, for it is often the case that shippers who have left us once return to us after a few days of wandering, and when they do come back, they make the best shippers, and men whom we can depend upon for regular shipments, thereafter.—Exchange.

Season Conditions and State of Trade.

We have now reached August, and have had no droughts to check growth in any manner whatever. Lawns are as green as in springtime; all kinds of shrubs and plants are still doing their very best. The truckman is having great crops, but plenty of weeds.

Very hot spells have been of short duration.

Carnations can be housed at any time now with large enough growths to suit all but those of the old school, who think they need large plants, and will house just before Fall. The tendency, however, is toward early lifting, and this season, so far, suits this operation to a dot. Such crops as sweet peas, grown out of doors, without artificial watering, have never stopped growing or flowering, late sowings coming along equally well. These flowers are much in evidence, and the season is going to be a long one.

Long-stemmed asters are now very plentiful, of the three principal colors—pink, purple, but largely white. They sell by the tens of thousands, ranging in price from 40c. to $1.50 per 100. Will this hold out, with the East flooding us, as well as home supplies? Roses and carnations seem to get cleaned off well enough to content the big growers.

The street man now buys adiantum ferns that are cheap, and arranges them around bunches of sweet peas. There is a tendency among these people now to "bunch" their flowers, going back to the old bouquet style again.

Many Still Summering.

C. L. Washburn and family returned Monday from outing near Muskegon, Mich. L. G. Greszens and wife have left for Paw Paw Lake. About August 15 Mrs. Horton will leave for the Colorado Mountains. E. E. Piesor, of the Kennicott Bros. Co., left Thursday on the steamer Manitau, for Mackinac. His itinerary will finally land him in New York in time for the Convention. G. H. Piesor will be one of the contingent going with us, Sam Piesor now breaking in as a bookkeeper the while. Larry Kelly is back again with the same firm. A. L. Vaughan, who has been summering beside the St. Joe River, is in the city, but will leave for the East about August 15. J. A. Budlong, the almost sixty-year old cyclist, is contemplating a trip to New York awheel. C. C. Cropp, of Vaughan's seed store, and family are at the Dells of Wisconsin. Mr. Vaughan takes short trips across the lakes.

Jottings.

Fred Benthey is enjoying, with the boys, to-day (July 30), his 21st birthday. He is looking for a bid for his first vote. Vote right my boy. On this depends four more years of good business.

Out on the Klehm farm they have an acre of valley pips, planted this Spring, 20 inches apart between the rows and two inches in the rows. The pips stand three years before being ready to force. The business of growing their own valley pips is a well-established feature with this firm.

George Reinberg has purchased of his neighbor, Peter Schaffer, his six greenhouses, heretofore in carnations. George will wreck the houses, using the glass, etc., another year.

H. N. Bruns is still growing valley, as the market seems to demand.

W. S. Heffron on August 1, entered as manager of the cut flower department of McKellar & Winterson, to relieve Mr. Winterson and give him more time to devote to the general business of the firm.

Visitors.

Harry Balsley, Detroit; M. Bloy, Denver.

Among Growers.

Wietor Bros.' immense place is in fine shape. The early planted roses are now giving crops. The six new rose houses were finished and planted six weeks ago. Half of the new range of carnation houses, all 33x330 feet, is completed and ready for planting; the other half being well on the way. This is a noble group of houses, having iron posts and gutters. Every available foot of room is used, and it will take alone 80,000 plants to fill them. With the old carnation range in addition, the firm expects to house 125,000 plants. There are three separate fields planted, with upwards of 200,000 plants to select from; two of the fields are in high, rather sandy ground, which this year's seasonable rains just suit. The plants are sturdy, large enough to house already, and cannot well be beat. Among them are 15,000 of the pink sport of Armazindy, that are likely to make their mark next Winter. Another field is on lower ground, and has been almost too well supplied with rain. The plants here are later, but are now doing finely. Quite a batch was planted direct from the cutting bed, and appear to have done best. The kinds mostly consist of the one mentioned and Triumph, Crane, America, Flora Hill, White Cloud, The Marquis, and Lawson. The range of new carnation houses will be like all the others, heated with hot water; two new 60-foot smoke stacks are built six feet outside, four feet inside.

Ess.

Buffalo.

Business Notes.

Some of the stores refer to a fair run recently in funeral flowers; others pronounce trade dull, with emphasis. The weather continues agreeable, as a rule, and no excessive heat. Flowers in the classes offered reach around for all demands.

Jottings.

At his home place, at Cold Springs, Mr. Scott is active in rebuilding two of his large show houses in an improved manner—butted glass, of course. A bench of Liliums, roseum and candidum look fine.

Local interest in both the S. A. F. meeting and Pan-American matters, prospective, is at strong tide with many of us. The exposition grounds are daily showing better outlines, and it seems beyond question that Landscape Architect Ulrich is going to get some strongly designed effects finished up before next Summer. Several acres, at least, closely filled and planted are now given over to young growths in a great variety of herbaceous and semi-hardy stock in houses, frames and garden beds.

We were quite surprised to see Michael Bloy on Tuesday, he having relinquished his position with the Park Floral Co., at Denver: on account of ill health.

It looks a bit as though the projected picnic may not come off.

VIDI.

The band wagon for the Trade Exhibit is almost filled. Hurry up if you want a seat there.

Boston.

Trade Items.

There is nothing new here in regard to business. The market is getting thinned out a little on carnations, but asters will more than replace them for some time to come. The latter, which are already overplentiful, bring from 20c., for the smaller ones, to 50c. per 100 for the choicer kinds. Roses are still plentiful enough, with Kaiserin and Carnot the only good ones. Sweet peas continue of pretty fair quality, and are in sufficient supply.

Deep expressions of sympathy have been heard on all sides here for Edwin Lonsdale, in the great loss he has sustained through the death of his two daughters by drowning at Ocean City, notice of which appeared in the morning papers Wednesday last.

W. H. Knapp, of Newtonville, started Thursday on a two weeks' vacation, which he will spend in New Hampshire, at the White Mountains.

Michael J. Barrett, with Galvin at the conservatories, is recuperating at Nantucket, whither he has gone with his family for a few weeks.

John Walsh has returned to his post at the Flower Market, after having spent a pleasant vacation at Yarmouth, N. S.

Al. Hutson, W. H. Elliott's salesman, is on his vacation in Ohio, and that vicinity.

Wm. Hannon's Sons are building two new 120-foot houses, at their Dorchester establishment.

Exhibition of Mass. Hort. Society.

Last Saturday prizes were offered for perennial phloxes and antirrhinums, but on account of the long drought, which affects both these plants, there was no exhibit of the latter for prizes, and the displays of the former were smaller than would otherwise have been the case. Rea Bros. and W. J. Clemson had the premium-taking collections of these flowers. N. T. Kidder showed for the first time a plant of Hæmanthus Catherinn, a native of South Africa, with showy spikes of scarlet flowers. W. J. Clemson made a nice display, including a catasetum, growing on a block, bougainvilleas, tritonias, and allamandas. Mrs. J. B. Lawrence showed a few antirrhinums, also dianthus, dahlias, zinnias, candytuft, mignonette and sweet peas. Mrs. S. F. A. Jefferds sent in a fine plant of Nephrolepis exaltata bostoniensis, and Mrs. E. M. Gill, E. C. Lewis and Mrs. G. Duncan, hardy herbaceous plants.

F. J. N.

Denver.

Trade Notes.

Trade is inclined to be quiet, with now and then a little funeral work to help clean up. Good stock is getting very scarce, especially roses; but with outdoor flowers, such as gladiolus, dahlias, sweet peas, etc., we won't run short for awhile yet. One of the leading stores put in a window of sunflowers during the past week and it caught the eye of a "passer-by." After asking the price of them, she said that she had a small ranch of 40 acres covered with them, that he might have if he went out to cut them, as she didn't want them to go to seed.

Several of the firms are building and rebuilding, and when all is finished Denver will be equipped with some fine looking places.

Michael Bloy, for several months foreman for the Park Floral Co., has gone back to Buffalo. His place has been taken by Ben Boldt, of the same town.

DENVER.

Ottawa.

We are having the best kind of growing weather, and crops are looking fine, carnations especially.

Trade is quiet, so there will be no excuse for giving the two conventions the go-by. Most of us will be going to Montreal, but hardly to New York. From all accounts there will be quite a crowd at Montreal.

Sweet peas and asters are now in good shape. Next week the Horticultural Society holds its sweet pea exhibition, and as there are a lot of sweet pea enthusiasts around us, we generally have a good show.

The ents of bowling trophies for the New York Convention make an old bowler's fingers twitch. These prizes alone are enough to bring a crowd to the Convention.

E.

I. D. CRAWFORD, PROP'R.

Cut Flower Market.

Alex. Scott, the manager of the Florists' Exchange, finds the demand for flowers quite brisk, rather exceeding the supply; although stock seems to be coming in a little better since the last rains. Carnations lead and bring from 60c. to $2. Weber's Genevieve Lord is among the few extra varieties which command the highest price. Outside carnations bring 75c. Roses are scarce. The first Summer Kaiserin are coming in. For outdoor roses white and pink Cochet have become the standards. Weber sends in some very fair Perle and Kaiserin. Asters sell for 50c. to $1. Achillea, the Pearl, Lilium lancifolium and rudbeckias are regular sellers, but go cheap. Sweet peas are over. Greens are plentiful. Halliday Bros. have been cutting asters for six weeks and more. They grow Michell's Queen of the Market and Truffaut's Paeony-flowered.

Real Estate Transfers.

Edwin A. Seidewitz has purchased the "Walnut Hill" property in Arlington County, of 18 acres, with a fine dwelling house, for $7,650. Ground is being broken for four new greenhouses, each 100 feet in length, one for decorative plants, one for general forcing and Easter plants, one for carnations and another for violets. Seidewitz intends to devote the whole of his Annapolis place to cut flower culture and to gradually transfer the plant business entirely to Arlington. His cyclamen seed and seedling business is developing very favorably.

Henry Ekas has sold to Henry Fisher five acres of ground on Sinclaire avenue for $5,000.

Changes in Business.

P. Weidman, formerly head gardener to Alex. Brown, Esq., is going to build a dwelling house on his place at Bohntton P. O., near Gwynn Oak, and to establish himself as a commercial florist. Some time ago he bought this place, which contains 16½ acres of excellent land. Weidman is a very skillful cultivator; he has the best wishes of the craft for continued success.

Random Notes.

Paul Bender, gardener to H. A. Parr, Esq., has a fine lot of chrysanthemum seedlings coming on, and a few pretty orchids in bloom.

Hugo Walter, of Park Heights avenue, decidedly one of the most careful market growers, finds antirrhinum very profitable to handle. He grows them in pots and gives them the space vacated by the early chrysanthemums. He sows in shallow flats in Spring, and allows the plants to stay in them for two or three months, potting off what he wants successively. The first batch is being potted into 2½-inch pots for bloom in January and February. His specialty is geraniums for Easter. He propagates in Winter, and keeps the rooted cuttings in thumb pots through the Summer. They are then twice shifted until they get four-inch pots. He realizes 25c. a piece for them in the market, and for years never has had a plant left unsold. The excellent quality of his geraninms has never been attained by any other florist about here. A little corner of swainsona pays him well. Callas are cultivated two years in the same pot. Mr. Walter finds they bloom earlier and more profusely the second year; but towards the last the flowers get small. Carnations in the field look splendid here. Dry weather never hurts them if you keep the surface carefully stirred up. A crimson sport of Jubilee is being tested. The plant kept absolutely clean, while the type was badly affected with rust. Mr. Snyder succeeds Ph. Weidman as head gardener to Alex. Brown, Esq.

Club Meeting.

There was a small attendance at the last meeting. A large and enthusiastic crowd will go to the Convention. The bowling team is confident of scoring high.

T. E.

Worcester, Mass.

The weekly show of the Horticultural Society was mostly given up to a display of native flowers. There were six exhibitors, the largest display having 124 varieties. There were exhibits of cultivated flowers, in which F. A. Blake, Mrs. A. A. Hixon, H. F. Littlefield, Mrs. W. A. Fobes and Mrs. H. A. Jones took a prominent part. The last mentioned exhibitor attended the Hampden County Horticultural Society's annual sweet pea show, held in Springfield, July 24, where she won thirteen first premiums and three seconds.

EVERY :: :: DAY DURING S.A.F. CONVENTION

W F Gale 331 Main Jan 23 19

THE FLORISTS' EXCHANGE WILL PUBLISH SPECIAL DAILY MORNING EDITIONS

Tuesday, AUG. 21.
Wednesday, AUG. 22.
Thursday, AUG. 23.
Friday, AUG. 24.

Each issue will contain an account of the Convention proceedings and the news items and happenings of the previous day, together with all other and sundry special matters of interest to delegates. Copies of the daily editions will be on hand at Convention Hall on the morning of each day issued, and will be distributed free to all attending the Convention, thus giving the advertising matter therein contained a circulation among none but interested parties, many of whom will begin placing their Fall orders while in the city, or soon after returning home. The advertising value of these daily issues, reaching the right parties at the right time, should be clearly evident. Don't allow the opportunity to escape you of advertising in this, the first Florists' Daily Morning Trade Paper. The low price of **$1.00 per inch net, covers and includes all four editions. One-quarter page, $10.00; One-half page, $20.00; Full page, $40.00.** Preferred positions, 25 per cent. extra. None of the regular weekly advertising will appear in the daily editions unless so ordered.

If your order has not been sent in, mail it at once. Engage your space now and mail the copy later.

S. A. F. CONVENTION AT NEW YORK, AUGUST 21 TO 24.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 32. NEW YORK, AUGUST 11, 1900. One Dollar Per Year.

LILIUM HARRISII IS NOW READY

And we are pleased to state that our bulbs have never been finer. Bulbs are exceptionally fine, clean and bright, and running well up to size. We are very particular about the Harrisii that we handle. Our stock is not picked up indiscriminately from small growers. We have our bulbs grown for us by only a few selected growers, whose stocks are the healthiest, and for which we pay the highest prices. Our fields are the healthiest and best on the Island, and we are sure that our stock will prove unusually satisfactory. Certainly the bulbs have never been finer than they are this season. If you have not already covered your wants in this line, we will be glad to have your order. Bulbs are ready for immediate shipment.

WE OFFER THESE, IN CASE LOTS, AT $18.00 PER CASE.

5-7's contain 400 bulbs to the case; 7-9's, 200 bulbs to the case; 9-11's, 100 bulbs to the case. **If cash is remitted with order, we will supply for only $17 per case.**

FREESIA REFRACTA ALBA Plant now for Christmas Flowering. Finest quality Bermuda-grown bulbs, extra quality, 50c. per 100; $4.00 per 1000. Selected bulbs, 70c. per 100; $6.00 per 1000.

BERMUDA BUTTERCUP OXALIS Heavy Selected Bulbs, 75 cents per 100; $5.00 per 1000.

WINTER-FLOWERING ROSES.

We have a fine stock of all the leading varieties—first-class, A No. 1 plants—which we can offer as follows:

STRONG PLANTS, IN 3 1-2 INCH POTS.

Bride, Bridesmaid, Perle, Meteor, La France, Bon Silene, Papa Gontier, $8.00 per 100.

Souv. de Wootton, Golden Gate, Kaiserin Augusta Victoria, Pres. Carnot, Sunset, $10.00 per 100.

American Beauty, of which we have an extra fine lot, $12.00 per 100.

F. R. PIERSON CO., Tarrytown-on-Hudson, N.Y.

FOR SUMMER DECORATIONS!

ASPARAGUS PLUMOSUS NANUS

Never Wilts!

Cut Strings, 10 Feet Long, 50 cts.

W. H. ELLIOTT, BRIGHTON, MASS.

THE TRUE AND THE TRIED STOCK OF LILIUM HARRISII

Or BERMUDA EASTER LILY Bulbs.

WE venture to say that our **THREE-LEG BRAND of LILIUM HARRISII and LONGIFLORUM** is freer from disease than any other stock grown in Bermuda. The statement is verified by customers who have grown and forced it exclusively for years and will have no other.

IT IS NOT THE CHEAPEST, BUT THE BEST.

After filling all advance orders, we have left a few boxes of each size, and this is our price:

		Per 1000	Per 100
5 to 7 inch Bulbs,	400 in a box	$50.00	$5.50
7 to 9 " "	200 "	100.00	11.00

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLGIANO, First Vice-President; S. G. COURTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Nashville, Tenn.—The American Plant and Seed Company has been incorporated. The incorporators are Gilbert Marshall, J. R. Atkinson, R. A. Adcock, Robert Caruthers and Ford McNeal. The capital stock is $30,000, and the purpose of the incorporators is to grow flower and garden seed.

Valparaiso, Ind.—The Northern Indiana Seed Company, of Valparaiso, capital stock $2,000, has been incorporated. The directors are E. E. Shedd, Ella B. Shedd and Harold J. Schenk.

Springfield, Mo.—The Springfield Seed Company has been incorporated. R. R. Ricketts, C. H. Walker and W. H. Stevens are the directors of the new corporation. The capital stock is $1,200. The corporation is formed for the purpose of buying and selling, at wholesale and retail, field, garden and all kinds of seed, and the business, which has been conducted for years without incorporation, will be increased.

Resolutions on Death of Mr. Breck.—At a meeting of the seed trade of Boston, held at the office of W. W. Rawson & Co., to take action on the death of Charles H. B. Breck, president of the Joseph Breck & Sons' Corporation, there were present Messrs. W. W. Rawson, Thomas J. Grey, A. F. Barney, of Schlegel & Fottler; Oscar H. Dodds, of T. W. Emerson Company; N. W. Hills, of C. H. Stone & Co.; W. W. Simonds, of Hovey & Co., and John K. L. M. Farquhar. The following resolutions were adopted:

Resolved, That, whereas death has in the fulness of time terminated the long and useful career of our esteemed and venerated associate, Charles H. B. Breck, the seed trade of Boston deplores his loss; and

Resolved, That the sympathy of the trade is hereby extended to his bereaved family.

The seed houses were represented at the funeral, at Mount Auburn, on Saturday afternoon, by the following-named representatives:

W. W. Rawson & Co., by H. W. Rawson and H. E. Fisk; Thomas W. Emerson Company, by O. H. Dodds; Schlegel & Fottler, by A. F. Barney and J. M. Gleason; Thomas J. Grey & Co., by Thomas J. Grey; Hovey & Co., by W. W. Simonds; Charles H. Stone & Co., by F. W. Stone; R. & J. Farquhar & Co., by John K. L. M. Farquhar.

CHANGES IN BUSINESS.

SPRINGFIELD, OHIO.—The McGregor Brothers Co., has been incorporated. Capital $50,000. Incorporators: F. McGregor, D. McGregor, H. McGregor, R. McGregor, and A. McGregor.

NASHVILLE, TENN.—Joy and Son Co. has been incorporated. Capital $18,000. Incorporators: T. C. Joy, P. L. Shaw, C. B. Harrison, D. P. Wrenne, all of Nashville.

PEORIA, ILL.—J. C. Murray has removed his downtown store from 401 to 403 Main street.

Philadelphia.

Club Meeting.

The August meeting, held Tuesday last, was fairly well attended, though, no doubt, the extreme warm weather kept many away. In the absence of Edwin Lonsdale, Geo. C. Watson acted as secretary pro tem. Three new members were elected and one proposed.

The chief event of the evening was the essay of H. C. Geiger, on "Cooling Rooms for Florists' Use." The paper was very lengthy, and will be given in full in our next issue. Mr. Geiger handled this subject in a masterful manner, having gone to considerable trouble to obtain details, and received a hearty vote of thanks for his paper. At the September meeting the subject will be, "A Review of the S. A. F. Convention of 1900."

The Transportation Committee recommended to the club that the members leave for New York on Monday, August 20, at 4:02 p. m., by Pennsylvania R. R., Broad street. This was adopted. The railroad will give all accommodation required, and if sufficient numbers warrant, a special train will be provided, otherwise special cars will be attached to the regular train. Members are requested to send word to John Westcott, Ridge and Lehigh avenues, if they intend to go by this train. No doubt many will go on Tuesday morning, but in the case of those who take ladies along, it is much more desirable to go Monday afternoon, and thus get hotel accommodation, and be settled before the Convention opens.

On Monday, August 20, the Philadelphia Club will hold "Open House," in the club rooms, Horticultural Hall, Broad street above Spruce, to entertain members of the trade and their friends, from other cities, en route to New York, who may stop off in this city. At present it appears that the delegations from Pittsburg and Baltimore will be here. A reception committee, with Robert Craig as chairman, has been appointed to take care of visitors while in this city. Those who may read this would do well to send word to Mr. Craig, 49th and Market streets, of time of arrival, etc., so that provision may be made to take care of them.

For the benefit of local members, it may be stated the lowest railroad fare to New York is by certificate plan. Pay full fare going, $2.50, and get a certificate with your ticket; then you pay one-third fare returning, 84c., on presenting certificate. Total both ways, $3.34, thus saving 64c.

The following resolution was unanimously adopted by a rising vote of the club:

That the secretary send a letter to Mr. Edwin Lonsdale and convey to him the feeling of heartfelt sympathy, which animates every member of the club, in the sad bereavement which he has sustained in the loss of his two daughters. The circumstances attending this sad affair were so particularly distressing, the young ladies were so often with us in our hours of social relaxation that the club, that all feel a deep sense of personal loss, as if the stroke had fallen on their own family circle, and feel that a double measure of their tender regard and sympathy is due, and is hereby extended to Mr. Lonsdale and his sorrowing family.

Testimonial of Esteem.

As before stated, John Walker will soon leave this city and go to Youngstown, Ohio, where he has bought out the establishment of E. Hippard. The employees of Robert Craig & Son felt that they could not let him go without showing some appreciation of the kind feelings they entertain towards him, so on Saturday last all the employees and some invited guests assembled in the large packing shed. The proceedings were opened by M. Cavanaugh, who dwelt upon the regard of all the employees for John Walker, and pictured briefly his career in the employ of Robert Craig, starting 22 years ago as a young man, when the place had only about six houses, and gradually working and growing up with the establishment, until about eight years ago, when he was appointed superintendent of the entire place. Mr. Cavanaugh finished his tribute by presenting to John Walker, on behalf of all the employees of Robert Craig & Son, a handsome silver swinging pitcher, with cups attached.

Mr. Walker briefly thanked all for their kindness, and said he would always greatly cherish the handsome gift. Usually when a superintendent leaves, the employees were glad to see him go, so that in this case, he all the more appreciated the kindly feeling shown. Appropriate remarks were also made by Ex-Mayor Wm. B. Smith, Robert Craig, Robert Kift and David Rust. The boys had made the event a gala day, having on hand plenty of good cheer for all hands, and everyone had a good time.

Jottings.

John Westcott is negotiating for a tract of land, 200 acres in extent, at Waretown, on Barnegat Bay, N. J. This place is well known to all those who have gone down on those famous fishing trips. Much of the land is the usual marsh, near the coast, but the tract also contains much good ground, lots of good red cedar, also an old-time farm house, which Mr. Westcott thinks would make an ideal club house. We have our Bowling Club, Gun Club, etc., and why not have a Yachting and Fishing Club?

Mr. Westcott has made an offer for the tract, but as one of the executors of the estate is at a distant point, the deal is not yet consummated.

Not much can be said about the cut-flower business. There is a fair amount going on for midsummer, but mostly funeral work. The temperature in this city is against any business; the thermometer has ranged from 96 to 98 degrees, daily, in the shade, for the past week, with the humidity 75 to 80 degrees.

Henry F. Michell has returned from his annual tour of the seed-growing districts. DAVID RUST.

PLANTS and FLOWERS.

GLADIOLUS. We send you to-day a sample of gladiolus brought in by Mr. Jas. Semple. He has been experimenting some time with gladiolus, hoping to improve this flower as much as he has the aster. Will you kindly let us know through your columns your opinion of the flower sent, and whether you think Mr. Semple is making any improvement on the varieties we now have.

PITTSBURG CUT FLOWER CO., LTD.—The color of the flowers of the gladiolus submitted is very beautiful—pale lilac on a white ground. The spike is of branching habit and the variety is certainly an improvement over many existing kinds. There is no doubt but that Mr. Semple is on the road to accomplishing with the gladioli as good results as he has already obtained with the aster.

POTTED STRAWBERRY PLANTS IN 2 INCH POTS.

Louisville, Ky.

Flowers arriving in this market now are as good as can be expected, with the temperature always above the 90 mark. In roses Beauty are the best. Asters are plentiful. C. W. Reimers is bringing in the largest and best I have seen here.

As yet I have heard only two members of the local trade announce that they intended to attend the New York Convention.

The August meeting of the Kentucky Florists' Society was held at the residence of Joseph Coenen. The weather must affect the boys, for these monthly meetings are not as well attended as they should be. I would urge all of the members to be present at the next meeting, as business of importance will be brought before the Society.—J. S.

Boston.

Trade Notes.

Business shows a slight improvement, mostly in funeral work and Summer resort orders. Stock is not overplentiful, except in the case of asters, which are a great drug, many being sold at $1 per 1,000 to the street men on Tuesday. The flowers, of course, were of the poor grades. Good to fancy asters bring from 20c. to 40c. per 100.

A few of the new crop of Bride and Bridesmaid roses are being received and of fair quality for the first cut. Beauty continue in fair supply. Carnations are still scarce. Sweet peas hold on plentiful yet; and there are quantities of amatum and lancifolium lilies, which are found useful for funeral work.

News Items.

His many friends in the trade were pained to hear the sad news of the death of John Gilson, which occurred Thursday, August 2. Deceased was for many years saleman for Edmund M. Wood & Co., and perhaps the best-known salesman coming into Boston.

Geo. A. Sutherland and family are at Nantasket for a few weeks.

David Welch is now on his vacation, which he will spend at various places in Maine and New Hampshire.

George M. Hannon is at Yarmouth, N. S., for a few weeks.

Massachusetts Horticultural Society.

Annuals were the only flowers for which prizes were offered on Saturday, and some very fine collections were staged. Mrs. J. L. Gardner, Mrs. E. M. Gill and E. C. Lewis taking the prizes. The Blue Hill nursery made a nice showing of herbaceous plants and a fine vase of Lilium Batemanni. A vase of Lilium amatum was sent in by W. J. Clemson, also allamandas, tritomas, phloxes and sweet peas from the same exhibitor. A large display of phloxes was made by Rea Bros. Mrs. E. A. Weeks staged verbenas, and Mrs. J. L. Gardner gloxinias. H. T. Clinkaberry, Trenton, N. J., sent a spike of Cypripedium Clinkaberrynum (C. Curtisii x C. Philippinense), for which a certificate of merit was awarded.

An adjourned meeting of the Society was held Saturday, at which the committees on the revision of the constitution and by-laws, on school gardens and children's herbariums, and on nomination of officers and standing committees for the next year, were appointed.

The death of Charles H. B. Breck, for many years a vice-president of the society, was announced, and a committee was appointed to prepare a memorial. One member was requested to act as pall-bearer on behalf of the society at the funeral. F. J. N.

Chicago.

State of Trade.

The cool Summer weather has turned to a heated spell, ranging from 90 degrees to as high as 96 degrees on the street level during the middle of the day. This affects both the condition of the flowers and their sales.

The supply of sweet peas has suddenly fallen away, although there are yet plenty for the demand, with prices 10c. to 15c. per 100. There is an outcry regarding asters, especially on late-sown peas. Carnations, colored, have been rather scarce; but white are abundant. Scott, from outside, is looming up as usual. Melba also seems to do well. Asters are very abundant, especially white kinds. Common stock is often cleared at 10c. to 20c. per 100. A few fancy single-stem flowers have sold in this market at $3 to $4 per 100, but there are not many of them as yet. White asters crowd out white carnations for funeral work. As a rule, asters, this year, are good in form and full in center. Roses get fairly cleared off. Golden Gate, Kaiserin and Meteor being the best stock. Liberty is coming in, flowers short, selling at $4; long-stemmed at $6. The Golden Glow rudbeckia is quite abundant, but finds poor sales at 15c. a bunch. Some dahlias also are in, with no call for them as yet. Gladioli are still abundant at $1 to $2 per 100, and selling fairly well. Cosmos is also arriving, but there is a poor demand for it. Good Japan lilies are very hard to dispose of.

Are you going to New York? is the common cry one now hears. City Passenger Agent Vosburg, of the Lake Shore R. R., feels elated at the inquiries he is receiving anent the florists' special train, that will pull out in style on Sunday, August 19, at 3 p. m., from the Rock Island Depot.

Round About.

Vaughan's seed store made their usual record of early delivery of Roman hyacinths this year, July 18. They also received, last week, a car-load of Harrisii lilies. The bulbs are in better condition than for several years.

Aug. Jurgens is cutting some first-class valley.

John Brod, whose greenhouses are at Niles Center, has opened a retail store at 616 N. Wells. This makes his third retail store. Mr. Washburn says they have housed all their carnations—54,000. The plants never were in finer condition than this year.

Miss Fanny Ludlow, of Vaughan's seed store, is at Paw Paw Lake on a vacation.

Alex. Newitt is now with L. J. Stuppy, at St. Joseph, Mo.

Tell the printer to drop the thousands from the square miles in Chicago City limits. Let it go at 186, in article on "Growth of Florists' Business in Illinois."

James King's field of hardy phlox, was a blaze of color on our visit to Elmhurst last week. G. Swenson, the violet man at the same place, as usual, is making great preparations for next Winter.

Ess.

St. Louis.

Business Slow.

Business has got down to low water mark, nothing but a little funeral work going on. The weather is very hot and exhausting, and people who can, must not be blamed for going off to a cooler place, if any is to be found. The cut flower market remains the same as last reported, except that a few more roses are coming in and of a trifle better quality. Single tuberoses sell for 5c. per stalk, plenty of asters of all grades, also carnations are on hand. With the much greater area that will be planted with carnations all over the country, is there not a danger of overdoing them and bringing the price down to nothing next winter? We are a little afraid of this, though carnations certainly did sell well last Winter, still, we would not be surprised to see roses the best paying crop again soon.

Notes.

John Young and family, accompanied by Fred O. Weber, have left for Atlantic City for the Summer. They will probably run over to the Convention.

A. Ringier, of Barnard & Co., Chicago, is in town. He is on his way east from the Pacific coast, where he has been in the interest of his firm. He reports an excellent trip, in a business way, and is much taken with California as a residence and business place. C. C. S.

FOR SALE, cheap, greenhouse, 16x64 feet; glass, 12x14 feet; Cypress rafters and gutter; ventilator rigging; manifold coils for heating. Ed. B. Weber, 400 North Ninth street, Reading, Pa.

GREENHOUSE in live Western town of 5,000 population; good flower town, no competition; nearest greenhouse sixty miles; cheap fuel; $800, cash payment; balance long time, low rate of interest. W. M., care Florists' Exchange.

SIX GREENHOUSES to let on lease, close to trolly and station; well stocked with roses, carnations, violets and chrysanthemums; a good chance for man with small capital. For full particulars, apply Stanley, Plainfield, N. J.

FOR RENT, three greenhouses—without stock; dwelling and stable, if required; convenient to New York market; suitable for growing roses and carnations; city water. W. L., care Florists' Exchange.

TO LET—One greenhouse, 125x20 feet, also office dwelling and twelve city lots adjoining, for a term of years; established 1888; opposite St. Michael's Cemetery. W. H. Scheurer, 532 Flushing ave., Astoria, N. Y.

FOR SALE or rent—One of the best florists' plants in New England. Death took my wife away and I am too old to run the business. Will sell at a sacrifice. This is the chance of a lifetime. For any information address P. Cormley, Worcester, Mass.

GOOD OPPORTUNITY.—Lease, with privilege to buy, four greenhouses: two 100x20, two 100x10, with ground; hot-water heating; good location; retail business; cut flowers and pot plants; 15 minutes from New York. Verbal applications preferred, with principals only. 676 Avenue E, Bayonne, N. J.

FOR SALE—14,000 feet of glass, used mostly for roses, 4 acres of ground and 2 dwelling houses; 3 minutes from station, city improvements, hot and cold water, and good forcing water in greenhouses supplied by Summit Water Co. On account of illness with rheumatism, will sell whole or part interest. A. Harth, Milburn, N. J.

TO LEASE for a term of years, very desirable greenhouse property; two houses, 150x20 and 60x20, heated by steam; over two acres land, sixteen miles from Boston, 3 minutes to station, trains hourly to and from the city; rare chance for rose grower; possession given Sept. 10th. Further particulars, apply to Patrick Welch, 15 Province St., Boston, Mass.

FOR SALE—8 greenhouses, double span, all sashes 3 ft. 9 in. wide, 8x8 glass, bedded in putty and white lead; 1 house, 4x8 ft. sash; 3 houses, 6 ft. sash; 2 houses, 8 ft. sash; 1 house, 8 ft. and 12 ft. sash, all 75 feet long; 1 house, 12 ft. sash, 58 ft. long; 1 house, 12 ft. sash, 78 feet, 8x10 glass; rafters and ridges first-class pine; all in good order; 3500 feet 4 in. pipe. J. G. Pfordt's Sons, 899 Broadway, Albany, N. Y.

TO LEASE, on excellent terms, a fine acreage of land situated within one hour of New York. Very accessible, with large and commodious greenhouses, flower gardens, dairy, large brick buildings for cows and horses. Land capable of raising all kinds of products, shrubs, trees, etc. Will lease whole, or in part, to suit. Owner having a piece of land within easy reach of the above is willing to pay for the care and work on the same if terms can be agreed upon. Particulars may be had by addressing Talbot Root, 27 Pine street, New York City.

FOR SALE or Rent, nearly new house and lot, 100x100 feet; one greenhouse, 11x45 feet; Corcoran windmill, hot and cold water in house, use of about 50 lots, now covered with about 30,000 privot, 10,000 myrtle, large stock of other plants. Situated half way between Prospect Park and Coney Island. Near famous Ocean Parkway. Principal trade, wholesale with parties connected with cemeteries. A rare chance; only reason for selling wife cannot live so near ocean. Price for all, $7,500. Within three miles, it is now estimated there are 1,500 new houses building. Smith street cars from Bridge to Avenue L; time 45 minutes. P. O., F. A. Bolles, East 10th street, Lawnwood, Brooklyn, N. Y.

BY J. WALTER BRADLEE, Auctioneer, 23 Court St., Boston. Chance of a lifetime for a florist. Four greenhouses, with two acres of land, on Thacher street, off Blue Hills Parkway, Milton, Mass., will be sold at public auction on Wednesday, August 22, 1900, at 3 o'clock P. M., all and singular the entire plant of Edward E. Saunders, florist, together with a large assortment of bedding plants, pots, and general fittings, tools, etc., to be sold in lots to suit. This property is very desirably located, within seven miles of Boston proper, five minutes walk to steam and electric cars to Boston; electric cars to Brockton pass the property. The business has been carried on for a period of 20 years, and offers an unusual opportunity to secure a plant so centrally located for a man to increase his business, as the local florists cannot begin to supply the demand. Any florist who understands pleasing the public is assured of success from the start. Terms: $300. Cash deposit required at time of sale. For further particulars apply to the auctioneer.

L. USSING'S GREENHOUSE PROPERTY Exchange, 53 W. 28th St., New York (with G. E. Bradshaw). Telephone, 1239 Madison Sq. Sell, rent or exchange at all times.

FOR SALE OR RENT—SIX GREENhouses, 12000 feet glass, well stocked with chrysanthemums and roses, located on Jersey City Heights. Terms easy. For particulars and price, or terms, address W. J., care Florists' Exchange.

FOR SALE OR RENT, CHEAP TO RE-sponsible party, on account death, a first-class place, built last year, New Jersey, 6 miles from New York; size, 200x300 feet; splendid soil and sod; one 3-4 span house, 150x20; one house 115x10; frames, heatable; small dwelling, city water; houses and outdoor well stocked with cut flowers. Sold on easy terms. Rent $25 per month. W. O., care Florists' Exchange.

MISCELLANEOUS.

FOR SALE—Base-burning Furman steam boiler No. 4, good condition; used two seasons. If you want it, address Box 57, Lyons, N. Y.

Chicago.—The practice games of the club on Friday night showed the undernoted result. The tie of Fred Stollery and Balluff, left over from the previous Friday, ended in favor of Stollery by three pins only in the long series. The New York team finally stands in the following order:—Asmus, Winterson, Degnan, Hauswirth, Fred Stollery and George Stollery, the latter having been voted on the team before he left for Europe. Degaan's low score is explainable by his having a sore thumb on the right hand, and bowling with the left.

	1	2	3	4	5	6	7
Winterson	208	190	132	178	143	148	118
Balluff	152	138	164	137	139	122	111
Kreitling	120	186	129	153	115	172	99
F. Stollery	153	137	160	142	157	126	201
Hauswirth	184	126	140	130	142	161	157
Degnan	52	51	140	...	...	...	...
Austio Shaw	117	117	108	109	...	...	...

New York.—The scores made last Monday evening were as under:

To the Bowlers.

As Mr. Charles Schenck, Secretary of New York Florists' Clubs' Bowling Committee, is quoted in the last week's issue of the FLORISTS' EXCHANGE as saying that he could not reply to the question asked him several times, apparently by would-be contestants, as to whether any entrance fee would be required for the national tournament, I think it best to again state that as far as the National Florists' Bowling League is concerned, there is no fee of any kind except for the "sweepstake" prizes, which, of course, are only open to the clubs who contribute to this fund. It can not be determined just how this fund is to be divided, or prizes purchased with the money, until the representatives of the contributing clubs get together in New York, as the League Committee has not been able to get sufficient data to enable them to go ahead in the matter.

ROBERT KIFT, President N. F. B. L.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN.

THEODORE J. SMITH, Geneva, N. Y., President; N. W. HALE, Knoxville, Tenn., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

American Association of Nurserymen.—The report of the twenty-fifth annual meeting, held in Chicago, June 13 and 14 last, has been issued. It contains a stenographic account of the proceedings, a list of the members and code name of each firm; also the Nurserymen's Telegraphic Code. Next meeting place is Niagara Falls, second Wednesday in June, 1901.

Georgia State Horticultural Society. A very interesting meeting of this society was held at Dublin, Ga., last week.

Maj. G. M. Ryals, of Savannah, said the peaches shipped by him brought twice as much in Baltimore as in New York. He could only account for the difference by the neglect of the railroads in keeping the cars iced.

Prof. Stockbridge informed the society of the extensive experiments made by the Southern Pacific Railroad in building special cars and filling them with carbonic acid gas. This was found to prevent and stop the decomposition of fruit. Prof. M. B. Waite, of the United States Department of Agriculture, dwelt at length upon the fertilization of the soil for peach trees. One of the best commercial fertilizers, said he, is 10 per cent. potash, 8 per cent. phosphoric acid, and 4 per cent. ammonia.

Officers were elected as follows: President, P. J. Berckmans; secretary, G. H. Miller; treasurer, L. A. Berckmans; vice-presidents, G. M. Ryals, Savannah; B. W. Stone, Thomasville; S. H. Rumph, Marshallville; Henry Matthews, Fort Valley; W. M. Scott, Atlanta; R. E. Park, Macon; G. H. Waring, Cement; H. N. Stevens, Athens; J. J. Justice, Marcus; Neill McInnis, Augusta; J. M. Stubbs, Dublin.

Milledgeville was selected as the next place of meeting. Just before the society adjourned, President P. J. Berckmans was presented with a handsome gold watch.

MISCELLANEOUS.

FOR SALE, 650 feet 4-inch cast pipe, part been in use but two seasons; in fine condition, 7c. per foot; also fittings in ells, bends, y's, etc. Address, C. B. Shisler, Williamsville, N. Y.

FOR SALE, one 16 H. P. boiler; one 60 H. P. locomotive boiler; one Dean steam pump; 3000 freezias, $4.00 per thousand; lot of stock geraniums; 500 Rose Queen carnations, $3.50 per 100. Post Office Box 95, Newtown, Bucks Co., Pa.

FOR SALE—GREENHOUSE PROPERTY AT NYACK, N. Y. A plot 220x125 feet, on which are four Rosehouses, 100x18x6, each house heated by a No. 16 Hitchings Boiler, and seven houses, each about 64x11 feet, heated by flues. This property will be sold cheap to quick cash buyer.

Mention the Florists' Exchange when writing.

(162) **Chrysanthemums**—What length of time is generally required for the chrysauthemum to develop the flower from the time of takiug the proper bud on plants grown to single stem?—C. G. F.

—About four weeks is the time required for the flower to develop, after the formation of the bud.

(163) **Short or Long Span to South**—Could you induce some of our best growers to discuss through the EXCHANGE the relative merits of "short or long span to south," for the beuefit of those of us who have had no experience with the two in comparison?—J. A. H., Ohio.

[Will some of our readers oblige.—ED.]

(164) **Begonia Leaves.**—W. H. Rogers—The trouble with the begonia leaves evidently arises from the plants being allowed to get too dry, and then being given an overhead watering, instead of watering the roots and leaving the foliage dry. Pull away all affected leaves; shade the glass over the plants, keep them from ever getting very dry at the roots by regular attention, and the burning of the leaves will not occur.

(165) **Protecting Peach Trees in Winter.**—I have a peach orchard, with chiefly Crosby and Crawford early trees, planted in May last. The orchard is situated on the northern side of a hill, in a place in Massachusetts where the thermometer last Winter showed 26 below zero. Is it necessary to protect these trees any before next Winter, and how can I best protect them?—SUBSCRIBER.

—The only protection necessary is to bank about one foot of soil around the base of the trunk, just before the ground freezes for Winter.—J. H. HALE.

(166) **Galvanized Pipe for Greenhouses.**—Galvanized pipe will not give off as much heat as black pipe painted with lamp black and oil, but about the same as when asphaltum is used. This is because a rough pipe radiates more heat than one that is smooth. On the other hand a thick coat of rust prevents the radiatiou of heat, and black pipe in the condition usual in greenhouses will not give off as much heat as one that is galvanized. If the pipes are new and of equal thickness, there will be little difference in the strength, but the galvanized pipes would be much more durable than black pipe if the threads are painted.—L. R. TAFT.

(167) **Aster Plants Dying**—Kindly tell me what to do to save my aster plants, which are dying, one bed after another. The root is perfectly healthy; but the main stem turns brown, then withers and dries up. Can it be the soil; or was it the seed?—A SUBSCRIBER.

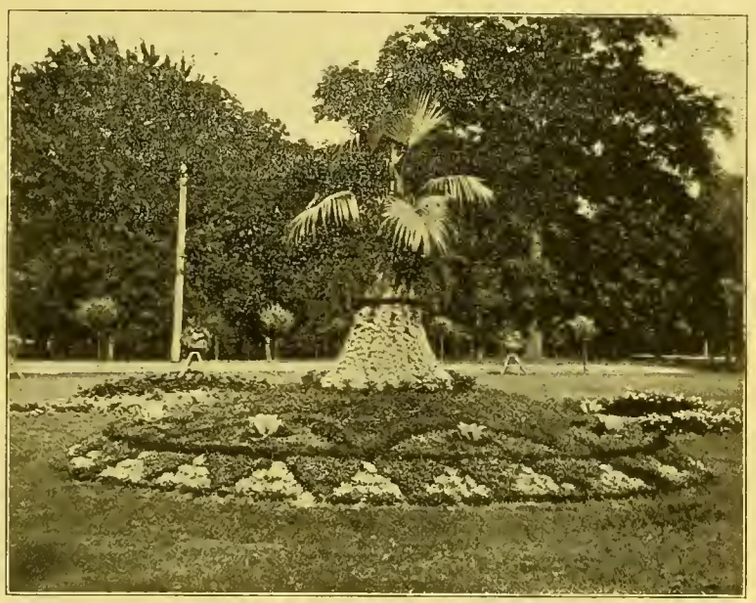
—The trouble with Subscriber's asters is not due to the seed, but it is undoubtedly the work of the tarnished plant bug—(Lygus pratensis). This bug did much damage to asters around Rochester last year; and so far there seems to be no effectual remedy for it. But as the bug is most prevalent in dry seasons, we would try daily sprayings, using some insecticide with the water about every third day.

(168) **A Rose Trouble.**—Kindly tell us through your valued paper the effect of eel worms on roses? Our rose plants are apparently in excellent condition. We notice the buds are imperfect, those of them we have allowed to mature. I presume that is caused by the change from excessive heat to cold, which will occur at this season of the year, between day and night, no matter how careful one is? Let me hear from you and oblige, M. D.

—The effect eel worms have upon roses is not confined to the flower bud. When the plant is attacked by this pest the leaves and buds begin to drop, then turn yellow, and the plant dies, all within the space of two or three days. The trouble with the buds mentioned is no doubt of a local nature, and will pass away as the weather becomes cooler. In the meantime we would ventilate freely, both day and night; and if the soil seems to be infested with any kind of worms we would give an occasional watering with lime water.

(169) **Disbudding Roses.**—Through the medium of your worthy paper, I should like to know about the right size to let the buds develop on young rose stock before disbudding. Varieties are Bride and Bridesmaid. They were planted on the tables June 30. I noticed a bench of 500 Liberty recently which were going through the disbudding process, and one could look over them and see on almost every plant buds matured to good size, and showing color. Is it best to let them develop so far before disbudding?—W. H. B.

—The disbudding of roses should always be done as soon as the buds are large enough to handle. This applies to all varieties. The time to discontinue taking off the buds should depend upon when the first crop of flowers is wanted. As the buds take thirty days to mature, this can easily be figured out. If we wanted to begin cutting, say by the first of October, we would not disbud after the last of August.



A Bed in Forest Park, St. Louis.

First Prize Photograph by Rudolph Windt in FLORISTS' EXCHANGE Photographic Contest for July.

(170) **Carnations**—Will some one kindly tell me the best way to mix soil for carnations. I have plenty of good loam and cow manure. About how many loads of soil to each load of cow manure (well rotted)? Would you advise me to put in any sheep manure, lime, and bone meal; if, so, how much? Also please name me about eight of the best varieties to grow where the highest price cannot be obtained; no matter what varieties, the average price during Winter being 1½c. I want white, red, and pink.—CARNATION GROWER.

—The loam and cow manure will make the best kind of compost for the carnations. Use four loads of soil to one load of the manure; mix well together and add lime at the rate of about one bushel to the load. The sheep manure can be used to advantage later, by mixing it with the soil, about half and half, and employing it as a light top dressing.

The best eight varieties for your market would, in our opinion, be Lizzie McGowan and Flora Hill for white; Wm. Scott and Mrs. Frances Joost, deep pink; Daybreak and Governor Griggs, light pink and Evanston and Jubilee for red.

(171) **Heating.**—I have three houses: No. 1, 75x26 ft.; sides 4 ft. 6 in.; ridge, 12 ft. 6 in. from ground. No. 2, 75x26 ft.; sides, 4 ft. 6 in.; ridge, 12 ft. 6 in. from ground. No. 3, 50x26 ft.; sides, 4 ft. 6 in.; ridge, 12 ft. 6 in. from ground. All new and close. The thermometer sometimes shows 10 degrees below zero. Steam heat. How many runs of 1¼-inch pipe to heat No. 1 to 60 degrees. How many runs of 1-inch pipe to heat No. 2 to 50 degrees, and how many runs of 1¼-inch pipe to heat No. 3 to 60 degrees will I require?—L. C. H.

—Use 12 1¼-inch pipes in houses Nos. 1 and 3 and 12 1-inch pipes in house No. 2.

L. R. TAFT.

I enclose rough sketch of greenhouses and residence. I wish to heat the greenhouses and residence with a 30-horse-power steam boiler. There are six rooms in residence, one 15x15 (8½ feet to ceiling); one 14 x 14; one 10 x 18 dining room; and one 10 x 18-foot kitchen, with two rooms upstairs, 14 x 14 and 15 x 15 feet. I have 2-inch pipe on hand. Can I use that for the main, running to residence? How many 1¼-inch pipes will it take to heat the greenhouses to 60 degrees, 20 below zero weather? Would it be a saving of fuel to convert steam boiler to hot water boiler, and could I warm the residence the distance I would have to send the hot water?

Please give me your idea of the best way to heat; size and amount of piping it will take for greenhouses?—THEO. SOUERS.

—The radiating surface required in residences is modified by the number and size of the windows and the amount of exposed wall surface in each room, and as this data is not furnished it is not possible to give definite answers regarding the amount of radiation required in the different rooms in the dwelling. To heat the rooms with steam, if they have only two sides exposed and only two windows of average size, 40 feet of radiation will be required in the room 15 by 15 feet; 36 feet will be needed in a 14 by 14 room, and about the same in the dining-room and kitchen. If there are three sides exposed to any of the rooms, an addition of six feet will be required; while a third window will make the addition of from eight to twelve feet of radiation desirable.

It may interest the readers of the EXCHANGE if a simple rule for determining the amount of steam radiation required for ordinary living rooms on the first floor of a dwelling is given, and if Inquirer will use it in figuring the radiation for his dwelling, it will probably give better results than the approximation given above. It is as follows: "Add one-half the area of the windows, one-twentieth the exposed wall surface and one two-hundredth of the cubic contents of the room." In a well-built house this should give a temperature of 70 degrees in zero weather. When the first floor and hall of a house is heated as above, a reduction of 50 per cent. can be made in the radiation needed for sleeping rooms on the second floor. Many persons would prefer to have the heat shut off entirely, except in severe weather.

If properly insulated a 2-inch main will answer for the dwelling. It can also be used for the return, although a 1½-inch pipe would answer. To heat a greenhouse 48 by 12 feet to 60 degrees will require six 1¼-inch pipes, while 10 will be desirable in the 50 by 20-foot house.

It is probable that a plant such as is described could be more cheaply heated with hot water than with steam, so far as cost of fuel is concerned; but the expense for the piping would be considerably more. Thus eight 2-inch mains would be needed in the 48 by 12 greenhouse and 13 2-inch in the 20-foot house. The dwelling also would require about twice the radiation suggested for steam.—L. R. T.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

Convention Defects.

Editor Florists' Exchange.

I have been greatly delighted and edified by the various wise suggestions proffered by "Ivera" in one of your contemporaries recently, regarding certain defects that are likely to discover themselves at the coming Convention in New York unless that gentleman's advice be acted upon. One of his very best propositions is to have a competitive display of corsage and headdress adornments of flowers by the visiting ladies on the night of the president's reception. My wife is anxious to participate in this contest, and is desirous of knowing whether personal beauty and avoirdupois will also enter into the matter. She hails from Donegal, tips the scales at 250, and stands six feet one in her stockings. Her hair is auburn (some vulgar persons call it red); her nose takes a skyward turn, while her hazel eyes inwardly watch its elevating progress; her whole "physiog" is beautifully mottled with the most symmetrical freckles of russet brown, evenly distributed. Now, she wants to know whether she will be placed in the variegated class. She seems desirous, also, of cultivating "Ivera's" acquaintance, in order to obtain suggestions as to the kinds of flowers best suited to a complexion like hers.

She has been discussing the subject of judges, too, with another florist's wife, a neighbor. The latter favors ex-President Rudd; but my better half would prefer "Ivera." She is sure, from the learned manner in which he discourses on ribbon and other millinery, that he must be a "ladies' man," and feels certain she can throw the "comaither" over him—a conviction strengthened by his latest suggestion of a "crazy-quilt" decoration of the convention hall—in fact, she has already begun to practice the "nudge and wink," which she tells me it is necessary to be an adept at if one would win first prize at any kind of a florist's competition. With that acquisition, combined with her personal grace and beauty, and "Ivera's" directions as to the selection of flowers for her hair faithfully carried out, she fears not the outcome.

Like "Ivera," I sympathize with the retail trade in the treatment it receives at the hands both of the New York Florists' Club and the S. A. F. Why is it thus? Why repay the many efforts made by the retailers on behalf of both these associations with sneers and contempt? It is very plain that those in authority in these societies don't know their business, and am proud to think there is one man in America who can teach them. Unlike the bull frog that croaks because it cannot help it, "Ivera" never takes up his pen but what he writes something. There is only one way of salvation for each of these institutions—and that is, that "Ivera" be allowed to become dictator *de facto* by electing him president of each. Failing this, I grieve to think of the fate, not only of these bodies, but of the florist trade generally. Elect him, and, surely enough, "merit shall not be measured by ignorance."

Cincinnati.

Trade Is Quiet.

Business has been a little quiet the past week, but we have no reason to complain, as the month just ended has been very satisfactory. Asters now have full sway and are selling fairly well—funeral work, of course, taking most of the stock. Julius Baer made a blanket on August 2 and shipped it to Greencastle, Ind., to cover the remains of the late Dr. John Clark Ridpath, the historian.

An Outing.

Thursday afternoon the craft of this city was invited to the residence of Mr. and Mrs. John Lodder at Hamilton, O. We left Cincinnati at noon, in a hard rain, but nothing daunted, we were bound for Hamilton, with a party of 55 florists, their wives, children and sweethearts. Two hours' ride brought us to the residence and greenhouses, where we were met by Uncle John, his estimable wife, their sons and daughter. Then began a tour of inspection of the lawn and greenhouses. The bedding here is very beautiful, all in good taste, and was much admired. We have no such bedding in Cincinnati outside of the parks, and I am sure it was an object lesson for more than one of our party. The greenhouses have had their Summer overhauling, and are now ready to receive their occupants for the months to come. Liquid and solid refreshments were served bountifully and thoroughly enjoyed.

A business meeting was then called and preliminary arrangements made to put a handsome float in the trades' parade, September 20. After the meeting supper was served. Then President Wm. Murphy, in a few well-chosen remarks, extended a vote of thanks to the hosts, and called on E. G. Hill to address the meeting on his trip abroad. I would like to tell you all Mr. Hill said, as it was one of the most interesting addresses I ever heard the gentleman make; but you will have to wait until you get him in New York at the Convention, when I can assure you you will be highly entertained.

Cincinnati was not alone represented at Brother Lodder's, as Park Commissioner Balsey, of Detroit; J. B. Heiss and H. M. Altick, of Dayton, O.; J. R. Goldman and Mr. Adams, of Middletown, O.; and E. G. Hill, of Richmond, Ind., were present.

The next regular meeting of the Florists' Society will be held at the residence of Mr. and Mrs. J. A. Peterson, Thursday, August 9, and the September meeting at Mr. and Mrs. Julius Schuman's, Newport, Ky., September 6.

I most heartily endorse the article in the EXCHANGE of August 4, page 751, entitled "Commission Men and Growers." It is truth unadulterated, and I hope every grower will read it carefully, and act accordingly.—E. G. GILLETT.

Pittsburg.

Trade News.

The last few weeks very little has been doing outside of funeral work. There is sufficient stock for the present demand, but not a very choice quality. Asters are the principal flowers used, also the best as regard quality. Roses and carnations are poor; the present spell of hot weather will make them scarce. Sweet peas are also very poor. Gladiolus is plentiful and choice.

Jottings.

C. Blind and Britenbaugh Bros., both on the Allegheny side, are putting up more glass. Mr. Blind, who landed in New York from the old country about thirty-five years ago, will pay his first visit there since that time during the Convention of the S. A. F.

Walter Harvey, who has been confined to the West Pennsylvania Hospital for several months, will soon be about again, although not entirely cured.

Wm. Clark, of the Pittsburg Cutflower Co., was made happy about a week ago by the arrival of a bouncing boy in his household.

Mrs. E. C. Ludwig, who had an attack of the grip, has fully recovered.

J. Murchie, of Sharon, and A. Ringier, of Chicago, were in town during the past week.

Quite a severe hail storm passed just east of the city a few days ago, breaking glass in some buildings, but as there are few plant houses located in that vicinity not much harm was done to florists.

The Picnic.

The annual picnic of the Florists' Club was the most enjoyable one ever held. A fine day to begin with, a good attendance, and lots of sport. The base ball game between an Allegheny and a Pittsburg team was a "base," affair, for the Pittsburgers had, by all odds, the best team—some wonderful players among them—and won by a good score.

Convention News.

Final arrangements will be made for the trip to the Convention in New York, at the club meeting this week. The majority of the members will leave Thursday morning, August 16, on the Atlantic City excursion, spending a few days in the city-by-the-sea, and will reach Philadelphia on Sunday or Monday, getting to New York, Tuesday, in time for the opening of the Convention. Those who cannot leave so early will go Sunday or Monday direct to New York. Rate to Atlantic City and return, ticket good for 16 days, is $10. Rate from Philadelphia to New York about $4 the round trip. A ticket on the certificate plan, direct to New York, will cost a little over $15 for the round trip, but is limited to a few days before and after the Convention only. Our party will likely consist of about three dozen.

E. C. REINEMAN.

Rochester, N. Y.

Business has been very light the past week; a moderate amount of funeral work being about all that is doing. Carnations are almost out of the market; the supply small, flowers smaller and price $5 per 1,000. The leading stores have some really fine roses in stock, the output of noted growers; but the bulk of the offerings are of the usual midsummer quality.

The abundant rains of July have brought on outdoor flowers in full supply. Sweet peas are still of good quality from many early plantings, and nice peas can be had at $1 per 1,000 stems. They are sold by the Greek and some of the stores at 5c. per bunch of 25 stems.

The "gladiolus man" is again in evidence with "gladiolus, 10c. a bunch." The retailers' sales of this flower are generally light. Possibly, if the varieties were not so much of the cheap mixture kind, the sales might improve. White asters occupy the largest space in the stores at present. A good quality of Queen of the Market is now selling at $5 per 1,000, and is still the main supply, although Daybreak and Comet are beginning to appear in quantity. There is a lack of delicate colors in the early asters. A Queen of the Market, with the color of Daybreak, would be very useful. A limited supply of fine Comet asters, that came in with the first Queen of the Market easily, brought $1.50 and $2 per 100.

Much curiosity has been aroused by the announcement of a projected clambake. The exact date cannot yet be given; but the affair will surely take place this month. The committee is in constant communication with Far Rockaway.

G. A., Jr.

Horticulturist F. A. Waugh of the Vermont Agricultural College has been investigating plum culture in Caroline county and thinks the outlook for profitable cultivation of the plum very good.

The Merry War.

Speaking of expositions and other outside attractions and the injury therefrom—Isn't it funny? When we had the World's Columbian Exposition in Chicago, we were told that the Exposition would injure the attendance at the Convention if it was held in the same city, and Chicago *could not* have the Convention because she had an exposition in progress!

Now we are told that Buffalo *must* have the Convention because she will have an exposition in progress. Great Scott! What a difference it does make whose ox is gored.

This subject naturally leads up to our facetious friend, Rawson. Confidentially, it is my firm belief, that if the Convention is held in Buffalo, we shall not get him to attend a session unless we hold them in the Midway. By the way, did anyone see Rawson at Detroit, or at Omaha? And there was an exposition at Omaha, too.

W. N. RUDD.

PHOTOGRAPHIC CONTEST.

AWARDS IN JULY COMPETITION.

First Prize.—Rudolph Windt, St. Louis, Mo., for view of bed in Forest Park.

Honorable Mention.—Rudolph Windt, for another view of same bed at greater distance; Frank Hamilton, New York, view of Harlem Mere; Central Park; H. Beaulieu, Woodhaven, N. Y.

The judging was done by Mr. F. J. M. Gerland, President of the Central Bureau of Engraving, New York, who unhesitatingly awarded first prize as above.

Description of First Prize Picture Photograph.

This picture was taken on a plate 3½x4½ inches, and is only slightly reduced in the reproduction shown herewith. It is very clear cut, and distinct as to detail, very evenly focussed, and shows care and judgment in selection of point of view and choice of time.

Mr. Windt furnishes the following particulars regarding the picture: The plants represented include a Latania borbonica, Asparagus Sprengeri, alternanthera, achyranthes, and Echeveria secunda glauca. The group was distant from the camera 15 feet, the camera facing the north-east. The photograph was taken at 4:30 p. m., in sunshine, the largest stop being used. An exposure of 1-25 second was given.

A second view of the same object, taken at a greater distance, is also very good; but is so placed on the plate as to show insufficient sky and too much foreground, thereby lessening the general effect.

The view of Harlem Mere, Central Park, 8¼x6¼ inches, submitted by Mr. Frank Hamilton, is a very beautiful picture, and the photographer is to be commended for the selection of his subject. It is, however, technically deficient; was evidently taken during a strong wind, and the effect of which has not been overcome.

M. A. Patten, Tewksbury, Mass., submitted a view of greenhouses taken from a church belfry. A large area has been included in a small picture, 6x3½ inches, but the detail was to a great extent lost, so that there is not sufficient sharpness in the photograph.

Crimson Rambler is the subject chosen by H. Beaulieu, Woodhaven, N. Y. The photograph is a large one, 6x8 inches, taken at very short distance; it is a splendid piece of work for the most part, but the top and left side have been allowed to get out of focus.

Mr. Frank Hamilton, New York, also submitted a view showing specimen catalpas growing in Morningside Park, New York.

Mrs. T. Gould sent one photograph of the Ivy-leaved geranium l'Elegante, growing about a window, and one of a large plant of Iberis Gibraltrica, both views taken on her place at Ventura, Cal

Society of American Florists.

"DEAR SIR:

"Enclosed please find $3.00 for S. A. F. dues. I wish to profit by experience gained at Detroit and save valuable time, as I think there will be a grand rush at New York on the first day of the Convention."

The writer of the above is one of a large number of wise men who are paying initiation or dues and securing their badges in advance. Why do you not do likewise? Do it now and insure your own comfort on the opening day. If you paid dues for 1899, send $3.00; if you did not pay dues for 1899, send $5.00, and certificate with badge will be sent by return mail.

W. J. STEWART, Secretary,
67 Bromfield Street, Boston, MASS.

A Handy Guide to New York, Free.

We have had prepared, and will present to every delegate to the S. A. F. Convention who makes application for same at our stand in the Exhibition Hall, a colored map of Greater New York and suburbs, containing also a reference list of railroad depots, ferries, steamships, hotels, places of amusement, etc., etc.

This very handy guide will be of service, we feel assured, to all strangers "within our gates," enabling them to find their way around New York, Brooklyn, and nearby points in New Jersey and Long Island with ease and comfort.

The "Daily" Florists' Exchange.

The publishers of the FLORISTS' EXCHANGE will issue a daily edition of that paper every morning from Tuesday to Friday, August 21 to 24, inclusive. This will be the first daily florists' trade paper ever published, and, while necessarily short-lived, will, we trust, be none the less remarkable.

As the material contained therein will relate more or less closely to Convention matters and the doings of the delegates, during the week, we herewith solicit the good offices of our friends, asking them to keep us informed as to such news of public and personal interest as may come under their notice. Our exhibit in the main hall of the Grand Central Palace will be headquarters, where all news notes and items intended for publication may be left up to 10 p. m. each day.

Delegates desiring to meet friends or make business engagements can do so through these columns, free.

Will be pleased to have delegates notify us now as to the names of those in their family or immediate party, coming to New York for the Convention, and name of hotel at which they will stop.

Chicago to New York.

The committee wishes to state that by whatever railroad a florist travels to New York he must leave New York (on returning) on or before August 28, in order to secure the reduced rate.

G. A. GRANT,
W. N. RUDD,
WALTER KREITLING,
Transportation Committee,
Chicago Florists' Club.

Firms Who Are Building.

RHINEBECK, N. Y.—Charles Ferde is building a violet house.

SHAMOKIN, PA.—Hugh Campbell is erecting two greenhouses here.

CROMWELL, CONN.—A. N. Pierson is building two more greenhouses.

NEWINGTON, CONN.—Newel C. Osborn is building a new greenhouse and windmill.

PHILADELPHIA.—Hugh Graham will erect a greenhouse, 135 x 60 feet, on Old York road.

WATERTOWN, CONN.—Merritt Heminway is having an addition built to his greenhouse.

ROCHESTER, N. Y.—R. H. Pringle, of Plymouth Avenue, is about to begin the erection of two houses, one of 100 feet and one of 75 feet.

MINNEAPOLIS, MINN.—John Monson will begin work immediately on five greenhouse buildings, each 16 x 150 feet; also one 30 x 100 feet; a two-story office warehouse and boiler room, at 1612 West 36th street.

GRAND RAPIDS.—Most everybody is building. Cross has built two more violet houses; Crabb & Hunter have also added two violet houses and rebuilt three small houses into one large rose house. The firm now have nine violet houses alone. Mulle Bros. have rebuilt two small houses into one; Henry Smith one new violet house, and is rebuilding several small houses into a large one, and overhauling his extensive shed front, so as to get more light. Freyling & Mendall's are building one rose house; the Grand Rapids Floral, two large carnation houses (they certainly have some fine stock to put in them). Hill & Pohlmann three violet houses; James Scholes a large house for mixed stock, and Chas. Chadwick is trying to imitate Chicago by building one of those little additions, about 45,000 square feet of glass. His houses are 235 x 35 feet, a very convenient size for working.

G. F. C.

A four-page illustrated supplement, showing views of some of the most interesting places in and around New York, will be issued with next week's number of the FLORISTS' EXCHANGE.

New York.

Market Notes.

We have to record another very dull week in the flower business. The weather continues extremely hot, and perhaps this has something to do with the poor demand.

The street vendors can do but little business under present weather conditions, and this makes it bad for the bulk of the cheaper kinds of flowers, as they have to reach the public through this channel, as a rule.

Roses are increasing in supply considerably, and are showing up in better form than they were. Short Beauty are to be had in quantity, but the long-stemmed flowers are still very scarce, and when obtainable they realize $3 per dozen. Mme. C. Testout is certainly the finest pink rose coming in just now; there are not enough of them arriving to crowd the market, and they bring good figures, 6c. and 8c. each.

The supply of lily of the valley has diminished materially, and $3 per 100 has been the ruling price. Carnations also are not so plentiful, and values have been more steady than for some time past.

Asters are plentiful. Some fine pink Semples have begun to arrive; these, when selected, have brought $1 per 100; other smaller varieties go at from 30c. and upwards per 100.

Speciosum lilies and gladiolus are principal features, and the retailers make liberal use of them in window displays.

Among the retail stores business is very quiet.

C. Thorley will open his Fifth avenue store in the early Fall. It is on the corner of the Lorraine apartment building, at the south-east corner of 45th street and Fifth avenue.

Jottings.

S. J. Limprecht, 119 West 30th street, will, on the 1st of September, add a wholesale commission flower business to his already established trade in cut palms and Southern greens.

Young & Nugent, wholesale florists, at 42 West 28th street, are receiving very fine Bridesmaid roses daily from the Peter Crowe Co., Utica, N. Y.

Several prizes have been offered for the Ladies' bowling match to be held during the Convention.

In the mention of the Central Park greenhouses last week, the name of the superintendent should have read N. J. Rose, instead of N. J. Morse.

The committee of Brooklynites that are formulating the plans for giving the lady members of the S. A. F. a carriage ride on that side of the river, during the Convention, have about completed their arrangements, and a grand time is assured to all the visiting ladies who take part in this excursion.

The carriage drive includes the principal portions of Greenwood Cemetery and Prospect Park. At the latter place a luncheon will be given in the Shelter, and sweet music will be discoursed while the luncheon is being served. The Park authorities are doing all they can to make the visit of the delegates a memorable one. Specially designed flower beds have been already planted, and a large raised mound, that will bear suitable inscriptions, done in plants, is in course of preparation, directly opposite the Shelter, where it will be in full view of the ladies while they are seated at lunch.

Henry Hurrell, of Lager & Hurrell, orchid growers, Summit, N. J., leaves today, (Saturday) for a month's visit in England, sailing on the S. S. Campania.

The regular monthly meeting of the New York Florists' Club will be held on Monday evening, August 13, in the rooms corner 27th street and Broadway. A large attendance is desired, as all Convention matters will be finally settled. The bowlers will meet at the alleys in the afternoon of the same day.

Visitors this week included Walter Mott and D. D. L. Farson, of Philadelphia, Pa.

OSWEGO, N. Y.—Patrick Campbell, of New York, has purchased Delos Northrup's greenhouse establishment at Syracuse avenue and East Fourth street. Mr. Campbell learned the business of florist with Mr. Northrup's father many years ago. He has lived in New York for some time, but will now make this city his home, and will conduct the florists' business here.

Providence, R. I.

Market Quiet.

Seldom indeed has trade been so quiet among the florists in this vicinity as now. An occasional funeral order constitutes the extent of business done, and nothing remarkable in that. There is plenty of most all kinds of stock for the demand. Asters are abundant. There is a shortage of roses and no auratum lilies. Gladioli and other outdoor stock is seen in the stores but find little sale. Sweet peas hold their own. Prices average 50c. per 100. Choice asters bring $1.50 a 100.

The growers are busy repairing and putting houses in shape for Fall. Violets are looking remarkably well in the houses, but violets are a treacherous crop here, and there is no telling what may happen to them. Carnations have suffered outdoors for lack of rain, and many will have to buy stock to fill their houses. There seems to be a diversity of opinion about growing these plants indoors in Summer, but I find many who have done so with good results.

N. D. Pierce, of Norwood, is our largest grower of asters, and with his improved appliances for irrigation he is enabled to produce some very fine flowers. His asters find a ready sale. He has a contract to supply the River Steamboat Company with several thousand blooms two to three times a week, which are presented to the lady patrons.

Walter S. Hogg, one of the few remaining early settler florists in this city, retired from business August 1. The business will be continued by T. R. Peterson, who had been in Mr. Hogg's employ for the past 20 years. The establishment will be known as "The Hogg Greenhouses." Mr. Peterson has a thorough knowiege of the business, having mastered its many branches under the guidance of Mr. Hogg, and we wish him every success in his new undertaking.

Walter Mott, of Philadelphia, was in town last week.

The many friends of Edwin Lonsdale sympathize with him in his recent bereavement.

Everyone is talking convention, and it looks as if Providence will be well represented this year. It certainly should be so, for the rates to New York are low enough—$1 round trip.

Miss Sellew is expected home from her vacation, to take charge of the store while T. J. Johnston attends the convention.

T. L. O'Connor is enjoying his vacation on a yachting cruise, and Thomas Canning is spending a few weeks at Block Island.—A. M.

EVERY :: :: DAY DURING S.A.F. CONVENTION

THE FLORISTS' EXCHANGE WILL PUBLISH SPECIAL DAILY MORNING EDITIONS

Tuesday, AUG. 21.

Wednesday, AUG. 22.

Thursday, AUG. 23.

Friday, AUG. 24.

Each issue will contain an account of the Convention proceedings and the news items and happenings of the previous day, together with all other and sundry special matters of interest to delegates. Copies of the daily editions will be on hand at Convention Hall on the morning of each day issued, and will be distributed free to all attending the Convention, thus giving the advertising matter therein contained a circulation among none but interested parties, many of whom will begin placing their Fall orders while in the city, or soon after returning home. The advertising value of these daily issues, reaching the right parties at the right time, should be clearly evident. Don't allow the opportunity to escape you of advertising in this, the first Florists' Daily Morning Trade Paper. The low price of **$1.00 per inch net, covers and includes all four editions. One-quarter page, $10.00; One-half page, $20.00; Full page, $40.00.** Preferred positions, 25 per cent. extra. None of the regular weekly advertising will appear in the daily editions unless so ordered.

Engage your space now and mail your copy as soon thereafter as possible.

THE FLORISTS' EXCHANGE,

P. O. Box 1697. 2 to 8 DUANE ST., NEW YORK.

A set of all four Daily Issues will be mailed to out-of-town addresses on receipt of 10 cents, to cover postage.

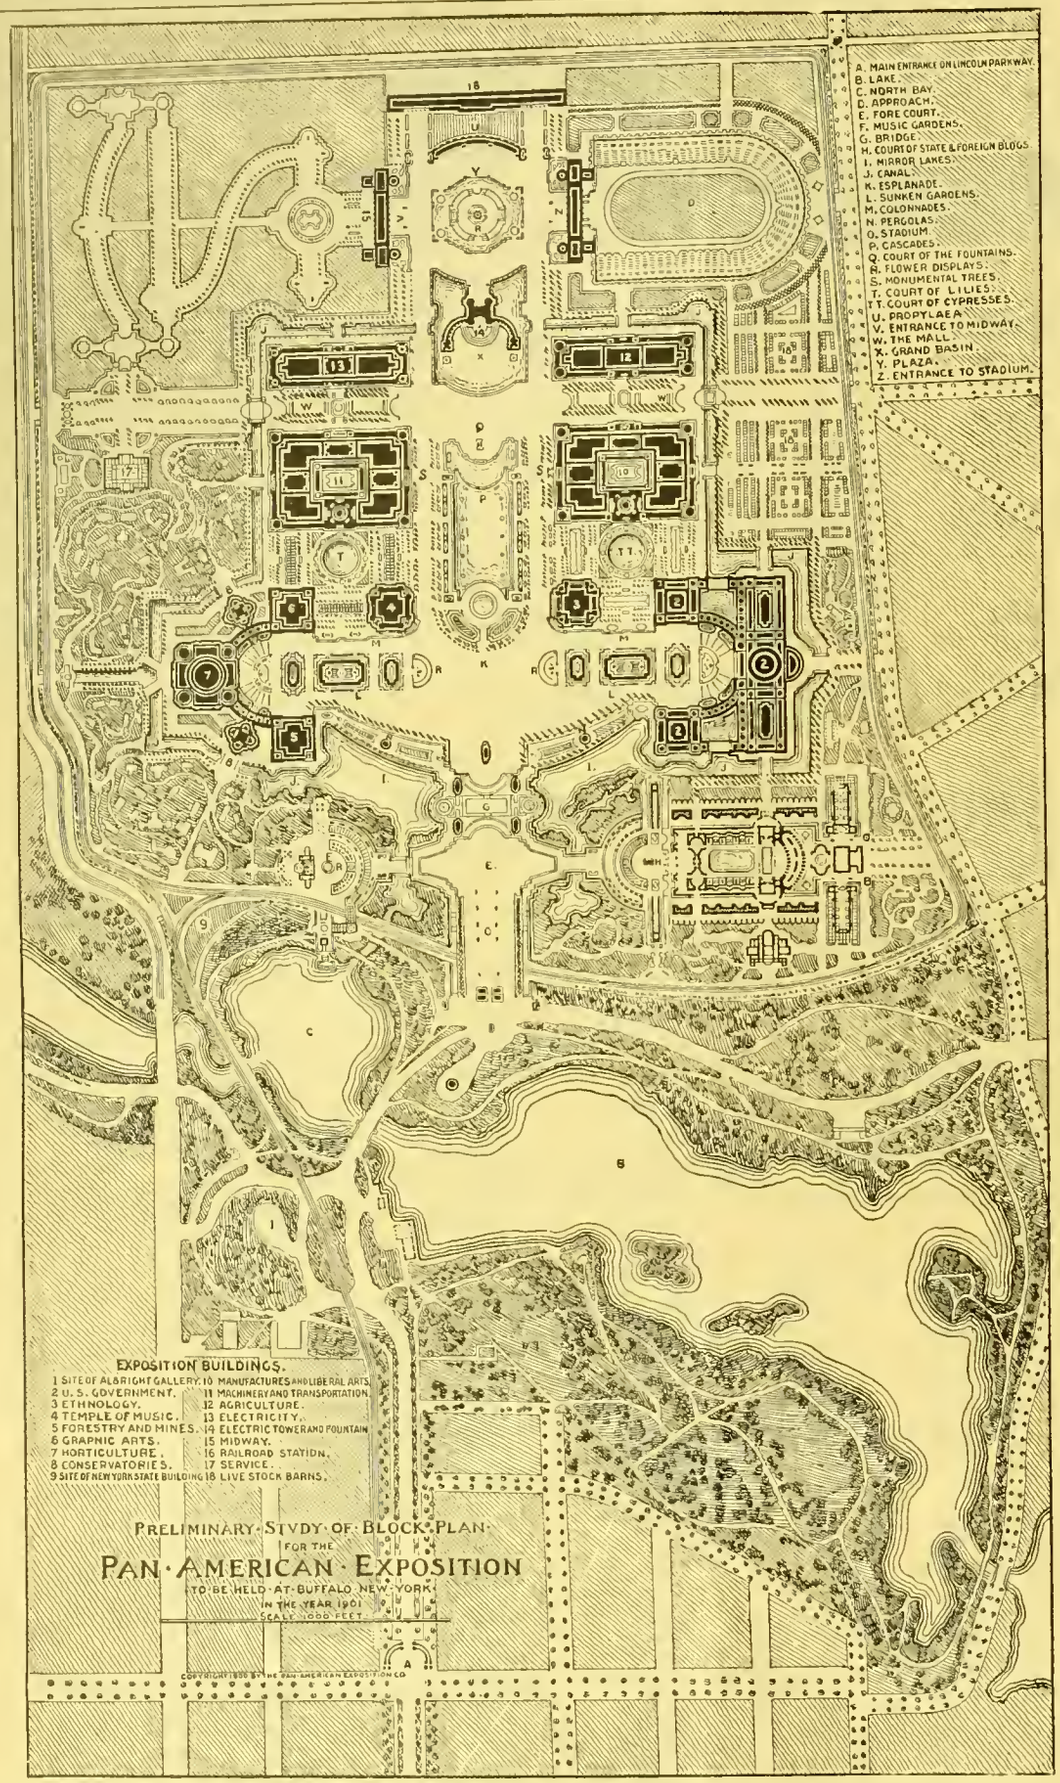
Visiting members may have rooms reserved at any of the above hotels by applying direct, or through the Chairman of the Hotel Committee, Mr. S. S. Butterfield, P. O. Box 1697, New York, specifying grade of accommodation desired. Most New York hotels are conducted on the European plan.

The Pan-American Exposition, Buffalo, N. Y.

Whether it be Chicago or Buffalo for to visit and thoroughly enjoy what is now expected to prove one of the most interesting and instructive of recent American expositions.



the S. A. F. Convention in 1901, renders generally, and delegates especially, will be interested in this preliminary study of block plan for the Pan-American Exposition, as, regardless of the city chosen, all who can manage it will undoubtedly want

LAWRENCE, MASS.—J. B. Halley is back after quite a vacation. He says he feels better than ever and intends running down with the convention crowd.

Ferns and Decorative Plants.

John Scott, of the Keap street greenhouses, Brooklyn, has made untiring efforts to place himself in the front rank as a producer of ferns and decorative plants, including palms, and, with the range of new glass in Flatbush which was built last season, his facilities for growing these plants in large quantities are now about doubled. Two houses are filled with kentias, large specimens predominating. There are also a goodly number that are potted, four together; these make extremely bushy subjects, being well furnished and of good color. Boston ferns are the main standby of the establishment, and the stock is remarkably fine. There are five houses devoted to this fern. Some are in pots, others in pans, ranging in size from 6 inches to 14 inches. The larger sized plants are especially good, almost a yard across and ready for being repotted again.

Of Pandanus Veitchii and P. utilis, there are about 1,300 plants. Large plants of the latter variety are somewhat scarce this season, and as the stock here consists of good-sized specimens, they should bring good returns.

Ficus is represented by 2,500 plants; these are branching nicely, and promise to be in excellent condition for the coming season. In small palms, the seedling kentias and arecas are both good and numerous. There are 15,000 kentias and 20,000 arecas more than will be grown, and these will shortly be offered for sale.

Seedling ferns form another important feature, several houses being devoted entirely to them. The varieties raised are those used chiefly for fern dish or jardiniere work. Some fine batches of dracænas were in evidence, of D. Lindenii and D. Sanderii. The steady demand for these plants makes it almost impossible to work up a very large stock, though of the latter variety, there are now about one thousand plants.

BRIEFS FOR BUSY FLORISTS.

ROSES.—Young stock is beginning to produce blooms now, but unless the demand for the flowers is very urgent, there is no use in allowing them to develope. The better plan will be to pull away all buds that form, and if this is done for another month yet, the plants will be the better for it. There must be no attempt at feeding them with liquid manure. The soil in the benches contains all that the plants need for a long time yet, and the using of liquid manure at this period is altogether unnecessary. For keeping down green fly there are many different methods, but the cleanest and one of the most effective ways is to have wire netting of a very coarse mesh strung along the sides of the bench, and just inside the posts; this is doubled back to form a kind of net and the tobacco stems are placed in there. An occasional spraying brings out all the tobacco odor, and when that is all gone, the stems are easily removed and new ones put in their place. The advantage possessed by this method is that neither the walks of the house nor the surface of the beds have to be littered over with the tobacco stems, becoming filthy; neither does it require so much tobacco to keep the house clean.

SEEDLING PALMS.—Small plants of arecas and brentias can now be bought so reasonable that wherever one has any bench room in the greenhouse it is worth while growing a few hundreds of them. If potted into 2½ inch pots and kept in a moist atmosphere, they will make shapely little plants, suitable for using in the center of ferneries, by the coming fall; or, if not employed for that purpose, they can be potted along and grown until they become salable as decorative plants.

The Sweet Pea Bicentenary.

Strictly speaking, this celebration might have been entitled "The Apotheosis of Henry Eckford," for the name of the venerable florist has been on every tongue; his work has been lauded to the skies, and the slightest utterance that has fallen from his lips has been received as the quintessence of sweet pea wisdom. In some respects this is unfair, for while the major portion of the varieties of sweet pea now grown are the result of much painstaking and intelligent labor on his part, the good work done in Europe by Laxton, Brown, Muskett, Haage & Schmidt, Carter and others ought not to be ignored; while the more recent efforts of our American friends deserve, and will doubtless in due time receive, the same generous recognition.

The Crystal Palace is certainly an ideal place for such a celebration, and the beauty of the surroundings helped in no slight degree to atone for the lack of elegance so conspicuous in the arrangement of many of the most meritorious exhibits.

Some idea of the extent of the display may be gleaned from the fact that for the competitive exhibits 4,000 vases were required.

In addition to these were some immense non-competitive exhibits from Hurst & Son, Dobbie & Co., Harrison & Sons, Carter & Co., H. J. Jones (a magnificent display splendidly arranged), Dickson's Chester, R. Sydenham, B. S. Williams & Son, etc.

The advertising element was a little too prominent in a few cases, and the committee did wisely to pass them by.

The display made by Dobbie & Co., was particularly interesting, as it contained no less than 182 distinct varieties, a fairly large family to spring from one (or, as some say, four) parent.

The place of honor was naturally assigned to the exhibit of Henry Eckford, which contained the best of his latest introductions. There was nothing very striking or novel on the stand, but the following are certain to become popular when put into commerce:

LADY M. ARMESBY GORE, creamy yellow, shaded with pink, a large, finely formed flower.

GEORGE GORDON, a rich lake, may best be described as a light Captivation.

JEANNIE GORDON, buff wings, veined carmine, with a bright rose standard—a perfect flower.

MISS WILMOTT, described as an improved Gorgeous; a giant flower with the orange salmon tint very brilliantly developed. There were others, but they are not needed, as they are no improvements on varieties we already possess.

The Cupid and Bush sections made such a poor display that the judges only awarded second and third prizes respectively. At last one English firm (Laxton Brothers) have learnt the art of producing the Cupid strain; but English gardeners, with the possible exception of Messrs Waterer and Weston, have not yet learnt the secret of their successful cultivation.

The opening ceremony was performed by Lady Treloar, wife of the genial president, and at the luncheon which followed, the places of honor were assigned to Herr Fritz Benary, Rev. W. T. Hutchins, Henry Eckford, Mr. Leonard Sutton and Mr. N. Sherwood. The speeches were of the usual order but far too long, and everyone breathed a sigh of relief when permitted to return to the sweet peas once more.

With such an experienced set of men as formed the committee, it was to be hoped that some reasonably perfect arrangements for the conduct of the business would have been made. Unfortunately, these hopes were not realized, and a good deal of disorder prevailed. This was especially the case with the conference which was held in an out-of-the-way room that was almost inaccessible and in which the earnest and faithful few were boiled or roasted as a penalty for their devotion to the best interests of the flower we had met to honor.

The chair was occupied on the first day by Mr. R. Wilson Kerr, of Liverpool, and on the second day by Mr. Geo. Gordon V. M. H. The first paper on "The Early History of the Sweet Pea," was read by Mr. S. B. Dicks. The paper, which was largely based upon the article by the same author, which appeared in the FLORISTS' EXCHANGE for July 19, 1897, was very well received, and in the discussion which followed, some very interesting remarks were made by H. Eckford, Rev. W. T. Hutchins, S. Ainsworth, F. A. Gardiner, T. Laxton and L. Kirby. Some of the more important of these shall be referred to at some future date.

A paper on the Classification of the Sweet Pea by Mr. W. P. Wright was to have followed, but owing to the lateness of the hour, and the fact that an excellent summary of the arguments to be advanced had been printed by the author, he contented himself with a brief, but very lucid address, which called forth the hearty approval of all who were privileged to hear it.

The paper on New Points in Sweet Pea Cultivation and in the uses of the flower for decorative purposes, by Mr. H. Dunkin, was deferred until the second day's sitting. Viewed from the English standpoint, it was both instructive and useful and when published, will be a very helpful guide to successful sweet pea cultivation.

Mr. Curtis read the paper on "The Evolution and Improvement of the Sweet Pea," prepared by himself and Mr. John Eckford, son of the Wem veteran. Much of the early part of the paper was a repetition of what had been previously advanced by Mr. Dicks, but the latter part which dealt with the work accomplished by Eckford, was intensely interesting and instructive.

The closing paper of the Conference was on "The Sweet Pea in America," and was very appropriately furnished by the Rev. W. T. Hutchins. As this paper will, no doubt, be published in America, it is only necessary to add that it occupied an hour in the reading, was embellished with many interesting interpolations, personal and otherwise, and was of such an interesting character throughout that it deserved a much larger audience, but could not have had a more appreciative one.

The faulty arrangements before referred to prevented the reading of a paper on "Sweet Peas under Glass, and Sweet Peas with Perfume," which had been prepared by Mr. W. Cuthbertson; but as it is the intention of the Committee to publish all the papers in pamphlet form, the loss to Mr. Cuthbertson is more apparent than real.

In bringing this hastily written notice to a conclusion, it is well to say that the prevailing sentiment which pervaded the Conference was to reduce the number of varieties to a more reasonable compass, and the hope has been strongly expressed that a strong and thoroughly representative classification committee shall be established on a permanent basis for this purpose. Some enthusiasts even demand the formation of a Sweet Pea Society, but the opposition to the idea is very strong.

One of the most pleasing features of the bicentenary celebration has been its international character. The friends from other lands were delighted with the welcome accorded to them; the hosts were equally charmed with their guests, and it only needed the presence of Mr. W. Atlee Burpee to make the international feature a complete success.

Mr. Dean and his coadjutors deserve to be congratulated upon the splendid results of their untiring exertions. It has been with them a labor of love, and the reward of that labor is sweet. S. B. D.

Crystal Palace, London, where Sweet Pea Bicentenary was held.

Buffalo.

We are having a taste of what Buffalo calls hot weather. Though the mercury has not risen above 85 degrees, the muggiuess inclines to a heating condition. The calls for funeral flowers during the past week have been mentioned as good. Most of the stores had nearly a rush of it through Saturday and Sunday last. On the latter day Palmer & Son turned out quite an elaborate, solid built and decorated casket cover. This firm has quite a profuse, hence handsome, show of L. auratum as a window display.

The sweet peas now furnishing by Jerry Brookins, of Orchard Park, show up about the finest.

Mr. and Mrs. E. E. Pieser, of Chicago, on a pleasure trip, found our city attractive enough for two days this week. Other visitors were: Mr. Meredith, of The London (Ont.) Floral Co., and Max Beatus, of the Dayton, (Ohio,) Box Co.

VIDI.

HORNELLSVILLE, N. Y.—W. A. Wettlin is the fortunate possessor of a piece of land upon which carnations fairly luxuriate. Such varieties as The Marquis, Flora Hill and Mrs. Lawson, are easily to be distinguished at a distance.

NOTES BY THE WAY.

SPRINGFIELD, MASS.—Mark Aitken is fortunate with a grand lot of asters—no sign of disease or bug. Queen of the Market is fine this season.

HOLYOKE, MASS.—E. H. Howland is growing his usual quota of chrysanthemums, believing the demand will be as good as last year. The stock is in fine condition.

PROVIDENCE, R. I.—T. O'Connor has a splendid batch of chrysanthemums, of which, by careful handling, he secures a continuous supply through the entire season. He is adding a house for storage purposes.

Farquhar Macrae is adding to his plant, and will soon break ground for five rose houses.

FALL RIVER, MASS.—Chatterton Warburton was busy fixing up when I called, and intends being with us at the Convention.

George Smith is building, but will lay off long enough to visit New York. He may make the trip in his handsome yacht "Flying Scud," and bring along the rest of the craft from the "City of Spindles" and Providence. J. Warburton, Sr., will not be with us this year. When last heard from he was at Hamepest, Norway, whether in search of Andrée or no he did not say.

SALEM, MASS.—McGee, Geary & Co. expect to join the Boston delegation accompanied by Messrs. Walk and Galloupe, of Beverly. Mr. Walk may exhibit his patent flower box. Asters are fine in this section, and are most acceptable for funeral work, which Mr. Hallahan, the designer at this establishment, tells me has been remarkably good all Summer.

HARTFORD, CONN.—George S. Osborn has returned from his vacation, in time to take in the Convention. This will be his first attendance, but he feels perfectly safe in the company of those two veteran craftsmen Messrs. Whiting and Coombs, who are ever ready to take in a good thing that they can turn to profitable account.

NEW HAVEN, CONN.—One of the best plants of recent introduction for summer flowering is Pentas lanceolata. John Doughty, grower for J. E. Hubinger, considers it very desirable for design work. The flower is pure white, star-shaped, and the plant very free flowering and easily propagated by cuttings. Crotons and fancy-leaved caladiums are used freely outside, and illuminate the lawn with their brilliant foliage.

CAMBRIDGE, MASS.—The vacation period is being taken full advantage of by the members of the craft. John McKenzie is off to the mountains, Fred C. Becker is hustling his stock of Boston ferns into shape, prior to taking a brief time off—possibly a trip to the convention. He expects a phenomenal demand for Finus and Nephrolepis bostonensis, both of which are in fine shape.

Lucius Foster has a fine stock, and from the way orders are coming in, there promises to be fully as large, if not a larger, demand than ever.

W. E. Doyle's place has taken on its summer garb. The magnificent palms adorning his residence are a splendid advertisement. His foreman, Dan Murphy, has just returned from a vacation with new ideas for fall business.

BROOKLINE, MASS.—James Quinn is making extensive alterations to his place. Since the recent death of Mrs. Quinn, the veteran head of the establishment, has felt like giving the young men a chance, so has turned over the business to his son Stephen, who has taken an active interest in it for many years. New houses are being built and under consideration.

F. E. Palmer says the problem of having what the other fellow has not in the way of stock is occupying his mind just now

M. B. Bunker is off for a vacation at Southport, Me., where he has a summer residence.

P. Welch is just now entertaining several of his fellow-craftsmen at his cottage at Old Orchard.

HAVERHILL, MASS.—C. H. Kaulback says he would like to be with us at New York, but has not yet recovered from the busy late spring business. His presence would be very welcome, as I think he could give us some ideas which, if not original, are valuable.

Montreal.

Trade Notes.

We have all got a fit of the blues these days, and find it very hard to look at the pleasant side of anything. We thought to get some improvement after enduring July with its frost, and eight inches of rain falling during 21 days, but up to the present it seems as if August is going one better, or, worse, in every way. Suffice it to say, that to be comfortable outdoors in the evenings an overcoat is necessary.

Bedding and flowering plants of all descriptions are running entirely to rank foliage; in many cases flowers are quite absent. Exceptions just now are early asters and sweet peas. The former are very fine, but have a tendency to open centers. In some places Semple's are beginning to look very seedy, and unless a favorable change speedily occurs, will suffer severely from stem rot. Sweet peas are enjoying present conditions, and are covered with flowers of the highest quality. Carnations in the field look all right at present, but the growth is very soft. Young roses are suffering seriously from mildew.

In the stores trade still continues of little moment, customers being absent from the city on their holidays. Several boating accidents lately have made an increased demand for funeral work. There are no indoor flowers worth the name on the market.

Club Notes.

The picnic, adjourned for a week until Tuesday, July 24, on account of bad weather, came off in a most satisfactory manner. The attendance showed an increase of about 300 per cent. over last year.

The weather was all that could be desired and the various contests came off without a hitch. The cricket match, Gardeners vs. Florists was, as usual, the event of the day. The Gardeners won the game.

The race for members over forty was won by Jos. Davis and John Eddy; under forty by Geo. Robinson and Fred. Russell. Members' wives: Mrs. Robinson, Mrs. J. Bennett and Mrs. A. C. Wilshire. Hop, step and jump: Geo. Robinson, F. Russell and Joe Davis. Throwing Cricket Ball: Fred and Joseph Bennett. There were the usual two or three trained athletes present to pick up anything they could compete for to the detriment of our own friends. It is to be hoped the committee in future will take some energetic measures to suppress these annually recurring nuisances.

Canadian Horticultural Association.

However listless we may feel on ordinary matters, there is an amount of enthusiasm and unanimity seldom seen here in connection with the coming visit of the above society.

The meeting of the various committees to-night has practically settled the whole program for the Convention, and all that now remains to make it a success is the attendance in goodly numbers of the delegates from outside points. Judging from the printed program, the business part of the meeting is in most capable hands. From latest reports the social side is by no means neglected, including as it does some interesting items for each day. As on Thursday afternoon delegates will view the sights from the electric cars, Friday afternoon will be devoted to Lachine and a trip back to the city over the famed St. Lawrence Rapids. All Saturday is devoted to the social side, and will include visits to the gardens and various horticultural establishments in the city and vicinity concluding with a banquet in the evening.

B.

Eastern Delegates.

Eastern delegates to the Canadian Horticultural Association Convention at Montreal, 16 and 17th August, can get single fare return rates (if over ten) from any station on the Intercolonial Railway. Get a certificate at station of departure that you have paid single first class fare to Montreal, get the same signed by Secretary of Convention, present to Montreal ticket office before the 20th, and you will be given a free ticket home.

A. H. EWING, Sec. C. H. A.

Toronto.

The Market.

There is very little change in business conditions. We have a few very hot days, which have made roses rather poor again. Carnations coming in now are also generally poor stock. Asters, however, are good, and there are plenty of them. Sweet peas are also plentiful; and with plenty of hardy stock in sight, no difficulty is experienced in doing what business is offered.

News Jottings.

Harry Delmenth is away to some of the Northern lakes for a holiday. C. J. Tidy is also away, and I hear of several others who have gone for a change.

The Horticultural Society opened its Summer flower show in St. George's Hall August 8. The show is chiefly for amateurs. There is likely to be a good exhibition, as there is a large number of entries, and the officers have worked hard to make the affair a success.

Another of our prominent citizens has passed away in Mr. J. J. Withero, who has often been called the father of our industrial exhibition. He was for 21 years its president, a position he resigned in February last. He gave much of his time to the institution, and in the earlier years of its existence did very much to make it the success it has proved. He is the fourth of the old directors who have died this year.

T. M.

METEOR ROSES.

The Model Extension Carnation Support.

LANCASTER, PA., June 17, '99.
MR. THEODORE PAEDER,
Brooklyn, N. Y.
Dear Sir:—Your Model Carnation Support is all right in every way, and will no doubt be considered as necessary as good plants with growers when better known. I consider it the best to the market, and if your other specialties are as good, they should make another addition to the money makers of 1900.
Very respectfully,
ALBERT M. HERR.

Cut Flower Market.

The market is unchanged. Outdoor stock begins to suffer from drought again.

Firms that Are Building.

Wm. Frazer, of Ruxton Nursery Co., is adding two houses, each 100 feet long. Recently he acquired about six acres of land adjoining his place, which now contains 10 acres, with two dwellings, stabling, and about 25,000 square feet of glass, not counting the houses about to be constructed.

T. T. Cummings, manager St. Mary's Industrial School, has just finished three new houses, each 18x100 feet, ¾ span, iron pipe posts and bench supports and double top ventilators. One of his old houses, planted with Kaiserin and Meteor, looks remarkably well. Planted in May, the plants are from 4 to 6 feet high and should yield a fine early crop. One house of chrysanthemums will be filled with Easter lilies.

Isaac Moss, of Govanstown, is doubling the glass of his new place on Gittings avenue. He is breaking ground for two new houses, 18x200 and 28x200; the small one for smilax, the larger for carnations. Steam will heat the whole plant.

Cultural Notes.

Mr. Harneck, head-gardener to Mrs. Robt. Garrett, has for twelve years been very successful with water lilies for Winter bloom. He finds N. dentata and N. Devoniensis the best for the purpose, the pretty N. zanzibarensis demanding too much heat and sunlight. He keeps water temperature at 75-80 degrees, and the lilies produce flowers quite freely from September until Spring, when firing is stopped. The plants then rest; but are not disturbed, further than that for a day or two the water is drained off and a sprinkling of bone is worked into the ground. The soil has not been changed for 12 years. An old Musa sapienta fruits regularly every two years, and the last time produced a crop of eight dozen fine deliciously-flavored fruits. The long bulb or stem, which this year is expected to bear fruit, is about 15 feet high, and two new root-shoots are about to start. Musa Cavendishii also produces fruit here, but it has a cucumber-flavor and is worthless. Winter-flowering orchids do well here, and a number of seedlings (dendrobiums and lælias) are especially interesting. Harneck flowered his first—Lælia Garrettii—two years ago (Lælia grandis and L. Dayiana). The new cross blooms twice a year, and the flower is in every way intermediate between its parents. It is remarkable, that a regular crop of pineapples can be raised without a special department. The plants are staged about the pretty conservatory as if for effect only; but by proper attention Harneck never misses a fruit. The variegated form yields as good fruit as the others. A Cycas circinalis deserves mention; it has a stem 5 feet high and a fine head of leaves.

The Park Board has advertised for bids on the bulbs for the public squares. The list specifies some rather little popular varieties and very odd numbers. One would think the list had been made up to suit somebody's stock on hand, and to render competition at this advanced season as difficult as possible.

Milwaukee, Wis.

Riemer & Radmer, 411 State street, have just installed for John Mender a No. 8½ Furman Steam boiler, which will be used to heat Mr. Mender's large new greenhouses. Messrs. Riemer & Radmer are making special efforts to interest all florists in Milwaukee into using the Furman system of heating. They are practical people, who have large experience in greenhouse heating.

T. E.

The late Henry Dale, of Brampton, left an estate valued at $55,000, of which $15,000 is in personalty. The executors are Mr. William Algie, of Beaver woollen mills, Alton, and Mr. T. W. Duggan, deputy sheriff, Brampton.

THEIR PROPAGATION AND CULTURE.

BY GEORGE W. OLIVER, PROPAGATOR TO THE U. S. BOTANIC GARDEN, WASHINGTON, D.C. AND LATE OF THE ROYAL BOTANIC GARDEN, EDINBURGH.

A working Hand Book of Every-day Practice for the Florist or Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experiences of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines, and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is to be found in much more pretentious works costing ten and twenty times as much money. Strongly bound to stand rough handling and plenty of it. Price, $1.00 by mail, postpaid.

331 Main

LILIUM HARRISII IS NOW READY

And we are pleased to state that our bulbs have never been finer. Bulbs are exceptionally fine, clean and bright, and running well up to size. We are very particular about the Harrisii that we handle. Our stock is not picked up indiscriminately from small growers. We have our bulbs grown for us by only a few selected growers, whose stocks are the healthiest, and for which we pay the highest prices. Our fields are the healthiest and best on the Island, and we are sure that our stock will prove unusually satisfactory. Certainly the bulbs have never been finer than they are this season. If you have not already covered your wants in this line, we will be glad to have your order. Bulbs are ready for immediate shipment.

REGULAR STOCK AS USUALLY SOLD:
Bulbs 5 to 7 in. in circumference, $16.00 per case of 400 bulbs.

OUR OWN SELECTED STOCK:
Bulbs 5 to 7 in. in circumference, $18.00 per case of 400 bulbs.
Bulbs 7 to 9 in. in circumference, $18.00 per case of 200 bulbs.
Bulbs 9 to 11 in. in circumference, $20.00 per case of 100 bulbs. (scarce)

If cash is remitted with order, 5 per cent. can be deducted from above-named prices.

FREESIA REFRACTA ALBA Plant now for Christmas Flowering. Finest quality Bermuda-grown bulbs, extra quality, 50c. per 100; $4.00 per 1000. Selected bulbs, 75c. per 100; $6.00 per 1000.

BERMUDA BUTTERCUP OXALIS Heavy Selected Bulbs, 75 cents per 100; $5.00 per 1000.

WINTER-FLOWERING ROSES.

We have a fine stock of all the leading varieties—first-class, A No. 1 plants—which we can offer as follows:

STRONG PLANTS, IN 3 1-2 INCH POTS.

Bride, Bridesmaid, Perle, Meteor, La France, Bon Silene, Papa Gontier, $8.00 per 100.

Souv. de Wootton, Golden Gate, Kaiserin Augusta Victoria, Pres. Carnot, Sunset, $10.00 per 100.

American Beauty, of which we have an extra fine lot, $12.00 per 100.

F. R. PIERSON CO., Tarrytown-on-Hudson, N.Y.

FOR SUMMER DECORATIONS!

ASPARAGUS PLUMOSUS NANUS

Never Wilts!

Cut Strings, 10 Feet Long, 50 cts.

W. H. ELLIOTT, BRIGHTON, MASS.

THE TRUE AND THE TRIED STOCK OF LILIUM HARRISII

Or BERMUDA EASTER LILY Bulbs.

WE venture to say that our **THREE-LEG BRAND** of **LILIUM HARRISII and LONGIFLORUM** is freer from disease than any other stock grown in Bermuda. The statement is verified by customers who have grown and forced it exclusively for years and will have no other.

IT IS NOT THE CHEAPEST, BUT THE BEST.

After filling all advance orders, we have left a few boxes of each size, and this is our price:

	Per 1000	Per 100
5 to 7 inch Bulbs, 400 in a box	$50.00	$5.50
7 to 9 " " 200 "	100.00	11.00
9 to 11 " " 100 "	200.00	20.00

	Per 1000	Per 100
LILLIUM HARRISII, as usually sold, 5 to 7 inch bulbs	$40.00	$4.50
ROMAN HYACINTHS, White, 12-15 cent.	16.00	1.75
" " " 11-12 "	12.00	1.50

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLGIANO, First Vice-President; S. G. CORTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Recent statistics published by the United States Department of Agriculture, show that 32,079,371 pounds of clover seed, valued at $2,379,372, were exported from America in the fiscal year ending June, 1900, against 19,980,434 pounds, valued at $1,264,922, during 1899.

New York.—The wife of Albert Hulsebosch, of Hulsebosch Bros., bulb growers and importers, Englewood, N. J., presented him Friday last with two healthy boys. He is now the happy father of six boys, the eldest of which, Peter, ten-and-a-half years of age, is now sick with scarlet fever at the Riverside Hospital.

S. B. Dicks, of London, will arrive today (August 18), on the S. S. Lucania. His address will be care of R. J. Godwin's Sons, 60 Wall street.

European Notes.

A fairly good rain over the whole of western Europe has put new life into the growing plants, and somewhat retarded harvesting operations. Spinach comes under the latter category, and a lot of the seed has been knocked off by the heavy storms, but as a fairly large acreage was planted, there is no prospect of any scarcity.

The work of threshing out the turnips proceeds apace, and the results are more disappointing than our worst anticipations. This is more especially the case with the white-fleshed field varieties, such as Grey Stone and Pomeranian White Globe. The yellow-fleshed Aberdeen kinds are giving rather better results. Rutahagas, with the exception of Brown's Universal, are finishing up badly, and even on first-rate land the crop will be almost nil. Special attention was directed in these notes to this valuable introduction of Brown's when it was first exhibited, and further and fuller experience confirms the favorable opinions then expressed. The fact that it resists mildew better than any other variety renders it doubly valuable for cultivation in hot climates. In appearance it resembles the Westbury, but it is much larger and heavier than that justly esteemed variety.

Flower Seeds.

Flower seeds are in an interesting condition just now. Asters are exceptionally promising. Stocks are good, Nasturtiums are dying off a little too quickly, but will yield a very good crop of seed. Sweet peas are now so little grown in Europe that a probability of a very short crop will hardly affect their value. Pansies have suffered most of all, and the crop of seed from the high-class strains is a very poor one. Spring-sown larkspurs have perished by wholesale, while annual chrysanthemums, clarkias, godetias, popples and nemophilas are quite satisfactory.

In market seeds Crimson Clover maintains its value, and will probably rise when the shortage of root crops is fully understood. Mustard is stationary, and rape firm at the latest rates.

Novelties.

As regards novelties for the coming year, the following are worthy of special mention: Arctotis candidissinin (Haage & Schmidt), a large daisy-like flower, of a silvery-white color, with a long stem; easy to cultivate, and fine for cutting.

Antirrhinum majus Tom Thumb with golden leaves (Putz). This will prove a formidable rival to the golden pyrethrum, as it is of an equally bright golden color. In addition, it produces spikes of lovely red and rosy colors, which blend most harmoniously with the foliage.

Nasturtium Tom Thumb "Golden Queen" (Cooper, Taber & Co.) is a pure golden yellow flowered variety, with yellow foliage. Unlike the scarlet-flowered variety named Cloth of Gold, this newcomer throws its numerous flowers well above the foliage, and its value as a decorative plant is thereby considerably enhanced.

Sweet pea, Mont Blanc (Benary) may best be described as an extra early and dwarfer form of the Emily Henderson. It will prove of very great value for forcing purposes. The Cupid section is to be reinforced by such varieties as Firefly, Boreatton, and others equally distinct, so that America will no longer enjoy a monopoly in the production of these curious plants.

Of last season's novelties Laxton's new pea, Thomas Laxton, has apparently come to stay. It is a more vigorous form of Gradus, with a longer pod, blunt at the end and quite full. As it is equally dwarf and a more certain cropper, it will no doubt soon supplant Gradus.

Taber's Duke of York pea also gets another lift up this year, as the Royal Horticultural Society, after testing it at Chiswick, have confirmed the award of merit previously bestowed. G. Keith, Jr., of Toronto, and H. W. Gordinier, of Troy, N. Y., are in London.

EUROPEAN SEEDS.

Exhibitions.

SCHWAEBISCHER SAENGERBUND, Ridgewood Park, L. I.—The premium list of the twelfth annual horticultural exhibition, to be held at Ridgewood Park, L. I., September 2-9 inclusive, has been issued. Prizes are offered for ornamental carpet bedding, flowering plants, foliage plants, and water garden.

The following named gentlemen will receive entries until the 20th day of August, 1900:—Aug. F. Schrader, Elmhurst; Fred'k. Marquardt, Middle Village; Carl Koch, Flatbush; Herm. A. Hahn, Broadway, Brooklyn; John Miesem, Elmhurst; and Hermann Maenner, Maspeth, L. I.

RHODE ISLAND HORTICULTURAL SOCIETY.—The schedule of prizes for the September and November exhibitions has been issued. C. W. Smith, 61 Westminster street, room 23, Providence, R. I., is secretary and treasurer.

Indianapolis, Ind.—H. H. Bassett, who for many years acted in the capacity of traveler for several nursery firms, died here August 7. He was born in Randolph County, Ohio, in 1836.

Cleveland.

Trade Notes.

The past few days have been the hottest of the season, with the thermometer on the street level registering from ninety to one hundred degrees. Such weather conditions, of course, have a depressing effect upon all lines of trade, and the florists' trade suffers with the rest. Withal, storekeepers report a fairly good business for the present period; funeral work constitutes the greater portion doing at this time. This consumes large quantities of present offerings of the growers. With the exception of good grades of roses and carnations, flowers are very abundant. Roses are small and of poor color; the hot weather seems to have bleached them until there is not much color left in the blooms. Carnations are reported unusually scarce, and what stock is offered is of very poor quality; good blooms are eagerly sought after. Prices now obtaining are 50c. per hundred for short stem stock, and $1.00 per hundred for best. Rose prices do not vary from former quotations; seconds move slowly at $1.00 and $2.00 per hundred, and the best blooms brought in by local growers do not fetch over $4.00 and $5.00 per hundred. The former grade is bought largely by street men, and offered at 15c. per dozen. Essex Greenhouses, located at Coe Ridge, O., are consigning considerable quantities of short stem Beauty to one of the wholesale establishments here; this stock brings $3.00, $5.00, $8.00 and $10.00 per hundred, according to quality. Some very fine flowers of Meteor were seen; these, however, were from distant points.

Asters are becoming plentiful and are seen on every hand. The ruling price is $1 and $1.50 per 100, but in some instances, where the blooms are not of best grade, not over 50c. is realized. Gladiolus flowers are in large supply, and form an important part of nearly every window display. The blooms are right in their prime at the present time, and some very fine spikes are exhibited. These move well at $1.50 per 100 spikes. Sweet peas are very abundant, and large quantities are wasted; they do not bring over $1 per 1,000. Carl Hageaburger, of Mentor, Ohio, is the first grower to bring in cosmos; he put several bunches of nice blooms in market last week. This is the only cosmos seen here so far this season. There are large lots of Japanese lilies offered by the growers, and $5 is the outside figure paid by the retailers for auratum blooms. These retail at $2 and $3 per dozen, while rubrum and album flowers retail for $1 per dozen. Other retail prices are as follows: roses, $1 per dozen; carnations, 35c. per dozen; gladiolus, 50c. and 75c. per dozen spikes; asters, 50c. per dozen.

A few dahlias are coming in; rudbeckia, coreopsis, larkspur and helianthus flowers are on hand in large quantities.

News Notes.

Jas. Eastwell, with Smith & Fetters, spent several days of last week in Chicago.

Paul Kunze, Rice avenue and Harvard streets, who succeeded Kunze Bros., last Fall, is making extensive alterations in heating apparatus throughout his entire range of houses.

Bate Bros., wholesale growers and cut flower commission dealers, with houses at Collamer, Ohio, recently purchased the greenhouses belonging to G. W. Heiser, and are removing same on to leased ground on Collamer avenue, East Cleveland. Their plant, when completed, will consist of seven houses, 150 x 14 feet, which will be given up exclusively to the growing of roses and carnations, and two smaller houses, one of which will be devoted to the growing of adiantum and the other to miscellaneous stock. Bate Bros. operate a wholesale cut flower store at 228 Euclid avenue.

An extensive and unique decoration was that at the banquet tendered to the Government River and Harbor Commission by the Chamber of Commerce, at the Hollenden Hotel on Thursday evening, 9th inst. The dining table itself represented a white steam yacht, and was 60 feet long by 12 feet wide. The entire deck of the boat was a solid mass of flowers, principally asters; a space of two feet on either side of the deck afforded room for dishes, etc. The smokestack was made of smilax, and in the center of this floral yacht, which was decorated with the national colors, was a 10-foot mast, carrying a pennant, upon which were the words "Greater Cleveland." Corsages of red and white roses, tied with blue ribbon, were worn by the ladies, and boutonnieres of red and white carnations, tied with blue ribbon, by the gentlemen. The decoration was designed and executed by Ella Grant Wilson.

R. Roberts, of this city, and well-known among the Cleveland florists, has secured the greenhouse establishment belonging to the estate of E. J. Paddock (deceased) for a term of years. These houses are located in Newburg, a suburb of Cleveland; Mr. Roberts' lease of the premises commenced on August 1. His specialties will be roses, carnations and chrysanthemums.

Mr. and Mrs. Jas. Eadie, Miss Jennie Eadie, also Mr. and Mrs. Adam Graham left Wednesday, August 8, for Atlantic City, N. J., where they will remain until the Convention opens at New York.

Miss Mae Evans, with J. M. Gasser, has just returned from a two weeks' stay at Cambridge Springs and Bethesda, Ohio. H. B. Jones, also with Mr. Gasser, is back to his post after a month's stay at Philadelphia and other Eastern points.

L. F. Darnell is spending his vacation as his old home at Cumberland, Md.

Miss McCullough is also absent from the city, and is spending her vacation with friends in the East.

As near as can be ascertained at the present time, about fifteen of the Cleveland florists will attend the Convention.

G. A. T.

Pittsburg.

Business Bits.

Up to the present time the florists' trade has been far better than it ever was before during Summer, with good prospects of a continuance of the same conditions until Fall trade begins. A large amount of funeral work was put up the past week. The demand for flowers at funerals has increased wonderfully the past few years, and prices paid for floral pieces are far better than they ever were before.

No great variety of stock is to be had just now—asters, gladiolus and a few lilies are the principal flowers used. Carnations are mighty scarce, and roses not any too plentiful. Asters, so far, are of fair quality and in good supply. Last week's hot weather was very hard on stock under glass and outdoors. Not a drop of rain and the thermometer in the middle nineties for eight days in succession—the longest hot spell we have had for many years.

News Jottings.

J. B. Murdoch is making extensive alterations in his store room. A new tile floor, new metal ceiling, and a change in the front, giving a nice show window, are among the improvements. On account of this work, Mr. Murdoch will be prevented from attending the Convention in New York.

T. P. Langhans, of the Pittsburg Cut Flower Co., and Secretary of the Florist's Club, is off on his vacation in the mountains, and will also be missed in New York.

Club and Convention Items.

The August meeting of the Florists' Club was unusually well attended, and all arrangements were completed for the trip to the Convention. This is the second time the Florists' Club has started out almost a week ahead of the Convention, on a pleasure trip. Thursday morning, August 16, a party of about forty left Pittsburg in a special Pullman coach for Atlantic City, getting there the same night. They will spend the time there until the following Monday, then, by an early train, will proceed to Philadelphia to spend the day with the Philadelphia florists, who have kindly invited wanderers passing through on their way to New York to eat and drink with them and be merry. Then, with our Philadelphia brethren, Monday afternoon, we shall leave for New York. There are a few members who cannot conveniently leave before Sunday or Monday, and will travel on the certificate plan, so that there will be from forty to fifty, all told, including ladies. The Pittsburg florists on the Atlantic City excursion should ask for certificate when purchasing tickets from Philadelphia to New York, as a saving of about 65 cents can thereby be effected.

About 50 acres fine tillage land, fronting on Portsmouth avenue; large 12-room dwelling, hot-water heat, slate roof, etc.; large slate-roof barn, carriage house and carpenter shop, all conveniently and attractively arranged. Live stock, hay, wagons, carriages, all working tools and appliances, and many personal household effects. An extensive and profitable florist business—wholesale growing—long established, included; practically no competition; 15,000 square feet of glass, six large greenhouses, grand soil; sales limited by production only; 5 minutes from business district, electric and steam cars near; adjoins compact part of the town; delightfully situated; town famous for its beauty, refinement and rare educational advantages; Rye, Hampton and Salisbury beaches in easy distances and with electric connections; property should be seen to be appreciated; inspection may be made at any time; present owner to retire from business and remove from town; $500 cash deposit at sale, balance on easy terms. Descriptive and illustrated booklet mailed upon request. Address HAYES ESTATE, Exeter, N. H.

FOR SALE—GREENHOUSE PROPERTY AT NYACK, N. Y. A plot 220x125 feet, on which are four Rosehouses, 100x18x6, each house heated by a No. 16 Hitchings Boiler, and seven houses, each about 64x11 feet, heated by flues. This property will be sold cheap to quick cash buyer.

HITCHINGS & CO., 233 Mercer St., New York.

Import and Export Statistics.

The following exports and imports of plants, shrubs, and seeds, etc., are for the month of June:

The dutiable imports of plants, shrubs, and vines amounted to $9,206 in June, 1900, against $12,247 in the same month of last year. The free imports of seeds amounted, in June, 1900, to $39,405, against $26,222, the value of the imports of June, 1899. The dutiable imports of seeds amounted to $67,225 in June, 1900, against $19,479 in June of the previous year.

The exports of seeds to other countries amounted to $61,189, against $68,315 in the same month of 1899. The countries to which the United States exported seeds were the United Kingdom, which received shipments to the value of $4,023 in June, 1900, against $9,580 in the same month of 1899. Shipments to France amounted to $2,107, in June, 1900, against $800 in the same month last year.

An increase is noted in the exports of seed this June to British North America, being $21,295, as against $4,486 in June of last year.

BUSINESS OPPORTUNITIES.

TO LEASE, on excellent terms, a fine acreage of land situated within one hour of New York. Very accessible, with large and commodious greenhouses, flower gardens, dairy, large brick buildings for cows and horses. Land capable of raising all kinds of products, shrubs, trees, etc. Will lease whole, or in part, to suit. Owner having a piece of land within easy reach of the above is willing to pay for the care and work on the same if terms can be agreed upon. Particulars may be had by addressing Talbot Root, 27 Pine street, New York City.

BY J. WALTER BRADLEE, Auctioneer, 23 Court St., Boston. Chance of a lifetime for a florist. Four greenhouses, with two acres of land, on Thacher street, off Blue Hills Parkway, Milton, Mass., will be sold at public auction on Wednesday, August 22, 1900, at 3 o'clock P. M., all and singular the entire plant of Edward E. Saunders, florist, together with a large assortment of bedding plants, pots, and general fittings, tools, etc., to be sold in lots to suit. This property is very desirably located, within seven miles of Boston proper, five minutes walk to steam and electric cars to Boston; electric cars to Brockton pass the property. The business has been carried on for a period of 20 years, and offers an unusual opportunity to secure a plant so centrally located for a man to increase his business, as the local florists cannot begin to supply the demand. Any florist who understands pleasing the public is assured of success from the start. Terms: $300. Cash deposit required at time of sale. For further particulars apply to the auctioneer.

L. USSING'S GREENHOUSE PROPERTY Exchange, 53 W. 28th St., New York (with G. E. Bradshaw). Telephone, 1239 Madison Sq. Sell, rent or exchange at all times.

MUSHROOM PLANTS—TO RENT, 4 houses, 20x60 ft. each, capacity 6000 lbs., 5½ miles from Philadelphia; every facility; market for all grown; established trade. Address P. O. Box 96, Yeadore, Pa.

FOR SALE OR RENT, CHEAP TO RE-sponsible party, on account death, a first-class place, built last year, New Jersey, 6 miles from New York; size, 200x300 feet; splendid soil and sod; one 3-4 span house, 150x20; one house 115x10; frames, heatable; small dwelling, city water; houses and outdoor wall stocked with cut flowers. Sold on easy terms. Rent $25 per month. W. O., care Florists' Exchange.

New York.—The bowlers met Monday afternoon, and the following scores are the results of their efforts:

	1	2	3
F. H. Traendly	194	169	157
A. S. Burns	126	169	147
W. Liebenheller	143	153	123

W. H. Siebrecht	..	118	..
A. Le Moult	..	132	..
A. H. Langjahr	..	103	..
W. Marshall	..	115	..

Mr. John Westcott, of Philadelphia, Pa., a member of the National Florists' Bowling League, was in the city on Monday, and the schedule of prizes for the coming tournament was arranged. It was decided that all teams wishing to participate must notify the chairman of the Sports Committee (Mr. Theo. Roehrs) at least 48 hours before the tournament begins.

As the Queen of Edgely and the Edmund M. Wood trophies are being offered through the National Bowling League, all clubs wishing to compete for these prizes must become members of the League. There is no fee required to join the League; all that is necessary is to notify Mr. Roehrs, 511 East 176th street, New York, or at the Convention hall previous to the needed 48 hours.

Teams are to consist of six players, with three substitutes, the names of all of whom must be forwarded at the same time as the notification of entry.

The prizes will be awarded as follows:

The Lord and Burnham Co. cup will go to the team making the highest total in the three tournament games.

The cup given by Hitchings & Co. will go to the team making the highest score in the third game.

The Queen of Edgeley cup will be awarded to the team having the highest scores in the first two games.

Each of the above prizes has to be won twice before becoming the property of the winners.

The Edmund M. Wood cup will be given to the club having the highest total score in the three games. This prize becomes the property of the winning team when won the first time.

The Detroit trophy will be given the club making the highest score in any one of the three games. This prize has to be won twice; it was captured last year by the Philadelphia team.

The list of individual prizes offered is as follows:

Silver cup, presented by Theo. J. Lang, for the highest average in the three games.

Silver cup, donated by Traendly & Schenck, for the highest score in any one game.

Gold medal, donated by Theo. Roehrs, to the individual making the highest three scores.

Gold mounted fountain pen, donated by J. K. Allen, to the player making the greatest number of strikes.

One box of cigars, given by F. Brinkama, to the player making the most spares.

For the individual games, outside the tournament, and which will be played at the close, John I. Raynor offers a gold medal to the player making the highest score.

W. F. Sheridan gives a silk umbrella, for the next highest, and Fitzgerald & Hammond, a cigar case, for the third highest score.

In the Ladies' Contest, Cleary & Co. offer a bronze vase for the highest score; A. H. Hews & Co., a jardiniere for the second highest; and Dana, the photographer, one dozen photographs for the third highest score.

Chicago.—The bowlers are determined to keep their hands in, even if the weather be hot. Kindly look over some of these scores; they will bear examination, and if some of the prizes do not go to Scott's "musical team, or human calliopes" (fie, fie, Scott, to so name the quiet, orderly Chicago boys), then I am no guesser.

Mr. Rudd, (and others) on Bowling.

There are to be found everywhere those, myself included, who are surcharged with gratuitous advice and opinions on matters that may or may not be of the slightest personal concern to them, and these they are continually emitting.

I am, however, not going to inflict any unsought counsel on this occasion, but simply to ask a question or two.

Mr. Rudd says in a recent letter to his organ: "Bowling is all right," etc. How does he know? Has anyone ever seen Rudd in shirt waist on the alleys?

He further ventures the assertion, "No one who does not enjoy those things is compelled to attend the contests much less to enter them." This is what I would term innocuous philosophy, well worthy of a green(wood) sage. Again comes another streak of wisdom more profound than the first—"too much pleasure is, of course, bad for business." What "monster in human form" can gainsay its truth? And, obversely, too much business is bad—for what? But who has ever heard of the business of an S. A. F. Convention being impaired by the accompanying pleasure had on these occasions?

Then comes the "unkindest cut of all," —"Some few of those cups and other trophies * * * might well have been given for contests more strictly horticultural." Zounds! as if it were not man's prerogative to give cups and trophies for whatever purpose to him seemeth meet! Such a reward for magnanimity! But why should Brother Rudd sneer at the generosity of his fellow-beings, or how applied? There is always a way left open to remedy this unpardonable sin by the scoffer himself giving cups for more strictly horticultural contests—e. g., flowers of speech.

Rudd's unsolicited "opinion" (I say it with fear and trembling) is but the echo of the wail of one living in (or among) the dead—past. There is not enough life in it to help one make a "poodle."

R. ELWOB.

Convention News Each Day

THE **SPECIAL DAILY MORNING EDITIONS** of the **Florists' Exchange,** to be issued August 21, 22, 23 and 24, will each contain all the Convention news of the previous day. Copies will be distributed free to all delegates, and will be mailed to any address on receipt of **Ten Cents,** to cover postage.

If you want to keep posted, send your order at once, and be in time for the first (**Tuesday's**) issue.

THE FLORISTS' EXCHANGE,

P. O. Box 1697, New York.

Louisville, Ky.

Milton Reimers, the seven-year-old son of E. G. Reimers, the Baxter avenue florist, had a narrow escape from drowning last Sunday, in Green Lake, Wisconsin, his life being saved by the bravery of his brother Karl, aged ten, and that of Joe Scholtz, the ten-year-old son of the president of the Dennnzio Fruit Company. Unstinted praise is given Joe and Karl for their bravery, and gold medals have been ordered, and will be presented to them in a manner befitting their heroism.

Do Not Fail to Visit

THOMAS YOUNG, JR.

Wholesale Florist

41 and 43 West 28th Street NEW YORK

And inspect the facilities for handling Cut Flowers at

The Largest and Finest Wholesale House in the City

Baltimore.

Trade Notes.

The cut flower market is unchanged. Good flowers find ready buyers but are a little scarce. Outside stock has suffered severely. Asters are getting small. The temperature has been up to 100 degrees for a week or more. Thunderstorms last Sunday brought relief and a few showers.

Off to the Seashore.

Fred. Burger and his family are spending four weeks at Ocean Grove.

Mr. Feast has taken his family to Atlantic City.

Mrs. Seidewitz and Miss Seidewitz have fled the hot city to take a few days' rest at the same place.

Miss Tilly Held is spending her holidays there with friends.

Mrs. Mary Thomas has been heard of from Paris. She is at present traveling in England and enjoying the best of health.

George Black is ill with typhoid fever at his summer home at Lutherville; he is improving satisfactorily now and his many friends are glad. They may expect him to be about again in two or three weeks.

Club Meeting.

A special meeting was held to arrange Convention matters. Much disappointment was felt and expressed that President Halliday will be prevented from joining the delegation. An hour of eloquent argument was tried to change Bob's mind, but neither persuasive entreaty nor peremptory demand could shake his determination. Everyone was well aware that he would go if he could. Some of the arrangements for the bowling have to be changed yet; but it is hoped that everything will be in good shape when the time comes. The Baltimoreans fully appreciate the opportunity of seeing the best convention meet, of learning the latest and best about plants and the trade, and of having the most glorious time with the S. A. F. in New York.

Though in special session, the club thought it their duty to express their condolence to Mr. Lonsdale and his family, and suitable action was taken.

Touching words, alluding to the ready kindness which has made Mr. Lonsdale one of the dearest friends of the club, mingled with the heartfelt expressions of deepest grief and warmest sympathy for the hearts which are bleeding in their hour of trial. That sincere sympathy could but lighten their burden of sorrow!

T. E.

Buffalo.

Living Weather Arrives.

The best item noticed is the arrival of showers of fair extent, and cooler, living weather. In the trade a moderate call for funeral flowers has prevented stagnation. Aside from such, business is distinctly quiet. The dry weather reduced the outdoor aster supply somewhat, so that while these flowers now are amply plentiful, the glut so common at this date is not so noticeable.

Pan-American Notes.

Affairs Pan-American are moving well. The local dailies begin to see Superintendent Ulrich's work, and give it ample notice. We understand that Superintendent Scott is absent this week, attending the Canadian Horticultural Association's Convention at Montreal, in the interest of the Pan-American Exposition Co.

The Annual Picnic.

The florists' annual picnic came off on Wednesday of last week at the Bedell House and grounds on Grand Island. In attendance the crowd was ample enough to be inspiring.

The leading event was a baseball game of five innings, with what was termed "Scott's Nine" pitted against the "Down Town" crowd. The former won by a score of 15 to 4.

In the foot-racing contests, Lean Men's Race, Will Grever won first; Heavy Weights—W. F. Kasting, first; E. J. Buxton, second; Open-to-All—Wm. Scott, first; Wm. Waring, second; Delivery Boys—Joe. Spidel, first; Wm. Hauenstein, second; Three Leg—W. Grever and E. Reichert won first. The others fell. Hop, Skip and Jump—David Scott, first; W. Grever, second.

Bicycle race, three-fourths mile—E. Brucker, first; W. Grever, second.

An acceptable supper was then taken care of, followed by short remarks by some of our orators. Return by boat to the city was made at 9.30 p. m., and the affair considered a success.

Next week's convention matters absorb some attention and interest. A goodly number will no doubt go, but in a scattered manner. The bowlers are practising and talk encouragingly.

Mr. and Mrs. S. A. Anderson are sojourning at Muskoka Lake, Canada.

H. V. Hunkel, of Holton & Hunkel, Milwaukee, en route East for pleasure and the Convention, called Saturday last.

VIDI.

Waynesboro, Pa.

Henry Eichholz, the geranium man, as he is known hereabouts, has some very fine new seedlings to be introduced. He will make a large exhibit at the Pan-American at Buffalo. For the past five years he has devoted a great deal of time to hybridizing the best standard and foreign novelties on Mars, the dwarf border geranium. His intention was to produce a race of geraniums that will adapt themselves as pot plants as well as for bedding purposes, doing away with the lanky growth of most of the older varieties. A look at about 3,000 plants of America in a clay field will convince the most sceptical that he has succeeded well in his efforts, the plants being profuse bloomers with a growth of not over a foot in height.

A bed of over 400 seedlings is remarkable, for coloring, but only five will be introduced and three or four more given another year's trial. The grandest of all is No. 31. It is clear, wine red, of large size and truss, perfect in growth and sun-proof.

A very pretty dwarf pink with white eye, extremely floriferous, is No. 25. 75 is a dwarf cherry red of fine build and flower.

Mars in different colorings is here by the score; but only the best three will be retained, Mr. Eichholz believing that whatever he introduces must have value and a long life. Fancies are very pretty in collection, but for business a geranium must bloom. The green grass varieties for late spring sales must go before many years.

Of double varieties only two will be retained. These are in the aureole class, coloring darker and more distinct than the later importations.

By the way, nearly all the best foreign novelties can be seen here. Jean Viaud is the best of this year's foreign introduction, with Clyde a close second (Clyde being an American sport of Mrs. E. G. Hill).

Browallia gigantea, Begonia Gloire de Lorraine and Baby primroses are grown by the benchful. Carnations are all housed. Chrysanthemums look splendid. Liberty rose is like Mars geranium. It blooms, blooms and only blooms, but the stems must get longer to be of any value.

Mrs. D. S. Fahnestock is building a new house for her ever-increasing retail trade.

The latest addition to the florists' ranks here is John Spangler, with a house 8x20 to start with.

Worcester, Mass.

The last week's show of the Horticultural Society was not quite up to the usual standard in quality or quantity, owing to a very heavy rain a few days before.

The week before, August 2, the flowers were very fine in all classes and the competition close. Some exhibitors did not like the judgment on sweet peas, the judge awarding premiums on a little longer stems and faded flowers over blooms with a little shorter stems and large fresh flowers.

Business is very good for this season of the year. Sweet peas lead in sales. Asters are coming in now.

J.

Mount Vernon, N. Y.

Frederick H. Renner, a florist, formerly in the employ of Arthur Dummett, of this city, is locked up at Police Headquarters awaiting trial for forgery. The police say that he has swindled many merchants by means of checks, to which he forged Mr. Dummett's name. He is a married man, about forty years old, and formerly a trusted employe of Mr. Dummett. According to the stubs in a check book found in his possession, he has made out at least twenty checks ranging from $5 to $100. Renner admits his guilt.

The Convention of the Canadian Horticultural Association was held the past week. A full report will appear in a future issue.

At the McFadden (Cincinnati) sheriff sale on Tuesday last, the orchids and other plants were bid in by an attorney for $2,500.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

The Geo. Wittbold Co., Chicago, Ill., register Nephrolepis Wittboldii, originated in 1897. Fronds 2½ to 3 feet long and 10 to 12 inches wide; pinnæ undulating or wavy in all growths; texture leathery.

WM. J. STEWART, secretary.

The "Daily" Florists' Exchange.

The publishers of the FLORISTS' EXCHANGE will issue a daily edition of that paper every morning from Tuesday to Friday, August 21 to 24, inclusive. This will be the first daily florists' trade paper ever published, and, while necessarily short-lived, will, we trust, be none the less remarkable.

As the material contained therein will relate more or less closely to Convention matters and the doings of the delegates, during the week, we herewith solicit the good offices of our friends, asking them to keep us informed as to such news of public and personal interest as may come under their notice. Our exhibit in the main hall of the Grand Central Palace will be headquarters, where all news notes and items intended for publication may be left up to 10 p. m. each day.

Delegates desiring to meet friends or make business engagements can do so through these columns, free.

Will be pleased to have delegates notify us now as to the names of those in their family or immediate party, coming to New York for the Convention, and name of hotel at which they will stop.

The New York Convention.

The preparatory work of the convention, so far as the local club is concerned, is well in hand, and there is every indication that all will be in readiness by the opening day. This gratifying condition of affairs, considering the magnitude of the undertaking, is a most excellent tribute to the executive ability of President O'Mara, to his enthusiasm and hearty desire for the success of the 1900 gathering, all of which have found a most sympathetic, responsive echo in every member of the New York Florists' Club. We believe the statement can safely be made that no body of men ever worked harder in a like connection than the local florists have done to insure the success of an S. A. F. convention. Ever since the society decided upon the metropolis as its meeting place for this year the work of preparation for its reception has been gone about with most commendable energy, unremittingly, and unbegrudgingly. Only those who have undergone a similar experience can appreciate what all this means; and yet they can hardly realize what it does actually mean in a great city like New York. Let us but say that S. A. F. matters have been the engrossing theme at every regular and special meeting of the home club for almost the past twelve months.

We do not mention these facts in order to invest them with any scarecrow habiliments, or to hold them up as a deterrent to the enthusiasm of other cities desiring the society's presence; but we present them as showing that feeling of kindly interest which one set of florists entertains for the great majority, and the sacrifices and hard work willingly undergone for others' material welfare—in short, to testify to that one great progressive factor engendered by the S. A. F. itself—the spirit of brotherly love.

We feel sure that florists all over the country will appreciate the services of the New York Florists' Club on their behalf by a practical demonstration thereof, in the large numbers present at what must be the greatest event in the history of the S. A. F., and a fitting celebration and exposition of the high standard reached by the American florists—educationally and practically—at the passing of the nineteenth century.

The greatest reward, the highest compliment you can return your hosts for earnest effort put forth is to come and share the hospitality they have provided for you, and in such unprecedented numbers as the occasion assuredly demands.

The Convention opens at 9:30 a. m.

The opening hour of the Convention has been changed from 10:30 a. m. to 9:30 a. m., Tuesday, August 21. This step has been rendered necessary in order to suit the prior engagements for that day of Acting-Mayor Randolph Guggenheimer, of New York City, who will deliver the address of welcome.

It is hoped that the delegates will lend their assistance, looking to a punctual opening at the hour named, as other pressing business engagements prevent his honor being able to remain at the Convention Hall beyond the time stated, and he has, at some personal inconvenience, so arranged his affairs as to enable him to open the proceedings, which, he says, will give him extreme pleasure.

New York.

Club Meeting.

The Florists' Club held its final session before the convention on Monday evening last, President O'Mara in the chair. The attendance, as usual, was most gratifying. The reports of the various committees all showed that the work allotted to each, so far as it could be performed, had, as the president stated, "been pushed forward to the limit of perfection;" and all that now remains is for the biggest gathering of delegates to be present, in order to make the convention of 1900 what it surely will be—a record-breaker.

It was decided that the horticultural exhibition should be declared officially closed with the close of the convention. Every member was urged to use his utmost endeavor looking to the securing of exhibits in order to present a show worthy of New York and of the occasion.

The Hall Decoration Committee, J. Nugent, 42 West Twenty-eighth Street, chairman, would like to be advised by donors of stock as to what they will contribute, and the material should reach the Grand Central Palace, Lexington Avenue and Forth-third Street, not later than Monday forenoon next, addressed in care of Mr. Nugent.

In place of dancing an entertainment will be provided at the close of the president's reception Tuesday night.

The boat to Glen Island will leave on the Thursday afternoon of the convention from West Thirty-fourth Street pier at 1 o'clock sharp, calling at East Thirty-first Street pier about an hour later to pick up any belated passengers.

A letter was read from William Scott, of Buffalo, telling of the horticultural features of the Pan-American Exposition, which promises to surpass all previous efforts of the kind, and offering to supply full information to those desiring it.

Mr. May was appointed a committee of one to prepare and send to Edwin Lonsdale a letter of condolence expressive of the club's heartfelt sympathy with him in his recent sad bereavement.

The more weighty work of the club over, the balance of the evening was devoted to recreation. Mr. Henshaw told of his recent trip to Europe. In England he met Dean Hole who spoke kindly of his last visit to the States, which is a pleasant memory with the eminent rosarian. Mr. Henshaw attended the show of the National Rose Society, where he noted the good work being done by English rose growers in the improvement of the sweet briers and the hybridizing of Rosa Wichuraiana. The best displays of roses were made by Dickson, of Belfast. The speaker commented favorably on the sweet pea exhibition in the Crystal Palace, and afforded great amusement by a recital of how he "did" Paris under the chaperonage of a lady interpreter. F. L. Atkins, who recently returned from a European tour, promised an account of his journeyings at a future meeting. Other speakers were Messrs. Philcox, of St. Louis; Harry May, John Westcott, of Philadelphia, who was in the city on matters pertaining to the convention; Lemoult and John Morris. Songs were rendered by Messrs. William Plumb, Louis Schmutz, Butterfield, Birnie, Herrington, Stewart and Wallace, while J. Hogan contributed to the fun by some excellent step dancing. J. P. Cleary officiating at the piano. During the evening refreshments were served by the Entertainment Committee.

Market Conditions.

Business continues very quiet. Plenty of flowers are coming in, but real good stock is very scarce. American Beauty are more in evidence, but mostly of the short-stemmed grade, and they are little sought after. Many of the Bride and Bridesmaid arriving are still very small, and cannot be moved satisfactorily; $5 per 1,000 has been the asking price on some days, and then failed to tempt buyers.

Quite a few white carnations, picked from plants outdoors, are coming in. About 50c. per 100 is the ruling figure for these. Cosmos blooms began to arrive this week, but there is little demand for them. Some tuberoses are now to be had; they bring from $3 to $4 per 100. Speciosum lilies are getting pleotiful but sell slowly as yet, realizing from $1 to $3 per 100. Lilium auratum still bring 4c. each.

Lily of the valley took a drop this week, and has been selling at $1.50 and $2 per 100. The asters to be had are of only moderate quality, and the demand for them is practically nil. Gladiolus also are not selling so well, and instead of $1 per 100, they can be had for 75c. Tritomas and cut sprays of Hydrangea p. g., are on the market, but there is little call for either of them.

Business is only a secondary consideration just now, anyhow, in this city. The coming Convention is the whole thing, and everyone in the trade is doing his utmost towards making this Convention a record breaker.

Jottings.

If you want to make appointments with brother florists during the Convention, put an item in the daily edition of the FLORISTS' EXCHANGE. It won't cost you anything.

Alex. J. Guttman has just had a new ice-box built in his wholesale florist store.

The store and greenhouse of L. Hart, 1001 Madison avenue, were badly damaged by fire on Friday afternoon, August 10. The fire started from the electric wires, and before it could be got under control, a lot of valuable palms and other plants were destroyed, and the ceiling and fixtures of the store completely spoiled.

On Sunday last Woodside, N. Y., was visited by a rather severe hailstorm. Many panes of glass were broken in the greenhouses of Chas. Smith and G. & H. Ulrich.

The New York Bowling Club will meet for practice on the alleys, Monday at 3 o'clock p. m.

Another team has entered the S. A. F. Bowling Tournament, Milwaukee having notified Secretary Schenck within the past week.

W. C. Krick, of Brooklyn, has made substantial improvements on his adjustable and folding plant stand. He is now putting on the market a grade of violet foil that keeps its color and does not rub off.

The Schwaebischer Sængerbund, a German Society of Brooklyn, is to be commended upon its efforts in promoting the cultivation of flowers and plants. In a schedule just issued, we are informed that the 12th annual exhibition will be held at Ridgewood Park, L. I., on September 2, 3, 4, 5 and 9th. Among the liberal premiums offered are four for the best carpet bed, not less than ten feet in diameter. The first prize is $50, the second $40, the third $30, and the fourth $20. There are also good money prizes offered for collections of plants, such as cannas, geraniums, ficus, carnations, etc., also water gardens.

The second annual picnic of the Society of City Gardeners, Catalpa L. A. No. 1694, K. of L., will be held at Brommer's Park, 133d street and Southern Boulevard, on Thursday, the 23d inst. This Society is composed of gardeners employed in the city parks, and although only in its second year, much good has resulted since its formation, especially in securing better recognition from the municipal authorities as regards wages, etc.

The new geranium Paunpeck was again shown at the Florists' Club meeting, Monday last, by Daly Bros., Granton, N. J. The committee on awards gave it an honorable mention, which it justly deserved. Its habit is identical with that of Contrast, from which variety it is a sport; but the color of the flower is a delicate pink, of a shade that should make it popular as a bedder.

W. W. Burnham, manager of the plant and flower departments in Bloomingdale Bros.' store, is giving away every Saturday from 30,000 to 50,000 spikes of gladiolus. The flowers are distributed from every department in the store, so that

each customer gets some without having to go purposely to the flower department.

The Reception Committee will meet at 3 p. m. Monday, with Chairman W. F. Sheridan, in his store, No. 39 West 28th street.

G. T. Philcox has again located here, after spending some years in St. Louis, Mo.

Samuel Henshaw has returned much improved in health, from England, where he has been spending several weeks recuperating from injuries received in the recent carriage accident while driving in Bronx Park.

F. L. Atkins arrived Monday on the Deustchland. Bobbink & Atkins are building two new storehouses and also extending their greenhouses.

J. K. Allen has returned from a two-weeks' stay at Atlantic City. Miss Riley, bookkeeper for Mr. Allen, left Saturday last for a fortnight's visit to Sullivan County, this state.

The heated spell has been broken, and we are now enjoying agreeable weather.

Auction Sale.

Visitors to the Convention will do well to stay over and take in the great sale of palms and other plants to be held at the Rose Hill Nurseries of Messrs. Siebrecht & Son, at New Rochelle, N. Y., Monday and Tuesday, 27th and 28th inst., at 11 a. m., each day. Cleary & Co. will sell at auction there about 50,000 palms, 5,000 stove and greenhouse plants and 10,000 ferns, besides many other decorative plants and commercial orchids. Trains leave the Grand Central Depot for New Rochelle at 9 a. m. and 10 a. m., and carriages will be in waiting to convey visitors to the nurseries. Lunch will be served, and the visit will be an enjoyable one, whether made in the capacity of a buyer or otherwise.

Chicago.

State of Trade.

An eight-day period of unprecedented hot weather—from 92 degrees to 96 degrees with a blazing sun all the time—has had its effect in the rose houses, and on the supplies brought into the market. The gain supposed to have been obtained has all been lost. Last year an extremely hot spell, later in the Autumn, was supposed to be one reason for the shortness of crop observable right up to the holidays. Fortunately, the change came with a glorious rain again on Saturday, accompanied by moderate weather.

Asters, gladioli and sweet peas are still very abundant, and the main stock in trade of the street men. Auratum lilies are in capital condition this year, with evidence of considerable variety among them.

The death list is heavy, owing to the trying weather conditions; hence funeral work constitutes the bulk of the business going.

All the growers we have come across admit the carnation growth in the fields this year as something fine. Lots of carnations are already housed. A few growers, however, do not believe in early lifting. Much of the carnation stock now coming in is field grown, and the heat has affected the flowers somewhat. White are hardest to get rid of. Beauty roses have suffered considerably from heat—very few long-stemmed flowers are worth above $2; mediums, $1 to $1.50; shorts, $1 to $3.

Hydrangea paniculata grandiflora made its appearance on the 13th. No great demand is experienced for asparagus, smilax or other greens.

Injury from Escaped Gas.

John Brod, who recently opened a retail flower store at 616 N. Wells street, has had a lot of large old plants of palms, yuccas, magnolias and lots of softer foliaged subjects, injured badly by gas leaks in street, and from there to his cellar, then up to the store floor.

Round About.

Mr. and Mrs. W. A. Rieman, of Vincennes, Ind., were in the city the past week.

U. J. Virgin, New Orleans, is making his usual Fall trip, which, this year, will take in the New York Convention, over the Chicago florists' route, but a day or two ahead of the regular train.

A. L. Vaughan, western representative of Hagemann & Meyer, New York, starts same day, August 16.

John Muir will leave at same time.

Walter Retzer returned on Saturday last from Powers Lake, Wis., looking brown and rugged. He will be with the New York party. Ess.

Providence, R. I.

The last regular monthly meeting of the Florists and Gardeners' Club was held Thursday, August 9, in the club rooms at 96 Westminster street. There was a large attendance, owing to its being the last meeting before the Convention. After the routine business was disposed of, the evening was devoted to final arrangements about transportation and other Convention business. It was finally voted that the members leave for New York on Monday, August 20, at 8 p. m. by regular Providence line of steamboats. The rate will be one and one-third fare for the round trip, on the certificate plan.

Providence hasn't as large an army of florists as other cities, but she will be well represented at this Convention, and unless something unusual happens they will all be there, big and little, high and low. A. M.

Philadelphia.

For the Convention.

Convention topics are now uppermost with every one. From present indications this city will have a good turnout. Not only florists, but a good many private gardeners are going along. It is impossible to give any estimate of the number, but Philadelphia will be well in the front, as usual, and will do all in her power to help New York make a grand success of the Convention. This city will be well represented in every way—in papers read before the Convention, in the exhibition hall, and in the sports. Some people still keep harping about this city being slow, but to-day we take second place to none.

John Westcott was in New York on Monday last, and made all arrangements about the Wood and Edgely trophies, that are offered for bowling. Some would have liked to have had this done before, but remember these trophies were obtained by Mr. Westcott, and power was given him by the donors to offer them for what he thought best. His desire was to not conflict with the New York Club in their arrangements, and accordingly he went over and consulted the proper parties when the time came.

The delegation from Pittsburg to the Convention arrived in this city Thursday at 6 p. m. and left at 7 p. m. for Atlantic City, where they will remain until Monday.

News Notes.

David G. Yates, of Yates & Son, nurserymen, Mount Airy, near this city, died on Monday last at Poland Springs, Maine. He had been troubled with urinary ailment for several years, and went to these Springs every Summer to drink the waters. His funeral was held on Wednesday, the body being cremated.

Thomas Mingey, for the past 25 years superintendent of Horticultural Hall, Fairmount Park, has resigned that position. In the above capacity he has become widely known, and has been famous for the way in which he has managed the houses and grounds under his care. He is, we understand, open for a similar position.

H. G. Faust & Co. are now about finishing improvements in their seed store, and will have much better facilities for handling increased trade.

H. Bayersdorfer & Co. are having a new two-horse truck built. Increased business and heavier shipping cases have demanded this. Every steamer now is bringing cases of goods purchased by H. Bayersdorfer on his recent European trip.

D. Landreth & Sons have recently made a great improvement at their retail seed store, 10th and Market streets, by building an elevated platform, about eight feet in height, which will be used for office purposes for cashier, bookkeepers and general manager of the store. The platform is of rustic work, and adds greatly to the appearance of the store, besides affording much more badly-needed floor space. DAVID RUST.

An Explanation.

Plans which should have accompanied Mr. Gieger's essay on "Cool Rooms for Florists," published this week, pages 788-9, will appear in a future issue of the FLORISTS' EXCHANGE, we having been, until this writing, Friday a. m., August 17, unable to obtain possession of either the originals or duplicates thereof, from the fact that the originals were sent direct to our contemporary at Chicago, by Mr. George C. Watson, acting secretary of the Philadelphia Florists' Club.

Firms Who Are Building.

BEVERLY, MASS.—Charles A. Morrisey has purchased land on Balch street, on which he will erect greenhouses.

CLAY CENTER, KAS.—Humfeld's greenhouses are rapidly nearing completion. Two ninety-foot houses have been erected and glass covered; the plans and specifications of three more are in the hands of the carpenters. By the way, while Charley was at work giving the men a boost several days ago, his left knee was severely injured by being punctured by a rusty nail. It penetrated the joint just below the cap.

HARTFORD, CONN.—James Young has been granted a permit to build two new greenhouses at 8 Cove street.

MANCHESTER, N. H.—George W. Hilliard has added a new rose house, to be devoted to American Beauty.

TOLEDO, O.—Crane Bros. are building two new greenhouses, which will make 22 operated by the firm.

ST. LOUIS, MO.—F. W. Bruenig is building another greenhouse.

DANVERS, MASS.—E. & C. Woodman, Tapleyville, are making extensive improvements in their greenhouses. Iron bench supports will substitute wooden ones, and stone and cement walks will be constructed.

SPRINGFIELD, OHIO.—The George H. Mellen Co. are adding five new greenhouses, each 130x20 feet.

Best Methods of Building Cool Rooms for Florists' Use.

A Paper read before the Florists' Club of Philadelphia, by H. C. Geiger, of the Floral Exchange (Inc.), Phila.

In opening a discussion as to "the best methods of building cool rooms for florists' use," we are launching our boat upon a comparatively unknown sea; for while much space in our trade journals has been devoted to the important subject of the heating of our houses for the production of fine flowers, but little so far has been printed about the best mode of caring for the flowers. Much depends upon the cutting and packing of flowers in order that they may reach the hands of the retailer and his customer in good order, but it is equally important that the storage room, in which the cut bloom is kept until shipment, should be built in as perfect a manner as can be devised.

The subject divides itself into two departments, that of the retail store and that of the grower; and though the use of the words "cooling rooms" seems to imply that this paper should refer chiefly to what is needed by the grower, let me say a word, in passing, about the retail store. Unhappily, we have not as yet in practical use any other than the one designation for "ice box"—a name that is chilling and rather repellant in many ways. The great advance in our profession and the critical taste of our customers make it quite essential that a handsome flower case shall be the chief attraction of every store. I have in mind what is, to my taste, the ideal store—one in which all the fixtures are of white marble, the walls of white tiles and the ceiling colored in pale nile green, pink and silver. In this store the flower case is of white marble, lined with white tiles, and is large enough for a salesman to walk into it. But as such a box is beyond the means of most florists, let us consider one of more modest pretensions.

"Many men, many minds," but it seems to me, we can all concur in one thing—that the practical cooling box should be of plain but good design outside, should have several compartments for displaying flowers and at least one large compartment for keeping stock, not to be visible. The glass doors must be of double glass, with an air space between; the glass to be hermetically set, else moisture will collect between the panes. Many fine cases are mirror-lined; but, to my taste, white tiles are preferable, as they show the flowers to better advantage and are free from the objection to the mirrors, of clouding in time. I cannot better illustrate my meaning than by describing a handsome case which was built in our city last summer and has given good service. It is of oak, four feet wide, sixteen feet long, and about nine feet over all in height. It is divided into three show compartments separated by plates of glass, and has a fourth compartment closed from view by a mirror door. The rear wall is lined with mirrors, the ceiling and floor of white marble. Under each compartment is a deep drawer, zinc-lined, used for greens. This drawer receives its cool air from the compartment over it by means of some holes pierced in the marble floor. There are three ice-chambers on the top, and the ice is put in from above.

The lighting of this box is effective. The electric globe is placed in the vent for hot air along the front, and while it sheds a glow over the whole box, it also serves to make an upward draught for the warm air to the ice chamber. The temperature of this case is, in summer, fifty degrees, with one and a half tons of ice weekly; and in winter, forty-five degrees, using one ton of ice weekly.

In passing to the second part, I have several plans to offer you, which have the merit of having been tried and found successful, and some of which are simple enough to build from by any handy man. Though very careful in every statement made here, I am only an amateur in this line, my sole experience having been obtained in the building of the successful room at Edgely. In building a cooling case, or a larger cooling room, it will be money saved if the matter is placed in the hands of an expert builder, one who has studied the subject carefully, for, if the box is not built in accordance with scientific principles, it will be a source of constant expense and annoyance.

PLAN No. 1.—This plan is now in operation in Chicago and is similar to that of a root house, no ice being used. The details have been kindly furnished by Messrs. Kennicott Bros. Co. They are as follows: Size, 34 feet long, 11½ feet wide and 7½ feet high; cost, $800. The walls are of stone, 24 inches thick and cemented on both sides to keep out the frost. The walls are stripped with 1x2-inch strips, and the floor and the ceiling with 2x4 inch strips; the spaces filled with asbestos; two layers of strong building paper put on and then the inside boarding. The walls come 12 inches above ground and have a window on each side, 6 inches high and 30 inches long, so that two or more windows can be opened to allow circulation of air. The windows must not be opened on the side on which the wind is blowing, as dust will come in. By watching this room, you can keep roses for from one to three weeks in winter, and from four to eight days in warmer weather. The room is in service from October 1 to June 1, when recourse is had to regular ice-boxes. If this room is entered direct from outdoors, a storm door must be built and the outside door must always be shut before the inner one is opened. This plan seems to recommend itself for its simplicity. Doubtless many growers have a cellar that could be turned into such a room without much expense.

PLAN No. 2.—The room built after this plan has been caring for the cut of some 50,000 feet of glass, devoted to roses alone, near Philadelphia, and is recommended for its simplicity. The size of the finished room is about 8x12 feet and 8 feet high. The side walls have 3x4 studs, put the 3-inch way, then a lining of 1-inch boards, the space between filled with powdered charcoal, one ton being used. Next comes, on each side, an air space of one inch; then a lining of boards; another one-inch air space and a final lining of boards inside; then on the outside the drop siding, make a wall thirteen inches thick over all, with four air spaces (each one lined with building paper—sides as well as ceiling) and six linings of boards. The ceiling is made in a similar way except that the rafters are six inches deep, giving a six-inch space to be filled with charcoal. The ceiling is made to have a slight rise, and two one-inch pipes are run through the ceiling, at the highest point, to allow escape of hot air. These pipes have a metal cap in the cool room, to control the outlet. The floor is of cement, with a link of terra cotta pipe, set upright, with the bell of pipe flush with floor. At the bottom of pipe, which is 3 feet long, is a French drain, so that surplus water can be disposed of without carrying it out. The ice-bunker is made large enough to receive cakes of artificial ice, is lined with galvanized iron and runs the entire length of box, where the drip runs off in an iron pipe to a small barrel, from which an overflow pipe runs outside. This bunker, into which the ice is put from outside, works well; but it seems feasible to assume that it would give off more cold air if openings were made on the sides low down; the only opening at present being all along the top, which must do duty as an escape for cold air and an intake of warmer air. This box was always quite dry when seen by me, and the flowers sold from it, speak for themselves. The owner offers the suggestion that an air-loft with a shingle roof be built over it to keep off the sun and to give air circulation. The ice bill is $2 per week in summer and $1 in fall, and often there is none in winter. The room is entered from the packing shed; the door is made as thick as the walls and rebated in regular refrigerator style. I am not able to give the cost of this box, but any carpenter can supply the figures, as it is of simple construction.

A letter just to hand from the owner of the box, contains the following: "While any carpenter can build this box, it is a broad question with us whether it would not be economy, in the first place, to employ a practical refrigerator builder; in other words, while the expense at the first off-start might be greater, would there not be economy, in the long run, by the saving in the consumption of ice and the consequent less expenditure on that item? It takes practical knowledge to build cooling rooms for roses as well as it does to grow roses."

All of which agrees with my remark in a foregoing part of this paper.

PLAN No. 3.—This plan is the one adopted at the nurseries of the Floral Exchange, Edgely, and which we find quite successful. We had at hand an ice house, 14x18 feet, adjoining our packing room, which we used as a basis. We first stripped the stone walls with 2x3 inch strips, then put on two linings of 1-inch boards and four layers of heavy paper, the inside lining being of poplar. The sub-ceiling had four linings of boards and four layers of paper. It is important to let the paper lap around the corners of box and to use a quarter round bead to cover joint after the lining is up. The floor had a bed of ashes, then 3 inches of granulated cork, in which were laid the sleepers to receive the yellow pine flooring. This plan was adopted by the builder, owing to the damp nature of our ground at that point. One small window, double glazed, opens to the north. The ice-bunker, well designed for its purpose, runs across the centre of the box, the ice being put in from the outside. The size of the bunker is 5 feet wide over all, 3 feet, 9 inches high and 12 feet long, holding two tons of artificial ice. Cold air is emitted from the lowest point and also from six openings, 1½ inches wide, running the whole length of both sides of bunker. The warm air strikes the covered sides of the bunker and finds its way to the top. The drain is run off in a metal pipe covered with wood to avoid moisture. Overhead we have an air loft, 3 feet high, with openings on three sides and a vent in the roof. The racks for the shelving are made of ¾ inch pipe, and the shelves are of poplar, this being the best wood to use for all inside work.

The size of the room is 11 feet long, 12 feet wide and 10 feet high. We can put in it ten thousand roses, at one time, if necessary. We have tested the keeping quality, with the result that roses kept for two weeks, provided they were not sprinkled before they were placed in the room. The temperature varies from 50 degrees, with an outside temperature of 97 degrees to 45 degrees in winter. In extreme weather, when the thermometer was at 10 degrees above, the temperature got as low as 28 degrees, as we were running the room without any ice at all, but upon our placing some ice in the bunker, the temperature rose to 42 degrees, and we had no further trouble. The weekly requirement is two tons in summer and one-half ton in winter, but from this same supply, we get all the ice that is used in packing roses for shipment. This room is free from moisture, and one can light a match on any part of it. Its cost was $300, this being only for the interior work, as the walls and roof were already in place. Letters patent cover the design of the bunker used in this room. Any one wishing to use it will please address The Thackara Refrigerator Co., Philadelphia.

PLAN No. 4.—Again we are called upon to visit Chicago that we may study what has been called "the best cooling room in the West." The details have been kindly furnished by Messrs. Bassett & Washburn, who write that the house was designed for them by the general superintendent of the Armour Refrigerating Co., and that he spent much time in perfecting the plans of it. This is a large affair, being 50 feet long, 24 feet wide and 28 feet high from basement floor to the eaves. It cost, a few years ago, $1,500, but Messrs. Bassett & Washburn think it could not be duplicated now for less than $2,500. This size is larger than is needed by most of us, but the construction can be applied to smaller houses. The basement, of stone, is 8 feet high, and the walls are cemented on both sides. The floor is 4 feet below ground level, is made of cement and drained by two 3-inch drains. Two small double-glazed windows give light. The upper walls are built as follows: The uprights are made of 2x6-inch joists, sheathed on the outside with 1-inch boards, with then a layer of heavy wax paper, on which are nailed 1x1-inch strips, to form an air space and to take the drop-siding. On the inside first comes the sheathing of 1-inch boards against the studs, then a layer of best 1-inch hair felt, fastened in place by 1x2-inch strips and covered with a layer of wax paper. Over this comes the last line of 1-inch sheathing boards, on which are nailed 2x2-inch strips to keep the ice from bruising the lining, making a wall thirteen inches thick, exclusive of the 2x2-inch strips. A sub-ceiling (details not sent) separates the ice-chamber from the air-loft, which has a high pitch shingle roof with vents in the ends and two in the peak. The frame sides above the stone basement are 20 feet in height to the eaves, and on one side is provided a door through which ice may be put in. The house will hold 150 tons, but ordinarily only 125 tons are put in, and when once filled the house is not re-opened until the next year's supply is secured.

The cooling of the flower room is accomplished in this way: Beams 4x12 inches, placed 8 inches apart, run across the ceiling, to support the weight of ice above. A zinc floor is then laid over the beams, covering the entire space, with a V-shaped gutter formed between each beam. In this gutter is collected the drip from the ice-chamber, cooling by contact the air of the storage room. During warm weather moisture forms on the gutter, caused by the frequent opening of the door to bring flowers in. This has been overcome by making small gutters of wood under the zinc, to catch the drip which is slight at any time and only occurs in hot weather. All drips are collected in closed drains and run outside. On the zinc floor of the ice-chamber are placed 2 x 4 in. joists, six inches apart, to receive the ice and protect the zinc floor from injury. Warm air vents run independently from the ceiling of the flower room to outdoors to remove warm air. What moisture is needed is obtained from the pots of water in which flowers are placed.

Messrs Bassett & Washburn recommend that a large vestibule be built in front of door to cool room, to prevent the rush of hot air every time the door is opened.

It is also an excellent place in which to keep carnations, valley, peas, violets and Harrisii lilies, by hanging a curtain in front of them to keep the air off. While this house was costly to build, the owners write that they would not be without it for ten times its cost, and if it gives them the same comfort that ours gives us, we can very easily believe them.

Many of us hope that the day of ice is passing away and that we may find it to our advantage to put ammonia plants in large places. I am indebted to Mr. Samuel S. Pennock for the following description of his successful plant, and beg to read his letter in full:

"The cost of plant, including compressor, electric motor, condenser, belting, shafting, piping, cooling tank, small outfit for making 50 pounds of ice daily, placing all machinery, piping, etc., in position, also including insulation of two rooms, each 21 feet long by 10 feet wide by 11 feet high, with shelving and two patent doors, was about $2,700, not including the outside wall of the building. Each room gives us about 450 square feet of shelving area. The temperature is kept at about 50 degrees in summer and at 40 to 45 degrees in winter. When the thermometer outside is 40 degrees or less, the machine does not have to run, as we open the windows and admit the cold air from outside. The windows are triple-glazed and have an adjustment of 'Daylight' prisms to give service in the day and save electric light. During warm weather the machine has to be run about four to five hours a day, at a cost of thirty cents an hour. Of course, if the doors are being opened and shut with unusual frequency, then the machine has to be run longer. The running of the machine requires very little time and attention; any careful, level-headed man is able to run it. Ten to fifteen dollars' worth of ammonia is needed in a year. Our system is the direct expansion ammonia system, which is preferable in small plants, and was installed by the Remington Machine Co., of Wilmington, Del. We have been very much pleased with the results so far, for, besides being a great help and convenience to us in our business, it is much cheaper in cooling a space of the same size than with ice, and gives a more satisfactory air. The air is drier, and for carnations there is no comparison, as it keeps them two or three times as well. The rooms are so arranged that one may walk in. They have a tier of shelves around the sides and a tier in the middle, with alley-ways between, access being had to every part. The pipes are all overhead, with drip pans underneath to carry off the water when the frost on the pipes melts. The cold air opening runs down the centre of the room, and

the warm air intakes on the sides. The cold storage people are very particular to have the room well insulated; and in ours the insulation (which was put in by the Ridgway Co.), consists of the following: First, a coat of asphalt paint on the brick walls; then a 2-inch space filled with ground cork; then two boards, ⅞ths, tongued and grooved, Y pine, with layers of brown building paper between them. Next come five layers of paper with ½ inch air space between each; then two more ⅞th boards, T. & G. yellow pine, with two layers of paper. The floor rests on brick arches coated with asphalt, then a good layer of locomotive brieze, finished off with a layer of cement. The cooling apparatus is directly under the floor. The entrance door (made by Stephenson, of Chester, Pa.), is very satisfactory, as it does not bind, and the latch works easily with one hand."

The letter of Mr. Pennock is surely to the point, and I recognize that we are all indebted to him for the most valuable part of this paper.

In conclusion, I would like to call your attention to an article that is worth a trial by those of you who are troubled with damp air in your cool rooms. It is a preparation of the Pennsylvania Salt Manufacturing Co., which can be had at groceries and drug stores at a cost of twenty-cents a package, and is named "Humidine." My attention was called to it by one of our wholesale dealers, who had tried it for two months, with the result that his box was perfectly dry and he could then keep carnations and peas where formerly the drip and moisture in the box were quite detrimental to them. One package was enough for two months in a box 4x10 feet.

Bangor's "Old Home" Celebration.

The floral parade held in Bangor, Me., August 9 proved a great success. Carl Beers had the decoration of the following, which received favorable comment from the press and people: The most elaborate vehicle was the six-horse coach, occupied by the Tarrantine Club, and decorated in yellow and white, with a magnificent palm covering the tops of the coach and spreading fifteen feet. A "T cart," the first of the kind in Bangor, decorated in roses, sweet peas and asparagus, was driven by C. H. Morse. The Stanhope cart, decorated in sweet peas and driven by the Misses Weatherbee was much admired. The carriage driven by Lemuel Nichols and that in which the Lenna C. Howe's Orchestra were seated, were trimmed in golden rod and yellow roses. Another attractive turnout was the carriage belonging to Mrs. F. A. Robinson and decorated in yellow flowers, ribbon and bunting. One of the most attractive was the float representing Real Estate. This was owned by Louis Kirstein, was 12x18 feet, and had the house, lawn, graveled walks, pine trees, lake, croquet and golf sets, swings and hammocks in miniature.

C. B.

The Avoca (N. Y.) Flower Show.

August 8, 9 and 10 were warm days for a flower show, but in spite of hot, dry weather its success was assured under the management of E. A. Higgins.

The abundant local water supply kept sweet peas up to the high-grade standard of this section. The virtues of Avoca water seem to act as a tonic to general vegetation, and growth is most luxuriant. Rarely will one see lawns greener or finer sweet peas, asters, gladiolus, pansies, etc.

Judging was quite a serious matter, with twenty and twenty-five entries in a single class. Most of the floral arrangement was thoroughly artistic.

Sadie Burpee clearly demonstrated its superiority as a white sweet pea and lavender Lady Grisel Hamilton is all that is claimed for it. The most useful dark sweet pea undoubtedly is Navy Blue. In general effect Lovely is a prettier pink than Prima Donna.

The display of asters and gladiolus was exceptionally fine. Pansies were also very good for the season. Decorative plants were much in evidence.

Some of the double tuberous begonias were grand. As pot plants they are a success.

Out-of-town exhibits were numerous. Stove plants from the botanic gardens at Washington, water lilies, palms, etc., from Dreer's, lilies and gladiolus from Childs', begonias and crotons from Rawson, besides smaller lots from other sources. The attendance was good despite torrid heat, leaving a surplus of several hundred dollars over expenses.

A flower show that pays its way is certainly to be commended. Mr. Sam Hamilton's non-appearance was a disappointment all around.

GROVE P. RAWSON.

Different Methods of Orchid Culture.

The methods of growing orchids have, since the introduction of the plants into the collections of scientists, amateurs and florists, undergone many changes. Speaking of the epiphytes, more especially, many theories have been advanced as to their requirements, and these again have found many different applications at the hands of the cultivator. Orchids have shared the fate of nearly all exotic plants at the beginning of their career in the garden and greenhouses; imaginary difficulties have complicated their cultivation and retarded their popularity, and even now they are barely over this critical point of their history, for new methods are still being tried.

The tendency of orchid growers to resort to all sorts of unusual proceedings in regard to the cultivation of the plants, and their diffidence in handling the strange and often very expensive new specimens, was broken when some twenty to twenty-five years ago large importations began to fill the markets. With the plants, intelligent advice and information arrived; and all at once orchids proved to be very easily satisfied, and, more than any other plant, able to survive neglect and harsh treatment.

The principle of the rational culture became to imitate as much as possible the natural conditions in the plants' native habitat, and we find that the epiphytal character of many orchids had been very intelligently studied. Blocks, rafts, baskets and pans were resorted to and fern fibre, sphagnum, charcoal, crocks, etc., in different compositions, were chosen to furnish the nourishment to the plants, their character as *air* plants being the main consideration.

Whether the epiphytal orchids really do take nourishment from the atmosphere more than any other green plant is problematic, or rather doubtful. A fact is, that many orchids attached to a piece of wood, and suspended in an atmosphere conveniently saturated with moisture, will live for a number of years and produce good flowers.

But the first success with this mode of treatment had led in the beginning of the orchid history to a great exaggeration of the necessity of the direct exposure of the roots to the air. We know now that the continuance of life, and for a year or two, of vigorous growth, was due rather to the reserve food which the plants had brought with them in the pseudo-bulbs, their leaves, stems or roots, as the case might be, than to normal vegetation.

We know by experience that with many orchids the optimum of leaf or bulb-growth does not coincide with the optimum of flower production. We find that orchids, which, as in the case of those grown on blocks, principally fed on the reserve food, will produce flowers more freely than bulbs and leaves, and that in the reversed conditions, if the plants are overfed, or not sufficiently rested; that is, if the reserve food is not allowed to be brought into action, the vegetation will be comparatively in favor of leaves and bulbs. It is not any more considered difficult to make orchids grow; but as the flowers are the desideratum, the growers study how to produce the maximum of flowers and at the same time maintain the vigor of the plant, in order to insure permanent success—that is growing orchids to a nicety.

New Fern, Nephrolepis Wittboldii.

Primarily a healthy, vigorous new growth, bulb, stem or leaf has to be produced, and this depends principally on the potting material and the maintenance of the proper state of moisture in it. The mechanical and chemical character of the potting material and its quantity has to be studied before all; and this found, the further attention is much simplified.

Cattleya citrina used to be grown on more or less bare blocks; but it was a generally admitted fact that the plants would deteriorate, gradually go back. Grown in pans, as has a few years been done by Sander in England, they are as easily managed as other orchids. Dendrobes shared the reputation of the cattleya named; but they are not difficult to grow if properly fed. Pans, and preferably pots, of standard depth, should be used to grow orchids in; they allow of a sufficient quantity of rooting material to be provided and afford the protection the tender roots need. Though some epiphytal orchids luxuriate in their native habitat on limbs of trees, or on nearly bare rocks among straggling ferns, there is no more reason to subject them to the same trying conditions in our greenhouses than there is, for instance, for the ferns, that we find covering rocks, but which we grow in good solid soil. The object of gardening is to improve the growth of plants, their fruits and flowers, and therewith their usefulness and beauty. The general principle has been to improve on the natural conditions, it has given the desired results, and it has proved to hold good with orchids, also. But they will stand a great deal of fatigue; they have a wonderful resisting power, and thus the effect of different treatments is not so readily traceable on them as on most other plants. It takes years to ascertain the rights and wrongs.

T. E.

(To be continued.)

BRIEFS FOR BUSY FLORISTS.

SMALL FERNS.—As a majority of these are used for filling small fernerles, they must be kept in the little pots as long as possible. To rush them along and get them into four-inch pots by the time they are needed for that purpose is a mistake, as in a good many cases they then have to be reduced at the roots considerably to allow of a sufficient number of them being planted together to make the jardiniere or fern dish look presentable. It will, therefore, be found good policy to keep them in the 2½ or 3-inch pots just as long as possible.

CHRYSANTHEMUMS.—Pot plants will require plenty of attention from now on to keep them in good shape. Pinching back the shoots should not be done later than this date. Keep the plants tied up to the supports as occasion requires, and if, when potted the last time, space was left to allow of a top dressing being given, the same ought to be put on now. A dressing of well-rotted cow or stable manure is the best that can be applied.

AZALEAS AND RHODODENDRONS that are plunged out-doors must not suffer for the want of water during these warm months. They will need to be looked over every day, and besides the watering, they should have an occasional good syringing, to help keep them clean.

The New Chicago Fern.

NEPHROLEPIS WITTBOLDII.

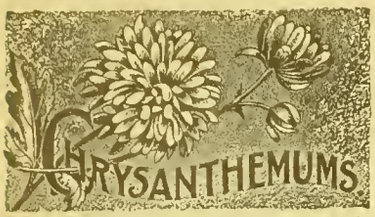
Many a plant, afterwards found of great value, has had what might be called a chance history. It is pretty much so with the new fern here illustrated. Among the hundreds of thousands of the valuable Boston fern grown and distributed by the Wittbold Co., of Chicago, along in 1897, when handling a lot of young stock in a bench, Otto Wittbold noticed a plant having three or four fronds only, decidedly distinct from any of its neighbors. The plant was set aside and the more its growth developed the more distinct the difference became; this distinction, by the way, all favoring a valuable acquisition, as the fern had many of the characteristics of the favorite Boston fern.

Whether it is a distinct species, a hybrid, or a sport, is not known. It shows, in some respects, the type of N. washingtoniensis; in others, more, those of the Boston fern. So impressed were the owners of its value as a grand and distinct companion to its best prototype, that when the original plant got old enough to show its character it was planted in a bench, in the same way as the family of nephrolepis generally is, and found to be nearly as prolific as the Boston fern for raising stock from. Bench after bench has been given up to its progeny, including benches over the walks in every house high enough to warrant it.

Those growing the Boston fern at its best well know that as the fronds get age a decidedly wavy or undulating condition is a notable feature. This in the Chicago fern is pronounced in the youngest state and later. It is also more robust in all ages and all growths, a well-grown frond being not unlike a young cycas frond, two feet six to three feet in length, and of a leathery enough texture to be used in the same way as cut cycas leaves are employed by retail florists. The spread of frond is easily 10 to 11 inches in the center, with the broadest spread on from the upper half of the frond; the widest part of the pinnæ, at the base, is six-eighths of an inch; the pinnæ tapering to a point, and are six inches long. These pinnæ instead of, as in the Boston fern, standing out at right angles with the main stem and forming at the largest a frond, say, five inches wide, slightly angle upwards towards the apex, giving a breadth of fern of about nine inches in the main part.

While the fronds, from their stouter stem, do not droop as freely as in the Boston fern, the habit is there, and the whole plant is decidedly of a more ornamental and striking character. It looks as though it will make a great commercial fern.

EDGAR SANDERS.



Buds.

The period is rapidly approaching when it is time to take the buds; in fact, with some of the earliest varieties the time is already here. The very early flowers of Gastelliler, Bergmann, De Montmort and others are produced from buds taken from the first of August onwards. Whether it pays to get flowers in the market before the beginning of October, every man must determine for himself. Early flowers of many varieties were cheap, far too cheap, in New York last Fall.

Any time after the 20th of August we find is early enough to take buds on Robinson, Australian Gold, Solar Queen, Glory of the Pacific, Merry Monarch and the general run of second early varieties.

The great bulk of the mid-season varieties, such as Maydower, Morel, Falconer, Childs, Golden Wedding, Frank Hardy and so on, are best taken after the 25th of August, but as soon after as you can get them.

Frank Hardy is a much maligned variety, owing to its habit of turning over its flowers, coming crook-necked, as it is called, but if the buds are taken from the 25th to the end of August, 99 per cent. of the flowers will come perfectly straight.

The late varieties, or perhaps I should say, the varieties that are intended for late work, since any variety can be got in flower by the 7th or 8th of November, should be taken on the late bud or terminal as it is called. If the variety was planted late and treated right, this bud will not appear, probably, before the end of October, and this, as the reader will notice, gives a range of three months for disbudding, and, of course, consequently three months flowering for the man who grows chrysanthemums from start to finish.

Some growers wait for the terminal bud to show in all varieties before they take it, but this is a great mistake, because there are some varieties that produce very fine flowers on late crowns, when the terminal flower is small and unsatisfactory.

Take a crown bud of Pennsylvania on August 25 and a terminal three weeks later, and the terminal bud will finish first; but there will be a great difference in the quality of the flowers.

One great trouble with taking crown buds is the fact that the neck of the flower becomes long and weak if the plants are growing closely together, and the consequences are disastrous to the flower, which falls over. The man who plants closely gains nothing any way. He more than loses what he makes. He may have twice the number of flowers, but they are of a cheaper grade, and at the least approach of a glut sell for less than half the price of the AI stock. Still it's a free country, and every man is at liberty to grow what he feels like growing.

IORA.

The Cultivation of Sweet Peas.

Read before the Pennsylvania Horticultural Society by Wm. Robertson, gardener to John W. Pepper, Esq., Jenkintown, Pa.

Read Before the Pennsylvania Horticultural Society by William Robertson, Gardener to John W. Pepper, Esq., Jenkintown, Pa.

It has been my practice to prepare the ground thoroughly in the fall and to sow the seed early in spring. In November dig a trench ten inches wide and one foot deep. Then put four inches of well decayed horse manure in the bottom of the trench, tramp it firm, and place two inches of soil on top of this manure; then give a liberal dusting of pure bone meal and cover this with soil in a rough condition and let the trench remain in this state until spring.

Sowing the seed depends greatly upon the weather and condition of the ground; but the seed should be in not later than the middle of March. Should the soil in the trench be too wet, take some dry soil from the shed and put one inch of this in the trench; sow the seed and cover with one inch of dry soil.

The white varieties are more liable to rot, and should not be sown before April 1. These varieties also require drier soil than the other colors, and these two conditions must be strictly carried out in order to have success with white sweet peas.

It is a good plan to have a ridge along the side of the trench to prevent surface water from running into it. Do not fill up the trenches with soil while the vines are growing. Allow a slight grade down into the trench, and by keeping the ground cultivated the spring rains usually wash all the soil into the trench which is necessary to be about the vines. As warm weather appears, use a mulch in the trench, and give a good watering as the ground gets dry.

This has been my method of cultivation, and its success can be seen from the fact that I have been awarded first premium for three consecutive years, in the competition for the Henry F. Michell prizes, for best general display of sweet peas exhibited before this Society.

It is advisable to sow named varieties in order to secure a full collection of the grandest blooms.

In my opinion, the following are the leaders in their different colors.

PINK. Blanche Ferry, Katherine Tracy, Miss Hunt, Princess Beatrice and Apple Blossom.

WHITE. Blanche Burpee and Queen of England.

RED. Cardinal, Firefly and Splendor.

BLUE. Navy Blue, Countess of Radnor and Monarch.

YELLOW. Primrose and Mrs. Eckford.

ORANGE PINK. Lady Mary Curry.

First Prize Sweet Peas.

Grown by Wm. Robertson, Gardener to John W. Pepper, Esq., Jenkintown, Pa.

Glaziers' Paste.

French Glaziers' Paste is a new substitute for putty, which G. N. Holland, Washington, D. C., is placing on the market in this country. It has been used for some time in Europe. The chemical composition is such as to allow for the climatic and atmospheric changes. The paste does not harden sufficiently to crack, and can be easily removed when necessary.

Bicentenary Notes.

Henry Eckford does not believe that a natural cross is possible with sweet peas, but that all the so-called sports are the result of artificial hybridizing.

Edward Laxton, son of the famous Thos. Laxton, affirms that the effect of a cross in sweet peas does not fully develop until the second year or later. Amateur hybridizers please take note and act accordingly.

Haage & Schmidt state that Crown Princess of Prussia was a natural sport, and not the result of an artificial cross. Is it not possible that local conditions that were not observed had something to do with its development?

The Rev. W. T. Hutchins suggests that, as all the different shades of color exist in the white, the first sweet pea might have been a white one, and the breaking up of this may have given birth to the varied tints we now possess. This is a very interesting idea, and a fuller statement of the theory from the prolific pen of its author will be heartily welcomed.

Mr. Kirby states that Emily Henderson first made its appearance in a field of Blanche Ferry. Is that why it so often produces a percentage of the parent variety? If the writer is not mistaken, the fault was developed in several sections the first year the variety was sent out.

Did the Painted Lady sweet pea originally come from Ceylon? On this point the writer invited a definite expression of opinion from the Conference, but "sports" and "hybrids" proved more interesting, and no collective opinion was given.

The veteran Sam Ainsworth said yes, and he has had to deal with sweet peas for more than sixty years. G. Stanton said no, because in southern Great Britain it is a hardy annual. In this connection the following extract from Maunder's Treasury of Geography may be of interest. Writing of Newera Ellia, which is situated in the mountainous regions of Ceylon, about forty-seven miles from Kandy, Maunders says: "Nothing about Newera Ellia tells of the tropics; the beauties of vegetation here wear a familiar aspect, as the eye is gladdened with floral gifts that pertain to the temperate zone, such as rhododendrons, violets, sweet peas, etc., etc.

Linnæus, Kniphof, Burmann and many other eminent botanists all held to the opinion, and C. C. Sprengel, in his work "Geheimniss der Natur," states that Linnæus received it from Ceylon, and on this account calls it the Lathyrus odoratus of Ceylon.

If then the opinion of the writer that it is properly Lathyrus odoratus zeylanicus be an error, he is honored in being found sinning in such good company.

More on this subject is likely to appear in another place.

Everybody is getting heartily sick of new varieties that differ only in the shadow of a shade from novelties of the preceding year, but it is nevertheless true that a pure nemophila blue and a brilliant golden yellow would gather the shekels into the pockets of the fortunate raisers.

Mention this paper.

(172) **A Paint for Greenhouse Pipe.**—Please let me know through the Question Box of a good paint to put on 2-inch black iron pipe that is badly rusted—something that will not be harmful to rose plants. Also when is the best time to put it on the pipes—when they are hot or cold?

—The best paint for greenhouse pipes is that made by mixing together lamp black and linseed oil. Have it just thin enough to apply with a brush. Clean all the loose particles of rust from the pipes before painting them. The work of painting can be done either when the pipes are hot or cold, as no bad odor arises from the application.

(173) **Soot for Roses.**—Soot from soft coal, spread on the benches, helps to keep down snails, etc., and is also a good fertilizer.

(174) **Heating.**—I have a locomotive boiler about 35-h. p. My houses consist of one rose house, one carnation house and one for general stock—in all about 5,500 feet of glass; well piped and with overhead hot-water heating. There is plenty of fall to boiler. The outlet for flow pipe is only three inches; also return. Would it be better to make it four inches flow and the same for return? I do not think I get as good results as I should. I am also troubled with the water boiling out if I get the fire a little too strong. I am connected with city water system, but have to fill the boiler, as it needs it, same as you would a steam boiler. Can it be connected with the city water main so as to fill of its own accord when it boiled over; if so, how can it be done?—J. G.

—When an open system is used it is not advisable to attempt to carry more than 600 feet of radiation with a 3-inch flow, although 800 or even 1,000 feet can be carried; 800 to 1,200 feet can be carried by a 3½-inch flow and 1,200 to 1,600 with a 4-inch. For 5,500 feet of glass, not far from 1,600 feet of radiation will ordinarily be required for three houses to be used for the purposes stated, and for an open system it will be well to use a 4½-inch flow and a return of the same size. With mains of this size and the proper amount of radiating surface, the required temperatures could be maintained with a gentle fire in a 35horse-power boiler, and there should be no trouble from the boiling out of the water. However, when locomotive and other tubular boilers are used for hot water, it is a good plan to run them under pressure. In the present instance, it will only be necessary to place a stopcock in the pipe leading to the expansion tank, and connect the city water at the highest point in the system. The connection could be made at any point, but from danger of the drawing off the water should a break occur in the city water system.

To prevent danger from an explosion, a vertical pipe should be placed at the highest point in the system, and the end closed by a safety valve, set slightly higher than the pressure that will be carried in the city main. It is also well to place a vacuum valve just below the safety valve, to prevent the siphoning of the water from the heating pipes in case of a break in the city mains.—L. R. T.

CHANGES IN BUSINESS.

MINNEAPOLIS, MINN.—L. S. Donaldson has purchased the greenhouses and stock of the C. A. Smith Floral Co. It is understood that the new owner intends to make improvements on and extensions to the plant.

ST. LOUIS, MO.—The Koenig Floral Co. has been incorporated, with a capital stock of $2,000. Incorporators—Otto G. Koenig, Katie M. Koenig, John L. Koenig, and Amanda Koenig.

You cannot, in justice to yourself, afford to remain away from the Convention next week. Everything is in readiness for the biggest and most successful gathering in the history of the S. A. F.

Coal Purchase.

It will be recollected, some time back the Chicago Florists' Club appointed a committee to try, by united action, to obtain more favorable prices on the enormous quantity of coal used by vegetable gardeners and florists in and around Chicago While, as the chairman reports in what follows, no direct results have been obtained, much information has been gathered together that is of considerable value. The committee's work should be continued and pressed for all it is worth. ESS.

REPORT OF THE COMMITTEE.

The committee has been offered by firms which they believe to be reliable the following prices:

Strictly Lower-Vein Brazil Block (for the season ending April 1, 1901)	$2 45
Hocking Valley coal (for the season ending April 1, 1901):	
Domestic lump	2 80
Steam lump	2 70
Mine run	2 65
Steam nut	2 30
Central Illinois coal (mined on Illinois Central R. R., a very good grade):	
Domestic lump, immediate delivery	1 90
Season contract	2 00
Steam lump, immediate delivery.	1 80
Season contract	1 90
Egg coal, immediate delivery	2 00
Season contract	2 10
Nut coal, immediate delivery	1 70
Season contract	1 80

On the above Illinois coal, $3.00 switching charges per car can be paid by the *shipper* at the above prices.

Streator lump, present price at Chicago	2 00
" " " at mines..	1 80
(Cannot make season contract.)	
Wilmington & Spring Valley, present price: Standard lump (at mines)...	2 15
Chunk, " ...	2 25

No season contract can be made on Wilmington coal, but special prices can be made for season contracts on Spring Valley coal.

Pocahontas coal (smokeless):	
Mine run, present delivery	3 35

Season contract cannot be made, but it is not probable that prices will go higher.

New River (smokeless):	
Mine run, present delivery	3 25
(Cannot contract for season)	
Thacker splint, West Virginia, steam lump (season ending April 1, 1901)..	3 05
Henriette smokeless, run of mine, (season ending April 1, 1901)	3 50

The above prices are based on delivery on the cars at Chicago. Some florists may be so located that a reduction can be obtained by saving on freight charges. In other cases the conditions may be such as to increase the prices somewhat. In case the railroads lower the freight rates from mines, these prices will be lowered to correspond, but no increase will be made on the prices given on season contract.

Any florist or market gardener who is interested will be placed in communication with the persons making these offers on application to W. N. Rudd, Room 1002, 185 Dearborn street, Chicago.

I feel warranted in recommending that florists using less than 1,000 tons should buy the Lower-vein Brazil Block, unless freight rates and shipping charges should strongly favor some other coal. Much of the so-called Lower-vein Brazil Block in the market is mixed with Upper-vein, which is a cheaper coal. We are assured of being furnished with genuine article at the above price. Of course, those employing expert firemen day and night may be able to use the cheaper coals profitably.

Having no authority to contract or buy, the committee has been unable to deal direct with the mines, and undoubtedly has not obtained as low prices as it could have done could it have assumed the purchase of even 15,000 of the 25,000 tons listed with it. It is hoped that a beginning may be made this year, and that all will buy through the committee who can, as the purchase of a large quantity this year will make it easier next year to obtain concessions. Respectfully submitted,

W. N. RUDD, Chairman.

Pan-American Progress.

The weather for the past month has been rather dry, on the whole, yet it has been very favorable for the development of the ground. But few hours have been lost since the opening of Spring, on account of wet weather. Since my last notes a great deal of finishing has been done to that portion of the ground lying south and east and west of the Mirror Lakes. Many acres near the Elmwood avenue entrance are now in a most complete state. Flower beds are prepared, and the grass, the sowing of which has been going on every day this Summer, now gives this portion of the grounds a most finished and beautiful appearance. The rapidity and luxuriance with which the grass grows has been a revelation to our citizens and all visitors. Mr. Rudolph Ulrich has a large staff of men constantly seeding, and another gang continually following with the hose, and their labor is well rewarded.

People who doubted that the immense amount of work to be accomplished could be finished, now feel assured that there will be no difficulty in getting all of the ground in order by the opening day. The sunken gardens in front of the Horticulture and Government buildings respectively are excavated. The fancy garden on each side of the large basin, known as "The Cascades," is now surfaced, and the banks will soon be green. This is in the very center of the building region. The bottom of the canal and lakes have been covered with two inches of broken lime-stone, which insures their

THE LATE LOUIS MENAND.

being what their name implies, "Mirror Lakes," and not muddy pieces of water.

The United States government is making a large display of ornamental and economic grasses that are useful and hardy in this latitude. Several of our leading seed houses have secured plots of ground, varying from one-eighth to one-half an acre, and are having them seeded, and will ornament with flower beds.

At the south border of the Mirror Lakes, and also in the many inlets and bays on both sides of the fore court and grand approach, are planted 1,400 nymphæas, with a few groups of nelumbiums. Clay banks, or dams, have been made to retain 18 inches of water for the accommodation of these aquatics which are the exhibit of Henry A. Dreer, of Philadelphia, and if in one area, would cover about an acre and a half of water. They must make a magnificent appearance from the banks of both sides of the lake. They are already making good growth, which assures us of a grand display for next year.

Work is progressing finely on all buildings. The Propylæa, the most northern direction of the grounds, is nearly completed. The Electricity Building, Agricultural Building, Graphic Arts, Forestry and Mines, United States Government Building, all are going up. The largest two buildings, which are the Machinery and Transportation and Manufactures and Liberal Arts, each 350 feet by 500 feet will soon be roofed in.

A remarkable feature of this Exposition is the immense interest and confidence displayed by the leading amusement people of the world. It is a fact that the amusement, or Midway features, will entail a larger outlay of money than the whole of the Exposition at Omaha cost. To accommodate the many remarkable novelties that will be exhibited they will now occupy the ground to the south of the Mall and extending south below the Horticultural Building. Many of these attractions and features of amusement are to be on a most expensive scale, and this is at the risk of the concessionaires. It shows what confidence they have in the prospective attendance.

The half-million dollar Art Gallery, the gift of Mr. J. J. Albright, is going up rapidly. This is situated in the park proper, overlooking the lake. The New York State Building is also in the park at the northeast corner, and is rapidly building. A magnificent new boat house and refectory will be built in the park proper, and a new bridge spanning the lake between the north bay and the large bay, at a cost of $50,000. These are permanent improvements.

Beautiful as the grounds of the Pan-American Exposition now appear, the visitor can form but little idea of what they will be, because there is at present a high board fence separating the acquired ground for the Exposition proper from the park. When that is torn down, and the 100 acres of the beautiful park scenery is then part of the whole, it will be seen what an immense advantage it is to have the park a part of the Exposition. WILLIAM SCOTT.

OBITUARY.

Louis Menand.

Louis Menand, the "grand old man" of the florist craft, passed away Wednesday, August 15, at his home near Albany, N. Y., at the ripe age of 93 years. Mr. Menand had been a prominent figure in American floriculture for the past 60 years, and had seen the industry grow from almost its infancy to its present magnitude; he himself contributing not a little to its wonderful development.

Deceased was a born gardener. He first saw the light on the 2d of August, 1807, in the old province of France called Burgundy. His father was also a gardener, and from him the son inherited the love for plants and flowers, which was his abiding portion until his death. Louis first essayed to grow plants from cuttings when he was but ten years old. His first employment in his chosen vocation he secured in the neighborhood of Paris.

Leaving his native country in July, 1837, at the age of 30 years, he landed in America on September 7, of that year, with numerous testimonials in his possession as to his capabilities, to people in various parts of the New World and in Havana. His desire to master the English language led him to refuse a position offered him as curator of a botanical garden in the latter city, and to accept one in the employ of George Thorburn, at Astoria, L. I. Here he remained three years, leaving for Albany the latter part of October, 1840, which city he had since made his home.

His varied experiences in the country of his adoption have been recounted by himself in his "Autobiography and Recollections" in his own quaint, terse style, a book written principally, as he tells, to while away the hours of his declining days, and to divert his thoughts from dwelling too much on the loss of his wife and faithful helpmate. The reader's interest in this work centers in the author's early struggles to acquire an education; difficulties before which a less stout heart and indomitable perseverance would have quailed; his various successes in the early days of his career in America with Cape and New Holland plants at the then exhibitions of the Brooklyn Horticultural Society and elsewhere; and his innate hatred of sham, deceit and humbug, in whatever form disclosed. This love for the favorites of his early years he cherished all his life long. At one time he had an excellent collection of orchids, among them valuable specimens of such as Vanda Corningii, which was sold for $250, cymbidiums, angræcums, and others. He also gathered around him a magnificent collection of cacti and succulents, his partiality for which curious class of plants remained to the end.

His long and useful gardening career presents numerous traits well worthy of emulation by those he has left behind, and his manly character, his sterling integrity and beautiful home life commanded the respect and admiration of all who knew him, whether as a friend or business associate.

J. R. Shaver.

J. R. Shaver, a florist of Charleston, W. Va., died from apoplexy last week. He was riding his wheel and became overheated. Deceased was 61 years of age, had been in the florist business for 16 years, but retired some time ago. The greenhouses will be conducted by J. W. Alexander, his successor.

Reports from France state that the vineyardists there have been successful "in dissipating hailstorms by firing cannon at the clouds." Respectfully submitted for the information of the Florists' Hail Association.

CRYPTOMERIA JAPONICA JAPAN CEDAR.

THE NOVELTY DECORATIVE PINE.
Everybody wants it. There is money in it. Strong plants, from 2 inch pots, $5.00 per 100, or 20 for $1.00, by express. SMILAX, from 2 in. pots, $1.25 per 100.

Newport, R. I.

The flower trade, which was slack during the early part of the season, is now booming; and never was there so much competition as now, all being apparently busy. Hodgson, as usual, getting the lion's share. The new firm of Wadley & Smythe appear to have about all they can attend to.

The Newport delegation to the S. A. F. Convention will be small. Among those who intend going are Robert Humrick and Fred Ziegler. The latter, seedsman with the G. A. Weaver Co., intends spending ten days in and around New York.

J. S. Hay, formerly seedsman with the G. A. Weaver Co., has gone to Philadelphia to enter the employ of Henry A. Dreer, in the seed department.

The musk melon crop is a failure here, caused by the leaf blight, for which, apparently, there is no known remedy.

MAC.

Asparagus Sprengeri Strong, 2½ in., $3.00; 3 in., $4.00 per 100. **Plumosus N.,** extra strong, 2½ in., $5.00 per 100. **Violets,** Marie Louise, healthiest stock in the country, fine clumps, ready for immediate delivery, $3.00 per 100; $30.00 per 1000. CASH. **WM. S. HERZOG, Morris Plains, N.J.**

St. Louis.

State of Trade.

Business and market conditions remain practically as per last report. Funeral work, and not very much of that, comprises all that is doing. Stock received, owing to the hot weather, has a bedraggled look.

Our city will be poorly represented at the Convention. Not over eight or ten are going, as far as we can learn.

An Outing.

Ten members of the Florists' Club accepted an invitation from Fred. Amman to visit his place in Edwardsville on Sunday last. A most enjoyable time is reported by those who attended. They were met at the station with carriages and driven to the place of Mr. Amman, an inspection of which revealed it in tip-top order. Roses, especially Perle, in the growing of which Mr. Amman excels, were very fine. His carnations were also in an extra fine state. Dinner was served at the leading hotel, after which toasts were in order, speeches being made by Dr. Halstead, President-elect Guy and Mr. Amman. The balance of the day was spent on the lawns, where all kinds of innocent amusement were indulged in until train time, when a tired but well satisfied crowd returned home.

Club Meeting.

The regular meeting took place on the 9th inst. Attendance was fair. The most important business was the election of officers, which resulted as follows: President, E. W. Guy, of Belleville; vice-president, Chas. Juengel; secretary, E. Schray; treasurer, J. J. Beneke. Trustees: J. W. Kunz, F. J. Fillmore, Phil. Mobr. The annual report of the secretary showed a slight decrease in the membership during the year—nine members having been dropped, five resigned and two having died. The secretary thinks the failure of the chrysanthemum show is mostly responsible for these resignations. The resignation of Andrew Meyer was received and accepted, and the application of Wm. F. Adels, for membership, was received and read for the first time.

A vote of sympathy was extended to the family of J. J. Beneke on the death of his daughter, which occurred some time since, also to Edwin Lonsdale, whose two daughters were recently drowned.

An invitation from the Philadelphia Florists' Club was received—to have such members as are going to the Convention drop off at that city and visit their club rooms.

Firm Changes.

John L. and Otto G. Koenig, sons and successors to the late Julius Koenig, have incorporated the business under the name of the Koenig Floral Co. This is an old and reliable business concern, catering to the wants of the people of the north end, and making a specialty of cemetery work. We hope the boys will sustain the enviable reputation so long enjoyed by their late father.

C. C. S.

Omaha, Neb.

Business Items.

Trade for the past week has been much better than during the week preceding; but the good stock was about as scarce as it could be without being invisible. Young Beauty are beginning to come in, and go readily at from $1 to $1.50 per dozen. Carnations are getting very poor, and are retailing for 25c. and 30c. per dozen. Asters are quite popular at from 25c. to 40c. Of roses nothing can be said, as they are so poor they are sold at any price. Some very good cosmos is seen and seems to take.

A party of florists visited W. J. Hesser, at Plattsmouth, recently, and report having had a very good time, with inspecting his palms and ferns, and incidentally partaking of some of the vineyard products.

S. B. Stewart and wife have been out camping for the last two weeks.

Miss Cassie Arnold has been ill for a fortnight, but is now able to be about.

J. H. B.

Milwaukee, Wis.

Messrs. Riemer & Radmer, 411 State street, have recently set for Mr. B. Heyden, of their city, a No. 8 Furman brick-set hot-water boiler. Messrs. Riemer & Radmer have been very successful thus far this season in introducing their system of heating for greenhouses.

USE **W. C. KRICK'S** FLORISTS' IMMORTELLE **LETTERS, Etc.**

Medal Awarded at the World's Fair and Highest Award Wherever Exhibited.

These Letters and Designs are made of the best immortelles, wired on wood or metal frames, having holes drilled in them to insert toothpicks, by which they are fastened in the design. Give them a trial. You will find these goods to be superior to any in the market.

2-inch Letters, $2.50 per 100. Postage, 15 cts. per 100

For other styles of Letters, Emblems and Designs send for catalogue. Before purchasing, send for free sample and catalogue, and compare with any other letter on the market.

THE **Perfect Flower Pot Handle and Hanger**

Is used for lifting plants out of jardinieres, also for hanging up plants for decorations on walls, etc. Will sustain a weight of 100 lbs.

No. 1 will fit from 2 to 5-inch pots, per doz. 30c.; No. 2 will fit from 5 to 8 in. pots, per doz. 40c.; No. 3 will fit from 9 to 12-in. pots, per doz. 50c. Postage, 10 cents extra per dozen; sample pair 10 cents, postpaid.

KRICK'S "PERFECT" ADJUSTABLE and FOLDING **Flower Pot Stand**

This Stand is adjustable and folding (see cut), and can be raised from 24 to 40 inches.

The top of Stand is furnished with an indurated fibre saucer, and plants can be securely lifted at an angle by means of a curved rest laid under the flower pot, this is particularly handy when plants are used in decorations, etc.

The Stand can be erected and folded in a moment, and when folded quite a number can be packed together, taking comparatively little space in wagon, leaving a greater amount of room for plants, etc.

These Stands are finely finished in Aluminum and Gilt.

No. 2, including a 10 inch Saucer and Tilting Rest, price, $2.00.

Pat. Nov. 21, 1899. Open. Folded.

For sale by all Florists' Supply Dealers.

The Model Extension Carnation Support.

LANCASTER, PA., June 17, '99.
MR. THARON PASSER, Brooklyn, N. Y.
Dear Sir:—Your Model Carnation Support is all right in every way, and will no doubt be considered as necessary as good plants with growers when better known. I consider it the best in the market, and if your other specialties are as good, they should make another addition to the money makers of 1900.
Very respectfully, ALBERT M. HESS.

Grand Rapids.

Cooling Showers.

The weather continued unbearably hot until Saturday night, when we were treated to a heavy rain and decidedly cooler weather. Carnation are in fine condition for benching, and are being hurried in, so as to get the start of another hot spell. The last continued for eight days The thermometer was as high as 103 in the shade, and from 115 to 135 degrees inside, making it almost impossible to stand inside work, except a little while at a time.

Business but for a few straggling funeral orders would be dead as a door nail. As to prices, any old figure almost is the rule, the demand being so light. It is really a good thing business is dead, as there is very little to supply it with, and then the quality is off at that.

Wencil Cukersky, superintendent of parks, has recovered from his severe illness, and is again attending to business.

G. F. C.

Charleston, Mass.

J. S. Gravelle, manager for Howard, the florist, has returned from a month's trip through the larger cities of the East.

Boston.

Interest in Convention Great.

There is little to interest anybody in regard to business hereabouts now; but many are interested in the Convention next week, and are fixing up affairs so as to be able to attend.

Stock is in plentiful supply to meet all the demand there is for it. Beauty, Kaiserin, and Carnot are about the only good roses arriving, though Bride and Bridesmaid are improving steadily. Carnations are still a little scarce, but the call for them is light. Asters continue plentiful, and the great bulk of them move rather slowly, though, of course, quantities are disposed of. Then there are lilies, gladiolus, etc., which are used principally in funeral work; and sunflowers, rudbeckias, etc., found useful in window decorations.

Jottings.

The two 700-foot rose houses, erected this Summer at the Wabun Rose Conservatories, have been planted to American Beauty and Liberty entirely, and present a handsome sight. The 300-foot houses at this place, which were considered long at the time of their building, are now made to appear small by the addition of these latest two monsters.

The well-known Hayes Estate, at Exeter, N. H., is to be sold at auction on Wednesday, September 5 next. This estate is well known to Boston florists, as many Beauty, Meteor and Jacqueminot roses have been shipped from there to the Boston market in past years. The estate comprises about fifty acres, and contains six fine greenhouses.

Welch Bros. have just finished repainting and renovating the interior of their store, and are in readiness for the Fall trade.

Massachusetts Horticultural Society.

The only prizes offered for flowers Saturday at Horticultural Hall were for montbretias and perennial phloxes. None of the former were shown for premiums. George Hollis, T. C. Thurlow and Rea Bros., however, made very good displays of phloxes. Gladioli were shown by J. W. Clark and E. J. Shaylor; asters by Norris F. Comley and F. O. Willard, and delphiniums by Rea Bros. W. J. Clemson, E. C. Lewis, Mrs. E. M. Gill, Mrs. G. Duncan and R. P. Struthers made exhibits of various seasonable flowers, and H. A. Wheeler showed a nice lot of orchids; and C. W. Hoitt, Lilium Henryi, receiving honorable mention. The Blue Hill Nursery sent in a collection of herbaceous plants. Edwin Whitin had a very good plant of Cattleya Hardyana var. Robbiana, and W. J. Clemson showed one of Oncidium crispum. R. H. Kidder staged a specimen of Ananassa sativa.

Saturday, August 18, the annual exhibition of aquatic plants and flowers, asters, etc., will be held.—F. J. N.

Cincinnati.

Trade News.

Very little can be said regarding business this week. We are now passing through one of the hottest spells we have had this Summer; the thermometer has been ranging in the nineties all week, and no relief is in sight yet.

Club Outing.

On Thursday afternoon, August 9, the Cincinnati Florists' Society held its regular monthly meeting at "the House in the Woods," the residence of Mr. and Mrs. J. A. Peterson. The hospitality of the Petersons being so well known, it is needless to say that a large crowd was present. After cooling the inner man and holding a short business session, a trip to the greenhouses was proposed, and while it was a good deal like taking a Turkish bath, it was well worth the effort. Adiantum Farleyense is Mr. Peterson's specialty, and his stock of this fern is very fine. He also has a fine lot of dracænas. The houses of roses never looked better, other stock looking equally well. After making a tour of the houses, the party was invited back to the lawn, where a sumptuous repast was spread. After a vote of thanks to the genial host and hostess the company dispersed.

The next, and so far as I know, the last, outdoor meeting of the society for this season will be held at the residence of Mr. and Mrs. Julius Schuman, at Newport, Ky., Thursday, September 6, at 2:30 p. m.

All are invited, and more especially the ladies.

Death of a West Virginia Florist.

I have just learned of the death of J. R. Shaver, of Charleston, W. Va. He dropped dead on Friday afternoon last.

Success With House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, $1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller. For particulars, address

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 to 8 Duane St., N. Y.

Plant Culture

NOW READY FOR DELIVERY.

FORMERLY ADVERTISED AS

COMMERCIAL PLANTS

THEIR PROPAGATION AND CULTURE.

BY GEORGE W. OLIVER, PROPAGATOR TO THE U. S. BOTANIC GARDEN, WASHINGTON, D.C. AND LATE OF THE ROYAL BOTANIC GARDEN, EDINBURGH.

A working Hand Book of Every-day Practice for the Florist or Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experiences of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines, and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is to be found in much more pretentious works costing ten and twenty times as much money. Strongly bound to stand rough handling and plenty of it. Price, $1.00 by mail, postpaid.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 to 8 Duane St., N. Y.

THEN don't fail to see us. Our **Mr. P. Berkowitz,** happy and affable as ever, with his assistants, will be there to wait on you. His maxim:

No trouble to show goods—No pain to answer questions.

Next, run over to Philadelphia, it will pay you to inspect in its **Unabridged Magnitude** our **Latest Comprehensive Importation** and **Own Manufacture.** Your friend—call him **"Old Harry"** for short (but don't confound him)—has just returned from his annual buying tour of Europe; he will show you what he acquired for you at the Paris Exhibition and other European centres, It cannot be excelled.

Come over! Bring your friends along! We will take care of you and your comfort. Our hospitalities are at your call, also the facilities of our store and office.

P. S.—Remember New York—OUR EXHIBIT ONLY. Our Store and Warehouses are in Philadelphia. The OLDEST, LARGEST and MOST PROGRESSIVE FLORIST SUPPLY HOUSE IN AMERICA.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 34. NEW YORK, AUGUST 25, 1900. One Dollar Per Year.

LILIUM HARRISII IS NOW READY

And we are pleased to state that our bulbs have never beeu finer. Bulbs are exceptionally fine, clean and bright, and running well up to size. We are very particular about the Harrisii that we handle. Our stock is not picked up indiscriminately from small growers. We have our bulbs grown for us by only a few selected growers, whose stocks are the healthiest, and for which we pay the highest prices. Our fields are the healthiest and best on the Island, and we are sure that our stock will prove unusually satisfactory. Certainly the bulbs have never been finer than they are this season. If you have not already covered your wants in this line, we will be glad to have your order. Bulbs are ready for immediate shipment.

REGULAR STOCK AS USUALLY SOLD:
Bulbs 5 to 7 in. in circumference, $16.00 per case of 400 bulbs.

OUR OWN SELECTED STOCK:
Bulbs 5 to 7 in. in circumference, $18.00 per case of 400 bulbs.
Bulbs 7 to 9 in in circumference, $18 00 per case of 200 bulbs.
Bulbs 9 to 11 in. in circumference, $20.00 per case of 100 bulbs. (scarce)

If cash is remitted with order, 5 per cent. can be deducted from above-named prices.

FREESIA REFRACTA ALBA Plant now for Christmas Flowering. Finest quality Bermuda-grown bulbs, extra quality, 50c. per 100; $4.00 per 1000. Selected bulbs, 75c. per 100; $6.00 per 1000.

BERMUDA BUTTERCUP OXALIS Heavy Selected Bulbs, 75 cents per 100; $5.00 per 1000.

WINTER-FLOWERING ROSES.

We have a fine stock of all the leading varieties—first-class, A No. 1 plants—which we can offer as follows:

STRONG PLANTS, IN 3 1-2 INCH POTS.

Bride, Bridesmaid, Perle, Meteor, La France, Bon Silene, Papa Gontier, $8.00 per 100.

Souv. de Wootton, Golden Gate, Kaiserin Augusta Victoria, Pres. Carnot, Sunset, $10.00 per 100.

American Beauty, of which we have an extra fine lot, $12.00 per 100.

SEED TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLOIANO, First Vice-President; S. G. COURTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

European Notes.

The atmospheric conditions now prevailing are decidedly favorable to our root crops, and the sale of crimson clover has been materially checked. As this is a seed that quickly loses color it will no doubt be pushed as much as possible, even if it involve, as it must do, a heavy loss.

Mustard, both from home consumption and for export, is in brisk demand, and as the hot wave materially reduced the crop, growers who in April anticipated a big decline in value, now hold firmly for a rise. Both the brown and white varieties are affected.

The finer weather of the past week has enabled growers to thresh out Rape grown on early land, and the results are so very disappointing that a very stiff rise in price has been the result. The heavy demands from your side for this article have entirely revolutionized the European trade.

EUROPEAN SEEDS.

Germany imported seeds from the United States, in June, 1900, to the value of $29,934, against $42,901 in June, 1899. Other European countries received shipments to the value of $1,210 in June, 1900, against $4,730 in the corresponding month of 1899.

OBITUARY.

John Laing.

John Laing, of the firm of John Laing & Sons, Forest Hill, London, England, died at his home August 8 in the seventy-seventh year of his age. The deceased took a foremost place among the nurserymen and hybridists of England. In early life he was a deep student of botany, having had a most remarkable collection of mosses.

JOHN LAING.

Mr. Laing was a Scotchman and was for a period a partner in the firm of Downie, Laird & Laing, of Edinburgh. Subsequently he represented the firm in London, but for many years past had been head of the firm that bears his name, given above. He did excellent service in the hybridizing of florists' flowers, such as penstemon, clivia, streptocarpus, gloxinia, and the like, while his work with the tuberous begonia fairly revolutionized that genus. He took a most active interest in all affairs connected with horticulture, and his genial character endeared him to all with whom he came in contact. He had partially retired from business, owing to declining health.

Mr. Laing was well known on this side the Atlantic, and his personal acquaintances here will join with us in extending sympathy to the bereaved family.

C. C. Bowen.

Charles Clark Bowen, Detroit, died at his home in that city, August 9 last. The physicians ascribed his death to angina pectoris. Deceased was born in Yates, Orleans County, N. Y., September 8, 1831. Leaving the Rochester University he went to Green Bay, Mich., and engaged in a general merchandise business. Later he traveled for a Rochester seed firm, and subsequently became, in 1877, a partner in the firm of D. M. Ferry & Co., seedsmen, Detroit. Next to Mr. Ferry, Mr. Bowen has been the principal stockholder and worker in the great seed firm, which has built up such an enormous business and reputation all over the world. With H. Kirke White they worked together, the three men supplementing each other admirably.

Until a year ago Mr. Bowen was vice-president of the Standard Life and Accident Co., and he was one of the heaviest stockholders in that concern, but he was obliged to resign from the board because of ill-health.

With Mr. Ferry and others, he built the Saute Fe, Phœnix & Prescott railroad, and he was the treasurer of that successful road, of 200 miles, up to the time of his death.

His son, Lem. W. Bowen, is also connected with the same house.

In his private life, deceased was known as a man of kindly heart and wide sympathies. He was one of the managers of Kalamazoo College, and one of the trustees of Chicago University.

Mrs. Mary Beck Rossbach.

Mrs. Mary Beck Rossbach, 51 years old, wife of John Rossbach, a florist of Bloomfield, died at her home, 118 Maolis avenue, Glen Ridge, shortly before midnight, on Saturday, 11th instant, from a complication of diseases.

Pansy Seeds Fresh crop, Vantier's mammoth; it is the best strain in every respect; 120 varieties, colors, and markings mixed; flowers are often up to 4 inches in diameter and smell like violets; 3000 seeds, $1.00; 1 oz., $4.00.
Shellroad Greenhouses, Grange P. O., Balt., Md.

Kansas City, Mo.

With the thermometer registering 95 degrees, the inactivity in the flower market is easily accounted for.

The Convention is the principal topic, and we learn that Mr. G. M. Kellogg and wife will take the Chicago special to the New York Convention, and will then visit Mr. Kellogg's early home in Westfield, Mass.

Mr. Arthur Newell, wife and family, go direct to Mackinac, Mich., where Mrs. Newell will visit, while Mr. Newell takes in the Convention.

Miss Mary Hayden has returned from a visit to her home in Elroy, Wis.

Miss Kellogg has gone to Denver for a few weeks.

Several well-built rosehouses, aggregating 50,000 square feet, have been added to G. M. Kellogg's range at Pleasant Hill, Mo.

Robt. Jarrett, a veteran florist of this city, has retired from business, and has sold his stock to a younger man.

Samuel Murray has been treating his friends to some delicious pot-grown grapes of the black Hamburg and Muscat of Alexandria varieties.

A house of Asparagus Sprengeri, in 8 and 10-inch pots, shows how Mr. Murray rates this useful plant.

The modern conservatory, on the grounds of A. R. Meyers, is well under way and James Payne, gardener for Mr. Meyers, will have further scope for his recognized ability. D.

Columbus, O.

On the 1st of August Franklin Park passed under new management. Heretofore Mr. Reese was superintendent, while Albert Knopf, manager of the Franklin Park Floral Co., has had charge of the planting. The attractive feature in bedding this season is a calendar. The letters are made of alternanthera, bordered by echeverias. James Underwood, the new manager, will direct the whole park.

F. K. Linke spent his vacation in St. Louis visiting the Missouri Botanical Garden.

The Franklin Park Floral Co. has made decided improvements. A show room, as well as a storeroom, have been added, while the coldroom for cut flowers has been rearranged and improved.

Misses Nellie Charles and Anne Long recently dropped in on some of the florists of Dayton. FRITZ.

RHODODENDRONS

Native Rhododendrons; well furnished plants, all sizes. Prices on application.

Springfield, Mass.

J. W. Adams is expecting to attend th National Congress of Agriculture.

C. F. Fairfield is summering at Block Island. Other members of the craft are "at home," making ready for the Winter.

The Hampden County Horticultural Society's Sweet Pea Show was not as large this season as formerly, but what flowers were shown were of excellent quality. The Eckford Silver Cup went to W. J. Eldred, of this city, for the second time, thus becoming his property. There was quite an interest in this all through the season, but when it came to staging the flowers, Mr. Eldred was the only grower who exhibited the complete set. His blooms were far better than he was able to show last year. Mr. Eldred also entered in most of the other classes, and secured quite a number of premiums.

Mrs. H. A. Jones, of Worcester, Mass., was an extensive exhibitor. She took 12 first prizes, besides several others.

D. William Brainard, of Thompsonville, Conn., was awarded first for "any variety," with Sensation.

Representative L. D. Robinson's time at the Statehouse has not prevented him from growing sweet peas; much of the work has been done by his son. They made a fine display. They have cut several thousand blooms a day, for all that others have had so poor luck.

O. H. Dickinson, manager of the B. L. Bragg Co., the Agricultural Store, also made a good exhibit.

The water lilies and lotus from Park Commissioner Barney were extremely fine; hundreds of blooms filled several tanks, and attracted much attention.

Mrs. W. J. Eldred, of West Springfield, has given much attention to nasturtiums; her exhibit contained every known variety.

The next flower show with us will be the National Dahlia Show, under the auspices of the Amateur Horticultural Society; this comes in September.—G.

BRIEFS FOR BUSY FLORISTS.

BOUVARDIAS that are planted out-doors may be lifted now and transferred to the benches where they are to flower. They wilt very easily, but if proper care be taken, they can be moved without losing a leaf, almost. See that the soil about them is well moistened the night before lifting. Plant them direct on the bench after taking them out of the ground, instead of letting them lay around long enough to wilt. When in the bench, give a thorough soaking at the roots. Syringe the foliage and then shade them rather heavily, keeping the house rather close also; especially if there is much wind stirring. The shading should be either cheesecloth or paper, and should be removed each day towards evening. A light syringing in the morning, and again later in the day, will be all the water needed. After the first three days, the shading material can be reduced by putting it on later and taking it off earlier, thus gradually it is dispensed with altogether.

THE BABY PRIMROSE, PRIMULA FORBESI is a pretty and useful plant, but the foliage is so very low-growing, that the subject never looks at its best when grown in deep pots. There always seems to be so much pot and so little plant in sight. This is easily obviated by growing the plants in pans. When they are ready for a shift from three-inch pots, put them right into pans, and, if large plants are desired, put them two or three together in a nine-inch or ten-inch pan, when they will make very effective pieces when in flower.

HELIOTROPE that has been out-doors all Summer is very strong and vigorous, and from this it is always advisable to procure the stock for next Spring sales; in fact, far better than depending upon the plants for cuttings, that are pot grown and kept for blooming inside.

Take a good batch of cuttings now, "or within a week or so," and root them in the ordinary way. As there is no heat under the cutting bench, care will be necessary as regards watering. Keep the sand just moist, and never have the leaves wet over night, or they will damp off.

ROSES.—As the nights begin to get cooler do not try to keep the houses closed to avoid mildew, as by doing so it comes much more quickly. Keep the ventilators open night as well as day and the foliage will become tough and leathery, and not be so liable to be attacked with mildew. Do not syringe late in the afternoon, as that would leave the foliage wet over night—a condition that must be avoided.

AMERICAN ROSES

Mention this Paper.

ON OWN ROOTS.

In the following varieties:—American Beauty, Anna Diesbach, Coquette des Alpes, General Jaqueminot, Jules Margottin, La France, La Reine, Mme. Geo. Bruant, Magna Charta, Mrs. John Laing, Paul Neyron, Prince Camille de Rohan, Victor Verdier.

All two-year, strong field-grown Plants. Delivery after September 15th. Samples will be shown at the Convention.

SOCIETY OF AMERICAN FLORISTS

Sixteenth Annual Convention

and Trade Exhibition at . . .

GRAND CENTRAL PALACE, NEW YORK,

AUGUST 21 to 24, 1900.

FIRST DAY'S PROCEEDINGS.

Tuesday Morning, August 21.

A real late Summer morning ushered in the advent of the sixteenth annual meeting of the Society of American Florists, and old Sol, who had hidden himself behind threatened rain clouds, smiled on one of the largest audiences that ever graced a convention hall in the history of the S. A. F., many of whom were ladies. No place of assembly ever looked grander than the Grand Central Palace, which, under the magic touch of the Hall Decoration Committee of the local club, Messrs. Nugent, Brower, Bogan, Le Moult, Bunyard, T. Lang, J. K. Allen and Sigmund Geller, was transformed into a perfect bower of beauty and loveliness.

Acting Mayor Guggenheimer, of New York city, was on hand punctually, and soon the conventionites were convened in the spacious and beautiful hall.

On the platform were the officers of the S. A. F., ex-Presidents Craig, Smith and Dean, President O'Mara of the New York Florists' Club, ex-Alderman Morris, Councilman Morgan and Edgar Sanders.

President O'Mara at 9.55 called the convention to order and introduced the acting Mayor in the following well chosen remarks:

Mr. Chairman, Ladies and Gentlemen:

A year ago the New York Florists' Club invited you to hold your annual convention in the city of New York. We promised you at that time that we would do our best to make it pleasant for you during your stay here, and would try to show you as good a horticultural exhibit as was capable of being produced here, that we would do everything possible for your comfort; and I desire to say the New York Florists' Club has, up to the present time, carried out their promises made you at that time.

We wish to say to you we welcome you heartily and trust during your stay with us you will enjoy yourselves and that when you return to your homes you will feel rejuvenated, as it were, and your interest in horticulture will be increased tenfold.

I am satisfied that the community of New York will be benefited by your presence, will be benefited by the exhibition which has been made here, will be benefited by everything in connection with the convention.

The chairman then introduced to the meeting acting Mayor Guggenheimer, of New York, who said in welcoming the Society of American Florists to the city:

The Address of Welcome.

Mr. President, ladies and gentlemen: This opportunity which has been given to me in my capacity as Acting Mayor of welcoming the members of the Society of American Florists and Ornamental Horticulturists to the city of New York affords me very great pleasure. Indeed, we have only one complaint to make against an association whose growth and prosperity have always been so closely identified with the Empire State. It is now twelve years since you held your annual meeting and exhibited in this metropolis the perfection of your horticulture and nature's wonderland of flowers. We trust, and in saying so I represent every class in this great community, that your next interval of absence will be materially shortened. The people of New York are proud of the city which you have this year selected for your meeting. In fact, we are never tired of reciting its praises. We are not unaware of the marvelousness of its growth and enterprise. To-day it is the gateway of the wealthiest, because the most productive, country in the world. In a few years it will be the greatest city upon earth in wealth, in area, and in population. That is our manifest destiny. We face the rising sun of promise and prosperity, and turn our backs upon nothing American. (Applause.)

But our great houses of trade, our public buildings and splendid residences—in fact, every home in our enlarged city—would be sordid and unlovely but for the touch of the landscape gardener in unexpected places and the unpainted loveliness of God's flowers, the sweetest things that breathe on earth, and yet have no souls to recognize their own shy or imperial beauty. Such art as yours is universal. It is like the boon air or the sunshine. It cannot be confined to the gardens and conservatories of the rich. It glorifies our public parks with such

RANDOLPH B. GUGGENHEIMER,
Acting Mayor.

natural loveliness that the little children from the tenements who play there in the sunshine learn imperishable lessons of form and color from the exquisite growths of nature that exult everywhere in their spring and summer pride. It beautifies the windows and rooms of all who love the odorous handiwork of nature, and transforms many a poorly furnished home into a place of delight.

Therefore, ladies and gentlemen, I welcome you to this city because the art which you represent appeals to the heart and imagination of every man, woman and child in this community. (Loud applause.)

The Response.

Mr. Edgar Sanders, of Chicago, responded to the Mayor's address of welcome. He said:

Mr. President, ladies and gentlemen: When I was requested to step on this platform I had no idea of what they proposed to impose on me. Coming as I do from that little place by the lakes, I came down here to hear what was to be said and done. I understand that the gentleman who was to reply failed to come, and behold of all the masses I had to be selected to take that position!

I only wish that they had let me know something about it, because then I would have been prepared to have said something that I hope would have been satisfactory to this monstrous, this extraordinary gathering, worthy of the occasion.

As I had the privilege of attending the meetings of the horticultural societies in 1853 up to 1857 in this city from Albany, where I then lived, you will understand that I am not an utter stranger here; but really I did not expect to be thus called upon. I will not take up much of your time, except to say it took a whole train to bring us from the West, and for the object that brought us here I thank you all who have come here for this grand meeting. (Applause.)

The chairman then presented the president, E. M. Wood, to the meeting, who spoke as follows. The reading of Mr. Wood's address occupied over thirty minutes, and he was frequently applauded.

President E. M. Wood's Address.

Ladies and gentlemen, members of the Society of American Florists and Ornamental Horticulturists: I am profoundly sensible of the high honor which has been conferred upon me as the presiding officer of this great convention of American florists, the greatest in the society's existence.

We meet on this our sixteenth annual convention under the most encouraging and hopeful auspices. We meet in Greater New York, the Empire City of America, at the closing and opening of a century. In a city receiving and distributing, as she does, three-fourths of the entire imports of the country, having within her harbor nine-tenths of the tonnage that on this side of the sea seeks an entrance; receiving, housing and caring for seven-eights of the immigration that reaches our shores, her interests are more extended and universal than those of any other city in the land.

The increase in floriculture and horticulture in this city, and indeed throughout the United States, is unparalleled. Here are practically forty commonwealths, trading with each other, without let or hindrance, without custom duties, in climates having products so varied and endowed with such resources natural and acquired as have no parallel anywhere in the world, unfettered by trusts, with opportunities at every hand.

As one of the greatest and grandest thinkers of New England, Emerson, said, "We live in a new and exceptional age."

America is another name for opportunity. Its whole history shows it to be the last, best gift of God to man. Is there anything more uplifting or glorious than those words, or more fascinating to stimulate in floriculture and horticulture the ambitious youth?

"The cultivation of flowers," says a writer, "is of all the amusements of man the one to be selected and approved as the most innocent in itself and most perfectly devoid of injury to others. The employment is not only conducive to health and peace of mind, but probably more good-will has arisen and friendship founded by the intercourse and communication connected with this pursuit than from any other whatsoever. The pleasures, the ecstacies of the horticulturist are harmless and pure. A streak, a tint, a shade, a perfume becomes his triumph, which, though often obtained by chance, or by the honey-bee for him, are secured alone by morning care, by evening caution, and the vigilance of days—an employment which in its various grades excludes neither the opulent nor the indigent, and teeming with boundless variety affords an increasing excitement without contention or ill will."

Flowers usher man into the portals of a higher, nobler and sweeter life.

The growth of flowers, their distribution, their uses are for all, and not for the favored few. It is with pleasure that I witness the advancement, not only in the use of flowers, but in the art and in the broadening influences which they inspire. What credit for the love of them is due to the common school, to the educational influences of colleges and other institutions of learning, I know not; but the rapid increase in the wealth of the community has done its share. Last, and perhaps not least, we are indebted to the honey-bee for a variety of benefits. Few people know or realize that much of the variety of plants, most of the colors in our garden, many of the perfumes on our toilet tables, much of the beauty on many of our canvases, a great deal of the poetry in our language, and even a considerable development of the beauty sense in ourselves results from that rather mythical historical incident, dated an aeon or two back, when the young of the bee organized themselves into families, and became in every sense of the word true vegetarians.

In this great city and State, and in many other States, the business of the florist, of the grower of flowers, and of other horticultural products has graduated from the hap-hazard and shiftless methods of twenty-five years ago into a thoroughly comprehensive and systematic method, where order and executive management are in absolute control. To-day it is not only a pleasure to visit some of the floral and horticultural establishments and see the beautiful plants and flowers, but it is also pleasant and instructive to note the excellent system, thorough organization and strict accountability.

Capital no longer shuns or fears but seeks an investment in these industries as one of safety and profit.

This society has contributed much to educate the florist to more comprehensive ideas and methods, a forerunner of commercial integrity and honor. It has raised the industry from a plodding, groveling one to the dignity of an art and to the equal of any commercial or manufacturing interest. It will compare favorably with mercantile or banking establishments, requiring the highest skill, executive ability and knowledge of the government of men. The florist, the horticulturist of to-day is a man who by nature is a restless, changeful being. Were this otherwise there would be no advance in floriculture or horticulture.

He is tired of much of the old and is fond of the new things, new methods, with brilliant effects; consequently he wants immediate results. We can safely prophesy that as time goes on he will become more and more of an interrogator, and do more and more of his own thinking.

How little people think! This was expressed by a prominent gentleman at a public dinner in this city, when he exclaimed: "There are not two hundred people in New York City who think!" This, however, is a pessimistic view. We come here, many of us, or all of us, thoughtless of what we can best do to promote the welfare of the society. We come for a good time. Now, I do not object to a good time myself, and I infer from your iridescent faces that you do not.

Perhaps we are not unlike the two boys who were saying their prayers together. One started to say the Lord's Prayer, and when he said, "Give us this day our daily bread," the other nudged him, and whispered: "We've had bread long enough. Ask Him for pie." (Laughter.)

The age is intense. It is active in all pursuits. Its people are more sensitive and independent in thought, and it appears to me that some method must be devised to prevent the society from disintegrating into different organizations through devotees and lovers of special flowers by such action as shall provide all that they hope to receive from outside organizations. Unless this is done, it is not unlikely that we may address ourselves to diminished audiences, if not diminished members of the society.

What are the causes and what are the remedies? First, the society is not strong enough financially. This is the most serious cause. It can do little or nothing for its members to carry out their wishes, either by money or by exhibits or by premiums. It would be far better for the Society of American Florists if the devoted followers of special flowers contributed such sums of money as they now contribute or deem necessary for special exhibits to a general fund to be under the auspices and direction of this society. These could be known by such names as the Chrysanthemum Fund, the Carnation Fund, or such fund as any particular contributor or contributors may designate for their special flower.

The Chrysanthemum Society, the Carnation Society, and last, but not least, the brightest jewel in the constellation—the queen of flowers—the rose.

"Loveliest of lovely things are they
On earth that soonest pass away;
The rose that lives its little hour,
Is prized beyond the sculptured flower."

Theodore Parker says: "Every rose is an autograph from the hand of God on this world about us. He has inscribed his thoughts in these marvelous hieroglyphics which sense and science have these many thousand years been seeking to understand.'

Every enthusiast in his love for a special flower wants a special organization. These societies never would have been organized but for the necessity of having means to develop, improve and advance the claims of their favorite flower. It seems to have been thought a necessity, if these flowers were to be improved, at the present time. I have the honor to be a life-member of one of these societies—the American Rose Society. My heart is in the rose.

Yet I do not approve of these special societies if it be possible to care for them in this organization.

The instinctive and universal taste of mankind selects flowers for the expression of its finest sympathies, and the individual heart of man blesses flowers. How much more is this sentiment developed in his favorite flower, the love for which burns with increasing brilliancy and strength. How difficult to hold in check the outside action which he takes to advance and improve its beauty and its variety, when the parent society is powerless to assist.

How sad the spectacle which many of you witnessed of the bold enthusiast for his favorite flower, the rose, taking possession of the society's meeting at Detroit, and appealing to its members to become subscribers for life membership, when the Society of American Florists and Ornamental Horticulturists was in need of funds itself. Not the faintest effort was made to obtain subscribers for this society at that meeting, and yet it is hard to blame the enthusiasts of rose culture.

The remedy for it is to put money in thy purse and expend it freely for the general good.

There are other remedies. First, by organizing the society into an association, national, if possible, otherwise under State laws, with power to hold property. Second, encourage auxiliary societies in every city and large town in the country, which shall obtain their charters from the parent society and for which they shall pay a certain sum, per capita at the time of organization and annually thereafter according to the numbers and strength of the society. By this plan the society will be continually growing financially stronger and in time will be able to co-operate with the auxiliary society. It would be advisable to have a committee to investigate this proposition and report at the next annual convention. Third, by organizing the co-operative department of purchase and distribution into a corporation, which takes nothing from you but gives you money for good fellowship. What, then, is or ought to be our purpose? To co-operate in anything connected with our profession that benefits the greatest number. To co-operate for the diffusion of knowledge of floriculture and horticulture and the happiness of our members, and for the benefit and happiness of mankind. But if we cast a retrospective glance, do we not see that most that has been done has been largely for self-interest?

Has the purpose been broad enough, and if so, have we performed the duties which that purposes imposes? Of the great number of florists and horticulturists and those intimately connected with us by trade, have we as members more than a small percentage? If our society were sufficiently attractive and beneficial as it ought to be we should have thousands join our standard instead of hundreds.

Our membership should be more active, more energetic, take greater interest in the society and band together for the common good.

Our exchequer appears to have had hard-sledding, up-hill and on bare ground at that. Some process should be devised by those who have the welfare of the society at heart and who feel the responsibility which it carries with it by which money shall flow continuously into our treasury, with some assurance to those who desire to promote and advance the claims of their special flowers within the society that it will be done. We are not facing as we ought the problems which this purpose demands of us.

Our members should be constantly thoughtful and active for the society in obtaining new members, soliciting every one who trades with them to become a member of the society, following the example set by that distinguished horticulturist, C. M. Hovey, of Boston, when he was trying to build up and extend the Massachusetts Horticultural Society. He and his superintendent and clerks solicited every person who came to his nurseries or greenhouses to become a member of that society. In this manner I became a member at the age of twenty-four.

We ought to be more resolute, definite and active, and not, Micawber-like, "waiting for something to turn up."

It is said not by one step hath chance fashioned on the infinite stairway of time, nor ever came good without labor and toil in science or art. It must be wrought out through the muscles, born of the soul and heart.

Are we not floating with the current, instead of seizing the oars and with a firm hand and determination rowing up stream? We ought to work with a definite purpose, rather than from impulse, turning aside the thought of self, and laboring solely for the benefit of the society. In this manner only shall we harvest the greatest benefit. It will be found that it is the strength and definiteness of purpose that determine the measure of success. It is said that one of the most gracious features of nature is that it is capable of forming high and noble purposes. The mind overleaps its ignorance and fixes upon the wisest and the best. A clearly conceived purpose strengthens and inspires us, and the success of a purpose is the fulfillment of hope. I would not affirm that a purpose, even if cherished with sufficient will and energy, will always carry a man to a goal, but rather carry him onward and upward to some kind of success, sometimes greater than his first aim. It would be absurd for me to assert that, if you aim and strive with energy, you will be heads of corporations or famous in any industry or undertaking in which you may embark. Human beings have their limitations, and, while you would attain success, it would, or might be, in other fields. Failure, in the sense that it educates, leads to success. Show me the man who has made no failure in an undertaking, and I will show you a man devoid of ambition, energy or purpose. A fixed purpose is the eternal condition of success. It is wisely said that nothing takes its place. Talent, genius, push of circumstances or education will not. The world is bubbling over with educational men, aimless and helpless as the prodigal son who fed on husks, but I am glad to see that you, ladies and gentlemen, have escaped that sorry fate.

You have seen the co-operative department of purchase installed. Many of you have heard the discussions and know the object, the purpose, recommended to the committee appointed by the convention in Detroit; their report was read at the convention; it was printed with the other doings and sayings upon co-operation. The purpose was stated clearly, and the convention believed in the object to be attained by co-operation. The vote at that meeting was that the Executive Committee of the Society of American Florists and Ornamental Horticulturists, in their individual capacity, and without involving this society in any way whatsoever, should organize the corporation, as suggested by the committee. It was the sense of that convention at Detroit, in my judgment, that the corporation should have been organized, without involving the society, but since then, at the meeting of the Executive Committee, it was the opinion of a majority of the committee that the society did not give sufficient sanction for the organization of a corporation, and so voted to continue the co-operative purchase department, as it then existed, until the meeting of this convention.

These several suggestions and recommendations are worthy of your consideration.

As an illustration of the remarkable growth of floriculture and horticulture, we may instance the great West, where in some localities it has increased in population in twenty years, four hundred per cent. The increase of glass in the same time for floriculture and horticulture, is over eleven hundred per cent. No one could have foreseen this enormous and phenomenal growth. We here see some food for co-operation. Could we obtain all the parties who erected the glass as members of this society, and a profit of twenty-five cents a box for glass, it would net a sum of over hundreds of thousands of dollars. This for only one branch of industry. We can scarcely comprehend the magnitude of the uses of glass for floriculture and horticulture. Add to the society's members those interested in floriculture and horticulture and it is impossible to estimate the magnitude of the growth and the wonderful impetus it would give the society. It is said there is a lesson which even co-operation should learn, it has taught us all through nature, as well as in political and commercial combinations; the race which rests, and seeks the happiness of the hermit crab, very speedily decays. It is only in conquest over difficulties as they arise day by day that the solution lies. If co-operation is not to die out, or be choked, it must spread itself wider and wider. It affords the world all the advantages of competition, while it avoids the cruelties which arise from an uncontrolled and unbridled monopoly. The achievements have been so great in the past, the morality of the movement is so true and elevated, and the character of it so suited to the individualistic temper of the Anglo-Saxon race, that we cannot doubt the result, if only co-operators will earnestly work. With opponents so active, it is evident the assiduous propagation of co-operative principles is necessary.

I will trouble you again with a few statistics to remind you what co-operation has done in England and Wales. Up to and including 1893, total sales $2,995,530,380, net profits $256,080,345. To 1895, by the last report, inclusive, $4,070,547,775, net profits $360,075,120. The Leicester Co-operative Society Hosiery Manufacturers commenced in 1887 with a capital of only $150; on December, 1898, the capital had increased to $204,855.

I sincerely hope that you have examined into the merits of co-operation carried on by a corporation, so that the decision here rendered at this convention, when the subject comes up for action, may be voted upon intelligently.

Co-operation ought to be continued by the corporation, with competent officials to manage it. To-day all mankind, as never before, is interested in co-operation, to avoid being crushed body and soul by the colossal trusts. When co-operation is fully installed in the different industries it will sound the death-knell of trusts. Co-operation here will still require the parental, patient and fostering care of its friends, and of those who breathed into it the breath of life and have nursed it since its birth.

Our society had in its treasury, Jan. 1, 1900, $855.55 and a life membership fund of $585—this amount after sixteen years of association. Does this sum seem sufficient and satisfying for all the efforts that have been made for sixteen years of labor? Number of members 553?

It pales in comparison with the association of the Massachusetts Horticultural Society, organized in the year 1829, when floriculture and horticulture were in their infancy, obtaining 250 members the first year and increased to 500 members in the year 1845, with $53,000 in its treasury. This, too, when floriculture and horticulture had hardly begun to climb to the great proportions to which they have grown. (In fact, Mr. Edgar Saunders says that in 1853 the whole country was just beginning.) They have nearly a million dollars to-day. What plausible answer can we make in our defence that we have not accomplished more, when the country is teeming with people and wealth, to which the years from 1829 to 1845 bear no comparison? They established a home. We should have one, second to no other horticultural building in the world. Can we have it? Most assuredly if we will it, and make it a labor of love. A home which shall bring the society an income, with an experimental station in some suburban district, where everything in floriculture and horticulture can be tested and tried, from which we all would receive a great benefit.

This home should be a place where any member can come; it should be the Mecca of the florist, where he can seek and give information; a place for the diffusion of knowledge. I believe the first home of the society should be in the City of Greater New York, it being to-day nearly the center of advanced floriculture and horticulture and which during the life of some members here will increase to ten million inhabitants. When this shall be accomplished, and is on the road to success, it will be time to consider other cities, where it may establish a home.

For sixteen years we have had uncertain existence, and until the Society has a local home, a house it can call its own, its advance will be fitful and uncertain. With a local home, I believe the Society will gain largely in permanency and membership. It will take upon itself a new lease of youth and vigor, and its usefulness will be felt in all parts of the country. Every department of floriculture and horticulture should here be welcomed and find here a congenial atmosphere. We should aid and encourage the science connected with our art, that we may better appreciate the elevating and purifying influence derived from a better and more advanced knowledge, which it is possible for us to obtain in no other manner.

This is the age of rapid progress and development, the accumulation of wealth with means to gratify our tastes for the beautiful. It should be our aim to lead in floriculture and horticulture and to mould public sentiment in our art. We should stimulate it so that it would further embellish and adorn our homes, our private grounds, our public parks and buildings. We have an unparalleled country, with unequaled natural advantages and we ought to be able to give those seeking information the most advanced and practical ideas, so that each and every member of our Society would be better equipped to carry forward this profession and under the most favorable methods. Such are some of the possibilities stretched out before us, and to their accomplishment we should be inspired by a common purpose. We should allow neither discord nor difference of opinion to weaken our efforts, but work together harmoniously and unitedly, that we may be recognized in the community as a powerful influence in every branch of our profession.

The recommendation of the President in relation to a home for the Society has been considered by a committee consisting of Messrs. O'Mara, Rudd and Cartledge, who will make a special report to you on the subject.

It has been suggested that the past presidents of the Society be made honorary members. If you deem it wise to consider this question, it would be well to fix the status of such honorary members.

The interest developed in some of the manly sports connected with our Society is encouraging. Anything which is uplifting, which brings more of us together at our convention, is welcome, and, if twenty or more clubs organized for manly sports will come to our next convention, we will give them all encouragement and a hearty welcome.

The increasing demand for plants, both foliage and flowering, is no doubt due to a taste for something more permanent in homes than cut flowers.

An erroneous idea has gone abroad that cut flowers at some seasons of the year are exorbitantly high, but an analysis of the prices for the year will find that the average is lower to-day than the grower ought to receive. Adverse criticism is occasionally made, which is heralded abroad by the newspapers and periodicals, that extravagant prices for flowers are charged by the grower for the holidays. These criticisms are made by those who know little or nothing regarding the cost of cut flowers. It is the one season of the year in which the grower hopes to receive a remuneration for his efforts. He is obliged, oftentimes, to lose a crop of flowers for which he received nothing, in order that he may obtain the desired crop for the holidays when there is a great demand for them. Did he not do this, not over half the flowers could be offered for sale in the holidays. The high prices which we hear of are only for the few flowers which are called exhibition flowers. If the grower depended for his income upon this class of his product, there would not be a commercial foot of glass in existence for the growth of cut flowers. It is to the vast volume of second, third and fourth class flowers, and that demand which comes from the middle as well as the poorer class of people, who never pay high prices for them, that the grower, and in large measure the florist, depends for his success. Those who want, and will have, the very finest of flowers, select-

ing only the most perfect in form, foliage, size and coloring, and who are thoroughly conversant with these qualities, are willing, as they ought to be, to pay the price which is demanded for them.

Wild flowers, beautiful children of the woods and fields, is there not a future for them in the greenhouse? If made a specialty, would they not find a welcome and a place in every home? Here is another opportunity for youth to seize and develop.

As to the growth of our industry:—Very little commercial glass was in existence in 1810. In 1845, glass was laid in putty and butted, the edges being dipped in copal varnish, but it seemed to have gone in desuetude until recently. Since then the growth of floriculture and horticulture has been phenomenal, beyond even the imagination of the most advanced horticulturist of that day. It may be said that it has kept pace with the increase of railroads, if it has not outstripped them, in its activity and growth, and to-day we are the foremost nation in the growth of flowers and plants and in the extent of our greenhouses and floral establishments.

It was not until 1890 that the Census Bureau made special returns on floriculture and its growth as a distinct feature, and so it is impossible for me to make comparisons with former decades with any degree of accuracy; but let me picture to you what we had accomplished up to that time, 1896, and leave you to imagine what the census now under way will disclose.

The wonderful progress in the world of science during the past few decades, as exemplified in one of many instances in the building and equipment of a railroad, is no more worthy of note than is the advancement which we have made in our own art. The rapid stride in the development of the locomotive—in its speed, its power, its economy in fuel, and in its many novel appliances—is no greater than in our own vast greenhouses of the present day.

The hothouse of twenty years ago is as obsolete as is the small, slow, wood-burning locomotive of our childhood days. To keep abreast of the times we, as well as all progressive people, have been obliged to discard the old for the new. At great cost we have been forced to construct our greenhouses on entirely new plans, involving changes in foundations, frames, roofs, lighting, heating and ventilating, as well as to greatly increase their size.

Is there to-day an undertaking that can show a more glorious advancement than ours?

We are not simply pushing ahead; we are leaping forward with bounds. Our improved methods, our capital invested, and the beauty, the variety and the amount of our product is increasing at a rate which has no parallel in any other art.

To accomplish all this has demaned of us unceasing toil, patient vigilance and the keenest thought that brain can give.

We have a right to congratulate ourselves upon our splendid achievements.

But let us not rest content with our past accomplishments. As we have sown with unremitting toil and honesty of purpose, so we are entitled to reap the benefits which American manhood claims as its birthright.

The silken threads, beautiful in texture and brilliant in coloring, are in themselves a source of delight and of usefulness, but when banded together they become a fabric of a hundred-fold strength and utility.

So with us. Co-operation should lead us to enhanced benefits, to progress in our art, and to every form of success in added measure over what we have already accomplished.

"The multitude which does not reduce itself to unity is confusion."

Ladies and gentlemen, I appeal to you to clasp hands in unity of action, in steadfastness of purpose, and to show to the whole world the triumphs and possibilities of American brotherhood.

Secretary Stewart's Report.

Secretary Stewart was then introduced to the assemblage, and read his annual report, as follows:

One year ago we met at Detroit under circumstances peculiarly encouraging. Confidence and stability had returned to the business interests of our land; we had the advantage of a popular city, centrally located, and it was not unexpected that the convention of 1899 was most successful in all respects and the results highly gratifying to those intrusted with the management of the society's affairs. The usual full official report, a 168-page volume, was published in the fall and mailed to every member, and a detailed account of the proceedings at Detroit having also been widely disseminated through the trade papers at the time, it is not necessary now to make any extended report of that event. Among the strong features of the meeting were the fine trade exhibition, in which some sixty firms were represented, the interesting papers presented and discussed—especially those on "Rose House Pests" by Edmund M. Wood, "Hybridizing Carnations" by C. W. Ward, and the "Development of Public Patronage" by J. F. Sullivan—the very practical report of the work of our legislative committee, the spirited discussion on the subject of co-operative purchase, the unstinted hospitality of the Detroit people, the splendid illuminations in honor of our visit and the large number of flattering invitations received for the next convention. We accepted the invitation from the New York Florists' Club, seconded by the fighting Governor and Mayor Van Wyck, and here we are.

The annual meeting of the Executive Committee was held in New York city on January 16, 17, 18, 1900, all the members of the committee being present except one. Besides the usual convention preliminaries, many other important subjects closely connected with the society's welfare were considered with careful deliberation, among them the organization for co-operative purchase of greenhouse supplies. The committee feeling that, in a matter involving so heavy a responsibility, the society's wishes were not indicated with sufficient clearness in the vote of instructions passed at Detroit, finally left the plan undetermined and the subject will be again brought before the society at this convention.

It being announced that the New York Florists' Club proposed holding a horticultural exhibition in connection with this convention, the committee voted to appropriate twelve silver and twelve bronze medals for distribution thereat, under the direction of the New York Florists' Club. It was decided that the department of nomenclature supervision might now be transferred from the care of a special committee to a regular botanist, and Dr. N. L. Britton of the New York Botanical Garden was appointed accordingly to this office. Sub-committees were constituted to investigate and report to this convention on the matters of society incorporation, and a permanent society home.

The Department of Plant Registration has moved along acceptably since our last report; it has been the means of adding several very influential names to our permanent membership list; its provisions are willingly complied with, it pays well and is evidently approved by those who have had occasion to avail themselves of its advantages. The registrations in this department since our last meeting were as follows:

August 25, 1899, by Lager & Hurrell, Summit, N. J., Cattleya Gigas Atropurpurea and Cattleya Hardyana Robbiana.

September 18, 1899, by Peter Henderson & Co., New York, Canna, Governor Roosevelt.

September 21, 1899, by W. E. Hall, Clyde, O., Geraniums, Little Pink and Clyde.

September 21, 1899, by M. H. Walsh, Woods Holl, Mass., Rose, J. S. Fay.

November 1, 1899, by D. Carmichael, Wellesley, Mass., Carnations, Eleanor Ames and May Whitney.

November 13, 1899, by Conard & Jones Co., West Grove, Pa., Canna, Olympia.

November 17, 1899, by Alex. MacLellan, Newport, R. I., Chrysanthemum, Victoria.

December 4, 1899, by Robert Montgomery, Wellesley, Mass., Rose, Mrs. Oliver Ames.

December 26, 1899, by Benj. Dorrance, Wilkesbarre, Pa., Rose, Sara Nesbitt.

February 1, 1900, by Conard & Jones Co., West Grove, Pa., Rose, New Century.

March 5, 1900, by C. Warburton, Fall River, Mass., Carnation, Cressbrook.

March 7, 1900, by C. H. Gerbig, Archibald, Pa., Geraniums, A. N. Gerbig.

March 13, 1900, by Lager & Hurrell, Summit, N. J., Cattleya Trianae, Nettie Martin.

April 2, 1900, by Nathan Smith & Son, Adrian, Mich., Canna, The Express.

April 2, 1900, by Lager & Hurrell, Summit, N. J., Cattleya, Trianae Aurantiaca and Trianae Fairy Queen.

April 5, 1900, by the Floral Exchange Co., Philadelphia, Pa., Rose, Queen of Edgely.

April 16, 1900, by J. H. Dunlop, Toronto, Ontario, Rose, Lady Dorothea.

April 20, 1900, by Lager & Hurrell, Summit, N. J., Cattleya Labiata, Mrs. W. C. Squier.

June 2, 1900, by Richard Gardner, Newport, R. I., Canna, Bobs.

July 15, 1900, by Arthur Griffin, Newport, R. I., Melons, Griffin's Hybrid and Sea Verge.

July 15, 1900, by M. H. Walsh, Woods Holl, Mass., Roses, Sweetheart and Debutante.

August 9, 1900, by Geo. Wittbold, Chicago, Ill., Nephrolepis Wittboldii.

A number of purchases of glass and rubber hose have been made for parties applying through the department of Co-operative Purchase, a trifling commission being added in each case, the profits therefrom being devoted to stationery, postage and other expenses incurred in the department.

The Secretary's experience during another year strengthens the favorable opinion previously expressed regarding the system of membership assessments now in operation and there seems no room for improvement in this department. The number of individuals who paid in 1898 but not in 1899 and have therefore been dropped from the membership roll is 46 and the number of resignations 2. The full number of members recorded as paid up for 1899 is 553 inclusive of 26 life members, a net gain of 119 over the previous year. The new names added to the list of members in 1899 numbered 148, one each from California, Colorado, Connecticut, Georgia, Iowa, Louisiana, Maryland, Montana, Tennessee and Texas; two each from Kentucky, Massachusetts, Minnesota, New Jersey, Rhode Island and Wisconsin; four from Canada, six from Missouri, seven from Indiana, seventeen from Michigan, nineteen from Illinois, twenty-one from New York, twenty-five from Pennsylvania, and twenty-seven from Ohio. Since our last meeting three members have died: Alfred Henderson, September 5, 1899, J. M. Jordan, February 4, 1900; Harry Dale, July 15, 1900.

The list of plant introductions in America, published in the annual report for 1899, described 189 new things. This included twenty carnations, seven roses, five cannas, twenty dahlias, fifty-six chrysanthemums, eight sweet peas, twenty-five geraniums and forty-six miscellaneous. The list of canna introductions fell off very heavily from the previous year.

We had hopes of securing for this convention a lower excursion rate for our members than the usual fare-and-one-third, but all efforts in that direction were futitle. It is gratifying, however, to know that the concession this time extends over practically the entire country, and, further, that our organization enjoys the good will of the transportation authorities in the fullest sense, no instance of the misuse by our members of their special privileges having yet been recorded.

From a territory so strong horticulturally as that in which we meet this year large additions to our membership are naturally expected. The confident spirit of the times, so well evidenced in the substantial gains made at Detroit, is still with us, and early in the year it became apparent in the Secretary's office that New York's convention would be a record-breaker. It is our privilege now to rejoice that the period of reaction, the days of depression and uncertainty are, at least, behind us, and that once more our honored society is on the high road of prosperity.

The continued co-operation and cheerful assistance which the Secretary has received during the year from the members is not the least among the factors in the Society's prosperity, and he takes this opportunity to acknowledge the same with grateful appreciation.

The secretary's report was loudly applauded.

Treasurer Beatty's report showed receipts of $2,247.05 and expenditures of $1,759.59.

There are now twenty-three life members in the society.

Appointment of Judges.

Plants: Herman Lips, J. F. Huss and Robert Hunnick.

Cut flowers: William J. Smyth, J. N. Champion and A. Gude.

Boilers and heating apparatus: Alexander Montgomery, F. H. Dressel and John Coombs.

Greenhouse appliances and flowerpots; C. W. Ward, A. Wiegand and W. W. Coles.

Florists' supplies: F. C. Weber, A. Gaedeke and Philip Breitmeyer.

Bulbs and seeds: William Plumb, W. H. Siebrecht and Alfred Zeller.

Invitations.

Invitations to the society were received from Mayor's office, City of Niagara Falls; office of Commissioners of State Reservations of Niagara Falls; the Chicago Florists' Club; Saratoga Convention Bureau; Park Commissioners of Buffalo; and the Chamber of Commerce of Detroit.

Then followed the reading of reports of the State vice-presidents:

Reports of Vice-Presidents.

Connecticut.

John N. Champion, State vice-president for Connecticut, reported no increase in membership in the society over previous years in his State. The spring trade was better than any time since 1893 and prices ranged about 10 to 15 per cent. over last year. Florists sold out early. During the holidays the plant trade seemed to take hold of the market, everything in pots sold on sight. Connecticut being so close to New York city the wholesale men reaped quite a harvest from the Connecticut retail men. The weather had been very hot. The glass surface had been greatly enlarged this season, over 200,000 feet being added, and nearly every florist in the State having either built or remodeled their old houses to some extent. Reported increased trade for hardy and herbaceous plants, such as larkspurs, hollyhocks, peonies, etc.

One new seedling was a white carnation, named Elm City. He mentioned the reorganization of the New Haven Horticultural Society and stated the society now had a membership of seventy-five and would be well represented at the convention.

Iowa.

J. I. D. Fulmer, State vice-president of Iowa, reported. They had a large society out there, but the distance to the eastern coast was so great he feared few would be present from Iowa. He reported an increase of 50,000 feet of glass in the State, which meant the shipping in of thousands of dollars worth of cut flowers during the coming season. Very few shows would be made in the State this year, the State fair being the only one of any account.

He could not recommend anything for the betterment of the society but lopping off "Ornamental Horticulturists" from the name of the society, and in meeting in Buffalo in 1901.

New York—East.

To the president and members of the S. A. F.—Once more it is my privilege to report very satisfactory trade conditions existing in Eastern New York, and a most hopeful outlook. This favorable state of affairs is also augmented by the fact that greenhouse builders have been busy during the period that has elapsed since the society last met, orders in this line having been considerably in excess of those for last year, both for florists and private places.

As an indication of the feeling prevalent among growers of florists' stock in this vicinity, I beg to quote the following, received from the proprietor of one of the largest establishments: "The business year just past has been entirely satisfactory. The demand for all sorts of plants has been strong and the supply not overly large. So far as I can see the outlook is good, and indications are that the strong demand will continue. Possibly there

may be a shortage in some few lines of plants, but I believe there will be a good supply of the bulk of commercial florists' stock, and that the demand will fully equal the supply. I expect that up until the 1st of January the presidential election will cause some disturbance in trade, but as soon as the election has been determined upon, business will settle down into the usual lines, and I apprehend that florists will have one of the best presidential election years in their history."

Business in the city itself has also maintained its previously reported satisfactory status, and it is gratifying to record that no business failure of any consequence in this trade, so far as has come under my observation, has occurred in New York city during the past twelve months.

The auction branch of the business has been very well patronized during the period mentioned, large quantities of stock having been disposed of through this channel. A feature in connection with these sales here has been the quantities of Japanese plants and curiosities in the horticultural line disposed of, and the high prices obtained for same in some cases, there having been several individual sales of this class of stock within the year.

A notable fact in connection with the cut-flower market is the earliness in the arrival of chrysanthemums each year. The first to reach this market in the fall of '99 was the variety, "Lady Fitzwygram," on September 5, followed by "Madame Gastellier" on the 10th, and a red variety, comparatively new in this locality, named "Pride of the Market," which arrived Sept. 11th. The demand for chrysanthemums has kept well up to that of previous years, and the prices for same have been well maintained.

During the season the committee of the Chrysanthemum Society of America for this district granted certificates to the following kinds, namely: Walter Molatsch, Eulalie, White Major Bonnaffon, Stellata (Gold-mine), Superba, Margaret Enright and Souci.

In the matter of exhibitions, a very successful show was held in March in Eden Musee by the American Rose Society, at which time, also, occurred the annual meet of that association. That this show was popular was attested by the very large attendance during the days in which the exhibition was held. The quality of the stock shown was a revelation, demonstrating the very high standard of cultural perfection which the American rose growers have reached. Another show was held by the society in June; but, owing to the lateness of the season, many exhibits could not be staged. This exhibition, however, was particularly educational and instructive, evidencing the advance which our rose growers are making in the raising of seedling varieties. Particularly worthy of mention are the crosses of Rosa Wichuriana with the standard varieties of teas and hybrid teas.

As has already been announced, a grand horticultural exhibition occurs in connection with the present meeting, under the auspices of the New York Florists' Club, gotten up particularly in the interests of the private gardeners.

Our neighboring cities and towns have held their usual flower shows, and there does not appear to be any diminution in the popular interest therein.

The obituary for the year just passed contains the names of some of our prominent co-workers, including those of Mr. Alfred Henderson, Mr. E. S. Carman, Mr. Isaac Hicks, Mr. John M. Hodgson, and Mr. William H. Brower.

Among miscellaneous items deserving of notice may be mentioned the completion of the magnificent greenhouse structures in the Botanical Garden at Bronx Park; also the erection of a range of greenhouses in Central Park, New York; an addition of a spacious palm house to the range in Prospect Park, Brooklyn; the establishment of a school of agriculture and horticulture at Briarcliff Farms, near Sing Sing, New York. In this school students are instructed in general horticulture, and a study of the market conditions existing to-day is to be made a specialty.

The agitation continues for the establishment of a general flower and plant market in New York. A petition for the creation of such an institution has been presented to the municipal authorities, has passed the City Council, and been recommended by that body to the Board of Aldermen for favorable consideration. This petition asks that a portion of the building proposed to be erected in connection with the Clinton Market, Canal and Washington streets, be used for the purpose of a plant market.

An effort has been made the past year to establish a society known as as the New York Horticultural Society, its object being to create a greater interest in all matters horticultural among the general public. This institution is still in embryo, but its promoters are sanguine of its ultimate success, judging from the cordial recognition it has received at the hands of some of our leading citizens.

Among the new books issued during the past year by publishers in this city may be mentioned Ornamental Shrubs for Garden, Lawn and Park Making; and an American edition of the Orchid Growers' Guide (Putnam); Landscape Gardening (Orange Judd Company); Commercial Violet Culture, and Plant Culture (A. T. De La Mare Ptg. & Pub. Co., Ltd.); and the Cyclopedia of American Horticulture (MacMillan), the latter of which may be termed the crowning effort in American horticultural literature of the century just ending.

The florists of New York and vicinity feel deeply honored by the presence of the Society of American Florists in the city this year. It is their earnest wish and hope that the stay of the delegates with us may be one of both pleasure and profit, and that it will ever remain with them a pleasant memory.

Respectfully submitted,
ALEX. WALLACE,
Vice-President.

No other reports of State vice-presidents were received.

Report of the Legislative Committee of the S. A. F.

Read by Mr. Patrick O'Mara.

Gentlemen: Since the last convention several matters of importance have been brought before the Legislative Committee.

First was the effort at co-operation with the Conference Committee of the Implement and Vehicle Association. The matters which that association had in hand and which it was trying to reach were:

1. To make the express companies pay the revenue tax on receipts.
2. To get a parcels-post system.
3. A uniform freight classification.

It was contemplated to send a committee to Washington for the purpose of urging these matters upon Congress, and your committee offered to co-operate with said Conference Committee in any effort in that direction. Nothing having been heard from the gentlemen composing that committee as to ways and means to be adopted, correspondence was begun with them, the final result of which was that we learned that after much effort they found conditions in Washington were such that it was impossible to make any progress with the two matters first mentioned, and that they were obliged to postpone action upon them for a more favorable time. The matter of freight classification is still in the hands of the freight committee, and no effort at active co-operation has been sought by them with your committee.

A bill was introduced in Congress by the Hon. James W. Wadsworth, chairman of the Committee on Agriculture, on Dec. 4th, 1899, and referred to the Committee on Agriculture. On Feb. 12th, 1900, it was reported with amendment to the Committee of the Whole House of the State of the Union and ordered to be printed. This was known as H. R. No. 96.

A bill was introduced into the U. S. Senate, known as Senate No. 2571, by the Hon. Geo. C. Perkins on Jan. 19th, 1900, read twice and referred to Committee of Agriculture and Forestry.

Both of these bills were in general effect the same as those introduced in 1898 referred to in the report of the Committee last year and each of them contained a section exempting florists' stock from the provisions of the act in interstate commerce, which amendment was obtained by your Committee at that time. Upon receipt of information that these two bills were pending, the chairman of your committee opened correspondence with the introducers, copies of which with the replies are herewith presented. Neither of these measures was enacted.

A bill was introduced in the New York State Legislature known as Assembly No. 901 relating to insect pests on nursery stock—this bill also contained the amendment which was offered and accepted by your committee at a previous session of the Legislature. The chairman of your committee wrote to the introducer of the bill sending him a schedule of plants the same as sent to Washington. That bill was not enacted.

Information was received that a bill was pending in the Dominion Parliament to remove the restrictions previously imposed upon the importation of nursery stock. Upon receipt of that information, the chairman of your committee wrote to the Minister of Agriculture asking that roses grown in greenhouses be entirely exempt from the provisions of the act; a copy of the letter is presented herewith. Your committee are glad to report that the suggestion was adopted and, by special dispensation of the Privy Council, roses grown under glass and imported in leaf are now allowed entrance into Canada as greenhouse stock. This your committee considers a very important concession.

The chairman of your committee received an appointment on the Executive Committee of the Merchants' Association of New York, which has been doing very good work in an effort to improve the administrative features of the present customs laws. Up to the present time nothing further has been done than to bring matters before the authorities, but from the progress made, it looks as if some objectionable features of the administrative act can be done away with and better service obtained through the co-operation of the officials and the Merchants' Association.

New York, Feb. 21, 1900.

Hon. Geo. C. Perkins,
Washington, D. C.

Dear Sir: We have just been informed that there is a bill before the Senate, No. 2571, introduced by you, which has been referred to the Committee on Agriculture and Forestry. As we are not aware who is chairman of that committee, we take the liberty of writing to you and suggesting an amendment, which we enclose. This, as you will see, aims to provide for the intelligent enforcement of the bill should it become a law. We found on previous occasions that the average executive officer of the government has not sufficient botanical knowledge to distinguish between what is commonly known as "nursery stock" and what is commonly known as "florists' stock," so endless confusion results in the application of such measures in ordinary commercial life.

We trust you will give this matter your careful consideration and refer it to the chairman of the Committee on Agriculture and Forestry with as strong a recommendation for its adoption as you may feel like giving.

Yours truly,
(signed:) PATRICK O'MARA,
Chairman Leg. Com. S. A. F.

(Enclosed.)

Add to section 8 as follows:

A.—Greenhouse plants grown under glass for either flowers or foliage, such as palms, ferns, orchids, cacti, chrysanthemums, azaleas, roses, carnations, violets, heliotropes, begonias, cannas and petunias; but roses which have been grown in the open ground are not exempted by this act.

B.—Herbaceous perennials, the tops of which die down in winter, such as perennial phloxes, paeonias, anemone japonica, aquilegias, delphiniums, dicentras, funkias, helianthi, spirea palmata, and all other herbaceous spireas, tritomas, veronicas, yuccas, etc.

C.—Herbaceous bedding plants such as coleus, verbenas, pansies, alternantheras, echeverias, achyranthes, ageratums, asters, etc.

D.—All conifers.

E.—Bulbs, tubers of all kinds, such as lilies, hyacinths, narcissi, tulips, caladiums, irises, cannas, dahlias, tuberous begonias, gloxinias, water lilies and all aquatic plants, tuberoses, tigridias, etc.

UNITED STATES SENATE
Washington, D. C., Feb. 22, 1900.

Mr. Patrick O'Mara,
35 Cortlandt Street, New York City.

Dear Sir:—I am in receipt of yours of the 21st inst., with copy of proposed amendment to S. 2,571. I will gladly refer it to the chairman of the Committee on Agriculture and Forestry for his consideration and action.

The bill was prepared by a committee of scientific and practical horticulturists and floriculturists from six different States. Yours very truly,
(Signed) GEO. C. PERKINS.

HOUSE OF REPRESENTATIVES.
Washington, D. C.

Hon. James W. Wadsworth,

Dear Sir:—A short time ago I saw in one of the horticultural papers that a Bill was before the House restricting the importation of nursey stock, also that there was a provision in it exempting florists' stock from the provisions of the bill affecting nursery stock. To avoid complications, should the measure become a law, it seems to me that it would be well to have the exemptions explicitly stated, and I beg leave to submit herewith a classification to be embodied in the Bill, which I think would result in having the law administered in a more satisfactory manner when the time comes.

I am writing by this mail to Mr. Benjamin Durfee, of Washington, who is a member of the Legislative Committee of the Society of American Florists, and have asked him to communicate with you in reference to it. Possibly you may remember that I appeared before your committee in relation to the same matter during the last session of Congress.

Hoping this will have your favorable consideration, I have the honor to remain. Yours, very truly.
(Signed) PATRICK O'MARA,
Chairman Leg. Com. S. A. F.

Committee on Agriculture,
House of Representatives, U. S.
Washington, D. C., 16 Feby., 1900.

Mr. Patrick O'Mara, New York, N. Y.

Dear Sir:—Your letter of the 15th inst. has been received and contents fully noted.

H. R. 96, to provide rules and regulations governing the importations of trees, shrubs, etc., etc., is in charge of Mr. Haugen of this committee and on the 12th inst. he—by order of the committee—reported an amended bill to the House, a copy of which (with the report) is enclosed. I have referred your letter to him for his consideration. Very truly yours,
(Signed) J. W. WADSWORTH.

New York, April 13th, 1900.

Hon. Sydney Fisher, Minister of Agriculture, Ottawa, Canada.

Dear Sir:—We have been informed by several of our customers in Canada that there is an act before Parliament now permitting the importation into Canada from the United States of nursery stock after fumigation. We desire to call your attention to the fact that roses are generally included in nursery stock, and yet there is a vast difference between those grown as nursery stock and those grown as florists' stock. It is safe to say that 90 per cent. of the roses distributed in the United States are grown in greenhouses, remote from orchards and almost beyond the possibility of being infested with the San Jose scale or any other insect harmful to orchards. Under these circumstances, we believe it would be wise to make an exception in favor of roses grown in greenhouses, because no danger need be apprehended from their introduction and there are certainly thousands of people in your country who are prohibited from getting new and rare varieties from this country, which can only be had in the growing state.

We have the honor to remain, yours very truly, PATRICK O'MARA,
Chairman Leg. Com., S. A. F.

Ottawa, Apr. 16th, 1900.

Dear Sir:—In reply to your favor of the 13th inst. addressed to the Honorable the Minister of Agriculture, I beg to inform you that a Special Order-in-Council, of which I enclose you herewith a copy, has been passed permitting the importation of greenhouse-grown roses into Canada. Yours obediently,
(Signed) JAMES FLETCHER,
Dominion Entomologist.

New York, Feb. 21st, 1900.

Hon. Alonzo W. Litchard, Albany, N. Y.

Dear Sir:—We take the liberty of writing to you in relation to Assembly Bill No. 901 now before that body, said bill having been introduced by you. We notice that florists' stock is exempted from the provisions of the act, but in case it becomes a law, we fear

that there will be the usual complications unless the exemptions are made so plain that the executive officers of the State can have no difficulty in interpreting the law and applying it intelligently. For this reason, we beg leave to offer you the enclosed amendment, trusting it will receive your careful consideration and meet with your approval. Yours very truly,

(Signed) PATRICK O'MARA,
Chairman Leg. Com., S. A. F.

All of which is respectfully submitted. PATRICK O'MARA,
JOHN N. MAY,
BENJ. DURFEE,
Com.

Committee on Purchase.

President Wood reported for this committee. He said: At the Executive Committee meeting I made a report and had a charter drawn up, and by-laws for incorporation. The charter was rather broad and I suggested limiting it to glass, pipe, hose, paints and oils. There was quite a long discussion in the committee, and there appeared to be an opinion that the convention did not give sufficient sanction to organize a corporation. There were members of the committee who were willing to take stock in the corporation, but they felt that the society had not given sufficient sanction for it; so they voted to continue the Purchase Department.

Now, I can add very little to what I have already said. The department will have to go into incorporation in some form or other if it is to be continued. It would seem unfortunate not to have a corporation because I believe that it would be of great benefit not only to the society, but to each member who avails himself of purchasing of that committee. The report of Mr. Wood was made a special order of business for to-morrow.

There was no response for a report of the Committee on Claims.

The Committee on Establishing a Home.

Mr. O'Mara reported no opportunity had been afforded to meet and discuss plans, ways and means, owing to very serious defect in the appointment of the committee, in that no funds had been placed at its disposal, and as there was some distance between New York, Chicago and Philadelphia, and the railroads would not carry them free, they could not very well meet to show plans to each other. It was intended, however, when here to hold a meeting and try to develop some plan by which the matter could be put in shape for the next committee to take it up, and carry out the work outlined by this committee.

The committee was granted twenty-four hours to formulate and present its report.

Committee on Incorporation.

Mr. Beatty reported as follows:

The necessity of incorporating the Society of American Florists and giving it a legal existence is so obvious as not to require mention at this time.

No progress has been made toward acquiring a national charter, and it does not appear to your committee that further effort in that direction is advisable.

After investigating more or less fully the incorporation laws of the various States, your committee finds that the laws of the State of Indiana are so broad and so liberal that this society can be incorporated under them without changing materially its present constitution and by-laws or altering its present methods of work.

We therefore recommend the appointment of a committee of three with power to incorporate the Society of American Florists, it being understood that before final action on their part, full details shall have been submitted to the members of the Executive Committee of thia society, and have been approved in writing by three-fourths of the members of said committee.

The thanks of your committee are due to Mr. W. J. Vesey, of Fort Wayne, Ind., for legal advice kindly and freely given.

H. B. BEATTY,
W. N. RUDD,
Committee.

The convention adjourned at 11:30 until this evening.

Tuesday Afternoon.

The Ladies' Drive—Brooklyn Division.

At 1.45 o'clock p. m. the members making the excursion to Brooklyn took the "L" trsin to the bridge and then via Fifth avenue "L" to Greenwood Cemetery, where thirteen carriages awaited them. A delightful drive through Greenwood and along Fort Hamilton Parkway to the foot of Prospect Park and along the many roads to the Vale of Cashmere, thence to Sleepy Hollow was indulged in.

Here an enjoyable supper was prepared under the management of the New York Florists' Club, and the ladies of the society, with the members to the number of about two hundred, were entertained, Springer's Orchestra supplying the musical entertainment.

At the conclusion of the banquet Mr. A. H. Langjahr, of Brooklyn, as chairman, in welcoming the the members of the society, said:

Ladies and Gentlemen: As I have been instructed to return you in time for the president's reception and the entertainment this evening, I will not take up your time with a long speech of welcome.

We have with us our talented friends, who, I see by the expression on their faces, have been to see the Muses. I wish to welcome you in the name of the committee, who feel highly honored to have you with them to-day. Their only regret is that they had not had you with them all day. We are but six miles to old ocean, Flatbush, the beautiful mount of homes.

The chairman then introduced Mr. James Dean, who said:

Ladies and Gentlemen: We have been to-day fortunate in having so many ladies with us, but unfortunate in that the Mayor was unable to attend, and also our Park Commissioner, Mr. Brower, but if they had known of the wealth of beauty we have with us they certainly would have been here.

The New York Florists' Club is highly honored with your company, and I hope you have enjoyed yourselves.

We are on historic ground, where one of the battles of the Revolution was fought, and I must say as a citizen of Brooklyn that I was exceedingly well pleased with the park as I drove through it, and we certainly are indebted to Commissioners Brower and De Wolf and Mr. Thompson, who has charge of our greenhouses in the park, for a great many favors. (Applause.)

Mr. Scott, of Buffalo, upon being presented to the audience, was greeted with applause, Mr. Smith, of Washington, no doubt by way of encouragement, saying "Great Scott."

Mr. Scott said:

"Mr. Chairman, Ladies and Gentlemen—I felt honored to-day when your chairman whispered to me I was one of a committee of young men (laughter, oh! oh!) to entertain the ladies to-day or to accompany them. I am sure I speak for you all when I say we are more than pleased with the glorious afternoon we have had. The view of that magnificent cemetery was well worth the journey alone, and then this unparalleled park! There may be larger parks, but for diversity of scenery, for its care and the excellence of its maintenance I doubt if there is an equal in the world. (Applause.)

"Those who were fortunate enough to attend the convention held in New York twelve years ago will remember the open hearted welcome given us, and this is quite in keeping with it. I am particularly proud to see so many ladies here. I wish they had all come here and the men all gone up on the other journey. (Laughter.)

"We owe a great deal to the ladies in the business. No doubt many of the beautiful young ladies around me hardly realize how much their mothers helped their fathers in their business in the earlier days. They have done it and God bless them for it. (Applause.)

"We thank you from our hearts for the royal way you are treating us, and I hope I will see every one of you and many more in our beautiful city of Buffalo a year from now." (Applause.)

Mr. Smith, of Washington, being introduced, said:

"I think we ought to pass a vote of thanks for the excellent manner in which we have been treated to-day by the management. One of the grandest memories of our visit will be the trip around this magnificent park. My friend, Mr. Scott, or Great Scott, has seen many European parks, and I have seen them later, perhaps, and Brooklyn can well be proud of its magnificent park. There are few parallel, none superior. (Applause.)

The chairman, in presenting to the audience Mr. Carmody, of Indiana, said: Florists as a rule always have something peculiar; Mr. Carmody is in the nature of a saint. (Laughter.)

Mr. Carmody, on being requested to stand on a chair, as he was short, said he was simply short of breath. His extreme modesty, he said, commended him to veil himself, whereupon he placed a huge vase of flowers before him, saying: "Hence, I disappear behind this beautiful veil."

Joking aside, however (removing the vase of flowers), the remark of my friend, Mr. Smith, is a most sensible one, the last one he made that it is getting late and we all want to get home, and I think, agreeing with me in that remark, you will excuse me from saying anything further. (Laughter and applause.)

There were 202 participants in this enjoyable outing, and all returned in time for the president's reception and the evening's entertainment.

At 7 p. m. the members dispersed.

New York Division.

About 125 ladies, with their escorts, enjoyed the drive through Central Park, Morningside Park and the Riverside drive, stopping at Grant's Tomb. Everybody had a most enjoyable time.

Tuesday Evening, Aug. 21.

President's Reception.

Led by Mr. Jos. Forsyth Johnson, the president's escort, consisting of Secretary Wm. J. Stewart, Treasurer H. B. Beatty, President Patrick O'Mara of the New York Florists' Club, accompanied Mr. and Mrs. Wood, to the platform while the cornet soloist charmed the assemblage with the beautiful strains of "Jernsalem." Other ladies assisting Mrs. Wood and the president to receive were Mrs. Beatty and Miss Stewart.

The vast assemblage passed in front of the platform, where President Wood and President O'Mara gave each one a hearty handshake, the orchestra discoursing sweet music the while.

The sight was indeed inspiring; the happy faces of the ladies and the smiles of the sterner sex reflecting the evident pleasure experienced and the good fellowship existing.

The reception lasted nearly an hour. Over 1,000 people were present at the President's reception.

The music provided by the orchestra was first class in every particular and commanded applause at the finish of every selection rendered.

Mr. Robert Kift, of Philadelphia, then gave an illustrated lecture, entitled

Floral Decoration.

The title of my paper covers the whole field of floral arrangement, the principal divisions of which are church, house and table decorations. Any one of these could be but touched upon in the limited time at my disposal. I shall consider them, therefore, in the broad sense, as in the views which I have here collected, examples of all classes of decorative work will be found.

We read of the splendors of ancient Roman and Egyptian banquets where flowers were said to have been so lavishly used; unfortunately I have no photographic views of these to offer you, and it may be that newspaper reporters were also abroad in the land, then as now.

While we may not hope to rival these celebrated fetes for some time to come, there is no doubt that the use of plants and flowers in decorations at all social functions is rapidly becoming more general.

Large private entertainments or balls are now given by individuals that for lavish display far exceed the former united efforts of the entire four hundred. Wedding festivities are also, if possible, made greater society events, and at times tax the resources of the florist to the utmost.

Perhaps the greatest factor for the increasing recurrence of these elaborate displays is the occasional "carte blanche" order that, falling into good hands, is carried out with judgment and discretion, thereby producing a floral effect that delights all and encourages other patrons to even greater efforts when the occasion arises.

On the other hand, money expended for flowers is too often considered wasted, or of least moment. Editorials even, have been written in the daily press, deploring the extravagant and senseless waste for such lavishment of flowers upon these occasions. The reverse is the case, however, as the delicacies and the music, considered so absolutely essential, are soon forgotten, while the decorations, greatly admired at the time, make a deep and lasting impression.

When an architect plans a house he sees in his mind's eye just how every room will look before a line is drawn. The floral decorator should be able to do the same with his work. A look over the ground and a study of the color effects of the furnishings and permanent ornamentations will show him just where the special features that he has in his mind can be displayed to the best advantage.

Every arrangement of flowers or plants, be it ever so small, should have some little touch to distinguish it, some individuality. Every room should have a point to which special attention is given so that on account of its novel or tasteful arrangement it attracts attention. It is these special features that call forth admiration; they make a

ROBERT KIFT.

lasting impression that is carried away; they are the life of the work.

Every decorator should provide himself with neat wooden and wicker pedestals of various heights. Iron stands, some adjustable and fitted with tipping devices to hold a plant securely on its side, are also useful. Pot covers in good assortment of sizes are indispensable.

All the above, except a few for special occasions, should be painted a foliage green, as it is the plants that add beauty and grace, the covers and pedestals are merely accessories, and should be concealed as much as possible.

Tall floor vases for chrysanthemums or American beauty roses, are almost a necessity. These can now be had in silvered wicker with zinc lining, not better than glass, but much more lasting.

If the order calling for a house decoration is elaborate, have a base of operations; put your boxes in the laundry or other cool room in the basement, and work from there; this confines the litter mostly to one place and keeps the stock in better form.

The foliage and flowers for each room should be selected and boxed separately from a list previously made out, showing the different points where each lot is to be used, which when ticked off, makes the order complete. This should follow with all plants, pedestals, pot covers, vases and other accessories, which when checked again, insures the safe return of all that had gone out, and means a great saving in the course of a season's work.

Those of the trade who make a specialty of large decorations, soon become more than mere florists, and appropriate the word "decorator." They also add to their force upholsterers,

carpenters and electricians, and are obliged before long to hire storage room for the properties that accumulate, and which, by re-arranging, can be utilized time and time again. Their use will be demonstrated in the views later on.

I must also speak of the kneeling stool or prie dieu. Some form of this useful article should be found in every decorator's stock, it being indispensable at a house wedding, and is also often an essential feature at the church.

Within the past twelve to fifteen years the decorator has called to his aid the evergreens of the woods. Laurel branches and wreathing made of their sprays were first used; then that grand Southern vine, the wild smilax, was introduced by A. C. Oelschig, of Savannah, Georgia, in 1888. I have an interesting letter from Caldwell, the woodsman, who, while he does not claim to be the original smilax man, is without doubt the genius who found out its commercial value, and having faith, devoted his whole time to collecting and getting it before the public. He invented the light packing case and obtained special express rates; so that now the material can be had in almost any city of the Union and Canada during its season. He thinks the entire output of last season would probably reach over 3,500 cases. Palm leaves and crowns, as well as leucothoe sprays and galax leaves, are also used extensively. Wild smilax adapts itself to almost any kind of wall or suspended form of decoration; each spray seems as if especially selected for arranging over this picture or mirror, or over that doorway, as the case may be. The only danger lies in its too promiscuous use, as then its naturally irregular and graceful form is lost in the mass of foliage.

I could describe a number of beautiful effects made by combinations of flowers and foliage, but think you will be able to get a better idea from the pictures about to be thrown on the screen, nearly all of which have one or more features to commend them.

I will only say try and let your individuality show in the work; do not rest satisfied with something that any one who had the material at hand could do. The mere setting a few plants about in the corners, crowding some ferns together on the mantel, and hanging strings of smilax in which a few carnations have been wired will not build up a reputation. Customers rarely know what is required; they expect the florist to have ideas; they look to him to tell them what they should have, the rest being merely a question of price.

In conclusion, I believe that one of the most important elements in a decoration is to be on time. Many an otherwise faultless job is spoiled from lack of time in which to carry out all that was promised. What should have been a brilliant victory, so to speak, was turned into defeat, the florists retreating in confusion through the rear door while the guests were entering the front. There should be time, indeed, for a final inspection and, if necessary, a touch here and there that, while not in the contract, adds much to the work and leaves nothing to be desired. Then what a satisfaction there is in going about with the host and hostess and hearing from them that they are well pleased and that everything is exceedingly satisfactory. You may be very tired, but you go away from their presence with a light heart and feeling of gratification that amply repays for all your efforts.

Mr. Kift's lecture was accompanied by quite a number of views of church, hall, table and other decorations, and was a most instructive effort, for which he deserves great credit.

A vaudeville entertainment followed.

SECOND DAY.

Wednesday, August 22.

Morning Session.

The convention opened punctually at 10 o'clock this morning, with a large and enthusiastic attendance. President Wood announced the first business of the session as the reading by the secretary of the report of the judges.

(See page 819.)

Certificates to Unnamed Varieties.

In regard to awarding certificates to unnamed varieties: Having ascertained that the bylaws of the society contained no provision thereanent, Mr. Rudd, Chicago, moved that where awards are made to unnamed varieties, the owners thereof be requested to name the same, and the certificate be withheld until such names be furnished. The motion was seconded by Mr. O'Mara and carried.

Co-operative Purchase.

Mr. O'Mara took the chair while the president read the constitution and by-laws, as formulated by him, on the proposed "Co-operative Society of the Horticulturists of America."

As an introductory, the president said: "There seems to be some erroneous idea about the co-operative department of purchase and distribution. Some think it is going to injure the several trades—the members that belong to this society. Now, it is not the object of the co-operative department of purchase to sell any particular one thing of a man's make. The only position they will assume is the position of a dealer who receives a commission for doing the business. The profit which they may make is distributed—50 per cent. of it to the purchaser. That makes him a willing purchaser of the co-operative department he can buy at the same price at which he can buy of the maker or dealer, and the co-operative department gives him one-half of the net profits that are made by them. This, of course, obviates the necessity of having any salesmen, and all that large expense is done away with.

"I prepared papers of a corporation which embody my ideas, and I will read them to you. It was proposed to organize a corporation under the laws of the State of New Jersey to avoid taxation."

Mr. Wood then read the proposed constitution and by-laws, adding that the papers were drawn up by Mr. Morefield Storey, of Boston, one of that city's ablest lawyers.

CERTIFICATE OF INCORPORATION, OF THE
PROPOSED CO-OPERATIVE SOCIETY OF HORTICULTURISTS OF AMERICA.

The undersigned hereby associate themselves into a corporation under and by virtue of the provisions of an act of the Legislature of New Jersey, entitled "An Act Concerning Corporations (Revision of 1896)" and the several implements and amendments thereof.

The name of the corporation is Co-Operative Society of Horticulturists of America.

The location of its principal office in the State of New Jersey is No. 60 Grand street, in the city of Jersey City, county of Hudson, and the said office is registered with the Corporation Trust Company, of New Jersey, and the name of the agent therein and in charge thereof and upon whom process against this corporation may be served as the Corporation Trust Company of New Jersey.

The objects for which the corporation is formed are:

(a) To buy, sell, manufacture and deal in machinery, boilers, piping equipment, implements, tools, furniture, glass, lumber, bones, guano manure and fertilizers, including all articles, supplies and equipment used by horticulturists and florists, or for the construction of greenhouses.

(b) To do all such other things as are incidental or conducive to the attainment of the above objects.

The total authorized capital stock of the corporation is $25,000 (twenty-five thousand dollars) divided into 2,500 (twenty-five hundred) shares of the par value of $10 (ten dollars) each.

The names, postoffice addresses of the incorporators, and the number of shares subscribed for by each, the aggregate of which being $1,000 (one thousand dollars) is the amount of capital stock with which the corporation will commence business are as follows:

Name and Residence.	Shares
Reginald H. Johnson, 60 Grand street, Jersey City, N. J.	98
——— ———, 60 Grand street, Jersey City, N. J.	1
——— ———, 60 Grand street, Jersey City, N. J.	1

And the undersigned respectfully agree to take the number of shares of stock set opposite their names.

The duration of the company shall be unlimited.

Without limiting or restricting by reference, inference or otherwise the objects and powers of the corporation hereinbefore set out, the corporation may use and apply its surplus earnings or accumulated profits authorized by law to be reserved to the purchase or acquisition of property or to the purchase or acquisition of its own capital stock from time to time to such extent and in such manner and upon such terms as its board of directors shall determine, and neither the property nor capital stock so purchased and acquired nor any of its capital stock taken in payment or satisfaction of any debt due to the corporation shall be regarded as profits for the purpose of declaration or payment of dividends unless otherwise determined by a majority of the stockholders.

The number of directors at any time may be increased up to the number of five by vote of the board of directors, and in case of any such increase the board of directors shall have power to elect such additional directors to hold office until the next meeting of the stockholders, or until their successors shall be elected.

The board of directors shall have power, without the assent or vote of the stockholders, to fix the amount to be reserved as working capital, and from time to time to sell, transfer, or otherwise dispose of any or all of the property of the corporation, provided that except in the ordinary course of business the board shall not exercise the power to sell, transfer, or dispose of real estate without the consent of at least two-thirds of all the stockholders.

The board of directors from time to time shall determine whether and to what extent, and at what times and places and under what conditions and regulations the accounts and books of the corporation or any of them shall be open to the inspection of the stockholders, and no stockholder shall have the right of inspecting any account or book, or document of the corporation except as conferred by statute or authority by the board of directors, or by a resolution of the stockholders.

The board of directors shall have power to hold its meetings, to have one or more offices, and to keep the books of the corporation (except the stock and transfer books) outside of this State at such places as may be from time to time designated by them.

In witness whereof we have hereto set our hands and seals this day of ——— 1900, at Jersey City, in the State of New Jersey.

Signed, sealed and delivered in presence of

State of New Jersey } ss.
County of Hudson. }

Be it remembered that on the ——, day of ——— 1900, before me, a commissioner of deeds of New Jersey, personally appeared who I am satisfied are the persons named in and who executed the foregoing certificate, and I having first made known to them the contents thereof, they did each acknowledge that they signed, sealed and delivered the same as their voluntary act and deed.

Commissioner of Deeds for New Jersey.

At the conclusion of the president's remarks Mr. O'Mara said: Referring to the report of last year, this matter was brought up at that time and by vote was referred to the Executive Committee with an amendment by Mr. Wood, which reads as follows:

"That the Executive Committee of the S. A. F., in their individual capacity and without involving the society in any way whatever, do organize the corporation as suggested by the committee."

I think it is pertinent to inquire whether this is the report of the Executive Committee, to whom the matter was referred.

The President—As Mr. O'Mara has read, the vote of the society was, that the Executive Committee put this co-operative department into a corporation without involving the society in any liability in any manner.

On motion of Mr. Dean, seconded by Mr. Sanders, the matter was laid on the table.

The president then called upon J. D. Carmody, of Evansville, Ind., to present his paper on "What I Think I Know About Greenhouse Construction."

In his opening remarks Mr. Carmody said: I fear I am going to give you a sad surprise, and I will tell you why. I am a foolish old fellow, full of fun. I am one of those who would rather be the instigator of one smile than the manufacturer of a barrel of tears. (Applause.) I notice that wherever I go people laugh at me. (Laughter.) Well, that pleases me. (Renewed laughter.) I would rather they would meet me with a smile which opens their mouth from ear to ear than with a scowl upon their forehead. (Laughter.)

But I am going to disappoint you. I have not got a single word of fun or frolic in this whole paper. This is a matter of business, and for a man who goes into the florist's business it is a solemn thing to him, for he does not know where he is going to come out. (Laughter.)

A number of years ago Friend Kift sang a very plaintive hymn, the refrain of each verse was something like this: "It all goes into sash." (Laughter.)

That is a serious business, and now this is a serious business I am about to undertake; and I have laid fun aside.

With these few opening remarks I will proceed to the serious subject:

Mr. Carmody's paper will be found reported in full elsewhere.

Selection of Place of Meeting.

The invitations to the Society, mentioned in yesterday's proceedings, including an additional one from Mayor Carter Harrison, of Chicago, having been read by Secretary Stewart, the various supporters of the competing cities were each heard.

Professor Cowell spoke on behalf of Buffalo, as did Wm. Scott. Mr. Scott pointed out the earnestness with which the invitation had been extended by the Buffalo florists, the attractions of the city, and of the Pan-American Exposition, and the reduced railroad rates sure to be obtainable.

Mr. Rudd, after a few pleasantries regarding the sensitiveness of the Chicago people, and their desire to be guided by advice and suggestions of visitors to their city, even to the extent of spending twenty-six million dollars to remove the offensive odor emanating from the Chicago river, moved that an unanimous ballot be cast in favor of Buffalo, a motion which was received with hearty applause.

Mr. Craig commented on the magnanimity of the Chicagoans, as exemplified by the motion, and paid a grand tribute to that city's progressiveness, adding that, had the S. A. F. O. H. decided to go there, good care would certainly have been taken of the delegates. One solitary negative voice was heard, the voter, however, afterward withdrawing same. So that the city chosen is

BUFFALO FOR 1901.

Milwaukee's invitation was received after Buffalo had been chosen as the next meeting-place.

Action on Proposed Amendments to Constitution and By-Laws.

The motion of Mr. Rudd to "amend by striking out, wherever they occur, the words 'and ornamental horticulturists,'" was lost, the vote on same standing as follows: Affirmative, 59; negative, 46; a two-thirds vote being necessary to effect the change.

The retention of the present title found a warm advocate in ex-President William F. Gude, who believed that, search the whole encyclopaedia no better name for the society could be secured, or one that would add more dignity or be more helpful to the association in the way of securing membership and otherwise, than that now applied.

To Change Nominating System.

Lawrence Cotter, Dorchester, Mass., gave notice of motion to amend the section of the by-laws referring to the nomination of officers. He proposes that Section 6 shall read as follows:

"The nomination of officers of the society shall be made orally.

"2. A majority of all the votes cast shall be necessary for election."

Nomination of Officers.

The following names were put in nomination:

For President,
PATRICK O'MARA and ERNST ASMUS.

For Vice-President,
J. F. COWELL, W. F. KASTING.

For Secretary,
W. J. STEWART, E. A. SEIDEWITZ.

For Treasurer,
H. B. BEATTY, W. W. COLES.

The Sander Cup.

A committee was then appointed by the Chair to award the Sander cup for "the most creditable exhibit in the trade exhibition department. The special committee of judges for this class will be selected from the ex-presidents of the S. A. F. who may be present at the convention. The exhibit which shows the greatest enterprise in its contents and its arrangement, and is calculated to attract, in the opinion of the judges, the greatest amount of attention from trade visitors, will be entitled to the cup. All classes of trade exhibits are eligible for competition."

Ex-Presidents Wm. Scott, Wm. F. Gude and W. N. Rudd were the gentlemen selected.

Meeting adjourned, 1.45 p. m.

Wednesday, August 22.

Evening Session.

Was opened promptly at eight o'clock, President Wood in the chair.

The first paper on the program was that of Prof. Galloway, Chief of Division of Vegetable Physiology and Pathology, U. S. Department of Agriculture, Washington, D.C., which was entitled "American Floriculture, Retrospective and Prospective."

PROF. B. T. GALLOWAY.

The speaker traced the development of horticulture from earliest times, showing its wonderful growth, and bettered condition in these later days. He presented some valuable statistics, taken from the Year Book of the Department of Agriculture (these have already appeared in our columns) showing the magnitude of the industry to-day.. He believed the Society could accomplish good work by assisting in the creation of organizations, which would have for their object, not only the improvement of the members, but the encouragement of all lines of horticultural work in their communities. The paper will appear in full in a future issue.

At the conclusion of the reading, Prof. Galloway was given a vote of thanks by the Society for his very able and valuable effort.

Dr. Britton's Lecture.

The New York Botanical Garden was the subject of a lecture, illustrated by stereopticon views, by Dr. N. L. Britton, of the New York Botanical Garden.

In presenting his paper Dr. Britton expressed the pleasure it gave him to come before the meeting on account of the honorable position he held of botanist for the Society for the last year. The New York Botanical Garden had been under organization about five years.

A number of sketches were given, showing the museum, the conservatories, and road system, the arboretum, fruticetum and bog gardens.

A series of sketches showing a party taking a stroll through this tract in the early days proved highly diverting.

Many very beautiful colored photographs of border scenes and flowers, the work of Mrs. Van Brunt, among which were the German iris, native iris, Lilium superbum, orange red milk weed, the cardinal flower and many others, were greatly appreciated.

The many beauties of the Bronx River were produced, showing a diversity of woodland scenery rarely met with.

About a hundred sketches were thrown on the screen.

A hearty vote of thanks was tendered the Doctor by the meeting for his very interesting and charming lecture.

Dancing was engaged in by the young folks till a late hour. Refreshments were served. Edgar Sanders rendered "Little Brown Jug" in his own inimitable way.

THIRD DAY.

Thursday, August 23.

Morning Session.

Session opened at 9 o'clock, President Wood being on hand early. The first business of the meeting was the reading of Mr. Frazer's paper on "Come to Baltimores." In the absence of the author, on account of sickness in his family, Richard Vincent, Jr., presented the paper to the meeting, at the conclusion extending a most cordial invitation to all to come to the Carnation Society's meeting in the Monumental City in February, 1901.

Come to Baltimore.

I regard it a very pleasant duty and a great honor to be accorded this opportunity of addressing you, especially on a subject which is, I assure you, very congenial to me. Now I am expected to show you the best side of Baltimore, and at the same time to prove to every carnationist in America that it will be both a duty and a pleasure to be present with us at the annual meeting of the American Carnation Society in February, 1901.

It is our supreme desire to have that meeting the greatest, numerically, scientifically and socially, that has yet been held, and we want you all to help us attain the full measure of our ambition.

We Baltimoreans are a very modest people, and we do not aspire to more than we are sure we can accomplish. Only once since the organization of the Society of American Florists have we

WM. FRAZER.

made a modest effort to have it meet in our city; when we next decide to invite the society to meet with us we expect to be successful, because we hope that when the Carnation Society separates, you will leave us so happy and well pleased with Baltimore that you will all vote to hold the convention of the Society of American Florists at an early date in our city.

I suppose I ought to tell you something about the attractions of Baltimore. Well, we believe we have all the attractive features common to great cities. We are proud of our parks, our monuments, churches, universities, schools, hospitals, theatres, hotels, and last, but not least, our beautiful Chesapeake Bay, which in summer gives us great pleasure and health by the many fine excursion steamers that ply on its waters, carrying thousands of our people daily down almost to the ocean, and in winter supplies us with the dainty oyster, the finest and most abundant supply of fish; and from its shores the terrapin, of which Maryland boasts.

We are easy of access, either by boat or rail; with the great systems of the Pennsylvania and the Baltimore & Ohio railroads we can be reached from any part of this great continent, and also by the noble steamers that reach us from seaboard cities and foreign ports.

Now a word about the personnel of those engaged in horticultural pursuits in and about our city. A few of them are known to you all, some to many, and the others are well worth knowing. At Buffalo you honored us by electing our Mr. Robert Halliday president of the American Carnation Society, and for that I thank you most cordially. Mr. Halliday represents one of the pioneer families in horticulture in Baltimore, he being of the third generation of that name. I need not mention his many grand qualities, as I know his extreme modesty would disapprove; you all know him, that is enough. While we have Hallidays we have also Feasts, the grandsons of Samuel Feast, worthy representatives of another pioneer family in the business. Then we have a Moss, a man of enterprise, a permanent fixture, and unlike the rolling stone, he gathers moss.

We have a Burger, but not a Boer, a man of peace, active and alert, always busy and an enthusiast in the profession. Then there is Rider, not a rough rider, nor a man with political aspirations, but a man who aspires to grow the best carnations and violets, and we think, successfully. Then comes Akehurse an A I grower of carnations, and the originator of some fine new sorts which we hope he will send out, which, no doubt, he will do, if he can find a "Lawson." Then there is Binder well known among the chrysanthemum men. But he is not only a "mum" man, but tries his hand on carnations; if his seedlings of this season continue to flourish he may surprise some of the specialists. In our capital city, Annapolis, we have Seidewitz, the popular Mayor of that city, known to all men as enthusiastic, genial and ambitious. In connection with our parks we have an artist in Mr. Seybold, who has done much in the decoration of our public domains. The bedding in all our parks is under his care, and we are proud of them. I must also mention a firm whose products are quite a factor in supplying Baltimore florists. I allude to Henry Weber & Sons, of Oakland, Md., away up in the Alleghanies. They produce grand stock, and while we of the low lands swelter in the summer heat, trying to produce flowers of medium quality, they, from their mountain home, send a fine grade of flowers. Personally, I must not speak of these gentlemen, since they are all well known to you, Mr. William Weber being vice-president of the Carnation Society.

One other name, and then I am done particularizing. I want to mention Mr. Richard Vincent, Jr., who represents our State as vice-president in the Society of American Florists, and a most enthusiastic member of the Carnation Society, a regular attendant at all the conventions, an honor to the trade and an all around good fellow.

We have too many men in the trade for me to attempt to give them personal mention. I will only say "come to Baltimore" and meet them; come and see for yourselves; come to make the meeting of 1901 the best yet; come and do us good, and get some benefit for yourselves; come and see if you wont be pleased and say, every one, when you go away, "well, I am glad I came to Baltimore."

Committee on Incorporation.

The report of the Committee on Incorporation was again read by the secretary.

Mr. Beatty explained that since making the report the committee had received information that led them to believe there is yet a chance of getting a national charter, and therefore the committee would like either to change its report or to have its recommendation amended or stricken out.

On motion of Mr. O'Mara, seconded by Mr. Wood, it was resolved that the report of the committee be referred back to them for further consideration.

Method of Nominating Officers.

The secretary then read the proposed amendment to the by-laws relating to the nominations of officers of the society.

In discussing the amendment Lawrence Cotter said he wished to urge the adoption of this amendment, and that no further argument was required than yesterday's occurrence, which showed no one could tell who was running for any office. He moved the adoption of the amendment.

Mr. May, in seconding the motion, said he did so with the idea of facilitating business, as oftentimes it was very materially delayed by occurrences such as those of yesterday, and the trouble should be remedied.

Mr. Dillon desired to know whether it was the intention that speeches and eulogies of candidates should accompany the nominations, as much time in the past had been thus consumed.

Mr. Hauswirth was of the opinion that any one attending the convention should have an opportunity of eulogizing his favorite candidate for office.

The amendment on being put to the meeting was carried.

William Weber then read as follows his paper on

The Improvement of the Carnation.

When we contrast the carnation of to-day with the carnation of fifteen years ago we behold a difference so vast that, had it been foretold at that time, the would-be prophet would have been made light of. Very naturally we all expect to advance continuously, but at that time we scarcely thought

WM. WEBER.

we would accomplish more in fifteen years than had been done in the preceding fifty. Yet, when we look at the world in general, we are after all forced to admit that we have merely done what could naturally be expected; had we not made such strides, we would not deserve to be called progressive, or co-equal in animation with the spirit which pervades all other branches of trade and industry.

I am charged with the mission of telling you the story of "The Improvement of the Carnation." The whole story, while very simple, would be of such length as to prove irksome did I attempt to tell it to you in detail as it occurs to me. I will therefore be as brief as possible, leaving the hundred and one little things which always form a part of the whole to your imagination.

Improved methods of culture stand out in bold relief as being the most important item of our subject. How different are those we use now when compared to those methods of a decade or more back. We house our plants now from six to eight weeks earlier than we used to do. Then we merely tried to get them all in before damaging frosts would arrive. The result was usually very large plants with an abundance of shoots. Leaving out the Winter culture in the greenhouse, and presuming they were to be grown in their natural way, these large plants were good subjects to Winter over, and produce and abundance of flowers the next year; in other words, they were ready for their Winter's sleep.

What happens when large plants are planted late in the season is this: The

time left for them to become established on the benches is decidedly too short. It will take two weeks in September or October to accomplish what one week in July or August would do in the way of filling up the soil with roots. When this is accomplished the plants are ready for work, and not before.

The product of a poorly or partially established plant cannot approach perfection. When we plant late there is no time left for thorough establishment to take place, and the result will, in nearly every case, be a large crop of medium grade flowers at best. And where the culture is indifferent quality as well as quantity will be inferior.

The merits of early planting are not as fully recognized as they should be. Early planting is one of the bulwarks of the present high standard the carnation of to-day enjoys. The reason is very simple. When we plant in July and August we are giving the plants ample time to become thoroughly established before the days are so short, and consequently less light available to help them along. Then we have our plants in good working condition, and the carnationist with advanced ideas can commence feeding his plants judiciously, and with the exactitude and nicety of one who thoroughly understands his subject.

Early planting may mean a few less flowers, but this will be more than made up in the better quality and greater length of stem than could be expected from the late planted stock.

A careful study of our soil, what it contains, and what it lacks; what constitutes plant food, and how plants feed, are matters which demand the fullest consideration. We cannot hope to accomplish anything of real value unless we work along these lines.

The grower who will stop trying to do as well this year as he did last year, and instead make a systematic effort to each year eclipse last year's record, will soon be in line with the best growers in the land. What we need is to stop guessing, and become so infused with our task that we will soon have all the ideas of our own we can manage and put to the test. In this manner, each one working along his particular line of thought will evolve some points, perhaps, which his neighbor in the field may not; and in this way help to contribute to the store of knowledge which is being steadily collected, and which will doubtless be preserved in history.

As soon as we learn to depend on ourselves, we begin forthwith to improve. What matters if we do make a few mistakes? Is there any one here who hasn't made them? I believe not. They simply serve to guide us in our work, and teach us the value of proceeding with our eyes open, to never experiment on a scale so large that failure of the experiment would swamp us. If we manage it carefully the results will inspire us with a confidence known only to those who thoroughly understand their calling, be he florist, engineer, merchant, soldier or what not; it is all the same.

Great as has been the improvement of the carnation in recent years, all indications point to a still greater improvement in the near future. No small factor is the modern houses which are building. One would think that we had nearly reached the limit in perfect greenhouse construction, but each year shows some little defect, and a way to overcome it. The palatial houses now used form one of the greatest contrasts to the methods of a few years back, and no small portion of the carnation's improvement is directly due to this one thing.

Everybody knows the absolute necessity of careful selection of stock, and doubly so in the selection of cuttings, and their proper care, so that I can say nothing new along this line. One of the evils of to-day is a tendency to bite off more than we can chew; it is poor policy and had better be abandoned, as it means only a loss of reputation and money.

I have thus far said nothing of the seedling man—the hybridist. Certainly a very large slice of the credit and the honor the carnation now enjoys is due to his efforts. We are wont to kick and to cuff him for the indifferent and poor varieties he has burdened us with, but through it all shines the fact that he is a most deserving fellow, and has labored hard for the advancement of the carnation.

We have passed the era when any medium good variety may be disseminated. We now expect some special feature in a new candidate for honor. Hybridists understand this fact very well, and we are promised some sensations at our annual meeting in Baltimore next February.

There is only one real practical way by which we can judge a carnation, and that is its ability to make money for the grower. It would be unfair to seedling raisers did we intimate that this fact is not always kept in view. We cannot expect to scale the ladder at a single bound, and must therefore be content with a gradual ascent.

The foregoing I believe will cover in a general way the practical part of the improvement of the carnation, but there is another side to be seen, another force to be reckoned with. The various trade journals must come in for their share; the different florists' clubs and societies which give exhibitions from time to time, and award prizes, thereby stimulating interest, as well as a friendly rivalry.

PRESIDENT-ELECT PATRICK O'MARA.

It must be admitted, however, that the greatest of these forces is the S. A. F.'s biggest and proudest baby, the American Carnation Society. The mother society may well feel proud of her offspring. We are accomplishing in a systematic way things which would be impossible were not the American Carnation Society in existence. This organization brings together annually the carnation lovers from all parts of the country. That these meetings and exhibitions accomplish great things must not be doubted for an instant.

The practical fruits which resulted from the great advertising the carnation received as a result of the deal which made the Lawson carnation the property of Mr. Thos. W. Lawson, were largely brought about by the Carnation Society. If there had been no Carnation Society there would have been no Lawson fund, and likewise no Lawson medals. That interest in the society on this account has increased a hundred-fold is certainly true. Mr. Lawson has been a potent factor in the advancement of the carnation, and the beautiful flower which bears his wife's name is a fitting example of the up-to-date carnation.

To sum up every detail, and give due credit to each for the part played by it in bringing the carnation to its present standard, would make a long story. I will leave this to you, and believe that you agree with me that the small as well as the large items are necessary to complete the list, the whole forming one grand pyramid.

A glance at the future is always interesting. During the next ten years we may expect many great changes in the cultivation of the carnation. Perhaps, even, a revolution.

Professor Arthur and others have started many of us to experiment with sub-watering, the ultimate success of which will be fraught with incalculable benefit to the grower, and at the same time reduce very largely the labor connected with the daily care of the plants. The principle of sub-watering is all right, and out of the experimenting now going on some good must certainly come. That a good many failures are being met with in these experiments is very natural. We cannot hope to be successful to any great degree at the very outset. We must first become very familiar with the idea and the principle of sub-watering, and the effect under varying conditions it has upon the plants before we shall be in a position to reap the benefits of our experiments.

A few years ago when indoor culture was first suggested for carnations, the idea was received in anything but a favorable light. In spite of this, however, we have been gradually drifting toward indoor culture. Many now house their plants as early as the first week in July. Thus half the distance between outdoor and indoor culture has been traversed. Whether the remaining distance between the two systems will be covered remains to be seen.

One of the most important matters in connection with indoor culture is thorough ventilation. When we have mastered this fully we may expect some good results from indoor culture.

What the hybridist will bring forth in the near future is always interesting to conjecture.

There must be some law or system in Nature regarding color, etc. Possibly by degrees, study, work and practice, these secrets will be gradually unfolded to us. At any rate, we know that these things will not come to us unless we make some effort.

Election of Officers.

The election of officers resulted as follows:

President, PATRICK O'MARA, New York City (unanimously).

Vice-President, WILLIAM F. KASTING, Buffalo.

Secretary, WILLIAM J. STEWART, Boston (by 120 to 35 votes).

Treasurer, H. B. BEATTY (unanimously).

The first ballot for vice-president resulted in a tie, necessitating a second ballot. Again the vote was a tie, the final ballot standing: Cowell, 63; Kasting, 86.

Speeches by Newly Elected Candidates.

President-elect O'Mara said: I desire to thank you most heartily and kindly for electing me to the high office of president of this Society. I am not good at issuing promissory notes; I try to do all I can without making any promises in advance of just what I will do. All I can say to you is this, that if God spares me for the year to come, what energy I have, whatever little talent I am possessed of, will be expended for the Society of American Florists. (Applause.)

I do not know as yet who are going to be my co-laborers in office; but I trust in the wisdom of this body to elect men who will be a credit to the organization—in fact, I know they will. It will hardly be in place for me to express any desire as to who shall be my assistants, so to speak; but I know we have men of experience who have been conducting the affairs of this Society, and I know it would give me pleasure to go along with them for the year to come.

In regard to the New York Florists' Club, I have heard it said very kindly, here and there, throughout the Convention Hall that much of the success of this convention was due to me. I want to say right here, ladies and gentlemen, that the success of this convention is not due to any one individual of the New York Florists' Club. The success as far as it has gone, and, I trust, to the end, is due to every member of the New York Florists' Club. From the moment that the invitation was extended to you at Detroit up to the present moment, every individual member of the Club has felt it to be his own personal duty to do all that he could to make this Convention a credit to the Society and to New York, and I think I can say at this stage, we have succeeded. (Applause.)

With anything like the support that was given to me this year in the City of New York by our local club, I have no reason whatever to doubt but that the record made here this year, grand as it is up to the present time, will be surpassed in Buffalo in 1901. (Loud applause.)

Secretary Stewart: No one can look over the audiences we have had in this hall the last few days and go through that vast exposition of horticultural industries beyond, without being easily impressed with the vastness and importance of this event in which we have all been privileged to participate this week. To be associated in any capacity, officially, with an organization that makes such an occasion possible, is, I think, a very high honor, and to me it is doubly so, doubly appreciated from the fact that it has been repeated so many times.

The great success that we have chronicled this week is due to the earnestness of our officers and our members, but without the co-operation that we have received from the New York Florists' Club, under the tactful leadership of the man whom you have elected to-day as your president, it would not have been possible. The coming year under his leadership will be, we all know, one of the highest successes for this Society, and I promise you, on my part, to do all I can to hold up his hands, to co-operate with him, to make it, if possible, an occasion equal to, if not even greater

than, this which we have been participating in here.

Thank you again, as I have done so many times in the past, for the honor you have conferred on me. (Applause.)

Then followed Mr. Robert Craig's paper on

The Welfare of our National Society.

I have been appointed to open a discussion on the "Welfare of the National Society," and while I am fully aware that, in view of the large amount of work to be done in a very short time such discussion must be necessarily brief, I think it is well that we should hear the views of the members on this most important question. We all appreciate now that our society has been and will continue to be a great educational force; that it has stimulated and developed floriculture along many lines, and it is quite proper that we should consider now, at this, the largest and most important meeting we have ever held, how we may improve the workings of the society itself, which has done so much for us all.

We are impressed with the fact that the society is at this time stronger than it has ever been before, and we are delighted with the evidences of the many warm and powerful friends the society has here in the metropolis of our country. We have the greatest trade exhibit we have ever had, and the finest exhibition, and the New York Florists' Club has given us a delightful and valuable Souvenir Book, particularly interesting in its history of floriculture in its earlier stages in the vicinity of New York, as well as in the forcible facts presented relative to its present status—truly a marvelous development. The editor of this work deserves our gratitude and praise as do all those who have so ably assisted him. The book is worthy of the great city it represents, and will long be treasured as a memento of this great meeting. As long as we have such workers as our New York friends have proven themselves to be, the welfare of the society is assured.

I find it difficult to suggest any new features likely to be of benefit to the society. Its management has been in the hands of many of the most capable men in the country and their time and thought have been freely given to it. Its annual reports show that they have had at our yearly meetings valuable essays on cultural methods; on building and heating greenhouses, and on almost everything pertaining to the business, by practical men who had given these problems much study, as well as scientific papers from college professors and other specialists on plant diseases, insecticides and fertilizers, which contained information that the practical florist had neither the time nor the necessary apparatus to obtain for himself. I do not hesitate to say that these annual reports constitute the most valuable business library a florist can use. I think, therefore, we should do well to continue working along much the same lines as heretofore; cultivating closer and more cordial relations between the government experimental stations and the botanical departments of our great colleges, both of which have shown repeatedly a disposition to aid us in every possible way. I understand there will be a proposition at this convention from Purdue University, Lafayette, Ind., for this society to appropriate a small sum of money for experiments in subwatering, the result to be reported at our next meeting. I hope this society may do this, and also earnestly consider all like propositions which may come before it.

It might perhaps be well for the society to hold a meeting and exhibition during Lent for the purpose of showing, particularly, cut flowers and novelties in plants at a more favorable time than is the month of August, which is a very unfavorable time for a meeting, having for its only advantage the fact that it is the vacation time of the year when florists can best afford the time to attend. But an exhibition in Winter or early Spring would be very attractive and would undoubtedly be well attended.

Another feature, already established, which deserves encouragement is that of life membership. I can think of nothing which would more greatly benefit the society than an increase of the life membership list. It has been wisely determined that the money received from life members shall be invested permanently, the interest therefrom only being available to the use of the society, so that in becoming a life member one may feel that even after being removed by death his subscription will continue to benefit the society. We should have at least one thousand members in a country like

VICE-PRESIDENT ELECT,
WM. F. KASTING.

this, and could have that many if the present members should take hold of this matter in the right spirit. I hope the younger members of the society will take a greater interest. We need the vigor and enthusiasm that belongs to youth, and there is no way by which a young man can benefit himself more, as well as the society, than by taking an active part in the proceedings and by studying the problems which concern us all, and thus qualifying himself to take part in the proceedings. Every man should do what he can on the Baconian principle that "every man is a debtor to his profession."

In discussing this subject Mr. Scott said:

"It is very encouraging to hear a man of Mr. Craig's ability and disposition speak of the national society as he does when he takes a roseate view of the status of the present society. There is no prouder moment in the history of the society than at this very moment. I entirely agree with him on the life membership question. I am not one myself, but I think I will go home and make up my mind to send my check at once. We are very numerous in this country, and it is strange; I believe the membership is but 600, and there 3,000 commercial florists in the country.

"Mr. Craig referred to a proposition from Professor Arthur, of Purdue University. Professor Arthur, on his way to the seashore for a much-needed rest, called on me about two weeks ago. He is not the originator of the sub-watering system, but he is an enthusiast. He believes it is the correct method of watering our carnations particularly, and also violets. He requested me to write to a number of the leading lights in the profession. I wrote to Mr. Gurney Hill, Mr. E. M. Wood, Mr. May and others, asking them whether they would be in favor of appropriating a small amount of money, to be given into the hands of a committee of three or five, to be appointed by the president, and to cooperate with some experimental station—for instance, Purdue University, which would be a good one, and it would be willing to spend an equal amount, and the system of sub-watering would be given a thorough scientific test. Professor Arthur believes it is the plan, and, although at present apparently expensive, it is going to be the method.

"In response to those letters two-thirds of them read something like this:

" 'In reply to your letter, I am entirely in favor of a small sum of money being appropriated to test the principle of sub-watering.'

"The only unfavorable reply to that was from Mr. C. W. Ward, whose letter reads something like this:

" 'My whole place is practically under the experiment of this system of sub-watering, the results of which will be given to the Society of American Florists.'" (Applause.)

A National Charter.

Mr. Rudd moved that the president-elect be empowered to appoint a committee of five to continue and carry out the project of obtaining a national charter for the society.

Mr. Craig, in seconding the motion, said it was very important to get the national charter, as it would give the society a standing in this country and among the nations of the world that could not otherwise be obtained. In the previous endeavor to get the charter it passed both houses of Congress without opposition, but was vetoed when presented to Mr. Cleveland for his signature. He understood Mr. Wilson, the Secretary of Agriculture, was favorable and that many Congressmen were favorable, and if it were properly managed the charter could now be got.

Mr. Dean expressed the hope that the charter would be obtained, and that a home was greatly to be desired. He stated that a member of the society had told him that, as soon as the charter was obtained and everything was in line for a permanent home, he (the member) would put up $5,000 or $10,000.

The motion being put to the meeting, it was unanimously carried.

Mr. May heartily endorsed the sentiment of Mr. Craig's paper. There were many things the members could advance for the benefit of the society, and he looked for the day when not only a national charter would be obtained, but a home also for a headquarters, where an experimental garden could be established, and not only sub-watering could be experimented on, but every other evil and benefit which appertained to the business. With one of the best men to be found placed in charge, the young assistants could be put there for a nominal sum to learn the business and study the diseases appertaining to our plants, which would very much improve the young men's ideas and make of themselves successful florists and gardeners.

Mr. Dean was much gratified, he said, by a statement made by the secretary to the effect that there was an increase in membership, and that the membership had increased very nearly four hundred since the commencement of the convention, which was wonderful and most gratifying. (Applause.)

A Committee on Sports.

A resolution, signed by Theodore Roehrs and Robert Kift, was presented, seconded by Mr. Stewart, and carried, as follows:

Whereas, The bowling and shooting tournament and other sports have for the past few years become some of the standing features of our conventions, without interfering whatsoever with the work and objects of our Society, and,

Whereas, We, the undersigned, deem it proper and advisable to have the above mentioned sports under the control of the officers of our Society, we beg to offer the following resolution:

That a Committee on Sports be appointed by the president at the time of the Executive Committee meeting in the convention city, to take full charge of all bowling, shooting and other contests, with the understanding and special instruction, that their arrangements must be made so as not to interfere with the regular work of the Convention.

Mr. Hill, in his opening remarks, referred to Mr. Wood's criticism in his address upon the champion of the American Rose Society, adding the sting was entirely taken out of the criticism because President Wood was the first man to come down with $50 for the Rose Society. Mr. Hill spoke of his own loyalty to the S. A. F., and he wanted every one to be loyal to the mother society. He hoped that every one of its offsprings—the various auxiliary societies—might see it to be wise and the right thing to come under the parental roof, and hoped this remark would atone for his over-zeal at Detroit.

Mr. E. G. Hill then led the discussion on "The Rose," as follows:

Discussion on the Rose.

Led by E. G. Hill, Richmond, Ind.

My nomination to this function, I believe, is at the instance of the members of the American Rose Society. I consider it a double honor to be thus chosen and permitted the privilege of opening this particular discussion before our national society. As time is precious, what I say must necessarily be brief.

The rose as grown in American gardens, and the same flower as cultivated under our American forcing methods, are two quite distinct phases of this important subject.

In order that the rose may rise to its proper place in American gardens—a place similar to that which it holds on the continent of Europe and in England—it is absolutely necessary that it may be freed from the dread fungus disease known as "black spot," which so cripples it in America, but which is practically unknown across the water. It is to be sincerely hoped that some heroic remedy, or some preventive measure, may be found which is as yet unknown to practical rose growers. By rose growers I mean both amateurs and professionals.

The rose as seen and grown in Europe is quite different from its development in this country. Abroad you may see roses at every turn, in every dooryard, growing in the healthiest and most luxurious fashion. These very same varieties growing in our Northern States, in all save a few favored localities, look like mere ghosts of their prototypes in Europe. This is noted by all who have had opportunity to compare growths as seen on the two continents.

I hold that in order to popularize the rose, and to give it the supreme place that it deserves in our gardens, a remedy must be found for the fungus growth referred to, and which has played with such destructive force upon our rose stocks. When I was a young man I well remember with what vigor and luxuriance old varieties like Malmaison, Giant of Battles, Mme. Laffay, Bourbon Queen, and a host of others, grew and flourished; but it is no longer so. Even these old varieties, at the present day, are only shadows of their former selves. If this remedy cannot be found which shall restore our out-door roses to perfect vigor, then we must breed a new race that shall prove immune from the dread disease. This same disease was not many years since a serious menace to our indoor-grown forcing roses, but at the present time where black spot is prevalent it is generally conceded to be due to incorrect culture and improper methods.

This is the situation as now presented, whether we relish the fact or not. We may ask in all seriousness, what has caused this remarkable deterioration in the growth and vigor of our garden roses? Are our indoor-propagated roses responsible for a lack of vitality sufficient to withstand the disease? Are our under-glass methods of propagation responsible for the enfeebling of the rose? Your speaker waits for an answer.

What we want in this country are varieties of roses that shall flourish and bloom as do La France, Mme. Testout, Mme. Jules Grolez, l'Innocence, Pres. Carnot, and the like, in France and England.

If it is necessary to breed a distinct class of roses for our country, whither shall we turn—to what section of the family shall we look for the sturdy parents? In the Rugosa section notable advance has been made by European raisers, and possibly we may find varieties adapted to American climatic conditions along this line as the work progresses. In the section of Rugosa Hybrids we have Mme. Georges Bruant, Blanc Double du Courbet, Souv. Cochet, and I noted in the garden of Victor Lemoine two sorts, the result of crossing tea varieties with the Rugosa; one of these was a beautiful bright pink in color, and M. Emile Lemoine stated that it flowered continuously; the other quite as attractive, but blooming only once a year.

In the gardens of Mr. P. Lambert of Trier, of Soupert and Notting of Luxemburg, as well as in many others of both commercial and private rosarians, this work of experiment in the Rugosa section progresses, and something of note in beauty, vigor and hardiness is sure to develop, and it may be that we are just on the eve of having placed in our hands a class, a set, a type which shall prove the nucleus of a new race that shall inaugurate a new era in the cultivation of roses in our gardens. In this connection we must not forget the two novel developments of M. Bruant—Fee Opal and Rosa Belle; these were obtained from crosses of the tea section with the old variety Fortune's Yellow.

I saw them in bloom and am glad to testify that they were strikingly beautiful.

Probably the most noteworthy result of these recent experiments is M. Jh. Pernet's Soleil d'Or, which was obtained by crossing the Persian Yellow and the H. P. Antoine Ducher. This variety is distinct enough to merit the type name of Pernettiana as bestowed upon it by the raiser.

While recognizing the good work of our friends across the water, we must not forget to commend also the efforts of our own hybridizers, who are also experimenting on the line of the hardier types—Messrs. Walsh, Manda, Dawson and others.

A more widespread effort in this particular line of work should be inaugurated over our own country; we need more Ramblers, equaling the Crimson and in different tints and colors; these can certainly be had by proper and systematic effort.

To sum up: We must make an earnest effort to either free our roses used for garden purposes from the blighting effects of black fungus; or we must, with intelligence and energy, seek to form and build up a new race of roses by crossing the hardier species with our present highly developed tea and hybrid tea varieties. American hybridists must keep in mind the hardy, vigorous characteristics required by varieties that are to succeed in our climate, nor stay their efforts until the new type is produced; the reward will be ample.

Regarding new sorts for forcing purposes, we need new colors in forcing varieties—say, like Gen. Jacqueminot or Rodocanachi, or a variety with the tint and fragrance of a Marechal Niel combined with the fine practical qualities of Bride or Bridesmaid; a fortune awaits the producer of such a rose, and if you will allow prophecy, I will venture to predict that within a very few years we shall have roses rivaling American Beauty, Bride and Bridesmaid, but covering a good range of color. The speaker has no knowledge of such undisseminated novelties being in existence at the present moment, but with the number of workers in the field and the crying need of such varieties apparent to every rose forcer, they are certainly among the probabilities.

In conclusion, I believe that the American Rose Society will prove the instrument that shall revolutionize the status of the rose, and that will make plain to the rose grower, professional and amateur, the need of the rose from our American standpoint, and with this hope in view may I ask—and urge—that you give to this young and growing society your name and your helpful encouragement and support.

At the conclusion of the reading of Mr. Hill's paper, President E. W. Wood said: I am very glad that the sting which my friend Hill speaks of has not entered deep into his heart. I would not scratch him for the world. (Laughter.) But it does not change my mind. When we have a home, to Mr. Hill and everybody else who loves a flower that home will be so attractive and so congenial that they never will leave it. We want to retain every flower that we grow to-day in this Society, and every flower that we can produce in the future. And when we have a home, as I have suggested, Mr. Hill, for the rose or any flower, will never want to leave it.

Question Box.

A question as to the culture of gardenias under glass remained unanswered.

S. B. Parsons, Flushing, N. Y., inquired if any one had had experience with Gardenia Veitchii, and been able to grow it without its being affected with mildew. He believed the gardenia was not so well known as either G. Radicans or G. Fortunei. The latter is a superb flower; the blooms are very much larger than the common, but the variety is sparse in flowering and will, therefore, never be a commercial flower, yet every man who has a bit of glass should grow it. The Gardenia Veitchii has a larger flower than G. Radicans, not quite as large as that of Fortunei, but is a most abundant bloomer—as abundant as any gardenia grown; yet the disease is so fatal to it that its culture has had to be given up. It does not pay.

The Convention adjourned at 11:35 a. m. to meet in Buffalo in 1901.

President-Elect Patrick O'Mara.

President-elect Patrick O'Mara has been engaged in horticulture all his life, and is a pupil of the late Mr. Peter Henderson. His first work for Mr. Henderson was done when only in his eleventh year. This work was planting onions, and from that beginning he passed gradually through all the various departments, including the market garden and greenhouse, obtaining in a period of about 17 years daily friction with one of the brightest and soundest practical gardeners and florists the country has ever seen, a fund of thorough knowledge which could not be obtained in any other direction. About 15 years ago Mr. O'Mara was transferred from the greenhouses to the New York store, to take charge of the business of the plant department—a most important position, which he ably fills.

Mr. O'Mara is an ardent florist in every sense, taking a very active interest in everything that tends to the betterment of the industry. He has been a member of the Society of American Florists for 12 years, and of the New York Florists' Club for 11 years. He was appointed one of a committee in 1892 to try and effect a lower rating on plants conveyed by the express companies. Previous efforts in this direction had proven futile, but there is no such word as fail in Mr. O'Mara's vocabulary if he believes he has right and justice on his side. After negotiations, which lasted nearly a year, he triumphed, alone and unaided, and secured for the plant buyers of the country the most valuable concession that has ever been granted to them. In recognition of his valuable services, and as a tribute to the firm he represented, President Wm. R. Smith appointed him one of the Executive Committee of the Society of American Florists, vice Mr. Charles Henderson, resigned. The matter of Custom House delays was also placed in his hands, and the result of his earnest work is given in last year's proceedings of the S. A. F.

Mr. O'Mara was elected president for the 1894 term of the New York Florists' Club, and again for the 1900 term, an honor which rarely falls to young men, and he is justly proud to preside over the deliberations of such a body of veterans in every line of horticulture. He is an enthusiastic bowler, is president of the New York Florists' Bowling Club at present, and was captain of the "dark horse" team that swept the field in St. Louis in 1893, an honor of which he is extremely proud.

As a presiding officer the president-elect has few equals in the craft. He is a fluent and ready speaker, quick to penetrate into the intricacies of the most difficult problems, grasping at once the salient points of all matters brought before him, and never failing to render a common-sense decision thereon. He has wonderful executive ability, is an indefatigable worker, and it is largely to these excellent characteristics that the success of the present convention is due. He is also a brilliant and polished writer; bright articles from his pen from time to time have appeared in our columns and elsewhere. A series of articles in the New York Herald commanded wide attention, although the writer was unknown; an article entitled "Landscape Gardening—A Retrograde Movement," written in answer to Mr. McMillan, superintendent of Buffalo parks, and which he signed "Observer," was admitted to be one of the best bits of literary work of the period in horticulture.

Under his guidance the affairs of the S. A. F. will be well looked after, and the society will surely prosper—if hard and conscientious work can contribute to that consummation.

Vice-President-Elect Wm. F. Kasting.

Wm. F. Kasting, of Buffalo, the vice-president elect, was born in Germany, coming to this country with his parents when he was four years of age. He first started in the florist business in 1886, in the greenhouses at the Niagara Hotel and has followed that vocation ever since at various points, including Cleveland, St. Louis, Steubenville, O., and Erie, Pa. About seven years ago Mr. Kasting entered the employ of Dan'l B. Long, then doing a wholesale commission business, and three years later bought out that gentleman. Since he began business on his own account Mr. Kasting's trade has almost doubled in volume.

The present year Mr. Kasting was appointed by the Mayor of Buffalo a Park Commissioner of that city for a term of six years.

The vice-president elect is a very popular young man, a hard worker and will prove a very valuable aide to President O'Mara.

The Trip to Glen Island.

Over fifteen hundred souls enjoyed the beautiful trip up the Sound to Glen Island on the Starin steamer "Glen Island." The arrangements for dining this large crowd were perfect, and everything passed off without a hitch. The Reception Committee worked indefatigably to make the affair the success it surely was, and Chairman Sheridan and his aides are deserving of the highest credit.

The boat arrived about 3.30 p. m., returning at 8 o'clock.

The many features of this favorite resort were very much appreciated.

Presentation to the President.

On the invitation of ex-President Adam Graham, of Cleveland, a large number of the delegates assembled in the saloon on the main deck of the "Glen Island" on the homeward journey, to listen to an address by Robert Craig, Philadelphia, whom the speaker characterized as "the silver tongued orator whom everybody knew and loved."

Mr. Craig, mounting a chair, said: Ladies and gentlemen—I feel very much elevated in several ways, and flattered. A title like silver tongued orator is enough to swell any ordinary individual's head. We have had a very pleasant day; we have had a succession of pleasant things happen to us all day long and now comes the pleasantest episode of the whole occasion. Before telling you what my principal purpose is here, I want to express what I think we all feel, and that is gratitude to the New York Florist Club for their grand treatment of us on this occasion. (Applause.)

We have had a most magnificent time ever since we landed in New York; everything has been managed so judiciously, the work has been so earnestly done that there has been no hitches anywhere—just a succession of delights all the way through.

And such a result could only be accomplished by great co-operation on the part of everybody. Under the leadership of Mr. O'Mara, in whom they all have such faith and confidence (applause), they have done more for the S. A. F. than has ever been done before at a convention. (Applause and hear, hear.) They have given great strength to the Society—a great impetus to the Society—so that I feel satisfied that as a result of this meeting, when we meet next year in Buffalo we shall have another grand convention, because we have gained great strength at this one. There is a great feeling of courage in the heart of every one in regard to the affairs of this Society, because of the work of the New York Florist Club.

We have had a delightful day. Nothing more judicious could have been done than to bring us to this beautiful place—Glen Island. The sail up the river was charming and the Island in all its departments appealed to us by its beautiful arrangements. I had the pleasure of an hour's talk with Mr. Starin himself—a most delightful hour—and I took the liberty of saying to him that every member of this Society felt personally grateful to him for his grand entertainment to-day. I understand that the use of this boat was a gift by him, and that in other ways he has been very generous to the Society. (Applause.)

You know that Mr. Starin is a very busy man. He has done in his lifetime more work than a hundred ordinary men.

He said to me that the work of building up this beautiful resort, which has really made him a public benefactor in the city of New York, has been the greatest pleasure of his life; and that the special feature which has gratified him most has been the cultivation of flowers and the planting of trees which ornament that island.

He is really one of us in heart, and we shall never forget his kindness on this occasion.

Now, ladies and gentlemen, I won't detain you much longer. I have been asked on behalf of the members of this association to present to our retiring president, Mr. E. M. Wood, a token of their appreciation and esteem, something that comes to him with the good wishes and the good will of every member of the society. Those who know him best know him to be one of the largest hearted of men. Just a few minutes ago, my neighbor said: "His heart is bigger than his body," and I guess it is. (Applause long continued.)

Turning to Mr. Wood, the speaker said: It gives me very great pleasure, sir, on behalf of the people here assembled—you are a friend of every one of them—to hand you this token of their good will. (Loud applause.)

President Wood was received with cheers, and standing on a chair he replied as follows, his voice trembling with emotion: Ladies and gentlemen: I see that you have watched me. (Laughter.) When I look in its face, which I shall have occasion many times to do, it will remind me of the pleasant associations which have been mine, and the very many pleasant acquaintances and friends I have made, since I have become an active member of the S. A. F.

This token of your esteem and regard indicates to me that you believe that my efforts in behalf of the S. A. F. have been unselfish and honest. (Applause.) I thank you, again and again, and I shall cherish this token as long as I live. (Great applause.)

The audience then joined in singing "He's a Jolly Good Fellow."

The gift was a handsome gold watch and guard of Tiffany workmanship.

The Shooting Contest.

WEDNESDAY AFTERNOON.

Shooting commenced at 2 p. m. The Philadelphia team proved the winners of the Lockland Lumber Co.'s trophy by score of 92 bluerocks. Buffalo was second with a score of 59. Cleveland came in third with a score of 53. The New York team was made up more as a complimentary team than anything else, no previous practice having been had, and the low score is not to be wondered at, seeing that some of the team were making their first efforts at blue rocks. The tournament passed off smoothly and a pleasant half day was spent, the whole party being back at the Convention hall in time to take in the evening's entertainment. The $5.00 stylographic pen put up by the New York Florists' Club was won by John Burton, of Philadelphia, Pa.

The scores are as under:

NEW YORK.	
E. Steffens	13
D. Y. Mellis	3
A. Schultheis	7
W. J. Elliott	5
Theo. Roehrs	4
L. Schmutz	1
Total	33

PHILADELPHIA.	
W. K Harris	17
W. Taplin	9
J. Burton	16
Geo. Anderson	16
E. Reid	17
A. B. Cartledge	17
Total	92

BUFFALO.	
Wm. Scott	10
T. B. Braik	7
W. B. Scott	9
W. F. Kasting	6
W. Webber	8
F. Beard	19
Total	59

CLEVELAND.	
A. Graham	9
H. M. Alteck	11
John Burns	11
J. Warneke	6
T. Meehan	12
G. A. Rackham	4
Total	53

In the contest for the pen the scores were as follows: Anderson, 7; Harris, 8; Reed, 7; Graham, 5; Alteck, 5; Cartledge, 7; Beard, 3; Breck, 5; Scott, 4; Kasting, 3; McClellan, 1; W. B. Scott, 5; Burton, 9; Burns, 4; Schultheis, 0; Meehan, 2; Warneke, 3; Rackham, 0.

About fifty visitors accompanied the shooters to Dexter Park and much interest was taken in the affair.

FOUNDED IN 1888.

FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.
To foreign countries in postal union $2.00.
Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.
No advertisement less than 75 cents.
Discounts on continuous advertising.
For rates, on Wants, etc., see column for classified advertisements.
Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.
Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

Contents.

ENERGY AND ENTERPRISE.

ISN'T a trade paper that shows these two qualities, as the FLORISTS' EXCHANGE has during the past week, worthy of the fullest support of every member of the trade.

If you want to know who registered at the convention, and many other features not in any other paper, send for a set of the FLORISTS' EXCHANGE DAILIES, four issues complete, for ten cents.

Group Portraits.

At Glen Island, Thursday, two group pictures of the delegates were taken by Prince of Washington. Mr. Prince informs us these photos will be sent C. O. D. to any one desiring them.

Presentation to Manager Cleary.

The exhibitors in the Trade Exhibit, showed their appreciation of Manager Cleary's services on their behalf by presenting him on Friday forenoon with a purse of gold amounting to $100, the presentation speech being made by Secretary Stewart. Mr. Cleary was deeply affected by the generosity of the exhibitors, and feelingly accepted the gift.

The S. A. F. Convention, 1900.

Well, it's all over, and has passed into history, as we said it would do, as the greatest Convention in the life of the Society of American Florists. The immense and enthusiastic gathering, the large augmentation to the membership roll and other factors were an inspiration, and surely augur well for the future prosperity and consequent increased usefulness of the national society.

Mr. Edmund M. Wood made an acceptable presiding officer, opened the proceedings punctually, and conducted the duties of his office with commendable judiciousness and celerity. The officers and members of the New York Florists' Club are deserving of the highest credit for the clock-work-like regularity with which every detail connected with the Convention so far as devolving upon them was carried out; and an extra meed of praise is certainly due to the Reception Committee for the masterful manner in which the recreative features were handled. (We feel sure we shall be pardoned for this particularization, because we think it is highly deserved.) In short, let us say that from the moment Acting-Mayor Guggenheimer opened the proceedings, Tuesday, to the close of the Convention, there was not a single hitch.

Now, as to the practical work accomplished. The president's address was a scholarly one, and carefully prepared, its only fault being, perhaps, its extreme length. That Mr. Wood has the welfare of the S. A. F. at heart is evidenced by the frequent appeals for its support throughout his paper. His statement that "our membership should be more active, more energetic, take greater interest in the society, and band together for the common good" should be laid well to heart by everyone. Not only do these words apply to the rank and file, but also to those who guide the society's affairs, for to quote the president again: "if we cast a retrospective glance do we not see that most that has been done has been largely for self-interest?"

It is to be sincerely hoped that the movement which has been set on foot to secure a home for the S. A. F., and which appears to receive the endorsement of its membership will result in something tangible along this line being effected.

The status of the society is such and its importance as an educational factor in the country is so great, that the day has long since passed when its office, metaphorically speaking, can be carried around in the secretary's hat. Invest the association with the dignity it richly deserves by providing it with a home.

It was gratifying to learn that the possibilities of securing a national charter for the Society are greater now than at any time heretofore. The acquisition of this instrument may, and assuredly will, form an incentive toward the establishment of permanent offices for the Society.

The introduction into the program of illustrated lectures, not of a mere diverting character, but of a practical and instructive nature, calculated to assist our craftsmen, should be continued. The lecture of Robert Kift was worth many times more to the retailer for the suggestions and hints it contained, combined with the demonstration of these, than 10 years' dues to the S. A. F. So also do these remarks apply to the grower in connection with Mr. Carmody's paper. Give us more of such features.

We hardly think that any one will regret the disposal made of the proposition to incorporate the "Co-operative Society of Horticulturists of America;" neither will they condemn Mr. Wood's enthusiasm in the matter. That it was well-meant cannot be gainsaid, but the practical carrying out of the suggested scheme is prevented by the facts that you cannot successfully hitch an educational society and a commercial organization to the same wagon pole, and the extent of the territory, the interests of the florists in which the Society seeks to cover. Local bodies of the craft, however, might, and should, give the matter attention—the only possibility of its successful operation lies among them.

The graceful retreat of Chicago before the onslaught of Buffalo in the contest for next year's meeting will go down to future generations as a master-stroke of diplomacy, worthy of the statesman florist who engineered it. "And Ornamental Horticulturists" is to remain yet awhile; although a majority were not in favor of it. Are we, however, right in our selection of the word "ornamental?" Probably the Encyclopedia could furnish us with a term more expressive of our *work* than of our good selves, and it is "by their deeds ye shall know them."

The change in the system of nominating officers was desired, not so much by the method that has prevailed for the past few years as the lack of a proper study of its value and application by those putting it in operation. However, the "dog has returned to its vomit," and no more need be said thereupon.

We would strongly urge a careful perusal of Robert Craig's address on "The Welfare of our National Society." There does present itself an urgent need that the S. A. F. make its influence felt by some ocular and practical demonstration thereof, more than once a year. An exhibition, conducted under the Society's auspices, at a time that seemeth most opportune, is an excellent suggestion worthy of heed. To seek further co-operation with the experiment stations and other governmental institutions of the country, should also be the Society's aim. The florist's trade is indebted to these stations for some most practical and beneficial hints; and to assist in the further conduct of the work, such as these institutions undertake, would result in ten-fold benefit.

Is it coming near the time when all auxiliary societies shall be under the "parental roof"? The rumblings are heard, though faintly yet, perhaps. Let its supporters present the applicability and usefulness of such a proposition in its fullest force. Mere generalizations demonstrating nothing tangible, will not receive the earnest consideration given to well thought out, practicable plans.

Unstinted praise is, we think, due to the managers of the trade and horticultural exhibitions respectively. Their efficient services tended to most magnificent results.

And now, one word about the part played by THE FLORISTS' EXCHANGE in this Convention. Our efforts to furnish a daily report of the proceedings culminated most successfully, and, to us, most creditably, if we are to judge by the numerous encomiums bestowed upon our enterprise. That it necessitated hard work, we are willing to affirm, but the consciousness of having done that work well, and the appreciation of such are surely sufficient reward. Each day's proceedings, right up to the hour of closing were chronicled, and read with intense interest, the following morning by the delegates, all the four editions containing respectively 20, 24, 22, and 20 pages, of the same size as those in our usual weekly issue, being in the Convention hall before the morning sessions began.

We think we may be pardoned for this little bit of self-praise, especially in view of the fact that the proceedings recorded were gleaned by members of our own staff, and the composition and printing of the daily editions done in our own press rooms.

The full success of our week's work was due entirely to the active co-operation of the staff and employees of the printing establishment, without whose cheerful and willing assistance it would have been impossible to perform, what is generally believed to be a most remarkable feat—for a florists' trade paper.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

N. Studer, Anacostia, D. C., registers Nephrolepis washingtoniensis erecta, a seedling originated in Anacostia four years ago. Fronds thick and leathery, with metallic lustre, five feet and upwards in length and 12 inches or more in width. Habit upright.

Nephrolepis washingtoniensis pendula. Seedling originated in Anacostia about four years ago. Fronds thick and leathery, with metallic lustre, five feet and upwards in length, and 12 inches or more in width, with dark brownish midrib. Habit drooping.

WM. J. STEWART, secretary.

The Seed Trade Outlook.

The seed trade was never more at sea than at the present writing. The question usually is, where can we sell at a profit? but now where can we buy a reliable article, not at a price that, under usual conditions of trade, would afford a profit, but one that will satisfy the consumer without regard to price. There is no disguising the fact that in nearly all lines there is a shortage, and in many lines, one for which there is no relief. We take, for instance, American-grown seeds; formerly we could get from Europe something of the same name that could be used in place of home-grown stock, even though not of as high standard of excellence. This year the case is different, the kinds grown in Europe for the American trade have more generally failed there than here. Let us go into detail.

The pea crop in both countries is short; in some kinds very short. At the same time there are hold-over stocks sufficient to meet legitimate demands—quite enough to warrant a good profit to both the wholesale and retail dealers, unless some of the adventurers, without a climate, hope to sell or give away seeds in hopes that the customers once secured can be retained. These sharks did a vast amount of damage last year, when, but for their methods, a good profit could have been made on all sales, by every one in the trade.

Let us say one word to those who offer to give the consumer nearly all the profits that justly belong to them: Your plans won't work. We have seen them tried repeatedly, and the customers you make this year will buy next year of the man that adopts your practice, unless you continue to sell at a price that affords you *not* profit, and impoverishes your honorable competitors. It may seem very well to offer A. B. all your profit for the sake of his influence, but some one else is doing just the same with C. D., and so all through the trucking districts of the country. Do not think your arguments and confidential quotations will be kept sacred, for they will not. The men you bought will sell you out next year, and make a good profit. But more along this line some future day. There will be peas enough for the planter—but there should and will be a good profit to all who handle them.

Cabbage is not in sight to fill more than from 50 to 75 per cent. of contract orders for American-grown seed, which alone is used for the most critical trade, and the shortage cannot be made from Europe, as they have not sufficient for their own trade. The box and packet trade must suffer this year. At the same time they will clean out old stocks in a way they fully understand, which will make a good demand for future crops. In this country there is more than the usual amount put for another year, but the outcome is a game of chance. It is safe to say, however, that the wise dealer has already made his contracts for his next year's supply. As for the foreign crop for 1901, no one can tell anything about it, as the growers there do not begin to tell half they know, and supplies are apt to come from unexpected places. What is true of cabbage is true with all other of the Brassica family, if we except Brussels sprouts, for which there is but little demand.

The shortage of turnip seed will enable all holders to close out old stocks at a profit.

Spinach for Autumn sales is in short supply. Prices should rule high, at least high enough to afford a good profit.

The present year's crop in Europe is not large enough to bring prices down below a good profit.

Kale is short beyond the fears of the pessimist—20 per cent. is a high estimate of what will or can be delivered on contracts.

Onion seed is short—Many kinds very short. Every one except the grower should make a good profit and have no fear of a surplus.

Bush beans, a moderate crop, the drought in some places and the blight in others, have injured the crop materially.

Lima beans, both bush and pole promise fairly well.

Tomato seed will probably be in good demand, at firm prices; the same is true with beets, although, of some varieties, there is quite some stock in the dealers' hands.

Carrot seed will be very high for garden sorts, fully 50 per cent. above last year's prices.

Radish will be high, at the best, less than half a crop, which will give the dealers an opportunity to close out old stock, and give them an opportunity to dictate prices.

In conclusion let us say, if the trade

does not do a satisfactory business the coming year, it will be their own fault. Some of the early adventurers have become sickened of their old methods, and the new ones will not be able to secure supplies that will enable them to injure the legitimate trade by low prices.

Classification of the Sweet Pea.

One of the most practical papers presented before the recent Sweet Pea Conference in London, was that of Mr. W. P. Wright, dealing with the classification of the sweet pea. He said, in part:

When we consider the parts of the sweet pea flower, we survey magnificent raw material for floricultural excellence. In the first place, we have the standard, the principal part of the bloom. What clay is there for the moulder's hand! He can fill it with substance and perfect its outline. Teaching himself beforehand what perfection is, he can set himself to approach it with all the tenacity of his race. And when he has his ideal flower he can paint it with a score of lovely hues. Many of the flowers which we have to-day are pleasing to the eye, but not satisfying to the mind. At a distance, the gay, fluttering blossom is as winsome and enchanting as a butterfly, but a near inspection often reveals unevenness of outline, raggedness, notching, and kindred abominations, all of which must be swept away.

With respect to hooding, I must speak in almost equally uncompromising terms. While freely granting that some of the varieties which hood persistently are pleasing and pretty, I cannot but regard them as imperfect. Hooding is inherently an imperfection, because most varieties hood while immature, and again when past their best. In a complete state of development certain varieties have enough substance to stiffen up the folding segment, while others, more flimsy, fail to do so. The hooded flower is a flag at half-mast.

As the hooders are a fairly numerous race, and include some of our prettiest peas, we must make a section of them, but in my humble judgment they are floriculturally on a lower grade than the erect flowers. It is doubtful whether posterity will find itself burdened with others than these two sections. It is true that there are numerous varieties at the present time which only hood slightly, and give many erect flowers, such, for example, as the beautiful whites Blanche Burpee and Sadie Burpee, and these might be termed half-hooders or intermediates; but I think that once we decide to set up erectness as a standard of excellence, we shall soon find ourselves getting closer to it by selection. Slightly altering an old tulip phrase, we shall get erectified flowers, not only of these whites, but of many other exquisite peas.

Then there is Recurvation, or Reflexing, but this is almost bound to go. It is characteristic of the old Invincibles and Bicolors.

There is also notching. This is a serious disfigurement. It is a feature of the old sorts—a relic of the black barbaric days when there was no Eckford. Let us get away from it.

Some person has suggested that in the future we shall get fringed flowers. When I survey a variety like the fluted form of primrose I can well believe it. But it is not to me an agreeable prospect. What person, having in his veins one drop of the blue blood of the old aristocracy of florist, can ever wish to see a fringed sweet pea?

To sum up, we want in the ideal standard a large, bold, erect segment, firm, substantial, and leathery, smooth at the edge, even in outline, and symmetrically rounded. We will be fairly satisfied if it is the size of a half-crown, so long as the shape is right, but we shall get it bigger, and with the quality, too. Such varieties as Senator, America, and Stanley are noteworthy for excellence of standard, but there are many more. Let us turn to the next pair of petals—the wings. These should not be erect, like the standard, or the tip of the keel would become unduly prominent. In the variety Golden Gate, which is not a yellow, the wings are vertical and open, giving a resemblance to a pair of half-open gates; but this we must suppress with the strong hand. We will pass through the gates and away. The wings should be closed at the top, and slightly folded or hooded, so as to hide the tip of the keel. This likewise gives full exposure to the standard. Well set, well formed wings are a great adornment to a flower, and in the Bicolors give us many choice harmonies of color. The wings of Stanley cover the keel well; those of Senator do not.

In the keel we have another pair of segments, cohering so as to form a small pouch. We need not worry after form here. If the wings do their duty only the front of the keel will show. The amateur hybridizer will not fail to note that by the time the flower is expanded the pollen is shed and the flower self-fertilized. To secure cross-fertilization the anthers must be removed while the flower is still in the bud stage.

Mr. Wright's summary of the points of a perfect sweet pea is as follows:

The standard of erect flowers must be quite flat, well-rounded, smooth at the edge, free from notch or serrature, and not less than 1¼ inches across.

The standard of hooded varieties must be well-rounded and smooth.

The wings must be about half the size of the standard, spreading at the base, but slightly folded and hooded at the top, so as to hide the tip of the keel.

The colors, whether self or parti, should be clear and well defined.

There should be at least two perfect flowers on a stem.

The plant should be of a strong, free habit.

Color, he said, must play an important part in a system of sweet pea classification; indeed, I should not be surprised if the future allots to it the leading position in view of the few variations that there are likely to be in form. By the exercise of a very little ingenuity we can get nearly all the leading varieties into one of several well-defined groups. We have:

(1) SELFS. This is a large, important, and beautiful class, and perhaps no better example of a pure self could be found than Salopian. Many of the bright red "Selfs" have a distinct tint of magenta in the wings, but Salopian has not. In this section natural subdivisions occur to the mind. Thus we have Countess of Radnor as the type of lavender Selfs, Navy Blue of blue Selfs, Dorothy Tennant of mauve Selfs, and so on.

(2) FLAKES. A fairly large class, and one likely to increase in popularity. We have crimson Flakes, such as America, mauve Flakes like Gaiety, rose Flakes like Aurora, blue Flakes like Grey Friar, and maroon Flakes like Senator.

(3) BICOLORS. In one sense flakes are Bicolors, but it would be logical to adopt a system of classifying as Bicolors those varieties which have one well-defined color in the standard and another in the wings. Sub-sections come naturally if we take as the distinguishing color that of the standard. For instance, in Little Dorrit and Empress of India (rose standards with white wings) we have rose Bicolors; in Orange Prince, Countess of Powis, etc. (salmon standards and pale wings), we have Salmon Bicolors, and so forth.

(4) FANCIES. There are, and must be, no inconsiderable number of varieties which refuse to be disposed of so easily as the rest. Take, for example, the lovely Lottie Hutchins, which is lightly splashed with pink on an ivory ground. It is not a true Self, nor is it a true Flake. Such varieties might be classified as Fancies, with the subdivisions White Fancy, Yellow Fancy, etc., taking the ground color as the distinguishing feature.

(5) PICOTEE EDGES. A very small class at present, but one that may increase.

Mr. Wright, in his paper, enumerated and described 165 varieties. He then tabled lists of these peas classified according to form. The following are types which serve to show his arrangement:—Erect-flowered varieties—Emily Henderson, Painted Lady, Boreatton, and Countess of Powis.

Hooded varieties.—Colonist, Imperial Blue, Sensation, and Oriental.

Partially hooded varieties—Navy Blue, Sadie Barpee, and Salopian.

Revolute varieties.—Invincible Scarlet, Peach Blossom, and Daybreak.

He also furnished lists of varieties classified according to color. This color classification is almost identical with that adopted by the English growers for carnations—selfs, flakes, bicolors, white-ground fancies, rose fancies, and picotee-edged as detailed above.

The classification committee hopes to reduce the number of varieties to 50.

The Florists' Exchange Dailies

Were a great success, and contained a lot of matter that has not been printed elsewhere. The publishers have reserved a limited number of copies, which **will be mailed** at **10 cents for the set.**

The Exhibition of 1900

TRADE AND HORTICULTURAL.

Plant Exhibitors.

H. A. DREER, Inc., Philadelphia, Pa., displayed a full line of ferns, both in small and medium sizes, also seedling palms and fancy caladinny. Among their collection of mixed plants are kentias, latanias, cycas, dracænas (including specimens of D. godseffiana), and some large specimens of Kentia Forsteriana. This firm also has a collection of blooms of their double fringed petunias, which are very handsome.

C. W. WARD, Cottage Gardens, Queens, L. I., had a splendid collection of geraniums in pots, including many new varieties. There are nearly one hundred varieties all together, and they showed all the varied forms and colors known to this family. Begonias, also, were represented, as were those two excellent cannas, Pres. McKinley and Black Beauty.

J. M. KELLER, Bay Ridge, Brooklyn, N. Y., had a fine collection of specimen palms, Dracæna Massangeana and Boston ferns, also a collection of orchids, including cattleyas and cypripediums.

J. A. PETERSON, Cincinnati, put up a nice exhibit of adiantum in 5-inch pots, fine plants; also plants of dracæna and Pandanus Veitchii.

FRITZ DRESSEL, Weehawken, N. J., had a large collection of Dracæna Massangeana, which are exceedingly fine, together with specimens of Boston ferns, ficus, palms and aspidistras.

CLUCAS & BODDINGTON CO., New York, make a fine showing of palms, medium sizes predominating. In their exhibit phoenix, kentias, latanias and arecas were represented, also araucarias.

HIRAM T. JONES, Elizabeth, N. J., had an exhibition of evergreens in good shape.

ROBT. CRAIG & SON, Philadelphia, Pa., had a display of crotons that is excellent; about thirty-five varieties are included in the list. Araucarias, dracaenas in variety, ficus, latanias and some magnificent Boston ferns and specimens of kentias, phœnix, etc., were in this exhibit.

SIEBRECHT & SON, New York, made a very large display. Some fine specimens of kentias, phoenix, &c., we staged. Adiantum Farleyense is used as a setting for the oncidiums that are in bloom. Many anthuriums are also shown, together with other choice plants, including such as Dieffenbachias, Platycentra grande, birdnest ferns, Dracaena Sanderiana.

LEMUEL BALL, Wissinoming, Philadelphia, Pa. displayed a nice collection of young palms and decorative plants, Pandanus Veitchi, Livistonas, arecas, araucarias, latanias and kentias are among them; the kentias especially are strong and vigorous.

DALY BROS., Granton, N. J., sent a batch of their new geraniums, Paunpeck.

A. B. HOWARD & SON, Belchertown, Mass., made a fine showing of single petunias of the New Star variety; also dish of the Liliputian Zinnias.

C. H. JOOSTEN, New York City, put up a display of small palms and rose plants, both grafted and on their own roots.

H. A. BUNYARD, as sole agent for John Peed & Sons, London, England, made a nice display of fancy-leaved caladiums, named varieties.

P. OUWERKERK, Jersey City, N. J., had a splendid collection of evergreen shrubs and trees, among which are some specimens of Cedrus deodora, taxus and holly in varieties; also buxus, abies and thuyas in variety.

N. STUDER, Anacostia, D. C., had a nice collection of palms and ferns, the most notable among which were the Neprolepis Washingtoniensis pendula and N. W. erecta. Included in his collection were plants also of pandanus utilis, cocos, seaforthias, latanias, chamaerops, Boston ferns and dracaenas in variety.

CHAS. D. BALL, Holmesburg, Pa., had a collection of cycas, Pandanus Veitchii, araucarias latanias, livistonas and Dracæna Sanderiana.

JULIUS ROEHRS, Carlton Hill, N. J., made a magnificent display both of specimen stock and in smaller grades. Orchids are one of the features and plants in bloom of Vanda coerulea, Dendrobium formosum, D. phalaenopsis, Cattleya Eldorado and Oncidium citrosmum are to be seen. There were also a few plants of Acalypha Sanderi. The large kentias and phoenix palms are fine subjects, while among the lesser stocks anthuriums, ardisias, oranges, Adiantum farleyense and fern balls helped to make a fine exhibit.

A. ROLKER & SONS, New York, showed a nice collection of palms, ferns and usparagus.

ELIZABETH NURSERY CO., Elizabeth, N. J., had a fine display of evergreen and deciduous trees and shrubs, also herbaccous plants and flowers.

WM. MOON CO. NURSERIES, Morrisville, Pa., had a collection of conifers, spruce, etc.

ARTHUR COWEE, Berlin, N. Y., had an exhibit consisting entirely of gladiolus; many fine varieties among them.

R. DREYER, Woodside, L. I., had a fine collection of palms and decorative plants, among which were specimens of Livistona sinensis, phœnix, araucarias, dracaenas, cycas and Boston ferns.

LEHNIG & WINNEFELD, Hackensack, N. J., had on view a choice collection of their finely marked foliage cyclamens. These were excellent specimens, showing plenty of flowers.

J. C. VAUGHAN, New York and Chicago, displayed a number of nephrolepis ferns.

GEO. WITTBOLD CO., Chicago, Ill., had a nice display of their new fern, Nephrolepis Wittboldii, in various stages of growth.

BOBBINK & ATKINS, Rutherford, N. J., made a very creditable display of evergreen shrubs and trees, among them being fine specimens of retinospora cupressus, buxus, podocarpus, abies, etc., in varieties. They also showed small ferns in flats, some Arundo donax and a batch of well-grown Eurya latifolia.

LAGER & HURRELL, Summit, N. J., had a fine display of orchids in bloom, among them Cattleya chrysotoxa, C. Harrisoniæ, C. granulosa, C. velntina C. bicolor, Dendrobium formosum giganteum, Miltonia Roezlii and M. R. album, Oncidium incurvum, O. Kramerianum, O. Papilio. There were about 150 plants in the collection.

Miscellaneous Exhibits.

AMERICAN FLORIST, Chicago, Ill., had specimen copies of their paper for free distribution.

AMERICAN GARDENING, New York City, a collection of books on matters horticultural.

H. BAYERSDORFER & CO., Philadelphia, Pa., had a very elaborate display of florists' supplies, including metal designs, china fern dishes, paper pot covers, chenille and cape flowers in colors, and new importation of immortelles, moss wreaths and other designs. Prepared cycas leaves and wheat sheaves are made a specialty, as also are fancy baskets, of which a very full line is on view.

HENRY BIRD, Newark, N. J., made a showing of his new Acme Flower Pot.

JOS. KIFT & SON, Philadelphia, showed their glass flower holders, also mirror decoration, demonstrating the utility of the holders for that purpose. Also handsome jardinieres.

BOBBINK & ATKINS, Rutherford, N. J.—This firm showed a fine line of bulbs, including hyacinths, tulips, crocuses, all in named varieties; also palms, both medium and small sized. They also had a fine exhibit of the Hasselt Belgian Pottery, for which this firm are the sole agents for America.

BOSTON FLORIST LETTER CO., Boston, Mass., had a fine display of florists' letters of all descriptions.

JOHN LEWIS CHILDS, Floral Park, N. Y., showed 141 varieties of gladiolus and over 100 varieties of herbaceous flowers.

CLUCAS & BODDINGTON CO., New York City, made an excellent display of bulbs, including Lilium Harrisii, L. longiflorum (Bermuda); L. longiflorum giganteum, L. longiflorum from Japan, and a fine collection of French bulbs generally. All these bulbs were in their original packages, the Japanese longiflorums were from cold storage, having been preserved in perfect condition for over ten months. Also longiflorum bulbs grown in the Azores. These are said to be as early as Harrisii, being also procurable a month earlier than the Japanese bulbs.

W. J. COWEE, Berlin, N. Y., exhibited a line of machine-made stems for florists.

DAYTON FRUIT TREE LABEL CO., Dayton, O., showed a complete line of labels. This includes labels of every description, from the smallest plant to the largest tree.

THE DEAN BOILER CO.'S (Boston) exhibit went astray en route to New York. The firm had a desk in the exhibition hall.

DETROIT FLOWER POT MFG. CO., Detroit, Mich., had an exhibition of their red pots and pans; also of their bottomless pots.

HENRY A. DREER, Inc., Philadelphia, Pa., had two tanks filled with aquatics which were very beautiful. Among those shown were Nymphae rosea, Nelumbium album striatum, Nymphaea O'Marana, N. gloriosa, N. delicatissima, N. sub-rosea and N. Zanziharensis. This exhibit was not entered for competition.

WM. ELLIOTT & SONS, New York, exhibited seeds, bulbs, implements, fertilizers, insecticides and other horticultural specialties; also palms and ferns. The exhibit covered 400 square feet, and was arranged in a hollow square with an arched entrance covered with cork bark, entwined with evergreen sprays, flanked with pillars of mushroom spawn. A number of vases of gladiolus spikes were appropriately placed throughout the exhibit with very good effect. With this exhibit were shown nikoteen and aphis punk from Skabcura Dip Co.

JOHN G. & A. ESLER, Saddle River, N. J., exhibited sections of their new hose pipe in three different grades.

EXCELSIOR PLANT CO., New York City, exhibited naturally prepared cycas leaves, Japanese moss, Japanese blue ware, including some handsome large vases.

FINLEY LAWN RAKE CO., Joliet, Ill., made an exhibit of their rotary lawn rake.

FLORISTS' EXCHANGE, New York City, had a full line of the latest works on horticulture; copies of the Special Daily Edition, and maps of New York City for gratuitous distribution.

THE FLORISTS' REVIEW, Chicago, had an exhibit of the book issued by them, Scott's Manual.

GEORGE M. GARLAND, Desplaines, Ill., had on exhibition a section and piece showing method of construction of the Garland Gutter.

SIGMUND GELLER, New York City, made a fine showing of florists' supplies, including metal designs, wheat sheaves, plant stands, fibre vases, immortelles. A large vase of red immortelles with pampas plumes and milkweed balls was very effective. Also French baskets made of wood shavings for violets and centre pieces; these were in all colors. In this exhibit was also a novelty in statice wreaths, silver and bronzed cycas wreaths.

HENRY W. GIBBONS, New York City, exhibited the standard sectional boiler, the chief points of which are the very extended flue area and convenience for cleaning.

GORTON & LIDGERWOOD CO., New York City, showed one of their side-feed boilers for hot water or steam. They also had on exhibition a placard showing sections of soft coal boilers.

THE IVES KROMSKOP COMPANY, Inc., Philadelphia, Pa., showed color photography to perfection. This exhibit was inspected by many visitors to the convention, and its value noted as a practical demonstration of the color value of them.

BENJ. HAMMOND, Fishkill, N. Y., had samples of his paints and putty, slug shot, grape dust and other insecticides.

HELLER & CO., Montclair, N. J., exhibited their unique seed cases. These are mice-proof and well adapted for florists' and seedsmen's use.

PETER HENDERSON & CO. occupy 400 square feet with a particularly well set exhibit of seeds, bulbs, jardinieres and general horticultural requisites particularly adapted to florists' use. Models of their specialties in vegetables made in papier mache are shown, and give a very clear idea of the articles represented. Florists' insecticides and fungicides, also Henderson's ball bearing, spade handled, lawn mower and horticultural books.

THE HERENDEEN MANUFACTURING CO., Geneva N. Y., showed the Furman new model boiler. A placard stated that the boiler had received "the highest award and medal of honor at the Paris Exposition."

A. HERRMANN, New York, showed metal designs, sheaves of wheat, plant stands, Cape flowers, white and colored cycas wreaths, plain and with porcelain flowers, and cycas leaves and fancy imported baskets, artificial flowers and leaves. This was a very extensive exhibit.

A. H. HEWS & CO., No. Cambridge, Mass., had a very full line of flower pots and vases; many different styles were shown in the latter. There was also a full line of seed pans.

ISAAC HICKS & SON, Westbury Station, N. Y., showed photographs of trees in various stages of removal, in which their Tree Remover was being employed.

HILFINGER BROS. POTTERY, Fort Edward, N. Y., had an exhibit of standard flower pots.

E. HIPPARD, Youngstown, Ohio, showed section of greenhouse with standard ventilating machine.

HITCHINGS & CO., New York, exhibited their well known corrugated firebox boiler; also new cast iron sectional tubular boiler; also two standard sections of even-span iron frame construction greenhouse with wood and iron construction benches. Also self-locking sash raising apparatus.

IONIA POTTERY CO., Ionia, Mich., showed a complete line of pots, pans and saucers.

ED. JANSEN, New York City, showed a complete line of baskets, including all the latest novelties in shapes and colors.

JENNINGS BROS., Philadelphia, Pa., made a display of their greenhouse specialties; their patent iron gutter, ventilating apparatus, inside drip bar, etc.

C. H. JOOSTEN made a very neatly arranged display of bulbs shown in small baskets arranged in classes. Over the table is a set of about fifty colored plates in frames, showing the blooms of the principal varieties. There is also shown here Fostite Insecticide and Joosten's Magazine Bellows and samples of fibreware vases and saucers.

W. F. KASTING, Buffalo, N. Y., had three soil pulverizers on exhibition.

WM. H. KAY, New York, exhibited a sectional boiler, a tubular boiler, fittings and hose; also pumping machine and windmill.

WM. C. KRICK, Brooklyn, exhibited his perfect adjustable flower stand.

W. C. KRICK, Brooklyn, N. Y., has a fine display of letters, monograms, etc., in immortelles; adjustable plant stand for displaying plants in a tilted position or otherwise; pot-holders, for hanging of plants, etc.

LEHMAN BROS., New York city, exhibited their wagon heaters, together with samples of fuel for same.

S. J. LIMPRECHT, New York, had a fine line of baskets, pot covers and wheat sheaves; also doves and plant stands.

LORD & BURNHAM CO., New York city, section of a modern greenhouse, including iron benches, with tile and wooden bottoms; also sectional boiler, a hot water heater, hot bed sash, patented ventilating machine, self oiling; the mechanism is inclosed, retaining the oil after applied.

DANIEL B. LONG, Buffalo, N. Y., had an exhibit of florists' photograph albums, newly designed specialties in the florists' trade, including new designs for tags, cards, envelopes and catalogues.

W. A. MANDA, South Orange, N. J., had an exhibition of gold, silver and bronze medals that had been captured for new and rare plants in previous years.

JOHN C. MEYER & CO., Boston, Mass., exhibited a complete line of silkaline, the principal tying material of the florists' trade of the country.

N. F. M'CARTHY CO., Boston, Mass., had a display of wheat sheaves, metal designs, hose couplings, wire cutters and fine Japanese chinaware for holding cut flowers.

THE MACMILLAN CO., New York, had an exhibit of books pertaining to horticultural matters.

WM. H. MOON CO., Morrisville, Pa., had an exhibit of evergreens, including retinosporas, Oriental spruce, Colorado blue spruce and others.

NEW JERSEY MOSS & PEAT CO. had an exhibit of their moss and peat.

Miscellaneous Exhibits.

POLLWORTH, C. C., CO., Milwaukee, Wis., showed the Klokner high vase flat.

THE QUAKER CITY MACHINE CO., Richmond, Ind., showed a section of greenhouse and the Evans challenge ventilating machines.

REED & KELLER, New York city, a general line of their specialty, wire designs and florists' supplies, a novelty shower bell, extension arch wedding design. The bell is pulled by a string and a shower of roses or other flowers falls on the bride. Also plant stands, sliding pedestals, rings, bars and standards, with glasses for flowers, and some beautifully lettered ribbon designs, casket cover sheaves and casket designs of various kinds.

A. ROLKER & SONS, New York city, a fine display of plant stands, baskets, cycas leaves, plant stakes, Neponset paper pots, Cape flowers, raffia, fern dishes and covers, etc.

RUSTIC CONSTRUCTION COMPANY, 19 Fulton street, New York city, had a display of rustic settees, tables, baskets, etc.

SCHLOSS BROS., New York, showed a very complete line of ribbons.

JOHN A. SCOLLAY, Brooklyn, showed samples of patent plant sprinkler, putty bulbs, and the Aeolipyle, a coal saving apparatus, utilizing the gas from the coal. It is attached to the smoke pipe, can be used where either steam or hot water heating is employed. Also the Invincible boiler, conical boiler, and patent expansion joint for pipe connecting without threads—a handy appliance.

EMIL STEFFENS, New York city, made a good showing of wire designs—wreaths, crosses, gates ajar, harps, horseshoes, etc.

STEVENS & CO., 107 Chambers street, New York, a collection of sprayers and sprinklers, including an air compression sprinkler.

STUMPP & WALTER CO., New York, showed bulbs, mushroom spawn and requisites, including many brands of concentrated fertilizers and insecticides; also hyacinth glasses, plant tubs, hose, florists' thread, plant stakes and fibre ware.

SULTAR CO., New York city, showed a line of disinfectants, oils, etc.

J. M. THORBURN & CO., New York, cover 400 square feet with an exhibit of seeds, bulbs and implements, neatly set off with small decorative plants. The exhibit included blooms of the firm's specialties and novelties: Salvia splendens, Silverspot, improved strain of coxcomb; specimens of gilt edge cauliflower, Thorburn maximum lettuces, bags of Thorburn's Lawn Grass Seed, and ball-bearing lawnmowers; also newly imported French, Dutch and Bermuda bulbs.

J. H. TROY, New York, made a creditable exhibit of bamboos, palms, etc.

VAUGHAN'S SEED STORE, New York and Chicago, showed a collection of bulbs, with specimens in glasses in bloom. The exhibit was set off with plants of nephrolepis.

THOS. W. WEATHERED'S SONS, New York, exhibited their sectional boiler, two conical boilers and two self-feeding boilers; also a section of a greenhouse, showing their new gutter, part cast iron and part wrought iron.

WHILLDIN POTTERY CO., Long Island City, Philadelphia and Jersey City, made a fine exhibit of florists' pots in all sizes, ranging from one inch to sixteen. The one inch pots were fixed with a wire and used for boutonnieres. The design, "The Whilldin Pottery Co.," was made with one inch flower pots on a green live moss background.

THE WHITE ENAMEL REFRIGERATOR CO., St. Paul, Minn., exhibited a refrigerator having the Bohn patent syphon system.

The Sander Cup

Was awarded to Julius Roehrs, of Carlton Hill, N. J.

The Horticultural Exhibition.

The judges of the Horticultural Exhibit were:

Plants.—Wm. Falconer, I. L. Powell and George Smith, of Orange, N. J.

Cut Flowers and Vegetables.—C. H. Allen, Floral Park, N. Y.; Leonard Barron and George McWilliams, Whitinsville, Mass.

D. WILLIS JAMES, Madison, N. J. (W. Duckham, gdr.), was first for group of foliage plants covering 100 square feet, consisting principally of crotons, diffenbachias, palms, dracaenas.

E. W. BLISS, Brooklyn (E. Wolz, gdr.), was second in this class. This exhibit was composed of palms, pandanus and cycas.

For collection of new and rare plants D. Willis James, Esq., was again first. These included fine specimens of Acalypha Sanderi, Dracaena Godseffiana, Geonoma Pynaertiana, Kentia Sanderiana, Kentia Forsteriana, Thrinax Jamesii and Licuala jeanenceyi, also Rhopaloblasta hexandra.

E. W. BLISS, Esq. (E. Walz, gdr.), got special prize for group coleus—a collection of very fine plants.

J. B. DUTCHER, Esq., Pawling, N. Y. (A. L. Marshall, gdr.), took second prize for six cannas, six varieties, including Pawling, red; Mrs. James Wood, Gloriosa, President Cleveland and others. G. E. Dickinson, Esq., Irvington, N. Y. (J. Boshard, gdr.), first.

H. M'K. TWOMBLY, Esq. (A. Herrington, gdr.) was first for specimen cycas, with a handsome plant. J. P. Trevors, Yonkers, N. Y. (H. Nichols, gdr.), second.

Mr. Twombly was also first for group of foliage plants covering 200 square feet, including very large specimens of Caryota urens, Cocos plumosa and others.

H. M'K. TWOMBLY, Esq., was also first for six palms, six distinct varieties.

DEAF AND DUMB INSTITUTE, New York (A. K. Petit, gdr.), first for collection of rex begonias; E. W. Bliss, Esq., third.

H. L. TERRELL, Esq., Seabright, N. J. (James Dowling, gdr.), third for group of foliage plants covering 100 square feet.

L. STEIN, Esq., Irvington, N. Y. (Thomas Cockburn, gdr.), took first for Asparagus Sprengeri.

E. D. ADAMS, Seabright, N. J. (Geo. H. Hale, gdr.), first prize specimen croton.

Group of flowering and foliage plants covering 100 square feet. First prize, Mrs. J. B. Trevor, Yonkers, N. Y. (H. Nichols, gdr.). Some very fine colored crotons were staged in this group.

For the best six distinct dracaenas, D. Willis James, Esq., Madison, N. J., was first, with Dracaena, Lindenii, D. Sanderiana, D. cantleyi, and D. Charles Dissel.

OAKES AMES, Esq., North Easton, Mass. (R. M. Grey, gdr.), made an exhibit of pond lilies and sedges.

HENRY F. MICHELL, Philadelphia, Pa., showed a plant of the new begonia Triumph of 1900, introduced by Godfrey Aschmann.

S. THORNE, Esq., Millbrook, N. Y., showed a collection of aquatics.

E. D. ADAMS, Esq. (Geo. H. Hale, gdr.), was first for group of fancy leaved caladiums.

E. D. ADAMS was second for group of foliage plants, covering 200 square feet.

D. WILLIS JAMES, Esq., Madison N. J., took first for specimen plants of Acalypha Sanderii.

WM. BROWN, Esq. (P. Riley, gdr.), Brooklyn, N. Y., took first prize for 12 Crotons. This exhibit was very well colored.

W. J. CLEMSON, Esq., Taunton, Mass. (Ed Powell, gdr.), was second for collection of hardy perennial and bulbous plants, 25 species.

D. WILLIS JAMES took first prize for collection of vegetables, 25 kinds.

W. J. CLEMSON was first for collection of vegetables, 6 kinds.

W. J. CLEMSON was first for 6 heads of celery.

The second prize for twenty-five kinds of vegetables went to F. O. Matthieson, Esq., Irvington, N. Y. (A. A. Taaffe, gdr.)

The first prize for gladiolus, 12 varieties, was captured by D. Willis James.

CHAS. A. ATKINS, Madison, N. J., took the first prize for flower garden design.

E. D. ADAMS, Esq., was second for a collection of Asters.

MRS. J. B. TREVOR, Yonkers, N. Y., got second prize for group of ferns covering 100 square feet.

H. M'K. TWOMBLY, Esq., was second for three ferns distinct.

The third prize for specimen fern went to E. D. Adams, Esq., Seabright, N. J.

MRS. CHAS. PRATT, Brooklyn, N. Y., (W. S. Rennie, gdr.), took second prize for specimen palm.

E. D. Adams, Esq., Seabright, N. J., took third prize for specimen cycas.

D. WILLIS JAMES, Madison, N. J., took first for twelve stove and greenhouse plants.

E. J. ADAMS, Seabright, N. J., took first prize in the class for six ferns dissimilar.

MRS. J. B. TREVOR, Yonkers, N. Y., (H. Nichol, gdr.), was first for three ferns, distinct varieties.

MRS. J. B. TREVOR took first prize for specimen fern with a fine plant of Adiantum Farleyense.

For the group of ferns covering 100 square feet, the first went to H. L. Terrell, Esq., Seabright, N. J., (J. Dowlen, gdr.)

JAS. EASTMAN, Esq., Tarrytown, N. Y., (Wm. Scott, gdr.), took first prize for collection of vegetables; twelve kinds.

C. N. BLISS, Esq., Oceanic, N. J. (N. Butterbach, gdr.), took second for collection of twelve varieties of vegetables.

C. C. WORTHINGTON, Irvington, N. Y. (L. A. Martin, gdr.), took third prize for 12 kinds of vegetables.

MAYOR HOPKINS, Tarrytown, N. Y. (R. Angus, gdr.), took second prize in the class for 6 varieties of vegetables.

For collection of cut canna flowers, G. E. Dickinson, Esq. (John Bochard, gdr.), was first.

In class for six dracaenas, six distinct varieties, H. McK. Twombly was second.

E. S. CONVERSE, Malden, Mass., was second for collection of rex begonias.

MAX NATHAN, Esq., Hastings, N. Y. (R. Astley, gdr.), exhibited a plant of Oncidium Krameri.

D. WILLIS JAMES, Esq., was first for three nepenthes in flower.

D. WILLIS JAMES, Esq., was first for fancy-leaved caladiums with a fine collection.

F. O. MATTHIESON, Esq., Irvington, N. Y. (A. A. Taafe, gdr.), was first for collection of asters.

MISS E. J. CLARK, Pomfret, Conn. (John Ash, gdr.), took first prize for 6 bunches of grapes in three varieties, some magnificent bunches being shown.

J. EASTMAN, Esq. (Wm. Scott, gdr.), Tarrytown, N. Y., took first for two dishes of hot house peaches. Also first for dish of same fruit. Perry Belmont, Esq., Newport, R. I. (W. Barth, gdr.), being second in latter class.

D. WILLIS JAMES was first for six varieties of tomatoes, five of each; E. D. Adams, Esq., second; F. O. Matthieson, Esq., third.

E. W. BLISS, Esq. (Ed Walz, gdr.), Brooklyn, was second for six ferns.

PERRY BELMONT, Esq., was first for three varieties of tomatoes; Major Hopkins, Tarrytown, N. Y. (R. Angus, gdr.), second; Jos. Eastman, Tarrytown (Wm. Scott, gdr.), third.

AMERICAN GARDENING, New York, showed handsome specimens of a new seedling tomato.

WM. H. S. WOOD, Esq., Greenwich, Conn. (John W. Duncan, gdr.), was first for pair of frame cucumbers; W. J. Clemson, second; Mrs. J. B. Trevor, third.

WM. ROCKEFELLER, Tarrytown, N. Y. (Wm. Turner, gdr.), was second for four bunches of grapes. The same exhibitor had also a collection of fruiting trees—apples and plums—in pots.

JOS. EASTMAN, Esq., Tarrytown, N. Y., was second for six bunches of grapes.

The Awards.

Report of the Judges.

Class A—Plants.

Robt. Craig & Son, Philadelphia, splendid lot of well-grown crotons; certificate of merit. Fine specimen Boston fern; certificate of merit.

Henry A. Dreer, Philadelphia, very fine collection of palms and ferns.

Cottage Gardens, Queens, N. Y., fine display of cannas and geraniums. New geranium "Little Pink;" certificate of merit. New dark leaf Canna "Black Beauty," very effective.

J. M. Keller, Bay Ridge, collection of palms and orchids.

Daly Bros., Granton, N. J., new pink geranium, "Paunpeck."

Wm. H. Moon Co., collection of evergreens.

Lager & Hurrell, fine collection of orchids in flower.

Bobbink & Atkins, a large collection of hardy evergreens; certificate of merit.

P. O. Ouwerkerk, well grown collection of specimen evergreens.

Elizabeth Nursery Co., Elizabeth, N. J., grand collection of evergreens and samples of deciduous shrubs and H. P. roses.

Fritz H. Dressel, fine collection of dracaenas and decorative plants.

Bobbink & Atkins, Eurya latifolia, a plant of special merit and rare in the country; certificate of merit.

Siebrecht & Sons, New Rochelle, N. Y., splendid collection of palms and decorative plants; specially noticed.

J. A. Peterson, Cincinnati, Ohio, collection of Adiantum Farleyense and Pandanus Veitchii.

Jno. F. Cowell, collection of hybrid dracaenas; certificate of merit.

A. Rolker & Son, fine collection of ferns and foliage plants.

R. Dryer, Woodside, L. I., fine collection of foliage plants; certificate of merit.

C. H. Joosten, New York, collection of palms.

H. A. Bunyard, New York, fine collection of well grown caladiums.

Thos. Roland, Nahant, Mass., exhibit of begonia Gloire de Lorraine.

Geo. Wittbold Co., Chicago, Ill., a fine exhibit of the new form of fern, namely, Nephrolepis Wittboldii.

Vaughan's Seed Store, New York, a fine lot of well grown Boston fern in all sizes.

Julius Roehrs, Carlton Hill, N. J., fine collection of palms and foliage plants, interspersed with specimen plants of Dendrobium Phalaenopsis in full bloom.

Clucas & Boddington Co., New York, collection of well grown, healthy palms and decorative plants in popular sizes.

Lemuel Ball, splendid collection of palms and decorative plants; well grown specimen dracaenas; especially noticeable.

N. Studer, Washington, D. C., fine collection of palms.

(Signed) HERMAN LIPS,
J. FRANCIS HUSS,
ROBERT HUNNICK.
Judges.

Class B—Cut Blooms.

Henry A. Dreer, Philadelphia, choice collection of double fringed petunias.

A. B. Howard & Son, Somerville, Mass., collection of new star petunias; considered fine for bedding plants; also collection of dwarf Liliputian Zinnias, considered useful bedding plants.

John Lewis Childs, Floral Park, N. Y., a large exhibit of gladioli.

Meadow Vale Farm, Arthur Cowee, Berlin, N. Y., fine collection of hybrid gladioli; awarded certificate of merit. Special mention of white gladiolus "White Lady," for splendid form, large size and perfect color.

The Floral Exchange, Philadelphia, new rose "Queen of Edgely," sport of American Beauty; awarded certificate of merit.

Henry A. Dreer, Philadelphia, fine collection of Nympheas; certificate of merit awarded for general collection. Special mention for two new seedlings, Nympheas.

Class C—Boilers.

Lord & Burnham Co., Irvington-on-Hudson, N. Y., improved No. 5; awarded honorable mention. Lord & Burnham sectional boiler, awarded certificate of merit.

Herendeen Mfg. Co., Geneva, N. Y., the Furman new model boiler; awarded certificate of merit.

Henry W. Gibbons, New York, standard steam or hot water boiler; special mention.

John A. Scollay, Brooklyn, Invincible new sectional hot water boiler; special mention. Scollay patent pipe joint for either wrought or cast iron pipe; special mention.

Wm. H. Kay, New York, Palace Queen sectional hot water boiler; honorable mention. Palace Region cast iron hot water boiler; honorable mention.

Thomas W. Weathered's Sons, New York, sectional hot water boiler; special mention.

Hitchings & Co., New York, cast iron tubular sectional boiler; special mention.

Gorton & Lidgerwood Co., New York, magazine steam boiler; honorable mention.

Class D—Greenhouse Appliances and Flower Pots.

Jenkins Bros., Philadelphia, iron gutter for greenhouses, very strongly constructed; drip bar on gutter, substan-

tially packed expansion joints; highly commended.

G. M. Garland, Desplaines, Ill., iron gutter, strong construction; the manner of supporting the gutter by means of two-inch pipes is commended.

Lord & Burnham Co., Irvington, N. Y., automatic air valve and patent pipe headers for water system of heating; honorable mention. Iron greenhouse construction and ventilating machine.

Quaker City Machine Co., Richmond, Ind., ventilating machines.

E. Hippard, Youngstown, O., new chain ventilating machine.

Stevens & Co., 107 Chambers street, New York city, cheap insecticide sprayer, made in several different forms. Very desirable for private places; honorable mention.

W. H. Kay, 42 Dey street, New York, exhibit of greenhouse hose; also ball-bearing steel windmill, bearing being on both pivot and thrust, making a very easy running mill; honorable mention.

T. W. Weathered's Sons, New York, new styles of manufacturing expansion iron gutter. New extension wire support for graperies, which seems very practical.

Hitchings & Co., 233 Mercer street, New York, exhibit of iron-frame greenhouse.

Ionia Pottery Co., Ionia, Mich., an assortment of flower pots and pans.

Whilldin Pottery Co., Philadelphia, Pa., exhibit of flower pots.

Detroit Flower Pot Mfg. Co., bottomless flower pot, highly commended for violet and fern culture.

A. H. Hews & Co., North Cambridge, Mass., fine exhibition of artistic and commercial flower pots.

Florists' Supply Co., N. Tonawanda, N. Y., sod-crushing and pulverizing machine; apparently a good, practical machine.

Dayton Fruit Tree Label Co., Dayton, O., fine exhibition of wooden labels.

Lager & Harrell, Summit, N. J., exhibition of orchid baskets and peat and moss for orchid growing.

Hilfinger Bros.' Pottery, Ft. Edward, N. Y., exhibition of flower pots.

J. G. & A. Esler, Saddle River, N. J., fine exhibition of greenhouse hose.

(Signed) C. W. WARD,
W. W. COLES,
ANTHONY WIEGAND,
Judges.

Class E—Florists' Supplies and Fancy Earthenware.

Alexander Klokner, Milwaukee, Wis., exhibit of vase stands of considerable merit.

J. A. Scollay, Brooklyn, exhibit of Scollay's Sprinkler.

Lehman Bros., New York, Wagon Heating Apparatus for heating florists' wagons, apparently a very practical device.

Finley Lawn Rake, Lawn Rake Co., rotary lawn rake, deserves special mention.

White Enamel Refrigerating Co., very practical ice box, special mention.

Rustic Construction Co., excellent exhibit of rustic baskets and stands.

A. H. Hews & Co., North Cambridge, Mass., handsome new design in earthenware urns; special mention.

Heller & Co., Montclair, N. J., mice proof seed boxes; special mention.

J. M. Thorburn & Co., New York city, one of the finest exhibits of florists' necessities.

Schloss Bros., New York, excellent exhibit of florists' ribbons.

Peter Henderson & Co., New York city, very fine display of rustic baskets and garden tools.

A. J. Cowee, Berlin, N. Y., exhibit of wired toothpicks.

Stumpp & Walter Co., New York city, fine display of wire florists' supplies.

New Jersey Moss & Peat Co., fine exhibit of Sphagnum moss.

Bobbink & Atkins, Rutherford, N. J., exhibit of Hassalt pottery imported from Berlin; special mention.

John C. Meyer & Co., Boston, fine display of Silkaline.

A. Hermann, New York, metal designs in baskets; special mention.

Ed. Jansen, New York city, finest display of novelty baskets.

H. Bayersdorfer & Co., Philadelphia, complete collection of florists' supplies; special mention.

W. C. Krick, Brooklyn, Immortelle emblems; special mention.

N. F. McCarthy & Co., Boston, Mass., florists' vases and Boston letters; special mention.

S. J. Limprecht, New York, beautiful decoration in sheaves of wheat and Mountain Laurel; original and artistic.

Excelsior Plant Co., New York, exhibit of jardinieres and plant stands; special mention.

Emil Steffens, New York, wire designs; special mention.

A. Rolker & Sons, New York city, beautiful display of cycas designs and wreaths.

Reed & Keller, New York, wire designs and adjustable iron arches; Lowpha vases and hanging baskets; special mention.

Sigmund Geller, New York, exhibit of wheat sheaves and French baskets, made of wheat and shavings; special mention.

Class F—Bulbs and Seeds.

Clucas & Boddington Co., New York city, general display of bulbs, excellent Lilium longiflorum from cold storage; very good.

Wm. Elliott & Sons, New York city, very fine collection of excellent bulbs; also extensive exhibit of grass seed.

J. C. Vaughan, Chicago and New York, excellent display of Roman hyacinths, assortment of Dutch hyacinths and tulips and Harrisii bulbs; a very creditable exhibit.

Peter Henderson & Co., New York, excellent large display of Dutch bulbs, lilies, seeds and decorative plants; a fine and extensive exhibit of superior quality.

Stumpp & Walter Co., New York city, general assortment of Dutch bulbs; very creditable display of superior quality.

C. H. Joosten, New York city, collection of Dutch bulbs and exhibit of fostite.

J. M. Thorburn & Co., New York, a fine and extensive exhibit of seeds, bulbs and vegetables and implements of superior quality.

Bobbink & Atkins, Rutherford, N. J., very fine exhibit of Dutch bulbs of superior size and quality.

(Signed) WM. PLUMB,
WM. H. SIEBRECHT,
ALFRED ZELLER, Judges.

Class G—Miscellaneous.

Wm. H. Kay, 42 Dey street, New York, complete line of boiler house tools and fixtures. A display of garden hose; especially recommended.

A. T. De La Mare Ptg. & Pub. Co., Ltd., New York, complete collection of horticultural literature.

J. G. & A. Esler, Saddle River, N. J., exhibit of garden hose.

Benj. Hammond, Fishkill, N. Y., exhibits an attractive display of slug shot and insecticides.

The Sultare Co., New York, fine display of antiseptics, disinfectants, insecticides and germicides; especially recommended.

N. F. McCarthy & Co., Boston, display of hose menders and hose couplings. Committee compliments novel method of holding down exhibits.

Henry Bird, Newark, N. J., the acme pot, a new seed pot, including an ingenious method of supplying moisture by means of capillary attraction and assisted with wicking.

The Rustic Construction Co., exhibit of a varied collection of rustic work; awarded certificate of merit.

The Finley Lawn Rake Co., Joliet, Ill., exhibit of a rotary lawn rake; awarded certificate of merit.

Geo. T. King, Nicholson's Dictionary of Gardening.

The Macmillan Co., New York, exhibit The Encyclopedia of American Horticulture and other horticultural works.

Daniel B. Long, Buffalo, N. Y., exhibit of floral photographs and advertising novelties; special mention.

Isaac Hicks & Son, Westbury, L. I., N. Y., exhibit of photographs of their tree remover, which the committee says can talk.

Jos. Kift & Son, Philadelphia, attractive display of Kift patent adjustable flower holders; also rubber capped flower tube; awarded special mention.

W. C. Krick, Brooklyn, N. Y., exhibit flower pot handle and hanger; a very useful device.

Snap Shots.

President Wood, in his address, called attention to the paucity of the funds in the S. A. F. treasury. The S. A. F. seems to have reached a point where Ben Franklin's maxim applies: "A penny saved is a penny earned." The maxim, in this instance, might be modernized to read, "Spend less, earn more," or, what is better, devise some means whereby the S. A. F. treasury might be replenished.

Co-operative purchase by the S. A. F. through sub-committees of the Florists' Club might be practical.

Murray Hill was headquarters.

Among the faces that we missed in the great 1900 convention is that of the genial "Canna" from the banks of the great father of waters. He is the Pooh-Bah of the Iowa K. of P., and his official duties prevent him from joining the members of the S. A. F. in their annual merry-go-round.

The secretary of the Florists' Hail Association says he was treated to the roar of a hailstorm that passed three miles to the eastward of his domicile last Saturday; Pearl River was the scene of destruction.

The patriarchs in the Chicago push: Edgar Sanders, age 73, in Chicago since 1857; Samuel Garland, age 70, in Chicago since 1845; George Wittbold, age 67, in Chicago since 1857.

The ex-presidents present were E. G. Hill, Wm. R. Smith, James Dean, Adam Graham, W. N. Rudd and W. F. Gude.

The carriage drive was a great success, and Chairman Walter F. Sheridan of the reception committee scored his first success.

President Wood's reference to holiday prices of cut flowers was timely, and was needed, as a public refutation of the many fake stories that at various times have been foisted upon the public.

The Florists' Hail Association bobbed up serenely with 934 members, 13,025,762 square feet of glass insured and a reserve fund of $7,526.87, and an emergency fund of $5,896.57.

W. N. Rudd, extensively decorated with Buffalo badges, was several times mistaken for the Shah of Persia.

President O'Mara of the New York Florists' Club has reason to be proud of the success of his lieutenants who have assisted him in managing the convention. The successful general deserves great credit for putting the right men in the right place.

Mr. C. W. Ward, as a press agent, was a dandy. With typewriter assistance he had everything in shipshape for the newspaper men.

And the horticultural exhibition, what a magnificent display! Seldom have we looked upon its like. Manager Herrington is to be complimented on such a successful culmination to his efforts.

Julius Roehrs and others who have donated plants, etc., for the decoration of Convention Hall, stairways and vestibule deserve special thanks for the liberal manner in which they responded to the calls of the committee for decorative material.

J. D. Carmody, he who halleth from Posey County, gave florists who intend to build greenhouses solid chunks of information. It might be well to say that the essay was not in Posey County orthography.

E. Haentze, of Fond-du-Lac, Wis., is one of the old-timers present. Last year Mr. Haentze lost $160 and was lucky enough to find it again. This year his pocketbook is buttoned up and strapped fast, locked and barred.

Lewis Ulrich, of Tiffin, Ohio, is one of those prosperous florists who is enlarging his establishment every year.

Albert M. Herr, treasurer of the Florists' Hail Association and secretary of the Carnation Society, is one of the most unassuming men in the convention. Treasurer Beatty of the S. A. F. O. H. is a good second. This modesty is no doubt due to the influence of the two estimable ladies whom they have selected as their partners in life. No bouquets, please.

Lecturer Carmody, with a map and rod, was the veritable type of a Posey County "skule marster."

President Woods' co-operative scheme was hit on the head by an especially long and strong club from an especially long-headed and far-seeing man.

There is nothing narrow about Rudd, of Chicago. He is capable of wearing a Buffalo badge, multiplied indefinitely, and still voting for Chicago.

The vote on location of next year's convention was the most exciting episode of the convention.

Ex-President Graham is still the same "Old Adam."

Joseph Heacock, the Man of Palms, from Wyncote, Pa., is the new man on the Hail Association's Board of Directors.

J. C. Vaughan, the firm friend and admirer of Michael Dooley, is ever on the wing, but he yesterday found that it was impossible to be in two places at the same time. This is about the only thing Mr. Vaughan ever failed to accomplish.

Mayor Seldewitz, of Annapolis, is a good type of political florist. He left the political portion of the outfit at home, and is now what we have always known him to be—one of the jolly, good florists.

The vaudeville show was a laugh-and-grow-fat affair. Those who are disposed to look upon the entertainment as being a trifle loud must remember that they are in Greater New York, and not in an interior Presbyterian town.

The critics who are always shouting "What can be learned at an S. A. F. meeting," ought to have been present to hear "Kift's lecture," and see "Kift's pictures." They could have learned how to put up an up-to-date decoration instead of being back numbers.

Henry Eichholz rooted for Buffalo by printing his circulars, headed by a line, "Vote for Buffalo."

Edwin Lonsdale's presence at the Convention was greatly missed. Many and frequent were the expressions of sympathy heard about this genial man on his recent very sad bereavement.

A Hard Tackle to Get His Hard Tack.

The genial treasurer of the New York Florists' Club, "Our Charlie," had an exciting experience at Glen Island, Thursday, which is worth relating, as showing the excellent order prevalent at the dinner in that well-regulated resort.

When asked to show his ticket at the dining room door, Charlie had not one in his possession and called upon Alex. S. Burns to prove his identity. Mr. Burns, however, could not make it clear to the manager, as he himself was not known. Finally Chairman W. F. Sheridan was found and through his instrumentality Charlie got his dinner.

Carmody's Flashings.

Always go to a bachelor for a pin, and to a nigger for a match.

An automobile will not drag from its place a post set in water lime cement. There is nothing like water lime cement as a preservative for wood.

In speaking of the gutters, showing an inside width of seven inches, he said: "All florists have not small feet. Many are of the claw-footed variety, and oblong. Of course, it is a good thing to have in soft ground—you don't go down so deep." (Laughter.)

In describing the cap at the ridge of the house, "it shuts like a lid," he said; "like one of those chests many came over from the Old Country with—my friend Coles, and some of those other foreigners. Great Scott came over with his box, too." (Laughter.)

After explaining the position of the rafters, he remarked, on taking a drink of water, "I am not altogether a windmill—I run by water a little. I drink to your health." (Laughter.)

A drop in boiler grates on Thursday resulted in a damaged shoe and sore foot on one of the heating experts.

What I Think I Know About Greenhouse Construction

Paper read by J. D. Carmody, of Evansville, Ind., before the Society of American Florists, New York; August 22, 1900.

To attain the best results in any branch of industry the best methods must be employed. Especially is this true of plant culture under glass. Never until good houses were constructed was it possible to grow such roses and carnations as now gladden the eyes of

J. D. CARMODY.

mortals and make the business of floriculture a financial success. But it took many years to attain the perfection in plant houses which enables the florist to produce these perfect flowers. Those of us on whom time has carved fantastic wrinkles and ornamented with silver locks can well remember the makeshifts, the dugouts, heated by brick flues, that were dignified by the name of greenhouses. They bore the same relation to the present commercial houses that the stage coaches of that day do to the present railroad palace cars. The progress of transformation was exceedingly slow from the fact that not every one who has the requisite ability to grow good flowers possesses also the mechanical genius to plan and build a structure especially adapted to their best development. And it was only when the florist and mechanic combined their efforts, resulting in greenhouse building becoming a special industry, that perfection in floriculture under glass was approached.

Be it understood I am not writing this article for those who are able to employ the specialist to place the house in position ready for occupancy, but rather for those of moderate means who go into the business of growing flowers for the love of them, and with a desire if successful to make a living by their production.

I desire also to assist the vegetable grower to put a roof of glass over his lettuce and cauliflower, and relieve him of the inconvenience of the cold frame and hot-beds which are now rapidly giving way to plant houses.

The ordinary village carpenter has not the first correct idea as to the construction of a plant house, but if furnished a few sectional drawings and watched by the gardener who has seen or read up on some structures, a great many mistakes can be avoided, and greenhouses can be put up by home labor and out of home material, and the proprietor by doing a share of the work can save not a little of the expense. At the present time, thanks to machinery, the sash and sash-bars can be gotten from the factories fully as cheap and in better shape than formerly, and I would advise proprietors to patronize greenhouse builders to that extent.

The first thing in building a greenhouse is to have the ground to put it on, and right here let me say if possible have a deed for the ground before you commence building. You may think the price too high, but you may be sure, as a rule, the improvements you put on the ground will not reduce the value. If the ground selected is on the outskirts of the city, as it should be, in a short time the city will build out beyond the location, and the price will go higher rather than lower. I know of many florists who, by the sale of their greenhouse property late in life, were able to retire with a competency, making more out of the rise in real estate than they saved in all those years of labor by the sale of plants and flowers.

I would not advise to build in a city among high buildings or near smoky factories. A leaking gas main will in a few hours ruin a house full of plants. (The writer has experienced loss in this way.) In an atmosphere of dust and smoke good flowers cannot be grown.

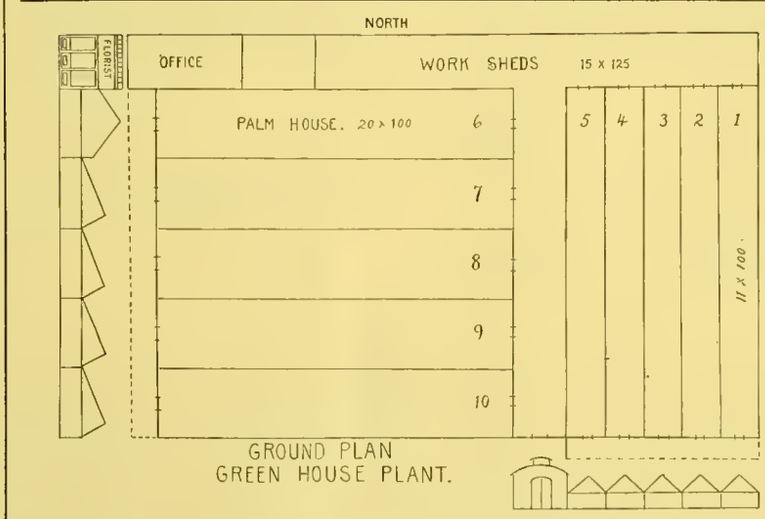
Locate your house so that it cannot be shaded by anything, and if you have several houses locate them so they do not shade each other. Nothing is so desirable in growing cut flowers as clean glass and sunshine.

In drawing your ground plans study convenience of getting your fuel dropped from the wagon directly beside your heat generator. Do not have a deep cellar for your boiler or fire-place, as it makes it inconvenient to get the ashes away.

On the character of the plants intended to be cultivated largely depends the plan of the houses, and by all means settle on a plan and have a complete drawing of same, both ground plan and sectional, before commencing the work.

Most persons starting in this business expect to increase their range from time to time as occasion demands. Therefore, the first house should be located so that it can be enlarged or built by the side of and remain as part of the plant without remodeling. If it is desired to grow principally bedding plants at the start, I would recommend the houses to stand with the length north and south.

The first thing to build on starting a greenhouse is a shed not less than fifteen feet wide and as long as the plant house is in width; this will furnish a workshop and shelter to keep the new lumber dry and a place to paint the material before it is put up. (See diagram.)



GROUND PLAN
GREEN HOUSE PLANT.

I will now call your attention to this diagram as a ground plan of a range of houses I would build were I to embark in business to grow a general assortment of plants and cut flowers and had an open piece of ground.

Here we have the first shed located along the north side of the plant, with a range of five glazed houses opening into it from the south. These houses are 11x100 feet each.

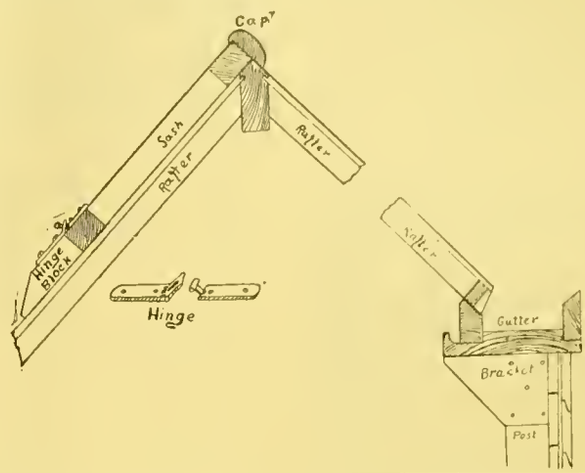
Now, we will suppose the plant, as you see it here laid out, represents several years of moderately successful labor of the new beginner, who, years ago, bargained for one or two acres of ground in the suburbs of the thriving city of Poseyville, Posey County, Indiana. He had worked in a grocery store for several years and handled flowers for the proprietor, who sold them for a florist on commission. By handling these he got a liking for flowers, and finally decided to go into the business. Having little money, but a good deal of sense, the first year he built 50 feet of houses, Nos. 1 and 2, and the potting shed across the end as a beginning. He bought sash and rafters ready made from the planing mill, and with the help of a carpenter for a few days put up the houses, doing the glazing and most of the work himself. Not having the price of a boiler and pipe, he resorted to the cheaper method of brick flues under the benches for the first year.

Having good success, the next year he builds fifty feeet more on each house and gets a few sections of a cast-iron boiler and pipes to heat by water. I recommend water heating for small places, especially as it requires less attention and holds heat longer than steam. The third year he builds house No. 3 and increases the size of the boiler by adding more sections. And so on each year he adds more plant space until, finding a greater demand for cut flowers, a different style of house is needed, also a different aspect, as good roses and carnations require more sun. A house for their growth should be so located as to get all the sun rays possible, so he changes the houses to stand east and west, and No. 1, 20x100 feet, with shed to cover entrance, is his next labor.

Providence, in the shape of industry, economy and good management, favoring him, he finally has this plant complete without the loss of a single house by mistake of location or error in construction—a thing that seldom occurs with new beginners.

Having completed the plant, the new beginner will proceed to explain some of the whys and wherefores of the construction. He built two 50-foot houses at first, instead of one of 100 feet, because, having to use flues to heat with, they give better satisfaction than if the houses were 100 feet long.

The houses are 11 feet wide, to allow a center walk of 3 feet, with 4-foot side benches. The walks in most single houses are only 2 feet in width, which is too narrow for comfort and convenience. The shed should not be less than 15 feet wide, the roof not high and nearly flat, with a tin or tar paper covering; 16 feet boards will make the roof. The shed is at the north, first,



not to shade the houses and, secondly, to protect from cold northerly winds. The office is put at the corner as nearest to the thoroughfare, the cut flower room in the rear of office for convenience.

Having laid out our ground plans we will now proceed to construct our houses. The first step after building the shed is to set the posts for the side walls. These should be set not more than 6 feet apart (4 feet would be better) and be made of material least subject to decay. I have found red cedar the best of all woods. I have also used catalpa, chestnut, locust and heart of white oak with good results. If the posts are charred on the lower end when they go into the ground, it will add many years to their existence; or if after the post-hole is half filled with earth properly rammed, the rest is finished to the ground level with a grout of one part water lime cement and three parts sand and gravel, it will save from rot for many years. The ingredients should be mixed dry, and wet up in batches for each post-hole. This cement will also keep the posts firm in position. After the posts are set in a line and the cement is hardened (if cement be used, which is highly recommended), measure up from the ground level about 4 feet on the middle post and from 3 to 6 inches lower at one end, and the same space higher at the other, so as to give the gutter a pitch of from 6 to 12 inches in 100 feet toward the end where you wish the water discharged; then stretch a line tight and tack on two horizontal lines of very straight boards to conform with this line, one on the outside and one on the inside of the line of posts. Then saw the top off the post just at the top of these boards. These strips form a rest for the saw and are a gauge to cut by. They also stiffen the posts, so that they do not work loose and get out of line in the sawing. Now, on top of the posts, spike on the bottom of your gutter. The best lumber should be used here, and be sure there are no sappy places in it. Clear cypress is good, but if the redwood of California can be obtained it is more durable, though in absence of either, white pine, free from sap, if kept painted, will last many years. We will call your attention to this drawing, which shows a style of gutter which gives me the best satisfaction. This is a full size cross section sketch with the dimensions as follows:—

Full width of gutter bottom 12 inches, thickness when dressed 1⅞", gutter sides 1¾" space between 7", depth inside 3". Bevel top edge the same as the sash bar, the lower end of which is tacked on top of gutter sides, and space between the sash bars is filled with a block, on top of which the lower light of the glass will rest. We prefer to have the sash bar lay on top of gutter

rather than be tacked to the side, as many do, from the fact that this way is stronger and the bar will last longer. Furthermore the drip water will run outside the house through the grooves in the sash bars. No; it will not let in the cold air, for, when freezing, this small apperture will close up with the ice. Sash bars tacked to side of gutter have nothing but the small nails and the narrow ½ inch pasting between the glass to hold the lower end up. Again, the water of condensation running down keeps the end of the bar wet, and the nails will rust out and the bars soon get rotten. You will notice the bottom of the gutter is philistered out to receive the side pieces, which are spiked on from the side, and also from below, while the outside edge is left standing, forming a gutter to catch drip and conduct same out along the main gutter. We show an outside wall and water table, also valley gutter for the latter. We deem it best to spike on cross heads of plank 2" thick by 6" or 8" wide to better support the wide gutter. The differently constructed outside wall will not need this extra member. If desired the outer wall can be made with gutter, omitting the narrow gutter shown in the other sketch.

The side walls should be constructed with two thicknesses of board lumber with tar paper between. The inside lumber may be of common rough boards, while that outside should be of dressed flooring, tongue edge up, or, what is better, what is called ship-lap lumber, as shown in the sketch. Good weatherboard, the same as is used on frame houses, may be employed when other material is not obtainable. If it is desired to make a nice finish, stamped sheet iron representing brick work may be used. This should be well painted inside and outside, and frequently coated outside to prevent rusting. In fact, paint is a good thing to have about a greenhouse, and every joint in constructing should be painted before putting together and each year some portions, particularly the gutter, should be looked after with a view to painting if needed.

We now call your attention to the gable construction. You will observe the top of ridge pole is just flush with the top of the sash bars or rafters and comes to a ridge in the center, conforming on both sides to the pitch of the house.

The ventilating sash rests on top of the sash bars, or rafters, as the case may be, and the top rail is shaped to conform to the slope of the opposite side of the house. Now, on top of the sash is spiked or screwed a cap piece as shown, which shuts over the ridge pole, making the joint air and water tight when the sash is closed.

The sash is hinged at the bottom to a tapered block shown here and elsewhere of same thickness as the sash, and spiked or screwed on to the sash bars or rafter and header, close up against the lower edge of the sash.

My sketch shows a full side view of a section of a well-built 11-foot house.

In a house of this size we prefer to use glass 12 or 14 inches wide, and every fifth sash bar is of extra size. These are of same thickness as the other, but 2 inches wide, and extend from the gutter to ridge pole. Between these sash bars or rafters is fitted in a cross header and the lighter sash bars, 1¼ inches wide, extend only from the gutter to this header, leaving an open space when the sashes are lifted.

In a house 20 feet wide, and larger, I would use a rafter 2x4 to every fifth row of glass, in the same manner as here shown. The joints between the sash will come over this rafter.

My reasons are: This plan makes a much stronger house than to have all the sash bars extend to the ridge pole, and it is no more expensive, for the material in the sash bar that in the other plan is hid under the sash, will more than pay for the extra size of the rafters. Again, you have the full space of the open sash for ventilation, and less shadow. Where the sash bars are long, I bore an inch hole through these rafters, where support to the bars is needed, and run a ¾-inch pipe through the length of the house; this stiffens the whole structure and supports the sag of the bars better than a wooden purlin.

I advise the center posts to be of 1½-inch pipe as looking neater and being more lasting. One every 10 or 12 feet is sufficient, but never be without them if the house is more than 11 feet wide, and even in this size it is a good plan to set up every 25 feet a ¾-inch pipe each side of the walk under the heavy sash bar, or, better, bend the pipe into an arch and let the ridge pole rest on the center of arch.

If iron pipe is not obtainable, use 3x3 oak or cedar posts. All posts should rest on a firm foundation, like a flat stone, or a square of artificial stone, made by digging a shallow excavation at the desired place in the ground and filling same with water lime cement, gravel and sand, same as used in setting the posts. Set a spike up endways in the center of this concrete, and when solid the spike will serve to hold the bottom of post in position, be it iron or wood.

If of wood bore a hole in bottom of post and set it over the nail.

The outward pressure of the roof on the sides of the building is very great, and without center support the ridge pole will in time sag down and the sides bulge out.

We advocate ventilating sash about 3 feet deep up and down the roof, hinged at bottom, and continuous, being bound together at the top as shown in illustration, for several reasons:

First, in union there is strength. Secondly, it gives ventilation without draught from side currents that blow in when single sash is used. Thirdly, when hinged at the bottom they are easier raised, as there is less weight on the lifting appliance.

In houses running east and west the sash should be located on the south side, because, when open, the sun will still shine through the glass instead of directly on the plant, which is a great advantage when the house is shaded.

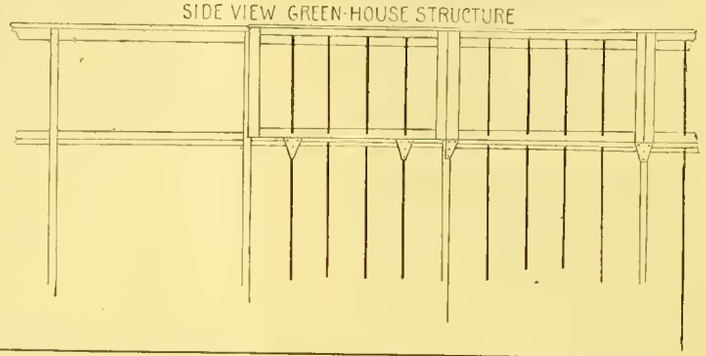
If the house stands north and south, put sash on west side. If sash opens at the bottom, cold winds and scorching sun rays have direct access to the plants when the sash is open. Without an appliance of some sort that will lift a number of sashes with one operation, continuous sash cannot be used, but whether sashes are single or continuous, I contend there is nothing about a greenhouse more useful or that pays for itself quicker than a ventilating appliance. To open and ways in the centre of this concrete, and close sashes by hand, one at a time, is a tiresome and vexatious labor, and takes much time that could be better employed.

With a machine, air will be given and taken off when needed, and not put off on account of a lack of time, and at all times the sashes are secure from being blown open or off the house, resulting in expensive destruction that shows poor economy in doing without the much needed apparatus.

You will observe in the ground plan of the plant I have some of the 20-foot houses constructed on the long slope to the north. I have done so because it is the only way to avoid one house shading the other, when high houses stand east and west and are close together. This plan of building is recommended by some of the best florists in this country who grow cut flowers of superior quality. My own experience is limited, but I am willing to be guided by such men as Fred Dorner, C. W. Ward, George Miller and many others who give their testimony in favor of this method.

Now, as to the better way to put in glass, butt or lap, I have proof that it largely depends on the pitch of the roof. If steep, say, for instance, on the short span south side, butt the glass; on the long and flatter slope, lap it. As to details of puttying or not puttying, caps over the sash bars to hold in the glass or no caps, we will leave everyone to decide for himself.

SIDE VIEW GREEN-HOUSE STRUCTURE



There are some few things in building benches that are worth noticing. If you are putting side benches in a narrow house with narrow center path, put together your benches as shown in sketch No. 1.

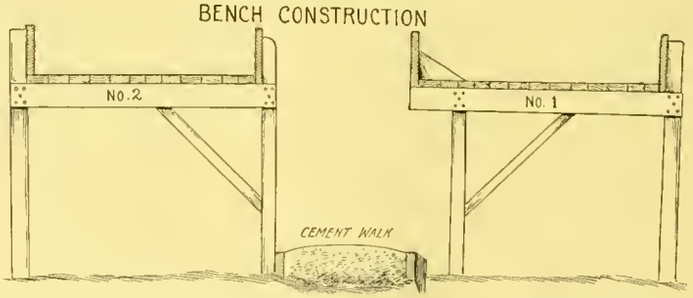
Here notice the front part sits back about 6 inches from the face of the bench; the face board is nailed to end of bed piece and bottom board. After bottom is on, a right angle bracket, 2 inches thick, is spiked down over every bed piece, and top of face board is nailed thereto.

This prevents the top of face board from warping out of shape. Always make bench frames independent of the side of the house. Some make the gutter posts answer the place of one bench post by spiking the bed piece to it. This helps to rot out the posts and damages the building. If the walk is 3 feet wide, make the bench frame as shown in cut No. 2.

The object in setting the front leg back is to give more room in the walk, so that a box or barrow may pass without obstruction. When there is room I deem pattern No. 2 the better, as the front leg extends above the bottom boards, and makes a support for the face boards. An occasional brace should be put in to stiffen a line of benches. It is generally economy to use good lumber in benches. I have found a coat of water lime cement applied every season inside the bench to be a great preserver of the wood and to keep sow bugs away. Mix cement with water and apply with a whitewash brush. The bottom boards should never be more than 6 inches wide, and if used for planting in 3-inch slats a half-inch apart are better.

One of the best evidences of a thrifty gardener or successful florist is a neat, well kept greenhouse, the walks of which are a very important part. Wet and muddy walks should not be tolerated and need not be, when by adopting the following directions good pathways may be had at a small outlay of money and labor:

BENCH CONSTRUCTION



First, level the walk and on each side lay a line of 2x4 inch scantling, fill in between with cinders and coal ashes saved from the winter's firing; pack down until within 1 inch or 1½ inches of top of scantling. Fill the remaining space with a mixture one part water lime cement and three parts sand or sifted coal ashes, wet up into a stiff mortar, round up in center, and smooth off with a trowel, using a thin layer of dry cement on top; sprinkle with water while slicking over. This walk will last as long as the house and be a joy for a lifetime.

I would not advise to build houses of any width between 11 and 20 feet, say 12, 14, 16 or 18 feet, for the reason that any size over 11 feet will require two walks to properly care for the plants. Having these two walks, it is a waste of glass if all the bench room possible to reach comfortably is not provided along these walks. A 4-foot bench is as wide as the average man can properly reach over, and is about the proper width. Now, in a 20-foot house there should be 8 feet of bench room in the centre and 4 feet on each side, with two walks, each 2 feet wide, making a total of 20 feet in the clear, and less will not be economical.

Greenhouses, like other buildings, are each year subject to changes and different methods of construction. Some are improvements, while others may not be. We now have iron frames, iron pipe benches, with tile or slate bottoms, iron gutters, all of which are good in their way if one has the money to buy them, but the poor man will always commence business in wooden structures, and for this class I have penned these instructions, and if they benefit or aid any fellow-being I am fully rewarded for the labor spent.

Discussion.

On motion of W. W. Coles a vote of thanks was tendered to Mr. Carmody for his interesting paper.

Mr. Scott, in discussing the paper, said: I think Mr. Carmody will not object to a few criticisms of his paper. He said when he got to the serious part of his paper he would leave out all the jokes. But I am glad to say he did not. He also said "string a line one hundred feet." I have never seen any line by a builder that was ever strung one hundred feet in a true line. There is a much better method than that. My plan is to get a twelve foot straight edge that is absolutely straight. Level it at the end of the house, then sight along it to the further end, and that you can get to a fraction of an inch to a dead level; then you can either rise or fall as you like.

I also object to the rise of six inches. If the house is heated with steam it may make but little difference, but if heated with hot water it is an inconvenient rise, especially if down hill.

I also do not like that piece Mr. Carmody puts up between the bars. He described to you the bar on the edge piece of the gutter and that necessitates an additional piece being tacked on to the gutter. Now, that is a bother and a nuisance, and if there is any place a house will rot, it is where there is a joint.

Mr. Carmody also spoke of the long slope to the north. There may be some good cultivators who adopt this house yet, and you have only to go to Toronto to see Mr. Dunlop's and those of the late lamented Harry Dale, who had a number of those houses; but I have them side by side, and I hope nobody will adopt that plan. To me the equal span is the house.

I recommended water lime many years ago. If used on new lumber it will lengthen the life of the lumber double the time.

Mr. Carmody recommends 20 feet for the width of a house. This is a most inconvenient width to make a house. With two side benches an 18 foot house is more convenient or a 22 foot house with three benches. I either build 22 or 18 feet.

J. L. Dillon—I wish to emphasize one thing Mr. Carmody brought out in reference to the fact of buying your land and getting your deed. This renting of ground I do not believe in. I believe every florist ought to buy his land, getting it near a town that is growing. He is sure to get a good income from his investment.

Exhibition Echoes.

J. P. Cleary made a very efficient manager. The work to be accomplished was a heavy task and called for much tact and executive ability. Mr. Cleary was equal to all emergencies, however, and this, the greatest trade exhibit ever put together, was steered in straight lines by our popular auctioneer, to whom great credit is due.

A. Herrington is also to be commended upon the efficient manner in which he engineered the horticultural exhibition.

The very fine specimens of rhapis that graced the stage in Convention Hall, were kindly lent by David Clark & Sons, the up-town florists.

Siebrecht & Son were also generous in lending fine plants for use in the Convention Hall.

The American Carnation Society.

This Society met at 4.30 p. m., ex-President Wm. Nicholson in the chair. Suggested subjects for essays for next meeting were the principal themes for discussion, and the following were selected:

Hybridizing Carnations—Essayist, Peter Fisher, Ellis, Mass.

A Discussion on the Naming of Carnations, by some member to be selected by the president of the Society.

The secretary was instructed to write Mr. Albert F. Woods, of the Division of Vegetable Physiology and Pathology, Department of Agriculture, Washington, asking him to give a talk on the results of his recent investigations with the carnation or any other subject that might suggest itself to him.

Mr. E. G. Hill, Richmond, Ind., will be asked to say something on "Carnations Abroad," as seen on his recent European visit.

John Cook, Baltimore, will be asked to write a paper on "Hybridizing the Marguerite and Remontant Carnations," and Mr. Eisele will also be applied to for one on the same subject.

A practical demonstration of how to take cuttings, how to cut and pack flowers, and, possibly, a paper on cool rooms for storing carnations, will occupy the attention of the delegates at the Baltimore meeting, in Februrary, 1901.

Florists' Hail Association of America.

The annual meeting of this association was held at 4.30 p. m., E. G. Hill, vice-president, presiding. Elected: Stephen D. Horan, Bridgeport, Conn.; William F. Dreer, of Philadelphia, and Joseph Heacock, of Wyncote, Pa., directors.

The secretary reported an aggregate insurance upon 13,025,762 square feet of glass. He also reported cash balance on hand of $6,823.44, and the total reserve fund as $7,526.87. Upward of 74,000 square feet of glass, last year, broken by hail, was paid for by the association during the past year.

At a meeting of the directors, J. C. Vaughan, of Chicago, Ill., was elected president; E. G. Hill, of Richmond, Ind., vice-president; John G. Esler, of Saddle River, N. J., secretary, and Albert M. Herr, of Lancaster, Pa., treasurer.

Report of the Secretary.

On the first day of August, 1900, the 934 members comprising the Florists' Hail Association of America insured an aggregate of 13,025,762 square feet of glass, subdivided as follows: 3,130,059 square feet of single thick; 6,908,043 square feet of double thick; 137,282 square feet of single thick at extra one-half; 326,107 square feet of double thick at extra one-half; 740,917 square feet of single thick at extra whole, and 1,783,354 square feet of double thick at extra whole.

The receipts for the year ending August 1, 1900, have been: From liquidation of Du Page bonds, $1,000; from tenth assessment, $7,400.53; from new business as per treasurer's report, $2,260; from interest on investments, $259.06; from re-insurance of glass broken by hail, $79.55. Total receipts for the year, $10,999.14.

Disbursements for losses for the year have beeen $5,570.42; for expenses, $1,340.16; investment on account of reserve fund, $1,600, making a total of $8,510.58.

The cash balance on hand at the close of the year is $6,823.44, of which $926.87 belongs to the reserve fund and $5,896.57 is available for use in the emergency fund. The reserve fund of the Florists' Hail Association now consists of $6,600 invested as per treasurer's report, and $926.87 cash in hand. Total reserve fund August 1, 1900, $7,526.87.

Fifty-six thousand four hundred and fifty-two square feet of single thick glass and 18,104 square feet of double thick glass belonging to insured members has been paid for during the past year.

A careful study of the appended table will prove interesting:

STATES.	No. of hailstorms from June 1, 1887, to August 1, 1901.	No. of losses paid from June 1, 1887, to August 1, 1901.	No. of hailstorms for year ending August 1, 1900.	No. of losses paid for year ending August 1, 1900.

The secretary especially requests that members furnish him with information concerning all hail storms in their vicinity, whether they are personally interested or not, as such information will materially assist in the compilation of statistics.

The Florists' Hail Association of America during its thirteen years of existence, has won an enviable reputation for prompt payment of claims, and straightforward dealing, and both officials and members have reason to feel proud of its present financial and moral standing.

Chrysanthemum Society of America.

The annual meeting of the Chrysanthemum Society of America was held Wednesday afternoon in Grand Central Palace, E. G. Hill in chair, E. A. Wood, of Boston, acted as secretary pro tem., in the absence of Elmer D. Smith.

The secretary's report, setting forth the varieties certificated by the society last year, a list of which already has been published, was adopted.

The following gentlemen were elected officers for the ensuing year: President, Arthur Herrington, Madison, N. J.; vice-president, Eugene Dailledouze, Flatbush, N. Y.; secretary, Edwin Lonsdale, Philadelphia; treasurer, John N. May, Summit, N. J. Mr. Smith positively declined to stand for secretary again, and a vote of thanks was given him for his efficient services on behalf of the society during the seven years he has been its secretary.

The society decided to donate to the National Chrysanthemum Society of France the sum of $25 to be used toward securing a suitable trophy to be competed for at the forthcoming chrysanthemum show of the French society, to be held in Paris this Fall.

It was also decided to offer a cup, value not exceeding $20, to be offered for the best ten blooms, new or old, at the exhibition in Chicago this Fall, to be given under the auspices of the Chicago Horticultural Society, the judges in this competition to be appointed by the Chrysanthemum Society of America.

The society also voted that the president of the Chrysanthemum Society of America be permitted to appoint committees to pass on seedling chrysanthemums each year without any of the restrictions thereanent that have prevailed. The committees will inspect seedlings at the same five cities as heretofore.

The following communication from S. J. Mitchell, of Texas, was read and ordered acknowledged.

We publish Mr. Mitchell's letter, and although the subject is outside the province of the Chrysanthemum Society of America, the suggestions contained in the communication may be of service to local societies holding exhibitions:

Elmer D. Smith, Esq.—

Dear Sir: I have for a long time been of the opinion that a scale should be formulated for the judging of emblems, designs, etc., and as yet have not learned that the Society has adopted any.

I will have to act as judge at two shows in Texas this year and do not consider my work as authentic unless it is in line with your Society. For this reason I will submit a scale for the consideration of the Society, which, if it meets with approval, I will use this year; if not, please send me a scale authorized by the Society.

Suggested Scale.

EMBLEMS.

Excellence in Mechanical Execution and Construction	15
Finish and Artistic Effect	40
Quality of Material	15
Adaptability and Color Harmony	30
Total	100

Several new members joined the society at this meeting.

The Jansen Reception.

At the reception tendered by Ed. Jansen, at his warerooms, 112 West 18th street, to visitors of the convention, which commenced at 2 and lasted until 7 p. m., there were several hundred people who enjoyed the hospitality offered. Refreshments were served and a Hungarian orchestra enlivened the collation with sweet music. The many ladies among the visitors were well taken care of by Mrs. Jansen.

During convention week, H. H. Berger & Co., 47 Barclay street, had a special display of bulbs at their offices, where they have welcomed visitors and sent them away with free samples of the stock and other good things as souvenirs.

Euclid, Ohio.

The Cushman Gladiolus Company has purchased a tract of land embracing 106 acres at Sylvania, near Toledo, Ohio. This is new soil, admirably adapted for the culture of bulbs of all kinds, as well as herbaceous plants. The firm proposes to enlarge its business to the fullest extent under most favorable circumstances. Mr. Cushman and wife arrived in New York Sunday night, and spent Monday visiting the gladiolus fields located at Floral Park, N. Y., and points of interest in and around the metropolis.

ENERGY AND ENTERPRISE.

ISN'T a trade paper that shows these two qualities, as the FLORISTS' EXCHANGE has during the past week, worthy of the fullest support of every member of the trade.

A Letter Home From Hubbie to Wifee.

Dear Jane:

'Tain't no use talking, New York is the biggest town yet. Why, Buffalo can't stand no chance. I'm glad I'm here; it does a fellow good to see all those new kind of greenhouses they have in the show. My, my! if we only had a little more money we'd fix our house up all right.

You know, this is a real different kind of convention than they had up in Buffalo that time; much more stylish; put on much more airs than they did up there. Last night they had what they call the president's reception. My, they did things fine. All of them big florists had on swallow-tail coats, and I thought they was going to have a kind of party, because the programme said "refreshments." Now, after they all got done shaking hands with President Wood, some feller came out and cut up on the platform just like our crazy Tom, and everybody laughed. I couldn't see why they laughed, because the man was acting so crazy, and every time he said a cuss word people would clap their hands.

I almost fergot to tell you before they had this man dress up in woman's clothes. A man named Kift from Philadelphia showed some picters about some way of fixing fine flowers for weddings.

My! there was some fine views they fixed up; but that didn't do me no harm, them picters, even if I don't get a chance to put up any like them up in our town. I got very tired of all the talk of that man in woman's clothes, hut as the programme said "refreshments" I thought I'd stay, and, what do you think? After I waited all the way after 11 o'clock a big man with a swallow-tail got up and tells the people there was to be no refreshment this evening. I was real mad. They say that man's name is O'Mara. He wants to be president. I ain't going to vote for him.

More next time. Your affectionate husband, JOSH.

(THE SAME TO THE SAME.)

Dear Jane:

It's getting finer and finer, but I got to watch out for myself. My! my! they do drink down here! Why, don't you know, Jane, that man that comes along and sells us some bulbs and seeds from down East; you know he was always such a nice, quiet man, and said he didn't drink a drop. He's real different down here. I saw him last night in a very bad way. I went in the place where they hold the Convention to hear some of the men say something about the business; I only heard one man say something about greenhouses; but then they voted on the place to go next year. They made speeches and read dispatches and don't you know, that man Scott from Buffalo, he got up and talked the most. He wanted the Convention to go to Buffalo. My! my! He must he awful anxious to have it there. I wonder why that is? Well, you can go to see the Convention next year, then it won't be far from home.

I got some cream and cake all right last night. I saw the fellow come in with the things. I watched for him, and then I got a front seat and the waiters brought me the refreshments all right. This is the biggest kind of picnic I have ever been to, they are always on the go, but you don't hear them talk much about any flowers. I thought at a florists' convention they would talk about flowers, but, my! my! Jane, they talk about awful things sometimes.

People don't go to bed here at all, for they are always on the street. I looked out of my window and saw them all times of the night. I couldn't sleep, they make so much noise, the street cars!

You ought to see these big florists, they look like real rich men, wear diamonds. I wonder whether they are all so rich as they look?

Will write again. Going on an excursion to-day. Your good husband, JOSH.

The most unkindly cut of all—police headquarters notified the Boat Committee that they would have representatives on the trip, although this was only customary on Sunday school excursions!

National Florists' Bowling League

ANNUAL TOURNAMENT.

At Palace Alleys, 125th Street and Third Avenue, New York.

The National Florists' Bowling League held its meeting on Thursday afternoon on the boat going to Glen Island. Representatives were present from the cities of Milwaukee, Buffalo, Detroit, Cleveland, Philadelphia, Brooklyn (Flatbush), Chicago, Pittsburgh, Boston, New York, Baltimore and Providence. Officers were elected as follows: William Scott, President; Phil. Hauswirth, Secretary; J. F. Wilcox, Treasurer.

It was decided to refund the $10 paid by the five different clubs this year, so that there is no sweepstake prize this time.

The Contest.

The bowling tournament commenced exactly at 10 o'clock. Six teams rolled in the first round, in the following order: On alleys No. 1 and 2, Providence and Cleveland; alleys No. 3 and 4, New York and Milwaukee; alleys No. 5 and 6, Cleveland and Boston.

In the list of clubs and their captains in yesterday's issue, the Chicago team's captain should have read Ed. Winterson instead of Mr. Hauswirth.

The teams changed alleys after each game, so that one game only was rolled on each alley by each team. Providence team was only represented by two members, so were out of the tournament. There were many lady spectators and they did their share of rooting and cheering for their friends. The room was uncomfortably warm, but the liquid refreshments served, helped to allay the discomfort to a great extent.

The Trophies.

The Lord and Burnham Co. cup awarded to the team making the highest total in the three tournament games, won by Buffalo, with a score of 2775 pins.

The cup given by Hitchings & Co. to the team making the highest score in the third game, was captured by Buffalo, score 1021.

The Queen of Edgeley cup awarded to the team having the highest scores in the first two games. Winner, Chicago, with 1842 pins.

Each of the above prizes has to be won twice before becoming the property of the winners.

The Edmund M. Wood cup given to the club having the highest total score in the three games. This prize becomes the property of the winning team when won the first time, and was captured by Buffalo, with 1021 pins.

The Detroit trophy was awarded the club making the highest score in any one of the three games. This prize has to be won twice; it was captured last year by the Philadelphia team. This year the winner is Buffalo, with 1021 pins.

The list of individual prizes offered was as follows:

Silver cup, presented by Theo. J. Lang, for the highest average in the three games, won by Kasting, Buffalo, average 194.6.

A gold medal for the second highest average in three games, won by Wm. Webber, Buffalo; score 189.6.

A gold medal for the third highest average in three games, captured by G. Asmus, Chicago, score 167.6.

These were donated by Theo. Roehrs.

Silver cup, donated by Traendly & Schenck, for the highest score in any one game. Winner, W. F. Kasting, score 228.

The list of other individual prizes was not available at time of going to press. These will be announced next week.

Different Methods of Orchid Culture.

(Continued from page 789.)

The proper resting of the orchids has long been recognized as the key to the production of flowers. If we can induce a cattleya to produce a fine large pseudobulb, we must ripen it oft; we must allow the energy of root action to decrease and stop for a certain length of time; allow the bulb to transform the food matter which has accumulated in it into such food as the flower requires before it will be produced. There is no doubt but the flower needs food different from the green parts of the plant and the transformation of this food, or as it is generally called, the ripening of the bulbs, does not generally take place while the roots are actively growing.

In regard to resting, the different kinds of orchids require somewhat different treatment. Some, such as cattleyas, need only a slight rest, while others require more severe drying off. (For Odontoglossum citrosmum, for instance, it has become a popular rule to starve them until the flower spike pushes out of the new growth.)

Again, we know, that the resting of orchids does not necessarily mean the withholding of water, nor, on the other hand, that such is the only attention needed. There is no absolutely dormant state in the life of orchids; as stated above, the work of transforming the accumulated food matter is carried on during the period we term the resting time. This transformation causes heat, and thus the evaporation of a certain amount of moisture, which the plant must be able to replace, lest the bulbs, stems or leaves will shrivel and, in extreme cases, perish.

A liberal supply of direct sunlight seems to be of great importance during this period, and, in order to keep the temperature and saturation of the air in the house moderate, adequate ventilation likewise. As far as the purification of the air is concerned, the needs of ventilation on that score have been much exaggerated; the many little cracks and openings of a greenhouse roof allow, as a rule, sufficient change of air without the opening of the ventilators. What seems to be very beneficial, if not absolutely necessary, for the healthy development of orchids, as well as of nearly all other plants, is the circulation of the air enclosed in the house. Every cultivator knows, that as soon as artificial heating of the houses is begun, the danger of disease is minimized; it accelerates the circulation of air. Practical experience in low houses, and in frames, has taught us, that the closer the plants are to the glass, the better they will thrive, because that is the only position where there is a congenial air circulation. Large, spacious houses are preferable for the same reason and nothing will produce mealy bug, scale and other defects on the plants, like a low, tightly-closed house, and this kept in a stagnant atmosphere. Of all plants, orchids, while resting, need a spacious, light house, in which the danger of overcharging the air with moisture and undue changes of temperature are easily avoidable; but they need, then, as well as during their growing season careful attention as to the proper state of moisture at the roots, however little it may be.

The potting material which, since the beginning of orchid cultivation until the present day, and in different countries and nurseries, has been employed presents an interesting diversity of compositions. When the writer first came to Chicago, he found a nice little collection of orchids all nailed to blocks, growing and even producing flowers. Among them were Odontoglossum crispum and cypripediums. They improved rapidly when put into pots, pans and baskets, with a liberal supply of fern fiber and moss. At another commercial place, when large importations of orchids arrived from Mexico and Central America, a lot of them, and principally lycastes, were potted off into broken-up German peat. These plants did very nicely, the receptacles being well drained. The root fiber of the Osmunda Claytoniana ferns, with an addition of sphagnum, seems to be the favorite material for orchids throughout America. In a large orchid nursery in England, where it was tried principally with cattleyas, it has been declared a failure, perhaps for the reason of inadequate treatment having been given the plants.

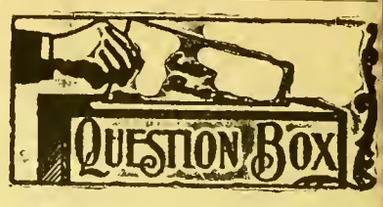
The orchid peat is, in the majority of English nurseries, very carefully prepared and mixed in a great many ways to suit the different kinds of orchids and growers. Still, if otherwise the treatment of the orchids be good, the difference in the formulæ (and they sometimes are mysteriously complicated) is not traceable on the plants. The continental growers have, up to a few years ago, used the lycopodium fiber altogether, and with so much success, that the English growers have imitated their methods in many instances. Lately, the practical men in Belgium have discarded all the red tape business, and pot orchids like a common plant in leaf mould, and again this change is crowned with signal success.

T. E.

(To be continued.)

Courtesies Extended.

All the prominent houses in the vicinity of New York kept open house for the week and were kept busy entertaining their friends.



(175) **Carnations.**—I would like to know what three varieties of carnations will stand the most heat? Is White Cloud a free bloomer?—F. S.

—Carnations are so much alike in their requirements as to temperature that to designate the three varieties that will stand the most heat is impossible. White Cloud is a good variety for the Fall and Spring, but is not so free through the Winter, though some growers might find it just the reverse.

(176) **Packing Cut Flowers.**—Will you please give the method of how to pack cut flowers for shipment, through the Question Box. Also inform me whether there is a work on this subject. —H. V. B.

—Cut flowers should be packed in long, shallow trays. Place the buds close together, and only one layer deep; then they do not bruise each other. The trays must first be lined with soft paper and the flowers also covered with the same material. The trays should be made so that several can be placed in a stronger box, in which are partitions to rest the trays upon.

The book "How to Grow Cut Flowers," by M. A. Hunt, gives instructions as to how to pack and grade flowers.

Price $2, and can be had from this office.

(177) **Propagating Acalypha Sanderi.**—Acalypha Sanderi is easily propagated from cuttings. Take the little side shoots that form and they root the same as coleus, and just as easy.

David F. Day.

David F. Day, one of the Park Commissioners of Buffalo, died Wednesday last. He was an excellent botanist, being considered one of the best in Western New York, and had a first-class herbarium. Deceased was particularly fond of herbaceous stock, of which he had an excellent collection. Mr. Day stood high in the estimation of his fellow citizens.

E. J. Townsend.

Edmund J. Townsend, the oldest florist of Hamilton, Ont., died at his home there August 16. For six months past he had been under treatment for serious throat trouble.

Deceased was a native of England, and had recently turned 60 years of age. He came to Canada about 42 years ago, and after living a while in Toronto, went to Hamilton 30 years ago. He started business as a florist for himself, in 1872, on Park street, and carried it on at the same place till the time of his death. He was a reserved man, strictly attentive to business, and had the respect of the whole community. He leaves a widow and family of five—four daughters and one son.

If you want to know who registered at the convention, and many other features not in any other paper, send for a set of the FLORISTS' EXCHANGE DAILIES, four issues complete, for 10 cents.

110 WEST STREET, NEW YORK CITY.
Mention this paper.

New York.

The market has been about the same as in our last report, so far as prices are concerned. Roses of the better grades are coming in rather more plentifully, and carnations from outside are also more in evidence. In outdoor flowers there has been no change except an increase in their numbers. There is just about enough regular business to clean up the best of the stock, while the rest is disposed off to the street man at whatever can be obtained for it.

The Convention has, of course, been the center of attraction, and for this week all other subjects are brushed to the one side.

Cincinnati.

Market News.

Everybody's trylog to keep as cool aad quiet as possible. Business is at a standstill. Stock is coming in ia limited quantities.

The St. Louis contingent passed though our city Sunday on their way to the Convention as did the Lexington party, both delegations going by different routes.

The weather here for the past week has been almost unbearable, the thermometer trying to beat all records.

George & Allen are remodeling the greenhouses they recently purchased. This will be their retail plant, and as they are the only greenhouses on Walnut Hills, the firm will undoubtedly do a fine business.

Fred. Lodder is building a large house, 150 feet, for growing vegetables.

R. Witterstaetter has his new house completed, and will soon have all planted.

Wm. Murphy is also getting ready for housing his stock.

E. G. GILLETT.

Cleveland.

Trade Notes.

This week seems to be the dullest week experienced by our florists this Summer. Funeral orders have been coming in quite freely all through the season, until the past few days, and have furnished an outlet for much of the product of the growers; at the present time even work in funeral designs is very slack, and flowers are in abundance. There is no change in market rates since former writing, and retail prices remain the same as last reported. Carnations, outdoor blooms, are offered in considerably larger quantities, but the flowers are still small and show the effects of the hot weather of the past few weeks. Recent heavy rains have benefited all outdoor crops. Asters seem to be doing better this year than they have done for many seasons past, and some fine blooms are offered; growers realize $1.50 per 100 for the best flowers, and inferior stock moves at figures considerably below this mark.

Japanese lilies are very abundant; the same is also true of gladiolus. Rudbeckia flowers are seen on every hand, and these with golden rod, hellanthus and coreopsis make some very effective "yellow" window displays. G. A. T.

St. Paul.

Notwithstanding the intense heat, trade is fairly good. But the weather has had its effect on stock, and but few good roses are being cut. Inside carnations are about all gone and but few are grown outside, so that the "divine flower" is a very scarce commodity at the present time. Some very good asters are being cut and these with roses, constitute the bulk of the stock. Funeral flowers comprise the bulk of the demand at the present time.

Vacations have been in order and nearly all of the store men have been out rusticating, but Sept. 1 will find most of them at their accustomed places, and trade resuming its normal condition, unless the weather should continue on its hot and sultry course.

So far as I have learned Mr. A. S. Swanson is the only delegate to the convention from the Twin Cities. The writer, with others in our State, would like to see Buffalo chosen for next year's convention. Besides being a cool summer resort itself, the Pan-American Exposition offers so many attractions, as well as nearby trips to Niagara Falls, Toronto, etc., that the majority would prefer that city to Chicago, where they can go any time. By all means let the convention be held at Buffalo, and Minnesota will send twice as many delegates as she would to Chicago.

VERITAS.

Roses Up to Date.

Abstract of paper read before the Canadian Agricultural Association, by John H. Dunlop, of Toronto.

The up-to-date roses I can only speak of from a florist's standpoint, and they are comparatively few. I will enumerate them as they suggest themselves to me. To my mind there is no rose that will compare with the American Beauty, with its magnificent foliage, grand stem, flower, and exquisite fragrance. We all know it. It was one of the sights, never to be forgotten, at the first exhibition of the American Rose Society, held in New York last March, when some two thousand magnificent blooms were staged—tall, stately, perfect flowers.

The Bride.—The rose par excellence of its color; as its name suggests, purity, whiteness. The white rose of commerce, without a peer.

Bridesmaid.—The pink rose that has superseded all others in popularity. We have had others, but they have quickly given the place of honor to the Bridesmaid, of that deep, rich shade of pink so much sought after.

Meteor up to the present has held the place of honor in its color; its rich, velvety crimson always appealing to the customer, but lacking that very essential of quality in a rose—fragrance. If we could only produce a rose with the good points of Meteor, with odor, we would be loath to give it up, but there is another crimson of which I will speak later that will probably supersede it.

Perle des Jardins, the pure golden yellow rose of the day. This we find declining in popularity through some of the caprices of fashion. It is a grand rose of its color, and I think will be more largely grown than previously.

Sunset is a good rose, but of a dull shade, not having the brightness of Lady Dorothea, a saffron yellow, shaded with rosy pink.

Madame Hoste is a good, light-colored yellow, having many good qualities. Its fine, long, pointed buds are always attractive.

Golden Gate is a fine rose of a peculiar combination of soft pink and creamy white; long, pointed buds, exquisitely sweet; a strong grower.

Mrs. Pierpont Morgan is of the Cusin type, but of a more pleasing color. Very popular with the flower buyer, and has the advantage of showing to good advantage under artificial light.

Clara Watson in color is a combination of pink and white. A good strong grower, very sweet scented.

I will now speak of the rose that we have heard so much about, and for which many of us paid a good price for a few plants, that we may test its good points and prove some of the assertions that have been made in its favor. I speak of Liberty, that grand, crimson rose, that has been ushered into the floral world this season. Who does not remember the magnificent vase of Liberty roses that were exhibited in Toronto last March at the first carnation exhibition of the Gardeners and Florists' Club. Its glowing Jacqueminot crimson and sweet perfume were the attraction of that show. I cannot speak of it from a grower's standpoint, but will give some of the figures given by Mr. Asmus in comparison with other varieties in point of productiveness. The test was made with a house of Liberty against Bride, also one of Liberty against Bridesmaid, during the past season. Each house was given equal treatment in all respects. In each of the houses of Liberty there were eight hundred plants, but in each house of Bride and Bridesmaid seven hundred and eighty plants, or twenty less than the Liberty.

Bridesmaid, House No. 11.		Liberty, House No. 15.	
Nov.	1,288	Nov.	3,145
Dec.	2,058	Dec.	3,179
Jan.	1,329	Jan.	1,900
Feb.	1,425	Feb.	1,895
	6,100		10,119
Bride, House No. 12.		**Liberty, House No. 16.**	
Nov.	2,307	Nov.	5,507
Dec.	2,052	Dec.	1,707
Jan.	1,731	Jan.	2,042
Feb.	1,445	Feb.	2,260
	7,535		11,516

These figures will tell the tale better than any guesswork of the flowering qualities of this rose, as we have here the four severest months on the blooming qualities of any rose or plant that is treated contrary to the laws of nature.

As to the color, I am given to understand that during the Winter months it is much brighter than late in the season, and not guilty of producing that beautiful purple tint so often seen in crimson roses. I saw Liberty growing at Mr. Asmus's place last March, and could only find words of commendation for the appearance of it at that time. It was certainly producing good crops, although it had been very severely cut for propagating the enormous stock that was disseminated this spring.

I have also had a letter from an esteemed rosarian. I refer to Mr. Robert Simpson, of Clifton, N. J., whose opinion I prize very highly, being, as he says himself, prejudiced at the beginning, but by watching it he was gradually won over by its many good points. To use his own words:

"I have been to Mr. Asmus's place a good many times to see it (Liberty) during the past two seasons, and would say that, beginning with a prejudice against it, I have been won over completely by its many good qualities. I am naturally very conservative and critical, and when I speak in favor of a new rose, you may be sure I have good reasons for doing so."

Now it remains with us to try and bring out the many good traits we have heard of this grand, new rose. We have not heard of any of its faults. We may know more of them by another season, as it is scarcely possible that all will have the success of those that have pioneered its entry into the floricultural world.

There is another new rose, but I have not been able to learn much of its history or good points. No new rose has ever been guilty of coming before the public with a single blemish or fault. All are perfect until we find them out. This one is Sunrise. It was sent out from England as a sport, I think, from Sunset. In color it is a deep apricot yellow, almost a red, very bright in summer, and is said to be a free bloomer. I have a few plants of this variety, but for some reason it will grow a short time, and then die off. The plants are grafted, and I am not aware of the stock they are worked on which may influence the growth of the plant, or, more properly speaking, the lack of growth. I hope to be able to report more favorably of the variety later.

Lady Dorothea.—This rose is of Canadian origin; I think the first that has been originated in the Dominion, and not the least to be proud of. It is a sport from Sunset, of good habit, a free grower, profuse bloomer; losing some of the bad qualities of its parent in that it is free from imperfect flowers in midwinter; color brighter and more beautiful in the four months of dark weather, when most sought after and appreciated.

The color is a soft shade of peach pink, deepening to a red at base of petals outside and a bright flesh pink inside—a beautiful harmony of color. This rose is becoming very popular, and I feel confident it will take a leading place in the list of standard varieties from the excellent reports I have had from sections of the continent far removed from each other.

These are the only varieties I can speak of at present, as the new varieties are very limited; but, judging from the number of rosarians who are hybridizing, there should be no lack of meritorious new varieties in the near future. And I would here suggest to some of our own Canadian growers, if they can afford the time and patience to await results, to experiment in this line. It does not follow from this that some are not already making the attempt, but I would commend all who have the ability and inclination to try hybridizing the rose. The room occupied will not be great—only a few feet would be necessary—and if carefully and thoughtfully worked out, who knows what the results might be? I feel confident that he who can produce a first-class rose in this country will add a lasting monument of his ability and keep us with roses up to date.

A Newark (O.) local paper contains a sketch of George L. Miller's establishment, which consists of 14,000 square feet of glass. Mr. Miller is 24 years of age, and has already built up an extensive mail trade in bedding stock. He is also devoting himself to the seed business.

Asparagus Plumosus Nanus

Transplanted seedling plants, for July and August delivery, ready for 2½ inch pots, at $3.00 per 100; $25.00 per 1000; 500 at thousand rates. Express prepaid.

Third Annual Meeting of the Canadian Horticultural Association.

Held at Montreal, Aug. 16, 17 and 18, 1900.

The Third Annual Convention of the above society was opened on Thursday morning, August 16, in the hall of the Natural History building. The address of welcome to the delegates was delivered by Acting-Mayor Cagnon, to whom Mr. Millar, of Toronto, replied in a very happy manner.

James McKenna, of Montreal, president of the Association, in delivering his address, spoke of the honors lately won by Canadian florists all over the continent. Alluding to the Canadian duty on plants, he advocated a committee being formed to suggest to the government what, he thought, would be some advantageous amendments to the existing laws.

The suspension of the clause in the San José scale act, by the Canadian Government; thus allowing the entry of the newest of the varieties of roses grown under glass, he considered to be quite a boon to our rose growers.

W. Scott, of Buffalo, being invited to address the meeting, dwelt at length on the subject of horticulture at the coming Pan-American Exhibition at Buffalo, assuring the Convention that a visit to that exhibition would be of the utmost importance to all growers of plants and flowers. Mr. Scott thought the Canadian Government should have a building at that exhibition and should be officially represented.

A resolution moved by S. S. Bain, seconded by W. Gammage, was adopted, asking the Dominion Government to arrange for official representation at the Pan-American Exhibition.

A resolution by the same gentleman was also adopted, urging the advisability of the Dominion Government giving Toronto the grant of $100,000 asked, to help enlarge the Toronto Exhibition of 1901, from a provincial to one of national importance, when it would attract many of the visitors to the Buffalo Exhibition. The resolution was sent to the manager of the Toronto Exhibition, and will be forwarded to the government by him, with like resolutions from other important bodies.

The actiag mayor took occasion to remark that the matter of Montreal's representation at the Pan-American should be brought up in public discussion.

Messrs. Thos. Manton, of Eglinton; W. Scott, of Buffalo; S. S. Bain, of Montreal, were appointed a committee to report on the trade exhibit.

The report of the secretary was then read, and showed an increase for the year in membership of over 100 per cent.

The afternoon was devoted to seeing the city, the delegates boarding special electric cars at Domiuion Square at 3 o'clock.

The evening session was opened by the Rev. Dr. Campbell, who called the attention of the Convention to the neglected wild flowers of Canada. No horticultural collection could be considered complete without specimens of many Canadian orchids and ferns.

S. S. Bain read a paper on "The Advantages of Organization in Our Business." He considered a very great many of our troubles arose from the lack of this most important essential. Among the many points, he enumerated a system by which plants, especially such varieties as are used in large quantities for bedding purposes, could be classified as to quality which would be a great help. He advocated the formation of a society on the lines of the S. A. F. Buyers' Association. This, he argued, might not be a success in every line, but it would effect a great saving in such lines as bulbs, and standard varieties of plants, that must be imported in large quantities.

In the discussion following, the majority inclined to the opinion that while organization on general lines would be beneficial, the details must always be governed by individual opinion.

President McKenna expressed the view that lack of education more than lack of organization was the root of many of the evils to which the craft was subjected. Judging from local conditions, the prices of the larger and educated growers were always up to the level of a fair profit; the trouble is with a lot of petty growers, who never take the trouble to ascertain what is the cost of production, what is a living profit on the plants sold, or if the plants are of the quality and varieties to give satisfaction.

A vote of thanks to Mr. Bain was moved by Mr. Gammage, seconded by A. Martin, and carried unanimously.

Mr. Dunlop read a paper on "Roses Up to Date." (This paper is given elsewhere.) A lengthy discussion on the variety Liberty followed, many who were present and had seen it growing were as enthusiastic in its praise as was Mr. Dunlop. In the discussion Mr. Scott recommended Katherine Augusta Victoria and President Carnot as excellent summer-flowering varieties, either grown under glass, or planted in the garden. The thanks of the Association were heartily accorded Mr. Dunlop.

Geo. Robinson, Outremont, read a paper "How to Make a Private Place Attractive." Trees and shrubs planted thickly to secure immediate effect and ignorance of the best and most suitable varieties, and of their natural characteristics, were the principal causes of failure at present. To secure the employers' interests, make the place attractive, grow a good selection of the best varieties and have one specialty for each season.

Friday.

Friday morning the first paper taken up was Prof. Fletcher's "Hints on the Treatment of Plants," which in the regrettable but unavoidable absence of the professor was read by the treasurer, Mr. Simmers. This paper was full of practical hints, and included several formulas to be used in treating diseased plants and trees. Tar paper discs around the stem, as a preventive of injury by the cabbage worm, were strongly recommended, as was also the burning of all waste and refuse material in the Fall, instead of leaving the same until Spring, in which latter case it becomes the breeding place of all sorts of fungus diseases. The paper closed by inviting all members of the Association to submit to the Agricultural Department at Ottawa questions concerning troubles they might experience with plants and did not understand, and where possible, enclose specimens of the subjects affected.

In the discussion, the subject of the bordeaux mixture's lack of keeping quality was considered its chief fault. Some advised preparing its ingredients separately, and mixing in proportion as required. Some of the delegates were also of the opinion that the mixture could be prepared in paste form, all ready for mixing with water.

Mr. Findley's (Exhibition Park, Toronto) paper was read by Mr. Manton. Mr. Findley always propagates his violets from cuttings. Experience has taught him that by this method he secured an increase in the cut of 25 per cent. over other methods of propagation. The plants are planted direct from the sand bed, and the glass removed until the bed is frozen solid enough to bear a man's weight without showing the impression of the heels of his shoes, when the glass is replaced and plants are started to grow.

T. Manton read a paper on "Herbaceous Plants," enumerating many of the varieties that he had tried and found suitable to our northern climate. He especially recommended the clear and bright varieties, many splendid sorts being useless for commercial purposes, owing to lack of this essential. Mr. Manton found that this portion of his business was growing far more rapidly than the section devoted to annual and soft-wooded varieties.

In the discussion, Mr. Nott, St. John N. B., made some very interesting remarks concerning the park system in that city, of which he is the superintendent. Contrary to the usual custom, the system is not the property of the civic authorities, but of the St. John's Horticultural Society. It consists of 600 acres of formerly waste and swamp lands, which being taken in hand by this society, is now, after a very few years, a splendid park, assessed at $100,000 value. It now contains miles of splendid roads, a chain of lakes, scores of acres in extent, filled with aquatics; hardy perennials are mostly used as flowering plants, as the society lacks the greenhouse facilities for growing soft-wooded stock. It is the intention of the society, as soon as the system is complete in every respect, to present the entire park to the City of St. John which city will then be in the unique position of owning a fully equipped park, on which not one cent of public money has ever been expended.

Place of Meeting.

The place of meeting for 1901 was next considered. Mr. Gammage, of London, Ont., on behalf of himself and brother florists, extended a cordial invitation to the society to make London their place of meeting in 1901. Mr. Gammage also read letters addressed to the association from the Mayor and Board of Trade of London, in support of his invitation. Mr. Scott, of Buffalo, endorsed London as it was near Buffalo, and he wanted all the Montreal members to see the horticultural display at that exhibition. After other western members had added their quota, the vote was called and London was unanimously selected as the next place of meeting.

In the Question Box, among others, "What should a florist pay his assistants," was assigned for answer to Messrs. Dunlop, Bain and Scott. The unanimous opinion was that the right man and not the money was the essential. A good man was worth all his employer could afford to pay him. The best men were the men who had grown up with the place and who often started in the most menial positions.

The afternoon was spent in a visit to Joseph Bennett's commercial place at Lachine and the grounds of Mr. T. A. Dawes (C. A. Smith, gardener), where refreshments were served. After a vote of thanks to the donor, the party boarded the steamer Sovereign, and many for the first time experienced the novelty of a trip down the rapids and to the city.

The concluding session opened with a very important paper, entitled "Modern Heating and Ventilation," by R. W. King, C. E., Toronto. This gentleman has made a very exhaustive study of steam heating as applied to horticultural establishments, and installed the entire plant at the place of the late Harry Dale, of Brampton. Steam heating and automatic ventilating were the portions treated on, and many comparative tests were given and with instruction for installing an entire plant. Some of the delegates were in favor of printing this paper, as they thought its length would render its publication in full in the trade papers improbable. Mr. King, however, said the paper was already bespoken by two of the leading engineering journals, who had undertaken to print it in full; and in event of its abbreviation in the horticultural press, any number of copies containing the full text could be supplied.

A paper entitled "Commercial Orchids," by Mr. Goodier, Exhibition Park, Toronto, was read. The best sort for commercial work was the cattleya, and full instructions for the care of the same were given.

Mr. Gammage, on "Carnations Up to Date," came next. He considered the best of the commercial varieties of 1900 to be Ethel Crocker, Lady Van Horne and Genevieve Lord.

Election of Officers.

Election of officers for the year beginning January 1, 1901, resulted: President, J. H. Dunlop, Toronto; first vice-president, Joseph Bennett, Montreal; second vice-president, G. W. Rennie, London, Ont.; secretary, A. H. Ewing, Berlin, Ont.; treasurer, H. Simmers, Toronto; executive committee for three years, George Robinson, Outremont; C. G. Nott, St. John, N. B.; W. Gammage, London. For one year, F. C. Miller, Toronto.

The Exhibit.

The judges' report on trade exhibits were: J. Campbell, Simcoe, 250 spikes of gladioli, very highly commended.

W. Gammage, for carnations in pots, Gloire de Lorraine begonias, violets in pots, and small ferns. Highly commended.

C. A. Smith, two vases zinnias, two vases double dahlias, plants of Acalypha Sanderi. Highly commended.

Graham Bros., Ottawa; collection of commercial ferns. Highly commended.

C. A. Scrim, Ottawa, collection of commercial ferns and plants of ericas, in pots. Highly commended.

Saturday.

Saturday the delegates were the guests of the City of Montreal. Entering the carriages provided at 9:30 a. m., a visit was paid to the principal private establishments in the city, followed by an inspection of the fine bedding surrounding Park Superintendent Henderson's house, on Mount Royal. A short time was spent at the "Lookout," from where the city, river and surrounding country, 900 feet below, is spread out like a huge panorama. At the park restaurant refreshments were served, followed by a drive to Mr. Joyce's (George Robinson, gardener) fine place at Outremont, where, after the entire party had been photographed, luncheon was served. After thanks to Mr. Joyce, George Trussell was visited with more refreshments, arriving back at the Windsor at 5:30 p. m.

The Banquet.

The banquet tendered to the visiting delegates by the Montreal Gardeners and Florists' Club was held in the Wulford Hall in the evening; 70 covers were laid. A most enjoyable evening was spent. W. Ewing was toastmaster.

The singing of "Auld Lang Syne" and "God Save the Queen," completed three of the most instructive and enjoyable days ever spent by the craft of Montreal.

Philadelphia.

Pennsylvania Horticultural Society.

Contrary to all expectations, the meeting of this society, on Tuesday last, was the best so far of this year, for not only was there a good attendance, but there was also a very large exhibit, over 300 vases being required to hold the outdoor cut flowers, which were staged for the prizes offered by Henry A. Dreer, Inc.

There were six exhibitors, Joseph Farley, gdr. to James M. Rhodes, Esq., Ardmore, Pa., took first and John McClenry, gdr. to Wm. Weightman, Esq., School Lane, Philadelphia, second for the Dreer prizes for cut flowers of aquatics.

Wm. Fowler, gdr. to Mrs. Chas. Wheeler, Bryn Mawr, Pa., took first and Wm. Robertson, gdr. to Jno. W. Pepper, Esq., Jenkintown, second for the prizes offered by Henry F. Mitchell. Francis Canning, gdr. to Samuel T. Bodine, Esq., Villa Nova, took first for Magnus tomato, and Joseph McGregor, gdr. to Mrs. Thos. A. Scott, Landsdowne, Pa., second. John McCleary first for sugar corn, and Francis Canning second.

For the prizes offered by H. Waterer, for 12 best tomatoes, any variety, Robt. G. Carey, gdr. to Thos. C. Price, Esq., Chestnut Hill, took first, the variety selected being Stone, the seed being carefully selected by the exhibitor from a few plants three years ago, which showed superior quality from others. The fruit staged was far superior to any other on exhibition. Second prize was taken in this class by Wm. H. Carey, gdr. to Mrs. Allen B. Rorke Ardmore. There were eight other exhibitors in this class, the varieties staged were, in addition to the one above, Stone, selected trophy, Magnus and Ponderosa. John Hobson, gdr. to Edw. A. Schmidt, Esq., Radnor, exhibited a well-grown plant of Allamanda Williamsii, also six vases of Allegheny hollyhocks. Alphonse Pericat, gdr. to Mrs. Geo. B. Wilson, was awarded a silver medal for new hybrid orchid, Laeliocattleya velutina elegans, also a certificate for cut flowers of laelias and cattleyas.

At the September meeting of the Society the chief attraction will be dahlias; prizes will also be offered again for outdoor cut flowers.

Hail visited this vicinity on Saturday afternoon, August 18; no damage has been heard of among florists, but 12 miles out, at Bryn Mawr, the suburban place of Geo. W. Childs Drexel, Esq., caught the full force of the storm; all the glass in the large greenhouses was smashed, doing considerable damage to the choice collection of plants; much damage was also done to the valuable collection of trees on the lawns.

DAVID RUST.

Baltimore.

Cut-Flower Market.

Outdoor roses and carnations are coming in quite good. The recent rains and cooler weather has helped all outside plantations along. Aster bugs are doing some mischief. Violets, as a rule, look well. A few of the stores have closed for the hot months.

Among Growers.

John Cook's place, on Edmundson's avenue, is always very interesting to visit. Mr. Cook's new rose, "Baltimore," is to establish its reputation this season. Three or four benches were planted in June, and have made magnificent growth. A hybrid seedling—American Beauty x white seedling—has produced very fine flowers. Mr. Cook predicts a grand future for it, and the fine, delicate, salmon-colored flowers, the size and perfume of the American Beauty, certainly seem to justify the raiser's ambition. Another notable seedling has been raised from Earl of Dufferia x white seedling. Mr. Cook uses his own seedlings for hybridization.

A new white carnation is to be cultivated for the third season. It is larger and finer than any other white in the market. There are some 400 plants in cultivation now, and it will probably be offered to the trade next Spring.

Among the many interesting foliage and flowering plants, an Aucuba Sieboldi was noted. It has very beautiful leaves, of a dark green color, with the central area of bright golden yellow. No croton is prettier than this aucuba, and it should prove very valuable for decorations and floral compositions. A collection of the finest lilac is found very useful for forcing and outdoor cultivation.

Princesse Alice de Monaco (Weber) blooms very profusely outside; Mr. Cook considers it one of the best bedding roses.

The public squares and parks are in very good condition at present; in artistic bedding Patterson Park (superintendent, Chas. L. Seybold) leads, a fine cactus bed, near the main entrance, and a tropical croton bed, near the Casino, are masterpieces in their respective style. If this gifted landscape gardener would only be allowed the necessary freedom of action, the public parks would derive lasting benefit from it. Seybold is an admirer of conifers, and has a knack of grouping them to produce the most pretty effects.

The City's bulb contracts have been awarded. Fred. Burger, bidding for H. F. Michell, got the bulk of the tulips, and Ed. A. Seidewitz, the hyacinths. The prices were quoted very low.

It turned out that the secretary of the park board had made a mistake in his specifications, and it will be necessary to furnish 22,000 Chrysolora instead of 2,000, as was originally listed.

The weather has radically changed; it is quite cool now and showers prevail. The recent storms have done little damage to florists, as far as is know, in town.

T. E.

Toronto.

Business is still about the same, little but funeral work doing, and not very much of that. Roses are somewhat more plentiful but of no better quality; carnations are also poor; asters are good and plentiful. Lancifolium and Auratum lilies have also been plentiful. Most of the boys have their carnations planted, and many of them are very good. Young roses are generally looking well. Violets in the fields are growing freely. 'Mums are also beginning to move along rapidly. A house of Liberty roses at John Dunlop's is looking very well and, by its appearance, is likely to be a money-maker. The news of the death of Mr. Ed. Townsend, of Hamilton, came as a blow to the boys here; he was a great favorite in Toronto, and had many friends among the older members of the profession, and his family have our deepest sympathy.

From various causes there were but few of the boys from the West down to the Convention at Montreal, and those who stayed at home can never know what they missed. The railway rate was high and the weather hot, but one day, among the genial crowd of Montreal gardeners and florists was enough to recompense for both time and trouble. The Convention was a great success; the city is a grand one; the florists kind, smart and up-to-date, and the private gardeners there, splendid exponents of the profession; their plants, flowers and fruits being as near perfection as possible. On Saturday we were treated to a drive by the city, and we visited a great number of the private gardens of Montreal, and while all were grand, each in its own way, those presided over by Messrs. Geo. Robinson, W. Wilshire Smith and Geo. Trussel took my fancy most. Two of them had splendid collections of herbaceous plants, and the others had fine orchids, while all had fine general collections. The gardeners of Montreal are proud of their places, and have good reason for their pride.

The next year's convention is to be in London, and it is to be hoped there will be a full attendance. Great Scott was at this one, and his bright remarks and genial personality made many friends, both for himself and for the Pan-American Exposition.

THOS. MANTON.

Worcester, Mass.

Trade is first rate for this time of the year. Gladiolus and asters are coming in plentifully; they are in fine shape.

There was a very fine exhibit of Gladiolus, perennial phlox and nearly all varieties of asters at our weekly show, Thursday last. Much dissatisfaction was expressed by exhibitors, owing to the very poor judgment of the judge in making his awards on pompon asters, he giving first premium to 30 vases of a mixed lot, consisting of Victoria, Jewell and several other varieties.

Owing to the rain we have had for the past few weeks, flowers are much better in quality.

Horticultural Architects And Builders and Manufacturers of Greenhouse Heating and Ventilating Apparatus

ESTABLISHED 1859.

WINNERS OF THE HIGHEST AWARD.

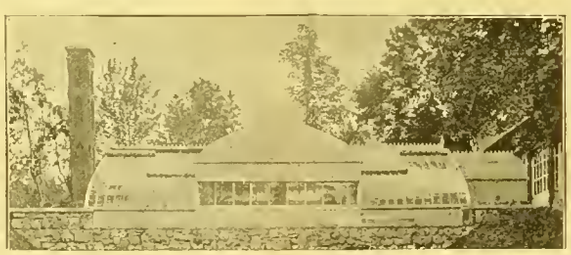
At the World's Fair.—The Dean Gold Medal.

Certificate of Merit, Society American Florists, and the Silver Medal for 1898 of the N. Y. Florists' Club.

Madison Square Garden, for the best Amateur Greenhouse.

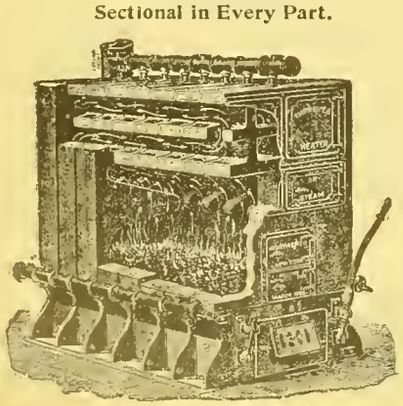
Conservatories, Greenhouses, Etc.,

Erected complete of our patent Iron Frame or of Wood Frame construction. Estimates furnished for Cypress Material, Greenhouse Heating and Ventilating Apparatus, Cypress, Hot-Bed Sash and Ventilating Sash.



The Weathered Patent Improved Sectional Boiler

For Water or Steam Heating. Absolutely Sectional in Every Part.



1899 Model.—Sectional View.

A Few Points Claimed for this Boiler:

Simplicity of construction.
Sectional headers.
Sectional ash-pit.
Maximum vertical circulation.
Minimum friction
Direct or indirect draft.
Smoke-box on front or back.
Rapidity of water circulation.
Easily cleaned in every part.
Grates on level with fire-door opening.
Greatest amount of boiler surface exposed to radiant heat.
Heating surfaces so arranged in fire-box that the hot gases must strike every part before entering combustion chamber.

Each section is complete in itself, and can, if broken, be replaced very quickly, as it is only necessary to take out the bolts in the flanges, when the damaged section can be taken out and a new one put in. Should it not be convenient to put in a new section, the header can be plugged and the broken section left in place until a more convenient time, and this can be done with less trouble and expense than with any other sectional boiler in the market.

46 AND 48 MARION STREET, NEW YORK

SUPPLEMENT WITH THIS ISSUE.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FL[illegible] FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 35. NEW YO[illegible]R 1, 1900. One Dollar Per Year.

LILIUM HARRISII IS NOW READY

And we are pleased to state that our bulbs have never been finer. Bulbs are exceptionally fine, clean and bright, and running well up to size. We are very particular about the Harrisii that we handle. Our stock is not picked up indiscriminately from small growers. We have our bulbs grown for us by only a few selected growers, whose stocks are the healthiest, and for which we pay the highest prices. Our fields are the healthlest and best on the Island, and we are sure that our stock will prove unusually satisfactory. Certainly the bulbs have never beep finer than they are this season. If you have not already covered your wants in this line, we will be glad to have your order. Bulbs are ready for immediate shipment.

REGULAR STOCK AS USUALLY SOLD:
Bulbs 5 to 7 in. in circumference, $16.00 per case of 400 bulbs.

OUR OWN SELECTED STOCK:
Bulbs 5 to 7 in. in circumference, $18.00 per case of 400 bulbs.
Bulbs 7 to 9 in. in circumference, $18.00 per case of 200 bulbs.
Bulbs 9 to 11 in. in circumference, $20.00 per case of 100 bulbs. (scarce)

If cash is remitted with order, 5 per cent. can be deducted from above-named prices.

FREESIA REFRACTA ALBA Plant now for Christmas Flowering. Finest quality Bermuda-grown bulbs, extra quality, 50c. per 100; $4.00 per 1000. Selected bulbs, 75c. per 100; $6.00 per 1000.

BERMUDA BUTTERCUP OXALIS Heavy Selected Bulbs, 75 cents per 100; $5.00 per 1000.

WINTER-FLOWERING ROSES.

We have a fine stock of all the leading varieties—first-class, A No. 1 plants—which we can offer as follows:

STRONG PLANTS, IN 3 1-2 INCH POTS.

Bride, Bridesmaid, Perle, Meteor, La France, Bon Silene, Papa Gontier, $8.00 per 100.

Souv. de Wootton, Golden Gate, Kaiserin Augusta Victoria, Pres. Carnot, Sunset, $10.00 per 100.

American Beauty, of which we have an extra fine lot, $12.00 per 100.

F. R. PIERSON CO., Tarrytown-on-Hudson, N.Y.

FOR SUMMER DECORATIONS!

ASPARAGUS PLUMOSUS NANUS

Never Wilts!

Cut Strings, 10 Feet Long, 50 cts.

Early Arrivals of Lilium longiflorum.—An advance shipment of Lilium longiflorum bulbs has reached New York, consisting of about 100,000 bulbs. This is the earliest arrival of longiflorum on record, the transportation from Yokohama to New York taking only four weeks. Early orders are already being filled by H. H. Berger & Co., Wm. Elliott & Sons, J. C. Vaughan, Clucas & Boddington Co., C. H. Joosten, Hulsebosch Bros. and Hagemann & Myer. The bulbs are very fine, clean and sound, and on account of their quality and early arrival should give excellent satisfaction. The next consignment is expected about September 18. On account of the Japanese Government having impressed into service, as transports, a number of merchant vessels, some difficulty is experienced in securing transportation, and freight rates are likely to advance.

Holland bulbs have also arrived, and are a week ahead of the usual time. These bulbs are particularly fine this year. The indications are that Roman hyacinths will be scarce.

New York.—F. W. O. Schmitz, with his family, has returned from Europe.

Mrs. J. C. Vaughan and her son Leonard arrived from Europe, Sunday last. Mr. Vaughan himself will remain in this vicinity for a week or more, and they will spend most of the time at local Summer resorts.

Vaughan's Seed Store has been headquarters this week for Western Convention delegates.

The crop of immortelles is this year considerably shorter than usual, owing to unusual frosts in the south of France, and prices abroad have already advanced over 50 per cent., the market here being affected accordingly. The foreign market is bare of good cape flowers, and the new crop will not be in before January next.

Among the successful firms exhibiting at the Paris Expostion who have received awards in the Department of Agriculture is T. W. Wood & Sons, of Richmond, Va.

Seed Crops—Since our last report on the seed crops, and the conditions of the trade in general, we have received valuable information from many of the seed growing sections, which not only confirm all we said, but make the situation more seriously critical than we had reason to suppose. Some of the most reliable growers have reduced their estimate to 50 per cent. on contracts. Now, this is a very serious matter, not only for the dealer, but for the grower who has to set aside about one-eighth of a full average crop for stock seed for the next season; and it follows that when there is but half a crop, one-quarter of this must be set aside for their own planting next season.

The most serious aspect of the case is that the insect enemies, so destructive this year, will be ready for their deadly work next year. The plant louse has been very troublesome in the vine growing sections of the West; in some localities the loss to the cucumber seed crop will be fully 50 per cent, and other vines have also suffered badly.

The loss of the ruta bagas and turnips now begins to be felt, when foreign dealers are asking a price fully as high as the retail price has been of late years.

The Long Island cabbage seed crop is becoming beautifully less, as much seed was injured and lost by the rains after it was cut. One grower lost 600 pounds at least. The seed is unmarketable, because of its appearance, not to mention the fact that much of it began to sprout while wet, and, after drying, the seed is shrunken and unfit for sale.

But there is no loss without some small gain, and the trade, however much they may suffer from shortage of stocks, will in the end be gainers, as the "adventurers," who sell before they have the slightest idea of what the crop is to be, fully expecting the seed will turn up somewhere, as it always has done, will be disppointed in getting their supplies, which will be a disappointment to their customers, who will gladly return to the trade that has ever treated them as strictly first-class business men always do.

Baltimore.

The Market.

The cut flower supply just about meets demands. There seems to be a large stock of fine, though somewhat small, carnation plants. Housing is well under way. Some out-of-town roses are shipped here, but arrive in bad condition.

Echoes of the Convention.

Wm. Fraser mourns the loss of his father-in-law, on account of whose illness he had to forego the pleasure of attending the Convention.

Everybody speaks enthusiastically of the successful meeting and the hospitality of our New York brethren. Seidewitz thinks that he ought to repay the national society for the many benefits he has derived from it. He will be ready to serve it if his friends will give him the opportunity he looks for.

Combining Carmody's and Scott's advice, growers can hardly make a mistake in greenhouse building. Clipper bars and butted glass have many advocates hereabouts; they are the features of all the new structures. Messrs Feast, Moss, Anderson, Madsen, etc., all prefer them to the putty-glazing and lapping system.

Great relief is felt in the certainty that we still are "ornamental horticulturists."

Changes in Business.

Harry Ekas has purchased the greenhouse establishment of the late Wm. Ekas on the Frederic Road for $1,700. There are three greenhouses and a dwelling house on the place.

Paul W. Binder has raised a fine, dark purple, double violet seedling. The flowers are considerably larger than those of Marie Louise and very fragrant.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN.

THEODORE J. SMITH, Geneva, N. Y., President; N. W. HALE, Knoxville, Tenn., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Ames, Ia.—A recent important change has been made at the Iowa State College in the horticultural department. Prof. John Craig, who took the chair after the resignation of Prof. J. L. Budd, has resigned to take a position under Prof. Bailey at Cornell University at Ithaca, N. Y. His time will be largely devoted to the preparation of the Cyclopedia of American Horticulture. John I. Schulte, now connected with the Department of Agriculture, and formerly assistant to Prof. Budd here, has been elected to fill the vacancy. Mr. Schulte is an Iowa boy of great promise, and a graduate of the Iowa State College, in the class of 1895. He is at present in charge of the exhibit of the horticultural display of the Department of Agriculture at the Paris Exposition. He has been cabled the announcement of his election, and his friends here think he will accept.

Newport, R. I.

As reported in my last week's notes, the season is on in earnest. In addition to the regular work in the cut flower trade, the past week has witnessed a round of dinners, dances, housewarmings, etc. The "Goelet Ball," on the 28th, was the grandest affair this season, and while there are several affairs of the kind being arranged for, to take place in the near future, yet this is not likely to be eclipsed. The floral decorations were by Hodgson.

The "Harvest Home," given by Mrs. Stuyvesant Fish, on the 22d ult., was also an elaborate affair of its kind; this was also arranged by Hodgson, who, besides bringing into use large quantities of roses for the tables, used immense quantities of farm products in great variety, intermixed with which were artificial sunflowers and poppies, which made a brilliant effect. Varl-colored electric globes also played an important part.

The decorations for the housewarming at the home of Mrs. Herman Oelrichs, on the same evening, was also a grand floral event. They were executed by Small & Sons, of New York, Arthur Merrit being in charge of the work.

By the death of Prof. Fairman Rogers in Vienna, a week ago, horticulture has lost a leading patron. It was he who gave the Newport Horticultural Society a lift in its early days, enabling it to give exhibitions when the state of the finances would not otherwise have admitted.

MAC.

Buffalo.

Market Conditions.

A full week of unusual humid weather at a continuing temperature ranging above 80 degrees has been the recent experience, now however, being succeeded by cooler conditions. It placed business at the lowest ebb, and absentees to the convention last week were not missed as regards the need of their help at home.

Flowers, in growing kinds, are amply abundant, gladiolus being noticeably plentiful and lancifolium lilies make some window displays that are almost inspiring.

Jottings.

Louis Rapin, of Pine Ridge, who was in a local trolley car accident that proved fatal to several persons, and which occurred over three months ago, is now up and about, but still confined to his home, the result of a spinal injury then received.

Sunday last was made the last general or open and free admission day to the Pan-American grounds. The local papers give out that 20,000 people visited the grounds on that day. Admittance for the present can be secured only through passes. The management decided on this step through so many visitors interfering with working progress.

VIDI.

Pittsburg.

Business Bits.

Trade has been a little slower the past few weeks, but as most of the florists were away from home they had no great expectations, so were not disappointed. Stock is not very choice; the supply is sufficient, mainly asters and gladioli. Some fair roses are seen occasionally; but carnations are mighty scarce. Carnations in the field are pretty good, considering the dry, hot Summer, and are being housed now.

Convention Aftermath.

One after another the delegates who attended the S. A. F. Convention in New York are getting home again, all very much pleased with their trip and the treatment received at the hands of the New York florists. The trip to Glen Island was a great treat to all.

The few days spent in Atlantic City were very much enjoyed. The boys and men took to the water like ducks, some of them having their first bath in salt water.

L. Lamborn and wife, of Alliance, Ohio, John Young and family, and F. C. Weber, of St. Louis, Mo., were among the visitors to Atlantic City before attending the Convention. W. C. Beckert, the seedsman of Allegheny City, with his family, also spent several weeks there.

E. C. REINEMAN.

Port Chester, N. Y.

The Westchester County Gardeners' Association held a rather hurried session for their August meeting on Saturday, the 25th, owing to the oppressive heat. Thos. France and John Johnson were elected members. Arrangements were completed for meeting in a new hall with ample facilities for the holding of exhibitions. The society now meets in Knights of Columbus hall, Ryan building, Port Chester, N. Y., fourth Saturday evening of each month.

J. W. D.

Oceanic, N. J.

A very well attended meeting of the Monmouth County Horticultural Society was held August 17. It was decided to have the chrysanthemum show in the Town hall at Red Bank on the 9th, 10th and 11th of November.

A communication from the Pan-American Exposition was read, and after discussion a legislative committee was appointed to attend to the latter communication at once.

Fine Collection of SEEDLING PALMS, ARECAS, LATANIAS, KENTIAS, from 2 to 4 inch pots; also collection fine RUBBERS. Write for prices.

C. H. JOOSTEN, WHOLESALE BULBS AND PLANTS, **85 Dey Street, New York.**

(178) **Tulip Tree Scale.**—The twig sent by you is affected by the common tulip tree scale (*Lecanium tulipiferæ* Cook), a species which affects not only the liriodendron, but also the magnolia. When occurring in great numbers, this scale may seriously affect the health of a young tree, or may kill a branch or two on a large tree. A certain amount of pruning, accompanied by a spray or wash of a dilute kerosene soap emulsion, applied, preferably, in the early Summer, when the young lice are hatching, will be efficacious.—(Prof.) L. O. HOWARD, Govt. Entomologist.

(179) **Duranta Plumieri.**—At what time should seed of Duranta Plumieri be gathered? Should seed already two months on the bushes, apparently ripe, be picked? Should it be planted soon after picking, to obtain best germination?—B. S.

—Duranta Plumieri is so easily grown from cuttings that it seems a waste of time to raise them from seed. Pick the seeds, and if not thoroughly dry, spread them on papers and dry them out, then sow them in a mixture of leaf soil and sand; and keep them in a warm situation, never allowing the soil to become dry after the seed is sown.

Rose Queen of Edgely.

The new rose, Queen of Edgely, has added another to its numerous victories. It was awarded a certificate of merit at the Convention of the S. A. F. last week, and the endorsements it is receiving wherever shown place it in the front rank as a coming rose.

On March 27th of this year a certificate of merit was awarded at the show of the American Rose Society in New York. On the 8th of April the Philadelphia Florists' Club gave a written and signed report, setting forth its many good qualities. On April 17 the Pennsylvania Horticultural Society awarded the rose a silver medal, and also reported that the variety was a great acquisition. On May 5 a silver medal was gained at Boston, from the Massachusetts Horticultural Society, and again, on May 9, a silver medal was awarded to it by the American Institute of New York.

Hail News.

Wm. Murphy, of Station F, Cincinnati, Ohio, is one of the latest sufferers from a hail storm. He is insured in the Florists' Hail Association.

A couple of storms in the vicinity of Lancaster, Pa., also did some damage. Amos N. Rohrer, of Strasburg, and H. B. Weaver & Bro., of Wheatland Mills, being the injured ones. Both were insured. E.

A neatly printed pamphlet entitled "A Garden Talk" informs us that Edwin A. Seidewitz, of Baltimore and Annapolis, Md., has added a landscape department to his business, to be under the supervision of Theodore Eckardt.

St. Louis.

Trade News.

Business has been pretty good the past week, consisting almost altogether of funeral work. The great trouble is to get decent flowers. Owing to a long continued hot and dry spell, the stock hereabout is simply miserable. The only blooms coming in are very small roses, smaller carnations that look wilted and off color on receipt, a few ragged looking hydrangeas and poor asters. Of the latter there are not nearly enough to supply the call; they seem to have gone to pieces all of a sudden.

The weather has broken, however, with some rain, and indications of more, and the chances are that the worst is over.

About Town.

The Beyer boys have the decorations of the harvest feast of the Suabian Society again this year. This, by the way, prevented one of them from attending the Convention. They have a splendid lot of market chrysanthemums in the field, also some for cut bloom. Their place looks in first-class order, especially the palm house, which is no doubt the best of its kind in the city.

Mrs. M. M. Ayers has gone East to buy stock, as well as to recuperate after a very busy season. Her representative, Mr. Adels, reports an excellent Summer business.

Wm. Kalish & Son are building an additional house. This firm has not been very long in the business, but seem to have their share of the trade of the west end.

H. G. Berning is very busy making up carnation supports, in which he is interested. Judging from the quantities of orders he has received for it, it must be the ideal support.

The regular meeting of the Florists' Club will take place on September 6, instead of the 13th.—C. C. S.

We acknowledge receipt from the Herendeen Manufacturing Co., of Geneva, N. Y., of a placard illustrating the firm's specialties, the Furman boilers, and showing details of their mechanism.

Mention the Florists' Exchange when writing.

St. Paul.

Trade Notes.

Trade continues dull, though the exodus from the Summer resorts, which has begun, will soon result in the increased sale of flowers. The month has been one of unusual heat, and all roses have been off grade. Funeral work has constituted the bulk of the trade, which has been about as large as usual for the month, considered the dullest one of the year.

In spite of the protracted drought early in the season carnations in the field have made a most satisfactory growth, and the plants are better, more stocky than for many years. Planting them in the benches has already begun, and if the size of the plants augurs anything for the crop, there should be an abundance of good blooms the coming season.

The News.

Wm. Donaldson & Co., of Minneapolis, have purchased the entire plant and ground of the C. A. Smith Floral Co., located at 35th street and Portland avenue, and will hereafter grow their own cut flowers and plants. The price paid, according to a local paper, was $19,000 cash. There are five acres of land and about 40,000 feet of glass, besides a barn and two dwelling houses, all in a choice, rapid growing residence section. James Souden, foreman for eight years for L. L. May & Co., has been appointed general manager of the place. Mr. Souden is known as one of the best cut flower growers in the state, and with some of the best houses in the country will undoubtedly produce high-grade stock.

There has been the usual amount of repairing and building this season. R. C. Seeger's place, which is nearing completion, will be one of the best equipped in the city.

John Monson is building a nice range in Minneapolis.

Robt. Brown, formerly with E. Hippard, Youngstown, O., has accepted the position of foreman for L. L. May & Co.

The Bowling Tournament.

The following further information regarding the tournament has been kindly furnished by Chairman Theodore Roehrs, of the Committee on Sports:

Team.	No. of Strikes.	No. of Spares.	Average.
Buffalo	39	79	154.1
Chicago	44	72	151 6
New York	32	80	149 2
Baltimore	48	53	149.1
Flatbush	44	68	148 1
Philadelphia	37	63	142.1
Detroit	22	81	139.1
Pittsburg	39	49	133.8
Milwaukee	31	55	133.1
Cleveland	36	54	131.5
Boston	19	49	104 2

At the meeting of the Committee on Sports, held on Monday, August 27, the Baltimore club was disqualified on account of having two men bowling on the team whose names had not been entered (Messrs. Weber and Binder), eight names having been entered, but only four of them bowling in the team.

Among the winners of the individua prizes, not mentioned in last week's issue, were:

The gold mounted fountain pen, donated by J. K. Allen, to bowler making greatest number of strikes. Winner, Wm. F. Kasting, Buffalo, with 13 strikes.

Box of cigars, donated by F. Brinkama, to man making greatest number of spares, went to Theodore Roehrs, New York, with 18 spares.

INDIVIDUAL CONTEST.

The scores made in the contest for individual prizes, outside the tournament, were as follows:

D. J. Scott	181
J. F. Wilcox	177
Robert Kift	169
Siebenheller	155
J. Donaldson	150
G. C. Watson	147
Hyatt	144
Keuhn	135
R. Watson	128
Phillips	127
Gilkinson	126
Burns	125
Langjahr	113
Balluff	111
J. A. Shaw	111
D. Long	100
Steffens	97
C. Kahlert	93
Birnie	85
Krick	60

The first prize in this contest was a gold medal, donated by John I. Raynor, New York. Won by D. J. Scott.

Second prize: Silk umbrella, donated by Walter F. Sheridan, New York. Winner, J. F. Wilcox.

Third prize: Cigar case, donated by Fitzgerald & Hammond, New York. Won by Robert Kift.

THE LADIES' CONTEST.

	Score.
Miss Eastman	86
Mrs. Winterson	81
Mrs. Langjahr	68

The matter of awarding the Ladies' prizes was laid over, and will, I hope, be decided at the next meeting on September 3.

Among the Magazines.

SCRIBNER'S—September is the most popular month for camping excursions, because it combines the last month of trout fishing with the first month of deer hunting in most of the great preserves. It is, therefore, appropriate that the September number of Scribner's should have an outdoor flavor to many of its articles, and that the illustrations should suggest sport and adventure in many out-of-the-way places.

LADIES' HOME JOURNAL.—The pictorial features of the September Ladies' Home Journal include a page drawing of "Loiterers at the Railroad Station," as A. B. Frost sees them; "The Wonders of California Gardens," and the beauties of Yellowstone Park. There are numerous practical articles, and much else that is helpful in the departments.

MINNEAPOLIS, Minn.—James Souden, for eight years in charge of the establishment of L. L. May & Co., St. Paul, has been engaged as superintendent of the Donaldson plant here, lately the C. A. Smith Floral Co.'s.

THE NATIONAL PLANT CO., Dayton, Ohio.

Mention the Florists' Exchange when writing.

Montreal.

Trade Notes.

At last we are getting some hot, dry weather, and plants that have been brought in from the fields don't seem to relish it. Roses are still very small. Few flowers from young plants are seen yet. Sweet peas and asters continue good, and form the staple for any little demand there may be from the stores.

Club Notes.

A big crowd at the club meeting on Monday night listened to some very interesting reports from the various committees.

The picnic report was highly satisfactory; a balance of $25 on the right side was recorded. Four new members were elected. C. A. Smith exhibited a very fine specimen plant of Acalypha Sanderi, for which, on recommendation of the exhibit committee, he was awarded a certificate of merit.

A paper on "Hints on the Promotion of Interest in the Club," read by Fred Bennett, was well received. The writer was accorded a hearty vote of thanks.

Convention Echoes.

We feel highly flattered at the pleasant remarks made by our convention visitors, and are very pleased that our humble efforts were appreciated. Not alone by our intercourse with our friends from distant points was this convention most beneficial: it has been of the greatest value in making us more familiar with several of the very best of our own craftsmen who have heretofore held largely aloof from the workings of the club.

It is with the greatest gratification that we have seen the active interest taken in the Convention by our new park superintendent. We beg to assure Mr. Henderson of our hearty appreciation of his efforts toward the success of our Convention.

The finest thing in hardy perennials seen on Saturday was Delphinium sulphureum Zallia, grown by George Trussell. As its name indicates, it is a pure sulphur yellow; its spike of flower, 18 inches in length, is equal in quality to a spike of oncidium.

A clump of Hydrangea paniculata, of a size seldom seen in this section, was a feature in Mount Royal Cemetery.

The general effect of the bedding in Mount Royal Park is very fine. Mr. Pidduck is to be congratulated on the success he has achieved during his first year in charge.

A bed of Abutilon Savitzii, with a groundwork of dwarf-growing achyranthes, at Geo. Robinson's place was greatly admired. B.

HARDY RUSSIAN VIOLETS Runners, well rooted. $1.25 per 100, by mail; $10.00 per 1000, by express. The flowers are very large, good steme, and the best bloomers. Try me with an order.

JOHN RECK, Bridgeport, Conn.

Mention the Florists' Exchange when writing.

Echoes of the Montreal Convention.

The attendance might have been larger, but the increase was more than 50 per cent., and the Provinces of New Brunswick and Nova Scotia added.

The paper by Mr. Robinson on the decoration and care of private grounds was thorough. Mr. King's paper on the heating and ventilating of greenhouses, when read from print, will furnish thought for all.

Pan-American Scott made an able plea for a petition to the Dominion Government to erect a Canadian building at Buffalo next year, and after rumors of a big Dominion exhibition in Canada next year a resolution to that effect was enthusiastically passed.

The dignity of the chair was well upheld by President McKenna.

The choice of London for the next meeting met with no opposition.

A very good feature was the regular attendance of all members at all meetings—one advantage of a small attendance.

The trade exhibit should be larger in the future.

The elections went all right. Dunlop will be a record breaker.

The social phase of the convention was simply out of sight, running so smoothly that at the termination it was impossible to pick out one that had done more than another toward entertaining us. It was a committee of the whole in its perfect sense.

All from outside were surprised at the magnitude of the city—the very fine buildings, the volume of business done, the number of pleasure resorts and the grandeur of the interior of the churches. Great Scott! The trip down the Lachine Rapids was enjoyed; it went off well; and why not? We had just come from the private gardens of Mr. Daw, of ale renown, where, after seeing one of the most perfectly kept grounds and greenhouses, under the charge of Mr. Smith, we were regaled on the beautiful lawn with ale fresh from the cellar, and everything that goes with it.

On Saturday the whole day was taken up with cariage rides to all the places of note, and all the very fine private residences and gardens. The latter were eye openers, most noticeable among them being that of Mr. Joyce, the millionaire confectioner; gardener, Mr. Robinson, who read the able paper and certainly showed that he practiced what he preached. Here we were welcomed to a fine, cold lunch on the lawn, presided over by Mr. Joyce in person. A ride to the top of the mountain, world renowned for the grand view of Montreal and the neighboring country, was worth the whole trip.

A visit was paid to George Trussel, with Mrs. Molsom, where some of the finest geranium beds were seen. Mr. T. is a specialist in geranium bedding.

The climax was the banquet given by the Florists and Gardeners' Club. This was fine and complete in every way. E.

Worcester, Mass.

The flowers at the weekly show were very fine. The competition was very close on zinnias, scabiosas and bouquets. Those in the amateur classes were nearly as fine as those in the florists' classes.

There seems to be a large black bug or beetle around here that eats up the aster flowers as soon as opened. The pest is fully as destructive as the green louse on sweet peas. J.

Cincinnati.

Trade Notes.

We have very little to say for trade this week. Funeral work is all that demands flowers and we have plenty of those for the call.

Jottings.

Don't forget that the next regular meeting of the Florists' Society occurs at the residence of Mr. and Mrs. Julius Schuman, at Newport, Ky., September 6, at 2.30 p. m. The ladies are especially invited to attend. Several new members are expected to be added to the list, and much important business will be transacted. Every grower and store man should be present.

None of the Cincinnati contingent who attended the convention has returned home yet, but Miss White, of Lexington, Ky., was a caller Sunday, and the report she brings is certainly very gratifying. The crowd must have been a large one, judging from the list of new members. To enroll 400 new members at one meeting is phenomenal. Now if they would all stick it would be still more wonderful.

I am a little surprised that the press of New York did not take more notice of the convention. I bought the New York papers every day, but failed to find even a little notice. Does the press of New York think the Society of American Florists so small that it is not worthy of notice?

The Florists' Exchange is to be congratulated on the success of its daily editions. Buffalo is also to be congratulated, and so is Bro. Rudd, Mr. Watson to the contrary notwithstanding. I should have liked to have seen the trade papers print the names of every member present. I for one enjoy looking over the list and seeing who among my brother florists were fortunate enough to attend. (The daily editions of the Exchange contain a list of this kind. Ed.)

On Wednesday last a hail storm passed over Murphyville and did considerable damage to greenhouses. At Wm. Murphy's it not only broke glass, but it laid his smokestack over in the field. Nearly all the Murphys sustained loss from broken glass. Corn, sweet potatoes and nearly everything in the plant line suffered from this storm. Fortunately it was only spread over a narrow strip, but it left its trail.

Abbott & Stevens is the firm name of a new cut flower store, recently started on Vine street, near the Canal.

Max Rudolph now has his new range of glass at College Hill nearly completed. He is beginning to cut some roses and other stock.

The weather still remains warm and sultry, with the thermometer ranging in the nineties. Occasional thunder storms cool the air for a time, which is a godsend for the downtown districts where little children suffer. The hilltops fare much better, as there is nearly always a good breeze stirring there.

The stable of Henry Schwarz, Price Hill, was destroyed by fire Monday night last.

FOUNDED IN 1888.

The Florists' Exchange

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO., LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.
To foreign countries in postal union $2.00.
Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.
No advertisement less than 75 cents.
Discounts on continuous advertising.
For rates, on Wants, etc., see column for classified advertisements.
Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.
Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The Florists' Exchange are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

A Card of Thanks.

The Hall Decoration Committee of the New York Florists' Club wishes to thank the following firms for their generous contributions of cut flowers and plants loaned at the recent S. A. F. Convention, all of which were very welcome, and, it is hoped, used to the best advantage.

Plants.—David Clark's Sons, Julius Roehrs, Siebrecht & Son, James Weir & Son.

Cut flowers and greens.—C. W. Ward, W. A. Manda, W. H. Siebrecht, W. Nillson, Chas. Lenker, William Plumb, Wm. Wallace Burnham, Louis Schmutz, Adolph LeMoult and Arthur Herrington.

To Caldwell, the Woodsman, for southern smilax, and to the Adams Express Co., who kindly "paid the freight" on same.

To Reed & Keller for loan of screens, etc., and to Whirtimber & Co. for loan of vases.

The committee would also thank members for the "help" loaned and contributed—of which W. I. Brower and Edw. Bogan did more than their share.

J. B. Nugent, Jr.,
Chairman of Committee.
Harry A. Bunyard, Sec'y.

Photographic Contest for August.

The Florists' Exchange photographic competition for August has closed. Quite a number of entries have been received. The winners' names will be announced in an early issue.

Convention Group Pictures.

With this issue we present supplement showing photographs of groups taken at Glen Island. As before stated, originals of these pictures will be sent C. O. D. to those desiring them on application to the photographer, Prince, of Washington, D. C.

New York's Flower Market.

What Philadelphia Thinks.

The National Convention of Florists, recently held in New York, has started there talk of the need of a public flower market. The idea is certainly a good one. Flowers are more and more in demand, and in certain cases and conditions of life fall but little short of taking rank as one of the necessities. A large majority of people in big cities have no other way of getting flowers than to buy them, and they ought to have the same facilities in this as they have for the purchase of vegetables and similar supplies. If a flower market would lower the price, as is to be hoped, it would also still further increase the demand, so that the growers would probably have nothing to complain of.—*Philadelphia Times.*

The New York Press and the Convention.

Disappointment has been expressed in some quarters at the alleged paucity of news regarding the Convention contained in the daily papers of New York City, and in some instances, unthinking and uninformed persons have attributed this supposed condition to a seeming dereliction of duty on the part of the Press Committee of the New York Florists' Club. We wish to state for the information of all parties concerned that we have in our possession, supplied to us by our press clipping bureau, extracts from the Sun, World, Herald, Times, Tribune, Commercial Advertiser, Daily News, New York Commercial, Evening Post and others, and across the river, the Brooklyn Citizen and Brooklyn Eagle, all giving more or less extended reports of the Convention during the days it was in session.

As regards the Press Committee, we think it due to them to state that at no other convention which we have attended have the arrangements for supplying information to the daily papers been so complete as at the meeting just past. The chairman of that committee, Mr. C. W. Ward, in his usual methodical manner, had a typewritten summary of each day's work prepared, ready for the use of every daily paper in New York City. These summaries were handed to the correspondents as they called at the Convention Hall, saving them a vast amount of trouble, and we are glad to state, as before mentioned, they were taken full advantage of by the daily papers.

But in a metropolitan city such as New York is, and especially at this period of the year, when politics is the absorbing theme, it is a matter for gratification that the Society of American Florists received the attention that it did at the hands of the daily press. We have known conventions to occur in this city which have been entirely ignored by our newspapers, and other cases where less than a single stickful of type was devoted to their whole proceedings. The S. A. F. has, we think, fared admirably at the hands of the New York papers, and there has been absolutely no ground for criticism, so far as the work of the Press Committee of the New Florists' Club is concerned. By personal solicitation, and otherwise, the members of that committee put forth strenuous efforts, to the end that the work of the society be brought prominently before the New York public, and that their labors were successful, the extracts from the daily papers before referred to amply demonstrate.

Snap Shots.

Dinner party No. 1, at Glen Island, envied dinner party No. 2, because the latter had an hour more to get up an appetite.

The fretful clam had an inning on Friday, some victims felt like a jack-knife and others like a water-spout.

Inadvertently, the names of Robert Craig, John N. May and Wm. Scott, were omitted from our list of ex-Presidents present at the Convention. The above named gentlemen are always on hand, and, though named last, they are not least by any means.

A western man handed a member of the New York Florists' Club, on the close of the Convention, a program of the New York Florists' Club's grand midsummer excursion, tendered to the Society of American Florists, up the American Rhine, by the steamer Long Branch, Capt. James Lynch, on Friday, August 24, 1888, with this remark: "I have no further use for this memento. The New York Florists' Club has completely wiped out the memory of that occasion, and is now at the head, instead of the tail, of the procession. Formerly when a New Yorker got too gay, I used to show him this card, and he would immediately subside. Hereafter a New Yorker is entitled to sing as loud as he likes."

Of course, we had to be reminded of the "old sore" of 1888. But it's buried "deep in oblivious wave." Such poetry fully atones for the kind remembrancer.

Now, Willis N., will ye be good? "Bemdaned" (? bed—d), as thou hast been, with all the strength and forcefulness of the Philadelphia philosopher.

John Evans and George M. Garland forgot their ventilators and iron gutters while the baby elocutionist told how "Maw had joined the club."

The Annanias Society missed its annual session.

Ex-President Gude saved the O. H. appendage of the S. A. F., and that prince of ornamental horticulturists, ex-President W. R. Smith, still feels that the National Society protects him with its sheltering wing.

That was an admirable idea of J. L. Dillon's to show photographs of his house of Queen Louise carnation taken at different periods throughout the growth of the plants.

The philosophy of the Philadelphia Scotchman, fortified by that of Puddenhead Wilson, ended as it began—in wind—and helped blow the Convention to Buffalo.

He was a mean man who put a card stating "take one" in the dish of Roman hyacinths on exhibition belonging to a New York house. The visitors acted on the suggestion, and cleaned the dish.

Quite a number of the delegates took in the vaudeville entertainment Friday night, on the Roof Garden of the Grand Central Palace.

The Chicago Times-Herald announced that J. C. Vaughan had been elected president of the S. A. F. O. H., and presented a good likeness of that gentleman, together with an account of his interesting career. There's a good time coming.

The Chrysanthemum Society of America had its usual quota of members present at its annual meeting.

While we are dreaming of a "charter and a home," it is well to inquire where the American Florists' establishment for the manufacture of glass is located.

The one thing that will be a sheet anchor to the S. A. F. O. H. in the future is the life membership reserve fund. That idea was promulgated by J. G. Esler, and put into practical shape by Grove P. Rawson. Robert Craig saw its utility when he called attention to it.

The waiter at the table of the committee No. 49 was a genuine Irishman, and kept the diners in roars of laughter by his original Irish witticisms.

Two new high balls—the S. A. F. and the New York Florists' Club—were tasted, and the S. A. F. took the taste of the imbibers the best.

Convention Echoes.

By a Westerner.

New York has done herself proud, and fully redeemed any feeling as to bygones. It was, indeed, a royal reception from first to last. The carriage ride to Central Park, and the outing to Prospect Park and other parts of Brooklyn, were glorious features. The Glen Island trip, for all, was something ever to be held in remembrance.

Old and young were in ecstasies from first to last.

Just imagine, also, if you can, a couple of staid old Milwaukee florists mounted on high on the hoodah on the elephant's back, with a photo taken of the scene, wherewith to tantalize the stay-at-homes!

How some of our boys did turn down the clams when they finally found out the right way to get at them. As a rule, the westerners are watchful and careful of etiquette; but, once right, ready to go ahead. Those seated near the writer seemed perfectly at home in opening the bottle that made Milwaukee famous.

What shall be said about the exhibition? At times there has been a feeling that the trade exhibit had seen its best days; this one settles the question for good and all. It needs but the place, the right men in control, and the will of exhibitors themselves to make of these exhibits a great feature.

It was certainly a happy thought to include in the show the products grown by private gardeners. The plants were certainly superb; the grapes and vegetables grand.

In fact, what was there omitted, in the lay out? Tell me. From vegetables up to the choicest palms and water plants; greenhouse building complete in all necessary details; florists' supplies in endless detail. Even the little flower pot, as a memento, will be carried from one end of the continent to the other, attached to many a fair florist's dress, to show how they did it in New York. Who that saw the chaos of the vast space required by exhibits on the arrival of the Chicago special, near midnight, on Monday, would have imagined all would be so slick for the opening the following morning.

All one can say is "well done, New York; it will be hard to beat you this time."

The Convention itself, thanks to Presidents Wood and O'Mara, went off equally satisfactorily, and the meetings were well attended, considering the counter attractions of the city itself and the exhibits in the adjoining building.

It will never be known how near Chicago came to beating Buffalo for 1901. Somebody seemed afraid of the trial. Never mind! New York has set a pace; Great Scott! who's going to beat it?

That Chicago bowling team worked a little on the same lines. Say, how they did wallop the Quakers for the first two games, and then, like the rooters for Chicago in 1901, fell by the wayside. Buffalo rubbed it in; took first place in both trials. However, Ed. W. promised a prize should be brought back, and he was as good as his word; his better half better.

The Posey County man's talk is worth looking into.

That Souvenir Book is certainly a beautiful memorial of New York's noted Convention and exhibits great industry in its compilation. Ess.

New York.

Market Notes.

The din and bustle of the Convention have subsided, and we are again settled down to regular business; at least, to what business there is, which isn't very much. Wholesale experts claim that trade was never so dull as has been experienced during the past week.

The shipments of roses are steadily increasing, but the weather is so hot that few are reaching the city in good condition. American Beauty and K. A. Victoria are coming in in the best shape of any, and realizing the highest figures, but this is not a time when anything like a steady market price can be quoted. With thousands of roses on hand, weather so warm that street peddlers are not operating, and store trade at its lowest ebb, we are not surprised when we learn that roses in lots have gone for 25c. per 100. Then, again, there have been fair values paid for the little fancy stock arriving; for instance, Kaiserin and Beauty have, on snap sales, touched 10c. and 20c. respectively.

Asters, gladiolus and hydrangeas are very plentiful, but no fixed values for them obtain.

Carnations are mostly from outdoors.

as yet; from 50c. up is the asking price. Lily of the valley is a glut; thousands are on hand, and if it averages 50c. per 100 for this week it will go beyond our expectations, judging from the quantity carried.

Brevities.

Miss Riley is back at the cashier's desk in J. K. Allen's wholesale house, after spending several weeks in the country.

Sheets of the FLORISTS' EXCHANGE, containing the full scores of the bowling tournament, were given to the florist audience at the root-garden performance last Friday night within 90 minutes of the time the last ball was thrown down the alley.

On Monday of this week thieves broke into the residence of P. L. Bogart while the family was absent. Fortunately the marauders were scared away before they had time to collect any valuables.

The 69th fair of the American Institute will be held in the Berkeley Lyceum building, West 44th street, on September 25, 26 and 27. Premiums will be awarded for plants, flowers, fruits and vegetables.

The final meeting of the Committee on Sports of the New York Florists' Club will be held on the alleys, 57th street and Sixth avenue, on Monday, September 3, between the hours of 3 and 6 o'clock, p. m. The election of officers of the bowling club for the ensuing year will also take place at the same meeting.

Young & Nugent are changing the interior arrangement of their store. The office is being moved from the rear to the front, and, when finished, the change will add quite a little to the floor's capacity.

James Hartshorne, of Chicago Carnation Co., was a visitor on his way home from Europe. Jimmy is sorry he just missed the Convention.

E. W. McLellan, of San Francisco, left New York for Philadelphia on Thursday. He will also go to Boston before returning to the West.

John P. Cleary left Wednesday to spend a few days in the country, to recuperate after his hard week's work at the Convention.

Gus. Bergmann, salesman for John Young, is critically ill.

The Siebrecht Sale.

The auction sale at Siebrecht & Son's, Rose Hill Nurseries, New Rochelle, N. Y., on Monday and Tuesday last, was not as well attended as was anticipated. The stock consisted of palms, ferns, dracænas and other stove and greenhouse plants, also orchids. Prices were good, the orchids selling particularly well. Among the trade buyers were Julius Roehrs, Carlton Hill, N. J.; Robert Craig, Philadelphia, Pa., and Theo. Lang, New York.

Among the Retailers.

J. H. Small & Sons recently executed a magnificent decoration for Mrs. Herman Oelrichs, at her Summer home in Newport, R. I. The affair was a "harvest home" dinner, and occurred on the 22nd inst. The principal feature of the decoration was a canopy, under which the dinner was served. This canopy was composed wholly of hop vines, all in full fruit, and extended from the piazza of the mansion over a length of 90 feet; it was 30 feet wide and 25 feet high at the highest part, and at the side reached down to within 12 feet of the ground. Over a carload of hop vines were consumed in the making of the canopy, and, it is probably the first time this vine was ever used for decorative purposes to any great extent. In the 12 foot space, from the lower edge of the canopy to the ground, a genuine "harvest home" display was made, with the exception of four openings, the entire length being banked with farm implements, and products, such as corn, wheat, etc. From the canopy, looking towards the ocean, but one vista was left, and through it the assembled guests had a magnificent view of the full moon in the distance. This was a work of art, however, and not the real thing, as the original happened to be in the last quarter at that time. The moon used was one painted for the occasion, and hung almost 200 yards distant from the canopy in such a position that it was in plain view of the guests. Interspersed among the vines that formed the canopy were hundreds of miniature incandescent lights that brought out the coloring of the vines to perfection. The tables were nine in number, one in the centre and four at each end. The centre one was oval shaped, 28 feet long and 12 feet wide. In the centre of the table was a miniature lake that occupied all the space to within two feet of the edge, all around, making the water scene exactly 8x24 feet. Rippling fountains played, and the surface of the water was dotted with aquatics in their full glory, the most beautiful of all being the night blooming nymphaeas. Around the edge of the table, and also upon the smaller tables, pumpkins, egg plant, fruits, and similar large vegetables were cut in halves and used as vases, in which were placed cut flowers.

That this elaborate decoration was much appreciated by the hostess was attested by the fact that within twenty-four hours after the affair Mr. Small received a personal letter from Mrs. Oelrichs congratulating him upon its complete success and the artistic ability that had been displayed.

Philadelphia.

Godfrey Aschmann sailed Saturday, August 25, on the S.S. Lucania for Europe. Mr. Aschmann, while abroad, will attend personally to the packing of his consignments of azaleas, palms, araucarias, etc.

Local news is very scarce; everything is very quiet in this city—little business is being done in the florists' line.

All have got home now from the Convention, and every one speaks in the highest terms of the way the New York club managed everything. Systematic arrangement was to be seen in every affair that took place, and all members of the S. A. F. were certainly royally entertained.

The members of the Philadelphia Club feel blue at the way our bowling team went to pieces. After putting up a practice game of 2898, on difficult alleys at home, better things were expected. Third place would have been some consolation, but sixth place is too bad.

Many persons have spent a few days in this city since the Convention, but all have now gone home.

John Westcott has received the deeds of the property he made an offer for down at Waretown; so the sale is now assured. DAVID RUST.

Firms Who Are Building.

NEW BRITAIN, CONN.—Andrew Bromley has taken out a permit to build a greenhouse.

WEIR, MASS.—B. F. Connolly is making an addition to his greenhouse establishment.

TERRE HAUTE, IND.—John G. Heinl will build several greenhouses, also put up a new store.

SO. FRAMINGHAM, MASS.—Wm. Glidden has completed the erection of a greenhouse here.

BLOOMINGTON, ILL.—Henry Schweimann will add a greenhouse, 50 x 100 feet, to his establishment.

PHILADELPHIA.—J. Koehler & Son will build two new greenhouses, one 14x125 feet and one 22x125 feet.

RALEIGH, N. C.—O'Quinn & Co. are building one new house, 20 x 80 feet, and adding a workshop to their office.

DAYTON, O.—The Dayton Floral Co. will make some extensive improvements this Fall. Two new greenhouses will be added, and an extra 50-h. p. boiler installed.

WESTBORO, MASS.—Albert H. Brown is finishing two large houses (one for carnations and one for violets), using 16 x 16 glass, butted.

Pinks in the field are the finest this year he ever had. He has 14,000 in all.

KALAMAZOO, MICH.—Van Bochove Brothers have completed the construction of three new greenhouses at their plant on Third street.

One of these will be devoted to the culture of roses, one to violets and one to carnations.

CHANGES IN BUSINESS.

MILLBURY, MASS.—Wm. E. Horne & Sons have closed out their greenhouse business.

MERRIMACPORT, MASS.—Lowell Whittier has purchased the greenhouses of Charles Davis, and will make extensive improvements.

ALLEGHENY, PA.—The Hartman greenhouses have been secured by J. M. Reeves, of Warren, O., who intends to operate them again immediately.

OCONOMOWOC, WIS.—C. B. Tremain, for a long time past proprietor of the extensive farm and greenhouses near Monterey, has sold his farm of 120 acres to Albert Gaulke for $7,650. Mr. Tremain has reserved the greenhouses and contents, which will be removed to Hartford.

Personal.

SO. FRAMINGHAM, Mass. — W. R. Shelmire is now in the employ of Henry M. Eaton, of this place.

IRONTON, O.—C. H. Brown has resigned his position as superintendent of Miller's greenhouses and gone to Huntington, W. Va., where he will engage in business with John D. Elkin.

GENEVA, N. Y.—Wendell Paddock, who for seven years has been assistant in horticulture at the N. Y. State experimental station, has accepted the professorship of botany and horticulture in the State Agricultural College, located at Fort Collins, Col. He will start for Colorado early in September.

Business Difficulties.

GREAT BARRINGTON, Mass.—Jacob A. Raifstanger has filed a petition in bankruptcy. Total liabilities are $5,377.57, of which $3,500 is secured to the Great Barrington savings bank. Assets are $165.

Different Methods of Orchid Culture.

(*Continued from Page 824*).

I may note here that a few, and some of the best, Belgium firms hold on to their old tried methods—so the former Linden establishment, now l'Horticole Coloniale. Your correspondent has never anywhere seen the same marvelous growth of orchids which here distinguishes each and every plant. Only those who have seen them can form a correct idea of the excellence of the orchids on this place. This firm grows all the orchids in the same composition of clean lycopodium fibre and sphagnum, cut up short and thoroughly mixed, without any attempt at artificial manuring.

Though it takes me away from the main subject, I would like to draw attention to the peculiar construction of all the orchid house benches in this place. The bottom of these benches is open, strips of wood about 3 inches wide are laid about an inch or so apart, and the hot water pipes are from 2 to 3 feet directly below the benches. Thus the heated air rising from the pipes in Winter (and in Summer, also, in the warm houses), strikes the pots and plants directly.

The late eminent orchid grower, Forstermann, of Long Island, drew my attention to the advantage of suspending cattleya pot plants under the roof as productive of better growth and flowers than if placed on the bench. A successful cultivator of Hamburg asserted and demonstrated that cypripediums in wooden, pot-like boxes, would grow much more rapidly and vigorous than those in earthenware. (I have noted this in an earlier number of the Florists' Exchange.) There is a coincidence in these observations which proves that orchids do not like the freshness of temperature at their roots, which is produced by the evaporation of moisture, when the pots are placed on solid bottom benches on gravel, ashes or similar moisture retaining material. This theory might well be traced home to the natural conditions in which orchids grow in their native habitats; their roots, being always near the surface of the soil and surrounded by material which is a bad conductor of heat, are during the day in nearly as high temperature as the upper part of the plants, while during the night they are kept warmer than the atmosphere which surrounds the foliage.

The idea of cultivating orchids in leafmould originated with Delanghe Vervaene, an old cultivator and successful florist, of Brussels. He is considered the boss propagator of his country. His theory is, "Every plant which we take into our greenhouses away from its natural environments must completely change its habit of life, and it is perfectly logical, therefore, to assume, that epiphytal orchids should be grown in pots, like other plants, because we cannot, even for a minute, deceive the plants as to their being exiles, not having the means to reproduce the conditions they lived in." Delanghe did pot his first Odontoglossum crispum in leafmould, and demonstrated that it was a good thing. Later, he followed up this experiment with oncidiums, cattleyas; and what started as trials turned graduâlly into one of the most profitable branches of his fine establishment. Next to Delanghe (as far as your correspondent's own observations allow him to judge), A. A. Peeters, also of Brussels, took this new method in hand. Peeters has one of the largest, and decidedly one of the most valuable collections of orchids in the world, and there is not a single plant among the hundreds of thousands that is not grown in a leafmould and sphagnum mixture. Let me mention only a couple of the most remarkable instances: His Oncidiums, Forbesi, varicosum, sarcodes, his Dendrobiums, phalaenopsis (a lot of about 2,000 plants) are a marvel of health and have produced an immense wealth of flowers. Some have doubted the hardiness of the flowers and their keeping qualities under this leafmould treatment; but experience has taught that the flowers are in every way as good as the most perfect blossoms produced by peat cultivation.

Sander has keenly watched this new departure, has not hesitated to adopt it in his Belgian establishment, and, more recently, to make extensive trials with it at St. Albans—much to the disgust of some of the old orchid hands.

French growers are well satisfied with this innovation. L. Duval, a very prominent French horticulturist of Versailles, is full of praise for leafmould orchids, and published an interesting treatise on it in the April and May numbers of Le Jardin.

With the Italian growers, though their experience is restricted to a small number of plants, it is of long standing.. They generally cultivate their orchids in chestnut soil (decomposed chestnut tree limbs), which in its mechanical character is much like leafmould. The great Phalaenopsis, of the Monte Carlo greenhouses, could not be excelled in size of leaves and profusion of flowers.

There seems to be nothing more easy to manage than an orchid, once well established in leafmould. For the commercial place it has the advantage of simplifying the work in more than one way. The potting is a simple manipulation. A few potsherds over the drainage hole, a little sphagnum to keep the soil from working through, and then the plant is potted like a geranium, moderately firm. The pot is filled to about one-half inch of the rim, in such a way that the surface of the soil is even with the stem or bottom of the bulb of the orchid. Some growers will give a top dressing of live sphagnum; others prefer to do without that. The cultural methods are further simplified as regards the watering; this need not be done so frequently, and no doubt herein lies a chief advantage of leafmould.

We know that orchids require a copious supply of moisture in their growing season. The old material being very porous, allows the water to drain through very quickly, thus frequent waterings are necessary. The leafmould will retain the moisture a much longer time. After the watering its state of saturation changes slowly and with a little attention may be kept very constant. In the old material there is a rapid change from wet to dry.

During the resting time, when a slight degree of moisture only is required, the old material is rather hard to manage. Without sphagnum it dries too fast and too entirely, and the sphagnum itself again will take up too large a quantity and retain it rather too long. Leafmould may be watered at intervals of two or three weeks, and will keep slightly moist all the time, as the last reserve of moisture which the bottom layer of sphagnum gets will, by capilary attraction, rise through it to the surface. The peculiar natural upward movement of the water against the growth and the direction of the roots, which is so important a factor in the healthy development of plants cannot so well take place in a heterogeneous compost of fern fibre and sphagnum; it will rather follow the veins of moss, and its evenness depends on the manner in which the sphagnum is distributed throughout the compost.

There is harly need to say that the watering of orchids in leafmould has to be done with one regard to the peculiarities mentioned, in a little different way than the more porous material demands, but any observant cultivator will quickly find out the right way.

In a recent number of The Florists' Exchange a few notes were given on the composition of the famous Belgian leafmould, to which in all deference to the author (not having the copy at hand I may be excused for not naming him) I cannot agree. According to these notes it must appear as if great importance were given to the proportion in which different kinds of leaves are present in the composition. A fact that your correspondent often had occasion to note was that the leafmould is purchased from peasants who own wooded land, and who gather it as they find it in the groves. The florists get it partially decomposed, and either pile it up for future use or take it to the potting shed at once. They pay great attention to the state of decomposition in which it is. Some use it while a portion is still entire; others prefer to allow it to become a spongy humus. For orchid potting some will add chopped sphagnum, and others use it pure as they get it, only taking out sticks, roots and fresh leaves.

Some mystery seems to hang over the Belgian leafmould, for at home all sorts of plants thrive to perfection in it, and especially the azaleas. Similar soil does not seem to produce the same good results in other countries. Even the Belgian leafmould exported into other countries appears to lose its character. No doubt this is not due to the soil, but to other attending circumstances, climatical or cultural. If there is anything particular about the Belgian soil, it is the presence of an excess of iron, which is communicated to the water also. But this cannot but in a small degree enter into the chemical composition of the leaves. The vegetation of the woods, where the leafmould is gathered, is rather below the average. The trees consist principally of oak, elder, birch and beech, the top soil not a small portion of which is always gathered with the leafmould, is full of very fine white sand.

The French growers gather their leaves generally fresh every Fall and pile them up for three years, turning them occasionally to keep them from burning. Their soil and natural vegetation, at least about Versailles, is entirely different from that mentioned in Bèlgium; still they succeed splendidly with orchids and nearly all other plants in their leafmould; no doubt this will prove to be the case where subsequent handling of the plants is intelligently studied.

A trial of this new method of growing orchids may well be recommended.

Mention this paper

An Interesting Trio.

We present herewith a photograph of three gentlemen which, we are sure, will interest all readers of The Florists' Exchange. The parties represented in the picture are Mr. Samuel B. Parsons, Flushing, N. Y.; Mr. William R. Smith, Washington, D. C., and Mr. Edgar Sanders, Chicago, Ill.

The gentlemen named were present at the recent meeting of the Society of American Florists and Ornamental Horticulturists in New York City, and the "snap-shot" was the happy thought of ex-President James Dean, of that society, the photograph being taken by a grandson of Mr. Sanders, named Victor J. Smith, a lad of thirteen years, the work of developing being also performed by him.

We give the following details regarding the interesting careers of the three delegates:

Edgar Sanders.

Mr. Edgar Sanders was born in Sussex County, England, Oct. 10, 1827. His father was gardener on the Crawley estate in that county, a position which he held for upwards of fifty years. Edgar was the eldest of fourteen children, and after receiving his education went to work at the age of thirteen years, first in a nursery, then as gardener on a private estate, forging his way up from a boy to foreman of the establishment. Subsequently he held the position of head gardener in two private places near Egham, Surrey. In 1853 Mr. Sanders decided to come to America, landing in New York in April of that year. He immediately proceeded to Albany, where he found profitable work almost on the day of his arrival there. His first labor was performed in James Wilson's nursery in that city; subsequently he obtained a month's work laying out the grounds of Luther Tucker, who was the original publisher of Downing's Horticulturist, but at the time mentioned had started The Country Gentleman, for which paper Mr. Sanders began to write at once, and was on its staff for a period of six years. After completing the work for Mr. Tucker, Mr. Sanders became gardener for General John F. Rathbone, of Albany, a gentleman who afterwards became famous as an orchidophile. Here the subject of our sketch remained until the Spring of 1857, when he decided to try his fortune in the West, leaving then for Chicago, where he purchased land and built the first fifty-five foot greenhouse in the Spring of 1857. He raised a general stock of plants, and was noted as a shipper of same all over the country. He opened his first flower store permanently in Chicago about 1864. The fire of 1871 checked his career for some time, although he was fortunate in only having the store burned out. He remained away from the retail trade for three years, when he entered this branch again, and continued in it until about 1882, when he practically retired from the direct work of florist.

Mr. Sanders has been for many years a contributor to the horticultural papers. On arriving in Chicago he became attached to the staff of the Prairie Farmer, published in that city, and continued in that position until a few years ago. He also conducted a horticultural department of a daily in Chicago, and wrote for the Orange Judd Farmer, all at the same time. His first venture at writing for the class papers was commenced at the age of nineteen, when he began to contribute to the London Gardeners' Chronicle. He also was a correspondent, from England, to the American Gardeners' Chronicle, then published in New York.

As is well known, Mr. Sanders is the esteemed and valued Chicago correspondent of The Florists' Exchange. His services in that capacity are highly appreciated, not only by the publishers of The Florists' Exchange, but by the trade in the district which he so ably represents, with whom he is a prime favorite, entering into the spirit of every entertainment occurring there among the craft with the vivacity of a young'un.

Mr. Sanders has also during his busy life, taken an active part in public work. In the 70's he was for three and a half years a commissioner of highways of the town of Lakeview, Chicago; was supervisor and treasurer of the same town from 1879 to 1883, when it became part of the city of Chicago. He was also its first commissioner of public works.

Mr Sanders was married before leaving England. His wife died in 1876. He has five daughters, one of whom is married to E. R. Smith, Bayonne, N. J., of the firm of E. R. Smith & Son, Spring street market, New York, whose grandson, as before stated, took the accompanying photograph in the convention hall.

Mr. Sanders has always taken an active interest in all matters horticultural, and was elected the first temporary president of the American Association of Nurserymen in 1876, and again president in 1884. He has been president of the Chicago Florists' Club, in which he is a busy worker.

Samuel B. Parsons.

Mr. Samuel B. Parsons was born in Flushing, Long Island, in 1819, in an old ancestral home dating back nearly one hundred and seventy years. When the mulberry craze started in 1839 Mr. Parsons, then a lad of twenty years, became enthused. He set out three hundred thousand mulberry buds, called a convention and did much to spread the silk excitement in New York. In the following year he traveled extensively through the West India islands, and on his return comenced the nursery business on the ancestral farm. When twenty-six years of age Mr. Parsons took a voyage to Europe to study the horticulture of the old world. Next year he went to Florida, where he bought one hundred and sixty acres, near Blue Spring, for the purposes of orange growing. This venture, however, was frustrated by attacks of the scale. In 1850 Mr. Parsons was commissioned by the United States Government to investigate the agriculture and horticulture of Sicily and the Ionian Islands. The results of his investigations are given in the reports of the Department of Agriculture of that period.

Mr. Parsons was one of the first to suggest the establishment of roof gardens, and has lived to see his efforts along that line culminate in success, in New York city especially. One of his greatest endeavors has been to convince orchardists that their plantations may be as well made beautiful as not, and he has ever been a strong advocate of landscape gardening with fruit trees. As an introducer of rare trees and shrubs Mr. Parsons stands in the front rank among nurserymen. Possibly to him more than to anyone else in our country is horticulture indebted for a knowledge of the Stuartia, virgilia, Andromeda arborea, Japanese maples, rhododendrons and other beautiful subjects that, through his efforts, have become generally cultivated throughout the United States.

Mr. Parsons has also done good work in grape culture. When the demand for the Delaware was so great he grew and sold as many as two hundred thousand plants in one year. The houses used for the propagation of the grapes were finally turned into those for camellias and rhododendrons.

On the death of A. J. Downing, the famous editor of The Horticulturist, Mr. Parsons was offered the editorship of that periodical, but owing to pressure of other duties declined.

As is well known, Mr. Parsons is author of the book, "Parsons on the Rose," one of the most charmingly written treatises on the subject that has appeared from the pen of a practical man. During his long and useful career he has taken a deep interest in all matters pertaining to horticulture. He was one of the founders of the American Pomological Society, and his address delivered before the Pennsylvania Fruit Growers' Society, in 1878, is a very valuable contribution to horticultural literature, advocating as it does the planting of trees in our city streets and enumerating a long list of varieties suitable for that purpose. To those who recently started on foot the plan to establish an American Horticultural Society it may be news to state that so long ago as 1878 Mr. Parsons proposed the creation of just such an institueion. In closing the address referred to, he uttered these words: "I would like, in conclusion, to leave with you the thought that if any reverence is due the man who can place in stone, or upon canvas, the ideals of his brain; who, out of dead matter, can make a lifelike form, so an equal reverence is due the horticulturist, who, if he knows his privileges, can grasp the forces of Nature, crystallize them into living forms of beauty, and, grouping them in all the shapes suggested by a fertile brain and taste, produce scenes more charming than Phidias ever carved or Apelles painted.

"For all this we need a teacher and a school. Let us find them at once, and a few years hence, when we meet again, let us all say that our Alma Mater is the American Horticultural Society, and that horticultural art is the highest art all the world over."

Mr. Parsons is a kindly, genial gentleman, a polished writer and speaker, and one of the brightest stars in the horticultural firmament to-day.

EDGAR SANDERS, Age 73. SAMUEL B. PARSONS, Age 81. WILLIAM R. SMITH, Age 72.

William R. Smith.

Mr. William R. Smith, of Washington, D. C., was born in Scotland in 1828. He served an apprenticeship as gardener in Lord Elcho's gardens at Haddington, and graduated at Kew in 1853. After spending a few weeks in Edinburgh to study American conifera, he came to the United States in the old Inman liner "City of Manchester," going to Philadelphia, where he spent three weeks at Dundas' famous place on Chestnut street, at that time one of the finest private establishments in America. Thence Mr. Smith was called on to take charge of the (so called at that time) United States Botanical Gardens, which had been in existence (in name only) for nearly one hundred years. It was then an unreclaimed swamp of eleven acres. The filling in of this swamp by Mr. Smith has enabled him to turn it into a place of beauty.

Mr. Smith has been chairman of the parking commission of Washington for a number of years, and was instrumental in having that city planted with shade trees, transforming it into one of the most charming cities on the American continent. The botanical collection at Washington is rich in palms, agaves and insectivorous plants of all kinds, also aquatics. Trees and shrubs are well represented, and lately excellent collections of herbaceous and alpine plants have been added.

Mr. Smith was elected, at Toronto, vice-president of the Society of American Florists for 1891 and 1892. He was president of the society at the St. Louis convention in 1894, and his address on that occasion was considered one of the most scholarly efforts ever presented to the society. Mr. Smith has been a leading spirit in trying to obtain for the S. A. F. a national charter, and has high hopes of the materialization of his desires in the near future.

He is an ardent admirer of Robert Burns, the Scottish poet, and possesses a private collection of Burnsiana, second to none in the world. Only last year he went to Scotland to further augment his valuable collection.

Despite his many years, Mr. Smith is a regular attendant at the meetings of the Society of American Florists and Ornamental Horticulturists, no matter how distant the meeting place may be from his Washington home.

BRIEFS FOR BUSY FLORISTS.

GLOXINIAS.—Plants bearing distinct colors, the stock of which it is desired to increase, may be multiplied easily by taking leaf cuttings the same as is done in the case of rex begonias, using the whole leaf. The old corms may also be kept over another year and be just as good as ever; and, when they are through flowering, and the corms are beginning to ripen an occasional watering with weak liquid manure will add greatly to the substance of the corm and make it much stronger and more productive of flowers the next season Care must be taken, however, that the liquid is not strong nor given too often. Dry down the plants gradually and let every third watering be with liquid manure.

ARDISIA CRENULATA. — These have set their berries now in most cases, and the chief features are to keep them clean, and have them retain all their foliage. Frequent syringings are absolutely necessary to keep the foliage clean and if Fir Tree Oil, or some such insecticide be used occasionally, the task will be much easier. A little soot in the water used for the roots will also help to give the leaves that deep rich green color so desirable to show off their red berries to the best advantage.

CARNATIONS.—The extremely warm weather has been very trying upon the carnations that were lifted early and planted inside. If the shade on the glass has been allowed to remain until now, the plants will have been benefited thereby, as the sun's rays have been very powerful. Don't give the benches a soaking with water every time the foliage shows signs of wilting. Watering can be easily overdone at this time, and, if it is, but poor results will follow. Should the foliage begin to hang, and look like wilting, give a light syringing and moisten the paths and all under the benches so as to create a humid atmosphere, repeating the operation two or three times through the day, if necessary.

Auction Sale in Brooklyn, N. Y.

An auction sale of decorative foliage plants, including Boston ferns, rubbers, palms, pandanus, etc., will be held at the Keap street greenhouses (John Scott, Prop'r.), Brooklyn, N. Y., on Tuesday, September 4. W. J. Elliott, auctioneer, will conduct the sale.

The August and September supplement for the July issue of the Credit and Information List of the National Florists' Board of Trade has been issued. This supplement contains 883 changes on the names already in the list, while 125 new names have been added, making a total of 3,062.

ACME POT

A self-watering pot or pan, devised specially for spores, fine seeds and cuttings. No surface watering; seeds cannot be washed away; surface earth does not harden. The pot, as will be seen by the cuts, is original in its construction and application, and is the result of many years of practical experience in the art of propagating and raising seeds and spores.

Description of pot, showing method of supplying water.

PATENTED.

A, indicates the pot; B, a reservoir for water; E, section of pot showing earth line and perforations or water passages F F F below. G, full size section, showing groove, with cord siphon. Several pots may be arranged around one reservoir, each connected therewith by a cord, through or over which the water is conducted by a pillary attraction.

Price, boxed, f. o. b., Pot and Siphon Cord complete, 50 cts. each; $5.00 per dozen.

Indorsed by leading florists and the trade generally. Send for full descriptive circular.

Florists on Walnut Hills, Cinn.

Editor Florists' Exchange.

In your issue of August, 25 to hand, your Cincinnati correspondent says "George & Allan are the only florists on Walnut Hills." Allow me to say that is not so. I am here, and have been for 17 years, and there are quite a number of others scattered around on the hill, as the Florist Directory will show. I, therefore, wish you to correct the statement of your correspondent. The firm named is very centrally located, but it is by no means the only one.

ALFRED FORDER.

I wish to correct a statement made in my notes of August 25, page 825, in which I say that George & Allan have the only greenhouses on Walnut Hills. What I wished to convey was that the greenhouses of this firm were more centrally located than any on Walnut Hills. To let the paragraph in question stand without an explanation would not be just to the other four or five places situated on Walnut Hills.

E. G. GILLETT.

Haverstraw, N. Y.

Henry Backer was killed at Congers on Monday morning, August 20, as he was walking along the railroad track. Mr. Backer was engaged in the florist business, operating the houses formerly conducted by Schnelder & Noe, near the Conger stock farm, and was walking on the southbound track. He was eighty years of age and, being deaf, did not hear the train approaching.

Artillery Against Hailstorms.

Among the agriculturists of North Italy there is no scourge more dreaded than hailstorms, for where they come everything is devastated. In the case of the mulberry trees, so important to the silk industry of the country, not only is the leaf destroyed, but the damage done to the plant is often apparent even in the following season. Last year a number of experiments were made in different districts, but chiefly in Lombardy and Piedmont, with a view of breaking threatening storm clouds before the hail had time to form, by firing toward them blank cartridges from specially constructed cannon. The results are described as being most encouraging. There were many cases in which it is asserted the clouds were broken and discharged in the innocuous form of sleet that would otherwise certainly have fallen in the shape of hail. It is admitted, however, that the results of partial experiments in one season cannot be taken as conclusive, and, therefore, experiments are this year to be made on a much larger scale. —Pall Mall Gazette.

(Whenever a hailstorm, to a dead certainty, is coming, we hope somebody will try the experiment. But how to know when to go gunning for hail is the question.)

FIELD-GROWN

CARNATION PLANTS

The stock of field-grown Carnations which we offer for sale this season is in especially good condition. The plants have been grown upon good soil; the season has been favorable, and we have been less afflicted with plant diseases of all descriptions than at any period heretofore in the history of our Carnation growing. Having a large stock of plants and every facility for packing and shipping promptly, we can fill all orders on the shortest possible notice.

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLGIANO, First Vice-President; S. G. COURTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Bobbink & Atkins, Rutherford, N. J., have received their second consignment of Dutch bulbs, consisting of 150 cases.

St. Paul—Notwithstanding the severe drought early and intense heat the latter part of the Summer, seed crops in this section will be good. Some enormous yields of onion sets are reported, while the average will be up to or above the standard. Onion seed is a good crop of good quality.

European Notes.

Genial weather over the whole of Europe has replaced the very unpleasant conditions which succeeded the very hot spell, and both roots and plants for 1901 crops show signs of a much-needed improvement. Many of the Brassicas had, however, gone too far astray, and indications in this line are not at all favorable.

Just now we are all scurrying round to make up shortages. Cabbage is, of course, the worst item, but carrot is a good (or bad) second. Winter radishes are fairly abundant. Respecting Spring and Summer varieties, there is nothing fresh to report. Much of the vacant land in Western France was planted with dwarf beans in place of radish, and a glut seemed probable on some varieties. We can possess our souls in peace; they have gone the way of all other crops, and the land is bare.

EUROPEAN SEEDS,

Import and Export Statistics.

The following exports and imports of plants, shrubs and seeds, etc., are for the month of July:

Imports.—The dutiable imports of plants, trees, shrubs and vines amounted to $37,812 in July, 1900, against $38,075 in the same month of last year. During the seven months ending with July, 1900, these imports were valued at $298,761, as compared with $236,392 worth imported in a corresponding term of 1899.

The free imports of seeds amounted in July, 1900, to $26,631, against $27,719, the value of the imports for July, 1899. The total for the seven months' period of 1900 amounted to $658,937, as compared with a like term of 1899, when the imports were valued at $502,267.

The dutiable imports of seeds amounted to $17,051 in July, 1900, against $7,127 in July of the previous year. During the seven months of 1900 these imports were valued at $396,197, as compared with $221,346 worth imported in the previous seven months' period.

Exports.—The exports of seeds to other countries amounted to $53,764, against $128,471 in the same month of 1899. During the seven months of 1900 $1,666,288 worth were exported, as compared with the seven months' period of last year, when these exports were valued at $1,410,431.

Rockford, Ill.

Mr. Sigmund A. Bauer, of Erie, Pa., it is reported has entered suit for damages in the sum of $10,000 against Hiram W. and John T. Buckbee of this city, and the case is docketed for the October term of the Circuit Court. Mr. Bauer, it will be remembered, was arrested at the instance of Buckbee Bros., on August 26, 1899, charged by them with certain misdemeanors, and at the trial which ensued was found "not guilty." The suit now instituted by Mr. Bauer is to recover damages for alleged false imprisonment and detention from his business affairs.

Z. CHRISTMAS
IS THE
SWEET PEA for forcing.
Seed, $10.00 per lb.; $1.50 per oz.
ANT. C. ZVOLANEK writes as follows about it "This grand variety is for inside culture only. The flowers first appear from September to November 20th, and flowers from then all winter until June. From middle bench, 6½x100 feet, I cut an average of 84 dozen per day; grows only 4½ feet high and flowers on 15 inch stems; color similar to Blanche Ferry. They are easily grown, and with each order I will send directions as to the way I grow them. I have raised them 8 years now, and they do well every year. All seed is from selected plants raised inside, and I will guarantee them to flower all winter. Plant after your 'mums. Have only a small quantity of seed." Address

Convention Echoes.

BY A BUFFALONIAN.

The stay-at-homes, of course, were more numerous than the attendants at this great convention. Nevertheless, with wishing to overcome so great a city as our rival for next year's meeting place, and show the country that some bowling element of distinction still existed here, a goodly number had to go, as the daily records of attendance from Buffalo shows in the daily edition of the Florists' Exchange.

The convention now over, the recollections of those attending must long remain a vivid pleasing memory.

From an outside viewpoint, words fail to express the meed of praise that seems due the New Yorkers. Such unstinted lavishness in efforts to please their guests, all general movements timed to concerted action without flaws or shortcomings, individual efforts that betrayed the unselfish hosts, abounded everywhere, and nothing available seemed too good to offer. The system of all the clerical, registering and office features adjoining each other in a line, proved a boon to those new to the common requirements of delegates. A like of the trade exhibit we expect never to see again—unless, perhaps, a decade hence in the same place. Though arranged to a studied effect of convenience and grouping, in its entirety it truly was a bewilderment of horticulture. And quality, not a mere filling in of space taken, was the strong card of exhibitors.

The Florists' Exchange we deem especially deserving of praise in its daily editions. The completeness shown and promptness each day, betrayed the fact of hard toiling night-and-day preparation to an unmeasured degree.

With such a voluminous shining and bright example of how a convention can be managed and entertained, the fact of its coming to our humble borders at such a near future is almost appalling to our ambitions.

O'Mara, the guiding star of 1901.

Wood was "watched" and Cleary "shined"—very proper.

A shore dinner is apt to make a country squash feel quite bumpkin.

The dear girls, wives and sweethearts. God bless such a lot of them!

Such cool weather conditions were a boon that could be and was appreciated.

Considering his youth and spirit, Kasting takes honors cool and submissive. Some stay-at-homes ask why he did not bring the entire Greater New York City along with him.

Monkeys and pigs; Germany and Filipinos. Versatile, instructive and attractive.

The New Yorkers seem to display an envious knack at handling crowds. They did it to admired perfection.

Can anything more torrid than was that bowling alley room be entitled a place of amusing entertainment?

Phil Breitmeyer showed fatherly solicitude and guiding care for the Detroit crowd. This delegation planned to visit the Pan-American exhibit grounds here and also Niagara on Sunday on the return trip.

Lawrence Cotter—a striking example of reliable Bostonian embonpoint.

The New York retailer, he of the distinguished air at home in his store, was not in evidence as numerous as we hoped to see.

Of all fond remembered spots, though moderate still large in its completeness—Glen Island.

"Wood, we co-operate! Or would we not seems to be a question that is almost buried in its burning.

Robert Kift showed clever "adjusting" of the flower of past decorating displays.

And now Geo. Watson pokes anathemas at Rudd! What else should or could poor deserted Chicago do?

John Starin should know by this time that he is owner of a fine show of tuberous begonias.

"Buffalo in 1901" we think sounds well.

VIDI.

New York.—The following scores were made last Monday afternoon:

	1	2	3
F. H. Traendly	112	154	120
C. Schenck	162	131	117
A. S. Burns	27	99	148
T. Roehrs	143	136	149
E. Steffens	113	116	113

The New York Florists' Bowling Club will hold their next meeting in Traendly and Schencks' store on the second Monday in October (which will fall on the 8th), at 3 p. m. Mr. T. Roehrs was elected temporary chairman and Mr. C. Schenck temporary secretary until the next meeting, when officers for the coming year will be elected.

CORRESPONDENCE.

Editor Florists' Exchange.

As we presume the publishing of the paper read by Mr. Geiger before the Philadelphia Florists' Club in reference to cooling rooms for florists was in the interest of the trade generally, we wish to correct an error in the statement made in regard to the consumption of ice in the plan described as box in use near Philadelphia. The total consumption of ice for eight months was about $120, or about $15 per month. As we felt we were in some way responsible for this error, we felt obligated to rectify it, that our fellow-craftsmen might not be misled.

MYERS & SAMTMAN,
Chestnut Hill, Philadelphia.

Philadelphia.

Club Meeting.

There were not many present at the meeting on Tuesday last. It was very quiet for a September meeting; no doubt the continued hot weather kept many away.

Robert Kift opened a discussion on convention topics and spoke in great praise of the exhibition.

Robt. Craig said he would like to have heard more expressions of opinion as to the advisability of holding the convention in Winter instead of August; the latter month was chosen because florists were not so busy, but he thought a Winter convention would be more educational and better exhibits could be made Mr. Craig said he had never known a convention where so much business was done on the floor of the exhibition hall as this last one; business was good with all exhibitors.

Jardiniere given by A. H. Hews & Co., of North Cambridge, Mass., to the lady in the Bowling Contest making the second highest score.

At a meeting of the Florists' Club Committee on Sports, held Monday last, the prizes for the ladies' bowling contest at S. A. F. tournament were awarded.

First prize, for highest score, bronze vase, offered by Cleary & Co., to Miss Eastman.

Second prize, for second highest score, jardiniere, offered by A. H. Hews & Co., to Mrs. Winterson.

Third prize, for third highest score, one dozen photographs, offered by Dana, to Mrs. Langjahr.

John P. Cleary, who was present, told how the New York club had worked to get up the Convention, and spoke of the splendid harmony existing between the members—all had worked with a will since last September.

Mr. Cleary had come over to inspect the Stoke-Pogis Nurseries out at Villa Nova, where he will hold an auction sale of all the stock on Wednesday, October 3d.

Cut-Flower Business.

There is scarcely anything to report as to cut-flower business, most of the stores are quiet; outside of some funeral work, little is doing; flowers are not plentiful nor of very good quality.

Jacob Becker has returned from Europe, and had a very enjoyable and profitable trip.

DAVID RUST.

Alvin Fruit and Nursery Co., Alvin, Texas, has filed a charter of incorporation. The capital stock is $15,000, and the incorporators are R. B. Halley, V. H. Pace, W. L. Moore and others.

FOR SALE—GREENHOUSE PROPERTY AT NYACK, N. Y. A plot 220x125 feet, on which are four Rosehouses, 100x18x6, each house heated by a No. 16 Hitchings Boiler, and seven houses, each about 64x11 feet, heated by flues. This property will be sold cheap to quick cash buyer.

600,000 Pansies, The Best All-Round Strain,

BECAUSE we grow all our seed, saving it this year from over 10,000 plants carefully selected from the 40,000 we flowered and sold in Boston and vicinity last spring. We have been growing and perfecting this strain for over twenty years, paying special attention to form and substance as well as size and color. Many novel and rare colors not found in other strains are included and the proportion of light and dark is evenly balanced. They always bring the highest price and one sale insures another. Awarded a First-class Certificate of Merit, by the Massachusetts Horticultural Society. Plants now ready, $6.00 per 1000 by express, purchasers' expense. Smaller plants by mail, 75c. per 100 prepaid. Cash with order. please.

GENEVIEVE LORD

Another year's trial convinces us that it is not only a worthy successor to Wm. Scott, but far superior to that variety in every way. In short, it is the finest pink carnation to date, all things considered. We offer a limited number of field-grown plants as follows: First size, $12.00 per 100; Second size, $10.00 per 100. Also a few other varieties. Write for prices, etc. Delivery September 1st.

New Varieties of

CARNATIONS

Grown from seed and named after my three grandchildren. We have grown these under ordinary culture for the past four years, and find them equal to any and far superior to many other varieties.

RUSSELL Clean, healthy, and the most vigorous and prolific we have ever grown or seen. We believe it is the best general purpose Carnation ever sent out. Grown side by side with Scott, it is far ahead of it in every respect, except size, which is about the same. It has never burst with us, when others in the same house have done so badly; it is a lively light-rose pink, distinct from anything we have ever seen; very fragrant. Where an abundance of good, fair sized blooms is wanted, it cannot be surpassed.

MILDRED A strong grower, with very long, strong stems. Flower very large, and a continuous bloomer. A fine shade of light, soft pink.

WILLIE Strong grower, with long, stiff stems. Flowers very large, of a bright shade of very dark rose pink. A continuous bloomer. We have more than we have room to house, and offer extra fine plants within reach of all. No. 1 plants, $1.50 per doz.; $6.00 per 100

A. T. DE LA MARE PTG. & PUB. CO., Ltd.
P. O. Box 1697, New York.

Rochester, N. Y.

Repairing and planting in are keeping every one busy. Carnations are mostly housed and in better condition than usual at this date.

Business is still very light in the stores. With carnations practically out of the market, and roses in short supply, asters have been used on every possible occasion. There was a break between the early and late varieties that was filled with Daybreak and Bride comet asters. The first really good stock of branching and branching comet asters came in August 25, and brought $1.50 per hundred—an unusually good price for Rochester.

Jas. Vick's Sons report the best season's trade in many years. Their handsome Fall catalogue is just coming from the press.

Mr. Hill, of the Vick and Hill Co., is still abroad, but is expected home this month. Fred. Vick has just returned from a month's vacation in Connecticut, taking in the S. A. F. convention on the way.

S. B. Dick, London, England was in town one day last week on his way West.

Geo. Crook has returned to his first love—steam-fitting—and is now permanently located in New York. His sister will continue the florist business on Mt. Hope avenue.

There was an attendance of forty at the outing on August 30. The day was fine, and it was so evident that all were having a jolly time that those on whom the work fell felt abundantly repaid. Quoits were the standard amusement. A chariot race, adapted from "Ben Hur," was won in two straight (?) heats by Messrs. Copsey and W. Keller. A Bohemian lullaby, rendered by the Bartholomay Co., received numerous encores. The vases of gladiolus furnished by John Fay Kennell showed what skillful cultivation can do with that flower. His seedling, No. 1900, was pronounced a decided acquisition. The register, with its forty autographs, will be preserved.

T. H. Gilmore had entire charge of the menu, and much of the actual work of preparation and serving fell to his willing hands. Tom's twenty-seven years with the Vick seed house have made him well known in Western New York as an expert along several lines of floriculture, but his skill as chef was a surprise to some of the boys.

G. A., JR.

Guelph, Ont.

At a meeting of the Guelph Horticultural Society, August 29, it was determined to hold an exhibition of flowers on Sept. 11. The meeting was addressed by Mr. A. Gilchrist of Toronto Junction, who spoke on the subject of management and cultivation of house-plants.

Tarrytown, N. Y.

The Tarrytown Horticultural Society held its monthly meeting Aug. 30. Mr John Egan read an able paper on the cultivation of cannas, which incited considerable discussion. R. A.

Yield of Carnation Flowers.

Editor Florists' Exchange.

Not finding any one among the trade who could give me definite information in regard to the yield of disbudded, long-stemmed carnation flowers per plant, I took the trouble the past season to keep an accurate record of all the plants of each variety—not a few selected plants, but the whole, good, bad and indifferent, and the inclosed table is the result. It shows the actual yield per plant for each month, and shows the particular month in which each variety was at its best.

New York, Gomez and Bon Ton were badly infested with spot, or fairy ring, when taken into the house, and lost a good share of their foliage. Maceo was somewhat so, but not as bad. Crane made a poor growth in the field, so that the plants were quite small when taken in.

The plants were housed the last two or three days in August and first two or three days of September. From the list we find that all the varieties except Bradt are more or less what we call croppers, and could the two crops have come in about a month earlier they would have paid much better. Perhaps more experience will enable us to bring them in earlier.

Our houses were run at a night temperature of 50 to 52 degrees. We shall try White Cloud and Gomez this year at 45 degrees, and think they will give better flowers and do less bursting. We have the leading new varieties, and shall continue our records the coming season. Our stock is in much better condition, and we hope for better results than last year.

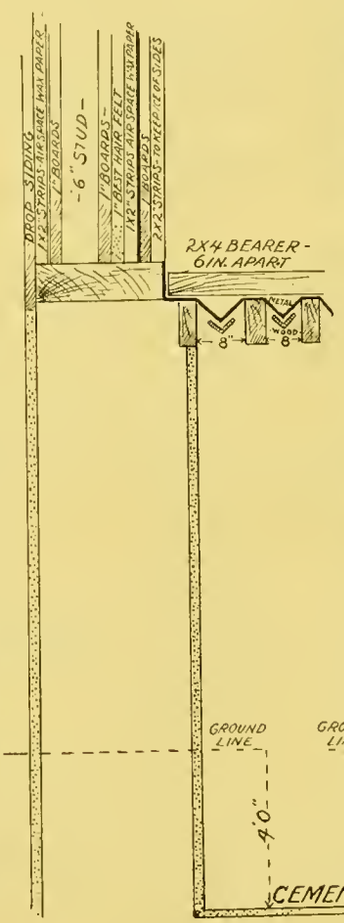
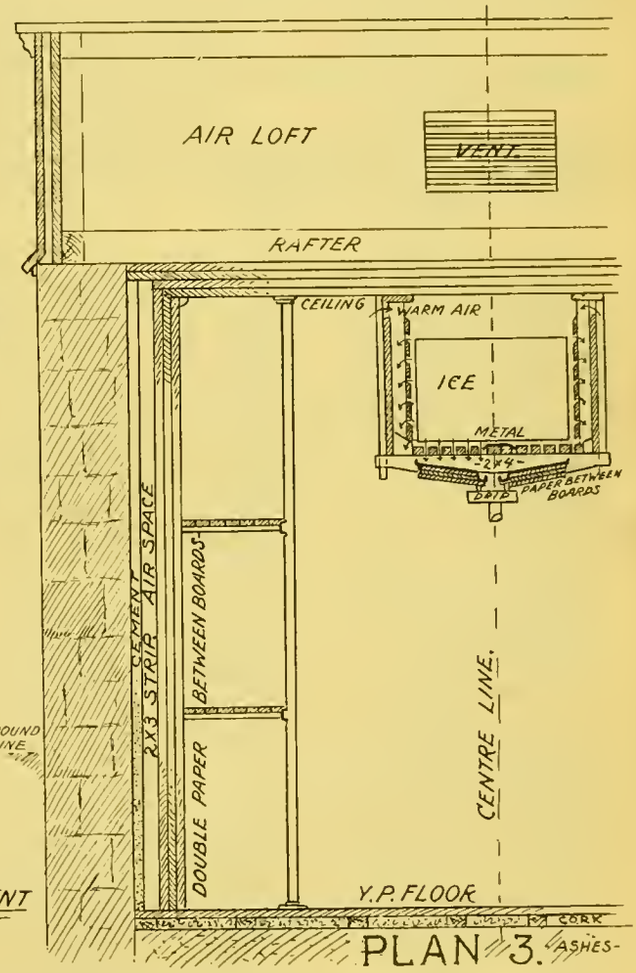
PLAN 2.



DETAIL PLAN 4.



PLAN 3.

Cool Rooms for Florists' Use.

We herewith reproduce plans of three cool rooms that are giving satisfactory results. These plans were used by Mr. H. C. Geiger to further explain his paper on cool rooms, read before the Philadelphia Florists' Club when that body met in August.

Plan No. 2 is recommended for its simplicity. The size is 8x12 feet and 8 feet high; the side walls are 13 inches thick, having 3x4 inch studs in the centre and three one-inch boards, one inch apart, on each side of the studs, the spaces being filled with powdered charcoal. The ceiling is made in thes ame way, exceptiug the rafters, which are 3x6 inches, thus allowing of a 6-inch space for charcoal. It is made with a slight raise; two one-inch pipes are run through the ceiliag, to allow the warm air to escape; these pipes have a metal cap fitted to the inside, by which the flow of air is regulated.

The ice bunker is made so as to be filled from the outside; the plan shows plainly how that is constructed.

Plan No. 3 shows a room that was originally an ice house, but was made into a cooling room by lining the walls and ceiling with wood, as shown by the details of the plan. Building paper is used between the boards, and the floor is of wood, laid on a bed of ashes and cork, to avoid dampness.

Plan No. 4 shows a section of a very large room, but the details can be worked on a smaller scale if necessary. The walls are of stone, to the height of 8 feet, and are cemented on both sides; the floor is 4 feet below the ground level, and is made of cement. The upper walls are built of wood, and a glance at the plan shows how the house is put together and what size lumber is used.

The rafters that support the ice chamber are 4x12 inches, and are set 8 inches apart. The plan also shows clearly how the 2x4 bearers rest on the rafters and hold the ice, and how the V-shaped gutter of metal is placed between the rafters to collect the drip. For fuller details we refer to FLORISTS' EXCHANGE, issue of August 18th, page 788.

FOUNDED IN 1888.

Corrections.

In our issue of August 25, containing the report of the awards at the Horticultural exhibition of the S. A. F., the prizes given for cannas should have read as follows:

Six Cannas: First prize, J. B. Dutcher, Esq., Gdr. A. L. Marshall; second prize, G. E. Dickinson, Gdr. J. Boshard.

Collection of Cut Cannas: First prize, J. B. Dutcher, Gdr. A. L. Marshall; second prize, G. E. Dickinson, Gdr. J. Boshard; third prize, D. Willis James, Gdr. W. Duckham.

Boston.

Business has made little or no change recently, it running along very quietly, with quantities of stock which move very slowly indeed, the demand is so light. Roses of all kinds are plentiful, and carnations, too, are becoming more so every day; but the general quality is not extra fine. Asters are a great drug; gladioli, sunflowers, hydrangeas, etc., are very plentiful, and make a big show, but there is not enough demand for them to anywhere near clean up the daily shipments to this market.

F. J. NORTON.

PHOTOGRAPHIC CONTEST.

Awards for August Competition.

First Prize.—A. J. Pennock, Lansdowne, Pa., for a photograph of an aquatic scene in Washington Park, Chicago.

Honorable Mention to several other of Mr. Pennock's productions.

Honorable Mention to Rudolph Windt, St. Louis, Mo., the prize winner in the July Competition, for a combined view of a canna bed and vase of flowers in Forest Park, St. Louis, Mo.

Honorable Mention to Mrs. A. H. Austin, Charleston, Ohio, for an aquatic scene in the ponds of W. J. Richards, of Wayland, O.

The judge for the month of August was Mr. Edward Bierstadt, 94 Reade street, one of our oldest New York photographers, whose reputation as an expert is world-wide among his professional brethren.

The entries for the month of August were considerably larger than for any preceding month, showing that an awakening interest in this competition is being taken, as it draws near to its close.

We would remind intending competitors that this month is the last in the series, and all photographs intended for the September competition must be mailed us not later than the 30th inst.

Among the contestants the work of Mr. A. J. Pennock, of Lansdowne, Pa., stands out pre-eminently the best, that gentleman contributing ten subjects which were not only very handsomely finished and mounted, but, in the majority consisted of appropriate subjects, showing considerable artistic skill in selection and execution.

We will endeavor to publish the prize photograph and others, together with the judge's formal decision, in next week's issue.

Convention Echoes.

WESTWARD, HO!

Every thing good or bad must have an end; it is the same with this convention outing of 1900. To-morrow, September 6, the writer will be again aboard train bound for home and its duties, which now chiefly concern the well-being of the FLORISTS' EXCHANGE in so far as reporting the progress of the doings and sayings of the florists of Chicago and its environs. Most of those who made up the big aggregate at the convention have long since returned to their varied callings, there is but a remnant left, we are sure.

If every one has enjoyed the occasion as well in the varied ways peculiar to each individual, they will have pleasurable memories for years to come. In my case it has not been noted for the greenhouses I have seen or the business done by Easterners, but rather a three weeks' recreation—sight-seeing and travel, always, of course, with a view of enjoying as much as may be everything horticultural that would come in the way of a rapid traveler.

Immediately after the convention a call was made on the wholesale florists and markets congregated in New York, to see how business is done in these lines in Greater New York; afterwards, the watering places at Midland Beach, Long Branch, Elberon, Asbury Park, etc., completed that part of the outing. Yes, we did also call on Peter Henderson & Co., and Vaughan's Seed store, finding Mr. Vaughan still in the East, at present in Philadelphia, and these and others of like character up to their eyes in receiving and shipping bulbs.

Our next trip was to the hub, famous old Boston, where we found our old-time friend, John A. Pettigrew, of the Public Park, ready and more than willing to do exactly what we desired—see Boston and its environs, its wonderful park system, its old common, its noted public garden, right in the heart of the city, its historical places, including old Harvard; a peep at the famous old Massachusetts Horticultural Society and Horticultural Hall, soon to be no more, and its celebrated librarian and factotum, Mr. Robert Manning.

Then we saw the foundations of the new hall, and what a place it will be in that Back Bay district. What a noble library and building and foundation for the future, why should not old Boston be famous horticulturally with such worthies, now no more, as decorate its halls in statue and painting and who have contributed thereto.

We also visited the secretary of the S. A. F., Wm. J. Stewart, in his den, looked in some of the retail places, not forgetting the man who stirred the florist world by that $30,000 Lawson carnation.

Also saw Wellesley and its, for this country, wondrous gardening display that Mr. Harris has just retired from, after almost a life's time of effort.

In our rides through the park systems we saw the grand arboretum and jovial Jackson Dawson, who is inseparable therefrom. What a day and a half in a buggy and a good horse before us.

As if this was not enough, Mr. Pettigrew, with the aid of Ex-President Wood and Mr. Keith, the celebrated theatre man, who placed his pleasure yacht at the disposal of a jolly party, of which the owner was one, arranged a cruise through the inland waters of Boston harbor and away to Marblehead, Mass., where Mr. Keith has a Summer home. Such a banquet as was served, graced by the presence of Mrs. Keith and a Miss Smith—oh, it was glorious. The others of the party were Jackson Dawson and a Mr. Clark, who has a hotel in Boston and a seaside home near Mr. Keith. An outer route by sea home ended the Boston visit.

We took the rail through the famed Berkshire Hills to old Albany, thence by the Hudson River railway back to New York.

Ess.

Massachusetts Horticultural Society.

The annual exhibition of plants and flowers by this society was held in Horticultural Hall, Boston, Wednesday and Thursday of this week, and a very good showing was made. As is usual, the upper hall was devoted to display of plants, while the cut flowers filled the lower hall.

The exhibits of plants were very fine, being the selection from the finest collections about Boston, and some excellent specimens were brought out.

Three very good collections of forty decorative foliage greenhouse plants were made by Mrs. John L. Gardner, Jason S. Bailey and Dr. C. G. Weld. These same exhibitors also showed collections of six plants and were entered in the classes for caladiums, crotons, dracænas, etc. Among other exhibitors in these classes who were successful were Col. Chas. Pfaff, W. H. Lincoln and E. J. Mitton.

Oakes Ames showed a collection of strangely spotted and marked seedling caladiums, and received a certificate of merit for a seedling Cypripedium Thorntonii var. Oakes Ames.

A. F. Estabrook sent in a collection of begonias and adiantums and Mrs. J. L. Gardner showed a few small Gesnera bulbosa.

The display of crotons by Messrs. J. S. Bailey, W. H. Lincoln and E. J. Mitton were exceptionally good.

In this hall also were arranged what few foreign grapes were shown. The quality was away ahead of any seen for some time, John Ash, gardener to Miss Eleanor J. Clarke, of Pomfret Centre, Conn., sweeping everything in the way of prizes with some wonderful fruit. Mrs. E. J. Cutter, L. M. Chase and F. W. Damon also showed a little fruit.

Here also Jas Comley made an extensive display of asters and cannas, and E. J. Mitton showed three pitcher plants.

Among the cut flowers dahlias formed the most important exhibits, the principal exhibitors being W. C. Winters, Lothrop & Higgins, H. F. Burt, W. G. Windsor, C. S. Pratt, W. H. Symonds and Mrs J. B. Lawrence. There were also nice displays of hardy lilies, tropæolums, marigolds, zinnias and dianthus in competition for prizes.

The Blue Hill Nurseries filled sixty vases with herbaceous perennials, and Carl Blomberg and Miss Alice L. Grinnell showed native plants in variety.

On Saturday, Sept. 15, the last Saturday show of the season will be held, and on Sept. 27th and 28th comes the annual exhibition of fruits and vegetables.

New York.

Trade Conditions.

Another week of warm weather has to be recorded, and the effects of it are very much apparent upon all flowers that are coming in. Roses particularly look way-worn and jaded in most cases, and the sooner we get a spell of cool weather the better will it be for the roses, and incidentally for those who have to grow and handle them.

During the early part of the week business seemed to revive a little. The opening of some of the theatres created an extra demand for certain lines, and, Monday being Labor Day, the street peddlers were induced to speculate heavier than has been their wont during the Summer months.

The aroused activity in the business was of short duration, however, for before the week was half gone, trade fell flat, and the flowers coming in are again very much in excess of what demand there is. American Beauty roses are becoming quite plentiful, but are mostly of the short-stemmed order as yet. Some Liberty also are arriving, but are not near the quality they will be later in the season, and those who are unacquainted with this rose will do well to reserve judgment upon it until it is seen at its best.

Carnations are not so much in evidence, but asters and gladioli are a glut, with very little call for any of them. Cattleya labiata has begun to arrive, and the blooms are very fine. Lily of the valley is not received in such large quantities as for some time past, consequently prices have been steadier and ruled somewhat higher.

Among the Retailers.

With the opening of the theatres on Monday, many made-up pieces were used and presented to favorites upon the stage. At one of the Brooklyn theatres a huge horseshoe created quite a sensation while passing down the aisle. The sensation came more from the odor of the piece than from its beauty, for it was a vegetable rather than a floral emblem, being made up with cabbages, turnips, etc., and finished off with onions. What sentiment there was in the emblem, the sender and the recipient alone know.

Jottings.

A five days' festival, with an industrial, horticultural and agricultural exhibition was opened last Sunday in Ridgewood Park by the Schwæbischer Volksfest Verein of Brooklyn. About ten thousand persons were present at the opening ceremony. Valuable cash prizes are to be awarded for flowers, flower beds, etc. The closing day is to-morrow, (Sunday) when the winners of the various prizes will be known.

Violet plants around Poughkeepsie, Rhinebeck and the Highlands are reported to be in excellent condition so far; and, if no drawbacks are experienced, heavy crops will be yielded shortly after cool weather arrives.

The regular monthly meeting of the New York Florists' Club will take place Monday evening the 10th inst., at 8 p. m., in the rooms corner 27th street and Broadway. Important business is on the docket, and every member should be in attendance.

Auction Sales.

John Scott's sale of decorative plants was held on Tuesday at his Keap street greenhouses, and was fairly well attended. W. J. Elliott was the auctioneer, and the stock offered was all in fine shape. Fairly good prices were the rule, most of the stock catalogued being disposed of satisfactorily.

R. Dryer, of Woodside, L. I., will hold his annual sale of palms and decorative plants at the greenhouses on Wednesday the 19th inst., at 11 a. m. J. P. Cleary is the auctioneer.

Matrimonial.

Wednesday evening Pauline G. Siebrecht, daughter of W. H. Siebrecht, of Astoria, was married to Harry H. Lorenz, also of Astoria. The spacious sheds of Mr. Siebrecht's establishment were cleared and elaborately decorated with oak boughs, greens, electric lights, etc., and after the ceremony, which was a church wedding, a goodly number of guests sat down to a hearty wedding dinner, and a general good time followed.

Wednesday morning John Scott, of Brooklyn, was married to Miss H. Harper, also of Brooklyn. The wedding took place at her residence, 203 South Fifth street. The wedding was early, and the couple left on the Empire State Express for a ten days' trip, which will take in

Buffalo, Niagara Falls, Toronto and the Thousand Islands.

John is well known to the trade of this city, and every one will wish him luck in double harness.

Personals.

Mr. and Mrs. August Rhotert returned on the S. S. Columbia, arriving August 31st, in good health, after a two-months' sojourn in Europe.

Mr. Geo. Groenewegen has arrived from Europe, and will make a tour of the trade in the interest of the Syndicate of Belgium Plant Growers, whose sole representatives in this country are Bobbink & Atkins, of Rutherford, N. J.

Thos. Young, Jr., arrived from England last Saturday on the S. S. Campania. Mr. Young is in excellent health and has had a delightful time, taking in the Paris Exposition and other places of note during his stay abroad.

A. Dimmock, representative of F. Sander & Co., St. Albans, England, arrived in the city on Saturday last.

W. H. Gunther arrived home Thursday, after spending several weeks with his family in the Berkshire Hills.

Baltimore.

Cut flowers of good quality are scarce. The retail market is exceedingly dull.

County Fair.

The Baltimore County Fair was opened on the 4th. A few good exhibits, notably those of Mr. P. W. Bender, were entered for the flower and plant department. Commercial florists don't seem to pay any attention to this fair, though, no doubt, the horticultural section could be made a very pretty feature of the show.

The General Horticultural Exhibition

Which is planned to take place next Summer, from May to October, is attracting a good deal of attention and many friends. It will be principally a landscape exhibition; but a fine Spring and Fall show of potted plants and floral decorations will be the opening and closing events, and during the Summer months a few special shows will be held for the exhibition of flowers, fruits, vegetables, etc., which may be in season. Of course, there are those who predict a failure—still our best men and society is for the exhibition.

Herewith is the text of a circular issued by the secretary:

Baltimore, Sept. 1, 1900.

A meeting was held on Friday, August 31st, to consider the steps necessary for the organization of a "General Horticultural Exhibition, which it is proposed shall be held next year in Baltimore.

Mr. John Cook was elected temporary chairman and Mr. Theo. Eckardt secretary. Two special committees have been appointed to study the matter under consideration, and will make their report to a second meeting, which will be held on Sept. 13th.

The first committee is to study the technical features of the exhibition, the selection of the ground, the plan and program of the show, the premium list, the expenses, etc.

Messrs. Ed. A. Seidewitz, Isaac Moss, Chas. L. Seybold and Theo. Eckardt are serving on this committee.

The other committee will have to study the possibility of organizing a permanent "Horticultural Society," or of reviving the former "Maryland Horticultural Society."

Messrs. John Cook and Paul W. Bender were appointed, and Mr. Wm. B. Sands, who was not present at the meeting, will be asked to serve on this committee. Both Messrs. Cook and Sands have been very active members of the old Maryland Horticultural Society, and it is hoped that their personal appeal will win all the surviving members to support its re-organization.

The members present at the meeting were very enthusiastic, and the attendant circumstances certainly augur well for the consummation of the project.

A number of influential Baltimoreans have been approached privately, and it is the universal sentiment that the project of the show, as well as the revival of the Horticultural Society will meet with general approval and substantial assistance.

The Electric Park has been proposed as the most favorable place to hold this show. It has many advantages; the twenty acres of ground and the large Casino building could accommodate a goodly number of exhibits. The situation is an ideal one; the car service is perfect, and besides, it has a superb water supply and a fine electric lighting plant. Mr. Fenneman, who personally is much pleased with the plan, thinks that definite arrangements very favorable to the show committee could be arrived at.

The financial side of the scheme presents no difficulty, as a small admission fee of 10 or 15 cents would amply provide for the expenses involved; but it is thought advisable that a guarantee fund of about $4,000 should be raised. First of all it would give the undertaking absolute security, but at the same time it would present a feature of propaganda for it. The guarantors, it is thought, could at the same time be enrolled as members of the permanent society.

At the next meeting a permanent organization will be formed, and practical work will then be begun.

THEO. ECKARDT, Secretary.

Notes.

Mr. Widemann, representing A. Hermann was recently in town. He is still under the inspiration of that grand Convention meet, and his pencil has been kept busy ever since with orders.

The Carnation Convention Committee has selected Lehmann's hall for the meeting and exhibition, and reports good progress in all arrangements.

Mrs. Mary Thomas returned from Europe per S. S. Campania. T. E.

Orange, N. J.

New Jersey Floricultural Society.

The opening of the floral season was marked by what has now become an annual smoker by the New Jersey Floricultural Society at its rooms in Orange.

In the business meeting preceding the social portion the society decided to make the Fall exhibition again complimentary to its friends and the flower-loving public and to hire a larger hall to accommodate the expected increase from the exhibit of the school-children's work. This and further details were given to the exhibition committee after pledges were received from nearly all present to contribute to the exhibition.

Besides the musical and dramatic portion of the evening, provided by the committee, the audience insisted upon hearing once more the old favorites, and George Smith was heard in "The Tinker's Weddin' O!" and "My Dad's Dinner Pail;" Dave Rose gave "Bonny Dundee," and John Hayes, "Annie Laurie." The president, Peter Duff, was beguiled into singing "'Twas Twenty Years Ago," and this was considered the event of the evening by those who accomplished it, as Mr. Duff can rarely be drawn out. The affair terminated only when the talent was exhausted.

Notes.

Malcolm MacRorie, of South Orange, and treasurer of the New Jersey Floricultural Society, is solicitous for his wife now on the ocean from Glasgow, the papers having quickened his apprehension in regard to the plague now in that city and as regards possible quarantine here.

W. A. Manda's place at South Orange still bears the festive appearance given it for the visitors from the S. A. F. Convention.

Dave Rose, of Montclair, was prevented from reaching the Convention by an accident to the benches in one of his houses.

Local trade is dull, many florists are busy clearing up and stocking for Fall business.

Jos. A. Manda contemplates opening a store in Summit next week.

J. B. D.

St. Louis.

Business Dull.

Trade is rather dull, even for Summer; we think the Summer business is getting worse all the time. Possibly it is because the people have more money the last year or two, and can now afford to get away. In this we cannot blame them, as our weather is not generally of the mountain or seashore kind, and we would be quick to do the same, circumstances permitting. Stock is on the up grade; carnations have improved considerably of late and there are plenty of them, especially white, that sell at 75c. to $1 per 100. Roses are slightly better, but in rather short supply; the select Kaiserins bring 5c. each; not many to be had; the next best are Bridesmaid, worth from 2c. up. Asters are of better quality, and sell from $1 to $1.50 per 100; plenty of single tuberoses at 4c.

Notes.

Some of those who attended the New York Convention have returned, and are loud in their praise of the superb decorations of the hall, and of the hospitality and generous treatment of the New Yorkers.

Charlie Kuehn seems rather leary of hot places since he attended the bowling tournament.

W. J. Hesser, Plattsmouth, Neb., was a recent visitor.

Shaw's Garden.

Sunday last was the second open Sunday at Shaw's Garden; the attendance was estimated at 15,000 people. To the general public the most attractive feature was the display of roses, in which the management have reached the highest degree of perfection obtainable in this climate.

The special features were the South American Paw Paw trees in full bloom, which will soon have fruit; the water lilies, of which the collection is second to none, were at their best, and are said to have the deepest color of any yet produced, and the Brazilian caladiums and orchids, said to be the best and most expensive collection in the country. Other noticeable things were the soldiers' blooming grass, from California and Mexico, and the tamarinds, of which the garden has a very fine variety, and the display of foliage begonias, which exceeded the famous display at the World's Fair in beauty and extent.

American Floriculture, Retrospective and Prospective.

Read by Professor B. T. Galloway, before S. A. F. Convention, at New York, August 22, 1900.

It is sixteen years since the Society of American Florists was organized, and during this comparatively short period changes have taken place which viewed collectively have had a marked effect on the welfare of every member. The daily happenings in our lives, whether it be at home or in business, come to us in such a way as to make little conscious impression. They nevertheless mold us and direct us, and for this reason it is wise to pause once in a while and look back on the aggregate results in order to be able to more intelligently guide our future course. With this object in view, we invite your attention to some of the more important events of the past century as affecting the development of the florists' business, hoping that such a review, brief as it must necessarily be, will help toward a better understanding of what must be done in the future to keep floriculture in the front rank of horticultural pursuits.

A hundred years ago floriculture as we now understand it was practically unknown in this country. Here and there were pioneers, who, in addition to following various horticultural pursuits, paid some attention to the cultivation of flowers. The early work, however, was carried on more for the purpose of gratifying a love for the beautiful than to reap pecuniary benefit. From the earliest times gardening has been a favorite pastime, and long before there was anything like a commercial tendency to the work, interest in it was kept up through an inherent desire to come into contact with nature.

Naturally the beginning of the work here was associated with the development of certain cities. The greater part of the wealth of the country was collected at such places, and better opportunities were thus afforded for the development of such an industry as the one we have under consideration. The city of Philadelphia was early favored in this respect, and for this reason, and also on account of its comparatively mild climate, it attracted gardeners and others interested in horticultural work from all parts of the world. Boston and New York were also early centers of floricultural work, and many of the first pioneers made their start at these places.

The rigorous climate of the New World necessarily required that special attention be given to the use of glass houses for the growth of many plants, and thus was early set in motion the forces which have had so much to do with the successful growth of the work here. The early greenhouses were necessarily crude affairs, but they served their purpose and were the links which made better work possible. In most cases only the sides and ends of the greenhouses were of glass, the glass being in very small panes, set in heavy frames of wood. Heating was for the most part effected by means of hot air carried into or through the houses by bricks or other similar devices. Such were the majority of the houses erected up to about 1825, when there began to appear a more marked interest in architectural effects and improvements in other directions. The demand for plants, flowers and seeds was rapidly increasing at this time, largely owing to the more settled condition of the country, which afforded men of wealth an opportunity to turn their attention to the beautifying of home grounds and public parks.

Throughout the development of floriculture and other branches of horticulture in this country, home adornment or amateur work preceded the commercial. It is a fact that wherever the cultivation of flowers as a means to the adornment of the home or to public parks and other places is encouraged there soon arises a sufficient demand for flowers to warrant the investment of money in growing them for commercial purposes. Horticultural societies and other allied organizations have therefore played an important part in the development of commercial work. It is often through their efforts that interest is aroused and stimulated until eventually a whole community feels the benefit.

The early development of floriculture is so intimately connected with other horticultural industries, such as the selling of seeds, plants and flowers, that it is difficult to separate one branch from the other and follow the development of any one alone. The selling of seed was naturally an early established industry, but years elapsed before the seed seller found it worth while to handle flowers. By 1840, however, there was considerable demand not only for flowers, but for plants also, and to meet this numerous establishments sprang up at various places. Thus we read in one of the current horticultural journals that "Boston and vicinity is making considerable progress in floriculture. The establishment of a public garden in connection with a conservatory is having a tendency to diffuse a taste for plants." At this time (1840) there were a number of important establishments near Boston, New York and Philadelphia, and there were considerable areas of glass, devoted largely to the growing of camellias, azaleas, rhododendrons, fuchsias, pelargoniums, and to some extent roses.

The introduction at about this time of hot water into greenhouse construction gave a decided impetus to the work, and progress along many lines was rapid. For the next ten years floriculture flourished. The rose was rapidly coming into use and the cut flower business was growing. In 1852 a horticultural writer in Hovey's Magazine says: "Many establishments containing greenhouses and forcing beds, more especially for the production of flowers for bouquets, have sprung up in the upper part of New York city." Reference is made to Mr. T. Dunlap, of Harlem, and the immense quantity of flowers, particularly roses and violets, that he grew for his New York store on Broadway. In another place it is mentioned as a matter worthy of note that one store in New York had disposed of several hundred dollars' worth of plants and flowers during the holiday trade.

By 1860 the business had developed considerable importance. Stores in a number of cities were beginning to more and more make plants and cut flowers a specialty. The rose continued to grow rapidly in importance, and various bulbous plants, such as gladiolus, Japan lilies, etc., were receiving marked attention. Greenhouse construction had kept pace with other improvements, and comparatively well-lighted, well-heated and well-ventilated structures were taking the place of sash roof houses, in which wood predominated and good light and proper heat were out of the question. By this time the rose, as a flower for bouquets and other purposes, was beginning to supersede the camellia. Little attention was given to growing the rose, however, as a distinct crop. As a rule it was found in houses with other plants, the varieties grown being Lamarque, Bon Silene and one or two others, and these were planted about in odd places, either in the ground or in pots, the flowers being utilized whenever they were marketable.

At the breaking out of the Civil War horticultural work was in a large measure checked, and matters remained pretty much at a standstill until about 1872, at which time there were several thousand florists in the United States. The carnation began to receive attention about this time, owing to several importations made into the United States from Europe. Up to this period all the work had been carried on with little reference to specialization. It was the common practice to grow many different kinds of plants in the same house, and not only were the crops grown for the plants themselves, but were also forced for cut flowers. With the increasing demand for both plants and flowers, which began to be especially noticeable between 1873 and 1875, came the necessity for giving more particular attention to individual crops. Thus commenced the first movement leading to specialization. From this time on the progress of the work was rapid, but as the events have all taken place within our memories it is unnecessary to dwell upon them in detail here. Suffice it to recall the era of plant growing, which lasted for a few years and was followed by a rush to get into the cut flower business. Many of the large plant establishments were modified so as to be able to give their entire time to the cut flower business. The rose received special attention, and there followed a rapid development in growing this crop. Solid beds gave place to benches, and special forms of houses were developed as best suited the needs of the crop. The carnation was a close second to the rose in the matter of importance, and a history of its development would make an interesting paper in itself. The same is true of the violet, which in the early days was grown almost exclusively in frames, but owing to keen competition the frames were soon found inadequate and sunken pits were substituted. From the sunken pit was gradually evolved the modern violet house found at the present time.

Gradually the general gardener is disappearing and the specialist is taking his place. The carnationist, the rose grower and the violet grower find it necessary to devote their entire attention to their respective crops if the best results are to be obtained.

With these various changes came the establishment of large retail stores and commission houses, all so organized as to be able to handle the great quantities of flowers and plants produced by the growers themselves. The importance and need for organization brought into being this society, and the demand for closer union developed the trade journals, small at first, but growing and waxing strong as the years pass by.

A careful survey of the field at the present time leads us to believe that there are now in the United States between nine thousand and ten thousand establishments engaged in the growing and selling of plants and flowers in a commercial way. There are, in addition, many hundreds and perhaps thousands of individuals scattered over the country who sell small quantities of flowers and plants either at their own homes or in other places, but these can hardly be regarded as conducting commercial establishments, although the aggregate amount of glass they control is no doubt considerable. In order to get a satisfactory basis for the figures which follow we have tried to reach every commercial florist in the United States and to obtain from them data on the amount of glass controlled, kind of crops grown, etc., as would enable us to draw reliable conclusions in regard to the present status of floriculture. This work has been supplemented by personal studies and observations in many sections, and as a result information has been secured which is believed to be reliable as far as it is possible to make it at the present time. At best, however, it must be understood that the figures given are tentative, and with the carrying out of more thorough plans, for which the present work opens the way, they may be materially changed.

The total area of glass in the United States is estimated at from 22,500,000 to 30,000,000 square feet, the largest number of square feet being found in the States of New York, Illinois, Pennsylvania, Massachusetts, Ohio and New

A View of the Trade Exhibit, New York Convention, S. A. F. O. H.

Jersey, in the order named. New York is accredited with twelve hundred establishments and 4,500,000 square feet of glass; Illinois with eight hundred establishments and 4,250,000 square feet of glass; Pennsylvania with about nine hundred establishments and 4,000,000 square feet of glass. The development of the business has been more rapid in Illinois, principally in the vicinity of Chicago, than anywhere else, and if present conditions continue it will be only a few years when Illinois as a State and Chicago as a city will lead the country in the amount of stock grown and handled. On the basis of 22,500,000 square feet of glass, the following estimates have been made and published in the last Year Book of the United States Department of Agriculture:

(Mr. Galloway here repeated the statistics which have already appeared in these columns. See page 546, issue of May 26 last.)

It may not be out of place now to briefly point out some of the lines along which floriculture seems likely to develop during the coming years. I think all will agree that much is yet to be accomplished in the way of improving business methods in conducting this work. We have been especially struck with this fact in our efforts to get data which would be of value in connection with the figures already quoted. The producer of plants—be he farmer, fruit grower, or florist—as a rule does not consider it necessary to apply to his work the ordinary practices followed in the world of business. The reasons for this become apparent on considering the position in which the plant grower is placed with reference to the manufacturer and storekeeper. The grower of plants is at all times required to assume great risks—in fact, the risks as a rule, are so great as to preclude anything in the nature of mathematical precision in the matter of calculating profit and loss. It must be said, however, that this statement does not hold true so strongly in greenhouse work as it does in outside horticultural pursuits. With the increased facilities for growing plants under glass and the specialization that is rapidly coming about, the risks are becoming less at the same time competition is becoming keen. It behooves every man, therefore, who is looking forward to obtaining the highest success in his work to adopt every honorable means to increase production and decrease expenses. This can be done only by the closest attention to business methods, leading first of all to a thorough knowledge of every detail as to the cost of production. We have found it almost impossible to get any authentic figures upon the last named subject. Very few men know what it actually costs to produce stock, as no systematic attempts are made to obtain facts in regard to this matter. As to the cost of houses and other equipment, there is, as a rule, very little available information on hand.

These statements are not made in a spirit of criticism, but are brought out simply to call attention to a matter which will undoubtedly disappear with the improvements going on in all directions in connection with this work. We have no doubt that much could be accomplished in this direction through organization of the florists throughout the country, for at present only a small percentage belong to anything in the nature of an organization. It would seem of the highest importance, therefore, to put forth every effort in the matter of not only strengthening this society, but developing local and special organizations, which would have for their object not only the improvement of the members, but the encouragement of all lines of horticultural work in their respective communities.

We have already pointed out the importance of horticultural societies in the early development of this work, and suggested that what was true of them at that time holds true of such organizations now. The societies can arouse an interest in floriculture by meetings, exhibitions, and in other ways, which will be felt by those who are looking to the commercial aspect of the case. We believe that this society could do a vast amount of good by encouraging the organization of florists' clubs and local organizations everywhere, not with a view of making them in any way tributary, but on the other hand to have them develop as strong independent bodies along general lines, which the Society of American Florists could in its present position direct. Such organizations could do much toward the establishment of public parks and the general adornment of the home. The great work that is under way in the city of New York is a sample of what might be done on a smaller scale in other places, and what will no doubt finally result in benefit not only to the people as a whole, but to the florists in particular in the matter of bringing about a greater love for flowers and an appreciation of what they stand for in our everyday life. I refer to the establishment of the New York Botanical Garden and the efforts being made to bring this enterprise in touch with horticultural interests along bread lines.

In the future the tendency will undoubtedly be to specialize more and more. This will be made necessary by the growth of competition, requiring the very highest products of the soil. With greater specialization will come closer attention to every detail of the business and a higher appreciation of many little things which are now allowed to pass as a matter of course. The Society of American Florists can do much to shape this work, and we trust it may long survive to carry it on.

Begonia Gloire de Lorraine as a Hanging Basket Plant.

Begonia Gloire de Lorraine as a Hanging Basket Plant.

Our illustration shows the adaptability of Begonia Gloire de Lorraine as a hanging basket plant. The specimen was one of a pair exhibited by Alex. Ogg, gardener to Frank W. Andrews, Esq., Newport, R. I., at the last Fall show of the Newport Horticultural Society. Should the new white-flowered variety "Caledonia," prove to be as good as the pink one, it, too, will be a grand acquisition.

The basket of Begonia Gloire de Lorraine was one of several grown by Mr. Ogg last Winter. Wire baskets were used, lined with moss, the little plants being put through the meshes of the wire in planting. Mr. Ogg finds no trouble whatever in growing this begonia.

MAC.

(180) **Plant For Name.**—Brooks Sisters. The plant is a species of Ipomoea; which one it is impossible to tell from the material sent.

(181) **Lilies for Border.**—I have a border along the east side of the house that I want planted with hardy lilies, what kinds would you propose and how many; border 18 x 2½ feet.—P. O.

—The lily border, 18 x 2½, will require three rows of bulbs to fill it nicely; these should be about 10 inches apart in the row, making 60 bulbs needed altogether. If white flowers are wanted, get Lilium candidum; if colors are preferred, get varieties of Lilium speciosum.

(182) **Callas, in Beds on Raised Benches.**—Would you advise planting Calla Æthiopica bulbs in beds on raised benches. I have all of mine planted that way now, and I want to plant a few more.—G. P.

—The callas will do just as well, or better, planted on the benches, and we would not hesitate in planting the rest of the bulbs in this way.

(183) **White Flies on Abutilons.**—About three weeks ago I noticed a number of very small white flies about the abutilons and asters, inside; I have given various treatment, particularly tobacco smoke; have spoiled some varieties of plants, while the fly seems to thrive and multiply. Can you or any reader suggest an effective remedy?—H. H.

—The small white fly is probably thrip, and we would advise syringing with an emulsion made either with whale oil soap or fir tree oil.

(184) **Water Lime.**—Will you please explain to me what is meant by water lime, which Mr. Carmody uses around the posts in connection with cement. Is it what we call about here lime slaked in water such as bricklayers use? I have before now seen the name hydraulic lime or the same purpose. Is all that the same thing?—J., PHILA.

—Water lime, hydraulic lime and cement are all identical with each other. When cement is mixed with sand and water, then it becomes a water lime, the name having originated probably from the fact of its being waterproof.

(185) **Shipping Galax Leaves to Europe.**—Can I ship galax leaves direct to Europe via Hamburg steamship line and all charges be paid by parties in Germany, or would I have to pay the freight to New York before they could be placed on board steamer?—W. H.

—Freight on galax leaves from Hoboken to Hamburg, Germany, is 12 cents per cubic foot, minimum $3.60, and all the freight and charges on same would have to be prepaid.

We can only carry same on the freight steamers of our line; that is, on the Saturday boats.

Our charge for handling the shipment here is $1.10, in addition to all other charges incurred.—HAMBURG-AMERICAN LINE.

BRIEFS FOR BUSY FLORISTS.

CHRYSANTHEMUMS.—Where fumigating is done to keep down the green and black fly, a little extra care in burning the tobacco should be exercised about the time the buds are forming. An overdose of smoke will sometimes injure the small buds, especially if the plants are on the dry side during the smoking.

COLEUS.—Take the main batch o cuttings now; they need no bottom heat to strike in, and can be put right on the sand bed in the greenhouse. Shade during the day, keep the sand moist, and they will, in a few days, be rooted, and may then be transplanted into flats, which is the most convenient way to handle them until such time as they have to be potted up and grown along to produce cuttings for next Summer's stock.

Cuttings of ivy-geraniums, abutilons, vincas, etc., should be taken as soon as possible. If the stock of any of them is at all limited provision should be made to lift the old plants and pot them up before the season closes.

LILIES.—After the Harrisii bulbs are potted and put away until growth starts, do not cover them over with fresh manure; this is the worst thing that can be done to them, as fresh manure will help to develop disease should the bulbs be the least tainted with it. If the pots of bulbs are in a shed or under a bench in the greenhouse, a covering of papers is just as good as can be had. Too much water is another danger that should be guarded against; the lilies will grow much more satisfactorily if kept a little on the dry side, rather than always soaking wet, though, of course, they should never be allowed to wilt for want of water.

Columbus, O.

E. L. Charles has had good success in blooming lilac twice in one year. A year ago Mr. Charles had a bunch at the Ohio State Fair, and a bush, with five double bunches, can be seen in his yard at the present time.

J. B. Heiss, of Dayton, was a caller last week.

Mr. Ludwig has returned from the Florists' Convention.

Miss Charles has returned from a visit to Newark, Ohio.

Plants and Rooted Cuttings,

MORRIS, ILLINOIS.

Mention the Florists' Exchange when writing.

Pittsburg.

The past week's trade was rather quiet, not much of anything doing, even funeral work was scarce. Stock of cut flowers is not choice, but abundant enough for the demand; asters are fair and in good supply; gladioli are not as good as last year; roses are coming in better and command fairly good prices.

Personal.

W. Harvey, who was confined in the West Penn hospital all Summer, is out again, staying at J. F. Gibbs' place in Woodville.

Gustav Ludwig has suffered with a bad attack of hay fever ever since his return home from the Convention, compelling him to remain at home most of the time.

W. F. Lauch, of Carrick, Pa., has put benches in all his houses this Summer; heretofore his plants, mainly caruations, were grown in solid beds with good results, but he expects to do still better with raised benches and better drainage.

T. F. Langhans, of the Pittsburg Cutflower Co., is back at work again after spending a month's vacation in the mountains.

The September meeting of the Florists' Club takes place Thursday, September 13, at the storeroom of the Pittsburg Cutflower Co. A good attendance is desired, as several matters of importance will be discussed.

E. C. REINEMAN.

A most interesting personal letter, received from Peter Barr, and written on board the steamer voyaging from Fiji to Auckland, informs us that the veteran traveler will remain in Australia until July, 1901.

Worcester, Mass.

The weekly show was as large and fine as has been held for a long time; the tables were full of splendid stock. Much dissatisfaction was expressed at the judging.

The weather has been very dry and plants suffer much. At the Agricultural Fair held here September 3, 4 and 5, there is, considering the drought, a fine exhibit of flowers. "J."

Wichita, Kan.

College Hill Greenhouses, is the style of a new florists' establishment here. It commences with two houses, each 10x75, principally for carnations. H. L. Hunt, formerly with W. H. Culp, of this city, and A. R. Marsh are partners in the new firm.

F. Keutcheamaster has recently torn his houses down from Harry street and moved two blocks west of the city park, where he is rebuilding and enlarging.

C. P. Muller has planted a house of roses and benched his carnations, and has everything in good shape for Fall trade.

W. H. Culp & Co. have a fine lot of palms and decorative plants, and will plant two houses in carnations, devoting the rest of their glass to a general collection of plants. H. H.

Grand Rapids.

We have had a very quiet month as far as trade is concerned; people are still at the resorts, and the few at home do not care to die.

With the end of the resort season, business is expected to pick up considerably. Carnations are nearly all in; most of them have shortish stems, which will soon be remedied. The sweet pea crop is about done, but there are still plenty of asters, although whole crops that were planted on low ground have been ruined. Asters do not like wet feet, the plants that have done the best this year were those planted on high ground. We have been having all kinds of weather—first it would blow a gale, blowing down trees, smashing glass and playing old Ned generally, then would come a deluge to drown everything out, followed by a cold, raw day, then back again to as hot as Tophet, where it is now.

A word as to the fine time we had at New York, and to thank the florists of that great city. The grandest trade exhibition ever held; the unequaled decorations of the Convention hall; the meetings themselves; that trip to fairyland—I believe they called it Glen Island—one of the most delightful spots imaginable, and the clams, how delicious, all but the black talls; all are engraven on our memory, never to be effaced; but what impressed one at every turn was the smoothness with which every detail of the great Convention was conducted; order and promptness everywhere, no hitch anywhere, everything went off like clockwork, and the New Yorkers deserve praise without stint. If Buffalo can give us a Convention in 1901 anywhere approaching the one just past, she will indeed cover herself with glory.

Recent Visitors.

A representative of W. W. Barnard, of Chicago, and Mr. Cook, of the Kalamazoo Nursery & Floral Co., who are erecting a range of glass for nursery and cut flower purposes.

GEO. F. CRABB.

Buffalo.

A good spell of hot weather has been with us, but seemed to have reached its termination in goodly showers on Labor Day.

The craftsmen who run stores have finished up their vacations, and are on hand prepared for any business, though 6:30 p. m. is still the closing hour rule. Aside from the calls for funeral flowers, which, as a rule, have been steady, there is so little doing that in some cases refrigerators are allowed to go practically empty. Roses in new growth, small-sized blooms, are plenty enough; carnations now at lowest ebb, both in quality and quantity; these are fully supplanted by asters and tuberoses.

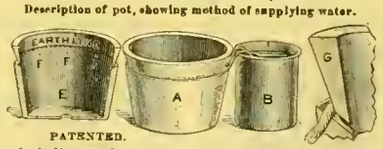
On Labor Day, Adamss showed an effective window display, almost startling in its bright coloring, produced by a combining of scarlet salvia in vases, arranged in the folds of a large American flag.

Recent visitors included such commercial men as Walter Mott and Paul Berkowitz, of Philadelphia; E. A. Benyan, of Evergreen, Ala., and our genial suburban perambulator of wit and wisdom, W. J. Wise, of E. Aurora, N. Y. VIDI.

ACME POT

A self-watering pot or pan, devised specially for spores, fine seeds and cuttings. No surface watering; seeds cannot be washed away; surface earth does not harden. The pot, as will be seen by the cuts, is original in its construction and application, and is the result of many years of practical experience in the art of propagating and raising seeds and spores.

Description of pot, showing method of supplying water.



PATENTED.

A, indicates the pot; B, a reservoir for water; E, section of pot showing earth line and perforations or water passages F F F below. G, full size section, showing groove, with cord siphon. Several pots may be arranged around one reservoir, each connected therewith by a cord, through or over which the water is conducted by capillary attraction.

Price, boxed, f. o. b., Pot and Siphon Cord complete, 50 cts. each; $5.00 per dozen.

Indorsed by leading florists and the trade generally. Send for full descriptive circular.

Z. CHRISTMAS

IS THE

SWEET PEA for forcing.

Seed, $10.00 per lb.; $1.50 per oz.

ANT. C. ZVOLANEK writes as follows about it. "This grand variety is for inside culture only. The flowers first appear from September to November 20th, and flowers from then all winter until June. From middle bench, 6½x100 feet, I cut an average of 8¼ dozen per day; grows only 4½ feet high and flowers on 15 inch stems; color similar to Blanche Ferry. They are easily grown, and with each order I will send directions as to the way I grow them. I have raised them 8 years now, and they do well every year. All seed is from selected plants raised inside, and I will guarantee them to flower all winter. Plant after your 'mums. Have only a small quantity of seed." Address

Bulbs in 1900.

With the arrival of the French and Dutch bulbs, one is glad to notice that, if appearance goes for anything, the quality of the stock is not inferior in any way to what it was last year. From reports received last Spring it was thought that the bulbs would not be so good as usual and that, in some lines, there would be actual shortage. So far, however, orders are being filled up to the full count of all varieties.

During a recent visit to W. H. Siebrecht, of Astoria, L. I., who, by the way, forces a million and a half bulbs annually, we were informed that all the bulbs received thus far looked very promising indeed; the Dutch hyacinths especially, being in much better condition than last year even. As Mr. Siebrecht is such a large grower, and, by experience, knows what is best among bulbs for forcing, a partial list of the varieties he uses will be interesting, and also a guide to smaller growers. In narcissus the kinds used are: Von Sion, Paper White grandiflora, Princeps, Poeticus, Horsfieldii, and Golden Spur.

About twenty varieties of tulips are used. The white kinds are La Reine, White Pottebakker and White Belle Alliance. Pink varieties are Cottage Maid, Rose Grisdelin, Salvator Rosa, double, and Murillo, double. Among the yellows are Yellow Prince, Canary Bird, Yellow Rose, late double, and for late singles, Golden Crown and Bouton d'Or. In red varieties, Belle Alliance, Scarlet Due Van Thol, Prince of Austria, Vermilion Brilliant and Couleur Cardinal are grown.

In hyacinths, single named varieties only are used. The white ones are La Grandesse, Baron Van Thuyll, Madam Van der Hoop, Elfride and Grandeur à Merveille. Pink kinds are Charles Dickens, Moreno, and Gertrude. Light blues are Charles Dickens, Grand Maitre, Bar on Von Thuyll, Queen of the Blues and Czar Peter. For dark blue, Mary and William the First are grown.

Speaking on the subject of treating the bulbs after they are potted or planted in the flats, Mr. Siebrecht favors the modern bulb shed rather than burying the bulbs outdoors, as in the shed they can be watched at all times, and can be handled, when needed, much more conveniently than when they are in trenches outside.

Lilies are forced only for the Easter trade, and, owing to the uncertain condition of Bermuda stock, Mr. Siebrecht will this year plant only Japan longiflorum. Past experience proves that of the Harrisii planted only thirty-five per cent. are good, and there is too much loss attached to them. If the small percentage of good bulbs could only be picked out from the rest before they were planted, it would be all right; there would then be some profit in them, but, having to grow them and then discover the diseased ones afterwards, wastes, entirely, a lot of valuable time, and also space on the benches.

Mr. Siebrecht forces lily of the valley all the year round. The benches in the greenhouses are at present filled with poinsettias, chrysanthemums, aspidistras, Boston ferns and Pandanus Veitchii, stock that will be all disposed of before the bench space is required for the bulbs.

European Notes.

Shortages continue to be the order of the day. The latest additions to the list are the French strains of sugar beet and mangel wurzel. At the beginning of July we had hopes of fairly large crops of both, but the persistent drought and subsequent attacks of vermin have so far upset our calculations that orders already booked will cause as much difficulty to fill, and late buyers will doubtless have to go lacking. The Golden Tankard variety of mangel is exceptionally scarce and good strains fetch almost any price the fortunate holders demand.

Some of the English growers reported probably good deliveries of some of the coarser field turnips; the threshing machine is dispelling the illusion in a very cruel fashion. The actual crop is not one half as large as the estimate.

Parsnip, parsley and celery dried up prematurely, and the yield is disappointing. The first-named article is particularly scarce this season.

A spurt in the trade for rape has brought all available stocks to the front, and the shortage is so serious that prices have taken a solid leap upwards, which, allowing for an average demand from your side, will be fully maintained.

WEEBER & DON, New York.—Catalogue of Bulbs, Roots, Seeds and Garden Requisites. Illustrated.

R. & J. FARQUHAR & CO., Boston, Mass.—Illustrated Catalogue of Bulbs, Plants, Shrubs and Seeds for Autumn Planting.

H. H. GROFF, Simcoe, Ont.—Neat descriptive catalogue of New Hybrid Gladioli, originated and selected by himself. The catalogue contains the announcement of an exhibit of gladioli at the Pan-American Exhibition in August, 1901.

PINEHURST NURSERIES, Pinehurst, N. C.—Illustrated Wholesale Catalogue of American Seeds, of Conifers, Palms, Trees, Shrubs, Herbaceous Plants, also Roots and Bulbs for Fall Planting.

Some Good Cannas.

The new canna, recently shown by Mr. Pierce, Rochester, N. Y., has attracted much attention. Mr. Pierce is an enthusiastic and skillful grower, and his collection of thirty of the newer varieties of cannas is grown under the most favorable conditions. With such treatment the Mrs. Kate Gray is a distinct advance over all others. The plant which the writer saw was over seven feet in height, with splendid dark foliage. The flower is a rich orange scarlet, having the effect of a solid color, and is quite distinct. We measured blooms that expanded 5×6 inches, the extremely broad petals giving an almost circular outline. One spike of 22 flower buds had nine perfect blooms open at the time. The parentage is given by the originator, Mr. F. Edward Gray, Los Angeles, Cal., as Crozy X Italia. Mr. Pierce is interested to know what will come of seeds, now nearly matured, on a spike of Mrs. Kate Gray.

G. A., Jr.

Cornell University.

The Cornell University (College of Agriculture), Ithaca, N. Y., has issued its announcement for 1900—1901. Special attention is called to the fact that "tuition is free to students pursuing the prescribed course in agriculture and intending to complete that course; and to special and graduate students in agriculture taking at least two-thirds of their entire work in the departments of agriculture, horticulture, and in the courses in agricultural chemistry and economic entomology."

Evergreens for Church and Hall Decoration —The great variety of color in evergreens offers an excellent opportunity for utilizing them in decorations of various kinds. Everyone knows what tasty beds of them can be arranged out-of-doors, but, on the other hand, very few think of what might be accomplished by their use inside. One of the prettiest foliage decorations the writer has ever seen, barring, perhaps, some where ferns were brought into use with fine effect, was a stage setting of these evergreens, ranging in size from little ones in 3-inch pots, used to bank in the foreground, edging off the whole, to large bulky arbor vitæs in 24-inch tubs. Contrary to what might be expected, there is nothing sombre about such an arrangement if the taste of the decorator will bring into use a sufficient number of bright golden colors, and some with graceful foliage like the Retinospora filifera. Hemlock and Swedish and Irish junipers are very useful. Other desirable kinds are the Chinese arbor vitæs, variegated box, dwarf box, deodar cedar, cephalotaxus, Japanese euonymus, junipers, retinosporas, and arbor vitæs of all kinds and in many colors. They stand rough treatment better than the general class of plants used in decorations, especially as they may be taken out in cold weather without danger of freezing. A large old-fashioned fire place offers an excellent opportunity for decoration by means of evergreens. Of course, there can be no fire going.—*Meehan's Monthly for September.*

CLASSIFIED ADVERTISEMENTS.

These Columns are reserved for advertisements of Wants, and Greenhouses, Land, Second-hand Materials, etc., for Sale.

Rate 10 cents per line (7 words to a line), when set solid, without display.

Display advertisements, 15 cents per line (6 words to a line).

No advertisement taken for less than 50 cents, except Situations Wanted.

When answers are to be addressed care of this office, add ten cents to cover expense of forwarding.

SITUATIONS WANTED.

ROSE and carnation grower wants situation; capable of taking charge, single, age 31. X. L., care Florists' Exchange.

SITUATION wanted by young man, 24, for general greenhouse work; 2 years' experience. Henry Bauer, 385 East 10th st., New York.

WANTED—Position by lady with florist; seven years' experience; excellent designer. Address X. R., Florist, care Florists' Exchange.

FIRST-CLASS maker-up and decorator wants change of situation; in store or commercial place; can produce the best references. Y. C., care Florists' Exchange.

FIRST-CLASS carnation and rose grower wants situation as foreman or section man; German, year's experience in this country, best references. Robert H. Cranston, 27 Clarke St., Westerly, R. I.

NIGHT fireman, with two years' experience, and thoroughly capable of caring for boilers, piping, etc., wishes situation; also can do general greenhouse work. X. Y., care Florists' Exchange.

FOREMAN or assistant in roses, carnations, chrysanthemums, violets and stove plants; 10 years' experience. (Situation wanted by October 1st.) Peter Hawsen, care Mr. G. Towall, Station M, N. Y.

SITUATION wanted by practical florist; German, 25, experienced in carnations, forcing bulbs, general stock and landscape gardening; willing and sober; open Sept. 18 or later. X. W., care Florists' Exchange.

YOUNG American, 19, desires to learn the culture of roses and pinks with reliable firm; six months' experience in general greenhouse work; best of references as to character. Address X. Z., care Florists' Exchange.

FLORIST, gardener, single, age 30, 14 years' experience in greenhouse and outdoor gardening, wants situation on private place; best of reference; state wages and particulars. Address Gardener, P. O. Box 152, Northport, Long Island.

SEEDSMAN—TRAVELING SALESMAN, who commands good trade in bulbs and plants, wants position with American or European house; good references exchanged. Y. B. Seeds, care Florists' Exchange.

HELP WANTED.

SALESMAN and maker-up wanted, must be up to date and thorough in every detail; reference. Apply L. Hart, 1000 Madison Ave., New York.

WANTED—Single man to take charge of section of rose houses; write, stating age, experience, and wages expected. D. Falconer, Chatham, N. J.

YOUNG man wanted to work in store; must have some experience in greenhouse work; references required. J. M. Gasser, 99½ Euclid ave., Cleveland, O.

WANTED—A young man for general greenhouse work, etc.; must be a quick potter; state wages expected. Address John H. Ramsay & Co., Bath, Maine.

WANTED—A thoroughly competent decorator and maker-up in a New York retail store; man must be of good address and reliable. Apply, stating experience and wages required, to Y. A., care Florists' Exchange.

GARDENER—Man to take charge of greenhouse and assist in decorating, and be thoroughly experienced in filling fern dishes; reference. L. Hart, 1000 Madison Ave., New York.

WANTED—At once, good grower and propagator of carnations; wages, $25.00 to $30.00 per month, with room and board; must start with $20.00 for first month; give age and name of last employer. A. Nelson, Notch Road, Paterson, N. J.

WANTED—Young men, experienced in budding and grafting roses and in making soft wood cuttings of shrubbery; steady employment, good wages; must be strictly temperate. Apply to The Elizabeth Nursery Co., or to George Reeg, Supt., Elizabeth, N. J.

WANTED—An experienced grower of palms, ferns and bulb stock, to take charge of tropical house adjoining city store; good salesman, decorator and maker-up preferred, willing to work and temperate; reference; wages moderate. Apply to the Melrose Floral Co., Harrisburg, Pa.

WANTED—In an old established import and export seed and bulb house, a young man under 20, as packer; must be strong and willing, and come well recommended; previous experience not essential; steady position and good chance for advancement. Address in own hand writing, X. V., care of Florists' Exchange.

CHANGES IN BUSINESS.

CROMWELL, CONN.—Edward Blinn expects to start in the florists' business here soon.

GLEN ROCK, PA.—W. S. Newcomer will engage in the growing of fruit trees and plants here.

DELHI, N. Y.—The Eggleston greenhouse property was recently sold on foreclosure, and bid in by George St. John for $750.

HOMESTEAD, PA.—Mrs. Altena J. Stewart has sold her greenhouse plant, located at Hope Church, near Homestead, Pa., to Frank James. She has removed to Thomas, Pa.

LOWELL, MASS.—William A. Roberts has withdrawn from partnership in the firm of Patten & Roberts, florists, having purchased an interest in the Norris Livery Co., of 15 Warren street.

HELP WANTED.

WANTED—An honest, young man, single, who understands general greenhouse work, potting, propagating, etc., able to look after fires if necessary, and to assist in making up designs; state wages, per month, with board; references and full particulars. Address Wm. A. Bock, 2394 Mass Ave., No. Cambridge, Mass.

FOREMAN wanted, must be man of unquestioned ability and character, successful and up-to-date grower, and a hustler, accustomed to handling men on place where palms, ferns, 'mums, azaleas, bulbs, budding stock, and everything used on a commercial retail place, is grown. Place consists of 10,000 sq. ft. of glass, located in Chicago; good wages to right man; best of references required; state where last employed. Address Y. D., care Florists' Exchange.

WANTED — A FIRST-CLASS ROSE grower who can graft; send reference and wages wanted. Emil Glaubor, Montclair, Colo.

WANTED—A COMPETENT WORKING foreman, posted in general nursery trees, shrubs and herbaceous plants. Address Letter X. T., care Florists' Exchange.

MISCELLANEOUS WANTS.

WANTED—600 feet 2-inch pipe, 3000 feet glass, not smaller than 10x12 in.; second hand; state price. P. Kratzer, Roslin, L. I.

WANTED—50 THUYA PYRAMIDALIS, 6 ft.; cash. Address Box 128, Westminster, Vt.

BUSINESS OPPORTUNITIES.

FOR SALE—Small up-to-date greenhouse plant and house, close to New York city; no reasonable offer refused. W. F. Lynch, West New Brighton, S. I., N. Y. City.

TO RENT—At Hollis, L. I., greenhouses and about eight acres of land, orchard and garden, together with four rooms in house wing, stable and carriage house; glass houses, 100x20, 100x20 and 75x15, also poultry house. Address "Owner," 124 E. 27th st., N. Y.

FOR SALE—14,000 feet of glass, used mostly for roses, 4 acres of ground and 2 dwelling houses; 3 minutes from station, city improvements, hot and cold water, and good forcing water in greenhouses supplied by Summit Water Co. On account of illness with rheumatism, will sell whole or part interest. A. Harth, Milburn, N. J.

MUSHROOM PLANT — TO RENT, 4 houses, 20x60 ft. each, capacity 6000 lbs., 5½ miles from Philadelphia; every facility; market for all grown; established trade. Address P. O. Box 96, Yeadon, Pa.

MISCELLANEOUS.

FOR SALE, some extra good second-hand 3-inch pipe, at 6c. per foot; also some 4-inch; secure it while it lasts. W. H. Salter, Rochester, N. Y.

FOR SALE—GREENHOUSE PROPERTY AT NYACK, N. Y. A plot 220x125 feet, on which are four Rosehouses, 100x18x6, each house heated by a No. 16 Hitchings Boiler, and seven houses, each about 64x11 feet, heated by flues. This property will be sold cheap to quick cash buyer.

HITCHINGS & CO., 233 Mercer St., New York.

Flatbush, N. Y.—The Flatbush boys will soon have one of the finest alleys in the state to practice upon. A. Schwalbach is having constructed eight new alleys in the spacious room hitherto used as a bicycle school and skating rink. The room is lofty, with a gallery around the sides, and, when completed, it will be an ideal place for holding matches, etc. Being on the ground floor is one of its greatest advantages. The Brunswick Balke Co. are putting in the alleys, which are to be ready by October 1.

The scores rolled Thursday evening are as under:

Buds.

These should be taken now as soon as they appear. There is no need to worry any more about the crown or terminal bud, as to which will be the better one to take, because most of the buds now forming are terminals. Where plants are still showing crowns, it is safe enough to take them when the season is so far advanced as this. They are easily handled, compared to the earlier crowns, and seem to be asort of compromise between the crown bud proper, and the terminal. I have yet to see the variety that will not produce a good flower from this bud. "Always disbud in the early morning" is advice as old as the hills. Then the young shoots are brittle and very easily removed. Always make sure that the bud you are retaining is perfect in shape. Sometimes young grasshoppers and caterpillars will eat away one side and when the flower develops it is worthless.

Grasshoppers have a liking for the choicest buds in the house; the only way to catch these pests is in the early morning when they are slow in their movements.

When the bud is taken the plants start right in making suckers and side shoots, and these must be kept picked off if you wish to concentrate all the energies of the plant into the flower bud. Bonnaffon is one of the worst varieties for making suckers, as a rule; but this year it is, so far, behaving like a gentleman in that respect.

Where mildew puts in an appearance the best remedy is to spray with sulphide of potassium, used in the same proportions as recommended for the rust; *i. e.*, one ounce to two gallons of water. This will not disfigure the foliage as sulphur does, and it will do the work just as efficiently.

Syringing should not be practised so frequently after the bud is swelling. The aim now is to ripen the wood, and this is done better with a drier atmosphere. As the buds commence to show color, overhead watering should be discontinued altogether, simply keeping the atmosphere moist by damping down the paths.

It is important that the aphis family should be wiped out before the buds show color. Smoke lightly, but persist in it for several successive nights and it will be generally found to be effective. If the fly shows itself again when the flowers are half way developed, the only thing to do is to strew the paths and benches with tobacco stems.

Flowers of the early varieties are beginning to straggle into the market, but judging by the prices obtained, there is no frantic rush to buy. Speaking generally, Robinson is the first one to come in that will command any kind of a price. Merry Monarch sold well last Fall, but it was simply because of circumstances. The flower is too soft to be of any use if anything else in the same color could be obtained just at the same time.

This growing season has been a hot one, but the bulk of the varieties have come through all right, the only difference being that they are, generally, more dwarf than usual, which is a blessing to the grower if his houses are low.

IORA.

Philadelphia.

The Market.

Business improved somewhat the past week; several of the stores have had wedding orders, and these, while not very large, have been very acceptable. There has also been a quantity of funeral work on hand. Transient trade has not increased; in fact, many storemen say that this month is duller, so far, than the corresponding period in August; and while flowers are not plentiful, there is still more than can be used.

Robert Crawford, Jr., is embellishing his store ready for the busy season, by painting, and adding mirrors. He also is making some changes in arrangement to provide more room for the increase of business.

Jottings.

Visitors in town this week included J. H. Wenthoit, one of the officers of the General Bulb Co., of Holland, and J. McHutchinson, representing August Rhotert, New York

The Pennsylvania Horticultural Society will hold its September meeting Tuesday next, and as a large exhibit is looked for, the exhibition is to be kept open free to the public on Wednesday. Exhibits of dahlias and outdoor cut flowers will be staged. The subject of the essay at this meeting will be "Dahlias," by L. K. Peacock.

Another trophy will soon be installed in the show case in the club room. John Westcott caught a 50 pound drum fish last week, down at Barnegat, and did it with a light rod and line. Suggestions as to the trophy are in order. This beats catching two perch on one hook.

DAVID RUST.

Colorado Springs, Colo.

The second annual flower show of the El Paso County Horticultural Society was held in Colorado Springs, Colo., August 23 and 24, and was in every way a pronounced success. There were over 1000 exhibitors, and the interest evidenced by the attendance of the public was all that could be desired. The cost of admissions was placed at 5c. for children and 15c. for adults, and the exhibition tent was crowded from the opening at 10 o'clock in the morning until 10 o'clock p. m. The prizes awarded and all expenses incurred were paid in cash within a week from the close of the show.

As an index to the work carried on by this Society, it is stated that 2000 collections of flower and vegetable seed were furnished by Messrs. R. & J. Farquhar & Co., Boston, Mass., for distribution among the school children; the children signing receipts for the seed, and agreeing to exhibit the product at the flower show. Ten prizes were offered by the Society, ranging from $5 to 50c. and 25c., Californian gold pieces, for each variety of flower and vegetable grown from these seeds.

Prizes in gold were also offered by the Society for the best maintained grounds connected with any of the public buildings; for the best kept front and back yards; for the best planted and most neatly kept home premises in the city, etc.

The work for next year is already being outlined, and will be carried forward upon a much wider scope; but the first aim of the Society is to interest the children in the growing of flowers, vegetables and fruits, and the care of their home surroundings.

H. C. H.

The following item was received by special courier from Philadelphia:

A progressive Philadelphia florist whose *viens* are always interesting, enlightened a select and critical audience of the brethren one warm night last week. The watermelon finish may have been more horticultural but not less appreciated.

New York Florists' Club.

A Big Gathering.

The large attendance present at the club meeting Monday evening, September 10, demonstrated that the enthusiasm of the members had not ceased with the close of the work incumbent upon them in connection with the recent S. A. F. O. H. Convention. In opening the proceedings President O'Mara took occasion to congratulate the members upon the outcome of their endeavors. He said the trade press had teemed with encomiums passed upon the club, and those present at the Convention had marveled at the smooth way in which the affairs of the exhibition and the different outings had passed off. He did not think the club itself need marvel when was remembered the conscientious work which the various committees had performed during the year.

Praise for Hall Decoration Committee.

Mr. O'Mara paid a glowing tribute to the Hall Decoration Committee, adding that its work will go down into the history of conventions as unique, as something better than was ever done before on a similar occasion, everything considered—limited material, nature of hall, etc., and as good, if not better than will be done again. He eulogized the assistance rendered by Ed. Bogan, now far beyond the allotted span, asserting that that gentleman's energy and willingness were well worthy of emulation by many younger men.

The President's Modesty.

Touching upon his election as president of the national society, Mr. O'Mara modestly disclaimed any personal worthiness for the honor bestowed, attributing his election more largely to the fact of his being the executive head of an organization that had achieved such grand results for the late convention.

Reports of Committees—Ways and Means.

A summary of the receipts and expenditures connected with the annual gathering of the S. A. F. O. H. was then read by Chairman John N. May, of the Ways and Means Committee, showing a most gratifying financial balance to the good.

Horticultural Exhibition—A Protest, and Sensible Disposition of It.

Mr. Herrington reported for the Horticultural Exhibition Committee: There were 59 classes in the schedule, in 42 of which there was competition. The number of exhibitors was 25, besides seven or eight others not competing. The prize of $100, awarded to the individual whose exhibits scored most points, was won by Wm. Duckham, gardener to D. Willis James, Esq., Madison, N. J., and after a protest in connection with the awarding of the $100 prize to the society whose members scored the largest aggregate of points with prize-winning exhibits had been fully considered by a committee consisting of Messrs. Theo. Roehrs, John Birnie, A. S. Burns, D. Y. Mellis and W. B. DuRie, the prize was awarded to the Morris County (N. J.) Gardeners and Florists' Society, the committee's decision being that "the points should be counted for the home organization of which the competitor is a member," thus upsetting an inexplicable attempt to pool the winnings of members in several different organizations for the New York Gardeners' Society, because these winners happened to be also members of the latter association.

Why Not a Fall Show in 1901?

Speaking of the success of the recent horticultural exhibition, President O'Mara urged a consideration of the necessity of holding a show in the Fall of 1901. He believed New York had reached that stage in horticulture when she cannot afford to be without a proper exhibition of her horticultural goods in the city at least once a year. He was very sanguine of the success of any such undertaking; all that was necessary being the courage to venture into it.

Visitors Talk on Various Themes.

Among visitors present were J. C. Vaughan, of Chicago; Mr. Campbell, of the Park Floral Co., Pasadena, Cal., and Alfred Dimmock, of St. Albans, each of whom was called upon for a few words. Mr. Vaughan confessed to lack of a proper subject to talk upon, until prompted by the president to "tell us how we missed a 900-mile ride in 1901." After which the speaker made some felicitous remarks regarding the selection of next year's meeting place of the S. A. F. O. H., adding that when Chicago once put out her latch-string she never drew it back; and it was still hanging outside.

Mr. Campbell praised the business-like manner in which the club's affairs were managed, and hoped the time would come soon when California would have a sufficient number of florists to entitle her to invite the S. A. F. O. H. to the Pacific Coast.

Irrigation and Thirst in California.

Some merriment was created by Mr. O'Mara's interrogation of the speaker as to the alleged non-ability of an Eastern man to get up a thirst on the Coast, owing to the moist climate. Mr. Campbell admitted it was possible to develop such a natural force, and there was every opportunity for quenching it. Being asked, he then went on to tell of the method of irrigation practiced in California, which was almost entirely surface-irrigation yet, accomplished by means of runways. Deciduous fruits were not much irrigated, but oranges, lemons and nursery stock were, the irrigation being followed up by pulverizing the soil in order to preserve the moisture. Sub-irrigation was yet in an experimental stage in California. Its advantages were more or less acknowledged, but the system was considered too expensive. It was also attended by the drawback of the roots filling up the small openings in the water pipes.

At the Paris Exposition.

Mr. Dimmock told of his visit to the Paris Exposition, the greenhouse part of which was not, to him, a very successful one; but the thermometer at time of his visit stood at 96 degrees in the shade, being very hard on plants. The best things observed were some foliage plants, such as crotons, caladiums and alocasias, a number of which were quite new. The foreigners seemed to be rather fond of the broad-leaved crotons, while over here narrow-foliaged kinds were preferred. What there was of the outside display was not bad, but some of the cooler growing trees and shrubs suffered terribly from the heat.

For Next Meeting.

The president then announced for next month's meeting an illustrated lecture by Mr. Henshaw on his recent European trip, also fuller details of that gentleman's recent tour through Porto Rico.

A Presentation.

On behalf of the club, Mr. O'Mara presented to Alexander Wallace $100 in gold, as a token of appreciation of his satisfactory endeavors in connection with the compilation of the club's Souvenir Book, the president eulogizing the Souvenir both as a work of art, and as a valuable contribution to horticultural literature, which would be highly prized by present and future generations. The recipient feelingly replied, thanking the president and members for this very tangible recognition of his efforts, also acknowledging the valuable assistance that had been given him in the work by his fellow-committeemen and others.

Sociality and Again Business.

Songs were then rendered by Messrs. Dimmock, Butterfield, Plumb, Clucas, Louis Schmutz and Wm. J. Stewart, after which further business was conducted. A committee, consisting of Messrs. May, Burns, Stewart, Wallace and W. A. Manda, was appointed to draft suitable resolutions to be engrossed and presented to Mr. Starin, for courtesies received from that gentleman during the Convention.

Votes of Thanks.

The vote of thanks by the ladies of the Convention to Chairman Sheridan of the Reception Committee, for his most courteous and efficient services, was conveyed to him by Mr. May, through the club. Mr. Sheridan made a suitable response. Votes of thanks were also passed to the exhibitors, and to the advertisers in the Souvenir.

Some Good Exhibits—Awards and Comments.

Exhibits were made, and awards given as follows: Bobbink & Atkins, Rutherford, N. J., showed some choice varieties of altheas, also sprays of Bignonia radicans grandiflora, flowers of the canna, Crimson Bedder, and a plant of the Japanese privet, Ligustrum Ibota compacta. The privet is a very fine leaved, compact variety and the award committee give it a high commendation, together with honorable mention. Honorable mention was also given to the bignonia, to the Hibiscus Leopoldii, and to the canna, Crimson Bedder. The other varieties of hibiscus shown were, H. totus albus and H. camelliæflora. H. Beaulieu, of Woodhaven, L. I., had a bunch of seedling dahlias, among which were two white ones of the cactus type. These two, the committee decided, were innovations.

Regarding Ligustrum Ibota compacta, Mr. Stewart remarked that the type was perfectly hardy in the Arnold Arboretum and in the vicinity of Boston, and if the variety shown displayed the same characteristic it would be sure to prove a valuable acquisition. Mr. Henshaw stated a plant of the Ligustrum Ibota, received from Japan, had proven hardy in the Botanical Garden in this city. It was also worthy of remark that all Japanese plants were hardy in the neighborhood of New York.

In reference to the dahlias exhibited Mr. Beaulieu said that he had had perfect immunity from thrips, and good success with his seedlings, both in wet and dry weather. Mr. Ward found that in seasons when there was an abundance of rain, dahlias did well with him; but as soon as a spell of dry weather was experienced, they were practically no good. Mr. Vaughan remarked that at Western Springs, unless there was a reasonable amount of moisture or some cool weather, he did not get the flowers. Another thing noted was a great difference in the flowering habit of dahlias. In order to obtain success it was necessary to have dahlias that have the flowering habit, and the right season.

Mr. Atkins' European Impressions.

The hour was now getting late, 10:30 p. m., but the members listened with interest to a short account, by F. L. Atkins, on the most noteworthy things observed by him on his recent European tour. In Liverpool, Eng., the speaker visited the parks and Botanic Garden, the latter of which had been much improved. He noticed, in going through the conservatories that over the footpaths were hung fuchsias, geraniums and Cobæa scandens, which practice he thought might be adopted by American growers with advantage. In the grounds, on the slopes, were planted violas, white and blue. Liverpool was taking a great interest in horticulture. The streets are decorated with California privet, planted in boxes, these being cared for by the municipal authorities. Thousands of window boxes of flowers are also made up and distributed by the city to those desiring them, prizes being given to the citizens caring the best for the plants. In the parks he saw thousands of specimen hollies, one particularly attractive variety being named Hodgsonsii. These hollies stand the salt air well. Mr. Atkins visited Hawarden Castle, where he saw the favorite oak of England's "grand old man," Right Hon. Wm. E. Gladstone.

At Wolverhampton the excellent growth of trees and shrubs was noted, as well as a well-maintained wild-flower garden. At the rose exhibition of the Royal Horticultural Society a pure yellow carnation, named Lord Bobs, was remarked; a large flower, and magnificent stem, the variety being introduced by Kelway. A collection of hybrid delphiniums also attracted the speaker's attention.

A Few Good Roses Enumerated.

Among the best varieties of roses noticed, he mentioned White Lady, Charlotte Gillemot, an ivory white; Clara Watson, which grows very fine in England; Countess of Caledon, rich crimson, semi-double; Killarney, L'Innocence, pure white; Jules Grolez, bright china pink; Marquis of Salisbury, semi-double, bright crimson; W. J. Grant, Imperial pink; Rosa rugosa fimbriata, pink with white edge, very suitable as a border rose; Comtesse de Nadaillac, Empress Alexandria, Souv. d'un Ami and its white sport.; Ernest Metz, a salmon-colored variety; Francesca Kruger, Hon. Edith Gifford, Meta, rich rose, a magnificent bud and stem; Muriel Grahame, one of the Mermet sports: white and pink varieties of Maman Cochet, Madame Rene Gerard, and Meta. In France, Mr. Atkins noted a new bougainvillea, a cross between B. glabra and B. Sanderiana, which would make a grand subject for cut flowers and decorative purposes. In Battersea Park, London, the sub-tropical bedding was the finest seen there in years. Bamboos had made magnificent growth this season. The evergreens at Kew Gardens were most remarkable.

Orchids Grown in Peat.

In Belgium he noted that almost every grower was cultivating his orchids in Belgian peat; and, judging from the appearance of the plants, it was certainly a grand idea, the odontoglossums being something wonderful.

Holland and France.

The nursery interests of Boskoop were also touched upon, and the speaker closed his interesting remarks with a narration of the hunting of the French authorities in the matter of ventilating and shading the horticultural building of the Paris Exposition. Mr. Atkins was tendered a vote of thanks; after which the meeting adjourned at 11 p. m.

Photographer Prince presented the club with the two group pictures taken at Glen Island, and was thanked therefor.

During the evening a liberal supply of refreshments was dispensed by the Entertainment Committee, who had promised to "blow off" the members, being as good as their word.

Mention the Florists' Exchange when writing.

600,000 Pansies, The Best All-Round Strain,

BECAUSE we grow all our seed, saving it this year from over 10,000 plants carefully selected from the 400,000 we flowered and sold in Boston and vicinity last spring. We have been growing and perfecting this strain for over twenty years, paying special attention to form and substance as well as size and color. Many novel and rare colors not found in other strains are included and the proportion of light and dark is evenly balanced. They always bring the highest price and one sale insures another. **Awarded a First-class Certificate of Merit,** by the Massachusetts Horticultural Society. Plants now ready, $6.00 per 1000 by express, purchasers' expense. Smaller plants by mail, 75c. per 100 prepaid. Cash with order, please.

I. E. COBURN, 291 Ferry St., - EVERETT, MASS.

Mention the Florists' Exchange when writing.

Chicago.

State of Trade and Weather Conditions.

The weather here, so far as rains are concerned, continues seasonable in very striking contrast to that obtaining in the East, where drought seems the rule and no doubt accounting for the good stock of carnation flowers in this market. White carnations are too abundant for the demand, as outdoor stock is still in fine shape, Mrs. Fisher having been planted in large quantities solely for Summer flowering use, besides Evelina, Flora Hill and others. There are also good pinks and reds, which sell best; but $1 per 100 is a high price for anything, except some house-grown flowers, which from this on will begin to cut quite a figure and now sell for $1.50.

Last week, beginning Tuesday, all the wholesalers report a very dull trade, as bad as any time during the Summer. Shipping trade was not affected so bad, Bassett & Washburn particularly reporting fair trade for the season.

The Grand Army meeting in the city, followed by Labor Day, called for flowers in certain lines, which helped matters a little.

Asters are still very abundant. A few Lady Fitzwygram chrysanthemums showed up last week, but sold only at about 6c. Early chrysanthemums are not likely to cut much of a figure this year, as far as we can yet learn.

Prolonged heat still affects roses, but this will very shortly end. Peter Reinberg seems to have got rid of the troublesome gall fly at last.

Round About.

E. H. Hunt has added a modern cooler. 12 x 7½ feet, doubling their capacity, to meet increasing trade in cut flowers. This firm has on the press a fine Fall catalogue, elegantly gotten up, showing the stock dealt in.

Henry Muno, son of John Muno, the grower out on the Ridge, has started to learn the wholesale business.

A. H. Schneider, of Oak Park, has finished and planted to carnations two houses, 14 x 90 feet.

George Wittbold Co. put up the last new house this year, 28 x 125 feet, in a rush, and housed in it a fine lot of rubber plants from the open ground. As the Fall openings are now beginning Henry Wittbold is getting very busy in this line of work.

Ed. E. Piesor, of Kennicott Bros., is the last of the Convention crowd out. He is expected home at the end of the week.

Mr. and Mrs. O. P. Bassett have returned from their Summer home at the Delevan Lake, Wis.

John Fuhrman, 1651 N. Clark street, returned from his trip to Paris, England, Holland and Germany September 1, looking brown and hearty.

Club Meeting.

The first regular Club meeting will take place, after vacation, Friday, September 22, when lots of work will be cut out.

Now that the Queen of Edgely bowling cup is in the city, the query is what to do with it. Capt. Ed. Winterson, so far, has been its custodian, having given bond for its safe delivery at Buffalo next year. Some of the boys would like to show it in their windows for a time. "Oh, for a permanent home for our Florists' Club," is the cry now! Ess.

Indianapolis.

At the regular monthly meeting of the Indiana State Florists' Association, September 4, a committee, composed of Adolph Bauer, John Heidenreich and George B. Wiegand, was appointed to consider the advisability of holding a chrysanthemum show the latter part of next month. Another committee, composed of Fred Huekriede, Edward Bertermann and E. O. Nelson, was appointed to consider the question of preparing a float to appear in the flower parade during the October carnival. Both committees will report at the next meeting October 2. E. G. Hill, of Richmond, made a short address on the floral display at the Paris exposition.

FOREST TREES

We offer for sale the largest stock of Forest Tree, in this country, Sugar, Norway, Sycamore, Silver Leaf and other Maples by the thousands. Also Lindens Poplars, Elms, Willows, Mt Ash, etc., in large quantities, as well as a general stock of other nursery products. Address

New Varieties of
CARNATIONS
Grown from seed and named after my three grandchildren. We have grown these under ordinary culture for the past four years, and find them equal to any and far superior to many other varieties.
RUSSELL Clean, healthy, and the most vigorous and prolific we have ever grown or seen. We believe it is the best general purpose Carnation ever sent out. Grown side by side with Scott, it is far ahead of it in every respect, except size, which is about the same. It has never burst with us, when others in the same house have done so badly; it is a lively light-rose pink, distinct from anything we have ever seen; very fragrant. Where an abundance of good, fair sized blooms is wanted, it cannot be surpassed.
MILDRED A strong grower, with very long, strong stems. Flower very large, and a continuous bloomer. A fine shade of light, soft pink.
WILLIE Strong grower, with long, stiff stems. Flowers very large, of a bright shade of very dark rose pink. A continuous bloomer. We have more than we have room to house, and offer extra fine plants within reach of all. No. 1 plants, $1.50 per doz.; $6.00 per 100
CHAS. BLACK, Hightstown, N. J.
Mention the Florists' Exchange when writing.

20,000 CARNATIONS $25.00
1000 strong, healthy, field-grown plants of **Daybreak, Scott, McGowan, New York** and **Joost.** Cash with order.
R. J. GARDNER, Bayside, L. I., N. Y.
Mention the Florists' Exchange when writing.

4 ACRES FIELD-GROWN CARNATION PLANTS--120,000
Our Carnations this year are very fine. They have been grown with the greatest care, free from disease, and are packed light by our improved method of packing, by which we can send to all parts of the United States, in perfect condition,

MAYOR PINGREE	BUTTERCUP	G. M. BRADT	
	$1.50 per dozen; $8.00 per 100.		
CRIMSON SPORT	ARMAZINDY	MAUD ADAMS	WHITE CLOUD
ELDORADO	DAYBREAK	JUBILEE	TRIUMPH
MELBA	$1.25 per dozen;	$6.00 per 100.	
McGOWAN	MRS. FISHER	ALBERTINI	PORTIA
METEOR	L. L. LAMBORN	C. A. DANA	WM. SCOTT
DOROTHY SWEET	FLORA HILL	SWEET BRIER	
	$1.00 per dozen;	$5.00 per 100.	

PANSY PLANTS Grown from extra choice seed, of our own production, and not surpassed in variety, size, beauty of coloring or freedom of bloom by any other grown. Price, 50 cts. per 100; $4.00 per 1000.
Mention this paper. J. L. DILLON, BLOOMSBURG, PA.

FOUNDED IN 1888.

THE FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO., LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.
To foreign countries in postal union $2.60.
Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.
No advertisement less than 75 cents.
Discounts on continuous advertising.
For rates, on Wants, etc., see column for classified advertisements.
Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.
Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

American Carnation Society.

CARNATION REGISTRATION.

LENA—Color a little darker than that of Scott; size 2½ to 3¼ inches. Stem very stiff and of good length; very productive and never bursts. Vigorous and healthy. Has been grown for seven years and gets better every year. Registered by J. Howard Pyle, Willowdale, Pa.

ALBERT M. HERR,
Lancaster, Pa. Secretary.

The Galveston Disaster.

In view of the terrible disaster which has overtaken the people of Galveston and other Texan cities, the FLORISTS' EXCHANGE believes that the trade in general would be willing to aid in alleviating the distress of the sufferers by contributions of money and otherwise, and to that end, opens its columns for the publication of the names of those sending subscriptions which can be forwarded direct to the committee of which Mayor Van Wyck, City Hall, New York City, is at the head, or to Governor Sayers, Austin, Texas.

PRIZE PHOTOGRAPHIC CONTEST.

For Month of August, 1900.

As mentioned last week, Mr. Edward Bierstadt, who kindly acted as judge, awarded first prize to Mr. A. J. Pennock, of Lansdowne, Pa., for a landscape photograph.

Mr. Bierstadt says: "The photograph of Mr. A. J. Pennock was awarded first prize on account of its artistic merit. It has the combination of foreground, background, light and shade necessary for the production of an artistic picture. It gives a feeling of atmosphere in it, which, to an artist, is very important. It has also that sharpness that is required as one of the charms, but notwithstanding this sharpness it does not interfere with the general view that gives it its excellence. As a photograph, you might say, also, that it is clean work."

Mr. Rudolph Windt's picture of a vase and bed in Forest Park, St. Louis, is highly commended because "the work is clean. I cannot say that the subject is chosen with very good taste, nor chosen with an idea of getting a good perspective."

Mrs. A. H. Austin, of Charlestown, Ohio, is highly commended for a landscape photograph. "The same description as for Mr. Pennock's would answer, only that this lady did not handle the plate as carefully as she might have done. The fact of a figure coming in once or twice gives a person some idea of relative size. If she had made a little more sky and little less foreground, it would have been still better." (This photo we have not reproduced, it being also an aquatic scene, on the order of that by Mr. A. J. Pennock, shown in this issue.)

Mr. Bierstadt further says: "Unfortunately too many amateurs choose the middle of the day for their photographic work, at which time the light is so strong from directly overhead, that they get that spotty effect shown in so many of the pictures submitted for my consideration. There is also shown a too general desire to get more on a plate than should be attempted; in other words, seek concentration rather than diffusion. Artistic effect of foreground, depth, detail and background, are not sufficiently striven after. These are all points for careful consideration before taking your picture.

"Many of the photos submitted would have stood closer to a prize had these factors been studied."

Mr. Pennock states that the first prize photograph was taken with Queen Pantograph lens, stop 22, time exposure 2 seconds, clear; Cramer plate.

Mr. Windt informs us that in making the photograph of the canna bed and flower vase the largest stop was used; exposure 1-25 second. The picture was taken in sunshine, at 1:45 p. m., the camera facing east.

Mr. Windt sends the following acknowledgment regarding July contest, in which he took first prize:

Publishers Florists' Exchange:

GENTLEMEN—I desire to express my thanks for check received August 17 for $5.00. I also thank you for congratulating me upon being so successful in winning the first prize. This was my first attempt in entering a prize contest.

St. Louis. RUDOLPH WINDT.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

The Conard & Jones Co., of West Grove, Pa., register the following cannas: "Montana"; flowers bright cream yellow. "West Grove"; color, rich coral pink, slightly dappled with crimson and shaded yellow in the throat. Foliage green, slightly edged with purple, large and exceedingly tough.

WM. J. STEWART, Secretary.

Notice to Plant Introducers.

All firms having offered for sale for the first time in this country any species or variety of plants or ornamental trees or shrubs, are requested to send notification, giving origin and brief description to be included in the list of plant introductions in America for the year 1900, which is to be published in the annual proceedings of the S. A. F. Please forward immediately to

WM. J. STEWART, secretary,
67 Bromfield street, Boston, Mass.

A Winter Meeting of the S. A. F. O. H.

There are doubtless many members of the S. A. F. O. H. who will view with favor the suggestion of Mr. Robert Craig, of Philadelphia, that the national society hold a Winter meeting and exhibition. In later years there seems to have arisen an urgent need of a gathering other than the Summer one, which has gradually become more of an annual outing for pleasure rather than an assembling of business men met for business purposes.

A Winter meeting need not in any way impair a convention held at the time of the year heretofore chosen for such. We can have both, and the business of the Society will be still further promoted by the holding of both. Divest the Winter meeting of the concomitants that usually attend the August gatherings,—president's reception, a magnificent spectacle, doubtless, but a meaningless one, outings, bowling, etc., and come down strictly to a consideration of matters affecting trade interests, barter and affairs more in consonance with the "commercial age" in which we live. For it is impossible to maintain or advance one's business standard by simply indulging the social element in our beings, particularly when commercialism is dominant in every walk of life.

We firmly believe that "a Winter meeting, for business only" is imperative for the future welfare of the S. A. F. O. H., and that it would receive the endorsement and encouragement of the more practical-minded members, which means the large majority, and whose opinions on the subject we shall be pleased to receive for publication in the FLORISTS' EXCHANGE.

Flower Shows in New York.

One of the best and most important lessons taught by the recent horticultural exhibition in New York is that the gardeners and florists of the city and neighborhood are capable of putting on view a display of plants and flowers, unrivaled, perhaps, anywhere in the country. With this knowledge at hand, the suggestion of President O'Mara (at all times practical, and not more so than on this occasion) that the Florists' Club begin to consider the advisability of holding a flower show in the metropolis in the Fall of 1901, is deserving of earnest thought. No one will question the truth of Mr. O'Mara's comments that "New York has reached that stage in matters horticultural when she cannot afford to be without an exhibition of these goods at least once a year," and few, that give the subject serious consideration, but will share in the sanguineness of the president of the Florists' Club regarding the ultimate success of the venture, when viewed in the light of recent experience—so far as the making of an exhibition is concerned, at all events. The matter of its paying qualities, from an attendance standpoint, may, however, create a little doubt in the minds of some of the less optimistic.

The show in the Grand Central Palace, so far as the general public's appreciation of it is concerned, can hardly be taken as a gauge of the city people's interest in such displays, as "society had not yet returned to town," yet there was sufficient evidence that enthusiasm in affairs of the kind was not wanting. With a flower show, well advertised, well managed, well presented at a proper season of the year, and a popular admission price, all of which can be done in New York, were it so willed, we believe no fear need be entertained on the score of patronage.

Courage, brave hearts! give it another trial, and begin work NOW.

New York.

The Market.

We are now in the middle of September and business shows no signs of an improvement. Usually by this time the Summer dullness is beginning to pass away and trade brightens up; this year seems an exception, however. The Summer has been a warm one, still continues so, and we do not look for much change in business circles until cooler weather comes to stay.

On Wednesday morning the thermometer registered a temperature of 87 degrees and a southwest wind was blowing at the rate of 60 miles an hour. This kept up the greater part of the day, and its effect on outdoor flowers, specially asters, has been anything but beneficial. So far, this year, asters have not been up to their usual standard of quality in the New York market, and if the late ones do not show up much better than those already sent in, the chances are that early chrysanthemums will have a good market, when they begin to arrive. Roses are coming in in much heavier supply than the demand for them calls for, and a great many have to be "thrown away," while plenty are sold at from 10c. to 25c. per 100. First-class blooms are scarce, however, and bring better prices.

Noticing some boxes of roses opened one morning this week, we were forcibly reminded of what a Pittsburg retailer said to us during the convention week. "Pittsburg retailers," he said: "do not like to have roses shipped from New York, because the wings have to be plucked before they are salable," meaning that the outside petals have to be torn away because they are bruised by being packed carelessly. The boxes referred to had been filled so near the cover that the outer petals were all spoiled. After taking the pains to grow nice roses, reasonable care should be exercised in the packing to insure their arrival in the market in the best possible condition.

Carnations are a complete glut; many have been sold at 20c. a 100, while a few of the newer sorts have reached $1 per 100. A few bunches of Ethel Crocker have been on the market, and it is evident that this variety is going to be a favorite, its pleasing color making it saleable at first sight.

Asters and gladioli are also a glut and no steady price can be quoted for them.

The holders of lily of the valley are inclined to be somewhat firmer, and from $1.50 to $2.50 per 100 is asked. Buyers are shy, however, and the stock is not moved very satisfactorily.

Cattleyas remain about the same as last quoted. Cypripediums have begun to arrive; 12c. each is the figure asked. Asparagus, smilax and adiantum remain about the same as last week with a fairly good supply coming in.

Among the retailers theatre business is the chief line. The Broadway stores have felt quite an increase in this branch of the trade, some nights the demand being greatly in excess of other years. Uptown stores are not affected much by the theatre trade, however, and some of them are quieter this month than they were last.

Auction Sales.

Cleary & Co., 60 Vesey street, opened the auction season on Tuesday with a sale of palms, evergreens, shrubs, etc.

Wm. Elliott & Sons will commence their season on Tuesday next with a sale of decorative foliage plants.

There will also be offered at this sale a number of cases of Lilium Harrisii, Roman hyacinths, and other bulbs.

Jottings.

Rowehl & Granz, of Hicksville, L. I., are sending quantities of fine dahlias to the city. This firm has recently established a nursery at their place and have a nice stock of young maples, privet, spruce, etc., planted.

Joseph Rölker, who arrived from Germany recently, reports very favorably upon the seed and bulb crops as he saw them while abroad. Mr. Rölker also was very favorably impressed with the palms and sweet bays seen in the neighborhood of Ghent, Belgium. Specimens of the latter are numerous, and the prices run into thousands of dollars per pair.

A. H. Langjahr, Brooklyn, has been enjoying a week's vacation

W. Duckham, Madison, N. J., sailed on the S. S. Umbria last week for a visit to England.

An early delivery of Southern wild smilax was made to H. A Bunyard, who received the first consignment of this vine from the South on the 4th inst.

Toronto.

The Industrial Exhibition.

The show of plants at the Industrial Exhibition, this year, was again in advance of former years. In the section for 50 foliage plants, distinct varieties, the pots were this year limited to 18 inches, instead of any size as in former years, and the change was a decided improvement. The plants shown by Exhibition Park and the Central Prison were about as pretty a lot of clean, well-grown stock as one would wish to see, all of them testifying to careful culture and selection; these two lots were awarded equal first prizes. In the groups of plants arranged for effect, the Horticultural Gardens took first prize, with the best group of plants I have ever seen shown for this prize; they were clean, choice and well-grown, arranged with great taste, every plant to the best advantage, nothing crowded, and yet the effect produced was all that could be desired. The second prize was taken by the Government House with a fine collection; these were rather crowded, but produced a good effect. Third and fourth were taken by Manton Bros. and Grainger Bros. with well-arranged groups of commercial plants.

There was great competition in the classes for large palms, many fine plants being shown. The class for one specimen fern was a good one, there being six plants shown, all good ones; first was taken by Reservoir Park with a fine Davallia Mooreana; second by Exhibition Park with Microlepia hirta cristata; third by Horticultural Gardens, also with a microlepia. All the plants exhibited in this section were over five feet across. The crotons in 10-inch pots were a beautiful lot of plants; the same may be said of the dracæaas in 9-inch pots.

There was considerable competition in the section for flowering plants, and while many good ones were shown, no single exhibit had a full lot of good subjects. In the section for 12 plants about eight were good and the other four poor; this is certainly not as it should be.

A new exhibitor, George White, gardener to Major Pellate, made six entries in begonias, geraniums, fuchsias and selaginellas, and took six firsts, all his plants evidencing first-class cultivation.

The prize winners are about as follows, in the order named;

J. Chambers, Exhibition Park; Wm. Houston, Central Prison; A. Watkins, Horticultural Gardens; Geo. Reeves, Reservoir Park; Manton Bros., Eglinton; L. J. Graham, Goverament House; Grainger Bros., Deer Park; Geo. White; Grobba & Wandrey, Mimico. The judge was Ed. Mepsted, of Ottawa, and his decisions gave general satisfaction, although the competition was in several cases remarkably close. Geo. Miller, the new superintendent, proved his ability to fill the position by having everything staged up to time, and Geo. Vail, the chairman of the committee, is a pleased man that the first part of the show proved so good.

The show of cut flowers at the Industrial exhibition last week was generally good. The floral designs were very good, and gave the judge considerable trouble to decide which should take the honors. In the section for large designs there were five entries, and four of them were a credit to the exhibitors. The first prize was taken by Grainger Bros. with a piece that was quite up-to-date—a Union Jack in natural flowers, with ivy leaves and long-stemmed Lilium lancifolium album, nicely arranged. The second prize went to Dunlop with a very fine wreath on an easel. This piece, I thought, was the best I had ever seen. The third was won by Fred Brown with a lyre, also a very fine design.

Some of the roses exhibited were good, others poor. A few Liberty shown were not at all good; but both Dunlop and W. Muston, who exhibited the flowers, say the plants are growing well.

Carnations were poor; asters good, but all the collections of the latter had a good many duplicates in them, and in the section that called for Truffaut's and Victoria asters, Semple's and other branching kinds were shown.

The collections of annuals were not so good as usual, but the perennials and hardy shrubs were the best I have seen here. Gladioli were very fine. The water lilies were not up to the usual standard; the same may be said of the cut cannas. Dahlias were also poor; the weather was very hot and the flowers soon got *passe*, a good many of them going to sleep before the evening of the second day.

Jos. Bennett, of Montreal, was judge, and with all the keen competition, his decisions were generally considered fair.

The show of fruit was very satisfactory, apples, pears, grapes and peaches being both good and plentiful. The fruit building was so crowded that several extra tables were filled. Geo. Mills was superintendent, and ably filled his position.

Among the visitors to the show were J. Bennett, Montreal; C. Scrim, Ottawa; Wm. Scott, of Pan-American, Buffalo; Messrs. Holt, Morgan and Webster, of Hamilton; Mr. Jordan, Peterborough; Mr. Scott, Orangeville; Mr. Brooks, Fergus; Mr. Prowse, Brantford; Mr. Terrill, Pletou; and others, whose names I did not get.

Messrs. Bennett and Scrim went on to Buffalo with Mr. Scott to view the grounds of the Pan-American.

Trade News.

Business outside the exhibition is still flat and unprofitable. The weather is yet warm and dry, and there is not likely to be much improvement until we get cooler nights and the people come back to town. The city is still full of visitors, but they are not of the flower buying sort.

There is no change in values of cut flowers; the prices on really good stock are stiff, but stock that is not gilt edged can be bought for the buyers' price, generally.

Simmons, of Yonge street, has just finished decorating his store, and a pretty place he has made it. Dunlop is redecorating his King street store; this latter is the handsomest florist's store we have here. T. M.

Montreal.

Trade Notes.

With the return of Society from the Summer resorts, trade is beginning to show signs of life. The principal trouble just now is to secure good flowers. A welcome rain has arrived, and will greatly facilitate the housing of carnations. In many sections the sudden change from very wet to very dry caused the soil to bake and crack in an unusual manner, and made the removal of the plants from the soil impossible..

Chrysanthemums are coming along finely and promise to be of a very good quality. Clematis paniculata is now in flower, and is invaluable in any place where cut blooms are needed.

Horticultural Society Shows.

The first annual exhibition of the Lachine Horticultural Society was held in the Town Hall, August 30 and 1, and was in every way a splendid success. The exhibits were of the highest merit, the amateur section especially so; in fact, these exhibitors entered in many of the open sections and captured several of the honors from the professionals. In plants the hanging baskets of ferns and asparagus cannot be passed unnoticed; the equal of this display has yet to be seen in this locality. In cut flowers, the amateurs were beyond comparison. A table, containing 25 vases of asters, exhibited by Mr. Walker, was superb. The committee did not anticipate such a large number of exhibits or as large an attendance of visitors; in consequence the hall space was entirely inadequate. Another year it is to be hoped the committee will arrange for sufficient space to give the amateurs full consideration. The enthusiasm engendered by the late show should be maintained at any cost. Among the professional exhibitors, The Forest and Stream Club (Tom Mc. Hugh), J. Bennett's greenhouses, C. A. Smith and Willie Hall of Outremont, were conspicuous.

The Montreal Horticultural Society held its annual exhibition in Drummond Hall on Tuesday and Wednesday September 11 and 12. This is a new exhibition hall and an ideal one for the purpose. It is centrally located, and can be procured for a reasonable rental. The exhibit of plants and flowers was very fine, but the fruit and vegetable section fell far below the average of former years in quantity. The place of honor in the decorative sections was easily taken by W. J. Wilshire, his exhibits being fully up to their usual standard of excellence, his specimen hydrangeas being especially worthy of notice. The attendance, we regret to say, was disappointingly small.

Club Notes.

A very small attendance was the feature of the meeting Monday night. A couple of members were proposed; the same members were elected to membership. Two very fine papers were read. John Eddy, a vegetable expert, read one on storing vegetables in Winter. One of the most interesting bits of information it contained related to tomatoes. Mr. Eddy says if the green fruits are taken before frost, spread out on freshly broken soil in the garden and covered with straw to protect from frost, they will keep in perfect condition until January; when taken inside they will ripen in a few days, and their flavor will be unimpaired. A. C. Wilshire read a paper entitled: Ferns for Florists' Use; the varieties with ironclad constitution that he could confidently recommend were Aspidium tenuisimum, Cyrtomium falcatum, Polypodium nuremm, Lastrea chrysoloba, Pteris cretica, P. serrulata, P. tremula, P. Ouvernardii, Polystichum angulare, Nephrolepis exaltata bostoniensis, N. exaltata and N. cordata compacta and Gymnogramme chrysophylla. B.

Omaha, Neb.

Omaha still swelters, and consequently a dullness in trade remains. But everybody is cheerful because cooler weather is on the way. B.

The Donaghues, Sr. and Jr., spent several days shooting in the sandhills and bagged 140 prairie chickens and ducks. B.

(186). **Fruit Tree Seedlings.**—Can you tell me what the duty is on fruit tree seedlings imported from France? Or are American-grown seedlings just as good? Which is better, French or Japan pear seedlings?—W. S. N.

—American-grown seedlings are just as good as those produced in any other country. The duty on importations of seedlings, three years old or less, is $1 per 1000 plants and 15 per centum ad valorem.

(187) **A Beautiful Weed.**—I send you by same mail a sample of weed growing between here (Moneta) and Redondo, Cal. There are acres and acres of it. It is growing in the sandy land and where nothing else will grow, the soil is very dry at this season and unusually so this year, owing to the drought. Moneta is about 12 miles from Los Angeles; and Redondo is six miles from here, on the sea coast.

The specimen flower is rather a poor one, as it would make too bulky a package to send you a large one through the mail. In color it is white and of different shades of pink. The plant grows from a foot to three feet in height. It makes a beautiful sight in the morning when wet with the early dew.

Please state through the columns of your paper whether it has any commercial value, and give the correct botanical name, and greatly oblige, J. J. DEAN.

—The name of the plant sent is Eriogonum vimineum.—G. W. O.

(188) **Wintering Celery Without a Cellar.**—C. HASS.

—Dig the celery at the approach of Winter and pack it carefully into a trench. The following from "Celery Culture for Profit," by Greiner, tells how to make such a trench: "We throw out a trench four feet in width, putting half the dirt on each side to facilitate covering. The trenches are just far enough apart to drive between and unload from each side. A board is run through the center of the trench to prevent the celery from crowding together too closely. The upper edge is about on a level with the top of the celery. If not packed too tight, it will keep longer without rotting. The trench is dug two feet deep, more or less. Rafters are cut from two by four scantlings (hemlock or chestnut), at an angle that will bring the peak or ridge four feet from the bottom of the trench. Generally, three boards, a foot wide, will cover each side. Ventilators are made from common fence boards, inserted at reasonable distances, and in severe weather stuffed with litter to exclude frost. For about two weeks after storing, celery will 'sweat' and throw off a great deal of moisture. We therefore slip the roof on as soon as we can after filling the trench, to keep off rain, and leave the soil covering off as long as we dare. At the approach of real cold weather we simply put about a foot of earth all over the roof. With rafters four feet apart we have no trouble about the roof settling under its weight."

(189) **Noisette Roses.**—Will you kindly give the following explanation in the columns of the EXCHANGE? There is a class of roses termed the "Noisette." What does the word "Noisette" mean, and how did it originate? Also give list of roses included in this class. A full history would be greatly appreciated and settle an argument.—JOHN SMITH, Buffalo, N. Y.

—The word Noisette is obtained from the name of a French gardener who, in the year 1817, produced a hybrid between the China and the musk roses and called it the Noisette, after his own surname. This took place at Charleston, South Carolina. Many fine varieties have sprung therefrom, the chief characteristics being a very vigorous growth and the flowers coming in clusters. Ellwanger, in his book on the Rose, says that John Champney, also of Charleston, South Carolina, raised a variety from the seed of the white musk rose, fertilized by the blush China, which was called Champney's Pink Cluster. A few years after, viz., 1817, Philippe Noisette raised from the seed of Champney's Pink Cluster a blush variety, and sent it out under the name of the Noisette rose, not giving credit to Mr. Champney as the originator of the class. The same writer also says that these roses originally had the characteristics of the old musk rose, such as scent and a tendency to bloom in large clusters. The group is naturally of strong growth and nearly hardy, but the varieties which are now commonly grown have generally tea blood in them, and have, therefore, lost much of their hardiness, as well as the habit of blooming in clusters. Among the true Noisettes are the following varieties: Aimee Vibert, Beaute de l'Europe, Caroline de Marniesse, Celine Forestier, Elisa Boelle, Lamarque, Marechal Niel, Ophirie, Solfaterre, Triomphe de Rennes, Eugene Pirolle, Beauty of Greenmount, Fellenberg, Pumila, Washington, Woodland Marguerite.

(190) **San José Scale on Apple Trees.**—W. O., Patchogue, N. Y.

—I regret to state that the leaves which you send are affected with the San José Scale (*Aspidiotus perniciosus*). You will find a full account of this insect, together with a consideration of remedies, in Bulletins Nos. 3 and 12, New Series, of this Division, copies of which will be sent you under separate cover. All badly infested trees should be dug up and burned. It is too late after the trees are in bloom or foliage to apply the strong Winter applications necessary to exterminate this insect. It is possible, however, to keep the scale in check by spraying with weaker washes once or twice during the Summer as a preliminary to the more rigorous Winter applications. The soap treatment may be given at the rate of a half-pound of whale-oil soap to a gallon of water, or a kerosene emulsion treatment at the rate of one part of the emulsion to ten of water. I am sending you a copy of Farmers' Bulletin, No. 19, which will acquaint you with the method of preparing kerosene emulsion. You will also find, in the Bulletins on the San José Scale sent to you, a description of the Winter treatment for this insect. The Winter treatment can be applied shortly after the leaves fall and the trees go into a dormant condition and thereafter at any time prior to blooming the next Spring, late treatment being apparently less injurious to blooming and fruiting than early treatment. Before applying the Winter treatment to the dormant trees, it is advisable, as a saving of expense and time, to cut them back pretty severely, burning the cutting immediately.

Before applying any treatment, either Winter or Summer, all the trees, especially those near the infested ones, should be very carefully examined, and, if found to be infested, even in the smallest extent, they should be treated as indicated, boiling up the soap in water until it is dissolved. The solution should be applied moderately warm with a spray pump or brush all over the infested trees which are to be treated. The greatest care must be used to cover every particle of bark, otherwise some one scale or half-dozen scales will escape and restock the trees. The infested trees, which it is advisable to destroy, should be dug up and burned before they have leaved out. The young scales will not hatch and spread until some time after the trees have come out in leaf. In their Winter resting stage they cannot spread from one plant to another. Digging up and burning the trees is the best method of getting rid of the scale.

[Professor] L. O. HOWARD.
Division of Entomology.

Group of Delegates attending recent Montreal Convention of Canadian Horticultural Association.

Pan-American Notes.

Since my last notes great progress has been made in every department. The rains of last month have had a very beneficial effect on grass, trees and shrubs. A large area that was, even in July, the most formidable clay banks, is now finely graded and covered with grass as green and smooth as the proverbial billiard table. The nymphæas planted in numerous pools in July are making a fine growth and many of them flowering.

Mr. Ulrich, the landscape gardener, is now busy placing groups of herbaceous plants on the margins of the shrubbery borders. Properly, he is not mixing up indiscriminately a great many species, but is putting groups of one species and variety here and there. This is as our hardy plants grow in the temperate zone, in colonies, and not a hundred species in a few square yards, as we find in the tropics. Mr. Ulrich has over 200,000 of these herbaceous plants, and they must add immensely to the appearance of the grounds next Summer.

The Horticultural Building is in course of erection. The two conservatories leading on the north and south to the Forestry and Mines and Graphic Arts are already completed, and will be heated so that they can be utilized by New Year's. Although not modern constructed conservatories, they have all the requisites to the growth and welfare of any plants, and will be seen and used by everyone. Many of the fine beds in the Grand Court and the Sunken Gardens are now assuming shape. The grading is practically done in the Esplanades and the Fore Court, and on the banks of the Cascades. The United States Building will soon be roofed in. This is a most beautiful and imposing structure.

At the rear of the Government Building, just across the Canal, the Department of Agriculture under the direction of Prof. J. Lamson-Scribner, and executed by Mr. Ball, of Washington, has made an exhibit of all the useful grasses of the United States. The plot covers one acre and a half, and every kind of grass used in the States and Territories, even to sand binders, will be found here. This display will be of great value to agriculturists, and Mr. Scribner informs me that the department has never made a similar exhibit.

The horticulturists of the country will be pleased to hear that many large entries are received. J. C. Vaughan, of Chicago, has about half an acre devoted to an exhibit of lawn grass, on which there are half a dozen very fine beds. Just at the north of that, Peter Henderson & Co., New York, have a similar plot. These are finely situated, being close to the Midway. By the side of the main entrance is a similar exhibit by Henry A. Dreer, of Philadelphia, and near by a local firm, Whitney-Eckstein Co., have another plot. F. R. Pierson Co., of Tarrytown, has entered for a very large exhibit of choice trees, shrubs and plants, and numerous other firms have also entered for exhibits.

The Albright Art Gallery, which will be a white marble palace, is being rushed with all speed, and although time will forbid its entire completion, it will be sufficiently in shape to serve its purpose during the Exposition. The New York State Building, which will be given to the City of Buffalo for a historical building, is going up rapidly. It is beautifully situated, overlooking the North Bay in the park proper.

Large beds of hardy roses located in the Music Garden have made a most excellent growth. They were planted fully six weeks later than the proper time, but with good care they are going to be a great success.

This is very encouraging, as it tells us what we can expect from other exhibits when planted at the proper time. Any doubts as to the Exposition being ready

on time are now dispelled, particularly by those who have watched closely its progress. Every building is nearing completion. One of the largest buildings, Machinery and Transportation, is covered with staff and coloring is commenced. The buildings are now seen from several of the railway lines entering Buffalo. It is pleasant to hear from visitors who were well acquainted with the progress of the World's Fair, that in preparation in all departments we are away ahead of that great institution. Some enthusiastic horticulturists have ventured to say "You have got the World's Fair beat already." This may sound a little boastful but, mind, we did not say it. I can only repeat that when completed, and the 150 acres of Buffalo's beautiful Delaware Park are thrown into the grounds of the Exposition, it will, in point of beauty of landscape and agriculture, be hard to beat. WILLIAM SCOTT.

"A Mechanically Constructed Coil Boiler."

Since the appearance of A. T. Hoyt's article in the Florists' Exchange (see page 643, issue of June 30), several inquiries have been received asking a description of such a boiler as the gentleman then referred to. Mr. Hoyt furnishes the following instruction regarding the making of an octagonal-shaped coil boiler, recently constructed by him for a grower near New York, and which is in practical operation, with evident satisfactory results.

AN OTAGONAL-SHAPED BOILER.

The first thing to be considered in the construction of this coil boiler is the furnace. A furnace four feet wide and seven feet long, inside measure, will hold a coil large enough for a five-inch flow and a five-inch return; an eight by four-foot furnace, a six-inch main flow and return, and a six by four-foot furnace, a four-inch flow and return.

The furnace is carried up so as to form an ash-pit (under grate bars), the grate bars being about four feet long, leaving a hearth back of the bars about two inches higher than the grate bars (no bridge wall). The wall is carried about three inches higher than the hearth before the pipe commences.

The start is with three pipes from a four-inch manifold outside furnace. The first pipe, or No. 1, passes from the manifold through the furnace wall, with a 90 degree, or square, elbow, on its end, and just far enough inside to admit a pipe in the elbow running backwards toward back end of the furnace. That will leave about two and one-half or three inches space between it and the furnace wall. On the end of this pipe is a 45 degree elbow, and from this point the shape of the coil, 45 degree or eight square, commences. The end and side pieces of the pipe are about one foot nine inches, and four feet six inches long, respectively. The corner pieces are about sixteen inches in length.

The coil is carried around the furnace about three inches from the wall on an incline.

The second coil, or No 2, starts from the manifold in a similar manner and goes through the wall far enough past coil No. 1 to run another coil similar to No. 1, with about two and a half or three inches space between it and No. 1. This coil is on the same level and incline as No. 1.

The third coil, or No. 3, starts from the manifold, and is carried far enough past coils Nos. 1 and 2 (also with a square elbow on its end) to run a coil similar to Nos. 1 and 2 with about two and a half or three inches space between the pipes.

Run these coils nearly once around the furnace, then carry up the wall so as to have it high enough to start three more coils of pipe from another manifold going into furnace at side and on top of coils Nos. 1, 2 and 3, with about two and a half or three inches space between the pipes. These three coils are similar to the three coils already described.

The first three coils (Nos. 1, 2 and 3) will have incline enough to clear the top of the second three (Nos. 4, 5 and 6) at their entrance into the furnace. This incline leaves the bottom of the coils clear of the grate sufficient for firing.

Each coil has a circuit of about four times around the furnace, four and one-half times if the coils leave the furnace on the opposite side from their entrance. The latter is the best, as it holds up the coil from the top better than when the pipes go out on the same side as their entrance. They all leave the furnace at top in a similar manner as they enter, and go into two manifolds (three coils in one manifold). These coils at the start are blocked up at the bottom (these blocks burn out), and are run on an incline throughout their entire length. The coils are kept apart by a casting or loop that is put on to one coil, and the other goes through it. The loop is simply a light casting with a hole at each end large enough to easily slip over the pipe, with about two and a half or three inches space between the holes.

A forty-five degree coil will settle or stretch if not supported at the bottom or hung from the top, and these loops stop that action.

The two outside manifolds at the bottom connect to the return main, and it is a good plan to drop the main so as to make a catch basin just at the furnace, and come up to make the connection. A gate or globe valve at the low point, if opened occasionally, will carry off all dirt that would otherwise enter the coils. The two upper manifolds connect to the flow main, and the main should be as high as the upper manifold. A good idea is to hang a short pipe from the under side of the flow main close to furnace and have a valve on it. This will clean the main of all dirt.

The circulation in these coils is strong and carries all dirt with it and dumps it into the main, and a pipe as described will clean the main.

A coil-heater, like everything in mechanics, to be effective, should follow mechanical laws, and one fundamental law of mechanics is that something cannot be made from nothing. Water absorbs heat and also at the same time receives a motion, and this motion is always first directed upward. The motion is the circulation, and the theory of water circulating through piping from a simple difference in the temperature is simply something from nothing. All the circulation ever obtained is the motion the water receives while heating, and the more motion received at the heat point contact the more heat the water absorbs. Fire or heat directly under the water gives the greatest motion, and consequently the greatest heat. The motion from the heat being upward, an inclined pipe is more favorable to circulation than a horizontal pipe. The circulation is strongest in a forty-five degree inclination and lessens in anything above or below that elevation. Water at the side of the heat point contact absorbs very little heat and consequently has very little motion or circulation. As water absorbs heat more readily when in motion one of the valuable points of the forty-five degree coil is manifest.

The forty-five degree bend virtually stirs or churns up the water, at the same time offering only a slight check to the circulation, and its heating qualities from this source are far ahead of a square or circular coil.

Use cast-iron fittings and carefully examine them for cracks or sand holes, and if the manifolds are far enough from the side of the furnace, or if the pipes are connected to manifolds with unions, and if any break should occur in one coil, that coil could be cut out and the plant run with the other five; or if two-inch gate valves were on each pipe going into and out of the furnace any break could be stopped by cutting out that pipe. The most economical pipe for a coil heater is one and one-fourth-inch pipe, mechanically considered, but two-inch pipe being heavier, has greater lasting qualities.

This type of a coil heater can be built of one and one-fourth or one and one-half-inch pipe, but the furnace need not be so large and not so many feet of pipe need be used in each coil as in two-inch. All forty-five degree elbows are not tapped true, and in building this kind of a coil it is frequently necessary to bend some of the pipe to preserve order.

Another type, easier to make than this, but not so good, will be described later.

There is an opening in the center of this coil boiler that extends up through it, and an iron plate covering the opening on the top about two inches above stops the greater part of the fire from passing up through the center opening. The chimney opening is placed at back and top of furnace; clean-out doors are on each side of the furnace and near the top. These are valuable, as soot will stop the effectiveness of any construction.

The coil boiler should be run with slow combustion, and when a good fire is obtained it can be shut up quite tight, and still be strongly effective for a long time. The same principles will apply in constructing a coil as are shown in economy in water heating, namely, small pipe; but if durability cuts any ice then two-inch is about the smallest size to use, and this should be full weight, black or wrought iron, and not light-weight steel pipe, of which the market is full. A. T. HOYT.

BRIEFS FOR BUSY FLORISTS.

ROSES that are being grown for the second or third year are pushing well into growth now, and at this stage are very susceptible to mildew, therefore care must be exercised in giving air. Leave on just a crack of air through the night if possible; also be sure to have the foliage dry every day before the sun sets, by doing the syringing and watering in the early part of the day.

If the benches have not already had a good top-dressing of some rich material, it should be given now. Rotted sods and well decomposed stable or cow manure in equal proportions make an excellent top-dressing and two or three inches deep on the surface will not be too much to put on. If feeding is to be given in liquid form, however, it should be commenced in a weak form and only afforded at intervals of several days, increasing it in strength as the foliage becomes more abundant. Start the fires as soon as the nights become at all chilly. It is very poor economy to save a few dollars in coal, and lose a month's growth on a house of roses; therefore, put on the fires when necessary whether it is earlier or later than the time they were started in previous years.

HYDRANGEAS that were planted outdoors during the Summer may be lifted and potted at any time now. Have one-fourth of well-rotted manure in the soil used for potting, and let the plants stand in a shaded place for a few days to prevent the foliage from wilting and falling off prematurely. By lifting them now, and getting them established in the pots before growth ceases, they will respond to being forced for early work much readier than if allowed to finish their growth out-doors and then potted up while in a dormant condition. Should they not be wanted for forcing, but rather for early Summer work next year, they can be left where they are until October, then lifted and potted and kept in a cool place until next March.

PELARGONIUMS.—Plants that are kept to produce next year's stock should be watered just enough to hold their foliage; then when the fires are started and bottom heat obtainable, the cuttings can be taken and rooted with more certainty. At the same time the old plants can be shaken out, the roots reduced, and potted over again if it is desired to keep them to produce another crop of cuttings, or to be grown along as specimen plants.

Aquatic Pond in Washington Park, Chicago, showing Victoria Regia, Euryale ferox, Water Lilies, etc.

OBITUARY.

William Saunders.

William Saunders, Superintendent of Experimental Gardens and Grounds, Department of Agriculture, Washington, D. C., died at his home in that city, on Tuesday, September 11, aged seventy-eight years.

Mr. Saunders was born in St. Andrews, in the county of Fife, Scotland, in 1822. His father was a gardener, whose employer for the most part of the time was absent in India, the gardener occupying the mansion during the absence of its owner. Amidst these refined surroundings the early boyhood of Mr. Saunders was spent. Originally he was intended for the Church, but his natural inclination was towards the gardening profession, which he entered after completing his education in various colleges, serving an apprenticeship of four years. His apprenticeship completed, he moved to London, where he secured employment at his business under the famous gardener Kinghorn, at Richmond. In spare hours he perfected himself in architectural and map drawing, fitting himself for the position of landscape gardener. In London he made the acquaintance of Professor Meehan, then at Kew, and the friendship then begun has been lifelong.

After his marriage in London he crossed the Atlantic, his first great work in his adopted country being the laying out of Clifton Park, an estate of 400 acres, belonging to Johns Hopkins, Baltimore. The designing of Fairmount Park in Philadelphia was also his work, as was that of the National Cemetery Grounds at Gettysburg.

In 1862, when the Agricultural Department became a separate institution of the Government, Mr. Saunders was appointed by Mr. Isaac Newton, the First Commissioner of Agriculture, superintendent of the Experimental gardens and grounds, a position which he held till his death. He had seen this department develop from a dubious experiment to a vigorous and substantial branch of the Government, in which development he himself had been largely instrumental. The grounds about the buildings, the most artistic and beautiful of any in the city of Washington, were laid out by his hands, and the trees in the Arboretum have grown to maturity under his loving care. Through his direct instrumentality nearly all of the tropical fruits have been introduced into the United States and are being grown with success and profit, one of the most valuable introductions being the seedless orange.

In 1867 Mr. Saunders originated the order of the Patrons of Husbandry, otherwise known as the Granges. He was the first master of the order, but resigned under pressure of his official duties.

Deceased was a typical Scotsman, of tall and massive frame. In his intercourse with the public he was genial, cordially responsive and held in high and loving regard by all his associates. He was a prolific contributor to the horticultural magazines, and the fact of his having been educated for the ministry was, no doubt, responsible for the seriousness and earnestness of his character and his literary tendencies. He rendered the city of Washington valuable services on the Parking Commission, having planned the principal parks of the city, and assisted in furnishing its streets with shade trees.

Mr. Saunders was a man of considerable family, having several grown sons and daughters, one of the former being interested in floriculture in Washington, another in Maryland, and a third engaged in the orange industry in Florida. Mr. Saunders had been in failing health for some time, but had been confined to his bed little more than a week, and absent from his duties less than a month.

We are indebted to Professor Galloway for the following:

A meeting of the associates of Mr. Saunders was held in the office of the Secretary of Agriculture, Tuesday afternoon, September 11. In calling the meeting to order, Secretary Wilson said: "You have learned, gentlemen, that our friend Mr. Saunders, who has been connected with the Department longer than almost anyone else, has been called to the reward of all good men.

"While we are here in the Department we are bound up in duties that bring us into very close relations, and when one is taken away, it is the universal sentiment that what we can say or do to recognize his worth as a man and a fellow-worker, it is right and proper for us to do. That is why I have called you to my office this afternoon, and I am now ready to listen to any suggestions you may have to offer."

Dr. B. T. Galloway said: "I have known Mr. Saunders for about twenty years, and have been personally associated with him for about fifteen. He was a man of strong convictions, and his personality has had a remarkable influence on horticulture and agriculture in this country. Mr. Saunders was a prolific writer and for a number of years was the editor of several important horticultural journals. About the beginning of the war he came here, at which time these grounds were without ornament of any kind. The result of his great labors we see about us to-day."

A committee consisting of Dr. Galloway, Dr. L. O. Howard and Dr. A. C. True was appointed by the secretary to draft suitable resolutions. The committee reported the following:

In the death of Mr. William Saunders the Department of Agriculture has lost a faithful and efficient officer and American agriculture and horticulture a true and trusted friend. As superintendent of the gardens and grounds of this Department for more than thirty-five years, and as a promoter of many important agricultural and horticultural

THE LATE WILLIAM SAUNDERS.

lines of work Mr. Saunders' name has become famous throughout the land. His ability as a landscape gardener was universally recognized, and his knowledge of plants, from a strictly economic standpoint, was of a most thorough kind. The beautiful Department grounds are a monument to his skill, and some of the most choice varieties of fruits which now bless our country are the result of his keen insight into horticultural work.

Mr. Saunders was a man of sterling honesty, manifesting a strong interest in the progress of our country and the advancement of the man at the plow. In his desire to benefit the farmer, he was the organizer of the Patrons of Husbandry or National Grange and a number of other Associations which have had a marked influence on the country's welfare.

To the world Mr. Saunders was noted for his strong convictions as to what was right. A good husband and father, an estimable citizen, his loss will be felt by all who knew him. Therefore, be it

Resolved, that the sympathies of the officers of the Department of Agriculture and other associates of Mr. Saunders be extended to the widow and family of the deceased, and that a copy of this minute and resolution be transmitted to them.

In moving the adoption of these resolutions Dr. Howard said: "I have known Mr. Saunders for twenty-three years. He was one of the rare men of his time, and made his personal impress upon everybody with whom he came in contact. I think his death the greatest loss the Department has sustained since its foundation."

The resolutions were adopted by a rising vote. Those present besides the Secretary of Agriculture were Dr. Salmon, Col. Andrew Geddes, Chief Clerk, Drs. Galloway, Howard, True, Wiley and Palmer, Mrs. Silliman, and Messrs. Evans, Hyde, Williams, Hitchcock, Handy, Smith, Arnold, Pearson, Dewey, Luebkert, Whittleton, Harvey, King, Pieters, Kerr, Shatswell, Halley, Haggerty, McKericher and Perry.

Show at Ridgewood Park, L. I.

The twelfth annual horticultural exhibition of the Schwaebischer Sangerbund, Brooklyn, was held at Ridgewood Park, September 2, 3, 4, 5 and 9, and again proved a decided success. It is remarkable the fine show made by the florists here every year. The extensive lawn is changed in a few days into a regular paradise, and attracts many thousand visitors. The center attraction of this year's exhibition was, as usual, the high column made of vegetables, the work of F. Marquardt, of Middle Village, who deserves great credit for his skill. The column was from 50 to 60 feet high; around it were the different exhibits, all arranged in beds of various shapes and sizes.

There were three carpet beds, each one planted very carefully and of pretty design. In this competition F. Marquardt got first prize, $50.00; Wm. Nillson, Woodlawn, N. Y., second, $40.00, and third, $30.00. In cannas there were four competitors, A. L. Miller of Brooklyn, carrying off first prize; F. Marquardt, second, and A. Schrader, of Newtown, third. The Cottage Gardens, Queens, received a diploma for canna, Black Beauty. In the center of a bed of this variety, Mr. Ward placed some Kate Gray cannas, the flowers of which contrasted beautifully with the foliage of Black Beauty. Around the whole was a row of variegated phrynium. Mr. Miller had some very fine varieties in his bed, one of his seedlings calling for particular notice on account of its magnificent bright color.

Some fine beds of geraniums were in competition. Fritz Marquardt got three first prizes for one bed of white, one of salmon, and one of mixed; N. Rothar, first for a bed of scarlet, and A. Schrader two second prizes for one bed of salmon and one of scarlet respectively.

In the class for bedding begonias three competitors entered. H. Maenner, Maspeth, was awarded first prize, Wm. Brennecke, Hempstead gardens, second, and F. Marquardt a diploma. Two beds of Salvia splendens made a fine showing and drew great crowds; F. Marquardt got first in this class; A. Shrader second. Asters were represented in two fine beds, and were much better than expected for the present season. Both were exhibited by Wm. Kalfour, Brooklyn. One of the finest beds was that of coxcombs exhibited by F. Marquardt, and the first prize was well deserved. The same exhibitor had also a fine bed of Vinca alba and rosea, for which he received first prize.

Carl Koch, of Flathush, had a fine group of excellently grown Ficus elastica, for which he received first prize; M. Lawler, Flushing, being awarded second, and F. Marquardt a diploma. Parsons' Kissena Nurseries, the Bloodgood Nurseries and Bobbink & Atkins had each fine groups of conifers, the latter getting first prize; Parsons second and the Bloodgood Nurseries a diploma. Two beds of different foliage plants, exhibited by A. Schrader, attracted much attention, and the first and second prizes were well deserved. In coleus, A. Miller had a fine collection, as had A. Schrader; the former getting first and Schrader second. Fred Marquardt got first prize for a bed of coleus, arranged for effect; H. Maenner received a special prize for a bed of acalypha, and A. Schrader a similar award for a bed of torenia, which showed good cultivation. These plants deserve to be grown more generally. Water lilies were exhibited by A. Shrader, for which he received first prize. H. Maenner had a bed of roses in bloom, which were much admired.

M. Lawler had the biggest group in the show, consisting of palms only. This group was well arranged, and its owner awarded a special prize. Besides these groups, specimen plants of cycas, allamandas and bay trees were used for effect.

As a whole, the exhibition was a worthy one, and showed what unity can produce when led by the right spirit. A. Shrader, as manager, took the greatest pains to have everything in good shape; and the speech made by the president of the Saengerbund, Mr. Aichman, showed that everything was highly appreciated.

Next year the Sængerbund will celebrate its silver jubilee, and special efforts will be put forth to make it a memorable affair.

Messrs. Fred. H. Dressel, Carl Wœrner and J. L. Schiller officiated as judges, and the treatment which they received from the Sængerbund was, indeed, royal.

Boston.

The Market.

There is little change in business conditions, although a slight movement among the city florists is noticeable. Already the retailers report their customers returning; though the number is small as yet, still the reappearance of faces not seen at the stores for three or four months, requesting the return of their plants, which have been boarding at the greenhouses all Summer, is a certain indication of the passing of the dull season. All stock is very plentiful, and very little sought after. Now and again, some funeral work helps deminish the supply of flowers for the time being, and a few small wedding decorations have occasioned a light demand for showy stock.

In roses, Beauty fetches from $2 to $12.50 per 100, specials making $16 to 20. Bride, Bridesmaid and Meteor are in heavy supply, rather an overstock; the quality, though improving, has not reached a very high standard as yet. Prices range from $1 to $4 per 100. Carnot and Kaiserin are of better quality; and are in supply to meet what demand is experienced for them.

Carnations are becoming more abundant, but are still mostly short-stemmed and have only a light call, fetching 75c. to $1 per 100 for ordinary grades. Asters continue in plentiful supply, and the quantity disposed of makes hardly any noticeable diminution of the heavy shipments. Prices vary from 50c. to $1 per 100 for the extra large long-stemmed Semple variety, smaller grades making 25c. to 50c.

Here and There.

Edward Hatch entertained a few of the Old Guard on Saturday, at "The Windmill," Wenham, Mass. A very pleasant day was spent.

Henry M. Robinson & Co. have made arrangements for handling a heavier stock of hardy supplies than before, and feel better able to cater to their increasing trade in this line.

The house of Nephrolepis exaltata bostoniensis is at L. H. Foster's, Dorchester, though not quite so far along as is usual at this season, is in excellent shape, plants being strong and healthy. Three of the old houses have been torn down and rebuilt this past Summer, which delayed the planting somewhat, thus accounting for the plants being not so much developed.

A call was made at the E. S. Whitten place. Mr. Cotter was unfortunately not at home. The rose houses are in very good shape. The first crops of Bride, Bridesmaid and Liberty are fully up to the high standard of the stock produced by this establishment. Carnot, Kaiserin and Beauty, too, are looking fine, and give promise of a good cut.

At W. H. Elliott's, Brighton, the last of the old houses were torn down and modern ones built to replace them this past Summer, and one new house erected. The large asparagus house has been planted, and this work in the second one is well along, the lower part being planted to asparagus and the upper part to chrysanthemums. The rose houses and fern house are in first-class condition.

N. F. McCarthy & Co. hold their first Fall sale on Friday, selling palms, ferns, rubbers and a fine assortment of carnation plants, including several of the best commercial varieties.

"Tim" Waters, representing G. A. Sutherland, has just returned from a trip through New England. He reports quite a lively Fall opening. "Tim" started for Maine Monday evening.

Jas. Files, Portland, Me., was in town this week.

Cleveland.

Market Notes.

Market conditions remain practically the same as at last writing. The supply of flowers is large, and wholesale dealers report trade dull. Roses are improving in quality; longer in stem and of better color; some good Beauty are offered and the best blooms bring 15c., seconds 10c. and 12c., and short stem stock 5c. to 8c. Meteor are of better color than they have been, but are yet short in stem. These and all other tea roses sell at $2 and $3 for second grade, and $4 and $5 for first grades.

Carnations are plentiful and the blooms still small, but of better color. The flowers of many varieties still show the marks of hot and dry weather. The ruling price is 50c. to $1 per 100; retailing at 25c. and 30c. per dozen. The supply of asters is shortening up, and good bright flowers find ready sale. These, too, show the effects of Summer weather, and from present indications it will not be long until this popular flower is out of the market for the present season. Prices now obtaining are $1 per 100 for ordinary stock; extra blooms fetch $1.50. The retail price remains the same as last reported—50c. per dozen.

Tuberoses are abundant and sell at $2 and $3 per 100. The rates on gladioli are the same as before, viz., $1.50 per 100 spikes.

Notes.

H. M. Clair, Jr., representing S. L. Allen & Co., Philadelphia, manufacturers of "Planet, Jr." garden tools, was in town for several days this week.

C. L. Washburn, of Bassett & Washburn, Chicago, was also a visitor Wednesday.

The following item appears in the Cleveland Press of September 11:

"W. H. Gaffney, aa Erie street florist, filed a petition in bankruptcy in the United States court, Monday. He places his assets at $635 and his liabilities at $1,231."

Mr. Gaffney has been operating a retail flower store at 297 Erie street since 1896. Previous to that time he was in the employ of W. H. Beaumont, a former Cleveland florist, for a period of 16 years.

H. J. Bradbury, with J. M. Gasser, returned on Monday, 3d inst., after an eight weeks' visit at Detroit and other Michigan points. Detroit is Mr. Bradbury's home; his father, J. H. Bradbury, is a prominent grower and retail florist in that city.

F. M. Smith, of Smith & Fetters, left on Wednesday evening for New York and other Eastern points. He expects to be gone for a period of two weeks, and will spend several days at his old home, Bristol, Conn.

H. D. Stehr, who has been in the employ of J. M. Gasser some time past, will open a flower stand in the Arcade on September 15.

A Handsome Flower Store.

The store of Smith & Fetters, at 148 Euclid avenue, has for several weeks past been undergoing some extensive alterations, and the improvements effected make it one of the most attractive stores in the city. It quite outdoes any establishment of its kind in this section of the country. The interior has been entirely refinished, and presents a very beautiful appearance. The fixtures are finished in ivory and gold. The shades of color used on the walls and ceiling are very delicate, and the combination equally effective. The side walls are done in a pale Nile green, the ceiling in pale yellow tint; the cove is finished in three colors—shaded tints of Nile green, pink and yellow. At the base of the cove, and extending entirely around the room is a row of incandescent lamps, producing a very desirable lighting effect. The interior of the ice box is entirely of mirrors. At the right of the ice box is a ladies' writing room—7 x 8 feet—elaborately furnished; the ceiling is pale yellow, the side walls in pale Nile green, with panels of a delicate shade of rose pink. This room is lighted with a three-light chandelier. The floor covering is Brussels carpet of very brilliant pattern.

From the ceiling of the main room are suspended two elaborate brass chandeliers of seven lamps each. The floor covering of this room is a Nile green and yellow-figured linoleum. The work room has been removed to the basement. In the rear of the store is a conservatory, 20 x 20 feet, which affords ample space for display of pot plants, ferneries, palms, etc.

G. H. T.

Providence, R. I.

State of Trade.

Business has been quiet with us here for several weeks. People are returning to the city; the theatres are opening for the season, but business does not really start until we have had a good hard frost, and the storemen think they have been having one all Summer.

Asters have done very well with a few of the growers. E. E. King and N. D. Pierce bringing in the bulk used in this market. The flowers are sold all the way from $1 to $1.50 for No. 1 stock down to a few cents per 100.

Carnations are scarce and very poor in quality. Roses are fair, though rather small. Outdoor stock has suffered much from the long continued dry spell. Carnations in the field have made little headway since planted out, and a number of growers will have to buy stock to fill their houses. Violets are doing well.

Early Chrysanthemums.

E. E. King brought in the first chrysanthemums of the season, an early white variety similar to Bergmann They do not find a ready sale, however, for there are so many good white asters to be had cheap.

Fred Hoffman reports everything looking fine at his place. He is making a few improvements, putting a tile floor in his office.

T. O'Connor has the sympathy of the trade in the loss of his daughter, whose funeral occurred August 31.

The September exhibition by the R. I. Horticultural Society of fruits, vegetables and flowers, will be held in Tillinghast Hall and Annex, 283 Westminster street, September 18, 19, 20. Lothrop & Higgins, the dahlia growers of East Bridgewater, Mass., offer a special premium for best collection of dahlias shown by amateurs.

A.M.

Cincinnati.

Business is not booming as yet, but in a week or so we expect it to commence, as the Fall Festival opens September 19, continuing until the 29th.

Thursday afternoon about fifty of the craft assembled at the residence of Mr. and Mrs. Julius Schuman, where the regular monthly meeting of the Florists' Society was held. After the business session a social time was enjoyed. A committee was appointed to draft a schedule for the regular monthly shows, commencing with the November meeting.

J. A. Evans was a caller this week.

We are still having hot weather; 90 degrees is a good average. Quite a number of the craft are on the sick list.

E. G. G.

Cryptomeria Japonica (JAPAN CEDAR), strong plants, from 2 inch pots, at $5.00 per 100; 20 for $1.00.

Asparagus Sprengeri 2 inch, strong, $2.50 per 100. Satisfaction guaranteed.

New Miniature Rose **"SNOWFLAKE"**

A money-maker for Florists. GENUINE SNOW IN SUMMER.

THIS entirely new POLYANTHA ROSE is especially suited for growing in small pots or pans for store trade and decorative purposes. The dainty pink buds and full white flowers, carried in clusters of 10 to 40, at once captivate the attention of the customer. It forms a complete corsage bouquet quite by itself; blooms in 2 inch pots, and "forever afterwards" every bud opens well if placed in water, and keeps for days.

As a dwarf hardy bedding rose and for border edging, no other rose could excel it, being continually in bloom throughout the entire season.

The high praise bestowed upon this **new rose** has induced us to introduce it for the originator.

Not more than 5000 plants will be ready for delivery on December 1st. Send for photos.

Price, for plants from 2 inch pots, $15.00 per 100, $2.50 per 12; from 3 inch pots, $25.00 per 100, $4.00 per 12. Rooted cuttings, $10.00 per 100.

Asparagus Sprengeri Plants in 2½ in. pots, ready for 3½ in., $4.00 per 100; $35.00 per 1000. Plants in 3½ in. pots, ready for 5 in., $7.00 per 100; $60.00 per 1000. Plants in 5's, $20.00; in 6's, $30.00.

Edelweiss The coming fad, fine plant, $1.00 per 12; $6.00 per 100.

New Astilbe Chinense The fragrant pink Spiræa, fine for forcing, $1.50 per 12; $8.00 per 100.

New Buddleia Variabilis Exceedingly sweet scented, like a hardy Lilac Mignonette, spikes 10 inches long, strong plants, $2.00 per 12; $12.00 per 100.

New Deutzia Corymbiflora The finest of Mr. Lemoine's new Deutziss, $2.50 per 12; $15.00 per 100.

Spotted Callas $2.00 per 100.

LITTLE GEMS, $2.50 per 100. WHITE CALLAS, $2.00 per 100. YELLOW CALLAS, $20.00 per 100.

The New Lace Fern The most popular fern for cutting, lasts from 3 to 4 weeks, 12 fronds bring from 1 to 2 dollars, very hardy, and grows exceedingly under benches, 2½ in., $5.00, 3½ in., $8.00 per 100.

New double, white, hardy Hibiscus Very double, pure white. $1.50 per 12.

New Hibiscus Archeri With elegantly fringed border, $1 per 12.

New Hibiscus Peachblow Extra large, double pink, $1.50 per 12.

New Baby Primrose 75 cts. per 12; $4.00 per 100.

Primula Obconica $5.00 per 100.

2 Newest Salvias The very best to date, $1.00 per 12; $5.00 per 100.

NOTES BY THE WAY.

CLEVELAND, O.—On Labor Day, the stores closed at noon. Paul Berkowitz and I happened in on Mr. Fetters, of Smith & Fetters, who called us to refreshment, in celebration of his birthday and the opening of their store, which, being finished in green, white and gold with the finest plate mirrors, has a charming appearance.

J. M. Gasser contemplates making important changes in his business. At the greenhouses Isaac Kennedy has stock in excellent shape. Two-year-old Bride and Bridesmaid, in houses, a short span to South, open at gutters, are fine. Mr. Kennedy does not advocate running the plants beyond two seasons. Golden Gate, Meteor and Beauty are grown extensively. A pretty rose for the retail counter is Reine Marie Gerard, a copper-colored polyantha. In a healthy stock of several thousand chrysanthemums, Mrs. Jerome Jones is most popular.

Schmitt returned from the Convention with Carmody's essay fresh in his mind, and immediately set to building two houses, each 120 x 20 feet, for carnations, complete in every particular. His crop of asters is very late this year, only now coming into bloom, but will be worth more than an earlier crop, continuing until early chrysanthemums come into market; these are fully up to usual standard of excellence.

The display of cannas at Gordon Gray's is the brightest sight in this smoky city. Did they last in bloom longer than they do, they would all be "Black Beauties" without the beautiful gloss seen upon that variety.

Herman A. Hart was a heavy buyer at the Convention, filling one house with his purchases; the remainder are filled with his usual fine stock for an all-round retail trade. He has rebuilt several houses and filled with Boston fern, having well-grounded faith in the plant.

Mr. Hart is one of the regulars at the Convention, and feels assured he always gets full satisfaction for any sacrifice made to take the trip.

A. J. Ziechmann is rebuilding, so is L. Warncke.

Klrehner Bros. report busy times with funeral work.

Walter Fancourt, Jr., graduate of Robt. Kift, Philadelphia, is with Smith & Fetters.

BUFFALO, N. Y.—Wm. Scott was busy looking over his stock previous to his daily trip to the Pan-American.

Harry May, of Summit, called on his way to Painesville, and agreed that the chrysanthemums as seen here were as fine as any. Yellow Queen, Alex Scott remarked, had dollars on every bush. F. R. Pierson, of Tarrytown, was also a caller, Pan-American business being a primary object; the wonderful progress made convinced him that this will be the grandest exposition on record. Unfortunately, the horticultural section is the most backward, but Supt. Scott will not allow any grass to grow on the ground after the roof is on. Speaking of grass, reminds me that the banks and beds are one verdant spot, kept well watered. No rain having fallen since the snow melted has retarded gardening. Professor Taylor was out of town looking up important matters in connection with his department.

We called on W. J. Palmer & Son and found Will., Junior, making up a fine funeral piece of Lilium speciosum album with Asparagus plumosus. They use hundreds of this beautiful lily in design work. First blooms of Liberty rose are coming in from Lancaster, and Barney promises to eclipse all records this season with new houses. Meteor is as fine as ever; Bride and Bridesmaid are getting larger and firmer, now nights are cooler; no sign of mildew at present.

D. B. Long is a busy man filling orders booked for his novelties at the Convention.

Chas. Keitsch was with us in spirit, being unable to accompany the crowd, owing to the arrival of a new boiler just at that time; and, as Charley gives his whole attention to everything he undertakes, the trip had to be foregone. Already he has plans under consideration for the business of the convention next year.

Mrs. Newlands will be established in her new place by October 1.

WILKESBARRE, PA.—Ira G. Marvin has doubled his stock of chrysanthemums, and feels assured that all will be disposed of at good prices. Plants are in excellent shape. W. M.

St. Louis.

The Market.

Trade conditions have changed but very little since last report. Carnations continue to improve in quality and quantity. Some good Kaiserin and Meteor roses are to be seen; Bride and Bridesmaid are still very small. Asters are in fair supply; some days plentiful, others scarce.

Club Meeting.

The regular meeting took place on the 6th; attendance was fair. The principal event was the installation of officers. The new president, E. W. Guy, took possession of the chair with the grace and dignity that comes natural to a gentleman of the old school. In a short speech of acceptance he remarked that he was afraid he could not fill the chair as well as the retiring officer had done (there being somewhere in the neighborhood of 100 pounds difference in their weight,) but he proposed to do the very best he could in the interests of the club. Among other things he suggested was the holding of the hot weather meetings at different places, thinking this would be more of a novelty, and of greater interest than in the hall. The question of allowing the ladies engaged in the florists' business to become members, as some of them wished, came up; and it was decided that there was nothing in the constitution and by-laws to prevent the consummation of their desires. It was further agreed to make special days for the attendance of the ladies at the meetings, it being assumed that they would not care to be present at them all.

Essays are to be an important feature the coming season, and the following program has been made up by some interested members; For the October meeting: Profitable Winter-blooming Plants, by E. Schray, and The Best Method of Growing, and the Best Varieties of Roses for Present Demand, by F. J. Fillmore.

November Meeting—Successful Violet Culture, by F. G. Ude; and Hardy Flowers for Florists' Use, by C. C. Sanders.

December Meeting—Latest Facts About New Carnations, by F. W. Ude, Jr., and New Carnations, from a Commercial Standpoint, by A. F. Halstead.

January Meeting—How to Grow Good Perle Roses, by J. F. Amman; and, Cut Fowers for Florists other than Roses and Carnations, by F. C. Weber.

February Meeting—Best Method of Wholesaling Cut Flowers, by H. G. Berning, and The Requirements for the Elevation of our Business, by J. J. Beneke.

March Meeting—The Cultivaton of the Rose To-day, as Compared with Ten Years Ago, by R. F. Tesson; and, Shrubs Suitable for Florists' Use, by Crew Sanders.

April Meeting—Bulb Stock and How to Grow It, by E. W. Guy; and, How to Grow Profitable Pot Plants, by Carl Beyer.

May Meeting—Orchids from a Commercial Point of View, by R. J. Mohr; and, Sweet Peas and How They Should Be Grown, by Max Herzog.

If the above program is carried out faithfully, we cannot see how the meetings can be other than instructive and interesting.

After the meeting an adjournment was taken to a nearby café, where the new president had an enjoyable lunch spread, which was greatly appreciated by those present.

Arthur Ellison will spend a vacation in Springfield, Ills.

Visitors.

C. S. Ford, with A. Herrmann, New York; Carl Rauth, Springfield, Ills.; B. Echner, of M. Rice & Co., Philadelphia.

C. C. S.

Columbus, O.

The weather here continues very hot. It is the longest siege of extreme heat we have known for years.

The horticultural exhibits at the recent State Fair were not as numerous as they should have been; but such as were there reflect credit upon the exhibitors. The display of plants and flowers made by E. L. Charles was fine. He led easily in securing premiums. He captured 15 first prizes and four seconds. His floral designs were very much admired. F. C. Breece, of West Berlin, O., took first premium on cannas.

The amateur exhibits contained some fine plants and revealed some skill in growing them. Miss Anna Long, of this city, led them in securing four firsts and four seconds.

The Livingston Seed Co. has just added another house to its range on Neil avenue. FRITZ.

Poughkeepsie, N. Y.

The flower show given by the Dutchess County Horticultural Society will this year be held on October 6, 7 and 8, at the Armory, and extensive preparations are being made for it. The exhibition is expected to be one of the finest yet held. The committee and judges held a meeting in this city, Wednesday, September 5, to make arrangements for the show. This committee is composed of James Blair, the president; W. G. Saltford, W. G. Gomersall, Clarence Reynolds, Richard Griggs and U. S. Agar. These committees have been appointed: Judges for the table decorations for the three days, Thomas J. Macpherson, F. B. Lown and Clarence Reynolds; decorating committee to decorate the armory, F. B. Lown, William Shickle, Frank Hasbrouck, William Milbanks, David Gindra and Samuel Horn; music, William Shickle; press, William Sloan and John Galvin. William G. Saltford was appointed manager. The following judges were also appointed: Samuel Goldring, of Albany; John N. May, Summit, N. J.; George Hale, Seabright, N. J., and William Turner, Tarrytown.

A prize of $25 for best 200 violets, offered by Mayor Sherrill, will form an extra inducement among growers, and we may expect an unusually large display.

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, $1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

FOR PARTICULARS, ADDRESS

A. T. DE LA MARE PTG. AND PUB. CO. Ltd., 2 to 8 Duane Street, New York.

Plant Culture

NOW READY FOR DELIVERY.

FIRST ADVERTISED AS

COMMERCIAL PLANTS

THEIR PROPAGATION AND CULTURE.

BY GEORGE W. OLIVER, PROPAGATOR TO THE U. S. BOTANIC GARDEN, WASHINGTON, D.C. AND LATE OF THE ROYAL BOTANIC GARDEN, EDINBURGH.

A working Hand Book of Every-day Practice for the Florist or Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experiences of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include **Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines,** and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is to be found in much more pretentious works costing ten and twenty times as much money. Strongly bound to stand rough handling and plenty of it. **Price, $1.00 by mail, postpaid.**

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 to 8 Duane St., N. Y.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,
Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 DUANE STREET NEW YORK.

We can supply any book or magazine, no matter where published.

THE FLORISTS' EXCHANGE, 2 to 8 Duane Street, New York.

The Water Garden

BY WILLIAM TRICKER.

This work contains nine beautiful plates, eighteen full page descriptive views of leading Water Gardens and Ponds, and numerous smaller pictures prepared with special reference to this work. On heavy enamelled paper. Elegantly bound. Large octavo.

PRICE, $2.00.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of grounds, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details. Prospectus and Reviews free on application.

A. T. DE LA MARE PTG. & PUB. CO. LTD., P. O. Box 1697, New York City.

Cyclopedia of American Horticulture

THIS great work comprises directions for the cultivation of horticultural crops and original descriptions of all the species of Fruits, Vegetables, Flowers, and ornamental plants known to be in the market in the United States and Canada.

BY L. H. BAILEY, OF CORNELL UNIVERSITY, ASSISTED BY WILHELM MILLER AND MANY EXPERT CULTIVATORS AND BOTANISTS.

In Four Quarto Volumes. Illustrated With Over 2000 Original Engravings.

VOLUME ONE (A TO D, 509 PAGES, 743 ILLUSTRATIONS 9 PLATES) IS NOW READY FOR DELIVERY.

THOUGH distinctly an American work, not only plants indigenous to the North American continent are mentioned, but also all the species known to be in the horticultural trade in North America, of whatever origin. It is really a survey of the cultivated plants of the world.

The chief characteristics of this great work are comprised in our describing its source, scope, and general features. It is **AUTHORITATIVE** since its contributors are the best specialists in America, and there will be at least 5000 signed contributions from the best-known horticulturists, cultivators, and botanists in this country and in Europe. It is also most **COMPREHENSIVE** in that it presents for the first time in carefully arranged and perfectly accessible form the best knowledge of the best specialists upon greenhouse and garden practice, fruit growing, vegetable culture, forestry and the like. It is moreover fresh, entirely **ORIGINAL**; not a rehash of old material, old cuts, etc. The articles are specially prepared and illustrated for this work alone; while the trained botanist discusses the botanical features of the important commercial plants, practical cultivators submit observations on their culture, marketing, and the like, so that the reader has before him the very best practice in the most favorable localities for the perfection of any fruit, vegetable, or economic plant. The arrangement is very systematic, clear and convenient for ready reference.

THE CYCLOPEDIA is to be completed in four handsome quarto volumes, embracing about 2000 pages, with more than that number of original illustrations. It is carefully printed upon specially made paper of a permanent character, and the work will be completed this year.

This book is sold only by subscription, and orders will be accepted for the full set only. For terms of subscription and all further information, address

BOOK DEPT. THE FLORISTS' EXCHANGE, Nos. 2 to 8 Duane Street, N. Y.

Buffalo.

Trade News.

Trade in the stores ranges rather quiet, even for Summer. Several of the retailers supplied some good funeral pieces for the obsequies of N. Y. State Comptroller Col. Morgan, who was buried on Sunday last. Rebstock had a number of arrangements in variety. Scott supplied, on an order from the "Official Associates" of the deceased, a large standing cross of massive proportions, which elicited much comment and mention in the local papers.

Asters and gladiolus are quite plentiful; so are roses, but in size very small; while carnations are scarcely relied on just now.

Here and There.

The Park department has taken on lease the Phil Latour greenhouses, which are located across E. Parade avenue from Humboldt Park, and, under the management of Henry Elbers, here will undertake to grow more of the needed bedding plants for this portion of the park system.

A meeting of the Buffalo Florists' Club has been called for Friday evening of this week.

Park Com'r W. F. Kasting is taking in another convention this week at Saratoga, and of political men, where rooters are wanted in strong evidence.

C. T. Guenther, of Hamburg, was a caller last week. Also Mr. and Mrs. John C. Hatcher, of Amsterdam, N. Y., who had been visiting the Toronto Exhibition. VIDI.

Denver.

The outdoor season is nearing its end, and good indoor flowers are eagerly bought, being just now a little scarce. Beauty roses are good and sell well, but good teas are hard to get. The same may be said of carnations. During the shortage season some well-grown asters, by Wilmore, greatly helped to fill up the gap. Violets have begun to show up in small lots, but are hardly saleable.

A look around the different growers shows things prosperous for the coming season. At the Park Floral Co.'s greenhouses young carnations look grand, and the houses of Beauty are also a fine sight. A bed of Liberty is to be seen here, and, so far, is good.

J. A. Valentine, our only representative to the New York meeting, is home again, and reports that it was a great convention; only it was hot.

The Denver Florists' Club held its monthly meeting Friday last. The coming chrysanthemum show was the main topic of discussion. The reports of the different committees were read, but owing to so much "16 to 1" going on, the committees asked for further time, and the meeting was adjourned till politics take a rest. After the meeting several of the members got together and formed a bowling club. We expect to start in at once; and although it may be a little early to say it, we may be seen on the alleys at Buffalo next year.

MR. THERON PARKER, Brooklyn, N. Y.
Dear Sir:—Your Model Carnation Support is all right in every way, and will no doubt be considered as necessary as good plants with growers when better known. I consider it the best in the market, and if your other specialties are as good, they should make another addition to the money makers of 1900.
Very respectfully,
ALBERT M. HESS.

SOUTHERN NATURAL PEACH PITS

FOR several years past we have given special attention to the procuring of Southern Natural Peach Pits, selected from original seedling trees in the mountains of Tennessee and North Carolina, which are entirely free from yellows or disease, guaranteed to give good stands and make much stronger and healthier trees than those from any other section. These pits, being very small in size, contain more than double the number to the bushel. We have for many years annually supplied a majority of the best Nurserymen and Peach Growers in the United States. Samples and prices on application.

JOHNSON & STOKES, Seedsmen, PHILADELPHIA, PA.

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLGIANO, First Vice-President; S. G. COURTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

A New Tomato.—The Brooklyn Eagle recently illustrated a new tomato named Quarter Century (Disseminators, W. Atlee Burpee & Co.), one shoot of which "had 14 perfectly developed tomatoes, the greater number of them ripened uniformly, and which presented at first glance the appearance of a bouquet of highly-colored flowers. The weight of this cluster was about nine pounds."

European Notes.

The cry is still, as of yore: Shortages! Everything we touch disappoints us, and we really don't know where we are at two days together.

Mignonette is coming out woefully below our expectations; such strong growing varieties as Machet, Bismark, etc., are very poor, and any seed saved loses fully one-half in cleaning. Nasturtiums are quite as bad, never having recovered from the drought of July. Add to the foregoing pansy (which is worse than our gloomiest anticipations), phlox, petunia and zinnia, and it is easy to see that "the poor grower," at any rate, has reason to be sad.

In vegetable seeds peas are now attracting considerable attention, the more so as some irritating shortages are reported from your side. In every case in the knowledge of the writer the crop is simply wretched, while the loss in picking this miserable remnant will be very heavy.

Beans of the Windsor and Longpod type are very small in size and will cause troubles later on. The crop of scarlet runners in England is very poor, particularly the improved strains, which are so deservedly popular in that country. These hardly appear to be estimated at their proper value in your country. If some intelligent and enthusiastic scribe should write them up and make them popular, he would be known to posterity as "a benefactor to his fellow-man."

The only bright feature is the splendid demand for seeds of all kinds from nearly every quarter of the globe.

Is it necessary "to point a moral to adorn this tale"? If so, let buyers hold on to houses of standing for the goods they need. The temptation to gain a few extra shekels by working off stock that has practically no value is too great for some men to resist. Already we hear of offers which range from 5 to 75 per cent. germination and which are certain to cause trouble both to buyers and sellers. In this case it behooveth us to say *Verbum sap.*

EUROPEAN SEEDS.

A Rochester (N. Y.) Gladiolus Farm.

The gladiolus fields of Mr. J. F. Kennell, near Rochester, N. Y., were a fine show through August and the first half of September. About ten years ago he bought a few collections of gladiolus and began selling the cut flowers along with the products of his garden and aplary. Later, the rapid increase of stock of such varieties as Marie Lemoine gave surplus bulbs, which were disposed of in the same way. The plantings have been gradually increased until they now cover four acres and take Mr. Kennell's entire time. Many thousands of bulbs are sold to seedsmen, and of the flowers that are cut a large part were sent to Buffalo the present season, where their fine quality commanded a satisfactory price.

To get varieties suitable for the wholesale cut flower trade, Mr. Kennell has tried practically the entire American catalogue list and many collections of unnamed seedlings, and has cut the list of really desirable kinds down to a half dozen. Of course, the largest sales are of those varieties that are light enough to be used in design work, and which are called by courtesy "white." Shakespeare, May and Augusta, in order of earliness, are the most satisfactory. Augusta is perhaps the most profitable in the whole list, on account of the quantity of bloom produced, and rapid increase of stock. For pink ("rose and carmine") and scarlet Mr. Kennell grows Eugene Scribe and Grand Rouge. The flowers are grand, but the bulbs are difficult to keep over, and increase slowly. Some Brenchleyensis (scarlet) is used early in the season. A fine red seedling, "No. 1900," about two weeks later than the main crop, has attracted much attention this season. Nearly half of the sales in the latter part of the season have been of this one variety. It is a rich dark scarlet, with a conspicuous light patch in the throat; a large striking flower of good shape and well set on the stem. The plant is quite distinct on account of its wealth of dark foliage. The stock increases so rapidly that Mr. Kennell hopes to put it on the market after another season.

Besides the above-mentioned kinds, grown for cut flower trade, there is a large collection of named varieties and several mixtures grown for the wholesale bulb trade. A large block of Isaac Buchanan, a fine yellow, was noticed. Of the colors that are adapted to the florists' needs, but have been discarded by Mr. Kennell, it was explained that one had crooked stems; another burned in the hot sun; one would require staking; some open but few flowers on a spike at a time; and many otherwise fine sorts are thrown out because the flowers are set on opposite sides of the spike, leaving the bare stem between.

The bulbs are planted in single rows two and one-half feet apart, and four to six inches apart in the rows. The first plantings are made as soon as the ground can be worked in the Spring, others following until about the first of June. They receive very thorough tillage, and with the later cultivation the soil is banked against the rows.

Nearly all the work on Mr. Kennell's place is done with his own hands, and having the faculty of close observation, he has acquired an intimate knowledge of the gladiolus that has made him an authority on that flower in Western New York, and has enabled him to succeed with varieties that have been unsatisfactory with others. G. A., Jr.

Chicago's First Wholesale Cut Flower House.

The catalogue of E. H. Hunt, Chicago, just to hand, contains an interesting statement from Mr. Edgar Sanders, as to the first wholesale cut flower house in Chicago. Mr. Sanders writes to Mr. Charles M. Dickinson, manager for E. H. Hunt, as follows:

"In answer to your inquiry relative to whom belongs the credit of being the oldest wholesale flower house in this city, I state without hesitancy that to the firm of E. H. Hunt belongs the honor. Being actively interested in the welfare and growth of the florist business since 1857, I can give you the following facts: In 1878 Mr. J. C. Vaughan began to supply the local retail trade with flowers that were consigned to him by sundry growers. By 1880 this had developed into a regular wholesale cut flower business, which proved very acceptable to both growers and retailers. In 1889 the late respected Mr. E. H. Hunt succeeded, by purchase, to this branch of the business, and since then your firm has been in continuous operation, and is, therefore, the oldest cut flower house in Chicago."

BRIEFS FOR BUSY FLORISTS.

CARNATIONS, that are to remain in the field until chrysanthemums are off the benches, ought to be kept from flowering until after they are housed; they will then be in a better condition for producing blooms through the Winter. Keep the buds picked off by all means, and if frosts occur, a mulch of litter between the rows will keep the plants from getting too severe a check.

PANSIES.—The transplanting of these from the seed bed to the frames should not be delayed any longer. The soil in the frames should have a liberal dressing of manure dug into it, and if a good sprinkling of lime be also incorporated with the soil, and put around the edges of the woodwork of the frames, slugs and other vermin will be kept down materially.

ROMAN HYACINTHS AND PAPER WHITE NARCISSUS, wanted for Christmas blooming, should be potted up right away to give the best results, as forcing them into flower before sufficient time has been given them to form plenty of roots always results in a poor lot of flowers. After the bulbs are potted, the pots can be put outside and covered with three or four inches of soil, remaining there until the middle of November without being disturbed.

SWEET PEAS.—Where a bench in a cool house can be devoted to these for Winter-flowering, the seed should be sown about this time. Sow in rows across the bed, and have the rows two feet apart. A stout stick at the end of each row, to which five-foot chicken wire is attached, makes the most convenient trellis. A night temperature of 45 degrees proves the most satisfactory, and the vines will yield flowers a longer time than if grown in a higher night temperature, besides being less liable to attacks from red spider, thrips, etc.

PRIMULAS.—The first sown batch of primulas are now ready for the flowering sized pots, and should be potted right along. A five-inch pot is plenty large enough. Work a little well-rotted manure into the soil (this being the last potting), and don't pot without putting a crock over the hole in the bottom of the pot to insure drainage.

ADIANTUM FARLEYENSE.—This fern never seems to be plentiful enough during the Winter months, and it is one of those things that, when it is wanted, it is wanted very badly, and there is nothing that can be substituted for it. To grow this fern it is absolutely necessary that the potting material be coarse, so as to drain very easily. A fine soil, that holds moisture any length of time, is sure death to this fern. It grows perfectly free in a mixture of fibrous peat and fibrous loam, with plenty of rough, gray sand added; and, as the plants get large enough for seven or eight-inch pots, an addition of well-rotted cow manure—about one-tenth of the whole—may be given. When preparing the soil in which to pot the plants, tear the fibrous peat and loam to pieces; mix it well together, shake out the fine soil from the lumpy pieces and put it to one side, using only the rough material for the potting. Never stand the plants directly on the bench if there is a sand bottom; stand them on an inverted pot; or use half-inch broken marble or stone on the bench bottom. Snails will never be so troublesome then, and the drainage will never clog up. Permanent shade should be on the glass, and a night temperature of 60 degrees must be maintained. Watering must be done with the watering-pot, then excesses will be avoided. Never syringe the plants. Keep the atmosphere reasonably moist by dampening the paths and walls occasionally. This should be governed chiefly by the rise of the temperature through the day. A dry air is one of the conditions that must be avoided to successfully grow this most beautiful of adiantums.

Newburyport, Mass.

E. W. Pearson has refitted and painted the office at his greenhouses.

A Family Jar.

A correspondent, writing from Shanghai, says that a young Chinese lady there has recently been married to a red flower-vase, the vase being a substitute for the son of a wealthy mandarin to whom she had been engaged. Her fiancé died just before the contemplated marriage, and as she vowed she would never wed another, the flower-vase was substituted for the bridegroom, and the marriage celebrated with all due pomp. These impersonal marriages are not uncommon in China, and it is easy to believe that a happy pair so united would easily dispense with other family jars.—*London Chronicle.*

Cincinnati.

Market Conditions.

Business is good, prices are advancing, and stock is improving in quality. The Fall Festival is making a market for cut flowers. At the exhibition of floral designs and general display, held at Music Hall on Thursday, George & Allan carried off first prize of $100; Sunderbruch's Sons took the second prize of $75 and Hoffmeister Floral Co. third prize of $50.

Chrysanthemums will not be in this market in any quantity before October 10. The first varieties will be white and yellow Fitzwygram. Huntsman & Co. were the first to display chrysanthemums on September 24.

Jottings.

The Fall Festival in itself is a grand success, and the city is crowded with strangers; all the buildings are beautifully decorated.

Albert Brunner, of G. Brunner's Sons, was badly hurt in a street car wreck, Saturday evening, while on his way to the city. Two of C. C. Murphy's men were on the same car, one of whom has since died. The other had his legs broken in two places and very little hopes are entertained of his recovery. The accident occurred on the Elberon Avenue Price Hill Line, the car jumping the track while running at a high rate of speed.

E. G. GILLETT.

Pittsburg.

The Market.

Trade has improved considerably the past week in every way; funeral work has been plentiful, particularly, among the Allegheny Market florists. There is no scarcity of stock. Asters still take the lead. A good many dahlias are used, and are very fine. The quality of carnations and roses has not improved much yet.

Jottings.

Those little flower pots are making things lively in the Allegheny Market. G. & J. Ludwig are also distributing thousands. Everybody asks for them.

J. B. Murdoch has about completed the alterations in his store room, and his plate glass window is the finest in town.

Some nice contracts were awarded by the Department of Public Works for trees and shrubs for the parks of the city. The contracts were pretty well divided among A. E. Crouch, Rochester, Pa.; Thomas Meehan & Sons, Germantown, Pa.; Ellwanger & Barry, Rochester, N. Y., and the Andorra Nurseries, Chestnut Hill, Philadelphia. The bids aggregate about $11,000. All this stock will be set out in the parks this Fall.

Schenley and Highland Parks are in fine trim yet; the cold weather has had no effect on any of the plants.

E. C. REINEMAN.

[The little pots referred to by our correspondent, in this and last weeks' issue, are the same as those given away at the New York Convention as souvenirs, by the Whilldin Pottery Co., of Philadelphia, who also furnished the supplies distributed by the Pittsburg and Allegheny florists.—ED.]

Chicago.

State of Trade.

As cooler weather prevails, business at the wholesale houses is improving rapidly. Stock clears off much more satisfactorily and an advance in price is noted all along the line. Shipping trade is already quite a feature. Asters will cut less of a figure from now on, relieving the glut of white carnations, and making a place for the chrysanthemums expected the end of this week, Amling already having orders booked for these flowers.

Nick Wietor reports good shipping orders for both roses and carnations; of the former 5,000 went to a Northwestern city to fill one order.

Those handling bulbs and florists' supplies are in the midst of a good Fall trade. J. C. Vaughan has received his seventh car load of bulbs, and they are going out at a lively rate.

Club Meeting.

The first meeting of the club after vacation occurred September 21. Preparations were made for a regular program of essays and work for the ensuing season. A long list of suitable subjects was presented by the committee. This was discussed, and the subjects assigned to various competent parties.

At the meeting in October, the Boston fern, and small ferns for filling pans, baskets, etc., will be dealt with; J. S. Wilson and F. Ochstein, to open the discussion. Bulbs suitable for forcing will be the topic assigned to Anton Then and August Juergens. Election of officers occurring the second meeting in October, a talk on violets only will be given by Mr. Weber.

Since the meeting, Secretary C. W. McKellar has in reply to inquiries received letters from Galveston florists telling of the pitiable condition of the craft there, occasioned by the recent hurricane. President Hartshorne has been asked to call a special meeting of the club to take action thereon.

Among Growers.

Anton Then has 10,000 chrysanthemum plants, and expects about 12,000 blooms—a few more than last year. He began to cut Lady Fitzwygram about the first of September, and considers it a useful variety for his own store. Other kinds grown are about the same as those of last year, with perhaps more of W. H. Chadwick, and a considerable batch, for very late, including Merry Christmas. He also has Feé du Champsaur and a sport of Yellow Hardy on trial. Mr. Then is growing 15,000 carnations. He commenced to house as early as August 10, finishing about the 20th. Excepting some trouble with stem rot, particularly on Triumph, the plants look well. Crane shows a good crop for first cut, the length of stem being fair. Bradt is always late. Argyle is looking well. This variety is found to be a good keeper. Mr. Then considers, for his use, that McGowan and Daybreak are too good to discard. New varieties include Mrs. Lawson, Genevieve Lord and the Marquis, all of which are doing well.

The Weber Bros. have their eight rebuilt houses in roses, including 5,000 each of Bride and Bridesmaid.

Round About.

The Chicago and Northwestern Railway is to discontinue the decoration of its stations with flower beds. These are to be replaced by shrubbery. The greenhouses will be devoted exclusively to raising cut flowers for the road's dining cars.

Anthony Warnemont, gardener at the C. B. & Q.'s greenhouses, Aurora, has a seedling white chrysanthemum of incurved type which he expects to exhibit at the forthcoming show.

Visitors this week included Geo. E. Jones, of the Houston Nurseries, Houston, Ga., and W. L. Morris, Des Moines, Ia. ESS.

CHANGES IN BUSINESS.

OTTUMWA, IA.—C. Kranz has purchased the greenhouses and floral business of F. M. Teeter, including the store at 107 North Market street.

JAMAICA PLAIN, MASS.—David Lumsden, formerly with Galvin, the florist of Boston, has leased the McDermott greenhouses on Perkins street.

MARIETTA, O.—C. H. Smith & Co. have purchased the greenhouse property of the late John Fisher in Williamstown. The company is composed of Marietta people and they are making arrangements to add to the stock. It will be run in connection with the Smith greenhouse.

NATICK, MASS.—The Waban Rose Conservatories have been incorporated under the laws of the State of Massachusetts, with a capital stock of $250,000. E. M. Wood is president. The Natick Review says: "It is the purpose of the new management to improve and enlarge the present plant. At the request of the bondholders, who comprise some gentlemen of wealth in Boston, Mr. F. O. Baston will act as treasurer and will have full management of the finances of the corporation. Moorfield Storey, of Boston, is the attorney of the corporation, and the Boston Safe Deposit and Trust Co. act as trustees."

Firms Who Are Building.

WOODSVILLE, N. H.—Fred Randall is building a greenhouse.

STONEHAM, MASS.—A. S. Parker is building a greenhouse for bulbs.

JEWETT CITY, CONN.—A. A. Young, Jr., has built a large addition to his greenhouse.

TROY, N. Y.—Wade Bros., Beman Park, have just completed the erection of a new greenhouse 125 x 20 feet.

SONNENBERG, N. Y.—The erection of a new greenhouse, 20 x 60 feet, was commenced by Saunders & Mead last week.

MANCHESTER, MASS.—W. F. Spry is erecting a storage house 16 x 60, and has just completed a greenhouse 28 x 70 feet.

BROOKLINE, MASS.—Messrs. James F. and David J. Quinn have taken a seven-years' lease of premises on Harvard street, and have begun the erection of a greenhouse and salesroom for their own occupancy.

BAY CITY, MICH.—John Irvine & Sons have secured a magnificent location for their new greenhouse plant, and will build a range of ten modern houses the coming season. The M. C. R. R. Belt Line runs through the property, thus affording excellent shipping facilities for coal, etc.

Personal.

MERIDEN, CONN.—A. F. Crawford, the florist, suffered two severe hemorrhages of the stomach a few days ago, but is able to attend to business. He feels much better now and no serious results are anticipated.

Chicago.—At the close of the club meeting on September 21, two games were played and the under-mentioned scores made.

At a meeting of the regular bowling club, held on the 20th, the first practice game was also played. At that meeting the cup, won at the New York Convention, was ordered to be sent to a jeweller to be suitably engraved, with the name of each of the players who won the cup. By resolution of the club, it was also ordered that a challenge be sent to the Buffalo, St. Louis and Milwaukee teams, to play a match game, at a date agreed on, but preferably at the time of the flower show in this city in November.

Dunlop Cycle Races.

The second annual bicycle races of the employees of J. H. Dunlop, florist, were held on the Dufferin race track on Saturday, September 8, and were attended with great success. The following is a list of the prizes and winners:

Three Mile Scratch Race.—Prizes given by J. H. Dunlop—J. Mortimer first, pair of sterling silver mounted suspenders; A. Thornton second, sterling silver match box.

Ten Mile Handicap Race.—M. Atkinson, 4½ min., first prize, marble clock, given by E. G. Pool; J. Milne, scratch, first prize, ansonia clock, given by J. H. Dunlop; F. Saunders, 2 min., second prize, handsome album; G. Hager, 1 min., third prize, large lamp. J. Milne, in spite of a bad fall in his first mile, captured the time prize in 29 min. 42 sec.

At the conclusion of the races, the employees and their friends adjourned to the home of J. Milligan, president of the meeting, and partook of refreshments, after which music, songs and recitations became the order of the evening, one and all spending a most enjoyable time. A hearty vote of thanks was tendered to their employer and friends, who so kindly donated such handsome prizes, which were distributed to the successful winners by Mrs. Dunlop.

A. F.

The Market.

Business is slowly improving. The weather is very fine and inside stock is generally looking well. The quality of the roses coming in has considerably improved. Carnations are rather plentiful, but somewhat short stemmed; the flowers are of good substance and last well. Asters are still very abundant. Dunlop is cutting a considerable quantity of Liberty roses; the flowers are rather short stemmed, but they are good and sell well. If these roses keep on improving as they have done the past three weeks, Liberty will prove to be what has been claimed for it, and will be a great money-maker.

Outdoor flowers are still very plentiful. We have as yet had no frosts to cut off tender plants, and the flower beds in the city are bright with foliage and bloom.

Association Meeting.

The September meeting of the Gardeners and Florists' Association was a social one. A goodly number of members turned out for an evening's enjoyment. President Wm. Jay occupied the chair.

Seedsmen Report Good Business.

All our seedsmen report good business this Fall. A large quantity of Japan

NO POLITICS, McKINLEY OR 16 TO 1

IN THIS AD., BUT MERELY AN ANNOUNCEMENT TO

CASH BUYERS

Remember that he who buys for Cash has a double advantage over his slow-pay-on-credit buying neighbor, as he can buy cheaper and sell cheaper, and thus control the best custom in his locality. His goods will move quick, and his stock always be fresh.

C. H. JOOSTEN, Importer, 85 Dey Street, New York.

longiflorum lilies have arrived here; they are good stock and are selling well. The Dutch bulbs arriving are much better generally than last year; and the quantities received make one wonder what will be done with them all. T. M.

New York.

The Market.

During the past week warm and sultry weather has prevailed in this city, and this has caused a decided increase in the quantity of flowers in the market. Retail trade is very dull, much more so than it was in the month of July, consequently, with the increase in the supply of flowers, the wholesale district has, this week, presented anything but a lively appearance.

Bride and Bridesmaid roses are coming in very heavily, and no attempt at holding them up to the prices that obtained one week ago is made. Where they can be disposed of in straight slips, they are let go at a price which is no higher than was received for the No. 2 grade seven or eight days ago.

The top grades of American Beauty, Liberty and Meteor may be said to about hold their own figures, but this is only in the long-stemmed stock, however, and all other grades are much in excess of the demand, prices being cut accordingly. Good stock of President Carnot, Golden Gate and Morgan is arriving regularly, but they meet with little better demand than other varieties.

Carnations, improving in quality, have decreased in value, and 50c. is a common price for the ordinary kinds. Cattleyas are in excess of the demand, and are selling at 25c. each. Lily of the valley has experienced no change in values, but is not moving so freely. Chrysanthemums of the Gastellier, Bergmann and Montmort varieties are coming in in limited numbers. Yellow varieties are being eagerly asked about; there seems to be a heavy demand in sight for them for the coming week.

Gladiolus, tuberoses and asters still form the bulk of the flowers used for window display, their cheapness making them the most available for this purpose.

Smilax, adiantum and asparagus move only slowly, though the price of them remains stationary.

Auction Sales.

Wm. Elliott & Sons and Cleary & Co. held auction sales in their respective rooms on Tuesday and Friday. Boston ferns, palms, field-grown carnations, etc., were offered in extensive quantities.

Jottings.

Ed. C. Horan is receiving fancy blooms of Marquis de Montmort chrysanthemum, also extra fine quality Carnot roses.

The next meeting of the New York Florists' Bowling Club will be held at Traendly & Schenck's store at 3 p. m., Monday, October 8.

The youngest son of O. A. C. Oehmler, manager of Aldred & Co.'s retail store, Fifth avenue, and whose residence is at Mount Vernon, N. Y., accidentally drank some carbolic acid on Friday, the 21st, from the effects of which he died, Sunday last.

W. W. Burnham, manager of Bloomingdale Bros.' floral department, is mourning the loss of his little daughter, who died Thursday morning, aged one year.

Jacob Gerlinger, a florist of East Williamsburg, L. I., left home on the 8th inst. and has not since been seen by his relatives. His aged mother is in feeble health, and is grieving sorely over her son's disappearance, her friends fearing that if he does not return soon the mother will die broken-hearted.

Visitors this week were Dan'l D. L. Farson, Philadelphia, Pa.; John N. Champion, New Haven, Conn.; Chas H. Ricksecker, Linville, N. C.; Otto Katzenstein, Pinehurst, N. C.

F. R. Pierson, a florist, has, says the *New York Herald*, obtained a temporary injunction to restrain James Speyer, banker and philanthropist, who lives on the heights overlooking the Pierson property at Scarborough, N. Y., from stopping the flow of the stream which Mr. Pierson depends on for water for his greenhouses. It is said that Mr. Speyer had tampered with the stream's natural flow, which, it is asserted, is small enough at the best and gives scarcely any water in dry weather, such as is now prevailing.

The Lord & Burnham Co. have been awarded by the Detroit Park and Boulevard Commission the contract to build three greenhouses for the park of that city. This is part of a contemplated range of ten houses.

Philadelphia.

Trade News.

Business conditions are improving, but very slowly. The retail stores do not show much activity. Flowers are becoming more plentiful, there still being quite a lot of outdoor stock coming in. Pink roses have been selling very well; white are in over-supply and much stock is left over. Beauty is in fair demand, but is not going as well as most stores would like. Funeral work has been the chief outlet the past week; transient trade and regular orders are behind the average.

Around Town.

H. T. Dumont has taken Clarence Dunn into partnership in the wholesale cut flower business. Already they are branching out and expect to increase their business the coming season. Arrangements have been perfected to handle quantities of American Beauty roses and choice valley.

Chas. B. Stahl is also preparing for increased business, having enlarged one refrigerator and added a new one.

John G. Eisele is well prepared for a good season in the mail order trade, having a large stock of small plants. He finds an increasing demand for some of the old-time favorites, and is growing a batch of browallias, also more ferns than usual. DAVID RUST.

ASSOCIATION OF AMERICAN CEMETERY SUPERINTENDENTS.—The annual convention of this association occurred at Cleveland, O., September 11, 12 and 13. Election of officers resulted as follows: President, George M. Palmer, West Laurel Hill Cemetery, Philadelphia; vice-president, Frank Eurich, Detroit; secretary and treasurer, H. Wilson Ross, Newton Center, Mass. Pittsburg was selected for the next place of meeting.

AZALEAS

Our Mr. Eisele, who has just left Belgium, reports that the Azaleas grown for us are in an unusually healthy and fine condition this season. Our shipments are expected to arrive here the beginning of October. We handle only the leading sorts, which are best adapted to the American trade; all plants are carefully sorted over and repacked at our Nursery, thus enabling us to guarantee satisfaction. If you have not yet placed your order we can still book same for fine bushy crowns, well set with buds, as follows:—

10 to 12 inches in diameter	$4 50 per doz.;	$35.00 per 100.	
12 to 14 " "	6.00 "	45.00 "	
14 to 16 " "	7.50 "	55.00 "	
16 to 18 inches in diameter	$12.00 per doz.;	$90.00 per 100.	
18 to 20 " "	25.00 "	200.00 "	
20 to 24 " "	36.00 "	300.00 "	

Prices on Azaleas include duty, packing and delivery in good condition to any express, freight or steamship line in Philadelphia.

For a full line of DECORATIVE PLANTS and other SEASONABLE STOCK see our current QUARTERLY TRADE LIST, of which a copy will be mailed on application, if you have failed to receive one.

FOUNDED IN 1888.

FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the trade in general.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.,

2, 4, 6, 8 Duane St., New York.

P. O. Box, 1697. Telephone 1854 John.

REGISTERED CABLE ADDRESS: Florex, New York.

SUBSCRIPTION, $1.00 PER YEAR

To United States, Canada and Mexico.
To foreign countries in postal union $2.00.
Payable in advance. The date on the address label indicates when subscription expires.

CHANGES OF ADDRESS.

When notifying the publishers to send the paper to a new address, give both old and new addresses.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.00.

ADVERTISEMENTS, $1.25 PER INCH.

Special positions extra.
No advertisement less than 75 cents.
Discounts on continuous advertising.
For rates, on Wants, etc., see column for classified advertisements.
Copy must reach this office not later than Thursday in order to secure insertion in issue of the following Saturday.
Orders from unknown parties must be accompanied by cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The FLORISTS' EXCHANGE are headquarters for all standard books pertaining to the Florist, Nursery and Seed interests. Catalogue sent free on application.

The Rev. G. H. Engleheart, the celebrated hybridist of narcissi, has been placed in the list of Victoria Medallists in Horticulture. It is said the place in the list left vacant by the death of John Laing has been offered to Rev. W. Wilks, secretary of the Royal Horticultural Society.

The next regular meeting of the Dutchess County Horticultural Society will be held at the rooms of the Young Men's Christian Association, corner of Main and Washington streets, Poughkeepsie, N. Y., on Wednesday, October 3, 1900, at 1.30 p.m. As this is the last meeting before the exhibition, a large attendance is requested.

Coal.

The strike among the anthracite coal miners is causing some uneasiness among Eastern greenhouse owners who have not yet got in their Winter supply. Although contracted for at a given price, some dealers maintain say that such price does not hold in times of a strike such as the present.

GALVESTON RELIEF FUND.

The publishers of the FLORISTS' EXCHANGE have, for the convenience of our readers, decided to receive subscriptions at this office for the Galveston relief fund, which will be at once acknowledged in these columns, and the amount contributed forwarded to the proper authorities as the donations of our trade on behalf of their suffering brethren in the storm-swept sections. Checks and money orders for the Galveston relief fund should be made out in favor of the A. T. DeLa Mare Printing and Publishing Co., Ltd., crossed "in aid of Galveston sufferers."

So far as the FLORISTS' EXCHANGE has been enabled to ascertain, the florists of Galveston have practically lost their all. These number some eighteen concerns, the members of three of which, we are informed, have been completely wiped out by death of the entire family.

All of the sufferers appear to have been in business in but a small way, thus making it all the harder for them to recuperate of their own efforts; hence assistance should go to them freely, and immediately.

Undoubtedly many of our readers had, previously to the opening of our columns to a relief fund, already sent in their contributions to the general fund, as had the publishers of this paper, but we would offer a suggestion to those florists' clubs and others who are working on lines parallel to the EXCHANGE, that, in order to effect the greatest good to the greatest number, all funds, plant and seed contributions be made through the one central agency at Galveston.

The sum total of the contributions herewith acknowledged to date has been forwarded to Mayor Jones of Galveston with the request that he personally, or through a committee appointed by him, attend to the even distribution of the fund (which, by the way, we trust to see duplicated tenfold), while every member of the trade in Galveston, known to the publishers of this paper, has been notified by letter, if in need of assistance, to apply to the Mayor or his committee.

Publishers Florists' Exchange:

Inclosed find $2 for Galveston Relief Fund. JOHN BIRNIE.
West Hoboken, N. J.

Inclosed please find check for $2 for Galveston Relief Fund. I lived in Galveston over two years. I couldn't speak the English language then, my health was bad, and the people there were very kind to me and helped me very much. I wish that I could send more. BEAULIEU.
Woodhaven, N. Y.

Inclosed please find check for $50. We will forward the box of clothing a little later on, as probably the people will need clothing about the 1st of November more than any other time, and, perhaps, by that time the arrangements for the distribution of such donations may be better perfected than at present.
C. W. WARD.
Queens, N. Y.

Contributions Received.

Peter Henderson & Co., New York City,	$100.00
C. W. Ward, Queens, N. Y.	50.00
John Birnie, West Hoboken, N. J.	2.00
Beaulieu, Woodhaven, N. Y.	2.00

The Galveston Disaster.

J. D. Pruessner, of Galveston, Texas, sends us a very interesting communication regarding the calamity that recently overtook the unfortunate city. The name of Joseph Rosencranz is added to the list of florists who perished, that gentleman's wife and child being also numbered among the dead. Mr. Pruessner continues:

"Those florists remaining have lost all they had; their greenhouses being wrecked, smashed and demolished; the plants lying under this débris in salt mud are mostly beyond redemption. Thanks to the great and sympathetic American people, no one has to go hungry; all have something to eat by this time as well as shelter. But what next? How shall we rebuild our homes? How shall the florists reconstruct their greenhouses and stock them? They need money first to rebuild the houses, then stock with which to fill them, and no doubt, the American florists, who are also American people, will do the right thing. Will the FLORISTS' EXCHANGE receive any money, or pledge for stock, that anyone of our brother florists may be willing to donate to repair the loss of the Galveston florists? The loss of their homes is not to be included here, for that would have to come from other funds. This is only for greenhouses, stores, plants, bulbs and florists' requisites. All the florists of Galveston will send in a correct estimate of their loss to THE FLORISTS' EXCHANGE, and all contributors will have the eternal gratitude of the Galveston florists."

[As will be observed in last week's issue, page 910, we have opened a Galveston relief fund, to which several substantial contributions have already been made. We shall be pleased to publish a list of the wants of the Galveston florists as suggested above, also the names of those in the trade contributing donations of stock, etc., in aid of the sufferers. —ED.]

Editor Florists' Exchange.

The only way to give you an account of the loss sustained by the trade here is to say that it is complete. Hothouses are smashed to atoms and the salt water, which was from ten to fifteen feet deep over our island, will leave few plants alive. We are in hopes of saving some of our palms, but, in any case, the market is killed for one year at least. All trees but the salt cedars that were not uprooted are dead. The oleanders used as hedges here are alive. The sago palm, sabals and pritchardias, as well as the Phœnix, canariensis and dactylifera, also the Latania borbonica and Cocos australis, which grow out-of-doors here, seem to have stood it pretty well and may pull through.

In hothouse plants the kentias and Asparagus Sprengeri are yet green. The arecas, dracænas, except Godseffiana, maidenhairs and ferns of all kinds, of which I made a specialty, are all killed. The only one showing any life is Adiantum princeps.

In the face of the terrible mortality caused by the storm we are too thankful to have come out with ourselves and family alive to mourn over the loss of property now. OTTO FEHRLIN.

A Compliment from Abroad.

THE FLORISTS' EXCHANGE, a well-known American trade paper, published a daily issue during four days of the Convention of American florists held in the Grand Central Palace, New York, August 21 to 24. The feat is worthy of American enterprise, and certifies to the energy and ability of those who conduct this florists' trade paper.—*The Gardening World.*

Commercial Home Grounds Competition.

Intending contestants are reminded that entries in Classes A and B in our Commercial Home Grounds Competition close October 31. The prizes offered are: In Class A, unimproved grounds, $10; Class B, improved grounds, $25. Full particulars, conditions of contest, etc., will be found on page 500, issue of May 12 last; copy of which may be had on application to this office.

The Photographic Contest.

Publishers Florists' Exchange.

Your favor of the 19th inst. came duly to hand, containing check for $5, for which please accept my very best thanks. I thank you also for your congratulations at my success. I certainly was greatly pleased to be the winner of the first prize for the August photographic competition. I appreciated very much the generous words of commendation upon my work, printed in the EXCHANGE at the time the prize was announced.

I trust that your efforts and labor in the work of the photographic competition will have brought about all the good that could be desired in this direction.
A. J. PENNOCK.

Horticulturists and Birds.

In our August Photographic Competition, A. J. Pennock, Lansdowne, Pa., the first prize winner, submitted in competition two pictures of birds, accompanied by the following pertinent comments, to which we beg to direct the attention of our readers. He says:

"You may be a little surprised at seeing two of my pictures put in a competition for horticultural subjects; namely, the birds. You may not, however, consider them so foreign to the subject after hearing a few words of explanation.

"There can be no doubt as to the propriety of the horticultural press dealing with the subject of birds. But whether a trade paper should take up the matter would, of course, be for it to decide. That all gardeners should be informed as to the necessity of bird protection and their usefulness to man in keeping in check injurious insects, there can be no doubt. Suffice it to say for the present, that without birds man could not live! They are Nature's means for keeping a proper balance in the insect world. Certainly no garden would be complete in its beauty without the birds (or the insects either, especially certain species). So I have sent the photos along with the others. Birds are much harder to photograph than plants. I have worked considerably in this line recently and strongly recommend the use of the camera instead of the gun to all florists interested in hunting."

Many of our readers would, no doubt, like to hear further from Mr. Pennock in an article on the subject of "Birds and Their Usefulness to the Florist and Horticulturist." Will the gentleman kindly oblige at his convenience.—ED.

Advantages of Plant Registration.

Our contemporary, The Horticultural Advertiser (England), commenting on the recent Convention of the S. A. F. O. H., characterizes some of the opening speeches as "poetical, if not florid, yet not without practical value."

Adverting to the registering of new plants by the society, the Advertiser asks for information as to the advantages of this plan which the journal in question evidently fails to grasp. The system of registration as adopted by the national society has several advantages. Firstly, it is a recorded indication of the horticultural progress making in America, so far as the obtaining of new plants of a commercial nature is concerned; being also valuable for reference as to the originator, date of origin, description, etc., of the subjects enumerated. Secondly, registration secures to the party registering the right of priority as to nomenclature, and this to members of the society, free of charge. Thirdly, the announcement of the registration by the secretary of the society, both in the class journals, and also in the published proceedings of the society forms an excellent advertisement for the originator,—in itself, not the least of the privileges resulting from the registration plan.

It is gratifying to note that originators of new plants in this country are becoming more fully alive to the benefits accruing from plant registration, as well as to the value of the system to the florists' trade generally, a fact which the annually swelling list of new plants registered demonstrates.

Scotch Florists and Gardeners in America.

In the *Scottish-American*, New York, of September 26, J. Arnot Penman, popularly known in the trade as "Jim the Penman," of Dictionary of Gardening fame, furnishes an article on the above subject, in which is given a list of Scotchmen, past and present, engaged in the florist and seed industries in America, together with a similar list of Scotch private gardeners and superintendents of parks. The list, though unavoidably incomplete, is a very extensive one, and includes the names of many of the best known men in the floricultural world in this country, a glance at which will demonstrate the important part played in the management and development of the industries in question by the men who hail from the "Land o' Cakes." The writer has also mentioned the birthplace of the majority of the parties named, as well as their present position and location. The article should prove of much interest especially to those whom it more particularly concerns.

Live Covers for Country Homes.

Among the Experiment Stations of the country that have rendered, and are still rendering, good service in many ways to the florist trade, we have had occasion more than once to mention the New Jersey Agricultural Experiment Station at New Brunswick, N. J.; and a recently issued bulletin, prepared by Dr. Byron D. Halsted, the able botanist of the Station, on the subject forming the caption of this article, demonstrates that the good work is there being pushed along lines that cannot but make for the amelioration of the masses, and the advancement of the floricultural interests of the country.

In the bulletin referred to (No. 144, June 30, 1900), Dr. Halsted, after pointing out the desirability of shade, and the satisfaction found, for a portion of the year, at least, in a sun-shelter of one sort or another, enumerates and fully describes a long list of the leading house vines; *i. e.*, vines for covering the walls of houses, his remarks being accompanied by beautiful half-tone illustrations showing the adaptability and ornate character of the plants named, for the purposes in view. The descriptions are written in a pleasing and entertaining manner, not being overburdened with too many technicalities, the use of which in writings for the perusal and instruction of the average layman are more apt to beget resentment than otherwise. Instructions for planting vines are also furnished, together with notes on some of the most common diseases attacking the plants. A chapter is devoted to the "General Characteristics of Climbing Vines," which we quote in its entirety for the benefit of our readers:

"House vines are not easily classified, but they may be grouped primarily (1) as for green covers and (2) for floral display. The former would include the ivies, the hedera leading, for, in our climate, it does not even bloom and its leaves are evergreen. The Japanese ivy is of the same close-clinging type (although its method of holding fast by tendril discs is far different from that of by true roots in the English ivy), but has deciduous foliage of a much more sprightly tone of green. As to the flowers, only the bees usually know of them, and on from the middle of July, the results of the blossoming are obtaining in the form of clusters of blue-black spherical grape-like berries that, hanging near the naked wall after the leaves have gone, give an earnest of the fruitfulness of the green cover in the Summer and early Autumn. All the colors that appear in the rose in its fleeting Summer petals are here conserved and flashed out for weeks in the autumnal foliage. In sheer splendor there is no climbing plant that equals the Japanese ivy when it assumes its October garb. As met with at its best it seems as if the Artist had dipped the giant brush in a harmonions mixture of crimson and gold, and touched the walls as an earnest of infinite purpose and perfection.

"The American ivy is likewise a vine grown for its rich festoons of tangled branch-tips and dark "fingered foliage," interspersing the varying tones of green between the earlier and later leaves, while the multitudes of brown flower-buds may redden the wall in July, and the liberal supply of wide-spreading berry-clusters in Autumn are but incidents in the annual life of the cherished vine.

"The pipewort is to be included in this class where the foliage is first and last the leading element and the strangely-constructed, even fantastic 'pipes' only heighten the interest in the dark-green foliage among which the blossoms hang inconspicuously as objects of floral wonderment.

"The hop, while it may be loaded with fruit of its own peculiar making as the season closes, flings out no banner of bright color to catch the eye of passing insect, and, therefore, in its dark-green dress should stand among those plant covers that gain their places for foliage chiefly. The matrimony vine brings us to a point in the list where it is not quite so easy to decide, for it hangs full of minute blossoms not seen by the unobserving, but fondly visited by the industrious bees, and in early Autumn all may notice the orange-yellow berries like so many minute tomatoes that would need much magnification to show the close resemblance. Besides it is one of the first of vines to sound the color note of Spring.

"If we admit the matrimony vine, then it is only a step to the trumpet creeper, with its flowers lasting only for a short time in midsummer, and serving to attract attention to the overflowing richness of the loose foliage as it falls as a spray from the eaves. It is the sway and movement of the free vine tips, the rich texture and deep color of the trumpet creeper as a climber that satisfies, and not the scattered glove-finger corollas that only accentuate the qualities of the verdure that strives to envelop them.

"The wistarias may become the bridge over which we pass from the foliage to the floral side of our groups of subjects. These lofty, aspiring climbers have a phase in their annual cycle when the blossoms are, above all else, the most conspicuous. In May and before, the compound leaves have scarcely thought of the growing season, the flower buds have opened, and out of them come the giant clusters like skillfully arranged pea blossoms in a leafless pendant of surprising length, and hung in such profusion that it would seem as if the gorgeous, exhausting work was overdone and further growth of the ambitious vine would be impossible. But, before this solicitude has taken root the leaves unfold, and shortly the large rope-like stems are covered with foliage half formed and of a light, warm and tender hue.

"Along with such strong bloomers as the wistaria, we must needs arrange the roses, although the sequence of foliage and floral advents is not the same. The colors in the rose are higher, as is red or crimson above the lilac of the wistaria, and, as if thinking it would be too strong a change from bare canes to the brilliancy of the 'Baltimore Belle' or 'Crimson Rambler' in full bloom, the rose first weaves a tapestry of fresh green upon the trellis, and then when all nature is in full leaf, it comes forth with its display of blooms as a welcome to the rare and perfect June. The individual flower is the acme of beauty in form, texture and color, while the background of delicate perfume only adds to that which already seemed perfection. No wonder that the lovers of the beautiful in nature have agreed so generally in crowning the rose as queen.

"The foliage of the rose is ordinarily sparse, and for purposes of piazza screens needs to be supplemented by that of some other climber in harmony with it. This cannot be that of the wistaria or trumpet creeper, or yet of the pipe-vine, for these are all of the coarse masculine form of plant covers; but instead something that is both delicate and substantial as the honeysuckle, with its fine, leafy stems, producing a well-disposed screen with flowers that are inconspicuous as compared with roses, and keep coming all the season through with a fragrance of peculiar sweetness at evening when the piazza is most apt to be the outside resting place for the family. The honeysuckles are more closely related to the foliage twiners than the clematises, for in the latter the leaves are light in tone of green, airy in form, and unless the slender stems are numerous, the shade is scant. Certain species of the clematis group are among the most conspicuous bloomers on the whole list of climbing plants, and one only needs to refer to the Jackman type in support of this. The purple and blue, and even the white blooms are truly surprising for their size, but less can be said of the fragrance. Along with the roses such climbers need to be placed at the head of the list of vines with conspicuous flowers, and without which they would lose a large part of their attractiveness and usefulness as ornamental live covers for our homes. The *Clematis paniculata* type, which includes our native Virgin's bower, has the more modest bloom, but weaves the small flowers into such a showy, fluffy blanket, that the whole mass becomes conspicuously beautiful. The plant is of the feminine type of climber, full of grace and quiet beauty. It is with this clematis that we have the ornamental nature of the fruit brought to the front. For weeks in Autumn its feathery plumes make a display of refined texture and tint that is one of the most attractive features of the vine. There is no other climber that can equal it, not even the 'wax-work,' with its clusters of orange-yellow fruits, the handsome berries of the matrimony vine or of the honeysuckle."

SYRACUSE, N. Y.—The annual State Fair brought out a larger number of exhibitors in the horticultural section than usual, which was very gratifying to the hustling superintendent, Robt. Bard, who figured that 7,800 bottles alone were provided for the use of amateurs, to stage perennials, apart from the tomato cans provided by themselves, and which I noticed contained many fine specimens of native ferns and the like. Unfortunately, not a single flower was labeled, but, as Bob is a veritable encyclopedia, he could furnish names in answer to the many inquiries made.

P. R. Quinlan Co. were large exhibitors, as usual, and carried off the bulk of the awards, although one design, staged by W. H. Workman, of Oswego, was allowed to be one of the features of the show. L. E. Marquisee was formerly an exhibitor, but, since he has made such a success with carnations, he has given up showing plants, so that practically there is no competition in any class, and the judges have an easy task.

(191) **Cultivation of Edible Asparagus.**—Please give full cultural directions for asparagus (the edible); also state what kinds or kind are best for market purposes. Can asparagus be planted with safety in the Fall?—R. D.

—In making an asparagus bed, first see that the land is well drained. Dig or plow the soil to a depth of 18 inches, then, after it has lain a few weeks, spread a heavy coating of manure over the surface and dig it under. Fork the ground over again once or twice before Spring if possible. Spring is the best time to plant. Put the plants in rows 18 inches apart, and the same distance between the rows. Get two or three-year-old plants if possible. The variety we would recommend is Conover's Colossal. Give a good dressing of rotten manure in the Fall and, in the Spring, before growth commences, give a liberal sprinkling of common salt. A plantation can be kept in good condition a good many years by this simple method of cultivation.

(192) **Carnations Going to Sleep Prematurely.**—The reason why carnations go to sleep cannot be attributed to any one particular cause. Growing them in too high a temperature; using artificial manure indiscriminately, or putting the flowers into an ill-ventilated flower room after they are cut, will often cause them to go to sleep prematurely. To avoid "sleepy" conditions, don't try to force the plants at all; do not feed them until they require feeding, and have a clean, airy flower room, with a temperature of about 40 degrees, where the flowers can stand in water for at least 12 hours before they are to be used. Also, do not use ice cold water in which to place the flowers when freshly cut from the plants.

(193) **Bulbs and Carnations.**—Will you kindly let me know through your valuable paper how to treat Roman hyacinths and Paper White narcissus in order to have them in bloom by Christmas, to be grown in same house as carnations.

Also how much bone meal to put over carnation benches before planting, the ground already containing one-sixth manure.—SUNSCRIBER.

—Plant the bulbs in pots or flats and in a cool, dark place. They may be either buried in a trench outdoors, or kept in a cool, dark shed, or under the benches in the carnation house, if covered with cloth to exclude the light. Give one good watering after the bulbs are planted. Bring them in and place them on the benches about the 20th of November, and they will be in bloom for Christmas. A five-inch potful of bone meal to 100 square feet of bench surface will be sufficient.

(194) **Boarding Bay Trees.**—What charge should be made for keeping large bay trees, 10 feet in height and 6 feet across, in 30-inch tubs; also smaller bays, about three-quarters the size mentioned, for a month, and during the whole Winter.—R. & G.

—This problem has been a vexatious one for a long time, and probably always will be, as much too much depends upon who the customer is, and what his or her yearly purchases amount to. There is, however, only one way to ascertain how much should be charged for boarding plants, viz: to measure up the space they occupy and charge so much per square foot. Every owner of a greenhouse has an idea as to how much each foot of bench space should net him per year to be profitable; and, by measuring up the space used, and the length of time it is occupied, a just conclusion is easily arrived at. Say, for instance, forty feet of bench space is occupied for six months, and each foot is worth $1 per year, twenty dollars should be charged for the plants thus taken care of.

(195) **Asparagus Sprengeri Seed.**—Will you kindly tell me when to pick the Asparagus Sprengeri seed and how to treat it after being picked?—C. D. M.

—Pick the seed as soon as ripe and soak same four days before sowing.—R. ASMUS.

(196). **Heating.**—Please state if for hot water heating a two-foot drop of the return pipe to the bottom of the boiler will be enough, where there is an overhead flow and a gradual fall all the way back.

—If properly arranged a fairly good circulation can be secured, although it is always desirable to have the returns as high as the top of the heater; and the higher the returns, the better the circulation.—L. R. TAFT.

(197) **Heating.**—Would a return tubular boiler, 9 feet long, 3 feet 4 inches diameter with 36 3-inch tubes, be sufficient to heat by steam two houses 125 x 22 x 12 feet high, the sides 4 feet 6 inches double boarded, with paper between, also one house 125 x 14x8 feet high, connected, to a temperature of 58 degrees at nights in zero weather, or a few degrees below?—J.

—To maintain a temperature of 58 degrees in the two houses above described about 2,000 square feet of radiation will be desirable. The boiler would be rated at 25 horse power, and as each horse power is estimated as able to handle 100 square feet of radiation, it should suffice for the two houses. With a somewhat larger boiler it would be possible to leave the fires for a longer time at night.—L. R. T.

(198) **Metallic Paint on Greenhouse Pipes.**—We are using what is called Prince's Metallic Paint on our greenhouse hot-water heating pipes. I believe it to be detrimental to radiation, but my employer thinks it the best material for preserving the pipe, and says that if the heat does not radiate freely the return water is hotter than it would be and so is really not more costly in fuel, though it needs extra pipe surface. There is some truth in that, but in what proportion does it work? For, necessarily, the hotter return water will not fully compensate for the extra heat needed to supply the additional pipe. I have asked several prominent men in the business, and they claim the paint should not be used, both on account of its unhealthfulness for the plants and its stopping up the pores of the iron. Is the paint unhealthy for the plants used in that way, and to what extent does it prevent radiation? Also, what is the difference in preserving qualities of a metallic paint and lampblack and oil, or turpentine, as commonly used for pipes?

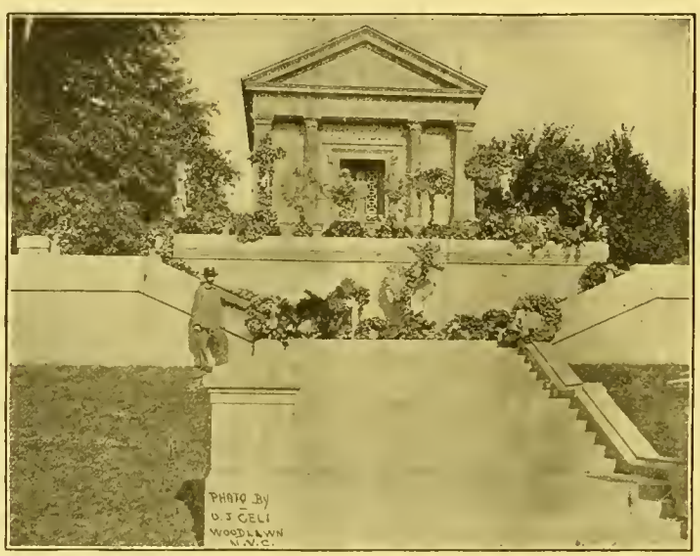
What action does sulphur have on wrought iron pipe?—does it eat into it and will lampblack prevent it?

—I am not familiar with "Prince's Metallic Paint," and cannot speak regarding its qualities. No paints that contain coal tar should be used in greenhouses, and especially on the heating pipes. Aside from any injurious effect they might have upon the health of the plants, all paints that give a smooth surface to heating pipes lessen the amount of radiation from them. Hence, as stated above, it becomes necessary to increase the radiating surface. The difference in the radiation from pipes painted with lampblack and oil, and the metallic paints, will vary with the smoothness of the surface from ten to twenty-five per cent. in favor of the former paint.

Asphaltum and the other metallic paints will prove more durable than oil and lampblack, hence piping upon which they have been used is less likely to become corroded than when painted with lampblack and oil, but when kept properly painted there is no difference, as either will be a perfect preservative.

The use of sulphur upon unpainted pipes often causes serious injury, and this will be but slightly lessened by lampblack paint. The injury, however, is mainly superficial, and is much greater to the appearance than to the durability of the pipe.—L. R. TAFT.

(199) **Wages of Head Gardeners Down East.**—G. R.—There is no union wage among private gardeners, consequently wages are not uniform, and we cannot give exact figures. We may say, however, that the gardeners of New York City Parks have established a scale of wages, and are paid as follows: Foremen, $100 per month; journeymen, $75 per month. These figures are a good clue to the wages of head gardeners in the East, though on very large places, well maintained, the head gardener realizes more according to the responsibility of the position.



Floral Pieces at Tomb of the late C. P. Huntington, Woodlawn Cemetery, N. Y.

New York and Chicago Growers.

It will be recollected that one of the notable features worthy of all praise, that the New York Florists' Club got up for the recent Convention there, was a handsome "Souvenir" book of 152 pages, containing varied information, which book was presented as a gift to every member of the S. A. F. O. H. In that book is given a list of 36 of the principal establishments around New York, which it was thought the delegates would likely desire to visit, together with the owners' names, date established, amount of glass owned and general information, such as how to get to the places mentioned, the kind of stock grown in them, etc. In the case of one or two of the known larger establishments mentioned, the glass area is not given; the same with the dates of founding of others.

Of the 36 named, 35 of the firms have all told an aggregate of 1,618,345 square feet of glass. In the class having 100,000 square feet and over, there are four; one of 225,000, one of 150,000, one of 125,000, and one of 100,000. There are two with between 80,000 and 100,000; two with between 60,000 and 70,000; four with between 40,000 and 60,000; ten with between 20,000 and 40,000; and ten with between 15,000 and 20,000. The others are below the 15,000 mark.

The four big places given around New York, each containing 100,000 feet of glass and over, or a total of 575,000 square feet among them, would hardly equal the area of Chicago's largest establishment.

Take all the 35 establishments named, with their grand total of 1,618,345 square feet of glass, and we can show six or eight with 100,000 or over, that will have more glass area than the whole 35 given.

Looking into what each establishment is specially noted for growing, there is a strange variation. While Chicago's monster places are almost exclusively rose and carnation factories, those of New York, on the contrary, show up in a very varied way, and, we must believe, call for a higher grade of gardening skill in the conduct of such establishments than do specialties like ours.

Another feature: it is well known that Chicago's monster plants and those who run them as florists are a creation of the last decade. In summarizing the 35 places given around New York, we find Peter Henderson & Co.'s establishment dates back as early as 1847; the Dailledouze Bros. and the Zellers to 1861 and 1862 respectively; the Kretschmar Bros., back to 1867. Nine of the others started between 1870 and 1880; 13 firms altogether commencing prior to 20 years ago. Of the remainder there appear to be eight dating back to between 1880 and 1890; and eight between 1890 and 1900.

There is much more food for thought in what the Souvenir Book contains, on the history of the florists' business of New York, both in the past and that of the present day. ESS.

Chicago.

American Institute (N. Y.) Show.

The Fall flower, fruit and vegetable show of the American Institute was held in the Berkeley Lyceum, New York City, on Tuesday, Wednesday and Thursday of this week. Julius Roehrs, of Carlton Hill, N. J., staged a nice assortment of decorative plants and orchids, among the latter being beautiful specimens of cattleyas, oncidiums and cypripediums. Among the plants there were many fine dracænas, Adiantum Farleyense, and palms in variety. Lager & Harrell, of Summit, N. J., staged a nice collection of orchids, including cattleyas, ærides, odontoglossums, vandas, miltonias, oncidiums, etc. A plant of Cattleya sanvlor, a cross between C. Mendelii and C. intermedia, was also shown in bloom. This is a very pretty variety of a delicate lilac color. Wm. Turner, gardener to Wm. Rockefeller, Esq., Tarrytown, N. Y., made a nice display of stove and greenhouse plants, as also did G. H. Hale, gardener to E. D. Adams, Esq., Seabright, N. J. James Bell, Fort Washington, N. Y., made a creditable exhibit of alocasias and fancy-leaved caladiums. N. Hallock, of Queen's, L. I., showed a collection of hardy phlox in many different colors. John Lewis Childs, of Floral Park, staged a collection of gladiolus, also a general collection of hardy flowers. The Manhattan State Hospital, Central Islip, L. I., had the largest exhibit on the floor. This consisted of greenhouse plants, together with a fall line of vegetables and fruits.

The exhibits of dahlias were the most attractive feature, and, considering the season, the displays made were very creditable. Those entering dahlias for competition were: H. F. Bart, Taunton, Mass.; Lothrop & Higgins, East Bridgewater, Mass.; H. Beaulieu, Woodhaven, L. I.; G. H. Hale, Seabright, N. J.; Rowehl & Granz, Hicksville, L. I.; W. Atlee Burpee & Co., Philadelphia, Pa.; James Dowlen, gardener to H. L. Terrel, Esq.

James Caunce showed vases of zinnias and African marigolds. Mrs. J. H. Troy had a vase of roses. A. McKenzie, Cedarhurst, L. I., staged two nice plants of Acalypha Sanderi. Spikes of a new hybrid gladiolus, a large-flowered scarlet with white across the lower petals, named Princeps, were shown from the trial grounds of the Rural New Yorker, Little Silver, N. J. W. C. Krick, Brooklyn, N. Y., had samples of his pot-holders and adjustable plant stands on view, and Robert Kift, of Philadelphia, exhibited his glass devices for holding cut flowers. A collection of hardy flowers was shown by J. W. Duncan, gardener to W. H. S. Woods, Esq., Greenwich, Conn.

Among the fruit exhibitors, Ellwanger & Barry, of Rochester, put up an extensive display. In vegetables the trial grounds of American Gardening, Greenville, N. J., furnished an exhibit of tomatoes. Dean Ferris, Peekskill, N. Y., exhibited a large variety of vegetables. This was made as a government display and represented vegetables that are being experimented with.

The grapes shown were of superior quality. Mrs. P. Barry of Rochester was a large exhibitor. Other competitors were Howard Nichols, Yonkers, N. Y.; Wm. Turner, Tarrytown, N. Y.; Jas. Caunce, Larchmont, N. Y.; C. C. Corly, Montclair, N. J.; and Wm. Scott, Tarrytown, N. Y.

The judges awarded the first premium for decorative plants to Julius Roehrs. The exhibits of G. H. Hale and Wm. Turner each received a special mention. For the collection of hardy phlox N. Hallock received a certificate of merit. For gladiolus, J. Lewis Childs took first prize in each of the three classes; and a certificate of merit was awarded the new variety Princeps, shown by the *Rural New-Yorker*. For collection of hardy flowers, J. W. Duncan received first and J. Lewis Childs second. In the dahlia classes, H. F. Burt took firsts for 50 single, display of singles, 10 show varieties, 25 fancy varieties, 25 show varieties, 50 show varieties, best display of cactus varieties, and vase of cactus blooms. Mr. Burt also took second prizes for collection of 25 kinds and bunch of Grand Duke Alexis. Rowehl & Granz were the first prize winners for Grand Duke Alexis, best bunch of White Swan and vase of A. D. Livoni, being second for 25 show varieties. Lothrop & Higgins were first for display of pompon varieties, second for collection of cactus varieties, also second in each of the classes calling for 10, 25 and 50 blooms, respectively.

In the amateur classes, G. H. Hale was first for cactus kinds; also for the best 50 variety, the best 10, the best 25, and the best 25 fancy. J. Dowden took first for 100 single blooms and second for collection of cactus varieties.

Besides the exhibits already mentioned, H. Clinkaberry, of Trenton, N. J., showed cut blooms of cattleyas, among which were specimens of his new C. gigas Roebfingiana; also a few white blooms, C. labiata alba, and C. labiata Cooksonii, white, with purple lip.

An Interesting Occasion.

1890-1900.

Mr. and Mrs. John Banks Deamud, of Chicago, on Saturday evening, September 22, 1900, celebrated the tenth anniversary of their wedding. A call was first made at their residence, 6435 Star avenue, but the real entertainment took place at the nearby Fraternity Hall. This was a good old-fashioned reunion of relatives and without the stiffness and formality of a simple reception.

At 11 o'clock, a march was made to the banquet hall, where long tables were arranged elegantly decorated with flowers, and loaded with good things for the inner man; and thus an hour was pleasantly spent. The scribe does not know, except by hearsay, when it all ended; but it was not before the wee sma' hours.

Mrs. Deamud has enough useful, ornamental and fantastical tinware to last a life time, or with which to establish a good-sized tin shop. Before marriage she was Ida, daughter of H. H. Wilder, for many years master mechanic of the south side parks of Chicago. "The Happy Family," as shown in the illustration, consists of Mr. and Mrs. Deamud and son, Wilder Samuel Deamud, a comely lad now in his ninth year.

ONE OF THE MEN WE MEET.

John Banks Deamud was born January 12, 1866, in Davisville, Ontario. His father moved to Saginaw, Mich., before the son was three years old, and still resides there, being interested in farming and the lumber business. It was here the school days and youth of Johnny were passed. On September 22, 1884, he came to Chicago to seek his fortune. A few months afterward he began work at Vaughan's Seed Store, as he himself tells it, as a "rousta-bout," another name for general utility man. Step by step he advanced to the position of general salesman, being highly esteemed by his employer, and, naturally, became well known to hosts of buyers in the florist and seed business.

While with Mr. Vaughan, he visited England and the Continent generally in the interests of his firm. Leaving this position he entered the wholesale florist's business in 1893, first under the name of J. B. Deamud & Co., really handling the cut of Bassett & Washburn's flowers. On September 5, 1896, he started in business for himself in the Atlas Block, under the firm name of The Illinois Cut Flower Co., now changed to J. B. Deamud, wholesale commission florist, with a fine salesroom at 51 Wabash avenue.

In a comparatively short time Mr. Deamud has worked up a commission trade of which he may well be proud.

He is a member of the S. A. F. O. H., the Chicago Florists' Club, is a Master Mason, and has travelled the rugged path to the envied position of a Shriner.

EDGAR SANDERS.

NOTES BY THE WAY.

KANSAS CITY, MO.—Through the courtesy of Samuel Murray, I was enabled to see this magnificent city of bluffs (not bluffers) under most favorable circumstances. The average traveler usually passes through with the impression of a dirty, congested place in his mind; but when viewed from a point of vantage, it is a glorious sight. In one direction the city proper, fringed with the handsome residences of its wealthy merchants, extends away as far as the eye can reach over a rolling country with boulevards which rival the famous Michigan boulevard of Chicago and Riverside drive of the metropolis, while in another direction stretches the fertile valley of the Missouri river. Small wonder that our fellow craftsmen are so proud of their city, and yet one sees but little matter in connection therewith in our trade papers. It must be that the boys are so modest that it requires another to sing their praises, as it were.

Standing on the spot where that famous old Indian chief, Sitting Bull, formerly surveyed the landscape for signs of the enemy, I could not but admire the foresight of that veteran craftsman, Robert Brown, when he saw a future for plants and built a greenhouse upon what was then virgin prairie. It was a long, tedious pull, but being almost a native himself, he was the man to lay the foundation of a business which has grown to extensive proportions, and is now known under the style of Robt. Brown & Sons.

Situated not far distant are the plants of the Humfeld Floral Co. and Samuel Murray.

The latter gentleman grows many specimens for his store. I noted a fine batch of trained chrysanthemums that reflect much credit upon his grower, Mr. Sharpe.

Considerable friendly rivalry among the citizens for premiums offered by one of the journals for the best kept gardens has created a phenomenal demand for plants which benefited all growers. A. Barbe supplied many from his well-grown stock.

The store men look on at such times with envy, but as Arthur Newell naïvely remarked, while they are chasing grasshoppers we are cooling ourselves up at Mackinac, preparatory to having our innings later. W. L. Rock does a flourishing business.

One of those mammoth greenhouse plants transplanted from Chicago may be an event of a not very distant date. There is no danger from the shaggy buffalos; the only relic is H. I. Millatt, of the Bison City, who predicts another season as good as last year, which satisfied all hands.

ST. JOSEPH, MO.—The firm of W. Krumm & Son has changed, Mr. Krumm, senior, having retired in favor of the boys after building up a flourishing business, the continuation of which will, we are sure, be carried on with mutual satisfaction. Fred Krumm, the popular store member, felt so elated that he immediately took a life partner, remarking there were enough crumbs to go a little further. He is receiving hosts of congratulations.

J. N. Kidd had all arrangements made to attend the Convention, but was compelled to defer at the last moment, on account of heavy funeral work.

DAVENPORT, IA.—Otto Klinghiel, who took over the plant so well conducted by Chas. Dannacher for several years, has a fine stock prepared for Fall. Mr. Dannacher is resting upon his laurels.

ROCK ISLAND, ILL.—Henry Gaethje is putting in an electric pump, his establishment getting beyond the old-time windmill capacity.

MOLINE, ILL.—Henry Knees reports a very busy Summer with a fine lot of stock for Fall. Carnations have done very well right through this country, and by this time all are planted.

ST. PAUL, MINN.—I met Chas. R. Dane, of Boston, who stopped off for a few hours en route from a visit to Winnipeg, where he spent a delightful time, and reports the craft there fully as progressive as their American friends. Mr. Dane pointed out to the writer the spot where he first landed in a batteau in '57, when a greenhouse was a rarity, and such a place as the Donaldson glass block, where Jas. Souden presides over the Floral Department, was not dreamt of; and a handsome store, with a double fronted entrance, with span for a car load of plants as occupied by those young hustlers Holm & Olson, an impossibility.

Otto Heiserkorn has built a handy greenhouse on to the rear of his store.

J. B. Deamud, Wife, and Son.

LAFAYETTE, IND.—At time of my visit to F. Dorner's Sons, they were busily engaged housing seedling carnations, these being the last to come in from the field. The early part of the season was favorable to the growth of the plants, but the latter part was very trying, and those that have come through bear evidence of a vigorous constitution. While the number of seedlings is larger than ever before, the percentage of good blooms is greater, and the habit of the plants more promising. There are very few of the dwarf, bunchy type. Altogether the outlook for something even better than what has been sent out augurs well.

Among the numerous seedlings being tested is a white of '98, which may be classed as an improved White Cloud, it being sturdier than that variety, with a longer stem, and will come into crop earlier, which, as is well known, is White Cloud's only drawback. A yellow is a fine Gold Nugget, but of a brighter color, cleaner habit, and, if possible, freer. Another is a cerise pink, of which more will be heard; also several "dark horses," that will demand recognition later on. White Cloud and Glacier are grown as standards, while a house is set apart for trial of the new varieties sent out by other introducers, Mr. Dorner being greatly in favor of growing the plants one season before endorsing them. The irrigating system is a success, and will be enlarged this season.

Fred tells me that shipping business has far exceeded expectations. The demand from the South is increasing; as, while the growers there are very successful through the Winter, during the Summer the plants do not make so good a growth as what is here termed second size.

While in the field of seedlings I noted a new canna, of an orange shade, of very free growth, medium height and highly promising. Also a carnation with a stem three feet in length, flower of a dark color—a rival to Roosevelt.

Mr. Dorner says the daily edition of the EXCHANGE, at the Convention, was a masterpiece of journalism

INDIANAPOLIS, IND.—Anthony Wiegand returned home deeply impressed with the princely hospitality of the New Yorkers, and says that he could end his days at Glen Island, which means, we hope, that he could spend a long time there. Anthony, Junior, came back with some ideas he picked up in a tour of the stores, and is embodying these ideas in the reconstruction of their own store, making it thoroughly up-to-date in every detail.

But little trace is left of the bad fire that visited the plant of W. J. Hasselman last Spring; everything is now in running order. The establishment is heated with hot water under pressure, furnished by a 140 h. p. boiler, which is, I believe, the largest of its kind used in our business.

At the State Fair held last week W. W. Coles, of Kokomo, took first premium for a general collection of old-fashioned flowers. There was keen competition, proving the increasing popularity of perennials, which largely predominated.

TERRE HAUTE, IND.—J. G. Heinl & Son have a choice stock for Fall business. They intend transferring the entire plant to land situate a short distance away, and of less value as real estate. By next Spring a new block will be erected. Fred Heinl has plans for the store, which will be strictly up-to-date.

DANVILLE, ILL.—John Willis was one of the crowd who attended the Convention. It was some twelve years since he had visited the great metropolis, and he was amazed at the changes that had taken place during the interval. There were no markets then, and he recalls his peregrinations from Flatbush to New York with much interest. Mr. Willis was acquainted with that enthusiastic horticulturist, Simon Mardner, of Mayence-on-the-Rhine, the raiser of those indispensable varieties of azaleas Deutsche Perle and Simon Mardner. He is now making carnations his hobby, and has a yellow, of Malmaison type, which, if sufficiently floriferous, will be a desideratum.

The building of the conservatory at the Soldiers' Home is under way, and by next Spring will be finished.

BLOOMINGTON, ILL.—Andrew Washburn & Sons have added several houses and remodelled their store during the Summer. Owing to sickness, the senior member of the firm was prevented from attending the Convention, and perused with much interest the report, as contained in the EXCHANGE.

J. D. Robinson has added a house for the Perle, which rose is as popular as ever for funeral work. His chrysanthemums in pots are well grown.

SPRINGFIELD, ILL.—Brown & Canfield were compelled to move into a larger and more commodious store, where they will be able to give more room to plants. The seed branch is large, and increasing.

Louis Unverzagt was busy making up groups for his exhibit at the State Fair, to be held this week, where he usually is very successful, owing to the high grade of stock shown by him.

Miss Bell Miller has one of the largest stocks of Boston ferns in the state.

PEORIA, ILL.—J. C. Murray has removed into a larger store, located a short distance from the former site. Increase in the seed business is responsible for the change. Closer attention to this branch has proven very remunerative, and as nothing but high grade stock is handled an enviable reputation has been built up. An addition has been made to the greenhouse plant; two houses, each 100 x 25 feet, S. E. aspect, with a corridor house, supplied by Moninger, are intended for roses, of which the stock planted is in excellent shape. Beauty will be grown extensively, part of the old plant being utilized for that purpose. Liberty is doing finely, planted in same house with Bride and Bridesmaid. Of carnations, Mrs. Joost is the most popular; it does splendidly in this section. Chrysanthemums in pots are a feature; they usually sell well, and this year will probably be no exception. I noted also a well-grown batch of poinsettias, which the grower, Mr. Reeve, tells me are in good demand.

W. M.

Columbus, O.

Mrs. E. L. Charles was severely burned recently while putting out a fire caused by an exploded lamp.

Emil Metzmair has returned from Europe. He reports having had a very good time.

Correspondence

The Howard Star Petunias.

Editor Florists' Exchange.

On the priociple that merit should not go unrewarded, I am sure you will welcome a word about this unique strain of petunias. September 15 Professor Maynard, of the Agricultural Experiment Station at Amherst, and myself went to Belchertown to see these petunias. Mr. Howard knows how to make and stick to such a line of floral development better than he does how to introduce it. Everyone who has seen cut blooms of these petunias on exhibition has been struck with their novelty and quality, but probably also everyone's first thought has been that but a small percentage in a field of them would have this decided character. I was myself chiefly interested to see what their general character was in the field. Mr. Howard has been 20 years at work on them, the last five years showing the most decided progress of all. Seventy-five per cent. of the plants from seed show original character, although there are perhaps three types that are most striking. There is the sharply-defined star, with rich velvety maroon border. Then there is a type in which the star blends with the border in a brilliant wine shading; and there is a beautiful class in which veined and feathered work takes the place of the star. Those that incline to a white flower are beautifully blotched.

We saw the plants before the recent rains had refreshed them, and they were still thrifty and full of bloom. One thing that indicates their quality is that they seed very sparingly, and they will yield an exceptionally small quantity this year. Professor Maynard and myself advised holding it till a better seed year. I think any fair judge would class this petunia with the best recent floral acquisitions.

Mr. Howard has also a fine strain of Liliput zinnias, and is at work on verbenas and asters. He will another year devote more labor to exhibiting his petunias. And, by the way, why was it the Massachusetts Horticultural Society, where they were shown this year and attracted great attention, awarded them no special recognition? Probably it was because the judges waited to find out whether the general character of the strain is as fine in the field as it appears to be on the table. I am sure that any Massachusetts society owes it to a man in her borders not only to recognize his 20 years' persistent work on this flower, but to prove to their own satisfaction that it is in the field what it appears to be on the table. Mr. Howard has a good thing, and is too modest about it.

W. T. HUTCHINS.

Notes on Cannas.

The number of varieties of cannas is increasing every year, and as decided improvements among them are being made, it will be necessary for such growers as wish to keep up to date, and have the best kinds only, to discard many old varieties, as these are gradually being superseded.

We recently had the opportunity of going through the canna fields of the F. R. Pierson Co., Tarrytown, N. Y.; and C. W. Ward, Cottage Gardens, Queens, L. I. At both these establishments the cannas are planted in blocks, and competing kinds are placed side by side, so that, now that they are all in their full glory of bloom, a comparison of their respective qualities is rendered comparatively easy.

As the florist and gardener uses the canna for distant effects, rather than for close inspection, such as is given to carpet beds, etc., the canna's strongest points should be its distinctiveness in color and form, rather than the size of its individual segments.

In the fields of the F. R. Pierson Co., which are located near the firm's rose houses at Scarborough, N. Y., the season has been a particularly dry one, and has been a severe test on the staying qualities of the cannas. In the crimson bedding class, Tarrytown, McKinley, Philadelphia and Beaute Poitevine stand at the head of the list. Tarrytown was sent out two years ago, and after growing it side by side with its competitors, Mr. Pierson unhesitatingly pronounces it the very finest crimson bedding canna in cultivation. Its habit of throwing up the flowers well above the foliage, so evenly, together with the branching of the flower stems, each branch bearing such a profusion of vivid blooms, makes it by far the most desirable sort of its color.

Mrs. Kate Gray shows up very handsomely, and where a tall growing, orange-scarlet variety is needed, this is the one to fill the bill. This variety is the result of a cross between Italia and Mme. Crozy, and the color and size of the flowers make it very effective.

In the vari-colored section, Pierson's Premier, Queen Charlotte and Souvenir d'Antoine Crozy are among the very best. Pierson's Premier is, however, preferred, owing to its uniform dwarf habit (it grows but three feet high), and its profuseness in flowering.

In yellow varieties but three need be mentioned here: Floribunda is a tall growing kind of a bright color, probably the freest bloomer of all cannas; and where a tall plant is needed this variety is to be preferred to Eldorado. The latter is a beautiful yellow, and for medium height is all right. Buttercup is a very dwarf variety, but the pure yellow color of its blossoms makes it one of the most effective of its class.

In the pink-colored class Rosemawr stands way ahead of all the others. This variety has a soft rosy tint that is foreign to the usually so-called pink canna, and, seen at a distance, the pink tint is decidedly pronounced and very pleasing in effect. This canna attains a height of about three feet, and, as its appearance in the field shows, is a capital bedder, being very free and lasting, and the flowers holding their color tints without fading.

In the dark or purple-leaved section, President Max Michelli has both well-colored foliage and flowers. The latter are of a deep orange shade, and are borne as freely as those on the green-leaved section. Shenandoah is one of the dark-leaved kinds, and throws a pink flower. This variety looks very promising, and further trial will probably place it among those in the front rank. Crimson Bedder shows up well, as also does the Duke of Marlborough; the latter, as a dark crimson, being probably the very best of its color. Secretary Chabanne approaches nearest to the salmon tint as the flowers develop, and is quite distinct. It is also early and of good habit, growing from three to four feet in height.

Besides the varieties mentioned, Mr. Pierson has a block planted of Souvenir de Mme. Nardy, a beautiful mottled variety; Pandora, a dark foliage variety, flower stems rather slim; Michael Fauvchoir, a tall growing orange-colored variety that looks promising; Mlle. Berat, a dark-pink kind; Alsace, the only "white" canna; Baron de Bellroche, which throws a pleasing carmine-colored flower and has very heavy foliage.

Phillip Rivoire is a new kind, with a colored flower which looks promising; Alphonse Bouvier, a tall dark sort; President Cleveland; Sam Trelease, a scarlet flower with yellow throat, very pleasing, and shows a good habit; President Carnot, a dark foliaged variety; J. D. Cabos, light orange; Admiral Avellan, F. Neuvessel, J. C. Vaughan, and Burbank and Kronos, of the Italian varieties.

Mr. Ward has a very select collection of cannas in the field, and a visit to them at this time is most interesting. We noticed particularly a seedling that gives great expectations as a bedder. The color of the flower is about the same as that of President McKinley, a little brighter if anything, and this variety is inclined to be a rather taller grower than McKinley. In the crimson class Mr. Ward's specials are President McKinley, Mrs. Kate Gray, Philadelphia, Duke of Marlborough (dark), J. D. Eisele and Beaute Poitevine. Eldorado is the favorite yellow; and in the purple-foliaged class Black Beauty is in the front of all others. For an orange or bronze-colored variety, J. D. Cabos takes the lead, while in the mottled sorts Comte de Bouchard is considered the best one. Sam Trelease is showing up in good form, and will be kept as a standard sort; and that gilt-edged variety, Souvenir d'Antoine Crozy, is reckoned as the best in its class.

Other varieties are grown; but we have given the names of the choicest kinds in their respective colors. Those mentioned have been fairly tried, and can be relied upon as the best up-to-date varieties.

Acid Salts.

Perhaps no principle in agriculture is better established than that an excess of any salt, in the usual acceptance of the term, is a cause of barrenness. Yet it is quite as well established that the quantity of different salts admits of some latitude, and that some salts do produce better results than others. Referring to the acid constituent of these salts, it will be found that some acids are organic. They consist of hydrogen, carbon, oxygen, all of which, under the influence of the living plant, may be dissociated. Other acids consist of oxygen and nitrogen, essential constituents of plants; others consist of chlorine; others of sulphur and oxygen, and others of carbon and oxygen.

In other words, the acids are composed of elements which form food for plants, or of elements which enter in small proportions only into the composition of plants.

In the first case, the salts admit of a larger quantity being applied than in the second. By the first, plants are fed; by the second, they are poisoned, for the base of all salts act ever the same in agriculture. Peculiarity of action depends on the acid of the salt. The acid is eliminated; if this is set free in large quantities and its elements can be taken up and converted by the plant, well, good effects follow; if, on the other hand, the elements of the acid are such as the plant does not demand, they act like poison on the animal economy.

Let salts be divided on this principle of the peculiarity of action depending upon the acid of the salts into two classes—the first nourishing, the second poisoning, plants. The first class contains (a) carbonates, (b) nitrates, (c) phosphates. The second class—that is, those whose acid forms but a small portion of the elements of plants, we find there two classes: First, sulphates, as plaster, copperas, glauber salts, all of which, in small quantities are beneficial; second, muriates of chlorides, as they are strictly called, as common salt (muriate of soda), muriate of lime, muriate of potash.

In all this action of salts, it is seen that the presence of life seems almost essential. Whatever the vital principle may be, it may be best represented as analagous to electricity and galvanism.

In this point of view, the salts present themselves in a new relation, in which, alone, they may be said to be stimulants or excitants. Plants and soil act, it may be supposed for illustration, by forming galvanic batteries, or piles, with each other. The most active element in the pile is the growing plant. It is an acknowledged fact that chemical action, if not the source, is ever attended by electrical effects. An acid in contact with an alkali or metal always produces chemical action, but the silicates of the soil are already combinations of acid and metals; hence as such they have no tendency to act on each other. If there be added to these a salt or an acid, chemical action, decomposition, begins. The electricity is, we may say, excited by salts; they are in this sense, and in no other, excitants or stimulants. The very first act of vegetation, the germination of seeds, induces this electric action, this decomposition of the elements of soil. Germination produces carbonic acid by decomposing water. The very first act of life in a seed is to evolve carbonic acid by its carbon combining with oxygen of air, and its second act is to decompose water. Its oxygen combines with the carbon of the seed; a single bean produces many times its bulk of carbonic acid gas, and in the soil would surround itself with carbonic acid. This evolved, begins its action upon the silicates.

This living seed begins its electric action, and the plants exert and keep up this influence. Salts act in a similar way, but above all, over all, influencing all, is the living plant. This electric action induced, extends to undetermined distances; hence, there is a transfer, as is usual in all cases of galvanic decomposition, of substances remote from the plant to its root, where they are taken up. It is not the potash, soda and lime, etc., immediately in contact with the root which alone supplies the plant, but under the galvanic influence an undetermined portion of soil is decomposed. By numerous experiments it is known that plants constantly discharge, while growing, carbonic acid from their roots. This acid decomposed the silicates in a soil which had resisted the action of nitro-muriatic acid. It eliminated elements from supposed pure quartz whose existence there had been proved in no other lode. ANDREW H. WARD.

NURSERY DEPARTMENT.

AMERICAN ASSOCIATION OF NURSERYMEN.

THEODORE J. SMITH, Geneva, N. Y., President; N. W. HALE, Knoxville, Tenn., Vice-President; GEORGE C. SEAGER, Rochester, N. Y., Secretary; C. L. YATES, Rochester, N. Y., Treasurer.

Rochester, N. Y.—Fire destroyed most of the buildings of the Batavia Nurseries, owned by Nelson Bogue, September 23, entailing a loss of about $8,000.

October Purple Plum.—We send you by bearer samples of October purple plum, which we want you to examine and pass upon. The tree is a fine grower and a heavy bearer.—STEPHEN HOYT'S SONS, New Canaan, Conn.

—The plums arrived in good condition and proved to be very juicy and pleasant to the taste. As a late plum it is a beauty, and should surely become a favorite.

THE EXPERIMENT STATIONS.

FIELD OPERATIONS OF THE DIVISION OF SOILS.—U. S. Department of Agriculture, with accompanying maps. The operations consist of soil surveys over various areas, aggregating 720,000 acres, the work accomplished being, in the opinion of the Secretary of Agriculture, the most important of its kind ever undertaken.

PROGRESS OF PLANT-BREEDING IN THE UNITED STATES.—Reprint from Year Book of Department of Agriculture, 1899, an interesting and valuable pamphlet.

LIVE COVERS FOR COUNTRY HOMES, Bulletin 144, New Jersey Agricultural Experiment Stations, New Brunswick, N. J.—An illustrated pamphlet, enumerating a list of vines suitable for covering house walls, etc.

HOW INSECTS ARE STUDIED at the Ohio Agricultural Experiment Station.—Bulletin 114. Prof. F. M. Webster gives an interesting account of the work of the entomologist at this station.

INVESTIGATIONS OF PLANT DISEASES.—Bulletin 111 of same station. Profusely illustrated.

TWENTY-THIRD ANNUAL REPORT Connecticut Agricultural Experiment Station, New Haven, Conn.—Contains, among other things, notes on experiments with different fertilizers applied to carnations, and an article on "Stem Rot" on carnations.

THE APPLE ORCHARD, Bulletin 49, Missouri Agricultural Experiment Station, Columbia, Mo.—Deals with preparation of soil for planting crops to be grown in an orchard; cultural methods, etc.

TESTS OF SMALL FRUITS, Bulletin 83, Indiana Experiment Station, Lafayette, Ind.

CUCUMBER ENEMIES. How to Fight.—Pamphlet issued by Maine Agricultural Experiment Station, Orono, Me.

GRAPE CANE GALL MAKER AND ITS ENEMIES.—Bulletin 116, Ohio Experiment Station, Columbus, O. Illustrated.

INSECTS AFFECTING THE TOBACCO PLANT. By Prof L. O. Howard.—Farmers' Bulletin 120, United States Department of Agriculture. Profusely illustrated.

TOBACCO STEMS
"Good Strong Kind."
60 CTS. PER 100 LBS.
BALES WEIGH 500 LBS.
TOBACCO DUST
"THE BLACK STUFF."
Fine or Coarse to Your Order.
50 to 1000 lbs., 2 cents per pound.
H. A. STOOTHOFF,
118 WEST STREET, NEW YORK CITY.
Mention this paper.

Boston.

Market Report.

Business shows but slight improvement as yet The wholesalers find most of it comes from out-of-town purchasers. The retailers, although they see customers returning nearly every day, do not report any great rush yet, though most of them are kept busy returning "boarders" now. There is little prospect of much improvement before the middle of October, unless we should get about a week of cold, disagreeable weather, which would drive many home early.

The market is stocked well enough to meet all demands on it, although at times a few finer roses could be used. There are quantities of Bride, Bridesmaid, Meteor and Liberty coming in, but they are principally of the poorer grades. A few of a little better quality make $4 per 100. Kaiserin and Carnot are not as plentiful nor as good as they have been, though a few good flowers of the latter are to be had. American Beauty are in good supply, but as yet the demand is light for the better grades.

The supply of asters is decreasing and the quality, too, is falling off, though there are still more than enough to meet the daily demand. Carnations are becoming plentiful from indoors. Prices have not changed much, dropping a little if anything, with the increased supply. A few fancies or novelties make $2 per 100.

News Notes.

Welch Bros. are receiving shipments of some very fine American Beauty.

R. H. Kidder is bringing in a few solanums of fairly good quality. Mr. Kidder has a fine lot of young palms, rubbers, araucarias, pandanus, dracænas, etc., at his place.

Lawrence Cotter had an unwelcome visitor on Wednesday morning, September 19. An escaped inmate of the lunatic asylum at Austin Farm amused himself throwing stones through the glass in the greenhouses, and doing other damage about the place. He was shortly afterwards arrested.

Massachusetts Horticultural Society.

The regular exhibition held at Horticultural Hall, took the form rather of a fruit and vegetable show. The annual exhibition takes place September 27 and 28. Prizes were offered for cactus dahlias, for the first time, and some fine flowers were shown by H. F. Burt and W. G. Winsor. Good exhibits of perennial asters were made, among the better ones being those of the Misses Doran, Blue Hill Nursery and Miss A. L. Grinnell. The hardy herbaceous plants shown were of very good quality, Blue Hills Nursery, Carl Blomberg and W. J. Clemson, making nice displays.

Among other flower displays worthy of note were Rea Bros.' collection of perennial phloxes, Francis Skinner's asters and zinnias; Mrs. E. M. Gill's and Jas. Comley's asters and Miss Grinnell's large collection of native plants. Only two plants were shown, and both were orchids; one a Stanhopea Bucephalus guttata, exhibited by H. A. Wheeler, which was awarded a first-class certificate of merit; the other an Oncidium ornithorhynchum, from R. Carslein, gardener to Col. F. Mason.

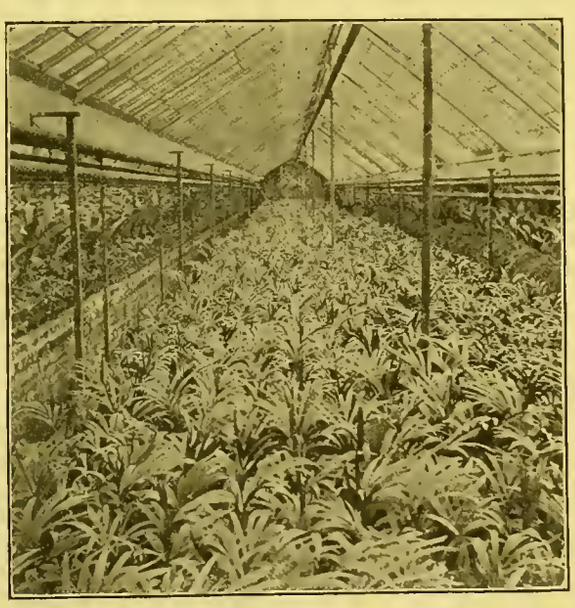
The fruits and vegetables were of an uniformly high standard of quality, and this in the face of an unusually dry season. Among the apples Gravenstein was presented in greatest number, and was in the lead for quality. Other fine sorts shown were Garden Royal, Porter, Maiden's Blush, Red Bretigheimer and Wealthy, the latter variety winning first in the class for "any other variety," as shown by C. M. Handley, who also won second in this class with Fall Orange. The crab apples on display were excellent and included fine specimens of Transcendent, Hyslop and Montreal Beauty. The Bartlett pear still holds its claim as the favorite, though Sheldon and Souvenir du Congrés showed up finely. Peaches, too, were extensively shown, and of very fine quality. Splendid specimens of Coolidge's Favorite, Crosby, Crawford's Early, Old Mixon, Freestone, Stump the World and Elberta being staged. Nectarines, plums and native grapes added to the fine display.

At the exhibition of the Massachusetts Horticultural Society, Saturday last, a few very nice things were shown. Oakes Ames, Esq., (Robert M. Grey, gardener) sent in three fine orchids, for one of which, a hybrid cypripedium bearing Mr. Ames' name (C. Rothschildianum x C. ciliolare) he was awarded a silver medal. He also showed Epidendrum Godseffianum, with three fine flower spikes, and Stelis Rodriguezii, an interesting Mexican species. A large collection of dahlias was staged by C. S. Pratt, and one of asters by F. Campbell. Joseph Chase had a fine collection of grapes of excellent quality. F. J. N.

Dayton, O.

The horticultural display at our county fair this year was very good. A goodly number of amateurs had their plants on exhibition, and made a fine showing. Among the growers the collection of J. H. Brehner deserves special mention. His large palms, rubbers, crotons, dracænas, araucarias, etc., were very attractive, due to their condition and arrangement. His large Codiæum interruptum, as a center piece, was very noticeable. The most interesting part of the plant exhibit was "Before and After Joining the Outdoor Art Association of South Park." This work was designed and suggested by Mr. E. H. Kerr, and was unique, indeed. The "before joining" was illustrated by a tent representing a hut surrounded by a fence. In the center of the front yard was a small bed containing a carnation plant. A few small plants were placed in one of the windows, and several oleanders were promiscuously dispersed in the front yard. The clothesline, bearing some clothes, helped make the front yard conspicuous. Just across the walk was the "after joining" display. In this case the front yard was larger, and, instead of being bare, was covered by green grass, making a beautiful lawn, with a curving walk through the center, leading to the house. The lawn was tastefully bordered by potted decorative plants, to illustrate planting. The house was, indeed, a homelike and inviting spot. In front of the house grew plants reaching up to the lower windows, bordered by some not so high. The veranda and windows were tastefully covered by growing vines. It made the most striking picture we ever saw. It simply shows how much more homelike a house can be made by a little interest and judgment.

In this connection, perhaps, a word or two about South Park, where this Outdoor Art Association had its origin and now wields a powerful influence, will not be out of place. In this part of the city is the factory of the National Cash Register Company. Their section was but a short time ago a very unattractive locality. But the love of plants and the influence of the Outdoor Art Association, as well as the encouragement given by the company, has transformed this spot into an Eden. It is certainly inspiring to stroll in that neighborhood and see the homes of the factory employees—houses beautifully decorated by veranda boxes and hanging baskets, and surrounded by rich green lawns, neatly bordered by growing plants. N. C. R.



Views in Palm Houses of J. B. Heiss, Dayton, O.

Western Palm Trade.

Our illustrations show the interiors of the palm houses of J. B. Heiss, Dayton, O. Mr. Heiss finds an increasing trade in this line, and is making preparations to meet it.

Denver.

The Florists' Club of this city is exhibiting great activity. It will hold a flower show, November 8 to 14 next, to which, it is reported, admission will be free. At the last meeting of the club the matter of creating a general interest in gardening was discussed, following a paper on the subject read by Mr. Davis of the city park greenhouses. It was suggested, and received with favor, that the co-operation of the City Improvement Society and similar organizations be sought and that exhibitions be given of garden and house plants, at the proper seasons, to be participated in only incidentally by the florists and the paid gardeners, and principally by persons who dig their own gardens and nurse their own plants. Prizes will be offered also for the best kept gardens, the best lawns, the finest trees and other features in the beautification of the city.

The club will also look into the matter of making a flower market in Denver. The plan proposed is to erect a suitable building in a central location, provided with stalls, in which the florists may exhibit their wares. This plan has been tried in Cincinnati and other cities, and found satisfactory.

The matter of the wages paid in Denver floral establishments was discussed, and the employing florists present agreed that less was paid than in other lines of trade where less skill and reliability were needed. The uncertain scale of prices for flowers was blamed for the low wage scale. It was decided that the club should do all in its power to advance the interests of the working florists, both by increasing the demand for flowers, and by getting the public to understand the amount of skill and work required to produce the higher class of stock. This may be supplemented by a movement to establish uniform prices.

Exhibits were made at this meeting by Manff, McGregor and others.

St. Louis.

Market Improves.

Stock and business continue to improve; roses are arriving of very much better quality, with satisfactory sales for the best of them. Prices run about the same as last reported.

We hope and expect from now on that trade will be good. Our fair opens next week; our exposition is already open, and there is a big ball next, all of which tends to increase business. This we certainly need, as it is generally admitted that the past Summer has been a remarkably dull one.

Ostertag Bros. report a very busy and satisfactory trade induced by decorations of large downtown stores. They use natural and artificial plants together.

Visitors.

Mrs. M. S. Vesey, of Fort Wayne, Ind.; Walter Retzer, of Chicago; W. H. Bearry, representing Curry & Co., Nashville, Tenn.; Frank Howard, representing Chicago Folding Box Co.

Notes.

Theodore Miller has opened a retail business at 4832 Delmor avenue. He has a neat, well-built greenhouse store, with elegant finish and fixtures, all in pure white; his icebox being one of the most attractive features. Mr. Miller was for years superintendent of Portland Place, one of our best and most fashionable private establishments. In connection with above business he will undertake landscape work of high class only, and would like to receive the wholesale lists of florists and bulb men. Mr. Miller has done considerable work in the laying out of nice places, several of which are in Portland, and adjoining neighborhoods.

H. G. Berning has gone to Chicago on a wedding trip, he having been married recently.

George Waldhart has moved into his new store. C. C. S.

Louisville, Ky.

The retail prices of flowers here are: Roses, other than Beauty, $1 to $1.50 per dozen; Beauty, $2 to $3 per dozen; carnations, 25c. to 50c. per dozen. Stock is improving steadily, especially American Beauty, which are coming in extra fine.

In the recent floral parade the florists did themselves proud. In the division devoted to industrial floats Mrs. C. W. Reimers received first prize, and Nanz & Neuner second. In the division of coaches entered by clubs, the Lucky Thirteen Club, of which J. E. Marrett is a member and who designed the decorations, received first prize. J. S.

HEADQUARTERS FOR

LORRAINE BEGONIAS

We offer the following for immediate delivery:

BEGONIA GLOIRE De LORRAINE.

Fine strong plants from 2¼-in. pots, $15.00 per 100; 3½-in. pots, $25.00 per 100.

Begonia Gloire de Lorraine Nana Compacta.

Fine strong plants from 2¼-in. pots, $15.00 per 100; 3½-in. pots, $27.50 per 100.

We especially recommend the 3½-in. size as being exceptionally well rooted and of strong, healthy growth; almost ready for a shift to a 6-in. pot. These plants should find a ready sale at Christmas, as they will be in full flower at that time.

Begonia Caledonia, the White Lorraine.

Plants from 3½-in pots, for delivery Nov. 1st, $5.00 each.

We are the only Firm in America offering this fine new Novelty this year.

Buffalo.

Market News.

In floral lines, we see a better supply of roses than a week ago. Asters have shortened up. The retailers are quite ready for Fall trade.

Palmer had an orchid display this week. Anderson dazzles the eyes of shoppers with a window vivid with salvia blooms. Adams' store is quite bower-like with a stock of palms. Rebestock still shows longiflorum blooms of good quality. Fall trade develops somewhat slowly. A fair wedding order is booked at Anderson's for Wednesday next.

Round About.

Wm. Scott and Sam. Smiley of Lancaster are on a two-weeks' jury service in the same court.

No frost has appeared as yet.

To see the progress of work at the Pan-American Exposition, one requires both ample time and staying qualities. The structural part of the leading buildings is well advanced. Some are partly roofed, and staff ornamentation and coverlag shows in finished form in many parts and places. Filigree work in embellishing is being adapted with a free hand, and which promises to add not a little to a finished effect. Some slopes and terraces are now planted with hardy foliage stock to fine effect. The aquatics generally are nicely established, and must be an early season success next year. The improved growing weather of the past six weeks has materially helped the deciduous plantings of this year.

New Varieties of

CARNATIONS

Grown from seed and named after my three grandchildren. We have grown these under ordinary culture for the past four years, and find them equal to any and far superior to many other varieties.

RUSSELL Clean, healthy, and the most vigorous and prolific we have ever grown or seen. We believe it is the best general purpose Carnation ever sent out. Grown side by side with Scott, it is far ahead of it in every respect, except size, which is about the same. It has never burst with us, when others in the same house have done so badly; it is a lively light-rose pink, distinct from anything we have ever seen; very fragrant. Where an abundance of good, fair sized blooms is wanted, it cannot be surpassed.

MILDRED A strong grower, with very long, strong stems. Flower very large, and a continuous bloomer. A fine shade of light, soft pink.

WILLIE Strong grower, with long, stiff stems. Flowers very large, of a bright shade of very dark rose pink. A continuous bloomer. We have more than we have room to house, and offer extra fine plants within reach of all. No. 1 plants, $1.50 per doz.; $6.00 per 100

Madison, N. J.

After a two months' adjournment over the heated period the Morris County Gardeners and Florists' Society, met again Wednesday, September 12. A spirit of intense self-satisfaction prevailed by reason of the honor that has come to the Society through the successful showing made by its members at the recent Convention in New York. A hearty vote of thanks was tendered to President Duckham, A. Herrington and C. H. Atkins, who were instrumental in winning the grand Society prize, which event will be fittingly celebrated at a subsequent meeting.

The secretary reported that the schedules had been printed and generally distributed. Details in connection with the show were discussed, and, among other things, it was decided to have a dance at the close of the exhibition, the new hall in Madison being magnificently adapted to an entertainment of that kind. Good music will be provided, and the management confidently expect to have the capacity of the hall fully taxed for this function, realizing therefrom a substantial increase in the proceeds. The show will be arranged with this objective, disposing the groups around the sides and the tables in the center, which latter can easily be removed the second evening.

A. Herrington spoke on "Horticultural Progress as shown by the S. A. F. O. H. Convention," and gave an interesting talk thereon. He thought that the recent exhibition in New York, taken collectively in its two sections, was the most complete exposition of horticulture, as an industry, that this or any other country had ever seen. In the trade section there was everything required in the business from a thumb-pot to a greenhouse on view, while the plant display could not be surpassed. In speaking of the horticultural section, he thought the success attending this feature of the Convention was a factor that the Society should give earnest consideration and foster in every possible way, for since the S. A. F. O. H. had shown a strong desire to enroll in its ranks all horticulturists, its annual exhibitions ought to be something more than a mere display of trade samples. The aim of all the producers in the trade was to create and stimulate larger demands among the private consumer or user, and the recent show successfully demonstrated a means to that end, truly progressive.

Another evideuce of progress in horticulture was the prominence given to vegetables. The strong competition in the vegetable classes more than justified the provision made for them, and the interest manifested in these exhibits by visitors was equal to that evinced in the plants and cut flowers.

Last but far from least, progress in aquatic horticulture as shown by the exhibits was a revelation to many and a happy augury for the future.

MADISONIAN.

Ottawa.

September 24, and coleus still all right; no frost yet to injure tender plants, something unusual for this locality.

Last week was Central Exhibition week here, and, although we had two wet days, the show was a great success. The horticultural exhibit was fully up to that of former years. C. Scrim captured the red ticket in the classes for ferns, caladiums, petunias, cannas, dracænas, abutilon, roses, carnations, cut cannas, and general collection of cut flowers. The Government House took first in the classes for palms, begonias, greenhouse plants, foliage plants, coleus (the finest I have ever seen), geraniums, etc. Graham Bros. were first for group for effect, table plants, etc. T. French took first for rose bouquet. J. McKenna was the judge on plants and J. Bennett on flowers; both from Montreal.

Owing to the open weather, Fall work around the greenhouses is well advanced. Crops are in good condition. Scrim is picking some good carnations; Evelina and Glacier are a sight with buds. Chrysanthemums are specially strong in growth.

Visitors.

J. Hay of Brockville and Mr. Johnson, of Kingston, just from Paris. E.

Bridgeport, Conn.

The work of razing the greenhouses formerly used by the West End Floral Company, at the corner of Fairfield and Clinton avenues, is under way, and will in all probability be completed before the end of many weeks. It is said that the land occupied by the houses will be cut up into building lots.

Oceanic, N. J.

The meeting of the Monmouth County Horticultural Society, on September 21, although not as well attended as usual, was a lively one. An application to this society for a private gardener for Washington, D. C., was read; also a communication from Buffalo. The exhibition committee reported that the Town Hall could not be secured on account of the election and other matters, and the Society decided to have a display of chrysanthemums, roses and carnations in their meeting room, Red Men's Hall, Oceanic, on November 9. This show will be free to the public.

It was also voted that the Society make an exhibit at the Pan-American Exposition. B.

Baltimore.

Cut Flower Market.

The Hebrew New Year's Day gave quite an impetus to the cut flower and plant trade. Asters especially were in demand and sold out Saturday afternoon at good figures, realizing from 75c. to $1.50 a 100. The cold weather of the last two weeks has brought but few changes. Outdoor Cochet roses have improved somewhat. The retail trade is perceptibly picking up. Good carnations are still very scarce.

Club Meeting.

The last meeting of the club was well attended and a good deal of business transacted. On October 8 a dahlia show will be held in the club rooms. Messrs. R. Vincent, Jr., & Son are the promoters of the dahlia interest in this town and deserve much credit for it. They will make a large display of all the best old and new varieties, and especially of the fine Cactus dahlias. The Summer has been very hard on dahlias; with or without watering, they have not come up to expectations, and stem rot, attacking the base of the stems, has done much harm.

The parks, public squares and the private places are looking fine now, the lawns and beds having been much improved by the recent rains and cool weather. A Victoria regia, which has been wintered without any protection for two seasons, has been in bloom since July 1 in one of the pretty country places of the Green Spring Valley. Aquatics are gaining in favor with amateurs hereabouts.

Nurserymen report a brisk opening of the Fall season. Messrs. Corse & Sons are gradually transferring their nursery to their new place in Baltimore County.

T. E.

Brooklyn, N. Y.

Hicks & Crawbuck, the wholesale commission men, have recently inaugurated a system that is finding much favor with the retail trade here. They meet the Madison, N. J., trains every morning at Hoboken, with their own wagon, and get the boxes of roses in their Brooklyn store as early as half past eight. This is a good two hours earlier than the express companys have been delivering them, proving a great convenience to the Brooklyn retailer.

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, $1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

FOR PARTICULARS, ADDRESS

A. T. DE LA MARE PTG. AND PUB. CO. Ltd., 2 to 8 Duane Street, New York.

COMMERCIAL VIOLET CULTURE

A Treatise on the Growing and Marketing of Violets for Profit.

By B. T. GALLOWAY,
Chief of the Division of Vegetable Physiology and Pathology, U. S. Dept. of Agriculture.

THE WORK IS THOROUGHLY PRACTICAL AND DISCUSSES FULLY:

Varieties and their Origin.
Localities where the Crop is likely to Prove Profitable.
Requirements for Success.
Construction of Houses and Frames.
Manures and Fertilizers. Heating Houses and Frames.
Picking, Bunching and Marketing. Soils and their Preparation.
Propagation, Selection, Planting, Watering, Cleaning and Feeding.
Diseases and their Treatment.
Insect Enemies and Methods of Combating Them.
Cost of Producing the Crop. Profits, Etc.

Superbly illustrated with upward of 60 plates, plans and diagrams, etc.

Including Working Drawings of Model Violet Houses; Plans for Complete Heating Systems; Photographs Showing Methods of Handling Soil, Preparing the Beds, Bunching the Flowers, Packing for Shipment, Etc. Numerous illustrations showing the character of the more important diseases are also given.

Elegantly printed on heavy woodcut paper, and bound in flexible covers of royal purple cloth and gold; 224 pages, small octavo. Price, postpaid, $1.50.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2 DUANE STREET NEW YORK.

We can supply any book or magazine, no matter where published.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

Vol. XII. No. 40. NEW YORK, OCTOBER 6, 1900. One Dollar Per Year.

SEVERAL very large shipments of JAPAN LONGIFLORUM have arrived in very bad condition more than half of the bulbs having been lost by heating. This large loss will make a scarcity in this article, and probably many dealers will be unable to fill their orders in full.

If you do not succeed in getting your full supplies, we have still to offer a fine lot of

5-7 Bermuda-Grown LONGIFLORUM

These bulbs are in splendid shape. We can offer them at **$14.00 per case.** 350 bulbs to the case.

WE ALSO HAVE A FINE STOCK OF

LILIUM HARRISII.

7-9 in. size is generally scarce, but we have a very fine stock of this size still on hand. These are a lot of bulbs that were left in the ground and dug late, and, in consequence, are in grand shape. Bulbs are plump, bright and clean, and are as fine a lot of Harrisii as any one would want to handle. We can supply these as long as unsold as follows:

5-7 inch, 400 bulbs to the case, only $16.00 per case.
7 9 inch, 200 bulbs to the case, only $18.00 per case.

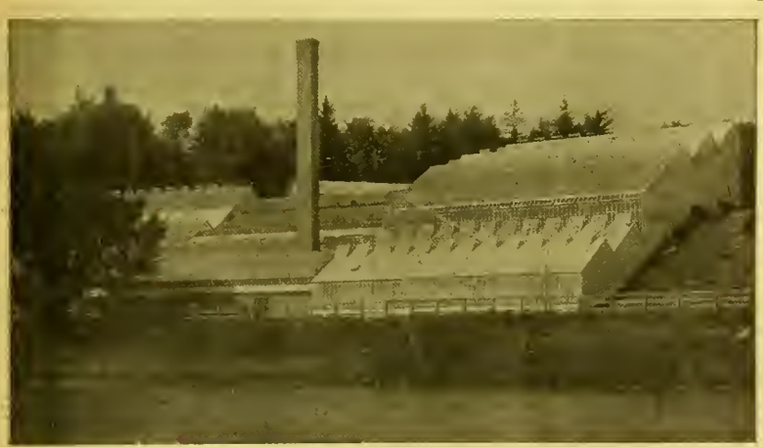
ORDER AT ONCE BEFORE WE ARE SOLD OUT.

We can also offer a fine stock of **WHITE ROMAN HYACINTHS**
Extra quality bulbs, 12-15 ctm., in case lots, 2,100 bulbs to the case, **$16.00 per 1000.**

PAPER WHITE NARCISSUS GRANDIFLORA Case lots, about 1,300 bulbs to the case, $7.50 per 1000.

☞ **Five per cent. discount from above-named prices when cash is remitted with order.**

F. R. PIERSON CO., Tarrytown-on-Hudson, N.Y.



Asparagus Plumosus Nanus

CUT STRINGS, 8 to 10 Feet Long **50 CTS.**

W. H. ELLIOTT, BRIGHTON, MASS.

WHY PAY MORE? WHEN

the following Bulbs is now ready for delivery:

FIELD-GROWN CARNATION PLANTS

The stock of field-grown Carnations which we offer for sale this season is in especially good condition. The plants have been grown upon good soil; the season has been favorable, and we have been less afflicted with plant diseases of all descriptions than at any period heretofore in the history of our Carnation growing. Having a large stock of plants and every facility for packing and shipping promptly, we can fill all orders on the shortest possible notice.

SOUTHERN NATURAL PEACH PITS

FOR several years past we have given special attention to the procuring of **Southern Natural Peach Pits,** selected from original seedling trees in the mountains of Tennessee and North Carolina, which are entirely free from yellows or disease, guaranteed to give good stands and make much stronger and healthier trees than those from any other section. These pits, being very small in size, contain more than double the number to the bushel We have for many years annually supplied a majority of the best Nurserymen and Peach Growers in the United States. Samples and prices on application.

AMERICAN SEED TRADE ASSOCIATION.

ALBERT MCCULLOUGH, Cincinnati, O., President; F. W. BOLGIANO, First Vice-President; S. G. COURTEEN, Milwaukee, Wis., Second Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1697, New York.

New York.—S. B. Dicks, of Cooper, Taber & Co., London, paid a flying visit to New York on Thursday, for the purpose of consulting the Customs authorities respecting the re-appraisement of imported seeds.

George Cooper, son of F. Cooper, a seedsman, of Wellington, New Zealand, will probably visit America shortly on a business trip. He left Wellington about September 4.

Exports of Seeds.—Seeds were exported during 1895-1899 to the average annual value of $3,700,743. The shipments were marketed chiefly in the United Kingdom, Canada, Germany, and the Netherlands. The United Kingdom took 36 per cent. of the total, Canada 20 per cent., Germany 18 per cent., and the Netherlands 14 per cent. To Belgium we sent 5.9 per cent., to France 1.5 per cent., to British Australasia 1.3 per cent., and to Denmark 1.1 per cent.

European Notes.

Climatic conditions continue favorable for a healthy development of plants for 1901 crops. The early frost is still an absentee, and while the nights are cool, the days are bright and moderately warm, and the outlook is decidedly more hopeful. The autumnal mists, morning and evening, somewhat hinder the threshing of this season's crops, about which the only fresh thing that can be said is that the worst has not been told.

As regards flower seeds, the latest reports from Italy are quite as unfavorable as those from Northern Europe. Carnations, aquilegias, pansies, centaureas, resedas and stocks are nearly a failure. On the other hand, asters, dahlias, salvias, celosias torenias, verbenas, and most of the climbers will yield a relatively good crop.

The failure of the onion crop for the third year in succession (for our plantations have only yielded one-fourth of what was expected), is so disheartening that everyone here loses the humor to plant onions again for seed. On the other hand, the crops of sweet corn and dwarf French beans in the Campagna are good. Lower down, in the more southern parts of Italy even, these items have failed.

Of novelties in flower seeds from this quarter M. Herb will introduce, among others, the following:

Amaranthus bicolor, a variety with bright sulphur-yellow leaves; Heliotropium giganteum nanum regale, a dwarf growing giant-flowered variety of the Regina Margherita type; Commelina sellowiana, with fine rosy-colored flowers, and three excellent varieties of Salvia splendens, viz., gigantea, atrosanguinea, and grandiflora compacta.

Damman & Co., who have paid much attention of late to gazanias, and have introduced some very lovely hybrids, have for this season a beautiful bright, clear yellow variety, very floriferous, quite distinct in color and does not close up so early as the older kinds. It is a really beautiful novelty, and deserves to be widely circulated.

The German lists of novelties are already in the hands of your readers; the most valuable of them have privately been mentioned in these notes.

EUROPEAN SEEDS.

Dahlias at American Institute Show.

Editor Florists' Exchange.

We wish to call your attention to an error that appears in your account of the dahlia exhibition recently held in conjunction with the American Institute Show. The dahlias exhibited by us were exhibited for exhibition purposes only, and were not offered in competition for any of the prizes. We did exhibit three new ones—Magnificent, Salmon Queen and Harlequin, which we are to introduce in 1901, before the American Dahlia Society, and received certificates on the two latter-named sorts.

W. ATLEE BURPEE & Co.

[There was nothing to indicate that the dahlias were staged for exhibition only, hence the natural error complained of.—ED.]

Regulations of Foreign Governments Regarding Importation of American Plants, Trees and Fruits.

The United States Department of Agriculture, Division of Entomology, has issued the following information:

The Department of Agriculture has for some time been collecting, with the assistance of the Department of State, the full texts of the regulations of those foreign governments which have, through fear of the introduction of San José scale, adopted measures prohibiting the importation of American plants and fruits or requiring inspection before admission. The series is not yet perfectly complete, but, in view of the Fall trade, it has been deemed wise to issue a brief digest of those on hand, in circular form, for the information of American exporters of this class of articles. The digests have been made with care, and it is hoped that they will be of some assistance.

AUSTRIA-HUNGARY.

Prohibits (decree of April 20, 1898) importation from America of living plants, grafts and layers, and fresh plant refuse of every kind, as well as the barrels, boxes, and other coverings in which such goods or refuse may be packed, and fresh fruit and the refuse of fresh fruit, as well as the packings which may cover the same, when examination on frontier shall prove presence of San José scale. Admission limited to Bodenbach-Tetschen, Trieste and Fiume. Also prohibits transit of such goods through the empire.

BELGIUM.

Importation and transit of fresh fruits, living plants, and fresh parts of plants sent from the United States can take place only by ports of Antwerp, Ghent, and Ostende, upon production of a certificate from competent authority attesting that products are not contaminated by San José scale. If not accompanied by certificate, products can not be delivered until inspected, and, if not exempt, must be destroyed with packings; cost of all service at expense of importer. Order goes into effect March 15, 1899. Does not apply to shipments in direct transit by railway under supervision of customs authorities.

BRITISH COLUMBIA.

Rules and regulations, published June 25, 1897 (under authority of "Horticultural Board Act, 1894"), provide that all importers of nursery stock, trees, plants, or fruit must give notice upon arrival, and before removal from wharf or station, to a member of the board or to the inspector of fruit pests, who shall inspect the same and, if clean, issue a certificate which shall be good for three months, unless revoked by further inspection. Nursery stock found to be infected shall be disinfected or destroyed. Fruit found to be infected shall be destroyed or reshipped.

CANADA.

Prohibits (San José scale act, 18th of March, 1898) importations of nursery stock from United States, Australia, Japan, and Hawaii. Stock so imported to be destroyed and importer liable to penalty prescribed by section 6 of customs tariff ($200 for each offense).

Exempts:

1. Greenhouse plants with the exception of roses. (Amended April 25, 1900, by striking out the words "with the exception of roses" after words "Greenhouse plants.")
2. Herbaceous perennials.
3. Herbaceous bedding plants.
4. All conifers.
5. Bulbs and tubers.

Amended (April 7, 1900): So as to authorize importations from April 7 to May 15, through customs ports of St. John, N. B.; St. Johns, Quebec, Niagara Falls and Windsor, Ontario and Winnipeg, Manitoba, only, where they will be thoroughly fumigated with hydrocyanic-acid gas.

CAPE OF GOOD HOPE.

Regulations published March 25, 1896, under authority of act No. 9, dated 1876, prohibits importation of any stone-fruit

FOR GREAT CASH BARGAINS IN BULBS

C. H. JOOSTEN, Importer, **85 Dey St., New York.**

Mention the Florists Exchange when writing

tree, or any fruit, scion, cutting, graft root, or seed, the growth or produce, thereof, from the United States, and any one importing such article as aforesaid shall be subject to a fine not exceeding £100 sterling or six months' imprisonment, and, in addition, the articles will be destroyed.

Note—Consul-General Stowe states (February 7, 1900) that proposal is under consideration to relax above as regards States where neither, "peach yellows" nor "peach rosette" exists.

FRANCE.

Prohibits (decree of November 30, 1898) entry into and passing through France of trees, shrubs, products of nurseries, cuttings, and all other plants or parts of living plants, as well as fresh débris from them, from United States, directly or in storage, as well as cases, sacks, etc., used for packing. Also prohibits fresh fruit and débris, when examination proves presence of insect, at entry into France.

GERMANY.

Prohibits (decree of February 5, 1898) importation of living plants and parts of living plants from America, and barrels, boxes, etc., used for packing. Also fresh fruit or fresh parts of fruit when examination at port of entry shows presence of San Jose scale. Imperial Chancellor authorized to grant exceptions.

Amended (commercial agreement of July 10, 1900) by annulling regulation providing that dried or evaporated fruits from United States be inspected. Such fruits are now admitted without other charge than customs duties.

NETHERLANDS.

Prohibits (decree of May 23, 1899) importation and transit, direct or indirect, of live trees and shrubs, or live parts thereof, produced in America, including boxes, casks, baskets, sacks, vessels, and other articles used for packing, unless accompanied by certificate issued by consular officer of Netherlands or competent authority in port of shipment, and objects shall not be landed unless certificate is satisfactory to receiver of import duties. Exceptions: (a) Importations from countries bordering on the Netherlands in which measures have been taken for combatting the San José scale. (b) Importations for scientific purposes. (c) To meet requirements of frontier commerce.

NEW ZEALAND.

Prohibits (Act of 1896) importation of fruit of any kind infested with fruit-flies. Fruit infested with codling moth will be destroyed unless immediately reshipped. Fruit, plants, trees, cuttings or buds infested with any scale insect will be admitted only when accompanied by certificate. Otherwise it will be fumigated at expense of importer or destroyed.

Imported fruit admitted only at Bluff, Dunedin, Christchurch, Wellington, and Auckland.

Live plants admitted only at Dunedin, Christchurch, Wellington, and Auckland.

Fumigation performed only at Dunedin, Christchurch, Wellington, and Auckland.

SWITZERLAND.

Prohibits plants; prohibits importation of fresh fruit from America except through Customs Bureau at Basle, where it is subject to an examination by an expert for San José scale or other parasites. No restrictions to direct importation of dried fruits.

TURKEY.

A note from the Minister of Foreign Affairs to the United States Minister at Constantinople, dated October 18, 1899, states that the Imperial Government has decided to interdict the importation of trees, plants, and fruits coming from the United States.

L. O. HOWARD,
Entomologist.

Approved:
JAMES WILSON,
Secretary.
