## QUESTION BOX.

OPEN TO ALL. FREE TO ALL.

Answers Solicited from Those Who Know.

(6) Baltimore Florists' Club—G. A. T., Maryland. This Club meets every second and fourth Monday in the month. Non members pay 50 per cent. of fine for absence on an entrance fee for exhibits shown at the exhibitions. The Club membership fee is \$1.00 per quarter, with \$1.00 initiation for Benefit Fund.—E. S.

(7) Black Flies on Violets.—J. P. G. The specimens are badly infested with fly. All that can be done now is to place to bed the plants, and to give them a good soaking around the plants, also fumigate lightly several evenings in succession. This will probably stop the present crop of bloom, but so will the fly if not checked, so it is better to apply the remedy. It is very probable that the plants are being kept much too warm.

(8) Worms in Violet Beds.—X. Y. Z. Worms are removed more readily by lime water than by dressing with kerosene. The latter, when exposed to the atmosphere, soon becomes clink, and in that stage does not act as an entrance for the worms. Pure lime water generally irritates the worms; soot water, also, has partly the same effect. In the case of violets, there is no secretion or lime; it should be perfectly clear.

(9) Smoking in Daytime.—Is there any foundation for the report that a cigarette smoke put into greenhouses while the sun is shining tends to burn foliage worse than a light smoke at night?

—No experienced grower would ever think of smoking in sunlight or during the day. The reason is, the smoke will almost to a certainty burn foliage and, positively so, if any moisture be on the plants, with the strong light, the effect to a large extent, is nullified. It is, of course, necessary to remember, also, that in the case of smoking, it is the heat, besides, the smoking liquid, that does the damage.

(10) Glass Culture.—M. V. K. Seeds are sown in a flat, under glass, in the Spring. A good time to sow is from the middle to the end of February. Sow in a flat, using nice, light soil, heavily covering the seeds. Shade the flat with brown paper, and place in a warm spot; if no other convenience is at hand place on pipes; but see that the soil does not dry out. As soon as the plants are ready to handle put them up in 3 1/2 inch pots. They grow on quickly and when ready move into pots a size two or larger. The house and temperature given to Spring bedding stock suits similar very well. Take good care of the plants during early Summer and plant into permanent quarters in August. Place green twine in position immediately afterwards. The strings should be ready for cutting in October.

(11) Mildewed Rose Leaves.—A. & F. Apparently the plants are still suffering from a form of mildew, which has been better about the check and the new leaves submitted are fair specimens. Stock must now be in very bad shape, and it is only a question of time and attention to receive stimulants of any or in any form. All that can be done now is to keep up the new growth, and, say not less than 50 degrees at night. Keep the soil at the roots as dry as possible, only applying enough water at the wood ripening up. Much of the foliage may drop off, but with a little water, and a little time, new growth may be benefited by the warmer and brighter atmosphere. The plants are a little when new growths are well developed.

(12) Heating by Coil Boiler.—How large a coil boiler will be required to heat a greenhouse 100 x 200 ft. with an average runs of 2-inch pipe will need to heat about 2000 to 2500 sq. ft. of ground. The boiler is to be made of 1 1/2-inch pipe.

For a greenhouse of the size mentioned the boiler should be of the grate about 18 inches square if hard coal to be used, and it should contain about 75 linear feet of 1 1/2-inch pipe. This could be arranged as a box coil in five ranks of six pipes each, or thirty pipes, each 2 1/2 feet long. Without more definite information regarding the boiler, the only question of value to the house only an approximate estimate can be given, but for 30 degrees eight 2-inch pipes, and for 40 degrees, ten will be required if it is to be heated 30 degrees. —L. R. TART.

### A Correction.

(No. 15) of issue of January 9, I noticed two errors that apply to the question of N. S. Draper (No. 12) that renders it incorrect not misleading. In the third line it says, "made of 1 1/2 and 1 1/4-inch pipe." This should read "made of 1 1/2 inch pipe." The other error is a similar one. It occurs in the fifth line from the bottom of the column where it speaks of "a 2 and 1 1/2-inch pipe." Instead of "a 2 1/2-inch pipe."—L. R. TART.

(13) Disease on Carnations.—I have on my carnations two diseases—one I am and the other stem disease; and as I am a loss what I do to check these, will send you a sample of each, and ask you to kindly let me know what the trouble is, and what I can do to cure them. I am sometimes think it is too much that way. What about the bottom of the stems. One side of these diseases my carnations are doing finely, but an very much alarmed as the trouble is getting worse. —L. H.

—One disease is rust, pure and simple. I would refer M. L. H. to my answer to a similar question on page 115, Vol. VII, No. 50, of the EXCHANGE; also to Mr. Shelton's answer to a similar question on page VIII, No. 51, of the EXCHANGE. I will shortly make this disease the subject of an article in these columns.

The other trouble is stem rot, for which the best remedy is to pot the plants up after a plant has become affected. All plants which are badly affected had best be cut up and the roots carefully showing slight traces of it should be carefully gone over and all affected spots cut away. This disease is usually contracted in the field. Continued wet weather, deep planting and poor drainage are the principal causes for its appearance. Although, the same conditions supplemented with close planting and lack of vent what I can do to cure them. I am sometimes think it is too much that way. What about the bottom of the stems. One side of these diseases my carnations are doing finely, but an very much alarmed as the trouble is getting worse. —L. H.

(14) Dahlias for Easter.—Please give temperature in which plants should be grown to get them in fine shape for Easter. —W. WENZ.

—Our experience has been that it is better to start the plants at a night temperature of 45 degrees, in order to secure a strong, hardy, stocky plant. The temperature may be raised after the plant is well started to 50 degrees. After the buds are formed to 55 degrees, with a corresponding increase of day temperature throughout. This is to secure the best results; but where one temperature is to be given, 50 to 55 degrees at night and a corresponding day temperature will have found to be best. It must be remembered, however, that the dahlias is a very sturdy, and very firm of constitution plant. In life, therefore, a temperature of 75 to 80 degrees will be entirely sufficient. A plenty of fresh air will be necessary, the plants, and tones it up wonderfully. The plants will keep well with liberal feeding it will stand almost any amount of forcing. As a rule, the plants should be started in Ruby Queen in a night temperature of 75 degrees, and day temperature of 90 degrees, but the flowers were smaller and

did not keep so well as those grown in pots with a night temperature of 50 degrees.—LAURENCE K. PEACOCK.

(15) Scientific Analysis of Carnation Soils.—J. K.—The scientific chemical analysis of soils is a very important matter as determined by chemical analyses, and yet carnations will succeed on one and fall on another. It furnishes the basis for a good carnation soil. It is necessary to get the best results, of course the soil must receive fertilizers. My suggestion is regard to preparing carnation soil would be to select a good pasture soil containing anywhere from 12 to 14 per cent. clay, and in the fall of the year turn the ground over with the plow, allowing it to stand in the rough all winter. In the spring the soil may have its effect. In a region where limestone is lacking air-slacked lime should be added at the rate of about 1500 pounds per acre. This might be spread broadcast over the sods after they have been turned by the plow. In the spring, the soil should be worked in Spring it should be harrowed and reharrowed until it is a thoroughly fine work. Winter it should be stacked or put into a heap, mixing with it for every four or five parts soil one part of good cow or horse manure. In the fall, every 50 cubic yards of the mixture add 350 to 400 pounds of fine ground bone and 100 pounds of fish-bone or ground slacked wood ashes. The bone and ashes should be mixed with the soil at the same time the manure is added. The soil in the heap should be allowed to stand a couple of weeks, and then turned at least twice before putting it on the beds.—G. B. T. GALLOWAY.

### Propagating Clematis.

GRAFTING—One of the oldest methods of propagating clematis is by grafting on seedlings of Clematis vitalba, viticella, virginica, etc., on the roots of the stock. These are ready for working upon. Parts of the stock, about two inches long, of C. vitalba, C. virginica, etc., are cut and inserted in the soil. Many varieties are shy growers. These are cultivated quicker, and are the better for it, when root grafting is adopted. This is a very simple operation when done in the right way. Any strong growing kind answers the purpose, but the four mentioned are especially well adapted. A quick method is to cut the stock in two, and insert a good bottom bed, free from the hot pipes. The root stocks can be placed quite close together, and the soil should be inserted the clove of the kind required into the fleshy part, or what should be the base of stem or above ground growth; even smaller parts of healthy roots will do. All that has to be done is to lightly work the soil to two parts together with manure or raffia; no wax or similar material is necessary, unless, by preference, a little manure is used. The plants that when all the roots are so served and placed closely together, they must all be covered with soil, in this location, the place of soil. Keep moderately moist, and give a bottom bed of 65 to 75 degrees. Put up with a good bottom bed to grow. This work can be going on all year.

CUTTINGS—Bring one or two-year old stock plants into a greenhouse in the Fall, and cut them up into cuttings, and set to 55 degrees, in January and February 60 to 65 degrees. The young shoots should be cut off, and give one or two cuttings in the first eight days. Further treatment should be similar to that given rose. In three weeks or less the plants will be ready to be put in the first wood from outside in three to four weeks.

LAYERS—These are treated like layers of wisteria. Every 12 inches make a small cut, and insert a peg, and tie the layers books tighten the layers in the ground. The foot should be made about three to four inches long, and the soil should be in the first wood from outside in three to four weeks. In October cut the layers,

in parts and plant in pots or frames over Winter.

SEEDS—The seed will ripen in Fall, it should be gathered over Winter and mixed with sandy earth, and sown in a shallow frame until life is seen, and then sown. Only persons who have the knowledge and skill to get the seeds to germinate, there now exist over 200 varieties, which can only be distinguished by the microscope. For instance, Kazusa, Sibiridid, and Hooker seedling are one and the same flower. If there were only 20 to 25 varieties on the market, the growers would not be so often disappointed. A large field is open here for the right man. A good yellow and red stock is a very desirable one.

Clematis is now being cultivated in different parts of America, and although the plants are weak, it will do better than the imported stocks and give better results. —ALBERT KNAPP.

### The Solid Bed Method.

Since writing my article advocating solid beds for carnations, I have visited some of the principal florists round London, Pa., and found, with only one exception, that the show bench is in use, and in every place the disease is more or less prevalent. The one exception, where solid beds are used, all the plants are in a most healthy condition, with not a sign of rust or other disease. The varieties grown are Meteor, Scott, Daybreak, Portia, Hlinze's White and McGowan. —H. YOTELL.

### BOOKS RECEIVED.

Turkeys and How to Grow Them.—A Treatise on the Various Breeds and Origin of the Name of Turkey; the Various Breeds, and Best Methods to Inure Stock to the Business of Turkey Growing, with Essays from Practical Turkey Growers in Different Parts of the United States and Canada. Edited by Herbert Myrick. Orange Judd Company, publishers, 33 Lafayette street, New York City. Price, 10 cents.

This book contains the best information of the greatest value to turkey raisers, but is too long on the subject by parties in different countries. The book is difficult and critical work of rearing the turkey chicks is fully described, and shows the experience of the most successful turkey raisers. The chapter on fattening and marketing is equally complete, with directions for turkey broilers for fancy profits, catching, killing, picking, packing and shipping, how and where to sell to the best advantage, marketing feathers, etc., and every possible hint for getting the utmost money out of the industry.

H. A. STODDARD, N. Y. C.

## ROSES.

## Varieties, Etc.

I have often been asked the best varieties of roses to grow. This is rather a hard question; because, as mentioned in my previous articles, some roses will grow in one place and poorly in another. Then, again, varieties differ in popular favor in different localities.

However, I will enumerate the varieties I have grown the past three years and tell you how they are getting on. **American Beauty**—This most beautiful of all roses is a very rank grower, but at the same time it is very susceptible to black spot and red spider. It is the rose for the upper ten, mostly bringing a big price, always in good demand, and very profitable when well done.

**Meteor** is without a doubt the finest dark red we have—very free blooming, easy grower, brings good prices, and sells on sight. To get the best results from this rose it should be a house to itself, on account of the high temperature it needs to get good, bright color into the flowers, in stead of black ones with incurved petals; 65 degrees to 68 degrees nights, 73 degrees full days, and 80 degrees to 85 degrees with sunshine is right. This variety also needs watching closely for cutting the blooms.

**Bridesmaid** is the best pink rose of today, its color being much brighter and clearer than the once most popular **Mermet**; it is also a money-maker.

**Mme. Guste** we use very remunerative variety, bearing good flowers on long stems. When I look at the tally board I find this variety and **Mermet** are certainly no loss for any other kind. It is largely called for when well grown, and is an excellent keeper.

**Papa Gontier** we don't hear much about, but it still sells well with us. I have one bush in the garden, and I think it would not be without it. It needs a little extra care, and in most others, 30 degrees nights being about right, it only requires more liberal watering.

**Princess Irene** is a variety beaten for its fine use, and **Niphetos** for every thing that comes along; it is also a good paying kind.

**Pink and White** is a variety that is the finest rose of recent introduction, putting that good old variety, **Mme. Cusin**, in the shade; its large flowers, its bushy habit of growth, and floriferousness, being of the first order.

**Perle and Sunset** are two good ones in the yellow class, and in my opinion will have to wait a long time to produce their kind.

**Kaiserin** does well and cannot be surpassed for a white Summer rose. It has a little drawback in Winter, however, on account of its flowers coming with a weak net; also being a little shy in opening; its substance and texture are certainly not so good this season.

**Mermet** does not seem to do as well as formerly, and is not called for so much, as we grow less and less of it every year.

**Mermet** is something charming and well formed but being very attractive, but it is not so hardy as the most American ones; also very susceptible to black spot. It will still give it another trial on a small scale.

**Perle and Sunset** are two good ones in the yellow class, and in my opinion will have to wait a long time to produce their kind.

**American Belle** never grew half as strong as **Beauty** with me, and the last named also is a little better.

**Mrs. Whitney** has a delightfully fragrant flower of good form and substance, but is a little too slow a grower to be profitable.

**Sou. de Wootton** is a very easy grower, but a very poor keeper, especially in the south.

**Mme. Caroline Testout** has a most beautiful flower, but the bloom is too tinged and the p and is not productive enough. The color quickly fades after the flowers are cut.

**Sou. de Wootton** is a very easy grower, but a very poor keeper, especially in the south.

where we are now having, greenly is very apt to put in an appearance. It is also about time the tobacco cuttings that were put in the houses in the Fall were replenished. Greenly should never be allowed to get a start in the houses, and as the saying is, remember it is very harmful to fumigate especially when your plants are bearing flowers. It not only injures the plants but the flowers will surely lose their color and the petals come crumpled up. I have seen it turn the centers of the flowers in some varieties, more especially the **Mermet** family, to a decided brown, making the cut for about two weeks unusable.

Ventilation in excessive cold and bright weather should be paid on with great caution. If the plants are vigorous and healthy they will now begin to throw up fine shoots from the bottom, and if a chill strikes them they will surely blight. Don't have the thermometer on the highest bench but on the lowest and completely sheltered from the sun, and you will find the least crack of air in these times will have the effect of sweetening and brightening the atmosphere. The temperature at night should not be kept up to the top notch or both flowers and plants will soon lose their substance. If they stand 35 degrees in the early part of the night and the temperature drop to 32 degrees or 34 degrees by morning, it is all right, with of course, the exception of **Mermet** varieties.

With strong fire heat and the sun gain-

Specimen Hydrangea Otakea in Garden of Hon. J. S. Fay, Wood's Holl, Mass.

ing more power, syringing can now be done with more safety. It is not a good plan to use center tables; it is very convenient to syringe from them, but you and your shirt sleeves get wet, but know and you will find the excellent results will be derived from this direction, once in awhile.

If the day promises to be very bright, don't let the fires go down too early, let them help the plants along this season; it is quite 9 o'clock before the sun begins to warm up the houses.

It is a mistake to point to go round the houses the first thing and examine the soil thoroughly, and when water is needed, it is given before syringing. After that is done, it is next to an impossibility to find out dry spots.

**H. H. Central New York.**

## Hydrangea Otakea.

The handsome specimen of above shown in our illustration was grown in the garden of Hon. Jos. S. Fay, Wood's Holl, Mass., (M. H. Walsh, gardener). The photograph was taken August 29, 1896. Height of the plant is 6 1/2 feet, and the circumference 30 feet. There were 208 blooms on the plant, and the average size of the flowers was 1 1/2 inches in diameter. These plants are easy of cultivation, and should be more extensively grown.

M. H. WALSH.

## American Horticultural Society.

This is the new title which has been proposed upon the recently formed American Gardeners' Society. The Executive Committee of that body recommended the change of name at a meeting of delegates from the outside societies called by the secretary of the National Society, held in the Hotel Monmouth Hall, New York, on Monday last, Jan. 11, the new title was unanimously adopted. President J. M. Hunter occupied the chair as the meeting referred to, and stated its objects. He pointed out the need of such a society in America and the elevating influence it would exert on the cause of horticulture generally; he addressed himself more particularly to the gardeners, who he said, "had made but a sad mark in the world up to date," and urged them to assert their rightful position. The gardener was "the pupil of the horticultural world." He charged the horticultural press with not having rendered that assistance to the endeavor to form a national society to which it was entitled. In his closing remarks he asked those interested to set aside petty jealousy and quarrel against self-aggrandizement in the carrying on of the work of the newly formed society.

The time of the meeting, which lasted over four days, was devoted to discussing the constitution and by-laws, in which dele-

of discussing and creating a greater interest in American horticulture, to which all members and auxiliaries of the society shall be invited.

The life membership fee was fixed at \$50. The present officers are: President, J. M. Hunter; Vice-President, Wallace C. Gomerall; Secretary, James I. Donnell; Treasurer, J. P. Butterback; Executive Committee: Arthur Herrington, Charles Webber, William Flinn, Peter Donnell, J. M. Hunter, J. M. Hunter, James Blair, William Duckham and George Hale.

Minutes were read from the secretaries of various societies, acknowledging the receipt of the call for a meeting, several of them expressing their desire to be in the movement.

After adjournment the delegates attended the "smoker" tendered them by the New York Florists' Club, which was thoroughly enjoyed.

## CORRESPONDENCE.

Insertion will be given in this column full communications free from animus; but notices of persons are not necessarily reflect our own.

## A Yellow Self Carnation.

Editor Florists' Exchange:

I mail you the following carnations: three flowers of **Buttercup**; six **Boston O'Or**; and six blooms of a yellow self, a seedling of mine, cross between **Buttercup** and **Boston O'Or**. It is not as good as too much when I state that it is a deep yellow, clear in color, true self without spots, does not crack, buds and answers very well for what the market has been long looking for. The flowers were cut from the plants, and I will improve by bench culture. The seedling is yet unnamed.

W. H. WEBER, Ford, Pa.

We sent a flower to Mr. Weber for his opinion. He replies as under:

"The bloom arrived in a shriveled up condition. It is evident that the flowers were not under these circumstances, I could scarcely render an opinion as to size, form, etc., as I can see it only in the past year, and even if it should not be at first class, every one would be glad to acquire it, and I would to the extent that it may prove, through further crossing, a stepping stone for what we call a new yellow carnation—i. e., a first-class pure yellow carnation."

W. H. WEBER.

## Woman's Fastidiousness.

The Star reporter happened to be in the florist's shop when the beautiful girl made her appearance. She is obnoxious, and she seems to find an inordinate pride in the deficiency of her sensibilities. She didn't know exactly what she wanted.

"You don't know they are very nice and large to-day," remarked the young man from the plants, "and they are very fresh." "No," she said, "I don't care for chrysanthemums, they are not my kind of flowers. They seem to be flouting their charms in your face so persistently that they bore me." "You are a fastidious woman," he said to me, "one of the sweetest attributes of a woman." "Maybe you'd like some nice fresh orchids?" "Yes," she said, "I like orchids, but I don't like to buy goods so slow and was bent on occupying your store with my own." "I'll show you some." We have some very pretty designs in orchids.

"I don't care for orchids, too many. I never care much for orchids, excepting for a little red one." "But, miss, you are so fastidious, but there is nothing sympathetic about you."

"We have a lovely article in pinks." "Ah, no. The perfume is oppressive. They remind me of their old-fashioned, formed petals, nothing save the vanity of the life, but I would like some roses." We make a specialty of roses, and they're on the highest counter for this week only.

"I don't care for roses, either. While they are nice, they are not my kind of flowers, but there is nothing sympathetic about you."

New York Florists' Club.

The meeting of the Club on Monday night was certainly a success in point of attendance. It being honored by the presence of some fifty old members of the New York American Horticultural Society, and of the New York Gardeners' Society, who had just fresh from their respective cities for the occasion.

President Allen took the chair for the last time in his executive capacity. Mr. Darlington, of Flushing, N. Y., acted as secretary, and Mr. H. H. Hunter, of John Young, who, as a member of the committee on entertainment, was then busily occupied.

President Allen made a farewell address of a customary trenchant master. He spoke feelingly of the death of Harry L. Sunderbruch, President of the American Horticultural Society, characterizing him as a gentleman well known and esteemed by all in the trade, and moved that the secretary be instructed to express the Club's sympathy and condolence to his bereaved family and the Cincinnati Florists' Society. Mr. Allen then moved that he fail to his lot of announcing more deaths of members of the Club and prominent florists of the country, and that he in trade, that had been the lot of any previous president of the Club. Of the immediate president, Samuel Henshaw, Mr. Allen believed he would make one of the best presiding officers of the Club.

The newly elected president, being introduced to the members, said that he had always experienced a peculiar difficulty in talking. His mother had interested him to be a person, but he thanked goodness he had escaped that fate. He felt highly honored by his election to the position he now occupied, and would use his best efforts to merit the confidence of the Club. In connection with the presence of so many private gardeners, he told the audience that he was a member of the gardeners in the country, and belonged to a race of gardeners; that he was just as enthusiastic an exhibitor of ornamental and horticultural literature, and he trusted he would ever remain so. No man could be so interested in horticulture as he was in this line, and he always bore in mind the advice given by his father who said: "Sam, you can't sit alongside a fellow who says he knows it all, get away from him as quickly as you can." He said he was glad the day of records had passed. We have arrived at more liberal days and the willing and unobtrusive gardeners are willing to give freely of their experience. In closing he welcomed the members of the American Horticultural Society.

Mr. Allen now introduced Mr. Plumb, his newly elected vice-president, remarking that the latter also was a private gardener, and the officers seem to run that way this time. Mr. Plumb briefly returned thanks to the members of the Club for his election. He was always willing to do his share of the work, and he trusted he would ever be found to continue faithful. Treasurer Weathered was next introduced, and he made an oration, which he wished he could find words to express his thanks for the confidence which was placed in him by the members of the Club for the past year, and was now again renewed. He heartily thanked the members for the election of W. J. Stewart, of New York, as president, and Geo. Henshaw, who, probably absent through illness, to his family, and A. L. Don, the third year of his service, as secretary. Mr. Stewart said he was glad to be elected a trustee of the Club, and would fulfil the duties of the office to the best of his ability. He thought it was the first time that a trustee of the New York Florists' Club had come from the interior of the State. He visibly reminded of the influence possessed by the gardeners of America, and proposed to take his lot of flowers to the florists and gardeners so all might work together. It was very easy for every gardener to be a good exhibitor and for every florist to be a good gardener.

President Henshaw formally welcomed the members of the American Horticultural Society, replied, and then announced that the annual club of the New York Florists' Club would take place at the Arena on Monday evening, January 20th, and applications for tickets should be put in immediately in order that the committee may compile a list of names, and be in a position to inform that all who intended to be present should notify the committee not later than Wednesday evening, January 20th.

Adjournment was then taken to the floor

below, in which had been spread a bountiful feast for the delectation of the members.

The smoker was a treat, and the gardeners and florists thoroughly enjoyed it. The artists, under the direction of John M. Turner, did their parts in a most satisfactory manner, Dick Gorman's impersonations being vigorously applauded and enjoyed.

The "old, familiar signs," rendered by Mr. Turner in the banjo, were a source of great delight, and as each familiar national air seceded from the trembling strings, the representatives of the different nations present joined heartily in singing the chorus of each national song. Andy Hunter, as purveyor, in a past master. Pipes of all sorts and sizes, and plenty of good tobacco, furnished smoke enough to kill all the greenery in the United States. Smoke evidently has an irresistible magnetism; faces of members were seen on Monday evening which rarely greet an ordinary meeting.

The assemblage broke up at a late hour.

Cincinnati.

The funeral of the late Harry L. Sunderbruch was held at his late residence, Roosevelt, on Saturday afternoon, 14th. The floral tributes were many and beautiful. The services were in charge of the Masonic Fraternity. The Cincinnati Florists' Society.

The business of the deceased will be conducted as usual, for a time at least. At the annual meeting of our society, held Saturday evening, resolutions of condolence and sympathy with the bereaved family were presented and ordered approved upon the minutes.

Owing to the funeral, and out of respect to the memory of our late brother member, the exhibition at the club rooms Saturday afternoon, but the usual meeting will be held in the evening. A committee was appointed to select a floral design to be used as the "club's emblem" upon funeral occasions. Various committees were appointed to look after the details connected with the coming meeting of the club, and we expect to have a most held meeting ever held by the Society.

The election of directors resulted in the old board being returned, viz., Wm. Murphy, Theo. Beck, Fred. Walz, Ben. George and E. G. Gillett. The directors named made the following elections: E. G. Gillett, president; Fred. S. Walz, vice-president; Wm. Murphy, secretary, and Ben. George, treasurer.

John A. Evans, Richmond, Ind., was a visitor. E. G. Gillett.

A Costly Bloom.

The florist who got no judgment for \$318 against John L. Sullivan recalls the fact that the ex-emption has a single blossom probably cost him \$50,000. It's on John's nose. -Norfolk Virginian.

St. Louis.

Wholesale Notes.

Trade was good last week. There was a large supply of roses, carnations, and violets, but the social affairs of the week and several large funeral orders kept the market clear of accumulation. The supply of real choice roses was light, and those received brought good prices, some very choice Bridemaid bringing 12c. From that price Bridemaid graded down to \$4 per 100. A few extra fancy Meteor sold at 15c., but flowers of that description are so scarce that this price cannot be named as a fair market quotation. Fancy Meteor brought 10c. per selection, 6c. second selection, 3c. There was some call for Breck and Downing, but they moved down to \$3 for seconds. Perle sold well, but took better than 100, and 100, and 100, and 100. Perle was in great abundance, but sold out clean. Testout, Siebacht, Wainey, and Morgan were not in demand, and sold at low figures, some fancy Testout going as low as \$5 per 100.

Carnations were in great supply, but the close of the week found the market clear of stock, and but few were lost. There is no longer the demand for red carnations noted in previous reports, and they are now sharing the same price of other colors. While are most abundant with Scott's

The publication in your last week's issue of the statement that the E. H. Michel Floral Co. had been incorporated, has elicited articles of incorporation, a true, and a legal objection to the name, however, has been made, and the fact that it has not yet been incorporated. It is a little premature, therefore, to publish as you have done, the fact that it has not. This new concern had absorbed the business of E. H. Michel, this statement is true, but the fact that it has not been incorporated by fact. Your correspondent has certainly arrived at this conclusion from hearsay evidence, for no such statement has been made by us. I will ask you to kindly make explanation of it, and oblige, and when a charter has been obtained, I will notify you or your correspondent. Until you have done so, the statement is not addressed to the E. H. Michel Floral Co. when such an organization may never come into existence. E. H. MICHEL.

Baltimore.

Market Notes. How quickly the prices of cut flowers rose previous to, and how quickly they fell after, Christmas. Every other class of business offers bargains at the end of a charter, and has been called "tariff." What is the consequence—trade after the holidays dull.

Flowers are abundant and selling at low figures.

Club Notes.

The Club has decided to hold a show, provided a guarantee fund of \$50 can be secured. Mr. Burger proposed the following committee to solicit subscriptions: Messrs. John Donn, Robert Graham, P. Welsh, Montgomery and H. Fisher.

A motion to make the guarantee fund \$100 was voted down.

Fres. Burger's stand, in refusing to read an anonymous communication before the Club, was a source of bringing out a lot of oralational talent.

Jettings.

Some comment was made by the members on the practice of some cemeteries selling graves by lot, and the graves being plucked from the graves.

BENHISHER & Co., a department house, sold printhees at two for 50c. at the A. S. S.

Washington.

A new wagon, the latest creation of the makers of the world, is the "Gude" which drives it, and the price of Gude Bros., is the handsomest production yet seen; it is also the most useful, being equipped with a hot-water boiler and made air tight. No more fears of frost, remarked WILL Gude, as we had at Christmas when the thermometer showed 24 degrees of frost, and many plants were spoiled in consequence. By the use of the Gude will have been appointed upon the executive committee of the A. S. S. for the next year. It is now to utilize some of the young and useful bloom.

W. M.

Poughkeepsie, N. Y.

The annual meeting of the Dutchess County Horticultural Society was held on January 6. The following officers were elected for the ensuing year: President, Geo. H. Asher; treasurer, James Sloan; secretary, Wallace G. General; assistant secretary, William G. Salford. Sixteen new members were elected, making an addition for the year of forty to the membership. The treasurer's report showed a good balance of \$100.00. A number of valuable floral gavel and marble slab was presented to the society by Mr. John C. Galvin. The floral display was most successful. The chrysanthemum exhibition had been most successful. There were 15 exhibits staged in addition, besides a number of applied displays for exhibition only. It was suggested that more classes should be provided for private exhibitors. A challenge trophy should be offered for competition among regularly constituted societies. The property of the society, which was won in three times in succession; also, that where chrysanthemums were exhibited, the number of plants, and the effect with foliage, was considered the most attractive exhibit in the last exhibition. It was suggested that a class should be made a private gardeners' class as well as an open class.

New Delivery Wagon of Gude Bros., Washington, D. C.

N. S. City attended the funeral in a body. The business of the deceased will be conducted as usual, for a time at least.

### For the Busy Man.

Scott carnations are a giant in several mar-  
kets.

The street fairs in St. Louis now deliver  
flowers to purchasers.

Several societies are considering the advan-  
tage of holding a Christmas dinner.

The New York Florists' Club dinner will be  
held at the "Arenas," on January 29. Those  
intending to be present should notify the com-  
mittee.

Judging from our reports, business all over  
the country is better. Has this condition  
been brought about by the high Christmas  
prices, or what has caused it?

The new National Society has been established,  
and will consist of all American Horticultur-  
al Societies. Its aim is to affiliate all existing  
clubs and societies under one governing body.

### A National Horticultural Society.

The newly organized body which has  
assumed the title of an association that in  
one time existed in this country, but re-  
garding which no information can now be  
obtained (although inquiries have been  
made), as to whether or not it is defunct—  
The American Horticultural Society—has  
undertaken the task of cementing together  
under one head the many organized clubs,  
etc., devoted to the advancement of hor-  
ticultural interests now existing, a task  
that is herculean in its nature, but one  
which the promoters of the new society  
look upon very optimistically.

The endeavor just mentioned, to a very  
great extent, following any attempt on  
similar lines, which it has been proposed  
should be made by the Society of American  
Florists, with the end in view of making  
that Society the governing body—the  
position which the new American Horti-  
cultural Society now seeks to arrogate to  
itself.

It is plainly evident that both associa-  
tions cannot occupy one and the same  
position; and it is also equally clear that  
an attempt by both to secure one and the  
same, both on the one hand, and in  
tagging matters up and in frustrating  
the union of all the horticultural forces under  
one governing head.

The proceedings of the meeting held last  
Monday in New York City, a report of  
which appears elsewhere in this issue, in-  
dubitably showed the new Society is ex-  
ercising its endeavor to carry out what it  
has undertaken, and that there is a certain  
amount of opposition in the membership.  
This desire to co-operate would seem to  
emanate from organized bodies where gar-  
dening is a hobby, and where membership,  
the replies received from florists'  
clubs—and they were few in number—  
showed some indignation, as portraying  
the feelings of these bodies in the matter.

There is now presented to the S. A. F. a  
problem for solution, as portrayed by  
S. A. F. is sincere in its intention to stand  
at the head of all organized clubs in the  
United States, and the new Society is  
the American Horticultural Society for the  
honor, or what shall it take? That  
question needs to be solved, and it is  
apparent, and with existing conditions,  
it is the only way to be followed.

The program mentioned in the  
constitution of the new American Horti-  
cultural Society, and which is so com-  
mend themselves to those having the  
best interests of horticulture at heart;  
and—this is the building up of a new  
organization by the society; the desire to help  
auxiliary societies in the matter of essay-  
ists and lecturers, and the keeping of a  
Bureau of Registration and Information.

The best made in the business have seen  
the advantage, and urged it, holding an  
exhibition as a creator and maintainer of  
enthusiasm, and those who have had the  
opportunity to see the program, and to  
appreciate any assistance, so far as the  
forthcoming of essayists is concerned. The  
Bureau of Registration and Information  
now in the line of aiding gardeners in  
securing positions, and employers worthy  
the aid, and the program in the interest  
of the promoters in this direction did not  
manifest itself at the meeting referred to,  
but was an expression of same sought.

### New York.

During the past week a depression  
that is appalling has hung over the cut  
flower trade, which by the way is  
(We mention the latter in order to show  
that flowers are not alone in the existing  
depression.) Individually the various com-  
mission houses and distributing centers  
report the supply as being very light, but  
the sources are not seen at this time,  
that, taken as a whole, the aggregate  
makes an enormous quantity of stock,  
with the bulk never seen at this  
time. As a consequence, such a thing as  
a cash market is no longer possible. It is  
very likely, if any dealer is seen, he is  
doing a large trade can absolutely clean  
up at the price, and never at brisk or  
firm figures.

After the stores or best trade have re-  
ceived their goods, which by the way is  
now bought in very small parcels, for they  
refrain from stocking up prospectively,  
and are now contenting themselves with  
lots at the mercy of bargain seekers and  
the Greeks, and the condition of business  
is such generally that the purchasers have

the best of it in the end, and buy at their  
own offers.

The weather has been unfavorable to the  
Greeks getting on the streets, and further-  
more, in some parts of the city the police,  
under the orders of the Bureau of Incen-  
drazing, have been very strict, and have  
even in some cases when privileges had  
been granted by stockeepers on their own  
roofs.

Roses in large bulk, or, as is described,  
straight light, meaning that the purchaser  
takes the stock as it comes, without  
sorting, have sold as low as \$23 per 1000,  
and, generally, \$30 per 1000. In smaller  
lots, the price has been \$25, and \$25 per  
100 was about the average. Extra Bride  
and Meteor, and some of the best of the  
Meteor about the same. A few bringing  
\$10. Beauty varied from \$5 per 100 to 50c  
each.

Carnations in 1000 lots sold as low as \$3  
per 1000, and quite a number went at \$4  
and \$5 per 1000. Stock sold only realized  
75c to \$1.50 per 100, and specials, fancies  
and novelties from \$2 to \$3; when kept  
over a year they showed a rate of lower-  
grades.

Violets have had a hard time of it, and  
for some time. The retail stores have  
more than 40c. per 100 for extra good stock.  
In thousand lots prices ruled at from \$3 to  
\$2 per 100.

Lilacs is very plentiful and sells at from  
75c to \$1.00 per bunch, six heads to a bunch.  
Cypripediums have short supply, and to  
supply; these are quoted at \$8 and \$10 per 100.

Cattleyas have taken a tumble and are  
very plentiful; \$35 to \$50 quoted from one  
source, but others are realizing only \$25  
to \$30 per 100, and buy to sell. They  
can get all they need at those figures.

Liliums, longorum and Parviflorum realized  
only \$4 and \$5 per 100; a few in small lots  
sold at \$6 and \$8; on the other hand, \$3 per  
100 realized for the same.

Valley, Romans and narcissus are selling  
lower than last week; the first named is  
very plentiful.

J. K. ALLEN has been receiving Jacq-  
roses for the past two weeks.

THRENDLY & SCHENCK are receiving  
Saxons daily, and have been since New  
Year's.

### Utting.

PAUL PRISON is confined to his  
bed with a very severe cold.

JULIUS ROEBERS is also confined to the  
bed, suffering from a similar cause.

Charles W. Allen has short notice the en-  
gagement of L. C. BOBBIN, Rutherford, N. J.,  
to Miss GERTRUDE SCHMIDT, sister-in-law  
of the writer.

ALEX WARENDORFF will join the ranks  
of the benedicts February 10.

It is reported that the sheriff, on Thurs-  
day last, took charge of the store of S. C.  
Burnham & Co., at No. 788 Fifth avenue,  
on an execution for \$109, in favor of their  
landlord.

J. AUSTIN SHAW, Brooklyn, has dis-  
posed of his retail business at 926 Fulton  
street, and is now engaged in a wholesale ex-  
clusively to wholesale work in the future.

### Toronto.

#### Market News.

Trade has been fair since New  
Year's, but cut flower stock has been very  
plentiful. Wholesale prices, in many  
cases, have been low for this time of the  
year. Roses are good, and while the best  
of the fair and poor stock is selling at  
15c; No. 1, 12c, and from 10c to 12c; and  
other varieties sell at from 10c. down to 1c.  
Carnations, from 10c. to 3c.; violets from  
75c. to \$1.50 per 100.

Roses are offered at retail at from 50c.  
to \$3 per 1000; carnations from 25c. to various  
club notes.

The January meeting of the Horti-  
cultural society was held on Tuesday,  
the 9th. In the absence of the president,  
Mr. Geo. Vair was elected to the chair.  
The minutes of the last meeting were read,  
"How to Increase our Membership," on  
paper and the subject were discussed by  
several members.

Some matters connected with the tariff  
were also discussed, several of the mem-  
bers being of the opinion that it would be  
better if all duty were taken off all domes-  
tic roots and greenhouse plants; but it  
was decided to refer the matter to the  
next meeting for full discussion.

At a meeting of the executive commit-  
tee, held on Tuesday, the 16th, a resolu-  
tion it was decided to hold the annual  
dinner at Webb's, on February 9.

THOS. MANTON

### Philadelphia.

The meeting of the Horticultural  
Society on Tuesday next, promises to be a  
very interesting one. Professor  
Robbuck will deliver an address en-  
titled, "Fire and Flood, the Scourge of  
Pennsylvania." This lecture is given  
under the auspices of the Pennsylvania  
Forestry Association, which will be asso-  
ciated with the Horticultural Society on  
this occasion. Invitations have been sent  
to members of the Civic Club, the trustees  
of the University of Pennsylvania, and to  
the Drexel Institute.

#### Market Notes.

During the past week business  
was very quiet. The retail stores are not  
doing anything worth mentioning. There  
have been a few wedding orders only.  
Flowers are very plentiful; the wholesale  
houses are filled up, and although fair  
prices have been obtained for good stock,  
most of the flowers have been sold for  
what would be obtained. Prices for good  
stock were: For Beauty, \$3 to 6 per dozen,  
flowers are very plentiful; the wholesale  
houses are filled up, and although fair  
prices have been obtained for good stock,  
most of the flowers have been sold for  
what would be obtained. Prices for good

# HARRISON'S WHITE!

## NEW CARNATION Sport from WM. SCOTT •••

Strong, Vigorous Grower...

...Requiring no Support.

COME AND SEE IT!

DESCRIBED AND ILLUSTRATED  
In FLORISTS' EXCHANGE,  
...Nov. 21, 1896, Page 1044...

Read what Prominent Carnationists say about it:

JOHN HARRISON'S PLACE, Bergen Ave., near Bidwell Ave.,  
JERSEY CITY, N. J., January 5, 1897.

We, the undersigned, are satisfied that the carnation John Harrison is now growing under the name of HARRISON'S WHITE is what he claims it to be, namely, a sport of Wm. Scott, and is a really good thing. This conclusion we have arrived at after a careful examination of the stock he has now growing on his place at above address.

(Signed)

JOHN N. MAY, ERNST ASMUS, HENRY DAILLEDOUZE.

QUEENS, N. Y., January 7, 1897.

Editor Florists' Exchange:

Regarding the white sport from Wm. Scott, which is offered by Mr. John Harrison, of Jersey City, and which I recently stated to you that I was of the opinion that the variety was identical with Puritan, I desire to say:

Yesterday, in company with Mr. L. E. Wood, the originator of Puritan, I visited Mr. Harrison's place, taking samples of Puritan and comparing the growths of the two varieties. After careful examina-

tion, Mr. Wood pronounced Mr. Harrison's variety as distinct from Puritan, and I am now convinced that my first impressions were wrong.

There is a certain difference in the growth of Mr. Harrison's sport from the growth of Scott as usually seen, which resembles much the growth of Puritan as I have seen it at times, which difference can be accounted for by their being grown dry (as the plants were too deeply planted), and this resemblance, coupled with the knowledge that I had once mistaken a plant of Puritan, which was growing by accident in a bench of Scott, as a sport from Scott; also the fact that a portion of Mr. Harrison's original stock of Scott was propagated by us from the same bench in which the Puritan plant was growing, caused me to think that Mr. Harrison had fallen into the same error that I had made.

I am very much pleased to find that I have been mistaken, as a clear white sport of Scott, such as Harrison's White is, certainly will prove one of the most valuable commercial carnations that could be originated, and I hope you will allow me to say in this column that if any florist has \$10 to spare, I believe he can do no better with it than to invest in a hundred of Mr. Harrison's White Scott.

C. W. WARD.

PRICES: \$1.50 per doz.; \$10.00 per 100; \$40.00 per 500;  
\$70.00 per 1000. Cash or satisfactory reference required.

**CARNATIONS**

**An Experience with Alaska.**

In my remarks last week I made mention of an experience we are having with Alaska, and which it seems to be in direct opposition to what I then said. I refer to the time of starting the cuttings.

At first, looking below one of the new introductions, we began taking cuttings very early. I think the latter part of the season. The first batch, as was as rooted, was planted on a bench, several feet from the house, and was destroyed by me in a former article; here they remained until April, when they were transferred to a cold frame, and were not started until long this time there had been several crops of cuttings taken from them, and it could hardly be said that they looked very promising when placed beside the younger and thrifter plants, which had been started the latter part of February and throughout the month of March.

They were planted in the field in May, on a rather low piece of ground, which was not very well drained; in fact, to waste the end of summer the soil had become so completely waterlogged that the mossy growth, which is a never-failing sign of moisture and poor drainage. In addition they were completely covered with water several feet deep in the latter part of July. Up until this time the season had been almost constantly wet; after this, the weather was all that could be desired.

The younger plants were planted on a higher and better drained piece of ground, where the soil was the same. They made more growth and altogether looked thrifter than the old ones. Naturally we chose the younger plants when housing time came. Having selected the best of these, and requiring between two and three hundred more to plant a cutting bench, we took enough of the older plants to fill out, selecting the best ones. The younger ones started out without any apparent check, while the older ones which had made a rather slow growth, did not start so well. The difference for some time was in favor of the younger plants, so far as growth was concerned, but gradually a change began to take place, and I could easily see that the old plants were forcing ahead, and at the present writing the difference in their favor is so marked that the most casual observer would notice it at a glance. The younger plants still show some signs of bacteria and some cases of stem rot, while the older ones are free from both.

I was at first puzzled as to how this could be, as it seemed to be directly contrary to all our former experiences, and my conclusion is that the young plants, having a more rapid and succulent growth, took up more water than they could care during the wet part of the season, and thus the older ones, which started slower and consequently took up less moisture, I am convinced of this, not only from the fact that the growth of the younger plants, but also the distinct difference in the color of the foliage that of the young plants being a shade of green, while the older ones showed a bright lively bluish shade. This indicated a rich coating of the natural bloom of the foliage, without which the carnation can be healthy. It is the herald of health, and the plant's best safeguard against disease.

Next to Alaska, Uncle John shows the greatest difference. As with the former, the difference is decidedly in favor of the old plants. The same difference is noticeable in nearly all of the other varieties. I am satisfied, however, that had we had an ordinary season, or one inclined to be rather dry, the young plants would have come out best.

The lesson that I draw from this is that it is not so true, as it is generally supposed, but to plant out some of each, and thus be on the safe side.

From one week to the next, it might be inferred by some that I advised not to pinch back in the field. If what I said conveyed this impression, it was unfortunate, as there are many rapid growing varieties which must be pinched back. I referred particularly to the slow-growing and late blooming sorts, which we rarely pinch back more than once.

**MINNIE COOK!**

Largest stock in the country of the finest of variegated carnations. Strong, healthy, rooted cuttings, ready made in January. Have also other varieties, including Storm King, Della Fox, Bridehead, Scott etc.

**DORNER'S**

**NEW PINK**

... FOR 1897....

**MRS. CHAS. H. DUHEE** (Seedling)

Lively delicate pink, large flower. Color bright, clear, strong, true. Plant vigorous, erect grower, a very early, free and constant bloomer, much more so than any of our former varieties, rivaling in profusiveness with Scott. This promises to be the best of the light pink commercial varieties. Certified at Indianapolis and Philadelphia. We have grown this variety now for five years, and it is indispensable at our place.

**MRS. GEO. M. BRADT** (Seedling)

Clear white, heavily edged and bright, and bright scarlet, giving it a very striking and cheerful appearance. Flowers large and full, with center petals standing erect, giving the bloom a well rounded form. Color resembling Mme. Albertini. Habit strong and vigorous. This variety is now in its fourth year and has proven the most even and constant bloomer from early to late. We received for these flowers the highest prices paid in the market. Received gold medal at Atlanta, certificate at same place and at Chicago.

**C. A. DANA** Delicate shell pink, vigorous

dane flowers on strong, stiff, wiry stems, color soft and exceptionally pleasing. Flowers of medium size. One of the most attractive colors in pink carnations. Stock limited.

Rooted cuttings ready March 1, 1897, \$10.00 per 100; \$75.00 per 1000.

Plants from soil at same price four weeks later.

## TRAVELING SALESMAN

Is open for an engagement with first-class house, moderate salary. B. W. B., care Florists' Exchange.

## SITUATION WANTED

As foreman, by first-class grower of cut flowers; thoroughly posted in all branches; Eastern States preferred; life experience, Europe and America; best of references. W. L., care Florists' Exchange.

## SITUATION WANTED.

By an honest, sober, industrious man, long experience, commercial or private place, capable taking full charge, acting as foreman or grower in state or foreign. G. L., care Florists' Exchange.

## STOCK WANTED.

Roses Wanted. G. R. O'SHEA and J. W. HICKS, Wholesale and Retail Florists, 40 Bootham Place, BROOKLYN, N. Y.

## WANTED

1000 Var. VINCA, strong plants, cheap, for sale, at post. Address: J. W. HICKS, care ALEXANDER MEAD, Greenwich, Conn.

## WANTED TO RENT

For two years' greenhouses in some large town where all that is raised is sold at home. Everything in first-class growing condition; would take place about May 1, 1897. As I mean business I would be pleased to receive particulars and prices. Address: GOODMAN, care Florists' Exchange.

## PEA GROWERS!

Will some of our Canadian friends favor us with names and addresses of reliable growers of pea cut flowers in the West? We are on behalf of a foreign firm intending to place their first-class cut flowers in the States.

"Business Manager," Florists' Exchange. WHEN WRITING MENTION THE FLOWERS' EXCHANGE

## Charleston, S. C.

W. MCINTOSH & SON report an increasing business in their truck or vegetable seed department, which is under the charge of Mr. McIntosh, Jr. This is a big item in this section, and was formerly supplied entirely from the North. They have increased their warehouse space and by carrying a glass roof have formed a combination containing greenhouses or roof garden, where a large stock of plants is carried, the demand for which at Charleston is greater than at any other port hitherto. W. M.

## Savannah, Ga.

GEORGE WAGONER graphically describes the storm of September 23, and which was noted in the EXCHANGE soon after the disastrous occurrence. The damage he sustained was considerable, much of the stock being spoiled entirely in addition to broken roofs. As a part compensation business has been very good since that time.

A. C. CHELSEA was more fortunate, still his loss was considerable. He has added a capital propagating house, and intends growing extensively in a variety of stock as he has been doing. La France is one of many roses that do well here, and is always in demand. W. M.

## Belleville, Ill.

Trade for the holidays was about the same as last year, but there was an increase for blooming plants, and a slow sale of bulbs stock.

A. W. FEH is on the sick list. Wm. L. Egan, Sec. of the Floral Co., and E. W. GUY are cutting plenty of carnations; West End Floral Co. will be in with a heavy cut of roses about the last of the month.

Nearly all of the florists here will attend the St. Louis Convention of the Florists' Club on the 14th inst. E. W. G.

## HELP WANTED.

On commercial place in neighborhood of New York, an experienced rose grower. Address, with full particulars, E., care of Florists' Exchange.

## WANTED

A Florist and Gardener, German preferred, who thoroughly understands the growing of general stock, roses, carnations, palms, ferns, and all other plants, and who will be a reference from commercial places as to character and ability need apply; must have experience in making up state vases, etc. single. Wm. A. BOCK, North Cambridge, Mass.

## WANTED

For SALE In immediate neighborhood of New York, 2 greenhouses (10000 sq. ft., 3 smaller), all well stocked; dwelling 7 rooms, stable, all in best repair; grounds over one acre. Price, \$2000, half cash. Inquire G. Riedel, 915 Hanover St., New York.

## FOR SALE.

Country place, about three acres, 5 miles from New York, very desirable for gardener and dower grower, or for a man's residence, on direct line railroad, adjoining station; home large, arranged for two families, water flowing, new greenhouse, shed for violets, carnations or vegetables, with hot water, poultry-house, and range fence; large and productive garden, spring water under pressure; market in neighborhood. Price, \$2500 square feet. Henry S. Conklin, 20 Court St., Brooklyn N. Y.

## FOR SALE.

A new greenhouse property of nearly 6000 feet of glass, built in the center of a beautiful village in the favored Hudson River Valley. It is a fine structure, with a large hot water heating, brick, and a acre of land; two blocks from the Telephone, telegraph, and two express offices. Good shipping point for New York or Boston for all water freight.

JOHN HENDERSON CO., Flushing, N. Y.

TO TAKE PLACE OF WIND MILLS

The DeLamater-Riden and the DeLamater-Ericsson Hot-Air Pumping Engines

Will pump water from any source, and force it to any height and distance. Simple, safe and free from care. The only attention required is to start a fire and keep it burning. Any kind of fuel can be used.

They are supplanting wind mills everywhere, as well as steam and hand pumps, rails and all other means of supplying water. Are favored because possess advantages over all of them.

Send for catalogue to THE DE LAMATER IRON WORKS, 467 West Broadway, New York City.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Grand Rapids, Mich.

The second annual meeting of the Florists' Club was held, January 2, and officers were re-elected with the exception of the treasurer, James Scholz. The officers now are: President, Henry Smith; vice-president, William Cunningham; secretary, N. B. Stover; treasurer, Henry Van Velsa; press reporter, Wences Calkerski. George F. Crab, chairman of the committee, announced that the annual banquet will be held at the Grand Hotel on the evening of January 26, with the Hon. Charles W. Garfield as toastmaster. Short speeches will be expected from each member, and music and recitations will be given by the florists.

With a few important changes, the schedule of the last show was recommended. A few varieties were suggested to bush chrysantheums, and more miscellaneous flowers will be exhibited. The roses will be shown by name rather than by color alone.

The treasurer's report showed \$44 87 collected during the year with \$29 47 remaining in the treasury. Mr. Crab announced that at the next meeting of the Club, January 19, a change will be recommended by the by-laws, suggesting that before the report of the next chrysanthemum show shall be presented, it shall meet the approval of the exhibitors. Mr. Crab brought some fine specimens of seedling carnations, and Mr. Stover a handsome collection of carnations.

St. Joseph, Mo.

The florists all seem to be well pleased with Christmas trade. Prices ranged about the same as last year's, and the supply was about equal to the demand. One or two were short on roses and violets. Romance among hardies was plentiful. Beauty scarce. Sales on Christmas green and trees fell below last year; the town was flooded with the latter, and the trees were unneeded. Holly, as usual, sold well.

Trade during the week kept up very well, but on New Year's the demand was rather light. Plant sales were not so good as last year.

Toledo, O.

E. FIDDER reports that Christmas and New Year's trade was splendid. Ewald Suder has added another greenhouse, 20x100 feet.

STOTT'S FIR TREE OIL SOAP

For killing insects on plants. Has the endorsement of any insecticide. It is not costly, requiring but one ounce to a gallon of water. It can be had of leading seedsmen in New York, Boston, Philadelphia, Chicago, Cleveland, Ohio, and San Francisco, or of the manufacturer.

Newark, New Jersey, J. C. PIerson

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

It costs 4 cents for each 500 feet of floor space.

Does not injure the most sensitive plants. Endorsed

Winkoteen

by prominent florists. Used for fumigation or spraying indoors or out. 500 pounds of tobacco in one pint of Winkoteen. Sold by seedsmen. Circular free. SEABOARD DISP CO., CHICAGO.

Quickly Does It.

EVERY FLORIST OUGHT TO INSURE HIS GLASS AGAINST

THEFT. For particulars address JOHN G. ENLER, Sec'y, Riddle River, N. J.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Butted Glass

This is no longer an experiment, it has come to stay. There are various ways of making Butted Roofs, but the best way is with the

Clipper Bar.

With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Baked glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of special-dried Cypress clear of lumber sap, stained saw, knots and all other defects.

LOCKLAND LUMBER CO. LOCKLAND, O.

Mention paper. Write for Circulars or Estimates.

Satisfied With Results.

We are satisfied with the results of our ad. in your valued paper. The returns in our somewhat peculiar position in endeavoring to introduce a comparatively new article were more than could be expected. A. DIETRICH & CO. Chicago, May 29, '96.

Standard Flower Pots.

Send for New Price List with extra discounts. All our pots, from 7 in. and upwards, have our Patent Elevator Bottom, which is a great advance, as it insures perfect drainage.

### The Professional Gardener's Mission in Horticulture.

Paper read by Patrick O'Mara (of Peter Henderson & Co.) before the Lenox (Mass.) Horticultural Society, January.

When your secretary communicated to me your desire that I would come before you and talk to you on some topic pertaining to horticulture, I very naturally commented at the honor you had conferred on me by issuing the invitation. Pleased that you was, you were so graciously for in this community of gardeners, second to none on the continent, he who could do before you as an instructor or on some special fitness for his task, and such a fitness I do not claim. The certainty, however, of meeting men who I respect, I esteem, of mingling with men who occupy an enviable position in horticulture, the knowledge that I would be your guest for a time and partake of your hospitality, that I would have the pleasure, ever new, of looking at your beautiful hills in their winter garb—these were potent allurements, and not to be resisted. The feeling also that in my own mind I was doing something to you which would be the means of urging you to renew efforts in your horticulture, that horticulture would be benefited by my words, and that I probably would have more than I would impart, were good reasons why I should not decline the invitation.

A few years since I was daily engaged in the working department of our business, and, therefore, did not feel justified in choosing to assume any line of active operation. You will be able to see from time to time, I am informed, men who are qualified to speak on these lines, and you will have the opportunity of being in daily contact with men representing the profession, also with the class who more properly are the patrons of horticulture, people who are engaged in employing gardeners; in daily contact, too, with the gardener who cultivates his or her own little garden, and the cultivator of winter gardens, are a small category of gardeners, a closed piazza, or, more frequently, a sunny porch, in which he may be seen. In many phases of the question, that I should sometimes ask myself if the gardener was to be placed in the right position in the environment and technical education, if he was using both to their full advantage for the benefit of all concerned, and it was thus I came to choose as my theme "The Professional Gardener's Mission in Horticulture."

To begin with, what is a gardener? Webster says: "One who makes and tends a garden; a horticulturist." The horticulturist is: "One who practices the art of cultivating gardens." Before proceeding further, it is well to understand that that distinctly calls cultivating gardens an art, and is an authority who is careful in selecting words, and who is not haphazard. In this country the man who grows vegetables for a livelihood is called a gardener, and the horticulturist who grows flowers, a trucker and a truck-farmer. We also have the florist, which embraces the man who grows and keeps flowers, and the grower, those to whom the title properly belongs, viz., the persons who are cultivators of flowers. We have also the owner, who is called separate and distinct from these, and yet the three must be combined in one being; and to make this more definite, or what is generally known as the "private" gardener.

Occasionally the so-called "private" gardener is known as a "manager" or "superintendent," but it may well be questioned if he really honors the title. When he leaves the place where the title was assumed or thrust upon him, it very frequently is left behind, and he is called a manager. It also tends to create an artificial distinction between man who are equal and who are not, and the rate of pay should be discouraged. Gardener who have charge of public parks, cemeteries and hospitals, it may be said, do not assume the name with perfect propriety assume the name of superintendent, but the fact remains, that no man who is called superintendent should be assumed to be known professionally by the "grand old name of gardener."

It was a title good enough for Sir Joseph Paxton, and his claim to it rests largely on his work as the gardener at Chatsworth. It was a title good enough for Peter Henderson, and his claim rests on honor to the last of his days. It was good enough for his son, who, in writing his book on horticulture, entitled it "The Gardener—Author—Merchant," the gardener being the foundation stone. With two such honorific titles, it is not surprising even if there were no others, it may well be said that no man entitled to bear it should have any hesitations in assuming the dignified title of gardener. However, as there may be some danger of a man's true position being misunderstood, it is in that word, I would suggest that the word horticulturist, which is a quality, is in the eyes of some outside the title, it might have weight, and it would certainly be a proper distinction from the amateur gardener, the trucker, the nurseryman and the commercial florist. It would be well also to have all gardeners' societies known as an association of horticulturists, and it might operate to properly classify those who are entitled by education, experience and natural ability to bear the title of horticulturist, who, lacking all these, are yet bold enough to assume it. Horticulturists are candidates for positions which are unable to fill with credit to themselves, with credit to the public, and with credit with a proper regard for the responsibilities they are so willing to assume. That horticulturists are not to be taken advantage of by them, under such circumstances, assume the title of professional horticulturist, and that those who assume it, which would inevitably follow the discovery of their false pretenses would be a salutary thing.

To have a claim upon the title, a man should be able to grow flowers, fruits and vegetables, and to be able to give the care for trees and shrubs, lawns and roads, and to be able to give the order and in short attend to every detail connected with the horticultural business. He should be able to attend to the details of horticulture, and his services should be all the more valuable in the country where the horticulture of a place, where there is no horticulture are done, and we would, if more men were capable of this, be spared the necessity of employing a horticulturist from incompetence or want of co-operation between the gardener and farmer.

It is the horticulturist who may properly claim the title of professional gardener that I address myself; it is to them that we must look for developments of an upward tendency and they will be held responsible for any retrogression in ornamental horticulture, for they are before all others the recognized exponents of the art. It is their mission to improve, and the general public, who are there in room for improvement, more especially in indoor horticulture. The overwhelming tendency during the past few years has been to make the so-called "private place" nothing more nor less than a cut flower establishment and hospital for the decorative plants which are used in the dwelling house and for outside decoration in summer; so that the horticulturist has been reduced to the latter instead of being maintained, as it should be, purely to gratify aesthetic tastes, is devoted to a utilitarian purpose. The product is counted and reckoned at a few more dollars and cents. The horticulturist is called upon to attend to the daily or semi-weekly cut which is sent to the house. This is not as it should be, and the horticulturist is not to be taken advantage of by not being within his power to control, yet by well-timed suggestion and persistence, he should be able to direct, and much-to-be-desired change.

The greenhouse should be a place of recreation for the horticulturist, and he should be induced to visit them daily, to look forward with pleasure to that visit, and the best way to accomplish this is to induce them to get a good collection of plants. A house of roses, carnations, violets or chrysanthemums, is desirable in a winter greenhouse, a collection, too, that embraces in their season gladiolus, tuberous begonias, and geraniums, and also a collection of sparganix, primulas, and other seasonal pot plants, both flowering and ornamental

foliage. The late A. W. Bennett set a brilliant example in this among our latter day gardeners, both at Flatbush and Schenley Park. It is freely admitted that variety is superior to monotony, but it is less so in small than in large places. The individual preferences of the proprietor or horticulturist should be considered, but be rendered subservient to the amount of pleasure which visitors are sure to obtain by the superior ordering of the plants, that in many places the proprietor's residence is of short duration and very often during the summer months, and it is difficult, say, well nigh impossible, for the gardener to influence him in the right direction, and it is not to be expected that in many places the proprietor is to succeed, and the example once set, it will soon become general. It must not be understood that I advocate an entire abandonment of growing cut flowers, far from it; what I urge is a wider scope for the professional indoor horticulture than obtains at present.

I once felt it necessary to call public attention to the monotony of our flower shows of the present time and to suggest some remedies. That monotony still exists, and that it is the cause of the loss of many of them. Horticulturists of the last new departure was taken, somewhat on the lines of the present time, and with flattering results. The suggestion was to have the whole equal to any I ever saw and superior to any I have seen. The horticulturists brought people to the shows, and the monotony would not come. Now, if good collections are made, and the horticulturist is to be away with it, and it behooves the gardener to be able to give the horticulture of horticulture to strive to get there.

This thought suggests another. It was said that "a garden of plants without a man, is like a book without a reader." There is food for thought in this. Horticulturists should be properly intelligently called so that they may employ themselves with them; acquaintance with them will ripen into friendship, and the horticulturist will be able to have a better understanding of the horticulturist. How is it possible for the horticulturist to be able to tell the visitor what a plant is, and to be able to give the horticulturist the case, that when the gardener is called to, he has the name "on the tip of his tongue," and he can give the name.

An annual prize should be offered by every horticultural society for the best labeled collection of plants in the greenhouse and grounds and persisted in until its need should disappear. Not only should the botanical name be given, but the vernacular also, when the subject has one. "What's in a name?" Why even the stars of the horticulturist should know them when we know their names. But to know the names of plants alone should not suffice. The horticulturist should know their history and should know how to tell it when asked. An hour should be set apart for every meeting for the horticulturist should call upon members to tell what they know of plants in their collection, and to give the name of the plant, and etc. It will at all events give him practice in telling what any visitor may ask him, and it will be a most profitable thing in the long run. Let the president be asked questions, too, his position should not exempt him. Try to get the horticulturist to give the most interesting which otherwise would be uneventful.

It is then, then would be steps in the right direction and the gardener should take them.

It is another thing, study the habits of your employers and at the time they may be expected to visit the greenhouses see to it that the best care is given to the plants, or while watering is being done, do not a good time, neither is the odor of the plants. It is not to be expected that ladies, to visit the greenhouses, and it is largely owing to these two causes that they are not to be expected to visit the stable or a malarious swamp. Remember that the love you bear for plants is not to be expected to be communicated to you have it in your power to communicate it, but remember, also, that it cannot ex-

cept in rare cases, be communicated on sight. Be patient, therefore, an enthusiasm is contagious, but a sustained enthusiasm is convincing. London says: "Delicacy and nicety depend principally upon organization and intellectual cultivation; they cannot be communicated by instruction except in a very limited degree, and yet the influence which education may have in giving a bias to taste is so obvious as hardly to require illustration." It is surely the mission of the professional gardener to provide education and so direct a course. He should, to properly fulfill his mission, be so imbued with the lore and love of his art as to be able to say with Horace Smith, Floral apostle: that in every episode of "Wesp Without Words" he should say: "Oh! may I deeply learn and ne'er surrender—  
"Your love divides."

A tendency here of the dominating influence of the commercial cut-flower grower on horticulture at the present time is to measure the beauty of a flower by its size. We may well pause and ask with the lady who, with Arlic wit, inquired: "Do we measure beauty by the square yard?" It seems so. If Burns thought thus, the world would be the poorer by the loss of his exquisite lines. "To the Daisy," "The poet in all climes and all ages has ever been the oracle who proclaims the merit of true beauty, and delicacy rather than exuberance has ever been his theme in flower; even though they lack more color, to preserve varieties having delicacy of color, delicacy of perfume and beauty of contour, even though they lack more color. True beauty is imperishable, the rage of the size is sporadic. The Colossus of Rhodes for a time may have been the admiration of a living reality. The Venus de Milo and De Medici will endure when Memories Liberty and Germany are only memories.

(To be continued.)

### San Francisco.

The following officers have been elected for the coming year: President, Professor E. A. Smith; Secretary, Professor E. A. Hodgkin; Treasurer, John Henderson; Editor, Mrs. J. M. Martin; and Secretary, John Hinkle and Mrs. J. R. Martin. The proposition of the carnival committee to hold the carnival at the Palace Hotel, the week ending April 17th was accepted. Expenses are to be borne by the committee. Rooms and catering must be paid for and awarded instead of premiums, inasmuch as there will be no receipts for admission. The February meeting of the Society will be addressed by Professor Kellogg, entomologist of Stanford University.

GREEN 210 OIL

...NEW ROSE...

## Souv. du President Carnot

ADMIRED BY EVERYBODY. IT GROWS IN FAVOR DAILY.

President Carnot is without doubt a grand acquisition to the list of forcing Roses. It has all the good qualities, being a remarkably strong, quick grower, extremely healthy, and a constant bloomer. It produces long, stiff stems, with handsome foliage; the color is an exquisite sea-shell pink, with the edge of the petals Ivory white. The blooms are larger than either Bride or Kaiserin Augusta Victoria, and of perfect shape; even upon small plants the blooms are large and show the same character as one year old plants.

### EVERY WIDE-AWAKE FLORIST SHOULD PLANT IT.

How many florists have purchased new Roses during the past few years, and after growing them for a year or two have been disappointed and dropped the new Roses as unprofitable?

We recommend with full confidence President Carnot, both for forcing and open air culture. We know it will be both profitable and popular as a cut flower. It has been tested in the West, in Boston, in New York, and Washington, and from all these different localities with their varied soils comes but one report—it is the Rose of the year. It has taken more medals and certificates of merit than any other variety ever introduced in this country. All these reasons, we think, should induce florists to plant it largely this year, as the price is exceptionally low for such a sterling novelty.

### A Perfectly Hardy Garden Rose.

We have tested President Carnot in the open ground and it produces as many flowers as Maman Cochet. At this date it has stood three degrees above zero without protection, and every plant is perfect to the top of the stem. We are convinced that it is perfectly hardy.

## QUESTION BOX.

OPEN TO ALL . . . FREE TO ALL

Answers Solicited from Those Who Know.

(26) Green String for Smilax, etc.—In one of your issues was an article about using green string instead of white. I never yet got green string which would not be bleached white at the time of cutting the smilax. Can you recommend a place where I can get string which will not fade?

—We would refer you to John C. Meyer & Co., of 87 Summer st., Boston, Mass., whose ad. of Silkline may be found in this issue. They carry a large stock of this silkline in the different sizes, in green as well as in fancy colors for tying purposes, and are always pleased to furnish samples and prices on application. They claim that silkline will be found superior to any other cord on the market for stringing smilax, asparagus, etc., as well as for general florist work.

(28) Cuttings from Blind vs. Flowering Wood.—A bet B a cutting made from the blind wood equalled that made from flowering wood. What is your decision?—ROSE CUTTING.

—In giving this decision I most decidedly shall give it to A. In my recent notes on propagating I said cuttings from below where a flower had been cut were the ideals, and that good plants also could be got from good blind wood. As a result of an extensive trial I made between these two kinds of wood—flowering versus blind—when the cutting of the flowers commenced, I could not see the least difference in the whole lot; while if the largest and best plant of all was to have been picked out, it would have been in favor of a blind wood cutting. Now I don't want to be misunderstood in this matter, as it may seem curious to some why I should say one week flowering wood cuttings were the ideals, and another that blind wood was equally as good. To this I will say that from the former you are always sure of a good percentage of strong plants, while with the latter, if the utmost care is not

## CORRESPONDENCE.

Insertion will be given in this column to all communications free from animus; but the opinions expressed do not necessarily reflect our own.

## Seedsmen and the Tariff.

Editor Florists' Exchange:

Mr. Allen's letter in last issue reminds me of an anecdote of the late Mr. Henry Ward Beecher. One Friday evening, at the regular prayer meeting, one of the trustees got up and requested the congregation to join with him in thanking, for the wonderful escape he had had. While walking along Nassau street, New York, he said a cask of ice fell from a high building, and struck down a man at his side. Mr. Beecher listened patiently, and then very quietly remarked, "How about the other fellow?" and proceeded to deliver a matchless extemporaneous exhortation saying we were always thinking of the fellow who escapes, rather than the one who is hit.

Mr. Allen is praying for the seed grower, forgetting the other fellow—the farmer. How do you think the farmer. What compensation have they for the

Editor Florists' Exchange:

I would like to say just a word on C. L. Allen's article on "The Tariff." It is very good when you cannot look with one way, but there are always two sides to every question. It is not fair to compete with foreign goods, but he does not say a word against the hordes of cheap help coming over to compete against our laborers. P. S. SPENCER. Conn.

## About Delivery Wagons.

Editor Florists' Exchange:

We were very agreeably surprised to see in last issue of THE EXCHANGE the abstract of one of our latest delivery wagon so nobly executed, accompanied by the explanation, and that it is of some advantage to the craft in general. It costs very little more to have and keep a good tasty tarred for delivery than the common delivery wagons so generally used, and which we consider a detriment to our business, or rather the profession, whereas, a turnout like the one shown in your last issue, not only enables us to deliver flowers and floral designs in better shape, but naturally draws trade and elevates the standing of florists. A. GUDÉ & BAO.

## Freaks of Nature.

Editor Florists' Exchange:

The past year seems to have been prolific in sports in several places in Germany. While roses have appeared on the Mermet Island with the Bride, while in Ireland a yellowish shade appeared. Two shoots of a Marechal Niel rose in Germany produced perfect Gloire de Dijon roses. Now the question is asked: Is the Marechal Niel a sport from Gloire de Dijon, as the origin of this rose was never given. Here, in Baltimore, we have a pure white sport from Maman Coche, and a seedling and cross of Souvenir du President Carnot and Mme. C. Testout has no trace left of any tea blood, but looks like a hybrid perpetual, and has not shown any flowers yet. SENEX.

## American Horticultural Society.

Editor Florists' Exchange.

In your issue of January 16 I note your remarks regarding the newly formed association, the "American Horticultural Society." Having made inquiries regarding the original society here in this name last Spring, I now beg to enclose the reply I then received from its late secretary, Prof. E. A. Popenoe, of Rockwood, Md.

ALEXANDER MACLELLAN, Secy., Newport Harb'r Socy.

Copy of Mr. Popenoe's reply referred to by Mr. Maclellan, is given as under:

MANHATTAN, CAN., April 8, 1896.

DEAR SIR: I think that the horticultural society of which you inquire may be the "American Horticultural Society," which is now so long active, having lacked the funds to continue its publication. Its last meeting was held in Chicago in 1893, and the last publication was of the meeting in California in 1888.

The American Pomological Society, of which Mr. Geo. B. Searl is president, and E. A. Popenoe secretary, is practically the National Horticultural Society, and is properly entitled:

Yours truly,

E. A. POPENOE.

## An Australian Design for the "Fourth."

The accompanying illustration (Fig. 7) shows a design made for the occasion of the celebration of the Fourth of July in the Antipodes, by SEARL & SONS, Florists, of Sydney, New South Wales. It was the subject of several complimentary notices in the horticultural press, and is highly admired by all with a full description of it. "The floral design was of long and festal character, and was composed of the following: 'Tus shield in center of the design was made up of blue and white chrysanthemums, and was encircled with white Marguerites to represent the stars, and the stripes on lower half were made up of blue and white chrysanthemums alternating. The four draped flags were composed of blue cornflowers with white stripes, and were supported underneath the shield is a row of holly berries and white chrysanthemums. The scroll encircles the shield, and is composed of white chrysanthemums, with the words 'E Pluribus Unum,' written in red letters, the whole being a very striking design, that called forth a lot of admiration.'"

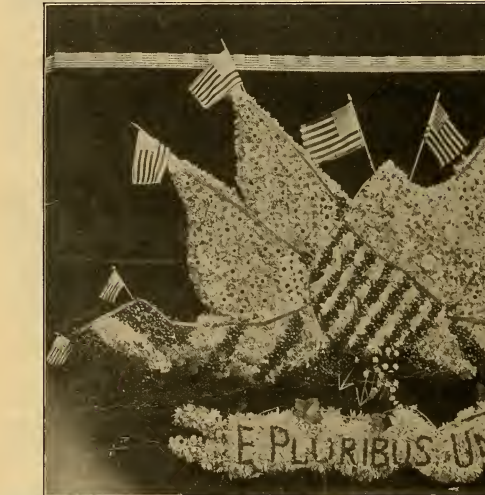

Fig. 7.—Design for "Fourth of July," made by Searl & Sons, Sydney, Australia.

(27) Yellow Queen Chrysanthemum.—Please let me know, through the Question Box, if Yellow Queen chrysanthemum is a sport from White Queen, or if it is a seedling? I have a sport from White Queen, with yellow center, shading to cream at outer edges, and would like to know if that is similar to what is called Yellow Queen.—J. W. A.

Chrysanthemum Yellow Queen is very distinct in foliage and habit, and is undoubtedly a seedling. It was distributed by John N. May, Summit, N. J., Spring of 1893. It certainly is not a sport from The Queen. Mr. May could inform your correspondent, J. W. A., on this point. The only sport from The Queen I know of is Gov. Budd, sent out last season by Donato Bros. It is a light yellow.—ELMER D. SMITH, Secy. Chrysanthemum Society of America.

Yellow Queen chrysanthemum was a seedling of 1891, exhibited in New York at the New York show in 1892, at which show it received a certificate of merit, and was sent out by me in 1894. It is in no way, shape, or form related to The Queen; in fact, the seed from which it was obtained, was sown a year before that which produced The Queen.—JOHN N. MAY.

exercised in selecting the wood, there will be a much larger percentage of weaklings when the time comes to pot them into a 3½-inch pot. It necessarily follows that there will be more anyway. As for the impression some may have, because a cutting is made from blind wood that the plant grown from it will be more liable to grow to blind shoots, is nonsense. I shall try to explain what is the most desirable kind of blind wood to be taken for cuttings. Let us take the Biennial, for instance. When looking over the plants you will find lots of good shoots that have fallen to rest buds, most probably due to the dull weather, and, having ceased growing, are good and solid. This is the right kind, and I am positive is just as good as any. At the bottom of the bushes always will be found wood that was made before they were planted; also was this stuff used was made shortly after. This is the undesirable kind.

Years ago I held the smaller the rose cutting the better, as you did not have so much wood to sustain during rooting time, and I grew good roses then too; but experience has proved that a big one made the largest and strongest plant quicker. It is often necessary to make a blind wood cutting with three eyes, leaving the top leaf and half the second on it. H. H. Central New York.

doubled piece which Mr. Allen says they will pay for their seeds? If you protect the florist from all forms of foreign competition, the gardener from the competition of tropical vegetables and fruits from the West Indies, Bermuda, and Europe, and put a bounty on agricultural products, then I say amend to a prohibitive tariff on seeds; but don't protect the seed grower and let the florist farmer, and gardener to fight his battles alone. If the Government is going into the business of protecting or fostering special industries, like seed growing, let all be treated alike. Shut out tropical Europe, and mix of all kinds, canned goods, flowers, nursery stock, vegetables, English grapes; in fact, everything that is imported, that competes with American growers. Let us all stand on the same level. Don't make fish of one and flesh of the other. Furthermore, if you are going to follow the theory to its logical conclusion, you can stop importing the seed grower in Holland only gets one-half the wages he can get here, he will not be long in finding it out. In short, build a Chinese wall along our coast, and shut up our seaports, then we can advance prices until we are all millionaires, and live on the interest of our investments. Pile on the tariff, but pile it on equitably; let no party man escape. Protect everybody, and make us all rich. EQUITABLE.

## ROSES.

## Fertilizers, Hybrids, Etc.

A good many roses that have been doing their best this season will now begin to need some nourishment, especially those on very shallow benches. The thorough waterings they now get will wash a lot of the nourishment out of the soil, and if the flowers begin to get below the standard it is a slight sign that they need some manure that is, as long as temperature and other details have been carefully attended to.

As it is yet too early to put on a top dressing of manure with prudences, something else must be applied. For years I have made careful experiments with about all the artificial fertilizers and so-called plant foods I know of, and must say they have been anything but satisfactory, some very bad results having occurred from quite a number of them. I can mention a few, using them faithfully according to directions, in some instances I have found even half the quantity advocated to work injury. In most cases a very soft growth, that was washed away by the rain, was the result, and in others they surely killed the young feeding roots, as the plants that I found ceased growing, and lost at least two-thirds of their foliage.

I never got caught and lost a whole bush of roses in quite enough for me to risk. The only exceptions I have found beneficial were nitrate of soda and bone. The last named is an excellent food for the rose, building up a strong and sturdy constitution, while the former acts as a tonic and gives a rich color to the foliage. Some bone is injurious if used too freely—that in which acid has been used is to be avoided, therefore I apply what is called steamed bone. That this process takes some of the virtue out of the bone is, I am convinced, still it makes it safer for use, is much more easily made soluble, and is, therefore, taken up by the plant easier. Bone meal I use in the soil when taken in the house, as it lasts longer than the flour.

The nitrate of soda should not be exposed to the sun for any length of time after it is put on, and should be applied very lightly with fresh loam as soon as possible. There is no doubt in my mind but what nitrate of soda makes a very good food for feeding roses, and that to use in a liquid form at this time of the year is a valuable, alternating with nitrate of soda.

When using such a powerful stimulant as the last named, be careful not to overdo the thing. I use one-half pound to the barrel, and find it quite plenty. In my experience nitrate of soda does not give an animal manure that I have found produces the best results, and how to distribute the manure.

The compost heap is sometimes a source of failure owing to the fact that a quantity of manure, artificial and animal, put into it. In view of the fact that so much has been written about it, I will venture to wonder to me there are still some who do not exercise more common sense than try to grow roses in a compost pile. As it came to my notice a few years ago, where a grower used night soil in the soil, plants that resulted in a total failure. This was probably due to the disinfectants that were in it, as this manure is a good one for the proper use. It is used in quite various health departments it is not allowed to be used in a good many places. For some time past I have used quite a quantity of infectants are used in cattle sheds and care. My advice would be not to procure manure from these sources.

To refer to the compost pile again will not be out of place. My method after placing the manure in the pile, it has been placed about 4 inches deep and stepped it up, a few inches more, and then a second put in the pile from the outside to keep it from sliding. This course I have used for many years, and covered with an open shed is all the better. It will be found very easy to work up in the Spring time, and after the weather has cleared a bottom, and with two handles on each end, this is put about 5 feet from one end of the pile, and a cloth is draped down and broken up it is put into this. When full of it, of course, holds a wagon load. A man at each end lifts up the

frame and puts it to one side for the time being. An 8-inch pot of bone meal is strewn over the top, also a wheelbarrow load of rotted cow manure. The whole is then thrown up together, and is ready for use any time. This may seem extra trouble, but I do not find it so, and furthermore I know exactly what there is in the heap. The carting and taking into the houses mixes it up thoroughly; some soils need more manure than others, and whatever quantity has been found to give the best results, if it is a 5th, 6th, or a wheelbarrow full, it can easily be proportioned to the soil in this way.

By the time you read these notes it will be twelve weeks to Easter. Those who grow hybrids in pots for that trade should now give them their attention, as it generally takes about twelve weeks to get them in nicely. A great deal of the success with these is in proper treatment from the start. They should be put in light boxes and kept cool for about two weeks. A few days over that time, a temperature of 40 degrees nights, 45 to 50 degrees day time being about right. They will soon start to swell their buds, and the temperature should then be raised gradu-

ally and keeping a watchful eye on them generally brings them in all right. Easter Sunday comes late this year, April 18, and at that time of the year it is surprising how quickly the buds open. H. H. Central New York.

## OBITUARY.

William Elliott, seedsman and auctioneer, 54 and 56 Day st., New York City, died at his home, 10 West 71st st., on Saturday morning, January 16, 1897, after a somewhat protracted illness. Dropsy was the immediate cause of death.

The death of Mr. Elliott removes from our midst the last of the old school of seedsman in the East, that linked the past and the present of the industry, men, who by honorable work, indefatigable push, energy and application helped to bring the business to the status it holds to-day; and of the past generation of seedsman we do not believe there was a name more familiarly known, or one that carried with it the reputation of integrity, more than that of William Elliott.

He, at 807 Broadway, where he remained for many years, spent the time in the market garden, and leased a place on Bergen Hill, N. J., but succeeded in losing all the money he had accumulated in attention to farming, and went to Canada for that purpose, but a cursory examination of the advices offered by the late woods proved so unprofitable that he relinquished the idea and returned to New York, and to his first vocation, that of a gardener.

Mr. Elliott had not yet succeeded in finding his professional vocation, when he conceived the idea of becoming a seedsman and, about 1854, bought the establishment of John W. Child, 121 John st. He was then approached by Mr. Isaac H. Young to go into partnership as seedsman with him, who had already the firm name of Young & Elliott, at No. 9 John st.

In 1858 Mr. Elliott added to his seed business that of an auctioneer of plants, which business had previously been carried on by McViney & Young, the former of whom retired when Mr. Elliott started. The first auction sale Mr. Elliott ever held was for Andrew Dryburg, of Philadelphia, Pa. In 1859 Mr. Isaac Young died. The firm left John st. for 12 Cortlandt st., where it was located for 15 years, and finally moving to the present location. After the death of Mr. Young, Mr. Elliott took his two sons, William and Gardner, into partnership with him, and the business has since been conducted under the firm name of Wm. Elliott & Sons.

Mr. Elliott was one of the most popular men in the seed business in New York, and as a plant auctioneer and grower, if we may so call it, he was equally well liked. His manner to those who did not know him seemed at times brusque and exclusive, yet he was really very kind lived. He had the courage of his convictions at all times, and spoke his opinion of business operations without the least fear or favor. He was extremely fond of a joke, and his characteristic Scotch humor was never far from him, and he was never lagging in enlivening the sales and accomplishing the desired object.

Mr. Elliott was a leading member of the old New York Horticultural Society in its prime, a member of the Society of American Florists, and also a member of the Florists' Club. He has left behind him hosts of friends and few, if any, enemies. The funeral took place Monday, January 18, and was largely attended. Many beautiful floral pieces marked the esteem and respect in which he was held by his fellow workers. The interment was in the family plot at Woodlawn Cemetery.

His widow and two daughters were before mentioned.

Albert T. Jackson.

Albert T. Jackson, florist, died at his home at Bowmanville, Chicago, Ill., on Thursday, January 15, 1897. He was born at the Garrison, old Fort Dearborn, Chicago, August 30, 1811, and had been a resident of the city since his birth. He served his country as soldier in the war of the rebellion, and at the close of the war was captured by the rebels in 1862, when he returned to his home in Chicago. He had since been engaged in flower growing, and was well and favorably known by his old residents of Bowmanville. Deceased was a member of Grand Post No. 32, at Chicago, and of the widow and two sons, Harry E. Jackson and Albert T. Jackson, Jr.

## THE LATE WILLIAM ELLIOTT.

ally 3 or 4 degrees a week until the desired temperature is reached, and then to 55 degrees nights, and 62 to 65 degrees full days; 75 degrees with sun-burns. Plenty of syringing is needed to make them break good. When they begin to grow it often happens more buds than are needed break out; the plants should be gone over and the superfluous buds rubbed off, leaving from six to ten on each plant, or whatever number you deem best. When they are growing well and have got into their high temperature, very liberal feedings with manure water will be found beneficial. Keep them free from green fly, red spider, etc. Golg over them once every two weeks, resetting them and turning them around, picking out the smaller ones that will be weakened by some that have grown stronger, setting them together and also allowing them enough room, will bring about the results desired. If they are growing well and the sun fades the color in some varieties, such as Magna Charta, and it pays for the last few days to shade just enough to keep the direct rays off them. They are not very easy plants to bring in just in the nick of time, but by studying the weather

Mr. Elliott came of a race of gardeners, his father, grandfather and great grandfather having been in the business. He was born on October 10, 1829, at the village of Crailing, near Jedburgh, Roxburghshire, Scotland. After having received an elementary school education he was apprenticed at the work of Miato's gunnery, near his home. His apprenticeship over, he went to Wallington, near Newcastle, England, where he was employed as gun-dealer to Sir John Trevelyan, then as foreman for four years at Ripley Castle, Yorkshire, and then as foreman at the factory of Sir Wm. Ingley, leaving which he worked for several years in the north of England, and afterwards with John & C. Lee for two years, at their nursery at Hammersmith, a suburb of London.

He then returned to Scotland, where he engaged in the sale of fruit at wholesale. This venture proving unsatisfactory he returned to his first occupation as gardener, being employed at various places in the neighborhood of Liverpool. In 1851, on the advice of an old friend, he came to the United States. On his arrival he readily secured employment with the late Andrew

## CARNATION MME. ALBERTINI.

Carnation Mme. Albertini.—A great deal has been said in the last few years about large carnations, and we remember reading some years ago a statement made by one of our correspondents, who had carnation the "queen of flowers," and that before many years we would have single buds and 3 inches in diameter. We think the time has come; as may, as far as Mme. Diaz Albertini is concerned, and we well and favorably known by his old residents of Bowmanville. Deceased was a member of Grand Post No. 32, at Chicago, and of the widow and two sons, Harry E. Jackson and Albert T. Jackson, Jr.

(The blooms were very large, somewhat off color, and rather weak in the stem.)  
It was carried out by our correspondent's conception of John Thorne's ideal carnation—was to measure "four" inches in diameter.—Ed.)

## CARNATIONS.

## American Carnation Society.

The program for the sixth annual meeting of this Society has just been issued. The meeting will be held in the Gibson Hotel, Cincinnati, Ohio, on February 19 and 20, 1907.

An exhibition will be held in College Hall, opposite the place of meeting and access is free of same.

All exhibits should be ready by 10 A. M., Thursday, February 18. Those from distance are to be forwarded (express prepaid) to College Hall, Cincinnati, Ohio, and marked care of Wm. Murphy. Mr. Murphy will have full charge of the exhibition, and intending exhibitors should apply to him at once for space, addressing mail to Station F, Price Hill, Cincinnati, Ohio.

The following rules regarding exhibits will be enforced:

1st. All entries must be forwarded to the secretary, Albert M. Herr, Lancaster, Pa., at least ten days before the meeting.

2d. All entries not tagged by 11 A. M., February 18, will be disqualified.

3d. All those who are not members of the Society must be introduced by one of its members for exhibiting in any of the classes.

4th. All exhibits must have the varieties correctly labeled, and give the name of the grower's or exhibitor's name and address with every exhibit—this card not to be larger than 4x2 inches.

Regulations governing the competition of seedlings for the "Certificate of Merit" will be as follows:

1st. The variety must have been bloomed three years.

2d. Not less than fifty blooms must be shown.

3d. At least one plant must accompany the exhibit; this plant to be taken from the bench or bed in which stock is growing.

4th. All exhibitors entering for this certificate are required to pay an entrance fee of \$5 for each variety so entered. This fee must be made in the case of those that were entered in the two-year class at last exhibition in New York; and \$2.50 for those that were entered in this exhibition, and compete for the Certificate of Merit, upon the payment of \$5 for each variety.

Special attention is called to the following: Two-year old seedlings can be entered for competition for a premium certificate, by exhibiting 25 blooms. Payment of \$5 for each variety so entered will be required. This year's entries and varieties entered to compete for the regular certificate at the next exhibition upon the payment of \$5.

The scale of points will be used as follows:

Color.....	20
Size.....	15
Only.....	15
Substance.....	10
Form.....	10
From.....	10
Plant.....	10

There is but one class for general premiums, and that remains of variety. Section will be the dividing line between light and dark pink; a light pink must be as light as a dark pink, and vice versa. The same is to be darker than Scott's Wonder.

First and third prizes, of the value of \$10, \$5 and \$5, respectively, for the best vase each of 100 blooms white, light pink, dark pink, carnation, crimson, yellow variegated, and white variegated, and premiums of \$5, \$10 and \$5 for best display of 500 blooms, assorted variety and quality to be considered in judging.

In addition to the special premiums enumerated on page 10 of the V. J. H. of the EXCHANGE, the following are offered:

C. Hancock & Son, Grand Haven, Mich., \$5 for the best 100 white on exhibition.

E. Hippard, Youngstown, Ohio, offers one standard ventilator apparatus (value \$25) for the best 100 white on exhibition.

Ed. W. Weimar, Mount Vernon, N. Y., offers \$10 for the best seedling, any color, not yet named, and of any variety, not less than six blooms to be shown.

Mr. W. J. Schumier, of Avondale, Pa., on the carnation, from the taking of the certificate for the best 100 white on exhibition. H. Weber, of Oakland, Mo., will take leave from that point until its usefulness has expired. This will be a most abundant of time for general discussion, and every one should come prepared to ask a question or tell something of their own experience with carnations in general, varieties, diseases, markets, and kindred subjects.

Any suggestions or questions can be sent to the secretary, up to February 13, after

that date they will be too late for the meeting.

The secretary Herr adds: "Our lamented president has done noble work for which this Society and to be making the coming year's meeting a fitting memorial to him in a more befitting manner than by making this the most successful meeting ever held by the Society."

Copies of the program may be obtained from the secretary, Albert M. Herr, Lancaster, Pa.

## Rust and Useless Remedies.

I have on several occasions stated in the EXCHANGE that I would not take the subject of an article in these columns. What I will have to say so far as regards its treatment and cure, is based entirely upon my personal knowledge and experience with this fungus, for the disease evidently belongs to that class.

Its origin is somewhat in doubt. The opinion seems to be general that it is not native to the country, but was imported. Just when, is not known; however, this is of little importance at this time, as it would not materially aid in our efforts to combat the trouble. Several years had elapsed before its evil results began to be felt, and it was not until 1892 that I was unable to check it with the various remedies then used, soon made it a matter of course to make a study of the disease, seeing that all such remedies proved of no avail, and of extermination seemed to be the only course to take.

To this end a compact was formed among the principal growers in the vicinity of New York; this was as near as I can judge, about ten years ago, perhaps a little more or less.

I believe, was to destroy every plant on their premises which showed any trace of rust, and to propagate only such as were free from it.

This effort was published in the trade papers and signed by the several parties concerned. Doubtless many other growers not members of this compact adopted the same tactics, in the hope of freeing their stock from the disease.

It is interesting to note that in the most dreaded of cases the carnation had yet developed. Those having the least knowledge of cure, at the time, were the most successful.

But with all the stringent measures taken to stamp it out, it still held on with a vengeance, and it was not until the same manner, was actual experience in this has proven to us, particularly with varieties of the "Dwarf" group.

This last resort then being of no avail, it was looked upon as a hopeless task to expect through this method the accomplishment of the desired result, and as a matter of course, the agreement entered into by members of the compact, ceased to be binding.

Although we were aware of the futility of the effort made by others to eradicate the evil by this was of extermination, yet I felt that I would give it a trial, and covered rust on our place, we pursued the same tactics as they did in the hope of giving the disease a chance to get the best of it.

It is needless to say, however, that in our endeavors to exterminate rust in this manner we met with the same results as did all others who employed similar methods; and we, and they through successive years, to look upon it as an evil which had to be put down.

Following close upon the failure to eradicate rust in the manner mentioned came the recommendation of various mixtures in liquid form to be used as a wash or spray. Some were claimed to be a positive cure while others, it was stated, would materially check its progress. I consequently reported, also a number of instances where the plants, after the use of the different mixtures produced a decided check to the spread of the disease. I believe that this was the only success in checking its progress were the result, partially, better attention given the plants, and from atmospheric conditions.

The culture to produce continued cures in the above manner, bears me out in the assertion that the disease is not a cure, but a check to its progress were the result, partially, better attention given the plants, and from atmospheric conditions.

It is now more than six years since we discarded spraying as of no practical benefit, if whatever in the cure of this and other diseases to which the carnation is subject.

The general trend of opinion among growers everywhere is the same. Here and there two methods of combating rust, the one by the use of the above long list of failures stands a monument to the ineffectiveness of the same.

The above is history; my object in repeating it here is to bring more forcibly to the reader's mind, the nature of the attempt to cure rust by either method. Next week I will endeavor to explain, to the best of my ability, the nature of the disease and the conditions which are most conducive to its development and spread.

H. WEBER.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

THE BEST COMMERCIAL  
WHITE CARNATION  
ON THE MARKET.

NO RUST. NO BACTERIA.  
CLEAN AND HEALTHY.  
A FREE BLOOMER. A READY SELLER.

Side by side for two seasons and under the same  
treatment Nivea has proved itself more floriferous  
than Scott.

The flower is large, clear white, with extra strong  
calyx, and has a long, stiff, wiry stem.

The plant is of open, erect growth, and when  
planted 9 inches apart each way they receive plenty  
of light and air.

The stock has never been exposed to rust, nor has  
it ever shown any signs of bacteria.

The originator, Mr. H. A. Cook, Shrewsbury,  
Mass., has a large stock of Nivea, and it has never  
been overpropagated.

It has all the necessary qualifications of a stand-  
ard commercial white carnation:

SELLS WELL.  
KEEPS WELL.  
SHIPS WELL.

The undersigned have handled the entire output  
of cut blooms of Nivea, and they have sold readily  
at an advance over other white carnations in the  
Boston market.

ROOTED CUTTINGS  
READY FOR DELIVERY  
MARCH 1st.  
Per 100, \$10  
Per 500, \$35  
Per 1000, \$60

SOLE AGENTS,  
CITY HALL FLOWER MARKET,  
NO. 115 PROVINCE STREET,  
BOSTON, MASS.

DORNER'S  
NEW CORNATIONS  
...FOR 1897...

MRS. CHAS. H. DUHME (Seedling  
1893) Color  
lively delicate pink, large flower, fragrant,  
with good calyx on strong stiff stem. Plant  
vigorous, erect grower, a very early, free  
and constant bloomer. Much more so than  
any of the light pink varieties, rivaling in  
productiveness with Scott. This or comes  
to be the best of the light pink commercial  
varieties. Certified at Indianapolis and  
Philadelphia. We have grown this variety  
now for five years and it is indispensable at  
our place.

MRS. GEO. M. BRADT (Seedling  
1893) Color  
clear white, heavily edged and striped with  
bright scarlet, giving it a very bright and  
cheerful appearance. Flowers large and  
full, with center petals standing erect, giv-  
ing the bloom a well rounded form. Calyx  
resembling Mme. Albertini. Habit strong  
and vigorous. This variety is now in its  
fourth year and has proved the most even  
and constant bloomer from early to late.  
We received for these flowers the highest  
prices paid in the market. Received gold  
medal at Atlanta, certificate at same place  
and at Chicago.

C. A. DANA Delicate shell pink, vigorous  
wiry grower. Medium to  
large flowers on strong, stiff, wiry stems,  
color soft and exceptionally pleasing.  
Flower a splendid keeper. One of the most  
attractive colors in pink carnations. Six 6  
limited.

Rooted cuttings ready March 1, 1897.  
\$10.00 per 100; \$75.00 per 1000.  
Plants from soil at same price four weeks  
later.

## Providence.

The Market.  
 During the past week business has shown a slight improvement over that of last week. The weather has been very soft recently, but growers have been being a drop in temperature of 42 degrees in 24 hours. Carnations still hold the market, while being more plentiful than for the fortnight previous. A few Dela Fox are being brought in, but they do not show the perfection that was expected of this variety. Eldorado is thought well of, and what few have come in find ready sale. The demand for violets is not so brisk as it has been, although few are left over. Roses sell well on sight; Bride and Bridesmaid at \$2 per dozen; Erie and Wootton \$1.50; Bon Silens, 75c. to \$1. Yellow tulips and Narcissus appeared the past week and sold well at \$1 per dozen. Jettiss.

A slight blaze Tuesday night occasioned small damage to the greenhouse and contents belonging to CHARLES T. WRIGHT, 307 Washington St.

FRANCIS CASSEY, assistant at the Rhode Island Greenhouse, Pawtucket, has severed his connection therewith.

WILLIAM MAXFIELD has recently put in a sleeve-section report at his greenhouses at Barrington. During a recent cold snap his boilers gave out, and it was only by kindling log fires in between his benches that he succeeded in saving his crop of carnations. He is now bringing in some fine stock.

JOHNSTON BROS. have removed from 214 Union st. to better quarters at 82 Westminister st. They report an increase in business since their removal.

ROBERT HOGG is expected home about the 23rd inst from a three months' trip to England and Scotland.

WILLIAM LEWIS SMITH, a well-known veteran nurseryman, died the 13th inst. at his home in Warwick, R. I., aged 80 years.

W. H. MASON.

**Tobacco-Oil Kills Aphids** IF IT FAILS  
**\$25.00 REWARD**  
 Will be paid to any person securing a good position to a good gardener. (Gentlemen's place.) Address: C. D. G. Co., de Florists' Exchange.

**WANTED.**  
 A first-class orchid grower; must have the best of reference; state wages. Address  
 J. T., care Florists' Exchange.

**WANTED TO RENT**  
 For a term of years; greenhouses in some large town where all that is raised is sold at home. Everything must be in first-class running condition; would take place about May 30, 1900. As I make business of my own, please to receive particulars in full. Address  
 Goodman, care Florists' Exchange.

**Should be grown by everybody.** The past season may have taught all growers that the high-grade Carnations are the only ones that were profitable, and Dela Fox stands above them all for size, color and stems. Rooted cuttings now ready.  
 MYERS & SAMTMAN, Wyandocor, Chestnut Hill, Phila.

## Greenhouses, Stores Etc.

**\$500 CASH**  
 Will buy half interest in good paying florist business established ten years. Experience not necessary. Apply to

**John Harrison's White Sport**  
 from Wm. Scott.  
**Harrison's White.** A snow white sport from Wm. Scott, being a very bright and good variety. Probably the ideal white commercial carnation. Every florist should try it. \$2 per doz.; \$10 per 100; \$70 per 1000.  
**FRED. DORNER'S GEO. M. BRADT.** (Seedling 1893). Color: clear white, heavily edged and striped with light scarlet, being a very bright and good appearance. Flowers large and full, with center petals standing straight giving a very good effect. Cultures resembling Wm. Albertini. Habit strong and vigorous. This variety is now in the hands of the grower, a permanent blooming in the early to late.  
 Received Gold Medal at Atlanta. Certificate at same place and at Chicago. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

Say  
**Master**  
 There's  
 Money  
 in this for  
 you

E. G. HILL'S Flora Hill. Received N. C. S. Certificate January, 1896. Gross moderately heavy. Very fine and healthy in growth, with very few, if any, buds; moderately stiff stem, enormous flower. The largest and the most striking of the most striking of the good flowers throughout the entire season; not subject to rot. \$2.50 per doz.; \$12.00 per 100; \$100 per 1000.

**FRED. DORNER'S C. A. BARK.** Delicate shell pink. A cross of Scott on Uncle John. Vigorous, strong in habit; medium to large in size, on stiff stems; color very soft and exceptionally pleasing; flower a splendid variety, one of the most attractive pink carnations. \$12 per 100.

**FRED. DORNER'S Mrs. CHAS. H. DUBHE.** (Seedling 1895). Moderately heavy, with a strong, fragrant, with good style on stiff stem. Plant vigorous, erect grower, a very early bloomer and constant bloomer, much more so than any of the light pink varieties, rivaling in productivity with Scott. This promises to be the best of the light pink commercial varieties.

Certificate at Indianapolis and Philadelphia. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# DREER'S SPECIAL OFFER OF SEASONABLE STOCK

DOUBLE PETUNIAS. Our stock of these is too well known to require special description; it offers good healthy plants from 3-inch pots, \$1.25 per doz.; \$3.00 per 100, or set of 15 varieties for \$1.20.

TUBEROUS ROOTED BEGONIAS. Now is the time to plant for early flowering; the strain is the same as has been sent out by us for several seasons, the best that can be procured. We offer Singles in choicest mixtures, \$2.00 per 100; \$24.00 per 1000. Singles in separate colors as scarlet, crimson, white, yellow, orange and rose, \$3.00 per 100; \$25.00 per 1000. Doubles in choicest mixture, \$3.00 per 100; \$25.00 per 1000. Doubles in separate colors as scarlet, white, rose, yellow, \$3.25 per doz.; \$25.00 per 1000.

GLOXINIAS. A most select strain of the Crasifolia type in the mixture, \$4.00 per 100; \$30.00 per 1000.

SPECIAL VALUE IN YOUNG PALMS. Having an immense stock of young plants of the following sizes we are enabled to supply them at a better value than ever; intending purchasers will not miss it by laying in a supply at once.

KENTIA BELMOREANA. 2 1/2-inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000. 3 " " " 3.00 " 25.00 " 240.00 " 4 " " " 4.00 " 40.00 " 300.00 "

KENTIA FORSTERIANA. 2 1/2-inch pots, \$1.50 per doz.; \$10.00 per 100; \$80.00 per 1000. 3 " " " 2.00 " 15.00 " 120.00 " 4 " " " 2.50 " 20.00 " 160.00 "

LATANIA BORBONICA. 2 1/2-inch pots, \$7.75 per doz.; \$50.00 per 100; \$400.00 per 1000. 3 " " " 1.25 " 10.00 " 80.00 " 4 " " " 2.00 " 25.00 " 200.00 "

We are as usual carrying an immense stock of the usual decorative sizes, a full description of which will be found in our current Trade List.

OR RARE PLANTS. Japanese Iris.—A collection of 21 of the choicest Krumper varieties in cultivation, imported from Japan, \$1.50 per doz.; \$10.00 per 100; set of 24 for \$25.00.

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

FUCHSIA TRIPHYLLA HYBRIDA.

St. Louis.

Club Notes.

The first regular meeting of the Florists' Club this year was very gratifying, about thirty members being present.

Trade Notes.

Trade was very slow the last week and stock very abundant.

Settings.

ELLIOTT & ULAM had a fine display of orchid blooms in their window last week, which attracted the passer-by.

Toronto.

Trade continues fair with stock still plentiful and prices about the same as last week.

Horticultural Society.

The annual meeting of the Horticultural Society was held in the City Hall, January 13.

Wrought Iron Pipe, Valves, Cocks, Fittings, etc.

WM. H. KAY, 42 Dey St., New York.

ton, second vice-president; C. Chambers, secretary-treasurer; directors, J. Chambers, Dr. J. O. Orr, A. H. Ewing, E. Cromisind, Mr. Merrill, W. V. C. Deaves, Dr. McC. Queen and C. McP. Rosa. Dr. Orr and T. Manton were selected as representatives of the Society...

THOS. MANTON.

Washington.

The floral work in the decorations for the Inaugural Ball has been awarded by the executive committee of the inauguration committee to Messrs. J. H. Small & Sons.

A florist here has a nice lot of the Carnot rose and of planting out time will have in the neighborhood of 2000 plants. He came into possession of a plant when it was offered by some northern nurserymen last Spring.

Brooklyn, N. Y.

Trade here has been extremely quiet since the holidays, and although the supply of flowers coming in is not large, there is sufficient for all demands.

G. W. CRAWBUCK has moved into the store formerly run by J. Austin Shaw, at the corner of 17th and 18th streets, New York.

PETER MALLOS, Court st., who has been laid up for a couple of weeks with sore eyes, is now around again.

Club Notes.

The smoker of the St. Louis Florists' Club was "pulled off" in the red room of Mercantile Club last Thursday afternoon, in the presence of all that it was a success.

President Kucz delivered the opening address, and in his ready words delivered address it was. Fleckenstein started the ball rolling with a song, and then followed by an address by Mr. Jordan, who gave the florists some sound advice.

The attendance was large. President Kucz presided, and Mr. Johnson, Tesson, Sanders, and Wm. Young to serve as committees for this year's chrysanthemum show.

Wholesale Market.

There were several large decorations here last week, in which considerable cheap work, but trade generally was very quiet.

Carnations are in over-supply. There was heavy demand for good quality for decoration the latter part of the week, but the supply was so excessive that values declined to 10c per 100.

At a meeting of the Kentucky Society of Florists, held January 5, the following officers were elected for the coming ensuing year: C. H. Kunzmann, president; J. E. Marret, vice-president; Joe Coenen, secretary; John Thompson, recording secretary; John Thompson, treasurer.

Jeremiah E. Long is reported to be insolvent.

**IF YOU WANT WATER FOR Home, Farm or Ranch**  
 The DELAMATER-ROSEN and DELAMATER-ERICKSON Hot-Air Pumping Engines will positively give satisfaction. Any other method of securing a supply of water, such as by rams, steam pumps, hand pumps and wind mills, does not give entire satisfaction, and Hot-Air Pumping Engines possess advantages over all of them. They will pump water from any source and send it wherever needed—in the house, barn, stable, dairy or garden—and to any height and distance. They are safe and economical and will burn any kind of fuel. A scarcity of water is impossible. Send for catalogue.  
**THE DELAMATER IRON WORKS,**  
 467 WEST BROADWAY, N. Y. CITY.  
 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**The Right Cypress for Greenhouse Material.**  
 Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.  
 All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we cannot afford to jeopardize. We send out the best only.

**Modern Greenhouse Heating.**  
 One of our boilers, 10,880 feet of two inch pipe, and six tons of coal will heat 23,400 feet of glass (four 20x200 feet double glass houses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrick" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

## WOOD BROS., Fishkill, N. Y.

WE MEET THE PRICES OF ALL COMPETITORS  
 ON NEW CANNAS "Italia" and "Austria."

**500 DOLLARS WORTH FOR 25 CENTS**

Two years ago we offered the original and best of these Cannas

**1000 DOLLARS**

for one plant of **ITALIA** and one of **AUSTRIA**. If you were refused—\$5.00 asked for the parts of the stock.

That plants were fully worth the price asked was proved by the enormous sales made subsequently at \$5.00 each, even up to six months ago.

Owing to rapid propagation we can now make our price on

**AUSTRIA**, at 38c. each; \$3.50 per doz.; \$25.00 per 100; \$200.00 per 1000.

**ITALIA**, at 60c. each; \$6.00 per doz.; \$45.00 per 100; \$400.00 per 1000.

The prices for immediate delivery and fine, large, home-grown roots. Send for list of ALL THE NEWEST CANNAS at popular prices.

**ALL SOLD.** Our entire stock of ASPARAGUS SPENGERI, consisting of nearly 10,000 plants, was sold to Mr. Robert Craig—the best good thing who has seen it.

**NEW ROSES, CLIMBING WOOTTON, GARMINE PILLAR**, \$2.00 per doz.; \$10.00 per 100.

\* Send for catalogue of novelties.

JOHN N. MAY, Receiver.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**CANNAS.**

We offer a splendid collection in strong started growing plants. These are much better than dormant roots, as they are sure to grow, and are ready for immediate setting to grow on, and will give considerable increase between now and Spring. Stocks of some of the finest varieties are quite limited, and orders for these should be placed before it is too late in the season, as many kinds will undoubtedly be exhausted before the season is over. While there are large stocks of the less desirable varieties, there is a great demand for the newer and scarcer sorts, and buyers will find it to their advantage to place orders for these sort early.

**THE TWO NEW ITALIAN CANNAS.**

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Canna "YELLOW CROZY."**

(VAUGHAN'S No. 1.)  
This novelty, proven by us for two years, is a clean, pure sunny yellow with no red markings, except a few faint red spots on the smallest lower petal. The effect produced by a bed of it is a solid mass of pure yellow. It rises to the same position as the "Yellow Crozy," the compact spike shows off well above the foliage, height 3 feet, foliage green. It has a remarkable habit of throwing out additional lateral flower buds from the main spike—often as many as seven. In the fall and it branches less than any yellow canna we have seen, owing to its good substance. It is, in short, just the color and habit of plant which has been sought for the past five years, a sure "Yellow Crozy."  
Price prepaid, March 15th delivery, from 3-inch pots, \$1.50. Stock limited.

**Canna BURBANK.**

THE AMERICAN SEEDLING, WITH GIANT ORCHID-LIKE FLOWERS, SEEDING IS BELIEVING.

Mr. D. ZWISLOCKI, of Needham, Mass., of the same Committee, who tested it with all the best now on sale, says: "I follow Burbank in the best yellow in cultivation now, very large flowers of a handsome, bright shade of nearly pure yellow."  
Mr. J. T. BURNETT, of Detroit, Mich., of the same Committee, says: "I consider Burbank one of the best of the year's novelties."  
Mr. JOHN KANEY, head gardener of South Park, Chicago, and an expert judge of Cannas at the world's fair, says: "The flowers were much admired in the park this summer. The foliage is like rubber; it is always good; you can't tear it."

**PRICE, EACH 75 cts.; SIX FOR \$4.00.**  
**TUBEROSES**—bulbs, per 100, \$1.00, per 1000, \$7.00; in Chicago, \$5.00. Nicely select  
**CLADIOLIA**—XXX Florida Mixture, per 100, \$2.00, per 1000, \$13.00.  
**CANNAS**—ITALIA, per 100, \$2.00.  
**AUSTRIA**, per 100, \$2.00.

To Regulate the Importation and Sale of Agricultural Seeds.

In our issue of Dec. 19, 1896, page 1140, we gave a summary of House bill 9322, which was introduced by Mr. Cook of Wisconsin, in the House of Representatives, and which has been referred to the Committee on Ways and Means and ordered to be printed, having for its object the regulation of the importation and sale of agricultural seeds. The following is the full text of the bill referred to:

It is enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no seeds on grasses, clovers, or other forage plants shall be admitted into the United States, either in bulk or in packages, containing any seeds of dodder (Cuscuta species), Canada thistle (Cirsium arvense), Russian thistle (Salsola tragus), the bulbules of wild onion (Allium vineale) or ergot (Claviceps), or more than one seed of any species of the flax (Cannabis sativa), wild carrot (Daucus carota), plantain (Plantago species), chickweed (Lepidium species), cockle (Agrostemma githago), chess burr (Cirsium discolor), yellow top (Lepidium repens), pennyroyal (Thlaspi arvense), prickly lettuce (Lactuca scariola), or wild mustard (Brassica species), or which have, either inadvertently or intentionally, been mixed with inferior seeds, or four parts of the seed of any one of the foregoing seeds.

To carry out the provisions of this Act, the seeds of all other forage plants from foreign countries shall be allowed entry into the United States only at the ports of New York, New Orleans, and Boston, and more, under such regulations as may be prescribed by the Secretary of Agriculture, in concurrence with the Secretary of the Treasury, and the Secretary of the Customs, and ports shall be made, under the direction of the Secretary of Agriculture, by skilled experts who shall have passed an examination thereof to be thoroughly competent in the work.

Sec. 2. That no seed shall be sold, offered, or transported into the United States which contains any seeds of dodder (Cuscuta species), thistle (Cirsium), Russian thistle (Salsola tragus), the bulbules of wild onion (Allium vineale), or ergot (Claviceps), or more than one seed of the flax (Cannabis sativa), wild carrot (Daucus carota), plantain (Plantago species), wild oat (Lolium species), quick grass (Agrostis species), pennyroyal (Thlaspi arvense), prickly lettuce (Lactuca scariola), or wild mustard (Brassica species), or which contains the seeds of agricultural plants, whether in bulk or in packages, including the seeds of cereals, grasses, forage plants, and ornamental plants, and seeds not including those of trees, shrubs and ornamental plants, which is sold, offered or exposed for sale in the United States by any firm or dealer in seeds, shall be accompanied by a written or printed guarantee of the percentage of purity (freedom from foreign matter) and the composition of the seed, in the percentage of seeds as when the percentages of the various constituents are stated.

Sec. 3. That any person who shall sell or offer for sale any agricultural seeds, or include those of trees, shrubs and ornamental plants, in packages or bags of any kind, or in any other form, shall be held to a guarantee of the percentage of purity and shall be held to the full penalty of this Act as a misdemeanor, and upon conviction thereof shall be fined not less than fifty dollars nor more than one hundred dollars, or imprisoned for not more than six months, or both, as the court may direct, for each and every offense.

Sec. 4. That an allowance of two per cent. shall be made for the loss of seeds by firm or dealer in the purity of seeds of grasses and forage plants, and five per cent. for the variation of the germination of all seeds included by the Act.

Sec. 5. That dealers may base their guarantees on tests conducted by themselves, or by the State or Federal Department of Agriculture, under such conditions as it may prescribe, and may employ such methods and apparatus as may be approved by the Secretary of the American Agricultural Colleges and Experiment Stations, but no guarantee residing within the United States may have seeds purchased from any other State or Territory, or by the United States Department of Agriculture, or any other State or Territory, under such conditions as may be prescribed for such purposes. The tests and conditions shall be fair and reasonable.

Sec. 6. That the result of all tests made for purchase of seeds at any of the stations together with the names of the firm or person who conducted the tests, and the results. The stations shall publish equitable standards of purity and germination, and with any other information concerning agricultural seeds as may be of public benefit.

Sec. 7. That any person who shall violate section two of this Act shall be guilty of a

WE OFFER a choice mixture of the celebrated NEW BRANCHING ASTER. Flowers 4 to 4 1/2 inches across. Can hardly be told from fine Chrysanthemums. Colors—Pure White, Shell Pink, Lavender and Crimson mixed. Unsurpassed as a cut flower.

Price, trade pkt. 20c; per oz., \$1.00; per lb., \$10.00.

Send for our New Wholesale Market Gardeners' and Florists' Catalogue.

NEW WATERPROOF MUSLIN, FOR HOT BEDS AND COLD FRAMES. Being disinfested with the waterproof fibre cloth we have been handling, we have had prepared for us by a new patented process a grade of muslin, which we furnish ourselves and which we guarantee thoroughly. It allows a much larger percentage of light to penetrate it than the other kinds now on the market, although the fibre is much closer, and it is stronger and better in every way. Small samples mailed free.

Price, 10c. per yard. In pieces of 40 yards, at 8c. per yard.

For tying buds and grafts and for bunching Asparagus. Price, per lb., 16c.; per 100 lbs., \$13.00. Per bale of about 200 lbs., 12c. per lb.

JOHNSON & STOKES, 217 and 219 Market St., PHILADELPHIA.

American Seed Trade Association - The executive committee of this Association met in the Essex Hotel, New York, on Tuesday last. Among those present were: President - W. Wood, Toronto; Secretary - F. W. Stephens, Cambridge; Capt. S. F. Willard, Wetherfield, Conn.; S. D. Croby, W. J. Elliott, H. Nussenger, F. E. McAllister, and Secretary A. L. Don, of New York City; C. L. Allen and John Lewis Childs, of Floral Park, N. Y. The next annual meeting of the Association will be held in Washington, D. C., second Tuesday in June (6th), and will last for three days. The bill recently introduced into Congress by Mr. Cook, of Wisconsin, to regulate the importation and sale of agricultural seeds, was taken up and discussed, and as the greater portion of the bill in its present form, was considered inoperative, and some sections, if carried out, would be an injustice to the seed trade, a committee was appointed to exercise its utmost endeavor to have the terms of the bill modified.

The Bermuda Bulb Crop - The bulb crop of Lillian Harrell this coming season will be very limited. The fact is the low prices obtained on the crop of bulbs in 1896 forced many small growers to sell upon the industry. Much of the land formerly used for this purpose has been used for cottons and potatoes, and that which has been devoted to Harrell is planted with very small bulbs. We also have had excessive rain and cloudy weather for two months. In view of the conditions, there certainly will be a very short supply of the large-sized bulbs for the trade the coming season, and it will be necessary that some advance in price be fixed on the crop of 1897 to bring the growers out straight. - F. W. STEPHENS, Pgt.

CHATTANOOGA, TENN. - It is reported that C. B. Moores & Co., the oldest local dealers in farm and garden seeds, failed January 29, with liabilities of \$5,527. The report says the seeds are largely in excess of the indubitance.

European Notes. At last we are favored with a few glimpses of sunshine, and nature appears to be making an effort to throw off the effects of a mild three days' rain. So far as we can at present judge the mild weather is a great improvement, but with a variety of outdoor flowers, is not helping the plants for 1897 crops. Broccoli in northern Europe are worthless where not already destroyed, and some other round seed crops will soon be in the same case.

A few brighter days has helped trade very much, and this, combined with the maintenance of high prices for all kinds of grain, inspire us with the hope of a fairly good season after all.

Early peas and beans are bound to bang fire, but second early and later sorts may help us out all right in the end.

The usual display of Cyclamens graced the first meeting of the year at the Royal Horticultural Society. Another striking example of the "Synchronism of Variation" was afforded by the display of some beautifully fringed varieties from an English and a Belgian grower. In the case of the first named only two colors were shown—pure white, and rose, the habit of both plants was perfect; the form of the flower good, and the leaves very ornamental; each flower had more than the proper number of petals, and in this respect resembled the so-called double strain sent out by one of our southern growers this season.

The exhibit of the Belgian grower contained a more numerous collection of colors, but the form of the flowers was not so good, as they were only fringed to a horizontal position. The petals were almost round, broad and fringed after the manner of a Chinese primrose. A brilliant crimson variety named Cyclamen papilio "Brussels Gem" was decidedly the most effective. If the merits of the two strains could be combined in one we should have a really beautiful and useful novelty.

While we hear on every hand of the unprofitable nature of the seed trade there appears to be some money in plants, for the estate of the late Anthony Waterkey has been valued for probate at £128,736, 6s, 11d; roughly, \$624,750.

While we hear on every hand of the business founded by T. S. Ware, has just died at a comparatively early age. He was a bright, successful man, and the news of his death will cause regret to many friends on your side and ours.

EUROPEAN SEEDS.

midwestern, and upon conviction thereof shall be fined not less than two hundred dollars nor more than five hundred dollars, and be imprisoned for not more than one year.

Sec. 3. That any person or persons violating section three of this Act shall be deemed a misdemeanor, and upon conviction thereof be fined not less than one hundred dollars nor more than three hundred dollars, and imprisonment for not more than six months for each and every offense.

Sec. 4. That any person or persons who shall label any package or bag containing grain or vegetable seeds, or any other agricultural seeds, or seeds of trees, shrubs, and ornamental plants, shall be held to a guarantee of the percentage of purity and shall be held to the full penalty of this Act as a misdemeanor, and upon conviction thereof shall be fined not less than fifty dollars nor more than one hundred dollars, or imprisoned for not less than thirty days nor more than six months.

Sec. 5. That provisions of this Act shall apply to regular dealers in seeds, and to farmers or persons growing cereals and other seeds for the market.

Sec. 6. That no provision of this Act shall be construed to require the guarantee of a crop, or of seeds already planted, except what may have been necessary for making tests.

-In an interview which our Washington correspondent had, on January 27, with Representative Cook, of Wisconsin, who introduced this bill into Congress on December 10 last, the following information was obtained. Mr. Cook says he does not expect his bill to pass this session. It has not yet been considered by the Ways and Means Committee, to which it was referred, nor has he had a hearing before the committee. This bill was drafted by Mr. Cook in conjunction with the botanist of the Department of Agriculture, and the Secretary of Agriculture is now preparing an amendment to it, meaning to refer to the bill in his hands. Mr. Cook will ask for a hearing before the Ways and Means Committee.

Mr. Cook says he has had hundreds of letters recommending the measure, and very few opposing it. His desire is to elevate the seed trade and guarantee that the farmers get good seed. Although Mr. Cook goes out with the botanist, he says the bill has aroused so much interest that it will be taken up next year if it fall to pass this year.

## Washington.

The carnations at the propagating gardens have turned out exceptionally fine this Winter, 30,000 blooms having been cut from one of the houses this far. Owing to insufficient attention the benches were put up and planted about the end of April last year, several months before the root was put in position. This peculiar treatment seems to have gone well with them, as the plants are, and have been, in a very healthy condition. This particular house is a half-span structure, facing south. The north side, above the bench, has been utilized in growing panates. Several narrow shelves, one above the other, with about two inches of rich soil in each, were planted early in the Fall, and ever since they have given an unceasing supply of very fine flowers.

At the establishment they are hanging on to the California violet, and as the plants appear now, covered with large flowers with long stems, one would think it to be much better than it really is. No one than six weeks ago, however, the plants looked as if they had decided to carry a huge crop of foliage instead of flowers; runners were being developed from every plant in great numbers, so that heroic measures were decided upon. The large leaves were cut off, and the beds allowed to get pretty dry for a week or two days. Now they are looking in the best of health.

G. W. OLIVER.

## Providence.

Business was very flat at the opening of the week, but gradually increased, so that on the whole the week aggregated better than the average. Bulbous stock in general and fine cuttings were sold in excellent quality. Carnations still hold in favor and command good prices. Whites are plentiful, but cuttings are difficult to get in numbers. All roses are scarce and bring fancy prices, while second grades go at from \$1.00 to \$2.00 per dozen. Violets are popular and continue in good demand.

**Club Notes.**  
The regular monthly meeting of the Club was held on the 22d inst. President Macrae in the chair, and about thirty members in attendance. A paper was presented was Editor F. Fletcher, of the New England Florist.

The treasurer rendered his semi-annual report, showing that the Club was in an excellent financial condition at the end of the first year. The receipts were \$1,067.78; the expenditures \$1,055.56 for the six months, leaving a balance on hand (without any liabilities) of \$69.29, with \$50.00 owing to the Club by members for dues.

President Macrae spoke of the desire of the constitution committee to have as many plants as possible for decorative purposes during convention week in August next, and urged the members to give this matter attention. A communication was read from William J. Stewart, secretary of the A. S. F., to the effect that the executive committee would meet in this city on March 5.

It was voted that a committee of three should be appointed to make awards on any exhibition displays of new varieties to be exhibited before the Club. President Macrae, William B. Hazard and Matthew J. Myers so constituted.

Mr. Hazard suggested that a dance be held under the auspices of the Club in the next future and that a committee of a new hall and dairy house for this purpose. A committee consisting of Messrs. W. B. Hazard, D. D. E. Johnson, J. M. Hingson, T. Johnston and Walter Nichol was appointed to make the arrangements.

**Carnation Exhibits.**  
During the week there have been two fine exhibitions of new carnations at the store of E. J. Johnson—one, a fine large bunch of the new yellow Mayor Fitzgerald, sent by John Bretmeyer & Sons, Detroit, Mich., and the other, of Narragansett, a handsome promising pink, shown by J. F. Schellinger, of Riverside, R. I.

**Here and There.**  
T. O'CONNOR, who is forced to remove from 335 Westminister street by the tearing down of the building, has secured temporary quarters at 30 Dorchester street.

WILLIAM BUTCHER, who has been confined to his house by illness, is convalescing.

Mrs. CATHERINE A. NICHOL, widow of William N. Nichol, an old-time florist, died in this city on the 25th inst., aged 76 years.

John Nichol, of the late James Nichol, of Pawtucket, both well known florists, are sons of the deceased.

W. H. MAGNAN.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Chicago.

The past week stock has been fairly cleared off, and of good roses there was barely enough sometimes to go around; hence prices have kept up tolerably well. This, however, does not mean increased business so much as a decidedly short cut. No. 1 of all the best being \$9, and from that down to \$3 for No. 3. American Beauty still holds up to \$6 per dozen for extra long stemmed flowers, and not many of these are coming in; \$10 to \$25 is the price for the larger portion, down to \$6 for shorts.

Carnations slackened up to supply somewhat, but they are plentiful enough for all demands, excepting now and then good whites. The general price is \$1 to \$1.50; a few bring \$2, and we did hear of some very large, stiff, long-stemmed Daybreak from Buetner that sold at \$3. The same party also had extra Russian valley that sold at \$4, but \$2 to \$3 is the common price.

Tulpe are now better in quality; the reddest shades are pink and yellow, \$4 is obtained for the best, \$2 for seconds. Herriell and longiflorum lilies are plentiful for all cuts, and the price ranges from \$5 to \$13. Quite a goodly number of these flowers is coming in small and badly, and do not bear shipment or rough handling. You still are now abundant and hard to clear off at \$2 to \$3. The quality of violets is improving, but prices still range from 75c to \$1. Excellent California are being sent from Elus Island, and they sell fully as well as the doubles.

We have been having more sunny days, but on Wednesday rain and snow was with us; Thursday and Friday were sunny and the weather moderate. On Saturday, however, came a blizzard unequalled in severity since 1873. Sunday and Monday the thermometer sat at 10 degrees below zero all day, mornings 20 to 25, and even lower, was reported by some. The result was that a good deal of the stock came into the market touched by frost, some samples being badly enough spoiled to prevent their sale. While this extremely low temperature prevails, sales will hardly be improved, and it seems to be general all over the country. Previous to this a decidedly open Winter has ruled here.

Jottings.

OTTO SPIEDEL, who since the World's Fair has been in the greenhouses at Lincoln Park, Chicago, will take the position of gardener to P. D. Armour, Jr., Oconomowoc.

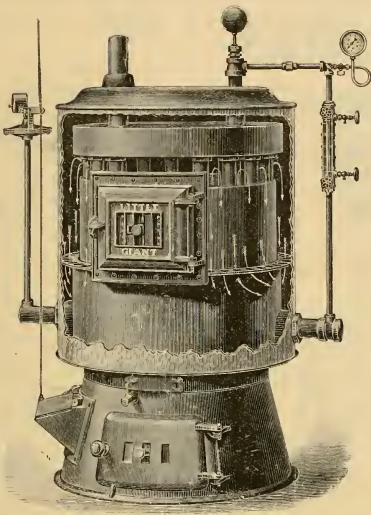

On January 22, at Hicelada, O. P. BARRETT met an irreparable loss in the death of his wife, aged 59 years. The immediate cause of death was blood poisoning, but she had suffered from cancer for some time. Everybody who knew Mrs. Barrett spoke in high terms of her most estimable character, and all deeply sympathize with Mr. Barrett in his bereavement.

On Wednesday the jolly face of FLEET WINSHOTT was once more seen at his office after a few weeks' absence on account of rheumatism. It appears now to be on a fair way to complete recovery.

ROBERT STRIO, of Charles, Zinn & Co., florists' baskets, etc., of New York, was seen among boys in the past week. Miss Stella Kanat, daughter of Fred. Kanat, of New York, was married the past week to James Grayson, and will be "at home" after February 1, at Tower Grove Park, St. Louis, Mo.

The Cook County Agricultural and Horticultural Society, at the annual meeting, January 25, elected the following officers: President Andrew Downing, vice-president John C. Ure; secretary and treasurer, C. J. Linde. Amasa, near Chicago, Ill., 121 S. Salle street.

The Florists' Club has elected the following officers: S. Murray, president; James P. Burt, secretary; W. W. Barnes, secretary; William Sharp, assistant secretary; A. A. Newell, treasurer; C. A. Barker, secretary. The Club was given a dinner by 'C. C. Ripley' after the business session of January 20. Mr. Ripley presided with a handsome testimonial by the members to show their appreciation of his services.

TUFF STUFF ON GREEN FLY IS TOBAC-OIL.

# THREE NEW RAMBLERS IN ROSES.

## COMPANION ROSES TO CRIMSON RAMBLER.

One of them (AGLAIÄ) is the first and only Hardy Yellow Climbing Rose and is therefore an immensely important introduction.

### DESCRIPTIONS.

**AGLAIÄ, or YELLOW RAMBLER.** A seedling from Rosa Polyantha Sarmantosa (Siebold) crossed with Reve d'Or. Has withstood unprotected and without injury a continued temperature of from zero to two degrees below, and, with slight protection in winter, will do well anywhere that other roses succeed. Color, a clear decided yellow. The flowers are borne in immense pyramidal clusters, after the manner of Crimson Rambler, often 120 to 150 in a bunch, and last three to four weeks without fading.

AGLAIÄ.

This cut also well represents the growth and manner of blooming of the other two Ramblers.

### EUPHROSYNE, or PINK RAMBLER.

A seedling from the same Rosa Polyantha Sarmantosa (Siebold) crossed with pollen from Mignonne. Color, a clear bright red with numerous golden anthers. A very strong grower and profuse bloomer. Much like Aglaia in all characteristics but color.

**THALIA, or WHITE RAMBLER.** A seedling from the same Rosa Polyantha Sarmantosa (Siebold) crossed with pollen from Paquette. Pure white. In other respects very similar to Aglaia.

All three of these Roses are exceedingly vigorous growers, making shoots eight to ten feet high in a season, and all bloom in handsome big clusters after the fashion of Crimson Rambler, to which, through the Rosa Polyantha Sarmantosa, they are related.

## WE WANT

Every florist and seedsmen who reads this to handle these valuable new roses, especially "Aglaia" of which we have prepared a fine and large stock. We will supply at very small cost handsome circulars describing the "Aglaia," or will supply a moderate quantity of them FREE. Will also send FREE several copies of a fine Color-type Plate, illustrating the "Aglaia" to all florists and dealers who will put them up in their stores or offices and handle the plants among their customers. Electrotypes of any of our "Aglaia" cuts will be loaned FREE to seedsmen and dealers for catalogue use. These roses are most important introductions and will be quick sellers. Secure your share of the profit to be made in handling them, by writing us at once. All the retail business upon them will be done by our customers. Our trade is wholesale only.

STRONG PLANTS FROM DEEP 2-1 2 IN. POTS FOR DELIVERY AFTER MARCH 1.

**JACKSON & PERKINS CO., NEWARK, NEW YORK.**

Our Trade List of Field Growth Roses, Shrubs, Trees and General Nursery Stock will be mailed on application.

### The American Beauty.

I have just finished making my last batch of Beauty cuttings, and while doing so have been thinking that for this week's notes a little talk about the rose will be in order, not that I expect to teach large growers anything about it, and if there are some who have had good results growing it differently from me, it certainly would be their policy to still pursue their own course.

Plenty of good wood can now be got, providing the plants have done well, from cases that have run up to the roof without setting buds. These I cut down about two feet of the buds, as long as they are feathered below that, and use for propagating. Although this wood may be termed blind, it answers the purpose admirably, at the same time my experience is, that from where the canes are cut off, they throw a shoot that will surely flower after growing from one to two feet.

Those who have not cut their cuttings of this variety in before this time should lose no time in doing so, as a strong plant and healthy plants is needed to give the best early results. The making of the cuttings, and how to propagate them I have told you about before, and remember from the time they are ready to be planted over the ground never have the least check, or black spot will surely make its appearance, which I suggest you might spot will not be covered with any application, but it will by two or three. This solution takes a much longer time to dry or clean on old wood, and therefore should only be applied on bright days, and when conditions are most favorable for drying off.

This fungicide is also a good remedy for anthracosis. If this disease makes its appearance on a plant it should be applied at once, as in some instances, if neglected, the trouble will soon spread.

Temperature plays a very important part in the propagation of colored flowers, and a remunerative quantity. With a high temperature at not less than 70° Fahrenheit, a large percentage of them comes blind; 80° degrees nights is the most for me to get the best results; in, when firing is being done.

During the last holidays I was lucky to be on time with a crop of Beauty. That was a fortunate thing for me, as my part as regards a crop coming in at a certain time, I am aware, but still good judgment was done for me to wait to when the first crop is out and last budding done. Last season, contrary to what I have done before, I cut wood from two to three weeks earlier—September 30. My reason for doing this was that when the next growth started it would get a much stronger sun to develop flowers before in them than it cut later, and at the same time it is cut earlier.

## TUFF STUFF ON GREEN FLY IS TOBAC OIL.

## BRIDESMAID has a wide reputation.

PARENT S' STOCK still exists in perfect condition at the Sunnywoks Greenhouse. Orders for 36 plants for \$10.00 per doz. Also Bride, Beauty, Testout, Meteor, and Rose.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Christmas, which they were, and almost every shoot, with the exception of a few at the warmest and the longest of the day. The plants are not quite so large as formerly, but still I am satisfied with their returns.

It may be remarked that cutting them at this early date is not the usual practice of chrysantheums, but I find they sell well even if chrysantheums are all the go.

To plant up in greenhouses, or in the open and best method is to put up a standard made of 1-inch pipe at each end of the bench for a wire to be stretched over them stretching a wire from one end to the other immediately over the top of the plants. The first line will be about a foot from the bed, and as the plants grow taller, others are stretched along a foot above each other until the top reaches. It is very important that the growths should be kept tied up straight; bending down, or their starting them up from the bottom, I don't like, as with me it has always resulted in short stemmed flowers that are not of a good quality; it also has caused the foliage in some places to become too much matted, thereby shutting out light that belongs to other plants.

There are more shoots that grow to the roof without setting buds than I need for propagating, rather than turn them down, but I cannot do this until the plants are when they most invariably give a fine flower after growing a stem about 18 inches.

In looking over the plants for cuttings just now you will find quite a number of them that are starting a root. These can be cut without them, as in two weeks' time when the sun gets more power, you will find that these cuttings will strike and leaves and then flower.

This rose being a very strong grower, needs a little more of soil than most others, and also likes a very liberal amount of feeding in the shape of cow and sheep manure.

In carrying over plants the second year, at the beginning of the year, or earlier, is the time to commence if the flowers are not needed; the plants should be gradually dried out, stopping the water being done to keep the wood from shriveling. The soil will get so dry that the plants will not be able to stand and burn them. A few plants will be found, especially in the inside row, that are not so healthy as the others, and should be cut off and thrown away. It is better to do this when drying off is started, as they can be put in a foot of soil, and the ground ran a spade along the bottom of the bench under each plant and lift up. The soil they should be very hard, but should be all taken off clean with the least possible injury to the roots.

When in this state they should be very hard, but should be all taken off clean with the least possible injury to the roots. When in this state they should be very hard, but should be all taken off clean with the least possible injury to the roots. When in this state they should be very hard, but should be all taken off clean with the least possible injury to the roots.

They should be carried to the shed or greenhouse and set on a bed of straw, and the benches same as for young stock and replant. It will be found necessary to water the plants in the greenhouse, and requires to be exercised in planting them properly. Don't make a small, deep hole in the soil, but make a shallow one, and when the plant is put in (as was before), then spread out the roots evenly, cover up, and firm the soil by treading it, and water thoroughly with water. After this they should be left alone with the exception of syringing until the bed has become very dry. We should be judiciously until the plants have begun to make a fairly good headway, increasing the quantity of water to keep them in it.

When treated in this way they start to make new roots in a very few days. They would not be likely to be lost in this way and have done the same myself. Although some of the finest blooms of the year were from these plants, I still have a preference for young stock, if strong and healthy, inasmuch as you can see if it is likely to be a fairly strong one to a more uniform lot.

A little trouble experienced with two-year-old stock in that they do not grow quite as strong as others, and the first flowers that come are mostly in a crop of short flowering and intermediate. I had not got so good young stock and the old ones were in first class condition I would not hesitate one minute about planting the latter.

**G. YOUNG & SONS CO.,** 1406 OLIVE ST., ST. LOUIS, MO.  
 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

...TWO GRAND... **NEW CARNATIONS** ...FOR 1897...

**Lily Dean.** A very large, bold, handsome flower, pure white ground, with very delicate margin and penciling of clear pink, making it exceedingly beautiful and attractive. One of the very freest blooming varieties known. Should be grown in a temperature of not over 50 degrees at night, otherwise the very large flower is too heavy for the stem. The plant is a strong vigorous grower. It has been certificated wherever shown. Price \$2.50 per doz.; \$10.00 per 100; \$75.00 per 1000.

**Maud Dean.** Delicate blush white, gradually deepening to center, making it the most distinctly beautiful and attractive flower ever sent out; it is also one of the most delightfully fragrant carnations known; its keeping qualities are remarkable; an extra well built flower with good stiff stem which always carries it erect, making it an ideal flower. It has received certificates from the A. C. S., Philadelphia, New York, Orange, Springfield and many other societies. Price \$2.50 per doz.; \$10.00 per 100; \$75.00 per 1000, ready March 1st.

The flowers of these two varieties have sold in New York market at 200 to 300 per cent. above any others for the past two years. Commissions for cataloguing above Carnations, 15 per cent.

**NEW CHRYSANTHEMUMS FOR 1897**

**Elvena.** A very beautiful soft silvery pink throughout, of a very pleasing shade; the most valuable early pink to date; broad, incurved petals, extra good stem and foliage. Season October 10th to 15th. Certificate C. S. of A. Price 50 cts. each; \$5.00 per doz.; \$35.00 per 100.

**Elainora.** Deep pink, reverse clear rose; large hold handsome incurved flower with good stem and foliage; second early. Certificate C. S. of A. Price 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

**Evangeline.** Pure white of Kioto form; the greatest novelty of the year. Six Certificates in 1895. Altogether one of the very best ever sent out. Price 60 cts. each; \$6.00 per doz.; \$40.00 per 100.

**Loantika.** Bright clear red, very early and large; flat petalled, reflexed, but very full. The best early of this color. Season 10th to 15th of October. Price 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

**Leonidas.** Amaranth, shaded maroon, very large, with straight flat petals forming a bold imposing flower. A very fine exhibition flower. Certificate C. S. of A. Price 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

**Symphonia.** A very beautiful shade of carmine pink, reverse soft silvery pink, incurved and very compact; Ivory form of medium size. A fine bench variety, 18 to 24 inches high. Price 50 cts. each; \$5.00 per doz.; \$35.00 per 100.

**NEW CLIMBING ROSES FOR 1897.**

**Climbing Wootton.** A sport from Souvenir de Wootton and identical with it in color, size of flower and fragrance, but an exceedingly strong, vigorous grower, producing canes 10 to 15 feet long in one season. It is perfectly hardy in this section, and will prove a grand addition to this class; where the canes are well ripened, if slightly bent over in the Spring, it will produce an abundance of flowers covering the whole stem. Good, strong plants, from 3 inch pots, \$2.00 per doz.; \$10.00 per 100. Extra strong year old plants, \$4.00 per doz.

**Yellow Rambler.** Identical with the Crimson Rambler, except in color, which being a pure yellow will fill a long felt want, and as such will be a great acquisition to this class of roses; for all purposes it is equally vigorous, hardy and floriferous. A grand new variety Price 45 cts. each; \$4.25 per doz.; \$30.00 per 100. Ready March 1st.

**Souv. du Pres. Carnot.** The sensational rose of the season, and a grand forcing variety in every way. No live florist can afford to be without it for next season. My advice is to order early if you want the best stock. Extra fine healthy plants, from 2½ inch, \$15.00 per 100; \$125.00 per 1000. Can be shipped as required.

**Clara Watson.** This is one of the most beautiful H. T. Roses, of the largest size, very fragrant and fine form. The predominating color is salmon pink, blended with blush pink on the outer edge of the petals, with just enough yellow at the base to bring out the whole, making it a very artistic and distinct flower. It is a very strong grower and very free flowering, and will become a general favorite when better known. It is also a grand Summer bedding rose, good strong plants. Price \$3.00 per doz.; \$15.00 per 100.

And all the Standard Varieties of ROSES in Teas, Hybrid Teas, and Hybrid Perpetuals for forcing, bedding, etc., at bottom prices. See my Trade List, now ready.

**JOHN N. MAY, Summit, New Jersey.**

## PARIS'S EXCHANGE

The following selection of Winter Flowering Carnations contains all the newest and most profitable market varieties yet introduced, they are all exceptionally vigorous, the flowers are large, with perfect calyx, and most profuse bloomers.

**CANARY BIRD.** Large yellow, with a bright scarlet eye, the flower is full and well formed. 8s. per doz.; 40s. per 100.

**DUKE OF YORK.** Flowers very large and full, on long stiff stems, color very rich velvety scarlet crimson, color performed. The plant is exceptionally vigorous. Certified H. H. S., London. 4s. per doz.; 50s. per 100.

**HENRY GIBBONS.** Flowers large and full, growth vigorous and very free, free bloomer, and of vigorous constitution. 8s. per doz.; 45s. per 100.

**LEONIDAS.** A magnificent variety, bright crimson scarlet, large flower, growth vigorous and very free. 7s. per doz.; 65s. per 100.

The above are all strongly rooted plants from 3 1/2 in. pots. Packing free, and freight paid to New York, London or Philadelphia.

Cash with Order, or Satisfactory Reference.

**R. H. BATH, THE FLORAL WISBECH, ENG. FARMS.**

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Should be grown by everybody. The past season most have taught all growers that the high-grade Carnations are the only ones that were profitable, and **Delia Fox** stands above them all for size, color and stems. Rooted cuttings now ready.  
**MYERS & SAMTMAN, Wyndmoor, Chestnut Hill, Phila.**

## Carnations!

(Rooted cuttings now ready.)  
 Mayor Fingree, Meteor, McGowan, Daybreak, Scott, Portia, and all other good ones.

**Good Healthy ROSES for Spring Delivery.**  
 Send for price list.

**CUT ROSES and CARNATIONS always in stock.**  
**H. DALE, - - Brampton, Ont.**

# CARNATIONS

## NOVELTIES FOR 1897

### NEW SEEDLING CARNATIONS.

**BREITMEYER'S Mayor Pingree.** Color clear lemon yellow, lightly marked with pink and occasionally splashed with white. A very strong robust grower, continuous bloomer, perfect cropper. Blooms from June to October. Stems extraordinarily stiff and from 18 to 30 inches measure 2 1/2 to 3 inches and over in diameter. Excellent keeper, very productive. Cuttings strike readily, and promises to be a splendid yellow commercial carnation. Certified wherever shown. \$2.50 per doz.; \$10.00 per 100; \$75.00 per 1000.

**FRED. DORNER'S Geo. M. Bradt.** (Seedling 1895.) Color clear white, heavily edged and striped with bright rising. It is a very bright and cheerful appearance. Flowers large and full, with center petals standing erect, giving the bloom a well-rounded form. Calyx resembling Mme. Alberti. Habit strong and vigorous. This variety is now in its fourth year, and has proven the most even and constant bloomer for many years.

Received Gold Medal at Atlanta. Certificate at same place and at Chicago. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

**FRED. DORNER'S A. Dana.** Delicate shell pink. A cross of Scott on Uncle John. Vigorous, wiry grower, erect habit; medium to large flower on stiff, wiry stems; color very soft and exceptionally pleasing; flower a splendid keeper; one of the most attractive pink carnations. \$12 per 100.

**FRED. DORNER'S Mrs. Chas. H. Duhme.** (Seedling 1902.) Color lively delicate pink; large flower fragrant, with some pink on strong, stiff stem. Plant vigorous, erect grower, a very early free and constant bloomer, much more so than any of the light pink varieties, rivaling in productiveness with Scott. This promises to be the best of the light pink commercial varieties.

Certificate Indianapolis and Philadelphia. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

**JOHN N. MAY'S Lily Dean.** A very large, bold, handsome flower, pure white ground, with a delicate margin and center of clear pink, making it exceedingly beautiful and pleasing. One of the very best blooming varieties known. Should be grown in a temperature of not over 50 degrees at night, otherwise the very large flower is too heavy for the stem. The plant is a strong, vigorous grower. It has been certified wherever shown. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

**Ed. G. HILL'S Flora Hill.** Received N. C. S. Certificate February, 1896. Grass moderately heavy. Very free and healthy in growth and very free in bloom. Strong only, moderately stiff stem, indifferently keeper.

**Harriet's White Sport** from Wm. Scott. A snow white sport from Wm. Scott, having all the good qualities of its parent. Probably the ideal white commercial carnation. Every florist should try it. \$2 per doz.; \$10 per 100; \$75 per 1000.

**Harriet's White Sport** from Wm. Scott. A snow white sport from Wm. Scott, having all the good qualities of its parent. Probably the ideal white commercial carnation. Every florist should try it. \$2 per doz.; \$10 per 100; \$75 per 1000.

**BOSTON FERN.**—Stock plants, from 5 and 6 inch plant, at \$3.00 to \$4.00 per dozen.

**WHITE LILAC Mary Le Gray.**—From fine plants at \$30.00 to \$40.00 per 100; \$4.00 to \$5.00 per doz.

**GERANIUM.**—A select list of 40 varieties for bedding purposes.

### Well I Should Smile!

**JOHN N. MAY'S Maid Dean.** Delicate blush white, gradually deepening to center, making it the most distinctly beautiful and attractive flower ever sent out. It is also one of the most delightfully fragrant carnations known. Its keeping qualities are remarkable; an extra well-built flower, with good, stiff stem, which always carries it erect, making it an ideal flower. It has received certificates from the U. S. S., Philadelphia, York, Orange, Springfield and many other societies. \$2.50 per doz.; \$10 per 100; \$75 per 1000.

**CANNAS.**—A fine stock of new Yellow Barbanks, All o Austria, Italia, Sunbeam, Mme. Crozy, Queen Charlotte, Chas. Henderson, Bouvier, and other standard sorts.

**DAHLIAS.**—A selected list of 43 distinct sorts for Florists' use.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## QUESTION BOX.

OPEN TO ALL . . . FREE TO ALL  
Answers Solicited from Those Who Know.

- (29) Disbudding Pansies.—B. SISTERS. The size of pansy blooms is created by the strain rather than by removing the buds.
- (30) Raising Material for Sweet Peas.—B. SISTERS. Any kind of soft, clean string (usually either white or green), or florists' twine, similar to what is used for such strings, etc., will do.
- (31) Lithium Longiflorum for Easter.—B. W.—It should be very easy to bring these into bloom for Easter with only a normal temperature. That event being so, warmer the better. When the seeds begin to germinate, the young plants are taken out and potted up in small pots. Owing to the seed germinating irregularly the seedlings have to be gone over at intervals, and those which have started taken out.
- (32) License to Peddle Seeds, Plants, etc., in Maryland.—Wm. M. WHITEFORD. According to the laws of Maryland, any person buying seeds to peddle or sell them again is required to pay a license of \$10.00. The same holds good for plants, but I am not aware that this law is strictly enforced.—E. A. S.
- (33) McGowan Carnation.—The specimens arrived in bad condition; those for name were beyond recognition. The McGowan buds and flowers appear to be suffering from an overdose of some nitrogenous matter. The roots and growths were perhaps not in a condition to assimilate so much, and this led to the trouble in the flowers. From your information the temperature was all right.
- (34) Red Spider.—INQUIRER, Mass. Water is the foe of red spider. Dry heat creates the pest; moisture and ventilation prevents its breeding. Use your judgment and act in between. If the pest has got the best of you, choose a bright morning and turn a strong spray on the foliage, using all the force you dare. Do it thoroughly. You may lose some flowers of present crop, but that is better than losing the plants entirely.
- (35) Field Mice in Carnation House.—Can any of your readers give me information how to destroy field mice? I have been pestered all Winter with them in my carnation houses; have tried all the means I can think of in the shape of poisons but they prefer cutting off the buds, chiefly of the white varieties. From 100 to 150 blooms are thus destroyed in a single night. I have tried cats, but the mice are too numerous for them.—A. READER.
- (36) Propagation of PANDANUS VETCHII.—J. W. C.—Pandanus Vetchii is propagated solely from off-shoots, the large plants being grown specially to produce these. The off-shoots are taken when small, and either rooted in sand or each one is placed in a small pot and rooted in that way. The last method is preferable. They require strong bottom and top heat to propagate them quickly, and an average store heat afterward. Green off shoots are easiest.

(37) To Sow Seed of Asparagus Plumosus NANUS.—B. SISTERS. Sow in shallow boxes in loamy soil; cover the seeds lightly with a light mixture, and give a little higher temperature than is given to the growing plants. Cover the flats with glass and open paper to withhold light and prevent evaporation. Remove the coverings occasionally to avoid condensation and mold. Seeds frequently germinate freely on the beds where grown.

(38) Sowing Lithium Borbonica Seed.—H. B., Jr.—Sow in shallow boxes or put each seed in a 2-inch pot. When large quantities are being handled, the seed is usually placed quite thickly in small flats and covered slightly with light soil, and the boxes kept on or near the pipes under the bench, or on a shelf in a warm house—warmer the better. When the seeds begin to germinate, the young plants are taken out and potted up in small pots. Owing to the seed germinating irregularly the seedlings have to be gone over at intervals, and those which have started taken out.

(39) Changing from Carnations to Violets—I have a north and south house, 12 ft. x 30 ft., even span, 8x10 glass in each, aged 8 ft. Present heating arrangement will carry a night temperature of 45 to 50 degrees, when mercury shows 15 degrees below zero outside. The house is now planted with carnations, which are not doing well, I suppose on account of lack of proper heat and light, other conditions being, apparently, favorable. Would this house be suitable for violets under above conditions? If not, what changes would be necessary?—E. S. H.

—Apparently, there is not light and heat enough in your house to flower carnations in midwinter. The house may do well though for Fall and Spring or Summer. The house itself should do fire-rate for violets, if your soil, etc., is equally favorable.

(40) Annex as a Fern House.—Wm. STEPHAN.—We would think the house you describe well adapted for ferns of almost any kind. If used for Adiantum Farleyense, a night temperature of 68 to 75 degrees is needed; all other commercial ferns will do with 45 degrees night, and some with even a lower temperature. The question of kinds and how to grow them depends entirely upon local requirements, and that is a point you must settle yourself. If only cut fronds of Adiantum Farleyense are wanted, the house would be wise, and they in all probability would do well, but the advantage of pots would be apparent if you need at any time to store anything else in the house, or make a change.

(41) Vaporizing Ammonia in Rose House.—Will some grower enlighten me as to the slightest injury that could result if three quarts of water containing 2 per cent. of ammonia were vaporized in a 100x18-ft. house containing roses in full bloom?—A. S.

—I have never tried this, and furthermore would not like to venture it, as I have found there is enough ammonia in

the ammoniacal solution of copper to spot the petals, no matter how carefully it is sprayed. A drop less than the size of a pin's head will cause a brown spot.—H. H., Central N. Y.

—Is a house of the dimensions given, the danger to foliage and fruiting is diminished by applying the percentage of ammonia stated, especially if the household happen not to be quite tight. On the other hand, we fail to see what benefit could accrue from the practice named. Ammonia vaporized, in other words, free ammonia, is so volatile that the bulk of what should be lost of value goes out through the ventilators.

(42) Heating by Coil Boiler.—Which would be best, a box coil of 1½-inch or 2-inch pipe, a hose 100x20 feet, "slip" house, or what size of coil would it require? The greenhouse pit for the coil will be just 20 feet from the chimney to the dwelling. Would it be advisable to connect the furnace to this chimney, which is 15 feet high. My fuel will be slack.—J. L. MCLFORD.

—For a house of the size given, I would prefer to use 2-inch pipe, although 1½-inch coil could be used. With data as to locality and the temperature to be maintained, I can only give an approximate estimate as to the size of coil required. For 50 degrees I should use about 150 square feet, and for 60 degrees, 200 square feet would be required. This would require a box coil five feet long, and with six ranks wide in the one and eight in the other, each consisting of eight pipes. If the flue in the chimney at the dwelling is 12 inches or more in diameter and has no other opening, it may be used, but, as a rule, it will be better to have an independent chimney for the heater when the distance is as great as that given, and especially when slack coal is used.—L. R. TAPP.

(43) Changing from Hot Water to Steam Heating.—We would like to get a few ideas on heating an addition to our plant, and would like to be sure if our arrangements would be sufficient. We use at present the hot water system, and heat about 30,000 feet of glass, but we are erecting four new greenhouses, 20x100 feet, 6 feet at eaves and 13 feet at ridge, about 12,000 feet of glass, and have also had some other exposure and are brand new. We want to run one 2-inch snipe pipe at ridge, and drop down to ten line single returns and coils of five pipes each. Would that be sufficient to heat the houses with 30 horse power boiler?—PHILLIPS & Co.

—The heating plant seems well arranged, and the boiler should be ample for the purpose, while the size and number of pipes are the same as are generally used in houses 30 feet wide. Owing to the size of the stack at the side wall the amount of glass (3000 square feet) is considerably larger than is usually found in houses of this size, and one or two more pipes might be desirable in very severe weather for houses of this size. For Meteor, etc., and similar varieties. For ordinary Winter weather the ten returns would be ample.—L. R. TAPP.

## Heating by Coil Boiler.

I have recently erected three greenhouses, each 16x50 feet, three-quarter span, short span to the south, and I find they are very easy to heat, more so than equal span houses. I am heating with a coil boiler of my own make. The construction of this boiler is very simple. In making it cut a piece of 2-inch pipe 19 inches in length; have your return bends ready to screw together, then cut the next pipe so that the succeeding return bend will miss the first, or where you leave off, and so on until you reach the top. I have used in my coil six return bends. The last pipe will be about 30 inches in length. Put an elbow on the short pipe, also on the long one.

To set the coil lay the short side down, on brick, over your grates, there being two coils of the same size. Let these two coils come together at the top, like the roof of a house, over the grates (the longest pipes at top), then take your flows from each coil, and the bottoms for cold water. This system runs down hill.

I keep my rose houses at 65 degrees in zero weather with a low fire, grates surface being 20x20. This is a cheap, durable hot water heater. I have two flows and eight returns of 2-inch pipe. This heats one house 16x50 feet.

I will be pleased to furnish all information regarding this heater, if interested.—D. W. PAYNE.

PH. CLINTON, O.

## Hail Association.

Among recent members of the Florists' Hail Association is the New Jersey experiment station located at New Brunswick, N. J. Those who become members of the E. H. A. now are exempt from the seventh assessment, which will be levied March 1, 1897. Notwithstanding the hard times the Hail Association is still steadily growing.—JOHN G. ESLER.

## Vaporizing Tobacco Extracts made

easy and sure by using the TOBAC-OIL VAPORIZER—\$3.50 each. Money back if not satisfactory. Particulars by writing H. A. STOOHOFF, 315 MADISON AVE., N. Y. C.

**CARNATIONS—ROOTED CUTTINGS.**

*Announcement to our many friends and customers:*

BY special arrangements with most of our friends who have new carnations to offer for 1897, we can fill your orders at their catalogue prices. No live florist can afford to do without these grand novelties, such as **Flora Hill, Mrs. McBurney**; Mr. Dorne's two novelties **Mrs. Chas. Duhme, Mrs. Geo. M. Bradt**; and Mr. Breitmeyer's **Mayor Pingree**. For more particular description see the introducers' advertisements.

**INTRODUCTIONS OF 1897.**

	Per Doz.	Per 100	Per 1000		Per Doz.	Per 100	Per 1000
Flora Hill.....	\$2.50	\$12.00	\$100.00	Mrs. Chas. Duhme.....	\$2.00	\$10.00	\$75.00
Mrs. McBurney.....	2.50	12.00	100.00	Mrs. Geo. M. Bradt.....	2.00	10.00	75.00
Mayor Pingree.....	1.50	10.00	75.00	C. A. Dana.....	2.00	10.00	75.00

Standard Varieties of our own growing, we believe, are as fine as can possibly be obtained, every precaution having been taken that no cuttings were taken from any plants that were in the least diseased in any way. Therefore we feel assured that they will give perfect satisfaction.

**STANDARD VARIETIES.**

WHITE.		PINK.		SCARLET.		
	Per 100	Per 1000		Per 100	Per 1000	
Alaska.....	\$2.00	\$15.00	Della Fox.....	\$5.00	Dazzle.....	\$3.00

					Eldorado.....	4.00 30.00

It will be noticed that our prices for standard varieties of carnations are somewhat higher than a great many others. We desire to state that in order to adhere to the **HIGH STANDARD** we have **DETERMINED TO MAINTAIN**, we can say from experience that to sell at lower figures would mean no profit for our labor, etc. We believe that the number of **STRICTLY FIRST CLASS** cuttings that can be taken from a plant is **LIMITED**, and that in order to get the best results, and to continue to improve the carnation, the adoption of a **HIGH STANDARD** rigidly maintained is an absolute necessity. We have therefore decided to produce only the best at living prices, and assure our friends and customers that if they decide to trade with us they will be more than pleased with the **QUALITY** of our goods. We will be candid in saying that our stock is **LIMITED**, and that we could not fill an order for **100,000** cuttings, although we could root several millions if we would take every cutting.

*We would advise to let us have your orders early as long as our stock lasts unbroken.*

We insert a few of the many testimonials received from our many customers for the benefit of those with whom we have not had the pleasure to deal.

FLATBUSH, Brooklyn, N. Y.

# HARRISON'S WHITE!

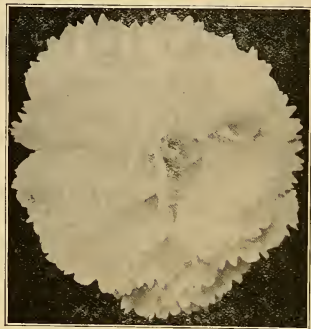

NEW CARNATION, SPORT FROM WM. SCOTT.

40,000 SOLD UP TO DATE. ALL LEADING CARNATIONISTS ARE PURCHASERS.

Strong, Vigorous Grower...

...Requiring no Support.

COME AND SEE IT!

DESCRIBED and ILLUSTRATED in FLORISTS' EXCHANGE, ... Nov. 21, 1896, Page 1044....

Read what Prominent Carnationists say about it:

JOHN HARRISON'S PLACE, Bergen Ave., near Bidwell Ave.,  
JERSEY CITY, N. J., January 5, 1897.

We, the undersigned, are satisfied that the carnation John Harrison is now growing under the name of HARRISON'S WHITE is what he claims it to be, namely, a sport of Wm. Scott, and is a really good thing. This conclusion we have arrived at after a careful examination of the stock he has now growing on his place at above address.  
(Signed) JOHN N. MAY, ERNST ASMUS, HENRY DAILLEDOUZE.

Editor Florists' Exchange:

QUEENS, N. Y., January 7, 1897.

Regarding the white sport from Wm. Scott, which is offered by Mr. John Harrison, of Jersey City, and which I recently stated to you that I was of the opinion that the variety was identical with Puritan, I desire to say:

Yesterday, in company with Mr. L. E. Wood, the originator of Puritan, I visited Mr. Harrison's place, taking samples of Puritan and comparing the growths of the two varieties. After careful examina-

tion, Mr. Wood pronounced Mr. Harrison's variety as distinct from Puritan, and I am now convinced that my first impressions were wrong.

There is a certain difference in the growth of Mr. Harrison's sport from the growth of Scott as usually seen, which resembles much the growth of Puritan as I have seen it at times, which difference can be accounted for by their being grown dry (as the plants were too deeply planted), and this resemblance, coupled with the knowledge that I had once mistaken a plant of Puritan, which was growing by accident in a bench of Scott, as a sport from Scott; also the fact that a portion of Mr. Harrison's original stock of Scott was propagated by us from the same bench in which the Puritan plant was growing, caused me to think that Mr. Harrison had fallen into the same error that I had made.

I am very much pleased to find that I have been mistaken as to a clear white sport of Scott, such as Harrison's White is, certainly will prove one of the most valuable commercial carnations that could be originated, and I hope you will allow me to say in this column that if any florist has \$10 to spare, I believe he can do no better with it than to invest in a hundred of Mr. Harrison's White Scott.  
C. W. WARD.

In addition to the premiums already made by A. J. Harting and Grace N. J., offer twelve orchids for carnation house, for best twelve blooms, any color, any variety. **LARRY M. HARR, Sec'y.**

## Rust.

With spraying a failure and pick-ling of little value when used alone, I occurred to me that by drying and acetating the conditions which were most conducive to the development of rust, and that under these conditions, as far as possible, would be the most logical course to pursue. It seems strange, indeed, that we should try to cure with medicines plants troubled with this disease, and at the same time keep them surrounded with conditions which were undoubtedly the first cause of the appearance of rust; this in substance is what we, and doubtless all others, did who were trying to rid their crops of this pest with fungicides.

My observations soon convinced me that moisture and poor ventilation were the main factors in producing rust. We had excellent object lessons in this three year ago. The previous Spring we had purchased 500 cuttings of a novelty which we called well covered rust. They were given a place to themselves in the field where they made a splendid growth in spite of the disease. When housing time came, they were fairly clean, considering the condition in which they were placed upon that. These were the last to be housed, and the only available place for them was a sick bench in a house planted with rusted cuttings. The plants were kept and heavy waterings required to keep Goulter's copper coating kept in a sour condition. That this was a most ideal propagating place for rust was soon made apparent. The plants which were housed but a short time when rust could be seen on almost every leaf. We, however, were astonished to find that the disease would die out to a large extent, as was our experience with other varieties; and we based on this fact the hope of the more. Alarmed that such an epidemic might cause a general spread of rust on the species which are raised about here, we cleaned, we removed every plant and burned it. The soil, too, was hauled away, and a fresh thorough wintered. This experience convinced me that a moist atmosphere, particularly a close one, was the most favorable to the existence of rust. This explains, then, why a wet season is more conducive to the trouble than a dry one, and the fact also is amply substantiated by every one who has had any experience with rust.

Occasional rains, not lasting long, and followed by clear, bright weather, do very little harm; on the contrary, I believe that such seasons very materially in destroying the spores by washing them to the ground; once there, they can be considered harmless. It is the continued wet weather and damp atmosphere which causes the spores which are raised about here find lodgment on the damp foliage of the plants to germinate very rapidly. The result is a greenness, which is not so much nearly that of a wet season. This is the case particularly where overhead watering is used, and where the plants are kept in a deal of drip, strynging under the benches, and so on.

As a rule, then, are the conditions which I am satisfied are responsible for the presence of rust, and for its development and propagation. All authorities on rust, I believe, agree that it is a fungus in nature. A difference of opinion exists as to whether it is a rust, whether or not the disease is constitutional. I am satisfied that I have had abundant opportunity to see it in all its forms. I have made a special study of it, and have been able to identify it in me free to state to the best of my knowledge, it is in no way constitutional, and that it is a disease which can be gotten rid of rust on several varieties, some of which were badly affected. This, however, should not be taken too far, as rust was constitutional, for if the disease were in the system of a plant, it would certainly appear in any cutting taken from it.

The argument advanced by some, that the finding of rust pustules high up on the lowest stems of the plants, leaves, etc., cannot be considered as evidence that rust is constitutional. Such findings are the result of rust which has been carried by proper atmospheric conditions are observed, it is considered that rust is not constitutional, as it is very susceptible to disease. The tip of a flowering stem which is only partially developed is very

## H. R. 9532—A Bill to Regulate the Importation and Sale of Agricultural Seeds.

There is now before the Committee of Ways and Means of the House of Representatives, H. R. 9532, introduced by Mr. Cook, of Illinois, a bill for the importation and sale of seeds (the full text of which appears on page 87, of this issue); and while some of the features of the bill are commendable, yet most of the others are impracticable, and in some cases, we should positively shudder, and all others, if by any means, are absurd and should be eliminated.

Sections Nos. 1 and 2, prohibiting the importation and the sale of grass, clover and other foreign plant seeds containing seeds of dodder, Canadian thistle, Russian thistle, bulbets of wild onion, egret, or more than 1 per cent. of the seeds of wild fax, wild carrot, plantain, wild rice, cockle, chives, penny-cress, prickly lettuce or wild mustard, are, with some modifications, we believe, practicable, and would be a benefit, as well as a relief, to seedsmen who understand their business. Except in a few instances among foreign plants, it is possible with the above named seeds for an expert to determine the purity on examining the seed, and to reject those under, or which, in a slight bundle of cost, would be by machinery to bring up to the required standard. The explicit modification might be made in the case of dodder, Canada and Russian thistle, etc., which are not allowed for in any form whatever.

The bill requires that the samples must be entirely free from any foreign seeds, and attaches a penalty upon conviction of a fine not less than \$200 nor more than \$500, and imprisonment not more than one year and one day for each offence. The most careful and critical examination might not reveal a single seed, or other objectionable weed, yet, is a seedsmen, who, under these circumstances sold and delivered in a good faith, to be fined \$500 or imprisoned for a year in the delivery there happened to be found a seed of these weeds? An allowance of some kind must be made.

The American Seed Trade Association will, with an assurance born of ignorance of the subject, undertake by grain inspection to regulate the purity, etc., of vegetable seeds, which to the practical mind is an impossible task. It is not the business of the most expert to test by examination of the grain whether every seed will produce a true plant, or whether it will produce, or perhaps the rankest mixture imaginable. Does Mr. Cook, or anyone else, know enough of the seed of a turnip, or a cabbage, a Kohl Rabi, or a cauliflower, to be able to say, with any accuracy that a Rutabaga seed is not a rape? or that a Tom Thumb pea will not grow six feet high? How, however, goes farther, and why, do some experts who can tell the difference between the seed of red and white onion, or whether a seed is long or short, or long white or a small round red variety. If such experts there be, let them come forward. We can name importers, or seedsmen who will pay them more than Uncle Sam will.

With vegetable seeds the most important subject is overlooked—the purity and quality of the stock. What the bill, however, goes farther, and why, do some experts who can tell the difference between the seed of red and white onion, or whether a seed is long or short, or long white or a small round red variety. If such experts there be, let them come forward. We can name importers, or seedsmen who will pay them more than Uncle Sam will.

With vegetable seeds the most important subject is overlooked—the purity and quality of the stock. What the bill, however, goes farther, and why, do some experts who can tell the difference between the seed of red and white onion, or whether a seed is long or short, or long white or a small round red variety. If such experts there be, let them come forward. We can name importers, or seedsmen who will pay them more than Uncle Sam will.

The bill requires also that every package of seed containing one pound or more shall be accompanied by a written or printed guarantee of the purity of seed from foreign matter and germination. Such a thing is impracticable. The percentage of growth is constantly varying, and to fully comply with the requirements of the bill, the seedsmen of the country would, for the same volume of trade, require double his present staff, and consequently, his present facilities would be early be higher, without as far as we can see, any attendant benefit to the farmer. The bill, in fact, is a gross and flagrant injustice, is allowed to sell seed without being in any way accountable under the act, and to sell seed without being held accountable with heavy penalties attached. The farmer, who in many cases when growing a seed, is allowed to sell seed in allowing weeds, which can be easily hough or pulled out, to grow and seed in the crop, is allowed to peddle his seed eye with any quantity of wild onion bulbets in it, his clover with dodder, dock, or any other foreign matter, and to sell seed in can sell any kind of seed no matter how filthy, to whoever will buy, and it is a fact that many farmers do so. There are thousands of farmers in the United States who are not able to distinguish between their neighbors and others, of many seeds, cereals, and grains, larger quantities for sale than for their own use. The bill, though he is the first sower, under this bill, the farmer is allowed to go "Soot free."

The result of a bill such as is now before the House would be the extinction of the seed trade in America, and scattering it all over the country, to the great reverse of those anticipated by Mr. Cook or others interested in this bill. For it would mean the freedom of distribution of seeds by farmers without the benefit of improved machinery. The bill would make it impossible for anyone to make it apply also to farmers, excepting those who are able to distinguish between their neighbors and others, of many seeds, with their machinery to bring the seeds in the country to the required standard. Then, again, has Mr. Cook any idea of the shrinkage in weight and loss of good seeds in the process of cleaning, and the purities in cleaning in order to reach the high standard he sets up?

In some years of poor crops there would be a large quantity of seed in the country that could be brought up to the standard of germination and purity to supply the requirements of the bill. The bill is a law for that particular article would for that year, in the hands of the farmer, and could be sold with impunity. The standard or a quality that, by cleaning, would be raised up to the standard of the premium, and those under the standard would be ridiculously low in comparison.

A very large proportion of the red clover seed grown in the United States contains plantain (allowed in the bill to the extent of one per cent.), a large part of which is sown with the most improved machinery and heavy shrinkage in cleaning be brought up to the required standard. The bill would mean the freedom of distribution of seeds by farmers without the benefit of improved machinery. The bill would make it impossible for anyone to make it apply also to farmers, excepting those who are able to distinguish between their neighbors and others, of many seeds, with their machinery to bring the seeds in the country to the required standard. Then, again, has Mr. Cook any idea of the shrinkage in weight and loss of good seeds in the process of cleaning, and the purities in cleaning in order to reach the high standard he sets up?

The bill requires also that every package of seed containing one pound or more shall be accompanied by a written or printed guarantee of the purity of seed from foreign matter and germination. Such a thing is impracticable. The percentage of growth is constantly varying, and to fully comply with the requirements of the bill, the seedsmen of the country would, for the same volume of trade, require double his present staff, and consequently, his present facilities would be early be higher, without as far as we can see, any attendant benefit to the farmer. The bill, in fact, is a gross and flagrant injustice, is allowed to sell seed without being in any way accountable under the act, and to sell seed without being held accountable with heavy penalties attached. The farmer, who in many cases when growing a seed, is allowed to sell seed in allowing weeds, which can be easily hough or pulled out, to grow and seed in the crop, is allowed to peddle his seed eye with any quantity of wild onion bulbets in it, his clover with dodder, dock, or any other foreign matter, and to sell seed in can sell any kind of seed no matter how filthy, to whoever will buy, and it is a fact that many farmers do so. There are thousands of farmers in the United States who are not able to distinguish between their neighbors and others, of many seeds, cereals, and grains, larger quantities for sale than for their own use. The bill, though he is the first sower, under this bill, the farmer is allowed to go "Soot free."

With Uncle Sam in the business distributing free seeds, we think the seedsmen already have enough to contend with.

## Substitution and Deception.

In a communication received from an Ohio subscriber the past week, occurs the following interesting item:

"I noticed in a recent issue a complaint of excessive charges arising through wrong packing; but I think that one of the most serious and most common and greatest is the fraud perpetrated on the public by advertising some plant or seed as being one thing, and when the purchaser has bought it and carefully grown it for months, to find it only an odd variety, if not a seed that has been in commerce for years."

He cites two such alleged cases as having happened to himself through advertisements inserted in the EXCHANGE, and adds: "I think you ought to draw a line and guarantee your patrons, or in some measure see to it that you are not defrauded. Trust you will give above some thought."

Complaints of the nature of this one, are, happily, few in number, so far as the advertisements in the EXCHANGE are concerned. We endeavor, as far as lies in our power, to keep ourselves and our patrons free from just such a contingency, but under existing conditions—lack of effective external supervision—there is open to dishonest or careless seedsmen a great opportunity for imposition, by giving a name to an odd variety, and by advertising finding a market for same, which a trade paper is unable to, appropriately expressing it, "nup in the bud."

It is a fact that many farmers do so. There are thousands of farmers in the United States who are not able to distinguish between their neighbors and others, of many seeds, cereals, and grains, larger quantities for sale than for their own use. The bill, though he is the first sower, under this bill, the farmer is allowed to go "Soot free."

We do not for a moment think that any re-respecting business man would be so dishonest as to commit a fraud upon the horticultural trade, and when cases of the kind are referred to us, we are sure we are not a matter of carelessness or ignorance rather than of a desire to deceive.

It is a fact that many farmers do so. There are thousands of farmers in the United States who are not able to distinguish between their neighbors and others, of many seeds, cereals, and grains, larger quantities for sale than for their own use. The bill, though he is the first sower, under this bill, the farmer is allowed to go "Soot free."

The bill, though he is the first sower, under this bill, the farmer is allowed to go "Soot free."

Regarding the two cases in question, we shall have diligent inquiry made, and report to our correspondent direct.

## For the Busy Man.

A report from Bermuda states that bulbs of a new variety of Hyacinth have been discovered. Mr. Fell, proprietor of T. S. Ware Nurseries, Tottenham, London, England, is dead.

The American Seed Trade Association will meet in Washington, D. C., next June.

The order for the decorations in connection with the Dudley-Marion soil has been awarded to H. Small & Sons.

Information has been received to the effect that the bill to regulate the importation and sale of agricultural seeds is not likely to pass this session.

Owing to the unexpected influx of advertisements for this issue at the last moment, we regret that the remainder of Mr. P. O'Meara's very able paper on the "Professional Gardener's Union in Hertsfordshire" has been unavoidably held over till another number.

## Our Novelty Supplement.

Two large pages of fine toned paper are embodied in this week's issue of the FLORESTA EXCHANGE, and on these are given illustrations and descriptions of the leading novelties from some of the principal houses that are distributing them this year. As the various subjects illustrated and described are the first choice of the originator and disseminator, efforts to bring will prove a handy reference, and as such, we feel confident, will be retained by our readers. It may be said that the novelties in plants and flowers are presented, those of fruit and vegetables being excluded.

We feel a little proud of the presswork and typography displayed in the supplement, and trust that our efforts to bring the most prominent novelties of the present year before our readers in this manner will be appreciated.

We take this opportunity of thanking our subscribers for their increased patronage on this occasion, which has imparted to our number the magnitude and substance of a special edition. We hope their business cannot be rewarded as richly as deserved.

## Erratum.

In an advertisement of Rehberg Bros., page 70, last issue, read price for American Beauty and Teston \$40.00 per 1000, not \$40.00.

New York.

Wholesale Market. The favorable conditions reported in our columns... The demand for high grade roses and carnations...

rooms on the main floor were decorated with the fine specimen Area Intescens and Keottia. The work was done by the Florists' Club...

Philadelphia.

Market Notes. There has been a little more satisfaction in the cut flower business the past week; the supply has fallen off, and at last a scarcity of roses can be noted...

Shipments increased in bulk, but fell away in quality, consequently there is still a tendency for poor lot of stock on hand which can be counted by the thousands...

Good tulips brought \$3 and \$4 per 100, yellow making the higher grade. Pink and white varieties also sold at \$1.50 and \$2...

Good monition has sold very well this season, \$1.20 per dozen is the present price...

Monday, Jan. 23. J. H. HANDELBERG died on Sunday last, January 24, in her 71st year.

The Funerary took place on Thursday and Friday last, at the residence of the deceased.

The Fun Club held a medal shoot on Tuesday, the trophy being captured by the members...

H. G. FART is about again after a long leave of absence from the office.

A large attendance is expected at the meeting on Tuesday next, Isaac Kennedy will be the speaker.

The bowling alleys are nearly completed, and will be ready to use next week.

A meeting will be held in the clubroom at 8 P.M. for the purpose of organizing a protective association...

A smoker will be given by the Florists' Club on Tuesday evening, February 9.

A Golden Anniversary. We have received from Messrs. Peter Henderson & Co., New York, a copy of the Edition de Luxe of their "Manual of Floriculture..."

Index to Advertisements.

Table listing various florists and their advertisements, including names like Marshall C. Jones, A. J. Alway, and others, with corresponding page numbers.

Cincinnati.

Weather and Trade Conditions. The weather has been very unsettled—rainy, dark, and changeable...

Trade, while fair, is nothing of which to be especially proud, a little funeral work and loose bunches being about all there is.

The will of the late HARRY L. SCHNEIDER leaves \$20,000 to the widow; is executed.

On Tuesday, January 19, a party of florists, consisting of Edward Fretz, Wm. Murphy, E. H. Gray, C. C. Murphy, E. Hoffmeister, R. Witterstaetter, Fred Waiz, J. W. Rodgers, Ben. George, Julius Weidner, J. A. Peterson, J. T. Conger, R. Barnes, and the writer, made a trip to Richmond, Ind.

The houses of G. H. GARD & Co. were very interesting in connection with getting Spring stock into shape. Everything in looking well. Rex begonias are a certain specialty here.

At G. H. HILL & Co.'s a choice lot of wholesale stock in radium cans, Italia and Austria, are especially good. There is a grand stock of small palms—arcs.

Eachers' Amaranthes. A splendid lot for sale at extremely low prices. Also small palms, 1 1/2 per 100, medium size palms, \$1.00 per 100.

Of course, the party was interested in ventilating machines and we were conducted through the works of the Quaker City Machine Co. by John A. Evans.

These little trips are productive of a great deal of good; they bring members of the craft closer together, create ideas and are always instructive in many ways.

TOUFF STUFF ON GREEN LEAF IS TOBAC-OIL. FERNS! FERNS! A fine stock of mixed Ferns, from 3/4 in. pots, ready for immediate use.

Pittsburg.

The cold wave, which reached us January 23 with a strong wind and snow storm, continues at present writing, January 27, and during that time the mercury has registered as low as 10 degrees below zero in some places, and for several days has been hugging the zero point. It is tough on the growers, and requires tons of coal to keep up the desired temperature for plants under glass. So far I have not heard of any frost, nor of any of our great shortage of stock of cut flowers, but the demand was very light. As few people are out on the streets, and the weather is better than last week's, excepting that a little more activity occurred in funeral parlors and out of the stores, the Tulips are coming in, but the quality is not of the best—too short in the stem. Harvested at \$7 per 100, and seem plentiful, but they are only in fair demand. Callus are hard to sell. The demand for valley is very light this year; few are sold loose, and the flowers must be used in work to get rid of them.

A. L. VANDERMAN, representing J. C. Vaughan, of Chicago and New York, spent several days in our neighborhood. S. S. SEIBERGER, of New York, and W. J. BOAS, of Edwards & Docker, Philadelphia, were also in town during the week.

Cleveland.

Trade Notes.

Owing to the extreme cold weather trade in all the branches is almost at a complete standstill. Funeral work is about the only thing that occasions any movement, and orders in this line are few. Of late, very few society events, weddings and receptions have occurred, and, of course, the usual work in the decorative line that such occasions call for, is of very little consequence. In spite of the quiet conditions of trade, stock in some items remains scarce. Short supply of roses is most noticeably felt; Beauty, of which very little stock is offered, are very hard to obtain. Other varieties are offered more freely, and prices realized are \$1 per dozen for ordinary to \$2.50 for best. Carnations are more plentiful, and sell at 25c. to 50c. wholesale, 75c. and \$1. Harvest is in fair supply, and sell at \$1.50 per dozen to \$3 for best stock. Valley and violets hold their own, and bring \$1 and \$2 respectively. Hyacinths are in poor demand; a great deal of good stock goes to waste before it can be disposed of. Tulips find ready sale and realize from 50c. to \$1 per dozen. In Von Sion good stock is scarce and brings from \$4 to \$7 at wholesale, retailing at \$1 per dozen.

All other flowers sell at prices previously reported. Lilacs 25c. per spray, peonies, freesias, 50c. to 75c.; cyclamens, 50c. Romans find very poor sale.

Florists' Club Meeting.

At the Florists' Club meeting, held on Tuesday evening, there was but a fair attendance, the weather being such that it prevented many members from attending. It was decided to hold a social in the near future, and a committee was appointed to make necessary arrangements. Another committee has in hand the arranging of a premium list for the chrysanthemum show next Fall.

Notes.

Mr. J. M. GASSER has just returned from an extended trip through the east and lower Canada.

L. J. LEOPOLD, a retail florist at 165 Euclid ave., made an assignment on the 15th inst. Assets, \$400; liabilities, \$700. Last Tuesday night the heavy plate glass doors of CHAS. ERHARDT'S store and flat of J. P. PATRICK immediately adjoining on Erie st., were broken into. If it was done by burglars their efforts were fruitless, as nothing was secured at either place. As near as the writer could learn, the perpetrators were found and placed under arrest.

G. A. TILTON, for eight years past in the seed and bulb business in this city, will on the 1st of Feb. terminate his partnership with his father, the firm name to be A. Tilton & Son.

A. RINDLER, representing W. W. Barnard & Co., Chicago, was visitor this week.

TUFF STAB ON GREEN FLY IS TOBAC-OIL.

St. Louis.

Market News.  
I am able to report a clean market for St. Louis for last week. Receipts were light than in the week previous, and there was just enough demand to keep prices moving upward. As the week progressed it became clear that both roses and carnations were off crop, and each following day's call put prices up another notch. The week of St. Louis took an additional twist at prices, and sent them up to Christmas figures almost. One lot of American Beauties, which cost 75c. each. A lot of Kaiserin brought 11c. All varieties and selections advanced from 2c. to 10c. each, and the light receipts to-day (Monday) are firmly held at the advance. Good Brissmands are selling at 5c. to 10c.; fancy selections at 15c. This rose seems to have been in best demand during the past week. Meteor came next in call and sold at almost the same figures. Bride and Kaiserin were not as much in demand, and did not command as good prices. Pearly, which was brought from 4c. to 6c., and were scarce. Good Beauty were not plentiful, and those received brought full value. There was a good supply of 12 to 20 inch stem, of color Beauty, which sold fairly at prices considered, at prices ranging from 10c. to 20c. each.

The carnation cut reported the previous week, the way the market took, took a double pressure of light receipts and fair demand. Prices of ordinary blooms advanced gradually from 5c. to 10c. per 100 yesterday, and to 13 to 24, at which a few are selling. Fancy carnations brought 33 Thursday, and would bring 34 to-day if they could be had.

Double violets advanced from 50c. to 81 per 100. Of course there were all sorts of kicks and threats on part of the florist, but the wholesaler who had the violets got \$1 per 100. Single violets sold at 55c. per 100; California violets sold well at 70c. The giant of Romans and narcissus is off, and bulbous stock again commanding attention. Poor quality Romans selling for a few days at \$2 per 100. At present writing the supply is equal to the demand at \$1 to \$1.50 per 100.

Lilium Hartwell is scarce, and receipts sold at \$12.50 to \$15 per 100. Callias are in fair supply and good prices. The price is now stationary at \$10 per 100.

Jonquils are still scarce and bring 24 per 100. Smilax is abundant and not in request. It is sold as low as \$3 per 100. Wild rose seems to be leading it here in use for decorative work.

The demand is light to-day, but as there is a stock on the market, indications point to steady prices at the figures named. Retail Notes.

Trades was stimulated by a number of special events at the close of another of nearly all the florists had a share. Funeral work was plentiful, and as the sale of cut flowers in the stores proved the week closed was satisfactory.

The Fakir.  
There was considerable agitation last week on account of the fakir, for whose existence here the wholesalers are blamed. Some retailers urge that the fakir would never be of wholesalers who sell to the fakir. If St. Louis was the only flower market on earth it would be an easy matter to freeze the fakir out of the business, but as long as there are other sources of supply within a night's ride of the main markets, the fakir will continue to grant permits to fakirs gratis, so long will we have to bear his presence.  
C. G. F.

Syracuse, N. Y.

Business here was quite dull for the week after the holidays, and within the last ten days. There has been quite a scarcity of cut flowers. The weather with the exception of the first three days, has been most disagreeable during the month, and very unfavorable to the production of high grade blooms. Notwithstanding the untoward conditions carnations were never better at L. E. Mackenzie's benches of Scott, Alaska and McGowan being excellent, the blue color of Scott being especially noticeable. Mr. Marquise is so pleased with Alaska that he intends to plant no other white for next season.

TUFF STUFF ON GREEN FLY IS TOBAC-OIL.

At P. R. QUINLAN Co's greenhouses was noticed a very fine batch of Hartshill, which will be just right for Easter; also a grand lot of callias, which latter are in demand here for funeral work and still pay well. It is almost superfluous to mention roses, which are always in elegant shape here, under the fostering care of Mr. Bard, but I may say that a house of Erie and Sunset is worth a little journey to those interested.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

Biota Aurea Nana.

This is a seedling of Biota Scupper Aurea, and originated 10 years ago in our grounds. The original plant measures only 36 inches in height, is of most perfect form, and surpasses all the other varieties of Biota Aurea so far introduced. During Fall and Winter the foliage assumes a beautiful golden color, and in Summer is of bright green. It has also the merit of being perfectly hardy in the latitude of New York. Nothing is more desirable in the way of a dwarf conifer. It has also proven valuable as a pot plant. Price 8 to 10 inches, \$2 per 10; \$12 per 100. 12 to 15 inches, \$3 per 10; \$15 per 100.

F. J. BERGMANN'S, Augusta, Ga. FRUITLAND NURSERIES. Mention paper.

BEER'S SPECIAL OFFER OF SEASONABLE STOCK

DOUBLE PETUNIAS.
Our stock of these is so well known to require special description; we offer good healthy plants from 3-inch pots, \$1.25 per doz; \$8.00 per 100, or a set of 15 varieties for \$1.50.

TUBEROUS ROOTED BEGONIAS.

Now is the time to plant for early flowering; the strains in the same as has been sent out for several seasons, the best that can be procured.
We offer
Singles in choicest mixture... \$2.50 per 100; \$20.00 per 1000
Singles in separate colors as named, ordinarily in yellow, orange and rose... \$3.00 per 100; \$25.00 per 1000
Doubles in choicest mixture... \$3.00 per 100; \$25.00 per 1000
Doubles in separate colors as named, white, rose, yellow, \$1.25 per doz; \$8.00 per 100

GLOXINIAS.

A most select strain of the Crossifolia type in the mixture, \$4.00 per 100; \$30.00 per 1000.

SPECIAL VALUE IN YOUNG PALMS.

Having an immense stock of young plants of the following sizes we are enabled to supply them at a better value than our current Trade List, by laying in a supply at once.

KENTIA BELMOREANA.
2 1/2-inch pots, \$2.00 each; \$15.00 per 100; \$140.00 per 1000
3 " " 6.00 " 45.00 " 400.00 "
4 " " 8.00 " 60.00 " 500.00 "
KENTIA FORSTERIANA.
2 1/2-inch pots, \$1.50 per doz; \$10.00 per 100; \$90.00 per 1000
3 " " 2.50 " 15.00 " 140.00 "
4 " " 3.50 " 25.00 " 300.00 "

LATANIA BONONICA.

2 1/2-inch pots, \$2.75 per doz; \$3.00 per 100; \$4.00 per 1000
3 " " 1.25 " 12.50 " 70.00 "
4 " " 2.00 " 25.00 " 200.00 "

We are as usual carrying an immense stock of the usual decorative sizes, a full description of which will be found in our current Trade List.

JAPANESE IRIS.—A collection of 24 of the choicest Krumper varieties in cultivation imported from Japan, \$1.50 per doz; \$10.00 per 100; set of 24 for \$25.00.

New Sword Fern, Nephrolepis Cordata Compacta.—We consider this the most valuable addition to our list of ferns for many years, and the most desirable sword fern in cultivation. 3-inch pots, \$1.00 per doz; \$10.00 per 100.

For a full list of Novelties as well as a full standard collection of seasonable stock, see our Quarterly Trade List, which will be issued about January 15th.

We are Sole Agents for Mr. Crozy for the distribution of his new Cannas in the United States. A descriptive circular of his latest novelties will be mailed upon application.

FERD. BOULON, Sea Cliff, L. I., N. Y.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Traffic Notes. Boston.

"One good day and then several poor ones," is the verdict of nearly all of the retail florists in this city on the condition of business. Balls and parties, dinners and other festivities are occurring in considerable numbers, and yet the retail business looked for at this season of the year is noticeable only by its absence. Roses have shortened up a little, and the demand is very good, while all other lines, with the exception of white carnations, are abundant at moderate prices; in fact, at prices that would have been considered cheap in preceding years.

E. M. WOOD was greeted by a large and appreciative audience at Horticultural Hall on Saturday last, when he lectured before the Society on "The Chrysantheum: Its Past, Present and Future." The upper hall was well filled by the audience, and Mr. Wood's paper, which was carefully prepared and of marked interest to all admirers of the chrysantheum, was admirably delivered from the platform. Next Saturday being the first Saturday of the month on which the Society's meeting is held, there will be no lecture.

A. G. COOK, of Shrewsbury, was awarded a first-class certificate of merit by the Massachusetts Horticultural Society on Saturday last, for his new seedling white carnation, Nivea. J. S. Bailey exhibited two fine pots of cyclamen, the flowers on one of which were double, and James Conley showed a very good seedling yellow carnation.

F. G. HENNING, who now represents the F. E. McAllister Company, New York, visited Boston and vicinity a few days since.

A number of growers from different sections of New England, as well as all the local and suburban representatives of the trade, went to the flower market, on Wednesday morning last, to see the exhibition of Ward's carnations, which was announced in the EXCHANGER last week. All were disappointed, however, as word was received from Mr. Ward that the exhibit could not be made until Thursday, Feb. 4. JOHN GALVIN, the veteran florist of this city, will shortly celebrate his golden wedding anniversary.

Montgomery, Ala. W. B. PATTERSON has recently added two houses each 90 x 22 ft., with shed attached. He reports a capital season, and is well pleased with his investment. His position as principal of the high school, and being the only florist here, places him in an enviable position.

Warwick, Conn. STEPHEN CHASE, of New Britain, has opened up a new plot of land newly arranged as his present grounds, and has ordered from France nearly 30,000 seedlings and choice ornamental stock to fill up the new grounds the coming Spring.

Elizabeth, N. J. JOHN BARKER has been awarded by a jury in the Union County Circuit Court \$250, with costs, in his suit against the Elizabethtown Gaslight Company, for damages he declared he had sustained through injury to his plants from escaping gas.

TUFF STUFF ON GREEN FLY IS TOBAC-OIL.

EBIE'S GAZONNET

THE LARGEST SINGLE VIOLET TO DATE

Larger than the California, darker color, better bloomer strong grower and sweet scented.

See Editor's notice in FLORISTS' EXCHANGER of April 4, 1896, under "Plants and Flowers."

A Good Paper.

Yours is a good paper. I advertise in it for our business.

HENRY R. RUPP & SONS,

Baltimore, Md., June 1, '96.

Augusta, Ga.

Traces of the destructive December storm are very evident here, a large number of the finest specimen trees upon P. J. BRUCE'S place were destroyed; havoc was played with smaller stock, particularly rooms, which were very soft, owing to the exceptionally warm fall. Following in the wake of the storm a sharp frost fell, which cut all tender stock back. At present, the weather is favorable for shipping, and extra hands are being employed, owing night and day with orders. A very good season is reported. The demand, which, owing to disturbances in Cuba and at the Cape, declined somewhat this season, has been compensated by an extraordinary call from Mexico. Preparation for growing crops on a larger scale are being made; some fifty thousand Market stocks are just planted for working next season. All the new varieties of roses are tried before being sent out, to test their adaptability to soil and climate. Mr. Beckman is very successful in the culture of camellias, and believes that with a tariff of 50 per cent., enough can be raised right here to supply home and southern trade. It looks that way, with a fine thrifty stock of 25,000 two-year-old plants. Azaleas thrive here, and bear a growth chiefly under slates, do not make such rapid growth as does the Belgian stock, requiring fully one season longer; it is believed these can also be raised with profit with a duty of 50 per cent. A splendid stock of one-year-old plants, ready to be pinched back, is in frames to be planted out in houses with slat roofs. It has been found that croton, acclaph and arbutanthes succeed beautifully in this climate, making remarkable growth, both indoors and out, the colorings are superb, surpassing what is usually seen in the north. Coleus, etc., have been entirely discarded for bedding purposes. A big stock of orange is raised, both for blossoms and fruit, a large quantity for orange blossom in Murraya exotica, which bears a flower very similar to that of the orange, both in form and standard. It is very free-flowering, and has a pretty habit. Considerable stock has been worked up of the ever-bearing peach, which was described in the EXCHANGE at this time last season. Stock will be sent out next fall, which will introduce a new class of stone-less fruits. W. M.

**Modern Greenhouse Heating.**

One of our boilers, 10,800 feet of two inch pipe, and sixty tons of coal will heat 22,400 feet of glass (four 20x200 feet double cable glasses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrigt" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

**CANNAS "Italia" and "Austria."**

**500 DOLLARS WORTH FOR 25 CENTS**  
Two years ago we offered the originator of these Cannas  
**1000 DOLLARS**  
for one plant of **ITALIA** and one of **AUSTRIA**.  
The offer was refused - \$25.00 asked for a part of the stock.  
That the plants were fully worth the price asked was proved by the enormous sales made subsequently at \$5.00 each, from top to six months ago.  
Owing to rapid propagation we can now make our offer.  
At 25c. each, \$25.00 per doz.; \$2.00 per 100; \$50.00 per 1000.  
At 60c. each, \$6.00 per doz.; \$45.00 per 100; \$450.00 per 1000.  
The prices for immediate delivery; and, large, home-grown roots. Send for list of **ALL THE NEWEST CANNAS** at popular prices.

# LIFE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX, NO. 7.

NEW YORK, FEBRUARY 13, 1897.

One Dollar Per Year.

## A PEARL of GREAT PRICE

NO! the PRICE is SMALL compared with the QUALITY.

### EXCELSIOR DWARF PEARL TUBEROSES.

"Every bulb's a pearl." Our Tuberoses bulbs are scientifically cured and cannot be surpassed in quality, while the price is no higher than charged for the ordinary strains \$7.50 per 100, for immediate or spring shipment.

**DON'T FORGET** that we carry FRESH STOCKS of all Florists' Seeds and Spring Bulbs. Quality the BEST MONEY WILL BUY and prices low.

### NEW MARGUERITE GIANT PEARL.

This new variety is superior in size and habit to any in cultivation. It is truly a giant in size, the individual flowers often measuring 3 inches and over in diameter. The snowy-white petals are arranged in two rows around a dazzling yellow center, and are of good substance. Habits of the plant is very compact, being much more symmetrical in growth than some of the older varieties now in cultivation. Ready for immediate delivery. \$2.25 per doz.; \$12.00 per 100.

.....NEW CHRYSANTHEMUM.....

## MISS LOTTIE D. BERRY.

(Certificated Under Name of Garret A. Hobart.)

This is a large pure white, incurved Japanese; very full and double, borne on a good, strong, stiff stem, well furnished with foliage up to the flower. Blooms in mid-season, and is a first-class keeper. Certificated Chrysanthemum Society of America, November 7, 1896.

Price, 50c. each; \$5.00 per doz.; \$35.00 per 100. Ready for delivery March 1st.

## PITCHER & MANDA, Short Hills, N. J.

JOHN N. MAY, Receiver.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## OUR PRICE LIST OF HIGH GRADE SEEDS AND BULBS

Will be found on Pages 27, 28 and 29, of the FLORISTS' EXCHANGE, January 9.

OUR Asters are grown for us by the leading European Aster seed grower, and the results obtained from our seed will prove true to variety and color.

**Simple's Superb Strain, Long Stemmed Chrysanthemum Aster,** colors white or pink. Price per packet, 25c.; per oz., \$2.00.

**Giant Comet Aster.** Price per packet, 25c.; per oz., \$2.50.  
**White Jewel or Ball Aster.** Long sought for color of this popular class. Price per packet, 35c.

**Dwarf Pearl Tuberose Bulbs,** 4 to 6 inches in cir., \$7.50 per 1000.

**Tuberous Rooted Begonias,** sound stock, 6 colors, separate, \$3.00 per 100.

**Gloxinias,** named varieties, \$5.00 per 100.

In Making Up Your Order Don't Fail to Include Some

## ALLEN'S DEFIANCE MIGNONETTE

Offered this season at \$1.00 per doz. and 35c. per packet, containing 1-8 ounce.

## F. E. McALLISTER CO. Seed and Bulb Merchants, 69 Cortlandt St. N. Y.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## Canna "YELLOW GROZY."

This valuable Novelty, proven by us for two years, is a CLEAR CANARY YELLOW; petals 1 1/2 inch wide, plant 3 feet, flower spike large, full and well rounded, often containing 20 to 25 full open perfect blooms at one time. Fine 3-inch stock March 15, at \$1.50 each. A bargain.

## Canna BURBANK.

THE AMERICAN SEEDLING, WITH GIANT ORCHID-LIKE YELLOW FLOWERS.

Splendid colored plate form, shows actual natural size. It excels all others of this new class in style and texture of its leaves.

MR. D. FERRIERE, of Needham, Mass., of the Society of American Florists' Canna Committee, who tested it with all the best now on sale, says: "Yellow Burbank is the best yellow in cultivation now, very large flowers of a handsome, bright shade of nearly pure yellow."

MR. J. T. TEMPLE, of Davenport, Ia., of this Committee, says: "I consider Burbank one of the best of this year's novelties."

MR. FRED KANTZ, head gardener of Booth Park, Chicago, and an expert judge of Canas at the World's Fair, says: "The flowers were much admired in the park this summer. The foliage is like rubber; it is always good; you can't tear it!"

PRICE, MARCH 1, EACH 75 cts.; SIX FOR \$4.00.

## CANNAS

The very best are quoted in our "Book for Florists"

Write for a copy. Ask for colored plate of BURBANK.

Second size, per 100, \$4.00 in Chicago, \$5.00.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

SEEK TRADE REPORT.

Points and information from seedmen, and all interested in this column, solicited. Address Editor Seed Trade, care of Florists' Exchange, P. O. Box 1695, New York.

European Notes.

The cold spell continues to affect the whole of western Europe, and sharp frosts, combined with heavy snow, have been sent from Madrid to the Highlands of Scotland, with about equal severity in each place. In Germany, also, especially in the eastern, a cold, wintry weather prevails. While the readings of the thermometer are not very low, the condition of the land. It is hardly likely that our plants are now being injured to any great extent, as they are well protected by the snow.

All outdoor work is at a standstill and trade, consequently, very slow. Europe is now so thoroughly provided with means of rapid transit that the old style of ordering, which was put forward for the season in one lump has given place to a "hand-to-hand" system of buying, which imports the goods in small lots and immensely increases the responsibilities and expenses of the wholesale dealers.

The horticultural congress for January 30 contains some fairly good illustrations of the new fringed and crested forms of cyclamen, the cold referred to in these notes two weeks ago.

In this connection it is interesting to note the use of the modern methods of florists in their methods of cultivation over those employed during the eighteenth century. In the "Gleaner," Director, published in 1759, the advice is given "to sow the seeds of the Persian Cyclamen as early as possible, and in six or eight years after their sowing their roots will show all their beauties in blossom, observation that every two years into fresh mold."

The French Society of Psychologists assert that a fatal infection is exercised by tulips on those who tend them. It is said that in Holland gardeners who cultivate tulips invariably die in a violent manner or are overtaken by disaster. More than twenty instances were put forward to corroborate this strange statement. This seems rather rough on Myhrer Due Van Turen.

New York. A Geffeler has succeeded to the seed business of G. Herrmann, at No. 413 East Thirty-fourth street.

Dahlin Tubers.—Before the United States Customs at New York, Dec. 22, 1896. In the matter of the protest of W. W. Barnard & Co., against the decision of the Customs at Chicago, Ill. The following opinion was given by Hunt, general appraiser:

The merchandise consists of the tubers of dahlias, imported into the port of Chicago, Dec. 22, 1896, by W. W. Barnard & Co., and upon which an assessment of 10 per cent. ad valorem under paragraph 2345 of the tariff act of Aug. 28, 1894. The merchandise is claimed to be cut flowers or decorative purposes. That the tubers in question are not glass as plants, but tubers of roots not edible. The protest is sustained."

The Free Seed Distribution.—We are in receipt of a pamphlet, from the Department of Agriculture, "Report of the Special Agent on Seed Distribution for 1896," being a reprint from the report of the Special Agent on Seed for the same year. The pamphlet gives a full account of the history of seed distribution to the public, and other things, including by whose order the seeds were mailed and to whom sent. It is interesting to note the methods of distribution elected

that the latter may not be reduced to the wretched level of the farmer? Why, then, should that vast assortment of new makers, the simulate Moses, Solomon and Lycurgus, now looking for legislation to enable them to distribute, as public aims among their fellow-citizens, the seeds of the pauper seeds developed by Congressional appropriation, to the detriment, injury and demoralization of the people, by shutting out pauper competitors—by excluding labor, which they declare is almost given away in Europe, from competing with high priced labor, the only thing that has any effort to crush out the seed business, by compelling it to come within Congressional charity, that will give away? What injury do seedmen do that your infant industry should be thus stopped out as the sole competitor to race with governmental gifts? (Signed.) J. STERLING MORTON, Secretary.

Feb. 3, 1897. Hon. J. Sterling Morton, Secretary of Agriculture, Washington, D. C. Dear Sir: I acknowledge, with thanks, receipt to-day of both your letters of yesterday. I have read them with interest, and with the conclusion that "the attention of the party coming into power should be called to the fact that the free and promiscuous distribution of seed antagonizes the principle of protection." Protection to the seed growing industry of America is in no sense offensive as being in the interests merely of a particular class of wealthy merchants or manufacturers—as the seeds are produced by small farmers throughout the country, and by the very fact that they are produced at home insure a much higher grade is quality than when grown in Europe, where the crops cannot be subject to the constant inspection of American eyes. (Signed.) W. ATTLEE BURPEE, Secretary.

TUBES FOR MAILING PLANTS.

The Mailing Tube does away with all outside wrapping, saves much time, and makes a secure package which cannot be smashed in the mails. It is made of stiff pasteboard, is light, economical and the best device that can be secured by the florist for mail purposes. The above cut shows tube closed at one end by cap, which is firmly attached and perforated to allow ventilation; the open end is generally stopped up with paper but extra cap can be furnished.

FLORISTS' Attention.

CINNAMON VINE ROOTS For Potting, Etc. BEAUTIFUL AND LIFE COLORED PLANTS FREE WITH EVERY ORDER.

I have a good supply of strong roots of this popular vine, especially suited to Florists use. This beautiful fragrant climber finds a ready sale everywhere. Three or three roots planted in a pot will make a dense mass of bright vines, completely surrounding a window, etc., making it a perfect bower of beauty.

Now is the time to lay in your roots. I supply many of the largest Florists in the United States and Canada. Try a thousand or so. The colored plates save time and talking and make them go off "like hot cakes."

A FEW TESTIMONIALS: From Deane L. Putnam in Epworth, The Cinnamon Vine used to grow in the garden, and when in bloom, it was very beautiful, and when in fruit it was very beautiful. It was sent me by Philadelphia had been transported with it, as ornamental in the house.

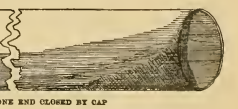

L. M. J. Clarkson, Author of "Art Studies," writes: "I have a very fine specimen of the Cinnamon Vine in my garden. It is a beautiful plant, and if it were more widely known you would be overwhelmed with orders."

B. Wilson, Mechanician, Pa., writes: "It blooms as early in the house as our Cinnamon Vine, and over and round a window, and will fill a room with a beautiful fragrance, and a beautiful watermelon."

PRICE OF CINNAMON VINE ROOTS: THESE ARE 100 for \$8.50 ONLY HALF 500 for 4.50 USUAL PRICES 250 for 2.50

EXTRA LARGE TWO YEAR ROOTS. For Counter sale, double the above rates. Terms cash, to accompany all orders, or will send C. O. D. on receipt of 10 per cent. References, Copartners, Green and Low, New York, N. Y., N. B. Bank, send your orders at once, as I have no stock on hand.

### ROSE NOTES.

What a delightful change in the weather we rose growers have had since my last notice—no more the temperature rising above freezing point in mid-May, but fine, successive, bright, sunny days with it. I have been busy with the hose, also my standby investigator, pure air, and, I may say, cutting fine blooms that I did not try to burst open in the past.

There is no question in my mind but that it is very unwise to try and get a scant supply of inferior flowers; while, on the other hand, if you refrain from cutting you will be able to supply your customers with a fine quality, and likewise have the quantity at your disposal.

The theory of not cutting so many blooms I cannot remember to read in any issue of this season the same as a tulip. I could not the most flowers and best returns are got from plants that are kept in a healthy and vigorous condition; whereas if forcing (which is not growing) is resorted to health and vigor are very seriously impaired.

In other words, the future is what we should always strive to look to. "Most probably your plants are dropped in to have a little chat about roses, and as he questions were pertinent they may be of some value to readers of this journal. "What are you doing with that four or five inches of air on?" he inquired. "I went to do that I'd get such a dose of mildew that it would ruin my plants; yet it don't seem to bother you. Last fall when I was here you had your ventilators way up and the air was waving the bushes to and fro. How is it?"

"Most probably your plants are much softer than mine, and if so it will be quite a while before they could stand so much. I don't want you to get the idea that air is the cause of mildew; on the contrary, when properly applied it's the best preservative of mildew I know of. Likewise, the best fertilizer, I am very careful in putting it on and reducing it. As soon as the sun warms the house up in the morning to 60 degrees I start with a crack, and by noon have as much on as will let the thermometer show you to be shielded, stand in the seventies. Where I have ventilators on both sides of the ridge, if I don't close up on the ventilators, you see, that allows air to blow over instead of directly in; again, in the afternoon, when inside temperature begins to drop, I start reducing until the temperature drops to 65 degrees with a crack on, then I close up. I always bear in mind it is very important in growing plants that a circulation of air be maintained all the time. As soon as the sun warms up, you don't keep your doors open to cause draft. If your plants are so soft as you say, I would advise you, as every opportunity, to carefully look after them during growing. You ought not to be troubled with mildew anyway, this time of the year, as so much more air has had to be used. However, if it does put in an appearance, I would advise you to sulphur and paint on both sides of the ridge, or to paint a strip of paper three feet long every ten or twelve feet will be sufficient to keep mildew out. Some use oil and sulphur, but I prefer the first mentioned, as oil

causes too much of a lasting, disagreeable odor."

"What temperature do you keep nights?" "That is according to outside conditions. If the outside reads in the thirties I run 55 degrees; in the twenties, 55 degrees; tens, 54 degree; zero and below, 52 to 50 degrees; never lower than 50 degrees, or there is danger of the plants losing too much of their foliage, which will give them a decided autumnal appearance. I will advise you to tie the thermometer prescribing a fixed night temperature. While I have an intellectual night fireman, I don't need that."

"How do you get the fireman to understand this thoroughly?" "Well, if you don't get the right kind of a man it is easily drilled into him; he will soon take an interest in his work and pride himself when you come around any time during the night that the houses are feeling good. Sometimes he will say a certain range was a little high, or was satisfied everything was rather wet, and I thought it best to let it go to about 12 degrees, which will begin to dry off. Then I slacken up; or, if they're a little down, I thought it best not to push them for all that."

"Do you come around here nights?" "Yes, I invariably miss one night. Sometimes I come in early in the morning, though. My day's work is done when I say good-night to my plants."

"What is the deal that you have a fine lot of young stock. I think this is where one of your secrets comes in. How do you manage it?"

"I have no secrets. Whatever success I may have achieved I attribute to attention to the minutest details, work, and being up to date by reading and studying all gardening literature, selecting from what I read all that I believe will be of value to me, and putting it into operation. To go back to your question about young plants, I will say I don't know of any other plant that gives me more pleasure to grow than young roses. As long as one starts right, selecting the proper wood, and is successful in rooting, it is by no means a difficult matter to produce good plants. The great aim is to bring them to maturity early and keep them in that condition all the time. From now right along is the time to look forward to next winter. Don't try to get a large plant in a hurry; constitution is what is most needed. A stout thickset plant, with a large, firm, fleshy foot, with eyes and spines the color of blood, when potted into a 3 or 3 1/2 inch pot will make the ideal plant of the future; while one that is lanky, soft, and as green as a leaf will soon drop out of the race. They should have an abundance of light, air and nourishment, and watering at the root must be attended to properly. Sometimes those in the center of the benches become rather wet, while those on the outside rows get dry. Mine are always gone before they spring with a small spray on the base, and those that are found to be on the dry side watered. It is a very easy matter, through the carelessness of an employe, to virtually ruin a batch of young stock by syringing such varieties as are susceptible to black rot, or by watering or by going over with the hose the whole lot and soaking them indiscriminately. I can give you an interesting receipt, and say the right kind of men are not to be had every day to perform this important work. They should be advised to get you to get one that takes an active interest in his work, treat him right and keep him. I consider one important point is that while they

are growing go over them as often as time can be found and reset, at the same time, selecting them into sizes, putting the tallest at the back, coming down with the smallest in front. It not only gives the smaller ones a better show, but resulting and turning them about does them so much good that I fail to find words to express my experience."

"Have you got all your cuttings in yet?" "No; such varieties as Hoste, Perle, Purple and Gator, which I don't plant before July, I find the first week in March is plenty early enough. These varieties are very fast and easy growers, and a young growing plant is much more preferable when planting time comes than one that is stunted and potbound."

"Do you grow more young stock than you do for your own use?" "I most generally have some over, and invariably get sold out. As for making a business out of that part, I don't think I could make my bread and butter at the ridiculously low prices at which they are now offered. While they sell for the present price I am very willing to let others cut their plants up and spoil them for nothing. It may pay some to do it who don't grow, and then they will get rich out of it anyway."

"What is your experience with the new wood?" "To be candid, I must confess I am rather ignorant about it, at the present at least, and therefore I wish to commit myself to Central New York. H. H."

### 25,000 GERANIUMS 25,000

**NOW READY.** Strong plants, 2 1/2 inch pots, \$1.50 per 100; \$3.00 per doz. Also bedding and basket plants later.

**Colicus Rooted Cuttings,** 75c. per 100; \$5.00 per 1000. Cash with order.

### WOOD BROS., Fishkill, N. Y.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

Greenhouse Heating by Hot Water.

Greenhouse heating by hot water is an experiment (not mere theory) that is fair, and rather expensive, whereas it should be the reverse, as it is undoubtedly the cheapest and most reliable for other plants or persons; but that it is not up to a very high standard of perfection, except in some particular cases, in the "Florists' Exchange," as well as in other papers.

To show to these questions often there is a mere "theory" instead of actual experience. The great trouble is that in the very little treatment given to planning a greenhouse completely and according to mechanical laws, instead of "a one-plane style" exists.

There is a mechanical law that requires study and experiment (not mere theory) that is a greenhouse building and heating, especially heating by hot water, in order to keep expense as close as possible, both first cost of the plant and afterward in running it.

To heating with hot water the first step is almost always a mistake; if not fatal, it is costly afterward in expense. In planning a greenhouse, the first and greatest attention is paid to a fundamental law of mechanics, that "something cannot be gained from nothing," instead of laws, "What is gained in time is lost in power," and "What is gained in power is lost in time."

A four-inch pipe, as a heating pipe, will hold heat longer than a one-inch pipe, and will require more "time" to heat it and get that power. And does it pay to use a pipe longer than the one-inch heat-pipe? The "theory" of hot water heating is a mistake, and it is the basis of ten out of ten trouble florists' have with this system.

Specific gravity is generally held as the law of the next order of mechanics, and not only this, but this is a grand mistake, and a very economical plan can ever be put up with it. One of the chief mistakes is to put a feature in hot water heating, but it is not the main factor, or the force or cause of the steam circulating through long lines of pipe.

In planning a hot water plant it seems to be the next order of mechanics laws, but a better result would be obtained, as water circulation is effected by purely mechanical laws, instead of specific gravity, which will not, never does, nor can it, be taken into account in a pipe, much less downhill.

The first intelligent action in heating a greenhouse, in planning the same would be to consider the length of the house, or houses; second, its height, width, and the amount of exposure and temperature to be secured in a particular house, or in each house. The first item, would give the size of pipe to use for radiators; the second and third items the number of lines, or the graduating.

The next step—the number of houses—would give the size of main flow to reach them. The second item, would be the situation of the heater, or boilers.

Given a house of any size, but say 100x300 feet, with a roof five feet over the roof (glass), and ordinarily built.

This gives about 2,400 feet of glass; and the next order of mechanics law, to three square feet of glass, for highest temperature, is the rule, about 800 feet of radiators, or rather more, if the heater is about 1,000 square feet to do the work. Here is a more exact calculation would come to be the next order of mechanics law, instead of specific gravity. In this house 800 square feet of pipe radiation is expected to be heated, or heated by hot water (without forcing) will do it. The size of the pipe will make some difference whether it is four-inch pipe, or one-inch pipe, and here is where a knowledge of "mechanical laws" is a benefit. "What is gained in time is lost in power."

The difference between using a 1-inch pipe, a 1 1/2-inch pipe, a 2-inch pipe, a 2 1/2-inch pipe, up to a 4-inch pipe will manifest itself, although only the amount of radiation (800 feet) is carried. The radiator will heat, and it will heat constantly, night and day, the larger pipes, once heated, might possibly be more economical, but there is a danger in a fluctuation. But where the heating is so varied as in daytime greenhouse heating, a pipe of one inch about 800 feet will give an increased expense in pipe, fittings, labor, and in fuel ever afterwards.

Where a force will carry 800 feet in one-inch pipe would not carry that much in four-inch pipe, and that force would be the "mechanical laws," and that increase would be in fuel and attention. Cannot be obtained from "Something" cannot be obtained from

"nothing," especially in water heating, and if a result is obtained, a sufficient force is required. The transverse area of one-inch of five lines each, of the house, if the valves were opened at the same time, could be heated in twenty minutes, or, in other words, the 100 square feet of water in the extra in the 1 1/2-inch pipe, could be passed through in twenty minutes; and at the same time, the 200 square feet of water in the 2-inch pipe would be passed in twenty minutes required, if the 2-inch pipe were used, and to get the same amount of heat, the 2-inch pipe would be required. The "law of compensation" applies here, for the same heater, on same given pipe, will be the same for the 1 1/2-inch pipe, the diameter in the house and on 2 1/2 times the amount of fuel; and if you were to crowd the amount of fuel in twenty minutes provided the "mechanical laws" were observed, the amount of fuel will be required over and smaller pipe, as the heater then would have to more than double its velocity; and as speed is generally augmented by an increase of power in and with water as the square of the velocity, the advantage of pipe just the right size is apparent.

The heating can be from an extended main, or a small number of houses, or in a plant, or the heating may be direct, to and from the heater, if a single house; or these can be done, and the heating may be of any length of house or any width, as the principle and amount of heating may be applied to any length of house, or any width of house, house out of the ordinary build.

The position of the piping has much to do with the circulating power, and the "law of compensation" and "specific gravity" will assist in determining its best position.

Specific gravity cuts quite a figure in water heating, as will be shown later on, but it is not the circulating power, as most generally conceived, and right here is where the trouble lies in water heating. "Mechanical laws" are aside from the way for a whim or notion, and the florist has to take the bill. A. J. HOYT, Ohio.

or valve is opened in a certain limit of time, say twenty minutes, then, if the heater were good, all the lines or circuits of five lines each of the house, if the valves were opened at the same time, could be heated in twenty minutes, or, in other words, the 100 square feet of water in the extra in the 1 1/2-inch pipe, could be passed through in twenty minutes; and at the same time, the 200 square feet of water in the 2-inch pipe would be passed in twenty minutes required, if the 2-inch pipe were used, and to get the same amount of heat, the 2-inch pipe would be required. The "law of compensation" applies here, for the same heater, on same given pipe, will be the same for the 1 1/2-inch pipe, the diameter in the house and on 2 1/2 times the amount of fuel; and if you were to crowd the amount of fuel in twenty minutes provided the "mechanical laws" were observed, the amount of fuel will be required over and smaller pipe, as the heater then would have to more than double its velocity; and as speed is generally augmented by an increase of power in and with water as the square of the velocity, the advantage of pipe just the right size is apparent.

The heating can be from an extended main, or a small number of houses, or in a plant, or the heating may be direct, to and from the heater, if a single house; or these can be done, and the heating may be of any length of house or any width, as the principle and amount of heating may be applied to any length of house, or any width of house, house out of the ordinary build. The position of the piping has much to do with the circulating power, and the "law of compensation" and "specific gravity" will assist in determining its best position. Specific gravity cuts quite a figure in water heating, as will be shown later on, but it is not the circulating power, as most generally conceived, and right here is where the trouble lies in water heating. "Mechanical laws" are aside from the way for a whim or notion, and the florist has to take the bill. A. J. HOYT, Ohio.

Chicago.

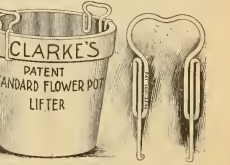

There has not been much change either in the price of stock or in the demand. If anything, the tendency of prices has been downward; \$7 is the very high price for any kind of stock, and from that down. Home trade is not what it should be by any means; shipping is slow, and, as a result, the best goods are wanted. American Beauty is coming in better, and the "Globe" and "Globe" are the best obtained for the very best. Harris is still the highest figure for prime being \$12 per bushel, your stock is \$14 at your own price, even as low as 25c. to 50c. per dozen. Callas are more plentiful, but, naturally, do not sell so well. The price of the ruling pipe, Valley, the very best, and they are fine, are down to \$3; from \$1.50 to \$2.00, and for the best, \$4 to \$6. Carnations are low; very few sell for over \$1.50 per 100.

There is one satisfaction as a rule most of the stock, save at times at some price, but many a grower finds the general average too low to be comfortable. The "Globe" and "Globe" are seen some of the finest freemans that have been coming into the market. Walter H. Brown gave me the "Globe" history of the growth: These same freemans are of the stock obtained eight or ten years ago, when the first bulb was sent to the market, and the bulbs continued as good or better than first obtained. The way they are grown, put in the soil in ten days before the bulb put, after the flowering period is over, care is taken to allow the foliage to die off naturally, the bulbs are then put in for the next year. When they are grown on this call, the bulbs being allowed to die down each year. When there is no longer any foliage on the bulbs, the under the greenhouse stages and kept perfectly dry. About the first of August, by means of a small hand trowel, down to the earth, selected into sizes, care being taken that those of a size only are placed together in the same pot. The bulbs are then put in flower along about Christmas or New Year's, and being placed in the same pot, and gradually out of the pot in February, or middle of March. Such flowers as these have been seen, long, stiff stems, of 18 to 24 inches high. Even now they sell at \$3, while the common run of flowers in the market are sold at \$1.50 at \$2. Surety says this care is well repaid, and cheap as frezias bulbs are, the price is very low for the care it takes always on for early planting, which, after all, appears to be important for their success in getting through for Spring business. B. D. SANDERS.

NEW INVENTIONS.

In this column we shall be pleased to illustrate and describe any useful new invention, the drawing or photograph of which accompanied by full description, may be furnished us by our readers.

Clarke's Patent Standard Flower Pot Lifter.—Retail florists, and others who sell direct to the public, are well aware that many complaints of palms

and other house plants lying can be traced to their having been kept in Jervis tubs, with three or four inches of water in the bottom. The neglect to remove this water, and to place the plants in a tub, taking out the inside pot, and the danger of breaking expensive jardiniere. The illustration below presented shows a simple device which renders the work of handling easy. This lifter is the invention of Charles W. Clarke, of Philadelphia, and is held in patent on the market by Henry A. Dreyer, Philadelphia. It is simple, and will last a lifetime.

Fall River, Mass.

J. S. H. Lannigan is the latest addition to the ranks, and distinguished himself as director of the ball recently given by the "Boston Club," which made up its enthusiasm what it lacked in numbers. The ball was a decided success and another is to be on the tapis.

C. Warburton and George Smith introduced the writer to the finest bowling alleys it has yet been his pleasure to witness, and with. To those of sporting proclivities I can assure barrels of fun and a host of pleasure. The "Boston Club" is to Providence and when one speaks of the seat of the convention he must include the City of Spaulding with W. M.

Springfield, Mass.

The Amateur Horticultural Society has elected the old board of officers. A meeting called to add ladies to the board of directors failed of a quorum, quite as easy to be the question posed. No exhibitions have been planned yet.

The Hampden County Horticultural Society will hold its usual winter show in July, and a first-class chrysanthemum exhibition in November. W. F. Gale has been chosen manager of the show, and again, also Secretary of the Agricultural Society, thus bringing the two societies together. If fate should direct, for the best interests of the horticultural agencies of the State, the horticultural societies and the agricultural society would join forces under one banner.

HERTHICK'S sign is again swung out, this time below the center of the business portion of the city, in a quarter never before invaded by a florist.

C. R. MILLER & Co. have given up their city market stand; J. F. Whight and Geo. Phelps have taken a small store, and Mr. Phelps will provide.

Mr. HUGHES' sweet pea circular is out, and opens the ball for one sweet pea show, only one growers look to this for novelties.

JOHN WILKINSON has taken charge of F. G. Miller's greenhouse.

It is reported that CHARLES R. MILLER has filed a voluntary petition in insolvent court. Greenhouses have not been in as warm a condition for some time as at present; the heavy fall of snow last week has banked the ground, and the plants are in a very bad way. The cucumber and tomato houses of Mr. Smith in the east section of the city are very well protected by fire. About time ago, no insurance.

Number of small dinners and a good run of order will have kept the store men reasonably busy. At the several Greenhouses have taken a pushing, W. F. G.

**Bottom Watering System for Carnations.**

Mr. Weber's recent carnation articles upon ventilation and watering suggest that growers may be interested in knowing of a way in which the difficulties under consideration may be more easily overcome. As stated by Mr. Weber's articles, carnations require a dry and fresh atmosphere and not moist, close surroundings; second, no water should be applied to the foliage at any time; third, sufficient water should be applied to every particle of soil, and the application must not be made until the soil is in the best condition. The method of the writer of this article wishes to bring before the attention of growers is the so-called sub-irrigation or bottom watering system. To be sure these suggestions cannot be put into practice this season, as carnations are all benched, but while the question is being discussed I wish to present it, hoping that many growers may plan to adopt it next season.

The sub-irrigation method of watering has already been described in these columns, but for the benefit of those who are uninformed I will give a short description of it. To begin with, the benches must be level and water tight, or, better than benches, solid beds thoroughly cemented. A good form of water tight bench is to build of strong, heavy lumber, then coat inside with 1/2 inch of the best cement.

Before putting in the soil lines of ordinary drainage will give a better result if properly built so that it will not settle when the weight of soil comes upon it. In any case a cement bottom is to be preferred to matched lumber, even though the boards be kept painted.

Before putting in the soil lines of ordinary drainage will give a better result if properly built so that it will not settle when the weight of soil comes upon it. In any case a cement bottom is to be preferred to matched lumber, even though the boards be kept painted.

Thus the foliage remains perfectly dry so far as applied moisture is concerned. Very little time is required in watering. If lines and benches are level every part of the soil will be soaked; as the water comes out the joints it spreads evenly. The passage of air through the tiles helps keep the soil in good condition.

As regards the amount of water to apply, with the hose remain on an experiment was conducted here at the Ohio State University upon sixty-plant plots of carnations, with a very marked result in favor of the sub-irrigation method. In the experiment were those plants that were sub-watered which were covered with a like method mentioned by Mr. Weber that they had a frosty appearance and were not attacked by the rust. The plants in the trench method at the university is not sub-watered this season, as another experiment is in progress with a very not desired result in favor of the sub-irrigation introduced; but were profit and a superior product the aim I would have had a foot cover on the method and advise growers to adopt it next season.

Columbus, O. W. R. BEATTIE.

**Plant Beauty.**

Henry T. Bailey Massachusetts State Superintendent of Drawing, delivered a lecture on Saturday last, before the Massachusetts Horticultural Society, his subject being plant beauty. Mr. Bailey said, in part:

"Plant beauty is of two sorts, beauty of color and beauty of form. In some plants, like the calla, beauty of form predominates; in others, like the pmony, beauty of

"Beautiful color has such qualities as purity, gradation, depth, and when colored flowers are massed, harmonious relations of the different hues should be secured. "There are five typical color groups or harmonies. The first may be called a balanced harmony. All green-leaved plants with white flowers are in this group. The second is dominant harmony, produced by combining tints and shades of one color, as for example a head of hyacinths or a

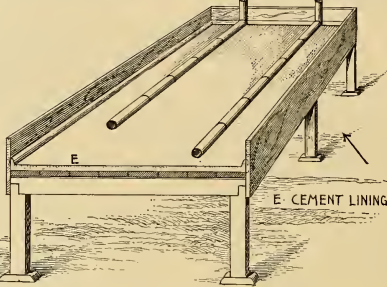

FIG. 15.—BOTTOM WATERING SYSTEM FOR CARNATIONS. Bench made water-tight with cement; Tiles in position.

color; in still others, like the gladiolus, the lines of stalk, flower and bud are as aesthetically lovely as their colors. Plants conspicuously beautiful for their form should not be gathered together in tight bouquets; each should be enjoyed by itself, or with two or three companions so grouped in a vase or other receptacle that the beautiful lines of each are enhanced by those of the others. Plants of lovely color, on the other hand, are more effective when massed. One snowball is insignificant; a bushel basket full of branches crowded with the balls of cream, white glowing against the rich green of their foliage is highly effective. In the arrangement of flowers of beautiful form, we have much to learn from the Japanese.

"The Studio for October and December, 1896, has suggestive articles with more

of double violet asters with no green foliage in sight. This combination of tints and shades, so common in the decorative arts and in dress goods, is rarely found in nature, and is least satisfactory as a harmony. The third is analogous harmony, composed of related hues of color. All green-leaved plants with yellow flowers are in this group. A bunch of gladioli tinted with violet-red, crimson, rose, scarlet, and salmon forms an analogous harmony of exquisite beauty. The fourth is complementary harmony—a harmony brought about by the juxtaposition of complementary colors. A violet-red camellia seen against its glossy green leaves is a complementary harmony; so also is a bunch of violets with their rich yellow-green leaves. The fifth is perfected harmony; a color group composed of analogous

were used to make this clear. The complementary and analogous colors were illustrated by means of the Bradley color wheel.)

**Planting Sweet Peas.**

We must abandon the trench method of planting sweet peas, says Rev. W. T. Hutchins, the sweet pea specialist, in his latest "Directions." The trench method was used to secure deep planting, and the substitute for deep planting is firming the soil. Since the trench method apparently causes the blight, we must stop it. Sweet peas do best in a heavy soil, and you can get very nearly the same effect if your soil is light by firming it. Plant, if possible in your vegetable garden, where the soil has been deepened and enriched in past seasons. And, if when your row comes it has been newly spaded, tread it down considerably before planting. This treading will hollow out the place for your row about right. (Tread enough so as to hollow it to about 2 inches deep and 2 feet wide) and it will thus collect moisture, and, by its compactness, will hold it. In this hollow, scratch the lines for your seed 1 inch deep, covering them only this one inch, and firm the ground above the seed with a garden roller or its equivalent. Your seed will thus be in this hollow, and when they come up do not fill in any earth about them, at least for six weeks. Every time you hoe, firm the ground compact about them, and don't let loose moles lift up. You will notice that vines that come up in the well trod path do not have the blight. This method applies to light soil in which the blight is troublesome. In the case of heavy soil, it settles soon of itself, and the surface of it must of course be kept from baking. In either case, after the buds begin to appear, put on a light mulch to shade the ground.

But in thus abandoning the trench method do not fall to have a soil of at least 12 inches of good loam, properly enriched. If you do not have such a place in your garden it may be necessary to dig a trench and fill it with good material. If you do, make it of good depth and of several widths, and put well rotted compost or tobacco stems in the bottom, covering with 8 inches of soil, and tread down well every layer so as to have a firm bed; or each feed of wood ash or bone flour may be profitably worked in. As to making phosphate so quick in its effect that a good time to apply it is just when buds begin to form. It is a fine plan in treating it to compactly within 2 inches of top and proceed as above.

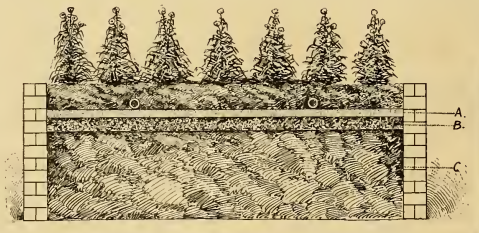

FIG. 16.—BOTTOM WATERING SYSTEM FOR CARNATIONS. Cross section soil bed, showing position of (A) Cement coating, (B) Concrete foundation, (C) Original earth.

suggestive illustrations of the fine art of flower arrangement, as practiced by the floral artists of the Suijise Kingdom. Mr. Conder's book on the subject, to be found in the library of the Horticulturist Society, will repay thoughtful study. Even the Japanese prints, now so easily obtainable, are not to be despised by the widely-awake florist.

"Form beauty is dependent largely upon contrast, proportion and curvature. (This was illustrated by numerous charts and blackboard sketches) of the grouping of plants or sprays is to be governed by the jaw of balance. (Illustrated.)

hues combined with a color complementary to the general effect of all the group. For example, the gladioli forming an analogous harmony if placed against a background of old popple-leaf leaves, a rich bluish green color, would be greatly enhanced in color effect, and the white would form perfected harmony. A bowl full of pansies is in perfected harmony. The analogous group runs through varying hues, from purple-yellow in the flower centers to the yellow-green of the foliage. The complementary effect of this group is to be seen in the rich purple of the petals. (Charts, diagrams, and bouquets of flowers

### Sedsmen and the Tariff.

#### Editor Florist's Exchange:

I cannot refrain from refuting the assertion of B. in regard to American agricultural labor which he certainly misrepresents. I have been a florist since I was a boy that is employed on seed farms. In early life I was a wage-earner myself, but since 1885 I have been an employer of labor, and never have been able to procure labor cheaply, or have it for board. Misquoting the negro labor of the South does not represent the farming community of this country. If B. will take the trouble to investigate this matter he will find that over a large portion of our country, the biggest proportion of agricultural labor is employed by the month or year, and that at an average wage of \$15 or more per month, with board (this is a low estimate, as I do not wish to exaggerate), \$30 to \$30 per month, without board, and at \$1 per day, without board. We pay our men \$4 per day, and they are content to stay for not six months. In all of the Middle and many of the Western States, the farmers are as anxious as soon as spring opens, and cannot end them until after the gathering of his corn crop, which they might have done in the fall.

We have been able to pay these wages at a profit until this tariff tinkering began, four years ago. Now, our men have the best of the bargain.

Your correspondent B. speaks of the money that is paid to the farmer, and says better paid than our laborers. If I am rightly informed, the majority of the people in this country own very small amounts of their own, and by hard work and frugality, eke out a subsistence that would in any healthy community be the part of our Northern agricultural laborers.

I say again to Mr. Allen's views on this first of our protection, which is a direct protection to our farmers and laborers, and not a tariff for the benefit of the farmer no matter where he gets his goods. Our own markets are the best in the world, and no one will sell his goods in our market until competition will govern the prices. If it does make prices low, our farmers and laborers will be benefited. If it does not, the Old World, will get what there is. Protection gives us our market and enables us to pay our labor the highest wages that a better paid labor of this country that made it what it was and should be now. We earn fair wages, keep money circulation and makes business better for every one. We cannot expect better times until we pay our money to our people and apply to the pauper labor of Europe and elsewhere.

CHARLES BLACK.

### The Nursery Tariff Question.

#### Editor Florist's Exchange:

In my letter of Jan. 26, as printed in the last issue of the "Exchange," a typographical error in the figures of an erroneous statement, as follows: "3 cents per cent" is equivalent to 6 per cent. on \$100,000.00. It should have been stated that \$5 per cent. should read: "3 cents on \$5 per cent is equivalent to 600 per cent. on \$100,000.00." It should have been \$5 per 1,000, which should read: "3 cents on \$5 per cent is equivalent to 600 per cent. on \$100,000.00." It should have been \$5 per 1,000, which would read: "3 cents per cent would pay 12 per cent. under the same conditions as above."

The anticipation that the results of such rates of duty will infuse life and prosperity into our people and apply to the collateral question of tariff, and I do not believe there will be that revival and improvement in business conditions that I hope for, whatever the new tariff may be, until the currency and financial conditions of the country are in such a state that its permanency and stability (as at present) are in a better understood and logical condition. I do not believe there is less banking up the money on all sides, but I believe that that appears to be the case at the present time, in the effort to apply a forced remedy to existing conditions.

FREDK. W. KELSEY.

Answers Selected from Those Who Know.

(7) Hot Water Heating.—Last September determined to heat my two greenhouses, 70x18 and 60x14 feet, with hot water, procured a No. 7 Dancy boiler with 3-inch pipe, and employed the down hill system. Five 2-inch lines (or flows) running into a coil under the benches; coil of seven 2-inch pipes, 12 feet long, was run down hill back to the boiler each side the even span 70-foot house, and on the same principle was run into the 60-foot house. My plumber claimed that there was no better principle of heating than this. My own idea is that there should be more returns than these. Although the heating is good, it is ten degrees lower at the end furthest from boiler, than it is in the house. The low temperature—lower end say 40 to 45, end nearest to boiler 55 to 60. The house 60x14 contains rooms for heating. My plumber gets 65 to 70 degrees, further end 50 to 55 degrees. What I want to know is if the principle is as good as could be arranged, or would more returns have given a quicker circulation?—CANADIAN.

The difference in the temperature at the end of the pipe, is a matter of course. It is a fact that there are seven 2-inch pipes in each coil supplied through one 2-inch flow pipe, and the temperature of the water has been not over four pipes in the coil the temperature would have been more even, but that is all about care to have the coils of the above length for single flows and returns. Even with this arrangement, the water in the house runs away from the heater and is brought back in a single pipe from the farther end, it is not as warm as it would be if it were brought from the heater will be as warm as the other, unless there is a short coil across the end, and the temperature of the water in the coils cools ten or more degrees before it reaches the end, and of course, a smaller coil will heat the water more quickly at the end furthest from the heater than it will. If the flow pipe runs overhead to the boiler, it will be as warm as the water in the heat will be comparatively even. I do not quite understand as to the number of pipes in the house, so that I cannot say. He speaks of having five flows, and as he has two houses it looks to me that he must have seven flows in each house, and three in the other, if my house (the saw row) one is to be kept at 60 degrees and the other at 65 degrees. I will give you the same number of pipes in each, and although no minimum outside temperature is given, it will be sufficient for any climate, each supplying a coil of four pipes, will be sufficient for either house. This will require thirty runs, instead of the forty now in use. This will give a much more rapid circulation and the pipes will be warmer than they are at present.

It is not a matter of course that the temperature at the ends of the coils is the same when seven pipes are supplied by one. It is a matter of course that the temperature will be easier to make the change if the present coils are not disturbed, except to the extent of the pipe. The temperature will be lower than the other. Then carry the flow pipe overhead and connect with the boiler. If you have a single flow pipe at the lower end of each coil with the heater circuit will be completed.

The temperature of the water is rather more than should be carried by a single flow pipe, the excess of radiating surface in the coil will be sufficient. The range in the coil will be hottest at the farther end there will be but little difference in the temperature of the ends of the coils.

L. R. TAFT.

(48) Heating by Box Coil.—Kindly tell me the size box coil required for a rose house 8x32 feet, faces south, long slope to south, and a 10-foot run on the front and back ends. The house has a peak at the 9 feet to peak. Also state number and necessary for flow and return. Building is 10x10, 12x12, 18x18, 24x24, 36x36, 48x48, 60x60.

—For a rose house of the above size about 128 cubic feet of pipe will be required. This can be secured by using two flows and two returns, each of 1 1/2-inch pipe. The flows may be overhead and the returns under the benches, or both may be under the benches.

L. R. TAFT.

(40) Hot Water Heating.—I have a greenhouse 87 feet long, 10 feet wide, standing east and west, door at each end; a five foot curb on the east end; a two foot curb on the west end; a two foot curb on the south; about 20 inch glass front, facing south; about equal span ridge 3 feet. To heat this greenhouse I have bought a boiler house, 87 feet long, 6 feet wide and 2 feet high. I want to heat the house and frame with the boiler, and to furnish the hot water, and the latter to 40 degrees. The coldest we ever have it is about zero. Please tell me how to connect the boiler with the house and the latter to 40 degrees. The coldest we ever have it is about zero. Please tell me how to connect the boiler with the house and the latter to 40 degrees. The coldest we ever have it is about zero. Please tell me how to connect the boiler with the house and the latter to 40 degrees.

—For a house like that described to be heated to 65 degrees with 2-inch pipe, I would use two flows and eight returns. The flows would be carried on the rafters about two feet down from the ridge (one on each side), with a slight downward slope and the returns would be carried on the walls, which can be in the wall, as will be most convenient, and the boiler would be placed that will not be injured by the heat from the pipes, one of the returns could be carried in a hole in the wall.

For the pit three pipes will be required, which can be arranged with the flow along the east wall, and two returns along the south side.

L. R. TAFT.

(50) Heating by Hot Water.—Wentland to heat a greenhouse 22x100 feet, to be heated by hot water, 1 1/2-inch pipe to be used. The temperature of the water may be 114-inch pipe will it take to heat to 60 degrees outside temperature below zero. Please tell me how much of the pipe required, and what would be the best size of piping and how much of it would be required to heat the boiler. Also what size of fuel coal will be used. Also give size of grate and funnel.—S. BROS.

To answer the above requirements the house would be heated with six 2-inch overhead flows and eighteen 1 1/2-inch returns. One of the coils should be run on each side of the house. The grate should be about 20x36 inches, and the box coil should be made of six coils of 2-inch pipe 5 feet long each. The grate should be 24 inches wide. The funnel should be 12 inches in diameter.

L. R. TAFT.

(51) Peat—Subscriber.—The material, sample of which you send, is no good for pot or bench purposes; it lacks the character of peat, being entirely deficient of humus. The material, if such is applied, the material dissolves. It may make good garden soil, if mixed with some other material.

(52) Gloxinias.—John Kniveton—A favorable temperature in which to start gloxinia bulbs is 58 to 63 degrees. They can be started an time now, or in 10 inches up May.

(53) Harvesting Moss.—Sphagnum should be delivered to orchid growers and others who use it in fresh state, as possible. What is needed is what is termed "live sphagnum," so the period of collecting must be taken into consideration. The material can be best disposed of, if collected, the present should be a good time.

(54) Fumigating Violets with Nikotin.—The article in the 21st issue of the question-table of Nikotin in three parts is very interesting. The article is being put into each pan. In one hour the fumes will fill the house entirely. Vaporizing will be done in a flower pot. The house as well as at night, without damage to flowers.—J. V. M.

(55) Worms In Rose Beds.—Wm. S. Young.—In the rose beds of several kinds can be oftentimes driven out of a bed by drying it out. The grub will be driven out of the soil, and many will fall over the side of the bed. But it is not always possible or expedient to submit the beds to such a process. The next best method to adopt, is to water the soil in the drains, and to put out with pure lime soil. This, properly made from quicklime and thoroughly clarified, will be found to be a very effective remedy for these pests, and usually they try to squirm out of the soil while the lime is being put on. The lime will be so hot that the grubs will be killed outright. If the lime is at all dead, it is not possible to clear the soil of the grubs. The lime must be live. Soot water will also drive worms out, especially earth worms; but with the use of lime, the soil will be improved. It is more dangerous of injury to the roots than there is from the application of lime. From the application of lime is not quite so dangerous; in fact, it often proves beneficial to the plants themselves.

—In reply to question 53 in January 30 issue, I will say that bluish pile of carbon, if applied to the soil and followed up, eventually will kill the grubs. The balls of cotton with this material, and a little water, will be found to be a cheap and easy way of getting rid of them as near as possible; keep a close watch for the grubs, and if they are found, the cheapest plan is which to get this article in Taylor's "Fumigating Carbon bluish pile," and if you have any doubts, write to Edward R. Taylor, Carleton, Ohio.—R. H. COMSTOCK.

## Indianapolis.

The February meeting of the Indianapolis Florists' Club was held at the residence of John Bitterman on the 3d inst. The new officers taken on for the year were: R. A. McKend, president; Alvin Schreiber, vice-president; H. W. Riemann, Morris and East streets, secretary and treasurer. The matter of a spring show was up for discussion, and it was decided that as we are to hold a fall show, the idea of a spring show, to be held in April, was dropped. The present, two shows in one year, not being advised.

—In consideration on carnations, especially Daybreak, and the eel worm in roses, were topics brought forward by Herman June, and J. B. Hatfield, and discussed by J. B. Hatfield, Mr. June to read a paper on the action of the eel worm, and J. B. Hatfield to make the present, two shows in one year, not being advised.

## Orange, N. J.

The Floricultural Society of New Jersey held its regular monthly meeting Monday, Feb. 1, President McBorie in the chair, and about sixty members were present. The proposition to hold a fall show received attention. Dr. Kitchen was of the opinion that the show should be held, and fully realizing the necessity of calling in outside aid, suggested that the executive of the Memorial Hospital Committee, the Ladies of the Exhibition, and the Horticultural Society be asked to cooperate, allowing them a third of the cost. At least ten florists will attend. R. A. McKend has been confirmed to his bed for four days with kidney trouble.

R. C.

**Fumigating Greenhouses With Hydrocyanic Acid Gas.**

In the course of work on the fungous diseases of greenhouse plants we have been forced to take notice of a number of insect pests, which if left alone or destroyed by means of the sprays used, would seriously interfere with the progress of the main work in hand. Tobacco, for instance, in any form is not always safe for some crops, as under certain conditions it may render the plants more susceptible to disease.

With a view of finding an effectual means of destroying some of the more common insect pests, especially aphides, hydrocyanic acid gas has been used under the direction of Mr. Alb. R. F. Woods, on a small scale to show its entire practicability, at least in the case of violets. We recently called attention to this matter in the columns of THE FLORISTS' EXCHANGE (December, 1896, page 1193), and since this note we have received a number of requests for a full and complete explanation in calculating the space in greenhouses, amounts of materials to use, etc. For the benefit of those making the inquiries we take this opportunity of answering the questions as far as we are able.

Figures 1 and 2 show cross-sections of the two styles of greenhouse structures now in general use. The house shown in figure 1 is an even span, 75 feet long, 9 feet 6 inches wide, 10 inches on the sides, and 4 feet 2 inches from the beds to the ridge, with a walk 30 inches wide and 2 feet 10 inches deep. It is divided into triangles, accurately the number of cubic feet of space in this house, and to this draw lines from the ridge and gutter plates, as shown in the sketch, and mark the respective inches in feet and inches on each. The result is a division into triangles, rectangles, and from these the cubic contents of the house may be computed. For example, the number of cubic feet in the walk (figure 1) is found by multiplying the depth, 34 inches, by the width, 30 inches, and then by length, 75 feet, or 900 feet, and dividing the product by 1,728, the number of cubic inches in 1 cubic foot, as follows:  $34 \times 30 \times 75 = 7650$  cubic feet. To find the number of cubic feet in the space between the bed and gutter plate, multiply 9 feet 6 inches by 10 inches, then by 75 feet, and finally divide by 1,728, which will give 393.75 cubic feet. It will, of course, be understood that in making this calculation the feet must all be first reduced to inches.

The rule generally given to find the area of a triangle is to multiply the perpendicular by the base and divide the product by 2. The result of this is as follows:  $10 \times 30 = 300$ . Thus, to find the contents of the space above, multiply by six and divide the product by 2, as follows:  $300 \times 6 = 1800$ .  $1800 \div 2 = 900$  inches  $\times 2 \times 3000$  inches, or 75 feet equals 10200 cubic inches, divided by 1,728 cubic feet, the result is 589.75 cubic feet. The total number of cubic feet contained in the roof, thus, is 393.75 cubic feet multiplied by 2 equals 787.5 cubic feet. The total number of cubic feet of the dimensions given as follows:  $254 \times 393.75 = 100,425$ ;  $1,318.75 \times 2,135.41$  cubic feet.

For fumigating violets use 0.15 gram of potassium cyanide per cubic foot. Thus, a house, as shown in figure 1, would require 2136.41 x .15 = 320.3115 grams. To reduce this amount to even 1/2 ounce, the number of 14 parts of commercial sulphuric acid and 1 part water. That is, where 11.29 ounces equals 1 ounce, more should be added in such ounces by weight of sulphuric acid, and 1/2 ounce of water.

Figure 2 shows a section of a different style of house, the cubic contents of which may be determined as in the preceding. This house is 120 feet long, 18 feet wide, front wall 5 feet 6 inches, and rear wall 4 feet 6 inches. It will thus be seen that the size of a house of any given shape or style can be figured out, and the amount of material necessary to fumigate it ascertained.

After determining the number of cubic

feet the house contains, and the amounts of materials necessary to make the fumigation, arrange the ventilators so that they can be easily and quickly opened from the outside. This is absolutely necessary, as the house should be thoroughly ventilated as soon as possible after exposing the plants to the gas the desired length of time, and it would be almost certain death to re-enter the house to open ventilators. All having been arranged, lock over the house and stop all large cracks,

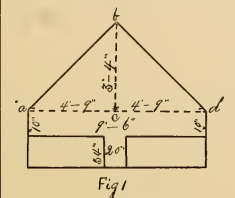

Fig 1. EVEN SPAN HOUSE. Showing method of calculating space.

bag in position, taking care that the bag does not fall into the jar before reaching the door. If, however, it should fall, hold your breath and make a rush for the door, for it will mean death to breathe the gas. Everything being in readiness when the door is reached loosen the string, allow the bag to quickly descend into the jar, and immediately step outside and close the door.

The plants should be left exposed to the gas for exactly twenty-five minutes, and

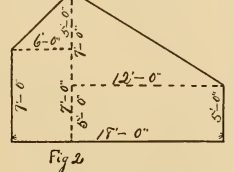

Fig 2. THREE-QUARTER SPAN HOUSE. Showing method of calculating space.

through which the gas might escape. It will also be well to close the roof from the outside. The water will fill the cracks between the glass and make it nearly airtight.

Everything being in readiness, get a 1/2 or 2 gallon earthen jar, of as small a diameter as possible, so that when the acid and water are added, the potassium cyanide will be covered. Place the jar about the center of the house, provided the latter is not over 75 or 100 feet long. If longer than this, it will be best to use two jars, placed in the walk about an equal distance from each end of the house. Tack a small stick or lath across the walk to the edges of the beds, directly over the jar. If, however, the sides of the walk are not of sufficient height to allow the bag to hang above the jar, tack a piece of board to each side of the walk, and the lath across these, as shown in figure 2. Tack a string from the junction of this stick to the door, and fasten one end of it there where it can be easily reached. Procure a small paper bag (two pound bag), large enough to hold the

then the doors and ventilators opened. This should be done from the outside, all arrangements for doing it having been made beforehand. When the doors and ventilators are opened wait 30 to 35 minutes before trying to enter the house, and even then enter with caution.

The gas should be used at night, or after the sun goes down, as the increased temperature during the day causes it to penetrate the tissues of the plant more quickly, first on account of its increased diffusibility, due to a rise of temperature, and second, because the plant has its stomata or breathing pores, open, and is taking in the gases of the air in order to make sugar. It is quite possible that if the temperature were low and assimilation could be stopped this gas could be used in daytime. In decomposed by light, but it appears from experiments so far that the gas resulting is probably very effective in killing insects, and not so dangerous to plants. However, additional experiments will be necessary before the gas can be used in this way with safety.

potassium cyanide. After placing the cyanide in the bag, tie it to the end of the string at the jar, so that it will be suspended over the lath and just above the jar, as shown in figure 3. In this way when the string is loosened at the door, the bag and contents will sink into the jar. After this is properly arranged, move the bag of potassium cyanide fastened to the string to the other side of the house, and then when putting the other materials into the jar. Then pour in the required amount of steam should arise from the jar, showing the acid is all added, a considerable amount of steam should arise from the jar, showing that the water is quite hot. If, however, this does not occur when all the acid has been added, more should be poured in to cause the desired evolution of steam. After this, carefully place the string and

then the doors and ventilators opened.

When using the gas endeavor to have the plants a little on the dry side and the temperature relatively low. Use potassium cyanide, 50 per cent. pure, and commercial sulphuric acid. The former can be procured for about 35 cents per pound, and the latter for from 3 to 5 cents per pound. At these prices the gas can be made very cheaply. It is at about 15 to 20 cent per 1000 cubic feet of space to be fumigated.

In conclusion, it may be said that, following the above method, we have found the gas very effective in killing both green and black aphid on violets. One fumigation was sufficient to thoroughly eradicate the pests from badly infested plants, and what is just as important, the houses one hour after the work was done were as sweet as if they had been exposed to fresh air.

**New Orleans, La.**

A brief visit from Old Boss will be gladly welcomed by the New Orleans grower, and check other outdoor stock. Owing to the continued warm weather (which capped the day with a hot sun, the thermometer stood at 80 degrees at noon), roses especially have been in abundance, and the grower has been able to supply as supplied from outside cities, and when Rose, H. R. H. J. E. M. M. and C. E. B. do considerable store business, but under existing conditions it is an open question as to how growing under glass, to any extent, can be made profitable here.

C. W. ECHLING is cutting some superb *Maman Cook*, grown in a cool house in solid beds. *JAS BRADY* is doing likewise. M. COOK has a magnificent crop of *Marechal Niel* roses. *Marie Henriette*, while *Briele* and *Testout* do well under similar conditions; so that I would not have some other variety. The latter is well known as a fortune awaiting anyone who thinks of taking such a venture as has been addressed to your correspondent here.

It is contended there is money in raising plants for export. The prevalence of the water hyacinth, which is a pest in this section. Mr. Virgin extends good wishes to the grower of his store, and as the nymphs germinate quickly from the seed, will soon arrive at a stock of them. His note on *Parsons* and *Mr. Fouts* experimented largely; and although this has hardly been a success, it is a good thing that *Parsons* as being quite hardy. He has left this variety, with *N. Dorothea*, outside all winter. The latter was planted early last Spring and survived a cold spell. A large tract is being converted into a lake and a stock of them will be available in kind of palm which will thrive here is being raised, and the result must be soon known. The grower has a local market, which is well equipped with a superior stock, well and creditably grown.

E. VALDELO is a highly successful grower of palms and ferns.

C. HOLST is cutting some very good *chrysanthemum* *J. Cannell*. This variety has been most profitable to him this season.

**Atlanta, Ga.**

The hottest fall experienced in this city in many years places the boys, who are all gardeners, in a quandary; it was a difficult task to keep stock alive after being planted and only now are heavy cuts recorded.

WEST VIEW FLORAL CO. were earliest to try their supply and filled all orders. Their method of growing, which tends demolishing one range, and by lengthening several houses will give them a big block.

BROOKWOOD FLORAL CO. are cutting fine stock; in fact one could hardly realize the profits of this business. The experience of the past season it is positive as good results can be obtained here as anywhere.

MR. SEALA is justly proud of his house of violets and can claim the distinction of being the first to raise *Marie Louise* in this city. *Marie Louise* are first-class. He will go into this branch here as soon as the season opens. Gardeners have done but fairly; plants failed to recover, as did the roses. It has been up to time of writing has been very fair.

C. A. DAHL CO. have had a very good season of decorating and funeral flowers. *W. W. B. Co.*, who recently lost his wife, has called for Europe for a brief visit. Mr. Ross, of New Orleans, has taken charge of the store in his absence.

W. GRISHAW, of Brookwood Co. is suffering with a severe cold. W. M.

**Jersey City.**

GEORGE KRUSE, New York Bay Cemetery, has a very nice story office. His store is nicely fitted up in every way, its size is 22x29 feet. To connect the above with the store, he has had a new building built an snook house, 30x49 feet. The work was done by Hitchings & Co.

F. H. DORSETT.

Boston.

The general tone of the flower business this week is an improvement of the past few weeks, and without any great rush in the market...

In the market stock moves a little more readily, though prices continue low. There is yet nearly a month before Lent...

Horticultural Society.

The prize exhibition of the Massachusetts Horticultural Society was not exceptionally large, but was remarkable for the extra quality of the exhibits...

EDWIN LONDALE is growing more American Beauty this season, and while not so early as the red bell, it is very promising. The familiar sight of large sprays is no more, the recent demand...

The scarcity of flowers of the past few weeks is at an end. All kinds are now in plentiful supply; in fact, in some things almost a glut is being put out.

One of the most interesting features of the most favorable season was an exhibit by M. H. Walsh, of Wood's Hill, of a dozen specimens of his new seedling lily white rose, called Norfolk...

At this meeting the prize was given to the planter of the best red rose, which was a variety to a marked degree, with their long narrow petals rich and bright...

CARNATIONS.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

American Carnation Society.

Arrangements are well under way for the coming meeting on the 18th and 19th inst. The programme for the meeting and entertainment will be about as follows:

Address of welcome—His Honor Mayor Caldwell.

Response—William Scott of Buffalo, N. Y.

Address of welcome in behalf of the Florists' Society—President E. G. Gillett.

Response—E. H. Michel, St. Louis, Mo. Secretary Herr's report.

Treasurer Charles H. Allen's report.

Address of President Richard Wittermeister.

Discussion of president's address.

Piper by W. R. Shelmire, Avondale, Pa. Discussion of same.

Vocal solo by E. H. Michel.

The above is for Thursday evening, at 7.30 o'clock.

Friday Morning Session.

Under the management of the Florists' Club by Henry Weber of Oakland, Md. Discussion of same.

Miscellaneous business.

There will also be a session on Friday afternoon at 2 P. M., for election of officers and selection of a place of meeting for 1898.

Thursday afternoon, at 2 o'clock, starting from the City Garden, 609 West 12th Street, the visiting florists are invited to make a tour of the Queen City in company with a new pleasure.

This trip will occupy about four hours and will give our visiting brethren a chance to see the various business enterprises.

A view of Cincinnati in general. Friday evening, at 8.30, a banquet will be given at the City Garden, 609 West 12th Street.

The Toastmaster Giesy of the Lockland Lumber Company has been working this part of it, since he came to the city.

New Varieties.

I would like to say a word in regard to new introductions. Of late there has appeared in the columns of the "Exchange" various articles in regard to the dissemination of the qualities necessary to insure their election as standard commercial sorts and

I will confine my remarks to carnations. It is now to draw the line so close as to exclude all carnations which are not good money-getters and standard sort commercially. I fear these words will not be greatly liked. Variety is a necessity. Take for instance William Scott. Of all the carnations now in the market, this has been the most profitable. It seems to thrive alike in all localities, and for this reason it is given a new name.

The late carnations which have come from the market year after year have caused its familiar form and color to become to some extent monotonous. This has to a large extent lessened its popularity, and it must be admitted that it is losing in public favor. This has caused me to believe that it will no longer be as profitable to grow in large quantities as heretofore.

It is my duty, however, to advise my friends that the new varieties which have been introduced in this variety need never go abiding, and that it will doubtless be, for some time to come, a safe and profitable investment. This is an instance of how me must be able to provide.

The era for introducing new extends into the realms of flowers as well as in everything else. If we would be abreast of the times we must cater to public taste, and so long as the public demands new things we must supply them. I am not willing to admit that we are setting our backs to the future. I believe that we are advancing steadily. The last meeting on the 19th inst. sent out every year is an indication that more and more attention is being given to the raising of flowers.

There are many things which are more experimenting now where only a few did a short time ago, and are realizing that they can pay no too small a price and bring in light some of her wonders as well

as others can. Therefore, it is not surprising to see many new varieties offered each year for trial and to be abandoned. As the case may be. Most of these new introductions are offered as improvements over existing sorts, or they exhibit sufficient good qualities to justify their owners in putting them upon the market.

That climate and locality exert a great influence over different varieties cannot be questioned; this has been noted previous many times over. The numbers and varieties that do equally well in all localities is very small, indeed. In evidence of this fact, I might say here that McGowan has never been the grand stand-by with us as it has been in other sections. I regard Uncle John as a white its superior many times over. If, therefore, a grower has a new carnation of promise, whither after trial of several years, proves itself superior to existing varieties of same color, or if the color alone is an improvement, would he not be justified in disseminating it as a reward for his pains and labor? I think so. And if, upon trial, it proves a partial or total failure in other localities, must he hold it accountable when he has judged and tested it with the best material present. I believe, would answer "No."

But there is another side to this question. It refers to the practice of disseminating varieties which do not exhibit at the place of their origination, qualities sufficient to warrant their dissemination. This may arise either from a love of money or a "kick judgment as to the necessary prerequisites of good coloration is either added to the good reputation of the originator. On the contrary, they will prove to be of inacceptable injury, and will serve to make buyers more wary of any future introduction of such a character.

A great many new carnations are being offered this year, most of which give promise of being profitable. The florists who are now considering the advisability of investing in some of these, and who wish it something like a consolation with most of us, there is very considerable interest in it. It will depend largely on the buyer whether or not investment in any of the new varieties will pay for itself. If he is alive to the requirements of the carnation, and has good success generally, he need not be afraid to experiment. His disappointment comes more often to those who, either from ignorance or carelessness, have poor success with many varieties, as they are continually looking for something they will never see; that is, a variety that will flourish and be profitable under the most adverse circumstances.

I would advise all those who can possibly spare the time and money to make one of the American Carnation Society, to be held in Cincinnati on the 18th and 19th of this month. This will give an excellent opportunity to see the new carnations which are being offered to the trade this year, as well as the most of the older varieties on exhibition. To the average widespread grower such an opportunity is all that would be necessary for him to make an intelligent selection. In addition to this the benefits to be derived from attending meetings are many. It is an opportunity in the discussions, making the acquaintance of the members of the club, will more than pay for most of the expenses of attending. To stay at home always and work is not the best way to ever prosper in the raising of this kind will prove to be beneficial that will go home with more enthusiasm for their work and desire to succeed.

GARNATIONS

In all about 20,000 square feet of glass, partly heated by steam and partly by hot water. Watering is done from the open end of Central Valley Water Works. The houses are situated in Central Valley of the Newburgh short cut, near Redford, in each reach of the New York Flower Market. Original cost \$15,000. Address: S. B. 240, Albany, N. Y.

**OTTO ANDRE, Central Valley, N. Y.**

## Fires.

**BATONNE, N. J.**—A blaze occurred in the establishment of C. Crane on January 28, destroying the greenhouses and other buildings. It originated in the furnace room. The fire was being kept maintained to keep the greenhouses at the proper temperature. Mrs. Crane was burned slightly about the face, and while rescuing the family cow from the blazing shed. Owing to the heavy fall of snow the fire department was delayed in getting to the fire. Hundreds of plants were killed. The loss was \$9000. He had inadvertently permitted the insurance to lapse.

## FOR SALE CHEAP.

Extra good second-hand 3 and 4 inch pipe for hot water heating.

W. H. SAULTER, Rochester, N. Y.

## The Market.

During the past week it has been almost impossible to get around on account of the immense amount of snow that has fallen all day, and it has been the worst that has been experienced here for 30 years, and interfered materially with the business of the florists. The general business in cut flowers has fallen off, but the great demand for funeral work is still very large. The florists' work in the stores have been very busy. The only social event of the week was the press reception given to the florists by the association, the extensive floral and table decorations being furnished by E. J. Johnson.

Carriages have so far been in sufficient supply to fill all demands, and have been made up among whites and Daybreak on account of funeral work, there has been a scarcity, and for the first time in many weeks a requisition has been made on the hire.

Roses continue to sell well, but there is a great dearth of first grade stock. There is an increasing improvement in this respect, however, and prices are stiffening up to a corresponding extent.

Violas remain in good quality, and are well sold. The demand for this stock of violets has been very large, and prices are 10 per cent. higher than last week. The demand for this stock of violets has been very large, and prices are 10 per cent. higher than last week.

Mr. Sullivan has removed from 270 to 70 Westmain street. He reports excellent run of business since biweekly.

George CAMPBELL, wire worker, has removed from 270 Westmain street to 113 Union street.

ROBERT HOOB has returned from a three months' trip through England and Scotland.

Eugene McCarron, the East avenue florist, has returned with an addition to his family. It's a boy.

Mr. Buswell, with Walter A. Potter & Co., is a very proud father of a boy, born the past week.

Charles Jordan has entered the employ of John Johnson as assistant bookkeeper and collector.

Walter Mot, M. Renkoff of H. Byers, and John and L. B. Manda were with the past week.

W. H. MASON.

## Sharon, Pa.

JOHN MURCHIE'S new creation, a "port of Tidal Wave, promises to attract some attention for its manifold merits. It is a bright scarlet, being a shade lighter than Portia; a strong and vigorous blooming with full foliage, a perfect double flower and a very large and heavy measuring 12 inches in diameter. It is Mr. Murchie's intention to give it in February, but he is not putting it on the market.

As an orchid grower, Mr. Murchie is very successful, and his collection comprises, among others, *Corymbium cristatum*, *Dendrobium spectabile*, *Dendrobium Phalaenopsis*, *Phajus grandiflorus* and *Phalaenopsis Schilleriana*. He has a very nice collection of Pithia orchids, though now and then he can sell all he cuts in Sharon, as well.

Enslaved is unusual, but the snow blizzards and the extremely low temperature of the past few days being no doubt, in a measure, accountable for its temporary stagnation.

ITINERANT.

## Sandusky, Ohio.

A marked change for the better is noticeable all along the line, the volume of business transacted by the florists during the past week or two surpassing that of any previous season. The improved market conditions at this season of the year certainly point to a very successful and a good general property and that the hard times will soon become a thing of the past. It is very remarkable that the corresponding is not the only one to "indulge" in such radiant views. I have during the past week seen a number of florists, choosing for the purpose the most conservative element, who signed their names to the fact, that we will all soon be "on our feet again."

Mr. J. C. Gooding, Jr., for a number of years connected with the B. A. Elliott Co.

of Pittsburgh, who about a year and a half ago started a business here, has ample cause to congratulate himself upon the success of his venture. He has been in the floristry short space of time. Besides his flower store and adjoining conservatory on the corner of the main and 11th streets, he has five houses, each covering 100x20 feet, for roses and carnations, and one for violets, and another for geraniums and other plants, and west, with the short span to the south, being well built and equipped with the best material and the most modern feature introduced, and one which is likely to mark a new departure in the arrangement of the florist's houses. The plan is described. Unlike the generally adopted way of joining the side benches to the main benches, the side benches are separated from the latter by a space 2 feet wide, the idea of this innovation being the introduction of two paths in a house instead of the usual two, thereby enabling his men to work to better advantage about the plants. Mr. Gooding also thinks that the plants themselves, by being kept from close proximity to the walls, will gain vastly by it.

Mr. Gooding intends to tear down his Columbus avenue conservatory immediately and build a new one, which will be a heated modern 75x40 structure, with its dined roof, stained glass doors, etc. It is to be very bright and airy, and will contain houses in the spring for palms and ferns.

Mr. Mator, the veteran florist, has been on the road for some time. He is reported at last reports, he is said to be slowly improving.

ITINERANT.

**Buffalo.**

Business hints.

A morning report of weather from the previous cold snap has helped business somewhat. There was a fair demand last week for flowers by nurseries. But the line of entertainments and decorations trade is at a standstill.

Some of our retail men are complaining early about collections this Winter, which has a depressing effect upon any otherwise promising business.

Flowers are quite plentiful for the demand. Roses, carnations, violets, etc., are abundant and cheap. The demand for all lines, giving the buyer full scope as regards variety; even orchids are beginning to appear in the market.

Stringent times, with moderate business, constrains to reduce prices to the consumer. The price of carnations is 20c per dozen, "daffodils, 50c per dozen," are not an uncommon sight in the market.

On Thursday last week a trial consisting of Professor Cowell, William Scott and George Long made a visit to the florist's son's extensive place at Lancaster. The gentleman there was found in high spirits, being in excellent health. From the general appearance of his new noted high-colored La Reine tulips and the good quality of his Broomsticks. Beauty also showed up well.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

**Grand Rapids, Mich.**

At the last meeting of the Florists' Club the entire evening was devoted to carnations. The attendance was large, every member being present. Many growers responded to the invitation of the secretary to exhibit their new varieties of carnations.

George Hancock & Son of Grand Haven, Mich., exhibited the following: 'F. P. Fish', 'L. Hubbe', 'D. Bredemaid', 'Armadillo', 'Ivanhoe', red seedling very large. C. A. Dana was also exhibited by being having traveled all the way from New York, and although it had been in storage seven days before the meeting it was still in fresh and crisp condition and was cut. Mr. Hancock also had on exhibition a yellow seedling which promises to be very fine variety, and is believed to a clear golden yellow yet seen here. He gave the Club a very interesting talk on all the varieties which he received with applause.

E. O. Hill & Co., Richmond, Ind., exhibited their new white, Flora Hill; there were fifty blooms which were remarkable for their size. This is a perfect flower, having long calyx, good stiff stem, and is claimed by the introducer to be the most profuse carnation grown.

James Hunt of South Co., Lafayette, Ind., exhibited a pink variety, Mrs. C. H. Duhme. This is a very fine, large flower and the color is that of the most delicate pink, good stem and very fragrant. They also sent Mrs. George M. Bradl, which as a variegated carnation, seems to be the finest striped thus far introduced. It is a large flower, having a good stem and was admired by all present.

Hoppe & Lemke, East Grand Rapids, had fifty blooms of their new scarlet 'Corolla'; the flowers were very good and being a Grand Rapids variety, of course, we think it the best scarlet in carnations.

Bredimere & Smith, Grand Rapids, exhibited their new yellow 'Mayor Pingree'. Crab & Hunter of Grand Rapids, had several varieties of red, pink and variegated, being first year seedlings; they were very good and promise excellent results. Mrs. Crab had a paper on new carnations, naming the varieties which he thought best adapted for Grand Rapids growers. His paper brought out an extensive discussion, which was very profitable and interesting.

Henry Smith and the Grand Rapids Florists' Club had a good display of Rose Queen, Bredimere's, Scott and other varieties.

All the exhibits were fine and the Florists' Club took it as a compliment that florists from other cities went to the trouble and expense of sending their productions to the meeting.

James Hancock tendered the club an invitation, which was accepted, and the club will hold its first meeting in March at Grand Haven.

The Stover Floral Company have traded their city place for six acres of land, and 15,000 feet of glass at Grandville, Mich., and will take possession on or about July 1. They expect to do a wholesale business, principally in carnations, violets, and ranunculus.

The next meeting of the club will be a violet meeting. WENCIL CUCIERSKI.

The annual banquet of the club was held in the Eagle Hotel Jan. 28. There were 120 guests present and the affair was one of the happiest ever enjoyed by the club. The table decorations were, of course, all that good taste and artistic profession of the choicest of flowers could make them. Charles W. Garfield was toastmaster and performed the duties in his happiest manner. Henry Smith, the president of the club, responded to "Catching the Train," "The City Parks," "Benjamin's Flying Ball," "George F. Crab," "I Never Remembered It Pours," Wencil Cucierski, "The City Parks," "Hills to Pleasant," "The Boys," Henry Van Velden, "How to Boss the Boys," James Schlos, "Night Fishing," F. A. Chapman, "Hills to Pleasant," "The Ladies," Jean Goble, "The Fortune in Selling Plants," N. B. Stover, "Who Composed the Florists' Club," C. C. Cushman, "Fun in Working All Night," J. K. Johnson, "How to Beat a Board Bill," Mrs. Sarah Smith, "Woman as a Florist," Mrs. Evelyn Arnold, "Pleasure in Reporting," Fred North, "When the Wind Whirls Down," Miss Lena Belle Bridgman sang and recited; Miss Jessie Gibbs gave two humorous recitations; Professor Cornelius played a piano selection; Little Gracie Hogan, a beautiful little five-year-old mulatto girl, gave a series of Delsarte postures.

**AMERICAN GARDENING**

An Illustrated Weekly Journal devoted to Gardening and Fruit Culture in the Open and under Glass, and Record of Current Events in Horticulture. Established Fifty Years. Every Saturday. 16 to 24 Pages. \$1.00 a Year.

**WITH HANDSOME PREMIUM.**

Offices: Rhinelander Building, 2 to 8 Duane St., New York.

THERE is no paper published which so systematically teaches how to make money in working the soil, explaining all methods that make it yield freely, and render its products of extra value on the markets. AMERICAN GARDENING fills all wants in this direction and includes all that is worth knowing. It shows the profits to be obtained from

**Fruits, Vegetables and Plants**

**Under Intensive Cultivation By Glass and In The Open.**

The man who tills the soil for a living must now look to the close and careful cultivation of Choice Fruits and Vegetables on small areas of ground—intensive cultivation as against extensive cultivation.

AMERICAN GARDENING is the only paper published which is exclusively devoted to Intensive Cultivation.

**FREE Read Our Unsurpassed Offer:**

To introduce it to NEW readers we will send AMERICAN GARDENING for three months (12 numbers) to any address on receipt of TEN CENTS in stamps or coin. Sample free.

Subscriptions to be discontinued at the expiration of that time unless you notify the publishers to the contrary. This offer is open only to those who are not PRESENT SUBSCRIBERS to this Journal.

AMERICAN GARDENING, - P. O. Box 1697, NEW YORK.

NOTE: We will allow 25 per cent. discount on yearly subscriptions at \$1.00 forwarded by subscribers to the FLORISTS' EXCHANGE.

**COMMONWEALTH OF PENNSYLVANIA. DEPARTMENT OF AGRICULTURE.**

FLORADALE, PA., Oct. 17, 1896.  
 TO WHOM IT MAY CONCERN: This is to certify that I have seen the 12th day of October, 1896, and inspected the nursery stock of C. L. LONGDORF, grown at Floradale, County of Adams, State of Pennsylvania, and found no indication of the presence of 'Black Knot Disease', 'Rosette', 'Yellowing', or other injurious insects or diseases; that might be transmitted to nursery stock from the nursery to the orchard or garden.  
 (Signed) G. W. GROFF, Special Agent.

**50,000 PEACH** to offer at lowest prices.

C. L. LONGDORF, Floradale, Pa.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Beware of Him.**

A customer wrote us on Dec. 10th, 1896, as follows:  
"What is the trouble with you and \_\_\_\_\_ of \_\_\_\_\_.  
He claims credit of having turned about a dozen contracts from you. Your lumber is too good to be worked against that way."

The person referred to grows flowers. He also manufactures and sells a specialty that other florists use. You are likely to hear from him at any time. When we sold him our Building Material on credit he recommended it, but when we found it necessary to ask him for cash or security his attitude toward us and our material changed. Our

**Clear Cypress Greenhouse Material**  
is superior to any greenhouse woodwork furnished by others, and we will be glad to back up this claim by the testimony of many Growers in all parts of the country.

Write for our booklet, "Quality."

SUMMER IN WINTER

By Using Standard Greenhouse Boilers

One cent gets our Catalogue, GIBLIN & CO., - Utica, N. Y. WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Simple Enough.

If water is needed for any purpose on a farm, (other ordinary, stock or dairy), in a country residence, on a plantation or ranch, for a green house, Pot house or nursery, the most simple appliance is a

DELMATER-RIDER or a DELMATER-ERISSON Hot-Air Pumping Engine.

Any other method of securing a supply of water, such as by rams, steam pumps, hand pumps and windmills, do not give entire satisfaction, and Hot-Air Pumping Engines possess advantages over all of them. They will pump water and send it wherever needed in the house, barn, stable, dairy, garden, green house or nursery, and to any height and distance. They are so safe they can be run by a child, so economical that a shovelful of coal will run one for hours, and so reliable that a scarcity of water is impossible. They will pump water from any source and will burn any kind of fuel.

If interested, send for catalogue to THE DELMATER IRON WORKS, 467 West Broadway, N. Y. City. WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. NO. 8.

NEW YORK, FEBRUARY 20, 1897.

One Dollar Per Year.

## NEW CALIFORNIA GIANT MARGUERITE (GIANT PEARL.)

This variety is truly a giant in size, the individual flowers often measuring 3 inches and over in diameter. The snow white petals are arranged in two rows around a dazzling yellow center, and are of good substance. Habit of plant is strong and compact, in every way superior in size and beauty to any other varieties introduced up to the present time. The originator writes us that he has in his garden all varieties of Marguerites in cultivation, and there are none which can equal the Giant Pearl in size of flower and profusion of bloom. No Florist growing cut flowers should be without it.

Young Stock, 2 inch pots, \$1.75 per dozen; \$12.00 per 100.

## "Every Bulb's a Pearl."

**EXCELSIOR DWARF PEARL TUBEROSES.** Selected, 4 to 6 inches in circumference, \$7.50 per 1000. Of course: Quantity effects the Price. If you wish 5000 or more, write for sample and special quotation.

**JAPANESE LILIES.** New importation. Re-packed—Bulbs guaranteed in perfect condition. Note: Japanese Lilies will be scarce this Spring, owing to the enormous proportion of bulbs arriving worthless.

	Per 100	Per 1000
Lilium Auratum, 7 to 9 inches in circumference.....	\$4.50	\$49.00
" 9 to 11 inches in circumference.....	5.00	55.00

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# Free Seed Distribution Must be Abolished.

The Senate's amendments to the Agricultural Bill (incorporating a provision for the expenditure of \$150,000 for the purchase of seeds for free distribution) will not be agreed to, if at all, until approved by the Conference Committee to which it must be referred. Meantime, there is fair opportunity for making assaults upon the whole system of gratuities.

## Free Seed Distribution.

Through the courtesy of Mr. Burpee, we are enabled to publish some further communications which have passed between him and the Secretary of Agriculture, of course, that is, the subject of free seed distribution by the Government.

United States Department of Agriculture, Office of the Secretary, Washington, D. C.

W. Atlee Burpee, Esq., Philadelphia, Pa., Feb. 10, 1897.

Dear Sir: It is not possible to unite the seed growers and dealers of the United States in a demand for the extension of gratuitous distribution of seed through Governmental agencies. Can they not be induced to make such a demand to the National Treasury, which belongs to all of the American people, for the purpose of carrying out a policy which is so obviously for the benefit of the American people? Why should not such a protest plainly state the fact that the seed purchased with public money and distributed at great carrying cost to the Government, comes in competition with people who are already in the market with seed thus bought at wholesale and given away and delivered throughout the country at retail.

Why not show that the distribution by Government gives the farmer about 25-35¢ per 264 packets, which at 5 cents a packet (retail price) would be more than a million seeds for the farmer. The number of packets there are many which at retail sell for 10 cents or more, each. Therefore, it is a waste of money to make the Government of the United States beaten by this economy-y dissemination out of something like one million dollars a year made in a single year. And the evil is growing.

The American people like fair play. Yours respectfully,  
(Signed) J. STERLING MORTON, Secretary.

Editor Florists' Exchange: I have the honor to thank you most heartily for the admirable editorial in to-day's (Saturday, February 13) "Exchange," which I read with much interest. I enclose herewith, with letter, as per copy inclosed.

I think we should keep hammering on this question, until the Government of Wilson, who is to become the new Secretary of Agriculture, whatever may be his present views, will realize that this measure is deserving of the condemnation which Secretary Morton has so continuously and vigorously expressed.

I have pleasure in inclosing you a copy of a letter of Feb. 13, received to-day from Secretary Morton. I have no doubt you will publish in next week's "Exchange." I also inclose copy of my letter to Secretary Morton, and a copy from Secretary Morton, also a copy of my letter of yesterday, which crossed the Secretary's.

Hon. J. Sterling Morton, Secretary of Agriculture, Office of the Secretary, Washington, D. C., Feb. 12, 1897.  
Dear Sir—It was very much pleased to receive your favor of the 10th inst. Unfortunately, the Secretary of Agriculture holds its annual meeting in June, and it would be impossible to now secure consideration of this matter.

W. Atlee Burpee, Esq., Philadelphia, Pa., Feb. 11, 1897.  
Hon. J. Sterling Morton, Secretary of Agriculture, Washington, D. C.

Dear Sir—When I saw your yesterday I was really in hopes that the Senate of the United States, having had so much data before them, would be induced to repeal the Agricultural bill again, containing the appropriation for the purchase of seeds. You are, of course, right, then, when I find that this bill had already been passed, even with an increased appropriation for the purchase of seeds.

While I regret extremely that you cannot see the fruit of your work to abolish the gratuitous distribution of seeds, I am sorry for leaving your office, and while I have no means of knowing what position Mr. Morton will take in the matter, yet I

really think that if properly followed up your efforts can yet meet with success.

It is my present intention during the summer to prepare matter for the press, which, by mailing to probably 10,000 papers in the United States, will, I think, result in getting thousands of protests from the readers of these papers addressed to their members of Congress.

I know, of course, that all leading horticulturists, as well as seedsmen, will gladly co-operate to present a solid front against a further continuance of this promiscuous distribution of seeds.

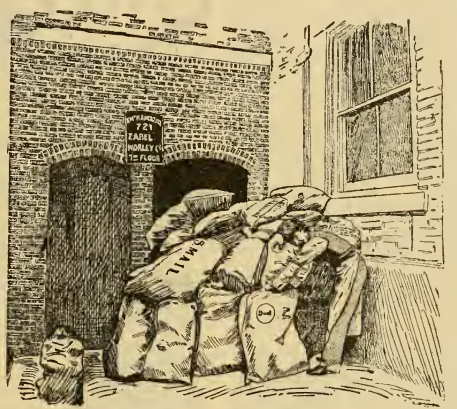

I am convinced that the strength of the advocate of free seed in the House of Representatives rests largely upon a misconception—that is, that the members of Congress think their rural constituents are flattered and honored by the receipt of a package of seeds. Now, from our own knowledge in filling the Government contract this year, I believe the majority of recipients, instead of being pleased, will

ending June 30, 1897, will compactly load 77 of the largest United States mail cars. The Senate has now determined that there must be \$150,000 invested in seeds for the next distribution, and if the same quantity of the same sort of seeds is bought for next year's distribution, at the same price, they will fill nearly eighty-nine cars.

In 1892, \$1,000 were appropriated for the purchase of "rare, valuable and improved" seeds, not common to the country, to be distributed for experimental purposes among intelligent gardeners and farmers, with the instructions to report their individual successes in the cultivation thereof. But the law as now amended ignores the original purpose of its inception and enactment. Only common varieties are distributed. Instead of \$1,000, there is appropriated in the year 1897, \$150,000. If, during the next fifty-eight years, the sum increases in the same arithmetical proportion as it has since that first \$1,000 was invested in seeds for gratuitous distribution, it will aggregate the enormous sum of \$2,500,000.

(Signed) J. STERLING MORTON, Secretary.

Hon. J. Sterling Morton, Secretary of Agriculture, Washington, D. C.  
Dear Sir—Enclosed find with thanks receipt of your favor of the 12th inst. As stated in my letter of yesterday, I feel quite confident that by thorough publicity in your papers throughout the United States next winter, the promiscuous distribution of

## ONE MEMBER'S QUOTA.

(Reproduced from the "Philadelphia Ledger.")

be disappointed, because they will in many cases obtain seeds of varieties which they do not care to grow in their gardens.

W. ATLEE BURPEE, Philadelphia, Feb. 12, 1897.  
United States Department of Agriculture, Office of the Secretary, Washington, D. C.

W. A. Burpee, Esq., Philadelphia, Pa.  
Dear Sir—I have yours of the 11th with enclosures. The action of the Senate seems for the time to perpetuate and increase the disbursement of public funds for the gratuitous and promiscuous distribution of garden and flower seeds through Governmental agencies in the United States. However, this does not change my views of the duties of men in public and private life who desire the return of the Government to something of the frugality and economy which was practiced by its founders. They never believed it the duty of the Government to give to the citizen anything for which he has not paid, or to maintain and economical administration.

Unless a full stop can soon be put to this gratuitous distribution of seeds, it will grow to an enormity, which will eventually destroy the retail seed trade of the United States. No branch of industry can succeed financially as a competitor with gratuities.  
The seeds distributed for the fiscal year

seeds can be made so unpopular that members of Congress will begin to realize that the Government is expending money for the paper class who desire something for nothing. Inclosed I hand you editorial from the "Florists' Exchange," today, and think you will agree with me that the editor has "niced" up the whole situation admirably in the sentences: "The only good thing it is a good thing, accomplished by the seed distributors, is the possible capture of votes by Congressmen from country districts."  
W. ATLEE BURPEE, Philadelphia, Feb. 13, 1897.

United States Department of Agriculture, Office of the Secretary, Washington, D. C., February 13, 1897.

W. Atlee Burpee, Esq., Philadelphia, Pa.  
Dear Sir—I have your of the 12th inclosed herewith from the "Philadelphia Times" of that date, and also copies of telegrams and letters.

The Agricultural bill will have to be referred to your conference committee. The Senate's amendments will not be agreed to, except after that committee's action is known. There is no opportunity for making assaults upon the whole system of gratuities. Yours respectfully,  
(Signed) J. STERLING MORTON, Secretary.

Mr. T. W. Wood, President American Seed Trade Association, Richmond, Va.  
Dear Sir—You have doubtless seen al-

ready by the trade papers that I am trying to use several vigorous letters received for free seed distribution. I am confident that the Seed Clause of the Agricultural Appropriation bill may yet be defeated, and I am glad to see that the "Philadelphia Times," and an quite sure that a number of papers this week will have articles on the subject.

Now, as this work was only begun after the bill had passed Congress this year, I fear it may possibly fail of immediate result.

I am, however, convinced that with proper executive cooperation we can make an appeal so popular that the first year of the new Administration will be the last year of the Governmental distribution of seeds promiscuously.

As I was unable to meet you with the Executive Committee in New York, I will write now to ask if it would be agreeable to you, in the event of the bill passing this year for me to take a paper before the meeting of the American Trade Association in June, 1897, when I think we could secure the cooperation of all seedsmen in a determined effort to defeat this form of Governmental paternalism.

I am, however, convinced that with proper executive cooperation we can make an appeal so popular that the first year of the new Administration will be the last year of the Governmental distribution of seeds promiscuously.

(Signed) T. W. WOOD, Secretary.

W. ATLEE BURPEE, Esq., Philadelphia, Pa., Feb. 17, 1897.

W. ATLEE BURPEE, Esq., Phila. Pa., Feb. 17, 1897.  
Dear Sir—I received yours of the 15th inst. We regret that we did not have you at our executive committee meeting. We made a program, and in it we allowed time for the consideration of the government seed distribution and you were inclined to think it would be desirable to have another paper; so, as you have so kindly offered to supply it, I am quite sure that the Association will be glad to hear you upon the subject indicated; that is, in your opinion, to the free distribution of seeds by the Government. I have been thinking of writing you several articles before the convention opens in Washington, inviting the large number of our countrymen to attend, as well as others, to join and co-operate with us, with a view of killing the Governmental distribution of seeds.

I think that probably this could be accomplished by the employment of an energetic man to copy and distribute the appropriation, by co-operation with the seedsmen, and in inducing all the members of Congress to write to their congressmen, opposing the appropriation, as unquestionably it pertains to the property of the people, as well as the larger seedsmen. These petitions would undoubtedly have their effect, in addition to the work that can be done through newspapers. I do not fear but that if we make a getting message to get to the matter, the appropriations will cease.

Should be glad to have any views from you in reference to the matter, and hope you will prepare the paper, which I will advise Mr. Don to have announced in the program.  
T. W. WOOD.

It is highly encouraging to notice that many of our countrymen are beginning to feel that cities have already taken up the fight against the continuance of Free Seed Distribution. I have been thinking of writing you several articles before the convention opens in Massachusetts, a banner State in all that tends to the development of agriculture. I am confident that you will nobly by refusing their sanction to the measure. Denounce it with vigor of life, and do not allow it to pass unopposed. Spread the facts broadcast, around the people, and show them that this bill threatens to every business man, and it will be stamped out as an would a plague.

The subjoined editorial from the "Mail and Express" (New York), of Feb. 17, is a fair expression of the manner in which free seed distribution is looked upon by those leading papers whose editors have given it attention:

## STOP THE FREE SEED BUSINESS.

It is sincerely to be hoped that the Agricultural Appropriation bill, which has just passed both houses of Congress, will be the last to contain an appropriation for the free distribution of seeds. The sum of \$150,000 of the people's money for any such purpose is a mistake and extravagance. It is a waste of money. The Congressmen with vast quantities of garden and flower seeds at Government expense for gratuitous distribution mope in their

constituents has developed into an abuse of confidence, and it is sooner it is abolished the better for all reputable interests.

Whoever plans to provide free seeds for those who cannot afford to buy them, or whose crops have been destroyed by fire or insect, or whose crops are all right, but practically it is all wrong. The distribution is inefficient and frequently unjust. The seed is too often sent to those who neither need nor deserve it, while those to whom it would be of real assistance get but a paltry allowance. The practice is generally regarded by him as a part of his working campaign material, and he rarely gives it to those who are in the most good for his own political interests, without considering the real needs of his constituents. It is a little more than a virtual gift, and it is a little more than a political machinery, and the appropriation which supports it is a little more than a campaign fund under Congressional direction.

This free seed custom is a species of petty paternalism of the worst kind. Its entire benefit would be indicated by an overwhelming majority of the farmers and other persons who buy seeds from year to year, and who are opposed by nobody but a few persons here and there, who are opposed by their favoritism. The system is unbusinesslike, it is demoralizing, and it should be crushed once for all by the incoming Congress.

Free Seed Distribution.

In view of the pressing importance of the subject we reprint editorial from the Florists' Exchange, issue of 13th inst.:

"We append here a question as to the fact that the free distribution of seeds by the United States Government is a direct violation of the principles of the American people, and the principal object of the doctrine of protection and development of the land and deserving industries. The seed-growing industry in this country is one of its swaddling clothes, so to speak. It is a healthy, honest and honorable business. The free distribution of seeds is necessarily fairly intelligent and should be discontinued as a matter of course."

"It may be said that persons with a prohibitive tariff on seeds, those distributed by the Government will necessarily be put out on our own and our own growers will have the benefit and profit of a home market. This might be an argument if it were not for the fact that the free growers or wholesale dealers at market prices, but when the contract is given to the lowest bidder it leaves the growers at the mercy of the contractors.

"The fact is the free seed distributed degrades the seed and plant, and it hurts otherwise connected with it. As an evidence of how the seed trade is affected, it may be stated that the Government ease into its very vitals by distributing those seeds which, during times such as the present, form the mainstay of the business, those from which culinary products are obtained. Vegetable seeds form the bulk of the output by the Government, and at times luxuries are dispensed with, and only bare necessities are purchased. Flower seeds are considered luxuries, and in times like these are not in request, and the seedsmen must look to a trade being done in vegetable or farm seeds to which they can carry on his business; and here the Government steps in and frustrates him in the attempt.

"The American farmer or gardener is not a pauper. He would be abundantly able to buy what seeds he needs, and he would be barely compensated for his produce. "At this time thousands of planters are holding off, waiting to see what they may get from Washington before placing their orders with the florist or seedsmen. In fact, we are not sure but that there is more harm done to the seed trade in this way than from the actual competition from the free distribution. It is a fact that last year many country people made up a list of the seeds they required and sent it to their Congressmen, and when they received the fully assorted packets it was too late to purchase and plant many of the vegetables, etc., actually needed in the family garden.

"I only need think, if it is a good thing, that the free seed distribution is a necessary and possible capture of votes by Congressmen from country districts. The had results are the demoralization of the seed and infant home industry, the degradation of the seed and the forms of American labor and the placing of the seed class of other wise independent citizens to one of the worst forms of paternalism—the assumption of pauperism—and the practical forcing of alms upon those who neither need nor

desire them. What farmers, florists, gardeners, fruit growers, etc., need is a free, free, advice and the assistance of the Government in developing profitable markets for their surplus products."

European Notes.

Hardly had last week's notes been dispatched before a complete and most disagreeable change set in, and with the exception of the north of Scotland, where the thermometer has just touched zero, we are enveloped in continuous warm and drenching rain. In England the Thames has already risen 42 inches above its proper height, while many of the growers report the land containing their plants for next season's crops as completely submerged. While this primarily affects the European seedsmen, it will also affect some of the large growers of peas on your side. It is well within the mark to say that it has not realized, possibly to sow peas with any reasonable prospect of success since the beginning of last October; it is now too late to sow first early varieties, and the surplus of these to be carried over is very large. In view of existing conditions growing conditions are not so favorable for such sorts as Telegraph, Cooper's Goliath and Filibuster, for all of which the demand is still considerable.

The anticipated rise in the value of blue holling peas and haricot beans has not been realized, owing to the return of milder weather. Judging by the prices realized here, the Wisconsin growers must be losing money fast.

In market seeds clovers have gone down with a rush. Rape and mustard, that will have to be relied upon for winter crops, have risen in value, and in bird seeds sainfoin is fetching a rather better price. Hemp is practically unmarketable. Turned and Canterbury are in good demand at fairly remunerative prices.

Following the example set by the Florists' Exchange, the Gardeners' Chronicle, which is the leading trade paper in Western Europe, has started a new column of American notes, embracing all matters of interest to the plant and seed trade. This is undoubtedly a step in the right direction.

Despite the unprofitable conditions of the seed trade, the horticultural press, led by the leading retail houses have been more elegant and elaborate than ever; and the Horticultural Catalogue, published by the jubilee catalogue just received from Peter Henderson & Co. A fac-simile reprint of the Horticultural Catalogue, published by the jubilee catalogue just received from Peter Henderson & Co. WOMEN'S SEEDS FOR PASTURE

In same size packets, the Seven Superb Sweet Peas described below would have cost \$3.10 in 1894, but are sold now for only 25 cents.

25 Cts. buys these Seven Superb Sweet Peas:

- CROWN JEWEL**. Fine standards, tinted and veined with violet-red; the wings are creamy, slightly tinted with rose; a most profuse bloomer.
- GRAY FRIAR**. Entirely unlike any other Sweet Pea. A most beautiful variety, on a strong growth, the hoaviest colored and largest, are born 3 and four on a stem.
- LITTLE DORRIT**. Cream-colored pink; standard of finest form, large white wing, slightly tinted, the colors beautifully blended. A superb variety, on a superbly lovely raceme.
- METEOR**. Truly an exquisite variety. Standards bright orange-salmon, wings delicate pink, with slight veins of purple.
- DRS. JES. CHARBRELAIN**. The flowers are truly monstrous, and produced generally three to four on a stem. The color is very effective—white ground heavily striped and flaked bright rose; of the form, very striking.
- RAMONA**. Grand flowers of very large size, born three or four to the stem; color creamy-white, daintily splashed with pink.

"1897" Special Superfine Mix. This mixture is composed of Twenty-three of the finest New-Flax-Plowed Sweet Peas, which is a choice blending of each separately and mixed by ourselves, which can be easily recognized when in flower.

25 Cts. Superb Sweet Peas, each in full-size, separate packet, true to name as described, and mailed, postpaid, to any address.

For ONE DOLLAR we will send five complete sets (30 pkts.), and give FREE as a premium one full-size packet each of **CLIPPER** and **BOKRA**. The flowers are truly monstrous, and produced generally to get up a couple of Five for One Dollar.

With every collection we enclose a copy of "How to Grow High-Grade Sweet Peas at the HAMPTON MEYDING." This plainly justifies its name, and is one of the best and most practical treatises on the Great High-Grade Sweet Peas, which are contained in this unequalled collection.

ARTHUR BOYLE, Santa Fe, New Mexico, Jan. 7, '97.

American Carnation Society

SIXTH ANNUAL MEETING,

CINCINNATI, FEB. 18th and 19th 1897.

The Exhibition.

At the exhibition, held in College Hall, on Thursday forenoon, there was a large attendance, and almost as great vitality as the parent association. He referred to the criticism in carnation culture as surpassing that of growers in larger centers and thanked the visitors' hosts for their hospitality.

The Nomenclature Committee reported forty varieties had been registered during the past year, but complained of their work having been much hampered by many varieties being registered but not registered, and advised the society not to recognize such.

This Committee also recommended that originators obtain consent before naming a variety after individuals.

The President's address was discussed by Messrs. Ward, Scott, Hill, Michel and Dornier. Recommendations were made by Messrs. Ward, Scott, Hill, Michel and Dornier. Recommendations were made by Messrs. Ward, Scott, Hill, Michel and Dornier.

CHAS. E. SMITH, Cor Jefferson and Jackson Aves., YORK, PA.

...ROOTED... ROSE CUTTINGS.

Healthily, well-rooted cuttings from the best flowering wood.

Metee, Siebrecht, Wootton, Sunset, Perle, Hyde, Bridemaid, \$1.50 per 100.
Trotton, \$2.00 per 100. Beauty, \$2.50 per 100.

CARNATIONS.

Strong, healthy, well-rooted cuttings, \$1.50 per 100.
Tidal Wave, Scott, Rose Queen, \$2.00 per 100.

L. L. MAY & CO., St. Paul, Minn.

When writing mention the Florists' Exchange.

WE MAKE A SPECIALTY OF GROWING A. W. SMITH'S HYBRID VIOLETS

(Iponaea Noctiflora).

The above are strictly the best Moonflowers in cultivation; blooming from 30 to 45 days earlier than the old variety; producing four or five different sized and shaped blooms; fruit to seven inches in diameter. The flowers are pure white.

Plants now ready to sell from 3/4c plants up, at \$1.00 per doz.; \$7.00 per 100. No less than 50 plants at 100 rates. Cash with order. Order for May will be booked now.

CODREY ASCHMANN, 105 Ontario St., St. Louis, Philadelphia, Pa.

form, pointing out the progress of the Carnation Society, which had grown to be of great importance and almost as great vitality as the parent association. He referred to the criticism in carnation culture as surpassing that of growers in larger centers and thanked the visitors' hosts for their hospitality.

Secretary Albert M. Herr, of Lancaster, Pa., reported little change in membership. He endorsed the suggestion of the Executive Committee that the society should be open to members, which has been done.

Treasurer Charles H. Allen was unavoidably detained from the meeting, owing to the illness of Mrs. Hill.

The Nomenclature Committee reported forty varieties had been registered during the past year, but complained of their work having been much hampered by many varieties being registered but not registered, and advised the society not to recognize such.

This Committee also recommended that originators obtain consent before naming a variety after individuals.

The President's address was discussed by Messrs. Ward, Scott, Hill, Michel and Dornier. Recommendations were made by Messrs. Ward, Scott, Hill, Michel and Dornier.

cross-fertilization, and these, in time, make their appearance at our annual exhibitions to compete for the society's certificate of merit.

At our meeting in Cleveland last August we adopted a scale of points to be given to each variety, and to the different varieties that come in competition for this certificate. It remains to be seen whether this scale will be of any value in determining which commercial varieties than heretofore.

Should we not also adopt another scale to be given to certain varieties of carnations? I would include first class blooms, but sparingly; I would include Mrs. Diaz, Mrs. Deane, Mrs. Deane, Mrs. Deane, etc. There are not generally cultivated as commercial varieties.

Our society has not used the same scale at two successive meetings. Should this scale prove satisfactory let it remain in force; should the contrary be the case, let us have your opinions freely as to wherein lies its weak points. This should be given your most careful consideration. Have it as perfect as possible and then adopt it permanently. We certainly should adopt a scale to be used in judging our standard varieties, which we call for annually. It would be more satisfactory to have a scale that would be used in judging exhibits more intelligently; it would probably increase the number of our exhibitors, and it would be a more desirable request committees, who have the management of our Fall exhibitions, to use our scale in making their selections. We should schedule a call for them, for a certificate or special prize, and report the results to our members in force; should we not do so at our annual report, and by this means members would be enabled to become better acquainted with the merits of the flowers in the early Winter months.

The action of the Florists' Society in Boston, in requesting the different societies' clubs to appoint committees to pass on all new carnations in their vicinity, was a fine idea. It would be desirable to encourage special carnation exhibits at the December meetings, by continuing to send exhibitors a certificate not only for the annual report more valuable, but would increase the demand for high grade blooms in the market. Those in charge, in general, where these exhibitions are held. Here, in Cincinnati, we held our carnation exhibits in the display in the winter, and if those interested could but realize what a fine advertisement they would be, they would hesitate to undertake them at that time in their own cities.

At our meeting at New York your president, in his address, touched upon the subject of registration, and the number that are retained in the hands of the exhibitor beyond their place of birth, and most of which are now entirely extinct.

In our last report we had eighty new carnation registers of which seven have been disseminated and six more are offered; and if we add twelve more it will amount to about all that list of eighty that will ever be heard from. Of what value is so large a list of names when we have no one to refer to? The only benefit derived is that it will prevent the duplication of names. But of what benefit is it to have a list of names when we have a view to finding those in cultivation?

It has been the custom of growers of new carnations to send in their names with each year seedlings. When the time arrives for its dissemination something comes to light that is not in the list, and is worthless. It is then consigned to the rubbish heap, respect, variety and all. Nothing new is sent in, and the name is never indicated that such a variety really existed. Why should this name be left there? If we cannot by any means prevent these names from multiplying, let us at least prevent them from our circulation. Let us have a roll we shall use to inform our members. We are not growing as fast as we are in the past. It is a pity that so many have been named the "Rooted Cutting Society." If such impressions still exist, we should not so much insist on the name in convention but what they transmit more or less business. Let us show by our conduct our attention to the members who are prompt at the opening of our meetings and invite non-members to come with us to see the carnations. Let us have an enthusiasm that is possessed by ourselves.

Another opportunity would be at the exhibitions of the different Florists' Clubs, and a name should be given to each variety that will come to our annual exhibition. All those who are engaged in the cultivation of the carnation should be given a name, the duty of becoming members and of sharing the burdens of this society, for they are the ones who bear the burden of the carnation, which can justly be attributed to this society.

Do not let us become over-confident in our strength, as therein lies our danger. Let us be active in collecting new members. Let each one of us be very careful, which requires constant care and watchfulness to develop it into a vigorous plant. Let us be very careful to do something for the welfare of this association, no matter how little importance it may seem to each one of us. Let us be light to consider that may be of benefit to us. Discuss freely and thoroughly at our meetings, and do not be late before our meetings. Give generously your experience of the past year, thus helping to increase our success as earnestly desired by our dead friend and president, Harry L. Sunderbruch.

Again, fellow members, I earnestly request you, every one, to aid us by your presence at our meetings, and to be present heartily into the spirit of the meetings, to make this, our sixth annual convention, a success so earnestly desired by our dead friend and president, Harry L. Sunderbruch.

## The Carnation, from the Taking of the Cutting to Planting in the Field.

Paper prepared by W. R. Shidner of Ansonia, Pa., and read before the American Carnation Society, at Philadelphia, Pa., Dec. 18, 1898.

The old-fashioned way of propagating the carnation was by layering, a method still used largely in Europe. Of layering, Nicholson says: "The method is to dig up the plant. This method is far more generally adopted than any other, whether the plants are to be used for cuttings or for growing. At the end of July or beginning of August is the best time for layering. Before commencing to compose the layer, the soil should be sand in nearly equal proportion should be prepared. Some pebbles can be made of joint stems or other material of a woody nature, which will decay in the soil. A layer of compost, about two inches in thickness, should be placed over the soil, as in this the young plants will root. The shoots selected should be denuded of their lower leaves at the base of the young wood, and a slit must be made from this point upwards, extending through a joint stem or other material of a woody nature. The layers should next be carefully pegged down in their place, keeping the position of each of soil must then be placed over the layered part to a little beyond the peg, and the whole layer covered with soil. Watering will be necessary to give occasional waterings, but care must be taken that the shoots are not allowed to dry. The soil should be kept moist should be placed in the open till they are rooted, which usually takes a month to two weeks.

I make this quotation to serve as a comparison with the mode of propagation universally employed in this country, and may also be of some service to those who may have a related seedling, or may wish to see the origin of their carnation stock.

The method of increase by slips in root cuttings is the most rapid and has reached its highest development and greatest perfection in this country. It is practiced in the majority of our commercial growers. The stock can be increased by slips much more rapidly, chiefly by the method of root cuttings. The resulting plants will be just as good, healthy and thrifty if the proper care has been exercised. The method of increase by slips of winter bloom is very superior, because they can be rooted so much earlier in the season.

The plants should be well established in the ground in March or cutting, and the growth before propagating operations begin. Of course this will depend very much upon the season, and the soil, and the independent of that, one will hardly wish to set the first lot of cuttings before December 1st. The cuttings should be taken from the plants in the field. For summer bloom for the following year, the cuttings should be taken in the best. For this purpose I take cuttings during October and November from the stock plants in the field. In cutting in the summer, and which will be found very full of stock and healthy slips. As soon as they are ready to be put in a bench in a moderately cool house. They are carried here till the latter part of the winter, and are potted (one slip only), when they are potted and placed in a cold frame, and there held until time to plant them in the field. The ground can be made ready in the spring. In potted in this kind of stock, I use 2 1/2 inch pots, and fill them with a mixture of soil in a pot. This saves a great deal of root in the field and reduces the labor of cul-

tivation and in picking the flowers. The rooted cuttings may be potted or trayed at once from the sand and placed in cold frames, where they will be ready to be taken up to go through, the frames should be deep and well protected, both north and south.

But I believe I will make a few good plants as when they have been kept growing gradually without check. This will be the best, and will be a severe check in our climate if carried all winter in the field.

This method of fall propagation has been recommended for the general increase of carnations, and it is a method that will pose I see no advantage in it. The plants, in all probability, will be too large and will be more liable to winter injury, and labor and expense; they will take up too much room when planted indoors, and will be more liable to winter injury, and will go as thirty young stock of half the size. As to the question of health, there is no reason why winter cuttings struck during the latter part of winter, from properly grown stock, should not be just as healthy and vigorous as those struck in cold frames all winter, and I am inclined to think very much healthier. If a house be used for winter cuttings, and if the plants in a growing condition, you have a fine lot for summer bloom, that is all.

The best time for taking the following winter's bloom is from December to April. After the latter date they may still be taken, but the plants will be more liable to the outside air gets warmer and the days grow longer. Varieties that bloom late in the season (that is, from December to January), and those that grow quickly, say during February and March, will be the best. The plants should be taken in the morning, and should be kept in the shade towards the top of the stem, which will run to bud and make plants totally worthless. The plants should be taken in the part of the stem for the next crop of flowers. Thus from one to half a dozen or more cuttings may be taken from one plant, which will give ample stock for one's own use and a good deal to spare. One can get a large number of cuttings from one plant, in eight, both slips and ends of shoots not yet budded. And perhaps to raise a fine lot of cuttings, it will be necessary to be excusable. But I do not recommend this robbery in an easy case. The plants will, in the winter, certainly suffer if the cutting is persisted in.

I prefer the method of taking cuttings by the method called "pulling." Grasp the slip with thumb and finger about one inch from the base of the stem, and holding the lever part of the plant with the other hand if there is any danger of losing the plant, pull the plant down the part with a snap, leaving the stub end on the stem. Where the slip breaks will be the best time to take cuttings. The cuttings thus pulled will need no trimming or further preparation of any sort, and are ready at once to be set in the sand. It used to be my practice in carnations to use them to break the slips out sideways, and to break the slips out sideways, and usually cutting off the lower portion of the heel. This made an extra pair of hands, and it was necessary to do this method rooted as well as they do by the method above described. Indeed, my practice was to pull the cuttings down to trim all the leaves to the top severely. By experimenting I soon found this was not the best method, and I now pull the cuttings so trimmed never rooted so well. While this has been my experience there may be others who have had better success. However, I consider the proper "pulling" of the cutting a very important matter, not only for the reason that it is the best shape to root.

I think it is useless to give any minute directions as to the preparation of the cutting bench. Let such materials be used as are ready at hand. Any kind of good soil will do, such as peat, sand, or loam, river limestone sand, coal dust, silver sand, or even soil itself, in fact anything that will hold water, and will not dry up. It is simply severe to hold up the cutting and supply it with the necessary moisture. The cuttings should be set in the cutting bed, and they will strike readily over a tumbler of water if supported by inserting them in a glass of water. The cuttings should be supplied in other particulars. I prefer to use the cleanest and sharpest knife, and to use a sharp knife. The cuttings should be packed too hard, and the roots of the cuttings are difficult to remove from it. Note that the cuttings should be set in the mixture about three inches of sand is placed on the bench and well firmed and levelled. The cuttings should be set in the furrow in a bed across the sand by pressing into it the edge of a piece of glass, using

a lath as a guide. The slips are inserted in the furrow about two to the inch, a little thicker or thinner according to the size of the cuttings. The slips should be set in the furrow and tamped hard with a piece of iron. The lath remains for a guide for the rest of the cuttings.

Lastly, the cuttings are given a thorough watering.

The best place to have the propagating bench is in a cool, shady place. It is important to have it, and securing for it at the same time the coolest and shallowest part of the house. It is important to have a house specially devoted to propagation, and where the business is carried on, it is important to have a house that is indispensable. Bottom heat can be used or not, as thought best. For my part I prefer no heat, and I believe that bottom heat will injure my propagating benches, which are 2 1/2 feet wide.

There are two important matters to be attended to in the management of the cutting bench. The regulation of the temperature, moisture, and shading. The slips will root best in the same temperature in which the plants themselves were growing, avoiding, of course, the higher temperature of the flowering houses during clear days. This temperature is from 55 to 65 degrees, and it is important to have the cuttings retained in the same temperature for a month or less time. But there are good reasons why the temperature should be kept at this stage (60 degrees) — the main reason being the danger of cutting bed fungus. At 60 degrees the plants will be in the best position to make its appearance, while under 60 degrees it will seldom be seen. At 65 degrees the plants will be in the best position to be appreciated from it. Then I think we obtain a more robust plant by lowering the temperature to 55 degrees, then select 50 to 55 degrees as the proper degree of heat of the air, the sand may be kept at 60 degrees, and the cuttings at 55 degrees. If they go to a little below 50 degrees at night (even to 45 degrees), or to 55 degrees, it will be of no harm. At a short time, no harm is done. Still I would keep the temperature as regular as possible, and I would not advise to have the cuttings out for five weeks, and will not be troubled with fungus. At least that is my experience.

Shading is a very important matter, by all means the rule to keep the sand thoroughly wet until they begin to strike root, and then to shade them. The cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun. If bottom heat is used, the cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun. If bottom heat is used, the cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun. If bottom heat is used, the cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun.

The cuttings must not be allowed to wilt, and to prevent this shading will be required, unless the propagating bench is so arranged that the cuttings will be shaded. After the trial of many things I have settled down to the steady use of newspapers for shading the cuttings. They are cheap and even slovenly makeshift to use for this purpose; and there is nothing I have ever found so good. The cuttings should be shaded nearly as good. Newspapers are always at hand, cheap, effective, and what is more they are easily obtained. The cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun. If bottom heat is used, the cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun. If bottom heat is used, the cuttings should be shaded, but not so much that they will come out, but so that they will not be hurt by the sun.

The house should be ventilated when 60 to 65 degrees, and kept down from 60 to 65 degrees on bright days. As above stated, the cuttings are covered during the day, and are shaded during the night, and laths may then be laid across the papers to keep them from blowing over. The cuttings should be kept in the cutting bed, and they will strike readily over a tumbler of water if supported by inserting them in a glass of water. The cuttings should be supplied in other particulars. I prefer to use the cleanest and sharpest knife, and to use a sharp knife. The cuttings should be packed too hard, and the roots of the cuttings are difficult to remove from it. Note that the cuttings should be set in the mixture about three inches of sand is placed on the bench and well firmed and levelled. The cuttings should be set in the furrow in a bed across the sand by pressing into it the edge of a piece of glass, using

Three New Carnations

Take the hand hybridized. Have made this a study for the past five years under a great deal of labor and expense have grown thousands of seedlings in this time and have selected only a few on the following point: Health, vigor, frost and continuous flowering, large masses of good substance, strong only, good stems.

AMAZON Seedling of L. McGowan's Tidal Wave, 3 in. pot, \$1.00. Fully variegated pink and white.

GAVETY Seedling of L. McGowan's Tidal Wave, 3 in. pot, \$1.00. Fully variegated pink and white.

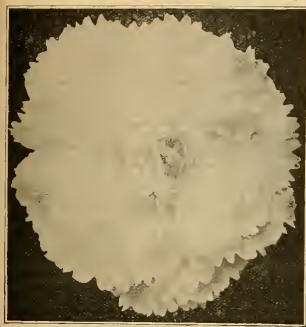

SAGINAW Seedling of L. McGowan's Tidal Wave, 3 in. pot, \$1.00. Fully variegated pink and white.

The above varieties are blooming now for the ordinary field and crop exposures, which is very important, it will bring on diverse and low water.

# Famous Carnation Della Fox

Should be grown by everybody. The past season we have taught all growers that the high-grade Carnations are the only ones that were profitable, and Della Fox stands above them all for size, color and stems. Rooted cuttings now ready.

MYERS & SAMTAN, Wyndmoor, Chestnut Hill, Phila.

New York.

Wholesale Market.
Business for the past week has averaged better than in two previous reports. Wholesale trade has been better than in the past week. There has been an absence of that abrupt despondency which has prevailed in the past few weeks. The flower market. Considering we are now only two weeks from the Lenten season, it has had a very good run for the past week, amounting to a rush, to make up for past losses. Certain it is, the season has not advanced so far as to have the usual roads, that only two and three years ago realized a 30 per dozen, are now going for 100 per dozen. Florists' stocks at the same date would have readily sold at 50 and 55, etc. as, for this past week considerable sell orders at 50, 55, and 60. The supply of stock for the week has been normal and in quality fair. Bridemaid roses were especially fine.

Fancy and high grade stock roses sold readily at prices ranging from \$5 to \$10 per 100, a few very special bridemaids, neocoras and tetocous making \$15. Brunners and Mrs. Morton brought from 85, to 250 per 100, and each. Special and fancy beauty, \$4 to \$4.50 per dozen.

Standard stocks of carnations moved quickly; \$1.50 earned to be the prevailing figure. For special varieties, \$1.75 to \$2.00. The supply of 100 was the limit which buyers would stand. Fancies and special varieties, per 100, ranging from 100 to 150. This variety or more, notably Minnie Cook. This variety now leads here. Keats' variety, violet, slightly, but some light was thrown on the sale of the stock, which was dry goods, 100 per 100, at Monday, 15,000 at 15c. per 100. Fortunately for growers, this did not reflect upon the quality of the stock, which having been obtained in straight trade. Our quotations remain as in last issue.

Standard stocks of carnations, valley especially so, quantities having been sold as well as \$7.50 and \$10 per 1,000; Narcissus \$10 per 100; Sweet Peas, quantities, buyers were getting six bunches for \$1. Romans, \$7.50 per 1,000 to \$15 per 1,000, with a setting of highly colored Galax leaves, bunches of violets on the cross, relieved with valley, cattleya blooms and admiral; a most acceptable piece of workmanship.

Retail Trade.

W. F. Sears, made some very handsome plants for the orchid season. The chief among these a very handsome upright cross, five feet high, the base of ground with green, yellow, and red, primad roses and lilies, the standard of Bride roses, valley and a wreath of cattleya blooms with a setting of highly colored Galax leaves, bunches of violets on the cross, relieved with valley, cattleya blooms and admiral; a most acceptable piece of workmanship.

With the advent of spring flowers the display of the stores. Azaleas, tulips and hydrangea have been very freely used, also pansies and carnations. The display of one fine window of Lillium Harriall in pots, simply skirted with green plants. Scallen and a few plants of the orchid season, and orchids. Fleischman eclipsed anything he has done before in his new store with a display of plants, many of them splendidly flowered, with Adiantum Farleyense form to assist the grouping. This charming display was arranged about the middle of the week on a trunk of prepared palm stems, and there are throughout the store were arranged pots of most acceptable pieces of workmanship.

City News in Brief.

Arthur Wise, employed by J. K. Allen, has been appointed as clerk of the Fair. Lacking any Society fund, the employees of the wholesale houses have put up a fund for this purpose. They held their confere in the time of his trouble and have secured a goodly sum. A horticultural exhibition will be held at the horticultural section of the American Institute will take place on March 9, at their own rooms, No. 110 West Twenty-ninth street. This will afford an excellent opportunity for those who have seedling carnations or other novelties to exhibit them before the public. Certificates will be awarded to meritorious varieties. The president, Dr. H. W. H. ...

A competition for Floral Funeral Design, to be adopted as the official design of the New York Florists' Club, will be held in the club's rooms, No. 19 West Twenty-ninth street, New York, city, on Monday, March 8, 1897.

The competition will be governed by the following regulations: 1. Competition open to all florists. 2. Designs entered in competition must be accompanied by name, initials or mark other than that of the designer's name; names or addresses of competitors attached to designs. 3. The committee's awarding names may be attached after the judges have passed upon the designs. 4. Designs accepted for exhibition, which can be reproduced in effect at any time of the year, at a cost not to exceed \$15.

Business Cards. 1. The committee will award the prize, if in their opinion, the designs offered are not worthy of publication. 2. It is earnestly requested that the floral artists of New York will enter this competition in full force. 3. The committee will award the prize, if in their opinion, the designs offered are not worthy of publication.

On Wednesday, Feb. 17, in the City Court, before Judge O'Dwyer, a suit was filed by the firm of Messrs. S. Wadley of New York and New Rochelle, against the Pennsylvania Railroad, brought by the firm of Messrs. S. Wadley, against the Pennsylvania Railroad, which had been assigned to the above court. The suit was filed on Feb. 22, 1895. The plaintiffs were awarded damages in the sum of \$267.59, with interest from February, 1895.

This case has quite a little interest for florists and shippers, in that it clearly shows the necessity of proper care to be brought to account without a costly trial, when neglect can be proven.

From other testimony produced it appears that the car containing the goods was properly packed for the time of year, and would have been forwarded directly through by the Pennsylvania Railroad, had it not been for the usual time by this train between the two cities being twenty-four hours. Mr. Wadley, proved the goods were frozen when delivered.

Table listing various florists and their addresses, including categories like Wholesale, Retail, and Florists.

## Philadelphia.

**The Market Improves.**  
There has been quite a change in the cut flower market this past week, and happily for the buyer. The market has advanced in great demand on Friday as follows: On Saturday there was quite a rush to secure the flowers for the coming week. The florists are hoping that in future years the demand may be kept up, and another advance should be added for the coming week.

All this week the market has done better; and the prices have advanced. Over last week, stock has been sold out cleaner, and in many cases the stores have had to order from the growers for extra supplies. American Beauty led the selling, the best long-stemmed bringing \$7.50 per dozen. Other roses, Bridemaid sold best, \$10.00 being the highest price met. Meteor went from \$6 to \$8. Bulbous stock is very plentiful and does not move to sell. Valery is very plentiful, a large quantity now coming in from nearby growers. Carnations have sold very well, the general price being \$1 to \$1.50, a few fancy bringing \$2 to \$2.50.

## Horticultural Society.

Although the attendance was not very large at the meeting on Tuesday, owing, no doubt, to the heavy rain, the meeting proved very interesting. Mr. Joseph Meahan read an interesting paper on the Carnation plants and their cultivation were very interesting. Mr. Tallow explained the plans of flower beds at the Richmond Hotel. The premium for mushrooms offered by Henry F. Mitchell, was awarded to Wright & Co. of Niagara Falls, N. Y., who were greatly admired. The premiums offered by Clarence H. Clark, Esq., for vegetables and such were awarded to Kaisha and James Westcott, respectively.

## Howlers.

The howling alleys were used for the first time on Saturday last, and were pronounced perfectly satisfactory; 165 was the highest note made, which is very fair considering that the howlers have had no practice recently. A match between the Howlers and the Gun Club is on the boards for this week.

High Graham has been doing a large business in decorations. The mid-winter season is the best season ever seen in this city; competent judges said it excelled the recent large event in New York. The Matron's Ball this week was also very large and well decorated.

## Among the Growers.

South Waukey continue to turn out some good flowers from their place at Lansdowner. American Beauty has done well and paid for itself. Meteor has done well. The Bridemaid and Brute are grown largely. Only one house of Brute is brunched and these are being brought to market. Meteor their store trade some carnations and bulbous stock is being grown.

Charles Price has had a very successful season and his plants are in perfect condition. The benches are of iron, with slate bottoms, and are somewhat shallower than usually seen, but they certainly suit roses. Brunner, while doing well, has not been paid for as well as other roses. Meteor has proved profitable. Mrs. Morgan is well liked here and will be grown on a large scale next season. It has been noted before the least thing has been given it; it seems to prefer to be loose and when seen this way shows strong growth. Bridemaid and Brute do well, and although cut hard, are yet in good condition.

H. T. Connor has done fairly well with roses and carnations; he still believes in grafting and stocks are now being potted so well. Kaiserin are for the next season.

DAVID RUST.

## Ridgewood, N. Y.

John Bowling is growing some fine fine varieties. D. V. Snyder is shipping tulips in large quantities. His stock is fine. Mrs. A. E. Bunker and Saddle River florists, furnished the flowers for a dinner decoration at the residence of E. A. Walton, president of the Horticultural Society. In the same company, the guests being Vice President-elect Hobart and Governor John W. Orlogs, of New Jersey.

## Boston.

**The Market Improves.**  
The cut flower market is in a greatly improved condition over the average reports of the past week. The market has not advanced much, but stock of all kinds is moving readily, and everything of good quality is doing well. The market is improving it is more than probable that prices may advance slightly. The retailers all have more stock on hand than last Saturday and Sunday (Valentine's Day) business was especially brisk in all quarters.

## Annual Club Dinner.

The annual dinner of the Boston Garden and Floral Exchange Club came off at the American House on Thursday evening, February 11. It was well attended, about seventy-five members, friends and ladies being present, and was in every way, socially and financially, successful. President Grey was at the head of the table, ably assisted in doing the honors of the occasion by Ed. Hatch, who officiated as toastmaster. The good-natured remarks of the veteran florist and gardener, John Galvin (who also elected the boys that he could still trip the daisies with any of the younger elements), E. O. Orpet, J. H. Woodford, J. Woodward Manning, Warren Powell, M. Holmes of Providence, W. J. Kennedy, E. L. Beard and Jackson Davis. Among the visitors from out of town were noted Messrs. W. H. Burton and Lambman, of Fall River; Appleton and Rennie, of Providence, and McCorie, of Orange, N. J.

William Nicholson, M. A. Patton and William Spillaker, of Philadelphia, were representatives of the trade who left on the 3 o'clock train Tuesday for Cincinnati and the Carnation Convention. They will be back on Tuesday evening, and will stop a few hours at Niagara Falls to break the monotony of the journey.

W. H. Dunlap, of Longa Springs, N. Y., sent a bunch of seedling self pink carnation to Welch Brothers for examination. It was pronounced to be the best promise of something first class.

Mark Smith, one of the oldest florists of Fall River, died Saturday last.

James Stillman has opened a retail flower store on Moody street, corner of Spruce, New Bedford.

The decorations of Mechanics' Hall, on the occasion of the Charity ball, on Tuesday evening, were very elaborate and very generally admired. The floral work was done by Leon Severy.

H. H. Dunlap, of W. A. Dunlap & Sons, seedsmen, of Nashua, was in town last Saturday.

## Golden Anniversary.

An important social event of the week was the celebration by Mrs. Dea and Lily Dea Galvin, of the golden anniversary of their marriage at the home in Dorchester, on Monday evening. The house was well decorated, and the couple were surrounded of many valuable presents, among them being a solid mounted dinner set of cut and engraved fifty pieces. The entertainers and friends of the gentlemen and girls of Boston were present. The presentation speech was made by Mr. Dea, and the couple were well complimented which expressed the warm appreciation of the friendship of Mr. and Mrs. Galvin. The presentation was well chosen and held by the trade in this section, where they are so well known.

## New York Horticultural Society.

John N. May, of Summit, N. Y., exhibited a fine variety of Dea and Lily Dea carnations, the Horticultural rose on Saturday last, and was awarded a first-class certificate. Mr. May is a member of the Horticultural Society. Charles Gardner, gardener, showed four new varieties of clematis, Lady Caroline Neville, and a variety of clematis, Mrs. E. C. Reynolds. James Cougley tabled a beautiful basket of Coe's long-crested, and some carnations. The Massachusetts horticulturists may well feel proud of the work of these Congressmen in opposition to the Washington free seed movement.

The essay on "Sweet Peas," by Rev. W. T. Hutchings, of the Massachusetts Horticultural Society, was especially interesting and instructive. Next week, Saturday, Feb. 27, the Horticultural Society will read a paper on "American Kitchen Magazine," will read a paper on "Good Food" from the Garden.

## Washington.

**Seedling Carnations.**  
Strauss & Co. have three large houses devoted to seedling carnations of their own raising. They do not select seedlings, but simply a crop raised from selected seed. There are, of course, hundreds of varieties, but they have so far selected only the pink, variegated, comparatively little, that for selling as flowers they pay nearly as well as the so far selected plants. They have approved pink, white and red varieties. All the plants look remarkably well, and some of them have produced phenomenal flowers; especially is this so among the white and fancy colored but some of the pink ones are also good, three and a half inches in diameter, of good form and substance.

Mr. Miller, the rose grower of this establishment, inaugurated a series of experiments last summer, with the view of determining the best soil for roses. As applied to horticulture, judging from the way he rattles off a yard of symbols in the space of about five minutes. However, he talks about cow manure by the same old name, and says he would not care if there was no other manure to be had, so far as the feeding of roses is concerned. Mr. Miller has kept a careful record of the soil used in the different manures and soils. There is also an experiment in the use of manure on the bushes when planting. Two lots, side by side, were planted, one with difference in the soil. One of them was planted according to the orthodox method of firming the soil, the other was planted as loosely as possible.

## The Water Hyacinth.

The water hyacinth is responsible for an immense amount of inconvenience to boatmen on some of the heretofore navigable waterways before my departure for the United States. Introduced within recent years to those rivers, it has increased so rapidly that it is now quite a nuisance in the interest of dense matted growth, interfering with and at times compelling steamers to come to anchor. It is a great nuisance in the city last Monday, an appropriation of \$10,000 was sanctioned to enable the Secretary of War to employ the necessary means of clearing those rivers of this nuisance. G. W. O.

## Jacksonville, Fla.

This is a strange place from which to send you Pittsburg notes, but as I did not have time enough before my departure for the South Sea, I will send them now.

Trade has improved a little over that of last week, and the outlook is bright for the Lenten season. Flowers are rather plentiful, excepting roses, home-grown stock, which is in short supply. The interest of good quality will be shipped here. Tulips are much better now; some fine yellow ones are the best of our. Day lilies, gladioli and daffodils are plentiful and well sold. The rose-wood plants are also abundant and new orders are taking place yet.

The regular meeting of the Florists' Club here was held on Saturday last, and though it was a disagreeable night, President Cannon's address, the reports of Messrs. Eysse and Entertainments for the year, consisting of J. Sempie, Fred Burki and E. C. Reineman, Charles T. Condit, and the report of the committee to prepare an essay for the meeting Feb. 25. A little talk about the welfare of the Florists' Club was indulged in, as a few percent, and it looks as if the meetings will hereafter become more interesting to all. Keelbel Brothers, of Charlotte, Pa., and C. T. Siebert showed Dorner's two new carnations, Mrs. D. Duhaime and Mrs. George M. Bradt—which had been received. They were highly thought of. Both seem to be strong growers, and well adapted for the soil, and will hold up the larger flowers well.

It will not return for a month or more. I would ask some of your Pittsburg readers to send you on news occasionally. Will let you know how the Florida market is doing, my only destination Nassau, N. P., before I do Florida. Weather is delightful here and quite warm. E. C. REINEMAN.

## Buff. lo.

We are enjoying very seasonable weather, which helps the business, otherwise weather from reaching a thorough stagnation. Flowers are fairly plentiful for the ordinary demands and being sold at low prices. If anything, a scarcity inclines in roses. The plantations seem to be having the elements in their favor in this locality this winter, as the fact exists that an unusually large percentage labor the average of the hours of sunshine have been seen than usual, which, of course, stimulates all growth and the same, generally, are lacking unusually well.

A happy move was that of D. B. Long on Tuesday last week, the showing of new carnations at the regular meeting of the Florists' Club, as it brought out a large quantity, including about a baker's dozen of "first shown" varieties of the divine color were displayed and naturally called out interesting comments. Among those from out of town were T. A. Webb, Corin, N. Y.; H. J. Wise, East Aurora, N. Y.; Fred E. Lewis and Charles Dole, of Lockport, N. Y.; W. C. Strub, of Attica, N. Y., and Fred Schlegel, of Rochester.

At the club meeting routine business was disposed of and the nomination of candidates for office for the next year, beginning March 1, took place. A good number of eligible material was duly honored, with promise of an active contest at the polls on the second Tuesday in March. On occasion, the details of which were put into was decided also to hold a banquet on that the hands of Charles Kottisch, S. A. Anderson and W. A. Adams, which signifies that there will be nothing left undone that would be to the advantage of the club. Some bowling games were indulged in later by local men and visitors.

W. J. Palmer, last week rather suddenly and unexpectedly, at the advice of his physician, hid himself to some Pennsylvania resort or sanitarium, in the interest of his rheumatic troubles.

William Scott and D. B. Long will attend the District Society's meeting at Buffalo, N. Y. They will probably be the only, but of course able, representatives of this locality at that meeting.

## Patterson, N. J.

Ed. Seery decorated the armory on the occasion of the Charity Ball. He also secured the DeVan-Morrisse wedding decoration.

One of the flower stores here is selling carnations at 10 cents per pair.

## Sault Ste. Marie, Mich.

The date of the meeting that Grohman Brothers of Saginaw will build greenhouses here.

TObAC-OIL

## Vaporizing Tobacco Extracts made

easy and sure by using the TObAC-OIL VAPORIZER—\$3.50 each. Money back if not satisfactory. Particulars by writing

**NEW ROSE**

**SOUV. DU PRESIDENT CARNOT**

Admired by everyone wherever seen. A strong, healthy grower, free bloomer, and a good all the year around rose, both for in and out of door culture. Should be grown by every LIVE FLORIST throughout the country as it will surely prove a money maker. Read what some of our Floral Artists and others from different parts of the country say about the blooms.

WM. H. BROWER & SON,

Floral Artists, 535 Broadway, N. Y.  
We think your new rose, Pres. Carnot, is one of the best roses that we have ever handled. It has a very fine color, good stiff stems, and as for keeping it is the best rose on the market. Our customers say they keep from six to ten days.  
We remain, cordially,  
WM. H. BROWER & SONS.

ALEX. MCCONNELL,

Fifth ave. and 45th st., New York.  
I consider your new rose, Pres. Carnot, a very valuable acquisition, supplying a light pink shade in color entirely distinct from any other rose cultivated for cut flower trade. Its strong and vigorous growing qualities and beautiful foliage are commendable, also a superb keeping rose, retaining its color for days. A very desirable variety.  
Yours,  
ALEX. MCCONNELL.

J. M. GASSER,

101 Euclid ave., Cleveland, Ohio.  
Your blooms of Pres. Carnot came to hand in good order, notwithstanding the long journey. They showed up in good shape, and were the admiration of all who saw them, especially of those who know a good thing when they see it. We think it will prove quite popular in the future.  
Respectfully,  
J. M. GASSER.

WM. SCOTT, Florist,

Cor. Main and Balcom sts., Buffalo, N. Y.  
The rose, Pres. Carnot, was received in good shape. The color I consider beautiful, and lasting qualities all that can be asked. After the third day they opened out beautifully and hung well.  
Respectfully,  
WM. SCOTT.

P. L. BOGART,

Sixth ave., New York.  
In regard to the new rose, Souv. du Pres. Carnot, it has a good stiff stem and a large flower. It is certainly a beautiful thing, and more particularly when flowers are full blown, showing its beautiful pink center. Its keeping qualities are excellent. I had a vase of them standing in my window from Tuesday afternoon until Saturday night, and even then they did not fall apart.  
Yours very truly,  
P. L. BOGART.

DAVID CLARKE'S SONS,

Boulevard, 75th and 79th sts., N. Y.  
We find the new rose, Pres. Carnot to be all that is claimed for it. Its delicate color and strong stiff stems, together with its excellent keeping qualities, make it one of the best roses on the market to-day.  
Yours truly,  
DAVID CLARKE'S SONS.

JOHN V. PHILLIPS,

372 Fulton st. & 7 Chitwood St., Brooklyn, N. Y.  
The Pres. Carnot roses sent me I distributed among my best customers for their approval, and being so exceedingly satisfactory for its keeping qualities, beauty of color, form, foliage and stiff stems, I received more orders for them than I could fill. The demand for them far exceeded your shipments.  
Respectfully,  
JOHN V. PHILLIPS.

Mrs. E. MILLER, Florist,

Inglton, Ohio.  
The Pres. Carnot roses were received by me in excellent condition on the afternoon of January 14. We have many visitors to see them. They were very much admired and talked about. The last one fell to pieces yesterday, January 24, showing it to be an excellent keeper.  
J. THIRKELDSEN, Manager.

PENNOCK BROS.,

134 Chestnut st., Philadelphia, Pa.  
We have handled our Souv. du Pres. Carnot roses since early last Fall, and have had no better selling rose. Have lost but very few flowers, as we find it to be one of the best roses to keep. It has brought double the price of about the same class of roses. Think it will be one of our staple roses when it can be had in quantity. Good strong stems and foliage, and large pointed bud of delicate pink, it has been quite a favorite this Winter.  
Very truly,  
PENNOCK BROS.

NORTON BROS., Florists,

Hotel Berkeley, Boston, Mass.  
Its delicate color, shading to pink and its long, strong stems, its fragrance and remarkable keeping qualities should place the new rose, Souv. du Pres. Carnot, with our most desirable roses.  
Very truly,  
NORTON BROS.

Plants of strong, healthy, guaranteed stock, out of 2 1-2 inch pots, ready for delivery March 15th, can be had of the undersigned at

State of Trade.

There is no mistake about the condition of the market for carnations the past week. Everything was cleared off in fine shape, and the cry all along the line was that dealers should get in their orders. If this was not to a great extent caused by a shortage of cut among most growers, still it is a fact that everything might be considered very encouraging. But the cut was undeniably small for the season; a average however, not far off from the second week of March, if not before. It is astonishing how little the sun does itself this time of year, and until it brightens a similar condition of things will prevail. Prices, however, have not been so advanced as they were, and the sellers, and boxes of tea roses, sell at an average of from \$4 to \$6, with a few extra long stems, of those fortunately having them, from \$7 to \$8.

The Hoppers' Park folks seem to have had quite a fair cut of long-stemmed Beauties, going from \$4 to \$5 per doz. Bossert & Washburn's cut ran more to shorts and mediums, but prospects for long stems in a short time are good. Hartshill have sold in quantity lately at \$5 per doz. Indeed all white stock, on account of funeral, has been in great demand. The general drop of bulbous stock. Carnations have risen to \$2 for anything like fair stock, and the fact that has been so far, as to the past week, is that there is not much real fancy given in just now, and \$3 is about the figure for that. But the fact that carnations are still cutting fine California varieties; price for double or single, 75c to \$1; none too plenty.

Florists' Club Meeting.

The date of the next meeting might have been changed from February 25 to March 4. An extra large hall has been obtained for the fifth floor of the Masonic Temple. The date of the next meeting every accommodation will be supplied for exhibitions. Messrs. Stollery, McKellar and Wilson were appointed a committee to take charge of the exhibition. Flowers intended for exhibition, and forwarded from outside points, should be addressed to the care of Messrs. Kellar and Hartshorne, in the care of C. H. McKellar, 59 Wabash street, Chicago.

Another will be given at the regular dinner, March 25, consisting of a musical evening with refreshments, and your correspondent has been requested to give the boys reminiscences of the early days of the trade in this city. The committee in charge consists of Messrs. Baldwin, Kellar and Hartshorne.

The essay of the evening was by Joseph Reeves on "The Growing of the Chinese Primula." This gentleman is a very successful grower of this stock, having expended in each pot, with a spread of foliage from 20 to 24 inches, admirably flowered. Mr. Reeves is foreman for Mr. Andrew McLean, 218 33d st.

In the discussion which ensued Mr. N. Neillick objected to the use of bone meal as a fertilizer for pot plants, except for such as stayed in the pots a longer time. He preferred horn shavings, one-third of a pound to each pot, this being much quicker in action than bone meal. Mr. C. W. Johnson prefers Clay's fertilizer, a large proportion of which he has used in England, as well as here, with the best results, whether in pot plants or on the carnation beds.

Mr. Baldwin spoke very highly of Albert's horticultural manure, which is very good for act. in the soil. The latter cannot be used in obtaining it, as well as the necessity of using care in its use, as the company's motto is far too powerful, and has the means of disseminating its use in some hands.

Mr. Reeves maintained that the primula needs a cool, moist atmosphere to reach its highest perfection, and believed most growers due to improper handling during hot months. Seed is sown from the 1st to the 15th of June for early blooming plants, and a compost of peat moss and leaf-mould being the best when obtainable.

Clay's seed sowing lightly and do not press the soil very firm. The latter cannot be allowed to become dry and should be kept moist. Mr. Reeves said that seed germinates in from 10 to 15 days, and from beginning to end everything should be kept cool and moist. Mr. Johnson said that seed should be sown in three-inch pots, the soil to be a light rotted soil, rather rough, with a liberal proportion of rotted manure and sand.

At this stage plenty of light and syringing overhead will be found beneficial. In shifting to the four-inch pots use soil somewhat rougher and heavier and add a proportion of bone meal. He does not put firm and plants should never be allowed to get pot bound long. Keep the plants as close to the glass as possible, but not too close together. Carnations should be covered with all shade as soon as practicable. When plants have been shifted for the last time feed with nitrate of soda once a week until the flowers appear, using a four-inch pot of the nitrate to forty gallons of water. When in bloom feed occasionally with weak manure water, increasing the strength as the plants mature. Those wanted in batches by the young plants under 10 degrees, but they can be kept in good condition at 40 degrees.

Notes About Town. P. J. Hauswirth has been busy with receptions at the Auditorium, two of which were in honor of Lyman J. Gage, the new Secretary of the Treasury. The Pioneer Floral Company has also been successful with three receptions and one wedding, all at clubhouses of Jewish people. The late Mrs. J. C. Beck has the position of general superintendent of the West Side Park.

The Viator Brothers of Rogers Park are going largely into Jubilee, Triumph and Armatzany carnations this year. Stock in this market is not so good as it was in evidence as a seller as heretofore. EDGAR SANDERS.

ROOTED CUTTINGS. Cash prices.

All transplanted in soil; as good as pot-grown.

- Verbenas, Mammoth—\$1.00 per 100, but \$6.00 per doz. for 100.

**The Cultivation of Phalaenopsis.**  
 Paper read by F. McDonald before the New York Gardeners' Society, Feb. 15, 1896.

In early boyhood I made up my mind to study the nature of the phalaenopsis, and believe it was fairly common with the collection which was under my care at Summit, N. J.

I venture to say that it is only a question of a very short time when we will have the phalaenopsis on the cut flower market of the United States, as plentiful as is the cattleya to-day. Who of us would have thought, ten years ago, that the demand for cattleya blooms would have reached the proportion it has assumed at the present time? Fifteen—yes, or even ten—years ago there was little indication that the love for orchids and orchid flowers would grow so rapidly.

I do not deem it expedient to go into the history of the phalaenopsis, in this or any other country, for the simple reason that it is not yet well known to have a really authentic history. There is now, I believe, only one noteworthy collection of this orchid the world over, and that is the one and ultimately ending of Mr. G. Amesick's collection at Summit, N. J., which was the highlight over seen, according to the unanimous opinion of orchid experts on both continents.

In treating of the cultivation of any plant grown under glass, we must begin with the house in which we are to grow the plants, never to put air, or a house especially built for phalaenopsis; any ordinary stove house will do. Neither does it make much difference whether the house is built north, south, east or west, providing you have the desired temperature, which is 65 degrees, and there is more or less variation from that in the winter.

The next thing necessary about the house is a full supply of pure air, and ventilation is one of the greatest essentials to their well being. I have often been told by orchid growers never to put air on the phalaenopsis when it was freezing hard outside. Well, contrary to advice, I have put it on, and kept the ventilators open, whether the temperature was above or below zero; but when the weather was damp or cloudy, down came the ventilators tight, to remain so until the outside at-

mosphere became purified, when I would put on air again very gradually.

Heating is another factor which is too often omitted with regard to phalaenopsis. It is absolutely necessary to have a little fire heat in summer to keep the inside atmosphere purified. The first thing to be considered is to be allowed to go out during the summer months; so that when the day is damp or cloudy, you are living in a house that get the best of the fungi which are sure to accompany on the compost in such weather—disease which will follow to grow and reach the roots or foliage of the plants, is bound to bring dire results. An excessive increase in the house will bring black or yellow spot on the foliage—the worst disease of all to get rid of. In this case, a kind of only contact, perfume, and that is a continual wash over every individual plant. When this trouble is discovered, the remedy is simple. As soon as observed on the leaf, take your knife and cut off that portion of it where the disease is located. Be careful in cutting at least half an inch below the spot, though it may be the top of it. It seems hard to do this, but you will find by continuing this course right along in every case, and then using plenty of sulfur on the part of the leaf you have cut through, that you will have no more trouble with spot.

Another thing which brings about a great deal of vexation, and proves a great drawback to this magnificent orchid, is the yellow caterpillar, a small, but little insect that I have ever had to contend with. To get rid of him, as usual, keep the house in a state of cleanliness at all times. Have some fresh stems on your pipes, and always keep a little fresh stems in water to sponge with, give a light fumigation three times a week. If this is done regularly, it will keep the thrip within bounds. Phalaenopsis requires to be shaded from the direct rays of the sun at all times.

Watering is another of the most essential duties connected with the raising of an orchid. I seldom use any other than rain water, and that always of the same temperature as the house, or the water in the pan or pipe (the plants are generally grown in such), the best way is to have a barrel or cask in the house, and to draw the water as you can get it, and dip your plants at least once a week. By this I don't mean the foliage or the stem, but the compost and roots and up as far as the bottom leaf. This done, they require to be looked after with the watering gun every morning. They require this treatment only when growing.

When resting, i. e., drying them off a little, in order to get their flower spikes through the hard skin in their natural way, one has to be very careful, because on this depends principally general results. You have to study and know at what time your plants are ready to flower, and whether it is wise to get them into flower. To stop a plant from growing in order to get it into flower, you should lessen the water gradually, and when you see the flower spikes appear, increase the amount of water very slowly until the flower spikes are fully expanded.

Do they need to be fed? Well, yes, they do. I don't know what they get at their native home, but I do know that under cultivation they will take a good meal once a week while growing. Fresh cow manure diluted in water about one peck to the barrel, is what I used; and although I have also used several fertilizers I have found this liquid manure to be the best. But they should never be fed while in flower. The same course should be observed when they are through flowering, for at least two months. It is bad policy to let them flower too early, and to have a good point to pinch out all flower spikes from weak plants, and prevent them flowering at all this year, and to have the next year you will get a flower spike twice as strong and the plant will almost be double in size as a result of stopping its growth.

Now there are a great many little details which I do not consider necessary to mention here, and I refer you to some of our orchid books. Suffice it to say that you have in this paper the principal points necessary to the raising of an orchid, to obtain best results with phalaenopsis.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Fall River, Mass.**  
 Mark Smith is reported very ill, and his friends fear that he cannot recover.

**Orange, N. J.**  
 John McGowan informs us that the information in a recent item regarding the fire at his place is erroneous. He uses hot water heating, and not stoves. In his greenhouse, the origin of the fire is unknown, but is supposed to be incendiary. One large bush, containing carnations, was completely destroyed. The damage he sustained amounts to between \$1,000 and \$1,500.

**New Orleans.**  
**A Cold Spell.**  
 We have experienced a very cold spell of weather the past two weeks—rain, snow and frost; and the thermometer going down to 22 degrees. The sleet froze as it fell, covering the palms with a mass of ice. For three days they were black and stiff. Fortunately none was injured. It is remarkable the degree of cold these palms will stand when once established. Phoenix reclinate is a very soft palm here, and a degree of frost will very quickly upon it. Very few are planted now. P. canariensis is a grand palm planted out, but does not succeed in pots.

Roses have got a setback for a time; we always get better roses after a good frost; they then get their much needed rest. Canines have suffered most, but few were killed. After all the cold weather does us lots of good. If we did not get it now and again we would be overrun with insects of every description.

Caninas are of no use here now, on account of the worm. We have tried many things for it, but what will kill the worm will kill the plant. Business is picking up a little now. Some of the large carnival balls are on.

Henry A. Dreer Inc. has made a donation of several thousand bulbs to Audubon Park.

J. Muller is on the road to recovery. H. FAWCOTT.

**Toronto.**  
**Annual Supper.**

The annual supper of the Toronto Gardeners' and Florists' Association was held in Webb's parlors on Tuesday, the 24th inst., and it was a very successful affair; I think the best we have had yet. Nearly one hundred members and friends were present. The dining room was artistically decorated with plants, azaleas in bloom, cinerarias, narcissus, anemones, palms and begonias. The tables were decorated with small plants and cut flowers, the latter being the Meteor roses, narcissus and anemones. Some of the latter being blooms of very fine seedlings. At the head of the table were some grand blooms of cattleyas and a few sprays of Coelogyne cristata.

President J. H. Dunlop was chairman. The most of the annual songs and stories were of the best. Several members of the City Council and the District Councillors were present as guests of the Association. Mr. Gammage of London, F. Foster, Jr., and Sam A'Heit of Hamilton were the members of the profession from outside points. (We would have liked to have seen more.)

After the supper the usual loyal and patriotic toasts were proposed and responded to. Some very fine songs were given by Messrs. Gammage, Herrick, Hinton, Kingston and Tidy. The president gave the toast of the Toronto Horticultural Society, coupled with the names of H. Simmons and B. Utley, president and vice-president. Mr. Simmons, in responding, spoke of the work the society intended doing, and asked all the gentlemen present who were not already members to join. Several signified their intention of doing so on the spot. The toast of the "Seed Trade" was responded to by Messrs. S. E. Briggs and H. Simmons; that of "The Growers," by T. Manton; "The Retailers," by C. J. Tidy. Both these gentlemen said there was less friction between the different sections of the profession here than ever before, and both agreed that the trade is all right. The toast of the "Past Presidents" was responded to by John Chambers and George Reeve, who each congratulated the society on its success. Messrs. Ayles and Gammage spoke as "Our Guests." Songs were also rendered by Walter Munton, John Chambers, George Manton, Alf Babbs and others. THOS. MANTON.

WE MEET THE PRICES OF ALL COMPETITORS  
ON NEW  
**CANNAS "Italia" and "Austria."**

**500 DOLLARS WORTH FOR 25 CENTS**

Two years ago we offered the originator of these Cannas.

**1000 DOLLARS**

For one plant of **ITALIA** and one of **AUSTRIA**.

The offer was refused—\$5000 asked for a part of the stock. That the plants were fully worth the price asked was proved by the enormous sales made subsequently at \$5.00 each, even up to six months ago. Owing to rapid procreation we can now take our price on

(Flower One-half Size.)  
**AUSTRIA,** at 25c. each; \$3.50 per doz.; \$26.00 per 100; \$200.00 per 1000.  
**ITALIA,** at 60c. each; \$6.00 per doz.; \$45.00 per 100; \$400.00 per 1000.

The prices for immediate delivery and the finest, large, home-grown roots. Send for list of **ALL THE NEWEST CANNAS** at popular prices.

**ALL SOLD.** Our entire stock of **ASPARAGUS SPRENGERI**, consisting of nearly 10,000 plants, was sold to Mr. Robert Craig—he knows a good thing when he sees it.  
**NEW ROSES, CLIMBER WOOLTON, GARDNER PILKAR,** \$5.00 per doz.; \$10.00 per 100.  
\*Send for catalogue of novelties.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## RÖLKERS' SOLUBLE CEDAR OIL INSECTICIDE

The price of any foreign soluble insecticide oil thus far introduced; it dissolves readily in any water, soft water preferred.

**Specially Prepared for AUGUST RÖLKER & SONS, New York.**

Who offer it to the American Horticulturists as the **BEST AMERICAN REMEDY** for destroying scale, aphid, thrip, fly, spider, mealy bug, and other insect pests. Does not injure a healthy skin. **Once Tried Always Used.**

**Directions:** For scale, plants dissolve one pint in fifty gallons of water; for hardwood plants and hard-shell insects increase up to a quart in thirty gallons of water, ganging by experience and by obscurity of each case; stir well, then dip, or spray with a fine rose-greenhouse syringe, or with the knapsack sprayer (capacity six gallons).

For dipping purposes, well to always keep a ready lotion handy in a cask or tub.  
**Send \$2.50 the gallon tin; \$1.00 the quart tin.**

Sold by **SEEDSMEN AND FLORISTS.**

**To Florists:** We sell the Oil for \$1.50 per gallon; 60 cents per quart. The soap for 90 cents a pound tin; \$12.50 the 50 lb. tub.  
**Trial Tins** of soap sent by mail on receipt of 50 cents for pound tins; 25 cents for half pound tins. Address

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. NO. 9.

NEW YORK, FEBRUARY 27, 1897.

One Dollar Per Year.

## NEW CALIFORNIAN GIANT MARGUERITE (GIANT PEARL.)

This variety is truly a giant in size, the individual flowers often measuring 3 inches and over in diameter. The snow white petals are arranged in two rows around a dazzling yellow center, and are of good substance. Habit of plant is strong and compact, in every way superior in size and beauty to any other varieties introduced up to the present time. The originator writes us that he has in his garden all varieties of Marguerites in cultivation, and there are none which can equal the Giant Pearl in size of flower and profusion of bloom. No Frost growing cut flowers should be without it.

Young Stock, 2 inch pots, \$1.75 per dozen; \$12.00 per 100.

## "Every Bulb's a Pearl."

**EXCELSIOR DWARF PEARL TUBEROSES.** Selected, 4 to 6 inches in circumference, \$7.50 per 100. Of course: Quantity affects the Price. If you wish 5000 or more, write for sample and special quotation.

**JAPANESE LILIES.** New Importation. Re-packed—Bulbs guaranteed in perfect condition. Note: Japanese Lilies will scarce this Spring, owing to the enormous proportion of bulbs arriving worthless.

## American Carnation Society, FIFTH ANNUAL MEETING.

HELD AT CINCINNATI, FEBRUARY 18 AND 19, 1897.

Our last week's number contained a list of the names of those who were present at the sixth annual meeting of the above society, held at Cincinnati. In this issue we will continue the list of the participants. A full account of the exhibition is also given. As mentioned in our last, the most important feature of the meeting was the display of the beautiful carnation blooms shown by Mrs. Barker & Sons, Bradt exhibited by Fred Dorner, & Mrs. Mayhew, Ind., and Jubilee by Mr. H. H. Lutz and E. G. Hill & Co., being marvellous of good cultivation.

All the meetings were well attended, and the business was conducted with a vim which was most gratifying, demonstrating the high esteem which pervaded the delegates.

At no time was there a lull in the proceedings, and the Cincinnati gathering will go down in history as one of the most successful in the annals of the American Carnation Society.

SESSION THURSDAY,  
EVENING, FEB. 18.

The sessions were held in a room in the Gibson House, and by a change in the mode of procedure from that adopted at previous meetings the first session occurred at 8 P. M. on Thursday, Feb. 18, and was presided over by Mr. L. W. Sauer, President Richard Witterstaetter occupying the chair.

The chairman introduced His Honor, Mayor Brant of Cincinnati, who spoke as follows:

"Mr. Chairman, Ladies and Gentlemen: I have never known a florist or one who was engaged in propagating the beautiful flowers, to be other than a good citizen; and I have never known one of those who are known of one of them being in trouble and having to be dealt with by the officers of the law, and that I might mention distinguished member of your society. (Great laughter.) I will explain his trouble—his name is— (Pause.)— (Applause.)— Those who are engaged in beautifying the world and making it better for every one, have a right and an obligation to the world's improvement, cannot be otherwise than good citizens, and I am glad to see that there is, at an exceeding great pleasure to me and welcome you to Cincinnati, as an official of the right hand fellowship. I want to say to you that our people feel complimented that you have selected this city as the site for one of their meetings. Now, you can guess why he asks that question."

"(Great applause.)— He has been in trouble before. (Renewed laughter.)"  
The Mayor, continuing: "If it not amusing to all of us here in Cincinnati, we have trouble always have to speak before they are accused of anything." (Roars of laughter.)

"But, gentlemen, I sincerely trust that you will have a pleasant and profitable time, and I want you to do it if you do not expect to make Cincinnati your future meeting place. Remember, gentlemen, that I am here to do nothing but to be of use to my house, the telephone in my office rings at any hour of the day, and the telephone in my apartment at night. (Renewed applause.)"

The chairman then introduced to the President of the American Carnation Society, in response to the Mayor's address. He said, in part:

"My dear Mr. Mayor, you will be tired of hearing generally. Twelve years ago, at the birth of our national society, known as the American Carnation Society, Cincinnati was chosen as its first meeting place, and I joyally were the florists treated. The society grew, and prospered, and prospered with best intentions, has prospered, and is still the association around which we all have gathered. I am glad to see that you have so cordially welcomed to-night, is an offshoot of the parent, and such has our growth been that we have throughout the country devote their entire time and

energy to the cultivation of the carnation flower, and the result has been that florists have produced varieties of this ever-popular flower, the attribute of which were its beauty and the great variety of its color.

I must leave to the able president of the society the pleasant duty to tell us of the progress and the ability of the general development of the carnation. And I can only say they are a cosmopolitan set of individuals, the strict rules of social etiquette were being entirely ignored. You will find Lily Dean bringing with Charles A. Dana, Lizzie McGowan hobnobbing with the Rev. Dean Hole, even at the unbecomingly hour of Daybreak. Helen Keller sits meekly by and smiles with composure. Armazindy, Della Fox and Uncle John have gone off on a trip together; Mayor Pogue has looked out for reforms and will do his best that no unworthy aspirant enter the field, while Emma Worthey, Mrs. Bradt and Mrs. H. H. Lutz, and our famous ladies, consider this occasion a regular Jubilee.

It was with feelings of the most sincere gratification that the sad tidings of the death of the president of this society and my beloved citizen, Harry L. Sunderbruch, passed over the country. Modest, unassuming, hard-hearted man, respected and loved by all who had the pleasure to know him, he was really a man of great worth. His tidings, and was always ready to help a good cause. We sympathize with the florists of Cincinnati at this juncture, and I can only look forward to this date, when the fierce face and beaming good nature of the great and good man, who has made this was not to be, and all too soon he was taken from us.

"My dear Mr. Mayor, that your florist visitors are a barones and well-behaved lot of men. It is impossible that a florist can be other than a well-to-do, well-bred man. Their business is elevating in both mind and body; many of them are covetous, and it is a pleasure to see them as a by-product of genius since the dawn of history. Many of them are philanthropists in their own right, and they are a credit to our Honor that if my memory serves me right, I do not remember a prominent gardener or florist, who was not a good citizen."

These conventions are productive of the greatest good; we learn to know each other, and to know ourselves. This we may see an exchange of ideas with your intelligent fellow man. Conventions have brought to me a right man, who is like my light under a bushel. Though so universally known, how can this be so expressed as by Grey's immortal lines:

"Full many a gem of purest ray serene,  
The deep-veined earth's self had hid away,  
Till my full flower was born to blush unseen,  
And waste its sweetness on the desert air."

The chairman next introduced the president of the Cincinnati Florists' Society, E. G. Hill, who said in response to the Mayor's address as follows:—"Mr. President, Ladies and Gentlemen of the American Carnation Society: I have a very little pretension in me, after the eloquent address of welcome which you have rendered me. I am a florist, and I am proud of it. (Applause.) We only wish that the Cincinnati Florists' Society were what you are, and that I could be a great honor to have the pleasure of entertaining this society—a society so respected as you are, and which has been a society which, though only a few years old, has made more progress than any other society of florists. I am proud of it. (Applause.) We only wish that the Cincinnati Florists' Society were what you are, and that I could be a great honor to have the pleasure of entertaining this society—a society so respected as you are, and which has been a society which, though only a few years old, has made more progress than any other society of florists. I am proud of it. (Applause.)"

The chairman next introduced E. H. Michel, Secretary of the Cincinnati Florists' Society, who responded to President Hill's address of welcome. He said, in part:

"The florists who are here, of course, chiefly for business reasons. But our friends have not forgotten this in their coming to-night, which, when touched, will respond most quickly and bring pleasure as well as profit to all who are present, and to which I have already referred. And while our busi-

ness is the principal cause of our presence here, it is not our only reason. For instance this short vacation is the only one we take throughout the busy winter season, and it is our only outlet of recreation, and the entertainment which you provide for us here, I assure you, gentlemen, is most thoroughly enjoyed."

To hold these annual gatherings in places where good attendance and favorable surroundings could be secured, and the greatest care, and upon the proper selection of such places depends also the success of our meetings, and consequently the prosperity of the society. Meetings in the past have been held in many different sections of the city, and I can only say that it was very satisfactory to such a degree that the society, once looked upon as merely a local branch of the great national society of florists, has now grown to be of equal importance and is possessed of greater vitality than the member organization. This year's meeting place I am sure, has been selected with great judgment. Cincinnati is not only centrally located, but we find it a most fitting place for the meeting of the Carnation Society because the roll of its florists contains the names of so many who have done important work in the advancement of the divine flower, and it is a pleasure to see them so well organized and conducted to encourage improvement and increased popularity of our flower. Some of the florists of the West, Chicago and St. Louis, have more growers in their immediate vicinity than any other place in the country. I would think it most natural that these places should present such a marked advance in far market cultivation; Cincinnati; and the experience of the past few years has shown that the large cities, where they may supply the largest market, have not within their spheres such a number of enthusiasts who are ardently devoted to the propagation of the divine flower, and the welfare of the society, as Cincinnati; therefore, I feel that the most fitting place for the meeting of this society in Cincinnati will mark another step forward.

Again referring to your hospitality, I can only say that I feel that I believe I voice the sentiments of most of those here assembled, have anticipated just such an opportunity to be afforded to me by one who has known the members of the craft here in Cincinnati since its beginning, and who has seen them do things of this kind by halves. We know, when you invited us to come, that we could expect to find a most generous reception; that there would be no flaw in the arrangements for our entertainment here; that we should be met by the society. If we had not personally met, then we knew by reputation, and by the fact that we had known of the presence of Huntsman, Walk, and that peer of all good floss, whose laudable and all-aiming efforts, the terrible push forward the interests of this society, and have worked so energetically for its behalf since its inception, the Carnation Society and the florists of Cincinnati have suffered to see the society. His memory and the hospitality of his recent co-laborers in this field, and his devotion to the welfare of the society, that it may be known as a banner year, can be no other means by which we can show our appreciation in a manner that should be most gratefully received by you, and call for careful attention to the interests and welfare of the Society at this meeting, and to the same end, we have made such thorough and unselfish preparations. (Applause.)"

### Secretary's Report.

Secretary Herr read his report, as follows:—"Mr. President and Gentlemen: Your report on the business of the Cincinnati Florists' Society at our last meeting in the time and having mailed them to a member of the society, and to a member of the list of membership. There are a few whom it is impossible to find."

Following the suggestion of the Executive Committee, a number of circular bulletins have been sent to all the members of the society, and an important feature with the co-operation of the members

"There were few delinquents in the list change in the membership. There is room for a little work in this, and a number of growers we have interested in carnations in the United States."

"We will refrain from adding to this report the fact that our lamented president did noble work for this meeting, and to the present day. Respectfully submitted,

A. ALBERT M. HERR, Secretary.

Treasurer Allen's report showed a balance in the treasury of the society's credit of \$141.18.

**Discussion of President's Address.**  
(See pages 165 and 166 of last week's issue for a preliminary address.)

**A Fixed Scale of Points.**  
C. W. Ward, Queens, N. Y., considered the suggestion to have a stable scale of points a most important one. Intending to take the preliminary certificate for next year, ahead, what rules and regulations for exhibitors were to be enforced, each of the preliminary certificates to be awarded to a dozen dozens of seedlings, and last fall he bunched his seedlings, and the results of the preliminary certificate were disseminated, after his plants were all touched, the number of blooms had increased from a dozen to twenty-five. With many varieties he did not have the number of plants from which he could pick twenty-five blooms, and was therefore unable to exhibit for a preliminary certificate. If the society adopted its rules and scale of points to be accepted by the Judges at Fall exhibitions, the scale has got to be fixed, and the preliminary certificates for next year should arise necessitating that being done. He suggested a committee be appointed to take up the subject, and a scale should be adopted by the society.

William Scott thought the suggestion to have a fixed scale of points for commercial and exhibition varieties a most valuable one. He said: "We know very well the responsibility of the preliminary certificate is simply marvellous; something not dreamed of ten or a dozen years ago. We would not touch the number of exhibitors, having overestimated a certain number of growers to produce such flowers; that the preliminary certificate is a most important one. At the same time there was no doubt that the blooms had been grown for the preliminary certificate. The preliminary certificate, say twice a year, to visit the houses where the different varieties are grown, and to see the habit of the plant and the number of flowers each was producing, and to see the growth of the plants. It is undesirable to buy a variety, specimens of which had been seen before, and to buy them as a specimen, and then find, after they have been one year under your care, that they are not what you expected. I suggested it would be possible to learn, reliably, what were really good market cars."

E. H. Michel, St. Louis, said Mr. Scott had proposed something that left room for a great deal of profit, and he was unable that an organization, with the object in view to pass judgment on fancy stock exhibitors, and to see the results of the representatives around to the various farms to inspect the stock at different times when they are in the hands of the growers; and if the committee were to visit the grower at times which he would designate in his report, and to see the results of the impression with a variety would be even better than when he had to grow it for an exhibition. He suggested that the society would not be any better informed as to the variety's merits than under present conditions, and he suggested that records of particular horses or cattle was to judge them on the circuit, at the various points, and to see the results of the best way to ascertain the merits of a carnation is to watch it wherever the flowers are grown, and to see the results of the carnation in Chicago, New York, before the American Carnation Society, or wherever they are grown. He suggested that the carnation bloom wins laurels wherever it is a sure evidence that they are worthy. One reason for the present state of affairs is the profusion of it. He thought the words of those who were in close contact with the preliminary certificate, and the preliminary scheme as suggested by Mr. Scott, the speaker considered impractical.

Mr. W. Ward, that there should be established a fixed programme or line of work in regard to the preliminary certificate, and a number of flowers of different varieties required. He considered it a mistake that the preliminary certificate be given in connection with a preliminary certificate because a great many growers of second year plants have not time to produce and grow a sufficient number of plants to produce 25 blooms at one time, from the fact that the preliminary certificate is considered 12 flowers sufficient for all purposes.

As regards a scale of points for judging, and to see the results of the preliminary certificate, the florists' clubs throughout the country to adopt these points at the meetings, when each grower is given a preliminary certificate, the method of judging would thus be established which would be very valuable.

better which could not be generally obtained until the following year. A mortality among growing plants was also effected that it was the sense of the meeting that the committee in preparing the premiums should make some provision for varieties in commerce and standard varieties exclusively; that is, those varieties seedlings be raised from these classes.

A vote of thanks was tendered to Messrs. Charles Weber and Wm. H. Hill.

**Stem Rot and Overhead Watering.** Mr. Beucher said he would like to hear from Mr. Ward, Mr. Hill and other veteran carnation growers in regard to stem rot, and whether they syringed their plants over the foliage.

Mr. Hill stated he had found that deep planting increased this trouble. Sometimes cuttings put in cold frames and watered there until started, he found that deep planting increased this trouble. Sometimes cuttings put in cold frames and watered there until started, he found that deep planting increased this trouble. Sometimes cuttings put in cold frames and watered there until started, he found that deep planting increased this trouble.

Mr. Hill stated he had found that deep planting increased this trouble. Sometimes cuttings put in cold frames and watered there until started, he found that deep planting increased this trouble.

dark scarlet and crimson varieties, but he made it a point to pick his flowers before they were fully open, and also variegated kinds, it did not hurt.

Mr. Henry Kreder remarked he had seen a scarlet carnation in England. He had seen a scarlet carnation in England. He had seen a scarlet carnation in England.

Mr. Ward had used salt solution through Mr. Nicholson's directions and was sprayed by means of a force pump having 10 to 50 pounds of pressure. This was very efficacious for red spider, but he had discontinued using the solution as it was very sticky and the plants were spraying stiffened up the stem greatly, and the foliage became much darker green in color.

Mr. Nicholson had never seen spot result from the use of the salt solution, which he considered the best safeguard against fungus.

**Afternoon Session, Friday, Feb. 19.**

**Scales of Points for Judging.**

The committee appointed to revise the scale of points for judging seedling recommended that five points be taken from color and three from shape. The new scale became, stem, leaving the scale to read now:

Color ..... 10  
Shape ..... 10  
Stem ..... 10

The committee recommended that only 12 blooms be required in competitions for carnations.

Also that the scale for general competitions now read as follows:

Color ..... 15  
Stem ..... 15  
Shape ..... 15

Thus dropping the points for calyx entirely. It was explained that the points for stem were not really of value, as they are not good, the calyx would not be good.

Mr. Dorner submitted, in view of the fact that the petals are improved by cultivation, while fragrance could not, the points given to these should be reversed.

Mr. Dorner's proposition was, stated that he had considered the scale of points from the standpoint of the seller of the flowers. The committee recommended that only 12 blooms be required in competitions for carnations. Also that the scale for general competitions now read as follows.

Color ..... 15  
Stem ..... 15  
Shape ..... 15

Thus dropping the points for calyx entirely. It was explained that the points for stem were not really of value, as they are not good, the calyx would not be good.

straggling growers like Daybreak. If one row of string was not sufficient for all the plants, a second row should be put on inches above the first. By this means he could get an strong stem and a big flower.

William Nicholson also recommended the Dorner system; he had seen a scarlet carnation in England. He had seen a scarlet carnation in England.

Mr. Ward had used salt solution through Mr. Nicholson's directions and was sprayed by means of a force pump having 10 to 50 pounds of pressure. This was very efficacious for red spider, but he had discontinued using the solution as it was very sticky and the plants were spraying stiffened up the stem greatly, and the foliage became much darker green in color.

scarlet, were also well packed, and Armadillo was very fine. I think there is also a place for Yellow Jacket.

John N. May's exhibit arrived in a glass case. It was a very fine collection, of course, did not have a show.

In C. W. Ward's collection were noted Scarlet, White and Pink Grand. Mrs. James Dean. These flowers arrived in splendid shape and held their faces well on the public all during the exhibition.

J. Bretmeier & Son of Detroit made a glass case for the exhibition.

generously donated flowers upon this occasion to help us out.

In conclusion I will say that all who missed this the first annual Convention of the Carnation Society missed the greatest opportunity ever presented to the growers of America and especially to the flowerer.

E. G. GILLET.

### Rare and Novel Varieties

**Mad. McNurney (Hill & Co.),** a very pale pink, showed up in good size and form.

**Flora Hill (Hill & Co.),** as displayed, this proved to be nearly what might be called monstrous in size. Stood up fine and looked all right in every way. It bids fair to be a prominent fancy variety in white, being quite double and a fine shaped flower; without question a good keeper.

**Jubilee (Hill & Co.),** showed up fine in every respect, and easily carried over established honors as a fine large red. It seems to be grown this year entirely free from rust.

**Armadindy** held up its head in fine style, and apparently will be a favorite in its class. Keeping qualities fair.

**White Ruby (Hill & Co.),** of style similar to Armadindy, is a fine white, with carmine-edged petals, but decidedly improved in character of firm, fine stem. It is very handsome and shows durable keeping qualities.

**Painted Lady (Hill & Co.),** kept quite well a large flower, slightly darker than Tidal Wave in color. Style of flower similar to Jubilee.

**President Sunderbruch,** shown by Witter-maetter, is light red, of good shape and form, that has every appearance of becoming a standard.

**Emma Woehner's** Emma Woehner variety showed up in most excellent style in all respects and is one of these bright, clean-looking flowers that takes the eye and one's fancy, and a color decidedly attractive. Unless signs change, this will become a standard in its color, which is a light pink with a tinge of blue.

**President-elect Budd of Chicago** showed the results of commendable efforts in the character of the Rose Queen displayed, which were really fine, as also were the Della Fox, of which as much may be said.

Of the varieties to which a comparison of large size is applicable, it occurred to us that Mrs. George M. Bradt (Dorner) readily took the lead, being unusually large and strong. A flower of the Keller style of color, but evidently a fine improvement on it in every respect, for a fancy variety.

This concern really covers itself with plenty of examples of their new varieties, among them being:

**"White Cloud,"** a fine large white, which grows in every way and showed good keeping qualities.

**No. 38 (95),** a lemon yellow of a Jubilee type flower, but a rather slender stem, looked quite attractively.

**No. 67 (94),** an unusually fine large white flower, but a rather slender stem, looked quite attractive.

**No. 18 (94),** a large fine built, many-petaled red, with a good stem. Upper portion of rays yellow. Keeping qualities fair.

**Storm Queen,** a fine large full-centered white, with nice, clean Emma Woehner style of stem. The petals of the bloom looked soft, but, nevertheless, it showed good keeping qualities.

**No. 18 (94),** a fine large red that looked attractive and decidedly pleasing in every way.

**C. W. Ward, of the Cottage Gardens,** has

**Glaizer,** a fine white, firm stem, Jubilee style of flower, with fair calyx. Keeping qualities fairly good.

**Chas. A. Dana,** delicate peachy pink, petals somewhat irregular and whorled, fair stem and calyx.

**Daybreak,** a fine large pink, light soft pink shade, full centered petals, numerous and somewhat irregular, almost whorled, good stem and calyx.

**No. 18 (96),** a very full large white, with good stem and calyx.

**C. S. Swayne's Sweetheart,** a flower after the Keller style, full, numerous petalled, quite nice. Truly it is a fine flower, a light soft pink shade, fringed, glaucous foliage, with good stem. Flowers set in fair calyx.

**The new sport from Daybreak** called after the Jubilee style, but of darker shade. A fine looking flower.

**Edith Foster,** an enlarged type of flower after Emma Woehner style, but lighter in color, with a firmer, heavy stem, and wide, very dome whether there is a florist, in the Central West at least, who was not on familiar terms with our dear friend, Harry Sunderbruch, for we could all approach him, and all felt the touch of his kindly spirit.

We have met, pursuant to our plans and purposes, on this, the anniversary of our carnation festival, in order to carry out and discuss the plans which have been arranged by our officers. We are indebted in great measure at least for the two days of our meeting to the untiring energy and spent to the wise forethought and enthusiastic earnestness of our lamented president, Mr. Wittermaetter, in making arrangements to the task of properly responding to the toast proposed, not from unwillingness to do so, but from a desire to be able to do so properly and fittingly, true the name and character of Mr. Sunderbruch. A wave of grief has swept over us, and a great cloud has rested over us, as we have missed the presence and many form of our dear friend, and we are all gathered here at this meeting; yet, in the midst of the activities of life we verily live in death. So we have met to do as was planned and intended for our comfort and entertainment.

**Jack Frost (Edw. Swayne)** is a large, white and almost almost after the style of a hollyhock. It is rather flat faced, with the petals fringed. A three-petaled flower, with a fine stem and a good looking flower, but small in size for an exhibition bloom.

**Harnon & Burr, of Savans, N. Y.,** showed a white seedling, which gives some promise of being a fine flower, but small in size for a commercial flower, but small in size for an exhibition bloom.

**Major Pingree** looks fine and all right, and destined to occupy a place among yellow.

**Edith Foster** and the red Morello (Hoppe & Lerneke) arrived too late for judging. It showed up to the satisfaction of many of our friends, but the stem was rather heavy for so large and heavy a bloom a heavier and stronger stem may be desirable.

### The Banquet.

One hundred and twenty-three sat down to the banquet provided by the Cincinnati Flower Society, and the occasion was a most worthy one. It was strictly temperance, and on that account contrasted favorably with others that have gone before. There was as much real fun, perhaps more than we have witnessed on similar occasions, with no after results to be regretted. The happy dinner and the most enjoyable social gathering can be provided without the costly concomitants which are erroneously considered indispensable to create good fellowship or to make such things a "go." Cincinnati has set an example which other cities would well do to follow in the future; it remained, in this manner, for the society the prestige that it lost through newspaper accounts, exaggerated no doubt, of hangings in connection with its previous meeting, and of this we are heartily glad.

**President E. G. Gillet** acted as chairman and Mr. G. W. Ward, of the Cottage Gardens Company proved a very acceptable toastmaster, his ready wit and masterful handling of the toasts bringing him many congratulations. **Mr. G. W. Ward** was the first to speak. He said: "The time we have all been looking forward to—the time for merry-making and the enjoyment of each other's happiness will not be unloved. There will be a current of sadness in our hearts as we look back to the time when we were still. One of our choicest flowers is not here. There is a vacant chair to-night. There is a vacant place in the ranks of the American Carnation Society and prominent in everything of interest to the American florists, it is but fitting that we

should first remember him—Harry L. Sunderbruch. The one whom I will call upon to respond needs no introduction. You all know him as well as I—him—Mr. E. G. Hill of Richmond, Ind."

**Mr. Hill** was received with great applause by a voice tremulous with emotion he said:

In January I was traveling one of the great thoroughfares of the world, New York when I was accosted very unexpectedly by a gentleman in our business. He called me by name and said: "I know your face." "Do you know the sad news that has just reached New York?" "And I looked up at him and said: 'No, I do not know you.' He could not speak. Then he said: 'Harry Sunderbruch is dead.' My heart sank within me and I said: 'I do not know you.' And I do not know every florist in this broad land felt as I did, for Harry was known far and wide, very dome whether there is a florist, in the Central West at least, who was not on familiar terms with our dear friend, Harry Sunderbruch, for we could all approach him, and all felt the touch of his kindly spirit.

We have met, pursuant to our plans and purposes, on this, the anniversary of our carnation festival, in order to carry out and discuss the plans which have been arranged by our officers. We are indebted in great measure at least for the two days of our meeting to the untiring energy and spent to the wise forethought and enthusiastic earnestness of our lamented president, Mr. Wittermaetter, in making arrangements to the task of properly responding to the toast proposed, not from unwillingness to do so, but from a desire to be able to do so properly and fittingly, true the name and character of Mr. Sunderbruch. A wave of grief has swept over us, and a great cloud has rested over us, as we have missed the presence and many form of our dear friend, and we are all gathered here at this meeting; yet, in the midst of the activities of life we verily live in death. So we have met to do as was planned and intended for our comfort and entertainment.

**Ben George** recited "Buttery Dick," a pathetic, strange and wonderful, full my mind to-night as I ponder over the untimely death. Though profound in their grief, they all had expressions of sympathy and questions deep and mighty regarding the possibilities of existence, hereafter, the coming of a new world, and other questions pertaining to life, thoughts which have compassed the minds of thinking men of all ages and of all nations.

**Mr. Wittermaetter** responded to the toast, "Seedlings," and pointed out what a great factor they were in maintaining established standards.

**Ben George** recited "Buttery Dick," which was well received.

**Mr. Wittermaetter** responded to the toast, "The Future of the S. A. F." He traced the society's past history in a most interesting and instructive manner, and handed over by one city to another. It was now the parent of at least three societies, and he said that the future of the society these have begun to develop a great deal of the American nature, viz: to jump upon the high ground, to protect against anything doing this. Each and every one should consider it a duty to support and encourage the work of the S. A. F.

**W. Weber of Oakland, Md.,** replied to the toast, "The Probability of a Golden Yellow." He said that he had seen a golden yellow in his store for the persevering hybridist.

**Mr. Wittermaetter** spoke a few words, stating the pleasure the meeting and entertainment afforded him, and commending the president of the society for the fact that which the society had asked him to accept.

**Mr. Wittermaetter** then spoke a few words, stating that he thought in view of the amount of work done by the society, and the many things it has done, it was well that the vice-president should be resident near to the seat of action.

**Mr. Wittermaetter** then spoke a few words, stating that he thought in view of the amount of work done by the society, and the many things it has done, it was well that the vice-president should be resident near to the seat of action.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# THE BEST COMMERCIAL WHITE CARNATION ON THE MARKET.

# NIVEA

Trade Mark.

# CLEAN AND HEALTHY.

The originator, Mr. H. A. Cook, Shrewsbury, Mass., has a large stock of Nivea, and it has never been overpropagated.

Nivea has received First Class Certificate of Merit from the Massachusetts Horticultural Society.

It has all the necessary qualifications of a standard commercial white carnation:

**SELLS WELL. KEEPS WELL. SHIPS WELL.**

The undersigned have handled the entire output of cut blooms of Nivea, and they have sold readily at an advance over other white carnations in the Boston market.

Rooted Cuttings Ready for Delivery March 1st.  
**Per 100, \$10. Per 500, \$35. Per 1000, \$60.**

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# Famous Carnation Della Fox

Should be grown by everybody. The past season must have taught all growers that the high-grade Carnations are the only ones that were profitable, and **Della Fox** stands above them all for size, color and aroma. Rooted cuttings now ready. **MYERS & SANTMAN, Wyandom, Chestnut Hill, Phila.**

against its appearance. The rest we will have to leave to Nature. We cannot control the weather. If we do this much, however, we can be reasonably sure of but little trouble from stem rot.

The above is my opinion of cutting bench fungus and stem rot at the present time. I feel sure that I am in the main correct, but as we are never done learning, I may, perhaps, through further observation and study have reason to change my mind on this subject. H. WEBER.

**Carnation Dominion.**

The new white carnation, Dominion, which Dunlop, Toronto, is sending out this year, was raised by him five years ago. He has grown it steadily ever since and it has proved to be the most prolific variety he has had during all that time. I have seen it growing at his place several times every season and can confidently recommend it to my brother florists who are looking for a prolific white carnation that has been thoroughly tested, and which is free from disease. The calyx does not burst. The variety is a continuous bloomer all the season. The grass is something after the style of McGowan, but the plant is much more vigorous than that fine variety here, and was proved to be easy of propagation. The flowers are large and the plants are easily handled. I saw the house run after the potting in November, and I think it was even better than that the picture shows. I visited the house again in the spring and it was still apparently in the same good and as clean and free from disease as ever.

At the last meeting of the Toronto Gardeners' and Florists' Association the committee that was sent out by that body to Mr. Dunlop's reported that they considered his first-class variety and awarded it the society's certificate of merit. I may say that the committee made a very careful examination, and the stock was decided to give no certificates except to meritorious subjects. THOS. MANTON.

Bench of John H. Dunlop's New White Carnation Dominion.—Single bloom at right corner.

**Cutting Bench Fungus**

Now that propagating is at its height, a few words concerning what the average propagator regards as the most dangerous and destructive agent we have to deal with, will not be out of place. I mean, you will almost everybody else, have had my share of experience with this wholesale destroying disease, known generally as cutting bench fungus.

I have long since realized the fact that there is but one way to cure or eradicate any disease peculiar to the carnation, or to any disease the plant, life, and that is to first ascertain the source or conditions which cause its appearance, and for the cure, to reverse these conditions as far as possible. This rule will hold good for every disease to which the carnation is subject.

That this particular one is a fungus we all know; and, like many other forms of fungus, it revels in a close, moisture-laden atmosphere. Heat also aids very largely its formation and destructiveness. Proper ventilation is certain death to cutting bench fungus, and whenever the disease is present this most important life-giving principle (fresh air) has been withheld. The idea that carnation cuttings when first put in the sand are not able to stand any considerable amount of fresh air, is not worthy of serious consideration. True, they will resent cold or heavy draughts, but this is not what they want. Sufficient ventilation can be given at all times to keep the atmosphere dry, invigorating and sweet without jeopardizing their chances of rooting nicely; in fact, where these conditions are maintained, the result will be larger, finer and healthier roots and cuttings than can be produced by any other known method.

Various reasons have been assigned for the appearance of cutting bench fungus, among which are decayed benches, poor drainage, excessive heat, the continued use of the same sand, etc. All of which, with the exception of the latter, are responsible to a certain extent for bringing on this disease, excessive heat, more so than the others. Bottom heat, too, is responsible for its share of mischief, and should never be resorted to except for such varieties as prove difficult to root without it. Bottom heat does not include a high temperature overhead. Such varieties as need bottom heat must be kept just as cool overhead as they can be to succeed in it.

The temperature of the propagating house has been given in these columns often before, but it will doubtless bear repeating:

Nights, 50 to 55 degrees; day, 55 to 60 degrees. The weather must be so far off in maintaining it. These figures cannot always be adhered to, but will serve as a guide.

Of all the reasons advanced as assisting in the formation of cutting bench fungus, I regard that of the continued use of the same sand as the least worthy of consideration. Our sand lasts us for a whole season, and the last cuttings rooted are no more affected with fungus than the first ones. We would regard the frequent changing of sand as so much unnecessary labor. If the ventilation is properly looked after, there will not be one iota of trouble arising from this source.

Mr. Ward in giving his opinion on stem rot at the meeting of the American Carnation Society in Cincinnati, stated that under the microscope plants affected with stem rot showed traces of cutting bench fungus. If this is true and it seems very reasonable, stem rot and cutting bench fungus are identical to a certain extent. This sustains me in my claim that close and deep planting, excessive moisture and a lack of fresh air are the main factors in developing stem rot. These factors need not be all present at one time to induce stem rot. This is in line with Mr. Ward's idea that it is often generated in cold frames where young stock is being held. There are often many days in succession when no ventilation can be given, the sash may be covered with snow thus shutting out the light, in addition to this they are apt to be neglected, causing extremes in temperature and thus stunting the plants, causing, as Mr. Ward says, a hard, woody stem so common in cabbage and cauliflower plants that have been wintered over in cold frames, which is practically one and the same disease. This would seem to explain in part why some plants develop stem rot in the field, when to all appearances none of the conditions exist which are supposed to bring it on. The cold frame, however, is not the only place where young plants are liable to contract stem rot. Similar results can be brought about in any greenhouse, such as over watering, poor ventilation, putting the plants in dark out-of-the-way corners, under benches, etc.

Thus it appears that all of the practices which tend to induce cutting bench fungus and stem rot in direct contrast to the conditions we must maintain if we are to be free from either.

To banish cutting bench fungus is very simple. Good ventilation and a proper repair for congenial temperature will ac-

complish this without difficulty. Stem rot is more complex in its nature, and therefore more difficult to manage.

If proper care is exercised in selecting the cuttings, seeing so it that none are taken from plants already affected, the correct steps will have been taken to guard against it. The next is to root them in a cool, well ventilated house; from there, they must go to a light, cool house. Either box pot or plant on benches in soil fertile enough to induce a good growth keep firm and healthy by plenty of ventilation. If cuttings are not treated, I am satisfied that stem rot will not make its appearance during this time.

When this disease originates in the field, several causes may assist, either collectively or independently, to generate it. Of these, deep planting and poor drainage are the principals; either alone will suffice to bring it on, and, are, or are not, as the case may be, largely assisted by continued wet weather and a heavy murky or humid atmosphere. Stem rot, like all other diseases, is the result of irregularities; we can, if we will, control all these same one. Those which we can control, I might say, are selection of cuttings, watering, ventilation, quarters for the young plants, well drained land and planting in the field; where these have been looked after properly, we will, I believe, have done all in our power to guard against it.

## CORRESPONDENCE.

Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.

## Seedsmen and the Tariff.

Editor Florists' Exchange:

"Protection gives us our market and enables us to pay our labor living wages," declares Charles Black, contributing to the "Tariff on Seeds" discussion in your issue of Feb. 12. Who are the other fellows in the pool with Mr. Black, to whom he refers as "us"? Are they workmen?

That a protective tariff which operates to give an exclusive market to "us" or to any other set of individuals is profitable, and "enables us to pay our labor living wages," there can be no manner of doubt; just as a crib full of corn in a farmer's dooryard "enables" him to feed his neighbor's hogs. But farmers are not feeding their neighbor's hogs, and by that same token gentlemen interested in special tariff legislation are not increasing wages simply because a protective tariff "enables" them to do so.

"We," Mr. Black, or any other combination of interests, never did and never will pay more than the market rate of wages, a rate which is determined by the same law recognized by Mr. Black when, referring to labor products, he says: "Competition will govern prices."

Workmen sell the only thing they have to sell—their labor—for the best possible price they can get, just as Mr. Black sells seeds. But the American workman sells his labor in an absolute free trade market, in open competition with the labor of the whole world. Not so with combinations of capital, who, protected by tariffs, strive to control American markets, and do control them, in limiting the output by clos-

ing mines, mills and factories, which in turn throws thousands of idle workmen into the free market to make more intense the competition among them for the remaining opportunities to labor left open, and down goes wages. Foreign pauper labor jostles and elbows American pauper labor in the bitter fight for "a job," and that workman, be he foreigner or American born, all else being equal, who will sell his labor cheapest gets the "job." Free trade in the sale of labor compels the lowest prices, while protection in commodities enables monopolists to compel the highest price, and thus we have the spectacle of American workmen burning their candle at both ends; paying a high price for what they consume and getting pauper prices for what they sell. The iron law of supply and demand fixes the price of wages, but pampered combinations of capital under a protecting tariff law fixes the price of commodities. By all means let "us" control the American seed market for the benefit of (us) the dear home workman. Pile on the duty, heap up the tax, there is no limit when the fool is in harness and he has no rights "we" are bound to respect.

Come again, brother Black, the subject needs all the airing we can give it.  
H. B. BUDDENBORG.

## Lady Hume Campbell Violet.

I have read with interest the words of your several writers on temperature for violets. Last year we tried Lady Campbell for the first time, M. Louise up to that time having been our standby. We planted a large house, one-half to each variety, using for all the same soil—a rich sandy loam virgin soil with no manure of any kind. The plant started out finely and showed great prospects until it came to the time to use

artificial heat. We gave a night temperature of 40 to 45 degrees. M. Louise bloomed freely and gave good flowers; Campbell stood still, but the plants were literally studded with buds, which would not open, and what few did open were of a pale, sickly color and not salable.

We were disgusted with Campbell and were ready to consign it to the dump. We said all the mean things we could about it and would have sold the whole pack for a "yaller dog," when all at once we noticed that the plants were throwing up buds in great shape, and a couple of days of good sunshine made that bench look covered with popcorn of a royal purple. What was the cause? Well, about that time we had found it necessary to hire a new night fireman, the old one being of a sleepy nature. The new man informed us, when we spoke to him of the improvement in Lady Campbell, that he had been running the house at night with a temperature of 50 to 55 degrees and allowing all the fresh air the weather would allow, leaving the ventilators up more or less all the time. The consequence was M. Louise went back and Lady Campbell came to the front, giving us a far larger cut of flowers than we had ever had from M. Louise, and, we think, a better flower.

This season we are growing Campbell, and we are free to confess we are delighted with it. Two houses have given us a profusion of good flowers, stem and color all that could be desired, and not one particle of disease has shown itself. We use no water on the foliage in dark, cloudy weather, but syring on bright days, leaving on all the air possible when the outside temperature will permit.

We are well pleased with Campbell as a violet for forcing, and we believe it will prove the best variety to all who give it the proper treatment. We trust these few

your readers who have failed with Campbell will give it another trial and follow our method of culture, and we know they will reap good results.

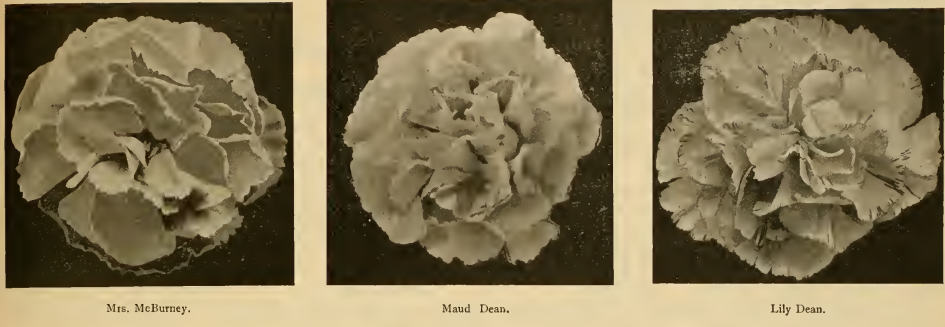

F. W. B., Richmond, Ind.

## Sweet Pea Sensationalism.

For fair play, even more than in self-interest, we wish you would be good enough to allow us to correct a false impression apt to be conveyed through statements made by a seedsman of some prominence to the effect that he "received the only award on sweet peas at the World's Fair." This is downright humbug and misrepresentation, which must have been written by some clerk unaware of the facts. It is time the world knew, if it does not already, that at considerable expense and with considerable foresight the writer made a special trip to Chicago to arrange with good friend Chief Thorpe for the planting of our California-grown sweet pea seed around the entire circuit of the Wooded Island, where they grew and were admired and were written of considerably in the horticultural and general press. As pioneers in sweet pea seed growing in the United States, we submit that in the early part of 1892 sweet pea seed was quite valuable, and that in addition to the "taking of time by the forelock" and "stealing a march" on the seed trade of the world, the expenditure of good money in the interest of the seed trade and our entire enthusiasm for sweet peas and improvement of these stocks deserve substantial recognition, of which we are sure your excellent paper would not see us robbed.

At my elbow hangs the World's Fair diploma, reading: "Metal for Special Merit, etc." \* \* \* Exhibit Collection of Sweet Peas. Consists of a fine collection of twenty varieties of sweet peas. They are remarkably vigorous in growth, have bloomed profusely, and are of excellent color." And on my desk stands the fine aluminum case containing the medal referred to. Yours, with thanks for courtesy,

JAMES SPROULE,  
Manager Sunset Seed and Plant Company.

Mrs. McCurney.

Maud Dean.

Lily Dean.

### Carnations at Richmond, Ind.

A number of the delegates who attended the carnation meeting at Cincinnati left the city Saturday morning by an early train for E. G. Hill & Co.'s place at Richmond, under the personal guidance of Mr. Hill. A sumptuous dinner was provided for the visitors at the Westcott Hotel, after which a trip was made to the greenhouse. The carnation plants in some cases yet showed that they were suffering from the recent deluge, but, generally speaking, everything was in good shape. Particular attention was paid to Jubilee, which had showed up in such elegant form at the carnation exhibition, and the cleanliness of the plants was a noticeable feature. These seen on the benches were rooted in June and planted out of thumb-pots Aug. 1. Mr. Hill says he will plant in this variety in future June 1, thus insuring flowers at an earlier date. Jubilee does best both with Mr. Rudd and Mr. Hill in a night temperature of 52 to 54; 60 on dull days and 60 to 63 on clear days. Mr. Hill advises those who would adopt his method to give plenty of ventilation and to put a watch of about three-quarters of an inch of old stable manure, not as a fertilizer, but as a screen from the sun.

Flora Hill was, of course, the great attraction. The admirable showing it had made at Cincinnati winning for it many admirers. Mr. Hill tells me that this variety commences to bloom very early in the season, even before it is lifted from the ground in the autumn. It is very prolific, and in freedom of bloom takes after its parent McGowan. As seen at this place, it is a strong rampant grower, with good constitution, making no useless growths, every shoot terminating with a flower bud. The blooms measure from 3 to 3½ inches in diameter, and their keeping qualities could be well judged at the show, where it was among the two or three varieties that stood out prominently at the close as being good keepers. It may be remembered it was

certificated at New York last year. All things considered, it takes a foremost place among the white carnations of to-day.

Whitecote Riley is a very pretty improved Armasindy, having a much stronger growth and a larger flower.

Salmon Gen is a Daybreak seedling with a flower as large as that of Mrs. George M. Brady. The color is a bright lively salmon, and the plant has the same general character as Daybreak.

Mars is the winner of the Weimar prize for best seedling, any color. It is a cross between Jubilee and Portia, seeded from the latter. It partakes of the general character of Portia in the production of its flower stems and blooms, the latter being larger. The color is a most intense, rich scarlet. This is the second year's trial, and the stock of the variety is limited as yet.

Triumph was sent out last year. It is a strong rampant grower. Mr. Hill says it must have good culture, rich soil and plenty of water in order to keep it in sufficient vigor to produce quantities of flowers. When its cultural requirements are understood it should come into general favor.

Mrs. McCurney is a pleasing salmon, carrying a good, strong stem; we think this variety has a future.

Psyche—Of this variety William Nicholson was heard to remark: "It comes as near being the ideal carnation in form, contour, arrangement of petals and general make-up of flower" as any he knows of. The color is a satiny white ground, with slight pencillings of carmine. It is the result of a cross between Armasindy and Helen Keller, but the flower comes a third larger than that of either of these two.

Mr. Hill says of it: "I look upon this as the most valuable seedling of this particular type thus far produced."

Among the new roses Souvenir du President Carnot was looking grand. Mr. Hill had an experience with this rose worth relating. Said he: "In the new craze for grafting plants, do not graft Carnot, or

any other variety, on the European dog rose, Rosa canina, unless you want them to go dormant all winter, despite heat, water and kind attention. Carnot, on own roots, continues to produce beautiful blossoms throughout the winter, but with our large house, where we worked on European imported stock, the plants went dormant in spite of all we could do. We allowed them to rest for a week then started them into heat, and have now nothing so beautiful in a rose house. In about three weeks' time we expect to have a most magnificent display of Carnot flowers again."

Muriel Grubane was also noticed in flower. This is Hugh Dickson's sport from Mermot. It received the gold medal from the National Rose Society of England. It is distinct from Catharine Mermot and evidently possesses all the good qualities of Bride and Bridemaid as it is size, substance and free flowering. Mr. Hill thinks it well worthy of trial.

The showing of geraniums was a grand one, a great improvement being noticed in color and size of the English round-flowered class. Notable among the varieties were Trilly, a reddish-crimson, with extra large flowers; General Washley, light scarlet; Phyllis, light salmon scarlet; Cecilia, white, with golden salmon center. Others of this class notable for size are Florence Farmer, salmon; John Forbes, scarlet; Lucrece, pink; Snowdrop, pure white; Midsummer, one of the finest, cream white, with a large salmon center.

Mr. Hill is endeavoring to raise varieties at Richmond that combine the large size of the English round-flowering varieties by crossing with the American bedding geraniums; and while progress has been very slow, the improvement is quite marked. A variety named Indiana is likely to come to the front as a bedding geranium on account of its large size, brilliant color and immense truss.

Another section seen here that is very

popular in Europe, especially on the Continent, in what the French call the "Croume" section. They are of the Mirande type and are strikingly beautiful. Of these Mme. Hoste and Marie Hoste, both of which originated at Lyons, are handsome varieties. Renonce and Menlek I., two of Lemoiné's productions, are also grand.

Among those of a new type after the style of the striped Mme. Brunt, are Le Vieux and Dr. Marmotek, two of Brunt's productions of last year, that are very pretty and great improvements over the first of this type.

Mr. Hill has tried the new calla, introduced by Godfrey, and named Devonian. The color is strikingly pure, size not too great nor too small, and it appears to be a free bloomer. It has given satisfaction here.

The general stock—palms, begonias, panzanus, ficus, etc.—was in excellent condition.

Cinders from locomotives are used here on the benches instead of sand, on which to stand the pots. This material is clean and has the advantage of being obnoxious to sow bugs and other vermin that do not relish crawling through the cinders.

Among the gentlemen of the party were Messrs. Ward, Scott, Long, Nicholson, Dornier, Brettmeyer, Betscher, Patten, Spillbury, Hoppe, Johnson, Hilze, W. Weber and the "Exchange" man.

The party then paid a visit to Quaker City Machine Works, where, under the guidance of the genial John A. Evans, they were initiated into the construction of the double steel linked chain, which for strength surely cannot be beaten, and the Challenge ventilating machine, generally. Evidently the firm anticipates or possesses many orders, judging from the number of machines in preparation.

This trip was enjoyed by all who participated in it, and was very entertaining and instructive.

St. Louis.

**MARIE LOUISE VIOLETS** ROOTED RUNNERS

LOOK HERE! This Stock Must Be Healthy. Picked in October 20,000 flowers; in November, 120,000; in December, 150,000; in January, 110,000. All prepared by my commission men. Will more than twice double this before Easter. \$4.00 per 100, cash with order.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Market News.**

The recent revival of the flower business is a good deal of a novelty. Nothing of the kind has happened before for almost a year. There have been during that period a number of indications of a languor to partial liveliness, but they have been unimportant and disappeared so quickly that they were not noticed.

Business is good now and prospects are that the market will be healthy and steady for the past two years. The indications of the moment is uniformity and stability in figures—not unreasonably high nor unreasonably low, and to continue a business that traffic is wholesome and remunerative. Wholesale Market.

The increased buying movement noted for the past two years has assumed larger proportions. It is true that roses are decidedly of crop, which would cause a softening of the market, but the cheerful fact that business is much improved is readily granted.

In roses Bridewell was again the favored rose and was short of demand. This variety is now prime, and very fine buds can be seen at all the wholesale houses. The price obtained for fancy selection Bridewell was 10c. to 12c. Bride was also short of call and buds were scarce. Meters were in ample supply and owing to the success of the past few days, and the fact that the quality well-favored, call at 10c. There was an increased number of "bull-headed" meters in evidence, and the price sold at 5c. High grade roses commanded 6c. and were scarce; second grade roses sold at 4c. to 5c. for fancy selections and 4c. to 6c. for seconds.

American Beauty is still scarce. Our best retailers bought buds which in times of ample supply would not have been given consideration by them, and paid liberally for them. Bringing Beauty the quality of roses is fair.

Standard varieties of Carnations were in good request at \$2.00 per 100. The demand and supply have apparently become so equal that the market is not showing an overstock in the near future. Daybreak was scarce and Scott most plentiful. Red and white varieties were in demand on Saturday and Sunday. The extra call was occasioned by celebrations on Monday, Washington's Birthday. On Tuesday, because of the increasing demand for flowers on St. Valentine's Day and Washington's Birthday, in which celebration, Lincoln was most plentiful, and those received were not of good quality. If there was any loss in transactions last week it was of that variety.

Violets were in superabundance. Southern blooms are now coming in in quantity, some of them rivaling the home grown article in quality. The effect of the heavy receipts was disastrous to prices and caused a general slump in the value of violets. Southern stock sold as low as 10c. per 100 and many blooms were left for want of trade. The price of double violets dropped to 40c. per 100 and California, which are most in demand, dropped to the same figure.

A few bunches of the new violet, Princess of Wales, were sent to the market last week. It is a magnificent violet and will crowd the California hard before many bunches are sold.

All bulbous stock was in good demand and ample supply. Valley was plentiful and sold at 10c. per 100. Roman was scarce and brought same figure. Von Skin sold at \$3 per 100. Lilies were abundant and sold at \$2 per 100. Sweet peas have made their appearance. They are as yet in limited supply and not of prime quality. They were at \$2 per 100. Sunlux is plentiful and sells well at \$10 to \$12.50 per 100.

Heard Notes.

Decorations for weddings and receptions are numerous; funeral work is plentiful, and the demand for flowers is good. The Grand Opera this week is attracting considerable demand for fine flowers. The quality of the roses at \$2 per 100. Sweet pea the retailers have to contend with now.

Justings.

A. S. Halsted and W. L. Hucks, Belleville (Ill.) carnation specialists, were visitors to this market last week. A. S. Halsted was in charge of the greenhouses of Mrs. Ida M. Pravel, Marion, Ind., is here on a visit.

It is regretted that I report the serious illness of pneumonia of the oldest son of J. J. Beekers. C. G. F.

#### For the Busy Man.

Fight the Free Seed Distribution. See pages 202-203.

The union question in New York opens Tuesday, was married Wednesday last.

C. E. Weld, a violet specialist of Rosindale, Mass., committed suicide Monday last.

A secretary here of the American Carnation Society, was married Wednesday last.

A full report of the proceedings of the Carnation Convention appears on pp. 187-190.

It is rumored that bulbs and roots will be shipped in the dutiable list under the new tariff law.

The Baltimore Club is endeavoring to establish an association on the lines of the Philadelphia one.

R. J. Murphy, whom the delegates to the Carnation Convention met at Cincinnati, died Wednesday from a stroke of paralysis.

The Executive Committee S. A. F. meets in Philadelphia, Pa., on March 3. Send your suggestions for the good of the Society to the Secretary.

#### Government Free Seeds.

From an early period in its existence THE FLORISTS' EXCHANGE has, on principle, and from a sense of the unrighteousness of the thing, whenever the time seemed opportune, vigorously and conscientiously attacked Government Free Seed Distribution.

In all its endeavors it has had the hearty sympathy of the seed trade, and also that of the Hon. J. Sterling Morton, Secretary of Agriculture, than whom no man has had better opportunity to realize and appreciate the magnitude of the abuse, and the open door it presents for future and enlarged spoliation.

Secretary Morton has sought, from the very first month of his assumption of office, with all the official and personal influence his command to legislate the evil out of existence, and his earliest efforts on the subject were clearly expressed in a letter to THE FLORISTS' EXCHANGE, published in our issue of April 22, 1903.

The publication of the Hon. Secretary's letter at this time, and the consequent publication of Free Seed Distribution by every prominent seed concern in the country.

The time is again propitious for a general assault upon this iniquity. The bill proposed for next year's Free Seed Distribution is to-day in the hands of a Conference Committee, consisting of Senators Call, Cullom and Quay, and Representatives Wadsworth, Henry and Clardy.

The Bill, when presented, may receive President Cleveland's signature. And it may not. Judging from his previous record at this point. And if the latter is the case, more time will be ours in defence of the right, and, through public agitation, a new Congress with a new Secretary of Agriculture, may be impressed with the sense of the injustice of the measure, and will repeal the law. And if the latter is the case, more time will be ours in defence of the right, and, through public agitation, a new Congress with a new Secretary of Agriculture, may be impressed with the sense of the injustice of the measure, and will repeal the law. And if the latter is the case, more time will be ours in defence of the right, and, through public agitation, a new Congress with a new Secretary of Agriculture, may be impressed with the sense of the injustice of the measure, and will repeal the law.

Mr. W. Atlee Burpee, of Philadelphia, a noted seedman, despite the fact that he is a Government contractor this year, as is evidenced in our columns is wholly opposed to the continuation of the system. He has taken a prominent part in the agitation for a repeal of this unwelcome provision of law, and in the fact which he states to us, that every seedsmen who has received a contract from Government this year is heartily opposed to the continuation of Free Seed Distribution, possibly lies the strongest argument that can exist for its abolition. To be in receipt of Government patronage and yet unanimous on the subject, these gentlemen must realize, to a greater extent than others not in possession of the facts, that the right to Free Seed, very heart, as it were, of the Free Seed Distribution, the absurdity and unfairness of the whole procedure.

The time and the wedge which has been driven into the life of the seed trade, the seed industry, and which threatens its further existence, must be withdrawn. If Congress must be made acquainted with the fact that Free Seed Distribution is not favored by farmers, seed growers, seed sowers, or any class of commercial cultivators.

The people must be given to understand that Free Seed Distribution exists because Congressmen either mistakenly believe they are doing good to the country at large by its promiscuous distribution, or else, and what is more probable in the case of the latter, that it has been freely shed upon them in recent years, for the reason that through these petty offerings to individual constituents, they create an influence at home which will stand them in good service when needed.

All we need is a little more public knowledge, a Congress perpetuating a wrong and inflicting injury on a great industry. Worse yet, setting an example, the outcome of which may be fraught with disaster to our institutions.

We advise, and earnestly ask, every subscriber to THE FLORISTS' EXCHANGE, be seedman, florist, nurseryman, or cultivator of any class, so long as he has the good of all in mind, to immediately, and without an hour's delay, write a concise and vigorous letter of protest to his Congressman, and further lading out by Government of free seeds, stating the injury it is creating, the injustice of the measure, how to be introduced, and the fact that the precedent it establishes for still more harmful legislation, and the fact, most potent of all, that the very men in whose behalf the measure is ostensibly said to be introduced, condemn it the most severely.

The intention of the original framers of a wise measure having been completely negated and frustrated by a recent Act, it is time for the trade and the people to call a halt and bring the force of Free Seed Distribution to an end.

#### Society of American Florists.

The Executive Committee of the Society of American Florists, at its meeting, by attendance, R. I., on March 3, to discuss plans for the society's future and to perfect arrangements for the coming year, was one of the most interesting meetings of this organization, the coming convention at Providence.

The Executive Committee earnestly solicited suggestions on the above lines from every member of the society. Flower growers, plantman, wholesale or retail dealer, nurseryman, seedman, whatever you may be, the society has a right to know. What do you think? What can it do? What should it undertake for the general benefit of the members of our meeting? All can help a little and the greatest good for the largest number should be our aim.

The Society has met our members, has felt the effects of the years of depression, but confident predictions of coming revival are being made. It is a time when it is in when it comes. You have opinions as to how this may best be accomplished. Attention will be given to all communications and your interest and assistance will be appreciated.

The following gentlemen are the following members: Adam Graham, Cleveland, O.; William Scott, Buffalo, N. Y.; Paragurh B. Smith, New York, N. Y.; E. B. Eddy, City, Pa.; Jackson Dawson, Jamaica Plain, Mass.; George P. Rawson, Elmira, N. Y.; J. W. Smith, Adrian, Mich.; Harris, Philadelphia, Pa.; J. G. Eiler, Sand River, N. J.; W. N. Ridd, Mt. Greenwood, Pa.; W. M. Smith, Adrian, Mich.; W. F. Gude, Washington, D. C.; and J. Charles McCullough, Cincinnati, Ohio.

Communications may be addressed to any of these gentlemen or may be sent to the secretary, William J. Stewart, No. 67 Broadway, N. Y.; or to the Secretary, March 1897.

#### Export and Import Statistics.

The Treasury Department has completed the statistics of our country's exports and imports during the last fiscal year. The under-noted figures will doubtless be of great interest to our readers. The total value of cut flowers exported was \$78, the major portion of which went to the United States. The value of plants, trees and shrubs exported was \$133,778, the customs districts towards which the quantities and the values set out from each being: Bangor, Me., \$2,022; Boston and Charlestown, Mass., \$3,906; New York, \$1,829; Detroit, Mich., \$7,446; Passanagoquady, Me., \$888; Braxos Le Santiago, Tex., \$615; Paso del Norte, Mexico, \$2,235; San Francisco, Calif., \$1,806; Puget Sound, Wash., \$1,692; Buffalo Creek, N. Y., \$4,118; Cape Vincent, N. Y., \$1,000; Chicago, Ill., \$1,879; Detroit, Mich., \$4,678; Niagara, N. Y., \$59,557; North and South Dakota, \$1,839; Oswego, N. Y., \$1,839; St. Louis, Mo., \$1,839.

The countries to which the largest supplies were sent were: Germany, \$10,463; Austria-Hungary, \$10,463; United Kingdom of Great Britain, \$12,712; Dominion of Canada—Nova Scotia, New Brunswick, etc., \$5,577; Quebec, \$1,806; France, \$1,806; Italy, \$1,806; Guatemala, \$1,418; Mexico, \$7,455; British West India, \$1,418; Mexico, \$1,418; San Domingo, \$1,418; Porto Rico, \$1,418; Argentina, \$865; Uruguay, \$200.

The total value of plants, trees, shrubs and cut flowers imported was \$263,554. Of this, the following customs districts receiving the

largest values were: Baltimore, Md., \$471; Boston and Charlestown, Mass., \$1,511; New York, N. Y., \$725; New York, N. Y., \$1,511; Philadelphia, Pa., \$20,611; San Francisco, Calif., \$1,489; Buffalo Creek, N. Y., \$1,489; Detroit, Mich., \$1,489; Cuyahoga, Ohio, \$782; Detroit, Mich., \$1,489; Minnesota, \$1,489; Milwaukee, Wis., \$1,489; Cincinnati, \$1,489; Indianapolis, \$1,489; The countries sending us the largest values were:

Belgium, \$121,768; France, \$9,046; Germany, \$58,877; Netherlands, \$27,684; United Kingdom of Great Britain, \$27,164; Quebec, \$18,294; Austria-Hungary, \$12,397; San Francisco, Calif., \$1,856; Brazil, \$427; Colombia, \$1,523; Japan, \$4,906.

Of this the districts receiving the largest supplies were:

Boston and Charlestown, Mass., \$22,869; New York, N. Y., \$508,771; Philadelphia, Pa., \$18,294; Augustina, Fla., \$2,397; San Francisco, Calif., \$6,257; Buffalo Creek, N. Y., \$4,979; Chicago, Ill., \$1,416; Cuyahoga, Ohio, \$18,092; Detroit, Mich., \$5,547; Geneva, N. Y., \$1,838; Huron, Mich., \$6,544; Milwaukee, Wis., \$7,678; Minnesota, Minn., \$549; Niagara, N. Y., \$1,838; Germany, \$18,906; Albany, N. Y., \$913; Cincinnati, Ohio, \$1,838; Columbus, Ohio, \$1,272; Indianapolis, Ind., \$1,838; Louisville, Ky., \$1,838; Pittsburgh, Pa., \$1,838; St. Louis, Mo., \$585; Springfield, Mass., \$390.

The countries from which the largest quantities were imported were: Austria-Hungary, \$2,445; Belgium, \$11,100; Germany, \$11,100; Italy, \$3,466; Netherlands, \$279,758; United Kingdom of Great Britain, \$40,115; Bermuda, \$105,882; Quebec, Ontario, etc., \$2,644; Mexico, \$1,426; British West India, \$2,765; China, \$5,125; Hong Kong, \$983; Japan, \$19,419; Porto Rico, \$1,129; British Africa, \$3,550.

#### Inspection of Imported Trees.

A Bill has been introduced into Congress to provide for the inspection of imported trees, plants, buds, cuttings, grafts, slips, nursery stock, etc., to be imported into the United States, and for the inspection of nursery stock grown within the United States. The bill is a subject of interstate commerce. Full particulars next week.

#### Secretary Kerr Married.

ALBERT M. HERR, Lancaster, Pa., the energetic and popular Secretary of the American Carnation Society, was married on Wednesday, February 24, to Miss Elizabeth A. daughter of Mr. and Mrs. Andrew L. L. of Philadelphia. The Exchange wishes the young couple long life, prosperity and happiness.

#### New York Wholesale Market.

Washington's birthday (Monday) as a business day was most disappointing. About 1000 boxes of flowers were to be had, but demand proved lacking. This left a heavy supply on hand for Tuesday, Wednesday and Thursday. Demand was also heavy, the outcome being a general slump of prices. Roses sold at \$1.50 to \$2.00 per dozen, and \$1.00 to \$1.50 per slip straight. Wednesday and Thursday, fortunately, shipments lightened up; this was the case of the market. But the demand was not brisk enough to warrant any advance in figures. The corresponding week of last year was the best. The week was one of the best of the whole season for trade and averages were high; alas, this week will be no comparison. It was probably in some lines stock did not realize the full of what it did then.

There is a heavy quantity and quality; in special, Beauty made 40c to 50c; Hybrids 20c; Bridemaid 12c, with many lower. In the week of Rotterdam, Mabel Morrison and Mervelle de Lyon have made their appearance, but most of the stock is short-stemmed and poor so far.

Shipments have lightened up in supply very considerably, and prices are that much the better. The outlook is that this week will not be heavy again for some time.

Flowers are more abundant than ever, and prices are lower. The market moved freely until mid-day, after which they tumbled, and since then have been in a state of depression. The stock changed hands at \$3.00 per 1,000; toward the end of the week \$3.50 and \$4.00

## QUESTIONS IN A BOX.

OPEN TO ALL. FREE TO ALL.

Answers Solicited from Those Who Know.

(36) Diameter of Pipes.—I have 16,000 feet of what is called 2-inch pipe in a boiler, at a temperature of 50 degrees in coldest weather. Would a 40 H. P. boiler be capable of piping 16,000 feet of pipe, would it be a saving to use 1½-inch. Our houses are 175 feet long, and have a rise of 5 feet. I would like to know if I should prefer to use the one pipe system, steam to flow and water to return in same pipe, or use 2-inch pipe as we have plenty of that size on hand, providing it was economical. A. G. H.

It would be all right to use the 40 H. P. boiler and to pipe the houses as proposed, but it would be more economical to use smaller pipe. Rather than use the 2-inch pipe for steam, I would have the house so piped that it could be heated with hot water under pressure, at least in all but zero weather. While it would be better to have larger flow-pipes, it will be possible to use a 2-inch pipe with two 2-inch returns. Each coil of one flow and two returns will then provide nearly two square feet of radiating surface for each foot in its length. This will be sufficient to heat the house, measuring over the side, and for a house of three such coils would be sufficient to heat to run all the pipes down, and, if so arranged, to connect the main feed pipes with the separate tank, and a vacuum valve and safety valve connected with top of the pipes.—L. R. TAFT.

(37) Primula Obovata.—Pet. Bezard. This plant was introduced in 1852. It is a native of Central China.

(38) Average Cost.—Will you kindly tell me what should be the average cost of flowers in a house for the purpose of growing for cut flower purposes: Carnations, Beauties, Brides, Bridemaids, Mignonette and so on.

It is next to impossible to answer this question intelligently, so much depends upon the size of the house, the conditions of house, heating arrangement, etc. Supposing all these are favorable, the number of blooms cut will then depend largely upon what he grows for. For instance, a man who sets out to have extra special Brides or Bridemaids will perhaps get them, and they may realize \$4 per dozen; but in this case his cut will be very light, and may not be worth \$100 or ten blooms of any kind, whereas another grower may average thirty blooms, but many of these will be of such a grade that they would not bring more than \$1.50 per one hundred. Beauties may run from one to four specials, or there may not be an extra or special on the plant; on the other hand, there may be a dozen extra crooked-neck or bling buds. Certain varieties vary so much with the grower and how close he plants that the average of such blooms may be \$1.50 or fifteen cents. Violets may vary, if in health, from three to fifty.

(39) Stringing.—What Constitutes a Stringing?—A grower who sends me a report says he always so much per string. Kindly inform us what constitutes a string; what length and what is the average of a grower who sends in strings ten feet long, with several straws, have to sell at the same price as the grower who sends in a single string, three feet long? What should a florist expect when he orders smilax, a three-foot or a ten-foot string?

SUBSCRIBER, Mass.

Our market quotations are usually given in terms of strings of sprigs, and on the market, not taking either extreme. Speaking generally, it would mean strings of sprigs eight feet long, and each of four feet would be treated as short, and it would be difficult to give a price on such a basis. Smilax is a very variable article, a catch price, and usually there is more of that quality thrown away than sold. A ten-foot string, with six straws, would also

be difficult to quote, for that would be strictly fancy, and would command a much higher price. For instance, if our highest quotations should be 10c and 12c, such a string would be worth 25c to 30c. The average of marketable straws is six to eight feet.

(40) Hot Water Heating.—Please tell me what heat two 2-inch flows and eight 1½-inch returns would heat. The average length, 15 feet wide, 8 feet ridge, 5 feet side walls, which include 20 inches of glass in the house, and a house of 175 feet long in the coldest weather, and house is well built. Hot water heating.

TURNBULL.

It is impossible to give a definite answer, but should regard the piping sufficient to heat a house of 175 feet long, 8 feet wide, 5 feet high, and perhaps 50 degrees in mild weather, if the heater is of suitable capacity and the piping properly arranged. L. R. TAFT.

(41) Hot Water Heating.—I have a greenhouse 10 feet by 20 feet that is not now in use and desire to heat it by hot water, and make a box coil boiler. How much pipe must I have in boiler and how long? Will it be necessary to heat the house to heat same to 55 or 70 degrees? W. H. M.

W. H. M., LELAND, Illinois.

Without more data it will not be possible to give a satisfactory answer, but if the house is 10 feet wide and 20 feet long, and if the wooden exposed wall surface does not exceed 200 square feet, the use of 1½-inch pipe will be sufficient. If of 1½-inch pipe are used in the heating coil, and from 300 to 350 linear feet in the house, and a second-hand car heater, or a small hot water heater of some kind rather than to make a coil of pipe.—L. R. TAFT.

(42) Hot Water Heating.—I have two greenhouses, 10x25 feet, equal span, and one 10x25 feet, equal span, but the two sides are 4 feet high and unprotected. How many 2-inch pipes for flows, and how many 1½-inch pipes for returns, will it be necessary to heat it to 70 degrees? The coldest weather we have is about 15 below zero. What size hot water coil heater will be needed to run through a house 10x25 feet, under the bench and up through the roof at the farther end of house; the heater to stand in the center, the pipes running each way, and to be left overnight. N. Y.

If the houses are well built, of the usual height, and without glass in the side walls, the houses 10 by 45 feet can be heated with two 2-inch overhead flow pipes and four 1½-inch return pipes. If the flows are under the benches, or lower down than the plates, it will be best to use four 2-inch flow pipes and eight or nine 1½-inch returns. In the house 20 feet wide run four 2-inch overhead flows and twenty 1½-inch returns. The grate surface required will vary from eight to ten feet, according to the kind of fuel used, and the box boiler. The necessary heating surface will be provided by forty-eight pieces of 2-inch pipe five feet long. They can be arranged in six coils of eight pipes each over a grate 2½ by 3½ feet.

If the above estimate no allowance is made for the heat from the flue, as although it may be sometimes used in cool weather, it is a matter of waiting for the pipes, the effect upon the draft is often so great as to make the heat uncertain. It is generally best to use the flue in combination, and it will be better to rely on hot water alone in tropical houses. L. R. TAFT.

(43) Propagating Ipomoea Pandurata.—What is the best method of propagating Ipomoea Pandurata? I have tried the method of sprouting the tubers, drawing the sprouts and planting them as is done with the common Ipomoea. I have also tried the method of cutting the tubers. (44) Black Beetles on Elm.—J. M. We cannot help you in regard to the elm. It seems to be a matter of waiting until nature will do the working. With a good practice to scrape the bark to such an extent?

(45) Dwarf Double Tuberoses.—J. M. Put up in late spring in good soil, and in pots. In this season no bottom heat is needed.

(46) Best American Carnations.—What are the best carnations of America origin?

(47) Plant for Name.—E. Lappe.—The specimen sent for name is one of the old class of perlagoniums. It is very hardy, and floriferous, but they are seldom seen in these days. Possibly the one you have is *P. Stronatum*, which is very hardy, and either it may be a garden form of that variety.

(48) Imperfect Yellow Stock Blooms.—E. Lappe.—The color of Yellow Stock is due to the action of the perlekia on the system under which the flowering bulbs are grown when in the fields, and whether they are raised in greenhouses. Different localities also give different results. There is also a difference in price to the importer.

(49) Packing and Growing Carnations.—Will someone tell me the best way to pack carnations, the number of flowers to put in a box when shipping to commission merchants?

Are solid boxes just as good for raising carnations as raised benches? When sold at wholesale for what season?

What distance apart should carnations be set in a greenhouse with such varieties as Scott, Daybreak, McGowan and Meteor? G. W. S.

There are different methods of packing carnations and usually this work depends upon the quality of the soil. Some growers, who are sending in special and fancy blooms will go to the trouble and expense of packing them in trays with a wooden resting, or a wooden frame. Others simply tie them up in bundles of fifty and ship in large boxes, packed with generally neat, evenly graded, and shipped in shallow boxes, just one layer deep. Some growers will grow them up to twenty-five to a bunch. Care is taken that they have been cooled before shipping to the grower.

It is impossible to state the amount to be realized per plant. It depends upon the size of the market, the market you have to dispose of them and the price it is possible to get locally. Except to a few special growers, the average value of carnations this season will not be more than 65c per 100, and in many cases not that. Figure this out at an outside average of fifteen blooms to a plant, the latter standing ten inches each way. Solid beds of carnations will give from fifteen to twenty plants closer than either of the others, say 8 by 8, but this depends upon the size of the plants. (See Mr. Weber's paper, page 167 of last week's issue, for full cultural information regarding carnations.)

## Legal Queries.

Taxes, Galesburg, Ill.—A principle of law so well established as to be termed "pre-valuation" is that annual crops parake of value are to be valued at their market value as adding to the value of the land for realty taxes. This is so well established that it is not necessary to refer to any law disposing of real estate, and can be no part of the personality.

Contract, Chicago.—I cannot be classed as "annual crops," and so partake of the nature of personal property, amenable to the state and local laws affecting personal property.

Water Meters, West Collingswood, N. J.—I have a signed water meter. Custom (N. Y.) makes the water meter by the meter, subject to inspection from time to time by the company. Any violation of contract put up with by the company should shut off water. Interpretation of contract does not involve knowledge of local laws governing such corporations.

Defective Hedges, Wilmington, Ohio.—I am an estate, and there was a negligence in your part (my servants). We should say that heater company is liable—even if I guarantee by them.

## Ephyllums.

These plants, owing to their exceedingly attractive flowers and the comparative simplicity of their cultivation, ought to have a place in the list of plants grown for winter bloom. They can be turned out in a salable state just as easily as in a short time as the azalea and command perhaps even a higher price besides helping to furnish greater variety in what is offered for sale. As the plants have a procumbent or drooping habit of growth, they are only used when grown in this manner for basket work, therefore we usually see them grown as standards, that is, grafted on the stem of some other plant, so that they are well above the flower pots. The best stocks for this purpose and the ones most used are *Perezia Aculeata* and *P. Buxi*. To have ties in condition for the reception of the grafts they should be grown on from cuttings to the desired height; six or eight inches is a useful size, although they can be successfully worked on stocks of pereskia much taller. When the wood of the stock is sufficiently firm, cut off the top; make a split down the middle for three-quarters of an inch or so, then insert a piece of the ripened growth of ephyllum, and either run one of the pereskia spines through the whole, to keep it firmly together, or tie with raffa.

If a nice growing atmosphere be given, they will not be long in uniting. As an important point is to have the pereskia in as small pots as possible at the time of grafting, so that when the union between the stock and scion takes place, the plants will get a fresh impetus by being shifted into larger sized pots. From now on the most favorable position in which to make their growth is near the glass in a rather warm house. They like a moderately humid atmosphere while growing. They may be had in flower anywhere from November till late in spring; in fact, as tractable as they, that flowering plants may be had all during the flowering season of the azalea. The potting mixture to be used should be exceedingly porous, the least stagnation is fatal to the roots. Sandy loam, broken brick, old manure and a little leaf soil will be found best. G. W. V.

## HALL NEWS.

The latest additions to the ranks of the membership of the Florists' Hall Association is the Missouri Botanical Garden.

## SARATOGA, N. Y.

T. J. Totten is sending a fine seedling carnation to Welch Brothers, but if it does not well upon further trial he will discard it. He has a grand lot of Cardiage, which some growers are growing, but are strongly in evidence here. Some very well grown plants had ready sale in Albany stores.

## The Seed Bill of Distribution is to be Hatched.

Every florist, as well as every seedsman, every seed grower as well as every man who plants seeds for a living, should make his duty, immediately on receipt of this copy of the **FLORISTS' EXCHANGE** (if he has not already done so), to write a concise and pointed protest to his Congressman, against the further distribution of Government Free Seeds.

As pointed out in previous issues, the distribution is a startling and serious menace to an industry which, more than any other, has contributed to the advancement and welfare of the nation.

A unanimous and urgent protest **AT THIS TIME**, will have its effect. Write to the home address of your Senators and State Congressmen as published in this issue. Write now.

A joint meeting of all seedsmen has been convened to meet in Washington, March 2, to discuss legislation now before Congress affecting their interests.

PHILADELPHIA, Feb. 24.

Editor Florist's Exchange:

Dear Sir:—In replying to yours of Feb. 23, would say that I have already sent you a copy of my statement, as President of the American Seed Trade Association, who, next to ourselves, is the largest commercial contractor, above all others, in relation to the continued free distribution of seed. I have also previously forwarded to you copy of telegram received from L. L. May & Co., and have received a letter from H. W. Buckbee, another contractor, who is interested in the continued free distribution of the Government Seed Distribution.

This morning I received another vigorous letter from Hon. J. Sterling Morton, a copy of which I inclose to you, together with a copy of my answer. We, seedsmen, and agriculturists generally, should certainly feel gratified that we have such a powerful "friend at court." From the fact that the President has signed the bill, it is to be expected that "the President declined to sign the last agricultural appropriation bill, containing a number of provisions relating to the continued free distribution of seed, last year," I think we may hope that he will also decline to sign the bill now before Congress, and it is time to make an immediate and vigorous protest to the members of Congress, and to the President, and to the Secretary of Agriculture, that you urge every florist, as well as every seedsman, to write immediately a letter to their respective members of Congress at Washington. You can readily show to the florist readers of the "Exchange" that this system of Government paternalism, while not yet affecting them as disastrously as it does the seedsmen, MUST BE STOPPED, or we cannot tell where it will end.

W. ATLEE BURPEE.

Messrs. L. L. May & Co., St. Paul, Minn., telegraphed Mr. Burpee their opinion as to the Free Seed Distribution as follows: "strongly opposed to it. Continued Government distribution means ultimate ruin to the seedsmen of America."

United States Department of Agriculture,  
Office of the Secretary,  
Washington, D. C.,  
Feb. 23, 1917.

Dear Sir:—Replying to your several communications of the 21st and 20th inst., I have to acknowledge the receipt of proof of the number printed in the "Exchange" entitled "The Free Seed Distribution Must Be Abolished." Likewise a copy of a letter to Hon. William C. Clegg, in which you state which have been sent to Senators Cullum and Quay and the Representatives containing the same. You may remember that the President declined to sign the Agricultural Appropriation bill, containing the provisions for a gratuitous seed distribution feature last year. He has not yet signed this bill. The next Congress will convene the 1st of July, and no harm could come to the bill if the bill should not be passed, though, of course, we have no information as to whether it will be or not, nor do I authorize to speak upon that question.

The "Florists' Exchange" has taken the case very earnestly and sensibly, and presents the case with great interest and lucidity. Its editor is evidently a gentleman of ability who knows how to state his

case vigorously and clearly. Very respectfully,  
Yours,  
(Signed) J. STERLING MORTON,  
Secretary.

February 24, 1917.

Hon. J. Sterling Morton, Secretary of Agriculture, Washington, D. C.

Dear Sir:—I have the honor to receipt today of your courteous favor of Feb. 23, I can do better in expressing my appreciation of the same than I can in the trade generally of your continued efforts to do away with the promiscuous seed distribution by the Board of Agriculture.

I have been from home in agricultural work for the past two weeks. Returning last night some of the 15th inst. with clippings relating to my forty-two-year friend, Sterling Morton. Jealous rivals may protest if they please, but I will leave the Cabinet office of Secretary of Agriculture having accomplished more practically than all other predecessors combined.

I remember distinctly that the last two agricultural bills containing the promiscuous and gratuitous seed distribution features were not signed by the President, and the signed bill I learn that he has not signed this bill. From the fact that the President declined to sign the two previous bills I think that we have reason to hope that if they please, he will leave the thought of course, as you say, you "have no intimation as to whether it will be or not."

I am very glad that you approve of the bill, and that you are the editor of the "Florists' Exchange," to whom I am sending a copy of your letter today, with the request that he urge his readers to write immediately to their members of Congress protesting against the continued free distribution of seeds. As the "Florists' Exchange" reads not only of seedsmen, but also thousands of florists and horticulturists throughout the country, I am in hopes that a vigorous editorial urging the immediate writing of such letters to the majority of members of Congress, will be the most popular measure which they seem to consider.

Beside leading editors from papers already forwarded to you I have noticed that a number of prominent local papers, the "Daily True American" of Trenton, N. J., Feb. 12, devoted nearly a column to the subject, and the "Herald" and "Editor" express tersely the objection to the bill in the following terms: "The whole business is the attempt of the Government to get back upon the old Jacksonian foundation of the people of the United States Government to strict limits prescribed by the Constitution, leaving us people to buy their own seeds, to build their own plants and provide their own banking facilities the better it will be for the Government and the people who have to put up the money to support it."

W. ATLEE BURPEE.

The following summary of the situation to date calls for careful reading and important action. The home addresses of the Representatives of the House of the Fifty-fifth Congress is given in another column, and these gentlemen are the ones to be written to.

WASHINGTON, February 24, 1917.

Editor Florist's Exchange:

The Agricultural Appropriation Bill will not be decided, as the President has not yet received the bill, and the Constitution prescribes that a bill may become law

without the assent of the President in ten days, or he may return it to the Senate inside of that time with his veto.

New the ten days will not expire before the end of the present administration, and even should the President receive this bill tomorrow, he will not return it with his action with reference to the two previous Agricultural Appropriation Bills, which will be returned to the President with his veto. Thus, the bill will die without action, and the new Congress will be obliged to pass it. It is now the time for the seed trade to bestir themselves, and urge the Congress to turn down the Seed Appropriation Bill.

Will you kindly urge vigorously that every florist and seedsman should help by writing immediately a letter of protest to his new Members of Congress, insisting that they vote against the bill appropriation when it comes up for consideration.

An special effort could certainly be made with the seed members in all the localities where there are any seed houses. For instance, New York has sixteen city districts, and if the seedsmen of New York and other cities will go to the Congress in person, and insist that they have no use for seeds, they vote against the bill, and request that they work for it, they will be able to get enough votes, in addition to the members who voted against it in the present Congress, to completely stop it.

You are probably aware that the new Bill provides that a member can have any kind of a bill, and that he asks for this. If this is carried out, we will practically have a free Shop where a man can send to his Representative for just what he desires and get it. This will be a great advantage to the consumer, but a great deal worse than it is now, and may completely ruin the trade.

W. ATLEE BURPEE.

### Buds to Be Datable.

Rumor has it, on pretty good authority, that bulbs and all bulbous roots will be included in the new tariff bill among the articles to be taxed at the rate of 30 per cent, if not more. Let florist-dealers take a timely warning when they see anything like this, and endeavor to place new orders. Will the Dutchman pay the duty for the florist and advance the cost of his goods to his customers 30 per cent? And how will the dealer like to pay 20 per cent or more on seeds, which are not in the general market, have to be slaughtered for less than the duty? Order gently, gentlemen, will be the right motto.

R. W.

Rochester, N. Y.

Charles and George F. Crossman, comprising the firm of Crossman Brothers, to-day (Feb. 24) made a general assignment to Henry B. Hathaway. Preferences named aggregate \$26,000. Aside from these, the extent of the firm's liabilities is not known, but it is thought that they will swell the total to about \$45,000.—New York Sun.

**Farflung Catechism.**—This is an exceedingly interesting pamphlet, containing fifty questions on the subject of the tariff on seeds, which has been distributed by D. Landreth & Sons, Philadelphia. Those who are interested in the subject will find the pamphlet well worth reading.

### European Notes.

Now that the continuous rains have cleared away the snow we are able to form a fair idea as to the condition of the land done to our growing plants. Unfortunately early turnips appear to have suffered more than any other crop, and many of their plants are entirely perished, and where they are not completely destroyed those left standing are so badly injured as to be practically useless. Such varieties as the Milan, Munich and Strap-leaved cannot by any means be expected to give a good crop of arangel for, and unless a change for the better specially takes place this will be a very serious loss to the growers. Rutabagas are also looking very sickly, but, at present, the loss of these does not cause any serious concern. Asparagus, asparagus and broccolis have also suffered greatly, and with the short breads left standing in the ground, it is a surprise of any one of them next season.

The later consignments of Lilium auratum, which are arriving in large quantities, while the roots are unusually large. Reports on the new yellow Chinese Lilium, which is the most desirable of any one of them next season.

will quickly be in high demand.

The yellow-anthered Lilium is an album is clearly a distinct variety and can be easily distinguished by the shape of the root.

Whether it will be as valuable to florists as the introducers claim is an open question. It is the subject of a program arranged to remove the anthers from existing flowers for sale. EUROPEAN SEEDS.

James Vetch & Sons, Limited, Chelsea, England, have been registered by Vallance & Vallance, No. 29 Essex Street, Strand, with a capital of £100,000 in 10 shares of £10,000 preference and 7,000 ordinary. The object of the company is to acquire the goodwill of the business of Messrs. Vetch, Hill, Surrey and Langley, and other connected businesses carried on at King's Road, Chelsea, Fulham, Coombe Wood, Kingston Hill, Surrey and Langley, Buckinghamshire, or elsewhere, under the style or firm of James Vetch & Sons.—English Paper.

The following is a list of the Senators and Representatives composing the new Fifty-fifth Congress. We advise every florist to write to each of them, and to his own Senators and Congressmen, at the home addresses herein furnished.

SENATORS.

Alabama.....	John T. Morgan, Selma.
Arkansas.....	E. W. Pettus, Selma.
California.....	John P. Jones, San Jose.
Colorado.....	Edwin S. Wallace, Denver.
Connecticut.....	Henry M. Teller, Central Islip.
Delaware.....	Joseph R. Hawley, Hartford.
Florida.....	Samuel Pasco, Newtontown.
Georgia.....	Augustus O. Bacon, Macon.
Illinois.....	William M. Cullum, Springfield.
Indiana.....	William E. Mason, Chicago.
Iowa.....	Charles Warren Fairbanks, Indianapolis.
Kansas.....	William B. Allison, Davenport.
Kentucky.....	John H. Barker, Burlington.
Louisiana.....	Lucien B. Gear, Leavelle.
Maine.....	William Lindsay, Frankfort.
Maryland.....	Samuel Douglas McEnery, New Orleans.
Massachusetts.....	Edward F. Ellisworth, Lowell.
Michigan.....	William F. Rice, Lewiston.
Minnesota.....	George F. Wellington, Cumings.
Mississippi.....	George F. Hoar, Worcester.
Missouri.....	Henry Cabot Lodge, Nahant.
Montana.....	James McMillan, Butte.
Nebraska.....	Julius C. Burrows, Kalama.
Nevada.....	Cushman K. Davis, St. Paul.
New Hampshire.....	James McMillan, Butte.
New Jersey.....	James Z. George, Carrollton.
New York.....	Edward C. Whitham, Green.
North Carolina.....	Francis M. Cockrell, Warren.
North Dakota.....	George G. Vest, Kansas City.
Ohio.....	Lee Sharpe, Blue.
Oregon.....	Heleah.
Pennsylvania.....	William V. Allen, Madison.
Rhode Island.....	William M. Stewart, Carson.
South Carolina.....	John P. Jones, Hill.
South Dakota.....	William E. Chandler, Con.
Tennessee.....	Joseph H. Gallagher, Concord.
Texas.....	William J. Sewell, Trenton.
Vermont.....	Thomas C. Platt, Troy.
Virginia.....	Marion Butler, Raleigh.
Washington.....	William C. Clegg, Wash.
West Virginia.....	William N. Roach, Lark.
Wisconsin.....	Henry C. Hanrough, Des Moines.
Wyoming.....	John Shanley, Minn.
	John S. Hanrough, Minn.
	Joseph B. Foraker, Cin.

Wisconsin..... John E. Osborne, Wausau.

TUFF STUFF ON GREEN FLV IS TOBAC-OIL.

**Grand Rapids, Mich**

The last meeting of the club was devoted to violets, as advertised, and the sweet flowers related supreme, from royal blue to white. The gathering was a whole, was entirely satisfactory and instructive. Such meetings bring the members closer together, and we have better attendances.

The following varieties were on exhibition: Marie Louise, Lady Hume Campbell, Swallowtail, and California, and California. Henry Smith read an able paper on the violet from the runner to the picking stage, which was very interesting.

The writer had the pleasure of visiting Mr. Smith's violet houses. He grows nothing but Marie Louise, a white, coming to grand sight. He is cutting about three thousand a week from three houses, each sixty feet long. He advocates solid benches, takes the each of in June and plants his violets in the benches, putting the sack back when the weather gets cool in the fall.

The Grand Rapids Floral Company and Crab & Hunter exhibited Lady Hume Campbell, very large flowers.

Harry Stover, of Muskegon, Mich, died very suddenly, Feb. 18, of paralysis. He was 70 years old the florist and a retail business at Muskegon about four years. He started in the florist trade with E. Y. White, of Grand Rapids, in 1874, and coming to Grand Rapids in 1883. Ten years later he went to Muskegon. Deceased leaves a widow and children.

Wesley Culverski and F. A. Chapman had a severe attack of grip, but at present he is out of the bed.

Trade has been very good the past two weeks. Downtown stores report they cannot get sufficient flowers to supply the demand. Carnations have been coming in in very fine condition. Roses have been off color, are looking fine and will soon be plentiful.

March 2 the club goes to Grand Haven, and all members will be present. The guest is George Hancock & Son, the veteran carriage owners of Michigan.

N. B. STOVER, Sec.

**Montreal.**

Your correspondent here has had a long spell of sickness, which will account for the dearth of news for some time past from the metropolis of the Dominion.

Members of the craft here are very much interested in the coming of the winter, and rebuilding and adding to existing plants and stocks generally.

W. S. Bain reports an excellent health and has completed a block of houses at Lachine, but, as with all others, both small and large, he thinks he has not enough and will extend this coming spring.

A. Marin has purchased a new property and will erect a range of houses thereon, vacating his present location.

Walt Wilsbire is cutting some good stock. He is to be congratulated upon the fact of winning his suit against the Water Company, but the damages assessed, even if paid, are hardly adequate for the loss in stock and time involved.

Wilsbire Brothers are bringing in some fine white stock.

S. S. Bain and Collin Campbell are having a goodly share of decorative orders. The former gentleman reports an exceedingly brisk run on funeral work of late.

Miss Murray continues to preside over the flower store of J. S. Murray, who takes great pride in raising old-fashioned stock. His garden in summer is a picture.

Beautiful double and single Kingings are being so freely claimed just now, he feels entitled to be called the Violet King of Canada. Certainly he is raising excellent violets, both double and single.

B. T. Groves reports heavy sales of popular plants, many of which he raises large numbers, and does them well.

F. McKenna & Son have a corner on the stock market, and so to speak, business recovers across the border the boys in this live and pretty place will feel the benefit of the improvement. W. M.

**St. Albans, Vt.**

Henry Bryant finds he can buy roses cheaper than he can raise them, so will throw out his stock and increase the area of culture. He has contracted shipping business. W. M.

**EXTRA REVOLUTA...**

The true long leaf variety, just arrived. Stems from 2 inches long, upwards, \$1.00 per 100 lbs., great reduction on quantities. Prices on all bulbous and decorative stock given by correspondence.

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Chicago.**  
 State of Trade.  
 The supply of roses in this market for  
 the past week was still far from sufficient  
 to fill all orders. The consequence was that  
 prime All long stem Bride and Bridesmaid  
 went at \$7 to \$8, but there were few of  
 these the general price being \$4 to \$6.  
 The best sellers were Bride, Bridesmaid and  
 Mar. In spite of this condition many  
 growers concede that they rarely average  
 the lowest figure for all sent in, while some  
 exceed the average did not go beyond \$3.

This winter, taken as a whole, has been  
 exceedingly unsatisfactory to consignors,  
 and, as a result, lots of grumbling has been  
 indulged in. Where the blame lies is not  
 easy of explanation. One thing is sure—  
 let the stock be ever so scarce, heavy prices  
 could not be obtained. The light cuts, owing  
 to a very mild winter, which always  
 means a heavy supply, ready to hand, a  
 possible reason, coupled with the disa-  
 position on the part of the best buyers to  
 spend much less money than usual in de-  
 corations for receptions, parties, etc. But  
 for the general demand matters would be  
 much wiser.

However, there are signs of plenty of  
 roses in the near future.  
 Carnations also get cleared out fairly  
 stock is rather light and is selling at from  
 \$1 to \$2, with concessions for inferior  
 grades.

Violets are becoming abundant. The  
 best sell at 75c. to \$1, but poor stock goes  
 as low as 25c. to 50c. Some are offered on the  
 streets at 5c. per bunch, but nobody seems  
 to know, or admit, where they come from.  
 Lilacs are plentiful, selling at \$6 to \$8.  
 There is a feeling that much of the stock  
 designed for Easter will be in before that  
 time.

One ambitious stock is plentiful enough  
 for the demand, except Romans, which are  
 now getting scarce and poor. Dafoedils are  
 abundant and sluggish at \$1 to \$2. The  
 best long-stemmed tulips bring \$3 to \$4,  
 with shorts at half these figures. Double  
 chrysanths are increasing in quantity; the  
 light colors are fair sellers at \$3 to \$5.  
 Maidenhair fern is scarce, going at 75c.  
 to \$1.

**Eastern Visitors.**  
 A flying squadron from the carnation  
 meeting at Cincinnati, consisting of John  
 N. May, Ernst Assinger, Frank McMahon,  
 E. Daldeouze and H. Rath, after visiting  
 E. G. Hill & Co's place at Richmond, Ind.,  
 Fred Dorner & Sons Co., at Lafayette, Ind.,  
 landed here Saturday morning. They were  
 taken in tow by Mr. Washburn and vis-  
 ited Chicago, where the establishment of  
 Bussett & Washburn and Pain Bros. were  
 inspected.

They afterward visited Kiehm's nursery  
 at Arlington Heights, Reinberg Bros., Rose  
 Hill and E. Buetner's. They left Chi-  
 cago Sunday on their way to John Bretz-  
 meyer's at Detroit.  
**The New President of Carnation  
 Society.**  
 The Carnation Society has done well,  
 seeing it is to come to order in 1898. In  
 selecting as its president W. N. Ridd. He  
 has shown himself, as manager of the Chi-  
 cago Horticulture Society's exhibition, as  
 a bright man in this kind of work. He is  
 a noted grower of carnations for this mar-  
 ket. Chicago was invited in looking  
 after florist gatherings, and now is a good  
 time to begin to create an enthusiasm, so  
 as to be ready next February. It will take  
 work and willing hands above the fraterni-  
 ty generally—that is all.

**Proprietor of Store Light.**  
 Just now a lively fight is on in this city  
 against the department stores, and bill  
 of a restrictive nature is pending in the Leg-  
 islature to regulate them. So far the florists  
 and others of the trade have not shown  
 their hands as a body, but may do so later.  
 The seed trade in this city is very severely  
 injured by these stores, and there has been  
 at times even a good deal of grumbling  
 among the florists also. These huge affairs  
 seem to grow, the smaller business florists  
 houses suffer from them.

## To Make Pipe-Joints Tight.

Rust joints in cast iron Metal Worker, greenhouse heating, says Metal Worker, are by many considered most serviceable. These joints are made with what are generally called iron filings, but these should not be too fine or too fine dirt. It is better to have the iron filings coarse, or more correctly speaking, machine cuttings. The best advice for these joints are from castings made from soft, strong iron, entirely free from grease. They should be packed for use by wetting down with water that is slightly salt. Too much salt is objectionable, as the resulting expansion may break the pipe. It is better to order to prevent the filings from getting inside of the pipe, the bottom of the joint should be packed with oakum and the filings packed on top of it. Another method of joining these pipes is to use oakum and red lead applied alternately in several layers. Success in this work depends upon the quality of the red lead used and the care with which the joint is made. Sometimes Portland cement is used instead of red lead between the layers of oakum. Sal ammoniac is also employed for mixing with the iron filings, but there is danger, when too much sal ammoniac is used, owing to the excessive expansion that ensues and which may break the hub.

## Hot-Air Engine Manufacturer's Combine.

The De Lamar Iron Works Company, No. 467 Broadway, New York, and the Rider Engine Company, No. 37 De street, New York, two of the largest manufacturers of hot-air engines, have consolidated under the name of the Rider-Ericsson Engine Company, at the former address. After April 1 they will occupy new quarters at No. 22 Corlandt street. By this combination, by increasing the facilities a better engine can be put on the market at less cost. There are many hot-air engines used by farmers where it is necessary for them to provide a private water supply, and they are most effective and economical for this purpose.

## BOOKS RECEIVED.

"The Forcing Book," by Professor L. H. Bailey, Publisher, the Macmillan Company, No. 68 Fifth avenue, New York. Price \$1. In this volume the author has compiled in handy form the cream of all the information available on the subject of forcing vegetables under glass, as applicable to AMERICAN conditions. Especially valuable is the chapter dealing with the construction of the forcing house, much of the material being, as a goodly part of the text is culled from the bulletins of the various experiment stations, and from letters on the subject in the horticultural press, but there is also given the experience of practical growers in various parts of the country. Many farmers are interested in vegetable forcing, and all such will find in this manual a deal of very useful information.

**Modern Greenhouse Heating.**

One of our boilers, 10,880 feet of two inch pipe, and sixty tons of coal will heat 22,400 feet of glass (four 30x200 feet double gable houses) to 65 degrees in coldest winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firelight" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boiler of our day.

Decorative border containing text: COPIES OF AMERICAN GARDENING WILL BE MAILED TO 50,000 SATURDAY, MARCH 13, 1897. We believe advertisers generally will recognize the value of a thorough representation in this Special Edition, and we herewith solicit your patronage. Advertising Pays But Advertising in American Gardening Pays Best. No advance in rates over our regular charge of 25 cents per gate line will be made. Copy for your advert. in this issue must be in our hands not later than March 6th. AMERICAN GARDENING, P. O. Box 1697, NEW YORK.

WE MEET THE PRICES OF ALL COMPETITORS ON NEW CANNAS "Italia" and "Austria."

500 DOLLARS WORTH FOR 25 CENTS

TWO YEARS ago we offered the originator of these Cannas 1000 DOLLARS

for one plant of ITALIA and one of AUSTRIA.

The offer was refused - \$2,500 asked for a part of the stock. That the plants were fully worth the price asked was proved by the enormous sales made subsequently at \$5.00 each, even up to six months ago. Owing to rapid production we can now make our price on

AUSTRIA, at 35c. each; \$3.50 per doz.; \$35.00 per 100; \$290.00 per 1000. ITALIA, at 60c. each; \$6.00 per doz.; \$45.00 per 100; \$400.00 per 1000.

The prices for immediate delivery, and fine large, home-grown roots. Send for list of ALL THE NEWEST CANNAS at popular prices.

ALL SOLD. Our entire stock of ASPERAGUS SPRENGER, consisting of nearly 10,000 plants, was sold to Mr. Robert Craig - he knows a good thing when he sees it. NEW ROSES, CLIMBING WOOTTON, CARMINE PILLAR, \$2.00 per doz.; \$10.00 per 100.

HOW FLORISTS MAY MAKE AN EXTRA PROFIT

By utilizing space between crops, etc., is fully explained in

THE FORCING-BOOK

An Illustrated Manual of the Cultivation of Vegetables Under Glass.

By Prof. L. H. BAILEY, in the GARDEN-CRAFT SERIES of Cornell University.

It includes not only the results of extensive experimentation at home, but also the experience of the most successful growers-over the world. How to force Tomatoes, Cucumbers, Lettuce, Asparagus, Melons, etc. How to Build, Heat, Ventilate and Manage Forcing-houses. How to fight weeds and all kinds of diseases. All this is told in a simple, right up to date. 206 pp., flexible cloth. 16 cts.

MAILED ON RECEIPT OF PRICE, \$1.00, BY THE PUBLISHERS THE MACMILLAN COMPANY, 66 Fifth Ave., New York

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# SEED TRADE REPORT.

Kind attention is called to the following, which is interesting in the column, solicited. Address Editor Seed Trade, care of Florists' Exchange, New York, N. Y.

## Free Seed Distribution.

As announced in "The Florists' Exchange" of Feb. 27, a joint meeting of seedsmen was held in Washington at noon, March 3, to discuss the proposed bill before Congress affecting the seed industries of this country, and particularly the best method to pursue with a view to securing further promiscuous distribution of seeds on the part of the Government.

The first action of the informal meeting was to agree upon a letter to be presented to the President, as per copy printed herewith. Notwithstanding that it was Cabinet Day, upon which the President's private secretary, Mr. Thurber, as a rule declines to receive callers, an exception was made in favor of the Committee of Seedsmen. Mr. Thurber stated that he would attach this protest to the Agricultural Appropriation bill, so that when the President took up the Appropriation bill he would be made fully cognizant of the matter before him.

After the return of the committee from the White House the meeting, upon motion of Mr. Burpee, unanimously elected Mr. T. W. Wood of Richmond, Va., chairman. After the reading of a list of the names of a number of letters, which he had received from seedsmen who could not be present, but who were ready to open their purses to promises of subscriptions from firms present; and other firms represented, a full and free discussion followed. It was decided finally that the best plan would be to elect an Executive Committee to represent the seed trade generally, with full power to take such prompt action as might best likely result in the killing of the Appropriation bill in every manner present that the President would not sign the present bill, hence the whole question of the Agricultural Appropriation bill must necessarily be taken up by the Fifty-fifth Congress, which it is thought will convene within two or three weeks. On motion the following list of Seedsmen was elected unanimously: T. W. Wood, chairman; Jerome B. Rice, Burnett Landreth, A. A. Severance and W. Allen Burpee.

Upon motion of Mr. Brotherton it was resolved that the chairman of the committee employ a secretary, who would act as that the committee be empowered to extend all funds raised by voluntary contributions in such a manner as the committee might deem best. Any funds remaining in the treasury after the work is done to be returned back to the contributors. It was the sense of the meeting that seedsmen generally throughout the United States, including all local merchants handling seeds, should be notified immediately of the necessity of writing personal protests to the members of the new Congress, as printed in the "Florists' Exchange" of Feb. 27. To enable the committee to use every means to "make public opinion" in the short time it is necessary that funds be subscribed quickly and liberally.

The meeting adjourned shortly after 4 P. M. when a number of seedsmen called upon Secretary Wood and Dr. Dandridge, both of whom have done so much to encourage seedsmen in their fight against this proposed competition of Governmental gratuities.

The Hon. Mr. Morton gave the welcome invitation to the members of the committee to protest against the appropriation of \$150,000 for the purchase of seeds, as contained in the bill before Congress. He introduced a bill, that he had strongly indorsed this protest, which would be received by the President. He stated that the seedsmen as mentioned above, when the Agricultural bill came before him for his consideration.

## Copy of Letter to President Cleveland.

To the President of the United States: We, members of leading firms of seed merchants, and voking the name of the committee of seedsmen and growers throughout the United States, assembled to consider means for further increasing public information regarding the continued promiscuous distribution of seeds by Congress, desire to express to you our earnest protest against the proposed appropriation of the Agricultural Appropriation bill last year. We venture to express the hope that you will also decline to sign the present bill. Should you decline to sign the present

bill, as we earnestly petition, we believe it is possible to convince a majority of the members of Congress that the promiscuous distribution of seeds means not only unfair competition with an important, legitimate industry, but also a serious loss to the country as expressed by your Secretary of Agriculture, the Hon. J. Sterling Morton, a most offensive form of favoritism.

American people love fair play. Our farmers and gardeners are not paupers, whose itching palms are extended for the paltry gift of five packets of common seeds, which could be purchased for ten times as much. If our seedsmen do not act at nearly any village store, With high esteem, respectfully submitted,

W. ALLEN BURPEE, T. W. WOOD, W. BROTHERTON, M. S. GRIFITH, Committee, Hon. Grover Cleveland, President of the United States, Washington, D. C.

The subjoined correspondence proves that free seed distribution has one firm advocate at Washington. It is the result of the publication of the correspondence of both gentlemen which, although perhaps leading up to the formation of the Executive Committee, has not bearing on the present controversy.

Botanic Gardens, Washington, D. C., Feb. 20, 1897. Mr. Albee Burpee, Contractor for the Supply of United States Ornamental Seed for the Agricultural Department.

Dear Sir: I received the copies of the Philadelphia "Times" marked. Your picture and the compliments to you and your great establishment are all mine, but you will excuse me if I object to the opinion of both you and Secretary Morton. How either of you can accept money for doing what you think wrong needs some explanation. I think the distribution of seeds to our friends and kindred establishments a possibility, it is your best evolving agent.

It is the dictation of the necessities of the industrious farmers and struggling artisans all over the Union, but especially in the South and West. That there have been great mistakes made in the matter is true. None has made more than the present incumbent. I do not think it belittles the business in every way. I regret to think you coincide with them. "The number of our people who are in my opinion, amply qualified to elect their agents. It goes without argument that our Government should be for the people. The answer of the Secretary in his letter to you about paternalism I would like to suggest an amendment, viz. call it "materialism," using paternalism for the expenditures at West Point and Annapolis in the interest of the building of the forts and blowing up Hell Gate and other expenditures in the interest of commerce.

Agriculture needs a motherly interest. The diffusion of knowledge among the toiling millions is all important. Increase will follow as a consequence. The remedy I made to you and our good friends, Landreth and Dreeer, when we met a short time ago, "That seed was the origin of all our ills," seemed to please you. It is true, but might die for want of a better. The empty much, I do not believe, should never be hungry much. "

Very truly yours, I have all good had inspired President-elect McKinley and Senator Allison to select James Wilson of Iowa Secretary of Agriculture. I do not think our partnership will disturb his relations with the people's legislators. When you were in the building of the new law, the friendship and respect of Randall, from your city; Kerr, the Speaker; Milton Saymon, the Chief Justice; and the members on the Democratic side of the House, including his countryman, James B. Beck of Indiana, who is now the Chief Justice, the writer that he never could master the rules like Wilson, his practice in courts of law interfering with the business of the State. Wilson was the best equipped man, as to the rules, on the floor of the House. As a member of a large committee, and as a member, his mastery report on "Transportation of Cotton to the Seaboard," remains a monumental work. I do not think it is fair to say. What other member would have spent eight days on a cattle car from West to East as he did to get to the origin of the great wars worth untold millions to this nation.

As to his patriotism, this thoroughly American citizen, Scotchman, Scots Irish brother as to who should go to the war or stay home and manage the farm. For family reasons both could not well be spared.

His brother, Peter, drew the prize, as he planted and watered the plants. The late Mr. James divided equally with him lands acquired, cattle, and everything, to the last August being his last year as a farmer, died as a farmer during the four years war.

His success in raising the standard of the Agricultural College, and the success of the experimental station to the first rank in his latest acknowledgment.

By the man God's providence and Major McKinley has selected to preside over the great agricultural interests of this country.

The seedman's society, of which you are or were the honored head, together with the Agricultural and Horticultural societies of this country, we can guarantee will be carefully considered, and what is best in the interest of the great public good. The number will be recommended to the next Congress, and by them will receive due attention.

I have no personal acquaintance with Mr. Morton. I never looked on the light of his appearance. His public acts and utterances I criticize.

I am, with great respect and kindness, yours,

P. S. "Owd some pow'r the little gize you see is the farmer's as iters see it."

It was free month in the soil. And foolish notion."

Mr. Wm. R. Smith, U. S. March 3, 1897.

Dear Sir—Returning to Philadelphia to-day, I will file in the fact of the whole in writing yours of the 20th ult. A week's absence has allowed so much personal concern to accumulate, that I cannot give an answer as fully as might be desirable—yet from our conversation on Friday last, I thought your letter had been received by me in Washington. I fear that nothing would support your opinion now as to the propriety of the premium on distributed seeds by the Government.

In Richmond on Sunday I saw Mr. Alfred Henderson, the son of the late John C. Henderson, and he was equally as surprised that you should be in favor of the Congressional appropriation. He said that the seeds can be purchased at almost any village store.

They are quite right in stating that, with our friends Landreth and Dreer, I was particularly pleased with your expression that the seeds should be sold to the growers. We had the pleasure of calling upon you in January. I must maintain, however, that you are altogether wrong in your opinion that the Government, after doing so much for agriculture in giving in the first place, in the second, the seed to the growers, and in appropriation for agricultural colleges and experimental stations (of which I heartily believe you should count as one of the common varieties of vegetables and flowers, the packets of which bear, as in but-terflies, the request, "Please report the result of your trial to the United States Department of Agriculture.")

It is only too close contact with farmers and gardeners throughout America I know that the great majority are not the members of some members of Congress seem to consider them—standing with outstretched hands, begging for five packets of seeds for ten cents (more or less).

I do not know how you became so prejudiced against the Government, but I am sure that the animus of the bitter contention to which he has been subjected by men of this party is the cause of it. I can understand which he has maintained so consistently for right and truth. He does not want to see the labor of the people, the money paid in depreciated currency. No other sound money Democrat has done so much to injure Mr. McKinley.

You think inconsistent for me to take money from the Government, and yet not to approve of the Government ordering to be done. We are faithfully fulfilling our duty to our country, and we are not changeable—the contract calling for seeds only last week I said to Secretary Morton that should the appropriation for the Governmental distribution of seeds be passed and that we would have no objection, we would be likely to secure the order again.

I purpose to continue the fight, and am not going to be placed in a position where the motive of jealousy could be attributed to my action. You can certainly see that it would have been injurious to me to attack this system last season, when our friends Landreth & Sons had the order. Sincerely yours,

W. ATLER BURPEE.

Editor Florists' Exchange.

I have had time for you in few hours

I have not had time to do more than

glance hastily over the magnificent attack upon the Governmental seed business. "The Government Free Seed Distribution." With the limited time at my disposal, I am unable to refer to the details of the work you are doing, as well as for you have already done, to stop this iniquitous and unchristian scheme. I am sure that the sender and the great mass of our people, who while combats of the fraud yet are free to circulate and to be associated at their expense, and in their name.

The lethargy of the people at large may be secured to the Government, but the personal interest and a consequent lack of intimate knowledge; but the same can hardly be said of the Secretary of Agriculture, Secretary Morton for them to take the matter in hand is timely. It only needs a full and free circulation of the true facts, and the facts in their true light, I believe, to puncture this glaring fraud so thoroughly that it will be forever laid low. In justice to ourselves, in common with other representative seed houses, it may be said that the Governmental seed business takes a menace to the seed business of the country this "Government Free Seed Distribution" has become. With one notable exception, we seedmen have been too apathetic on this question, the one exception being the late James Wick's, who not now recall—we the late James Wick, Secretary, to whose lasting honor it should be referred to the fact that he was in the center ago in his annual catalog, he not only pointed out the wrong that was being done, but he also pointed out the "Government Free Seed Distribution," but went farther and pointed out the tendency this practice, of free distribution, and the wrong of debauching the moral sense of a large portion of the rural community, by leading them into thinking of nothing, making of them as it were national mendicants. If we had all of us taken the same course, the Governmental seed business, which we now complain would not have reached the proportions it has attained to-day, and the Government, have been the more easily strangled.

It cannot be too often or too strongly urged, that the Governmental seed business, "Seed Distribution" as carried on for the last twenty-five years at least is a clear case of fraud, and that the Government stated it, and that the original purpose is so distorted that its author would in all probability be glad to have his voice against it, were he alive to-day.

The gallant fight which the present Secretary is waging, and which has been in term made against this unjust practice is a matter of recent history; and yet, hold for the fact that the Government has been seen how even he had finally to succumb. In our own experience, every year of the past few years, the Government with whom we have come in contact from time to time have deplored the fact that owing to Congressional pressure, they were unable to carry out either the spirit or the letter of the law, i. e., to send away "free" and "improved" seeds, bulbs, plants, etc. Such being always secure as naturally high priced, and as it were, "free" and "improved" seeds, the average Congressman looks for in seeds, to advance his political fortunes, the heads of seed catalogues, and the heads of the Government, have been commissioners or Secretaries, in order to secure necessary appropriations, and to secure the necessary appropriations in various, most of which were already veterans when we who are now seniors in the Government were in the Government, in short clothes. It would only be a logical conclusion for our paternal lawmakers to see that the Government has been given the necessary fertilizers and tools to completely round out their gift. Happily for the seed business, the Governmental legislators have not as yet entered into connection with them, but why they should for the Government, and why they should for the great Government of ours to distribute the articles named, or in fact any other thing, I do not know. It is now (almost exclusively) nothing but the common kinds of flower and vegetable seeds.

From the time that this free seed business became a part of the law of the land, up to the time that the Governmental appropriation of \$5,000 a year, or to strain a point, \$10,000 a year, would have been all that the Government had at times been permitted to distribute, it is our judgment as to purchase and distribution of seeds, that the Government not only have kept within the letter and the spirit of the law but would also, I believe, have been able to do so in an agricultural and horticultural communities.

PETER HENDERSON & CO.,  
317 Broadway, New York City.

#### Editor Florists' Exchange.

We find the statement in disapproval of the Governmental seed distribution that in our opinion it will in time ruin the seed business of the country.

The large surplus of stocks from the past two years and the anxiety of seedmen to dispose of them has enabled the Government to get a large quantity of them they were wont to do when the seeds were purchased and put up by Government. It is our opinion that if you should add the privilege of selection of seeds by the Government, what firm can stand such competition?

One firm claims their loss by free distribution last year was \$50,000, and the loss of the United States Government was quite as much, making \$100,000 loss through one firm, and all the seedmen in the United States felt this outrage in like proportion.

It was most aptly expressed by Mr. Frank A. Munsey in "Munsey's Magazine," in his issue of the 15th inst.

"It is rather a cold proposition to have a competitor who is willing to work for nothing, and to have a competitor who is a business man can content himself with the thought that this sort of a game cannot be played with the Government of the United States government are at his command it is rather too slow a process to wait until the Government has written and distributed seeds on the part of the Government, and hopes to see them win. It is our opinion that if you should add advertising in general mediums has fallen off by reason of the government's having gone into the seed business."

In checking up our advertising the past week, we found immediately under our advertisement in a country paper a free notice of the Congress, and that all who wanted seeds free to send their names addressed to him.

It is coming to this throughout the United States? If so, then, the publishers will lose the seedmen's advertising. The Government will be the loser, which they might have sold. The growers or farmers will lose the living prices paid for seeds, and the Government will be the loser. The seedmen will invest their capital in a business in which the Government will be the loser. The Government will be the loser of pure seeds of the highest types, as all stimulus and rivalry between seedmen to produce the best has been taken away and the business will degenerate.

Who will be the gainer? Something must be done by seedmen for self-preservation at all cost. Not a man in the business would complain if the government would confine its work to the testing of all varieties of seeds, and issuing bulletins of educational value.

The past has proven that seedmen and nurserymen who make a business of selling their lines of trade always secure the new and better varieties, and their facilities for doing so are not to be compared to those of the government. There has never been a new variety introduced by the government.

The seeds sent out by the government are as staple to the seedmen as sugar to a confectioner. The seeds are sent out long and short and must be allowed.

A very large majority of the present Representatives in Congress were elected out of the seed business, and the industrial one of the foundation stones of which is agriculture, and these protecting Representatives have not yet have nearly annihilated this industry.

We thank you for the good work you are doing, and we are glad to see your paper in the United States Florists' Exchange.

JAMES WICKS' SON.

Other letters on this subject will appear next week.

President Cleveland having declined to sign the Agricultural Bill which contained the free seed provision, gives the seed trade time and opportunity to make a vigorous campaign of education, leading to its abolition forever. The New Congress will be called in the next few days, and the reader of the Exchange should prosecute vigorously and at once his Congressional duties.

Tariff on Seeds.—Recently in this city, committees from all the commercial organizations of California met in conference at the Hotel de Ville, and were before the Committee on Report and recommended a scale of duties on seeds which we are pleased to say was accepted, and

made a part of the report of proceedings, a copy of which we take pleasure in mailing to you to-day under separate cover. I am sorry to say, however, we were the only firm to vote against the tariff on seeds, locally, in the matter, notwithstanding California's pre-eminence in seed-growing. If only the Government of the United States would be more wakeful and watchful, commercially, the cry of our farmers and surplus growers would be heard in the halls of the past. Let us all stand solid on this line of effort for just seeds.

J. H. JINNET SEED & PLANT CO.,  
JAMES SPROULE.

Undertaken is the recommendation referred to in the foregoing communication: "The seeds of various kinds, except the following, which we approve, except in the case of beans and peas—"

"5 cents per pound on all turnips, rape, spinach, parsley, beet, mangold,  
"10 cents per pound on carrot, kale and radish.  
"15 cents per pound on celery, lettuce and endive.

"20 cents per pound on cabbage, kale, onion, tomato.  
"25 cents per bushel on peas and beans.  
"30 cents per pound on Koll-rabi, brussels.

"All flowers per pound on cauliflower.  
"All flowers per pound on celeriac.  
"All seeds not enumerated 60 cents ad valorem.

Beans and peas are grown largely as a farm product and form one of the special industries of California. This committee believes the duty of 60 cents ad valorem as given in the Act of 1890 should be allowed.

St. Paul.—Mr. Parmelee, of the Allan Seed Company, and Mr. Desnoyers, representing Joseph Breck's Sons, were recent callers. The seeds have advanced rapidly in price, owing to the heavy Southern demand of late, and will go as high as \$2.50 to \$3 per bushel for large lots, according to the opinion of some.

There is a good strong demand for seed of winter wheat, oats, and, in fact, all kinds of field seeds.

Catalogue sales are reported nearly up to the mark. The California Seed and Plantation distribution by Ucie Sam's 100,000-000 packets of seeds, it is a wonder that the seeds have not all been sold. The same practice, if continued for a few years, will ruin the seed trade of America, and the result of selling production from foreign labor will be all supplied to the detriment from our own law makers.

VERITAS.

#### European Notes.

A slight change for the better in European weather during the past week has caused an influx of orders of a most satisfactory description, and if the present improvement continues the returns for the month of February will be exceptionally high.

Some one has now arrived for sowing the stock seeds of our annual crops, such as radish, cress, spinach and sweet peas. In order to bring the seed to the market below the average. The low to two cents a dozen; First, the unremunerative prices of the seeds, and secondly, the fact that largely increased by the uncertainty attending the present tariff legislation on paper.

Unless a definite decision on this latter subject is speedily reached it is probable that the seeds will be sold at a low price, and others will have to content with very scanty gleanings from the odd corners of the market.

The latest reports from your side confirm every sweet pea confirm the prediction. That the seeds will be sold at a low price, and others will have to content with very scanty gleanings from the odd corners of the market. The seeds of the country is good, somebody (usually the grower) got to be content. But the commendable caution and prudence displayed by the whole body of European growers is not to be commended. As it is, growers on this side are fairly well satisfied.

But the report from the South of Europe is deluging the northern markets to a greater extent than ever, and it is certain that the market will be deluged next season. Many of the largest consumers of this article have definitely given up the idea of buying from the South. The plentiful supply of rains should prevent any scarcity of first size bulbs for 1897. But the report from the South of Europe have seen them, but the florists are not eager to buy. EUROPEAN SEEDS.

NATHAN SMITH & SON, ADRIAN, MICHIGAN. WHEN WRITING MENTION THE FLORIST'S EXCHANGE.

# NEW ROSE SOUV. DU PRESIDENT CARNOT

The best all round Rose introduced in the past five years, both for winter forcing and open air culture. If you want the best plants for next winter's forcing, **ORDER NOW.** Plants will be sent out March 15th, and are now in splendid condition. All are ready for either 3 inch or 4 inch pots.

**EVEN** in these dull times there has been no better selling Rose as a cut flower than **President Carnot.**

**THE** price is so low that every one can plant it largely.

**UNLIKE** other New Roses it has been tested and successfully grown in all sections of the country.

**NO** other Rose has received so many Medals and Certificates of Merit.

**THE** strongest imaginable grower. Blooms can be cut with three foot stems if desired.

**A** PERFECTLY hardy garden Rose.

**EVERY** wide awake Florist should plant it.

**NOW** is the time to order.

President Carnot has no weak points and by voluntarily restricting the production this Spring, and sending out only guaranteed plants, the undersigned growers are determined that it shall not be injured by over propagation. Plants are now ready to deliver in first-class condition.

Strong Plants from 2 1-2 inch pots, \$3.00 per doz.; \$15.00 per 100; \$125.00 per 1000. 50 SOLD AT 100 RATE. 500 SOLD AT 1000 RATE.

## NEW INVENTIONS.

In this column we shall be pleased to illustrate and describe any useful new invention, the drawing or photograph of which, accompanied by a full description, may be furnished us by our readers.

### Carnation Supports

I have charge of half a dozen carnation houses, containing about 20,000 plants, nearly all of which are supported with chicken wire or wire netting—a system I don't admire much and would be glad to dispense with.

In exploring the field of carnation supports I find in nearly all cases many weak points, even in the best methods, and it seems there ought to be some better system when one takes into consideration the quantity of carnations grown at the present time.

I find several systems that are no doubt better than the chicken wire method, and the one adopted by C. W. Ward of Cottage Gardens, L. I., which he calls the "Dorner system" and which he has described and illustrated in your paper, is one of the best at the present time, although it has some objectionable features, the principal one being that it almost totally obstructs the rays of the sun from striking the soil in the benches, except merely on the front edge.

The wire lathing is so placed on the benches that the carnations grow completely over it, and as the mesh of the lathing is also very small, it shuts off all means for light and air to pass through the plants freely, and prevents the sun's rays ever striking the soil. And most of us will agree as to the benefit derived from sunlight and a free circulation of air around the plants, especially in winter.

Another objection to this method, and one that is also found to the chicken wire is that there is nothing to hold the plants up between the rows of lathing or setting, and if red spider makes its appearance and strong syringing is required the plants are kept down, and on top of the lathing and as the currents of air are inferior the plants don't dry out quickly, and the result is a favorable medium for fungoid diseases and insect pests, such as rust, bacteria, red spider, etc., necessitating the use of a Warrenton Dorer to prevent calamity.

The wires running lengthwise of the bench along the front, to keep the flowers from hanging over the walk, are also an objection, as they form a barricade for worms when clearing the rows, picking off dead leaves, top dressing or other work.

The overhead system of wires is the most valuable feature of this system, but that only supports the flowers, and not the base of the plant, which is the point where it should be thoroughly supported.

To secure the most light and heat circulation of air around the plant, the ring supports have the advantage of any others, but their unwillingness to stay just where you want them is their weakest point. They require more or less tying with cord or string also, and there is a good deal of work connected with them in keeping the flowering shoots inside the rings and holding them in position. When I first saw the Horst support it struck me as being a good thing, but it has the same fault as the ring supports in being too easily disarranged or pushed out of place.

Under the impression that the above methods could be improved on, I invented a little of my time in trying to improve on them. The illustrations show the results of my work. The end frames (a) of the main support are made of No. 3 wire; the end frames (b) of the extension are made of No. 10 wire; the horizontal wires (c) are No. 10 wire, but can be made of No. 8 when a long support is required, such as for 5 or 6 feet wide benches. All the wire is galvanized and the different parts are all detachable.

Figure 1 shows the support with the extension (a) attached and the former fully constructed. Figure 2 illustrates how the support should be used and how it appears in the bench sustaining the rows of plants across the bench; and figure 3 illustrates how it supports the plants in rows lengthwise of the bench, also the advantage of the cross-hooks.

Figures 2 and 3 are from photographs of some seedling carnations, supported with this stake, and serve as a good description of how it holds up the plants both lengthwise and across the bench, keeping them in an erect and natural position and giving them all the freedom for growing they require, as well as providing as much

FIG. 2. Illustrates how the support should be used, and how it appears in the bench sustaining the rows of plant across the bench.

light and air on the soil and among the plants as can be obtained, thus allowing the plants to dry out quickly after syringing and proving the most natural and only preventive against rust or bacteria. It also keeps the plants in the best position for fighting red spider, no matter how strong you wish to syringe.

As the cross hooks (d) are not attached to the horizontal wires they can be placed at any desired point, and as they spring down to the wires they have a firm grip, and will stay where you put them. They also hold the horizontal wires in position, making the support much stronger and more difficult to disarrange, and allowing the use of light wire for making it up. The principal feature of my invention,

however, is that it is not easily disarranged when once in the soil, and if the workman leans against it when cutting flowers or cleaning plants, etc., it springs back to its original position as soon as he takes his weight from it.

If the horizontal wires are put through the coiled sockets about an inch, there is no possibility of them falling out, as the coiled sockets lock the wires in position, each one assisting the other in holding the support downward and in position. When you want to take the support down just pull up the end frames and the whole thing will come apart with the greatest of ease.

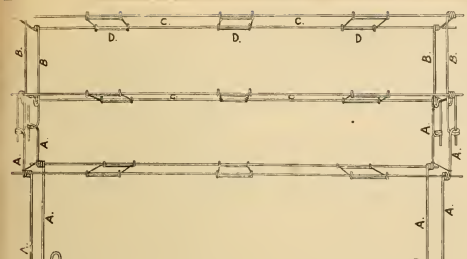

The U shaped feet prevent the support leaning or falling sideways; the exten-

sion part makes it adaptable for all carnations. This can be adjusted or detached at will without interfering at all with the main support, and as all the parts are detachable, each part, or like parts, can be conveniently separated and stowed away in a very compact and small space ready for another season.

The support has a very neat and systematic appearance in the bench, and although it may appear, at first sight, expensive, in reality it is not, as one support will carry as many plants as there are across the bench. It doesn't cost as much as the best ring methods, and it is good for years. ROBERT MILLER, Assistant Foreman for C. Strauss & Co.

FIG. 3. Illustrates how it supports the plants in rows lengthwise of the bench, also the advantage of the cross-hooks.

Carnation Supports.

Fig. 1.—Shows the support with the extension attached and the former fully constructed.

**CARNATIONS**

*Red Spider.*

As Spring approaches spider is very apt to become troublesome. Especially is this the case where the temperature has been kept up rather high, and where the ventilation has not received proper attention. There are a great many who still labor under the mistaken impression that by allowing the pipes to get cold, and thus utilize the sun's rays, whether the sun be obscured by light clouds or not, and keeping the ventilators closed, they are saving fuel. They may, indeed, be saving a little fuel, but it is at the expense of the health of their plants. For what does it profit a man to eave a few hundred pounds of coal or its equivalent, and to go on doing undermine the health of his plants by withholding from them the greatest of all life-giving principles—fresh air? In all cases where there is a casual outbreak of spider in Spring it can be easily set down that this has been withheld to a large extent. It is a mistake idea to think that spider is to be practiced than in bright weather, for then something near what is supposed to be the correct temperature is likely to be maintained without resorting to ventilation. A temperature of 65 degrees without ventilation on a cloudy day will cause far more mischief than 80 on a bright day with plenty of ventilation.

Spider revives in close atmosphere; it may not make much visible headway during the winter months, but at this time, if proper precautions are not taken, it will be depositing its larvae, lay the foundation for a general outbreak as soon as warm weather comes on. It is a mistake idea that spider springs into existence on the approach of warm, bright weather. It is not. The most prolific breeding places are such positions as are warm and farthest from the air and light. It is always best to look forward to the approach of Spring on a time when we can most successfully combat it.

We are not troubled by any great extent of spider, excepting on one or two varieties. This is because of the careful attention to the ventilators, both day and night. A few kinds, however, seem very hard to keep clean. This is especially true of Daybreak. There is undoubtedly something in the sap of this and other varieties available to the spider. It is especially true where spider has a good foothold, something more than good ventilation is needed. This is to spray extra carefully at any season of the year, hard enough to dislodge spider, productive of more harm than good. The fact that this treatment is beneficial to the rose does not imply that it is also good for the carnation. The water interferes in the nature of the two will account for this fact very readily.

During the winter we have been spraying with salt water as a remedy for spider, and find it most effective in eradicating it. This is the treatment I have recommended for spider at the meeting of the American Carnation Society in Cincinnati, Mr. Ward has received the use of this solution. He uses about two 2-inch pots full of salt to three gallons of water, and applies it with a fine nozzle, using about fifty pounds pressure. Mr. Ward had also used it with good results, but claimed that

It induced spot. He also used a much stronger solution than Mr. Nicholson. Our solution is fully twice as strong as that applied by Mr. Nicholson, and in some cases it may have been even stronger than that. It is applied with a Meyer's hand spray pump. This can easily be attached to a bucket or small tub. It throws a very fine spray, just what we want. The spray should not be applied with force. The idea is to thoroughly wet the foliage, particularly down in the body of the plant and under the leaves. One such spraying of salt water will accomplish more than a dozen with fresh water. We have never had the least trouble from spot arising from this practice. If spot makes its appearance ventilation has not been attended to properly. A close, moist, humid atmosphere and spot go hand in hand.

I have also, as Mr. Ward stated, noticed a better color in the foliage and a stiffer stem as a result of spraying with salt water. This is not due directly to spraying the foliage, but rather to that portion of salt which finds its way into the soil. We have never had any trouble from plants affected with spider as planted in the sand, the leaves most affected being the lower ones. The use of the spray in a good solution of salt water. We have tried dipping that the foliage and a portion of the stem, and dipping the tip of the stems, and placing the cuttings, stems up, in flats to drain off, also dipping the cuttings entire, and while no serious injury resulted from this latter method, I noticed a difference in favor of those treated by the former method, they rooting some days sooner than the others, and looking a little fresher. I therefore give the first method the preference. Before placing the cuttings in the sand it should be well watered, so that the foliage may be allowed to dry for about twenty-four hours, that the good effects of the salt may not be lost by washing it off before it has had time to accomplish its work. H. WEBER.

**A Carnation Challenge.**

The following correspondence is self-explanatory and will be read with interest. The outcome of the contest will always be eagerly watched for. It is seldom a lady and gentleman meet in open combat. The carnation of the contest will always be shed, and among the gallants the lady will doubtless be the favorite.

W. A. SNEYD, Esq., Jan. 29, 1897.

Dear Sir:—Apropos of your claim in regard to carnation Flora Hill I should like to enter into a friendly contest with you as to who has the largest white carnation, and would match Jack Frost against Flora at such time and place as you may choose on not less than one week's notice.

I should like weight, with a specified length of stem, as well as diameter of flower, to count.

My own claim has been made public, I had thought of sending out a public challenge, but concluded it would be more friendly to write you first, and if I do wish the matter to have any unpleasant features for you. Presuming that you will make no objection to my making public and inviting all other growers. Yours cordially, EDW. SWAYNE.

RICHMOND, Ind., March 1, 1897.  
Mr. Edw. Swayne, Wauwat, Pa.:  
My Dear Mr. Swayne:—Mr. Drees has just forwarded to you my friendly challenge to a contest between your new white carnation Jack Frost and our Flora Hill. Your terms as to time, place, manner of judging, together with the very estimable gentleman that you suggest as umpire, all meet our hearty approval. The suggestion of weighing the carnations is decidedly novel, but I have long thought that shabbies, eggs, etc., should be weighed, and why carnations? I would suggest that the interest of the contest might be increased by having fifty blooms of the number exhibited. Any time with one week's notice will suit us. It has been said that beauty cannot be weighed by scales, nor measured by the yard stick, but we are willing to see it tried in this case. Our only further suggestion is that the loser set up a good dinner for the umpire and two contestants. With kindest regards, yours sincerely,  
B. G. HILL & CO.

For the Busy Man.

E. Herenden, of the Herenden Manufacturing Co., is dead.

Read the article on "Seedlings and Certificates" and let us have your views.

The fifty dollar cup, offered for best seedling carnation, at the Boston Carnation Show last week, was won by Dorner's C. Dana.

The American Institute will have a Carnation show at New York on Thursday, May 23, 3 P. M. Judging will be done according to American Carnation Society's scale of points.

Our Boston correspondents have been very busy in the advertising business, and have had a factory increase in advertising patronage.

Luther H. Tucker, editor and senior member of Luther Tucker & Son, publishers of the "Country Gentleman," died Feb. 23 of Bright's disease.

Correction.

The name of John H. Dunlop's new white carnation is "Oleatio," and not Dominion as given in our last issue.

Government Free Seeds.

The Free Seed Distribution humber has had more attention bestowed upon it by the press of the country during the past two weeks than it has ever before. All papers unanimously concur in its being a direct benefit to the farmer, and a wide rural which opens out the way to the further and more costly taxing of the land by the people for the purpose of a very few—of the people. No honest citizen, understanding the subject, would give the Free Seed Distribution a moment's thought to the great public it is a very small affair. But the question is not one of size, it is one of right, and it is right against the wrong; of the doing away of a law which is so absolutely misapplied, and of the doing away of a law which is manipulated to carry favor, as to call aloud for its swift repeal.

A World Congress appropriate \$150,000 for a bit or miss distribution of any other mercantile commodity to Tom, Dick and Harry would-to the citizens able to pay nine-tenths of them for that which they receive? And further, use the United States mail to frank the goods sent to the recipients. Emphatically, No! Then why should the seedmen of the country, who would rather sell than give, be asked to do this? Is this justice? Is this right?

We are glad to notice the press taking up the subject of the Free Seed Distribution, and we are glad to notice the press taking up the subject of the Free Seed Distribution, and we are glad to notice the press taking up the subject of the Free Seed Distribution.

Expositions.

The Tennessee Centennial and International Exposition opens May 1, 1897, and a visit to the Exposition is one of the things which Commissioners call attention to the fact that the Western States thus far have secured nearly all the space which they desire to have for the Exposition, and we are glad to notice the press taking up the subject of the Free Seed Distribution.

The Exposition grounds comprise a park of some two hundred acres, lying two miles west of the State Capitol and approached by three lines of electric cars and a steam railway. Over \$100,000 have been expended in the past few years, and from its elevated plane a fine view of Nashville and the surrounding country is obtained. The site has been regarded at a large expense and prepared for the edification of the Exposition, an elaborate system of drainage has been laid off and macadamized, and the finishing construction will be of asphalt.

The Trans-Mississippi and International Exposition will be held at Omaha, Neb., from June 1 to November 1, 1898. It is included horticulture, viticulture, pomology, beet root industry, etc. Awards will be made for the best specimens of each of an international jury, and in addition prizes open to the world, consisting of valuable medals and gold medals for special exhibits are offered.

Latest advices from Hamburg state that some 40,000 tulips will be ready for the market in November. Of these, 20,000 roses are entered already, and some fine novelties are promised from the South Sea Islands. It is said that W. A. Manda has a feature; they are becoming more popular year by year. It is said that W. A. Manda has a feature; they are becoming more popular year by year. It is said that W. A. Manda has a feature; they are becoming more popular year by year.

exhibited here with profit commercially."

The committee has now agreed to pay for the culture of carnations, and is present to the exposition, and which need growing in order to fit them for their exhibition. "It may seem the roses will be a more fortunate choice of words, and which can growers to send a few hundred of different kinds?"

Seedlings and Certificates.

At the recent meeting of the American Carnation Society at Cincinnati, possibly was the point of most vital interest in the discussion of the subject of certifying seedling varieties. Mr. Adam Gardiner fell a remark which was an unfortunate choice of words, and which raised up in the minds of some of those present dangerous possibilities, unless the matter was brought out. And it will, indeed, for us now to ask: For what purpose is a Judicial Committee on Seedlings? Is it to be a committee of opinion, or is it merely to express opinion as to the distinctness of whatever a raiser may submit to us to say, and to have a committee of experts to come with an ideal of its own and adjudge everything before them? Is it to be a committee of opinion, or is it merely to express opinion as to the distinctness of whatever a raiser may submit to us to say, and to have a committee of experts to come with an ideal of its own and adjudge everything before them?

The adjudication of a novelty, upon a seedling, is a matter which is not only a matter of fact, but it is also a matter of opinion. A delicate flower is not laid out by mechanical means, its cultivation is a matter of art, to be written description so accurately as to enable any man to give a faithful reproduction from a single cutting, and the requisite 85 points before the committee. Truly, as was pointed out by Mr. Manda, the certificate is a matter of art, and it is also a matter of opinion.

We can not deny the existence of qualities in a particular seedling which may render it of immense practical value. It is a matter of fact, and it is also a matter of opinion.

Some of the seedling when before the committee scores 83 points, it is damned commercially, the whole eye knows it is of good commercial value, and does still sell his crop of blooms, but there is no sale at "novelty prices" for the crop. Again, it can be asked, how many of the varieties certificated during the past few years have been found to be commerce? Very few, indeed.

Such a sequence of circumstances completely discredits the system of certifying seedlings. It is a matter of fact, and it is also a matter of opinion.

The purpose of obtaining a certificate is to secure a right to the name of the seedling raiser. Nay, more, that is the pivot on which rests the fabric of the entire system. It is a matter of fact, and it is also a matter of opinion.

The purpose of obtaining a certificate is to secure a right to the name of the seedling raiser. Nay, more, that is the pivot on which rests the fabric of the entire system. It is a matter of fact, and it is also a matter of opinion.

New York.

Wholesale Market. The Patriarchs' ball in this city and the Inaugural ball at Washington have succeeded in averting a total collapse of figures in this week. The events, to a large degree, enabled dealers to maintain the prices of last week during the first half of the week. The carnation market began to slacken on Wednesday, the leading stores began to seek a reduction on the carnation market. It was a day of appearances on Thursday and Friday, they were padding their point.

Carnations are holding up to last week's prices fairly well, but to-day (Saturday) may bring a further decline. Violets are very plentiful; apparently, the average price will be equal to last week.

Bulbous stock, except Harriell Isles and Valley, has shortened up considerably. The first named at \$2.00 per 100, and the latter at \$3.00 to \$3.50, except a few double bulbs, which are selling at \$2.00 per 100 or stock for several weeks, and are settling, worse—\$2.00 was the only figure for the first named at \$2.00 per 100.

Mignonette was a drug all round; the price was not enough in quality, but there was but little stock.

Smilax fell again to the old figures; the price was not enough in quality, but there was but little stock.

Sweet peas are plentiful, and sell at 25 cents per bunch of 12 sprays. The carnation market with moss roses; what he has sent in so far have disappeared quickly. Julius Hochrs is continuing to sell his carnations at 10 cents per bunch.

Thorley has a nice lot of Shakspeare gladioli in his window of Thursday afternoon.

J. H. Small & Sons decorated the new ballroom at the Waldorf Hotel on Monday night for the Patriarchs' ball. In this decoration they exhibited other standard maid roses, together with several hundred Beauty's last named being disposed of in the afternoon in the dressing rooms and on stairways. Southern smilax and asparagus were freely used, also stars and stripes.

The roses were arranged in festoons and loops, being broader on the great mirrors than on the other grand walls just now. A continuous chain of roses around the entire room, this being made possible by the aid of the above mentioned stars and baskets.

A Carnation Show.

The meeting at the American Institute on Tuesday evening will be of more than usual interest. A large number of the trade have notified their intention of being present. It is a matter of fact, and it is also a matter of opinion.

These will now be held every Tuesday and Friday during the season. William Hill will be in charge of the exhibition of this week; R. M. Gardner & Co. opened on Friday at their rooms, No. 159 Fulton street. The office of the American Institute will be at their rooms, No. 6 Vesey street.

Auction Sales.

The Florists' Club meets on Monday night, when the floral fungus competition for the Plumb cup will take place. It is hoped a large attendance will be present.

Koffman, the Smilax King, shipped per N. Y. 1000 New York. It is the first of a series of regular shipments, which will be made twice a week.

The North Hudson Florists' Club will hold their annual convention at Helfrich's Assembly Rooms, on Monday evening, March 29.

Edmund seedman, has been laid up for the past ten days with an attack of the grip. He is getting over it and expects to be at his desk next week.

A Trip Down South.

In northern Florida, from Jacksonville down to this point, I was not very much impressed with the condition existing this year. In fact, it was so grand, almost as if the frosts of several weeks ago having done considerable harm to plant life. But here, and there, in the south, I was struck with the coast of Florida, conditions are more favorable, and one enjoys outdoor life to its full extent...

The beautiful river flowing by, the large portulaca, the grass, the water, something southern moss, reminding me much of our willows, funeral-like, casting their shadows across the splendid driveway bordering the river, the wheels spinning noiselessly by with their fair occupants, the fragrance of the flowers in the gardens perfuming the air, and last, but not least by any means, the infernal mosquitoes which have been pestering all the winter...

The orange groves in this locality are, as yet, all in recovery from the effects of the severe frost of a few winters ago, but it will require a few more years to get any profit out of them. The loss to Florida is incalculable, and the growers have felt very much discouraged since that time and are all anxious to sell out. I have heard for those who have not seen it to realize the damage. Trees spreading from twenty to thirty feet around and with many stems six to eight or more inches in diameter, were in most cases, frozen to the ground and were cut down. These are now again sprouting and making fair growth. A few growers escaped the frost, and these orange groves are a sight to be laden with the finest of oranges, which sell at sight, at much better prices than we pay for them at home. I have seen the splendid crop for next season from those trees which were not greatly injured are very promising, and I have heard that the Bananas were also cut down by the frost, but are again recovering—they are hard to determine how...

Early vegetables, strawberries and pineapples are doing well, particularly the latter, and the orange crop is somewhat improved over last season, but it is not as heavy as "mice hoists" of the palatial houses would like to have it, very few houses being filled with people.

In St. Augustine I had the pleasure of meeting Mr. Carmody of Evansville, Ind., with his wife, was making an extensive southern trip. Mr. Carmody has rented his grove, and has fitted up for himself to the ventilating apparatus and boiler appliances. He is a great lover of the wheel and is a great sportsman, and he did roads for miles and miles; in fact, this is a paradise for wheelmen. Fishing is also excellent in this locality, and I saw a few hours returning with forty and fifty good-sized fish. E. C. RINEMAN.

VIOLET CAMPS

HEATING BY COIL BOILER.

I have received a great many letters of inquiry as to the description of the "Exchange." The boiler has undoubtedly been tested well this winter. My thermometer outside stood 24 below zero, while the temperature inside, with no more than 100 lbs. of steam, was 95 to 100 degrees. If I should ever get good draft is used, this boiler will heat no water with less fuel than any coal boiler I've seen. The boiler is 12 ft. high, 24 in. diameter or less coal, but I find such the cheap...

Trade continues good and prices depend upon the development of the seller's nerve...

St. Louis.

Trade continues good and prices depend upon the development of the seller's nerve...

Market Notes.

Trade continues good and prices depend upon the development of the seller's nerve...

Some recent and rather odd weather interfered with business, especially on Saturday...

Buffalo.

Some recent and rather odd weather interfered with business, especially on Saturday...

State of Trade.

Some recent and rather odd weather interfered with business, especially on Saturday...

This week "Bicycle Row" (as it is aptly termed) and justly too, there being more than 100 bicycles fixed up...

Carnations are plentiful. Scotch most abundant and the demand continues without interruption...

Flowers are in great abundance. South-coast carnations are in demand...

Hubbush stock is plentiful. Snailix is very scarce and prime stock is selling at 15c. to 20c. a string.

Retain Notes.

The retailer is having the market all to himself. The supply of roses is not sufficient to meet the demand...

Thomas Manfield reports a good season; orders for designs have been quite heavy.

Lockport, N. Y.

Thomas Manfield reports a good season; orders for designs have been quite heavy.

Market Notes.

Business for the past week has been all right. There were hardly enough roses...

The recent flood caused three of our growers much loss of carnations.

On Sunday a large number of florists and friends attended the funeral services of R. J. Murphy.

Trade continues good and prices depend upon the development of the seller's nerve...

**Dreer's Royal Exhibition Pansies**

WE have in surplus beyond our regular requirements about 25,000 fine strong plants of our Royal Exhibition strain of Pansies; these are seedlings that were transplanted into cold frames in November, wintered in that shape, and will make fine strong stock in a short time, and must not be confounded with small seedlings out of seed bed.  
We offer as surplus lasts at:  
\$1.00 per 100, or \$7.50 per 1000.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Baltimore.**

As is usually the case, the last week of the season will bring one with the majority of the stores. Although there was a good demand the supply met it. Violets, particularly, have kept up this year. Our neighboring cities, especially Washington, taking a great many. Carnations have been of good quality and have sold very readily; often when nothing else sells the carnation is in demand. Roses have also been good. Halliday Brothers have grown some very fine La Reine tulips; these have sold quickly with this firm this season.

**Notes.**  
 J. Austin Shaw of Siechroft & Son was in town this week.  
 The disease of Harnell has shown itself again this season; it is prevalent in many places.  
 John Gook has refused a good round sum for his new rose, Mrs. Robert Garrett. This rose is a most profitable kind of a pleasing pink shade. In all probability Mr. Gook will introduce this variety very shortly. EDWIN A. SEIDSWITZ.

**OBITUARY.**

Robert J. Murphy.

Robert J. Murphy died Feb. 24 at 11 A. M. of paralysis. He was 61 years of age. Early on Monday morning "Bob," as he was always called, repaired to his greenhouse and commenced cutting his favorite carnation Daybreak. At about 8 A. M. his son found him stricken down speechless and helpless, but still gripping his favorite flower. He was quickly carried to his residence, and all that mortal hands could do was done, but to no avail.

Mr. Murphy was loved by all who knew him; he was a kind and devoted husband and father. A widow and four children—two boys and two girls—survive him and mourn his loss.  
 Robert J. Murphy was well known among the craft; he was a charter member of the S. A. F., and never missed a meeting of that distinguished body. He was a native of Ohio, born on the farm upon which he died. When a boy he learned the moulding trade, and worked at it for about five years. He had been in the florists' business for over eighteen years, and had made a success of it.

Again within a short time the Cincinnati Florists' Society has lost a valued member, and we have all lost a good friend.

E. G. GILLETT.

Edward W. Herendeen.  
 The trade will be shocked to hear of the sudden death of Edward W. Herendeen, president of the Herendeen Manufacturing Company, Geneva, N. Y., which occurred at Geneva, Feb. 23. Mr. Herendeen was born July 23, 1851, at Farningford, Ontario County, N. Y. He was graduated from Haverford College in 1871, and began his career in the nursery business at Macedon, Wayne County, as a member of the firm of Thomas & Herendeen. In 1889, having closed out his business in Macedon, he came to Geneva, where the firm of Herendeen & Jones in the nursery business, and later the firm of Herendeen Van Dusen were organized. Mr. Herendeen went out of the nursery business in 1874, when he joined the Thomas Harrow Company, who were succeeded by the Herendeen Manufacturing Company, established in 1888 and incorporated in 1891. He was one of the organizers of the new concern, the implement business was discontinued, and the manufacture of steam heating apparatus taken up. Mr. Herendeen was a prominent man in Geneva, being a member of the Board of Trade, and was interested as trustee and stockholder in several important institutions and business enterprises. He leaves a wife and four sons—Edward G., a lawyer, of Elmira; William L. and Francis A., of Geneva; and Frederick G., of Boston, the latter three being connected with the Herendeen Manufacturing Company.

Section of 22 foot Short Span to the South House.

### Use of Old Glass in Modern Greenhouses.

As a general thing the only objection found against the old style of commercial greenhouse is the smallness of the glass and the useless size of the wood members; this combination causing plants to "draw" and otherwise act to the disadvantage of the grower. Much of just complaint from this source reaches us. Why not remodel something on the lines of this twenty-two foot, short-span-to-the-south house? The width can be adapted to suit, the degree of pitch to the roof can be made more or less according to requirements. The cut represents a twenty-two foot house of even height to the eaves, with the eaves web cut for about 3 inches extended overhang. Every alternate 3 foot by 6 foot ridge sash is hinged for ventilation, using two vent arms for each sash; the sash are secured to the iron pulvins by screws or bolts; the joints of sash are made tight by small batens laid in stiff white lead; the vent sash batens are made fast on the vent pulvin; the eave should be placed with 18-inch glass, the sash bars being set without reference to the rear sash or sash bars; the iron eave bars to be placed immediately under the roof bars, the side and roof glass joining at the aprisprino. With this extended eave, and by lapping the roof glass only 1-16 of an inch over the side glass, you will have a warm overhang that cannot form ice and snow on the roof; or icicles on the eave, and is absolutely non-freezing. The bottom rail of the rear eaves, a small cypress header can be placed to receive the side glass at above mentioned point. This class of house has few, if any, disadvantages, and many points of merit; among the latter is abundant sunlight, adaptability to solid beds or benches, ample head room, economy, as you use much old material; and such a house can be built over the old site, and warmed by the old heating system. The cut represents a frame rolled iron of moderate expense, Locust posts, cypress rafters and iron pulvins, can be substituted, but with little saving in cost and with considerable loss in space, light and durability. J. B. HOWATT, Jersey City.

It costs 5 cents for each 600 ft. of floor space.

Does not injure the most sensitive plants. Endorsed by prominent florists. Used for fumigation or spraying indoors or out. 200 pounds of tobacco in one tin of RICE'S. Sold by prominent Greenhouses. See also D.P. Co., Chicago.

**Modern Greenhouse Heating.**

One of our boilers, 10,880 feet of two inch pipe, and sixty tons of coal will heat 22,400 feet of glass (four 30x300 feet double gable houses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrigt" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. No. 11.

NEW YORK, MARCH 13, 1897.

One Dollar Per Year.

## SEEDS. FLOWER and VEGETABLE.

### 1/2 CENT PER PACKET.

(5000 LOTS.)

Large Packets (2 1/2 inches), lithographed in the brightest colors of the varieties represented—large assortment of the most popular sorts. Seeds are guaranteed Fresh, True and Reliable. The well-known P. & M. True and Good Brand. We sell them at Wholesale Only.

1000 Packets at 1c.....	\$10.00
2500 Packets at 1c.....	18.75
5000 Packets at 1c.....	25.00

These are put up to retail at 5c. and 10c. per packet. Large, handsome colored Hangers are furnished free with all orders. Write for a sample packet each of Flower and Vegetable Seeds, and Low Offer of Lawn Grass Seed in pint and quart boxes for retailing, Spring Bulbs, etc.

## PLANTS FOR EASTER FORCING.

### AZALEA INDICA.

A fine stock, comprising the best varieties, well budded, shapely plants, 10 to 12 inch heads, \$5.00 per dozen; \$45.00 per 100.

### SPIRÆA ANTHONY WATERER.

We offer a fine lot of this beautiful new Spiræa, which is excellent for Easter forcing. The plant is of a dwarf, compact habit, producing a profusion of bright, crimson flowers, and will command a ready sale owing to its showy trusses.

3 in. pots, 1 year old, 1.50 per doz.;	\$10.00 per 100.
4 in. pots, 2 years old, 2.50 per doz.;	15.00 per 100.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# LILY OF THE VALLEY

.. FOR EASTER ..

We offer at a bargain stock remaining unsold at this date in order to close it out. We have only 12 cases left unsold, which we offer as long as unsold at

**\$20.00 per case of 2500 pips, net cash.**

This is the same grade of Valley that brought \$25.00 per case early in the season, but we now offer it at 20c in order to close out the stock. Price is cheap, quality the very best, highest quality selected German pips. Speak quickly if you want it.

## TUBEROSE PEARL.

In order to close out our surplus of Tuberose Bulbs, we make the following exceptionally low offer, viz:

Extra Quality Bulbs, \$1.00 per 100;	\$7.00 per 1000.
“ “ “ 5.00 lots at	6.00 “
“ “ “ 10,000 “	5.50 “

## TUBEROSE BEGONIAS.

We are headquarters for Tuberose Begonias, and can supply the very finest quality of these bulbs in any quantity. Large buyers should write us for special prices. We can offer these bulbs in large quantity lower than you can import them. We offer them in separate colors, white, pink, scarlet and yellow.

SINGLE, \$3.00 per 100;	\$25.00 per 1000.
DOUBLE, 8.00 “	70.00 “

Write for our descriptive catalogue and complete wholesale list, if you have not already received same.

# F. R. PIERSON CO.,

TARRYTOWN-ON-HUDSON, NEW YORK.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## SEND FOR OUR PRICE LIST OF HIGH GRADE SEEDS AND BULBS

If You Have Not Received One. FLOWER AND VEGETABLE SEEDS IN PACKETS.

### We Do Not "Commission" or Place Seeds Out "On Sale."

But we supply Florists with seeds put up in handsome colored packets for retailing at \$1.25 per 100, or \$10.00 per 1000. These Packets, besides having a lithograph of the flower the common and botanical names on the front, have a description of the flower and outline directions on the back and a blank space for name and address, which will be printed on same if ordered in 1000 lots or more. SEND FOR SAMPLE.

Price of Peas, Beans and Corn in Packets, \$4.00 Per 100.

**DWARF PEARL TUBEROSE BULBS**, 4 to 6 inches in circumference, \$7.50 per 1000.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# THE BURBANK CANNA.

The new giant yellow Orchid-flowered variety with musa-like foliage. Unquestionably the finest of the new Orchid-flowered class and a GRAND yellow.

Realizing the true merit of this grand California seedling, we placed plants of it at once in the hands of members of the CANNA COMMITTEE of the Society of American Florists. They say of it, unpoliced by us, as below:

Seeing

is

Believing

MR. D. ZINGGEBEL, of Needham, Mass., of the same Committee, who tested it with all the best now sown, says: "Yellow Burbank is the best yellow in cultivation now, very large, flowers of a handsome, bright shade of nearly pure yellow."

MR. J. T. TEMPLE, of Danvers, Ia., of this Committee, says: "I consider Burbank one of the best of this year's novelties."

MR. FRED KANST, head gardener of South Park, Chicago, and an expert judge of Cannas at the World's Fair, says: "The flowers were much admired in the park this summer. The foliage is like rubber; it is always green; you can't tear it."

MR. JAMES DEAY, chief of the New York's horticultural display at the World's Fair, says: "Burbank is a new and diversified forerunner of a new class of these beautiful flowers."

MR. BERNEKE writes us Oct. 17, 1896: "One thing about it is surprising, when the canna are cut with long edges, placed in water in a warm sunny window, they bloom for a week. Other Cannas all fade. Even when cut and thrown on the ground, they continue to bloom. The buds are grand for weeks when cut."

Now ready, fine plants from 3 1/2 inch pots, each, 75c. doz., \$8; 25 for \$15; Doz. lots ppd. to London, 37s; doz. lots prepaid to Hamburg, 38 marks.

FREE TRADE REPORT.

Points and information from seedmen, and all interested in this column, solicited. Address Editor Seed Trade, care of Florists' Exchange, P. O. Box 1697, New York.

Philadelphia—More activity in bulk orders around the seedmen has been noticed in business of past years is not seen. Orders are coming in slowly. Among the buyers are going around to find the cheapest prices on the market. It is probably suffering the most just now. Returns are very poor so far, and it really looks as though large firms will have to curtail present system and find some other means to secure patronage.

New Albany, Ind. Co. have made splendid progress with the Government seed order. They have now a force of eighty men and girls working on this time, and will probably finish the order in two weeks.

California Seeds.—This has been a most peculiar season for the growers in regard to the weather. The planting season has looked very poorly, and the present harvest is having to be a total failure this year. During the Fall the weather was very cold and held everything back. Now the rains are "pressing the button and doing the rest."

Ontario never looked more pitiful than now. The crops are all rotting, and in spots the bulbs have rotted completely. This is especially so in low spots on high ground. For the past six weeks hardly any work was done. This condition may be good for the trade in general, as it will reduce the market to some of its surplus, but the growers do not like to put their money on a losing speculation.

Lettuce and spinach have pulled through in an apparently good condition. Both are backward in regard to the season, and some pieces of the former are becoming very weedy.

Safety is doing well. This year it was planted on high ground and on top of the hills, and is doing good, and prospects for a crop are flattering.

Copiers are getting in their work on the new Government material promised to suit. Some growers who were neglectful in getting their crops in early are now in a hard race with the market. The best of the land can be worked, and then it will be too late to be seeded. There are quite a few more seeds yet to be planted, and whether the late sowings will amount to much is hard to tell. Eckford's latest news is that the "Wing" from Europe, but whether they will produce anything will depend on the weather of the next few months. There is a disposition on the part of the growers who make sweet peas a specialty, to again send for Mr. W. A. L. Henshaw's new authority on this favorite flower, to look over the crop. Two years ago, when he was in prime, and since then the progress in the seed business has been so rapid that from that eminent gentleman seems almost necessary. If arrangements can be made to send him to California, and if the plans are to have several large exhibitions at San Francisco and San Jose. The one at San Francisco has been so successful that under the auspices of the State Floral Society, and during the convention of the State Horticultural Society, some 50,000 visitors will be guests of the city. Such a plan, if carried out, will not only give the State the largest exhibition of "golden state," but will also create a demand for the new varieties. —California Signs.

European Notes.

The weather prophets have foretold a repetition of last year's experiences, and preparations are consequently being made to meet the winter which will be the prevalent from March to June. As the land on all the low-lying districts is beginning to be almost all water, the sowing of winter crops, such as sweet peas, radish, spinach, and cress are being in well, and in view of the weather having to be variable, these crops should be ready for harvesting very early.

The corn and bean trade has been done in broad beans, and the anticipated surplus has been reduced to very reasonable dimensions. The pea crop is remarkably large, but there has been the extraordinary demand for the Washington variety. Both these varieties succeeded very well this year, and as both are peas of good quality,

as well as productive, merchants and growers have every reason to be satisfied. The stocks of pole and dwarf beans are very heavy, but a few Spring frosts may do much to bring these down to manageable proportions.

In market seeds the continued upward tendency of rape and mustard, and the complete stagnation of clover seeds are the most noticeable features. As regards the latter nobody cares to break the ice, and as some of the smaller ones, having not yet been laid in anticipation of a rise, are under the necessity of realizing very speedily, it appears as though prices would go lower still before a fair start will be made. With the exception of favae and sainfoin, which sell freely at remunerative rates, the demand for all other seeds is practically nil.

The report that the growers in California have wisely decided to cut down their acreage of sweet peas this year has caused much satisfaction among European growers, although it will not lead to an additional acre being planted on this side. It is hoped that the reduction that will thus be effected in the enormous stocks now in the hands of the American growers may also reduce the competition within which they are engaged, and thus enable the growers on both sides of the Atlantic to reap some benefit from the present depression.

EUROPEAN SEEDS.

"No, I do not intend just yet to commit myself as to what I think of publications concerning 'Tapeworm in Poultry' and other subjects of a kindred nature. It would be manifestly improper for me to attempt to be humorous on this or any other subject connected with the Department of Agriculture, especially before I have received my appointment. Nor do I see how I could with propriety forebode my attitude respecting the distribution of seeds, a question which appears to have been pretty thoroughly hammered in both ways during the present session of Congress. I've got you to do me the honor to ask me all about it,—oh, say some time next July or August."

The correspondent adds: "Although by birth a Scotchman, Mr. Wilson is in appearance a typical American farmer,—not an agriculturist of the sort grossly caricatured in the comic publications, but a fine, upright, gray-haired, sturdy-looking citizen, whose actions and manner of speech yet betoken an almost life-long contact with the soil. He talks in rather a low tone of voice, using occasionally the gestures of the trained parliamentarian, and while he speaks there is something of palpable sincerity in his expression and manner that is convincing."

used three or four years ago for rare seeds, plants and bulbs, but was unsuccess in his effort to produce. He has decided that the law could not be carried out in its full extent, and he has decided to discontinue the distribution of seeds. The facts bear me out in saying that the seedmen and florists have for a long time been in obtaining all new varieties of seeds and plants, and that they have been very successful in obtaining them from any other source, hence they have been leaders in horticulture.

The seed trade felt that they owe your paper a debt of gratitude for the way in which you have reported on the matter, and no doubt they will reward you by liberal patronage with their advertisements.

Chairman the Seed Trade Committee.

(COPY OF LETTER.)

I herewith send you a memorial which explains itself. This memorial we desire that you get signed by every one in my way connected with the seed trade, the highest to the lowest, even all the girls that you employ filling bags, likewise growers and sub-growers. We desire that you take it to Congress, as soon as after it assembles, on the 15th of March, as we can get them together. Here are the names pasted together, and I have attached to some of the petitions will be small, so the headings of some will be cut off and the names pasted together; therefore I think it would be better if you could get the names signed on each side of the paper pretty uniformly, so as to make the names continuous on the memorial as much as can be. Please get this signed as soon as possible, and return it to me as chairman at your earliest convenience.

Will you please write to the newspapers in your section, likewise all that you have any influence with by reason of your placing advertisements, and ask them to write articles against the free distribution of seeds by the Government, which is so injurious to the seed business, as it is impossible for seedmen to compete with the Government, which is giving away such vastly increased quantities every year, and which is directly opposing to the spirit of our Government? The people should be supporters of the Government instead of the Government supporting the people.

T. W. WOOD, Chairman.

Memorial.

To the Fifty-fifth Congress of the United States of America, now holding Special Session in the City of Washington:

We, the undersigned, engaged in the various branches of the business of selling and growing seeds, would hereby respectfully petition your honorable body to discontinue the appropriation for the free distribution of seeds, for the following reasons:

First—The distribution of seeds interferes greatly with our pursuing the chosen line of business, in that it takes trade out of legitimate channels, thus depriving us of a certain amount of business that rightfully belongs to us, and interferes indirectly with our sources of income.

Second—Many of us have devoted our lives to the study of horticulture and agriculture, and are not at all ignorant of the value of other means of getting a livelihood.

Third—We are citizens of the United States, the only country in the world that interferes with the freedom of trade in the sale of all lines of business, thus putting us on a par with the despotic Canadian neighbors and foreign empires.

Fourth—The free distribution of seeds is in direct opposition to the spirit of our Government, which conveys to all clearly that the people should be free to do as they please with their own property.

Fifth—That it is an injustice to us to be compelled to retrench our business methods after years of hard work. No business can be carried on with the greatest trade out of legitimate channels.

Sixth—No other line of business would permit the Government to take away the fruits of our labor, and thus interfere with our business as a trade.

Seventh—If the seed business is to be made unprofitable, the money which has been invested in the large amounts of money now annually expended by the seedmen in the country for maintaining and improving the present standard of quality of our seeds, and the field seeds will be withdrawn from the business, thus rendering it entirely injurious to the horticultural world.

Eighth—The seed business not only renders unprofitable the time and labor expended, but also gives employment to many for short periods, and thus interferes with the country in employing many bright spirits, who are thus engaged in other work is scarce.

Ninth—The majority of us are aware that it is not only the horticultural and agriculture for the Department of Agriculture, but also the seed business, and we cannot see how the country can be benefited by the Government taxing out annually of common varieties of seeds which have been grown a great many years, and we do not know that seedmen have within the last few years sent out any new varieties of seeds, and we are not aware of the spirit of the law. This, we believe, is an error. If our memory serves us right, he adver-

Hon. John Wilson, Secretary of Agriculture.

New Secretary of Agriculture.

In an interview with a representative of the Washington "Star," Secretary of Agriculture Hon. John Wilson is reported to have said:

"It would be mere idleness for me to make any present attempt to predict any changes that may be in contemplation with regard to the policy of the Department of Agriculture. I know very little of the newest of the new Congressmen now holding seats at the south end of the Capitol. Although I believe in the first practical measure in Congress to introduce a bill providing for the creation of the Cabinet office of Secretary of Agriculture, and that time not the vaguest notion that I myself would ever be invited to accept that position, yet I am not without the feeling that I then had at hand in support of the measure has escaped me. I have not practical agriculture, I watched the workings of the Department of Agriculture very closely when I was in Congress, but, as my time has been wasted enormously in scope since that time. I have just completed six years of the Agricultural College of the State of Iowa, and I anticipate four years more of mastering the difficult labor and close study in mastering the details of the Department of Agriculture for it is perhaps needless for me to state that I did not come to Washington for fun.

FREE SEED DISTRIBUTION.

The Seed Trade Committee.

OBJECT.—To promote and mould Public Sentiment against the present Free Distribution of Seeds by the Government.

COMMITTEE: T. W. WOOD, Chairman. J. A. SEVERENS, WALTER BURNETT, W. L. M. FERRY & Co., BURNETT LANE, JEROME B. RICE

OFFICE OF CHAIRMAN, Richmond, Va.

Editor Florists' Exchange: "I enclose you a letter and a memorial which I shall be glad if you will publish. We, as seedmen, feel that the free distribution of seeds is a great injustice to all who handle seeds, and it should be abolished, as it is impossible for us to compete with the Government, which is giving away such vastly increased quantities every year, and which is directly opposing to the spirit of our Government? The people should be supporters of the Government instead of the Government supporting the people. If our memory serves us right, he adver-

Ninth—The seed trade of the United States has done more for, and expended more money in, the interests of horticulture and agriculture than it has for any other industry.

Tenth—If the free distribution of seeds to our horticulturists is not carried out for 10 or 20 years as it has in the past, it will bring disaster to us as a nation.

Eleventh—it is unjust to permit the United States mails to be burdened with hundreds of millions of seeds, which are a waste of Congressmen, causing a large yearly deficit in the post office.

Twelfth—it seems inconsistent to us for our Government to protect us by providing a free distribution of seeds to our horticulturists, and then turn around on the other hand and try to prevent us from receiving a free distribution annually of such enormous quantities of seeds.

## Give all a Chance at the Public Crib.

That the most of us are overjoyed at getting something for nothing goes without saying—but there are some of us who rather than to receive seeds for free, would rather have the permission to call ourselves to the notice of the Congressman who has the honor to represent our district in Washington. We ask him to make an innovation by sending those of us who are in our own right, who do not wish to be utilized for seed purposes something we can apply to our several necessities. We are willing to give up our right to have a hiberto against those not addicted to the seed habit has been most unjust and mandatory unfair. We will gladly give a penny or borrow by brassry only, and are in no way interested in beets, turnips etc. etc. can carry no protest and see for the information and something in the place of seeds.

We have indicated that the seeds do not come given on a gratuitous plan. We have been informed, however, that there is a medium of exchange, said medium being a vote. But what's that? A mere trifle—a near-next-to-nothing; a paltry thing which our statement, it would appear, is of little consequence. It is a thing which, if your vote far above a few seeds, and who feel that they, too, ought to have something to show for their money. It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money. It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money. It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money.

Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money. It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money.

It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money.

Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money. It is given Mr. Timothy Haysed a help toward the marble halls of the Capitol, and these helpers are those who are in the habit of giving their votes far above a few seeds, and who feel that they, too, ought to have something to show for their money.

Four packages (except tobacco) which are sent to the Exchange office the clerk might be put to hunting up novelties to "trade" for votes. This extortion, if it is not checked, could be enlarged, ought to be worked out by some one of executive ability. By so doing we would have the post office as a "free or go without" and left offended. Another thing, it would be easy for a number of our horticulturists to make a racket for one good article—a bicycle, for instance—and then raffle it off. Just think of the opportunity to be had by a man presiding at a raffle in the town hall. It would also give him an opportunity to perfect his talents in diplomacy with a view to getting a foreign mission. The latter plan could be elaborated so as to include pooling issues, such as the establishment of a free library, a free library or any needed village improvement.

The dear paternalism of the Government! Giving seeds right and left with an unguessed but misapprehended generosity has a more serious aspect than it is given upon. Who can tell what thoughts dangerous to our institutions may be engendered by the receipt of seeds by the man whose only real estate consists of what address to his feet as he, Coxy-like, wanders about in the open air? Can you imagine the Government seeds and no land to sow them in a menace to our country. Why, in the case of the horticulturist, the Government do not the Solons give the seeds to the professional agriculturist, pay him for growing them, and in diplomas, which would be practical charity. We are tired sifting for bread and receiving vegetable seeds in a more or less stage of decomposition.

Again, insult is added to injury when the Department of Agriculture, which should be the Little State departments, issue bulletins containing recipes for the extermination of insects, and when these are published they find that they exist, migrated to "fresh fields and pastures new" before the proclamation has had time to reach the country. The "Mixture," "Persian Rug Powder," "Parah Green," "Aunt Destroyer," "Ammonia No. 1" and "Cattoway" have been issued, and whatever was recommended for them, should be sent, and why not a Government seed catalogue? Why not a Government seed catalogue? Why not a Government seed catalogue? Why not a Government seed catalogue?

If the Government for the people feels it incumbent upon itself to keep watch and ward over the horticulturist of the States and these United States, let it do so thoroughly, and not discriminate in favor of one class. It should not be so parsimonious as to want seeds have something we want or call a halt in the absurd practice of doing so. It should be so parsimonious as to want seeds have something we want or call a halt in the absurd practice of doing so. It should be so parsimonious as to want seeds have something we want or call a halt in the absurd practice of doing so.

Following are a few letters written by applicants for free seeds, which serve better than any other form of expression to demonstrate the demoralizing effect upon the seed trade, and the horticulturist, of the free distribution system.

Following are a few letters from the State of Washington, in which the writer gives a list of nearly forty (40) neighbors, and adds: "I would like to forward to you a list of the farmers I mention in the list of names in my letter herewith, and I would be glad to send you a few seeds, according to Government appropriation."

The seeds which you sent me and my neighbors are of great value to me. I am very glad that you have sent them to me. I am very glad that you have sent them to me. I am very glad that you have sent them to me.

Hon. J. H. Walker, Representative to Congress from the State of Washington, in his report on the distribution of seeds, and I addressed these few lines to you. I am very glad that you have sent them to me. I am very glad that you have sent them to me. I am very glad that you have sent them to me.

I have received some of your free Congress seed and have you any flower seeds which you can send me? I would be glad to send you a few seeds, according to Government appropriation.

Please send to me some garden seeds, such as peas, early and late cabbage, celery, carrots, and whatever else you wish to send.

Saw in your catalogue of the Government seed catalogue, which I received some time ago, we have not received any of the free seeds. Could you give our name, so that we might get our share, too?

## PROTESTS.

President Cleveland having decided to sign the Agricultural Bill, which contained the free seed provision, gives the seed trade time and opportunity to conduct an aggressive campaign of education, leading to the abolition forever. The new Congress convenes March 15, and every reader of the Exchange should protest vigorously and at once to his Congressman.

The government free seed distribution the way it is carried on to-day is a colossal mistake. It is a colossal mistake. It is a colossal mistake. It is a colossal mistake.

La Crose, Wis. A. SALLZER SPIES CO.

Dear Sir—That the free distribution of seeds by the Government is a colossal mistake, and an unjust and most unfair injury to the horticulturist, has been shown by Secretary Morton and others, but we think if looked at from the standpoint of the agriculturist it will also be seen to be an evil.

Our forty years' experience as seedmen, and our knowledge of the country, and the horticulturist, with hundreds of thousands of both professional and amateur horticulturists, and the great obstacle in the way of every home including a garden, and every florist, is not the want of seeds, but rather the want of disposition and skill to plant and properly care for the garden.

We are certain that furnishing every man, woman and child with free seeds of the seeds of the Garden of Eden, and in increasing the quantity and quality of the vegetables grown and consumed by our people, is not the way to increase the wealth and better the condition of the end rather than their possession that leads to profit.

A careful study of varieties of cultivated flowers and vegetables propagated by seeds, and the habits of ordinary planters of these varieties, and the fact that as seed of varieties selected and distributed free by the Government or otherwise take the place of ordinary merchandise, and the fact that each individual, the personal interest and care which are always essential to the success of the horticulturist, and the success of the horticulturist, and the success of the horticulturist.

No fair minded man can intelligently study the subject without being convinced that so real horticulture is the only way for our people through a free distribution of seeds by the Department of Agriculture, and the fact that each individual, the personal interest and care which are always essential to the success of the horticulturist, and the success of the horticulturist, and the success of the horticulturist.

We hardly think it worth while to enter any protest against this action by the Government, so long as the representatives at

Washington are so universally in favor of it. You must admit that Secretary Morton made a very strong fight to discontinue the practice, but he was overwhelmingly defeated, and there can be no question of this, especially the way it has been conducted for the past five years. The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country. The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country. The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country.

ROBERT BUIST CO.

We believe there has never been a season in which the free distribution of seeds by the government has done the seed business of the country as much damage as is the one we are now going through. We believe that it has been a potent factor in assisting the demoralized condition of the seed trade, as are any all feeling it this year. The proposed amendment allowing each Representative to distribute just the amount of seeds he may wish to give to us. It should be opposed by seedmen and others interested to the utmost extent of their ability. We can but believe that this proposed amendment, showing, as it will, on its face its injustice to seedmen and others interested to the utmost extent of their ability. We can but believe that this proposed amendment, showing, as it will, on its face its injustice to seedmen and others interested to the utmost extent of their ability.

JOHNSON & STOKES.

We consider the free distribution of seeds by the Government to be a colossal mistake, and an unjust and most unfair injury to the horticulturist, and the horticulturist, and the horticulturist.

The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country. The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country. The horticulturist's department has insisted upon getting seeds at about half the cost of production, and a disgrace to our country.

LAWRENCE, Kan. F. BARTELDSE & CO.

I am very glad, indeed, your paper is taking hold of this "free seed distribution" matter, and you certainly deserve a great deal of credit for it. We can but believe that this proposed amendment, showing, as it will, on its face its injustice to seedmen and others interested to the utmost extent of their ability. We can but believe that this proposed amendment, showing, as it will, on its face its injustice to seedmen and others interested to the utmost extent of their ability.

Rockford, Ill.

We are of the opinion that one of the reasons for the great depression in the seed business of the country, and the horticulturist, and the horticulturist, and the horticulturist.

The practice of free seed distribution by the United States Government has in it so much of the demoralizing influence that it should be resisted by every self-respecting member of Congress. Free distribution of seeds is a colossal mistake, and an unjust and most unfair injury to the horticulturist, and the horticulturist, and the horticulturist.

J. E. FELTHOUSEN, Schenectady, N. Y. WHEN WRITING MENTION THE FLORISTS' EXCHANGE

FLORISTS' EXHIBITS.

A Carnation Meeting.

The special meeting called by the Chicago Florists' Club, for an exhibition of carnations, on March 4, was a pronounced success as regards the number of exhibitors, the staged and attendance. The hall was packed with admirers of the divine flower, and the display showed that carnations still exhibits the excretion of all flowers is the one to call on grovers, retailers, dealers and collectors of the club meeting.

It is generally admitted that, considering the quantity of carnations grown for the market, the fact that they are sold hardly up to the average of other large cities, and if so, as these better grade flowers are plentiful enough to always be available in open market, the quality of standard market kinds will be raised, and trash be swept from the market altogether as undesirable at any price.

Fred. Dornier & Sons Co., of Lafayette, Ind., were the largest exhibitors, their display embracing Mrs. C. H. Dild, Mrs. George M. Bradt, White Cloud, Dazzle, Storm Queen, Lucile John, three vases of the same variety, and other carnations for next year; No. 1 in light pink, No. 23 a yellow, and No. 8 scarlet. Also six vases of the King of the Garden, and other carnations. One of these had the color of the old clove pink, without its fragrance, however, and had the color of the carnation degree.

E. G. Hill & Co., of Richmond, Ind., had grand vases of Jubilee, Flora Hill, Triumph, and Mrs. McBurney. Hugh Graham, of Philadelphia, showed his Grand York and the Daybreak. Hopp & Lemke, of East Grand Rapids, Mich., sent their Morelo.

Ed. A. Peterson, of Cincinnati, staged Emma Woebler, and Evelina a perfect white.

J. John Burton, of Philadelphia, had a large vase of a splendid new white seedling, George Hancock & Son, Grand Haven, Mich., exhibited Ivanhoe.

John R. Ridd, of Fossil, Ohio, had Rose John, Della Fox and Jubilee. The Solitary Rose, Arzgie; Hahn roses, Mrs. J. A. C. Vaughan, and the Hills & Jacobsen, Daybreak; Otto Hansen, Century, which has grown so well in this market; Ernest Stronach, a scarlet seedling from Lizzie McGowan with Tidal Wave.

Geo. Sauter, of Plain, Ill., exhibited Silveo, Scupper, Tidal Wave, Portia and Daybreak.

These flowers exhibited were by Ernst Assmus, N. J., Souvenir du President Carnation rose, hardly in the condition to be shown; J. C. Vaughan, an elegant vase of Burbank canna, and a smaller one of Snow Cross; Hahn, one of the best seedling variety; a vase of the pretty pea-like flower of Crotalaria longistrata, and six grand vases of five kinds of carnations, radicans, shipped in from New Mexico.

Solitary Rose had very fine Mrs. Morgan and J. A. C. Vaughan. The latter had the much talked of Princess of Wales violet, grown in same house as an exhibit of carnations. This violet is a very fine, very fine, quite distinct in shape and build of flower, but rather weak in stem as compared with California and California roses by the Heim Bros. Charles Raupack, of Park Ridge, a new grower with us, had a large vase of white and pink carnations, flowers being of extraordinary size and texture.

Hahn & Jacobsen also sent very fine Brideismat from young plants with 3 foot stems; May's strain of miniature carnations, and the standard new California white Marguerite.

Kuhl, of Pekin, Ill., sent very pretty Belle Siebrecht roses in the bud. After the exhibits had been well looked at and said to be the best carnation show with the exhibit at the Cincinnati meeting, save, of course, in the quantity staged. It is striking over so many carnations, we felt that the old varieties and style of growing must go, and the sooner growers woke up to that fact, the better for themselves. He was thoroughly convinced, while all might not grow the San-Jose? carnations, as we were told, but the 1 1/2 inch flower of the day was ousted

from the market. Oceans of poor flowers went on to this market that had to be sold off for a day or so, and the growers relegated to the ash barrel.

Every good flower-seller has a collection of carnations, and the purchase of novelties, and stated they had paid with him, and probably had a few more for the chase 25 or 30 for trial, but the most money was made by larger purchases and a margin.

E. G. Hill, being called on, said on looking around this city he was forced to come to the conclusion that carnations of the same size and style of flower is to be met with in other cities than in Chicago. He said he had seen a fine carnation in the soil here can be made to grow good flowers.

Here commenced house planting, especially in the case of the carnation. The plants were rooted and potted off in 3-inch pots in July, and set in benches the first of August. He thinks highly of a method of 2 inches of rotten dry manure in Summer. Using lime in the soil, which he thinks benefits where lime is deficient. He is of opinion also that lime stiffens the stems. This is a mistake to use coarse soil.

For temperature he grows a near 25 to 4 degrees at night or 55 degrees in cloudy days; and 55 to 60 degrees in cloudy days.

Fred. Dornier, Jr., being called on, said the selection of a soil is of great importance, but not believes in placing them in cold frames, so as to receive a check; preferring to grow them in the soil, and to plant them out. He does not believe in under-glass culture, but sees care in taking up the plants, and to be made in shade for a few days; the draught at this time being very bad. If once the cuttings suffer in the day, a support over the wire netting, A-baped, in two tiers, the top one, eighteen inches high, being raised in color, and the bottom one, a water in a cool place before marketing.

A. Madam, a retailer, said the time for planting carnations is from the first of August. There would be no difficulty in selling such flowers as were on exhibition, if they were to be put in the soil to catch it; but rust was not now the danger it once was. He believed lime in the soil, but he was not sure of the effect. Both Messrs. Dornier and Hill are non-believers in syringing, while the house growers did not seem to regard the idea.

W. J. Johnson, who grew Mr. Radd's Jubilee, planted it in the house June 29; the soil at first was too light, so he pounded it, and rose again to the surface. A mixture of potassium for rust.

Among the dealers present the question of the highest price for carnations was brought up. F. Benth said the difficulty here was that a few day flowers might be obtained and not called. Such flowers would sell at a regular supply could be had.

C. A. Sampson was of the same opinion. The few he had been able to get at 60 cents per dozen retailed at \$1.20. Fragrance in a flower is very important, and the fact that it is so important.

A question as to fertilizers being asked. Mr. Hill thought highly of Clay's sheep manure, but he thought it was better to be obtained through the use of manures in stiffening stems. Mr. Dornier used nothing but the soil, and he thought it was better to use cow and horse manure fermented with bone and horn shavings; used this week, say that it was better than anything else, and a little salt.

EDGAR SANDERS.

Carnations at American Institute

The show of novelties at the meeting of the American Institute, held at Chicago, Ill., on the 28th of August, in last, was a decided success, there being over twenty exhibitors, and a large number of carnations were shown. The following were some exhibited for the first time. The judges, as announced last week, were Messrs. J. A. C. Vaughan, Ernst Assmus and Wm. J. Brower; and the judging was done under the scale of points of 100 for the best. The following carnations were shown, so 10 points were deducted from the total. There would have been a large number of carnations of all varieties, but for the cloudy weather prevailing during the exhibition.

Clay's Sheep Flatbush, received No. 3; a chase variety, which scored the full amount of points. It is a large, bushy carnation, a delicate blush on a white ground of shading gradually to deep red. It is a very fine carnation, and is very healthy; the flowers of good size, and of a deep purple, the fragrance is very pronounced. This charming variety captivated the

ladies present, by whom it was greatly admired. The same lady showed Mrs. A. R. Ridge, and a fine carnation, which was a grand vase of Helen Keller and Lizzie McGowan.

Chas. H. Allen had a magnificent vase of Snow White, Stamford, Conn., staged Mrs. A. T. Plummer, a fine scarlet seedling; it scored 70 points, losing on fragrance, but being very good in color. The fish varieties. The petals of these are very deeply fringed.

Mr. J. A. C. Vaughan, staged a large vase of Mrs. Joust and Nero. These scored 79 and 80 points respectively, the latter falling off in color, and the former being a Victor, a sport from Daybreak, was exhibited by Hugh Graham, Philadelphia. The carnation was very good, and was seen there. Daylight, exhibited by Joseph Towell, Paterson, N. J., was in the opinion of the judges, identical with Victor. It was staged in fine form. Mayor Pinchere, after his long journey from Detroit, Mich., showed a fine carnation, and some of the exhibitors, Brettmeyer & Sons, much interest.

Gately, Englewood and Amazon were exhibited by Albert Hale, Manchester, Pa. and Mrs. J. A. C. Vaughan, and Lily Dean. B. K. these were greatly admired, being in excellent shape. This selection was put up a vase of President Carnot roses.

A. Herrington, Madison, N. J., made a fine carnation, which was very good in color, and was staged by Mrs. J. A. C. Vaughan, and Lily Dean. B. K. these were greatly admired, being in excellent shape. This selection was put up a vase of President Carnot roses.

Harrison Quincy, Parsippany, N. J., put up a fine carnation, which was very good in color, and was staged by Mrs. J. A. C. Vaughan, and Lily Dean. B. K. these were greatly admired, being in excellent shape. This selection was put up a vase of President Carnot roses.

Mr. J. A. C. Vaughan, staged a large vase of Mrs. Joust and Nero. These scored 79 and 80 points respectively, the latter falling off in color, and the former being a Victor, a sport from Daybreak, was exhibited by Hugh Graham, Philadelphia. The carnation was very good, and was seen there. Daylight, exhibited by Joseph Towell, Paterson, N. J., was in the opinion of the judges, identical with Victor. It was staged in fine form. Mayor Pinchere, after his long journey from Detroit, Mich., showed a fine carnation, and some of the exhibitors, Brettmeyer & Sons, much interest.

ventilators should not only be attended to regularly during the day, but, during the night, the night should have particular instructions to have some ventilation, or whenever the thermometer outside stands at freezing.

Those who have kept their plants rather warm, and have not attended to the ventilation, doubtless notice that on every bright day their plants droop over badly, and that on cloudy days they are again being very dry at the roots. Usually spraying is resorted to to freshen them up, but this is not a permanent remedy, and is not only not beneficial but is a positive injury. This condition has been brought about by the excessive heat, and the heat, or lack of ventilation. Either of these will produce about the same results, and the remedy is to be found in to show an entire absence of that stiffness of stem so much desired in the carnation, and without which there is little probability of the flowers bringing remunerative prices.

Those who have not practiced overhead watering the past winter, should not be in a hurry to begin it. The carnation does not delight in shower baths until the weather becomes positively warm, and it is impossible to keep the temperature in the houses down to a reasonable limit.

It is better to have the plants to get up a clean stock of varieties which are affected with rust. If the foliage has been burnt, it is better to remove it, and to get up a clean stock of varieties which are affected with rust. If the foliage has been burnt, it is better to remove it, and to get up a clean stock of varieties which are affected with rust.

CHAS. E. SMITH, Cor. Jefferson and Jackson Aves., YORK, Pa. WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

**Boston.**

S. W. TWOMBLY, of this city, presented a beautiful floral design to President McKinley at the inauguration, and has been the center of the inauguration of republican presidents for twenty years or more. The design in this instance comprised an artistically arranged collection of acacia, white lily, hybrid and other roses, mimosas, geraniums, hydrangeas, columbines and white carnations, and finished with Parryesque fern all arranged in a circular form 4 feet in diameter. In the center was the seal and coat of arms of Massachusetts. Mr. Twombly's son, W. A. Twombly, accompanied the design to Washington.

J. H. Koller, manager of the foreign branch of the Massachusetts Benefit Life Association, was on Tuesday elected president of the company. He is a member of the family so well known to the florists of Boston.

There is not much to offer on the bud sale situation differing from last week though it is in some lines and with some dealers improving, and nearly all the retailers report some busy days. Stock continues plentiful, at moderate prices.

**The Lily Disease.**

Complaints from the lily growers are increasing this year, many having lost 50 per cent. of their bulbs from disease. One grower alone informs me that he has lost 75 per cent. of the 4500 he had, many of which had set buds and looked very promising up to a short time before they were ruined. The total loss would run up into many thousand plants, and to the uninitiated it would appear that the great majority of lilies at Essex is lost. It is, however, not so. The total loss is not so great. The more experienced, however, say there is no danger but there will be enough to go around, and that when the time comes they will appear in the market in large and small lots for all markets. If this proves true, we can only consider with dread the gut we would have had if all that had been planted had turned out well.

W. J. Kennedy manager of the Flower Market returned from a trip to New York and Philadelphia.

Mr. Becker, of Cambridge, is bringing a fine lot of plants along for Easter, his lily being exceptionally strong and healthy. *Nephrolepis exaltata bostoniensis* is showing in full stage of perfection and looks very promising.

An important business change is about to be made on Beacon st. Welch Brothers have given up their old store at No. 2, which has been their headquarters for many years, and which since the opening of the City Hall Flower Market, a few months ago they have used as their florist supply business, and also as a retail cut-flower department. They have now moved the supply business to the Providence at market, and no retail orders will be received. On the 30th of this month Julius Zinn, who has been for fifteen years with Newman—for several years an manager—will open a retail store at No. 2 Beacon.

A complimentary dinner was tendered to Ed. Hatch on Friday afternoon by a few of his many friends among the florists and growers of this vicinity. It occurred at the Hotel Savoy, and was an unusually pleasant affair and participated in by several prominent members of the profession from a distance, in addition to local talent. Among the visitors were Messrs. Scott, Buffalo; Graham, of Cleveland; Ridd, of Chicago, and Smith, of Adrian, Mich. These gentlemen, after attending the meeting of the Executive Committee of the S. A. F. in Providence, spent a day or two inspecting the points of interest in this vicinity.

Among the Bostonians who attended the annual banquet of the Providence Club on Wednesday evening were Messrs. W. J. Stewart, Michael Norton, Jackson Davidson, F. W. Fletcher and E. A. Wood.

Judging Carnations by Points.

Editor Florist's Exchange:

I have read in your valuable Florist's Exchange about the new scale adopted by the American Carnation Society at its Cincinnati meeting, for judges to go by in awarding points over this broad and varied field. So far, so good. I believe the present scale is an improvement on the one in Cincinnati, at the late convention, and was frequently asked by the exhibitor, "Why do you give the prize to so and so?" Knowing full well that any exhibitor has a perfect right to knock the grounds on which a judge bases his decision, would it not be far better to adopt a scale that comes closer to what we call the beautiful in flowers, than to follow in the footsteps of scales heretofore in vogue? Let me explain: I think the most important point in a carnation is the same in all, and well balanced; that is to say, the size of the flower must be in proportion to stem and foliage; and the best balanced flower ought to get a limit of 50 points for perfection. This is in carnations, but in chrysanthemums and other flowers as well. How would you base the award on an Emma Weber, or an Armazindy carnation to be a prizewinner, if it were not for this very thing? You would not. Some are far larger than these varieties, but cannot stand on their own pedestals and thus show their ineptness in an advertising public, and instead, they have their eyes fixed on the tablecloth, and turn the back of their heads to the judge. I have seen great ones on strong stems, but their heads are not much more in diameter than the stems. I have seen a variety of the same at Cincinnati, "Why don't you try the Flowers up so that we can see 'em?" or they would not be so large. I have seen a variety too, to look well on that big stem." A flower must have a stem to carry it erect, and a foot must be long to support it erectful.

The remaining 50 points could be divided so that my scale would read about as follows:

- Best balanced flower..... 50
- Color..... 15
- Form..... 15
- Stem..... 10
- Foliage..... 10

And, I believe that any good judge will have plenty of room by the first 50 points to place the prize where it belongs.

HAMILTON, O. THOS. BOCK

Seedlings and Certificates.

Editor Florist's Exchange:

Recent an article on this subject, page 245, has been published in your issue. We think that the writer has a bad focus on his subject, to say the least. The National Society has commended the best and most careful thought of the members of the Carnation Society. The present system is the result of the combined wisdom of such men as Dorner, Ridd, and the Louisville Seedling Society. I have known the growers. The system may not have reached absolute perfection, but it is nearly as good as any variety, but it is standard. The points laid down in the rules are certainly indicative of an excellent system of selection, and a standard against worthless introductions, and to raise the standard to the highest degree of excellence possible at the present time. As Mr. Ridd so aptly puts it, "The whole proceeding is a relative one, not necessarily a simple one as new varieties, but it certainly indicates and takes account of a variety possessing an unusual number of those points of excellence which go to make up the ideal variety."

I take issue squarely with the translation that is now being put forth at present with the National Society is with the intention of "cutting out" the best and the best thing, then upon the public by a sale of cuttings or of stock, such an unprincipled and selfish method of doing business and integrity of men who are the peers of any in the trade.

The usual care bestowed upon the entries at Cincinnati by the committees on awards, showed a very earnest desire to arrive at the best and the exact truth regarding the candidates for awards.

Of course, no cut and dried rules can determine as a finally the merit or desirableness of a new variety, but suppose that a variety should possess an accumulated amount of beauty and real merit; suppose that the jury chosen by the Society should fail to fully appreciate all its hidden charms; this jury, nevertheless, with a desire for absolute fairness, goes on and marks down credits for the fine qualities which it can see - a non-judging jury, a goodly and plenty of instances of large size, some color a pleasing color - all these qualifications it must have, to pass; and it is not for the Society to have those hidden beauties and high commercial qualifications to which our critic is so utterly susceptible, and of which he is so keenly appreciative, then indeed we have a novelty; the millennium of the carnation will arrive, and perfection is attained; there is no further use for committees, points, scales or competitive exhibitions. I fear that if the writer of the article in question were known he would be found to be, like Abraham Lincoln's tailor - a man with a grivance.

If the Carnation Society is so dull of vision in criticising its own flower, or so

The article in question is a capricious criticism; it does not suggest a single remedy, nor indicate a single improvement, nor suggest the trial of a different method; it seeks only to undermine faith, and to tear down that which our Society has been slowward with care building up, and without even suggesting a foundation stone for a new edifice.

Instead of weakening faith, we ought to strengthen it, and, having faith, add to its works, and this, supplemented by knowledge, will make for the best interest of this branch of our trade. E. G. HILL.

Seedsmen and the Tariff.

Editor Florist's Exchange:

I have read with interest a correspondent's reply to a recent article by Charles Black on "Seedmen and the Tariff." The free trade clamor which still lives and rears its head, despite the experience through which we are passing, with its appealing "free trade" delusions, its idle mills, idle workmen, and starving citizens. This correspondent's own line of reason,

by your correspondent in last week's "Exchange." F. W. B. Richmond, Indiana. While the issue of Lady Hume Campbell was in the hands of the printer, I had a number of violets to bloom they would not produce a flower, but in a week after getting more seeds, they made out a number of flowers. It was late before I made the discovery, but I think now they will pay well for lost time. I have a number of other varieties they are producing. The Campbell with me seems to be positively proof against disease, but only on a small scale; so far it is no equal to Campbell in healthiness. J. FRYER.

Sweet Pea Tests.

Editor Florist's Exchange:

I desire, through your columns, to call the horticultural public to the new and original work that I am doing with the sweet pea.

I have established a department for testing unnamed sweet pea novelties, and for their introduction, by my method of culture and nomenclature, rendering a full report on each variety, and on the results. If so requested, a comparison as to points, with the typical variety as known at present, in each of the three types of the growing sweet peas (L. Vivini), expanded, hooded and reflexed. These tests are sure to give the greatest amount of information of novelties, as they will be entirely impartial, and be accurate in the extreme, and will be made from the material by which the novelty grower has for his pet productions.

The plants from which tests are made will all be grown by my expert methods of culture, and will be very important in color will be infallibly given by my "Chromometer." Every sweet pea grower has been impressed with the various names of colors given in different catalogues for the same variety of the sweet pea.

No charge will be made for these tests to those regularly in the seed trade, but all novelties not in the trade will not be tested after this year. I have some thirty unnamed novelties so far for this year, and the greatest number of these are not yet introduced, among which is the new dwarf (L. cupulea), Pink Cupid, and many others. From the material I have I can send you a list of the material, and I will be pleased to receive samples of the same varieties from any one in the trade, or sweet pea specialists, on my word of honor that not a single point will be permitted to go out of my possession, or be allowed to produce seed, and no information given to any regarding the tests, excepting what may be requested by the senders. I have been engaged by W. Atlee Sears & Co. to test the entire list of sweet pea this year, in order to properly place them as to color, type and quality, which will be published by them in 1898, with my methods of culture and testing, as well as a full exposition of my nomenclature of the sweet peas, and points for the guidance of committees on nomenclature of the different sweet pea groups.

I will be glad for florists, or seedsmen, visit my testing grounds on any day, excepting Sunday, during July, and will be pleased to have you test the novelties which will be offered to the trade for some years to come, and I will, so far, permit of all being seen in the flower, and you may have them for sale, or for any other purpose. Information can be given as to the tests, excepting by express permission of the owners. W. Atlee Sears & Co. Sweet Pea Expert. Roaring Spring, Pa.

Pteris Serrulata Zelleri.

ing, if carried to its ultimate destination, will convince him or any other free trader that protection protects.

If our own mills, work-shops, farmers, and laborers are busy, then the price of labor must rise. If a protective tariff keeps out foreign goods, then the quantity of goods kept out must be made at home. If more are made at home, the law of supply and demand will create another market for our home labor, and wages are bound to rise.

If we pay our money to home producers, we keep that much more in the country, and instead of shipping gold to Europe, we will be putting it into the pockets of our own people.

Did this correspondent ever stop to consider that "combinations of capital" have built our railroads, opened up our vast wheat fields, developed our coal mines, harnessed the lightning, dammed up Niagara to do man's bidding, all under a protective tariff, while the price of wearing apparel, farm machinery, food, and everything else steadily decreased in value, until the purchase power of a day's wages was never so good as now.

Theory is one thing, my friend, but 20 years of prosperity, with "combinations of capital protected by tariffs," knock all your fine spun words into a broken jumble. I have seen "foreign things" wherever you meet them, and our own farmers and workmen meet protection against foreign labor and foreign goods, just as much as if that labor stood at our doors offering to do work at half price.

VERITAS.

Pteris Serrulata Zelleri.

This fern is said to be a distinct one, and one who has examined the stock. It is of very dwarf and compact habit, resembling the one known by the name of Zelleri in honor of Mr. Chas. Zeller, of Flatbush, N. Y., whose every body knows. Our illustration is drawn from nature, and is very faithful reproduction. Messrs. Sieber & Co. have secured the entire stock of this valuable fern, and will introduce it this season. The stock is said to be in a most healthy condition.

Volunteers.

I have had about the same experience with Lady Hume Campbell as that related

Philadelphia.

Business has now settled down to the usual contentions, and consequently there is an over-supply of nearly every kind of carnation. Good roots continue to sell fairly well, prices being about the same as in the past few weeks, but second-class stock is not moving. Carnations have dropped to 100 per 100, and good stock, including most of this figure. The greatest glut just now, is in violets; as they are scarcely being given away, and nearly every street corner variety is to be seen with violets. But even with this sales are not so brisk as usual. Lenten season is more in vogue this year than ever, so that most of the flower buyers are out of the way.

The chief topic under discussion this past week has been the large number of florists who are leaving the city, and it is evidently the judgment of the majority, that such a transaction does good, as it creates a love of plants among those who would not go to the florist to buy, but when once the desire is cultivated, may do so in the future. It certainly greatly aids the grower in getting a large quantity of surplus stocks.

Visitors in Town.

James Delany, Boston; J. L. Dillon, Bloomington; W. H. Jones of Boston Flower Co., P. P. Plerson, Scarborough, N. Y., who has been visiting the principal rose growers in the State, and who has returned here on Wednesday, from his southern trip, and will remain three days.

Here and There.

At the Pennsylvania Horticultural Society's monthly meeting, on Tuesday next, a very interesting paper will be read by J. W. Anderson, of the Orchard of What can be Accomplished by Spraying and Some Serious Enemies of the Orchard. Henry F. Mitchell will present papers on electricity at this meeting.

Growers.

JOSEPH H. ACOCK has made quite a success of his carnations, and has started this branch three years ago, and was compelled to build another house last Fall. He is fairly successful, and has a large quantity of which are in perfect health. The aereas are mostly in 1 and 1/2-inch and good sized plants, and are showing a lot of fine ashes, keeping the roots cool and healthy, and thus making perfect plants. He is also making perfect stock of K. Helmsone in perfect condition, showing that pains can be taken to grow successfully on a large rose place.

The varieties of roses now grown here by this grower, under the name of Beauty, a few from Ruser, Meteor, Bride and Bridesmaid. Carnations will be almost entirely dropped from the business, and the plants are not some very good seedlings, a pink one being worthy of special notice, having perfect form, good stem, and being of an exquisite shade of delicate pink. DAVID RUST.

Carnegie, Pa.

M. C. DUNLEVY took to Pittsburg about 9,000 carnations which had been ordered for decorating the special train that carried the late McKinley from Canton to Washington. On arrival, the President handed a bunch of these carnations to the engineer of the train, and he was to be distributed safely, and which act created a loud demonstration among the crowd gathered to meet the president.

Buffalo.

Every-day trade is coming on apace fairly well, though of course not so large as in the Fall. It is thought to be so far, and sometimes at Kastings's wholesale house, assume a "piled up" condition. The following are the exhibitors manifested at present in the forthcoming annual election and banquet of the Club, to occur on Monday next, and who are hoped to be the leading members from the executive committee present on their return from the annual meeting. The affair is to be held at the Relini Hotel. In connection with the banquet, the members are to occupy Parlor A in the afternoon with a display of new carnations, which is no doubt to attract a great deal of general interest.

William Scott and J. F. Cowell have been appointed to meet at the meeting of the Executive Committee of the S. A. F.

It is reported that Hughes & Co., of 35th St., have had their retail business to Mrs. Nusbaum, formerly head clerk with them.

Visitors.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

### Brampton, Ont.

HARRY DALL is experiencing peculiarity with his roses, for it was this afternoon through the month of February. The bud leading over towards sunset makes a serious loss to the flower on the 15th of the sun in the morning cause the bud to straighten, but leaves a kink or bend in the neck. This prevents the roses from the best and finest bud, and as the stem is in proportionate thickness to the size of the flower, it is a problem Harry is trying to solve and which is causing him sleepless nights. He has hit upon a partial remedy by using a wire support, about 15 inches long, applied so soon as the bud is a certain size. This answers admirably, but ordinary stock, he is nothing out by the extra trouble.

**H. B. BIDMIST** and Mermet are the kinds most affected. Hoste, somewhat, but not to so great an extent. Some grand stock is being cut. At time of my visit a shipment was being made—Bride and Mermet, with 5 feet stems, and made in proportion. Woodens still keep well. Perils and Sunsets are yet profitable. Ousia is indispensable.

There will be good arrangements for Easter. California and Luxonne violets, with Snow Crest daisy, are grown in large numbers, and all all kinds. Here the double violet really is not in it this season.

Mr. Dall believes in replanting his apparatus but with young stock annually. He has become a disciple of the grafted stock method of rose growing, and intends expanding his business by this. With this decision after visiting the establishment of A. F. Plazan at Cromwell, and reading Fred Palmer's system, which he considers much simpler and less expensive.

### Washington.

The Inaugural Ball.

The decorations at the Inaugural Ball differed from those of former similar occasions in that everything in the way of painting and electric work was made subservient to the floral designs. The evergreen, flags and shields were used in very lavish profusion, and their gaudy colors were not so prominent as they were on previous festal occasions. This time the flags were few and far between, just enough to suggest their presence. The flowers and sprays of flowering vegetation. This time the flags were few and far between, just enough to suggest their presence. The floral decorations were of white and yellow cloth and background, and was arranged in every available place on the great hall, and the floral decorations were shut out from view by the three colossal arrangements of white and yellow chollis. Some similar and scraps of andromeda were used principally for spraying. Perhaps the finest work was shown in the decoration of the two music stands; the one in yellow at the east end of the building was arched in imitation of the golden doorway of the Transportation building at the World's Fair. In each of the upper corners of the structure were three large arched wreaths, made of gilded andromeda leaves. These wreaths had a background of green. In the arch were small white flowers, with fastidiousness of China silk, immense garlands of Meteor roses running along the entire front of the stand. In the center of the building, between the two rows of columns, was draped a white. The spraying of apparatus on this was very effective. Bridesmaid roses were made up in garlands and draped along the top of the stand; at the back of the stand were silvered ampion wreaths at each corner. Stretching across from each group was a thick band of gala leaves, on which the electric got in some fancy work displaying the American flag. Above the wreaths, and reaching to the second balcony, were two golden coronas which were made to appear as if they had been emptied of their contents, consisting of some two or three dozen nicely flowered red, white and yellow roses. The roses in moss and hid in greenery. This piece of work was especially telling.

**Milwaukee.**

Martin Doward, one of the oldest Scotchmen of the city, died March 2, aged 83. He was born in Montrose, Forfarshire, Scotland, in the town of Milwaukee in 1845. He was a shoemaker by trade, but entered the employ of the U. S. Patent Office in 1875. Here he retired, and for many years devoted his time to the business of a florist and landscape gardener. He leaves a widow, three daughters, and two sons.

**Syracuse, N. Y.**

The large nursery and packing house of the Green Nursery Company, situated on the town line between Chili and Riga, was burned March 25. The fire started in the cellar of the packing house. The flames spread rapidly and were soon beyond control, and in a few minutes the entire packing house and the adjoining barns were destroyed. The loss in the neighborhood of \$10,000, with an insurance of \$4000.

**Syracuse, N. Y.**

A special meeting of the Central New York Horticultural Society was held recently to arrange the schedule for the annual chrysanthemum show to be held next Fall. The prizes appropriated for the premium list was \$50.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

# WATER LILIES

## EGYPTIAN LOTUS and VICTORIA REGIA.

We are specialists in this line and carry full line of aquatic plants suitable for all purposes.

Our stock is unequalled in the United States; see our quarterly trade list and general catalogue. Estimates furnished.

**HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA.**

Baltimore.

The Market. "The glut in violets did not occur until last week, when Saturday last they were sold for 15c per 100, the price being the double yesterday. No single ones are grown here to any extent. Carnations are still selling out. There was a slight overproduction of whites, but the finer colored ones were not overplentiful. Nasturtium roses are not over-plentiful. Nasturtium are going to waste; this is also the case with callas.

The Club. The annual election took place at last meeting. Our venerable colleague, James Pentland, received the highest honor, and was elected president. No doubt the position of president will be well filled this year. Mr. Moss was elected secretary, Mr. Hinton was chosen ready to serve. His previous record as president will enable him to act well in lines of duty. Mr. Binder as recording, and Mr. Binder as financial secretary, represent the private gardeners' interest. William B. Sands is officiating for the eleventh year as treasurer; none better. John Wagner was elected librarian.

At the adjournment the boys replied to the banquet hall, where 45 out of the 135 members of the Club participated in the feast. As usual, Mr. Pentland was interested in that capacity. The brethren told some interesting stories and made some beautiful and funny remarks, and at a late hour we dispersed.

Carroll's Meeting. Monday, March 23, has been selected for our next exhibition. Several novelties. All introducers are kindly requested to send their flowers for exhibition, so that our growers may have an opportunity to see the quality of the novelties that are being introduced. Anyone wishing to send flowers for that day should address them to Edwin A. Seidewitz, 36 West Lexington street, Baltimore, Md.

## AZALEA INDICA

For Easter forcing.

We offer a very fine lot of Azaleas, comprising the most distinct and best varieties in cultivation, embracing all shades of crimson, white, pink and rose color. They are shapely specimens, well "headed" double and single flowered and will make splendid plants for Easter decoration. It is almost impossible to ship Azaleas when in bloom and have them arrive in good condition, hence the necessity of procuring them in advance before the buds open.

These Azaleas have been grown especially for us by the largest grower in Belgium, and the greatest care has been taken to ensure plants well set with buds, carefully selected varieties that will be certain to please, and compact, shapely plants. By such arrangement we are enabled to offer this grand stock at the following very low rates.

Size,	Per doz.	Per 100.
3 to 11 inch heads, established plants, in pots	..... \$5.00	\$40 00
..... 11 to 12 "	..... " 50	55 00
..... 13 to 16 "	..... " 85	70 00

6 sold at dozen rates, 25 at 100 rates.

**PETER HENDERSON & CO.,**  
35 CORTLANDT STREET, NEW YORK.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

John Cook has a white sport of Maman Ockel. It has all the good qualities of the original, with the exception that it is a pure white color. It has a good growth and is mild-sprung.

Jettage. Harry Ekas is well again. He has a white sport of Philadelphia, with in town this week.

EDWIN A. SEIDEWITZ.

Dunkirk, Ind.

The Dunkirk Greenhouses, owned by James R. Johnston, and comprising 6,000 feet of glass, were badly damaged by fire on the night of March 1st. The stock, consisting of one house of carnations, one of roses, one of phloxes, etc., total loss to the plant will be rebuilt. Loss is estimated at \$2,000. It is supposed to have been started by tramps.

Dreer's Special Offer. FOR MARCH.

AZALEAS FOR EASTER.

We are this season carrying an unusually large stock of Azaleas in the best varieties and in fine condition for Easter. As these plants can be shipped more safely when in bud, we wish to impress the importance of early orders. We will not be responsible for injuries arising from late shipment when the buds are developed. 4-inch pots, with fine bushy crowns, 10 to 15 inches in diameter, will set with buds, \$5.00 per doz.; \$40.00 per 100. 6-inch pots, fine plants, will set, 12 to 15 inches in diameter, \$8.00 per doz.; \$70.00 per 100. Specimen plants, \$5.00, \$2.50 and \$3.00 each.

TUBEROUS ROOTED GERANIAS.

Now is the time to plant for early flowering, the ground in the shade has been sent out by us for several seasons, the best that can be procured.

WE OFFER

- Singles in choice mixture, \$2.50 per 100; \$30.00 per 1,000. Separate colors, scarlet, crimson, white, yellow, orange and pink, \$2.00 per 100; \$25.00 per 1,000. Doubles in choice mixture, 1.00 per doz.; 7.00 per 100. Separate colors as scarlet, white, rose and yellow, 1.25 per doz.; 8.00 per 100.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

WE MAKE A SPECIALTY OF GROWING

A. W. Smith's Hybrid Moonflowers

(Thomasia Noctiflora).

The above are strictly the best Moonflowers in cultivation; blooming from 30 to 45 days earlier than the old variety; producing four or five different shaped blooms and blooms from five to seven inches in diameter. The flowers are pure white.

Plants for stock now ready to sell from 24 inch plants at \$1.00 per doz.; \$7.00 per 100. No less than 50 plants at 100 rates. Orders for May will be located now.

We also have a lot of Chrysanths, choice varieties; blooming in 4 in. pots, which we sell plants for Easter, at 15 cts. per 100.

Also about 75 Liliun Harrisii, in 4 in. pots, showing buds.

Fine Geraniums, 4 in. pots, all colors, mixed 65 cts. per 100. We also carry on an immense stock of Easter Plants, in 6 in. pots, which we sell cheap for Easter; prices on application.

Hyacinths already budded (separate colors or mixed), only 25 cts. per 100.

CASH WITH ORDER.

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

*Tiffin, O.*  
 If the present improved business conditions are to serve as a basis for the near future is certainly full of promise. Louis Ulrich is by no means an enthusiast, and hence his report, that the past few months has been the best in point of sales, collections, etc., that he had experienced for the longest while, may be regarded as significant. Encouraged by the outlook, Mr. Ulrich contemplates several improvements. He intends extending one of his cold-storage houses and may erect a handsome conservatory for his palms and decorative plants. One of the finest and most elaborate writing decorations ever accepted in Tiffin was that recently put up at the Trinity Protestant Episcopal Church, Mr. Ulrich being master of ceremonies. The imposing edifice was profusely and handsomely decorated, the flowers being chiefly pink roses. Palms, ferns and Harzli plants were used with splendid effect. Huge vases, holding long-stemmed roses, were placed on the altar, in the pulpit and in the baptismal font, while a bunch of pink carnations, tied with pink ribbon, adorned each seat in the auditorium. Over the center aisle, from the four large chandeliers, strings of pink and white plumage was suspended, the price for the carnation bouquets, and making a box of green and pink, and white for the bridal party passed. **INTERESTANT.**

*Grand Rapids, Mich.*  
 The members of the Florists' Club were the guests of George Hancock & Son, Grand Haven, on March 3. A pleasant time was spent in looking through the greenhouses, after which the guests were escorted to Ver Kuy's parlors, where they were served a sumptuous banquet by the Ladies' Society of the Methodist church. After the supper the Club returned to Mr. Hancock's home and here their session, which was a rose meeting. Crabb & Hunter had on exhibition Belle Stebbins, La France, Meteor and Bridesmaid. Henry Smith showed samples of Bridesmaid, Meteor, Mrs. Weston, Kalmia, La France and Souvenir de Woodstock, and the Grand Rapids Floral Company contributed Meteor and Bridesmaid roses and a few choice carnations. William Cunningham read a paper on the "Tea Rose." At the next meeting, to be held at the Eagle Hotel on March 16, it was decided to have a discussion on "Spring Bulbs." J. Van Schelle will prepare a paper on the topic. Thanks were extended to Mr. Hancock and his son James for the delightful entertainment. Mrs. J. Hancock was most courteous in her attentions to the ladies of the party, and the day was happily and profitably spent.

*Toronto.*  
 Business has continued good during the last week; a great many parties, etc. were held, and quantities of cut flowers were used. The rose crop has been plentiful, fog bulbs however are more abundant, but prices are generally very low, fine spikes of Dutch lilyacinths, selling for 60c. per dozen; tulips, from \$1.50 to \$3 per 100. Daybreak carnations are still scarce. Violets are very plentiful; there is no settled price for these now, each grower having a different figure, and all being low. There has been a better demand for lilacs, considerable funeral work creating this. Cattleya blooms are very well, but not many are offered just now. Trade is likely to be considerably quieter now, but in cut flowers always sell slowly in this city during Lent, but nice flowering plants generally go better, especially if the weather is warm. Messrs. John A. Mery, Dent Ammus, F. McMahon, H. Hall, and E. Daldouze called at J. H. Dunlop's place on their way home from Cincinnati.

**THOS. MANTON,**  
*Hackensack, N. J.*  
 A fire at the Red Towers greenhouses destroyed a portion of the two buildings devoted to palms. The fire originated from the heat, but no particulars as to loss or insurance could be ascertained.

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Cincinnati.

Market Notes.

In the fore part of the week trade started out brisk, and throughout the first week of March would be a hummer, but Lent put a damper on our hopes. Even roses were not wanted during the latter part of the week. Carnations are still in good demand and scarce, selling at \$1.25 to \$1.75 for ordinary, and \$2 to \$3 for fancy.

Tulips are plentiful, and La Helne, white, sell at 2c. and 3c. Yellow, of all kinds, are consigned to the barrel. Valley gees slow at 3c., and callas are selling at 50c. to \$1 per dozen; Harriell the same. Good Dutch hydrangeas sell at 3c. and 4c.; roses from 3c. to 6c., according to kinds and quality.

Jetties. The stores are all complaining of dull trade. Another heavy rainstorm again gave trouble to Fred, W. & K. Wolfe, and Ben. Gilne. A trip to their different establishments on Saturday showed destruction on every side; what little they had saved from the former backwater of the Ohio was destroyed by the flood of Mill Creek. The water had, in nearly all places, covered their benches from 6 inches to 3 feet in depth, and in some places the water had been 6 feet deep. Mud was all you could see everywhere. Fred, W. & K. Wolfe had a few plants and Dutch gees, and some carnations. His roses, planted mostly in 1895 beds, had been covered, only a few inches of the tops were sticking out. It is sorely possible that he may save a few of them. His lilies were entirely submerged. The weather, fortunately, is not very cold at this time.

At K. Wolfe's place everything is least \$3,000.

Ben Gilne's place also presented a sorry sight, and is also almost a total loss. I should say, at a rough estimate, including damage to H. Schlichter's plant that the aggregate loss now exceeds \$5,000. The market gardeners of the Mill Creek Valley estimate their loss at \$50,000.

H. W. Warden, Superintendent of Parks, was badly injured in a rear end collision on the E. & O. R. R. on Friday. A warehouse caught the express stop, on a freight following, dashed into the sleeper, killing one person and badly injuring the balance of the passengers. At the police station, Warden was doing well. I have not as yet learned how badly he was injured. The accident occurred near Lakeland, O.

Judge Smith's jury in the Superior Court on March 4 found a verdict in the suit of the Cincinnati & Co. against the J. H. McGowan Pump Company, in favor of the plaintiff for \$385, after a tedious trial. The case is an old one, having been on the docket for nearly ten years, and \$108 of the verdict was for interest on the claim. The suit was to recover damages for plants which Critchell & Co. lost by freezing in their greenhouses more than ten years ago, because of a defective working of a pump, which the McGowan Company had supplied, to furnish water for the holders. In the winter of 1887 the pump, in the midst of a spell of freezing weather, cut off the supply from the main pipes, and the plants froze. The suit was brought for \$1,500 with the above result.

PAUL BRINKOWITZ, of E. Bayersdorfer & Co., is the city clocking.

Card of Thanks.

We desire to express our sincere thanks to the many friends and brother florists of Robert J. Murphy for their kind words of sympathy in our sad bereavement. We especially thank the Cincinnati florists for their most beautiful floral offerings.

Mrs. R. J. MURPHY and FAMILY.

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. NO. 12.

NEW YORK, MARCH 20, 1897.

One Dollar Per Year.

"Every Bulb's a Pearl"

**THOSE TUBEROSES**  
Beat anything I ever  
saw; very large.

(Signed) W. A. MUNROE.

Providence, R. I., March 10, '97.

"Every Bulb's a Pearl."

There is no doubt about it. We have the finest stock in the country. Bulbs are selected 4 to 6 inches in circumference—the True, Dwarf Pearl, and have given satisfaction wherever shipped. Our Tuberoses are grown on one plantation—on new land each season—scientifically cultivated, harvested and cured. They cannot be surpassed in quality while the price is no higher than charged for ordinary strains. The general stock of Tuberoses bulbs is getting scarce. Do not delay ordering too long.

Per 1000 ..... \$7.50 Per 10,000 ..... \$55.00  
Per 5000 ..... \$32.50 250 supplied at 1000 rate.

While we make Tuberoses a leader, do not forget that we carry select stocks of all other Spring Bulbs, Seeds and Plants.

**PITCHER & MANDA, Short Hills, N. J.**  
JOHN N. MAY, Receiver.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## LILY OF THE VALLEY

.. FOR EASTER ..

We offer at a bargain stock remaining unsold at this date in order to close it out. We have only 12 cases left unsold, which we offer as long as unsold at

\$20.00 per case of 2500 pips, net cash.

This is the same grade of Valley that brought \$35.00 per case early in the season, but we now offer it at cost in order to close out the stock. Prices is cheap, quality the very best, highest quality selected German pips. Speak quickly if you want it.

## TUBEROSE PEARL.

In order to close out our surplus of Tuberoses Bulbs, we make the following exceptionally low offer, viz:

Extra Quality Bulbs, \$1.00 per 100; \$7.00 per 1000.  
" " " " 5.00 lots at 6.00 " "

# SEED TRADE REPORT.

Points and information from seedsmen, and all interested in this column, solicited. Address EDITOR, THE FLORISTS EXCHANGE, P. O. Box 167, New York.

## Free Seed Distribution.

The following telegram from Mr. T. W. Wood, Chairman of the Seed Trade Committee, is highly encouraging:

"Have just returned from Washington seedsmen can kill the Free Seed Appropriation if they continue the pressure upon Congressmen and Senators to urge them to renewed efforts, and not let up until the work is accomplished."

We take pleasure in reproducing the following expression of opinion from the Hon. E. F. Loud, representing the Fifth District of California, the author of the new Postal Law bill, who expressed himself during his canvass as being opposed to free seed distribution. This gentleman carries some weight in Congress, and he is the only one who sends the largest seed-growing section in the United States. He believes all the growers of California are opposed to this system, understanding with that much of the seed distributed is bought abroad at very low prices. This gentleman's letter is forwarded us through Messrs. C. C. Morse & Co. of Santa Clara, Cal., to whom it was addressed:

"I have always regarded the distribution of seed by the Government as business beyond the jurisdiction of the postal administration of law. Fully one-half or two-thirds of the seed distributed is sent to growers who never see it. As a rule they are not of superior quality, neither are they rare. Twenty-five cents would buy all that seed that is never seen. If it were not for it costs the Government, besides the transportation and handling, which is a very large item, about fifty or sixty or a hundred thousand dollars a year. As well, I think, I could send flowers or cornmeal or clothing, which might be sold, to distribute this very ordinary character of garden seed."

From Hon. J. H. Brownell, House of Representatives, Washington, D. C., March 18, 1897. Editor Florists' Exchange.

I am in receipt of your printed circular concerning the Free Seed Distribution. I concur most heartily with all criticisms on the Government distribution of seed contained therein, and assure you of my most hearty support in endeavoring to correct the abuse. J. H. BROWNELL, M. C.

Replying to your letter of the 15th inst. I wish to say that you can most certainly use my influence in the matter, and I will heartily co-operate in breaking up the so-called seed distribution, which is not only a waste of money, but a rank imposition upon the people themselves. J. H. BROWNELL, M. C.

The Florists' Exchange would respectfully suggest that the Seed Trade Committee, through their chairman, address a strong personal letter of protest to every individual Congressman and Senator, asking him whether he favors continued free seed distribution or not; and if in favor of the same his reasons therefor. The letter should be a simple, logical statement of the seedsmen's position, written in such a manner as will command the attention of every citizen, and in such a way which will compel an answer. This method would afford opportunity for a personal discussion of the case with many members who, despite their conscientiousness, might be inclined to favor the appropriation, and enable the committee, through further correspondence, to meet and overcome the false beliefs under which the members in favor of free seed distribution might be laboring, and perhaps finally to bring about a majority of that which is just and right. The letter should be written with a view to meet-

ing the sentiments of the party addressed, it being well known that Representatives and Senators are most in favor of free seed distribution than are those coming from other sections where the character of the soil is more fertile. As we understand it the greatest pressure upon our Representatives comes from the Florists' Exchange, and from free seeds.

All signs point to the fact that when the appropriation bill for free seeds is again brought up in the House it will meet with more opposition than ever before. The Florists' Exchange in its receipt of several letters from Senators and Congressmen, and in its receipt of many petitions, is to defeat further free seed distribution, and if the crusade is actively and intelligently kept up there is no reason why it will cannot be defeated. We have received information that possibly a change may be made in the bill, but we sincerely trust that in whatever form the bill be presented it will meet with the same, which certainly deserves.

Retail seedsmen when writing in protest to their Congressmen should make mention of the fact that the buying, mailing and distribution of seeds by Government is vitally injurious to trade in this country. Their neighbors can thus obtain their supply free, they have no need to buy from them, and their Congressmen, if Congress is being constantly increased and better seed sent out, and now that it is the intention that a constituent can order from his Congressman any seed desired, and in quantity sufficient to start a business, to completely the destruction of their trade; hence they desire their Representatives to vote against Government appropriation of seed, and in any form it may be presented, as the measure is unjust and opposed to the spirit of the Government.

Editor Florists' Exchange. As all the seed trade is interested in the fact that the Government is making a distribution of seeds by the Government, which is proving itself so injurious to the seed trade, and is being carried out throughout the country, I therefore think they should know something of what we are doing.

In addition to other work which has been accomplished the past week, 5,000 copies of the Florists' Exchange Circular, which was mailed with a copy of the accompanying letter to all principal newspapers and florists, has been distributed. We reason to believe that it is having a good effect from responses already received.

As we are desirous to write to all the seed trade personally, but I should be very glad if they would keep such with me, and make any suggestions which they think would further the object we have in view. I think, further, that nearly all the seed trade should aid in killing this appropriation by promising what they are willing to do to complete the destruction of the trade. The balance could be called for if needed; money left over will be returned to the donors.

It is not fair that a dozen firms (which is the number who have at present published Florists' Exchange Circulars) should write to all the seed trade personally, but I should be very glad if they would keep such with me, and make any suggestions which they think would further the object we have in view.

I enclose a few extracts of letters which I think are interesting. E. W. WOOD, Chairman, Richmond, Va.

(Copy of Letter to Newspapers.) I enclose you extracts from the "Florists' Exchange Circular" which I have just published. I think I ask your kind attention. The annual free distribution of seeds is a very great injury to the seed trade, and to the seed business. This year there were given away by the Government, about twenty million packets of seeds. The Congressman and Senator had as his quota, forty-two thousand five hundred packets of garden seeds, and a large number of seeds as well as to every county store that handles seeds, for if their customers can get their seeds free, they will not buy. The bill, which was contemplated in the last bill, it will ultimately destroy all dealers in seeds in this country, and it is the same as if it had been done for the past few years. Seedsmen have been compelled to curtail their business, and to sell their seeds at prices by this unjust and unequal competition.

The free distribution of seeds is against the spirit of our government, which maintains a free trade with the Government, and not the Government the people. It likewise fosters paternalism and beggary.

The seedsmen of this country have incurred large amounts of money in advancing the seed trade, and have been so enterprising that they have really become leaders in developing and disseminating new and improved varieties of seeds and plants, and have been willing to pay the cost of the improvement of the Government; but when the Secretary of Agriculture came into office and tried to carry out the policy of the Government, he has been so unwise as to plant or cuttings of rare, new or valuable varieties, he received comparatively few orders for them, and he has been so unwise as to acceptance. It is an extravagant appropriation, and burdens the mails with hundreds of thousands of seeds, adding a very large amount to the annual deficit of the Post Office Department.

I hope that you will give your editorial support and influence in opposition to the appropriation for the purchase and free distribution of seeds by the Government, and send a marked copy of your paper containing editorial on this subject to your Congressman, or to Mr. WOOD, Chairman.

Messrs. N. W. Ayer & Son, of Philadelphia, well known advertising agents and a firm which probably places more seed trade orders than any other agency in this country, and who are therefore in the best of positions to notice the effect of the free seed trade. This advertisement has been upon the business of their patrons, have taken upon themselves at their own expense to send 100,000 newspapers to the very strong personal letter calling attention to the abuse, together with numerous copies of the Florists' Exchange Circular on the subject. Their efforts on behalf of the seed trade are deserving of the highest praise, and we trust that in increasing the popular indignation against continued free seed distribution, the Florists' Exchange newspapers we quote extracts which we deem worthy of reproduction:

Extract from letter sent to ten thousand newspapers by N. W. Ayer & Son, newspaper advertising agents, Philadelphia.

Dear Sir:—The free distribution of the distribution of free seeds by the Government has reached a point where, in our judgment, it is no longer a matter of expediency, but of principle. It is a fact that the seedsmen of the country are completely ruined by this trade, and to much as any other branch of trade, and it is equally true that in the aggregate it probably spends as much money in a given period of time in advertising in the newspapers as any other line of business, and are therefore invited to the friendly offices of the newspapers in securing their just and reasonable rights.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater.

The legislation that permits favoritism to a certain class of people is not only wrong in principle and unjust in action, but it is also a waste of money. This phase of the question alone is sufficient to demand the abolition of the practice. Even more so, when we consider the opportunity for its use for political effect, making favors of the Government depend upon personal influence.

While costing the people of the United States a very large amount of money annually, the free seed trade is a waste of money for the purpose for which it was provided. The original intention was to obtain from the Government a certain amount of such reports as would be useful in the advancement of the agricultural and horticultural interests of the country. The Government records show that there are absolutely no returns of any value whatever.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater.

# PROTESTS.

There is not much left to be said in regard to this Government seed business, as the subject has been well handled by the Florists' Exchange, and the only question is if our Congressmen and Senators persist in running a Government seed store in the face of the opposition of the vast majority of the able and wise seedsmen of this country, and cannot be convinced of the shamefulness of the policy, we will have to let them go ahead, appropriate money for the purchase of seeds and advertise for them, and let them do as they please.

Is there any law compelling seedsmen to make bids for the order, and would it be so unwise as to let them do as they please? Is there any law compelling the seedsmen in the United States agree between themselves that they will not bid for a Government contract? Would this not be the quickest way to convince our able men at Washington, and that there is a higher power than God, and that we are higher power than God, and that we are not absolutely subservient to their will and demand? With the refusal of seedsmen to furnish seeds, what could they do but take them in their sign, pull down the blinds, lock up their stores, and refuse to do any more until they can find seedsmen who will furnish the seed. Just so long will this needful for a Government contract. We are loyal to ourselves, and let the Government seed order alone.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater. There is no doubt but what the lavish distribution of seeds throughout this country has reached a point where, in our judgment, it is no longer a matter of expediency, but of principle. It is a fact that the seedsmen of the country are completely ruined by this trade, and to much as any other branch of trade, and it is equally true that in the aggregate it probably spends as much money in a given period of time in advertising in the newspapers as any other line of business, and are therefore invited to the friendly offices of the newspapers in securing their just and reasonable rights.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater.

It is not sufficient to justify our calling your attention to this question; but strong as they are, the interests of the country are at large, and the individual and national capacities, is yet greater.

General Manager The Cleveland Seed Co. We are, it is almost needless to say, most emphatically "with you" in your views regarding Government free seed distribution, which is clearly a prostitution of government authority.

We are, it is almost needless to say, most emphatically "with you" in your views regarding Government free seed distribution, which is clearly a prostitution of government authority.

The warm, dry time has been followed by a spell of cold and violent storms, and under which seed growers in low-lying districts at present labor. The French variety of seeds, which they are in the case completely under water, while many of the farms in the Fen districts of England are now being washed away by the sea. This has checked business all around, for even on the light lands, work about the country has been stopped, which were beginning to make progress, will not benefit by the check, for although

only a few degrees of frost have been registered... Dealers who laid in large stocks of recent importations of Lilium auratum on account of the epidemic of the Dutch bulb, have reason to regret their purchase...

The demand for the different varieties of Lilium lancifolium, which fell off rapidly last year, is back on the hands of the dealer. Florists have found the monstrous variety of L. lan. album at once easy of sale and profitable, and the smaller bulbs are offered at a cheap rate, a brick trade is being done.

EUROPEAN SEEDS.

NEW YORK.—Leon Hulseboch will travel in this country in the interests of Hulseboch Brothers, bulb merchants, importers of European seeds, &c. J. J. Comot, representing Carter, Dunnet & Beale, and A. Ingram, representing J. G. & Co. London, arrived in the city this week.

CORRESPONDENCE.

Insertion will be given in this column to all communications free from animus. But opinions expressed do not necessarily reflect our own.

Seedlings and Certificates.

I have read your article on "Seedlings and Certificates" with the greatest interest, recognizing that it opened up a much-needed discussion, which might eventually result in the betterment of our florist certificates which pretend in any manner to determine the commercial value of a new creation.

I had made up my mind to say nothing upon this subject, but Mr. Hill's insinuation in your paper, that I might have some one with a grievance seems to call for such a reply as will demonstrate that the present system of rules is not based under the petticoats of an editorial article.

The unjust insinuation that the "Florists' Exchange" has been guilty of farming out its editorial columns deserves a rebuke that will henceforth be a warning to those who would attempt to question the morale of your editorial staff.

(The article which called forth Mr. Hill's letter and which was published on page 224 of March 6 issue, was not written by a carnation grower nor by a contentant.—Ed.)

In this letter I will deal only with the commercial values that the advocates of certificates are endeavoring to fix. I will not touch upon the value of florist certificates with, for it is manifest that the commercial feature is what proves so attractive to the public, and I will deal also the rock upon which the certificate sign is destined to be wrecked.

It is no longer the granting of such certificates may degenerate into an effort on the part of a few growers and dealers to give their countrymen an introduction to new varieties of plants to the end that their own particular productions may receive the advantages of the rule. The interests of equally worthy members of the fraternity who may be averse to "wire-pulling" and who may be unable to stand the waste of time and money necessarily incurred in following up and attending the exhibitors.

Mr. Hill's somewhat arrogant denial of the use of certificates for the purpose of booming the sale of his own varieties is rather neutralized by an inspection of page 23 of the G. H. & Co.'s spring trade list for 1893.

I quite agree with Mr. Hill that no fair judge would have withheld the certificate awarded to Mr. Dornay and Mr. Graham at Cincinnati, but there were several other exhibitors to whom I wish almost any unbiased narration would have awarded certificates. The damage done is not the certificate awarded, but by certificates withheld from varieties fully as meritorious, fully as profitable to the grower as the variety to which the public, and upon which the seedling grower has expended fully as much time, care and expense which could have been fully entitled to recognition as was Mr. Graham's selection and propagation of a sport from Daybreak.

The difficulty with the whole certificate business is that the "Peers" are endeavoring to make the certificate affair a close corporation, so saddled with rules, regulations, expenses and obligations that the plain ordinary seedling grower may feel that he is not wanted, that his productions are slighted, and as a natural consequence he will drop out of the society, and that body will peter out to a few who will be engaged in a mutual admiration society.

Witness the five-dollar entry fee (put on for the avowed purpose of discouraging the small grower and obliterating his new seedlings), the dollar charge for registering names, the snap changes in the rules for exhibitions, which might appear to have been made for the purpose of giving some one the advantage. Would it not be better if the "Peers" placed themselves upon the level of the ordinary florist and made him know that his efforts were fully as well worth recognition as the efforts of the "big guns," who can tickle each other with favors? If this were accomplished, would you not have little cause to complain of the decadence of your societies?

Would it not be well to cease making certificates "affaires commerciales," and instead leave each seedling grower to introduce his own productions upon his own reputation, he will be hereafter issued with respect the legitimate results of his own reputation? Is it safe, is it just, to saddle the grower with the responsibility of vouching for the commercial value of an untried seedling?

Is not the opinion of the raiser who has studied, during an extended period, the peculiarities of the plant he offers far more value than the "opinion," i. e., "certificate" of any set of judges, when that opinion of necessity is formed from the inspection of a bunch of flowers, and a plant especially grown for the purpose of being awarded a certificate?

Are the opinions of the neighborhood florists of this country such children that they cannot get along unless the "Peers" make rules and regulations by which to govern them, which they must buy their new creations? Would it not be well to let the grower who brings a European variety to this country, saddle it with a new name, and foists it upon his brother florists, reap his just deserts? Would it not be well to let the dealer who brings here a European chrysanthemum and foists the trade by a skillful and unscrupulous use of language by the languages—meet the reward that is justly his due, and would it not be well to let the grower who deceives, who does not deceive, who has been honest

and conscientious and dealt fairly, meet with the just reward which his reputation will surely bring him?

Is it fair that because we have had a few "ray deceivers" among the trade we should assume that the grower to be trustworthy and to attempt to exact from honorable men the payment of a license to do business in the way of a florist?

While there may be some introducers of new varieties whose representations cannot be believed, whose previous record is such that they may stand in need of such a license, the honest grower who has succeeded in foisting the trade even when marching under a certificate banner?

Is there any known test of the commercial value of any plant save its introduction, its general culture and its general sale to the public? Will ten thousand certificates either help or hinder a variety which a florist cannot grow, which will not produce sufficient flowers, or which his customer refuse to buy?

Is it not a piece of brazen assumption for any judge of judges, to attempt to either condemn or indorse the commercial value of a creation without having given it a practical test? It seems to me as if all the certificates thus far issued have been mere guesses, and that all the certificates that will be hereafter issued will continue to be mere guesses. The certificates issued in the past certainly have been no proof of the value of a plant as to the commercial value of a flower, and I fail to see wherein we are to be any better off in the future.

The limits of this letter will not admit of suggesting any remedies, but if Mr. Hill cares to carry on the discussion I will endeavor in another letter to indicate such a course of action by the society as will avoid the impractical dangers now marked out by the "Peers." In the meanwhile, let us hear from Mr. Hill's clever pen again. C. W. WARD, Queens, March 15, 1897.

The New Trade Bill.

The proposed new tariff bill fixes the rates of duty on all bulbs, plant trees, shrubs, vines, roots, etc., for growth in the open air, at 20 cents per doz. and 10 cents per doz. for those to be taken in vases; thus, all raw material used by the florist will in future pay a pretty steep rate of duty. The bill, as it stands, is very long ago, the S. A. F. took a limited action to have the old 20 cent rate removed under the proposed new tariff bill. How does this intended return to the old

G. J. BENEDICT.

...FLORIST...

Palms and Ferns of Extra Quality Always on Hand.

Grand, A. H., Feb. 11th, 1897

Mr. H. A. Stoothoff.

Dear Sir:—

I am glad I can indorse Tobac-Oil. What I say is absolute fact, not fancy. My houses contain ferns and common bedding stock, callas, palms in fine variety, orchids in bud bloom, etc. To brother florists desirous of a safe article for destruction of Aphid I say, Use Tobac Oil. I find it safe and clean, doing the work thoroughly. I have used it where tender ferns and delicate flowered orchids were in bloom and they showed no ill effects. It can be vaporized, and hardly any odor is noted when house is filled with vapor, which permeates the air in a very few moments; customers could come in any time during the vaporizing process and I do not think they could notice any objectionable odor. The work done by it is truly magical. I am glad to recommend it. I apply it by placing the required quantity of Tobac-Oil (diluted) in an iron stove kettle, removing the griddle from my coil heating boiler and inserting the kettle; soon the Tobac-Oil is to a boiling pitch and the vaporizing done. Respectfully yours,

G. J. Benedict

system of heavy duties please our American florists now? Will they get more money for their flowers, or will they get out of what people should this duty come?

Will it not be a good plan to invite discussion of this subject for your special issue of April 3? A grand trade-airing on this subject, before the law be passed, may be the best thing to do. The trade of the country should certainly have a chance to speak its mind publicly and plainly. I have already certified and published in your issue, and have been invited to vote on the subject. I have not yet returned it to you, by filling out a blank vote printing in the paper, but returning it to your office to be canvassed. I am sure you will be glad to receive it, and forward it, together with your issue of April 3, to the Committee on Ways and Means of the House of Representatives.

Thus Congress will get a chance to learn the wish of the majority of our trade, nobody can contradict that the voice of the favored ones only, or more aggressive one, has been listened to, and we all will be satisfied that the will of the majority be done, whether we favor a duty or not.

How does this strike you?

A REPUBLICAN READER. (Our correspondent's idea strikes us most favorably, and, on the editorial page, our thanks are tendered to you, giving the discussion invited.—Ed.)

Tariff on Seeds.

Editor Florists' Exchange: In your issue of March 6, page 216, fourth column, you give an opinion which believes that the duty of 40 cents per bushel as given in the act of 1890, shall be "illegally" referred to Paris, and changed. This is incorrect and misleading as regards peas, as they are dutiable at 20 cents per bushel in the act of 1890, and have never been changed since. Previons to 1890 the duty on peas was 40 cents per bushel.

Knowing you will be glad to correct an error, we thought you would be glad to see this. JOHN H. ALLAN Seed Co. Pictou.

Toronto.

Trade Notes. Carnation show-downs are very plentiful here now; violets are offered by the thousand. Roses are still fine and abundant. The weather has been very bright, and nearly all the carnations offered in the show are generally rather slow. One of our growers is sending to present a new, nice box of roses, enclosing his card in the boxes, and there is no doubt he will increase his number this year.

There has been no plant trade on the market this Spring, as the Saturdays have to be given to the carnation show. It will go on now, and there is every prospect of warm weather soon. THOS. MANTON.

Providence.

The Market. Business has revived a trifle during the past week, but is still far from brisk. There is a demand for flowers, and a majority of which are of the first quality. All roses, however, are scarce in this market, but what few are in demand are secured from Boston. Violets are fine and in large quantities. The indications are that there will be a considerable shortening up of the supply at Easter. Jetties.

MATHEW MACNAIR has been nominated by the Prohibitionists for Representative to the General Assembly from his district.

J. AUSTIN SHAW, representing Siblebrot & Son, of New York, was a recent visitor. While in Providence he was met by several florists, is contemplating the building of three greenhouses in the Spring on his farm at Conant, near Providence.

The Mason Box Company at Attleboro, which manufactures a large number of the florists' boxes now in use, is making radical changes in the interior of their box. Preparations are being made for the putting in of several new machines for box making. A new gasoline engine has already been placed in position, and is about to be run. A new flower press has been purchased.

WALTER MCNORRIS has gone on a visit to Glasgow, Scotland.

WILLIAM MITCHELL has been confined to his home during the past fortnight by a cold of appendicitis, but is now improving.

RANDALL BOOKER, of Johnston, R. I., intends to enlarge his plant nursery, by building another house for carnations and violets.

THOMAS JOHNSON and wife are contemplating a Southern trip next month. W. H. M.

Special terms for large quantities. Remitt Draft on Paris or Lyons with orders.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Boston.

The Boston wholesale market this week has been in a fairly good condition, stock of good quality moving readily, with the exception of violets and bulbous flowers. Violets particularly are in abundant and prices uncertain. Roses and carnations and all other regular lines, including smilax, are in good demand. Flower orders have not shown any advance. The retailers are doing a satisfactory business all along and the wholesalers report good shipping business.

Spring Show Next Week. The Spring show of the Massachusetts Horticultural Society opens at Horticultural Hall next Tuesday and continues until Friday, remaining open day and evening. Both halls will be filled with choice exhibits, making the event of great importance.

Market Around. The seedsman in the vicinity of Market street report a very favorable opening in trade in that line, with prospects of a good Spring's business.

THE RETAILERS are beginning to make inquiries for flowering plants for Easter trade.

JULIUS ZIEN is settling established at his new retail store, No. 3 Beacon st.

C. P. GRIMMER has everything in good condition at his new store, which is particularly attractive.

H. J. GOMMANS, representing K. J. Kurkij of Ghent, Belgium, is looking up business for this season. He is located at his headquarters at the United States Hotel.

M. CHARLES V. WHITTEN died at his home in Dorchester, at 3 o'clock Thursday morning. He was a well-known business man and had been for many years at the head of one of the largest clothing houses in New England. He was an ex-warden, ex-director of the Commonwealth Bank, and occupied many other positions of trust and honor. On his bequest the estate in Dorchester is an extensive range of greenhouses which have been under the management of Lawrence C. Cutler. Mr. Whitten was about 60 years of age, was a resident of Dorchester for 40 years, and leaves a widow, two sons and two daughters.

Phidelphea. State of Trade.

There has been very little business during the past week; all kinds of flowers have sold slow, even roses, which have gone well all along, have stood still the past few days. Prices for good dovers have remained firm, but second-class stock could be had at any fair price.

Carnations have sold fairly well, but at a reduced price. There has been a better sale for first-class flowers, the stores asking more for these, so that poor stock finds buyers. Violets are continuing quiet and only really first quality blooms are bought by the stores.

Northern daffodils are now very abundant, and in many cases the sales scarcely pay express charges. Good double Violets are selling slow. \$3.00 is the little room for these southern single.

Horticultural Society. The meeting on Tuesday last, was poorly attended. Federsze gave a very interesting lecture on "Spraying Orchards." It was one of the best that has been delivered before the Society in some time. He also answered many questions regarding spraying. City uses for carnations are recommended, using the Bordeaux mixture, with 5 ounces of Paris green and the arsenite of lead solution, 1 to 15.

W. R. SHLEINER had on exhibition a vase of new carnations, mostly of the line, which was greatly admired; it is of a color that is wanted, and will be welcomed by all. As he named the variety a cardinal red, death of St. Eisenhart.

W. T. EISENHART, father of R. M. Eisenhart, died on Friday last, at Doyistown, Pa. He was a resident of Boston for 50 years. D. R.

Paterson, N. J. The Park Commissioners, at a special meeting held Monday afternoon last, passed a resolution expressing sympathy with the city and with the family of the late Henry McCrow, park superintendent.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## OPINIONS

### A Talk on Carnations

At the regular meeting of the New York Gardeners' Society, held on Saturday, March 13, C. W. Ward, of the Cottage Queens, N. Y., gave an interesting and instructive presentation, for exhibition, and general purposes. He pointed out that in a commercial variety early and continuous flower qualities were essential. There were some varieties that were "croppers," as, for instance, Buttercup and Eldorado, neither of which was a continuous bloomer; there was always an intermission in their flowering. The same was prevalent in Scott, though the intermission was not so marked as in some other varieties. This tendency to crop could be changed somewhat by pinching in the field; endeavoring to avoid cutting all the buds back at one time so as to prevent getting all the buds together. There were also some varieties that can be "stumped" by checking and thereby forcing the flowers.

Mr. Ward named the following carnations as being in his experience the best crops of the kind: **PINK**—Scott, Daybreak, C. A. Dana and Tidal Wave.

**YELLO**—(the most difficult list to lay out at the present time.)—McGowan, Alaska, Storm King, Flora Hill and Harrison's White. In the last one finding a place in the list on account of it being a sport from Scott.

**VARIEGATED**—Mrs. George M. Broad and Armaszdy.

**YELLOW**—Buttercup, Eldorado and Mrs. Magre.

**SCARLET**—The only variety in this color the speaker had ever been able to make a crop, but he succeeded in placing it in the best commercial scarlet-to-day, but, unfortunately, the flowers were too small.

**Double** carnations, Mr. Ward enumerated:

**PINK**—Pridemast, Daybreak, Maid and Tomp.

**WHITE**—Storm King and Flora Hill.

**VARIEGATED**—Lily Dean, Mrs. George M. Broad and Armaszdy.

**YELLOW**—Buttercup and Mayor Pines.

Eldorado can also be grown, but it is very hard to succeed in making it. He obtained perfect flowers of this variety by placing a rubber band around the bud as soon as the flower begins to open.

In regard to seedlings, Mr. Ward stated it was becoming a difficult matter to select the best variety to grow. It was entirely impossible for him to tell anything about a carnation until he had grown it sometimes three years. By studying the habits of many seedlings, it was possible to grow splendid flowers and obtain large crops.

In the discussion a number asked a question regarding Mayor Pines carnation being opposed to heavy feeding—rich soil. Mr. Ward had seen the variety at the originator's place; there, he thought, the plants were fed regularly; the soil was rather heavy. However, in his own garden, he saw the plants about Thanksgiving; they were then in full flower. The stems were about 20 centimeters in diameter, and the flowers 3 inches in diameter. It seemed to him that a rich soil suited the variety, but that the soil at the originator's place; the stem and flower were right, and it was a magnificent keeper.

When questioned as to the relative to the propensity of Scott to burst at the present time, Mr. Ward said it was inexplicable. The reason that was given was that the variety, which every variety of carnation has, after it has been forced for any considerable length of time, this intermission was, the freer you have a variety, the more cuttings it produces, the greater the number of flowers you grow from them. The more you propagate it the sooner it begins to flower. Intermission to whether obtaining cuttings from different places, who help the matter, the speaker replied that it was not, and again, it might not be entirely true. He said there the cuttings had been cut and whether or not the stock had been cut in the country, he would prefer to get the plants, and examine the plants; and then, by the time he had cut them, to ascertain how well the cuttings struck. The pretty good test of the vitality of a carnation can be obtained if the cuttings struck readily; if they came out without any spot or without any burning of the leaves, it is a sure sign that the vitality of the plant was unimpaired. One thing

noticeable in the falling away of vitality was the difficulty with which cuttings could be struck. There was a great deal of the productiveness of the plant when the striking of the cuttings was not affected at all by the vitality of the plant, and it did not blossom much, if any. This had occurred in several kinds; in that case, the vitality of the plant, much more than when the plant was very productive. If one finds a variety, the cuttings of which do not strike readily, he may make up his mind that something is wrong.

Chris Besold, Minola, N. Y., made a few remarks about his new varieties, Mrs. Francis Jost and Nero. From what is possible, by selection of good cuttings, to obtain improved plants of a variety that might appear to be a different strain altogether. He advised against using cuttings affected with viruses. Plants attacked with spots by proper attention, could be got into good condition again.

Among the exhibits shown were the varieties Mrs. Francis Jost and Nero, from Mr. Besold, the former being certified; Maid Dean and Lily Dean, from John M. Ward, the latter was awarded a certificate. H. Moutch, Bay Ridge, sent two seedlings, red and white, receiving honorable mention for their beauty.

### Selection of Varieties.

Propagating is still at its height. A great many growers are busily engaged with this, while a greater number are buying either for their own use or for resale. The stock will prove profitable additions to their stock.

Some of us are thus engaged it might be well for us to pause and reflect on how many varieties we may be growing, which have not been selected for any special purpose to make them really profitable and worthy of further consideration.

Among the discarded and less than twelve varieties, five of these were novelties of 1896. Doubtless many others discarded, which may not be worth the trouble.

When planting time came last fall we realized that it would be far better and more profitable to discard the older and more tried varieties of the same color, and which were superior to them in every respect.

Although we claim to be situated in a region most favorable for the culture of carnations, we have had to pay for the seedlings for the time, labor and the space they have occupied, and the sums they cost us. Had these varieties originated with us, I hardly think they would have been discarded, and the sums they cost us. I know of nothing more injurious to our business than to disseminate novelties which will not pay for themselves. The rate "stunt," that it would be folly to attempt to grow with profit.

Some of us do not wish to infer that these new carnations did not exhibit some good qualities at the place of their origination, but all of them did show some good points in us, but their bad points were so far in excess of their good ones as to render them unprofitable. Some of these varieties might have passed fifteen or twenty years ago, but it must be remembered that great changes have taken place in the culture of the carnation since then, and one, which is to displace, or even divide the honors with it, will not be in the picture. It will be a gem of the first water.

This year we will discard some eight or ten varieties, five of which are novelties of last year.

Most of these and all of the new ones, selected, will be in the picture for the year, they were deemed as unworthy of a place there.

On the subject of most of the novelties sent out each year, and while we find it convenient to discard some at the present time, it is not the whole of the matter, we feel satisfied with the result.

It does not always get all of the best ones, which will be the most profitable to do this without buying some of each and every one as they are sent out each year. It would be the most unprofitable to do this without buying some of each and every one as they are sent out each year.

Now, I would not advise an indiscriminate purchase of all the new varieties, neither would I advise, by in large quantities, for the average florist cannot afford to do either of these. Small quantities, and as many varieties as possible is the better plan.

By this method the most profitable ones can be selected without much loss, and if a large quantity of any one or more of them the following season the order can be placed intelligently.

We do not wish to be profitable, however, to buy largely of a few which give promise of being extra fine and decided acquisitions.

When this can be done the full benefit of a novelty can be reaped.

As when every attention was given them, and as a result of this treatment, you discard many varieties for something else, which may not be a whit better, or not even as good.

A reference to the past few years shows me that we discard about or nearly as many new varieties as we do of standard sorts.

It is a mistake to think we are not advancing, but we are not advancing so far, but there is much chat mixed with the wheat, that only an impartial and thorough man can see and judge and separate.

I hope to see the day when all growers of seedlings will have a proper regard for the quality of their seedlings, and not their expenses in experimenting in seedlings by disseminating varieties which, in their better judgment, should be consigned to the waste pile, or at least kept at home.

The confidence of the average florist in the ability of the grower to propagate by practices as these, and if that confidence is to be restored, let us have a higher grade of seedlings.

Nobody objects to paying a good price for a good thing, but to pay a good price for rubbish is not a good thing. It is little more than the average florist can afford.

I am not leveling these remarks at any particular individuals; those who are guilty will feel self-conscious, and if this article should help to bring about the desired result, I will feel more than repaid.

I trust that by speaking thus I do not make any enemies, for this is not my wish. Those who go into the seedling business should not do so with the expectation of reaping a bountiful harvest, for there is considerable work and expense attached to it, and it is not easy to liquidate this expense by offering a poor or medium quality to the trade as a grand money maker.

It is better to possess a few, and have a purpose of putting it on the market. It is better to possess a few, and have a purpose of putting it on the market, and abide by that judgment, than to be the disseminator of a worthless variety.

H. WEBER.

### Nivea Carnation Again.

I desire to state that in the Fall of 1898, in purchasing Winter stock of white carnations of H. A. Cook of Shrewsbury, Mass., I did not see the variety Nivea. I ordered, saying that it was a new seedling of mine, but that he did not know whether it had been previously introduced. He sold me without any restrictions whatever. It has since been introduced, and I have propagated it for many years, and have a purpose of putting it on the market.

It is better to possess a few, and have a purpose of putting it on the market, and abide by that judgment, than to be the disseminator of a worthless variety.

Spencer Mass., A. W. HOTT, Ado. Mar. 16, 1897.

### FLOUS CARNATION DELLA FO!

MYERS & SATTMAN, Wyndmoor, Chestnut Hill, Phila.

## Decorative Effect of Trees and Shrubs in Winter.

(Continued from page 265).

*Porphylla Fortunei* is not generally thought of as an ornamental shrub in winter, but I have been especially attracted this year by a large clump of it in the arboretum. It is quite a new shrub, and has a mass of greenish yellow. Planted in a mass it is very effective; individually it attracts less attention. *Clethra alnifolia* is noticeable on account of its old persistent seed pods, blue gray in color, with the bluish white of the stamens showing. Thus typical though a winter shrub, it is extremely showy on account of its large clusters of reddish brown seed vessels, which last until the plants start into growth in spring time. *Rhus aromatica* is pleasing to the eye on account of its speckled flower clusters borne on the extremities of the slender grayish leafy stems. The same might be said of all catkin bearing shrubs, as *carpinus*, *alnus*, *myrica*, etc.

*Pyrus nigra* holds its black, buckcherry like fruit all winter, the one objection in noting this being that the berries wither upon the approach of severe weather. *Pyrus malinella* has a beautiful covering of snow over its bark of a brownish tint color which makes it stand out conspicuously in winter. Among the other ornamental shrubs Hamamelis, Virginiana, or the witch-hazel, is very noticeable in winter on account of its persistent deciduous leaves, which, like those of some of the other, remain on the plant throughout the winter. This persistent character of the leaves may not be a desirable point in the estimation of all, in that it conveys the idea that the plant is dead; to me, however, it is desirable in a limited quantity to vary the color of the winter scene, the common European chestnut, is very attractive in winter on account of its large terminal clusters of thickly set black berries.

Rhodotydes kerrioides, when well set with terminal clusters of four hard-shelled blackberries, is very fine for winter. While *Hamamelis*, the black elder, does not retain its leaves in winter, it is very attractive throughout the winter, yet it should not be omitted from a list of this kind, as it is still an effective plant during the holidays. The same can be said of the Japanese form, *Hamamelis*, which is vastly more prolific, but bearing berries of a smaller size. *Celastrus scandens* and *Celastrus articulata* are two of the best vines for running over a trellis work in winter. The idea of getting pretty winter effects, as the small drooping clusters of orange colored berries make the winter scene more attractive.

In trees the birches seem to stand in front as the most beautiful in the winter, and the most characteristic persons express an admiration for this class of trees, which seems to have a greater charm than any other. The most attractive is the weeping birch, *Betula alba*, probably the most common, especially *B. alba laciniata*, which has the most attractive and graceful in winter, the white trunk marked here and there by the black connections of the slender branches. The tree has the habit of the slender branches, making it a very beautiful tree. *Betula papyrifera*, or the paper birch, is also very attractive in its native haunts; a broad-spreading tree of medium size with smooth white bark and a trunk like that of the birches, with a dish single form a curious contrast with its slender reddish bronze branches. *Betula nigra*, with its distinct character from the others, but no less desirable. When standing alone it is singularly graceful. The stem of the plant is very white, the trunk is brown bark, very loose and torn; the trunk is dark gray, rough and with little resemblance to the bark of any other birch, with the possible exception of the blue black birch. The young shoots are brown, and the light green of the bark of the trunk, the bark of the tree is very much broken, showing a great variety of color.

The shrubs in the arboretum of trees which produce fine winter scenery, especially so if it is pruned severely every year or two, as in the case of the young shoots, keeping it more in the form of a shrub than a tree. The other day I had

the pleasure of driving through a white road near Dehman. It was during the middle of the day, the sun was well up, and the day was clear. We came to see into full view of this beautiful stretch of white road, about fifteen feet high and as wide as the distance between the trees. I cannot make any statement positively. It was a pleasure to remain long in the middle of the road, and to see the sun and describe all the species and varieties of this large group of plants in regard to their color and their uses. It was a pleasure to see an artist, but the bars vary in brown, yellow, light green and dark green, and in color. The season is not yet advanced. The most developed catkins which in the winter months show greatly the color of the catkins. The colors are: saix vitinea eretizemensis, saix itria, saix aca, saix (cassian variety), saix corvina, and saix pectinata are a new lot. I saw in the nursery rows of the arboretum as being especially noticeable on account of its constant color of the leaves.

Among our smaller trees, Acer Pennsylvania, or striped maple, possesses many varieties to a number of winter colors. The one smooth bark, olive green with orange and white marking through out the year, is the most beautiful. The leaves are very bright red. Acer spicatum when cut down to the ground springs up from the base of the trunk in a very short time. It presents a pleasing effect similar to some of the ornamental trees of the corner, the young shoots are very bright red. This is also true of many of the other species, but not so to the same extent. The leaves of the species I might mention others, as the spruce, castragis, physocarpus, etc., but while I have not seen them in winter, I have the idea of the number of our hardy woody plants which are decorative through all the winter. The most beautiful of these are the greater part of the winter is charming, and you will notice that the greater part of the winter is charming. The most beautiful and desirable plants for summer plantations, which prove that in autumn and winter, the most promising remedy yet discovered at the present time.

I might mention others, as the spruce, castragis, physocarpus, etc., but while I have not seen them in winter, I have the idea of the number of our hardy woody plants which are decorative through all the winter. The most beautiful of these are the greater part of the winter is charming, and you will notice that the greater part of the winter is charming. The most beautiful and desirable plants for summer plantations, which prove that in autumn and winter, the most promising remedy yet discovered at the present time.

I have spoken exclusively regarding deciduous trees and shrubs as though they were in winter all the year. This is not so, and I am a great admirer of the evergreen, but in treating this subject writers too often leave out of consideration the beauties of our deciduous trees, and therefore at this time call them more especially winter trees. While it is true that we cannot spare our evergreen trees it is evident that we could in dispense with these trees in winter. There is a certain number in evergreens which, though not trees, certainly does not lose their leaves in winter. There are a number of deciduous plants, changing from month to month, and from season to season, and an artist in the art of their transformations throughout the year.

In speaking of evergreens it is not my purpose to list them, but to draw attention to me to enumerate all of our hardy trees and shrubs which belong to that great and valuable family, conifer. A visit to Mr. H. H. Hunney, who has a large collection of trees and to the pinetum in the arboretum would be more instructive than anything that I could say of this class of plants. They are: Abies, pines, spruce, larch, yew, cedar, and cypress. The most beautiful of these is the one which belongs to his noble family will be found, and a careful study should be made of the plants which are to plant for both summer and winter work.

When walking through any grounds in winter, which are well planted with trees, a landscape architect will reveal to the eye some plant which especially appeals to him. It is not the most beautiful of the other equally beautiful though less conspicuous shrub or tree. In giving you a list of the trees and shrubs which are to be planted in the winter, I have mentioned those which will withstand our New England climate, and are highly attractive in winter. I have also mentioned those which I have mentioned to you, and my suggestions will prove of value to your future work.

## Diseases of Forcing House Vegetables.

Bulletin 73 of the Ohio Agricultural Experiment Station is devoted to studies of some of the more common plant diseases of the forcing house and garden, especially those encountered in the culture of vegetables under glass, an industry which is assuming very considerable importance in Ohio and other Northern States. The bulletin is illustrated with several plates.

Commonly known as "damping off" at the Station of lettuce rot, a disease which affects the head varieties especially, when grown under glass. The Grand Rapids variety seems to suffer least. Too high temperature, especially at night, is conducive to the rot. Through ventilation and care in watering are the remedies suggested. Other diseases of lettuce are leaf blight, leaf perforation and downy mildew. Experience at the station and elsewhere has demonstrated that when lettuce is watered by sub-irrigation it is much less liable to these diseases than when watered.

Another class of diseases affecting especially cress, tomatoes, begonia, cucumbers and some other plants is caused by small eel-worms or nematodes, microscopic in size, which work in the roots of the plants, causing minute enlargements or galls. The symptoms of attack are stunted growth, yellowing and drooping of the leaves, especially dying of the leaves at the point or lateral margins, with a scalded aspect. In roses, which are the most liable of all plants to nematode attack, the disease is known as "die-back" or "die-back." The steaming of the soil before planting is the most promising remedy yet discovered at the present time.

The powdery mildew of composite plants has been successfully combated upon cucumber by the use of lime, and with weak solution of potassium sulphate or copper sulphate. Probably the downy mildew of the cucumber would yield to the same treatment.

The sudden withering of outdoor cucumbers is due to a bacterial disease, which is carried by plants and seeds, and the cucumber beetle. No effective prevention is known, but burning of diseased plants and the destruction of the beetle are indicated.

The sudden withering of leaf and fruit of cucumbers is found in the East and is likely to cause trouble to pickle growers in Ohio. Spraying with Bordeaux mixture is indicated. This disease, as well as for a new leaf-blight of the muskmelon, causing many rather large, dried spots in the leaves, followed by dying and curling under from the tips to the margins.

Tomato leaf-spot, the most common fungous disease of tomatoes grown under glass. This caused serious loss in the station greenhouse in 1913, where it was introduced from a plant over from which it spread throughout the houses. The disease first appears as rusty brown patches on the lower surface of the leaves, and these patches enlarge the leaf becomes yellow, with and finally dies. In cases of serious attack the leaves are withered, and in any case its growth will be seriously checked.

Tomato leaf-spot, as with lettuce rot, thorough ventilation is required, and spraying with diluted Bordeaux mixture is indicated. Cucumbers are also subject to other forms of leaf blight and spot, some of them affecting fruit as well as foliage. All diseases of this class should be carefully watched, and in any case its growth will be seriously checked.

The bulletin is a report of progress in the study of plant diseases made at them but little known, and in case of serious outbreaks of such diseases gardeners are recommended to send samples of diseased plants to the Experiment Station at Wooster, with full description of soil, treatment, etc.

## OBITUARY.

Henry McCrowe.

Henry McCrowe, who for the past three years had been Superintendent of Parks at the City of New York, died on Monday, the 14th day last, March 14, of Bright's disease. He was 50 years of age. Mr. McCrowe had been in the service of the City of New York and was inspected for work for the past three months.

Deceased was born at Twickenham Ferry, near London, and in his younger days was apprenticed to Vetch. After serving at Twickenham Ferry, he was employed by the Royal Engineers, he became manager of the extensive parks surrounding the home of the Marquis of Blandford in Ireland, and had charge of the park-like domains of Lord Peck, Sir John Garnet, Capt. Hill, and J. Murphy, the brewer, and Dist. He worked some time in Sander's nurseries at St. Albans. He came to America ten years ago as an gardener to J. R. Picher, Esq., and then went to Woodstock, Vt., where he gathered together an extensive collection of plants. Subsequently he became gardener to Mr. J. R. Brown of Bellport, L. I., and to the City Land-escape works, among which was the laying out of the grounds of Banker Lanier at New York City, in partnership with J. S. Parks, he commenced in the florist business at Patchogue, L. I., which he relinquished to accept the position he held at the time of his death.

Mr. McCrowe had an intimate knowledge of plants and was a very successful orchid grower. He was superintendent of the New York Flower Shows for two successive years, and his work was of a high and much acceptance. Obliging at all times, he was well liked by all the exhibitors. At

The Late Henry McCrowe.

the last election of officers of the New York Florists' Club, he was the unanimous candidate for the presidency. He leaves a widow and six children—three boys and three girls.

The funeral took place Wednesday, March 17, Messrs. S. C. Nash, John G. Eiler, A. L. Don, A. Dimmock, W. J. Stewart and J. W. Withers, representing the N. Y. Florists' Club, were the pallbearers. Interment was in the Holy Sepulchre Cemetery, Patterson, N. Y.

The Paterson Daily Press pays the following tribute to the deceased park superintendent: "Mr. McCrowe came into the employ of the Commission and took charge of the parks in New York City. His advance in the development and artistic embellishment of the parks under his management was quite noticeable to all, and universal expressions of sympathy and regard are heard over his untimely death. His work was so carefully planned and executed for every piece of work he undertook seemed to blossom into beauty. He was a master hand in his profession, which he carried out on a scientific basis. There were many who were good gardeners, but he undertook, for he always knew his mind's eye beforehand how a piece of work should be done, and he always completed. He was schooled in every root and branch of landscape gardening, and in the art of planting and strictly implements, as he was also with the draughtman's pencil. As a grower of flowers, ornamentals, and shrubs, he was such as only England, the home of landscape gardening, produces. Mr. McCrowe was a man of high character, and a thoroughly grasp and digest all that he had to do to the enrichment of his mistreated mind."

**The Sweet Pea.**

A paper on "The Sweet Pea, the Flower for Everybody," was read before the Massachusetts Horticultural Society Saturday, Feb. 12, by R. T. Fernald, of New Bedford, in Orchard. Mr. Hutchins said in part:

"With regard to the history of the sweet pea, Francis Copani, an Italian botanist in Sicily, about 1700, was the first cultivator of this flower. There were four original species, two of them natives of Ceylon and two of Sicily. The Gandolle, however, speaks of two only, the other two being variations of these. Mr. Eckford of England began specializing this flower in 1885. Mr. Laxon also introduced some valuable novelties, but to Mr. Eckford must be attributed a large part of the honor in developing sweet pea to its present beauty. Today California is the second great factor in sweet pea. That State is supplying the best trade stock we have, and exports almost the balance of the world's supply. It seems to me that England, France and Germany must refer to the sweet pea as the California stock. Some growers in California do not hesitate to grow 250 acres of the flower so as to supply every known variety.

"Those who failed in the culture of sweet pea last year had plenty of good company. I bent all my energy to escaping the blight, and succeeded only in seeing my vines go up ten feet, blooming in a scattering way after they were five feet high. There were two main causes, the first being that we had no frost to check a rapid start, and this was followed by an excess of rain during the growing season. One of the worst vices of sweet pea is a tendency to rank vine and no bloom. Last year we had exactly the conditions to produce that. Make the plant work, if you want to increase the bloom. The root is the part of the plant that works, and the stiffer the soil the more wholesome exercise it gets. The sweet pea does not have a soft bed beneath it, but a bed that induces a less hardy growth, induces the root and weakens it for its after-work. It favors a top growth beyond the power of the root to support. It stimulates growth at the expense of bloom. We have been following the trench system, that is, we have dug an inch and a half beneath it, and fertilizer, and the very looseness of this bed under our seed and vines has been enough to make mischief. The soil should be made firm by treading down. We have weakened the plants by this soft treatment, and then have impressed them at the tenderest age four inches below the sunny surface of the ground and suffocated the still more by filling in the earth before they were at all hardened. Hence the clay loam at the bottom should be done away, the soil is a light loam. Clay loam ought to produce good flowers.

"I should be better off if I used the trench method. I have a soft, spongy soil, I plow it in the Fall, going over each furrow three times. Then I dig out about six inches where my rows are placed, treading the soil, if I find it soft. In the Spring I plant my seeds in the trench deep or shallow and cover an inch, and roll the soil above and along the sides. If you have a clay loam, it will set sufficiently. I believe in spading in the Fall for the purpose of mixing, but I should let the frost do this. Then I believe in the "firming" of the ground and avoiding the other things that have smothered our tender plants. One by one I have tried all the good things that have been recommended, but I resort to tar paper, and give my vines two feet in size to the ground every few feet to prevent the roots running lengthwise of the rows.

"I have been very early and successful. After the frost is out of the warmest part of the garden is the time to plant the seed, and continuing to do so until the first of this purpose. Plant the seed liberally enough for all various losses. I plant the seed once in a row, and sow ten feet. Use more than that if it is cheap mixed seed. After all losses the plants will come up. I have sown the seed apart. Some of the devil that did not go into the swine went into the cutworm. If I could find a way to get that devil out, I have many of them I shall surely have my

pride humbled soon. I believe in going at him in the Fall. Just as soon as the frost has spoiled things, put on a good dressing of salt, freeze him out by spading up as late as possible. I find virtue in bran and paria green; a pair of bran with a table-spoonful of the poison stirred in, sweetened a little, and sown on the surface or lightly hoed in in the Spring is a simple remedy. Dverting the worms by planting something of no value for them to feed on helps. Go out early in the morning and kill them before breakfast.

"The last two seasons have brought them other pest, I call it a louse. It colonizes on the under side of the foliage, near the base of the vine, and causes whitish translucent spots on the leaves. Go at it vigorously with tobacco tea or a force of water from the hose. I use the latter, but with the excess of rain, it caused the vines to grow up at the expense of bloom last year. The balance of the rules for culture are simple and thoroughly done. Run or trellis strongly, and give the vines room to ramble. Water freely after the blooming

About 25 men are employed the year around to take care of the place. The palmetto and cocos palms are grand. Plants of 25 feet and over in height were 7-8-planted with ease, and are growing nicely, particularly the cocos, which are very abundant, and look pretty with the blue flowers and fruit of good size. The lavas are well kept, and borders are planted with blooming plants. Many beds of various sorts of plants are scattered over the grounds. Among the plants noticeable for their thrift and beauty, were fine beds of crotons, about 20 varieties, highly colored; acalyphas of great size, aralias in variety, also coleus and bigonia. Observers and hibiscus grow to good size, and look very bright, particularly the hibiscus with its large red flowers. Among the larger plants and trees, the most conspicuous and the grandest of these, according to Mr. Hegarty, is the large Ficus, a good sized tree bearing a fine large bloom leaf resembling an orchid. It is also very fragrant. The graceful cocos, pal-

metto also multiply very rapidly, and could no doubt be grown in this locality, as well as in Bermuda.

"The weather here is delightful, the thermometer stands at about 85 degrees, but a mid-ocean breeze makes one feel very comfortable.

"I was also astonished to see the grand carnations and roses which are shipped from the north to St. Francisco, and have control of the florists' trade from St. Augustine to Miami. I must say I never saw any better carnations than those of C. A. Dana, one of Dorner's new seedlings, I believe. The flowers were of splendid size and color, and had strong long stems. I saw a rose which was shipped from Long Island, was his regular shipper, and he never saw anyone else's in his packing house. The rose was of the best condition, and he can keep them so for almost a week after he receives them. They bring \$1.50 per dozen, which is not too much, taking into account the heavy express charges and other considerations. American Beauty from North, shipped to New York, were fine blooms; they bring \$1.50 to \$2.00 per box. Bride and Bride-maid do not ship so well. Mr. Foster says, occasionally he gets good flowers. E. C. REINEMAN.

**A Standing Wreath.**

The accompanying illustration is a representation of the wreath exhibited by Wm. I. Brower, New York, in the recent funeral competition for the Plumb Cup, held before the New York Florists' Club, from which body the designer received a certificate of merit. The wreath is based on a triangular base, a point to which the committee judges took exception, claiming it to be architectural in form. The base was formed of green leucotoea and andromeda leaves, springing from which were sprays of brown leucotoea foliage. The wreath itself was 23 inches in diameter, made of brown glaucous leaves, fringed with Adiantum cucullatum, having a cluster of Bride-maid roses, and a spray of white roses to the left. The standard was comfortable and with smile.

**Flower Catalogue Defense.**

It must be with sorrow that Rochesterians see in the outside press stirring allusions to those lovely prospective pamphlets which anticipate the flowers that bloom in the Spring; for the weak jokes and sad humor directed toward the flower catalogues can be only a source of pain to this literally blooming community whence they emanate. Like his entering vine of the pumpkin, we have observed this vein of comment creeping far, and in a growth more luxuriant than that of any number having ever seen before. An editorial in the Brooklyn Eagle is an example. It likens a flower catalogue at the end of the season to a patent medicine sinance as a vehicle of promise unfulfilled. It says, with a ring of scorn in its speech, that without one of these catalogues one "can have no idea of the size to which roses and onions attain. And the colors—why they nearly make one weep with their brilliancy." Now, flower catalogues are a subject on which Rochester is sensitive, and it may be added that we know more about an American grower and his light and Buffalo and Syracuse know—all put together, and here there is a deep regret, that they have not been more liberally dealt with their highly colored promise of flowery Spring. May we not even claim some of their dazzling characteristics? We was found the suggestion of poster art, and shall we permit these books of hopeful messages and benedictions to be idly scorned? No literature of the city is so widely circulated as they, through them the flower city has become a household word. To turn the thoughts of Innumerable Darby and Joaze to floriculture, to those lovely pictures of sun-drenched cottages, and backyards that are living groceries, and to turn the thoughts to Illinois, is a triumph that might be envied by any great florist. The floral trade is great, also the Japan plum, and a few other sorts. Screw pines grow rapidly and attain good size. Fine specimens of acave, perfect in shape and of large size, generally bloom in about five or seven years.

Among the flowering plants the vines are much seen; in fact they grow wild here. I have seen them in the Dutch Abyssinia is used for bordering, as is also alternanthera, phloxes and hardy pinks, petunias are also plentiful. In Canada Crozy, A. Bonvier, and several other sorts are grown, and doing fairly well. Hardid Illies thrive here, some of the stems bearing from 40 to 80 blooms. They

riped comes, but not too much before. Into the rows north and south to give the flowers both morning and afternoon sun on both sides. You are favorably situated here as any garden with sweet peas. Almost anywhere near the sea coast they thrive.

**A Trip Down South.**

I have now reached the southern limit of my trip—a beautiful spot, rich in tropical vegetation, and grounds well laid out, surrounding magnificent hotels of which the Hotel Royal Poinciana is as fine and complete as any found in the United States. The gardens are in charge of Robert Hegarty, a native of Providence, who has done much in the few years he has been here, though at times laboring under great difficulties, the climatic conditions being so different from those in the North.

Standing Wreath, exhibited by Wm. I. Brower, New York, in competition for Plumb Cup. Awarded a Certificate of Merit by N. Y. Florists' Club.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

Cincinnati.

Market News.

Should Lent continue as it has begun, we shall not complain. While high prices for stock of all kinds is a thing of the past...

Generally during this Lenten season carnations have been a drug, but from appearance of our growers will be strictly in it for Easter.

The Easter Outlook.

Easter is drawing near, and the order for all kinds of stock very promising. I noted while walking through the market Saturday evening last that pot plants were selling quite lively.

Saturday was our regular monthly exhibition and meeting.

The Hoffmeister Floral Co. staged some good Beauty of Clematis, Bride, Misses and Bridemaid roses, and a fine pot of Harrist.

R. W. Rittermeister had a choice lot of Emma Wecker. He received a certificate from W. M. Tullis...

The meeting of the Florists' Society was well attended by the committee by routine business transacted.

Harry Edwards, of Newport, Ky., is all smiles: 'It's girl.' JOHN LONZER & SONS, of Hamilton, suffered severely through the late high water.

FRED KLINGE, florist at the House of Refuge, will soon become a Benedict.

THE QUEEN CITY FLORAL CO. will close their stock and all orders by the 15th.

There are whippers in the air that Cincinnati may have a chrysanthemum show this fall...

COME early and avoid the rush. Send your advertisement for the 'Florists' Exchange Spring Special' by return mail.

President Carnot Rose.

We grow First Premium with this rose at the St. Louis Exposition...

Healthily well-rooted cuttings from the best flowering rose, M. Lescage Siebrecht, ...

L. M. & CO., St. Paul, Minn.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

Chicago.

Slate of Trade.

Stock of all kinds is accumulating, and prices are falling. Trade among home dealers the past week was poor, but...

Few carnations now go above \$1.50, while those of very fair quality can be had for \$1, down to 50c. to 50c. per 100.

The very best Harrist sell at \$6 down to \$4.50, but with the very best quality, but sell fairly well, the price ranging from \$4 to \$5.

Burbank has a rounder and broader leaf, more sturdy and as far as flower qualities: the blooms following each other so that the head is always fine.

There is some talk as to what Easter prices are to be for the roses in the market. The lateness of the event this year is not likely to encourage expectations of high prices.

CHANGIAN is doing a lot of shipping, and business bids fair to be very good. The three great features at this place are chrysanthemums and roses.

Burbank has a rounder and broader leaf, more sturdy and as far as flower qualities: the blooms following each other so that the head is always fine.

Yello Crocus now up well and will be a taker as a bedding yellow. Italia is showy, but flimsy. The variety Philadelphia, an improved form of Flamingo, is a very taking flower here.

CHARLES T. NEILICH has started a retail store at 239 N. State st. W. F. PRYOR, of Kennett, Mo., is sending in to Hunt the old carnations...

NEW BUILDINGS. One bears occasionally of new additions going up, but John C. Moninger Co. and A. Dietrich & Co., state the past few months...

Another show town-out-of-door daffodils, and other bulbous flowers, have appeared in this market. E. J. PRYOR, of Kennett, Mo., is sending in to Hunt the old carnations...

Binghamton, N. Y. J. B. Tully is adding a violet house, 140x 18 feet. He reports a capital season.

W. M. Eldridge & Co., are adding a rose house, 18x100 feet. Business, especially in funeral work, has been very good of late.

**Pittsburg.**  
 Trade News.  
 During my absence the past month  
 trade was reported as fair, and prices were  
 upheld well, but the past week has been  
 rather quiet. Stock seems to be plentiful,  
 but there is no great glut, and prices are  
 fair and firm. Bulbous stock takes the  
 lead now. Good tulips sell at from 2c. to  
 3c. wholesale, realizing from 50c. to 81 per  
 dozen. Dutch hydrangeas from 1 to 1 1/2 per  
 dozen for good blooms. Harriall lilas are  
 still plentiful, being quoted at about 1/4  
 per hundred, and selling at retail from 75c.  
 per dozen up. From present indications,  
 the supply for Easter will be heavy.  
 Some good fairly well, while others price  
 is 5c. to 6c.; at retail, from 1/2 per dozen up  
 to 1 1/2. Good carnations bring 1/2 per  
 hundred, selling at 55c. per dozen up.  
 W. Lauch is cutting some fine A. Albertal at  
 present.

It is not often that violets are as abundant  
 as at present, but for all that, prices  
 realized are better than for some years  
 in the East, although the demand is not what  
 it generally is at this time.  
 Plant sales are very slow yet, with lots of  
 stock offered.

**A Gas Explosion.**  
 Years ago, when natural gas was used  
 by all growers for fuel in heating green-  
 houses, explosions were very rare, although  
 the gas was handled carelessly at times;  
 but lately they are occurring more fre-  
 quently. Last Sunday C. Hinkel, near  
 Allegheny City, suffered quite a loss by an  
 explosion of gas, which accumulated in the  
 greenhouses or boiler shed, and became  
 ignited by the flame under the boiler.  
 The boiler house and all the contents of the  
 greenhouses damaged. Walter Hinkel,  
 who was in the building at the time, was  
 badly hurt.

**Jolliffe.**  
 I. S. Carr, of Monongahela City,  
 has opened a branch store in Washington,  
 Pa. Louis Schmitt, who had lately changed  
 of Wyand's place for a number of years, is  
 now with C. Hinkel, and Fritz Muehler's foreman  
 went to Wyand's.  
 E. W. Richards, of New Brighton, paid  
 a visit to the city last week.

The next Florist's Club meeting takes  
 place Thursday, March 25. An interesting  
 program has been prepared by the com-  
 mittee.

L. H. Neff, the Builder at Florist, has pur-  
 chased the store of GIBBONS & McGINNIS,  
 on Sixth st. This is one of the best and  
 oldest stands in the city, and will no doubt  
 flourish under Mr. Neff, who is one of the  
 most enterprising and energetic florists in  
 our vicinity. E. C. RIEBEMAN.

**Washington.**

Among the Stores.  
 Every body who has been fairly busy for  
 the last few weeks, but the prices are away  
 below what they used to be, and seem to be  
 in sinking worse all the time. In the  
 F street stores, carnations are selling at  
 25c. per dozen; violets, the very best, at  
 50c. per bunch and roses anywhere from  
 25c. to 1.50 per dozen for teas. The opening  
 day of Congress used up quite a quantity  
 of material; and next Monday the  
 Senator had a basket or some other kind  
 of floral offering, and many of them had  
 over a dozen pieces.

The Agricultural Appropriation Bill.  
 The Agricultural Appropriation  
 Bill was re-introduced in the House Mon-  
 day. There are no changes in the bill  
 from when it left the House last session.  
 Mr. Smith ill.

Supt. W. K. SMITH has been confined  
 to his home for the past two weeks, suffer-  
 ing from gastric trouble. He hopes to be  
 about in a day or two. G. W. OLIVER.

If you have not tried an ad. in one  
 of our Spring specialties, ask some  
 one who has what he thinks about  
 them. The next will be issued April 3.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Modern Greenhouse Heating.**

One of our boilers, 10,800 feet of two inch pipe, and sixty tons of coal will heat 28,400 feet of glass (four 20x30 double gable houses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrigt" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

**Plenty's Horticultural Works,**

148-156 Randolph Ave.,

JERSEY CITY, N. J.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Milwaukee.**

JACOB FREYTAG has finished a plant which for convenience and appearance would be hard to excel. The greenhouses consist of five, each 30x23 feet, running in a row by lines facing north and south with an office at one end and boiler shed at the other. Several of the old houses which are set in good order, though relegated to the background, will be used for violets and bedding stock. One of the best selling plants for winter is the carnation in pots, also canna. I noticed a fine yellow, a white and a blue carnation. The yellow Crysleams are in good demand; the plants are well grown, many running eighteen inches across, and fine strain.

CURME BROS. report a favorable seed return; this is an important branch of their business, and one which they are making strong. They raise considerable stock at the greenhouses which are under the supervision of Mr. Currie, Sr., one of the old type of Ayrshire gardeners who usually succeed in what they undertake. The whole of the cut produced is consumed, with much purchased outside, at their downtown store.

C. B. WHITALL intends devoting more attention to the retail branch of his trade; to facilitate matters he is removing the business of the Wisconsin Flower Exchange to his store downtown, where ample accommodation is afforded for the carrying on of an independent concern. He reports an excellent season, all things being considered and predicts a bright outlook for the future.

W. S. SCOTT, of the firm of Eriksen & Scott, and treasurer of the local Florists' Club, left something to be desired by Pittsburgh. In the meantime the business of the club is in abeyance, and the members are anxiously awaiting Scott's return.

W. M.

**Saginaw, Mich.**

WM. ROTHEE intends building a large carnation house, which promises to be a unique one, and may mark a departure in the building of carnation houses. He will also make other extensive alterations and improvements.

CHAS. PATCH will add two more rose-houses to his already extensive plant; these will run east and west, with the short span to the south. While at Mr. Fruch will overhaul his other houses and equip them with the best ventilating appliances.

MESSRS. GROHMANN BROS. will likewise be kept busy making improvements and alterations.

Weddings, socials, and banquets have kept the florists more than ordinarily active. The most noteworthy event of recent date was the annual banquet of the 77m-Club. For this occasion the immense stage of the Masonic Temple was transformed into a tropical hower by the artistic arrangement of palms and decorative plants. A unique feature introduced was an improved curtain of wild smilax arranged in a way to represent an immense natural vine growing over the stage, having 25 feet of colored incandescent lights embedded here and there in the green. Messrs. Grohmann Bros. had this decoration in charge.

J. B. GOETZ reports a splendid trade all along the line, especially in funeral work.

INTERANT.

**Bay City, Mich.**

MESSRS. BOEHRNER BROS. report trade as always ahead of anything they had experienced ever since they are in business. Their roses and carnations, of which they grow the best standard varieties, are in splendid condition. Their true joy is the distinction of being the first in the Saginaw Valley to build their houses with the short span to the south. They are much pleased with the result.

INTERANT.

**London, Ont.**

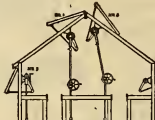

J. GAMMAGE & SONS report a very satisfactory season. Plant trade is increasing both wholesale and retail. They lease a nice central, drawing attention to a well grown general stock, particularly young roses.

**Kansas City, Mo.**  
The monthly meeting of the Club was held, March 11, at the office of C. C. Ripley, an enthusiastic amateur. President Murray is progressive, and has an able corps of assistants. The subject for this particular night was the best and most profitable plants to grow for Christmas; and as we were betwixt and between, Easter as well was discussed. A full list was prepared by Messrs. A. Newell and A. Barbe, which, while embracing nothing but what is generally grown and well known, provoked much discussion pro and con.

Walter Mott was present, and gave the members the benefit of his Eastern observations. The preliminary schedule of the Chrysanthemum Show to take place next Fall was read by Secretary Barnes. It contains a liberal premium list, and encourages design work, which is a wise move, as this profitable branch of the florists' business has been allowed to decay for which many instances the members are themselves to blame. An interested member was M. L. Goodman, who is superintendent of the landscape department at Port Arthur.

**R. S. BROWN & SON** have recently completed a useful range of four houses, one of zinc, two of copper, and one of galvanized iron, of which they are large shippers West and Southwest. The method of heating is with boiler tubes connected to Carmody's new boiler, while Evans' machine does the ventilating; and, by the way, the fame of the illustrious representative of this machine, as a vocalist, is being wafted, as is his machine, the country o'er.

**JAS. PATTY** has become quite a celebrity in connection with carnations, of which he brought a fine specimen to the Club to show the boys what splendid plants can be grown.

**PROBST FLORAL CO.** report a very satisfactory season. They are having a big run houses built last summer none too many; they are 1 and 2, each 10 feet and 12 feet, and also Meteor and Bride roses. In addition to cut flowers, much flowering stock is raised in the house of cyclamen in fine shape for Easter being one of the features. W. M.

**St. Joseph, Mo.**  
L. J. STUPPY has had great success with M. Louise violet this winter, one of the few whose stock has improved instead of deteriorating. He has cut heavily of roses and carnations, but, with others, is looking for the easiest. Well, J. Hille's bill is at present. I saw some grand stock with J. Freytag at Milwaukee. Mr. Stuppy has been sick for some time, being threatened with pneumonia, which it is to be hoped he will escape. His tank is conducting business as usual.

D. S. REICHAUD is also under the weather, but expects to soon be around again. He has a good lot of stock.

**JAS. KIDD** is issuing an attractive mailing plant catalogue which cannot fail to be read with interest. W. M.

TRADE follows wherever the "Florists' Exchange" goes, and the "Florists' Exchange Spring Special" will go everywhere.

**PIPE VALVES**  
Wrought Iron, Pipe, Valves, Cocks, Fittings, etc., for Steam and Hot Water; Rubber Hose, Pumps and Well Pumps.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**The Right Cypress for Greenhouse Material.**

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouses. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we cannot afford to jeopardize. We send out the best only.

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. NO. 13.

NEW YORK, MARCH 27, 1897

One Dollar Per Year.

"Every Bulb's a Pearl"

**THOSE TUBEROSES**  
Beat anything I ever  
saw; very large.

(Signed) W. A. MENROE.

Providence, R. I., March 10, '97.

"Every Bulb's a Pearl."

There is no doubt about it. We have the finest stock in the country. Bulbs are selected 4 to 6 inches in circumference—the True, Dwarf Pearl, and have given satisfaction wherever shipped. Our Tuberoses are grown on one plantation on new land each season—scientifically cultivated, harvested and cured. They cannot be surpassed in quality while the price is no higher than charged for ordinary strains. The general stock of Tuberoses bulbs is getting scarce. Do not delay ordering too long.

Per 1000 ..... \$7.50  
Per 5000 ..... 32.50  
Per 10,000 ..... \$55.00  
250 supplied at 1000 rate.

While we make Tuberoses a tender, do not forget that we carry select stocks of all other Spring Bulbs, Seeds and Plants.

**PITCHER & MANDA, Short Hills, N. J.**

## THE BURBAK CANNA.

The new giant yellow Orchid-flowered variety with musc-like foliage. '95 unquestionably the finest of the new Orchid-flowered class and a GRAND 'Yell'. Realizing the true merit of this grand California seedling, we placed plants of it at once in the hands of members of the **CANNA COMMITTEE** of the Society of American Florists. They say of it, **UNANIMOUSLY** as follows:

MR. D. ZIEGLER, of Northham, Mass., of the same Company, who tested it with all the best new ones, says: "Yellow Burbak is the best yellow in cultivation now, very large flowers of a handsome, bright shade of nearly pure yellow."

MR. J. T. TEMPLE, of Danvers, Vt., of this Committee, says: "This is the best yellow I have seen in 15 years' experience."

MR. FRED KANTZ, head gardener of South Park, Chicago, and an expert judge of Cannas at the World's Fair, says: "The flowers were much admired in the park this summer. The foliage is like rubber; it is always good; you can't beat it."

MR. JAMES DEAN, chief of the New York horticultural display at the World's Fair, says: "Burbak is a new plant without comparison of a new class of these beautiful flowers."

Seeing

It is purity of family, of genus, of species of that it is a right as it is intended to conform. We ask this question by way of information.

The free distribution of seeds is a travesty of the original act of Congress which has made the abuse possible and of which the inventor cannot be held responsible. But what influence can the sections have with its Representative in Congress? It is not in our power to appropriate, if he is, at the same time, profiting by the practice he condemns?

The right agent is the inventor, Mr. Smith, to the letter, but where he upholds the system, and criticizes the acts of Secretaries and Congress, he is not intended to carry out the law as he understood it, and to put a stop to a howling abuse, we must do it for him. At the same time, at the same time, we scarcely think inspiration had much to do with the appointment of Mr. Smith, while we do not question it while he is able to judge better when we see what he does. Our influence and acts are what we need. Our environments, we are apt to think what we do, either from our own volition, or in obedience to custom, or to right. Mr. Smith is at the head of another branch of the Government's charitable institutions, viz., the distribution of seeds. Each member of Congress, and all others as high or higher in rank is entitled to a certain amount of seeds, which is sufficient for an ornamental garden, which are sent free of transportation charges to the United States. Each member, too, is entitled to a bouquet of regulation size at regular intervals. This is a matter so familiar to the face," and the practice of sending plants to them is probably the most generous of seeds sent out from the country free, seem justifiable. Surely if it is, the other is, and truly so, to the last, as well as to the law at the last, last season was more liberal to the dear people than ever before, or ever will be. It is not the distributing was, for all applicants were to select just what they wanted instead of what is given. If the selection is good, this is better. But why stop here? If seed is the beginning of wealth, why not attempt to cultivate the growing crop? Surely if an M. C. wishes to be a grower, he should be so. It then, why not go and grow, and in case a man has not the land to furnish that, why not rent a few acres, and there, there hand. There is a certain class of politicians that is exceedingly anxious to do everything, and to do as little as possible. These men are called socialists, and their motto is "free distribution, commencing with free seed distribution."

Turning to the serious side of the question there is a work the Department of Agriculture can and should do—a work in its line of duty. It is to encourage agricultural industry, and agricultural progress. The inventor of a new machine or appliance, a patent medicine, the author of a new method of conducting business, in many years. But the originator of a new vegetable, fruit or flower has no protection whatever. He must sell his seed for one or two years.

The original act, which was approved March 3, 1837, was intended to encourage and distribute among the people new and valuable seeds and plants. To that end the inventor is to receive a certain amount of seeds for one or two years.

What an insignificant work for a country to buy from its inventor, and pay for it the price (we say nothing of quality) and distribute them under the seal of the Department of Agriculture, and to let the chain of American progress. Better, by far abolish the Department, than have it controlled by a few men, who will do for the people what that is worth, or that cost but one-half cent per paper, the price to look for them in the department stores.

New York. Wm. Maggat, Wetherfield, Conn., was the visitor this week.

St. Louis City, Ia.—A local paper reports that since the Sioux City Nursery and Seed Company, which is the largest of a receiver, he has made a profit of \$5,000.23.

St. Louis, Mo., Feb. 25, 1897, which has the face value of the former as \$123,700.46, and the latter as \$123,700.46, which can be realized on sale at \$83,830.93.

Bernuda Harris Bulbs.—It is reported that growers of bulbs in the island of Cuba, are making combinations, with the end in view of maintaining a certain percentage of the product and join one or the other. It is also said that the crop will be short, owing to the present inferior condition of the plants.

European Notes.

The March exhibition of the Royal Horticultural Society in London is regularly the largest and most interesting of developments in cinerarias, and this year has been no exception to the rule. A considerable number of new varieties were looked for, but only one grower (J. Douglas) appeared in opposition to James Peck. The combined display of the exhibit was that it was the finest he has ever staged. The colors were greatly improved, and many of the new varieties bloomed very large and of superb shape and substance."

There were also an animated controversy has been going on in Europe respecting the best method of raising the plants. The Cambridge Botanic Gardens numerous experiments have been made with various methods, and it is thought that a final settlement of this disputed point.

The following extracts from an article by the Rev. Canon H. C. G. in the "Gardeners' Magazine" is of most popular value: "Cineraria cruenta is most likely one of the parents, and some of the best specimens of this variety have been crossed with it. Some gardeners, have shown seedlings from C. cruenta, presumably raised in the garden, and these seedlings have been well on the road to our present garden varieties. It is not, however, the case, as it is crossed in some way by the garden forms, for I have proved that seedlings from H. C. G.'s seedlings and those from the original C. cruenta are not different."

English gardening books published about 1790, reference is made to "Cineraria cruenta," and it is stated that the woolly-leaved African C. lanata, and the blue-leaved variety, C. cruenta, 1793, is stated to "far eclipse all other sorts cultivated in our gardens." The Florist for 1849, referring to the above, says: "Yet these are all purple sorts of the most starchy and open description imaginable. What would the admirers of such flowers have said to the beautiful productions of the present day?" p. 177.

Another point of interest in the colored plate of four of the finest varieties known, three of them raised by James Peck, and one by J. Douglas. The diameter of the largest bloom is not quite 1 1/2 inches, and the colors are as follows: "The first is a large, double, and of the same work, A. Kendall, one of the foremost cultivators of the present day, has the following properties of a good cineraria:—"In judging the properties of a cineraria, first consider, but where every other property is equally good, a large size of the petals is the first thing I should hope yet to see every pip as large as a half crown, and as round as a full moon. That which is the most perfect, and perfectly that flower will pass, but if the petals reflex is a fatal point, and cannot be remedied, the flower is lost. I should see the recent developments of his favorite flower it would have caused him many of a cineraria's properties, but where every other property is equally good, a large size of the petals is the first thing I should hope yet to see every pip as large as a half-crown, is 1 3/16 inches; many of the blooms exhibited by James were about 3/4 of an inch in diameter, and in some cases the size was exceeded. The tasteful master of floral fairs, and the size and position of the petals is still insisted upon, the cupped petals are the most valuable, and more beautiful reflexed flowers that were at first so much despised. The range of colors is also a matter of great importance. One other very interesting exhibit at the meeting before referred to was a beautiful variety named 'Mrs. Nichols', and another named Salpurga. The flower has all the

attractive qualities of the parent variety. As regards seeds in general, the situation is practically unchanged since the last year's report. The supply of seed appears to be exhausted, and rain, hail, sleet and snow are adjudged between a cold winter, in which the quantity of seed cold, biting winds.

The cultivation of our Spring trade is the large demand for all varieties of beans of the Windsor and Long Pod, and the quantity of seed is declining in value every day. By the death of Charles Sharpe, of Sleaford, a well-known and prominent figure is removed from the European seed trade. His great business abilities and extensive knowledge of the soil, and the art of acquiring a considerable fortune, and so on, continues were his successes that only when he entered the world of politics that he sustained defeat. A short time back the business he founded was turned over to a limited company, but he retained his interest in it to the last.

EUROPEAN SEEDS.

Boston.

The Spring Show. The annual Spring exhibition of plants, flowering bulbs and cut flowers of the Horticultural Society of Boston, occurred on Tuesday, Wednesday, Thursday and Friday of the past week. The success of the show, in respect to the quality of exhibits among the best ever held in Boston, and the fine weather of the day, with beautiful weather, but the attendance, so far as the general public was concerned, was not so good. It is thought to have been, considering the magnitude and excellence of the exhibition. However, the exhibition was successful in all respects, and the competition in many of the classes far exceeded expectations.

Show Notes. W. E. Doyle, by H. K. Southworth, made a fine display of Lady Campbell Violets, which he has made up for this Winter.

Nives carnation showed up well, in better condition than it has been seen before at the exhibitions. W. H. Spooner showed a few specimens of the new variety Spenser, similar to Baroness Rothschild, and said to be an improvement on it.

A number of prominent gardeners from different sections of the State were in attendance on the opening day. R. & J. FARQUHAR & Co. showed some new varieties of plants.

JAMES COMLEY made, as usual, an interesting exhibit of cut flowers, including hybrid roses, carnations, and several of his Japanese introductions. W. A. MANDA, of South Orange, N. J. showed the new improved, golden-leaved variety, two new hybrid Wiganthus roses. —Manda's Triumph and Ross Rambler—and a pair variegated canes, which was pronounced fine.

JACKSON DAWSON showed a fine specimen of Crimson Laurel in full bloom. Several of his specimens were certainly wonderful specimens.

J. F. KILLEN, representing C. H. Johnson, has been present about town for the past few days.

JOHN R. POTERBERG has been in town in the interests of the F. R. Pleson Company.

J. M. VAN ZANTEN, of M. V. Van Zanten & Sons, of Lisse, Holland, is in Boston. W. K. W.

Pittsburg.

The Market. There has been no improvement in trade over that of last week, and not much to expect until the first of the Easter holidays arrive. Stock of cut flowers is very good and quite varied, but the prices are high. Carnations and roses are still quoted at pretty good figures, and the market for these flowers is very changeable.

Here and there. The Elliott greenhouse in Allegheny, Pa., extensive range, has been rented to A. G. SKYRING, the well-known German gardener.

W. HATCH, of Carrick, will shortly join the ranks of benedicts. Several letters in town during the week were from Mrs. M. A. O'Neil, of Akron, O.; Mrs. Shepard, representing the Akron Pottery Co. of Akron, O., and Wm. Hagmann, of Cleveland, O. Dr. Dyer passed through the city on his way West.

A New Cyclamen Pest. The Cyclamen are ranked by most of our growers and the park conservators in both cities. The Phipps conservators in Schenck park generally make a fine and extensive display of these plants, but this season they are causing lots of trouble.

One of the most serious enemies to the common pests of the greenhouses, such as green fly, thrip, etc., but these can be kept under control by proper attention. Good time. This new insect, doing great injury to the blooms, does not work on the leaves, but on the calyx. It is found at the base of the calyx, and can be readily seen under a microscope.

E. C. REINEMAN.

ORANGES BUSINESS.

MARLBOROUGH, MASS.—Mrs. W. H. Stone and Miss Nellie Brown have opened a florists' establishment on Washington street, in the corner of the other building near the florist's business at 113 Whitehall st. In addition to his retail business, he will also do wholesale business.

JACKSONVILLE, ILL.—Joseph Hill, florist, has removed his retail store to 232 West State st., and has added to it a florists' business line of field, garden and flower seeds.

MONTICELLO, ILL.—Arthur Hart and his wife have removed to the business to George Foster. The new firm is Foster & Cheonwith. Mr. Hart re-enters the employ of his father-in-law.

TRENTON, N. J.—The Mercer Floral Company has been incorporated, capital \$100,000. The firm is composed of Anthony R. Kuser, John L. Kuser and Benedict C. Kuser, of Trenton.

THE INDEX to Advertisements in the "Spring Special," April 3,

will be a list of wide-awake business men. You should be on that list.

BEDS.

Now that we have got our muck on, and warm weather is with us, we find watering has to be resorted to.

By not using so much artificial heat, and syringing almost daily, the beds are liable to get overwatered in places; likewise, we may be deceived by the moist look of the muck, for if you dig down a little it is often found the soil is very dry.

This is due to injurious air, if over-watering, but will cause the flowers to come small, with a crooked-neck bud. Examine the beds thoroughly, as careful watering at all seasons is the high road to success.

The weather we have been having lately is very trying, the thermometer some nights reading from 50 to 55 degrees. If a house is closed up early it will stand about eight as far as temperature is concerned, but this is just the condition to cause a soft, watery growth that will give lots of trouble a little later on.

Black spot, mildew and red spider will very quickly put in an appearance. A circulation of air should be maintained at all times, so if your temperature runs too high heat on one pipe around the outside of the house will do the trick.

It is surprising the brightening effect this has on the atmosphere.

We have been using some hose lately where very small-sized glass was used, and lots of wood in the roof, causing a scarcity of strong light, which is so important for us to have if we wish to grow good flowers.

It is very next to impossible to obtain glass of such quality as these on such a variety as Hoist, the Bride, etc. would advise people running such houses not to neglect painting pipes with sulphur and lime, and if held enough to get a very shining film, which is not used as a preservative in mid-day, and used on sulphur. The best way to do this is to get a small brush and dip it in the wash and fill the air with the sulphur; it will then settle very finely over the plants.

Clubbed Soupless is a very useful rose for those who are engaged in the retail business for seed purposes, and is popular during Summer. The longest thorns, when disbanded, give very nice flowers every day for a long time of the season.

It is an easy and quick grower, but as it is only for Summer work, the sooner the young plants are put up, the better.

Always plant one or two benches in a carnation house, and when the house is needed for carnations again, the plants are dug out of the bed with as much soil as possible left on them, and heeled-in a bench out-of-doors.

The variety is very hardy, but should use a little spray manure basket on during Winter. As soon as the frost is out of the ground, get them up, and set out three or four, put into as small sized pots as possible, and set in a good light.

When they very quickly make strong plants for planting out. These old plants will do much better in the soil than the young stock, but the latter gives longer stems. I may add they are very easily propagated in a hotbed in July and August, and make the flowering plants in 4 inch pots, for Spring sales, selling readily at all seasons.

When placed out the house they should be treated the same as our other roses; but where they commence to show the glass should be kept to hand, and not quite so much air given, which will induce a very delicate color. H. H.

New Hotbed Mat.

The R. T. Palmer Co., 113 Worth St., New York, are introducing a new hotbed mat. It is covered with harpels, filled with much screened rubble.

The standard sizes are 65 feet and 3x6 feet, but it can be made to any length desired. These have been found to be quite satisfactory in warm mats; they are pliable and easy to handle; are very warm, and have the advantage of being much cheaper than the former.

Sweet Peas for Florists.

As a result (probably) of my letter to your issue of March 13, regarding sweet peas, I have been asked by a number of florists, my opinion as to the most desirable sorts of sweet peas for the florist who grows cut flowers, and who does not desire to grow more than is necessary.

For the benefit of these gentlemen and others who may be interested, I give below the best twelve varieties for cut flowers for the florist, based on the character of the flower and the information gained from florists who have made a specialty of growing sweet peas.

First we have the white, as they sell fifty per cent. better than any other. For florists to use Embl. and others of this class should be planted very early, to be followed by Blanche Burpee, which is the best of the white, as well as the largest and most prolific.

The next in order as a seller is the pink and white, of which Blanche Perry is the present the best specimen, although a better one is on the way. The seed of this is the best white, as well as the largest and most prolific.

Of the self-pinks, Lovely is the finest, and we create a color when it becomes known, being a late novelty. It is large, bears many flowers, and has excellent, long stems.

For a deep rose, I think for the florist one will be found superior to any other color for the last and can be held on the vines longer than any other of its color, which is a great advantage to the florist in many cases.

For a red, there is none that can match Boston Brilliant, and one which is not so sweet, as the good points yet developed in all the sweet peas, but will sun-black in hot weather. A line of these and others will not be produced, and I prophesy that this will sell alongside the whites when they are known.

Mars is also a good red, but one that class red is all the cut flower grower will care to have.

In the shades of mauve, Burpee's New Cousins, a selection from the Cousins of Burpee with the finest color of any I have as far in the lead, and is destined to become a good seller. It should be bunched alone. For a dark mauve, I can recommend Dorothy Tennant, although it will not sell alongside of the Cousins, as it is a little heavier, and the latter casts it in the shade, but where this shade is desired, it is found to be the best of the dark ones. It is very lasting on the vine, and keeps well in the vase.

For a florist who will desire a varied assortment, which is Aurora, introduced this year; it leads all in its class, from every angle of view. It is a beautiful variety, many fairs, and is flaked and striped on a wide ground with intense orange-salmon. It is the finest of all, and best adapted for mailing, as its brilliant color carries it well. It also goes well with white or dark colors, and will catch the eye of every flower lover who likes brilliancy of color.

Of the dark varieties, I think the Forenoon will sell best, as it is larger and of better substance than the Stanley, which is so trying to the eye when massed, while the former masses well.

For delicate effects in the line of decorations, Ramona in pink and Juncata in white will give the best opportunity, while Maid of Honor will mass well as a binged variety, giving a delicate effect.

Some growers are very apt to mass all of them—but are all good sellers, the latter not having yet arrived when the florist can sell the latter varieties. I have been asked my opinion as to the reason why so hard to get in the market are these sweet peas in some localities, to which I reply that the people are becoming educated in the matter, and are doing the work of the experts, as shown in the many sweet pea shows, has demonstrated that the high bred, as it is called, by those who have seen these will not purchase the poorly grown stock which is generally to be had. When they get into the market sweet peas such as the specialist grows, people will buy them. You cannot sell massily roses, neither can you sell many of the poverty-stricken sweet peas offered to the flower buying public. The trouble is with the florist, and not with the public. I know I could market my peas to good advantage, having been asked to sell a dozen of the crop last year. (Get good seed, give expert culture, and to your stock, and you will have a man, and you will sell it.)

Some statistics as to what a row of sweet peas will produce, and the best to grow in interest. By planting them three inches apart in the row, and two rows in the row, we get one bush to the foot. These eight plants when skillfully grown will produce thirty five sprays each, on an average, making 340 cut sprays, average-

GHRYSANTHEMUMS.

# NEW YELLOW CARNATION MAYOR PINGREE

BESTGER BROS., Canal Dover, O.

**MR. FRED BREITMEYER, MT. CLEMENS, MICH.**

Dear Sir,—Regarding the Mayor Pingree Carnation, I have traveled extensively the few years past and have viewed nearly all the new varieties introduced in their original habitat, but none have pleased me so well as M. P. as to growth, freedom of bloom, if fact nearly every essential factor that goes towards making the perfect carnation. I have crossed it with many other kinds and for crossing it seems admirable. We have some seedlings that doubtless will give us something very fine, if vigorous growth is any criterion upon which we may pin our hopes, etc.

Any one who does not secure some plants of it will make a mistake, doubly so to those who are in the fascinating part of plant breeding. Thanking you for the plants you sent, etc.

**THE CORNELL UNIVERSITY, College of Agriculture, L. H. BAILEY, Prof. of Horticulture, ITHACA, N. Y.**

**MR. FRED BREITMEYER, DETROIT, MICH.**

My Dear Sir—I am greatly obliged for the photograph of the Carnations, which is very good. We are growing a picked lot of Carnations this year and we have a pretty good shape considering that this is one of the dullest climates in the North. Of all the varieties which we have, the Pingree has attracted the most attention. It is the best yellow which we have ever grown, and if it holds up everywhere as it has with us, it seems to me that it is a coming variety. The flowers are good shape, long keepers; the plant is exceedingly strong, and the stems are long enough and strong enough to satisfy John Thurpe's idea of a typical flower.

Yours very truly,  
**L. H. BAILEY,**

**P. S.**—As a pot-plant I know of nothing that has the stamina of Pingree.

Ready Now. \$1.50 Per Doz.; \$10 Per 100; \$75 Per 1000.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## Buffalo.

## Market News.

Last week a miscellaneous call for flowers and plants, and shops and buyers, augmented business to a favorable extent, and helped to clean up all desirable stock in outdoor and indoor plants for the week. This week several store openings have also helped somewhat, J. H. Hebotock has a good display of plants on hand on Monday and Tuesday, while most of the cycle stores are still in for display.

It will be continued to be plentiful for all ordinary demands, occasionally showing a surplus in kinds. Prices have a low tendency, and the weather has prevailed to materially improve plant growing conditions, and the prospects are bright for the supply with the ready and good variety for Ester.

J. G. Pickelmann, of French st., shows his usually nice lot of L. longiflorum of low growth, fine character, apparently budded just right. Keitch & Son have almost a house full of cinerarias of good growth as regards flowers and foliage.

W. A. Anderson in the unexpected death of his sister Lillian, a most estimable young lady of 23 years, has been serving in the position of lookkeeper in her brother's store for a number of years, was well liked and whose death was very much missed. The funeral occurred on Sunday last.

PHILIP BREITMEYER, of Detroit, Mich., paid us a pleasant visit on Friday of last week.

## Annual Club Meeting and Election.

As given out, this was held on Friday, March 12, at 8 o'clock, on Washington st. A lack in numbers was probably made up by the active interest of those present. At the afternoon high weather had arranged in Parlor A a second display this season of the new varieties of carnations which attracted much attention.

Exhibits included: From L. A. Galliamus, Syracuse, N. Y., a new seedling red of fine character for commercial use, but two crimson, rather weak stem, but full flowered. From R. Witterstaetter, Sedalaville, Ohio, a new white, very fine, full flowered, and his new white Evelina, which looked nice.

From E. Eric, Pa., sent a new seedling called Lizzie Tong, of the Helen Keller type. Though not quite so large, it is a favorable for productiveness.

John Burton's white seedling was very attractive for its purity.

E. G. Hill & Co., Richmond, Ind., showed Mrs. McBurney, Triumph, Flora Hill, and Jubilee. The latter, no doubt, attracted foremost attention during the display.

Breitmeyer & Sons, Detroit, Mich., sent a fine bunch of Maya Pingree.

Hopp & Lemke, Grand Rapids, Mich., sent a new red Maya.

T. A. Webb, of Corfu, N. Y., showed a red seedling that held its head up well, which he has had on his premises several years, but is not yet stocked up over. A new carnation, Ontario, showed the appearance of free flowering qualities, but inferior to the best. It has three pink seedlings, similar to the above, but shade, also an unusually large one a shade of red. From H. H. H. sent new roses. White Bougere, attracted considerable attention, and looks very similar to the old one. In looking at the new varieties, while a vase of Bride, Bridemaid and Mergot, showed the continued good quality of size of the flowers grow across the border.

John N. May, Summit, N. J., sent Lily Belle, and Mand. The latter, which they looked well, but the latter apparently suffered on route, as it went to sleep quickly. Mr. May also carried a new variety of carnation roses, which surely showed that to be a flower of the finest character.

At the Club meeting in the evening the report of attendance was 10. The subject of the meeting was the report of the journal subject to the call of the president, which means that, in effect, a general report on regular meetings has been taken.

After the meeting proper, the Club adjourned to the banquet rooms, where just as was done to a well arranged menu furnished by Ashley & Garvin. President Anderson, in the position of toastmaster, made Mr. May and the meeting very responsive from the following: The topic of Grower, Wholesale and Retailer, received

due attention from Chas. H. Keitch; Novelties, Dan B. Long; Violets, from the Grower, Sandpools were duly dilated upon by R. H. C. Bard, of Syracuse, and quotations of flowers and plants of growers now known all the way to J. H. Dunlop, of Toronto, favored us with a detailed response to "Nicheity in Carnations." W. A. Adams was, as usual, called upon for a toast to the ladies. Needs to be held the subject graciously discussed. Wm. Legz responded to the Secretary. H. J. Wise gave a nice dissertation on the value of the Florist's Exchange, was taken care of by Philip Scott, and the position of the Commission Man was duly defended by W. F. Kastig.

Inter-spersed between the speeches the Club was pleasantly entertained by some musical talent, which included vocal solos by Messrs. Numan and Wasmert, and string music by a quartette of various instruments.

The out-of-town visitors included Thos. Mansfield and F. B. Lewis, of Lockport, N. Y.; H. J. Wise, East Aurora; John H. Dunlop, Toronto, Ont.; R. H. C. Bard, Syracuse, N. Y.

J. P. Cowell, recently returned from an extended trip East, having visited New York, Philadelphia, and Boston.

Recent visitors included Daniel Keller, of Reed & Keller, New York; C. O. Umsted, representing K. J. Knyk, of Holland.

Vini.

## Baltimore.

## The Market.

Lent has not brought the glut of flowers of past years. Cool stock is selling well. Violets are nearly done with; some growers are trying to keep the flowers on the plants for Ester, boards and white wash being used to shade the glass; but this warm spell continues, I am afraid there will be very few violets about on Easter day.

## Carnation Meeting.

A large attendance was present at last Club meeting. We had a grand display, but our own breeders did not bring much stock. J. Breitmeyer & Sons, of Detroit, Mich., sent Mayor Pingree, which showed recent culture. They were greatly admired, and it was a pity the quality was somewhat impaired by their three day long journey. The stem of this variety is something remarkable.

Burton's white seedling is very fine, stem extra, flowers not over large.

vase that Mr. Burton sent was very much admired.

Baltimore, Mr. Hess's new seedling, a good solid pink, was fine, but it lacks in quantity. Mr. Hess is not in an accession of cuttings, and in the hands of our expert growers, it would no doubt prove a valuable variety.

H. Weber & Sons shipped some very fine standard varieties. P. Erdman and W. H. H. Brod have been present with extra good stock. Emily Pierson, shown by Mr. Erdman, was good; he recommends the variety for its fine blooming quality. Albertini, staged by Woodfall Bros, was immense. This firm had also a vase of different varieties, which showed up well. This was also the case with Fisher & Ekas, Lehr Bros, and Mr. Kipp exhibited some good flowers.

A grand exhibit was that of John Cook's new rose, Mrs. Robert Garrett. This is really a beautiful production, a very pleasing shade of pink, nearly the color of Souv. d'un Ami, large, with very thorny stems. It should be a very prolific bloomer. This variety received a certificate of merit from the local Novelty committee.

Mr. Cook's white sport of Maman Cochet was not shown at its best. No doubt this will make a good bedding variety.

The violets exhibited by Mr. Richmond and Lehr Brothers were very fine. Mr. H. H. Brod exhibited a very fine Ruby King, is a good thing, similar to General Grant in color, but of a very stocky growth. It received the local committee's certificate of merit.

The best treat we had had this season was the display of the "Water and Fountains of the Caration," by Mr. Peber, Jr. of Oakland, Md. Upon being asked in regard to the length of stem, he was under the impression that plenty of ventilation will produce a good, strong stem. He is right, the application of salt water as being beneficial.

John Donn told of carnation plants growing 4 feet high in some of the islands in the English Channel.

Mr. Von Donhoff spoke on bulb-growing in Holland. He said, after careful examination, he had found no place in this country where bulbs are grown successfully. In view of this fact, he considered it inadvisable to place a tariff on Dutch bulbs.

## G. N. BENEDICT.

...FLORIST...

\* Palms and Ferns of Extra Quality Always on Hand.

Concord, Ch. H., Feb. 11th, 1897

Mr. H. A. Stoothoff,

Dear Sir:

I am glad I can endorse Tobac-Oil. What I say is absolute fact, not fancy. My houses contain ferns and common bedding stock, callas, palms in fine variety, orchids in bud bloom, etc. To brother florists desirous of a safe article for destruction of Aphid I say: Use Tobac Oil. I find it safe and clean, doing the work thoroughly. I have used it where tender ferns and delicate flowered orchids were in bloom and they showed no ill effects. It can be vaporized, and hardly any odor is noted when house is filled with vapor, which permeates the air in a very few moments; customers could come in any time during the vaporizing process and I do not think they could notice any objectionable odor. The work done by it is truly magical. I am glad to recommend it. I apply it by placing the required quantity of Tobac-Oil (diluted) in an iron stone kettle, removing the griddle from my coil heating boiler and inserting the kettle; soon the Tobac-Oil is to a boiling pitch and the vaporizing done. Respectfully yours,

G. N. Benedict

Notes. One of our well-known florists lately received a communication from Hamburg, appointing him a judge at the contest on the subject of the language of the language, threw the document into the basket, with the remark, "Another of those 'what-ifs' and 'what-alogs.'" "Where ignorance is bliss," etc.

Bulbous stock will be difficult to keep back for Easter trade.

EDWIN A. SHLEWITZ.

## Cincinnati, O.

Business during the past week was extremely low. Carnations were the only flowers that sold. We predict that the demand at Easter will be good, as usual, but the quantity of stock with which the growers? Appearances indicate that it will be scarce, but it is yet a little early to say much about the matter. The market Saturday was only fair, prices ruling very low. Violets by the thousand were for sale at 5c. and 10c. per bunch of 10 or 15.

Death of J. C. Cook.

Joseph S. Cook, one of the pioneer florists of Hamilton Co., died at his late residence on Walnut Hill, Thursday, March 18. He was originally a citizen of New York, and came to this State in 1840. He arrived in this city in the year of 1840. In 1848 he engaged in the florist business, and since that time he has been very successful and built up a considerable establishment. Mr. Cook was thirty-two years old, and leaves a widow and five children.

Here and There.

AUGUST HOFFMEYER, a few weeks ago, broke his thumb, and Saturday last stepped on a rusty iron rod, the sharp end of which passed between his shoe and his foot.

MISS CARRIE HOFFMEYER is just recovering from a severe skull spell.

WALTER H. BAYLER was severely injured in a recent railway accident, is unable to be at his office.

WALTER H. BAYLER, of Charleston, W. Va., says: "My damage from the recent high wind will amount to about \$200, and I am not contented." Nearly all the boys in this city who suffered from the high winds are getting from their stock another sign for the start.

E. G. GILLET.

Those who were at the carnation meeting and visited the place of A. Sunderbruch's Sons, at the sale of a large lot of carnation Day-buds, which, for growth and color, rival the finest. The shade of color is a beautiful "candy." Plants very healthy, caused no doubt by the quantity of lime mixed with soil, and careful watering. Overhead syringing is done on very bright days.

The vagaries of Lilium Harrison are illustrated in the following: A number of plants, ranging from 5 to 6 feet in height, and carrying from eleven to thirteen buds each, bulbs—very large, and showing an early stage disease developed, as with scarcely an exception it has done in other cases, but instead of showing the characteristic sickly plants, they were thrown out early, and the balance seems to have benefited by the absence of the disease. Plants very healthy, considering the smoky surroundings. This place, as with other large establishments, is a very fine one, and is situated on a hillside.

J. A. PETERSEN obtained a number of florists who ran out to see his now famous carnation, Outcast. Mr. Petersen has been notified of the intention of his fellow countryman, Dr. Hansen, the celebrated explorer, to visit him at an early date, possibly in the month of March. He will be a gala one and mutually delightful.

Mrs. H. L. Sunderbruch will, by the arrangement of the late H. H. H. Fadden place on April 15 next. It is reported Mr. McFadden, Jr., will run on to the other end of the line, the extension conducted of late. The commission house will be run separately by the same parties as before, and associated with the late H. L. Sunderbruch.

W. C. Nolan is making preparations for a big spring business.

Akron, O. W. M.

W. A. HELFER is the latest addition to the craft here. He erected, last summer, about 10,000 feet of glass, and has met with such success, as to cause a large enlargement of the plant during the ensuing Summer. The handsome Hoffman wagon exhibited at the fair, and purchased by Mr. Heller, and has been put to good use by ALMOND & SON report a good season.

**For the Busy Man.**

The Special Edition of the FLORISTS' EXCHANGE appears next week.

Directed to write on the Tariff Question; read in your letter early.

**Our Special Edition.**

The reading matter in next week's Special will be devoted largely to commercial orchids and their culture. The services of some of the best growers in the country have been secured for the purpose of his method of growing whereby he has obtained success.

There will also be a chapter devoted to some little known but profitable Easter plants.

These chapters will be liberally illustrated. A symposium on the all-important subject of Feeding Plants Under Glass will prove an interesting feature, in which the practice carried out by several growers will be presented.

In addition, we hope to lay before our readers a very serviceable article on the subject of greenhouse heating from the pen of Professor Taft, in which that gentleman will give his valuable advice on the selection of boilers, piping, etc. for large and small greenhouse establishments.

The tariff question is the thoroughly ventilated in our Special, pro and con. Already we have received a number of queries on this question of a quibbled question; but we ask all interested to send in their opinions at once, so that we may present a complete and authoritative article to our National legislators before the proposed Act becomes a law.

The Agricultural Appropriation Bill was reported to the Senate Wednesday afternoon, from Appropriation Committee as it passed the House.

**The Tariff Bill.**

The misleading extracts published last week by more than one paper, have induced many to question which of the various editions was correct. The FLORISTS' EXCHANGE's account was correct in every particular, as published, and we reprint the extracts of our edition in full, with conditions affecting the seed trade, so that, having every thing plain set before them, our readers will be able to judge for themselves the discussion which we herewith invite on the subject.

**A Subject for Debate.**

**THE TARIFF QUESTION.**  
 Let the Trade Decide.

To Be Discussed in the Special Edition of THE FLORISTS' EXCHANGE, (April 3).

The whirligig of time has brought about the quadrennial sea-saw of political faith, and the changes consequent thereto have involved the business men of the country into the consideration of an altered tariff, deemed absolutely necessary to the health and welfare of the country.

Although great pressure is being brought to bear on passing a revised tariff at the earliest possible moment, there will be sufficient time afforded to intelligently discuss the measure as it affects seed-growers and nurserymen, in all its bearings, and to this end, we would outline the following method of procedure.

Our Special Edition will be published April 3, and will come into the hands of 9,000 gentlemen, principally employes, so that the tariff will be made known.

To appear in that issue we invite a short, concise letter, for or against the proposed new enactments, from every reader interested.

As this is a subject which directly or indirectly touches you we will expect many letters, and so caution the writers to keep the debate free from extraneous remarks. Business policy, not politics, must be the guide mark. All communications should reach us not later than March 31.

A coupon will be printed in next week's issue on which our readers will be expected to vote, and to return to this office within ten days, when the results will be at all times made known. To avoid any delay to the Committee on Ways and Means for consideration, before their final session, this will be made known to the wishes of the majority, and that they will carry due weight with our legislators we have no doubt.

The following are the proposed tariff provisions affecting the Florist:

**DUTY TABLE.**

- PAR.
- 240 Beans, dried, fifty cents per bushel of sixty pounds.
- 250 Peas, dried, fifty cents per bushel of sixty pounds.
- 251 Peas, green, runners, or other small packages, one cent per pound.
- 251 Plants, trees, shrubs, vines, bulbs and roots of all kinds, for growth in the open air or otherwise, not specially provided for in this Act, thirty per centum ad valorem.
- 253 Seeds of all kinds not specially provided for in this Act, forty per centum ad valorem. [This includes all vegetable seeds.]

- FREE LIST.
- 545 Grasses and fibers; not dressed or manufactured.
- 567 Moss, crude or unmanufactured.
- 599 Myrobala.
- 602 Nuts, \* \* \* Palm nuts, \* \* \*
- 617 Plants, trees, shrubs, roots, seed cane, and seeds, imported by the Secretary of Agriculture or the United States Botanic Garden.
- 680 Seeds: Asine, caraway, cardamon, cotton, cummin, fennel, fennugreek, flaxseed, galbanum, rapeseed, and Job's bread, or bitter, sugar beet, mango wuzel, orange, or sugar cane, wheat, and all other grain and grass seeds; all the foregoing not specially provided for in this Act, fifty per cent.

If the above paragraphs go through, all bulbs, palms, orchids, and florists' stock for forcing, will hereafter pay an import duty of 50 per cent.

All vegetable seeds will be taxed forty per cent.

All flower and grass seeds will come in free.

Nursery stock will pay thirty per cent; but—

If the Free Seed Distribution is to be maintained, and dealers refuse to bid for the Government contract, the Secretary of Agriculture will have the power (under paragraph 617) to import seed, free of duty.

The proposition of the FLORISTS' EXCHANGE and our voting opponents on the tariff question is just the thing, and should call for a general response on this question.

It is all very well for a few people to get together and "claim everything" for their side of the case; but votes tall, and when several thousand people have the opportunity of expressing their views directly on a given proposition, there is some basis for the statement as to the consensus of opinion on the question at large.

Persons that do not believe that legislation should follow the wishes of any particular trade or organization, even where the desire is practically unanimous for such legislation, based upon special advantages, or on other grounds, unless such legislation is for the good of the country at large. In other words, I believe that the Government should be in the interests of seventy million of people, not at the request or behest of a comparatively few persons, or in the interests of a few persons of the many.

Whatever one's personal views may be, however, we should be such that we should stand upon this important question as to what the majority of the trade really do desire. The question of sectional interests, the prevailing sentiment through the medium of the FLORISTS' EXCHANGE ballot will not be a general proposition.

New York. **FRED'K W. KILBET.**

**Bermuda Lily Flowers.**

The unjust and reprehensible practice of flooding the American markets with cut lilies from Bermuda at Easter is likely to assume a more aggravated form in this year than heretofore. Hitherto our growers have been confronted with the competition in this line having its origin with the bulb growers themselves in the islands, whose circulars, containing offers, were scattered all over the country. The competition is being augmented by the offers of parties located in the States, and of which the following is a sample:

"We can furnish you with boxes containing sixty Bermuda Easter lily buds for

\$3.00 per box. All orders must reach us by the 1st of April, as we import only such quantities from Bermuda as are ordered, and orders must contain a part remittance, at least, of a guarantee."

Curiously enough, the firm making this offer enclosed a circular to the party addressed, advising that it can supply "Bermuda bulbs; Lilium Harrisii our speciality."

This is adopting with a vengeance the tactics of the Bermuda growers, so loudly condemned and justly complained of by the American florist in former years. It is grossly unfair to solicit and obtain a man's trade in a raw material upon which you have a corner, so to speak, and then throw yourself in competition with him in the finished product at a figure he cannot stand out against. Such a grab-all practice is bound, sooner or later, to have its reaction. It is a deterrent to business and should be stamped out.

**OBITUARY.**

**William Magill.**

We announce with deep sorrow the loss, through death, of an old, valued and efficient co-worker in the cause. Although unknown to the majority of the trade, Mr. William Magill, who was now creditably filling the position of Treasurer of our company, Mr. Joseph Magill, had been identified with the FLORISTS' EXCHANGE from its inception until recent months ago, when falling health compelled him to withdraw from all active work. Owing to his watchful care and close scrutiny was largely due the freedom from typographical errors, both in the regular issues and advertisements, which has been characteristic of our columns.

A thorough printer, well versed in all the mysteries of the art, he was ever ready to render aid and assistance, and his advice, and in his career of fifty years at the business he has graduated many scores of young men, who are now creditably filling their mission in life. The writer of this article has much to remember him by in all his life.

His integrity was spotless, his devotion to the interests he served could not be exceeded, and he was ever a most unflinching courtier, pleasant in his intercourse with all his associates, his comrades in this office, and his business associates in word and deed, consistent to the end. He repeatedly expressed his pressing his firm conviction of a future and a better state, and passed away peacefully and fearlessly, Thursday morning, March 25.

Mr. Magill was born in Scotland, April 10, 1828, and came to the United States in 1849, and for the past 26 years has been a respected citizen of Jersey City Heights, N. J.

**Charles Eliot.**

Charles Eliot, a member of the concern of Olmsted, Olmsted & Eliot, the well-known landscape architects of Brookline, Mass., died on Thursday morning at 37 years of age. The deceased was a member of the Massachusetts Horticultural Society, and devoted to his chosen profession. The funeral services will be held at the residence, 105 W. K. W.

**Providence.**

Among the many plans to beautify the new addition to the Government park none have been received with more hearty support for every one concerned, including all the members of the Massachusetts of the Grand Army Posts of this state, and the various veteran organizations to plant a tree for every soldier who has been selected, with one tree for each organization, and to call the whole the Veterans' Park. The trees to be native of the state, and to be planted in soil from the many places in Rhode Island having an interesting connection with the war, will include maples, elms, birches, and oaks. It was suggested that the grower plant in the soil the tree for the pointed star forming the badge of the Grand Army. The planting will probably take place, with appropriate Grand Army ceremonies, on Arbor Day.

New York.

Wholesale Market. Business is dull, but little is being done in any line. The supply is not heavy, but not much over current demand. Monday and Tuesday stock sold out at some prices; Wednesday and Thursday much of it remained on hand.

Roses went as low as \$15 per 1000 on straight slips; some kept stock of fair quality choice buds at \$19 per 1000, good firsts and extras sold at \$4 and \$0 per 1000. A few better quality flowers, such as figures, but sales were limited. Beauty cleared out at the regular price quoted for carnations, except for a few. Lighter and irregular to give any quotation upon them. A few more roses sold fairly well, the supply not being over plentiful.

Carnations, perhaps, were steadier, both in demand and sales than any other line of stock, going at normal prices. Violets were too abundant to find purchasers for all; the average daily supply now must be about 200,000. Prices on these varied from 15c. to 40c. per 100, a few select hundreds making perhaps 50c. Valley sells worse than here; \$17.50 per 1000 being top price for special stock.

All kinds of indoor stock are selling low. Myrsine and alseum and stock of that character finds but few buyers. Sweet peas are better but not in moderate demand, well, with figures varying from \$1 to \$2 per dozen bunches, there being so much difference in stem and flower.

JAMES M. KING, who for ten years was with Ed. Horan, and within this past year with Thos. Young Jr., started in the common house on an equal account this week at 49 West 29th street.

Retail Trade.

There is nothing of importance doing in this line just now, funeral work creating the bulk of the larger orders. At the present time storekeepers and their buyers are very excited about Easter supplies than any other thing, being more out of town looking around, they bring more in their stores. The prospects are that plants will be abundant and good, the larger size, and the plants will be abundant and good. The larger size, and the plants will be abundant and good. The larger size, and the plants will be abundant and good.

Historians in town were A. B. Scott, Philadelphia, and H. C. Agar, New York, Cal.

St. Louis.

Club News. The regular monthly meeting and annual rose meeting of the Florists' Club was held Thursday last. President Kunz presided.

The rose exhibits were of the highest order. John N. May caused a fine lot of new and Lily Daze variegations. These were of the highest order. John N. May caused a fine lot of new and Lily Daze variegations. These were of the highest order.

Robert F. Tesson had a fine vase of such of the roses as the new, Bride, Woodstock, Meteor and Perle roses, and a vase of lily of the valley and Callifloras.

Frank Fillmore exhibited a vase containing Bride, Princesmaid and Perle, and also some assorted carnations. They were very fine.

A. S. HARRIS of the St. Clair Floral Co. has been reading an address at the previous meeting to prepare an essay on "Growing Roses and Carnations," to be read at the meeting. The doctor prepared the essay with great care, but he did not read it, and thereby made a fiasco.

J. G. GLEASON, formerly with John Herwick, has been reading an address at the previous meeting. Mr. Herwick's Easter lilies are looking well. J. E. K.

Issue will be the Special Spring Trade Edition.

Just the time to Catch Buyers. The Trade are Waiting for it.

CIRCULATION 9,000 COPIES TO LIVE BUSINESS MEN. If your advertisement has not been sent in, MAIL IT AT ONCE.

Insertion cannot be guaranteed if copy reaches us later than Wednesday, March 31.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

### Chicago.

State of Trade.

On referring to last year's reports, I find there is not much difference between the prices now and then. There appears to have been a shortage of roses than as compared to the present supply, which is pretty ample, and, as a rule, good in quality. In such other localities, it might be getting plentiful, as we find an increasing quantity shipped from outside to this market. Dealers seem to manage to clear out fairly well. After the orders of buyers of prime stock and shipping orders have been filled, prices drop. There is a margin of \$5 for best less down to \$1 for left over and poor quality flowers. American beauty can now be had, bringing \$4 per dozen for extras, \$15 to \$25 for next quality, with demand beyond the supply.

Carnations are holding their own at \$1 to \$1.50; some extra fine Triumph, Jubilee, and other varieties from J. & Co. McKellar's, are selling at \$1 to \$5.

Lots of single double flowers are in from the South, selling slow at \$1 per 100.

Violets are still abundant, and being low in price, lots are worked off.

Some extra fine mignonette and pansies have been arriving from New York; the pansies being grand and fine, averaging 3 to 3½ inches. No sweet peas are as yet exposed in this market; a few are in, but they find a market through growers' hands, retailing at 50c a dozen; \$3 per 100 is about the wholesale price.

There is considerable talk around as to what Harriell will sell for at Easter. Some dealers are ready to place orders if an agreement can be made as to price.

Among the wholesale men, reports as to figures vary, the most general opinion being that these lilacs will bring, by the dozen, \$1.50; by the hundred, \$10. A few talk of \$15 as the high-water mark. There is some content that \$10 will be the very highest. There is some fear that Bermuda flowers may be sent here again, but if so, they will hardly interfere with the first quality stock. Unless all things fall, there will be sufficient home-grown flowers to supply demand, around Town.

E. H. Hunt will move May 1, to 76 and 78 Wabash ave., where he has erected the second floor, space 46x160 feet. This brings all the wholesalers but Randall and Block of Chicago to the same place.

St. Patrick's Day was a dreary, wet day here and bad for street business. A few of the flower chambers was much evidence in the wholesale houses. A good deal of the common oxalis, with a few other varieties, was sold. Surely the clovers could be easily grown for the purpose and would be nearer to the genuine thing.

Harry Bunyard, of Pitcher & Manlin, St. Louis, Mo.; C. G. Grant, of Lincoln, Ill.; M. Stanch, of the M. A. Hunt Company, and Mr. Knecht, of W. J. & M. S. Vesey, Fort Worth, Tex., and EDGAR SANDERS.

## THE "Florists' Exchange Spring Special," to be issued next Saturday, will go to 9000 five business men. You better be in it.

Dreer's Special Offer
FOR MARCH.

AZALEAS FOR EASTER.

We are this season carrying an unusually
large stock of Azaleas in the best varieties
and in fine condition for Easter. As these
plants can be shipped more safely when in
bud, we wish to impress the importance of
early orders. We will not be responsible for
injuries arising from late shipment when the
buds are dropped. 5-inch pots, each with
bushy growth, 10 to 12 inches in diameter,
well set with buds, \$5.00 per doz.; \$30.00 per
100. 6-inch pots, fine plants, well set, 12 to 15
inches in diameter, \$7.00 per doz.; \$40.00 per
100. Specimen plants, \$2.00, \$2.50 and \$3.00
each.

TUBEROUS ROOTED BEGONIAS.

Now is the time to plan for early flower-
ing; the strain is the same as has been sent
out by us for several seasons, the best that
can be produced.

WE OFFER
Stingles in choice mixture..... \$2.50 per 100; \$20.00 per 1,000
orange and rose..... 3.75 " 25.00 " 100
Double in choice mixture..... 1.00 " 10.00 " 100
separate colors as wanted, white, rose and orange..... 1.50 " 15.00 " 100
CARNATIONS
Gloxinias. A most select strain of the Cras-
sifolia type in fine mixture..... 4.00 " 100; 30.00 " 1,000

SEASONABLE HERBACEOUS STOCK.

Table listing various herbaceous plants such as Anemiths, Aquilegia, Boloria, and their prices per 100 or 1000.

HARDY VINES AND CREEPERS.

Ampelopsis Viticoll, strong pot-grown, 3-inch pots,
\$1.00
Clematis Hardy Hybrids, all leading varieties, strong 2 year old, each as Jackman, Henry,
Duchess of Edinburgh, etc., etc..... \$7.75 per doz.; \$39.00 per 100

## RESPONSES.

*Insertion will be given in this column to all communications free from animus, but the opinions expressed do not necessarily reflect our own.*

### Seedlings and Certificates.

I expected that Mr. Ward would be first to refer to the article which was called forth this discussion, and I am not surprised by the character of his reply, for he has been his usual self since the Cincinnati meeting and before he had left for home; the essence of what I expected is contained in his own penultimate paragraph.

Mr. Ward need not go out of his way to defend the morale of the editorial staff of the "Exchange"; his services in that line are quite gratuitous, as the editor and myself can settle that between us.

But the editor's original paragraph; I cheerfully accept the statement. I am none the less firmly grounded in the belief, however, that Mr. Ward's unprovoked attack on the Carnation Society in the opening article; I would be willing to wager my entire wardrobe upon the veracity of the facts. (This is emphatically denied.—E.D.)

Before taking Mr. Ward's statements for granted, we must consider the position of a gentleman's position. Like many a pronouncement issued, it is formidable in its effect, but weak in argument and vain in statement.

His whole grievance against the Carnation Society may be summed up in the following words: "There were several other seedlings exhibited to which almost any unbiased grower would give the award of certificates." There is the matter in a nutshell; the man with the grievance is looking for what he can get out of the seedlings. Mr. Ward is posing only as the champion of the poor, small florist, who cannot afford \$5 an acre, though he would not give a certificate to a seedling that he knows is quite up to Society requirements!

Mr. Ward assumes a very unlovely aspect when we refer again to the words quoted above and note his attack upon the three gentlemen who were the recipients of the three gentlemen, who, not of their own choice, but by selection, were asked to give the award of certificates to the certificates. From this statement we are to understand that the honored president of the Society of Horticulturists, together with Mr. William Scott and Mr. E. H. Michel, are biased—they are professionally or morally not so well placed as to give the award were pulled!

I think that an attack of this kind aimed at the integrity and judgment of the gentlemen in question needs no characterization, and I think that when Mr. Ward comes to think over the matter dispassionately, he will see that his only course is to make the amende honorable.

With reference to the use of the certificates in E. G. Hill & Co.'s wholesale list. We were very proud to use them. I am sure I had received a certificate for every seedling that I might have which I considered worthy of distinction, and have presented the Carnation Society in high esteem because I believe it composed of honorable, upright gentlemen. I received a certificate bestowed by it was a valuable acquisition, and I certainly should not fail to advertise them, when they were presented to me, in a variety honored. What use is usually made of awards of merit, medals, first prizes? Did you not see the exhibition at Fair and other exhibitions jealously hide the honors from sight, or was it simply a matter of honor to receive the certificate? By the way, I don't believe that there has been a more persistent seeker of certificates than Mr. Ward himself, and the certificates that he won for Meteor and Storm King from the secretary of the Carnation Society means, though he may not have thought of having them electrolyzed.

It is very interesting to me to see so emphatically to say that the wire pulling done by our firm has consisted in selecting the seedlings and advertising them, packing them carefully, putting them to their destination in good time, and allowing them to be judged to do the best, and, further, when a pet variety of ours had a better chance of being sold than such "hidden beauty" it might possess, I have deemed it the pritty thing to give preference to the seedling that was sold and in this course I find myself in plenty of honorable company.

The result of the genius for juggling words and solely to his those unacquainted with the rules of the society he tries to

bring odium upon it by charging that the entry fee was put at \$5 in order to work a hardship upon the smaller growers and to allow them only a few lines of space. This is not so in the slightest fact. The society welcomes fine exhibits from whatever quarter they may come, and expects to have the best upon its tables every year, and if a grower, big or little, is confident that he will give a good exhibit, he can afford to afford the entrance fee, and could still afford it though it were much higher, for the society would not expect to keep out rubbish, a most desirable end, and it helps to produce a revenue, a very necessary one, to the society, and it is only right that those likely to be benefited should also contribute to the support. This was noted the correct thing to do by the "little" as well as the "big" man.

The difficulty is not as Mr. Ward intimates with the certificates awarded, nor for that matter with the method of awarding them, but the trouble lies with the estimate which Mr. Ward places upon his own judgment in the awarding of certificates. Between every line may be read "I. C. W. W. know more about carnations than all the other men in the world," and Carnation Society put together." This is the logic of his reply.

Let us take issue with Mr. Ward in the matter of the originator being the better judge of his own product. The old collocation of "originator and a stick of twine" thinks his own "crow the blackest" a homely way of putting the truth tersely. But through growers of carnations and judge it with more exactitude than can its originator.

As to the awarding of this series refers to Mr. Adam Graham as having made a most unfortunate choice of words. The words "I am a grower" were used in the awarding of a seedling had competed against another, in the published report I find that Mr. Ward had been the competitor, and that the point system is used, so no unfairness results as in competitive tests; any variety that scores a number of points receives the certificate.

As to the "best seedling," Mr. Weimar, the president of the Carnation Society, in his own rules, and if this particular class was made competitive, it was not under the same conditions as the other classes; any member objected to the competitive test he need not enter under the test; it was a matter of choice to do so.

Mr. Ward again says: "The certificates issued in the past have been no practical value, as to the certificates of merit value." The great grand-winning variety introduced was certificated at Pittsburgh, and the same was true of the other.

I suppose apropos of preparing for this campaign, Mr. Ward made the statement that the certificates of merit awarded by McGowan had never been used, and, intending thereby to depreciate the certificates that had been issued, but in the case of Wm. Scott shows, and had the society been in existence at the time, it would doubtless have been a certificate upon McGowan also.

It is interesting to note that the Carnation Society has no more ardent supporters than many of the gentlemen on its membership list, who are not only not in the array class against class is little less than that of the "peers" so sincerely characterized as the "peers" of the society, but they are the root of cutting interest, but they are many men of intelligence in the society who naturally would not see fifty to one odds, and this is still a country of men.

I care not for Mr. Ward's personal thrashing of my connection with the Carnation Society. When the facts are known it will be shown that I wronged no one, and that I have used the most honorable methods. We advertised Mrs. Perrin as a sport from Mme. Felix Perrin (see our list of names), and I have had the correspondence with prominent florists broken, and because the variety as flow-ers before me, and I will send the descriptions from abroad.

I emphatically decline going any further into a discussion of the wire pulling, and I can come to the Carnation Society, to Mr. Ward or to myself along such lines. I am particularly desirous to refer to the original article, and doubly so to the editor of Mr. Ward's communication, who has been so kind to send me the article if he will kindly harmonize this paragraph.

As to carnation culture, stimulated by the exertions of the society devoted to the olive flower, we continue to make progress. As to the carnation, the seedling, and new seedlings, have of necessity made the advancement seem numerically small; but

it has been marked, notwithstanding. A certificated variety may not be relied upon, for it is not a carnation, and this is not before this honor is bestowed upon it. Editorial in "Florists' Exchange," December 1897, and the same was published with his editorial of March 6, 1897, headed "Seedlings and Certificates."—E. G. HILL.

### The Carnation Contest.

#### Editor Florist's Exchange:

Will you kindly state that the contest between E. G. Hill & Co. and myself, as to who has the largest white carnation, has been settled for April 1898, and will be held in all competitors and others are also invited to exhibit any variety of merit, and flowers, prepared to Pennock Bros., 1514 Chestnut st., Philadelphia.

The contest will be held in the Florists' club room, Horticultural Hall, Philadelphia.

EDWD. SWANNE.

### Carnation Lizzie McGowan.

#### Editor Florist's Exchange:

I send you a few Lizzie McGowan carnations, some I had left over from my morning bouquet. My only in sending these is to show you that this variety is not a played-out variety, by any means, and that it is a variety that all florists would like to have as believe. I wish to see the sort that you have in the hands of the stems, which are as strong, if not stronger, than those on many of the other sorts that I have seen recently. By careful selection, I am improving this variety every year, paying attention to the stem, but I am sure I will see that I have not neglected the flowers, as these average 2 1/2 to 3 inches in diameter.

I can heartily endorse all that Mr. Weber (your able writer) says, especially his advice to the grower to grow the variety, but to be sure and not neglect the old ones.

Respectfully, A. J. THARP.

Beard Station, N. Y.

(The flowers received were splendid blooms, large, with strong stems. In other quarters, with careful selection of cuttings, this variety has proven most satisfactory, also.—E.D.)

## QUESTIONS.

### OPEN TO ALL FREE TO ALL

#### Answers Solicited from Those Who Know.

(73) Forcing Liliun Harrisii for Easter.—Liliun Harrisii with the buds in sight now will need no forcing for Easter. During the month of April growth is much more rapid than at the present time. Lilies may be expected to develop more in one week than they do in two in March; for this reason there will be more difficulty in keeping lilies back than in forcing them in some seasons.

(74) Hydrangeas for Easter.—If the hydrangeas are showing color in the eyes they will need but little, if any, forcing. But if the eyes are yet green, it would be better to keep the house a little cooler, or to hasten them on, for it is easy to let up and harden them afterwards for a few days. A light liquid manure water may be given at intervals till flowers are nearly open.

(75) Treatment of Adianum Farleyense.—E. H. Pot in good strong loam with a little leaf mold and some sharp sand added. Give a moderate amount of light, and keep at a temperature of from 60 to 70 degrees. Give water as needed, well supplied with water. Ventilate sufficiently to keep the atmosphere sweet and fresh.

(76) Soft Coal Ashes on Benches.—G. KNOX.—No, sand ashes are not injurious, about the reverse; roots of bedding stock, ferns, etc., are often found matting together, and it is preferred to put the soil in their pots, when these plants are stilly upon or plunged in ashes.

(77) Lily of the Valley.—JOSEPH WOOD.—There is no reason why you should not dwell in such a house. The time for planting pips depends upon when the blooms are wanted. From 31 to 25 days before the time when you wish the plants. Several growers repeat this all the year round.

(78) Single Geranium Midsummer.—After a diligent search for the introducer of geranium Midsummer, the best I have been able to find has been traced either by Campbell or Pearson.—W. F. SIMMONS & Co.

(79) Fumigating with Hydrocyanic Acid.—How strong should the hydrocyanic acid gas be used to fumigate the red spider on roses and carnations? Should the spider be killed by the gas, or should injury to the plants?—M. DE LONG.

The varieties of roses and carnations on which we experimented were found to be very susceptible to injury from the ordinary applications of this gas. Red spider will endure strong applications without any apparent injury. From our present knowledge, therefore, it appears impracticable to effectually rid roses or carnations of this pest by the use of hydrocyanic acid gas. Further experiment may, however, advise the problem.

P. H. DORRIST.

(80) Diseased Aspidistra. —H. H.—The specimens of aspidistra sent with your letter of March 1, have been under observation in our laboratory since their receipt. The diseased spots on these specimens are not the same as those on the first specimen, and are not necessarily of the same characters which would indicate that there is any connection between the two troubles. In this case the trouble seems to be due to the yellowish discoloration of the leaves.

The leaf seems to react very quickly to injuries of all sorts, producing in most cases a yellowish discoloration. We have been able to produce the whitish, blotched appearance of the lower surface of the leaves of a second lot of plants, possibly by the use of water, thus permitting the protective cells on the surface of the leaf to get out of the way. This is a good way to kill, and is greatly injured, the so called guard cells of the leaf, and the result is that the stomata these pores to open and close. When this occurs the tissues in the immediate neighborhood of the stomata are dried out very slowly and the spot has a whitish appearance, although it is not necessarily of the same characters as the spots of quite large size, appearing on both the upper and under surfaces of the leaves. This is a problem in progress in this way, as we have been unable to get any thing like it to the laboratory. We should like to receive specimens of this other disease. (Prof. J. B. T. GALLOWAY.)

(81) Two Year Old Tea Roses.—Will two year old tea roses, in solid benches, do as well, if cut down, as young plants? If not, how short should they be cut?—EDNEY SMITH.

—If your plants are in perfect health there is no reason why they should not do as well, if not better, the third year as the second. If they should not do so well, it depends on what growth they have made.—3 feet, if you have plenty of head room, is about right. In June the plants should be dried off, and all the air possible given to well ripen the canes. This will cause the soil to have water in it, and the plants will be hardy in the slightest. Of course they should be syringed and damped down just enough to keep the wood from drying out, and to keep the plants from this wood should be cut out, leaving only the strongest and youngest canes. They should be cut to the desired length, and I will be found necessary to tie them out a little; in other words, they should be damped down, and the plants should be syringed; then clean the beds carefully, fork in some good cow manure and a sprinkling of bonedust, and water the plants, followed with a good watering; after this, with good care, the plants will flourish. Use the syringe freely, but be careful not to get the beds wet. After the plants are dried off, they should be syringed before they need another. Never shade, and all the air night and day that can be had, and the plants will be hardy, the sturdier and better; whereas an orchid treatment will produce that condition of things which will bring the plants invariably ends in a total failure.

H. H.

COME early and avoid the rush. Send your advertisement for the month of Florists' Exchange Spring Special! by return mail.

**Philadelphia.**

There has not been any noticeable change in the flower market the past week. Stock is very plentiful, and only very few of the good grades, but the volume of business does was small. Shipping has been very good, and is now very good, and this has prevented any glut in the market. Roses and carnations have been very plentiful and are now very good. Some of the best of the long-stemmed Beauty has not been quite so large, still there are sufficient for all the purposes for which they are used. Some are coming in—probably the best come from E. P. Hostetter, Mahan, Pa., these are of the color of Edward Reid, the Albertine being very fine, and favorably sell at \$3. This grower is also raising excellent Michigan Beauties. The grower, Mr. J. M. Tenen continues to send in some very good Daybreak and Scott.

The carnations are plentiful as ever, and are difficult to dispose of. On Wednesday one grower accrued in 10,000 doubles; the other 100 is being asked for these, but many sell below that figure.

Southern daffodils are very plentiful, and sell slowly at 50c. per 100; in fact, all bayonet stocks find slow sale.

Some carnations in now arriving from Fayetteville, N. C., and sells fairly well at \$15 per 100 bunches.

**News Items.**

A. DIMMOCK has been in the city the past week looking up business for Sander & Co.

The bowing alleys in the clubroom are now cleared. Some of the old bowlers are getting into shape again.

Reports from Chester County the past week are very good. The carnations have been found on fruit trees in several different localities.

**Glossaries.**

The contest between E. G. Hill & Co., Richmond, Ind., and Edward Swayne, Wauaset, Pa., as to who has the largest carnation stock, will be held at the Florists' Club room, on Friday morning, April 2, at 10 A. M., and will be a most profitable meeting, as well as being a most good blooming.

On every hand preparations are being made for the good season, but it is being found very difficult to hold plants large, the past few days having been very dry.

M. BOOAN is growing about 10,000 geraniums this year. In putting these up the last week he has had a very good crop of them, which has given great satisfaction. Genetas and lilies are the principal stock for exportation. Both are being held in anticipation now to Spring stock, of which a large quantity is grown for the market trade. The carnations are being shipped for Easter, and well hardened.

J. Wm. COLFESH is watching his Jacquets now very closely, to make them for the Easter season. At present they look about right.

GORODE ANDERSON has his usual complement of carnations. All the plants are in splendid condition, also is a house of Brunner for Easter week.

**Amuse growers.**

John Hackett has had a very successful week for Easter week. These propagating in large quantity for cutting trade. Speaking of planting carnations and geraniums, it is being found that it pays, as so much blooming time is lost early in the season, and while one house of carnations is in bloom, this season is now looking splendid, the practice will be carried out another year, and need not be carried out another year, but a much better flower, is being largely grown and proved to be very successful. The carnations are too busy in throwing out unhealthy plants has been proven on this place this year. The carnations are now doing in the season. Most of them were thrown out, but those left in have done very well, and are now in the best shape and produced very good flowers. Van Leuwen is a variety grown largely here, and is proving to be very successful. The carnations are all stock is in perfect health, and there will be a large crop for Easter.

Sandy Butt is now devoting his chief attention to Easter stock, of which he is growing a large quantity, consisting of all the best grades of carnations. The plants are in good trim. Around the carnations right for Easter, all light colored varieties being grown. Another novelty in this line is in pink carnations. They are in 6 in. pots, in which they were potted last spring, and grown on during summer. It is being found that they are doing very well in Fall they were covered lightly for the winter protection until brought in. They

**Paris for Easter.**

**LILium LONGIFLORUM, AZALEAS, HYDRANGEAS, SPIRÆAS, RHODODENDRONS, assorted ROSES, LILACS, and HYACINTHS in pans and pots.**

Also a fine healthy lot of **CARNATIONS** from Paris; Daybreak, Wm. Scott, Lizzie Mc-Gowan, Tidal Wave and Minute Clock.

**PRICES ON APPLICATION.**

WHEN WRITING MENTION THE FLOWERS' EXCHANGE

are now well set with bud and lock right for the Easter. The azaleas are being kept in an outside frame, having one steam pipe around it for cold nights. Lilies are a very good lot. In pots of fair height, being hard and well flowered. On this place are two new short-span-to-the-mouth houses, which present no perceptible difference is noted in growth of plants over those in outside houses, but the new houses are certainly much lighter and should thereby be better adapted for forcing plants.

**Growers.**

John Shellen, who has been steadily building the past few years, has now an establishment of fourteen houses, most of them 200 feet long, where he grows a large assortment of plants, mostly for his own store trade. In roses he grows best exclusively, chiefly Brideismad and Bride, and a house of carnations, for summer and fall work. In carnations he uses a large assortment, including all the newer varieties. Della Wix was seen here doing splendidly, producing long, stiff stems, with excellent flowers. Scott, Cartledge and McLowan are the main crop varieties. Jubilee has done fairly well, and will be grown more next season. Palms and rubbers are largely grown. In the latter half of the year, most of the latter has fallen off very much the past year. Crotons are being grown largely for the market trade, but it is being found better than in soil. In one of the houses a bench of Carnot roses was noticed. A house will be grown next season.

DAVID RUST

The Chrysanthemum Show of the Pennsylvania Horticultural Society will be held in Horticultural Hall November 9-13, 1937. The following list of exhibitors has been established: Premiums, namely, Thomas Cartledge, W. Allee Burpee, John G. Gardner, and W. K. Harris, recommended the adoption of the schedule for 1936 for the year of 1937, with the omission of a few classes which failed to attract. The number total of premiums to be offered for the coming show is \$3003, and to be divided: thirty-two premium plants, \$54; chrysanthemum flowers, \$409; foliage and flowering plants, ferns, etc., \$785; roses, carnations, violets, etc., \$292; fruits, \$14; vegetables, \$80. In addition to these, the usual special prizes are offered.

Cornelius H. premium list may be had from David Rust, Secretary, at Horticultural Hall.

**Knoxville, Tenn.**

CHAR. W. CROUCH has, with the majority of his southern friends, missed it with the carnations. The carnations that he made a big hit with California and Luxonno. It looks as if the single violet has been the best. In fact, the carnations, in some sections, had the double variety been depended on, growers would be badly left. The carnations are being sent to the bride and Brideismad on solid beds are very fine, while the new house built late in the fall, and planted with carnations and Daybreak carnations, is hard to beat.

Mr. Crouch the coming Summer will re-build his carnation house, and grow two or three more new ones. His business is increasing so fast that the thirteen houses he now has are not growing enough flowers to supply the demand.

C. L. BACBY is sending in some well-grown carnations, and expresses his good will content with season's business.

It would astonish many of my friends in the South that they should have so large number of flowers we cut each day. The weather here is beautiful, and we go

**H. C. STEINHOFF,**  
100 West Hoboken, N. J.

**Cleveland.**

**Trade Notes.**

Trade with some of the retail dealers in this city, while with others it remains very quiet. The usual period of dullness that accompanies the Lenten season manifests itself to a considerable degree, and in consequence lower prices and an abundance of stock are the result. A few interesting matters. The violet disease work are coming in, and these, of course, use up a small share of stock.

The supply of roses is moderate. Of American Beauty no good stock is offered; tea roses sell fairly well and bring 75c; \$2.00 per dozen, many very the bloom of Brunner, grown by Mr. Gasser, were seen. Dutch bulb stock finds slow sale and prices are very low. Hyacinth bring 75c to \$1.50; tulips and narcissus, 40c to 50c. Carnations and callas sell at \$1.00 to \$2.00; lilies, 75c, and \$1.00 per 100; valley, 50c and 75c per dozen.

Carnations are in good supply and the best stock brings but 25c. to 35c.

**Wholesale Notes.**

Growers experience considerable difficulty in finding market for their products and the prices realized are exceedingly low.

Carnation, best stock, bring but 60c to 75c per dozen, the best \$3.00 to \$5.00; lilies and narcissus, \$1.50; violets, 35c per 100; valley, \$2.00; nigellone, very best, \$2.00; Hyacinth callas, 60c. a dozen, roses, from \$2.00 to 35c.

Here and There,

Frank Wiedner, who for four years past has been with C. Ehardt, is now with W. H. Beaumont, Erie st.

Mr. and Mrs. J. M. Gasser, who for several weeks past have been traveling through the South, are now in Atlanta, Ga., and are expected home within the next couple of weeks.

Carl Hagenburger, Mentor, O., was admitted to membership of the Florists' Club at last meeting.

Editors in Iowa send us H. A. Bunyard, representing Pitcher & Manda, and A. T. Boddington, New York. G. A. T.

**Cambridge, Mass.**

W. E. Doyle is forcing some specimen hydrangeas, the demand for which promises to be heavy at Boston as heretofore. Lilacs are first class, but do off slowly, being used chiefly for store decoration. A batch of longidorm is in excellent shape.

F. C. Becker reports a very satisfactory run in the carnations. He has had a full bill of orders for Nephrolepis hostoniensis as a result of his advertising in the Exchange.

**For Sale.**

**LOCUST POSTS,** in different sizes, at 6 to 8 cts. per foot; delivered F. O. B. cars at station here.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

Indianapolis.

ANTHONY WIGAND has long considered the advisability of raising a batch of palms from certain to certain sizes, purchasing good home-grown stock, with which to experiment. The result of one season has been so satisfactory that, with the same feeling which one has of a great cure, he is anxious to tell it for the benefit of others. His method is very similar to that of the Belgians, with the exception that in this case the plants are planted out in beds for a year, during which they make rapid growth, and being planted widely apart grow bushy as well as tall. In early fall they are taken up with a nice ball, potted and plunged in a hotbed frame, where they are allowed to remain for a few weeks until rooted through, to be then transferred into a cool house to be hardened off. This seems to be very satisfactory, as no complications have been received of the several hundreds sold locally this season. It is not a good system, however, for shipping purposes, as the plants being tender, easily blight and require a hotbed or receipt to start them up, which means considerable time and trouble. H. W. RIEMAN has purchased his brother's interest in the business, and intends purchasing the retail branch still more. He has a good supply for local sale, particularly a fine batch of cyclamen and primulas.

BERTRAM BROS. report a very satisfactory season, especially in plants and carnations. John is sending to some fine-grown bulbous stock. W. M.

DON'T delay. Send in your ad. for our Spring Special at once.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

# Ten Degrees Below Zero

is the temperature that has been undergone without injury by unprotected yearling plants of the new climbing rose

# AGLAIA OR YELLOW RAMBLER

in our nurseries the past Winter, thus proving it to be even harder than we had supposed.

## A Hardy Yellow Climbing Rose

is what everyone has wanted for years and Aglaia is, therefore, an immensely important introduction.

## 150 Blossoms in a Bunch

have frequently been produced by the Yellow Rambler, for it has the same manner of blooming in splendid big clusters as does the Crimson Rambler to which it is a splendid companion rose and probably related. The color is a clear decided yellow; the flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well established plants making shoots eight to ten feet high in a season.

## We are the Introducers

of this rose in this country, having been so appointed by Mr. Peter Lambert, the originator.

We are also prepared to offer plants of two other valuable climbing roses:

## EUPHROSYNE or PINK RAMBLER

Color a clear light red; otherwise very similar to Aglaia.

## THALIA or WHITE RAMBLER

Pure white; same style and habit as Aglaia.

# WE WANT EVERY FLORIST

to handle these three roses among his customers and to everyone who will do so, agreeing to depend upon us for his supply of plants.

## WE WILL SEND FREE OF CHARGE

a beautiful colorotype plate illustrating the Aglaia, together with 100 handsome descriptive circulars with name and address stamped upon them. Send at once.

Price for strong plants from 2½ inch pots, **\$15.00 per 100.**

Send for our Trade Lists of other Roses and General Stock.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**W. C. CRICK, 1287 Broadway, Brooklyn, N. Y.**  
 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**American Dahlia Society.**  
 The annual Spring meeting of this Society  
 was held at Palmdale, California, Wednesday  
 evening, March 17, President C. W. Taylor,  
 Treasurer Burton reported the  
 Society to be in a prosperous condition,  
 with a large balance in the treasury.  
 Robert Craig was made an honorary mem-  
 ber. The following officers were unanim-  
 ously elected: Robert Craig, president;  
 Henry F. Mohell, vice president; E. Clifton  
 Taylor, 4227 Main St., Germantown, Pa.,  
 secretary; Frank C. Burton, treasurer;  
 A. Hinch, chairman of executive committee.  
 Henry Hicks, of New York City; G. S. Ward,  
 Quiseo, N. Y., and Samuel Moon,  
 Morrisville, Pa., were elected to membership.

The following gentlemen were appointed  
 a committee on Constitution and By-Laws  
 — Robert K. D. J. Clifton, E. Clifton  
 Taylor.  
 Mr. Ward was appointed a member of  
 the executive committee in place of J. D.  
 Eisler, resigned.  
 The committee was instructed to  
 have the schedule printed not later than  
 April 15.  
 The annual Fall exhibition will be held  
 Tuesday and Wednesday, September 21  
 and 22, at a hall to be decided upon later.  
 The meeting adjourned to convene in  
 regular session, September 21, 1897.  
 E. CLIFTON TAYLOR, Secretary.

**Newport, R. I.**  
 At the Horticultural Society's meeting,  
 held on the evening of the 10th inst., John  
 K. M. Le Parquier, of Boston, reported  
 the lecture which he, a few weeks ago,  
 delivered before the Boston Gardeners and  
 Florists' Club on "Recent Trip through  
 Europe." The lecture was illustrated by  
 means of the stereopticon, the instrument  
 being operated by James Parquhar.  
 At the close the unanimous thanks of  
 the Society was voted to the Messrs. Parquhar  
 for their most interesting entertainments.  
 Unfortunately the attendance of the mem-  
 bers was not what was to be expected, but  
 being outnumbered by the visitors.

On Thursday, March 11, President Adam  
 Grant, secretary Wm. J. Stewart and  
 John N. May, members of the executive  
 committee of the Society of American  
 Florists, waited upon the secretary of  
 the Newport Horticultural Society with the  
 cheering information that the committee,  
 in its meeting held on the evening of the 10th  
 to place one dozen medals, six of silver and  
 six of bronze, at the disposal of the New-  
 port Society, of which the President and  
 flowers to be held here in August at the  
 time of the S. A. F. convention. And, in  
 addition, Mr. May will offer a special  
 premium, not specified, and suggests that  
 it be offered for a collection of cannae in  
 tubs.  
 A meeting of the Executive Committee  
 of Newport's society will be held on Satur-  
 day evening, the 30th, to consider the  
 matter.  
 With such an offer the probability is  
 that there will be a grand show of new  
 and rare plants at that time.  
 A. MACLELLAN.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Toronto.**  
**JOHN H. DUNLOP** has already booked  
 several orders for the White Bougere rose,  
 and carnation Ontario. The carnation is  
 a fine variety, well adapted for design  
 work. The rose is an every day variety,  
 and is to the pink Bougere which is  
 to market. The cut and description in  
 the Exchange do not do the subject  
 justice; they should be seen to be fully  
 appreciated. Mr. Dunlop will have a  
 stand out for Easter. I doubt if his stock  
 ever looked better than at the present  
 time.  
 W. M.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# Clear Cypress Greenhouse Material.

This with us means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap-bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

Write for Circulars or Estimates.

LORD & BURNHAM CO., ARCHITECTURAL OFFICE, 160 FIFTH AVE., COR. 21st STREET, NEW YORK. Factory: Irvington-on-Hudson, New York. Mention paper

Syracuse, N. Y.

The Central New York Horticultural Society has issued the preliminary list for its next chrysanthemum exhibition. The amount in cash prizes has been increased, and some valuable specials have been already offered. The rules governing the contest for the bicycle read as follows: Special prize by E. C. Stearns & Co., \$100 Stearns Yellow Bicycle, for a new and distinctive yellow chrysanthemum not yet disseminated, to be selected by a representative of the firm of E. C. Stearns & Co. from three plants, selected by the Society's judge, from all plants entered for this prize, and to be named "The Yellow Fellow." Only plants in pots can be entered for the above prize. The contest is, of course, open to all.

The P. R. QUINLAN Co. have had an elegant display of Dresden Vaseum in the window of their downtown store. Some of the plants had immense spikes of bloom, though only in 8-inch pots.

A notice in last week's issue a statement that \$30 had been appropriated by the Central New York Horticultural Society for the Fall show premium list. This is incorrect; it should read \$500.

James Egan, of Stamford, N. Y., was in town last week, and paid a visit to the leading private and commercial establishments.

A special meeting of the Central New York Horticultural Society was called for Friday, March 20, to discuss the premium list of plants and flowers for the State Agricultural Society. It was unanimously agreed upon by the members to demand the adoption of the old rates. Last year the premiums were cut in half, in spite of the protest of exhibitors. There is nothing to commend the niggardly policy of the department, as it is freely admitted that the Horticultural building attracts fifty per cent. more visitors than any other section. If exhibitors stand by the Saturday evening session, there will be larger premiums or no exhibits.

John N. May, of Sunnyside, N. J., had an exhibition bloom of carnations, Maud Dean and Lily Dean, and Pres. Carnot roses. These were very much admired by the members, though Lily Dean received the most attention.

Waters in town - F. L. Atkins, of Piteber & Manda. The weather is unusually mild for this season, and it is feared that some damage will result later to fruit trees and other crops. C. BARSON.

Norwich, Conn.

S. CRANE is very busy fitting out his new grounds, which are nearly as large as his present nurseries. He has ordered from France seedlings and choice ornaments to plant on the same. He claims that close application to business and advertising in the Florists' Exchange has had very much to do in creating his increased trade.

A Generous Offer.

A Chicago florist makes a liberal offer on a placard shown in his window. The placard reads: "With every plant we sell we give the earth." - Printers' Ink.

APRIL 3 is the date set for this "Florists' Exchange Spring Special." Don't miss it.

It Goes to the Spot.

We believe in the Florists' Exchange as a means of reaching the pocket books of the florists throughout the U. S. and Canada. BRANT & NORRIS, Forest Glen, Ill., March 17, 1897.

Evans' Improved Challenge.

Roller bearing, self-oiling device, automatic means of setting. It not only makes the IMPROVED CHALLENGER the most perfect apparatus in the market. Write for catalogue and prices before placing your orders elsewhere.

Quaker City Machine Co., RICHMOND, IND.

Modern Greenhouse Heating.

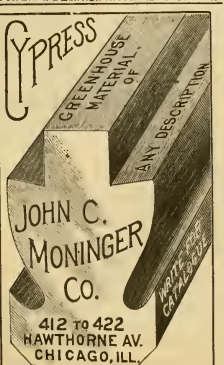

One of our boilers, 10,880 feet of two inch pipe, and sixty tons of coal will heat 22,400 feet of glass (four 20x300 feet double gable houses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you - we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrigt" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal fireless, economical water heating boilers of our day.

## SPECIAL GREENHOUSE BOILERS

Made for Hard and Soft Coal and Wood.

. . . Magazine and Surface Burners . . .

. . . Portable and Brick Set . . .

For 150 to 10,000 square feet Radiating Surface.

Send us sketch of your  
 greenhouse; we will guaran-  
 tee to heat it, even where  
 others have failed. We refer  
 to Henry A. Dreer and Mr.  
 Hugh Graham, of Philadel-  
 phia. Ours is the only Boiler  
 that has no packed joints to  
 leak, screw joints to rust fast,  
 or large or complicated cast-  
 ings to crack. Heating and  
 Grate surface proportioned  
 to save coal.

It Has  
 No Equal.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

THERE are several varieties of CYPRESS,  
 but the proper kind for Greenhouse  
 Construction is the

# LOUISIANA ..RED CYPRESS

This is what we use, and furnish it  
 THOROUGHLY AIR DRIED....

ATTACHED LETTER WILL CONFIRM OUR CLAIM.

John C. Moninger Co.,

Chicago, Illinois.

Gentlemen:--

We beg to acknowledge receipt of contract made with  
 you by our Mr. W. S. Atles for 2,000,000 feet of air dried Louisiana  
 Cypress to be furnished you during the year of 1897, and in confirm-  
 ing same will say that we shall always carry such stock as you use  
 for the manufacture of your Green Houses, so you can get same at  
 least two years old, air dried; this will enable you at all times  
 to guarantee to your customers strictly clear, air dried, stock,  
 and will place you in a position where you will have no competition,  
 as no other firm that manufactures the Famous Louisiana Red Cypress  
 can guarantee to furnish this amount of stock of such an age, and  
 warn it not for the large stock we carry on hand at all times, we  
 should be placed in the same position as our competitors.

Thanking you very kindly for the favor shown us, and trusting  
 the year of 1897 will bring you a large and increased trade, which  
 your high standard of work certainly merits, we beg to remain,

Yours very truly,  
*Lutcher & Moore, Cypress Lumber Co.*

We devote our entire time to this line of business,  
 which enables us to furnish correct material at proper  
 prices.

ESTIMATES CHEERFULLY FURNISHED.

**Lath Shading for Greenhouses.**

A method of shading greenhouses that permits the work to be readily done from the inside, that makes it possible to put on or take off the shading at any time, and to change the shading from one part of the house to another at will, is desirable in the ordinary commercial greenhouse. A plan has been devised in the greenhouse of the Wisconsin Agricultural Experiment Station that accomplishes these ends in a cheap and satisfactory manner, and is described in the Thirtieth Annual Report, 1896, just issued. It is simply an application to the greenhouse of a screen made of lath, similar to that used for cold frames and hotbeds.

These screens are supported from the sash-bars by simple wood buttons, screwed to their lower edge. A lath screen consists of twelve ordinary lath, nailed with No. 8 wire nails, to cross pieces which are also of lath, the nails being clinched. In the Station greenhouse the sash-bars are a fraction over 13 inches apart in the clear, and the screens are made 38 inches wide. The laths are placed 2 1/2 inch apart, except at the center, where a space 2 1/2 inches wide is left for the sash-bar. The screen is put up with the cross pieces toward the ground, which brings the lower side of the lath on a level with the lower edge of the sash-bar, so that when the button is placed at right angles to the sash-bar, it supports the screen. In the Station greenhouse, the pitch of the roof is such that the screens require no support to prevent them from slipping down, but with a steeper roof, a tack-driven part way in, at the center of the outside laths on the lower side, would catch on the buttons, and thus support the screen.

When not in use, the screens are stored under the benches, or elsewhere. Being very thin, they occupy little room. They should be made of the best quality of well-seasoned house lath. If wet lath are used, the screens often warp badly. By means of a simple form, which may be devised by any person apt with tools, the screens may be nailed up very rapidly.

For houses in locations where the sunshine is less intense than in the comparatively clear and dry atmosphere of Wisconsin, as in the Atlantic states, or in the vicinity of the great lakes, it would probably be better to place the lath a full inch apart than the distance noted above. Indeed, it seems well to have two or more classes of screens, with different spaces between the lath. In houses extending north and south, the east side usually requires less shading than the west, since the most intense sunlight comes somewhat after noon. Screens made of lath placed 12 inches apart answered fairly well for the east side of the Station greenhouse.

It may be questioned if any method of shading that wholly obstructs the direct rays of the sun is as favorable for the growth of most plants as one that, like the lath screen, obstructs only a part of the rays, leaving the others to shine in their full force.

# NOW YOU KNOW NO BOILER EXCELS OURS

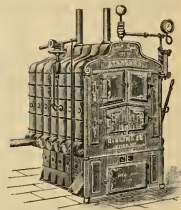

and few equal them. They have many interiors. If you have a boiler that equals ours

## CLING TO IT

because it is a valuable possession, but you probably have one that is much inferior; that does not heat your house; that consumes much coal and is exasperating. To its necessity for attention. WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## FEEDING PLANTS UNDER GLASS.

## THE GROWERS' STANDPOINT.

In order to obtain the experience of practitioners in this subject, we call on the Florists' Exchange recently sent a communication to a number of florists in various parts of the country, asking for such information as could be given on the following points:

1. As regards the physical or mechanical conditions best suited to crops under glass, and how can they be secured and maintained? 2. What food should be used, and in what form at the start, and how and in what form should it be added? Should the soil be prepared in any special way, and for how long a considerable time before it is wanted? 3. Considering that both cow and horse manure are not well balanced food, how should the deficiency be provided for? If advisable to add peatash to the compost what is the best form and how much can be added with safety? Should it be mixed when the compost is mixed or added at the time of planting, after the soil is in the beds or on the benches? 4. If additional phosphoric acid is required in the soil in what form should it be added? How much should be necessary, and should it be applied in the compost or to the soil after it is in the houses? In what form should it be applied to the soil, if at all, and when should it be added? In case plants, either roses, carnations, or gladioli start with a poor growing condition how soon should extra food be supplied and what food is most liable to be wanted? After what circumstances commences in the fall when food should be applied? Should it be liquid manure or "top-dressing"? 5. Applying liquid manure through a syringe and sprayer, what are the best sources of nitrogen, potash, and phosphoric acid? What strength of these fertilizers should be used? 6. How should they be applied? What should be the temperature of the water to give the plants in general the best conditions for consuming the foods?

It was recognized, of course, that a number of the foregoing questions would be difficult to answer. Still it was thought desirable to bring out as many points as possible, and have been answered. The following views would result only in good. Below we give the experience of a number of growers who have kindly interested themselves in the matter.

## Mr. Watson's Method.

My cousin Watson, of Katlamazo, Mich., says that he has used the following method with clean, healthy stock, is the proper food to maintain and keep it in the most acceptable condition of the plants. "I have every grower his own ideas how best this should be done, and apparently widely different treatments have produced different results. I think this can be explained by the fact that not only is there much difference in the nature of the soil, but also in the altitude and climate, differences in altitude all have their effects on plant life. Again differences in seasons, amount of sunshine, or cloudiness beyond the horizon, all should be considered before we can hope to depart from certain treatment results to expect from certain treatment."

Still there are a number of things we can nearly always depend upon with some degree of certainty, and these are: 1. The condition and noting of effects we can do much to make the plants in maintaining a healthy prothuberance.

Beginning at the compost heap it generally agreed that well-rotted soil and cow manure will form the best foundation. Some add well-rotted cow manure, and when turning it over besides to putting in some of the best topsoil, and to commence with well-rotted cow manure, and either rotted soil or fresh, dry loam, and when it is the time to plant, they will show need of it. For a start there should be in the food reserve in the loam and manure the proper proportion. To avoid it should it be so that it is found to feed till a good, healthy root action has taken place. It may be that the best and most efficient in potash or phosphates, and in this case, in sprinkling or watering, and bone meal will be of benefit. The best way of referring to it after the soil is carried in, is to use a more or less liberal application to be obtained by sprinkling it over the bed than in any other way.

As the soil is so various and other diseases may be helped, and even started, by the use of cow or horse manure, but at the same time we know that it is not the place, so with its faults and deficiencies we must still depend on it as the second support of the plants.

With regard to the adding of chemicals at the composting, should the soil be such

as to make this necessary, it is, indeed, poor, and successful results could not be expected. It is better to use a soil so deficient (that was intended for greenhouse planting) that needed it, and I should not expect to get a good soil so deficient in principal plants.

For roses, etc., when planted in summer, it is better to use a soil so deficient in sheep manure and loam will be of benefit in preventing the sun from burning the plants, and the soil so poor, but with a good compost little food will be required till the fall and cutting commences. It is better to use a soil so deficient, when the plants are making a vigorous growth, say about the latter part of September, or the first of October. November cutting fairly starts a dose of weak liquid manure twice a month will be necessary, and can be increased as the time goes on.

Carnations and violets should require very little extra food, if well grown, as they are usually planted in good, fresh soil after making their real growth, and if the plants require extra food early in the season then the fault is with the soil used, and not the actual requirements of the plant. A little extra manure is better than no manure, but real food should not be necessary till the days begin to lengthen, and then they require extra food. It is better to use a good soil to start with, I have not found carnations benefited by heavy feeding in the summer. It is better to use a soil so deficient in a starvation diet for them, but I do think it easily possible to overfeed them with liquid manure. Carnations do not prefer liquid feeding in every case where easy to dissolve thoroughly, but horse manure and good ash I like to sprinkle over the beds.

Just how, what and when to feed must all be determined by the soil and conditions, and endless losses occur by careless methods. The worker should supervise the plants, and be careful of the increasing contents in the one who owns the place or a foreman of ability. The work should never be done in a hurried way, and the extra water will not make a stick plant, kill the green fly and red spider, nor keep off the insects. It is better to use a soil so deficient to get the best results from the food applied. It is now generally accepted that the soil should be deficient in the following elements: It is well to remember just what we are feeding for. If for robust foliage, we should give nitrogen, but if for flowers, it is recommended chiefly for the flowers. This is rather a new one to some of us, yet I have been successful in this. Nitrate of soda was especially good for producing a good growth of roses, and especially for the chrysanthemums, but the phosphates being good for the production of flowers were new to me. I have no doubt of its correctness, and shall certainly remember it when mixing fertilizers for this winter.

For general purposes, I have found that water will not make a stick plant, kill the green fly and red spider, nor keep off the insects. I have no doubt of its correctness, and shall certainly remember it when mixing fertilizers for this winter.

While judicious feeding is always attended with profitable results, yet it only does good when the most judicious conditions are equally well balanced the good done will be greatly minimized, and in

some cases it may even have a disastrous effect. It is also well to remember to make good use of the manure, and to use it with new fertilizer especially so.

## Feeding Carnations and Violets.

Mr. D. Hammond, of Lebanon, Pennsylvania, writes: "I have compared actively heavy loam, with a soft, yellow clay subsoil, all underlaid with limestone, and in the spring of 1892 I grew my carnations, carnations and violets, on solid beds."

In preparing our soil we plow up a space large enough for our requirements, in the open field, in the early spring, turning in a liberal quantity of manure, and sow broadcast Canadian field peas; these we turn down as soon as they show signs of coming up. In the fall we grow another liberal dressing of manure, cow or horse, whichever we can procure to best advantage, and again plow and our soil is again ready to use in a very short time, or at once if necessary. The soil we use in leveling up and top-dressing the beds in the houses. In preparing our houses we board up the sides of the beds to prevent water running off, and dig in two four-borse wagon loads of manure to each house and never hesitate to plant all the carnations and violets in the house before planting we broadcast 100 pounds of bone and a liberal sprinkling of wood ashes, and a liberal quantity of top-dressing. This is all we do until after Christmas, except sprinkle the carnations occasionally with liquid manure, also a liberal quantity of a three-gallon watering pot. After Christmas, when the soil and plants show signs of coming up, we give the manure principally as a liquid application at the rate of one-half peck to fifty gallons of water, and alternating with nitrate of soda and wood-ashes in liquid form. Nitrate of soda we use at the ratio of 4-10 to 100 gallons of water, and wood-ashes at a 6-inch peck to 50 gallons of water.

## Mr. J. A. Snydman's Experience.

Mr. Snydman, who is a large grower of carnations and gladioli, writes: "Feeding is one of the most important features in the raising of plants, and the most important of all is the soil. The soil should contain plenty of food at the start and it should be prepared all before the plants are put in the manure, and the dirt and mixing well. Care should be taken not to use soil that is too freshly turned."

In cases where cow and horse manure are not so well balanced, a frequent top-dressing of extra manure will prove valuable. When plants start well and continue in good growing condition no extra food should be applied. But if the grower thinks it necessary he may give them the usual top-dressing of manure.

My experience with chemicals has not been very successful, I consider them of little if any value in the raising of plants. A light coat of top-dressing of any well-decomposed manure is far superior to any artificial fertilizer I have ever used.

## Mr. H. Weber's Method.

Mr. H. Weber, of Oakland, Md., writes of his method of preparing the soil for proper soil feeding, etc.

We select every fall a piece of rich meadow, or a piece of good soil, and require for all purposes during the next year; this we plow about 5 inches deep in the fall, and in the spring we give a heavy coat of barnyard manure (horse and cow manure mixed). After the busy season is over, we give a liberal top-dressing of manure, and in the fall, after cultivating this, say, once every week or ten days, as is necessary to destroy weeds and grass, and to keep the soil warm. In weeks before we begin to use the ground we apply bone meal at the rate of two bushels to the acre, and a liberal quantity of lime—15 or 20 bushels to the acre. If the land should be in need of potash we should use it at the rate of one bushel per acre. In all the above references to the other questions asked it may be said that the soil should be enough fed in the soil before the plants are put in the soil at the start to mature any good field-grown crop.

We prefer the preparation of the soil as stated above. Do not like the practice of compost heaps, as the frequent stirring and turning of the soil is a most favorable action on the ground.

Each one should determine which of the various chemical ingredients are lacking, in nitrogen, phosphoric acid, or potash. Which ever of these is lacking, it should be given in some form. If potash is deficient we use good wood ashes. If phosphoric acid is lacking, we use bone meal. If nitrogen be deficient, we use nitrate of soda. This should be used in the most judicious manner, and applied in the houses. A safer article, however, would be dried blood.

After the plants have started to grow fairly well, and all weeds have been carefully pulled, we give a liberal quantity of decayed muck, which has been composted with lime. A sprinkling of raw bone is put on the benches before the muck is used.

After flower-bearing has commenced in the fall, we give a supply food of the form of liquid manure.

We think that the manure of cattle which has all succeeded in the fall, is the best. It may be used in the form of a top-dressing, or, hay and grain, will contain sufficient nitrogen, potash and phosphoric acid to all succulent plants. We use it occasionally we use some horse manure, that is, milk it with that mentioned above. We will give a liberal quantity of a large class of our barnyard which is covered up and keeps the liquid manure from freezing. All the liquid manure from the stables and barnyard is gathered in this cistern, and is piped to all of the houses. In case we run short and it does not rain we turn on the water from the hydrant and in this way have all the liquid manure we need. Our barnyard is about 50 feet above the houses, which gives us plenty fall and saves all pumping, etc.

The temperature of water and liquid manure should be about 65 degrees. We do not use any water that is too hot, or turn on steam while watering, thus taking the chill of the water.

## Mr. Lothrop Wight's Experience.

Mr. Wight gives his experience in carnations and gladioli, and writes: "The proper physical and mechanical condition of the soil at the foundation of all successful raising of plants is that the soil is porous. The soil must drain run short and it does not rain we turn on the water from the hydrant and in this way have all the liquid manure we need. Our barnyard is about 50 feet above the houses, which gives us plenty fall and saves all pumping, etc."

gallons of water. This can be used every time you water. You can tell by the darker color of the leaves when the plants have had enough. For potash use nitrate of potash in solution, the same proportion as nitrate of soda, but don't use it so often. It do not like water added as a top dressing. It seems to clog the soil and leave the surface in a bad condition. For phosphoric acid top dress with bone meal at the rate of a teaspoonful to a plant.

It does not matter much about the temperature. However cold it may be the temperature of the soil and house immediately modifies it to a reasonable amount. It is said that the usual water will need to be warmed.

In conclusion, all soils that are fit for greenhouse use will contain in sufficient quantity everything necessary for plant growth except humus or decaying vegetable matter, potash, nitrogen and phosphoric acid. As you enter the nearest forest you will see that nature can grow excellent crops without the use of stable manure. So can we. The stable is a convenient, but not a necessary source of vegetable matter. Potash is often present in sufficient quantities. Nitrogen and phosphoric acid are nearly always deficient. These three substances should be proportioned to the needs of the particular soil to which they are applied. To apply more of either one than is needed is a waste. It follows, then, that every one should study by own soil and ascertain definitely what its needs are.

**Nikoteen Insecticide.**

The superiority of Nikoteen over all other preparations for killing insects that attack plants, is unmistakably proven by its rapidly increasing sale, particularly in localities where it has never been advertised, and is sold purely by that merit which advertises itself, viz: the pleasure one has in recommending to a friend an article the use of which is a source of profit to himself.

That it contains nothing injurious to plant life, and really is an article to be relied upon for exterminating insects, is testified to by every one of the many florists and gardeners who are using it.

One of the noticeable things about Nikoteen is, that when you use one bottle, you cannot be persuaded to use tobacco stems or any other substance.

**It Goes to the Spot.**

**Greenhouse Woodwork**

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

# SEVEN SWEET PEAS FOR THE MILLION

In same size packets, the Seven Superb Sweet Peas described below would have cost \$3.10 in 1896, but are sold now for only 25 cents.

**25 Cts. buys these Seven Superb Sweet Peas:**

**CROWN JEWEL.** Pale standards, tinted and veined with violet-rose; the wings are creamy, slightly tinted with rose; a most profuse bloomer.

**GRAY FRIAR.** Entirely unlike any other Sweet Pea. A most beautiful mixture of purple on white ground, the heaviest coloring being on the back of standard. The flowers, of hooded form and large size, are borne three or four on a stem.

**LITTLE DORIS.** Carmine-tinted pink; standard of fresh form, large, white wings, slightly tinted, the colors beautifully harmonized; a superbly lovely variety.

**METEOR.** Truly an exquisite variety. Standards bright orange-salmon, wings delicate pink, with slight veins of purple.

**MRS. JOSE CHAMBERLAIN.** The flowers are truly enormous, and produced generally three to four on a stem. The color is very effective—a white ground heavily striped and marked light rose; the stem very striking.

**RAMONA.** Grand flowers of very large size, borne three or four to the stem; color creamy-white, delicately spangled with pink.

**"1897" Special Superfine Mixed.** This mixture is composed of the finest New Large-Flowered Sweet Peas. It is a choice blending (each grown separately and mixed by ourselves), which can be easily recognized in the flower.

25 Cts. buys all the above—Seven Superb Sweet Peas, each in full-size, separate packet, true to name as described, and mailed, postpaid, to any address.

**For ONE DOLLAR** we will send five complete collections as above for all 25 pcts., and give FREE as a premium one full-size packet each of CROWN JEWEL and RAMONA. provided it is stated when this offer was seen. Please try to get up a club of Five for One Dollar.

With every collection we enclose a copy of "How to Grow High-Grade Sweet Peas" by the HAMILTON METHOD." Tells plainly just how to succeed in growing to full perfection the finest High-Grade Sweet Peas—such as are contained in this unequalled collection.

Florists and agents who wish to make a business of selling these collections will be supplied at the rate of \$2.00 per dozen collections, by mail, postpaid, but without the premium packets. We have prepared this collection to extend our trade and still further increase the popularity of SWEET PEAS—the people's flower. The price is too low to yield us any direct profit, and whether one dozen or one hundred dozen are ordered, we cannot send the collections, by mail, postpaid, for less than \$2.00 per dozen. By express the price is \$1.50 per dozen, or \$15.00 per hundred collections. It would be easy work to "make money and do good" by selling these collections. We will supply **Lithographed Leaflets**, showing these Sweet Peas painted from nature, free of charge to those who order one dozen collections or more.

### BURPEE'S SEEDS GROW!

**W. ATLEE BURPEE & CO.,** Seed Growers, PHILADELPHIA.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## Herbaceous Plants.

Paper read before Pennsylvania Horticultural Society, Feb. 16, 1897, by Joseph Metchin.

Having been invited by my secretary to read a few notes on the subject of the night, it has given me great pleasure to accede to his request. Though left to my own measure, I have suggested the name "Herbaceous Plants," and I at once decided to adopt it for, from this class of plants, an enormous number of plants derive pleasure than from any other. The herbaceous plants of our woods and fields are very varied, and I have seen in many of our most beautiful kinds almost exterminated, speaking of the vicinity of this city. There are hundreds of sorts which can be found, the looking for and finding the names of which would afford great gratification.

Referring to these, as well as to the herbaceous plants of other countries, there is a feeling of satisfaction to be derived from their cultivation. While for the sake of many of our cold, bedding plants will always be in demand, they will never occupy the place in the affections of the people that herbaceous plants do. The veranicas, the hollyhocks, the gladioli, the columbines which grow in the garden or in the woods, we never regret to get to know them, then, to know the spots to which we were wont to eagerly watch for their reappearance, and to find some loved friend. It is this reappearance, and not the winter's absence, that makes them so welcome to all.

## Transplanting Can Be Successfully Accomplished.

It is common to hear persons say, when viewing some woodland beauty, "How I would like to transplant it to my garden." While it is true that but few transplants in getting such plants to flourish in their new homes, it is not always true, and knowing how to do it, we can do it. Let me mention the trailing arbutus, Epimedium, as an illustration. It is the common belief that it is best not to transplant, and more than once I have directed gardeners who have asserted this in public print, to transplant it, and it successfully, so have many others. Two years ago, when in England, I saw a nice patch of it in a garden, and many other large nursery firms there, and I said to the lady who owned it, so that it follows that it is not a native there, the plants were safely transported from their original home, and they have since flourished as well as the plants which were not disturbed. It would not thrive in the open garden, but if small, bushy plants with a good ball of earth be taken and set in a woodland where the required conditions exist, they will live and flourish.

With native plants, a little care should be taken to provide for them situations as near as possible to those they have been accustomed to. There are shade-loving plants, and those that grow in open places. It often happens that a party shady border is at command, where those that demand it can be placed. It does not always follow that a wild plant is found growing in the best possible place for it. Take, for example, the scarlet Columbine, found on dark rocks along the Wissahickon. I have seen better places for it in open places in gardens than ever I have seen wild, no doubt because the garden afforded it conditions that it could not have in the wild.

**Mulching is Necessary.**  
To those who have not tried it, it would be a great surprise to find how much better plants grow when the ground about them is well mulched. In fact, many of them feel more nearly at home than anything else that could be done, save the giving of water to some extent. In fact, many of our woods have shade above them and decaying leaves about them, and those in fields and on the grass or other places, and so it is that in both places the roots are cool. This is what mulching of the garden plants is all about, and it is a most important feature. Another thing rarely thought of is this: The wild plants in the woods are often cut with the axes and the roots do not get to their roots. I am sure that all plants, hardy or not, are the better for a good mulch, and that the plants in the fall, that the roots may have a winter covering. As herbaceous plants will repay the best given in the fall, and that with manure in the fall. Let it be long manure, the better to protect the plants; the straw or horse manure is better in the spring; the remainder can be left undisturbed; it will be loose, and often it will be sufficient mulching for the summer.

Next to mulching there is nothing like a constant stirring of the soil. Let me say here that I have found many workmen in

gardens totally unacquainted with the principles of hoing. The hoe is drawn over a surface already hard, cutting of the weeds close to the ground. Then the weeds are brought up to the surface, and the soil is in a worse condition than before, for the weeds shaded the surface if they did rob the ground of their food, and the hoeing tends to loosen the soil as to destroy weeds. Every stroke of the hoe should loosen up an inch more soil, and the loose soil should not be raked down too fine, or the first heavy rain will heat it down very hard. One word hardly above what a really constant cultivation of this kind is to herbaceous and all other plants. And when rains come, the water is all taken up where it falls. Good mulching preserves the looseness of the soil in the same way. I am sure that very many one of our lovely native flowers could be successfully grown if mulching or hoeing would be made a feature of cultivation.

## How to Propagate.

The propagation of herbaceous plants is mostly by division of the root or by sowing seeds, though when the seeds are small as in hard many sorts can be increased by cuttings. A little practice will suggest the best way to propagate. The seedling will show it after a year or two's growth, by the clump-like appearance displayed. There is no set time to propagate. Very early spring is an excellent time; so is early fall. If done late in spring, the summer's heat comes, and the plants do not before well rooted, and to late fall frosts before in the same way. The sowing of seeds is an interesting as well as a successful way; this work should be done early in the spring, not of doors, just as soon as the season will permit. There are some kinds, such as our wild aster, which are the better for being sown in the fall. Just before the ground freezes up will do with the wild aster, and appear early in the spring, and, what is more, they will flower the same season, in the fall. It was my thought to name some fifty kinds of herbaceous plants, giving the months in which certain ones flower, but as the catalogue was getting too long, and information it seems hardly an advantage to do it here. I will but say that, commencing with April and ending with November, something can be had for every month of the year.

## A Few Words About Ferns.

As the catalogue was to name plants I will diverge a little and speak of ferns. I believe that all of us who possess a garden, be it ever so small, have a place for

new ferns. What they require above all else is shade. It may be the eastern or northern side of a dwelling, on a wall, or any other situation where the afternoon sun is not so hot. They flourish in it all. Under trees is not suitable as a rule. The roots of the trees exhaust the soil of the ground, and the water runs down the streams on the fronds, both to the injury of the plants. My own collection of native ferns is not so large as that of my neighbor's house, which forms a division line. The sun shines on them until noon, and they flourish in it all the day, as possible way. Among the twenty-five sorts collectible about our city some half dozen are the evergreens, and these should certainly be planted. The time to collect ferns is toward late summer. All the kinds can be secured then, and they are being fully matured the height to which they attain is shown, and the proper place for them in the garden can be determined. Take a good ball of earth with them, if possible, though as it is easy to get all the roots, it is not difficult to transplant without this.

## The Royal Gardens, Kew.

During the trip to England, already referred to, it was my privilege to visit many large private grounds, and though the climate is not so good as that of our country, particularly favorable to the cultivation of herbaceous plants, I cannot say that I saw any abundance of more interest in them there than is displayed here. But let any one who wishes to see them in perfection visit the Royal Gardens, Kew. The department for these plants is supposed to contain everything hardy, and to have every plant correctly named. And as far as possible to every plant has been given a position it prefers. There are swamps, bogs, dry rocks and damp rocks, shady nooks and open places, all filled with flourishing plants. With notebook in hand, after two visits, I did not nearly make record of all I would have wished to have done. In the woods and fields visited I did not find nearly as many wild plants as in similar situations here abroad. No doubt it is there as it is here near large cities, those who do not wish to dig or pull them up, and they soon disappear. On reaching these shores again, after my travels abroad, I did not feel a little pride in the beautiful scene presented on each side of the track as the cars sped on from New York to Philadelphia in the month of August, and, while full of recollection of the never-to-be-forgotten kindness shown

to me by the good friends I had parted with before my departure, I saw the picture before me could not be prated, or any other shore. Crossing the Delaware at Pottsville, I saw the most interesting Pennsylvania, my feelings can be expressed by quoting these lines from Byron:

Yet are they skies as blue, they grass as wild:  
There are they grows and verdant are the fields.

For look wherever I would, cultivated fields,  
The trees of the forests, and the wild flowers,  
I saw them all, and I could not see never to have looked so beautiful.

## Richmond, Ind.

E. G. HILL at this present time, while surrounded by those magnificent varieties of carnations recently sent out, has still others clamoring for recognition of their several virtues. Jubilee, named in anticipation of the silver anniversary of Mr. and Mrs. Hill, will undoubtedly hand their name, through it, down to posterity, for it has only begun to be understood and its time rolls by its merits will become more conspicuous. Triumph must be cut before the prize-winner at Cincinnati, stands erect, as it flowers, congratulating itself upon its recent success. Close by is the variety Flora Hill; its supple form and chaste appearance are well contrasted with a very beautiful variety of bewitching charms. Next year it will see it out to share the honors which will doubtless be heaped upon it in recognition of its merits, and a variety whose only failing is bursting, but that does not damage the flower. There are a host of seedlings yet untried. Many must be discarded, and great care will be taken to confine the list to such as have some merit. Some of the most interesting introduced. Two were noticed more particularly, one a cross between Helen Keller and Mrs. Hill, and the other a cross between Boston Dor and Flora Hill.

The varieties being sent out by Mr. Hill this season will be of great interest, and will be well fed to obtain good crops. This is evident here, notice also that they are very free bloomers, so that cuttings are scarce, and many orders cannot be filled so soon as could be desired. Neither the Helen Keller, nor the Boston Dor, cuttings, judged by the stock from which they are taken and their condition in the seed bed.

While close attention is paid to carnations, it is not to be forgotten that new varieties not yet generally known, a beautiful white hybrid tea, Mme. Jules Flegre, that is the best and most profitable, probably grown as a bench rose, it will create a furore. It is a lovely thing and will have a host of admirers at its debut.

Of new geraniums, La Vienne is a decided improvement on Mme. Pearson; other ones are the Jasper and the very crimson-scarlet, and Iris (Brazant) a glowing scarlet, with immense tuss.

Another variety, which marks a new departure in the early hybrid class. In roses for blooming purposes, Paris and the new variety, which is a cross between a grand house of Carnot for Easter.

W. M.

## Terre Haute, Ind.

J. G. HEINL & SON consider their advertisement in the Exchange as the most profitable investment ever made. Orders for neprolepis and violet, Princess of Wales, came in a large number of telegrams, and the stock of the former and greatly reducing the latter, which is very fine. They grow a large number of neprolepis and violet, in 5, 6 and 7-inch pans—most on top. In 1896 they had a single factory plant for a house, and in 1897 they had a grand profusion of ferns extant. Princess of Wales is a grand violet and is going to the front.

J. G. HEINL & SON, is at present sojourning in Mexico; his son Fred. is working partner.

W. M.

## Detroit, Mich.

J. BREITMEYER & SONS, in addition to sending out the carnation, Mayor and the violet, in the month of May, of which at the time of my visit I saw one thousand Marie Louise used in the formation of a handsome wreath.

W. M.

## Dayton.

H. H. RITTER reports a good season, although decorations have been fewer than usual.

## G. B. BENEDICT ...FLORIST... \* \* \* \* \*

Palms and Ferns of Extra Quality Always on Hand.

*Cancelled, A. B., Feb. 11th, 1897*

Mr. H. A. Stoothoff.

Dear Sir:—

I am glad I can endorse Tobac-Oil. What I say is absolute fact, not fancy. My own certain ferns and common bedding stock, callas, palms in fine variety, orchids in bud bloom, etc. To brother florists desirous of a safe article for destruction of Aphid I say: Use Tobac Oil. I find it safe and clean, doing the work thoroughly. I have used it where tender ferns and delicate flowered orchids were in bloom and they showed no ill effects. It can be vaporized, and hardly any odor is noted when house is filled with vapor, which permeates the air in a very few moments; customers could come in any time during the vaporizing process and I do not think they could notice any objectionable odor. The work done by it is truly magical. I am glad to recommend it. I apply it by placing the required quantity of Tobac-Oil (diluted) in an iron stone kettle, removing the griddle from my coil heating boiler and inserting the kettle; soon the Tobac-Oil is to a boiling pitch and the vaporizing done. Respectfully yours,

*G. B. Benedict*

# A GREAT SELLER.

THOMAS MEEHAN, Phila. "A great advance over the ordinary garden trowel."  
PROF. L. H. BAILEY, "I find it very serviceable for transplanting. It is the  
most useful trowel I ever used."  
JOHN LEWIS CHILDS, "The finest thing for garden work we have ever seen.  
For transplanting, lifting and setting plants it has no equal."  
ERIK REXFORD, Schictown, Wis. "I had them just what I have long wanted.  
They must prove invaluable for outdoor work. I give them my unqualified approval  
for greenhouse use."  
F. H. HORSFORD, Charlotte, Vt. "The best trowel for garden use I ever saw."

PRICES:  
No. 1, 8 inch, Tempered and Polished - per dozen, \$3.00

Society of American Florists. Revised Rules Relating to the Management of the Annual Trade Exhibition.

1. The Society of American Florists shall, through the Executive Committee, control all features of the trade exhibition.

2. There shall be appointed annually at the winter meeting of the Executive Committee a superintendent of exhibits. The vice-president of the S. A. F., or the local organization in the place where the convention of the current year is to be held, shall be invited to recommend such superintendent for election by the Executive Committee, as aforesaid. Said superintendent shall have general charge of all displays under seven days' full service and pay at and during the exhibition, he shall receive all applications for space and assign the same in the order in which they are received by him. He shall provide and arrange all necessary tables and staging.

3. It shall be the duty of the superintendent of exhibition to furnish the secretary with a full report of the exhibition; said report to be introduced in the annual report of the society.

4. Exhibition space shall be designated in square feet. A maximum charge of 25 cents per foot for all space less than 12 feet; more than 12 feet and less than 50 feet, 21 cents; more than 50 feet and less than 100 feet, 15 cents; more than 100 feet and less than 200 feet, 13 cents; more than 200 feet and less than 1,000 feet, 17 cents; 1,000 feet or over, 15 cents. No entry to be accepted for less than 2'. No charge shall be made for plants and flowers entered for exhibition only.

5. Wall space shall be measured four feet in height, and when practicable a table not less than one foot wide with it added gratis, if desired and applied for with entry.

6. Exhibition classes to be arranged as follows: A—Plants; B—Cut Blooms; C—Greenhouse Appliances, including Flower Pots; D—Florists' Supplies, including Flower Barthenware, F—Balls and Seeds; G—Miscellaneous.

7. Exhibitors may group their goods together, excepting in the case of hanging plants and cut flowers. These shall be shown in a separate department from the other classes.

8. Judges shall be appointed by the president and secretary at least a month before the exhibition. The president and secretary may appoint substitutes in place of judges, who may be absent.

9. Awards shall be given as follows: Highest—Certificate of First Service; Honorable Mention. Third—Highly Commended.

10. Judges shall be governed by the merits of the article exhibited, and shall state in their report on what special points of excellence awards were based.

11. The judges shall withhold awards on unworthy exhibits.

12. In any case any article or device has received an award at a previous S. A. F. exhibition, awards shall cover subsequent improvements only.

13. No award shall be made covering the quality of seeds, fertilizers, paints and other articles of such nature that an intelligent opinion cannot be had without a practical test; but awards for creditable display may be given.

14. The exhibition shall be closed between the hours of 2 and 4 P. M. on the first day of the convention, during which time the judges shall pass on the exhibits, and they shall report promptly to the secretary on the same day. Exhibitors shall be excluded from the hall while the judges are at work.

15. Exhibits not in position before 1 P. M. on the first day of the convention may be excluded from the report of awards.

16. Days of exhibition shall be closed five minutes before the opening hour of each session of the society and remain closed during the session.

17. Exhibition to be open not less than two hours before the opening of the morning session, to remain open during the day, except during session hours, and as provided in section 13, and to remain open one hour after the closing of the evening session.

18. No article exhibited shall be removed until after the close of the last day's session, except by permission of the superintendent of exhibition.

19. All disputes not covered by rules or published action of the Executive Committee shall be referred to that committee.

JENKIN'S EVERGREEN AND SEEDLING NURSERY, WINONA, OHIO.

## Ten Degrees Below Zero

is the temperature that has been undergone without injury by unprotected yearling plants of the new climbing rose

## AGLAI<sup>A</sup> OR YELLOW RAMBLER

in our nurseries the past Winter, thus proving it to be even harder than we had supposed.

## A Hardy Yellow Climbing Rose

is what everyone has wanted for years and Aglai<sup>a</sup>, therefore, an immensely important introduction.

## 150 Blossoms in a Bunch

have frequently been produced by the Yellow Rambler, for it has the same manner of blooming in splendid big clusters as does the Crimson Rambler to which it is a splendid companion rose and probably related. The color is a clear decided yellow; the flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well established plants making shoots eight to ten feet high in a season.

## We are the Introducers

of this rose in this country, having been so appointed by Mr. Peter Lambert, the originator.

We are also prepared to offer plants of two other valuable climbing roses:

## EUPHROSINE or PINK RAMBLER

Color a clear light red; otherwise very similar to Aglai<sup>a</sup>.

## THALIA or WHITE RAMBLER

Pure white; same style and habit as Aglai<sup>a</sup>.

## WE WANT EVERY FLORIST

to handle these three roses among his customers and to anyone who will do so, agreeing to depend upon us for his supply of plants.

## WE WILL SEND FREE OF CHARGE

a beautiful colorotype plate illustrating the Aglai<sup>a</sup>, together with 100 handsome descriptive circulars with name and address stamped upon them. Send at once.

Price for strong plants from 2½ inch sps,

**\$15.00 per 100.**

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

### Soils and Potting.

Before the Massachusetts Horticultural Society Saturday, March 20, T. D. Hatfield, of Wellesley, read an interesting paper upon the above subject, of which the following is an abstract:

"This subject is most important, both from the gardener's and the farmer's point of view. Gardeners seldom agree fully, about the proper soil for any crop. Soil may be heavy or light, land high or low, with much variation of exposure. We often wonder at our neighbor's success under conditions where we should consider failure certain. An acquaintance of mine, a gardener at Cape Ann, told me that the only potting soil he could find was turf from what had once been a salt marsh. After it had been broken up and exposed to frost and air, he found he could grow almost anything in it.

"Sometimes we have a lot so springy that it cannot be cultivated till late in the season, and again a soil so dry that we must irrigate for all but early crops. A dry soil is easily worked, but holds substance poorly, and therefore needs frequent manuring. A heavy soil is probably best and holds manure better. By autumn ploughing and cultivating the ground in plots, one can bring it into good friable condition.

"We gardeners believe in 'leaving well enough alone,' and there are methods which we confuse because it is the custom, though we cannot explain why. Much must be learned by experience.

"We read in old books, 'one-third of turfy loam, one-third of leaf-soil, and one-third of sand,' or it may be fourths, including rotted manure, or fifths, with peat added. This accounts for over-watering, is slow, and but few mixtures of soil are in use to-day. Leaf-soil, one of the best ingredients in any compost, is seldom used except in private gardens. Well-rotted manure is a good substitute. However, the soil should be light for potted plants and there is less danger from over-watering with the hose. Rose growers always find means of meeting the wants of the soil. They may add clay, but can generally do without it.

"With azaleas it used to be considered necessary to use English peat, and 80 per cent. of these plants are still so grown in England. But look at the azaleas grown by Mr. Sanders, gardener to Professor Sargent, of Brookline, and you will see that azaleas can be grown in soil almost wholly lacking peat.

"There are other considerations almost as important as the soil and its consistency. For glorioxias I tried various kinds of soil, all to little advantage. With these plants much depends on care for the tubers during the so-called resting season, though they are never absolutely at rest, and it is a mistake to remove them and store in dry

sand. They should never become thoroughly dry for living shoots will always be found which require some nourishment. Start with sound, healthy roots, withholding water until some leafgrowth is made, and keep near the light, and then glorioxias will succeed in almost any soil.

"I have had a hot compost heap. Good turfy loam is not plentiful, and some of us have found how to get along without it. Old houses and greenhouses are extremely careful in mixing their potting soil, but the American grower prepares his in the best without a foot of turf. The best method is to cultivate the area for strip-ping, growing there a crop of clover with no other object beyond turning the best of what is put into the soil as manure, into plant food of the kind which the carnation most needs. The American grower raises the better carnations, though it is true he has better light during winter time, has made a specialty of the work, and has originated a new type of carnations. This shows that the importance of a prescribed composition for soil is overestimated. I have grown carnations in soil from the common compost heap which were just as good as those grown in special soil.

"In a sandy soil the roots are gently turf trimming to be done and I used to get enough in this way for a season's use; but now I get a quantity of leaf-soil. I mix it with two loads of the best manure—sheep manure is preferred, as it is richer, so that I get a quantity of leaf-soil. I layers alternately with pure ground bone; fermentation starts, and the soil is heated to 150 degrees Fahrenheit, which will kill all insect life and weed seeds and makes the bone meal available as plant food. Bone meal should be worked into the compost long before it is needed as it is not fit for use until fermentation has subsided. It should never be used as a top dressing.

"I have said that light soil is best for potted plants, but a man may get along with heavy soil if he handles them carefully. Injudicious watering will lessen the value of the best compost, and lack of air and proper watering would ruin the best plants. In potting plants, have clean pots. If new, de-odorize, that is, heat them in water. If old, wash with moist earth and leave for a day or two. This earth should not be used again. Next to the soil is the manure. The best material is crocks or broken pots. Cool ashes, though excellent for many plants, is bad for others.

"Plants which do the greater part of their growing in winter time, as well as those which require a long time without retting, require more care. All potting should be done firmly and for the most part by hand. Plants which grow quickly, geraniums, heliotropes, coleus and fuchsias—what gardeners call soft-wooded plants—need less care.

"The best of liquid manures for potted plants, to continue the productiveness of those which are used, is that which the resources of the soil have been exhausted, is the dregs from the barayard. It is well to start with one-eighth strength and increase as experience dictates. Colorado sheep manure may be used at the rate of a peck to fifty gallons of water. Substances such as ammonia and nitrate of soda, at the rate of one pound to fifty gallons, are really stimulants, and increase the manure, and though it is quick of benefit as well as of injury. Liquid manures should be used only on healthy plants, and there must be free drainage."

50,000 ROOTED CUTTINGS

...OF THE...

New Seedling Carnation,

Originated by Mr. H. A. Cook, of Shrewsbury, Mass., grown by the subscriber, and now being put on the market as

❖ NIVEA ❖

Cuttings Now Ready and Free from Rust.

\$10.00 per 100; \$35.00 per 500; \$60.00 per 1000.

DAYBREAK, SCOTT, STORM KING, PURITAN, METEOR, GOLD FINCH, HECTOR, ALBERTINI  
and others, \$1.25 per 100; \$10.00 per 1000.

*Cuttings and Flowers of Nivea may be seen any morning at my stall, No. 103, Boston Flower Market.*

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

ROSES      ROSES      ROSES

In extra fine stock ready for immediate shipping. All the best New and Standard varieties of Teas, Hybrid Teas, Hybrid Perpetuals and Climbers. Also monthlies for Summer bedding, at prices to suit the times.

CARNATIONS, Lily Dean and Maud Dean

The two finest Carnations of the season. No florist can afford to be without them. Prices each \$10.00 per 1000; \$75.00 per 1000. Also all the other new varieties of the year at advertised prices.

To make room immediately, I will sell a lot of extra large transplanted Scotts and McGowans fit for immediate planting out at \$1.50 per 100; \$12.50 per 1000 for cash with orders.

~ CHRYSANTHEMUMS ~

My own set of six new ones for this season and all the new varieties offered for this year at advertised rates. Also the best standard varieties in extra fine stock.

CANNAS. All the best varieties in fine stock.

JOHN N. MAY, = Summit, New Jersey.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## COMMERCIAL ORCHIDS.

The growing popularity of orchids, and their more extensive use in floral decorations, has been noted in these columns as well. The great increase in their production occurred to us that a chapter in our Spring Edition, devoted to the subject of commercial orchids, would prove interesting and opportune. The articles presented herewith are written by specialists in the growing of the several species touched upon, and the information they have imparted will render very efficient and valuable aid to anyone who may be inclined to take up the cultivation of orchids.

Owing to sickness or other unavoidable causes we have been deprived of the services of several of our contributors and had contained upon for other articles on one or more useful species not included here.

## Orchid Collecting in Colombia.

Abstract of Papers read before the New Jersey Entomological Society, recently, by John E. Laver.

On a march, say, at Savannah, United States of Colombia, or at the mouth of the mighty Rio Magdalena. The river is navigable for a distance of 600 miles, and under favorable conditions the voyage will take from nine to ten days, whereas, under reverse circumstances it may be lengthened to twenty days. The lower parts do not offer much of interest to the traveler, as the surrounding country is very low and swampy. Indeed, large stretches are marshy. Only a few habitations and small towns begin to appear. Most of the habitations are built of bamboo and mud, and are surrounded simply by a few bamboo poles secured in the ground with a few leaves of *Cocos* buttresses tied over and on and around the principal foods are corn, rice, bananas and yucaes. The latter are the tubers of *Manihot*, *utilissima* (taoca) in commerce as typical.

The vegetation on the Lower Magdalena is somewhat monotonous, but, gradually reaches more interest as the traveler approaches the scenery in many places is magnificent. Imagine the river banks covered with ferns and vines and all steeply descended with vines and climbers down to the water's edge, forming a dense mass, here and there a beautiful colored bird. Behind this extends a low range of hills, the top of which and in the background the blue chains of the Cordilleras, towering one above another. The interest of the collector will feel not a little disappointed by the almost total absence of orchids along the river.

After the terminus of the Lower Magdalena is reached a short railroad takes the traveler to the mouth of the river, and through some mighty rapids, which divide the Magdalena into two sections, the Upper and Lower. The river is shallow, and the only means of transportation left the traveler is on mule or horseback. After three or four days of riding, a trip of several miles, hot plains, wading rivers, climbing and descending hills, Bogota is reached. The latter is used to go, and sit on a certain extent, the center for Cattleya Trianae. However, at present the plants are becoming scarce, and the situation is difficult at the foot of the Tolima, a snow peak, forming part of the central mountain chain and extending to an elevation of 10,000 feet above sea level.

## Where They Grow.

One of the most important items to the collector is to find a good district, not only where plants are abundant, but where also a good strain of varieties may be obtained. The districts are characterized by hardships and inconveniences, but it certainly pays, though a good deal more, to add to the cost of obtaining before obtaining results. In districts where plants are plentiful collectors will purchase on the market, is, comparatively speaking, a pleasure compared to what the exploring trips are, especially where the plants are scarce. The good general place must be selected as headquarters—a place situated, if possible, in the interior of the country, far from district outskirts, or, in short, in some place from which there is an exit permitting collectors to escape in case of trouble.

By headquarters I mean a few ranches or tents pitched for the occasion, or where the collector pitches his tent. The make cases. When tents or ranches are ready men are sent out in different districts, two or three, or five, or ten, and previously been shown what and how to collect. They carry provisions to last for several times for two weeks. They bury themselves in the mountains, ready to destroy anything in their way bearing on orchids. Whenever a plant is detected, the tree is cut down, and the plant torn from the trunk or the branches. The smaller trees are cut down in three or four feet down to the ranch. The vegetation is most exuberant in the cordilleras or moun-

tains, with their spurs and hills, rivers and streams, forming valleys and gullies, hollows and precipices impossible to describe in limited space. In these high mountains are where the orchids luxuriate and where they display their magnificent flowers to the best advantage, inviting the collector to come and pick them, yet oftentimes deifying every attempt to capture them. If the collector is a lover of plants he will be nature in all its marvelous beauty. For a moment or two he is likely to forget himself, forgetting all hardships and worries, while a feeling of ecstasias steals over him, leaving an impression which he will not soon forget.

## Cattleyas.

The cattleyas are found at from 2,000 to nearly 5,000 feet above sea level, almost exclusively in the high mountains, and in the trunks or in the forks of the branches. They always try, as it were, to establish plantations where they receive the abundance of light and a glimpse of sun. Sometimes, indeed, they are exposed to the full sun. The latter, as a rule, are the best plants. At the lowest elevation they will persistently follow the course of streams. For a moment or two he is likely to forget himself, forgetting all hardships and worries, while a feeling of ecstasias steals over him, leaving an impression which he will not soon forget.

The latter, as a rule, are the best plants. At the lowest elevation they will persistently follow the course of streams. For a moment or two he is likely to forget himself, forgetting all hardships and worries, while a feeling of ecstasias steals over him, leaving an impression which he will not soon forget.

## Geographical Range.

The Republic of Colombia is very rich in orchids. The different species here are spread over its entire territory. The greatest number of species, however, is probably to be found in the northern foothills of the central Cordillera, which is a continuation of the Peruvian and Equatorial Andes, but extends to the eastern Cordillera, running into three distinct chains, known as the Central-Cordillera, the Eastern Cordillera and the Cordillera Oriental. The distance between them the immense valley and river system, called the Cauca, the Magdalena and the lower Cauca. The latter is the "Cazanar." This latter immense territory is bounded principally by the Amazon and the Orinoco. The plants are found in all which are as yet unexplored.

The State of Tolima may be considered as the home of the Cattleya Trianae. It follows the eastern foothills of the Central Cordillera, and extends to an elevation of about the fifth degree northern latitude, and at its southern limit it is distributed over a distance of thirty miles. It includes also the home of *Odontogloum crispum* (Seibman).

Cattleya Javaya takes the place of Cattleya Trianae further northward, where it extends between the sixth and the eighth degree northern latitude. It follows the eastern and eastern chains. This territory is exceptionally rich in useful species, such as *Phragmatopus*, *Phragmatopus*, *Phragmatopus*, *Odontogloum luteo-purpureum*, *O. oespum*, *O. coronarium*, *O. Wallisi* and *O. coronarium*. It also includes the *Phragmatopus Maximiliana*, *Luteo-alba*, *Epidendrum fimbriatum* and *Maximiliana* in variety. Sansau, Cauca, is the headquarters as the principal district for the latter.

I found *Miltonia vexillata* as low as 2,000 feet above sea level, but at 4,000 feet to 7,000 feet, but at the first-mentioned altitude the plants were generally very small.

It generally grows on smaller trees and branches of *Melastoma* and *Quercus*. *O. coronarium* is found at a very high altitude, of 8,000 feet, but grows in masses, where it ramifies for yards until it finds a tree suited for its requirements. The magnification of the power spikes surprises imagination.

## Odontogloum crispum.

On the Eastern chain, *Odontogloum crispum* is found in the mountains of the fourth and sixth degree northern latitude at an altitude of 6,000 to 9,000 feet. The best plant of the lowlands is at an elevation of 6,000 and 7,000 feet below where it grows in occasional openings of the forest on the eastern foothills of the Eastern Cordillera, Cattleya Schroederae. On the Western Chain, or along the Rio Cauca, Cattleya Chingana, is found where the forest is open. It grows to a great extent in forests on level land, stretches of which are swammy and unproductive, and where it receives certain places, and grows invariably on the rock. The flowering season is August and September, but where the forest is not yet destroyed, or they would have been extinct ere this. The natives are also beginning to feel more considerably with the forests, besides which many of the land owners and even the respective governments are beginning to feel the total destruction of their most beautiful jewels. And you can blame them?

Many of the New Granadina orchids are rapidly decreasing in quantity. *Cattleya chrysantha* is very near extinction, *Miltonia laevigata* is very scarce, *Miltonia Mendellii* and *Odontogloum crispum*. *Miltonia vexillata* and *O. crispum* increase rapidly in quantity where the forest is not already destroyed, or they would have been extinct ere this. The natives are also beginning to feel more considerably with the forests, besides which many of the land owners and even the respective governments are beginning to feel the total destruction of their most beautiful jewels. And you can blame them?

## Some Useful Cattleyas.

It is not quite a decade since the cultivation of orchids for cut flowers was assumed in this country, but at that time they were being gaining steadily in public favor, until now they are in great demand for the most part of the country and districts adjoining. The exquisite and rich tint of their flowers and their low durability when cut, makes them especially adapted for such a purpose.

## The principal orchids cultivated for cut

flowers in America, so far, are the cattleyas, the *Lablata* section, some dendrobium, cymbidiums, cypridiums and vandaeas. As all of them have to be gathered and brought here from their tropical homes, the temporary headquarters, directly connected with the collecting of those plants. Every orchid collector who has to go far into the interior of the country, and has to counters plenty of hardships and privations to be remembered in later life. His most important business is to plan his collecting, though very desolate, offers him at least shelter and an opportunity to enjoy the most beautiful nature and that of the native mountain dwellers.

The old *Cattleya lablata*, or the *C. lablata* section, was first introduced into the country on claim, perhaps, the most interesting history connected with its first introduction. The first introduction into the country was discovered instead. Arnold found *Cattleya Seibmanii* in the Caribbean Mountains, near Rio de Janeiro, it was mysteriously lost for more than fifty years, and became again introduced into the country, from Brazil and South America were explored in the vain search for this beautiful species. The first introduction into the country was discovered instead. Arnold found *Cattleya Seibmanii* in the Caribbean Mountains, near Rio de Janeiro, it was mysteriously lost for more than fifty years, and became again introduced into the country, from Brazil and South America were explored in the vain search for this beautiful species.

The climatic conditions of its native

home differ somewhat from those of other cattleyas and mostly resemble those conditions under which species-producing growth is favored. In this respect it differs from months of the year and is very vigorous; owing to this fact, the double flower-branch of the Cattleya is very much increased for the coming flowers. From about 10 o'clock in the morning until about four in the afternoon it is in full bloom. After this time, a breeze generally sets in, and the nights are mostly cool and refreshing. The plants are very hardy, and stand 60 to 100 degrees F., but only remains for a very short time at the lower extreme. At the lower extreme, the Cattleya is extremely floriferous; four to five large flowers on a spike are common, and I have seen one with as many as seven large flowers per spike.

The conditions of our northern latitude, make some cultural changes necessary, and we should try to keep the plants after the flowering season, as long as rest as possible, which we can only do by keeping them very cool, dry and airy. If such a course is followed and the plants are kept from growing as long as possible, the flowering season may easily be prolonged up to Christmas.

As to the cultivation of this very free growing and floriferous species.

The most beautiful of the cattleyas, one of the most popular is the beautiful spring flowering *Cattleya Mossiae*. It has present a very beautiful and rich color and is found in the Cordillera of Venezuela. Once very plentiful and easy of access. It has become very scarce, and it is difficult to get so many large shipments having been collected there for many years. I remember, however, to see one in the Cordillera, and the trouble and expense to collect this orchid it does now. The supposed native home of this species is in the epiphyllar forest it still to be found, are getting more and more existing in the Cordillera, but the plants are not existing there, for they think they possess a treasure in these plants which they are unwilling to give up. They are in European countries and North America. It is, for instance, curious to note, how the collector in the Cordillera is convinced that a white "Flor de Mayo" (*Cattleya Mossiae*) is not a *Cattleya* (it is worth its weight in gold in England).

Another valuable Venezuelan *Cattleya* is *Cattleya Peruviana*, which is found in the Cordillera of the Caribbean mountains. Under cultivation it blooms during the summer months, though, under the same conditions, it is the first collecting experience with this variety was a succession of great hardships. During the last rainy season, and for a very long time, the mountains are almost daily deluged with heavy rains, and are for long periods of time almost impassable. It is often unobtainable, as those few Indians who live in those districts subsist upon anything edible. With some bananas and bread made out of the roots of the manihot (*Jaribe manihot*) they are satisfied; in between these are some sugar from the sugar cane and dried fish, with black coffee, is added.

Due to the high degree of moisture during the greater part of the year, a most luxuriant tropical vegetation is found in the mountains, and the plants are very hardy and for that reason, it may be, this particular *Cattleya* only grows very high up on the mountains. The plants are very hardy, and for that reason, it may be, this particular *Cattleya* only grows very high up on the mountains. The plants are very hardy, and for that reason, it may be, this particular *Cattleya* only grows very high up on the mountains.

Some of the most beautiful plants of these magnificent forests can, therefore, be obtained only in these mountains, and only is found upon the oldest and finest specimens.

The plants are never found growing upon palms, but some varieties are very frequently met with upon rocks in the mountainous regions, and are very often under pieces bordering the same. Almost entirely in such positions is found *Cattleya Percivaliana*, and *Cattleya Trianae*, which are found in Venezuela. On account of their rich and highly colored flowers, this is one of the most beautiful *Cattleyas* known in the world. I have seen them in their home in bloom and the flowers almost the same color as those seen under cultivation with us, they are sometimes rather small, and as the plant is seemingly more common in the mountains, it has to a great extent been dropped out of the list by commercial growers. The two last mentioned *Cattleyas* have not been introduced into the United States, but they are very beautiful, as on account of some peculiar qualities, of little value to commercial growers, but of great value to the collector of useful cattleyas for cut flowers. The climatic conditions of its native

hidden in the great Cordilleras of Colombia. Some of our most useful and beautiful cactaceans, many odontoglossid orchidites, many *Millettias*, etc., have their home there. The cañonias, in many respects, the most interesting and agreeable, are covered in America for the Northern Iverster. As the enormous parts of the world are covered by a degree of moisture, mostly in the Tropics, with a luxuriant tropical vegetation. The rain and only a few in the interior, as the great Rio Magdalena, are covered with an opportunity to see a large tract of the country. The borders are dotted with princely forests and only a few hundred alligators, monkeys, parrots and other different animals, are scattered (fowl). But to go up one of the many tributaries, in a small canoe, affords a much more agreeable trip. Here a large little boat is pulled along by the natives on the shore a picture of the most magnificent grandeur is unfolded. Here and there an native hut or a village is encountered. The houses, either built of reeds or mud, are never covered with palm leaves and surrounded by plantations of sugar cane, coffee, cocoa, bananas and other tropical plants of economical value.

The mountains of Colombia are known to be the home of *Cattleya Schroederiana* C. Mull. C. gigas, C. ciliaris and *Odontoglossum* (the plants are found at an elevation of from about 3,000 to 7,000 feet above the level of the sea). The latter, however, is not confined to the headwaters of the Rio Magdalena, has been very much decimated in late years and although they are not yet exhausted, it will sooner or later share the same fate of most of our other *Cattleyas*—to so scarce a number as to be of no commercial purposes will have to be abandoned.

ADOLFA A. SACHSE,

Newtown, L. I.

### Treatment of Newly Imported Orchids.

Years ago it was considered a difficult task to establish a new import of orchids with any degree of certainty; many thousands were lost annually, and when one looks back on the crude manner in which they were handled on arrival it is not surprising that so many were lost.

The plants, when unpacked, should be placed loosely to admit air, in flats on damp sphagnum, and put in a shady part of the nursery, respectively, where they should not be a proper importation house for a day or so, after which they should be sprinkled with water and covered over with a clean cloth the bruised and decayed parts, and taking away any decayed material from the roots. The plants should be pulled up as quickly as possible into small pots or baskets as occasion demands, allowing in each case plenty of drainage, and giving the same occasion as established plants in the same practice. For a while they must be carefully shaded from the sun and receive water sparingly at the roots until the plants have acted up to the point, they require the same treatment as their better established sister plants.

When plants of the genera *Cattleya*, *Laelia*, *Dendrobium*, *Madevalina*, *Odontoglossum*, *Oncidium* and *Strobilanthus* like others are received in a shriveled condition, they should in addition be syringed over with cold water two or three times a day in favorable weather. In planting them up, many *Cypripedium* also do well with the same treatment, but the slow growing coriaceous orchids, such as the concolor section, *Rochechiliana*, *Bandieriantha*, *Conopsea*, *Habenaria*, *Vanada Aerides*, *Phalenopsis*, *Saccolabium*, *Gonanda* and *Kiddeus* sorts must, if planted at all, be very much shaded from the sun, and in bright weather using a very fine spray, as water lodging in their stems is always a sure way to rot. In winter it is better to omit the syringing and keep them in a trifle closer atmosphere until the winter signs have nearly returned, when treatment is required.

R. M. GREY.

### The New Orchid Culture.

The mystery which for a long time enshrouded the cultivation of orchids outside of our own nation has been broken, and was intensified by those few men who were supposed to have mastered the secrets of this cultivation, was very rapidly dissipated by the following information. A little over a year ago two men, eminent in the orchid growing world, the late and noble play of Messrs. Fletcher and Mandi, decided to go into the business for themselves,

under the firm name of Lager & Hurrell, at Summit, N. J., John E. Lager, the senior partner, is a native of the United States, collector than as a grower; and in this capacity is probably destined to be the most successful in his line. His young firm's reputation being already world wide. His partner, Henry Hurrell, as a grower has rarely excelled him in any branch of his working in the great collections of Europe and America eminently fitting him in this and that capacity. The success of the firm, so that may arise, either suddenly or otherwise, so that the success which so far has attended it, by this young firm is a readily accounted for.

Mr. Lager had not been long gone to the home of his business, but was invited to his firm 150 large cases of *Orchid*. To handle such a bulk and fix it up in no mean task under ordinary methods; to place the plants either on blocks, in baskets or in pots would necessitate a large outlay of money for peat, pots, etc. In addition to a great amount of manual labor, and very considerable room—something which the firm had decided to avoid, a novel scheme of treatment, a scheme which in very large quantities, has been used by growers stand aghast when they heard about it, and one which we ourselves have since used with perfect success. We will give just a year for results before mentioning it in the columns of the "Florists' Exchange."

The result of a very recent visit, for observation, so satisfies us that our former system, as described in these columns, is present to our readers the methods of what we will call "The New Orchid Culture." We begin with the test has a skeleton, even span frame, fixed in the center, at nearly the same angle as the former, but instead of a wooden, or iron, looking structure is to receive the orchids; but, instead of pots, the plants are fixed upon bent hemlock blocks, which are fixed with widths varying from 8 to 10 inches. Very little trimming to the plants is done; can be received, and the plants are largely retained, thus saving an immense amount of labor, which would be necessitated in the old plan. As soon as a plant is spread out on the board; no wire is used, but in its place coppered staples, of iron or wood, are used. In place of more substantial parts which bring the plant to rest tightly and evenly, and should any plant be broken, the loss is a great one, they are fattened by driving a small tack through them.

Instead of peat, fiber, moss, etc., in, as a measure, done away with, and as a substitute a little chopped peat is mixed with the fiber and the soil. In place of this is added a sprinkling of dried cow dung. To prevent these ingredients from working out of the board, an ordinary builder's lath or strip is nailed up the side, so that when complete the plants rest, as it were, in a shallow trough. The board itself is one inch thick, and the ends are kept free. The whole work is completed in the shade, so that all that remains to be done is to carry the trough into the house and place it upon the wooden floor. The plants, and the pieces can be discerned in the illustration herewith.

Any of the pieces in the original orchid cases has of extra size, instead of breaking them up they are secured to hemlock blocks, and then put into a wire loop. These are suspended from the roof or in any other convenient position. In place of the old grower's tray system the labor of watering has been removed, and the plants are allowed to hang from time to time, and as they grow. The appearance on the whole is the reverse of the former, and the plants are kept far from the water, and the air is kept far from the plants. The plants are allowed to hang and are making a good growth. The plants are hanging on the surface of the board a mass of new roots was found, some of which have run to extraordinary lengths.

A slight shading of whitelead and naphtha is spread on the glass. The temperature of the glass should be, in winter, of degrees, sometimes a little lower, high temperatures being avoided. Lots of ventilation can be had, by the use of *Laelia*, *C. gigas* and other kinds are either placed upon blocks or in baskets; in this way they are more easily managed. All of these are in the same good health.

Since Mr. Lager has been absent upon his European tour, the following are *Cattleya Trianae* and 100 miscellaneous, including *C. gigas*, *C. Schroederiana*, *C. chocoensis*, *C. ciliaris*, *C. ciliaris*, etc. About 100 hundred cases are in the way, largely of *C. Trianae*. It may here be mentioned that the plants are all in the best of health, in order, and is producing some fine forms, many of which are very distinct.

### *Cypripedium*.

The *Cypripedium* is one of the most useful genera in the orchid family, taking into consideration the length of time they last live, and the ease with which they can be flowered. One has no trouble to have them in bloom all the year round. A batch of good plants, started in November, and when in full flower, makes a unique and grand show. People will travel hundreds of miles to see a few of these plants.

The cultivation of the *Cypripedium* is simple. The compost they most delight in is rotted horse manure, and peat. No other broken charcoal. Fill the pots half full with peat, and pot very firm, for that is almost all the way through. Don't be afraid of the water if all the other conditions are favorable.

In winter temperature, they may be divided into two classes, intermediate and stove. In the winter months 50 or 60 degrees for 80 degrees for 60 degrees will suit them from warm countries admirably. *C. insigne* will grow well and give a good show. *C. pubescens* will never do so well when kept too warm.

Some advocate putting them outside in the open air from the first of September. I think that is a good plan if one has a suitable place and water handy. The main thing is to obtain good strong roots, and then they will be all right to bloom finely. Of course they must be in the shade position in the winter, and other practices in the sun. This class of orchids is easily damaged by frost.

In the other class in the hot weather, keep plenty of air on the house night and day, but moderate shading. Keep the stages in the open air, from the first of May in the warm season, with good syringing in the evenings of bright days. They then will give a good show.

Sometimes the yellow thrip will be a go at them, but that is easily kept down by spraying with a weak solution of kerosene oil, or to suffer from wet syringing. If they have a very bad attack, place them in a moist, warm position, for a couple of weeks and thrip will take its exit quickly.

One of the kinds most suitable for first-class use that can be bought now quite cheaply and used in quantity, I consider the following: *C. Harrisonianum* flowers in October, and all through the winter month. *C. insigne* give a good show of plants in November until the end of January. *C. callosum* and *C. spiciferum* are also good winter blooming.

*C. villosum* and *C. Boxallii* have fine large flowers, and are invaluable for their production of bloom.

*C. Charlesworthii* is a very fine, new sort, beautiful, but rather too short in stem for cuttings.

Of course there are hundreds of varieties and sub-varieties that are very grand and valuable for cuttings, and for their high price for general florist purposes.—GEORGE SAVAGE.

That the *Cypripedium* has made great strides in popular favor is a fact which the up to date grower has taken advantage of, and in consequence a large number of *Cypripediums* for the market, and find them a profitable investment.

The commonly grown *Cypripedium* is a fine, and is one of the oldest in cultivation it has held a position in the fruit and vegetable markets. It can be grown in any ordinary greenhouse, with as little care and attention as a common house plant. The grower intending to engage in this business is to be attended to is to see that the plants are properly potted, and the best to ensure a good crop is to keep them through flowering. The following is a good compost to use— $\frac{1}{2}$  good fibrous peat,  $\frac{1}{4}$  of good horse manure, and  $\frac{1}{4}$  of the Chop the peat and moss small enough so that it will mix readily with the soil, and put it into the pot, and use the soil which will keep the whole fresh and sweet.

When potting the plants so that all the old roots are decayed, the use of the old plant should be elevated slightly above the rim of the pot, which should be filled three-fourths full of the above compost. For the plants firmly and do not use too large sizes. After the plants have been potted they should be kept in the shade for a much water upon soon cause the material in the pots to sour, and the root action will be retarded. The grower's plan is to give them a good watering to begin with, and then keep them moderately

moist until root action has properly started, after which they will take a plentiful supply of water. They will also be greatly benefited by an application of weak liquid manure about twice a week, which can be increased as the plants begin to flourish. This would be given a rose, chrysanthemum or any ordinary plant.

A good *Cypripedium* raises their plants to very large specimens, but to obtain the best results in quantity and quality of bloom, it is better to start the plants on up and put in four, five and six inch pots. One of the finest lots of *C. insigne* I ever started was in the above manner, during the summer months. The cashes were elevated above the frame about ten inches above the level of the ground. The plants and this was left on day and night, and only taken off during wet and stormy weather. When the plants were taken off after the nights began to get cold the foliage was slightly yellow, but it was the yellow of sun-ripened growth and not of disease. They flowered with great freedom and were of excellent quality.

Other *Cypripediums* which can be bought cheap and reasonable, and are useful for commercial purposes, are *C. Lawrencei*, *C. goodii*, *C. pubescens*, *C. Ashburtoniae*, *C. Boxallii*, *C. villosum*, *C. Harrisonianum*. All these can be grown in the same manner as those mentioned above. It is to be noted that a receipt that it is best not to use soil in the potting mixture. Equal parts of live and decayed horse manure, with sand, is found to be a good mixture for them. All these have plenty of good, clean drainage water, and should be kept in the shade, as possible. A temperature of from 55 to 65 degrees will suit these *Cypripediums* well, and give them a fine show. The plants and ventilation. When the sun gets powerful in spring and summer the plants must be kept in the shade, and if the foliage will get spoiled and the plants ruined. ROBERT E. ROSE.

### Lahars for Florists.

A great number of laharas are so easily grown and require so little attention that they are great favorites with all orchid growers, and are also some of the most useful for commercial purposes: *L. albida*, *L. anceps*, *L. autumnalis* and *L. maculata* are the best. They are raised very easily in a rose, peat or any ordinary greenhouse. In fact, I have seen them raised in the open air, and in the temperatures and positions that it appeared as though they had the power to adapt themselves to any position, and in any course, to grow them to perfection they should have a nice, bright, well ventilated pot, but not too dry, and small pots, in all times. They can be grown in pots, baskets or blocks, and as blocks take up the space, more in growers' practice.

When putting the plants on the wood used in the pot, they should be carefully and be sure that the plant is put on very firmly, as it will not grow so well if it is not put on in this way.

The plants will take a plentiful supply of water; in fact, they will require syringing very often, and in winter they should not retain the moisture very long. If possible, it would be better during the winter to have the plants watered from the sun by painting the glass with a light coat of whitewash, as they are apt to rot too dry, and shrivel up.

As soon as the bulbs have completed their growth, the most of them should be reduced, as the plants are apt to start into new growth before flowering if watered too copiously. When the plants are reduced (which is during November, December and January) is over, the plants should be reduced, and they should be kept until they are enough given to keep them from shriveling.

The *Cypripedium* has rather small flowers, but the albid is very beautiful, varying through shades of white, rose, pink and blue. *L. autumnalis* is one of the finest laharas, being of a handsome rosy purple color, and is one of the best to raise in large quantities to three to six in a pot.

*L. purpurata* ranks as one of the most handsome and is one of the best, and is highly deserving its title, "Kings of Orchids." The sepal and petals are white, sometimes with a little purple, but the lip is very broad, of a rich purple color, veined with a deeper color. The throat is yellow, and the spur is long. If they are during early spring and summer. Though raised as an inter-cultured orchid, it can be raised in the open air. The grower's plan is, it requires a plentiful supply of water during the growing season, with plenty of

House of *Calanthes*.

twelve gallons of water, and after being mixed the liquid is ready to use and stands for three days, when it is ready for use. No care is taken to use the clear liquid, but the residue, which is left in this, is spread over the cindered stages of the houses at the rate of three gallons to a bush containing the plants. The residue is then spread over the cindered stages of the space. The tub is then refilled with water, soda and lime, so that the mixture is alkaline, and is used in the same way, when needed again—Garden and Forest.

### Phalenopsis.

In treating of the cultivation of any plant grown under glass, we must begin with the house in which we are to grow it. It is not necessary to have a house specially built for phalenopsis; any ordinary stove house will do. Neither does it make much difference whether the house is built north, south, east or west, providing you have the desired temperature, which is 65 degrees; nothing more nor less; no variation from that in the winter.

The next thing necessary about the house is a full supply of pure air. Ventilation is one of the greatest essentials to their well-being. I have often been told by orchid growers that they put all their phalenopsis when it was freezing hard outside. Well, contrary to advice, I have put it on, and kept it on all the time, whether the temperature was above or below, but when the weather was damp or cloudy, down came the ventilators light, to remain so until the outside air became so dry that the plants could put on air again very gradually.

Heating is another factor which is too important when we are to grow phalenopsis. It is absolutely necessary to have a little fire heat in summer to keep the inside atmosphere pure, and the first thing to be done is to be allowed to go out during the summer months; so that when the day is damp or rainy, the air is fresh and pure, and the best of the fungi which are sure to accumulate on the compost in such weather—such as mildew, blight, and rust—do not reach the roots or foliage of the plants, is bound to bring dire results. An excessive amount of the heat will result in the yellow spot on the foliage—the worst disease of all to get rid of. In this case, I can only give one piece of advice, and that is a continual watch over every individual plant. When this trouble is detected, the remedy is simple, and is as easy as observed on the leaf, take your knife and cut off that portion of it where the disease has manifested itself, and cut at least half an inch below the spot, though it may be the top leaf. It seems hard to do this, but you will find that continuing this course right along in every case, and then using plenty of sulphur on the part of the leaf you have cut away, that you will have no more trouble with spot.

Another mischievous trap that brings a great drawback to this magnificent orchid, is yellow thrip—the most desperate one of them. It is very common, and is difficult to get rid of him, as usual, keep a close watch and use tobacco in all forms; but the best and most certain remedy is to always keep a little fresh stems in water to sponge with; give a light fumigation with tobacco smoke, and it is done. Early, it will keep the thrip within bounds, and it will keep the resinous insects off. The sulphur requires to be used from the direct rays of the sun at all times.

Watering is another of the most essential points connected with the culture of these orchids. I seldom and any other than the water, and that always of the same temperature, the hottest water being used in pans (the plants are generally grown in such), the best way is to have a barrel or tub of the same temperature, and into which you can get it, and dip your plants at least once a week. By this I don't mean to get the water of the same temperature and roots and up as far as the bottom leaf. This done, they require to be looked after in the winter, and to be watered freely. They require this treatment only during growing.

In resting, i. e., drying them off a little, in order to get their flower spikes through the hard skin in their natural way, it is not so very difficult, and the success depends principally general results. You have to study and know at what time your plants are through, and when it is wise to get them into flower. To stop a plant from growing in order to get it into flower, you should keep it in a cool place, and when you see the flower spikes appear, increase the amount of water

er very slowly until the flower spikes are fully started. Do they need to be fed? Well, yes, they do. I don't know what they get to eat in the open air, but I do know that under cultivation they will take a good meal once a week when growing. Fresh cow manure, mixed with water, and a good peck to the barrel, is what I use; and a good peck to the barrel of mixed manure to be used. But they should be watered well. The same course should be observed after they are through flowering, for at least two months. It has a good effect to water too freely. I always made it a point to plant out flower spikes from weak plants, and prevent them from growing that year. The following year you will get the flower spikes twice as strong and the plants will almost be double in size as a result of stopping it from flowering.

PETER MC DONALD.

### Odontoglossums.

This is certainly one of the most difficult classes of orchids to grow, and yet among its varieties are some of the most lovely orchid foliage for growing and arrangement; such, for instance, as those of *O. crispum* (Alexandre) and its varieties, *O. pescatorei*, *O. vexillarium*, *O. Roezlii*, *O. Uchiro-urum* and *O. grande*, which we cut and arrange them in the most beautiful ways do abroad. The two first named are the most valuable for cut flowers, but are also the hardest to grow. Several growers have tried odontoglossums for some years past, with more or less success; still these orchids have not as yet proved very profitable; though there is hope that we may succeed with them ultimately, for we have seen that eminent orchid growers in private establishments, like George Savage, Mr. Gray at Cornhill's, and the late William Robinson at the Victoria, have grown their varieties in elegant shape, and I believe if the proper facilities and treatment are given them they can be grown successfully in a commercial way. Our friend, William Mathews of Ulthwa, was in this country, having to cope, in his very hot and dry atmosphere, with the most difficult to grow a block of twenty bushes a hundred feet long, each filled with 20,000 plants of *Odontoglossum* in the most beautiful and excellent condition and bringing forth their splendid crops of handsome, graceful arched spikes of flowers, some of a rich rose and rosy pink and richly spotted and mottled blossoms of yellow and chocolate it makes one who wishes to get right in and do them likewise.

Much has yet to be learned in regard to growing these stubborn plants in such protection as we see them raised abroad. Belgium, so far, is the country where they are grown in the best way, and in fact there are several places in Great Britain and also in France where they are done so.

The other varieties of odontoglossums mentioned above, we can manage very well in this country, and grow them with profit. Fairly good plants of them will be had now for from 4s and upward, and if you do not mind paying a trifle more than the price for the plants. The most essential thing to successful culture of this class of plants, is an even, moderate temperature of 55 to 60 degrees in winter, and 65 to 70 degrees in summer, and not exceeding 80 degrees in summer, and at all times a continual current of fresh air is highly essential to their welfare. It is of great consequence to do this, and if it is not done success must never be allowed to get so stagnant, therefore plenty of drainage is necessary.

HENRY A. SIEBRICHT.

New Rochelle, N. Y.

### Raising Orchids from Seed.

With the quantity of good material at hand in the different collections throughout the country, and the comparative ease with which orchids may be raised from seed, it is surprising to note how few orchids have been reared to maturity in the United States compared to Europe. It is not a difficult matter to raise orchids from seed, and it is not so very difficult to get them, either, the capsule ripens as quickly as those of roses or carnations, and many of the most valuable and beautiful orchids, etc., can be flowered from seed in six little time, and in nine cases out of ten give bet-

ter results. A well matured pod contains thousands of seeds, and it is not uncommon to find one or two seeds in a small pot, when a good location has been selected in which to sow the seed.

After a few days of practical experimenting, I find that seed does best when sowed in a pot containing a plant of the same kind, and that the best medium is a dendrobium pot or basket; cypripedium seed, in a pot containing a cypripedium plant, and so on. The best pots in pots, baskets and blocks, especially made up with the finest material, and which are used in the most successful greatest care, but have never yet raised a plant in this manner. It is also poor policy to choose a pot in which to sow the seeds, the surface material is liable to decay on being brought into the close, warm atmosphere of the greenhouse, and is likely to contain minute injurious insects, in other cases the seed is lost in selecting a location, take a pot in which the compost is pressed in firmly, so that repeated watering will not wash the seed in, and that the surface, after germination, be sure that the surface appears fresh, and the sphagnum, etc., is washed over the surface, so that short growth, and not liable to grow so freely as to smother out the seed. It is also well to wash the surface on the surface, but do not cover it over, label it, with the date of sowing, etc. This done, if the water is not to be used, water the seed in watering. At the end of from one to six months, or a year in rare cases, the young seedlings will be seen pushing up their tiny cotyledons. The following table gives the number of months required to produce them from seed.

Cattleyas take about five years to reach the commercial size, each of the first three years, orchids, 2-2½ years, phalenopsis, 1½ to 2 years, and the first three cypripediums from 2-4 years, according to the species; the selenipedium section is the longest growing, and requires from three and one-half months after the flower was fertilized, and the plant in bloom in less than one year.

After the seedlings appear they must be guarded against insect enemies, wood lice, and other insects, and the plants should be kept in a cool place, and start to root, when they may be pricked off singly, into two inch square tin buckets as the species may demand.

The potting material should consist of one part of peat, and one part of sphagnum, and half moss and peat; if preferred, fill the pot two-thirds full of fine peat, and the rest of the pot with sphagnum, and pack tight so as to hold the tiny plant firmly, and also to keep the material from soaking in too much water. This done, place in a lightly shaded part of house containing other plants of the same genus (don't put it in a propagating house, or start to hurry it, or it is sure to perish), and give it the same treatment as the older plants, and it will often start to root, the compost appears dry on top.

It is recommended by some, to pick off the roots of the plants, and to do so, unless the compost in which they are growing is decayed or the foster plant is about to decay, and to do so, after the operation, and the whole batch to be lost through having no roots to nourish them after being disturbed.—ROBERT M. GREY.

### Brief Review of Commercial Orchid Culture in America.

Twenty years ago very few orchids were grown in this country in a commercial way. The only one who was engaged in the business was Isaac Buchanan; he had a fairly good collection of both East Indian and South American, and also some Mexican orchids.

It was in the year 1846 that the late George Such started in the commercial orchid business, in connection with his famous nursery, and he was the first to raise the plants. Some of the older leading florists will remember that when they wanted a new variety of orchid, they would write to him, and they would send to South Amboy for them. It was about this time, too, that the writer was first engaged in the business. In the war, and had then charge of the orchid house, started into commercial orchid growing in the year 1850, and when he then were vandae, accolabium, dendrobium noble D. Biggibum, D. thyrsoiflorum, D. dendrobium, Cypripedium, and others, etc., can be flowered from seed in six little time, and in nine cases out of ten give bet-

Mossiae, speciosissima, Skinneri and C. Downiana; very few Pedicularia or Trianae. The first orchid raised in this country was good old stand-by C. Insigne and a few C. barbatum and C. venustum. Cologyne and C. speciosa were also raised. In the course, several kinds of Stanhopeas, such as tigrina and insignis, also Laelia autumnalis, and C. speciosa, were raised. In all the species, with the exception of some common epidendrum and coccinidia.

It was not until the year 1850 that I had some nice orchid blooms, it was quite a task to dispose of them; very often they were not wanted. In the year 1850, I had some lovely customers; and through this sort of business would seem, at first, not to pay, but I was able to get on in the following way. It was the means of properly introducing orchid flowers. They were too cheap, but they were not too costly to give away in the proper way. The writer has given away thousands of orchid blooms in his time.

About this time the William Court came over from the grand old house of James Veitch & Sons, London, and he had such faith in orchid culture as a paying business, that he sent over to me some of the several hundred pounds worth of the choice and rare orchids, such as Phalenopsis, Cypripedium, Stanhopea, and others. It was the means of properly introducing orchid flowers. They were too cheap, but they were not too costly to give away in the proper way. The writer has given away thousands of orchid blooms in his time.

The writer has given away thousands of orchid blooms in his time.

John S. Bush, who had been gathering a large collection of orchids, and was very busy to this time, now turned his attention to orchids in a commercial way. The vendor has given away thousands of orchid blooms in his time. It was, too, about this time that F. S. Sawyer, of New Rochelle, N. Y., began to send over consignments of orchids, both established and imported plants, and he was the first to do so in this country. William Mathews, of Ulthwa, of course, there were a number of private places where the orchids were raised, and they were sold extensively and successfully.

**CHANGES IN BUSINESS.**

LYNNFIELD, MASS.—Oscar S. Stowell, is about to engage in the florist business here, and would like to receive catalogue and trade information.

BABYLON, L. I.—J. E. Raymond will start in the business here as a grower.

**CATALOGUES RECEIVED.**

L. L. PILLSBURY, Galeburg, Ill.—Wholesale Price List of Plants and Root Cuttings.

THEO. F. HECKER, Glenfield, Pa.—Trade Price List of Carnations, Chrysanthemums, and Violets.

J. A. McDOWELL & Co., City of Mexico—Trade Catalogue of Cacti, Orchids, Bulbs, etc.

BANNING & HAGENBERGER, Kinman, O.—Price List of Bedding Plants.

SIEBERCHT & SON, New Rochelle, N. Y.—Wholesale List of Palms, Orchids, Ferns, Stove and Greenhouse Plants, etc.

H. G. PAUST & Co., Philadelphia.—Wholesale Catalogue of Plants, Seeds, etc.

HENRY A. DREER, Philadelphia.—Quarterly List of Seeds, Plants, Bulbs, etc.

F. R. PIESSEN Co., Tarrytown, N. Y.—Catalogue of Seeds, Plants, etc., profusely illustrated.

The Library Committee of the Massachusetts Horticultural Society desires to obtain, for the use of the members of the society, and others, the catalogues of the most prominent nurseries, seedsmen, and florists in America and Europe. The library of the society is by far the largest horticultural library in the United States, and excelled by few in Europe. The members of the society number about eight hundred, and the library room is open and frequented by them and other persons interested in horticulture every day, with special meetings and exhibitions every Saturday through the year. Though the society, in its corporate capacity, does nothing in gardening, it will be to the advantage of nurserymen, seedsmen, florists, etc., to have their catalogues placed on the tables, where they can be examined by members of the society and others interested. It is the purpose of the committee to preserve and bind such catalogues as may be received, as matters of future historical interest, and therefore they desire to make sets as complete as possible. You are respectfully solicited, not only to send us those which you issue the present year, but to place the name of the society on your list of correspondents, so that we may receive such as you may publish in the future. Catalogues may be addressed to Robert Manning, Librarian, Horticultural Hall, Boston, Mass., C. S. A.

**The National Florists' Board of Trade.**

Among the advantages which accrues from membership in this organization may be briefly pointed out the following among others: Our published list, furnished to all subscribers, contains the names of a large number of "dead-beats" in the trade, and a complete code goes with the same. It will be put a short time before this list contains the names of all in the trade who are unworthy of credit. This is the only list published, and is issued at a very low figure, so that every one in the trade may receive the benefits accruing therefrom. There are many, not only through the States of the United States, but in Italy and Holland, who receive this list, and are even at this early date receiving benefits therefrom.

Through our collection department we are able to make many collections for the reason that no one in the trade wants his name put on our information sheets, thus letting the members know that we have accounts against them still unsettled. Every one likes to keep his credit from impairment, and when once a claim is received at this office and the same remains unpaid, these facts are sent to our members. On claims on which there is a contest, or where goods are not received or not in good condition, or on time, or where the shipper has not complied with his part of the contract, information regarding such a party is not given out.

It is customary for members of the trade to send their collections to attorneys, who charge 10 per cent. We only do this, as a last resort, for we are able to effect collection of many claims by our draft system, which costs but 3 per cent, with a minimum collection fee of \$1. Another advantage of our collection department is that when a member in the trade has claims against the same party, all of lessening the expense in bringing suit.

In our reporting department, banks are furnished to subscribers who can secure full information from parties inquired about. We secure our information from the parties regarding whom the information is desired, through our attorneys, through banks and through members of the trade to whom these parties have referred us. Our reports are more reliable, accurate and complete than those usually obtained from commercial agencies or attorneys, because we have more channels through which to obtain such information.

The secretary will be pleased to correspond at any time, with any one who desires full information regarding the plan of the work, and easy throughout the United States, even to the Pacific coast, will testify to the fact that they have received more benefits through the different departments of this board than through any commercial agency.

The law department is prepared to handle all matters requiring the services of attorneys, and give all business met their prompt attention. They have one of the best equipped law offices in the city, and if any member of the trade is in trouble with a railroad or express company, or desires information on any point of law, they may correspond with these attorneys.

All communications addressed to the secretary of the board, Cornelius S. Loder, No. 271 Broadway, New York, will receive prompt attention.—Adv.

Cattleya Schroderae.

**Coelegy cristata.**

The photo-engraving on this page shows a grand, well-flowered specimen of this useful orchid, carrying between 700 and 800 expanded blooms. The scapes bear 4-8 flowers each, thus giving the plant on an average at least 125 flowering growths.

The cut fully illustrates the fact that under careful management this species affords us one of the finest orchids for decorative purposes.

The plant is of dwarf habit, leaves of a fresh bright green color, with olive-shaped diphyllois pseudo-bulbs, and lanceolate, arching foliage, 6-8 inches in length. The blooms are large and expand 3 1/2 inches in diameter. The segments are crisped and unspined, all pure white excepting the disc in the lip, which is bright yellow, and bears two or more fringed keels.

In order to make the plant bloom freely it should be grown at all times in a cool temperature, and never allowed to become dry at the roots, especially when growing. Peat, chopped turf and sphagnum, in equal parts, make a good compost for potting.

Among winter flowering orchids this is perhaps one of the most valuable, from the ease with which it can be grown. Its free-flowering qualities and its decorative effect all combine to make it a very desirable subject. Another advantage it possesses is that the plants may be used when in flower for dinner table work or for small groups. This was amply demonstrated in New York City during the past winter, coelegeries being used for both purposes.

**Floral Park, N. Y.**

The managers of the New York State Agricultural Experiment Station have secured one of the large greenhouses of John Lewis Childs, for the use of the botanical school. One section, 25 feet in length, will be devoted to the study of bacteria, another section of the same size to the study of insect life and habits, and the remainder to miscellaneous work.

**OBITUARY.**

Dr. Robert Hogg.

Dr. Robert Hogg, the renowned English prologist, died at his home in London, on March 14. He was in his seventy-ninth year, having been born at Duns, Scotland, in the year 1818. He is known as the author of the "Fruit Manual," an encyclopaedia of ornamental fruit growing in Britain, and also as the editor-in-chief of the Journal of Horticulture. He was for many years Secretary of the Fruit Committee of the Royal Horticultural Society and a prominent figure in European horticulture.

**Hoosier Women and Legislation.**

The Indiana lawmakers did pretty well early in the session Representative Furness had a bill to present what he called an "Anti-Jail-Bird-Flower-Senders' bill." The idea was to repress those ardent female sentimentals who send bouquets to convicted felons, who murderers preferred something very like a riot-susced. The women had a lobby in Indianapolis, and their forces were promptly concentrated on Mr. Fornahell's little bill, with fatal effect. He sought revenge by presenting a higher theater bill, and awaited victory with confidence. Again the women foiled the "sillyman." There were 11 widowers and 21 bachelors in the lower House. The women marshalled them to their defence to die to death under a heap of "fool" amendments, such as requiring men to remove their boots before going to the theater and preventing the "going-out-to-see-a-man" act between acts.—Herald.

Coelegy cristata.

## A PLEA FOR MORE HARD-WOODED PLANTS.

During the last twenty-five years, and more particularly the last fifteen years, the tendency of the horticultural trade has been to discard plants and confine their whole establishments to the production of cut flowers, especially roses and carnations. We find by looking up the history of our trade that previous to the date mentioned, there were more general collections of growing plants in this country than there are to-day. This is accounted for by the fact that the average grower could and has produced financial results of greater benefit to himself by furnishing out bloom than in attempting to grow plants which were in the first place never in giving such results, and at the same time required more skill in their cultivation. It is for these reasons, rather than the edict of public taste, that such conditions have and do prevail. The outcome of this has been that now, according to demand, there is an overproduction of flowers in this country, and a consequent reduction in values; and sometimes it looks as though the buying public are satiated with cut flowers, and so switch off from time to time to something else.

During the past three years there has been a returning demand for variety in the way of flowering plants. This has been very noticeable in the New York market during the Christmas and Easter holidays, and to the plant lover one of the plainest signs of the times has been the introduction and sale of many of our old favorites—not new, by any means, for most of them were either introduced into Europe during the reign of Louis XIV. or the century of the first half of the present, and from appearance the plant branch of the trade is not so far from the way as to rapidly than heretofore. All that is needed apparently is for the American grower to be acquainted with the varieties and their energy, and the desired end will be accomplished, and such plants placed on the market in sufficient quantities to create a demand.

The object of this article is to point out to the grower that there is a large market and profit not yet reached, except by but a few specialists. Palm growing is well understood, and the market is well supplied. Azaleas are extensively grown, so are hydrangeas and dahlias. But the great wealth of plants from Africa and New Holland (Australia and New Zealand) is but faintly recalled or understood. That there is a market for these in this country when they are put before the people, is abundantly proved by the enormous sales in New York the past two years. The same is true. This plant is not new, having been introduced from New Holland to Europe in the year 1792. It grows in all climates, and can climate well, and in fact produces better and more flowering wood when planted in the open than in the house. In the summer months than it does in Europe, whence we import it annually at a great price. It is equally well grown in New Jersey, so if one Ascasia, it is equally true of many; yet to-day anyone desirous to buy a hard-wooded plant in this country would have to go to Belgium, France or some other European country to buy it.

The same remark applies to any of the plants under discussion. At this juncture of our trade, it is not a country where hard-wooded plants will not thrive in this climate. To meet the opposition the horticultural trade has in the past mentioned, and further state that in April, 1856, for the purpose of illustrating a lecture on the living and growing plants, I gathered at short notice, from various private collections, just 100 species and varieties of hard-wooded plants. At that time, which, of course, demonstrates beyond question that they will live and flourish.

True, they do not turn into money the first season of their existence from the cuttings made, and it is not until they need more skill and care in propagation than pelargoniums, coleus and alternantheras; but such is the demand for such back to American gardens. Our propagators can rise to the occasion and prove to the world that as skilled gardeners they can

produce something more than the softest of soft-wooded plants.

We are glad to note that some have already commenced to do this. A proof of this is found in the rapid multiplication of several kinds of cut flowers. Five years ago probably 1,000 kinds of plants have been introduced from the main plant on the New York market, and the number will reach over 20,000. Thus there are about 15,000 kinds of plants in the market and the plant is increasing in popularity daily. So far it is only the soft-wooded plants that are doing well, and it is wonderful that is being grown. It has been demonstrated that these kinds will produce the same results in this country as they would in England to three, that they simply rely on our climate; yet they are not all so easy to grow as they are in Europe. Now that these have taken such a firm hold upon our trade, it is not possible to produce others of the still more beautiful Cape heaths? We think so. The only difficulty to overcome in the matter is to keep them cool enough in the summer months.

As we further advance into the family and take the larger and higher colored species of erica and epacris, it is found that they are produced from the hard wood section, and the harder the wood the better the plant. The plant that suffers during very hot weather, if exposed to the hot sun. The roots need to be kept cool, and the plants should be kept at all had one, adopted in England, was to make frames of turf sod piled up so as to make a cool shade, and the plants were staked, or plunged in ice, the sod being supposed to create a cooler and more moist atmosphere than bricks or boards. We see the same good deal of reason in the argument. However this is, a question of detail, may be left to the taste of individuals, grower or dealer.

One method seen in this country with the turf was to place them in the open, and some large trees (not under them), plunged in a prepared cold water, and then being placed in the pot. The soil was originally water muck; this, with some leaf mold and garden soil, was used, and the plants were naturally adapted to the plants' position, and in which they thrived.

Another method is the use of slat frames, with the top covered with muslin. Here were all the choicest kinds available, and the grower is mentioned simply to give intending growers a clue, which they may devise other and perhaps better methods.

On the other hand, a dozen and more of the kinds now in this country and being imported from the Cape, are available.

They may be planted right up in the open in May and lifted in the early fall. Then they may be grown in the house, and of course. They need only sufficient fire heat to prevent actual freezing, and they thrive better in the open, but with just a little return pit, or in small houses, than they do in more elaborate structures.

### A List of Proved Varieties.

The following ericas are now being generally and successfully grown—the time for their introduction being the special wood in September, and all excepting E. Wilmoreana, E. zymalis and E. transalpinica, which are now in flower. E. a. autumnalis, pink; E. Caffra, pink; white (1800); E. praestans, white (1810); E. praestans, white (1810); E. Wilmoreana; E. persulcata (1800); E. per rosea; E. per rubra (1795); E. cupressifolia (1802), pale yellow; E. gracilis, nearly red (1797); E. gracilis, red (1794); E. Mediterranea, white; E. Caffra, pink (1802), pale yellow, pale red (1800).

The following is a select list of kinds that are well known in the horticultural trade, carnica, cocinea, and superba; E. Cavendishiana, one of the grandest yet introduced.

Several varieties of epacris may be grown also.

### Propagation and Cultivation.

As regards making cuttings, all parts of the plant are used, but the best is the special wood and special treatment to produce healthy cuttings that will root. Instead of using the soft wood, which is the best, the pot or pan should be at least three inches below the surface of the soil, and the temperature than ordinarily. Take cuttings about an inch long, and when they break, trim them carefully and dibble them into sand in small pans or pots, well shaded with glass, either in the open air, or in a stove house. The plants should be kept in the pot or pan should be at least three inches filled with drainage—broken potsherds, or broken bricks, or broken tiles, or have plenty of grit. The cuttings should be dibbled in as thickly as possible, and placed in a shaded part of the propagating

house in a temperature of 45 to 50 degrees, and the plants should be kept in the shade. One very important item, and which needs to be sharply looked out for is that the cuttings should be kept in the shade and fall. To avoid this either bell glasses or boxes must be used. For convenience in appearance, the plants should be kept in equally good results can be obtained by using any ordinary wooden box covered with muslin, and the plants should be moved occasionally to wipe the condensed moisture from the glass. Old newspapers are used to line the rubber, and the plants should be kept in the shade at night a little thick of air may be given when the cuttings are nearly rooted. The plants should be kept in the shade times a day to keep the sand moist, for to have it become drier is fatal.

When the plants are nearly rooted, transfer them to pans again, containing prepared soil—a good mixture of sand with some leaf mold, either in the open air, or in a case that is necessary. In Europe they use peat; in this country peat is of no value; it is used in a mixture with the sand, and is used again until they are well established; then push them along until they are in three-inch pots, in which they may be kept for a considerable time. Such species as Erica persulcata, E. p. alba, E. praestans and E. mediterranea, should be kept in the open ground in June, and if properly watered they will look after themselves in summer. The cuttings should be kept in the shade until the plants grow. After they are first rooted, the tops should be taken out; it is better to nip them when the plants are nearly rooted, and the more snipping can be done than in Europe, consequently a plant can be produced in almost half the time.

Other plants that may be grown are Boronia heterophylla, B. striata, Polygala hibernica, Argemone, and others. We do not, least, will not a Cape plant, Stasia Halford. Specimens of these, seen recently in the market, are of the latter kind may be grown. Its charming blue flowers keep in good condition for weeks, and it is a fine plant for the house. It is of sufficient quantity to make it worth the value of a buyer taking hold, the plants will grow in the open air.

JAMES W. WITHERS.

## Anthuriums.

This is a most fascinating and interesting class of plants. They are found in mostly all the islands of the West Indies, the West Indies, in the West Indies, all the way down into South America, especially in the mountains of the Andes, and in the Pacific Slope in Mexico; in fact, I have found them all over South America, and in the mountains of the Andes. They are of growth and queer forms of flowers, they are not unlike the orchid, and many persons not familiar with them take them to be orchids. There are many varieties of them which are clothed with superb brilliancy, and are of various colors, and really are, are growing. They are very beautiful when seen growing in their native country, and in the West Indies, and in the mountains of the Andes, and in the Pacific Slope in Mexico. Their leaves measure three and four feet in length, and are three or four feet long, and are of a dark green color, and are like pendulous down to the ground. Their leaves measure three and four feet in length, and are three or four feet long, and are of a dark green color, and are like pendulous down to the ground. Their leaves measure three and four feet in length, and are three or four feet long, and are of a dark green color, and are like pendulous down to the ground. Their leaves measure three and four feet in length, and are three or four feet long, and are of a dark green color, and are like pendulous down to the ground.

There are some very fine growing varieties, such as andreaean and its many hybrids—Perrievrea, Browni, Clarki, and others. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants.

There are several greatly improved hybrids—Perrievrea, Browni, Clarki, and others. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants. The plants are of a very fine section which have been produced of late years, all make very showy and valuable plants.

I predict that in the near future, while houses of the better and more brilliant

flowering varieties of anthurium will be raised in the open air, and the plants can be quickly grown, and multiplied from seed as well as by division of the offsets, and the plants will be ready for the market in two years from seed. If it is kept growing right along, anthurium requires a large amount of water, and a high degree and plenty of moisture. In potted ample drainage is needed, with a compost of leafy lumps of burnt charcoal. Keep the growth well above the rim of the pot and cover the soil surface with sphagnum moss. HENRY A. SIEDRZCH.

## Chicago Horticultural Society.

We are in receipt of the preliminary list of premiums offered by this Society. In connection with its forthcoming annual exhibition, which opens November 9 to 13, 1897. Several new features have been introduced in chrysanthemum—cut bloom has been inaugurated. A national competition in chrysanthemum is offered for the best 13 blooms, 12 varieties, from each State, Territory and Canadian Province. The exhibition is to be held in the State or Territory or Province specified. The winning plants will be awarded a premium of \$50.00 respectively are offered for the best collection of cut orchid blooms; and a prize of a silver cup of \$25.00 for the best collection of new roses never before exhibited in this country.

There are the usual prizes for plants and for cut blooms of chrysanthemums, roses, carnations, violets, and floral arrangements.

In the seedling class for chrysanthemums, certificates of merit will be awarded to the best plants. The plants which have been sown for at least two weeks, and for first year seedlings, and for second year seedlings, will be awarded to seedling carnations.

Rules governing the competitions, together with the scales of points under which each class will be judged, are furnished in the Digest, copy of which may be obtained on application to W. N. Rudd, Room 202, 185 Dearborn st., Chicago.

## HEATING GREENHOUSES.

The selection and planning of the heating apparatus for a greenhouse presents many intricate problems that can only be accurately solved by persons of experience, but by following the principles that have been previously encountered will necessitate the deviation from what has heretofore been the general practice. In the past ten or fifteen years there has been an almost complete change made in the method of greenhouse heating for several reasons. It is desirable to give rules that could be followed with any certainty that the results would be satisfactory, but it is not possible to put a rule as gradually being cleared up, it is now possible to formulate general principles founded upon the experience of our best florists.

## Greenhouse Boilers.

The life of a greenhouse boiler, owing to lack of proper care, is combined with the fact that it is generally located in a damp stock hole, is usually short. Not only can it be prolonged by giving these matters proper attention, but the nature of the material used in its construction, and the manner in which it is constructed, will have much to do with its durability. In addition to considering the first cost of a boiler as we view it from an economical standpoint, the expense of setting it up and connecting the piping must be taken into account. It is not infrequently the serious loss that may result from the giving out of the boiler in the midst of winter.

It is generally admitted that cast iron boilers are more durable than those in which the part which is subject to wear and on this account they would generally be preferable as greenhouse heaters, but, owing to the fact that most of them are patented, the cost is considerably larger in proportion to their capacity than that of many of the boilers which are wrought iron. The main factor of which is not restricted, and which can be put together by the florist or grower, however, is the durability of a small one, the superior durability of the cast iron may make it, from the reason stated above, more economical. It is not hard to use them than the wrought iron boilers.

There are many forms of these patented cast iron heaters that have been thoroughly tested and found economical of fuel and that will give a satisfactory surface area as well as their rating. While we find a marked difference in the arrangement of their fire boxes, and the way in which they are placed, they can be classed into four groups, (a), those with a horizontal circulation of the water through the pipes, (b), those placed above the other over the fire pot, so that they will have a fairly direct impact of the heated gases, (c), those in which the sections are connected. While a vertical circulation of the water has some advantages, it cannot be depended on for a long time to give the full benefit of the direct impact of the heat from the fire. In all of the heaters of this class the openings in the pipes are "staggered," and a very efficient heating surface is secured, while the single short boiler with horizontal circulation of the water is greatly impeded. In some of the earlier forms using this construction the water was heated rapidly, but in some instances the results were not satisfactory.

In another class (b) we find heaters that have a vertical circulation of the water, and low upward through vertical or drop tubes in the Furmen, Seolay, Royal, Standard and other makes. These heaters are placed with tubes hanging down over the fire pot and thus endeavor to combine an efficient heating surface with a direct impact of the water. We may also find a group of heaters (c) in which an endeavor has been made to get the most out of the heat above the boiler by having most of the water circulation vertical, while the fire travel is horizontal. These heaters are usually arranged as to afford effective heating surface. This class would include such heaters as the Rapid, the Standard and others.

In a fourth class (d) we may place heaters having the water spread in a thin layer above the fire pot and then rise to the surface increased by means of convolutions or corrugations. The Hitchings, Wilks and others of this similar construction would be placed here.

In addition to the surface exposed within the fire pot, it is desirable that the heaters arrange to increase the fire surface and thus secure greater economy in the use of the fuel. It is not necessary in all forms of heaters it is not necessary in this theory, and in most, if not all of the best heaters, it is the reverse is a valuable feature. Several firms

make small conical heaters that are sold at a low price, and as they require no setting they will often cost less than a simple box coil.

One of the greatest abominations in a heating apparatus is a boiler that has the least chance of its occurrence should always be selected. A well-made, packed joint may be made, but it is not possible to prevent a spring a leak and has to be repacked within a few months. At any rate, all joints, whether they be of the screw or slip type, or from the direct action of the fire, as possible. As will be seen from the illustrations, the water should be made to rise their water joints entirely outside the fire pot, and as many of them are screw or slip type, it is better to have them under reduced to the minimum.

For a greenhouse it is desirable that the heaters should be rather heavy for use in a dwelling, and although most of the heaters are all right in this respect, we have had more or less trouble with loose doors and other attachments.

In selecting a heater there with a single circulation of the water upward, or over the fire pot, or from below upward, should be chosen rather than one where it is long and narrow.

## Wrought Iron Boilers.

For several years heaters constructed with wrought iron have been used, but are forcing themselves to the front, owing to the fact that they are cheaper than the cast iron heaters. They are made in two or under two heads (1), ordinary tubular steam boilers, and (2), pipe boilers, including the latter.

Under tubular boilers we find the common horizontal and vertical forms, with both the ends of the tubes of the same type. The ends of the tubes are riveted, and if extra thick will be found quite durable and economical both in fuel consumption and in the results obtained. When a boiler is desired for 5,000 square feet of radiating surface, a tank of water, one can do worse than to select a horizontal tubular or locomotive boiler.

The so-called coil or pipe heaters have in their favor a low first cost, but they have several disadvantages. The first is that, however, has been due more to faulty construction and negligence than to the inferiority of the material.

These boilers are economical and effective, but have often been lacking in durability. When a boiler is desired for 5,000 square feet of radiating surface, a tank of water, one can do worse than to select a horizontal tubular or locomotive boiler. These boilers are economical and effective, but have often been lacking in durability. When a boiler is desired for 5,000 square feet of radiating surface, a tank of water, one can do worse than to select a horizontal tubular or locomotive boiler. These boilers are economical and effective, but have often been lacking in durability. When a boiler is desired for 5,000 square feet of radiating surface, a tank of water, one can do worse than to select a horizontal tubular or locomotive boiler.

When pipe boilers are used the size of the pipe should not be less than one and one-half inches. A radiating surface of over five hundred square feet of radiating surface it will be well to have them of two-inch pipe. If the water is in an open system, and the slight increase in the first cost will be well repaid if they are extra durable.

Not only should all joints be as much as possible out of direct contact with the fire, but the water should be made to rise the threads well turned into the fittings, and the joints wrapped with asbestos. While the water should be made to rise in the form of a box coil, in which the ends of the pipe are connected by return bends, or better by a direct connection, it is better to have the objection that it causes the water to pass back and forth for six to ten times as long as it would be if it were made to rise considerably inside the circulation.

Another form of coil heater that is well adapted for use in a greenhouse is the screw type. It is one of the forms that is recommended by the best engineers. It is a durable and effective heater, and has the advantage over the other forms in that it is possible to pass through but one length of pipe.

These boilers will need to be bricked in between the boiler and the wall. If the pipes should be from sixteen to eighteen inches above the grate, and there should be a brick work between the boiler and the wall, and eight to ten inches between the upper and lower brick work covering the top of the heater.

## Grate and Heating Surface in Heater

The efficiency and economy of the heater will depend upon the quality of the grate and correct adjustment between the size of grate and amount of heating surface, and the capacity to deliver the amount of heat required for the house.

The size of the grate will vary with the kind of fuel used. For hard coal, the grate should be burned, about one square foot of grate for 150 square feet of radiating surface. For soft coal, the ratio of the capacity of the grate will increase as the size of the heater enlarges, until, with a hard coal, the ratio of the grate will become as 1 to 200. For heaters of this size a somewhat larger grate is desirable with a soft coal. For large heaters that have frequent attendance and where there is a night fireman, it will be safe to consider a square foot of grate capable of firing for 300 square feet of radiation.

It is even more difficult to give figures that will show definitely the relation between the grate surface and the heating surface of the heater. On the one hand, and the radiating surface required in the house on the other. In small heaters, run on a coal fire, the ratio between the grate and heating surface, the ratio between the grate and heating surface of the boiler is about 1 to 100. For ordinary heaters, every square foot of grate surface, there are fifteen or twenty square feet of heating surface. For ordinary heaters, more economical results will be obtained, even under the above conditions, if there are not more than a square foot of grate surface for each foot of grate in large boilers, where frequent attendance is given and where there is a night fireman. This can be increased to thirty-five or forty feet, or even more.

It is fairly effective and is properly adjusted to the size of the grate, it is safe to estimate that there is sufficient for eight square feet of radiation.

## Estimating the Radiation.

The amount of pipe required for heating a greenhouse is proportional to the glass surface in the roof, sides and ends, and if there is much wood well exposed, the amount of pipe required to heat glass and one-fifth of its area is added to the glass surface.

When the outside temperature does not fall more than 10 degrees below zero, the following table gives in one column the amount of pipe required for a square foot of glass surface and the glass surface of the house, for the different degrees, while in the other column is given the corresponding ratio when steam is employed:

Below Zero.	Ratio of Pipe to Glass.	For Steam.
40	1/2	8
30	2/3	6
20	1	4
10	1 1/2	3
0	2	2 1/2

Although the above figures are based upon the experience of many florists, they cannot be used under all circumstances, as the size of the pipes and the amount of exposure will need to be considered, and allowance must be made in the case of a large greenhouse. The ratio is more or less than ten below zero.

## Piping for Hot Water.

Instead of using cast-iron pipes formerly used for hot water, wrought iron 1 1/2 and 2 inch pipes, with screw joints, have been used. This change is the result of the arguments against the use of hot water for heating greenhouses remain. For the same reason, wrought iron of the inch size is preferable, especially if the piping is raised but slightly above the level of the benches, and may be used under all conditions. For commercial houses it is seldom desirable to use pipe sizes larger than 1 1/2 or 2 inches, with short runs considerably above the heater a smaller size may be employed.

It is generally admitted that the best results are obtained when the flow pipes are carried overhead and most or all of the return under the benches, on the walls or in the walks. As the circulation in the pipes and heater is due to the difference in the height of the water, the water is drawn through the highest and lowest points in the system, and as this difference in height increases with the height of the columns, it is evident that the higher the water is carried, the better will be the circulation, but the distribution of the radiated heat through the house and its effect upon the plants will be better if the top of the pipes be below the level of the plates.

## Number of Flow Pipes.

It is generally desirable to carry the
