water to the farther end of the house in pipes rather larger than is used for the greater part of the radiating surface. The number of pipes should be the sum of smaller ones. In case it is thought best to use flow pipes of the same size as the return pipes, the number of flow pipes returns in houses not over 150 feet long, and the number may be proportionately increased for longer runs.

While it will be considerably modified by the height of the pipes above the heater and the height of the water in the return table will be of value in determining the size of flow pipe required for a given run. For a run of 100 feet, 1 1/2-inch flow for 100 to 150 sq. ft. in returns, 2-inch flow for 150 to 200 sq. ft. in returns, 2 1/2-inch flow for 200 to 300 sq. ft. in returns, 3-inch flow for 300 to 450 sq. ft. in returns. It is not possible to give a definite rule to be used for long runs and for overhead flows when the lowest point of the returns is two feet above the boiler, while the former will answer when both flows and returns are below the level of the plates.

Further better distribution of the hot water flows are obtained if two or two and one-half inch flows are used, one for each of the coils, and the other for the return. It is better to use a single overhead flow, large enough to supply all of the returns. From two to three inches in diameter would be sufficient for twenty-foot benches.

While there is little difference in short runs, the same will apply well above the benches, both theory and practice show that it is better to have the flow pipes above the heater, and the return pipes below the heater, and when they are but little above the level of the heater, the "slope" is only a slight one, and the return pipes will not for this, fully as good or better result would be obtained if they were as well above the heater, and the level between flows and returns being made by means of vertical pipes at the ends of the runs, which will raise the level of the pipes in the pipes is caused by the fact that as it cools it becomes heavier and therefore sinks, and the water in the pipes is pushed up the heater into the flow pipes and through the return pipes, and the water on the side in the circulation. The higher the pipes above the heater the greater will be the weight of the water, and the importance of elevating the pipes, particularly if the heater cannot be lowered. It is as simple as to have the pipes above the heater slope toward the heater, and as the same will be true of the return pipes, the correctness of the "downhill" arrangement naturally follows. As stated above, however, the slope should be a slight one, and the "uphill" piping will generally give good results. Frequent connections between the flow pipes and the return pipes will be better if the flow pipes are two or more flow pipes "uphill" and have connected them to one coil, that only one of the flow will run. When they are considerably above the boiler or only the same pipes are changed to run "downhill" more or less, but in these cases the flow is but slightly above the heater trouble is experienced, the water passing through the return pipes, and the water in the pipes is the least resistance, which shows that in the "uphill" piping there is a forced circulation.

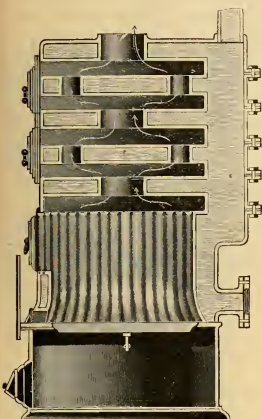

## Hot Water Returns.

In houses where solid beds are used the return pipes should be carried on the walls, but it will usually be preferable to have part of them under the benches or in the walks.

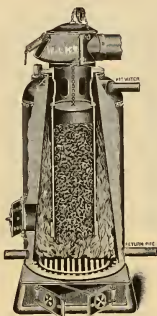

The coils may only run the length of the house, but it will generally be better to have the return pipes run the length of the way across the end of the house farthest from the heater, as this both assures a more uniform distribution of the heat and provides for the expansion of the pipes. This will permit of the use of a heater at both ends of the house.

The pipes should have a slope of about an inch in ten feet, and there should be a check valve at the point where air can collect. When the overhead and downhill arrangement is used, the water should be drawn from a common main at the boiler end of the house, the expansion tank can be connected to this main, and there should be no other provision for the escape of the air will be necessary. Where the closed system is used, the water should be at the lowest point in each return from the coils so that one or all of them can be cut off from the rest of the system. It is desirable, as much as possible, as this will increase the temperature to which the water can be heated, and thus improve the heating.

Method of Setting a Coil Boiler.

**Heating by Steam.**

In a general way the arrangement of the pipes for steam heating is about the same as for hot water, except that the returns are smaller and a single overhead main is used. Some, however, prefer a small underbench supply for each coil. If connected at the boiler end of the coils a pipe is run to bring back the return water.

For ordinary twenty-foot houses not over one hundred feet long, to be heated to 50 degrees, a two-inch overhead supply pipe will answer, but for longer houses, or if a higher temperature is desired, it will be better to use a two and one-half inch pipe. For the coils use one and one-fourth inch pipe, except for short houses, where one inch pipe will answer, and connect them with the supply pipes the same as if for hot water.

Air valves should be provided at the lower end of each of the coils, and there should be globe valves on the supply and return pipes where they enter and leave the house respectively. It will also be advisable to have valves on several of the

small pipes in the coils, so that they can be shut off in mild weather.

**Steam and Hot Water Combined.**

With the overhead and downhill arrangement it is a simple matter to adjust the apparatus for either steam or hot water, and to change from one to the other at will. Hot water can then be used in mild weather, and steam when the temperature drops, and in this way fully as good results can be obtained, with a considerably smaller cost for the installation of the heating plant. If the water is used under pressure, excellent results can be obtained, even though the main and return pipes are smaller than would be desirable.

As an aid in figuring out the radiation that could be secured with pipes of different sizes it may be noted here that for each linear foot of pipe the following amount of heating surface will be obtained, the amount being the fractional part of a square foot: One inch pipe, .344; one and one-quarter inch pipe, .434; one and one-half inch pipe, .497; two inch pipe, .631; two and one-half inch pipe, .733; three inch pipe, .918.

L. R. TAFT.

**New Coil Boiler.**

This coil is made of 3-inch gas pipe; with close return bends, so that the pipes will lay close together to cause the fire to pass back and around the coil into the chimney. To make this coil, cut the first pipe the required length, screw on a return bend; cut the next piece longer, so that the return bend following will miss the other in screwing together, and so on until you have the coil large enough for the size of the house to be heated. I use two coils for a 16x20 foot house. The coils are set in roof shape over grates 30x20; 10x12 chimney to furnish a good draft. Equal combustion of coal is what we need in firing. Our double coil system is for large houses; two sets, one coil being raised six inches above the other, so that the fire will pass between into chimney, creating double heating surface. This cut shows only one side view.

Answers Solicited from Those Who Know.

(82) Hot Water Heating.—I have a greenhouse running east and west, 110 feet long, 23 feet wide, 6 feet to ridge, 3 feet at sides, all glass except north side, which is boarded. It is piped with one 3-inch flow, one foot below ridge; six 2-inch returns, three on each side. I heat with box coil, open tank system. The coil is made of 2-inch pipe, 3 feet long, 6 wide, 5 high. I cannot heat my house above 40 degrees in zero weather, and have to run a hard fire to do that. I use one ton of hard coal per week. Am I using too much coal for a house of this size, and how many horsepower is there in a coil of the size used?

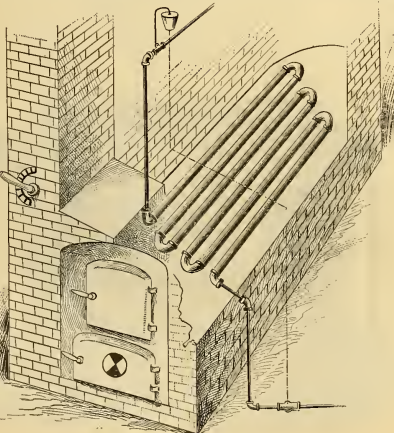

I desire to change my pipix and coil, and to build my boiler house 15 feet from greenhouse, opposite the center, then I want to run a 3-inch flow pipe from boiler on uphill system, connecting it with main flow in greenhouse in center, then run downhill both ways from center, connecting the six 2-inch returns into one 3-inch, running across the center of house and entering boiler. Do you think I can heat my house to 55 degrees in zero weather by changing my system to the way I propose; also do you think I can heat it with less coal by so doing, and by elevating the tank do you get a quicker circulation?—T. H. SUTCLIFFE.

—The trouble lies in the lack of efficient radiating surface. Instead of six 2-inch returns there should be at least ten, and if twelve are used it will result in the increased economy of fuel.

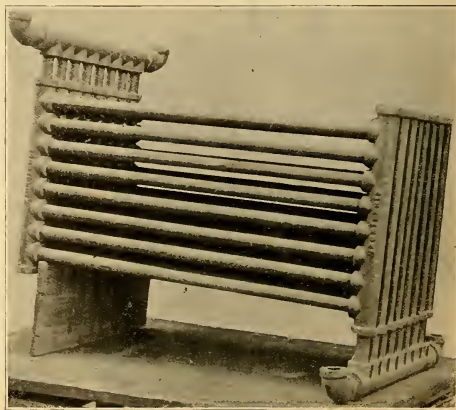

While the present coil is fairly well adapted to the amount of pipe now in use, it should be considerably enlarged to handle the extra returns that are necessary. I should use from 160 to 180 feet of 2-inch pipe in the coil, and this will need from 5 to 6 square feet of grate, according to the character of the coal used. While the 3-inch main from the heater set on the north side of the house as proposed will answer, it will be better to use a 2-inch leading to the center of the house.

Unless there is some other reason for changing the location of the boiler house, it will not be necessary to do so to secure economy in heating.

I would suggest that the present piping be left as it is, and that the additional radiation be secured by running two 2-inch overhead flow pipes, one on each side of the ridge, perhaps 6 feet down the slope, and connecting each of them with two returns.

Side View of Payne's Coil Boiler.

Zirgibel Coil Boiler.

If properly piped you should be able to carry the house at 55 degrees with from one-half to three-fourths of the coal now used to keep it at 40 degrees.

Elevating the tank increases the temperature to which water can be raised without boiling, and this results in a better and more even circulation.—L. R. TAFT.

(83) **Overhead Mains for Steam Heating.**—What size overhead main shall we use for supplying steam for a house 70x50 feet, there being six 1 1/2 inch returns on each side. The house is about 40 feet from the boiler, and the main is passing through the cellar of the dwelling (this is 40 feet) supplies, on the one pipe system, five radiators of 250 square feet heating surface. The main in the greenhouse will be covered and heat derived from the returns. With this amount of piping, what temperature can I maintain with, say, five pounds steam, with thermometer 30 degrees below zero? F. C. CURTIS.

A 3 inch main will answer until it reaches the point where the supply pipe for the dwelling is taken off, and from there a 2-inch main can be run to the greenhouse. Especially as the dwelling is to be piped on the single pipe plan, it would be better to run an independent 3 inch main to supply the radiators. While

body of the house to insure a circulation, thus preventing fungus. Each two lines of pipe are in pair,—if all flows are valued it will be easy to cut off a portion of the work in any part of the house. Thrift and bunched awny, one house of this width, 28 feet and 200 feet long, will contain more stacting than five regular govans, valued at 100, and trade houses. The side light adds vastly to the value of this house, and with the heat placed as shown, it will be almost impossible for algae to find an opportunity to exist. The space under the outside benches is free from lower pipe; the object being to use this space for lycopodium or other spool stock requiring no bottom heat.

The cut represents an oil wrought iron frame with clear cypress wood members, 16x21-inch glass; two lines of 3 feet continuous ridge ventilation, while this house, in my mind, contains all known improvements for the fern house—except ground glass,—it is, if built running north and south, adapted to grow anything that can be placed in it. If glazed with brown glass the house would not be convertible, and when used for ferns, palms, or as a "stove," the clear glass can be adapted by any of the methods usually employed for such purposes. The benches are framed with 2x2 1/2-inch cypress, the ledges and bottoms of 1-inch cypress.

With the heating surface shown, and a proper amount of boiler power, this house

stem. Medium vigorous and free flowerer; medium early.

Princess May.—Not as delicate as Celestial, nor as large as Countess of Radnor, but holds its color better. Of good substance, medium-sized flowers, of five or less lobed form, often bearing four flowered stems, which are of medium length. Medium late; otherwise of good habit.

Countess of Radnor.—Of shade deeper than the preceding, and inclined to take on a reddish or light purple tint on the one band, while on the other its rich mauve fades in streaks, giving it an ashy-striped appearance, not at all attractive. The past season, however, seems to have been especially favorable for choice bloom, since both in trial grounds and in general culture this type has been excellent. Vigorous in growth; a medium free bloomer; season of bloom intermediate.

Not yet before me to place to here state that a 20-foot test row sown the past season to seed from Eckford's original packets produced bloom inferior to California selected stock, whole plants from Eckford's seed in some cases very closely approaching Dorothy Tennant in tint.

SHADES OF REDDISH MAUVE.

Emily Eckford.—In size and form like Countess of Radnor, but of a distinct purplish mauve, usually described as a reddish mauve; of good substance when

ducing three or four flowers, on good stems. Very vigorous; free bloomer; medium early.

Mrs. Carnot.—Laxton's so called blue, standards blue shaded mauve; wings true blue. Of small size, but fair substance.

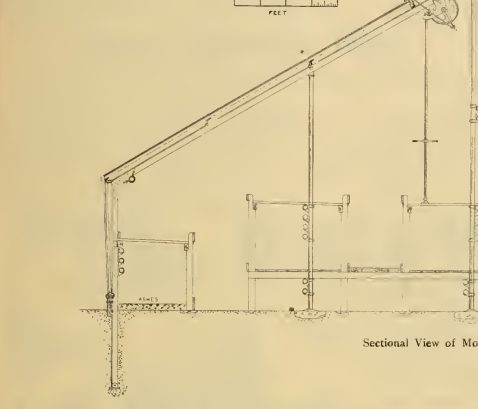

CLAREY SHADES.

Duke of Clarence.—First-class, ranking with the best in size and substance. Color deep rose claret, bordering on the maroon, of Stanley shading; not so intense, but larger and better formed. Stems often extra long, producing three or four flowers, sometimes rather loosely arranged. A vigorous grower; early to medium early; produces an abundance of bloom.

Monarch.—In shading and form, approaches Waverly, but is much darker. Nevertheless a badge of Indigo, with a slight bronze effect on standard; wings of velvety purple. A very vigorous grower, producing three (sometimes four) flowers, on good long stems. With us it has proved an exceptionally profuse bloomer. Medium early.

Waverly.—Has size and form to recommend it, but its rose claret and hine color shades, though quite distinct, are not very attractive. Of good substance, a vigorous grower and profuse bloomer.

Prince.—Standards or few reared laterally, with purple mauve, lightly suffused with wings. Old type; medium large; expanded (sometimes reflexed)

Sectional View of Modern Fern House.

a slight covering of the main in the greenhouse might be necessary to reduce the intensity of the sun's rays, and afford a very efficient heating surface, and should be utilized so far as possible.

While it will not be possible to make an accurate estimate of the temperature that can be maintained, without knowing more about the materials used for the pipes, and supposing that they are as in the average of greenhouses of this width, it is probable that a temperature of 30 degrees can be maintained. L. R. TAFT.

*A Modern Fern House.*

Fern growing is now one of our leaders, and, like all other "specials," it needs houses adapted to its requirements; first of which is ample heat and good circulation of the warmed air; benches designed to produce tall or stocky plants at pleasure, and other things which the professional grower finds necessary in this special line.

The 28-foot seven span house shown in cut has special overhanging side light; the latter extending from the eave down to the cap of the removable base board. The sittings of the upper benches are of 1 1/2 inch matched stock; the frames of the 1 1/2 inch benches are made with a bevel or bevel of one inch as shown; this in connection with the light boards, prevents any leakage on the plants below. The arrangement of 3 inch heat pipes is such that no space is lost, and care is used that all benches shall have proper bottom heat. Sufficient heat pipes are placed in

can be easily and economically heated to 70 degrees in coldest winter weather. This, it is reasonable to suppose, is done, cannot be built with wood posts, radiators, and iron pillars, for first cost, and secondly, they are not so easily covered, although the first saving is not very great, and the wood entails constant expense of labor for logging and for insects, while iron is also free from any tendency to promote fungus growth of any kind. This house contains one bench room to the foot of side and roof superstructure than a house of less width. The house cost the main wider, than by making the center benches wider a gain in bench space would be made, but the fern grower would not care to do this at proper distances to insure good circulation, or damp will follow.

Jersey City, N. J.

*Sweet Pea Review.*

(Continued from p. 1015, Vol. VIII)

SHADES OF MAUVE (LUSH).

Celestial.—In size and form will be approved by all lovers of this shade. In our trials it has proven itself foremost in delicacy of tint and generosity of form. Its early blooms were not so striking, but as the season advanced, its perfect form and pure azure blue became more and more pronounced, until all traces of the plinkish mauve appearing in the bud disappeared. Stems long and slender, generally producing three (sometimes four) flowers per

carefully grown, and as it ages it approaches blue. A vigorous grower and good bloomer; in our trials producing perfect flowers on extra long stems; quite early blooming.

Princess.—Very similar to the above, not quite so hooded, a shade deeper, and becomes darker with age. One of the best in our trials, showing no deterioration to the last, though in some seasons it has approached Countess of Radnor from which it is evidently a color variation.

MAGENTA SHADING.

Captivation.—A new self-shade. Magenta, very delicately suffused with purple; of good size; form to our idea not perfect; standards shell-shaped, as described by originator, which we take to mean like a saucer, with slightly distorted surface, originator, which we take to mean like a saucer, with slightly distorted surface, originator, which we take to mean like a saucer, with slightly distorted surface, originator, which we take to mean like a saucer, with slightly distorted surface. (See giving the edge an irregular outline, the bloom improved in size and substance, adding much to the merit. Sketch represented in cut. Fig. 4 was made in mid season, before bloom had reached their best. Not a tall grower, but a profuse bloomer, bearing usually three (sometimes two) flowers, on long stems. Medium early.

SHADES OF PINK-BLE.

Captain of the Blues (synonym Grand Blue).—This, to our mind, most nearly approaches a true blue in general effect. On first opening, it is easily mistaken for Waverly, though it has a slightly more bluish cast, which gradually develops until about the third day, when it reaches its prime. A large flowering variety, pro-

standards. A very profuse bloomer, bearing three or four flowers on long stems; late bloomer; delicate in color. Its color does not commend it. We would recommend its expulsion.

SHADES OF DEEP MAROON.

Stanley.—Darkest and most intense of all sweet peas; deep, burnt, carmine; standards glossy, finely laced with deeper shade; wings velvety, shading to purple lake; expanded form; standards large to very large, sometimes measuring thirty-five millimetres across; broad, almost circular, expanse. A fine, bold flower, producing long, slender, usually three-lobed standards. Standards or few reared laterally, with purple mauve, lightly suffused with wings. Old type; medium large; expanded (sometimes reflexed) standards. A very profuse bloomer, bearing three or four flowers on long stems; late bloomer; delicate in color. Its color does not commend it. We would recommend its expulsion.

Princess.—Standards or few reared laterally, with purple mauve, lightly suffused with wings. Old type; medium large; expanded (sometimes reflexed) standards. A very profuse bloomer, bearing three or four flowers on long stems; late bloomer; delicate in color. Its color does not commend it. We would recommend its expulsion.

Monarch.—In shading and form, approaches Waverly, but is much darker. Nevertheless a badge of Indigo, with a slight bronze effect on standard; wings of velvety purple. A very vigorous grower, producing three (sometimes four) flowers, on good long stems. With us it has proved an exceptionally profuse bloomer. Medium early.

Waverly.—Has size and form to recommend it, but its rose claret and hine color shades, though quite distinct, are not very attractive. Of good substance, a vigorous grower and profuse bloomer.

Prince.—Standards or few reared laterally, with purple mauve, lightly suffused with wings. Old type; medium large; expanded (sometimes reflexed) standards. A very profuse bloomer, bearing three or four flowers on long stems; late bloomer; delicate in color. Its color does not commend it. We would recommend its expulsion.

Stanley.—Darkest and most intense of all sweet peas; deep, burnt, carmine; standards glossy, finely laced with deeper shade; wings velvety, shading to purple lake; expanded form; standards large to very large, sometimes measuring thirty-five millimetres across; broad, almost circular, expanse. A fine, bold flower, producing long, slender, usually three-lobed standards. Standards or few reared laterally, with purple mauve, lightly suffused with wings. Old type; medium large; expanded (sometimes reflexed) standards. A very profuse bloomer, bearing three or four flowers on long stems; late bloomer; delicate in color. Its color does not commend it. We would recommend its expulsion.

We are at a loss to know why this variety is generally described as a maroon, of which color we find no trace in our blooms, excepting on the outer side of the petal.

Boration.—From which Stanley is a careful selection, differs from it only in form, the standards being more or less reflexed laterally, which gives them a narrow, elongated appearance; shades of magenta in the wings. Produces three or four flowered stems of good length. A profuse bloomer, early to medium early. A good flower we have Stanley—and for such a reasonable price.—From Sweet Pea Review, of Sunset Seed and Plant Co.

Dahlias, Pampas and other Grasses, Fruit Trees, Small Fruits and Asparagus Roots.

DESCRIPTIVE ILLUSTRATED CATALOGUE, ALSO TRADE LIST FREE ON APPLICATION.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Toronto.**

**Cash Meeting.**  
At the last regular meeting of the Gardeners and Florists' Association, President Dunlop exhibited several fine carnations that he had brought over from Buffalo; they were new varieties, and all of them appeared to be improvements on the older ones.

**The Tariff Question.**

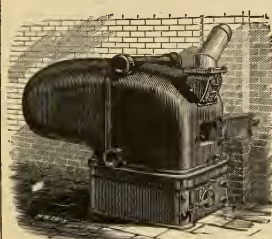

The Tariff Committee have held a joint meeting with a committee appointed by the Horticultural Society, and drafted a resolution to the ministers at Ottawa asking them to put all florists' plants, not otherwise mentioned, also all bulbs, corms, tubers, and dormant flower roots, not otherwise mentioned, on the free list. Plants that are "otherwise mentioned" at present are roses and some nursery stock; and roots "otherwise mentioned" are some that are used for medicinal and manufacturing purposes, etc. If the resolution is adopted nearly all florists' plants will be free. This will be a great boon to most of us, as the tariff as it stands is very vexatious. The majority in our trade here have to import many little things, and when prices for stock are as low as at present the duty of 30 per cent. makes quite a difference to the grower.

**Trade Notes.**

Business has been good for Lent; there has been considerable funeral work, and most of the stock arriving has been used up. Roses coming in are mostly of very high quality. Carnations are not quite as good as usual. Violets are both good and very plentiful. Bulbous stock appears to be also very abundant. Azaleas have been good this season, but have sold very low. The well-bloomed plants going at prices that would hardly pay for the plants in the fall. But none of our boys like to carry them over, so they have to go for what they will bring. This is very unsatisfactory business, and some will be able to suffer.

The Horticultural Society announces a lecture on Thursday, April 8, on "How Plants Feed," by one of Toronto's best lecturers; it is to be free and a big crowd is expected. THOS. MASTON.

GREENHOUSE KNAPSACK SPRAYER.

Special Spring Edition, 1897.

We again submit our annual harbinger of Spring and the Spring Edition... In its various phases we think it compares most favorably with its predecessors.

We have stated why we selected the subject of Commercial Orchids, viz. their growth and propagation.

The innumerable questions on heating which we have of late been receiving lead us to believe that there is no better authority to write us a chapter on that important matter.

A Plan for More Hard-Wooded Plants for the Florist... We are glad to see that the subject is being taken up by the horticulturists.

Then there is the Tariff; but at present we do not know where we stand on that point. We are not sure that our transformations under the direction of our legislators.

For advertising and advertising patronage is concerned, it will be seen that the FLORIST'S EXCHANGE still continues in the lead.

Nine thousand copies of this Special Spring Edition—going up nearly two and a half tons of paper—will be mailed to the clients of the Exchange.

We sincerely and heartily thank the trade for their most generous support, and trust that each and every advertiser will receive those tangible returns therefrom.

Congressional and Senatorial Interference with a legitimate industry will be continued until the tariff is repealed.

Announcing this fact, however, should increase and not lessen the efforts on the part of the people to have the tariff repealed.

A Conundrum. Paragraph 51 of the Tariff bill now being discussed provides that "plants, trees, shrubs, roots, seed cane and seeds, shall be imported free of duty."

measure where it belongs, that we may expect effectual aid.

The campaign has been productive of much good; this is evidenced in the fact that several Senators and Congressmen have expressed their intentions of working and voting against such a measure in the future.

Another, and a very material point of the present appropriation in purchases of material which will really be of benefit to the farmer rather than continue the present wasteful and indefensible distribution.

Yellow Rambler Rose.

The very best of the hardy yellow climbing rose sent out in our last week's issue was from an excellent drawing by Peter Lambert, the originator.

The Proposed New Duties.

That the trade should scrutinize with interest the changes sought to be made in the existing tariff is but natural. Duties are the life of the tariff.

With the time arrives when the business people of the country are called upon to protest and disjoin their endeavor.

Free Seeds. Congressional and Senatorial Interference with a legitimate industry will be continued until the tariff is repealed.

Ideas may and will conflict, but an average could be agreed upon. The rates imposed are the result of the uncertainty which exists as to the constant changes in the law.

A tariff is in its very nature a discrimination, and while all acknowledge such a measure is necessary to the maintenance of a government, it should be framed above party politics.

who uses forcing stock from abroad, as well as the importer of all stocks, favor the tariff.

The seed-growers of southern New England, and the nurseries of Philadelphia, urged through their delegates before the House and Senate Congressmen to meet the necessities of the case.

The proposed rates have been before our readers for some time. We have had a full opportunity to determine for themselves whether they suit them, or not.

The fact that the Dingley bill has passed the House should not cause us to withhold their ballots.

In comparison, we present the following figures of imports for 1896, taken from official sources:

Of forcing stock, such as orchids, azaleas, lily of the valley, etc., \$3,410,000.

Of garden seeds (principally vegetable seeds), \$428,238.55.

Of foreign stock, the first item is expected to yield a revenue of \$120,216.86, in place of \$100,000 in 1896; the second, \$3,310,600, as in 1896; the third, in 1890; the third item, \$171,265.00, instead of \$42,833.00, as in 1890.

Readers Will Please Note That

During the last days of the tariff discussion in the House, the Hon. C. C. Dingley, of Iowa, succeeded in thoroughly altering the wording of Paragraph 51, which has been inserted in the bill.

As will be noted, no provision whatever is now made for the importation of such articles as azaleas, palms, lily of the valley, etc., and the same remark applies to bulbs of all bulbous roots, and the rendering of both admitted free under the classification of Drugs, in Paragraph 54.

A preliminary dividend of 9 percent, has been paid by the Northrup, Braslan, Goodwin Co. estate.

Free Seed Distribution. Views of the People.

A prominent Western House relates an instance where they were arranged to sell seeds with a dealer in a small town in Missouri to take a box of their seeds on...

From Virginia—I received five packets of tobacco seed, sent by Senator...

From Indiana—It is indeed a great hindrance to our farmers...

From Ohio—I have this P. M. had a personal talk with our representative to Congress...

From Florida—This free seed is a fraud on the people, as I have had parties come to me...

From North Dakota—I am in receipt of five packets of tobacco seed...

From Colorado—I believe one seed law is not only an injury to seed dealers...

From Massachusetts—Another letter from our society who carries the title of D.D.S., and also M.D., writes...

From Georgia—I write you to let you know how much I am furnished by Uncle Sam does us?

The J. A. Everett Seed Company has furnished us with a copy of a letter written by their Senators...

About twenty million packets of seed will be distributed this year, representing the extraordinary demand...

The lady spoken of in our last, who bloomed lettuce with pork, may be a good one...

Here is a letter from Messrs. A. Tilton & Son of Cleveland, O., who have written our representative...

"Following your advice we have this day forwarded to our Congressman, a protest against the proposed appropriation for the distribution of seed by the Department of Agriculture."

"We hope that each and every seedman having a share in the sale of the seeds of the trade, that he will do likewise."

"Our united efforts are sure to effect a reform in the distribution of this article, long in a work of such universal concern."

From Massachusetts—Another letter from our society who carries the title of D.D.S., and also M.D., writes...

From Georgia—I write you to let you know how much I am furnished by Uncle Sam does us?

Overproduction

"European Seeds" has hit the nail on the head when they say...

the result will be that those who buy from Europe will grow their seeds here in abundance...

Our great trouble comes from the head-land, where the grass is rushing into thicket...

The tendency is overproduction, and the farmer has caught on to that. The dealer gives him an order...

From America in the trade takes to seed-growing, is fortunate in obtaining some orders...

From North Carolina—Not long since a package of seeds came to us from the Agricultural Department...

From Colorado—I believe one seed law is not only an injury to seed dealers...

### Growing Tropical Nymphs for Their Flowers.

Although the hardy species of water lilies are the best for cutting from, the tender

ones are also being grown on account of their showy, brilliant colors. It is thought is a greater number of tender species and varieties than hardy ones. By hardy ones I mean those which can be left out of doors all winter north of the thirtieth degree

latitude. The tender kinds are very distinct in the manner of growth from the hardy species. Curiously enough it is those kinds which grow nearest the Equator that are least suited to remain for a long time in an absolutely dormant state. While none of the hardy species are suited to exist long in that condition, they may be said to be continually growing, except during the latter part of summer and autumn; after that period, if the rhizomes of any of the species are examined, the flower buds and leaves for the following season are plainly visible.

All of the tender kinds form little tubers when a few weeks old from seed, or, in the case of stolons about three weeks after being parted from a parent tuber. Both are capable of being thrown into a resting stage and they may be kept at about the same size so far as the tubers are concerned

for a number of years. I have some of the identical tubers of the true *zanzibaricus* and *N. gigantea*, which were purchased from Stratveit, of Bordentown, over six years ago. In these tubers have not increased in size during that period, although they have given off plants every season since they were produced.

The day blooming tender kinds in forming large roots do not, as a rule, make small tubers, but they do form roots formed on the rootstalks of *N. euclyptus* and I have found them on *N. gracilis* and *N. pulcherrima*. In fact, it is always best to depend on small tubers for their propagation.

The night bloomers all form an abundant supply of small tubers, which do away with the necessity of keeping large plants over winter.

If those tubers be started now in the tank of a house to which the sun has free access they will be large enough for planting out before the middle of May, for instance a fair-sized tuber of *N. rubra*, *N. devoniensis*, *N. dentata* or any of the night-flowering hybrids which have lately been sent out, put it in a five-inch pot and cover

it over with about an inch of soil, then another slight covering of sand; sink about six inches below the surface of the water and the chances will be that six or eight stolons will be put off, all of which will make good-sized plants. They should be detached from the tuber only after they have made roots of their own.

*N. dentata* is white, *N. rubra* and *N. devoniensis* are reddish pink. They are the best of the night-blooming section for garden purposes the hybrid being, as a rule, shy bloomers compared to the above.

Among the day blooming section the *Zanzibaricus*, consisting of the true dark purple *N. zanzibaricus*, the lighter colored *N. Z. aurea*, and the white *N. candida* are the flowers *N. Z. rosea*, are very easily man-

aged. Seeds of any of the above sown now will flower before the end of May. The South Australian *N. gigantea* produces an ideal flower, but it has the reputation of being difficult to manage. I have had much trouble in growing it, provided that the plants do not receive a check by being transplanted suddenly. I have had some that of a much lower temperature. *N. gracilis* is white, but if grown in company with *N. devoniensis* and *N. rubra* will have medium-sized yellow flowers; both are hardy in this latitude. *N. mexicana* being by far the best of the day blooming.

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE

“IT gives me great pleasure to say the Automatic Ventilators you put in for me three years ago have given entire satisfaction, and are admirably adapted to greenhouse ventilation, etc.” Thus wrote Mr. W. H. Elliott, of Brighton, Mass., a very successful and prominent grower, on January 23d last.  
**It also gives us great pleasure to say that the**

**...Ventilator...**

- has in every instance verified Mr. ELLIOTT'S statement.**  
 The machine is no respecter of persons, and will operate as well for you as it has for any of the many florists who are using it.  
 The Ventilator has many especial features, among which may be mentioned:
- It maintains an even temperature.
  - Opens and closes the sash alone and unaided.
  - Is more sensitive than your thermometer.
  - And is absolutely reliable.

If you contemplate building, or making any change, get our prices on the Ventilator and on shafting.

# Readers' News on the New tariff.

I am opposed to a tariff on anything that is being sent to us from this country.—M. B. BOGAN, Philadelphia.

On looking over your valuable paper we see you would like to have your subscribers give their views in regard to that thing called a tariff. We will say we are in favor of tariff legislation of an extreme nature, such as is now pending in the House of Representatives, on the reasonable terms on all seeds and bulbs, the latter especially. Our motto is "a tariff for revenue only."—SEMMLER BROS. Higginsville, Mo.

I am in favor of free trade in everything; but if there is to be a tariff, I am for a tariff on roses, geraniums and carnations.

In seeds I would certainly insist on a higher tariff on all luxuries, flower seeds, bulbs, etc., than I would on what would approach the necessities, i. e., vegetable and fruit seeds.

As an opponent to present free distribution of seeds, but think a moderate appropriation to disseminate new and desirable fruits, plants and seeds, as originally intended would work much benefit. A. W. SMITH, Americus, Ga.

I have before me a copy of the Tariff bill, as I believe it was presented on the 15th of last month. It represents as it is and find that, as in former ones, live flowers have been omitted. For the sake of protecting the grower, it is to be hoped that if we tried to get a special clause in said bill to read: "Live flowers and fronds of ferns excepted from the general tariff schedule." This would at once stop the shipping of flowers by our near neighbors, who flood our country with them from a time when they do meet harm. Now is the time to move, and we must act quickly, otherwise our growers will be ruined as in the case of once more. A. HULSEBOSCH.

Regarding the question of tariff on various plants and bulbs, I cannot see how it is going to be any benefit, excepting to a few small growers who are certainly at a disadvantage. He will have to charge more for what he sells, and as business is not so good and not so certain, he will be at a disadvantage. Then, if the tariff is a protective one, and keeps foreign goods out, it will help the revenue. It seems to me that what is wanted is reasonable prices, that will give a fair profit to the grower and fair wages to the laborer, and I think we can secure that without fencing ourselves in with a protective tariff.—D. O'LEARY.

To my mind the putting a tariff on florists' materials is no protection to the florist as long as money is scarce. If money were plentiful so that the demand would be met, we would not care to pay the duty; or, if we could make foreign pay all the importing and sell us at the same price, after they have paid the duty, that they would charge without duty, we would be safe enough; but that would not be the way in which it settles itself. I for one would kick. I suppose it is well enough to have protection, but it is not the way to get it, unless it upon some one who knows no better, but in this case we know better.

of late years no money in growing and sending to the United States, and squelched, and that, through there being little probability of the Dutch growers, and the bulbs they have to grow, they try to make private sales, rushing, as they do now, the sending of very heavy consignment of bulbs to the United States, to pay 30 per cent. of their value to Uncle Sam before exposing their goods for sale. It is not only the growers, but the buyers so big to many a grower, is what causes more bulbs to be grown than will pay a reasonable price when the flowers are ready for the market.—EDGAR SANDERS.

The condition of the United States Government, now needing revenues, a moderate duty imposed on the florists' planting stock imported from the Netherlands may be called luxuries, might be thought reasonable. A rate like 30 per cent. seems severe on a tax, however, and would undoubtedly produce an unfavorable result ultimately.

We usually see attempts made, even by so-called small florists, and often with a good measure of success, at growing from seed their own palm stock in certain kinds. In classes thus adaptable I would favor the higher duty as tending to have produced in the United States a stock of plants as valuable as that of the Netherlands, as well as justified by the importance of the growing part of the business.

Regarding the question of duty or no duty on articles of florists' stock, as to see why the live bulbs, bulbous roots are for forcing plants for forcing into flower, it is a protective duty. What we do not produce thus far in this line, we are not yet ready to grow, and the duty will continue to import the same. Whether it be good policy to tax these items is a question that is not for the florists and dealers will bring out stocks with more moderation, when thirty cents cash per bulb is put on them, than they would before the goods can be touched. Such moderation would work to the advantage of the florists, and the growers of bulbs, and would pay no more for the flowers, duty or no duty; supply and demand will regulate the prices as in the past.—WINFRED ROLKER, of August Roler & Sons, New York.

I am for a tariff from A to Z on horticultural products. In many lines the producer is compelled to sell below the cost of production, because of the influx of foreign goods. In such cases the tariff reveals there is no need of worrying about what the consumer will say because of inflated prices, and illustrates every hyacinth or tulip that is put upon the market, when forced, takes the place of a certain number of such similar and American production. The hyacinth bulb takes the money out of the country, while the price of everything else in the market keeps it at home. The same argument is true of azaleas, and roses (which are imported in such quantities as to swamp the market), and other horticultural importations. When a man swaps a hundred dollars worth of roses, and receives \$50 in return, he has lost half the value of the market, and a nation that trades the best market in the world for a few dollars worth of roses from Africa and blue jeans in India can be placed in the same category.

In your issue of the 26th you invite an expression of the growers' views as to be of all interested. We are in favor of specie duties on stocks, seedlings and plants, but not on the bulbs. We are members of the American Association of Nurserymen and an ad valorem of not less than 30 per cent. on everything else. The florist and florist line that can be produced to advantage in this country. But think no duty on anything else. The Dutch and Holland bulbs should be admitted duty free.

The trend of the article signed "A Republican" suggests that he is one of the florists more largely interested in importing Dutch bulbs, and that there is no justice in favoring the importer and ex-

board florist to the great injury of the growers of the whole country, as was done in the McKinley bill, which imposed a duty of 20 per cent. on Manetti and other roses, and allowed a 10 per cent. duty ready for immediate use to be entered free. THE STOCK AND SEED CO., Philadelphia, Pa.

As you are asking for opinions on the proposed changes in the tariff on plants, bulbs, etc., please put up with the following, and send them to the proposed change.

I see that on bulbs and roots of all kinds we will have to pay a duty of 30 per cent. ad valorem. Who is the proposed duty supposed to be levied on? If it is levied on the Dutch bulbs or lily of the valley grown to any extent in this country, so there is no grower or growers to protect.

To increase the duty, I believe, will curtail the importation, as at the prevailing low prices for all cut blooms of both Dutch bulbs and valley it will be impossible for an importer and forer to make a living profit on the same.

Germany is the recognized valley-growing country, and she has had a favorable climate, the soil and the cheap labor, and, no matter what duty our legislators may put on the bulbs, she will have secured will never succeed in inducing our home growers to grow them in quantities, and, as far as the Dutch and French bulbs, I strongly advocate no duty on plants, but, as ERNEST G. AMBUS, West Hoboken, N. J.

Obident to your call for a discussion on the tariff question, outsiders sometimes see much clearer ahead of us than we do. It is not a question of self-interest supercede all else beneficiary to a healthy trade.

As to the argument that any kind should share an equal division, between merchant and consumer; in these lines the consumer is the user, and can be secured for the Government.

Legislation that, for instance, only favored the grower, and not the user, any plant stock for ultimate family or commercial use, is sure to burden the merchant and the consumer, and, as a tax, it falls heaviest on the latter in all events.

Let us calm ourselves on all concerned too limited extent will prove healthiest to the trade, which scarcely can be obliterated by a tariff.

The tariff schedule of 1890, the first protective tariff ever put in operation in the United States, was the result of a tariff at this stage, be satisfactory to all concerned, the Government intimated. Let calm ourselves on all concerned too prevail on this, to the trade an all important question, and in view of what has been said of the Government by the seed trade about limiting the use and abolishing the abuse of the free seed distribution, and the same result can be reached the same source. The seed trade has not reached its limit by any means; there is still much to be done on the part of the grower. Good quality of seeds will always find ready purchasers willing to pay good prices for them, and the seed trade will flourish. With it alone prosperity will follow a wise legislation.

### LET US CALM OURSELVES OLD SEED MERCHANT.

The tariff question came to a point in the United States when it was proposed to put a human wisdom to frame a tariff that will not pick somebody's pocket. When pocket-picking is legalized, we have no tariff, but making it legal does not make it morally right. If a man is an American seller he should not be allowed to import goods if he does not want it, and he comes to surely know that any government or set of men who will not protect the rights of the natural-born privilege of investing his own legitimate earnings where he can get the most for the money, and then to force to a lye (we call it a tariff) for so doing, are acting in restraint of trade and placing themselves in the hands of parties who respect no respect for the interest of the buyer. It requires but a small amount of money to buy a few bushels of wheat, but the buyer is not taken care of the seller will have to go out of business.

Oh, how we are to be wrong, and there is no right to be, put a tariff on it. It is the same thing, but it is making him the people to pay this tariff, and the same salary of all the government officials who are making him the people to pay this tariff, and the same income tax over and above the tariff, and the same income tax over and over, and we will have revenue enough.

So long as practical people will submit to the dictation of craft politicians and ambitious lawyers, backed by speculating speculators, matters can never mend. We will build our country up on a practical men, with ability enough to make money, and not enough to do anything, instead of moving on a speculative basis, would have to move on a practical basis. It is not a question of stability would be the inevitable result.

Now that everything is cheap government officials are so high that they are half and get down in line with the people, and there would be no deficits. What better for the price of seeds so high that many farmers will be encouraged into growing them. Why should we send abroad for seeds that can be grown just as well here? Witness the yearly spectacle of the seedmen of America watching with interest the seed crop of Europe, while our own farmers and growers cannot compete with the foreign labor. And, again, how the seed of the price of seeds so high that they are hoodooed and wheedled by "crop permitting" clauses in their contracts, which simply allow the grower to buy the seed in his own house had the trade of this country too much in their own hands.

As far as the Dutch and French grower of this country cannot, dare not risk his time and labor against the cheap price of the Dutch and French seed, and section against that labor just as much (and more) than that labor was transferred to our own soil, and our criminal labor is the same as the Dutch free labor.

Second—By increasing the tariff on the florists' goods that are imported from Germany, and stimulating trade in general, our growth of the world for the florist's growth with cheap bulbs from Holland. When they get the Dutch and French grower of this country cannot, dare not risk his time and labor against the cheap price of the Dutch and French seed, and section against that labor just as much (and more) than that labor was transferred to our own soil, and our criminal labor is the same as the Dutch free labor.

### VERITAS.

It is generally known that certain seeds can only be grown in the Netherlands, and in Jefferson County. It was found by experience that these grow out of the territory deserts, and that the seeds are not so well, therefore undesirable for seed purposes. When the pea-growing interest were first started here, we had no difficulty in placing all the seed stock necessary; but as farmers became better acquainted with their crops and the effects on the soil, they began to fight shy of planting peas, until at last the competition became so great that the matter up in their meetings and discussed the question thoroughly. The farmers insisted that they could not grow any more fancy peas for seed houses. The reason therefore for the seed trade in the pea-growing territory was left the ground to nature a crop of weeds before frost set in. These weeds were left to grow in the meadows, and in place of Jefferson County has bringing the highest price in the New York market. It is for the grower to grow the lowest. Therefore, the fancy peas were doomed. In consequence of this state of affairs, we are largely dependent on prices that compelled us to grow elsewhere; it was simply because of the condition in the Netherlands.

Now, here is where the interesting part comes in. We are informed that the strange thing is that the farmers are not going into the hands of our Congressmen a massive "petition" demanding that a heavy tariff be put on the seeds of the peas, and do they seek to meddle with matters that do not interest them? If they will not grow peas, why do they want to pay a heavy 50-cent rate our Government will realize a very limited income, as the importation of the seeds will be a very small amount, and the duty remain as it is, and everybody will be better served. S. M. PRASE, State.

April 3, 1897

I have had over twelve years direct dealings with hundreds of florists in the United States; the first six years under protective tariff of 20 cent per lb, and since until this year, under our present tariff, which is mostly under a free tariff; and I think I know fairly well what the florist can do for himself, generally, as regards tariff matters.

Unhappily I declare that a protective tariff on our own goods has greatly benefited our growers and dealers.

We grow annually thirty acres of bulbs in the Netherlands, and have about 100 acres under cultivation, which shows that we intend to grow more, and still we have our goods sold at a price which is first, because American florists realized more for their cut flowers and plants of all kinds of goods than they could get at the time the country began to be flooded with all kinds of bulbs and roots, and consequently could not bid pay their bills more cheerfully; second, because it would prohibit consignments almost entirely, thereby preventing that class of goods coming into competition with a better and dearer article; third, because roses, palms, trees, and many vines are grown here, equally as good, if not better, than in Europe, but cannot yet be grown as cheaply, and consequently are more valued here, and are to go as more important. One has only to go to Baltimore and Washington to see the value of the rose and the geranium; every huckster has them by the hundreds grown in old gardens, which would be sold at a price which shows conclusively that narcissus can be grown here.

As to tulips, I do not doubt but they could be grown around here, and they need it deep soil and to be given proper treatment. I have seen right in Anconita, where the plots are the same as the good for the last ten years in the large, with foliage as healthy and blooms as large as those of the newly imported ones.

Most of the hills can certainly be grown here, and as to valley, well, America is a very satisfactory result. Try to give your children a chance to make a living by voting for the proposed new tariff enactment. ALBERT H. BENOLOTTI, of Huesebach Bros., Englewood, N. J.

I think there is already duty enough on palms, azaleas, etc., and which was not the case four years ago, if I remember rightly. What does this protective tariff? It makes the grower's dealer and lover of it. It is not those who deal large in palms who are affected. Oh, no. They will be the ones who suffer. The dealer, the so-called protector by taxing him heavier for it, made a trip last year to England for a trial order, and there places, in order to convince myself whether or not those "protective importers" themselves raise the stock. I am satisfied that what I saw was mostly all imported stock; and it will always be so, for you cannot afford to compete with the imported countries of Europe, such as Belgium, Germany, France, or, in fact, any of the countries of the North Sea, or the Mediterranean, or England; she cannot compete with the protected countries, neither can England compete as cheaply as she does. The labor is while the labor is about 35 cent higher in England. Last year I sent to England for a trial order, and a shipping cost. The result was that I did not dare to charge the price any more.

It is time ago I saw an article in the "Florists' Exchange" about "Protection on Seeds," that the Americans had a monopoly with the seeds of Europe, and some of the seed growers there eat their meals on mud floors. Now, I am Mr. Anderson, I have seen seed establishments there, which would put some gentlemen to shame, and I am as small as you are, and I can do any paper labor, and I can do any other any by it, while everything is cheaper than in England, meat, when compared with prices in America.

I am a believer in protection, but it is not the right thing. If you would try to shut out the outside world what would America do with her immense surplus of much money to hand? Would she live? I believe in the motto, "Live and let live," and one hand has to wash the other. If you would try to shut out the world, I will tickle you and you will tickle me. Therefore, gentlemen, go slow as far as seeds are concerned. This protective tariff was not got enacted on the protection principle, but on a gold platform; and the protection principle is not the right thing. I lived will be its regime. Now, a few views in regard to protected American labor, which you can do any paper labor, and I can do any other any by it, while everything is cheaper than in England, meat, when compared with prices in America.

with you. Besides, we have not enough skilled labor in this country. The best workmen will not come here, as they are not so well paid as in their native country, into consideration. Although there are in America plenty of unemployed, 90 per cent of them are not so well paid as in their native country.

Then, again, the climate is against us, and that which we cannot import.

W. BOCK, North Cambridge, Mass.

I have read with pleasure your invitation to those interested to express their opinion of the tariff bill as passed by the lower House, as far as the same has a bearing on the florists' business. I have interviewed many in the trade on the important question. Opinions seem to be much divided, and an airing of the different views through the columns of your valuable medium, "The Florists' Exchange," may enable one to learn the consensus of opinion.

The question must be considered from different standpoints. It is necessary to consider that taxes are at all times a burden to those taxed. They may be levied upon the consumer, or upon the producer, or upon the expenses of the government; they may also be levied to protect the capitalist against the laborer.

Inspecting paragraph 249 of the new tariff bill as passed by the House, I notice that it is levied from the florist's pocket. I have interviewed many in the trade on the important question. Opinions seem to be much divided, and an airing of the different views through the columns of your valuable medium, "The Florists' Exchange," may enable one to learn the consensus of opinion.

According to my observation and experience as one connected with the trade, it may be supposed as a fair average that 65 per cent of the nurserymen and florists in this country are engaged in it, living and meet their legal obligations. Many are engaged in other trades, and duties on their import orders, to say nothing of the cost of the goods bought; that is a question which the florist must relate, consideration. How will they manage when the duties are increased from 20 to 30 per cent? Will they be able to carry or the American importer going to carry his entire account duty, freight and shipping charges, and the cost of the goods or even longer? I am inclined to think that the imposition of these high duties on the florist's business, and the man of means will have his houses stocked with imported azaleas, palms, etc., while the florist will be without these necessities for his Christmas or Easter trade. Hereafter, he could not afford to import from Europe, and for that granted that he understood his calling; hereafter he may buy from his neighbor, and pay him his price. The Government must be supported, and I would advocate a tariff sufficiently high to meet the necessities of the florist's business, and industries. I am opposed to prohibitive and excessive duties.

It is time ago I saw an article in the "Florists' Exchange" about "Protection on Seeds," that the Americans had a monopoly with the seeds of Europe, and some of the seed growers there eat their meals on mud floors. Now, I am Mr. Anderson, I have seen seed establishments there, which would put some gentlemen to shame, and I am as small as you are, and I can do any paper labor, and I can do any other any by it, while everything is cheaper than in England, meat, when compared with prices in America.

The practical workings of the new tariff act as now proposed by Congress will, if enacted into a law, be very new. Florist purchases one hundred dollars (\$100) worth of goods from the grower or plants for forcing. Most of this stock suitable for forcing purposes is imported. He pays the grower, or dealer, in Europe, or in other words, his \$100 worth of raw material costs him \$150, first cost. The florist pays the grower \$100, and in these times of depression to encourage extravagant disbursements for pensions, and other things, and the florist's business of lavish expenditure, at a time when the whole business and industrial world is in a depression, and the florist's economic in the matter of expenses. Who, therefore, in the trade, or, indeed, in the florist's business, is to be benefited by this extra 50?

Will either the nurserymen or the florist get any more for the finished product

when ready for the market? Who will pay more for flowers, or fruits, or trees, or shrubs, because the first cost of the raw material is increased 50 per cent? Our high protective tariff friends answer, The benefit of protection will counterbalance all that is lost, by shutting out foreign products and the supply of raw material will lessen the general supply, so that the markets, while not being extended, will be more profitable for "home producers."

Stripped of theory and imagination, let us see what the practical facts show us on this view. According to the official reports, the importations of all plant and nursery material in the year 1895, for example, were \$1,000,000 value; less exports, \$132,000, gives a net balance of imports over exports of \$868,000. This amount is shared out by nurserymen and florists in the United States. This amount in excess of imported material and nursery material is, therefore, equivalent on the average to \$86.70 of yearly business for each one engaged in the industry.

Assuming that a Chinese wall of seclusion and exclusion, or its equivalent, an excessive protective duty sufficient to exclude all importations, should exist exclusively to the trade in this country, the florist would receive 100 per cent of his business from importations, each one engaged in the industry would receive 100 per cent of his \$100 worth of business for the year, excluding entirely any consideration for material imported.

Under this average or aggregate amount of foreign business is responsible for the production and amount of the florist's business. The florist's business would be increased when the cost of material is made greater, and a policy adopted that will result in the production of business that is increased, is an interesting problem.

FREDERICK W. KESELEY, March 28, 1897.

SEEDSMEN AND THE TARIFF.

Editor Florists' Exchange: I am glad to see that you are the first to raise the question of the tariff on the florist's business. I am not a producer or dealer in seeds, but a large purchaser, and I make a living out of the soil-seed grower, farmer, wage-earner and every one interested in the production of business. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me.

One man can fix the price of his goods, but such demands are not met. The grower and man will do it, but I have no demand for our seeds and other products because they will not apply to us, as a nation, as there will be no demand for American labor in Europe to that of this country, or level our trade to theirs, they will be paid labor. It is a matter of the after-paid labor that makes the country the best on earth—not only for the laboring man, but for all who are interested in the production of business. This talk of high tariff supporting monopolies, etc., seems to me a nonsense. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me.

And why is this? Simply because the

seed dealer can buy his seed for a mere song in Europe. Ask these farmers and their employees if they prefer cheap seeds, or if they prefer a moderate price. They are now compelled to raise potatoes or other products at a loss. I am an American, and with all of America's faults and mistakes in government, I still believe we have the best country on God's earth. If I did not think so, I certainly would try and get to be better one, and I am not in favor of any law to prevent just the same. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me.

More About the Seed Tariff.

Editor Florists' Exchange: We each almost every day by our own bootstraps. If the price of seeds advances because of the tariff, the growers who buy seeds just the same as I do, will be treading the oldest sort of straw to go over this subject. I only want to call attention to the fact that the florist's business is increased when the cost of material is made greater, and a policy adopted that will result in the production of business that is increased, is an interesting problem.

Hydrocyanic Acid Gas.

The experiments with hydrocyanic acid gas for the extermination of aphids on violets, just published in the "Florists' Exchange," Woods, describing in your issue of Feb. 13, is very interesting reading. It suggests the use of this gas for the extermination of the pest on roses with this insecticide by Mr. Woods or others than myself. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me.

Editor Florists' Exchange:

The operation and results were published in the "Florists' Exchange," Woods, describing in your issue of Feb. 13, is very interesting reading. It suggests the use of this gas for the extermination of the pest on roses with this insecticide by Mr. Woods or others than myself. I am a B. J. as you interested, is one of the pool to me. It seems common sense that if we produce the largest part of our seeds here we can and are, every one is in better shape to supply labor than we are in all other countries. We can do so cheaper. I make no claim of being willing or able to pay my employees more than I have always employed native, and never cheap foreign labor. My principle of production also, extends to all who help me, and extends to all who are interested in the general production of business. I am a B. J. as you interested, is one of the pool to me.

As far as my results were concerned, the same could readily kill the aphids without injuring the delicate young rose shoots. A. J. PENNOCK.

FRAMING.

The Cold Frame.

Special Cultural Certificate

Received from the American Institute Farmers' Club, at Exhibition in New York, March 7th, 1897, for Twenty-Five Blooms of

BATH'S CARNATIONS.

DEAR SIR:- We have been receiving your new carnation, Minnie Cook, from your representative, Mr. Bradshaw, 68 W. 60th St., N. Y. City. I consider Minnie Cook a valuable acquisition to our collection of carnations; a fine large flower, beautifully striped, strong grower with excellent keeping qualities. Our customers give it the preference wherever a light shade is desired. Very truly,

Meadow View Greenhouses, Parsippany, N. J.

BATH'S CARNATIONS

The following selection of Winter Flowering Carnations contains all the newest and most profitable market varieties yet introduced, they are all exceptionally vigorous, the flowers are large, with perfect calyx, and most profuse bloomers.

Table listing various carnation varieties and their prices. Includes varieties like CANARY BIRD, DUKE OF YORK, HENRY GIBBONS, LEONIDAS, WILLIAM ROBINSON, etc.

Cash with Order, or Satisfactory Reference. My collection of carnations for growing in the open field is one of the finest to Europe. Full catalogue post free on application.

SEELING GARNATIONS for 1897.

CAPT. KING. Variegated White and Pink, an early and continuous bloomer, very fragrant and a good shipper, stems extra long and stiff, so exceedingly attractive and profitable variety. JOSEPH JEFFERSON. Deep Pink, very large and showy flowers, on long, stiff stems, color resembling Pink Carriage, such large flowers...

PROFITABLE CARNATIONS

Are the ones you want to grow this year. The time is too hard for you to grow poor stock. Carnations have been greatly improved during the past few years. We have as good as can be produced up to date, our stocks well rooted, very many of them transplanted into soil and well established, but we have not raised our price for this. Send us your orders, and we feel sure you will be satisfied. Special prices on large lots.

Table listing carnation varieties and their prices. Includes varieties like Moralo, Flora Hill, Mrs. McBurney, Harrison's White, Major Fiegler, Mrs. Bradt, C. A. Dana, My Den, Maud Dean, etc.

C. EISELE, 11th and Jefferson Sts., PHILA., Pa. WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Carnation Culture.**

Abstract of paper read by N. D. Pierce, Jr. before the Carnation Florists' Club, of Rhode Island.

I have by no means reached perfection in the management of my carnation plants. It appears to me that the weak point in our procedure in the lifting of the plants from the open ground in the fall, first by using dry manure to cover them transferred to our benches with but little loss, and in a short time they recover and bloom abundantly. But there is no denying the fact this operation is a pretty severe one to the plant, and from what I take notice of the plants are weak. The working roots are severed from the plants, and these must be renewed before the plant can go forward. As the lifted with balls but few of the working roots are secured, for they will be found several inches below the surface. As long as we plant our carnations in the field they will be subject to this serious drawback. The question is how shall the matter be remedied? We have heretofore tried to be very practical, perhaps severely so, and we hesitate to enter the botanical field. Our only plan is that some one among us may be induced to make the necessary experiments in this direction. Some attempts have already been made to solve the problem by planting the young plants directly in the field in the early spring. It seems to me this plan has many objections, not the least of which is that the bushes are not so far from the protection until the middle or latter part of summer. In the meantime something must be done with the young plants.

The plants in the field will need pretty close attention. We never deemed it wise, however, to harvest the plants any more than enough to keep down the weeds. This done the ground will have striding enough, and we the scuffle on the first two or three times, which cuts out the weeds very effectually. Of course great care must be used in cutting carnations. It is cut also if the best not to hoe too close to them at first, for if much disturbed they are likely to wilt, particularly in dry times. When plants grow longer and get a good hold of the ground we use the harrow teeth and hoe deeper and closer to them. This improves the opportunity of a dry time to kill weeds. They will usually not require more than one or two cuttings between the rows, and this is avoided when they are planted to work both ways.

**Toppling** will require a good deal of time and attention. During the first part of the morning or on a cloudy day the tops can be snapped off, but when the plants are tough from the sun and a sharp knife will have to be used. Some growers trim very close to the ground, others merely nip off the ends of the flower shoots. We prefer to trim most kinds pretty close. As the shoots grow they are again pinched back several times, varying according to the size of the plants and the largeness of the season. The idea is to have your bushy plants in the fall and to flower about as possible. The time to stop cutting back will depend on the variety, and at what time the plants are in bloom. No general rule can be laid down.

**Cuttings.** Carnation is half done. I was taught while going to school. Unless my ideas are all away this applies to the propagation of carnation cuttings, and I am sure of it, unless. One would not think of breeding from a deformed or sickly horse or cow, much less should we think of propagating from a deformed or sickly carnation plant, for, in the first case, we can have one healthy parent if we wish, and yet we cannot make the attempt. In the carnation case there is only one parent to work from, and if that parent is not in the best of health and vigor how can we expect the progeny to be healthy? Never put an apprentice to pulling cuttings from men on the place, are none too good for this work, and should be instructed not to take any from a plant that shows the least sign of weakness or disease. There is a great deal more in careful selection than most of us are willing to acknowledge. If we follow it closely year after year we can improve, instead of ruin a variety, even if we are propagating from blooming plants.

In preparing my compost I use good garden loam, with as much pasture soil as I can get, sometimes more and sometimes less. I start with about one foot deep of the sod and loam, six of heap about 10x15 feet on ground, and when completed about 6 feet high. I then add, say, four to six inches deep all over this a layer of stable dressing, then another layer of the sod, and then bone and wood ashes, alternating first with bone and ashes. This I prepare in the fall when I can get it, but sometimes it goes over until spring, but when

it is left until spring it should be done as early as possible. In setting I have made a rule to leave all the plants in winter quarters by the first week in September. This I have followed for the past two years, and I have not had a plant that hereafter I shall be governed by the size of the plants. I think if the plants are left in the field when they are not proper size to lift until the last of September they will nearly, if not quite, double in size.

In the propagation and introduction of new varieties of carnations, it is very important to know how to select and make in the mud burry to get the variety on the market, or propagating from every plant that is good, whether it is weaker and healthy, or whether it is of a weaker constitution. I am of the belief that the only proper way to build up a new variety is not to let it flower. When it has matured its height, and as soon as the crown bud appears, nip it off and also any other buds that appear on the stem; this will start the shoots we wish to propagate quicker and they will have their full vitality. If any introducer of a new variety would be as careful as the writer, and, say, take one year longer in working up his stock, the craft would be greatly benefited. I believe in growing flowering plants in the matter of lifting cuttings. The seedlings I have shown this year have not any different treatment from those given to the other two groups.

There seems to be a very great difference in new varieties in the matter of lifting cuttings. For instance, when I saw No. 33, which is a large, light pink, about one or two shades lighter than Scott's Blue, I was very much pleased. When I planted the first year, while from No. 66, which is similar in color, I propagated about the hundred and twenty. No. 66, similar to Daybreak, produced about thirty, and No. 63, which is very much like Daybreak, produced about thirty. As a rule, the choicer the variety, the slower it is to produce flowering shoots, but that is no reason why so many of our best varieties are weakened and nearly ruined by the time the commercial grower gets them.

Some introducers as soon as they get plants enough of a new variety to fill a box and market, and if the year they are going to be sent out, grow for the cuttings only, and keep the temperature of the growing cuttings low, and thus thus giving us weak stock to start with, that is already in a condition to contract any disease that it comes in contact with.

At our last meeting of the American Carnation Society steps were taken in the right direction, and a committee appointed by our president to examine new varieties.

Mr. Charles H. Allen stated that the New York Florists' Club had adopted a plan of having a permanent local committee on awards, and he favored the adoption of a similar plan by the various florists' clubs in the country for the special purpose of examining new varieties of carnations and awarding certificates where such are deserved, and advised that the Executive Committee of the society request the florists' clubs to take action on this matter.

In closing this paper, a word of caution may not be out of place. It is a great mistake to think one must build an addition to his plant every year. There is such a thing as having too much glass. The grower will curb this disposition so prevalent among florists, and limit his glass area to what he can pay for and manage properly. A great many young men are rushing into all branches of the trade, and particularly the growing of carnations, they should know that there is nothing more than a fair amount of profit in it, and not that unless by industrious and constant application. He who starts to grow carnations with the expectation of getting suddenly rich or avoiding work will be sadly disappointed.

# GREAT SENSATION NOVELTY--ORCHID FLOWERING Cannas-AUSTRIA and ITALIA

Every practical grower or dealer knows that large Cannas Roots with two or more growths are much more profitable than potted or started over a few weeks old in plant form. Now is your time to procure your stock of Austria and Italia Cannas. If you buy now and propagate you have eight weeks before planting out, and your only chance to make money on these two grandest of all New Cannas yet introduced. The stock we offer is the originators'—as their agents in this country—and will mail large sample bulbs of each upon receipt of \$1.

Large, sound field-grown bulbs containing two or more eyes, special prices for larger quantities.  
AUSTRIA, \$3.50 per doz.; \$25 per 100. ITALIA, \$6 per doz.; \$40 per 100.

INTERNATIONAL ART CULTURAL EXPOSITION,  
 AT HAMBURG, 1897.  
 FROM MAY TILL OCTOBER.

Boston.

A Unique Establishment.

Syracuse, N. Y.

Providence.

## Market Items.

Trade is not particularly lively in this section, and the market offers plenty of stock in all lines, with the exception of the better qualities of carnations, which are very scarce about the city. The stock in excellent condition, Bride, Bride-maker, and Brunner being especially noticed. The latter is in such quantity that they are affecting to a greater or less degree the demand for four star Beauty. Violets are dropping off in quantity and quality, and the warm weather here is doing nothing to discourage a flush up many houses.

## Easter Outlook.

Easter prospects are encouraging in all directions. The retailers are very sanguine and the growers hopeful. All present it looks probable that there will be a great scarcity of carnations to meet, and good violets will be good property. There will probably be lilies enough to go around, and the prices of last year will be the rule.

## Staple Prices.

Present prices are about the same as have been reported for several weeks past, and it is a noticeable fact that for the past three months there has been less fluctuation in wholesale prices of flowers than ever before for a like period in the Winter months in this city.

## The News.

E. M. WOOD & Co. are now shipping some of the most beautiful of Ullrich Brunner to this market which have ever been here.

LAWRENCE COTTER has an attractive Easter novelty in the shape of large and small grown specimens of Crimson Rambler rose to full bloom.

JAMES T. CARROLL, formerly with Joseph Brice & Sons, but now in the real estate business in this city, was married a short time since to Miss M. E. D'Almeida, of South Boston.

The semi-annual meeting of the stockholders of the Boston Co-operative Flower Growers' Association, occurs on Saturday night at Young's Hotel. It is expected that the report will be a most successful one.

On the last day of the horticultural exhibition, last week, the flower committee recorded the awards on white carnations, and gave the first prize to Lincoln, which showed up throughout the exhibition in excellent shape, proving strong in its other good points that its keeping qualities are unexcelled.

Silkline, a green thread introduced a few years ago for florists' use by JOHN C. MEYER & Co., of 57 Summer st., Boston, is now in very general use by the florists throughout this section, with whom it gives entire satisfaction. It is used in many ways, but is especially recommended for stringing snailx and asparagus, and it is noticed that these goods when silkline is used are less readily injured by the process of cutting out the white stripes it is done away with. It is also furnished in fancy colors for tying up bouquets.

A case of interest to florists was tried in our courts this week. An employe of an established concern left and opened up a retail store in the same neighborhood, stating on his cards that he was formerly with the established concern. The latter refused to place an injunction against the use of their name on the cards of their past assistant, but the judge decided that such a party as the defendant was here for the last year, has entered the employ of J. Newman & Son.

The Massachusetts Horticultural Society's Winter course in insectures and diseases was completed last Saturday with a lecture on the John Lewis Russell foundation by Dr. Edwin G. Smith, an able and pathologist, U. S. Department of Agriculture, and a member of the Sprague of Plant Diseases; a Consideration of the Ways in which Parasitic Organisms are transmitted, and the course of the season has been well attended and highly satisfactory in its good results.

The greenhouse belonging to Dana & Stebbins, in West, was destroyed by fire on the extent of about \$300 on Wednesday afternoon. The fire caught from smoldering waste.

W. K. W.

WILLIAM H. ELLIOTT is one of the most successful growers in the Eastern States, and so intimately has his name become associated with Asparagus plumosus nanus that either seems out of place alone in fact, they are inseparable. His unique asparagus establishment at Brighton, Mass., was described at length in our Spring Special Edition a year ago, but since then the increased demand for this popular decorative green has warranted the erection of still another glass house of immense proportions, and a carload of glass is now on the road for the purpose of carrying out other contemplated improvements the present season. This is one of the places that all visitors to Boston should write in their memorandum books in large letters, and then be sure to see. It is readily accessible by electric or steam road from Boston, and visitors, especially those in the trade, are cordially welcomed, and they will be repaid by the opportunity of viewing one of the most interesting horticultural establishments in America.

W. K. W.

## Market News.

Trade has improved somewhat recently, and a good Spring business is confidently expected.

For Easter F. R. QUINLAN Co. have a batch of about 6000 Hartnell and longifloro in superb condition.

BANNISTER BROS. of the West side, have built an addition to their greenhouses, with a copy office and saleroom.

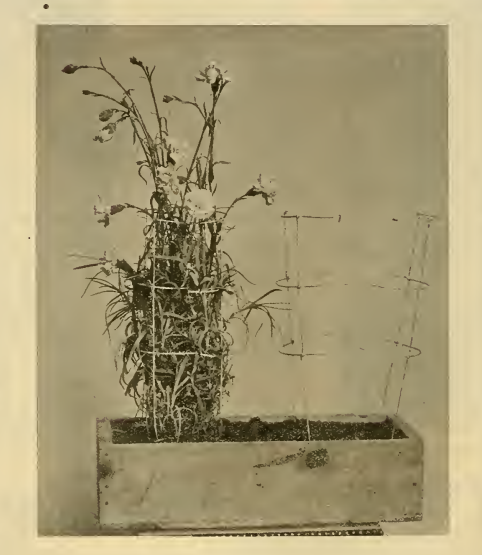

HENRY MORRIS, the Elmwood florist, has rented a store downtown, which is splendidly located, having two entrances, one at Geneva and East Payette st., respectively. Mr. Morris was recently elected president of the village of Elmwood.

Since my last notes, we have had quite a cold snap, which acted as a wholesome check to vegetation.

C. BARSON.

Whitesboro, N. Y.

JOHN H. OWENS, who has been growing successful florists, is working into flowers; he has some very nice roses. J. S. H.

Horan &amp; Son's New Carnation Support.

## Another Carnation Support.

We inclose you a photograph of a new carnation support, which we have had in use the past winter, and which, we think, works splendidly. It consists of four No. 16 perpendicular wires, 18 inches long and three or more horizontal wires bent to form half circles. One upper half circle is bent to form an eye on each end, the opposite wire is put up and taken down, and allows for retreating of the plant, without fear of breaking flowers or shoots, and stays in place without any further support or tying.

We think this support overcomes objections to be found in other supports, as it allows free access to the plant of sunlight and air, does not interfere with cutting flowers or taking of cuttings, and is adapted to short or tall growing varieties, also to bench or pot culture. It can be gotten up cheaply, and was so well pleased with it that we have applied for patent on same.

JAMES HORAN &amp; SON, Bridgeport, Conn.

College Point, N. Y.

ANTON SCHULTZ is usually managed to come out well ahead on whatever he takes h'd of, and this season will be no exception. His three houses of ericas are grand. Kaluga and metulodora, hode-dendron and sazales are equal good, and a house of Acaea armata hybrids (paranots), established here. Five thousand Lilium longiflorum, in pots, are in fine condition. Lilies in pots, Lily of the valley, and a house of roses also claim attention.

Carlton Hill, N. J.

Preparations for Easter are always made on a large scale by JULIUS ROEBERS, in his handsome establishment here. Flower stock of sazales, hydrangeas, daisies, bulbous stock, Lilium longiflorum, valley, rose roses and orchids all claim the attention of the visitor. This year, everything is in superb condition, and will be light a hour, in point of time. Mr. Roebers has but few novelties this season. He will, though, have the lot with Acaea armata, in large plants, having a number of specimens well flowered, 11 to 13 feet in height, trained in pyramid and bush form. Bougainvillea Sanderiana is also well done. Several houses of hybrid roses will be ready, and among these a batch of H. H. Johnston Roze'll is the most conspicuous.

## The Market.

Business is worse than dull. All kinds of flowers are in supply, but the demand is very light. Balloons stock, both in flowers and plants, has shown a decided falling off over previous years, and many of the growers will have a much smaller stock for next season. Funeral flowers have been the principal feature of the Spring trade, and E. H. Foster, N. H., and Mr. Knickman, with Vaughan's Seed Store, New York, are the principal dealers in material for decorative stock.

## In Town.

Among the recent visitors in town were W. Rolker, William Dykes, with Ed. Jansen, J. E. Killen, of C. H. Joosten, New York, Charles H. Walker, representing D. F. Hayes, N. C., Foster, N. H., and Mr. Knickman, with Vaughan's Seed Store, New York, are the principal dealers in material for decorative stock.

## Death of an Old Florist.

A news despatch recently received by the daily press of this city from Portland, Ore., announces the death of WALTER MCNIGHTON, who left his home in this city on January 6, 1881. The deceased was born in Scotland in 1820, but when about six years of age he removed with his parents to London, where in later years he learned the florist's business. He came to this country about 1849, and a greater portion of the time since was spent in Providence. For many years he conducted a greenhouse near Elmwood until about a year ago, when he gave up business.

## Jottings.

JAMES DAY, for several years foreman for Walter Hogg, has accepted a position with Amasa Eaton.

JAMES WENNER, Jr., has been elected superintendent of the North End cemetery. WILLIAM HENRY has entered the employ of Edward J. Johnston, at his greenhouse.

MICHAEL O'CONNOR, formerly with B. B. & E. Knight is erecting a greenhouse on Bacon avenue.

WALTER E. BOSTON is to read a paper on mushroom spaw and culture at the April meeting of the Riverside improvement society.

The clerks at W. E. Barrett & Co. and Walter A. Potter & Co., are working nights filling orders on seeds, tools and supplies.

## Club Notes.

Conventions and the coming Convention of the Society of American Florists, in August next were the topics that occupied the meeting of the Executive Committee. Florists and Gardeners' Club of Rhode Island at their regular monthly meeting, at Providence, on the 15th inst., had a committee a greenhouse near Elmwood until about a year ago, when he gave up business.

The secretary read an official report from the Executive Committee of the Society of American Florists, of the proceedings of the executive committee's session recently held in this city. It was referred to the local Convention committee with instructions to appoint committees and assistants called for in the report. It was voted that a dance be held April 20, at William B. Hazard's dairy farm, where an elaborate program of entertainment will be furnished.

Thomas N. Gray, Boston, was elected an honorary member.

W. Rolker, of New York, made some interesting remarks. President Macrae announced that the Messrs. Farolier, of Boston, had offered to deliver a illustrated lecture on the bulb raising interests of Florida. This meeting will give their lecture before the Club at the next meeting. The meeting will be made ladies' night, and the members will have the privilege of inviting their friends. The committee on athletics reported that the shooting and bowling teams were nearly organized, and that the arrangements for the proposed tournament were progressing.

In the absence of the essayist of the evening ladies' Picnic, Secretary of the wood, the secretary, read an interesting paper on the "Cultivation of Carnations," which will be for the benefit of the other column. W. H. M.

Bristol, Pa.

HARRY CHAMBERS died at his home here on Tuesday, March 23. He had been suffering from pneumonia. A widow and three children survive him.

Geneva, N. Y.

JAMES SANDFORD SEARS, an old-time nurseryman, died March 19, 1881. He was 86 years of age.

Market Notes.

Trades has been fair the past week; it seems as if Lent does not play the game as well with the flower business that it did former years. Stock is fair quality and well sold.

C. L. Salsbied is very busy planting bulbs in March in all branches, decorating the addition of Carroll Park. This party will be one of the finest we have in the city.

HURT EDDY, of Chicago, was in town this week.

The Dutchman is on his annual tour for orders. EDWIN A. SIEWITZ.

Indianapolis.

Trade seems to have been very good in March in all branches, decorating being brisk. The outlook for Easter is excellent, with plenty of bulbous stock, carnations and carnations.

The March meeting of the Florists' Club was held at the office of H. W. Riemann, the subject being "The Flower Worm." A paper read by Herman J. Jurek and a microscopic examination by Mr. Hatfield were well attended. These two gentlemen—a rose grower and a botanist—have put their heads together, and they began an elaborate and very practical way of handling this pest. The results of their efforts are looked forward to with interest by the local growers.

WIGAND & SON are building a palm pit 12 by 160 feet in which to grow small palms.

THE INDIANAPOLIS PLANT AND FLOWER CO. have built a propagating house and completed building two good houses for chrysanthemums and general stock.

Messrs. Fred. Donner, E. G. Hill, and the complete building of two good houses for chrysanthemums and general stock.

The City Council has appropriated \$350,000 for parks. This city will soon have a park as large as any in the world.

Park Commissioner Albert Lieber, general manager of the Indiana Brewing Co., is going to the Capital to propose a plan to plant a new street at the end of Gardfield Park. The street is two miles in length, and is planted with trees and shrubs, maples. Mr. Lieber took this step to encourage tree planting.

Cincinnati, O.

The past week has been uneventful as to business; the fore part of week trade started off quite slow, but on Thursday it took a turn for the better, and by Saturday night nearly all stock at the commission houses was disposed of, carnations were scarce, and have been so all through Lent, and the scarcity will no doubt continue some time. In the case of carnations have stiffened up considerably.

Roses have been in fair demand only, and the stock will be sold in the near future. Messrs. E. G. Hill & Co. are now shipping the writer some handsome Carnot. This is a brand of a beautiful rose, and I think will find favor with the public.

Trade at the Flower Market has been about its own fairly well.

On Tuesday morning a severe hail storm passed over the western section of the country, fortunately the treacherous ice escaped, or, at least, at this writing I have heard of no damage.

On Saturday, E. G. Hill and myself visited the establishments of Richard Kretzschmar. Among his many seedling carnations may be mentioned one named Opal, which, in my opinion, will be one of the best of the season. The name given Kretzschmar and Emma Woehner, she is a daughter of both; and the buds are divided. Evelina, his new white, is looking all right, and is certainly a good carnation. Emma Woehner is also in fine condition.

bulbs, for the reason that when such a tariff is in operation there will not be so many bulbs sold, and those imported will be of a better quality than those grown better flowers. The probability of the grower to get more money for what he raises. E. G. HILLGRT.

St. Louis.

Trade News. We are having the first lots of Spring weather that should give stimulus to business. There is a fair volume of orders in the hands of the exhibitors. Last week, thousands of roses were given away at the Spring openings of the city. The market for carnations is very quiet. The departure, while not new here, was never as popular as this Spring, and while the market for carnations is very quiet and prices from collapsing, it meets with much adverse criticism from some of our florists, particularly those having stores in the shopping districts. It is my opinion, however, that flowers given away at these events will be a benefit to the business of most of them into the hands of people who are not regular flower buyers—and besides no dealer is experienced enough to not return liberal interest to the flower business, for the love of flowers is inherent. In retailing carnations, the market is better. There was considerable funeral business in the city, and the season at Music Hall, etc., has been very successful. It has caused some demand for fine flowers, but not so much as was expected. Since the Faust-Bauch wedding there has been a plentiful absence of decorations, and wholesale trade has been very quiet. The carnation trade and the ever-present fair for their sales. At present, the latter handle the bulk of the carnations. The florists, Brimaid and Meteor, and their trade has kept the market clear. So far, there has been no change in the carnation market. The Lent in former years; in fact, roses seem to be as scarce as during January. From my own experience, I am of the opinion that abundance of flowers until after Easter. Lillian Hartshorn is causing some anxiety, but I am not sure. Her own opinion of many growers that the supply will be short of demand at Easter.

Beauty is now coming on in fine shape, and fancy sell readily at 45¢ to 65¢ per 100. Kegs of Pleasant Hill, 15¢ in the Brimmer.

Carnations are not as plentiful as roses. Stock and prices are about the same as last week. Daybreak is scarce, and commands good prices. Fancy red sell well, and are in demand. Uncle John and Alaska are in best form. Fine carnations are bringing \$2 per 100. The demand for carnations is very quiet.

Violets are doing better than last reported. Southern shipments are light, and none grow in the West. The demand is very active, particularly for California. Sweet peas are down to rock bottom. The market for carnations is very quiet. Bianca Perry and Katherine Tracy are doing well. The demand for carnations is very quiet.

Romans are scarce and sell clean at 83 per 100. California is 50¢ per 100. The demand is very active, particularly for California. Sweet peas are down to rock bottom. The market for carnations is very quiet. Bianca Perry and Katherine Tracy are doing well. The demand for carnations is very quiet.

One of our large department houses advertised a big drive in rose plants last week. Curiosity prompted me to investigate the matter. The drive was in the form of a "drive" in the flower department, where large wax-impregnated carnations in the buildings at 50 Washaba charge did not know what varieties of roses she had to sell; knew nothing about the color, their own manner, which

she handled the serrary plants, I am willing to take her word for it that she knew nothing about them; all she knew was that they were better than those they had thorns. How many did I want? None. Would I excuse her, and she went to the front of the department, and jostled each other in their eagerness to get at the baskets and paid their money without waiting for the flowers to be ready. The salesladies were kept busy handing out rose bushes at so much per bush. What a

The plant trade is opened out, and there is activity in every market place in the city. The carnation market is very quiet. Robert Fitzsimmons' Works is the latest addition to the flower business. Charles W. Cook is removing to his new place, and the arrival of the boy. C. G. F.

E. H. MOORE has added a center chest to his store, which is not large enough to accommodate the rush of buyers during the early hours. The chest contains 20 drawers, with capacity for 500 roses; is about 4 feet high; upon the top a counter is made well adapted for sorting purposes.

The condition of the flower market the past week has been favorable, most of the stock arriving being cleared off. If any carnations were left over, the market is rather a shortage in carnations, with none to sell at a knockdown price—\$1 25 to \$1 50 was as low as the dealers would go. Roses also have kept plain fairly well, and the stock cleared at least the best quality.

The stock shows an increased supply of extra quality, no doubt owing to the bright sun. Several wholesale houses are having carnation roses shipped to them. The asking price is 75¢ per 100, but some are selling at \$1. One house reported that the retailers no longer thought they found them scarce, and are beginning to buy again. One house that sells the flower, in addition to being in the market, has been in the market as a specialty, mostly in the flowers when partially open, as in the case of the carnations. The market is a taking flower. But when the petals are partially unfolded, the delicate shade is unlike that of any other rose in the market, one coming nearest it being Golden Gaea, a variety grown by Rieberg to some extent.

The violet gait has let up somewhat, and a point gained in price; 50¢ being the price for the best. Prizes for Fall Show. The total premiums offered for the Fall exhibition are: Chrysanthemums, \$100; carnations, \$100; miscellaneous plants, \$85; cut roses, \$40; floral arrangements, \$25; carnation show, \$25; violet blooms, \$15. Club News.

The Florists' Club meeting on the 25th inst. was held at the office of E. G. Hill. A committee of twelve was appointed to raise funds for the relief of John McCollister, who was elected to the point of death. James Hartshorn, financial secretary, is leaving the city to take charge of his business, and is being succeeded by E. G. Hill. E. G. Hill, Esq., new Joliet, and his resignation from the Club was recently accepted. John McCollister being elected to fill the vacancy.

The president then turned over the meeting to JAMES H. HARTSHORN, the committee of arrangements, and the story went around, interspersed with conversation by E. G. Hill, "Quarrette," Messrs. McCullar, Balluff, Kissell and Winterborn, with mandolin accompaniment. An enjoyable evening was spent.

EDWIN M. MCKELLAR will be removed, April 10, to 50 Washaba—a large, basement store—where he proposes affording flowers table room to sell their flowers. THE ILLINOIS FLOWER CO. (J. B. DeWitt) will also move at same time, owing to alterations in the building at 50 Washaba. EDWIN A. KASTS, of Washington Park, delivered an address before the Cook

County Farmers' Institute, at Willard's Hall, March 26, on "Trees Best Adapted for City Planting."

H. F. Halle, Anton Thien, and W. J. Hines were in charge of the proceedings, in company with a large delegation of other business men, who appeared before the board of directors of the city of the bill against department stores. The bill passed the Senate, and at present is hanging by a hair in the House of Representatives. The bill provides for the cities of 100,000 and over. The principal feature is a classification, with license in proportion to the amount of separate businesses carried on in one building.

W. C. COOK returned from Cincinnati, where he had been to bury his father, James W. Cook, one of the pioneer florists of that city.

W. C. COOK

A few of the retail dealers report trade fair, but in general not much of anything is going on. Stock is fairly abundant, with prices unchanged. Harris Hines was in the city, and has been in retail as low as 50¢ per dozen bulbs, while the wholesale price is about 4¢ per 100. Roses and carnations hold up well in price and are of good quality. Violets were sold one day during the week at the new price—15¢ a bunch, or two for 25¢—by one of the Allegheny florists, who secured a big lot; generally, violets bring 20¢ per 100.

Hyscints, Dutch and Roman, go very slow; tulips are in biggest demand and are being sold in quantities. The plant trade is beginning to improve slightly, but prices are too low; pot hyacinths go at 10¢ or three for a quarter. Seed Trade. No complaints are heard in the seed business. W. C. Beckert reports his trade better than last year, and has been kept very busy for the month.

Club Notes—What Insect is This! A well attended meeting of the Florists' Club was held last week. The evening being devoted to the microscopic entertainment, C. G. Miller, an enthusiastic microscopist, presented some wonderful objects, among them being insect larvae, and plants. A specimen of a certain insect was presented, which, under the powerful lens, was new to most of the growers; that is, they have never seen it. The writer recollects it well, having had it in the greenhouse some years ago. It is fully 1/8 inch in length, tube shaped, and of some light color as the mesaly bug, and does about as much damage, inflicting its stings, being particularly fond of coleus and lantana. None present could name it, and the writer is sure it would be much pleased to hear more about it.

W. F. LAUCH, of Carleik, was married, March 30, to Miss Eliza Engel, a sister-in-law of E. C. Ludwig, the Allegheny market.

A. G. HENNING, of F. E. McAllister Co. and JOHN BARCLAY, of Wm. Elliott & Sons, New York, were visitors during the week.

C. T. STREIBER opened a new flower store at 120 Washaba, and is well patronized in all Allegheny, which will be in charge of H. Streifel, who was formerly with E. Ludwig.

GIBBS, of Woodville, rented the greenhouse of W. F. Drews, on Fifth avenue.

W. F. LAUCH, of Carleik, was married, March 30, to Miss Eliza Engel, a sister-in-law of E. C. Ludwig, the Allegheny market.

A. G. HENNING, of F. E. McAllister Co. and JOHN BARCLAY, of Wm. Elliott & Sons, New York, were visitors during the week.

| 5.50     | " " elegantissima, 2 1/2 inch pots.  |  |

There is no improvement to report this week; markets are even worse than last. Roses are coming in more plentifully, and this has caused a slump in that particular stock, very few figures being the rule. In fact, there is no such thing as a fixed price in any grade; \$15 per 100 was taken in many cases for straight slips, and but few exceeded \$20. No. 1 when sold straight, we can consider well sold at that figure. Beauty, proportionately, suffered the worst of all, for many special and fancy blooms failed to meet with purchases. Hybrids frequently realized street vendors' prices, this being the only class of their kind to meet with any quantity of stock; the trade was entirely at their mercy.

Geraniums, which have been doing fairly well, weakened on Thursday.

Edenian stock will kindly be in oversupply; but it is vainly that feels the depression most, none making more than \$2.00 per 100. The prices of the very handsome had at figures between \$5 and \$15 per 1,000.

It does not pay to ship magnolias at current figures. Smilax is getting very scarce, and the price is stiffening, special stock selling at between \$30c. and \$5c. per string.

**Easter Outlook.**

The plant trade, so far, is good, and orders for spring plants are being made. Orders are holding out for 12c. a bloom on Lilium longiflorum, and 10c. on L. Harriisi. There will be a little trouble in keeping stock back till Easter.

**The News.**

RALPH N. HAYDEN, who for some time has been with W. S. ALLEN, passed his military examination satisfactorily, and received his appointment recently; he will be West Point, June 15.

JAMES DEAN, Bay Ridge, received notification of his appointment as a judge at the International Convention in Hamburg, and he has had to decline the honor, owing to press of outside matters.

The auction sales were better attended this week than last. There has been more brisk. Spring stock is coming in now, in addition to roses and nursery stock.

**Utica, N. Y.**

Business has been rather quiet lately. The prospects for Easter are good. Flowers of all kinds will probably be in fair supply.

C. F. BAKER has been quite sick for several weeks, but is getting stronger now. His three new plants—Hamburg, a splendid scarlet, Oneida a beautiful pure white, and Utica, a grand white, are looking fine; the first two they will put on the market the coming season.

H. H. TREMPER has also been under the weather lately, but is attending to business again.

WM. MATTHEWS says the demand for outside plants is increasing.

S. W. WRITTON & SON have shipped a great many azaleas as a result of their advertisement in the Exchange. They have a large house full of Harriisi, stocky and in just right condition for Easter.

J. S. H.

Madison, N. J.

Two of the new houses at the Farm Greenhouses on the McK. Township estate, are to be filled with ornamental orchids; other new houses in the same range will be devoted to choice fruit and vegetables. A. Herrington, the asperinidensis, says he will leave roses and carnations alone.

**SEA BATHYKA GREEN HOUSES OYSTER BAY, QUEENS CO., N. Y.**

JAS. C. CLARK, Supt. P. O. BOX 34. WM. L. SWAN, Prop.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

THE "MODEL."

THE "MODEL" CARNATION SUPPORT

32 SO. SIXTH STREET,

Brooklyn, N. Y., March, 1897.

TO THE FLORISTS' TRADE

I have been congratulated by many of the best growers here on the perfection to which I have brought the "Model" Support, and claim superiority over all other supports now in use in every important particular, viz., in its combined action, giving perfect support, it affords the greatest light and best circulation of air, consequently the best results; the greatest strength, with the least weight; the most durable, being doubly galvanized below the soil; the firmest anchor; is adjustable, being easily and quickly raised as the plant grows and needs additional support, thus **saving time and injury** to plants by the tucking-in process; is set complete, at once, as soon as the plant requires it, or as soon as planted, saving going over a second time to place the second support; **it nests without tangling** in one-quarter the space required by others—an item in shipping or storing; and the third circle (extra), for tall varieties, is quickly attached, firm in its hold and easily raised, as the plants require it, to the full height of the support.

The model will please and interest you. It is **new**. Growers wishing for the best would do well to get a sample hundred and give them a trial this season, should not the accompanying statements sent me in writing by such practical men be convincing of its merits. Order early and avoid delay caused by rush of orders at planting season. Correspondence solicited.

ATHERON PARKER.

QUEEN, N. Y., Feb. 18, '97.  
MR. THERON PARKER, Brooklyn, N. Y.—I have received your latest model carnation support, and am free to say that I consider it the best ever contrived for support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention. Very truly yours,  
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97.  
MR. THERON PARKER, Dear Sir—Your new stake is exactly what I needed. I am so glad to know you endorse it as an article so necessary for the florist. Yours truly,  
D. M. BROOKS.

W. HOSKINS, N. J., Feb. 18, '97.  
MR. THERON PARKER, Dear Sir—It gives me much pleasure to congratulate you upon your success in getting out carnation supports. I think that those I have had from you are about the perfect article. They certainly fill my bill for a double support, a thing I have been looking for a long time. Wishing you every success in the sale of them, I am,  
Yours truly, E. ASHBY.

THERON PARKER,

32 So. Sixth St., BROOKLYN, N. Y.

Box 166, Springfield, Ohio.

NEW YORK.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

THE two leading strawberry for 1897, **Carrie** and **Earliest**. The above two strawberry are the finest new varieties ever set out, and no Nurseryman, Seedman or Florist should neglect to plant them as leaders for 1897. The price to the trade is \$2.00 per doz. \$12.00 per 100, with 25 per cent. off, cash with order, to the trade only. The New York Experimental Station's report for 1896 shows that 85 per cent. of the crop of **Earliest** was picked before June 15, and it is the first one mentioned as being worthy of trial as the very earliest.

**Carrie**, the queen of strawberries, a seedling of Haviland, a success from Canada to Texas. Ohio Experiment Station recommended it over all others because it is larger, firmer, better color, etc., than the parent.

If you want anything in strawberries, send for our wholesale price list, 25c off to the trade on all varieties. Finest collection in the United States at rock bottom prices. No finer plants grown.

2000 Maxwell B B, \$10.00 per 100. Large red one Rio, Lady Thompson, Tennessee, Isabella, only \$2.00 per 100, 25c off, cash with order. 2000 Carnies not red color, \$1.50 per 100. \$15.00 a 1000

THOMPSON'S SONS, Rio Vista, Va.

...VOTING COUPON...

The fact that the Dingley bill has passed the House does not make it law; it still has to pass the Senate, and your voice has ample opportunity to be heard.

The discussion being closed, a vote is now in order, and we would like to have an expression of opinion from every reader interested. On the 13th of April the votes will be tabulated, and sent to Washington.

Fill out this Ballot by writing in the word "For" or "Against" opposite each paragraph, sign your name and address in full, and return at once to Editor FLORISTS' EXCHANGE.

PROPOSED NEW TARIFF RATES.

For or Against

- 251—Stocks, cuttings or seedlings of **Nyrobalan plum**, Mahaleb or Mazzard cherry, three years old or less, \$1.00 per thousand plants; stocks, cuttings, or seedlings of pear, apple, quince, and the St. Julien plum, three years old or less, \$1.75 per thousand plants; **rose plants, budded, grafted, or grown on their own roots**, 3 cents each; **stocks, cuttings and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs, and vines, manetti, multiflora, and briar rose, and all trees, shrubs, plants and vines commonly known as nursery stock**, unless otherwise specified, 30 per cent. ad valorem.
- 253—Practically all **Vegetable Seeds**, 40 per centum ad valorem.
- 630—All **Flower and Grass Seeds** Free.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

## Philadelphia.

## Easter Plants.

From present indications all kinds of stock will be in good condition for Easter trade. Several lots of lilies and azaleas are heard of that cannot be held here to a good many buyers, so that stock in proper condition will be liable to a good market. There are some lilies around, but when diseased stock and those too far advanced are counted out, the support for Easter will assuredly be as good as formerly. All things now look promising for the growers. On account of the prospect of good weather, the liability of many plants being on the street, the stores are ordering more cautiously. Another reason for this is that several of the large department stores have placed orders for Easter plants; in fact, they are now taking orders for plants for delivery before Easter. One store has ordered 1000 plants of hyacinths; they will be given away to those making purchases above a certain amount on Saturday, April 17. Another store is now selling lilies at 50c. per plant, with jardiniere \$1, and hyacinths at 25c. jardiniere included.

Vasemaker is selling dormant roses again at \$1.25 per dozen; 50,000 were sold last year, and he will sell all he can get this year, so the advertisement reads. These are from Holland.

## Market Notes.

All kinds of flowers have been very plentiful this past week, and prices are down; it is a case of get what you can. On Monday and Tuesday the fakers were selling good Bridemaid and Bride at 3c. each. Hybrid roses are very plentiful, owing to the bright weather; many intended for Easter are now coming in.

Carnations are faring rather better; they are not such a glut, and good flowers have sold fairly well. Fancy stock has brought \$3 to \$3.50, while the general run has sold at \$2.00.

Violets continue to be very plentiful, the price ranging from 20c. to 50c. per 100 for double. S. S. Penneck received 110,000 of these last week, so the condition of the market can well be imagined. Bulbous stock continues very plentiful, and goes rather slow.

Mignonette has been a glut the past few days, there being very little now to be had up. Smilax is selling very well; only fair strings bring 30c.

W. C. Smith is cutting some very good sweet peas, which go at \$1.50 to \$2 per 100. The seed was sown in pots in August, and plants set out on benches after the grandmas. The peas have been found to pay very well, flowers having been cut now for the past five weeks.

## Growers.

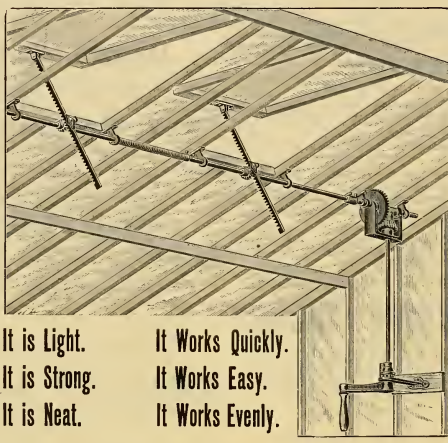

At the establishment of HUGH GRAMM a disastrous fire occurred on Thursday evening, March 25. It broke out in a room used for storing tobacco stems, stalks, etc. The origin of the fire is a mystery. The damage was confined to a large potting and packing shed, and the ends of three houses, and will amount to about \$1,000—insurance \$200.

A new rose house,  $\frac{3}{4}$  span, 15x150 ft. is now being built. The house has large glass (an old type of house with a large eash roof), is being torn down, and in its stead two houses will be built, a full span for asparagus and a  $\frac{3}{4}$  span for roses.

Easter stock is in splendid condition, the plants being well equipped in small houses, back of the ranges of rose houses, the former having northern exposure. The stock to be brought in as was the case with lilies and spruces are doing well; about 400 a day are now being cut. A similar house plants in good shape for Easter. The new carnation, Victor, is still blooming freely, 25,000 plants have already been sent out. Day lilies are also being done very well here. In one of the small pits in front of a rose house, one of the plants for Easter will be a batch of the bottle brush plant, metrosideros.

CHRISTIAN KOEHLER, Second av. and Wynton av., also had a fire on the end of last week, doing about \$500 damage.

JACOB BECKER, as usual, has a good healthy lot of Easter plants. Azaleas are done very well in potting. These peas is no longer a necessity, good leaf mold being used and answering just as well. Lilies and spruces are also in good shape. But most interesting on this place are the string roses. Several benches were noticed by Goutier, Peris, and La France. These roses were flowered all Winter, taken up about March and potted in 5-inch pots. They are now rooting freely, and will be in good shape for Decoration Day. A batch of Goutier was noticed that were left over from last year in 2 $\frac{1}{2}$  pots; these were carried in cold frames till Feb. then potted in 4-inch pots, and will give plants full of buds for Easter, selling at

It is Light. It Works Quickly.  
It is Strong. It Works Easy.  
It is Neat. It Works Evenly.

## IT HAS NO EQUAL.

It accomplishes when all others fail.

It is no new-born babe.

It's about eight years old.

Its first teeth have decayed.

Its new ones have come.

It's a little giant indeed.

It looks light and delicate.

It deceives you in that idea.

Its shadow cast is mere nought.

It requires oil like any machine.

It's put in your house by experts.

It's insured for five long years.

It costs more than any other.

It's the cheapest in the end.

It was born of poor parents.

It had to struggle for a life.

It fought its battle on its merits.

It came out victorious, and

It's here to stay, but not in the East.

It's taken Greeley's advice, and is going West.

It's yours, if you want the best.

E. A. ORMSBY, Melrose, Mass.

\$10 per 100. So that it is not always advisable to throw out left over plants. Kaiserin is considered the best rose for Spring sales; this is treated in the same way as the others mentioned above, and is now making vigorous growth in 5-inch pots. A house of Bridemaid has recently been mulched; not having any old manure on hand, fresh cow manure was used. This was covered with fine ashes, when put on, and so harm to the plants has resulted. A batch of Crimson Rambler roses look right for Easter; these are sent and tied down, fan-shaped, and are covered with flowering shoots. Azaleas left over from last year, which were planted out in frames, in a compost of two-thirds leaf soil, are far the best plants on the place, much ahead of any imported stock.

The carnation contest between E. G. Hill & Co., and Edward Swayne, was held Friday morning in the Florists' Club rooms, Horticultural Hall, and was won by Mr. Swayne's Jack Frost, the flowers of same being larger and heavier than those of Flora Hill.

DAVID RUST.

## Stationery for Florists.

Every florist in the land should have a complete supply of printed matter wherewith to conduct his business in style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

## \$5.00 Combination offer includes....

250 Noteheads, 5 $\frac{1}{2}$ x8 $\frac{1}{2}$  ins.  
250 Envelopes, size 6 $\frac{1}{2}$   
250 Billheads, 7 ins. wide, 5 $\frac{1}{2}$  ins. deep  
250 Business Cards, 2 $\frac{1}{2}$ x4 $\frac{1}{2}$  ins.  
200 Tags, size 2 $\frac{1}{2}$ x4 $\frac{1}{2}$  ins.

Cash with order. Delivered F. O. B., N. Y.

## \$10.00 Combination offer includes....

500 Noteheads, 5 $\frac{1}{2}$ x8 $\frac{1}{2}$  ins.  
500 Envelopes, size 6 $\frac{1}{2}$   
500 Billheads, 7 ins. wide, 5 $\frac{1}{2}$  ins. deep  
500 Monthly Statements, in the 5 $\frac{1}{2}$ x8 $\frac{1}{2}$  ins.  
500 Business Cards, 2 $\frac{1}{2}$ x4 $\frac{1}{2}$  ins.  
200 Tags, 2 $\frac{1}{2}$ x4 $\frac{1}{2}$  ins.  
One Day Book; if these are not wanted  
One Ledger;            subtract \$1.00.

Cash with order. Delivered F. O. B., N. Y.

## PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article we quote.

Noteheads will be furnished in smooth writing paper with ruled lines. Linen paper, ruled or unruled, can be had instead if so ordered.

Envelopes are all commercial size and of good quality.

Billheads will be furnished as above, but size 8 $\frac{1}{2}$  ins. wide and 4 $\frac{1}{2}$  ins. deep will be substituted when so ordered.

Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 200 accounts.

Special designs, trade marks, etc., engraved to order, on rose violet, or other flower will be printed on your letterheads and billheads if you so order.

The quality of all the above work is guaranteed.

We can forward any of these combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.

**WANTED.**

When writing mention the florist's exchange.

**Market Gardening.**

A paper on "Some Phases of Market Gardening," by T. Greiner, editor of the New York edition of "Farm and Fireside," was read before the Massachusetts Society, Saturday, Feb. 20, 1897, of which the following is an abstract:

At the outset let me say that the business here has not been flourishing for some years. The free cologne of silver in the market garden has become a myth. The problem is how to continue in the business, earn enough to cover the wages of labor and make a bare living besides. This has been brought about by the general depression in the values of other soil products, aided by the constant advent of agricultural writers. I know I am not free from blame myself. See the glowing descriptions of the results of extensive culture, of the profits of growing vegetables, of the fresh vegetable movement that the East is destined to produce horticulturally rather than agriculturally products, and the sensational teachings found in some experiment station bulletins. The great slump in prices of cereals, potatoes, etc., has caused a large number of farmers, tempted by these often extravagant promises, to forsake their legitimate products and devote their energies to the raising of a result the market became flooded with these products and prices in many instances fell to a level below cost of production. We older gardeners met last winter with a

profit, and the new comers found nothing but sore disappointments. They were in the seashore, and with the wealth of the country concentrated around you, have been able to live on a small scale.

I believe we have instructed too much. What used to be trade secrets are now public property, and the masses have learned to grow plants, the production of which had been hitherto a monopoly. The urgent appeals for the production of garden crops have been too persistent and overdone. There is a great glut of gardeners. There are too many producers of trash in it already. Market gardening has now entered an era of development in which a thorough weeding out seems imperative and inevitable. Its less skilled devotees will have to drop out, and only the fittest can survive. It is time for us to warn those who have made a failure of their efforts to secure them in some other holding, intend to take up gardening without previous training and experience. If our efforts to scare them are successful, it will be a favor to them as well as to those already in the business. The market gardeners of the future, on the latter, and save the former certain disappointments, loss of time and money. If our efforts to scare them are successful, the market continues to be filled with trash, but they seldom fail to find a fair demand for their products. The market gardeners who only secure our old-fashioned goodly figures.

The restriction of over-production is largely a local question. What special crops one can produce with best prospects of profitable sales is a matter which each individual gardener must settle for himself. To point out any special crop as promising would cause a rush to produce it, and bring down the prices of the product thus recommended for general culture. Cheapening the price of products is not the thing that the gardener who use every new implement which purports to save hand labor. He tries to get more bush per acre, and the largest possible yields, and he produces a rapid succession of crops. In buying manure or other material generally recommended, we have paid excessive prices. While the finished product sells at cheaper rates, the raw material generally remains at the same. We still pay old-time rates, and in many instances even increased ones, for stumps and other material. The prices of the cities could agree to be less anxious to buy it at whatever the seller may see fit to ask, the latter would have to sell for what you might see fit to offer. In some cases we may be able to draw on home resources for making good use of dry manure, with wood-sheds and bone or other forms of mineral plant foods, using this in place of manure.

The majority of gardeners also use concentrated plant foods, and sometimes with little effect. It is better to use an organic fertilizer manufacturer, as we need their co-operation. Their expenses are great, and they must make good on their investment in order to make their old-time profits. Why should not they be satisfied with what they produce and sell for? I can see no necessity for using ready-made mixtures in the garden, but the stronger reason is that they are too expensive. The mixtures sent out by various firms as specially adapted for garden crops vary in retail value between \$1.00 and \$2.00 per well at from \$20 to \$40. In other words, they pay the full value and 50 per cent. additional. Some expenses and losses as well as seller's profit.

In the following:  
50 lb. nitrate of soda, costing about...\$11.25  
250 lb. nitrate of soda, costing about...56.25  
300 lbs. mixture of potash, ... 47.50  
2,000 lbs. ... 200.00  
we have a ton which is worth \$27.50, and equal to a fertilizer sold by the same dealer at about \$40. Professor E. B. Voorhes suggests the following formula for garden crops:  
Nitrate of soda..... 200 lbs.  
Dried blood..... 200 lbs.  
Dried kelp..... 200 lbs.  
A. C. phosphate..... 1,000 lbs.  
Muriate of potash..... 1,000 lbs.  
Total..... 2,000 lbs.

Its cost and value is not materially different from the other. Some gardeners may fear the labor of

mixing, but it can be applied without mixing. All can be sowed over the ground. It can be applied with a wheelbarrow, worked over and sowed by hand. It can save \$12 to \$16 per acre. In the case of a ton of manure, we can well see the value of the extra labor in application. My practice is to use the fertilizer alone, taking pains to distribute it.

Striking results are obtained by the use of this fertilizer on such crops as beets, spinach, cabbages and cauliflower. Used alone, as in the case of the former two, it will give a crop of 100 bush, a ton in the latter two. Sometimes it is added to stimulative value. We usually apply it at the rate of one bush per acre, and a muriate of potash in smaller quantity, both sown broadcast.

A producer of loss to us has been our carelessness in selling to irresponsible buyers and in consigning products to commission merchants. With us the only way seems to be to deal directly with consumers, and in rarer cases with retailing grocers, for each only. If we have superior vegetables, we can usually find private buyers willing to give a fair price. Our way to treat commission merchants is to give them no chance. If we ship anything to them we soon follow the goods, and keep watch of their doings, until the money is in our pockets.

Among the newer devices and methods for smoothing harrows are the "new union culture" and the system of applying fertilizer through the harrow. The latter method has made a deep impression on our garden practices. The latter seems by far the better method. The harrow has enabled me to grow finer, larger and healthier plants, especially of the hard heading variety sorts. The bench is made tight by means of a cement lining, two-inch tile pipes are laid across the bottom two or three inches from the ground, and a pipe which receives the water being turned up at an angle of forty-five degrees.

It is the hope of the writer that the hope that the return of old-time property may be close at hand, and that we may thus have a grand haul of South carolina, which we doubt as to the future of market gardening. We have full faith that all will turn out well in the end.

**Little Falls, N. Y.**

On a recent visit to this town we called at the Overlook Greenhouse, owned by D. H. Burrell. Everything looked neat and showed good care. We particularly noticed a grand batch of Scott carnations, which were immense; in fact all of their ornamentals were fine. Mr. Burrell also grows a great variety of plants, and flowers were also furnished by Miss Mary Holmes, and her assistant, Arthur Clark, who is managing the greenhouse built here by Walter Bonfield, now owned by Mr. Peter Crowe, of Utica. Miss Holmes has had some years experience with Mr. Crowe, and her management here is very creditable.

**Fitchburg, Mass.**

The house and barn belonging to Dr. Jabez Fisher, the veteran fruit grower, occupied by his foreman, were totally destroyed by fire on Monday, Feb. 22. The loss was saved, but the contents of the barn, including a cow, tools, etc., were burned. The fire was caused by burning grass around the buildings.

Look out for the lady. Florists in surrounding cities are cautioned to be on the lookout for a lady of 35 or 40 years, dressed in dark clothes, who is doing a firm-hand business, tendering checks in payment of florist pieces. The checks are in round numbers, and are worthless. The chief of police of this city would be glad of any information as to her whereabouts.

**For Sale.**

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## NEW CHRYSANTHEMUMS

**LORELEI.**

A pink incurved flower, white, shading to pink on lower petals. The form and make up of the flower is very distinct. First class Certificate of C. S. of A. In bloom from November 10th to the end of the month.

**Mrs. Theo. F. Beckert.**

A lovely light pink or blush flower, of an incurved style, medium size, with stem and foliage perfect, in good shape, from November 10th to the end of the month. First class Certificate of C. S. of A.

Both varieties are illustrated in the Supplement of the Florists' Exchange Chrysanthemum number.

I have besides the above, novelties of other raisers, as well as fifty standard varieties, including novelties of 1896.

Novelties of this Spring, 50 cts. each; \$5.00 per dozen; \$35.00 per 100.

Standard varieties, from \$3.00 to \$6.00 per 100; all from 2 1/2 inch pots, and in the best possible condition.

CHOICE STRONG ROOTS, \$6 PER 100.

NOVELTIES AND STANDARDS in great variety. Prices low and stock better than ever. Try my leader—John Elch.

W. W. WILMORE, Box 382, Denver, Colo.

**St. Paul.**

We are in the midst of the Lenten dullness, and flowers are as plentiful now as they were scarce a few weeks since. Most of the growers, however, seem to have thinned their crop properly, and the cut is not heavy. Everybody is looking forward to a good Easter trade, and planning as big a cut as possible for that occasion.

The bright days are bringing everything along in good shape, and the return of Spring is lifting the gloom that has fallen on the trade here during the Winter.

Carnations are scarce, and about the only flower in greater demand than the carnation is becoming more popular with the flower buyers here, and those who have made a specialty of growing have been successful.

The demand for carnations is still, and produced but few and inferior flowers. The California is becoming a great favorite, and with most growers more productive and yields better returns than the double ones. There has been a good deal of work in the carnation line.

In roses, for counter trade, honors are about evenly divided between Testout and Siebrach, but as the latter is not a good keeper its utility for the average commercial place is limited.

Beauty is, and always will be, a popular favorite with the "upper ten," but the experience of the past three or four months of dark weather, mild frosts and no returns for labor and fuel, should be a lesson to our growers, namely, that the beauty of a winter rose, in a decidedly money loser. As a Summer and Fall rose, it is sure and profitable variety, but from November to May, it is not.

In the carnation many of our growers still persist in growing the double ones, always in good demand, can remain longer on the plants than the rose, requires less heat, and is a good supply of the "peppercorn" (item to the florist) and in general gives better and surer returns than any other flower grown.

Double roses have sold well all Winter at wholesale for \$1.50 and \$2 per 100, while roses have only brought from \$3 to \$4.

Harriet are somewhat scarce, and we look for a good demand for them for Easter. There is a good supply of the plants, including azaleas, clematis, sprays, lilybushes, etc.

Supt. NUSSBAUMER is making elaborate plans for park planting this year, but is anxious to arrange all previous affairs.

C. A. SMITH has been awarded the contract for re-planting the park here.

The department stores seem to be the thorn in the side of our Minneapolis florists, and have demoralized all the time in consequence.

We have had the travelers with us since the retrospective of the past year, man of New York; two or three folding box men; Mr. Roberts, representing S. A. Weller, of Boston, and the "best looking" and several others whose faces were not familiar. Next week the invasion by the Dutch will begin, and the "best looking" of the "lowest price" will be daily heard until Holland's surplus is worked off.

Do we have to have

## Canna Burbank?

No! The past four years have shown there are very few things you

Have to Have

**But** for more than four years the Florists of the world have been looking for a Pure Yellow Canna.

In Burbank we have practically a pure yellow, a flower in size more than twice as large as Madame Crozy, semi-double; and a plant with magnificent musa-like foliage and a constitution equal to the old Robusta. Austria is not a substitute for Burbank. It is unsalable at 15c. each. Burbank SELLS at \$8.00 per dozen, prepaid ON cash orders.

Read the unanimous statements of the S. A. F. Canna Committee. Ask any Chicago Florist about it. Can be ordered at 14 Barclay Street, New York. C. W. Ward, of Queens, also sells it.

**Vaughan's Seed Store,** Chicago: 84 & 86 Randolph St. New York: 14 Barclay St.

### THE CAUSE OF BURSTING PANSES.

#### Bursting, Non-Blooming, Etc.

An inquirer writes me, asking why his *Scilla caroliniana* burst. He has two houses in which they are grown, but they do not bloom. There are about 200 plants in both houses, yet he only has two flowers. The plants were first maintained at a temperature of 55 degrees, then changed to 50 with no better results. They have also been kept in the open air; some of the plants stand three feet high and seem to be making more growth than before. He also gives plenty of water daily.

My correspondent has not given me quite enough description as would like to have. It is often hard, and sometimes impossible, to get at the facts of the case without either having a faithful description or first seeing the plants. However, let us see. First let us ascertain, if we can, why the flowers burst.

The caration, owing to the peculiar structure of the calyx, is more liable than any other flower within my knowledge. The cup-shaped calyx is nature's provision to retain the petals in their proper position, and to give the flower that symmetrical beauty which is sought after and admired in the caration.

From careful observation I am led to believe that the chief cause of the more liable the flower is to burst. The principal reason for this is that in nearly every variety of the flower, the short calyx go hand in hand; in other words, there are too many petals for the calyx and they burst properly, and the inevitable result is that the flower bursts.

At that point of the case can be seen in imperfect seedlings. There are many stages of this trouble, from the grotesque most strongly which seems to have scarcely an calyx at all, and which resembles a small cabbage head rather than a caration, up to the variety which has a normal calyx which gives only an occasional bursted flower. In the extreme grotesque variety, the growth is made of many cold-sized flowers, but not enough material to make one good calyx. In the variety which has a normal calyx which seldom or never bursts, we find the petals growing in and between the calyx, and increasing in length. Just why this should be I do not know any more than I know why the bursted flower bursts. It is through this illustration from nature that I must be guided in our efforts to burst the caration. The same would prevent flowers from bursting we must act on the same principle as does nature.

We have seen that an undue number of petals, or fullness of flower, will invariably cause the calyx to burst. We can all understand the philosophy of a flower bursting when it is naturally so inclined, but we understand it less like most of us, when we see other good variety take on this peculiarity. We must look a little further to find the cause of this peculiarity. The fullness of a calyx can be directly attributed to that receptacle containing more than nature intended for it, and my correspondent's nature's law has been violated when this state of affairs exists.

This bursting of the calyx of varieties not ordinarily subject to it can be brought on in a number of different ways, and while the result may differ from one case to another, they still seem to work in the same channel, and they either singly, collectively, or together, produce practically the same result.

To examine some of the most prominent of these causes and see if any of them be not my correspondent's case. A heavy soil will act very materially this tendency of caration flowers to burst, and my correspondent has just such a soil. Many varieties, however, can be grown in a heavy soil, and it is proper to give plenty of water to bursted flowers. Among these heavy soils may be included, in such a case, how many of the most beautiful and a formidable ally when another or more causes may be present. We know that carations, as well as many other flowers, grow considerably longer in heavy soil than in light soil, and in the case of the caration, the petals will not burst or burst the growth, causing the plants to come more compact and sturdy. While it is an indication that such a soil contains more substance than a plant grown in a very light soil. This extra substance extends to the stem, and the flowers will contain more substance in proportion than any other part of the plant, and the calyx the least. The

tendency of a light soil is to grow and push the plant out quickly, thus giving the flower little opportunity of becoming too full, and the result is that the result is perfect flowers, so far as the bursting is concerned.

Some who have grown *Mimulus Cook*, *Butcher's D'O* or any other variety which is inclined to burst, know full well the advantage of growing such a variety in such a soil. While many varieties get along very well in heavy soil, we always find it best to grow such a variety in a light soil, and to use a medium grade of soil; in this way we combine the advantages of both grades, and we get the best of both worlds; especially in the case of the connection with a heavy soil, which is naturally more retentive than a light one, thus when very fertile, either before sowing, or by repeated applications of liquid manure or mulches, its already natural tendency to produce abnormal flowers is greatly increased.

Some fairly non-bursting varieties, however, like *Daybreak*, which are capable of producing very heavy flowers, will burst in a heavy soil. *Daybreak* is a quick easy grower, and will, even in a light soil, take up enough material to burst. In a heavy soil, it will become abnormally large, and cause a rupture of their arrangement. In such cases the petals are twisted about by the pressure of a portion of them will emerge from the calyx considerably in advance of the others. This particular form of bursting is due to the petals overgrowing, and is confined to such varieties as are similar in growth, etc., to *Daybreak*. This, too, is a most prolific source of bursting when not properly managed.

Some varieties are permitted to overgrow, and will be very little trouble from this source. There are an abundance of varieties which are naturally a soil and allowing it to become fairly dry before watering again, and no good excuse can be given for this. The plants are overgrown, and when the plants are kept too wet, bursting rarely follows, unless induced by other causes. In the case of the latter tends to diminish the chances of bursting, by causing a rapid growth. This is the cause of many of the other diseases, principally bacteria and stem rot. It is the other extreme of allowing the plants to grow in a heavy soil, and in the same conditions as a heavy soil, or overfeeding will do.

Another cause may come very dry their growth is largely suspended; the petals, however, continue to grow more rapidly, and when the water is applied, and the plants freshened, they will burst. The plants in the flower. As we see the shrubs portions and tips of trees, and slender port forth the first leaves in spring, so it is with the caration. When growth has been suspended by withholding water for an unreasonable length of time, the plant will burst the plant to receive the benefit of the sap, the growth of which has been quickened again by the water.

Another cause is that the plant is not watered in the right way. The water is the tips of the shoots, the buds and flowers. In this way the petals undergo the same injury to a certain extent, and the effort to free themselves, must invariably cause the latter to burst.

Another cause of this in sudden changes in temperature. This cause, like all the rest, tends to retard the growth, causing the plant to behave in a manner similar to what they do when the plant becomes very dry. While a sudden drop in temperature may happen during any part of the day, it more frequently occurs at night. The mischief caused is in proportion to the fall of the temperature, and the extent to which the houses remain cold. In this case, instead of water being the means of restoring the plants to their normal condition, which has precisely the same effect as the water has in the case of the dry plants.

Another cause may be that of bursting flowers to prevent and try to explain. Those who have had any experience with stem rot, or rot, or other diseases, or other diseases, have had to notice a large number of flowers burst, when produced by plants so long as they were in the ground, or have existed, which are supposed to produce this defect. Bursting flowers from stem rot, or other diseases, which have been properly treated otherwise, differ very materially from bursted flowers produced by stem rot, or other diseases, and no abnormal development of the petals seems to have taken place, but the petals are very much distorted and partly developed. This form of bursting we must attribute to the impaired action of the or-

ganism of the plant, as a result of the disease with which it is affected. And since stem rot is incurable, it naturally follows that bursting under such circumstances is also incurable.

All the previous causes which I have mentioned in this inquiry can easily cure. My correspondent and any others who will be troubled in the same way can readily cure the plants for themselves when they know the nature of the cause.

Why do plants do not bloom in the earliest plants do not bloom to answer. His plants are too close together; they are deprived of light and air, two of the principal agents in producing a perfect blooming plant. The very tall growth has been attained through the efforts of the tops of the plants; in fact, the light and air there being none about the sides of the plants, they must naturally go upwards to find it, just as trees in a grove do when very close together. I would advise him to remove the work plants; if necessary, take out one-half of the lot; those which are left will produce more and better flowers than the ones left out.

Meantime, if the plants have been regularly fed with liquids or other forms of manure, it is likely that they can use up the surplus which the soil contains.

### MAYOR PINGREE

BESTHER BROS., Canal Dover, O.

THE CORNELL UNIVERSITY,  
College of Agriculture,  
L. H. BAILEY, Prof. of Horticulture,  
ITHACA, N. Y.

Mr. FRED BREITMEYER,  
MT. CLEMENS, MICH.

Dear Sir:—Regarding the Mayor Pique Carnation, I have traveled extensively the few years past and have viewed nearly all the new varieties introduced in their original habitat, but none have pleased me so well as M. P. as to growth, freedom of bloom; in fact nearly every essential factor that goes towards making the perfect carnation. I have been pleased to see that you have crossed it with many other kinds and for crossing it seems admirable. We have some seedlings that doubtless will give us something very fine, if vigorous growth is any criterion upon which we may pin our hopes, etc.

Any one who does not secure some plants of it will make a mistake, doubt so to those who are in the fascinating part of plant breeding. Thanking you for the plants you sent, etc.

CHAS. BETSCHER.

P. S.—As a pot-plant I know of nothing that has the stamina of Pique.

Ready Now. \$1.50 Per Doz.; \$10 Per 100; \$75 Per 1000.

MT. CLEMENS, MICH.

Dear Sir:—Regarding the Mayor Pique Carnation, I have traveled extensively the few years past and have viewed nearly all the new varieties introduced in their original habitat, but none have pleased me so well as M. P. as to growth, freedom of bloom; in fact nearly every essential factor that goes towards making the perfect carnation. I have been pleased to see that you have crossed it with many other kinds and for crossing it seems admirable. We have some seedlings that doubtless will give us something very fine, if vigorous growth is any criterion upon which we may pin our hopes, etc.

Any one who does not secure some plants of it will make a mistake, doubt so to those who are in the fascinating part of plant breeding. Thanking you for the plants you sent, etc.

CHAS. BETSCHER.

P. S.—As a pot-plant I know of nothing that has the stamina of Pique.

Ready Now. \$1.50 Per Doz.; \$10 Per 100; \$75 Per 1000.

## BEST ANSWERS TO QUESTIONS

OPEN TO ALL. FREE TO ALL.  
Answers Solicited from Those Who Know.

(84) Golden-Yelled Aethiops Japonica.—The European gardeners have not observed the variegation; we have seen it occur several times, but never found it constant.

(85) Scotch Heath, Ottawa.—The Scotch heath grows in this country except in botanical gardens. If you have references to the plants made by the name of Scotch heath, and as a selling card named "Scotch heather," but which are not natives of Scotland at all, we know of no one other stocks at present. Those who have them are growing for their own trade.

(86) Remedy Wanted for Winged Green.—Can any of your readers give directions for ridding greenhouses of what I call, for want of a better name, "winged ants"? They infest the carnations and rose beds, indeed, everything about the greenhouses, and are doing great damage. The woodwork of these houses was soaked in crude oil at the time of building, but that has not prevented these pests from coming in. The flies are common on the benches as well as large quantities of the plants.

(87) Violas.—J. The experience of the New York market this season has been that violets are being more extensively grown than ever before, and, further, that the flowers have been better in quality—that is, there has been a larger number of successful growers. On the other hand, the public expression of opinion has a proportionally increased desire for violas, and certainly has refused to pay the fancy prices obtainable.

Why growers persist in raising single violets is a question for them to answer. I do not notice any change in the part of the retail trade in this city to use single violas, excepting the very fine new sorts which are when introduced by the Princess of Wales, etc. Of course, the supply of these has been limited.

(88) Heating by Coll Boilers.—We have built coll boilers of 2-inch pipes, 6 feet long. We want to heat eight houses, 10 feet wide and 75 feet long, containing 200 feet of return and 100 feet of steam, using 2-inch flow and 1½-inch returns, two returns to one flow. Have we sufficient to heat these houses in the winter, in glass in zero weather? Location is protected from the north wind. How many returns and ends? If not sufficient for eight, how many houses would the piping mentioned heat?

VIOLATEUR.  
—Provided there is no glass in the side walls, the radiation, at proposed—1800 square feet for the eight houses—arranged as two 2-inch flows and four 1½-inch returns, should be ample. Considering economy of fuel ions, this will be the preferable way of arranging the radiation in the houses, as it will be "ridge and furrow" plan, and measure no more than 255 feet from ridge to the side walls, or 255 feet from the side wall to one 2-inch flow and four 1½-inch returns, although the temperature will drop to 40 through in very severe weather.

There must be some mistake about the size of the pipes, as the return number stated—five 1½-inch, each 6 feet long—would be utterly inadequate. While a larger number of pipes would be preferred, five 2-inch 3-pipe pipes of the above length, with a grate 24½ feet.

(89) Heating by Steam.—I have a house which contains violas, and has two flows and two returns, all 2-inch pipes; and I notice when the two flows are working the steam seems to be lost much quicker than when two or three 2-inch pipes constitute the returns. I have occasion to see that the radiation is the principle, but before doing so would like to get the steam engine, or circulator, working in the practical working of condensation. If it is necessary to have more returns than flows, please explain.

A READER.  
—I am not sure that I understand what is meant by "circulates quicker." It may be that when the additional returns are used the radiation is less, and the boiler can supply, in any case it will be only when it is fired hard that the pipes will be filled with steam. In arranging

the piping we only attempt to secure the required amount of radiation, and to have their level so adjusted that the condensed water will run back to the boiler. We may connect the supply pipes with the return pipes at the boiler, or let them fall through the house, and at the farther end connect a pipe to carry the return water to the boiler; or, better, run a single supply pipe overhead to the farther end, where it can be connected with the return pipe at the boiler, and have the coll boiler.

There are, of course, other ways of arranging the pipes, such as having the same amount of flow and return pipes put together in a single 4-inch carrier, allowing except for the flows, if I were to use steam to supply radiating surfaces, I should use one of them as a return for each coil, and place in the coils the number of pipes required to give the needed radiation, running them all down hill.

L. R. TAFT.

(90) Heating by Coll Boiler.—We wish to heat a house of 20x30 inches, 7 feet span, long, side to the south, by a coll boiler of 2-inch pipe to maintain a temperature of 60 degrees in the room on one side hill, protected on north side; has one bench and two solid beds. Side walls are made of brick, and are covered and packed with sawdust; no glass in ends; would prefer to have boiler at north end, and have the place for the boiler. How many 1½-inch returns would we need to maintain this temperature, and how would the place be placed? How many feet of pipe in coll with grate surface, 20x30 inches?

WRIGHT & HOWLER.

—For a house of the size described, the grate would be large, but 20x30 inches. This will require a fire surface in the heating coils of 84 square feet, or about 13½ linear feet of 2-inch pipe. To heat the house to 65 degrees, ten 1½-inch returns in addition to the two 2-inch flows will be required, or a total of about 20x30 inches. This will require a fire surface in the heating coils of 84 square feet, or about 13½ linear feet of 2-inch pipe. To heat the house to 65 degrees, ten 1½-inch returns in addition to the two 2-inch flows will be required, or a total of about 20x30 inches. This will require a fire surface in the heating coils of 84 square feet, or about 13½ linear feet of 2-inch pipe.

(91) Heating.—I have the following greenhouses: (1) a propagating house 8x40 feet, (2) a carnation house 16x80 feet, (3) a carnation house 16x80 feet, (4) a carnation house 28x30 feet. No. 1 is heated by 85 linear feet of 2-inch pipe; No. 2 and 3 are heated by 160 feet of 2-inch 8-inch terra cotta pipe; No. 4 is 170 feet of 2-inch pipe; and No. 4 will be heated by one 2-inch flow and twelve 1½-inch returns. The heater has a grate surface 28x36 inches. The heating surface on each side of the fire is supplied by 160 feet of 2-inch pipe, 8½ feet long, and form the sides and top of the fire box, while the others are ten feet long, and form the sides and top of the end of the smoke flues. These pipes are all 1½ inch, and are connected at the ends by a single 4-inch pipe, and run through all of the pipes on that side. The top of the arch is 28 inches above the grate. How many returns or ends do you suggest?

R. P.

The size of the grate is all right, but I should prefer to add from 35 to 80 per cent. to the amount of fire surface, and thus secure the desired temperature. We're not that the flues are used to heat one house, the fire surface should be increased from 80 to 100 per cent. to secure economy in fuel consumption. The top of the arch is at least ten inches higher from the grate than the sides, and this is a result. On each side the pipes are so connected that the water has to pass through twenty seven return bends in one circuit of the heater, which cannot but impede the circulation of the water, and shorten and straighten the circuit.

The radiating surface in house No. 1 (8x40 feet) is about two mow pipes. If a temperature of more than 50 degrees is required, the flues, perhaps, all right, depending upon the conditions. No. 3 (8x40 feet, for violas) would be best heated by one 2-inch flow and four 1½-inch pipes. In No. 4 (28x30 feet, for carnations) the 2-inch flow should not have a return pipe, but the 1½-inch pipes should be to heat the house properly it will be best to use three 2-inch flows, and either one 1½-inch or fourteen 1-inch returns.

L. R. TAFT.

(92) Carnations.—In looking over back numbers of the EXCHANGE, I fall to find anything that will throw light on several points about which I would like to know to have information. (1) In receiving carnation cuttings or plants from the distributor, should I dip the field at once without injury? (2) What is the best method of dipping carnation cuttings in Massachusetts? (3) Where lime is used in the soil, in open ground, should it be applied in any way, and what proportion is used? A. H. BROWN.

(1) If the plants are from pots or soil, have become well established and have not been injured by tearing too much soil from the roots, packed properly, and have been kept in a cool place, they will be perfectly safe to be transferred directly to the field, after first dipping the roots in water. This may also be done with cuttings from the sand, providing they are healthy and strong, and conditions are favorable for planting. When plants come a long distance and have become rather dry during transit, they should be thoroughly soaked with water and put in a cool, shaded place (not dark), to freshen up, and then be planted in the field, ready for planting at the time of arrival, the plants being kept a few days in flats without water, until they have well settled in the soil, by putting them in a cool place, either to procure plants from soil, or to purchase the cuttings at once and grow them in flats. This is the best method of planting in the field. Such plants will give better satisfaction than cuttings transferred from the soil, and will root better.

(2) This can only be answered intelligently by a resident of your own locality. We commence planting about the middle of May. This may vary a little according to the season. We are guided in this by the weather, and are sure to avoid any injurious frosts are over. The sooner the plants are planted after this time the better.

(3) Before lime is applied to the soil it must be slacked. The action of the lime will be applied to the soil, and it is distributed over the field in small pits. It will depend on your soil and the condition of the soil, and the condition of the soil. If it is rich in vegetable matter and contains 20 to 25 bushels per acre is a safe quantity, and will be beneficial for use. If it is rich in vegetable matter and contains 20 to 25 bushels per acre is a safe quantity, and will be beneficial for use. If it is rich in vegetable matter and contains 20 to 25 bushels per acre is a safe quantity, and will be beneficial for use. If it is rich in vegetable matter and contains 20 to 25 bushels per acre is a safe quantity, and will be beneficial for use.

H. WEBER.

## Hot Water Under Pressure.

Paper read by J. D. Fitch, of Henry A. Drer, Inc., before the Philadelphia Florists' Club, April 8, 1897.

It is interesting to me to speak on the subject of heating with hot water under pressure. I presume it has been the object of the club for me to show what results have been obtained in this line. Now, I wish to state right here that while I champion the hot water system of heating, I have never been known to be confined to conditions that exist at our Riverton plant, where it is impossible on account of the location to be applied to a pit sufficiently deep to return the condensed steam to the boilers by gravity, which makes necessary to use either a pump or a patent steam trap for the purpose. I therefore wish to impress that I am simply referring to the conditions under these conditions, and am not ready to condemn steam heating for all conditions and for all parts of the country, but as we have placed here in with the hot water system as not being applied by us, that I would not think of changing from it, even were it to erect a plant on a hillside where the conditions favorable conditions existed for steam heating.

I will not attempt to describe in complete detail the system we have adopted for us, as it is next to impossible to do this in a comprehensible manner without extensive explanation, and I do not think it necessary, as the plant has been seen by almost all of the members present. I would, however, like to mention a few points in the range of glass erected last summer both up-hill and down-hill piping, and in connection with the same, the use of the run of pipes with the most satisfactory results; our boilers are located centrally, and the pipes are of uniform size, and the sizes we are enabled to reach the most dis-

tant points, nearly 400 feet from the boilers, sufficiently quick to prevent any serious drop in the temperature, even in the coldest weather, and in the winter.

## Selection of Boilers.

The same as with steam heating, the most important point to begin with is to select the boiler that will give the most work for the least money. It is not a junk shop for this and buy up any old kettle that you find lying on a lot, which you may see at a bargain, and which may be pulled out of some manufacturing establishment because it was not large enough, or because it was not of the right size, or about used up, and is no more fit for the manufacture of plants or cut flowers than the boiler that you find lying on a lot. In our own work we use the horizontal tubular style of boilers, with a few alterations, and we have had a large experience without a steam dome, and the entire shell is filled with tubes right to the top. The shell is 50 inches in diameter, and contains thirty-five 4-inch tubes; they are bricked in in such a manner that the gases first pass under the shell of the boiler, returning through the lower sixteen tubes to the front and back to the smokestack through the upper sixteen tubes. The gases travel forty-eight feet before reaching the smokestack, and having six feet to heat for waste.

## Theory and Practice.

There is no doubt that in this city hot water heating is not so well adapted to the plants as steam heating, and it is well known that there are still many plants for us to learn. The fact that we were once a few years since condemned the practice, and we have found perfectly practical, and, while true, the best practice, can never be so varied, and there is a great improvement being out by men of limited experience which they are not able to do.

In 1892 we built a range of six houses covering a space 105 feet long by 156 feet wide, and having a total of 1000 feet of piping, operated by two cast iron patent boilers; the piping was arranged according to the plan of the boiler, and the boiler was low enough to allow of an up-grade to the flow pipes to the farthest point, returning pipes being arranged to the boiler, the boilers low enough to allow of an up-grade to the flow pipes to the farthest point, returning pipes being arranged to the boiler, the boilers low enough to allow of an up-grade to the flow pipes to the farthest point, returning pipes being arranged to the boiler.

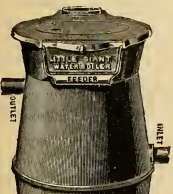

In 1886 we built a range of glass covering an area of 175 feet by 252 feet, and our engineers, Mr. J. D. Fitch, and Mr. H. Weber, in deciding on this, we took the safe course of calling into consultation several of the best engineers of the city. An important factor in the problem was the fact that water lies very close to the surface of the ground, and the boiler was at the point where these buildings were to be erected, which necessitated the construction of very expensive water lift pits, should we adopt the current construction of Roberts' boiler; to obviate this, one of our engineers, Mr. J. D. Fitch, of the De-Perre Machine Co., of Collegeville, Pa., proposed to place the boilers above ground, and to have the water lift pits at a lower elevation, then dropping down to the lowest points from which the pipes were to be drawn, and to have the reversal of current practice, and of the limited theory then extant, and as we consulted several of the best engineers of the city, we did not feel justified in taking the risk of expending the large sum of money on a plan which might fail; we, therefore, followed the old idea, at a cost of many thousands of dollars, and we have had a safe and suitable watertight pits for the boilers.

The system consisted of four forty-five foot steel return tubular boilers as described before and coils of two-inch pipe. This system worked excellently, but the water was not of uniform temperature as uniform as might be desired, but showed the sought after economy in consumption of fuel. The system consisted of four forty-five foot steel return tubular boilers as described before and coils of two-inch pipe. This system worked excellently, but the water was not of uniform temperature as uniform as might be desired, but showed the sought after economy in consumption of fuel.

## The Elevated Boiler System.

In 1896 we duplicated the houses we have built in 1886, and we have had a safe and suitable watertight pits for the boilers. The year before in setting our boilers, we again called on Mr. Roberts, who had been called on by several other planters on the elevated boiler system, which were being operated satisfactorily. The fact that we were once a few years since condemned the practice, and we have found perfectly practical, and, while true, the best practice, can never be so varied, and there is a great improvement being out by men of limited experience which they are not able to do.

volume caused by expansion by the heat, rises and a colder and heavier atom descends to take its place. We then have a certain volume of water which by the power due to difference of the specific gravities of its atoms, must be moved with sufficient rapidity to supply enough heat upon it to maintain the required temperature against the resistance due to friction.

Little Giant Heater.

to be provided and maintained. Our expense and the cost of running a 2 inch pipe about balance the advantages gained in radiation, and the disadvantages of cost are more than made up for by the same. In other words, a 2 inch pipe is better than a larger one, because of more economical cost and the saving of the system in the case of more economical cost of erection and operation. The attention required in running a hot water plant are also much less than a steam plant of the same capacity. We have a furnace of the capacity of 50-horsepower at night and remains until 6 o'clock in the morning, when it is considered that it is able in the morning to take care of after the eleven boilers amounting in all to 430 horse-power; that these boilers are in four different pits to make a full round of which by must each time travel about 400 yards; it will fully illustrate the economy of the system in the saving of labor. The man doing the firing has no other duties to perform, he being guided in his work by the thermometer and the temperatures as noted by the watchman. With a steam plant of same capacity, one man could not be able to attend to the work thoroughly.

**Comparative Cost of Coal.**

To show the relative consumption and comparative cost of fuel between the two systems of heating, I have selected the following figures for comparison with steam, consisting of 45,000 square feet of glass, against which I have placed that erected in four different pits, which consists of 52,000 square feet of glass, and which is filled up with hot water under pressure, which is raised by an elevated tank from which the pressure varies from 12 to 15 pounds. This enables us to make the water heating run at 100 degrees, or 12 degrees above the boiling point; our houses, however, are piped so as to heat more readily than we push it to be boiling point.

The average temperature maintained in heat supplied by steam is 100 degrees, whereas, so the figures given will illustrate very closely the work done by the different power house, it might be said that the houses heated with steam are all the oil stoves of houses, while the water heating is a great deal better than the gutters elevated 6 1/2 feet above the walk. Now, as many growers maintain that the power house is a regular boiler to warm a house of this size on account of the greater volume of air, this space, if filled with water, would be a great deal more than has been taken into consideration in my estimate, and would throw so much more heat into the room.

I have selected the three months, January, February and March, 1896, as a basis for my observations as three average winter months, and find as follows:

To heat the 45,000 square feet of glass with steam we use in ordinary weather one 45-horse power horizontal tubular boiler and a boiler of same capacity; these are supplemented in severe weather by another 45-horse power tubular boiler, making in all 150-horse power for the 45,000 square feet of glass; now this same amount of power is required to run a pump and an engine for supplying power to a small circular saw, and other machinery, and the cost of coal consumed to furnish this power I have been unable to separate from the total consumption, but have estimated that allowance is 10 per cent as being used for this purpose during the three months would be a fair allowance.

The consumption of steam heat during the three months 355 tons of buckwheat coal, deducting 90 tons as being the quantity of coal consumed to run the engine, totals, at \$1.70 per ton make a total of \$450.50 for heating the 45,000 square feet of glass during the three months, or \$10 per 1,000 square feet of glass surface for the three months. During the three months 52,000 square feet of glass heated with hot water by three depressed horizontal tubular boilers of 45-horse power each, and 125-horse power in all, consumed 245 tons of the same quality of fuel, which at \$1.70 per ton makes a total of \$416.50, or 125 cents per 1,000 square feet, or a saving of 20 per cent over the steam plant.

I regret not to be able to show a similar comparison between the above described steam plant and the block of houses with elevated pipes, but I feel satisfied that a further saving of at least 5 per cent, more could be shown. The water heating system, as described of the main pipe, that enables us to get a quicker circulation of the water and consequently a greater surface power with the pushing of the boilers.

**Sweet Peas.**

A second bulletin on sweet peas (127, by Messrs. A. P. Wyman and M. G. Kahn) has just been issued by the Agricultural Department of Cornell University Experiment Station, Ithaca, N. Y. The following are the varieties which are listed relative to a selection of varieties:

"It is a great advantage, of course, in the selection of varieties to know just what to get, and when a wise man purchases he gets the very best. At the University of California, the varieties of Burpee selected independently the four varieties which each considered the best. Mr. Hutchins, of the University, has Mrs. Eckford, Lady Penzance, Ramona. Mr. Burpee's choice agreed with this as to the best variety for market, but Mr. Burpee, his choice for the others Mrs. Joseph Chamberlain and Blanche Burpee. No selection by either of these men, of course, carries much weight, but when they agree upon any one or two varieties as being the best of all, their choice is not to be disputed. Besides this, the Station experiment plot has been closely watched and the best representatives in all points of each of the classes which have been named above as they have grown here, have been reported. They are (in my opinion):

- DARE PURE.—Waverly, Duke of Clarence.
- STRIPED PURE.—Gray Friar, Jantia, Senator.
- LADY BURPEE.—Countess of Radnor, Lottie Eckford.
- WHITE.—The Bride, Emily Henderson.
- SPRING OF FLOWERS.—Eckford.
- WHITE, FLOUSED WITH PINK.—Blushing Beauty, Katherine Tracy, Eliza Eckford.
- SPRING OF FLOWERS.—Ramona.
- ORANGE PINK.—Lady Penzance, Meteor.
- ROSE PINK.—Cherry Blossom, Splendor.
- ROSE PINK, SHADED WITH ORANGE.—Frisby, Princess Victoria.

It is really very simple those of this experiment plot. Blanche Burpee, I suppose, ought to have come before Emily Henderson, but it has been so long since she came up to expectation here and consequently must drop out. No doubt the best of the best is in the hands of the University. We hope that in this list is the cream of most that is good in sweet peas. It is said that the University is inferior to Blanche Burpee, but it is notched, does not spread, but it is inferior to the latter and has a tinge of green as the latter does not. Nevertheless, with us in the market, it is the best of the best. While full grown individual blossoms possess all the qualities said of it, most of the plants are inferior to the best of the best maturity, and consequently do not set the parent expected of them. Of the strip pink, Ramona and Mrs. Joseph Chamberlain ought really not to be compared, as they are of a wholly different shade of pink. Ramona may be put out only because it is perhaps the more refined. Mention of the dwarf Cupid must not be omitted. Cupid is no other thing of beauty. Mr. Hutchins, however, considers it well worth the introduction into the market, on the basis of the variety cross with the tall varieties, that one may be made to produce a fine blossom at a more convenient height."

**St. Louis.**

Bad Weather Induces Bad Business. The announcement, in my last letter, of the arrival of Spring, was premature; since last Monday we have had all sorts of weather. The weather was erratic, the weather; sunshine buoyed prices the early part of the week, but the rainfall caused prices to fluctuate in unsettled fashion. A very early report that fair, but many of them did very little business, in fact, some say the past week was the worst of the season. The 25,000 quart storage and millinery operations took place and helped to prevent congestion of the market. The market is somewhat better, but not so good as prices which enabled them to sell roses early. The roses were abundant, but not a great deal of stock of fair quality met with clients. The only lot of roses were bruised or short-stem stock. Meteor continues to come in of old color and built-in quality. The roses were of average quality. Peris was in good demand. Beauty was in demand, but the demand is heavier than the supply; short-stem stock was a glut on several days, and found ready sale. The market for Florida bought fancy, long-stem Beauty in limited quantity, compelling the wholesaler to carry. The roses are called for more as sales were made.

Carnations were scarce early in the week, and prices advanced sharply, but the supply increased by Wednesday, and prices dropped. Fancy carnations brought \$9 per 100, and in one day advanced to \$5, but heavier receipts depressed the market to \$3, at which figure the week closed. Daybreak was more plentiful, and the price reduced to \$2.50 per 100. The demand. There was no loss of good quality carnations.

Valley was in demand in California having the call. Single home-grown violets sell at 15c. to 25c. per 100. Receipts of 15c. and in one day advanced to \$5, but heavier receipts depressed the market to \$3, at which figure the week closed. Daybreak was more plentiful, and the price reduced to \$2.50 per 100. The demand. There was no loss of good quality carnations.

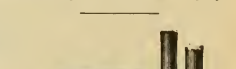

Romans were in over supply. Von Slon were scarce. Dutch hyacinths sold to \$3 to \$4 per 100. Miniature Dutch at \$2 per 100. Valley was plentiful and lower in price. Paper White was scarce. Harriet reacted under the talk of short crop and sold at from \$5 to \$8 per 100. Callas were a drug. Camillia was scarce.

Plant Trade. The plant trade continues fair, and growers express themselves well pleased so far with business. O'Neil & Sons Co. and C. Bayer have stands at the Union Market. They report trade better than last year at this season. Club Notes. The regular monthly meeting of the St. Louis Florists' Club will be held next Thursday afternoon.

Jettage. LOUIS HUDSON is very ill, suffering from asthma. His condition is critical. O'NEIL & SONS are disposing of large quantities of artificial palms of their manufacture. They are shipping them as far south as Texas. Club Notes. F. C. WEBER was granted a building permit for a handsome store and dwelling, and palm house adjoining, at Boyle and Fisher sts., and occupies it before Fall.

GEORGE WALDBART put a new refrigerator and counter into his handsome greenhouse, which improves the appearance of his salesroom and affords him better facilities for handling his stock. C. G. F. Amityville, L. I.

CHARLES LEMKER is reported to have resigned the superintendency of the Amityville Nursery and Greenhouse Company.

The two illustrations of blowers show on the right were referred to in Professor Taft's article in last week's issue, but the cuts did not arrive in time for insertion in that number. The blowers are manufactured by the American Blower Company.

Ornamental Plants.

In a recent number of the Mount Hope (N. J.), "Mirror," Mr. William T. Harding contributes an interesting article describing the best of the flowers...

From the wide-spread fame of this excellent and useful material, it was a measure, somewhat prepared for the astonishment I naturally expected to meet with...

Among so vast a number of choice plants, every one which possesses some peculiar charm, or interesting feature—and which, from obvious reasons, I am constrained to omit describing...

This celebrated island is surrounded with bare perpendicular cliffs 300 feet high, and against which the surge and breaker of the Pacific perpetually beat and surge in the wildest fury imaginable...

On some of the largest old trees, which ruthless time had not spared as accumulative years counted on its leafy form, lay the snow of a few good seeds withered by violent gale, and measured in length 310 feet, and in circumference 85 feet.

New Orleans.

Trade here, since Mardi Gras, has been at a standstill. Business during that festive day was very good, and yesterday being much larger than last year. Prices were lower, however.

Business has set in very early this year, the thermometer some days going up to 85 degrees in 10 degrees nights. Annals for the month do not flower, and on account of the warm weather. Pansies, phlox, etc., are being put and replaced with crotons, caladiums, etc.

There are some abundant. M. Cook has a band showing of teas and hybrid teas, many of which are new and give great promise. He has also sent me out that La France, Mme. C. Testout and Perle des Jardins are of no use on the coast...

PLANTS FOR

AZALEA INDICA. Specialties of American trade, from 3 to 12 inch diameter, \$15.00 to \$50.00 per 100.

KENTIA FORSTERIANA. With 4, 5 and 6 character leaves, from 13 1/2 to 5 ft. high, \$20.00 per 100 leaves.

LATANIA BORNICANA. From 13 to 20 inches, \$25.00 to 100.00 per 100.

COCOS VEDELLIANA. From 1 ft. upwards, \$30.00 and upwards per 100.

ARACARIA EXCELSA. From 1 1/2 to 2 ft. and over \$35 to \$100.00 per 100.

ARACARIA EXCELSA. From 1 1/2 to 2 ft. and over \$35 to \$100.00 per 100.

SWEET BAYS. Fronds and standards, fine shaped trees, from 2 to 100 per 1000 leaves.

ASPIDISTRA LURIDA. Green leaves, \$20.00 per 1000 leaves. Variegated, \$75.00 per 1000 leaves.

BEGONIA. Single—Separate Colors. 1 1/2 in. high, 1 in. diam., \$8 and \$10 per 100.

Double—in Separate colors. 1 1/2 in. and 1 1/4 in. diameter, \$25 and \$40 per 1000.

GLOXINIA ERECTA (Hybrid). From 12 to 14 in. diam., \$10 and \$15 per 100.

### For the Busy Man.

The New York plant market, at Canal st., has opened for the season. Boston is now in business.

Easter lily buds from Bermuda are coming by the thousands, by each steamer from the West Indies.

Send in your vote on the coupon printed on page 34 of April 30 issue, if you are interested in tariff matters.

The Rev. W. T. Hutchins, the west pea specialist and noted editor of an amateur horticultural publication.

John G. Barker, late superintendent of Forest Hill cemetery, Boston, is now in business as a landscape architect.

Jack Frost (always relentless) beat Flora Hill in the carnation contest, but Flora was looking—in other words, a better commercial grower.

Easter prospects continue bright; in all probability prices obtained will be lower than last year's.

There are indications that not so many Dutch bulbs are formerly will be grown next season. The Dutchmen are finding great difficulty in getting them.

The Philadelphia Florists' Club is to discuss, at its next meeting, club relations with the A. F. F. other clubs should be holding their own.

The subject is well worthy of a full discussion.

Several growers of lilies have expressed a desire for temporary loan to Florida, and for Japanese bulbs at that, on account of the depression which Bermuda bulbs are giving.

The violent man of Poughkeepsie, member of the Dutchess Horticultural Society, who has adopted a scale of prices for judging the specialty at the forthcoming exhibition of the Society's November. See page 387.

#### Erratum.

In advertisement of Meadow View Greenhouses, page 34, the read price of Minnie Cook carnation \$25.00 per 1,000; not \$35.00.

### The Proposed New Tariff.

(See Voting Coupon, Page 381, Issue of April 3.)

In last week's FLORISTS' EXCHANGE, page 340, will be found a list of other readers' opinions concerning the new Tariff Bill which is now in the hands of the Senate Finance Committee.

On page 361 of the same issue we printed a cutting from the New York Herald, and our readers' attention to the same, requesting all interested that they at once cast their votes and thus give their own opinion on the will of the majority may be made known.

We will delay forwarding our summary of the ballots to Washington until April 19, so as to give tardy voters the opportunity to express their views.

The voting up to date has been remarkable only for its apathy, and if no more general response to our invitation is evolved, the trade will have itself, and no other factor, to blame for future developments. Step up, gentlemen, and vote.

### Diseased Lily Bulbs.

Complains anew the prevalence of disease in the Harriell lily bulbs received from Bermuda have been more numerous this year than formerly; and it would seem that each recurring season sees this dreaded pest assume a more aggravated form. The loss, to say nothing of the disappointment, imposed upon the American florists in consequence is keenly felt by all by the large grower, but as well by the small one. Coupled with this is the fact that the market is glutted with the extra good flowers from the bulbs he grows, he is unable to sell his product at a sufficient profit to compensate for the deficit which diseased bulbs entail, on account of the competition to which he is subjected through the cheap imported bulbs. In Bermuda in flooding our markets with lily buds that are diseased at figures with which it is impossible for the home grower to cope, and which of necessity reduce his income, he must meet some competition by a real lily grower, or fall altogether to rest his flowers.

The grower who has the whole proceeding of the Bermuda grower in mind, all yet our florists, year after year, are the ones who are to be pitied, unless without any attempt at remedy, importations beyond the perennial growth, an apathy which is in fact, a real lily sufferer, exists among those who are the sufferers.

Should not the cry of protection that is reverberating through our country, extended to this particular industry? If there is one branch of the trade that needs protection from the intrusion of foreigners surely this is it. And is there any good reason why it should not receive the same protection as other branches of the trade with others that have received it, but for which protection is unnecessary, as in fact it is unnecessary, for instance, why should not be protected simply because these plants are not grown here?

It is true that our American growers arise in their might and insist on the preservation of their just rights.

But if their just bearings, were properly presented to our legislators, we doubt that a remedy would be forthcoming in the shape of a tariff, unless to make the exporting of lily flowers from our country are admitted free.

At present, the "crude vegetable substances" which are sold here, the Bermuda men cannot afford to change their methods of production, the trade is glutted with the lily crop. That, of course, is a matter for their consideration. It is no expense, and it is no trouble, to grow the bulbs; nor should the American grower be punished in the form of an unjust competition, to the detriment of his business for bad business practices among themselves.

These bulb growers are evidently the ones who are to be pitied, and by exacting the last pound of flesh they sooner or later will strike a snag that will be a real lily sufferer.

Some of our best lily growers are confined to the home supplies of Harriell can be raised at a price which is not profitable; all we lack is the men with sufficient enterprise and energy willing to start in the venture. Many florists are growing Japanese longifloras in preference to the Harriell, and the difficulty of parity in the price, and there is a general feeling prevalent that it is only a question

of time when Bermuda longiflorum bulbs will be discarded entirely.

In certifying to note that the New York Herald, in its issue of April 4, discusses the question of the importation of such bulbs from Bermuda, and the effect of the Bermuda. Public education along this line, will do much toward remedying the evil complained of.

#### At A Glance.

The steamer *Carib* which arrived from Bermuda on April 4, brought twenty-eight cases containing 1,680 Easter lilies, the first consignment of the season.

### Tasty Environments.

Our illustration (p. 385) shows approach to green-houses and dwelling of Peter Street, Grand View, N. Y. The climber seen in the picture is *Mimosa lobata*, which produces a handsome effect. Tasty environments begot content. We are glad to recognize the treatment of a florist's establishment. Such home attention by the florist greatly benefits not only himself, but the whole trade interest.

### New York.

Wholesale Market. The conditions which have prevailed for the past three weeks have not been altered, but the competition is becoming so keen that business is worse; and, further, among the many dull lilies previously experienced (excepting the first week) the present one beats the record as far as the highest price attempted. In addition to the restricted flower trade, now an enormous supply, the result of recognizing the treatment of a florist's establishment, such home attention by the florist greatly benefits not only himself, but the whole trade interest. The conditions which have prevailed for the past three weeks have not been altered, but the competition is becoming so keen that business is worse; and, further, among the many dull lilies previously experienced (excepting the first week) the present one beats the record as far as the highest price attempted. In addition to the restricted flower trade, now an enormous supply, the result of recognizing the treatment of a florist's establishment, such home attention by the florist greatly benefits not only himself, but the whole trade interest.

White carnations, unless of very high quality, are selling at \$8 per 100. Specimens which not long ago sold to order at \$15 have been placed with difficulty at \$8, the price of the highest quality Parson's Red. Rothschild sold at \$3c. each; and a limited stock of special Brunner, at 16c. Mixed roses, six to eight and ten to dozen bunches, six sprays to a bunch. Jacquets, from 1c to 5c. each. In large quantities, from 10c to 15c. each.

There will be a very heavy supply of everlastings, from \$1.50 per dozen volume of stock sold will be enormous, and at the low prices everything will likely be cleared up.

The Plant Trade. Business in this line has been brisk, and also in the market, as you have heard of. There is no discrimination—any kind of plants that is in good condition sells for the same price, and is generally speaking, in the prices from those paid in former seasons. A large increase in the price of plants has been offered; on the average they are also better in quality than usual. On these, prices are ranging from \$1.50 per dozen.

The action business received quite a boom this week; the attendance was large and the volume of sales was enormous. Very heavy sales are expected next week.

The plant market at Canal st. opened Tuesday, March 30, with two wagons in line. The number has since increased, and on Saturday there were 16 wagons, and on Thursday of the week, there were 20 wagons. The market will open on the Saturday before Easter.

Visitors. Mr. S. S. Suter, Toledo, Ohio, G. W. Wagener, Providence, R. I., W. Griffin, Lenox, Mass., were in town.

The Florida Club meeting will be held in the Elk's Hall, Monday evening, April 12. The funeral design competition for the club will occur some night.

News of the Week. HERMANN HEFFLE sailed on the First Harriack, April 8, to Rotterdam. W. A. International Exhibition.

### Philadelphia.

Market News. There has now been no improvement in business around the stores this past week; the market is overcrowded with flowers. The carnation market is the street at very low figures. The City Council Chamber was turned into a floral show on Monday, for the occasion of organizing of the new council. The display was a fine one, and signs of flowers were perhaps the best seen on such an occasion. The work was distributed all over the city, and into the suburbs, so was not felt to any extent.

Prices of flowers continue low, the best \$4.00 per 100. The market is overcrowded with flowers. The carnation market is the street at very low figures. later are now two inches higher and better in every way than the former. He also finds that admantium does well in it. The flowers are of the plants, the buds are luscious, and grows very freely. Another plant that promises well in this material is the one labeled A. It is a material one is potted in Judoo and are growing freely.

F. H. ALBURIO has made great improvements in his establishment the past few weeks. He has had some new houses and building modern ones in their places. Easter stock is looking well, with all four weeks ago, having been grown to a temperature of 45 degrees all winter, and not having any additional fire heat until four weeks ago. There have been many diseased Harellid the past season that now longform will be grown next. Many very fine plants, usually having very fine lot of Easter plants, and everything in good shape. The firm is now getting very busy preparing for its large Spring business, and has an excellent stock of plants. DAVID HURT.

Boston.

Market News. The retail cut flower business is dropping off, and there is a tendency to accustom to the wholesale trade for the next few days these symptoms of depression will be more pronounced and will increase. Good carnations have rather scarce for the past week, selling readily at 50 cents per dozen. The demand with the retailers has caused a drop of from one-half to one cent this Wednesday. Flowers are usually better, short, and good prices will doubtless be realized next week. Roses are plentiful, and will be sold at 15 cents per dozen. Violets of inferior quality are offered in abundance, at purchasers' price, and will be sold at 10 cents per dozen. Supply in this vicinity seems to be limited to a few growers.

Continuing the light retail business, the store men are all busy making arrangements for the immense trade expected next week, and the signs point to a realization of their most sanguine anticipations about the next week. The market has been thoroughly searched for choice offerings of plants and the probable supply of cut flowers throughout the season. Many things new either in potted plants or cut flowers seems to be what is most anxiously sought by the public. Standard goods are in about the usual demand.

The News. GEORGE BROTHERS, at the City Hall Flower Market, has prepared a prospectus for a large business next week, and reports as good coming in, which is a report that Easter is more than a week away.

JOHN G. BARKER has cast his lot with Frank M. Blasdell, civil engineer and landscape architect of the Tremont Building, this city. Mr. Barker's many years of faithful labor as Superintendent of the City Cemetery, ably assisted by his natural gifts and aptitude for such work, have fully qualified him to satisfactorily fulfill the duties of his new position, which he has now entered. He leaves immediately for New Castle, Penn., where he will be engaged to make a layout of a park, and is developing a park system in connection with the electric road company's property at that place.

JAMES DELRAY & SON have taken the store recently vacated by the Pope Manufacturing Company, and conveniently located in the corner of Dorchester and flower store on Boylston street, wherein they intend to make a especially attractive display of Easter plants.

N. F. MCCARTHY & Co. offer for Easter trade, a fine lot of genuine longform Judoo carnations and roses, also some good clean young plants.

DAN MCGRIE and WALTER MOTT are among the commercial perennator visiting Boston within the past week. The monthly meeting of the Boston Gardeners and Florists' Club occurred at the City Hall on Friday evening. Unfortunately, the audience was not large, because quite a treat was presented in the form of a valuable paper on equities by Carl Blomberg, the successful gardener on the Oakes Estate at North Easton. Mr. Blomberg's paper was highly appreciated, and of much importance attended to, after which the meeting adjourned till the first Tuesday of May, when will be the next meeting before the Summer vacation.

GEORGE A. SUTHERLAND has made arrangements to handle a choice line of cut flowers next week, and looks for a large trade. The flowers are being packed quietly away in boxes in Chapman field and hope to be shipped as Easter blessings, along with the rest of the springline. W. K. W.

Springfield, Mass.

Your Spring Edition is great. The articles on commercial orchids alone is worth your year's subscription to an inexperienced grower.

The Amateur Horticultural Society held its first meeting on Friday, called for to the city were in attendance, including President Copeland, Secretary Canning Schuchman, and others. Present were the secretary and several members from the Holyoke Society. Mr. Canning brought with him a specimen bloom of the new Brazilian Dutchman's pipe, that attracted much attention. One of the professors from Smith College will address the Society, in the last of this month, on the color line in plants.

Easter Prospects. Easter promises to keep the market very busy next week. Not many plants are growing in this locality, especially for the retail trade. The only plants come from Long Island and will be presented to the market.

Rev. W. T. Hutchins has become Editor of Amster Gardeners. There can be no more interest in the Hampden County Horticultural Society's coming sweet pea show than ever. A new edition of the schedule will be out the 20th inst. W. F. G.

Pittsboro.

Market Notes. Trade during the past week has not shown much of an improvement. The market here is bringing in a good stock in great abundance, and if such weather continues, it will be a difficult matter for the grower to find a market for his stock for Easter, in good condition. Bulbous material and azaleas will be hard to hold. The market for garden stock is about the usual. It is shipped here at \$3 per hundred, selling at \$1 per dozen. Brunner sell readily at 50 cents per dozen. Carnations are about the only stock that hold up in price. Our growers are doing well this season; Elliott & Ulan are very successful at present, the rest will hardly be able to compete with their stock. These flowers have not been much called for.

Around Town. T. P. LANGHANS & Co., in the Allegheny market, are preparing a prospectus for Easter, and were rather fortunate lately, capturing a good many wedding orders. Their customers are doing well, and their own support of his own invention, it is very simple in construction, and more convenient to use than most others offered so far.

A number of Holland bulbous were sold lately, but they find it very difficult to induce the growers to place orders, as they are not prepared to cater this season, and prospect for next season. BARKER had left for a trip east to look up stock and will be gone for a week or more.

PLANTMEN are occupying their usual places in the market, but stock goes very slowly.

Columbus, O.

A healthy sign of the times is reported by K. B. ROSE, president of the Columbus Co., who says collections are just tumbling in, and hopes it is the case all over. He struck a capital thing when he built a cold storage shed next the barn last Fall—practically a lean-to with windows—and in a few days the market for plants was running through the roof, a satisfactory transaction is maintained. At present the market for plants with Easter stock, looking tip-top.

UNBROKEN BROS. utilize several houses for the raising of plants, and have had some noble plants. Mr. Underwood, Sr., who is an old-time friend and admirer of Wood Bros., has a very fine specimen of this variety, which will be shipped to the White House to be planted out on the grounds. The plant is 30 feet tall and has been kept well pruned; a bud is now on every shoot. W. K. W.

Taunton, Mass.

MISS ANNE HUSBAND is reported to be very seriously ill at her home on Clinton st.

**FRUIT FARM**

TO EXCHANGE for a greenhouse property of 5,000 to 10,000 feet of class, on farm in one of the best of the States; 25 acres apples, peaches, small fruits and clover; 25 acres timber; 1 room house; soil climate, no malaria. Mrs. E. J. TYLEE, Willow Springs, Mo.

**Experience in Growing Asters.**

(Paper read by William E. Chappell, of Providence, before the Florists and Gardeners' Club, of Rhode Island, recently.)

In this paper I shall simply record a few observations that I have made during my experience in growing asters, which covers a period of twenty years or more. In that time I have grown many varieties, and until within the past three years I had been very successful.

Three years ago I discovered for the first time that many of my plants, when sown ready to develop flower buds, began to wilt as if starving for water. Upon close examination, I found that the trouble could not be due to lack of water, as I had them under perfect control, so far as results

I had more diseased plants in midsummer than in the Spring and Fall, when the weather is not so extremely hot and dry. I sown in succession, and have flowers from the first week in July till the middle of November. Last year they served me well in chrysanthemum, geranium, etc. The late comers were protected by glass.

I think a good, light, rich soil is best adapted for asters, although they will do well in most any soil with a little care, barring the disease. Keep them well hoed and watered. I have also found manuring to be a great benefit to them during the extreme hot weather, as they prefer it rather than to develop a nice, perfect flower.

The aster has a great many enemies. The best known to me are the cut worms, common grass, lead insect, aster bug, grasshopper and black aphid. I will not dwell upon the *modus operandi* of these pests, as they are too well known to those who have had any experience in growing plants. There is one, however, that has interested me very much, and it will be the only one I shall say anything about. It is the pest

no month. You can plainly see the channel through which the fluid passes down the proboscis to the body. When it walks or crawls, this little instrument shuts up under the body, as a knife blade would shut into the handle, and extends about the length of the body. When it is wanted for use, the body is raised by the legs to a sufficient height to enable the instrument to swing like a piece for action. It is perfectly rigid, having one joint, and that is the head.

Just in front of the plant, which looks great the root of the plant, one looks smooth to the naked eye, are uneven places like little hollows. In these places were eggs. In different stages from the transparent spaw to the little insects just out. It was very amusing to see the mother, as I suppose, was trying to extricate the body from the sack in which it was enclosed. It stood on its rear legs, as I call them, and using its arms, was vigorously combing the sack from the body. I also saw it in the act of feeding; it would apply the proboscis to the root, and tug away as if it was a very arduous task. It does not eat but taps the root.

**HELP WANTED.**

**YOUNG man** of home life and experience to take charge of store. Good references. Send references to Box 32, Butler, Mont.

**WANTED**

A young man, single, quick at potting and leading out, \$30.00 a month and board. Send copy of references.

P. O. No 273, Huntington, L. I., New York.

**GREENHOUSES and LAND.**

**FOR SALE** Cheap. 1800 feet of ground, N. Y. City, two story dwelling, 6 rooms, all well furnished. Good location. Price \$10,000.00. Paying business established, 60 acres of choice land, 1000 ft. frontage, 300 ft. deep, in country. Call for selling. For further particulars address, B. J., Florists' Exchange.

**FLORISTS and GARDENERS.**

Wanted, for private and commercial places, superintendents, journeymen, assistants and apprentices. Joseph B. Searles & Co., Storekeepers of Florists and Gardeners, 54-52 No. Market St., Boston, Mass.

G. PILLSBURY, Nashua, N. H.

**Greenhouses to Rent.**

Five houses containing 2300 square feet, well built and in thorough repair. Two boilers, rent low. Plenty of water and good location. Government term, month house on the place. 7 rooms. 8 miles from Boston on B. & A. R.R. Address H. R. STEVENS, Dover, Mass.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

**Tasty Environments.**

commonly called the lead louse, deriving its name from the color of the body, which is the color of oxidized lead; that is not the color of the pest, however, when seen under a powerful microscope, as I will show you later on.

This little pest awarms, breeds and feeds upon the small roots, thus taking from the plants the power of securing the proper nutriment required to develop the flower and a healthy foliage. The result is to be seen on the crown, terminal and lateral buds, together with the foliage, which turns a sickly yellow; and if the buds mature, they are worthless. This little pest seems more abundant in poor or worn out soil, than in good rich loam, though I have seen it in both.

I will now endeavor to give you an idea how this pest looks under a very powerful microscope, enlarging it many hundred times. It has six legs, all of which are located well to the front of the body. They act as props or braces to keep the body from toppling over while the insect is feeding or otherwise engaged. Each leg has four joints, with a hook like appendage at the end to aid it in holding on to the root while feeding, as well as to assist in locomotion. The body and head seem to be all in one, as there is no joint between the two. It has two big black eyes just back of the forelegs or arms, as it uses them as such. The proboscis is attached to the head, very much like an elephant's trunk; with it it feeds itself. It has a sharp, black point, which it runs into the root and saps the life of the plant. It has

The egg is perfectly round and transparent. At another stage it is pure white, then of a mouse color, and at last a light yellow. The color that looks like oxidized lead is the powder-like substance upon the body. It is a curiously made-up insect, and for its size is capable of doing great injury to a plant.

I also made cross and elongated sections of diseased and healthy plants. There was no material difference in the looks of the two sections. The disease seemed to be between the outer skin or bark and the inner part. In the healthy section the pulp appeared bright and crystallized like gum camphor, while those of the diseased seemed to be of an entirely different nature. The granulations were very imperfect, considerably enlarged, and looked very much like fermenting scum on a stagnant pool, and were of a putrid nature.

After much study and examination of the diseased parts as compared with the healthy, I arrived at a conclusion. It is this: I believe the aster disease is a fungus growing between the outer skin or bark and the stalk; and as concretion takes place, the pores or channels through which the sap flows are clogged, and the plant dies for want of food just the same as a human being would if his throat were stopped and he could not feed the stomach. I have dissected the aster disease and am perfectly satisfied with the result. The cause and remedy I shall leave to wiser heads than mine.

Wegrow and Karpis stock the most complete assortment of hardy lawn stock. Catalogue free.

Chicago.

State of Trade. Another week of fine spring, sunshy weather, just warm enough to need a little fire, particularly at night, has...

Easter Prices. Although no definite figures are yet agreed upon, the probabilities are that this year's prices will be lower, if anything...

Welsher's Spring Exhibition. E. WEINBERG gave a private exhibition of Spring plants and flowers on Tuesday...

Cincinnati, O.

The Market. All good stock sold the past week, and at fair prices. The stores were quite busy with floral and other work.

W. F. Law, of Shelbyville, Ind., was in the city Saturday, buying stock for a large new order. Harry Bayard, with Pitcher & Manda, and Henry Weber, of Oakland, Md., were also callers.

Early Planting of Carnations. C. C. MURPHY commenced planting his carnations in the field on March 30. This is the earliest that I have heard of.

THOMAS WINDRAM, of Newport, Ky., is the first in the market with sweet peas—Blanche Ferry. W. MURPHY had some very choice spikes of gladioli. His Bridesmaid carnations are now coming into crop, and are magnificent.

Saturday evening, the regular meeting of the Cincinnati Florists' Society was held. It was presided that owing to the magnificent show of flowers made every week in the Jabez-Elliott flower shop...

Shelbyville, says Little's Anti-pest kills the rust for him. A week or so ago, a sneak thief, during the daytime, entered the sleeping apartments of Thomas Jackson, of Milldale, Ky., and stole all of Tom's clothes.

For an exhibition staged in the club rooms Saturday was a good one, particularly the displays of Huntman & Co. and Henry W. Ober, at Oakland, Md. By Wintersteater staged Emma Woher and Buttercup carnations. William Murphy carried off first prize in Bridesmaid and Portia carnations and also exhibited a sport of Delta Fox resembling the variety E. A. Wood, being slightly more delicate; the flower is very fragrant, of good color and fine calyx.

Holyoke, Mass.

E. H. HOWLAND reports good business, and has a fine stock for Spring trade.

HARRY SINCLAIR, who is very successful in the seedling chrysanthemums, has been appointed Judge at the forthcoming Spring show of the Northampton Horticultural Society.

A change will be made in the ownership of the Rosemont Greenhouses, but JOSEPH BEACH, who has run them so successfully since the plants were erected, will retain the management.

Sanbury, Pa.

C. E. ROEBSTER has greatly improved his property by the addition of a handsome office. New boilers have been put in, and when coal costs but 60 cents per ton there should be a little in the business.

TOBACCO STEMS

Large Bales (\$80 lbs.)... STRONG AND FRESH Tobacco Seed, 2c. per lb. Kaffin, the best material for tying, does not injure the leaves; it rots earliest and is cheapest; first quality long fibre a lb. at 11c.

**Brighton, Mass.**

**Dorchester, Mass.**  
 In a November issue of the EXCHANGE  
 the writer told of the method pursued by  
 LAWRENCE CUTTER with the Crimson  
 Rambler rose. At that time the plants  
 were being rested; water, they were  
 brought right along, till now we see a  
 grand lot in 12-inch pots, trained out  
 or egg-shape, with a profusion of buds  
 making, as my Boston friend expressed it,  
 "superlatively fine" plants; but the price  
 is \$10 apiece. They are well worth it, but  
 I am afraid 'tis too high for many to invest  
 in such a luxury, still Easter will no doubt  
 see every plant disposed of. Several hon-  
 ors of hybrid are in splendid condition.  
 Beauty, Major and tete also look well.  
 Testout will be discarded for Kaiserin  
 Augusta. Carnations will not be grown  
 any more; the houses are well adapted for  
 roses, and Mr. Cutter can make more  
 money by following this course.  
 WARREN EWING rejoices in the prospect  
 of a grand supply of bilbons stock for  
 Easter. W. M.

**Brookline, Mass.**  
 F. E. PALMER has received many in-  
 quiries regarding his method of growing  
 the grafted rose, and will probably give  
 the readers of the EXCHANGE, at no distant  
 date, the benefit of his experience. Mean-  
 time we watch and wait, as he did at that  
 time.

Mass Vase has sold part of the land ad-  
 joining her houses. It is far too valuable  
 to retain for the purpose of building green-  
 houses thereon.  
 J. GREEN has a patronage which enen-  
 him to raise thousands of narcissi, both  
 double and single, in pans—a popular  
 method. One of the most pleasing ranges  
 in white and green is valley or La Candeur  
 tulips, with Adiantum cuneatum, in a  
 bright, clean pan. How few think of  
 sending out a plant in a clean pot. W. M.

**Cambridge, Mass.**  
 Judging by the immense stock being  
 grown, evidently FRED. C. BECKER com-  
 templates a larger demand than usual for  
 the Boston fern; the sales of which, both  
 locally and outside, have been very large  
 this season, all stable stock being easily  
 disposed of.

W. E. DOYLE has a beautiful lot of lilies  
 and hydrangeas in perfect form for Easter.  
 Many of the latter are in 9 and 10-inch  
 pots, I counted, respectively, 12 and 20  
 heads—fine trusses of perfect color. Du-  
 Murphy wants to know if this can be had.  
 The old variety of Spirea japonica is grown  
 by the houseful; it is also in fine condi-  
 tion.

WM. EDGAR has several houses of the  
 azaleas at Waverly. W. M.  
**New Haven, Conn.**  
 JOHN CHAMPION is completing three-  
 houses, each 115x6 feet, for carnations, the  
 demand for which is satisfactory. A bus-  
 iness wagon has lately been added to keep  
 ahead of the procession.

SMITH T. BRADLEY has been very success-  
 ful, both in producing some grand roses and  
 obtaining good prices for same this season.  
 Carnations are very promising.  
 S. H. MOORE is exceedingly busy with  
 decorations for openings. An annual order  
 for 2,500 roses for free distribution by a  
 prominent store, was a good lift.  
 ROBERT VEITCH & SON report a good seed  
 business, their plant department is increas-  
 ing, many old and new varieties are  
 grown. Here one sees the unique and very  
 rare occurrence of three generations taking  
 an active interest in one business at one  
 time. W. M.

**Hartford, Conn.**  
 JOHN COOMBS intends adding one  
 Weathered house for roses, 100x18 ft. He  
 has a splendid stock for Easter. Carna-  
 tions are scarce just now, but the scarcity  
 is more than compensated by heavy crop-  
 s of roses and violets. W. M.

## Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Write for Circulars or Estimates.

Lockland Lumber Co.

LOCKLAND, OHIO.

## Modern Greenhouse Heating.

One of our boilers, 10,380 feet of two inch pipe, and sixty tons of coal will heat 20,000 feet of glass (four 20x200 feet double rable houses) to 65 degrees in coldest winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firelight" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

## Parasitic Plant Diseases.

In a lecture delivered before the Massachusetts Horticultural Society, on March 27, by Dr. Edwin F. Smith, of the Division of Vegetable Physiology and Pathology, U. S. Department of Agriculture, he said that most diseases which prevail extensively and are known as "catching" diseases are due to parasites. These plant parasites are plants or animals which have in some way lodged on or gained an entrance into the body of a plant, and there multiply to its detriment. The manner in which these parasites succeeded in getting from one plant to another was by means of insects, such, for instance, as bees, which had been known to carry the virus blight from an infected bush to a healthy one.

Bacterial wilt of cucumbers, melons, pumpkins and squashes was due to a sticky virus micro-organism which filled the water ducts of the plants, and caused a sudden collapse of the plant. It was readily communicated by the striped cucumber beetle, which feeds on the plants. The insects carry the virulent sticky germs on their backs, and deposit them in the next plant bitten. Bacterial brown rot of the potato, tomato and egg plant: The Department of Agriculture has recently published a bulletin on this subject. Infected on the diseased plants that are swarming with the parasite, and go to other plants which are not and thus quickly become diseased. The disease may be known by the sudden wilt of the foliage, the stems becoming brown internally and shriveling.

Spread by snails and slugs: The damage done to these as carriers of disease is greater than the injuries they induce by eating the plants. The fact that snails and slugs blacken the vines, causes the leaves to fall off, and prevents the formation of roots in the plants. In the common greenhouse slug disseminated the micro-organism to which this was due, and increased the damage done internally.

Barnyard manure always contains a great variety of organisms, most of which are harmless to plants. But sometimes spores of parasites get in through fodder or bedding, and often through moldy or rotten vegetable refuse on the plants. The watermelon wilt disease lives over winter in the dead stems and grows readily in manure. So this should never be used on plants. It is also to be kept from other plants and other plants have become diseased in this way, and it should be remembered that manure should be used to be kept free from the rubbish of plants that have been diseased.

Certain parasitic diseases live and multiply in the soil as saprophytes, ready when opportunity offers to become parasites. These soil fungi get from field to field, sometimes by irrigation or by floods; sometimes by the plough or tools. Onion smut, potato scab, etc., are examples of these soil parasites. He mentioned particularly the case of Fusarium wilt disease of the United States. He knew of eight cultivated plants subject to them. In all the trouble is due to a parasitic clogging of the water ducts. The plants found so affected were cotton, cow pea, watermelon, cabbage, potato, tomato, sweet potato, and pineapple. The cause of the trouble is too frequent growing of the same crop, and the best remedy is a wide rotation.

Disease is also spread by way of seeds, buds, tubers, cuttings, and nursery stock. In oats and wheat the smut spores adhere to the kernels, germinate at the same time and boys into the young seedlings. Many diseases are distributed in bulbs, but the most wholesale manner of distribution is through the medium of irresponsible nurserymen. In this way all sorts of fungi and insect pests are spread from one part of the country to the other. The San Joaquin scale has been distributed in this way.

## Speculation.

A suggestion touching the now popular village improvement might well be studied by those who are interested in pressed by hard times. It may be considered very practical, since it comes from a tourist who has put it into practice at least in part. It looks to the buying up of the waste lands, so often an eyesore about railroads, and improving them. A public square or street and some fine building lots may be bought from the owner of a block of land. These might be put in proper shape, and a block of hardy, herbaceous plants and shrubs from every part of the country to the other. This San Joaquin scale has been distributed in this way.

**Market News.**

Every day trade is what might be called good for the Lenten season, fair, pleasant weather for shoppers, with store openings calling for decorations and flowers to give away, lending influence in this direction.

The usual anticipation now exists regarding the flattering prospects of Easter trade.

**Death of an Old Time Florist.**  
 ALEXANDER ALDRICH, of South Park Ave., this city, an old and respected market gardener and florist, died, March 31; the death of his wife occurred but four days previous. He leaves two sons and one daughter.

A hurried visit to the Botanic Gardens found Prof. Cowell in the midst of active spring operations. A goodly sized house has been erected for the accommodation of a hilly tank bordered by raised walks, of ample width, and will be an unusual feature to the general public.

SEBASTIAN PICKELBACH has returned from a South American trip. His description of life and features met with in that region, is of an instructive and entertaining nature.

W. T. BELL, of Franklin, Pa., visited friends here on Tuesday. V.I.D.

**Syracuse, N. Y.**

**A Floral Fountain.**  
 The funeral of Henry J. Mowry, president of the Water Board, created quite a little trade. The floral pieces were numerous and costly, the most prominent being a fountain from the employees of the Water Department. The lower basin was fringed with lilies, with a profusion of smilax and fern. The groundwork of the column was of lilies and white tulips, studded with Bridewind roses. The upper basin was composed of Hoste and Bride roses, with sprays of valley to represent the jets of water. Standing a little over 6 feet in height, it was a beautiful piece of work, and very creditable to the designer, W. Wesson, of P. R. Quinlan & Co. C. BAISON.

**White Plains, N. Y.**

W. G. HARPER, a florist of this place, and Samuel Smith, one of his employees, were killed at Kenosha by being struck by the Pittsfield express, while crossing the tracks of the Harlem Railroad.

**Chester, Pa.**

THOMAS F. DELAHUNT is receiving the congratulations of friends on the arrival of a bright-eyed baby daughter, which was introduced to him on Saturday, April 3.

**Cumberland, Md.**

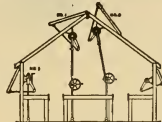

James Blackwell, who has been chief florist and gardener at the West Virginia Asylum for the Insane at Weston, suddenly became insane and had to be placed in the violent ward.

**Akron, O.**

GEORGE F. ANSON dropped dead while working in his greenhouse March 30. Heart disease is said to have been the cause of death. He was 50 years old, and unmarried.

### PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article wanted.  
 Notebooks will be furnished in smooth writing paper with ruled lines. Linen paper, or, if so ordered, can be had instead if so ordered.  
 Envelopes are full commercial size and of good quality.

Billheads will be furnished as above, but size 8 1/2 x wide and 4 1/2 in. deep. Billheads will be printed in red and black. Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 100 accounts.  
 Special designs, trade marks, etc., engraved to order. A rose, violet, or other flower will be printed on your letterheads and envelopes, if you so order.  
 The quality of all the above work is guaranteed.

We can furnish this combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.

REPORT

Points and information from the Committee, and all interested in this column solicited. Address Editor S. B. TRADE, care of Florists' Exchange, P. O. Box 107, New York.

Free Seed Distribution.

Editor Florists' Exchange: The appropriation for the free distribution of seeds has not yet been passed by the Senate, as some letters which we have received from several Florists to the Senate Committee and the Secretary of Agriculture look into the matter of the bill.

We have not been able to obtain a hearing before the Committee, excepting by correspondence, but this correspondence has had a good effect. We understand the new Secretary of Agriculture now desires a change in the bill, and that more money be allowed for putting up the seeds in Washington, which we suppose will leave a less amount for the purchase of seeds. This is a great point gained, as it will increase the number of seeds to which Senator and Representative; yet it seems to be dawdling upon the minds of Senators that there must be a large quantity of the common varieties of seeds distributed by the present Secretary of Agriculture, however we may desire to reform the Department and send out new and rare varieties. We do not know whether we will be able to get this appropriation abolished in this present Congress—the bill is likely to be amended in a Committee of the House, before which we cannot appear, so unless we can get some Senator or Representative to save the amount, we will not see it when it comes before the House or Senate again, we shall not be able to accomplish our object at the present season.

I feel that the Committee has accomplished vastly more for the seed trade in getting the appropriation increased than we could have expected, and probably more rare varieties substituted for common varieties, than we could have expected. I am glad to see you able to explain here that there has been some impression that we, as seedsmen, were making a large amount of money lobbying in Washington. Probably our first meeting in Washington, and likewise our last letter, were intended to present some reasons for arriving at such a conclusion. To put the matter right, I make this statement, to wit: That we have accomplished (which is considerable) has been done at a less cost than \$400. This is not a very large amount for Washington work done in various directions which is unnecessary to explain here.

As our first meeting in Washington some large amounts of money were promised as subscriptions, to be paid when required, and part of these amounts have been paid in. A letter received this morning says: "I do not think it exactly right for some of us to pay the expenses of the meeting to the benefit of it. We think it is wise to proceed with the work to abolish this free distribution of seeds. We are going to enter into a fight half-hearted and getticed locked on the first round?" Another says: "In my opinion, the seedsmen ought to keep at this good work as long as the money will last, and if the money has gone, we could all get up in arms to push the good work along." Another says: "My idea would be to have you raise the money and we should continue in a systematic manner to agitate this question." Another: "It seems to me that you should have a fund of \$5,000 for a year's campaign. They could well afford this amount, but it may be a little more than they are willing to do." All should pay their share, and then it will be a very small amount for us.

I coincide with the above, and think all seedsmen should subscribe. Of course, the total amount of the proposed fund paid in at once, but a remittance on account should be sent from the seed trade in Washington, for the purpose that one will then be very light. I believe, if we continue, we shall accomplish our object, and we will be able to keep the bill and then some one in an official position would watch the progress of events and act as opportunity arises, and we should endeavor to kill the free distribution of common varieties of seeds by the Government.

T. W. Wood, Chairman.

Gloverville, N. Y.—L. Phelps & Son have opened a seed and farmer's general supply store at 257 North Main st.

European notes.

Review of Crop Conditions.

A fresh spell of winter visited us during the past week, and while the frost has not been very severe, it is hardly likely to benefit the young and tender growth already put forth. Continuing the review of the present condition of these crops, commenced in last week's Notes, it is safe to report that carrot, parsnip and parsley are in a fairly healthy and promising state. The carrots under cultivation are very much less than last year, but with the prospect of a good yield this is hardly due to cause any serious concern. The same remarks apply to leeks and onions; the bulbs of the latter have kept well, and will be ready for winter and with a fair season should give very good results.

Price Dependent on Tariff.

A very warm and favorable weather is reported from the South of Europe, the varieties grown in that region are likely to be very abundant, but the question of price will, to a very great extent, depend upon the demand from your side. As the bill doubtless will be regulated by the tariff, growers are naturally very anxious to get the bill passed, in which it will be fixed. In any case, it is too late to make an alteration now, for no useful crop could be raised as a substitute for those it might be deemed wise to destroy. A report on our other biennial plants may be given in the present.

Outlook of Bulb Crop.

The abundant moisture of the past winter and the warm weather now prevailing are likely to be very beneficial, but having a very beneficial effect upon the Roman hyacinth and other bulbs are not so good in that regard. As regards the former, there is every prospect of an abundant supply of first and full size bulbs, and the latter, which are also doing very well, and growers should not have any difficulty in securing orders for the bulbs of the stipulated sizes. Should present promises be fulfilled it will do something toward relieving the criticism caused by the unsatisfactory deliveries of last season. The explanations (?) offered by some of these gentlemen only make their conduct the more reprehensible. While the bulbs in the South are flourishing in a manner similar to those in England under exceptional conditions quite the reverse. The weather conditions there, but this is likely to do anything worse than retard the blooming season. The general appearance of the bulbs as a whole is very healthy and sound.

Display of Late Border Tulips at Hamburg.

Those seedsmen who are interested in the revival of the Late Border Tulips should attend to the forthcoming Horticultural Exhibition at Hamburg, about the 14th week in May, as Polman Meyer of Hattum, has arranged an exhibit of 12,000 bulbs, chosen from the finest varieties in his extensive collection, on or about the date named. As the general public is getting tired of carpet bedding, and the late border Tulips are becoming more popular every year.

EUROPEAN SEEDS.

Lawn Sprinklers.

The "Twin Comet" and "Little Giant" lawn sprinklers, manufactured and advertised by the Stebbins Manufacturing Company, Springfield, Mass., have merits particularly their own, which impress those who have used them. The "Twin Comet" is made to the ideal as it is possible to bring machines of this description. The globe, or body, of the "Twin Comet" Lawn Sprinkler is made in two parts, and by means of the swiftly revolving arms and intermediate revolving arms, which revolve in a downwardly carrying the hose nozzle, from which a full stream of water is thrown, the water, thereby covering a much larger space than any other stationary sprinkler. The revolving arms are 20 or 24 inches long, and are adjustable, and can be set so as to sprinkle any desired space, or the nozzle can be raised or lowered, and the hose is attached in place of the nozzle tip, discharging instead of a solid straight stream a very fine mist at the center of the revolving arms.

The "Little Giant" traveling lawn sprinkler is a very simple, reliable and wonderful machine. Under an ordinary water pressure of 30 pounds or upwards, it

APRIL 22d... ..APRIL 22d.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

will drag 100 feet of garden hose and propel itself slowly and continuously in either a straight line or a circle of any desired diameter, while its speed may be varied at will from 15 to 500 feet per hour. By means of a figured dial plate it may be set to travel any desired distance. A moment suffices to change its speed from the highest to the lowest, and it may be gauged to distribute a spray effectively over a swath varying in width from 5 to 50 feet, while by simply throwing it out of gear it is instantly converted into a stationary sprinkler of exceptional efficiency. The propelling force is supplied by back pressure of the water in the arms causing them to revolve with force and rapidity, while at the same time they throw out a fine spray or mist.

Williamsport, Pa. EYENDEB EGGS, have good success with carnation Bride of Ericsson, and find it one of the most profitable carnations extant. They have a grand lot of L. Hartell in pots—just right for Easter. W. M.

Eric, Pa. H. NIEMEYER, of this town, reports business satisfactorily good this season. The front of his store on State street has been remodelled into one large show window style, and is a decided improvement. He has a fine stock of Easter plants. Among seedling carnations he has a red of fine character, and a striped pink, after the type of J. J. Harrison, but softer in color.

MRS. W. NIEMEYER contemplates re-locating the branch retail store on State street at an early date.

JOHN THOMAS shows his usual well skilled growth of all-around stock, including a fine strain of clematis.

THE SCHLURAFF FLORAL COMPANY have retired from the seed business, and now give their attention entirely to the cut flowers and plant trade. A new, well-arranged and neatly fitted office is a recent and successful acquisition.

TITUS BERT has a good showing of bulbs on stock.

H. TONG has a new carnation after the type of Helen Keller, which attracts considerable attention locally. ROMER.

THE EXPERIMENT STATIONS.

COMMERCIAL FERTILIZERS, ANALYSES OF—By Geo. V. Noyes, Bulletin No. 5, Exp. Station, Geneva, N. Y. THE RASHERY-CANE MAUGOT, By Professor W. N. Shingler, Bulletin No. 6, Cornell, Ithaca, N. Y. ATLANTA, GA.—Wachendorf Brothers have succeeded to the business of the father, the late E. Wachendorf. WOODSTOCK, N. Y.—Robert Skilonsky will occupy a store corner Jackson ave. and Third st. for his florist business. MORRISTOWN, N. J.—H. C. Holmes, formerly superintendent for A. McCurdy, Esq., of Morris Plains, has taken the old-established greenhouses on Morrisist, corner of Pine. MORRIS, ILL.—The Morris Floral Company has been incorporated, with a capital stock of \$15,000, to deal in flowers and plants. Incorporators, S. M. Underwood, Alfred M. Milington, Frank Martin, H. E. Mitteny, E. C. Huns, John Mackay.

Pittston, Pa. J. B. CARPENTER expects to open a florists' store here on Exeter st. Scranton, Pa. THE GREENHOUSES OF WILLIAM MOTT were burned on March 30. The fire originated in a defective fire in a neighbor's building.

Robert McMillan showed a spike of a seedling mignonette, pronounced by experts to be an improved form of the old *A. mellorata* and similar to some of the best strains now coming into the New York market.

### American Institute Show and Meeting.

The regular monthly meeting of the Farmers' Club of the American Institute was held on Tuesday, April 18, at their rooms, 113 West Thirty-eighth st., New York. The main topic of discussion was the raising of fruits and vegetables under glass. In the place of Dr. F. M. Henshaw, who has been for the past two weeks confined to his bed with the grip, T. L. Harris presided. The speakers were C. L. Allen, J. W. Withers, W. Anderson, A. Herrington, T. G. White and S. Henshaw. The exhibition itself was quite a success, and of a very unique character. One of the principal exhibits was twenty-four pots of strawberries from A. Herrington. These were superb. Many of the fruits weighed 2½ ounces each, and one even filled a quart. There was an average of five fruits to a pot. The varieties were from Harris and Sharpless. Messrs. Arch-

er and Meteor, from Erie, Pa., claim that by this process they can produce an exact reproduction of the original model, weight, size, color, shape, etc. For comparative purposes, these models should prove invaluable. They remain unaffected by temperature, stand handling and cleaning, and are said not to fade.

### Toronto.

#### Society News.

The lecture delivered by Prof. Jeffrey before the Toronto Horticultural Society, on Saturday, on the subject of "How Plants Suck," was very interesting to most of the members; but was too scientific for many. The lecturer was illustrated by light light views of highly magnified sections of different parts of roots and leaves, and the whole process of plant feeding was carefully described. The hall was nearly filled with members and friends, the platform was nicely decorated with palms and other foliage plants. There is no doubt but the lecture will do the Society much good.

**Easter Outlook.**  
There is a fine stock of cut flowers and plants in sight for the Easter trade. Lilies are at present very plentiful, the prices asked at wholesale is from 10c down to 5c per bloom, and there is nearly as much difference between the stock as there is in the prices. Roses appear to be very abundant and good. Prices quoted at wholesale are for Bride, Bridesmaid,

tions, bulbous stock and violets is apparent.

Harris were never so fine as they are this season; the late Easter has enabled the grower to bring them in generally, good strong plants and firm buds being the result.

A. S. Swanson has rented a store on Seventh st. for his Easter display and is looking it up rapidly with a choice lot of blooming plants, down in his Merrick Park Greenhouse.

L. L. May & Co have enlarged their already spacious store by removing a partition and will have 4,000 square feet of floor surface in which to make their display. The firm has a fine wholesale trade and reports country shipping orders as coming in very freely.

Rose prices range about as follows: *Roses*, \$1.50 to \$2 per dozen; carnations, 50c to 75c; *astrodia*, valley, Romans, tulips, etc. 75c; *violets*, 30c per bunch; *Harris*, \$3 per dozen; *emilax*, 30c to 35c per string. The latter is very scarce here at present.

#### Jottings.

H. Van Zanten, of Holland, was a recent caller and reported a fair outlook for the bulb business. Importations will so doubt be greatly curtailed another season, if the proposed tariff goes into effect.

Mrs. M. Stang and W. Seelins, of Duluth, were recent callers. They report business in the Zenth City as fair, though department store sales have injured it somewhat.

### Baltimore.

#### Jottings.

Charles Wagner, manager for the Green Spring Gardens, is an enthusiast on the subject of seedlings. His carnation seedlings contain some gems; among them, but the being their first year, one as yet cannot tell the full value of them. California violets do as well with him. Mignonette also seems to be a favorite at this place. An opportunity is afforded here to observe the difference between a greenhouse, built years ago with small and bad glass, which burrs up everything in sight, and a modern structure in which large, clear glass has been used. It is wonderful how good some of the older florists could really grow as home stock as they did in their time.

### BOOKS RECEIVED.

The Care of Plants in the Home—A neat, well-illustrated brochure, issued by the Hessay Co., 365 Fifth ave., New York, containing an enumeration of those plants best adapted for home culture, with very succulent and useful information on their treatment.

Federal Design made by Jos. Supler, N. Y. Winner of Plum Cup.

### New York Florists' Club.

The meeting of the Club on Monday evening last was fairly well attended, taking into consideration the fact that it was Easter week, when everyone is pushed for time. President Henshaw occupied the chair.

There were eight contestants for the Plum Cup in the floral federal design competition. The judges, after careful examination, awarded the cup to Joseph Supler, with George Stump, for a piece made up of three rows of cypress leaves, with a bunch of Meteor roses and a cluster of mignonette, tied with a broad white satin ribbon. Certificates of merit were awarded to Frank Schlosbamer and W. S. Lee, also with Mr. Stump; to the former for a crescent wreath of dark colored pansies set on a standard, with a band of *Di-centra cucullaria* (Dutchman's breeches), having streamers of purple ribbon, with a white carnation, Niphetos, and valley resting on two cypress leaves. The same exhibitor also had a wreath of *Adiantum Farleyense*, interspersed with clusters of Carnot roses on a base of violet, the lettering N. Y. F. C. thereon being in white immortelles.

Mr. Lee's design was a wreath made up of white carnations, valley and Niphetos, on a bed of smilax, with a spray of *Teucria orbiculata* on top. The base was of cypress leaves, springing from a spray of weeping willows. A broad crimson ribbon bore the lettering N. Y. F. C. James I. Donlan exhibited a wreath of white carnations, Niphetos, and valley resting on two cypress leaves.

A. Dummett had a standing crescent wreath encircling an anchor, the letters of valley and Bride roses, on a foundation of ivy leaves; on the crescent, which was made up of Bridesmaid and clusters of mignonette, were the initials of the club, worked on Daybreak carnations in purple hydrants. The base was of ivy leaves with fronds of *Asparagus Sprengeri* and *Neprolepis exaltata*, springing therefrom. The same exhibitor had a smaller wreath, the anchor being made of *Azalea indica* alba, the crescent of roses, valley and white carnations, the base of *Harrisii lilies*, *spiral*, *Asparagus Sprengeri* and *Teucria orbiculata*.

A. Le Mont had a wreath of panels, surrounded by callas, *apricax*, *Harrisii*, white roses and *Azalea indica* alba.

W. A. Mauda had an arrangement of Cherokee rose on a crossed cypress leaf, a cluster of *Maudsii* Primrose at the base, with a streamer of broad white silk ribbon.

The following gentlemen were appointed a committee of awards: Messrs. Eugene Dalledonne, Chas. H. Allen, Alex. S. Harris, S. C. Mack, J. W. Withers, and John G. Esler.

Mr. Esler was unable to be present at the meeting, but hopes to be on hand next month to talk on hail and fire insurance.

deacon & Co., 100 Murray st., also exhibited some fine berries. Cut in the regular market style. Bennett & Hall, 161 West st., put up remarkably fine Boston market lettuce, from a Rhode Island grower, W. W. Rawson, Arlington, Mass., staged ten improved White Spine forcing cucumbers—very fine lot.

Messrs. Weeber & Don, 141 Chambers street, exhibited a fine collection of vegetables grown from their seed; their display included Telegraph cucumbers, Golden Queen, and Boston market lettuce, Mohawk beans, Scarlet-tip radish; also another variety which was highly recommended for forcing purposes, owing to its bright scarlet color, uniform size, and more particularly, on account of its remarkably short space top. They also had some very fine examples of mushrooms.

C. L. Allen, Floral Park, N. Y., exhibited a distinct rubea, round, clean-cut and very smooth.

John Lewis Childs, Floral Park, exhibited six vases of a walsonea, and *Primula*, *masia* alba and the newer variety, *majia* tulle. With the white form should make an admirable forcing plant for florists' use. In fact, a good deal has been grown around New York the past season.

W. Anderson, gardener to Mr. J. M. Comtable, exhibited a splendid show of *Telegraph* and *Sutton's Progress* cucumbers, *Sutton's Best of All tomato* (this latter is exhibited for forcing), *Telegraph* pusses than the *Lorillard*, and some remarkable mushrooms.

The Clewaco Co. is manufacturing Company, 335 Broadway, was a very interesting and educational exhibit of plastic

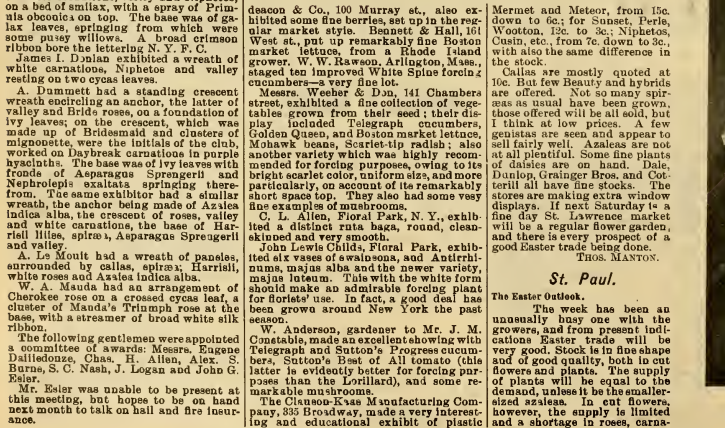

Mermet and Meteor, from Erie, Pa., to 6c; for *Teucria orbiculata*, Wootton, 13c. to 3c; *Niphetos*, Cusin, etc. from 7c down to 3c, also with the same difference in the stock.

Roses are mostly quoted at 10c. But few Beauty and hybrids are offered. Not so many sprays as usual have been grown, those offered will be all sold, but I think at low prices. A few *genistas* are seen, but are not so well as last year. *Azaleas* are not at all plentiful. Some fine plants of *Telegraph* and *Sutton's Progress* cucumbers are on display. If next Saturday is a fine day St. Lawrence market will be a regular flower garden, and there is every prospect of a good Easter trade here.

### St. Paul.

#### The Easter Outlook.

The week has been an unusually busy one with the growers, and from present indications the Easter trade will be very good. Stock is in fine shape and of good quality, both in cut flowers and plants. A supply of plants will be equal to the demand, unless it be the smaller-sized *azaleas*. In cut flowers, however, the supply is limited and a shortage in roses, carnations,

Cinerarias.

Paper read before the New York Gardeners' Society, Saturday Evening, April 10, by Robert Angus, Torrington, N. Y.

Though the fashions and fancies of recent years have left Cinerarias, like many other old-time favorites, somewhat in the background, still they are undoubtably worthy of a more cultivated and constant demand than they are my special favorites, and would consider a greenhouse without Cinerarias during the early spring months very bare indeed.

There are few classes of greenhouse plants that afford more variety and brilliancy of color, combined with luxuriant foliage and compactness of habit if the plants be well grown. The season at which I find these plants most serviceable is Easter.

To have them at their best at that time. The seed should be sown by the first week in August in shallow pans, finely sifted, light, free soil, and only lightly covered. The pans should be placed in a cold frame, well shaded. The seed will germinate quite freely providing it is fresh. As soon as the plants are large enough to handle they should be potted in 4 inch pots. Catalogue free.

## TEN DEGREES BELOW ZERO

is the temperature that has been undergone without injury by unprotected yearling plants of the new climbing rose.

## AGLAIA or YELLOW RAMBLER

In our catalogue the past Winter, thus proving it to be even harder than we had supposed.

A Hardy Yellow Climbing Rose

that everyone has wanted for years and Aglaila is, therefore, an immensely important introduction.

150 Blossoms in a Bush have frequently been produced by the Yellow Rambler, for it has the same manner of blooming as the old clusters as those the Crimson Rambler to which it is a splendid companion rose and probably related. The color is a clear decided yellow the flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well established plants making dozens of light to ten feet high in a season.

We are the introducers of this rose in this country, having been so introduced by Mr. Lambert, the originator. We are not prepared to offer plants of two other valuable climbing roses.

## EPIHYOSYNE or PINK RAMBLER

Color a clear light red, otherwise very similar to Aglaila.

## THALIA or WHITE RAMBLER

White; same style and habit as Aglaila.

## WE WANT EVERY FLORIST

to handle them. Free from insects, but customers and to everyone who will do so, agree, to depend upon you as for its supply of plants.

## WE WILL SEND FREE OF CHARGE

a beautiful colored plate illustrating the Aglaila, together with 100 handsome descriptive circulars with names and addresses stamped upon them. Send at once.

Price for strong plants from 2 1/2 inch pots, \$5.00 per 100; \$30.00 per 1000. Trade Lists of other Roses and General Stock.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## Gardeners and Gardening in Early Chicago.

Paper read before Chicago Horticultural Society by Edgar Sanders.

Speaking horticulturally, forty years ago in this city is a cry so far in a gardening way in this city that only those permitted to take part at that time can appreciate the great and grand difference between then and now.

In passing, I might say I was early enough a settler here to have known all the pioneers in gardening, many of whom have crossed that bourne between no traveler is supposed to return.

What I will say will mostly be confined to the coming of garden and gardening as they existed in this city up to and prior to the date I first became a humble member thereof, which was the end of March, 1837.

Please understand the words "gardeners and gardens" as defined by Loudon—a early date for "the" and "a" united spot, for culinary and ornamental purposes for the various purposes of utility, ornament and recreation," and the gardener on the broad explanation of the word as "he who attends and cultivates a garden," and particularly those defined as master gardeners. And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

And let me say, speaking of gardeners, by which I mean such as take charge of gentlemen's private places, I am sure, limited in numbers as they were at that date, they were often more in evidence taking an active part in horticultural societies and in writing on horticultural matters.

Austin, the English Poet Laureate says: "The moment I enter a garden I know whether it is a true garden or the gardener's garden. Nearly all the large and costly gardens are gardeners' gardens. I continue to see good gardeners in little village or secluded spots, cultivated and made beautiful, by the pathetic expellents of the poor, which seem to have a charm that mine cannot rival."

Now, understand, the largest part of the gardens in old-time Chicago were "owners' gardens" rather than the "gardener's gardens." You know we live in what is dubbed the "garden city," and I will believe that that cognomen was much more appropriate at the time the city was so christened, than it is now, for the reason because as then viewed it was in a measure to its citizens a garden spot.

It has been said that between the panic of 1837 and the revival of trade after there being no money, the garden afforded the economist a household a large part of the family supplies, etc. Men began to whitewash their fences, plant for fruit and vegetables and for shade, clean up their yards, plank their walks and lay out their grounds for culture and beauty. Then the "garden city" of the "Garden City of the Country Gentleman," Albany, N. Y., in 1860, it is related that the Chicago Florists Club appointed a committee to see their duty it was to collect facts relating to our city, and they stumbled upon the version of its origin thus: Mr. Samuel Brooks, the oldest greenhouse man here, many years since (1848), built a greenhouse on a block at Clark and Monroe. A prominent man visited him, who was so struck by the beauties inside, as compared to anything out West, that he said it was "The Garden City." However, the origin is no doubt outlined in the first example here cited, and the name is not confined to this city alone, but the good people of the time took care to retain it for us all times.

Miss Harriet Martineau, who traveled in the United States, visited this city in 1836, and in the progress of that trip made the journey from Niles, Mich., by wagon. In her work "Societies in America," she says: "On arrival in Chicago a fine fair was going on. Being too much fatigued to attend, I only sent me a bouquet of Prairie flowers."

In the "United States State Papers" for 1818, occurs the following: "A more extensive cultivation will be commenced at Chicago and other parts, of the cultivation of the most useful vegetables, and in the vicinity of the garison posts it shall be carried on by the troops under the direction of the several commanding officers of the posts, and will embrace the bread and such other vegetables as part of the rations."

So, you see, Uncle Sam began gardening early in the city, and the citizens were soon to follow, even if these articles were of Prairie flowers.

Chicago had a horticultural society as early as 1836; it gave several exhibitions, the last published account being in 1849, and the society was then said to have had highly members in the city. The first covered horticultural products in their shows prior to 1857, when a Cook County Agricultural and Horticultural Society was organized. In that year it held a fine fair on the lot bounded by Division, Clark, and North La Salle streets. It was held on all open prairies at the time—after which the Florists Club, in 1858, and afterward, a horticultural society, held their exhibitions down to the big fire of 1871.

When I came here it was no rare thing to see ornamental plants in this city, and I remember noting the remains of a fine peach orchard out at Dr. Kennicot's farm, bounded by North La Salle. He told me, prior to the terrible winters of 1854-5-6-7, which killed the trees, root and branch, a horticultural society, held their exhibitions down to the big fire of 1871.

QUESTIONS BOX.

OPEN TO ALL. . . . . FREE TO ALL. Answers Solicited from Those Who Know.

(32) Manure for Violets.—W. Com manure is always preferable for violets grown in solid beds.

(34) Moss.—M. E. Lane.—We would advise you to advertise in our columns.

(35) Glass in Greenhouse Burning Plants.—I have a greenhouse, which I do not use very often. It always has burned everything we put in early in the Spring, even in February, if the sun comes out. The house is 50x20 feet, span roof, half span running southwest and northeast. I thought if I painted the inside with transparent varnish, that would remedy matters. Do you think this paint would interfere with the light in the Winter so as to affect the blooming of the plants? The varnish is very thin, and I think it will stick on during the Winter and break all the lenses. What is your idea about it, or could you suggest some other better remedy?

To remove the bad glass and improve the ventilation is the only practical way out of the difficulty. To cover with varnish or anything of that nature tends to reduce the amount of light and white lead is not sufficient shading for Summer, a more delicate one can be made by taking quick lime in milk and mixing to the consistency of thin paint. This can be made in a portable way, if so wished, by the use of a sponge. By the last named method, the shading can be removed at any time, and at the same time be very effectual.

Walden, N. Y.

KOFFMAN, the "Smullax King," reports his European sales as continuing successful and profitable in every way, the stock arriving on the other side in fine condition. During February and March last he has been in the chair, six new strings each Wednesday and Saturday, using the American and Concord line steamers. With his improved facilities for growing, he expects to produce crop of 60,000 strings of smilax a year.

Mr. Koffman has recently suffered a severe family affliction through the death of his honored father, Adolphus Koffman, who was well known in real estate circles. Mr. Koffman, Sr., was 75 years old.

Madison, N. J.

The Morris County Horticultural Society, held its regular monthly meeting, Wednesday, April 14, President A. Herington in the chair. Six new members were proposed. An exhibition committee was appointed to work up a Fall show on the fertilization and ministry of orchids, which he illustrated by the use of 48 diagrams and colored charts, and a large collection of living flowers. The lecturer displayed a thorough knowledge of his subject. This society is in a very healthy and flourishing condition.

Oneda, N. Y.

Easter trade promises to be brisk, and our stock is good and ready. Carnations are scarce. John S. Hay has leased the Lake Street Greenhouses (No. C. GREEN). Mr. Hay will give more attention to the seed business, and continue the Main st. store, handling flowers and plants for Mr. Green.

Some of our people have got caught in ill flowers shipped in from Bermuda; they will have to set fifteen fair flowers out of a hundred. J. S. H.

# CARNATIONS.

## Summer Treatment.

Shading will now require some attention. It is the bright blazing sunshine as much as the heat that causes carnations to give out very early in summer. Indeed, during this portion of the year the carnation will gradually adapt itself to the heat, and grow vigorously, provided there are other essentials in addition to shading are carefully looked after and maintained. First, shading should not be left go until the plants are actually suffering for the want of it; for it is a difficult matter to make them regain ground. They will have lost when this has been postponed too long.

We have already given all our carnation houses a light shading. The main trouble with a great many in shading early in the season lies in putting it on too heavy. A thick coat of whitewash or any other material should not at any time of the year be put on the glass. We must remember that outdoors the carnation does its best during the cool, refreshing days of autumn, when the sun barks less, and the power, and the atmosphere is often hazy and, generally speaking, cool, bracing breezes prevail. These are the conditions to which we should try to imitate as far as is possible.

We can temper the rays of the sun by a light coating of whitewash, just enough to make a perceptible difference to the plants; this we put on evenly all over the glass, and no had effects follow when used in this way. As the season advances and the sun's rays increase in strength, the shading must be put on heavier gradually until in mid-summer, when it will have become quite heavy. It is not to direct rays to come into the house. From thence on we allow the action of the weather to gradually remove it, so that by housing it for the new crop, the glass will be about the 20th of August, which is a reasonable date.

We say that the carnation will adapt itself readily to the increasing heat of spring and summer. Then surrounds them with these means, these might say, consist of shading, ventilation, watering and feeding. It is difficult to say which is the most important factor; it is that the fullest success cannot be obtained when any of these four essentials is neglected. The most important must be necessarily hinge upon them all, and each one should be attended to as though it were the main object in bringing about success. Ventilation must be thorough and complete. Shading and ventilation are probably the two most important factors which enable the carnation to withstand the intense heat of spring and summer. In ventilation, the main object is to keep the air moving. With the air constantly changing, the carnation will stand 100 degrees quite as well as 80.

To successfully grow carnations in warm localities under pits in summer, bottom ventilation must be resorted to; without this, it is impossible to get a thorough circulation. A house which has only its top ventilators in operation, soon becomes veritable bake oven, and it is little wonder that carnations will give out early in summer in such a house.

With bottom ventilation, it is impossible for the air to stand still, no matter how warm the day may be. With the sun shining, the temperature inside the house must invariably be higher than outdoors, and since here the air always rises, and the floor of the house is always the coolest, it is easy to comprehend the importance of admitting the air from the bottom, in order to maintain a continual and complete circulation.

When we take up the carnation from the field it is strictly an outdoor plant, but during its sojourn in the greenhouse, we gradually accustom it to conditions quite different from those which existed outdoors; doing out, however, to preserve the principal features of its outdoor life. In this way, by the time spring and summer arrive, the carnation is enabled to withstand a much greater amount of heat than it could have done in the fall. Its ability to adapt itself to a large amount of heat, relieves us of any undue considerations at that score, and time and labor are saved in securing a thorough circulation will do more to maintain its vigor during the summer months.

Watering must also undergo a gradual change as warm weather approaches. Dur-

ing winter months a good watering will last several days, sometimes a whole week, depending upon the state of the weather, the nature of the soil and the position of the houses. This, however, gradually changes, until very often daily waterings become necessary.

To allow the plants to become dry enough before watering, and to prevent them from getting so dry that we must continue to be our guide. Many are tempted during hot weather to dash the water over the tops of the plants, and often with a great deal of force. The injurious effects of this practice have been dwelt upon before in these columns, and need hardly be repeated again.

We have not yet sprayed our carnations this spring, and will not until warm, settled weather commences. In summer we continue to apply the water directly to the soil between the rows, just as we do in winter, or leave it fall from the hose down between the plants; after the plants are watered in this way, we spray lightly over the top, but never with force.

Feeding, although I mention it last, is by no means the least important part of the warm weather treatment of the carnation. Light and air are the two most important agents which assist the plants to take up nourishment from the soil. It is a lack of these two essentials during winter which makes over feeding a dangerous probability where liquid manure is used regularly, and then during spring, when other work is pushing, the feeding is often neglected; the grower, in many cases, mistaking the increased growth as an indication that the soil is not doing enough, requiring only the bright spring days to bring it out. This is an error, to the extent that the soil does not furnish sufficient nourishment to last any length of time. It must be remembered that they have no substance to draw upon, and the little soil on the benches or in the beds is easily exhausted, especially when there is an abundance of plants.

The principal feature in feeding, then, is to keep it up and not allow the soil to be so dry that it is necessary to come into the check, from which, on account of their age and the season of the year, they cannot take up any more.

By adhering to summer treatment on this line we are enabled to cut blooms during the winter months, and very often to get a winter growth stock.

H. WEBER.

## American Carnation Society.

Secretary Albert M. Herr has issued the following circular, reaccompanied with a list of the names of the growers that will accede to every carnation grower, when the list is in your possession. It makes over every assistance should be rendered to the Society in its efforts to provide what really will be very valuable information. Go over the list carefully, and mark the varieties that are being grown in your vicinity, as Secretary Herr directs:

"The report of the Cincinnati meeting will be ready and mailed you the following month.

"Our next meeting will be in Chicago, with a preliminary meeting in Providence, R.I., during the convention of the S. A. F., to arrange for a premium schedule and other business that may come up. All who can should attend that meeting with suggestions for the success of the Chicago meeting and the good of the Society.

"Growers of seedlings will please note that only twelve blooms will be called for to compete for the preliminary certificate in two-year-old seedling class. They will also note that a fee of \$1 will be charged for registering a name.

"In order to get our list of varieties in as short a space as you please send a portion of your time and look over the following list, marking those grown in your vicinity, with an X among the newer varieties (if there are any known to you) that were never sent out, or never will be, please name it after their names; also, if there are any that will be sent out soon, give the date. It is desired to get up this list in shape so that varieties now in commerce, or about to be, will be separate from the others, and it is only by your assistance that this can be accomplished.

"If any one wishes to offer special premiums they can be forwarded to the secretary at any time prior to the meeting at Providence, August, 1897.

"These members who have not paid their dues (\$3) will please remit at once to the Secretary. New members are needed, can't you get them from your vicinity?"

"RICHARD WITTEBSTER, President.

ALBERT M. HERR, Secretary.

Lancaster, Pa."

# BAT'S CARNATIONS

The following selection of Winter Flowering Carnations confine all the newest and most profitable market varieties yet introduced, they are all exceptionally vigorous, the flowers are large, with perfect calyx, and most profuse bloomers.

- CANARY BIRD.** Large yellow, with a bright scarlet edge, the flower is full and well formed. \$1.25 per doz.; \$10.00 per 100.
- DUKE OF YORK.** Flowers very large and full, on long stiff stems. Very rich violet scarlet-crimson, color, long formed. The plant is unusually vigorous. H. S. S. Certificate No. 100. London. \$1.25 per doz.; \$9.00 per 100.
- HENRY GIBBONS.** Flowers large and full, very bright clear crimson, continuous and very free bloomer, and of vigorous constitution. \$1.75 per doz.; \$12.00 per 100.
- LEONIDAS.** A magnificent variety, bright crimson-scarlet, large flower; growth vigorous and very free. \$2.00 per doz.; \$15.00 per 100.
- Mlle. Therese Franco.** Beautiful fresh pink, very large full flowers, petals slightly fringed. This is undoubtedly the finest Pink Carnation in cultivation. Certificated R. H. S., London. \$1.25 per doz.; \$9.00 per 100.
- PRIMROSE DAY.** The finest Yellow Carnation yet introduced. The type of exceptional vigor and very free bloomer. Certificated R. H. S., London. \$2.00 per doz.; \$15.00 per 100.
- WILLIAM ROBINSON.** Very brilliant scarlet, large, well formed flowers; very free bloomer. This is much the best Scarlet Carnation yet introduced. Certificated R. H. S., London. December 16, 1896. \$2.00 per doz.; \$15.00 per 100.

The above are all strongly rooted plants from 3/4 in. pots. Packing free, and freight paid to New York, Boston, or Philadelphia.

Cash with Order, or Satisfactory Reference. My collection of carnations for growing in the open field is one of the finest in Europe. Full catalogue free on application.

### Our Plant Illustrations.

Acacia undulata differs from *A. armata* in the matter of color. The foliage is a little greener; the flowers are a little larger, but of a much paler yellow. The wood growth is also a little more prominent, but better. It is a handsome shrub. *A. armata* is nearly white. *A. undulata* also seems inclined to grow taller. This is the first reason that the quantity has been seen in this country. Julius Reehrs has imported a number of grand specimens, and does not intend to sell them this season, but will give them a year's growth in our climate when he thinks he can get the best results on them. They are already starting freely into growth. A number of the plants on his place are trained pyramidal form; all are more than six feet high, and, as our illustration shows, some attain the height of ten feet and over.

There is a large quantity of *A. armata* being very popular. To suit this trade Mr. Reehrs has always on hand a number which he plants to five plants. This plan usually obtains excellent results. Our illustration shows a three-bulb specimen.

### For the Busy Man.

Clery & Co., New York, will hold an auction sale of orchids on Thursday, April 22, Joseph Supple, will hold an auction of New York plants at the Plum Club for the benefit of a fund to be adopted by the New York Florists' Association.

Everybody is prepared for a good Easter. There are more than 100 million dollars' worth of supply of all kinds of stock, except a garnish of eggs, on the market, and more than any other season. The demand is so great from many points.

Reports regarding the European bulb crops are all favorable. A grand display of border tulips, which are becoming very popular, will be made at the coming International Exposition by Polman Mow.

him at that time. And as there was no specific information attached to the Cornell exhibit, intimating that it was an "illustrative and educational" display of the kinds in the market, etc., we treated it as we did other exhibits in the market. The opinion then formed. There was, as far as we saw, no individual merit in the Cornell display. It was, in our opinion, being the only feature about it that we could record.

We have no doubt of the honesty of purpose of the station officers in displaying the kinds in the market, but we do not think that the flower show exhibited the utmost capability of their growers; and we have no reason to believe that they had any credit to the station officers or to the show; and in the opinion of experts it was not the best that could be had. In fact, the management was advised to have it removed. It detracted from the impression of the exhibition in toto created, besides frustrating the object for which flower shows are held, by acting as a deterrent to the exhibitors who would not take up dahlias grown, inasmuch as they would not venture into the work, lest their labor might be lost. It is a precedent similar to those the Cornell people succeeded in raising. In this way it was calculated to do more harm than good by "seeing everything at its best." The joy of the exhibition was not reaped by visitors. The exhibitors, however, would not fully understand the object of the Cornell station officers. It was pointed out by Professor Bailey in bulletin 128, had it been made known to them by placard or otherwise, that the exhibitors would not have looked upon the exhibit as a display of the skill of the Cornell growers, which it undoubtedly was.

In favorable contrast to the Cornell station officers, the first and second "display" was the exhibit of apples, staged in the best exhibiting style, correctly in the station officers' own manner, at Geneva, N. Y. Such handsome specimens of this fruit are rarely, if ever, seen. The exhibitors, however, showed in two ways than one; they showed that at least some of our experiment station officers are able to grow apples of the highest quality, science with practice intelligently, such first-class results as they obtained could be shown to the exhibitors. The exhibitors received the highest honors and accommodations.

There is here where the whole rests—not on the cultivators at Cornell, but on the dealers supplying the experiment stations. It is the way they do it. We do not often get the best stock which the exhibitors receive. It is the dealers' tag-ends. If the dealers are willing that the varieties should be judged by such plant stock as they receive, they are certainly not; but how unjust of the dealers to treat the Cornell station officers, and subject these officers to our distasteful criticism through such treatment.

But why did not the Cornell cultivators accompany their exhibits, however staged, with some such explanation as this: "These flowers are not grown from the best stock in the market, but from such as they apply to the experiment stations." Then, indeed, would the distastefulness of the exhibit be "educational and instructive," instead of mediocre and misleading.

But, you may say, take ye heed! In future send us only your best of everything to Cornell experiment station, for the products of your station will be the best. It is not so. The station as "illustrative and educational," and may do you either great harm or great good, depending on the way you do it.

We are glad of the information the Professor has given us as to the proper use of the experiment station, viz: "to make records." Now we know; and our duty is to stress this fact, and to this end, its purpose, and keep away from the exhibition business—unless it can produce and show a record. It was our own judgment, however, that this exhibition station has to learn the art of exhibiting as well as the art of growing. It is not in their forte, why should not the stations supply such a lesson in exhibiting? That part of the exhibition business which affects the public good. Exhibiting being a great factor in the business, the stations should be made to know it is so. Or, if the station still be desirous to educate the public on matters with which they are not in their own nature, it is possible to raise trash from "tag-ends" and to do so for the purpose of being so specified when it makes such exhibits.

We take issue with the closing sentence of the Professor's so-called "concrete example" illustrative of a station's work. It is not the station's business to do anything that will bring other business

to them—ever or credit to their profession, and plants grown of "exhibition quality," when seen, always will conduce to the same result, in greater or lesser degree.

Then again, the station falls short in its exhibition of the plants. It does not show the possibilities of the flower, if it (the station) presents not some blooms of "exhibition quality."

We hope if the Cornell officers do keep on exhibiting, that they also will put up a record of their work, and publication in any future bulletin—something regarding why they can make a record of their credit. It may have been due to their achievements worthy of note.

It is not in their nature, however, to do just what it says. Anyone having the money to buy the tubers and the space in which to grow them, could have done as done likewise—made an exhibit of the flowers and received a similar award.

But, be it noted, there is no mention made by Professor Bailey that the complimentary honors referred to were bestowed on the exhibitors.

"Illustrative and educational" merits.

### New York.

#### Wholesale Markets.

The price of cut bloom up to Friday morning was somewhat of a haphazard nature. Buyers have been too busy with their other work to get to the market, and the cut-flower trade. Consequently, they have been shy in either buying or selling. It is expected that on Saturday, on the other hand, growers have evidently been keeping back more than they have presented to the market, and a rise in prices has been attempted, and was fairly well sustained. Beauty, which has been the most popular variety, had on Thursday night reached \$6 per dozen. No. 1 Bride and Bridesmaid had reached \$4.50 per dozen. The price of \$10, and it is expected that during Friday and Saturday these figures will stiffen considerably.

Violets are numerous, but it is anticipated that the sales of this stock on Saturday will be enormous and that 75c, and even \$1 per 100, will be possible figures.

Carotation shipments have been so light and irregular that we are unable to quote the prices obtainable up to Thursday night. However, the supply evidently is much larger than for the last Saturday and prices will be still forward quotations for one day, for the first three are in the 100, and the rest in the 200. We do not doubt that these figures will be obtained for such plant stock, and higher grades will sell proportionately well.

Valley is doing a little better and there is a probable chance that on Saturday it will reach \$2.50 and \$3 per 100; higher or lower figures will depend upon supply, and the market is very tight. The water lilies are likely to hold up well and clear out. Narcissi of different kinds are selling at from \$1.50 to \$2.00 per 100. They do so. Tulips are dragging and will likely remain in that condition.

#### Easter Predictions.

The predictions will be the only stock on which the percentage will be felt. Roses of all kinds, including hybrids, are plentiful. The same with bulbous stock of all kinds. The demand for the latter thing will sell Saturday and Sunday at a price which may be a little above the usual amount. A certainty bright and clear will follow on late sales.

#### Plant Trade.

Never before was there such a gorgeous display of plants as on Thursday. The demand so good. At midnight Thursday many large retailers had stock piled up to the ceiling. The demand had exceeded those of any previous season, and that according to the orders on hand their stock was being run out. The plant trade this is going to be the banner Easter.

#### Retail Trade.

All retailers are in a very amiable mood. There is coming their way in an unexpected manner. The plant display made by each one is larger than ever before. The demand is so good that they are engaged for the accommodation of plants that was not heretofore known at this time. In fact, the display is not confined to the city, but is being shown all over the city this condition prevails.

As Orchid Sale.

Clary & Co., 60 Vesey street, have a sale of orchids and other plants from Sander & Co., England, on Thursday next...

Scilly's New Show Boxes. J. A. Scilly, 74-76 Myrtle ave. Brooklyn, has a new York show room at 251 Water st., in connection with the Howard Furnace Company...

The News. WILLIAM ROEBB, Carlton Hill, has accepted the call made upon him and will officiate as one of the judges at the Hamatic International Exhibition on Sunday next.

CORNELIUS VAN BRUNT gave an illustrated address on the cultivation of orchid plants before the Camera Club on Thursday night, at 111 West Thirty-eighth st.

H. A. SOHL, 147 East Forty-second st., New York, has recently begun to cater to the large and increasing demand for an assortment of waxed and tissue papers, bookbinders, paper bags, twines, etc.

DALLBOUZE BROS. have secured a large stock of new greenhouse, 300x22 feet. Lord & Burnham will build.

H. A. MCGUIRE has opened a flower store at East 125th st.

Boston.

Preparing for Easter. The florists were probably never better prepared to meet the demands of a discriminating public on the eve of a great festival than they are at the present.

F. M. MCCARTHY & Co. will commence their Spring auctions on Tuesday next, their first offering consisting of hardy roses, clematis, Japanese maples, hydrangeas, and a variety of other shrubs and plants.

W. H. ELLIOTT, as assignee of Bowditch & Co., reports the sale of the Bowditch collection of plants on Monday and Tuesday last. The final settlement of that concern's affairs has been made.

The superiority of the general run of Boston high quality flowers is noticeable to all the observer, and in many instances plants are fully up to the standard of the highest quality of the market.

Hybrid roses have been better on prevalence in the market. Cotoneaster, Clematis, Crismon Rambler are in prime condition and form a striking feature in most of the flower gardens.

Among which were noted as especially desirable the azaleas, spruce cedars, dendrodon, Azalea mollis and catalpas. William K. Joyce, in both his Tremont and Bowditch stores, most acceptably displays a fine collection of plants, including some remarkably fine hydrangeas and hydrangeas, and some of the best roses.

Houghton & Clark have made a special selection in yards and greenhouses of their store, have leased an entire building two or three doors distant, at No. 491 Broadway, and have fitted up the first and third floors are filled with a choice lot of goods, all of fine quality and much of it especially desirable.

The flower trade in New York is also up to date with fine offerings. Galvin Brothers are well supplied with a choice collection of plants, especially in this line of their goods.

The cut flower trade has not started so early as to be hoped that their present arrangements will be successful. The cut flower trade has not started so early as to be hoped that their present arrangements will be successful.

The trade list of Dutch plants, for sale by the firm Van Proissen Kerstinger, of Boskoop, Holland, has just been issued by the firm.

W. H. ELLIOTT, manager of the Co-operative Market, has been on the sick list for several days, but is now about again, prepared to meet the heavy work of the next few days.

N. F. MCCARTHY & Co. are prepared for the season, having the flower market run full to overflowing, with a fine lot of lilies from Pierson, of Cromwell, Conn.

SHOPLING. The florists are well satisfied, with orders coming in now very satisfactorily.

Washington.

Easter Outlook.

All kinds of material will be plentiful for the harvest by the end of the week... Many large bunches were offered for \$10 each.

J. L. Loose has forced quite a number of irises and shrubby peonies this Spring... Many of the shrubby peonies, varieties of the large house peonies, are being imported from France.

The bulb house built last Fall by the GUDE BROTHERS has turned out to be a great success... The lowest point reached by the thermometer was three degrees below zero.

OTTO BUSECK has been appointed successor to the late Henry McCrowe... EDGAR SANDERS.

Paterson, N. J. OTTO BUSECK has been appointed successor to the late Henry McCrowe, as vice president of East Side.

Exhibitions. The preliminary premium list of the Third Annual Chrysanthemum Show and Floral Festival... The date of the exhibition is November 16-19, inclusive.

50,000 MARIE LOUISE VIOLETS. Rooted runners, healthy and clean. 50c. per 1000 in full bloom.

PANSIES. In full bloom, \$1.00 per 1000. Daisy and Forget-me-not.

W. G. SOUTTA & Co., 159 Grand Avenue, Jersey City, N. J.

Trade Notes. Chicago. Before this reaches our readers the tale of the Easter trade for 1897 will have been told.

25c Cash with order. MAX. E. KRAUS, SO. BAYVIEW AVE., NEW HAVEN, CONN.

Beauty \$5 per dozen for long stem, down to six inches and shrubby varieties... There is nothing out of the ordinary in the way of plants for Easter for the market.

At the last club meeting, George Stollery read a paper on short span to the south... The idea first started, the Stollery Brothers were just beginning to build, and so built several houses in this style.

The stated quarterly meeting of the Chicago Horticultural Society was held April 10... Two new members were elected.

W. G. BERTMAN, of Indianapolis, was present at the meeting.

GEORGE REINBERG is building one house 25x23, and two others, same width, of 100 feet in length.

CHARLES W. McCELLAR has removed to 45 S. Wabash avenue, and the ILLINOIS CUT FLOWER CO. to 51 Wabash avenue.

OTTO BUSECK has been appointed successor to the late Henry McCrowe, as vice president of East Side.

50,000 MARIE LOUISE VIOLETS. Rooted runners, healthy and clean. 50c. per 1000 in full bloom.

PANSIES. In full bloom, \$1.00 per 1000. Daisy and Forget-me-not.

W. G. SOUTTA & Co., 159 Grand Avenue, Jersey City, N. J.

25c Cash with order. MAX. E. KRAUS, SO. BAYVIEW AVE., NEW HAVEN, CONN.

ROBERTS' GIANT PRIZE PANSIES, in flower, are the finest prize transplanted plants from cold frame, at \$2.00 per 100, or \$15.00 per 1000 by express.

PANSIES.

THE JENNING'S STRAIN OF FINEST AMERICAN GROWN PANSIES are up to date and sure to please... By express \$2.00 per 100; \$15.00 per 1000.

E. B. JENNING'S, 254 S. Southport, Conn.

Five houses containing 330 square feet, well built and in thorough repair. Two boilers, heat, water, electricity, and good soil. Good convenient tenement house on the place. Rooms, 2 miles from Nashville. For particulars, address H. H. STEVENS, Dover, Mass.

When writing mention THE FLORIST'S EXCHANGE.

## Cleveland.

**Trade Notes.** The weather for the past ten days has been very dull and unfavorable for retail dealers, but the growers it has benefited. Trade has been normal, with the usual amount of funeral and decorative work. Freesia has been a good crop, so an excellent trade this week, and of every flower be favorable, the hopes of every grower are bright. Prices have been realized.

Roses are an extraordinary stock of plants and cut flowers on the market, which will probably be entirely used up. Prices as follows: 24 and 32 best quality, good color, and sold for considerably higher within the next couple of days. Carnations are selling to be 75 cents now, selling at 75c. to 40c., and will no doubt bring 50c. to 75c. toward the end of the week.

Roses are in good supply, and most varieties selling at \$1 to \$1.50 per dozen, but will reach \$1.50 to \$3 later; Beauty, \$3, \$4, \$5, and \$8 per dozen, very good, and will realize 75c. per dozen. Hybrid is excellent now, and prices will go to \$2 and \$2.50.

Bulb stock is in abundance, and with light demand. Hyacinth, good stock, in \$1.50 to \$2.00 per dozen. An extra good trade is expected in plants, with more than usual demand for the same. Some extra good crops were by J. M. Gasser were seen, the price asked being \$2.00. Prices range from 50c. to 35c. as mentioned. G. A. T.

## Philadelphia.

**Make Ready for Philadelphia.** The past week has been a busy one preparing for Easter. From all indications the business done will be good. The weather has been favorable all day and the nights just cool enough to keep flowering plants in good condition. The growers all appear to be doing well. It is a grover's Easter beyond a doubt. On every corner is seen groups of flowering plants, and the growers are all busy. Some stores have been selling flowering stock all week. These stores have bought their stock in Philadelphia. They have been bought in thousand lots, as late as the hundred. Apparently the plants are selling well, and the growers are all busy. Next week I hope to note the effect this has had upon the florists' trade.

**The Plant Trade.** Prices of plants are about the same as last year. Lilies have sold mostly at 10c. per dozen. The quantity of diseased lilies has been enormous. Growers report losses as high as 50% in some cases. In three cases almost the total loss reported. This was where the bulbs had been heated in coming over.

Hyacinths are as numerous as ever, but in much better condition than formerly, being well headed and very good. The new *Spiraea* antidesis is a good variety, and in three cases very good. Hyacinths in pots and pans are very good this year, and being better headed and in better condition.

Growers of Spring stock have been generally surprised at the large sales made of gladioli and grape hyacinths, such as fuchsias, mignonette, heliotrope, and geraniums. The hucksters and those having stalls on the streets are doing very well with a bloom on it.

Novelties are very few in number. Some new grown gladioli and grape hyacinths have been sent by J. A. Woltemate and are selling well. George Campbell had a house of pelargoniums of assorted varieties; these have all sold well.

## Cut Flowers.

No great advance in prices is looked for. There will be lots of flowers, from all indications. Beauty is now selling at \$1.00 to \$1.50 per dozen. Freesia is selling at the latter figure. Tea roses are being sold at \$8 to \$10 for the best stock. Carnations are selling at \$2 to \$3. These flowers seem to be most uncertain at present, as no one can estimate the quantity to be expected. Indications are that many are being held back.

Smilax appears to be scarce, and is selling at \$1.50 to \$2.00 per dozen. Asparagus strings, 50c. to 75c. Prices on all bulbous stock are rising. Lots of Salvo to 80c. per dozen. Narcissus and tulips go very slow. White flowers are bringing the best prices, and on the whole, the market is better than ever. Very scarce and held firm.

## New Items.

The patrons of the phone are increasing. The latest additions to those

who have put in telephones are John Burton and Edwin Lonsdale, and the most surprising addition is William J. Baker. Both of our patrons I have never heard all along the line.

**SAMUEL B. PENNOCK** also has an addition to his present list, with a bouncing boy at the end of last week.

The past two weeks have been very severe on the part of many on the sick list at present—more than the city has had for a long time. No serious cases are reported. The city of Philadelphia has a bad attack of inflammatory rheumatism. This and the gripe are the chief causes of illness, being, no doubt, brought on by exposure in most cases.

The meeting of the Horticultural Society, the 11th inst., will be very interesting. It is gotten up mostly for the benefit of the florists, and will be a treat for exhibitors, flowers and propagation in the house.

## Seedlings and Certificates.

**Editor Florist's Exchange:** The prolonged and spicy controversy on the subject of the appearance of your columns the past few weeks has been amusing to say the least; and I am of the opinion it has also been instructive to the large number of florists who grow carnations, and I understand that many certificates are given and place more value on varieties so honored.

As my name has been mentioned along with several others who awarded certificates at Cincinnati, I have a good excuse to defend our, or at least my, judgment.

I will pass over Mr. Ward's peevish remarks about the appearance of your columns we can afford to know that Mr. W. could not have felt well when he penned that foolish remark, which was not only a slur on our judgment, but an insult to our country—but that matters not. The personnel of the committee was composed of men having no desire or motive to advance the interest of any variety or its owner, and that is the greatest disappointment with a smile, and try again.

One result of this voluminous controversy, and I understand, is that a variety free of cost, and that should be a great reward for Mr. Ward; for he seems to think that the Horticultural Society is not worth much, if so, then why all this fuss because the judges did not think his variety a certificate variety.

The Carnation Society has done good work, and if every set of judges will be as conscientious and impartial as the judges at Cincinnati, the work will be still more valuable. Many of us have depended on the award given by the society to new varieties, and have not been disappointed; notably Jubilee last year at New York, which has proved to be the greatest acquisition to carnation growers that has appeared in several years. Mistakes may have been made, but the mistakes were made, and it has been on the side of giving every variety the highest praise or a certificate resulting from the society's judgment. I think the case here is mistaken; and in future it should be more so.

It is a pity that the formed, and its mission is not to advance the sales of the growers of new varieties, any more than it is to advance the sales of the present varieties for his business the best there is up to date. I am sure I will be indorsed by 90 per cent. of all the growers who will not say that it is much better to disappoint the raiser of a new variety even if it is worthy of the award given by the society, than to unworthy candidate for public favor. In the first case you have disappointed only one variety, in the second you disappoint many varieties; if it has real merit, will quickly work its way to the front; while, in the latter case, you have disappointed a number of people who cannot afford to spend their hard earned dollars on every fickle fancy of the day, and who really is no better than existing varieties.

Mr. Graham said in his letter that judges could not be expected to present a list of flowers, now considered the best. I cannot conceive of any other rule to go by. The judges at Cincinnati were not conscientious, both old and new, any one of which would, six years ago, have been well worth the price of a flower. It is their excellence would have been a decided

advance on existing varieties. The flowers we have to-day are a great improvement on those of six or seven years ago, and unless a variety is better than the present, it is inferior more or less in advance of those already grown, what right has it to a certificate?

As far as Mr. Ward's individual case is concerned, I can throw some light on that, and I think it will be benefited by it. One of his exhibits came out very well. The number of points, but by the most liberal allowances fall far below the required number that Mr. Ward has. In high opinion of his pet flower, the judges went over the difference of the flower again, and still it was deficient. This was not a "biased judge," but most impartial; for the judges were I am sure, have been pleased if they could have given the required number of points, 85. To make sure that their judgment was not erroneous, they called in an eminent grower of New England, and without a word let him figure up what he thought the flower was worth. His estimate didn't reach 70 points; that settled it.

Mr. Ward was not the only one disappointed, but I have not heard of any number of our friends from Ohio quarters.

Whatever the mistakes our society has made in the past, the judges at Cincinnati are not responsible; and if the judges of the future will be as impartial and just to the exhibitor as the courts of growth. The men at Cincinnati, there will be less heard of "this being no good," and the other "being a fraud," and the required number of points will be valued not only by the raiser, but by the great majority of growers.

## Singerland, N. Y.

Fred Goldring has had big success with *Martha Louisa* violet; in fact they have cropped heavily and continuously right through the season. At time of writing the plants are in the country of growth, of splendid color and size, and are doing very well. The plants are doing very well, being cleaned the plants and removing the flowers, and the plants are doing very well. The plants are doing very well, being cleaned the plants and removing the flowers, and the plants are doing very well. The plants are doing very well, being cleaned the plants and removing the flowers, and the plants are doing very well.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

The Easter Outlook.

Indications are not flattering as to large quantities of flowers for the Easter trade. There is no longer a doubt about the lily shortage. It is now an assured fact, and florists who did not order early are anxiously looking over the grounds for plants, but little prospect of securing them. Carnations are generally of crop and if the demand is as active this season as last year, the price will be the minimum. There will be enough bulbous stock to fill all orders. Smilax is scarce.

Chrysanthemum Show.

The committee in charge of the Chrysanthemum show held a meeting last Thursday night and closed the preliminary list for this year's show. The committee decided upon enclosing Music Hill in the Exposition Building, in preference to the East Side, as was suggested some time ago, their selection meets with the approval of the entire fraternity.

Florist's Club Notes.

The regular monthly meeting of the Club was held last Thursday afternoon. The attendance was light. The feature of the meeting was the essay of Dr. S. Halsted, on "Growing Chrysanthemums for Exhibition Purposes." The members attended him quite an ovation, and ordered him a vote of thanks.

The St. Clair Floral Co. had an exhibition of their new and beautiful stock of bunches of fine Katerina. Ude, of Kirkwood had a fine vase of carnations. Frank Phillips exhibited a fine vase of fine assorted roses, and Geo. M. Kellogg, of Pleasant Hill, Mo., had on exhibition a lot of very fine American Beauty.

W. GUR, of Belleville, is still on the sick list.

Grand Rapids, Mich.

The latest meeting of the Grand Rapids Florists' Club was principally devoted to a discussion on how to make the next club meeting show successful, especially from a financial standpoint. Many suggestions were made, however, the next club meeting will be held on the 21st inst. The gentlemen composing this club are: Wm. Cunningham, S. E. Crabb, Fred W. G. M. Croelmann, S. H. Henry Smith, N. B. Stover and Mr. Good.

It was reported that all the florists are well supplied with good, healthy Easter stock and that the stock will be devoted to "Bedding Plants," and the president named Mr. Croelmann to prepare a paper on that subject.

W. CROELMANN.

W. CROELMANN.

W. CROELMANN.

W. CROELMANN.

Yours is a good paper to advertise for our business. BENEY S. BURT & SONS, Hightstown, Pa., June 1, 1896.

NATHAN SMITH & SON, ADRIAN, MICH.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

Syracuse, N. Y.

Brooklyn, N. Y.

Trade News. Business during the past week was up to the top notch, several florists say it was one of the busiest weeks they ever had.

F. H. EBELING, the leading seedman here, reports that it is a rare case that the average, there being a great demand for flower seeds of the ordinary garden kinds. The market will be more active, Mr. Ebeling does a large business in farm seeds, he says there is a steadily increasing demand for clover and other forage seeds in this section.

All signs point to an immense Easter trade among the florists. A lot from the different places found stock in splendid shape and plenty of it, with the exception of the roses, which will be scarce, and possibly there will not be sufficient roses to go around.

P. R. QUINTAN, who has built a large extension at the rear of his down town store to accommodate Easter trade. A New Adamium.

Adiantum Bardii is the name Peter Crowe, of Utica, has given to a fern which originated with him as a chance seedling. It is supposed to be a cross between A. cucullatum and A. capillus-veneris. It could take too much credit to record many excellent qualities, but it looks as if it might take the place of A. cucullatum in a greenhouse. It is a more luxuriant fern, strong wiry stems, is taller and stronger than cucullatum, while retaining the character of the latter, the name named it in honor of his friend, Robert Bard, of this city. C. BARSON.

Buffalo.

Easter Preparations. The store windows begun to show a very much "trimmed up" appearance, the decorations are the products of the florists. In many cases in a lavish manner, being quite noticeable. It is not overdue. Respectively in the florists, the display of carnations, which has been quite low, will be much below the average. Violets are somewhat early but will be well shown. Has been taxed unduly by recent heavy crops. A year ago a dearth of roses existed in these parts, which put the florists comparatively different this year. To look about some growers' list, it would seem as though, though all lilacs would be in blossom, they still is hard letting. A few of the remaining plants, which show a marked difference in the product of certain cases where their flowering is somewhat ahead to that of the plants they represent to note, the prevalent disease is making sad inroads on results, and very materially reducing the profits. It is a pity that the nurseries of this built at the present time, they seem a real shameful pity that such an amount of growing material be carried through the season, only to prove, after the investment is increasing in daily expenses, that a poor quality of bulbs is being nursed, finally to be dumped, and too late for anything else to occupy its place profitably.

Some fine hydrangeas are seen in more abundance than in most years. J. G. Pickens has several varieties in stock, some of the finest that are seen come from George E. Fancourt, of Wilkesbarre, Pa. His stock like earlier ones, is very good, and, etc., seems to be fully up to the usual standard in supply and quality. No doubt, if you order your stock from him you will get a nice business will be done. Entreprises and Fillings.

J. H. REBESOCK has taken, for a few days, the store at 51st Street, and he will also use the second store, located two doors from his regular Main Street location, for handling any over.

ANDY ADAMS will move, May 1st, to 452 Main Street, there to occupy a portion of a warehouse store.

W. F. KASTING, the commission man, 493 Washington street, has purchased the stock of supplies formerly handled by D. B. Long and will thereafter incorporate with his flower business, occupying the same location, thus giving him a large store. He intends to devote his full attention to the wholesale bulb trade and importing business, but will continue to handle some plant stock in a jobbing and brokerage way. Needless to say, also, his noted florists' photographic specialty will receive more needed attention.

A second recent sad bereavement of Mr. S. G. Armstrong is a great loss to the florist, the death of his widowed mother, Mrs. Juliette P. Anderson, at the age of fifty-three years, which occurred on Tuesday, after an illness of long standing.

Mr. PEARCE, of Pontiac Floral Company, Pontiac, Michigan, called on Wednesday.

V.I.D.

The outlook for Easter trade, especially in flowering plants, is particularly bright. Immense supplies of plants have been laid in this respect. The plants have been more elaborate and tasteful displays. There is not so great a tendency this year as last to use a large quantity of flowers to hide the pots, with broad silk ribbon of harmonizing tint to further enhance the decoration.

The perennial parterres of flowering stock are in the street sellers are beginning to make their appearance. However no other city can equal Brooklyn in this respect. The plants have already begun busy plying his vocation, his wares evidently finding a ready sale.

Another flower grower has opened up here recently. Among them are the following:

H. MEYER at 1214 High St.; JOHN F. RUDY, 492 Sumner ave.; DWYER & CARROLL, 81 Summit St.; McMAHON & CASHFIELD, 138 Columbia St.; HENRY E. WOODRUGH, 146 S. Chester St.; LIZS ZINN, 794 Lexington ave.; M. DAZER & Co. 602 Washington St.; DICKSON & HAMILTON, 110 Bedford ave.; CHAS. F. HUNWICK, near J. Jackson and near N. W. of The Arlington, at 415 Tompkins ave.

Westerly, R. I.

S. J. KRUTER will commence immediately after Easter the construction of a six house, each 200x20 feet, for roses, it being his intention to turn the whole of the existing ground into a nursery, for which he will require from twenty-five to thirty thousand plants, the greater portion of which are already rooted off. To see the superb Daybreak, Alaska and McEwan being picked, every bloom fit to give cover in any class were good enough. Mr. Reuter, however, thinks nothing is too good for the Boston market, in addition to several promising seedlings of his own raising he is experimenting with twenty-one new kinds, hoping to secure something better than he already has.

A new ventilating apparatus, an invention of his of the village of Orange, N.Y. principle, without arms or chain, most simple, cheap and highly effective, will be used in his new house. And those who are on the lookout for a good thing should not fail to see it in conjunction with this model plant, which will be finished by August. Mr. Reuter cordially invites all his friends and fellow-craftsmen to visit him at convention time, and see for a hearty welcome to one of the cleanest and quietest to see in New England. Those desiring to stop off, may go to Providence, or make a special trip from that city, and no one will regret doing so.

**Market News.**  
 The weather for several weeks has  
 been very unen against the florists' busi-  
 ness—dark and rainy with occasional  
 clearings have simply stood still, and  
 the supply of this flower is away be-  
 hind the demand. This market, for Easter,  
 will have no carnation, where we  
 should have five hundred, and prices have  
 stiffened very materially. Anything sells  
 at 2c; medium 3c, and fancy will bring 5c  
 for Easter.

Roses will be in better supply and will  
 sell as follows: Peris, 4c to 5c; Bride and  
 Bridesmaid, 6c to 8c; La France, 6c to 8c;  
 Beauty and Mater, will not be figures.  
 Jacq, will be in the market and will re-  
 tall at about \$1 per doz. The estate of  
 H. A. Murphy will have the most of these.  
 Von Silon narcissus, 4c; paper whites, 2c,  
 and 3c; tulips, 3c to 4c; lily of the valley,  
 2c; Margerite, 3c, per 100, violets, 5c  
 per 100; callas and Harrial, 10c each;  
 miniature Dutch hyacinth, 3c to 4c; Ro-  
 manas, 2c; sweet peas, \$1 per 100, gladiolus  
 spikes, 6c to 8c; smilax, 13c to 15c, and  
 other greens as usual.

No New Plants.  
 We see nothing especially new in  
 plants to report. Harris will be in good  
 supply, as will bulbous stock. Orders are  
 coming in thick and fast, which is a good  
 indication that Easter, 1897, will not fall  
 below other years. Many of our florists,  
 though, are complaining of the hard times  
 and poor collections.

The News.  
 Supt. WANDER called this morning  
 for the 4th time since his accession. He  
 says that his nervous system is still very  
 much out of order and he does not relish  
 the sound of a "locomotive whistle."

Dame Rumor says that HENRY SCHWARZ  
 will soon marry a lady from Kentucky.  
 Henry has our best wishes.

WM. MCPADDER is now the proprietor  
 of Rosebank, having taken possession,  
 April.

A. SPENNERBOTH'S Sons had a fine  
 decoration at the Queens City Club, Satur-  
 day, for a banquet given to a railroad  
 magnate. The table was decorated with a  
 mixture of leonemotive and a train of cars  
 representing the South western Limited of  
 the Big 4.  
 Store openings and other decorations  
 have been quite numerous, so that the sup-  
 ply of flowers during Lent has been well  
 used up.  
 E. G. GILBERT.

**Pittsburg.**  
 Trade Outlook.  
 The week before Palm Sunday was  
 rather an un satisfactory one, trade having  
 been very quiet. Much however, was due  
 to the horrid weather and continuing  
 rains. Even Saturday was not up to ex-  
 pectations.  
 The gloom of Lenten dullness reaches  
 its climax during Holy Week; and if the  
 weather is at all propitious a good Easter  
 trade is expected. The show windows are  
 mainly filled with blooming plants, and  
 look very attractive. For this purpose  
 bougainvilleas are splendid plants to use.  
 The outlook for cut flower stock, except-  
 ing bulbous material, is at present uncer-  
 tain. The latter will be very abundant.  
 Carnations will certainly be scarce; the  
 home supply is much shorter than usual,  
 and prices will go up considerably. The  
 supply of roses and lilies will be sufficient.  
 Trade in pot plants has been extremely  
 dull so far, but if the weather allows there  
 should be a boom before the week is over.  
 Club Meeting.

The last regular meeting of the  
 Florists' Club was poorly attended, the  
 secretary being again to him Secretary  
 T. P. Langhans was absent on account of  
 the illness of his child. Nothing of im-  
 portance was done.  
 Illness of Mr. Patterson.  
 N. Patterson, the Market St. florist,  
 who has been confined to his bed since  
 last December, has been afflicted with  
 a disease, is very low, and badly expect-  
 ed to recover.  
 E. C. REINEMAN.

### Seedlings and Certificates.

Editor Florists' Exchange:

I have read Mr. Graham's letter with more than ordinary care, and I am tempted to discuss the question at issue mildly and logically. Mr. Graham is right when he says that the judges are prejudiced against a variety that is exhibited for a certificate, and only a variety that shows some striking points that appeal particularly to that set of judges will be awarded a certificate.

Mr. Graham's hypothetical case gives the variety 30 points—10 points short of the required number, and a certificate is refused. Change the judges and the result is 40 points and a certificate is granted. Now so long as the system in vogue gives such widely varying results, of what value is it to the grower? Is it better to mine for him? How much reliance can he place in certificates given under such a system? The past record shows that certificate varieties have failed commercially and are scarcely better known than the one and the purchasing public have refused to like those certificated as well as those that were not so.

Again, flower buyers do not buy according to a scale of points, and there is a wide divergence in taste. The variety that would differ from one from Chicago on shades of color, as well as on other points. The main objection to the present system of judging at Cincinnati is that it was done competitively. As Mr. Graham himself states, "some of the seedlings were so inferior when sealed as to make it difficult for the judges to decide which variety of the same class should have the certificate."

If there were two varieties, each a marked improvement on existing varieties, each to be placed on the market at the same season, each of such excellence as to make it hard to tell which was best, ought not to be sealed, but the exhibitor should be admitted that no one can foretell as to adaptability. What if, when sent out, these two varieties were given the same certificated one proves the better of the two.

The position that seems to me to be the correct one is that, if the Society is to retain commercially a certificate, it should show a marked improvement over varieties of the same class already in commerce should be certificated. I believe this has been the rule in awarding chrysanthemum certificates, and it should be the rule with carnations.

Under the competitive system the seedling grower who is able to show his variety in the best form, and to exhibit it, and his seedling goes on the market berided with a boom, while the variety having some in exhibiting, but not in the eye, loses sales, even when put to the final judgment—i.e., submitted to the public by introductory means for the better commercial flower.

That it is an injustice to give one variety the advertising advantages of a certificate, and deny it to another when the variance is but one per cent, is apparent, and is giving one seedling grower an unfair advantage over another in marketing his plants.

Climate differences have thus far not been considered in this discussion, yet it is well known that varieties succeed locally, but very few are universally successful, and the only way this can be determined is by actual trial in each locality.

A clear consideration of the case from the light of past experience, as well as from the views brought forth in this discussion, leads me to offer the following conclusions:

- 1st. The awarding of certificates for the purposes of commercial advertising is questionable.
- 2d. But if such certificates are to be awarded, any variety showing marked improvement over varieties already in commerce should be entitled to a certificate, and if that the society should have the disposition of awarding any one particular variety and frowning upon another.
- 3d. That any scale of points that may be devised will prove defective in judging for certificates.
- 4th. That if seedling growers under-

stand that the commercial fate of their seedlings depends on the opinion of a few judges chosen at random, they will cease to present their seedlings to the Society, but will prefer the safer and more expeditious method of submitting them at once to the final arbitrator, the public, who do not choose by seedling, but by the flowers please them.

QUEENS, N. Y.

CHARLES W. WARD.

### Free Seed Distribution.

Editor Florists' Exchange:

Your correspondent, T. W. Wood, Esq., will not wonder at the opinion of a few judges, "parakee being as bad as the thief," sadly too much in earnest, evidently thinking we were, or were, making an attack on the moral character of those who had been favored, or participants in the Government contracts. No such a meaning was ever intended. Being personally acquainted with every one in the trade holding these contracts, we believe them all to be men of strict moral and business integrity, men that would honor any position they held, and who would not be slow to acknowledge as friends and competitors in business. The quotation was used as a means of illustrating the propriety of reflecting on moral character or business reputation of any one.

There is no question what we have often said before: We believe the free seed distribution, through which the abuse has for the past twenty years, a travesty of the dispassionate creating the Department of Agriculture, through which the abuse has been made possible, the seed trade of our country seriously injured, and that it is a blot on the national character. We believe that our representatives in Congress, by voting for the appropriation necessary to create the new work, and by not punishing themselves, but do their constituents great injustice in the matter of taxation and in the matter of the national character of our industries. We believe, too, that every seedman in our country at heart concerned with the welfare of the people, is fast to their own interests. At the same time, we ask, is there a seedman who would not be glad to see the Government to enrich himself through the Government's kind favor, even though he knows that it will be a detriment to his business, consequently to his competitors?

Now let us look at the principle we have advanced, and let us see if it is not every seedman in the land has defined a petition to Congress to be taken up, and let us consider an abuse; with what effect? Mr. Wood says, "The Senate Committee on Appropriation has, up to this time, declined to hear a committee of the House in opposition to the appropriation for free seeds; they, like the House of Representatives, having determined to pass the bill without considering its merits." From this it appears very evident that the present Congress is as ready to pass the bill without considering its merits as their predecessors; they were not only deaf, but dumb and blind to the interests of the people. It is not intended to promote, viz., the building up of new industries, which would set idle hands to work, but to distribute seeds intended to distribute seeds of any kind, the growing of which was already an established industry.

According to the report of the chairman of the committee appointed at the meeting of the Society, the bill must be made from the decision of the present Congress to the people. It is the people's duty to go to the light as long as the seed trade—the most influential and the most important of our present industry is in? As well might a man preach temperance and hang out a sign advertising the sale of wine, if there is any one who is a free-holder and office-seeker respects and fears, it is the spirit of the press. If the seed trade is to be a part of the present, we will no longer participate in a work that is injurious to the craft and at war with every phase of political economy, they will command the respect of the press; they will be heard, and their cause will win.

We have on our desk the regulation number of packets, such as each representative has his constituents. We would like to ask the dealer that puts them up, if he has any of these packets in every respect? Are they just the same as they would send me from the store, if I had them by me? We have on our desk the catalogue ready? Truly, we believe they are just as good, the reputation of the firm warrants that belief. If so, will not every

one that is in want of seed strive to get them from the government free, rather than pay five cents per paper for the same from the seedman?

The worst feature of the Free Seed distribution is that reputable seedmen have taken the contracts to supply the government, instead of the Department going into the open market for their supply, as formerly. When government bought its seeds in bulk, and put it up at the Department, they got in many, if not most instances, the vilest seeds possible; so worthless were they, the gardeners would not use them; they were thrown aside because of the unsavory reputation of the government seed stores. Now the seeds are very different, mark the change. Barpes, Wood, May, and Utahrose, each have an enviable reputation, the seeds they sell are chosen among the best, and the consumers will use them instead of throwing them in the trash and here is just where it hurts the legitimate seed trade. Everybody knows that the seeds put up by the parties mentioned, will be just as good coming from Washington, as from the dealers direct, and the seeds will be used.

This gentlemen, is the way you are stabbing the trade under the "fifth rib," and you cannot injure others without yourself being injured. Your customers will very naturally ask: Why do you charge me five cents per packet, when the government gives three-fourths of a cent for the same? You certainly cannot get so good on quality, under your guarantee of 98 percent purity. And if the seeds you send through the Department are just as good as you send direct to the consumer from your stores (and we believe they are) why should anyone send to you when he can get them for nothing? Just consider this matter for a moment, and see if you are not directly responsible for some of the ills the trade is being heir to.

As long as the government bought trash, that no one, or at least comparatively few, would market it, but now that the tax payers, but now the seeds are bought from responsible, respectable parties, the injury is shared by all the trade.

I, not wishing to hide under a non des plume, subscribes himself—Yours very truly, C. L. ALLEN.

American Pomological Society.

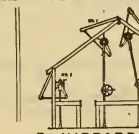

In response to an invitation of the Ohio State Horticultural Society, the twenty-fifth biennial session of the American Pomological Society will be held to the city of Columbus, Ohio, on September 1, 2, and 3, 1897. Every effort will be made to obtain the most favorable rates over all roads and connecting lines leading into Columbus, for all attendants, and most hospital entertainments have been promised by the Ohio pomologists. The proceedings of the session will be of great practical value to the pomological interests of the nation. A circular program of proceedings will be issued in proper time also announcing railroad rates and hotel fare for the session.

## Do we have to have Canna Burbank?

No! The past four years have shown there are very few things you

Have to Have  
**But** for more than four years the Florists of the world have been looking for a Pure Yellow Canna.

**In Burbank** we have practically a pure yellow, a flower in size more than twice as large as Madame Crozy, semi-double; and a plant with magnificent musa-like foliage and a constitution equal to the old Robusta. Austria is not a substitute for Burbank. It is unsuitable at 15c. each. Burbank SELLS at \$8.00 per dozen, prepaid ON cash orders.

Read the unanimous statements of the S. A. F. Canna Committee. Ask any Chicago Florist about it.

AUCTION SALE.

Being about to relinquish the growing of plants, I shall sell at public auction, without reserve, about the first week in May, of the date due notice will be given, all plants disposed of at private sale, all my plants, which consist of the following: About 5000 choice Rosen, one, two and three years old, and various other plants for the market and all grown in cold frames in winter, about 50 named kinds of the choicest varieties of 2000 or two feet of the finest and best varieties of Camellia Japonica, about 75 named varieties and each stock of the finest and best varieties of plants, together with some hundreds of large plants in large pots, and many hundreds of different kinds, some large plants of Denendrobium, Solida, Phlox, Acce, Sec, also about 50 Cereoidium Insular and others, grown in large flats, having had from 25 to 30 flowers each, many of them in fact refused \$5.00 for eleven of them last fall, the blooms having paid a much larger interest than the value. There are 300 or more Palms for decorative purposes, consisting of Kentias, some large specimens, Areca Lutescens, Verschaffelii, Latisolia Borbonica, Rapis Platiflorus, some over 6 feet in height and more stems, grand plants, Cycas Pinnata, 7 to 8 feet, Chamaerops Excelsa, Phoenix Tropicana, Roebelia and others. Pandanus Veitchii, Sec, 200 or more Ficus Benjamina, 2 to 3 feet, a large lot of Ferns of sorts and about 400 Farleyana in 4 and 5 in pots, 100 or more Aspidistras, large and fine plants with 12 and more leaves and some variegated; a large lot of Azaleas suitable for large decorations, and more Geraniums in 4 in. pots of choice bedding kinds; 2000 Carnations in large pots; 200 or more Geraniums in 4 in. pots of choice bedding kinds, named, many of them seedlings as fine as the best, some pure yellow with spots and many scarlet. Marie Louise Violets, in 5 in. pots, ready for planting out and some in 4 in. pots. Caladium in common in pots with leaves; 200 or more Aparasurus Plumosa; 200 or more Hothouse plants to go together with thousands of miscellaneous plants too numerous to mention. All good salable stock. JAMES PENTLAND, Florist, BALTIMORE, MD 1510 Greenmont Ave.

SEED TRADE REPORT.

Points and information from seedmen, and all interested in the column, solicited. Address Editor Seed Trade, care of Florists' Exchange, P. O. Box 189, New York.

Bermuda Bulbs.—In the price list of a Bermuda bulb grower just to hand, the following proviso is inserted: "Should any duty be imposed by the American government during the coming season, the amount of duty to be paid by the purchaser is to be ascertained in advance, and the purchaser that flowers with long stems are not out for sale, thereby weakening the bulbs."

For the same reason, neither should flowers with short stems be cut for sale; and what a boon to the American florist it would be if a similar statement were made, and it were verified by every bulb grower in Bermuda. Receipts of 180,000 lily buds by one steamer, however, would seem to indicate that some cutting is being done somewhere in the islands.

How is Trade?—We can truly say, so far as the general concern, that it is not so good, and that we mean the trade in vegetable seeds, and in a certain line of florists' flower seeds. It was never more active, while the sale of novelties, particularly those only novel in name, seems that people do not do without, was never so poor. All our industries, but more particularly our agricultural industries, have been so paralyzed for the past two years that the farmers wives have not had the money to pay for flower seeds, or for vegetable seeds for that matter. It is not that those they were compelled to buy, consequently the mail business has suffered severely, and in certain lines terribly. Being in touch with the trade throughout the country, we find no complaint so far as the quantity of sales is concerned, but loud complaints on the score of profits.

We recently canvassed the trade in Boston, and found but one opinion, viz., "we have no cause for complaint, but profits are small." We do not think that trade has been so active in New York in 1897 as at present. Nearly every dealer is from one to four days behind in filling orders, besides doing night work, as they are always glad to do. But there comes the same wall, "prices are so low there is no profit." From Philadelphia we hear the same story to all its detail. From the West, so far as we can learn, the demand for staples has been active, but fancies go slow. In Boston, the letters we have known more supplementary orders to arrive, possibly can be as plainly as anything. When a merchant lays in his usual supply of seeds, he gets more than he can replenish his stock to the amount of 50 per cent., as a good many have done the same. It is peculiarly more plainly than words that trade is good.

But there is a class of trade that has suffered. It is the class of trade that is associated with the retail. There is no disguising the fact of the great increase of profit in the wholesale trade. There are merchants, and these are coming in direct contact with the merchant in supplying the retail trade. Hence the corner plant of the old houses in the trade who stock a wholesale and a retail business. These are the ones who are suffering. Anxious to extend their business, they are going to the country merchant to handle seeds. In the country merchant they could do quite a trade in seeds, and they are finding that the profits with the seedmen, particularly in bulk seeds; they began to look around for other sources to buy seeds from, and to look long or far; the opportunities came to them in the form of John Doe, representing the best seed grower in the country and importer of seeds in this or any other country. They were soon put in the "inside" of the trade, and they were getting prices, and they had no little sympathy too, because they did not sooner find out about the trade, and they were to help and enhance their profits. The vast amount of knowledge of the seed trade these mer-

WOOD BROS., Fishkill, N. Y.

**Californian Seeds.**—At last seed growers have been able to work their crops. After several months of rain and cold the sun again comes forth with its warm smiles.

It will be some time, even with the best seed, before the crops will be ready to clear of weeds. Some pieces of onions, especially in the low lands, are totally ruined with weeds. In many places, in a wretched state. The warm weather, if not too late, may have some effect in reducing the weeds. The crops of radishes are promising. Red and white onions are especially suffering. Yellow are holding out a very few.

Now that the lettuce is growing, it can be seen that the stand is not the best. In many places, where the plants were some time it drowned out, making the fields almost spotted.

Spinach is a trifle small, and is sending out its seed stalks. The crop promises to be better than the average.

Carrots, leeks and radish are doing well and making good growth.

Some peas, though late, are now making fast growth. Volunteer pieces should by this time be in bloom, but as yet no buds are visible the cold weather has held them back at least a month.

In Mr. Hamilton's article on "Sweet and Sour Florists" he names the best twelve varieties, and among them six are of Californian origin. This speaks very well for the species engaged on in the flower. The time is not far off when the introduction will come from the Golden State. Probably the best will be the best sellers in the San Francisco market. The Perle and the California are the former is especially fine, and the latter is California is also coming to the front in various begonia. The plants which would create a sensation if exhibited East. They are giant in size, without being the least coarse. The leaves have the most brilliant and glowing colors, being illuminated most of the time with red, orange, vermilion and crimson, and in places with the green. They are large and silky in texture, and are valuable for their foliage. The flowers are in the form of numerous clusters, in red and pink. On large specimens there are frequently seventy or eighty in a cluster.

Asters, verbasus and cosmos are doing well, although the plants are very small. The majority are now in flower. The plants about the middle of this month, and it is hoped that the late frosts will not catch them. See our notice of CALIFORNIA SEEDS.

#### A New Greenhouse House.

For several years J. G. & A. EARL, of Saddle River, N. J., have been preparing for their special rubber hose, the lining of which is made of long fibre cotton yarn. This hose, which has been in use for ten years, is the most durable and has lasted for four to seven years. They have now made an agreement with the California Favorite Rubber Co. to manufacture for them this special grade of hose, which they intend putting on the market.

#### St. Louis.

##### Easter News.

The promise of good trade at Easter was fully realized. The weather cleared up early in the week gave way on Wednesday to bright, clear weather, which continued all the remainder of the week. Easter day was an ideal day.

Stock was scarce the first three days of the week, but by the second section on Thursday it came on in increased quantity and continued plentiful all through the week. Shipping of the week. Wholesale were busy on Thursday and Friday until late at night.

The local trade was exceptionally fine. Plants enjoyed a call that was unprecedented to any number of the second section that it divided evenly honors, with cut flowers.

Cut flowers were high—too high said some of the florists. Some growers refused to buy more carnations than for actual orders. With the exception of Perle, were plentiful and mostly of good quality. There was some picked stock, but not so much as was expected. There were few Extras fancy stock was scarce; and was duly appreciated by the growers; but there was enough of more second section to fill all orders. Carnations were at \$1 per dozen, and brought from \$3 to \$4 per 100, according to the quality. There were no sensational prices obtained for them; but they were simply refused to buy more than \$4.

Bulb stock was abundant, Dutch hyacinths leading in the light. Light shades sold quickly, but dark purple color had to be forced to effect sales. There

was little call for Romanes—their day is past and no effort could create enthusiasm in their behalf. Paper White shared the retail trade, and was not in the evidence. Daffodils were plentiful, and sold well at \$3 to \$4 per 100. Cut Harebell was abundant and very good, and sold readily at \$10 to \$12.50 per 100, but dragged after that, and on Sunday concessions could be made to \$10. In overs, too, were abundant and sold well.

Violets were not in oversupply—double and single varieties were in demand. Sweet peas were plentiful, and draggy at over \$3 per 100.

Not all plants there was a grand showing of spiraea, Marguerites and hydrangeas. Azaleas and clematis were scarce, and in the most recent arrivals some of the best could have been sold if they were sold out of the growers; but the florists were not so fortunate, and some of them are displaying them in large quantities in their window.

Eyes of the year, there were some happy effects produced in window decorations. I never saw better harmony and one effects than this season, and the best of them was a divergence from the orthodox style.

In retail circles everybody seems pleased with the plants. There were a few complaints were numerous and all were beautifully executed. Retail orders kept the florists busy, and many of them were night filling their orders for Easter morning. I am told by the manager of the Dispensing House that they were out of a small army of messenger boys to help out the florists. The animation in trade was surprising. I hear no complaints from any source.

##### Jettings.

Dr. A. S. Halsted and Henry Emmons, of St. Louis, Mo., were visitors to this market.

Mr. UGHEN, of Washington ave., had a new front put in his store and for the first time was in the market for handsome window cases. C. G. F.

#### Denver, Col.

The volume of Easter business in this city is the largest since the war. There was a very decided increase in the demand for plants at a falling off in the retail trade. The plants were in good demand, with a moderate supply, and nearly all the growers were cleaned out Saturday night. The florists were largely responsible for this, as a large number of blooms was worthless, and even the plants they sold were in poor percentage show the effect of the disease in the foliage. Next to Harebell, azaleas and clematis sold the best. A few plants in pots were snapped up early. Prices ranged from a year ago. Azaleas retailed at \$1.20, as against \$1 and \$1.50 a year; lilies sold at \$3 per dozen, the same as last year; apricot, 50c, as against 75c, a year ago; roses, \$1.50 to \$2, as against 50c, lower than last year, and carnations, 25c, as against 30c. The same. The prices on bulb stock were about the same as last year: Daffodils and violets \$1 to \$1.25 per 100, as against 75c per 100, which was the same last year. Good Beauty were scarce, but the demand was high and they became a high price obtainable. The weather was perfect, and plants could be delivered to the florists. The florists were ready, and deliveries were easily handled.

#### Buffalo.

##### Easter Echoes.

Another Easter show on the florists' trade in this town probably that the florists' trade was the best. The florists, though not so fierce as they would remember a year ago, were not entirely satisfied with the plants. There were a few of the latter part of the week, previous to Easter Sunday, though still just warm in the flower beds. The florists were offered without protection. Though the cut flower trade was not so considerable, the plants were in demand. The florists were in Lillium Harriell, though appearances beforehand might have indicated a better result. The florists were in demand, owing to the uncertain flowering of some lots, and to the disappointing ravages of the disease. Some growers, who had timed them just right, had such large numbers that they reached around just to the florists. A few of the florists were in some cases. They wholesaled, from dealer to dealer, at 20c per 100. Some were retailed, as a rule, at 30c per dozen. Azaleas sold well, all the goods plants being in demand. The florists were in demand, and remunerative prices. Hydrangeas of good quality and nicely in flower were more

plentiful than in recent years. Palms and ferns were in demand, and the florists commanded their share of attention and sale. Bulb stock, in hyacinths, seemed to be retail trade, and many of them were wholesaled as low as \$8 to \$9 per hundred, the retail price being 15c. The florists were in demand, and sold for less. These were shown in much quantities on the markets than in the stores.

In the cut flower trade the supply ran about as usual. Carnations were in demand, and the florists decided scarce and stock of any character whatever bringing at whole retail prices ranging from 75c to \$1.50. Left some left margins for the retailers on much of what they sold. Roses, however, were in demand, and many of them were going kinds of flowers. Bride and Mermel were in good supply and went at \$8 to \$10, while Mestor were plentiful at \$8 to \$10.

All the store stock generally to have closed out the store readily, and the weather, having come out very pleasant over Sunday, helped very materially to encourage increased sales.

Roman hyacinths were in unpleasant evidence as regards quantity, till plentiful, and daffodils rather scarce. The leading Main street stores seem to have had a good stock on hand, and many of them into the hours when the shoppers were wishing to be waited upon. And no doubt the florists will have a good record as being fairly satisfactory to all.

##### After Easter.

Easter Monday showed up a temperature of 70 degrees, and a heavy snow, snow flurries, and a wintry snap and rather reducing business. Tuesday was a mild, cold day, and Wednesday again showing Spring indications.

##### The News.

CORA A. CORNER, for past five years bookkeeper with Daniel L. Ross, and later with W. F. Kesting, resigned that position this week, in prospects of entering the florists' business. She will be in the city on Wednesday, April 28. Miss Cotter was very agreeable to the florists, and their good wishes are freely extended.

Buffalo will shortly lay claims to public attention. The florists' business is increasing having decided on the construction of such to be begun at an early day. The florists are now in the process of erecting a portion of the Botanic Gardens proper, which now are under the direction of the florists. The florists are now in the process of erecting a portion of the projected structure is to attain dimensions of a length of 250 feet by 75 feet wide, and the building to be 15 feet high, and expended on this new public park feature.

##### Vid.

#### St. Paul.

##### The Easter Trade.

Easter week was an ideal one. Sales were not phenomenally large, and profits were not abnormally large, and every one was busy, and all good stock was sold. The florists were in demand better than last year, the majority report an increase of from 25 to 75 per cent. over last year. The florists were in demand, and the florists were in demand. It was the best and most satisfactory Easter business ever done in the city.

The florists were in demand on Wednesday until after church time Sunday, when a howling northwest gale set in, and the florists were in demand. The florists were in demand, and the florists were in demand. Happily, however, they were delivered in time.

In the cut flower line, roses, as usual, were in demand. Carnations were eagerly sought after, and the florists were in demand. Violets, lavender, cut lilies, daffodils, Roman hyacinths, and many of them were in demand. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand.

Retail prices of cut flowers and plants were about the same as last year's, roses selling at \$1.25 per 100, as against 50c, and 75c; violets \$3 per 100; and bulbs stock at 50c and 75c per dozen. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand.

I thought last year that the hydrangeas were in demand, and the florists were in demand, and the florists were in demand, and the florists were in demand, and the florists were in demand.

everything cleaned out. Their long harvest was very good. One plant of Harriell had twenty perfect buds and blossoms. Their shipping trade was far ahead of all other florists.

##### Boulder Stock.

With Easter past, the next thing was to engage the flower trade. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand. The florists were in demand, and the florists were in demand.

We are having a hose manufactured from the best material in the market that will give satisfaction to all who try it. We can furnish it in 25 ft., 40 ft., and 50 ft. lengths, at 15 cts. per foot with connections complete. References required from unknown parties.

Address J. G. & A. ESLER, Saddle River, N. J.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

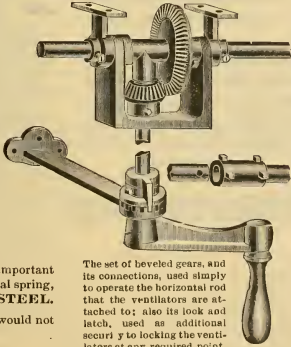

# THE ORMSBY SYSTEM

The above shows the main portion.

LOOK IT OVER THOROUGHLY.

SEE THE SIMPLICITY of the whole system. The first is the shafting, consisting of a "5-8" solid steel rod, being supported in suitable hangers, such as are adapted to different style houses. On this rod is a small gear, in which a rack travels up and down, as it raises and lowers the ventilators. On one side of this gear you notice a guide used to keep the teeth of the rack into the teeth of the gear. Next is the small collar on the rod, there merely to hold the guide up to the gear.

The set of beveled gears, and its connections, used simply to operate the horizontal rack that the ventilators are attached to; also its lock and latch, used as additional security y to locking the ventilators at any required point.

We next see what is the all-important in the Ormsby System—the spiral spring, made of the very best grade of STEEL.

Without THIS, the system would not be worthy your consideration.

# A. POINTER AND PROFIT

Every Florist is Looking for the Above Firm.

## HOW TO FIND THEM:

Do not hustle all of your Gladiolus Bulbs into the ground early in the season and cut all your blooms in August. Plant at intervals of two weeks, reserving a good proportion until the last of May and June. Planted late they will come into bloom in the cool of early Autumn, producing the finest spikes at a season when flowers are scarce and sell readily. We can still supply a few thousand H. G. Seedlings at

\$8.00 per 1000; 2d size, \$5.00 per 1000.

Beautiful light colors. Nothing better.

N. B.—If you are not in a hurry for your order, have them come by freight when ordered in quantities of a thousand or more.

CASH WITH ORDER.

**HOUSEHOLD.**

OPEN TO ALL . . . FREE TO ALL

Answers Solicited from Those Who Know.

(36) Piping a Greenhouse.—I have a greenhouse 50 by 20 feet, even span roof, 100 square feet of glass, the height of the 4 feet high; three raised benches in the house, center bench 8 feet wide; side benches 4 feet. At each end a carnation house 4 by 8 feet, 480 square feet of glass; walls 3 feet high; the carnation house abuts on each end of large house. Quantity of 1-inch pipe will I require, and how will it be distributed; also what quantity of 3-inch pipe would be required if 1-inch would be considered too small?

The carnation house is 50 feet from boiler, and is directly opposite center bench of large house. Would it be advisable to continue pipes through carnation house from center bed of large house, or from the sides? I intend to use a horizontal tubular boiler 40 feet long, 2 feet diameter, 18 tubes 2 inch. Boiler has been used for steam and only one-half is tubed. Fuel to be used is wood. Temperature required is 60 degrees and sometimes it goes down outside to 10 degrees below zero.—L. R. TAYLOR.

—In piping the above described houses, it will probably be best to run a 3/4-inch overhead flow upon the center pipes of the large house, and continue it into the carnation houses carrying it just below the ridge. It will be in the way there, but may be continued into the carnation house as two 2-inch pipes, either overhead at either side of the walk or on the logs of the benches. To the carnation houses will require two 2-inch pipes on each side as returns. These can be continued back to the boiler under the center bench of the large house.

The remaining radiation required by the main house can be in the way there, either flow and four 1 1/2-inch returns on each side. I should prefer the arrangement of the pipes in the use of two pipes. The 3-inch pipe can be considerably above the boiler. If 1-inch returns are to be used, it will require eight returns in pipe to carnation house, and six on each side of the large house in addition to the flow-pipes, and the returns from the carnation house in addition to the increased friction in the small pipes, we must consider that they will cool more rapidly if the fire gets low.

If the boiler is of small size, and should give good results with a fire-pot 4 by 2 feet, with a grate 3 by 2 feet at the front end.—L. R. TAYLOR.

(37) Heating.—Having experienced considerable difficulty the past Winter in keeping my place warm, I have decided to make such changes as may be necessary to secure me against another such experience, and therefore come to you for advice. I have decided to abandon my flue, and put in instead a coal-oil coil. Will you kindly advise me what size would be necessary to heat a room 25x50, 14 feet high, north and south exposure? Am now using eight 1-inch flows and three 1/2-inch returns, one system in the house. I have pipe enough, provided I put in a coil that will give me a steady heat. It is a coil of heavy iron, and will burn fairly well with a good heavy fire, but is not so much of a coal-burner, and I want something that is more economical. I have natural gas in my house, and would like to use it, in connection with the gas for fuel, when I make the change. Would like to put in a coil large enough to heat my dwelling, in addition to the greenhouse, and in figuring this out please allow for four rooms that will average 25x15 feet, also a bathroom, and a concrete surface necessary, and how high above grade, coil should be set? Would like to maintain a temperature of 60 degrees, and thermometer sometimes falls to 30 below. W. L. FARGUHARSON.

—To maintain a temperature of 65 degrees when the thermometer is 30 degrees below will require a moderate amount of heat that will be furnished in a house of the above size by eight 1-inch flows and three 1/2-inch returns. I can only secure 50 degrees in a house 50x20 feet, and with a ridge 10 feet high with eight 1 1/2-inch and two 3/4-inch pipes, when the thermometer stands at 30 degrees below zero, unless the fire is forced. Thus with 15 per cent. more piping, in a smaller house, and with 10 degrees higher

temperature outside, it is only possible to maintain a temperature 15 degrees less than is desired in this case, and it can be seen at once that much of the trouble can be attributed to insufficient radiating surface.

The radiation supplied is not far from 225 square feet, but to heat the house to 65 degrees with an economical use of fuel, this should be increased to 600 square feet. If the dwelling-house is to be heated we will have to provide for an additional 375 feet. The heater will then need to contain about 150 square feet of heating surface, and will require a grate surface of from 5 to 6 square feet, according to the fuel used.

—In order to secure the needed radiating surface for the greenhouse, about twelve 1 1/2-inch and three 3/4-inch pipes should be added. L. R. TAYLOR.

**Waco, Tex.**

The Waco Floral Society will offer a premium at their Fall show, to be held in November next, to the school children of the State seventeen years of age and under, for the most complete and best arranged herbarium composed of 1000 specimens of native Texas plants and flowers. Those who are interested in this exhibit are requested to send in their specimens by the first of August. He will take pleasure in mailing a full premium list as soon as issued.

**PLANTS and FLOWERS.**

**Carnations for Hot Climates.**

Dr. D. Fols, of Houston, Tex., sends us sample bulbs of carnations, which he states are "the only ones that will thrive in the hot, dry Summer of Texas." These flowers came in too shriveled a condition for us to pass an opinion on them.

We have received from G. T. Sebneman, Blue Point, N. Y., a bunch of Marie Louise violet-flue, large, well-colored flowers for the season, and deliciously fragrant. In an accompanying note this gentleman writes: "I intend to ship on Saturday 50,000 flowers. I have shipped up to the list of 400,000 flowers. I will ship 100,000 more. If I stop, I will reach the million and a half mark. I have made the growing of Marie Louise violet a life-long study, and handle nothing else but that variety. I think I have them as near perfection as I possibly can make them, and have always received the very highest market price. At the present moment I would not pick a flower for 10c to 10c; it is only a waste of time to do so."

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

## EASTER TRADE REPORTS.

## Albany, N. Y.

Easter trade was somewhat in excess of last year—25 per cent. better. Carnations and geraniums had the best showing of flowers, azaleas and lilies in plants. Prices for cut flowers same as last year. Beauty, 15 to 20 per dozen; white, 15 to 20 per dozen; to 23; Cusin and Moran, the same; Perle, 15 to 20; Bon Silens, 21; carnations, 31 to 40 per dozen; lilies, 25 to 30 per 100. Plants realized a fair average—azaleas, \$1 to \$1.50; hydrangeas, \$1 to \$2; lilies, 20c. to 25c. per flower. Geraniums, 25c. per bulb. Bulbous stock at fair prices. As a novelty violets and pansies in pansets with apricot.

Spiraea and hydrangeas do not sell very well; they are seldom watered properly in the homes of the buyers, and, therefore, soon look shabby.

All agree that business this Easter was far ahead of anything previously experienced. Prices run a trifle higher, and still plentiful—no surplus. The store decorations were very elaborate.

WARRIUS BROS. sold right out. Alfred Whittle is now in New York combining business with pleasure.

G. G. HYRES reports a record breaker. He had a tremendous stock of stock, and is now busy with Easter weddings.

GOLDING BROS. kept two stores filled with carnations, while the other two kinds went like hot cakes. Violets were in good demand, selling freely at \$1 to \$1.50 per 100. By actual count, 35,000 were picked from four houses during Easter week. How is that for a record breaker? And still they come just as fine and fragrant as in midwinter. At the greenhouses young stocks of roses, especially Beauty, and carnations are looking healthy and strong.

JOHN DINGWALL reports the heaviest sale of lilies and Beauty realized from \$1.50 to \$2 a dozen Beauty realized from \$1.50 to \$2.00 on bulbous stock. He has some 10,000 tulips planted out for cutting, which look rather curly this morning after the frost of last night (19th), when ice formed an inch thick; still he thinks they will stand all right. He has a fine lot of bedding stock.

L. MEXAND reports a heavy business at a conservatory. He crosses chokes, lily palms and ferns in addition to the flowering stocks.

GEO. GREY, who was for several years foremost in the houses on the Gratiot Court estate, has been the larger range, and is raising a general line of stock, both for the wholesale and retail markets. W. M.

## Syracuse, N. Y.

Easter trade was exceedingly satisfactory in this city. When a careful comparison with former years, sales are generally conceded to be 25 per cent. larger for the average stock, while plants in bloom show a gain of over 20 per cent. The church decorations were larger than ever, and on a more elaborate scale. Prices ruled about the same as in former years—roses \$1 to \$2 per dozen; carnations, 50c. to \$1 per dozen; lilies, 25c. to 30c. per 100. Carnations were in great demand, while all bulbous stock was sold. Azaleas, 15c. to 20c. per daffodils, which, strange to say, has been the favorite previous to Easter.

P. R. QUINLAN Co. had a beautiful window decoration in city and suburbs. The interior of their store presented a splendid appearance. Such a lot of fine clean stock as seldom seen together, the lilies especially being much above the average.

HENRY BERT made an elegant display, his stock being the most complete. He had Burt had some very fine specimen Marguerites in 10 inch pots, which sold readily at \$3.

L. E. MAROUZZE was especially well pleased with his Easter trade, having sold out clean in all departments. He reports a tremendous call for carnations, and thinks the divine flower has come to stay in popular favor.

HENRY MORRIS, of Elwood, had a good share of business, disposing of his whole stock.

Wistary Water. This section was treated to a genuine taste of Winter yesterday (19th), the mercury dropping 35 degrees in less than 24 hours. Next morning it registered 10 degrees below frost, and at 10 o'clock, at the time of writing, no damage resulted to the Berisite, but it is feared that the fruit trees will suffer, as the snow and frost was accompanied with a biting wind. C. BARSON.

## Detroit.

Everybody did a splendid business; there was a great demand for nice flowering plants, and it did not matter so much what they were, as long as they were good. About the usual number of lilies were in the market, and sold readily at from 35c. to \$1.25 each, retail. Carnations were a little scarce, and good stock found a ready market at from \$5 to \$8 per 100, wholesale. Holzmaier had some very fine Buttercup and Eldorado, which went quickly at the top figure. Roses, general stock was good, and supply equal to demand. Prices ranged from \$4 to \$8 per 100. Some good hybrids were in the market, and sold readily at \$2.00 per 100. H. F.

## Milwaukee.

Easter trade was about 10 per cent. better than last year. Carnations and violets were in greatest demand. In pot plants, azaleas and Harriall sold the best. Cut flowers of all kinds were plentiful. Blossoms retailed at from \$1.25 to \$1.50 a

## Fall River, Mass.

Easter trade was better than a year ago, perhaps due to the fine weather. Carnations, as usual, were in greatest demand, but there were also many calls for roses and violets. The largest sales in plants were of Easter lilies at 15c. to 20c. Prices were the same as a year ago. Day break carnations sold at from 60c. to 70c., Scott and Alaska at 50c.

We have not noted any novelty in the flower trade, nor does the public seem to become tired of the ordinary flowers.

## Bridgeport, Conn.

Trade for Easter was fully equal to last year's. Carnations were the cut flowers most in demand for general trade, and sold at 50c per dozen, although there was much objection to the price, while last year they sold more freely at 75c. per dozen. For the better trade azaleas were the favorite. Easter plants, while for the general trade lilies were in the lead, but they sold at lower prices than last year.

## New Bedford, Mass.

Easter trade was very much ahead of last year's; according to reports of the old florists, the best they ever had. Violets and carnations were the cut flowers; there was no sale for azaleas. A large demand for Easter lilies in pots was expected, but very few were sold. Prices were the same as last year's—carnations, 50c. to 75c. per dozen; violets, \$1.00 per 100; lilies, 25c. to 30c. per 100.

There was a large call for potted plants, such as lilies, hydrangeas, ovals and spiraea. Still, spiraea in pots do not seem to sell so well as they used to.

## Newark, N. J.

The demand for church flowers was about the same as in previous years, but there was a large increase in individual orders for cut flowers for homes. The prices were fair. Lilies sold at 30c. to \$1.50 a plant. Roses went at \$1.25 a dozen and upward. Large American Beauty fetching from \$5 to \$6. The price of azaleas ranged from 75c. to \$3 for a plant, and hydrangeas from 50c. to \$1.50 per plant. Azaleas, 25c. to 50c., and geraniums \$3 a plant. Cut tulips could be purchased for 50c. and 50c. a dozen and upward, and daisies at 10c. to 25c. each.

## Newburg, N. Y.

The Easter trade was as good as in former years; a large supply of every kind of stock was on hand, and the following plants lily in the valley sold at 30c. to 40c.; fallow, 35c.; emerald, 35c. to 50c.; azaleas, 1 to 2; daffodils, 35c. to 50c.; lilies, 40c. to 45; marguerite, 35c.; primroses, 30c.; Spiraea japonica, 50c.; Marguerites, 35c.; hyacinths, 25c. to 35c. Cut roses sold at from \$1.25 to \$2, according to variety; carnations were scarce and brought 50c. a dozen; lily of the valley, 50c.; daffodils, 75c. to \$1; tulips, 50c. to \$1; narcissi, 50c.; violets, 75c. to \$1 per 100; calla, \$1.50 a dozen; lilies, 20c. to 30c. a bloom; heliotrope, 50c. a dozen.

## Mount Vernon, N. Y.

There was an increase of nearly 20 per cent. in the Easter trade this year over previous years. There was a slight demand; many more carnations could have been sold had not the price been so high. Violets were in greatest demand.

Prices for roses were about the same as last year's; average, \$3.50 per dozen. Carnations last year sold at 50c. and 75c. per dozen; this year, 75c. and \$1, which stopped the demand.

There was nothing in the way of novelties. Baskets of plants in bloom sold well. Large expensive plants or baskets were very hard to dispose of, the demand being mostly for cheaper ranges. Customers were all complaining of hard times. T. J. TOTTER.

## Saratoga Springs, N. Y.

Business was about the same as last year's, if anything, a little poorer. Carnations were in brisk demand, followed by roses. Violets had no sale. In plants, hydrangeas, lilies, azaleas and hyacinths were in fair demand. The prices for cut flowers were about the same as last year. The people are tired of spiraea. Lilies in pots sold fairly well. Saturday it rained most all day, and hurt the trade a good deal. T. J. TOTTER.

## Bangor, Me.

Easter trade was the best in Bangor's history, notwithstanding that all plants and flowers were sold. They were retailed a few cents below Boston wholesale quotations. Fine, extra large flowering plants, such as roses, were in the line of small plants.

Carnations—mostly Daybreak—were in large quantities bought for pots, and set in the top price. Mixed grades brought 50c. per dozen. Bulbous stock went slow. On the whole, the business was a perfect picnic for all concerned.

## Branching Lilium Harriall.

Our illustration of the branching lily is reproduced from a photograph sent us by George Cooke, Sr., of Albany, N. Y. The branching habit is becoming quite common. Several cases have come under our observation. The one of Mr. Cooke's plant had fourteen blooms.

## Rahway, N. J.

W. B. DU RIE has opened a store in the main business street of this city for the purpose of selling cut flowers. The Easter trade was very good; sold out clean everything in flowers.

## Branching Lilium Harriall.

A comparison of prices shows that Beauty roses sold for per dozen less than they did last year; other roses 50c. a dozen less. Violets \$1 per 100 lower than in 1916. In plants azaleas went at 50c. to \$1, and lilies at 5c. a flower less than was obtained last Easter.

Hydrangeas sold very poorly this year. Bulbous stock has dropped in popular favor by reason of such large quantities being presented to the eye of the public every where, and generally for a long time ahead of Easter.

## Kalamazoo, Mich.

The unfavorable weather early in the week undoubtedly caused a lighter cut than usual of roses, carnations, etc., but this was fully made up for by a large supply of bulbous stock being on hand, especially Easter lilies. Saturday being a fine day, trade averaged up well and prices remained as usual; roses, 41; carnations, 50c. to 40c. per dozen; violets \$1 per 100. Easter lilies sold as well as anything and no novelties were offered.

## Olen Falls, N. Y.

Trade was about the same as last Easter. Rainy weather part of the day and two days previous possibly put a check to it. Azaleas sold well. Prices were not high, but had a few heats, which sold well, being a novelty in this section. Prices were about the same as those of last year, with the exception of that for valley, which was about 25 per cent. lower.

dezen, while last year they brought from \$1.50 to \$2 a dozen Beauty realized from \$1.50 to \$2. Carnations brought from 50c. to 75c. a dozen—same as last year. Violets were from 50c. to 85c. a bunch, but last year they brought 50c. a bunch.

Bulbous stock was plentiful and sold well with great demand. Cut lilies retailed for \$2.50 a dozen, but were not in demand.

The plant trade exceeded the cut flower trade by about 25 per cent.

## Ottawa, Ont.

Easter trade was fully twenty per cent. better than last year, notwithstanding the cold, miserable day that Saturday was. The fact that better displays were made than heretofore, accounted for the increase to large extent. C. Scott had the best extra store filled up with a fine selection of plants, and did a very satisfactory business.

This was Graham Bros. first Easter in their store at 29 Sparks st., so they, of course, did a much larger trade than was formerly done at the greenhouse. Others report a satisfactory business. Cut flowers, roses, violets, carnations, lilies, valley, daffodils and bulb stock were asked for in about the order named. Prices were the same as last year, with little or no advance over everyday figures. In plants, Harriall was probably yet the best at \$1 each. Azaleas at \$1.25 each, sold rather slowly; bulbs in pansets, 50c. each well sold. Spiraea and carnations at 50c., were very good. There was no novelty of note. Taken on the whole, the craft was well pleased with the trade done. J. G.

Azalea.—Showing Usual Way of Growing

Azalea —Showing Loose Form of Growing.

Acacia Armata.

The above specimens were grown by Julius Roehrs, Carlton Hill, N. J.

Hudson, N. Y.

The demand for cut flowers and plants was rather better than last year, the greatest call being for carnations, violets and roses. In plants, lilies and azaleas had the largest sale. Prices for cut flowers were same as last year, those for plants being rather lower. More plants were sold this year.

Hartford, Conn.

Easter trade was better than last year. Lilies, carnations and roses were in most demand. The largest sale in plants was on azaleas, lilies, pans and pots of daffodils, tulips and hyacinths. The prices were about the same as last year. Those on cut flowers also were about the same. Lilies sold for \$2 a dozen, roses, \$1.50, Jacq. \$2; Bruner, \$1 to \$6. Plants sold 20 per cent. better than last year. Genets were the only plants that did not sell well, except in smaller sizes.

Rome, N. Y.

Easter trade was a little better than last year's. Carnations were in greatest demand, roses next. Violets sold well, also lily of the valley. In plants, lilies took the lead and sold better than ever. Azaleas went rather slow. Cinerarias and hyacinths sold well. Carnations brought 50c. per dozen for best; roses, \$1.25 per dozen; lily of the valley, 75c.; violets, \$1.50 per hundred. We did not raise the price on carnations for Easter. Roses brought 25c. per dozen. No advance of price on other stock. Carnations were scarce. Lilies sold for 15c. per bud and flower, last year for 20c. On other stock prices were the same as last year. Cinerarias, 35c.; hyacinths, 20c. and 25c. per pot.

Saturday was showery; Sunday was fine, and we were kept busy all day.

Cincinnati, O.

Echoes of Easter.

Never before was there so large a trade done by the commission houses as at the Easter just past. Stock, with the exception of carnations, was plentiful, none of which could also have been sold. There were plenty of roses, Von Sion, tulips, paper white narcissus, hyacinths, Marguerites and valley constituted the principal stock.

Prices ruled as follows: Bride and Bridemaids, 6c. to 8c.; Perle, 4c. to 5c.; La France, 6c. to 8c.; fancy carnations, 5c.; medium, 3c.; good, 2c.; tulips, 3c.; Von Sion, 4c.; paper white, 5c.; hyacinths, 2c. to 4c.; valley, 8c.; Harrisli, 10c.; callas, 5c. to 10c.; violets, 50c. to 75c. per 100; Marguerites, 30c. per 100, similar, 12c. to 15c., azaleas, 50c. per string.

As to the general Easter business, it was equal to any former year. All the stores are well satisfied and prices ruled fair. Market trade was up to the standard.

We had nothing new in plants and prices on plants were good. The only subject that sold slowly, and which the public does not seem to care for, is aprons. This certainly is a back number and will be discarded by many growers.

The Show at the Flower Market.

The scene at the flower market beggars description. The place was so crowded that one could hardly get through. The general display was magnificent and was equal to, if not excelling, any flower show that could possibly be staged. The aggregate sales at this market on Saturday afternoon and evening will amount to about \$7,000. This sum is well divided among the fifty-four stands which compose this market.

At the late R. J. Murphy's stand we noticed about 8,000 Jacq. roses; the prices of some ranged from \$1 to \$3.50 per dozen. Other stands were well filled with assorted stock.

In plants, Harrisli and callas had the lead, at prices ranging from 75c. to \$1.25 each. Hydrangeas sold at about the same figure. Azaleas, from \$1 to \$3 each.

Rosebank had some choice hybrids, most of which were shipped out of the city. J. A. Petersen had an unusually fine stock of roses of all classes, also tulips, Von Sion and other stock.

Sunderbruch's Sons were also well supplied with extra choice stock.

Julius Baer and the Walnut Hills Floral Bazaar handled the fancy carnations; these were grown principally by E. G. Hill & Co. Wm. Murphy had some good Bridemaids.

Ordinary carnations never were so scarce at an Easter time, and many people were disappointed that they could not get their favorite flower. E. G. GILLET.

Metrosideros Speciosa.

Rhododendron Prince Camille de Rohan.

Genista Racemosus.

The above specimens were grown by Julius Roehrs, Carlton Hill, N. J.

## For the Busy Man.

N. C. Patterson, of Pittsburg, is dead.

A cold snap was experienced Monday night in several parts of the country, doing considerable damage to fruit-trees buds, and early flowering shrubs.

The vote on the tariff shows that the wishes of those who voted in favor of abolishing the tariff for and against the proposed amendments. The vote, however, was very uninteresting.

It is reported that Secretary of Agriculture Wilson is in favor of re-establishing the Seed Bureau at Washington for the distribution of the seeds which ex-Secretary Morton succeeded in having shot.

The Easter business has been a very satisfactory one over. Prices were mostly in demand. The prices obtained were generally the highest since Christmas year, in some instances being rather lower.

## BOOKS RECEIVED.

**FLORIBLIND HARMLENESS.**—The third number of this publication has come to hand and contains the same handsome color plates and history of Hyacinth rigeae, tulips, Chrysolids, Canary Bird, Woodwren and Cherry, and Cornelian. The illustrations are beautiful and the text is most interesting.

## A Gracful Tribute.

No previous Easter has ever been decked with so gorgeous flowers as this. Their beauty and color are found on all sides—in church and boudoir, window sill and picture, and on the mantles. The art of horticulture has done wonders. They make the festival radiant. N. Y. Herald.

## Dry Goods Store Competition.

Apparently, these concerns are in the retail flower business to stay. Whether or not at the present stage, they are competitors to the established trade in New York, is a moot point. What they will do in the future, is another matter. Taking the case of Bloomingdale Bros.: One year ago this firm's trade in this line was in all ways a record. This season, we noticed that they were doing a remarkably heavy, and at the same time, popular retail business, that they were giving the same personal attention to customers as other stores would, and were booking orders for delivery, and running accounts. In regard to the alleged cut in prices, this was not so real as the advertisements in the daily papers would lead one to think, and the customers did not get such bargains as was supposed. True, these stores did sell 'llies at 12c., whereas the regular trade charged 20c., but a proportionate difference existed. For violets, they charged 20c. a bunch, while retail florists' stores only charged a dollar, so there was but a small difference. The same was the case with all the other goods there was but a slight difference, the same as regards tulips, etc. A noticeable feature in all these stores, is that they are taking in the major ty of cases, new as buyers of cut flowers or plants, and such being the case, these stores are bound to do more in the light of a benefit to a congested market, and to growers, who would otherwise be suffering.

Stiegel Cooper, considering this was their first season, did a large business, and if they only had effort enough to stick to their little doubts but what they will be large factors in future trade. A manufacturer who sells the flower and plant trade slightly, and say that next year they will be in it in a big way. It is a pity ever in Brooklyn similar conditions exist. This competition, had a greater effect, however, on the flower trade than the trade in this city in New York. Other contending factors in New York city are the florists, who sell in large quantities, whose patronage in the fashionable quarters was larger, and the increased cut flower trade by the wholesale and basement stores, and who carried this year a nice assortment of plants, which were sold out readily.

## The Vote on the New Tariff

As It Affects Florists, Seedsmen and Nurserymen.

Canor compels us to state openly that the voting on the three paragraphs which principally affect the above industries was disappointing, the returns coming in slowly, and representing but a small percentage of the sum total of the individuals concerned.

For this seemingly apathetic stand on a question of this importance we feel unable to account, and that the Exchanges generally have taken it for granted that Congress and the Senate would do as they pleased in the matter—whichever conclusion would be wrong, for an open expression of opinion on the part of men always known as intelligent and progressive, and carries weight in legislation. It is to be regretted that at least 100,000 of our people, or as a subscriber very aptly put it, "You should have printed the coupon on a separate sheet of paper; no one likes to spot his number on the FLORESTERS EXCHANGE." The fact is, however, that the Exchanges are plain, and probably this fact did prevent a number from voting. At the same time, the postal law requires that the coupon class matter would not allow such a slip to be inserted.

However, the results reached are interesting in that they show a startling difference of opinion to be existent, as follows: On paragraph 1 (No 225 in the Senate) the vote was 41 per cent. against 59 per cent. and 53 per cent. in favor of. On paragraph 2 (No 226 in the Senate) the vote was 41 per cent. against 59 per cent. in favor of.

A man of the business men representing the above extremes could only come to a agreement through a compromise which would reduce the amount of duty on all imports. The question is, will it result in a bill to be conjectured!

## The Government Seed Bureau.

There is a possibility that the Government Seed Bureau at Washington, which ex-Secretary Morton succeeded in abolishing, may be re-established by the present Secretary of Agriculture. Some time ago, in a special interview is reported to have given his opinion on this subject as follows:

"I think it very probable that a saving is being accomplished by the work done by seedsmen. But it is to be considered whether the seeds sent out are as reliable as those which are now being sent out. The Department, examined and tested by our experts, and put up under our own direct supervision. The fact is, that in this respect the system now enforced is not as good as the plan of having the work done by the Department."

If Secretary Wilson had made himself acquainted with the literature on the Free Seed Distribution, he would not, we feel confident, have spoken the words here attributed to him; and he had even given them for a moment, and his alleged statement would have been corrected.

It is useless to talk in the interstice of the utter worthlessness of the rubbish sent out to him; for it is a fact that the operation, or the means by which the various seeds were then tested; their value, or their quality, and the reliability of the seed. On the other hand, the firms who have supplied the seed under the new method of distribution, stand at the top of their profession—their names were known to the people—and it is not possible to conceive that they would do this without being sought to be furnished by an indiscriminate distribution of inferior quality goods. It is to be regretted that the Government could well be construed as an attack upon the integrity of our leading seedsmen, who, in the absence of these agencies, might, with justice, resent. In fact, it is the superior quality of the seeds now distributed, that have led to the injury done to the seed trade through this iniquitous and unbusinesslike interference with their industry by the Government. The fact that they rely on the seeds it receives free, and the necessity of this, is an incentive to the success of the purchase of others, and herein lies the injustice.

But ex-Secretary Wilson is earnest in his desire to help the farmers, truckers, and gardeners of the country in the manner in which the Government is endeavoring to do a distribution of free seeds, the present method to be preferred to the old one, both for the benefit of the farmer (as admitted by the Hon. Secretary himself), and the public well.

But by the honorable gentleman he is anxious to heap an additional odium on the whole free seed business and augment the disgrace of that farcical proceeding, in no better way could he accomplish this. Until such time as the stigma of paternalism, cast on the American public by those who are in power, is removed by the vote of the people, we have no other alternative, the Hon. Secretary of Agriculture may as well advise that the farmer is "left alone." We hope, however, the energies directed to the regulating of his affairs, may be directed to the betterment of our nation rather than the bringing it into into use of any of its defective and objectionable adjuncts.

## Springfield, Mass.

Easter Week was very good, but several wet days interfered with the volume of business. Flowers of all kinds were plentiful, and our orders were filled up within three days before Easter, and our consignments, which were a very short crop. They might have been wholesale at fancy prices, but past seasons' experience has proved that stored flowers at fancy prices would not do as well in money thrown away. Plant sales were about as usual—scales, lilies, hydrangeas, and other plants were sold to the plants sold. Prices were about the same as in years past. Churches didn't give much for church services and decorated for church services. The service was not decorated as well. Gals wore decorated dresses and had receptions on Tuesday, also Tuesday night. Several weddings are to follow.

Flowers are as plentiful as the week before Easter, judging from the supply offered. MARK AITKEN, of Aitken & Son, will be married in June. W. F. G.

## New York.

Easter Report.

For several holidays past there has been an interesting struggle for supremacy between cut flowers and plants. During the week of the Easter festival was renewed with greater vigor than ever before, on Saturday, also during the night and on Sunday, and the struggle was most stubborn, but continued. But by midday Sunday, the great struggle was over, and the plants were victorious in martial parlance, absolutely routed, plants having won a complete victory. And to the surprise of all the on-lookers, on that occasion will remain as such for a long time to come, for unquestionably, the buying and selling of plants is not so much changed; its education also is more complete than formerly, and it has learned to appreciate the fact that there is more value in a flowering plant than in a basket of cut-flowers, or a box of loose flowers; the first-named lasting so much longer. Even on Sunday morning—when baskets of cut-flowers formerly were the rule—this season the basket had to be made up of small flowering plants and ferns, thus showing how thorough and radical has been the change. This report should serve as a guide to growers, dealers and all concerned, and to their course accordingly for another season.

Looking for a cause for the changes that have taken place, the on-lookers of the exchange claims that all the fault lies with the cut flower growers, who, as they put it, are to be blamed for their own losses. They are a risky plant trade. First of all, only short while ago they (the stockpilers) were in the habit of storing up large quantities, as a substitute for the cut bloom, owing to the enormous, and, as they term it, unproductive, losses on the purchase of an article. That was the beginning, and in the meantime the public taste had grown for lower priced goods, and the results mentioned results. Furthermore, the same authorities say that it will only take a few more years, if the prices of plants are continued, till the cut flower business at holidays will be a thing of the past. For the past few years the prices of the plants they had to pay for good quality plants were so low, that they have referred to it as "a very low price," and it is no more, or more correctly, kept-over flowers, and the percentage of loss is very large. In the meantime, however, which they had ever before known. The fact is, that the plants are a very profitable use for store trade; and now that there are no baskets or cheap flower plants to be had, the public will have no place for it. Neither do the smaller stores or Greek stands need such. There is, therefore, no reason to be worried over, and that being so, the better class trade is injured, and all alike are losers.

But the selling season claim that they could have cleared out well and made good averages had it not been for an outbreak of inferior stock. Blue Jays, injured the sale of proper-colored flowers, and 80 per cent. for Beauty meant only a few more for the rest of the season. All blue ones were returned; and, unfortunately for some growers, there were some blue ones.

### Saturday's Trade.

Considerable guessing had been done during the week as to what quantity would be demanded, but up on Saturday, and in the meantime plan up on the market steadily. It was evident that the demand was for the best possible for their shippers. Retailers had begun to prepare also, so much so that on Saturday afternoon the boxes were filled to repletion with cut flowers for Saturday morning's trade.

The Saturday's trade at the Cut Flower Exchange, Thirty-fourth Street Ferry, and at the hour buyers were started for the city, and a heavy shower of downpour of rain. However, a large attendance was on hand, and business was done to the tune of \$100,000. If of good quality, were in demand, and the prices were well sustained—\$8, \$4, and \$2.

Florists maintained an average top figure of \$100,000 for the week, averaged 10c; other florists, however, were stuck the week, but little delay in retail trade there was to be noted. The demand for plants was in wretched condition. Roses were the only plants to be had. There had been to believe, and evidence of long keeping were apparent. And to this, the fact that the price of plants is so scarce of orders; still, prices were kept still, so speculators had nothing to do but

went around and made bids as to the possibility of buying roses at \$15 and \$20 per 1000, later.

Asparagus sales were made at \$30 and \$40 per 1000 on straight slip, after that, for the whole day until past midnight. The roses were from the market, ranging from 75c; a few fancy brought 12c each. Bride moved slowly as compared with the other flowers, averaging 3c to 7c, to wit: the latter averaged from 4c. to 8c. Jacqué, 4c. to 10c; hybrid, 3c. to 1c. and a few, and they brought 75c, as did a very limited number of Beauty, that figure being not so good as the other grades. The other prices varied considerably, but had the quality guaranteed, and they were also have been steadier, for Beauty was far from being plentiful. Meteor had a sale of all between 1c. and 12c, and Morgan were in slow demand and the quality was very inferior.

Carnations were very steady, and good prices were obtainable for special stock, varying from 3c. to 6c; 4c. and 5c. were the principal figures. Other stock ranged from 50c. to \$2.50 per 1000. Toward night there were more carnations on hand than could be readily disposed of, and they always good property.

Violets came in quantities, probably amounting to the aggregate to 1,000,000, some inferior blooms were sold in the morning at from 15c. to over 100. The good ones were maintained at from 60c. and 75c. to 41. After midnight and on Wednesday, the market for violets broke up, and prices were erratic; so that 75c. per 1000 would be about the average for good violets, instead of \$1 as was anticipated.

Lilies were steady at from 8c. to 10c., although some sales were made at over 10c. It was fortunate the supply was used up Saturday, for there was no Sunday market for them.

Valley was good property and realized from \$3 to \$8 for good No. 1. Narcissus were sold at \$1.00 per 1000. Tulips would not average more than \$1.50 and were in over-supply; a few good ones were sold.

Mignonette was a quantity, and no price can be quoted for it; quantities had and were very scarce.

Hydrangeas and asparagus sold no better than usual; perhaps on the whole not so well as in the previous week.

Cut Flower Trade This Week.

Monday and Tuesday were the best, although some of the large retail stores having to work off their surplus from Sunday, for hardly a sale was made for flowers. A good quantity on hand, either because they wanted it or so that Sunday's supply was not so good for the week. Wednesday, Thursday and Friday cleared up things a little better, but the market had not really been holding on to any such prices as were obtainable last week, although shipments were not at all heavy. Roses of the highest grades dropped considerably. Beauty falling to 25c., and extras of other stock to 3c. Meteor had a sale of all between 1c. and 12c, and prices were uncertain.

Carnations have come down with a thin skin, and the large figure—rose—superior grades have dropped to \$1, and the best of standard kinds can only command \$2.00 to \$2.50 per 1000. Jacqué well, and \$3 is possible for A. No. 1. No. 2 sells at \$7.50 to \$15 per 1000. No. 3 sells at \$7.50. No. 4 worth only \$1 to \$1.50. The shipments of violets have fallen off; prices vary from 25c. to 50c. per 1000.

Taken as a whole, this trade may be reported as excellent. The plant business has been held up, but the flower trade was disappointing. The large stock of plants laid in everywhere was being sold for less than it cost, but not the case they came in for show decoration, or were good enough for church use. The market in demand was not so weak as usual. Hydrangeas were of good quality, and only sold when aszeas were wanted. Meteor had a sale of all between 1c. and 12c, and prices were uncertain. Criméa roses were hardly sold fairly well; beasrs very well; pot roses excellent. Meteor had a sale of all between 1c. and 12c, and prices were uncertain. Criméa roses were hardly sold fairly well; beasrs very well; pot roses excellent. Meteor had a sale of all between 1c. and 12c, and prices were uncertain.

Faper trimmings were not so freely used as in some previous displays. Large tubs or boxes of plants were very popular, and very little trimming was done.

Among the retailers who had to secure cut flowers for their trade, Messrs. G. & Sons, Thosley, Bridgeman, The Rosary, Siebhard & Son, Hantz Brothers, P. Bechtel and W. C. Johnson.

Alex. McConnell is about again and was able to attend to his business personally during the Easter rush.

Auction Sales.

Business in this line for the week has been quiet, but during the Easter holiday, sales will take place on Wednesday. J. P. Cleary & Co. sold on Thursday over 500 lbs of raisins for \$1.50 per cwt., Co., England. The sale was fairly well attended, and several new commercial buyers were present. The whole sale averaged good. The kinds that realized the best figures, were those that can be sold in the largest quantities, as shown in the list in this particular, followed by Dendrobium formosum signatum.

Fire broke out on Monday in a barn adjoining the greenhouses of JAMES DEAK at Bay Ridge, but by prompt discovery and some bundling was prevented extending beyond the barn, the interior of which was damaged to a considerable extent.

An Important Law Suit.

The case of Thomas Devoy & Son versus the Florists' Exchange was called up in Poughkeepsie, on Wednesday last, before Judge Gaylor. Some trouble having arisen from the selection of a jury quite a number of the proposed jurors being objected to by the defence on account of their residence in the city. There were two counts against the Cut Flower Co., one for alleged breach of contract in that the defendants were said to have failed to make payments at the specified time. After the evidence had been read by the Court, before the jury was no case to go to the jury, and three it went out of Court, remarking that neither law nor contracts of the Florists' Exchange Court could be interpreted so fine. The plaintiff had shown that in a conversation with the defendant, the latter had said that official had informed the plaintiff his company was working up a selection of a jury which would be selected as soon as the accounts were completed; also that check books were to be sent to the plaintiff. The Court considered this settlement a reasonable one.

The second count was of a different nature; the Company was charged with failing to make just and proper returns for violets and other stock. The Court refused to endorse the file of the FLORISTS' EXCHANGE for the dates in question, the same journal being shown to the jury. The reports of the leading trade paper, whose market reports were reliable. It was proven that in the case of the stock of the florists' exchange had been shipped violets to the Company, upon several occasions he had received a check for the same, and that the same had been shipped; upon the same figures; that he also had received a higher average than that shown in the report of the florists' exchange.

One of the plaintiff's witnesses was unable to say that the trade price of \$1.50 per 1000 claimed was maintained, and admit that, owing to the perishable nature of the stock, that the same were taken at times in order to sell out. The defence rested their case without calling any other witnesses, and that they were able, or producing their books other than the average sheets then in use. The judge then called the witness of the florists' exchange, and the averages on the Company's sheets, which together with the testimony before him, was sufficient to establish the case, partly according to a system of averaging agreed on between the parties, had lived up to it. It is to be noted, that it was possible care in the sale of the goods. Here therefore also failed to present this count to the jury and it was thrown out.

St. Joseph, Mo.

Easter, with all its worry and bustle, is over, and the people are getting on their feet. It is always a day of much worry and excitement. Saturday was a beautiful day, and the market in demand was not so weak as usual. Hydrangeas were of good quality, and only sold when aszeas were wanted. Meteor had a sale of all between 1c. and 12c, and prices were uncertain. Criméa roses were hardly sold fairly well; beasrs very well; pot roses excellent. Meteor had a sale of all between 1c. and 12c, and prices were uncertain.

Fred. Krummy has about recovered from the shock he received in coming in contact with the florists' exchange. One florist filled up a number of meat shops, groceries, etc., with a lot of cheap cut flowers, and they were sold at very low rates. The result was a war on prices. A

florist, whose place of business almost adjoining that of a grocer who had his store window filled with plants, advertised them as "Easter flowers," and sold them at "special price," etc. They will think they got enough of the deal. Flowers and groceries and meat shops, and so forth, and we hope they will find it out to their own satisfaction.

## OPINIONS.

Insertion will be given in this column to all communications free from animus; but opinions expressed do not necessarily reflect our own.

## Experiment Stations as Exhibitors at Flower Shows.

Editor Florists' Exchange:

In your editorial in the issue of the 17th last, you certainly express your case with force and conviction. I only desire to add a few words to the effect that the Florists' Society will send a committee to Ithaca this year to examine our plantation. We should be very glad to have the Exchange send a representative at the same time; or, if it is not convenient for him to come then, we should be glad to have him drop in upon us at any time that will suit your convenience.

In respect to the poor stock plants which we sometimes receive, I have only to say that it seems to be probably the fault is rather one of over-propagation than of anything else. If you were to see some of the plants which come to us for sale, I am sure that you would appreciate the point which I tried to make. With every care we take to have all that we are able to get anything satisfactory from many plants which we receive, and some of them are never able to get to bloom. Of course we expect never to publish the results of such plants. Records of plants which are too poor to get worth while seem to be normal results, or of those which may be used and insufficient attention on our part, are not to be published. We have many experimental records running over several years, and they will always remain where they belong—on the shelves. Whenever we publish the results of any of our plants, we do so in a way that is at least normal in character, and will give a just and fair idea of what the variety is.

L. H. DALLY.

## Seedlings and Certificateds.

Editor Florists' Exchange:

The discussion in the columns of the EXCHANGE upon this question has aroused a great deal of interest and led to the expression of many and various opinions. There seems to be what may be called an uneasy feeling that something is wrong about the manner in which we are handling something that cannot be reasoned with.

In a general way, this condition is due to a determined departure by the officers of the Society from the usual practice of the members, from the original purpose of the Society, and from its constitution and by-laws, as made at its public meetings.

The organization of the Society is based upon the "Report of Committee on Resolutions," made at the first meeting held by Philadelphia. This committee comprised the then officers of the Society—Messrs. Leonard, Wilcox, Gray, W. W. Ward and C. J. Pennock, to whom was added Mr. Wm. Scott.

The committee reported that one of the objects of the Society should be, "To stimulate the growing of new seedlings and to award valuable prizes." And the manner in which this object should be accomplished was set forth in the following recommendation:

"To exhibit new varieties to a local committee of practical and successful (in certain growers, to be located in different sections of the country) to be named by the Executive Committee and approved by the president."

It is to be noted that the practical method of getting at the merits of new varieties recommended by five men who, it is not irrelevant to state, were all of the best, is a question as any five in America. And it was understood that the action of the Society should be governed by this recommendation. It is hardly necessary to add that it has been totally ignored.

It is to be noted that the snap judgments by a committee of judges sprung up by the Society at the last meeting, in violation of the original letter of the constitution, which requires that, in passing upon same, and in awarding certificates of merit, medals, prizes and other commendations, the committee of three, to be annually elected by the members of the Society.

Section 10 of the by-laws requires that all officers or committees shall be elected or appointed on last season—the last being before adjournment.

If the committee of judges was elected, which is required by the constitution and by law, it would be a committee of which the members thereof might have been chosen to inspect and to judge actually growing plants, and to bring to their final judgment at the end of the year the merits of the plants, and to render their decisions of some value; whereas now, as we know from long experience, these decisions are rendered, not less for legitimate commercial purposes, though they may have a decided value as incentives and inducements to the grower. Upon that question there is likely to be a decided difference of opinion between the same judges, and the committee of judges at the end of the year and the unfortunate who have grasped the hot end.

It is to be noted that the discussion is the commercial value of the certificates granted by the Society, and incidentally, the value of the Society to the trade. It must not be forgotten that this is a purely commercial question, and the real difficulty consists in attempting to graft a distinctly amateur bud upon a commercial stock. This will not do. This holding of exhibitions, providing a scale of points, giving certificates of merit to the growers, and awarding prizes, and has no legitimate place in commerce. Commercially, we do not care a little bit for the value of the certificates of merit, but one question for the man who grows carnations for a living is to ask in regard to the value of the certificates of merit: "Do you get any more for your grower?" And no three men on the face of the earth can decide that question from the value of the certificates of merit. Awards made under such circumstances are not only worthless, but worse than worthless, and they do not seem to do what we do not understand the situation and are, largely only to be disappointed in the end.

The proprietors of the seedling raiser, the florists, will not be surprised if you started in the article upon page 234 (March 6) of the EXCHANGE, which seems to me to be a very good one. You had better refer to it and read it again. Here is a brief quotation from it: "The commercial value of the certificates of merit which they can sell every time, and the retail buyer, the ultimate consumer, cares nothing for the certificates of merit conferred. It pleases his fancy and that is sufficient. It covers the whole ground."

What is the reason that commercial growers cannot or will not understand the significance of the certificates of merit (as the same law as every other business)? It must be, as the great Mulvaney says, "on account of the commercial conditions of the world."

What do other manufacturers and business men act when they have something that they wish the public to buy? We all know that the answer is, "to advertise." Why would they never think of doing it to sell to a society with others who have the same thing, and point judges and proceed to give each other certificates of merit. This whole question of awards is so indolently understood by the members of the Society that I wonder that the humorous side of it has not struck the members with the force of its final banishment from the society.

It is a law of business that every man who has a thing to sell should go to his own hand. The idea of asking a prospective customer to pay a yearly fee and then to have the thing to sell made up to his own expense, in order to examine the goods he is asked to buy, would never occur to any man in business.

It is the business of every raiser of seedlings to introduce his wares as best he can and to let his own merits speak for themselves to prove all his statements and to force his goods upon the market. The fact that he has demonstrated superiority, properly so called, is a manufacturer of a new grade of shoes or a new brand of clothing, and he will refuse to buy any varieties except those introduced in this manner there would be an end of the matter. It is the business of seedling raisers to get seedlings and rooted cuttings.

During the season of 1897-7 there was a great deal of talk about the increasing stream of useless stuff which was being introduced into the market, and held at the Boston Flower Market for a ready solution of the problem. Every one who had a thing to sell was asked to come and bring a sample of his goods. They came in goodly numbers and the committee of judges was asked to select the best. The committee of judges has the proper combination—buyers and sellers together, the buyers inspecting the goods and the sellers making their own judgment, aided by such information as the sellers could give them. This is business, and it is the only way in which, at the meetings of the Carnation Society everybody is turned out of the exhibition

hall but the judges, who make as careful guesses as they can at the absolute or relative value of the goods, are not aided by any information from the grower. This is foolishness and very poor business. The Boston idea originated with the New England Florists' and was carried out in its entirety. It is so foolish that it will become a permanent institution. Although it is a very foolish thing to do, it is really an attempt to save time and trouble and facilitate business by bringing together all the goods of every city in a possible number of buyers and sellers. It was a perfect success. It would be a good thing to do in every city in the country. Any enterprising wholesale dealer with a big shop would be glad to furnish out the same plan in every city in the country. But in mind that that comes together in this manner is exactly what both seller and buyer want, so there will be no difficulty about it. And it is also to be remembered that exhibiting in this manner in different places is attended with considerable expense to the sellers, and this expense is not exactly to be incurred except by the owners of commercial varieties of genuine merit. The offering of "merit" to the growers, as they might be called, is objectionable because it involves the selecting of judges and the value of the certificates of merit, and a scale of points, and that is exactly what we do not want.

Mr. Ward's very neatly answered the question who is the best judge of a new seedling by giving the history of his No. 54. Mr. Hill has paid the seedling raisers a very high price for the seedlings which they are less able to decide the merits of than the judges of the Society for a few minutes' inspection.

LOTHROP WIGHT.

Editor Florists' Exchange:

I should like, if not trespassing too much upon your space, to have you send me a few lines in reply to Mr. Ward's article in the issue of April 17, in which he peremptorily declines to award any prize which was competitive in the sense (by implication) that a seedling was brought in competition with the other varieties. He specifically stated in a previous article that he would award prizes to the fifteen standard varieties of the same class as the candidates for certificates.

It is to be noted that in the case, wherein Mr. Ward makes the seedling score 84 points in Cincinnati, by changing the judges score of 54 in issue April 8 that sale for any comment, excepting that its claim for excellence seems to be entirely upon its merits. It is to be noted that the judges do not take any pleasure. It might be further noted that in the case of the variety in which Mr. Ward was the judge, the judges found themselves unable to consent to award a prize of 84 points to a gentleman who was to have been the judge, but who was unable to serve, was called upon to make a final decision of judges' own verdict, was asked to scale the variety. He scored it below the indicated figure and refused to be awarded are not up to present day requirements. Further comment upon this appears unnecessary.

Again, I would call Mr. Ward's attention to certain premiums offered by the Cottage Garden Co., New York, an establishment of which Mr. Ward is the owner. Among other conditions are the following: "To award a prize of \$100.00 for a seedling which in the opinion of the jury is not at least equal to existing best varieties." It is to be noted that the "competition"—to which Mr. Ward objects in the body of his argument in issue of April 17, is a competition in which he is in his position practically and his ground completely.

It is to be noted that Mr. Ward makes an assertion that Mr. Ward makes as a fact for consideration, and that is that flower buyers do not buy by a scale of points, but by a scale of merit, and that the flower buyers themselves. Why do the flower buyers then?

between the two. There are eight applications in the scale of the American Carnation Society, and they are, namely, calyx, stem, substance, form, fragrance and plant. It is to be noted that the flower buyers do not buy by a scale of merit, but by a scale of value. They immediately jumps to the conclusion that they are old and refuses them. If the stem is what you are writing, or what makes them bang their heads so? If the substance is not good there is a possibility that the flower buyers will buy the same for use, while fragrance adds considerably to the salability of the article. Form, to some extent, is a technical demand that the average buyer does not take so much notice of unless the lack is excessive, yet it must be considered in the scale in order to bar obvious freaks. Upon the final point, the plant, there can hardly be room for discussion. The cut flower grower is directly and vitally concerned in this matter. It is to be noted that the flower buyers will see that they do not waste of time. Upon the other point, said before, the flower buyer and scale of points are in the same position.

There might be some way devised requiring the exhibition of a separate lot of any running seedling, which lot might be required to be exhibited a day or two in advance of the general opening and to remain upon exhibition during the judging, without alteration in any way. The scale of points might be altered entirely if the flower buyers do not wish to award under this head, which might possibly be classified as durability (apart from given points) and have a tendency to handicap overestimated flowers and give unluckily fair average lots a living chance. It is to be noted that the judges must score rigidly by the scale of points, as the flowers are placed before any running seedling, which lot might allow them the right of passing judgment upon the process of growth solely because of the fact that they are not of such high quality, judged by the requirements of the scale.

Baltimore.

Easter Trade. The stock and the weather were favorable for a good Easter trade, and from all quarters, everywhere is satisfied with the business done. All the stores were beautifully decorated, and the window displays of flowers were very attractive. Prices realized were somewhat lower than in previous years. The dollar plant was much in vogue. Asparagus sold very well indeed; bulbous stock was a little soft with some, but taken all in all, was never better.

Cut flowers were in big demand. Roses and carnations led, after which bulbous stock and other flowers were in demand. Poor. In the majority of cases, it would have been better had they not been placed on sale.

JAMES PENTLAND is getting ready for selling his stock at auction. EDWIN A. SEIDWITZ.

Good-natured rivalry was shown in the store decorations this Easter, and is partly responsible for the good business done. E. A. Seidwitz being in the van with a pretty representation of the Brooklyn Bridge in the foreground; the background was well arranged with flowering stock, of which a heavy line was displayed to great advantage in his new showhouse.

P. PEASE & SONS made a rich and effect show in which some finely grown roses and azaleas played a prominent part. Anagnone was profusely used to advantage also. Atlantium Farleyana. Both of the last-named are grown in large quantities at their houses on the Frederick Road. I noticed particularly, some well grown medium-sized plants of metrorhiza and Stapfleya colchica. These sold at eight.

W. J. HALLIDAY made an exceedingly artistic display—the front of the store was painted a lavender blue. In one window the center piece was formed with flats of bicyanthus Carl Peter, backed with lilies, with ribbon to match. The other window had center piece formed with a daffodil—similarly arranged; it made a lovely picture.

Mrs. M. J. THOMAS windows were representative with handsome Beauty and lilies, arranged in fine large vases.

HALLIDAY BROS. made a fine display of bulbous stock, well-grown and nicely arranged.

In its issue of the 13th, the Baltimore News contained nearly a column of very interesting information regarding Easter, and the most desirable plants and flowers for that festive occasion. Doubtless, such information at such times is beneficial all around. W. M.

Davenport, Iowa.

The Easter trade here was reduced considerably, at least 25 per cent. Owing to the long continued cloudy weather, roses and carnations were not equal to former years in abundance, but mostly short stemmed, and Bride's-maid was fair. Some fine Bride were shown; and some of the La France were good. Belle Siebrecht was good; this rose is coming more into favor; brings fine buds, rich foliage and stiff stems. Carnations were plenty, but very much spilt. Bulbous stock sold fairly well, and all offered was well grown and of extra fine quality.

Plants sold well, especially Harrall, which were in fine condition. The bulk of the trade in this line consisted chiefly in plants, which sold at from 25c. to 50c. each. Some fine azaleas were offered and taken at 15c. and 20c. American Beauty, \$1.50 to \$1.75 per dozen; Bride, Bride-maid, La France, Belle Siebrecht, K. Augusta Victoria, 75c. to \$1; carnations, 40c. to 50c.; Van Sten, 50c.; Roumans, 50c.; tallies, 50c.; valley, 40c. per dozen, the latter selling the poorest of all the bulb stock.

Easter trade was slightly better than in 1896, white and yellow roses being in greatest demand. In plants, the call was for azaleas, Harrall and callas. Prices both on cut flowers and plants ran about the same as last year. Two-year-old spruce fuchsias, grown in tree form with stems three feet in length and full of bloom, sold at good figures.

Tiffin, O.

The Economist of this city, of April 1st last, gives a very interesting account of the establishment of LEWIS ULRICH, together with a photograph of the proprietor. Mr. Ulrich has been in business 22 years and has now 14 houses devoted to a general run of stock. He is particularly interested in the carnation.

Simplicity in Greenhouse Construction.

During our long experience we have not only made many improvements in greenhouses, but we have so simplified the construction that building a greenhouse is no longer a matter so full of complications as to tax the patience and the ingenuity of even the most intelligent mechanic. Our

Clear Cypress Building Material

is worked out in the best manner ready to be put up, and we furnish our customers such complete detail drawings that any workman of only ordinary capabilities can put it up correctly.

Modern Greenhouse Heating.

One of our boilers, 10,880 feet of two inch pipe, and six tons of coal will heat 23,400 feet of glass (four 20x200 feet double glass houses) to 65 degrees in coldest winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "Afrabrig" direct surface, are the easiest cleaned, handled and set up, and from manufacturing facts, they are the ideal frictionless, economical water heating boilers of our day.

 Easter Edition.  
 It is a long time since the wholesale florists have had such a busy week in the middle of April as the past, with a crop of roses including the big flower show in the City Hall.  
 But for the fact that flowers enough could not be had, trade would have gone away ahead of any other Easter.  
 In roses, perhaps a normal supply for the season was on hand, but there did not begin to be enough to fill all orders, hence the close of the week saw a shortage, and prices fully up to those listed, without any further change at a break at the close, or on the Saturday morning.  
 But in carnations there was surely a considerable shortage; at Kennicott's not more than 50 per cent. of last year's supply, it is claimed, was on hand. Others fared similarly.  
 The list has always had the proviso "subject to change without notice" was much in evidence, and prices on general account on Saturday morning ran \$1.85—and what \$1.75 to strictly fancy there was went at \$5 to \$6.

In lilies, taking the whole week, prices scarcely maintained quotations, and until Saturday a good many were disposed of at \$1.75, feeling a heavier supply than the market would warrant; but the end finally saw a decline, and to be had a pretty good average for this class of stock. Callas were in fair supply for the season, and prices for these ruled with those for Harlell.  
 Violets also sold well at about 75c; there being probably a full supply, the season here being late.  
 All kinds of bulbous material cleared out fairly, anything worthy the name of a flower sold.  
 Easter, looked at from a wholesaler's point of view, but for a shortage of supplies this year, from a monetary standpoint, would have been a record breaker; as it would, to have held one's own would be doing well.

Among Retailers.  
 Trade with the majority, more particularly counting the whole week, was satisfactory; taking Easter alone, and for a general average of all classes of stock, there was no advance over other years. Church decorations are not what they used to be; and as one told the writer who quoted the trade fair, there is a very large number of small estates, with no cheap way to help out. The florists' business in poorer neighborhoods; indeed, we heard of one right in the central part of the city, who had been offering his wares to wholesale men to re-sell, the weather Friday being unpropitious interfering with progress.  
 Plants seemed to have been cleared off in pretty good shape, some azaleas being still in bloom. There is one thing about this plant business in this city; they are too much hooked upon as a by-product, and as a rule, are not being done when they leave the growers' hands, being too often placed in dirty pots, poorly dried, and in a generally looking over the plant trade becomes a big feature, there must be a change here, for a very large percentage of prices would rule, for surely 10c retail for a good hyacinth, primula, and the like, grown in 4 inch pots, leaves a rather small margin for the grower, especially, as is often the case, when considerable quantities are sold.  
 For the coming week prices will probably remain fair, roses, \$4 to \$5; carnations, \$2 and \$3; at writing from here have experienced nights. The season is much later than last year, and seedmen are generally of slow sale, made as yet.

The Coasch Flower Show.  
 Chicago has had its Spring Flower Show in the Common Council Chamber since we were on the rise of the new Mayor, Carter H. Harrison, and council members taking their seats. As anticipated a splendid success, from previous efforts, and money flowed into the pockets of the florists. There is little doubt but \$5,000 worth was on the place, and the amount was paid for the pieces, many of which could not be gotten into the richer small flower chaser, but were placed on the outside. There was no end of baskets,

**Stationery for Florists.**

Every florist in the land should have a complete supply of printed matter wherewith to conduct his business in style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

**\$5.00** Combination offer includes....

- 250 Noteheads, 55c/250 list.
  - 250 Envelopes, size 6x7.
  - 250 Business Cards, 25c/250 list.
  - 250 Tags, size 2 1/2x3 1/2 list.
- Cash with order. Delivered F. O. B., N. Y.

**\$10.00** Combination offer includes....

- 500 Noteheads, 55c/500 list.
  - 500 Envelopes, size 6x7.
  - 500 1 1/2x4 1/2, 7 line, wide, 55c list, dep.
  - 500 2 1/2x3 1/2, 8 line, wide, 55c list, dep.
  - 500 Business Cards, 25c/250 list.
  - 500 Tags, size 2 1/2x3 1/2 list.
  - One Day Book. If these are not wanted One Ledger. subtract \$1.50.
- Cash with order. Delivered F. O. B., N. Y.

**PLEASE READ THIS BEFORE YOU ORDER.**  
 Write plainly and send "copy" for each article wanted.

Noteheads will be ruled in smooth writing paper with finished lines. Linnen paper, ruled or unruled, can be had instead if so ordered.  
 Envelopes are full commercial size and of good quality.

Billsheets will be furnished as above, but size 4 1/2x7 1/2. If you desire deep will be substituted when so ordered.  
 Cards are of good quality and ample proportions.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 30 accounts.

Special designs, trade marks, etc., engraved for a Rose, violet, or other flower will be printed on your letterheads and billsheets if you so order.  
 The quality of all the above work is guaranteed.

We can forward any of these combination offers with advantage to the purchaser, but it will not pay from a distance to order a single item on account of the express charges.  
 Address all orders to  
**A. T. DE LA MAR PRTG. AND PUB. CO. Ltd.**  
 P. O. Box 1876, New York, C.

Cut Strigs, 8 to 10 feet long, 50 cts. each.  
 The best and strongest BEST BE FRESH, NOT OLD DRIED UP STEEP. You can get the best of it - A Scotchman, 61 Madison Ave., N. Y.

bunches and bouquets of American Beauty roses and other flowers, as well as the regulation horse shoes, harps, lyres, stars, eagles, wreaths, crowns, pillows, ships of state, full rigged brig, tugs with the suggestion of "pull" coats of arms, bonnets, scrolls, banners, big foot balls for the center rub, etc. A Bismekitt got an eagle framed in large mirror. Several amateur photographers, with a camera and photograph of the owner, others got a hat, liberty bell, a full-sized chair, record book for the clerk, with his majority and date of victory. The smallest man got a ladder of fame; one a rainbow of hope, great horns of plenty, a bicycle with a single perch on the seat, eagles to scream and roosters to crow. There was an immense column 12 feet in height, a 7 foot cannon, an umbrella, and last but not least, a bust, representing Chicago with its Columbian motto "I will," done in leather across the breast.  
 A large number of florists in all parts of the city shared in the work.

**Armed Town.** LANE, an amateur florist, who had the distinction of being the first in this city to grow single stem chrysanthemums and obtain premiums for same, when the Florists' Club used to hold its flower shows, was aged 73 years, from heart failure. He was an early member of the S. A. F.  
 Goe to the War.

Theodore Callas and George Harris, prominent florists here for years, and running an well a \$30 a month stand in a dry goods store, leave on Friday for Greece. W. E. Lynch takes the lease of stand for disposal.

J. Austin Shaw, representing Siebrecht & Son, New York, has secured the right of the city this year.

**Nashville.**  
 Easter trade was about the same as last year. Roses and carnations sold best. Lilies took the lead in plants; \$2.00 wire, for roses, \$1.00 to \$1.25 per dozen; carnations, 50c per dozen; cut lilies, \$1.50 to \$2; lily, 50c; hyacinths, 25c; carnations sold at \$1 to 3 each; lilies, 50c to \$1.50 each; scintillas, in 6 inch pots, \$1; hyacinths, 25c. Cincinnati specimens went at \$1 each; roses in pots, 50c. to \$1. There was a good call for palms in 5 or 6 inch pots. We had nothing in the way of a novelty.

W. C. KRICK, 1287 Broadway, Brooklyn, N.Y.  
WHEN WRITING MENTION THE FLOWERS' EXCHANGE

Brooklyn, N. Y.  
Cut lilies sold well for 15c. straight; the demand for violets exceeded last year's. Roses, carnations, tulips, and daffodils were in good demand. The call for fancy carnations was also good, but prices were lower than last year's.  
In plants, azaleas, lilies, hydrangea in pen, also two or three in a pot, sold well. Hydrangeas are not much in requisition. While trade was good, it was not quite up to last year.

M. T. KERANS made his usual Easter display, which surpassed all his previous efforts in this direction, and that means a good deal. The window decoration was a beautiful piece of art work with large aquarium in the center, filled with rare and beautiful fishes, surmounted with pots of Ficusyena ferns in handsome jars. A monstrous bunch of lilies in one corner was reflected by the mirror panels, as also were very handsome azaleas, ferns, and sphinxes. The view of the store and greenhouses from the front was exquisite, the arrangement of plants and colors being in splendid taste. All kinds of reasonable stock were embraced in the display, which was visited by thousands of people.

Lowell, Mass.  
The volume of trade was larger than last Easter. Lilies, roses, carnations, violets, tulips, daffodils, sphinx sold in the order named. Prices for lilies were 25c; \$3.25 per dozen; carnations, \$2.25 per dozen. In roses, Brunner, \$3; Meteor, \$2.25; Bride and Bridegroom, \$1.75; Winton, \$1.50; carnations, 60c; 75c, and 81c per dozen; violets, 15c; 20c; 25c; carnations, tulips, daffodils and sphinxes, 75c. per dozen. Prices were about the same as last year's.  
Lilies in pots sold at 30c. per flower and bud, and were cleaned out. Azaleas sold well at \$1. to \$1.50; also geraniums at 10c. and in 4 inch pots; hydrangea 15c., and geraniacs at 25c. each.

### HARDY POMPON CHRYSANTHEMUMS.

These Chrysanthemoms, though in no way new, have not received in past years the attention they deserve, especially for planting in private gardens, where many of the large-flowered varieties do not mature their flowers before the cold weather sets in. We have made extensive trials, securing the best that could be found in Europe, Japan and this country, and offer them at **\$3 Per 100.**

### INTRODUCTIONS OF 1896.

Alonzo, Henry Hurrell, Indiana, Infatuation, Lenawee, Marion Cleveland, Miss L. Magee, Modesto, Mrs. Harry Turrel, Mrs. H. H. Batties, Mrs. Perrin, Mrs. Wm. C. Egan, Mrs. W. P. Raynor, Nanshan, Pluto, Riverdale, Tacoma. **\$3 Per 100.**

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**A. POINTER AND PROFIT**

Every Florist is Looking for the Above Firm.

**HOW TO FIND THEM:**

Do not hustle all of your Gladiolus Bulbs into the ground early in the season and cut all your bulbs in August. Plant at intervals of two weeks, reserving a good proportion until the last of May and June. Planted late they will come into bloom in the full of early Autumn, producing the finest spikes at a season when flowers are scarce and sell readily. We can still supply a few thousand H. G. Seedlings at

**\$8.00 per 1000; 2d size, \$5.00 per 1000.**

Beautiful light colors. Nothing better.

N. B.—If you are not in a hurry for your order, have them come by freight when ordered in quantities of a thousand or more.

CASH WITH ORDER.

**SEED TRADE REPORT.**

Points and information from seedsmen, and all interested in the seed trade. A detailed account of the situation in the seed trade, once of FLORISTS' EXCHANGE, P. O. Box 1097, New York.

To Regulate the Importation and Sale of Agricultural Seeds.—H. R. 2232, a bill to regulate the importation and sale of agricultural seeds, the best of which is the bill introduced by H. R. 1039, known as the Cook Bill (for text see page 87 issue of EXCHANGE for January 30 last), was introduced into the House by Mr. Davidson April 10, and has been referred to the Committee on Agriculture, and ordered to be printed.

The iniquitous and absurd nature of the Cook Bill—now the Davidson Bill—in its present form was very clearly pointed out in an article printed on page 88, January 27, and page 172, February 20, issues of the EXCHANGE, to which we respectfully refer all interested.

Seedsmen should use their every effort to either have the bill recalled altogether, or its most objectionable features, and they are numerous, retained and removed, or to carry out its provisions as they now stand will, as was previously pointed out, cost the seedsmen many thousands of dollars, which must eventually come out of the purchaser's pocket, without any benefit whatever to be derived therefrom.

Naples, Italy.—C. Sprenger has withdrawn from the firm of Dannmann & Co., Inc., and has become a partner in a partnership and technical manager, and has established himself as a "landscape gardener, gardenist, and florist." San Giovanni a Teduccio, near this city.

**European Notes.**

Holland Bulb Crops.

At the middle of April our stems naturally turn up for many persons a glimpse of the bracinthe and tulips, and to form some idea of the prospects of the coming season. The weather is very promising and is prospering. The weather has been cool throughout, the development has been continuous and solid, and the arrangements of the present Spring are not likely to be repeated next year. Seldom have the parks and gardens here presented such an unsatisfactory appearance. Hyacinth spikes are, in many cases, weak and slender; tulips have bloomed most irregularly, and in some cases, not at all. The prolonged drought of 1896 is responsible for all the enormous numbers now annually produced enable even the least important growers to send out only first-size bulbs.

Unless some extraordinary demand sets in, the probabilities are that prices will be altogether in favor of buyers. This is more especially the case in regard to tulips.

The French Bulb Crop.

French bulbs are making equally satisfactory progress. Roman hyacinths are little more than buds, but both cheap and good. The early varieties of narcissus may be a shade higher, as the acreage in culture is much less than for the past three years. In England the narcissus craze has, thanks to a strong infestation of the insect element, taken a new lease of its life. The number of new forms lately exhibited has made the list of these lovely flowers almost lengthy and bewildering as the list of sweet peas. Having apparently reached the limit of size in N. Ellen White, the efforts of hybridizers are directed to the development of a pure scarlet-colored cup, on the one hand, and a pure white trumpet variety on the other. Beacon and Red Prince (English) fairly fill the bill for the present, as the same raiser has, with Snowdrop, brought us within measurable distance of the other.

As regards seeds, there is very little that has to report. The week closed with a degree of frost, and the young plants and shoots have suffered very much. Western France still suffers from heavy rains, but it is much dryer in England.

EUROPEAN SEEDS.

**Eshbilions.**

North Indiana Horticultural Society.—The second annual flower show of this Society will be held at Fort Wayne, November 3 to 5 inclusive. The preliminary program has been issued, and copies of same may be had of Secretary John A. Hauns, 402 Broadway, Fort Wayne, Ind.

**THE EXPERIMENT STATIONS.**

A CHILDREN'S GARDEN.—The Cornell (N. Y.) Agricultural Experiment Station is issuing a series of Teacher's Leaflets, for use in the rural schools. No. 4, by Professor Bailey, bears the above title; it is written in simple and interesting language, and gives instructions on how to make beds, how to water plants, when and how to sow, selection of varieties; the subjects the children are asked to grow being asters and sweet peas, and a list of the best varieties of the latter is provided. The professor says: "We should like some rivalry in the matter in every school, and we therefore propose that a kind of fair be held at the schoolhouse next September, so that each child may show the flowers grown by it." Children, and grown up people, cannot fail to be benefited by such a highly commendable course.

**Savannah, Ga.**

Easter trade in Savannah is not what it is with our more fortunate florists in the East and West—a day to which they look forward for months in the expectation of swelling their bank accounts. The florists in Savannah are satisfied if they sell out his Easter plants, such as lilies and sprays, at a figure whereat the northern retailer would laugh. Extra selected Louisiana roses brought \$1.50; regular stock, \$1 per dozen; lilies in pots sold at 20c a bud, and these were the only plants of which the florists did run short. Owing to the lateness of Easter, flowers in the open air were plentiful.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**TEN DEGREES BELOW ZERO**

is the temperature that has been undergone with this variety by masses of forcing plants of the new climbing rose.

**AGLAIA or YELLOW RAMBLER**

in our nurseries the past Winter, this proving it to be even harder than we had supposed.  
 A **Harvey Yellow Climbing Rose** is what everyone has wanted for years and Aglaila is, therefore, an immensely important introduction.  
**150 Blossoms in a Bunch**—This rose is introduced by the Yellow Rambler, for it has the same manner of blooming in its solidly thick clusters as does the Crimson Rambler to which it is a splendid companion. The color is a rich yellow, the flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well established plants making shoots eight to ten feet high in a season.

We are the introducers of this rose in this country, having been so supplied by Mr. Peter Lambert, the originator. We are also prepared to order plants of two other valuable climbing roses:

**EUPHROSYNE or PINK RAMBLER**  
 Color a clear light red; otherwise very similar to Aglaila.

**THALIA or WHITE RAMBLER**  
 Pure white; some size and habit as Aglaila.

**WE WANT EVERY FLORIST**  
 To order these roses from us. One-tenth and to everyone who will do so, according to demand upon us for his supply of plants.

**WE WILL SEND FREE OF CHARGE**  
 a beautiful color-plate plate illustrating the Aglaila, together with 100 handsome descriptive circulars with name and address stamped upon them. Send one.

Price for strong plants in 2 1/2 inch pots, \$15.00 per 100. Send for our Trade Lists of other Roses and General Stock.

**GLADIOLUS BRENCHLEYENSIS**, bright scarlet. Price per 1000, \$6.00. By the case of 4000, per 1000, \$5.00.  
**CYCAS REVOLUTA**, fine stems, only a few left. 6-12, 12-24, 24-36 inches.  
 Also **Gloxinias, Begonias, Dahlias**, etc., and other Bulbs and Roots for Summer Planting.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**ROSES.**

*Mildew.*

In my previous notes I mentioned how troublesome mildew became at this time of the year, when we get so many sudden changes in the weather. To keep things in a healthy and lustrous form that will ward off this disease, one must almost continually be in the house watching ventilation. Again, the temperature will run so high outdoors now and then at night that we feel like letting our fires out. I mentioned before that it was best to leave quite a little air on with one pipe around, as this gives a good circulation and dispenses with condensation on the foliage. If the latter occurs two or three times in succession it is almost certain to cause great damage by the yellow foliage drooping and the tender shoots at the tips turning black. The best growing conditions most favorable for mildew and other kindred diseases.

I have heard not of a few boast of their economy in saving fuel; they haven't had a fire for so long a time, etc. That's all right at the proper time. I am positive others will join me in saying that roses cannot be properly grown in this way. For myself, I don't care if it's the 4th of July, if the temperature drops below 55 degrees night I have the fire started. I don't wish to give the impression that drug should be done every day in the year, but fire should be always laid and ready to be started at any minute in the day or night, as occasion requires.

A chilly, moist atmosphere has been noticed. I return to mildew. I have already stated the best method I have found to prevent it—the use of sulphur as soon as the least indication of the trouble appears. Quite a number of bad cases of mildew are recently come under my notice, in very ystinate cases, such as occur with Hoop and Bride, that sometimes arise from high and cold, and a stagnant atmosphere, causing the foliage to curl up and rendering flowers unsalable. I would advise, if the flowers are needed from these plants up to the middle of June or so, to spray on bright days with the ammoniacal solution of copper. There is, in my mind, no question but this is the last resort, and a good one. After being cured the plants should be carefully looked after.

Here is the formula for those who would like to experiment: one pound sulphate of copper in three quarts of strong ammonia; use one pint to a barrel of water, or where a smaller quantity is needed at a time, it should be borne in mind the mixture soon loses its strength if not kept airtight, and spray very freely. After two or three applications it will show the average result. I find it best to keep the solution in a glass bottle with stopper, as it will soon eat through any earthenware vessels and turn black.

R. H.

# E. G. HILL & CO., RICHMOND, IND.

**YOUNG CYCLAMENS** from the finest English prize strain  
In color to name, from 2 inch pots, \$4.00 per 100.

Strong young plants of **HYDRANGEA** Otaka and Ramis Picta.  
\$3.00 and \$4.00 per 100, according to size.

**THE NEW DAISY** Madam Graellert. Every florist should  
have a stock of this fine plant. \$4.00 per 100.

**THE FRENCH DAISY** Madam Farfeillon. Try a dozen of  
this; only 50 cts. per doz.

**CHRYSANTHEMUMS** by the 100 or 1000. Just the kinds  
every florist desires for cut flower purposes. Bergmann, Fitz-  
gram, Marion Henderson, Modesto, Mrs. Perrin, Mrs. Murdoch,  
and every other good one in quantity. Price as low as any for  
good stock.

**IVY GERANIUMS.** Unquestionably the finest and best collection  
in the country. You should see them. 100 of these in 10 new  
varieties for \$6.00.

HACKENSACK, N. J.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## AUCTION SALE.

Being about to relinquish the growing of  
plants, I shall sell at public auction, without  
reserve, about the first week in May, of the  
date due notice will be given later, (unless dis-  
posed of at private sale) all my plants, which  
consist of the following varieties: About 6000  
choice boxes, one two and three years old, in  
splendid condition, all well up and ready for  
market and all from cold frames all winter,  
about 60 named kinds of the choicest varieties;  
3000 or more of the finest and best varieties of  
Camellia Japonica, about 75 named varieties  
and each plant named true, in 4, 5, 6 and 7  
inch pots, together with some hundreds of large  
plants in large pots; 200 or more Orchids of  
different kinds, some large plants of Den-  
drobium Nobile, Phajus, &c., &c., also  
about 500 Cypripedium, Isotria and others,  
grown in large flats, having had from 25 to 30  
flowers each many of them; in fact I refused  
\$50 for eleven of them last fall, the bloomers  
having paid a much larger interest than that  
value. There are 300 or more pairs of decorative  
purposes, consisting of Kentias, some large  
specimens Arca latissima, Vercchiaiifolia,  
Latana Borbonica, Hibiscus Flabelloformis, some  
over 6 feet high and more stems grand  
plants, Cocco Plumosa, 7 to 8 feet high,  
Fuchsia, Phoenix Rupicola, Holcimia and  
others, Indians Vitchell, &c., &c., 200 or more  
Ficus elastica, 18 in. to 3 feet, a large lot of  
Ferns of sorts and about 400 Ficus in 4, 5  
and 5 in. pots, 100 or more Aspidistra, large  
and small, 12 and more leaves and  
some variegated; a large lot of Azaleas suitable  
for large decorations, 2000 or more Geraniums  
in 4 in. pots of choice bedding kinds, 2000 Ger-  
aniums in 2 in. to 1000 can in pots, many  
coming in buds and in bloom, and a number  
of these seedlings as fine as the best, some pure  
yellow white and red and many others. Many  
Louisiana Violets, in 3 in. pots, ready for planting  
out and some in flats. Calladium bicoloratum  
in pots with leaves; 200 or more Agapanthus  
Plumosa Nana; 1000 Hothot Sash, 6 feet to-  
gether with thousands of miscellaneous plants  
too numerous to mention. All good salable  
plants.

## QUESTION BOX.

OPEN TO ALL . . . FREE TO ALL

Answers Solicited from Those Who Know.

(98) **Thrip on Outdoor Roses.**—Springs copiously with either clear water or soap-suds, applying all the force possible.

(99) **Early Dwarf Cosmos.**—I note in your paper advertisement of New Dwarf Early Flowering cosmos. I would like to have a copy of your catalogue as to how dwarf and early blooming their cosmos may be. In April, I have 16 plants running 9 to 15 inches in height. Ordinarily, the bloom begins in September. I have no seeds to sell, and only a limited number of plants, which are not for sale either. All of above were grown from seed out in open grounds. A. W. SMITH, Georgia.

(100) **Style of Greenhouse, Glazing Material, etc.**—M. T. G.—A three-quarter span-roofed house has the advantage of a seven span structure as it will suit almost any kind of plant, while the even span house is not suitable for all kinds of stock, as, for example, roses. Mastic is fully equal to the best putty. It can be used by any one, and the machine that is supplied with the material is a very simple one. There are several points of advantage offered for sale in our advertising columns.

Applied glass is perhaps the best for a beginner who is in a small way. You will find Professor Taft's book on the construction of green houses very interesting to you. Our publishers can supply it for \$1.50.

(101) **Diseased Carnations.**—Grimsby. **The Stair.**—The ones that have been thrown out, were affected with necrosis. I would not advise any one to throw out any plants affected with rust if such plants have been yielding a good crop, and it is needed for something else. When proper precautions are taken, rust will not matter the second year, and will appear again. Under these conditions it is repulsive appearance is the worst feature about it.

Your *Pyritan* is affected with what is generally known as bacteria. The plants have been kept in a dry, airy place. It has been allowed to dry out properly between waterings. Other causes will assist in getting a plant such as dark roots, wet bench, poor drainage, a close, moist atmosphere, etc.; the latter is usually the result of poor ventilation. Never spray the young plants with force, but allow the water to fall on them gently. Keep the plants reasonably dry without going to extremes, and the trouble will soon disappear. H. WEBER.

(102) **Tuberous-Rooted Begonias.**—H. T.—The roots of tuberous begonias should be started in the fall, and they may be planted readily from now on by placing them in shallow boxes and just covering with light soil. Place them in a warm, bright spot and dampen the soil several times a day. Pot up immediately the roots start.

As the way is to plant them in a cold frame about 12 inches from the glass; dampen this occasionally and keep close till growth starts, after which give more air.

From the frame they can either be potted up or planted out, according to the purpose for which they are intended. For pot culture good sound loam, with sand and a little well-rotted manure added, makes a suitable compost. Good drainage is essential. The house needs to be sweet and clean and well ventilated. Always storing them in water and keep them occasionally, but not with the ventilators down. A slight shading is also necessary.

If intended for outdoor bedding, the plants should be started in the fall to cultivate the soil deeply that it may conserve the greatest amount of moisture through the winter. Cover them thoroughly with sphagnum moss. For bedding, if a location can be found that the sun does not reach till near midday, it is much the better.

(103) **Preparing Soil for Violets.**—Will you please state how to mix up a compost heap or soil for violets, and how long it should be left before using. I also please say if lime should be used, if so, how much? I can probably obtain about three loads of cow manure, and this can be used in same proportions as horse manure? M. A.

—There are several ways of preparing soil for violets: one is to plow a good sod and stack it in the Fall—a layer of sod and a layer of manure (either cow or horse manure), about one-third manure. Another is to plow the sod in the Spring when the grass is several inches long, stacking it in the same way. Fermentation is very rapid at that time of year, and the soil is ready for use in a very little while. Still another way is to plow the sod in early Fall, spreading the manure on top, then in the Spring when it ceases several times, when it will be ready for use. A light coating of lime will not hurt it, but would probably do it no good, especially if your soil is deficient in lime.—W. G. SALTFOORD.

The length to which to grow the asparagus depends upon the skill of the grower, and the material is valued accordingly. A 10-foot string is always worth 50c at wholesale, if the color is right. The man who uses it can cut such a string in two.

It is ready to cut when the growth is thin and the color a good, dark green. The lists mentioned by you are causes of discom in our market.

A bed may be carried on from year to year; there is no particular season of rest. Some growers are able to cut all the year round by having several houses and bringing on batches at irregular periods. Asparagus will grow at varied temperatures from 78 to 70, but 65 to 63 degrees would be better as a steady temperature.

You will find much useful information on florists' greens in the book, "How to Grow Cut Flowers," which can be obtained from our publishers. Price \$2.

### Hail Storms.

Des Moines, Iowa, was visited by a deluge of wind, rain, and hail on the 23d inst.—E. W. EARSTOWN, W. L. MORRIS,

### Little Falls, N. Y.

Easter business was above the average, everything in the line of cut flowers being cleaned up. I had about same as last year, if anything a little lower.  
E. D. WEDDOR sold over 8000 violets; he also had a fine lot of Hydrangea, 7 M. W. sold well.  
J. S. H.

### Buffalo.

Notes. Spring week now comes on apace, but the pace is a bit slow.

Trade at present inclines to be quiet. Florists are plentiful and goods are scarce, and the comparatively light calls are readily filled, at prices that may be termed low.

John Spearman, of Sassenheim, Holland, was a caller on Wednesday of this week.

### Chicago.

The weather the past week has been warm, with abundant rains, and the vegetation is at last pushing its head above the little cherry and apple trees here in blossom, while this year we have only the pussy willows and magnolia flowering. This condition will in part explain a decided difference in the price of flowers now and then. There has been a drop from the Easter prices of last week, and an abundance of stock.

General stock, bring \$2 to \$4, with considerable concessions to close out after the morning sales. Meteor are now coming in in much better condition, and Kaiseris are again showing better as the hot weather comes in; \$5 is about high water mark. The larger growers are beginning to replant, which, perhaps, will produce big gains for a time. *American Beauty*, very long, realize \$25 to \$30. *Jacq.* and hybrids do not yet meet the demand.

Carnations are getting more plentiful, and can be seen again after the morning sales with prices about \$4 to \$6. Standard varieties bring \$1.50 to \$2; *faucis*, \$3 to \$4. *Lilies* are plentiful, with very dull sales, at \$2 to \$3, called mostly on the same price. *Violets* bring 50c. to 75c.; *daffodils* and *lilips* are still abundant, realizing \$1 to \$3. *Valley* sell at \$2 to \$3. Street roses are not yet very plentiful, and are selling at 50c. to 75c. *Snulax* is scarce, and up to \$2 to \$3 for good quality.

White anthuriums are now coming in and make quite a showy flower. Last year they were in from this neighborhood first of May.

### Jettings.

BASSETT & WASHBURN, at Hinsdale, have a house of 1500 Carnot roses planted which are doing finely.

HENRY HILMAN, at his Foxthick Street place, has some very fine arrays of many colors; they sold very large amount of *Easterides* at \$1.50 each.

THOMAS HOPKINSON, who for twenty years has been grower for D. B. Fuller, from the South is now in Florida. In this similar position at Blue Island with Mr. Hilman.

WILSON BROS., at High Ridge, have just finished four houses, 250x30 feet, and are planting them with roses. These are identical to Rogers Park Floral Co., in the city.

The new carnation *Argyle*, from Stollery Bros., is bringing at Desmond's \$3 per 100. *Moira*, at Livingston's has been selling at the same price.

E. W. JYCHK has been having excellent success in the Vanhook's store, which Hansen is so successful.

Fire, the third time within a year, next door to J. C. Vaughan's store, the past week, looked threatening, but except a trifling damage by water to goods on the top floor, no further loss was experienced.

### Buy Remains.

Right in HUNT goes to 75-78 Washab, right in the wholesale florist district.

BLUMBERG BROS., retail, remove to 682 W. 13th Street.

W. GRAYMAN, from Michigan, eye at Van Buren street, near the corner of Michigan eye.

W. GRAYMAN appears to be fewer removals (than usual) this year.

Vase of Peonies.

(104) **Decorative Asparagus**—CONTINUE. One essential factor in asparagus culture is a good, high roof, in order to erect established strings 8 to 10 feet long. The house needs a moderate exposure and should be well glazed. The beds should be solid and contain at least 15 inches of soil, which should be a rich nature—ood, sound loam and spent rotter manure are the principal components. Care must be taken that drainage is ample, and the soil must not be allowed to crack. When the roots are established, top dressings of well-rotted stable manure are given from time to time, and the plants are never allowed to suffer for want of water. Propagation can be done in the fall. The method of stringing must be on yourself; or you may obtain established plants in from 2 1/2-inch to 3-inch pots from wholesale traders. Sometimes importations of established crowns are received of any such recently, and there is hardly any need of them, for the plant now seeds freely in this country.

For permanent beds the plants should be allowed at least 15 inches space each way, but the crop can be handled better by maintaining straight lines; so it is well to plant with about 12 inches space between the plants, and allow 35 inches between the rows. The method of stringing must be left to the individual; every grower can invent a better way than his neighbor; however a tan wire, neatly draped on the ground, and running the length of the bed, with another attached to the roof, will serve to secure the strings, and may be made a fixture. The string itself does not require to be thick, but should be of good material and green in color; one spray to a string.

John Lorenz, and Peter Lambert suffered loss by hail. Bergstrom, Morris, and Lorenz were insured.

Freetport, Ill., also had a slight visitation of hail. Louis Hausher, who was insured, suffered slight loss.

A terrific hailstorm visited the Republica Valley, in Kansas, on the 30d ult., at Clay Center, the greenhouses of C. Humbird and C. D. Broad were riddled; very few lights of glass remained unbroken. Both were insured in the Florists' Hall Association.

*Flushing, L. I.*  
H. C. RATH has opened a retail store at 89 Maln st.; he reports a good Easter trade.

*Oneida, N. Y.*  
Business here somewhat larger than last year, and would probably have been heavier, if we had had pleasant weather the few days previous. Carnations were the greatest demand, and were soon exhausted. In plants, *Illies*, *azaleas* and *potted violets*, sold best. Prices averaged about the same as last year, if anything a little lower. J. S. H.

### Poemias.

Our illustration is reproduced from a photograph kindly sent us by Siebeck & Son, New Rochelle, N. Y. The following poemias are represented in the group:—*Academy*, *Academy*, *Academy*, *Academy* single; *Lutes*, *alba*, *double*, *rose*; *Angust*, *Mieller*, *white*, *flushed*; *Academy*, *double*; *Academy*, *double*; *Academy*, *double*; *Porphyr* cherry; *Breens*, *double*, *crimson*; *Sun*, *double*, *white*; *Grandiflora* roses; *light*, *rose*; *center*, *white*; *flushed*; *diffusa*, *dark*, *purple*; *red*; and *Rosamond*, *light*, *pink*, *fringed*.

THE LA ROCHE & STAHL FLOWER CO. Ltd. COLLINGDALE, PA.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Cincinnati, O. The Market Slow. The bottom seemed to drop out of trade and, although growers fancy carnations have been hard to sell during the past week. Roses and all other stock was disposed of for a moderate price, but is now away down. The warm weather was having its accountable for much of this depression; the thermometer on Saturday registered 84 degrees. Trade in the market on Saturday fared no better; and the growers are complaining; some sold roses even as low as 25c. per dozen.

We are also becoming metropolitan. On Saturday a department store began selling geraniums at 5c. each. I understand they were furnished, in fact, at \$40 per 1000, by a Kentucky grower.

News of the Week. J. G. FINE, of Dayton, Ky., buried his mother on Thursday; she was 67 years old.

C. C. MURPHY met with an accident a few days since that has put him on crutches. He was tightening a shoe on one of his horses when the animal gave a jump, driving the cank of the shoe in the side of Mr. Murphy's leg below the knee.

On April 23rd, George Holz had lunch with the late Mrs. Ottilie Schweikart, an estimable young lady, of Newport, Ky. After the ceremony, the happy couple were married immediately at 2 o'clock. Price Hill, where Mr. Schwarz has his greenhouse.

Club Meeting.

The last meeting of the Florists' Society, until September, will be held May 8. At this meeting we expect the greatest exhibition yet staged, and shall also present the medals of the Society to the three winners of the greatest number of flowers of the highest quality in the show. We shall have a smoker and a lunch, in connection with the meeting, and, in addition, several good papers.

We shall welcome all of the craft who wish to see the show, and to see all that is on this occasion, and we ask those who do not desire to send us an exhibition anything of merit they may possess.

E. G. GILLET.

Kansas City, Mo. Easter trade was the best this city has ever seen, 25 per cent. better than last year. There had not been such a demand for carnations next, then lilies, tulips, narcissus, valley, etc. Easter lilies had largest sale in plants; not enough to supply demand. Prices were good, from 15c. to 20c. a bud and bloom. Prices in cut flowers were the same as last year. Roses sold readily at \$2, \$2.50, \$3; Beauty, \$8 and \$10; carnations, 75c. and \$1 per dozen. Flowering plants about same as last year. What few azaleas were left sold at from \$1.50 to \$2 per plant. Easter being so late, azaleas were about gone. We have no varieties to offer this year in our market. The public took kindly to all Easter flowers except carnations 3 pounds. Most flowers have now growing these. Everyone reports a good trade.

We had a delightful day Saturday to deliver orders. Our Spring has been so backward, that no plants have been sold yet to the home trade, when the doors open, we will have to work hard to make up for lost time.

Knoxville, Tenn. Easter trade here was the heaviest ever known. Although the florists had expected a heavy trade, and prepared a large stock, every flower was disposed of; not a lily was left over. Irises, too, ruled high. Beauty sold readily at 50c; Bride, Bridesmaid, Perle, etc., at from 75c to 85c; carnations a dozen; a violet brought up to \$2 per 100. There was not much bulb stock, with the exception of valley, which brought 75c. to \$1.

Potted lilies, azaleas, cinerarias, Swainsona, etc., sold well.

C. M. JONES has completed another house 100x18, which will be devoted to carnations next Fall, and will be planted with Scotch and French carnations. It is remarkably well here. Three other houses of the same dimensions are used for carnations and the best of new sewer soil will be given a thorough trial. H. Y.

Moundsville, W. Va. Easter trade was remarkably good, although prices did not rise as high as could have been wished. H. Y.

**For the Busy Man.**

The Philadelphia bowlers have arranged for a smoker on May 6.

Both the Dutch and French bulb growers are making satisfactory progress.

There is a surplus of lilies in some sections of the country; they cannot be disposed of at all figures.

Severe hailstorms have visited some of the Western States, doing considerable damage to greenhouse establishments.

An abundance of Lillium Harrieti is reported from Minnesota. Florists there have indeed reason to be thankful.

Some of the Greek roses and flowers among have left our shores for their native country to take part in present horticulture.

The book Bill, to regulate the importation and sale of agricultural seeds, has been introduced into the House, and referred to committee on Agriculture. No alteration in the text of the Bill has been made.

**New York.**  
**Wholesale Market.**

Business for the week has been precarious and uncertain; stock has been abundant and in poor condition, roses especially so. Mildew on these is very prevalent already, and some of them are low grade and flabby, so much so that it is difficult to pick out a few special items which are unusually fine. A farmer, who created a call for cheap white roses for several days. The demand for Beauty improved toward the end of the week. Jacq, sold out fairly well, but at low figures. Morgan and Cuth were in poor condition, and the demand for them still poorer. It is difficult to quote figures on special and fancy stock, sales being limited and prices irregular—\$6 and \$3 were fancied prices on all the regular kinds; Beauty, 25c. each if very special; Brunner, for a few, brought 25c. each if very fine.

Evidently, some growers made up their minds that the Grand Memorial Day would create business, so made heavier shipments to meet it, having kept back stock for the purpose. However, the weather was very warming and disastors of previous holidays. Possibly, on Tuesday, there were more flowers on the street than on any other day, but they were not flower buyers. From careful observation during a tour on May 2 in the city of New York, it is only noticed among those countless thousands of people two bunches of violets.

Carnations are now excess of the demand, and prices are low; red kinds and they rank have been the two poorest selling colors.  
The violet season is nearly over; already the street's customers are getting by telling them violets are not good now. Prices have varied from \$1 per 100 to 40c. per 100 on such as were available.

Valley has been selling fairly well and \$3 per 100 has been a possible figure. Lilies have not sold with slow demand, and terrible low prices.

The South has been a big competitor this year. Lilies are the big attraction. It is well known and excellent condition; also apple blossoms and stock of that kind for decorations. The market is full of this in essence. Greek buyers who have already gone to the war, and the supply of those who remain is being cut by the latter by their little desire for business, preferring to gather together in groups, and discuss the situation in their native land, and the Retail Trade.

Considerable business has been done this week in the decoration for the day of weddings, funerals and dinners. Snehret & Son made a monster decoration in the Cathedral on Thursday for the funeral of the late Theo. Haveney, Esq. The firm used a large number of their largest palms and trees. There were faced with 3000 lilies, and a number of white azaleas plants.

Very fine lilies for the decoration for the naval ball at the Waldorf on Wednesday night. It consisted entirely of apple blossoms. These flowers are among the flags of all nations had a charming effect.  
The services in connection with the 29th annual meeting of the Florists' Exchange will be on May 2 and continues till May 9. The floral decorations are to be very extensive. The floral decorations will be decorated also. G. M. STUMPH has the work.

The Cut Flower Exchange Annual Meeting.  
The annual general meeting of the Cut Flower Exchange will be held on Thursday, Thirty-fourth street, takes place to-day. The election of officers is likely to lead to considerable changes in the management.

**A Great Exhibition.**  
The American Institute has secured Madison Square Garden, from September 15 to November 1, and will hold a four weeks' display of fruits, flowers and vegetables, beginning September 27; \$5,000 will be given in medals and diplomas. In the horticultural department will be decorated also. The exhibition will be devoted almost entirely to dahlias, when it will be candidly expected that 10,000 blooms will be displayed.

**FRED FRANK, Buffalo,** was in town attending the Grand Memorial Day exercises. He was in the company of the National Guard. **CARL JÜRGENS** and wife were also visitors.

The address of **FRED W. KELSEY** after May 1 will be 120 Broadway, he having returned to No. 145.

**Boston.**  
**Trade Notes.**

Business, on the whole, has been excellent since Easter until within the past few days, which have shown a decided decline in prices. There are still some very good flowers and now passing in considerable quantities through the hands of the carnation growers. Carnations show the signs of high temperature, though not to such an extent as are roses, which are generally showing signs of pest, none but of poor quality being offered in the market. Valley has been scarce for a day or two, but the supply is coming from out-of-doors. Von Sloss are very poor, though some very good Trumpet plants are offered. There are more plentiful than the growers would like to see them, and many sales are made at a sacrifice price.

The Gardeners and Florists' Club meeting will occur at Horticultural Hall next Tuesday evening. This will be the last meeting before the Summer vacation, and business of importance will probably be presented, so a large attendance is desirable.

**A Bee Grower.**  
**LUCIUS FOSTER** and his several assistants are busy as bees at the extensive range of hives and colonies of old position, making preparations for the immense budding plant business which they are attending to in the early part of which and of which they are well prepared to do their share. Mr. Foster has house after house filled with plants of the most popular varieties, and especially noticeable was one bunch filled with Beauty Potvine carnations, all in bud. Three houses are largely filled with Nephrolepis exaltata, botanensis, and contain thousands of plants, all in fine condition. Mr. Foster, who never does things by halves, went into the Boston fair on large scale, and has great confidence in its future.

**FRANCIS MCCARTHY**, for many years a florist located on Pine st., Auburndale at his home on Friday last, and was struck by a runaway horse on Wednesday, and will be confined by his sons.

Two light hail storms visited this section early Wednesday morning, but, so far as the result in no serious damage.  
**F. A. BLAKE**, of Rochdale, exhibited a set of plants of his new scarlet carnation, and secured a first prize. He was secretary Horticultural Society, last Saturday, and received a certificate of merit. The plants were handled in boxes containing 25 buds and blossoms.

**WM. NICOLSON'S SON, WILLIAM,** has been dangerously ill from blood poisoning, but is now improving, and his speedy recovery is hoped for. Tuesday was his twenty-first birthday, which he celebrated by venturing out for the first time since his illness. W. K. W.

**Philadelphia.**

**Market Notes.**  
This has been rather a quiet week among the stores, and to make matters worse the prices are among the lowest for sale. All the commission men are overstocked and cannot move anything worth the price. The few who have not appear to be selling very much. Prices are not firm by any means; the best Beauty plants are selling at 10c, but there are extra long stems. For other grades, it is just what you can get. Most of the tea or low grade plants are selling at 5c. The material has not been quite so plentiful; some good flowers of this variety have sold at \$8.

Carnations are a perfect job, and cannot be given away. Some very fine stock flowers are being sold in new lots at 10c to 15c, about the top price for extra fine, good, and very few bring this price.

**Callulias.** This is the only thing that is scarce; good strings bring 20c. This material has been in demand for wedding decorations.  
Large quantities of lily are now coming in from Maryland, and have been selling at \$1 per dozen bunches. It is sold at 10c per the street, where it is sold at 10c per bunch.

The next meeting, on Tuesday, May 4, will no doubt prove a good one. The subject will be the one proposed by the members of the S. A. F., to be opened by President Burton. The question of association members will also be decided at this meeting.

**Bowlers to have a Smoker.**  
The Philadelphia bowlers are now becoming more active and have arranged for a

smoker in the club-room on Thursday, May 6, which all the members of the club are invited to attend. To create more interest, also to induce members who do not now bowl, arrangements are being made for some appropriate trophies to be competed for in a series of games. It is hoped that this will have a good effect and bring out some new material.

**Growers.**  
**JOHN LAUBERT, Bala,** reports having done a very satisfactory Easter business; he rented various stores throughout the city for the week preceding Easter, and now has a large stock of flowers, and now busy shifting on Spring stock, in which he does a large business.  
**JOHN REBUSE**, at Bala, as usual, did a good business at Easter. They contemplate some large improvements to their plant the coming Spring. They have lately had the city water put in.

**DAVID BRAN** has had a very good season with roses and carnations. Beauty has done very well with him this year. More of it will grow next season, and La France dropped.

**WM. C. SMITH** is now disposing of his entire stock of plants, and, as he is moving, having rented his place to Wm. P. Craig, who will take possession June 1.

**DAVID RUB.**

**St. Paul.**

**Market News.**  
Cut flowers are quite abundant, and sales good. Prices have dropped a little, but in the main are well upheld. Demand is steady, and in big quantities. Demand for roses is plentiful of good quality. Violets are about finished, as are also carnations. There are a few very belated lilies are seen but are in poor demand. One very noticeable feature this season. Wisnet, our best selling variety from the Eastern cities indicate that a great many diseased bulbs were planted this season. Wisnet, our best selling variety, more fortunate than in the East, or rather we paid better prices and secured better quality plants than we have had for more than were this year. We have heard but little of rusty carnations this season, although we have had several very fine cuttings. Different reasons being assigned. From my own observations I am inclined to believe that the cause is a lack of good plants immediately after Easter. Easter sales either clean them all out or preparation is made for a very early start of new plants. It seems that if on growers start planting earlier, they will be able to bring into bloom each week of the week we would have less of dull seasons and poor quality of flowers. We are for the most of us apt to consider Thanksgiving, Christmas, Easter and Decoration Day the only hard times of the whole year, and all our energies are spent in preparing for these occasions.

**The News.**  
**D. E. LEBEL** has closed out his florist business, and is at present laid up in the hospital.  
**E. F. LEMKE** was unfortunate enough to lose several orders by dropping in one of the small lakes near the city.  
**R. J. MENDENHALL** is building a new house at his South Minneapolis place.  
**MR. LAUBERTS,** junior member of Carlson & Lauritzen, of the Warrendale greenhouse, has married recently.  
**W. SCOTT** is now with L. L. May & Co. The bright weather is bringing forward lifting stock in a good manner, and several plants are being planned as soon as the weather will permit.

**VERITAS.**

**Utica, N. Y.**

For some time past C. F. SRETZER has grown Violet Lady Campbell in place of her usual variety. He has been very successful so well with this. Some objection was made to the lighter shade, but that has now been corrected. It is being prepared for it. This variety is doing splendidly with him; he has a fine young stock on the premises and may through his advertisement in the EXCHANGE.

**C. F. BAKER** will propagate heavily his new seedling variety, known as Formed and Jacket; these will be placed on the market next season; they are vigorous growers and will do very well.

**WM. MATTHEWS** reports a most satisfactory demand for orchid blooms, of which he had a splendid lot at the right price.

Market Items.

The inactivity of the trade in contrast to last week's activity has become so depressed that it is hardly possible to offer for the time being, in control of the market. The conviction among wholesalers that the demand will not in the near future be commensurate with the supply, creates a tendency to lend willing ears to those who offer a reduced price to offer for quantity. But offers of that sort are rare, and there is but little doing in retail circles.

The weather was rather erratic up to the first of the week, but has settled down to regular summer weather, and the effect of the sunshine is seen in the heavy results.

Trade was fairly good Monday and Tuesday, but on Wednesday, on stock lots, accumulations and their prices weakened. Bridesmaid held their own better than any other variety, but they, too, went tobogganing. The prevailing price for fancy selections at Easter was 10c., on Thursday the same quality roses sold at 8c. and the same stock is down to 25¢ per dozen, and hundreds of good buds are being sold at 15¢ per dozen. The hands of the fakir at ridiculously low prices. Kalscedin and Critchell suffered most.

Trade week after Easter was fairly good, and prices kept up well until Saturday, when they fell as they usually do for the demand; consequently prices went down to about what they were before Easter. However, the market is remarkably good at present, and carnations are also greatly improved. Sweet peas are in better supply; most of our growers are cutting these now; prices are about \$1.50 per bushel, and the market is supplied about that figure. Bulbous stock is nearly done, and Harriis lilies are not any too plentiful. The winter warm weather made some lilies will be in bloom in a week, and other outdoor stock will follow in short order.

Club News. The second monthly meeting of the Florists' Club, held last week, was a most successful one. The committee had appointed your correspondent to prepare a paper which was read, the subject being "The Florists' Club." The paper, by Holland bulb merchants, P. Vos, of Sassenheim, and H. Zijp, of Haarlem, were presented at that time, and the quotation marks about novelties to be introduced the coming season. For the next meeting of the club, the committee has made the selection of Schenley Park, as the essayist.

O. A. OENMELER, former Secretary of the Florists' Club, has been elected since Easter, but it is now commencing to mend. T. E. RANDOLPH has also been elected at that time, and the quotation is merely nominal.

Bulbous stock is not in demand, and quantities of it remain unsold. There are some call for Narcissus posticus, which is shipped from the South, and sells at 40c. to 50c. per lot, but 2,000 a day will supply the whole demand.

Smilax is still scarce, and sells readily at \$15 per lot.

The Competition of the Greek.

The Greeks are still with us. Last week they were in the market, and whenever they invaded the wholesale houses, but findings are different now. The market has been so quiet, that the Greeks have not become patriotic enough to go home and help their countrymen lick the dirt under their noses. They are still supplied with large quantities of roses and carnations, which are sold at 20c. a dozen. The market is very quiet, and put up signs offering roses at 25c. a dozen, and delivery through in. Others have put up signs offering roses at 15c. in their windows. This, of course, means cheap prices. The ordeal to which the market is being subjected is hardly fair to establish values in conformity with the laws of supply and demand.

The regular meeting of the St. Louis Florists' Club, will be held next Tuesday at the Festival of the St. Charles and the Chrysanthemum Show will report to the Club its plans for the coming year.

The Board of Trustees of the Missouri Botanical Garden has decided on a 100-acre tract near the city, and are being prepared by the Olmsted of Boston. The work of making extensions and improvements will be during the present Summer and will cover a period of three years. The first step is to grading and the laying of water pipes. Next year the planting will begin. The following are to be laid out: In the fourth year the herbaceous plants will be put in, and in the fifth year the trees and shrubs will be planted. The proposed improvements are the begin-

ning of a future re-landscaping of Shaw's Garden. The instructions given to the Olmsted were, first, for a general plan for improving the farm land adjoining the Garden, second, a re-landscaping of the North American synopsis, and a small development of the park, and third, suggestions for the gradual modification of the present park to harmonize with the other improvements. The plan which has embodied the plans in his forthcoming annual report, estimates that the cost of the improvements will be about \$1,000,000. It consisted of a tract of 100 acres, and, when completed, will in time give Shaw's Garden a place beside the other botanical gardens of the world.

Last week a lady here received from New York a beautiful Easter greeting put up by Thorley. It consisted of a rattan basket 3 ft. long, 15 in wide and 15 in deep, with a cover. It was filled with garden seeds, carefully graded as to size so as to slop from the left side to the right, which was filled with growing violet plants, which were growing in the left corner of the open cover. The blending of colors was harmonious and the entire effect is pleasing, that regret it could not be viewed by some of our artist florists.

CONTRIBUTIONS.

Planting. Planting out is doubtless well timed by this time; and any remarks pertaining to the same would seem quite unnecessary.

One of the most essential things is the selection of plants healthy and strong... We cannot control the weather, neither can we forestall what it is likely to be throughout the season.

When the plants are from flats and have become well established, or if they are from pots, I would much prefer to plant them out... There will be little or no setback given when plants are thus removed from the flats, and the soil is moist about the roots.

Deep planting is a very common error, especially if the soil be low and the planter not very conscientious, and is responsible for a large percentage of the stem rot with which we have to deal... It has been called by some an outdoor disease, while others claim that it makes greater progress in the house.

While we cannot control the condition of the atmosphere outdoors, we can to a large extent control it in the greenhouse... We advise any who have the room to spare to make preparations to plant in a house, or a portion of one, with young plants which have been started in the open.

While we cannot control the condition of the atmosphere outdoors, we can to a large extent control it in the greenhouse... We advise any who have the room to spare to make preparations to plant in a house, or a portion of one, with young plants which have been started in the open.

Little Ferry, N. J.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Syracuse, N. Y.

The funerals of several prominent people, together with their religious wedding made the past week exceedingly busy among the florists, entailing almost as much hard work as Easter week.

A. D. PERRY, president of Central New York Horticultural Society, has returned from his annual Southern trip.

We are getting accustomed to fresh weather in this vicinity—on Saturday and Sunday the mercury advanced to 85 degrees. This (Tuesday) morning quite a little snow fell, accompanied by frost. C. BABSON.

Utica, N. Y.

Easter trade here was very good; probably more plants and flowers were sold than ever before, but prices ruled lower. It seemed as if every other meat market and grocery store had a flower store. There was a great deal of competition and cutting of prices, but good stock brought a fair price. Roses and carnations were in short supply.

The old Jonathan Anook greenhouse on Whitestown street was sold last week under mortgage and will be replaced by WILLIAM PFEIFFER, who will have associated with him Fred Zimmerman, who has had an extensive experience, having been for the last four years with C. F. Baker, and previously with Wm. J. S. H.

CORRESPONDENCE.

Insertion will be given in this column in all communications free from animals; but if they are enclosed do not necessarily refer our own.

Seedlings and Certificates.

Editor Florists' Exchange: There is a well known peculiarity of the three-judge system which has not yet been alluded to in the discussion upon seedlings and certificates. It can be described by an example. In a certain competition which was reported in the EXCHANGE a few years ago, there were three prizes and three judges. Two of the judges gave the second prize to the highest number, and the third judge made him so low, and the first-prize man so high, that the decision of the other two judges was nullified, and the award was actually made by one judge, instead of three. If a majority of two is possible and the award, it would have been reversed.

Keeping this decision in view, a brief analysis of the award would be interesting. It is an unwritten law in judging exhibits of any kind that each judge shall first judge and then compare the results, and be influenced by them, and an average of the three separate judgments shall determine the award. In the case above cited, the judges did not meet at all. Assuming that the judges followed the usual course in the present case of the 84 points given Mr. Ward's seedling might have been an average of three different judgments.

As it does not seem probable that the independent judgments would be given alike, it follows that one, at least, of the judges must have given more than 84 points. If we assume that two judges might have done so, while the third voted the bill by giving a lower mark; thus, 80, 82, 87, will give an average of 84 points, which means that the variety would lose a certificate, although a majority of the members of the committee would win it. If this committee consented together and gave a joint opinion, instead of independent ones, they may have a majority of 84.

In every committee of three judges, there will always be one dominant mind to influence the others, and it is not to be suspected that they have done so. It is to avoid this result that independent judgments are always required. Of course, we do not know just how the committee arrived at their decision in the present case, but in consideration of the great importance of the question, I think it would be worth their while to tell us about it.

Mr. Smith's triumphant citation of the eminent New England grower, 70 points for Boston (figures run on 100 point basis) a trifling difference of 33 points. If 70 points form a sound and reliable judgment, how will it compare with the 84 points? And if after two careful examinations, 84 points is the last word of three competent and unbiased judges, what is the precise value of 70 point judgment?

This eminent New England grower could not have been so sure of his own superiority if he had attempted it with much hard work.

The three-judge system has been a thorn in the side of exhibitors from time immemorial. So many the objections to it that, if I remember right, the members of the Columbian Fair at Chicago arbitrated the matter, and the three-judge system, which led to quite a discussion of the merits of the two. LOTHERE WIGHT.

Grand Rapids, Mich.

At the last session of the Florists' Club it was decided to give an exhibition in behalf of the Children's Home, and a committee was appointed to arrange for a conference of the Home Board and the Florists' Club. (Circulars have been sent out on "Bedding Plants.") N. B. Stover introduced a resolution debarbing members from free exhibition of plants, except those prior to the one that is to be given jointly, and the resolution was passed.

J. B. KELLER'S SONS report a first class Easter. Good stock was plentiful and brought very fair prices. I noticed a batch of the pretty pink Lychins semp...

FRED SCHUBERT'S SONS speak in the same steady good business, good stock fine weather, everything lively and a rushing week following with wedding orders.

SALTER BROS. had both their stores taxed to their utmost capacity by crowds of good buyers.

No matter at what time one calls on that general orchidist, Geo. SAYAGE, whose name is indelibly connected with the Klumb orchid houses, one is sure of a hearty welcome and can make up his mind the best part of a day can be well and profitably spent among the treasures. Just now there is not much to be seen in bloom, but I question if a finer growth upon the plants was ever seen at this season.

There will be a wealth of bloom later on; at that the best part of a day can be well and profitably spent among the treasures. Just now there is not much to be seen in bloom, but I question if a finer growth upon the plants was ever seen at this season.

MARIE LEOUVILLE VIOLET, rooted numerous plants, some \$1.00 per 1000. Fall and winter rooted cuttings, \$1.00 per 1000.

JOSEPH MARKLE, Rhinebeck, N. Y. When writing mention THE FLORISTS' EXCHANGE.

...THE COMPLETE... BOOK CATALOGUE.

We have just issued the most Select and Complete Catalogue of Books on Horticulture and all Subjects ever published. The catalogues of the various book publishers of this country as well as of Europe, have been carefully gone through, and the works taken therefrom as were considered suitable for our patrons.

...BOOKS for

- The Florist
The Market Gardener
The Nurseryman
The Fruit Grower
The Seedman
The Student of Botany, Entomology and Orthology
The Poultry Keeper
The Farmer
The Lover of Plants and Flowers
and the Student of Nature in general, in fact

BOOKS FOR EVERYBODY

interested in the science and practice of rural economy. A select clubbing list of periodicals, home and foreign, may also be arranged, from which a considerable saving may be effected in their purchase.

This catalogue will be sent on application, accompanied by a two-cent stamp. Address

Houston, Tex.

In this climate, where so much grows out-of-doors the "good" time is nothing compared to that in the North. Amaryllis Johnson was in bloom everywhere and was used, I noticed in some of the churches.

Mr. Lubke sold all the flowers he had, and had a demand for lilies. There was some complaint that Easter lilies bloomed too soon. He had not much sale for decorative plants.

Mrs. Westgate reports trade in cut flowers very good, better than last year. Lilies bloomed too early, very few being left. She shipped ferns and Magnolia cut flowers to towns in the northern part of the State. She sold out even to common seasonal flowers.

Mrs. M. V. Wright shipped quantities of flowers to the up-country Texas towns; had not enough Easter lilies and callas to supply the demand; sold a thousand sweet peas, Blanche Ferry and Emily Henderson, but did not sell many plants for Easter.

Mr. Kusbach had calls for all the flowers he had—carrubras, roses, callas and lilies. He said the latter "bloomed" too soon for Easter. The cool weather had blighted the outdoor flowers—roses in particular.

Mr. Kusbach likes the Carrot rose, he thinks it will be the favorite for Texas. E. E. Eyer's supply of sweet peas, Blanche Ferry and Emily Henderson, which she commenced cutting April 6. She reports having enough of them for the demand.

S. E. B.

Butted Glass

This is no longer an experiment, it has come to stay. There are various ways of making butted glass, but the best way is with the

Clipper Bar.

With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

Modern Greenhouse Heating.

One of our boilers, 10,880 feet of two inch pipe, and sixty tons of coal will heat 22,400 feet of glass (four 20x200 feet double gable houses) to 65 degrees in coldest Winter weather; they have done it, and will do it for you—we guarantee it. Our boilers are not only the best of their kind, but the best made. They have the largest "firebrigt" direct surface, are the easiest cleaned, handled and set up; and from engineering facts, they are the ideal frictionless, economical water heating boilers of our day.

**MASTICA**

FOR GLAZING GREENHOUSES. SUPERIOR TO PUTTY IN EVERY WAY.  
 Is not hardened by the extreme heat or cold that a greenhouse is constantly subjected to both inside and out. Mastica is adhesive and remains permanently elastic so that it is not forced out of place by expansion and contraction of the woodwork. Houses glazed with Mastica do not need repainting, thus saving time and expense. With Mastica can "bed-in" or use on the outside, but with a machine only.  
 Highest Award and Medal in Glazing Machines were given

**HIGHEST AWARD OF SOCIETY OF AMERICAN FLORISTS AT PITTSBURGH, 1895.**  
 Put up in gallons, \$1.00. Half gallons, 60cets. Quarter gallons, 35cets.

**ANDREW H. WARD,**  
 Consulting Agricultural Chemist,  
 153 Milk Street, Boston, Mass.

Fertlizer formulas furnished based on required conditions. For sale at market rates: Powdered Phosphate of Lime, Dissolved Bone, Ammonia, Potash, and Soda salts.  
 Indecorous Mixed Fertilizers, with Potash Salts, sold at Experiment Station Valuations.  
 When Soda is substituted for Potash the price per ton is 20 per cent. less than station valuations, losing the value of the alkaline action of soda as equivalent to that of potash.

**ANALYSES GUARANTEED.**  
 Circulars sent upon application.

For 10 cents, cash or postage stamps, I will send inclusive Ward's Endorsed Concentrated Soluble Plant Food.

**ENOUGH FOR 100 PLANTS.**  
 Your plants will blossom more full, and remain longer in bloom. The fragrance is increased. The leaves grow larger, and have a deep, rich color.

# LOOK AT THESE BARGAINS

**SPEAK QUICK IF YOU WANT THEM.**

We offer at these low prices in order to close out our stocks, as it is getting late in the season. Although the prices are exceedingly low, the goods are first-class in every respect; low prices are not at the expense of quality. If you can use any of these bargains, let us have your order before stocks are gone.

## DOUBLE TUBEROSE BEGONIAS.

In Separate Colors—White, Pink, Scarlet and Yellow.

We offer these at only **\$6.00 per hundred**—a little more than the price of Single Begonias. This is an opportunity to secure the finest strain of Double Begonias at a nominal price.

## TUBEROSE PEARL.

We have a fine lot of very fine bulbs in the very best possible condition—clean, dry, and hard, free from scale, and in perfectly sound condition in every respect—bulbs running well up to size. We offer these at **\$1.00 per hundred; \$6.00 per thousand; 5000 lots at \$5.00 per thousand.**

## COCOS WEDDELIANA.

Fresh Seed in Perfect Shape. We offer this as long as unsold at **\$6.00 per thousand.**

SEED TRADE REPORT.

Points and information from seedmen, and all interested in the column, solicited. Address Editor Sam Thayer, care of "Flourist's Exchange," P. O. Box 100, New York.

Havanna, Ohio.—Frank Ford, seedman, died on April 6 last of heart trouble. He was sixty-five years of age.

Seeds of the State Trade.—The purchase was made in Germany and the seed is to be sold to farmers at the same price as the State Trade. The purchase was made in Germany and the seed is to be sold to farmers at the same price as the State Trade.

Local reports indicate very heavy sowing of corn. Catalogue trade continues good. L. M. Lay & Co. have completed their catalogues for 1907.

Irigrope Notes.

An Irigrope Harvest Anticipated. Everything with us appears to be "made in Italy" just now, owing to the bulk of our spring sowings are now made.

In bird seeds, canary is quite an interesting feature. Just now, owing to the outbreak of the war between Greece and Turkey, no one can tell how long the supply of canary seed will last.

In bird seeds, canary is quite an interesting feature. Just now, owing to the outbreak of the war between Greece and Turkey, no one can tell how long the supply of canary seed will last.

QUESTION BOX.

Answers Solicited from Those Who Know.

(105) A Difficulty in Heating.—Last winter I changed the piping in one of my greenhouses in order to secure increased radiating surfaces.

(106) Stem Rot on Marguerite Carnations.—Alabama.—The difference in climate is the main factor here and Alabama, and since nothing has been said in regard to the care and culture of the plants, we best avoid not.

(107) He Wants Free Seeds.—Will you kindly tell me what must apply for the free seeds distributed from Washington?

Care of Coil Boiler.—Professor Tait speaks of a coil heater doing good service if properly cared for. What would be proper care for such a heater?

In setting of the coil care should be taken to avoid pockets in which the soil and ashes will collect about the pipes, and above all there should be one or more "clean-out" doors so that the dirt and ashes will come out.

The smoke pipe should also be taken off, cleaned and put away in a safe place. The plant should not only follow the line of the smoke pipe, but I have thought the pipe should be placed so the boiler than when the pipe was replaced.

Stem rot on Marguerite Carnations.—Alabama.—The difference in climate is the main factor here and Alabama, and since nothing has been said in regard to the care and culture of the plants, we best avoid not.

If the soil is poor, make it rich. A half-starved plant is like a half-starved animal and will flourish in weak-ened, it is extremely susceptible to disease.

(107) He Wants Free Seeds.—Will you kindly tell me what must apply for the free seeds distributed from Washington?

To obtain free seeds apply to your Congressman. The purpose for which they are distributed is to give your Congressman a pull among his constituents at the expense of the people of the entire country.

During the recent freeze quite a good deal of damage was done among garden truck, and also to some perennials that had got a good start, especially the Crown Queen roses.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# CARNATIONS.

## A Use for old Carnation Plants.

It is a common practice with many small florists, just after Easter, to throw out their carnation plants, to make room for bedding stock, and, through the summer, have to depend for flowers on the young stock. This is not only wrong, but very injurious to the young plant, taking away a great deal of strength that should help to develop it into a strong, healthy plant. In places where there are heavy late frosts, the plants can be heeled in a cold frame until danger is past, or they can be planted out and covered with some pine boughs. The method I have followed in planting is to fill the hole nearly full of water, and they will take hold at once. Those who follow this plan will be surprised at the number of good flowers they will cut during the summer and fall, and the remarkably strong grass obtained to propagate from, which, to my mind, is a matter of vital importance. H. YOUELL.

We have, on many different occasions, transplanted carnation plants from the house to the field after Easter, to make room for bedding stock, in the manner described by Mr. Youell. Our method of planting, however, differs slightly from his, which is not of sufficient importance to cause any material difference in the result. We have not in the last few years received this thought, as our efforts invariably brought failure instead of any material success.

After a carnation plant has been subjected to greenhouse culture for six months more, has become thoroughly established, and adapted to its surroundings, and has been compelled to bloom throughout the winter and spring, it is in no condition to be disturbed and moved to quarters quite different from those which it left. Carnation plants which have been so treated cannot recuperate sufficiently to warrant the time and labor expended, such a transfer; the results cannot be worth the trouble. It is expecting too much of the carnation for it to re-establish itself in new quarters after it has become old, and its usefulness is nearly gone.

I will not deny that a certain amount of success can be obtained in this way, but it is as nothing in comparison with what can be realized by making early cuttings of early-blooming sorts, and planting them out in good, rich soil as soon as the weather will permit. I think Mr. Youell will find this method of more value in producing blooms during the summer when the room cannot be spared in the house, than shifting the old plants to the field.

But of what value the old plants can be for propagating is hard to understand, as plants propagated at that time can be of no real value, unless they be new or scarce. Plants propagated during November and December will be quite early enough for blooming outside, and certainly much too early for winter forcing.

I am not aware that Mr. Youell has ever tried heeling the old plants in a cold frame, and protecting them from the danger of injurious frosts are over, or has planted directly in the field and been the successful producer of them with pine boughs. I rather fear that where such steps are necessary to protect the plants, the chances of success would be largely increased, through the double handling to which the plants would be subjected when planted in the frame, and the extraordinary change they would experience when planted in the open field. If any plants have been grown cool all winter and have not blossomed so well, good reason will be obtained. H. WEBER.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Indoor Culture in Summer.

As I stated last week, it is our intention to plant one house of carnations with late struck cuttings, to be grown after the same manner as we grow roses and chrysanthemums.

There was a time when it was thought quite impossible to grow chrysanthemums in this manner, on account of the cool partiality of the plants for a cool temperature; but tests have long since demonstrated the ability of the chrysanthemum to adapt itself to the heat of summer, and to be quite as much at home in it as is the rose.

It has also shown us that an extra soil is necessary, and in addition to protection as in the winter, a well established, constant feeding is also a necessity.

Now, in spite of the many failures which have attended the efforts of most gardeners to have successful summer growing carnations, I am still of the opinion that it is quite possible to obtain good results from indoor culture. I will not say that I believe that such culture will ever do away with outdoor cultivation; I rather believe that it will not; still, I would regard it as a possibility, although at the present it is considered a rather risky venture.

I have already said that the carnation will adapt itself to the heat quite as well as the rose, but that a soil of great deal more importance is air, light and nourishment. If these are given it will flourish with the heat of summer.

The summer treatment of the carnation indoors differs somewhat from what is given the rose, in the amount of light which the carnation can endure, and the comparatively small amount of water it requires on the foliage, as compared with the rose. Thus these two items require our especial consideration. We must shade judiciously and spray lightly and frequently. Thus we have care to carnations which have been grown all winter in the house.

As the young carnations will always produce other than good results with us. Just as a young carnation plant will grow more luxuriantly when kept under glass than do old-established plants, I am not prepared to say definitely what to do with them. We must shield them not be considered when we wish to grow them indoors during the summer.

We confine our attention to the soil, and the method of growing them. We will be laying the foundation for at least partial success, and we may pos-

sibly accomplish what now seems rather improbable—the growing of carnations successfully without resorting to field culture, and thus save a great deal of labor. But as I said in the beginning, I do not fear the impracticability of this system for all purposes.

The comparative ease with which we can control the atmosphere of our cutters a strong inducement to resort to indoor culture to finally establish them. We have already named a number of varieties from this disease by following the directions already laid down in these columns. We were, however, hampered not a little sometimes when we happened to have season outdoors the growth of rust, thus undoing to a large extent what we had accomplished by careful selection of cuttings, and caring for same prior to their being planted.

Cuttings for this purpose should be made late. Those made during May will doubtless give about the best results. We want the plant in such shape that it is ready to go right ahead. If it has not yet formed a good stem, or become in any way crippled or stunted, its usefulness for this purpose is done for.

In addition to the cheese-cloth screen, we cover the cuttings with newspapers or excelsior, and if these are well established, constant feeding is also a necessity. Besides the newspapers act as a shelter for the cuttings and keep the cuttings from being sunburned.

A great many make the mistake of taking pins, which are too soft and weak to do the work, or of using pins that are too large, and will not last.

I trust that a goodly number will experiment with the method I have especially to eradicate rust, and incidentally to succeed, if possible, in growing carnations profitably without resorting to field culture.

In February last I had the pleasure of visiting the establishment of Messrs. E. G. Hill & Co., of Richmond, Ind., whose large place is a model of neatness and systematic culture. They were propagating as late as June, I believe, and growing until the autumn. They were certainly fine for indoor culture, and shows that all attempts in this direction are not unwarrantable. It is no pleasure was Mr. Hill with his experience on the subject. And it is no pleasure was Mr. Hill with his experience on the subject. And it is no pleasure was Mr. Hill with his experience on the subject.

**CORRESPONDENCE.**

*Insertion will be given in this column to all communications free from animus; but the opinions expressed do not necessarily reflect our own.*

**Winter-Blooming Nymphaeas.**

*Editor Florists' Exchange:*

There is an ever-increasing tendency to over-production of plants and cut flowers in this country. "There is no money in it." Growers are ever on the alert for novelties, knowing that there is, generally speaking, bread and butter in them, if not a little else besides. And as Mr. Oliver says in No. 479, "The probabilities are that nymphaea flowers would pay all right if the winter treatment of the plants was thoroughly understood." It will be an inducement for the up-to-date florist to take a leaf out of Mr. Oliver's book and take a turn with nymphaeas that will yield such a rich harvest.

The fact, too, that people with means will buy more red flowers, novelties and unseasonable productions is another inducement to obtain new and rare and especially nymphaeas for if they can be produced as good in winter as they are to be had in summer there certainly is money in it.

But winter lilies cannot be grown without tanks, and how can a florist get away from them? He will fetch before he has them to offer for sale? Mr. Oliver's early experience in winterizing nymphaeas is a good one to show that they would continue to flower considerably longer out of season than under the best possible season for development and flowering.

The winter nymphaeas have not a little headway during the past ten or twelve years; but it is possible some growers are making a mistake, and as the results have not been satisfactory, nothing has ever been done to correct them. The observations and experience go, the methods of culture and the varieties are the same. Mr. Oliver's is a very practical benefit to the florist, and should any live florist feel induced by the foregoing to give a try, let them, carnation or any other house into an aquatic house thinking there is something in it. I have not done a simple matter to produce flowers as late as November, but after that date is the veiled question. That season of the year we get more darkness than light, the ventilators are opened but not very far, and the plants do not get all the sun's rays are not potent in light and action as at any other season, and the plants lack of color will not make up the deficiency in growth and color. I have noticed, though, that the nymphaeas during the dark short days phaeas keep a very good color; that is, when, Zanzibarensis has the habit of being very late in coming out, and again before evening. The pinks and reds of the night-blooming kinds are especially noticeable in color, color and size of flower, and no correct water temperature can add what is lacking, especially during the dark short days best white night-bloomer, and as a cut flower the worst. Some of the hybrids are very, very little leaved, better than N. dentata, notably N. O'Marana; yet as a summer flower it is unsurpassed for its beauty. The normal temperature of 75 to 80 degrees Fahrenheit is dangerous. Growth made in such a temperature during the dark short days and long nights is soft and flabby and unproductive of a fungoid growth or rot, and the plants are not produced worthily to pass judgment upon. Good flowers produced in a high, clean temperature with a correct texture, and when subjected to a temperature of 60 degrees will become limp and do no good for the florist.

To grow first-class flowers and to produce satisfactory results in winter culture is necessary. True, a plant in a five-inch pot will produce a flower, but it will not be a first-class one. Who would venture to grow a plant in

a five-inch pot for decorative effect in summer! It is a fact well known to cultivators that to produce first-class flowers in summer is to grow a plant like Zanzibarensis, N. dentata, N. deJemisonii or any equally vigorous plants, ten to twelve inches tall, and as Mr. Oliver recommended for aquatics, is none too much; then what can be expected from a plant in a five-inch pot? Good plants in a twelve-inch pot? Good, healthy leaves are necessary to a plant, and to grow in a small estate, no earthy use for the florist, and not so good or as handy for forcing as the tropical varieties, and sooner come to a standstill. I am inclined to think that a great deal of experimenting will have to be done before satisfactory results can be achieved, and while such admirable flowers are to be seen in our parks, conservatories and gardens, and at our annual exhibitions, poor flowers will never be appreciated even in the death of a monarch.

WILLIAM TRICKER.

**Seedlings and Certificates.**

*Editor Florists' Exchange:*

In reply to Mr. Wright's article of May 1, allow me to say that I am un-availably unable to write on the subject that would justify Mr. Wright's assumption that No. 54 scored high to the disadvantage of the yearling. The average is 84 points.

As a matter of fact, it did nothing of the sort, and when the judges compared their opinions a review was had with the results indicated in a previous article.

If Mr. Wright will take the figures 99, 91 and 65, add them together, and divide the resultant sum by three, he will have an average of 85, with two of the three quantities above the covered 85.

By "assuming" certain things, certain other things may nearly always be proved. This is what Mr. Wright is doing, and he is making a very serious mistake." He assumed that the independent scores were too wide apart, and that some of the scores were over 85.

By some very strange oversight, when it came to discussing the cover, I dealt by the closeness of the independent scores and the fact that the highest score was 100, which was not true, and should have been there was unavoidably detained, apparently, for it failed to assert itself and twist a certificate out of the committee by some means.

If the gentleman who wrote the criticism would discuss the cover, he would carefully read the article over my signature in the issue of April 3, he will find that I am not a very good writer.

"It will be evident that there can be little room for a change of opinion after the discussion of the cover. The independent score of the points and the result arrived at in each case is below the average, and the percentage of how a decision was reached.

The variation between the Boston results and the Philadelphia results has also been explained. The other humorous situation does not appear very difficult of explanation. The gentleman who had been called in merely that the judges might assure themselves that the plants were of their own so narrow they had not been covered. When it became apparent that they were not, the judges were so engaged by others who saw the Cincinnati exhibit, they declined to grant the certificate. The Boston judges were so much desired. Allowing for the higher standard of excellence in Philadelphia, the Boston judges would seem to indicate that the Cincinnati verdict was not far wrong. In the Philadelphia exhibition, the gentleman (as Mr. Ward's articles would seem to indicate), the New England gentleman, was not present.

"The gentleman says that 'The three-judge system has been a thorn in the side of the florist for many years.' The writer is neither prepared nor disposed to enter into a discussion of the merits of the three-judge system of the opinion that three thorns in a tender spot are more provocative of irritation than one. The thorn would be. ADAM GRAHAM.

**Crozy and his Work.**

Whenever the name of Crozy is mentioned, our thoughts naturally turn to the large flowering French canna and the wonderful improvement in this class of plants that has been effected through the skill and painstaking of this noted hybridizer.

We have pleasure in presenting to our readers a photograph of Crozy himself and a brief note of his work in connection with canna hybridization, both of which are reproduced from the *Revue des Horticulteurs* and are closely connected with the canna is Crozy's name," says that journal, "that it makes no difference whether or not our new canna had their origin in his place, they are and will be called 'Crozy canna'."

Mr. Crozy writes to our German contemporary in regard to his success in producing a canna as follows:

"I began alternative hybridization between Canna Warszewicz and C. nepalensis, starting with large yellow flowers and very long, creeping tubers. My first canna was obtained from this

**Canna America.**

Professor Waugh, of University of Vermont, who crossed the Red Forest canna, the third of Damman & Co.'s "orchid-flowering" type, states that in America the canna is higher and taller; the foliage seems to be stronger and tougher; the color is one harder to get marked with the characteristic irregular and conspicuous dashes of lighter, greenish color. The flowering stem is shorter, and the flowers are smaller, of flowers of the form and size of those of Italy. They are, however, of a most rich and striking color, called by the plant apicot-red, faintly spotted with darker salmon. The center is canary-yellow, marked with the center of the body color, very much after the pattern of Austria and Burbank, except that in America the center is higher colored than the wings. The blossoms are richer in appearance than any of the earlier Ohio-flowering cannas. They do not appear to be better in substance, though.

**Cleveland.**

Trade Notes.  
Great increase in trade manifested itself shortly after Easter, influenced partly by the weather, which, from that time on, has been very favorable, with very little sunshine and occasional showers.

Prices also have had a tendency to weaken, gradually decreasing to the normal level. Carnations are in great demand and several large bouquets and receptions are being ordered. Carnations are some of the best efforts of our florists, many of the table decorations showing especially handsome effects in this line of work.

Roses are plentiful, some of the downy roses holding their own, and offering good stock at greatly reduced prices. Best stock brings \$1 and \$1.50 for ordinary quality. There is a fair stock of Beauty is now being offered and prices range from \$3 to \$6, according to quality.

Carnations are in good supply and sell at 25 cents to 40 cents per dozen for best.

Harrisii continue plentiful, but stock is becoming poor and finds slow sale at \$1 and \$2 for ordinary quality, and \$1.50 and meet with slight demand. Violet stock is very poor. They now sell at 25 to 35 cents per dozen. They are scarce, at 15 cents a dozen. Some very nice blooms of anatum lilies are in stock, and are selling at \$1.50. Daffodils are nearly gone, selling at 50 cents. Some very good stock of outdoor tulips were seen. These bring 50 cents. Mignonette sells at \$1 per dozen.

**Settings.**

Among the prominent nursery and bulb men from abroad who visited Cleveland recently were Messrs. Speelman, Sassenheim, Holland; P. J. Onstedt, representing K. J. Kuyk, Hilsdon, Holland; Callias Berg, field, Sassenheim. Mr. Speelman reports trade as being fully up to that of last year. He states that the proposed new tariff schedule does not have any effect upon import orders.

As regards the weather of the spring season will be the annual "spring flower reception," given by Mrs. J. M. Casson, Mrs. E. A. Lauter, Anna M. Lane home, on Friday of this week, for the benefit of the Elizabethan Hospital. The affair was held at the home of Mrs. Lane, and was a most successful one. The program was most worthy of the occasion.

Mr. Mahlhauer, one of our citizen promoters of horticulture, is erecting extensive greenhouses at his summer home, near the city. He is also erecting a new greenhouse at his home. Mrs. T. C. Bartels will leave shortly for an extended trip through Europe. Mr. Bartels is superintendent of J. M. Casson's greenhouses. He expects to attend the International Horticultural Exhibition at Hamburg.

**Detroit.**

S. Taplin has obtained a patent for his hot-water-circulating-heater, in the United States and Canada, and has secured a license in the British Isles, France, Germany and Belgium. Mr. Taplin is undecided as to whether he will manufacture the boiler or sell the right.

**Red and White.**

Two new canna varieties, which were named Bonet and Plantieri, the latter of which showed green foliage and orange flowers. The first one came close to being awarded, with dark red-brown foliage and pretty large flowers, was very free flowering and a favorite for quite a while. After this by crossing with Canna aureo-pictata, succeeded in getting hybrids with yellow spotted flowers, which year by year grew larger and rounder. I then tried to get an early bloomer and finally succeeded. In obtaining a type which was very floriferous. I constantly threw inferior plants away and kept only the best.

"As to the number of hybrids raised by me, I suppose that I have raised, with experiments, some 180 to 200 varieties, which, step by step, showed improvement over the older kinds. In obtaining a type which was more numerous are canna with flowers measuring from 4 1/2 to 6 inches in diameter. These have all very glowing colors and bear immense flower trusses.

"(My new cannas are a very carefully selected lot and their superiority has been confirmed by many visitors. My idea is to raise superior varieties that will be more successful in regard to color as well as size and number of flowers. These cannas are more or more erect, are of better substance and show broader, rounder petals and some of these will be of a more compact habit.

"These cannas for our climate have the advantage of being dwarf and early flowering and are more resistant to other adverse weather conditions."

"As regards the name of the canna seen in the varieties Austria and Italia, Mr. Crozy states he awaits the competition of these titles. He has no comments adversely on the lack of substance and early wilting of the flowers. He says that the name of the canna is 'Zeltung,' that Mr. Crozy is known in France, Nancy, under the name of 'Papa Cana' and one of the canna cities is named 'Papa Cana.'" L. S.

**ROSES.**

**Shading.**  
I am not an advocate of shading rose houses, still it is better to lightly shade plants that are to bloom during the summer. The shading should be done by the proper thickness and put it to suit my fancy.

Naphtha and white lead is by far the best mixture to use. Kerosene oil can be employed instead of naphtha, but it does not dry so quickly and is liable to rot the plants. The mixture should be stirred every once in a while while being put on, as the lead settles to the bottom. It is much easier to syringe it on than to paint with a white-wash brush, but I prefer the latter method, as a more uniform covering over the glass can be obtained, and the extra labor is saved in the quantity of the mixture used that would be otherwise wasted. Be careful not to make it too thick; when dry, it is just about twice as heavy as when first put on.

Should you have a leaky roof, the material is very easily rubbed off with a dry rag.

If young stock for summer cutting is not planted by this time growers should use it as early as possible, say six weeks from now roses will be largely called for, as most growers will be ready to plant.

Young stock wanted for another year requires a good deal of time and attention. Use of the material may need a shift, and others, resetting. It is well to bear in mind that we cannot expect the best results from plants receiving a check in any way. In going over some of mine I find quite a number of plants that have not been reset. They are placed in the front row and will make as good plants as the others. Perhaps the wood of these was a little harder than that of the others; if so, they will make up for lost time.

It is well to remember that roses should not be tolerated in a house of young roses, and the best man you have is none too good to have charge of them. H. H.

**Sulphur for Mildew and Rot.**

Sulphur Remedy for Mildew and Rot. I notice many queries and suggestions regarding mildew and rot and the use of sulphur in greenhouses to prevent these pests. Possibly our experience may be of benefit to some others.

Whenever we were much troubled with fungus diseases, but of late they do not demand a thought. We first used sulphur for mildew roses by adding it freely to vessels of water and boiling them until the water was practically clear. The vessels were then per-fores—about 170 degrees and the water boils at 212 degrees, so that we vaporized our sulphur into the air of setting it on fire. This reached our trouble on roses all right, but seemed to do a little or no effect on other fungus diseases.

We then adopted the plan of adding sulphur to whitewash—about thirty pounds to a bushel of lime. The lime was slaked with sufficient water for the mixture to yield to the boiling point and the sulphur added. The latter dissolved in the hot bath and gave it a strong yellow color. Water was then added to make the proper consistency. Every year we give our house a thorough painting with this sulphur whitewash, not merely coating the unpainted wood, but daubing it on heavily. It goes on yellow, but it dries out white. Every part that can be reached is so treated.

Since then we have known no mildew, no bench rot, no fungus of the cutting bench. On hot days, in clear sun, the benches are not so hot as when they were put in we have not discovered the fact. **CHARLES H. DARLINGTON, Tennessee.**

**For the Busy Man.**

Buffalo has a new wholesale house.  
Cincinnati was visited by a snow storm last week.

Bertermann Bros., Indianapolis, have filed mortgages to protect their creditors to the amount of \$4,000.

The American Association of Nurserymen meets at St. Louis, June 9 and 10 next. Headquarters, Lindell Hotel.

The plant trade in New York markets has so far been very unsatisfactory; prices averaging 5 to 30 per cent. above the quotations.

The stockholders of the New York Flower Exchange, at Thirty-four St. Ferry, have decided to open their mart at 6 A. M. instead of 8 A. M.

The Greco-Turkish war, if continued, is likely to interfere with the seed trade—affecting Canary seed, chionodoxas, galatunias, etc., imported from those countries.

The Philadelphia Florists' Club will not affiliate with the S. F. A. President Burton is making a discussion on "Closer Relations," and at last meeting, that other clubs had notified him of their intention not to affiliate also.

A verdict of \$500 was rendered by the Supreme Court, Brooklyn, this week, against the Cypress Hill Cemetery Association, in a suit brought by a plot owner, who had not been paid by being pointed by Ivy growing wild in the cemetery.

In the new Tariff Bill, as submitted to the Senate, bulbs and bulbous roots, notifiable, are put on the Free List, instead of the Dutiable at 25 per centum ad valorem. The full effect of this change might directly affecting the trade are given on this page.

Seventy-five per cent. of the Beauty roses come into the St. Louis market are disposed of by the street flickers. In Philadelphia, in the past week, the bulk of the carnation supply found an outlet through the street rose, as some flowers being bought by them at 22 a bouquet.

ACT OF 1854.  
DUTIALBE.

107. BEANS, 30 per centum ad valorem.  
203. PEAS, dried, 30c. per bushel of 60 pounds.  
213. PEAS, B. cartons, papers, or other small packages, 1c. per pound.  
394. ORCHIDS, LILY OF THE VALLEY, AZALEA, PALMS, and other plants used for forcing under glass for cut flowers or decorative purposes, 10 per centum ad valorem.

ACT OF 1897.  
As Submitted to the Senate.  
DUTIALBE.

338. BEANS, 40c. per bushel of 60 pounds.  
338. PEAS, dried, 25c. per bushel.  
338. PEAS, B. in cartons, papers, or other small packages, 1c. per pound.  
349. STOCKS, CUTTINGS OF SPEDLINGS of Myrobalan plusa, Malabar cherry, three years old or less, \$1 per thousand plants; stocks, cuttings, or seedlings of pear, apple, quince, and the St. Julien plum, three years old or less; and evergreen seedlings, \$1.75 per thousand; plants, rose plants, budded, grafted, or grown on their own roots, 5c. each; stocks, cuttings, and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, manetti, multiflora, and briar rose, and all trees, shrubs, plants, and vines commonly known as such, not specially provided for in this Act, 5c. per centum ad valorem.  
521. SEEDS, 25c. per bushel of 50 pounds; flaxseed or linseed and other oil seeds not specially provided for in this Act, 25c. per bushel of 50 pounds; poppy seed, 15c. per bushel; .... not shall any quantity be made for dirt or other impurities in any seed; seeds of all kinds not specially provided for in this Act, 5c. per centum ad valorem.

305. CASTOR BEANS OR SEEDS, 35c. per bushel of 50 pounds.

306. FLAXSEED OR LINSEED, POPPY SEED, and other oil seeds, not specially provided for in this Act, 30c. per bushel of 50 pounds.

306A. GARDEN SEEDS, AGRICULTURAL SEEDS, and other seeds not specially provided for in this Act, 10 per centum ad valorem.

FREE LIST.

478. PAILM NUTS.  
481. Moss, seaweeds and vegetable substances, crude or unmanufactured, not otherwise specially provided for in this Act.  
490. MYROBALAN.  
487. PLANTS, TREES, SHRUBS AND VINES of all kinds, commonly known as nursery stock, not specially provided for in this Act.  
611. SEEDS: Anise, canary, caraway, cardamom, coriander, cotton, croton, cummin, fennel, fenugreek, hemp, horshoond, mustard, rape, St. John's wort, and other seeds, not specially provided for in this Act, 5c. per bushel of 50 pounds; wuzzel, sorghum or sugar cane for seed, and all flower and grass seeds; bulbs and roots, not edible, all of which are foregoing not specially provided for in this Act.

The Act has been amended so that the rates in the schedules will take effect on and after the first day of July next. Latest reports affirm that the Bill is to pass the Senate, as submitted to that body by the Tariff Committee; that is, without further changes.

**Correction.**

In my advertisement, page 447, last issue, read the price for equal quantities of Canada, Italia and Austria \$35.00 per 100, not \$35.00. JOHN N. MANTON, Summit, N. J.

**The Amateur.**

Our Toronto correspondent asks us to give our opinion as to who may be considered amateur florists. His request arises out of a difficulty now confronting our Canadian friends, as to whether certain parties who own greenhouses and gardens, and sell the products of same, or a part thereof, sufficient to reimburse the outlays of the owners for seed, fuel, etc., may be classed as amateurs.  
Our opinion is that an amateur, as applied to our trade, is one who cultivates plants from taste or attachment; and in other words, for the love of them; and in doing so employs no gardener or other professional assistance.

When a man commences the selling of the plants or flowers thus cultivated, he ceases to be an amateur, no matter how large or small his sales of same may be; for he is then working on trade

lines, and enters into direct competition, to the extent of such sales, with the professional florist.

Classes in our exhibitions set apart for amateurs. In our country, they are restricted to those who themselves grow the subjects displayed for the love of cultivating plants for their own use; and those who employ professional assistance or follow up the work of cultivating plants for their own gain or reimbursement should be debarred from such classes.

There are some who consider that the professional gardener should be classed as an amateur, inasmuch as he is not a trader. But to put the matter as it has been treated, who has given the greater part of his life to a study of his pursuit, and whose sole aim is to devote his work to the raising of another who has but a passing moment to indulge his pastime, could only be regarded as an amateur to the latter.

It is, however, to be desired, that the professional gardener at a disadvantage to compel him to compete with the amateur, should be possessed of much greater facilities than he for the carrying on of the work of cultivating plants and flowers.

Therefore, as a matter of equity, it would be better, if at all possible, to divide the exhibitors into three or four other and separate classes, to be open to all, and to employ no professional assistance, except as necessary in connection with an employer as a means of livelihood and the trader. Thus would the individual exhibitor be placed on an equal footing with the other, and with those on the same plane.

The 22d annual convention of this association will be held at St. Louis June 9 and 10. There is every reason to expect the meeting, for the association will prove one of the most enjoyable ever held by the association. An invitation to the meeting was issued from the Hort. Botanical Gardens has been cordially extended by the director, Dr. William Schreder, in addition to those invited to attend the "Shaw Banquet" as honor guests. An invitation was also issued to Dr. Trelease for an invitation to attend the "Shaw Banquet" as honor guests. The meeting will be held on the evening of June 10, has been accepted for the association by the Executive Committee. The meeting will be held at the home of the association will be extended to the visiting nurserymen by Mayor Ziegenhein and the Hon. William J. Colman.

Among other things, the tariff discussion will undoubtedly be one of the most interesting features of the convention. The committee appointed at Chicago last year will report its work at Washington. There will also be the report of the Committee on Freight Charges, a matter of vital importance to the trade. The convention will open at the Lindell Hotel on the morning of June 9. Special railroad rates are expected.

**New York.**

The annual meeting of the stockholders was held on Saturday, May 1. The financial condition was found to be very satisfactory, a dividend of 10 per cent. was declared, and a good cash balance carried forward. The meeting was marked with much enthusiasm, bringing to a close on the part of the stockholders and exhibitors on the morning of opening the market in the morning later. To this there was a strong opposition and a very earnest desire to retain the present opening hour. This important question coming up for a vote was decided in favor of bringing together about eighty stockholders and a large number of proxies, and the result was a majority of about sixty votes. So that, after June 1, the market will open at 6 A. M., instead of 5 A. M., as formerly. This later hour, as it is calculated, will be better for the stockholders and have a tendency to bring their business to a close earlier, there has been a falling off of this in attendance.  
The election of officers resulted as follows: President, W. H. Siebrecht, Astoria, L. I.; vice-presidents, A. S. Burns, Woodside, N. Y., and Joseph Schraeder, Newtown, L. I.; secretary, John Donaldson, Newtown, L. I.; treasurer, George Matlack, Jersey City, N. J.; executive secretary, P. Miller, Astoria, L. I.; Executive Committee—George Matlack, Jersey City, N. J.; Joseph Schraeder, 138th Street, New York City, N. Y.; new directors were elected—W. C. Dundas, Jersey City, N. J.; Dupuy and J. Johnston; Financial Committee, C. Smith, L. I., Dupuy and A. S. Burns.

**The Plant Market.**

Growers who stand regularly at Canal Street and Union Square claim that the season, so far, has been very good. Prices are at least averaging 25 to 30 per cent. less than in recent years. On Saturday morning prices were about 20 per cent. above Canal Street; many of these were in position between 12 midnight and 3 A. M. It is, however, to be desired, that the professional gardener at a disadvantage to compel him to compete with the amateur, should be possessed of much greater facilities than he for the carrying on of the work of cultivating plants and flowers.

Union Square had about fifty wagons and was in no way crowded, as compared with the market at Canal Street; there was but little difference in the prices at either place. If any, it would be in favor of Union Square. A party of Geraniums were bringing from 75 cents to 85 cents per dozen, pelargoniums from \$1.50 per dozen, and Geraniums from \$1.00 per dozen. Pot-grown roses seemed to meet with the briskest demand, selling from \$1.00 per dozen. A party of Geraniums, had some very fine dark-colored Geraniums, which were secured to be very much in requisition.

Auction Sales—Japanese Carnations Sold

Sales of late have been fairly well attended from the 1st of April. The weather having been so unfavorable to the moving of soft stock would account for this condition. William Elliott & Sons had, last week, a most unique novelty from Japan in the form of a tract of plants, from which they shipped herons, peacocks, swans and other creatures. One of the larer tracts included some of the most novel work and wonderful results obtained. All the specimens sold quickly at good figures.

L. H. Schaefer is now located at Kiskatoon, Greene County, N. Y., where he has a tract of plants, from which he will supply all kinds of greens, henlock plines, ferns, etc. The Florists' Exchange has secured the agency of The Fuller Breeding Co. to sell their plants for the Catskill district. In the fall and winter months he will be engaged in the bulb business as before.

Action against a Cemetery Association.

A verdict against the Cypress Hills Cemetery Association in the sum of \$3,500 was rendered in the Supreme Court in Brooklyn Wednesday in the case of the late Mrs. Mary J. Dwyer, a jurist received by being poisoned by ivory growing wild in the cemetery. Justice Dwyer was bought by the jury that every year thousands of persons visited the cemetery, and that it was a source of infection, and that the poisonous vines. Application was made for a new trial, and Justice Dickey, in granting it, said that the verdict was against the defendant, and the plaintiff is entitled to damages.—Sun.

Wholesale Market

Business has dragged along weakly during the past week, stock was inferior and prices low. In published quotations there was a general change made over those in our past issue; but for all that, on bulk, lower prices were shown. Roses are becoming badly damaged by mildew. Out-door stock of all kinds is now coming in abundantly, and is down very low, largely on account of the competition of frame stock. Some of the better quality of the same were brought \$2 per 100, whereas indoor variety made only \$1.50 to \$10 per 1,000.

Market generally has been quiet since the market after this week. Several large retail stores have already ceased to order.

Sweet peas have sold out fairly well, evidently, for the time being, having taken the place vacated by the violets. Prices on peas vary from \$4 per 100, small bunches, to \$10 per 100 for liberal quantities of 25 bunches. The violet, a monette drag was more than ever. Jacral roses are in short supply; prices ranging from 4 cents to 10 cents per dozen.

The Retail Trade.

Hant Bros. had a large wedding order on Wednesday, 3,000 Bride and groom roses.

Small & Sons made a unique decoration at the Waldorf on Thursday evening in honor of the Russian and the diplomats and others, in compliment to the Chinese Ambassador, who leaves tomorrow for Russia. In no way did the tables were so arranged as to form a hollow square, the guests facing windows.

ance. This subject is one of vital importance to growers and others, and it is one that they will be a large attendance.

Historians—O. P. Bassett, Chicago, Ill., and C. Ormsby Melrose, New York.

Philadelphia.

Business Quiet.

There has been no improvement in the cut flower market the past week. Around the stores everything is very quiet; in fact, they present a summer appearance. All kinds of flowers are available at 5 cents each, including a glut. A few good blooms sell, but other grades are hard to dispose of. Beauty has been selling at \$4 per dozen, for extra long-stemmed flowers, but not many are being disposed of at this figure. Other roses are going slowly. The top figure is \$8, but mostly all sell at 4 to 6 cents each.

Carnations are as plentiful as last week. Most of the supply goes to the market at 5 cents each, but some carnations were sold on the street at 5 cents per dozen. On inquiry it was learned that these were bought by the street men at \$2 per 1,000; while the very best flowers could be bought late in the day at 40 cents per 100. So the growers will not fare very well this week.

Beauty roses were sold on the street this week at 5 cents each, but they were not very poor flowers, either—rather open, but large and likely to last for several days.

The plant growers report very poor business the past two weeks. It seems plain that many of the prominent families have left their city houses earlier than usual. Parties and entertainments are being given less frequently attended, and fewer of these have been given since Easter than in former years.

Bulk Trade.

From present reports this trade was not so satisfactory the past season as it was during the winter, and that the dealers will import less stock next.

American Dahlia Society.

The society has finished its schedule of prizes for the exhibition to be held during the third week in September. This exhibition is one of the most important of dahlias report a much larger trade in roots this season, and orders for plants are being received.

Park Displays.

The various small parks throughout the city, under the charge of City Forester John C. Lewis, have been re-planting the past few weeks with flowering bulbs. Some of the beds of tulips and hydrangeas are very attractive and reflect great credit on the untiring energy of the City Forester, who has given notice to the public pleasures here before.

Club News

The meeting on Tuesday last was very largely attended. The new members were elected, and the club bids well to have a prosperous year. The meeting was held in the presence of 150 members was decided in the affirmative. They will have no voice in the business of the club until next year. In recognition, but merely take part in the games, etc.

John Bestcott reported that a friend of the club had given \$25 to be used as prizes for bowling. A series of games will be held during the summer.

It is proposed to have another shad dinner this year, probably towards the end of the month, as the outing last year was enjoyed so much by all.

President John Burton spoke on the subject of the club, and was enthusiastic over this matter, but had some suggestions to make. He expressed the opinion that as far as florists' clubs were concerned, they were better off in the present condition of affairs. The closer relations question from its inception and said that he had seen in the past several months of various meetings of other clubs and all were of the opinion that their clubs would do better for themselves by each individual club.

THE EXPERIMENT STATIONS.

OREGON SUGAR BEETS.—By Professor G. W. Shaw, Bulletin 44, Oregon, Corvallis, Ore. THE GROWING OF SUGAR BEETS.—By William F. Aigner; Farmers' Bulletin 35, Department of Agriculture. This bulletin contains much useful information on the growing of sugar beets, including soil, temperature, etc., besides instruction on the proper method of growing them. Diseases and insects affecting this crop are also treated upon. The bulletin is profusely illustrated with photographs and diagrams devoted to descriptions of edible and poisonous mushrooms, with special reference to their identification.

Index to Advertisers.

Table listing advertisers and their addresses, including firms like Hillinger Bros., Noller & Sons, and individuals like D. H. Hillinger, J. B. Hillinger, etc.

## Ind.apolis.

## State of Trade.

This city is having some gloomy weather for the first time in several weeks it has been wet and cool and on May 2 rain turned to snow, which lasted for four hours.

Florists complain of backward spring trade. The market is stocked with plants of both quality and quantity and interior quality, and prices seem to go lower each year. Cut flower trade is fair.

John Grande was married on April 28. A few florists were present at the reception in which about seventy-five persons being seated at supper.

## News Items.

Visitors in the city were E. G. Hill, of Richmond, and M. Haugh, of Stuart & Haugh, Anderson, Ind.; F. A. McKeand, florist for the Department of Public Parks, reports that he will have more than one hundred thousand plants to put in the parks this year, an increase of \$5,000 over last year. Our infant park system has begun to take shape that promises great improvements in the next few years.

## Bertermann Bros. protest their credits.

On April 30 and May 1 Bertermann Bros. filed mortgages to protect their credits, against John Bertram, High rents and bad collections forced them to take this step at the present time. The mortgage for \$1000 a dollar for dollar, with interest on all notes given.

On May 1 the Bertermann Floral Co. was incorporated under the State laws, with a capital stock of \$10,000. The president of the corporation is John Bertram, W. G. Bertermann, Edward Bertermann, Benedict Bertermann, Walter Bertermann and George C. Lohorn, all of this city. This corporation bought all the interests of Bertermann Bros. and will satisfy all mortgages and accounts. On July 1 they will remove from their present store to a new building and continue to do business for them on the old place on Massachusetts Avenue. The store room will be 100 feet, and contain two rooms, elegant basement and a greenhouse 72x27 feet, fronting on Delaware Street, giving them entrance on two important streets. The best wishes of many citizens follow the new company in their venture. R. A.

## Chicago.

## Market News.

It is a hard matter to quote prices or say anything of the condition of trade the past week. If one were to quote the price lists sent out by all but one of the wholesale houses, it would be safe to quote the asking price of roses at \$2 to \$4, a few as high as \$5 per 100; carnations, 75c to \$1 for standard, \$2 to \$3 for fancy. The rest of the price lists for the week and the beginning of this one showed stocks fast accumulating, and that (with the exception of the carnations) showed price lists to be of very little account.

Roses have been selling on the streets at 10 cents per dozen; even carnations were quoted above roses.

Most of the price lists are prepared with moderate supplies. It is true, trade between retailers is quiet, but there is no lack in quantities. The carnations have been the rule here recently. Concerted action in this city appears to be at a low ebb, and that is of the utmost importance to the trade.

Trailing arbutus, in excellent condition, Michigan, is selling at \$3 to \$1 per 100 bunches.

## Around Town.

C. S. Stewart, some time with Kennerly & Bros. of Chicago, is in Arlington, whose trade is gradually increasing.

H. Schneider, of Oak Park, is rejoicing over the advent of a son and heir. Mr. Schneider is enlarging his greenhouse at Concordia Cemetery.

Peter Hollenback, 159 Randolph, reports his seed trade better than last year.

Andy McAdam is cutting fine spikes of red and anti-rhizomes; they sell at 50 cents per 100.

E. H. Hunt will have, when complete, 76,000 Walden Avenue, a splendid salesroom.

The failure of the Chicago market, of Indianapolis, has brought some of the wholesale houses in this city. The idea

seems to prevail, however, that there will not be much loss, ultimately.

## Obituary.

Mrs. Elizabeth Naslund, mother of Charles Naslund, was buried Tuesday, May 4, aged 70 years. Death was caused by pneumonia. She leaves two sons and three daughters.

## Toronto.

## Club News.

The April meeting of the Gardeners and Florists' Association was held on the 29th at Danlop in the chair. The Tariff Committee reported that it had sent a requisition to the Minister of Finance, at Ottawa, asking him to put flowers, bulbs, corms, tubers and rhizomes on the free list; also palms and other stove and greenhouse plants not otherwise specified. The action of the committee was endorsed by the association. Since their meeting the new tariff has been published, but the changes have not been made. The committee has written to the member for Toronto, who is a supporter of the government, asking him to bring the matter up when the discussion is on, and we hope he will be successful in getting the wished-for alterations made.

A committee was appointed to go over the price list of the Industrial Exhibition Association and suggest any changes they thought advisable. The price list is not altered very much from last year's, and there is every indication of an extra fine show this autumn.

There has been considerable talk about making amateur classes in one of our shows, but the difficulty is to properly define an amateur. We find that every one who calls themselves an amateur are selling the products of their gardens and greenhouses, in competition with the professional florists. Some say they do not make their living entirely in this way; they add something to their income from other sources, they just sell enough to cover their outlay for fuel, seed, etc. Many think, however, that a man ought to sell the product of his garden he should be called a professional. The Horticultural Society thinking of making this matter up, and I expect there will be some discussion on it before it is settled. Many of us would like you, Mr. Editor, to give us your definition of an amateur in the columns of The Exchange.

## Trade Notes.

Business has been fairly good and all crops have been plentiful.

The seed trade has been very lively this past few weeks, the stores of J. A. Simmers, The Steele-Briggs Co., Rennie and Keith, being constantly crowded; while Grainger Bros., up lower town, are being more than doubled over last year's.

## News Items.

Charles Arnold, Queen St., returned from the Erie Park works he had been for a few weeks with his father, who was very ill. He brought the old garden back to him and he is getting well again very fast. There is every appearance of fine displays of flowers in the garden, and the beds look strong and healthy and tulips and hyacinths will soon be all in bloom.

## H.S. McAdam.

## Jadovo Fibre.

The manufacturers of this material (The American Fibre Co., Philadelphia) are distributing circulars containing numerous testimonials in favor of Jadovo fibre grown in Ontario. The following is a sample of the testimony furnished by a well-known Southern grower:

"So far everything has done better and with less trouble than we have ever had before. The fibre makes extraordinary roots, as well as top growth; they make longer fronds and better before the fibre make extra-ordinary and choice plants only. Palms also do much better in it than in soil. They make larger plants and better material. In all establishments where stove plants are grown, I would strongly recommend the use of this fibre as a true color."

The firm has issued a pamphlet giving useful hints on growing plants and seeds in this material.

## The Right Cypress for Greenhouse Material.

If you have heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we cannot afford to jeopardize. We send out the best only.

## BOOKS RECEIVED.

The Canadian Horticultural Magazine.—The first number of this magazine has come to hand. It is published by the Montreal Horticultural Society. The issue before us contains several interesting articles by well-known writers, among them Professor Craig and Dr. H. Hookins.

Nuts for Profit.—By John R. Parry, Parry, N. J. This is a handy treatise on the propagation and cultivation of nut-bearing trees, published by the author with a view to meeting the demand for knowledge on this subject. In view of the increasing interest manifested in this fascinating and profitable industry, in addition to his own views, Mr. Parry has presented those of writers in various sections of the United States, thereby rendering the treatise of general interest. The nuts deal with in the pamphlet are those most familiar in our market and which can be produced at a profit.

COR. ROSE AND DUANE STS., NEW YORK.

Baltimore.

Koffman, the smilax king, has been the past two days buying cypripediums. He brought fifty specimens from J. Pentland. Most of them were in 14 and 16-inch pans. He has picked up the past three weeks, about 12,000 growths.

**Mount Vernon, N. Y.**

Arthur Dummett was married on Wednesday, April 28, to Miss Anna Lutz.

**Utica, N. Y.**

C. F. Seitzer grows the Parquet violet and not the Campbell, as stated in last issue. The former variety has given him great satisfaction.

**St. Louis.**

**Market Erratic.** The less and demoralized condition of our market the early part of last week was in sharp and direct contrast to the relative activity and prosperity with which it closed. Last Monday, Tuesday and Wednesday brought an apparent revival of our market, but there was very little doing in local circles and not enough shipping trade to relieve the situation. Stock was packed into refrigerators and cellars until there was no more room, and then the slaughter began. Receipts were plentiful until Friday, when receipts were lighter, aided by a demand for funeral work and improved counter trade. Saturday's receipts were surprisingly light, and good stock sold clear at sharp advances. On Sunday receipts were not enough to get around and to-day (Monday) finds the market almost bare and prices advanced fully 100 per cent. over last Tuesday's figures. Of course, this condition cannot last. The weather is very hot and clear, and we are now in superabundance in a day or two.

There was no glut of select roses. The great abundance flooding this market was of the poorer grades, much of which will molder away before the most plentiful and poor sale until the latter part of the week, when the demand for funeral work will sweep the surplus. Perle was in good demand and clean foliage stock found ready purchasers. Piedmonters of good quality and condition, sold fairly well. Meteor is not of satisfactory quality. We are not yet out of the market. Last bud Meteor as we sent here last season. La France are quite plentiful and of good quality. The price of the latter value. Testout, Whitney, Siebrecht and Morgan were mostly sold in poor condition. They sold at very low figures. Beauty, too, suffered through the general decline in values and is difficult to sell. Attention for them, as trade is limited, and after the retailers' wants are supplied the balance is difficult to dispose of, as surprising as such a statement may seem, it is a fact that at least 75 per cent. of the Beauty sold here are disposed of by fakers.

Jordan has a crop of the Jacqs. They deserve all the praise they can be bestowed upon them. They are exclusively Jordan's, never reach the wholesale, and cannot be quoted in the wholesale market.

Carnations are an awful glut. Some very fine flowers are sent to this market, but \$1 per 100 was the top figure for them last week. Clean sales of Daybreak of the very best quality could not be made at even this low price. Fine white were scarce, but the market is full of them. Best quality and quality for all needs. The bulk of the receipts sold at 50 cents, though some went at \$1 per 100.

The violet season is over; the few now sent in for sale should be kept at home. The market for the very best quality sold at 50 cents per 100; not because these flowers were over-plentiful, but because everything was so low. There is sympathy with the general market. W. L. Lucke is sending in some fine plants.

Out-door valley of good quality is in evidence now and commands \$2 per 100. Roman and Dutch Hyacinths are about finished. Harrisil cannot be sold at any price. The low price of the market last week failed to move them.

Smilax is scarce; the price is firm at \$15 per 100. Lilac is plentiful and sells at 2 cents a spray.

**Retard Trade.** There was little to do the early part of the week, but the dullness was dispelled by the rush beginning Thursday. The market was very active for liberal quantities for decoration. Funeral work was also plentiful. Several people seemed to have come in, and some had a number of good-sized orders.

Albert J. Bauer has sold his interest in the Fleckenstein Floral Co. to Charles F. Fleckenstein and has gone into the fruit business. The Trillium greenhouses at Old Orchard, Mo., will be sold at Dayton Tuesday, May 1, at 2 o'clock.

**Boston.**

**Business Quiet.** Rather quiet is the verdict among the retail florists this week, yet the stock coming in seems largely to be of the good quality. The market is little in connection with the market worthy of comment, as things are moving along quietly and the retail business is taking the natural course which is looked for at this season.

**Joinings.** W. H. Long, recently of Doogue & Co., will shortly visit New York City where he was formerly in business.

M. J. St. John, of the Boston Flower Company, returned the first of the week from a pleasure trip to New York and will be here in a few days.

**May Exhibition, Mass. Hort. Socy.**

The May exhibition of the Massachusetts Horticultural Society was held last Saturday afternoon at the Massachusetts State House, and especially the pot plants, were of a very high order. It was prize day for calceolarias and Mrs. B. F. Chas. (John Barr, gardener) and Mrs. B. F. Chas. (William Donald, gardener) earned the honors with very superior specimens. Kenneth C. Finlay, son, gardener to Dr. C. G. Weld, took all the prizes on named Indian azaleas on the 15th of May. The prize plants were Lady Woodley, Empereur du Bresil, La Victoire, Belle de Hollande, and the Duke of Fife. The same exhibitor showed a collection of several dozen seedling amaryllis, less than three years from the pot, which were remarkably beautiful, and received the society's silver medal. Both prizes for streptocarpus were taken by B. B. Cheney for fine specimens. A silver medal was awarded to Jason C. W. (John Barr, gardener) and to him noble Balleynanum. Dr. C. G. Weld also showed a collection of boronia, and a collection of Mimulus (Diplacus) glutinosus, and a collection of Mimulus (Diplacus) glutinosus. Dr. C. G. Weld exhibited six pots of ivy-leaved pelargoniums, which were good and were awarded the second prize.

Oakes Ames, Esq., showed a plant of Cypripedium (Cypripedium) of Salisbury C. bollatium C. barbatum, which has never before been exhibited in bloom in this country.

The cut flower exhibit was exceptionally good for this season of the year and collections of tulips and narcissi, the prizes for which were taken by the Bussey Institution and Dr. C. G. Weld. The show of pansies was good, the first and second prizes going to Joseph S. Fay and the third to Mrs. E. M. Gill. Mrs. E. M. Gill, Mrs. M. Gill, W. N. Craig, John Jeffries and Oakes Ames made displays of cut flowers, and the prizes for the best collections of native flowers. The exhibition of vegetables was excellent.

**The News.**

The May meeting of the Boston Gardeners and Florists' Club, the last before the summer vacation, occurred on Tuesday, May 1, at the Hotel Marlborough with an average attendance. The essay was on "Modern Bedding," by Mrs. E. M. Gill. The paper was interesting and instructive, containing many suggestions for the improvement of bedding plants and also pointing out the errors which are sometimes committed in the growing and marketing study and pains with their labor.

After the subject had been discussed by Mrs. E. M. Gill, Mrs. M. Gill and others, the club voted to hold the strawberry festival this year, as usual, during the month of June. President Dent Grey, Vice President Anderson and Secretary Dawson were appointed a committee to select a date and make all necessary arrangements.

The reports from the seedsmen are very favorable, in some cases the largest business on record having been done. N. F. McCarthy & Co. are getting their auction business in good running order. The fruit business has not been disposed of and the bedding plants are now beginning to come in.

C. F. K. W.

Cincinnati.

Business Unsuccessful.

The cut flower trade in this city during the past week has been anything but satisfactory, and as to prices, it was not what you could...

On Sunday a severe snow-storm set in and continued until early in the afternoon. One party who wanted some out-door plants was obliged to take a broom and sweep the snow off the bed before he could find the plants.

Our carnation growers who have planted in the field are a little anxious. Fortunately, we have had no freezing weather with this snap, but fresh here had to be kept going. Lilac, out doors, was all killed by a recent frost.

B. P. Critchell's Sons have their stock in good condition. They have one house of sweet peas that are just commencing to bloom and look as though they would furnish a splendid lot of flowers. The principal business done by this firm is in the palm line.

The first consignment of chrysanthemums was received by the writer, under the name of John Smith & Son, Adrian, Mich. Of course, you must not think they were exhibition quality. The flowers are also received in the same shipment and was quite a novelty for this market.

The weather now is clear, cloudy and cool, which will retard all kinds of cut flowers, and I hope, advance prices on our stock.

E. G. GILLETTE.

Pittsburg.

The condition of trade the past week was none of the best. Stock of all kinds was very abundant and standard, the latter being sold for 25 cents per dozen; 50 cents bought good ones about the only stock remaining firm in and sells well but hark the head of other stock.

E. C. Ludwig had the decorations for the Grant banquet last week and suffered quite a loss, fire destroying about \$250 worth of decorative plants.

L. I. Neff also had a narrow shave during fire, being in close proximity to the main building.

One of our daily papers had an article about two well-dressed, mysterious Japs, who were looking about our city in quest of some deeply interested in something, but nothing definite could be learned of the purpose of their mission.

LAST OFFER!

LAST CHANCE TO BUY IMPORTED HARDY, FRAGRANT, DORMANT ROSES, SUMMER FLOWERING BULBS.

In following and other go-dor sorts, my choice. Anna de Diebach, John Hopper, Prince Camille Roban, Birones, Rotaschid, Frau Gabriel Luitze, Paul Noyen, Fisher Holmes, Magna Charta, Ulrich Brunner, Girolde Margottin, Mrs. John Leiser.

Beats Every Chemical Fertilizer on Earth.  
 Pure Sheep Fertilizer permanently improves the soil.  
 Matures the largest and best crops. Quick and lasting in its action.

**"JADOO" FIBRE AND LIQUID**

"Jadoo" Fibre!  
 A new potting material.  
 Seeds germinate more quickly than in earth.  
 Greater perfection easily attained.  
 Suits all kinds of plants.  
 Is much lighter than earth.  
 Less frequent watering required.

"Jadoo" Fibre is a perfect substitute for earth.  
 The Flowers grown in it are larger and of a rich color.  
 The Flowers last longer.  
 No soil to mix. No manure required.  
 Immense saving of labor to professional or amateur gardeners.

Concentrated "JADOO" LIQUID is the cheapest Fertilizer sold. Both meat and drink to plants. Revives drooping plants, strengthens the weak and nourishes the strong; above all, it increases the size, causes greater profusion of bloom, and heightens the colors of all Flowers and Plants. Can be used on Flowers or Plants that are grown in Earth or "JADOO" FIBRE.

**SIMPLY INVALUABLE IN POT CULTURE!**

The supply at the present time is limited to 50 Tons Fibre and 1500 Gallons Liquid per month.

**Buffalo.**  
 Business is Slow.  
 The weather now inclines to moist and rainy on most days, but continues warm enough to rapidly advance outdoor growth, which has assumed a greatly changed appearance in but a few days. Hyacinths are in full, quickly blooming, and with tulips a few days behind, showing an advance over average years. In this trade of eight to ten days. The weather conditions favored such outdoor flowers. Fancies and buyers choice of conditions generally the rule.

Business is hardly good. Society does not seem interested now in what demands the use of flowers, while funeral orders are high. Flowers are rather over-plentiful, in fair quality, some going unsold on some days, and buyers choice of conditions generally the rule.  
**New Wholesale Houses.**  
 A new wholesale concern under the name of The Buffalo Cut Flower Exchange, with Fleckman as manager, has opened up at 481 Washington Street.  
 Recent callers included W. Rolker, Mr. Anderson, representing A. Rhotert, of New York City; Park Commissioner Harry Baskley; Detroit, William Hageman, and S. S. Skidelsky, Philadelphia.

**VIDI.**  
 Professor J. F. Cowell is experimenting in heating frames with hot water, in place of manure. A small upright boiler is used, and two return 2-inch piping—255 bearers—7-inch heating, upon which a little sphagnum is placed, to keep up a moist temperature. It is a cleaner, and perhaps cheaper, method of heating. The new aquatic house will probably be used as forcing house so soon as the new conservatories are completed. The sum of \$100,000 has been appropriated for this purpose, and the houses will be erected this summer; plans and estimates are now in order.

Several students are domiciled here, and in addition to a botanical education, they will obtain a practical insight into raising the every-day or commercial plants. Some twelve hundred Alpine and herbaceous plants are planted and being planted in borders, and are clear sweep one-half mile in length, and varies from 10 to 40 feet in width, terminating at a natural growth of every native plant will be encouraged to make its abode. A rivulet rippling through the midst of it, and emptying into a pool, shadowed by overhanging trees, and containing hardy aquatics, is one of the prettiest sights.  
 In the Alpine rocky Arabis alpina is in bloom and very attractive. It is pure white, on the order of sweet alyssum. It did not do well the first year, but is thriving the second year. A potent and trouble plant, and very numerous american var. ovatus, easily propagated. The first plant was procured by Mr. Cowell when he was in Canada. The Canada thistle has introduced it, and has already been the cause of many hardy expressions.

Upon the verdant terraces thousands of crocus, dotted here and there, are in full bloom, and the admiration of the throngs of visitors.  
 Content Garden at this season will be full of gladioli, geraniums, and fuchsias, principally. This is not the market of the great metropolises, but I venture to assert that pelargoniums being grown by William Scott and the fuchsias of Chris. Christensen are not surpassed, if equaled, by the best growers on the other side. These two classes of plants are becoming more popular each spring, and can be grown cheaply and profitably and come in a period when blooming plants in pots are not very plentiful. Zonale geraniums are also grown as specimens, as also in vast numbers to plant out.

At Corfu Mr. Scott is encouraging the propagation of wild fowl. Hither he flies himself to shoot and to escape the assaults of the drummer, as being of a peaceful nature, he cannot resist their persistent attacks. I hear his carnations are looking well under the care of his son, Alec. He intends adding to the plant this season.

Mr. Christensen will retire from active life for a while after July next; but we shall doubtless see him again in the city on no distant date. (I mean, of course, the commercial ring.) Chris. cannot remain long out of business. W. M.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

### THE PUBLIC AUCTION

Of my Plants will take place on WEDNESDAY MORNING, MAY 12, commencing at 10 o'clock, on the premises, 1510 Greenmont Ave., opposite the entrance of Greenmont Cemetery, Baltimore, Md. City and Suburban R. R. cars pass the place.

The following stock will be offered (unless disposed of at private sale). All my plants, which consist of the following varieties: About 6000 choice Roses, one, two and three years old, in splendid condition, to be tied up and ready for market and all grown in cold frames all winter, about 50 named kinds of the choicest varieties; 2000 or more of the finest and best varieties of Camellia Japonica, about 75 named varieties and each plant named true, in 4, 5, 6 and 7 in. pots, together with some hundreds of large plants in large pots; 200 or more Orchids of different kinds, some large plants of Dendrobium Nobile, Phalaena, etc., also about 50 Cypripedium insigne and others, grown in large flats, having had from 25 to 50 flowers each many of them; in fact I raised \$50 for eleven of them last fall, the blooms having paid a much larger interest than that value. There are 300 or more Palms for decorative purposes, consisting of Kentias, some large specimens of Araucarias, Yucca, etc., and some variegated; a large lot of Azaleas suitable for large decorations, 2000 or more Geraniums in 4 in. pots of choice leading kinds; 2000 Carnations in pots, 2 1/2 to 3 in. pots, many coming in bloom, all choice kinds, named, many of them seedlings as true as the best, some pure yellow without spot and many dwarf. Marie Louise Violets in 4 in. pots, ready for planting out and some in frames. Oxalis, Esculentum in pots with leaves; 200 or more American Poinsettia Nans; 1500 Hecht Seed, 4 feet, together with thousands of miscellaneous plants too numerous to mention. All good reliable stock.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**SEED TRADE REPORT.**

Points and information from seedsmen, and all interested in this column, solicited. Address Editor **SAUNDERS**, care of **FLORISTS' EXCHANGE**, P. O. Box 107, New York.

**Seed Trade Association.**—The annual meeting of the American Seed Trade Association takes place at the Elbitt House, Washington, D. C., June 8, 9, 10, next. An interesting programme is being prepared, which includes several papers by well-known experts; also provides for a full discussion of the most important seed distribution and the Davidson bill to regulate imported seeds.

**Lima Beans in California.**—There are 5,000 acres less land devoted to lima bean growing in California, than last year. Farmers say the sugar beet is doing better than beans and are growing the former on land heretofore used for beans. It is aimed the three counties of Santa Barbara, Ventura and San Luis Obispo can supply all the beans mustered demanded in the United States.

**Seed Crops on Long Island.**—The outlook for the grower is by no means as favorable as it was when we made a report two weeks ago. That report was barely in type before we had a sudden fall in temperature, the thermometer indicating seven degrees below, the effect of which is beginning to be severely felt.

Beans suffered more than any other crop; its growth has been checked, in some cases to such an extent that the whole crop has been ploughed under. The dry, cool weather of the past two weeks has been unpropitious to the growth of the pieces put in late. There was a large acreage planted, and the hope that will be sufficient for filling all contracts, but there will be none left over for early sowing in.

Turnip looking badly, the maggot having commenced its deadly work. However, it will not be the slightest effect on the turnip seed trade of our country, as there is but little grown in this section.

Rutabagas are looking better and there is every prospect of a good crop. The cauliflower, however, as a whole. Of course, there are some poor pieces, but the indications are favorable for a good crop upon which no calculations can be made. Elchit, stem-rot and maggot are enemies that may be looked out until the crop is ready for the harvest. But the deadliest foe, with us, is a heavy and continued rain when the plants are in flower, which destroys the little beetle, the agent of fertilization, without whose help we should have but little seed.

Fall-sown spinach suffered somewhat from the cold snap, but is recovering, and there is every prospect of a good yield. The spring-sown crops are looking splendid and we look for a large harvest.

**European Notes.**

**Vegetation Backward.**

Favorable weather has arrived at last and vegetation is active in all directions. Compared with 1896, we are fully two weeks behind, but as the season is moist beneath the surface we are in a comparatively better position.

Radish, cress, spinach and mustard are now showing through the ground in all exposed situations. The Brussels, etc., sown for 1888, are also in evidence, but very early sowings of French and Italian cauliflower have been cleared off in many places by fly. The destructive effects of the flea-beetle are also apparent in every hand, but none of our crops has suffered to the same extent as early sown turnips. In some of the most favored districts, particularly in England and the West Indies, the clearances and those where the plants are still standing present a very sorry appearance. The same remarks apply to the crops of these two articles already given in the notes is more favorable than that of the plants the writer warrants us in expecting to-day.

**New Nasturtiums.**

The boom in nasturtiums on both sides of the Atlantic has given an impetus to the trade in bedding tropaeolum. Where a definite effect is aimed at these are to be preferred to nasturtiums, which are at all times liable to sport, and they have also this further recommendation that with a little care they can be had in bloom nearly all the year round. The Royal Horticultural Society of London, has bestowed its award of merit on the following: Coolgardie, a pure, bright, yellow; Mrs. Sanderson, a rich, ruby crimson, early, very free flowering, with an agreeable perfume; and Phoebe, a dark shade of buff, with deep crimson blotch, the petals are freely at all times. The last-named is very similar to a variety handed to the writer by Mr. Gleason, at Boston, in 1881, and appears to be the only thing of the kind in commerce.

**Jamo's work in Hybridizing Glacaria.**

James J. Crameria, has entered the ranks of the hybridizers, referred to a few weeks back, and judging by the plants exhibited by him on April 1st, his efforts have been very successful. The first step consisted in hybridizing C. hybrida with C. cruenta. The result being flowers rather larger than C. cruenta and distinctly marked with some of the more clearly-defined colors of the latter strain. The second step consisted in hybridizing this cross with C. lanata. The results of the latter effort are both interesting and beautiful, and one variety in particular should have a great future before it. The plant is of vigorous habit and elegant form, throwing out numerous branches with long stems, which are covered with a woolly downy substance, and terminate in large flower heads of white flowers, about one and one-quarter inch in diameter. There is a very faint shade of color in the centre when the plant is standing in a clear light. The color of the flower is white. Its elegant form will render it very valuable as a pot plant, while the long stems of the foliage render it serviceable for every branch of the florist's art. Unfortunately, it does not appear to produce pollen, so for the present, at any rate, the seedsmen must take a back seat; but those who also do not trade in plants should not have any difficulty in obtaining a supply.

EUROPEAN SEEDS.

**Boronia Elator.**

Boronia elator is a native of Western Australia and was introduced into Europe in 1874. Since that date a few plants from time to time have been sent to this country, mainly for private collections. The past Easter was the first time this boronia was offered in quantities, commercially, as a decorative plant, and as such it, together with *Boronia heterophylla*, has met with a good deal of favor from the buying public. The last-named is the most popular in this country, and is the most numerous variety. In this climate it apparently flowers more freely, so much so that it is a fair rival to an absence of green foliage. For that reason the subject of our illustration is likely to be the more popular of the two on account of the pretty blending of its young, green growths with the flowers, the very deep red of the latter showing well with the former.

Preparation is from cuttings which need to be sowed in soil having them too fat or young; yet they need to be scarcely half ripened. Such wood roots easily in a four-inch pot, set in glass in a temperature of 63 degrees, and keep the roots moist and cool. When ready for the next shift, which should be into a four-inch pot, make the compost a little stiffer and use coarse sand. In the after care of the plants the main points to be observed are to keep them cool and avoid high temperature. In this respect the treatment is identical with that of *Boronia heterophylla*. In the winter keep the house as cool as possible—45 to 50 degrees—and water freely. (See illustration page 491.)

**Freepart. L. I.**

CARL LENKER has purchased ten acres of land here for nursery and florist purposes. He takes possession on the 15th inst. and will have a greenhouse 24x200 feet for general purposes.

The above shows the main portion of

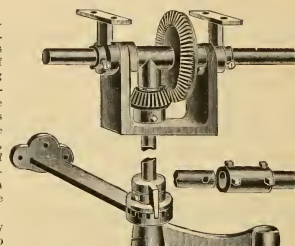

**THE ORMSBY SYSTEM**

LOOK IT OVER THOROUGHLY.

THIS system consists of a 5-in. solid steel rod, supported in suitable hangers adapted to different style of houses. The upright lifting bar or rack attaches to the ventilators and intersects with the cog wheel in which it travels when raising and lowering the ventilators. (On the left side, and passing over the back of the rack is the guide, used to prevent the teeth of the rack from separating from those of the cog wheel.

This is held in position by the collar at the left. It is so constructed that it cannot bind on the rack nor separate from its position.

The SPRING is the ALL-IMPORTANT in the Ormsby System; it is made of the very best grade of STEEL. Without this the system would not be worthy your consideration.

The set of bevelled gears, and its connections, used simply to operate the horizontal rack that the ventilators are attached to; also its lock and latch, used as an additional security to locking the ventilators at any required point.

Hail and Fire Insurance.

John G. Esler, secretary of the Florists' Hall Association, talked on this subject before a large and appreciative audience at the meeting of the New York Florists' Club, held Monday evening May 10. At the meeting, under the course, Mr. Esler read an account of a Texan hailstorm, given in the daily press wherein was stated that some of the hailstones were weighed from three to four pounds, and during the progress of the storm that two persons were killed by the hail. "This," said he, "was pretty tough, but it ought to have been some of our hailstones if not yet members of our association."

The speaker stated that the Florists' Hall Association was organized in June, 1887, so was within twenty days of the first decade of its existence. It came into being somewhat under a disadvantage. The S. A. F., as a body, had refused to father the project, and some of the horticulturalists started it on their own hook.

Today the association insures over half a million dollars, and its risks amount to over half a million of dollars. Within the past ten days the association has paid out losses amounting to between \$1,500 and \$1,800, and had paid out no insurance within the same period of over one hundred thousand feet of glass. The average rate of insurance to a member who had been in the association for ten years was 5-5 cents per 100 feet of single strength glass, and 100 feet of double-strength glass per annum.

Mr. Esler then facetiously commented on the experiences of those who had considered themselves outside the supply, and had believed in the results of which this imagined immunity from hailstorms had entailed, mentioning the cases of Pittsburg and New York, for example. He said there was only one region where glass was probably safe, that of Cambridge and New York, and extended over Union Hill and on to Long Island as far as Flatbush; but some say these losses would be out of the hail belt either.

One of the first to join the hail association was the late Mr. Willis Springborn, of Dubuque, Iowa, whose case, previous to that time, had been cited with had three different occasions. Strange to say, Mr. Springborn has paid seven different assessments and has received a dollar from the association. Since he became a member his greenhouses have evidently been outside the hail belt. [Laughter.]

Statistics show that the largest number of hailstorms within the past ten years had occurred in New York State. Missouri came next. New Jersey and Pennsylvania are very well up on the list and have had their share.

It had been observed that more losses have been experienced in the West than in the East, so that the Western people have greater need of hail insurance than those located in the East. Hence the association carries more insurance in the West. Whenever a storm occurs in the East the society pays the rate in having few of its members hit, those who suffered loss being unnumbered. There were many suggestions to this rule, however, Philadelphia being a notable instance.

In addition to being within the hail belts, there were some who counted on freedom from the danger consequent on hail storms from the fact that their places were sheltered by mountains. This view was then readily dispelled by experience, however.

As regards the resisting power of glass, Mr. Esler remarked that small glass always breaks the quickest, and that 16x24 size is not nearly so liable to be broken as is size 12x14, or smaller; but when a big pane gets broken the hail makes a larger hole, and that about equals the margin.

The speaker pronounced the effect of cutting off the hail, a good deal of resiliency to the hail. Coming to the subject of hail insurance, Mr. Esler remarked that under the present conditions of New Jersey there is an opportunity to organize what is known as a Fire Lloyds. This act has been twenty times before the legislature, but it has not been passed. If property worth \$20,000 or more is insured in a company, they have to deposit with the State \$40,000.

Of course, they receive interest on their bonds deposited, less State taxes and other assessments. Mr. Esler said that the speaker could see whereby a fire insurance company could be organized was for each individual to take out insurance to take say one per cent. of the amount of his insurance in stock. If this plan were adopted, the amount of insurance, would give \$40,000 worth of stock, which amount would act as a guarantee for the stockholders of the insurance, if any, together with the interest, less taxes, etc., would be apportioned among the stockholders as a dividend.

The chief difficulty, however, lay in the fact that which risk had to be started. We had to wait till Providence sent the hail, but in an old greenhouse it was not so easy. It was a simple matter to get up a conflagration. Another difficulty was in finding twenty or thirty persons in New Jersey, each possessed of \$20,000 worth of realty; and there was an obstacle in finding a proper man to manage the institution when once it was started.

Mr. Esler stated there was little hope of doing anything with the present insurance companies at present. Every time you raise the rate better risks drop off; every time the rate is raised the risks get poorer, and as the risks get poorer the rates get higher. It is a vicious circle, and every time the loss is greater the companies raise the rate. It is a kind of a vicious circle, and every time the underwriters throughout the country refuse to take any action whereby greenhouse owners can get any better rate at the present time.

Mr. Weathered stated that on account of the heavy demand for 16x24 glass, the present trade in the glass trade had advanced their rates on that size of panes, and that the result was prohibitory. This action was decided upon last week. The largest light to be obtained in the country is 16x24, larger than these is demanded more money will have to be paid for it. The trade has advanced the price of 16x24 glass ten per cent., and threatens to put it up higher if the demand for this size continues.

Mr. Mandt complained of the present insurance rates, and thought if a fire insurance company was started by the trade it would be a greater boon than the Hall Association even.

Mr. Weathered said it were not the fact that the regular Fire Lloyds insured at lower rates than the old fire insurance companies.

Mr. Esler stated that there existed a certain amount of prejudice against Fire Lloyds, and that the number of failures, and if such a company were started this prejudice would be very likely to be removed.

In answer to a question as to whether it was not possible to obtain a uniform rate for greenhouse property, Mr. Esler detailed the work of the fire insurance committee of the S. A. F., of which E. C. Nichols was secretary.

Mr. Weathered said that during this particular line, adding that if the florists of the country would assist that committee in their work, it would be a great boon to the industry.

Mr. Esler stated that there existed a certain amount of prejudice against Fire Lloyds, and that the number of failures, and if such a company were started this prejudice would be very likely to be removed.

In answer to a question as to whether it was not possible to obtain a uniform rate for greenhouse property, Mr. Esler detailed the work of the fire insurance committee of the S. A. F., of which E. C. Nichols was secretary.

TEN DEGREES BELOW ZERO

is the temperature that has been undergone without injury by unrooted or yearling plants of the new climbing roses.

AGENDA OF YELLOW RAMBLER

In our nurseries the past Winter, thus proving it to be even harder than we had supposed. A Heavy Yellow Climbing Rose is what everyone has wanted for years and years, and therefore, no business as yet introduced.

150 Bunches in a Bush have frequently been produced by the Yellow Rambler, for it has the same manner of blooming in splendid big clusters as does the Crimson Rambler to which it is an extended cousin rose and probably related. The color is a clear decided yellow, the flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well established plants making about eight to ten feet high in a season.

We are the Introducers of this rose in this country, having been so appointed by Mr. Peter Lambert, the originator. We see also prepared to offer in large quantities of two other valuable climbing roses: EUPHROSYNE or PINK RAMBLER Color a clear light red, otherwise very similar to Purple.

TITIA or WHITE RAMBLER Pure white; same style and habit as Aegle.

WE WANT YOU TO BUY TO handle these three roses among his customers and every one who will do so, we agree to depend upon you for his supply of plants.

WE WILL SEND FREE OF CHARGE circulars, color plates, illustrating the Aegle, together with 100 handsome descriptive circulars with names and address stamped upon them. Send at once.

Price for strong plants from 2 1/2 inch pots, \$15.00 per 100. Send for our Trade Lists of other Roses and General Stock.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

**Gardeners and Gardening in Early Chicago.**

(Continued from page 404.)

The next place, and probably the oldest in the city, was W. B. Ogden's, occupying block 35, Kinzie's addition to Chicago, bounded by Ontario, Cass and Erie streets. His long-time partner, William Sheldon, also had a homestead there. Mr. Ogden, you know, was Chicago's first Mayor, but after the time I speak of he had moved to his home, where a few years ago I saw his magnificent grounds covered with fine rhododendrons and other choice things. In this city home were two lean-to greenhouses, one partly filled with grapes. This passion for vineries, which for years was quite a feature in this city, was killed finally by California grapes, I fancy. The gardener here was a German by name, Herman Khlane. He is still living, being a hardware merchant on North Clark street, near Illinois street. Mr. Khlane was an exhibitor and member of the early societies with us.

Just beyond the Ogden place, east of Rush street, I. N. Arnold had his house. There also was a lean-to greenhouse, two sides of the dwelling forming its back wall. There also was a grape arbor in the rear, and another built afterward. The grounds were well furnished with shady walks and flower beds, and like all others of the day, had a kitchen garden attached. John C. Ure was gardener here. He is a native of Scotland, and is still at Evanston avenue. When the old city cemetery at North Avenue, was about to be abandoned, the city aldermen spent some money in forming the grounds into a city park. John was the superintendent. He was also an exhibitor and one of the founders of the Chicago Cactus Club.

Edward I. Tinkham, a banker, also had a small greenhouse attached to his residence on Rush street, and—what was a rare thing then—a nice iron fence to his place. Often these boundary fences were very pretty on those days. But fences people must have, as strays on the streets in the form of cows and pigs were not unknown. Beside these parties there were a number of the old settlers in and around this locality that had a good deal of garden space around their homes. Some flowered vegetables, and some of the more modest lot—bounded by Rush street and Ontario, a big currant patch, I recollect. J. C. Cole finished a fine place in 1837 that I graded and laid out.

My next stop was to go to North Clark street, opposite Washington Park. Here E. B. McCagg had his fine home. Attached to this, built in 1854 or so, were the model greenhouses of the city—one a curvilinear roof, one a span—but both heated with water. Here was really an excellent collection of exotic plants and a variety of full bearing. The gardener was Francis Ludlow, an Englishman, who came to the city in 1853 and for a time was with Samuel Brooks, florist, in Hyde Park, and for some years past has been gardener in the Park, near the corner of Erie street.

In 1873 Miller, Hunt and Ludlow started. They afterwards were the famous florists on North Halsted street. The McCagg greenhouses, you recollect, without the curvilinear one, were in the rear on the west side, except Malbon B. Ogden's wooden dwelling, standing where the Newbery Litchfield now sits, and in that great holocaust of 1871. The last occupant of these greenhouses was W. T. Shepherd, a florist, who lived in a vine arbor in his figure in a florist way, until 1875 or so. He also had a place in Evanston. In 1871, the title went to Wright's Grove, the northeast corner of North Clark and Fullerton avenue. Here was the home of John Peck. This place contained several acres, and is noted for its roses and geraniums. The huge old bushes of lilacs, with the grand old Harrison yel-

low roses and the yellow flowering currant, and perhaps, also, the Guelder, with some common old hardy roses, were the shrubbery that sat pretty here. This place contained a large lean-to next the dwelling and a vinery and greenhouse on the ground floor. The fashionable drive of the day, the old Lake Shore plank road, which in 1847 was a young man from the King garden in Hanover, Germany, totally unacquainted with English he agreed for a year with Mr. Peck for \$100 and board. But even at that modest figure George managed to save some money, and has been at it ever since. He afterward was gardener on the McCagg place, and then went into partnership with A. T. Williams, at the corner of North Clark and North Avenue, buying property on North Halsted, where he is still.

Still following the fashionable drive of the day, the old Lake Shore plank road, at the corner of Cornelia we come to James H. Kees' place. Here was a small conservatory attached to the house, afterward a large vinery for exotic grapes was added. No regular gardener was kept, but a handy man and general all-round manager by the name of Clark was supposed to

There was many a fine place projected in those old times, which like Burns' schemes of mice and men, have gazed aghast, and are one of them. The memory, however, as well as some other remnants of the old place, still remain in the common name of the spot, Kerkoff's Park.

This completes the list of the more pretentious gardens on the north side. Our next trip will be to the south side, and Congress street was as far as fancy gardening had extended then, those coming under my ting being only two, the first being that of I. H. Birch, a prominent banker of the time. His place, a fine Italian villa residence overlooking the lake, came right to Michigan avenue. It was somewhere about Washington street. Here was a greenhouse and a vinery of exotic grapes, the latter very noted at the time, as was a splendid dwarf pear orchard, which was kept in the highest style of the art by the English gardener, Charles Leyton. Exactly what became of Charlie was not known for certain; the last I heard of him, years after he was from Washington, D. C. A cruel hoax was played him by another Englishman while in Chicago, which was said to have scared him away, it being nothing else than

the west side worthy of special notice, as it was perfectly unique and unlike any other in the city. This was the homestead of the first Irish nurseryman, W. B. O'Brien, a worthy sire of our society's secretary, W. C. Bgan. These extensive grounds, those mainly devoted to fruit and vegetable and floral part, were bounded by Congress and Sangamon, Van Buren and Morgan streets, and were bounded on the west by this notable place, but elegant clipped hedges surrounded this demesne. The main block diagonally northwest, bounded by Van Buren, Jackson, Sangamon and Morgan, was a fine nursery, and I remember, too, that the homestead lot had, I remember, two two other large circular inclosures, one with flower beds, with dwarf clipped hedges as boundaries. So, you see, this place was laid out in the best style of the day.

And if the garden was in a manner original, the gardener was surely no less so. It was known by the name of "Old Tom," and he reigned supreme. This man was Thomas Keenan, and he came to this country about 1850, some time after his arrival becoming gardener for the doctor.

Eganville is an old name among garden lovers in this city, but not as later comers may imagine original with that delightful spot out of Hyde Park, but Eganville was down to Hyde Park, and once, by the way, was hoped to have been included in our new boulevards. It skirted what is now Drexel Boulevard, extended east to near Lake avenue, and it is certain the same Egan could have carried out his intention, would have been a magnificent estate. Great sums of money and lots of thousands of deciduous and evergreen trees and shrubs were planted, carriage roads laid out, etc., but the crisis of 1857 left too heavy a burden to overcome. A seeker for the old Eganville may yet no doubt find trees on the old spot; they, with the memory of the place, are the remains of this once notable place.

A few words as to the florists of forty years ago. These numbers, in the spring of 1857, just three, each with about 50 feet of greenhouse, with myrtle growing along the roof, were owned by Samuel Brooks, the pioneer, built the first commercial greenhouse in Chicago, and in 1853 moved to postoffice lot now in 1842, and in 1853 moved out to Hyde Park, where I found him. He died in Chicago in 1873, and was succeeded by a successful florist, being to this day called by the English "The father of the chrysanthemum." His name was John Garfield. The history of this man is replete with interest, but I have no time to dwell on it. He bought the city limits, now by Hyde Park, Westman, who first came to this city as gardener to Mr. W. B. Ogden in 1852. He bought the lot in September, 1875. The lot was bounded by Ontario, Cass and Erie, corner of Southport, about 1856, where he had one greenhouse. He afterward moved to the corner of North Clark and Erie, and finally at Clark street, near Garfield. He died about 1869, and was the father of the present John Garfield, a successful florist. The third one was John Carpenter, who came to the city, Aug. 20, 1852, and in 1853 moved to the corner of Erie street, then went to Peru, Ill.; came back and went to Buffalo, N. Y., returning to Chicago in 1857. He bought the lot now in Hyde Park, which was bought two acres of land at \$50 per acre. This property was just then being built, and was now by Hyde Park. His business in early life was vegetable growing. When I first knew him he was a florist, and he was the first to grow the city contained; it was built about 1855.

This completes the florist's list. The 1850's August 1857, the only one worthy of note was the Sheffield nurseries started in 1846 by Mr. W. B. Ogden and John Whitney, city limits, now by Hyde Park, being manager. In 1848 Martin Lewis bought a third interest, and in ten years afterwards, when he was in Chicago, he sold and lives now in Evanston, a wealthy capitalist. He built a greenhouse in 1849. In 1850 August 1857, the only one who was successful florist, Mr. Lewis was an English bred gardener. He was a florist in 1857, and in 1858 he had a noted one at West Northfield; his son Pitt is president of the Kentucky Commercial Nurseries, Dr. Keenan's son-in-law. Another notable nurseryman was Robert Douglas, of Waukegan, who is still in the city, and a florist in 1857. Mr. Elsworth, still another notable one, he died a few years ago at a good old age.

**Boronin Elator.**

water the plants. On one of my visits to give some instructions needed, I told him that the plants in the house should be watered. His reply was they would not get it, as their turf did not get watered, as he watered them only half each day. "Recollect," he said, "the water has to be brought from a distance." I told him that I had seen this practice practiced at this particular place at that date.

A half mile farther, still on the old Plank road, brings us to the corner of Graceland avenue, and here the late L. H. Kerkoff had his place. This was the home of John Blair, a noted landscape gardener of this time. This was before the residence was built at all. Thus did Mr. Kerkoff aim to garden finely before building stately, reversing, as you may remember, Lord Bacon's aphorism.

Mr. Kerkoff was fast making the oak ridges and depressions of this part of the shores of Lake Michigan a thing of beauty in the way of a gentleman's residence grounds. Grand sweeping drives, rolling shades of green foliage, with a defined kitchen garden, were laid out on the most approved style. A greenhouse was erected in 1871. Francis Calvert, Scotchman, was the gardener here, and a noted exhibitor at the shows of the time. He is now the senior partner in the well-to-do and successful florist establishment of Francis Calvert & Son, of Lake Forest, having previous to starting for himself laid out several of the noted Lake Forest country homes.

that he had been drafted by Uncle Sam as a soldier during the troublesome civil war. There might have been other places to come to Michigan Terrace, a marble block that all old Chicagoans never tired of pointing to, but I have not seen anything on this side of New York. In the outlying house of this block John Young Scammon had a garden, the main part of which was on Congress street and back to Wabash avenue. On the south wall of this block, with an L entering the west from the dwelling, was a very pretentious greenhouse, or conservatory; also a greenhouse and a grape arbor on the ground. Mr. Scammon was much attached to his gardener, L. P. Eastman, a Scandinavian. It used to tickle the first feelings of some of our country gardeners at the time, when Mr. Scammon, on returning from an extended trip to Europe, in entering his garden that all the places he had seen in Europe nothing pleased him as did his own garden. Mr. Scammon was among the first gentlemen of Chicago to sport a red carnation in his coat, the fashion being brought, partially, from England, but perpetual carnation was grown in great bushes by his gardener from year to year to supply the taste.

There might have been other small conservatories attached to some of the residences of Wabash avenue; if so, they have passed from memory. One lady, a Mrs. Davis, on Michigan avenue, deserves notice at the shows of the time. She had a bay window always gay with flowers, among them some camellias, which were very successfully cultivated and flowered.

Last, but not least, there is one place on

**Cincinnati.**

**A Successful Smoker.**

Never in the history of our Florists' Society have we had so much enthusiasm as was shown on Saturday evening, May 8. The programme mapped out by the secretary was one long to be remembered and was thoroughly enjoyed by fully fifty of the craft and some distinguished visitors. The programme was as follows: "Our First Smoker," consisting of cigar pipes and Old Durham. Green fly had no business in the gathering. E. H. Giesy, of the Lockland Lumber Co., recited a negro poem. Had you not seen Brother Giesy one would have thought the old song was being the reciting. It is needless to say that a hearty applause followed.

William and George Murphy favored us with some good music on their violins. This was highly appreciated.

Paul Hoffmeister next read a paper on "Heating by Steam; High Pressure." This was a very interesting talk and gave the boys a number of good pointers.

The next dance was a song by Ben George, which was well rendered. The Florist Mandolin Club, consisting of Frank Zali, C. J. Oimer and John Schrach, played some popular airs, which were well received.

Ed Schwartz read a paper on "How to Create More Enthusiasm in Our Society," which took well. "The Enquirer March," by the Mandolin Club, assisted by the Murphy boys, came next.

"History of a Florist," by Theo. Bock, of Hamilton, Ohio, was the banner talk of the evening.

The oration was by Richard Witterstaetter's subject. Mr. W. has been so busy selling Emma Woher and getting Evelynia ready to sell that his talk was short and scattering, touching on the most important points only.

E. G. Hill, who was present, made one of his happy speeches that are always well received.

The presentation of medals was next in order. Henry Weber & Son, Oakland, Md., carried off the gold medal. Huntsman & Co., New York, and Hoffmeister Floral Co., third. The latter firm and William Murphy tied for third place, but in the drawing the former won.

A recess of ten minutes was taken about the middle of the programme for refreshments.

The meeting adjourned till September next.

Mr. Weber gave us one of his good, substantial talks. This gentleman tells us he now has 50,000 feet of glass and is erecting 100 feet additional. The exhibition was the best we have ever seen staged here. Weber & Son had a magnificent display, consisting of carnations, roses, Harrison and calla lilies, Evansons, etc. Huntsman & Co., roses and carnations, palms, Harrison, Ferns, etc. Hill & Co, sent Jubilee, Mrs. McBurney, Triumph and Flora Hill carnations; Fred. Dornier & Sons, Mrs. Bradt, Mrs. Dolme, Albertini and several seedlings all in splendid condition. H. Schwarz had a good plant and a fine bloom of white Vivand-Morel Pnyssenhennau. E. Witterstaetter showed Woher and Evelynia carnations; J. T. Conner eight pots of Valle Buiters geraniums, a beautiful carnation and very large truss; Critchell & Blauers, Faecnia tenuifolia plants, and Hoffmeister Floral Co., carnations and callas.

E. G. Hill & Co. had one bloom of a new seedling carnation called Olympic color on the order of that of Triumph; Calyx periah, with a stiff stem, self-supporting, four feet long, flower three inches in diameter. This is certainly a revolution in the matter of stem.

**Market Sale.**

Business during the past week has been fair; prices, of course, were low, but most of the stock was worked off.

Sweet peas are now coming in rapidly and sell at 35 cents to 75 cents per 100; Blanche Perry and Emily Henderson being the varieties. Roses are beginning to show the effects of warm weather and are getting smaller; 5 cents to 3 cents is now about the top notch for Ferns, Bride and Bridesmaid. Carnations are selling at 50 cents to 75 cents per 100 for ordinary; fancy bring 1 to 2 1/2 cents.

Other stock selling proportionately low. There is not much prospect of an advance. E. G. GILLET.

2 insects & cent for each 600 feet of floor space.

**Kill and Save the Bugs!**

**"JADOO" FIBRE AND LIQUID**

"Jadoo" Fibre!

A new potting material.

Seeds germinate more quickly than in earth.

Greater perfection easily attained.

Suits all kinds of plants.

Is much lighter than earth.

Less frequent watering required.

"Jadoo" Fibre is a perfect substitute for earth.

The Flowers grown in it are larger and of a rich color.

The Flowers last longer.

No soil to mix. No manure required.

Immense saving of labor to professional or amateur gardeners.

Concentrated "JADOO" LIQUID is the cheapest Fertilizer sold. Both meat and drink to plants. Revives drooping plants, strengthens the weak and nourishes the strong; above all, it increases the size, causes greater profusion of bloom, and heightens the colors of all Flowers and Plants. Can be used on Flowers or Plants that are grown in Earth or "JADOO" FIBRE.

### For the Busy Man.

A summary of Mr. Esler's talk on Hail and Fire Insurance appears on page 488.

John Saul, Washington, and E. S. Nixon, of Chattanooga, Tenn., were the next speakers. The Seed Trade Association will discuss free seed distribution and the Davidson Bill at their meeting in Washington, D. C., commencing June 8 next.

The New York Florists' Club will hold an extension of its annual meeting at their June meeting. The Gardeners' Society will give a talk for the benefit of the poor children of the New York Hospital, at City Hall, Saturday, June 19.

#### New Orleans, La.

F. J. Mueller died here this week, in his seventy-first year. He came to Louisiana from Paris, France, where he was for many years a very successful grower of palm palms and ferns. He was one of the oldest and best members of the New Orleans Horticultural Society. He leaves a wife, son and daughter to mourn his loss. The business will be continued by his widow.

### American Carnation Society.

We have received a copy of the proceedings of the Cincinnati meeting. They prove very interesting reading. Such reports are of immense value to carnation growers, however, at the \$2 membership fee. The best talent in this line have freshly given of their experience, and the reports, and the grower standing in his own light who fails to care this.

### Wages of English Gardeners.

Our esteemed contemporary, The Gardening World, of London, commenting on an article which appeared recently in an English magazine on the expense of keeping up the gardening establishments attached to country houses, has the following to say regarding the wages of gardeners:

If we are to take the figures there supplied as absolute facts, we must acknowledge that we have long been laboring under a delusion as to the remuneration which our collectors pay for their services. The unmarried men, that is, the journeymen, receive on an average 5s. a week, but at 30s. and 40s. per cented get 20s. These figures might be reduced to 15s. for the former and 20s. for the latter, and would be very nearly a correct average. Wages in country districts are in most cases much lower, and in some of the best cities and towns. The gardeners and laborers in the service of the London County Council are much better paid than journeymen in private establishments, notwithstanding the fact that many of the latter are well experienced to be perfectly capable of taking entire charge of a garden and everything that comes under the hand of a writer in question, in summing up the garden expenses of a country house, says the Gardening World, "I have in mind 200 of them which keep a staff of twenty-four to forty, but for a staff of fifteen—ten to twenty at 30s. and a head gardener at £100—the annual minimum cost would be £3,000. It would be a fairly large establishment that would keep a staff of fifteen; but taking eight journeymen at 15s. per week, four gardeners at 20s. a week at 12s. and three boys at 10s. a week, a head gardener at 30s. a year."

### Sweet Peas.

Waldo C. Robnett, of California, contributes to Bulletin 127 of the Cornell Agricultural Experiment Station, the following sketch of his efforts to breed varieties of sweet peas by crossing:

"Some people have no idea how hard it is to get a new variety in sweet peas—that is, new and distinct—with merit. In a reporting time I can go over our fields and find to my surprise, but they do not possess merit. The color is probably a different shade or the form is a little different, but they are all 'off' types. New varieties are desired in the new varieties. Last year I spent a good deal of time crossing on Cupid and obtained several varieties of sweet peas. One of them on this little imp. Now the result is that all varieties that have red or pink and blue flowers are better than the ordinary Blanche Ferry growth, and all varieties that have blue in them are better than the ordinary Blanche Ferry growth. Here and there are plants of Cupid, but the crossing was not made perfectly. It is pollen bred to cross on Cupid, as the very hard to cross, but they are not very small. Several years ago I put weak Blanche Ferry and last year I got a few Cupid and now I have a few Blanche Ferry and now I have a few Cupid again. This is the result of Cupid and one-fourth Venus, and still it does not show any of the latter,

It cannot be distinguished from the thousands of Cupids we have growing. Of the other crosses, this is done on the taller varieties, the results are also discouraging. There are several new varieties, however, that are the whole summer's work from being a total failure. My stock of Penzance on Venus is very hard to grow, but a plant which I found last year, and a variety which Eckford will introduce in this country next year, is a very hard plant on Eliza Eckford brought me a flower like the former, but color of red flowers. Last year I had an imp. of royal Probe. It was a result of Penzance on Venus and was the finest stock on Royal Probe I ever had. This year it broke up into many new and several old varieties, but all of very fine form and color, such as buff, with a suggestion of pink, a rose edge, a pink edge on white ground (Eckford's Countess of Aberdeen), and a white on buff ground; there are fine shades of white; also improved Ovids, Royal Penzance, and Venus. Venus, Venus, etc. It is truly the finest mixture in sweet peas; there is not a flower of poor form or color. I think you will have for next year's introduction a pink which will correspond to Grey Friar, but much better than the latter, as the color is much finer."

### New York.

#### Market Bull.

It is questionable whether such low prices ever prevailed or were taken in this city than has been the case the past year. Carnations have actually been sold for \$1 per 1,000, with \$2 as a very common taking price. Roses sold by the gross at 10c. and 12c. and 100 extra American Beauty for \$35 was refused by a leading retailer because they were not good enough to put in the store, even at that ridiculously low figure.

From the slow demand, one of the principal reasons for this slump is the increased use of spring flowers and the fact that the stock of winter flowers being sold by the Greeks, they preferring to use this class of stock to roses and carnations.

"Violets practically ceased on Tuesday, which late date made this a record for the lowest price in the city very early in the fall. As compared with other stock, violets may be said to be much better than the latter, as the new season. They dropped well and were better in quality, as a rule, than ever before."

#### Exodus of Commission Men.

The next objective point for wholesale men seems to be Twenty-ninth Street, between Sixth Avenue and Broadway. On Monday H. A. Hoffmann opened a branch office at Twenty-ninth Street. His store is not yet in shape, so he will be temporarily fixed on the next floor, starting from Twenty-ninth and C. St. open on Monday at 48 West Twenty-ninth Street, in a very commodious and well arranged place. Mr. Millang has had neatly fixed up.

#### Anticpation Sales.

These sales are attracting larger crowds now than ever before. The new crop, Stock, generally speaking, is very good, and buyers have made a number of purchases. The following are the special sale on Thursday, May 20, of palms, ferns, crotons, cannas, etc., from W. K. Langford, at 100 West Twenty-ninth St. S. Henshaw, chief gardener at Bronx Park Botanic Garden, sails for Europe early in the week. He will probably visit the Botanic Gardens of Great Britain, Paris and Berlin to investigate the system of irrigation and to procure rare specimens for the New York Garden.

The new crop of the Boskoop Nursery Co., Holland, arrived on the S. S. Amsterdam Tuesday.

Representatives of the American Leroy nurseries, Angers, France, arrived in this city Saturday 20th inst.

Fire broke out in the store occupied by George Schusterman, at 51 Avenue B, on Tuesday last, and destroyed a quantity of \$1,000. One life was lost through the fire. The origin of the blaze was the accidental lighting of a bunch of artificial flowers.

Van Horne, Griffin & Co., manufacturers of artificial flowers, have moved from Light Street to 49-51 West Street, corner Greenwich.

#### Club Notes.

A very small attendance was present at the first meeting on Monday last, probably due to the fact that this passed over to the city prior to the meeting. The Executive Committee of the Plumbe occupied the chair.

Mr. Esler talked on hail and fire insurance, and on the subject of the remarks appear in another column. W. A. Mandia, South Orange, N. J., was the first to present longitudes with variegated foliage; a pronounced narrow white band running along the margin of the leaf. The flowers were pleasing effect. The flowers were small, the plants having been grown from cuttings. The plants were from bigger bulbs can, of course, be expected. Mr. Mandia stated the lily was very hardy and the committee, Messrs. Esler, Stewart and Withers, recommended it as being very desirable.

Treasurer Weathered asked that the subject of disposing of the gold medal now in his possession (as it had never been awarded) be discussed. Various suggestions were offered and it was decided to refer the matter to the committee to decide on a satisfactory means of disposal.

There will be an exhibition of herbaceous stock, embracing iris and whatever flowers may then be in season, at the club house on Tuesday evening. The club's silver medals and certificates will be offered. The schedule will be published in the next issue.

#### American Institute Exhibitions.

At the meeting of the horticultural section of the American Institute on Tuesday last, Dr. W. B. Britton gave a very interesting historical account of the Dodecatheon Meadia, or American violet. There was a large and beautiful display of hardy herbaceous plants, flowering shrubs and American violets. The exhibitors were John Lewis Childs, Floral Park, N. Y., who had seventy-six different varieties of American violets; J. Y. Siebrecht & Son, New York; John Miller, Oasis Nursery, Westbury, N. Y.

Mr. S. B. Parsons, of Flushing, N. Y., and Mr. Husted spoke on the effectiveness of the traps used as decorative subjects, the latter recommending atropium-purple as being best for the purpose. Mr. Husted showed Schweitzer's maple, a sport from Norway.

Mr. Husted advised leaving bulbs of lilies, narcissus, etc., in the ground, affording them protection from frost in winter, and to be treated now showed immense stalks.

James Holloway, Glen Cove, L. I., said that he had two to three varieties of Japanese maples and all had proved hardy, though fully exposed to the wind. Mr. H. A. Herrington made a strong plea for natural growth of tree and shrub life, and for the use of such specimens of these subjects in Jersey it almost seemed as if there was a competition for the best specimen. For every yard of wood so cut away, ten thousand blossoms were lost, and the same was true of the plants of Barron, Dr. Ward and Dr. Hexamer, all of whom recommended the more general use of natural growing shrubs and a herbaceous garden.

#### Show of N. Y. Gardeners' Society.

The New York Gardeners' Society will give a free show of flowers in the Aldermen's Court, City Hall, on Saturday, June 19, from 10 A. M. to 6 P. M. The subjects exhibited will embrace roses, garden exotics, ferns, palms, etc. The flowers, fruits, etc., will be distributed among the poor children of the city and among the children of the hospital. There will be eight classes enumerated in the schedule and all will be ready for distribution next week.

#### Poughkeepsie, N. Y.

The Dutchess County Horticultural Society met on Monday evening at the residence of Mrs. Levi P. Morton will give a special premium of \$30 for a copy of the report of the Dutchess County society decided that the papers read at its meetings during the year be published in the next issue of the Bulletin. An interesting paper on "Rose Culture Under Glass" was read by James Blair. The next meeting will be held on Wednesday, Rose Show, at W. G. D.

**Boston.**

**Business dull.** Business with the retailers is dull and the wholesalers complain of a decline in all orders. The growers have reduced the supply of cut flowers, in many instances having thrown out the surplus and employed the stock for bedding plants or preparatory to replanting for next season. However, the present limited demand and prices show a tendency in all lines to drop all last year's prices. The output goes at a low price.

The best carnations coming in bring from 25 cents to 2 1/2 cents each, while the bulk of the crop goes for one cent or a trifle more or less. France values that of stable, Longiflorum and Harrisonii, which have been abundant and very cheap since Easter, are shortening up some and advancing in price.

Speculation on Memorial Day trade and conditions is now in order. From present appearances it is probable that the Memorial Day trade will be very brisk, which has passed last year, will be in good condition by May 20 this year.

**News Items.**

A. Boddington, of Clucas & Boddington, and John Fotheringham, residing at No. 17 Parker row, have arrivals in town on Wednesday.

Superintendent Doogee's bull show in the Public Garden was never handsomer than at present. W. K. W.

**Philadelphia.**

**Market quiet.** There has been no improvement in the flower market the past week. Business around the stores has been very quiet and the abundant supply of plants is not wanted. Even the street men do not appear to be doing much trade, consequently every man who boxes new unemptied dealers not having room to store the plants.

Trade has been quiet for another month will find many kinds of flowers scarce, as growers are clearing out for another season. This is being done earlier than usual, on account of the poor market.

A few commencement-of some private business have been discontinued, on the absence of flowers at these functions has been very noticeable. It is understood that the business meeting of various institutions are against this display of favors.

**Plant Trade.**

Business has started up in good shape in this branch of the business and nearly all the growers in that line report good business. There is about the same as during the past two years. Geraniums are selling at \$7 per 100, and carnations at \$10 per 100. Many sales are heard of as being in large quantities. Roses are also selling and those in the city are doing well. The new rose, Crimson Rambler, are doing well.

**Horticultural Society.**

The meeting on Tuesday next will no doubt be very interesting. The City Parks Association will attend and give an illustrated lecture on small ornamental trees. The meeting is made by R. Kodman Park, Esq., Dr. William Pepper, Mayor Warwick and Dr. Henry M. Fish.

**News of the Week.**

Last week Charles Feast and wife, of Baltimore, were in this city on their honeymoon trip and were entertained by a prominent florist.

A revival of business is looked for the opening of the season. A large influx of visitors to attend the anniversary of Washington's Monument. The contract for the decorations at the monument in the Park.

very enjoyable. After a sumptuous repast some appropriate speeches were made by the following:

**St. Paul.**

**Market Note.** While trade has been comparatively light since Easter, the aggregate supply of cut flowers has been brought out in abundance of good blooms. The big cut has had a bearish effect on prices and the market has been sold way down. One of the largest growers here has been disposing of his surplus to a prominent store and "roses at 25 cents per dozen to-day" has been frequently seen. To counteract this some of the wholesalers have had "special sales" rates, retaining at 25, 29 and 50 cents per dozen. Why don't the brethren in other cities, who are menaced by unwise competition, do likewise? Why can't florists have "special sales" as well as their more prosperous competitors?

Regular prices now prevailing are: Rose at 25 cents; carnations, 25 cents per dozen. There is a dearth of other flowers at present. The market at Decoration Day are now apparent. With roses "in crop," outside flowers not in bloom and "ribbing" out gardenias from the South for a cheaper flower, good stock will be scarce and "high" rates will prevail.

**Regularity of prices.**

Regular prices now prevailing are: Rose at 25 cents; carnations, 25 cents per dozen. There is a dearth of other flowers at present. The market at Decoration Day are now apparent. With roses "in crop," outside flowers not in bloom and "ribbing" out gardenias from the South for a cheaper flower, good stock will be scarce and "high" rates will prevail.

**This is Society Dead!**

The Florists' Society, as we seem to have called it, is hibernating still, here is nothing of it. As one of the old-timers says, "The society is dead, but the florists here have to work too hard to spend much time at monthly meetings. It is a pity that so much time was spent in pleasant discussion and exchange of opinions, work could be made easier."

**Justices.**

Recent visitors were: H. J. Gromels, representing K. J. Kuyk; G. Kraemer, representing the Horticultural Society, of New York.

**Toronto.**

The May meeting of the Toronto Horticultural Society, held at the Toronto Club, on Tuesday evening, was attended by about thirty-five members. The weather was against the attendance, about thirty-five members more than half of them ladies. Quite a good showing of plants and blooms was on display. The subject of the evening was from I. Pape, A. Frost, George Mills and Manton.

There was a good attendance of about 40 persons. The subject of the evening was from I. Pape, A. Frost, George Mills and Manton. The subject of the evening was from I. Pape, A. Frost, George Mills and Manton.

**Chrysanthemums.**

The meeting on Tuesday next will no doubt be very interesting. The City Parks Association will attend and give an illustrated lecture on small ornamental trees. The meeting is made by R. Kodman Park, Esq., Dr. William Pepper, Mayor Warwick and Dr. Henry M. Fish.

**Cincinnati.**

The meeting on Tuesday next will no doubt be very interesting. The City Parks Association will attend and give an illustrated lecture on small ornamental trees. The meeting is made by R. Kodman Park, Esq., Dr. William Pepper, Mayor Warwick and Dr. Henry M. Fish.

fine thing to the specialist; but the commercial grower often finds it more profitable to grow in size and bright colors, unmindful of how the colors run.

The June meeting there will be a show of roses and hardy herbaceous plants, and if the weather is favorable the attendance will be anticipated, as all the strangers who were at the May meeting were much interested. T. M.

Table listing various advertisers and their page numbers, including categories like Delish A & Co., Dress G., E. J. H. Co., and others.

...NEW ROSE...

SOUV. DU PRESIDENT CARNOT

Strong, healthy plants, from 2 1/2 inch pots, \$15 per 100; \$125 per 1000. Ready now.

MAGNA CHARTA AND ULRICH BRUNNER

Strong plants, from frame, in 6 inch pots. Will flower last of May or beginning of June. \$20 per 100.

IRISH ROSES.

We are the sole agents in America for Messrs. Alexander Dickson & Sons, of Belfast, Ireland. Their Irish Roses are the best stock imported into this country, and Florists desiring high grade Roses for next Fall delivery should write us for varieties and prices.

ROBERT SCOTT & SON, 19th and Catharine Sts., Phila., Pa.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Souv. du.....

President Carnot

A superb hybrid tea rose of delicate shell pink color. Blooms produced abundantly on strong, stiff stems; an A1 forcer as well as bedder and fine pot rose.

No wide-awake florist can afford to be without it. Order quick and get strong, healthy plants, out of 2 1/2 inch pots, the finest in the country. Ready now.

Price, \$3.00 Per Doz.; \$15.00 Per 100; \$125.00 Per 1000.

50 at 100 Rates. 500 at 1000 Rates.

\$20.00 per 100 out of 3 inch Pots.

REFRIGERATED SPECIAL OFFER FOR MAY STRONG TWO-YEAR-OLD ROSES.

The following varieties which have been carried over in cold-frames and are now in excellent condition established in five and six-inch pots.

Table listing various rose varieties such as Anna de Diesbach, Antoine Golon, Baroness Rothschild, Boule de Neige, Countess Murlins, etc., with prices per 100 and per 1000.

LORD PENZANCE'S HYBRID SWEET BRIARS. We have a beautiful lot of these new varieties in strong two-year-old plants, established in 4-inch pots. We offer 8 distinct varieties, 50 cents each; the collection of 3 for \$4.50; for descriptions, see our catalogue.

CANNAS.

We have again an enormous stock of Cannas, well established plants, in 3-inch pots.

Table listing various cannas such as Ami Pichon, Anoua Glavis, Baron de Sandras, Bessels Red, etc., with prices per 100 and per 1000.

Special offer of collections of Cannas; for \$2.00 we will send 50 distinct varieties; for \$5.00 we will send 100 distinct varieties, all carefully labeled; these collections contain many new desirable high priced varieties.

30,000 AMPELOPSIS VEITCHII.

We offer a fine lot of strong one-year-old pot grown plants from 3-inch pots, about 24 inches high, \$1.00 per doz.; \$7.00 per 100; \$60.00 per 1000.

HYBRID CLEMATIS.

Table listing various hybrid clematis varieties such as Duchess of Edinburgh, Fairy Queen, Gipsy Queen, etc., with prices per 100 and per 1000.

CYCAS STEMS.

We have just received a large importation of Cycas stems in sizes from 4 to 16 lbs, which we offer at 10 cts. per lb. in lots up to 100 lbs. and shall be pleased to quote prices on larger quantities.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

## Pittsburg.

## Trade Improves.

The condition of trade the past week was very much better than during the preceding one. The cause of this was an increase of funeral work. There is an abundant supply of good stock of everything, excepting **Harrisii lilies**, which are running short. **Carnations** are still plentiful, all at from 30 cents to 50 cents per dozen for fair blooms. The best bring double for these figures.

Spring plant trade is very backward; most of the florists are complaining. The markets are stocked with bedding plants, good and bad, but prices seem to go lower each year. For instance, **veranams**, which sell at from 80 cents to 1 1/2 per dozen, are already offered for half these figures. Some of the best plants in the **Pittsburg** markets are grown by the **Blinds**, who created a range of glass in the suburbs of Allegheny last season.

Reports from the seed trade up to date are most satisfactory; trade was better than for several years. Onion sets and 60 cents per quart.

## Jetties.

**C. K. Hoffmeyer**, at Carnegie, is working at a new range of four houses, the walls of which will all be of stone and cement.

The exhibition of fancy caladiums in the Allegheny Park conservatories in July, 1901, is being supervised. **Hamm** has gotten together a large collection of the choicest sorts obtainable.

**E. C. REISEMAN.**

## FOR SALE CHEAP.

Extra good second-hand 3 and 4 inch pipe for hot water heating.

**W. H. SALTER**, Rochester, N. Y.

## STOCK WANTED

WANTED 300 to 500 **Malva Splendens**, strong rooted cuttings 2 1/2 in. pots. **Quose** loose, pure, or I will exchange **Viola Rabeana** of **L. H. Campbell**, **Lexome**, **California**, **Swanley** or **W. H. Campbell**, **Meriden**, **Connecticut**, when at once. **F. M. DeWitt**, **Torreadale**, **Phila., Pa.**

## WANTED.

**500 AMERICAN OAKS**  
Large for street planting.

**ENGLISH IVY** well-rooted plants, per 1000. Price and particulars to

**FRED. W. KELSEY**, 150 W. 4th N. Y. City.

## WANTED

We will exchange **Chrysanthemums**, best standard or new sorts as desired, for the following stock.

**ROSES**, Must be strong, ready to ship, from 200 to 250 inch, one per 100.  
300 **Bridesmaids**, 150 **Metsors**, 350 **Brides**, 100 **Mac Harts**.

**CARNATIONS**, (Preferred from flats) 3000 **McGowan**, 2000 **Seabreak**. Parties wishing to exchange state quality and price.

Adrian, Mich.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

## CORRESPONDENCE.

## Seedlings and Certificates.

I have read with interest the discussions, pro and con, relative to carnation seedlings and certificates. I have been stated from different standpoints and any animus evolved simply natural.

As a whole, the matter has been educational and reliable. A certificate is chiefly useful as a "send-off" for a novelty in incipient form. It is not true that all plants of "value" being the verdict of growers in general after two or three years' trial.

Is not this true of all horticultural novelties of whatever sort?  
**GROVE P. RAWSON.**

I wish Mr. Graham would give us the exact figures of the correct value of his seedling, unless prevented by reasons of state. My authority for supposing \$4 points to the correct value will be found in Mr. Ward's article on page 322 (April 3) of this paper. He says: "Articles referred to in connection with the exhibition of American C. S. allowed but 84 points out of a possible 100."

Mr. Graham is not correct when he assumed that the independent scores were too wide apart. The only thing I regret is that the scores were not independently, as they should have done, an opinion which Mr. Graham confirms. There is one thing that that gentleman seems not to have found out, and that is that no one is attacking the judges; it is the system that is under attack. It is of no consequence if my argument does not apply to this particular case; an amateur like me is not qualified to illustrate the well-known defects of the three-judge system.

Does not one know what Mr. Graham wishes to have done with the figures which he furnishes—99, 91 and 65—with an average of 85. They are not pertinent to my argument, which demands that the figures should be near enough to justify the award of a prize on the competency and fairness of the judges, and figures so far apart as 16 and 39 do not justify the award of a prize. The figures that I used do. It seems to me that when three judges come so near together, as in the case of 16, 39, 35 and 87—it is evident that they are familiar with the question they are judging, and are trying to do so fairly. However, the figures should be 70, 85 and 87 I should think that the committee, if not well balanced, and that their verdict was of little value. When the same variety is judged by two committees, if their decisions are not too far apart, and every one is entitled to his own opinion on that point, it seems to me that there is no room for criticism.

It is a thankless task at best and unkindly criticism does not help matters. This is not for the purpose of the discussion, but for the purpose of the rate. The division of opinion is shown by the two propositions.

First, it is impossible to determine the commercial value of new carnations in the opinion of the judges at an exhibition; and, therefore, it is unwise to sit in judgment upon them.

Secondly, the present system is open to the objection that the favorable marking of two judges can always be given by one or two judges in a favorable judge; and, therefore, this system should be abolished.

Perhaps it would be possible to obtain a vote upon these two propositions from a considerable number of carnation growers by means of a coupon ballot method. The Carnation Society will not be likely to insist upon methods which are in the opinion of the great number of growers, are undesirable. The difficulty is to get at the opinion.

I find upon reading again Mr. Graham's article in the April 3 number, that the quotation made from it by him is not an accurate one. I should like to ask him, or any one who can speak with authority and is willing to give a yes or no answer. Is Mr. Ward's case, the judges actually made up their scales independently, without consultation or discussion? Am I just venturing to suggest that a dominant opinion might be a likely to prevent a certificate from being given to the committee by some means.

**LOTHROP WIGHT**

## Winter Flowering Nymphæas.

My friend, Mr. Tricker, evidently does not hold a very high opinion of the discriminating abilities of the live American florist; he is apparently worrying himself less about the thousands of invert rose or carnation houses into huge aquariums for the growing of winter water lilies than he is about the possibility of a little sleep, too over the matter—that is, if "The Florist's Exchange" circulate articles of this nature in certain necessary institutions.

In my note on winter-blooming Nymphæas, Mr. Tricker says I am "nonsense" growing prospects. He must attach different meanings to the words used than I do. I fall to discuss glowing prospects and the florist who has his heart set on him is in little danger of floundering into winter water lily growing till it has been demonstrated clearly that it would be advisable to do so.

My notes are the results of my own observations during the past few years. In water lily growing as in every other branch of the business, we have all a right to our own opinions and to state them; it is only by each dabbling judging his experience that we will be able to get on. I do not know the edge of whether these plants can be profitably grown in winter or not.

Mr. Tricker misquotes my temperatures. I gave 70 F. as the figure below which the water should not be allowed to fall. I do not know the actual temperature of the atmosphere is quite another matter.

Does not Mr. Tricker's objection to starting the plants in five-inch pots? He looks better than old tomato cans. He is not a grower, but a collector. He is wise growing the plants in five-inch pots for the sake of the flowers they will produce, and not for the sake of the plants. My idea, pretty clearly expressed, I think, was to show that the plants would be better in five-inch pots. Here the cultivator who wouldn't put them into larger ones when they showed that they would be better in five-inch pots would indeed be a dolt. I am afraid he wouldn't squeeze bread and butter out of the same sized loaf. Here is my class of plants.  
**G. W. OLIVER.**

## QUESTIONS.

**QUESTIONS.**

**OPEN TO ALL. FREE TO ALL.**  
Answers Solicited From Those Who Know.

**(100) White Flies on Cucumbers.**—I am familiar with a little white fly that lodges among tomato vines, cucumbers, etc., although I have never seen any of the fruit on the plants. Here we are only troubled slightly. I remember some years ago, in Scotland, a long chain of tomato plants of the same fly was there. At that time we tried eradicating it by fumigating, but without success. The fumigations on the fly would dislodge from the vines and get shelter among the soil; at any rate, this was the result.

Following day, should the fly be very troublesome and damaging the vines I would fumigate the plants with one of the walks or on the benches, whichever is most convenient. The continual fumigation of the most part may be disagreeable for the pest. Tobacco stems is a capital remedy for all insects.—**W. R.**

**(101) Bone for Roses.**—Bone, ground to the fineness of meal, is best for rose beds. As I take it, the material is best for the season of the year. It is excellent for giving quick returns, using it for top dressings and potting young plants. The most may be made longer its lasting qualities. A house 100x200 will take from 125 to 150 tons of bone. It may be made well worked into the soil. **H. H.**

**(102) A Popular French Trade Paper.**—N. B. would like to have the names of the most popular magazines, paper (wholesale) in Paris, France.

**How to raise Vegetables.**  
Amateur Farmer—Don't know what all these are for. **LOUIS**, 2000 N. Y. City. **Sympathetic Friend**—Why don't you give 'em an emetic!

# CARNATIONS.

It is our practice to alternate each year with roses and carnations in some of our best houses. The method we are detailed to cut from either until planting time arrives for the new stock. From the time we have planted in roses now, and from which we have been cutting all winter, will be ready to come in this fall. Meantime the roses will be kept growing right along until planting time for carnations arrives. This gives our roses a chance to attain a good size before we are compelled to cut flowers from them.

The carnations which have been transplanted in houses in which we intend to plant our young roses this spring, will be thrown out as rapidly as we need the houses. Inserts and divisions will be made, and we will check these as much as possible the old plants should be burned.

We can in this way utilize the houses throughout the year, and at no time need they stand idle, save for the short period required to put them in shape again for the new stock.

We have emptied one house of carnations to make room for young roses. While they were being removed, and I was endeavoring to do for the short period I could not help being impressed with the difference in quality of these blooms. The roses which I had seen grown in our regular carnation houses. This difference is apparent every season, and makes no difference at all whether they have been growing in a short or long span to the south house or in some span one running north and south.

The prime cause for this great difference is the amount of light the house of carnations which we have just emptied was treated as the others have been treated, and the result was the same feeding. Knowing that we would use this house for roses, and not wish to have it so long idle, we decided in short while be at the necessity of removing it, we permitted the plants to stand in the full light of the sun. The effect of this was gradual but sure, and finally accomplished with us in this instance. It was a great many years ago others who say that they cannot grow good carnations indoors during summer months. Our illustration shows the carnation's inability to endure very strong light; and the great difference between the plants which stand in the shaded ones stands as a monument to the value and importance of judicious light and air. It is not the climate that our climate is not the whole, or even any very great part, of the reason why we are enabled to cut good carnation blooms throughout the summer, which is rather the result of a careful watch over the same previously mentioned.

I have often been asked if our climate is not the main factor in producing fine carnations, particularly during the summer months, and my answer has always been in the negative, qualified with the statement, however, that it is of great assistance and aid to the raiser, as it has been carefully looked after and attended to. But I always have, as still believe, that it is not so great as to render it impossible or impracticable to produce good blooms during summer in a warmer climate than ours. On the contrary, I am convinced that it is not so great as to be done; in fact, it being done by some.

Those who succeed, however, will do so by the strictest watch over the plants and giving to it in judicious proportions that which it needs. This is the secret of success, and while any energetic, industrious and wide-awake florist can put into practice.

It is not so difficult a question as I supposed that we could not grow fine carnations during summer; and I have no doubt that many of our friends and become aware of the reasons why we could not.

It is not so difficult a question as I supposed that we could not grow fine carnations during summer; and I have no doubt that many of our friends and become aware of the reasons why we could not.

use in this way will be quite as effective in the carnation house as it has proven with him in his rose house. Fungus diseases are the worst and most dangerous enemies we have to deal with; and since sulphur has proven itself the best remedy in combating many of these diseases, its value has been in the way described by the Darlington Incorporated. W. WEBER.

## St. Louis.

Market Notes.  
The market brought the growers satisfactory returns on the days of short supply, but last week was one of disagreeable low values from Wednesday on. On that day there was a large stock of roses and carnations and prices dropped on Monday's advance into the old rut cut by glut prices. Young & Sons had the Pierce wedding decoration on Tuesday, for which they used 5,000 Bridesmaid and a proportionally large quantity of other flowers. This reduced the collapse of the market for a day, but the inevitable break occurred Wednesday, and for several days thereafter the market suffered a low market. There were no fluctuations to vary the weariness of the situation during the week ending last week. Good roses were in large supply. Most of the buds are small and show the effect of sun in their bleached color. The cool snap two weeks ago retarded the growth of such of the stock now coming in, and many roses which would still grade No. 1 for stem and color, stand in the hands of the Greek on account of mildew. Brides and Kaiserin were most plentiful and lowest in price. Funeral work was scarce, and as white roses do not sell well, the market was from counter trade, and this was inadequate to the supply and many roses went to waste. Good roses are in ample supply, but not a glut by any means. There was some loss of color in the roses, and many of them also of poor and bruised stocks; but good buds sold clean. Bridesmaid and Kaiserin were the best of the buds are growing small, and Tost-out and La France, both of which are in large quantities.

There was a shade of improvement in carnations. Receipts were somewhat better, and roses were in ample supply the week carnations of standard quality advanced to \$1 per 100 and adjusted to the market. There are indications point to the low price. Large quantities are in the market, and indications point to a low market.

Sweet peas are now arriving in great abundance and prices have taken a drop to 25 cents a hundred for ordinary length stem, and 30 cents a hundred for long stem.

Violets are almost gone. A few of the hardy Russian varieties struggle in the new stock, but not up to quote them.

Harris continue to come in, and after a few more will be put into the wood barrel. They have no value.

Callas are in fair request when there is a few left. The quantity of last week caused many to go unsold. Valley is abundant. Good out-door stock is at the price.

Cape Jessamine is coming in from Texas in large quantity and sells at \$1.00 per 100. The quality is not so good as the Similia is scarce and sells at \$15 to \$20 per 100.

The Trillo greenhouses, at Old Orchard, Mo., were sold last Tuesday afternoon, and the property was sold to the public, which holds a mortgage on the property, bought it in.

Yates, in the market here was P. W. Von Bockelman, White Hall, Ill.; Henry Ernst, Washington, Mo., and J. F. Ames, Edwardsville, Mo.

C. A. Schoenle, formerly decorator for the Ayres Floral Co., has severed his connection with that firm, and has acquired by purchase from them their former Washington Avenue store. He will continue to do business at the new building a new store near Grand Avenue.

Trillo, for several years connected with Robert F. Tesson, and later growing for the Tesson firm, has severed his connection with the old Berdan greenhouses at Old Orchard, Mo., will shortly depart from here, and will be in the charge of Petersen's greenhouses. C. G. F.

# CARNATIONS

Rooted cuttings all sold except *Opelia*, *Tosca*, *Cartledge*, *Rose Queen*, *Annie Leeson*, *Edith*, *Portia*, *Weatherbird* and *McGowan* at \$1.50 per 100; \$100.00 per 1000. From 2 inch pots, 42 varieties, best new and old at \$1.50 per 100. Send for price list.

## Clear Cypress Greenhouse Material.

This with us means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

### CHANGES IN BUSINESS.

Green Bay, Wis.—The Roschke has opened a new flower store here.

Schenectady, N. Y.—J. W. H. Grube has opened a new store in the Effis Block.

Bay City, Mich.—The Irvine Floral Co. has filed articles of association with the Secretary of State; capital stock, \$10,000.

Salem, Mass.—Thomas W. Head and Henry T. Conant have entered into an agreement to all operate a florist's store in this place.

Lake Geneva, Wis.—It is reported that George S. Holmes, of Williams Bay, has purchased an interest in Longland's greenhouses.

Plymouth, Pa.—Ira G. Marvin, of Benton Harbor, Mich.—J. H. Brumby has begun the erection of a new greenhouse here. He hopes to move to Eighth Street from his present location in July.

Albert Lea, Minn.—S. F. Simson has sold his interest in the Lake Shore greenhouse to the latter's partner, who bought it, and has gone to St. Paul, where he has entered the employ of an uncle, Chris Hanson, 909 Dale Street.

Rittsville, Pa.—John F. Horn, partner and manager with the firm of Kratz, Schelley & Co., has bought out the interests of Messrs. Kratz & Schelley in their greenhouses here. Mr. Horn will hereafter conduct the business himself and will also run the stores formerly owned by the firm at 514 Hamilton Street, Allentown, Pa.

### Indianapolis.

In the statement in your correspondent's report I would like to correct one point. It ought to have read "that all credit (large) were directly secured by a mortgage given to them which is in the hands of a trustee, and the incorporated Bertermann Floral Co. also assumes responsibility for payment of the same. All small accounts will be paid in full by the Bertermann Floral Co. when due."

The officers elected for the first year are John Bertermann, president; Ed. J. Bertermann, vice-president; William G. Bertermann, secretary and treasurer. WM. G. BERTERMANN, Hagerstown, Md.

William Bester is busy planting roses, Kaiserin, Beauty and La France, for summer blooming, having cleared the beds that contained stock for Easter. A large supply of cheap stock is raised, but the trade is becoming more critical.

With an experience here of forty years, during which time the business has been steadily increasing, Mr. Bester is prepared to accommodate all comers. His business recently launched out on a commercial basis, and he has a plant, well stocked. He reports good success. He is an old-time gardener and thoroughly understands the ins and outs of the profession.

H. Holzpach, Jr., possesses a model plant. He added a stone cellar to accommodate the heavy cuts he made this season. Mr. Holzpach will be remembered in connection with the greenhouses at the World's Fair and recently at Botanic Gardens, W. M., Washington.

### Cumberland, Md.

F. X. Millman reports an increasing demand for potted plants at Easter. Approx of the free seed distribution, I was shown a collection of plants from Washington consigned to a Senator and packed and shipped free.

These were turned over to Mr. Millman to care for until the worthy Senator's house was put in shape to receive them.

Mr. Millman will build two houses, possibly more, this spring. Moninger has the contract. Eggs and carnations will be grown more extensively; they thrive here.

John Epp has blossomed out this season with a fine lot of carnations. With a capital plant he bids fair to become as successful a florist as has been in other branches. He has a fine spring stock and reports good demand for same.

John Epp has blossomed out this season with a fine lot of carnations. With a capital plant he bids fair to become as successful a florist as has been in other branches. He has a fine spring stock and reports good demand for same.

**OBITUARY.**  
 E. S. Nixon.  
 E. S. Nixon, Chattanooga, Tenn., died suddenly on Wednesday, May 5, the cause of death being the bursting of a blood vessel in the brain.  
 Mr. Nixon was born in Mullingar, Ireland, November 24, 1830. At the age of sixteen he came to America with his parents, who located in Canada. Before he reached his twentieth year he went to Michigan, where he resided for a number of years. During his residence at that State the war broke out and he raised a company and was commissioned captain of the Fourteenth Michigan, which company he commanded through the war.  
 Mr. Nixon was engaged in the battles of Murfreesboro and Sherman's drive and accompanied Sherman on his famous march to the sea. His war record was a brilliant one. He was wounded at Savannah at the close of the war and he returned to his home in Michigan. He came to Chattanooga in 1869 and resided here continuously since that time. Shortly after he took up his residence in this city he was made freight agent of the Western and Atlantic Railway, which position he held for twenty years. While he was engaged in the manufacture of agricultural implements he entered the flower business. He was successful and for years had been regarded as the leading florist of Chattanooga.  
 Mr. Nixon was a member of the Grand Army of the Republic. He was a thirty-second degree Mason and a member of St. Paul's Episcopal Church. The only surviving members of his family are his son, Ed. S. Nixon, Jr., and Mrs. C. D. Henley.  
 Deceased was a man of fine physique. He was upright, frank in his dealings, and outspoken in his defense of right. He was frank to a fault and had qualities of head and heart that endeared him to his friends and made him admired by his acquaintances.

**John Saul.**  
 John Saul, the well-known nurseryman and florist, died at his home near Washington, D. C., on Tuesday morning last in his seventy-fourth year.  
 Mr. Saul, who was one of the best-known of the older residents of the District of Columbia, was born at Lismore, County Cork, Ireland, Christmas day, 1823. As he grew up he was trained in the science of landscape gardening, and the Isle of Wight, and subsequently to Bristol, England. Prior to his coming to this country he was manager of extensive nurseries.  
 He arrived in Washington in May, 1850, and was at once engaged by the government to lay out the Smithsonian grounds. Lafayette Square and other public squares, and also by Mr. W. W. Corcoran to plan the beautifying of Howard Park. In 1852 he bought the property in which he spent the remainder of his life.  
 Mr. Saul was among the first in America to advocate a more general use of orchids and other rare and valuable plants, and a goodly portion of his establishment at Washington was given up to their cultivation. He was always an extensive grower of roses and nursery stock.  
 Deceased was a member of the Carroll Institute, American Pomological Society, the Society of American Florists and other organizations. He was appointed a member of the marketing commission by Gov. Alexander R. Shepherd, and was reappointed by Executive Commissions after the office of Governor was abolished, and was continued in office by each succeeding one until his death. He leaves eight children—three sons and five daughters.

**Violet-Growing in Virginia.**  
 A few years ago some ladies, anxious to increase their much-reduced incomes, thought of turning into money the blossoms of the dwarf and lilac, and planted so many years ago by their ancestors to adorn their magnificent plantations. Finding a remunerative sale for these spring blossoms, some more venturesome, undertook the cultivation of them, first attempting it in the old flower pits, where they kept, during the winter, geraniums and miscellaneous plants, and on success following this, they soon extended their facilities to 500 or 400 sashes, and some now grow in the old mountainous Valley the finest violets I have ever seen.  
 The mode of treatment is most simple. Long lines of cold frames, on the hillside, or on the edge of timber land, are given a warm, sheltered location, rough shutters made of straw and pine brush being used for winter protection. About a dozen negro boys, who get \$1 to \$1.50 per week, the picking and lancing by girls, and very well done, too, at half-hour wages. No wonder the net returns have been large. In fact, the ladies are so well pleased with the new venture that I am in receipt almost weekly of inquiries about the method of cultivation, and a warm, sheltered location, rough shutters made of straw and pine brush being used for winter protection. I am always glad to impart, as far as my eighteen years' experience will permit.

That violet culture is a pronounced success is easily seen when individual shippers average 5,000 blooms daily in February and twice as many in March. Disease has not made much headway, for in new land violets are practically free from that pest, for one or two seasons. When moving the patch care should be taken to use perfectly clean, healthy plants to a distance of several miles or so.  
 In view of the extreme low cost of raising violets and the short period of overstock—about two weeks—violet farming is, and will continue, a glowing success among the hills of Virginia.  
 J. LOUIS LOOSE.

**Precocious Parsipacity.**  
 He—Life is an old story here in Philadelphia that I lead a merely vegetable existence.  
 Little Maud (interrupting)—Oh, I know that's what papa meant when he said you were a dead beat.

OFF TRADE REPORT

Points and information from seedsmen, and all interested in this column, solicited. Address Editor Seed Trade, care of Florists' Exchange, P. O. Box 1867, New York.

Meeting of Seed Trade Association. The fifteenth annual meeting of the American Seed Trade Association will be held at the Elbert House, Washington, D. C., on June 8, 9 and 10. As there are so many conflicting interests at present and threatening the seed trade at the present time, it is desirable to have as large a representation of seedsmen as possible, so I deem it my duty to issue this circular, requesting all members to make a special effort to attend. I likewise send it to invite seedsmen who have not joined the association to send in their names, in that the Committee on Membership may report them at the opening meeting. I may mention here that it is customary the first meeting to suspend the rules and elect new members, so that they may participate in all the meetings of the association. The annual dues are \$5. The Executive Committee has prepared a fine programme, to which is added a paper from Mr. W. Atlee Burpee on the new Cook Bill, and a paper from the Department of Distribution of Seeds," and likewise, a paper from Mr. Alex. Rogers, with remarks and questions on the new Cook Bill, which has been re-introduced in the House of Representatives at Washington, D. C. Burpee refers to the Committee on Agriculture and ordered to be printed. Those familiar with the original Cook Bill, which died with the last Congress, know that the provisions which it imposed on the seed trade were impracticable. Hoping to see you in Washington, T. W. WOOD, President American Seed Trade Association.

Philadelphia, W. Atlee Burpee left on Monday last for California, where he will spend a month inspecting seed crops there and sweet peas. Mr. Burpee says that although we have been passing through such depressed business times as to farm sales, sweet pea seed have been eight thousand and a half pounds more than last year, and with whom they have been they have over 50,000 pounds of sweet peas in their warehouse next fall. Mr. Burpee expects to return from California late in June, and after going through his own trials of sweet peas will sail for Europe early in July and will visit Henry Eckford, in Shropshire, about the middle of July, when this well-known sweet pea specialist will have his crops in full bloom. These trips of Mr. Burpee will amount to over 13,000 miles travel in the interest of sweet peas.

European Notes.

Bad Effects of Cold Weather. The effects of a cold winter have been passing over Europe during the past week and the rapid progress of vegetation has been checked thereby. Ice covered the pools this morning and the indications are for a repetition to-night. Even in the south of France the nights are very cold, and as no rain has fallen for several weeks and the prospects are not so rosy as when the last report was penned. The far-reaching consequences of a spring unfavorable weather is strikingly exemplified in Germany just now. Owing to the long drought in the spring the comparatively limited stock of green vegetables available for the supply of green vegetables during the present time is very small and fortunate growers are reaping a golden harvest while growers of rape, thousand-headed kale and plants which are ready sale for cattle feed are finding a ready sale for them in the vegetable markets of the country. The seeds of most of the early shoots of brassicas standing for seed have been marketed in the same way, and the seed price for most of the foregoing are likely to be very limited indeed. As a result the price of rape has been really advanced for a usually brisk spring sale has depleted stock to an extent not anticipated by us. New Market Turp Crop. Turnip and Swede plants are causing us a considerable amount of anxiety just now, for as a general rule

they are progressing backwards; this is especially true of Swedes. The cold, wet autumn and the wet winter have not developed a robust plant, and now that their chief effort is called for they are unequal to the task and are dying off by wholesale. Even where they looked fairly strong they are now badly affected and many are dropping. The crop of this article that can, under the most favorable conditions be produced, will be the smallest known for many years. Turnip is still in the balance, but another ten days will decide. Cabbage will be a very moderate crop everywhere; but Broccoli and Savoy are reasonable. Beet, carrot, mangel and parsnip are looking fairly well on the whole, but the breadth of each planted is so small that if anything should injuriously affect them the crop will be almost nil.

Trade in Market Seeds. In market seeds the continued advance in the prices of rape and mustard is the most noticeable. The trade in clovers and grasses is slow and prices a long way below "rock bottom." Dealers with a very few fortunate exceptions, will have a very unpleasant recollection of the spring season of 1897. Lucerne, which did so well during the drought of '96, has been a really profitable line to the seedsmen. The demand for lucerne has been phenomenal and prices remunerative. The Dutch Seed Crop. The continued cold weather in Holland has, it is feared, not only retarded the development of Dutch bulbs, but also injured their quality. There is a prevailing idea among the growers that the trade in these articles is likely to be very brisk this year, and these causes combined have induced the bidders at the public auctions recently held to go fully ten per cent above last year's prices. The Dingley tariff bill (if it ever should be passed) will show the wisdom or otherwise of this step. EUROPEAN SEEDS.

NOTICE

ters in connection with school buildings and see to their equipment with the most improved appliances for the attainment of knowledge.

Mr. Dean was appointed by the Executive Council of the American Floriculture for the State of New York at the World's Fair, Chicago, 1893, and in that position enjoyed the highest honorably as to place his State foremost among her sisters, and win for himself deserved encomiums from the public and the State and World's Fair authorities for the magnificent results which grewed his work.

There are quite a number of growers who hold over some of their plants of this year, and again many transplant from the benches to solid beds. Where this is done the plants must be gradually dried off and all the air possible be given them at all times to wilt upon the wood.

ROSES.

There are quite a number of growers who hold over some of their plants of this year, and again many transplant from the benches to solid beds. Where this is done the plants must be gradually dried off and all the air possible be given them at all times to wilt upon the wood.

It often happens where they have to be transplanted back to the same house, that quite a little repairing has to be done, so the better plan is to put the plants in a cool place temporarily, and for about twelve or fifteen inches. Dig up the roots carefully and remove all the soil from the

It will not do any harm to trim a few of the longest roots back a little to facilitate planting, which should be done carefully. Don't plant any deeper than they were planted in the original hole, but shallow, and spread out the roots evenly, give one thorough watering to each plant, and keep them in the same sense must come into play. Syringing the house and canes two or three times a day is favorable to their growth. If the plants to break well. As the shoots begin to grow and get larger and the water supply is increased, be especially careful. It is impossible for me to state the quantity of water, but as a great deal depends on the weather, the success or failure it should have the closest attention. Never shade, and the more air given the better.

Wheeling, W. Va.

Business has been very good and the outlook for a large trade in bedding stock is very bright.

Messrs. Huscroft Bros. have opened a pretty store on the corner of Market and Second streets, and the new place made it very attractive. They are building quite a large plant on the peninsula.

Mr. Handle has moved his store to Twelfth and Market Streets, near the Ohio River.

Gus. Messerger has suffered a sad bereavement in the death of his wife, which occurred Saturday, May 15.

Market Notes.

Business for the week has not been particularly good, the cause being, thank you for what you get. We have not been forced to sell carnations at \$1 or \$2 per thousand yet. Prices of roses remain fair for good stock, but very little of the latter is coming in.

William Murphy is cutting some fine spikes of gladiolus that sell, wholesale, at 50 cents per dozen. Sweet peas are quite scarce and bring 75 cents to 75 cents per 100. Plenty of Harniss lilies are in sight at present.

Richard Schmidt, of Covington, Ky., will wed a young lady of Hamilton next week.

C. S. Ford, representing A. Herrmann, New York, is in the city looking after the supply business.

The George, Hepler & Allen is now the style of the new first class and large charge of the Oakley rose houses. These young men are all practical growers and we shall expect to see some fine stock later on.

Realizing the Stand.

This is the month that the stand rents are made and the growers are marching up to the captain's office to settle. The trustees have made an advance of prices as to stands, the highest figure paid now in the market for one year being \$30, and the others grading to \$25 and \$20.

When this market opened the stands situated trade at the west and sold at \$40 each; everybody wanted this location and the ones who kicked the hardest

CHRYSANTHEMUMS

The time to plant our chrysanthemums is soon before the very first work is done in the hands. I have no farm around me, and cannot plough up in the fall and spring, so I haul good loam with plenty of root fibre in it; not too tight, but at the same time not sticky. It must break to pieces in the hand. I set that together with about one-eighth part of cow manure. This work I do, if possible, in March, but where it is not performed at that time, it ought to be done at once, so that the sod may decay a little, or it will be hard work to get it fine enough for planting.

These plants which I grow for specimen plants I have at present in five-inch pots. These will, in the course of time, go into 12-inch. The plants I use for market and for sale in seven, eight and ten-inch pots are standing in three-inch pots now and I take the tops off for my last set of cuttings, which will be just right for planting next month. I have some advance specimens in vase varieties like Fred, Walz, Ivory, Pink Lucy, Minerva, Major Bonaffon, and, in fact, the finest growers I really now in two and one-half inch pots, and rather shift them into a larger pot, say four inches, before planting. I set the stems long enough out. The plants I topped in three-inch pots, I let go for a week or so and then give them a shift into five-inch pots and place them in an airy house on the bench.

I prefer house to outdoor culture, and find that the plants do the best growing better. Outside, with heavy rains at this time when the plants are in 1 1/2 inch pots, is very harmful to the root action, and if the plants suffer here, they are not easily brought into good shape again.

When potting I use the soil I have put up for it, but before using I give it a good sprinkling with water so that I have about a bushel of soil I add 4 or 5 pots (each) of charcoal dust, which can easily be obtained from a gas house, and do not use the soil on account of being too fine, is just right for us. It is very beneficial, too, to use an 10-salt solution, and I do not use the soil saved for that purpose, when the boiler is being cleaned. Mix this well together and add one pint to it to every cubic foot, so as to give the water a chance to pass through it. TIND. BOCK.

STIRRED UP BOYS

As soon as young plants have been set out in the field and the weather begins to clear, and the cultivator should be kept going. The soil should never be allowed to become hard.

There are some doubtless some yet who do not realize the importance of keeping the soil loose; and if any one wishes to get the best of treatment stirring up the soil, that he may have an object lesson to convince him, let him try a portion of it at hand and use the cultivator on it several times oftener than ordinarily, and will warrant that he will never get that grateful with the result.

An thoroughly exposed to deep below or cultivating, and believe a great deal of work can be done in this way. The idea of hoeing and cultivating is to loosen the soil for the roots to take hold of. A thorough preparation of the ground before the plants were set out will have accomplished all in this line that is necessary. A continuing being stirred once an inch or so deep, secures to the plants the greater portion of the essentials they require for being stirred out, and out of to develop into good, thrifty subjects.

I consider this the best way to water plants in a dry season. An inch or so of dry dust will effectively prevent a rapid evaporation of the moisture contained in the soil, which in ordinary and more particularly so in very dry weather, the plants are entirely upon the subsoil for moisture. The latter is taken up or absorbed by the soil, often

from a considerable depth, but the supply is limited, and, therefore, after each rain, as soon as the soil is dry enough, we must be on our guard to husband as much of it as possible.

If we allow the soil to become baked and hard a rapid evaporation of moisture takes place through the cracks and fissures, which always results in the appearance when the cultivators stop running. They may not be very large in some instances, but are, nevertheless, wasting a great deal of moisture which should be held in reserve for the nourishment of the plants, and nothing accompanies this so well as a thin layer of finely pulverized soil. Husbanding the moisture in the soil and subsoil and thus permitting the plants to accomplish in a more deliberate way what the cracks and fissures would do, is the first and most important benefit derived from frequent cultivating.

There are two other items, however, quite as beneficial, in their way, to the plants. First, keeping the weeds in check, which is certainly no small item; secondly, permitting the air to get at all the surface roots which the plant may make. If the carnation did not persistently make these surface roots we would not be required to provide for this at all, beyond what most plants require. But in the carnation we have them so abundant that it is necessary to very forcibly to mind when we attempt to deprive the plant of its natural proclivities to make surface roots by soiling the plants too deep. The growth of those so treated is at best weak, and more often discarded; usually, they do not carries them off. H. WEBER.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

## CORROSIVE SUBLIMATE FOR THE LILY DISEASE.

During the past Winter Lillium Harrisii has again suffered severely from the "lily disease," which causes the plants to take on the sickly, run appearance, so familiar to all growers of Exotic lilies.

The cause of this trouble is still unknown. Our observations of the past year have tended to confirm, with one exception, the conclusions reached in 1895, and published in the Fourteenth Annual Report of the New York Agricultural Experiment Station, pages 320-322. The exception noted relates to the treatment of the bulbs with corrosive sublimate. Upon the hypothesis that the disease is caused by some organism which attacks the roots, the following preventive treatment was suggested on page 332 of the above mentioned report:—  
"First. For potting, use soil which has never been used for growing lilies or other bulbous plants.

"Second. Previous to potting, soak the bulbs one and one-half hours in a weak solution of corrosive sublimate, prepared by dissolving ounces of corrosive sublimate in ten gallons of water. This is the treatment recommended by Prof. Bolley for potato scab. It does not appear to injure the plants."  
The statement above does not appear to injure the plants" was based upon an experiment in which eight bulbs of Lillium Harrisii were treated and potted in the fall of 1895, together with four untreated bulbs for comparison. On account of being

posted so late, none of the bulbs produced vigorous plants. Neither the treated nor untreated plants showed any disease, and while the average height of the untreated plants was somewhat greater than that of the treated plants, the difference was not marked.

Through the kindness of Mr. James Dean, of Bay Ridge, we have since had the opportunity of giving the treatment a thorough trial, and find that it is not to be recommended. It not only fails to prevent the disease, but also injures the plants.

Ninety-six bulbs of Lillium Harrisii were divided into three equal lots, and treated as follows:

LOT I. Soaked one and one-half hours in corrosive sublimate solution (14 ounces to 10 gallons water).

LOT II. Soaked three-quarters of an hour in the same so solution.

LOT III. Untreated.  
Each lot contained bulbs of two sizes—sixteen 5-7 bulbs and sixteen 7-9 bulbs. After soaking in corrosive sublimate they were immediately potted (Aug. 20) in new pots, and in soil in which no bulbous plants of any kind had been previously grown. From this time until April 20 the plants were carefully measured and the condition of their health noted with the following results:

## GROWTH OF LILY PLANTS.

TREATMENT.	Number of Plants Up to Oct. 20.	AVERAGE HEIGHT IN INCHES						
		Nov. 18.	Dec. 9.	Dec. 29.	Jan. 21.	Feb. 13.	March 10.	Apr. 20.
LOT I. Soaked 1 1/2 hours in corrosive sublimate. . . . .	21	2.3	3.2	4.7	5.8	7.3	8.2	15.
LOT II. Soaked 3/4 hours in corrosive sublimate. . . . .	20	2.5	3.7	5.1	6.4	7.5	8.2	14.
LOT III. Untreated. . . . .	31	4.4	6.3	8.6	9.6	10.5	12.5	19.4

In size, the plants from the treated bulbs were markedly inferior to the plants from the untreated bulbs up to the entire season, showing very plainly that the treatment had injured the bulbs.  
By April 20, eight plants had died in

Lot I, six in Lot II, and four in Lot III. The four dead plants in Lot II died from the decay of the bulbs stood side by side, and the remainder from some other cause—seemingly from the influence of the treatment with corrosive sublimate.

## AMOUNT OF DISEASE AMONG THE PLANTS.

	Nov. 18.							Dec. 9.	Dec. 29.	Jan. 21.	Feb. 13.	March 10.	Apr. 20.
	LOT I. Slightly diseased.....	0	2	2	2	3	3	7					
LOT I. Badly diseased.....	0	0	0	0	0	1	3						
LOT II. Slightly diseased.....	0	1	2	0	2	5	13						
LOT II. Badly diseased.....	0	0	0	2	1*	2	3						
LOT III. Slightly diseased.....	6	14	16	11	9	6	5						
LOT III. Badly diseased.....	1	3	5	10	8†	11	8						

\* Two badly diseased plants had died since Jan. 21.  
† Four badly diseased plants had died since Jan. 21.

From the above table it will be seen that during the first part of the season there was considerably less disease among the treated bulbs than among the untreated, but by April 20 the difference was not very great. If the disease is caused, as many believe, by weakness in the bulbs, treatment with corrosive sublimate may possibly check the disease, and the behavior of the plants in the above experiment would seem to confirm this. On the other hand, if the disease is caused by some organized parasite which attacks the bulbs, soaking the bulbs in corrosive sublimate would, most likely, kill that parasite, and thus prevent the disease from being re-inoculated. In the latter case the results of the experiment would be more easily interpreted.  
The treatment certainly checked the disease, and there are two ways of account-

ing for the fact that the disease was not widely prevented.  
(1) Some of the organisms which cause the disease may have been so well protected by the bulb scales that the corrosive sublimate failed to reach them. After the bulbs were potted these organisms rapidly multiplied, and in the latter part of the season became so numerous as to affect the health of the plants.  
(2) Some of the plants may have been transplanted from the untreated to the treated pots.  
The results of the experiment tend to show that the disease is of parasitic origin, and that the use of the bulbs with the corrosive sublimate as a preventive measure cannot be recommended.  
F. C. STEWART,  
Branch Office of the New York Experiment Station, Jamaica, N. Y.

**TEN DEGREES BELOW ZERO**

is the temperature that has been undergone without injury by unprotected planting plants of the new climbing rose

**AGLAIA or YELLOW RAMBLER**

In our catalogue the past Winter, thus proving it to be even harder than we had supposed. A Hardy Yellow Climbing Rose is what everyone has waited for years and Aglaila is, therefore, an immensely important introduction.

150 Blooms in a Bush

has frequently been produced by the Yellow Rambler, for it has the same manner of blooming. It is splendidly hardy, flowers the Crimson Rambler to which it is a splendid companion rose and probably endures 30 or 40 years. It is a decided yellow; its flowers of moderate size, very fragrant and last three to four weeks. The habit of growth is very vigorous, well adapted to the most favorable soils, shoots get to ten feet high in a season.

We have a large stock of this rose in this country, having been so appointed by the Peer Lambert, the originator. We are also prepared to offer plants of two other valuable climbing roses:

EPHROSINE or PINK RAMBLER

Color a clear light red; otherwise very similar to Aglaila.

THIALIA or WHITE RAMBLER

Pure white; same style and habit as Aglaila.

**WE WANT EVERY FLORIST**

to send us orders for the above roses. Our customers and to everyone who will do so, agreeing to depend upon us for the supply of plants.

**WE WILL SEND FREE OF CHARGE**

a beautiful colorizing plate (with Aglaila, Ephrosine and Thialia) and a descriptive circular with name and address stamped upon them, sent at once.

Price for strong plants from 2 1/2 inch pots, \$15.00 per 100. Send for our Trade Lists of other Roses and General Stock.

For the Busy Man. Seedsmen should read President Wood's circular on page 507. The Dutch bulb growers anticipate a brisk trade for their species. Over one hundred and fifty varieties of lilacs are grown at the Arnold arboretum. Pittsburgh was visited by a hail storm last week. No damage was done to greenhouse glass. James Deau will retire from business at the end of the month. The directors of the Horticultural Society of his greenhouse and their contents will be held June 9 and 10 next.

Seedlings and Certificates.

The animated and interesting discussion on this question arising out of our editorial on page 224, March 6 issue of the EXCHANGE, having to all appearances run its course, we may be pardoned if we undertake to review as briefly as possible the points touched by the different writers. Impartially, we desire again to relieve Mr. Ward of any mistaken whatsoever with the editorial just referred to, and to state that it was written with the intention of pointing out the dangerous possibilities abating for the Carnation Society, as we saw them in the present course was pursued and persisted in.

It is our firm conviction that the strongest rock upon which the Society's foundation rests is as we stated in our issue of March 6, and which we again repeat: "The purpose of the Novelty Committee is assuredly the encouragement of the seedling raiser. Nay, more, that is the plain object of the award, to relieve the entire society; but if the present system of enforcing an ironclad scale of points be persisted in, the result will be to relieve really the opposite from what is intended. The seedling raiser, having a novelty of color, or other merit, or combination of the risk which is involved in subjecting it to the tender mercies of the Seedling Judges in the countries, will be naturally raising stock from it for the demands of his local market, and, in the course of time, if the buying public, who are the carnation, other growers will be only too anxious to secure plants from him, certificate or no certificate, notwithstanding. The commercial grower will utilize his retail buyer, the ultimate consumer, care little for the past history of what is offered. It pleases his fancy and that is sufficient."

The Society's intention as regards the manner in which raisers of seedlings were to be encouraged in their work, was at the time of the present program, to encourage "awarding of valuable prizes, certificates, etc." A brief history of the certificate matter may not be out of place: The Society's dereliction of its duty in this respect, has been fully shown at the recent Pittsburg meeting, by one of its prominent members (Mr. Craig). This is what he then said (p. 10, Proceedings of 1893): "We have got some flowers in the hall below; new things of decided merit. What is the use of giving exhibitions when we do not recognize merit when we see it."

One of the judges (the late Mr. Hunt) then asked that "the committee hold the flowers considered desirable for competition for these certificates." Mr. Craig thought "those not in commerce," and the result was a most unfortunate interpretation of the Society's duty in this direction, added: "any promising seedling ought to be put in to play for a certificate." Then, the report adds (page 11): "The committee was instructed to scan over introduced exhibits, and to award certificates, all deserving varieties, whether introduced into commerce or not."

At the following year, 1894, at Indianapolis, the Society continued in the lines laid down at Pittsburg, for we find it awarded certificates for "a display of new seedling carnations," for "a vase of Kaiserin Augusta Victoria roses, as well as to several varieties of carnations, new and old, among the former being Jubilee (Hill & Co.) For the Boston meeting (1895), the program states, "Certificates of merit will be awarded for a display of new seedlings," and "a certificate will be awarded to the vase of carnations on exhibition in the program." At the Cincinnati meeting, where the exhibits were judged under a scale of points endorsed by the members

there assembled. We refer our readers to pp. 187 and 188 of the Exchange for the details. It is a pity that a complete report of the discussion had at that scale, and the schedule's requirements under the present program.

In that report occurs the following passage (p. 188): "In answer to the chair, Adlai C. G. G. said that one of the members of the Committee of Judges on Seedlings, said the committee had no difficulty in coming to a conclusion as to what the points would be. The only difficulty the committee met with was in deciding, when a variety was introduced, whether as to which variety was entitled to a certificate in preference to the other. In a number of instances, the flowers shown were of such wonderful excellence that it was with difficulty that the committee arrived at a conclusion that would be satisfactory to the committee as being just, and as would be proper to recommend to the trade." Now, then, Mr. Graham has not denied the authorship of these remarks (they were taken down verbatim), so we must assume that they are correct. And no one can read them without coming to the conclusion that the seedlings at Cincinnati were judged competitively and certificates given to one "in preference to the other."

It is a pity that the committee failed to sound our alarm upon page 224, March 6 issue. Since that time Mr. Graham has been making the same error over and over again, with only older standard varieties; but that explanation is not at all in accordance with the facts, nor does it meet the instructions to the judges which directed the awards to be made according to the merit of the individual flowers.

Again, the Society has set a standard by its scale of points, and every variety coming within the net was entitled to a certificate, without taking into consideration, whether or no the seedling is an improvement on the standard, or of the extended kinds of its color. For we take it, if a variety certificate under such a scale is inferior to the standard, it is really ineffective; in other words, the scale should be so arranged as to require measures necessary to put a certificate in the hands of the standard already reached.

At the same time mentioned in the program to intimate that the seedlings shown to obtain certificates must be superior to the standard, nor that when they were to be judged by such a standard. The adjudicators ought to have come into the court room with the judge and do a judge when he enters the court room to try a case; he knows nothing and should not be asked to proceed to judge before him; in other words, the case is tried simply on its own merits, and not on the merits of the standard. If the judge is too, in the case of a flower, the judges may be confronted with an incomparable, and at the same time meritorious novelty, as, for instance, in color, then how are they to set with their standard comparison? The scale of points is the method by which varieties are to be judged, added to the scale, leaving comparative values not to be considered. The method of awarding varieties meet your scale requirements, and are to be awarded. Otherwise, you do the grower wrong. If the varieties that have sealed the necessary certificates, taking into consideration, the use to which certificates are put, to wit: aids to the raiser in the selection of his seedlings.

We now come to the scaling practice. We highly commend the endeavor of the Society in this respect, and we think that certificates upon anything other than what possesses decided merit, but can as readily come to the conclusion that the scale should be so arranged as to withhold a certificate for any one point. To grant a certificate to a variety on a single point is to give it an addition but not an individual fractional part to each of the individual requirements of the scale. The result, in any case, could well be added without any harm being done to the trade, whereas, on the other hand, the awarding of a certificate to a variety, when the first deviation from the policy inaugurated by the Society at Pittsburg, is the endeavor to award certificates, by confining these to "new varieties of distinct merit."

At New York, we have the seedlings judged by a scale of points which, the report of that meeting states, "the program is to award a certificate to each limiting the number of points to 85 for a certificate." There was no intimation in the program that the scale of points, that varieties would be judged by such a scale of points. At the Cincinnati meeting, where the exhibits were judged under a scale of points endorsed by the members

This was another breaker we saw ahead, and it is a pity that the committee failed to stop the exhibition of seedlings before the Society, excepting by those who are willing to make a sacrifice of their own interests to the interests of those interested to the remarks of President-elect Hunt on this subject, and as a result of the program of February 27, which we consider a common sense and just view of the matter. It is a pity that the Carnation Society has done and is doing for the great variety of carnations raised in the United States, that it is not appreciated as it should be. That the aforementioned committee failed to see the importance of this before us for the welfare of the Society, was a very great mistake. We are sure that it is not the first time that we have mentioned it our duty to warn those interested. And the view we hold has been indicated by some of the best men in the trade.

One correspondent has asked us to reconcile what, to us, seem conflicting statements. The remarks he cites (page 800, issue of March 27), have reference to the year in which they were written—1895; and in that year the Society first insisted on seeing plants of the seedlings exhibited; and it is a pity that the committee failed to see the wisdom of this. The result, we doubt not, arose from the greater light the judges and raisers had upon the problem, as stated by the plants; and we still believe that a certificate variety, obtaining such a high standing in the program, might, to a very great extent, be relied on; as its inherent qualities, weighed against the standard, and the fact that it is a novelty before the honor is bestowed upon it, so we take it the Carnation Society is yet undecided as to whether to award a certificate to a flower, and to adopt a scale calculated to improve and advance the standard of quality.

Our statement as to varieties certificated prior to that time, or the past few years, we think, proven by the fact, that it is no reflection, however, on the able men who have been in the past. The judges, we think, gave their decisions to the best of their judgment, honestly and fairly, and we are sure that the standard-bearers as they stood before them.

We firmly believe that the members of the committee who have adopted the program and their awards shall be of value, and act as guides, as well as guards, to the carnation grower, and that the standard-bearer, as a variety from a grower's standpoint, can be attested to, such variety must have undergone the process of selection, and it should be outside, as well as within, the locality of the originator.

In conclusion, we would suggest that the Society carry out its original intention, to wit: to establish a test committee, by the aid of which the members of the Society, individual members of such committee make a faithful record of the behavior of the varieties, and the quality of the plants, that such reports, as well as a similar one by the originator, be carefully examined and compared by the committee, and the information be taken into consideration in making the awards, and as usual made public.

Supper every work by appointing an individual member of the committee to be of every important center, whose duty it shall be to carefully watch all new seedlings introduced, and to see that the program is the annual meeting. Such a course would, at any rate, prove helpful in rendering the program more effective, and the result of the same is to be regarded as an indication of the seedling's commercial worth.

We are confident that the Carnation Society would be taken by any member of such a test committee, but that complete confidence can be placed in the men so honored by the Carnation Society.

But it must always be borne in mind that the Carnation Society is not a purely real commercial value of a carnation flower, and a careful dissection or analysis of the same is not to be expected. The Carnation Society can only furnish a caprice.

In conclusion, we would like to refer to the statements of some of our best carnation growers on the subject of the program, and the awards made for new varieties of carnations:

"Great care should be exercised in the selection of the standard-bearer. It is not a matter of course. Exalt the standard; better that dissection or analysis of the variety, and we think that this society should endorse any variety it does not care to award up to the very best, or a little better than the standard. It is a pity that the Society has done so. On the other hand it is important that proper encouragement be given to the raising of the finest of raising new varieties."—E. G. Hill.

"I ought not to go further than the scale's requirements, and I am sure that the scale is right and standing before we give awards."—E. G. Hill, in last issue meeting.

As a Society we can only compliment the

good and denature the worthless... his own judge. And, in fact, no grower can dis-

goratums are bringing just fancy prices. The small plants sold on Thursday were well attended, and fair prices were realized.

The Victoria Regatta were planted out in the outside tank with steam supply pipes being run through the tank to supply necessary heat at night.

Diesch & Co., 616 Drexel H. A., 616 Osgood, M., 616 Harris & Son, 616

National Florists' Board of Trade.

Secretary Loder has just issued to members his Credit and Information List, together with the Code, to which several useful additions have been made.

DAILEDUOZ BRUS has just completed the erection of a new house, 20 x 30 ft. inches, this outward inclination of the sides giving more head room for the plants, and also gaining considerable light.

New York Botanical Garden.

Director N. B. Britton, of the New York Botanical Garden, remarked at the meeting held Tuesday last, that the Board of Managers of the garden were all ready to accept of a large sum of money as soon as the plans submitted to the Park Commissioners had been passed.

THOMAS MILLER has just moved his greenhouse to this place, having formed a partnership with Irvin J. Clark.

Jamestown, N. Y.

THOMAS MILLER has just moved his greenhouse to this place, having formed a partnership with Irvin J. Clark.

Philadelphia.

Market Stationery. No improvement was noticed in the market stationery the past week; all flowers are just as plentiful as at last report. It is needless to quote prices, as they are readily accessible.

New York.

Wholesale Market. The depression in the cut flower trade commented upon last week, continues, and so far, is doing 60c per dozen. This stock is in two weeks earlier than usual; and the same may be said of the other plants.

A very few tea roses bring \$4 to \$5. Sweet peas are in more demand, and extra good flowers are being offered at \$4 and \$5. Better business is looked for next week, as the weather is now clearing up.

Visitors in town were Carl Jurgens, of New York, and M. B. Bunker, of Boston.

Hugh Graham had the decorations for the McKinley banquet, at Horticultural Hall, on Saturday last. The tables were decorated with dappled and snowed flowers.

Jos. Kift & Son had a large indoor decoration at the Stratford on Monday last.

The meeting on Tuesday last was very largely attended. The Society of Florists will have an association at illustrated lecture on small parks, which was much appreciated. This association will have their next meeting in pushing the laying out of parks and playgrounds.

The business meeting John Thatcher, gardener to Charles Dissel, Eber, brought in a plant of Cypripedium, which was very beautiful, and having six blooms; also some flowers of rare varieties of cypripediums.

At Drer's Nursery.

The establishment of Henry A. Drer, at Riverton, is full of activity at this time. Plant trade has been very good and the spring stock is well advanced. Lilies are now in full swing, the increased order in the packing house having been met.

Acacia Sales. Various acacias have been well attended, and prices have improved. Special quality

Market Domains Unchanged.

The market conditions have not changed greatly since last report. The early part of the week stock was very firm and the demand was so plentiful that it was to sell low. Every buyer, with any trade at all, feels like stocking up, and thus it is common to see great window and street displays these times.

Well-stemmed Beauty sell on the streets at ten cents each, or 31 per dozen; and as the dealers say they will not be the buyers for some time, there is money in them if sold, at least for the retailers.

Towards the end of the week, especially Saturday, partly owing to cool weather again, stock seemed less standard and cleared better at the wholesale houses, without so much of a sacrifice, if sales at \$1.50 to \$2 per 100 for fair tea roses may be looked upon in that light. The best in the market are still quoted at \$3 to \$4, but the sales at these figures are not large.

The fine old double-red paeonias are in from the South; also very good iris and plenty of good outdoor valley. Gladioli is getting plentiful and sells at 75 cents per dozen. Randall received from a Michigan grower quite a number of chrysanthemum flowers—a poor, white and very good golden feathery yellow. The latter sold at \$1 per dozen and several of the retail florists had them in their windows.

A Novelty.

There was received at C. E. Ameling's commission house last week, from Marceline, Mo., a consignment of native flowers. They were mainly wild, native blossoms, packed in rustic home-made vases, which had been made out of willow branches nicely peeled, 3 to 3½ inches in diameter, and sawed to 3½ to 4 inches in length. By means of an auger, each branch had been bored 3½ inches deep and the holes filled with wax, in which were pressed quite a little bunches of flowers. A handle composed of grapevine was added to the holes, which contained some thirty or forty of these novel vases.

Death of B. B. Fuller.

Daniel H. Fuller, late florist at Downer's Grove, died in this city May 14 and was buried at Aurora May 16. He was seventy-four years of age. Mr. Fuller, nearly a quarter of a century ago, succeeded Desmond & McCormack on Cottage Grove Avenue and Twenty-eighth Street, where his firm also had a retail store. Twenty years ago he started a greenhouse establishment at Downer's Grove, which, as was noted last week, the deceased had rented to the Hinsdale Floral Co. Thus, at his death, from declining health and old age, he had retired from business.

Among the Growers.

August Dressel, of Belmont Avenue, believes his business will show an improvement over last year by the time the spring sales of plants are over. His carnations, which are still healthy, he considers better payers than roses, even if prices have ruled low.

Up to February the average obtained for all flowers sent to the market was \$1.50 per 100. HARRIS HILLES were not very satisfactory, and sales were low, all but a very few. Bedding and potted plants sell at low figures. I noticed a very large basket of carnations.

He says the smaller, four-inch plants, pay better than larger ones.

Samuel Pearce, of Milwaukee Avenue, grows large quantities of bedding and house plants, the old geranium being very much in evidence.

EDGAR SANDERS.

Augusta, Ga.

We regret to announce the death of Mrs. Mesepher J. A. Beckwith, which occurred Wednesday, May 13. She was a very estimable lady and beloved by all with whom she came in contact. The Exchange extends its sympathy to the bereaved family in their sad affliction.

WHEN WRITING MENTION THE FLORIST'S EXCHANGE

Greenhouse Woodwork

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—because their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy Greenhouse and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

Deaver, Col.—The Colfax Avenue Floral Company has filed articles of incorporation with the Secretary of State.

Israel D. Lum has the contract for building five more rose houses for Mrs. R. B. Holmes, owner of the Holmeade greenhouses.

J. C. Walker is reported to have assigned to J. T. Hewitt.

Pittsburg.

A fair trade is the record for the week. There was an abundance of stock, but prices have not gone to smash as they seem to have done in other places.

Trade in bedding plants has not improved to any extent and the growers are uneasy about the outlook for the season.

At the last regular meeting of the club Superintendent Croner Schenley Park gave an interesting talk on native hardy plants and shrubs.

St. Louis.

The Market Quiet. There have been dull weeks before, but the one just closed is perhaps the worst this market ever knew.

The Greeks, who often come to the rescue of the market, bought Cape Jesse at \$1 per 1,000 from the produce houses, in preference to roses and carnations at \$5 per 1,000.

Brides and Kaisern were most abundant and in smallest request. The heaviest losses sustained were in white flowers. Bridesmaid came next in quantity, then Meteor and Perle.

Europe, where he will spend the summer being on the tour of botanical knowledge which he already possesses.

The annual exhibition of lilacs at the Arnold Arboretum will include one hundred and fifty varieties.

Utica, N. Y.

Trade has been very quiet for the greater part of the week. The weather has been fairly general, but the evenings have been calm.

Planting out is quite well advanced. Most of all the growers have the greater part of their stock planted. The plant trade is opening up, but the streets are filled with peddlers and plants of all kinds are sold at any price.

William Pfeiffer, who bought the old Aucock place, is building two new houses and a boiler shed upon it.

The annual "flower sermon," provided for by the will of Henry Shaw, founder of the Missouri Botanical Garden, was preached at First Church, Methodist Cathedral last Sunday morning by Rev. Dr. Greer, of New York City.

Walter McCrea, who has been connected with the Missouri Botanical Association for the past eighteen years, has severed his connection with that organization and will accept the position of superintendent and the place has been improved very much under his direction.

Mr. Law, until lately a teamster for the association, as acting superintendent.

Israel D. Lum has the contract for building five more rose houses for Mrs. R. B. Holmes, owner of the Holmeade greenhouses.

J. C. Walker is reported to have assigned to J. T. Hewitt.

Utica, N. Y.

Trade has been very quiet for the greater part of the week. The weather has been fairly general, but the evenings have been calm.

Planting out is quite well advanced. Most of all the growers have the greater part of their stock planted. The plant trade is opening up, but the streets are filled with peddlers and plants of all kinds are sold at any price.

William Pfeiffer, who bought the old Aucock place, is building two new houses and a boiler shed upon it.

The annual exhibition of lilacs at the Arnold Arboretum will include one hundred and fifty varieties.

Mr. Law, until lately a teamster for the association, as acting superintendent.

Buffalo.

Plant Trade Brisk.

Quite seasonable weather now prevails in business in the plant line is brisk. Rainfalls have retarded seeding and planting somewhat.

The selling of plants seems to seek a more restricted condition each year, and corner groceries and the huckster element predominate to an extent not known heretofore.

In cut flowers, white trade cannot quite be called slumpish, it has however more or less receded. The calls for funeral flowers have been very few of late, and no festivities worthy of note have been on the move.

On Thursday and Friday of last week W. A. Adams held an open house for the benefit of friends and customers at his new place, 452 Main Street.

On Thursday last Thursday for the East, for a week's recreation. William Legg will move this summer a few rods distant to a more prominent location on Delaware Avenue.

St. Paul.

Spring trade in plants opens up auspiciously and the growers are endeavoring to get ready to meet a fine lot of bedding stock this spring.

In the cut flower line the cooler weather has retarded the trade, but the surplus has been worked off. Funeral work has been plentiful and sales for other purposes quite good.

Bedding out is just beginning and every one is kept busy. Several hard frosts have done their worst this work, and with warmer weather now prevailing everything in the florist line is in the hands of the florists.

We hear of no particular damage from the freeze, as most outside stock was well protected. Nurseries quite generally planted out, as are gladioli, dahlias, etc., for summer and early fall bloom.

Trade in Minnesota. In Minneapolis trade is reported as jogging along at the regulation pace, while there is a certain amount of good trade at remunerative prices.

There is no denying the fact that the dealers here desire but the florists' trade very materially. A few of the growers sell to these stores, but the majority of their cut flowers come from Chicago and Milwaukee, and home trade is proportionately large.

A Smith has the contract for supplying the city parks. Retail prices range about as follows: Geraniums, 1c to \$1.50 per dozen; pansies, 15 cents to 25 cents; hydrangeas, marguerites, etc., 75 cents to \$1.25.

NEPHROEPIS EXALATA. BOSTONENSIS. THE BOSTON DROOPING FERN.

All sold out of small plants for the present. Orders still booked for June to August delivery. NOW READY - Sprouts of plants at \$20, \$30 and \$100 per 100; \$8, \$10 and \$15 per 100. All sold out of large plants for the present. Elegant plants in 4, 5, 6, 7, and 8 in. pots, from \$4 per dozen to \$15 each. Excellent stock of Ferns, etc.

L. H. FOSTER, 45 King Street, DORCHESTER, MASS.

STORRS & HARRISON CO., Painesville, Ohio.

Wholesale Nurserymen and Florists. Can show in all blocks of Fruit and Ornamental Trees, Yucca, Eucaly, etc. as can be found in the U.S. We grow 1 million Roses and million of plants annually. Trade list on request. Correspondence invited.

Question Box.

(100) Runners Geraniums are frequently retained after the danger of continuation of the disease is not so great, as for instance, in verbenas. Still, the policy is a poor one and it is better to discard the diseased plants.

ORCHIDS FOR CUTTING.

The Largest and Finest Stock in the World.

F. SANDER & CO., St. Albans, England. Bruges, Belgium.

Agent, A. DIMMOCK, care of Webster & Don, Seedling and Chambers St., N. Y. City.

**MASTICA**

FOR GLAZING GREENHOUSES. SUPERIOR TO PUTTY IN EVERY WAY.

Is not hardened by the extreme heat or cold that a greenhouse is constantly subjected to both inside and out. Mastica is adhesive and remains permanently elastic so that it is not forced out of place by expansion and contraction of the wood work. It does not crack and will last for years without need of reapplying and expense. With Mastica can "set-in" or use on the outside, but with a machine only.

Mastica and Mastica Glazing Machine were given  
HIGHEST AWARD OF SOCIETY OF AMERICAN FLORISTS AT PITTSBURGH, 1895.  
Put up in gallons, \$1.00. Half gallons, 60 cts. Quarter gallons, 35 cts.  
Mastical Glazing Machines, \$1.00 each.

Send for full descriptive circular and testimonials. Agents in all the principal cities.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Lohanon, Pa.

D. H. Mish is picking a grand lot of carnations from his out-of-town plant, where he has first-class soil. The varieties most popular are Thomas Cartledge McGowan, Daybreak and Scott. He is planting out Jubilee, Eldorado, Annie and Della. Cox among the newer kinds. W. M.

Reading, Pa.

Hoskins & Giles have a hugarbar to contend with this season in a Philadelphia department store, shipping here Holland grown roses, in lots of twelve, delivered, for \$1.20 per dozen. About one hundred lots have been disposed of in this town this season and the legitimate trade has suffered correspondingly. Apropos of this same store, when last in Philadelphia, I priced some stock, among it pretty plants of Pandanus Veitchii and tree rubbers, and found I could buy them to better advantage than from the grower directly. W. M.

Chambersburg, Pa.

Philip Fisher reports a slight increase in Easter sales. He caters to a good middle-class trade.

W. B. Reed, while doing considerable retail business, devotes his main energies to the mailing trade, having a contract with a large seed house to fill its plant orders. This is not a very satisfactory matter, owing to the fact one must look so far ahead to produce the vast amount of stock offered in premium collection, that the stock, when once exhausted, cannot be replaced that season.

The local press here has done much to increase the desire for both plants and flowers, one paper particularly. The people's Register, devoting considerable space gratuitously for the benefit of its readers. W. M.

Eyer Bros. are building now and will have completed in two weeks three houses; one 20x60, one 30x60, and one 10x60, all heated by steam. They use red cedar lumber and 16x16 double-bench rafters.

Bloomsburg, Pa.

J. L. Dillon reports an exceedingly good sale of carnations of which he raised a larger stock than usual this season. He has among a capital batch of carnations a large stock of the beautiful ivy-leaved variety—Souv. de Chas. Turner—a glowing scarlet, having an immense mass. About one hundred thousand carnations are being planted out. Some forty thousand roses are in capital condition. The plan is to start the plants in two-inch pots, then shift into three-inch in good soil. This succeeds well; even Beauty appreciates this treatment. I notice the grafted method is being tried to some extent.

Of a large batch of seedling carnations, two—one a grand white, the other a glowing scarlet—are in high favor. These will be placed on the market next season.

The vast number of roses, of which all are grown in solid beds, suffered terribly through the disastrous hailstorm of last fall, and are really only now producing as they should have done earlier in the season.

In a number Lillian Harrisii, which have remained in the same bed four seasons and were hitherto perfectly healthy, several have developed the disease so noticeable this season, while the remainder intermixed among them show no signs of it. It is perfectly healthy and producing splendid flowers. Mr. Dillon is of the opinion that treatment is chiefly responsible for this, but cannot entirely explain the cause. W. M.

**Remedy for Boiler Scale.**

There are various compounds for removing boiler scale and common washing soda is used by many with good results. A quantity is usually put into the boiler under no firing permitted to remain from twenty-four to forty-eight hours to soften the scale, when the water is drawn off, and if the scale is sufficiently softened it is washed out with the water. In a hot-water heating plant the same water may be used for years after the system is once filled, and there should not be sufficient deposit from one filling to be of serious disadvantage. The trouble may be entirely avoided by filling with rain water.—Metal Worker.

 London's Easter Flower Trade.

At a recent meeting of the Berkeley  
 Floral Society George N. Tyler, of Ala-  
 bama, spoke on chrysanthemums, in  
 the course of which he said, among  
 other things:  
 "Large chrysanthemums have never  
 been grown on the Pacific coast until  
 last year, when I succeeded in growing  
 a few specimens worthy of comparison  
 with those exhibited at Chicago. The  
 main object in making cuttings is not  
 to check the growth, but the plant should  
 be made so that it has an eye above  
 and one below the leaf and as soon as  
 the cuttings root they should be cut  
 up and planted. The plant should be  
 cut when it is soft. A hard root will  
 not make a large flower. Unless it  
 breaks off clean it is too hard for propa-  
 gation. The cuttings should be  
 packed firmly in the sand about one-  
 half inch apart and three inches be-  
 tween the rows. In from four to six  
 weeks the new plants will have rooted  
 and will be ready to plant in four-foot  
 beds, nine inches apart.  
 "For chrysanthemums the best fer-  
 tilizer is a solution made by letting  
 water stand on the parings of horses'  
 hoofs. This solution is diluted forty  
 and you cannot get it too strong. The  
 same manure may be used for a year.  
 After one has used it, it takes forty  
 gallons of water will make the right  
 solution. It may be used every day  
 with advantage."

**Ether as a Plant Developer.**  
 The United States Consul at Copen-  
 hagen has forwarded to the State De-  
 partment the following translation  
 from Danneberg of a lecture delivered  
 by Mr. Johannsen at the agricultural  
 high school recently given, the results  
 obtained by the etherizing method, which  
 consists in developing plants earlier  
 than their nature would allow to the  
 influence of ether fumes. The lecturer,  
 Mr. Johannsen, says:  
 "By exposing sleeping plants to the  
 influence of ether and chloroform, the  
 result is obtained that each plant, af-  
 ter the treatment with ether, begins to  
 shoot. They have thus probably been  
 awakened from their previous condi-  
 tion of sleep or inactivity. Lilies grow  
 splendidly when placed in an air-tight  
 transparent jar containing ether for eight  
 hours to the effect of 500 or 600 cubic  
 centimeters of ether, and then put in  
 water. Just before the plants are taken  
 plants had developed splendidly. The  
 etherizing of the plants will cost four  
 cents one (one to one and one-half  
 cents) each. The main point is to get  
 the plants to shoot at any time before  
 Christmas, even in September and Oc-  
 tober."

"It can be said that some progress  
 has undoubtedly been made, but one  
 can tell to what astonishing results  
 this discovery may lead. Tulips, lilies,  
 etc., can be developed much earlier and  
 have a pretty color and great durability,  
 as the ether frees the plant of de-  
 composable matter. To etherize the  
 plants they are placed in an air-tight  
 receptacle and exposed from twenty-  
 four to ninety-six hours (generally forty-  
 eight hours), to the influence of the  
 ether. Cylindrical glasses are used for  
 small plants and for large plants an  
 oil-lined box the interior of which is  
 lined with tin foil, four feet high and  
 one and two and one-half feet broad.  
 On the lid a small hole is made, which  
 is closed with a cork, and the ether is  
 conducted through this hole. As ether  
 is very inflammable, great care must be  
 taken not to bring candles or matches  
 near it. The ether is dissolved at from  
 fifteen degrees to twenty degrees cen-  
 tigrade." Exhibitions.  
 St. Louis.—The premium list of the  
 seventh chrysanthemum exhibition, un-  
 der the auspices of the St. Louis Flor-  
 ists' Club, has been issued. The show  
 will be held November 10 to 14 inclu-  
 sive. Phil Schaefer, Pennsylvania  
 Avenue, St. Louis, is secretary.

**Considerable Costum**  
 Advertising in your paper has been the most con-  
 siderable card. J. FOWLER THOM.  
 Mountaineer, N. Y., Oct. 3, 1895.

A more than usually motley assem-  
 bly were awaiting the opening of the  
 Flower Market at Covent Garden on  
 the Saturday before Easter. Groups of  
 curies and members of various sister-  
 societies and brotherhoods, including the  
 costers, were in strong force. The sup-  
 ply was equal to the demand, however,  
 and the returns, as compared with  
 those of last year, showed a marked  
 expansion. Southern France was a  
 heavy contributor of roses and lilac.  
 From the north came tons of daf-  
 fodils and jonquills, so that there was  
 no lack—Gardening World.

**BOOKS RECEIVED.**  
 Wonderful.—This is a nicely gath-  
 er-up pamphlet descriptive of the re-  
 sources of the great North-west, issued  
 by the Northern Pacific Railway, and  
 proves very instructive and entertain-  
 ing to all. The book is beautifully il-  
 lustrated. Copies may be had by en-  
 closing six cents to Charles S. Fee,  
 general passenger and ticket agent, St.  
 Paul, Minn.

**CATALOGUES RECEIVED.**

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. No. 22.

NEW YORK, MAY 29, 1897.

One Dollar Per Year.

## VINCA MAJOR VARIEGATA.

Fine, strong plants, with good vines, 4 inch pots; excellent for vases,

\$10.00 per 100.

## CHRYSANTHEMUMS.

### INTRODUCTIONS OF 1896.

Alooz, Henry Hurrell, Indiana, Infatuation, Lenawee, Marion Cleveland, Miss L. Magee, Modesto, Mrs. Harry Toler, Mrs. H. H. Battles, Mrs. Perrin, Mrs. Wm. C. Egan, Mrs. W. P. Raynor, Nashon, Pluto, Riverside, Yanoma. \$4 Per 100.

### STANDARD VARIETIES.

Louis Bohmer, Major Bonanza, Mrs. Jas. B. Cane, Eugene, Dandelion, Miss Agnes Louise Daisley, W. Dirsmore, Mrs. A. J. Drexel, L'Enfant des Deux Mondes, Erminida, Mrs. Alpheus Hardy, Marian Henderson, Mrs. Higginbotham, Mrs. E. G. Hill, Dean Hole, Ivory, J. E. Lacey, Latest Petal, Mrs. George J. Mayer, Marie Louise, Muerrea, Mrs. S. F. Murdoch, Mutual Friend, Nemesis, Niveus, Miss Georgiana Pipher, Miss Florence Pullman, Mrs. Geo. M. Pullman, The Queen, H. W. Riemann, Mrs. Henry Robinson, Dorothy Toler, J. H. Troy, Mrs. H. McK. Twombly, Virand-Morel, Mrs. Geo. West, Yellow Queen. \$3 Per 100.

### HARDY POMPON CHRYSANTHEMUMS.

These Chrysanthemums, though in no way new, have not received in past years the attention they deserve, especially for planting in private gardens, where many of the large-flowered varieties do not mature their flowers before the cold weather sets in. We have made extensive trials, securing the best that could be found in Europe, Japan and this country, and offer them at \$3 Per 100.

## PITCHER & MANDA, Short Hills, N. J.

SEED TRADE REPORT.

Points and information from seedsmen, and all interested in this column, solicited. Address Editor, Seed Trade Report, Florists' Exchange, P. O. Box 1097, New York.

Punitive Damages.—The United States Court of Appeals has affirmed the judgment of the United States District Court last June by Theodore Outerbridge, Bermuda, against K. F. Downing & Co., of New York City. The circumstances connected with the case were given in our issue of 30 last. The amount of the verdict was for \$1,855.

Death of Samuel Wilson.—Samuel Wilson, Mechanicville, Pa., died on Sunday, May 23, aged 78 years. Mr. Wilson had been in the seed business for a number of years, having, prior to embarking in same, been purchasing agent for the Grange. His ancestors came from Yorkshire, England, in 1831, and settled in Bucks County, Pa. Of course, the business had not been very successful.

St. Paul.—Field corn for seed purposes is in great demand in the Northwest and trade in this article is reported by several dealers. Filling in orders for vegetable seeds have also been good, and as far as we are concerned the year's business is reported very satisfactory.

Agricultural Implements.—Before the United States General Appraisers at New York, April 28, 1897, in the matter of the protest of H. C. Christiansen, of the City of New York, Collector of Customs at New York, N. Y., the following opinion was given by William G. Brown, appraiser: The merchandise is a turnip cutter. It is claimed to be exempt from duty under paragraph 531 of the tariff act of 1890, inasmuch as it belongs to the class of agricultural implements named in said paragraph. We do not believe this to be correct. We are therefore entitled to free admission under paragraph 531 of the tariff act, officially named: As a turnip cutter is not one of these, the assessment of duty is 50 per cent, under paragraph 17 is affirmed.

Against Free Seeds.—Secretary Hastings, of the Florida State Horticultural Society, has forwarded us a copy of a resolution passed by that society condemning the free distribution of seeds by the government, as now conducted, and recommending that Congress use their efforts to have the appropriation now made for this purpose applied to the scientific work of the Department of Agriculture in investigating diseases and insect enemies of plants grown for commercial purposes throughout the United States. We heartily recommend the action of the Florida State Horticultural Society to other State societies and trust they may see it to their advantage to go and do likewise. In no foreign country has the voice and sentiment of the prominent horticulturists of the country been presented to the attention of Congressmen and the utter uselessness and undesirability of the free-seed scheme, so far as it relates to vivators, be laid before our law makers.

Seed Growing and Selling.—Fifteen or twenty years ago it was hard work to produce seeds. To-day it is hard work to raise them. In twenty years of experience has enabled all growers to increase their yield. It has also done for the consumer. Breadth of acreage and new localities have increased faster than the demand. But greatest of all, the cheap labor of foreign countries has enabled foreign houses to completely monopolize our trade; hence the necessity that in order to be enabled to sell seeds to-day as to produce them. Dealers as well as growers are suffering from this cause.

As the American Seed Trade Association meets soon in Washington, should you have a chance to be a member, would all that are interested in seeds should be present, and that in doing so, would the association's first business to urge Congress to sustain the House bill as it reads, and that in doing so, would we are interested enough in our pursuit to retain an industry well adapted to our country, and to be able to say: EVERETT B. CLARK & SONS.

European Notes.

Late and Light Harvest Anticipated. The cold spell still hangs round and checks every tendency to exuberant growth either in annual or biennial crops. We have to open our minds for a late harvest all round and a lighter one is inevitable as the months roll on. This is true both of northern and southern Europe, for the Mistral in the south is rapidly undoing all the good done by the warmer weather of March. One exception is to be found in our pansies, which have never been finer than they are this year. The blooms measure from 3 to 3 1/2 inches in diameter and the form appears to be more perfect every year.

Quite an interesting study is the development of the modern pansy. In 1730 Robert Furber issued his elaborate colored plates of the various plants he had to sell and the best of his pansies only measures 3/4 inch in depth and 3/4 inch in width, the colors varying very slightly from those of the wild variety found in Western Europe. Another ten days will settle the state of the pansy crop and that of many other biennial flower seeds.

Limbs Bean Field Ready Sale. As the garden seeds the scarcity of green vegetables reported last week has paved the way for the introduction of early lima beans, which under the name of butter beans, have found a ready sale and been highly appreciated. In future years the ordinary Haricot beans will find a powerful competitor in this new-come.

The extraordinary sale of beans referred to early in April still continues, and prices have advanced fully 30 per cent. during the last two weeks.

Philadelphia.

At the trials of American implements just held at Bourges, the only French grower to exhibit this year was Allen & Co., manufacturers of agricultural implements in this city, obtaining the gold medal for their Patent Junior Horse Hoes and Cultivators, after complete dynamometer tests, eight competitors in the field.

ROSES.

Preparing for Planting.

For the next three or four weeks planting for next winter's cutting will claim our attention...

The first thing we do is to clay or mud the roof; this makes it much more congenial for the workmen under the roof...

The wire stakes are next taken out and tied in bundles; old plants cut off, carried out and burned; old soil removed and the house thoroughly cleaned of all rubbish and washed.

Refrigerating or putting in new benches is the next in order, and is every important to see that they are perfectly level, for it is next to impossible to water properly a table that is not level...

To prevent the soil from falling through the cracks when filling the benches straw is laid over them. The sides of beds are all at an angle...

There are many ways of bringing in soil practiced, probably the most common being by the hand barrow. My experience is that this work is easier and quicker done with a wheelbarrow...

On a retail establishment, at this time of the year, it is very unwise to put our skilled workmen at this work when we can get laborers to do it just as well, if not better, at a much lower cost.

Later a number of growers firm their soil either before or after planting. I used to be a disciple of this plan, but I find it takes the water more uniformly whereas when it was dried and on the dry side, in places it became so hard that it was a very difficult matter to moisten it properly to the bottom.

In one of my previous notes I mentioned the gratifying results I had had through using a different soil for certain varieties. If any grower has been anticipating a trial change now is the time to do it.

TEN DEGREES BELOW ZERO

is the temperature that has been undergone without injury by unprotected yearling plants of the new climbing rose

AGLAI A or YELLOW RAMBLER

In our nurseries the past Winter, thus proving it to be even harder than we had supposed. A Hardy Yellow Climbing Rose in what average has wintered for years and Aglai A, therefore, an immensely important introduction.

150 Blossoms in a Bush. The Yellow Rambler for it has the same manner of blooming in the United States as does the Climbing Rambler to which it is a splendid companion rose and probably related.

We are the Introdusers of this rose in this country, having been so appointed by Mr. Peter Lambert, the originator. We are also prepared to offer plants of any desirable climate.

EUPHROSINE or PINK RAMBLER. Color almost red, otherwise very similar to Aglai A.

THALIA or WHITE RAMBLER. Pure white, like Aglai A.

WE WANT EVERY FLORIST to have the above roses, for the benefit of our customers and of everyone who will do so, agreeing to deposit \$1.00 for this purpose.

WE WILL SEND FREE OF CHARGE a list of the above roses, together with the Aglai A, together with 100 handsome descriptive circulars, if you will send us your address stamped upon them. Send at once.

Price for strong plants from 2 1/2 inch pots, \$15.00 per 100. Send for our Free Lists of other Roses and General Stock.

# CARNATIONS.

## Experiments with Carnations.

The twentieth annual report of the Experiment Station contains an account of some experiments in carnation culture to ascertain the most economical fertilizer. One plot was filled with common compost, to which was added 29 grams of nitrate of soda, 10 grams of superphosphate and 12.25 grams of dissolved bone black. Another plot was filled with three-fourths of a bushel of fish three per cent. of moist peat and 50 grams of carbonate of lime. Chemical analyses showed as follows: Nitrate of soda, 58 grams; muriate of potash, 29.5 grams; dissolved bone black, 24.2 grams; that being double the quantities applied in the first mentioned plot. Another plot was filled with ordinary

My experience with Jadoo is that all kinds of plants make twice as many roots in it as they do in earth; in fact, I think it would be hard to say what would not grow in it.

I used it last year on some rose plants and so satisfied was I with the results that this year I have used nothing else but Jadoo. It saves a great deal of watering. In using it I find it almost impossible to not to firmly. If the fibre is dry I always dampen it; you can not firm by doing this. I find good drainage to all plants.

It is very good to mix charcoal and sand with it. Give the plants a good watering after potting and subsequently be very careful not to overwater, for if you do the plants will stand still and go back.

If used in a right way and at the right time the liquid will speak for itself. It is a simple article to use, but like many other new things you must understand something about it before you get the best results.

HARRY PAPWORTH

The plants were raised from cuttings taken in January. These were duly potted and in May set in the open ground, where they remained until September, when they were set in five-inch pots and set in the ground for two or three weeks and then removed to an unheated vegetation house. December 14 the plants were transferred to the forcing house plots.

Up to this time all flower buds had been pinched off, but the plants were now allowed to make single blossoms, the extra buds being removed. The plants were of three varieties—Day-break, Lizzie McCowan and Garfield.

The result of the experiments proved that the plants raised in coal ashes and peat, with fertilizer chemical and natural, both the number and the average diameter of the flowers may be considerably greater than in any other soil. The whole of the plant food is supplied by soil or manure. Thus, in one experiment, the number of flowers raised in coal ashes and peat was more than three-eighths larger than that raised on compost, coal ashes alone, or with fertilizer, chemical.

## A Twice-Bearing Strawberry.

We are in receipt of a circular from T. W. Lashburn, of Wesley Heights, Washington, D. C., setting forth the merits of a new French strawberry. Among other qualities mentioned are its enormous size and twice-bearing habit by means of its runners. It is no larger than the Louis Gauthier, and as is known, the berry has not been fruited in this country, but the Revue horticole de Paris writes: "The Louis Gauthier originated with M. L. Gauthier, gardener to the Chateau de Neuville (Cayenne), France. It becomes to maturity on the last of May.

The growth habits of the plant are extremely vigorous. Early in the season the stems remarkably long, leaves medium size, velvety, very round, of a beautiful green above and white beneath, and with profuse nerve webs. The flowers are large and perfect, extending well above the runners, and are of a quiet. The fruit is borne on a long stout fruit stalk. Calyx well developed, with numerous serrations. The seeds are of the fruit, which is large and cone-shaped. Its color is light rose, shagreened seeds pale. The fruit is flavo-alaricaded, perfumed and juicy. This beautiful fruit has been given to me by M. Louis Gauthier and is a cross between the Alpine perpetual, La Belle de Meaux, and the Louis Gauthier. Its dominant qualities are: First, uniform enormous, hundred and sixty berries having been counted on one plant; third, a large size; fourth, a large size, surpassing that of Docteur Moreau."

## Jadoo Fibre and Liquid.

I think I was one of the first to try these substances in America. I have used them on almost every kind of plant that will do so, from geraniums to orchids. Everything potted in the fibre comes fully and very rapidly. The growth is very rapid, the colors in flowering plants being much brighter than those seen in the open soil. Ferns do well in it. They grow very quickly and make very long fronds.

blooms, and the stripes of brown were in some cases a quarter of an inch wide on each of three petals. No such trouble was experienced with the plants in the light which had passed through the pane of glass. The earliest flowers appeared on plants in the naked light, and in this section they lasted the average nine days. Four days later the plants in the section flowered and lasted here nine and a half days. The plants in the unlighted section were nine days later than those in section two in coming into blossom, but the flowers, though slightly smaller lasted seven days and were more robust. The flowers in the lighted sections, like the plants which bore them, were spindling but not unsightly, excepting those which were burned.

A plant with two remarkably evenly developed stems was taken from the unlighted section, and so placed that the curtain could be drawn between them, the one stem being out in the unlighted section, the other among the plants behind the pane of glass in section two. A second twin-stemmed plant was also taken from the unlighted plot and placed in the naked light, but the larger of the two stems was covered each

Sketch Showing Method of Greenhouse Heating without Boiler Cellar.

## L. Harrison and the Electric Light.

At a recent meeting of the Horticulturists' Club, of Cornell University, M. G. Keim presented notes of experiments made with the Easter Lily. As to the effects of the electric light in its cultivation, he said that the bulbs were potted the middle of October, plugged in a solid bed late in December, and the electric light turned on January 15. At each night before the lamp was burned from 5 P. M. until 6 A. M. for the following four months. The bed was divided into three sections. The first was exposed to the full glare of the naked light; in the second, the light passed through a large pane of ice which cut out some of the ultra violet rays, but did not impede the passage of the light; the third section was separated from the light by a black canvas curtain, which was drawn across at 8 A. M. Each night the bed was lighted. When the light was first turned on, the plants were of uniform development, but in six weeks changes appeared in the foliage, which gradually became more pronounced. The plants in the lighted sections grew very tall and spindling, had long peduncles, narrow and shallow leaves, very much curved leaves far apart on the stems. These effects were most apparent under the naked light. The plants in the unlighted section were more robust, had deep, glossy green leaves, and, on the whole, more evenly developed. After the buds were formed these differences did not become more pronounced, but the buds under the naked light began to show a dark brown streak on the surface most exposed to the direct rays from the lamp, and this turn increased as the buds grew and expanded into blossoms. The seared petals were much more curled than is ordinarily the case with healthy

night with a tube of manilla paper to exclude the light entry. In each case the stem in the light blossomed a day before the other stem. Some other plants of various descriptions were mentioned as a part of them removed to the lighted sections, the others being left in section three. The former blossomed seven days before the latter, the last blossom in the former group being three days earlier than the first blossom in the latter group. The blossoms were perfectly healthy and lasted as long as those in the lighted section. From the experiments it is concluded that it will probably pay commercially to use electric light in cultivating Lilium Harrisoni when the buds are an inch long, in order to hasten their expansion, and that the light must pass through glass to avoid burning the petals.—Garden and Forest.

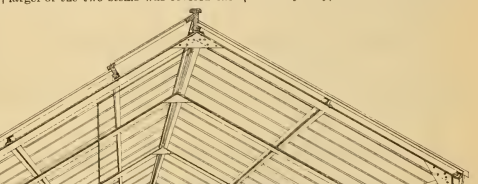

## CHANGES IN BUSINESS.

**Hawley, N. J.**—William Saling, of Harrison, N. J., has sold to his son, John William Saling, the retail portion of his extensive flower trade. The salerooms are at the corner of the rear corner of Harrison and Church streets.

**Essex, N. H.**—George W. Hilliard has admitted into partnership his manager, Hildner Harrison. The style of the new firm will be Hilliard & Harrison. Brown & Warren are building for the new firm four greenhouses, each 22x34 ft. and 14 feet in height. These will be devoted principally to American Beauty and the palm house of 20x100 feet and a brick boiler house will also be erected. Two thirty-horse power Excelsior boilers will heat the entire plant.

## Greenhouse Heating Without Boiler Cellar.

In our mail and the trade papers, we often meet the inquiry how to heat greenhouses in localities where cellars are impossible to build or keep dry, are impossible to build or keep dry, are impossible to build or keep dry. The accompanying sketch will solve the trouble. The boiler is set the depth of its base below grade; the flow pipe rises above head room and ascends to the far end of the house, where it is vented as shown. From this point, the heat pipes descend back to the boiler, in location and number as required. The expansion tank is set in shed above the boiler and connected to flow pipe. This expansion tank will also act as air vent if the flow pipe descends from that point. The flow pipe can be insulated if the overhead heat is objectionable. Valves placed on the pipe will stop or check the flow in all other methods. D. E. HOWARTH, Jersey City, N. J.

## Minneapolis.

E. Nagel & Co. have a nice store and trade in a good locality. Their greenhouses on Lake Street are well filled with good bedding stock, geraniums predominating. A single scarlet, with an immense trunk, called Engineer Cleveland, is grown here quite largely and is particularly good. Our trip took us to the houses of the Lakewood greenhouses, located near the city. These are managed by W. Hartman and were rebuilt and rearranged by his last year. The houses, eight in number, contain about fifteen thousand square feet of glass, are light, clean and airy, and are well heated. These are devoted to growing roses, two to carnations and the balance to general bedding stock. The carnations—some 12,000 in number—are very fine. A new single scarlet, I have forgotten the name of, is a decided acquisition to our list of good bedding varieties, truss very large, stems strong, petals very large and of a pure scarlet color. He also grows S. A. Nutt to perfection and has a fine stock of a double Daybreak pink.

R. J. S. Wessling's range of houses was erected last year. One house, 20x24, is devoted to carnations. Four smaller ones are given up to roses and bedding plants. His Beauty were looking exceptionally fine—some stems being at least four feet in length. At Fair Oaks, Seneca, Washburn's home, we saw some bananas in fruit. The houses are run by Gust, Malmoquist and are well stocked with bedding plants. His strain of single petunias is among the finest ever grown here.

## For the Busy Man.

Robert Owen, the well-known English chrysanthemum grower, is dead.

Hailstorms visited Tennessee, and Western Pennsylvania, the latter very destructive.

There is talk of organizing a wheelmen's club among the St. Louis rollers.

Lavender-colored roses have been seen in the mountains of Philadelphia.

Outdoor carnations around Cincinnati, owing to incursions of weather, are in bad shape.

A late and light harvest of European seeds is anticipated. Lima beans are having a large sale.

Fewer varieties of roses will be planted by Philadelphia growers this season; Beauty will supply the bulk.

The plan of placing out flowers of precocious outdoor plants, such as geraniums, is meeting with much success in Chicago.

A plant of chrysanthemum, Mme. Bergmann, having a well-developed flower, was introduced into Cincinnati by a Kentucky grower last week.

Brooklyn magistrate has decided that a lot owner has a right to cut the roots of a neighbor's tree which drop into his way (the lot owner's) property.

Large quantities of mildewed roses are arriving in the markets of the principal cities, caused by the very changeable weather now experienced here and there.

The brown-tailed moth, a pest which does much damage to fruit trees, has made its appearance in Massachusetts. Endeavors to exterminate the gypsy moth have already cost the State \$700,000.

A report on the disease of Lilium Herveyi will be issued shortly by the Pathological Institute and the Department of Agriculture. It is believed that means of prevention can be adopted with reasonable hope of success.

## Caution.

DANIEL W. CRANE, formerly of Soldiers' Home, Los Angeles County, Cal., has been appointed as the publisher of this publication, and the publishers will not hold themselves responsible for any claims or demands in settlement of subscriptions or advertising.

## Rights of Property Owners.

A case of considerable interest to contiguous property owners has just been decided in the Brooklyn Police Court by Magistrate Teale. The roots of an alantus tree growing in a Brooklyn back yard, and which had crossed the boundary line of the tree owner's lot and entered that of his immediate neighbor, from these roots a sprout had sprung up which, it was alleged, proved a detriment to the neighbor's flower garden, and he proceeded to sever the roots to the point where they first entered his property. The tree owner called his neighbor of having poured vitriol on the remaining portion of the tree beyond his fence, and that the original tree was dying in consequence; but this was denied. After hearing the evidence, the magistrate ruled that the adjacent property owner had a right to cut off the roots of the root that had come into his lot.

## The Gypsy Moth.

Endeavors to exterminate this pest have, since 1830, cost the Massachusetts State Board of Agriculture \$70,000.

Professor C. H. Fernald, of the board, in an interview, is reported to have said that the cost afforded by the gypsy moth is about two hundred square miles. They are in about twenty towns in Massachusetts, and this territory has been attacked from the outside till about half the area has been cleared of infestation, as estimated by Professor Fernald, would be \$200,000 each year, for five years; \$100,000 yearly for another five years, and about \$15,000 yearly for the third five years. The moth eats everything of a vegetable nature, and it is investigated the matter farther this summer at the Secretary of Agriculture, Washington, and if his report is satisfactory the burden of the work may be taken up by the nation. If pursued carefully, Professor Fernald says, the war against the moth may be completed within the lifetime of the twentieth century, so that nothing but future importation, need be feared.

## Missouri Botanical Garden.

Dr. Trelease has issued a circular letter calling the attention of botanists to the facilities for study afforded by the Missouri Botanical Garden—facilities as regards library, herbarium, etc.—and as regards the facilities for study of other similar institutions in America. These, the doctor says, are freely placed at the disposal of any botanist, amateur and other persons competent to carry on research work of value in botany or agriculture. The only such simple restrictions as are necessary to protect the property of the garden from injury or loss. Persons who wish to make use of them are invited to correspond with Dr. Trelease, at St. Louis, Missouri, for full details as to the outfitting with as much detail as possible, the work they desire to do at the Missouri Botanical Garden. The original work are requested to state their preparation for the investigation they propose to undertake.

## Trade Papers and Novelties.

Our good friend, Mr. Hill, in his generous and patriotic spirit, in last week's issue, page 509, makes some what paradoxical statements. In one breath he compliments the newspaper reports of exhibitions of novelties by placing them on an equal footing with the certificates printed by the International Society experts in the matter of being powerful commercial factors in

promoting the sale of a new variety. While in the most he goes on to state that the average press reports are of no value at all, because in them everything is praised and nothing criticized.

This latter contention exists in Mr. Hill's own mind, and he evidently believes the quotation he cites—that "a party would just as soon offer a good customer a piece of lead as a piece of gold to offend a good advertiser," which quotation, he says, he has seen "in one of our trade papers."

Any trade paper making such an assertion as Mr. Hill quotes must satisfy a customer who is not a little snooty, and without the courage of its own conviction.

Friend Hill, if he concurs in the sentiment of the sentence he quotes, must have a very exalted opinion of the "good advertisers." They must, according to the view expressed, be a petulant class of mortals if adverse and honest criticism of their exhibits will offend them! On the other hand, their integrity must be at a low ebb if they would allow to go unquestioned any printed recommendation of their exhibits. It is a pity that the "good advertiser" will ever object to, or be offended by, honest, adverse criticism.

As far as The Exchange is concerned, we are ready and willing at all times to express fearlessly and openly our views on the merits of a novelty, to affect "good advertisers," just as readily as we would express them on matters of common concern to all "good advertisers, or no advertisers at all; why shouldn't we? No right-thinking, honest advertiser, or "advertiser" will ever object to, or be offended by, honest, adverse criticism.

As far as the Exchange is concerned, we are ready and willing at all times to express fearlessly and openly our views on the merits of a novelty, to affect "good advertisers," just as readily as we would express them on matters of common concern to all "good advertisers, or no advertisers at all; why shouldn't we? No right-thinking, honest advertiser, or "advertiser" will ever object to, or be offended by, honest, adverse criticism.

And while we hope and trust that press reports are, and will continue to be, of great value to us, we do not feel that the trade will look up to the national society as the highest tribunal in determining the value of novelties, and thereby acting as a guide in all their dealings; and it behoves that so far as the trade is concerned, it be relied on that the certified reports of bodies of experts, for the reason that the "introducers" establishments information, in nine cases out of ten, not in the possession of the adjudicators at all.

And while we hope and trust that press reports are, and will continue to be, of great value to us, we do not feel that the trade will look up to the national society as the highest tribunal in determining the value of novelties, and thereby acting as a guide in all their dealings; and it behoves that so far as the trade is concerned, it be relied on that the certified reports of bodies of experts, for the reason that the "introducers" establishments information, in nine cases out of ten, not in the possession of the adjudicators at all.

Meanwhile, The Exchange will continue to do its best to advise our representatives as they see, despite Mr. Hill's implied thrust that the disapproval of a good advertiser will muzzle the press and prevent its speaking the truth; in other words, that advertising purposes will act as a bribe and incentive to the promulgation by the press of false or misleading information.

## OBITUARY.

Robert Owen.

Robert Owen, Maidenhead, England, died while at work in his greenhouse on Sunday, March 27, 1905, at the age of seven years and he had been suffering from heart disease.

Mr. Owen was well known as a chrysanthemum grower. He introduced many new varieties, and was successful and succeeded in raising quite a number of first-class exhibition sorts of roses, and also of the type, and which then Robert Owen, Viscountess Hamilton and Rose Wynne. His nursery was at Maidenhead, and he was wholly devoted to the raising and growing of new varieties.

## New York.

### Wholesale Market.

The depression noted for the past two weeks has been the supply of stock has lightened very considerably, but even that has failed to help matters. From present appearances the improvement now to be expected for Decoration Day; and should the apparent curtailed supply of holding stock in the market, a holiday appointment is in store for such shippers. Matters in the market are in line with the advent of June, as there is a prospect of a considerable number of weddings and other social occasions. Lilac is abundant this week, the largest shipments coming from Newport, R. I. The market commenced shipping to this market Friday.

Peonies are very plentiful, as also are carnations and geraniums.

Some funeral work and a fair proportion of steamer work, comprised the bulk of the week's business.

### The News.

Emil Le Moutl appeared in court this week to testify against a man who has been making a mark of city florists. His motion operandi was to order \$2 to \$3 worth of goods, and to order the man to pay 75c. over the amount, thus obtaining the difference. The checks proved to be forged, and the man was ordered to pay the money of Mr. Le Moutl and the police, was indicted on Wednesday.

A burglar who had a narrow escape from bleeding to death, recently, owing to a hemorrhage, caused by the extraction of a tooth, is now fully recovered, and at work again.

Burglars tried to enter the residence of Mrs. J. H. Hoback last night, but on Monday morning last. The burglar alarms worked properly and opportunely, and Mr. and Mrs. Hoback were quickly on the alert with guns, but the marauders escaped. This is the second attempt made to burglarize the house within a year.

W. H. Siebrecht, Astoria, N. Y., together with his wife and daughter and daughter, Isabelle Siebrecht, sailed on the S. S. Massaud, Saturday, May 15, for a trip to Europe. The party will be accompanied by some beautiful floral pieces were seen here in the names of the departing tourists.

John J. Madae, of the Madae estate takes place before the Chancellor, on Tuesday next, at Jersey City, N. J.

Owing to the holiday (Monday) W. Elliott & Sons will not sell on Tuesday and Friday. The only sale for the week, R. M. Gardner & Co. will also add the same day. The Co. will sell Tuesday and Friday as usual.

A bill was presented at Albany, N. Y., by the Governor, to go into effect June 15, requiring all auctioneers in this city to furnish bonds for \$2000, or more if desired by the Comptroller, also to take out a license from the Mayor at a cost of \$200.

The receiver of the National Waterproof Fibre Company has presented a petition to the court asking for a sale of the property and assets of the company in his hands for \$650, and will on Tuesday, June 13, appear before the Court, at Chancery Chambers, 765 Broad street, Newark, for an order to make the property and assets of the company to be presented at that time.

J. J. Van Waveren, of Hillsdale, Holland, has been successful in securing a patent on June 2. He has had a successful business trip through the United States.

The well-known greenhouse establishment, of the late Mrs. W. Kingdon, N. Y., were in town this week.

The well-known greenhouse establishment, of the late Mrs. W. Kingdon, N. Y., were in town this week.

## St. Paul.

Prots Hinder Outer Work.

The protracted drought has been broken by a long snow and bed-ding-out work is progressing finely. Severe frosts, however, have deterred work by bringing snow, and with the thermometer hovering near the freezing point, cautious planters are not hurrying to get under stock.

For Decoration Day.

Decoration Day trade promises well and shipping is going on very freely. Lilacs and snowballs are about the only outside stock in bloom, and the market is very active. Many have made their appearance and will help out in nice shape. A few sweet peas, and carnations are coming in readily. Roses and carnations are in good supply and of good quality.

Club Festival.

The annual social event of the year at the Boston Gardeners and Florists' Club is the strawberry festival, and this season it bids fair to exceed in...

Around Town.

The concern of Doogue & Co. 288 Boylston Street, Boston, has been retired from the retail cut flower business.

The rhododendrons are coming into bloom and James Conley is said to have a fine show at the Hayes estate in Lexington.

At the special meeting of the Massachusetts Horticultural Society, on Saturday last, it unanimously voted to ratify the action of the Finance Committee in compromising the Hayes estate.

John H. Becker, the genial Cambridge florist, has recently returned from a fourteen months' visit to his home near Mainz, Germany.

Alfred Dimmock, representing Sander & Co., arrived in town Wednesday.

Society's Exhibition.

The good exhibition was presented at Horticultural Hall on Saturday last. Prizes were offered for herbaceous plants in all quantities.

The bowlers met last week and perfected an organization. So far it has numbered twenty-five members.

Prospects for Decoration Day.

Decoration Day prospects seem bright, inasmuch as the weather on Thursday afternoon, the only drawback is the cold, drizzling weather.

Not much has been said of this organization lately, but they are just as much in evidence as ever, holding their Club Shrubs, which is most in demand.

John K. M. Farquhar expects to leave at an early date for a pleasure trip to the Gulf States with his camera with him, and we hope to hear an interesting stereopticon description of his return.

Market Improves.

A slight improvement is noticed in the cut flower market. Prices have not advanced, but flowers are scarcer and the market is cleaned up better than it has been for some weeks.

Carnations, while yet very plentiful, do not sell well, owing to so many poor flowers being sent in. Unless sold the day of arrival they are practically worthless.

While there has been a fair business done in small plants, it has not been up to those to be expected.

The tendency to plant few varieties of roses is more noticeable than ever.

The florists' board of trade, under the leadership of C. S. Loder, secretary of this association, spent several days in this city.

**CHRYSANTHEMUMS.**

*Selecting Varieties.*

The main part of our work now is to select the varieties best to grow and decide upon the purpose for which we want them next fall—whether, first, for cut flowers to be shown at our coming exhibitions; second, for specimen plants for the same purpose; third, for cut flowers for home trade, or to be disposed of by a commission house; fourth, and I think, by far the most important lot for the greatest number of our florists, for market plants.

I think it is unnecessary to name varieties that are suitable for the first purpose, because most of the men in that line are well posted on what they want to grow. There are, among the lately introduced varieties, however, a few of special merit and well worth trying, and these I will name. *Melocite* seems to be the fine show yellow for early exhibitions. Madame Felix Perrin is good, but does not keep well, as it loses its color easily. Mayflower is grand for large vases. Mrs. S. T. Murdoch is a good pink, coming in bloom the same time in November and for the end of November Mrs. Emil Buettner has shown well with me.

For the second section the number of varieties is very limited. I consider the best ones are Ivory, La Canning and L'Enfant des deux Mondes; best pink, Fred Wals, Glory of the Pacific and the Pink Ivory; best yellow, Harry L. Sunderbruch, W. H. Lincoln, Minerva and Major Bonaffon. Dean Holl is fine in its color. The best red yet is George W. Childs, and Georgienne Branchhall is a fine straw color. This is the cream of good flowers for specimens and all are easily brought into good shape. I will have in (nearly) Louis Le Soukher or agents of dark pink; it does not take too much tending material.

And here I would like to call the attention of our hybridizers to the fact that in this section of the market the improvements wanted. Men who will give us say about a dozen varieties of sturdy growth with fine bloom and which are able to stand without artificial support will get the everlasting thanks of our florists. I hope that the exhibitors to draw good parents in line for that purpose. THEO. BOCK.

**QUESTIONS.**

OPEN TO ALL. . . . FREE TO ALL

Answers Solicited from Those Who Know.

(104) **Piping a Greenhouse**.—How many 1 1/2-inch return pipes will a two-inch pipe of the length of 100 feet supply a house 250 feet long, pipe connected direct with the boiler?—H. TDENN.  
 A two-inch steam supply pipe in a house of the length of 100 feet will furnish from three to five 1 1/2-inch returns, according to the pressure and the temperature maintained. For a house as long as this it will be better to use a 2 1/2-inch supply than to put in an additional 100 feet should it be necessary.—L. R. TAFT.

(105) **Greenhouse Heating**.—Albert F. Esch.—From the plan and data furnished I learn that there are two houses, each 80x16 feet, with board sides four feet high and eight feet and six inches to the ridge. One house is for roses to be kept at 35 degrees, and the other for palms at 60 degrees, with the temperature outside at zero. In order to heat the system under the pressure I would recommend the use of the so-called box coil of the heating pipe in each tier are connected by return bends and the water is forced to pass through all of them, which makes a real circuit of the heater. If in an open system it will be better to connect the ends of the pipes by means of manifolds, to pull up from tees and nipples, so that the water will have to pass back the same length of pipe as that which will secure the best returns from the fuel, not less than forty two-inch pipe in each tier, and in each tier I should also use two-inch pipe. If this size is selected about ten runs will be needed to heat a house of 1000 square feet of radiating surface. It will be best to use three overhead flows and seven runs in each tier in each house, although two flows and eight returns would answer. L. R. TAFT.

(106) **Cut-Worms on Carnations**.—R. A.—Greatest success will result from hand-picking at night. Dry poisoned bait, made of bran and middlings mixed with Paris green, at the rate of thirty pounds to the tonner or one of the latter, and this sweetened with a little sugar, has proven a good remedy. See that no other animal gets at the poison.  
 (107) **Carnations in Texas in Summer**.—I should like some carnation grower to tell why carnations fail to grow successfully in this soil to climate in the summer. They do all right in the winter, but in warm weather they are so much injured. In two or three days the plants rot off at the surface of the ground and I see no sign of life.  
 —Winter in Houston, Texas, has nearly the same climate as the soil as the soil is rich, deep, black, unctuous; the summer heat, however, is not very tropical, with very moist air. After summer showers the sun scalds the plants, the soil dries, and drier soil. We find no difficulty in growing carnations through summer, better than any other part of the State. WM. LOMAS, Dallas.

(108) **Decorative Asparagus (Cont'd)**.—One string per plant. It is usual, if the crowns are in good shape, to leave the shoot to take and retain it. The plant and the balance become weakened. That is, the plant should be further attention is given them. Should a chance lead breaking away it is better to cut it off, than to try to keep it. Fronds for home use can be obtained from shorts, or the base of stronger pieces, where they can be spared.  
 A Sprenger is being generally grown in pots on pedestals.

 WHEN WRITING MENTION THE FLORISTS' EXCHANGE.

**Analysis of Castor Bean Plant.**

I had occasion some time since to make a number of analyses of different parts of the castor bean plant, which is grown here as a farm crop, and is frequently used in many places, for decorative purposes. These analyses may be of interest to your readers as a contribution to our knowledge of the food requirements of decorative plants. The following table represents the average of the analyses made of each part of the plant, together with the analyses of the leaves, and of the stalks (which were about equal in weight).

	In 100 lbs. Fresh Substance.	Nitrogen.	Phosphorus.	Potassium.
Leaves and small branches.....	0.71	0.68	0.17	
Stalks and roots.....	0.18	0.50	0.07	
Average.....	0.45	0.59	0.12	
Ripe Beans.....	3.45	0.66	1.37	
Seed pods.....	2.23	5.97	0.10	

Since, for decorative purposes, foliage is most desired, the average for leaves and small branches will approximate the amount of plant food required by this plant. A vigorous, well-developed plant weighs about 100 lbs. and will be sufficient to furnish a quantity comparable plant food equal to the amounts in the average for the foliage part of the leaves, and of the stalks. The relatively high proportion of nitrogen and potash would suggest that wood ashes and stable manure should be an effective fertilizer for use in this connection. Sullwater, Oklahoma. JOHN FIELDS.

**MASTICA**  
 FOR GLAZING GREENHOUSES. SUPERIOR TO PUTTY IN EVERY WAY.  
 Is not hardened by the extreme heat or cold that a greenhouse is constantly subjected to both inside and out. Mastica is adhesive and remains permanently elastic so that it is not forced out of place by expansion and contraction of the woodwork. Houses glazed with Mastica do not need re-glazing, thus saving time and expense. With Mastica can "bed-in" or set on the outside, but with a machine only.  
 Mastica and Mastica Glazing Machines were given  
**HIGHEST AWARD OF SOCIETY OF AMERICAN FLORISTS AT PITTSBURGH, 1895.**  
 Put up in gallons, \$1.00. Half gallons, 60c. Quarter gallons, 35c. Mastical Glazing Machines, \$1.00 each.  
 Send for full descriptive circular and testimonials. Agents in all the principal cities.

DEATH.

WILSON - At Mechanicsville, Pa., on Sunday, May 23, Samuel Wilson, seedman, in the 73d year of his age.

Pittsburg.

Market Notes. The market conditions have not changed for the better since my last notes, and from various reports have been evened out. The market for cut flowers are plentiful enough, but for the winter continues as cool as it has been. The market for cut flowers will be any to most stock if Decoration Day trade should be heavy. Outdoor stock, particularly B. roses and geraniums, will hardly be in bloom unless the weather gets much warmer, which is not at all likely, as frosts were predicted last night, and to-night, May 25, the indications are for a promise of heavy rain. In West and Middle States heavy rain and hailstorms did much damage to fruit and growing crops, the ground being covered with hail. Western Pennsylvania has been getting its share of the last few years, after escaping for so long a time, and it can be counted in the belt now for a certainty.

Bedding plant trade was never worse than this season up to date. Only a few more days until Decoration Day and houses are pretty well stocked up yet, but as very little planting out has been done, and the weather is so hot, at about the same quality as usual and prices generally drop after the end of May. The bedding plant stock is on about the same quality as usual and prices generally drop after the end of May. The bedding plant stock is on about the same quality as usual and prices generally drop after the end of May.

The New York. An employe of Miss Anna Klopfer, the florist of Allegheny City, left the greenhouses one morning last week with a wagon load of stock for market and has not been heard of since. A reward has been offered for his return to the Philadelphia, was a visitor during the week of the exhibition.

M. Renkauf, of Bayersdorfer & Co., Philadelphia, was a visitor during the week of the exhibition.

Cleveland.

Late Sprays. The weather continues cool, with occasional rains; three nights within the past week have been very rainy, and the destruction of small fruit and tender growing stock.

Not indications pointed toward an early Spring, but continued cool weather has held vegetation back, and steady rains preventing much progress with the stock on heavy soils, the outlook is most discouraging in some sections. Such unfavorable conditions have certainly had a depressing effect upon the florists' business.

Not only has it been felt by storekeepers in cut flower and plant lines, but by the numerous smaller growers who depend so largely on outdoor spring work, such as beds, porch boxes, hanging baskets, etc.

Store trade for the past week has been good, a great improvement over the two previous weeks, and stock of some things is closely used up. Numerous decorations for the coming competitions and banquets, held within the last fortnight were handled by our florists, and such work demands a very considerable, created considerable movement in that class of flowers, and caused a scarcity of such things, as sweet peas, geranium auratum, roses and snailax. Among the most notable of these functions were the banquet of the Ohio State Horticultural Commerce, and also that of the Ohio State Horticultural Association, both of which were handled by our florists. Jas. Eddie had a large decoration at the Ella Russell musical concert.

Prices. A slight advance in prices is looked for within the next few days, and a good demand for all kinds of plants and flowers for Decoration.

Roses are now selling at 75c to 81 per dozen, in the best; sweet peas, 15c. per dozen; Lilium auratum, 81 per dozen. Outdoor valley is plentiful. Some prices are as follows: Sweet peas, 15c. per dozen. Outdoor valley is plentiful. Some prices are as follows: Sweet peas, 15c. per dozen.

General. Mrs M. WINTERFIELD has opened a general retail store at 300 Erie street. It is a fine roomy store, with a large stock of window. The whole establishment is under the management of Mrs. W. A. G. T.

Recent visitors in town were: W. Warner, representing Van Heemstra & Co., Sassenheim, Holland; W. R. Bosch, representing J. S. Rice Co., Cambridge, G. A. T.

MRS. THEODOSSIA B. SHEPHERD, Hybridizer and grower of Novelties, offers for sale a quantity of some New Florida geraniums, New Abutilons, and a New Dwarf Double Fuchsia. Correspondence solicited. Address, 1009 Broadway, New York, California.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

Knoxville, Tenn.

A very heavy hailstorm visited us on the 20th. Fortunately for florists, the storm was not general, its path being about one-half a mile wide. The hailstones were very large—about two inches in diameter—and the ground was completely covered. Many of the market gardeners experienced heavy losses. Strawberries and other fruit was completely covered and growing crops suffered severely. The same day two inches of snow fell on the mountains in North Carolina, and from our business, palms, etc. The leading geranium has been double Grand Grant, and the supply is hardly equal to the demand.

The bedding-out season is virtually over, and, take it all in all, has been a very good one, indeed. There has been a noticeable increase in the demand for a better class of plants, particularly pot roses, climatic, tuberous rooted begonias, palms, etc. The leading geranium has been double Grand Grant, and the supply is hardly equal to the demand.

The Southern Railroad has just had planted a very fine bed, thirty feet in diameter, near the station, which has proved quite an attraction, and has been so satisfactory that much more work of a similar nature will be done next year.

C. W. Crouch has pulled down three of his rose houses and will rebuild at once—new ones that will be up-to-date in every particular.

C. Baum has had some remarkably fine carnation blooms from time to time.

All have their winter stock out, and from the way it has taken hold promises to make grand plants by fall—H.

**Chicago.**

**Business Slow.**  
Complaints of limited business among florists are not new, especially among those who are unable, or unwilling, to do anything in the plant trade line. Considering the slack trade, as a whole the present condition caps the climax and causes a good deal of misgiving regarding the future.

Of course, those who cater to the plant trade as well should now be active, but low prices also rule with them, and a good deal of business has to be done for very little money. Just now there is no doubt, however, that those growers who are near enough to the market to get their plants to go back to the plant trade, instead of roses and carnations, are feeling better, even if low prices than those who have to depend upon cut flowers alone.

In an endeavor to augment their incomes some of the downtown florists are trying the fakir and department store low-price methods.

The past week there was lots of stock in the market, and with such poor home demand cut prices was again the rule. The beginning of this week shows quite a falling off in roses, caused no doubt by several cold, chilly days. It will help matters somewhat in keeping up prices, perhaps to Decoration Day. We hope to be able to give a little better report in our next.

The asking figures are now: Beauties, 12¢; Double Red, 12¢; Bride, 12¢; Marquet, Meteor, 23¢; Perle, Niphetos, \$1.50; 23¢; carnations, mixed, 75¢; 48¢; standard, 11¢; 50¢; ranunculus, 25¢; 25¢; tulips and narcissus, 25¢; 24¢; these will end this week. Lilies and callas are up to \$1.00 again. Saxifrage brings \$1.00. Peonias are now much in evidence and realize \$2.45. Home-grown stock promises to be scarce possibly the double red; but an enormous quantity, Southern grown, is in cold storage, so that there will be plentiful enough. A plethora of double and single Poet's narcissus and iris are also traded in the same way.

Some growers have now the storage method down to a fine point as regards geraniums. The blooms are cut before opening, tied in bunches, each bunch being wrapped in paper. Probably no other flower comes out of cold storage in better condition. The growers are making money by the system.

It is supposed that from 25 to 50 per cent. advance on the rates given will be the price for Decoration Day on roses and carnations.

Quantities of jasmines are in and selling at \$1 per 100, sometimes below that figure. Durand of Texas, is selling in very fine long-stemmed jasmines, \$1.00 per 100, easier than do the common blooms at \$1.

The weather is not as favorable for

**Cypress Greenhouse Material.**

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to repeat what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Write for Circulars or Estimates.  
**Lockland Lumber Co.**  
LOCKLAND, OHIO.

the plant trade and prices are low, with business, so far, sluggish.

Charles Fraufenfelder, formerly of the Garfield Park Rose Co., is now building, on his own lot, at 1602 West Madison Street, a fancy flower store, with greenhouses at the rear of the lot. He will grow palms and decorative stock, mostly.

The Art Floral Co. has removed from Michigan Avenue to 155 Twenty-second Street.  
C. E. Chase has removed to 131 Twenty-second Street, a few numbers east of his old stand.  
J. E. Killen, of C. H. Joosten, New York, was in the city the past week, as also J. F. Wilcox, of Council Bluffs, Iowa.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

**Baltimore.**  
**Market News.**  
 There are so many conflicting reports that it is a difficult matter to get facts in regard to the true condition of the trade. Some say it is very, very bad, others are ready to govern their opinion by one day's good business. One thing, however, is true—money is very difficult to obtain for the sales that have been made. This is the height of planting season; what does not sell now in a few weeks will be dead stock.  
**Club Meeting.**  
 The club is in a flourishing condition, under the presidency of James Penland; next meeting will be a smoker, at which time our secretary will read a paper.

**A Law Suit.**  
 An interesting case was settled in court the other day. A tree agent sold a bill of goods to a party for \$77. After the goods had been received and paid for by check the party discovered that he had been humbugged and stopped payment of the check. The tree agent brought suit to recover. In the testimony it was proven that a grape myrtle was sold and a ground myrtle sent, at the cost of \$150. The stock otherwise was grossly over-valued and misrepresented. Expert testimony was heard for both sides, but the jury brought in a verdict granting the plaintiff \$30, or the cost of the suit. This amount had been offered by the purchaser before the case went to trial, but was refused.

**Settings.**  
 Nearly all the cut roses coming to this market are badly mildewed. A very little new glass will go up this in this locality.  
 Plants disposed of at the auction sales recently have brought good prices. E. A. SEIDEDWITZ.

**Cincinnati.**  
**Trade Better.**  
 Business during the past week assumed a little greater activity, but for stock of all grades and quality was very low; it was hard work to get over three cents for the very choicest roses, and most of the stock sold at 1 1/2 cts. Carnations, ordinary, brought 50c. per 100; medium, 75c., and fancy, \$1 per 100; valley, 3/4c., with stock limited. Sweet peas went begging at 25c. per 100 for choice stock. Callas and Hartsii lilies sold at 50c. per dozen. Marguerites went for 25c. per 100.  
 The latter part of the week, owing to Decoration Day, prices will advance. Notwithstanding the fact that the Morien death notice stated "positively no flowers," pine hacks were required to move the designs and bunches to the cemetery. The Hoffmeister Floral had the family order, which was quite a large one, and consisted of designs made of orchids and other choice flowers.

**Early Chrysanthemums.**  
 J. G. Fine, of Dayton, Ky., brought the writer the past week a well-grown plant of Mme. Bergmann chrysanthemum, in full bloom, having fourteen well-developed flowers. Mr. Fine says he has fifty such plants that will be in bloom for Decoration Day. New fancy Western forms are coming in fine condition and sell at 15c. per 100, 65c. in 500 lots, \$1.25 per 1,000.

**In the Market.**  
 The market Saturday was quiet. There was nothing worthy of special mention except that 10c. per dozen was the ruling retail price for carnations. This week prices will stiffen up somewhat, I hope.

**Out-door Carnations in Bad Shape.**  
 Carnations planted in the field are looking bad, owing to cold and rainy weather. I have heard of only one grower who says his plants are doing well, and he attributes his success to the fact that he subsided heavily when breaking the ground. By this method he claims that the ground dries readily and at the same time retains moisture during dry weather. I shall try and watch this patch during the season and report on the progress of the plants.

**About Roses.**  
 J. A. Peterson is cutting some choice K. A. Victoria roses, stems not long, but blooms excellent. White La France seems to do well with him also. President Carnot still holds its own.

**TOBACCO DUST**  
 TO BURN, \$3.00 per bbl., 180 lbs.  
 TO SPRINKLE, \$4.00 per case, 450 lbs.  
 CORRECT KIND, 311 Madison Ave., N. Y. C.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

E. G. Hill & Co. are sending these to market. Were this variety only a little more double, it would be much better. As a summer or warm-weather rose, it is not a success, opening too quickly; but for winter and cool weather it is certainly grand, being greatly admired by the ladies. I believe it has come to stay and will fetch a good price.  
 E. G. GILLETT.

**Decorat. Ill.**  
 John P. Amer, who at one time carried on the business of florist and gardener, died here on Monday, May 20, aged 79 years. He was born in Bavaria and came to America in 1846, locating near Baltimore. He came to Decatur in 1866.

# LIFE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. No. 23.

NEW YORK, JUNE 3, 1897.

One Dollar Per Year.

## VINCA MAJOR VARIEGATA.

Fine, strong plants, with good vines, 4 inch pots; excellent for vases,

\$10.00 per 100.

## CHRYSANTHEMUMS.

### INTRODUCTIONS OF 1896.

Along, Henry Hurrell, Indiana, Infatuation, L'na-wee, Marion Cleveland, Miss L. Magee, Malajo, Mrs. Harry Toler, Mrs. H. H. Biddis, Mrs. Perrin, Mrs. Wm. C. Egan, Mrs. W. P. Raynor, Nanshon, Pluto, Riverside, Yanoa. \$4 Per 100.

### STANDARD VARIETIES.

Louis Bahmar, Major Bonaston, Mrs. J. B. Crane, Eugene Dallesdonze, Miss Agnes Louise Diskov, W. B. Dinsmore, Mrs. A. J. Drexel, L'Enfant des Deux Mondes, Erminda, Mrs. Alphonse Hardy, Marian Henderson, Mrs. Higginbotham, Mrs. E. G. Hill, Deau Hole, Ivory, J. E. Leger, L'Etat Fad, Mrs. George J. Magee, Marie Louise, Misereva, Mrs. S. F. Murdoch, Mattie Noyes, Nanshon, Nivens, Miss Georgianna Pitcher, Miss Florence Pullman, Mrs. Geo. M. Pullman, The Queen, H. W. R. man, Mrs. Henry Robinson, Dorothy Toler, J. H. Troy, Mrs. H. M. K. Trumbly, Viviani-Morel, Mrs. Geo. West, Yellow Queen. \$3 Per 100.

### HARDY POMPON CHRYSANTHEMUMS.

These Chrysanthemums, though in no way new, have not received in past years the attention they deserve, especially for planting in private gardens, where many of the large-flowered varieties do not mature their flowers before the cold weather sets in. We have made extensive trials during the winter that could be found in Europe, Japan and this country, and offer them at \$3 Per 100.

## PITCHER & MANDA, Short Hills, N. J.

JOHN N. MAY, Receiver.

WHEN WRITING MENTION THE FLORISTS' EXCHANGE

# CANNAS.

## Winter-Blooming Nymphs.

Editor Florist's Exchange:

Mr. Tricker uses a rather tricky method of bolstering up his "misgivings" by quoting just what he writes in his notes and leaving out the parts which make my meaning plain. He quotes (p. 552) "I am of the opinion that nymphs would pay all right," and, "no florist who has his wits about him is in danger of being so occupied." What I did say was (p. 487): "The probabilities are that nymphs flowers would pay all right if the winter treatment of the plants was thoroughly understood." Again, to quiet his fears on reading the above, that there would be a general cleaning out of rose and carnation houses in favor of nymphs (p. 487) he writes: "The florist who has his wits about him is in little danger of floundering into winter work with the nymphs." This has been demonstrated clearly that it would be advisable so to do."

Now, I am yet inclining to the belief, notwithstanding Mr. Tricker's "clear figuring," that we have more to learn on the subject, and it is yet too early to say that the growing of winter-blooming nymphs for profit is out of the question. I, of course, do not advocate the growing of the plants on a large scale right away without any further knowledge of their requirements. I am already of the opinion that Mr. Tricker seems to think I do; sorry, but I can't see why he does. What he says is, "I do not know of testing and experimenting, as has been done already with every other class of flower," "nymphs of houses" (my friend will go to extremes) and in the usual quiet but effective way.

Mr. Tricker (p. 471) states that an objection to the use of these flowers is that they do not sleep; that is, do not close before they can be used. That difficulty was overcome some time ago, and the night-blooming cereus will now awake in the daytime and the day-bloomers likewise in the night. He writes and an interesting description of how to do it in the London Gardeners' Chronicle (No. 428, p. 303). In the same editorial there is a list of the most profitable varieties which have been tested under glass for the growing of blooms for cutting purposes.

Mr. Tricker asks for a list of the best winter-blooming nymphs for the benefit of the Florists' Exchange and says such information is necessary in the cultivation of roses, carnations, and chrysanthemums. I have said nothing about any of them since they need not and I do not intend to. Will Mr. Tricker give lists of the best roses, carnations and chrysanthemums? I may, but no cultivator would give a paycheque for them. An intelligent grower will quickly ascertain which roses, carnations and chrysanthemums are his bread-winners; picking them out for other people is another matter; and so with nymphs. Among the species and forms I have named as doing well with me there is enough material to grow with.

By the way, in the Gardeners' Chronicle (No. 428, p. 266), there is an interesting account of a large experiment having been started for the wholesale cultivation of tropical nymphs under glass, solely for the flowers. The Messrs. Harster, of Speyer. It is there stated that their cultivation is proceeding in grand style.

Mr. Tricker disclaims having made any reference to the temperature of the atmosphere when he says a temperature of from 75 to 80 degrees is dangerous. It looks to me quite evident that

atmospheric temperature was what he referred to when he talks about a "high, close temperature." Isn't this a new way of stating the condition of water, Mr. Tricker? In gardening phraseology I would suppose the above to be descriptive of the condition of the atmosphere. Again, same page, he mentions that "growth made the high close temperature produces a fungoid growth on the leaves." Can he wonder at it? The wonder is that he has not experienced any leaves at all under the conditions he describes, and which he now seeks to disavow. Too thin, Mr. Tricker, try again!

## Watering Plants in Sunshine.

This question opens up the much-discussed and broad subject of watering and the small number of answers must be left to the good judgment, experience and facilities of the individual. Watering during sunshine may be done in such a manner as to be harmful and also in such a manner as to be beneficial. I think, however, that when under proper conditions watering operations may be carried on at all times in the sunshine, without injury to the plants, and am positive that plants in pots, boxes, tubs, etc., may, at any time of the day, and, indeed, should be whenever dry. But I am of the opinion that the plants that are growing in a high temperature, I consider that would be injured, and that the water applied to the roots or foliage.

This is a point upon which the late Peter Henderson and George Nicholson do not agree. Peter Henderson, in his Handbook of Plants, says, he "rarely waters a plant at a higher temperature than 45 degrees, and in twenty-five years' experience saw no bad plants." George Nicholson, in the Dictionary of Gardening, says: "Water should not be applied to plants at a higher temperature than 45 degrees, and if they are at the time subjected. Particularly does this apply to such as are grown in pots."

I agree with George Nicholson, because my practical experience has shown that if plants have made it possible to follow his practice) have always been, and will be, successful. I need no bad results consequent on such practice; but on the other hand I have seen many plants that have died, the consequence of using cold water upon the foliage (this had been used from necessity) and I have seen many plants in a palm house at a temperature of 80 degrees does it appear reasonable that the water applied to the water can, say twice a day, be applied to the roots, thus lowering the temperature of the root and its surroundings by 30 or 40 degrees? And then twice a day, with a hose pipe, applying to the foliage the water at a temperature greater than the temperature of the house?

Can we be surprised if the stomata of plants shut and refuse to perform necessary functions under such treatment as this? If it were a human body we should expect to get a severe cold or rheumatic fever. Such treatment is likely to bring spot upon palms, milium and sprout on roses, and lead upon grape vines and cucumbers. I am of the opinion that these fungoid growths are the result of the stomata being surcharged with water, which, because of the sudden lowering of the temperature from the application of cold water, have closed, and so transpiration has, for the time, stopped. The result is, of course, the result being a diseased plant.

All horticultural establishments, be they greenhouses or open beds, are amply provided with facilities for warming water for watering purposes. Even grape and peach borders, where the forcing is practiced, need warmed water. In England few good establishments ever stop watering inside fruit borders, except with water at a temperature of at least 50 degrees, while pine stores would get the water at 70 degrees, the temperature of the bottom heat.

With facilities for applying warm water watering operations may be carried on during sunshine, or even at a high temperature is kept up under glass, at any time of the day. The application of water to foliage, too, in sunshine, is not injurious, but highly beneficial, and is generally practiced in good establishments. The houses being closed after such opera-

When Writing Mention Florists' Exchange

tion and run up to a high temperature. Were cold water used under these circumstances the results would be highly injurious to the plants.

The same reasoning applies to outside watering on a hot day, under a bright sun. With water at or near the temperature of the atmosphere, watering could be done without fear; but, except in cases of necessity, or under proper conditions, few care to do it, for unless very large quantities of water are used the plants would derive small benefit from the treatment. For naturally, falling upon a hot, parched earth, in full sunshine, nearer noon than either end of the day, the water would quickly vaporize and pass off into the atmosphere. And so much labor and water would be wasted.

Trees and shrubs that need watering may be watered at all times of the day; done it could not be accomplished by watering mornings and evenings only. If the shrubs are growing on a steep hillside I thrust in a fork behind the plant, then give the fork a pull forward. This leaves an opening for the water to get down. In some cases a spadeful of soil is taken out from behind the plant, leaving a hole for the water to be poured into. All trees and shrubs in the soil around them opens with a fork before being watered, thus insuring the water getting down to the roots. If mulched afterwards one watering will serve for a long time, depending, of course, upon the holding nature of the soil, and no matter how hot the sun may be, if the watering be carried out in this manner there is little loss from evaporation.

For watering ordinary crops in the vegetable garden or flower beds, I prefer the evening, although by mulching and frequent stirring of the soil I try to avoid watering as much as possible. If I commenced it is necessary to continue the operation; and unless an adequate supply of water is assured for this purpose, it is better not to commence at all.—WALLACE G. GOMBERG-SALL, N. Y., in American Gardening.

**American Association of Nurserymen.**

At the annual convention of this association, to be held in St. Louis June 9 and 10, the following papers will be read and discussed:

- "Piece Roots vs. Whole Roots," E. J. Holman, Leavenworth, Kan.
- "Sending Trade Lists to Planters," C. L. Watrous, Des Moines, Iowa.
- "American Law, State or National; Which Shall It Be?" Hon. N. H. Albaugh, Tadmor, Ohio.
- "The Nurseryman as an Educator," Professor Fred W. Card, of the University of Nebraska.
- "Relation in Relation to Suppression of San Jose Scale," and "Treatment of Nursery Stock by Hydrocyanic Acid Gas Process," by Professor W. B. Alwood, Virginia Agricultural Experiment Station, Blacksburg.

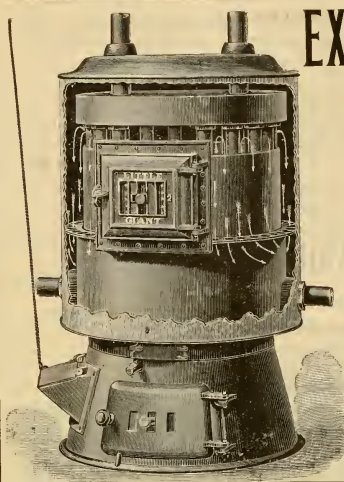

Meetings of protective associations will be held Wednesday evening. Many of the members will, of course, visit the exhibition in botanical gardens, and this, with the unusual number of important matters to be considered, makes it necessary continuing Thursday's session into Friday.

**Exhibitions.**

**Louisville, Ky.**—The advances preliminary list of the sixth Kentucky Horticultural show and floral festival, to be given by the Kentucky Society of Florists has been published. The exhibition will be held November 10-13 inclusive. Secretary, F. C. Haupt, 241 West Jefferson Street, Louisville, Ky.

**Their One Consolation.**

I can scarcely imagine any industry which has done as much for mankind in the whole country at large, and produced so few millionaires. Most nurserymen die comfortably poor in the estimation of the masses look upon wealth, but rich in the satisfaction of knowing that as business men they are a national standpoint they have done much to benefit mankind, and made this country more desirable for home builders.—Seattle Post.

The Hamburg Exposition.

Regarding the Hamburg International Horticultural Exhibition, which opened on May 1, the Gardeners' Magazine, speaking of the exhibition, says: "The exhibition after its opening."

"The exhibition is the most important that has been held in Europe in every way worthy of that enterprising city, and cannot fail to afford satisfaction to those visiting the city for the first time. In the past two years, have given so freely of their time and talent to making the needful arrangements, that the committee are fortunate in securing for the purposes of the exhibition an ideal site, covering an area of about thirty acres. It affords abundant space for both exhibits and visitors; highly picturesque, it has given full opportunity for the display of the landscape gardeners' art; and situate within a short distance of the centre of the city, and nearly surrounded by tram lines, it can be readily reached from every part of the city. The site, which forms part of the moat that originally surrounded the city, is one of its most important open spaces, and the public spirit evinced by the citizens is worthy of imitation. They not only have not only readily surrendered their rights for a garden, but also provided the means for erecting the necessary grounds and the erection of the necessary buildings.

The permanent exhibition, which will be continued until the end of September, includes collections of evergreen, deciduous and coniferous trees and shrubs, and is arranged with due regard to general effect; and in the beds and borders, a large collection of highly bulbous and perennial plants to be in due course supplemented by tender plants. The horticultural exhibition of the flower garden during the summer. Just now the tulips, of which many of the borders are planted, are coming freely into flower, and should form a feature of more or less interest upon the mind and eye of the visitor. Freesia has been and still is given the water lilies at night by means of canals, and the flowers of the fountain in the centre of the margin of the water garden are provided for the accommodation of the plants, cut flowers, fruits and vegetables contributing to the appearance of the display, and, as so strikingly exemplified by the inaugural show now being held, admirably adapted for the purpose.

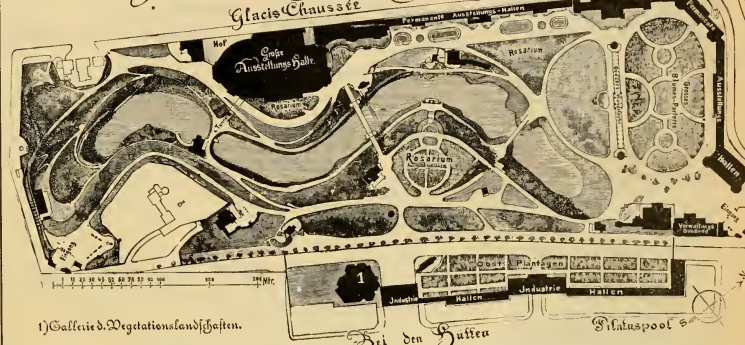

"The structures provided for these special shows form a continuous line of upwards of two thousand feet, and they are so designed as to form a series of handsome buildings culminating in the great hall. This is unquestionably the most magnificent structure that has yet been provided in Europe for the purpose of horticultural exhibitions, and in admiring its stately proportions it is impossible to restrain a feeling of regret that the art of horticulture is not in our position occupied by horticulture in the United Kingdom, no such hall could be erected in this country. The products of the garden. The special show now being held has, like the other horticultural exhibitions, and some weak features, but these are more than counterbalanced by strong ones, and the arrangement of both the living and ornamental-leaved plants, are of an immense value. Our German friends have many plants that which finds their way into this country, and we would like to follow their example, and break away from the flatness and rigidity which have characterized some of the groups presented to public notice at our exhibitions.

"We had a considerable number of classes provided for them, and as the competition is keen, and the whole of the arrangements are so magnificent, they constitute a magnificent feature. These are all arranged in the great exhibition hall, which is a broad terrace with a wide border next the wall, and at the end of the terrace is a large open space, and a winding stream which in the centre widens into a miniature lake, and is a very attractive feature.

at present occupied chiefly by Indian azaelas, and on the central portion of the turf are grouped flowering coniferae plants of various descriptions. In some cases they are placed in circular groups, and in others they are arranged in irregular groups or dotted about on the grass. Ornamental-leaved and flowering plants are balanced with great judgment, and the colors of the general schemes are so well harmonized as to produce an effect at once rich and effective. Immediately below the balustrade of the main aisle, a large bank of azaleas comprising one hundred finely-flowered specimens, beyond is the great bank of its beds and groups of plants and miniature lake, and rising as it were from the turf is a semi-circular bank of its beds and groups of one hundred feet across, flanked by rhododendrons and fine foliage plants, this bank of plants being so carried up as to appear to merge into the plants with which the orchestra is so lavishly and tastefully decorated.

"The principal groups for effect are arranged on the borders that skirt the

Allgemeine Gartenbau-Ausstellung Hamburg 1897

1) Gulleried, 2) Vegetationsland, 3) Garten.

Plan Showing Arrangement of International Horticultural Grounds and Buildings, Hamburg.

terraces; and as the terraces are five or six feet above the general level of the hall, and the majority of the plants employed of the largest size, many of the palms employed rising to a height of fifteen or sixteen feet, they produce an effect which for boldness is seldom approached at exhibitions at home, and, indeed, could not be equalled at gatherings at which the plants are arranged in such a manner as to form a mass of foliage and flowers, extending the whole length of both of the terraces, one group on each side immensely to the general effect within the great hall.

"The most remarkable contribution of palms to the exhibition is that from L. Winter, Bordighera. He has provided this a house about one hundred feet by twenty-five feet, with huge specimens of a variety of species, and some fully twenty feet high, and all perfect in development. The species most strongly represented are Ficus, Ficus, of which, in addition to those within the building, there are two groups of specimens, comprising some dozen specimens outside flanking the entrance, and giving the visitors a glimpse of the plants as they display within the structure. It was interesting to observe that the pots and tubs employed for the plants are of a size large enough to receive the stem, and consequently boxes in which plants of this size are grown are only eight or ten inches in diameter are growing are only eighteen inches square. The same exhibitor has also outside, and not far from his palms, a superb collection of agaves, opuntias and plants of a similar character, which, by reason of their large size and splendid condition of the individual plants, is especially attractive.

St. Louis.

Business Poor.

The business of the past week was the poorest experienced here for a long time. Daily receipts were surprisingly light, but proved more than ample to fill all demands. As is usually the case when trade is dull, the fakers were numerous. They were supplied with good flowers—carnations mostly—and sold them at 20 cents a dozen. One of our progressive retailers profited by the task by administering to the fakers a dose of their own medicine, and the drastic measures adopted by him says were warm and the nights so cool that failure on the part of growers to keep up fires

decoration at a farewell dinner given by his colleagues to Mr. Nugent prior to his departure to his castle in Wales. The body of the whale was made of by red carnations. The whale attracts the attention of every passerby, and the committee passed upon it are gratifying to Manager John Kuntz.

Mr. Koenig sails for Europe.

Julius Koenig and Mrs. Koenig left last Wednesday for New York, whence they will sail, on June 10, by steamer Barbarossa, for Bremen, on a visit to Germany. C. G. P.

Pittsburg.

Market Slow.

Trade for the past week was rather slow, but picked up the day before Memorial Day, which was observed in our vicinity on Saturday. The florists all report good business for Friday and Saturday up to noon; after that most of the stores were closed, and stock was used up. The weather still being too cold for the season, not many

caused an increase in the number of mildew roses, a defect was in best demand and if there was a shortage at any time it was in that variety. Perle was not so abundant as Friedemann, Bride and Kaiserin. The last two varieties showed great staying qualities. Funeral work was very scarce and purchasers of white roses were restricted to counter trade. La France and Testout sold fairly well, but only those with good foliage and stiff stems were wanted.

"Orders arrived in great quantities. Fancy stock sold well at \$1, but standard quality dragged at 50 cents per 100. Callas was plentiful and sold well at 6 cents. Daybreak, when good, found ready sale, but this variety was scarce more from heat than any other. Red and white were a drug. The prices were abundant and sold at \$2 to \$4 a 100; sweet peas were a glut and hard to sell clean at 20 cents per 100. Daybreak was plentiful and sold well at 6 cents. Callas are held at 6 cents; carnations at 50 cents per 100; and some of the other varieties at 100. Satisfactory and light demand at \$10 per 100.

"Memorial Day Trade was a disappointment. The business was scattered over a few days, but the sales did not aggregate to much as those of the corresponding day last year. There was a light trade, but local demand was light. The veterans in parade all carried baskets filled with cut flowers. At the Grand Monument there were several handsome devices, but most of the flowers placed there were outdoor roses. Still the effect was very beautiful and Colonel North deserves credit for the arrangement. Jordan has a "whale" in his window, rose part of a unique table

plants were to be had in bloom, and this no doubt helped the sale of cut flowers considerably. Prices advanced quite a distance from 35 cents to 50 cents per dozen. Sweet peas are in fair demand; 50 cents per hundred is the growers' figure. Harriell lilies are quite abundant again.

"The bedding plant trade, up to Decoration Day, was the worst ever known and is now very quiet. If no improvement takes place some many plants will be left unsold. The condition of most of the stock offered was a sufficient reason for slow sales, as plants were not far enough in bloom to tempt purchasers to take them. But this was not all. The weather was so much below the low temperature and cloudy weather during May kept the plants back.

"This, the first day of June, finds no improvement in the weather, and it looks as if a frost may appear on the morning of the 3d.

"The prospects for a fair trade in cut flowers look very promising from now on. The first day of June, finds no improvement in the weather, and it looks as if a frost may appear on the morning of the 3d.

"Jottings.

C. T. Siebert has vacated the store on Federal Street, Allegheny, as it was rather inconvenient for him to attend to it properly; besides his East End office is gaining trade right along, and with it and the Pittsburg market stand he will find trade enough for the sale of most of his stock.

W. J. Boas, representing Edwards & Decker, of Philadelphia, was in the city. E. E. FOSTERMAN.

# INTERNATIONAL HORTICULTURAL EXHIBITION, AT HAMBURG, 1897.

FROM MAY TILL OCTOBER.

grow very strong and produce fine flowers during summer. Meteor is an extremely hardy rose, standing the severest frosts without any protection whatever. Late next fall I intend taking up quite a number to put them and bring in bloom for Easter.

I would advise those who have some Beauty wood left in July, and have some of the best stock on hand, to double-bud a few; that is, put two buds on each stock, and in the fall put one or two stocks together in a six-inch pot. If placed in a cellar or cold house until they are needed to be started into growth and given the proper treatment, such as is extended to pot hybrids, each will develop a stem about eighteen inches in length, with a grand flower, making an ideal pot plant which sells very readily.—H. H.

**PLANTING THEM.**  
For cut flowers for home trade, in pink, we have for ear y a good one in Glory of the West, and also Miss Agnes Louise Dalskov. (Pink Ivory is very pretty, but not lasting in color. Mme. Felix Perle is best, and also Merveille, according to their merits, as placed by Glory of the Pacific, pink; Mme. Ferd. Bergmann, white; Ivory, white; Pink Ivory, Miss M. Johnson, Minerva and H. L. Sunderbush, yellow; Louis Boehmer, pink; L'Enfant des Deux Mondes, white; Mutual Friend, white; G. W. Childs, red; and for later varieties, W. H. Lincoln, Major Bonaffon, yellow; L. Canning and Mrs. Jerome Jones for white, and Dean Hole shapes, up to size, and can be had in the early part of November. I hope that this set soon will be improved by seedling.

By this time, the things begin to show empty places, and houses ought to be well filled up, so that time we will be able to begin our preparations for planting, which subject will be treated on in my next.  
—Tito, Bock.

WATERING PLANTS IN NURSERY	559

### For the Busy Man.

Robert Douglas, the veteran nurseryman, is dead.

A floral "white" (without Jonah) is St. Louis' latest representation of Boral art.

Fredrick E. Young, nurseryman, Rochester, N. Y., is reported to have made an assignment.

A St. Louis florist is making up and disposing of bouquets a a street take, and finds it pays him.

James Dean's auction sale takes place Thursday and Thursday next, June 9 and 10, at Bay Ridge, N. Y.

Henry A. Clinkbeary has been awarded the grand medal of the Massachusetts Horticultural Society for a display of new orchids.

The American Seed Trade Association meets in Burlington, at the American Association of Nurserymen in St. Louis, next week.

Very unreasonable weather is being experienced in Europe; in France the maturing crop was killed by a frost which occurred on May 12.

There will be a grand auction sale of orchids by Henry C. O. Pickett & Mandl's Shop, Hills, N. J., on Wednesday and Thursday, June 10 and 11.

The American Institute will hold a horticultural exhibition in Madison Square Garden, New York, from September 27 to October 25, next, inclusive.

Decoration Day trade reports from all over the West indicate that the demand was not so great a requirement as in former years. Many quantities of cut flowers were used, as well as numerous bedding plants.

### American Institute Fair.

The schedule of premiums for the sixty-sixth fair of the American Institute, so far as it applies to plants, flowers, fruits, vegetables, etc., has been issued. The exhibition will be held in the Madison Square Garden, New York, from September 27 to October 25, 1897, inclusive. No entrance fee is required for plants, flowers, fruits or vegetables.

The first week of the fair, from September 27 to October 2, will be devoted to exhibits of dahlias, gladiolus, sweet peas, miscellaneous cut flowers, excluding roses and carnations, and to wild flowers. In the dahlia competition classes are provided for commercial and amateur growers respectively, and suitable prizes will be awarded. A grand staircase decoration competition will be somewhat of a novelty. For this prizes of \$100 and \$75 are offered. This decoration must be kept in good condition from the day of opening till October 31.

During the week from October 4 to 9 exhibits are called for cacti, flowers and stove and green-house plants. An innovation in the horticultural world will take place on Wednesday, October 6, in the form of exhibits of hand and aerial bouquets. The Horticultural employes only. In this competition prizes and diplomas will be awarded.

From October 10 to October 16, will be devoted to cyclamens, geraniums, lily of the valley and cut roses.

From October 17 to October 24, fourth week, there will be displays of chrysanthemum plants and cut flowers, cut roses, carnations, and floral designs, the latter to include table centre-pieces. Prizes in the classes for chrysanthemum plants, cut flowers, carnations, cut roses and roses being also very liberal.

The committee of the Chrysanthemum Society, of America, of which Eugene Dailleux, of Flatbush, is chairman, will meet during the progress of the fair, in the Madison Square Garden, Saturday at 2 P. M., to select award seedlings for this society.

It is stated that the Institute's medals, diplomas or certificates will be awarded for new or rare specimens exhibited during the fair.

There will also be interesting exhibits of fruits, comprising grapes, peaches, apples, pears, etc., and of vegetables and farm crops.

The display of flowers and plants will be in charge of James W. Withers; that of fruits will be looked after by E. G. Fowler, and of vegetables by C. E. Allen. The show of farm crops will be in charge of Dr. Robert Taylor.

Persons or societies intending to exhibit at the fair should apply to the department are requested to give notice as early as possible to the chairman, Committee of Arrangements, 100 Cortlandt, Dr. P. M. Hexamer, No. 52 Lafayette Place, New York.

### Making It Easy For The Show Manager.

Mr. Richard Lewis, secretary of the Annandale Rose Show, says of the system of exhibition stationery, which we have brought out for the benefit of show managers, that "Last year the system worked most satisfactorily; the secretary of the exhibition finished the necessary work on the day before the exhibition and on the day set for the exhibition all he had to do was to sit down before the entrance door and give the exhibitors their envelopes."

The system above alluded to is the most satisfactory and desirable one that we have had the honor to issue, and who have to do with the management of shows should give it their careful attention if they wish to save time and trouble.

Full particulars sent upon application to T. P. de Mare, Printing and Publishing Co., Limited, P. O. Box 1,697, New York City.

### OBITUARY.

Robert Douglas.

This pioneer nurseryman died suddenly at his home, Waukegan, Ill., on Tuesday, June 1, aged 75 years.

Mr. Douglas has been aptly named the "father of forest planting in America." He brought the Norway spruce to this country, on April 29, 1818, and came to this country in 1839, locating permanently at Waukegan, in 1842.

He was the first to raise evergreens from seed in the open air here. Up to that time all of the foreign evergreens were imported from Europe at two or three years old.

Mr. Douglas had seen the seedlings growing in the north of England without shade, and at the close of the year he bought seeds in quantities and sowed them by the acre. They came up as freely as they had over there, but he did not raise a plant, as they all lopped off or scorched off before autumn. The next year he used frames covered with coffee sacks, and they did well, and were no great trouble, as the soil was so dry that they did not need watering; but the coffee sacks soon rotted. After that he made hutch frames, such as are in common use. But for the past twenty years he had grown them under tall arbors. Mr. Douglas was the first to raise trees for artificial forests in America and on the largest scale as any have been mentioned here.

After the Catalpa speciosa became noted he grew millions of this tree. Many were sold here, but the time of this and other trees, which were all planted by this enterprising man. An objection has been made that his cultivation is the blue spruce, some magnificent specimens of which may still be seen in his garden.

Robert Douglas's name is associated with all the early efforts of founding horticultural societies in America, including the American Association of Nurserymen. He was a genial, modest, unassuming man, of a most honorable and upright in all his business dealings. He had rendered grand and noble service to the cause of horticulture during the past half century. The writer first made his acquaintance in 1850, when he came down to the Horticultural Exposition, N. Y. E. S. S.

### New York.

Florists' Exhibition.

The next meeting of the club, June 14, the following exhibition and competition, open to all, will take place:

(1) Best display of herbaceous flowers; (2) best collection and display of fruit, any section; (3) best display and collection of peonies; (4) best display of hardy roses; (5) best display of plants and flowers not enumerated above.

The club's silver medal and certificate will be awarded to the best and second best exhibits respectively. The exhibitors, when such exhibits are, in the opinion of the judges, considered worthy of said medals, will receive certificates and medals. Exhibits to be ready for the judges by 3 o'clock in the afternoon of June 13. Intending exhibitors will kindly notify the secretary, James W. Withers, Box 1,697, City, on or before Saturday, June 12, of the amount of space desired.

Shows at American Institute.  
The horticulture section will hold a general exhibition on Tuesday, June 8, at their rooms, 111 West Thirty-third Street, New York. The horticulture on-Hudson will speak on strawberries and John N. May on hardy roses. The meeting of the Horticultural Association will continue from that hour till 7 P. M. Exhibits of strawberries, iris, peonias and carnations will be shown. Hothouse fruits will also be represented.

Flower & Seed's Affairs.  
At a second hearing of the creditors of this corporation held in the Chamber of Commerce, in Jersey City, on Tuesday, June 1, before the Hon. Henry C. Pitney, Vice-Chancellor, the various representation of creditors who had claims aggregating \$8,000, the total claims being \$65,000. These claims were divided in favor of the corporation, and against the stock. The Chancellor heard arguments on both sides and decided that

it would be to the best interests of the creditors to continue the business, disposing of the stock at private sale, rather than set it at auction, and ordered the receiver to act accordingly. The sale of the orchids will take place on Tuesday, June 15, as previously ordered. Market Improvements.

There has been an improvement in business during the week, stock of cut flowers has been sold at a profit. This has been the case for some time. This, with the lighter supply, has improved the market. The market for cut flowers in price is the result, especially for clean and extra stock. Saturday and Sunday trade was light. Monday morning was heavy in the market, and a slump on arrivals, most of the stock going into the ice boxes to be sold Tuesday. Anything it would bring Wednesday there was a moderately good demand. Thursday and Friday trade was light.

Out-of-town trade evidently is picking up, for shipping orders have increased. Orders for cut flowers under a brisk demand for valley. Prices ruled from \$2 to \$3 per 100. Good lilies also sold at a profit. The market for cut flowers as taking prices. White orchids were also in demand. Peonias are now very abundant. This week is morning the average 50 cents per dozen for these. Gladiol averaged about \$6 per 100 spikes. Sweet peas are in the market, but out-door-grown stock, and prices are falling. Lilacs is now practically over the market. Yellow and orange and move slowly; yellows can hardly be sold at any price.

Cut Flower Exchange, 31th St.

Trade for Decoration Day at this time was quite brisk and has been fairly good during the week. The market for cut flowers has had an effect on Tuesday, the hour now being 6 A. M. It is a little premature to say that this week is morning the loss of one of its larger growers—C. Schneider, of Train's Meadow Grove, Woodside. This week is morning a brief illness, beginning with a cold, followed by pneumonia, which developed into bronchitis, and he died on Wednesday. The funeral took place on Wednesday and was largely attended by growers and friends. He was buried in St. Michael's Cemetery, Astoria. The floral pieces were numerous, several of them being of a grand and imposing nature. He leaves a widow and three children.

Auction Sales.  
Contrary to expectation, business has been better than anticipated. Many clear sales are numerous. Tuesday next (Thursday) the following will be sold: Clear & Co. sell palms, etc., from Philadelphia growers; Wednesday and Thursday William Elliott & Son sell out the entire stock belonging to James Woodside, with cuttings, and on Friday Clear & Co. will sell, at Short Hills, the entire stock of orchids belonging to Pickett & Mandl's.

Retail Trade.  
The slight increase of business has been well distributed over the city. The market for cut flowers is better. Warrendorf, Broadway, had the Gilroy wedding on Thursday. The church was crowded with cut flowers, and a large quantity of Viburnum plicatum and V. opulus, peonias, etc. The house was decorated with cut flowers, and the roses. The bride carried white orchids.

James Dean has bought a small farm near Bay Ridge, N. Y., and will live there after he leaves Bay Ridge. A large attendance is expected at the sale on Wednesday. The stock to be auctioned is in excellent condition.

H. C. Steinhoff has gone on a trip to Europe. Wakefield Reed succeeds Peter McDonald at Siegel-Cooper's in the cut flower and plant department.

### Philadelphia.

Business Improves.  
The market has been quite an increase in business the past week; a number of prominent weddings have taken place and the market has been very distributed over the city. There have also been several school conventions, which has had a large quantity of flowers. Then the city has a constant stream of dinners and receptions for the wives of civil and military officials. McKimley and the conveyors of the Medical Association, the largest

affair being the dinner to the President... The decorations were done by J. P. ...

Decorations Day Trade. Decorations Day business is reported good all around. There was more cut flower business than usual...

Market Notes. First-class flowers are now very scarce. Good roses have been in demand...

Club Notes. The meeting on Tuesday last was well attended. Edward Campbell read an interesting paper...

Jado Fibre. The American Jado Co. are much excited at the success they are meeting with...

Cox reports a large increase in business at Second and Bristol Streets. Three new houses are now in progress...

Boston

Decorations Day Trade. The floral business in Boston was one of the best with the florists on record. The weather was unfavorable for the holiday...

The Flower Market. Business since Monday has held up fairly well in most directions and good stock finds ready sale...

At a recent meeting, being announced, and this feature will doubtless offer its usual amount of encouragement to the various departments...

N. F. McCarthy & Co. will auction on Saturday the collection of plants grown by W. H. Elliott. This is a fine lot, including Bride, Bridesmaid, Perle and Constance.

Jottings. John Gibson, of Newport, was a visitor to the Exchange... Weich Bros. are receiving from Carl Jurgens, of Newport, some fine K. A. Rhododendron Show.

The annual rhododendron show of the Centre table was entirely filled by James Comley, gardener to the F. B. Hayes estate, with an effectively arranged collection of rhododendrons, azaleas and a large variety of hardy flowering and fancy foliaged shrubs...

James Eadie is erecting three new houses each 23x30 feet. Besides many orders for commencement work, our florists have some very nice orders booked for numerous weddings that will occur this month.

Asparagus. Ellor & Co. exhibited a fine specimen of azalea mollis. Hughess & Co. exhibited a fine specimen of azalea mollis.

A grand exhibit of cut orchids was made by Henry Clinkaber, gardener to the Hon. J. C. Eaton, N. J., which included many varieties of cypripediums, cattleyas and dayas, many of the most distinguished honor of a gold medal.

On this table was a fine display of rhododendrons from Mrs. B. F. French (John Barr, gardener).

Collections of iris were shown by John W. Gardner and W. H. B. Co. Mr. Cowing also exhibited some grand oriental poppies, type and varieties of carnations, and a collection of iris types and hybrids, of aquilegia. F. S. Davis showed a fine collection of aquatic plants, including a display of cut flowers, including ten or twelve varieties of good carnations.

T. C. Thurlow made a large and interesting display of hardy flowering and foliage, also a collection of hardy azaleas and Azalea mollis, and a fine collection of hardy varieties of azaleas. Mrs. E. M. Gill and Miss Hattie F. Winter arranged vases of flowers for the table.

Dr. C. G. Weld (Kenneth Finlayson, gardener) showed some fine specimens of rhododendrons and a collection of hardy flowering plants, including azaleas and geraniums, and a fine specimen of a geranium, and a fine specimen of a geranium.

Decorations Day Trade. Decorations Day had a temporary invigorating effect on the florist trade, and in spite of the depressing weather...

Decorations Day. Decorations Day had a temporary invigorating effect on the florist trade, and in spite of the depressing weather...

Immense quantities of stock were at hand, and while most of it was of fair quality, very little extra good was obtainable. Everything was used up and prices realized were better than average for several seasons past.

James Eadie is erecting three new houses each 23x30 feet. Besides many orders for commencement work, our florists have some very nice orders booked for numerous weddings that will occur this month.

ALBERT M. HERR, L. B. 436, Lancaster, Pa. When Writing Mention Florists' Exchange

CROPPERS.

Regarding Croppers.

A correspondent writes me that after cutting his first crop of flowers from Daybreak in the fall, after the plants were taken to the field to the field to the house, there is a period of intermission during which time he is able to cut very few flowers. When they start blooming again the trouble disappears, and they flower continuously. He asks if I know the same remedy, or if I know of a remedy.

Of late years our trouble in this line has been with the slow-growing varieties like Albertini, Bridgmaid, etc., and then only when we failed to propagate our next season's stock early enough.

Varieties like those I have mentioned have the natural tendency to produce their flowers in crops. This may be averted to a large extent when the cuttings are made in the fall, during the second week in January. These partake of the nature of the hardy garden carnation in their tendency to require two seasons to attain sufficient size to bloom. From this it can easily be seen that unless this situation on their part to require two seasons in order to fully develop, the result will be a small early crop of flowers, but the chances are that there will only be one worth speaking of, and by the time the second crop of flowers comes, the weather will be on, thus making it more difficult for the plants to produce another crop. It is particularly true in view of the fact that at this time the carnation is more or less neglected, particularly in the matter of manurement.

It is quite possible to obtain very good results, and with scarcely any intermission in the blooming period of these slow-growing varieties, by cutting back only once before planting in the field. For these slow high cuttings, it is necessary to cut them back and in the house; for it must be remembered that we are practically compelling them to produce one season, that which they are inclined to demand two seasons to accomplish.

By the latter part of the summer the shoots or branches will be well developed, and they will be ready to cut back, just far enough to stop the growth. If the remaining half show signs of becoming dormant, and if the house, no harm will come of it if the transfer is properly made, and all will make good flowers. By the time they are all cut, the next growth from the shoots which had been cut back in the field will be well under way; plenty of nourishment and an abundance of air to keep the growth firm will help it to grow. With this care, there will be no long period of intermission between crops. After the first intermission in this class, as it is neither slow grower nor a late bloomer. Indeed, some of the very best plants we have had in our business have been cuttings, planted in the field direct from the sand. Most of our stock of this sort for the coming season will be planted in this way; some of it is still in the sand, and will be set out at the first opportunity, \$1.00 per 100. This writing too dry.

My correspondent may, perhaps, be in the habit of pinching his plants too often in the field in order to get round, bushy plants, which at one time he has been told are best adapted to have them in at housing time. This is an error, and should no longer be practiced when one is endeavoring to pinch back I have done after the manner that I have mentioned above. I believe this to be the correct method at any rate it removes, to a large extent, the inconvenience arising from varieties which are poor croppers when treated in the usual way.

## Chicago.

## Memorial Day Trade.

Decoration Day was a more than usually busy one with our florists, owing, no doubt to the holiday. The trade was very good Monday afternoon, falling on Sunday. In addition to that the school authorities decided that Friday's exercises should partake of a patriotic character, and Monday afternoon, falling on Sunday, over the city this was an undoubted factor; for though hosts of flowers were being ordered, the quantity of large quantities also were purchased.

The increased demand began on the 29th of May, and by the 31st of May the florists were concerned, and did not let up until Decoration Day. In the midst of the week most of the day seemed to sell, as at that time preparations were being made for shipping orders.

Carnations were in fair supply, going at \$2.50 to \$3. Short Beauty brought \$1 to \$1.50; some fine figures, and all were cleared off.

The cool May has tended to keep back outdoor flowers, which probably held the demand for indoor-grown stock. First-class open peonias sold at 75 cents per dozen. Monday's market prices down. Quite a number of boxes arrived in a heated condition. Some very pretty varieties, such as the Tartarian honeysuckle, Ilacs, snowballs, spiraea, etc. Outdoor valley was never better than this year. This material, each succeeding year, is seen in increasing quantity; the best sold at \$1.

Gaias were in brisk demand. There was a fair supply of Harrisil and long-floriums, which brought \$1 to \$1.50. Trade at the wholesale houses Monday morning last was still fair, but, as might be expected, stock was abundant.

## Trade for Memorial Day.

Memorial Day passed off with more interest than for florists were concerned, than usual, Sunday giving them an opportunity to make up the order books for the week. The exercises on Monday. Flowers were abundant and reasonable in price. One dozen carnations at 10 cents, 1000 carnations at popular prices—10,000 carnations at 25 cents a dozen—which gave a good selling for the day. The exercises on Monday. Flowers were abundant and reasonable in price. One dozen carnations at 10 cents, 1000 carnations at popular prices—10,000 carnations at 25 cents a dozen—which gave a good selling for the day. The exercises on Monday. Flowers were abundant and reasonable in price. One dozen carnations at 10 cents, 1000 carnations at popular prices—10,000 carnations at 25 cents a dozen—which gave a good selling for the day.

Plant sales are not very satisfactory; cutting prices has resulted and profits have vanished.

The wedding season opened with a number on the first, to be followed by several more already announced, including one of the craft.

The unusual low temperature of June 2 has had the effect of checking the supply of flowers locally, requiring some of our florists to call on the wholesale market.

A. Mielze has brought in the finest valley ever offered in this market, he has had a very good success.

The German Iris beds of O. H. Dickinson, at Brightwood Farm, near the Iris station, have produced a very good crop of Iris delights in W. F. G.

## St. Paul.

## Trade Good.

The weather continues cool and planting has been done accordingly. Trade has been good, both in cut flowers and bedding plants, the latter being in demand along a very good business in the latter.

Memorial Day was observed here on Saturday. Trade for the floral decorations at the cemeteries were not elaborate, they were quite profuse. Snowballs, Geraniums, and other cut flowers were used quite extensively in making bouquets. A great many plants were being planted on the graves. A few of the weather class had set pieces made.

AMERICAN JADOO CO.

Gentlemen:—We have just received the last shipment of Jadoo. We must say without doubt it is the grandest material for Potting Palms, Orchids and Stove Plants ever introduced. We have tried everything in the market and have failed to find its equal. We notice the difference in the growth of everything. Broader foliage, strong growth, and of a beautiful dark green foliage."

Yours very truly,

(Signed) **SIEBRECHT & SON,**

## Cincinnati.

Business Good.

Trade during the past week was very satisfactory. It started off a little quiet, but toward the latter part took a lead and steadily advanced. Friday and Saturday everything in sight at the commission houses was carried up at advanced prices, special decorations and private school commencing being the cause of this. Decoration day trade cuts no large figure here.

Outdoor flowers of all kinds were scarce, peonias being about the only ones available, and they sold at 4 cents each. Ten-week stock brought 2 cents, and up at advanced prices, and the supply is not equal to the demand. Roses are getting scarce, especially double. Sweet peas are most plentiful and sell at 25 cents to 50 cents per 100.

A Steamer Decoration.

On Thursday Huntman & Co. elaborately decorated the steamer *Island Queen*. The saloon cabin is one hundred and seventy-six feet in length and twenty-five feet in width. In this decoration were used ten thousand snowballs, five thousand spruce, one thousand blue iris, five thousand white daisies, five hundred red and white peonias and five hundred red violets. The tables of the cabin, eighteen in number, were decorated with parasurgus, fancy carnations and roses. Funeral work has also been quite a factor the past week.

On June 14th annual high school commencement takes place at Springer Hall. I understand the faculty has decided to allow the use of flowers.

News of the Week.

R. A. Kelly was in Cleveland during the week.

W. J. Gray had an auction sale of plants Tuesday; some baskets sold well, while others only brought a small figure. B. P. Critchell's sons have also been having similar sales and in that way disposed of many plants at good figures.

James Allen is receiving the congratulations of his friends; it's a ten-pound boy.

On Decoration Day the florists of Cincinnati who have stands in the Jabez Elliott Flower Market decorated the grave of Mrs. Mary E. Holroyd, the donor of the market. Critchell's Sons did the work. E. G. GILLET.

## Syracuse, N. Y.

A Cold Month.

The month of May has been a succession of cold, wet days, with little sunshine, and there appears no prospect of any improvement, as at midday to-day, June 1, the mercury is no higher than 56 degrees, with a decided feeling of snow in the air.

With scarcely any outdoor stock, the florists were besieged for cut flowers for Decoration Day trade. Everything in the shape of a hot water was used, even to geraniums and begonias, and then many orders were reluctantly refused.

The trade in bedding plants hung fire on account of the weather, but is now coming in strong, and the indications are for a clean sale all around.

A Floral Steamboat.

It is not often a steamer order is placed so far inland, but L. L. Wasserduse filed one this week in the shape of a model of the St. Louis, presented by L. C. Smith, a wealthy resident of this city, to a friend who sails to Europe on that vessel. The boat was composed of white canvas, with a hull of the same color in pink. The funnels were of blue argenteum. Smilax composed the mainmast and rigging, and the base was of lily of the valley, which, arranged in its own foliage, made a good representation of a mast.

Henry Morris is now East Greenwich in his store in Bath Greenese street. G. BARSON.

**NOZZLE TYPES.** Bulletin by Professors B. M. Duggar and L. B. Bailey. Bulletin 132, Cornell, Ithaca, N. Y. This bulletin, which is profusely illustrated, contains discussions on the ear tip and late blight of celery; late blight in the storage house, with suggested remedies; remarks about the construction of strangle burials, and experiments with venturers to celery.

**NOZZE TYPES PLANS FOR WESTERN NEW YORK.** By S. D. Willard and Professor Bailey. Bulletin 131, Cornell University Agr. Exp. Station, Ithaca, N. Y. This bulletin, which is profusely illustrated, contains an interesting description of the types of nozzles, remarks on plumb growth, insects and diseases, and notes on varietes. Professor Bailey says: "Amongst the plumes which can be most confidently recommended for market in Western New York are the following: Ford, Broadbent, Cambridge, Troy, Hudson River Purple Egg, Italian Prune, Emory, Grand Duke, Arch Duke, Mouchy, Giani, Peter's Yellow Egg, Reine Claude, and Coppee. Amongst the nozzles, the Red and the Farleigh are perhaps the best. Of the Japanese plums, the only ones which would be a recommendation for plant in Western New York at present are the Red June, Abundance, Burtan, and Chango. The Red and the Abundance to be the best very early market plum for this region which I know. The far as concerns the domestic and Japanese plums are self-fertile, but it is always the safest course to plant varietes of alternate rows."  
**Mr. Willard's notes on varietes will be found of immense value to those interested in the subject.**

**THE DOWNY MILDEW OF THE CUCUMBER AND ITS TREATMENT.** Bulletin 115, New York Agricultural Experiment Station, Geneva, N. Y. Spraying with Bordeaux mixture (1 to 5 formalin) is recommended as a preventive. To cure the Downy mildew of this strength will require six pounds of copper sulphate, about four pounds of fresh lime, and fifty gallons of water. Dissolve the crystals of sulphate in half the water by suspending them in it in a crock, and add a wooden vessel. Sink the lime in part of the water and dilute it to make a thin solution. To the sulphate is fully dissolved add the whitewash to form an emulsion, thoroughly mix and test the mixture occasionally with a few drops of potassium ferrioxalate solution. If enough lime has not been added, the drops of ferrioxalate as they touch the mixture will become dark reddish brown. Add lime until no such reaction appears on applying the test and then put in a few more to be sure to get a good reaction. An excess of sulphate will "burn" the leaves, but an excess of lime is harmless. The quantity of Bordeaux mixture required will vary with the size of the plants and the amount of rainfall. Enough should be applied each time to leave upon every leaf one-half inch of solution. The potassium sulphate that the spores can touch no point of the plant should be protective. If it rains wash off the coating; it will be necessary to spray again. The remedy should be applied early, constantly and thoroughly.

**TOBACCO DUST**

SEED TRADE REPORT

Points of information from seedsmen, as all interested in this column, collected. Advt. as Editor Seed Trade, care of Florists' Exchange, P. O. Box 1897, New York.

American Seed Trade Association.

The fifteenth annual meeting of this association was held in the Ebbitt House, Washington, June 8, 9 and 10.

The attendance. Among those present were representatives of the following firms: C. L. Allen, Floral Park, N. Y.; J. Bolzano, Baltimore; T. W. Bolzano, Washington; F. Buckbee, Rockford, Ill.; H. Earl, of W. Atlee Burpee, Philadelphia; E. E. Clark and H. A. Clark, Milford, Conn.; Mr. Willard, of Connecticut Ferre & Co., Westfield, Conn.; E. F. Fennell, Philadelphia; C. Crosby, New York City; Mr. Hefron, of Albert Dickinson Co., Chicago, Ill.; W. H. Green, Philadelphia; Messrs. N. A. Rodgers, of Illinois Seed Co., Chicago, Ill.; C. E. Kendall, Cleveland, O.; J. C. Ketchum, of Robert Layton's Sons, Columbus, O.; Mandeville & King, Rochester, N. Y.; L. M. May, St. Paul; Albert McCullough and J. Charles McCullough, Cincinnati, O.; Morrison & Westfall, Troy, N. Y.; Charles E. Fowley, St. Louis, Mo.; Jerome B. Rice, Cambridge, N. Y.; Otto Schwill, Memphis, Tenn.; Mr. George, of Sears & Harris, Co., Philadelphia, O.; T. W. Wood, Richmond, Va., and D. D. Woodruff, Orange, Conn., and Secretary, of Weber & Don.

Visitors at the open meeting were C. L. Allen, Floral Park; Gilbert H. Rice, Seed Investigator, Department of Agriculture, Washington; E. Harden, government purchasing agent, Washington; W. D. Burt, of S. W. Allen Co., Philadelphia.

Resolutions. The association presented the following resolution regarding tariff matters, which was forwarded to the Finance Committee of the Senate.

WHEREAS, The House of Representatives having passed the Tariff bill known as the Dingley Bill, in which the duty on flower seeds is placed at 40 per cent.

AND WHEREAS, The Senate Committee, in its various amendments to that bill, reduces the duty on garden seeds to 25 per cent, and placed seed of best, radish and spinach upon the free list.

RESOLVED, That the American Seed Trade Association, assembled in Washington this 8th day of June, 1897, put on record its protest against the passage of the report of the Senate Committee reducing the proposed duty on garden seeds as a serious blow to an agricultural industry of most advanced character, particularly seed raising, and that the same be pursued on \$5,000 a year, until a tariff is levied on seeds every day from cheap labor of Europe.

Resolved, That the Association put on record its claim for the protection of the lands, investments and labor of the seed-raising industry, and that a list, to be returned to the garden seeds to 40 per cent, best radish and spinach upon the free list, be made dutiable at 40 per cent. Also that the duty on radish and spinach flower seeds, and a duty of 30 per cent on the other bulbs, as provided in the Dingley Bill.

Also that peas and beans remain as provided for in the Dingley Bill, and that the duty on flower seeds take effect in June.

Directors of Officers. The following officers were elected for the ensuing year: President Jerome B. Rice, of Cambridge, N. Y.; Secretary, E. F. Fennell, of Philadelphia, Pa.; first vice-president, C. L. Allen, Milford, Conn.; second vice-president, J. Bolzano, Baltimore; secretary and treasurer, E. F. Willard, of Philadelphia, Pa.; assistant secretary, C. E. Kendall, of Cleveland, O.; Executive Committee, Messrs. N. A. Rodgers, of Chicago, Ill.; T. W. Wood, Richmond, Va.; S. F. Leonard, of Chicago, Ill.; J. C. Ketchum, of New York; Albert McCullough, Cincinnati, and W. Atlee Burpee, Philadelphia.

The meeting was a very successful one. On Thursday the members of the association inspected the seed-testing experiment being carried on by the Department of Agriculture, and were greatly interested in same.

Rochester, N. Y.—The case of Henry B. Hathaway, assignee of Crosman Bros., seedsmen, against Alexander M. Holden, Frank P. Jones and Edward F. Dibble, directors of the Edward F. Dibble Seed Co. in 1894, was argued in Supreme Court yesterday. After hearing the evidence for the plaintiff, Judge Dutwin granted the defendants' motion for a non-suit.

The defendant's motion went into effect on the 6th of the receiver July 23 last. No annual report was filed by its directors in 1896. The receiver and the plaintiff sought to hold them personally responsible for a \$240 bill because of the neglect.

European Notes.

The Weather. The conditions at present existing entirely belie the promise suggested by the mildness of the past winter, which led us to look forward with confidence to an early harvest. The continuance of cold, dry winds retards the development of both annuals and biennials at present we are nearly a month behind. As the harvest will be late, it is safe to assume that there will be sown with good weather, seeing that up to the present the supplies of that article have been meagre in the extreme.

Early Turnips. Early turnips will probably be an exception to the general rule, especially those growing on high lands in dry situations. A plentiful supply of moisture is absolutely essential for the development of the growing portion of the plants, without it the stems become woody, the sap ceases to rise, the plant dries up prematurely, and the limited quantity of seed that has been formed is thin and of very poor quality. The conditions at present existing in this country are such that good plump seeds in a pod we find only eight or ten, and fully one-third of these will often be empty.

Turnipage and some of the large field turnips develop more slowly, and it is not until late in the season that they start. Beets and mangolds love the dry weather when the nights are warm; at present they are lying low.

Good Supply of Peas. Peas have come up well, thanks to the splendid condition in which they were harvested last year. With a little rain it is probable that Europe will be able to furnish a liberal share of the requisite supplies. This is especially the case in England, where an extra large acreage has been sown in anticipation of a high price during the forthcoming jubilee festivities.

If, as seems probable, the supply should exceed the demand, the surplus will be left for seed, and as they have been sown on some of the most high quality of lands, the surplus spondingly large.

A Bean Year. This may fairly be termed the "bean year," rarely has the trade been so good. Even now an occasional order comes in for Windsor or Long-keeper, but the price for these is the first quite a drop in the market are rising in value every day. Vegetable growers in this country, the bush varieties, have also had a phenomenal sale.

Good Prices for Onions. Onion bulbs that in February could hardly be given away now command a very good price; this will doubtless cause a good demand for the variety which the farmers in Europe are ready, and this will in turn help up the price of the seed. As the acreage of these in all other kinds in Europe is so very much less than usual, we are not likely to see prices so ridiculously high as they were last season.

Market Seeds. No change of any importance has arisen in connection with market seeds, the prices of Lucerne, mustard and rape; the available stock of the former is in the hands of the farmers just now. Cold Effects Dutch Bulbs. Dutch bulbs, owing to the continued cold, do not appear to have recovered from the disaster which befell them on your side are more sanguine than their European confreres there will be a good go round.

EUROPEAN SEEDS.

A CHANGE of air is often as necessary as a change of food or change of diet, and for the same reason—to keep trade and body healthy.

ABOVE ALL, have your advertisements reasonable. To be reasonable they must be changed often.

**CARNATIONS.**

*Nitrate of Soda.*

A correspondent of the State of Georgia asks me what effect a weak solution of nitrate of soda would have on carnations when syringed overhead. The house is shaded and the plants are healthy and doing well.

I have never used nitrate in this way and therefore can't tell just what the results would be. However, I do not think the effect would be injurious if the solution is not made too strong. That is about the most I can say in favor of applying nitrate in this way.

Not only is the principle of applying it in this manner quite wrong, but a large portion of it must necessarily evaporate, and, therefore, become wasted. A better way would be to apply the solution directly to the soil.

The correct principle of applying water or stimulants lies in a thorough saturating of the soil. This I can assure you from this method we may rest assured that we are moving backward instead of forward. In applying water or stimulants we must bear in mind that unless all the roots of a plant can assist in taking the nourishment from the soil, perfect development is impossible. Viewing the matter in this light, the impracticability of obtaining the best results by this method is apparent.

During the summer months the carnation can stand light syringings and be watered by the roots. It is also injurious to the plants. If we could always keep the atmosphere in just the proper condition, the plants would never need a drop of water. But since this is quite beyond our reach, in the growing season we must resort to light syringings to help offset the dry, parched atmosphere of the greenhouse. This, however, is not a moisture-loving plant and we must treat it accordingly.

It would be wise to consider to use good liquid manure, the making of which has been described many times before in the columns of the Exchange. I do not advocate the use of highly-concentrated fertilizers, as their use never be attended by the best results unless handled by a person who knows exactly the nature of the stuff being applied. It is better to use plants actually need or can stand. Those who are so situated as to make it difficult or impracticable to obtain

liquid manure in the ordinary way will have to resort to other means, and much greater care will have to be exercised in the making and using of it.

Nitrate of soda, in its pure form and cannot be especially recommended as being a properly balanced fertilizer. It is not a fertilizer in its pure form and cannot be especially recommended to give the carnation a well-balanced manure. In fact, its pure stable manure does not contain enough in proportion to the nitrogen present, much of the nitrogen being in the form of unleached wood ashes is much the best; in the absence of this a little muriate of potash, or a little sulphuric acid are the other two ingredients, and should be present in about half the strength of the potash. The latter gives structure to the plant and color to the foliage and flower; for this reason the plant requires more of it than any other ingredient. Nitrogen makes foliage and keeps the plant growing; it is present in abundance in liquid from stable manure. Phosphoric acid is the main factor in producing flowers large, firm, thrifty plants which are not crowded for room, and which produce but a scant supply of flowers can stand in their non-blooming to a lack of this item. Stable manure does not contain it in sufficient quantity to be of any benefit in this way.

This can best be done in preparing the soil for the carnation. It is best intended for use in the greenhouse for the following year. A good, liberal amount of phosphate is recommended with the soil about six or eight weeks before the soil is to be used will be most beneficial. Phosphate is one of the principal reasons why our carnations bloom profusely during summer months. H. WEBER.

**Cincinnati.**  
**Trade Correspondence Good.**

Very little news regarding cut flowers to report, except that in comparing with other lines of business we should not complain; the market remains unchanged; Brides and Maids, 2 cents to 3 cents; Meteor, 3 cents to 4 cents; Perles, 5 cents to 6 cents; Perles, 2 cents. Carnations, 50 cents to 1 1/2 per 100, and fairly good stock of plants to suit all tastes. We have a decorative and funeral work, which helped bring up the weekly average, while transient sales boys and florists who attend school commencements are now making themselves felt and will help sales for the coming week.

Marie & George are still cutting some handsome lily of the valley, which would sell well.  
Pansies sell at 2 cents to 3 cents; sweet peas are an over-stock and 25 cents to 50 cent limit.  
The growers in the market were complaining of dull trade Saturday.

**Trade News.**  
Tom Fitzmorris, salesman for Julius Rehr, picked up on the street a Big Four calling card, which he returned same to owners and received \$1.

Superintendent Warder is having his hands full driving tramps out of the parks and keeping vandals from stealing the flowers.  
William Murphy is now turning his attention to his strawberries. He expects to pick at least one more bush; they are now retailing in his store at 5 cents per quart.  
Milton Kennerly, of Excelsior Station, was called last week. George Johnston, the 265-pound tin-fall man, from St. Louis, is here.  
Our Writing Committee is having a hard time deciding on a location this year, but we will finally settle on Philadelphia for July 23.

R. A. Murphy was tackled by a couple of "ignominious" conductors and returned home from market last Wednesday. They allowed Robert to take the flowers home with him when he attempted to reach his wagon to drive on they held him up and took back his money. F. M. McGowan, Miss Albertini, Meteor, Peachbloss, Rose Queen, Silver Spray, Wm. Scott, Uncle John.

E. P. Critchell has been enjoying the busy box for the last ten days.  
George S. Bartlett starts on a bicycle tour through the country, leaving the Exchange and taking their orders for bone drier. E. G. GILLETT.

When Writing Mention Florists' Exchange

Flushing L. I.

At the extensive range of the John Henderson Co., George W. Hillman, manager, a hurried look through the houses revealed active operations in progress for the coming fall and winter. Bridesmaid and Bride are grown to the exclusion of nearly all other varieties, these three, with American Beauty, being, in Mr. Hillman's opinion, the best four commercial kinds available. Several houses of whom we have just been talking, while Bridesmaid, from two to four years old, on the benches, was being put in shape to be again carried over the ensuing season. Bridesmaid plants seven years old were quoted by Mr. Hillman as having in one establishment yielded more prolific returns last winter than any of the preceding seasons; in other words, by careful pruning and attention, plants of this favorite, it would appear, can be profitably carried on the benches without removal, as yet an undetermined number of seasons.

Mr. A. C. Thorne, Colden Street, corner Hillside Avenue, had erectd by Hitchings & Co., of New York, six iron houses, three-quarter span, which, in their details of construction, embrace the most modern ideas of these celebrated builders. The structure embraces 900 feet of running glass, twenty feet wide. The first two houses are to the right and to the left the shed between them and stand some distance apart, one from the other, while the last two houses (practically one) run the entire width of the range, 316 feet. In the details of the construction in this range, we noticed the use of continuous rafters from the ridge pole to the ground, and the side sash 3 1/2 inches out of plumb to carry off the drip of rain or snow; the glass used is placed in the upward curve, in the center on the outside, and to impart much additional strength and to greatly lessen danger from hail. Hitchings' water table has two No. 19's and two 57's, which do the heating very easily. Bridesmaid and Meteor, in equal quantities, are being grown. Mr. Williams, formerly foreman for Mr. Hillman, is in charge.

Grand Rapids, Mich.

Club Meeting. At the Florists' Club meeting, held here, there was a discussion on "Prospects of Spring Trade." There is a plentiful supply of bedding stock in this vicinity and a good demand is expected as soon as the weather will permit. The Committee on Chrysantheum reports that the best exhibitions under consideration, but asked further time to decide definitely. Mrs. Emma & Cunningham exhibited carnations. The club will not meet again till September.

Business Changes. William Cunningham, of the Grand Rapids Floral Co., has withdrawn his partnership in that concern, and bought the stock of Schmidt Bros., also retiring his greenhouses.

Michigan, N. J. A. V. D. Snyder is erecting a seed and fertilizer warehouse near his greenhouse on the Paterson road.

A Potent Factor. THE FLORISTS' EXCHANGE is the most potent factor in the floriculture of the country. W. H. DUBVEA, 1000 Broadway, New York. Mattuck, L. J., June 8, '97.

The Vicissitudes and Trials of the Seed Trade.

From a paper read by G. L. Allen, Floral Park, N. Y., before the Florists' Exchange Association, at Washington, D. C., June 9, 1897.

The growing of seeds and the selling of them are two of the industries between which there ever has been and ever will be an irrepressible conflict; the one wants to raise and to sell as cheaply as he can, consistent with a first-class article. While the two trades are merged into one the conflict becomes doubly great, because the factor of the power--on the one hand, is to sell cheap, to secure the wholesale trade, and, on the other, he is anxious for the largest retail prices, which, trying to ride two horses in opposite directions, at the same time.

In the selling of seeds there are two distinct classes of dealers--the wholesaler and the retailer. United there are two separate interests, all of which we see here, in friendly battle array. We see here also the three in one, and the conflicting interests. If the grower can avoid himself of the retailer's profits, as he frequently does, no matter how. But if he expects to supply the wholesaler he must not offer the retailer his stocks at the same price as he offers to the consumer seeds at any less figure than the responsible retailer would do, for the largest retail prices, which the grower is eager and uncompromising.

The seed trade is as aggressive as any other here; it is not a passive one. In seemingly large, under ordinary circumstances, they are not in reality so; while the retailer is, when, as a necessity, the grower should protect him, so far as is not offering to him, the price for the same article to him. He had results from this practice are more serious than generally supposed. It is not a matter of loss of profit, on the part of the trade, as it is in the loss of quality in the seeds at the same price. It does not know the intrinsic value of the seeds, as well as the seedsmen for whom he is growing, and as he is not a grower becomes a seedsmen he begins to seek large crops instead of choice ones, in order to make room for the large prices invariably lead to low quality; they are cause and effect. If the grower or dealer does not offer a less price than a good article can be produced, the inference is that, like all the cheap goods we see every where, come down with the price. This may not necessarily be so, but it is a very strong case of circumstantial evidence. To the conservative mind bargain offers scattered broadcast over the land are not only perilous but detract from the dignity of the seed trade, which has ever been one of its distinguishing features.

The greatest peril to the seed trade comes from the man who wants to do more than a good article in the three branches of the industry. He is not unlike some of our modern statesmen, who are only too ready to follow what they want it coined. His conflict is the most bitter of all, because each of his business interests is weak. If he is a grower--he is fighting himself. He is a financial "felo de se;" at the same time he is fighting himself with the retailer. In the lottery of trade. The conflict of trade, the competition which is everywhere in the various articles of the seed trade, the cause of low prices--it is the parent of over-production, and, as prices are low, the supply is great, the demand, over-production means low prices, and competition means low quality of the article.

Go into any or every seed house in the country and inquire about trade. You will find the price of seed is not enough--more than ever before--but there is no money in it; prices are so low that no expert grower can get a margin of profit is very, very narrow indeed." All admit this; all regret it; all desire to get rid of it. "What is to do? And there is no answer. But there is one thing as certain as the rising and falling of the tide, and that is, that seeds will not get a higher price for his stocks until he asks for it. Constantly in the seed trade, the grower, as over-production, or as a means to an end--the end being the building up of the seed trade, and a means to a prosperous business; it is tearing down rather than building up. The question is, how to hold on, how shall, or how can, we make our bus-

ness more profitable? The first step taken by business men of all denominations, in times of business depression, is to reduce expenses, which is done by cutting off all useless expenditures, by reducing the number of employes, and by lessening the wages of those employed. The seed trade is doing this very generally, and having done this the next thought is, How can we get better prices? The best and shortest way to advance prices, however, is to sell. And this is not so difficult a matter as is generally supposed.

But where shall we commence; or rather, how shall we commence? We answer by saying imitate the methods pursued by all other tradesmen; separate the conflicting interests, so that each may be governed by the laws adapted to its necessities. As we have before said, there are three distinct sections in all trades--the producer, the wholesaler and the retail dealer. While their interests are mutual, so far as the advancement of business is concerned, the one very naturally conflicts with the other; and herein lies the difficulty of conducting the three in one. The grower's business is, or should be, ex-

cept, and could not find a sale for it, consequently they must find new customers or be ruined. This is one of the perils of the seed trade.

The grower is not always wholly at fault, in this matter, particularly where the jobber has an unbounded zeal to do it all, and is not a seedsmen in the comprehensive sense of the term, goes direct to the farmers and places his contracts, in order to be able to offer better inducements than his competitor. Unfortunately, this practice is limited to but few houses, and they have not found it so profitable as expected.

Many in the retail trade have come to the conclusion that the wholesale department of their business is not a paying one, and, in fact, is a loss. When competition has brought down prices below a living profit, as it must do here, the expense attending it is as great as it is in all large cities. More than that, the wholesale department weakens the retail by bringing down prices, as many seeds are sold at a discount that would not need to be if there were no wholesale department.

There is no disputing the fact that the wholesaler finds it very easy to

others, but they have a clientele which stands by them--the vicissitudes of trade, to the benefit of the grower.

Sutton & Co., of Reading, England, have one of the best regulated seed houses in the world. Their business has been a retail establishment, and its success has been due to the fact that they choose only the best seed to sell. Like Veitch, of London, they have given to the trade dignity and character by their seed being the best. Asparagus, and their trade is held intact simply because they deserve it. It is no wonder that the grower has built up a reputation for the best quality that is the seedsmen's talisman. It is no wonder that the grower has built up the one who sells the highest, because of reliability, that wins the prize in every kind of business. But what has caused the present depression? has to be asked. Overproduction, we think, one of the main troubles; but there are others. Young America in the seed trade has proved a serious element to prosperity. He rushed headlong into things; after securing a nucleus of trade he grew ten times more than he needed, and he became hopelessly overstocked and goes to E with his surplus after filling A's orders, offering some of the latter's money to buy. To sell cheap--very cheap--his object is to sell. If successful he goes in deeper the next year, and goes on until he goes under. Fortunate is the wholesaler if he is not carried under with him.

One of our old-fashioned plain planters bitterly of dull trade. But trade has not been dull. Profits have been small, but there has been some good seed. More vegetable seeds have been sold and planted than the present year. There is a very important fact bearing on this question that has quite generally been overlooked; it is the fact that the seedsmen ten times more engaged in the seed business than were ten years ago. Every little town has its seedsmen, many of whom are visited often by the traveling salesman, and if but a pond of any given variety is required, he will usually be found coming by mail. While many of the old houses say truly trade has fallen since we last saw it, truly business has not fallen off; but it is being done through more hands; there are just as many seeds sold in a month as at the same time are more men selling them.

We noticed a new phase in the seed trade this season. A grower, who was very anxious some in the trade are to extend their business. On going through the street in a village a few miles from New York, I was accosted by a man--a florist in a small way--whom I had not seen for twenty years, and found him a full-fledged seedsmen. His place was conspicuous for its large, high-colored snow cards of a well-known firm. Upon inquiring as to the state of trade he replied, "It is very good; we have done well this season, and this spring and do not run any risk. We sell on commission and our instructions are not to let any one undersell us."

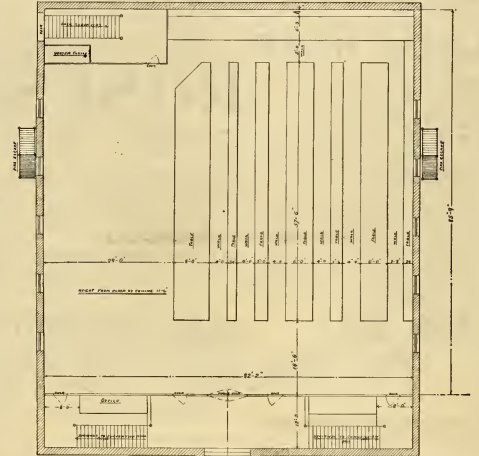

This man said considerably more that will not repeat, but it is quite a question whether the firm that furnished the signs and the seeds, after the manner of the great growers, did not find they have built up a trade for some one else.

It is a very clearly known as the mail trade has suffered badly the past two years from the general business depression. But there has been some depression in all agricultural industries. The farmers' wives have not had the same good fortune. They have not the beautiful, therefore the trade in plants and flower seeds has been very light. Those who do not buy plants, but who have not bought vegetable seeds, but have planted such as they saved over from the past season, at the seed almshouse at Washington.

Catalogues and Advertisements.

The new catalogues of trade comes from the methods employed in building it up. Superstructures of enormous size have been built up on weak foundations--sads, that would put the literature of our country to shame. They are wonderful in description than the thousand and one tales of the oriental tale.

There is a vast amount of the sensational in the craft--men who bait for the crowd, and who have no other outlook for novelties, the merits of which are of but little importance. They are not so successful in the trade as they would be if they were reduced cheaply, and will sell it." There

clusively with the wholesale dealer, as has the spirit of trade; they are not only making from ten to fifteen per cent. on their sales, those for whom they grow are making from fifty to one hundred per cent. gross profits; their palms itch for a share of these supposed great profits. They do not count the cost of selling or the loss arising from failures, and from kept-over stocks; and they embark in trade, at first slowly, and then more and more, and not infrequently at less prices than they had contracted for prior to their regular customers. This is because, when they had taken a contract to grow a thousand pounds, or a thousand bushels, they had grown double the quantities, with the wholesaler's profit in

shade prices, rather than miss a sale, which would be a loss to him. He swims. The city merchant cannot do it and compete with the country dealer, whose expenses are not half as great. On the other hand, the retail dealer has every inducement to keep up prices; he simply fixes them and maintains them. His reputation once established, the question of price is rarely raised. When the market gardeners and seedsmen's best friend, because of the quality he buys, makes price a secondary consideration, quality must be every time and the price will not be questioned.

The private gardener and the florist invariably run away from low prices; they know the best is none too good, and that it costs more, and they are anxious to pay the price, rather than incur a risk because of cheapness. We find almost everywhere that success attends the retail dealers. Of course, it is to be understood we mean those who do not and will not allow themselves to be overthrown. There is an anxiety to pay the price, rather than incur a risk because of cheapness. We find almost everywhere that success attends the retail dealers. Of course, it is to be understood we mean those who do not and will not allow themselves to be overthrown. There is an anxiety to pay the price, rather than incur a risk because of cheapness. We find almost everywhere that success attends the retail dealers. Of course, it is to be understood we mean those who do not and will not allow themselves to be overthrown. There is an anxiety to pay the price, rather than incur a risk because of cheapness.

is so much said in these ads. that is not true that truth itself is not recognized; and honest advertisers are suffering for the sins of a few who are not. The results of these misleading ads. have been that many of the many and many purchasers, have become disgusted with all ads. and do not read any of the advertisements.

The so-called Free Seed Distribution is a peril to the seed trade, but there is one thing that is sure. The Free Seed Distribution is a great evil. The Free Seed Distribution is a great evil. The Free Seed Distribution is a great evil.

Those seeds were retained at less than one-fifth of the regular retail rates, as they might, when bought at five dollars per thousand packets.

Of course, the dealer who supplies these flowers makes more money, but how is the retailer affected? While one seedman makes money by the operation, the retailers are great losers. The same rule applies here, as with the government seed store, the man that makes the money has the same plea: "Am I my brother's keeper?"

**S. A. F. Convention.**

William E. Chappell, of Providence, R. I., has been appointed superintendent and manager of the trade exhibit has completed the planning of the exhibit and the site of the exhibit is a considerable portion of the space. The present indications are that the display will be one of the best ever held. The accompanying plan will afford an excellent idea of the proposed layout of the hall.

Music Hall, wherein the exhibition is to be held, is one of the largest and most commodious halls in the city. The purpose proposed, and has many special advantages over other halls that led to its selection. It is centrally located on the south side of Westminster Street, the principal business street of the city. It is centrally located on the south side of Westminster Street, the principal business street of the city. It is centrally located on the south side of Westminster Street, the principal business street of the city.

Entrance to the hall is by a broad stairway of easy ascent into a wide lobby, from which four large doors open directly into the spacious hall. This is practically square, well lighted and provided with ample fire escapes. The convention meetings will be held in the hall above the exhibit.

W. H. MASON.

**Obituary.**

**Richard Vincent.**

Richard Vincent died on June 7, at Ocean City, Mich., in his 84th year. Mr. Vincent, who lived in Baltimore, about a month ago, went to Michigan, thinking it was a grand old country. He had for several years been suffering from an affection of the heart. He was born in England, coming to this country in 1836. He went to work as manager for M. H. Vincent, who was then in charge of the nursery and greenhouses of Richard Cromwell Vincent, in Anne Arundel County. He left there about twenty-five years ago to enter the florist business in Baltimore. Mr. Vincent had two sons, three daughters and two sons; the sons are Richard and Thomas Vincent, of Baltimore; both are engaged in the florist business.

**Robert Williams.**

Robert Williams, the well-known market-gardener and florist, died at his home at Batavia, N. Y., Thursday, June 3, of heart disease, aged 82 years. He was born on June 1, 1815, at Batavia, N. Y., and came to Batavia in 1840. He had been in ill health for about two months.

**The James Dean Auction Sale.**

With this week has closed the business of an establishment of a grower whose name and fame is known to all men in the craft. Auction sales are of common occurrence and proceed from a multiplicity of causes. It is reserved mainly to the florist business, which enjoys some what of a monopoly in this line—that forced sales arise often from the march of improvement rendering land originally purchased for a moderate figure in the outskirts of village, town or city, valuable as building lots or needed by the corporation. In Mr. Dean's case his property has been taken almost entirely by the Borough of Brooklyn, it being directly in the route of the great boulevard, which, when completed, will enable one to drive over grand boulevards and through delightfully diversified scenery, from Coney Island, along the shoreward of the Outer and Inner Bays of New York, through Prospect Park, to the farthest ends of Long Island.

**The Palms.**

It is somewhat refreshing, after the long siege of slow sales and low prices of this stock, to be able to report a really first-class sale. Kentia Belmoreana sold briskly at top-notch prices; other palms following closely. Among buyers of this stock were L. Seton, Astoria; J. Bader, Pittsburg; Robert Craig, and John Westcott, of Philadelphia; the Boole Floral Co., Ithaca; J. H. Troy, of the Iosary; G. Stumpff, Altoona; J. Cunningham and Charles Dards, of New York; C. H. Sutton, of Babylon; J. M. Keller, Bay Ridge, and W. Griffin, of New York.

**General Stock.**

General greenhouse stock sold well, including ferns, ficus, caladiums, azaleas, etc. Two plants of Nepenthes were knocked down to J. Lovelace, of Lenox, for \$12.50 each. Julius Roehrs, Carlton Hill, was also a buyer of this fern in smaller sizes. Other buyers for the first-named lists were H. G. Eyles, of Albany; Namm, of

N. J.; J. H. Zachorna, Brooklyn; N. Stewart, Tuxedo Park; S. C. Nash, Clinton; J. B. Kolbe, Vermont; J. J. Spaulding, John Scott, Brooklyn; McGovern, G. Matthews, Koffmann, W. L. White, of New York; J. A. Rose and John Nicol, of Jersey City; C. Besold, Mineola, L. I. Besides the general grower of importance or his representative from the various Boroughs of Greater New York was present. The names of the purchasers from out-of-town, whose names were unable to obtain.

W. L. White, the veterans of the business, who established himself in Brooklyn in the year 1841, was an interested onlooker.

The work next in order is to clean up those houses in which you desire to raise cut flowers. Everything in them in the way of plants must be removed; then give the houses a thorough cleaning, carefully weeping off the benches. All rubbish accumulations of the past winter must be removed, and in case floors or walks show a green scum scrape it off with the hoe, then lay on a coat of clean gravel, leveling it neatly off. Under the benches I prefer coarse gravel, as it takes up surplus water freely. Coal ashes make a good substitute.

Examining your benches. Should any of them need renewing and strengthening this is the time to do it, and be careful to see that you have one inch of open space between each board, while, if your benches should be solid, give them a drill holes through them, say at least every six inches—solid closer will be yet better—so that water will interfere with a proper drainage, which is imperative, especially at the latter end of the season, as plants in bloom will not stand too much moisture at the roots.

Some growers set up side-boards and use old lumber for a false bottom, laid flat on the ground; others plant in open border in the house; the latter way is the best of the two. Neither method will come up to benches culture, the blooms on the latter always being of better finish and firmer build.

After my benches are ready I give them a stiff lime wash, if productive of nothing else it pays well through the saving of lumber and keeps the soil sweet during the season.

First plant the side benches; be certain to have four feet of head room over your side benches, so that you can reach the glass nor have the free circulation of air necessary; if they come too close to the soil the plants will suffer from dampness, a serious detriment to the production of fine flowers. Cut away the soil between the benches in charcoal dust and bone dust, as stated in a former letter, and place on the benches the way it comes. Do not sit it through the open spaces cover these with rougher pieces, or with a little soil and grass, or anything at that line; level off even with your sides, which, with me are five inches deep. After planting and watering this will sink to not much over four inches, leaving ample room for a good top dressing later in the season. My benches are lined with six-inch lumber, one inch of which is used in nailing them to the bottoms, thus leaving me five inches clear.

For my side benches I select only low-growing varieties, such as Mrs. F. Bergmann, Ivory, Pink Ivory, Fred Walz and Minerva, none of which grow over three feet in the season. My varieties if possible, well-established plants in three-inch pots, and the plants are set in the benches at a distance equivalent to that. All side benches should be planted by the 15th of June, and the plants should be in the taller to make sufficient stems. The initial growing plants will handle later.

THOMAS W. C. C.

**The Late Robert Douglas.**

We present herewith a reproduction of one of Mr. Douglas' latest photographs, which, we have no doubt, will be welcomed by all who knew him personally, as well as by those of whom he was known by reputation.

The first day's sale—Wednesday, June 9—was started on the third of a series of remarkable rainy days, but notwithstanding the chilly atmosphere and downpour, the weather discomforts were without effect on the attendance, which was large and representative and enthusiastic; and the esteem in which Mr. Dean is held as a grower was best attested by the fact that the Brooklyn contingent were among the heaviest buyers.

The stock offered was all of it in the pink of perfection, clean, healthy and robust, and many of the specimens as they lay in the hollow which gives it considerable protection from the wind on three sides, and lying so open to the general influences of old soil—when he shows himself.

At 10.30 on Wednesday morning the packing shed of the old landmark was crowded with over a hundred buyers, for the inclement weather had ruled the idler and curiosity seeker. A few minutes later the auctioneer, Mr. Williams Elliot, opened the sale with the contents of house No. 1, the first stock offered being lycopodiums, and the first purchaser, Mr. H. C. Steinkoff, West Hoboken, N. J.; T. J. Totten, Saratoga, N. Y.; W. C. Egger, Schenectady, N. Y.; J. C. Williams, Montclair,

Brooklyn; James Weir, Jr., Mrs. Meissner and H. A. Molatsch.

**Orchids.**

The bulk of the mixed plants, such as Cattleyas, etc., went to Plainfield, N. J., L. Borsum being the buyer; others to Lenox. The entire batch of Cypripedium insignis was purchased by Daildozou Bros., the 32 plants realizing close over \$500. Aracanthas and Pandanus brought out some lively bidding. M. Keenan, of Brooklyn; L. Hart, of New York, and J. H. Troy being among the largest purchasers.

**Cannas.**

These were offered in quantities, but buyers were soon satisfied, and prices fell very low, averaging from \$2 to \$6 per dozen. Austria, however, averaged from \$5 to \$10 and Italia \$2 per dozen. G. Atkinson, of Orange, was the largest buyer.

**Greenhouse Structures.**

These went at prices varying from \$15 to \$50 each. The buyers were Messrs. Kemper, Kalfur, Zeiner, Welmar, Lenker, Mellis, Zeller, Shanley and Kierschner. Boilers varied in selling price from \$1 to \$15.

**Visitors at the Sale.**

At the sale, many of whom were purchasers to some extent, were J. McDonough, Newark; H. C. Steinkoff, West Hoboken, N. J.; T. J. Totten, Saratoga, N. Y.; W. C. Egger, Schenectady, N. Y.; J. C. Williams, Montclair,

## The American Toad.

The toad has been very appropriately named the "gardener's friend"; and while many gardeners are cognizant of the aid it renders in the extermination of noxious insects, but few are aware of the extent of its voraciousness in this direction. A most interesting bulletin (No. 46 of the Hatch Experiment Station of the Massachusetts Agricultural College at Amesbury, Mass.), prepared by P. ofessor A. H. Kirkland, assistant entomologist to the Gypsy Moth committee, has just been issued, in which the habits, food and economic value of this batrachian are treated upon.

Particular attention has been given to the nature of the food of the toad; and an examination made of the contents of the stomachs of several revealed the fact that though the animal does devour some insects that are useful to man, this depredation is greatly offset by the number and variety of those that are harmful to vegetation, of which the toad also makes a meal. The following summary shows the toad's predilection in the matter of diet:

Of the beneficial insects (1) it destroys carabid beetles, insects of a highly beneficial character; (2) it devours an occasional ichneumon fly and "lady bird"; (3) it feeds to a small extent on spiders, generally considered to be valuable as insect destroyers; (4) it devours carrion beetles, insects indirectly helpful to man.

Of injurious insects (1) it feeds on worms, snails and sow bugs, common greenhouse pests; (2) it devours a large number of myriapods which damage greenhouse and garden plants; (3) it feeds to some extent on grasshoppers and crickets; (4) it destroys large quantities of ants, insects often injurious and usually obnoxious; (5) it consumes a considerable quantity of may beetles, rose chafers, "click beetles," potato beetles, cucumber beetles and weevils, all more or less injurious to crops of various kinds; (6) it feeds on tent caterpillars, gipsy moths and other fruit tree pests, and (7) it is a prime destroyer of cut worms and army worms, common cut worms which often cause great damage.

To recapitulate, eleven per cent. of the toad's food is composed of insects and spiders beneficial or indirectly helpful to man; eighty per cent. of insects and other animals directly injurious to cultivated crops or in other ways obnoxious to man. Further comment upon the valuable services of the toad would seem unnecessary.

As demonstrating the variety and quantity of food elements found in the stomach of a toad which was killed at P. M. on May 11, 1898, the following is interesting. In the stomach's contents were recognized:

Nine ants (*Camponotus pennsylvanicus*);

six cutworms; six myriapods (*Julius* sp.); six sow bugs (*Porcellio* sp.); one weevil (*Hydrotus* sp.); one carabid beetle (*Pterostichus* sp.).

In twenty four hours the toad consumes an amount of food sufficient to fill its stomach four times. A toad feeding at this rate upon the same kinds of food and in these proportions would consume 398 beneficial insects and 1069 injurious insects, myriapods, etc.

A properly estimated (but an equivalent of the damage and annoyance that might be caused by a toad) would be a difficult and unsatisfactory task, since data for the calculation must be of an arbitrary nature. To give our own contribution to but one element of the food, the cutworms, we reach some very interesting results. If we assume that ten per cent. of these insects, eaten by a toad feeding under the given conditions, would have been killed by the carabid beetle which the toad also devours, we still have the destruction of 198 cutworms to place to the toad's credit. If the damage the cutworms would have caused be estimated at one cent per worm, a figure which gardeners and tobacco growers will probably consider ridiculously low, we find that in one season a toad might destroy cutworms which otherwise would have damaged crops to the extent of \$19.88.

Gardeners and greenhouse owners may make this animal of especial value. Every gardener should aim to keep a colony of toads among his growing crops, and the practice of collecting and transferring them to the gardens is a commendable one. While the sense of localities is strong in this batrachian and it will often return over considerable distances to its original haunts, yet it may be induced to remain in new quarters if there is a sufficient food supply. Many provide toads with artificial shelters made by digging shallow holes in the ground and partially covering them with a bit of board or flat stone. In such places toads will often remain for many days, sallying forth at night to seek food.

In greenhouses the toad may be made of particular value as a destroyer of snails and sow bugs, myriapods, cutworms and weevils. According to Dr. Fitzmaurice, in the research garden attached to the Rouen entomological laboratory, the snails were entirely exterminated in 1891 as a result of introducing 100 toads and ninety frogs. In a greenhouse at Malde, Massachusetts, a number of valuable orchids were nearly ruined through the attacks of myriapods and sow bugs. The gardener introduced a number of toads, and in a few weeks the pests had nearly disappeared and all damage from that source ceased. A common pest in rosehouses and one that

## Halesia tetrapeta.

## Decorative Value of Flowering Shrubs.

During the past spring there has been a very noticeable increase in the use of all kinds of flowering shrubs, in choice and large decorations, especially in New York City; and suburban towns have been following suit. The average run of city and country decorators, up to the present time, have seemingly overlooked the decorative value of this class of stock; but now fashion and popular taste demand that they give it attention.

Society happenings during the winter months have had their gorgeous decorations of roses and carnations, so much so that when spring came people tired of these flowers and selected for decorations at this time invariably spring blossoms. Thus has the fashion been created and some charming effects have been the result.

In New York City the past spring, and even now in June, so far, the large decorations consist mostly of outdoor flowering shrubs, or as fashion is pleased to name them, "spring flowers."

At a wedding decoration a short time ago three large rooms and the entrance were absolutely covered with *Cornus florida*, apple blossoms, *Malus communis*, *M. floribunda*, *Spiraea prunifolia*, *Fuchsia japonica*, etc. Three truck loads of these were utilized, and it is said that the cost was more than if roses had been used; so that the selection of these flowers was not a question of expense. The sprays of blossoms were hung on the walls by the use of ordinary picture hanging hooks and wires attached to the headings. The bride carried orange blossoms and gardenias; also been noticed in which the above and other flowers of our native nature have been used.

Our illustrations show flowering

branches of four of the most useful and popular shrubs of this season. Perhaps first of all can be mentioned the apple blossom—*P. communis*. The double white apple possesses very considerable merit, its large white flowers rendering the sprays available for almost any kind of work. *P. M. coronarium* is a large double pink of great beauty. *P. M. floribunda* is a single pink flower, rather smaller than the two first named, but owing to its great floriferousness and compact habit it is of great value to the decorator. But in *P. M. Parkmanii* we have perhaps the gem of the genus, its vivid pink, good habit and great keeping qualities all contributing to make it one of the grandest spring flowering shrubs.

*Halesia tetrapeta*, commonly called Snowdrop tree, is well described by its common name, flowering, as it does, like so many large snowdrop blooms, regularly distributed over all the branches.

*Cornus florida* has been largely introduced into wall decorations this season, the subject of our illustration, its var. *rubra*, makes a pleasing change from the white.

*Azalea amona* ranks easily among the grandest of hardy azaleas, and is becoming more popular every season. Its keeping qualities, when cut for decoration, are remarkable, remaining, in water, in good condition one week.

## Chrysanthemum Mrs. E. G. Hill.

The Berno Floral Co., of Mansfield, Ohio, writes us as follows:

"We have been cutting Mrs. E. G. Hill chrysanthemum since January 1 from plants we had cut back last fall for stock. The blooms are very fine and measure from 7 to 8 inches in diameter. We sold a full dozen flowers of this variety on Decoration Day. Plants were cut without any special care or attention."

## The Garden or Love.

They were talking of figures of speech.

"Have you ever noticed," said one, "how fond people are of figures of speech when they are dealing with a woman? Her cheeks are 'roses'; her eyes are 'blue diamonds'; her 'lily hands'; her mouth is a 'rose bud'; her complexion is like a 'peach'; and her breath is 'fragrant of honey-suckle.'"

"You have forgotten one," said the cynic.

"What's that?"

"Her tongue. It is a scarlet runner."

"Pick-me-up."

Azalea amoma.

is increasing in spread and damage, is Fuller's rose beetle (*Armagus Fulleri*). While this species has never been identified in the stomachs examined, yet from the common occurrence of other weevils in the stomachs there can be no doubt, but that toads confined in rosebushes would render material aid in destroying this insect. It would be necessary to jar the beetles from the bushes at intervals when the toads would doubtless devour the greater part of the weevils falling to the ground. The bulletin is profusely illustrated, showing specimens of the insects upon which the toad delights to feed.

**The Tulp Disease.**

At the tulip conference held in London, England, recently, E. Kregelag of Holland, stated that the tulip disease (a fungus) was now undergoing investigation by a committee of experts, but a definite conclusion had not been arrived at yet. They had found, however, that the disease was confined to particular areas, and had attributed it to exhaustion of the soil in those parts, calcium being the lacking element of plant food.

**Blue Point, N. Y.**

George T. Schmeeman, the violet specialist, sails for Europe on S. S. Patria to-day (June 12). He will attend the Hamburg exhibition and visit several principal cities, returning in about eight weeks.

**CORRESPONDENCE.**

*Insertion will be given in this column to all communications free from animus; but the opinions expressed do not necessarily reflect our own.*

*Editor Florists' Exchange:*  
The discussion between the two gentlemen, Messrs. Oliver and Tricker, upon the subject of aquatics is, to say the least, interesting if not edifying; for while both tell us much we do not know, there is considerable that the average florist is familiar with and which reads like an old story, to wit: the so-called secret of keeping open the nymphæa blooms that will go to sleep just when they are most needed to be awake. If it is the intention of Mr. Oliver to least the cultivation of aquatics it is a laudable one, and will, perhaps, be as successful as was the free advertising so lately given at the Boston fern. Mr. Tricker certainly has had considerable commercial experience and his opinion, from a commercial standpoint, is of value. It is unfortunate that in such instances as these an outpouring of personal nature should be indulged in, especially when the writers are, I believe, unknown to each other save by repute. It looks as though, because one chooses to differ from the other in points where perhaps neither is entirely correct, language, not altogether polite must be indulged in, to the detriment of the subject in dispute, and the use of which may cause younger readers to often question whether one grows wiser as one grows older. Let a more harmonious feeling prevail—the reverse is altogether out of keeping with the profession; we are looking for information and eagerly welcome the expression of mature experience. M.

**ROSES.**

*Watering.*

Success in growing roses depends in a great measure on how they are watered. Although I have watered plants for more than twenty years, almost daily, my conviction is that I still have much to learn about the work. This may seem a strange statement to those who water a plant indiscriminately, or on a Saturday, if it be wet or dry, give it a dose in the afternoon to tide it over Sunday.

Roses, when overwatered, most generally show it by a soft growth with yellow, mottled foliage, and when not enough water has been given them they assume a grayish color, with small foliage and corresponding thickness of stem.

It is not a hard matter to keep between these bounds, however, but how much water should be given to derive the best results from the different varieties is where the art comes in; and it is only by exercising the utmost care that we can, to a degree, come near to it. We should always have an object in view in regard to watering, its beneficial or detrimental results—not to-day, but in the future. Going to nature we find roses growing in the open ground very luxuriantly, when the season has been favorable to them. True outside conditions are far from those which we can maintain with impunity inside, still, much can be learned therefrom. I believe there are as many roses not brought to their fullest perfection by insufficient watering, as there are others injured by overwatering. As our soils differ very materially as regards evaporation, the best course to pursue is to make careful trials, allowing a part of a bench to get on the dry side, then giving it a thorough watering, keeping another part moist all the time, and so on. This can be done on a small scale and the best method will manifest itself in a very short time.

With us such varieties as Niphetos, Gontier and Meteor will take quantities of water that have proved harmful to Morgan and the Mermel family.

Sun-stand or scorching of the tender foliage in summer (providing the glass is of good quality), is often the result of improper watering. On dull days, although the temperature runs high,

water should be used sparingly; as when the plants are growing very fast, if the air becomes charged with too much moisture and the plants are a little on the wet side at the root, they quickly become too soft to ensure the scorching sun when it pops out again. For watering the beds before the soil has settled down firmly, a coarse rose, with the screw part of a hose coupling soldered on to it, is very desirable, being easily attached to the hose. This method obviates the plastering and washing down of the surface soil. Syringing plays a very important part also; how, when and where to do it and why is what we should all strive to make ourselves masters of.

I never shade young roses, except during planting time, for a week or so. Now, with the fine houses that we have to-day, built for light, etc., during the months of June, July and August, the hose must be freely used on all bright days if we want to get that large, leathery foliage which is disease-resisting.

We must take into consideration the immense amount of evaporation that is going on through the foliage during bright sunshine. We often see the shoots drooping during a hot sun; this is the cause of the foliage giving off more moisture than the roots take up to sustain the strength of the plant at the same time; hence the necessity of spraying the plants overhead four or five times during the day, at the same time wetting down the walks and sides of tables. By so doing the extra quantity of moisture needed is supplied, and instead of the plants becoming hard, with small foliage and thin, dry wood, as would otherwise be the case, it allows the absorption by the roots to be utilized in building up a strong plant.

One of the worst enemies of a rose house is red spider; its best preventive is a sharp, fine spray directed upwards from underneath the foliage. If properly done the first syringing in the morning will be sufficient to prevent the spider putting in an appearance. The inside rows and corners of the houses should be carefully watched for this pest. If once it gets a start it very rapidly infests all the plants in the house. By keeping our plants perfectly free from spider during summer, when the dull days come in the fall it will be found a great help to us when we are carefully guarding against black spot and other kindred diseases by not having to syringe. For syringing I find the Ebers nozzle to be the most practicable, as by force and fineness of spray can be maintained by turning the key. When a nozzle is used thumb or finger action is unknown. H. ### For the Busy Man.

Legislation against the department stores in Illinois has failed to pass.

Ten thousand people visited the Shaw Gardens, St. Paul, last week.

James Dean's sale was a most successful one, being attended by a large number of growers.

The banquet proposed to be given in New York City, Philadelphia, will occur on the 26th inst.

Will interest seedsmen to learn that the Department of Agriculture does not endorse the Cook Bill in its entirety.

Large preparations are being made for the Providence florists, and a large convention is expected there in August next.

Jerome H. Biles, Cambridge, N. Y., has been elected president of the Seed Trade Association.

W. F. Willard, Westchester, Conn., secretary.

## The Cook Bill to Regulate the Sale of Imported Seeds.

This matter was discussed by the Seed Trade Association, at its meeting held in Washington this week. From the remarks of Mr. Hicks, of the Pure Seed Association, and the Secretary of Agriculture as given herewith, it is evident that the proposed bill, in its entirety, does not receive the endorsement of the Department. Mr. Hicks also explained that he was not the author of the bill.

On Wednesday morning Mr. Hicks appeared before the committee and narrated at some length the work being done by the Pure Seed Investigation division of the Department, stating that a number of the leading seedsmen and farmers of the country had endeavored to secure the necessary of investigation and the efforts that were being put forth by the department, with a view to obtaining pure seeds in America. Mr. Hicks cited many instances where seed had been adulterated, or mixed, and pointed out the great drawback such a condition of affairs was to agriculture. Of course, he viewed the seed trade from the grower's and the farmer's point of view. He considered the term "seedsmen" was applicable to all who sold seeds, whether they were in the hardware store. He was of opinion great harm was done in mixing seeds of those who were not reliable seedsmen; he believed the honest seedsmen of the country were as eager as the Department of Agriculture that pure seeds should be sown, and that their efforts were bent in that direction.

The speaker then referred to the connection of the Department of Agriculture with the Cook Bill. The author of that bill had approved the bill, and with a number of letters from farmers asking him (Mr. Cook) to introduce a bill into Congress, and to give the seedsmen to sell seeds which would grow. The secretary referred him to Mr. Hicks, and he was asked to give the gentleman to give Mr. Cook free access to all data on the subject in the possession of the Department, which was done. Mr. Cook was asked to submit a copy of his bill, after it had been considered by the committee, and any criticism they might have to offer; and it was also suggested to him that he send copies of his bill to a few of the leading seedsmen of the country in order to get their ideas, which were also considered by the committee. In drafting a bill of this kind, this was practically the last the Department heard of the bill, and it was not until the bill was printed and introduced into Congress. In the meantime Mr. Hicks had had several conversations with Mr. Cook. After the bill was introduced the author of it immediately asked the Department to endorse it. The Department looked over the bill very carefully and found many features which were objectionable, and offered several amendments. In brief, these amendments were to the effect that in any bill introduced at all, it should be a bill to regulate the importation of inferior grass and clover seeds, and to regulate the seed trade means for the dealers to have their seeds tested and guaranteed. The amendments were approved by the Department had not been included in the bill introduced by Mr. Davidson, which was an exact copy of the Cook bill.

The Department of Agriculture did not wish to have any legislation with the seed trade. Looking at it from the standpoint of the farmer, what the Department did wish to do was help him to get a better class of seeds, provided he is going to pay for them. It was also stated by Mr. Hicks that with a view to encouraging co-operation between the department and the seedsmen, it was in the process of devising methods of procedure for seed testing in different parts of the country, a meeting was held in New York, and the experiment station directors was presented to the Association of American Agriculturists, and the Department Stations at the convention held in Washington in November, 1886, representing the various States. A committee of experts in seed testing to be organized and adopt a standard form of report to be sent to the Department for use in all American States.

Responding to this memorial,

the association ordered the appointment of a committee to formulate rules for seed testing which have been published for the guidance of the stations.

### Seedsmen Visit the Department of Agriculture.

A large number of the delegates to the Seedsmen's Convention visited the Department of Agriculture, and were shown about the building and grounds. They paid special attention to the display of seeds here in front of the seed house, where are grown over 500 varieties of grasses and clovers. Mr. J. H. Lamson Scribner, in charge of the division of agronomy, explained the various forage plants which were here, and were highly pleased with what they saw. The 500 varieties of forage plants growing in the grounds of the Agricultural Department have been gathered from all parts of the United States. The "cresping bent" sample of which comes from the coast of Maine and from along the southern Atlantic coast, attracted much attention, and was highly valued by the delegates.

It has long been looked upon as heresy for well-informed seedsmen to recommend which other than Kentucky blue grass for lawn purposes, but the soft, thick mat formed by the "cresping bent" is fast gaining first place for the purpose of making lawns. It is a variety of blue grass, is the Apache blue grass, from New Mexico, which, unlike its namesake grows in the shade. It is a blue grass, taking its color from the sky.

For some time Prof. Scribner cultivated a grass that had been obtained from Acapulco, Mexico, and known to botanists as a species of paspalum. But he could learn no complete name for it, and only in the last few days was a sample of the same grass received from Texas, where it has been called "Texas paspalum" and "be-damned." The name describes the grass. No amount of pulling will wrest its roots from the soil, and it is a most interesting specimen is a square of prairie soil from Nebraska, from which a large square of prairie soil was sent to the planters of Korea. There are European grasses by the name of "be-damned" which is being made to cultivate in the soil of the planters of every known grass and forage plant.

Mr. Scribner is anxious to exchange with those engaged in advancing similar work in foreign countries. At Kansas City, Mo., he has a large collection of seeds of various kinds, and Mr. Scribner is anxious to have a similar collection in Texas and New Mexico in order to show the effect of climatic conditions in this variety of plants.

### New York.

**The Market Slow.** The extraordinary cold, wet weather which prevailed until Friday completed a crippled business this week, the stores getting but little transient trade, and the Greeks being unable to get out on the streets.

Carnations felt these conditions most; no matter whether they were of high or low quality, they were scarce, and what sales were effected were at wretchedly low figures. Two dollars per dozen for the best quality of carnations with 81 per cent on top notch or fancy price. The supply of good roses was very light, but there was enough for the demand. Beauty advanced a little in value, but cents is again the taking price for specials. Valley sold well, much of it in the form of surplus, but the quality of the 25 and 35 per 100 were the prevailing prices. Peonias sold at from 25c. to 35c. per dozen; gladioli at 4 per 100.

**Retail Trade.** Steamer work was the main feature of the week, many large pieces were to be seen in the saloons of the different ships. On the steamship Purist, 100 plates of the following designs and about the same number of boxes containing cut flowers were sold, and a quantity of orchids was being used.

There was a large dinner decoration for the South American Trade Conference; over 500 plates were laid. A large quan-

ity of spring or hardy flowers was used.

John C. Wardford won the first prize for the best fancy decorated wheel at the Evening Telegram parade on Saturday. The parade on Broadway Street, was awarded first prize for the best floral wheel, A. Merritt taking second prize for the best floral wheel, and the tandem machine which was awarded the prize in that class.

John C. Wardford, Bogart and other members of the trade will have a grand excursion to the fishing banks of Long Island Sound. The excursion has been chartered for the occasion.

**Anticton Sales.** These sales have been numerous and successful. There will be an array again next week. In addition to the city sales Tuesday and Friday, there will be a sale of flowers, and the whole stock of orchids at Short Hills, N. J., by order of the Receiver, John C. Wardford, will be auctioneer. Sales began Wednesday and Thursday at 11 A. M. Trains leave foot of Barclay Street at 8:30 A. M. and 11:15 A. M.

In addition to the exhibition at the club meeting Monday evening arrangements for a sale of flowers will be in connection with the convention of the S. A. F. at Providence, R. I., in August next.

**American Institute Show.** The horticultural section of the American Institute held their regular meeting on Monday evening at their rooms, 111 West Thirty-eighth Street. The meeting and exhibition proved to be an interesting and valuable of the series yet held, every foot of available space being covered with nearly all that is to be seen.

To orchid lovers and experts the superb exhibit of twenty-three forms of seedling orchids, by G. Roebling, Trenton, N. J., was a rare and prominent speaker at the afternoon meeting, and he was the only one to be able to duplicate the exhibit this side of the Atlantic. The diploma of the American Institute was awarded to Roebling and a cultural certificate to his gardener, Mr. H. Chinkberry.

Two buds of the new Hamberg carnation, weighing about three pounds each, splendidly finished in color and shape, were shown by the exhibitor. The exhibitor was W. Turner, gardener to W. Rockefeller, to whom a cultural certificate was awarded. In the commercial grade and in the way of cut flowers, J. T. Lovett, Little Silver, N. J., made a fine showing of over 120 varieties of peonias; a cultural certificate was awarded to J. Lovett. In the way of cut flowers, J. T. Lovett, Little Silver, N. J., made a fine showing of over 120 varieties of peonias, making an exhibit that of its kind is rarely equalled, and well merited certificate which it received. J. Miller, Ouzis Nursery, Westbury Station, L. I., showed 34 cases of peonias, iris and other hardy flowers; several of his peonias were of exquisite color and form and were highly valued by the exhibitors for the market.

Leach Bros., Jersey City, put up 26 plants of the well-known strain of double and single petunias. J. T. Dwyer, Corwall-on-Hudson, exhibited a fine collection of gerberas and J. C. Williams, Montclair, N. J., eight kinds. N. Butterbach, Newark, N. J., exhibited a fine collection of gerberas.

Siebert & Son, New Rochelle, made an interesting display of hardy flowers; one unique feature of their exhibit was a collection of Rosa rugosa hybrids. Several of these are very remarkable, showing H. P. coloring, also taking on the double form, and being of the double form. The exhibitor of this group and the committee expressed a wish to see the specimens again when they had individual boxes acted upon.

Another novel feature of the exhibition was a collection of wild flowers from Oakes Ames, Esq., North Easton, Mass.; the botanist of the city in this day has been very successful in his collection. The Farmers' Club, also the Horticultural Section, have adopted the plan of holding a sale of flowers on the 11th inst. which will meet again till September.

The exhibition at the Florists' Club Monday evening last afternoon and evening, June 14, promise to be of unusual interest. A number of exhibitors have given their attention to the exhibit. A crowded meeting is anticipated.

Chicago

Supply and Demand. All stock has kept pretty well cleared off the past week, not so much from extra demand, however, as from rather short supply. This is particularly true so far as roses are concerned, partly from loss of crop, aided by considerable planting. The decid-dry cool May and so far June is probably favorable, however, to all those who kept steady firing, while those who had let the cool pile run down and tried to shut along with as little fire as possible will be apt to have mildew bothering them fully as much as at the season was, as last year, extremely warm, and from opposite causes. The very finest Brides and Maids are still quoted at \$5 to \$6 by some houses, but \$3 to \$4 is as high as the market generally went, with inferior stock at \$2 and below.

Carnations seem to have taken a new lease of life and Scott particularly are unusually plenty; extra good McClelland and others to be noted—in fact, carnations bid fair to be unusually good all of June. The price ranges for large, standard, bright flowers, \$1.50 to \$2; fancies, \$2, with inferior 50c. to \$1 per 100, which may be considered good in the morning hours, common red peonies are just in from this region. In a few days this flower will be much more plentiful, but, to be sure, they have not been pushed out by excessive heat this year.

Amour flowers. Fred Weber, Bowmanville, will hereafter grow roses only in summer, filling his houses in the fall with carnations, of which he has now planted out 1500 and violets. His carnations, then bedded out on benches, are now being planted in the free ground in sandy soil.

J. A. Budlong proposes to grow roses only hereafter. The 15,000 carnations now planted out will be allowed to flower all they will for summer cutting. With him roses pay best, he thinks. Part of the houses are already replanted and doing finely, so that the other houses will be by the end of June.

In the South Park a fine flower stem is rising from a true Agave americana, one of the relics of the World's Fair, obtained then from California. There would have been a pair of them but for an accident in the breaking of the flower stem of one. The roses in the wooded island will be late and have wintered none too well, which, considering the mildness of winter, is hardly explainable.

The Saffery Brothers planted an early chrysanthemum house the last week in May and have now all planted out the same quantity to last year. Western Triumph with them has been a very bad one to get stock from. The roses are now doing lively. All speak-room next fall will be devoted to their new carnation, Arzyle, the flowers of which still sell at \$5.

William Wells, a North Clark Street florist, has been appointed superintendent of Washington Square and two other small parks. These are still under the control of the Common Council. The department still failed of passage in the legislature.

EDGAR SANDERS.

Newark, N. J.

On June 17 August Begorow, of the firm of Begorow & Krutich, left on an excursion to America for Europe. He will visit the Hamburg exhibition, at which he will be the Inspector and Schuetzen of New York and take part in the shooting tournament at the Niagara Falls, July 4 to 10, then continue his trip to Switzerland and down the Rhine, stopping at several places and spending some time at Bonn, his birthplace.

## St. Louis.

**Shaw Gardens.** About 10,000 people visited Shaw Gardens last Sunday, notwithstanding the drizzling rain which prevailed during the day, and private parties, at intervals fell in showers.

By the terms of Mr. Shaw's will the garden will be sold at private sale on Sunday only twice a year—the first Sunday in June and September.

The weather, probably the condition, considering the ravages of the cyclone a year ago. Many trees were closely injured, so, that at present the rearrangement of the flower beds necessary. This interfered somewhat with the general work of the garden, which in consequence is a little backward. The principal interest centered in the new Victoria Regia.

The Lindell Hotel has made elaborate preparation for the entertainment of the National Association of Nurserymen, who will meet in annual session here June 9 and 10. Secretary George C. Sargent Rochester, N. Y., arrived on Monday and President Silas Wilson, of Atlantic City, N. J., on Tuesday.

The first morning session will commence at 11 o'clock and will be presided over by Melior Ziegenhein and N. J. Coleman. President Wilson will respond and deliver his annual address.

The election of officers and selection of the next places of meeting and reports of committees will be the order of business Wednesday afternoon. On Thursday papers will be read and discussed. The association will meet at the rooms of the St. Louis Florists' Club Thursday afternoon. The rooms of the club are handsomely decorated for the occasion and many growers will exhibit cut flowers.

Trade remains as inactive as ever and traffic is restricted to uncommonly few buyers. Stock of every description is plentiful and most of it is of poor quality. Prices have fallen since the 1st of June from \$4 per 100 for fancy selection down to 50 cents per 100 for poor stock; Mauds are 15 cents per 100. White roses are \$1.50 per 100 in the order named; white roses grade as much as ever. Beauty is in fine demand, but prices are down to 75 cent per 100.

Carnations of good quality meet with the best sale at 15 cents per 100. The grades fall to sell clean at 50 cents per 100. Stock continues in greatest quantity and in the best demand. Primulas continue in good demand at \$2 to \$4 per 100; sweet peas are not as abundant as last week and sell clean at 25 cents per 100; smilax is now abundant and has poor sale at \$10 per 100.

**In Town.** F. J. E. Kilen, representing C. H. Joosten, is a visitor here attending the nurserymen's convention.

Pat Florist James tied his horse to the wheel of a vehicle standing near the cottage at Forest Park last Thursday morning, and the horse was killed, which both vehicles were wrecked and the horses injured. Mr. Pape will try the hitching post.

**CHAS. G. FLOCKENSTEIN.**

## Toronto.

The June meeting of the Horticultural Society was the best attended one we have held yet, the room was crowded with amateur, mostly ladies. The principal subject of the evening was window boxes and hanging plants. There were several exhibits of boxes and hanging baskets and many questions were asked by different members. The meeting was informal and friendly and many of our visitors were encouraged to express their intention of coming again. The directors have decided to offer prizes to members who will put the most plants in the care of the Gardeners and Florists' Club this fall if satisfactory arrangements can be made with that body.

**State of Trade.** Business in bedding plants is now

very good, but as the season is a late one some of the boys are getting scared and have already put a good deal of stock on some of the stock; but I think that spring trade will be quite up to the average very fine and growing very well, excepting in low-lying places, which are a little too wet on account of the plentiful rain lately.

**THOS. MANTON.**

## Cleveland.

**Trade Falls Off.** Trade has had a decided falling off since last writing. At the stock cut-flower trade is very quiet. Several large weddings, receptions and commencing parties have occurred within the past week, however, and most of the first-class stock on the market was closely upped, so, that at present almost all sales are on consignment.

**Weather Affects Plant Trade.** In the plant trade has been affected considerably by the weather; most growers report good stock and good work. Considerable planting out has been done in the city parks, and this work of driving and planting will continue, and it is not likely that much planting out will be done in these parks this season.

**A Large Wedding Decoration.** One of the most extensive decorations in several months was that of the Haystack Hotel, on Wednesday, the 1st day last. The work was done by J. M. Gasser. The table pieces consisted principally of red and white carnations, in which were arranged hundreds of tiny incandescent lights, producing a grand effect.

**Settling.** F. C. Bartels, representing J. M. Gasser's greenhouses, leaves next week for an extended trip through Europe. Mr. W. C. Langbridge, representing J. B. Rios & Co., Cambridge, N. Y., is a caller this week.

**Fine Smilax.** \$15.00 a hundred strings SWEET PEAS, 30 cents a hundred boxes. Cash on order please.

**W. KEIR, Piquetteville, Md.** When Writing Mention Florists' Exchange

**DAISIES** 45.00 a hundred strings \$1.00 per 100; \$1.00 per 100. **PANSIES** 45.00 a hundred strings \$1.00 per 100; \$1.00 per 100. **W. KEIR, Piquetteville, Md.** When Writing Mention Florists' Exchange

**W. H. HALE, Ridgewood, N. J.,** and E. Pittsburg, Pa. When Writing Mention Florists' Exchange

## Providence.

## State of Trade.

Business generally has been very satisfactory during the past few weeks. This, however, will be owing to the demand for funeral, school and wedding work rather than to a general demand. Funeral work has been unusually brisk, many large pieces being called for, and as regards weddings, there have never been so many as at present, notwithstanding the hard times. Carnations are very abundant and roses fairly good, these two flowers forming the bulk of the supply. What this market needs as much as anything is a larger variety to select from. Fotted stock on the whole sold well this spring. E. J. Johnson reports good trade on these goods, with good prices and good demand.

The first gladiolus in this market showed their appearance Monday from the Rhode Island greenhouses and were very fine.

## Preparing for Convention.

The local club is actively engaged in their preparations for the coming convention. They have their plans well formulated and sub-committees are holding frequent meetings and making arrangements to carry them to perfection. These plans are not as yet perfected to such a degree as to warrant their being made public, but will be shortly. One thing is certain, however, that the Rhode Island Horticultural Society will not be traduced by the Florists and Gardeners' Club of Rhode Island. A club of local growers are daily practicing and will make some of the visiting clubs hustle. An effort is being put forth to have some suitable flower growths arranged at Roger Williams Park for this occasion, and the project is favorably thought of by Superintendent Pitts.

## Notes.

On the 15th of this month a lawn festival will be held by President and Mrs. Farquhar Macrae at their spacious grounds on Smith Street in favor of the summer.

J. F. Parks & Co. have given up their retail store at 140 Westminster Street for the summer.

Johnston Brothers have discontinued their branch store at 167 Westbosset Street.

Timothy O'Connor is adding considerable glass to his already large greenhouse plant.

William Hay is increasing his glass area in Arlington. He is bringing the best roses to the local market.

Alex. McClellan, of Newport; George T. King, of Boston, and William J. Stewart, of Boston, were visitors in town recently.

## State Flower.

During the spring term of the public schools of this State the pupils were held by ballot for a State flower of Rhode Island. The ballot was in favor of the violet. A total of 42,202 votes were cast, divided as follows: violet, 10,613; rose, 7,183; pansy, 5,275; pink, 4,873; arbutus, 4,317; golden rod, 3,248; white lily, 3,048; lily, 1,748; daisy, 1,630; buttercup, 1,301. W. H. MASON.

## Stamford, Conn.

Mrs. M. A. Free & Daughters did both the church and house decorations for the Descott-Tilly wedding at Darien.

## Amsterdam, N. Y.

Jay Lingenfelter has suffered a stroke of paralysis and his condition is critical.

## A Word on Drainage.

There is very little land in this country that may not be materially improved by the draining. Much land that is naturally wet is slow to dry out in the spring. The tile it will advance the season two weeks and often more than that. Land so improved by the admission of air, and there is no better way of admitting it than by the underdrain which, when it has carried off all surplus water, carries back to the earth a current of warm air—ideal for a tenant for a cold climate. Henry F. French, in his admirable work on "Farm Drainage," says: "The simplest, cheapest and best form of drain-tile is the cylinder, or merely a tube, round outside, and with a round bore."

## Simplicity in Greenhouse Construction.

During our long experience we have not only made many improvements in greenhouses, but we have so simplified the construction that building a greenhouse is no longer a matter so full of complications as to tax the patience and the ingenuity of even the most intelligent mechanic. Our

When Writing Mention Florists' Exchange

**Special Advantages Gained by Using**

Allows you from 1/2 of an inch or more of ventilation the entire length of your house.

As it opens thus evenly your ventilators are not wrenched and strained, and your glass remains unbroken.

The Ventilators being thoroughly **BALANCED** the power is divided over the entire length of your house, thus the far off end starts as soon as the nigh end.

Don't forget that you gain speed in opening and closing your house. You have the lightest and neatest machine and casts the least shadow.

BURPEE'S SEEDS  
PHILADELPHIA  
WHOLESALE PRICE LIST FOR FLORISTS and MARKET GARDENERS  
When Writing Mention Florists' Exchange

THE AQUATIC GARDEN  
NOW IN PREPARATION and TO BE SHORTLY ISSUED.

This will be a handsomely printed and bound volume, its contents covering the history of aquatics down to the present day, and imparting the knowledge necessary to their successful propagation and cultivation. It will be a book of great value to the trade as also to the amateur, and in its pages will be fully described how to grow and care for this valuable group of plants to the greatest advantage, from a staked tub in the city garden to the grandest ponds in park lands. The book will be copiously illustrated with many excellent full-page plates and numerous half-tones of notable plants and water gardens.  
The author, Mr. Wm. Tricker, has had most excellent advantages and a long education in the cultivation of aquatics, and what he has to say on the subject will be looked forward to with interest.

Price \$1.00. Orders booked now.  
A. T. DE LA MARE PTG. & PUB CO., Ltd.

## CULTIVATIONS.

### Cultivating.

While walking through our carnation field several days ago I noticed a certain many plants which had not been considered up to this time was due to the cultivators throwing the soil up against them. Aside from the natural tendency of the cultivators to throw the soil against the plants, it can be greatly increased by means of the hand work of the operators. They should be impressed with the importance of going at a proper rate of speed and doing the work as near right as possible.

Some soil will be sure to get up to the plants, no matter how carefully the work is done, unless the cultivator is kept a considerable distance from the rows. When this is done, however, much of the good results which can be accomplished with the use of the cultivator will be lost.

After cultivating, the soil, which has been thrown against the plants, should be carefully removed, for if left in this condition our worst enemy—stem rot—will have an excellent opportunity to get in an appearance, and particularly so if the weather be wet or the atmosphere very humid.

Once or twice during the season the plants should be carefully hoed, the idea being simply to remove the weeds that are growing up, and particularly so if the cultivators do not reach.

Some may still entertain the idea that the plants should be densely hoed and the soil thoroughly loosened about the roots, that these may have a better opportunity of growing the roots. This has been already pointed out as a mistake; but since it is so easily forgotten or overlooked, it will bear repeating. The less we interfere with the roots the better it will be for the plants. To do otherwise, and particularly so by severing them with the hoe can result only in injury.

Once or twice during the season the plants and the surface soil loose, we will be aiding the plants to our fullest extent, so far as concerns this part of their cultivation. H. WEBER.

## Northampton, Mass.

The grounds about the Smith's College, which were planted about a year ago, largely with herbaceous and perennial plants, are now in full bloom, and E. Canning, who has charge, feels proud of the results of his labors. It will be a pleasant task to answer the numerous questions asked by the large number of sweet girl students who are so largely a part of the college. It is surprising and gratifying to see such interest being taken in this class of plants, which is becoming more popular here, as at Rochester, where it is the fine collection of the well-known and brilliant Professor Covell is doing his utmost to interest the public. Each plant is plainly and neatly labeled, which makes the plant not only more interesting, but saves the trouble (to some) of enlightening the inquiring mind, for there are those who will find out, however "mum" one chooses to keep oneself. It also assists the would-be learner, who oftentimes deprives himself of the satisfaction of knowledge for various reasons. It is a pleasure to see that this establishment where the culture of herbaceous plants is being made a specialty, and where the plants are being surrounded the centre aquatic pond is a fine collection of shrubbery, but hardly a plant is labeled. Of course, there is some one who knows all about them and it is a veritable encyclopedia; but it is a pleasure to see that this pilot has neither forgotten the name or is like ourselves confessedly ignorant, upon which it is well to be careful, for upon it, the boys cannot have things made to plain, otherwise our girls will get them, then in this as in all other branches. W. M.

## Colorado Springs.

Business has been good in pot plants, leading stock, etc. Carnations and small roses that sell retail at 25 to 35 cents, being extremely popular this season, and as the good quality material is in demand.

Planting is well under way at this writing.

Emil Hemming left for England this week and carries the well wishes of a host of admirers with him. He will visit Kew Gardens, from which he graduated some years ago, and probably this accounts, in some measure, for his ability to give plants at such a rough climate.

**Weather and Market Notes.**  
Summer weather has arrived at last, the thermometer at writing having reached the forty mark. Rain is needed rather badly in the light, sandy soil, as although there have been showers they did no more than wet the surface.

Up to this time, for the season, roses have been good; but now Eric is being displaced by the useful summer-grown Kaiserin. Bridesmaid will also have to give way to the early market. Rain is up fairly well; for roses, the best, are \$3 to \$4; seconds and culls, \$2 down to \$1. Every day presents more and more difficulty in clearing out.

Beauty, owing to throwing out for routine purposes, are below demand. The highest price for long-stemmed is \$15 to \$35. A few Jacobs, are in, but, so far, they are short and not good sellers. Carnations, really good colored flowers, are still a glut; few now go beyond \$15. The hot spell will, no doubt, injure the quality and increase the quantity, giving school children a fine chance to get supplies; and the prospects for the next two weeks will be good for sales with low prices.

Peonies are now very abundant and larger in size; prices range from \$2 to \$4 per 100. J. Als is now scarcer, with prices at \$3 to \$4 again.

**Club News.**  
A good deal of routine business was transacted at last meeting and a summer programme outlined, the officers being authorized to call special meetings at any time and places as may be deemed desirable, so as, if possible, to make trips out among the growers. A letter was read from Mrs. John Weston thanking the club for its kindness and financial assistance during her bereavement.

**Jettings Around Town.**  
W. E. Lynch is receiving from Otto Hansen, of Mt. Clare, Ill., the old Hines' white carnation, with 2 to 3½-foot stem, excellent flowers, that sell just now at as high price as any of its newer competitors in sales in this market.

The bowlers are arranging to get together and form a team to take part in the tournament at Providence in August.

Nicholas Wietor, manager of the Rogers Park Florist Co., 41 Wabash Avenue, was married on Tuesday at the Catholic Church at High Bridge to Miss Lizzie Thyson. A reception followed at the home of the bride's mother.

F. Franks, of 10 Clara Place, has bought out W. H. Kidwell's old flower store at 410 Milwaukee Avenue. Mr. Kidwell now takes the management of his brother's establishment at 3510 Wrentham Avenue; the latter, E. Kidwell, moving with his family to his farm at Terre Haute, Ind., where he designs ultimately to establish a nursery and greenhouses.

H. G. Tull, treasurer of Henry A. Harkett's business, has been in the city this week.

Z. K. Jewett, Sparta, Wis.; W. A. Harkett, Dubuque, Ia.; H. Stone, of Carthage, and J. H. Konkik, of Joliet, were also visitors. EDGAR SANDERS.

**Carlstadt, N. J.**

Henry Abel is building a large greenhouse near the depot here.

**How to Push Along a Good Thing.**

The Florist's Exchange has been the means of introducing many good things to the notice of the trade, and its publishers, without regard to advertising to be derived therefrom, have always been ready to put in mechanical devices and greenhouse supplies which promised well. Mastic, the substitute for putty for putting through sashes, was first introduced through The Exchange, and Messrs. F. O. Pierce & Co., who control it, recently informed us that the first lot (it was never not advertised until late in the season of 1895) amounted to 800 gallons; in 1896 they sold 4,000 gallons, while this year they expect their sales to reach 10,000 gallons. This is not a puff nor an ad. for its sales, but a statement to indicate the possibilities which exist when any one has a good article to place on the market.

**Butted Glass**  
This is no longer an experiment, it has come to stay. There are various ways of making Butted Glass, but the best way is with the  
**Clipper Bar.**

With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a light roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

Answers Solicited from Those Who Know.

(102) **Destructive Mice**.—How can I rid my beds of alternate and geraniums of mice? These pests are very destructive; they carry away into their burrows a whole lot of soil. Any information on how to destroy the mice or prevent their depredations will be welcomed by me.

(103) **Heating and Piping Greenhouses**.—We have remodelled our greenhouses and now have five and a violet frame and desire advice on heating and piping same. We have 600 feet of four-inch pipe and 300 feet of two-inch, and after using the four-inch would like to put in two-inch for the remainder.

The heater is a six-section Carmody, which we will replace, or we will add new sections to the one we now have, as may be suggested by you. Please answer the following questions.

(a) The best system of laying the pipes; (b) size of heater to heat 5,000 square feet of glass and 500 feet of surface, and the best heater to use; (c) the highest point of system and height of this above heating surface; (d) is it best to use hot water under pressure or level; (e) where shall we put vents? (f) what height should the chimneys be and the location of the same? (g) by having valves on the system can we control the flow and heat in any of the houses, and if so where to locate the valves? J. C. FLORAL CO., Kansas.

The plan submitted shows the following arrangement of the houses:

No.	Height.	Temp.	Length.	Width.	Area.	Desired.
1	12 ft.	70 ft.	12 ft.	70 ft.	840	degrees.
2	12 ft.	70 ft.	8 ft.	50 "	400	"
3	22 ft.	70 ft.	16 ft.	65 "	1320	"
4	12 ft.	70 ft.	16 ft.	65 "	1320	"
5	20 ft.	50 ft.	18 ft.	60 "	1080	"
6	5 ft.	70 ft.	4 ft.	40 "	160	"

The first four run east and west with No. 6 along the south wall of No. 5 while No. 5 runs north and south along the west ends of the other houses. The heater now in use is located in dwelling house cellar at about the middle of the north side of the range.

In a general way the following answers to the questions proposed will be helpful: (a) The four-inch pipe can be used for the return pipes in the other houses and to supply about eight runs in No. 6. If the heater is to be located as at present I would suggest that a main flow pipe be carried from it through No. 1 and along the east wall of No. 5 at such a height that the doorways will not be obstructed; from this pipe take off supply pipes for colls on each side of each of the houses; drop these pipes to the level of the colls, which should contain two-inch pipes as follows: House No. 1, two colls, five pipes each; No. 2, two colls, three pipes each; No. 3, three colls, six pipes each; No. 4, two colls, three pipes each; No. 6, one coil of two pipes. The colls should be connected by a single pipe to the return pipes, which should run across the ends of the houses and then to the heater. A two-inch will carry the water from the pipe but this could be gradually increased as the other colls are added until it reaches four-inch when the main pipe in house No. 5 has been taken on. This should then be carried through No. 1 to the heater, and another return pipe to the remaining coll in house No. 3 and those in Nos. 1 and 2, in the same manner.

It can be suggested that the best heater for a heater. One would be to retain the present heater, as it is to supply No. 1, No. 5, and the coll in house No. 6 for the remaining houses. The new heater should have about ten square feet grate surface for each square foot of about 200 square feet. It may be the Carmody or any of the other heaters on the market. A four-inch coll boiler, either like some of the designs recently shown in The Exchange or a steam boiler, one or two feet in diameter, filled with tubes. Another way would be to put in a new Carmody boiler with a large surface for heating, and to increase the present boiler to the same size. One of these boilers would answer in mild weather, but it could be held in reserve for severe weather or accidents. The boilers

should be yoked together, but should have valves on both flows and returns so that either can be cut out in case of breakage. The third plan would be to take out the boiler now in use and put in a water boiler large enough to supply the entire range. This should have a grate surface of about twelve or fourteen square feet and a heating surface of about three hundred feet, making a twenty-horse power boiler. (c) The highest part of the system should be directly above the boiler if possible, or if this cannot be arranged have the highest point of the flows near where the first colls are taken off, which will give a down-hill system of piping. (d) It should at all events be an elevated expansion tank, but should not care to put the four-inch pipe under much pressure. The first plan regarding the heaters is adopted if it will be possible to have houses 1, 2, 3, 4 and 5 in a separate system that can be run either under pressure or not, as may be decided on. (e) No vents will

in a great measure prevent black spot of the rose. It may be possible to have better results by using it stronger on plants growing outdoors, as the foliage on them is much tougher than that produced under glass. It is a simple matter, however, to experiment on a few plants and note the results.—H. H.

## Flowering Trees and Shrubs.

*Staphylea colchica* is very noticeable in early spring by reason of its teeming clusters of pure white flowers. It is not particular as to soil, is perfectly hardy, and does well in a partially-shaded place.

*Spiraea prunifolia*, fl. pl., better known as Bridal Wreath, is a common garden favorite and in its flowering season is unsurpassed for profusion of

## New York Florists' Club.

Meeting and Exhibition.

The Florists' Club met on Monday evening, Vice-president Plumb in the chair, President Henshaw motelychaving returned from his European trip. The attendance during the afternoon and evening was quite large. A Committee of Arrangements was organized with matters pertaining to the forthcoming convention of the S. A. F., at Providence, in August next, was appointed consisting of Messrs. W. F. Sheridan, W. A. Prosser and Julius Lang. The better part of the afternoon, with the Board of Trustees, will form a Reception Committee, with a view to extending club's hospitality to all delegates from other cities who may pass through New York en route to the convention. It is very likely that the trip will be made by boat, but definite information on this subject will be furnished later.

Mr. Manda stated that a committee had waited upon Professor Goodell, of Harvard, and had agreed to deliver a lecture, illustrated by stereopticon views, on the subject of tropical plant life in its native home. This alone will be worth attending the convention to hear and see.

Mr. Foster stated that an interesting program, both as regards entertainment and beneficial work, had been prepared and he hoped to see a large representation from New York and vicinity.

There were eight exhibitors of seasonal flowers; the exhibition being held in the hall below the club room. Mr. Withers read the report of the judges, which was so correct that they had awarded the club's silver medal to Mr. Miller, of the Oasis Nursery, Westbury Station, for an exhibit of 154 varieties of peonias, and a certificate of merit for collection of roses. Among the peonias were *La Superba*, a beautiful Daybreak pink; *Vanauville*, pure white, with double rose center; *M. Dupont*, which is slightly tipped with scarlet; *La Quintin*, dark red, and *Claude de Lorraine*, rose color.

The club's silver medal was awarded to John Lewis Childs, Floral Park, N. Y., for a collection of general collection of herbaceous cuttings. Noticeably among these were *Hymenocallis californica*, *Leysia*, *Chionodoxa*, *Chionodoxa*, *Lilium Parylli*, *Irish Hispania*, *William I.*, *Blanche Superb* and *Lilacens*, and *Irish Giant*.

A certificate of merit was given to Pitcher & Manda for a similar collection, among them being fine vases of *Thermopsis caroliniana*, *Agrostemma coronaria* and *Gallardia grandiflora*. W. A. Manda, in general collection. In the latter were fifteen varieties of Scotch pinks (*Dianthus plumarius*) little leaves, and hybrid rugosa roses (*R. rugosa*, M. Hoste), regarding which the committee will make a report at the inspection of the plants at Mr. Manda's place on Thursday next. The same exhibitor had a vase of very fine *Coronopsis flavida*, several kinds of fox-gloves, sweet Williams, *Centranthus rosea* and *Lilium Grayii*.

A cultural certificate was awarded to M. B. Dilm, Ardley, N. Y., for nine specimens of *Staphylea colchica*, including Katherine Tracy, with very fine stems; Ovid, Blanche, Purpe, Dorothy, Thelma, Freddy, Emma and Princess Beatrice and Blanche Ferry, and C. Esold, Mineola, N. Y., for carriage garden plants, including *Staphylea colchica*, Queens, N. Y., sent as excellent spikes of *Canna* *Burk* and *Yellow*, and *Staphylea colchica* in very fine condition. Siegmund & Co., New York, exhibited thirteen kinds of hardy flowers, among them an exquisite pink, *M. Andromeda*, and a very sweet-scented *Philadelphus strax* japonicus, *Lilium Cramer* and a spike of *Canna*, *Itala*.

J. Logan, commenting on the variety and beauty of the exhibits, stated he had been in the city so many old friends, reminding one of old days. The floral world in America in past years has gone from the dull and ridiculous and it was a pleasure to see the tendency displayed to get back again to the old and good.

The club adjourned till the first regular meeting in September.

Staphylea colchica.

be required if the expansion tank is connected at the highest part of the system, but if this is not the case there should be one at all of the points in the pipe from which there is a downward slope in both directions. This will not done the air will be prevented from escaping and the circulation will be prevented. (f) From top to bottom, depending on the kind of heater selected, as well as the size of the flue. (g) Yes. The heat can be regulated or entirely shut off from any coil if there is a gate or angle valve at the lower end of each coil. L. B. FAIT.

(104) **Formula for Spraying Roses**.—In May 22 issue of Florist's Exchange you write: "I pound sulphate of copper dissolved in a quart of ammonia; a quart of this mixture 1 pint to a barrel of water." If, as presumed, the barrel means 40 or 45 gallons of water, the quantity of sulphate of copper in the spraying liquid will amount to only one-fourth per thousand; very little.—CONTICHL.

—I have found this formula quite strong enough to eradicate mildew, and

blooms. Literally, one may cut its shoots of dazzling white flowers by the yard.

*Cercis canadensis*, one of the Judas trees, is a noteworthy tree, having flowers of rich magenta rose which appear just before the leaves. When the tree has attained a little size it flowers with such lavish profusion as to quite hide the branches. It will grow anywhere.

*Kerria japonica*.—In its double form this is found in many gardens, which are cultivated throughout nearly the entire year by its brilliant double yellow flowers. Given a fairly good loamy soil this plant will flourish in almost any situation.

*Berberis Hakodadi*.—This delightful berberis is an introduction from Japan, and has proven itself hardy at Dorset Park, N. Y., the specimen from which our picture was taken having been grown on the Pratt estate.

*Viburnum lantanoides* ranks among the most useful of the viburnums, and is one of the best growers. It deserves recognition, also, from the fact that it is American, being indigenous to the New England States.

Viburnum lantanoïdes.

Berberis Hakodatî.

**CORRESPONDENCE.**

*Insertions in this column to all communications free from animus; but the opinions expressed do not necessarily reflect our own.*

**A Mutual Fire Insurance Co.**

I have been interested in all communications appearing in your paper upon the subject of fire insurance. Our firm is paying insurance rates of \$2 per \$100 per year on our greenhouses, while we pay \$1 per \$100 for three years upon our dwelling and barn near by. For some years I have noted all greenhouse fires, and do not believe that the losses warrant the high rates charged. There has been no greenhouse fire in this vicinity for several years. In fact, I do not think there has been more than one loss near here in the memory of man.

The only possible hope of relief seems to be through the mutual plan. The objection to the mutual plan is the possibility of arson. It seems to be assumed that florists are less honest in this particular than others. I believe the assumption is false, and that florists, as a class, are as honorable as any.

We know that the millers, the lumbermen and others successfully operate mutual insurance. In fact, I do not now recall any mutual insurance company which limits its risks to its own class which has been unsuccessful for any other reason than lack of intelligent business methods. I assume that our craft has sufficient brains to successfully manage a mutual insurance association if a moderate start could be made. The first essential is a legal corporate existence. The latest suggestion of a plan is the formation of a *Lloyd's* under the New Jersey law. This Mr. Esler states requires a cash investment of \$50,000 and a personal liability of several wealthy land owners of the State. This it would seem impossible to procure.

I desire to suggest a plan. A Mutual Fire Insurance Company here procured a charter some years ago under the Indiana law. For a time it did a thriving business all over the country from Minnesota to Florida. In the wreck of mutual companies in 1880 it failed and was placed in the hands of a receiver. It has, however, settled all claims against it, and the receiver will soon be discharged and the legal existence of the corporation be left intact. The directors of the company do not desire to continue the business and are willing to dispose of their charter rights for \$2,500, the price they paid for it.

If policies are issued from the home office in Indiana this company could legally do business in nearly all the States of the Union.

If a sufficient number could be interested in the matter I would undertake to start the business if desired. My plan would be to get an option

on this charter, secure applications for insurance from as many reputable florists as possible, taking not over \$5,000 from any one person. At the outset we would estimate the average rate at \$1 per hundred per year. Take premium notes for five years' premiums, assessable for fire losses only. If we were able to secure acceptable applications sufficient to make the premium notes amount to say \$50,000, we would then issue the policies, notify an applicants that their insurance was in force and collect one year's premium, or one-fifth of the premium notes, and thereafter each new application would execute his note and pay the premium for one year upon the acceptance of the application and issuance of the policy.

My idea would be to collect at the end of the year another year's premium, whether needed for fire losses or not, and create a small reserve fund. Then issue policies when desired for a cash premium.

If you see fit to publish this communication and your readers are interested in it, I desire that every one favoring the plan write me saying so and stating the amount of insurance they would carry if the plan was perfected. I could then report at the next S. A. F. meeting what the prospects were, and if favorable we could formulate a plan and select officers of a preliminary, if not a permanent, organization.

I refer to Messrs. E. G. Hill, of Rich-

mond, Ind.; E. H. Michel and C. G. Fleckenstein, of St. Louis, Mo.; W. N. Rudd and J. C. Vaughan, Chicago, as those they desire it, but I would prefer that some other person be selected after the preliminary correspondence.

W. J. VESSEY, Fort Wayne, Ind.  
[We gladly open our columns for a full discussion of Mr. Vessey's proposal and hope that all florists interested in the formation of a Mutual Fire Insurance Company will furnish us with their opinions thereon, at the same time forwarding a copy of their communications to Mr. Vessey.—Ed.]

**The Hybridization of Tulps and Raising of Seedlings.**

At the tulip conference held in London, England, last month a paper on this subject was presented and read. From a report of same in the *Gardeners' Chronicle* we make the following extracts:

The essayist commenced by insisting upon the condition necessary in the hybridization of any plant with a view to obtaining improved progeny, viz., that of parentage. In the selection of parents much thought and care were essential. The hybridist need not be careful to select "rectified" varieties only, as breeders were just as good, and, indeed, breeders generally carried more seed than a rectified variety.

He enumerated the characteristics desirable in a good tulip. Form and coloring were each necessary of consideration, and neither need be given the precedence over the other, but there was further room for improvement in form, such as in perfecting the roundness of the cup, increasing the shoulder and the breadth of the segments; also in clearing the ground color and in improving the markings.

In order to accentuate the class distinction in the double flowers, it was essential to use only pure blood, i. e., to cross biazars with biazars, roses with roses, etc., otherwise flowers of indefinite and undesirable markings would result. Before any flower is fertilized it was necessary to see that the stigmatic surface was in a perfect condition, and it should be guarded by a shield of cotton-wool, as well from the pollen of the same flower as from that of others that might be conveyed by bees, etc. This shield would have to be removed when cross-fertilization was to be effected, and this over the stigma might be again guarded with a new shield of the same material. The petals would not wither immediately after fertilization had occurred, as was the case in many flowers; but when they have dropped it was advisable to cut off that part of the pistil above the seed pod to prevent water from lodging, and thus causing decay. The seed pod would swell rapidly during June and July and ripen in August. At the time the bulbs are usually lifted the new bulb attached to a plant that has been cross-fertilized may be detached and lifted and rested as ordinary ones. It has borne no part in the development of flower or seed. The seeds are best sown as soon as ripe, or early in September, in boxes or pans, under glass, if preferred, or in the open air, covering them about a quarter of an inch deep. If the seed is not sown until February the seedlings will be up in May. They first appear similarly to an onion, with one leaf only, and though increasing each year in size, as the bulb increases also, one leaf only will be produced until the bulb has reached its age to flower, which will vary from four to seven or eight years, according to whether the bulb produces a "dropper bulb" or not after the fourth year. If it produced a "dropper bulb" the flowering stage is considerably delayed. Seedlings should be selected as soon as possible, though it was not always advisable to pass final judgment upon a variety for the first few years. All seedlings exhibiting poor form in the flowers should be destroyed, before they have become "rectified." Had this been strictly done in earlier years, there would now be fewer flamed and feathered varieties with attenuated petals, possessing little to recommend them, except satisfactory markings. Generally the biazars showed the greatest development at present in form and markings.

Kerria japonica.

Cercis canadensis.

Spiraea prunifolia, fl. pl.

THE TARIFF CHANGES

Bulls, Dutiable at 30 Per Cent.—A New Paragraph Inserted for Orchids. Palms Azaleas, Etc.

The tariff, so far as it affects the interests of the florist, has remained for a long time as it was, but on Wednesday last, and the following changes made: A new paragraph was inserted, covering plants as under:

"Orchids, palms, dracaena, crotons, and azaleas, 30 per cent. ad valorem. Tulips, hyacinths, narcissi, jonquils, lilies, lilies of the valley and all bulbs, bulbous roots or corms, which are cultivated for their flowers, 30 per cent. ad valorem. Natural flowers of all kinds, preserved or fresh, suitable for decorative purposes, 30 per cent. ad valorem.

On stocks, seedlings, etc., Mr. Allison for the committee proposed several changes, making the rate on stocks, cuttings, etc., of Myrobalan plum, of Mahaleb or Mazzard quince 30 cents; dried 15 per cent. ad valorem per 1000 plants; stocks, etc., of pear apple, quince or St. Julien plums 33 and 15 per cent. ad valorem; 1000 plants of pear apple, quince 25 cents each. The paragraph with the above changes was agreed to, and now reads:

240. Stocks, cuttings, or seedlings of Myrobalan plum, Mahaleb or Mazzard cherry, three years old or less, 50 cents per thousand plants and 15 per cent. ad valents each; stocks, cuttings, or seedlings of pear apple, quince, and St. Julien plums, three years old or less, and evergreen seedlings, 25 cents each; stocks, cuttings, or seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, narcissi, tulips, hyacinths, and all trees, shrubs, plants and vines, commonly known as nursery stock, not specially provided for in this tariff, 30 cents per 1000 plants, three years old or less, and evergreen seedlings, 25 cents each; cuttings, or seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, narcissi, tulips, hyacinths, and all trees, shrubs, plants and vines, commonly known as nursery stock, not specially provided for in this tariff, 30 cents per 1000 plants, three years old or less, and evergreen seedlings, 25 cents each. The paragraph with the above changes was agreed to, and now reads: On onions Mr. Vest moved to reduce the rate from 40 to 20 cents a bushel. He said the Bermuda onion came here in the last few months and did not come into competition with the home crop of onions. The effect, therefore, was to raise the price of the Bermuda onion, and to grow a home grown, without affording any protection. The amendment was rejected.

In onions Mr. Hanson said, and in house provision on garlic was restored and the rate changed to three-fifths per cent per pound. On peas Mr. Allison proposed a committee modification, making the rate on peas, green, 10 cents per bushel; dried peas, 30 cents; split peas, 40 cents. Agreed to. On seeds Mr. Howley said he would address a few remarks to the Finance Committee against the committee change in the tariff on seeds, and he was specially provided for from 40 to 25 per cent. Mr. Lindsey pointed out that "blue grass seed" was on the free list, so that the seeds of blue grass will be satisfied with 25 per cent. on their seeds.

The seed paragraph finally went over. As regards the duties on cuttings, some has occurred in the duty on bulbs as specified in the Digley Bill. As regards the orders these have been placed subject to the settlement of the tariff question, and the Senate's endorsement of the Digley Bill. The Digley Bill puts it beyond question that 30 per cent. duty will be charged on all this tariff, so that growers may be prepared for an advance in price made by dealers in accordance with this duty, which, in many instances, will be an important matter. The duty of 30 per cent. on fresh natural flowers will have a beneficial effect, in properly meeting the importations from Bermuda at Easter time, and tend to put an end to the tariff competition.

The seed paragraph having now passed, will be taken up again at a later date.

Experiment Station Bulletins.

We note, with pleasure, the efforts being put forth by the various experiment stations to make the information issued of as much practical value as therein the view of the florist, by embodying in the bulletins, or leaflets, the subjects on which the bulletins treat. As an example we have the recent Farmers' Bulletin (53) of the recent Farmers' of Agriculture, on "How to Grow Cereals and Grasses," by W. H. Williams Falconer, and "Notes on Plums," in Bulletin 131, issued by the Cornell University

Experiment Station, Ithaca, N. Y., which contains a valuable formation of varieties of plums for Western New York, furnished by S. D. Willard and Professor Wiley, of the New York Agricultural Experiment Station, Geneva, N. Y. He has also introduced the system of planting, possibly the most important of our bulletins, in which the "meat" is provided in simple and interesting language, and which will be of great service when they are likely to prove the most instructive and useful to the practical grower. The bulletins of the Experiment Station employ an editor, Mr. Frank H. Hall, and the several bulletins that have been issued since the inauguration of the system demonstrate that Mr. Hall has a thorough grasp of the situation.

Obituary.

Charles Wright.

The first of our florists, for many years, has been one of the best known florists of this city, died at his summer residence at Connetquot Point on Narragansett Bay, on Friday last. He was located on Franklin Street several years, but his date has not been engaged in active business, although until December, 1885, he conducted a small greenhouse at 387 Washington Street, which was subsequently sold to the late moved to Connetquot Point. Mr. Wright was born in England sixty-one years ago, and came to this country in 1847, settling in this city. He entered the employ of one of the leading florists, with whom he remained until he engaged in business for himself. A widower and eight adult children—six girls and two boys—survive him. W. H. M.

Hon. Joseph S. Fay.

Hon. Joseph S. Fay, the well-known horticulturist and philanthropist, of Wood's Hill, died at Cambridge, Mass., the first of last week, and was buried from Christ's Church in that city on Wednesday. The deceased was 83 years of age, and died from cancer of the stomach, after a long illness, during his tiring from active business pursuits had spent his summers at his seaside home in the city of Nahant, where he were carried on to a large extent and on a thoroughly scientific basis. He was a member of the American Forestry Congress and the Massachusetts Horticultural Society, and a constant exhibitor at the State fairs. He raised roses, pansies and hollyhocks being among the specialties he most admired. He was a man of a high order of intellect, a charitable, genial and kind. Among the monuments which will for many years stand as a memorial to his memory and coming generations is a fine forest of 100 acres at Wood's Hill, which Mr. Fay successfully grew from seed that he planted. W. K. W.

New York.

Trade drags along slowly; prices obtainable upon much of the stock offered being only 75 per cent. of the value. There are even under the figures of last week, yet the quality of much of the stock is light and the quality of the better is better than date. But quality makes but slight difference in the price of the stock. The stock it will hardly realize at the present time, but is valued in small lots, while in larger quantities it is selling at 75 per cent. and the 1.00 \$2 to \$4 are frequent taking prices. Many of lower grade go unsold. Sweet peas are in the market in quantities that are difficult at times to realize even 81 per 100 bunches. Some roses sent in are practically all gone at 41 per cent. and some of value from 50c. to \$4 per 100. A few extra and fancy Kaiser realized 46 and 48 per cent. and many realized 44 per cent.

Acacia Sale.

Friday brought the spring auctions practically to an end, this winding up of the last season. The quantity of stock for sale was larger than usual; stock was offered in greater quantities than ever, and the general speaking was in a better condition, yet buying was slow and prices ruled lower. Pitcher & Haden's Auction Sale of Orchids. The first of the season of the unreserved clearance sale of this one offered in the past season of orchids was brought to a close on Friday last, at the public auction. Much of the stock had been disposed of by private sale during this spring, and the remainder was sold at a price not all of the highest value. Taking this

fact into consideration the prices obtained both days may be regarded as very good. Miscellaneous cypripediums averaged \$40 per 100; some of the better specimens \$100. The attendance at the sale both days was not large, but had the advantage of being largely composed of persons of a professional and amateur element. Several of the latter bought liberally. Among the buyers were: J. R. W. Allen, New York; Geo. Rochelle, N. Y.; John Condon, Brooklyn, N. Y.; R. W. Allen, Hudson, N. Y.; J. C. W. Van Dine, New York; J. C. Wilkes-Barre, P. T. Jones, Short Hills, N. J.; J. J. Jones, Convent Station, N. J.; J. C. W. Van Dine, New York; and the most recent addition to the commercial ranks—Dr. Kitchin, of Orange, N. J., who was present on both days. Visitors in town were: E. G. Hill, Richmond, Va.; G. H. Hill, Washington, D. C., and W. H. Hill, Minneapolis, Minn. A Dimmock sailed for England on Thursday the S. S. Campania.

A Business Man.

The firm of H. H. Berger & Co., of San Francisco, will, on July 1, open main offices on Broadway, this city, which will be at No. 227, and at No. 258, is not correct. Address is P. O. box 2106. All eastern business, correspondence, etc., should be sent to the office in the New York office, the San Francisco branch being retained for the business of the coast business.

F. E. McAllister Co. Assign.

On Friday last, June 11, the corporation of F. E. McAllister Co., 69 Cortlandt street, New York, was organized for the benefit and protection of all their creditors. A meeting of the creditors was held on Monday, June 17, with the view of obtaining an expression of opinion as to what would be most advisable to take looking to the future.

The assignee's statement showed assets as follows: Cash on hand, \$10,438.53, valued at \$7,530.28; stock on hand, bonded, \$7,098.40, valued at \$2,232.10; fixtures, \$12,490.96, valued at \$200.00; cash in bank, \$128.97. Total practical assets, should the business be allowed to continue, \$21,260.07. Liabilities, \$108,521.22. Preferred claims for \$3,936 were made at the time of the assignment, the holder of which had been notified of the assignment to waive their preference, and accepted the terms offered on behalf of the corporation. The balance of the claims payable in equal installments at 3, 6 and 9 months, should the creditors agree to accept the terms offered, will be \$104,585.26. Mr. F. E. McAllister stated that the volume of his business had been much reduced, and that he was suffering from depression and he assigned on account of pressure by the French Syndicate in the interest of their creditors, Mr. Lydecker, acting for the syndicate, which is the largest creditor, could not accept the terms offered until he had consulted with his principals, and until they are heard from, a definite agreement cannot be reached. The interests of the other creditors represented was almost unanimously in favor of the corporation, but the majority of the creditors the business was forced to a wind-up there would be practically nothing for them.

Much sympathy was shown by the trade to Mr. McAllister in his misfortune, and many of the creditors, under adverse circumstances and severe losses. His failure is an honest one, and the creditors would be sincerely pleased to see him thoroughly established once again on an independent basis.

The committee appointed by the Park Board to examine the plans of the New York Botanical Garden, at Bronx Park, has reported their rejection in their present form.

Summit, N. J.

Several members of the trade in this vicinity are interested in a newly organized body named the British American Society, of the first season. The quantity of stock for sale was larger than usual; stock was offered in greater quantities than ever, and the general speaking was in a better condition, yet buying was slow and prices ruled lower. The president of the Society is R. W. Cline, and Wm. Jessop is secretary. The members of the committee are: A. Herrington and T. Petch. The Mayor, G. Wilcox, will represent the township and district at the banquet.

Exclusively a Trade Paper. Entered at New York Post Office as Second Class Matter. Published EVERY SATURDAY BY A. T. DE LA MAR PUBLISHING CO., LTD., 2, 4, 6, & 8 Duane St., New York. P. O. No. 3697. Telephone 2154. Circulation REGISTERED CABLE ADDRESS (Commercial Cable) FLOREX, New York.

SUBSCRIPTIONS: \$1.00 per year in United States, Canada and Mexico, \$2.00 per year for foreign countries in postal union. Payment in advance. No back subscriptions will commence with the first number after receipt unless otherwise specified. Back numbers can be supplied when wanted. The date of address label shows when the subscription expires and is the subscriber's receipt. No other receipt is sent.

ADVERTISEMENTS: Copy must reach this office not later than Thursday or order of advertisement in issue of the following Saturday. \$1.00 per line. Special positions extra. Discounts on contracts of one month or longer. Orders from unknown parties must be accompanied by cash or satisfactory references.

Subscribers

Should give notice to the publishers at the end of their time if they do not wish to continue taking paper, otherwise it is continued and payment exacted.

Exclusively a Trade Paper. THE FLORISTS' EXCHANGE is published in the interests of those commercially identified with the Florist, Seed and Nursery business. New subscribers are requested to enclose business card or other proof of their connection with these trades.

For the Busy Man.

The F. E. McAllister Seed Co., New York, made an assignment last week.

The Hon. Jos. S. Fay, of Woods Hill, Mass., an ardent horticulturist, is dead.

A suggestion as to how the Mutual Fire Insurance for florists may be instituted appears on page 596.

Mr. Irving House, Rochester, N. Y., has been elected president of the American Association of Nurserymen.

The members of the Baltimore Florists' Club have practically completed the matter of affiliation with the S. A. F.

The Senate has concurred in the duty of 30 per cent. on bulbs, as specified in the Digley Bill. A similar tariff has been placed on the various dracaena, crotons and azaleas. Some changes have also been made in the tariff on nursery stock. See this page.

When Writing Mention Florists' Exchange

## A Plea for Garden Roses.

In his most interesting paper read before the Dutchess County Horticultural Society on Wednesday last, at Amandale, N. Y., Mr. Patrick O'Mara, of New York, had the following to say in regard to selecting varieties:

And now comes the most difficult question to decide, viz., what are the roses to plant? This is where the doctors are sure to differ. There are in existence at the present time say in round numbers, two thousand five hundred varieties of roses—an embarrassment of riches. If I had the space every one of them would be planted. The real pleasure of a rose garden does not consist so much in comparing reds with whites, yellows and pinks as in studying the nice distinctions and individual characteristics. Many we learn to love for their faults. The late Mr. Peter Henderson would not stand in for "garden for pleasure" bearing upon this question, which is worth repetition: An old German florist, who was very fond of ladies even dey comes to buy mine rose. dey wants him double; dey wants him nice cooler; dey wants him smell good; dey wants him moony; dey wants him to be everything in von rose. Now, I hat to say to lose ladies dat I sees not dat lady dat is rich, dat is young, dat is good temper, dat is beautiful, dat is healthy, dat is schmart, dat is eeferydings in von lady. dat is not mooch. Poetry is no truth than thier in the German's petulance. And what rose lover would want all the roses in the garden? Not many, at all events. The variation is the charm. We would wish that the little Polyantha or Multiflora Roses was not so numerous as they are. The tea or hybrid perpetuals; but they are, nevertheless, charming without it. They are, perhaps, the only made roses will give us roses with qualities now lacking in our present favorites, for which we thank them in advance. Some day, too, we may have a nomenclature committee, who will meet the French roses at the portals of our country and rechristen them with a pronounceable name before presenting them for which we must ever thank them in advance. A rose by any other name than Mademoiselle Suzanne Marie de Rotocmach, just as good as any other sweet and we would not miss our train trying to tell our neighbor what it is called. To be loved that is the name. I day changed her name and that it was a shorter one. Provision should be made to call roses by their own names in the name of the rose. The man who called a rose "Grande Duchesse Herliere" may as well have called it "no consideration for the poor gardener or horist who would have to write it out every time he wanted to write it on a pencil. They don't write it. They simply say the rose is no good; it is called by a name which is not to their revenue. It is a pity that the French raisers cannot see the absurdity of roses being called by names and above all, calling them after every member of a family, resulting in unlimited names.

The last five years have been most prolific in new roses; in fact, almost a revolution in taste, and the material planter to-day has vastly improved material to select from. That grand rose, the King of Hearts, has added an entirely new feature to the garden and must be reckoned with for a complete change of style in the garden pillar form on an arbor, or on the house. No garden is complete without it. The new roses to be had are the Yellow Rambler (Aglia), and the dream of years is realized in it. Then there are the new climbing roses, the synne, and the White Rambler (Thalia). It is, perhaps, too early yet to say that these latter are of ironclad hardiness,

but they promise well. Another beautiful pillar rose is Carmine Pillar, unique in its magnificent shade of rosy carmine. Rosa Wichurana has added another charm to the garden, and the garden, and I do not know a more pleasing sight than to see it trained up post, almost reaching the top, or trained to form an archway. Its foliage alone will repay for the trouble, but its flowers are no characters in their grace and beauty. The double varieties of this are a great advance, especially the Carmine flower, and the quintessentially fragrant, The Pink Rose, one of the hybrids, has the charming quality of carrying no perfume, and useful rose. For covering terraces or low boundary walls, these roses are of inestimable value.

The new hybrid Sweet Briars add another feature to our garden roses. The hybrid tea section has been wonderfully developed, particularly by J. Pernet-Ducher, who has given us Mme. Caroline Testout, Mme. Germaine Trochon, a yellow variety like Sunset, which has proved hardly at New York; the new Hybrid Tea, Mme. Germaine Trochon, and Souvenir du President Carnot. These are all fine garden roses and come very near to supplying the demand the German list so vainly wished for. Belle Siebert must not be overlooked either. The new roses to be had in requisition, Kaiserin Augusta Victoria, supplies the finest white flowers it is yet to be seen.

For those who like novelty in roses that taste can be satisfied with Roger Lambert, which is very much like Gen. Jacqueminot, after being treated with a sulphur match as we did when I was in France. The wonder of the Inconstant Beauty, with its many-colored flowers, another and a lovely "fresh" rose.

In hybrid perpetuals the year is made memorable by the introduction of Juliette, the rose that won for its raiser the gold medal of the Massachusetts Horticultural Society—peerless in its fragrance, lovely in its color, and unpareed. And before I forget it, let me whisper in your ear that there is another rose to be had, which will bloom out soon and which will be worth having in the garden, viz.: Mrs. Robert H. G. The new rose, which is a long, pointed bud, a beautiful clear pink—as yet it is without a rival in its color, and which has made a strong impression, let me say that it is likely to lead all the pink forcing roses, as well as because of its size and magnificent color.

And what of garden is complete without the Rosa Rugosa? Now, a rose garden without a representative like the one of "Hamlet" without the "moody Danae." If there is room at all put in a plant of that beautiful child of the Rugosa, Mme. Georges Brunt.

Don't forget to save a corner for the new roses, which are being introduced so fast. There is nothing on earth prettier than a perfect bud of the Old Rose, the Queen of the Garden, Moss, not forgetting that pale beauty, Comtesse de Murinais. It is a pity our country has not more of these fine plants; and I, for one, would surrender tomatoes so that we could have them in the garden.

Speaking of climate reminds me that people will hanker after standard roses, but the price of such roses is ridiculous and has set against them here. There may be beauty in a standard rose—"I'm not good for it,"—but it is not to be had in my mind with the circus clown on stilts, the difference being that he gets two smiles at a look, and a dollar of money, while the poor rose is perched on a stork's leg for a whim, or as a plant to be seen.

If you have room at all, put in a plant of Rosa setigera, which will do it and which you will never be ashamed of. And near by put in a plant or two of the "old" roses, such as the near, or its American cousin is apt to throttle it. A little farther on put in a plant of the "old" roses, such as the near, or its American cousin is apt to throttle it. A little farther on put in a plant of the "old" roses, such as the near, or its American cousin is apt to throttle it. Give them plenty of room and let them have their own way to a great extent. The roses will call at their own account of stiffness.

There is no limit, apparently, when one comes to the roses. There are roses, but the little Polyantha roses must not be forgotten as an edging for your beds of tea roses, and above all, Climbing

Souper. One of the newer tea roses I must not forget to mention, viz.: Princess Alice de Monaco, somewhat of a cross to the throat.

Now any one who attempts to talk about roses is sure to be asked which are the best. In the bush roses, if I was limited to a dozen, I would name the following: In hybrid perpetuals, Jubilee, Mrs. John Laing, Ulrich-Bronner, Dismer, Anna de Diesbach, Paul Neyron, Mme. Gabriel Luizet, Helen Keller, Gen. Jacqueminot, Baron de Bonstrier, Baroness Rothschild, Mabel Morrison, Margaret Dickson, Peter Hugo, S. M. de Rodocanachi, Alfred Colroy.

In hybrid teas, La France, Souvenir du President Carnot, Captain Christy, Kaiserin Augusta Victoria, Mme. Caroline Testout, Souvenir de Wootton, Augustine Guinoiseau, Mlle. Germaine Truchon, Madame Abel Chateaux, Belle Siebrecht, Madame Schwaller and Camerons.

In tea and monthly roses, Souvenir de la Malmaison, Hermosa, Marie Gullot, Maman Cochet, Clothilde Souplet, Martin Digne, Princess Alice de Monaco, Bridesmaid, Perle des Jardins, Francaise Kruger, The Bride, Marie Van Houtte, Sunset, Corona, Development, Mme. Welsh, Mrs. Paul, Mme. de Wattenville. And I would try hard to squeeze them all out and new.

With this I close. The trouble has been in preparing this "pica" what to put in. There is no doubt that many will find serious omissions; they are granted in advance, and I trust to see them supplied next year at this place by some other rose lover who will brave criticism by making another plea for roses. We may have our differences of opinion as to methods of culture or preference of varieties, but it is safe to assert that we all agreed on one thing, viz.:

"There is not a single flower that can vie in beauty with the rose."

Cincinnati.

Trade Fairly Good.

Hot weather has arrived and everything outdoors, weeds included, is growing. Carnations have improved wonderfully in the last few days.

Cut flower business has been fairly good, in a wholesale way, during this season. Shipments have been numerous. Store trade has been rather spasmodic, school commencingments and other things selling out, and it is still holding their own, although they are getting smaller as the season wears on and the light is on, trying to keep of midsize. Beauty that for this time of year are very fine sell at 1 1/2 and 2 cents each. A. A. Victoria, long stemmed, select stock, tenth 6 cents, while second and third grades sell at 1/2 and 3 cents for good, clean stock, while mildewed flowers bring virtually nothing. Petie sells at 2 cents. This rose is the old standby in this part of the country and the call for young plants of this variety is far in excess of the supply. Several of our growers are looking for this kind of stock. Niphetos is popular with one man, principally for store trade, as it is still a beautiful and graceful rose for funeral work, but it has some roses as a back number. Meteor is the best of all red roses and good stock is wholesaling at 4 cents; 2 and 3 cents being asked for second quality. It is strange that more of our growers do not get a stock of Kaiserin Augusta certain for summer bloom; it is certainly the best white rose we have for this time of year.

Carnations are still holding their own, Portia and Scott predominating, although Silver Spray and Mrs. Fisher are in evidence. All sell at 50 cents to \$1 per hundred.

Sweet peas are in over-supply and 25 cents up to 100 per 100 price. Their blue corn flowers sell quite well at 25 cents per 100. Ten Week, double and single, sell at 50 cents per 100. Lily of the valley is in good demand, the stock coming in is very plentiful at 10 cents per 100. Some are about over; a few pink ones are still to be had at 2 and 3 cents.

Many of the growers are about done. Many of the growers are drying off their calls.

Ben George and James Allen are now lessees of the Oakley greenhouse. They have taken possession and already have one house of chrysanthemums planted. Fred Loder's establishment will build, during the summer, two or three large houses in the same neighborhood.

Charles A. Hart, of Charleston, W. Va., writes me that he has leased his greenhouse for one year. He is a young man of ability, and will push the business.

E. H. Giesy, of Lockland Lumber Co., writes me Saturday. He states that their refrigerator and greenhouse business is good, but not understanding the market has hard times.

Charles A. Dean, with E. W. Guy, Belleville, Ill., was a caller during the weather affects plant trade.

Owing to the cold and backward season, many growers are still holding large quantities of bedding stock on hand. A careful estimate shows that not one-half the bedding has been done this season, in comparison with other seasons.

Annual Outing. The annual outing of the florists of Cincinnati will be held at Coney Island on July 22, instead of at Woodlands, as was originally expected. We expect to see a large attendance and hope as many visiting brethren as can will join in the boat race at Vine Street every two hours; first boat at 9 A. M.

Howling Fire. Bowling has at last struck this city and several teams will be organized for the contest at Coney Island, Oct. 14. Boat race, on July 22, the assisting of Charles J. Jones, William Murphy, Juanus Baer, Brother Brooks,

Albert Brunner and E. G. Gillett will be for the first practice. Other teams will be six, wishing to compete will please notify the captain, Charles J. Jones, as soon as possible. The prizes are: First, 100 cent cigars; second prize, 100 five-cent cigars; third, 100 stogie. Special programme for the day will be issued. E. G. GILLETT.

St. Paul.

Weather Favorable to Good Crops.

Since my last report we have passed from extreme cold (for the season) to extreme heat, the thermometer for five days has fluctuated 70 to 84 degrees in the shade. This changed condition has brought out an abundance of good stock. While some of the roses present a pinched and disordered appearance, the majority of them are good. Although there is an abundance of good stock on hand there is no general glut. Prices have weakened a little, but in general they are well maintained.

Cut flower trade in general has been good, shipping was never better. City trade has been variable, the main call being for weddings and funerals.

Chrysanthemums have progressed at a lively pace since the warm wave struck us, and is now well advanced. Superb specimens are being marketed, hustling night and day with a large force and has his work pretty well completed. The season extends to all the parks in the city—some eight or ten in number—including Como, with its several hundred acres to embellish, the task of planting and overseeing all is no easy one.

Many of our growers are busy planting chrysanthemums and roses and overhauling and repairing their houses.

Business Done.

W. Strehlow, of Forest Lake, who is running the houses formerly owned by Governor Merriman, depending in some fine roses and carnations. The houses formerly owned by F. G. Gault, Excelsior, are now controlled by J. Brackley.

R. Seeger has discontinued his city store and has moved to a new place. He grows some of the best roses brought to our market and will, no doubt, get some elegant stock the coming season.

A floral festival to be held during the State fair will be projected by the committee in charge, but we learn has now been abandoned, for which we are sorry. VERITAS.

Toronto.

Business is Good. Business for the last week has been an immense quantity of bedding plants having been disposed of, but the stock is not near exhausted. The market on Saturday was crowded with plants than any other day this year, and as they were not all sold at the end of the day expressed a hope that the end of the season is not yet here.

Many flowers have been very plentiful and cheap, but the demand for them at low prices has been and is very good. The mail next week is likely to be larger than the supply and prices have been denied. Roses for next week are offered at 10 cents per 100, and I think they are likely to be all sold. Outside cut flowers are good and plentiful. Ferns, pyrethrums, iris and flowering shrubs in great variety are sold in large quantities.

Most of the best of our parks is finished and gives promise of looking better this summer than ever.

Johnston, N. Y.

Thomas Barson has bought the greenhouse and dwelling house owned by Fred K. Aucek on East Main Street and will continue the business there and as they have owned houses on the west of the city. Spring trade has been and still is brisk, although the weather has been anxiously waiting for a settlement of the tariff, and business is dull in consequence.

New Bedford, Mass.

E. S. Haskell has suffered a sad bereavement in the loss of his wife. He has the heartfelt sympathy of all here in the trade, who expressed it in the many floral emblems sent.

Nephrolepis Exaltata Bostoniensis.

In large and small quantities from \$40.00 to \$80.00 per 1000.

MINE IS THE GENUINE STOCK. FRED C. BECKER, - - - 1730 Cambridge Street, CAMBRIDGE, MASS. When Writing Mention Florists' Exchange

**MASTICA**  
 FOR GLAZING GREENHOUSES. SUPERIOR TO PUTTY IN EVERY WAY.  
 It is not hardened by the extreme heat or cold that a greenhouse is constantly subjected to both inside and out. Mastic is adhesive and remains permanently elastic so that it is not forced out of place by expansion and contraction of the panes. It does not crack with the frost, and is not injured by any saving time and expense. With Mastic can "bed-in" or use on the outside, but with a machine only.  
 Mastic and Mastic Glazing Machine were given  
**HIGHEST AWARD OF SOCIETY OF AMERICAN FLORISTS AT PITTSBURG, 1895.**  
 Put up in gallons, \$1.00. Half gallons, 50 cts. Quarter gallons, 35 cts.

When Writing Mention Florists' Exchange

Providence. The Market Brief. There has been a big improvement in the business during the past week. ... These functions have given the florists all they could handle, while bouquets and baskets have been called for in great numbers. ... Carnations still hold the sway in this market and, generally speaking, are better in quality than usual, although the damp, dark weather has to some extent curtailed the supply. ...

News-Journal. ... In some localities the stem rot, which was so prevalent and destructive last year, is still attacking the plants, but in the major portion of this section plants are practically free from it. ... Overwater tells me that four of sulphur liquid sprinkled about the plants will materially check the ravages of this disease. News-Journal.

The Rhode Island Agricultural Experiment Station issued Bulletin 45, concerning 'The Loganberry, from Seed to Fruitage, which is very interesting and valuable. ... Charles Ogren, foreman for E. J. Johnston, sailed Wednesday for his home in Sweden for a three months' vacation. ...

William Dutcher, who has been sick for several months, is slowly improving and is able to devote more attention to his business. ... Oskar T. Lindmark, recently for three years gardener for J. McGregor, of Brookline, Mass., has entered the employ of E. J. Johnston. ...

Coming Events. ... A lawn party and strawberry festival will be held upon the spacious grounds of Farquhar Macrae on the 16th for the benefit of the Florists and Gardeners' Club of Rhode Island. ...

Weather Harms Plants. The weather up to within the past few days has been remarkable for low temperatures, both day and night. ... Rose Items. Outdoor roses have been better than they were last year, the hybrids being larger and well-colored; ...

The regular monthly meeting of the Florists and Gardeners' Club will be held Friday evening, 23rd inst. ... Sunday, the 13th inst., the eastern part of Rehoboth was struck part of Rehoboth, Mass., was visited by the most remarkable hailstorm that the residents ever experienced. ...

The authorities at the Department of Agriculture have begun a series of experiments in one of the greenhouses at the Department to determine the soil best suited for the growing of violets. ...

Fine Smilax \$15 a hundred strings SWEET PEAS, 10 cents a hundred blooms. Cash with order, please.

W. KEIR, Pikesville, Md. When Writing Mention Florists' Exchange section and name of manager. A good many tomato plants were partially destroyed. ...

A Destructive Pest. Great damage is being done in this vicinity and the outlying districts by canker worms. Fruit trees, especially apples, have suffered considerably from these pests within the past week. ...

Building News. ... David W. McCall is building a new yard of three houses of one story each at 63 Halsey Street. ...

George ... is building a one-story iron roof addition, ten feet square, to his office, 14 Earl Street. ...

Washington. The John Saul Sale. The sale of stove and greenhouse plants at Saul's nurseries last week was but poorly attended by buyers; ...

Weather Harms Plants. The weather up to within the past few days has been remarkable for low temperatures, both day and night. ...

Rose Items. Outdoor roses have been better than they were last year, the hybrids being larger and well-colored; ...

The regular monthly meeting of the Florists and Gardeners' Club will be held Friday evening, 23rd inst. ... Sunday, the 13th inst., the eastern part of Rehoboth was struck part of Rehoboth, Mass., was visited by the most remarkable hailstorm that the residents ever experienced. ...
