Guided by the success I had on my first trip a few years ago, I last year made for the same old place, I was only to find, not what I expected, but the forests gone and trees planted by the thousands. Orchid collecting being my sole object, I was greatly disappointed, but there was only one remedy, and that was to push thru to the uninvited parts far from habitations, and I must say I was fortunately rewarded by finding a most beautiful lot of cattleyas, that, to judge by their appearance, had my first trip escaped the greed of the orchid hunter.

The South American Andes, as compared to other parts of the world, are, without the least doubt, the richest in useful species, as long as we keep to the lands proper, which are marvelous in the number of species they contain. Almost every foot ascended from the foothills, new features of the vegetation are presented, one locality varying greatly from another. This variation ceases immediately at the foothills, below which extensive valleys and river basins take the place of the rugged Cordilleras. The vegetation at these lower levels becomes at once more uniform, and plants found in the Magdalena and Cauca valleys of Colombia will, to the surprise of the traveler, appear repeatedly all through the Orinoco and Amazon valleys also. Some orchids are also very erratic as to their abodes; *Miltonia vexillaria* appears in the state of Antioquia, Colombia, and then travels along the central Cordillera, a plant here and there, until all of a sud-

den we find it re-established in Ecuador and Peru. Cattleya superbia is another, appearing in spots in Columbia, Venezuela and Brazil, and especially in the dense territories and low virgin forests embraced between the Orinoco, the Amazon, and Rio Negro systems.

Few people here imagine, when seeing beautiful orchids in flower, that much trouble, work and hardship have to be endured in securing them. Inconveniences of all degrees are experienced in getting one's footing on the new American soil. Here begins a series of the slow and toilsome ascent of the chains of the Cordilleras, ascending rivers sometimes by steams, then by canoes, and traversing mountains, straggling over the rocks, back involving a lot of time and much expense before the long-for orchid hunter reaches the place where he has certain claim attached to this mode of traveling. I enjoyed nothing more than very long back, we are gradually discovering the mysteries in their treatment, which after all that has been said, written, and read on the subject, and we can now note what a change has taken place the past few years in the culture of orchids. It is not the same as it was, and its sometimes tepid water, has given way to the hose; and the clumsy bins have been replaced by the more handy form of whitewash. The material for potting or fixing up is more sparingly used and less the material of the past. It is now admitted in larger quantities and the old system of closing up at a certain time has been abandoned. The new sort of plants are now treated on a more common-sense basis. These few things, similar to what may be seen elsewhere, have been strong levers in making orchids more popular in this country.

The high prices and the larger cities have done much to spread the popularity of these plants. In their season a multitude of cut blooms would be seen in the florists' windows and eventually they would be seen in the homes of the rich and really what is more beautiful than a display of gorgeous cattleyas with their bright and quaint colors and white varying each other in beauty.

Orchids in general furnish a great deal of pleasure to the collector, and those who love and study them, and although some of these flowers are to all appearances very common, they will still find something that will enable them to take a place even among the most gorgeous varieties. Low quantities are often contrast between the cypripedium and the cattleya, the one with its curious shape and quaint color, and the other in the extreme; and yet the former will always be admired and preferred to the latter by some persons.

In preparing this paper, I have avoided sensational stories so commonly connected with orchid collecting, and have only given a few plain facts taken from observations in nature, and which, I trust, will in some measure advance the interest and value of this queerly class of plants.

ways through the skill of the collector, but more through chance.

Supposing that cattleyas are collected directly from the grower, owing to so many inconveniences, only a limited number of flowers is seen after they are cut from the plants in felling the trees, and if a grower has any surplus he will usually after carrying the plants in a bag for a few days. Then, in refusing plants out of the grower's hands, the grower will collect, and without them the collector would have to leave the field without any. It is probably a wise man for the next trip.

Studying these plants in their native country, and in the gardens where they grow, in order to derive some practical knowledge as to their culture and lesser the sentimental absurdities and mysteries in which this beautiful class of plants have been enshrouded until not very long back, we are gradually discovering the mysteries in their treatment, which after all that has been said, written, and read on the subject, and we can now note what a change has taken place the past few years in the culture of orchids. It is not the same as it was, and its sometimes tepid water, has given way to the hose; and the clumsy bins have been replaced by the more handy form of whitewash. The material for potting or fixing up is more sparingly used and less the material of the past. It is now admitted in larger quantities and the old system of closing up at a certain time has been abandoned. The new sort of plants are now treated on a more common-sense basis. These few things, similar to what may be seen elsewhere, have been strong levers in making orchids more popular in this country.

### Raising Orchids at Home.

The Gardeners' Chronicle in a leading article on the subject of "Do Orchids Belong to the Tropics?" says: "We would like to point out such importations and to have orchids at home. To a great extent, so far, the experiments have consisted of raising cross-bred varieties, and one of the purposes of these tends to prove that the home-raised plant has a better constitution and better ability to withstand our climate and houses than the imported specimens can be expected to do. The question, then (although it would take time), would it not be wise to raise uncrossed, or true many of the finer varieties of collecting means, and other orchids, and thus, while increasing the plants wished for, get also the better constitution and ability to withstand our climate and houses than the imported specimens can be expected to do. The question, then (although it would take time), would it not be wise to raise uncrossed, or true many of the finer varieties of collecting means, and other orchids, and thus, while increasing the plants wished for, get also the better constitution and ability to withstand our climate and houses than the imported specimens can be expected to do. The question, then (although it would take time), would it not be wise to raise uncrossed, or true many of the finer varieties of collecting means, and other orchids, and thus, while increasing the plants wished for, get also the better constitution and ability to withstand our climate and houses than the imported specimens can be expected to do."

The above recorded is a timely one, not alone as pertaining to the desire to secure the better constitution mentioned, but also as pertaining to the supply of certain orchids, the paucity of which in their native habitat recent reports by collectors admit, that at

"The first glory of the Pacific were cut by the 9th of October; the flowers were well done, and up to October 16 most of them were about ready to cut. I would remind my readers not to cut flowers too early. I saw a large number of Mrs. H. Robison on the market in Cincinnati, which would have been well done by the 23rd of this month, but had been placed in open market only half finished. People are very slow to buy such flowers, but would readily take others at a better price when the flowers are in full bloom. Elvina is in full flower by this date, also is Golden Trophy. The first named is a very light-buff flower, of good silvery-pink color, but too small to bring good returns. The last-named is certainly a good early yellow, very full, of good form and color and I predict that, another year, there will be a large number of it grown. It is a dwarf and very fair for pots. Elvina also makes a very nice, stiff pot plant; it does not branch so freely as Glory of the Pacific, but is highly enough to ornament an eight-inch pot nicely; and that will finally be the place where it might be used. At this writing, October 11, many of the finer varieties are beginning to show color; but we will have enough to do to get the best flowers ready for exhibition by November 1. Some of our shows are scheduled for November 2, and if you want to use the flowers for the early shows it will be well to keep the plants a little on the dry side, which, I think, is better than to push them by fire heat which weakens them. Many varieties also lose a goodly percentage of their color, especially the pink ones, when heat is used."

Syracuse, N. Y.

Rn. Parade.  
 Train threatened to spoil the great parade to-day, but fortunately cleared just before time to start, the sun shining brilliantly. The float of the Central New York Horticultural Society was conspicuous among the number of highly decorated conveyances. Two pretty young ladies were dressed to represent Flora and Pomona, and were almost hidden by immense baskets of flowers and piles of fruit. The whole framework was draped with hanging festooned of the smilax and studded with flowers. Joseph Huller, father of the girls, arranged the crowds sorting and watering at the rear of the wagon. L. E. Marquise had three wagons in the procession, two of them being giftedly covered with palms.

Market News.  
 Trade is quite brisk now, numerous weddings recently have helped business along. A pretty novelty at a wedding last week was ropes of smilax studded with Birdseye rose-carried on the arms of the bridesmaids. The bride carried an immense shower bouquet of violets. The idea of the ropes of smilax originated with W. Wheaton of the P. R. (Union) Co.

There is no limit to the praise bestowed on the last issue of the EXCHANGE by the florists here.

Intending exhibitors at our forthcoming show are reminded that E. C. Stearns & Co., makers of the "Yellow Fellow," will present one of their highest grade wheels for a distinctive solo yellow chrysanthemum seedling, not previously re-assimilated, to be named the Yellow Fellow. Plants in pots only can compete, and the decision will be made by the Society's judges. Entries for our flower show must be made three days before the exhibition, which opens on November 9, extending to the 11th, inclusive. C. H. FAXSON.

Louisville, Ky.

The regular meeting of the Kentucky Society of Florists was held on Tuesday, October 6, at the residence of Wm. May, on Brook street. The meeting was well attended. The Commercial Club and Board of Trade, as well as the merchants of Louisville, are going to help us and order our next chrysanthemum show a success at least financially, by taking a number of tickets to send to their customers and friends outside the city. All the railroads are also to give excursion rates during the Fall show. Ky.

# DREER'S Special Offer Of AZALEAS

Expected to arrive early in OCTOBER.

The Quality this season will be fully equal to what we have sent out for several seasons past, which has given universal satisfaction, which is shown by the greatly increased number of orders already booked.

The Tariff which has been increased to 25 cent, on this class of stock will not affect the price, as we have been successful in making such arrangements with our Belgian growers (who are among the most successful specialists in this class of plants), which enable us to sell at the same prices as last season.

The Varieties we offer are such only as are known to us as the best suited to the American market, and all are bushy, well shaped plants, well set with buds.

Shipment can be safely made by freight to any part of the country, if orders are placed at once.

10 to 12 inch crowns, bushy and well set	\$35.00 per 100
10 to 12 " " " " " "	40.00 "
13 to 15 " " " " " "	60.00 "
13 to 15 " " " " " " extra heavy	65.00 "

Specimen Plants, 18 to 24 inches in diameter, \$24.00, \$30.00 and \$36.00 per doz.

# Azalea Indica

(Fall Importation Ready About October 15th.)

AZALEA INDICA.

The Azaleas which we supplied last season were admitted to be the best value for the money ever received by the many florists who bought them, and we can promise as good, if not better, stock and larger plants this coming season.  
 We have again made special arrangements with the largest grower of Azaleas in Belgium, and take pleasure in offering for delivery about October 15th, **Indian Azaleas**, double and single, all named varieties, leading market kinds, shapely plants, well headed, at the prices quoted below. These plants will be carefully packed and can be safely sent by freight to any part of the country.

10 to 12 inch heads	per doz., \$5.00;	per 100, \$40.00
12 to 14 "	" " " " " "	7.00; " 50.00
14 to 16 "	" " " " " "	9.00; " 70.00

Special, 18 to 24 inch heads, extra fine, \$3.00 each. 6 sold at doz. rate; 25 at 100 rate.

## Special Offer of Palms.

**ARECA LUTESCENS.**  
 2 in. pots, \$0.75 doz., \$5.00 per 100  
 4 " " " " " " " " 3.00 " 25.00 " "  
 5 " " " " " " " " 6.00 " 50.00 " "

## NEW MAMMOTH . . . FRINGED HOLLYHOCK

# ALLEGHENY

A large, clear, FRINGED flower in all shades, from the faintest shell pink to the darkest red, 5 to 7 inches across, PERPETUAL bloomer, from July till frost. FROM 2 TO 4 BUDS AT EACH AXIL. The greatest novelty among the hardy perennials for years. The forerunner of a craze which will surpass the Chrysanthemum and Dahlia craze.

### Blooms First Year From Seed.

We send to all Florists, to introduce this novelty, one trade pkt. for 25 cts. Send stamps or silver. I received Highest Award at Springfield, Mass., in Aug., '97, and at Madison Square Garden, in Sept., '97.

NOTE.—From 2 to 4 buds at each axil which all develop in rotation, while in ordinary Hollyhocks only one is found.

**Chicago.**

**Weather and Trade.**

The week opens up with an apparent cut to the grass, frost and heat. We have had no killing frosts in this vicinity. Carnations are yet ahead, and in fact, but they are not so far ahead. The growth blooms are coming in more freely. The Rogers Park Floral Co. is now bringing very good Armands, and also the very good Metowan. These and a few other good kinds fetch \$1 to \$1.25, the very best \$1.50; but the average is about the quantity of the latter, due to the being the price of a good deal of the flowers sold.

Roses are coming in better, with a good demand for all first-class flowers. The beautiful call for Beauty and Meteor and what President Carnot that do come into market. Prices remain the same as last week—\$2 to \$4—except for the finest long stem Beauty, which has now advanced to \$3 per dozen.

Chrysanthemums are more largely in evidence, the varieties so far being Merry Monarch, Emily Henderson, George de Kalb, Yellow Queen, Montmort, Bergmann, Glory of the Pacific, Midge, and a few Mrs. H. Robinsons, which sell at \$3 down to \$1. Jassett & Washburn's will be the very best. No new and desirable colors appeared before the Chicago committee.

There is still a few aurum lilies, and a very good variety of the same sort, which are in the market, the latter selling at \$1 per 100. If extra fine. Marguerites are also showing up in quantity. The dianthus, some magnonette, and heliopsis which is about all the variety there is to choose from.

Smilax is in good demand, showing that the retailers are getting some of it, indeed, the quantity of smilax is decidedly better than last year at the same time, and prospects are brightening for a good winter trade. The stock is fairly no stock accumulating in any of the wholesale houses as yet.

**Among growers.**

W. N. Ridd, Mt. Greenwood, has his usual quota of high-grade chrysanthemums. Pink Ivory, however, this year all reverted to white, there being not a sign of color in the whole batch. But for the difference in growth exhibiting in the Pink Ivory, one would be inclined to think a mistake had been made in selecting the cuttings. Has any other grower had the same experience? The Midge was the earliest white here, followed by George de Kalb, a very good variety, and a yellow batch of a seedling of 1896 of Mr. Ridd's, not yet named, from Yellow Queen crossed with E. Henderson, and a yellow amber, with the form of Mrs. E. G. Hill, gives great promise, and is said to come before the New York and Philadelphia committees on the 16th. E. M. Bigelow, Mrs. S. T. Murdoch, Mayflower, Major Bonanza, Yellow Queen, E. Balduccio, Mrs. Jerome Jones, Evangeline, Mrs. J. G. Giesener, and Modesto are among those showing up in this shape. Western King here, as at St. Louis, is hard to grow, and nothing is expected of it.

The carnations grown in the house, consisting of the varieties Mayor Pingree, Mrs. McKeon, and Mrs. G. Hill, are just now furnishing their first cuts. Mayor Pingree is very promising. Jubilee is not yet at its best. There are some excellent trained pot plants of chrysanthemums, and extra fine 10-inch geraniums and other plants growing in exhibition. One house of chrysanthemums is designed for very late flowers.

Albert Pugh, of Evanston, Ill., has thoroughly renovated his plant and built a fine new palm house 220 feet in length. This faces the glass front store and office, the vista from the street is charming. One of the windows of the store is built up with rockery, waterfalls, etc., and the entrance to the palm house is formed on the same plan, the rockery, fountains, etc., being made of Ohio porous rocks.

H. Schneider, Oak Park house has carnations the middle of August, and they are very promising. His violets, however, are all the same class, with light, partly of an, in excellent shape. The control of moisture about the plants during the late hot weather has, however, probably been very beneficial. With cooler weather they will soon be in fine flower, and yet there are no signs of frost, and the plants, generally, are smaller than usual.

**Around Town.**

The Illinois Cut Flower Co. will move shortly to a fine light basement under their present store.

started on the 11th with a brand new covered wagon to collect the supplies of flowers from Niles Center, Bowmanville and Tavenswood, that have heretofore been delivered by the express Co. They will charge less than the express companies, in that no charge will be made for supplies. They act in their own boxes for the purpose.

Florists in the city were: J. M. Gasser, Mr. Williams, and Will Rock (on his way to Kansas City), of Cleveland, Ohio; Mr. Drehr, of North Dearborn, Ill.; Mr. G. W. Little, of Mount Floral Co., Morris, Ill.; and W. H. Watson, of Lapeer, Michigan. EDGAR SANDERS.

**Washington.**

**Among The Growers.**

N. Studer is each year devoting more space to the cultivation of decorative plants, and less to the plants for cut flowers. Recently he has added to his collection most of the indoor plants, including the late John Saul. It is his intention to issue a catalogue shortly, and run the place with a general collection of plants. Crotons for bedding purposes occupy a large space; there are some thirty or more of the most of the meritorious new kinds, all looking in good order. Mr. Studer grows them in Dutch pots, and in the winter they are cooler during the winter than we usually see them. Of Ocotillo oranges there are over a dozen different sizes, all in fine bearing condition; some specimens in six and eight-inch pots about five feet in height, from 50 to 50fracts each. In one of the houses there is a fine batch of what seems to be either the new variety, or the form of N. acuta. The plants grow in four to five feet in height, quite broad and shiny on the surface. Mr. Studer says this fern is good for bedding, as the fronds last a cut stem two to three weeks. Nephrolepis davydovii, furcans fill a large house of plants, and are doing well. There are myriads of other ferns and cycloids in all stages of growth. Laurus nobilis, from six inches to one foot, all several houses, in all there are some 100,000 plants of this popular palm. Numerous cactuses have many varieties, most of which are exceedingly useful as decorations. The principal objection to them is the time they require to make useful sized plants. Mr. Studer has got a very good variety of the same, and a few feet long as quickly as a kentia. If the seed supply is inexhaustible it will be of great value.

In germinating large batches of palm seed, a section of benching is utilized. On a bench of slating, moss, chopped fine, or as a substitute, Jadoo fibre, to a depth of one inch is placed; the palm seeds are sown in this, and the benches are barely covered with the same material. If there is any vitality in the seed this method must result in more very much quicker than any other.

It is always a treat to walk through the greenhouse at the time of the Bros. Everything is kept in apple order; no old boards, dirty flower pots, or anything that is out of place. The plants are almost a time a dade in patent leather shoes could make the circuit of the place without thinking of mud. The chrysanthemums here have given some trouble this fall, owing to the tall growth they, or most of them, made. Cuttings were put in and the plants benched at the usual periods, but owing, it is supposed, to the unusually cool weather, they failed to grow to a height which has necessitated the lowering of many of the side benches. Some of the pink and white are in prime condition. Both of them are as good selling kinds here as any others at the particular time in which they come in bloom. Bergmann, Robinson, and Montmore are in full flower. Most of the last-named have already been cut. A few years ago chrysanthemums were grown in pots, but this method has been discontinued, as it takes too much time in attending to them, besides the returns do not justify it. The demand for plants in pots is as great as ever, but what the people want is plants ranging in price from 25 cents to \$1; the buyers who are willing to pay more do not show up very often. There are, however, plants in pots, and in full flower, after four weeks. Some good kinds for potting are grown in lots in the field all Summer, and during dull weather arched, potted, and put in a shaded cool house, where, if they are carefully tended, they do not show any bad effects from the change. Hydrangeas or Easter are grown in the same way very successfully. Some of the

plants treated this way last year were as fine as one could wish to see.

The Gude Bros. are building a handsome addition to the rear of their store on F street in the shape of a good-sized plant house, which as the occasion may require, will be utilized as a show place for decorative plants. It is the intention of these progressive young men to give displays of different classes of plants and flowers during the year. At one period there will be bulbous flowers and shrubs, at others roses, carnations, etc. Chrysanthemums, lilies, etc. From their experience in the past the money spent on these houses has always proved good investments. G. W. OLIVER.

**Baltimore.**

**The Market.**

Trade is dull, and flowers plentiful. Chrysanthemums are selling slowly. Roses and carnations are going better. Violets are poor.

Full and plant trade remains about the same as last week.

**Club Meeting.**

R. Vincent, Jr., gave us a talk on the ex-President S. A. F. W. R. Smith's remarks on the subject of carnations. Mr. Vincent detailed the position of the carnation or vegetable grower, stating among other things that he required a considerable amount of skill to grow good vegetables, and that often the growing of vegetables led to the growing of flowers. His remarks were listened to with much interest.

Mr. Moss showed a beautiful sport of La France rose. The color of this sport is a fine brilliant deep pink, with a scarlet shading. Mr. Moss stated that this sport grew as well as the type, with the exception that the leaf as well as the flower was much more firm.

**Notings.**

Fakes are now selling Dutch bulbs on the streets.

Palms at a recent auction brought ridiculously low prices.

 CARNATIONS A SPECIALTY.  
 No. 1305 Filbert St., Philadelphia.

**Cincinnati.**  
 The trade during the past week has brightened up considerably, and stock is getting a little more plentiful. Roses are doing better. Larger sizes, and prices for good flowers are steadily advancing. All good stock is rapidly clearing up. Chrysanthemums are coming along nicely. Glory of the Pacific and Mrs. Henry Robinson are now in this market, grown and shipped by A. B. Aldrich, of Springfield, O. A recent visit to this establishment shows that the coming winter has been doing some work during the past season. His chrysanthemums, taken near White, are well grown, and a house of Robinson, in full bloom is a grand sight. Mrs. E. G. Hill, with blooms measuring eight inches across and on a stem four feet in length, was a surprise to me. As you all know, this variety always wants to grow out of the bottom of the plant. A house each of Bride and Bridesmaid and one of Meteor certainly look promising. Carnations have suffered from lifting, but will improve with a little care.

**An Exhibition.**  
 Saturday, October 9, was our first monthly exhibition in the flower market. Our schedule was late in being issued, and we did not expect to have much of a display. However, we were very agreeably disappointed, and the showing was a very creditable one. Citizens were to have been the special feature, but owing to dry weather, the city greenhouses were the only ones who had any to stage. They showed some of the new varieties. Their exhibit of orchids and ferns was also very prominent. Many of the plants of Nephrolepis fostonensis being especially well done.

The Holmeister Floral Co. had a nice display of Yellow Queen and Bergmann chrysanthemums, Beauty, Bridesmaid, Meteor, Perle, and Flora Hill, Scott, Daybreak, and Alaska arrangements.

Theo. Beck staged Glory of the Pacific and Elysian, trying to tempt me. The latter named is of a very pleasing color (pink), but too small to be of much value commercially. Mr. Beck also had Alaska, carnation and Huber dahlia, a scarlet, about the size of a silver dollar, and very pretty.

A. Sanderbruch's Sons displayed lily of the valley, Daybreak carnation, Asparagus plumosus, and Margen, Bridesmaid, Meteor, Perle, and Bride roses. C. C. Murphy had a fine vase of Hilaria's. This carnation appears to be a good one, and the growers who bought it seem well pleased.

 481 Washington St., BUFFALO, N. Y.  
 Telephone, Seneca, 150.

George & Allen carried off the award for lily of the valley. This firm is so far along a long-drawn war, and their roses will place Chocotoni on her feet again as a rose market. Beauty, Bride, Bridesmaid, Meteor, and Perle are to be found growing in good shape.

Gas, Adrian had a new seedling white carnation of 1896; percentage, Albertini and a sport of Daybreak. It is very compact, and heavily fringed, with good stem, fragrant, and a perfect calyx. It was exhibited for the Society's certificate, but must be viewed by the judges at least three times, in order to receive the award. J. D. Fun had a specimen Mrs. Charles Pfeiffer, a nice plant of Cyceus revoluta.

At the meeting, one new member was elected. The Society's prospects for the coming winter are very flattering, and we look forward from now on to having grand exhibits each month, including many from outside sources.

E. G. GILLET.  
**Fort Wayne, Ind.**

W. J. & M. S. Vesey are shipping considerable stock, and are giving close attention to the retail trade than formerly. Mr. Vesey reports more favorably on the subject of fire insurance. He has the matter thoroughly at heart, and is well read in law matters. The craft should have no hesitancy in placing their confidence in the gentleness who comprise the committee in charge of this important matter.

WE OFFER A LARGE STOCK OF

## FINEST NAMED TULIPS,

Almost as cheap as common mixed varieties are usually sold. We have a very  
 large stock of these bedding and forcing varieties, and offer them as long as unsold at re-  
 markably low prices. Prices of Tulips are now so low that it should result in a largely increased  
 use of these showy flowers. We offer the following sorts, viz.:

- SINGLE.** *Bizard Verdlet, Cardinal's Hat, Crimson King, Eleonora,*  
*Chequer Ponceau, Duchesse de Parme, Van der Meer,*  
*1. Immaculate, Arms of Leiden, Duc Van Thoi, La Reine.* 75 cts.  
 per 100; \$6.00 per 1000
- Finest Mixed Single Varieties,* 60 cts. per 100; \$4.50 per 1000.
- DOUBLE.** *Rose Blanche, Blanc Borde Pourpre, Gloria Solis,*  
*Dutch Roman, 75 cts. per 100; \$6.00 per 1000.*

### SEED TRADE REPORT.

Points and information from seedmen, and all other matters of interest to the cultivator, published. Address: Editor Seed Trade, care of Florists' Exchange, P. O. Box 167, New York.

**AMERICAN SEED TRADE ASSOCIATION.**  
 J. J. BICE, Cambridge, N. Y., President; J. H. HILB, Columbus, 1st Vice-President; S. F. WILLARD, Wethersfield, Conn., Secretary and Treasurer.

**Clover Seed Duty Free.**—In answer to a question asked by Messrs. T. W. Wilson and R. H. Starnes, the assistant Secretary of the Treasury states that "paragraph 656 of the new tariff act of July 24, 1897, admits grass seeds to free entry, and the Board of General Appraisers at New York has decided in *Cynopsis 14720* that clover is a species of grass and that the seeds thereof are grass seeds."

The Onion loss of the seed trade is still a problem no one can just walk away from. It is evident to the jobber there is a marked revival in trade. Orders for nearly all kinds of seeds are coming in lively, and in many lines there is an advance in prices. The short crop of onions has caused those with large "hold-overs," not only to make sales, but to make them at a fair profit, while many were unwilling to bid at a much higher price than they sold for. As next year's foreign crop cannot be estimated until the autumn sales there may be considered home-grown seed used, and there is a difference of fully ten cents in the cost. The most of the holder of foreign grown seeds is still in prices. There is no disguising the fact of the increase in prices, and that the leading houses cannot fill their orders, and are refusing additional ones.

There is no doubt that it was, decidedly short; at the same time the seed is not scarce, as there are some tremendous quantities appearing. It is not to be bought in a wild, reckless way, as though no crop was to be grown other than this year, but it should be as generally distributed as a fair price can be obtained. We understand the government seed standard to be maintained at the old standard, and on the old plan. It seems that Secretary Wilson has no voice in the matter, and that the public seeds, as has been done the past two years, or be guilty of misbranding. But suppose the country seeds, as his predecessors have done, what will be the result? It is believed that Messrs. A. B. and D. will care to bid again in view of what has been withheld because the seeds sent out did not come up to the required standard? We think not, and what is now we do not think anyone else will. It is to be noted that the same prohibitions where there is a heavy penalty imposed unless they see some way of "fixing it up" for low-grown, understate importations have not been able to do on last year's transactions. There is not a seedman in the country who has a standard of government standard for purity and vitality was sady too high, and they will be willing to accept the government standard at the prices paid, excepting at a great loss, if these conditions were complied with. It is to be noted that the government are asking for what never has and never can be done. We do not pretend to know what the government are under favorable conditions, will stand the crucial test set up for them; but the best seed in the country will never come up to the standard, and it is to be noted that the government with seeds which are to be used in the same manner as the standard, unless at the same prices paid by their other customers. Then a few would be found in the market.

We note with considerable interest the efforts being made on Long Island to get the government to stand the crucial test of seeds. The farmers are holding meetings, the object of which is to form a company to grow the seeds, and to refuse to grow for the trade without a considerable advance on the figures now being offered. We understand these meetings were instigated by the parties for whom the farmers have, for a long time, been growing the seeds, not only being made to form a stock company on Long Island for the growing of seeds for the trade, but also to form a company which will be composed of practical seed growers, who intend adding materially to the

list now in Suffolk County. A large greenhouse plant will be included in the country.

**The Free Seed Distribution.**—Supplementing to the circular letter sent out from the Department of Agriculture, September 25, last, to its principal seed establishments asking for bids on seeds, etc., another circular has been sent out containing bids for the following seeds to a certain extent, those given in the first circular. Instead of bids to furnish seed in bulk, the bids are to be furnished in paper packets and cloth bags, and many of the plants or bulbs. The contractor is required to place the packets of seed when ready for mailing in boxes of five packets each, or more, if so directed; also to paste upon each of said packages a label, which is to be furnished by the Department. The packages are to be delivered in United States mail sacks to the nearest postoffice, properly addressed for transmission to their destinations.

Seeds were required of twenty species of flowering plants, the following quantities are as follows: Anthriscum, 62½ pounds; aquilegia (single), 62½ pounds; centaurea, 300 pounds; Celandine officinalis (mixed), 85 pounds; Centaurea cyanus (mixed), 85 pounds; dianthus (double), 125 pounds; Digitalis (double), 125 pounds; Digitalis (foxglove), 85 pounds; Lathyrus latifolius (everlasting pea), 174 pounds; Lupinus (mixed), 62½ pounds; Linum grandiflorum, 125 pounds; marigold (grandiflorum), 85 pounds; magnolia (double), 300 pounds; Malva (double), 125 pounds; Platycodon grandiflorum, 125 pounds; sweet peas (mixed), 751 pounds; Verbena (mixed), 240 pounds; thunbergia (fine mixed), 240 pounds; and zinnia, double, (mixed), 101 pounds. The following seeds were required in seven varieties put up into 886,000 packets; in the list of vegetable seeds in 1,000,000 packets; in 1,000,000 packets; 3,900 pounds of carrots in 390,000 packets; celery 800 pounds in 80,000 packets; cucumbers 400 pounds in 40,000 packets. The egg plant is not a favorite of the Department evidently, as they are only 120 pounds for "Y. Improved" to be put up into 36,450 packets. Of lettuce there were 10,000 packets; lettuce, Grand Rapids, 1,280,000 packets; muskmelon, 5,500 pounds in 550,000 packets; watermelons 2,400 bushels in 240,000 packets; 1,344,000 packets; parsnips 1,500 pounds in 150,000 packets; 20,000 pounds of potatoes in 200,000 packets; 1,280,000 packets; 5,000 pounds Improved Purple Top rutabaga in 240,000 packets; turnips, Bermuda, 1,500,000 pounds. Of turnips there were three kinds wanted, 34,000 pounds in all, to be put up in 768,000 packets; tomatoes, 6,500 pounds in 1,500,000 packets; 307,200 packets; peas, 2,400 bushels in 307,200 packets; sweet corn, 2,400 bushels in 307,200 packets.

The field seeds wanted were as follows: tobacco, 275 pounds in 83,500 packets; corn, 240 bushels in 240,000 packets; field corn, 280 bushels in 4,800 packets; cow peas, 125 bushels in 4,000 packets; clover, 125 bushels in 3,200 packets; Vicia villosa, 790 bushels in 25,280 packets; Alsike clover, 100 bushels in 3,200 packets; Bermuda, 100 bushels in 3,200 packets; lawn grass, 10,000 pounds in one-half pound packets. Alfalfa, 100 bushels in 5,333 packets; manure wuzel, 8,000 pounds in one-pound bags; kidney yetch, 8,000 pounds in one-pound bags. There were wanted 12,064,082 packets of vegetable seeds, 193,675 packets of field seeds, and 1,000,000 packets of flower seeds for free distribution.

#### European Notes.

**Nataliums.** The cool and dry climatic conditions noted last week continue, and the first fall in seed prices has been noted. We could desire. Our gardeners look almost as gray as August, and this may be due to the fact that the weather is considerably for none of our flowers looks gay; just as they stand in the garden, and the latter we propose to speak definitely next week. For by that time the color of the foliage and the later rate, will be out of danger; and the latter rate will be, at least, paring. It is to be noted that the weather is so freely that if the seed now being formed should prove to be fit for use after drying, it may help the shortage a little,

## CARNATIONS.

### Supports.

It is time now the A-shaped wire netting was placed in position between the rows, or such other supports as may be used to keep the growths up.

There are a number of supports of various styles and patterns on the market, of which I have seen only one in the advertising columns of the EXCHANGE. Some of these are highly recommended by some of the best growers, and doubtless all are possessed of merit.

I have before stated that I was opposed to any support that would tend to crowd or confine a plant in a space so limited in extent as to interfere with the area of the ordinary manufactured support, and not be crowded for room. We can use such supports on a few varieties only, which are not inclined to grow large and bushy, such as Buttercup, McGowan, etc.

There is a difference in localities, however, and my ideas regarding supports may not carry much weight in some sections. This is where the test of a grower's headwork and skill comes in. If he is keenly alive to the situation, he will always be able to adopt the ideas and opinions of others and adapt them to his own uses; and what he sees to improve he will be sure to be able to duplicate or improve upon, as the case may be.

For the present, and until we advise the carnation's natural inclination to grow open and restrained, permitting the freest possible circulation of air and light. Its only bad feature lies in interfering with the growth of the rows. In this way, however, there is little to be done after the first, and if necessary, the second crop of weeds is removed, a regular stirring of the soils not advisable. As soon, then, as the weeds are all removed the netting should be placed in position before the plants become too large to handle with ease.

Aside from one or two strands of wire along the sides of the benches, we have been using no other supports. Good culture and proper ventilation will accomplish much in the way of giving good stems. We must work on this line, I believe, if we want really good stiff stems without the aid of high supports.

I would like to impress upon the minds of those who may be tempted to tempt either in using the A-shaped wire netting, or any other supports, that time and money judiciously expended will be more than repaid by the better health of the plants and the blooms that will be saved from falling before the pests and becoming damaged or ruined.

Do not forget to plow a strip of sod for your carnation soil next year. In this matter we must go to the head. Always select soil in which ordinary crows grow and mature well. Such a soil they like best, but they do not like it rather between the two. We have used all sorts of soil, ranging from heavy to light, and the medium is the best for most varieties.

H. WEBER.

### American Carnation Society.

In last week's issue we referred briefly to some important changes proposed to be made in the Society in February next. Secretary Herr draws attention to the fact that the by-laws are contained in the Proceedings of 1891-92, and every member whose dues are paid to date, can have a copy of these proceedings forwarded on application.

With the approval of the Society the following resolutions were adopted by the judges at our next exhibition in Chicago.

#### INSTRUCTIONS TO JUDGES.

A full and correct report is required. A vigorous and liberal construction of all published rules and requirements is desired, and the judges are to be judged on their merits as shown, except as otherwise especially ordered.

In case flowers of color shown from a distance have been so badly damaged by rough handling in transit as to render them unfit for an exhibition, the exhibitor, they shall not be considered, and it shall be so noted in the report.

In applying the scales of points it is to be understood that the points allowed do not indicate absolute, but only relative quality.

In judging any class under the seedling scale of points the seedlings shall be compared with the best similar varieties in commerce, whether such commercial varieties are on exhibition or not. The exhibitor who grows a better in color than the best similar commercial variety, it shall receive the full number of points allowed for color; but if the commercial variety is of better color than the seedling, the latter shall receive a proportionally less number of points. If any seedling shall have a distinctly better and desirable shade of color it shall receive the full number of points for color.

In comparing the stem, the seedling shall be compared with that variety in commerce considered by the judges to have the best stem, and so on through the scale.

In judging the scale for general competition only those varieties in competition shall be compared, the exhibit showing the best color to receive the full number of points for color, and the best stem the full number of points for stem, and so on through the scale.

(Signed) W. N. RUPP, President.

(Attst) ALBERT M. HERR, Secretary.

#### CHANGE IN METHOD OF JUDGING SEEDLINGS.

In the seedling scale, when used for final certificate, insert 10 points for "Reports of Growers," and three other points correspond (especially calyx, which is too high, as no variety can have a good form without a suitable calyx). In awarding points under this head, the exhibitor must name, not later than July 1, the variety shown (a greater number to be considered favorably by the judges in a field than in a separated parts of the country, to whom he proposes to send stock of the variety) and also the name of the grower, and report to the Secretary not later than February 8, nor earlier than February 1 following.

Reports received after the above date unless each grower nominated sends in a report, or satisfactory reasons (which the Secretary shall judge) are shown in writing) shall be given for failure to do so. The reports shall be examined by the judges after they have seen and approved the exhibits as shown, they to take into

account the character and ability of the growers reporting, as well as the nature of the soil, and the locality. If the report is not satisfactory reports to receive the full 10 points, and the others proportionately less, but they are not considered from all points) it shall appear to the judges that the variety is unworthy of the full number of points awarded, and the judges shall enter in their report "Rejected on account of unfavorable report." The name, however, shall not be taken unless the reports are distinctly and uniformly unfavorable. Reports to be considered and published shall be sent to the executive committee and approved by the Society.

Those failing to have varieties tested as above, to forfeit the whole 10 points. Failing to receive reports after the exhibitor has announced the names of those who are to make the test, unless satisfactory reasons are given in writing, the Secretary shall withdraw the variety from consideration by the judges and it shall be so announced and published in the Proceedings of the Society.

(Signed) W. N. RUPP, President.

(Attst) ALBERT M. HERR, Secretary.

#### PROPOSED AMENDMENTS TO CONSTITUTION.

Art. III. Sec. 2. After first word insert "and" as follows: ART. IV. Sec. 1. After the word "year" add "and" until their successors are elected and qualified.

Art. VI. Before the words "a meeting of the executive," etc. insert the following: "The Executive Committee may be called by the President with the consent of the Executive Committee or a majority of the members of the Society. Notice of such special meeting shall be mailed or published not less than ten days previous to the date fixed for holding the meeting, and no subjects shall be introduced or discussed as are mentioned in the call. Voting at a special meeting by authorized proxy shall be allowed."

Art. VII. Strike out word "annually" in last line, and add the following: "At the time of the meeting of the Society there is an exhibition, the President shall, after consultation with the Executive Committee, invite as many members known to be present, for judges. The meeting thereupon shall either accept or reject the nominations or call for the nomination of additional names. When nominations shall have been made by the President and accepted by the meeting, nominations shall be closed, and the meeting shall proceed to vote for three judges by ballot. The three nominees receive the highest number of votes shall be the judges. The exhibitors at the exhibition of the meeting at which they are elected and shall award all certificates and medals, and they shall give their decision of the judges shall be filed in writing with the Executive Committee promptly. In case of protest a member of this Society or an exhibitor the Executive Committee shall examine into the matter and report, and if they determine an error has been made shall report to the Society with suggestions as to its correction. If otherwise they shall advise the action of the judges. In all cases of protest no premium shall be paid or certificate delivered until the protest is confirmed by the Executive Committee or the protest has been settled by the Society as herein provided."

(Signed) H. WEBER.

#### CHANGES IN BY-LAWS.

Sec. 1. Insert after "absence," the words "or disability."

Sec. 2. Insert and substitute the following: "The Secretary shall keep a true and correct account of the proceedings of the Society, and shall see that correct records are kept. He shall have charge of its books, papers, reports and other property, except as otherwise provided in the by-laws. He shall make an annual report."

Sec. 3. Add "He shall give bond in such amount as may be determined from time to time required by the Executive Committee."

Sec. 4. Strike out words "after receiving notice."

Amend Article VII. of constitution, by adding the following: "No person shall be convicted of dishonest practices in con-

nection with any exhibition of this Society, he shall be forever debarred from exhibiting at the Society, and being from it any certificate, premium or award. If a member, he shall also be forever debarred from office." (Signed) W. N. RUPP, President.

(Attst) ALBERT M. HERR, Secretary.

## QUESTION BOX.

OPEN TO ALL. FREE TO ALL. Answers Solicited from Those Who Know.

Plants for Name.—Lophospermum, or Maurandya aetrasogramum; Gazania splendens.

(151) To Make a Cistern Water-Tight.—I would like to know if there is any way whereby I can make a cistern water-tight. It is built of stone, wall 18 inches thick; the tank is 14 feet square, 18 feet high, and 9 feet above ground on one side. The 18-foot wall is entirely out of the ground, well-plastered inside with Rosendale cement. When the tank is a little over half full it leaks. Will pitch tar be good material with which to coat the walls, and would it affect the water so as to hurt plants?—Wm. S. H.

(152) Salt on Carnations.—In the EXCHANGE for October 2, 1897, your correspondent, Mr. H. Weber, in his article "Explosion of the Soil," speaking of spraying carnations with salt water says: "The good effects they seem to derive from its use are doubtless due to the percentage of potash the salt contains." I am not aware that common salt contains any potash. Will Mr. Weber please explain.—SEWALL FISHER.

—Mr. Fisher is right, as common salt is not supposed to contain any potash, and potash would have to be considered in this light. The use of salt on carnations seems to produce the same effects as we look for in the use of potash. It was this which caused me to make the statement that "salt doubtless contained a percentage of potash." At any rate, we get good results from the use of salt.

(153) Manuring Yields.—I have just planted a solid 100x4 feet bed of M. Louise and California Violet plants on which an employe put too much fertilizer—100-125 pounds Berg's bone and potash. New soil and a good coat of

manure were also applied. Will the plants be likely to have a chance of doing well? How would head lettuce do?

—Bone or any artificial fertilizer used on violet benches at this season of the year is apt to have a disastrous effect upon the plants. It is seldom that any material can be safely used till well on in the Winter, and even then there is a risk.

Yes, lettuce would do well in such soil, although so much hope is not good.

(154) Analysis of Animal Manures. —The following analyses are taken chiefly from the reports in our "Experiment Station" and may be found in "Manures, How to Make and to Use Them," by F. W. Semple:

**STATES CRIPPLED AMERICAN Beauty Beds.**—What makes Beauty roses come crippled? They are, when planted in the right kind of soil, properly syringed and kept at a temperature of about 50 to 55 degrees at night and 65 to 75 in daytime? The plants were planted on the 7th of August. They have since made a good growth, but the flowers, both short and long-stemmed ones, are partially or wholly crippled.—ALBERT DORNER, Pa.

—This is one of the most perplexing questions we have to deal with at present, and I, for one, am unable to determine intelligently the cause of the trouble. This year I have had more early buds come deformed than usual and have therefore spent quite a lot of time trying to reason out the trouble. At first thought I imagined it was due to some insect pest, such as thrip or green fly; but so far my observations have almost made me positive they are not its primary cause; but that it is due to a combination of atmospheric conditions, would term the evil manifestation of the flower bud. About the only consolation one can give is that with the advent of cooler weather the trouble will generally disappear. I have noticed that the Michigan rose is affected in like manner early in the season, but it grows out of it much quicker than Beauty. II. H.

When Writing Mention Florists' Exchange

**A Plant Market for New York.**

An enthusiastic meeting of plant growers residing North Hudson County was held at H. C. Steinhoff's, West Hoboken, on Monday last, to discuss the practicality of establishing a permanent plant market, under cover, in New York City. President C. Dietz of the N. H. Florists' Club occupied the chair, J. E. Klien acting as secretary pro tem. Mr. Dietz outlined the object of the meeting and a letter was read from the Deputy Collector of Clinton market, intimating the amount of space at present available for the disposal of the plantsmen. The meeting was unanimously in favor of securing the recent visit to New York and the same could be had on reasonable terms. It was considered advisable to obtain the co-operation of the Long Island growers, in the matter, and two gentlemen from that section will be asked to serve on the committee appointed on Monday last, which will confer with the Clinton market authorities and obtain information as to terms, conditions, etc. The Jersey growers appointed on this committee by Chairman Dietz are H. C. Steinhoff, H. Baumann, and A. C. Schroeter. These gentlemen will meet on October 26, and report the result of the conference at the next regular meeting of the North Hudson Florists' Club on Tuesday evening, November 3, in urging the desirability of such a market, as regards personal comfort and otherwise. Mr. Steinhoff referred to the facilities it would afford for a prolongation of the season. He thought that just as many plants could be sold during the winter months of the spring as had been sold an effort were put forth to accomplish this, New York City was far behind those in Europe which he has alluded to as regards the selling of plants during the Fall, well as in the matter of providing suitable and comfortable market accommodations for plant cultivators.

AZALEA INDICA.

# Azalea Indica

(Fall Importation Ready Now.)

The Azaleas which we supplied last season were admitted to be the best value for the money ever received by the many florists who bought them, and we can promise as good, if not better, stock and larger plants this coming season.

We have again made special arrangements with the largest grower of Azaleas in Belgium, and take pleasure in offering for delivery about October 15th, **Indian Azaleas**, double and single, all named varieties, leading market kinds, shapely plants, well headed, at the prices quoted below. These plants will be carefully packed and can be safely sent by freight to any part of the country.

10 to 12 inch heads.....	per doz., \$5.00;	per 100, \$40.00
12 to 14 " .....	7.00;	50.00
14 to 16 " .....	9.00;	70.00
Special, 18 to 24 inch heads, extra fine, \$3.00 each.		
6 sold at doz. rate; 25 at 100 rate.		

## Special Offer of Palms.

**ARECA LUTESCENS.**

2 in. pots, \$0.75 doz.; \$5.00 per 100	" 3.00 " 25.00 "
5 " " 6.00 " 50.00 "	" 9.00 " 70.00 "

# AZALEAS

Expected to arrive early in OCTOBER. . . . .

The Quality this season will be fully equal to what we have sent out for several seasons past, which has given universal satisfaction, as is shown by the greatly increased number of orders already booked.

The Tariff which has been increased to 25 per cent on this class of stock will not affect the price, as we have been successful in making such arrangements with our Belgian growers (who are among the most successful specialists in this class of plants), which enable us to sell at the same prices as last season.

The Varieties we offer are such only as are known to us as the best suited to the American market, and all are bushy, well shaped plants, well set with buds.

Shipment can be safely made by freight to any part of the country, if orders are placed at once.

10 to 12 inch crowns, bushy and well set.....	\$35.00 per 100
10 to 12 "	40.00 "
13 to 15 " " .....	60.00 "
13 to 15 "	65.00 "
Specimen Plants, 18 to 24 inches in diameter, \$34.00, \$30.00 and \$36.00 per doz.

## American Institute Show.

The features of this week were chrysanthemums and double-flowered roses. The general excellence of the exhibits was a surprise to all. More than 30 varieties were on exhibit in the chrysanthemum class, of superb quality. The classes were all filled, several of them particularly so. Especially was this true in the bronze and yellow classes. For the best six white there were eight contestants and for the best white seven. Exhibitors were shown less than 10 varieties, six blooms of a kind, G. H. Hale, Belpfort, L. L., was first with 10, Weber & Sons, Oakland, second. Mr. Hale had in his lot Ivory, Valencienne, Vesuvius, Mrs. H. Robinson, and Major Bonafant. Mrs. Robinson, Mutual Field, Miss Georgene Bramhall, Marie Louise, Golden Gate, and Iora.

In the class for the best five vases A. Herrington, Madison, N. J., was first with blooms of enormous size. His varieties were W. Wright, Miss Georgene Bramhall, Major Bonafant, Mrs. H. Robinson, and an English variety, Ethel Adeline. John N. May, Summit, N. J., was second with Ethel and Nemesis. Mrs. H. Robinson, and Henry Hurrell—a nice bright lot but beaten in size.

In the class for the best six white, Mr. Herrington was again first and H. Weber & Sons second. The best six yellow blooms were from the greatest exhibitor, W. Wright, and the greatest grower, W. A. Merritt. Ernest Assmus, West Hoboken, staged a new variety which received 10 points and a bronze medal. The committee last season as a new seedling Mrs. Trainor L. Park. The blooms were hardly at all better than the others. Mr. May managed to beat six remarkably well-grown Bonafant from Mr. Herrington. The variety is a new one, and a class certificate, this being the first time that it had come before the horticultural class of the American Institute.

For the best vase of white Mrs. H. Robinson was the only one shown. Here again the competition was strong. Mr. Herrington secured first honors with blooms of enormous size. He also secured the gold flowers petals. W. A. Merritt, Evergreen, L. J., was awarded first for still class. The plants, but they lacked stems to hold them up. John N. May in this class was awarded bronze prize. His exhibitors being very chaste and well-balanced.

For the best pink, Balfourrose Bros. were first with Glory of the Pacific.

For the best any other color John N. May secured first honors with Sunrise. W. A. Merritt was second. The award prize for a group of foliage and chrysanthemum plants. This was a charming exhibit.

In carnations H. Weber & Sons, Oakland, Md., were first for the largest collection with 10 varieties. Mrs. H. Robinson, New York, and Flora Hill were among his best. Balfourrose Bros. were first for collection of six and three, their principal vases were Flora Hill, Whitcomb Riley, and Victor. The last two varieties were also awarded first class certificates, being new and valuable acquisitions.

## Roses.

The rose classes were filled better than in the previous week. The F. R. Pierce Co., Bay Ridge, N. Y., was first. Mrs. M. Noe, Madison, were again the principal contestants in the beauty class; the latter named going to the front. The new rose variety, N. J. Noe, was first for Bridesmaid and the M. R. Pierson Co. first for Meteor.

Charles & Son, Madison, N. J., exhibited the new rose, Mrs. Robert Garrett, in the form. This rose, under electric light, is a most beautiful specimen and was very generally admired. The variety was certified as a new and distinct rose; and a national medal was awarded to the exhibitor for the variety's general excellence. John H. Taylor, Bay Side, N. Y., exhibited three of the new roses. The first was certified by the American Institute one year ago, and upon this occasion received a bronze medal. On Thursday L. M. Noe exhibited some grand Beauty, not for competition of quality, but for general appearance. He also contributed the Bride and Bridesmaid.

A exquisite exhibit and one which attracted considerable attention was a collection of berries from Robert Laurie, New York, to Mr. Robert Laurie, New York, R. L. The variety which called for special notice was the one from Laurie was awarded the gold medal of the Institute for this worthy exhibit. N. Butcher, Occident, N. Y., exhibited a fine lot of cosmos and an immense quantity of antirrhinums; and A. A. Taaffe, Irving-

ton, N. Y., sent a fine lot of sweet peas, roses and carnations.

## The Cap Contest.

The earnestness of the season prevented several exhibitors who had intimated their intention of competing in this contest, from carrying out their desires. Five exhibitors were unable to appear because of their inability to complete their set. Only three exhibitors materialized—John H. Taylor, Bay Side, N. Y., and W. A. Merritt, Park (gardener, W. H. Harvey), Fort Chester, N. Y.; and A. Herrington, gardener, New York, who brought to the contest, N. J. These competitors, however, made a grand showing, considering the early date. The cup went to A. Herrington with the following varieties: Miss Georgene Bramhall, Tiviana-Jorge, Mrs. H. Robinson, and Major Bonafant, (English), Major Bonafant, and Mayflower. His blooms were generally larger and possessed more body and stem than the second prize lot, which came from Mr. May, whose flowers, though, showed remarkable chasteness and beauty; and his rose that is fresher or better held blooms are shown. His vase of Evangeline will long be remembered as one of the most exquisite exhibits of the season. His roses, Sunrise and Nemesis were his weakest vases. Mrs. Robinson also lacked the size of her blooms. She was awarded the medal of merit of the American Institute. Mr. Park came third with the following varieties: Mrs. H. Robinson, Mrs. H. Robinson, Australian Gold, W. Simpson, and Mrs. Henry Robinson. This gentleman's collection was a normal one, but failed to average up in the totals. Mr. Park received the American Institute diploma.

## Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 23, and 30; November 6, and 13, respectively. Exhibitors should make their entries (for which a fee of \$2 is charged for each variety excepted) by October 15, and later than Tuesday of the week the bids are to be shown.

Bloomers for the following addresses, express prepaid, will receive the rules of the society.

Boston.—A. H. Fewkes, Horticultural Hall.

New York.—Eugene Dalliance, care of Dr. F. M. Hexamer, Madison Square Garden.

Philadelphia.—Edwin Louise, 1514 Chestnut street.

Chicago.—B. W. Witterstaetter, corner Franklin and Dearborn.

Chicago.—W. N. Rudd, room 202, 185 Dearborn street.

## Seeding Chrysanthemums.

CINCINNATI.—The first lot of seedlings was displayed before the committee on Saturday. It included, among other things, a lovely-white named Boundless Snow, of fine standard form; dwarf grower and fine foliage; and a new one, of the property of H. Yoshike, Oakland, Cal. It was a double cerise.

W. R. Ridd & Co. exhibited a bronze-yellow foliage, stem, substance, etc., that was just what was desired. The flower was large and compact, but the did not pass.

NEW YORK.—Only two varieties have been presented before the committee so far. The first was a new one, of the day last, Mrs. Arthur Carter and Ben Nevis. The first-named was sent in by Mrs. H. Robinson, and the second by a Japanese with the stem and foliage and fair size; but lacked the decision of color. These, which were viewed on Friday last, were Mrs. Arthur Carter and Ben Nevis. The first-named was sent in by Mrs. H. Robinson, and the second by a Japanese with the stem and foliage and fair size; but lacked the decision of color. These, which were viewed on Friday last, were Mrs. Arthur Carter and Ben Nevis. The first-named was sent in by Mrs. H. Robinson, and the second by a Japanese with the stem and foliage and fair size; but lacked the decision of color. These, which were viewed on Friday last, were Mrs. Arthur Carter and Ben Nevis.

Reports of Committees of Horticultural Society of America on seedlings exhibited on Saturday, October 16, 1897.

## AT NEW YORK.

## Chrysanthemum Diseases.

I am glad to say that I have never been troubled very much with either of the diseases mentioned, and I must confess I do not know their names. I have heard, sometimes I get a few spots of mildew, but nothing to speak of. I have also heard of a disease called "black rot," enough to give them any serious consideration. I very seldom have what is commonly known as "black rot." I had some trouble with a small white spot which Philadelphia and Mrs. Bergman were both afflicted with. It was caused by the puncture of an insect; but this year it is not so bad, and has almost disappeared on some plants. The plants in different growing the spot. They were never troubled with mildew, but I have noticed only difference between this year's treatment and last, that last year they got about double the quantity of manure and fertilizers that they got this year.

The batch next to the Philadelphia was in fine condition with large, healthy, and dark green foliage and not the sign of spot on them; but by looking at them closely, apparently the same puncture was in the leaf. I concluded that the cause of most of the sickness and mutilation of the affected varieties caused principally by faulty growing. The most serious cause of sickness and mutilation are brought on by improper treatment to the plant, and can best be cured or prevented by growing the plants, and not to the disease; and except in the case of mildew. I try to make the plants out-grow the trouble, but fail to do this. I destroy them altogether, as I have never yet seen a successful attempt to cure diseased plants, and I have seen a commercial point of view.

Mildew is the only disease I treat directly with fungicide, and I have used it, as it seems to be easy to get at. The early stages of mildew affect only the leaves, but if it gets into the stem, in time can be killed without doing much injury to the plant. But at the same time, if it gets into the stem, it will kill the plant, and the plants must also receive improved treatment, or the same condition of the plant will be brought in. The first place will bring it on again. In fact, the application of sulphur weakens the plants, and will not do much good, and will do much to mildew than it was at first.

It is very difficult to get plants out of the disease and except in the case of mildew, and disease are caused more by the plants suffering from ill treatment on the part of the grower. Insufficient light and air are the most common causes of the disease. Plants are in a growing condition, will probably bring on mildew quicker than if they were in a dormant condition. This will weaken the constitution of the plant will make it susceptible to mildew quicker than if it were in a dormant condition of the soil. Improper use of manure, and insufficient light and air are the most common causes of the disease. Any one of or all of these may cause disease, and the most effectual remedy is to get the soil, light and air in condition. Give the plants as much light as possible, ventilate freely, and feed with sulphur, probably to the extent of so much manure.

Nothing but practical experience will tell you how to get the best results, mechanical order, as how and when to apply water, etc. The plants must be cultivated on Saturday, October 16, 1897.

ditions and requirements, which can only be done properly by the grower who is in constant attendance. The soil, of course, must be in the best condition, and prepared, and of a physical structure suitable to the habit and nature of the variety. It is very difficult to get at it, it is a very difficult matter to get plants to grow in it under any conditions, making it a very difficult matter to get at it.

A prudent grower is not liable to be troubled much with disease; but if his plants are not in the best condition, diseases can assist him very materially, especially in the case of mildew. In this case, a fungicide is as liable to increase his troubles as he is to relieve him.

The most serious trouble I had to contend with this year was with the leaf miner; a small white worm about one-quarter of an inch long, that gets into the inside of the leaf and digs it completely out, killing the part of the leaf he works on and leaving a hole in the leaf as large as much as home on a healthy plant, probably more so, than on a sick one, and he will not be troubled with it, but he will not be troubled with it. I haven't done anything yet, except to pick off the damaged part of the leaf, and to pick off the damaged part of the leaf.

Black fly and thrip will also thrive on healthy plants, and if not kept down will be profitable to the plant, except as disease.

I think that "bagworm" is of considerable value to the grower, but I do not know.

ROBT. MILLER, Assistant foreman, C. Strong & Co., Washington.

## Plant Growing.

As the art of plant growing every year advances nearer to a state of perfection, the tendency toward each grower making his plants better and better, and his plants more apparent. The standard of excellence is now placed so high, and the competition so great, that the plants who get the most out of the plant business is the one who knows just how to produce. Since the price of plants, like all other commodities, has been falling, and the demand for plants is increasing, it is more profitable, as the margin of profit on the individual plant is so small, that the grower must produce in large quantities, just as manufacturing has to be carried on on a large scale to be profitable.

A young man embarking as a grower, should first give the subject judicious and serious consideration, studying well the case, and ascertaining what is the greatest demand for in his locality at the present price, and build his plant in a way calculated to grow what he does grow as near to perfection as possible at the minimum cost. He should also establish the fact, and demonstrated to the public and to the trade that nothing, but first-class plants, can be produced, and he will not find it difficult to dispose of his product, as a superior grade of plants is always in demand. He should also have rooted cuttings, palms, or whatever his specialty happens to be, and to grow it with his own hands, in such a way as to make them feel they have received credit for their own work.

The successful money-making florist is the one whose name is synonymous with all that is good in the plant business. He has rooted cuttings, palms, or whatever his specialty happens to be, and to grow it with his own hands, in such a way as to make them feel they have received credit for their own work.

No man should undertake the management of a place without first acquiring a thorough knowledge of the business, and able him to analyze his soil, and apply and supply the needed plant food in the most judicious manner. He should also have a knowledge of, and familiarity with, the root action of his plants, much of his success will depend on his ability to analyze his soil, and apply and supply the needed plant food in the most judicious manner. He should also have a knowledge of, and familiarity with, the root action of his plants, much of his success will depend on his ability to analyze his soil, and apply and supply the needed plant food in the most judicious manner.

CORRESPONDENCE.

Insertion will be given in this column to all communications from abroad, but the opinions expressed do not necessarily reflect our own.

Washington's Florists and Public Parks.

Editor Florist's Exchange. - In reply to Mr. Oliver's article in No. 39, page 866, of the "FLORISTS' EXCHANGE" and in defence of the ordinary flower growers, I beg to state some simple facts:

There are in the city of Washington, under the control of the Commissioner of Public Buildings and Grounds, in charge of the public gardens, in all about 360 reservations or public parks. These vary in size from a few hundred feet to 82 acres. Of this number there were 64 highly improved, some years ago, with fine trees and shrubbery, partially improved, 33, and unimproved 167. This does not include the U.S. Treasury Department, the Botanical Gardens, the Agricultural Department, the new library, or White House grounds, or the large Lake Creek Park, for which separate provisions are made.

To maintain these 360 reservations, Congress established at the Monument Grounds a nursery and propagating garden, embracing nearly two acres of the best equipped greenhouses, with the distinct provision that nothing shall be grown there except for the adornment of the aforementioned reservations. Last year appropriations for the maintenance of the establishment and that of the 500 reservations amounted to a sum of \$10,000, which included \$32,000 for salaries for public gardeners, overseers, gardeners and laborers; \$17,800 for the maintenance of the reservations; \$2,000 for 400 tons of coal, and \$45,000 for additional labor.

These 300 reservations, or part of them, were planted this year with 140 thousand trees 10 to 20 feet in diameter as follows: 24 with coelebs, acyrnathes, alternantheras, variegated geraniums, and geraniums 22 with canna's, 18 with yuccas, 10 with scarlet sage, 2 to 4 each with verbenas, single and double, and geraniums, 2 with palms, calladiums, muses, etc. There are also two dozen vases and a number of flower beds. These beds are planted in Fall with chrysanthemums from pots and with bulbs.

These House, or so-called, exclusive Mansions, contain 82 acres, and thereon are eleven finely constructed conservatories 100,000 feet of glass, all for the President's exclusive use. These conservatories, under the excellent management of Mr. H. Pfister and his able assistants, are crowded to overflowing with the choicest orchids and all kinds of blooming plants, as well as excellent specimens of 1,000 decorative plants. The President of the United States is at no time wanting in the "choicest possible." At the White House alone, in a year, as usual, are planted over 80 choice flower beds all done by Mr. Pfister and his assistants.

On eight to ten days during each of the winter, the east and other rooms at the White House are decorated with the choicest plants from the Propagating Gardens, very few fresh flowers being employed, there being used instead garlands of artificial flowers around mirrors, pictures, and columns. Now, let me state right here that it is not the fault of the florists, but the pernicious, unwarranted, and unlawful giving away of flowers to private individuals, who never give anything back by a glance at these facts, that especially in our Washington climate it is impossible to grow anything to sell. To grow the bedding plants mentioned, particularly as they are grown under glass, is a plant out after the tenth or middle of May. Nor do the florists get any thing out of the Propagating Gardens, so called, are by no means empty the balance of the year, but are well supplied with plants to sell. They grow there flowers and plants of the kind that the ordinary flower grower can grow, and if they are not ever available at the Government Gardens to supply the ever-increasing demand for plants during the winter that the complaints are made about the "measly appropriations" business here 25 years, and every Spring attend the city markets. The remark, "Oh, we get this that that plant at the Government Gardens

is a common one there, and those who make it are not the common people. Besides these institutions of Uncle Sam we have the Reform and Industrial Home School greenhouse products to compete with, and, also have to help pay their expenses by taxes, etc. "No, Mr. Oliver, it is not that any of us is green with envy, which prompts us to fight this unjust competition, and enjoy the sympathy and help of our brother flower growers in this broad land. It is simple justice that we are after."

N. STRUBER.

A Rule for Chimney Capacity.

There is an old rule of thumb for chimneys, says the Boiler Maker, assigning one square foot of grate per horse-power of the boiler, and from one-tenth to one-eighth the area of the grate for the area of the chimney, varying the height to make up for required draft. A more definite system of computing chimney power is in use by engineers, by which the quantity of coal to be consumed on the grate

is not the matter of profits. While many horticulturists have become wealthy, I have yet to hear of any one connected with the horticultural press who has achieved riches in this calling, in this country, at least.

A paper is to some extent moulded into form by its conductors, and the opinion generally prevails that the editors make the papers what they are. This is a mistake. It is the public now and always that makes the paper. The writer in that will be no better or higher than in the spring from which the well draws its supplies. A newspaper, trade or general, is only a vehicle for conveying information from one to another. On the patronage it receives will depend whether it will be kept in good repair, always well edited, its driver well fed and full of vim, or whether it becomes broken down, with croaky joints, and a meek, discouraged spirit for a man in charge of the reins, and who do not care a rap whether they stop or stand still.

Regarding the matter of advertising, there are two ways of considering the value of an advertisement. One is in case

community, or class, or trade have than an honest, fearless and independent editor, but the people who make that kind of a paper possible.

OBITUARY.

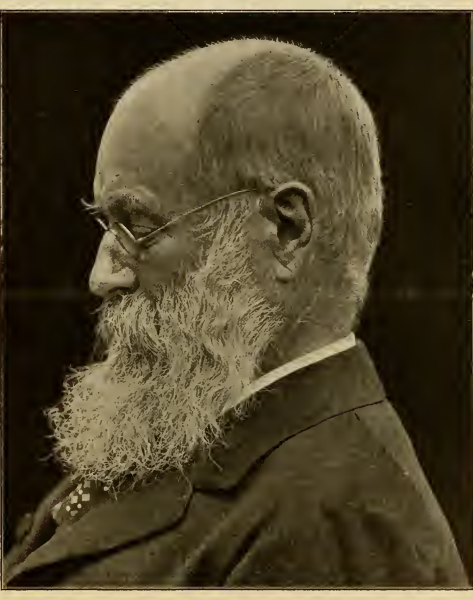

Charles Anderson Dana.

Horticulture, by the death of Charles A. Dana, the world-famed editor of the New York Sun, which occurred at his country home, Dosoris, Glen Cove, N. Y., on Sunday last, has lost an ardent admirer and warm supporter. Mr. Dana's love for the natural and artificial was lifelong, and at his charming country home, his instinctive good taste for no noble tree, fine landscape effects, and flowers was exemplified in a remarkable degree. Here was collected the choicest subjects, both native and exotic, the rarest and best of everything, and Dosoris, which became the Mecca of horticulture in America, seemed more like a museum of living plants than a gentleman's private garden. Its owner, too, knew his trees and loved them as he did children. He was familiar with their botanical as well as their common names, and he knew their geography, history, and use. He also was a connoisseur in the matter of fine fruit, and he had a special interest in bringing him into contact with most of the progressive horticulturists of all parts of the world, for he had not only been extensively visiting the public parks, arboreta, and botanical gardens of different parts of the world, but he had also endeavored to enrich his collections from these sources. There were two gardens in Europe of which Mr. Dana never lost speaking; these were Fota Island in Ireland and Castle Kennedy in Scotland, both remarkable for their magnificent collections of coniferous trees. One year the deceased editor entertained the prominent botanists and horticulturists of the country at his Long Island home. These gatherings were participated in by Judge Addison Brown, Jr., Britton, Samuel Parsons, senior and junior; Andrew Fuller, Thomas Meehan, Jr., Charles K. Smith, John Saul, George Steh. W. A. Sells, Isaac Hicks, Peter Henderson, J. C. Tracy, and many others. Several of these gentlemen have crossed the bonnie, but those who remain mourn their loss as they would a beloved brother.

We take pleasure in presenting here with a magnificent half-tone photograph of Mr. Dana. A tireless worker and a man of many parts, filling each as few men have the ability, we think of him solely as a horticulturist; his service to the common cause of gardener, amateur and commercial, can never be over-estimated; his influence, direct and indirect, was widespread. Hence the Florists' Exchange pays his memory tribute. The writer has spent some of his most happy hours in wandering over the estate of Dosoris; the study of the varied and valuable collection of trees and shrubs was a never-failing delight, while the well-kept gardens and conservatories revealed a wealth of plant life to which all strangers had free access. It is to be regretted that the profession know Dosoris only from observation; thousands from reputation; all will be glad that this conservation, which has never been allowed to fall into the hands of any one, may ever be kept up in its present glory for the benefit of horticulture, and the horticulturist. It is to be regretted that the writer has never been able to afford to lose any of the patrons of the beautiful in nature; least of all such a distinguished follower as was Mr. Charles A. Dana.

George Meek.

George E. P. Meek, died October 18 at his late residence, Covington, Ky. Mr. Meek was one of the leading retail florists of this vicinity. He had been in the florist business for 30 years. He worked in the nursery business, with S. H. G. Cobb, and started as an apprentice with the firm of C. W. Atchey and the employ of B. P. Critchfield for four years, and in 1875 he commenced his business at the corner of Covington, Ky. He was 42 years old, was married, and leaves a wife and one child. He was a member of the P. M. P. Pathias, which order had charge of the funeral services, which were held Wednesday afternoon at his late residence. The craft is extended to the widow and child. E. G. G.

The Late Charles Anderson Dana.

per hour and per square foot, with an allowance for the friction of the gases in the chimney, form the basis of the formulae for size and height of a chimney. A formula based on a consumption of five pounds of coal per square foot of grate per hour is much used, in which the horse-power required and an assumed weight of chimney are factors. Then Horse power = 3.33 X √height which must be increased by its square root N. 0.8 for the actual area to allow for friction. In this way valuable tables of sizes and heights of chimneys for a horse-power and for both brick and iron chimneys of round and square form have been made.

The Press and its Relation to Horticulture.

Extracts from Paper read before Boston Gardeners and Florists Club, Jan. 15, 1897, of New England Florist.

you have something special to sell at an announced price, and here you can easily judge of its value by the results. But by far the greater part of all advertising may be considered in the light of a sign, with your name, business and address. It answers the same purpose as the sign over your door. I am not sure, but I think it is John Danamaker who said that he would as soon think of taking his sign and asking his advertisement men out of the papers, and what John does not know about advertising, and Sunday schools and pollies, you are I haven't the time to touch him. The value of this kind of advertising can only be judged by general results. If you find your business increasing from year to year, don't take all the credit to yourself. Give the papers a little.

In conclusion, don't forget that in the matter of horticultural or any other kind of a paper you will get just what you pay for. For a year or two, possibly, you may get more, that is, with the capital and patience of the publishers are exhausted, but eventually the rule will conform to that which governs all other commodities. No greater boon can any

The Art of Catalogue-Making.

An advertisement occasionally appears in English horticultural journals, for book numbers of trade catalogues to complete the series. The justifications are essentially evanescent, but much of the concrete is permanent worth. In the index I always have examples of all the wild species of every genus of flowering plants. I remember the original description, and also the habitat, but it is not so with cultivated plants. These catalogues with their first descriptions of new varieties? Is the trouble with the way catalogues are made, or in the nature of the business?

The systematic botanist ignores this vast literature, not because of occasional dishonesty, but because he lacks order, but because there are limits to human capacity. He draws the line between wild and cultivated plants, catalogues and descriptions of new wild species in trade catalogues. It is possible to limit the work, not with the art of catalogue-making, but with the possibilities of human nature. I have been fussing for two years with catalogues, and have a practically complete catalogue of chrysanthemums advertised for sale in American catalogues in 1897, and a similar one for dahlias in 1898. My first idea was to get a complete list of all the varieties, just as a systematic botanist feels that he must know all the wild species of a genus before publishing a revision of that group. Such a piece of work is impossible at the present time. Incidentally, I have handed every important American catalogue and many foreign ones, with their designs and valuable features which are obvious to one who knows even a little about systematic botany, to a number of my friends. It is easier to criticize than to perform. The man who knows much of the art of catalogue-making and spends \$100,000 on it every year. It is precisely because I am not a catalogue maker that I feel that all of them should be kept that I can see, and perhaps in my early days, and present conviction.

Waiting for the present the all-important question to consider is certain technical features. "An ideal catalogue," says J. H. Griffith in his interesting article in the *Florists' Exchange* for March 30, 1895, "is one that contains a list of seeds, plants, or trees arranged methodically." Method has been most nearly perfected by librarians. The lack of system in the horticultural catalogue is perhaps the most frequent complaint of the purchasing novice and the skilled librarian. It is a complaint which one may witness at the dahlia Souvenir de Mme. Moreau in twenty various catalogues, under "Souvenir de Mme. Moreau" (the name is indelibly misspelled), and even the barbarous "Mad." But suppose the purchaser wants the old-fashioned, long-topped, double pink dahlia. How can he tell that he wants Souvenir de Mme. Moreau? He may be misled by the titles? Sometimes he buys names, sometimes he wants form, color, and habit, and sometimes he wants things for cultural reasons, i. e., for commercial, market, or special purposes.

There are only three logical arrangements to meet these three wants—the alphabetical, the systematic, and the natural. These three systems of arrangement are allowed to conflict in nearly every catalogue. The chief objection to them is purely a technical matter, and in my judgment, nearly entirely free with the same limitations imposed by expense.

mentioned by name, as are the roses. Our language is rich in names of colors, but poor in names for forms of flowers. Under "white, and white shaded" are given fourteen varieties arranged in double columns with descriptions equivalent to a single line stretching across the entire page. It is how an eye matter to choose the exact shade and the desired form. The last two of the twelve pages are devoted to an alphabetical list of varieties with references to the page where the several descriptions occur. To like all other trade catalogues the one just cited is designed to sell goods, not to record things as they are (as a library catalogue does), and yet it has all the value of comparative descriptions as opposed to the enthusiastic recommendation of every article. The avoidance of repetition saves time and money, and is a wonderful gain in clearness. To be a national register of new introductions, it is (sometimes said, for example, that Johnson's Dictionary of Gardening looks statistical and unreadable. The appear-

is an excellent example, taken from the catalogue of E. G. Hill & Co. for the spring of 1897, of Hill, Mrs. E. G. This variety is grand in color when not treated to bicolor of soda. Comes 4 1/2 feet high and over. It will pay any florist to study its requirements and grow it to perfection. Use the second crown, or early one, if you are a wretched failure. Plant June 5th." The amount of unpublished knowledge of cultural conditions for special varieties cannot be conceived of by one who is not in touch with the trade. Every worker with cultivated plants is inclined to despair over the confusion resulting from the use of titles and personal names, the importation or translation of unpronounceable foreign names, the unlimited use of the words "new" and "novelty," and a dozen other evils that might be mitigated if there were a national register of new introductions of plant importations. So long as the competitive system lasts, such a bureau, even if organized purely for purposes of re-

technical improvement for convenience in handling things as they are. If a trader, or a grower, or a collector, is interested in displaying them in logical order for the comparative student, he alone is to bear the responsibilities and consequences. As a rule, only the older and larger houses, or those who have been known as an organic whole. The annual retail catalogue, the quarterly wholesale trade catalogue, the monthly magazine issued at a nominal price to meet customers often than at a profit, the monthly list of new introductions, the separate issue of botanical and cultural information in the form of encyclopedias, directories, and other books distributed as premiums, all these things come only with the catalogue business. The beginner who stumbles into the "catalogue business" rarely has a distinct idea in view, and his only publication jumbles everything into a chaotic mass. It is a costly experiment, and hundreds fail in it.

Whether seedsmen will always portray possibilities and never mention averages or point out chances of failure, is a business problem of a different sort. So, too, is the question of trade catalogues no stronger than any of its links, but it was quite common in the past to give all the goods of a trade catalogue as a "complete" account, except one or two points. In very specialized manufactures the goods are not so readily considered part of the capital, but agriculture is an art, and in every profession the success depends on the personal qualities. It is usually safer and better business policy to hide no general methods, and to show the most successful horticulturists have the fewest secret recipes.

WILHELM MILLER, Ithaca, N. Y.

Insect Injury of Violet Leaves.

Our violets have been injured this Summer by a small green worm, varying in length from one-fourth of an inch when young to about one inch when fully grown. The Entomologist of the U. S. Department of Agriculture has kindly furnished me a photograph of the insect. The picture shows the insect in its different forms—three-fourths natural size, and three times as large as full grown and the third quite young. The illustration also shows two pupae three times.

The injuries have occurred from early spring up to the present time, and in some cases up to the present time. The cause of the injury caused by the undertermined saw fly, described by Professor W. G. Haliday in the *Florists' Exchange* of August 7, 1897, p. 720, this trouble has been observed only on plants under glass. Plants growing in the most secluded parts of the houses, that is, next to the walks and under the gutters, seem to be preferred by the insect. Their attacks are not confined to the plants so situated, however, being occasionally found on plants bordering on the walks and in the most open parts of the house. The general character of the injury is on a single leaf, although several may occur on the plant. The worms feed on the under side of the leaf, and on the upper epidermis, which presents a papery, white appearance, as shown with difficulty in the photograph. In this respect the injury differs from that caused by the saw fly referred to, as they lay their eggs on the under side of the leaf. Usually the worms are surrounded by a light, thin web, and where one leaf overlies another they frequently fasten together by means of the web. The larvae move rapidly when disturbed, and are very difficult to see. They are pushed off the leaf they will be most cases they will be seen to slip off the web, and then the web is transformed from the worm or larval stage to a thin, white web, which is fastened to the web between the leaves instead in the number described or on the edge of a leaf to the web and under the gutters, which means of a web. Here the chrysalis remains until the moth emerges, which in the case of the saw fly is about ten to ten days. The moth is one of the night flyers.

The worms can be of course be picked by hand and destroyed, but the most satisfactory manner of dealing with this pest is to destroy the plants with the cyanic acid gas, as described in the *Florists' Exchange*, Vol. IX, 1897, p. 147. The cyanic acid gas is a very powerful summer will keep violet plants clear of all insects except red spider, which so far as I know, can be destroyed by the use of water. P. H. DORSETT.

Violet Leaves injured by Larvae of Phlyctena Ferrugalis. Also showing Larva, Pupae and Moths.

name is unavoidable, and it is the best English one-volume dictionary of the subject. The *Vilmoria* catalogues, however, are neat and attractive, and the present catalogues are of a similar kind. Extreme carelessness in one direction usually means reliability in all. The present catalogues are of a similar kind. It is not a question which each firm must decide for itself. On general principles it seems to me, saying in time, money and labor for producer and consumer. I have planted about 500 varieties of dahlias this year according to form and color, and 167 kinds of chrysanthemums, which will apply to the great majority of either task without having a number corresponding to each name. The chief difficulty, where varieties are described, so long as they are properly cross-referenced. Four factors have been mentioned in the alphabetical, the natural, the cultural, and the unnatural. The use of numbered entries is a matter of choice, and many prefer to give an alphabetical list of the names of the varieties and include special directions with the varietal descriptions. The chrysanthemum catalogue of Nathan Smith is one of many that can be commended in this respect. Others, again, prefer to use the numerical system as much as necessary words of description. The word "Japanica" occurs dozens of times unnecessarily in some English catalogues, and does other class names, and is not necessary in the trade. It is not quite clear what is meant by special cultural directions, the following

condition, likely to be viewed with askance by seed merchants. Nevertheless, recording the progress of horticulture is a very different thing from regulation of trade. The general public ought not to be suppressed. The recording of synonyms is a matter of bookkeeping and ought not, in reason, to prevent the sale of any plants. A name that is synonymous with the name of a good thing is itself standing by a good thing. The ethical aspects of catalogue-making are almost beyond enumeration. The general public has experienced, according to Mr. Griffith, a strong and steady reaction against the untruthfulness and gainfulness of earlier catalogues. The chorus age is past. The "half-tone" is what the people want. They like it better than wood-engraving even if the latter be more artistic, and they have not yet found out how to combine the two. The gullible element is immortal, and so long as trade is founded on competition, the unvarying will be seduced. There are two reasons, one in the nature of plants, and one in human nature, why catalogues are likely always to be blamed for untruthfulness and unjustly. The articles are not finished manufactured products, but they are possibilities of growth which the buyer consumes, as does a foster parent the education of an adopted child. The grower, who deals with plants as an entrepreneur, is not a manufacturer, and is not a manufacturer. I am not a reformer. The catalogues should be referred to as a part of the trade, and some will say, humbug of it merely wish to make suggestions of

### For the Busy Man.

Business in New York City was never so dull at this season as it is the present year.

President Graham has appointed G. M. Kelly, President Hill, M. C. a member of Executive Committee's A. F. O. A. H., versus Kelly, McCullough.

The Fine Insurances Committee had a very satisfactory law discussion in New York this week. The result of their deliberations will be published in next issue.

A. Heroldton, Madison, N. J., won the silver cup of the Hayden Horticulture Society of America in the competition held Thursday last in Madison Square Garden, N. Y. There were three competitors.

### Society of American Florists.

President Graham has appointed Mr. George M. Kellogg, of Pleasant Hill, Mo., a member of the Executive Committee. The Executive Committee has also elected term of Mr. J. Charles McCullough, who has resigned, owing to business demands which prevent his devoting the necessary time to the duties of the office.

### American Carnation Society.

We ask for the subject matter contained in the circulars distributed by the Carnation Society (copies of which we print elsewhere), the careful consideration of all growers of the Divine flower. It will, we are frank, be readily conceded that only the best interests of the Society are sought to be furthered by the gentlemen with whom the proposed changes and amendments originated, and that their praiseworthy endeavors are to be highly commended.

Advertising to the "Instructions to Judges," we notice that an ideal has been set up for the guidance of the adjudicators, in addition to the scale of points governing seedling exhibits. The seedlings are to be "compared with the best specimens of the best similar varieties in commerce, whether such commercial varieties are on exhibition or not." This is certainly broad enough and gives the judge ample scope to build up from the best commercial varieties within his knowledge a high standard to represent color. The complainant must necessarily be subjected to a most crucial test. The recommendation, in our opinion, is an excellent one, and worthy of adoption.

A seedling which shall have a "distinctly new and desirable shade of color," is to receive the full number of points for color. This opens up the question, What is a desirable shade of color? How are the judges to determine this? Color, like flavor and fragrance, is an ethereal attribute; it is in no way tangible. One cannot specify for the purpose of comparison. It is until an opportunity has been given for its expression, and fashion's vagaries, in this connection, will always trim the balance. The words "and desirable," should, to our mind, be eliminated.

In the matter of the change in the method of judging seedlings, the system now sought to be inaugurated is practically what has been previously urged by us in these columns. The adoption of it would surely prove a strong safeguard, and an invaluable guide in the purchase of new seedlings placed upon the market. Any drawbacks or advantages which may attach to this system, are greatly overshadowed by the advantages that must certainly accrue from it. By all means let it become operative.

We do not think there could be devised a better way of electing judges than what is proposed in the document referred to. It is a liberal-minded proposition, and should meet with the hearty approval of all who appreciate an honest disposition to give general satisfaction.

We may be pardoned for saying, that to the discussion arising out of our editorial on the subject of "Seedlings and Certificates," can doubtless be attributed the proposed changes and amendments, showing how ungrounded were the fears of several members left the holding up of the "Certificate" as a barrier to the internal workings, should shatter the Society. A structure that has grown so rotten that it cannot stand repairing should be entirely demolished. The adoption of the suggested improvements in the Society's methods will strengthen the confidence and endow its certificates for seedlings with an unquestionable value.

### Reflections on Current Topics.

The seedling chrysanthemum season is again here, and with it, as a natural consequence, the usual augmentation to our nomenclature of the Autumn queen. "Hope for the future" is the motto of the "family christening" system will be supplanted by a common-sense and economical use of nomenclature this year. There are several good reasons why the first-named style should be abandoned. First, it is a waste of time and labor; it creates, secondly, its inanity; thirdly, the lack of originality that the application of it entails. There are also deplorable influences as well. Take, for example, the case of a rose of recent introduction which by the name of "The Retail Trade" in the metropolis, at least, more on account of its name than for its inherent qualities. This, of course, is unjustly rival; and no doubt the same spirit is abroad in relation to the products of certain chrysanthemum growers, whose persistency in creating a "family combination" as regards nomenclature has become a matter of adverse criticism and comment. Personally, I favor single word names, where practicable, as for this year, the "Retail Trade" style is easily pronounced and better lend themselves to correct and handy alphabetical arrangement. It is a pity that the suggestion they advertise cannot be the object of others. But I would not expect of them, as they are not the kind of names of that kind, that are indicative of the relationship of a family combination, but of individual characteristics. At all events, let growers give us something new and refreshing in the way of nomenclature. Chrysanthemum nomenclature has certainly been "weighed in the balance and found wanting." "Lippincott's Magazine" for October contains a bit of history associated with the trade, which, I think, might prove of interest to our readers. It is by M. Theodore Wolfe in his most instructive and entertaining article on "Some Little-known Facts and Anecdotes of the name of these the building at the corner of Nassau and Liberty streets, at one time tenanted by the firm of Messrs. Thorburn, Laurie Todd." A few doors from this stand, in his own rooms, Mr. Wolfe has a collection of plants of yellow fever, a strippling who was afterwards the inventor of what is now known as the "Yellow Fever" strippling, which he brought to the attention of the readers is the fact that on the opposite side of the street, in the building at the corner of Nassau and Liberty streets, at one time tenanted by the firm of Messrs. Thorburn, Laurie Todd, who there sold seeds and plants.

The trade has included in its ranks men of large and varied attainments, but one of our own writers, Mr. W. J. Cobbert, a self-styled author, editor, and parliamentarian. He was the author of an "English and French Grammar, respectively, a Treatise on Domestic Economy, a Treatise on Woods and Forests, one on the "Art of Gardening," and so on. In addition, besides a number of other valuable works, which met with public success, he has also published an "Invaluable record as regards intellectual quality, whatever else may be said of the Cobberts."

The wisdom of Canada has evolved a definition hitherto sought for in vain in the literature of the horticulturists, photographers, and which will render invaluable service to promoters and managers of horticultural exhibitions, who do not accept it. The directors of the Toronto Horticultural Society have decided that they will not accept of a name which does not depend on or has not depended in any way for its living on any occupation or profession, but which is a mere interpretation of this definition, however would lead us to infer that one used have a connection with the horticultural profession, and yet he may be considered an "amateur horticulturist." This to me appears to be somewhat of a paradox.

But the directors have also furnished an addendum clinching their definition: "The name of the exhibitor shall be on or on the premises of one who so depends or has depended for his living on the horticultural profession, and the name is debared from exhibiting." This embargo may have a local significance; it may be a matter of indifference to the severe. For the crime of being or having been a horticulturist, one's sisters, cousins, nephews, sons and daughters, and his mother-in-law, residing with him on the premises, are debarred from exhibiting. "Crud, stern, Canada," 1908.

### NEWS IN BUSINESS.

PARK RIDGE, N. J.—Mr. Bennett has sold his business as florist, and will reside in Fortchester, N. Y.

ASHTABULA, Ohio.—The Ashtabula Greenhouse Company, valued at \$25,000, has been incorporated by W. H. Cowdery, Hattie L. Cowdery, F. C. Ball, Vera F. Harris, and J. K. Harris.

YAFU, Cal.—Leonard Cortes has sold out his nursery business to John Ames; it will be continued under the style of Ames & Munro, the other partner being Wm. H. Munro, a practical nurseryman and florist.

WEST BROOKFIELD, Mass.—Wass & Brown are building several large greenhouses on Main street, and will branch out extensively in the raising of plants and flowers. Early vegetables will be a prominent feature in the new industry.

TRENTON, N. J.—Articles of incorporation were filed with the Secretary of State October 7, by the "Sea Girt Farm." The capital stock is \$100,000 and the main capital stock of the company will raise vegetables and furnish bonquets for Governors' balls and other social occasions. The incorporators are Samuel L. Gillin and Henry H. Yard of Belmar, Mary A. Blakey and Henry H. Blakey, of Trenton, and Edmund L. Hall of Spring Lake.

### New York.

#### Wholesale Market.

Business in every branch is in perhaps the worst condition that has existed in a long time. The market is simply dead, and the reason is not a shortage or excess of supply, but purely from lack of demand. The only apparent reason for this is the fact that the country and the City's swell thoroughfares, especially Fifth avenue, which is no doubt keeping some of the best material in the world. Plant growers are not any better off than florists, and are growing, excepting that the stock is not so plentiful as in the case of the former, congested greenhouses and nurseries. No steady figures are being for any class of plants.

#### Auction Sales.

These also are feeling the depression to a very large extent, and prices generally have tumbled low. Thursday next, the 10th inst., will see a public reserve on the premises at Union Hill, N. Y. the stock belonging to J. Thumman. This greenhous is one of the oldest established florists now in or near the city; his stock is in excellent condition and comprises a quantity of large specimen palms, also a great quantity of smaller commercial sizes.

#### Justices.

Julius Roehrs, Carlton Hill, has been appointed Justice of the Peace for two years, but is now convalescing.

#### Fire Insurance.

The Fire Insurance committee, consisting of Messrs. E. H. Michel, J. G. Esler, M. A. Patten, and W. J. C. Smith, held a meeting on Monday last at the Hotel, this city, this week. The committee formulated a policy and drew up other documents which will be presented to the policyholders which will be furnished in our next issue.

G. Friedman, brother of A. Friedman, Woodlawn, N. Y., died on Friday last of cancer of the stomach. He was a well-known foreman for his brother ever since the latter bought the Weinman business at the above place; previous to that he served for some years in the store of Henry Dutler, Ironsides. He was 28 years of age, and unmarried.

The horticultural exhibition at Madison Square Garden will be continued the whole of next week, on Monday, Tuesday, Wednesday, and Thursday, and on the same days, carnations, etc. The American Institute offers its medal of superiority to the exhibitors of the best table plants of orchids and small decorative plants combined.

#### Visitors.

W. G. Harris and R. Craig, Philadelphia, Pa., and W. G. Harris, D. C.; W. F. Gale, Springfield, Mass.

## THE FLORISTS' EXCHANGE.

This periodical requires no payment for the future. It is printed and compiled with the view of making this paper useful to you and to secure the satisfaction of knowing where to send your orders.

## Chicago.

The recent hot weather has had its effect on the output of roses; there has been little or no marketing, excepting them from open-air. Trade also slackened as a result, and prices are not quite so firm, with inclination to dispose of surplus at reduced rates. American Beauty and President Carnot are the best selling varieties. The average price of blooms of the latter reached 85 per 100 while 84 is as high as other varieties will bring. The output of four stock is in the market some of which is mildewed; this goes at \$1 or \$2 per 100. Carnations from the States in some places are still arriving. Mrs. Fisher is very good. Inside stock is now coming in more freely. A few varieties add at \$2, but \$1.25 to \$1.50 was the general price down to 75c. per 100.

Very few flowers are already abundant the varieties including Mrs. Robinson, Yellow, William, Mrs. Kate Washburn, Lacey Queen, Glory of the Gothic, Miss Johnson, etc., and prices are dropping. Very few flowers go above \$2 per dozen, with a feeling to sell at any price. A considerable quantity has been sent in before they were really ready, which has helped to glut the market with goods. So far but little Southern-grown stock has been received, and prices are expected that prices obtained for home-grown will be low enough to cut off the former from a profitable business.

P. M. Broadbeck is sending in some good California violets that sell at \$1. The double variety of the Pacific is very good. W. E. Lynch has bouvardias in, selling at 25c. a bunch.

## Club Meeting.

At the Florists' Club meeting on Thursday, a considerable business was manifested. Messrs. Sanders, Johnson, and Reeve were appointed a committee to prepare a budget for the next year for the entire winter. The program will shortly be published, so that members may know of it and prepare themselves accordingly.

The question of fire insurance was discussed, and the members voted not to take kindly to the mutual plan as outlined by the S. A. F. The discussion finally came to a close, and was appointed to make a thorough investigation of the subject, and see if something could not be done to secure lower rates for greenhouse risks.

The president was requested to appoint a committee of three to receive the report of the reception of the American Carnation Society in February next. Amateurs were present, providing that in return the membership fee of \$2, should also pay the first six months dues, and those members who have been dropped for non-payment of dues, be returned on the same terms. The members will be acted upon at the next meeting, at which the annual election of officers will take place. Mr. George Stollery will read a paper at that meeting on Chrysantheums.

Mr. J. H. Stollery exhibited his new light bronze chrysantheum named Mrs. Arthur Cant. The color is a pleasing light bronze, and is ready to show an early bloom, it being ready on the 8th. Stem and foliage are all that can be wished.

Stollery Bros. had a vase of 500 of their new carnation Argyle, a variety which proved to be a beauty. Argyle is a bright pink. No seedlings were sent to the committee of this city on last Tuesday.

## Chrysantheums Under Covers.

H. O. Smith, Oak Park, has a space 4x78 planted to chrysantheums with a few plants in the open air under glass. An insect pest is running around in case of early severe frost. The plants are in canvas October 1. It was an experiment which with early varieties which are recommended by the Society. Mrs. E. G. Hill are good and nearly ready to cut. Other varieties, all short-cut, are ready to cut. Being well foliaged. To be a success the plants should be good ones when set out, and should be properly cared for. Being placed over them at latest on the first of September.

EDGAR SANDERS,  
Lockport, N. Y.

Thomas Mansfield is very sanguine for the future. He has a fine stock of plants active during the Summer. He is wishing planting a well-grown stock.

W. M.

## Pittsburgh.

## Trade Actrs.

Great activity was noticeable in the florists' Trade the past week, due to a number of special orders. Among the most notable was the marriage of one of Pittsburgh's belles to a son of Senator W. C. Foster, of the Post Office, in the United States. Randolph & McLennan had charge of the decorations, which were very effective.

Stock is now in good shape and equal to the increased demand. Among the numbers are coming in much better, also more variety, but prices realized for some are not so good. The market is now bringing about \$2.50. Outdoor stock is still in evidence, but the frost a few days ago has crippled it.

At the last regular meeting of the Florists' Club the holding of a flower show this fall was discussed. Much of talk was indulged in for and against the scheme. The majority seemed to favor it and it was decided to appoint a committee consisting of Messrs. E. C. Ludwig, F. Burki and T. F. Langdon, who will meet at the next meeting. It is the intention of the florists to give the show for the benefit of the increased demand. Many of the florists in that case the most prominent people would take an interest in it, thereby giving a larger number of florists who were approached and seemed very anxious to go ahead, and it looks as if a good show is assured.

A letter addressed to the writer from W. J. Veasey, of Fort Wayne, Ind., regarding the fact that the Fort Wayne Co., was read and the matter well discussed, with the prospects of several of our growers going and it was decided not very many of the large growers were present, the matter is being taken up again at the next meeting. Insurances for greenhouse structures are high with the Fort Wayne florists, and they carry no insurance at all, but with a low rate they no doubt would be willing to do so.

For the next meeting night C. Kleger was asked to give an essay on something of the kind, and was asked to give it in wire for florists use. Mr. Rieser is a skilled mechanic and has given the florists a fine number of ornate planters, artistic designs and decorations.

E. C. REINEMANN,  
Fort Wayne, Ind.

Owing to the difficulty in securing special premiums, and the probability on this account that our Society would be unable to give out premiums, the Fort Wayne flower show, to have been held November 3, 4, and 5, by the Fort Wayne Horticultural Society, has been abandoned.

J. NO. L. HANNA, Secretary.

## London, Ont.

J. Gammage & Sons find Kaiserin Augusta Victoria a good rose for winter use. It is a very good variety. Beauty is not appreciated, so will be discarded. Wootton does well and fills the market. It was a great success. Beauty is not appreciated, so will be discarded. Wootton does well and fills the market. It was a great success. Beauty is not appreciated, so will be discarded. Wootton does well and fills the market. It was a great success.

Brampton, Ont.

A splendid lot of carnations is being planted by Harry Dale. Notwithstanding the drought the growth is prodigious and the plants are doing very well. The growers. Violets have been in good health; in fact, there is but little disease in either (particularly the roses) in this section. The plants in store is a beauty, the fruit is 25x5.0 feet, facing on two main thoroughfares. It is kept well covered by the curtains, especially when lighted up. W. M.

houses of cuttings, newly imported, are doing good, but how is it these plants get the least attention and bring the most money? I noticed this

At the recent cricket match what might have been a serious accident was happily averted. The ball struck the batsman on the opposite side and not on the program. The ball struck the batsman on the opposite side and not on the program. The ball struck the batsman on the opposite side and not on the program.

Owing to a bronchial trouble, the flower of the family has left in company with the family. The family has left in company with the family. The family has left in company with the family.

W. M.

## Toronto.

John H. Dunlop undertook a big task to lower every bench in his extensive establishment. This was successfully accomplished by the following: That nothing was disturbed during the change. That the plants appreciate this move is evident by the luxuriant growths and the fine texture of the foliage. Mme. Hoste has that deep rich metallic lustre so seldom seen upon its foliage, and here are being cut; Sunset also, the Golden Gate and Carnot have a few house devoted to them. Beauty has that leathery foliage so essential to perfect this variety. Wootton and Mrs. Whitney, with the White Bonnets, are also here. The latter being indispensable for design work. This highly prolific, Niphetos are planted on side benches. Heavy crops of Brite, Bridehead, and Veré are being cut; Sunset also, the Golden Gate and Carnot have a few house devoted to them. Beauty has that leathery foliage so essential to perfect this variety. Wootton and Mrs. Whitney, with the White Bonnets, are also here.

Decorations the popular Ontario with Flora III are the chief wares. Nearly all stock is planted and has come into the market in fine condition. A part only of one house is devoted to chrysantheums this season. A north house is being cut. The house has just been completed; it is at present filled with Adiantum cuneatum in pots and ferns.

Quite a number of Cattleya labiate are in flower. A few blooms are ready and have been carried over to a design. Violets have all risen early in the house and are away ahead of this season of outdoor demand, and is very sanguine regarding the outlook for the future. Charles J. Tidy, of the firm of S. Tidy & Son endorses these sentiments; in fact, there are many who are sanguine regarding the outlook for the future. Charles J. Tidy, of the firm of S. Tidy & Son endorses these sentiments; in fact, there are many who are sanguine regarding the outlook for the future.

The usual splendid display of dahlias is usually undertaken by the florists. It is somewhat affected at the exposition where Flora was very well represented by a number of fine specimens. It is usually keen and brought out the best efforts of the craft. Great Scott of Dunfermline was a great success. It is in a highly satisfactory manner, giving a plan here and there with much tact. He is not well covered by the curtains, especially when lighted up. W. M.

Frank Dunlop has recently purchased a big lot of plants and upon which he may build, at a not very distant date, a range of houses.

Miller & Son are enthusiasts upon seedling carnations; they have several of applicants, but they are better this season than hitherto. Are not these new kinds coming in? It is a very good thing. I must not omit an item which should afford great satisfaction to the raiser of carnations. The new variety, Mrs. M. Dunlop took first prize against eleven competitors who had the best imported stock. It is a very good thing. It is a very good thing. It is a very good thing.

W. M.

**Providence.**  
**The Market.**—The business shows a slight improvement, although the supply far exceeds the demand. There is a good quantity coming in better, both in quantity and quality than a week ago, and are bringing from \$2 to \$2.25 per 100. There is an increasing demand for small chrysanthemums that began to make itself felt last week. The growers have responded pretty well to that need and it, and but for the slight increase in price, there is a certain faction, most people would rather buy three flowers for 17 cents than one for \$2.50. There is no bloom, even though that bloom be an extra large one.

**Horticultural Society.**—The annual September exhibition of the Rhode Island Horticultural Society was held last week, and was essentially one of a success. The committee considered the exhibition this year the largest ever held in September.

The exhibitors were the following: Carnations, D. D. Waterman, N. D. Pierce, Jr.; orchids and cacti, Edgar Rock; dahlias, J. E. Boardman, Frank L. Gay, Sam W. Lewis; asters, William H. Tarbox, J. E. Boardman, Frank L. Gay, Sam W. Lewis; roses, William Hill, Fairbrother; Begonias, Frank Gay; tuberoses, Fairbrother & Wood, Frank L. Gay.

**Club Notes.**—Alec K. Rennie, treasurer of the Florists' and Gardeners' Club of Rhode Island, was elected to that office. On the 12th inst. he had an operation performed for an abscess in the stomach, and will be some time before he will be able to go out and about. Mr. Rennie is one of the most popular young men in Providence, and he has the best wishes of numerous friends for his speedy recovery.

A monthly meeting of the Club will be held next Friday evening.

**Bound and Aboard.**—A Sullivan's wife presented him with a bouquet, and here he past week. Con is correspondingly happy and is passing around the bouquets. E. Parker, of Attleboro, is cutting several hundred fine violets every day for this market.

Martin Renkau, of R. Bayersdorfer & Co., Philadelphia, was in town the past week cutting flowers in oak.

Fairbrother & Wood are renovating their Westminster street store and returning with flowers in oak.

Another wave of indignation is sweeping over the trade in this vicinity at the wholesale bulk sale of a department store at cut prices.

The City Council has passed a resolution appropriating \$10,000 for furnishing the new Casino building at Roger Williams Park.

George M. Parker has removed his retail store from 38 Dorrance street to 272 Westminster street.

George M. Parker is making some extensive alterations and improvements to his greenhouse at Olneyville. He furnished the plants for the big K. P. E. gathering in that town last week.

Twenty-six thousand dollars has been appropriated for the completion of improvements at Davis Park.

Thomas K. Parker is building a greenhouse, 14x16feet, at 209 Lipsett street.

John Williams has constructed a new greenhouse, 150x20feet, which is equipped with a 60 horse-power Whittien boiler, and will be ready for the chrysanthemums and later will be devoted to Easter stock.

George Macrae has just finished and planted a new carnation house, 125x30 feet, which is one of the best built houses in the city.

J. F. Parks & Co. will open their down-street store about the second week in October, and are recently built a new house, 100x20feet, re-covered two of the old houses and are re-equipping their outfit with the latest steam heating apparatus.

**Albany, N. Y.**  
 Whittle Bros. are ahead this season on chrysanthemums—fewer kinds, very well grown. John Dingwell pays close attention to carnations; Scott and Metcalf run his business very well. There is very little notice an absence of rust; 'tis a little early perhaps for developments.

**Willimansport, Pa.**  
 The stock of chrysanthemum in five and six-inch pots is larger than usual this season with Evenden Bros. who find them the most profitable sales for both market and store sales. A few of the earlier kinds are grown on benches. All kinds of six-inch plants are now nearly all planted. The large house erected this season has given entire satisfaction with four days at either end, bricked walls, 16feet to ridge, apricots and parlin D. 14 inch piping; ridge and front built up with four days at either end; nine benches, including a narrow front bench. The whole plant is painted with chrysanthemum, especially Mrs. Bergman. He may exhibit this season, in which one many contestants will have to compete. The firm is J. G. Bergman & Co. have a pretty lot of plants for retail trade. Ira G. Marvin grows the bulk of the chrysanthemum for a larger supply than usual, but expects to dispose of the whole at fair prices.

**Wilkesbarre, Pa.**  
 George Finnoter will have some very early chrysanthemums, especially Mrs. Bergman. He may exhibit this season, in which one many contestants will have to compete. The firm is J. G. Bergman & Co. have a pretty lot of plants for retail trade. Ira G. Marvin grows the bulk of the chrysanthemum for a larger supply than usual, but expects to dispose of the whole at fair prices.

**Rome, N. Y.**  
 We are having a fine fall for finishing up outside work; have not had a killing frost yet. Business is quiet here. Thomas Hughes has got the Morris R. Jones greenhouses neatly planted, and expects to do well this season. William C. Jones will confine himself to violets this year. He has nice plants. W. H. Orndorff also has his houses well stocked. J. E. Byam is putting a coil of pipe in to help out his heat.

**Kansas City, Mo.**  
 R. S. Brown & Son report a good outlook for this season. They have a larger number than usual of chrysanthemums in four and five-inch pots. These are better than the market.

Probst Floral Co. are heavy in chrysanthemums. In addition to a house of 400 plants they have a fine lot of five and six-inch pots for store trade. Just at present they are cutting up a few of the plants with Meteor on side benches, is in first-class shape. Carnations are good; three hundred each. Roses are well added. Adiantum Farleyense is well grown and largely used in design work. Mr. Murray will do work on a piece 14 feet in height by 14 1/2 feet wide. The base was filled with Adiantum Farleyense, clematis, and crotons, with a few Cutleya labiate stuck here and there; the rest of the work done in clematis on a raised standing end done in Meteor and Bride roses. Between the two words were placed a few of the best roses. The roses for the hands and pink carnations for the fingers. It was a splendid piece of work, and well worth the figure charged—\$25.

Arthur Newell does not grow much chrysanthemum, but is one of the best artists in the city. His forte is basket work; he draws upon Chicago for his plants.

The chrysanthemum show will be held in the armory as heretofore. Mr. Ripley will be in charge. It will be the appearance of the plants there will be a first-class display, with several new attractions, a number of western cuttings.

**Muncie, Ind.**  
 B. F. Wilson will issue a serial catalogue next season and do a general retail seed business.

The Muncie Floral Co. held their annual sale of cuttings of western cuttings.

George Miller has greatly improved his place last summer by general repairs, painting, etc.

**Richmond, Ind.**  
 E. G. Hill & Co. are paying close attention to several seedling chrysanthemums of their own. They have several white shows will be ready for the chrysanthemums and later will be devoted to Easter stock. It was a splendid piece of work, and well worth the figure charged—\$25.

Harvester. Also many others. The entire collection of the celebrated English raiser, Mr. G. Hill, is a very valuable variety of sufficient merit; also pumpions. Mr. Hill is of the opinion this interesting class will not be so popular as in the first cut was earlier this year than usual, a bunch of Lady Fitzgram being cleared and carried to the market. The plants of Bergman were flowered outside on canvas, owing to the favorable season. It was a very successful one.

The stock under glass is fully up to the usual standard. Several good plants were grown under glass all summer and are very thrifty and clean; in fact, the whole of this stock is in excellent condition. Mr. Hill of the advantage of carrying the plants up under glass, and that the best of the most promising of the extensive family of seedlings and worthy of especial mention is Miss Whitcomb, a most lovely pink of exquisite shade and fragrance. Flora Hill is proving itself worthy of the prize bestowed upon it. I notice elsewhere that this variety is very satisfactory.

Roses are being grown as extensively as formerly. Mr. Hill is crossing several good varieties, and will doubtless obtain fine results worth the time and trouble bestowed.

Considerable stock for catalogue trade is in excellent condition.

**Detroit, Mich.**

Evidently good times have struck the craft at Woodmead, judging by outward signs. The bank & Son recently built a handsome show house running the length of the establishment and the street. One stock finishing a dandy conservatory on the opposite side; the front is of large cobble stones and forms a series of steps in place of the old hexagonal shaped, and lofty, resting upon the stone walls some ten feet from the ground. A railing of iron work surrounds and completes this elegant and attractive house.

Charles Waznek intends to follow suit, building a new show house of the same kind. Being close to the cemetery, hosts of visitors are constantly dropping in and appreciating the improvements.

Robert Flowerday is changing several houses; in fact, the whole crowd seem to be on change.

George Leadley is finishing his store in white enamel and silver, with a ceiling of bottles and a very pretty array.

Philip Breitweiser has both mail and branch stores prepared and is making a fine display of roses in quantity this season.

Andrew Ferguson is cutting some excellent roses, the best of the Mohicans; the frost having cut down all outside stock, which will replace the hearts of many.

**Toledo, O.**

George A. Heint recently removed his plant some three miles farther out on Cherry street, and is doing a very fine one-house, built and arranged most complete. They are well supplied with an excellent stock of roses for a very long time. He has lately taken a capital store down on the west side of the location, and added a greenhouse at rear.

Mrs. Suder returned from the convention in Cleveland, and reports she is a busy lady and intends to keep in the front with good stock to please her local patronage.

**Columbus, O.**

Albert Knapp, of the Franklin Park Floral Co., reports the season as very profitable and the outlook cheering.

Underwood Bros. have a fine stock and anticipate a good season.

Mr. Underwood has had a fine plant department to their seed business; it is under the able management of Mr. Underwood, and consists of a transient trade can be done.

Mr. Evans & Son have a pretty lot of chrysanthemums of their own in the market. A medium-sized plant, at a corresponding price, takes.

**Dayton, O.**

H. H. Ritter has been kept busy with funeral flowers and decorations ever since his return from the convention, to which place he was accompanied by his father, who held the position of president of the show, but who takes a most active interest in anything pertaining to the business. He is a most reliable party in the Omaha trip, even if he "goes it alone," which is hardly likely.

**THE EXPERIMENTATIONS.**

The Soy Bean as a Fodder Crop—By Thomas A. Williams, assistant agronomist, under the direction of Professor Lemon-Schwartz, with an account of the Soy Bean as Food for Man, by Dr. C. F. Langworthy, and a report on the Soy Bean as a Fodder Crop, by John S. Beas, Department of Agriculture, U. S. Department of Agriculture. The bulletin states that "since soy beans contain no starch, they are not so palatable as other crops and suffer from indigestion. A soy bean feed is not as palatable as other crops and suffer from indigestion. It is also said that Japanese products take the place of a new substitute for coffee, and will sell under other names at an exorbitant price. Bulletin No. 93 of the North Carolina Experiment Station recommends soy beans as a palatable vegetable when prepared as follows: Boil the beans until the skins come off, and stir in water until the skins rise to the surface and then remove them. Boil the beans with bacon until soft, season with pepper, salt and butter, and serve hot. If the beans are green the preliminary soaking may be omitted. No other references to the use of soy beans for animal food in the United States have been found."

Method of Curing Tobacco.—By Milton Williams, Esq., Chief of Division of Soil, Farmer's Bulletin No. 69, Department of Agriculture, Washington.

THE SAN JOSE SCALE IN OHIO.—By Professor J. M. Venator, Bulletin No. 11, Ohio Experiment Station, Columbus. This bulletin gives very full information regarding the propagation and control of this pest. It also gives its eradication; also furnishes illustrations as aids to its identification.

Washington. Swalesonia Alba as a Bedder.

G. H. Brown, superintendent of the Propagating Gardens, made a happy hit when he planted out a batch of the Swalesonia Alba...

When he planted out a batch of the Swalesonia Alba at the Propagating Gardens, he was very successful. The plants used were then lifted from the greenhouse benches where they had been utilized during the Winter to cut from. After planting out, in a perfectly exposed situation, the plants were quite a stocky growth and flowered very profusely.

Col. Bingham, the superintendent of public buildings and grounds, is not only making enemies in the ranks of the florists but among the large portion of the residents as well. He has caused much indignation among the people because he has distributed flowers among them...

 When Writing Mention Florists' Exchange

**Poughkeepsie, N. Y.**  
 At the last meeting of the Dutchess County Horticultural Society it was announced that the following gentlemen had accepted the invitation to officiate as judges at the forthcoming Chrysanthemum Exhibition, November 3, 4, and 5: Messrs. William Scott, Buffalo; Samuel Goldring, Albany; A. D. Rose, Jersey City, and Henry Siebrecht, New York. Mr. William Russell, of Millbrook, gave an interesting address on loose-growing grown outside—grown on a wall with plant cloth protection in the Spring. Mr. Russell said he had ripened and had in good condition outside, Black Alcanthe, Black Hamburgh, and Buckland Sweet-water, having well-filled bunches weighing from one to two pounds.  
 Chrysanthemums in this locality are good where they are grown wholly inside, but where outside culture has to be followed during Summer months, the heavy rainfall this year appears to have injured the plants considerably.  
 Among the special prizes offered in the schedule of premiums a silver cup valued at \$25, which will be given for the best 250 double blue violets in bunches of 50 each, to be judged by experts. Another prize of \$25 is offered by Josephus Plants for best 100 double blue violets, in bunches of 50. Peter Henderson & Co. offer a prize of \$10 for best 12 blooms of white chrysanthemums, and Benjamin Hammon, a prize of slug shot for best chrysanthemum bloom on exhibition.  
 It is expected that a large and keen competition in the violet classes will result.  
 W. G. GOMBERALL.

**Newburgh, N. Y.**  
 George Crawshaw has started in the florist business here. He commences with two 100-bolt carnation houses and one violet house, his stock is in excellent condition. George's prospect for the first season are bright.  
 G.  
**Fish Kill, N. Y.**  
 Wood Bros. have a bench of 500 Jubilee, which they wish to sell \$5.00. No rust this year. They also have a bench of Flora Hill. This they consider, has a great future, and likely to surpass the McGowan; certainly no bench of carnations could look better or more full of promise than this one.

**The Market**

Roses, carnations, and chrysanthemums are glut. Prices are low. Fine chrysanthemums are selling as low as 4c. Violets are now coming in more plentifully.

**Joilings**

Mr. Harry A. Pair, of this city, is one of our very best patrons of horticulture. His grand country place, Sherwood, so well managed by F. W. Binder, was visited by the committee for novelties in order to judge the merits of Mr. Binder's new seedling chrysanthemum. The members were beautifully entertained by Mr. and Mrs. Binder. The committee thought fit to give the following chrysanthemum our local certificate, which they well deserved, being early and above the average in growth: Lady Hattie, a beautiful shell pink, large and very strong in growth; Harry A. Pair, an extra early large white bloom in flower October 6; this is one of the finest whites; a grand commercial variety; Golden Standard, a fine early yellow, pleasing in color; Willowbrook, a beautiful lemon-yellow, sturdy grower, very full flower; Sherwood, another good early white, one that if properly grown will be a good seller over the country.

William J. Halliday had a grand decoration of the Grand Chapters of Royal Arch Masons. It was a pity that everything had to be kept in red, as many of the Beauty and Meteor roses did not show to full advantage under the glare of red incandescent lights, surrounded with so much red hunting. The general effect away by large foliage was gorgeous.

EDWIN A. SEIDEWITZ.

**Omaha.**

The florists of Omaha and Council Bluffs are not at all satisfied with the way the Trans-Mississippi Exposition people are acting in regard to the letting of bids for the plants to be used next Spring on the Exposition grounds. The committee has submitted to the trade estimates naming in all 100,000 bedding plants of the ordinary varieties, asking for the lowest possible estimate upon part or the whole of the same. The trade think this bid gives the Exposition people an advantage over the home market and too great a latitude in their arrangements, without in any way binding them to buy from local growers. The number of plants is considered to be only a fraction of that required for the consummation of the extensive bedding planned by the company.

Business is exhibiting quite a rosy complexion; let us hope it is not a transient blush. Chrysanthemums look well and promise good blooms. The major part of the groves have some flowers nearly ready to cut, but as yet none have been exhibited in the stores.

Roses are fast improving both in color and size, particularly La France, of which roses are in great quantity in groves here, the soil and climate seeming to be just adapted to its successful culture. Some Beauties are coming in; nearly double the quantity of this rose is being grown.

Carnations in the main are still poor, but there are a few growers producing good blooms. Stuart has been dropped from the list by nearly all, or where grown is only an excuse for a carnation. It never did well after its first year here and is now entirely run out.

Hess & Swoboda have built two new houses and repaired their entire place, putting in a new 60-horse power boiler. J. W. and E. E. Arnold have renovated their greenhouses, entirely replacing the interiors.

Robert Unger, who for two years has run the "Old Parker" place (a range of about 30,000 square feet of glass) has opened up a downtown store at 113 South Sixteenth street and is showing a good line of general stock.

A. Donaghue has just completed the altering of his system of steam heating, putting in large radiators, etc. A. Donaghue, Jr., was married on the 23rd of September, in Detroit, Mich., to Miss Katarina Baum. He is now at his accustomed place in his sixth street store.

**Atlantic, Ia.**

"C. G. Anderson & Co. will build another greenhouse, 72 feet in length. They will grow early vegetables.

**Baltimore.**

## Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Write for Circulars or Estimates.

When Writing Mention Florists' Exchange

**Los Angeles, Cal.**

An organization of the nurserymen and florists of this city and surrounding country was elected October 11, under the name of the Los Angeles Florists' Association. Captain F. Edward Gray was elected president; C. H. Packard, vice-president; Miss Fred Lord, secretary, and Fred Howard, treasurer. It was decided to hold meetings on the first Monday of each month. At the next meeting, November 1, Mr. Sharr, of South Pasadena, will present a paper on the cypress, and as he is an expert in this family, we may expect an interesting article.

The new association starts out with over twenty members and will soon have fifty, and much good is sure to follow. Chrysanthemums are now in. F. Edward Gray displays some grand specimens. The first violets of the season are being brought in. Miss Lord and E. R. Meerve having the first. Mr. Meerve brings in a few Princess of Wales from young plants—better blossoms than the California and more fragrant. This is surely the greatest violet yet.

A very busy and promising season is opening for both nurserymen and florists. F. Edward Gray has been making some changes in his store, and it is now the most tasty, convenient, and beautiful store west of the Rockies. His modern methods are doing much to tone up the business.

SEED TRADE REPORT.

Points and information from seedsmen, and all interested in this column, solicited. Address Editor Seed Trade Report, Florists' Exchange, 200 N. La Salle St., Chicago, Ill.

AMERICAN SEED TRADE ASSOCIATION. J. P. BUCK, Cambridge, N. Y., President; E. R. CLARK, Milford, Conn., 1st. Vice-President; S. E. WILLARD, Melrosefield, Conn., Secretary and Treasurer.

New York—H. G. Faust, of Philadelphia, was in the city this week.

RICKFORD, Ill.—Invitations have been issued for the marriage of John P. Rickford, member of the biggest seed firm of that name in this city, to Miss Florence Williams of Lansing, Mich., daughter of a prominent family. The marriage will take place Tuesday evening, November 2, and Gov. Progre and other Michigan state officials will be present.—Chicago Journal.

The Government Free Seed Distribution for 1897 for planting seed to the Department of Agriculture for redistribution were received at the office of the Secretary, Friday, October 15, but owing to the absence of Mr. Wilson from the city, the bids were not opened till the 20th. The Government Seed Co., of Toledo, Ohio, has been awarded the contract; as the law directs that it shall be given to the lowest bidder. The following is a partial list of firms with the figures at which they proposed to furnish each:

Table listing seed suppliers and their prices per bushel. Includes Cameron Seed Co., Robert Buist Co., Hardin Seed Co., C. W. Ebeling, Madison Seed Co., Western Seed Co., D. Landreth & Son, A. J. Brown, J. C. Vaughan, J. Brock & Sons, Huntington & Pape, L. Hancock Seed Co., H. M. May & Co., R. Henderson & Co., Northrup & King, Brown Bag Seed Co., J. T. Wood & Sons, Jerome B. Rice & Co., J. M. Thornburg & Co., Henry Phillips Seed Co.

The Canna Disease.

A writer in a recent bulletin of the Trinidad Botanic Gardens reports that one of the new strains of canna imported for the gardens has been badly attacked by a yellow rust known as 'redo canna,' described as a parasite on canna from Brazil. Botanic mixture seems to have no effect in checking the disease which soon destroys the plant. The fungus appears to thrive best in dry weather immediately following a wet season. We believe that the disease in the United States, but its virulence and the danger of its introduction emphasizes the necessity of preventing the introduction of fungous diseases on imported nursery and greenhouses. H. H. H. Division of Botany, Washington.

CATALOGUES RECEIVED.

ROBERTS MACHINE CO., Collegeville, Pa.—Catalogue of Steam and Hot Water Boilers.

SUNSET SEED AND PLANT CO., San Francisco, Cal.—Catalogue of Beans, Seeds, Plants, Trees and Palms.

AMERICAN GARDEN CO., Tarrytown, N. Y.—Catalogue of Halls, Hardy Shrubs, Trees, Roses, etc., for Fall planting.

JOHN R. & W. FARLEY, Parry, N. Y.—Catalogue of Pomona Nurseries, out bearing and ornamental trees a specialty.

ATGER, BOLKER & SONS, 52 Dey St., New York.—General Illustrated Catalogue Florists' Supplies, Decorative Goods, Baskets, Vases, Etc.—Also a very complete catalogue well printed and profusely illustrated.

BOOKS RECEIVED.

THE NEWBURY AND SEEN TRADE POSTAL AND TELEGRAPHIC ADDRESS LIST, 1897.—This book contains an alphabetical list of the nurseries, florists, flower dealers, dealers in horticultural sundries, wholesale florists and commission salesmen of the United States. It will be found of considerable service to all desiring to establish a trade connection with those on the "other side." Price, postpaid, 50c.

OBITUARY.

J. N. Hauser.

John N. Hauser, one of the oldest florists in New York, died on Sunday afternoon at his home, 1012 Third avenue. He was born in Bavaria in 1816, and after an education in Leipzig, Vienna, and Paris, returned to his home. Before he was 25 his reputation as a horticulturist was such that the post of landscape gardener at the Imperial Palace at Paris was offered to him. This post he held until 1844, when he came to America, and in partnership with Eugene Ball, a former Parisian and an old friend, started a greenhouse business on what was then the old Bloomingdale road, at a place which is now Fifth street and Broadway. Five years later the firm was dissolved and Mr. Hauser went out to business at Twenty-eighth street and Third avenue. At that time he was famous for his carnations, which were the fashionable flowers of the day, and to the time of his death he always declared that as a decorative flower the cannella was not inferior to rose, orchid, or any other. When the city expanded Mr. Hauser moved up town and took up quarters at Third avenue and Sixth street. He belonged to the New York Historical Society and the American Institute. The funeral was held on Wednesday from the Sixty-first street E. M. Church. Mr. Hauser leaves a widow, three sons, and two daughters; the sons have been in the business for some time.

CHESTER, Pa.—Robert Hanna has built greenhouse and will cultivate flowers for profit.

# BOUQUINNEAS!

## CLABRA (?) and CLABRA SANDERIANA.

These plants are found to become leading florists' favorites. The beauty and durability of their bracts, combined with their protracted flowering season, make them especially valuable for florists' use for pot plants or for "cutting" purposes. In past seasons our plants have flowered almost continuously from Christmas to July, entire bouquets being available for June decorations. This season the 5 inch stock size promise of Christmas Broom. Both varieties are not only rapidly growing, very easily handled, but subject to any insect pests, and not at all particular as to temperature.

For best results, they should be occasionally watered, not trouble watered to flower them, and can be held for four to six weeks, if necessary.

Send for Circular of "FACTS AND COMMENTS."

WE OFFER NICE STOCK OF BOTH VARIETIES, FROM 5 INCH POTS.

Price, \$50.00 per 100; 5 Plants at 100 Cts. We mail 4 nice bracted plants of either variety, from 2½ in. pots, for \$1.00, or 12 for \$15.00.

# INDOOR CARNATIONS.

## Indoor Culture.

Indoor culture has been tried at different times by growers in various parts of the country, but, so far, the reports have been unsatisfactory until within the last year or two, when there has been a great change, and in some instances very encouraging results were obtained. Indeed, so well pleased have we been with the present culture, that they warrant the prediction that in a few years hence the majority of carnations will be raised hereafter as stated by me in this column earlier in the season, we have this year experimented in a small way in growing carnations under glass. We had for a number of years been growing buttercup in this way with much better success than when we planted it out in the field; as many of them will grow in the same way can testify.

At first no further thought was given to indoor culture, but, in 1897, we were in Buttercup beyond believing that indoor culture suited it best. The idea that many other carnations, and possibly all others, would do equally as well, or better, was hardly thought of. The carnation has been described and classified essentially an outdoor plant; and the idea that growing it entirely under glass was quite new to me. It is a carnation quite fixed in the minds of growers generally, that it is little wonder that indoor culture has made but very little progress.

Now let us examine the difference of the two situations: first, out in the field and second, under glass. In the former we have only two advantages which we do not enjoy to the fullest extent in the house: these are room and an unrestricted circulation of atmosphere, thus insuring a tougher and sturdier plant, cooler than we could expect under glass. If there are no extremes of drought or moisture the plant will be much sturdier, make a sturdier and larger growth in the field than they would in the house; but if there are extremes of either, they will die. Perhaps not more than once in four years. And if we do not have one very hard one during the winter, it will be ourselves very fortunate indeed. Thus if we average the four years up, we can expect most excellent results. While a certain proportion will die and others remain small or become distorted or crippled. I have not tried to dry the plants darker than it really is, but believe that I have only at times dried them too really, and I feel sure that the majority of growers will bear me out in this particular.

Now let us look at the situation of things as we will find them in the house. Suppose we plant our carnations during June 1 or a little earlier, or later, as convenience may dictate. There is nothing to hinder in fact, excepting the weather good as our knowledge of preparing it can make it. In this respect we stand on an equal footing with the carnations in all other respects, we have decided advantages when we resort to indoor culture, and that is, in the planting, we can make a great deal of growth during the hot portion of the season, but neither will we suffer in cold weather, for the conditions are such as to promote a rapid substantial growth outside, the season will be the same in the house.

But while they may not make much growth during the first part of the season, which is generally the best season, they will during all this time, be establishing themselves in the soil, thus getting ready to start growing when favorable conditions present themselves. A rapid growth during the first part of the season, which is generally the best season, will be the same in the house. But while they may not make much growth during the first part of the season, which is generally the best season, they will during all this time, be establishing themselves in the soil, thus getting ready to start growing when favorable conditions present themselves. A rapid growth during the first part of the season, which is generally the best season, will be the same in the house.

The advantages of indoor culture briefly summed up are: first, having the plants under glass during the winter, thus giving opportunity to note their changes, and taking plants when and which may demand attention; second, the ability to keep the soil in the best condition, and to exercise direct control of the allotment of water for each plant, thus keeping the soil in the best condition to produce the most uniform and best quality of carnations; and third (which is perhaps the most important of all), the almost perfect control of the weather and atmosphere.

When Writing Mention Florists' Exchange

There are responsible to a very large extent for all the fungous diseases to which the carnation is subject. Since it is our worst diseases we have to deal with in the culture of the carnation, are the result of indoor atmospheric conditions, can be seen at a glance that the almost perfect control of the atmosphere in the house, under glass, at once makes it possible for the carnation to exhibit such vigor of health and thrive if the surrounding atmosphere is kept at such a level.

It is due to this fact that plants which have been raised under glass and given proper treatment, will almost invariably exhibit bright, clean foliage, entirely free from any disease, and are equally suitable for the carnation to exhibit such vigor of health and thrive if the surrounding atmosphere is kept at such a level. The plants which indoor culture do not make as heavy or sturdy growth as those raised in the field, have to have the atmosphere circulate as freely as out-of-door air. However, it is not necessary so strong enough to support the flower.

I believe that we must look to perfect ventilation and control of the atmosphere if we would improve very much over the present system of growing carnations. A house having a continuous ventilator at the ridge might be termed a fairly well ventilated house. It is no means perfect when we attempt to grow the carnation. This plant, above all others, cannot stand a change in the atmosphere; for this reason we never find it flourishing where there are large numbers of other plants, which may be doing finely.

For perfect carnation culture under glass, a bellows ventilator is of absolute necessity, and that it should come directly over the plants. I have before recommended a continuous ventilator, but after the past Summer's experience with side ventilation, I give it the preference, because it comes directly in contact with the plants, which is the object we are aiming for in the carnation culture.

We propose to remodel all of our carnation houses to the extent of adding a bellows ventilator on each end of the house, either side, deep enough to take up the space between the top of the benches and the roof. These ventilators will, I believe, thus be fitted with ventilating appliances so they can be easily and readily changed to suit the weather and all weather will be the only times these ventilators will be used, and while they will be used only in the winter, the heavy enough, the results derived from the increased light and air will, I am sure, more than make up for the loss.

In our experiment we have tried some twenty varieties. Those named "Monte Carlo," "Duchess," "Duchess" and have made the best growth. Among them are Victor, Emma, Ruby, and the variety from Duxbury and Baltimore. All of these are in excellent condition and look better than plants of the same variety when the latter are in the field. Some do not show as bright, clean foliage as those

"Not having room earlier the majority of our plants are planted in the field, notwithstanding the lateness of the season, they are almost, without exception, more sturdy than those of Harry's White, Triumph, and Armistead look particularly well.

Plants which have a tendency to grow weak and those which seem to be subject to stem rot are probably the most numerous. The same may be said of many of the varieties. In Helen Keller not a plant in fifty has died, but all are healthy and strong. The same may be said of Dazzle, which is usually much subject to stem rot, but in about forty per cent of the plants raised, we have shown signs of the disease yet.

We have not been able to give as satisfactory a test as we would like, and we believe a further test under more favorable circumstances will produce even better results.

"With indoor culture watering becomes a very nice operation. The small plants are not watered so much as those in the field to moisten the soil in the immediate vicinity of the plants. The plants which are raised under glass, and as the roots develop and the plant attains size, water is given freely, and in the same way the water is given throughout the Summer is beneficial, but it should be discontinued so soon as the plants are well established, and we could advocate early planting, and believe that this system of culture will suit us to a better method of growing carnations.

The disposition of the old plants will be the nature of a drawback to indoor culture, as a majority of these still pay a

profit until the Summer is well along. There are very few places, however, which could not arrange to dispense with about one-third or one-half of their stock to make room for the young plants, leaving the rest of the houses to be filled with bold-grown plants.

As an experiment, I would not advise any one to plant more than one house, and not to condemn the system without first giving it a fair trial. H. WEBER.

 Mr. Theron Parker, Brook-  
 lyn, N. Y. Dear Sir:—I have  
 tested your latest model of  
 carnation support, and am free  
 to say I consider it the best  
 wire carnation support that I  
 have ever seen. It is quickly  
 and easily applied and will  
 prove very durable, and  
 will give the grower great  
 credit for the invention.  
 Very truly yours,  
 C. W. WARO.

## By-Laws of Florists' Mutual Fire Insurance Association

ARTICLE I.  
The name of this Association is the Florists' Mutual Fire Insurance Association.

### ARTICLE II.

The objects of this Association are the protection of its members and the florists' trade by insuring their greenhouses and buildings therewith used or connected therewith against loss by Fire and Lightning.

### ARTICLE III.

Sec. 1. The officers of this Association shall be a President, Vice-President, a Secretary, a Treasurer, and a Board of fifteen (15) Directors.

Sec. 2. The Board of Directors and the Secretary shall be elected by the members of the Association at its annual meeting.

Sec. 3. Within twenty (20) days after each annual election the new Board of Directors shall elect a President, a Vice-President and a Treasurer.

### ARTICLE IV.

#### DUTIES OF OFFICERS.

Sec. 1. The President shall be the presiding and executive officer of the Association. He shall have the authority to be signed to all policies and contracts executed by the Association. He shall appoint all warranted agents, and he shall supervise and direct the Secretary in the discharge of the business of the Association. No contract signed by the President shall be deemed executed until the same is filed in the home office and countersigned.

Sec. 2. The Vice-President shall perform all the duties of the President in his absence or during his absence in the case of the death of the President shall succeed him as President.

Sec. 3. It shall be the duty of the Treasurer to safely keep the moneys and securities of the Association, and to pay out its money as directed by warrants drawn upon him by the Secretary, countersigned by the President. He shall not receive any of the securities except upon a warrant from the Secretary, approved by the President. The Treasurer shall, by a majority of its Board of Directors, All moneys of the Association shall be deposited in the name of the Association by him as Treasurer and be paid out on check numbers with like number as warrants drawn on it. He shall report to the Directors and members annually.

Sec. 4. The Secretary shall be the managing officer of the Association, and by contract of the Association shall be deemed executed or binding on the Association until countersigned by him and sealed with the seal of the Association. He shall keep the records of all meetings of the Association and of the Directors and Committees. He shall draw all orders of the Treasurer and present the same to the President to be countersigned. He shall draw all policies of insurance and all contracts for the Association and countersign the same. He shall keep such books and records as the Board of Directors or the business may require. He shall collect and receive all moneys of the Association and take the same over to the Treasurer or other party as directed by the hands and take the Treasurer's receipt therefor. He shall adjust or cause to be adjusted all losses by the supervision of the President. He shall give all the notices required to be given by the Association or its officers. He shall be the only person authorized to approve risks or solicit insurance policies for the Association and shall perform all other things necessary and proper to be done in the conduct of its business not otherwise required.

Sec. 5. All officers of the Association shall carry such bonds with such security as the Board of Directors may require and at the expiration of the respective terms of office shall turn over to their successors all books, papers, and papers which may come into their hands.

### ARTICLE V.

#### INSURANCE POLICIES.

Sec. 1. Policies of Insurance will be issued by this Association insuring its members against loss by Fire and Lightning.

Sec. 2. Such policies will be written

only upon property owned by the insured, and used by him in the growing of plants under glass and in sheds, stables, barns, and dwellings, used in connection therewith.

Sec. 3. For the purpose of fixing the rates to be charged for such insurance the following classification of greenhouses is adopted.

#### CLASSIFICATIONS.

Class I. Greenhouses in good condition, heated by steam, hot air, or both, where boilers, flues, and pipes are properly insulated, with water under pressure. The insured shall be located within the limits of a city or other corporation having a paid fire department. The insured shall be insured on the premises whenever they are heated.

Class 2. Add for no watchman 25 per cent. to rate of premium.

Class 3. Add for no paid fire department 25 per cent. to rate of premium.

Class 4. Add for no water under pressure 25 per cent. to rate of premium.

Class 5. Houses heated by flues to be excluded from insurance.

Kindling wood or other inflammable material, such as shavings, sawdust, steam pipes, or iron flues in contact with woodwork of any description, to entailed obligation of company in case of loss.

Sec. 4. For the same purpose the following classification is adopted for stables, sheds, and dwellings is adopted:

Class A. All brick buildings with slate or metal roofs.

Class B. All brick buildings with shingle roofs.

Class C. All frame buildings with no exposure to other buildings within 50 feet.

Class D. All other buildings.

Sec. 5. The rate of insurance to be charged for all policy holders for the first year they are as follows:

Class A. 35 cents per \$100.  
Class B. 40 " " " "  
Class C. 45 " " " "  
Class D. 50 " " " "

On greenhouses and attached sheds the first year \$11 upon each \$100, on each acre of which sum not less shall be carried to the next year.

After the first year such proportionate amount shall be charged as will produce a net gain of 25 per cent. of the total income to the insured. Should the amount of premium so charged be less than the loss and expenses of the Association, the insured shall pay an assessment not exceeding a full year's premium on such property.

Before the Directors shall make an assessment on its members for alleged non-payment of premium, a majority of the Directors shall make a statement verified by their oaths, exhibiting the amount and nature of the losses sustained, of cash moneys and premium notes on hand, and the gross amount of the assessments to be levied thereon. Such assessment shall be payable within 30 days from the time a notice thereof is given to the Secretary to the policy holder, addressed to the address stated in the application for the insurance.

Sec. 6. Before any policy shall be issued the applicant for insurance shall file with the Secretary a written application duly signed, giving a full description of the property upon which insurance is desired, and the amount of premium as may be required by the blank application submitted for that purpose, or by the Secretary, and the same shall be approved, at once notify the applicant of the amount to be paid, and pay an advanced assessment on such application. Upon receipt of such advanced assessment the policy shall be prepared and forwarded to the applicant, which insurance shall be in force so long as the premium is deposited in the mail by the Secretary.

Sec. 7. The President, Treasurer, and Secretary shall make it their duty to warn the Secretary shall refer all doubtful applications before approving the same. Should the insured's rates upon all risks either less or more

hazardous than those especially described in these by-laws.

Sec. 10. All policies issued by the Association shall be in form adopted by the Board of Directors and shall insure the assured against loss by Fire or Lightning, and shall be subject to the same policy thereof unless sooner terminated under the by-laws of the Association. After the expiration of said seven years said policy may be renewed for a second year of endorsement thereon by the Secretary.

Sec. 11. Each policy issued for a period of seven years shall be subject to assessment at such time or times as the needs of the Association requires herein provided, that the insured shall have notified the Secretary shall at once notify by mail all persons liable to pay the same within 30 days from the mailing of such notice. Should such assessment not be paid within said 30 days by any person, his policy shall thereby be suspended, and while such assessment so remains unpaid the Association shall not be liable thereon. If said assessment is paid, the policy shall be reinstated without liability on the part of the Association for the amount of the assessment so assessed and paid. If said assessment remains unpaid for a period of 90 days from the mailing of such notice, the insured shall be notified and cannot be reinstated, but a new policy may be issued.

Sec. 12. No assessment of \$5,000 or insurance shall be taken upon any building or other structure entirely detached from each other.

Sec. 13. No member of this Association shall have any obligation to any other member thereof to be liable for any amount or insured or insuring therein, except for the payment of assessments held while in arrears.

### ARTICLE VI.

#### ELECTIONS.

Sec. 1. Upon all elections and questions that come before the Association each member of the Association shall be entitled to one vote by having \$1,000 of insurance held by him or fraction thereof over \$500, provided further that no person shall be entitled to cast more than one vote. But members may vote by proxy by filing their written proxy or a copy thereof with the Secretary 10 days before the meeting at which the stock is voted.

Sec. 2. All elections of officers shall be held in the state of Indiana, but it is desirable that the meetings may be held in other states, the Trustees are hereby authorized to call meetings of the members at any place of the Union, preferably at the meetings of the A. O. U. A preliminary election is desired to be held at such meeting the members shall, instead of balloting in the usual form, give the Secretary their written ballot or proxy, and shall indicate the ballot for the persons of their choice for the various offices, and the Secretary shall on ten days thereafter, call and vote said proxies as so directed, and no proxy not voted at said meeting shall be counted in said Secretary shall vote said proxies.

Sec. 3. The Secretary shall give notice of all meetings to be held by the members by publication in the florists' trade papers in the two weekly issues thereof preceding such election.

### ARTICLE VII.

#### COMPENSATION OF OFFICERS.

The officers and the members of committees shall not receive any compensation as may be fixed by the Board of Directors from time to time.

### ARTICLE VIII.

This Association shall have no agent except the Secretary.

### ARTICLE IX.

#### ADJUSTERS.

The President shall file with the Secretary a list of the names of the proposed adjusters for the Association in their various localities. When a loss occurs on the part of the insured, the insured shall convene an adjuster who shall attend and adjust the loss if required, and shall have the same service as the Board of Directors may fix.

### ARTICLE X.

Twenty-five per cent. of all premiums paid shall be credited to the reserve fund, and the same shall be subject to the will of the Board of Directors with the approval of the Board of Direc-

tors, and all the interest and profits earned shall be added to said reserve fund. This reserve fund shall not be called upon until the amount of such reserve is insufficient to meet claims for losses and expenses.

### ARTICLE XI.

#### RULES AND REGULATIONS.

Sec. 1. The Board of Directors may from time to time adopt such forms and regulations as may be deemed necessary for the conduct of the business of the Association as they may find necessary, not in conflict with the by-laws of the Association, and so adopted they shall have the force of by-laws until repealed by the Directors or members of the Association.

### ARTICLE XII.

Sec. 1. These by-laws may be amended at any annual meeting of the members of the Association or at any special meeting of the members thereof, of which special meeting 30 days' notice shall be given of the time and place of the meeting and the substance of the proposed change.

### American Institute Show.

The Chrysanthemum Show at the American Institute Fair, Madison Square, New York, was held on Saturday, and the sanguine expectations of those interested. The exhibition demonstrated beyond any doubt the superiority of the plants, and that it is no longer necessary to wait mail far on into November to receive the plants, but that the plants, blooms, for many of those staged on the day mentioned were equal to the best.

The competition in the various classes was more keenly contested than in the previous year, and the result was a secured first in each class in which he competed. For the best five vases, six (6) in all, the first prize was awarded to Vivian-Mordel, Frank Hardy, Miss Georgienne Braunhall, and Mrs. Henry Bellonius, and the second prize to Mrs. L. Park and the smaller Robinsons, than those in the first prize lot. On the other hand, the first prize was awarded to Mrs. Sanderbruech were wonderful; their vase of Dorothy Spaulding being also good as well as the vase of Mrs. D. Willis James. In this class John N. May also staged some fine blooms. For the best three varieties of the class, Mrs. D. Willis James, Mrs. L. Park and Mrs. Herrington was strong with Vivian-Mordel.

For the best yellow, Ernest Assame, West Hoboken, staged Mrs. Trainor L. Park and Mr. Herrington Major Bonnaton. Both were excellent flowers, but the age of the plants was a disadvantage, and Mrs. Bonnaton would have been a better aspirant. In the judging bed deferred to the next day, Mrs. L. Sanderbruech would have been a better aspirant. In the judging bed deferred to the next day, Mrs. L. Sanderbruech would have been a better aspirant. In the judging bed deferred to the next day, Mrs. L. Sanderbruech would have been a better aspirant.

Dalleidouze Bros. were first for pink with six grand blooms of Glory of the West.

Mr. Herrington was again first for white with excellent blooms of Mrs. Trainor L. Park and Mr. Herrington Major Bonnaton. For any other color, Robert Larrig, gardener to Cornelius Vanderbill, Esq., staged a fine white flower, Mrs. Kay, staging the same blooms that had been exhibited on Saturday, but despite their age they were first in the class in perfect condition; G. Hale, Bellport, L. I., was second; he also exhibited the same pink with white variegated flowers. He had a number of blooms, not for competition, for which he was awarded the medal of excellence.

A. D. Rose, 200 West Side Avenue, Jersey City, was first for pom-pom and hardy flowers with a fine variety of the same. In the rose class E. R. Pierson Co., Ferrytown, again secured first honors for the best variety of the same, Mrs. Bonnaton, consecutive times, beating L. M. Noe, Madison, N. J. The first named firm also secured first honors for the best number of blooms on Meteor.

John H. Taylor and E. H. Bredman, John N. May and L. M. Noe being second in the various classes, the first prize for the President Carnot. J. H. Taylor exhibited a charming lot of his new rose, the Carnot.

In carnations Dalleidouze Bros. were

first in classes for six and three, with blooms of wonderful quality considering the early date. Their best flowers were Whitecap, Riley, McGowan, Flora Hill and Mianle Cook. H. Weber & Son, Oakland, Md., were by no means a poor second in the two classes. Their blooms of Mrs. G. Braid and Flora Hill were grand.

Joseph Hilbert, Nyack, N. Y., was awarded a diploma for an exhibit of Scabrousus, including his new lavender colored sport, which for its distinctiveness was also awarded a certificate. It is said to be a sport from the white form; and in addition to its distinct lavender color it is much dwarfier in its habit and is admirably adapted for pot culture.

M. J. Moore, Highlands, N. Y., was awarded a diploma for two bunches of Marie Louise violets. These were of superb quality and were marvells in regard to budding. G. Smith, Orange, N. J., was awarded a cultural certificate for a group of carnations. A similar award also went to C. Beschi, Mineola, L. I., for a display of his carnation Mrs. Janet.

A first-class certificate was awarded to a new hybrid cypripedium named Anna Savage, the cross being C. Curtisii, with Charles Canham, George Savage, Rochester, exhibited this.

For the best table of orchids and ferns, A. Herrington secured the Society's medal of superiority, for what was one of the grandest exhibits of the entire season. His Cattleya labinata were splendid. Other good pieces were Odontoglossum grand, Oncidium ornithobium, and Cypripedium luridum purpuratum.

In foliage plants, Julius Roehrs, Carlton Hill, N. J., put up a superb group on the stage, covering 400 square feet. For general display of stock and arrangement this was a grand lot and well deserved the premier award and medal of superiority. John Scott, Keap street greenhouse, Brooklyn, exhibited a group covering 250 square feet. This was composed of a fine line of general commercial stock in fine condition. He was awarded the medal of excellence and a diploma for Aranea compacta and pandanus. The F. R. Pierson Co. also continued their groups of foliage and coniferous plants.

### Seedling Chrysanthemums

CHICAGO.—There were five exhibits before this committee on October 23. E. G. Hill & Co., Richmond, Ind., sent Australian Gold, incurred light yellow, six to seven inches in diameter, with stout stem, the flower being held up well; R. W. Emerson, of very similar type and size to the foregoing, with a deeper golden center fading out to a lighter shade on the outer edge of the flower; Solar Queen, color a deeper yellow than that of Australian Gold, something of the

Mrs. Henry Robinson.

Viviani-Morel.

Miss Georgienne Bramhall.

Winners of Silver Cup of Chrysanthemum Society of America, at Madison Square Garden, New York, Oct. 21, 1897.

shade of Yellow Queen, as exhibited of somewhat flat shape at the crown, better petalage than either of the two others, hence not so likely to drop its petals as those of the Mrs. Robinson type appear to do; leaves very broad, and well up to the flower, neck short, holding up the seven-inch flower perfectly; H. W. Longfellow, flower similar in type, petals, rather narrower, rather small o'clock-like, but abundant, and well up to the flower; stem stout, and if there is any place for a dull ivory white as against the purer color, it may find a place, as the incurved flower is of good size, with plenty of petalage.

Mrs. O. P. Bassett, from Bassett & Washburn, is a yellow sport of Mrs. Robinson, with all the characteristics of its parent, save color, which is a light primrose-yellow. Ess.

NEW YORK.—Five new kinds were presented before the committee on Saturday, October 23. Three of these came from E. G. Hill & Co., Richmond, Ind.; W. Hillebrecht, Union, N. J., and Robert Laurie, Newport, R. I., contributing the

remaining two. Mr. Hill's set arrived in grand condition, especially his Solar Queen. This is an attractive yellow incurving Japanese, of good size and substance, first-class stem and foliage. His European variety, Australian Gold, also scored well. Judging from those and other blooms of this variety seen on exhibition it is likely to be a grand exhibition bloom, its only fault being a rather long and bare neck. The type is Japanese. H. W. Longfellow is an incurving white and having Robinson as a guide it fails to come anywhere near the standard required; its only favorable point over the variety named would be its grand stem and foliage.

Mr. Hillebrecht's Miss Clara Sevin is a white, bisect variety, but too small to be recognized.

Mr. Laurie's Peter Kay is indeed large enough for all purposes. The variety is a buff-yellow, much after the style of Jeanne Falconer. In fact, it resembles very closely that variety in all points. Its behavior in the exhibition later proves it to be an elegant show bloom, its keeping qualities being remarkable.

The committee will meet for the future at 2 P. M. in the salesrooms of the New York Cut Flower Co., 121 West 23d street.

### Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 30; November 6, 13, 20, and 27.

Exhibitors should make their entries (for which a fee of \$2 is charged for each variety exhibited) to the secretary, not later than Tuesday of the week the blooms are to be shown.

Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

Boston.—A. H. Fewkes, Horticultural Hall.

New York.—Engene Dailledonze, care of New York Cut Flower Co., 121 W. 23d Street.

Philadelphia.—Edwin Lonsdale, 1534 Chestnut street.

Cincinnati.—B. Witterstaetter, corner Fourth and Walnut streets.

Chicago.—W. E. Tadd, room 202, 185 Dearborn street.

### Secretary's Official Report.

Below I give reports of chrysanthemum committees' work for the 23d inst., as far as recorded:

#### CHICAGO.

Miss Clara Sevin, Exhibited by Wm. Hillebrecht, Union, N. J., Japanese Reflexed, white. Scored 72 points.

Peter Kay, Exhibited by Robert Laurie, Newport, R. I., Japanese, amber-yellow. Scored 87 points.

Solar Queen, Exhibited by E. G. Hill & Co., Richmond, Ind., Japanese, yellow. Scored 84 points.

H. W. Longfellow, Exhibited by E. G. Hill & Co., Japanese Incurved, light yellow. Scored 82 points.

Australian Gold, (Importation), Exhibited by E. G. Hill & Co., Japanese, light yellow. Scored 91 points.

#### NEW YORK.

W. H. Longfellow, Exhibited by E. G. Hill & Co., Japanese Incurved, white, pink shadings on lower petals. Scored 85 points.

E. W. Emerson, Exhibited by E. G. Hill & Co., Japanese, white, shading to yellow at center. Scored 80 points.

Australian Gold, Exhibited by E. G. Hill & Co., Japanese Incurved, light yellow. Scored 77 points.

Solar Queen, Exhibited by E. G. Hill & Co., Japanese Incurved, light yellow. Scored 88 points.

Mrs. O. P. Bassett, Exhibited by Bassett & Washburn, H. H. Hinkle, Ill., sport from Mrs. H. Robinson, light yellow. Scored 85 points.

No blooms were presented at Philadelphia and we have no report from Boston or Cincinnati.

ELMER D. SMITH, Secretary.

(156) Diseased Carnation and Violet Foliage. R.—The violet leaves are attacked by the common fungus disease known as spot. This can only be held in check by picking off the newly diseased leaves and avoiding wetting of the foliage, except under conditions when it will dry off very quickly. Spot is often brought on by the foliage being injured in any way, as by excessive fumigation with tobacco, which injures leaf leaves greatly. Fumigation with tobacco should therefore be avoided and hydrocyanic acid substituted. For directions for using this gas see the EXCHANGER for October 9 and other numbers referred to there. Spot is also briefly discussed in the same number. The carnation leaves sent in by the same party are affected with the disease known as bacteriosis. This particular case was produced by the punctures of aphids. Full discussion of this disease will be found in the EXCHANGER for October 9.

JOHN H. LEY, Code Hope, D. C. When Writing Mention Florists' Exchange

Gloxinias. I thought I had the finest strain of gloxinias to be seen anywhere until I saw a collection last Summer at Montreal, belonging to T. J. Gorman, of Montreal, which broke up my belief in less than 10 minutes. I had seen 2000 gloxinias in that collection were four to five inches across. Probably there was a greater diversity in the color of the blooms in that collection were four to five inches across. I have been sticking to that strain of mine for the past twelve years, and I have been sticking to that theory. I have been sticking to that theory, in saving my collection from what I thought were the best blooms. The doctor's selection did not vary very often you try it, but it has worked this time. Twelve years ago the flowers were much smaller than what they are now, besides, there is a greater diversity of color than there was then. What prompted me to write about gloxinias at the present time is the way my seedlings have behaved this Summer in that new "grow all" called Jaxony. Some people say it will grow anything from a bachelor's button to a Drumhead cabbage. I am not so sure about that yet, but so far I am inclined to the belief that it is a useful article for some things. In the case of gloxinias was sown the surface of the soil in a box containing palm seeds which didn't come up to my expectations. The seeds were sown about the beginning of August, and as soon as large enough to handle the seedlings were placed into tubs, which were about three fourths screened Jaxo to one-third sand. At the present time there are leaves on them three inches across. I have seen several of them are in flower, two and three flowers to a pot. The idea is to let them grow as long as they will, and then pinch them and then gradually dry them off. Some of them now have tubers one inch in diameter.

At first sight the plants look badly in need of a shift; on closer examination, however, the pots are not very full, the roots, and I intend letting them take their chances for the balance of the time they will be left in the tubs. Hitherto my plan of wintering them after they have gone to rest has been to take them out of the pots, wash and put a dozen or so of them into a large flat of coarse-grained sand, standing in a shallow tub, in a cold room house. When wanted for starting, one or more flats can be taken out and the tubs filled into activity by giving them a little water and a position in a warm house where they will remain until ready to start. As soon as they push their growth above the sand they are potted up. Next year the plants will be ready to start. As soon as they push their growth above the sand they are potted up. Next year the plants will be ready to start.

By the way, water on the leaves of gloxinias don't hurt them so much as is generally supposed, that is, if they are not allowed to stand in water. I have done mine through a rose and the leaves get their share of it. Manure water, however, is not so good, because of its tendency to the hairy surface retaining it. It is difficult to wash off thoroughly. For this reason, if you are to use the seed sand should be sown in the Spring. A large seed pan or box should be used so that you can get the bottom of the surface getting suddenly dry.

For perpetuating ferns with extra well shaded or semi shaded cuttings will be the most satisfactory. A full-sized leaf should make about four cuttings. Make them the same shape of a V, the lower part to consist of at least an inch of the midrib with parts of the leaf attached to it on both sides of the margin. Treat them similarly to leaf cuttings of rex begonias. Another method is to lay the cuttings in the bottom of the sand of the propagating bed, having previously made several incisions on the upper part of the midrib. Tubers will form on both cuttings and leaves if properly cared for. No shoots will make their appearance until the tubers have gone through formation.

As soon as the plants in the leaf show signs of growth, they should be entirely withheld; shortly after this the tubers can be extracted and the cuttings placed in the seedling tubs. As the roots of the gloxinia are rather hair-like, they will start very dry. It should be in a condition neither too wet nor too dry. Plenty of drainage and porous material to grow in is also necessary for the result. A shaded, moist, warm house suits them best. Three or four medium-sized tubs will be needed to grow a large quantity. Stay longer in flower, than specimens in single pots. G. W. O.

Boston.

Weather and Trade. This beautiful Indian Summer which for perfection of weather is unequalled in the memory of the oldest inhabitant, has had a most demoralizing effect on the market for trade cut flowers in all the standard lines are coming in to the market in abundance and the dealers are selling at a price far below the demand, unfortunately, is light and the fairs are enjoying an unusually early season. The market for cut flowers is good, while carnations are fully up to the average for October flowers. Chrysanthemums are being sold at a price well above the average. Violets are in sufficient quantity to meet all calls, but the market is still inferior to that of the best and do not bring over 50 cents per 100.

White, of Holbrook, brought in some narcissi on October 23.

W. W. Rawson & Co. are in their new quarters occupying the whole building, Nos. 12 and 13 Faneuil Hall Square. A formal opening to the trade will be announced later.

William Roper, of Tewksbury, is officiating at the Flower Market considerable quantities of plants and flowers which are very promising. One is a large pink flower much resembling the Mrs. N. S. ... to be announced in a few days, the honor of being sponsor having been tendered to a ... is a delicate pink flower, the outer petals being of light lighter shade, the flower very centrally placed and the style ... Emma Wocher.

The New England Florist Co. will hold four exhibitions in this Winter, the first occurring on ... will be new late chrysanthemums, carnations, violets, and geraniums.

Luchs Foster reports an active demand from all sections of the country for ... bostonensis. He has already disposed of his stock from several houses which ... still offers the fern in large or small sizes and in large or small quantities.

A. Galvin, formerly with F. McCarthy & Co., and J. M. Fisher have opened a wholesale florists' and supply store ... 349 Washington street. Tim Waters, ... McCarthy & Co. and Welch Bros., is also connected with the new concern. They ... neat and attractive.

Manager Kennedy of the Flower Market paid a flying visit to his old home in Philadelphia last week.

A delegation representing the Massachusetts Horticultural Society, and a few other invited guests visited the establishment of W. Pearce & Son ... Saturday. The fifteen greenhouse comprising their range were inspected and a lecture on ... pleasant afternoon enjoyed by all the participants. C. J. Dawson is established ... the Boston Park Department, of which J. A. Pettigrew is superintendent. Mr. ... has headquarters at Franklin Park.

This and the ... the only one of the exhibitions in the year to which the Society demands an admission fee, and the small ... any one who is interested from attending.

The November meeting of the Boston Gardeners and Florists' Club will occur next Tuesday evening. Mr. A. W. Ward ... as a substitute for Potash," but Tuesday is Election Day, and the lecture is ... it, so it is doubtful whether he will be able to be with the Club on that evening.

W. K. W.

Cambridge, Mass.

It would seem that made-up palms had come to stay. The latest is made up ... Doyle's in 9-inch pots that were immense. Mr. Murphy says he has orders for such for certain places. Orchids are

quite a feature here. Some fine spikes of Oncidium, Arctostemum and Dendrobium Schroeders were noted; the plants are well cared for.

St. Paul. Trade on the increase. Chrysanthemums are coming in good quantity and are eagerly sought after; in fact, the supply is not yet equal to the demand, but it is expected that the crop will be largely expanded. The best flowers retail at \$3 to \$4 per dozen. There are some very fine specimens of this season that we can hardly name at the best.

A Rose Trade. Hansen is having trouble with his roses. A sort of stem rot has attacked them. Whether this is due to overwatering, or is some new malady is hard to determine.

H. E. Mills, of the State Nursery Co. of Helena, Mont., was a recent caller.

Philadelphia.

Business on the whole has been much better, but there is such a large quantity of large events are not left. Beauty of extra grade find ready sale, other grades are selling slowly, as are most of the low. Chrysanthemums are coming in in quantity, but the demand is not good and \$3 per dozen is the top figure for the choicest flowers. Pot plants are selling at \$3 per dozen for

Carnations are very plentiful; the choicest flowers are selling at \$7.50 per dozen, the average being \$5 to \$7. Violets are very plentiful and improved. In fact, a few extra large are being sold at 75c. per 100. A Loxanne also being sold at 75c. per 100. Some are being sold at 25c. and 30c. per 100 and not going last at those prices.

Edwin Lonsdale is sending in some good eppyrhimids which sell at \$2.50 per dozen. Some are being sold at \$3.00, but there are also some Charlesworth, Lawrencebaum, and Spiranthes.

Retail stores have been doing better business. Wedding orders have mostly ... cut down to the lowest point. In general, work the Fisher funeral on Tuesday ... view, that we have had for a long time, there being eight carriages full of flowers. Most of this work went to the up-town stores, and was widely distributed. Will Wyatt had fourteen large designs, all ... has started up much better this week. High traham has been very busy with a ... decorations for the cotton manufacturers; he has also had a few large wedding orders, but he is waiting for a lot of work in the decorating line, so it looks as if business were starting up.

Cleveland.

Trade with the retail florists continues bright and much general and decorative work is being done.

The retail trade is bright, and is looking toward an increase.

The chrysanthemum is the flower of the day and is being sold in large quantities, but outside it. Large quantities of excellent stock are on hand.

Elmira, N. Y.

The Advertiser of this city, contains a very interesting article relative to Mr. Rawson's work among chrysanthemums.

"A visit to his greenhouses these days is very interesting. Mr. Rawson shows us a choice selection, gives their history and explains the various points of superiority, etc. Among his new seedlings is one which we just bloomed for the first time. It is a very large, rose-to-shaped flower, pure white, and the richest of that color yet produced. To this he has given the name "Primo," and it made its first public appearance at the recent Elmer Horticultural Society. Another which is sure to make a sensation among chrysanthemum specialists, is one just in bloom which he has named Pride, because, as he says, it is so puffed up. The color is an ivory white and the bloom is large, full, and deep. It will unquestionably become very popular. Among the seedlings he produced last season were Mr. Rawson named W. H. Chadwick, in honor of the president of the Chicago Horticultural Society. It will make its first public appearance at the annual chrysanthemum exhibition in Chicago next month. It is an immense, waxy white flower, tinted pink, and a brilliant career for it is confidently predicted. Mr. Rawson will give his first sale November 9 to 11. He will also act as judge at Syracuse, on the occasion of the exhibition of the Central New York Horticultural Society.

Providence.

The Market.

Business has been fair during the past week with quite an increasing activity in funeral work. Chrysanthemums are now in profusion. The demand equals the supply at the prices of yesterday. Pink chrysanthemums have been scarce. A few small plants are just coming in and find it an immense, waxy white flower, tinted pink, and a brilliant career for it is confidently predicted.

Business has been fair during the past week with quite an increasing activity in funeral work. Chrysanthemums are now in profusion. The demand equals the supply at the prices of yesterday. Pink chrysanthemums have been scarce. A few small plants are just coming in and find it an immense, waxy white flower, tinted pink, and a brilliant career for it is confidently predicted. Mr. Rawson will give his first sale November 9 to 11. He will also act as judge at Syracuse, on the occasion of the exhibition of the Central New York Horticultural Society.

Carnations are fairly good at \$16.00 per 100 or wholesale, retailing at 25c. and 35c. per dozen. Quite a number of our largest carnation growers are shipping their stock to Boston this season. They find this of great advantage to themselves, chiefly from the fact that at the Hub there is a graded scale of prices where merit counts for something, while here a carnation is a carnation, be it good, bad or indifferent, and is expected to bring all one price.

Round and About.

On the 31st, the Rhode Island Greenhouse, Kilmorland, proprietor, will open a branch store at 2435 Main street, Pawtucket.

James Nisbet, of Pawtucket street, Pawtucket, is having a big run on ferns for home decoration.

Mr. Kinckman, of Schiller & Co., New York, was a visitor in town the past week.

A. M. Rennie, who was reported in my last letter as being on the sick list, is improving.

O. H. Nye, of Warren, is offering his entire plant for sale. It consists of five greenhouses and cottage, heated with hot water; 10 acres of land, and a young orchard. W. H. M.

Moberly, Mo. The fortieth annual meeting of the Missouri State Horticultural Society will be held here December 7, 8, and 9, in the Court House. A good program is in preparation.

Pansy Plants.

Schmidt's International Mixture of Pansies is the best in the market. It is a mixture of blooming, strong stocky plants, 50c. per 100, by mail; \$2.00 per 1000, by express.

Market Notes.

Chrysanthemums are now with us in good form, and are selling comparatively well at wholesale houses. In the market, on Saturday, prices were cut all to pieces. Carnations are getting good and are selling liberally, with, considering chrysanthemum time is here. Much has been priced out of the market, but the flower market if the growers were not overly anxious to dispose of their cuts. Lily of the valley in the market is first-class and sells at 4c. Beauty, good, bring \$2 per dozen; other roses, 2c. to 4c. according to quality. Prices for chrysanthemums range from 6c. to 15c. according to quality; and we also have for sale the following list of floral work at \$2 to \$3 per 100.

Chrysanthemum Jottings. Saturday morning chrysanthemum committee had nothing to do but roll tea; not a seedling made its appearance.

Fred. Wutz has a lemon-yellow sport from Mrs. Henry Robinson, but I see from the trade papers that Fred. is not alone in this; many others have the same thing. I do not think it is any improvement over the parent, if quite as good.

John Fries and Son at Newport, Ky., has splendidly tinted pink chrysanthemum, a seedling they have had for several years; they named it Mrs. George Robinson. It is an early pink with as many good qualities as Mrs. Henry Robinson.

Here and There. Austin Shaw, representing Sleberth & Son, New York, was a caller Thursday. Mr. Shaw seemed well pleased with his Western trip and reports trade very good.

General retail business is ahead of last year. M. Rice, of Philadelphia, was a caller Saturday. Frank Snyder, of Gallipolis, was also in the city. E. G. ULLETT.

Pittsburgh.

Trade Still Satisfactory. Trade in cut flowers is still satisfactory; but stock is coming in too heavy just now, particularly carnations and chrysanthemums. In the latter variety, Philadelphia, Mrs. Robinson, Ma'or Bonnalton, Golden Gate, W. Simpson, and Yellow Queen are among the best this week, selling at prices from 2c. to about 12c. apiece at wholesale; and at retail from 7c. to \$2 per dozen. Carnations sell at \$1 per 100 up; stock is good. Cosmos is now plentiful, but not in great demand. The first paper-white narcissus of the season grown by John Rader are quite good, and a few Harriall lilies are seen occasionally. Violets are not in much demand yet.

Jottings. J. M. Gasser, of Cleveland, O., was in the city last week. O. A. Ochsauer, who has been engaged by Mr. Gasser for his store in Cleveland, left for that city last Monday. Mr. Ochsauer was formerly secretary of our Florists' Club and was employed by E. C. Ludwig in the Allegheny market where he is well known. The weather is remarkably fine at present, not too warm, but rain is badly needed, since the first of the month no rain of any consequence has fallen and some weeks before that was dry. The chrysanthemum shows in the park conservatories in the two cities are very fine, this fall and are being viewed by the public, particularly on Sundays. E. C. KEENEMAN.

Rochester, N. Y.

Ellwanger & Barry have just received notice that six valuable medals have been awarded them for their exhibit of fruit at the International Horticultural Exposition held in Hamburg, Germany. Two of these medals are gold, two silver, and two bronze, in all worth about \$100.

Peabody, Mass.

I noted a capital hint at J. M. Ward's lecture upon iron cactus, excellent for Mary to manipulate when weeping or dusting. Large plants can be handled much easier. A water cactus would be an improvement upon the iron one. W. M.

Salem, Mass.

McGee, Geary & Co. are very busy and feel the loss by sickness of Mr. Geary, who it is hoped will speedily recover from what has been a long spell. W. M.

GREEN-HOUSE CONSTRUCTION. This has been a specialty with us for many years and to us is due the credit for many of the great improvements that have been made in the construction of wooden green-houses. To those that buy our Clear Cypress Building Material we furnish, free of cost, complete detail drawings from which any intelligent workman can put up the material correctly. We have plenty of time to write letters ABOUT OUR BUSINESS, and we will be glad to hear from those contemplating building. Write for Circulars or Estimates. LOCKLAND LUMBER CO. LOCKLAND, OHIO. In watering your cut flower houses be careful to do it early in the morning, as soon as the sun has warmed them, so that they may dry up well before evening. As the weather has been warm enough to carry the houses through the night without fire heat, up to the present, October 25, I have only closed up my houses twice. On all other nights I have had a little air on during the night and the flowers have fared well by it.

Pot plants need to be looked over in the afternoon again, as they are apt to dry out too much before night; but do the watering with the sun.

By the time these notes are before my readers, we will all be busy preparing for the shows. In this district, the Indianapolis show begins November 2, so this is the last week in which to get plants and flowers ready if you want to exhibit. Pot plants, with me, will hardly be far enough in bloom, but the cut flowers will be out in full force.

There is no doubt that the 1897 sets contain some very fine varieties among them, and the man fortunate enough first spring to invest a few dollars in novelties will be well repaid for his trouble.

My next letter will be devoted to a review of the novelties, what I know and think about them.

Now, one word to the men who intend making a display at the different shows. Don't take your temper along with you; leave that at home. It may happen that you won't get the premiums you expect, and worse than that, perhaps, you may get none at all. Always remember that the other fellow is there too, and in many instances he will be just as mean enough to slatter your hopes. When that happens, it is always best to be mild tempered, and swallow your pill even if it should be bitter.

I hope I will be able to shake hands with a good many friends in Indianapolis next week.

THEO. ROCK.

## COMING EXHIBITIONS.

Secretaries of shows will greatly oblige by furnishing us with particulars of their respective exhibitions, for notification in this column.

**ANDOVER, MASS.**—Florists and Gardeners' Club, Town Hall, November 5 and 6; J. D. Fairhurst, Secretary.

**WONDERSE, MASS.**—Worcester County Horticultural Society, November 8-11 inclusive. Athin A. Hixon, Worcester, Mass., secretary.

## The "Yellow Flower" Contest.

The Central New York Horticultural Society held a special meeting in the Chamber of Commerce rooms in this city Saturday night, and at the urgent request of E. C. Stearns, the committee to admit cut blooms in the competition for chrysanthemums decided to change the terms of the contest now stand the prize is offered for a new yellow seedling not previously shown, and the committee will award a flower which will be showy and attractive, and at the same time hardy and resistant to the various diseases which from the contestants by the Society's judge, and a representative of the firm of E. C. Stearns & Co. is to select the flower. The prize flower is to be known for all time as "The Yellow Flower," and this shall be so stipulated by the grower. E. C. Stearns & Co. agree to forward the interests of the flower in every possible way. The show is to be held in the big Albana, Syracuse, November 9, 10, 11. The hall is the finest in the state for such a purpose, and previous flower shows which have been held here have been very successful. Applications for entry blanks should be sent to the secretary of the Central New York Horticultural Society, Mr. D. Campbell, Syracuse.

## CORRESPONDENCE.

Insertion will be given in this column to all communications free from animus but the editor will not be obliged to accept or to reply to those expressed to not necessary reflect our own.

## Chrysanthemum Society's Work.

Editor Florists' Exchange.

I have always been under the impression that the various chrysanthemum societies existed not only for improving the methods of cultivating these popular flowers, and correcting all mistakes in nomenclature, but also for the encouragement of the raising of new and novel varieties from seed or otherwise.

With the last-named Society its object is to improve the methods of raising the varieties brought before its committees, whether an award is made or not; with no mention of a discount on large quantities. This is very poor encouragement indeed to seedling raisers, after all the work entailed, and the only inducement actually being a certificate of merit and seedling chance to secure the necessary 85 points.

And the scale for the highest type adopted by the C. S. A. scale D. "for commercial purposes," foliage does not count. The said scale is the one adopted for seedlings, and is printed in the schedule of the Massachusetts Horticultural Society.

## Newport, R. I.

### Horticultural Society.

A most enthusiastic meeting of the Newport Horticultural Society was held at Westwood on October 27, and twenty-one new members were elected.

Among the exhibitors were some Robert Laurie seedlings from C. Vanderbilt, Esq., sample bloom of new chrysanthemum Peter Kay, varieties from Isionia semper-flora and Isionia giganteum.

From Andrew S. Meikle, gardener for W. E. Allen, came a splendid variety of long-stemmed gardenias, and from John Allan, "Caswell's" collection of chrysanthemums were some fine buds of merit; to Robert Laurie for new chrysanthemum Peter Kay, a bronze medallist; for various chrysanthemums, some of which drew S. Meikle, for vase of gardenias, a bronze medallist for superior culture; John Allan, a bronze medallist for cut blooms, honorable mention; to Thomas Beattie a similar award for strawberry, four seasons in fruit. At the next meeting, November 10, Arthur Griffin, gardener for J. J. Van Allen,

Esq., will read a paper on chrysanthemums.

The enthusiasm noted above is some of the fruits of the S. A. F. convention.

By the way, I have had a good many inquiries regarding a group of cuttings taken by Frank H. Childs of this city; it will save me much time if you will kindly say that the picture is very good, and that copies can still be had if ordered at once by addressing Mr. Childs. The price is \$2 a copy. W. C.

## Toronto.

### Trade Improving.

Business is steadily improving here. There are a great many chrysanthemums being raised, and the selling well, the wholesale price being from \$1.50 to \$2.50 per 100; nice blooms of Ivory and Lager sold on Saturday last at \$8 to \$10.

Roses are improving, but slowly, and are not selling quite so well as they did before chrysanthemums came in. Tidy is showing some nice Bride and Bridemaid, and Dunlop some very nice Beauty. The latter appear to sell well.

Gardenias are getting more plentiful and the flowers are better in quality. Some very nice Daybreak are around which bring from \$1 to \$2.50 per 100; only the very fancy got the latter price.

Violets are still poor; the hot dry weather of the past few weeks has been too much for them.

Dunlop and Tidy are each showing some nice blooms of Carthusia, labata. Most of our florists are putting up nice window displays.

There are still a few dahlias around, but the frost has nearly done for them. Geraniums are still looking and blooming well in most of the city gardens, but in the city the early ones are nearly all gone.

They are all done. In one or two places in the city there are some fine beds of Anemone japonica, in variety, in full bloom. They look very well and are useful. Clematis is another very useful thing that is still blooming well in sheltered places.

### The News.

They will soon move a short distance up King street, where he will have a more convenient store and a nice corner at the back of it. This will be a great improvement, as there is nothing of the sort down town.

Arrangements for the Chrysanthemum Show are about completed. Some advertising has been already done, and as we are holding our exhibition at the old work in November instead of waiting for Thanksgiving day, there is no doubt we will have a first class show and plenty of competition for the prizes.

DENNIS ZIRNGIBEL.  
Newham, Mass., Oct. 21, '97.

**Baltimore.**

**The Market**  
Owing to the long-continued stretch of warm weather, outdoor stock is plentiful and there is no chance that indoor grown flowers will meet with any advance in price as long as this condition obtains. Chrysanthemums are abundant, and bring very poor figures compared with the outdoor stock.

Violets are coming in regularly and did fairly good sales. Carnations are doing very nicely now. Good roses are not over abundant, owing to the dull, dark weather.

William Binder's seedling chrysanthemums are grand and he has some really very fine stock. He paid a flying visit to Philadelphia the other day to show the flowers to some of the chrysanthemum experts there who were very much pleased with them. He has had good offers for the stock.

George W. Kaib chrysanthemum will displace Bergmann, Fisher & Ekas may well feel proud of this seedling which was certified last year. All those who invested in it have not been disappointed.

Mr. McNall, of Baltimore Co., formerly the credit, has political aspirations; he has been placed on the Republican ticket for the Legislature.

**Chicago.**

**State of Trade.**  
The cooler weather so far has not helped business. All advances previously noted in the prices of roses and carnations are being slowly but steadily receding. American Beauty that heretofore has held its own well; \$2 to \$2.50 is a top figure now, with \$4 for teas, except for a few extra long Kaiser that bring \$5 to \$6.

Carnations, although getting better in quality all the time, are hard to clear off. A few ladies may bring \$2; but standards realize from \$1 to \$1.25 down to 50c. and 75c. for common.

Chrysanthemums are bringing \$2, where the same quality of year ago fetched \$3 and over; and really good flowers go at \$1 to \$1.50 per dozen with very few exceptions. The outdoor stock, that brings 50c. to 75c. a dozen. Southern stock is considered to be doing well. It pays extra to buy and we don't see how prices for stock shipped from other states can be very satisfactory to the shippers. One thing is certain; there is a larger number of growers here this year who are raising fancy stock, thus creating a great competition in extra good flowers than was the case in former years. Pink chrysanthemums are scarce; the first of Vinand-Morel came in on October 25, not in first-class condition, and sold at \$1.75.

In green stock sunlax and asparagus have good demand; bouquet greens are coming in in carload lots. Galax leaves are being sold at 25c. per 100.

Chrysanthemum plants are plentiful and selling fairly well.  
The funeral of George M. Pullman caused quite a demand for fancy flowers. The quantity used being very large. The Central Floral Co. utilized a large quantity of violets and 800 carnations. Others were heard of who had carnations, such as: J. C. Sillman, E. Weinbocker, W. J. Smyth, C. J. Schubert, C. Fiske, Henry H. Smith, and others.

The Illinois Cut Flower Co. has moved into its new store, 51 and 53 Wabash avenue. A cold storage room 30x15 feet under the sidewalk, is a very useful acquisition.  
**Bowling.**  
On October 24 a team of seven bowlers representing the St. Louis Club and consisting of C. A. Kutz, captain; J. J. Bettske, Fred. Weber, Al Bauer, Carl Beyer, Mr. Kutz (with Jordan Floral Co.), and Emil Schrey, came all the way to Chicago to play a friendly game of bowls. About a dozen of the Chicagoans were present and entertained the visitors. The following six players were selected by the home club: J. S. Wilson, captain; Chas. W. Kutz, G. J. Grant, Charles Held, P. J. Hauswirth, and John Zack. Fred. Weber acted as umpire. W. V. Thompson was umpire. Five games were played, the score being as follows:

First Game.....	768	739
Second ".....	829	829
Third ".....	816	681
Fourth ".....	686	704
Fifth ".....	713	704
.....	869	357

being a victory by 482 pins for the Chicago boys. EDGAR SANDERS.

Carl Koebel committed suicide on October 19. Suicide upon a bench was placed at the rear of his home. Koebel attached a wire nose attached to a rafter, and he was in a chair. The contents of an ounce bottle of carbolic acid, drew the blade of a razor across his throat, and he was in a chair. Koebel's widow, in consequence of the death of his father in Germany is said to have been the cause of the rash act. Koebel came to this country about 20 years ago and for five years had been a resident of the neighborhood in which he died. He was in a fairly prosperous condition financially and conducted a florist business on a moderately large scale. He leaves a widow and five children, the eldest being 15, and the youngest 3 years of age. In a note he asked that his remains be cremated and buried in his home. He was to be placed in the same tomb with those of his father. His request will be carried out by his widow.

**San Diego, Cal.**

Miss Sessions has enlarged her flower store, and put in a plant glass front, which gives her some much needed room. The contract for furnishing a number of large plant glass fronts has just been awarded to this lady.

Chrysanthemums are making quite a show now, and during the past week a few violets have appeared at the stores, but these are rather small as yet.

The Country Horticultural convention met at the Chamber of Commerce rooms on October 10. Horticultural Commissioner Hall presided. The subjects discussed were "Good Roads," "Small Fruits," and "Lemons." Mr. Hall gave a report on the progress in regard to the yield of lemons on the "Bonita" ranch. This ranch contains 65 acres of lemon trees, which were planted in 1881. It is owned by a Boston company, and is managed by R. C. Allen, a graduate of Harvard who in 1905 was worth 225,214 pounds; in 1896, 454,856 pounds; in 1897, 102,929 pounds. Average price during this time 13c. cents.

Harvey Stiles, our park superintendent, is rejoicing over the advent of a son. A local collector reports that the demand for Lilium Parryi is steadily increasing. This beautiful lily is native of southern California, growing in the high mountains of Riverside and San Bernardino.

 When Writing Mention Florists' Exchange

**Trade Notes.**  
**Buffalo.**  
 The cut flower trade inclines to moderate, but with a recent fair call for flowers for funerals, occasions, and some minor festive affairs.  
 The supply of flowers is good. Chrysanthemums are now in good stock, good assortment, and in quality rather improved over past recent years. At Kasting's, some blooms of moderate size but the quality are received regularly from David Scott, of Fredonia, while those of George E. Fancourt, of Wilkesbarre and John Bishop, of this city, are also noticeable. Prices range from \$5 to \$15, this last being about the top measure of value.  
 The finest violets seen here just now are undoubtedly those from Wise Bros., East Aurora. The flowers find ready place at \$1 per 100.  
 Roses are quite plentiful, with carnations improving and going at \$1 to \$1.50 per 100 for good stock.  
 The Buffalo Cut Flower Exchange this week shows an improved stock of blooms, both in quality and quantity.

**Lebanon, Ind.**  
 William A. Bilger, the florist, has brought suit against the Indiana Natural and Illuminating Gas Company for \$4,500 damages. He asserts that in October, 1905, when he had his greenhouse well filled with choice flowers, it became necessary to make some changes in the position of the benches. He notified the gas company, and they shut off the gas. When the change had been made the inspector turned on the gas, took in the pipes allowed the gas to pass through into the greenhouse, killing all his flowers and ruining the specially prepared soil in which the flowers were planted.

**Jottings.**  
 Some of our boys aim at something other than clay pigeons. Phillip Scott several days ago showed a good bagful of feathered and footed game laid low in local groves and meadows; while S. A. Anderson is talking about in similar quest in Orleans Co.  
 Eliza Denton, of Fredonia, N. Y., a grower of seed specialties and the Risley Fries smilax, planting stock, in a call on Saturday last reported weather conditions in their vicinity this fall most favorable to the successful cropping of the Exchange strawberry, quantities that run into hundreds of quarts having been harvested and naturally selling at good prices. She also stated that the vast bulk or extent of the Chautauque grape crop, even at the extreme low selling prices, tended to help swell the growers' totals. So individually that class is now feeling quite encouraged with existing conditions.  
 Charles Keitsch recently welcomed the addition of a girl friend to his family, and Mr. and Mrs. J. H. Rehstock last week were gladdened by a male new-  
 born.  
 Charles Huescott, of Wheeling, W. Va., recently spent several days in town as the guest of W. F. Kasting. YIELD.

## RETAIL FLORISTS WHO WANT No. 1 HOLLY

FRESH FROM THE WOODS

SHOULD WRITE AT ONCE FOR SQUIRE'S HOLLY CIRCULAR AND PRICE LIST.

A Few Testimonials Taken From Squire's Holly Circular.

Thanks for the case of Holly you sent. It gave perfect satisfaction.  
HENRY A. BESTER, Hagenstown, Md.  
The Holly was very fine, and came in very good condition. Do not think I ever saw finer Holly.

The Holly was exceedingly satisfactory. We will know where to get Holly next year, with many thanks. Truly yours,  
FOOTE & CO., Huxart, N. Y.  
The Holly was exceptionally fine, and sold well.  
JOHN A. BECK, Milton, Pa.

When Writing Mention Florists' Exchange

WE OFFER A LARGE STOCK OF

## FINEST NAMED TULIPS,

Almost as cheap as common mixed varieties are usually sold. We have a very large stock of these fine holding and forcing varieties, and offer them as long as in stock at remarkably low prices. Prices of Tulips are now so low that it should result in a largely increased use of these showy flowers. We offer the following sorts, viz:

- SINGLE.** Bizar Verdiet, Cardinal's Hat, Crimson King, Eleonora, L'Inmaculee, Arms of Leiden, Duc Van Thol, La Reine, 75 cts. per 100; \$6.00 per 1000.
- Double Mixed Single Varieties,** 60 cts. per 100; \$4.50 per 1000.
- DOUBLE.** Rose Blanche, Blanc Borde Pourpee, Gloria Solis, Tithian, 75 cts. per 100; \$6.00 per 1000.
- Pony Red, Queen Victoria,** \$1.00 per 100; \$7.00 per 1000.
- Finest Mixed Double Varieties,** 75 cts. per 100; \$6.00 per 1000.

For complete list of varieties, see our Wholesale List, sent free on application.

- We also offer an extra fine lot of
- DOUBLE VON SION NARCISSUS** Double Yellow Daffodi.
  - These are extra selected mammoth bulbs, ranging from 2 in. in diam. up, and, under favorable conditions, should produce about two flowers to the bulb.
  - Full case lot of 2000 bulbs, \$8.00 per 1000.
  - In less quantities: \$15.00 per 100; \$10.00 per 100.

When Writing Mention Florists' Exchange

**CARNATIONS.**  
A great deal of dark weather may be expected for some time, and it is needless to say that unusual care must be exercised during periods of cloudy weather in regard to watering. It is during dark, mild weather, that most of the injury is done by improper watering, and many are inclined to save fuel and so keep their houses closed, or nearly so, thinking that so long as the proper temperature is maintained, all is well. This has often been pointed out as a mistake, and it is one of the most grievous errors that can be committed. It is better to make burnings a time, more than any other, the ventilators should be open sufficiently to allow for perfect circulation. We know that the state or condition of the atmosphere is all important to the health of the flower, and that it is not an attempt to economize too much on fuel at the expense of the plants, but rather to give them the best substitute for a naturally light atmosphere, such as we derive from continued bright weather, by keeping the fires going. It is far better to have the steam (or other heat is used) going day and night, and to keep the ventilators partially open. In this way we can have a constant amount of air, and its circulation will aid the plants to take up more nourishment, and at the same time prevent the appearance of stiffness, a structure so much desired and needed in the carnation, than they could do in a close atmosphere, be the temperature what it may. During dark weather less water is required, and the experienced grower often makes the mistake of watering his plants when they do not require it. Do not water the leaves, do not water them yesterday or the day before, they must be watered to-day, but examine the soil, and see whether or not it requires water. It is far better to keep the plants on the dry side during wet weather, than to water them too liberally, and instead of your plants falling flat and limp at the first appearance of the sun, a pleasing one will be the case.

## POUGHKEEPSIE, N. Y., SHOW.

The Dutchess County (N. Y.) Horticultural Society held its annual exhibition in the Armory, November 3, 4, 5. The success which has been noted from season to season was again repeated. Taken as a whole, this season's show was fully equal, and in some points superior, to previous exhibitions. The general arrangement of the exhibition was a decided improvement. Trade displays were more numerous, as also were foliage plants, groups of the same, ferns, etc., cut roses and carnations. Carnations, in particular, were also more abundant than last year, and many of the classes were well filled, there being often five or six contestants. The general average of the flowers was excellent, many of them being of the varieties Mrs. Henry Robinson-Viviani-Morel, Mutual Friend, and Mrs. Peabody.

One great incentive to such a good showing of fine material was the large special awards offered, and it was in such classes that the best kinds were shown.

One of the keenest contests of the day was for the Henderson prize calling for violets. J. L. Bates, Mrs. C. W. Russell, Mrs. Robinson, and A. Herrington, Frank Hardy. The latter were fine and showed contrast on their own grounds in the foliage. On the other hand, Mr. Powell's Mrs. Robinson were heavier and more uniform in color, they were 12 marvelous blooms.

Cut blooms on boards is always a feature, and this year was especially so. Generally used, The Butterfield prize for 24 blooms brought out six exhibitors, and was in this category that the very best flowers were found. Mr. Blair may be rightfully complimented upon his 24 blooms, for they were excellent and rarely are they equalled.

Violets, naturally, are one of the leading crops of the exhibition, and this year exhibitors were encouraged by some very liberal special prizes in addition to the Society's regular ones. But owing to the earliness of the season and the violet crop being late (we heard that the violet crop was not in at least three weeks late, but will be finer than usual after that date), the display was smaller than that of last year, and was a slight falling off in quality as compared with other years.

Charles Emerson, gardener to the estate of W. B. Dinmore, Esq., made a circular group of orchids, particularly attractive. The centerpiece was a grand plant of Cattleya Bowringiana, bearing seven spikes. The flowers were of pale C. labiata, all special types and very fine. C. maxima Backhouseana, with eleven flowers, was surely a conspicuous plant; other cattleyas were C. gigas and C. speciosissima. Dendrobium phalaenopsis Schlegeliana was very fine. Cyclopiums were well represented, among them being C. spectabilem and C. maculatum. The latter was particularly fine. For the best table of decorative plants, Mr. Emerson was again first with a group of crotons, some of which were colored, and for the main part in four-inch pots. There were also several choice groups of dracaenas, some of which were through the group and the whole was edged with Selaginella Emihana.

For the best fern garden to the Hon. Levi P. Morton, was second with a very fine lot.

For the best six foliage plants the awards again went to the same exhibitors in same order.

For the best group of ferns, Mrs. Rogers, Esq., Hyde Park, was the only exhibitor for three specimens. This was the best group shown. Mr. Emerson was first and F. Newbold second. Both lots contained some very fine ferns. The award was first for the pair of Adiantum emarginatum. In the open class for decorative plants, Mrs. Emerson was first and F. H. Rose, Co., Tarrytown, was the only exhibitor. Nevertheless the group would have had been a very close one had there been any competition. In the class calling for a group of chrysanthemum plants, Mrs. Emerson, Agar, gardener to Fred Vanderbilt, Esq., was the only exhibitor, and it is questionable whether or not she had any single-stem plants have ever been seen in this country. The grouping also was unusual. The work was improved and plants, and the foliage emerged down

to the pots. The growing and arranging was done by an assistant named James Bell.

C. W. Russell, gardener to C. F. Dietrich, of Albany, secured first prize for best bush plant, with Ivory, and the Allen prize with a monster plant of the variety, Mrs. C. W. Russell. He also secured the premier award in his class with a magnificent plant of the variety, Mrs. C. W. Russell. He put up six grand plants grown to single stem; his varieties were Mrs. C. W. Russell, Mrs. Peabody, Viviani-Morel, Mutual Friend, and Philadelphia.

For twelve white blooms there were three competitors. A. Herrington was first with Mayflower; W. C. Russell, second with Mrs. C. W. Russell. For twelve yellow, A. Herrington was first with extra fine Miss Georgiane Fremont.

In class for twelve pink there were also three competitors, W. C. Russell was first with Viviani-Morel of superb color. Mr. Herrington being second with blooms of greater size and stem, but lacking the color and freshness of the former.

For twelve crimson the first prize was given to Mrs. G. W. Childs and the second to L. L. Powell with the same variety.

For twelve blooms to a vase arranged for effect with other foliage, open to private gardeners, there were four in the class. The best was by Mrs. Blair with fine blending of Japan maples and mixed yellow varieties. In the same class Mrs. C. W. Russell, Mrs. J. H. Grigg, gardener to Charles De Rham, Esq., Cold Spring, N. Y., with the same variety was second.

For cut blooms on boards, best twenty-four, first prize went to E. Grigg, second to W. H. Porter, heavy, second to W. H. Porter, light. Esq. The last named exhibitor also secured the first premium for best bloom.

The Sherman prize for twelve blooms on a board, open to all exhibitors, and developed the keenest and best competition of the show. Mr. Blair captured the prize with heavy, second to Mrs. G. W. Childs, third to Mrs. C. W. Pullman, Viviani-Morel, Miss C. H. Bates, Mrs. Robinson, Mrs. James W. C. Russell, Mrs. Peabody, Mrs. C. W. Philadelphia, Lady Playfair, and Major Bonafant. Mr. Blair also secured the prize for twelve blooms on a board with a grand lot. In this set was a bloom of Mrs. Peabody ten inches in diameter, and another of twelve inches pink went to Mr. Russell.

For six yellow, first went to Hamilton Scott, Hillbrook, second to A. Herrington. Bonafant was the variety exhibitor.

For six white, first to A. Herrington with Frank Hardy; second to W. Turner.

For best 100 violets, first, Stanton Rockefeller, Ethelbeck; second, F. R. Newbold; third, J. W. Feeter, Highland.

The Society's silver cup for the best 250 blooms went to C. F. Bahret, Poughkeepsie.

For the Platy prize, \$25, for the best 100 blooms, there were eight entries, Mrs. F. R. Newbold being the only competitor. For best 100 single Paul Gindra was first, Sloan Bros, staged the second, and the third to Mrs. C. W. very fine. G. Salford, Ethelbeck, exhibited the pin violet, Mrs. J. J. Astor.

For the best carnation class, first prize for 25 white, went to W. Turner, with heavy blooms of Flora Hill, second to W. Turner, second to W. Turner. For 25 pink, first to Owen G. Owen, Monroe, with Triumph; second to W. Turner, with Mrs. C. W. Owen. W. Turner was again first with a grand lot of Jubilee. This exhibitor was also first in the class for 25 white and pink. Herman Asher was first for 12 pink. W. Turner secured the first for a collection of 25 yellow, first to W. Turner, the Mill's prize for the best 12 white.

Among trade exhibitors F. R. Pierson Co. of New York, took the first prize for the ball, and in front of the band stand some fine specimen neprolepis ferns.

John N. May, Summit, N. J., sent a vase of his charming chrysanthemum variety, Mrs. C. W. Russell, to the rear of the ball sections of their greenhouse construction, one showing iron frame, one showing wood frame, and a third a regular iron frame, even-span commercial house. A feature of the work was improved and watered by the same is heated from within, and

the water also is carried into the house. They also showed the Mitchell heater which is well-spoken of as an economical and efficient heater.

The judges were W. Scott, Buffalo, N. Y.; A. D. Rose, Jersey City, Sam. Goldstein, New York; C. F. Dietrich, New York. Among the visitors at the show were Peter Crowe, 1, Madison, N. Y.; C. B. Wood, Esq., New York; and E. B. Sutton, Babylon, L. I.

## BOSTON FLOWER SHOW.

It has been chrysanthemum week in Boston with the gorgeous given in full possession of the town. Tuesday, Wednesday, Thursday, and Friday were devoted to the annual chrysanthemum exhibition of the Massachusetts Horticultural Society, which is the event of the year for the worshippers at the shrine of the chrysanthemum.

The show was an excellent one and worthy of New England and its chief horticultural section. It has been claimed, as a whole, to have excelled its immediate predecessor of 1896, and in many respects it has. The exhibitions of the past two or three years would make a more than favorable comparison with the present one. These exhibitions have formed a continual evolution since their inception, each year showing a decided improvement over the preceding one, until the present exhibition, so it is thought by some that perhaps a further evolution in the future may be possible, has been reached, while others contend that the march of improvement will continue through the time and that the present halt in the procession is merely temporary.

As in the case of the show of last year, and the fact that two of the principal exhibitors of past years, James C. Wood and J. H. Grigg, were absent (plants and blooms) were not competitors this year may in part account for the fact that the quality which has been reached. On the other hand there were several new exhibitors who made entries in the show, and among them were A. Herrington, Madison, N. J., gardener to H. McKay Twombly, Esq., and J. H. Grigg, gardener to Cornelius Vanderbilt, Esq., while Alex. McKay, gardener to David Nevins, Esq., and C. S. Sandford, gardener, and E. M. Wood & Co., competed with their super-produces in many classes.

The day of the chrysanthemum as a "fad" has gone by, if the dozen years since that glorious show may be taken as a criterion. Eight, ten, or a dozen years ago both halls were crowded with the afternoon and evening throughout the season, a feature which is now noticeable only on the last week.

The arrangement of the halls this year was identical with the former, the lower hall being devoted to the cut bloom classes and the upper hall to the plants and foliage. The exhibitors were William J. Martin, gardener to N. T. Kidder, Esq., John Barr, gardener to J. H. Grigg, Esq., George C. Donald, gardener to Jason S. Bailey, Esq., among whom the prizes in the various classes were divided. The cut bloom classes calling for plants grown to one stem and bloom, the honors were divided between Mrs. C. W. Russell, George Green, gardener to James L. Little; C. F. Roy, gardener to Hon. E. S. Converse; and Mrs. C. W. Russell, George Green, G. Weld, and C. Sandford, gardener to H. H. Southar, Esq.

For cut blooms groups of chrysanthemums arranged for effect, limited to 100 square feet and edged with ferns or low-growing plants, the honors were again won by Messrs. A. W. Blake, Jr., C. G. Weld, John L. Gardner (William Moore, Esq., and J. H. Grigg, Esq., E. S. Converse, and awarded in the above order.

The competition on the cut blooms was perhaps as close as ever before, and the quality of exhibits was very high. In the class for twelve white blooms in the hall; in fact for several years flowers other than of the first grade have been shown in this class. Exhibitors, E. M. Wood & Co., Joseph H. White, Esq., (James Wheeler, gardener), C. S. Sandford, Esq., Alex. McKay, Esq., (C. S. Sandford, Esq., gardener), N. T. Kidder, Esq., Mrs. C. F. Cheney, James C. Wood, Esq., C. G. Weld, C. S. Sandford, Esq., Mrs. E. B. Wood, Cornelius Vanderbilt, Esq., H. McKay, Esq., J. H. Grigg, Esq., John L. Gardner, Esq., (John Jaffray, gardener), Mrs. E. B. Clarke (John Ash, gardener), and W. N.

Craig, were the principal contributors, and all may well feel proud of their share in getting together such a magnificent collection of superior specimens.

High Graham's new chrysanthemum Pennsylvania attracted much attention. It was awarded a first-class certificate of merit, and the vase of Frank Hardy, which received first prize for first grade flowers, was exhibited by W. Herrington, was especially admired.

Other features of the show were fine collections of carnations, from Peter Fisher and William Nicholson. Some of the carnations Mrs. Thos. W. Lawson, which was exhibited last year as No. 29, A. A. Kops, Esq., secured a certificate of merit for new carnation, Mayor Quincy, and Joseph Hill, Nyack, N. Y., the same variety as the one secured by W. Herrington, N. Y. (Arthur Griffin, gardener), received a silver medal for hybrid double ranunculopsis. James Comley and Mrs. E. M. Gill made good displays of cut flowers. W. P. Winsor showed fine cypripedium insigne; F. E. Palmer, a fine plant of Neprolepis exaltata; J. S. Bailey, some beautiful orchids and a fine collection of ferns, one of which he was awarded first-class certificate of merit. W. K. W.

## Newport, R. I.

New Box for Carrying Cut Chrysanthemum.

Robert Laurie of this city has planned a box for carrying cut blooms of chrysanthemum. He used it for the first time in taking flowers to the Massachusetts Horticultural Society's show. The dimensions of the box are length, 18 1/2 inches; width, 2 feet 6 inches; height, 3 feet 6 inches; capacity, 40 blooms. A feature being that the flowers are stood upright. A tin pan, 3 1/2 inches deep, is fitted inside the box and is held in place by a wire which is fastened a piece of wire netting. Cleats are also fastened inside, six inches apart, giving 7 inches from end to end, and 8 inches S on each side. Two holes are made in each, into which are placed the ends of the stakes. These are light and are sprung into position. The ends of the stems are pushed down into the holes, and the stems are held in the stakes, the upper stake coming just over the flower. So as to get the last row of flowers to make the end has been hinged in the middle, and is let down until all the flowers are in place. I believe that it is a first-class box for shipping choice blooms.

The Caswell Greenhouses tried a house of bench chrysanthemum this season as an experiment. All have been sold at fair but not fancy prices. John Allan who is manager here, is most successful with carnations.

## Florists in Politics.

Thomas J. Gibson has been elected to the City Council. Mr. Gibson is the senior member of the florists of this season. Bros. Andrew K. McMahon, ex-president of the Horticultural Society and president of the Florist and Gardeners' Club during its short life, has been elected to the Common Council. Mr. McMahon is a florist. Frank Bradley, the present president of the Newport Horticultural Society has been elected to a place on the Select Committee.

**POINT SYSTEM COMPETITION**

I am in favor of the point system of judging at flower shows and contests for seedling certificates for the following reasons:

1. It is the most expable of uniformity.  
2. In the case of cut flowers it places all one variety on the same footing.  
3. It prevents the judge from using his own preconceived ideas (if he have any) as to the merits of any particular shade of color, or peculiarity of form in the variety being judged.

It is a rational system.

Now to elaborate the above claims:  
1. It is my opinion that a system of judging the merits of any particular flower, or any variety of that flower must be cast-in-form in its nature. There must be no room for error, and no room for additions. The good qualities of the flower number 100, and every one contesting must have that number to perfect; have they less they are below the standard in their proportion to their ratio to perfection; this makes this system uniform and gives no competitor a chance to claim that any other competitor had better points in this system than he. It gives a definite and set standard, to which all can aspire, and by which all will be alike judged.

2. In judging cut flowers it places all of one variety on the same footing, because the judges have a typical flower (or should have) which represents to them the highest type, or 100 per cent., by which all others of this variety are judged, not on their own points, but as they compare with the points of the typical flower. For instance, in judging sweet peas we use points; form, size, color, and substance. We have the typical flower which represents the highest type known to date. With this we compare the competing flower, allowing it as many per cent. of the total number of points, as its relation to the typical flower entitles it.

3. It prevents the judge from using (perhaps unconsciously) his own preconceived ideas or sympathies as to the merits of any particular shade of color, or peculiarity of form, because it is not left by this system to the judge, *per se*, but to judge it in its relation to the type of its class. The flower being judged is as such as he would give room to in his garden; it may be one that he particularly dislikes; it may be a variety of a class which he has discarded for some other variety which he considers better, but that cannot affect his decision on the point system, as he must stick to the points as the flower before him shows them, and render his decision accordingly. Of course, the judge understands, as well as any other system, must be expert in his speciality, and know a "point" when he sees it!

4. It is a rational system, because it is based on the decimal system of notation, in which perfection being for 100, which has from the beginning been the most convenient system, as every point and every cent of points being a definite and easily understood ratio to it. Let us illustrate by the five qualities enumerated above, the way in which we will take form, to represent twenty-five one-hundredths, or one hundredth of the total color, fifteen one-hundredths substance, twenty one-hundredths, and stem, twenty one-hundredths. We will take good qualities of the flower. If we judge that the competing flower shows a form which is less than the standard, we will grade it "form, 20," and so on with the other classifications, the totals making the judgment on their own merits. The decision will be accordingly. This is perfectly rational, as all flowers bear some such ratio to perfection, and are judged more especially to a typical one. In this system it is customary not to take account of less than five points, but the time coming when single points will have to be taken account of in judging some of our higher priced and highly specialized flowers, as the points of difference will soon grade down that line between competing flowers of the same variety.

I will admit that there is one occasion in which the point system is of no value whatever. It is in judging between the merits of two or more varieties of the same flower, as between H. P. and tea roses, cactus, ampelous, and pompadour dahlias; dwarf and tall sweet peas, as in such judgments the likes and dislikes of the judges will have full play, as every one of the above represents 100 per cent. and it has no standards of comparison with its allied neighbor. But in the judging together of the variety, the "point" system of judging is perfect, for it knows no fear, favor, sympathy, predilection, educational, or sectional bias, or personal equation.

SAM. A. HAMILTON.

The judging by points of horticultural exhibits facilitates close decisions. This is its chief application; but even here judges differ, as it is seldom that two can agree as to the number of points an exhibit scores.

I deem the qualification of the judge or jury of more importance than any mere scale or system of judging.

Primarily the judging of horticultural exhibits requires not only excellent judgment and foresight on the part of the judge, but a wide experience and thorough knowledge of the subject in hand. Not everyone is naturally qualified to assume the responsibility. Commanded by the judge of strict integrity and earnestness of purpose—doubtful, however, if he would always be considered as a "jolly good fellow." Some disappointed exhibitor or other might be inclined to "cuss him down the banks." Howbeit, a good judge is alike indifferent to either praise or blame.

Snip judgment is greatly to be deplored, and the mistakes of mal-judgment are prolific among horticultural life and permanent losses towards educational exhibits.

Primarily the varieties of chrysanthemums and carnations receive awards that are self-

Where carnations and chrysanthemums are judged for certificates eight points should be required. In judging new varieties healthy growth and freedom of flowering are unknown quantities. Nor can their fragrance be properly judged where flowers are put up for exhibition.

Any other classes can be judged by ten points more expeditiously than by the usual standard, the greatest difference of judgment was with as criticism would be the number of points ascribed to individual characteristics.

GEORGE P. RAWSON.

There is to my mind no question that the system of judging by points can be so perfected that it will meet the case of any flower at hand. The defective application of the system, as it has stood, is no excuse for the statement that it is useless; it is simply not perfected enough. I will try to explain how it can be made more serviceable than it is at present.

The judging of chrysanthemums, as done in 1885, was according to the following points: Color, 25; form, 25; foliage, 15; stem, 10; petals, 10; size, 10. I think the most important point in a flower is good balance, that is, all the different points in the make up of a bloom should harmonize well, and make a handsome *tout ensemble*. Let us take for example Golden Wedding. It is a large flower, with a large stem, and a large leaf, carry the flower, with line dark foliage, well proportioned to flower and stem, and we take Ivory, with a small flower, but, again, with a stem sufficiently strong to carry that flower, and with small foliage, and a stem well with flower and stem. I would put the scale of points as follows:

Color.....	30	POINTS.
Form.....	15	"
Substance.....	15	"
Foliage.....	15	"
Stem.....	10	"

100

The next thing is to give instructions as to the different items above listed, so as to make the scale comprehensive enough for any judge to handle this system expeditiously. I would give a balanced flower, take Ivory, Golden Wedding, Niveus, and Major Bonafant. For standard foliage, take Modesto, take Modesto, the Queen, and Mme. Felix Perrin.

For standard in size, take Mayflower, Eugene Duillecouze, and Vivand-Morel.

For standard foliage, take the Queen, the Queen, and Helen Boudouin.

For standard form, take Kioto, Niveus, and Mrs. S. T. Jones.

For standard foliage, take Harry Hurrend and Mrs. Jerome Jones.

In giving the above standards he will be able to compare the new kind with the variety entitled to the full points, and an easily detected discrepancy case it does not come up to the standard.

I think any judge can see the difference in size between a Mayflower and an Ivory, or in color between a Queen and a Mayflower, or in fullness, between a Queen and a Henry Boudouin, in a well-balanced flower, between a Kioto and a Golden Wedding.

Would this system work? Take Ivory. It would carry 30 points for balance; it would lose some in color, some in petals, and some in size; it would lose much in size; it would lose some in fullness; it would carry well in form, but would lose in foliage in not being equal to our standard, Mrs. Jerome Jones.

Now let us take Eugene Duillecouze. It would lose in the points for balance; the stem is not quite strong enough for the flower, and the foliage is decidedly small for such a large bloom; in color it could come well up, but would not score full points, being not quite up to our standard, Modesto; in size it would go to

Chrysanthemum Mrs. Trainor L. Park (Yellow.)

the top, 15 points; in fullness it would carry well, but does not reach the standard; in form it is behind in not being high enough in the center; the foliage would get fair points, being too small, nor which it suffered in the balance; otherwise the foliage is not bad.

For the next let us take Mrs. Henry Robinson which will carry high for balance; this variety is well proportioned; in color it would also score high; in size it would get a good percentage, but it does not come up to our standard. Mayflower; for fullness it would stand close to the standard; Henry Riman; for form it would be very high in being sometimes perfect in that respect; the foliage ought to be much more substance, and be a little glossier to make it perfect.

This same principle would hold good in judging carnations, only the scale should be so arranged as to meet the different points in that flower. Say we make the scale for carnations as follows:

PERFECTION.	
Best Balanced Flower.....	30 points
Color.....	15
Size.....	15
Fullness.....	15
Form.....	15
Fragnance.....	10

The Society to indicate the standards for the different sections to be used for comparison, say for porta, Cortia, Uncle Sam, Emma Wheeler, for size, Mrs. Pratt, Justice, Flora Hill, and so on.

I take these notes that the judges ought to be appointed in the growing of the flowers; and as far as seedlings are concerned, expressed by the officers of the Society to give them a stimulus, and for doing so; they should also send in a report on growth and floriferousness. This examination should be made without notice having been given to the owner, and at such a season as directed by the secretary of the Society.

TRIO, BOCK, Hamilton, Ohio.

**CRYSANTHEMUMS**

**Review of New Varieties.**

In reviewing the new varieties sent out last Spring and varieties imported during the past year or thereabouts, I will include a few of the older kinds of extra merit.

In white we have as the finest of the year, Exemplum, a close headed variety of flower of great size, with fine stem and fair foliage, an easy grower and a splendid specimen of the garden. Barcha, a large incurved variety of milk-white color, of good size, good stem and foliage—a grand commercial variety. Maud Child, Weeks, a most beautiful white English variety; flower very deep and full, with good stem and fine foliage; it makes a fine pot plant in 8 to 12-inch pots. A grand commercial variety. Maud Child, Pratt, a nice incurved white. J. H. Woodford, pure white. It should be seedling according to description. Baron A. de Rothschild is a handsome reflexed white. Lady Northote a reflexed white with good foliage, petals very open. Bonifidus Snow, new Japanese variety, fine early reflexed, ready to October 10. Mandarin, Henry, a large incurved white, shading towards the center to yellow. Mrs. J. Penbody, a large fine stem, reflexed white foliage, tall grower. White Swan, a splendid hybrid variety, of grand form and finish, and an easy grower. Fine commercial variety.

In yellows I place first Golden Trophy, an incurved solid flower, sulphur. It is the best variety of the year. Next in size is Harry Hurrell, a fine solid chrome-yellow in the style of H. W. Riman, dwarf variety. It is a fine variety for pots and an excellent commercial variety. Mrs. J. C. Gibson is a fine canary, with large, good foliage, and fine flowers; the form is very irregular, petals being very pointed. Yellow Sun, a fine solid almost chrome-yellow, with a light touch of orange; form in the style of Gretchen Bunch, but with a yellow center, and a low, reflexed, of great size. Solar Queen, canary-yellow, deepening towards the

center. Australian Gold, in the style of Georgianna Bramhall. Miss Phyllis Fowler, a light yellow, style of Eugene Baile-douze. Mrs. L. P. Doughless, a fine incurved yellow. T. B. Morse, another handsome incurved yellow. Instability, a light yellow seedling of Baile-douze; good solid incurved, petalage very thin. Golden Ace, stout stem and foliage; the flower heads to be more massive on that stout foundation.

Mogullon Prince is a very pretty incurved bronze, extra good for collections. Pride of Exmouth is a flashy flower, capable of combination of white and yellow, penciled with purple; stem is weak. Platinum Glory, a rich salmon-rose, reflexed; fine size and a distinct color. Wm. L. Rosseau, a bluish-pink, beautiful, fair. Thanksgiving, a very good reflexed

will take up the work and push our Queen of Autumn well to the front. Our standard of excellence is getting higher from year to year, but I am of the opinion that we will never see the end of improvement in the chrysanthemum.

TRIO, BOCK.

**QUESTION BOX.**

OPEN TO ALL . . . . . FREE TO ALL.

Answers Solicited from Those Who Know.  
(157) Maggots on Violet plants.—A. G. COVILL.—The small white maggots which are injuring your violets are

only so that the plants may dry off before rotting. The best remedy is to be kept too high and the plants should be bright days—P. H. DORSETT.

**American Institute Show.**  
C. W. Ward, Queens, L. I., made a splendid showing of carnations on Friday and Saturday at the American Institute Flower and Vegetable Show. In all there were fifteen kinds, all of which were new, many of them being exhibited for the first time. They were awarded a lot of well-merited the award—medal of excellence which they received. Several varieties were also given medals of merit certificate. Among these were Gold Nugget, a rich yellow of great excellence; Mrs. James Dean, a delightful soft pink; Charles A. Dana, another pink of the same character, and New York, a cerise of fine parts. Other excellent kinds were No. 6, '96, bloom and color somewhat resembling New York; Maceo, very rich, dark violet color; John Young, a fine white; White Cloud, Glacier also a white. Flora Hill and Mrs. G. M. Bradt were also very fine.

**COMING EXHIBITIONS.**

Secretaries of Shows will greatly oblige by furnishing us with particulars of their coming exhibitions, for notification in this column.

**WORCESTER, MASS.**—Worcester County Horticultural Society, November 9-11 inclusive. Adin A. Hixon, Worcester, secretary.

**Chrysanthemum Midge.**

My illustration is from a photograph forwarded by G. C. Knott, St. John, N. B. It shows a very young plant grown up by me at the Horticultural Association of Gardeners, Lady Lyle. The plants were forwarded to us 18 days before the November 7's, with dark, close foliage; matured October 10; color pure white; stem sturdy. When necessary to be cut, as the flowers are much larger and just as early.

**Chrysanthemum Midge (White.)**

blush-pink. Lawn Tennis, mauve, reflexed, of a very symmetrical form. Cassio, an exceptionally fine colored flower—a deep rich wine-red, dwarf grower, good foliage, and an N. I. novelty. Doeder, dark maroon, in the style of George W. Child; form somewhat irregular. Dorolus, Spaulding, in the style of Maud Dean, a fine incurved flower dwarf grower, and splendid for pots; coming in that respect close to Free and Glad.

I will now name a few poisons, which I think could be grown with profit, say five or six inches in diameter. William Kennedy, dark crimson; Model of Perfection, a beautiful pink; Black Douglas, petals white, center yellow; Surprise, light pink of great size.

I took some notes at E. G. Hill's place, and will here mention some very fine newcomers to dissemination next year. No. 1, a fine dark yellow with a touch of orange in it; incurved, good size; fine dwarf grower with good glossy foliage. This will prove a commercial variety of merit. Quite a deep rose-colored incurved flower, a good dwarf grower; will also prove a splendid commercial variety. Washington, white, with a tinge of flush when done, incurved, dwarf grower, and another valuable variety. Monitor, seedling of this year, which shows up well. These notes don't include the late ones which were not in bloom.

With this I finish my letters and hope that for another season some other man

produced from eggs which are deposited by a gall fly, probably closely related to the Hessian fly, in the folds of the young, violet leaflets. The fly is very small, being little if any larger than the ordinary black gnat. The writer feels confident they would not be noticed in a greenhouse, at least he has never observed them. The trouble was noticed around Washington last Fall and Winter. A short description and a figure showing the injury was given in the EXCHANGE of December 19, 1896, page 1132. So far as known, there is no way to kill the maggots on violets without injuring the plants. The flies, however, can be killed by fumigating with hydrocyanic acid gas. A note relative to this matter, by Mr. W. G. Saltford, appeared in the EXCHANGE of September 11, 1897, page 118.—P. H. DORSETT.

(158) Violet Disease.—J. E. JACKSON.—The violets are suffering from an attack of a fungous disease known as violet spot, or more commonly perhaps as spot. Under favorable conditions, this disease spreads very rapidly, frequently destroying an entire crop in a comparatively short time. There is no known remedy for the spot, but it can be often checked and sometimes entirely stopped by removing all badly affected plants and picking off the diseased leaves from those slightly affected and destroy- ing same. The foliage should be kept as dry as possible. When necessary to spray for red spider it should be done early in the morning on bright days.

### For the Busy Man.

Several of the florists of New York, R. I., were actual candidates for political office at the recent election.

Superintendent William Falconer, of Schenectady Park, Pittsburgh, is getting together a fine collection on economic plants.

A movement is on foot to establish a Canadian Florists and Nurserymen's Society, of London, Ont., is taking an active part in the project.

Canadian florists are not satisfied with the state of the floriculture in their country; they want orchards and azaleas planted on the Free Isles.

There were eight new seedlings submitted to the Chrysanthemum Society Committee at New York on Saturday last, but none of the varieties secured a certificate.

There will be a chrysanthemum competition at New York, Florists' Club meeting on Monday next. The Club's silver medal will be given for best 25 blooms of not less than five varieties.

An embargo has been placed on the wild smiltax trade, owing to the prevalence of yellow fever in the States. It is causing great inconvenience to decorators in northern Ontario. Autumn foliage is being used as a substitute for the greenery.

### Erratum.

In advertisement of Messrs. Green & Underhill in issue of Oct. 23 and 30, read "City of London, Victoria and Yucca var. \$1.50 per 100, not per 1000."

### Advertiser's Notice.

The price of Cyprus 4, lib. pots, in my last advertisement should have been \$1.00 per line. Instead of \$2.00 as printed. Chicago, Ill. GEO. WITTEBOLD.

### Antipodean Discontent.

There appears to be a wave of discontent sweeping over the Antipodes relative to the results arising from business transactions of certain American florist and nursery firms with those in the trade located in Australia, as witness the subjoined criticism which appeared in a recent issue of the Australian Agriculturalist:

"I wish to add my testimony to a paragraph in your last issue entitling your readers about some of the catalogues issued by certain American nurserymen. 'Windbags' I call them. The firm you refer to, in— 'I think I could 'guess' in this case, but there are other 'windbags' such as the one in the 'blowing line.'"

The above forms the introduction to a complaint addressed to the editor of the journal in question, in regard to a transaction in roses, which evidently did not end to the liking of the complainant, who closes his communication with this sweeping assertion: "I have never had anything satisfactory from America yet."

In the same issue of the Agriculturalist we find a specific charge of unbusinesslike methods made against an American nurseryman. The result, as has resulted in a termination to the dealings of an Australian firm with that concern.

While it is not our purpose to condone practices which show a lack of the fundamental principles upon which all successful business structures are reared—viz., square dealing—we are constrained to add that such practices are not confined to America. They are prevalent in a greater or less measure all over the world, and doubtless Australia has its quota; and we venture to assert, that regarding the same, the Antipodes here will compare very favorably as regards liability with those in other parts of the globe.

The sequence of the transaction in question, thus publicly announced by the agriculturalist, will not be forgotten, however, and may thus ultimately be of benefit to all concerned.

Referring to the so-called propensity of the American nurseryman to "blow," which has tempted our friend in the home of the kangaroo to do his other catalogues "windbags," we do not believe that Americans hold a mortgage on this attainment. We think we can detect, if we may, be gentle zephyrs in the catalogues, hailing from the Antipodes. But after all, it is a falling of human nature, and we think it will be understood and uneventful. What would become of the many art of self defence, say, were there no Fitzsimmons or Corbett to perpetuate it, by means of their "windbags."

The main point on which one Australian gentleman's complaint is grounded has apparently resulted from bad packing.

The fact that similar plants have arrived in the Antipodes in good condition is conclusive proof, that with proper care exercised in this important work, plants may be carried safely to their destination, and live with endurance and uneventful. What would become of the many art of self defence, say, were there no Fitzsimmons or Corbett to perpetuate it, by means of their "windbags."

The special requirements for foreign export, and see to it that the packing is properly performed in every instance.

But our Australian brethren must not run away with the idea that the unbusinesslike method complained of permeates America. American growers, therefore, ought to seek advice and guidance before placing their orders. "Yes, they can do all this with a flourish and are proud to state that the vast majority of our American florist and nursery companies, who are engaged in foreign trade, will execute such orders, as they ought to be executed, in a straightforward and businesslike manner."

A Japanese paper in describing the new gowna color of the process of the Wales, states the color was of mauve satin, the shade of a "cattleyard orchid."

### Reflections on Current Topics.

Said a marketman to me the other day: "The establishment of a permanent plant market in New York City will prove one of the grandest blessings that could be enjoyed by the plant trade. For years we have labored under many disadvantages and personal discomforts, all of which are now being gradually developed out of our industry. These, in later years, have been aggravated through the inconvenience attendant upon the necessity of going to distant places, not wholly the outcome of necessity either. But with the facilities afforded by the proposed market, looking to the benefits that naturally result from concentration, I think I am sure that the old-fashioned and sectional rivalry which has heretofore existed will be completely eliminated, and under one roof will be found working for the common good."

Naturally enough the implicity of this market may be attended by some drawbacks, but these in course of time will surely be dissipated; and the present prospect, when the proposed market management it demands, must prove to be but the initiatory step toward the foundation of a much needed plant market in the metropolis—a general plant and cut flower market, centrally located. It appears to me that it is not only to be begun to consider, in a practical manner, the abolition of the existing segregation of our market, but also to have the subject at the forthcoming meeting which bear that its bearings was thoroughly discussed. Great results, it is felt, could be accomplished by the plant and cut flower traders working hand in hand; but the question is, how to do it. If we are to see that "consumption so devoutly to be wished" materialize.

It has never been just quite clear to me why howling was selected by the florists as their national game, and I am still in the habit of making a special note of it, regarding one of our best bowlers, the game, as now played, owes its origin in this country to the Germans, from whom it still receives its greatest stimulus; they being the biggest patrons of the bowling alley, and the most successful bowlers.

According to one of our best bowlers, the game, as now played, owes its origin in this country to the Germans, from whom it still receives its greatest stimulus; they being the biggest patrons of the bowling alley, and the most successful bowlers. The origin of the annual contest at the florists' conventions with that national game, however, was originally introduced at Buffalo, the majority of the then contestants hailing from the "tight little island" of Long Island. For a long time an explanation in that direction all of the more perplexing. I had a solution of the problem, in a general way, in the form of a song rendered by a Philadelphian at an annual supper wherein he states howling "is a game that will out play." Probably the apparent simplicity of the pastime has been a great factor in its popularity. The game, as well as the unabated enthusiasm which accompanies it. Matters of this nature are not to be despised, and it is to be regretted that the game has assumed such material significance in connection with the annual meetings of the florists, and that it is likely to retain—as a subject of historical import, its origin as affecting the trade might be worthy of chronicling, to our enlighten me?

News comes from London to the effect that Lilium Harrisii bulbs are being grown on a large scale in Natal, South Africa, whence an experimental importation was received in April last, and sold by auction. They are said to have been equal in size and quality to the best samples obtained in England. The bulbs were secured for Kew, and were planted in pots and placed on a cheder bed in the open air; they grew and flowered perfectly in the autumn and September, owing from the enthusiasm on the subject of growing this bulb in America, which Mr. Allen a paper read before the previous convention, has created. I expect to hear shortly of large cargoes being placed in the hands of the florists, and from California and other sections tend to justify this prediction. It is a great pity that the Natal "bulb" is becoming a successful competitor with Harrisii, on a small scale, as American trade is concerned. But indications point to the fact that success in this direction is being secured by Bermuda along these lines. Job.

### New York.

Wholesale Market.

Despite the fact that in the early part of the week considerable extra work was done by the florists, and the Astoria opening, etc., the demand has in no way caught up with the supply, and the market is expected to continue without abatement. Prices are absolutely firm, and it is difficult to purchase them as to dictate his own terms.

Chrysanthemums are in excellent quality, but realize little money. Good blooms only command \$c to 12c, each, and the average of the season is about 25c. In lower grades the price varies from \$1 to \$8 per 100, and among these the quality is of a fancy grade.

Roses remain about the same—\$3 per 100 for No. 1 grade of general kinds is considered a fancy grade. Prices below that vary from 50c. to \$2 per 100, the highest for special beauty being only \$2.50, but the majority fails to approach anything like that figure.

Extra carnations are considered well sold in New York; more realize only 75c. Lilies bring \$1.50 per dozen; white orchids 40c. each. Valley varieties are at \$1.40 per 100.

#### Retail Trade.

There was an enormous quantity of flowers used for the funeral of the late Mrs. Wm. J. Pease, of New York. The work was well distributed over the city. Florists on the East side caught considerable business, and the demand for chrysanthemums at the rate of 1,000 per day. The various rooms form quite a few flowers in the city.

A new store is being opened at 355 Fifth Avenue, between Thirty-fourth and Thirty-fifth streets, with the title, "Wehman, Florist."

Reed, 122 West Twenty-fifth Street, has now added to their already large wire business another floor, which has now been reached the city.

The florists have been largely used in recent decorations, more so than usual, owing to the fact, that Southern visitors have been invited to attend the embargo on the same through the prevalence of yellow fever in Southern States. The decorations were of considerable inconvenience among decorators has been largely used.

Wm. J. Pease has removed his establishment from 615 to 698 Lexington Avenue, New York.

The receiver's sale of the balance of the effects of the E. E. McAllister Co., held in liquidation, was held on Saturday, a satisfactory one, many of the articles offered bringing more than their actual value. The principal buyers in the trade included the Stump & Walter Co., Wm. Elliott & Sons, Weaver & Deane, Philman & Co., J. Crook & Co., Nellis and others. J. Pease & Co. were the auctioneers.

Florists' Club meets on Monday evening next. At this meeting will occur the nomination of officers, and the election of the Club's silver medal for 25 chrysanthemum blooms of not less than five varieties. The contest will again be submitted for the consideration of the membership.

The show of the New York Gardeners Society will be held in the Hotel Astoria, on Monday, October 11, 12 and 13. The competition in the majority of the classes is confined to the city. The show will be open to all, among them for groups of ferns, crotons, orange trees, and candelabra plants, and also for groups of cactaceae, violets, chrysanthemums, and lily of the valley. The exhibition will be held in the city, and will be held under the patronage of the society ladies of the city. J. H. Troy, the Rosary, is manager.

### Philadelphia.

Market Notes.

There has been a noticeable increase in business, and the stores the past week, but all kinds of flowers are so plentiful that the wholesale market remains about the same. There is no change in prices. Flowers here are selling fairly well, and those who are going to the city are well supplied to be doing a large business, as the weather remains so open and favorable.

New York. Sam. V. Smith, Rising Sun, has just completed a new wagon of a novel pat-

**BOUCAINVILLE!**

Fine, stocky plants, rooted August, of the finest bedding and fancy to date, only named, 2 1/2 inch \$2.00 per 100; 4 1/2 inch per 100; J. D. Cabot, Mellow, Contesse de Harcourt, Dr. Henry, Bambolina, J. Richmond, Mrs. Hoar, Mrs. G. Henry, Nancy, E. Roland, Le Rituel, J. Saller, Mme. Brant, Fort Potteville, Dr. Hothers, Dr. Ernest Raymond, Olivine, Snowdrop, Benjamin Schroder, Dr. Bianchi, Double Gavines, Mrs. J. M. Gier, Le Favorite, Farnum, Getzyberg, S. A. Nutt, Aurora Borealis, Beate Potteville, W. P. Simmons, Miss, de Solters, Peter Vliestor, Solitaire, Mrs. A. Bland, Mrs. E. G. Hill and 46 more choice varieties. We have also old standard leaders not named, mixed, at 2 1/2 inch, \$1.50 per 100; \$10.00 per 1000, strong, fine plants.

**PANSY PLANTS.** Giant Flowering, transplanted, bushy plants, \$4.00 per 100; \$10.00 per 3000.

**NEW VELVET PLANT,** color of purple velvet. Habit like a Geranium, and just as hardy. Sells at night, 50c a doz.; \$4.50 a 100.

**200,000 CARNATION CUTTINGS,** ready February 15, all the new and standard varieties. Write for estimate. We will surprise you.

**THE MORRIS FLORAL CO., Morris, Ill.** When Writing Mention Florists' Exchange

**Providence.**

The Market. Trade fell off slightly the past week, owing to the several days of continuous rain. There is an abundance of all kinds of flowers and prices are low. Chrysanthemums are moving fairly well. The demand for these is somewhat on the increase, accelerated by the fact that an approaching annual exhibition. Pink Ivory is said by growers in this vicinity to be inclined to revert to the original color; those grown this season showing very nearly white. During the week signs of frost are displayed in several of the store windows announcing choice prices for 40 and 50 cents per dozen. California violets are very plentiful.

**Notes.** The monthly meeting of the Florists and Gardeners' Club was held last Friday evening with a good attendance. President Macrae in the chair. In the absence of the secretary, William E. Clapp served as secretary. There was but little business and the members indulged in a general discussion of crops, conditions and prospects. It was voted to hold a ladies' night in January, and a committee was appointed to make the necessary arrangements.

Treasurer Renaie is still on the sick list, confined to his room, but is slowly improving.

**Road and about.** Walter Mott was a visitor in town the past week. The representative of Siebrecht & Son, New York, was also a visitor.

J. Parks & Co. have opened the downtown store at the same place as last year. Miss Carter is in charge. William Hay is rejoicing over the recent arrival of a son.

**Cincinnati.** Trade has been very spasmodic, and is a long way from being settled. Chrysanthemums have sold better although they have not brought any fancy figures; so far, no stock to speak of has been entered, but not they have been thin when we were obliged to sell very low in order to clean up. The same can be said of roses and carnations, except Beauty and Carmot, which have found a good market. Mrs. Henry Robinson and Lady Fitzwygram have been the best selling chrysanthemum so far. Golden Trophy sells well, but the quantity has been very limited. Bonafino is just coming in, as also is Queen. Pinks have been and are very scarce. A few Mme. F. Perrin, Pres. Smith and Virand Morel have been received, but in no large quantity.

In roses Bride, Friedesand, and Meteor have been a drug on the market for some time, and we cannot expect much else until the chrysanthemum steps out, and out.

John Frises & Son, of Newport, Ky., were the only exhibitors of seedlings on Saturday last. These flowers, however, were not shown before the committee. This firm has three good ones, and are much better than some which have already been disseminated. They embrace the three leading colors—white and yellow, and pink. The white one was certified in 1896, sealing at that time over 85 plants, both in this city and Chicago, and is the writer's namesake, being a large creamy white, and a splendidly built flower, following Mrs. Henry Robinson. The yellow is named after Mr. Frise's wife and is early, globular in shape, splendid foliage and stem, and a medium grower. The pink I have already described in these columns. Carnations are doing nicely, and we shall have many choice ones in the city a little later. Many of the new varieties are showing up all. R. Rittermeister's Evelyn is in grand form now, and will be exhibited at the Indianaapolis show by the way. Richard is the judge there again this year.

As a party of florists attended the show at Indianaapolis, got over in a body on Thursday. E. G. GILBERT.

## SITUATIONS WANTED.

**Rate, 10 cents per line (6 words), each insertion.** Cash with order. This rate applies only to situations wanted by florists and is not to be sold without display. Where letters are addressed in care of florists, 10 cents extra per copy must be added.

**SITUATION WANTED**, by competent young man, as assistant in commercial place; best of references. Please send names. Address: S. C. care Florists' Exchange.

**A YOUNG man wishes employment** in store of floriculture; understands all branches; can furnish good references. Address N. W., care of Florists' Exchange.

**SITUATION WANTED**, by young man; thoroughly understands growing of roses and all kinds of plants; good references. Address: J. care Florists' Exchange.

**SITUATION WANTED** as rose grower or foreman; good grower of cut flowers and general floriculture; good references. Address: J. care Florists' Exchange.

**SITUATION WANTED**, by young man, single, born S. Hollander; 15 years' experience about 2 years in this country; good hand in design work; best of references. Address H. Brinkgreve, Breile, N. J.

**WANTED**, position to florist's store, by young lady, as book-keeper; willing to assist in all matters; knowledge of stenography and book-keeping. Apply Miss Marie Smith, care of J. Florist, Milwaukee, Wis.

**CADRENER florist**, single, 18 years' experience in all branches, desires situation as foreman or assistant in commercial place; good references; the leading nurseries in Europe and America. Address: N. C., care Florists' Exchange.

**GOOD**, all around man. English, warm situation, good grower of cut flowers and general floriculture; will work in palm, ferns, orchids, etc.; will work abroad. H. V., Box 81 Knoxville, Tenn.

## WANTED.

A position; by a young man, American, single, good character, and executive ability; good machinery; knowledge of all branches of trade; was salesman, buyer and maker-up of one of leading stores in New York City; also served 10 years selling to the trade; fully capable of managing a store of commercial place. Please state salary and chances of advancement; permanent place desired. Address: Hustler, Florists' Exchange.

## HELP WANTED.

**First-class German gardener**, unmarried, either as assistant to buy plants, with knowledge of all stock; small capital needed; trip permitted. Address: K. 3, Florists' Exchange.

## WANTED.

**Two experienced plant packers** at once. Send references. Also wanted 6 plantmen for fern and palm dept. Communicate at once. Rose Hill Nurseries, Siebrecht & Son, New Rochelle, N. Y.

## WANTED.

A good all-round greenhouse man; single; a careful and rapid worker and of steady hand in good plants, etc. Address: H. B. N. care Florists' Exchange.

## WANTED.

A young man of pleasing address in a flower store; should be a good designer and competent at arranging wedding and other floral decorations with plant trade and willing to make himself available as greenhouse man; good references; dress, steady experience and salary excepted. C. F. Fairlie, Springfield, Mass.

## WANTED.

Prices on Holly, Lycopodium, Mistletoe and Laurel. Also Cyma Revolver. WILL LABRETT, New 150 No. Del. St., Indianapolis, Ind.

## WANTED.

Stock of *Latinia Borbonica* from plants of 1 inch pots, also 2 1/2 inch. Quote lowest cash price and state quantity for sale.

## WANTED.

"a Florist," care Florists' Exchange.

## Chrysanthemum Society of America.

The committees judging new seedlings will be in session November 6, 13, 20, 27.

Exhibitors should make their entries (for which a fee of \$2 is charged for each variety exhibited) by the first of October, or later than Tuesday of the week the blooms are to be shown.

Entries should be made in one of the following addresses, express prepaid, will receive careful consideration: Boston, 237 North St., Horticultural Hall.

New York—Eugene Dallouzeau, care of New York Cut Flower Co., 121 W. 23d St.

Philadelphia—Edwin Lonsdale, 1514 Centre Street.

Cincinnati—B. Witterstaedt, corner Fourth and Walnut streets.

Chicago—W. N. Ridd, room 202, 185 Dearborn St.

## Secretary's Official Report.

Seedling chrysanthemums submitted to the committees October 30, '97, are as follows:

## NEW YORK.

**Matherhorn**, Exhibited by Peter Henderson & Co., New York, Japanese reflexed, white; scored, exhibition scale, 75 points.

**Klonkie**, Exhibited by Peter Henderson & Co., New York, Japanese reflexed, pink yellow; scored, exhibition scale, 68 points.

**Mrs. C. F. Diehm**, Exhibited by Peter Henderson & Co., New York, Japanese reflexed, white, with lilac-pink suffusion and suffusion; scored, exhibition scale, 56 points.

**Florence Turner**, Exhibited by Peter Henderson & Co., New York, Japanese reflexed, amber; scored, exhibition scale, 55 points.

**Miss W. M. Case**, Exhibited by Peter Henderson & Co., New York, Japanese reflexed, rose pink; scored, commercial scale, 81, exhibition scale, 70 points.

**J. R. McDonald**, Exhibited by John Marshall, Purchase, N. Y., incurred sunny yellow; scored, exhibition scale, 81 points.

**Sea Foam**, Exhibited by D. Wm. Brainard, Thompsonville, Conn. Japanese reflexed, cream; scored, exhibition scale, 81 points.

**Col. Appleton**, Exhibited by J. R. McDonald, Riverdale, N. Y., Japanese incurred, yellow; scored, commercial scale, 80 points.

No blooms were submitted at Chicago and Cincinnati.

## MEMBER D. SMITH, Secretary.

## Seedling Chrysanthemums.

New York.—Eight seedlings were presented for inspection of the committee Saturday, October 30; and while the number was the largest of this season, the quality was certainly the least desirable; not one of the best and the necessary number of points to secure a certificate. The nearest approach to it was a variety named "Donna," which was exhibited by John Marshall, Purchase, N. Y. This is a high-colored yellow, with a good form and appearance and form. The variety was shown last season and then lost a certificate by only a few points; after that it was the flowers losing their petals while being exhibited. The same trouble occurred again on Saturday.

Col. D. Appleton, a fine large, bold, intense yellow, exhibited by J. R. McDonald Riverdale, made a good impression, but lacked finish or uniformity; several blooms being of great size and of a very good appearance. This was unfortunate to exhibit the blooms in this condition; for the variety must possess considerable merit, as we were told that the plant from which these were cut was carrying 30 such flowers.

Sea Foam is a cream, made a good impression, but lacked finish or uniformity; several blooms being of great size and of a very good appearance. This was unfortunate to exhibit the blooms in this condition; for the variety must possess considerable merit, as we were told that the plant from which these were cut was carrying 30 such flowers.

Peter Henderson & Co., New York, exhibited two entries, one for exhibition purposes, all of a neat, bright appearance, but lacking enough strength to pull them through. Yet, in all appearances, they seemed capable of more being made of them than they received. One of the best was Mrs. W. M. Case's, a delightful rose pink. It is a variety of great commercial exhibition purposes. This promises well to be a valuable variety.

Matherhorn is the name given to a white

reflexed of the "ullingrudi" type, a neat and charming bloom in its class. Several varieties from this firm were Florence Turner, amber, Japanese reflexed, with frequent lilac suffusion and marking, Japanese reflexed, white with frequent lilac suffusion and marking, Japanese reflexed, yellow, with frequent lilac suffusion, Japanese reflexed, a handsome chrysanthemum, but lacking in size.

## Chrysanthemum Culture.

*Paper read before the Chicago Florists' Club, October 23, by Mr. G. Stolley.*

I think the best place to start the subject of growing chrysanthemums is from the beginning, and that is, from the year previous. Our method is to select good stock plants of the varieties we wish to grow, keeping them on the dry side, our object being to keep them dormant as much as possible till we wish to begin propagating. I may mention here that last year we put some out in frames and outside without any protection, and some of them were killed; but on top of them till along in January, and we were very well satisfied with the result. In the spring we cut them down, sold, but after thawing out they started finely, and we got some good strong cuttings. I think that we have got them a rest that would be impossible in a greenhouse of the temperature before mentioned.

Our time for propagation depends on what size we want our plants to be when we start to grow them. In the north, slow growers we start about the end of January, good growers considerably later. We like all of our plants to be rooted in 3-inch pots for planting with the exception of a few varieties. Vivand, 3 1/2 inch pots, and some varieties in 2 1/2 or 4-inch pots, as it always produces in a young state, and we find the plants are much stronger than those which they will produce later when in a hard state. As soon as planted in the soil, we water them very freely. Next we select two of the strongest, cutting out the original plants.

In making out our books detailing these little peculiarities of different varieties, our notes are very extensive. It is our teacher one can have, and anyone having a love for his work will soon find that the more he knows the more he can clear our houses ready for planting, hoisting our benches over and giving a thorough cleaning to the benches. The bottom of the benches we put about one inch of well-rotted cow manure, after which we put a layer of soil about 1 1/2 inches deep. For soil we use that which comes from the river west of Bowmanville. The best experience I have had is to place a layer of soil about 1 1/2 inches deep. For soil we use that which comes from the river west of Bowmanville.

In the next season's work, I have had a chance to pulverize it, using very little manure, about three loads of cow manure, and using it very sparingly. We place in the center of the heap and when the pile is turned it gets mixed all through. In preparing the soil from the banks of the Chicago river we do not need as much manure as we would if we were to grow in a house. For its extracts, some of which are undoubtedly left on its banks.

As we grow our benches over we are ready for planting. As to the distance apart, we are guided by the variety to plant. As we grow our benches over we are ready for planting. As to the distance apart, we are guided by the variety to plant.

As we grow our benches over we are ready for planting. As to the distance apart, we are guided by the variety to plant. As we grow our benches over we are ready for planting. As to the distance apart, we are guided by the variety to plant.

Chicago.

Club's Annual Meeting.

The annual meeting of the Club took place on Tuesday, 27th, a good attendance. George Thielman was elected to membership. After routine business had been disposed of, the program was for the ensuing year, as prepared by the committee as follows, was accepted: February 7—Program given at annual banquet takes place that night.

November 25—General call to resident florists to induce them to become members.

December 8—Fumigation versus liquid insecticides.

December 22—Christmas week, no subject.

January 13—Ladies' night. Music, song, and story.

January 27—Potted plants for market.

February 11—Kilners' night.

February 25—American Carnation Society week, no subject.

March 12—Rose and violet night.

March 26—Lily and general bulbs.

April 6—Bedding plants.

April 23—Private gardeners' night.

May 6—Palms, ferns, and other ornamental plants.

May 20—Sweet peas and plants for forcing.

The program committee was continued with instructions to have each night open to some one member, to be selected. Messrs. McKellar, Reardon, and Hedron were appointed a committee on flower show banquet.

The committee on fire insurance asked for more time, and report of American Garden Society meeting committees was deferred.

George G. Stollery read a paper on growing new plants, and a presentation, quite a discussion followed on the evils of cutting the flowers before the bloom is fully developed.

The election of officers resulted as follows: President, O. L. Grant; Vice-presidents, Harry B. Gray, Fredrick W. Ward, T. F. Keenan; Treasurer, W. W. Hayward; trustees, P. N. Neelghe, C. W. Wilson, J. W. Wilson.

John S. Rudd had very fine double white and yellow carnations, a great salmon pink; a seedling from Harry Balesky crossed with Mrs. Jerome Jones, a deep red with ivory; Defender a Caltzudogni crimson, Sonyer de Petite Amie, and May Foster. Stollery, Fredrick, Keenan, A. J. Dresel; and A. McAdam had an elegant six-inch pot plant of the seed-double, pompon, and requiring no stakes.

A Gardener's Reception. A very pleasant evening was spent, by a special invitation, at the residence of A. O. Vink, in what he calls his ranch greenhouse, in honor of his gardeners, Ben and Friday. Fredrick, and Mr. Freer was present and a number of his friends including W. H. Chadwick, George Deaton, and Mrs. Deaton, respectively of the Chicago Horticultural Society, and John Thorpe; the others being company and private gardeners. A delightful evening was spent. This was the third annual King of the Kings' reception, and was lighted with Mr. Freer's hospitality. Not a plant or flower is sold from this establishment.

State of Trade. Roses are a glut and excepting a few fancy long-stemmed flowers, all sell very low. Reinberg Bros. sent in one lot of 4000 heavy and strong teas, extra fine. Kaiserin, Carnot and Testout are quoted at \$1.00 per dozen, commensurate with quality, \$3, being difficult to clear at this price.

Carnations are also suffering, although a fair demand is effected at 50c. to \$1.50.

Carnations well sold \$2.50 to \$1; 14,000 sold at \$1 a hundred for horse show on Monday. Lots of poor violets are yet in the market.

Chrysanthemums are in full blast; extra fine Bonafant, Marechal, and Mrs. Perrin being among them; they sell at \$2 to \$2.50 per dozen. What might be called a "Columbia" is being sold at \$1 down to 50c. per dozen for common. Lots of common blooms are shipped to New York and Philadelphia.

Paper white narcissus are in this week, selling at \$4 per 100.

Around Town.

J. C. Vanagan got in his first carload of azaleas the past week in time order.

John Algot, gardener for the late G. M. Fullman, was remembered to the extent of \$200 by the Fullman will. The Klinder Floral Co. has opened up at No. 1 Van Buren street, and W. H. Hill has opened up at 173 W. Erie.

Albert T. Hoy, Springfield, Ill., was a visitor the past week.

EDGAR SANDERS.

Toronto.

Flowers Plentiful.

There is an immense quantity of cut flowers around just now. Chrysanthemums, in every shade, are nearly all good blooms this year; they sell fairly well at from \$3 to \$12 per hundred. Roses are also plentiful; good stock for shipping is selling at from \$8 to \$8, while small and second class flowers can be bought very low. Carnations are good and are bringing from \$2 to \$2.50 per 100, with a demand at all for poor stock. But few chrysanthemum plants are offered here, and the changes made in the prices the past few years that the boys have stopped growing them, but I think that a number of them could be sold at fair figures this season.

Violets are selling fairly well, but few nice good ones are offered. Cattleya labiate are rather too plentiful.

There is every indication of our show being better this year than ever.

Club Meeting.

The October meeting of the Gardeners and Florists' Association was a very good one. There was considerable discussion on the changes made on the tariff. The committee having the matter in hand reported that they had an letter from the government, and that he was surprised to hear that the changes made in the tariff were not so radical as they had been reported; that both his colleagues and himself understood that the deportation of seeds, and the tariff on plants, and the changes were made, represented the florists' interests as well as their own, and as they had asked for certain things to be made dutiable, the tariff was altered to suit their wishes. The committee proposed that the necessity of at least putting orchids and azaleas on the free list, and promised to write to him regarding the matter, and after giving it up before the association. The matter was left in the hands of the committee.

The executive committee reported that most of the arrangements for the chrysanthemum show had been made, and a considerable number of prizes had been promised. The music had not yet been engaged, but some tenders for it were put in, and after discussion the matter was left to the committee, the president, and William Lawrence.

The judges for cut flowers will be Mr. J. H. Lawrence, for some time, and for plants, either Sam Aylett, of Hamilton, or A. H. Ewing.

The meeting was read by George Vair, president of the Electoral District Agricultural Society, in which that body had granted \$100 for the purpose of the show. A letter was also read from Mr. J. H. Lawrence, of Toronto, forming a Canadian Gardeners and Florists' Society, and it was suggested that a meeting should be held here, and should be held here during the show, the executive committee to provide a room for the meeting.

George Milla exhibited some blooms of a pretty fancy seedling carnation that he had grown for some time, after the style of Helen Keller, but Mr. Milla claims it to be the most perfect in color that he has ever seen. The flowers are well shaped, do not burst; the stems are stiff and strong, and strongly recommended it for further trial.

W. H. HASTON.

Rome, N. Y.

C. B. Humphrey has contracted for a gas well in the rear of his greenhouse, No. 605 Chatham street. Work will be done on the well \$1 to \$1.50 to be completed before December 17. It will be sunk to a depth of 900 feet if necessary, and will be heated by natural gas, enough natural gas to heat his greenhouses.

Pittsburgh.

President's Visit Stimulates Trade.

I am able to report another fair week's trade in cut flowers. The presence of President McKinley in the city last week, was an additional factor to work to a few of the florists. Stock of all grades was sold, and no prices were given, as usual. Carnations sell at from 25c.; roses 50c. per dozen and up. All chrysanthemums are in the best condition of it; there is much cutting in price, as every one is anxious to sell, and good flowers are offered as low as 75c. per dozen.

Club Notes.

There was not a quorum at our last meeting, so no proposed flower show will be of this year. This is a pity, as several prominent societies were very willing to lend assistance, in fact, we have insured the total expense of a show. The next regular meeting, November 11, will be a social one, but the necessary business will also be transacted.

Jottings.

Wm. R. Smith, of Washington, spent several days in our city last past week. Mr. Smith is very highly of the Phipps conservatory in Schenley Park, and was very complimentary of the collection of plants they contained. The chrysanthemum display, in its estimation, he had never seen, that is, the general display, which he thought had never been equaled anywhere in this country. Some of the same Superintendent Falconer is just starting, will be very interesting to the public. The number of plants he has received for this department lately, W. S. Clov sent a collection of pineapple wreath from his plantation at Fort Beach, Fla., and a consignment of stock was received from F. J. Berkman, near the city, in the oranges, tea, coffee, cinnamon, fig, guavas, persimmons, etc.

The weather has at last changed for the better, and we are now getting a day or two of rain for which some of our growers will be thankful, as they were compelled to keep their plants covered. Flowers are still blooming outdoors, but it looks as if a change were near at hand.

W. H. HARRISMAN.

Washington.

George Glorion, 317 R street, recently sustained rather severe injuries through his fall from a wagon. Mr. Glorion was thrown from the wagon and badly cut and bruised. He was taken to Georgetown Hospital.

The florists held a meeting on October 29 for further discussion of the subject of free flow of flowers by the government. A letter was read from Colonel Bingham in which he said that in his opinion the amount of damage to the local florists by the distribution of flowers from the government greenhouses would be small, and that the florists did not have just and sufficient grounds for complaint. He stated, however, that the investigation which the department was making had not been completed, and it would suit him very well to have the florists' views on this subject put on record, prohibiting the distribution of the flowers, as it would bring about a final settlement of the matter.

A letter was also read from Attorney J. J. Darlington, whom the florists have retained as counsel, in which they advised asking against an injunction, and the opinion of the writer being that the florists were entitled to stand by their standing in court. Mr. Darlington advised that in any settlement would be by conference with the Secretary of War and the Superintendent of Public Buildings and Grounds.

A committee was appointed to draw up a petition for circulation among the florists, and the Juniors, by declaring that the distribution of plants and blooms by the government was detrimental to the commercial interests of the florists of the city, and protesting against it. This petition will be used, if necessary, in seeking action by Congress. Messrs. N. Studer, W. H. King, J. H. Levy, Robert Bowdler, and Joseph B. Hadden are members of this committee, which was also instructed to draw up a statement of the florists' case for presentation to the Secretary of War. The committee will report at the next meeting.

The opinion of Robert Bowdler, it was decided to form a permanent organization, and steps to that end will be taken at the meeting of the Florists which will be held at the Hotel Johnson on Thursday evening, November 11, at 8 o'clock.

Darien, N. Y.

A hurried look through Harmon & Parr's houses last week showed their carnations in good stock, and average size with them, owing to the small growth cut-out doors, but in good general condition. Their new white carnation Genesee, also showed the result of improper pinching for its small growth outside outdoors, being very carnation later than last year. Its growth is fine and all strangers would indicate it is taking a good course as concerning the plants. A block of new here, is making hundreds of violets and to a serious extent. "Violet."

BOILERS FOR SALE!

Two No. 3, Style C. GURNEY HOT WATER DOUBLE CROWN BOILERS, complete. In use these seasons, were over 30,000 cubic feet of gas for Palm growing. Offering for sale, because we are increasing our capacity. These boilers cost \$550.00 each. We offer for \$300.00 each, f. o. b., River, N. J.

**Weather Conditions Change.**  
The unusually long spell of pleasant weather seemed to terminate with a rainy electric day, retaining its character that the light weather injured business. No doubt the craft, too, will weary of the weather, and finally one tending to reduce the general daily supply of flowers. Cut-price signs have recently been displayed at times in some stores. Business may be called hardly flat, while flowers of all going kinds are plentiful.

**Jottings.**  
H. J. Millart has been sojourning here since leaving Elmira, N. Y. His actions were indicative of one that is on the lookout for a business opening.

Dennis D. O'Connell has relinquished his formerly announced intention of engaging in other pursuits in Missouri, and can still be found doing business at his former Main street location.

Daniel B. Long last week made a short business trip east through New York state. William Scott started on Tuesday evening en route to Poughkeepsie to act as judge in the flower show on Wednesday.

Harry Bayerdorfer, of Philadelphia, called on Tuesday.

Architects' plans for the new conservatory in South Park are on display at the office of the Park Commission, and for the benefit of builders in their building estimates on construction. Wm.

**Syracuse, N. Y.**

Trade during the past month has been very satisfactory, a long succession of funerals helping out the regular business, while it has been a record-breaker for weddings, too. The weather has been magnificent—not more than three small showers during the month.

Interest in the coming flower show is well sustained among the florists and growers, and from the list that can be learned, it is apparent that more attention will be paid to it by the general public than in the past. We already received a gratifying number of entries for the "Yellow Fellow" contest, and more are expected during the first of the week. Almost all last year's exhibitors will compete for the various premiums, and many new exhibitors are likely to appear.

William Harradence has been appointed superintendent of exhibits at the flower show.

A tip to Henry Bart's greenhouses at Brighton found everything in the shape. Mr. A. Bart, who has charges, is justly proud of his carnations; a bench of Flora Hill would attract attention anywhere. His violets are superb, proof of their quality lies in the fact that he gets one and a half cents each for them.

**Orange, N. J.**

On Monday, November 1, was held the regular monthly meeting of the Floricultural Society of New Jersey. In addition to the regular business of the evening, a small exhibition of chrysanthemums was given. T. Wiley staged some grand blooms of chrysanthemums, May Flower, The Queen, Harry May, Minerva, and Mrs. J. M. Pullman, for which he was awarded several certificates. President Malcolm Morris exhibited some fine stock. Mrs. Robinson, Mary Bonafant and Vivian-dorel. Mr. D. Kinsler had about 20 plants grown to single stem in plants. Minerva, which were of great size. This exhibitor had also a fine bush plant of four or five stems in a single stem plant of a Paneratium bearing 12 expanded heads. Mr. Macfiorie put up several small plants of single stem given. There were in addition to the above several amateur exhibits of hardy chrysanthemums. D. Kinsler staged a very promising white seedling carnation. The blooms are of great size, the petals well distributed, color good and of considerable length; in fact, several blooms were almost ideal. There is room for improvement, however, in the stem as seen. George Smith also exhibited a new carnation which shows considerable merit, the color being a very deep coral and the flower illuminates well, and the stem is good.

A. D. Rose read a paper entitled "Chrysanthemum Culture, Past and Present," and a lively discussion followed.

**Simplicity in Greenhouse Construction.**

During our long experience we have not only made many improvements in greenhouses, but we have so simplified the construction that building a greenhouse is no longer a matter so full of complications as to tax the patience and the ingenuity of even the most intelligent mechanic. Our

 'PHONE, 3022 D.

**Elgin, Ill.**

Elgin is pretty well supplied with florists for a town of its size, growing enough flowers for its requirements. Generally, as one might expect, is the rule rather than specialties.

B. O'Neil, on North street, is the oldest florist here. Like many of the older ones of the craft, his houses are of the old pattern, that the times prevent remodeling, but the most is made of a considerable space of glass. He has a large house of tea roses just coming nicely in flower; a breadth of carnations, a house of violets, with palms, bedding plants, smilax, chrysanthemums; in fact, a mixed stock generally.

George Souster, on State street, has the largest place (some 12,000 or 15,000 feet of glass) modern in appointment. Acre house of 2,000 plants is very good, the varieties embracing the usual Western-grown kinds, including Beauty, about 4,500 carnations are housed, all in good shape with a big plantation of Mrs. Fisher outside, all flowering. Cuttings of this variety are already rooting to spring for summer flowers only. Chrysanthemums, including a very fine batch of Philadelphia, look as though they will bring good flowers. Miss Agnes L. Dalskov (Pink Ivory) makes others we know around Chicago, has not reverted to the white type, although as yet it is too light in color to be entirely satisfactory. A large house of violets appears to have suffered from the intense heat, the house being rather deficient in ventilating facilities. A good block of palms and decorative plants and other necessities of a well-appointed stock all show careful culture.

George P. Hagan rents H. Schlaack's place, the latter, poor fellow, being an inmate of the neighboring insane asylum. A bunch of excellent Kaiserin roses was observed here. Another rose house is looking fairly well, considering that no heat has yet been applied, owing to a change in the apparatus. The carnations are doing very nicely. Hagan utilizes part of the house for growing lettuce and parsley. E.S.

JACOB B. BUCK, Secretary, 111 N. 3rd Street, Philadelphia, Pa.; President; E. B. CLARK, Millford, Conn.; 1st Vice-President; S. F. WILLARD, Westchester, Conn.; Secretary and Treasurer.  
Express Rates on Seeds.—Secretary Willard of the Seed Trade Association informs us that under a new order of the Traffic Committee governing express rates, seeds in cloth bags or boxes may now be sent at the 20 per cent. reduction from merchandise rates.  
**European Notes.**  
The fact of the bulb season is a cause of considerable worry and anxiety to those of us who are connected with it in this troublesome and generally unprofitable trade, and our experience this season is no exception to the rule. As predicted in this column in July, the supply of first-class varieties at all prices equal to the demand, and supplementary varieties cannot be filled even at the advanced prices.  
**CYCLAMEN GIANTUM SEED.**  
A choice mixture of the finest giant flowering varieties. Flat, 25 seeds, 1/2 oz.; 1/3 pkts., 81 cts.; 3 pkts., \$1.00.  
**JOHN F. RUPP.** - Shiremanstown, Pa.

When Writing Mention Florists' Exchange

vanced prices dealers are willing to pay. The largely increased demand for second-size bulbs has cleared them out with extraordinary rapidity, and only a few plants and dark blue bulbs remain in the hands of the growers.  
Those who are accustomed to look at Holland and its products through the conventional spectacles framed by visitors who have spent, albeit an hour, in the Netherlands are not so much surprised to see the omnipresent bicycle brought into service, and coming from one farm to another to complete orders hastily called from your side. All the respectable firms that have clients in America report a largely increased trade this season. This is doubtless the welcome result of the "popularity" of which we have lately read so much in your journals. Some of our Dutch growers are ambitious enough to hope that, ere long, the aforesaid wave may be the means of liquidating some overdue accounts; and who shall say they are wrong?  
The work of planting for next season is nearly completed, and while some few planters have been forced out of the ranks, the acreage actually planted is not much less than in the previous year. Growers are of opinion that while first-size varieties will not be much higher in price than last year, second-size varieties and mixtures, must be advanced on account of the great clearance now effected.  
Tulips are still plentiful and prices are all in favor of buyers. While the acreage planted in 1895 is not so large as last year, prices are likely to remain reasonable unless an unlooked for demand sets in.  
**Vegetable Seeds.**  
As regards seeds, the cauliflower winter in northern Europe is very disappointing, and as the last year's supply of early varieties was completely cleared out, growers are holding out for better prices.  
Some of the later threshings of early winter wheat in the north land are yielding much better than estimated.  
Rutabaga is doing the same thing, but it is not so early as in the north land. Some early varieties of the latter, are most disappointing.  
It is noted that at one time looked so promising in western France, are in a deplorable condition; very much of the seed is still in the water. In the south the crop is barely half of the quantity arranged for. This crop has also suffered very much in Germany, while the acreage planted was much larger than usual on account of the failure last year. Some new fields in the more northern districts have escaped, but the general results are poor both in quality and quantity.  
**Flower Seeds.**  
In flower seeds a sharp touch of frost has cut off zinnias, balsams, gastero-cyanus and asters, and practically put an end to the harvest of '97. Fortunately late flowering zinnias are still in the field, and will be seedling material. It is able to cure them properly, the shortage will be sensibly reduced. In the whole, the crop of tall varieties is satisfactory, the dwarf kinds are decidedly short.  
Veters are all in now, and generally speaking, they have been brought in dry and in good condition for the sowing processes. The early varieties have suffered most; the later varieties have yielded well. The crop of zinnias are an average crop. White sweet peas are decidedly short, and the German crop is the worst on record. **EUROPEAN SEEDS.**

Nov. 13, 1897.

# CHRYSANTHEMUMS

The Best Twenty-five Chrysanthemums.

Paper read by Robert G. Carey, November 2, before Philadelphia Florists' Club.

Having been requested to name the best twenty-five chrysanthemums, and why they are the best, I feel certain I could do much better if you had omitted the little word "best," but I will name twenty-five that, I think, will not all be discarded by the most critical of our chrysanthemum growers.

I have about seventy varieties at present. The ones I name are all well-tested and good growers. I have avoided as much as possible all weak-kneed kinds and very tall growers. I have included with the best new varieties, I thought it better to confine myself to the good old tested ones, such as the following:

**Mrs. Jerome Jones.**—A beautiful broad-petalled incurved white, stem and foliage extra good; an ideal flower for commercial or exhibition purposes; height 3½ feet.

**Maud Dean.**—An extra large incurved pink of great substance, stem and foliage very good; one of the finest for exhibition; height 4 feet.

**Mayflower.**—A grand incurved white, low leafy and good growers. A grand foliage good; a grand bloom for exhibition; height 4 feet.

**White Beauty.**—A soft, clear, high-built incurved yellow; form, habit, stem, and foliage good; an ideal flower in every respect; height 3½ feet.

**Vivand-Moel.**—Extra large, reflexed pink, one of the grandest blooms for exhibition; height 5 feet.

**Miss Georgia Pither.**—Fine incurved yellow; stem and foliage very good; a very varied set of purposes; height 3½ feet.

**Silver (Lond).**—A large delicate salmon, slightly reflexed; stem and foliage extra good; height 5 feet.

**Wm H. Lincoln.**—A grand golden-yellow, stem and foliage straight petals; habit, stem, and foliage extra good. A grand variety for all purposes; height 4 feet.

**Autumn Glow.**—A large incurved light bronze; stem and foliage very good; one of the best for all purposes; height 5 feet.

**Mrs. H. Robinson.**—A large broad-petalled incurved white of great depth; foliage good; but I am afraid the flower is too small for exhibition; a grand variety to every other way; height 4 feet.

**The Queen.**—A grand double white of great substance; stem and foliage good; one of the best for commercial or exhibition purposes; height 6 feet.

**Caroline.**—A large incurved bronze and yellow; stem and foliage very good; fine for exhibition; height 4 feet.

**Mutual Friend.**—Extra large, reflexed, pure white; stem and foliage good; a very well tested variety; one of the best for all purposes; height 5 feet.

**Ambera.**—A fine incurved golden-yellow; stem and foliage very good; one of the best for all purposes; height 4 feet.

**W. B. Blumrose.**—Large golden-yellow, stem and foliage good; fine for all purposes; height 5 feet.

**H. W. Ribman.**—Large exhibition yellow of high rounded form; stem and foliage extra good; an ideal grower; height 3½ feet.

**Fairy.**—I think the purest and best white for all purposes; height 3 feet.

**Mademoiselle.**—Incurved yellow, with very high, full center; foliage extra large; one of the best for exhibition. A very well tested variety; height 4 feet.

**Both.** or **Marguerite.**—Graham—A pure white, incurved, fine stem and foliage. While not as large as many of the others, its general get-up and good-keeping qualities still make it a favorite. Height 4 feet.

**Chas. Davis.**—Golden-bronze, reflexed; stem and foliage very good; stem and foliage good; height 4½ feet.

**Defender.**—Fine dark crimson; slightly reflexed; stem and foliage good; height 4 feet.

**Golden Wedding.**—A rich golden-yellow;

low; broad, long petals and high-built center; one of the grandest yellows when well done; height 6 feet.

**Liberty.**—A large golden-yellow of beautiful form; at first a reflex; when fully developed, a perfect globular incurved; habit, stem, and foliage good; one of the best late yellows for commercial purposes; height 5 feet.

**Miss Agnes L. Dabkow.** or **Pink Ivory.**—A sport from Ivory, with foliage and habit like Liberty, but a beautiful soft pink; a color good for all purposes; height 3 feet.

**Eugene Halleux.**—Color, deep gold; of extra size and form; one of the finest yellows for exhibition. If this flower had been a sport from Liberty, then I would say it was far excellence in yellows. Height 6 to 7 feet.

As we often find good dwarf varieties in their being crossed between Fall varieties, I think it would be a great help to us if all the catalogue firms would state the height of each variety. I think this would save many a good variety from being discarded.

I thought it would not be out of order to give a few hints on the culture for bloom. I would advise a raised bed, six inches deep. If it is only a foot from the ground, it will be all the better. Free circulation of air underneath, which is a great advantage when using stimulants.

It is equally of great importance of sowing our soil or giving your plants cold feet. See that your drainage is perfect. Use a mixture of sand and rather stiff soil with a little bone and cow manure added; prepared in the Fall and covered with a layer of straw and early in June. Water sparingly till plants are well established. Give plenty of air whenever your plants are in bloom and evening during July and August, when winter permits. Stop the use of stimulants when your plants are in bloom and show color. I use no shading up till this time, but would advise a slight shading from now on. If the blooms are very near the class. This Fall the shade has been very beneficial.

## The Point System of Judging.

*Editor Florists' Exchange.*

Hamilton says in his paper on "Point System of Judging": "In the judging together of the variety, the point system of judging is perfect for it knows no fear, favor, sympathy, predilection, educational, or sectional bias nor personal prejudice."

This statement sounds infallible, but all the same it is really proven fallacious. Experience says that in the point system chrysanthemum was exhibited before the Boston, New York, Philadelphia, and Cincinnati committees. It received all and of uniform quality—as far as can be learned. How are we to explain this anomaly? The point system does not always count straight, and I suppose the variety was judged without "fear or prejudice."

Gentlemen, there is too much latitude from point to point; narrow it down so that it can be "judged" over.

I have been asked the reason for omitting "form" in judging chrysanthemum flowers, and I have said that to determine the correct form for a chrysanthemum flower is a minute of time, the style that you and I prefer is but a matter of taste. The form of chrysanthemum is its natural grace; but it will not bear dissection or prodding with "points."

GUYO P. RAWSON.

# CALIFORNIA PRIVET.

California Privet, extra fine plants at low rates. Prices given on application.

**HYDRANGEA OTAKSA**, strong plants for forcing, 8 ets. and 15 ets.  
**AMPELOPSIS VEITCHII**, field-grown, very heavy. Prices on application.

Rothschillmann, and of similar markings, suffused with rose.

In carnations a large number of seedlings was shown, many of them of great value. The highest entries for the best American seedling, the premium was awarded to Wm. H. Carey, of James Deane, a light pink slightly fringed. A certificate of merit was awarded to First, E. E. Shaw, of Elmira, for a carnation. Mrs. Thos. Lawson; also to John Barton for his new white carnation named First, E. E. Shaw, also a carnation variety. The Craig (up for new white carnation) was awarded to Joseph Heacock, of Pennsylvania, a high pink variety. Wm. P. Craig took first for 100 blooms with a grand vase of Flora Hill, C. W. Fisher took first for carnations or carnations, staging some very fine flowers. In fruit, Edwinger & Barry staged a grand collection of pears, which was awarded a certificate of merit. The exhibits of vegetables were very large, and the collections of John McKeary, K. B. Phinney, and Robert James being very good. DAVID RUST.

Twelve blooms, Kaiserin Augusta Victoria.—First, David Huffer, Germantown, Pa. Twelve blooms, The Maiden.—First, Mrs. Saml. Thos. Wilmour; second, Joseph Heacock, Wyncote. Twelve blooms, Papa Grotto.—Henry Weber & Son. Twelve blooms, Souvenir du President, Carnot.—Henry Weber & Son. Twelve blooms, Meteor.—First, Joseph Heacock; second, William L. de Shields. Twelve blooms, The Maiden.—First, Joseph Heacock; second, Myers & Santman. Twelve blooms of any other variety.—Second, William L. de Shields. Six blooms, American Beauty.—First, Joseph Heacock; second, Myers & Santman. CARNATIONS.—Growers only. One hundred blooms, one variety, any color.—First, Wm. P. Craig; second, Henry Weber & Son. Fifty blooms of any named variety.—First, Henry Weber & Son; second, C. W. W. W. Fifty blooms of any named variety.—First, Peter de Voest, Wyncote, Pa., Del.; second, C. W. W. W. Fifty blooms of any named variety.—First, Wm. P. Craig; second, Henry Weber & Son. Fifty blooms of any named variety.—First, Wm. P. Craig; second, Henry Weber & Son. Fifty blooms, any white, variegated variety.—First, Wm. P. Craig; second, Wm. Swayne, Kennett square. Fifty blooms, any yellow variegated variety.—First, Wm. P. Craig; second, Wm. de Voest. Fifty blooms, any crimson variety.—First, Wm. P. Craig; second, Wm. Swayne. Fifty blooms, any color.—second, William Swy. Best Am. carnation, never disseminated prior to 1897.—Wm. de Voest certificate of merit to Peter P. de Voest, Wyncote, Pa.; second, Wm. P. Craig. Best seedling, never disseminated prior to 1897.—First, Wm. P. Craig; second, Joseph Heacock; third, John Burghauer. VIOLETS. Twelve blooms, Princess of Wales.—R. M. Hart, Holmesburg. Twelve blooms, Lady Home Campbell.—E. E. Eberhart. Fifty blooms, Marie Louise.—First, J. M. Highlands, N. Y.; second, Wm. L. de Shields.

Fifty blooms, California.—First, R. M. Eisenhart; second, Penn Rock Co. Fifty blooms, any other variety.—First, R. M. Eisenhart. FORTY-EIGHT CUT BLOSSOMS, not less than twenty-four varieties.—George Middleton. CLEVELAND. Trade Notes. Horse show week brings with it a demand for floral work. Store trade, however, has been affected to a great extent by lack of weather; heavy rains have continued to fall for several days, and this has had a telling effect upon every line of business. Another detracting feature of the present season, and one which has troubled florists most seriously, is the floral bargain counter established by one of the large downtown grocery houses at which prices are slaughtered, choice cut flowers being offered at ridiculously low figures, such as best chrysanthemums, \$1 per dozen, roses, 25c a dozen; Beauty, 50c and 10c, per bloom, 15c for each; carnations, 15c a dozen; large quantities of stock are used in this class of work. Retail prices of cut flowers remain unchanged, but business is somewhat moderate sale and is a limited demand for other kinds of stock. Chrysanthemums bring at retail 75c to \$2 per dozen. Beauty, 40c short supply and finds better sale at anything else, now retailing at \$1.50, according to quality. Perle, 75c; Bridesmaid, and Meteor continue to sell at 75c per dozen for medium quantities, \$1.50 per dozen for best. Carnations sell at 25c and 35c, per dozen, and mix \$1.50 to \$2 per 100. Chrysanth. Show. Final preparations for the annual show of the florists' Club, November 16-19, are well advanced. The committee's operations is putting the exhibition in shape for the numerous exhibitors who will be placed within a few days. The entries now in indication the show will equal those of the past season, and if the weather is able during "show week," success assured. Club Meeting. At the regular meeting of the Club held on Monday evening last, a large number were in attendance. Many matters of detail in connection with the show were disposed of. In all it was an most active meeting held in several months. T. A. Tilton and Geo. H. Carrist were elected to membership. The executive committee report was of great interest, as it contained many valuable recommendations and suggestions in regard to work in connection with the exhibition. Notes. Horse show week brought with it many pleasing effects in window decorations. Noticeable among these were the windows of Smith & Teters, and J. M. Gass, both of which were well decorated. A large number of the decorations formed a prominent part of the decoration. Harry Bayensdorfer, of Philadelphia, and W. R. Roach, representing J. B. Rice & Co., Cambridge, N. Y., were recent exhibitors. G. A. T.

ADVERTISING. They must be fresh to be good, no NICOTINE in dried up kind, nicotine kills Aphids. Good kind, 75c. per 100 lbs. Bales Weigh 5150 lbs. each. H. A. BROTHERS, 218 MARION AVE., N. Y.

## The American Carnation Society.

Advertising space is to be offered in the forthcoming issue of the Bulletin of this Society, and all money received therefor will be devoted to premiums. Cash contributions will, it is said, have to be added to this money from advertising, and it is hoped that members and others will respond liberally. It is expected that a list will be compiled at Chicago, whereby the Society will be able to give a good show without contributions in the future.

At this time money toward the general premium fund has been collected from special premiums, but those who want to offer special premiums for varieties they have introduced have not privileged.

Advertisements, contributions and special premiums must be in the hands of the secretary by the 15th inst., but money need not be sent before February. Those parties who spoke to the secretary through the address of the Secretary is Albert M. Herr, Lancaster, Pa.

## Chester County Society.

By mutual consent the Chester County Carnation Society agreed to discontinue its meetings until the time should come that more interest would be taken in them. After a consultation with a few of the members, the secretary called a meeting at Kennet Square, Pa., November 6, in Wm. Swayne's office. There was a good attendance of the old members, and after considerable discussion it was decided to discontinue the monthly meetings as heretofore until further notice; the probability being that an arrangement would be made during the Summer months. Wm. Swayne tendered his office as a permanent secretary, for which the Society extended a vote of thanks.

An informal discussion took place in relation to growing, and the difficulty of getting any redress from the express companies in case of damage or loss of goods. Boxes returned in a broken condition was an annoyance that frequently occurred. The secretary was instructed to investigate express charges and other relative matters with a view of obtaining more just rates and having the petty annoyances stopped.

Several seedlings were on exhibition by Jos. T. Phillips, Chas. Swayne, and Lewis Eschbarg, the latter having three different white seedlings of great promise.

W. R. SHELMELE, Secretary.

## Carnation Belt Notes.

Carnations in the "Belt" are looking very promising at this time. There are a number of new seedlings being nursed up by their owners, and some of them will undoubtedly make a sensation when introduced to the trade. A good deal of glass has been added to this territory the past Summer, but much of it is now being devoted to the growing of tomatoes. A few tomato houses visited, showed signs of great promise, and we learned with a great deal of satisfaction that the hot-house tomato is generally preferred to the Southern product even at a largely increased price. Of course, the increasing value of the best fruit shipped from the South, and if the consumers in the cities are really awakening to that fact, there will be no success for all the tomatoes that can be grown under glass, not at a large price, but at a good paying price.

A largely increased "acreage" is being devoted to mushrooms. A few were lucky enough to strike the market with at least a part of their crop at one dollar a pound; which is a good deal better than dollar wheat, and decidedly superior to six-cent cotton. But the price is now off to 25c. per pound.

Violets are generally in poor shape. All now grown here seem to be of the Lady Campbell variety. No one seems to be able to grow Marie Louise because of the spot. Several years ago the last-mentioned variety was grown to perfection by many in this section. Why the disease should carry it off, so universally (here) is hard to explain. W. R. S.

## PRIMROSES.

Extra strong plants from 25¢ in pots, single variety in separate colors, \$3.00 per 100. Finest mixed, \$3.50 per 100. **IMPERIAL**, white and red, \$1.00 per 100. **ALBION**, white and red, \$1.00 per 100. **CHRYSEUM**, white and red, \$1.00 per 100. **PERFECT**, white and red, \$1.00 per 100. **ROSE**, white and red, \$1.00 per 100. **REGENCY**, white and red, \$1.00 per 100. **SCOT**, white and red, \$1.00 per 100. **TRILLIUM**, white and red, \$1.00 per 100.

### For the Busy Man.

A Baltimorean wants to know what it costs to force 1000 tulips in flats. Can you tell him?

Greve P. Rawson, Elmira, N. Y., captured the Yellow Foliage variety Clinton market, sending chrysanthemum, at the Syracuse show this week.

Most of the additional glass put in the "carnation belt" this year is being devoted to potato-planting. Mushroomers are also being extensively raised in this locality.

The offer of its silver medal, made by the New York Florists' Club, for an exhibit of chrysanthemum blooms, failed to draw out a suit contestant on Monday morning.

Ex-President Harrison told the Indiana florists in his speech on the occasion of the opening of their exhibition at the Indianapolis Hotel, that he never got inspiration to whip his wife a flower exhibition of any kind.

The meeting of the plant growers interested in the project of forming a United market, a permanent plant market in New York City, was held in the Hotel Astoria, New York, at Canal and West streets, New York, on Wednesday next at 3 P. M. All who favor the scheme should be present to take part in the destruction.

### A Society Flower Show.

Though held ostensibly under the auspices of the New York Gardeners' Society, the exhibition inaugurated this week at the Hotel Astoria, is in reality what may be termed "A Society Flower Show," the promoters of the enterprise being the elite ladies of New York, who are to be pitied for the show, and not from those greenhouses the majority of the exhibits are drawn.

The exhibition is to be given for charity. Possessing themselves a benevolent disposition, those ladies have taken this means of displaying the exhibits in their fellow beings, by charging admissions of \$2, \$1 and 50¢ respectively during the three days.

In certain of our local dailies a great deal has been said to the effect that this exhibition is not to be given for charity and not for gain, which it is said has been the ruling position that has heretofore brought flower shows in New York City into existence. If we judge by results the "gain" has been purely an imaginary concomitant of these undertakings, existing only in the mind of the writer of the local newspaper harangues referred to.

That apart, however we welcome the devotion of the money to a good cause and hope to see it become, as has been and is hoped, an annual event of equal importance to the florists and the public. It will attain this status, however, is questionable, from the very dissimilarity of the character of the parties that this life never has, for the majority, the attraction of animated movement, and sentiment, alas, it has been entirely developed to, of itself, sustain a great flower show.

It was the opinion of that lamented patron of horticulture, the late Adolph Lauenburg, Esq., that only by the establishment of a florists' exchange, working in its own particular channel along the lines of the existing Horse Show Association, could the florists be given successfully in New York City, that is, with some of that gain, at which the article of trade is so anxious to raise up such an organization, Mr. Lauenburg labored hard, never for a moment ceasing his efforts in this accomplishment. But death upset his plans.

It is sadly evident, that something of the kind is proposed by the florists, if we are to have in the metropolis of the country an organization whose commerce will sustain the volume of our agricultural interests.

It is true, we do not wish to take away any of the credit that rightly attaches to the commendable efforts of the florists in this connection, but during this year in the city. They are deserving of all praise. But it must be admitted that results were hardly what might be looked for in so large a horticultural center.

There is no reason why a flower show should not be conducted on business principles just as any other ordinary business enterprise. It is not to be believed that an overt desire for "gain" is conducive to the best interests of the promoter, if he is to succeed. The best results should pay—even when given for charity.

It is all very well for those on whom the arts of making exhibits falls not, to rave about the educational and elevating influences resulting from their efforts, but unfortunately sentiment will not liquidate coal and labor bills, nor the development of the exhibition reduce the cost of production. Ladies who roll (figuratively speaking) in wealth can well afford to indulge in such extravagance, but the florist, however much he may sympathize with such movements, needs some other method of support.

Past experience has demonstrated that our florists themselves, with all the influence, rest or lifting from their patronage from society ladies may bring, have not been able to get a profitable flower exhibition in New York City. It is just as true to say, that it is not so much as to do this, so far as affecting exhibitors are concerned, but for the florist, therefore a similar exhibition (lady patronesses and florists—even with the aid of the florists' exchange, viewed as likely to be productive of great failure.

It is only salvation in the matter appears to us to be the institution of a scheme having a similar intent to Mr. Rawson's plan, but one that will naturally urge the trade to do their utmost to bring this about.

### Reflections on Current Topics.

From across the Canadian border comes the announcement of a proposal to establish a Florists and Gardeners' Society in the Dominion. This information naturally suggests the inquiry: Will the florists of the Dominion be the supporters and adherents? Many gentlemen across the line have been and are yet to be shown the value of the florists and enthusiastic reception tendered the S. A. F. on its visit to Toronto, will appreciate the fact that the florists who were fortunate enough to participate therein. With such associations in existence, it is not surprising that Canadian florists from the S. A. F., just at a time when that organization has, in the opinion of those most familiar with its history, reached its turning point, and is on a fair way to greater success, would be easily deluded. True, our friends in the Dominion may feel that they have not received the recognition, the management of the Society's affairs, which they consider themselves entitled; yet as our interests are akin it must be conceded that any benefits that may have attended the work of the S. A. F., have not been shared by the florists of the Dominion. Should the proposed Society be organized and perfected, its establishment will in our opinion be a great benefit to the florists of the Dominion. The florists of the Dominion should the old S. A. F., a characteristic so admirably by their brethren in the States.

One of our large firms cataloguing *Araucaria imbricata* as "one of the wonders of the vegetable kingdom," recently received from a lady into whose hands their catalogue had fallen, a request to tell her more about the "vegetable" and point out the "boonky quality" which it possessed. The lady in question knew that the "vegetable" other known to her, cabbage, cauliflower, etc., and was very anxious to know the difference. In answer to this, the conception is one which would have surprised the florists. It stated that it was a "vegetable" and that catalogues will find their way into the hands of our contemporaries, who demonstrate the necessity of being careful almost to an absurdity in a choice of words. It is not surprising that the "vegetable" words, "a word of the plant world," might have served effectually to the purpose of clearing the matter clearer to the old lady's mind the true status of the subject of her inquiry.

I notice that a correspondent in one of your contemporaries is sorely distressed over what he calls "the discrepancy between (I presume he means disparity) in the reports of the New York Florists' Club and the reports of the "mam Mrs. Arthur Caton, and attacks the personnel of the New York committee on the ground that they are not "honest" as a foil. It has always occurred to me that the Chrysanthemum Society should have a committee of florists, one member either regular or impressed committee, from those who were qualified to carry out the Society's work, and to report out to their duty honestly and faithfully. It is a question of duty, and the results accomplished by the New York committee this year tend to prove that my opinion was well founded. If I am not that their scoring "even ups" well with that of all the other committees—excepting Philadelphia also. A report in your issue of the 12th inst. says that you have been operating in other fields besides New York?

The color of the variety in question does not seem to have been the only defect in the flower that manifested itself at New York, although its color was "again" in Philadelphia also. A report in your issue of the 12th inst. says that you have been operating in other fields besides New York? I presume your report speaks from personal observation, and is not a mere statement, therefore it is interesting to know the exact grounds on which the superior and inferior judgment was based. A Philadelphia judgment was based. A comparative record of the individual varieties by each of the committees, would throw some light on the analyses of the reports, and prove, next year (if the variety is not discriminated) who was responsible for the "discrepancy between the reports," etc. "Jon.

### New York Florists' Club.

The attendance at the Club meeting Monday evening last was only half. Vice-President Plumb occupied the chair in the absence of President Henshaw, who, it was announced, was in St. Vincent's Hospital; information which the members heard with the deepest sorrow. Mr. Plumb then read the report of Mr. Henshaw is again convalescent, and will be able to leave the hospital shortly. En.

The belated report of the transportation committee relative to the trip to Providence, indicated that 161 people had been taken to Providence by the Club on board the convention.

The report of the exhibition committee on the matter of the disposition of the club's gold medal was presented. The committee has been instructed to draw up rules and regulations governing the competition for the medal, in accordance with a resolution adopted at last meeting. The task, however, seemed an arduous one, and it was suggested that the matter, so far as they were concerned, by reporting that "the committee had no objection to the award of a gold medal for miscellaneous exhibits would be an unwise disposition of the medal, because they were not qualified to judge of the Club for further action." After this report had been thoroughly discussed it was referred to the executive committee, relieved by the appointment of the following special committee who will have the honor to handle and award the medal: Messrs. W. A. Manda, J. H. Troy, A. S. Burns, Wm. J. Brower, and J. M. Keller. The committee has been instructed to draw up this gold medal deliberation, it has created lots of good-natured debate, thus far, and it is expected that the nomination of officers was then introduced and resulted as follows: For president, Mr. Henshaw; vice-president, Mr. Logan and Louis Schmitz; treasurer, C. B. Weathered and Theodore Kodres; secretary, Mr. Henshaw, Mr. Plumb, Mr. Messrs. Wm. J. Brower, J. H. Troy, A. S. Burns, Chas. H. Allen, J. Dowsett and J. M. Keller.

The unanimous nomination of Mr. Plumb was received with general approval. Mr. Plumb was elected as regular attendant at the meetings and a hard worker for the best interests of the Club.

A resolution was put and carried to the effect that the secretary of the Club for the ensuing year, be requested to make a detailed statement of all the expenditures of the Club during the last 12 months, which statement is to be handed to the secretary who shall have same published and a copy distributed to each member.

The Tariff Committee of the Club made the following report: The special Tariff Committee beg to report that they have given the proper consideration to the matter of the tariff, and after careful consideration during the time they have had this matter in charge, and after having received the views of the members before Congress and the customs authorities, recent legislation, etc., request that the committee be allowed to be discharged.

It may be a matter of gratification, and a relief to the members of the Club, that members may be in favor of either high tariff or low rates of duty, that the principle of reciprocity is not a matter of controversy, the committee have contended, has been practically adopted in the recent tariff bill.

In asking for its discharge the committee desire to express their thanks and appreciation to the members of the Club given to the work of the committee by the officers and members of the Club, as well as to the members of the Club who have shown their interest toward accomplishing the object for which the committee were appointed. The committee are most desirous to be discharged. The report was received and the committee discharged with thanks. The competition for the silver medal offered for the best 25 chrysanthemum blooms of any color, was held on Monday evening last. The matter of making exhibits at its monthly gatherings the Club is going back to the old plan of having only five flowers of the variety Frank Hardy, which were marvels of good cultivation, and of the highest quality. The fact that this is an English variety and has captured honors wherever shown. Growers are urged to produce the blooms sure to be in great favor.

FRINGED, PERFECT BLOOMING HOLLYHOUSES ALLEGHENY

Which Highest Awards were given wherever shown. The Greatest Novelty for 1898. Get your seed now and have plants ready in Spring, as all the leading seedsmen will catalogue this Novelty... E. E. Wohlert, Altoona, Pa.

FLEISCHMAN, Broadway and 26th Street, NEW YORK

Chrysanthemum Society of America.

The committee judging new seedlings will be in session November 13, 20, and 27.

Exhibitors should make their entries (for which a fee of \$2 is charged for each variety exhibited) to the secretary, not later than Tuesday of the week the blooms are to be shown.

Blanks for entries of any of the following address, express prepaid, will receive careful consideration. Boston—A. H. Fowler, Horticultural Hall, New York—Eugene Dallemeuse, care of New York Cut Flower Co., 121 W. 23d Street.

Philadelphia—Edwin Lonsdale, 1514 Chestnut street. Cincinnati—B. Witterstaetter, corner Fourth and Walnut streets.

Chicago—W. N. Todd, room 202, 185 Dearborn street.

Secretary's Official Report.

At the meetings on November 6, seedlings were passed upon by the committee as follows:

PHILADELPHIA. Frank Hardy, exhibited by A. Herrington, Madison, N. J., incurved Japanese, creamy white; scored, commercial scale, 89; exhibition scale, 87 points.

Alice F. Carey, exhibited by Robert G. Carey, Chestnut Hill, Pa., reflexed Japanese, light pink; scored, commercial scale, 75; exhibition scale, 87 points.

Miss Gladys Vanderbil, exhibited by John N. May, Summit, N. J., reflexed Japanese, creamy white; scored, commercial scale, 92; exhibition scale, 89 points.

Pennsylvania, exhibited by Hugh Graham, Philadelphia, Pa., incurved Japanese, yellow; scored, commercial scale, 91; exhibition scale, 89 points.

No. 57, exhibited by N. Smith & Son, Adrian, Mich., Japanese, straw yellow, shading to white; scored, commercial scale, 73 points.

Pennsylvania, exhibited by Hugh Graham, Philadelphia, Pa., incurved Japanese, light yellow; scored, commercial scale, 87 points.

CHICAGO. Snow Queen, exhibited by Fred. Dornor & Son, Lafayette, Ind., white; scored, commercial scale, 85 points.

Marion, Ind.

Carl Anderson, florist at the Stinson Memorial Home, gave a chrysanthemum exhibition from November 8-11, at the Home greenhouses.

Seedling Chrysanthemums.

Chicago.—Three entries were before the Chicago committee, December 6. One came from John E. Starbower, and was a seedling of this year. One flowered in the fall, and the other two opened white, seven inches across.

Hugh Graham, of Philadelphia, sent his yellow variety of flowers, the counterpart of the type, save in color which is a good one. It came in poor condition, nearly all the petals being marred at the tips.

Fred. Dornor & Son, of Lafayette, Ind., sent a well-bred white with a faint yellow center, a very taking flower of that style known as a good supporter, but deep and abundant, inclined to be open, and medium broad; stem fair, foliage rather thin as only, showing six to seven inches of neck.

New York.—Only two varieties were before this committee Saturday, November 6. Both were of good quality of merit, and it will be surprising if they do not score well. Hugh Graham, Philadelphia, exhibited a variety which furnishes just what its parent needed—more color. This is now amply supplied by the fact that the roots exist, and which illuminates well. This new break cannot fail to be popular.

John A. Herrington, Madison, N. J., made a good impression upon the judges by a variety of type but the roots exist, and which illuminates well. Its wonderful stem and foliage, massive open and broad appearance makes it one pronounced and desirable variety. The type is difficult to decide, for the stereotyped "Japanese" curls have made it hard to judge properly. We prefer to call it just a plain Japanese, which, in our opinion, it really is. It is a variety in one direction and then in another, thus making a weak link in the chain of "plumelike" appearance. Its weakest point is its color, for it is not so full as the full color; nevertheless it is bound to be one of the best varieties of this year. Its early year doublets will be seen in every exhibition.

P. Paul.

Stock Illustrations: Trade Improving.

This business has not experienced any particular boom, but there has been a gradual increase, and prospects are daily growing brighter. There is an abundance of plants, and a surplus of particular surplus of anything. Roses are of excellent quality and in good demand. Wholesale prices range from \$3 to \$4 per 100 for teas, and retail at \$1 per dozen. French Camellias have made appearance in this market and sell well, though there is no special call for it. Usually they are demanded in very small quantities. Many of our first-class growers do not build houses adapted to this good variety, and at the price it usually commands, should pay better than that which would be obtained for the season, or carnations which will not average \$1.50 per 100.

Our country has a quality only, and in good demand, with a visible shortage in the supply. Wholesale prices are \$1 per 100; retail, 35c. to 50c. per dozen. In chrysanthemums, there is a fair supply of good quality with a good demand for them. But interest in the Queen of Autumn seems to be dying out, and the variety is being produced in very small quantities. "This city has the best lot of chrysanthemums this season that was ever grown here. Many of the Swanson arrowing—and selling too—some immense blooms. Morel, Willard, Philadelphia, and others are in the position, etc. are now in their prime. Would a good live exhibition revive interest in this variety? Have you not seen the quality of styles, forms, colors, names, etc., overcome the thing and caused a reaction?

Viols are coming in of fair quality, and in limited quantities. But very few of the cultivators were able to grow them. This fact is to be regretted, as it is a great variety, and will, I think, prove more profitable than the double kinds. Jottings.

C. F. Haupt has built a new house 16x18, doing the work, and has just moved. This makes three houses in his range—

which are devoted to violets, roses, carnations, chrysanthemums and bedding plants.

Artificial plants, dracaenas, vias, flowers, etc., are now seen in many of the stores, which is a fact they are more common in the business district than the natural plants. They serve a purpose all right, but the fact that they are used for decorating, and instead of detracting from the sale of the real article, they assist in disposing of it. The use of artificial windows, every picture in the magazines is doing mislead work for the retail florist, and for the palm grower. Notice the immense increase in the sale of viols, since artificial articles were worn so much a few years since. The article creates the desire which only the real can satisfy.

Mr. Anderson has opened up a new store in the "Hill district" opposite Hoyt and

Chris. Hansen is about to open a large and commodious store on East Sixth Street opposite May & Co.'s new place. Soft coal prices are soaring skyward, although some of the growers connected early in the season at very low rates. But very little coal has been used as yet, owing to the mild fall.

Boquet green has made its appearance, which will remind of the holiday season, which is well upon us.

Shipping rates are still good for roses, gladioli, gladioli and funeral work. James Soden, foreman for L. L. May & Co. is smiling again. It is a girl—the fifth.

B. F. Brown of the Bag Filling Co. was here last week, setting up a number of machines to be used by L. L. May & Co. in their warehouse.

John A. Herrington, formerly with L. L. May & Co. as manager of their retail nursery department, has removed to Los Angeles, California. He has a fine place there under the firm name of Howland Nursery Co., dealer in fancy ornamental stock. Wm. Travis.

Toronto.

Business Still Slow.

Business is still slow, and stock is very plentiful. Roses are cheap. Carnations are good, but prices are low. Chrysanthemum are very plentiful. St. Lawrence market has been overstocked with roses, and could not be disposed of at any price.

Show News.

The chrysanthemum show opened November 10, and began its every-day ability of its being a very good one. There are quite a lot of entries in several of the classes, and the quality is very good. The show has not been favorable for getting stock sold, but for all that a great many plants have been sold. The display of palms, foliage plants and orchids will, I think, be better than usual. Thos. Maxton.

Buffalo.

Business Slow.

Flowers are quite plentiful. The influx of chrysanthemums is now large, and much so, but the quality is not so general complaint of unusually slow sales of chrysanthemum plants in flower this year.

Thral, the florist, has the window at 588 Main street placarded with an opening for a new one of the plant, and is shortly to occupy, removing thence from further down to the same block. J. Austin, florist, has listed us last week.

VIDI.

SANDY CREEK, N. Y.—Thomas V. Maxon died at his home one mile west of Adams village, Sunday, October 16th, aged 67 years. He was one of the pioneers in the seed growing business in this locality and continued in it until his death.

COMING EXHIBITIONS.

Secretaries of shows will greatly oblige by furnishing us with particulars of their respective Exhibitions, for notification in this column.

CLEVELAND, OHIO.—Florists' Club, November 18-19. A. Titton, 35-27, Woodland avenue, secretary.

MADISON, N. J.—Rose Growers' Club, Fagan's Hall, November 16-18 inclusive. James J. Ryan, secretary.

Providence.

The week opened with 48 hours of wet weather the same as last week, practically killing what there was in the market. There has been an average funeral business, but cut flowers have moved rather freely. Prices on cut flowers in bloom have made their appearance and sell well. Chrysanthemum plants in the Boston market are in good demand. Chrysanthemums are quite plentiful, but many of them are specimen blooms with weak stems and are not fully matured when marketed. Violets are on the gain and are selling well. The American Beauty roses are selling well. This is something new for this market where the Beauty has been a rarity. They retail for \$4 to \$6 per dozen.

Small Talk. D. D. Waterman, Cranston, has had an extraordinarily large run on small potted chrysanthemums at good prices. He had a big stock in fine quality.

Edward Neale, in addition to running his orchid and cacti houses, has accepted a position as traveling representative for a reliable house.

The Hope Greenhouses, 279 Massachusetts avenue, gave daily chrysanthemum sales from the 1th to the 11th inst., which were largely attended.

It is rumored that C. C. Sullivan is about to engage in business for himself again.

E. Carl will add one new house to his range in Oxbowville next Spring.

John Fotheringham, representing E. K. Pearson Co., Tarrytown, N. Y., was in town last week.

George Johnston, of Johnston Bros., is suffering from another severe attack of rheumatism. W. H. M.,

Pittsburgh.

Trade News. Trade here fell up a little the past week, but the supply of stock was far too large for the demand. Chrysanthemums are in their glory at present, but prices are more than they have ever been. There is no heterogeneity in prices of roses and carnations, the former particularly so. In carnations, the standard, several of our growers are cutting Hartshill flies. Bulb sales have been actually slow.

Justice.

C. T. Siebert opened up another store in East Liberty on Center avenue, close to the corner of the good class of trade. Mr. Siebert is still selling carnation plants and says his sales this year are better than last. A good many shipments went south.

At the last regular meeting of the Botanical Society of Western Pennsylvania, Superintendent Falconer, of Schenley Park, gave a very interesting lecture on the flowers of the city. He was in Philadelphia, he spent several days in the city.

Superintendent George Darke, of Highland Park, has some fine chrysanthemums, as usual, not quite as many as are in the Schenley Park varieties, but better than last year's. E. C. REINEMAN.

Milwaukee.

Market News. Chrysanthemums reign supreme so growers of other stock are waiting for the time to come. Carnations are quite plentiful and only extra fancy are kept moving without difficulty. Carnation prices are very low, even at low figures.

Carnations are improving in quality, and stocks average fair in proportion to other stock. Violets, violets, and fancy chrysanthemums are in demand, and command good prices. Medium grade chrysanthemums are plentiful and cheap. C. C. Pollock has returned from a Western trip.

Recent visitors, J. C. Vaughan, Harry Baggersdorf, RASTUS.

Saratoga, N. Y.

T. J. Totten's range of new houses are now in full occupancy and growth. A large crop of Beauty roses cut from one house in August, and another crop is now in sight. A large trial assortment of roses is now here. Phloxes show only medium. Alaska has been discarded. Morello and Jubilee look fine in its element for growth and is producing magnificent wined flowers. The carnations are well weathered and moderate in size, while the wet weather apparently caused some rust. Wm.

CHRYSANTHEMUM STOCK.

SPECIAL LOW PRICES FOR NOVEMBER.

Order at once and secure strongest stock at cheapest rate. We have thousands of plants of Novelties and many Varieties in strong, healthy condition.

Novelties—Back's, Hill's, May's, N. Smith & Son's, Spaulding's and others, \$2.00 per doz.; \$1.00 per 100.

New Rochelle, N. Y.

Siehrach & Son have completed a huge water tower on their place here. The base structure is a stone tower, 20 feet in diameter, 30 feet in height, on the top of which is erected a standpipe of heavy iron 50 feet in height and 8 feet in diameter, making the entire height 80 feet. In the tower can be heated to any desired temperature. This, we believe, is the largest and most modern waterworks in connection with any florist establishment in the world. The Rose steam-heating plant, which was completed several days ago, is to heat the largest and most complete to date. The fuel used is two-thirds gas and one-third anthracite and one-third bituminous or soft coal. This properly mixed makes the best and cheapest fuel when large boilers are used and plenty of draft can be had. The saving, last year, on this coal over large sized Lehigh coal exceeded \$3,000. The gas and water are three of the principal items to be studied in these times of close competition and small margins.

New Canaan, Conn.

Through the action of a crazy servant, Edwin Hoyt and his entire family were poisoned with arsenic and strychnine. The sick ones were Mr. and Mrs. Edwin Hoyt, their son Stephen, and daughter Fanny, and also some of the family. Mrs. Stephen Hoyt, Miss Fanny Hoyt and the baby were in a dangerous condition, but are now to be recovering. Mrs. Stephen Hoyt, mother of Edwin Hoyt, died at the residence of his brother James on Tuesday night last.

Business Bits.  
We are not complaining of dry  
weather now, rain having fallen in abun-  
dant during the past week. Business  
was of course considerably affected, so  
far as transient trade was concerned.  
Wedding decorations were quite num-  
erous. A. Sunderbult & Son had the  
largest, using many thousands of red-  
and pink chrysanthemums. It was  
of course a pink wedding. J. A. Peterson  
has had several nice decorations  
also. His chrysanthemums and Beauty  
are carried of the stock that comes in  
to the best advantage. But I must say  
that roses are not in it now with the  
chrysanthemum. Carnations are holding  
their own at \$1 per 100. Roses are sell-  
ing for 10c to 15c, and chrysanthemums  
for \$1 to \$1.40 per 100, violets bring 50c  
per 100, Beauty 2c to 25c, each Lily of  
the valley 4c to 5c.

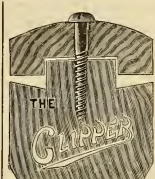

Saturday was seedling day. There  
were two exhibitors—Hugh Graham, of  
Philadelphia, Pa., who sent "Pensyl-  
vania," and one from South St.,  
Adrian, Mich. They were nice blooms,  
but as correspondents are not allow-  
ed to know the movements of the judges it  
is hardly worth while to make any com-  
ments. Betscher Bros., of Canal Dover,  
Pa., sent a white seedling to the writer.  
It is dwarf in habit, has good stem and  
foliage, is much better than Bergmann,  
some what of the same form, but I hardly  
think it good enough to compete with  
Mrs. Robinson. They also sent some  
seedling carnations, but they were in no  
condition to be judged, being badly  
wilted; some of the colors were quite  
good.

R. A. Betz, of this city, has accepted a  
position as cut flower worker with O. J.  
Friedman, of Chicago.

The Indianapolis Show.  
Thursday morning a party, consist-  
ing of J. A. Peterson and wife, W. Sun-  
derbult, and the writer, took a trip to the In-  
dianapolis chrysanthemum show. The  
city was just getting over the effects of  
the country, was the same old place  
at any of their shows. Our old friend,  
Toots, took for commercial flowers, and  
good assortment in new and leading  
kinds. Utica, N. Y.  
Roses at Peter Crowe's are looking  
very well. The number cut thus far  
has been large considering the extent of  
the houses. Solid beds are here consid-  
ered the best, while the general proprie-  
tor could not doubt give some points on  
mixtures to the scientific chap.  
A good-sized house of Adiantum canu-  
tum, grown for cutting, is a feature,  
while perhaps more interesting is a vari-  
ety originating here that possesses dis-  
tinctive qualities of merit. Its gracefully  
shaped and larger fronds are an im-  
provement over those of the conventional  
and with a pleasing tint of pink in its  
younger growth, one inclines to believe it  
a coming standard variety. It has been  
named Bardil in honor of Robert Bard,  
of Syracuse.  
George considers Alaska carnation  
a standard for quantity of bloom. He is  
well pleased with Figure and Lily Bean,  
and a leading here, but the originators of  
George shows promises of merit in that  
variety. S. Morello looks fair.  
C. F. Baker's new carnations, Oneida,  
a shell-tinted or salmon-pink, and Red  
Jacket, a red, are to be sent out this  
season, and will no doubt merit a large  
share of attention. The former undoubt-  
edly is an acquisition that must meet  
with favor, while the latter looks as  
though it need not occupy a back place.  
This, Mr. Baker says, is the sliding down  
from over 3,000 seedlings of some years  
ago. Besides a miscellaneous stock for  
the retail trade, that of young ferns in  
this season, and was recently offered in  
and was assumed goodly proportions.  
Mrs. Matthews rebuilt his older variety,  
and it is now occupied with roses, or cut  
blooms, which class of flowers, and also  
carnations, is being given more attention  
than formerly. A live interest in this  
of the best specialty, orchids, still per-  
sists in this city. A bench of  
chrysanthemums shows good culture.

At Wm. Scott's can be seen a middle  
bench of carnations, quite cosmopolitan  
in character, a veritable festivity of  
varieties in a goodly number of each. Mrs.  
Piegree, Eldorado, Woche, Dazie, and  
others can be fully noticed in a compar-

When Writing Mention Florists' Exchange

ture sense. The small outdoor growth  
made means smaller stock than com-  
mon now, but in general it is in good  
condition, an entire middle bench of Ge-  
nie shows growth and size improved  
over those seen at the originators—Har-  
mon and DeWitt.

A house of violets, long bedded in  
looks fine, the plants flowering freely.  
Another house of the same form was  
already cropped in goodly numbers, and  
very fair quality.

T. A. Webb's carnation stocks look bet-  
ter than even the middle bench of Ge-  
nie. They are in goodly numbers, and  
very fair quality.

In seedling carnations a red that has  
been tried for some years gives good  
promise of desired qualities. He also  
shows a white sport of Beyruth that  
inclines to hold its character. The chry-  
santhemums here are this year truly a  
nice lot for commercial growers, and  
good assortment in new and leading  
kinds.

**Utica, N. Y.**  
Roses at Peter Crowe's are looking  
very well. The number cut thus far  
has been large considering the extent of  
the houses. Solid beds are here consid-  
ered the best, while the general proprie-  
tor could not doubt give some points on  
mixtures to the scientific chap.

**Washington.**  
**Chrysanthemum Too Plentiful.**  
 We have had no frost so far, consequently outdoor material is very abundant. Chrysanthemums are about at their best outside. They have done well this season, owing to the favorable weather of the last two months. Cosmos is yet in flower, also marigolds, heliotrope dahlias, geraniums and hosts of other less prominent things. The first killing frosts usually come about the 20th of November. Indoor chrysanthemums are in full blast, everybody commencing their being too plentiful.

This is exhibition week with the stores, all of them are dressed a little more than usual. J. H. Small & Sons and the Clark Bros. have elaborate displays of orchids in their windows consisting principally of Dendrobium formosum, gigantheum, D. phalaenopsis, Lelia Arnoldiana, Oncidium Rogersii and several varieties of cattleya. Antennifolius and various of large blooms have been used to bring out some pretty effects.  
 The Guide Brothers have made a wide display of plants, ferns and palms to connect with the greenhouse recently put up. This useful structure is arranged with ferns, palms, ferns and palms. From the roof hang vines of Ussis discolor. In the evening when lit up the effect is pleasing.  
 J. L. Freeman is exhibiting a monster specimen plant in front of his store on Thirteenth street. It is one of the largest seen here. There are no less than 450 good-sized blooms on it. Attached is a label stating particulars as to time of propagation, etc.  
 The Clark Bros. have a fine lot of chrysanthemums which they have succeeded in keeping in a backward state. Some of them look as if they won't be ready to cut for several weeks yet.  
 J. L. Loos' is cutting some elegant cutkays and decorations. He reports a growing demand for these flowers.  
 G. W. OLIVER.

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. No. 47.

NEW YORK, NOVEMBER 20, 1897.

One Dollar Per Year.

## WE ARE OFFERING AN EXCEEDINGLY FINE LOT OF LARGE SIZED, BUSHY, ARECA LUTESCENS

in the very best possible shape. These plants are fine for decorative purposes. There is nothing better. On account of wishing to give our stock more room than is now possible, we are offering a limited number of these beautiful plants at very low prices. Anyone who has use for plants for decorative purposes will find these Arecae exceptionally good value and very satisfactory both in regard to quality and price.

Fine plants, extra bushy, 8 inch pots, 3	to 3 1/2 ft. high,	\$3.00
" " " " " " " " " " " "	" 3 1/2 to 4	" 4.00
" " " " " " " " " " " "	" 4 to 5	" 5.00
" " " " " " " " " " " "	" 5 to 6	" 6.00

Also a fine lot of smaller plants, 5 inch pots, 2 ft. high, \$1.00; 6 inch pots, 2 1/2 ft. high, \$1.50

## A BARGAIN IN NEPHROLEPIS

Both EXALTATA BOSTONIENSIS (The Boston Fern) and DiVALLOIDES FURGANS.

Fine, large specimens, 10 inch pans, plants 1 1/2 ft. across, \$1.00 each.

Florists will find this very profitable stock, one of the best selling plants that they can handle. If not sold immediately, increases in value very rapidly, is an unequalled house plant, makes a big show for the money.

We would also call attention to our particularly fine stock of *FICUS ELASTICA*, *PANDANUS VEITCHII*, *ARACARIAS*, *KENTIAS*, *LATANIAS*, *ASPARGAGUS PLUMBOSUS NANUS*, *BAY TREES*, etc., etc.

Wholesale list, giving prices of the different sizes of all Palms and other Decorative Plants sent free on application.

## THE NEW PRIZE-WINNING CHRYSANTHEMUM FRANK HARDY THE SENSATION OF THE SEASON.

We are now booking orders at \$3.00 per dozen; \$30.00 per 100. This Chrysanthemum has created a sensation wherever exhibited, as it is the finest introduction of the season. Further than that—as those who have seen it need not be told—it is the finest variety exhibited.

 When Writing Mention Florists' Exchange

The LONG ISLAND seed growers are  
 very low on their stocks  
 for the winter and the prospects are far  
 better than we had reason to hope for a  
 few weeks ago. The season was one  
 of extremes—first intense heat fol-  
 lowed by an unusual rainy period, which  
 was very destructive to all seed crops,

bringing blight, mildew and rust, then a drought, which made the setting of plants almost an impossibility and was so discouraging to many that not more than a few plants of each variety of cabbage for seed purposes was set. This made a death struggle with the weather. It was not until the favorable weather of the past few weeks had a wonderful effect, and the plants are being put away in a good shape. The output is relatively small, but it is probable that the quantity will be much as usual. What the crop will be a problem. There is but little difficulty in getting over the winter stocks, but the question is as to whether the germs of stem rot are ready for their fatal work. All we can say is that the indications are not so favorable as we could wish.

Onions, both Scotch and Siberian, is looking splendid. The seed was sown much earlier than usual and the plants are strong and healthy. Should the coming season be favorable there will be enormous crops, and this will be necessary to meet the orders now in and for the constantly increasing demand.

The rutabagas are looking well, if anything the roots will be a little larger, with this will be advantageous in the way of selection, the seed crop will not be affected.

The Allias turnip, purple top and white, in an unusual condition, both as regards size and yield. The same may be said of the purple-top Globe, and strap-leaf varieties.

The Fall-sown spinach for next year's seed crop looking well, but the quantity is not so small to figure such as a seed crop.

Among those who have been inspecting the growing crops the past week were W. W. Tracy and son of D. M. Ferry & Co.; Mr. Earl, of W. A. Beebe & Co.; Mr. S. W. Peters of H. J. H. Co.; Mr. J. Wood, of J. M. Thorburn & Co. and S. P. Willard, of Comstock, Ferry & Co., St. Paul, Conn.

**Government Seed Distribution.**—In the report of the Secretary of Agriculture, Hon. James Wilson, for 1937, he mentions the fact that out of the appropriation for the present fiscal year of \$139,000, there must be expended for seeds \$110,000, leaving for the purchase of plants, bulbs, etc., \$29,000. He adds: "The spirit of the law requires that the seeds, plants, bulbs, etc., be rare and valuable. The seeds are being made by the present Secretary of Agriculture to spread the appropriation for seeds, plants, etc., by the same means through agents and representatives abroad, through the various national and international associations. It is desirable that more of the appropriation given for seeds should be available for the introduction of what is new and rare."

Editor Florists' Exchange.

The present position of the free seed distribution by the government calls for some further comment in the United States, as all are so greatly interested in stopping the appropriation. The fact is, certainly, that many of those who say they sincerely desire the appropriation stopped, but they have neither the will nor the means to do so. Some of these seedmen are accusing the committee and the government of inconsistency because they bid to supply the government seeds. The facts are as follows: The appropriation by the government was made, and a large quantity of seeds had to be supplied, and the government had contracted to offer the government seeds, or had obtained from doing so, it would have been probably twenty to thirty thousand dollars more for supplying the seeds. This would have elevated them in position which they present day do not warrant, and the inclination of the larger seedmen would have accomplished good. As a large quantity of seeds had to be bought, it would have been better to refuse to do so, though they object to the distribution. If they had refused would stop the nuisance, they could have been offering seeds to the government, but as it will not, there is no inconsistency in the matter.

Some of the seedmen have worked ardently for the killing of this distribution, and have injured their business thereby, and they have been willing to sacrifice their own interests for the good of all. We ask earnest aid from those who

will work to kill this injurious free distribution of seeds, and request them to write at once to the congressmen and senators who represent their States, pointing out the injury that is being done to the seed trade by this appropriation. Gen. Le Duc said that "Thousands of dollars worth of seeds of some value have passed through the hands of members of Congress, and it is hard to say that not a dozen varieties have been made that have been available by the department as donations." And a recent report of the department states that a review of the department reports during the last year, in which over a million dollars have been expended for the free seed distribution, fails to reveal a single instance of benefit to agriculture attributable to this distribution."

In addition to writing to their representatives, seedmen can aid in bringing influence to bear upon newspapers with whom they have spent such large sums in advertising in the last few years, and which is now curtailed through the benevolent appropriation. The government is destroying individual enterprise, and teaching the people to depend on the State as a foster mother.

T. Woon, Chairman Seed Trade Committee.

European Notes.

Dry cold weather appears to have fairly set in for the season and the work of drying our seeds is proceeding under much more favorable conditions. As the work proceeds the shortage in Extra Early heads became more apparent. Dirigo, Crosby's and Egyptian are perhaps the worst, but it cannot be said of any variety that the yield is even middling. Cabbages also disappoint us, although we were prepared for very poor yields. Individual enterprises continue to our expectations. The poor crop of onion caused by the ravages of the disease has occasioned an advance in price, which at one time seemed hardly credible. There will be quite enough seed to supply the market, but it is hard to make quite such ruinous conditions as last year.

The crop of onion bulbs this year is a poor one, but as prices are low, growers may prefer to plant them now, and in that case prices will drop. This season's level of cleaning up the aster crop are now fairly well known. While the yield is only moderate the large stocks left over from last year have cut prices down to about last year's level. As this, in the case of growers who take proper care of their crops, means with very little loss, there are rumors that next year's plantings will be on a less extensive scale. EUROPEAN EDITOR.

St. Joseph, Mo.

The Chrysanthemum shows of which there are three, are all full, with at the City Park there is a fine assortment of recent introductions, and Mr. Ruft, who has charge of the garden, is busy selecting for his display. J. N. Kidd also makes grand display. He shows two-and-a-half foot plants with 250 flowers, and from 150 to 200 well-developed blooms on each; also a plant of M. Hoyer with 150 flowers, four feet through, with 250 flowers. This plant was given to the most popular unmarried lady in the city. A wedding table decoration consisted of Farleye's ferns and Brunialti roses, fully 150 plants were exhibited by Mr. Kidd, who, with his foreman, E. D. Ellsworth, has done much to advance the queen of Autumn. Messrs. Krauma & Son's display of blooms attracted many visitors and his American friends were much admired. Phillip Henschel has added two houses to his range.

Various reports speak favorably of business in general.

When Writing Mention Florists' Exchange

**WORCESTER, MASS., SHOW.**

The annual show of the Worcester Horticultural Society was equal to its predecessors.

The principal exhibitors were F. A. Blake, H. F. A. Lange, W. E. Sargent, C. D. Thayer, Moses Birge, Orpet of Lancaster, W. J. Wood, Mrs. Austin Ward, A. Roper, of Tewksbury, and Fred Medans, George McWilliams, of Whitinsville, was judge.

Mr. Lange filled the platform with a beautiful exhibit of palms and decorative plants. Mr. Blake's display of anemones occupied a place near the platform and was greatly admired.

One of the most beautiful exhibits in the hall was that in the class calling for 12 cut blooms. The first two were those of Mr. Lange and C. D. Thayer. In Mr. Thayer's were grand blooms of Mrs. P. Fevkes and Major Tompdon. These were especially large and their deep yellow color was particularly noticeable.

Two rows of cuttings were best, those of C. W. Ward, of Queens, N. Y., had a large collection, comprising an immense Mrs. M. Brad's and a number of other cuttings over three inches in diameter; a beautiful pink variety, C. A. Dana; Mrs. Jerome Perrin's white and pink.

One of the most beautiful blooms of a dark pink color, was C. A. Blake exhibited the C. A. Dana; Freedom, a white bloom three and a quarter inches in diameter; a seedling called Bon Ton, and a pink seedling which he has obtained by crossing Bon Ton and Lizzie McCowan, Hoyle, of Spencer, also displayed carnations.

Mr. Lange's exhibit of roses was exceedingly beautiful. He showed the Kaiserin Augusta, Victoria, Bridesmaid, Mar, de Waverly, Papa, Frontier and others.

The exhibit of Lady Hume Campbell which was by Mr. McWilliams, was very fine.

The display of chrysanthemums this year was the largest and finest ever seen in this city. One of the members of the Society said that it was easily 50 per cent better than any other display he had seen. The blooms were larger and handsomer and more varieties were shown. One of the beauties of the display was one which was called Red Warrior, a large bloom with reflexed petals, and of a deep terra cotta hue. It was shown by Mr. Lange. For the most part the specimens were of old standard varieties.

One of the premiums awarded F. A. Blake took first for best 12 plants in not over 10-inch pots; first for six plants; for best specimen plant; for best display of not over 25 cut blooms pink; best single blooms white and pink, and the best display of pompons. Mr. Blake was also first for display of carnations.

H. F. A. Lange took first for three plants named varieties: best pink, 25 white, 25 blooms white, 25 blooms yellow, 12 white, 12 yellow, 12 pink, 12 sprays, six cut blooms. The same exhibitor also took first on roses.

William Darling was awarded first for best red variety, Fred Medans for best yellow. They were also winners in other classes.

**Strongest to be got for sprinkling is the "Mum" kind, especially adapted to Chrysanthemums. . .**

H. A. STOOHPH, 315 MADISON AV., N. Y.

**SPRINGFIELD, MASS., SHOW.**

The Hampden County Horticultural Society held its annual chrysanthemum show November 26. The show was very weather interfered very much with the financial results; it rained the day before, preventing several from putting in plants, and on the day of the opening a heavy rain delayed many. It was a very even exhibition, that is, many of the exhibitors were of equal quality, leaving the judges' decisions to be arrived at by points.

The show as a whole was a very fine display of well-grown blooms. Among the private gardeners John Barr, gardener to Mrs. W. T. Adams, exhibited well known varieties, taking first for 25 cut blooms, in 25 distinct kinds, also for 12 mixed named, vase of 12 pink (Virland Morel) single specimen (Mrs. Jerome Jense); vase of 50 blooms mixed and vase of 25 mixed. Daniel McCreary, gardener to Mr. E. H. Lyman, Northampton, made a good showing of flowering flowers in several classes, taking a goodly share of the prizes.

Of the commercial growers, A. N. Pierson, of Cromwell, Conn., in quantity and quality. His 12 vases of six flowers each were given first; the varieties were: Marie Van der Veldt, white, yellow, red, M. Pullman, Queen, W. H. Lincoln, Major Tompdon, Mrs. Perrin, Emerald, Mrs. Jerome Perrin's white and pink flower, and H. E. Wildner. Several other classes were equally well filled. His vase of 25 single flowers, first prize, was followed by Mrs. A. Blake exhibiting the C. A. Dana; Mrs. Jerome Perrin's white and pink.

Mr. E. H. Howland, of Holyoke, put up the best exhibit he has ever staged; his gardeners, J. C. Smith and P. G. L. F. proud of his efforts. In the class for white, Mr. Howland took first with "The Girl of the Year." Mr. J. C. Howland's general exhibit was a vase of forty single flowers, first prize, a full flower, and in every way a satisfactory variety.

John Coombs, of Hartford, Conn., made a good showing, Queen, Mrs. E. H. Simpson, of Cromwell, Conn., exhibited the best. Mr. Coombs received several prizes.

Specimens were scarce. The specimens from Mrs. B. P. Cheney were as perfect and uniform as possible, taking first. E. J. May, of Holyoke, took first for 6, 12, and 25 single bloom plants, and second for standard. A. Lundsted first for 25 cut blooms; Mrs. C. B. Deane, a professional, Mrs. Justa Spaulding, of Chicopee, took first on three and one bush plant.

The later-style classes were not filled as well as last year, but many of the flowers were of better quality. Mrs. B. P. Cheney (John Barr, gardener) took first for Massachusetts, also the capital prize for New York. Newport took first for Rhode Island; Nathan Smith & Son, Adrian, first for Michigan; and A. N. Pierson, Cromwell, Conn., took first for New Jersey. The flowers staged for the Massachusetts exhibit were: Mrs. Howland, John Barrington, of Hingham, Mass.; Mrs. W. J. Wood, of Ocean; magnificent specimens. Mr. Pierson's state entry was a close second; Mrs. Maged's class, and Mrs. J. W. Boylston, of Boston, took first. The other Massachusetts state exhibit, Philadelphia appeared to best advantage, and Mrs. Jerome Jones and Mrs. Hoyle took in Rhode Island entry.

Several seedlings were entered, although none secured the required 25 points to entitle them to an entry in class 229. Two were granted diplomas; one was a yellow variety, the other an old gold and red marked 83. These were raised, as usual, by the Florida Carnot. American Beauty, Bride and Bridesmaid were as fine flowers as one could wish to see in a class. Mrs. Jones was second with a beautiful display, his Perle being extra fine. The third award for roses display went to John Coombs. Two amateur growers of pansies, A. P. Wade and Geo. Heingenbach, put on exhibition some fine forms for outdoor growing in November.

In violets Mr. Pierson was first on

double blue, and second on single blue. Mr. Pierson was also taking in carnations. From C. W. Ward, the Cottage Gardens, Queens, N. Y., were very fine. Mrs. Jerome Perrin, of Queens, N. Y., Blau, Gold Nugget, and John Young. This latter held better than Flora Hill. Mrs. W. J. Wood was the only exhibitor in this class—Buttercup, Daybreak, F. Mangold, Alaska, and Della Fox were very fine.

In the classes for single variety, H. Groul took all the firsts with his new seedling, Bessie, H. Pierson, of Holyoke, took first in class for single vase, second in two classes with Daybreak and B. J. Shaw; second in another with Anemone. Mr. Groul also secured the first silver cup offered by the Cottage Gardens, Queens, N. Y., for the best new seedling of the variety being grown by Mr. J. Van Alen's gardeners, Arthur B. Huntley, Newport, R. I., sent for exhibition one Begonia semperflorens (Hydris. E. H. Howland had an interesting collection of pompon and stenone lowered.

The following carnations were shown: E. D. Shaw, of Holyoke, arranged two tables with roses, carnations, chrysanthemums, ferns, palms, etc., from Rosemont, for exhibition only. His roses were the advertisement.

An exhibition of carnations from the Garden, South Manchester, Vt., arrived late in the evening of the 26th. They were: Daybreak, Helen Keller, Lizzie Gilbert, and Albertine.

The thirty-fifth year's work of the Hampden County Horticultural Society has been a very successful one, not so financially. It is a question how long to continue these exhibitions, as the money is not sufficient to pay the expenses. It may be well to discontinue them for a time.

The annual meeting of the Hampden County Horticultural Society occurs December 8.

W. F. G.

**WINNERSVILLE, KY., SHOW.**

The eighth annual Chrysanthemum Show of the Kentucky Society of Florists began Saturday morning, October 10, at Lerkranz Hall, under very favorable auspices. The weather was as fine as could be desired. An unusually large attendance on the opening day was the largest at any show yet, and the crowds were dense. The success of the chrysanthemum show this year, the florists are well pleased with the success of the show and are glad the flower-lovers of the State are becoming more and more interested in the plant. They have been busy for a long time with their plants and blooms, and certainly did not neglect their work. Mrs. Wm. Steinhilber was in attendance. Henry Litchfield had charge of the show this year, and the arrangements were very well made. The admission fee was reduced to 10c, and 25c., and that helped to swell the crowds.

The hall was handsomely decorated with palms, flags, and bunting, and the exhibits were the hand placed was a beautiful sight.

The chrysanthemums were grand this year. The exhibitors were particularly pleased to receive a gold medal for the new variety, Pennsylvania. W. T. Bell was selected to give the prize. The exhibitors took much pains this year and arranged their plants with splendid taste. The following exhibitors were present: Messrs. Jacob Schulz, H. Litchfield, and Jos. Coenen.

There were three principal prize winners for roses: For 10 varieties in bush form, Charles Schletter, specimen plant; for the standard, J. C. Smith, and for Jacob Schulz, J. E. Marrett, and F. E. Redmers were also successful exhibitors.

The first prize in chrysanthemums was first, and for single stem plants, Nanz & Neener carried off the premier honors. The same exhibitors were successful in the same classes, being followed by Charles Schletter and J. C. Smith.

Nanz & Neener were first for cut blooms of 10 varieties; J. Schmitz took first for 25 single stems of 10 pink, Nanz & Neener taking the honors for 10 yellow and 10 any other color.

For 25 mixed named, in single vase, the second day for 20 blooms white and same number yellow. Mr. Schmitz captured the prizes for 10 to 20 pink, Charles Schletter, Rasmussen, and E. E. Redmers were also prize winners.

For 10 varieties in blooms all colors, C. Schletter was awarded a special prize for 10 white; J. Coenen & Co. for 10 yellow and 10 any other color. The competition the third day was in roses and carnations. In the latter class Mrs. C. W. Ward, Mrs. Mann, and N. Neener were the successful contestants. For roses, Kleinstarck, Nanz &

Neuner, Buser, Schletter, Reimers, J. E. Neuner, and Jacob Schulz carried off the honors.

The special prize for best collection of carnations was awarded to Nanz & Neener, who also took the premier for best basket American Beauty. Hunt Floral also carried off the honor for best prize for Perle, Meteor, Bridesmaid, and Bidde, but as they failed to send their entry lists the entries were ruled out. They did, however, the first prize on all their roses.

Plants grown to single stems were far better than ever before, and were arranged very artistically. Altogether the show this year has been a most prize for the florists are well pleased with the results.

F. H.

**ST. JOHN'S, B., SHOW.**

The Horticultural Association of St. John held its annual display of chrysanthemums at the Mechanics' Institute assembly rooms on November 4 and 5. As the show was held a week earlier than in previous years, it was a most interesting exhibit to the exhibitors who would have made display had the plants been in fit condition to show. There was a whole sale of one of the two large rooms. The plants were not as fine as usual; but the flowers were excellent, all being fine specimens. Some 250 cut blooms were staged. John Cruikshank made a creditable display of plants. His 30-foot group was tastefully arranged. Some of his blooms were very fine.

Herbert E. Gould of Sussex, also made fine exhibits of cut blooms and plants. He captured all the prizes in plants, there being no competition in this class. Wm. Melatos, gardener to Joseph Allyn, Esq., made a very pretty display of display plants. His 30-foot group was the show.

H. S. Cruikshank made of 25 Vivand-Mordid plants (special mention); they were of large size and superb in color, and were H. E. Gould's vase of 25 Phlaid Blue "City" was a fine specimen.

Mr. Tom McCarthy, of Boston, was a visitor to the show, and said that "our boys had done very well in this class." Mrs. Wm. Melatos, the German street florist, was in attendance, and her blooms at her store; they are a credit to her gardener, Mr. Schmidt.

Mrs. W. H. Jones, of St. John's, exhibited some very fine blooms at her store; they are a credit to her gardener, Mr. Schmidt.

There were some very fine roses, and her horses look promising for a good cut this winter.

KNOX.

**Wilmington, N. C.**

At the chrysanthemum show held here in the Young Men's Christian Association rooms, first prize for the finest display of 10 varieties in vase form, was by Will Reider, as did the prize for the finest display of cut chrysanthemums. The yellow blooms of the finest specimen, chrysanthemums, one or more blooms, was captured by Lat Williams, of Wilson; and the first prize for the finest specimen display of cut and pot flowers and plants by Miss Lucy B. Moore.

They must be fresh to be good, no NICOTINE in dried up kind; nicotine kills Aphids.

Good kind, 75c. per 100 lbs.

Balance Weight 500 lbs. each.

H. A. STOOHPH, 315 MADISON AV., N. Y.

**CARNATIONS.**

In previous writings I have advocated that plants be not copied late in the season, but that they rather be permitted to grow on and bloom if they are inclined to do so, providing the plants have been cut back at least once, and have made several good side growths. After this the plants keep on gaining strength. The side shoots on these first lateral growths are much stronger and better developed in every way than is the case where plants have been cut back before the stems are reached maturity.

This is the very best evidence we can get as to which method causes the greater drain on the plants. Where plants are allowed to bloom, the growth is perfectly natural, there is an equal balance between the foliage and the roots. This balance can be maintained almost indefinitely, so long as the proper balance of cultivation are observed, and precautions taken. If we keep an equal balance between the foliage and roots and furnish all the other necessary requisites such as light, air, moisture, food, etc., in such proportion as will best facilitate growth and perfect development, or as near to that condition as the surrounding influences or state of things will permit, we will be approaching pretty nearly to perfection in cultivation.

But it is not always possible, through conditions that arise, to keep the correct balance between the foliage and the roots. I have learned, however, that the best way to correct this is by the treatment we give our plants just prior to their removal from the field to the pot during the winter.

I do not wish to be understood as advising that all one effort be centered in the one thought of bringing the plants into bloom while they are yet in the field; but that the extent to which the flowers are cut or removed as they open, there is no severe check or shock to the plants, and that the portions cut are in such a manner that the plant in its normal and natural conditions and cultivation will induce. When the plants are being staged and the flowers are cut or removed as they open, there is no severe check or shock to the plants, and that the portions cut are in such a manner that the plant in its normal and natural conditions and cultivation will induce. When the plants are being staged and the flowers are cut or removed as they open, there is no severe check or shock to the plants, and that the portions cut are in such a manner that the plant in its normal and natural conditions and cultivation will induce.

When plants are kept growing in this way and some of the roots are cut, cutting back they often get, they will recover and become established in less time than they would be following a great deal earlier. This is the secret of getting early flowers (if indeed it may be called one). Some may argue, and I believe, do contend that inasmuch as a plant loses a great many of its roots during the winter process, a corresponding amount of foliage can also be removed without injury to the plant, and that this operation will only serve to give the plant a great deal earlier. This is the secret of getting early flowers (if indeed it may be called one). Some may argue, and I believe, do contend that inasmuch as a plant loses a great many of its roots during the winter process, a corresponding amount of foliage can also be removed without injury to the plant, and that this operation will only serve to give the plant a great deal earlier.

My observations have proven conclusively to me that if an error, and instead of equalizing the difference, it causes a still greater one. That when they are brought from the field are fortunate if they do not lose more than one-half of the roots, and that the best way to produce these new roots; and while the plant remains unestablished the drain is simply upon the foliage and substance of the plant, just as it is upon a cutting planted in the sand. If it be healthy and properly matured this drain will not be in excess of what the cutting can stand, but rather there will be enough vitality and strength to spare to permit of its rooting nicely.

This it can be seen that if we rob the plant of its vitality by removing a considerable amount of its foliage, it has a double duty to perform. To first to develop new roots, and secondly enough to enable, and for which Nature has made ample provision. As soon as we remove a portion of the carnation plant's roots and disturb the root to such an extent that their functions are greatly impaired, the drain at once commences upon the plant, and when in connection with the removal of a portion of its foliage, we decrease the plant's vitality and its ability more successfully to with-

stand the shock of transplanting. It is only natural then, that plants so treated require a much longer time in which to become established and produce good flowers than would be the case if no foliage had been removed.

All varieties are subject to this same law, although some (the more rapid growers) will recover in less time than others. Albertini has been doing freely with you for a month past, I am quite sure, however, that this would not be the case had we not brought it to the flowering period by housing time. When we look at things in this light, we can readily understand why some of the late blooming kinds do not compare favorably with the hybrids, or even later. H. WEBER.

**PLANTS and FLOWERS.**

SEEDLING GERANIUMS.—John P. Shelly, Luckhoo, N. Y., sends us some very promising seedling geraniums, with immense trusses and long stems. The colors of the scarlets are intensely brilliant.

ANEMONE CHRYSAETHYMUM.—We have received from Will Rehder, of Wilmington, N. C., a large-flowered anemone of a very pleasing light pink color.

NEGANDIA, Mich.—Thomas Mackenzie has succeeded S. H. Fraser, resigned, in charge of the Negandias, with immense trusses and long stems. The colors of the scarlets are intensely brilliant.

HAVERHILL, MASS.—Wm. Ferguson, of Haverhill, Mass., removes to No. 7 Broadway, this place, where he will grow seedlings on a larger scale than hitherto.

**N. Y. GARDENERS' SOCIETY SHOW.**

The exhibition given for charity by the New York Gardeners' Society, under the guidance of eminent horticulturists, was held November 12, 13, 14, in the new ball room of the Waldorf-Astoria. Never before was a flower show held in such palatial quarters, and it would be to the advantage of the flowers and plants to be shown to exhibit in a room of this character, and as such a show is nothing if it be not educational; and the competing exhibits stand out clear so that the interested can find them readily for comparison's sake. Here the surroundings demanded something different, and a pictorial effect was obtained, and as such was a success. The gardener who contributed the whole of the display in the ball room proper deserve commendation for the general excellence of their exhibits. Groups of foliage and decorative plants formed the principal features. Mrs. G. C. Webb, Charles Knight, W. Duckham, and J. McKenzie, were the chief exhibitors in these classes. Chrysanthemum cut blooms were exhibited in fine condition by Peter Duff, gardener to J. Crosby Brown, Esq., Orange, N. J., some of the finest containing Grand Vivand Model, Jennie Falconer, Nivens, and Minerva. W. C. Russell, Millbrook, N. Y., also contributed fine examples of Golden Wedding and others. A comprehensive display, including nearly all the types and forms from pompon to the standard of the class, was here shown. Orchids turned out to be the greatest feature of the entire show. They were superb. For C. G. Roebing, Esq. of Trenton, his grower, Henry Chinkaberry, made a display that was never before seen, both with glory and afforded the public a rare chance to see some of the genus. In the display of cut flowers, Mrs. G. C. Webb and silver medal were gained, there were Cypridium Spiesianum, 10 flowers; C. elegans, 1 flower; C. calceolatum, 1 flower; Charlesworthii, six flowers, a fine type; C. Henry Graves, Jr., one flower; C. cyathophorum, 1 flower; C. heterophyllum, 1 flower; C. Thayerianum, four flowers; C. regale purpureum, five flowers; and some 22 others. Most noticeable, however, was the rare, pale green C. insigne Sanderli, with one expanded bloom and two buds borne on a deliciously healthy and vigorous plant. There were also Vanda Sanderiana, V. suavis, and the beautiful, rare V. tricolor Lawrence.

Despite the emphatic announcements in the daily papers that the show was to be purely an amateur one, and that the trade would not be permitted to exhibit, the schedule called for, and the management solicited growers to compete, and the exhibitors responded, and a fine showing was the result. They were allotted space at the head of the exhibit, and in an adjacent ante-room and without question made the most pleasing part of the exhibition, both for quality and arrangement. There was an exquisite orchid mantle decoration by A. Mauds, also a very group of fancy-leaved caladiums all of high merit. The last named gained the first prize and the orchids second. Arthur Wood, Madison, N. J., being first with a valuable exhibit of Cattleya labiata and Cypridium, and choice plants, including orchids, palms, crotons, ferns, etc. Charles Truman, Hudson, arranged a magnificent group of cyclamen covering more than 50 square feet, many of these plants were exceptionally well-flowered and were of a fine strain.

In competition for the best group of arecarias, John Scott, Keap street greenhouse, Brooklyn, was awarded first. E. T. Pierson of Jersey town, N. Y., being given the second prize. Mr. Scott had much the largest display, and the plants were all of grand quality, making really a handsome and unique exhibit. The same growers met again for the best group of chrysanths. Here the competition was closer, both contestants putting up very valuable lots of plants in a commercial sense. The judges awarded Mr. Scott first, but on what grounds it is hard to determine. As far as we were able to discern, the Pierson Co.'s plants were of a better color and also had the advantage of various sizes and every plant was in a

condition for immediate use as commercial decorative stock, while the first named had the advantage of having been for the most part freshly potted. A freshly-potted plant, of course, is at a disadvantage, and the judges in their phrasology, being "over-hated," meaning that the balance between pot and plant is not equal, and that the men again established fact. However, in this case the gentlemen judging overlooked this fact and not only awarded the prize, but also gave the first prize in the College Point, L. I., was awarded first prize for a display of cut flowers. E. R. Grandt, Co. W. Ward, Queens, L. I., excelled all his competitors in the class and arranging varietals by putting up the grandest lot ever staged by any single exhibitor in this city. The quality of bloom was excellent with the color arrangement perfect. There were in all fifteen cases, the majority of the kinds being new and including Gold Nugget, a rich yellow of great excellence; Mrs. James Beah, a delightful soft pink; Charles A. Dana, another pink of the same character, and New York, a cerise and fine variety. Other excellent kinds were No. 6, 96, bloom and color somewhat resembling New York; Marco, very rich, dark violet color; Jewel Young, a fine white, White Cloud, Glacier also a white. Flora Hill and Mrs. G. M. Bradt were also exhibitors.

C. Besold, Mineola, L. I., exhibited Mr. Jooest carnation and others. Stollery Brook, Long Branch, N. J., sent their new pink carnation Argyle. Hugh Graham & Son, Philadelphia, had an exhibit of their new chrysanthemum Pennsylvania, which was awarded a silver medal. A. Herrington was awarded first prize for the best trade display of chrysanths. Among these was his new variety numms. Among these was his new variety Frank Hardy. A. D. Rose, 100 West Side avenue, Jersey City, and John Lewis Childs, Floral Park, contributed pompon and other chrysanths and G. McWilliam, mignonne; Long's C. Harrell, Summit, N. J., also put up a grand lot of orchids for exhibition only. Among these was noted a remarkably deep-colored Cattleya labiata, so intense was this that a good specimen of the type looked like a red flower.

Reflections on Current Topics.

I have watched with no small interest the working of the new rule, adopted by the Chrysanthemum Society of America at the Providence meeting, governing the giving out of information relative to the awards of medals or certificates, with the effect that scores of points, etc., must be promulgated only through the secretary and the clerks of the Society to detect any advantage resulting from the committees adhering to the wording of the rule, either to the victor or to the exhibitors. On the other hand, conforming to this rule only imposes upon the secretary of the Society, and not upon the exhibitor, to appear to be superficial and unnecessary in view of the magnitude of the work and the committee, which that officer is called upon to make at the end of the season. It is also in drawback to the exhibitors.

I hold that the Chrysanthemum Society of America and the exhibitor stand in the same relation as do any other two contracting parties. For a certain sum the Society obligates itself to give to a certain party, thus for the time being becoming the order of things and the exhibitor (the exhibitor who pays the entry fee). The Society, however, reverses the natural order of things and asks of the exhibitor as to how the transaction shall be effected, withholding from those who exhibit the right of the exhibitor to demand the very information, through which the exhibitor who pays his money for the work done is to be made, and who is thus enabled to his advantage to obtain at the earliest possible moment.

Whatever the Society may do as regards outside parties, it appears to me to be a duty of the exhibitor to give notice to the men who hire his services whenever called upon so to do the result of his work. The exhibitor is equally responsible for it; therefore, why should it be denied them even for an hour or a minute? To deny it to them, and to deny it to one, would, in my opinion, be work well done.

The editor has forwarded to me a very interesting communication by Mr. Henry A. Siebert, relative to the inauguration of the bowling contest at the annual party of the Society. It appears that the game has been played at every convention of the Society, having originated with Mr. Siebert at Cincinnati. This, according to him, is how it came about. At the time of the convention and seeking quiet hour some of the good fellows of Cincinnati, took an excursion to Watkins, N. Y., to a rather primitive summer garden with two bowling alleys, and it was here, where, I think, the first bowling was engaged in by some of the first and old members of the Society. Although no actual record is given, I think it is really the beginning of this now favorite pastime and recreation. There were with me, I remember, the following names: Lonsdale, Craig, Westcott and Evans, of Philadelphia; Walburn and Armstrong, of New York; Orlin and Cull, of N. York; Hunt, Huntsman, and our late lamented friend Harry Sanderberch, of Cincinnati; William Allen, Cook and William Siebert, and C. L. Allen, of New York, and several others from other sections. It was at the first meeting that I bowed and then duty again called us to the convention hall. The last day of the gathering took place at Watkins, N. Y., and I recall that at the time the delegates out of the most enjoyable excursions to the Soldiers' Home at Dayton, Ohio, that has been my pleasure to partake of it all the Society's history, and there, all sorts of games, including bowling, were indulged in so that I think the bowling as a florist game had its inception at this convention. Mr. Orlin was the first to mention the fact that the most ardent advocates of the game were the Dutch and German delegates. I bowed but once since, and that was simply as a substitute or a fill in; and I think that I am fortunate in my own fortunate team to which I was assigned that I have never attempted it again."

I am obliged to Mr. Siebert for the information he gives. I have heard it said that the game was introduced by us, and any one after reading how the delegates sought relaxation from fatigue and mental exertion during the meetings, and the contestants swifter on the alleys, would incline to the belief that the florist was the first to introduce the game. But why was bowling, in preference say to pool, selected as the "florist game?"

I am obliged to Mr. Siebert for the information he gives. I have heard it said that the game was introduced by us, and any one after reading how the delegates sought relaxation from fatigue and mental exertion during the meetings, and the contestants swifter on the alleys, would incline to the belief that the florist was the first to introduce the game. The Quarantine embargo on southern greenery, imposed on account of the yellow fever epidemic now been removed. The Seed Trade Committee continues its efforts to make the free seed distribution by the Government, and its members continue to make bids for the contracts to supply the seed.

Secretary Wilson, of the Department of Agriculture in his annual report, suggests that more of the appropriation for seed distribution be made available for the introduction of seeds from new areas.

The plant growers interested in securing Clinton Market, New York, as a permanent plant market, will next meet on December 7, when the committee's report regarding rates, space and other points, will be submitted.

The botanist of the Department of Agriculture, in suggesting permanent trial grounds for seed departments of his report, suggests nothing could more enhance the value of the department's seed trials than a more liberal trial test of the seeds it is proposed to distribute.

Society Meetings.

MISSOURI STATE HORTICULTURAL COURT HOUSE, MOBILE, Mo., December 7, 8, 9, 10. A. Goodman, Westport, Mo., secretary.

KANSAS STATE HORTICULTURAL, at Stone Chamber, Sixty Capital, Topeka, Kan., December 28, 29, 30. William H. Barnes, State House, Topeka, secretary.

New York.

Among the Dry Goods Houses. For the past two weeks there has been a fair-sized chrysanthemum show going on at Wasmanski's. The center display is nearly as large as the show has been filled with pot plants and cut blooms. An even-span stand has been erected in the rear of the show, and is ranged to form a sloping back, while on the top center platform stand vases of cut flowers. It is interesting to note how many blooms and plants were on exhibition; but the firm's advertisement stated that it was the plants that the buyers was good and the plant sizes varied from five-inch pot plants to well-grown specimens of the variety "Mrs. T. G. Moore" of a very high order, and comprised excellent blooms of Eugene, Dahlbonnie, the new variety Ferns-Yvonne, and others. All were correctly and distinctly named. At first sight it seemed as if the firm had made this huge display for show only; but such was not the case. Plants were \$1.25. Specimen cut blooms were sold at 15c, and 25c, each. In another part of the store were found decorative plants exposed for sale, with prices affixed; and a hint to our retail trade to buy plants at these prices before yardage. At a glance the customer could ascertain the total or individual cost of any plants he placed in his basket. For instance, a fine plant of Pandanus in its handsome jardiniere marked \$2.50. A fine plant of Pandanus Vitellii alone was marked \$7.50; a variety of Ferns-Yvonne, a cut run of \$1.00. A fair draecena was marked \$1.50. No particular cut in values was noticed by the exhibitors.

Lecture on Violet Disease. At the meeting of the New Jersey Horticultural Society to be held on Monday evening, December 6, at 8 P. M., in the Opera House, New Jersey, a paper on the violet disease will be read by Dr. Walter Dodge, who has made a bacteriological study of the disease. The paper will be followed by a general discussion on fungoid diseases and remedies.

On Thursday, November 11, the American Bulb Co., purchased from James B. Fitcher all the greenhouse and retail lots of bulbs of the firm of Fitcher & Maada, used by them for growing exotics. This comprises what is known as the "Fitcher lot," consisting of 20,000 plants, 700,000 of glasses. This famous establishment, known all over the world as the "Fitcher lot," has been purchased by the United States Exotic Firm, New York. The specialists of this firm will be in charge of the plants, and special attention being given to Farleyense.

The Permanent Plant Market A representative gathering of market men at the restaurant on Wednesday night last, to discuss the advisability of hiring floor space in Clinton Market for a permanent plant market. John Birnie explained the object of the meeting, having previously presented a plan of the space now available in the building. Fred Lelming was appointed chairman, and J. W. R. Schmitt, secretary. It was unfortunately no one representing the city or market authorities was in attendance, and the discussion was necessarily very enthusiastic discussion of the whole matter, during which it transpired that the plan was adopted to wait until, in the market, a committee consisting of Messrs. John Neel, Chas. Dietz, and C. W. Schmitt, was appointed to wait on the market superintendent and obtain from him full particulars and report at a meeting to be held in the Market place on Tuesday evening, December 1 next. Ex-Alderman Morris was an interested participant in the proceedings, and gave plant growers some very sound advice on different subjects affecting their well-being in the present and prospective revival of trade, and this, as a social feature, is called to do, although there has been some discussion of the various advantages for the week will be higher, more on account of a general falling off in shipments and a corresponding increase in

weddings, funerals, and small dinners and larger out-of-town orders than otherwise. It is thought that this will diminish supply the market was fairer, and dealers were able to clear out without much difficulty. The market for cut roses have improved but slightly in values, and this only in Bride and Bridemaid. The market for cut roses is in demand, and \$3 per dozen was the highest possible figure obtainable for fancy stock. The market for cut roses falling to command half this price, although it is hoped that Friday and Saturday will improve.

Carnations are in better demand and are again up to the \$1 and \$1.50 mark, with white carnations at \$1.85 and a few special making more.

Violets toward the close of the week improved considerably. Monday, Tuesday, and Wednesday there were enough to go around and some to spare, and prices ruled on 50c. to \$1.25. Thursday there was a falling off in shipments, together with an increased demand for the Yale-Princeton football game at New Haven, in anticipation of which many thousands of violets were being received. This combination caused a general advance in price, so that in the evening it was as high as \$1.85. This prevailing figure and there was a general cry among buyers for more. In the morning the market advanced to \$2.00 and \$1.75, and there seemed to be no particular run, neither would there have been any prospect of a steady advance, instead of slipper. This, of course, saved the market for this week and violets will undoubtedly be in demand for the holiday stock for that period. Valley is firm at from the \$3 to \$4 for good quality. Lilies are slow to move at \$6 and \$8 per 100.

Chrysanthemums have not kept pace with violets and show but little if any improvement over last week, except for a very few.

F. A. Reiker closed his store Monday, and has been notified his grocer.

Ball Trade. There is a general picking up in this line. Weddings have been quite numerous of late, and many of these people are homes and churches were decorated with chrysanthemum; white and yellow were the prevailing colors. Many of the boxes, and stores proper are again furnished, and a much larger stock is being put up for the Christmas trade. Many stores seem to be abroad, a prediction which it is hoped will be verified.

Auction Sales. Roses and other imported stock are now being put up for auction, and has this fall had the effect of reducing very much the quantity of this class of stock. The new duty has the necessity of the bids for all roses being started about 7c. each, and buyers hardly know how to meet the present average figures run from 8c. to 10c. each.

Edwin Hoyt, of New Canaan, was in town Tuesday night, and was with the members of his family are progressing favorably toward recovery. Other well known florists are: Philadelphia: J. A. Valentine, president of the Floral Court Co., Beaver, Col., and Prof. William G. Hamilton, president of Agriculture, Washington, D. C.

Norwich, N. Y.

William G. Manderville died here November 5, aged 71 years. He was formerly in the hat business, but later in conjunction with his wife, engaged in florist trade. Deceased leaves a widow and four children.

St. Paul.

Short Supply. Cloudy weather will be responsible for a shorter supply and a higher price. In the present time carnations are both in short crop with a good stiff demand. Chrysanthemums are also in short supply, but a large shortage in general is imminent. Beauty are more sought after than ever, and this of the best quality. The market is returning prosperity. Shipping trade is very good, there being a steady demand from the other towns.

Notes. Augt. Vogt has purchased the business and furniture belonging to Hottom & Chris. Hansen's new store was opened for business on Saturday last. VERITAS.

Chicago.

Tred, Weather, etc. The week opened up with sales somewhat slow. The show was caused by a letter being sent out demanding for first-class cuttings, etc. normally...

W. H. ELLIOTT, - Brighton, Mass.

When Writing Mention Florists' Exchange

**New Orleans.**

Very little improvement is noticed in business here yet. The yellow fever is slowly disappearing and people are beginning to come back to the city. The weather still keeps warm, with plenty of flowers outside. Gardens are looking much better this Fall than usual.

All Saints' Day trade was poor this year, owing to so many people being absent from the city on account of the fever. Flowers were plentiful everywhere. The market was overstocked with chrysanthemums; good flowers sold well, but loose bunches of specimen chrysanthemums sell better every year for work for All Saints' Day.

C. Holst had a grand show of flowers for the first, and did a very good business, considering the times. Mr. Holst has been very successful in raising seedling chrysanthemums, and the most favored by his local trade—varieties that stand the weather better than most of those since here. This year he had over 1,000 plants all ready by the first, all his own varieties excepting Henry's Gem. Some of his plants carried 50 to 60 heads, the best of them selling at \$2 per dozen. Some of his varieties should find their way north, as we have seen nothing to equal them here in earliness, size and color.

Mr. Justin St. Mard did a very fair business this year. His Kate Brown chrysanthemums were good, also his Queen. The small single chrysanthemum, Silver Thimble, was fine. The weather has no effect on this single variety.

U. J. Virgin is cutting some nice roses daily. His plants all look very healthy and clean. He had a little trouble with black spot on Beauty, but it has disappeared. If the weather keeps as mild as it is now, I do not think there will be much money in roses under glass, as we are cutting very fine flowers outside now. Some years we do not get any thing from much before Christmas. This, of course, makes the season very short for the indoor trade.

HARRY PAPWORTH.

**Omaha, Neb.**

The first chrysanthemum show Omaha has given, opened November 15. To judge from the way the public patronized it and the satisfaction shown, and congratulations expressed on every side, it was greatly appreciated. The committee in charge and the entire Florists' Club worked as a man to make this first show a grand success. Bassett & Washburn shipped a fine bunch of Beauty; Hatcher, McKeller & Whitson sent chrysanthemums that are a credit to the grower. Many other growers and exhibitors have shown, and the intention of exhibiting, but as yet the trade not represented. The show will not close until November 20, and a great many cut flowers will be placed later.

More and better chrysanthemums have been grown in Omaha, in this city, in any previous year, but the sale is not so good. First-class bionous sell at \$2, and inferior grades at as low as 50c a dozen. Very few good varieties are seen, and they find ready sale at \$1 a hundred. Some fine Beauty roses are shown in our store, but a good many are affected by thrip, all the growers seeming to be troubled with this pest.

**Riverton, Ill.**

James B. Spaulding, president of the Spaulding Nursery and Orchard Company, died here November 11, aged 73 years. He was a native of Massachusetts, and had resided in this place since 1854.

Cut Strings, 10 to 12 feet long 50 cts. each. Shipped to every part of the country.

# HOLLY WITH THE DEW ON IT

WHAT'S THAT, you ask? Just this: We have an immense crop of extra fine HOLLY which we will ship by express. It will reach you so quickly and so fresh from the woods that the Dew on it won't have time to dry. No lost sales or weary waiting for that Freight Car that is side-tracked. No wet Burlap and wet paper to pay for extra for fear the goods may all dry up before reaching you. No great big branches to fill up the case. Such unnecessary wood is all waste, no good even to burn.

We will cut and pack these goods exactly as you order them. If you want Holly for wreaths, you want all small branches and tips for that purpose. If you want delicate branches for decorating, we know how and what to pack.

**We Won't Argue Prices.**

Figure it up for yourself: Lost sales, Extra Burlap, Drayage, etc., etc., and drop the old "Freight Stuff." Try fresh stock by Express. Have a fresh case reach you every day, or two days as you choose. You can countermand our order by night message for 30 cents if sales are slow. No danger of being stuck. Our way is the new way and the sensible way of handling Holly.

We also pack Holly in 1, 2 and 5 pound boxes, nicely labeled and your name on them.

Prices: Express charges prepaid, delivered at your door.

1 lb. Boxes	.....	\$3.75 per doz.	½ doz., \$2.00
2 lb. "	.....	4.00	4 " 3.50
5 lb. "	.....	Each, \$1.00	\$10.00 per doz.
10 lb. "	.....	" 1.50	15.00 "
25 lb. "	.....	" 3.00	
40 lb. "	.....	" 5.00	
50 lb. "	.....	" 6.00	

These are net weights and do not include the weight of boxes. Our Catalogue tells you all about it, and describes many other Christmas Decorative Evergreens. Several Novelties. Send for it.

Trade Quiet.  
Business remains about the same as last week; no improvement in anything. Thanksgiv'g, however, produces a little reaction. Chrysanthemums still have the lead. Heavy roses even having to take a back seat. There are still unmarketed as ever, and only strictly first-class stock will sell, and command any price.  
Club Items.

Saturday was the regular monthly meeting and exhibition of the Florists' Society, and the exhibitors presented a most excellent and free, of course the crowd was huge: from 3 P. to 8 P. m. one could hardly move about in the club-rooms. The exhibition was not so good or rather not so large, as we had expected. Many who had promised as an exhibit failed to show up. George & Allen made an especially fine display, including chrysanthemums, heavy, roses of other kinds, Romans, narcissus, etc., and carried off nine awards. Hoffmeister Floral Co. received four awards on roses and chrysanthemums. Carl Schweitzer one award for a yellow-bronze seedling chrysanthemum. Corbett & Wilson two awards on violets which were especially fine. The plants of some of our violet growers are troubled badly with the disease. Theo. Beck received seven awards for carnations and chrysanthemums. He had a white seedling chrysanthemum before the committee, but it was not finished enough to be judged properly, and was left until the 20th inst. Mr. Murphy received nine awards for carnations; the varieties shown were mostly new ones. For the same reason the only one exhibited, and it was certainly very choice, grown as Mr. Murphy does it.

**MANURE.**

**The Right Cypress for Greenhouse Material.**

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is Cypress that grows in the high lands and Cypress that grows in the swamps. All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you will get very much of the kind that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we cannot afford to jeopardize. We send out the best only.

When Writing Mention Florists' Exchange

W. W. Coles, of Kokomo, Ind., received two awards on roses, Carnot and A. Victoria. By the way a number of people who condemned Carnot when it first made its appearance have changed their minds, and more of it will be grown another season; to my mind it is the best of all the new introductions in roses during the past few years. C. C. Murphy was strictly in it with a vase of Harrison's White carnation. Commercially this is certainly a good thing, but Flora Hill still holds the palm as best white, and she has been the favorite. J. J. Peterson received three awards for well-grown standard chrysanthemums, R. Witters-ter received four varieties, the best of which was for Evelina. This carnation is far from its best yet, but will be heard from later. A. Sauerburch also received ten awards for a miscellaneous stock of well-grown flowers. The City Greenhouses received sixteen awards on orchids, ferns and other well-grown plants. Hugh Graham was awarded the special certificate of the Florists' Society for chrysanthemum Pennsylvania: E. G. Hill & Co. a special for a pink seedling chrysanthemum unnamed. It was what might be called a salmon-pink, straight flower on order Canning. W. H. Good stem and fine foliage. J. J. Peterson received special for a new seedling chrysanthemum, very light pink; percentage Queen and V. Hellock named Mrs. Samuel Heydon. Mr. Peterson has another named Mrs. Ed. Roth, a lemon-yellow. Thus W. Crouch received a special for his namesake chrysanthemum, which is a dark pink of Japanese parentage, with delicate and pleasing and robust substance. This, I believe, was grown by Fred S. Webb, of this city. Mr. Crouch At the regular meeting E. Giesy was appointed a committee of one to arrange for a special session at 8 o'clock on the 11th inst. E. G. GILLET.

**Buffalo.**  
Darker and colder weather now rules, and with needed fall rains included at the present intervals it is the season what may be termed unpleasant during the past week. It has, however, not shorted the rather large supply of good flowers daily offered. A goodly number of chrysanthemums, though at ordinary prices, have been culled to relate between the needs of college theatre parties and the special need of these blooms for the gardens. In fact, some good out-of-town orders have also been supplied. Violets seem in good demand, with none being wanted. The best qualities are picked up quickly. Carnations incline to be over plentiful for the demand.  
Recent callers were: Thos. Mansfield and Miss Mansfield, of Lockport, N. Y.; H. J. Wise, East Aurora; J. H. Kendle, Tonawanda. Vid.

**Baltimore.**  
**The Best Chrysanthemums.**  
 At a meeting of the Gardeners' Club, held recently, the following were declared the best chrysanthemums for cultivation: White, Mrs. Robinson; early dark, George W. Childs; early, medium, and late, white, Mrs. George S. Kald; the Niveus and Minnie Wanamaker; best pink, Maud Denn; Wissant-Morel; and Glory of the Pacific; best yellow, Eugene Dullemeau, Mrs. Whilldin, and J. E. Langer; best yellow, pink, and white for late planting, Golden Wedding, Janice, and Mrs. Jerome Jones.  
**The Market.**  
 There has been a good call for chrysanthemums this week, especially the larger varieties. Violets are in good demand, but roses are not over-abundant, nor is the demand for them great. Carnations are as popular as ever.  
**Notes.**  
 The Y. M. C. A. of this city is holding a bazaar, in connection with the same several of our leading chrysanthemum growers are making exhibits, but in view of the fact that this is not a competitive show, the same interest is not taken in it by the public. It is pity that we could not secure way clear to have a show this year.  
 One of our new department stores here at its opening had a grand display of natural palms and large showy chrysanthemums. It is gratifying that some of these large establishments had that natural plants are the most effective decorative material. Of late it has been very noticeable that a great many artificial palms have been used on such occasions as openings, and this has had a detrimental effect upon the natural plants.

Schroeder, Columbia, Midsummer, Gertrude Pearson, Marchion, Silver Queen, Gettysburg, also a fine collection of very Geraniums and Pelargoniums.

## CANNAS

REMEMBER we hold the entire stock of James Dean's PEDIGREE SEEDLINGS.

**President William McKinley**, Columbia brilliant crimson, with scarlet shading. Plant dwarf, growing from 2 1/2 to 3 feet high in rich soil. Foliage deep green, with heavy chocolate margin. Plant stools freely and is an abundant and very early bloomer. The flower shades are highly colored as in Alphonse Bouvier. The trusses are large, of good shape, and held well above the foliage, and the growth is compact and even. This variety may be considered a marked improvement upon Chas. Henderson, Columbia and other crimson cannas. The effect when massed is extremely brilliant, the color contrasting finely with the deep green foliage. We place this variety at the head of the list of crimson cannas, and believe that it will prove invaluable for bedding purposes. Certificated. Trade price, 75 cents each; \$60.00 per 100, from 4 inch pots.

**Defender**, Color clear yellow, striped with bright scarlet. Height 3 to 3 1/2 feet. Habit somewhat resembling Columbia. An early, very profuse bloomer, producing fine large heads of broad petalled flowers. Foliage clean, distinct, and a good grower. This canna will prove very effective for massing, as it produces a greater proportion of flowers to the foliage than almost any other yellow canna. Certificated. 75 cents each; \$60.00 per 100, from 4 inch pots.

Also all the other standard varieties of Cannas.  
 It will pay you to send us a list of what you need and allow us to make you special quotations.

# Imperial Japanese.... Morning Glory Seed

GROWN BY

**A. W. SMITH, AMERICUS, GA.**

Crop of 1897, now ready for delivery, is the product of selected seed from product of the best seed I could buy in 1898, paying \$45.00 per pound for same, and much more for others in packets. This seed is from blooms measuring to 1 3/4 inches across, infinitely superior in every respect to product of seed bought in 1896.  
This seed will produce blooms single, semi-double, double, plain, quilled, ruffled, crimped, scalloped, and slashed; containing every hue and color, except yellow, including all shades of red, violet, darkest purple, blue (from indigo through Ecstasy) to electric pink, chocolate, smoke, shrimp, and white. In solid colors, as well as some colors marked with white, and whites marked with blue, pink, smoke, chocolate, and purple; some blooms are one-fourth to one-third purple, pink or blue, with remainder white, and others have markings so frankish as to be indescribable; the whole surpassing in size, beauty and markings any plants in any other season. American or Japanese, and reaching me to offer the best seed that money can buy. The blooms generally have throats differing in hue from body of bloom.

Price, per pound, \$6.00.

For large quantities write for quotations to....

SEED TRADE REPORT

Points and information from seedsmen, and all interest in this column, solicited. Address in care of Florists' Exchange, P. O. Box 107, New York.

AMERICAN SEED TRADE ASSOCIATION. 100 Broadway, N. Y. President: E. B. CLARK, Milford, Conn. 1st Vice-President: S. F. WILLARD, Waterford, Conn. Secretary and Treasurer.

New York.—Henry Peterson & Co., 35-37 Cortland street, announce that after December 15 they will retire from the wholesale and jobbing seed trade, and will in future deal direct with the planter.

C. Morse, of Santa Clara, California, was a visitor this week. Mr. Neuhard, representing Young & Halsted, of Troy, N. Y., was also a visitor.

ROCHESTER, N. Y.—Henry B. Hathaway, the assignee of Crossman Bros., seedsmen, has been granted permission by the Court to continue his business in the usual way until June 1, 1898. The creditors that have agreed to this represent 150 out of 170, and \$129,119.31 out of a total indebtedness of \$154,740.75.

Tin-foil Paper.

A recent decision of the General Appraisers is to the effect that tin-foil is dutiable on surfaced-ent paper at 30 per cent, under paragraph 308.

OBITUARY.

Oliver Landreth.

Oliver Landreth, the well-known seed merchant, died of heart disease at his home, 617 Walnut street, Philadelphia, November 21st. He was born in this city in 1830. After a public school education he entered the seed house established by his grandfather, David Landreth, in 1850, where his name became the death of his father, whose name was also David, Oliver Landreth, from that time.

He was for the past thirty years a vestryman in St. Andrew's Protestant Episcopal Church, and was one of the Board of Managers of the Episcopal Hospital, and was noted for his successful management. He was a member of the executive committee of the Board of Trade. He leaves two sons, William Dixon and Lucius S.

When Writing Mention Florists' Exchange

European Notes.

Flower Seeds.

The cleaning up of the aster crop proceeds apace and reveals shortage on several of our variety, particularly the later sorts. At the same time growers have considerably reduced their prices of the most useful kinds, by which it is easy to discover that a large supply of 1896 seed still remains on hand. This is very hard on those growers who do not carry yearling stocks, for the exigencies of modern trade demand that they who desire to hold their own position together shall be able to meet any fair (and often very unfair) competition in price. As a rule, so far as late varieties are concerned, the crop has proved satisfactory. The Tom Thumb varieties have only given an adding crop even in the best situations, while Empress of India and King Theodore are very short indeed. Wallflower, candy-tul, godetia, clarkia, and harkpur are fairly abundant.

Vegetable seeds call for little comment just now beyond a passing reference to the present crop of extra early corn. The shortages observed during the past week are worse than those previously noted, and many growers have heavy stocks on your side; if this be the case there will probably be enough to go.

The National Chrysanthemum Society of England has held its annual exhibition during the present week. It is very interesting for the different seed firms to make a display of the products of their seeds at this show, and many of the most successful exhibits have been particularly good. This was especially the case with the St. Andrew's carrot, which has many other or other of its many synonyms on every stand. In one very important category, however, the present crop has excelled. This is evidently the carrot of the future, for although the past season has been very bad for the carrot, and especially for this vegetable, all the roots exhibited were of fine shape, large size and perfect color.

BOOKS RECEIVED.

THE WATER GARDEN.—By William Tricker. A. T. De La Mare Printing and Publishing Co., Ltd., New York, Philadelphia, P. O. Box 107.

The appearance of this handsomely gotten-up volume is another proof of the progress which has been made in any particular line attains a certain stage of development, it demands a better and more complete type of the greater interest it naturally creates. The progress made in aquatic cultivation has been phenomenal during the past decade; and the enthusiasm in this most interesting class of plants continues to study to the matter, which here, comes at a most opportune time, and from its very nature is bound to attract the attention of the horticulturist to which it is devoted. Besides being an example of the highest type of the printer's art—for the letter press, plates, and engravings are specimens of the highest quality—the book offers the grand advantage of having been written by one who has devoted years to the study of the subject, and his treatment, Mr. William Tricker's name has been synonymous with all that is good in the horticultural world. His thorough and practical acquaintance with them shines forth in every line. He has the scope of a master, and his descriptive, embracing such topics as the construction of ponds, adopting natural means, planting, hybridizing, seed sowing, propagation, building an aquatic house, wintering, correct dosing and planting of bulbs and marine, together with cultural directions for all ornamental aquatics. All these have been valuable to the horticulturist, and in addition, there are furnished very valuable lists of water plants, and a list of plants, largely new, suitable for the aquatic garden, hardy perennials suitable for growing in water, and many other suitable trees and shrubs for wet and moist situations. Margins of ponds, and the scope of the mirror, plates and eighteen full page views, several show very handsome effects, each one of which will well take its own part, by all who favor this style of garden adornment. The professional as well as the amateur will find much to interest in Mr. Tricker's book that will both interest and instruct. It is a useful and valuable work, and one in which we have pleasure in recommending it to all concerned.

Santa Barbara, Cal.

Santa Barbara is considered one of the most lovely spots in the United States.

It is almost entirely a tropical city. You do not think there is another place known where it can be seen so many beautiful plants, flowers and fruits, hardy, half-hardy, and tropical, from all parts of the world.

growing side by side, as at Santa Barbara, an unsurpassed variety. It is never very hot nor very cold.

Santa Barbara is a very clean city; the streets are well kept and watered several times a day with sea water, which keeps down all weeds and grass.

The streets are planted with palms in various grades, etc.; the effect is not so pretty as it might be, owing to the promiscuous planting.

Dr. F. Francessi is trying very hard to get the city to plant nothing but Cocos plumosa. This has been done in some parts, and it generally adopted the effect of a tropical association.

It is not the money in it that there was some years ago. Oranges will not grow nearer the city.

At the establishment of the Southern California Horticultural Association, one can see many plants of interest, both old and new, from all parts of the world.

Parkersburg, W. Va.

The florists of this city gave a chrysanthemum show the past week.

It was a fine lot of well-grown specimen plants of chrysanthemums in 8 and 10-inch pots, and a lot of good ferns and cut chrysanthemums.

The weather was very good.

HARRY PATWORTH.

## CORRESPONDENCE.

**Chrysanthemum Peter Kay.**

Editor Florists' Exchange.

In 1893 Mr. Peter Kay, employed by the Hon. J. J. Belden, of Syracuse, sent me a yellow chrysanthemum which he stated had originated with him, and had been grown locally for two or three seasons. I purchased the stock and control, and in the Fall of 1894 staged it before the Chrysanthemum Society of America under the name of Jeannie Falconer, and was awarded a certificate. In 1895 I distributed the variety to the trade. On visiting the American Institute Fair recently I was surprised to find the same variety again staged and certificated under the name of Peter Kay; doubly so, seeing that the same committee awarded both certificates. I write this that the trade at large may be advised of the fact, and be protected against purchasing a so-called "new variety" at a high price, when the same can be procured in the market at from \$4. to \$5 per 100. If the memory of our judges is so short and fleeting that they cannot recollect

thee's investigation, instigated by Mr. Spaulding's letter, would tend to show that Peter Kay and Jeannie Falconer are synonymous varieties, the former name having been attached to the chrysanthemum prior to its purchase and distribution by the introducer of Jeannie Falconer. I have had frequent communications evidently puts the matter in its proper light.

Eugene Dalldorf,  
Chairman of Committee.

Mr. Eugene Dalldorf,

Your favor is to hand. Mr. Laurie can give me information regarding chrysanthemum Peter Kay, and before answering your letter has made inquiry of his friend in Syracuse who supplied the stock but has had no answer so far.

At the time that I wrote you, I also sent a letter of inquiry to Mr. Peter Kay, of Syracuse, who was reported to be the raiser of both varieties (or variety). In question, and I have received the following reply under date of 14th inst. "In order to answer your letter referring to chrysanthemum Peter Kay intelligently, it will be necessary to make the following explanation, and then you can form your own idea as to its proper name.

grower, with dark green and leathery foliage, similar to Harry May, stiff stem and foliage close to flower; good from either crown or terminal bud, and when taken from first or early crown bud will mature October 20, and from buds taken later will mature November 1 to 5. It is a remarkably good shipper and keeper. In color it resembles Major Bonaffon, in form is a graceful, loose, incurved, high-built dwarf, and has been grown 8½ inches in diameter, by 7½ inches high. The flower for which I took first premium "for largest bloom on exhibition" at our late show, was of above dimensions, and was grown and exhibited in a 6-inch pot. It had no feeling of any description. The plant was 30 inches in height, with foliage close to flower and clear down to the pot. Crown bud taken September 6 matured November 1.

On the 27th of October, the Newport Horticultural Society awarded a medal for it, which was then supposed to be a new chrysanthemum; it was shown under the name of Peter Kay.

Later it was hinted that the variety exhibited was identical with Jeannie Falconer, which upon investigation proves

by comparison therewith what their standing is as to points. In the judging of chrysanthemum it seems to me that even two different judges, if they are the judges, were not equally competent as not having been familiar, for instance, with the color of the flowers of either, all equally perfect as Mr. Lawson seems to believe they were. Had Mr. Lawson said that the color of the flowers was perfect but all got good points, then it would indicate a deficiency in the point system. It is well known that the judges, and some given 55 and others 91, then the lack of a definite standard of comparison indicated. SAM. S. HAMILTON.

**Omaha.**

Our first chrysanthemum show was a great success. The exhibitors were 23 in number and each one was most enthusiastic. Occupying one of the most conspicuous positions was a large vase of pink chrysanthemums from E. G. Hill & Co., who also displayed a vase of pink chrysanthemums from W. W. Brennan. Farther on and in no less prominent positions were vases of chrysanthemum from J. C. Vaughan, and the splendid vase of the Queen, Modesto, Thanksgiving, The Times, New York, Nivens, and many others. The first vase of Seneca was represented by a vase of Mrs. C. H. Pierce. This elegant new yellow variety occasioned considerable comment, but not so much as a vase of Mrs. Geo. M. Bradt carnations, and another vase of carnations from Wm. Donner & Son, which contained Gold Nugget and other varieties. J. F. Wilhelm of Council Bluffs displayed vases of Beauty roses and chrysanthemums, the latter embracing V. H. Haddock, Geo. W. Childs, Emma Fitzgerald, Gretchen Buckner, Mrs. Perrin and others which compared favorably with any show. An exceedingly large vase of Golden Wedding from Jordan & Son was much admired. Chapin Bros., of Lincoln, exhibited good vases of Pink Ivory and Major Bonaffon.

Of the many exhibits of roses, one from Ellis & Holloway, of Milwaukee, was the most attractive; it contained vases of different varieties. The Mendenhall greenhouse of Milwaukee sent a magnificent display of cut chrysanthemums containing a great many of the best varieties. Roses from the new seedling chrysanthemum Assarion was exhibited to advantage, and in color (a fine lavender, running from white to a good red) and size it promises well, and should become popular. Commodore, The Queen, Golden Wedding, L'Amethyste, Golden Wedding, and other chrysanthemums shown by them compared very favorably with those seen from Eastern growers.

In the second hall devoted to pot plants, palms, ferns, begonias, etc., and divided from the first by a series of palm and fern decorations in the form of pyramids, banks, etc., were some of the pots of Ivory grown by Donaghe, also a pyramid of chrysanthemum from Chapin Bros. A collection of 32 varieties of red begonias grown by Paul Fitch, were well worth a moment's notice. Chapin Bros., of Lincoln, occupied half of one side with an elegant display of chrysanthemums of well-known varieties. Across the hall and forming a perfect screen of tropical verdure, was a magnificent display of chrysanthemums from Latabia horbonica, Phœnix reclinata, Pandanus Veitchii, Atheris excelsa, Cycas, and others. In the same hall, Erdling exhibited a fine specimen of Ficus elastica with a very effective and unique arrangement of well-known varieties and some fine ferns. Peterson Bros. Cycas revoluta were worthy of special mention. The Queen, Golden Wedding, and Ben Hoar displayed good pots of chrysanthemums. A fine piece shown by Donaghe, was a very attractive one of a semi-circular race track with exact marking the quarter posts, designed by Leonard J. Rohlf. Unget showed some good pot chrysanthemums. Elderberg presented a fine vase of hanging baskets of good pots of chrysanthemums. A pair of fern baskets composed of chrysanthemum and other plants, designed by Donaghe, helped to beautify the halls.

No prizes were offered and the plants were not entered for competition or comparison, but the show was financially successful. The following are the names of those who will go to the treasury of the Florists' Society.

Wm. Donner & Co. has moved their office to the corner of Broadway and Sixteenth street. They have opened up a new branch at a new location.

A. D.

**Partial view of Omaha's First Flower Show.**

or distinguish a variety placed before them within three years, of what protection are certificates to the purchasing public?

THOS. H. SPAULDING.

Editor Florists' Exchange.

Regarding the chrysanthemum Peter Kay, the only explanation that the New York committee of the Chrysanthemum Society of America can offer is that the right blooms exhibited before them on October 15 were entirely distinct from what is considered the proper type of those of Jeannie Falconer. The stem and foliage were superior, the flowers were broader and differently distributed; in fact the entire make-up of the flower was different, while in color there was no comparison. The blooms before the committee this year were darker and showed no traces of the clear color expected in a Jeannie Falconer chrysanthemum. Another notable distinction was the absence of the naked and weak neck, which usually characterizes the latter variety.

The committee simply judged the variety presented before them, and it scored 97 points, thus gaining a certificate. Its principal merits were a strong, rigid stem and neck, well furnished; good petalage and size; its color being its weakest point, the very reverse of what would apply to a true Jeannie Falconer in this respect.

However, the result of the commit-

tee was raised by me some six or seven years ago; I gave it out among the boys here and it became known as Peter Kay; settles the case here and the question of a doubt; the whole trouble being simply a case of misunderstanding between the parties named.

It appears to me Mr. Spaulding is the only one who can settle the question by giving us the pedigree of Jeannie Falconer. As far as I can see, they are one and the same thing, and Jeannie Falconer having been registered in 1894, would, I suppose, have the right to the name.

ALEX. MACLELLAN, Newport.

The following from Mr. C. A. Phillips, Syracuse, answers Mr. Spaulding's question, also throws some light on this subject:

Peter Kay was originated here six or seven years ago by Peter Kay, then gardener for Hon. J. J. Belden, and has been grown by our local growers here four or five years.

Mr. Thos. Bishop, our city park superintendent, I think, sent some of the stock to a friend (whose name I've forgotten) in the vicinity of New York, and I think this is the man who exhibited it as a seedling and won a medal.

Mr. Kay at one time sold part of the stock to Spaulding, of New Jersey. It is a dwarf and very strong and healthy

true. In letters which I have from Peter Kay, the raiser, and Thomas Spaulding, the disseminator, evidence is given which settles the case here and the question of a doubt; the whole trouble being simply a case of misunderstanding between the parties named.

It is in the interest of the trade that this information be made public. Mr. Laurie who exhibited Peter Kay here has already had inquiries for stock of same. In justice to Mr. Laurie, let it be said that he had no knowledge whatever of the variety in question having been introduced under another name by Alex. MacLellan, Secretary Newport Horticultural Society.

**Point System of Judging.**

Editor Florists' Exchange.

Replying to Mr. Rawson's inquiry in your issue of November 13, there does not seem to be any standard of comparison to be found in the chrysanthemum cut, or the case of the Mrs. Arthur J. Caxon chrysanthemum would not stand as at present.

If Mr. Rawson will look over my paper again he will see that "advocate" establishment of a standard for variety, by which all that should be judged, and of which he will be competent to judge who is fully acquainted with the standard. The standard one set, and all the job, familiar with it, the flowers will show

## MONTEAL FLOWER SHOW.

The Montreal Gardeners and Florists' Club's chrysanthemum show was held on November 10, 11, 12, at the Hotel Metropole, a number of plants and bloom were in advance of previous years; but this seems to be the case to a large extent. The plants grown by one or two exhibitors had to be put to a test of competition, and thus while we saw a couple of dozens of exceptionally fine plants from other florists, we are sorry to have to say that we did not need to have when the quality was not as good as now. Unless other growers could be found to compete with the exhibitors, we will have to be content to compete with those being exhibited now, our show will become so contracted that we will have to look to find enough plants to fill the hall.

In cut blooms the same thing is showing, though not to such an extent, as seems easier to grow the mammoth blooms than the mammoth plants. It will be necessary to rearrange the prize list for future shows so as to encourage those who have dropped out of the race. The sections for groups might be better filled, and perhaps the executive might arrange to have challenge cups for these in the case of 24 blooms and 24 plants, and so increase the competition. Other could also be arranged to have a competition for decorations made-in-work. All credit is due to those who do well, and we can't help but exhibit on these lines. There is no lack in quality in any of the exhibits; what is needed is more.

In reviewing the varieties of chrysanthemums, we find some of the older kinds doing things that seem to have been never ones to be better. In cut blooms, Mrs. H. Weeks, grown by Thos. McHugh, stands out as a variety of a fine and never one is better. In stem blooms, Mrs. E. L. Weeks, grown by Thos. McHugh, Mrs. E. D. Adams, Mrs. W. C. Egan, Mrs. Mme. Ed. Arnet, Rinaldo, Le Colosse, Grenoble, Mirreer, E. M. Bigelow, all do well. Mrs. Perry, also a fine one of last year, but still good. Princess of Chrysanthemums, Silver Clod, Golden Wedding, all hold their own with a few new ones. Westminster King was very much improved on those exhibited last year. In the next, Mrs. Perry, Mrs. Davis, the competition was very keen; in this class, there being only 1 1/2 plants in the exhibit. Mrs. Perry, Mrs. Davis, between second and third. McHugh is champion, but Mrs. Perry and Wm. Whiere are running him hard, and will not be so easy as it once was to predict a winner.

The second and third exhibits were cut with longer stems which showed them to be better than the following, and all varieties were conspicuous, being large, well-finished flowers. Mrs. Egan, Georgian, Pitcher, Emerald, Philadelphia, Col. Smith, Major Romanoff, Mrs. J. Jones, E. Dailledonne, Mrs. H. Robinson, Cms. Davis, Vivian-Morel, Mirral, Friend, Mrs. G. A. Magee, C. E. Whittall, Golden Wedding, Mrs. Perrin, Nemesis, Mrs. C. M. B. Marley, etc. The decorations were filled with much the same varieties, Vivian-Morel taking the prize for best. Mrs. Perry took the prize for best, Mrs. Perry took 12 roses and Myra for 12 pink yolk.

In plants Mrs. Perrin took the judge's eye. Mrs. Perry took 12 roses and Myra for 12 pink yolk. A splendid pair both in first and second twelve, Geo. Bonhous, carrying off the prize for best in second. Mrs. C. M. B. Marley and Maude. G. W. Childs, J. H. Troy, W. H. Perdue, Ivory and Ivanhoe, Golden Gate, Chas. C. Davis, exhibited by George Robinson, Yellow Queen, Pitcher and William Pitterson, J. C. Schaffner, Lager, M. Henderson, V. Morel, L. Canuing, Ivory, G. W. Childs, and I. Lafant took 12 flowers, and Mrs. C. M. B. Marley a Pinetree exhibited in both groups, and had also a fine assortment of palms and cactuses and an arrangement of ferns in the hall. C. Campbell had also two fine groups of palms and foliage plants, which he took to exhibit at the Metropolitan hall. Other conspicuous exhibits were a fine bunch of Barboursa grapes weighing 11 pounds, and a similar one weighing 10.4. Mrs. C. M. B. Marley had a fine specimen of Yanda carnium, Cypripedium, Pedicularis, Scilla, and others. We were very unfortunate in the choice of days, as the weather was miserable, and the crowds and attendance were small to good attendance, and as a result, the report is not so favorable as in other years. W. Whillson.

## THE MEN WE MEET.

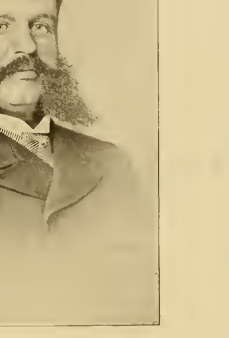

No. 1.—ALEX. S. BURNS.

Numbered in the ranks of the florist trade in America are many men who by their own exertions have pushed themselves to the forefront; men who are a credit and an honor to the profession, to whom their less-successful confreres look up with pride, and whose example to the rising generation is signaled out as being worthy of emulation. Generally speaking each one of these has made his mark through concentrating his energy and skill along one particular line; in other words, there is some speciality in which he excels and on which he is considered an authority.

"This week we have pleasure in presenting to our readers the portrait of one of the successful men in business whose position may be termed unique, and that outside the scope of our present sketch there is no other one man in America whose experience embraces suc-

cessfully all the phases of the three branches of the business ably mentioned, his opinion on each of these divisions are naturally interesting. Of the three his preference is for the growing part. Said he: "Were I to begin life anew I should certainly make a choice of the occupation of a grower; for I am perfectly satisfied there is still money in it, if conducted on business principles. A selection of a location is a part of paramount importance, and a beginner ought to secure a place, where soil, exposure, etc., are alike favorable. But the growing branch is one in which previous ownership of capital is imperative, more so than in the others. One may scratch into the retail business with but very little; and, as recent developments tend to show, into the commission business, with still less capital; but not so in the growing department."

Advertising to his first love—the retail branch—Mr. Burns attributes his success chiefly to the strict economy in its conduct, practiced by him. It is the small leaks that run away with the profits, and these the greatest attention should be given. Of course, times have materially changed within the past few

Alex. S. Burns.

essfully the three principal divisions of the industry—retailer, wholesaler and commission dealer, and grower.

ALEXANDER S. BURNS, whose portrait accompanies this, was born February 1846, at Donaghmore, County Tyrone, Ireland. His father and grandfather were both farmers, the latter a Scotchman who settled in Ireland about 1787.

Coming to New York in April, 1861, Mr. Burns obtained employment with Mr. Henry A. Siebrecht, who was then superintendent of the Post-office, second, third and fifth avenues. In 1870 Mr. Burns started in business as a retailer, his local name being Forty-ninth street and Madison avenue.

In 1872 he opened a retail store at 840 Sixth avenue, which he sold out to his brother eighteen years later; when Mr. Burns formed a partnership with John J. Keyner, as wholesale and commission cut-flower dealers at 11 West Twenty-eighth street, removing in 1891 to the corner of Broadway and Twenty-ninth street. This firm was the first to settle in Twenty-eighth street, which has now become the office of the florists of New York City. The partnership was dissolved in 1895, when Mr. Burns began to devote his whole time and attention to his greenhouse establishment located at Woodside, L. I. The latter was acquired by him in 1896.

Mr. Burns was president of the New York Florists' Club in 1892-93, and vice-president of the Society of American Florists for New York State in 1890, being still an active member of both associations.

Knowing all the phases of the three branches of the business ably mentioned, his opinion on each of these divisions are naturally interesting. Of the three his preference is for the growing part. Said he: "Were I to begin life anew I should certainly make a choice of the occupation of a grower; for I am perfectly satisfied there is still money in it, if conducted on business principles. A selection of a location is a part of paramount importance, and a beginner ought to secure a place, where soil, exposure, etc., are alike favorable. But the growing branch is one in which previous ownership of capital is imperative, more so than in the others. One may scratch into the retail business with but very little; and, as recent developments tend to show, into the commission business, with still less capital; but not so in the growing department."

Advertising to his first love—the retail branch—Mr. Burns attributes his success chiefly to the strict economy in its conduct, practiced by him. It is the small leaks that run away with the profits, and these the greatest attention should be given. Of course, times have materially changed within the past few

years, necessitating greater expenditures on the part of the retail florist; but there are some, and these of a lavish nature, too, which Mr. Burns thinks are not wholly indispensable, as for instance, the elaborate outfits of liveried drivers, gaudily decorated wagons, and so on. There is also great need for stricter business methods in the management of the retail stores of to-day.

It is probably the biggest bugbear, and one that requires complete overhauling, as the retail florist of to-day is generally over-curved. The entrance of the Greek into the retail business is not viewed with any degree of favor by our growers. In many respects, that individual is a benefit to the grower. His purchases are largely for cash, and are usually made under the same terms—a system that could well be emulated by others in the business.

Mr. Burns' experience of the wholesale business is that the commission man's faith is not strewn with roses, though his living is largely dependent on their sale. For the present condition, which is largely responsible for the failure, he lays the onus of the blame on the growers. A grower should, at all times, be prepared to sell his stock on terms sufficiently well as to know what his stock is selling for, and prominently should be looked upon as a banker. To the propriety to be continually changing a grower can place the disappointing business in the hands of the buyer's care. It is a custom that does not pay; but it

is a factor that confronts the wholesale buyer every day, and who is naturally influenced are patent to all. Mr. Burns believes that a central market for the production of flowers, and that the grower trade is one of the institutions of the future; "but," added he, "you will continue to have to dispose with the services of the commission man; he is an absolute necessity in the trade, and as such he will continue to exist."

"In connection with what is here stated, it may not be out of place to refer to a matter which has attracted the attention of the commission merchant, from a bulletin on Marketing, farm produce, from the United States Department of Agriculture, as follows: "Beware of being tempted to the market place by a false advertisement that they get you by irregular merchant."

"It is also a legal point which it will be well to bear in mind. In most, if not all, states when a commission merchant receives goods on consignment he becomes the shipper's agent, and any attempt to defraud his principal is a felony punishable by fine or imprisonment or both. Not so if he buys the goods outright, promising to pay for them a certain price. If he does not pay the shipper's only recourse in case he fails to receive the contract price is a civil suit, which results in a judgment, but which involves no more than the paper it is written on. To great care should be exercised in such cases, especially in those which arise, except to a well-known house of good reputation, the seller or producer should see to it that the goods he consigns to his own order, making draft through banks or express companies, and attaching to it the bill of lading received from the railroad company, property insured, and the commission merchant cannot will then present the draft and surrender the bill of lading only on payment, so that the commission merchant cannot obtain the goods until he has paid for them."—Ed.]

The success of Mr. Burns as a grower man is best shown in the excellent condition of his crops. Especially is this the case with his carnations, all of which are of the first quality, and exhibiting particularly fine.

## Seeding Chrysanthemums.

CHRYSA.—The following seedlings were sent to the Chicago committee November 20: From Nathan Smith & Son, Adrian, Mich., Rustique, an incurved half-yellow, some specimens showing a red tinge, large sized, even built flower; with stem and foliage both good. From same grower, Kilo, yellow, Sam Derbych X Modesto; very large, 11 inches from tip to tip of flower; broad-petalled, flat flower, rather loose in make-up, showing considerable aecid, and stem too slight to hold up the flower. From same grower, Japanese, white, incurved, Japanese, broad-petalled, well built flower of the class likely to carry, with stem and foliage both good.

From Fred. Dörner & Son, Lafayette, Ind., two specimens of a variety of very stout stem, foliage well up to the flower, and good petalage, showing a little yellow, but which in the early outer reflexed, making a striking, well-built bloom for market purposes.

The only members of this committee acting this year are George Stollery and C. W. Johnson. E. A. Kimball not having been able to attend, the committee had to accept from first, but to assist the committee, allowed all boxes to be sent to his office for conveyance.

CINNAMON.—Quite a number of seedlings were sent to the committee before the committee Saturday, November 20. Nathan Smith & Son, Adrian, Mich., had acream-vanilla, No. 169; foliage, stem and size all that could be desired, but it lacked substance in the stem, and the flowers were small in size, but possessing all the other qualities of a good variety. Rustique was another variety, put up for a certificate by Nathan Smith & Son, and it is quite a good exhibition variety.

Mrs. Wm. B. Adams is a graceful white, globular, incurved, double variety. It was scored 88 2/3 per cent, by the Cincinnati Florists' Society, and awarded a certificate. It was the property of Theo. Hack, of Hamilton, O. He also had a couple of blooms of a pink flower, which he took in the year's crop. E. G.

# ROSES

**10,000 STRONG PLANTS FROM 4 IN. POTS. BENCH GROWN.**

Archduke Charles, Mms. C. Barbed, Mosella, Samborini, White Silence, Papa Gontier, Mms. S. Barbed, Bride, Mms. Victoria, Kaiserin Victoria, G. Souper, Maman Cochet, La France, Gen. Lee, White Star, Mms. Jos. Schwartz, Mms. Schwaner, Vic. Hugo, Mms. Camille, Mms. Margolin, La Paquette, La Princesse Vera, Pres. Gaulain, Mms. Bresset Metz, Mms. Watteville, White La France, Mms. Lambert, Frances Kruger, Marie Van Houstel, Stanis La Ferme, Marie Guillot, Devoulez, Perle.

The above roses are in fine condition and must be selected with care to make room. Can be sent by freight or express only, not less than five of a kind and \$2.00 per dozen. Price for last one hundred. No checks accepted and for cash only. Samples, 25c. per pair. Price for 100 plants \$20.00 per 100.

## Point System Competition.

A careful perusal of the communications of the different competitors demonstrates that all have given considerable thought and attention to the matter. Mr. Hamilton makes the following declaration of his system, in general use, viz.: "The decimal system of notation in which 100 stands for perfection." He points out that it contains more good properties than any growers, critics, and judges will allow. It also declares the rating of the system. In judging cut flowers, it places all of one variety on the same footing; it prevents the judge from using his own preconceived ideas; but in paragraph 5 he admits that it will not cover quite a number of subjects, thus proving that it is faulty, inasmuch as it is not of general applicability. Further, he does not suggest any method whereby the system may be improved; and the competitor, who is a champion of the system, rather than to defend old ones. These are the weak points of Mr. Hamilton's otherwise excellent article.

Theo. Beck also champions the cent system, but admits that in the eyes of the chrysanthemums he places his greatest value on the "balance of the plant," which means that in this quality, and advances a similar argument for judging carnations. Other competitors, however, do not have any of the various societies now in use. His only new suggestion is as regards the question of how many flowers to be simply a change of the present wording and division of the numbers. The rules of the National Chrysanthemum Society of America call for: Form 25, fullness 15, size 15, and petalage 10. Now, any bloom which is not a specimen of a total of 65 must of necessity be well balanced. The standards of comparison used and which it would be difficult to prove cumbersome. When it comes to comparing varieties, no rule can be laid down for a committee of judges to go it. It is had enough to have to conform to a scale of points as a basis of analysis of a flower's merits. It would seem necessary that something be left for the exercise of the expert's knowledge, judgment, and taste. In other words, there would be but little check on worthless varieties. To give a man a list of kinds as he would find them, and to make it unimprovable. Although he may be a skillful grower, there will be many varieties and he would not know which he will not be acquainted, for it is seldom that the same varieties are found in all localities. For instance, Kioto is now rarely, if ever, seen offered for sale in New York.

The arguments advanced by Grove P. Rawson surpass those of the other two competitors in their practical applicability. All of his propositions admit of being carried out by any competent grower, and the simple nature of the scale greatly facilitate the now oftentimes arduous work of judging. His suggestions have to do with the system. By making 10 the maximum, a judge is not encumbered with a lot of figures, and the smaller the scale is the easier to make him careful in awarding values; whereas under the 100 point system, a judge is apt to be careless and give worthless varieties have a fictitious value placed upon them, the judge being only required to ascertain if such varieties scoring the necessary points to obtain a certificate. In other words, a variety which is known to be unjust, yet by analysis of its individual qualities, and its growth, is allowed to judge 60 or 70 points, through certain of its characteristics meeting fully the set requirements as to color, form, size, or fullness. Mr. Rawson's proposition as regards new varieties might be improved upon, inasmuch as that is a variety failing to score more than half the total 10 points should be considered as worthless and not redressed for made of it. He has, however, suggested an original system of application and is therefore entitled to the prize.

## New York.

## Wholesale Market.

It is satisfactory to be able to report a general improvement in the condition of the cut flower market, and with it a corresponding advance in prices. The wholesale market for carnations has been a steady improvement until, at this time of writing, values have increased to the extent of 25 per cent. over. This week's business may be regarded as the best in very many months, and for the first time this period it has been in favor of the grower.

There is a decided shortage of stock, especially in the reds, and it is likely to remain so for at least three weeks yet. This, in turn, will help forced to sell, such as wall, tooth and white, etc. One notable feature of the present increased demand, and at the same time somewhat shortened supply, is the diligent and careful manner in which agents advance prices. The long spell of depression has left the grower in a fix, and created a fear of slumps that seems hard to shake off. Under the conditions of a few years ago such a boom would have seen an advance of at least 300 per cent., and perhaps more, but the discipline of the years passed through, previous such a circumstance now. As an example, Beauty this week is selling at \$4 per 100, while last week it was at \$1.50 advance of \$1; while in the times noted above they would have made at least \$7.50. The price of the London Beauty in the former figures before many days. Brille, Bridemaid and show a larger increase, the former being at \$3.00 per 100, extra large in vase; No. 2 and No. 1 are making from \$3.50 to \$10.00, extra large specimens \$8 to \$10.

Carnations have not held quite so firm as roses, but they were not to be bought at between \$1 and \$1.50, with \$2 the top figure, except for fancy, large, double and extra large. Some include seedlings not yet disseminated and new kinds of the first year, like Emerald, Erythra, Flora Hill, Maccio, and Charles A. Dana.

Roman hyacinths and paper-white narcissus are not so plentiful in the open place, and are realizing \$1.50 to \$2 per 100 spikes. It is almost certain that the prices of these flowers in New York will be forced next last year. Orchids are doing well, at least carnations, but not so forward. Roman being forced next last year. No. 1 blooms of either are held at 40c, each, No. 2 at 30c. Cypripedium, Brille, and Bride, all show a fine advance of 100 per 100.

Violas continue to be the excellent variety in the market. They close on report a week ago, although the tendency at this time is to weaken rather than strengthen. A large quantity was still Wednesday for good bloom, and for a few specials straight sales at \$2.50 were effected. This week's business was disappointing, prices falling to \$1.50.

## Retail Trade.

This branch has had quite a boom. Over 60 weddings of importance are being planned, and quite a number of dinners, etc. The opening of the new Delmonico's was one of the features of the week's doings, and it is estimated that the new ball room was used for the first time when the Chamber of Commerce gave a dinner of 500 persons at 120th annual dinner; 411 members and guests sat down to dinner at nine tables, and the majority of the guests were pink carnations or cypripediums. On the tables and in the decorations 6,000 carnations were used, and on the sides others were used; also a quantity of orchids, white over the palms, many of them of great size, did very well at the room and were used as a screen for the music stand. The room was plentifully employed about the walls and over the ten great mirrors which are on the wall. The great hall itself is of old-rose color, cream and gold in harmonious blending, and the walls of the lower story are covered with alternating with panels of looking glass, which, reflecting the chandelier and the light from the mirrors, is so brilliant that the proportions of the hall and of the attendance.

A son had the decoration. This firm had the Burden funeral at the Waldorf. Among other things they had a large quantity which entirely covered the casket.

## Auction Sales.

William Elliott & Sons have received per S. Ohland a large collection of roses, rhododendrons, azaleas, clematis, and magnolias from the celebrated grower, C. Roebegren, of the coop-

Holland, these will be sold by auction Tuesday next.

J. P. Cleary & Co., on the same day, will sell a quantity of chrysanthemums. They announce a sale of old orchid sale and offering of a general assortment of valuable plants.

Jacob M. Weeks, Florist, Bayside, is one of the jurors on the Thorn trial at Long Island City.

## Plants From a Boring Transportation.

A recovery by Henry A. Stehrsch in the City Court against the Pennsylvania Railroad Company for the value of 100 cut flowers which were shipped from him from Chestnut Hill, Penn., on February 16, 1905, and which were damaged while in transit, was a judgment of \$100 in transportation, has been affirmed by the Second Term in an opinion by Justice McAdam. The writ of freezing after the usual time for transportation expired was in the defendant's favor. Justice McAdam said, "and the evidence was sufficient to require the submission to the jury the question whether the freezing occurred while the defendant was in default, and they found that it occurred during that period from causes for which, by reason of its neglect, the defendant became liable. Where the loss of the flowers was due to two causes, one of which would establish liability and the other excuse the defendant, and the jury found that which did cause it is inmaintainable, the verdict of the jury is conclusive.

## N. Y. Gardeners' Society.

The monthly meeting of the Gardeners' Society was held Saturday, November 20. John Scott, Brooklyn, presided. The members of the year were elected as associate members. John Scott exhibited a grand plant of Freesia maculata with 22 spikes, averaging five to eight flowers each. The plant showed remarkable vigor and the flowers were of a fine shade of pink. The nomination of officers resulted as follows: For president, W. Scott, gardener; for secretary, W. M. Watson, N. Y. City; Executive Committee, R. Brett, P. R. Pierkowski, W. Anderson, and J. W. Watson; for treasurer, W. Sage, and A. J. Wenger.

The manager of the late exhibition, H. J. Caldwell, reported the receipts were \$2,310, expenditures \$1,550, leaving a total of \$750 to be given to charity.

Supt. Falconer of Shenley Park, Pittsburgh, was a visitor this week.

## Philadelphia.

Trade News. Thanksgiving brought a decided boom to business, both in cut flowers and plants. All the stores appear to have been crowded with orders much more than was anticipated. As regards cut flowers it was found on Thanksgiving that the demand for all kinds, and the wholesale dealers were using the wires in all directions; even on the day following Thanksgiving a sufficient flowers on hand to fill all demands, the scarcity being felt most in the case of the white carnations. Choice flowers, sold at \$3.50 and \$4 per dozen; choice teas, Carnot \$8 to \$10 per 100; choice white carnations, Meteor \$6 per 100; Perle, Niphetos, and Gonter \$4 to \$5 per 100.

The plants which are reached for fancy carnations was \$2, while the bulk of the stock sold at \$1.50. Everything of fair quality could be obtained at \$1.00. Flowers left over being a few white.

Violas have sold well also; \$1.50 has been obtained for the best of the good double; the majority of the stock of fair quality selling at 75c, per 100. The bulk of the plants were selling 50c per 100.

All the plant growers report good sales the week. The local trade in good kentias, arecas and latanias has been very good, as also the business in ferns. A number of bunches of decorative plants having been dispatched during the past week. The Pennsylvania buyer was Mr. Freeman, of Washington.

## Florida's Bowling Club.

A Theatre benefit has been arranged for at the Grand Street Theatre on Wednesday evening, December 16, the play company to be the "New York" club committee, have the tickets on sale and anyone who has not been reached by the committee should purchase them at the hall itself at the club room. There are

## For the Busy Man.

Oliver Landreth, of the firm of D. Landreth & Sons, seedsmen, Philadelphia, is dead.

It has come to light that the chrysanthemum Peter Kay, certificated by the Chrysanthemum Society of America, is a synonym of the variety Jeanne Falconer.

The Florists' Mutual Fire Insurance Association will meet at Farway, Ind., on December 8, to adopt by-laws and elect officers.

Peter Henderson & Co., New York, announce their retirement from the wholesale and jobbing trade, and will in future deal direct with the planter.

A meeting of those interested in the proposed plant market will be held at Lynch's restaurant, corner Canal and West streets, New York, Wednesday, December 1, at 7:30 P. M.

## Mutual Fire Insurance.

The members of the Florists' Mutual Fire Insurance Association will meet at the office of Vesey & Heaton, Fort Wayne, Ind., on December 6, to adopt By-Laws and elect officers.

**Chicago.**

**Market Conditions.**

Trade the past week has been fair, but there have been no big gains. There are some appearances of stock being kept back for Thanksgiving, but a general planting of roses seems inclined to crop. The Robinsons say their firm and Hildebrand will show fair-sized quantities of stock for sale; and the growers would show a mass of white roses, then for a time, hardly any color at all except as they come in from other years. Others claim they have increased this feature, but the market slackened up towards the end of last week, and the beginning of this. The quantity of the growers seem to have an usual quantity of long-stemmed and medium flowers, with fewer shorts. Chrysanthemums are still with some, complain that there is not enough of the smaller grades of flowers, the Southern stock cutting no figure in this market this year. In the writer's opinion, there is a future for the chrysanthemum grown with a view of furnishing cheap bunches of flowers on one stem. The large, long-stemmed blooms here their place, but the same quantity of color contained in one of these, selling retail at 25 to 35 cents each, spread over half a dozen or more flowers for the same price, is better suited to the pockets of numbers of buyers in certain localities of this city. The Peckham Bros. who grew a vast quantity, say they had not enough of the small cheaper grades. The Illinois Cut Flower Co. have had some grand flowers the past week—ex. recently from the same grower. For example, was quoted at \$4 per dozen wholesale. Mrs. Perrin and Modesto have been satisfactory, and Bonafant is still a capital yellow. Carnations sell well, and prices are going up; standard bunches bring \$5; standards \$1 to \$1.50. Violets are late getting into condition here, fair quality flowers are worth \$1.25. Harriid lilies are now showing up.

**Thanksgiving Price.**

A fair Thanksgiving trade is looked for, but will be lots of chrysanthemums, as some growers have been holding them for the occasion. After this week these flowers will be on a down grade. Prices range all the way from \$5 to \$25 per 100, a few fancy ones may go higher.

In roses, heavy, long stems, will bring \$25 to \$35; medium \$15 to \$20; shorts \$7 to \$8. Tea, Carot, Kaiser and Meteor, \$5 to \$7; other \$3 to \$5. Carnations, good, average \$1.25 to \$1.50; standards \$1.75 to \$2; fancy \$3 to \$4. Violets \$1 to \$1.50; valley \$4 to \$6; smilax \$1 to \$1.5; admantium 75c. to \$1; asparagus \$60 to \$75; romans and sparrows, \$3 to \$4; Harriid in culture \$10 to \$20. We do not look for a bad break in prices this year, if the growers only send in their stock early enough.

**Trade Paper Changes.**

A somewhat remarkable change has taken place in the office of your contemporary in this city. The American Florist, on November 20, G. L. Grant severed his connection with that paper and since has been filled by W. R. Rudd. Mr. Rudd is well known to the trade as a specialist in the chrysanthemum and carnation fields, also a president of the American Carnation Society for this year. He is in the prime of life, and native of Illinois, but has been born on Blue Island, a village of Cook Co., ad-joining this city. As is well known also, Mr. Rudd has been a member of the Chicago Horticultural Society as secretary, manager, treasurer, etc. Mr. Grant has been in the prospect of a new florist trade paper which will be started the first of December 2, and is to be called "The Florist's Review." The office will be at 530-535 Caxton Building.

**around Town.**

F. F. Smith, till lately manager of the A. F. Bennett greenhouses, 37 Stryker

seventh street, has left for Denver, Col. The new manager is E. Pullen, who has been on the place since its starting in 1878. Mr. Bennett himself is in California.

Chrysanthemum plants appear to have sold off very well in this city, and this is probably due in part to a better class of market plants being grown. EDGAR SANDERS.

**Baltimore.**

**Trade Is Slow.**—After a week of brisk trade it has again fallen away. Chrysanthemums are nearly gone. Roses are plentiful with only moderate demand. Carnations are scarce. The quantity of the growers stock, being hardly in sufficient quantity for the market. Prices are ruling low in a whole.

**The Club.**

A very enthusiastic meeting was held last week. The question of holding a chrysanthemum show next year, was considered, and much animated discussion was had. The prevailing sentiment seemed to be that the holding of a show was one of the duties of the club, but the point is, as some one expressed it, an exhibition. The matter was finally referred to the executive committee, with instructions to ascertain the probability of holding a show and report at our next meeting. Joseph E. Freeman, Washington, sent a communication in regard to the distribution of cut flowers and plants by the government. The chief of a department had stated recently that this distribution of florists' stock was beneficial to the trade, and that Baltimore florists were in favor of it. Mr. Freeman wanted to know whether this was true. The club not knowing the facts of the case, deferred action until a committee of five should investigate the matter, and if they find matters to be as represented by the Washington florists, the club will, no doubt, pass resolutions condemning a practice which seemed to be so detrimental to the trade of our fellow-craftsmen.

**A Fern Question.**

Does Adiantum Farleyense ever produce spores, and are they fertile? was a question asked. No definite answer was given. Several of the members stated that they had seen fronds bearing spores, but did not know if same were fertile.

[Adiantum Farleyense is supposed to be a sterile form of Adiantum Capillus Veneris, and though reported as having been raised from spores from more than one source, the fact has never been demonstrated satisfactorily.—Ed.]

**Notings.**

Mr. Wm. B. Sands, treasurer of our Club, has been appointed judge of the Orange County show.

R. Eutter, a large, successful violet grower, died recently. He was a very large and fine flowerer. In his a kind, good, and honest man has passed away.

Isaac Moss, of Gowanus-town, mourns the loss of his mother. The craft sympathy with him, and his wife, EDWIN A. SEBASTY.

**Dayton, O.**

The school children of this city made a very interesting show here last week. The idea of this exhibit originated with J. B. Hedges, and it was due to his close of the school year, he gave each child in the school three or four small plants for them to take home and cultivate. Then he offered prizes of palms to the most successful of the little florists. Mr. Hedges also gave the teachers the necessary instructions for the growth of the plants, and they in their turn, imparted this knowledge to their pupils. The show was a grand success.

**Mason City, Ia.**

The Wheeler Floral Co. are building an addition to their greenhouse.

*Syracuse, N. Y.*

The past week was a very busy one, owing to a number of weddings and a great deal of funeral work, several orders coming from out-of-town.

Bannister Bros. have rented a fine store on the corner of West Geneva and Clinton streets, and Walter Menelly has taken part of a store on James street. P. R. Quillen Co. have had some fine Cattleya labiata, but it does not sell readily here.

The Horticultural Society held a meeting on Saturday evening, and after a rough estimate of the expenses and receipts of the flower show, it was found that the balance was not in favor of the treasury. The bad weather was blamed in part, as it rained on two of the three nights. The attendance was first-class on the fair day. Several good suggestions were made for next year's show of which many more later. Notable exhibits mentioned last week were a vase of cut-arranged Argyle, from Stollery Bros., Argyle Park, Chicago. The color is most pleasing, being of a rosy-pink. The seedlings Onaida and Red Jacket exhibited by H. Baker, of Utah, were also well described recently in the EXCHANGE. Both received a great deal of attention here. While anyone seems able to raise so good pink, it is seldom one has the good fortune to produce no good a scarlet as Red Jacket. It is a sure winner. Walter Menelly exhibited a fine pink which has been named Queen of Scots. Its color is good, fragrance extra, but its chief peculiarity is its good keeping quality. It was quite fresh at the end of the exhibition, long after most of the seedlings had everlastingly retired. Chrysanthemum seedling "Big Blue" for the Yellow Willow was said by many good judges to be the best ever yet produced. Compared with Golden Wedding, the color is shades lighter than that variety, and is perfectly diffused throughout the bloom, being of

a uniform golden-yellow from the tip to the base of the florets. In shape it is somewhat flat on the top, the outer petals drooping gracefully, the inner cutting neatly, making a perfect center. Stem and foliage leave nothing to be desired. Altogether it is a most attractive chrysanthemum, having an unmistakable air of elegance. If public admiration is any criterion, seedling 129 is a great future. The booths for the sale of cut flowers and candy were beautifully decorated and well patronized, the proceeds amounting to 10 per cent. to the Society.

C. BAISON.

*Ottawa.*

On Tuesday and Wednesday of last week the annual chrysanthemum show of the Ottawa Horticultural Society took place, and was said to be, in every respect, the best ever held by them. The plants were generally ahead of those usually exhibited, and the cut blooms were fully up to the standard of the day, and as every exhibit was Ottawa-grown, the interest was great. C. Scrim was the most successful exhibitor, the next being J. Graham, J. McNeil, Geo. Keyes, B. Thibault and W. J. Graham.

In plants, C. Scrim captured seven firsts, and one second; J. McNeil got one first and four seconds; P. G. Keyes, two seconds; J. A. Ellis, one second. In cut blooms Mr. Scrim took all the firsts except for the vase of violets, one variety, which went to J. Graham.

In roses Mr. Scrim was first for red, white, and yellow, and J. Graham for pink.

In carnations Mr. Scrim was first in all colors, also in cuttings and plants. Although C. Scrim took a majority of the first prizes, in many classes the contest was close. The most noticeable features of the exhibits were in plants of Glory of the Pacific, Georgienne Brant, Miss George, Queen of the West, Robinson, Ivory, and Bonaffon. In cut blooms The Queen, Niveus, Vivand, Starred, Standard, and Grandiflorum. Mrs. Peabody, Mrs. Robinson, Leaveau, and above all Modesto. The flowers of these as well as many others were very fine.

The contest in twelve blooms of any variety in a vase was very close. Graham with twelve Vivand-Morel beating C. Scrim with twelve Niveus. Either vase would have been noticeable in any show.

Owing to bad weather the good show for this year was very fine. A large crowd as H. deserved. (Almost a chestnut.)

On Thursday C. Scrim moved from his old quarters to a new store in the next block, which had been fitted up specially for him, and furnished with every hand-somely, with every convenience for use and comfort, and with a very fine light-plant display. The store has one of the finest stores in Canada. The move came at the right season of the year to enable him to give his customers "at home," to which he invited his many friends and patrons, and he left nothing undone to make it a pleasure and a treat.

There were large vases of Modesto, The Queen, Morel, Fitch, and Robinson, Peabody, Mrs. Murdoch, etc., placed in every direction. One of the features of the decorations was a mound in the center of the store, which is very capacious. The border was a circle of large tubs of Adiantum quantum in fine condition, next a row of Ivory plants, then a row of Georgiana Pitcher, the whole surmounted by large vases of fine specimens of Vivand-Morel, which made a very pleasing combination. All available space was occupied with chrysanthemum plants of many varieties mixed in with palms. One counter was filled with specimen blooms in vases of chrysanthemums, roses, and other flowers, with a fine batch of azaleas in full bloom. The whole with the many chrysanthemums, many arranged in an enchanting picture, and if the number of people who visited him on this occasion is any criterion of his popularity as a florist, the new "shop" will pay.

Mr. French, another of our prominent florists, is thinking of changing his list to take charge of his retail department. Business in chrysanthemums has been very good, and there is a steady demand for roses, carnations and violets. E.

**Clear Cypress  
Greenhouse Material.**

This with us means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality. It is not hard to see the reason; You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

 No. 1, 05 Filbert St., Philadelphia.  
 'PHONE, 3922 D.

**New Haven, Conn.**

There being no combined chrysanthemum show here, Smith T. Bradley hit upon an idea which was both novel and highly successful. A card of invitation was mailed advertising in conjunction with a flower show a vocal and musical concert each evening from 7 to 8, by Edison's phonograph, during the week of November 8-13. Although the weather was unfavorable part of the time, the place was crowded with an appreciative audience who carried off flowers for which they paid, and small plants such as cactus as souvenirs for which they did not pay. Taken all in all, including the cost of the special officers to keep the crowd in order, it was a most profitable undertaking which will doubtless be repeated next year.

John Champion and S. H. Moore both have the displays. The Yale-Princeton football match created a demand for yellow chrysanthemums and violets that was difficult to fill.

H. Vetter & Son have made an improvement to their store by the addition of a show case in the front. Cut flowers can be displayed to greater advantage.

W. J. Kove is picking tomatoes from a side bench, for which 30c. per pound is obtained wholesale—quite a nice little item when flowering stock is bringing such low prices. I understand that the veteran Archibald Vetch is quite sick. It is to be hoped he will soon pull around.

**Wallingford, Conn.**  
 Geo. H. Bowden is growing for holiday trade lilies and rhododendrons in pots. He has had several calls for such, presumably from customers who have visited the big cities. Cinerarias have been a specialty with him for many years. He does this plant well. W. M.

# Stationery for Florists.

Every florist in the land should have a complete supply of printed matter with which to conduct his business in bedding style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

**\$5.00** Combination offer includes....

- 250 Noteheads, 5 1/2 x 8 1/2 ins.
- 250 Envelopes, size 5 1/2
- 250 Billheads, 7 1/2 ins. wide, 5 1/2 ins. deep.
- 250 Business Cards, 2 1/2 x 4 1/2 ins.
- 250 Tags, size 2 1/2 x 4 1/2 ins.

Cash with order. Delivered F. O. B., N. Y.

**\$10.00** Combination offer includes....

- 500 Noteheads, 5 1/2 x 8 1/2 ins.
- 500 Envelopes, size 5 1/2
- 500 Billheads, 7 1/2 ins. wide, 5 1/2 ins. deep.
- 500 Monthly Statements, 5 1/2 x 8 1/2 ins.
- 500 Business Cards, 2 1/2 x 4 1/2 ins.
- Lower tags, 2 1/2 x 4 1/2 ins.
- One Day Book. If these are not wanted one subject subtract \$1.00.

Cash with order. Delivered F. O. B., N. Y.

PLEASE READ THIS BEFORE YOU ORDER.

Write plainly and send "copy" for each article wanted.

Noteheads will be furnished in smooth writing paper with ruled lines. Linen paper, ruled or unruled, can be had indexed as so ordered.

Envelopes are full commercial size and of good quality.

Billheads will be furnished as above, but size 8 1/2 ins. wide and 4 1/2 ins. deep will be substituted when so ordered.

Cards are of good quality and ample proportion.

Day Book and Ledger are large enough for ordinary purposes. Ledger is indexed and will hold 300 accounts.

Special designs, trade marks, etc., engraved to order. A rose, violet, or other flower can be printed on your letterheads and billheads, plain or in color, to order.

The quality of all the above work is guaranteed.

VOL. IX. No. 49.

NEW YORK, DECEMBER 4, 1897.

One Dollar Per Year.

## IN ORDER TO CLOSE OUT STOCKS REMAINING UNSOLD

We Offer the Following Bulbs at Greatly Reduced Prices.

### A BARGAIN IN VON SION NARCISSES.

We have an unusually fine lot of selected, ten-month bulbs—what the Dutch term *top profs*—regular price of which has been \$10.00 per 1000, but which in order to close out we will offer at only **\$15.00 per 1000**, or **Full case lots 2000 bulbs** at **\$4.50 per 1000**.  
 We offer also a fine lot of the following named **NARCISSES**, viz.:  
**True Irish Princeps and Trumpet Major**, \$5.00 per 1000; regular price, \$12.00  
**Alba Fleurs Odorata**, incomparable fl. pl., **Incomparable Stella**, and  
**Campernelle Jonquill**..... \$3.50 per 1000; regular price, \$8.00  
**Orange Phoenix**..... \$15.00 per 1000.

### A BARGAIN IN HYACINTHS.

We offer a fine lot of **MINIATURE HYACINTHS**, or **DUTCH ROMANS**.  
 They are generally sold, as they bloom evenly and at one time. These bulbs will be found very profitable, and their use is largely increasing. They are not only valuable for growing for cutting, but are also desirable for growing in pots, and can even be used for bedding purposes, and will give surprisingly good results—altogether out of proportion to their cost. No one can mix a mistake in using these largely. We supply these in about equal proportions of dark red, rose white, light and dark blue at only **\$9.00 per 1000**; regular price, \$12.00.  
**Pink Roman Hyacinths French**, extra quality bulbs, only **\$12.00 per 1000**; regular price, \$16.00.

### TULIPS.

We sold most of the Tulips offered last week very shortly after the advertisement appeared. We now offer as long as unsold, your pick of the following sorts:

- |   |                       |                            |
|---|-----------------------|----------------------------|
| At only <b>\$9.00 per 1000</b> , regular price, \$9.00, \$10, \$100, \$5.00 and \$2.00. | <b>La Reine</b>       | <b>Gloria Solis</b>        |
| <b>Arms of Leiden</b>   | <b>Fanny Red</b>      | <b>Bianc Forte Pourpre</b> |
| <b>Queen Victoria</b>   | <b>Lady Grandison</b> | <b>Rose Blanche</b>        |
| <b>Rosalie</b>  | <b>Titania</b>        | <b>Silver</b>              |
| <b>Elizabeth</b>  | <b>Bybloss</b>        | <b>Gesneriana</b>          |
| <b>Darwins</b>  | <b>Golden Crown</b>   |                            |
- The following sorts at only **\$9.00 per 1000**; regular price, \$12.00.  
**Potbaker White**..... **Chrysolora**..... **Rosamundi Huysman**  
**Potbaker Yellow**..... **Speak Quick If You Want Them**.....

**GLADIOLUS COLVILIA ALBA**, "The Bride," \$4.50 per 1000; regular price, \$6.00.  
**ALLIUM NEAPOLITANUM**, \$4.50 per 1000; regular price, \$6.00.

### A Fine Lot of SPIRÆA for Easter Forcing.

Case lots of **Spiræa Japonica**..... \$9.00 per case.  
**250 clumps**..... **Ashtholow Fierbunda**..... \$12.00 per case.  
 as follows:..... **Compacta Multiflora**..... \$15.00 per case.  
**CALLAS**, large bulbs, 1 to 1 1/2 in. in diameter, \$5.00 per 100; regular price, \$7.50.

**Imperial Japanese....**  
**Morning Glory Seed**  
 GROWN BY  
**A. W. SMITH, AMERICUS, GA.**

Crop of 1897, now ready for delivery, is the product of selected seed from product of the best seed I could buy in 1896, paying \$42.00 per pound for same, and much more for others in packets. This seed is from blooms measuring 2 to 4 1/2 inches across, infinitely superior in every respect to product of seed bought in 1896.  
This seed will produce blooms single, semi-double, double, plain, quilled, frilled, crimped, scalloped, and slashed; embracing every hue and color, except yellow, including all shades of red, violet, darkest purple, blue from indigo through heavenly to electric, pink, chocolate, smoke, shrimp, and white in solid colors; as well as same colors mingled with white, and white spotted with blue, pink, smoke, chocolate, and purple; some blooms are one-fourth to one-eighth purple, pink or blue, with remainder white, and others have markings so freakish as to be indistinguishable; the whole embracing in size, beauty and variety nearly any catalogue. American or Japanese, and sending me to offer the best seed that money can buy. The blooms generally have throats differing in hue from body of bloom.

Price, per pound, \$6.00.

SEED TRADE REPORT

Points and information from seedsmen, and all other matters connected with the Seed Trade. Editor SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1067, New York.

AMERICAN SEED TRADE ASSOCIATION. President: E. B. CLARK, Milford, Conn., Vice-President: S. F. WILLARD, Waterbury, Conn., Secretary and Treasurer.

New York.—Mr. Eug. Schachtel, the representative of Messrs. Florindriandrieux & Co., Paris, who has been visiting his firm in the United States, returned here during the last month, returning home on S. S. La Montagne, sailing December 11th.

Buffalo, N. Y.—The Whitney-Nees Seed Company will move from Binghamton, N. Y., to this city. The directors of the company recognize the superior facilities of this city for the handling and distribution of their goods. The first move for the company is one of the leading grass seed houses in the country.

It is the intention of the company to retain in Binghamton, N. Y., a small warehouse, so that the trade of a local nature may continue to go on as can be cared for.

European Notes

An Open Season. The middle of November finds us with flowers in abundance from the south and west, our gardens still gay with many hardy annuals and biennials in the north. Among the latter the single annual white-flowered gladiolus, both seen in the open near the end of July, are the most conspicuous. The flowers of the single annual white-flowered gladiolus are the most conspicuous of the numerous recent introductions and its merits have just been somewhat tardily recognized by the Royal Horticultural Society.

Crop Reports.

In the work of filling our orders the short crop of radish is already somewhat embarrassing, and if our home trade comes up to its usual dimensions we shall be obliged to go abroad. On the other hand, peas are much too plentiful and move off very slowly. Some of the best of the season will remain on hand to bear the market, while no more than four or five varieties are reported as under the average yield.

Radish in France and England has yielded fully good crops, but the German crop is short. There are a heavy amount from '96 in the hands of some dealers anxious to realize, hence the prices fall below a remunerative level.

Beans are turning out even worse than they were last reported, and the lucky grower who does the prevailing market for sacrifice prices does not affect their prices.

Peas are cleaning up badly and show a lot of waste; fortunately there is no prospect to spoil the value of the crop.

The Bull Trade.

The bull trade is exceptionally bright at the present time, but scarcely one of them is of a sufficiently striking character as to arouse any great amount of competition. The following are a few of the most generally useful: Aster, Triumph, white, valuable for winter bedding. Aster, Johannahting, (Midsummer day) the earliest of all the varieties in bulk, suitable for carpet bedding. Aster, Princess, dark crimson, a lovely and useful addition to this most perfect line.

Amaranthus quadri-color, the colors ranging from the darkest red to a pale, yellow, bright and deep, and almost black-green.

Campanula grandiflora alba, a very brilliant greenhouse plant for winter bedding, bearing pure white flowers; Campanula grandiflora rosea, (Queen) one of the best varieties of the year.

Balsam, Camphor, "alba perfoliata." It will be remembered that this is the first of such variety has been seen up to the present time.

Begonia, Golden Vernon, has the golden-yellow foliage of B. Bijou, but each leaf is marked with a wide dark red band, suitable for borders.

Begonia, Zulu King (Large Silver King) has the most striking foliage of B. Verona. When planted out during the summer, the whole plant changes to a brilliant red, and with their golden-yellow stems form a striking contrast to the extensive green foliage.

Campanula mirabilis is a perfect wonder. It belongs to the class of C. medium, but is much more than that. It flowers in large pyramidal bush about two feet in diameter, completely covered with flowers of a pale blue color. It is a wonderful flower, and one of the best that can be said in its favor, and that it resembles the aegretum.

Cyclamen, Bush Hill Pioneer, is a pure white variety with a distinct crest or feather of the same color on the face of each petal.

Cyclamen, Pappilo, a distinct strain very beautifully fringed. Three varieties are now offered, of which the one named Ombus is the most valuable. An extended notice of this strain appeared in the Florists' Exchange during February last.

Gloxinas are represented by two new ones not offered, of which the one named Gloxinia is the most valuable. An extended notice of this strain appeared in the Florists' Exchange during February last.

Gloxinia are represented by two new ones not offered, of which the one named Gloxinia is the most valuable. An extended notice of this strain appeared in the Florists' Exchange during February last.

The report states that the satisfactory result of the trial grounds maintained at Kenilworth, New Jersey, has given us the opportunity to give the public a glimpse of what nothing could more enhance the value of the department's seed distribution than a trial ground test of the seeds. It is proposed to distribute. The command by the department of a trial ground test of the seeds is given to the agricultural science, lending, as it necessarily would, to a scientific study of field crops. The department would be enabled, as it should, to record of all the new plants distributed in this manner, not only of the sample of the seed, but also an authoritative specimen of the plant itself, grown in the trial ground and suitably preserved for future reference.

After the transfer of the national herbarium to the National Museum building, the importance of creating at the department a reference herbarium of economic plants began to be appreciated. During the past year the beginning of such a collection has been made by preserving a full series of best specimens of all varieties of peas and beans, grown on the trial grounds, besides a large number of seedlings of various other plants, and many drawn from greenhouse germination tests, a series of weeds collected in the vicinity of the trial grounds, and other correspondents, and a series of poisonous and medicinal plants obtained in the same manner.

The division of botany assumed the task of making germination and purity tests of all seeds distributed by the department under the specific appropriation for that purpose. All seeds falling below a standard of vitality were rejected, and the remainder were tested under various conditions, so as to determine any possible causes for the correctness of the result. It was necessary to make over 5,000 tests, in order to secure a sufficient number of thousands of varieties of vegetable seeds, and about 100 varieties of flower seeds. The report states that the system of purchasing the seeds, so as to secure all of one variety in one lot, and the cost of testing would be much reduced.

# DO YOU EVER THINK?

Doubtless you do, but did it ever occur to you how small this old world is when measured by Telegraph or Railroad time?

Do you know that **Caldwell's Christmas Greens** are only 40 hours from Boston, Buffalo, St. Paul or Minneapolis? 30 hours from New York or Chicago?

We can reach you in 24 hours if you are in Washington or St. Louis, and only two or three hours more if in Baltimore or Philadelphia.

Indite us a message some morning, noon or night, and the wires have hardly coiled before the goods are at your door—fresh from the woods, glossy and green, and the dew yet sparkling on each spray.

**"Speed Our Specialty."**

**"Always On Time."**

MANTEL DECORATION.

## Now Think!

Does it pay you to handle Holly that is fresh? We can give it to you gathered only a few hours before you need it. It comes to your door all charges paid.

Do you get Mistletoe that is dry and wrinkled from age? Well, you ought to see ours! Like our Holly it is fresh. Berries white as snow.

We have Smilax, Ilex Cassinia, Magnolia Foliage, Palm Leaves, Palm Crowns, and Long Needle Pines all the same way.

Did you ever use **Caldwell's Greens**? If so, you know them, if not you need them. It pays to use the best. We have it in our line. "A little higher in price, but..."

Plenty of time yet to get our handsome pamphlet, "Southern Evergreens." It comes for the asking.

of FIVE DOLLARS to the man who will sit on a bunch of our "smooth-leaved" Southern Holly" and stay there, is still open to all comers.

## NOTE OUR OFFER

Dreer's Special Offer

AZALEAS

The Quality this season is fully equal to what we have sent out for several seasons past, which has given universal satisfaction...

The Tariff which has been increased to 25 per cent. on this class of stock will not affect the price, as we have been successful in making such arrangements with our Belgian growers...

The Varieties we offer are such only as are known to us as the best suited to the American market, and all are bushy, well shaped plants, well set with buds.

These will be supplied at the following prices until December 30th, at which time stock will be put up and prices will advance:

- 10 to 12 inch crowns, bushy and well set, \$35.00 per 100
10 to 12 " " " extra heavy " 40.00 "
13 to 15 " " " " 60.00 "
13 to 15 " " " " extra heavy " 45.00 "
Specimen Plants, 18 to 24 inches in diameter, \$24.00, \$30.00 and \$36.00 per doz.

NATHAN SMITH & SON, Adrian, Mich. When Writing Mention Florists' Exchange

ROSES.

The most in favor this season is the worst time of the year—dark days combined with extremely bad weather. In consequence of our late winter trying with lots of cold rains. Spraying has been almost abandoned, thus giving red spider a chance to get in as usual. We have found it very practicable, instead of spraying a whole house during these times to cover one bench and only one so—those that are most likely to be infested with spider—and the corners. By doing this the time is very much quicker than if the whole house is sprayed at one and the same time, and but very little harm, if any, is experienced. On no account should red spider be allowed to get the upper hand; I would rather take my chances with anything else than let this pest once get a strong foothold.

It seems hardly necessary for me to make any remarks on watering, as in previous notes the subject has been well explained. Under the most favorable circumstances after cases and I would advise not to wait for a bright day on which to do much but to keep the beds well looked after in this respect without regard to the weather, and when a heavy shower comes, we will be able to center our whole energy on spraying. No especially, spraying should be done as quickly as possible, and as early as the temperature will permit, giving the plants the most possible chance to dry off by nightfall.

Where a man has rather an extensive territory to cover with this work, he will find a very valuable time if he has to water all at the same time. Despite the excessive of the time in this work as well as spraying, in such miserable weather a petal or two on some of the buds and blossoms will get spotted, and if allowed to remain the entire flower will be spoiled. This is often the case with American Beauties, but to take only a short time to go through a house and pick over what few there are. It pays.

A bad weather will shut the garden out, we will be obliged to the safe side in using water as well as stimulants, as the atmosphere is very dry. It is very probable working with more freedom atoning to a great degree for the lack of sunshine. The chrysanthemum house is probably taking a good deal of our time lately, making us liable to neglect some of the current work in the rose house. The holidays will soon be here, and good roses will unquestionably be in demand at good prices. To get the good blooms on straight stems it is very essential that the plants be kept tied up, and last but not least, disbudded. I think this latter operation is not given the attention by many that it deserves. There are a few who tie it a six to cut off side buds because such growers believe they are out so many flowers. In one sense they are, and this opinion may cut these who have no competition and whose customers don't know what a good bloom is or ought to be, but when the latter is on edge is broad, the advantage of disbudding will not only very much increase the quantity of flowers, but an item that will receive constant attention. By disbudding the flowers are finer quality blooms are obtained, and at the same time a large amount of strength is diverted to other channels, obviating to a great extent the excessive drain on the plant producing so many flowers to the shoot.

In some instances the crown or center bud of such varieties as Perle and Meteor at the tip of the main stem, may be cut off or bulbous, in which case they should be pinched out, leaving the most promising side bud. H. H.

OBITUARY.

William Gray.

"After a brief illness this prominent and much-respected gardener passed away on November 25, at his home on the Corning farm, Albany, N. Y.

William Gray was a Scotchman, born at Greenlaw, Berwickshire, February 18, 1823. When still young, in the spring of 1851 he came to the United States and spent a time in the nurseries of James Wilson, Lydius street, Albany. He was gardener to Mr. Joel Rathbone, at Kenwood, and about a year later he went to the westward, settling in Western Iowa, intending to become a nurseryman. But finding the winter season unpropitious for his journey to the East, and accepted a position as head gardener to Mr. John T. Horton, of Farmington, Conn., where he remained about four years, after which time he was in charge of the choice collections of Gen. A. F. Rathbone until engaged as superintendent by the late Hon. Erastus Corning. Here he had remained until his death, and here, too, he did his life's work.

The Late William Gray.

The deceased was a great lover of orchids and the collection under his charge was one of the most famous and noted in existence, being rich in choice hybrids that had been raised in the place.

Mr. Gray was also a well-known entomologist and spent many years in pursuit of this study, his collection, embracing over 30,000 specimens, was rich in perfect specimens and in many new types, and were obtained from all parts of the globe; especially, was it rich in Spilididae, Noctuidae and Ichneutid and Dimorphic forms.

He leaves behind a wife, three sons (all in the profession), and two daughters. His many friends will learn of his death with regret.

Francis Ludlow.

The deceased, who died in Chicago, on November 25, was one of the city's old-time gardeners and florists. He was born near Derby, England, on December 3, 1823. When a young man he was on the point of leaving his native home for the Cape of Good Hope, but this intention being so much against the wishes of his family, it resulted in his emigrating to the United States in 1853. Coming directly to Chicago, he there worked with its first florist—Samuel Brooks. About 1854 he became gardener to Dr. McCagan, then who at that time had the finest greenhouse, and the first to be heated with hot water, in the city. He subsequently became foreman to Edgar Saunders, which place he retained until he was married. Mr. Saunders' eldest daughter, Sarah Jane, and in 1872 started into business for himself. Miller was in Chicago at that time for a time at the Rose Hill Cemetery Greenhouses, and for the past 16 years had been on the staff of the Horticultural Exchange. His father was a brickmaker in England, but

Frank took to flower growing, finishing his education at Fulham, London, being employed as a florist by the late son and three daughters, the youngest 13 years of age. He had hosts of friends among the florists of the city, and was largely attended; many beautiful flowers marking the esteem in which he held by his fellow-craftsmen.

IMMEDIATE NOVELTIES.

Under this heading we will publish brief descriptions and occasional illustrations of novelties of immediate interest. Growers and disseminators are requested to send us the necessary particulars together with the cuts for our intended descriptions to appear in this paper assuming no responsibility for the accuracy of the same, but also reserving the right of selection.

Continental Novelties.

Mr. ERNST BENARY, Erfurt, Germany, has submitted for our notice a fine collection, of which we condense the descriptions from his catalogue:—*Angelonema grandiflora* (Benary).—The *Angelonema grandiflora* is a graceful greenhouse plant, of aromatic odor, and bearing lilac flowers, which appear at the same season as the seed is sown. The first variety, which I have now obtained, is more than half the size of the more numerous pure white flowers standing out in contrast with the elegant dark green foliage. It is well adapted for use, particularly adapted for room or conservatory decoration, being a good winter bloomer, and it can be had in any quantity for the table.  
*Myosotis palustris* Tom Thunb (Benary).—This is a dainty form of the marsh forget-me-not, the plants forming little tufts, as in *Spergola piliferum*, from whence spring up an abundance of delicate sky-blue flowers. It comes true from seed, blooms abundantly from May until frost, and is admirably adapted both for borders and for pot culture.

tensively used as cut flowers at present. Growing about two feet in height, it bears a single, large, dense bud and produces its long stemmed flowers in the greatest abundance. The disc is brown, the ray-florets are yellow, with large velvety brown spots at the base—a coloring which may be compared to that of *Chelidonia palmistris*, or that of the dwarf French marigold *Legion of Honor*.

Mr. F. C. HEINEMANN, Erfurt, catalogues the following: Heinemann's New Emperor, *Salspurgiosus*, a novel variety grows as thick as a finger, and bears on its end a bouquet of flowers. One of them is richly veined with gold, and considerably larger than the other. The throat is wide open and short. The edge of the flower is not so deeply incised as with the old variety, which gives it a more round shape.  
Sky-blue, pillar-shaped *Forget-me-not*.—A variety striking by its very unique structure. All branches that form the plant grow perpendicularly. By this compact growth every plant forms a regular pillar or column. This habit makes it a most desirable form as a specimen plant for market sale, or as edging for flower-beds, and many other decorative purposes. The color is a variety of glaucious, pansy, cerise, bell, etc.

FREDERICK ROEMER, Quedlinburg, offers *Filianthus annuus*, Golden.—Single-stemmed variety of the variety of golden leaves. The plants are of luxurious but stout growth and reach a height up to six feet. The leaves are regularly striated with most distinct markings, the colors varying from golden yellow to bright red. The flowers are regularly striped and blotched in some of the color approaches a clear golden yellow.  
*Myosotis palustris* Tom Thunb and vigorous habit this novelty will prove to be a most useful ornamental plant, either if planted singly or in groups.

Newest Orchid-Flowering Cannas.

The list of this new race of cannas, of which Austria and Italy were the first to raise the standard, is contained in the circular, and I believe that two grades of certificates would be desirable for the plants raised in Austria and the second 75 points. I also believe that the date of points as awarded by the judges of the Horticultural Exchange, and embodied in the certificate when issued to the grower. A certificate might be framed something like the following:

Atlanta.—Height about three feet. Large grayish-green foliage with a dark border; flowers deep orange-carmine and very large; of very rich color. Very large flowers, five to six inches in diameter, salmon-red, the inner petals are darker.  
Paris.—About four feet. Dark green, brown bordered foliage. Very large flowers, five to six inches in diameter, salmon-red, the inner petals are darker.  
Rome.—About three feet; lively green, of strong growth and bearing abundant flowers of a canary-yellow color, spotted but not veined with red.  
Phoebe.—About six feet high; glaucous leaves, luxuriant growth, flowers similar to the preceding, but with a yellow, turning later on into a whitish yellow, petals spotted carmine, the inner petals more so.  
Professor Treub.—About four feet. Broad lanceolate leaves, brown-red, with large flowers, five to six inches in diameter, salmon-red, the inner petals are darker.  
Roman.—About three to four and a half feet. Growth extremely luxuriant, with large, dark green, heavily veined large panicles; flowers large, with yellow ground flamed salmon-red.  
Sardinia.—About four feet. Leaves brown, with a metallic blue, flowers of a middle size and a brilliant crimson.  
Sardinia.—About four feet. Bright green, of luxuriant growth. Flowers very numerous and large, of a deep orange to a paler yellow. A very pure color.

CORRESPONDENCE.

Insertion will be given in this column to all communications free from cost. The Editor reserves the right to not accept or to edit or to use as he may see fit.

American Carnation Society.

In reply to your request for my views on the proposed amendment to by-laws of the Carnation Society, I think that the amendment is a very desirable one. There may be some practical difficulty in the way of securing proper tests of varieties, but I believe that the Society, and, however, some varieties of the varieties that will bear hard upon many of the smaller growers and proprietors, and they will be inclined to think that the expense and restriction will make it unprofitable for ordinary growers to follow the production of such varieties, and this fact may lead to the Society some considerable support among the smaller men.  
While I have doubts about any great good being accomplished by the Society's attempting to determine in advance of introduction the value of the various commercial varieties, I am still willing to see the matter tried, although I should not like to see the Society's certificate until all of the seedlings that I may grow through the Society's certificate until I have been convinced that that was the best method for all concerned.

However guarded the Society might be in its selection of plants and varieties, and, I believe, and however successful it might be when the seedling had been tested, invariably upon a certified form, there is still the same chance of failure that has attended heretofore. There is no possible objection to the Society's having introduced a certified seedling from cutting the stock back, taking every possible precaution to insure the vigor of the health and vigor of the variety, as has been done heretofore, so that possibly in the future it may be possible to raise the new conditions might not be of any more value than those which have been granted.

I should favor holding forth more encouragement to the grower of seedlings of the highest quality, and I believe that two grades of certificates would be desirable for the plants raised in Austria and the second 75 points. I also believe that the date of points as awarded by the judges of the Horticultural Exchange, and embodied in the certificate when issued to the grower. A certificate might be framed something like the following:

John Doe, having exhibited carnation Minnie Cook, has been awarded a first-class certificate of merit with the following rating of 85 points:

Color	9
Form	9
Stem	9
Foliage	10
Flair	10
Calix	10
Plant	10
General Effect	18
(Signed) Total	85

(Signed) \_\_\_\_\_ Judges.

Or, to be gotten up in any form that would show the above certificate, and the Society should award the press should publish all of the above details and these details in the annual proceedings of the Society. We would then have a record of the certificate when issued to the grower, and it would be possible for them to see if they would enable the purchaser of the seedling to "size up" its general characteristics, and it would be possible to do heretofore; and it would also enable him to place his own estimate as to the value of the variety. The Society, as well as to observe more clearly the work as well as the strong features of any variety.

Possibly some may object to the second-grade certificate, but there will be no objection to the Society's publishing all of the above details, which, while not in the opinion of the judges sealing the required 85 points, would be of great value to the Society; and the second-grade certificate would cover that class and act as a check upon the grower, and it would enable growers who might otherwise become disgusted and discouraged, and quit ex-

hibiting, as well as quit supporting the Society. Every effort should be made to induce other growers, aside from the few dominating ones; as in the end the Society's support must come from the mass of smaller men acting in conjunction and accord with the Society, and in order to secure the support of this class the Society must offer them some inducements that are within their reach.

By-laws, rules, regulations, scales of prices, and all things, unless intelligently carried out and the best and wisest laws fall in the hands of improper judges. If the Society succeeds in securing each year an intelligent, capable and unbiased set of men, they may need for a time, at least, in doing good work; but an incompetent president might do a great deal of harm in dominating the affairs, and the well-known influence of the members of the Society might permit that harm to be carried out, even though the members have a right to turn down the nominations of the president. By general consent that is almost never done, so that the success of the plan would practically be in the hands of the president alone, and to that extent is dangerous.

C. W. WARD, QUEENS, N. Y.

**The Southern Yessamine Industry.**

**Editor Florist's Exchange.**  
We wish to tell your readers something of the Yessamine industry as conducted here.

The common cape, grown so extensively in the South, has raised here; it usually begins to bloom in this latitude about the 23rd of April, and continues until the 20th of May, or thereabouts, and the grandiflora variety follows it about a week or two, continuing for a month. It is popularly supposed that this variety originated near Alvin, about 1870, by a man, the name of whom named Snow (now deceased), and we believe it is not propagated commercially at the present time in any country.

About one-fourth of the entire output is taken in Texas, probably because they are the only buyers in that state. Kansas takes second in bulk for the same reason, closely followed by Missouri. The states which follow are: greater bulk, Ohio, Illinois, Indiana, Tennessee, Kentucky, Iowa, Pennsylvania, New York, Arkansas, Nebraska, Colorado, and Indian Territory, in the order named, with scattering shipments to every other state in the Union, except Florida. Montana uses a great many thousands this year, as did also Wyoming.

The business gives employment during the month of May to about 50 people including pickers, packers, box-makers, stencillers and shipping clerks, and it is worth a long trip to see the activity and busk at the double ends during the month of the season. I have seen six and seven big Fargo-like trucks loaded to the fullest capacity, waiting to be forwarded, on one single train.

And the business is only in its infancy, which is shown by the fact that the entire year in '95 (figures from florists list) the total sales of cut flowers in Texas were only about \$5,000. We do not know what the exact figures were for May, this year, but I am positive that the total sales were over \$2,000, and probably \$4,000 would be a moderate estimate. Hundreds of shipments are made by tonnage, and in fact the entire year in '95 (figures from florists list) the total sales of cut flowers in Texas were only about \$5,000. We do not know what the exact figures were for May, this year, but I am positive that the total sales were over \$2,000, and probably \$4,000 would be a moderate estimate. Hundreds of shipments are made by tonnage, and in fact the entire year in '95 (figures from florists list) the total sales of cut flowers in Texas were only about \$5,000.

The grandiflora cape does not bloom in the Fall, as it follows the habit of the magnolia, with which, it is said, the connection is very intimate. In the present common cape blooms here from September 1st until about the 25th of December, or thereabouts, but the supply is limited, and it is not extensively advertised, and it is accordingly in demand. In the United States the Fall sales do not amount to more than \$300 or \$400, as a rule.

About one-fourth of the entire output is for Decoration Day use, the other three-fourths being in the hands of the prime from the 20th to 25th. In June, from the 1st to 5th, many thousands are made and placed in cold storage, as they have a large ice plant here, and shipments are made from storage as late as the 17th of the month. Some seasons, but this stock is inferior in size, and the storage does not improve the quality of any of the flowers. The moderate demand for storage stock, and about 50,000 were sold this Spring. C. W. BENSON, TEXAS.

## THE MEN WE MEET.

No. 2.—ERNEST GEORGE ASMUS.

The name of Asmus is synonymous with all that is progressive in rose-growing in America. That that is not the only reason why the name of Asmus in this week's sketch has made a success.

Ernest George Asmus, of Bergenwood avenue, Jersey City, is a young man who can be classed, without fear of contradiction, in the very first rank of those who have succeeded in making good and natural shrewdness have been the great factors in the successful development of his career.

The self-made men of America are her mainstay and the foundation of her commerce, and the recognition that must be accorded Mr. Asmus for elevating himself from a hard-working boy who had to fight the battle of life, single-handed and without outside help, into a position of comparative affluence, gaining the respect of the trade for his integrity and sterling qualities. Born in the year 1841, on the 27th of November, at Hamburg, the son of Christian A. Asmus, a carpenter, he obtained two years' schooling in Germany and two years in this country, and then, in 1855, he emigrated and settled on Staten Island. In 1854 the family moved to Hill, N. J., where he first worked as a carpenter, and in 1856 to Angelen street, West Hudson, where he worked for some time with the brother and sister. A year after their start as flower sellers they became independent growers, and in a length in 1872 Mr. Asmus rented a place on Bergenwood avenue, near Schaeffer's Park, where these greenhouses, 60 feet long, heated by flues. The next removal was to a place on Nevelevoer's road, now occupied by Koegge Bros.; here they stayed for ten years. In the year 1880 Mr. Asmus bought out Peter Schuam, an old-time florist, and here he laid the foundation of his prosperity. The estate consisted of two acres and sixteen houses. Now we find the property covered by fifty greenhouses, representing not less than 150,000 square feet of glass.

Mr. Asmus is a wholesale grower of the cut-flower trade, making specialties in the various kinds of chrysanthemums and lily of the valley; the latter he grows all the year round. His reputation is as a rose grower is known throughout the length and breadth of the land. He has a large and successful competitor at all horticultural shows, and his private office is filled with silver trophies and certificates, and from 1884 captured at Boston, New York, Philadelphia, and other horticultural centers.

He is a member of the S. A. F. and of the New York Florists' Club, in the work of which bodies he takes a keen interest. His aims, modestly by the foundation of his success to hard work and plenty of it, and is indeed a tireless worker, and in the conduct and management of his large establishment by his two sons, Adolf and Ernest, who have inherited the business. But that energy which has brought their rise to the leading position he now holds.

As a horticulturist and as a specialist in the societies in which he has won his spurs are always interesting. Prior to entering the florist trade, Mr. Asmus gained considerable fame as a grower of plants for the market, also in bolls forcing, each of which he has written upon. He has found unprofitable, owing to increased supply or otherwise, in which he points to the necessity of growing a specialty "cesses to prove a good investment. Mr. Asmus declines.

As regards roses there are not now the good property they once were, when some of the best and other varieties than those now forming the staples, were the rule; when long-stemmed, large-bloomed roses were cultivated, but very few are now known, and quantity took the precedence of quality. Perhaps the most notable in quantity is the one that at this place is seen in the matter of hybrids. At one time these occupied about one-third of the business during the winter months; now there are only two houses devoted to hybrid varieties, and most of them are now grown by Mr. For this condition Brien and Meteor are responsible, the former having supplanted the latter in the market.—*Continued.*

That has created the greatest triumph in the history of the florists' industry. The varieties grown are Daybreak, Victor, Storm King, in lesser quantities. Amongst the Florists' Meteor, the great grower, which in it is

remembered that some of the kinds thus affected produced double the number of buds that Brideismad does. But the grower has no alternative; the trade demands Brideismad, and that variety must be grown. The following comparative yearly yield will show the prolificacy of the varieties named, in a house 100 feet by 15½ feet, containing, relatively, the same number of plants:

Cuda produced.....	44,175	salable buds.
Brideismad produced.....	22,774	“
Its highest record.....	28,263	“
Flotte produced.....	19,963	“
Waterlily.....	14,156	“
Toutou.....	12,857	“
Meteor.....	10,416	“
Victor.....	10,140	“
Beauty.....	16,715	“

As an indication of what the trade now calls for in roses, we cannot do better than summarize the houses allotted to each variety: Beauty 9, Brideismad 6,

M. Bratt, and Harrison's White. Among these new kinds his selection is Flora Hill, Mrs. Fingre, and Mrs. Bratt. Of the former he cannot say too much, its only defect being a rather weak neck for the immense bloom it throws. However it will be grown extensively next year. Jubilee, as will probably discard; its behavior hasn't been satisfactory. An unnamed seedling, scarlet, is to be preferred. Lily Jean is also disappointing. Victor is a grand variety, the house of it being a beautiful sight. The variety Mrs. Bratt is also in favor with Mr. Asmus; its large flower, rigid stem and other qualities being alike satisfactory. Some of the English varieties have been tested and found wanting.

Lily Valley is still extensively grown by Mr. Asmus, and forms one of his leaders. The increased tariff and the high price of first-class pipes have materially reduced profits. Valley, to be profit-

Mrs. W. B. Brown; flower scarcely exceeded that of the others. It has a compact ball of sharp pointed buds; raised from Queen X with Stevens. This variety is either a natural or a small growth, or it might be considerably enlarged in size if grown as are the plants of the old standard.

New York.—Saturday, November 27, was the last meeting of the New York committee of the season. Only one rose was presented, this one from George P. Rawson, Elmira, N. Y., and considering the late season, it was very valuable one, and should show up as acceptable as a late white. The type is a double one, and the petals are well distributed, curving to the center; while the outer or ray petals show a disposition to separate, to a pretty manner. The substance of the flower is also good, and the bloom bears evidence of making a good shippable color. It will have to be classed as a white, but in this quality it evidently is not constant, for some of the flowers presented inclined to pink cast, even more pleasing than in the case of Mrs. Jerome Jones, which it so excels, and this is saying a good deal. The stem and foliage are both good. Some indication is likely to arise from the name under which it is presented, viz., H. Chadwick, the same exhibitor having presented a yellow variety, under the same name one year ago, and the committee called attention to this fact.

## Plant Market for New York.

The enthusiasm which characterized the inception of this movement continues unabated, and that a large portion of Clinton Market, Canal and West streets, New York, will be given up as a permanent plant market, indoors, is now almost an assured fact. The meeting of plantmen called for Wednesday evening last, was well attended, and resulted in the formation of a permanent association for the market men, which may prove but the beginning of an organization of plant men in other parts of the city. The market—at least those most interested in their own welfare—

and chairman of the committee, appointed at this meeting to wait on the Board of Health, to present to them a rough diagram showing the number of stands available for the plantmen. There are 65 stands in 32 lots on the front on Canal and Washington streets. Superintendent Rapp, of the Clinton Market, stated that the rental of the stands varied according to the location; those in the interior of the building averaged 10¢ per stand, those in front of Canal and Washington streets, running from \$1.25 to \$1.37 weekly. Every standholder was entitled to "sidewalk" privileges. The smallest stands represent an average floor space of ten feet square. Mr. Asmus, who has been a member of the committee, and suggested the formation of a committee to wait upon the incoming Board of Health, and to secure such concessions could be made in the rental in the event of the stalls being taken up. He also stated that it might be practicable to auction the plants left over after the meeting. The meeting resolved to organize under the title of the New York Florists' Chamber and Association, and the following gentlemen were elected office-holders: President, F. Lehlig, Newark, N. J.; Vice-president, H. C. Steinhoff, West Hoboken, N. J.; Association dues were fixed at \$4 and the following were elected: President, H. C. Steinhoff, West Hoboken, N. J.; Secretary, A. D. Ross, 200 West Side street, New York, N. Y.; Treasurer, H. C. Steinhoff, West Hoboken, N. J.; Secretary, A. D. Ross, Leach Bros., Jersey City, N. J.; John Richards, artist, New York, N. Y.; John B. Bayome, N. J.; A. Schultze, College Point, N. J.; L. I.; F. Wachsauer, Middle Village, L. I.; and C. Schaefer, Woodside, L. I.

The Association will meet in Lynch's restaurant, corner Canal and West streets, the first of January, and the very first of things were passed to Mr. Lynch for the use of the meeting room, and the following gentlemen were elected: F. Lehlig and James W. Withers, after which the meeting adjourned.

Ernest George Asmus.

Bride 4, Meteor 4, Testout 2½, Carnot 2, Casin 2, Morgan 2, Kaiserin Augusta Victoria 1.

The novelties being tested this year are yet in an uncertain stage. The most promising is a hybrid rose, under name of Meteor, which for color will supersede Meteor, if otherwise satisfactory. Another is an exquisite shell pink, but almost entirely without value, but more to the withdrawal of the hybrids which formerly formed a succession crop to the chrysanthemums.

These six or seven houses were devoted to the latter; the varieties that proved of greatest value being Mrs. Traver 1, Park, glory of the Pacific, Mrs. Henry Robinson, Major Bonaffon, W. H. Lincoln, Evangeline, H. W. Resman, Mrs. Fern, Mrs. J. J. Gieseler, Mrs. Jerome Jones, Mayflower, Sunrise, the best earliest dark variety, he says; Defender, also a good dark kind, and Western King, which has also done exceedingly well.

Mr. Asmus finds that carnations, with him, are a less profitable crop to grow than roses, and that the greater extent of the carnation is being raised by the former. Here again, the higher grade of bloom now looked for, has militated against the carnation, proportionately. Six houses are devoted to carnations; three of the houses are now devoted to the greater extent of the carnation. The varieties grown are Daybreak, Victor, Storm King, in lesser quantities. Amongst the Florists' Meteor, the great grower, which in it is

able, should average \$4 per 100 sprays—then only a small margin is realized. Those connected with the valley market the past two years, will readily understand that little or no profit on it has been made, and that it will be difficult, if possible to produce valley every day in the year, is also an important department, and that the act of growing to the loss resulting from deterioration of the pipes, almost to the extent of cutting to produce the flowers.

When asked his views on the causes which have led up to the depreciation in stock, Mr. Asmus attributes it to the preponderance of roses during the past few months as compared with former years, which limits the demand for such plants.

Lane forcing, which was at one time a great feature of this establishment, will be abandoned after this year, owing to a general reconstruction of the section of greenhouses now devoted to that purpose.

## Seedling Chrysanthemums.

CHICAGO.—The undenoted varieties were before the committee on November 27. From George P. Rawson, Elmira, N. Y., W. H. Chadwick, in many respects a remarkable flower, of the largest size, an untraced Japanese, fore and back, bowl shaped; center fully covered, stem and foliage first-class. The flower is ex-labeled, but very similar to color similar to that of the Carnot rose, which is said to come when the variety is grown in a cool house; the other is ivory-white, which follows if grown in a warm house. It is said to be gooder grown in a cool house, and later flower.

### Exclusively a Trade Paper.

### For the Busy Man.

William Gray, the well-known gardener and orchard specialist, is now dead.

Owing to the glass workers' strike, prices on some kinds of glass have advanced forty per cent.

The Hoover & Gates Nursery Co. is reported to have gone into the hands of a receiver.

The Whitney-Grove Seed Co., of Birmingham, N. Y., will shortly remove their headquarters to Buffalo.

The outlook for Christmas trade, all over, is bright in some portions and dull in others. The outlook is in short supply.

Quite a number of new retail stores have been opened in the following districts: Allentown, N. Y. City, the past week.

The Washington Florists have formed an organization, its principal object being an effort to prevent the free distribution of cut flowers by the government.

The plant growers in favor of securing Clinton Market New York for a permanent plant market, organized on the following day last, under the title of the New York Florists' Association.

The point to which the project being carried out.

### FRUITS and FLOWERS.

WHITE SPURT FROM MAID DEAN CHRYSANTHEMUM.—John Lewis Childs, Floral Park, N. Y., sends us a white spurt from the Maiden variety. The characteristics of the parent are seen in the fruit, form and build being the same as in the type; the only difference noted is in color, which is a pleasing white. A few, however, show a tinge of pink. The fruit is very plump flowers on the ray and in the center.

Value for money expended, and not sentiment, should govern all business transactions.

THE SECRET of

## Success in Advertising

Consists in KNOWING what mediums to use.

No man so far as the Florists' Exchange is concerned who has used its advertising columns, or any other of its valuable returns but today has successfully yielded them, and the general consensus of opinion among business men is that it is most advisable to patronize one strong substantial medium freely than many weaker ones even sparingly.

Ninety out of every one hundred progressive florists and seedsmen are *bons fide* paid subscribers for our articles in the Florists' Exchange. This is saying a good deal, but our assertion is true and it is well known that our increase in business, from year to year, since the paper was founded in 1888.

It is the mainstay, backbone and soul of trade; and, all other things being equal, this item of business expenditure should be the last trimmed down. Do not curtail your advertising, but use discretion in placing it where it will do the most good.

Don't advertise unless you have the goods to sell. And don't try to sell goods unless they are equal to your representation—a dissatisfied purchaser is your worst enemy. And don't be too anxious to make sales for the sake of making sales; if you don't know your real best customer (who wants time), investigate him before you ship. An honest man courts a fair price and a good standing. In our trade, as in all others, there are harpers every ready to take advantage of the unwary.

### Monthly Exhibitions.

The past few years have witnessed a very large increase in the number of monthly exhibitions given by various florists' clubs throughout the country; a fact as gratifying as the shows are needed. These exhibitions have assumed different positions, their nature depending upon the individual choice of the exhibitor. In fact, the exhibitor in the West and Northwest, as well across the border among our Canadian friends, seems to be that of devoting a meeting entirely to one particular subject and having a discussion by the members on the various phases of the exhibition. In other words, the exhibitor might it is carnations, another chrysanthemum, and so on through the list of the staples embraced in the present day commercial floriculture. The New York Florists' Club was among the first to inaugurate these monthly shows, and, unfortunately, among the last to give them up. We are glad, however, to observe that the Club has again resolved that such exhibitions shall be held, and as an incentive to that end, has offered its gold medal to be competed for and awarded to the exhibitor whose display, as shown, scores the highest number of points, during the year 1898. There is no restriction on the display, which may partake of a general or specific character. Of course, it is understood, that the same exhibits will not be presented in competition with each other. This resolution was made by the Club for a double purpose, viz., to hold the members together, and also as a means of disposing of the gold medal which has been lying in oblivion for a number of years.

During the progress of the discussion a point was raised which might be worth while referring to here. It was this: Will a general exhibit, if first-class, be likely to draw an attendance, as one of new and rare things, pure and simple? It was argued, that as well-grown roses,

caranations, etc., could be seen in the leading florists' stores of any city, in their season, the only thing that the Club meeting would therefore prove of attraction to the general public, would be on the ground, a mostly exhibit of new or rare meritorious things which would not fall into the category, of course, having in mind that these exhibitions are exclusively for the benefit of club members. This refers to novices in design work as well.

Our own opinion is that if the exhibition is one of the sort, only a detriment, let the show be a general one—the more varied the better; if for the benefit of the members, the more rare, let new and rare things be the dominant feature; an announcement of which should be made to each member being made to the members prior to the date thereof.

There arises another phase of this question: Does the throwing open of these exhibitions, free of charge to the public, prove an advantage or a detriment when the annual show is held? It has been stated that the free weekly exhibitions of the Massachusetts Horticultural Society have militated against the attendance at its general exhibitions. The same objection may have been experienced in other places. It would therefore seem a wise policy to restrict the number of exhibitors of admission to these monthly shows, having in view the financial success of the annual exhibition. It would more likely be ensured when the people are accustomed to making a payment in connection with all flower shows, than if they are admitted free to all except the annual one.

We hope to see these monthly shows become still more popular in our clubs; that if that possibility, if all will, will be met by the public. A general monthly show, restricted to club members only, is the better plan. It is a matter of sense; while on the other hand, the benefits accruing from open exhibitions will be the same. The exhibition should be held at an early hour; or the doors could be closed in time to allow the business portion of the day to be completed, before a late hour, as is now done in several cities.

### Naming Chrysanthemums.

A difficulty, not hitherto experienced, so far as we are aware, has just arisen in connection with chrysanthemum nomenclature. Last year a seedling yellow Japanese variety named "H. C.," which was exhibited before the committees at Chicago and New York, but it failed to come up to the scale requirements necessary to be certificated. For that reason we assume the R. Y. (Mr. Grove P. Lawson, of Elmira, N. Y.) discarded the variety, but as it was named the same name, he presents another seedling chrysanthemum, this time a white Japanese inured, for adjudication by the various committees.

Now the question comes up, Can the Chrysanthemum Society of America certify the new variety that has been named to it a name which has already been bestowed upon a variety that has never entered into commerce, whose appearance before the committees was its first and last on earth, and which, to all intents and purposes, is dead?

The answer to this question will to a large extent, depend upon whether or not the variety named is a new one. If the answer be the committees are equivalent registration, and whether, seeing the variety named, the exhibitor had a chrysanthemum world than the presentation and christening stage, the committee should give its sanction of publication of the name such variety here.

In a matter of this kind there must, of course, be a duplication of names and varieties in a work to which the Chrysanthemum Society has already given its sanction, and in which it has been fairly successful. This, it has accomplished, through its efforts, and it is to be regretted. Despite its vigilance, however, there have been established precedents for Mr. Lawson's case. The variety named is the varieties Philadelphia and William Simpson; and while these may be adjudicated favorably, it is not likely to prove the validity of the practice.

It has been argued that priority of

name is maintained by several factors among them, the most important being, according to the Paris Code of Botanical Nomenclature, the date of the International Botanical Congress, is held "to consist of the . . . distribution among the public of the name of the variety." In 1896, the name of the variety "H. Chlawick in 1896, belongs that name, whether such variety was disseminated prior to or after the date of the Congress cannot perpetuate that name because the original seedling so named has ceased to exist, and no one has, to the same reason, could any other grower claim that name from him for the purposes of applying it to another seedling chrysanthemum. In other words, the name must live or die with the variety first holding it, so far as the chrysanthemum family is concerned.

This is an important point, and opens up another phase of naming chrysanthemum seedlings. The Society has hinted that it "would be well for those who exhibit seedlings under number to also provide the committee with a name to be used in case the variety is considered, and the name to be used in the certificate to be named rather than number." This liberal suggestion, as we believe, was thrown out by the committee, and the name of this kind: A grower may desire to compliment a friend, relative or acquaintance, and name an exhibit in honor of a chrysanthemum, and be naturally willing to bestow the name upon a certificate to be given to the exhibitor, and be popular. He would feel it an insult to the latter to have the seedling become the property of the committee. The Society foreseeing this contingency, and in order not to permit such acts under number; but expressed the preference to *certificates* worthy kinds, and the name to be used in the certificate his friend's disappointment following upon rejection. That being so, there is no objection to the name of the exhibitor, one name, however great may be the anxiety to pay the compliment. Exhibit the name of the exhibitor, and the certificate that does gain a certificate, then christen it—and all will be well.

It should be most abundantly that "one-name" practice is very evident, and we feel sure to no one is it more patent than in the case of the exhibitor. It is to be the aim of every chrysanthemum grower to render as high as possible the value of his name, and to be regarded as regards duplication of names and varieties, and one of the strongest and most important reasons for the same, is the cooperation by the association of some rule covering cases similar to the one under discussion. The name of the exhibitor, if used for a chrysanthemum and made public, can never be applied to another chrysanthemum under any circumstances.

### From Small Beginnings.

Some institutions, like large business enterprises, had their origins in small beginnings. One of these was the New York Exchange, Thirty-fourth street, New York, the origin of which was widely told last Wednesday by John Nicol, of Jersey City, in the deliberations upon the advisability of securing Clinton Market for a permanent plant market for New York City. The origin of the Exchange is of historical interest, and not generally known, we think it worth mentioning here. The first grower to cater to the New York cut-flower trade was the late John Henderson, of New York. He was succeeded by John Johnson, and to sell from door to door, so to speak, from his home in Jersey City. He was followed by the retailers, anxious to secure the flowers at the earliest moment, met Mr. Grove P. Lawson, of Elmira, N. Y., and the first street, and adjournment was had to the saloon located there, which for many years and to the present day, has congregated in the back parlor of the saloon, where they huddled together, they discussed the business of the day. It was the brighter and more progressive minds conceived the idea of securing the present Clinton Market for a permanent plant market. The beginning has proved an uninterrupted success, the investment having for several years returned to the exhibitor, paying a dividend of no less than 10 per cent. Here each grower has his stand,

OPEN TO ALL . . . FREE TO ALL  
Answers Solicited from Those Who Know.

(144) **Hydrocyanic Acid Gas in old Green-houses.**—Can hydrocyanic acid gas be used on violets in small quantities in old houses that are very open, although ventilation? Will the gas rise to the upper or lower end of house? Which is the better for use—night or day?—  
H. H. NORRIS, N. J.

—Hydrocyanic acid gas may be used under the conditions named in Mr. Norris's letter. It is not believed, however, that the results which would be obtained under such circumstances would prove satisfactory, the gas would hardly be open to allow the gas to escape in such quantity as to render ventilation unnecessary, the plants would hardly be killed; and, on the other hand, if the house is not sufficiently open to allow the gas to escape after twenty or thirty minutes, the plants might suffer severely. The gas diffuses very rapidly to all parts of the house. It should be used at night and only on nights when the temperature is high enough to allow a thorough ventilation for at least an hour.  
F. H. DOUGLASS, Assistant, Division of Plant and Physiological Pathology, U. S. Department of Agriculture.

(145) **Utilizing old Building Material, etc.**—We have four V-shaped houses, 100x10, two V-shaped houses 20x100, etc., which we intend moving to re-building. Would you use the 6-foot rafters on 10-foot houses for short-span, and the 12-foot rafter on 20-foot houses or long-span, and make the whole range 3-span; or are some small houses preferable for general florist stock; or, in other words, were you to build new 15,000 sq. ft. houses, you would make the houses all 3-span for general florist stock?—M. F. CO.

A direct reply to the above inquiry cannot be given, as it would depend largely upon the extent of the land available for greenhouse purposes. Its grades, and the location of the property with regard to the points of the compass. Assuming the land to be about level and of ample area, the best shape of the greenhouses for general purposes, would be their length about north-south, with their length running north and south. The reason for this preference are, first, because such a house receives the greatest possible duration of sunlight; the sun on rising over in the east, penetrates one slope of the roof; at midday it shines through both slopes, and enters the western slope in the afternoon, and in all cases, excepting for a short period in the middle of the day, casting the least possible shadow of the roof bars, which is that made by the angle of the sun above the horizon. It is but slightly increased. Secondly, convenience and consequent economy of labor in hauling the material to any one level, thus avoiding the expense and inconvenience of the steepled benches of the present type-span houses, and the wear and tear of climbing around them. Thirdly, greater ease in control of the temperature, as the air is more likely to contain one-half to five cubic contents than the three-quarter-span shape, and it also

has the protection of the potting shed and offices at the north end.

The three-quarter-span shape of house has but one merit, namely, that it receives a little less shade from the bars at midday, and gets its sunlight slightly longer than the other shape. It is worthy of more consideration in connection with the growth of some kinds of stock, but for general purposes, the disadvantages are: first, the absence of sunlight through the roof in the earlier and later portions of the day; secondly, the increased shadow of the depth of the bars interfering; cold northern exposure, and the expense of building and repair in consequence of the high north side, and the expense and inconvenience of the steeper benches.

HENRY W. GIBBONS, New York.

(146) **Diseased Carnation Folage.**—Find enclosed diseased carnation foliage, please let us know cause and what remedy to apply. There are only a few plants of big break affected. These were particularly young ones when they were planted, the man who planted them also tied them up as soon as they were planted, and they grew together, and when water was applied some of it remained in the center and, I think, caused the trouble.—MRS. E. HAYS.

—The enclosed specimens reveal the presence of what is commonly termed as "black rot." This disease is of a fungus nature, and will make its appearance whenever plants are deprived of light and more particularly when they remain on the plants. The treatment the plants have received since housed, as regards tying up and watering, is just precisely how they became affected, or what caused a spread of the pest; as it is very common to water plants to originate in the field, particularly if the bottom branches rest on the ground, and to tie up a plant with a string. To abate the trouble, untie the plants and allow them to stand at least partially open, and if the plants are already put black mould to flight. To expedite matters give the plants a good hand watering, and if the plants are in a free circulation of air, for in no other way can the disease be kept from spreading. If the plants are in a head watering is a detriment to the health of the carnation. During winter months, if the plants are in a head watering, if the foliage is kept dry. When given water, apply it to the soil directly.  
—H. WATSON.

**PROPAGATING LATE BLOOMERS**

The propagation of late blooming varieties should be commenced as early as the stock at your disposal is limited. By a timely commencement good results will be obtained, thus rendering it unnecessary to scrape every available pip together, regardless of the quality of the material. In order to propagate early and keep the cuttings growing to a healthy, vigorous condition, the best way to make such varieties profitable.

Carnation plants which do not come into flower until late in the season, or even later (as some varieties will do) when they have had improper treatment, can be made profitable and saleable. Some may deem this forcing, or continual burying along, detrimental, and that when persisted in year after year, it will cause deterioration. On the contrary, nothing is further from the truth, when better results are obtained as a result of careful judgment and judicious management and culture, always keeping within conservative limits, we can be assured that we are imitating Nature.

New and scarce kinds should also be propagated at once, and as soon as possible, planted in the open, and given a few inches of good soil, well enriched, about 2½ or 3 inches apart each side, and covered with a layer of soil to a good height before cutting back. To grow late varieties, it is necessary to sow early in the ground. This practice is one of the severest checks which a small plant can receive. It is necessary to sow early to the ground. This practice is one of the severest checks which a small plant can receive. It is necessary to sow early to the ground. This practice is one of the severest checks which a small plant can receive.

I have before dwelt on the injurious effects of cutting back carnations early in the ground. This practice is one of the severest checks which a small plant can receive. It is necessary to sow early to the ground. This practice is one of the severest checks which a small plant can receive. It is necessary to sow early to the ground. This practice is one of the severest checks which a small plant can receive.

cuttings, in every way. I think, as good as slips taken from old plants.

The danger of propagating from young plants lies in taking the slips from roots which are sufficiently well hardened. When propagating from the young plants, the danger lies in the fact that the young plants are not sufficiently hardened, and the liquid manure may be injurious to the young stock plants which can be handy to use in the propagation of carnations of all kinds. They will also make excellent subjects for early blooming in the open ground, and the results will prove very profitable. H. WEBER.

**A New Stake.**

The cut herewith shows a new invention for the support of lilies and other tall single stem plants. The support consists of stiff wire rod, the desired height, with two short wires fraily twisted near the lower end so that these and the end of the original wire form a triangle. This triangle will spread and driven into the ground makes the whole stand firm. The inventor of this triangle is Mr. Theron Parker, who is also the inventor of the model carnation support.

**The Glass Trade Strike.**

The price of glass continues to advance, and the shortage of stock is up as much as 40% since work has been stopped. There is a shortage of stock in the country. Florists' supplies are particularly scarce, but most of the trade have brought all they want for this season.

**Buffalo**

**Thanksgiving Notes.**  
Pleasant weather at Thanksgiving time gave trade some impetus, and while the weather was not so good as existed for all the good blooms available, some kinds inclining to scarcity for the week. The weather has become colder and wintry, three inches of snow on Wednesday morning this week, attesting the severity of the weather.

New enterprise is taking on full swing in the store line. Harry J. Millatt announces the establishing of a new store at 515 Main street.

Behind the screened windows of 588 Main street, Thrall & Peck are still preparing new quarters. They promise to open in a few days.

Mr. Bradford has added another branch to his former two places of business. This third one at 104 Elk street, where no doubt he will secure a large share of the East side business.

Progress in the new conservatory in the Dotter's Garden is well advanced, owing to irregularities in details preparation. It is expected that the winter will be a success again. The chrysantheums attracted the most of the visiting public, and recently, and a display of numerous orchids is in good promise for the near future.

**Recent Visitors.**

Lloyd B. Pease, Lockport; Gustavus Schoenfeld, Westfield; J. H. Gould, Middleport; John Holbe, of Hildesheim, Ont.; J. A. Valentine, Denver, Col.; J. E. Killen, N. Y. City.

**Niagara Falls, N. Y.**

Vineat & Co. have newly opened a flower store on Falls street, in a central business location. The "Co." of this concern is a local florist, and carries a locally noted violet grower, and who will largely supply the stock for this new venture.

E. A. Butler's houses show an improved look throughout, he reporting also a fair business this Fall, but collections slow.

John Dobbin has retired from his store on the east side of the river. On the occasion of our recent visit at his home place at Niagara Falls, Ont., he was in the best of health, and chrysantheums in profuse numbers. His young roses show up the also. The store of Mr. Dobbin has been sold, and he has passed into the hands of A. N. Whittier.

**Baltimore.**

**The Year.**  
The battle between the chrysantheum and other children of the floral world has ended; again peace reigns and the florists are glad to see the first of their heads with pride. Prices have advanced, Stock shortened, especially at the beginning of the year. The market for the trade were busy. Stock continues in good demand. Violets are very scarce.

**Jottings.**

All the rift is agitated in regard to holding a stock cut year. All recognize the vast importance of giving one; but the great drawback is the money for a guarantee fund. "From nothing comes nothing."

Several growers and dealers have their businesses in the market for sale. Dealers in Dutch bulbs are not so well satisfied with the result of this year's trade. Tulips have sold better than hyacinths. Crocuses and the finer varieties of narcissi have been sold out.

Sam Frost & sons have obtained a fine crop of asparagus seed; they are remarkably successful with this specialty.

EDWIN A. SELDREY.

**Syracuse, N. Y.****Thanksgiving Trade.**

Trade has been exceedingly lively during the past week, almost every available flower being sold. Thanksgiving business is not so good as it was in spite of the wretched weather which prevailed during the week, in fact the same may be true. Tulips have sold better than hyacinths. Beauty were the flowers most called for, and sold at \$5 to \$9 per dozen. Sam Frost & sons have brought in such as much as \$3 per 100, roses other than Beauty, \$1 per dozen. A few valley were sold at a profit. The weather is not so figure here until Christmas. This seems to be a mistake on the part of the growers. The weather has been so cold at this time of year, and it pushed a little it would sell readily.

The annual meeting and banquet of the Central New York Horticultural Society will be held at the St. Cloud Hotel on Wednesday afternoon. The afternoon session will dispose of business and the evening will be devoted to talks by prominent men. The attendance of women has been sent out to neighboring florists and a large attendance is expected.

C. B. DANSON.

**Brooklyn, Mass.**

Trade was good during Thanksgiving week, but has again fallen of some. Copeland & Cooper had a big wedding trade. The annual meeting of the Florists' Club met November 30, and was previously arranged. A constitution and by-laws were adopted. The meeting was held at the first Tuesday of each month, and the Metropolitan Hotel will be used for that purpose. The meeting was very successful, and a general horticultural society rather than a florists' society was recommended, and with that object in view, it was decided to obtain a charter as soon as possible. The meeting was very successful, and a general horticultural society rather than a florists' society was recommended, and with that object in view, it was decided to obtain a charter as soon as possible.

John D. Belmont, treasurer; Carl J. Dane, 243 Kildergan street; Brockton, secretary; H. E. Farrow, 100 South Street; and A. Copeland, Brockton; C. Maynard, North Easton; and C. E. Field, 100 South Street.

Other carnations on exhibition.

**Malden, Mass.**

Frank J. Walsh, son of John Walsh, and his wife, Mrs. John Walsh, were the victim of a serious shooting accident last week. The patient was shot in the chest by a loaded revolver by a young clerk, one of the chamber was discharged, and the bullet entered the chest, severing the facial nerve and burying itself in his neck. He now lies in a private hospital, and the patient is quite comfortable.

## SITUATIONS WANTED.

Rate, 10 cents per line of words, each insertion, both with orders. The rate applies only to situation wanted advertisements and when not enclosed a deposit of \$1.00 for the advertisement in our care and 10 cents to cover expenses of forwarding.

COLIN OGSTON, West Atlanta, Georgia, now open for an engagement as a first-class grower of wholesale or retail stock.

SITUATION wanted, florist, age 25, able to take charge of private or commercial plant, 10, 15, 20, 25, Philadelphia, Pa.

SITUATION wanted by an experienced grower, S. strictly sober; to take charge of wholesale or retail stock in an office or store, Philadelphia, Pa. Address New York, care Florists' Exchange.

## WANTED.

Situation by American all-round florist; good propagator and designer; violets, roses, carnations, good references. Private place preferred. J. P. H., Hinfanger Springs, Ct.

## HELP WANTED.

## WANTED

A seedsman fully capable of buying, selling, and generally managing a seed department. Please send references. Address New York, care Florists' Exchange.

THE GEO. A. WEAVER COMPANY,  
19 Broadway, Newport, R. I.

## WANTED.

An assistant (single man) in a commercial place. State wages expected, with board. Address P. O. Box 35, Sing Sing, N. Y.

## MISCELLANEOUS WANTS

## WANTED.

150 ft. additional pipe, 12 or 14 inch. Preference given to one of price is right. Address, box 504, Westfield, N. J.

HOT-HOUSE TOMATOES  
AND MUSHROOMS WANTED.

BRADLEY REFIELD, Commission Merchant,  
11 West Street,  
Market prices and prompt returns guaranteed. Write for cards and quotations. Address New York, care Florists' Exchange.

## WANTED.

To buy or rent a greenhouse establishment or dwelling house and ground, suitable to build upon, in a healthy location near New York City. Address, with full particulars, Responsible, care of this paper.

## BUSINESS OPPORTUNITIES

## TO LET.

Florist Establishment with good local trade, near New York. Good for an enterprising party. Address H., care Florists' Exchange.

## FOR SALE.

Greenhouses, in one of the best cities in Wisconsin. A good investment and a money maker for a hustler. Owner must retire on account of poor health. For particulars, write

ELLIS & POLLWORTH,  
MILWAUKEE, Wis.

## Address List ...

The Nursery and Seed Trade Postal and Telegraphic Address List, 1897.

An alphabetical list of the nurserymen, seedsmen, florists, growers in horticultural sundries, wholesale florists and commission salesmen of the United Kingdom. This book will be of great service to all desiring to establish a trade connection with those on the "other side."

Price, postpaid, 50 cts.

A. T. De La Mare Ptg. and Pub. Co. Ltd.,  
2 Duane Street, New York.

When Writing Mention Florists' Exchange

Concluded from page 1095.

SEEKING CHRYSANTHEMUMS AND CAR-  
NATIONS.

Selected seedlings, premium society's certificate of merit:

Yellow, ten blooms—H. Graham's Pennsylvania.

Pink, ten blooms—E. G. Hill & Co.'s Autumn Glory.

Red, ten blooms—E. G. Hill & Co.'s Black Hawk.

Bronze, ten blooms—E. G. Hill & Co.'s Madison.

Any other color (light W. Buckbee's Mrs. Robert R. Hitt (light pink).

First year's seedlings:

White, two blooms—First, E. G. Hill & Co.'s Exhantres; Second, E. G. Hill & Co.'s Onyx.

Yellow, two blooms—First and second prizes divided between three seedlings, all given by E. G. Hill & Co.—Genuine Gold, Caroline, and Elma.

Pink, two blooms—First, E. G. Hill & Co.'s Clo.

Red, two blooms—E. G. Hill & Co.'s Phil Sheridan.

Bronze, two blooms—E. G. Hill & Co.'s Any Other color, two blooms—Second, E. G. Hill & Co.'s Percival (pink).

## SPECIAL MENTION.

Tested seedlings, carnations:

Twenty, pink, not lighter in color than William Scott—Stollery Bros'; Argyle; W. N. Ridd, No. 16.

Twenty, pink, lighter in color than William Scott—Hopp & Lempe, Kathleen Fausell.

Chrysanthemum:

Yellow chrysanthemum—E. G. Hill & Co.

White chrysanthemum—E. G. Hill & Co.

The judges made honorable mention of the goose plant shown by W. H. Chadwick.

The Society's certificate of merit for best twenty blooms, carnation seedlings, not lighter in color than William Scott was given to Peter Fisher for Mrs. Thomas Lawson.

Best vase of roses, W. J. Smyth, a magnificent four-foot high stand of Mme. Salmon; first; second, Art Floral Co., Kaiserin and Erie.

Best vase of chrysanthemums, went first, W. J. Smyth, a fine group of Helen Floodgood; second, John Alois, with Verdand-Morel.

Best specimen plant in bloom, other than chrysanthemum, five entries, a six-foot stand of geraniums finely flowered, exhibited by George Bakvin, gardener to Nathan Meigs, Esq., got first; a double white bush geranium, second, W. N. Ridd.

Fred. Dornier & Son, Lafayette, Ind., exhibited at the show a white seedling carnation named Mary Wood; first; Queen, a very pure white, No. 11-94, light pink, No. 82-94, pink, Gold Nugget, a very deep yellow. It was very noticeable how well the old standard by Lizzie McGowan showed up in several of the exhibits. It is the white set for general purposes around here.

EDGAR SANDERS.

## America.

## Secretary's Official Report.

Since last report, seedlings have been examined and reported as follows:

CHICAGO, November 20, 1897.

Mrs. C. H. Peirce, exhibited by F. Dornier & Sons Co.; La Fayette, Ind.; Japanese, deep yellow, scored, commercial scale, 90 points.

Stellata, exhibited by Nathan Smith & Son, Adrian, Mich.; Japanese reflexed yellow, scored, commercial scale, 83 points.

Insitigue, by same exhibitors; Japanese incurved, light bronze, scored, commercial scale, 85 points.

Merza, by same exhibitors; Japanese incurved, white, scored, commercial scale, 85 points.

Madison, exhibited by E. G. Hill & Co., Richmond, Ind.; Japanese incurved, bronze, scored, commercial scale, 79 points.

November 27.

Wm. H. Chadwick, exhibited by Grove P. Rawson, Elmira, N. Y.; Japanese incurved, blush white, scored, commercial scale, 93 points.

Mr. W. B. Brown, exhibited by Theo. Bock, Hamilton, O.; incurved, white, scored, commercial scale, 75 points.

Boston, November 20.

Arline, exhibited by Nathan Smith & Son, Adrian, Mich.; incurved, white, scored, commercial scale, 90 points.

Thornden, by same exhibitors; Japanese deep chrome-yellow, scored, commercial scale, 92 points; exhibition scale, 94 points.

Mrs. C. H. Peirce, exhibited by F. Dornier & Sons Co.; Japanese, bright yellow, scored, commercial scale, 91 points.

November 27.

Wm. H. Chadwick, exhibited by G. P. Rawson; Japanese incurved, white, scored, commercial scale, 92 points; exhibition scale, 93 points.

PHILADELPHIA, November 20.

Spotswood, exhibited by Robert G. Carey, Chestnut Hill, Pa.; incurved, light yellow, scored, commercial scale, 91 points; exhibition scale, 88 points.

Mina Nevada, exhibited by John N. May, Summit, N. J.; Japanese pink, scored, commercial scale, 81 points; exhibition scale, 77 points.

Dolores, by same exhibitor; scored, commercial scale, 84 points; exhibition scale, 85 points.

Mrs. C. H. Peirce, exhibited by Fred. Dornier & Sons Co., La Fayette, Ind.; incurved, yellow, scored, commercial scale, 90 points; exhibition scale, 87 points.

November 27.

W. H. Chadwick, exhibited by Grove P. Rawson, Elmira, N. Y.; Japanese incurved, blush white, scored, commercial

scale, 80 points; exhibition scale, 89

points.  
Sport from Mrs. Jerome Jones, exhibited by Ferdinand Heck, Reading, Pa.; Japanese incurved, light yellow, scored, commercial scale, 90 points; exhibition scale, 90 points.

Our Old friend, exhibited by W. K. Hoyle, Philadelphia, Pa.; Japanese incurved, canary-yellow, scored, commercial scale, 89 points; exhibition scale, 88 points.

NEW YORK, November 27.

Wm. H. Chadwick, exhibited by Grove P. Rawson, Elmira, N. Y.; Japanese incurved, light yellow, scored, commercial scale, 86 points.

CINCINNATI, November 20.

Arline, exhibited by Nathan Smith & Son, Adrian, Mich.; incurved, white, scored, commercial scale, 84 points.

Insitigue, by same exhibitors; Japanese incurved, bronze yellow, scored, commercial scale, 75 points.

Mrs. C. H. Peirce, exhibited by F. Dornier & Sons Co.; Japanese reflexed yellow, scored, commercial scale, 87 points.

No. 169, exhibited by E. G. Hill & Co., Richmond, Ind.; Japanese incurved, white, scored, commercial scale, 81 points.

Mrs. W. B. Brown, exhibited by Theo. Bock, Hamilton, O.; Japanese incurved, white, scored, commercial scale, 84 points.

NOTE—Stellata was exhibited as Klio, and the change was made to avoid a clash with Klio, exhibited this season.

Thornden was shown as Golden Gem; the change was made necessary as the latter name has been applied already to a chrysanthemum. In last report No. 131 listed as Klio, of Chicago, should have read 83 instead of 87 points.

ELMER D. SMITH, Sec'y.

Boston.

State of Trade.

November has not, as a whole, been a successful month for the florists, proving as it has with many dealers, the winter record, however, with the advent of December better things are looked for, and with more reasonable weather the chances are good that the winter will materialize. Last week was good in all directions, and Thanksgiving gave all hands a good rest, but the winter has been a decided drop and conditions are but little more favorable than they were two or three weeks ago. Chrysanthemums are still coming in in more than sufficient quantities to supply demand. Carnations and roses are abundant and violets have dropped in price very nearly 50 per cent. But the winter has been a reasonable and unfavorable and good, as seen by the florists of this section are hoping for.

The wholesalers all speak in satisfaction of the trade. The florists' trade. Business has held with them in other lines and the distant dealers are lying in wait for their stock of supplies. Sample Holly has made its appearance at Sutherland's and will be in the other stores in a few days. It was only a few weeks all hands will doubtless find ample opportunity to work off their supplies.

Wholesale.

The garden committee of the Massachusetts Horticultural Society visited the estate of David Nevins, Esq., at South Framingham, on Wednesday, to see Alex. McKim's collection.

Winifred Rolker has been about town for some days.

Galvin & Co. are having good success with the large consignments of Hartsell Blue that they have secured.

Manager Kennedy of the Flower Market was made happy last week by the arrival of a fine stock of supplies.

Last Friday and Saturday the upper and lower halls of the Horticultural Building were filled with the plants of the Massachusetts school children competing for the herbarium prizes offered by the Society. It was an interesting collection indeed.

The December meeting of the Boston Gardeners and Florists Club will occur next Tuesday evening.

Paul Berkowitz, of Philadelphia, has been looking up trade in Boston.

W. K. W.

## The Water Garden

BY WILLIAM TRICKER.

PRICE, \$2.00. 25 per cent. off to subscribers to American Gardening and Florists' Exchange.

This work contains nine beautiful plates, eighteen full page descriptive views of leading Water Gardens and Ponds, and numerous smaller pictures prepared with special reference to this work. On heavy enameled paper.

Elegantly bound. Large octavo.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of grounds, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details.

A. T. DE LA MARE PTG. & PUB. CO. LTD., P. O. Box 1657, New York City

Mutual Fire Insurance, mutual

a recognized Protective Association,  
are good holdings. Secure them and  
breathe freely.

New York.

Wholesale Market.

The boom of last week was short-  
lived. On Sunday it was gone and so far  
this week has not returned. Saturday  
was a good day; Monday and Tuesday  
very poor, with but little, if any im-  
provement since. Business for the week  
has been extremely light and uncertain.  
Strenuous efforts have been made to  
maintain the quotations of last week,  
but it has been impossible, except at in-  
tervals far removed, and then only for  
small quantities. The supply generally  
has been very light and had there been  
anything like a brisk demand, fancy  
prices would have possible; but the  
fancy trade was only able to take care of

now seen are Indiana, Invincible, Lib-  
erty, The Harriet, a few Mrs. Jean-  
Jones, and some strugglers that have  
missed their season.

Carnations are again on the down  
track, having weakened in value consid-  
erably from last week. No. 1 stock  
ranges from \$1.50 to \$2.25 per 100;  
novelties vary from \$3 to \$5 per 100.  
Quite a large list is included among these,  
two very popular ones being Victor and  
Flora Hill. Lower grades and blooms  
two days old, command only \$1 per 100,  
and are often retailed at this figure.

Violets are scarce, the pick being very  
light indeed; but this is fortunate at the  
present time, for the demand is lighter  
still and prices have dropped from those  
of last week. \$1.50 is the top notch,  
with 75c. and \$1 the most prevalent  
taking figures, and sales have been made  
at much lower rates. Considerable spec-  
ulation prevails concerning the future of  
this crop. Some dealers, thinking that  
the demand is going to be good and that  
the supply light all winter, are making very

enth and Seventy-eight streets under  
the firm name of Hauff & Milling. In the  
same block L. Hart has leased commodi-  
ous premises and will erect a greenhouse  
in the rear and probably hopes to have a  
very handsome store ready for business.  
The West End Hort. Co. has the title of  
another new concern, between Eighty-  
fourth and Eighty-fifth streets West  
of the Hudson, and has formerly em-  
ployed by H. Hession, is the manager.  
Another recently established business is  
that of the Hoffman, Seventy-  
eighth street West and Boulevard.

Auction Sales.

These sales are still in full swing,  
and a general assortment of plants is  
being offered.

Ch. H. Weis, Stettin, Germany, arrived  
in New York, Sunday last, per S. S.  
Pennsylvania, bringing with him 9,000  
German-grown roses, including 200  
Marshall Niel (standards). W. J. Elliott  
will sell these, with other stock, Tues-  
day.

J. P. Cleary & Co., on the same day  
will offer large shipments of Ghent  
roses, named rhododendrous, roses,  
bulbs, etc.

A Prominent Sportsman.

The sporting publications are giving  
Ernst Asmus considerable prominence  
at the present time. He is now looked  
upon as one of the foremost sportsmen  
of the day. This honor is the result of  
his recent shooting trip in Newfound-  
land. When other sportsmen are not  
only shot his limit by law, but succeeded in  
killing several large animals on  
record. The authors show 52 points.  
Efforts are being made to get this grand  
sportsman ready for the coming Sports-  
men's Exhibition at Madison Square  
Garden, but it is feared the taxidermist  
will not be able to get it out on time.

Omaha.

Thanksgiving trade was very light,  
probably owing to the inclemency of the  
weather. First-class stock is scarce, and  
the best of the chrysanthemums are over-  
sold. J. F. Wilcox and McPherson & Reed,  
both growers and wholesalers of Council  
Bluffs, Iowa, have opened up retail  
stores in that city. J. F. Wilcox at 521  
Broadway, and McPherson & Reed at 6  
Pearl street. Council Bluffs is now well  
supplied with retail stores. A. D.

Society of American Florists.

The proceedings of the thirteenth an-  
nual meeting of the Society of American  
Florists, held at Providence, R. I., in  
August last, has now been received. The  
book contains the full transactions and  
deliberations of the Society. In the  
appendix some new features are this year  
presented. A detailed statement of the  
receipts and disbursements of the super-  
intendent of the trade exhibition is  
given, showing the total receipts from  
this feature to have been \$645,91. of  
which \$110.66 is reported outstanding.  
The expenditures foot up \$542.44. In ad-  
dition to the unpaid bill of the carpenter  
which amounts to \$60.

Cat Flower Exchange, 34th St.

The later hour at which this mar-  
ket now opens is giving great satisfac-  
tion, and this center is receiving very lib-  
eral patronage. Carnations are at the  
present time one of the leading features;  
these are seen here in great quantities  
and of excellent quality.

New Enterprises.

A new store has been opened on  
Madison avenue between Seventy-sev-

Aquatic Pond in Boston Public Garden.

The higher grades and could in no way  
help to work off the poorer stock.  
Street stands and fakirs have had mat-  
ters pretty much their own way, and  
stocked up heavily, but they in turn  
failed to sell, that class of business  
also being light.

In roses, long stem, fancy, and special  
Beauty have not yet passed the \$4 per  
dozen mark; in fact, that figure is the  
exception not the rule, more selling for  
\$2 and \$3 per dozen, and quantities of  
high-grade flowers only realize \$10 per  
100. The quality, generally speaking, is  
excellent. Good Bride, as against Brides-  
maid, is hard to sell; extras and specials  
of the last named are being looked for.  
There are too many of inferior grades;  
and as a rule, small roses are very poor  
in quality. While the cut of Meteor is very  
light, it also is having a hard time.  
Chrysanthemums are nearly over, and  
no steady price exists; there are but few  
that exceed \$2 per dozen. The varieties

tempting offers to growers. One retail  
storekeeper has made an offer of \$2 per  
100 to a certain grower to supply him  
direct with 5,000 per day for the months  
of January and February, and the bal-  
ance of the present month. There was a  
good deal of this kind of juggling three  
years ago, and then the growers got the  
worst of it; the contracts not being bind-  
ing. They were set aside at the very first  
shump.

# Our 1898 Catalogue

We can illustrate and print it for you, and the  
work will be well done, and delivered on time.  
We have the experience and every facility.  
First come naturally best.

A. T. De La Mare Ptg. & Pub. Co., Ltd., Nos. 2 to 8 Duane Street, New York.

WEEKLY MAGAZINES AT REDUCED PRICES for 1898. Save Money by ordering them through us.

Below we print a comprehensive list of the leading publications of the day. When more than one is wanted in club will be pleased to send you an estimate.

Our list has been carefully selected, and the price at which we offer magazines, etc. in club with the Florists' Exchange has been made as low as possible, in order to induce our friends to place their orders through us...

The first column of figures (A) indicates regular yearly subscription price; the second column (B) our price, including THE FLORISTS' EXCHANGE for one year.

Table with 4 columns: Magazine Name, Price (A), Price (B), and General-Cont. Price (A). Includes titles like American Agriculturist, Breeder's Gazette, Country Gentleman, etc.

Table with 4 columns: Magazine Name, Price (A), Price (B), and Horticultural, etc. Price (A). Includes titles like Canadian Horticulturist, Garden and Forest, Gardening (Chicago), etc.

Table with 4 columns: Magazine Name, Price (A), Price (B), and Poultry. Price (A). Includes titles like Poultry Review Advocate, American Poultry Review, Farm Poultry, etc.

Table with 4 columns: Magazine Name, Price (A), Price (B), and General. Price (A). Includes titles like Advance (Cong's) new, American Field, American Kitchen Magazine, etc.

Pittsburgh. Trade Improving. For the last few weeks trade has been moving along nicely and looks as if it would continue so for the balance of this year. Thanksgiving business was very satisfactory...

The News. Secretary Loughans, of the Florists' Club, has been on the sick list the past week. Superintendent Falconer, of Shenley Park, is back from his visit to Washington and the East...

Cincinnati. Market News. Thanksgiving week business improving much, and all good stock in the market sold off rapidly and at good prices...

John W. Knaz, the genial manager of the Florists' Club, is limping about and nursing his right foot very tenderly. Cause his fondness for the popular game of Rugby and a large stone that was in front of the ball when he attempted to kick a goal.

Knnoxville, Tenn. H. Youell has left this place, having secured a position as a private gardener in Chicago. This has been the most remarkable Fall on record. As yet we have not had a killing frost, and gardens are quite gay...

NEPTIS STOK CHRYSANTHEMUM STOCK. SPECIAL LOW PRICES FOR NOVEMBER.

**Titusville, Pa.**  
 W. Bay will open a new down-town store on December 7.

**Omaha, Neb.**  
 McPherson & Reed have opened a down town store at G Pearl street.

**Anderson, Ind.**

During the past Summer Stuart & Haugh consolidated two plants, which were widely separated. They have erected six new houses and added 70 feet to boiler shed. Three of the new houses are each 100 feet by 20, and three 100 feet by 10 feet. They now have eleven houses, and more than 2,000 feet of glass, all of modern construction.

**Holyoke, Mass.**  
 The Shaw Co. were rushed with funeral work at time of my visit, so I did not call over the hill to the plant of E. J. Howland who has had a remarkable run upon chrysanthemums. This may be owing to his success at the recent show held at Springfield, where of seventeen entries he secured fifteen premiums. His grower, Harry Snelser, has quite a batch of seedlings, one, a beautiful white from Mutual Friend and Queen, promises well.

**Hagerstown, Md.**

Henry Holzappel has a fine house of roses, and of carnations. His Beauty and Ferkel are extra fine. Overy is a specialty of this establishment, and one can see acres of this celery as is grown anywhere.

W. H. Bester has a good lot of Kaiser roses; his carnations also are looking well. His store under Hotel Hamilton is a drawing card here. Mr. Bester has built up an extra fine trade.

Mr. Bester, a brother of the above, grows a large lot of carnations and chrysanthemums. His roses this year are remarkably fine.  
 A. Jaenicke, successor of Mrs. Dayhoff, had some fine Robinson and Philadelphia chrysanthemums on exhibition which were a great credit to him.

EDWIN A. SELDENWITZ.

**Market News.**

The market the past week has been in much better condition; cut flowers have been rather scarce and prices have, as a result, become firmer. Choice roses are in good demand; the majority of the stock, however, is of second grade. Beauty is now bringing \$5 per dozen for choice flowers, which are selling very readily. Good Carnot are selling at \$8 and \$10 per 100; choice Bridemaid, Bride and Kaiserin at \$6 per 100, a few extra choice bringing \$8.

Carnations are very scarce. A few extra good ones, including some new varieties, are selling at \$2 per 100. The bulk of the stock of good flowers sells at \$1.50 per 100. The quality of the flowers is much improved, but the stems are yet rather short. White flowers have been scarce and in demand all week; in fact, many choice flowers sell almost as soon as they arrive. Violets have also been in good demand; choice doubles are selling

this city now has a model commission house.

**Florists' Club.**

The regular monthly meeting will be held on Tuesday next, at this meeting Robert K.H. will review the new chrysanthemus introduced this year. A large attendance is expected. The club room is now well patronized, the alleys being in use every night and some good scores are recorded. A. L. Brown had the highest score the past week of 210. The averages for November were: First class, A. L. Brown, 157; second class, David Rust, 131; third class, Wm. Rohler, 127. DAVID RUST.

**Cleveland.**

**Thanksgiving Trade.**

Thanksgiving week brought with it the most pronounced boom in trade in almost every line; a heavy demand for cut flowers, while the demand for deco-

**Bowling Club.**

The Florists' Bowling Club met on Monday evening last, and it was decided to arrange for "ladies night" on Monday evening of next week. A committee consisting of H. A. Hart and Wm. Stadle was appointed to secure light requirements. An enjoyable time is expected by the members.

**Notes.**

The range of houses owned and operated by G. W. Helsler & Co., situated on Euclid avenue, east, and it was decided recently been leased by the Bates Bros., four young men well known to the trade in this city. They will make rose growing a specialty.

C. Merkle & Sons, Mentor, Ohio, have just completed two new houses of latest design, 10x100 ft. built 3/4-span, short span to south. These two houses are now filled with carnations in excellent condition; the stock in one house covers entirely of seedlings.

F. E. Kilen, representing C. H. Joosten, New York, was a visitor this week.

**Washington, D. C.**

The florists here have organized the Commercial Florists' Association. A constitution and by-laws were adopted, and the following officers were elected: J. R. Freeman, president; Robert Bowler, vice-president; John Boyle, secretary; F. H. Hart, treasurer. President Freeman appointed an auditing committee, consisting of J. H. Ley, G. Henson, and J. R. Freeman. It was agreed that the association should meet every second or third Tuesday, beginning this month. The object of the association is to prevent the free distribution of cut flowers, and to secure for the florists claim that if the distribution should be stopped the wages of their employees could be raised from 10 to 25 per cent. ...

**Davenport, Ia.**

Last Monday morning Chas. Danbacher had his boiler shed and one greenhouse destroyed by fire and some plants destroyed by frost. To estimate the loss \$2,000.

H. L. Bills has been ill and confined to the house for the past fifteen weeks, but is now convalescing.

**Fall River, Mass.**

The greenhouses of John Wright, 459 Snell street, were last week damaged by fire to the extent of \$450. Overheated pipes caused the blaze.

**Plainfield, N. J.**

Brooks Carson is suing the Central Railroad of New Jersey for \$200 for damage done to his plants, which he alleges to have been caused by the carelessness of the railroad employees handling the boiler during transit.

**Wesley, R. I.**

Louis Reuter, son of S. J. Reuter, the Beach street florist, is home from the Agricultural College at Kingston.

**A Decorated Hansom.**

The illustration is from a photograph of a hansom decorated with flowers, etc., by T. J. Totten in connection with the recent celebration. The angle iron top was filled in with white asters and a few cape flowers. The sides of the hansom were decorated with tall strings of carnations of pink and white asters, with white doves dotted here and there as if they were to be sent to the owners. The side window was a star made of red geranium flowers. The wheels were first covered with cloth, then with yellow hydrangea blooms, a frame that fitted each wheel being covered with yellow linum and a piece of ribbon to match the asters in pink and white were tied here and there. Pampas plumes were placed on each side of the horse's head and the harness was covered with hydrangeas made into small roping and tied in or twisted to harness. The door of the hansom was banked with hydrangeas.

**MASSTICA**

For Glazing Greenhouses. A substitute for putty. Superior in every way. Sold in 5 lb. cans. Made in U. S. A. MACHINES were given Highest Award of S. A. F. at Pittsburgh. Address for circular, F. D. PIERCE CO., 170 Fulton St., N. Y.

When Writing Mention Florists' Exchange

Hansom Decorated for Saratoga Fête by T. J. Totten.

at \$1.25 to \$1.50. There has been much more call for the large singles during the past week.

Valley brings \$4 to \$6, according to quality, and is selling well. Saxifex realizes 15c., and is in sufficient supply for all demands. Romas are selling fairly well, so far, at \$3 per 100.

The retail stores have all been doing a fairly good business. The list of young ladies "coming out" this season appears to be very large, and teas have been quite numerous. The flower work appears to have been very evenly distributed; bouquets are ordered more freely than in some time past. The list of balls for this city for the coming season is a large one, and from present indications the season will be a good one for the florists.

**Japanese Plants.**

An auction sale of the dwarf hardy evergreen trees, peculiar to Japan, was held at Davis & Harvey's rooms the past week, and some very high prices were obtained, which was quite unexpected. Some of the dwarf trees, from two to three feet in height, sold at \$60 to \$80 each. The plants were from the Japanese Tea Garden at Atlantic City.

**Jollies.**

Louis B. Eastburn has been sending in to W. J. Baker a few blooms of a new white seedling carnation, which bids well to become a grand variety. It has a stiff stem, the flowers being fragrant, of good substance, and it has proved to be an excellent keeper.

Sam S. Fenwick has now completed the alterations at his wholesale commission store, and has a very commodious establishment. He has acquired the adjoining property, and taken down the dividing wall, making one large room. He will use the new addition for grading and shipping purposes. He also has added a new refrigerator, which is 8 feet deep, 10 1/2 feet high, and 12 feet long. The office has also been enlarged, and

rative work was fully equal to that of former seasons. Most stock which has been so plentiful was closely used up, and a decided advance in prices was shown. On Wednesday evening very little good stock was available. At the present writing prices remain about the same as they did a week ago, and while trade has shown some falling off, it still remains brisk, and most dealers feel greatly encouraged over the outlook.

**Present Values.**

Roses.—Some kinds are now very short, retailing at \$1 to \$1.50 per dozen; wholesale prices are \$4 to \$6 per 100. Beauty, some very good home-grown stock is in demand, but it is not so plentiful as out of town; retail prices \$4, \$5, \$6 per dozen; wholesale \$6 and \$10 and upwards, according to quality.

Carnations have taken a decided leap upward as regards prices; wholesale prices are getting up to \$6, to \$1 per 100 a few weeks ago, the growers now realize \$1.25 and \$1.50 on good stock, and the indication is that good carnations will be in very short supply before long. Retail prices range from 35c. to 50c. a dozen. Romas are now quite plentiful, and sell at retail at 75c. and \$1 per dozen. Growers retail at \$3 per dozen.

Some Hartsill blooms were seen; excellent stock, but not home-grown, now selling at \$3 per dozen.

Violets are exceedingly short, and those offered are of none too good quality. Local growers seem to have none to offer. Stevia holds a prominent place on the retail counter, and is now much used in floral work. It retails at 50c. per dozen. Chrysanthemums are about gone, and their absence not only causes a greater demand for other flowers in decorative work, but leaves a bare spot on the retail counter and in the show window that is difficult to cover with the limited variety of flowers now in market. The blooms offered sell at \$1 to \$2 per dozen.

NEW YORK, DECEMBER 11, 1897.

One Dollar Per Year.

## NOVELTIES IN CHRYSANTHEMUMS

We are Now Booking Orders for the Following Prize Winners. Plants Ready for Delivery March 1st. Place Your Orders at Once. Orders Filled in Order Received.

**FRANK HARDY.** This fine chrysanthemum has created a sensation wherever exhibited this season. It has a future, and is bound to find favor both for commercial and for exhibition purposes. It is a masterpiece in every way; erect stem, good keeper; foliage right up to flower.

**MRS. H. WEEKS.** This is an ideal variety for exhibition purposes, and takes on a size and final cut to be found in any other white. Its merits may be judged by the fact that it won first prize for the best twenty-five white in competition with the finest examples of Queen and Mrs. Henry Robinson that it has ever been the fortune of the writer to see. Stem, neck, and foliage are all perfect.

Price of the above two sets, \$3.00 per dozen; \$20.00 per 100.

**PENNSYLVANIA.** The first yellow chrysanthemum for cut blooms or for exhibition ever produced.

We also call particular attention to **AUTUMN GLORY, SOLAR QUEEN, BLACK HAWK and QUIGO.**

Price of the above five sets, \$5.00 per dozen; \$35.00 per 100.

We can also supply all other novelties of the season at intro' users' prices, and will be glad to book orders for any varieties wanted. Our collection of standard sorts is large and complete. We will be glad to quote prices on any of our standard varieties.

WE ALSO CALL ATTENTION TO OUR LARGE STOCK OF

## PALMS AND OTHER DECORATIVE PLANTS.

We will be glad to mail our special offer of these for holiday trade on application.

We are offering bargains in **LARGE ARECAS, ARUCARIAS, NEPHROLEPIS EXALTATA BOSTONIENSIS** (The Boston Fern), **PANDANUS VEITCHII, FICUS, KENTIAS, LATANIAS,** etc., etc.

## PALMER'S HOT BED MATS.

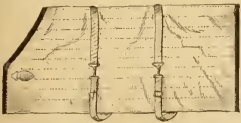

FROST PROOF.

MADE EXPRESSLY for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

Indestructible, Cheap and Warm

Will not harbor mice or vermin. Easily handled. Have now been in practical use three years. Cost less than half as much as old-fashioned straw mats and entirely take their place. Made in regular sizes, 76x76 inches and 76x40 inches, or any size desired sold by the running foot 76 inches wide.

That these mats are a much needed improvement over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hot Bed Mats should give them a trial.

WE ALSO MAKE  
**QUILTED HORSE BLANKETS,**  
The Cheapest, Warmest and Strongest in the World,  
WEIGHING 9 POUNDS.

## Four Grand Early Pink Chrysanthemums

### ROSE OWEN.

One of the best very early pink chrysanthemums of recent introduction. Ready list September to 10th of October. Height, 35 feet. Clean, neat grower, perfect stem, with bright, waxy foliage well up to the bloom. Color bright clear pink. V. Morel shade. Involved Japanese flower, large to extra large when well grown. Will bear close planting as foliage is not dense. We offer this variety with much confidence, knowing it will give satisfaction as an early commercial pink. Every bloom sent to New York market was snapped up at once by leading florists. Having a fine, clean stock, we shall be prepared to fill large orders. No grower who needs a clean, bright, first early pink should neglect Rose Owen. Dozen, 75 cents; 100, \$5.00; 100, \$45.00.

### J. H. WOODFORD.

A beautiful, large shell pink, shaded to center; high globular form with heavy broad closely involving petals, strong stem and fine foliage; extra early. Can be cut October 20 to 10th. Crowns or terminals; on crowns color is pure white, H. A grand early pink to follow Rose Owen. Nothing better in its color for a second early. Dozen, 75 cents; 100, \$5.00.

### GEO. F. ATKINSON.

Clear shell or mermaid pink, high built globular bloom of great substance and largest size. Early, flowering immediately after J. H. Woodford. Still stems and splendid foliage. A fine commercial sort, 95 feet. Dozen, 75 cents; 100, \$5.00.

### BELLE OF CASTLEWOOD.

Rich, emerald shell pink globular bloom of great substance, early flowering Japanese, distinct and pleasing shade. Immense bloom on a grand stem with splendid foliage. Too much cannot be said in favor of this variety as it is one of the most chosen and beautiful chrysanthemums in existence. No grower should be without it. Dozen, 75 cents; 100, \$5.00.

## THE BEST TWO VERY LATE WHITE CHRYSANTHEMUMS.

**DOROTHY DEYENS.** Undoubtedly the very best late white. Magnificent snow white, largest size globular form, clear delicate pink grand stem, rich deep green foliage. December 1st to 10th. Doz., 75c; 100, \$3.00.

**MRS. R. CRAWFORD.** November 20th to December. Extra large clear white, fine in every way. Flower large and well built; one of the very best. 3 feet. Dozen, 50 cents; 100, \$3.00.

### A GRAND LATE PINK.

**THE HARRIOTT.** Deep Rose, silvery reverse, large bloom of great substance, 9 feet. Ready December 1st to 10th. A grand commercial pink. Dozen, 75 cents; 100, \$4.00.

If you need Carnations, Geraniums, Kentias, Boston Fern, &c., write for our Jan. list.

### SEED TRADE REPORT.

Points and information from seedmen, and all other matters of the column selected. Address Editor Seed Trade, care of Florists' Exchange, P. O. Box 107, New York.

#### AMERICAN SEED TRADE ASSOCIATION.

GEROME B. RICE, Cambridge, N. Y., President; F. B. CLARK, Milford, Conn., Vice President; J. W. MILLER, Columbus, Wethersfield, Conn., Secretary and Treasurer.

New York.—The United States Consolidated Seed-Inaising Company of Brooklyn has been incorporated with a capital of \$300,000. The directors are Alfred Nicholls and Robert W. Butler of Brooklyn; John Scott, of Staten Island, and Robert F. Gaylord and Charles P. Storrs, of New York City.

Owing to some misconception of the notice published in the trade papers relative to the retirement of Peter Henderson & Co. from the wholesale jobbing seed business, they beg to announce that they will still continue to supply, at the wholesale prices, to florists and market gardeners, all sorts of planting, bulbs, plants and bulbs, as well as everything they offer. Their object is to deal direct with the market gardeners and florists only, and supply the best goods at the lowest prices, quality considered. Read for further announcements page 1117.

New York, Jr. I.—A. A. Hovey, for the past four years in charge of the department at George A. Weaver's store, has closed his connection with Mr. Weaver's business, and will go to New York to open a florist's store on Columbus avenue.

#### Presentation to Mr. C. L. Allen.

At a special meeting of the Riverhead Horticultural Society, held at Northville, L. I., on Friday evening of last week, Charles L. Allen, of Floral Park, was presented with a handsome testimonial of the members' appreciation of that gentleman's worth and services to the cause of horticulture, and the gold is heavy and finely chased, and it was presented by R. D. Peary, secretary of the Society. Mr. Allen's name and the name of the donor is neatly engraved upon the underside of the handle, and the inscription is as follows: "In furthering the interests of this Society in various ways, manifested the kindest appreciation of the honored contributor him."

#### European Notes.

##### Arrival of Winter.

A sharp touch of frost over northern Europe, and scattering snow storms over the south, inspire us with the hope that an abnormally mild season is about to change its character and put on a winter dress. Such a change will be most welcome both for the health and comfort of the seed grower, and the health and safety of the plants upon which his next season's crops depend.

##### Effects of Mild Weather.

The mild weather which has been referred to several times of late in these notes, as it is accompanied by considerable mist and fog, has had a very different effect upon the plants in the different districts. Taking brassicas as an example, upon a light or sandy soil are withering fairly well, but have every appearance of running when the Spring comes round; whereas on a strong or heavy loam are going off badly. The plants appear to have spent their force in getting up to the winter, and are less so seed purposes. If we have a dry Spring, it is from the latter class of soil that the crops are obtained, but in that case the crops from the dry, sandy soil are about nil.

There are in a similar condition, but it is the extra early varieties that have suffered the most up to the present time. The plants are in the present condition, and the perseverance of growers who persist in growing such sorts as the Extra Early Purple Heart of Milan, or the twin brother, the all-white variety. Not in one year out of ten do they yield an even moderate crop, and it is not infrequently worth a dollar per pound if the grower is to have a living profit. But if a grower should dare to risk this figure he would

be told to go to—Klondike. Some of the very early yellow-dish turnips are just about as risky, and if the present high prices of grain are maintained for another season, it is probable that these very risky crops will be dropped entirely. As regards the balance of this season's crops, the market producers are giving us the usual amount of trouble in the curing and cleaning. A cold dry spell would do us wonderfully.

#### Market Seeds.

In market seeds the only changes to report are an enhanced price for rape and a considerable rise in white mustard. Good supplies of the latter are very scarce and higher in price than they have been for several years. The clover seed market remains in a state of rter stagnation. Bird seeds hardly move at all, grasses are fairly active. Bolling peas and beans are in rather more demand than an upward tendency in prices.

EUROPEAN SEEDS.

## BERBEA IMPROVED MAMMOTH.

New crop seed of this magnificent strain. Highly improved, of the very largest size of flowers and good quality of the petals. It is selling at 25¢ per lb. for 25¢; 3 pats. 40¢; 4 pats. 41.00. Call for our prospect over! Address: W. H. RUPP — Shiremanslow, Pa. When Writing Mention Florists' Exchange

## Stationery for Florists.

Every florist in the land should have a complete outfit of printing matter prepared with to conduct his business in a brilliant style. We have the largest outfit in America devoted solely to horticultural printing, and we understand the wants of the trade. Below we quote two combination offers and would be pleased to supply you.

### \$5.00 Combination offer includes....

**FRUITING HOUSES.**

Our most trying period is now about over—the solution of the get through the dark soft weather which, as a rule, precedes the coming of Winter, without some wise means will be a failure. The soft growth, Careful management from now on should soon remedy this, since the temperature and atmosphere are quite under our control.

I have wondered how many of us have this season had this change of conditions which annually gives us a most excellent illustration as regards the atmosphere the condition most deleterious in?

After cold winter sets in, thereby making steadily frigid necessary to maintain a proper temperature, surplus moisture is a thing of the past to a very large extent. The atmosphere, on account of being colder outside than inside, is constantly changing; thus we can maintain, without much trouble, the cool, bracing air which is absolutely essential to bring the carnation up to the highest standard, and prevent the spread and ravages of the numerous fungoid diseases to which the carnation is subject, which all depend for their growth on moisture and stagnant air, which, while it may be all right for some other plant, does not circulate freely and is not strong enough for the needs of the carnation. The conditions which promote health and vigor in one class of plants very often produce the opposite in another species.

The older and more experienced growers who have already mastered the knotty problems in carnation culture, can say anything in this subject which they do not already know. My object is to give some hints, in case of the small or inexperienced grower, and I would not repeat things so often were it not for the fact that those who are most in need of such information are usually the ones who forget it first.

In every place where I have been, where carnations were not thriving at least fairly well, I have invariably noticed that the soil and atmosphere were in an improper condition of atmosphere. Very few sections there are, I believe, which are so dry and so cold, and which are in just as good shape as another; therefore, if we sit it out, constant vigilance will be required to accomplish more than anything else.

The very natural desire to save fuel to avoid the extra cost in growing carnations in the greenhouse. To give only when the temperature outside, or the rays of the sun, are such as to demand it in order to keep down the temperature inside, is a practice which must be entirely abolished before success will come. I remember, in my own experience, that this was my principal failing, and that the hardest one to remedy, for the simple reason that I, like others, was inclined to save fuel. In this as in everything else, the extreme must be avoided. The first important step is to understand the conditions necessary, and then to maintain them.

There will be no increase in temperature in our carnation houses in order to avoid the extra cost of the fuel. Experience has long since demonstrated to me the fallacy of this practice, and its evil results. The only way, if you care at all for the health and vitality of your stock now and later on, is to treat the plants as you would treat them at any other time, which is supposed to be the best and most economical.

Fumigation must also be looked after; some of it must be done regularly, since the self-sterilization will not have any effect down in the tender shoots.

H. WEBER.

Chester County Society.

The regular monthly meeting of the Chester County Carnation Society was held in the office of Wm. Swayne, Kennett Square, Pa., December 4. Wm. Swayne was called to the chair. The secretary read his report in regard to expenses, etc. He had a conference with Mr. David Herring, assistant superintendent of the Chesapeake Division, Adams Express Co., who promised to have all perishable goods handled with the greatest of care and would so instruct all the agents on the road; also that empties returned to be returned in good order and he would try and have the company take off the tariff of 5c. per box now paid for returning empties, and also to get down to lowering rates, but they would give us

the best service possible; and any neglect on the part of the agents be desired reported to him at once. It is to be noted that the shipment of the 100,000 from Central R. R. are entirely at the mercy of the Adams Express Co., there being no competing line. However, Mr. Phillips, of the Society, had been looking up a way to reach the Baltimore and Annapolis line, which is only four miles distant from Kennett, with some little loss of success. The way being very stormy, they are not so small and late. Wm. Swayne reported some irregularity in the express charges on making orders, which the secretary was instructed to investigate. The subject for debate at next meeting is "Is the American Carnation Society of any use under the sun?" Joshua Ladley for the affirmative, Edward Swayne for the negative. A lively discussion is anticipated. W. R. SHELLEBEE, secretary.

**Clover Seed Insects in Ohio**

Complaints are coming to the Ohio Experiment Station regarding the appearance of insects in clover seed, the present Autumn, in such numbers as to occasion much concern among the farmers. In southern Ohio, this insect has been determined to probably be one that has attacked clover seed in West Virginia, although it has never before been reported from Ohio. At the present time this is a very small, robust, whitish worm, that is found inside the seed. This insect is one of the most common four-winged fly, but entirely different from the clover-seed maggot, which is red in the maggot stage, and yellow and white in the adult stage. The trouble in the northern part of the states seems to be an entirely different matter, and though doubtless an insect, it would seem from the northern part of the states seems to be the young of some kind of fly, related to the "red weevil" in wheat, or the Hessian fly. Although the nature of the occurrence of small red or pinkish worms in great abundance among clover seed has come to the station several times this Fall, in no case has material for study accompanied such complaints, and the Station is not prepared to say whether or not the new insect is a serious enemy. The Station very much desires all information on this subject in this matter, and especially does it desire infested clover seed for investigation and study. This infested seed, in all cases, should be of a quart, being sure to get with the seed an abundance of the minute red or pinkish worm, which in all cases should accompany the package, by mail, a letter stating the exact locality from which the seed was taken, and the extent to which it occurs.

EXCELLENT results, increased sales, and good profits will come from using our world famous Wheat Sheaves Seed for new catalogue. Bayardserfer & Co. Adv.

### Violet Diseases.

The Floricultural Society of New Jersey, at its meeting held in Orange, N. J., on Monday evening last, discussed the subject of diseases of the violet. The lecturer of the evening was Dr. Dodge, who in a most interesting and instructive manner detailed his method of making cultures of the common disease known as spot. By means of diagrams he showed the action of the pest on the epidermis of the leaf. His deductions from the results obtained in his cultures were to the effect that the growth of the disease corresponded closely to the descriptions of that of a fungus. It was not a bacterial growth, such as produced trouble in the human anatomy. The fungus was one, which, under different circumstances had different forms of growth. Dr. Dodge at the outset of his brief talk, intimated that the violet spot was the only disease of this plant to which he had given any study.

Dr. Halsted, of the New Jersey Experiment Station, on being called upon, briefly described other diseases to which the violet is heir, among them the bacterial disease that strikes both the crown of the plant and tears down the tissue of the leaf. Another, a leaf spot, different from that described by the lecturer, coming from another kind of spore, with thread-like ramifications running in between the cells of the plant. The spores of this disease are carried by dripping water or the movements of the air. Another, the necrotic violet leaf disease, enters the leaf by the stomata or breathing pores, branching and breaking down the tissues. Black spot, different from the pest of the same name affecting the rose, only attacks the violet when the plants are kept up to "the high-water mark." One of the worst troubles below ground from which the violet suffers is the root rot, caused by nematodes or eel-worms.

Chairman McElroy then called upon several members to file reports on the discussion, which resulted in hosts of contradictory testimony as to the causes and remedies. It was agreed that in a moist atmosphere was conducive to the development and spread of the spot. Its effects were most remarkable. Some of

plants that up to a certain stage had been free were seized suddenly, and the older leaves being attacked and the younger growths enjoying immunity from the pest's ravages; again young and old leaves would both suffer. Russian violets as well as the less hardy Marie Louise and others of that type, were all liable to be more or less affected. It was suggested that not to wet the foliage might prove a preventive to the spread of the disease, to a more or less degree; while, from the experience of one successful grower who fed his soil liberally and mulched heavily, a good soaking with the hose had been the remedy applied to get rid of the trouble. Location, style of house, and other points were all touched upon. Mr. Herrington mentioned a case where violets were raised most successfully at Highlands, New York State, in houses originally built for rose growing, under conditions that were supposed to be dead against successful violet growing. The plants were in steam-heated houses, on elevated benches. The houses were 20x25 feet. The soil in the benches was kept rather dry so as to have the plants dry at the roots. Practically no water was applied to the roots. The plants were only manually fed, and a good spraying given every other day, and there was not a trace of spot on the place. Curiously enough, plants obtained from this place and grown in another locality, developed the disease. Mr. Minna believed the deterioration seen in the violet was attributable to forcing and over-propagation. The stock might be restored to prime condition, if a certain portion were put in cold frames and left there when the plants were making their natural growth and then propagated from. The violet, like the carnation and chrysanthemum, was more or less a hardy plant, and to force it, from year to year, like a tropical plant, was a mistake. Investigation and opened up a way for these diseases to get in their work.

The discussion, summarized by Dr. Kitchin, brought out the following points: That specific organisms are the cause of violet diseases; that it pays to obtain healthy plants with vitality to ward off these diseases; that in a moist atmosphere, the

WHILE we have withdrawn from the Wholesale Jobbing Seed Trade we respectfully announce that

WE WILL STILL CONTINUE TO SUPPLY FLORISTS AND MARKET GARDENERS...

bright and clear, were favorable to successful violet growing; that a certain amount of shading is beneficial, obstructing the action of the sun.

In answer to a question, Dr. Halsted said that preparatory to filling the houses, impregnating them with sulphur would act as a preventive; spraying diseased foliage with Bordeaux mixture and lime, and dusting with sulphur would check the disease, and although it had never been demonstrated, hydrocyanic acid gas might prove to be destructive to the lower organisms constituting the different diseases. Others who participated in the discussion were L. Batt, W. Duckham, and J. W. Withers. After all the vignettes of these troubles, some pests had been delineated upon, it was found that nothing of a novel character as to their origin and cure had been elucidated, when the meeting adjourned.

### Market News.

The reports from wholesalers and retailers this week are slightly more encouraging than they were a week ago, though the improvement noted in all cases was little more than noticeable. Great expectations, however, are indulged in for Christmas, and we hope they may be more than realized. The cloudy weather of the past month is sometimes unaliated, except for a day at a time occasionally; and unless we are blessed with more sunshine during the coming two weeks, it seems probable that cut flowers will be scarce for the holiday.

There is little new to report regarding the market, except as mentioned above, that the demand is somewhat better, though prices have shown little or no advance recent week. There is ample stock in all lines though many of the violets offered are a little off color and really good ones are being cleared up. At Horticultural Hall last Saturday, Fred L. Harris, gardener to H. H. Hunsnevell, Esq., exhibited a superb specimen of the new begonia *Glorie de Lorraine*, with its fine foliage and profuse pink blossoms. This valuable acquisition to the begonias, and as it promises

to be a good house plant it will prove of value in this respect. John Mitchell, gardener to J. E. Rothwell, Esq., showed a fine specimen of *Cyrtanthus*, *Niobe*, *Arthraurum*, *Lecanum* var. *gigantum* and *zenanthum superbum*. H. F. Chakabery, gardener to Hon. C. G. Roebing, showed a handsome specimen of *Cyrtanthus Niobe superbum*.

About twenty friends of E. M. Wood tendered that gentleman a complimentary dinner at Harvey Ames' Hotel, Westport, Waltham, Mass., on Thursday afternoon last. The affair was a decided success, all participants enjoying themselves to the full measure.

The Boston Gardeners and Florists' Club met on Tuesday evening, an average of thirty specimens of *Cyrtanthus*, attendance being present. An interesting paper on the advantages of soda water nozzles and forcing air-pumps in chemical fertilizing was read by Mr. A. H. Ward.

George Anderson has a house of polsters which are in fine condition and, as usual, will be in good demand for Christmas. W. K. W.

### Newport, R. I.

The following course of lectures have been arranged for by the Newport Horticultural Society.

By Mr. John K. L. M. Parquhar, of Boston, on December 22; subject, "Jamaica," to be illustrated by the stereopticon.

On January 26, 1898, Prof. H. J. Wheeler, of the Rhode Island Experiment Station, on "Results of experiments with lime on various crops;" and on February 23, Prof. L. F. Kinney, horticulturist of the State Agricultural Experiment Station, will speak on "Influences of horticultural societies."

At the meeting held on the 8th, two new members were elected. Robert Lannier staged a fine group of begonias, and was awarded certificates of merit for superior culture of *A. sanguinea* and *B. inermata* (improved). These were a fine lot, being extra well done. The stenographer recently built by J. J. Van Allen, Esq., have been taken by G. H. D. McIntosh, who, I understand, will be a new tanneries and letter for a new net. A. M.

# MISTLETOE

## CORRESPONDENCE.

Insertion will be given in this column to all communications from artists, but the opinions expressed do not necessarily reflect our own.

### Adiantum Farleyense.

Editor Florists' Exchange.

Your note on Adiantum Farleyense (page 1080) stating the fern is a sport of Adiantum capillus-Veneris is to say the least, somewhat misleading. No doubt, you had in your mind the sport from A. capillus-Veneris which very much resembles A. Farleyense, especially in the smaller and middling stages of their growth; but in a full-sized specimen of either their dissimilarity is very apparent. It has been long known that the variety or sport known as A. Farleyense originated from the sort named Adiantum tenerum. In fact, the proper name of A. Farleyense is Adiantum tenerum Farleyense. FRANK ROY, Montreal.

[The specific affinity of Adiantum Farleyense is yet an unsolved problem among botanists. We shall have something to say on this matter in our next issue.]

### Naming Chrysanthemums.

Editor Florists' Exchange.

As to the editorial on "Naming Chrysanthemums," the writer evidently had a lapse of memory. In the advertising columns of the Florists' Exchange Chrysanthemum number of 1896 was published the withdrawal of the name Wm. H. Chadwick from the yellow variety shown before the committee.

In wanting arguments it is wiser to get at all the facts before presenting briefs. As the yellow variety is not in commerce the name Wm. H. Chadwick is properly applied to this grand white in question. Simply before the chrysanthemum committees, names, numbers or letters denoting varieties presented are private property until the variety is discontinued, but when once in commerce, its name is permanent. This is the accepted, common-sense rule now in force. An reputable grower will guard the public from duplication of varieties under different names, and will convicted is "above suspicion." I suspect the New York committee would like to make a "Dryfus (reynus) of somebody (the French party) sink in disgrace vice for some one else's sake." He will spell the right to the man who will pardon me a little sarcasm. As to the replies, delaying reports except through the secretary, it works to the disadvantage of the exhibitor. On account of this delay I lost the advertisement of Wm. H. Chadwick in several prominent catalogues, by only a day or two in one instance—had gone to press.

Yes, we hear you. Were it Chadwick chrysanthemum will be distributed March 1. See advertising columns. And I can guarantee it to be in circulation in every particular. If I am not mistaken it has the distinction of being the only seedling novel of the year that has the hearty gault of the Chicago, Boston, New York and Philadelphia committees. Hip, hip, hurrah!

[In the advertisement referred to Mr. Rawson states "along in the early part of the season" seedling 77, a yellow after the order of Golden Wedding, was erroneously labeled W. H. C." This follows the announcement that among his seedlings for '07 he has "an immense way white, tinted flesh at center, to be named for William H. Chadwick, President Chicago Horticultural Society." The notification of the erroneous labeling was made after the variety had been presented before the various committees, or to other words, after actual publication"; therefore,

according to accepted botanical usage, the yellow variety is entitled to the name. We do not believe that erroneous labeling or non-discontinuation of the matter in the least. The particular variety in question has gone on record as such, and it is not to be discontinued. There are, however, several good and sufficient grounds on which change of name is allowable; in fact, necessary; but we hardly think that carelessness is one of these. Supposing the variety had been certified and discontinued, the erroneous name, according to our correspondent's own admission, would have had to be "permanent"; why, then, should it be otherwise because the variety failed to score and never entered the growers' Discontinuation is not the only factor that establishes priority of names as has already been pointed out. On general principles, laying fast and loose with nomenclature, wherever applied, is not conducive to public convenience, and while there is no compulsory law against the practice, in the best interests of all it should be indulged in as little as possible. E. J.]

## AMONG THE CANOLES.

Under this heading we will publish descriptions and occasional illustrations of novelties to be introduced. Growers and disseminators are requested to send us the necessary particulars together with the introduction of the variety. It will be used, and this paper assumes no responsibility for the statements made, a sole reserve the right of selection.

### New American Cannas.

The following are among the new Cannas for 1897-98 being introduced by A. J. Kunkin, Philadelphia. Grower and disseminators are requested to send us the necessary particulars together with the introduction of the variety. It will be used, and this paper assumes no responsibility for the statements made, a sole reserve the right of selection.

**Champion**—The largest, brightest, and most beautiful of the new Cannas to date. Immense spikes of gigantic flowers with petals 2 1/2 inches wide, of a pure, dazzling crimson-scarlet, overlaid with golden tints and purplish reflections. A color not approached in brightness and richness by any other canna. It is of very vigorous growth with bright green foliage. Buds four to five trusses to a spike; 50 to 75 enormous flowers to a single truss. All experts who have seen this pronounce it the finest canna in existence.

**Klondike**—A pure gilded orange; absolutely without a rival. A color quite new and much sought for by our clients. Flowers enormous; petals 2 1/2 inches wide, well-rounded, incurved. Dazzling orange, green freckled, one foot across.

**Lorraine**—Pink, edged white; a charming combination of colors. The flowers are large, a bright pink, spotted red, each petal broadly and clearly edged with pale yellow, soon changing to creamy white. Spikes large, bearing 40 to 50 flowers. Single stems of large flowers on bold, heavy stalks. The three or four in center of the spike are the upper segments pink lemon-yellow, just like pink ground. Lower petals is rich yellow with distinct and bold design of very marath red.

**Triumph**—Velvety scarlet, overlaid with deep blue and much sought for by our clients. Vigorous grower and constant bloomer.

**Cuba**—Enormous spikes of immense flowers. The segments are deep chrome yellow and by a large blotch of deep vermilion red; an immense advance over any of this type, and very distinct in the shades of its coloring.

**Golden Pearl**—By careful crossing, this will probably be the best of all the new flowers. We have frequently had flowers of it with 9 to 10 petals. It is quite regular in its growth. The color of its flowers are golden-yellow, others are yellow streaked and shaded red and blue; very dwarf; a profuse bloomer.

H. BAYNEBROOK & Co.'s new catalogue now ready. Send for it, 56 N. 4th St., Philadelphia. Adv.

# DO YOU EVER THINK?

Doubtless you do, but did it ever occur to you how small this old world is when measured by Telegraph or Railroad time?  
Do you know that **Caldwell's Christmas Greens** are only 40 hours from Boston, Buffalo, St. Paul or Minneapolis? 30 hours from New York or Chicago?  
We can reach you in 24 hours if you are in Washington or St. Louis, and only two or three hours more if in Baltimore or Philadelphia.  
Indite us a message some morning, noon or night, and the wires have hardly cooled before the goods are at your door—fresh from the woods, glossy and green, and the dew yet sparkling on each spray.

MANTEL DECORATION.

## Now Think!

Does it pay you to handle Holly that is fresh? We can give it to you gathered only a few hours before you need it. It comes to your door all charges paid.  
Do you get Mistletoe that is dry and wrinkled from age? Well, you ought to see ours! Like our Holly it is fresh. Berries white as snow.  
We have **Smilax, Ilex Cassinis, Magnolia Foliage, Palm Leaves, Palm Crowns, and Long Needle Pines** all the same way.  
Did you ever use **Caldwell's Greens**? If so, you know them, if not you need them. It pays to use the best. We have it in our line. "A little higher in price, but—"  
Plenty of time yet to get our handsome pamphlet, "Southern Evergreens." It comes for the asking.

**"Speed Our Specialty."**  
**"Always On Time."**

**NOTE OUR OFFER** of FIVE DOLLARS to the man who will sit on a bunch of our "smooth-leaved (?) Southern Holly" and stay there, is still open to all comers.  
**CALDWELL THE WOODSMAN COMPANY, EVERGREEN, ALABAMA.**

## THE MEN WE MEET.

No. 3.—CHARLES H. ALLEN.

They say that poets are born not made, and the same remark holds good with florists and gardeners; but when one of the latter has the advantage of having been, so to speak, born and bred in the business, his chances of success, other things being equal, are infinitely greater than those attending his becoming an advent into this world were otherwise. Yet in his, as in the case of those less favored, the top is reached only through hard, persistent effort.

The subject of this week's sketch is one of those men who may be styled a "florist by birth as well as by inheritance." The worthy son of a noble sire, he is now recognized as one of the leaders in the craft, in the particular lines which have constituted his life-work.

Charles H. Allen, of Grand Park, N. Y., is the son of Mr. Charles L. Allen, whose name is written in horticultural literature as familiar to those identified with the trade as a household word. Young Charles, after a few wanderings, nearly forty-two years ago, removing with his parents to Brooklyn when he was sixteen months of age, then attending the public schools, and later the Adelphi Academy. When he had reached his fourteenth year he was sent up through the city at Queens, N. Y., where his father engaged in the bulb business, more particularly the gladioli, and had his home place, having been the first in America to grow gladioli for the trade on a large scale. At the age of seventeen Charles became associated with his father in business, and has remained in it constantly for the past quarter of a century, succeeding to the entire control of the concern on the retirement of his father twenty-two years ago.

The great development of the gladioli industry in America can best be measured by Mr. Allen's statement that the trade therein has increased forty-fold. Much of this result, we are sure, has been due to his untiring efforts to popularize the flower.

While not entering into the political phase of the question it is worthy of remark that the imposition of a tariff on this staple made gladioli culture in the United States a business. At this time Mr. Allen started in business, a great proportion of the trade in imported varieties and a large part of the mixtures. The removal of the tariff on gladioli growers has since then secured the trade, and was not then felt. An export trade has been instituted for some time, and as many times as many gladioli bulbs exported as were imported.

One of the uses of this flower, that ever became popular, has been originated by American growers. One very similar to that now in vogue was introduced in California, some of the flowers were sciondoble, others came in whorls, but they never varied, and the new type, of which is known as the giant-flowered is an introduction from Europe, originated by Leichten. Mr. Allen states that these, although having very much larger flowers than those of the Gandavensis type, were not so shabby, and were more sturdier, and consequently, do not suit the florist trade.

It is now over work there is nothing better than the gladioli. Mr. Allen recommends that they be grown under color or name. They can be brought in by varying the time of planting, so that flowers can be had until heavy frosts. Of course, with late plantings considerable risk has to be taken.

A number of years ago a few florists tried to grow the gladioli, but they were not very successful. In later years, however, it has been found that some of the several parties who have discovered the little secret—which consists in planting the bulbs in the soil, and growing them hot. Heretofore, this condition had not been provided, and that was one of the reasons why they were not successful flowers were not produced, aside, until along in April or May.

Mr. Allen remarks: "I would not advise any florist to force more than four kinds, and these are Shakespeare, Isaac Bonita, Brecheval and Eugene Scrie."

This gentleman's gladioli trade for a season has exceeded one million bulbs. Regarding the question of raising our own supply of bulbs generally in this

country, Mr. Allen's "American paper," for which he was accorded an "American vote of thanks" by the members of the S. A. F. at Providence, will still be fresh in the memories of our readers. The following extract from the paper referred to concisely presents his views on this matter:

"I thoroughly believe that if the matter of bulb growing in this country is handled as it should be, by those who only understand the nature of bulbs, it will only be a few years when the foreign bulb growers will receive their letters of recall from this land; but you must remember that they will not give up the business without a struggle; they will do everything in their power to hinder the establishing of this as they have every other industry. Knowing, only too well that if an American undertakes the producing of any article in which there is a show of profit that he is bound to succeed, I will ask you that at present prices it would not pay to grow stock that we import; I will ask you to get a little time to figure out what you can get from an acre of Lily of the valley, planting the pots one inch apart in row ten inches apart; frezias the same and the other stock having more space according to their size. I believe that you will find the amount far beyond your present ideas."

Mr. Allen, has been abandoned. The Dahlia, he says, is not likely ever to become a popular cut flower, and as an outdoor decorative plant it has been, to a great extent, superseded by the canna. The connection of his gentleman with the carnation is well known. It is a plant that has received a good deal of his time and attention for the past quarter of a century. His first seedling was Haindale, and he has been interested in the raising of new kinds right along. Probably the greatest improvement noted in carnation growing in all these years, is the free-flowering qualities of the plant—the breaking away from the habit of cropping. Some of Mr. Allen's predictions, in regard to what may be looked for in the carnation, we give in his own language as follows: "I believe there will be worked up types for general Summer-flowering and for general garden work. This result simply hinges on some one being willing to apply himself in this direction."

I believe, also, that we are going to get a big class of flowers on plants which will be more remunerative to grow than those yielding quantities of blooms that only bring a moderate price. In mean, we will get high-grade flowers on some of the best growing plants of the world. Jubilee, Bradt, and Flora Hill may be cited as examples. Already I have ob-

## A Handsome Catalogue.

One of the most attractive catalogues in its line has just been sent us by Messrs. H. Bayersdorfer & Co., of Philadelphia, and the whole publication is in keeping with the diversity of high-class florists' productions. It is a list that should be on the front cover appear the familiar faces of Mr. Bayersdorfer and Mr. Berkowitz, and the whole publication is in keeping with the well-known energy and enterprising business spirit, which characterizes the whole. It is a list that should be in the hands of every dealer in supplies, by whom, as the firm suggests, it should be preserved for future reference.

## An Omission.

In the report of the Grand Rapids show we failed to state who were awarded the premiums for 50 seedling carnations. The prizes taken were as follows: First, Crab & Hunter, second, Grand Rapids Floral Co., third, Geo. Hancock & Son, Grand Haven. The principal variety in Crab & Hunter's collection was a new one, called the King of the Albertini, with a strong stiff stem, and rich rose fragrance, large, full, heavy buds, and of even better color than the market variety. Hancock & Son showed a promising yellow that, in the opinion of some, is of even better color than the Mayor Fliegere. The Floral Co. exhibited a fine mixture of varieties. G. F. C.

## New Trade Paper.

THE FLORISTS' REVIEW—The Florists' Publishing Company, 320-325 Canal Street Building, Chicago. This is a trade paper, modeled after the style of the American Florist, whose late managing editor, Mr. G. L. Grant, is editor and manager of the new publication. The reason of the name of the new journal is stated by Mr. Grant in his announcement to be due to the fact that contending against certain disadvantages, and conditions becoming more unfavorable with the passing years, "my only recourse was to start a new paper on a clean foundation, whether or not this is a matter of public importance, or in which the trade at large are interested. It is not our province to discuss. The first number to hand, evidently a specimen, is so well gotten up, with its typography and get-up of the publication being well-executed. As usually the case with new papers, a goodly share of advertising patronage marks the Florists' Review's inception; and the publisher outlines various schemes, little dreamed of in the journalism of this trade as drawing cards for subscribers.

We extend the right hand of fellowship to our new competitor, wishing it that measure of success which its future conduct will justify. The country is large and may furnish a living for all, and while the present times are not propitious for the starting of a new paper of the pretensions of the Florist Review, the established papers will be quickened to meet it, and it will not be long before the losers by the coming of the new venture, it certainly will not be the trade, more especially if it can secure a content between the two Chicago papers, already noticeable in the "cutting" of advertising rates, rather than to excess.

Charles H. Allen.

"Canna has been another specialty of Mr. Allen since 1880, when he began growing them in quantity. Then it was an unusual thing to sell over ten or fifteen thousand tubers a year; but since the advent of the French types, which may be said to have been inaugurated with the variety Star of '91, the demand for canna has increased wonderfully, his sales amounting to nearly 100,000 tubers. It will always be necessary to have a large number of varieties to afford a selection of those suitable for different locations.

"I have very little faith in the Italian varieties," said Mr. Allen. "I have not found one yet suitable to our climate. Although they make magnificent cannas, the flowers lack substance and will not stand our hot Summer sun. We, here, in America, are only at the portals of canna growing. By crossing these Italian varieties with some of the American-grown cannas (which are the best extant), we are bound to obtain flowers double the size of those now in existence. Every type that has been produced in France has been improved upon here, so far; as an example, I will only cite Mrs. Farnas Rogers in comparison with Madame Crozy. It is a mistaken idea to think that we have to go either to France or Italy for new varieties in canna."

Dahlia-growing, once a ceiling with

servid indications which go a long way to convince me that my prediction will come true, in Macco and several other seedlings to be introduced shortly, the blooms of which will rank with the best, and the plants which are very free-flowering. I look forward to the time when this class of flowers will be as numerous as the smaller grades now are; and they will bring higher prices. It will pay to grow them."

Mr. Allen renders a due deed of praise to the American Carnation Society, the work of which has been a great factor in the bringing about of the high class carnations now grown. He has been treasurer of the Society for the past four years. Mr. Allen was also president of the New York Florists' Club for two successive years—1895 and 1896. He is a member of the S. A. F., and in the work of each of these associations he takes a great and active part. He is anxious to promote the highest welfare of the trade, and receives his approval and valuable support.

WOOD BROS., Fishkill, N.Y. When Writing Mention Florists' Exchange

ROSES.

Some time ago I received a rose plant with an inquiry as to what was the matter with it. The accompanying letter read that most all the plants in the house were affected in a like manner, and as the plants had been given rose treatment had grown thrifflly right along until the third week in October, the party was at an entire loss to account for the trouble. A careful examination of the plant revealed that up to its last breaks it was in the best of health. The first young growths being very soft and pithy, while the foliage was of a sickly, yellow color. The first rose buds were healthy, with the exception of the young leafy ones. These had turned a dark brown and this was undoubtedly the cause of the trouble, and could be accounted for in more than one way. Two of the principal causes of plants losing their young leading roots are—an overdose of stimulants and the taking away for such a long time that the soil becomes sour. After writing the person in question what I thought was the matter with his roses, I received a letter from him that was in line with what I had stated he thought I was right, and that it was plain to him that I was right too much manner. The soil consisted of one-fourth part manure after which he had given it a liberal watering with water and wood ashes, topping it off with a heavy mulch of cow manure; and although he had not dug the beds for quite awhile, every time syringing was done, they seemed to get more soggy. He then told me that he had tried to throw them away or what can help them? I should not throw them out by any means, although had the Winter's crop is lost. I have seen such plants pick up very quickly, and do exceedingly well later on. The best way to handle them and stir the surface soil well, and if some of it can be removed without injury to the roots, it will be better. The best way of it with new soil without any manure of any kind. Water should then be withheld until the soil becomes on the dry side, and sweet; the temperature also should be run lower, say 54 degrees rather than 60. The soil should be covered, neither wet nor get 62 degrees dull days in daytime, being careful to put a little ventilation on the house. Every opportunity presents itself. Syringe just enough to keep the bushes free from under. When the leafy leaves in proper condition for watering do so only with clear water, until the plants begin to crack well, when a watering of dilute soda, one pound to 50 gallons of water, applied once a week two or three times in succession, will loosen them up wonderfully, and incite root action. By this time they ought to be growing nicely, and should then receive the ordinary liberal root treatment, switching off from the nitrate of soda to liquid cow manure or sheep manure care being taken not to overdo the thing. H. H.

BEAR in mind that we manufacture to order any desired quantity of plants. Send for new catalogue. Bayersdorfer & Co. Adv.

THREE WORDS FOR 'BUMS

The Yellow Fellow. Winner of the \$100.00 high grade Stearns bicycle prize in a strong competition. It gives a large graceful bloom with ordinary treatment and can be grown "a buhoper" for exhibition. Bud tinted blue. Iron clad constitution—midscean Japanese variety. 50c. each; \$4.00 per dozen.

Wm. H. Chadwick. A phenomenal seedling, the grandest novelty of the year. Star production. Certified at Chicago, Boston, New York and Philadelphia. An immense striking bloom, waxy white, occasionally frotated. Habit, growth, stem and foliage simply perfect. Any one can grow it successfully. It cannot be priced too highly. Mid-season and later. Single Plant, \$1.00; \$6.00 per dozen.

Madeline Pratt. Certified 1898. Named for the sweet little Miss on the Chrysanthemum Society's certificate. Snowy white, high built incurved flower. Very beautiful dwarf, early mid-season. Best from terminals, green cool. 35 cents each; \$2.00 per dozen.

Strong, healthy, young plants, from 2 1/2 inch pots, distributed March 1st. ....GROVE P. RAWSON, Elmira, N. Y. When Writing Mention Florists' Exchange

...The New White Chrysanthemum...

# FRANK HARDY

THE mid-season market white of the future, indispensable for the market grower and for the exhibitor. Highest honors at the leading shows in competition with all the best whites on the market, and the highest average of all varieties exhibited before C. S. A. Committees this season, with 92 1/2 points from Exhibits at New York, Boston, Philadelphia and Chicago.

## Strong Young Plants Ready March 1, 1898.

Price per plant, 50c.; per 12, \$3.00; per 100, \$30; per 1000, \$150. Not less than 25 at 100 rates, and 250 at 1000 rates. Cash from unknown correspondents.

A. HERRINGTON, Florham Farms, MADISON, N. J.

When Writing Mention Florists' Exchange

# CHRYSANTHEMUM STOCK.

Why take up room with ordinary or inferior sorts? Poor color, weak stem, bad foliage and poor keeping quality mean a loss to the grower. If you plant 100 to 500 of a variety, you want stem and color to hold till cut. We give below a selection of varieties that can be fairly classed as such leaders. **FRANK HARDY**, Bonnafont, Mrs. J. Jones, Madison, N. J.

Stock is perfectly healthy, not a rusty plant among over 25,000 planted, and not weakened by excessive use of stimulants.

**FRANK HARDY**, prices, unless noted, \$1.00 per doz.; \$7.50 per 100; not less than 1 doz. plants at this rate, and not less than 50 plants at 100 rate.  
**MRS. H. WEEKS**, Mrs. Robinson, one of the finest white, early in foregoing class and at same price. Perla, Mrs. H. Robinson, Maud Dean, Miss J. Dunham, Mrs. H. W. Wainwright, H. E. Widgeor, Yellow Queen, W. W. Coles, Ivory, Mrs. M. Kay, Twombly.

**CLARA GOODMAN**, In 3 plantings one of the very finest yellows in our collection, beautiful in color, with a elegant stem and growth. No. 1 in all respects. Late; an introduction of Vick & Hill. 35c. each; \$3.50 per doz.

**LIBERTY**, An excellent late yellow, very bright in color and O. K. generally, dwarf.

**FRANCES B. HAYES**, An elegant medium sized incurved late pink, very pleasing in color and form, dwarf.

**MISS HELEN WRIGHT**, A beautiful incurved white, might be termed an early Mrs. J. Jones, at times tinted violet, adding to its attractiveness, dwarf and No. 1.

**MISS GEORGIANA PITCHER**, A beautiful incurved yellow, of a very attractive shade, and as pleasing as Bonnafont. Middseason, dwarf.

**HELEN BLOODGOOD**, A beautiful medium sized incurved early pink, massive bloom, in habit rather tall, very distinct.

**NEW YORK**, This variety pleased us as much as any white grown. Large reddened flower, with elegant foliage. 35c. each; \$3.50 per doz.

**GOLDEN WEDDING**, One of our perfectly clean stock. Plant August 1st and you will not likely have any "burn" trouble, and second grade flowers.

Make up your order now, we assure you of good quality stock with liberal and candid treatment.

### FOR SPECIAL QUALITIES

and at same price as above:  
**Gold Lode**, Boston early white; **Merry Monarch** and **Bezzaman**, early white; **Glorie of The Pacific** and **Wm. Simpson**, early pink. **Esop**, Giron, early crimson; **M. Patek**, elegant, 2d early yellow; **Lady Fitzgerald**, extra early, pure white; **Just named variety**, 15c. each; \$1.50 per doz.; \$10.00 per 100.

**Other Varieties** in stock at general price of \$1.00 per doz.; \$7.50 per 100, not less than 12 plants at this rate, nor less than \$9 at 100 rate. **Pink Ivory**, **Harry Hurrell**, Indiana, Mrs. E. Buetner, Mrs. H. Battles, **Ruth Ellen**, **Violet-cut**, **Brigid**, **Fisher's Torch**, E. Dilledouze, **Harry Balsey**, H. L. Sunderbruch, K. Lech, **Louis Allen**, Mrs. S. W. Murdoch, Mrs. Baid, Philadelphia, **Princess Teal**, Mrs. Theodora, **Bellevue**, **Miss G. Miller**, **Oakland**, **Erminida**, **Miss M. M. Johnson**, **Moderato** (a little white in front).

### NOVELTIES

Of certified novelties we offer the following at 50c. each; \$2.50 per doz.; \$10.00 per 100, 9 plants at 100 rate, 250 at 1000 rate.  
**Booker** & **Lorelei** and Mrs. Beckert, **Esler** & **Eskal** & **Defender** and Geo. S. Kibb, **Mill's Golden Trophy** and **Thanksgiving**, **May Elvina** and **Erangelos**, **Smith's Merula**, **Mrs. Glesner** and Mrs. Eyrson, **Spaulding's Belle of Castlewood**, C. W. Ward, **Dorothy Devona**, **Dorothy Spaulding**, **Ernesta**, **Golden Wonder**, **Maud Adams**, **Mrs. Jan. Withers**, **Mrs. McCArthur**, **The Harriot**.

## We are Headquarters for all the Best Varieties.

### Chrysanthemums.

Send your orders to us for whatever number you may wish of the Certified **NOVELTIES** to be introduced in March, 1898. By so doing you will save money and time.

We have to offer of our own productions, **Solar Queen**, magnificent yellow, extra large flower. **H. W. Langfellow**, a white variety with all the characteristics of Bonnafont. **Black Hawk**, a decided advance in a red. **Quito**; this is Mr. Brydon's fine pink, a double **Maud Dean**, with more color in it. **Autumn Glory** (Yoshiliko); This to our thinking is the Star of the year for commercial purposes; won universal admiration on account of its fine form and decided color; easy to grow. **Boundless Snow** (Yoshiliko); This is an early white; style and build of **Vivand-Morel**; ready October 15. **W. H. Chadwick**, Mr. Lawson's fine novelty. This you will want; we are privileged to test this fine variety; it is a beauty. Then we have arranged to offer all the certified novelties at the same price as the originators send them out, as **Frank Hardy** (Herrington), **Pennsylvania** (Graham); **Mrs. C. H. Peirce** (Dorner); and all the other varieties certified by the Chrysanthemum Society's Committees. Then we have **Mrs. H. Weeks**, the finest white variety we know; a real gem from England. **Australian Gold**; you cannot do without this golden chrysanthemum. We exhibited this, and received certificate from New York Committee.

There are only a few certified novelties compared with previous years, so send in your order and let us book you now for 100 or for the set.

Every lover of Chrysanthemums will want Mon. Calvat's magnificent

novelties which he gave out the past Spring. There have never been introduced so fine a lot before. These have won honors without limit in France and England. Nearly every variety having won certificates. They were in the winning class at the great London Show last month. In February we will have these ready to send to our patrons. You will need them at the exhibitions next Autumn if you expect to win. Many of those cost us from \$4.00 to \$6.00 apiece last April. We will send you 25 varieties of Calvat's '97 set for \$1.00, including **Miss Lucie Faure**, N. C. Jubilee, M. B. Verlot, Marpa, and **President Nonia**, and all the prize takers.

### Carnations.

We have three superb varieties which we have selected to disseminate the coming March. We want, however, to give them a thorough trial year. Our desire is to follow with worthy additions to our well-known **Trumpet**, **rumble**, **Jubilee** and **Flora Hill**. After the holidays we shall announce their advent. You will find them described and listed in our January, '98, list.

We have all the good introductions of 1897: **Flora Hill**, **Mrs. Bradt**, **Mayor Pinrose**, **Victor**, and others, at very lowest prices, consistent with good, clean stock. **Jubilee**, **Trumpet**, **Ernesta**, **Emma** W. Oakes, and all the standard sorts at lowest prices.

Don't forget that you can secure from us all the new Carnations for '98, at disseminators' prices, thus doing away with the necessity of dividing your order.

## Our Plans for 1898

Provide for a comprehensive service in every department of the paper. As these courses are developed our subscribers will be able to judge for themselves. Certain it is that no stone will be left unturned to make 1898 the banner year for the FLORISTS' EXCHANGE, and its advertisers and subscribers.

Founded in 1888, the publishers and editors of the FLORISTS' EXCHANGE have unflinchingly worked side by side out of season, harmoniously worked together in the endeavor to make the Exchange a paper of national importance. Beginning at the very bottom, practically unknown, and with only a few subscribers, it has steadily worked its way to the very front, and begs to assure its friends, whose names are legion, that it intends to stay at the top. This position it will maintain by strict attention to business, by keeping straight along the path which has followed so successfully all these years.

As in the past, we will give full value for money received; but we "throw in" nothing.

In this age and country there is no royal road to success.

The FLORISTS' EXCHANGE has never made, and never will make resort to schemes of questionable policy to enhance its circulation. It is a paper for whom it owes allegiance and whose interests it makes identical with its own. There are legitimate ways to which true journalism may go. Beyond that, catch-penny affairs are sure to bring the paper into disrepute. It is a paper that is like a two-edged sword, cut both the public and the newspaper, inflicting irreparable injury on both.

Don't throw away your money speculating in futures; they are more often not than uncertain and evanescent. Invest where your returns are sure; in the FLORISTS' EXCHANGE. Write and subscribe for a paying established medium—the FLORISTS' EXCHANGE.

The FLORISTS' EXCHANGE obtains all the news of the florists' world. Its reports are always "there" whenever and wherever anything of importance is going on. It is not just a paper that has no hiccups, hence the information it furnishes is at all times up-to-date and reliable.

Six Thousand Copies of the FLORISTS' EXCHANGE are mailed every week; the major portion of this large edition being subscribed for by men in business for themselves, and not just for their sons, that, having paid for the paper, they read it from cover to cover. In this connection an advertiser writes: "From the first insertion of my one-inch advertisement in your issue of September 18 (1897), I saw over 17,000 advertisements. This is conclusive evidence that the FLORISTS' EXCHANGE is read from page to back cover, and its contents thoroughly scanned, for the advertisement referred to in my issue containing thirty-one (31) other advertisements was not near any reading matter."

## Florists' Fire Insurance.

The meeting of the members of the Florists' Fire Association was fixed for last Monday. No election was had and the meeting adjourned. The principal reason for the postponement was that a number of persons whom we were instructed to vote for as directors had not filled their applications for membership. It was agreed to re-sent out until late and are being re-sent out, but it takes time to round up matters.

As soon as sufficient applications are in policies will be issued. A misunderstanding has arisen over the requirement that heating pipes shall be properly insulated. The present committee are of the opinion that it is not sufficient to wrap wood near the boiler when it is very dry, and dangerous, but that in the green-wood condition it is not so dangerous, and ordinary circumstances are not dangerous.

The rate fixed is thought by some to be too high. It is believed by the committee that it is higher than future assessments will be but that it is safer to start too high than too low, and all will benefit by it in the future if too high.

W. J. Vasey.

## Chrysanthemums—Season of 1897.

Once again have we come to the end of the season of the chrysanthemum and once again do we all cast a look backward, and pausing, commune with ourselves as to the outcome and the lessons to be learned.

Regarding the most patent test of the exhibition our reports have shown that financial disaster has followed in all the leading cities, indeed Chicago alone offers an exception to this unpleasant truth. And there is in our two explanations, one is not interested; either the general public is not interested in these Fall exhibitions, or the exhibitions themselves are conducted on an incorrect or improper basis. Either of these reasons or both together must be held responsible. The first assigned reason may be but the result of the latter, and at all events, so far as we are concerned, self searching is the line of inquiry to be pursued:

Are the Fall shows conducted upon a sound basis? We fear not.

The present exhibition of to-day is not an encouragement of the cult of the flower from which it takes its name; it is a display of the actual market attainments of the time, for is it not a fact that the self-same display of varieties can actually be seen by anyone who cares to take a walk through the florist stores of the vicinity? The paucity of the varieties staged is apparent to everyone who considers for a moment, and not only that, but there is a depressing similarity in one show as compared with another far to be respected. The florist varieties of to-day are all indeed be some what of a surprise to many readers to see the statistics given on another page.

But do these facts and figures point a moral? At all events, one way to alter the present situation would be to encourage the exhibitor to sell a reality, instead of the multiplication of varieties, and so cut adrift from the commercial tone which now saturates the whole.

The mere exhibiting for the material gain of a cash price, a motive which, we fear, is far too common, is another depressing feature. Recent events in New York City have demonstrated very forcibly that the best and most interesting shows are not necessarily those at which the money inducement is made the great attraction to the exhibitor, and it is interesting to consider how to avoid it. Precisely similar conditions prevail in England, and to which the Gardeners' Chronicle refers. It is a reality, it would seem that when enthusiasm and not sordid gain is the prime mover from the exhibitor's side, the public interest spreads to the outer world. Whether this be a problem to be explained on psychological grounds, or not, is not the subject of the present discussion, but certain it is that the public always has, and ever will, disregard the matter of the profit, and will seem that a small exclusive circle, unless the proposal to do so emanate from without, will not be likely to be of any avail. In these conditions we do not now suggest, merely pointing out the facts as they are.

Advice from various sources tell us that the most faulty of the day is the mere "sizing display" of the usual plants do not lend them to any such arrangement with others. Why, one of the reasons for this is that the exhibitor, when used alone for hold effect than when its individuality is obscured by other varieties, is not so well supported the ground previously taken that these exhibitions under discussion are to be held for the purpose of promoting the chrysanthemum, but rather for showing off the florist's side of the exhibition, and to show that the flower show to be at its best must be a flower show, and not a show of the decorator's art.

## Notice.

In portion of this issue, on page 1131, occurs an unfortunate transcription of the names of the committee for the H. Weeks and Solar Queen. The former variety is that showing the flowers in a yellow color.

## The Water Garden.

CHANGE OF PRICE.—On and after January 1, 1898, the price of "The Water Garden" will be Two Dollars, regardless of the quantity of copies ordered. If a subscriber to this paper, Readers are requested to note this change in the "Change of Horticultural Books" they have recently received from us.

## Reflections on Current Topics.

A good deal has been said lately on the subject of the nomenclature of chrysanthemums—an evidence that the topic is one of vital importance. That being the case one would expect to find in the printed records of the Chrysanthemum Society of America, a nomenclature that is absolutely correct. However, at the risk of being considered hypercritical I would like to draw attention to the following discrepancies, appearing in the "Catalogue" list of the names of the ninety-seven seedlings exhibited before the committees of the Society during the year 1896, which is printed in the report of the Chrysanthemum Society of America (vide report of Proceedings of thirteenth annual convention, held at the Crystal Palace, N. Y., in 1896, page 117). In that report occurs the name "Trainer," doubtless meant for "Trainer," as it is also mentioned as being two distinct varieties, whereas the name is Mrs. Trainor. L. Park, the inventor of the variety, under the word "Trainer" being responsible for the discrepancy. There are one or two other instances of errors in the orthography of the names, such as "Loria" for "Loria" (Lorelei); "Marsia" for "Marsia" (Marsia) as always formerly appeared. These errors are not only a discredit to the Society, but also an individual—the printer; but they are none the less flagrant; and as I believe that the Society should be beyond question, I beg to draw the attention of all concerned to the above-mentioned facts.

I am pleased to notice that this journal has taken up the question of duplication of names. Nothing can be more confusing than the application of the same name to two or more varieties, no matter whether all but one have gone out of existence or not. The Chrysanthemum Society should do everything in its power to discourage this objectionable practice.

The Society should also adopt a rule (and rigidly adhere to it), setting forth the names of the varieties to be shown to the Society under number. While examination under number may be permissible and often times necessary, as was clearly pointed out in the report of the exhibition under name should be insisted upon. For instance, Number Eleven, "Crown of Thorns," should be insisted upon to be continued (after the style of Number One of Feulan name) means not that no one thing should be certified, but a detailed explanation in verification of its original existence; a necessary but unnecessary proceeding that could easily be avoided.

The French Chrysanthemum Society gets over this difficulty in this manner: The exhibitor sends with each variety submitted for adjudication the name of such variety enclosed in a sealed envelope, and the exhibitor is not permitted to attach to the exhibit; and the committee only opens those envelopes which are not so sealed. The varieties considered worthy of being certified, the names being bestowed before the certificate is issued. The French Society does not certificate a number, and in my opinion neither should the Chrysanthemum Society. The names in the case I have pointed out. The system of naming adopted here requiring no certificate, is a commendable one, in view of the faculty of originality, to conform to its needs, there should be no difficulty in meeting the system's demands. J. M.

## Exclusively a Trade Paper.

## For the Busy Man.

Robert Craig, of Philadelphia, is seriously ill and is about to die. He is a busy man.

Yampa is proving a very satisfactory late white chrysanthemum in the West.

It is reported that Superintendent William Macklin will shortly resign his charge of the Buffalo parks.

This is our "Chrysanthemum Number." If it is not too late for a large assortment of cuts of the new and standard varieties of Chrysanthemums. Parties wishing to see these in color should send for a printed matter will do well to write us for particulars.

The topic for discussion at next meeting of the Chester County Carnation Society will be "Is the American Carnation Society of any use to the Society?"

John H. Dunlop's (Toronto) new rose-sport from Sunset—has been christened by the "Aberdeen" "Mary Doreen," in honor of a little deceased daughter of her ladyship.

## Chrysanthemum Illustrations.

The publishers of the FLORISTS' EXCHANGE have for a large assortment of cuts of the new and standard varieties of Chrysanthemums. Parties wishing to see these in color should send for a printed matter will do well to write us for particulars.

For Index to Advertisements See Page 1136.

Specimen Plant Grown in Jadoo.

Our illustration is from a photograph of a specimen plant of Miss Florence Pullman grown in Jadoo fibre by William Robinson, gardener for John W. Pepper, Esq., Jenkintown, Pa., and shown by him at the exhibition of the Pennsylvania Horticultural Society, November 9 to 13 last: He received first prize for it in the class calling for best specimen plant white. The plant had 84 blooms averaging six inches in diameter. The specimen itself measuring about six feet through, each stem being well foliaged right down to the pot.

Mr. Robertson gives his method of treatment as follows:—  
The cutting was struck in January and put in a 4-inch pot about the first of February. Five weeks later it was shifted into a six-inch pot; in May being grafted into a six-inch pot, in June Jadoo fibre. Later shifts were made in the same material, and about August 1 the plant received its final shift into a 15-inch pot in which it was exhibited. When the buds were set started watering with Jadoo liquid according to directions, about twice a week, gradually increasing the strength until the blooms were half-developed, when a half of the liquid in a much weaker form was given. Altogether I used about half a gallon of the liquid on the plant.

Chrysanthemums in 1897.

Mr. A. Herrington's Opinions.

A comparison as to supply and demand between the present and previous years would appear to prove no decline in the quantity of the queen of autumn, although some of the more noted growers greatly reduced their quantities from their usual experience. It was hardly a day in the height of the chrysanthemum season when the market was not entirely in the purchaser's favor.

With all this glut, however, and prices disastrous to growers, my own experience is still, as always, room at the top, and high quality produce is rarely in excess long in finding a purchaser. I base this conclusion upon shipments totaling several thousands of blooms, the same averaging 20c. after express and commission deductions.

In regard to varieties popular, well-grown flowers of Mrs. Henry Robinson that can hold up their heads are invariably first choice to whites. The season again proves that the general public want and always give preference to selected varieties. Shipping Major Bonaffon and Miss G. Bramhall at the same time, both of the latter in the central standard point, the Bonaffon throughout their season sold for exactly double the Bramhall. The latter, therefore, goes into the class of bad sellers, but in light yellows it is hard to beat for exhibition, and in light purples it is hard to equal.

No new kinds were on trial with us this season, at least of American origin, but the importation of a few from the second season here, surpassed even our own. Among these were a few of the Bribe rose, that the offspring, though a sport, may surpass the parent in merit. In the latter class, the variety of flower Frank Hardy shows marked improvement upon Good Gracious, while the fact that the latter is the only variety of the Chrysanthemum Society of America, but that the average of points of merit has declined before our eyes, our committee is 92%, is rare testimony to merit above the ordinary level.

It is extremely rare to have only the second of its kind, attracted rather more notice than its predecessor; but when you see it in the first showing, it occurs to me to ask another question, has it ever been sufficient, and in how many

places can a chrysanthemum of any flower show be made financially successful from the door receipts? Make it gratuitous and it is crowded; charge on admission and the American public does not want it.

In exhibiting this season we have confined ourselves mostly to single vase classes, and have in every case been first or second, most often first, with Mrs. Henry Robinson, and Frank Hardy in white, Major Bonaffon and Golden Tending in yellow, and Vivand-Morel for pink.

Pompan varieties will have their day perhaps when beauty is no longer measured with a yard stick and the foot rule is not requisitioned to find the diameter of the blooms on show. This brings me to a point that you have not raised, though less overlooked in the series of questions. Have the big blooms had their day? There are lots prepared to answer "Yes"; and others are asking, "Give us natural sprays that show more of the grace and beauty of the flower." It occurs to me that those exhibited had better band themselves into a chrysanthemum missionary society and secure a

substantial appropriation to assist the florist while the public is educated up to the appreciative point at which they will pay remunerative prices. Even sprays of chrysanthemums have to be cultivated. A year ago a noted New York florist and decorator said to me: "The public are getting to be more particular in their choice of big blooms; don't grow them." I grew mostly big blooms, but some sprays extensively. A large box containing nearly 50 graceful sprays averaging ten blooms to a spray, was shipped as a trial, and the magnificent sum of 50c. was the return.

During the past season I have seen no evidence of any recognized system of classification governing the exhibits, but have seen Japanese involved in classes showing as classified, but there will ever arise types showing subtle gradations that make them appear to belong to no class defined and may it even be, for in this alone shall we get salvation from the stereotyped results that follow when things conform too easily to arbitrary classifications or approved types.

A. HERRINGTON, Madison, N. J.

E. G. Hill & Co.'s Opinions.

Supply and demand were about the same as last year; prices were about the same; high-grade stock selling out clean; second and third-class barely paying for shipping.

The greatest demand was in whites, for Lady Fitzgown, which far outshines Bergmann in this section; Mrs. H. Robinson, fine stock in over-spray, as everybody grows it, and nearly everybody can do it; Mrs. Jerome Hayes and Yonoma, a grand late white in fine condition will go to December.

Yellows—Earliest, Marion Henderson; second, Golden Trophy; third, Sunderbruch and Bonaffon; midseason, Mordock; late, H. W. Robinson and Oberlin.

Pinks—Gloria of the Pacific, Mrs. E. G. Hill, Lady Flamingo, midseason, Mrs. Perrin; first quality pink varietal season all through the season. We still lack a first-class late pink, Indiana, being the best, and it has a bare neck.

All varieties, failing, to show a clear bright color, a stiff or waxy stem, and good foliage, have sold very poorly and

in crimson-scarlet color, but rather scarce of petals. Marcia Jones and Sunrise are two extra fine specimens; Halcyon not so good as the rest; flowers are almost inconspicuous, the disc too prominent.

The two early whites, Midge and George S. Kalm, will receive a further trial next year; Midge, with us, was the larger and finer, while Kalm is much the freer grower and a very easy doer. Evangeline has made a good record for a beginner. We have seen enough of Mand Adams to lead us to try it next year for commercial late yellow.

The committee of the Chrysanthemum Society of America made few mistakes in scoring last year, we think, the 48 certificated varieties disseminated the past Spring being an unusually good collection. We have not Secretary Smith's completed reports as yet, but we think the number certificated the present Autumn will not reach 25. We enclose descriptions of seven sorts awarded certificates and grown by our firm; Australian Gold is Calvat's celebrated yellow sent out last year; Quito was raised by Mr.

Specimen Plant of Miss Florence Pullman Grown in Jadoo Fibre.

proved a loss to growers; magentas, a somewhat mixture of colors are not wanted at our prices. The new ones of the year certificated by the National Society here, but, next year, we think will see a goodly number of them take high rank. Adelaide is like a very late yellow; Western King is another grand, late white. If only it gets into freer growth, as we hope it will by another year. Chito, bronze, and Kentucky, pink, are enormous exhibition varieties, deep and tall; C. W. Ward and Merida, while not of extra size, make up for it in height. Dorothy Sandring, we feel sure, will rank very high among pink sorts, and J. H. Woodford is one of the most promising and beautiful white sorts of the year. Gold Standard is a magnificent bloom, but will be especially described on account of its graceful habit and long vase. Enrich, Mrs. McArthur, and Mrs. Tyson are three grand additions to the whites; T. B. Morse raises its petals too easily. The Harrington is one of the handsomest of the crimson-maroons with reverse of silver. Deinder is unsurpassed

Jas. Brydon, certificated at Boston, '96; Roundless Snow and Autumn Glory are Mr. Yoshike's two seedlings; the latter is probably the finest seedling of the year, especially as a first-class pink is still so badly needed.

DESCRIPTIONS OF NEW KINDS.

Australian Gold (Calvat).—Three and a half to four feet on bench; use first growth; one of the very fine of the broad petalled increasing varieties that can be had in bloom by October 20. Owing to its earliness, the vase can't amount feeding too late, which will cause it to burn. Awarded numerous certificates abroad, also by our own national society, the New York committee giving it 91 points.

Roundless Snow (raised by H. Yoshike) awarded certificate of Chrysanthemum Society of America; height sent three feet; requires no staking; very large and of Inter-Ocean type; color white, flushed pink, gradually becoming pure white. Comes in about same date as Mrs. Robinson. Take the first growth had.

Autumn Glory (raised by H. Yoshike).—Height 4½ to 5 feet; use terminal bud. November 5 to 15. A grand crimson-clad pink as an unsurpassed exhibition variety. There is nothing like it in

color, which is a deep reddish salmon upon opening and gradually changes to a soft shining pink, when fully finished. The flower is of the general shape of Vivald-Morel, is of the largest size and has no troublesome peculiarities. Has attracted marked attention wherever shown. Awarded certificate by Chrysanthemum Society of America.

Solar Queen (Hill).—Height 3 feet on bench. The first crown, October 17; heavily foliaged from the ground up to the flower; an extra fine variety for "single stem pot plant," brings a very large bloom with a height of 20 inches. Color, golden yellow, shading lighter; flower of extra size, averaging 10 inches across by 3 in depth. Very valuable as an early yellow, and can be had in grand shape for the early exhibition. Totally unlike every other yellow, both in form and foliage and destined to take place

full and solid. The following are all of this type: Mile. Elise Jordan, Odé Nall, white, bronze, and lilac, and Model of Perfection. Marie Stuart is a pretty little anemone pompon with pink rays and yellow disc.

In regard to revised classification, we do not see any need of it yet so far as chrysanthemum culture in America is concerned, but it is clear that more prominence should be given the Chinese varieties in our exhibitions, as exhibitors simply draw out new, and often most beautiful of them when they must come in competition with the big ones. We miss a great deal of grace, finish, and beauty when the Chinese section is absent from our flower shows.

For the twelve best cut blooms, for exhibition, we would name: Mrs. H. Weeks, Mrs. H. Robinson, Modest Autumn (Glory, Australian Gold, Mrs. George West, Mrs. W. C. Egan, Eugene Dal-

chrysanthemums, and there certainly is something distinctive about them. It is very seldom that an imported variety can be made to show its best the first season after arrival, but the following we found very conspicuous even when not done to the best advantage.

Mme. E. Roger, greenish crown, seagreen at the center, broad, incurving petals with green points, a fine flower aside from its color.

Mme. Farlat, pure white petals pointed gold, incurving.

Mlle. Lucie Faure, pure white, petals incurving and ringleted, large, deep and finely finished; very promising.

N. C. S. Jubilee, pale mauve, silvery reverse, large incurving.

President Nolin, chamolys-yellow, pale reverse, broad incurving petals, dwarf habit.

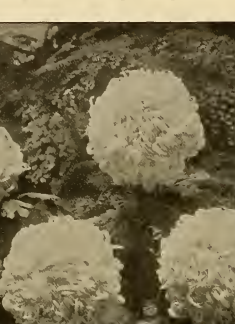

Marie, orange-yellow, petals slightly twisted.

overdone, so that purchasers get tired of these varieties. There is no doubt, after the first named varieties are gone, that in white and green colors, the best are to be had for the latter part of October the best we have; but I try to get them sold by the first of November. Now we have other varieties ready to take their places. The next in line shape by the first of November are: Niveus, Queen, and White King; the first named is simply grand, of fine to an, the purest white in color, with no green at the center, and the foliage is delicate and will hardly stand the middle of the season. It is a very fine variety, and I think, as good as any I have ever seen. The Queen is a very good variety of fine size, being not too large; it is of fine color, and I think, as good as any commercial variety as yet we have obtained lately. Some will not have that way, and will not be satisfied with it, but, however, we will see whose opinion is the correct one. Mayflower is certainly popular yet, being so large; the people offered \$5 per dozen for the biggest blooms; the variety is not finely finished and is not too clean in its color; it is a milk-white. New York, right after Mayflower, is a bold heavy flower, but with more delicacy of color, and more grace and looks rather shabby, otherwise I like it. The variety Eureka this year has been fine, but the flowers are not so fresh as that account break easily; otherwise it is a very chaste variety. Adelaide is pretty, but it does not grow so fresh this year as it did this season. It will not stand in the race for a first-class white. White Star has made a good showing, but exhibitors which, when well done, are very pure; the only fault I have to find with it is that the stem ought to be stiffer, but even with this fault it is much admired. It is of very easy culture. Western King is in perfect condition at present and certainly is a fine variety; if it will only show more constitution another year it will have a permanent place. Niveus and the Queen should have been classed in the November 15 to 15 varieties. I do not grow the Queen any more, and cannot do without Niveus. For the latest white Yonno is fine—large and pure, of a handsome balanced form.

In yellow Golden Trophy was the earliest this season; it was ready by October 15. For some people it is a very light light, but it is very near the color of Bonifant. Harry Hurrell is one week earlier in good color, and with a nice, rounded form in the style of Richmond—a good commercial variety. Next to that is Georgetown, which I think my customers prefer to Philadelphia, and it sells well as well. George S. Conover was some time out, but has now come in good shape till October 25, but it always is a good seller. Then comes Major Bonifant, a good one; ever since I met like Robinson, it suffered in our markets in being in over-supply; and it seems as if the poorest grower can get some good flowers of it. Next to the Major in our markets comes Modest and Golden Wedding, but from what I have seen of Modest, I do not think it will be able to push Golden Wedding aside; some flowers of it are very fine, but the stem is so delicate in stem and substance. The color is excellent. The plant is a gross feeder, and it is not so good as the other variety were better understood it may still find up and be very popular.

Major Bonifant is not much grown, but it brings good prices. Eugene Dalldouze is not much grown, but it brings good prices. It is not, however, a good commercial flower. Liberty shows up well as ever. No. 20. An English variety which resembles the Queen, but is a grand one; it is in it is over. Thomas, which is in it is overdone; it needs good culture and, with that, it is a grand one for the close of the season.

The so-called pink varieties have all suffered in color in being from 25 to 50 per cent lighter than they are in ordinary seasons, and in October 15. The first named is entirely too much for them. The earliest were Glory of the Pacific and Elvona, and the latter is a very fine one, but it is a show-bush rather a very pale color; then, too, it makes a rather short stem, very few flowers, and it is not so good as the other variety. Elvona is most graceful with its petals, and it shows a very fine substance to the flower which is its other light. Both varieties brought very high prices, and they are in the best season and the best in color was Madame Felix Perrin, rather a truer pink than I ever saw, and it is in the best season. The color fades quickly in its best season, and the flower is of too light build to show a good form after a few

among the very best flowers. Awarded certificate by Committee of Chrysanthemum Society of America at New York and Chicago. Very free in growth and easy to do well.

Black Hawk (Hill).—The most beautiful dark crimson-scarlet yet raised; looks like crimson velvet and does not show a trace of the reverse color, being of Vivald-Morel form; the very color long lasted among reds, and of grand size. It is a tall grower, but not stiff stems. As with all the reds, beware of late feeding and use a quantity of chlorine in the soil. Use late cuttings; either bud. First prize at Chicago for 10 blooms best red tested seedling; also Chrysanthemum Society of America certificate by the Chicago Committee.

In regard to pompons, we find that there is a great deal of interest, and ever shown, the sprays of cut blooms being especially decorative; in a retail cut flower trade they are greatly enjoyed for variety. The following sorts we have found very beautiful: Two crimson-scarlets, perfect in form, and approached in color are Black Douglas and Ruby Perfection; two crimson-mauves are President (Syn., Mr. Murray) and Wm. Kennedy; two fine yellows, Souv. de Jersey and Wm. Westfield; the clean color, the former very bright. The bronzes are St. Thais, Prince of Orange, and Mrs. Bateman. Elsie Walker is a golden-bronze flambé variety for all the world like a French marigold. Adele Frisette is a marbled lilac-rose.

Then comes the type of which Mlle. Elise Jordan is a fine example; these recurve their petals in a most marvelous way until they are as round as a marble,

Frank Hardy.

Chizeo, Geo. W. Childs, Georgiana Fitcher, Charles Davis, and Mand Bean.

Six best cut blooms for exhibition—Mrs. H. Weeks, Autumn Glory, Australian Gold, Mrs. Eugene Dalldouze, and Mrs. Geo. West.

For best twenty-five blooms, one variety—White, Mrs. H. Weeks; yellow, Eugene Dalldouze; pink, Mrs. H. Perrin; red, Geo. W. Childs; bronze, Chito; or other color, Le Colosse Grogach.

Best six specimen plants—Colonel W. B. Smith, The Bard, L. Canning, H. L. Sanderbrack, Chase, Davis, and Bonifant.

Best three for exhibitions (specimens)—Col. W. B. Smith, The Bard, Bonifant, and Mrs. H. Robinson.

Best twelve single-stem in 6-inch pots—H. L. Sanderbrack, Geo. W. Childs, Mrs. H. Robinson, Mutual Friend, Chase, Davis, Lawn Tennis, The Barrington, Mierva, and Major Bonifant.

Other notes: Mrs. H. Weeks, an English variety of last season has proved one of the best things of the year. It is of very pure white color, elegantly incurved, resembling Mrs. Robinson in a general way and following its own line in time of blooming. It is the coming exhibition white, we think, as it is often hard to keep Mrs. Robinson in good condition for the late shows. It is easy to manage and has a fine stem and foliage.

#### CALVAT'S NEW VARIETIES.

We have bloomed the set of these this Fall, and from what we have seen of them, and from the record they have made at the English shows, we feel sure that they are a remarkable lot of chrysanthemums. The originator speaks of his seedlings as the "Calvat race" of

#### Mr. Theo. Beck's Opinions.

I believe the season in these parts has been fairly successful. It is true that last year was a roughy October and up to the 20th of November at \$2 to \$3 per 100, we hardly could expect to get \$25 for choice chrysanthemums. But the retail prices have kept up well (I mean for choice flowers); \$3 per dozen has been the ruling price with few exceptions for very select, the price for which reached \$5 per dozen. One thing is certain, there has lately been an over-supply generally, and roses have suffered the most. Really first-class chrysanthemums have sold out; but some of them went as low as \$12 per 100, the smaller flowers going down to about 100.

I am satisfied that a great many people by noting that chrysanthemums as long as the flowers last, are very anxious for them to come into bloom and is sorry to see them go. I, for one, believe that the chrysanthemum will receive its full share of the popular favor as every year we have new forms and shades to catch the eye. The interest in the Autumn queen. As far as the varieties have been handled in our market, Mme. Ferdinand Bergmann was the earliest, and she is the best in color, and the best in form. Lady Fitzgram ready at the same time; the latter variety sold at about \$2 per 100 higher; not that she is doing any better than that of Bergmann, but I think because it is, or was, not grown so extensively. The blooming time was early and informal in form the people preferred it. Bergmann and Mrs. Henry Robinson are in their respective seasons

days. A good many of them have sold at low prices. Maud Dean is very little grown here. Betty Buck makes a good substantial flower; but has been rather poor in the same line. Its best varieties are A No. 1. Dorothy Spaulding shows a large yellow center, and as a cut flower it will not rank very high. Mrs. Theo. H. Becker has shown extremely white for the first time in three years; too much so for a delicate color like that. The same holds good with Pink Ivory; after the main flowers were gone, all the stems were pure pink with one, which proves that the color is not lost. Mrs. S. T. Murdock is a good late lavender pink and sells well.

The bronzes, plum color, red, etc., don't count much of a figure in our markets. For red Geo. W. Childs is the main variety. A few Shrimpton were seen, and I met with some blooms of Defender. Fisher's Torch, I did not see at all yet. I think this variety shows the best color of them all. Mrs. Drexel was shown on exhibition in good shape, but was not seen in the open market.

The best bronzes around here are: Col. Wm. B. Smith, Autumn Glow, and Chito. The two last named make very large flowers and can be grown with profit in small numbers. The Col. Smith sold rather better this year. Viscontesse des Chelles is too soft to be a good commercial variety. Mongolian Prince is rather a pretty flower, but not much larger than a pompon. Lava Tennis is beautiful in form, but people don't care much for the color. The same holds good with Anæsthetic, Whitnall, and West, all three plain colored.

One remark I wish to emphasize is that our growers here should not drop Vivid-Morel even if it don't show much color. Grow more Mrs. Jerome Jones. It was not shown extensively enough in our markets. Both varieties have not been duplicated yet, and none of them has a superior in its own class.

Of the novelties I have seen this year, I rather think there are few that will make a way for themselves in the next few years. Pennsylvania I saw displayed at Philadelphia and Cincinnati. It is identical with Philadelphia. The form and stem are fine, foliage poor, size medium, but large enough. I myself don't like it on account of the peculiar streaks in the florets; they look as if they had been cut out of rice paper. However, I think it deserved a certificate. One variety was shown under the name of Mrs.

C. H. Petrie. It is a fine clean yellow, in the form of a "Honey-Bell," with not so many petals that variety, but they are of a stronger build, and the form is certainly more pleasing to the eye. The center is deep, and about 14 to 15 inches over the flower; stem and foliage were good, as was the foliage. It was shown at the flower here from November 20 till December 5. A variety which I will send on next spring is Mrs. Wm. B. Brown; it is milk-white in color, 5/8 x 5/8 deep, very full, upper florets incurved and the lower ones spreading like a fan to the stem. The flower measures 15 to 16 inches over. All I claim for it is that it is a grand commercial flower for Thanksgiving and will easily make a place for itself.

Other varieties I have seen that have gained certificates are of very undecided colors, and I do not think that they will make great headway as commercial flowers.

The varieties which showed well in displays are very numerous. I will mention some good ones for that purpose: In 15 or 16 varieties Mayflower, Mrs. Robinson, Nivens, The Queen, Mme. Philippine Riviere, Mrs. H. Weeks, Evangeline, are all good in white; Major Bonnafon, Golden Wedding, Harry Hurrell, H. L. Sanderbruch, Philadelphia, Georgienne Braunhall, and Modesto are good yellows, as also are Georgiana Picher and Eugene Dullehouze. In pink, Mme. Felix Perrin, Mrs. S. T. Murdock, President Smith, Lady Playfair, and Vivand-Morel, C. B. Whitnall, Mrs. West, and L'Anæsthetic are good dark varieties. Casco is a finely colored flower, but too scarce yet. Mrs. Drexel, Defender, and G. W. Childs are good reds and wine color, also the Barrington and Cullingtoni when well done. For bronze, Col. Wm. B. Smith; Chito will also be a good one for that purpose. Autumn Glow is excellent, so also is Nyssa.

In the 10 and 25 vases, white, Mrs. H. Weeks, The Queen, Nivens, Mrs. H. Robinson are the front; in yellow, Golden Wedding, Major Bonnafon, Modesto, Georgiana Picher, H. L. Sanderbruch, Eugene Dullehouze and Henry W. Eleanore are grand; the largest flowers are certainly best shown in Mayflower. In pink, Mme. Felix Perrin and Mrs. S. T. Murdock as well as Vivand-Morel are in the front rank at present. In reds Childs, Defender, Fisher's Torch, and Mrs. Drexel hold the fort there; in bronzes, Col. W. B. Smith, Chito, Chas.

Pennsylvania.

Davis, and Mongolian Prince are all fine, as is Autumn Glow for late show. In specimen plants, white, Mrs. H. Weeks, L. Canning, L'Enfant des deux Mondes, Ivory, and Dean Hole are good; yellow, H. L. Sanderbruch, Minerva, and W. H. Lincoln; in pink, Fred. Walz and Louis Boehmer; in red, Geo. W. Childs.

For single stems, 19, 25, or 50 classes, H. L. Sanderbruch, Major Bonnafon, Golden Wedding, for yellow; Mutual Friend, Mayflower, Robinson, The Queen, for white; Helen Woodgood for pink; Childs for red; Vivand-Morel, Lava Tennis, for mauve; Marguerite Jofards or Col. Wm. B. Smith, for bronze. L'Anæsthetic is fine in dark.

For 10-inch specimens, Fred. Walz, Ivory, Mrs. Weeks, Sanderbruch, and Lincoln are fine; for 8-inch pots, Childs, Fred. Walz, Bonnafon, Ivory, Dorothy Spaulding, Rachas, Dean Hole, Minerva, Louis Boehmer, Mutual Friend, L'Enfant des deux Mondes, W. H. Lincoln, H. L. Sanderbruch are all more or less good.

Pompon, I think could be grown with profit if raised as show flowers with five or six blooms to a stem and the following varieties are fine in their color: William Kennedy, dark crimson, Model of Perfection, pretty pink; Black Douglas, a very dark variety; Elise Dorian, a beautiful pink, and Mrs. Bateman orange-brown. This collection may be extended if more varieties are wanted, but those named are good.

From all reports the shows in this district have been successful, so far as the displays were concerned, but the Indianapolis show, which I attended, was not well patronized by the public. There was a grand display of palms and decorative stock; but I believe, not enough chrysanthemums to suit the great rank and file. Palms are all very well for some people, but most of them want to see flowers and lots of them. Last year the Society gave some fine premiums for Mayflower, Major Bonnafon, Vivand-Morel, H. Eleanore, Eugene Dullehouze, and Mrs. E. Bigelow. Those vases were left out this year and on that account, the display was curtailed by about 25 large elegant vases with 25 flowers to a vase. Again a class for pot chrysanthemums was withdrawn, so that the exhibitors in pots was not up to last year's. The show was also a little early for the best result.

The managers must furnish premiums sufficient to attract exhibitors. To offer 25 blooms in the different colors \$10,

\$7, and \$5, will not conduce to displays of grand stock. Then again for specimen plants in 12-inch and over, premiums of more than \$7, \$5, and \$3 are desirable. It takes three plants to show one, and the balance not shown are sacrificed for cutting for cheap flowers. I believe that for the premiums for 10, 15, or 25 cent blooms, the flowers should be all shown under name and not as the best white, the best yellow, etc. The way things are handled now there are about five or six varieties that find favor, the rest standing out show.

In plants I would like to see more classes for groups, say a group of 10 yellows in 10-inch pots, and so on through the colors; the same for 15 to 25, 8-inch pots, in separate colors, and for the best groups of 25 plants in 8-inch pots, all colors. I would omit plants in 1-inch pots which are generally too small and cheap looking to make any show. Give the public nice, closely-set groups in solid colors, and in varieties, and you will have better show.

Just but not least, welcome to an item which is of great importance—classification of the chrysanthemum. The question is a difficult one to handle, and I would like to see a free expression, say from 50 of our best chrysanthemum growers on that point, then let the Chrysanthemum Society of America take the best suggestion after due consideration by a committee or otherwise.

THEO. BOKK.

## Mr. Grove P. Rawson's Views.

The supply of high-grade chrysanthemum blooms has been considerably in advance of former years, and there was also an increased demand locally.

Good flowers sell, same as with roses, carnations, etc., while poor stock—and there is always an overplus on the market—goes begging. Measly chrysanthemums are a disgrace to the family; and these numerous "black sheep" sort of flowers discredit the noble flower. Willed or bedraggled chrysanthemums simply terrify.

Of course, there is the annual wheel from the head centers. To be sure, this is lots of work, handling and shipping the blooms, and pretty rough handling too. I find arguments in favor of other markets. The facts of the case are, chrysanthemums have lost some of their popularity, and it is time to offer them their appearance early in the Fall, and the

in demand—the ladies like it. But poorly grown there is nothing to commend it; ditto Mrs. Perrin, Mrs. Jerome Jones, Mrs. Ferrin, and others of variable color possess a much clearer tone grown in the open than when they are in the greenhouse. If in a cool house they should not be cut until thoroughly matured.

Lady Playfair grown cool is a lovely pink after the order of Mermel rose; in heat a dull whitish color, not near so attractive. Glory of the Pacific suits me for an early pink; it is profitable to the grower. Iora is proving an excellent early midseason pink. Katherine Leech is a pink chrysanthem that must become a standard commercial variety for midseason.

Lillian Russell is the nearest approach to lavender—a clean, solid color and very artistic bloom for early midseason. Marion Henderson should not be planted too early to secure best results. Vigorous young plants, from 2½-inch pots, planted on benches not before the 20th of June, will give better blooms and earlier than those planted June 1. It is a variety that must be grown quickly without check. Let chrysanthemum growth meet with some sudden check, and disease will thereafter get in its work almost invariably. This is true of most any variety. Varieties of rampant growth should not be planted too early.

Plant Mrs. Mumlock out middle of August, using vigorous young stock, and grow cool. You can cut excellent December blooms up to Christmas.

As this variety never shows a center, it is the best sort for the latest blooms. For very late Maud Dean shows the eye.

Mrs. Humphreys, or Snowball, is an indispensable late white. I don't know of anything more useful to the average florist. My two best selling varieties for yellow, are the Irony and Bonaffon, for color in chrysanthemums, or at least next to white, are Major Bonaffon and the Yellow Fellow. The latter one grows so easily, is robust and free, with large, graceful blooms, of a very bright yellow, and an excellent keeper and shipper. In the bud state it is shaded bronze; but matures bright and clear. I believe it

will be generally well liked. Anybody can grow it, and with liberal treatment it is a whopper for exhibition. The phenomenal variety of the season, and this is certified by many connoisseurs, is Wm. H. Woodford, which has not been met with for many a day, and a variety that needs no expert to handle it perfectly. Its mammoth, grass-green blooms with half a chance. Like Bonaffon, Mrs. Jerome Jones, and Mrs. Mumlock, it can be had midseason or late, according to treatment.

It seems as though George S. Kall would become a standard early white, also Golden Trophy for an early yellow, grown as Glory of the Pacific on low benches. Too far from the glass, and both of these lose in color tone.

Of the new varieties I like Frank Hardy, Evangeline, Mrs. H. Weeks for exhibition plus J. H. Woodford, Casco for red. Thanksgiving for bluish pink, Autumn Glory for exhibition, and Mrs. Trainor L. Park, Mrs. R. D. Douglas, Mrs. John J. Glessner, and Sunstone among the yellows. In referring to new or old varieties of chrysanthemums, it is well to allow latitude for personal taste and choice. It is well to differ sometimes. It relieves monotony. I wouldn't overlook that old standby, H. Waterer, for a late cut bloom of bright yellow and red bronze. I wonder if Mr. Robt. Craig grows it as well as he did a dozen years ago? I saw that Philadelphia and it has remained with me a steady standard variety ever since.

As to bush plants, select those that are naturally compact, with the foliage good, and above all, short-necked blooms, as Bonaffon, Ivory, Cullingfordi, The Bard, Glory of the Pacific, Cheddard, J. H. Whitford and the like.

For standards the best one is Hicks-Arnold. There is no use to attempt standards unless you propose to do the thing up brown. Start in early, and Wm. H. Lincoln is grand for this purpose, or for a general pyramid. The hard is susceptible to training skill. It evidently was well bred from good stock. Select June and July cuttings for single-stemmed plants; give plenty of air, and grow them for all you are worth.

Miss Gladys Vandercilt.

demand lasts until after Christmas; while good Bonaffon for Decoration Day and June weddings and ceremonies brings \$5 a dozen.

On the average, prices are lower than formerly, but this is also true of every florist commodity. Prices have varied according to size and quality—\$1, \$1.50, \$2, \$2.50, \$3 and \$3.50 for bunches.

For a stunning decoration properly done, the chrysanthemum eclipses any other flower that grows or blows. I have proved this time and again, publicly and privately. The reasons are obvious. What brings the flower into ill repute is the quantity of unfinished blooms forced upon the market. You cannot sell poor roses to advantage, nor chrysanthemums.

Whether exhibitions are a success financially or otherwise, from my experience and observation, largely depends upon the management. It is something of an art to get at the public pulse, but when you are in "touch" every nerve tingles.

One needs to study human nature and wisely provide for contingencies and emergencies. Some have nerve; others nerves! In my local exhibition, which was as popular as ever, I tried a new scheme—display for decorative effect. Hundreds of blooms were massed, of one color or variety, and in different positions, the whole enhanced by brilliant lighting and abundance of greenery for harmonizing background. One got the deep public interested in the flower, and you have created demand. Work for the masses. The aggregate of trade is the sum of all its parts. Cater simply to the "society" and you are a slave without perquisites. I tried, once upon a time, a "class" distinction was made between the business, I assure you. Flowers are modest socialists. The love of flowers is born not bred, and knows no social distinctions. In fact, it often levels rank and file. The prices and peasant costume together in horticultural row without any loss of self-respect or patronage.

The classification of chrysanthemums will invariably call out a wide difference of opinion, and whether the various authorities will harmonize is indeed a question. At present I am in something of a quandary how to class Peter Kay. When this variety was transferred to Mrs. E. H. Spaulding for value received, unless there was some agreement to retain the name of Peter Kay, it should have been known thereafter as certified by the Chrysanthemum Society. I confess I did

not recognize Peter Kay at Syracuse as Jeanne Falconer, nor would I have recognized (casually) Mr. W. C. Egan, Lady Playfair as exhibited by different growers. Philadelphia was deep enough a yellow for Pennsylvania, but not enough, another "seedling" was in evidence, which bore so close a resemblance to the subject of this controversy, that personally I was not able to detect distinctive individuality. Synonymy is the sin of nomenclature, and its detection is conviction.

The best twenty-five varieties, except some of the stand-bys—which are everybody's collection, depend upon the skill and taste of the grower. Almost every writer names some that are strangers and pilgrims to the majority. In my opinion, the Irony and Bonaffon, are upon the subject, and I, for one, would discharge the obligation. Varieties, however, the Irony and Bonaffon, are as fixed stars in the chrysanthemum firmament. Exhibition varieties depend upon the skill of the grower for distinctive merit. It is possible for an expert to grow even a mediocre seedling up to a certificate, but its reputation would collapse after a general trial. Mrs. Robinson needs to be grown without check and cool, otherwise she is a disappointment on account of this natural defect, the Queen is returning to public favor.

Yellow sports from white varieties are in the order of straw or canary, as yellow Mayflower, yellow Jerome Jones, Yellow Queen, yellow Philadelphia, the color tone of Pennsylvania, the yellow sport of Philadelphia, is compared to the golden yellow of Bonaffon. Bonaffon is a pleasing clear yellow, but not at all golden; and Pennsylvania is nearer straw than chrome. One of the best all-around varieties is Hicks-Arnold, and a very popular cut flower and profitable to the grower.

Speaking of bronze, the term is so general that it loses its application; it needs to be modified as yellow-bronze, red-bronze, bronze-terra cotta, etc. Any yellow variety with some hot or shade yellow lights up much more effectively than the clear tones that are seen at their best in the light.

Cullingfordi is altogether the best all-around red. There seems to be a grower, unidentifiable for a variety of reasons, Belle Pottevine invariably attracts general attention, while for sprays grown naturally there is no other red pink white to compare with it. Well finished blooms of Pitcher & Mandis are greatly

Glory, introduced by Henry Yoshikue, at Oakland, Cal., and grown by E. G. Hill & Co., Richmond, Ind., the best I have seen. A description of it has already been given. Washington, a cream white, grown by E. G. Hill & Co., is a good one, but it was not shown before the committee. It is not a large flower, but will be a splendid seller. Chas. W. Crouch is a Japanese pink, and quite a good variety. As to white or yellow, I have seen nothing so far, that will displace some of the varieties now in commerce.

Regarding exhibitions, we have long since stopped giving them when we were obliged to rent a suitable place and then charge an admission. Our flower market, most any Saturday afternoon, is equal to many shows that are given, and at which a price is asked to view same. Our people all know this, and a chrysanthemum exhibition here would simply be a failure. Then again, we give exhibitions on the second Saturday of every month in the club rooms, above the market; at 2 P. M. the doors are thrown open, and the public is invited to inspect the exhibits free of charge. This, we claim, does more than anything else to promote the love of flowers: It is also

year, occupies space in the greenhouse, otherwise hard to fill, gets cleared off in time to add up benches with other important crops, so that if some growers, in a measure, drop out, others will take their places, as every season tends to show.

At first, it was the writer's opinion the past Fall, that there were fewer growers than last year, but when the aggregation was looked up, it was found that the number had increased. This is particularly true among the big growers; one having this year more than doubled their supply, and reporting the houses with from 60,000 to 70,000 as their quota. In this particular case no fault is found with the sales, but it is claimed that not enough of the small cheaper flowers were grown—a point the writer often has commented on. Yet before me, embracing 35 growers, represents a total of 257,000 blooms, and certainly there is at least 100 growers that ought to have been included in the list, so that it may be safely stated that a million flowers have been disposed of in this city from all sources.

As to prices obtained; taken as an entirety, it is doubtful if as much money per

such as Bonafant, Mrs. Robinson, Mayflower, Evelina, and the like. The old Ivory has not been so satisfactory this year, and needs to be grown to a very high grade nowadays to sell well, except perhaps in the cheaper grades in which it ought to find a place. The Niveus type are not favorites, although they are good growers.

Of the newer ones grown in sufficient quantity to judge of their merits, among the best are Nidge, Western King (stock hard to get), Mrs. Perrin, Modesto, Evelina, Yanoona, and Lenawee.

Very early varieties are Lady Fitzzygram, Marion Henderson, Glory of the Pacific, Mrs. Hillin, Mine, Bergmann, Miss M. M. Johnson, and Mrs. Robinson. Midseason and late Eugene Lelidoux, Golden Wedding, Mayflower, Mrs. J. M. Wood, Major Bonafant, J. E. Lager, Vivand-Morel, Mrs. Jerome Jones, Maid Bean, W. H. Lincoln, Harry Baisley, Mrs. H. Robinson, The Queen, Ivory, Modesto, Golden Wedding, Liberty, Pink Ivory (if it will come pink), are among those likely to be grown for this market another year.

Seedlings or sports have not been notable in this city this year. W. N.

education of the buyers to distinguish the varieties, the price would undoubtedly be lower. In fact, the market would be grown quite cheaply and pay? The writer believes so, and thinks it worth trying.

One notable feature in a class of flowers so numerous and varied as is the chrysanthemum is the fact that there are a very few varieties generally grown in quantity or conspicuous as sellers, dense figures in the chrysanthemum market at wholesale and retail, is the rule; all of which could be remedied did but the grower take the pains to select the name of every kind he shipped. However, it is quite within the range of possibility for the grower to get down to a few varieties for market kinds, bouquets and carnations. This condition could be remedied by the grower, and the growing of plants for exhibition purposes, which furnish a greater volume of flowers to the market.

Very few reds, bronzes or odd kinds are called for over the counter.

EDGAR SANDERS.

#### In New England.

In comparison with other years the chrysanthemum season in New England has not been a marked success; but taking the sale of standard varieties and special flowers during the present Fall as a criterion, it cannot be said that the quantity of flowers of autumn has met the prestige which it has so successfully maintained during the Fall and early winter months of the past decade. The conditions surrounding the growers and the weather have not been so much as to be active of ten strikes in any locality during the declining months 1897, and though chrysanthemums have sold at suicidal prices at times, the misseason particularly, the reports regarding the weather, and the fact that there has been little, if any, more encouraging.

The flower business appears to be starting to pick up, but the growers, formerly with us, the fashionable set preferring to spend the delightful Indian summer among the mountains or abroad.

Of course, the supply has increased many times during the past year, but there is another feature which has perhaps more direct bearing on the growers' returns than any other of this year. Some growers, and large growers too, who count their product by the tens of thousands, have not been so active in quantity only in view and furnished this market with wagon loads of flowers which would have sold for ten or twelve dozen. This product has, of course, never interfered with the higher grades; but, in the year these flowers were so abundant, diminishing their output, wonderfully improved its quality, so that thousands of chrysanthemums which formerly have found a ready market at \$2 per dozen, this year, found only a moderate demand at from \$1 to \$1.75 per dozen. In fact, this immense production of good blooms has lowered their price and knocked the demand for second-grade flowers completely out. As a result, a much better grade of good flowers is on the street than has been seen for many years, and it is so common that the better class of trade dealers are now buying them in quantity.

Some shrewd florists who are generally not large growers of chrysanthemums, have been buying up the second-grade flowers, and that other flowers, the business generally, and the chrysanthemums themselves, have been sold at a price which will merely aggrandise without attempting to discuss it here.

At the close of the season was satisfactory to the grower, the market taking the entire supply of early varieties at from \$1.50 to \$2.00 per dozen. The market was glutted and remained in that condition for several weeks. Thanks to the weather, the market has lately quieted, though of better quality, have not found the demand of the first classes. Chrysanthemums which were sold in November, when the weather was favorable, the florist business has been only a fair one, but it is not to be drawn out, when of desirable color (the straight colors, yellow, pink, white, and red), but of better quality, and a good well grown, in good condition and of medium size, has found a fairly good demand at a fair price. The market has been on an average, prices for good blooms at from \$1.50 to \$2.00 per dozen, and according to quality and demand. The call for the highest quality of flowers, and the fact that the market is perfect finish and magnificent foliage, at prices which make it profitable to grow them, is a fact that has caused many growers to a single stem, two to five flowers to a plant being the average in a

#### Autumn Glory.

educates the public to demand the better grades, and it stimulates our growers to raise better stock. It also enables the buyer as well as the grower to enjoy the flowers upon an equal footing, and makes many a sad heart glad.

As to exhibitions, the market has very little use for them, as our growers do not attend any of the foreign shows and at home such blooms are not required.

Pompan varieties are all right and should be more largely grown, and a beautiful little chrysanthemum, and sells readily at \$1.50 to \$2 per 100 wholesale. Belle Pathe is a new idea, but the stock of this variety seems to be almost extinct.

Another classification of chrysanthemums, it would be a hard matter to suit every one, but after all the work is done, you will find them sifted down to about twenty-five varieties for commercial purposes. Hundreds are now classified that are out of existence, and the list should be boiled down until only a live list remains. To do this it would be necessary to circulate printed lists to all the leading centers of America, to competent persons, asking such to cross those varieties not grown in their locality, or add to the list, as the case may be. A compilation of this information, then would be valuable to the florists of America.

E. G. GILLETT.

#### At Chicago.

There is every indication, so far as this city is concerned, that the chrysanthemum will be a factor in the Fall flower market for some time longer at least. It comes at so opportune a time of the

season was realized this year; last; but for high-grade flowers, probably the prices were about the same, running from \$2 to \$4 per dozen. This class does not represent over 10 per cent. of the whole, and the most of them range from \$2 to \$3, the next grade from \$1 to \$1.50 per dozen, but more favorite prices, while the lower grades very often have been the actual grower more than \$3 to \$5 per 100, after losses and commission have been deducted. The extra grade flowers find no sale, even at \$3 per dozen; but the call then is more for florists' window decorations than for general use. Then came a drop into the prime midseason varieties, and the chrysanthemum season proper opened with a bang, and business remained about the same as last year. A good many growers, and thanksgivings, though not very large, such as can be grown cheaply with a profit.

As regards the best sellers, in color they stand first yellow, second pink, third. The latter color was this year the scarsest, partly owing to the tendency of Pink Ivory to revert to the type. Vivand-Morel also has been off color, and did not sell well this year. In fact, flowers of its type are not so much in demand as are the incured Japanese or, if reflexed, the more perfect in form,

#### Australian Gold.

Rudd's Mrs. A. J. Caton is a fine bronzy-yellow and looks as if it had a future.

The Horticultural Society of Chicago held its seventh annual flower show which was successful in every way. Cut chrysanthemums were, of course, the principal features, and the pot plants in both bush and single-stem form were exhibited in lesser numbers than in former years. This is to be regretted, as cut flowers of themselves are not strong enough as drawing cards, the show requiring other striking features for general effect and attraction. An exception should perhaps be made in the tree or standard class; these were more in evidence. The single-stem pot plants on the line of non-competition. To keep up the year these growers are to be congratulated for one color, it really requires very large premiums to induce more competition. The next class those who exhibit for the large premiums in certain classes will have to be debarrated from competing in classes calling for the small numbers, else those with monstrous plants will not be able to draw exhibits, will carry away the premiums, and the smaller growers will cease to be competitors.

This is particularly true of roses, which interferes somewhat reducing competition. Of the pompon class there is not enough shown to the market to warrant me giving an opinion on them as sellers. However, lacking a critical edu-

the auspices of the Rhode Island Horticultural Society was superior in many respects to those of the past three or four years. This was due to the fact that the fact that the hall wherein it was staged was more centrally located than for several years past, but that there were no disadvantages to flower exhibitions. There is not a suitable hall in the city for the purpose, and but for the fact that one or two have made all the display and, of course, captured all the prizes. It was, therefore, a matter of no competition and consequently the attendance was decidedly larger, and indeed was the largest since the show of 1897 will about balance both sides of the ledger.

The system of judging this year also showed improvement and this point the public are quick to recognize. The price of admission to the hall remained the same at 25 cents; but instead of charging an additional dime for a seat in the balconies, these were thrown open, and an increase was made in the number.

It can be stated with certainty that public interest has greatly increased, and that the amount of money made this year it was only possible to show specimens of rare plants and flowers that, while having a great value to the collector, was by the average layman. A large mass of small potted and foliage plants grouped in a very orderly and artistic manner, and the tone and does not have a tinge of the significance or impressiveness that one usually observes in a well displayed fern would have. Then again, tall, giant stalks with one bloom nodding gracefully by itself, or less than two, with a large top of plants heavily laden with flowers. These criticisms may not be accorded with the impression of the but they are what I overheard at the recent show, and I believe are worthy of consideration.

The most popular exhibition varieties here may be summarized as follows: **Best of white.** Mrs. Jerome Jones, Mrs. Evelyne, Queen, Mutual Friend, Missie Wanamaker, Mrs. Jerome Jones, Mrs. Virginia, Mrs. Maud Dean, Mrs. Murdoch, Lady Playfair, Major Bonaffon, H. W. Rieman, and Modesto.

**For six blooms—Queen, Mrs. Jerome Jones, Major Bonaffon, Modesto, Mrs. Maud Dean, and Mrs. Murdoch.**  
**Best vase of yellow.** Major Bonaffon.  
**Best vase of white.** Mrs. Jerome Jones.  
**Best vase of pink.** Maud Dean.  
**Best vase of red.** Callington.  
**Best vase of bronze.** Harry May.

Attention has been given by the growers here to plants for exhibition purposes, this line of work being left to the horticulturists, and for this reason it does not show anything that was particularly remarkable.

Pompon varieties are not grown here and do not appear to be in favor—certainly not with the growers—and a few flowers that were introduced by one of the retailers two or three times from Boston were an entire loss. What the public trade in is, however, the small and sized blooms of clear color, solid incurred being preferred.

The best variety classification of the chrysanthemums it would seem to me that it would entail considerable study and time to do so. They are so close so much mixed that it is hard to draw the line between the two.

H. MASON.

### Best Selling 'Mums in Chicago.

Kennicot Bros. Company, the wholesale cut flower merchants of Chicago, have indicated their opinion that they find the following varieties of chrysanthemums the best sellers in the market of that city:

**Class 1. 'Market For All You Can Grow.**  
Yellow, Golden Wedding, 'Major Bonaffon, H. L. Sunderbruch, Modesto; yellow and bronze, Gladys, Mrs. Murdoch, Fern, Vivand-Morel; white, Ivory, Western King, Missie Wanamaker, Mrs. Jerome Jones, and Mrs. Virginia.

**Class 2. Market For a Fair Quantity.**  
Yellow, Golden Gate, Mrs. J. J. Gleason, Lady Playfair; red, Mrs. Drexel; white, Mrs. Gladys, Mrs. Murdoch, Mrs. (odd), John Shrimpton; white, Mrs. Robinson.

**Class 3. Market For a Few; some are new varieties.**  
Yellow, Lincoln, Mrs. Virginia, Eugene Dailleouze; white, Frank Hardy; pink, Mrs. Higginbotham, Autumn King, Mrs. Altona.

### At New York.

The season of 1897 will be remembered in chrysanthemum history for several reasons; primarily, for the fact that, in a business way, it has been the worst ever recorded, many growers finishing the season with averages 50 per cent. lower than those of 1896, and the returns of that year were considered low. Speaking for the majority, and leaving out very few special growers, the general average for all the varieties marketed will not exceed 85 per cent, and many will find themselves with not more than 85 as against \$8 to \$11 for the previous year. There are a few exceptions to this (but these number less than 20 all told), who averaged lighter, and a few of these, strange to say, surpass any previous year that they have been on the market, their average reaching \$15 to \$22 per 100.

But it is correct to state here that the number of blooms grown was smaller than usual, and their general average of quality was higher; the price of the first year were included. It is estimated that there were nearly 100,000 flowers less this year than in 1896, thus making the total about 500,000. In money value in 1896 they realized in the

calculations, and that much later in reaching the market with the variety, while on the other hand, some growers were early.

The season opened on the same date as last year, September 18; but was prolonged nearly two weeks. In 1897, on November 23 practically wound up the season and on November 30 it closed. This year at the first named date, there was a full supply, and on December 4 more blooms were seen than at the second date named in November of the previous year; and a few remained in evidence as late as December 11; so that the season has been just that number of days longer, and it is safe to say that the last half has been the best for general stock and average prices, a fact which has given many growers encouragement to raise the same quality another year. It is hardly to be adding to indicate, at the present moment, that there will be any lesser number grown, or that the chrysanthemum will be one whit less popular or profitable than now. In fact, with better business conditions prevailing, an increased popularity may be anticipated; for despite the continuous howl to the contrary, the chrysanthemum as a decorative flower to-day is popular over it was.

Maud Dean maintained her high standard of popularity as a leading late pink; Mrs. Jerome Jones came in sometimes as a rival, but she has been out of favor since Eugene Dailleouze, H. W. Rieman, and W. H. Lincoln, are all good as late yellows. Mrs. Virginia, Mrs. Murdoch, and Mrs. (odd) that appeared in 1896, it was fully expected that there would be a big percentage of them in the market. Very much to the favor this year, and that many of the older kinds would be outpointed; but such has not been the case. Very many of the newer kinds cut no figure at all and others only moderately so, except the variety known as Mrs. Harry May. Mrs. Traimor L. Park Ivory. These two realized the highest prices obtainable, and the latter was the only one that exceeded the \$4 mark in bulk; sometimes making \$3 and over. Eugene Dailleouze, H. W. Rieman, and Mrs. Harry May, in color the best on the market, its weakest point being size which it lacks; but despite this drawback it realized good prices and averaged high. Glory of the Pacific proved to be better than was expected, and will have to be ranked now as a standard early pink. The color of the Pacific proved to be better than was expected, and will have to be ranked now as a standard early pink. The color of the Pacific proved to be better than was expected, and will have to be ranked now as a standard early pink. The color of the Pacific proved to be better than was expected, and will have to be ranked now as a standard early pink.

together with the grandstem and foliage, make it one of the best. It also realized high prices, and was very popular. The selling price, Sanrice proved to be the best early red up to date, and was very popular. The variety known as Mrs. Harry May, in the main list quite a number of varieties has not been mentioned, which may be taken as an indication that they failed in some particular or other to come up to the market standard, or were lacking in shipping or other respects.

### Market Review.

On September 25 our market report read as follows:

Chrysanthemums made their appearance in the market on Friday, and a few blooms have been arriving each day since. The varieties were Lady Fitzzygram, Mrs. Murdoch, Mrs. Maud Dean, and Montmore. Prices varied from 12c. to 40c. per bloom; but the demand for the supply was limited. Several large growers will begin cutting heavily Friday, and it is always early to bid and never get right again, so that not more than 20 marketable flowers was the result; yet, another instance of a product that is sold in 100. Dorothy Spaulding and J. H. Woodford proved fairly acceptable. The market also observed a place as a late pink. There may have been others deserving special mention, but it so they did not come under our observation. In the main list quite a number of varieties has not been mentioned, which may be taken as an indication that they failed in some particular or other to come up to the market standard, or were lacking in shipping or other respects.

This section seems to have an unusual quantity of early blooms; many places in the market are full of them. Besides those received at the wholesale commission houses across town, chrysanthemums were also seen at the Exchange, Thirty-fourth street.

W. Gunther received from Leach Bros., Newark, N. J., a lot of Mrs. Harry May chrysanthemums; Mrs. Gasteller will have the variety, the flowers being of good quality. The flowers were first of the season to arrive in this city.

October 2 we said: Chrysanthemums, Mrs. Murdoch, Mrs. Maud Dean, and Fitzzygram, and Gasteller are quite numerous. The first named brings on an average of \$3.00 per 100; Mrs. Murdoch, after that the prices vary from 15c. to 12c.

October 9 we reported: Chrysanthemums, Mrs. Murdoch, Mrs. Maud Dean, and Glory of the Pacific all made their appearance on Monday. The flowers were of good quality. The varieties named last week helped to supply all possible demand. The variety known as Mrs. Harry May, according to the size of the blooms generally, they realized all they were worth; and the variety known as Mrs. Harry May, according to the size of the blooms generally, they realized all they were worth; and the variety known as Mrs. Harry May, according to the size of the blooms generally, they realized all they were worth.

October 16 we said: Mrs. Harry Robinson and Mrs. Virginia are the two blooms were noticed Wednesday, October 13. These were of excellent quality. The variety known as Mrs. Harry May, according to the size of the blooms generally, they realized all they were worth; and the variety known as Mrs. Harry May, according to the size of the blooms generally, they realized all they were worth.

### Boundless Snow.

neighborhood of \$60,000; but, this season, not more than \$35,000, thus representing a loss of about 40 per cent. with the previous year, of about \$20,000.

Many of the evils which existed in the past have not been so noticeable this season. Private growers have sold only a few flowers, and the competition has been so that competition from that source has been reduced to a minimum. There have been fewer cases of direct contracts between the grower and the retailer, and the ridiculous practice of dyeing the flowers was but little in evidence. Smaller and more chaste blooms have competed favorably with larger kinds, and in some instances have earned most money for the producer.

The most popular color, and of which the greatest number was sold at highest figures, was yellow. In quantity white came next, but with a lower average in value. Pinks in various shades came third, and at times averaged well, possibly to many growers bringing more money than any other color. Reds followed next but they were in light supply and averaged well in value. It is evident, however, that the ideal red is not yet at hand. Bronzes and other colors were not so much in evidence as usual; and what few there were found but a poor market. This was largely due to their inferiority.

The behavior of the varieties and the erratic dates of blooming will also long be remembered. Never has the knowledge and dates of the expert been so severely at sea. Many growers of reputation were as much as two weeks out of their

A noticeable feature this year is the manner in which a few well called seasons have been held their own. As a white, Mrs. Harry Robinson stands pre-eminently at the head, although, in quality, she is not so good as usual by a week or nine days; but for quality and value the variety heads the list. It is a very disappointing, failing to come to time, Marion Henderson is a point of time-outstripping it. John E. Lager also helped to fill the gap, but could hardly be called a success. Those who had selected Henry Hurrell as early yellow did better, although this variety hardly showed the high standard of quality seen in the last season; the flowers in most cases failing to incurve properly. Major Bonaffon, however, was in as early as usual, and proved to be the most valuable standard yellow yet on the market. It maintained its season longer than any other variety. In value it will come out even or nearly so with Robinson. It frequently realized but a few cents per dozen, and its rivalry did no more, except in general average where it slightly leads. Mayflower has found it hard to have done, considering the quality. Light colored blooms of this variety were conspicuous, many of them coming ahead of white. Pink Ivory also shared the same fate, although, on the average, it colored better than white.

In pink, Vivand-Morel showed up in as good form as ever, and had a prolonged season, but at its first appearance this year it was unfortunate, meeting with hard times, and therefore averaged lower than it ought to have done, considering the quality. Light colored blooms of this variety were conspicuous, many of them coming ahead of white. Pink Ivory also shared the same fate, although, on the average, it colored better than white. Mrs. Simpson was a disappointment.

Elvena, Sunrise, Major Bonaffon, Henry Harrell, and Evangeline.

October 23 business was so poor that no one was seen to be tempted. By October 30, the fall crop was over and this is what we said: "Chrysanthemums are so numerous and many of them so poor in quality that regular prices are out of the question; the highest many will pay for the best is \$4 per dozen, and this for blooms of more than special importance; \$2 per dozen is asked for good flowers, and this at the lowest even at the low figure."

November 6 we remarked: "Chrysanthemums are excellent in quality, but realize little money. Good blooms only command \$1.25 to \$1.50 per dozen. The best notch for specials is only 25c. In lower grades the price varies from \$1 to 88 per dozen, and among these are often excellent flowers."

November 13 our report read: "Chrysanthemums are in the cellars and boxes nosed—huge quantities of them. Excellent quality is offered at \$1 and \$1.50 per dozen, and buyers were not tempted. Not so long ago a similar quality of blooms was bringing \$4 to \$6 per dozen. On November 20, the business was not kept pace with violets and show but little if any improvement over last week. On November 27, the business was better; the market clearing well as compared with previous varieties like the Golden Wedding, W. H. Lincoln, H. W. Riemann, Maud Dean, and the new variety, Jersey. The market well up to its old-time form, and gave general satisfaction. Good blooms varied from \$2 to \$4 per dozen."

On December 4 we stated: "Chrysanthemums are nearly over, and no more blooms that realize more than \$2 per dozen. The varieties most in demand are the pink variety from Indiana and another named Indiana, but which is identical with Indiana from the same source. The variety from a free Liberty, a pink named Esther Cleveland, a poor sort which will have to be given up, and a variety named a riot, a few Mrs. Jerome Jones and some stragglers that have missed their season. The season closed on December 11, H. W. Riemann being in good shape up to this date."

Analysis of varieties.

From the above, data the following have proved the best on the market, taking into consideration growing, shipping, and quality, and the best upon the market in this order: Lady Fitzgibbon, (white) Marquis de Montebello, (pink) Mrs. Jerome Jones, (pink) Marion Henderson (yellow), Merry Monarch (white), Liberty Monarch, Mrs. Jerome Johnson (white), Ivory pink, white kinds, Major Bonaffon (yellow), Vivand-More (pink), Golden Wedding, Mayflower, Mrs. Jerome Jones (white), Eugene Bonifalone, W. H. Lincoln (yellow), Maud Dean (pink), H. W. Riemann (pink), and Esther Cleveland (pink).

These will be extensively grown for another year together with the following: Mrs. Jerome Jones, (white), Elvena, bright pink; Mrs. Trainer L. Park, yellow; Frank Hardy, (white), which may be very extensively perused; Evangeline, white, and Sunrise, a successful airy red. These will not be seen in any quality next season, and Liberty not at all. The last-named variety develops badly, and does not succeed with a grower in this vicinity as a cut flower; in one instance, it made a good pot plant, and is to be in this direction. The low W. H. Lincoln for small bush plants in fine pots.

Exhibition.

In New York and district exhibitions have been more numerous than usual. The chrysanthemum has been the most attractive feature in the various ones displayed, proving that that part of the general public which is sufficiently interested to attend to these still takes pleasure in viewing and criticizing the flowers of Autumn. The general feeling is understandable, for the varieties exhibited have been of a very high order, and the season has been so good. On a two weeks show held at Madison Square Garden in October during the winter months, the following were exhibited: Morristown, N. J., andoughkeeps, N. Y., held their annual show the first of the year. The exhibition was held for the first time at Perth Amboy, N. Y., and was an unqualified success; this being the first time since 5-6, Millbrook and Mont Kisco, N. Y., had flower shows during the following year. The Washington show was held in New York City, November

12-13, making eight shows in all, with a total of about 15,000 blooms staged, as against five exhibitions last year and a total of about 10,000 blooms. The kinds such as Mrs. Henry Robinson, Major Bonaffon, Vivand-More, Mutual Victory, Mrs. Jerome Jones, Golden Wedding, held their own. Among newer kinds, Mrs. G. Peabody, Frank Hardy, Mrs. Jerome Johnson, Mrs. Jerome Jones, Mrs. J. H. Woodford, Sunrise, Elvena, Evangeline, Sunstone, and Mrs. E. G. Hill, were successful. Only in one instance was a class for fineness or incurved provided for, and this was poorly filled. It is to be regretted that the attention that usual and were fairly given in schedules three times. The classes were held and although varieties were gathered together exhibited. Blooms were used largely in two exhibitions: single classes, one bloom, with long stem, each three times, and with great success. Exhibits of 6, 12 and 25 blooms to a vase constituted the plan in 1896; and it is to be stated that considerable improvement in staging was noticeable everywhere.

It is to be regretted that the floral effects were produced, by the use of Autumn foliage and berries mixed with flowers, and that the latter were not encouraged; on the other hand, some vile combinations of ferns and ribbon grasses or status were used which command discouragement.

The general management and arrangement of the shows were of great improvement; but that terrible evil—the entrance of the great, an extent as ever, and which has been the cause of the market will never be perfect.

Finally, how have the exhibitions been? Probably, how have the general public and how have they come out financially? It is to be regretted that the outside assistance and a few large-hearted friends, they have held their own. The business was better than expected, or dead-end, was larger on the average. The prospects for 1898 are that fully as good as last year, but they are not so bright, but with this difference—they will be largely made up of private growers, although some of the material has been better than usual, and next season they may be expected to be still less in evidence.

Seedling and Sports.

There has been a marked falling off in the number of seedlings and sports of the chrysanthemum this year; and only a small percentage exhibited have graded certificates. In New York, 1896 is credited with 47, certificates being awarded to 21 of them. This season but 27 were shown to this committee, six of which only scored points enough to be certificated. There were no early ones that scored, October 23 being the first date on which a certificate was awarded. There was only one late variety and that occurred November 27, in the varieties in which chrysanthemum committee more than 50 varieties were shown and 28 certificated. Chicago, New York, and Philadelphia had the largest number in the order named. The certificated varieties are as follows, full descriptions of same, as far as obtainable being given in full.

On October 23, E. G. Hill & Co. set, arrived in New York in grand condition especially his Solar Queen. This is an attractive yellow incurving Japanese, of good size and substance, first class stem and foliage. It scored 87 points at New York and 85 points at Chicago. His European variety, Australian Gold, also scored well, receiving 93 points. Judging from these and other blooms of this latter variety seen on exhibition, it is likely to be a grand exhibition bloom, its only fault being a rather long and here neck. The type is Japanese.

Only two varieties were before the New York committee Saturday, November 6. Both were of a high order of merit. Hugh Graham, Philadelphia, exhibited a variety of the type of the Solar Queen. The form needs no description, for it is simply a duplication of the type, but the class is exquisite and furnishes just what

its parent needed—more color. This is now amply supplied with a bright, clear, canary-yellow which illuminates well. This new break cannot fail to be popular. It scored 90 points at New York, Philadelphia 91 points, Boston 90, Chicago 86, Cincinnati 87.

Frank Hardy (English), exhibited by A. Herrington, Madison, N. J., made a good impression upon the judges at first sight which improved upon examination. Its wonderful stem and foliage, massive bloom, and bold appearance make it at once a pronounced and desirable variety. The type is difficult to decide, for the stereotyped "Japanese incurved" hardly describes it properly. We prefer to call it just a plain Japanese, which, in our opinion, it really is. The forets are of great length and incurved in curls, first in one direction and then in another, thus making a wave-like, or as the general public at exhibitions have said "plume-like" appearance. Its weakest point is its color, for which it hardly claims the full score, but it is to be regretted that nevertheless it is bound to be one of the popular favorites of this season, and next year doubtless will be seen in every exhibition. It scored 95 points, at Boston 94, at Chicago 95, and 89 at Philadelphia.

Autumn Glory, from H. W. C. was shown at New York, November 13. This is an excellent variety and demonstrated its good keeping and shipping qualities by arriving in first-class condition. The appearance of this bloom is intermediate between Vivand-More and Inter-Ocean; it is a large reflexed Japanese. The color is a shell-pink, with good illuminating properties; under electric light it takes on a pretty flesh-shading. The foliage and stem are both good, its only defect being a slightly bare neck, but not enough to make it objectionable. It scored 87 points at New York and the same number at Chicago, May 19, and the same number.

On Saturday, November 27, before the New York committee only one variety was presented; this came from Grove P. Rawson, Elmer, N. Y. Considering the late date of the plant, it was valuable and should prove very acceptable as a late white. The type is Japanese incurved; and the forets are well distributed, curving to the center; while the outer or ray petals show a disposition to depend in a pretty manner. The substance of the flower is also good, and the bloom bears evidence of making a good shipper. In color it will have to be classed as a white, but in this quality it evidently is not constant, for some of the flowers presented inclined to a pink cast. It is to be regretted that Mrs. Jerome Jones, when it so sets; and this is saying a good deal. The stem and foliage are both good. It scored 86 points at New York, and also scored certificates at Philadelphia, scoring 89; Boston 92 and Chicago 93 points respectively.

Other certificated sorts are as follows:

Chicago, October 23, Mrs. Jerome Jones, scored 87 points. It was a large incurved white, pink shadings on lower petals. Scored 85 points.

Mrs. G. B. Bassett, exhibited by Bassett & Washburn, Hillsdale, Ill. scored 85 points. Mrs. H. Robinson; light yellow. Scored 85 points.

November 12, Black Hawk, from E. G. Hill & Co., intense crimson, Japanese, scored 85 points.

November 6, Snow Queen, exhibited by Fred. Borner & Sons, Chicago, white, incurved, commercial scale, 85 points. This is a

well-built white with a faint yellow center, a very taking flower of that style known as a good shipper, petalae deep and abundant, and the stem and foliage and medium broad; stem fair, foliage rather thin as shown, showing six to seven inches of neck.

November 20, 1897, Rustique, exhibited by Nathan Smith & Sons, Japanese incurved, light bronze. Scored, commercial scale, 85 points.

Merza, by same exhibitors, Japanese incurved. Scored, commercial scale, 85 points.

PHILADELPHIA, October 16.

Mrs. Arthur J. Cator, exhibited by W. N. Rudd, Mount Greenwood, Ills. Japanese reflexed bronze. Scored 88.

Alice F. Carey, exhibited by Robert G. Carey, Chestnut Hill, Pa., reflexed Japanese, light pink. Scored, commercial scale, 78; exhibition scale, 87 points. Mrs. Gladys Hamilton, exhibited by John N. May, Summit, N. J., reflexed Japanese, creamy white. Scored, commercial scale 92; exhibition scale, 85 points.

November 13, No. 2, E. G. Hill & Co., deep yellow. Scored, commercial scale, 87 points; exhibition, 88 points.

No. 3, same exhibitor, pink, reflexed. Scored, commercial, 87 points; exhibition, 90 points.

Robert G. Carey exhibited by Robert G. Carey, Chestnut Hill, Pa., creamy white, Japanese incurved. Scored, commercial, 90 points; exhibition, 85 points.

November 20, Spotswood, exhibited by Robert G. Carey, Chestnut Hill, Pa., incurved, light yellow. Scored, commercial scale, 91 points; exhibition scale, 88 points.

November 27, Sport from Mrs. Jerome Jones, exhibited by Ferdinand Heck, Reading, Pa.; Japanese incurved, light yellow. Scored, commercial scale, 90 points; exhibition scale, 90 points.

Our Old friend, exhibited by W. K. Harris, Philadelphia, Pa.; Japanese incurved, canary-yellow. Scored, commercial scale, 89 points; exhibition scale, 89 points.

CINCINNATI, November 13.

Mrs. Samuel Hegdon, exhibited by J. A. Peterson; bluish white, Japanese. Scored 87 points.

No. 3, exhibited by E. G. Hill & Co., light salmon pink, Japanese. Scored 87 points.

Chas. W. Cronch, exhibited by Chas. W. Cronch, Chicago with a number of pink, Japanese reflexed. Scored 85 points.

Boston, November 2.

Grace E. French, exhibited by Geo. Hollis, South Weymouth, Mass., creamy white, reflexed. Scored 87 points.

November 20,

Arlene, exhibited by Nathan Smith & Son, Adrian, Mich., incurved, white. Scored, commercial scale, 87 points; exhibition scale, 90 points. It was exhibited, by same exhibitors, Japanese, deep chrome-yellow. Scored, commercial scale, 92 points; exhibition scale, 94 points.

Mrs. C. H. Peire, exhibited by F. Borner & Sons Co., Japanese, bright yellow. Scored, commercial scale, 87 points. This variety was also certificated at Cincinnati, scoring 87, at Philadelphia 90, and at Chicago with a number of points. The exhibitors of this variety say: "We have grown it three years in New York. It has good heavy stems, and beautifully cent. foliage, it is of even growth about 3 to 3 1/2 feet, very stocky and uniform size of flowers. Take first hand. The flower is made up of numerous petals of greatest substance and best-keeping qualities."

Analysis of the Varieties.

The following analysis of the varieties is taken from the reports of shows in New York City; Millbrook, N.Y.; Philadelphia, N.Y.; Syracuse, N.Y.; Portland, N.Y.; Northampton, Mass.; Springfield, Mass.; Worcester, Mass.; Hartford, Conn.; Chicago, Ill.; Grand Rapids, Mich.; Cleveland, O.; Detroit, Mich.; Toronto and Montreal. Other exhibitions were held at Boston, Philadelphia, Milwaukee, etc., but the names of winning varieties were not furnished.

There were eight varieties shown over 12 times and less than 19 times and less than 20, and 19 varieties shown over five times and less than 10.

HERBACEOUS PEONIAS. Large stock in choice varieties. Also a choice assortment of other hard perennial plants.

THE STORRS & HARRISON CO., Painsville, O.

Dreer's Special Offer

OF.....

AZALEA

The Quality this season is fully equal to what we have sent out for several seasons past, which has given universal satisfaction, which is shown by the greatly increased number of orders already booked.

The Tariff which has been increased to 25 cent. on this class of stock will not affect the price, as we have been successful in making such arrangements with our Belgian growers (who are among the most successful specialists in this class of plants), which enable us to sell at the same prices as last season.

The Varieties we offer are such only as are known to us as the best plants, well set with buds. These will be supplied at the following prices until December 30th, at which time stock will be potted up and prices will advance:

- 10 to 13 inch crowns, bushy and well set, . . . \$35.00 per 100
10 to 12 " " " " . . . 40.00 " " " " " " . . . 60.00 " " " " " " . . . 60.00 " " " " " " . . . 65.00 " " " " " " . . . 65.00 " " " " " " . . . 65.00
Specimen Plants, 18 to 24 inches in diameter, \$24.00, \$30.00 and \$36.00 per doz.

Wholesale Market.

On the whole, business for the week has been light and irregular. Florists' necessities for use up all the special and fancy stock without creating any unusual demand.

The market was in favor of the buyers till Thursday, when prices stiffened all over. The price for the best quality was lifted to \$5 per dozen from \$4; extra and special grades in other roses were advanced \$1 to \$1.10 and \$1.00.

Very special Bridemaid and Carnot realized as high as \$1.80 per dozen, while the roses in the same grades had not so fine, varied from \$8 to \$12 per 100.

Meat is included with these. For lower grades the market is not so firm, and as low as \$2 per 100 had to be taken, in order to clear, for lower grade stock.

Should any special demand arise, roses will probably stiffen considerably, for apparently the crop is very light, and the prospects are expected to continue so for some time.

A steady advance may therefore be counted on from now on. The weather is not so favorable.

Violas, despite the not over-large supply, did not move so freely as the roses. They were in demand, and have carried these each day to a loss, having failed to sell out a few flowers in the morning bought daily.

Consequently it was impossible to realize more than \$1.50 per 100 for the best stock, while such conditions prevailed. But on Thursday night the retailers had but few fancy violas on hand, and the market today if the weather is favorable for shopping purposes.

Should any special demand arise, roses will probably stiffen considerably, for apparently the crop is very light, and the prospects are expected to continue so for some time.

On the other hand, lower grades are too plentiful to be able to realize high values. However, the prospects, even with these drawbacks, are encouraging.

Orchids are at this time in excellent property, especially Cattleyas and Dendrobium formosum. Blooms of these have realized as high as \$50 each for No. 1 and 40c. for No. 2.

These, the fibrous and the flowers being very unsale to bloom for use as staples; but it is plainly evident that the winter season has not yet begun for funeral pieces and, occasionally, weddings.

The beautiful Dendrobium formosum has been sold with a reverse fate, however, and has been sold as low as 4c. per bloom. Cypripedium and other varieties of orchids prices vary from \$8 to \$12 per 100.

Roman hydrangeas are becoming plentiful, and are in good supply in the market. Prices vary from \$8 to \$12 per 100, and \$2 per 100. Vales is steady at from \$3 to \$4 per 100.

Lilium. The market has improved slightly; special quality having got up to \$10.

Chrysanthemums, strange to say, are still abundant, and, for the season, good. The varieties most in evidence are the 'Beauty' and 'W. Bennett'. Liberty, Eugene DuBois, and Mrs. Jerome Jones are also in demand.

The Harriott are the best. The stores are using them freely for window display; otherwise they are not particularly popular for them; and prices are so far from uniform that they are not worth quoting.

A departure in the method of handling stock is developing rapidly, several dealers having adopted a very considerable extent. Instead of receiving goods on consignment they are buying up stock outright. Sometimes it

worked on the same lines as those above. The florists' necessities for use up all the special and fancy stock without creating any unusual demand.

The market was in favor of the buyers till Thursday, when prices stiffened all over. The price for the best quality was lifted to \$5 per dozen from \$4; extra and special grades in other roses were advanced \$1 to \$1.10 and \$1.00.

Very special Bridemaid and Carnot realized as high as \$1.80 per dozen, while the roses in the same grades had not so fine, varied from \$8 to \$12 per 100.

Meat is included with these. For lower grades the market is not so firm, and as low as \$2 per 100 had to be taken, in order to clear, for lower grade stock.

Should any special demand arise, roses will probably stiffen considerably, for apparently the crop is very light, and the prospects are expected to continue so for some time.

A steady advance may therefore be counted on from now on. The weather is not so favorable.

Violas, despite the not over-large supply, did not move so freely as the roses. They were in demand, and have carried these each day to a loss, having failed to sell out a few flowers in the morning bought daily.

Consequently it was impossible to realize more than \$1.50 per 100 for the best stock, while such conditions prevailed. But on Thursday night the retailers had but few fancy violas on hand, and the market today if the weather is favorable for shopping purposes.

Should any special demand arise, roses will probably stiffen considerably, for apparently the crop is very light, and the prospects are expected to continue so for some time.

On the other hand, lower grades are too plentiful to be able to realize high values. However, the prospects, even with these drawbacks, are encouraging.

Orchids are at this time in excellent property, especially Cattleyas and Dendrobium formosum. Blooms of these have realized as high as \$50 each for No. 1 and 40c. for No. 2.

These, the fibrous and the flowers being very unsale to bloom for use as staples; but it is plainly evident that the winter season has not yet begun for funeral pieces and, occasionally, weddings.

The beautiful Dendrobium formosum has been sold with a reverse fate, however, and has been sold as low as 4c. per bloom. Cypripedium and other varieties of orchids prices vary from \$8 to \$12 per 100.

Roman hydrangeas are becoming plentiful, and are in good supply in the market. Prices vary from \$8 to \$12 per 100, and \$2 per 100. Vales is steady at from \$3 to \$4 per 100.

Lilium. The market has improved slightly; special quality having got up to \$10.

Chrysanthemums, strange to say, are still abundant, and, for the season, good. The varieties most in evidence are the 'Beauty' and 'W. Bennett'. Liberty, Eugene DuBois, and Mrs. Jerome Jones are also in demand.

The Harriott are the best. The stores are using them freely for window display; otherwise they are not particularly popular for them; and prices are so far from uniform that they are not worth quoting.

A departure in the method of handling stock is developing rapidly, several dealers having adopted a very considerable extent. Instead of receiving goods on consignment they are buying up stock outright. Sometimes it

worked on the same lines as those above. The florists' necessities for use up all the special and fancy stock without creating any unusual demand.

The market was in favor of the buyers till Thursday, when prices stiffened all over. The price for the best quality was lifted to \$5 per dozen from \$4; extra and special grades in other roses were advanced \$1 to \$1.10 and \$1.00.

announced his committees for the coming year. The chairman of the committee for the club smoker held in November last, was also elected to the same position for the year 1898.

The committee for the coming year. The chairman of the committee for the club smoker held in November last, was also elected to the same position for the year 1898.

Very special Bridemaid and Carnot realized as high as \$1.80 per dozen, while the roses in the same grades had not so fine, varied from \$8 to \$12 per 100.

Meat is included with these. For lower grades the market is not so firm, and as low as \$2 per 100 had to be taken, in order to clear, for lower grade stock.

Should any special demand arise, roses will probably stiffen considerably, for apparently the crop is very light, and the prospects are expected to continue so for some time.

A steady advance may therefore be counted on from now on. The weather is not so favorable.

Violas, despite the not over-large supply, did not move so freely as the roses. They were in demand, and have carried these each day to a loss, having failed to sell out a few flowers in the morning bought daily.

Consequently it was impossible to realize more than \$1.50 per 100 for the best stock, while such conditions prevailed. But on Thursday night the retailers had but few fancy violas on hand, and the market today if the weather is favorable for shopping purposes.

WHEN WRITING MENTION FLORISTS' EXCHANGE

# Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Santa Cruz, Cal.

The Florists' Society of this place held its Fall exhibition November 11, 12, and 13. There was a good display of flowers and plants; everybody was pleased, and the management made a little over expenses and were to have a better exhibition next year. From some cause or other, the people did not materialize in the numbers expected.

This is December, and heliotrope, and many other plants, and a lot of other tender plants are flowering now in our gardens. Callas have been in flower a month or more, and will continue until dried off next summer.—Bull.

Summit, N. J.

Lager & Hurrell have been very busy lately banding a lot of imported orchids and are now nearly through with the fifth lot this Fall. Their last lot consisted of the now scarce Cattleya Mendilli, and notwithstanding hard times, they have met with a ready sale.

Washington.

J. Louis Loose has opened a branch store at Rauscher's, corner Connecticut avenue and L street. This store is fitted up in Mr. Loose's characteristic good taste. He will use it as his main store.

Nutley, N. J.

Henry Weindheim, a florist, was found in a dying condition in one of his greenhouses early in the morning of December 5. He had gone there about midnight to examine his plants. Mrs. Weindheim missed him. Before a physician arrived he had died from heart disease.

Libson, O.

John Scott died at his home Friday afternoon, December 1, of heart disease. He was 45 years of age.

## PLANTS and FLOWERS.

**SEEDLING SCARLET CARNATION.**—We have received from T. A. Webb, of Cortus, N. Y., sample blooms of his scarlet seedling which, he states, he has been growing for the last five years. The flowers were very brilliant, similar to that of Jubilee, some of the flowers showing in the center occasional streaks of white. The stem and calyx are both good and the flower of good size. Altogether, from the blooms seen, we think this a meritorious variety. Mr. Webb writes us: "It is a cross of Hector and Silver Spray, and is a very free bloomer, a great keeper and shipper, and free from disease, and is pronounced by all who have seen it growing, a grand one."

Did you see the new catalogue of H. Dayersdorfer & Co.? Write for it. Advt.

St. Louis.

Trade Report.

Business has been very quiet the past few days—the beginning of the usual period of dullness that precedes the holidays. Retail dealers report a fair amount of small sales, but have no large orders on hand or in prospect.

Receipts of stock at the wholesale houses have not been large, although quite sufficient to supply the demand. Clean sales have been made of American Beauty at 10c. for ordinary and 25c. to 35c. for the best long stemmed stock. Vase is in short supply, and sell readily at 4c. to 5c. Very few Southern violets are coming in, and home growers stock is in demand at 35c., California bringing as high as \$1.50 per 100. Carnations at 2c. to 4c. are bought only when retailers have orders for them.

Holly and ground pine are being offered by the general commission merchants. The stock is good, plentiful and cheap.

Notes.

Chas. Cannon, Jr. was married at St. George's church, Wednesday, December 8. The bride, Miss Richardson, is from Springfield, Mo. The boys wish the happy couple great good luck.

C. A. Kuehn has enlarged his store, extending it back thirty feet to an alley. This change was made necessary by his increasing trade in wire designs and cut flowers.

C. W. Wors has moved to his new store at 2740 Olive st., formerly occupied by the Cannon Floral Co. He celebrated the event with an entertainment, at which refreshments, both solid and liquid, were lavishly dispensed. Every body was invited, and every-body that attended had a good time.

The Chicago team of bowlers will be in St. Louis Saturday (or Sunday) to play a match with the St. Louis experts. Whether they win or lose, the home club will leave nothing undone to make the Chicago men's visit a pleasant one.

The chrysanthemum show committee is of the opinion that the prizes awarded at the recent show will be paid in full. The discount in any case will not amount to more than 10 per cent. A full report will be made at the regular meeting of the Florists' Club, Thursday, December 17.

Fanny Copley Seavey's report of the St. Louis Flower Show, in the last number of the Florists' Exchange, is very interesting, although the inference to be drawn from it, that most of the prizes were carried away by exhibitors from other cities, is not in strict accordance with the facts.

One of our florists received an order for a pillow to be lettered "Fanny" and the boy in delivering it, by some mishap lost the first letter of the word, leaving only the letters A F A. As the family happened to be devout Catholics, it is needless to say that the design was returned. The florist is out the amount of the order, and the boy is out of a job.

CHAS. YOUNG.

New ideas are a help in business, you will find them in our new catalogue Bayersdorfer & Co. Adv.

ESTABLISHED 1888.

WM. H. GUNTHER,

WHOLESALE FLORIST,

Telephone 2300-38th St.

No. 30 West 29th Street.

New York, December 11, 1897.

An Open Letter to Growers

Gentlemen:

My business for the past ten years has been principally in Violets, until I have now established the best connection of anyone in that line.

Many of my customers, from time to time, have solicited me to take up general stock; to that end I undertook to handle the largest and best supply of HIGH GRADE CHRYSANTHEMUM BLOOMS coming into market this Fall, which have been disposed of to good advantage for my clients.

This season I purpose to still further extend my business by handling, in large quantities, Roses, Carnations, Orchids and all other florists' flowers, in addition to my specialty (Violets), which I yet continue to receive as extensively as ever.

It not being generally known that I am open to receive goods other than Violets, I take this opportunity of bringing this fact under your observation.

Yours very faithfully,

WM. H. GUNTHER.

P. S.—Growers contemplating a change will do well to make it at once and thus secure holiday prices.

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX, No. 51.

NEW YORK, DECEMBER 18, 1897.

One Dollar Per Year.

## NOVELTIES IN CHRYSANTHEMUMS

We are Now Booking Orders for the Following Prize Winners. Plants Ready for Delivery March 1st. Place Your Orders at Once. Orders Filled in Order Received.

**FRANK HARDY.** This fine chrysanthemum has created a sensation wherever exhibited this season. It has a future, and it is bound to find favor both for commercial and for exhibition purposes. It is a magnificent thing in every way; erect stem, good keeper; foliage right up to flower.

**MRS. H. WEEKS.** "This is an ideal variety for exhibition purposes, and takes on a size and finish not to be found in any other white. Its merits may be judged by the fact that it won first prize for the best twenty-five white in competition with the finest examples of **Queen** and **Mrs. Henry Robinson** that has ever been the fortune of the writer to see. Stem, neck, and foliage all perfection."

Price of the above two sorts, \$3.00 per dozen; \$20.00 per 100.

**PENNSYLVANIA.** The finest yellow chrysanthemum for cut blooms or for exhibition ever produced.

We also call particular attention to **AUTUMN GLORY, SOLAR QUEEN, BLACK HAWK** and **QUITO**.

Price of the above five sorts, \$5.00 per dozen; \$35.00 per 100. We can also supply all other novelties of the season at introducers' prices, and will be glad to book orders for any varieties wanted. Our collection of standard sorts is large and complete. We will be glad to quote prices on any or all standard varieties.

## WE ALSO CALL ATTENTION TO OUR LARGE STOCK OF PALMS AND OTHER DECORATIVE PLANTS.

We will be glad to mail our special offer of these for holiday trade on application. We are offering bargains in **LARGE ARECAS, ARAUCARIAS, NIPPHO-LEPIS EXALATA BOSTONIENSIS** (The Boston Fern), **PANDANUS VEITCHII, FICUS, KENTIAS, LATANIAS**, etc., etc.

**F. R. PIERSON CO.,**

## PALMER'S HOT BED MATS.

FROST PROOF.

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

Indestructible, Cheap and Warm

Will not harbor mice or vermin. Easily handled. Have now been in practical use three years. Cost less than half as much as old-fashioned straw mats and entirely take their place.

Made in regular sizes, 76x76 inches and 76x40 inches, or any size desired sold by the running foot 76 inches wide.

That these mats are a much needed improvement over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hot Bed Mats should give them a trial.

WE ALSO MAKE QUILTED

HORSE BLANKETS,

The Cheapest, Warmest and Strongest in the World.

WEIGHING 9 POUNDS.

When Writing Mention Florists' Exchange

### Violets.

The question is often asked by dealers the days, why do you so scarce in the present season? The answer is not so difficult. It is simply owing to conditions over which we have no control. Up to September stock was unusually plentiful, clean and healthy. As the season advanced, and winter seasonally warm, in fact, "hot," in the heated sense of the term, and violets were scarce, even in the open air. Natural results developed, and along in October the grower had to contend with the spot, black aphid, gall, fly, leaf roller, red spider or the other insect enemies of violets almost too numerous to mention, only to be followed in the darkest November on record. Of course, growth was checked and many buds nipped, hence a notable shortage as the usual cut. Besides, the greatly accelerated call for violets demanded blooms while they were yet in the bud state, otherwise quality would average about the same as usual.

The present outlook is favorable for a good and continued supply. Daily calls are largely on the increase, and plenty of plumb buds showing. Quality is excellent, rich deep color, good blooms on long stems—like a fine grape, plucked out of the shipping orders.

A note in a contemporary that "W. M. Plumb has a new way of growing violets. I wish he would explain where he got his information, as he was not at the greenhouse, and the way in which it is not admitted at court. I believe my violets both as to plants and strain will compare favorably with any grown, and "W. M." is cordially invited to visit my violet range personally and report on "facts." I can assure him a warm reception.

Violets have been a staple article for shipping with me for twelve years past, and there has been a marked improvement in strain and quality. Connoisseurs pronounce my strains to be a veritable drop in color and longer stemmed than Marie Louise is usually. Surely great pains have been taken to develop its good qualities—by careful selection and propagation. Speaking from experience "Patience" is less valued in the violet trade than has often an objectionable green center from which my strain is free. Undoubtedly it has been a great stimulus to growing violets successfully. Fresh-rooted with fine pulverized coal manure, and sold both in the way of a business, united to the closest application.

Other crops will bear with occasional neglect, but not so with violets.

[The blooms arrived in excellent condition; they were clean, and well colored, showing good culture.—Ed.]

F. Boulon, Sen Chef, N. Y., his daughter and son-in-law, have returned from France. M. Boulon brought with him several novelties, the most striking among which are La France, a fine single, equally as desirable, he says, as the now popular double. It is like one having a larger flower, which when fully opened is believed to take on a French blush tint. The color is like a soft velvety appearance. La Patrie is, he says, a handsome dark blue variety, and Belle de France is a fine double in the old English violet. Belle de Brabant and Belle de France are both doubles, with a color as distinct as that of Lady Hume Campbell, the flower of which is much like that of the latter, is a single white, with a flower of the same color as that of Swaney White. For a large sample of the time, these new varieties will be tried by M. Boulon.

Paris M. Boulon particularly observed the great popularity of the single violet. The French buyers of this flower do not wish the double. The Laxone and Quatre Saisons are great favorites. The French growers around Paris of such violet centers as the Belle Bouge La Reine and Fontaine au Rose are experiencing the same trouble as our own growers, as regard the double violet; in fact, so prevalent are these pests that that growing the double violet has been abandoned. Most of the plants now supplied from Nice, whence also come large quantities of carnations and other flowers, the perfume of which reach Paris the fragrance has gone; yet they are still sold. In the Halls Central and great markets in France, the carloads of blossoms are daily disposed of in great quantities, the prevailing system of reaching the dealer, the flowers are given by A. M., the best flowers be-

ing secured by the high-class stores in the earlier hours, the lakir element obtaining their supplies of cheaper grades as the hour for closing approaches. The French growers, like those at home, are still looking for the primal cause of all their troubles—spot, rust, and other diseases that attack their specialty, and render life burdensome.

### New York Florists' Club.

The meeting on Monday evening last, December 13, was well attended; the attendance having been the largest in some time. President Henshaw, who has almost fully recovered from his recent illness, occupied the chair. In a few preliminary remarks—a sort of valedictory talk—he commented regretfully on the non-appearance at the meetings the past year of some of the older members, stating that during his administration very many of them had not been present once. He deplored the secession of the gardeners from the Florists' Club. That body would like to harmonize with all similar organizations of a kindred nature, whose object was to increase the love of flowers and everything pertaining thereto. The president dwelt on the need for greater interest being taken in club exhibitions, referring to the successful shows of the old New York Horticultural

holding an annual dinner next month; and to request all those to come to the January meeting, "prepared to put down the money for tickets. No price was stated. Formerly, tickets for this occasion cost \$5 a piece.

The sum of \$150 was appropriated to the essay committee, for the purpose of creating awards, copyrighting their papers, and the publication of the same at the end of the year, a copy to be distributed to each member in good standing.

Notice of a change in the by-laws was presented, to provide for propositions for appropriation of money, which was submitted to the Club in writing, same to lie over one month for consideration. There followed a spirited discussion on the remissness in duty of the present essay committee, the difficulty of securing essayists or lecturers owing to paucity of attendance, the discourtesy and disrespect shown to essayists, on several occasions, through a disinterestedness in the papers read; the necessity of upholding the dignity, and the respect to which a lecturer or essayist was entitled; how far propositions could go in the matter of reporting copyrighted papers; the desirability of a wide dissemination of the subject material contained in the papers, even to the extent of distribution of same through the daily press; how best to interest the daily newspapers and the "public in the

fortune in the western world, settling at Montreal, where he was for a short time in the employ of the Jay's bookbinders. He was a first-class market gardener. His Canadian experience not coming up to his expectations, he returned to his native country, where he secured a position as gardener at Greenway, near New York. He was afterwards at Richmond, a noted grower and exhibitor of stove and greenhouse plants and palm-trees. He was afterwards in the West, on the greatest mission of his life—to secure his life partner. After remaining in the West for 13 years, he crossed the ocean, and has remained on American soil ever since.

It is perhaps, as a manager of New York's flower shows that Mr. Plumb's name is most familiar to the trade. When plans for the arrangement of the Lenox Lyceum exhibition, given under the auspices of the New York Florists' Club (their first undertaking of this nature), were advertised for, those submitted by Mr. Plumb were selected by the Lyceum committee. The beautiful layout of the Lyceum on that occasion will yet be fresh in the memories of those who had the pleasure to visit the exhibition in question. The Club's appreciation of his masterful services in connection with the exhibition held by the Florists' Club in conjunction with the Madison Square Garden, in 1891 and 1892, the 31 show having the honor of being given the first and only flower show in New York City, which it is presumed that has been a financial success.

In 1893 Mr. Plumb went South to Atlanta, Ga., where he was connected with the West View Floral Co., and acted as superintendent of the West View Cereals and Floriculture Co., gradually coming back north to accept the management of C. Weidenfeld's place at Oyster Bay, N. Y., a semi-commercial establishment.

President-elect Plumb is at present head gardener to the Hon. C. P. Huntington, at Throgs Neck, N. Y.

Mr. Plumb was one of the first twenty members of the Florists' Club at its inception, and has remained an active member ever since. He has witnessed the steady growth of the Club, and is proud to see it so well advanced until it is without parallel, as a florists' club, in the country, and has developed the young interest that has manifested itself in recent years. Ready at all times to do anything in his power, to the extent of putting his hand in his pocket whenever necessity demanded, to further the Club's advancement, the members' recognition of the good services he has rendered them as a body, is now shown by their electing him to the highest office in their gift—a well-deserved honor and worthily bestowed, and one which, we feel sure, time will but too amply vindicate.

Mr. Plumb is a member of the Columbia Commandery of Knight Templars, and of the Mechanics' Trade Union of the Shrine.

Spiegelkugel (to assistant)—Why did you put that sign up? "Boston Peaches"? Wags—Can't you see dey's all got specks?—World.

William Plumb, President-elect New York Florists' Club.

tural Society which the public largely patronized. The unwillingness to make displays was condemned, and the hope expressed that with new executive blood, and increased enthusiasm among older members future club exhibitions would excel all previous similar efforts.

The committee's report on rules and regulations governing the competition for the Club's gold medal was submitted and adopted (as given in another part of this number).

The election of officers resulted as follows: For president, William Plumb, gardener, C. P. Huntington, Esq., Throgs Neck, N. Y., vice-president, J. M. Logan, superintendent, Opafr Farm, White Plains, N. Y., treasurer, John Young, treasurer, C. B. Weathered; trustees, A. S. Burns, J. H. Troy, and W. I. Brower.

President Henshaw expressed satisfaction that a gardener would succeed him in office. Around New York there were many florists who at one time or other had been members of the Florists' Club. Mr. Plumb showed the members' appreciation of the gardeners' intelligence.

An invitation from the Dutchess County Horticultural Society, to the annual dinner of that association on January 5 next, was received and the secretary instructed to acknowledge receipt. The secretary was instructed to ascertain how many members were in favor of

Club's work; and the horticultural education of the people generally. It was a general round-up, and no doubt will create a favorable opinion of the incoming administration, which will start under propitious auspices, and doubtless receive the hearty advancement in many directions.

C. Besold, Mineola, N. Y., exhibited a vase of his beautiful pink carnation, Mrs. Joost, a four-year-old seedling of McGowan and Scott. The plants had been grown in the open air, and were cut during the middle of June. The exhibitor was awarded a vote of thanks.

### President-elect Wm Plumb N. Y. Florists' Club.

We have pleasure in presenting in this week's issue a photograph of the newly elected president of the New York Florists' Club, Mr. William Plumb, of Throgs Neck, N. Y.

Mr. Plumb is an Englishman. He was born at Buckden, Huntingdonshire, in 1850. There his father, Samuel Plumb, still lives hale and hearty, at the grand old age of 88 years. Early in life Mr. Plumb chose the ancient profession of gardener, and served an apprenticeship to the Chipping Barnet nursery, then in Kent, under Benjamin Godbold, a gentleman who achieved some fame as a successful grower of forced fruit.

In 1868 Mr. Plumb resolved to try his

They must be fresh to be good no NICOTINE in dried up kind: nicotine kills 75c. per 100 lbs. Good kind 75c. per 100 lbs.

Answers Solicited from Those Who Know... (167) Greenhouse Leaf for Identification.

(168) Greenhouse Building and Heating.—I wish your advice in regard to the style of greenhouse to build for growing roses, carnations, and chrysanthemums...

After the chrysanthemums are out will use some space for the growing of asparagus...

—I would build the houses 20 feet wide and from 60 to 80 feet long, according to the size of the lot...

(169) Greenhouse Heating.—I wish to build an even-span greenhouse 24x150 feet with a ridge...

—As near as I can estimate from the data furnished by N. X. Z., the rose house, 24x150 feet, will require about 1,500 cubic feet of radiating surface...

Each brick should have a grate about 2 1/2 feet square and contain about 150 square feet of radiating surface...

in the same manner. The fittings, etc., for the boiler will be fifty-six 1/2-inch pipes 5 feet long...

The pipe and fittings can be obtained from any dealer, and the grate and doors can be ordered from Hirdings & Co.

(170) Red Spider on Violets.—I am troubled with red spider on my violets. I have tried to kill them with hydrocyanic acid...

I understand that hydrocyanic acid gas is very poisonous and will kill in having red spider at this time of year that you cannot use water as freely as you would like to do...

(171) Gall Fly on Violets.—I enclose you a specimen of small fly seen over my violet frames. If it reaches you by mail it will be long frozen...

The small fly which Mr. Comstock enclosed was crushed in a small tin upon its receipt at this office consisting of the portions of two legs...

Regarding Mr. Comstock's request that an article be published about the gall fly on violets, I regret to inform you that very little is known to entomologists about this insect...

These were placed in a breeding cage October 23rd and many flies issued. These proved to be small gall midges of the genus Diplosis and of a species apparently not named or described.

NEWSPAPERS AND MAGAZINES AT REDUCED PRICES FOR 1898.

Save Money by ordering them through us.

Below we print a comprehensive list of the leading publications of the day. When more than one is wanted in club we will be pleased to send you an estimate.

Our list has been carefully selected, and the price at which we offer magazines, etc., in club with THE FLORISTS' EXCHANGE has been made as low as possible...

**CARNATIONS.**

**Top Cuttings.**

The taking of top cuttings has often been a subject of controversy, some claiming that at the end of flowering shoots which have grown out to considerable length, but which have not yet reached that tapering stage that indicates the formation of the buds, make equally as good cuttings as the well-developed side shoots which are asserted, with equal confidence, that they do not.

In my experience I have had results which would support either side of the argument. We have, growing in our houses now, plants of several varieties which were made from top cuttings and which are certainly none the worse off for having been propagated in this way. We also had several very good illustrations which, if not properly understood, would certainly produce anything else than a favorable impression as regards this method of propagation.

Of these varieties Bouton d'Or afforded a particularly good object lesson. The cuttings were made about the last week in April and taken directly from the sand as soon as rooted, and planted out in the field where they were to be raised, for some time long enough for them to form buds. Those who are familiar with the taking of top cuttings will understand how quickly small plants show an inclination to bloom, and how, if they are permitted to flower, every effort of the grower to keep them in the bud stage is lost. This was the case with our Bouton d'Or the past summer. When the plants were cut back they threw out a good many runners, and these, being healthy and well foliaged, they were small and thin, with scarcely a leaf, and running up to buds and blooms while they were still young. As often as cut back they repeat the same process, and so the result is that at the end of the summer, at housing time, the plants were worthless. I have had similar results with this variety with top cuttings, but the cases were in various stages; few of them being so extreme as the one I have just described.

There are two principal reasons for the inferiority of top cuttings to the side shoots. The first is, taking shoots which are either already commencing to elongate, preparatory to developing the buds, or about to do so. It seems that cuttings taken in this stage are seldom capable of forming good plants as they are continually inclined to bloom and make very little foliage. The base of the plant being so inclined to form buds and will make well-proportioned and bushy plants.

The second and equally important reason for this peculiarity of top cuttings lies in permitting the young plants to be cut back at the end of the season. This will cause the plant to confine all its efforts to budding and blooming, even though it blooms from the cuttings were made had been well selected.

The point to observe is, to take only such shoots as are inclined to elongate preparatory to blooming, and as they show signs of growing. They will then branch out at the base of the plant forming perfectly normal and healthy shoots. When treated in this way, I see no reason why they should not be as good in every particular as the side shoots.

We prefer, however, to propagate from side shoots, and resort to top cuttings only in the case of varieties which are of these cuttings we always reserve for our own use, as many growers are prejudiced against top cuttings. **H. WENZ.**

**American Carnation Society.**

The seventh annual meeting will be held in Chicago, February 17 and 18, 1898. Information regarding the exhibition hall, etc., will be sent you later on post-

tal card notice. The reason for this is that no definite arrangements have as yet been made, and it is thought best not to keep the premium list back for information as it is desired to have a good circulation to give members ample time to prepare for the same.

**W. N. RHOE, President.**  
Attest: **ALBERT M. HERR, Secretary.**

**Papers.**

We expect a paper by a prominent Chicago commission house on "Carnations from the Commission Man's Point of View." It was proposed that the subject be decided, and one from Prof. Arthur H. Purdies on "Moisture the Planters' Friend." There will be a question box for the "question box" to be sent to the Secretary.

**Premiums.**

**RULES AND REGULATIONS.**

1. All entries must be forwarded to the secretary, Albert M. Herr, Lancaster, Pa., at least ten days before the meeting.  
2. All entries not signed by 11 A. M., February 17, will be disqualified.  
3. The exhibitor who enters in the name of the Society must pay an entrance fee of \$2 for exhibiting in any of the classes.  
4. All exhibits must be clearly and distinctly varieties correctly labeled, and a card giving the grower's name and address must accompany the exhibit, and not to be larger than 6 by 12 inches.

**Regulations Governing the Competition for Seedlings for the Certificate of Merit.**

1. The variety must have been bloomed not less than three years.  
2. Not less than 100 blooms must be shown.  
3. At least one plant must accompany the exhibit; the plant to be taken from the bed or bench in which stock is growing.

Exhibitors entering for the certificate are required to pay an entrance fee of \$5 for each variety entered. Those who enter in the class for preliminary certificate at Cincinnati will be entitled to compete for the certificate of merit. Payment of \$3 for each variety entered.

**Seedling.**

Two-year-old seedlings can compete for a preliminary certificate by exhibiting 12 blooms and the payment of \$2 for each variety entered. Those who enter entitling them to compete for the certificate at our next exhibition, upon the payment of \$3 for each variety entered, in this class.

**Notc.**

The scale of points adopted at our last meeting, to judge all seedlings, will be used for the above two classes, and is as follows:

Color.....	15
Size.....	15
Form.....	15
Stem.....	15
Leaf.....	10
Form.....	10
Fragrance.....	10
Stiffness.....	10
<b>Total</b>	<b>100</b>

To secure the certificate a carnation shall score 85 or more points.

**General Fundings.**

In these there are three classes, and are first regardless of variety, and next by color, and the third by light and dark pink. A light pink must be as light or lighter than Scott, and a dark pink must be darker than Scott.

For best vase (100 blooms) each of white, light pink, dark pink, scarlet, and red, with 25 or more blooms of each variety, and of any other color, first and second premiums of \$10 and \$5 respectively are offered.

In named varieties there will be but one premium offered, and any other white, scarlet, or red, and only to varieties introduced previous to 1897.

A prize of \$4 is offered for each of the following: Best vase (100 blooms) each of Lizzie McGowan, Alaska, any other white; Hector, Jubal, Florida, any other scarlet; and any other: **Edna; Tidal Wave, Scott, Drynaker, Emma Wheeler, any other pink; Lighter than Scott; Aramundy, Helen Keller, Minnie Cook, any other white; and any other yellow; also the same amount of premium for six dozen of white varieties: Best vase (25 blooms) each of pink lighter than Scott; pink not lighter than Scott, red, any other color.**

The scale of points adopted at our last meeting for the judging of these classes is:

Color.....	25
Stem.....	20
Nice.....	15
Size.....	15
Franchise.....	15
.....	10

Total 100

85 being the minimum number of points a carnation is to score to secure first premium.

**Special Premiums.**

J. Breitenreper & Sons, Mt. Clemens, Michigan, offer \$10 for the best 100 blooms, \$5 for the best 50 blooms, and \$2.50 for the best 12 blooms of May or June.

E. G. Hill & Co., Richmond, Ind., offer \$100 for the best 100 blooms of Flora Hill, \$5 for second best 100 blooms of Flora Hill, \$10 for the best 100 blooms of Triumph, \$5 for the second best 100 blooms of Triumph.

The Cottage Gardens, Queens, N. Y., offer a silver cup, value \$25, open to all, for the best yellow or yellow variegated seedling carnation which is not yet distributed, judging according to the best rules of this Society. In competing for this prize each contestant's exhibit must consist of exactly 24 perfect blooms, six buds showing color and six buds half open. No prize winner shall be meant one that has not a bursted calyx, fully stiff stem at least 15 inches long and otherwise uniformly perfect in form. No premium shall be awarded to a variety that possesses a weak neck—that is, one that does not set the flower reasonably erect. No premium to be awarded to a seedling of the commercial class which is inferior to the best variety of its class now in commerce and no premium to be awarded to a seedling that is inferior to the best which shall be less than two inches in diameter.

**Secretary Herr's Experience with Carnations.**

Albert M. Herr, secretary of the American Carnation Society, has issued a circular containing his notes on the most popular varieties now grown, from which we make the following extracts:

**WIRRE.**

Among the white carnations Flora Hill is ahead of all others, and rightly so. The flowers are uniformly large, with a good edge and a long stem. It is a strong and healthy grower, and entirely free from rust. Everywhere that I have seen it, it has met with a very good reception; there is no danger of any grower going wrong in planting largely of it next season. Harrison's White has its sport from Scott, and has many of the characteristics of that variety, but some, wherever I have seen it growing, a bit late in coming into bloom. Lizzie McTowan, which was so long the best white carnation grown, is now only to Flora Hill. Alaska, which has many fringes, is a really good sort where it does well, but it does not do well in all soils. Mrs. Fisher has long been a favorite around Boston, and is a good one for Summer blooming, and I never saw better flowers in the house. Nivola also has made a name for itself in the East, but will not do so well in our climate. There are a number of others which will be in the market this season. A Trio, seen at the Philadelphia show, that seemed of merit, were White-Lord, Evadina, and a white grown by Mr. Barton.

**PIK.**

In this class I have called down and an growing Triumph for my main supply, because it has the largest flowers on a long stiff stem, with a perfect edge, healthy growth, and is free from rust. It will, with the proper care, flower better than Scott, and as a cut flower surpasses it in every way; but more especially as a good keeper. Scott has had its praise sounded by everyone and needs none of mine. It is likely to be a standard sort for some time, and the same applies to Daybreak. Emma Wecker made a sensation at our Cincinnati show on account of its fine stem, well-shaped flower and beautiful color. With me, this season, it has made excellent growth and is full of bloom. Victor introduced last season, gives promise of being a good one. It is a fuller flower and of stronger growth than Daybreak, from which it is a sport. In color it is a pale pink. Above all, it is a fine little thing, where quantity is wanted more than quality, and is a real good sort for Summer blooming. The Cottage Gardens had quite a show of the ones at the

Philadelphia show. Mrs. Thos. Lawson was shown very fine, also a salmon-pink by Joseph Heacock.

**SCARLET.**

In this class Jago leads all others on account of its good stem and brilliant color. It is a fine strong grower and good keeper. I have seen it, and has been that to get the best results, cuttings should be struck in January, and given to germinate with mist, and some even like the old Gardfield.

**YELLOW.**

Every one knows Buttercup, it is a large and healthy grower, and a hard one to grow for quantity, still it has many friends. Eldorado has both good growth and bloom. It is the only yellow I know of that really pays to grow, excepting Yellow Jacket, and no grower who afraid of rust will not want it, as I never saw a clean plant in my experience. Right here I might say that my experience with rust has been such, that if a variety is otherwise good, the fact of its having rust does not bother me. If care is used in the growing of carnations rust will never prove anything serious, and there is scarcely a place in the country that does not have some rust. I have visited a number and have tried to find one entirely free from it, and our country is so large that it is not all the time, this alone would be evidence that it is not such a serious matter. There are some varieties so good in every other way (excepting their having rust) that I have seen them, and I know Eldorado is one of them. Yellow Jacket is a new one with me, but has done remarkably well, and gives promise of keeping it hot. The flower is color of Buttercup, but not so large, the only variety I have seen that has so many blooms, and they are good enough for ordinary purposes. Major of France, an old variety, is a fine one, and gives promise of making a lot of bloom later in the season. I hope to tell more of this one later.

**CRIMSON.**

In this I have Jago and Anna Webb. Jago is not large, but is a good grower and has a long stiff stem. It is a good color and a good keeper. Anna Webb is an old variety but has some good points in the fact that it is a strong grower and free bloomer. Macco, exhibited by the Cottage Gardens, and Empress, of Wm. Swanwick, are both of good merit, and will probably take the place of all others in this class.

**CRIMSON.**

In this I have but two varieties. Helen Keller, which with me is always first, but in some places it is not so well, and Anna Webb, which will do well with every one, and is the greatest bloomer of any carnation I know of. The flower is of excellent shape, on a long stiff stem, and the plant is a strong grower, free from rust. In color it is not quite so bright as Keller, but it is a very pleasing shade. Mrs. Bradt, sent out by former last season, has caught the popular fancy, and is certainly a fine flower.

**CERISE OR RED.**

In this I have only one. Thomas Carthage is an excellent variety in every way, and the only one of this color that really pays to grow.

**SALMON, OR LIGHT PINK.**

In this color, my best of course, leads all others. I also have a few bella Fox, but it has not been much of a success with me. Mrs. McCrue sent out by Hill last season is doing well with me, and gives promise of being a good sort to grow. Later in the season I expect to visit a number of the growers and will see most of the new and old sorts growing, so that I can give a better idea of them at that time. ALBERT M. HERR.

Addressing and Mailing for Catalogue Men.

Our painstaking system of keeping a record of all persons engaged in floriculture has resulted in giving us a list of over 10,000 names of commercial florists, nurserymen and seedsmen, which we have every reason to consider the most reliable and correct of all lists. These names we are prepared to address at a moderate figure, and invite your patronage. An unreliable list, even if the first cost is cheap, is unsatisfactory and a poor investment at any price.

We have also many thousand addresses suitable for retail catalogues; people interested in floriculture and gardening generally. Will be pleased to furnish prices and full particulars on request.

A. T. DE LA MARE PTG. and PUB. Co. Ltd.

P. O. Box 1607, New York.

## American Carnation Society.

The premium list is now ready and can be had by applying to the secretary, Albert M. Herr, Lancaster, Pa. There is a liberal amount of money offered and one or more prizes will be given to the best show them in Chicago next February.

## The Hamburg Exposition.

The Hamburg Exposition was a great financial success, there having been a surplus of 375,000 marks (\$86,000), after paying 200,000 marks in premiums which sum does not include special. The total amount disbursed for all premiums was over a quarter of a million marks.

## New Brunswick, N. J.

The greenhouse of W. H. Maller, at Baritan Landing, was destroyed by fire Thursday. Many valued and costly plants were damaged. The loss will amount to several thousand dollars.

## St. Paul.

The Christmas Outlook.

Just at this time ago prospects for a good crop of flowers for Christmas were very encouraging. The dark weather of the past week, however, has been disappointing to the growers, and unless the weather should improve at once there will be the same scarcity of blooms for the holidays. Trade has been good, Thanksgiving Day trade was unusually brisk.

Everything sells well, there being an increased demand this year for violets and pansies. Stock is of good quality. Quite a good many flowers are being shipped in from Milwaukee and Chicago, notwithstanding the increased cost from our own growers.

Chrysanthemums are about all gone—Swanson is still in good ones and a few of the other growers are holding back some of their stock for Christmas. There was here a good sale for chrysanthemums this season, the growers, as a rule, do not consider them as a profitable article.

Holly and leycopodium are used quite extensively for decorating. The latter is much cheaper this year than ever before, the green pickers having had an exceptionally good year for gathering. Christmas trees are also very popular, and are disposed of by hundreds throughout the city. This trade is not handled at all by the florists.

J. Holtom has started up a small store on Mackubin street.

Chris. Hansen offers his range of houses for sale, on account of ill health and inability to personally superintend the management.

Wm. Schiffman recently returned from the East bringing with him another large collection of orchids, principally new to the florists of this city. He is from Yucatan and other Central American states. This winter in search of new specimens he expects to start the first of next month.

Retail prices are stiffening as the dark weather continues. The florists and the regular florist stores are advertising roses at 25 and 50 cents per dozen. VERITAS.

## Philadelphia.

Market Outlook.

The cut flower market is almost in a complete standstill, as is usual the week preceding the holidays. First-class roses are scarce, but there is an abundance of all other classes. Carnations are tight and cannot be moved at any fair prices.

The retail stores appear to be doing better than in the past, much stock has all kinds around. Violets have sold better than anything else the past week; there has been a large amount of orders to supply the demand, which the "coming out" teas and receptions increased. There has been a large amount of orders for decorations this season. Hugh Graham and J. J. Halberm's Sons have been very successful this season. They had been decorating work for dinners and receptions which have been numerous. "Sunnoch Bros. are doing a good business in choice plants; they have kept a few fine specimens in their window which have proved a good advertisement.

Joseph Heacock four years ago took a notion to grow palms, seeing that others were making quite a successful business out of this industry. He has since been rewarded, as he certainly has been very successful, and now has a very large lot of plants. His stock of 10-12 inch pots are a splendid lot, well furnished and hardy and certain to give satisfaction. He has also certain to sell these plants, as the foliage is broad and fine in growth, and has a good healthy color, which is a great recommendation for good trading. In other stock he is growing kentias and latanias, also some iboras.

Robert Craig is improving; the fever is abating and he is getting along nicely. He has been in bed for some time.

Chas. D. Ball has suffered a bad defeat in the death of his son William D. Ball, which occurred on Tuesday last, December 14. The sympathy of the craft is extended to the sorrowing widow.

Trade Items

Small & Sons had all the work they could attend to in the beginning of the week, but as the prices of plants were forwarded to Canton. Some of the wreaths were as fine as any ever seen in this city, and were made in a factory, was composed of catclays and A. Farleye; another of green orchids and admantium, other were of red and valley; valley and Meteor roses; and bellas and valley.

Numerous pieces were ordered sent to the residence of the late Gardiner Hubbard.

A basket of orchids was sent to one of the society belles on making her debut last week which is said to have reached the top mark so far as the prices of baskets of flowers are concerned. It was seven feet in height. The flowers were mostly of the variety sprays Vandykerules, 75 Calanthe Veitchi, 75 (Siam) the vestita igneo-oculata, 150 cypripedium, 200 cypripedium, 100 Schifferiana, 75 sprays Decandrobium formosum giganteum, and 25 spikes oncidium.

After chrysanthemums were ordered sent to the residence of the late Gardiner Hubbard.

The problem of utilizing space occupied by chrysanthemum sections was a fair way to be solved by Robert Miller who, this fall, has filled up several houses with carnations and roses during the summer in boxes with moveable sides and ends, using the bottoms for the use of the plants. After the carnations and roses had been thrown out, the carnations looked as if they had been grown in the same boxes during the daily cuts. The roses, of course, when removed were dormant, but in elegant condition for starting in other boxes. It seems a good one for use where chrysanthemums are grown on a large scale.

John Boyle has several houses of tomatoes which are bearing quite a large crop of fruit fast nearing the ripening stage. He has been experimenting with a house covered with sweet peas, and having them in bloom by Christmas. He won't succeed this year, but he has

learned something which he will benefit by later on.

Chrysanthemums are nearly over. Garden roses have yet about two thousand. W. S. Clark has just finished cutting his roses, and has a large stock of sweet alyssum and some of the varieties of Phlox subulata are still in bloom out-of-doors.

G. W. OLIVER.

Buffalo:

Trade is sluggish.

The cut flower trade is more sluggish than active. Several "coming out" teas and receptions have been given, goodly decorations and numerous tokens in nice roses, etc., were called for, helped matters. Carnations are tight. However, this week flowers are neither scarce nor plentiful, all ordinary orders being supplied readily. A liberal share of attention is now given to preparing for "Christmas greens." Ground pine has come in of good quality and at moderate prices.

Early holly orders in bulk are being supplied readily, but indications are that orders will not be so large as they were to the extent of last year, and to the loss of shippers.

The weather is still warm and divided nearly even between rainy days and pleasant ones, but sometime lacking largely the latter.

Stollery Bros. of Chicago, sent in some samples of their new variety, Argyre, which is a new variety of a well-built form in a Tidal Wave shade.

T. A. Webb, of Ohio, showed a bunch of his new red, which looks favorable. Though not the earliest hereabouts, it is a new variety, the blooms of the new white Geneeise sent by Harmon & Burr, of Darien, give every promise of success as an acquisition as a commercial sort.

Recent visitors included the travelers, George C. Kelley, of New York, and H. Pease, of Lockport, N. Y.

Providence.

Business has shown a retrograde movement the past week, both as concerns carnations and roses, and is entirely to the unseasonable weather.

There is only one consoling aspect, that such a low weather has resulted in considerable sickness and a consequent increase in the demand for funeral work. There is a larger demand for funeral work.

The Weather.

The weather is so mild that some of the lawns in this vicinity are almost as green as in midsummer. Dandelions and peonies are blooming and caterpillars have been found crawling about. Fruit trees are dozing in a second crop of blossoms and strawberry vines are furnishing a second crop of luscious fruit. Fruit trees are dozing in a second crop of blossoms and strawberry vines are furnishing a second crop of luscious fruit.

George C. Kelley furnished the potted plants and cut flowers for the golden wedding of Mr. and Mrs. Frank H. Hathaway on Thursday evening.

Johnston Bros. have got settled in their new store, 225 Westminster street, near the corner of Warren, building a large greenhouse on his farm on Alkemon avenue for the raising of flowers and plants.

H. Williams has just put in another lot of plants. O. W. Warren, is building his heating apparatus from steam to hot water, though he is preparing to build a new one. Ernest Fairbrother has entered the mushroom business on Smith Hill, where he has a fine mushroom bed.

A. M. Reine, George Johnston and William Butcher, who have been on the ground, are all able to be out and about their business.

J. Austin Shaw, with Stebbell & Son, New York, and Geo. H. Warren, building H. J. Haverdick & Co., Philadelphia, and W. Rolker, of New York, were visitors the past week.

W. H. MARON.

He Paid Well for Them.

Caroline—How do you know Jack Jones won?  
Caroline—I took his roses around to the florist and found out how much they cost.—Worled.

## THE MEN WE MEET.

No. 4.—WILLIAM H. ELLIOTT.

The late lamented Phineas T. Barnum used to tell with pride of the safe delivery of a letter to the Hon. Zolman, addressed simply to Mr. Barnum, America. An almost parallel case recently occurred in the receipt, by the party interested, of a letter from New York State to a florist in the person of William H. Elliott, at Asparagus P. Nans, Brighton, Boston, Mass. So closely associated has the name of William H. Elliott become with his most famous product that the above title is perhaps not surprising.

William H. Elliott is a good example of what thrift, integrity, and close application to business will result in. His business, extending all over the extensive range of houses at Brighton, enclosing 50,000 feet of glass and a well-kept nursery, is doing well all over the United States and Canada. Mr. Elliott can be claimed as a New England product only so far as his bringing up is concerned, having been born in Lancaster, Wisconsin, in 1857, and is consequently yet on the sunny side of forty years of age. His father died when the subject of this article was but six years of age, and a year later, with his mother, Mr. Elliott came East and settled in New York City. When his childhood days were passed until at the age of thirteen he entered the employ of John Spaulding, an old-time Scotchman of the strictly forward business school, who carried on a general retail trade, covering all lines, including bedding plants, cut flowers, with more or less nursery and landscape work. It was under the tutelage of Mr. Spaulding that the business character of Mr. Elliott was formed, a preparation for a successful life for which he has ever been most thankful to his worthy instructor. It was a matter of chance that time led to the profession in which he has grown to be so successful. His mother moved into a house which he had purchased, and the mother being in need of a boy, gave the lad the first opportunity on learning his desire to work in the nursery. Mr. Elliott's school days and he went to work for \$3 per week. So well were his educational attainments that he received his pay day he received \$4, and on the third \$5. At the approach of Winter, instead of being discharged, he was retained through the dull months at \$3 per week, and after that his progress was continued until at the age of 21 Mr. Elliott began to look for a broader field for his ability and energy, and after visiting New York City and New England, he returned to Boston and entered the employ of William C. Strong at the houses which he has since purchased and very greatly improved. He remained here but a short time and then took charge of a private place in Foxbury for a year, after which he was employed on the B. P. Cheney estate at Wellesley.

These two short engagements convinced Mr. Elliott that he was not destined for a private career, and he then entered the employ of E. M. Wood & Co. at the Waban Conservatories at Mattapan. In the month of January, 1881, Mr. Montgomery was established there as manager. To his experience of three years at Waban, and to the fact that E. M. Wood and Alex. Montgomery, Mr. Elliott feels that he owes much in the rounding out of his character. Mr. Elliott has been his opinion, not infrequently expressed, that his most success in his life is due to John P. Montgomery. Mr. Elliott, the latter former having made a man of him in seven years and the latter a gardener of him.

At Waban he took charge of the shipping in addition to superintending some of the business of the establishment, and his famous establishment were varied, including carnations, violets, pansies, and a large number of other varieties. In addition to the roses which are now, and have been for a number of years, the principal product of the establishment. The entire output was shipped to New York City, and the roses were kept, but which was soon after closed and their crops marketed in Boston. It was here that Mr. Elliott, in charge of their disposition, this being his first experience with the box, with a large number of roses to handle, and the trade to establish. The conditions were unpromising. It being about Christmas time, the roses were not in the best condition for the long-stemmed roses, the Cornelia Cook, and they found a ready market in this period. At that time there was no grading, a rose was a rose

and seconds, thirds, and ordinaries were unheard of. In addition to Cook, Marchal Niel and Gen. Jacqueminot were their specialties, and Mr. Elliott's success as a salesman was no less than had followed him in the other branches of the trade. It was at this time, in the Winter of 1881-'82, that the Waban Conservatories offered the first C. Mermut shown to the Boston Market. The following season, soon after January 1, Mr. W. F. Malloy succeeded to the position of Boston salesman, which he has creditably filled ever since, and Mr. Elliott went to New York and Philadelphia, handling Mack and M. Niel for the same concern, they having dropped, by this time, most other lines of cut flowers.

The first of October, 1883, found Mr. Elliott in charge of the J. H. Hoston place at Grove Hall, where he stayed for seven months. He grew roses for the market receiving, on contract, 25 cents each, for four months of the season, and about half that price for the other four months, for every rose that was cut, the

then, formed the nucleus of his fortune, and from this small stock in which he recognized sterling worth has come much of his success of today. This specialty he supplied to the Boston market only until the convention of the S. A. F. in New York in 1888, where he exhibited it, his first outside order coming from A. S. Swanson, of St. Paul, Minn. His trade from that date spread rapidly throughout the country.

Mr. Elliott, as has already been stated, is still a young man, though his careful training and extensive business experience, give one the impression when in conversation, that he is more advanced in years. He is essentially a self-made man, and to his foresight, exactness of detail, executive ability and integrity may be attributed his success, which is far in excess of the average man's who may have been surrounded with what are generally considered early advantages.

Mr. Elliott is married and is encircled by a loving wife and a beautiful family

William H. Elliott.

of children, his home life being an exemplary one, his dwelling adjoining his Brighton conservatories. W. K. W.

In speaking of these old-time prices, he says that it seems incomprehensible how we can produce roses at the market price of later days and continue to do the business.

In the spring of 1884 Mr. Elliott bought the Strong greenhouses which he has managed successfully and constantly added to, until he possesses one of the best ranges in this section today. Here he makes a specialty of asparagus, with a special excess in the production of which he is being sufficient to supply his trade. Some four years ago, leased the Shaw greenhouses in Newtonville where he has some 35,000 feet of glass devoted almost exclusively to roses.

His name is most familiar throughout the country in connection with Asparagus plumosus nanus, a history of his industry in this line was printed in the FLORISTS' EXCHANGE last year. Prichy it may be stated that less than a dozen plants, which were found through one side in the greenhouses when he bought

questions submitted in writing by letter.

Two or three of the gentlemen named as directors have not yet completed their application for the franchise and have made no formal application. Unless they do so, it will be necessary to call a special meeting of the directors, who will also notice that two places are left to be filled from lack of good names in other lines.

Any person in the business will be supplied with a blank application for insurance on request. W. J. VASEY.

## ROSES.

## Hybrids.

Those who habitually grow pot-herbids for Easter and later Spring sales, and who have not yet potted the plants, should do so as soon as possible. It is now time away in cold frames until it is time to bring the plants in, and to lightly cover the pots with material, such as leaves, spent hops, or old straw manure, to keep the soil in an even moist condition, with some ashes for the pots to stand upon and to keep the worms out. Plants wanted for Easter are put in separate frames, as they will have to be brought in sooner than those required for late Spring use. The frames should be covered sufficiently to keep out the frost.

Of course, where any one has a greenhouse at his disposal, it can be used to advantage for this purpose, but with many inside space is at a premium, especially just before the season.

14-to-date men read through their trade journals what an acquisition the Crimson Rambler has become in the Easter plant trade last year, and those who had the pleasure of seeing some plants of it in the hands of the growers, were sure in the future for the same occasion. The plant is a most prolific bloomer, and for making a show can hardly be excelled. A great point in its favor, and which helps its ready sale at a good price, is that it perfectly hardy. It is only differences in the culture of it from that of other hybrids is that the plants should not be cut back so hard, but only to a distance from 18 to 30 inches in length, according to their strength and ripeness.

Another rose of great merit is Margaret Dickson. This variety has a very peculiar habit, in that from one year-old plant it will produce a crop of flowers trimmed to a half-stemmed, making it a very striking and fine plant and out of the common, and, works on the market this year, will the first year, make a perfectly straight, single stem, to a height of from 18 to 30 inches, acquiring a diameter of one-half to three-quarters of an inch; the bottom of the pot before the plants are formed at the top. When these are pruned to within 4 or 5 or three eyes the self-standing habit of the variety is a charming, large white rose with a sleek-pink center.

By the first of April is in the hands of your readers it will be about sixteen weeks to Easter. Remember that it generally takes from 12 to 13 weeks to get the hybrids in bloom nicely for that occasion. I have given their culture in previous articles, but will give a complete list of the most important items for their future success. For very firm in well-drained soil, but in selecting for the purpose only strong, healthy plants. Water thoroughly, so that the water reaches the bottom of the pot before placing plants in their cold quarters, and start them cool when first brought into the open air, and gradually raising the temperature two or three degrees each week, until you are able to get the plants to bloom, or two or three times every day to make them break well; at the same time water the plants completely at the bottom of the roots. If more breaks show than what you think the plant can carry through, stop watering for a few days, and rub them off. This will throw much more strength into those remaining buds, and will be completely satisfied with liquid manure, but don't use it so thick that it forms a paste over the top of the plants, or that they are injured with red spider or green fly. Prevention is better than cure. Keep the plants in a cool, airy place, out of the room, and turning them around half way once a week. When given good pot water, they will be ready to start in a few days, and be attacked with mildew. H. H.

## Florists' Fire Insurance.

On Monday, December 13, at the adjourned meeting of the Florists' Fire Association the following persons were elected directors: E. H. Michel, St. Louis, Mo.; J. Vaughan, Chicago, Ill.; Elmer D. Smith, Adrian, Mich.; Wm. Scott, Buffalo, N. Y.; John G. Ester, Saddle River, N. J.; W. A. Patton, Tewksbury, Mass.; E. A. Sedewitz, W. M. F. Minneapolis, Minn.; J. J. Benham, Bangor, Me.; W. J. Vasey, Fort Wayne, Ind. W. J. Vasey was elected secretary.

The by-laws as printed were adopted with immaterial changes and with some formal additions, the principal of which are:

- (1) Requiring the directors to fill all vacancies occurring during the year.
- (2) Permitting all directors to vote on

### The Competition for Gold Medal of N. Y. Florists' Club.

The following rules and regulations governing the competition for the Club's gold medal were submitted by the committee, and adopted at the meeting held Monday evening, December 13, 1897.

The exhibition to take place at every meeting of the Club during the year 1898.

Intending exhibitors should notify the Secretary at least one week before each meeting, of their intending exhibits, stating classes in which they wish to exhibit; also, approximate amount of square feet required.

The limit of the space for the exhibits to be as follows, except by special permit, when an exhibitor intends to make an extraordinary exhibit: Cut flowers, 20 square feet; pot plants, 35 square

#### POT PLANTS.

Size, 10; cultural perfection, 30; foliage, 15; effectiveness, 15; rarity, 10; desirability for general culture, 25; total, 100.

#### COLLECTIONS.

Number of kinds, 25; rarity, 25; cultural perfection, 15; correctness of nomenclature, 15; desirability for general culture, 20; total, 100.

#### DECORATIVE AND MADE-UP WORK.

Novelty in design, 15; artistic arrangement, 45; harmony in color, 30; quality of material, 10; total, 100.

#### FRUITS AND VEGETABLES.

Quality, 50; size, 20; color or finish, 20; other points, 10; total, 100.

House of Cyclamen Grown by H. Trauth, Brooklyn, N. Y.

feet; collections, 50 square feet; decorative and made-up work, 20 square feet; manufactured articles, 25 square feet.

All the exhibits are to be staged and in position by 6 o'clock on the evenings of the meetings of the Club.

All these exhibits are to be properly labeled.

The exhibitors should hand an entry, a correct list of their exhibits to the Secretary, who will give them a number, by which alone said exhibits should be known until after the awards have been made and announced by the Secretary.

The judges are to finish the judging of the exhibits before the opening of the meeting, during which time no one should be allowed in the room except the judges.

The decision of the judges should be read by the Secretary during the meeting, giving in detail the points scored, and any exhibitor having any protest to make against the judges, same should be made before the close of the meeting, and the chair be empowered either to affirm or change the decision of the judges.

A committee consisting of six members should be appointed by the chair, selecting one expert in each of the different six classes.

### The Schedule to be Divided into Six Classes.

#### CUT FLOWERS.

Size, 10; form, 20; substance, 20; color, 20; stem, 10; foliage, 10; rarity, 5; fragrance or other quality, 5; total, 100.

## CORRESPONDENCE.

Insertion will be given in this column to all communications from our readers, but the opinions expressed do not necessarily reflect our own.

### Chrysanthemum Shows, Season of 1897.

Editor Florists' Exchange.

Your article on this heading in your issue of the 11th inst. reopens the question of "How to make a flower show successful." You give explanations of several causes of why they are not successful, but I fail to see any attempt at

solved by time, patience, perseverance, and conducted in a manner among ourselves "as to the outcome and the lessons to be learned" from past experience in America. We are in England, where the shows are comparatively well conducted. We are comparatively speaking, just beginning on this continent; they are well on their feet here. We are not to blame for them in time. I don't doubt but what we shall; but until the conditions are equal there is not much to be learned from that quarter. We have to go plodding along step by step, taking the knowledge as we go and profiting by experience gained. Let us not on any account get up a measure of half a dozen. Surely we Anglo-Saxons and Americans are not built that way. I don't think we should examine into the motives of an exhibitor, whether it is the cash prize, the glory, or anything else. We cannot afford to do it yet, but we want to get up our prize lists so that there will be inducements for exhibitors to bring out what will please the public and gradually educate it up to better things. The responsibility for shows that are failures on or retrogressions from our predecessors lies for the most part with the exhibitors, the committee that gets up the prize list. The majority of florists exhibit at shows for what they get out of them, the prizes or through the advertising obtained very few, as far as I have seen being able to pay their expenses, the prizes taken, and more credit than is usually given is due to those for helping the shows along at a loss to themselves. One can hardly blame the trade for not growing what the public will not buy and does not seem to care for. It is up to the exhibitor and the public taste up to a higher standard, the operation is going to cost some money to the promoters of the shows, which endeavors to do so. To botanists and true lovers of horticulture every flower under the sun is interesting and wonderful, but when you come down to the general public, including all classes, and are getting up a show which may be a financial success and a means of education at the same time, difficulties are encountered which, as said before, nothing but time, patience and perseverance can overcome.

You say: "A flower show to be at its best must be a flower show and not a show of the decorator's art." Why not both? What do you mean by a flower show? Is it not to decorate their houses, their halls, their churches, themselves, etc., etc.? Surely you would not have us turn to the military style again, in which all the exhibits are set around the hall and on the tables like regiments of soldiers with nothing to relieve the monotony. Should we not rather, when we have all the best flowers and plants in the neighborhood and often from afar, gathered together, should we not endeavor to show how these flowers and plants can be arranged to best advantage from an artistic point of view, educating the people (the people it all) in the flower show.

We also complain of the paucity of varieties staged, but what is the use of growing a lot of varieties which have little to recommend them, and which we think the best, adding improvements every year and discarding the old ones, which as said before, there are too many varieties, of great size and fine form, the color of which is good, which as said before, is of good effect to the fancier as a variety; the general public would never deprecate them, but to have them staged, I admit there are some very beautiful varieties such as the anemones, the pom-poms, etc. I think they should be staged more; but private gardeners should keep on growing and exhibiting the best, and the public should be educated by them; it costs them nothing for space.

We have to begin again and repair the "bust" into the bargain. Other things we have to remember are that the millennium is not here yet; that "the best laid plans of men and mice go for naught"; that there is a good deal of scope for the play of human nature in the marketing of these shows; and that we are none of us angels, our wings not even having begun to beat yet, and in considering remedies for past mistakes we must take all these drawbacks into consideration.

And I must say that I am rather glad that you do not attempt to solve a problem which, in my opinion, can only be

#### MANUFACTURED ARTICLES.

Utility, 30; durability, 20; simplicity, 25; cheapness, 25; total, 100.

Articles to be excluded by the committee: (Signed.)

W. A. MANDA ALEX. S. BURNS  
WM. I. BROWER J. H. TROY.

On motion of Mr. May, a paragraph excluding all "manufactured plants," from competition was added.

Considerable discussion occurred on the feasibility of including "manufactured articles," particularly boilers. It being urged that it was impossible to form any adequate or correct opinion as to their practicability or durability from a cursory or minute inspection, such requiring a practical test before determination. Cases were cited where at the S. A. F. conventions, boiler competitions and awards for alleged merit in that class had been the cause of much jealousy and unfavorable comment. It was explained that the intention of the committee was to cover the whole field, so that no branch of the trade should be overlooked in the Club's competition, and after Mr. May had facetiously remarked that this boiler question, as usual, was sure to land them in "hot water," and pointed out the remote chance of such exhibition ever entering into this contest, the committee's report was adopted as read, with the addition mentioned above.

solution of the question. Last year "still life" was the *bête noir*, this year the "commercial tone" appears to be making all the trouble and that our flower shows are "simply a display of the actual market attainments of the time." Well, I think you are much nearer to the true cause than we all keep first year, and I think that if we all keep firing away some of us are bound to make a bull's-eye at last, although I am inclined to believe that it will take longer than most people think. Let us first get rid of the idea that the public has to be roused to a fever heat of excitement; that has been one of the great mistakes of the past, and we are now, probably, to great extent, suffering from the reaction. As I said last year, fever heat excitations cannot be kept up, something has got to "bust," and when that happens we are worse off than we were before. We have to begin again and repair the "bust" into the bargain. Other things we have to remember are that the millennium is not here yet; that "the best laid plans of men and mice go for naught"; that there is a good deal of scope for the play of human nature in the marketing of these shows; and that we are none of us angels, our wings not even having begun to beat yet, and in considering remedies for past mistakes we must take all these drawbacks into consideration.

And I must say that I am rather glad that you do not attempt to solve a problem which, in my opinion, can only be

might write a great deal more on this subject, but I am afraid I have already written too much. I hope you will be able to see a good discussion every year on the question.

A. H. EWING, Toronto,

### American Carnation Society.

Editor Florist's Exchange.

In your report of the Chester County Carnation Society's meeting, it is stated that the subject for discussion at the next meeting will be "Is the American Carnation Society of any use under the sun?" My opinion is in support of the negative. This has been done in my absence, and wholly without my consent. I do not believe that I do not wish to take any such hostile attitude.

The prohibitions we have had scattered over the country in the last few years have had a very injurious effect, and it is probable without the American Carnation Society. The standard has been raised, and the carnations are being during that time. I recall but two things which appear to me to be mistakes. I do not believe that a tax of \$2 for registration is calculated to "encourage" the growing of seedlings. A premium on such new varieties as has an examination by a committee of the American Carnation Society would be far more "encouraging."

The proposal to distribute stock of the new variety among several growers for the purpose, I think, wholly impracticable and few growers are likely to submit to it. Here again, I believe, a visit would be more successful.

EDWARD SWAYNE, Wauwaset, Pa.

### A White Asparagus Sprengerii.

Editor Florist's Exchange.

Among a lot of seedlings raised by us we have obtained a beautiful variegated form of this valuable plant. The minute leaves are almost pure white, showing merely a line of green, enough to warrant its growth. It produces a striking contrast with the normal green form. We think it will make a fine plant if it grows as vigorously as the type.

A. BLANC.

### Orchid Flowers for Christmas.

There is no season of the year when orchid flowers are more in demand than at Christmas, and no wilder-wake florist can afford to be without them, if obtainable. Their chaste and beautiful colors have placed them almost at the head of the list as decorative flowers. They adapt themselves to all purposes when the best of work is required; hence, their use for the season of their sale is steadily increasing and to meet this demand the growers are taxed to their utmost to know exactly what to grow, just out of the hundreds of species and varieties of orchids, beautiful as they all are, there are many that cannot be grown profitably.

Among the different orchids mostly grown and upon which we can rely for a supply of flowers for Christmas is the Cattleya Trianae. Without doubt it is the finest of all the cattleyas, and is preferred at this season of the year. Its inexhaustible range of variations in colors from the chaste white to dark pink, is sufficient to satisfy the most critical taste. This orchid being of easy culture and obtainable at reasonable prices has brought it within the reach of all who desire to produce flowers at this particular season.

Cattleya Perseivaliana is another most beautiful Christmas cattleya, but which is not so easy to rear without much neglect on account of the introduction of Cattleya Inghamii, which has much larger flowers than the preceding kind, and owing to its flowering season being the Autumn months cannot be relied upon for just right and full up the possible gap between the two.

Cattleya maxima, in its native country called Flor de Navidad, is one of the most beautiful flowering species of the true Christmas cattleya. It produces on a spike five to ten magnificent flowers of a bright rose richly variegated on the lip, and should make a decided acquisition.

Cattleya anceps is another very useful Christmas flower; its rosy lilac blossoms on long graceful stems render it adapt-

able to a multitude of decorations. Unfortunately, it will not stand as well as some others; but this drawback may be overcome to a certain extent by covering the entire stems in water for a few hours after being cut.

There are two kinds of the preceding (*Laelia anceps alba*) is a most beautiful flower and, strange enough, stands much better than the common kind. Unfortunately, it is rather shy; and in order to induce it to flower more freely it must be potted where it obtains abundance of air and sun.

*Laelia albida* is another welcome addition to the list. Its white sweet-scented flowers are borne on long stems and are well adapted for floral decorations. It is of easy culture and will repay the grower for his trouble. *Laelia autumnalis*, with its long sprays of showy rosy purple flowers, produced from six to eight on the spike, deserves more attention.

*Cypripedium insigne* and its varieties have come to stay, and are well known by the average grower for its so-called upon their merits as valuable flowers at this time of the year.

*Odontoglossum crispum* is one of the

### Christmas Plants.

Lily of the valley is selling now at \$1 per dozen; it will be higher at Christmas time. Half a dozen fat tips in a 6-inch pan among a few small tips put in for forcing, are rather interesting looking on the surface of the soil in the pans a few finished buds of *Lycopodium Kraussiana* or denticulatum, growing, give them a most finished look. White Roman hyacinths may be treated the same way, or when putting the bulbs in the pans leave about an inch of space between the soil and the rims so that when the bulbs have made roots enough to take them into heat, a growing pan of any of the dwarf mossy lycopodiums can be knocked out and the plant, with a little of the soil attached, can be slipped down over the tips of the hyacinth bulbs.

A plant which does not last in a dwelling house as long as could be wished, but which is sure to be admired while it does last, is the little *Caladium argyritum*. Strong bulbs are dried off early in the Fall and at the end of the season are started in moss or sand and transferred to the middle of a pan of lycopodium.

Daphne odora and its forms would make a good plant for this season of the year, if they could be had well furnished with buds at a reasonable price. It is not generally known that this plant is quite hardy in fully exposed positions in the vicinity, so that there should be no difficulty for Southern nurserymen to introduce it. Cyclamens, Chinese primroses and *Franula oleacea grandiflora* are all old timers. *Franula floribunda*, now that we have an improved form of it, should also find a place.

Among the plants with ornamental fruit the new *Asparagus Sprengerii* sometimes bears a crop plentiful enough to render it doubly attractive; they are not to be depended upon, however, for changes of temperature affect them enough to cause the berries to drop. *Fraxinea cyclanota* is probably the best all-around Christmas plant which bears berries, but we see little of it. I suppose the reason that it does not merit the first year—too slow to get up. Plants from seed, if they get fair treatment, will fruit the second year, but florist need fear to recommend it to his customers, because it is a frequent occur-

Horizontal Building, Trans-Mississippi and International Exposition, Omaha, Neb.

most beautiful and most useful orchid of all. Its flowers present an almost endless variation in colors and forms and are generally borne on graceful, arching spikes from five to fifteen flowers on each. Unfortunately this orchid is but sparingly grown here, owing to our climate being so much against it; however, it is not so difficult to grow as some people imagine. Bear in mind that it is a cool-loving plant and treat it accordingly during our hot summer months. The plant is getting very scarce, and consequently high in price, but the quality of the flowers obtained and the profitable prices which they are sold, will soon compensate the grower for his first outlay.

*Androbium formosum giganteum* is another profitable plant to grow, and where there is a large number of plants raised by the grower, it is a money-maker on hand for Christmas. Its pure white, large blossoms are well adapted for decorations and always find a ready sale.

Besides those mentioned there is quite a number of different kinds of orchids that will flower at Christmas with more or less certainty, such as *Vanda carolinensis*, *Phalaenopsis*, and *Phalaenopsis*. The *Phalaenopsis*, justly called the queen of orchids, is another; its flowers, unsurpassed in beauty, are borne on magnificent drooping spikes, everyone a fan. This orchid, however, is rather expensive as a commercial subject, and its cultivation somewhat delicate.

LAGER & HORRELL, Summit, N. J.

The contrast between the foliage of the caladium and the moss is sharp and pleasing.

The Greek arbutus, *A. Andrachne* is a most charming, creamy-white flower. It resembles some of the elms, to which family it belongs; but the flowers are much larger. It probably could be produced in a sufficiently large form for commercial purposes.

We know the bromeliads best as outdoor Summer annuals, but they never do better than to be kept in a pot one time in the Summer which they do in Winter in a cool house. They are, of course, most popular in the front and much knocking about; however, they should be in every greenhouse collection.

There are numerous easily grown plants, which if they could withstand the ordeal of being carried from place to place, would find favor at Christmas time, such as the *Rhynchospora* or *lignum*, cranberry, and so forth. They are most popular here last season here after the azalea was the poinsett—just the old staple plant to keep from year to year. For euphorbia, this stands an amazing amount of feeding. They like good soil firmly packed around the roots. I saw a bunch of this a year or two ago grow the same way as we now grow *chrysanthemum*, and they paid better than the common ones.

Imported ericas and epacris are dangerous goods to handle unless one has a knowledge of their requirements. While home-grown plants this danger would be done away with. Some of the plants which have been produced in the Northern states compare very favorably with European goods. In this locality there are very few species which thrive, and the commercial kinds do not succeed at all.

rene for berries, which are ripe at one Christmas to last in good condition till the next one comes around. A heated frame with the pots plunged in sand is an ideal place to grow them on during their earlier stages. At no time do they require much heat; after potting they should be kept close for a few days, but in Winter they will thrive if the frost be kept away from them.

Oranges, tangerines and Kumquats are in great demand; the former can be got from California, and the latter can be later will thrive all the better for being grown on seedlings one year old, of the common citrus trifoliata.

*Solanum capensestrum* grown out all summer, dried and potted, makes a seasonable-looking plant for a while. The berries last longer if there are fewer of them when the plants are growing in plunged pots during the Summer. There are other solanums which are likely to bear more about in another year, one with quite large fruit shaped like a tomato.

G. W. O.

### A House of Cyclamen.

Our illustration is taken from a photograph of one of Mr. Cms. Traut's houses of cyclamen at Lincoln Road, Brooklyn. In this house, one or two Mr. Traut has been very successful with cyclamen this year, considering the hot spell we had in New York. Plants of nearly 100 square feet diameter have been numerous with him this Fall. He has exhibited special silver medals by the New York Gardeners Society at its recent exhibition, for a splendid collection of 75 plants, fine in flower, occupying a space of nearly 100 square feet. He has also been awarded two other first prizes for cyclamen this Fall. He is maintaining the reputation for excellent ericoid, so well earned by his predecessor (Gus. Bergmann).

FOUNDED IN 1888.

Its FLORISTS' EXCHANGE wishes to see its many friends and patrons a very Merry Christmas.

**A Misleading Official Report.**

We stand condemned. For utterances not our own we have been adjudged guilty of a crime. We have issued an official report, without question or comment, and by the tribunal of Superior knowledge and fair judgment we have been tried and found wanting—in one word, and said to relate, it is American. Let us now consider the new hybrid Cypripedium which has ever been shown.

The Pennsylvania Horticultural Society, in connection with its recent Fall exhibition, displayed a new hybrid Cypripedium Edwin Louisaide. This report, which was sent us by our Philadelphia correspondent, we printed as follows: (see page 1024, issue of November 13, last.) "A new hybrid variety from Cypripedium *Edwin Louisaide* and *Edwin C. Robertson* superior, and named 'Edwin Louisaide' being the first cross from *Robertsonianum* that has ever bloomed in Italy and our own, we plead guilty."

But let us explain a little. Our Philadelphia correspondent, who has been in the orchid business for over a week. There was no time to go critically over its details, for the lamellar paper had not yet side by side with the printers were waiting for copy. And, too, did we not remember that the quotation was not from the Philadelphia edition, and why under the circumstances should we doubt its authenticity, and why should we have been so careless out that our implicit faith in official reports was misplaced; this one has led us astray; we are sorry.

And, too, when hastily preparing the copy of the report for the press, our thoughts were so occupied with the little white slip—the American continent. We for the moment forgot that across the sea in the great advertising centers of cypripediums were also raised, and so, the misleading statement "the first cross from *Robertsonianum*" and inserted the word "American" before the word "cross" in the sentence. The result was that the word "read" the "first American cross," we might have escaped the censure of the Philadelphia edition, but we are sorry. All this, too, for the omission of a single word.

Our ourselves had already perceived the aforementioned ellipsis, but as this explanation could be made; and to that end, we know just how far the aforesaid official report was unreliable so that a full correction could be made; and to that end, we wrote to the originator of the new seedling cypripedium in question for information on the subject, submitted in his reply:

"I must say that the source where the Philadelphia edition of the Exchange Information is unknown to me. Certainly I myself did not give out the elaborate display of the new variety which went near the show. All the information furnished by me was on the exhibit card, and it was the seedling which was the first Orchid, Cypripedium, Edwin Louisaide, Robertsonianum, N. Robertson superior, and C. G. Robertson, Esq., Trenton, N. J."

You see it was not even mentioned as the "first American seedling," nor as "the first" to be obtained from Robertsonianum, that may have been its parentage, and it is the first American seedling which was introduced with the rich Robertsonian blood.

HENRY CLINCKENBERY.  
Though we sincerely regret that our critic has indicted, we feel like exclaiming, "Thanks, thanks to our new friends and patrons who have taken us in hand." Hereafter, we will then all official reports from the source, and let the facts be discussed, unadorned, *en grano salis*.

The Pennsylvania Horticultural Society, and the adoption of it entails criticism, and in future appointments judges

inclined to issue official reports, men who know what they are talking about, whose reports will be incontrovertible even beyond challenge.

The criticism has also tended to strengthen our conviction of the great need of a reliable source for the maintenance of orchid culture in America, the literature on which is far from complete. At our present office, we have had an orchid expert, Mr. Robert M. Grey, compiled for us a very valuable list of hybrid cypripediums, and we have published it on page 428 of volume VII of the EXCHANGE. Outstanding cypripediums appearing in the Gardeners Chronicle of February 6, 1903, we have had an orchid expert, Mr. Robert M. Grey, who we could check reported statements of fact in official reports, the nature of the one under consideration.

A "course in cypripediums," as suggested by our critic, is not enough. It is a text-book first, in order to make the work of the suggested course (and, even if it were not, it would be complete as it possibly can be made.

**Reflections on Current Topics.**

The disadvantageous nature of the undesirable rule adopted by the Chrysanthemum growers of this country formed a subject of recent discussion, and well exemplified in the communication from our Philadelphia correspondent of last week's issue. He states that through delay in receipt of the authentic notification, he was unable to receive his (Mr. Rawson's) seedling had been certified by the committee, he lost the advantage of such seedling in several prominent catalogues, "by only a day or two." Surely no more conclusive proof could be given of the necessity of this pernicious and unnecessary rule of its harmful effects. It is not the province of our critic to suggest a remedy, or of any similar body, to adopt and put in practice systems that act as deterrents to the legitimate business. The rule should be relegated to oblivion.

Our advertisement in several papers along with the goods offered for sale, is largely responsible for the existing "cutting" of prices, which is working so much injury in the business-to-day, "said a large grower and advertiser recently. These goods were advertised with the remark; and the detrimental effects of the practice, along the lines indicated, he was unable to do otherwise than to fault that cannot fail to remedy itself, sooner or later. While the price of an article is not a measure of its value, production, quality and quantity of the product play no important part in determining its value. The value of a grower, relatively speaking, may be able to produce a certain quantity of stock, and at a lower figure than his larger competitor, yet his supply is so small that the influence of his price—'he does' cut'—is not felt, and he is not a competitor. The real competition exists between those having the largest output, which is the quality of the goods, and the price of the best service rendered to customers, as regards quality, and matters incidental to the business, such as the withholding of prices would not affect.

On the other hand, the quoting of prices and the failure to reduce the price when these is a curtailment of office work, correspondence, and outlays connected with the business, and the failure to be the means of doubling the volume of business in the past three or four years, and the adoption of the "cutting" sales; it overrides delays in writing for replies to inquiries regarding values, etc. Now, if the price of the goods is not of exorbitant or extravagant figures to a minimum, and to create a greater uniformity of price, it is not wise, notwithstanding the cutting system now prevalent in some directions.

Our Philadelphia correspondent who studies the market closely, will show us they would an impending catastrophe, prices have fallen to a minimum, and he has charged so as to yield a living profit.

The practice of cutting prices on straw, and the cutting of plants for any length of time with impunity. However, our Philadelphia correspondent's observations will not stand up; it out; not even mitigate it, for other growers' plants and the best to be obtained by those inclined to cut.

The advantages of stating prices in advance, and the adoption of it entails numerous drawbacks, that to stop the practice would result in much greater loss and the adoption of it entails.

**MARKET NOTES.**

**Delay in Transportation—Freezing of Plants.**

As we have from time to time, as the case progressed, referred to the action of Henry A. Siebrecht *et vs.*, the Pennsylvania Railroad Company for damages caused by the freezing of plants in transit, or while in the custody of the carriers. Undenoted we now give a copy of the opinion of Judge McAdams of the Supreme Court (Appellate Term) of New York City, before whom and Judges Daly and Bischoff was heard an appeal by the defendant from an allowance by the General Term of the City Court of a judgment in favor of plaintiffs. The opinion is interesting as showing the liability of a common carrier under the circumstances. Mr. Siebrecht's counsel was Mr. John M. Gardner, 38 Park Row, New York.

In his opinion Judge McAdams says: "The action is to recover for damages to the plaintiff's plants, which were damaged while in defendant's care, caused by an unreasonable delay in transportation of the plants, and by the freezing of them. It appears that on Friday, February 22, 1895, at 2 P. M., one Burton, a horse-drawn freight car, containing plants from Hill, Pennsylvania, shipped by the defendant's road a lot of plants consigned to the plaintiff at Jersey City, was loaded on defendant's freight car, and the defendant agreed to transport with and dispatch. If the bill of lading the defendant's freight car, was damaged by freezing while in transit."

In order to recover, therefore, it becomes necessary to show that the defendant's negligence or breach of duty on the part of the defendant, so that they are liable for the damage to the plants. It not only unreasonably delayed transportation, but that the plants were frozen and damaged by the defendant's negligence. The plaintiffs assumed this burden, and proved that the average time of a freight train between the place of departure and the terminus at Jersey City, was from 12 to 14 hours, and that the plants, valued about 2 A. M. on Saturday as the proper time for the arrival of the train, and that the plants were not delivered in any event according to the bill of lading, and that the defendant's delay in transportation of the plants had no one at the train at that time to receive the goods. Their employe, Smith, testified that he telephoned on Saturday about 5 P. M. to the freight yard of the defendant, and received a reply that the plants were not yet at the plants to get in until 5 o'clock on Sunday morning; that he drove over on Sunday morning, and found the plants frozen, and received the plants in a frozen condition.

Of course the defendant, if free from negligence, is not liable for the damage to the plants. It agreed simply to transport the plants with the care and despatch, and the necessary delay in transportation for transportation the weather became so cold that the plants were not able to be transported in the ordinary manner, and the delay would have to be that of the shipper or consignees.

The defendant produced the United States Weather Report, which is a contemporaneous record kept by trained public servants, upon whose returns the Government Weather Bureau (under its forecasts, and proved by this record that on Saturday, February 22, at 8 P. M., the weather was coldest between midnight of the 21st and midnight of the 22nd, the thermometer having fallen to a minimum of 16 degrees at New York and 20 degrees at Philadelphia. On the morning of the 23d (Saturday) the thermometer rose to 25 degrees, and the temperature was 27 degrees by freezing.

The defendant also claimed that this established that the freezing of the plants occurred between Friday at 2 P. M. and the morning of the 23d, and that the plants were not to have arrived in Jersey City, and upon this theory requested the court to charge the jury that the defendant was not to be held liable for the damage to the plants which had reached Jersey City on the morning of February 23, 1895, and that the damage to the shipment occurred in the twelve

**For the Busy Man.**

Market chrysanthemums the past season were given a very gratifying in Covent Garden Market, London.  
A variegated form of Asparagus Sprenger has made its appearance in Philadelphia; also a new variety of Asparagus Sprenger.

The Detroit florists are benefiting by the rate of exchange on the dollar, and are offering a reduction, the free distribution of plants and flowers by the Government.  
The Pennsylvania Horticultural Society, the organization of a National Guild of Flower Growers was held in Philadelphia, and the objects of the Guild are specified on page 1163. The arrangement of the exhibition was arranged by the American Ice steamer Monday was destroyed through "boating." Price of mints—on a consignment advanced to \$2 per pound.

**Chrysanthemum Illustrations.**

The publishers of the FLORISTS' EXCHANGE have for sale a large assortment of cuts of the new and standard varieties of chrysanthemums. Parties wishing to refer to these in our catalogues and other printed matter will do well to write us for particulars.

**The Tenth Volume**

OF THE FLORISTS' EXCHANGE begins Jan. 1, 1898. In order to keep all the equipment complete and handy for referring to, you should use one of our binders. They are made in two styles, one at 75 cents, and one at 45 cents. Both are good and serviceable.

hours preceding the morning of the 23d, there is no evidence that the plants were injured because of the longer time occupied in transportation...

It was for the jury to say when the freezing took place, and if the request had been that they found that the plants were injured before the longer period of transportation...

It is well known that plants are safely kept during all seasons of the year, and that those in question were properly packed to resist the cold for 24 hours...

The risk of freezing after the usual time for transportation expired was on the defendant, and the evidence was sufficient to send the case to the jury...

Negligence is in general a conclusion from the facts in a case, and the instructions from the court, and it is always so when the facts and conclusions are in issue...

Where the injury may have resulted from one of two causes, one of which would establish liability and the other excuse the defendant and absolute certainty as to which did cause it is unnecessary, the verdict of the jury is conclusive.

We have not referred to the plaintiff's request for a temporary injunction because the objection presented for review is to the refusal to charge, which was founded exclusively on the defendant's motion for a temporary injunction, conditioned upon the finding that it was true.

Inferences to be drawn from them, with the inherent probabilities—all of which were considered by the jury—show that the trial judge properly disposed of the request to charge, and as his refusal to grant the injunction was upon which the exception urged was taken, the judgment must be affirmed, with costs.

A Permanent Injunction.

Judge GAYTOR, of Sioux City, Ia., has decreed that Jonathan W. Brown, of the Sioux Horticultural Bank, has no right to use the name "The Sioux City Nursery and Seed Company," which name the defendant formerly operated under that name...

These latter items incorporated what is known as the Sioux Seed and Nursery Company, and have been doing business under that name. Receiver Brown has filed a bill to have the name "The Sioux City Nursery and Seed Company" changed to the word "The," but articles of incorporation have been filed with the Secretary of State...

Floral Calendars.

Donald B. Long, of Buffalo, N. Y., very recently sent us specimens of an entirely new departure, in a subject of special interest to us, viz., the Floral Calendar. It is a beautiful calendar, and certainly the conception will go far toward firing his imagination and leading him to other attempts of thought and readiness of pen and pencil...

Trans-Mississippi and International Exposition, Omaha.

The Trans-Mississippi and International Exposition will open next June in the beautiful city of Omaha, which was admitted to the Union in 1857, but thirty years ago, Omaha and the region whose marvelous progress will be illustrated by the exposition, were but a few years ago comparatively unknown to a large portion of the people of the Atlantic States.

Under an act of Congress approved by the President of the United States, the Trans-Mississippi and International Exposition is granted recognition as a national exhibition, and the full rights and privileges for the admission of foreign exhibits free of duty, the right to strike medals, and the right to coin medals in the United States mints, and all other privileges heretofore granted to international exhibitions, except the right to coin medals.

Several horticultural establishments have at this early date identified their names on the grounds of the exposition, and the Horticultural building, Henry A. Dreyer will have a large display of plants, including a large amount of common and pansies; F. R. Peterson Co. will also have both kinds of pansies, and W. J. Peterson will have a large display of Barabank; Peter Henderson & Co. will exhibit grasses and ferns plants.

It is to be expected that A. O. H. coming to Omaha in 1898-1899 is a source of great satisfaction that her hotel facilities will be improved, and that the necessary accommodations are in contemplation. In addition to the present large number of hotels, there are already over 200 restaurants, tool gardens, and

cafes. It is estimated that the capacity of Omaha in this regard is sufficient to care for 50,000 people daily.

With our limited space it is impossible to do justice to the exhibits, and to which this exposition will present. Unlike other American exposition architecture, the buildings here are characterized by their briefy stated, the buildings and colonades will present the aspect of a Pompadour style of architecture, and the buildings having the tint of old marble. Intricate carving and classic sculpture will be the main objects of artistic effect produced by the finished work of the main colonades, and the main buildings, and beautiful porches and colonades with imposing columns will form the main objects of artistic effect and rampart will survey the main court from its lofty pedestals.

**W. WENDEL**, Middle Village, N. Y.

**POKESAL**-Florists' acesite covered wagon; built about 5 feet front end, 10 feet long, 7 feet 76 feet, built to order costing \$250. Used but two years. Will be sold cheap.

**VACABON'S SEED STORE**, Box 68, Chicago.

**St. Louis.**

**Business Still Bad.** Trade continues dull and prices have dropped considerably since last week. If the growers know what it actually costs them to grow stock (and it is not few of them), they will be able to realize that at present prices they are, as Sam Jones puts it, "working for nothing and boarding themselves."

Wholesale florists report extremely light sales, with a very large over-supply of pink and white carnations. Carnations at 2c, and large lots could be bought for something less than that. Beauty carnations in fair demand at 3c to 35c, and red roses of all kinds sold quickly at 85 to 100 per 100.

Carnations are selling at from 2c to 3c, with a scarcity of red sorts. The supply of Harris lilacs is very short. They would probably sell at good prices.

The windows of the retail stores are being arranged for Christmas decorations and in many cases these goods are very artistically displayed.

**Club Notes.** At the regular meeting of the Florists' Club, F. W. Weber and A. Meyer, Jr., were proposed for membership. The Christmas dinner committee was not able to make its final report and the matter was deferred until the next regular meeting when the question of giving another exhibition next year will be decided upon.

**A Bowling Match.** The Chicago Florists' Bowling Club visited the St. Louis boys Sunday, arriving at 7:30 A. M. They were met by the club and by Messrs. Beaman and Win. Young. Breakfast awaited them at the Hotel Rozier, after which a visit was paid to a number of the wholesale and retail stores. Lunch was served at the Grand, and the bowling contest

began at 9 P. M. The result was a victory for the St. Louis club, they winning four out of the five games. J. Zeck, of Chicago, made the highest average. The result was a surprise to both sides, as are under.

At the conclusion of the match the party adjourned to Lipper's for a banquet which was served. Speeches were made by Messrs. Grant, Vaughan, Wilson, Tresselt and the victors left for home on the evening train. All expressed themselves well pleased with the day's work and the result of the match. A formal invitation to the St. Louis florists to visit Chicago and attend the meeting of the Chicago Society to be held in the city next February.

**Toronto.**

**Trade Continues Good.** Business here is still good, and there is every indication of there being an extra holiday trade. Flowers are generally of good quality none now going to waste. Prices are still going up, but are not yet so high as they have been other parts of the week.

At this week are, Rude, Bridesmaid, Mermel, Meteor, etc., run from 80 to 85; Wootton, Sunset, Perle, Hoste, etc., \$3 to 36; Cusin, Nephets, \$2 to \$4; Beauty from \$10 to \$50, but very few of the better ones are offered. Carnations bring from \$2 to \$4; violets, \$1 to \$2; july, \$3; and \$4; Romans, \$2 to \$4; smilax, 12 1/2c; nigamette, \$4. These are present prices with an upward tendency.

Harry Dole, John Dunlop, and the North Toronto Florist Co. are all selling in fine roses; Miller & Sons, fine carnations, and Frank Duffel, good violets. The latter are much in demand this season and thousands are ordered by our retailers for the Christmas trade.

The weather is mild now and most of the boys here it will keep so until after Christmas.

There have been several meetings held lately by business men having interests in the city and St. Lawrence market, and it has been decided to ask the City Council very largely to increase the tax on the market. The city owns the space next to the present market necessary to make the market one lot; and there is no doubt a large business could be done if anything like proper facilities were provided.

The December meeting of the Horticultural Society was held on the 7th, 35 members being present. Mr. C. McPhee read an interesting paper on "Seasonable house plants and home decoration." Several of our amateur members took part in the discussion that followed. George Vair introduced the matter of giving plants to several of the school children, and several of them offered prizes in the Fall for the best plants produced from them. It was decided to bring the matter before the school officers and report at the next meeting.

Chrysanthemums are very scarce here this season, and some of our growers are greatly inconvenienced in consequence, as it has been the case in one or two years before for some time now. **THOMAS MANTON.**

**Brooklyn, N. Y.**

John McKee opened a new retail store at 83 Broadway on December 15. Two new stores have recently been opened in Seventh avenue; one by Dudley at 91 and one by Brady at 101, both in the neighborhood of Seney Hospital.

**Cincinnati.**

**Business Satisfactory.**

We have no complaint to make regarding business during the past week. The demand for flowers is still strong, as was a great demand for flowers, and probably \$3,000 was spent for this one funeral. General business was also good and stocks have been well cleaned up.

The inquiries for Christmas are very numerous; but, so far, stock does not show indications of being very plentiful.

**A Successful Carnation Meeting.**

Saturday, 11th inst., was our special carnation meeting, and not since the show of the Carnation Society, held here last February, have I seen such a grand display of carnations. E. G. Hill & Co. had the following: Psyche, on the order of Armazuldu, finely more-pencilled, a large flower of good form, stem, and calyx. Painted Lady, which, by the way, is well named, of the color of a lady's cheek that has been given that blush tinge; but to those who may never have noticed it, it is a very good one. The color is as blue as that of Bridesmaid and Tidal Wave; a grand formed flower, of good form, stem, and calyx. The color is that of a lady's cheek that has been given that blush tinge; but to those who may never have noticed it, it is a very good one. The color is as blue as that of Bridesmaid and Tidal Wave; a grand formed flower, of good form, stem, and calyx.

My dear friends, I have no doubt if it is better than Armazuldu, Nobility is similar in color to Painted Lady, especially so good, although not by any means.

E. G. Hill & Co. also showed six blood-red Carnations, yellow-crown, anthemion of good proportions, but the color was against it; still, for a late variety, it is very good.

F. Dornier & Sons Co. showed Mary Wood which is a white Brade-the best I ever saw. The color is very good, and get is the yellow carnation of the age, and unless I miss my guess wonderfully, it will be a sensation on the show. It possesses a most pleasing color and a very graceful carriage; although the stem might strike you.

John Young is a white, but I think Dornier & Sons can do better. Although I don't not buy it, this is a very good one. G. H. Crane is a scarlet and will probably make a good carnation. I have seen it, and unless I miss my guess, it will be a sensation on the show. It possesses a most pleasing color and a very graceful carriage; although the stem might strike you.

George & Allen had a splendid display of roses, violet, chrysanthemums, etc. The display was given by Mrs. George and E. H. Giesey, after which Win. Murphy briefly told us several of the new kinds. R. Witterstaetter's Evelyn carried off the plum (and made Win. Murphy pay for the supper). In a comparison with Flora Hill, whose weak stem lost the contest this time. Putting the two in comparison with several other experts to tell them apart, but when your nose touches the bloom Flora Hill soon makes good.

The regular monthly meeting of the Cincinnati Florists' Society was held on the evening. Recitations of an interesting character were given by Mrs. George and E. H. Giesey, after which Win. Murphy briefly told us several of the new kinds. R. Witterstaetter, Mr. Wiegand, J. P. of Indianapolis, was a caller this week. **E. G. GILLET.**

New York.

Wholesale Market. Business this week has been very dull. Trade is usual during the week preceding the holidays, but in this condition, this year, has been augmented to a large extent...

Roses show evidences of picking, and some very fine buds are depreciated in value by weak stem and hook. Prices on small roses have been hard to maintain...

Carnations weakened and are selling at varying figures, from \$1.25 to \$2.25 per 100. Violets suffered a severe set-back and have been the poorest sellers in the market...

Roman hyacinths are a gent. Valley is weak and irregular in price, except for special quality \$1.50 to \$2.50 are frequent taking figures...

Poinsettias, on order only, bring \$35 per 100. These are plentiful and are freely used. Lilium Harrisii is now fetching a little better price, from \$8 to \$12.50 per 100.

Smilax continues a drag. Christmas green trade is brisk and clearing up well, no shortage is noted, except on the very highest grade of holly and imported mistletoe...

Trade of the most unique dimer decorations of the week took place Thursday at the home of W. C. White...

were arranged on a bed of asparagus. Many of the individual bracts measured 18 to 20 inches in diameter, and were a magnificent blue. The Rosary Cut Flower Co. had this decoration.

New Stars. Woldemar and Dahlia Barth opened a store on Wednesday last at 1135 Lexington avenue, southeast corner of Seventy-ninth street.

Frederick & Co. is the firm name of a new store, just opened, at One Hundred and Sixty-second street and Eighth avenue. Miss Tucker, formerly at the Nestle-down store with Miss Wheeler, is now located at 210 Lexington avenue. She has named her store "The Perary."

The Sherry basement store, once run by Fleischman, has been let to three ladies who are now carrying on a flower business there.

Visitors. Henry Small, of J. H. Small & Sons, Washington, D. C.; Alexander Scott, Philadelphia, and John S. Snyder, of Oneida, N. Y.

Alfred Dimmock, of P. Hays & Co., sailed for England on the Teutonic, Wednesday last, after a very successful tour.

New York Gardeners' Society. The following officers were elected at the meeting of the society on Saturday night last: President, W. Scott, gardener to T. C. Eastman, Tarrytown, N. Y.; vice-president, A. Tamm, gardener to T. O. Mattheison, Irvington, N. Y.;

secretary, Wm. Bartholomae, gardener to W. B. Isham, Riverdale, New York City; Executive Committee, R. Brett, R. Pierkowski, W. Anderson, John Shore, G. B. Winslade, C. Webber, W. Sage, and J. Wuegerter.

A. L. Marshall, Pawling, N. Y., exhibited three carnans, all seedlings from Columbia; they give evidence of merit. J. I. Doulan and Jessie H. Marshall are the names given to two of them; the other is not yet named.

A. Piper, 174th street, exhibited a wild-flower orange, which, it was claimed, fruits more readily and makes quicker growth than the Othello orange. A certificate was awarded Robert Laurie, gardener to Cornelius Vanderbilt, Newport, R. I., exhibited six plants of Begonia incarnata, and two of B. socotrana before the horticultural section of the American Institute, Tuesday, December 14, for which he was awarded the diploma of the American Institute. The plants of incarnata displayed evidence of unusual cultural skill. Mr. Laurie claims that he has an improved form of this old but charming and most useful begonia, and he names it "Improved." Certain it is that the plants submitted showed considerable improvement both in size of individual bloom and in color, also in cretness of growth and branching of flowers; neither was the frequent and outbred seed vessel, noticeable in the type, so prominent. The plants, as exhibited, show a profitable method of propagating florists as flower subjects for Christmas trade. They stand out as excellent novelties.

A memorial, signed by many prominent business men, was presented to the Board of the American Institute, on meeting this week, suggesting to that Board that it would be a graceful recognition of the efforts of the florists to give his name to one of the newly projected parks.

Pittsburgh.

Market News. Trade has remained about the same all last week; the scarcity of stock notwithstanding. Carnations are choice and more plentiful, quoted at \$1.50 per 100 and up, and selling at retail from 35c. Roses advanced a little in price, and as they are not very abundant in our locality, will likely be high priced for the holidays and scarce at that. Romans, paper-whites and valley sold moderately well. Tulips are also scarce, but they are shortly expected. Harrisii lilies will be plentiful for the holidays, but uncertain in price.

Christmas greens have been in the market for several weeks. Trees arrived on December 15, and the supply promises to be heavy. Holly is fine, well berried, the best seen for many years, and sells readily. The profits in Christmas greens are not what they were some years ago, when the bulk of the stock was handled by the florists' trade. The last few years commission houses, grocery stores, peddlers, hawkers in the markets and many others have thinned this material, and prices are so low that it does not pay for Fleischman to handle it, although they still stick to it and work hard at that.

The last meeting of the Florists' Club for the year was held on December 9 and attended by about 25 members. The attendances during the past year have been very poor, and the payment of dues unsatisfactory, so it was decided that the executive committee should look over the membership list and decide who should remain. At present there are over 150 members on the books, but many of them take no interest in the affairs of the Club--do not even pay their dues. At the first regular meeting next year the committee will report, and arrangements will be made for the entertainment of members in the future.

**Weather and Market Conditions.**  
Free raw material for the ice men has been furnished in great abundance lately, with other people. But the halcyon Spring atmosphere, is not conducive to good business with the florists any more than with other people. But the cloudy weather has shortened up the output, and the offerings are generally taken up pretty clean at slightly advanced prices. Good Wintry weather is longed for by the retailer and sunshine by the grower. The city wintering season may be said to have practically ended. There is not much change in the rose and carnation market except the advance in price of the former. Violets still hold at \$1 per 100, and are a little more plentiful, but the quality generally is poor. Great expectations are being indulged in for the holidays. Holly and Christmas greens are in good demand; but orders are coming in to the dealers plentifully, and the stocks are taken up at present as fast as it arrives.  
At the Massachusetts Horticultural Society's rooms on Saturday, Henry Clinkaberry, gardener to Hon. C. G. Reelberg, received a silver medal for a well-fledged specimen of a fine new carnation—C. Leeanun Clinkaberryannum.

**A National Guild of Flower Growers.**  
A meeting for the preliminary organization of the National Guild of Flower Growers was held at the Market House on Saturday afternoon last, about thirty gentlemen from different sections of New England, present. The objects of the association are the advancement of the principle of co-operation in the growing, marketing of supplies and selling of products; the aiding and encouraging of exhibitions, floral festivals, fairs, etc., for the purpose of advancing the interest of the trade; the influencing of legislation in the interests of the flower growing industry; the promoting of fraternity among members; protection of members against irresponsible parties either buyers or sellers; the giving of good legal advice at a low cost; the organization of a company under the auspices of the guild for dispensing relief in case of sickness, accident or death; and the organization and chartering of branches to be known as local guilds in the various cities and towns of the country. The next meeting and election of permanent officers will be held in January at a date to be announced later.

**A Trade Exhibition.**  
A trade exhibition held for the purposes of allowing the growers or distributors of new late specialties to exhibit same, was held on Saturday at the flower market under the auspices of the New England Florist, with the co-operation of the Boston Co-operative Flower Growers' Association. After the business of the day was completed the stalls were roped off to allow exhibitors to arrange their products for display. A stock of flowers in display, largely carnations, was tabled. No prizes were offered, but many of the exhibitors presented elegant displays of carnations, mostly new ones to be disseminated the coming year among florists and growers. New York (Scott X Daybreak) which is about the color of Bridesmaid, but said to be much more fragrant, was first in flower as Scott. Gold Nugget (Dorner) bright yellow, with a few dark markings on the petals, was first in color and got a cropper. White Cloud (E. A. Wood X Daybreak) a fine new white with an especially good stem. Mrs. James Dean (Scott X Storm King) light pink, large flower, good stem, and a new one. Joan de Sorel (same on the same seed pod as the preceding, is a very double pure white, fringed, flowers, but resembling Scott's, very dark almost black flower, a cross of Mr. E. A. Wood's Winter Cheer was first in color and got a cropper. Bon Ton, a seedling raised by F. A. Blake, Rhode Island, a very fine, fringed, scarlet flower with a particularly good stem and a remarkably good keeper. The Bon Ton shows rather better than when first shown a year ago. Mr. Ward also exhibited handsome vases of Flora Hill, Scarlet Sable, Flame, Mrs. George M. Bradt, and Lily Dean.

One of the most attractive features of the exhibit was the vase of Peter Fisher's new pink carnation, Mrs. Thos. W. Lawson, which attracts much attention. Mrs. Fisher also showed a new pure white, Morning Star,

which though not of immense proportion, has many good qualities. He also showed Flora Hill and Mrs. George M. Bradt.  
Fatten & Co. made a fine display in the center of which was a magnificent vase of Edith Foster. Other varieties were Victor, Daybreak, Mrs. George M. Bradt, with red sport of same, Emma Wocher, Thomas Cardigan, Eldorado, and King gold. C. A. Dana, Uva, Flora Hill, Wm. Scott, and Klondike.

He also showed a fine display in the center of which was a magnificent vase of Edith Foster. Other varieties were Victor, Daybreak, Mrs. George M. Bradt, with red sport of same, Emma Wocher, Thomas Cardigan, Eldorado, and King gold. C. A. Dana, Uva, Flora Hill, Wm. Scott, and Klondike.  
H. A. Cook of Shrewsbury, Mass., exhibited a good vase of his seedling Uva which was put out last year, and also seedling No. 1, 34, a double pink flower of large size with long erect stem and, withal, a promising variety.  
Wm. Jones of New York Square, Pa., sent on a vase of Empress, very large and dark with unusually long stiff stem.  
John Farron, Chestnut Hill, Philadelphia, had a large vase of his white seedling.

**C. W. WORS,**  
**Wholesale Florist,**  
313 N. LEFFINGWELL AVENUE,  
ST. LOUIS, MO.  
FINE ROSES—Shipped carefully to all parts of the country.

Fatten & Son showed two large vases of their scarlet seedling, Wellesley, which is to be disseminated the coming Spring. This flower is of good habit and appearance, and the two vases, cut respectively on the Weyburner and 10 showed it to be especially well held in its bright color well.  
H. Grant, of Philadelphia, Mass., exhibited a handsome bunch of his new Crown Shell which promises well.

**Buffalo Cut Flower Exchange**  
**WHOLESALE COMMISSION.**  
CONSIGNEES SOLICITED.

Telephone, Benson, 1865.

H. E. A. Langes of Worcester, showed a handsome vase of his 1894 variegated seedling Ensign, which made a good appearance.  
Other exhibits of carnations were: W. S. Phelps, Jr., Flora Hill and Lizzie McGowan; Samuel Wheeler, Berlin, Mass., seedling white; Wm. Sims, Edith Foster; A. Hooper, Tewksbury, vase of seedlings, vase of Major Whitley (new), pink flower with light edge, and a vase of his recently named pink carnation Mayor Quincy, also vase of Edw. Sheppard, a seedling scarlet; J. W. Leach had a vase of Daybreak; Sewall Fisher, Servin, Va., had a new white seedling; Curdick & McDonald, vase of seedlings; M. L. Turpel, Eldorado; E. A. and W. K. Wood, vase of Frisella, a seedling white; Mrs. James C. Melvin, a seedling dark pink; W. C. Stickle & Co., John's Scarlet; Walter Knapp, seedling crimson; Andrew Christensen, Mrs. Fisher.

RICHMOND, INDIANA.  
When Writing Mention Florists' Exchange

It is rather late for exhibition chrysanthemums, but William Nicholson showed some very fine ones. S. J. Murdoch and Maud Dean; W. Sims some good Major Bonifant, and E. G. Hill & Co., representative of H. Little, had a fine vase of the new Japanese incurved variety, Christinas Gift.  
Victors connected with the trade were present from various sections of New England and New York, viz.: Mr. W. W. Lawson, Mrs. Ward, Allen, Dullandene, and Asmus.

Camden, N. J.  
William Zane, while at work on a greenhouse last week, fell through the sash and had his leg fractured.

### Baltimore.

**The Market.** Owing to the continued cloudy and rainy weather, stock has neither been good in quality nor plentiful. Trade in consequence has been very quiet. Violets are scarce and prove good salable stock. Carnations, also, are not over-plentiful.

**The Club.** A well-attended meeting of the Club was held Monday, December 13. Upon invitation, a number of our brethren from Washington and vicinity, to tell us their grievances in regard to the free distribution of cut flowers and plants by some of the government floriculturists. Among the visitors were: Messrs. Freeman, Hale, King, Boyle, Bowler, and Wood. Mr. Freeman's forcible address told us the conditions of affairs at Washington. He stated that he and his colleagues were not attacking any individuals, but methods.

Messrs. Hale, Woods, Boyle, and King corroborated the statement of Mr. Freeman. The Baltimore Club, by a unanimous rising vote, passed the subjoined resolution. Never in the history of this Club has such enthusiasm been manifested as in the condemnation of the practice which is so hurtful and so unfair. Every member of the florists' trade who contemplates a fight with all the vigor he possesses, this unjust competition.

Where does this S. F. A. O. H. stand on this question? We were surprised at the absence from the meeting of the genial president, Wm. F. Gade, who in his official capacity could surely make his influence felt in this matter; and I am positive that there would be but few members of our national society that would not support him in any steps he might take in this relation.

The following resolution was passed by the Gardeners' Club: Resolved, That this organization reprobates that practice of the existing, and still further growing, practice of the free distribution to officials and private persons, of cut flowers, decors and flowering plants in the District of Columbia by the sub-department of United States Greenhouses, as contrary to justice, to the correct principles of business and to public policy, as well as the very letter of the law governing the production of the plants, etc., adapted to assess the public account, and also as working a great detriment to the florist trade of Washington and vicinity.

(Signed) EDW. A. SEIDENWITZ,  
Wm. McROBERTS,  
FRED. G. BURGER.

Copies of the resolution were ordered to be sent to the Secretary of Parliament to C. Bingham.

It may be stated here that Mr. Freeman quoted a law covering an appropriation, and forbidding the growing of any plants except those adapted for park ornamentation. This law was passed in 1879.

**Note.** One of our large cut flower establishments is shipping stock to Philadelphia. P. Berkowitz, Philadelphia, made a flying visit to Baltimore last week.

**Grand Rapids, Mich.** The regular meeting of the Florists' Club was held December 7. Mr. George F. Crabbs read a paper on new chrysantheums which was listened to with marked attention. He stated that Western King was the best late white. The paper was critically discussed by the members and the question was asked, Does it pay to grow very late varieties? All seemed of the opinion that it did not, as most all of the growers filled their houses with earlier varieties and to have them planted with late varieties of chrysantheums would make it too late for the carnations to get any kind of a start before the holidays.

Mr. Hanna will read a paper on "Christmas Flowers—What is best to grow and which are the most salable and profitable?" The annual meeting and election of officers occurs January 4.

**New Haven, Conn.** John Roman, for many years salesman for R. Vetch & Sons, from which position he was forced to resign about two years ago, by an attack of Bright's disease, died December 1. He leaves a widow and six children.

# THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL.

VOL. IX. No. 52

NEW YORK, DECEMBER 25, 1897.

One Dollar Per Year.

## ...ROSES... CRIMSON RAMBLER ROSE.

### Extra Strong Field-Grown Plants for Easter Forcing.

We desire to call the attention of the trade to the great value of this rose as a pot plant for Easter sales. It is one of the showiest and most beautiful of all hardy plants, but also makes one of the most beautiful pot plants for florists' sales, and is particularly adapted for forcing for Easter, having proved one of the most valuable novelties grown for this purpose. A Boston grower realized ten dollars for every plant he had.

We can supply an extra fine lot of extra fine plants for potting and growing on for this purpose, plants four to five feet high, three to four strong canes each, stock in the very best possible shape. These long canes will flower from every joint, and by proper training and winding, the plants can be made of immense size, covered with a perfect mass of bloom. We know of no choicer plant for the Easter trade. Florists who do not supply themselves with a lot of this stock for this purpose will regret it.

Strong, field-grown plants, 3 to 4 canes each, 4 to 5 ft. long, {3 per doz., {20 per 100.

## HYBRID PERPETUAL ROSES.

We also offer an unusually fine stock of the very choicest and most desirable varieties of **HYBRID PERPETUAL ROSES** for growing for pot plants for florists' use for Easter and Spring sales or for out-door blooming. Our stock is unusually strong and cannot fail to please. We can supply the following extra choice sorts, viz.: Mrs. John Laing, Ulrich Brunner, Paul Neyron, Gen'l Jacqueminot, Mme. Gabrielle Luizet, Anna de Diesbach, Margaret Dickson, Magna Charta, Baroness de Rothschild, Co. Baron de Bonsetten, Marshall F. Wilder, Prince Camille de Rohan, Alfred Colomb, etc.

Strong, field-grown plants, extra heavy, \$2.00 per doz., {12.00 per 100.

Send for our Special Price List of Palms and Other Decorative Plants.

**F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.**

## PALMER'S HOT BED MATS.

### FROST PROOF.

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

Indestructible, Cheap and Warm

Will not harbor mice or vermin. Easily handled. Dry out quickly after rain. Have now been in practical use three years. Cost less than old-fashioned straw mats and entirely take their place.

### MADE IN FOLLOWING GRADES:

- |  |  |
|--|--|
| No. 1.— <b>Burlap Cloth</b> , filled with combination wool and quilted, seams 3 inches apart and edges firmly bound. | No. 2.— <b>Duck Cloth</b> outside, filled and quilted same as No. 1.                   |
| Size 48x76 inches, 50 cents each.  | Size 48x76 inches, \$0.75 each.  |
| " 76x76 " " 75 " " "   | " 76x76 " " 1.00 " " "   |
| Size 48x76 inches, 50 cents each.  | No. 3.— <b>WATERPROOF</b> , made of oil duck, filled and quilted same as Nos. 1 and 2. |
| Made any length, 76 inches wide, at 12 cents per running foot.   | Size 48x76 inches, \$1.00 each.  |
|  | " 76x76 " " 1.25 " "   |

That these mats are a much needed improvement over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone who uses Hot Bed Mats should know their a trial.

WE ALSO MAKE **QUILTED HORSE BLANKETS**, the Cheapest, Warmest and Strongest in the World.

**THE R. T. PALMER CO.,** 113 Worth Street, New York.

## Four Grand Early Pink Chrysanthemums

**ROSE OWEN.** One of the best very early pink chrysanthemums of recent introduction. Ready late of September to 10th of October. Height, 3½ feet. Clean, neat grower, perfect stems, with bright, waxy foliage well up to the bloom. Color bright clear pink, with incurving petals, large to extra large when well grown. Will bear close planting as foliage is not dense. We offer this variety with much confidence, knowing it will give satisfaction as an early, commercial pink. Every bloom sent to New York market, is snapped up at once by leading florists. Having a fine, clean stock, we shall be prepared to fill large orders. No grower who needs clean, bright, first early pink should neglect Rose Owen. Dozen, 75 cents; 100, \$5.00; 1000, \$41.00.

**J. H. WOODFORD.** A beautiful, large shell pink, shaded to center; high globular form with heavy broad incurving petals, strong stem and fine foliage; extra early. Can be out October 5th to 10th. Crown or terminalis; on crown one color, pure white, 4 ft. A grand early pink to follow Rose Owen. Nothing better in its color for a second early. Dozen, 75 cents; 100, \$5.00.

**GEO. F. ATKINSON.** Clear shell or mermaid pink, high built globular bloom of great substance and largest size. Early flowering immediately after J. H. Woodford. Still stems and splendid foliage. A fine commercial sort, 8½ feet. Dozen, 75 cents; 100, \$5.00.

**BELLE OF CASTLEWOOD.** Rich, enamelled shell pink broad petaled incurving flowers, 4½ to 5 ft. and pleasing shade. Immense bloom on a grand stem with splendid foliage. Too much cannot be said in favor of this variety as it is one of the most choicest and beautiful chrysanthemums in existence. No grower should be without it. Dozen, 75 cents; 100, \$5.00.

## THE BEST TWO VERY LATE WHITE CHRYSANTHEMUMS.

**DOROTHY DEVENS.** Undoubtedly the very best late white. Magnificent show white, largest size globular form, clear delicate flesh, grand stem, rich deep green foliage. December lat to 4th, 3½ to 4 ft. Doz. 75c; 100, \$5.00.

**MRS. R. CRAWFORD.** November 30th to December. Extra large clear white, fine in every way. Flower large and well built; one of the very best. 3 feet. Dozen, 50 cents; 100, \$3.00.

## A GRAND LATE PINK.

**THE HARRIOTT.** Deep Rose, silvery reverse, large bloom of great substance, 8 feet. Ready December lat to 15th. A grand commercial pink. Dozen, 75 cents; 100, \$5.00.

If you need Carnations, Geraniums, Kentias, Boston Fern, &c., write for our Jan. list.

**SEED TRADE REPORT.**

Points and information from seedsmen, and all interested in this trade, solicited. Address: AMERICAN SEED TRADE, care of FLORISTS' EXCHANGE, P. O. Box 1067, New York.

**AMERICAN SEED TRADE ASSOCIATION.**

JEROME B. RICE, Cambridge, N. Y., President; E. B. CLARK, Milford, Conn., Vice-President; S. P. WILSON, Wethersfield, Conn., Secretary and Treasurer.

**Philadelphia.**—By the will of the late Oliver Landreth, which has been admitted to probate, the late seedsmen's estate (valued at \$123,000), including his interest in the business of D. Landreth & Co., seedsmen, which he was a member, to his widow, Harriet R. Landreth, for life, and after her death to their two sons.

**Toledo, O.**—Assistant Secretary of Agriculture Brigham visited the Henry Phillips Seed and Implement Company, December 13, and expressed himself delighted with the progress making in filling the government seed contract. It is expected that the work will be completed long before the limit set.

**European Notes.**

The centenary exhibition of the Royal Agricultural Society of England, popularly known as "the Cattle Show," is at present in London, and the number of exhibitors was an immense crowd of persons more or less connected with agriculture and kindred pursuits. As these matters are of peculiar interest to seedsmen, although the fact is often overlooked by the farmer and the reseller, we will share between them the glory and the profit. The aforesaid gentlemen would have but a very narrow view of the best seed grain if they were not first to provide their pet bovine, ovine and porcine productions with the best upon which their very existence depends.

For this purpose the seedsmen is produced something which shall enable the stock raiser to fatten his beasts in the shortest time and in the least expensible manner, both as regards labor and expense. To do this well a knowledge of agricultural chemistry is absolutely necessary, and to this knowledge must also be added the faculty of making a name for his kind, either by wooing her to aid in the development of some hybridizing scheme, or by the use of his own or of some of her own hybrid tendencies. The results of these efforts are usually before the eyes of the galleries of the Agricultural Hall; and this year it must be admitted the display, so far as names are concerned, is, with one exception to be noticed here, very disappointing. To be sure the roots are the best and largest of the stationary lot, with very few exceptions, the specimens exhibited are the result of very artificial culture, and that would not be practicable on a large scale, but serve as an object lesson to the farmer, by the means of which he can be induced to be subjected to the highest cultivation. The same remark also applies to the potatoes.

The exception referred to above is a new Swede raised from one root by W. E. Brown (traders of the world-famous Monarch Swede), and named "The Universal." Respecting this distinct variety the raisers say that its characteristics are, "distinct pale green foliage, bright bronzy purple top, handsome uniformity in shape and color. It has been tried extensively, and in all cases it has withstood mildew and all diseases resulting therefrom, without any serious or even attacks of rot. Another great advantage is that it can be sown as early as April and comes to produce in the early part of September. Its chief advantage is that it can be sown on hot, dry land which is subject to mildew, and that it is not so liable to a seed rot. The tests of its quality show that it contains more saccharine than any other sort of Swede."

The roots exhibited were the produce of seed sown among mangels the first week in May. While very large, there was no sign of coarseness either in top or root. In shape it was strikingly resembling a mangel, but the leaves were much heavier Swede. The rind is very thick, not half the thickness of the slicing Swede, but will also be equally valuable for table

purposes as its eating qualities are fully equal to the best, yellow Swedish garden turnips. It will be offered to the trade early in the coming year.

The other exhibit, while very good in the eyes of the call for no special comment, but it may be remarked in passing that the large flowered varieties of *Fragaria virginiana*, are finding their way more and more into the Berlin nurseries. They fetch prices of four times higher than the common German varieties, viz., 6s. to 7s. 6d. the dozen, against 1s. 6d. to 2s. 6d. Gr. Krutzmann, Fankow, Berlin, is a specialist in primulas, who raises yearly 300,000 to 500,000 seedlings, and he says that still the demand is greater than he can meet. It is quite true that these fine varieties are as easily cultivated as the common ones, and they will in time oust them out of cultivation. Contravise to the English fashion these gardeners choose to propagate by cuttings, which are only designated by names as white, large white, red, rose, blue, etc., and are as easily cultivated as the common ones. Unfortunately while it is quite true as Dr. Hanner points out, that fine varieties are as easily cultivated as the common ones, the production of seed from them is quite another matter, as many flowers are only cuttings. As regards seeds in general, there is very little that is new to report. Our friends who feel inclined to kick at the delay in the despatch of their orders will be glad to hear that we are able to supply us as if they had just one week's experience of the hush up of all the bad weather left in the flowers, and we are able to supply them as if being served out at the present time. — EUROPEAN NEWS.

**CARNATIONS.**  
**American Carnation Society.**

There seems to be a general misunderstanding, regarding the fee charged by the Society for the registration of the names of new carnations. To any one who has followed the list kept by this Society before there was any charge made for registration, it must be apparent that the fee was in accordance with the number of growers who are raising seedlings. It would have been but a short time before there would have been any more from two to five hundred names added annually. It must also be apparent that the list, as it now stands, is entirely too large and cumbersome and that therefore scores of names registered that will never be used commercially. It was customary for growers as soon as a variety bloomed and gave a fairly good flower, to name such variety and more than likely, after trying it a year, he would discontinue, leaving the name on the list, but no variety to answer to it.

As the least means of avoiding all this, the Society adopted the method of charging a dollar each for every name registered with it, clearly stating on the list that if a seedling grower had decided on disseminating a variety, it was certainly worth a dollar to him to have the name registered. And it is a very short-sighted policy for any grower to send out a carnation without registering it with the Society, as he will be more than likely to duplicate his names and possibly get one of his varieties registered by some other growers, thus getting his one confused with it, in public opinion, much to the detriment of his name. There are several instances of this kind on the market now. ALBERT M. HERR.

**Earth Worms.**

The soil in the benches should be carefully examined once in a while, not only to ascertain if drainage is all right, and owing to its being porous and thereby liable to keep an eye open for earth worms. We have been troubled more than usual though from what particular cause I am quite unable to state precisely, as our soil when brought in seemed fairly good. I have thought some that the eggs are deposited in the soil as a result of watering with liquid manure, and this is probably correct, as our method of collecting the liquid from the barnyard and directing the same into the water tank through the houses, would account for this very readily.

There are several kinds of these pests. Those usually found in the soil in the fields are considerably larger and of a lighter color, and the smaller ones are found in the vicinity of the barnyard, or any place where the stable manure may happen to be, and of a darker color; but although smaller in size they are quite as destructive. Every one knows, or should know, that the worms feed on the small tender roots of the plant, those which are most active in getting their work done, their result, they are very easily comprehended, and no time should be lost in checking their progress when once discovered.

Line water is the standard remedy, and never fails when properly made and used. Placed in a hole, and the water to one peck of unslaked lime in a barrel and sinker; after which fill up with fresh water and stir well, allowing it to rest for at least 12 hours before using. The lime is good for several applications, and if used in the proportion in which can be made is a 5 cent one, the water being unable to take up any more than this.

The handy force pump which should be in every greenhouse can be used to take in a short time. One barrel of 50 gallons at either end of the row, and 20 foot houses when empty can be moved to the next house and filled, and so on until all the water is so treated. Of course, the soil should be thoroughly soaked, or the worms will be incompletely killed, and in only partial destruction of the worms. H. WEBER.

**Crossing Chrysanthemums.**

Judging from my own experience the best results are obtained from painstaking work. I believe pedigree stock is possible, provided the seed parent is protected from accidental environment, before and after pollination.

I am aware that several authorities declare that "crosses" are largely hazardous, and yet I am personally convinced that its measure may be appreciably curtailed.

In several crosses, I have them straight

one seedling. Seed sown in January, fifteen of these bloomed, maturing their immense blooms but a few days after Primo, and in advance of Bergmann under same conditions. Strong, straight growth three and one-half feet, with excellent stem and foliage. The flower is full and deep as well as large; and in both quality and size equals any of the midseason varieties.

My elation was puffed up at the sight of this noble flower that I named it *Pride on the spot*; and I confess to being proud of this high-grade seedling,

for the purpose. These varieties are "quite English, you know," and won't stand up under the American method, not that their stems are particularly weak, but mistletoe flowers require liberal treatment. I am quite curious to know how they will be regarded with intensive English cultural methods. Some of the English exhibition blooms would open our America eyes.

While we grow good chrysanthemums with much less care and expense, English cultural treatment illustrates greater possibilities. As Mr. A. H. Fewkes says:

"suitable opportunity when the bloom is partially developed, shave off the petals pretty close to the head; this will give the conservative gardener a better chance to develop; otherwise in most cases of very double blooms, sterility is the rule, even with the comparative ease of evolution has great uncertainty of seed bearing, however, as we know, there are exceptions in several species; but nature is equal to art," the very art of which is nature." When the seed parent is in condition to receive pollenization, generally on a sunny day, secure pollen from the variety or varieties desired for a cross, using a stiffish camel-hair brush for the operation. A hand magnifying glass is useful to preserve the nicety of the work. Probably many readers will recall the fecundation of the daisy with mechanical models by the late Wm. Hamilton Gibson in his illustrated lecture "Mysteries of the Flowers," at Pittsburgh before the S. A. F.

I reiterate protect the seed parent after pollenization; bees and other insect agency are liable to have a finger in the pie—to the detriment of your singleness of purpose. A simple and efficient provision is to envelop the head with a high-grade of tissue paper, on the same principle as you "bag" grapes. After fecundation keep the plant in a light position, good air, and preserve from dampness, or work will be futile. I have known a whole season's work spoiled from damping off.

It is well to sow ripened seed soon after maturity, as it secures to germinate true. Exercise all due care and pot off seedlings when large enough to handle easily, and designate each with letter or number.

The authorities of nomenclature will hardly insist upon an infallible appellation while yet in the seed leaf. Plenty of time for so doing at its debut whether certified or not.

The equation of personal taste has more to do with certifies than the uninitiated would deem possible. I don't suppose it could well be otherwise, all things considered. Often bloom as certified—not varieties! A paradox is a "pair of dice" and "they don't always agree on the same number."

Pedigree varietals are obtained along the same lines as for chrysanthemums. Here are some crosses:

DAYBREAK X TIDAL WAVE.

Daybreak cross, striped Tidal Wave; Tidal Wave growth.

TIDAL WAVE X WM. SCOTT

Scott color, flower and plant much like Tidal Wave.

TIDAL WAVE X PORTIA.

Scarlet tinted Tidal Wave.

The point I wish to make is this, in the matter of hybridization work more for something specific—whether you succeed or not. Haphazard work is too often but a waste of time and energy, to say nothing of expense. Hybridization is interesting work; strive also for improvement. There seems to be always room at the top. Work for the top now!

GROVE P. RAWSON.

Christmas Mantel Decoration.

enough to satisfy me, so that I can easily recognize individuality of heredity. A cross of Mme. Bergmann with Sin Jougain lengthens out the petals of Bergmann and elongates its growth in the majority of ten seedlings. All are as early as Bergmann, and one that I preliminary designate as Primo was fit to cut October first. This was a long-petaled paper-white rosette-shaped bloom double the size of Bergmann. As a first year seedling it had all the good points requisite for the commercial standard; and it ought to pay out well for 1898.

Another prodigy had unusual sturdiness from its first seed leaf, and I was able to propagate a good stock from the

and I have every practical reason to believe that it will be a leader among the early whites. (I'm tempted to build a special house for it—equal span). As to the other eight, four were reasonably good for further trial; two more mediocre and two single—inclined to the anemone order; but every one of them was white with other modified characteristics of both parents plainly discernible.

I believe I have some other fine novelties for 1898, but suffice details of nomenclature as subject to debut.

If boards were still allowable to exhibit blooms at flower shows, I have two distinctive whites, simply standing for

"We are apt to go to extremes exhibiting blooms with an ungainly length of stem, in the classes calling for single blooms in collections. Towards the second day exhibit of this sort are rarely presentable." But few English novelties are pedigree seedlings: Fall weather averages too dark and damp for successful hybridization. Reds and bronzes are more popular than with us, nor do varieties burn; but care is necessary to avoid damping off, and watering must be very carefully attended to. An American hose would drive an English chrysanthemist crazy.

A word as to the mechanical part of cross-fertilization. Select for the seed par-

Form and Value of the fixed Alkalis as a Plant Food.

Paper read by A. H. Ward, before the Boston Gardeners and Florists' Club, Thursday Evening, December 7, 1907.

There are two fixed alkalis, potash and soda. For agricultural purposes they are used in the form of muriates, sulphates, carbonates, nitrates, etc. John B. Lawes says: "Although potash, phosphoric acid and nitrogen are the main elements in the soil, the manure ingredients in artificial foods and in artificial manures are so different from those which the substances are met with greatly affects their value. The present method of analysis is not so correct as it properly recognizes these distinctions and the valuations founded upon these analyses are altogether false and erroneous."

Thus it appears that the form in which alkalis are applied to the soil greatly affects their value.

Muriates and sulphates are in a very inferior form to the carbonates. Their action on the soil and plant is entirely different. Muriates and sulphates are plain salts, and are not so readily absorbed by plant nourishing. Alkaline muriates are beneficial, however, when added to the soil, and are best kept down, and preventing the fermentation. They are sometimes used to check vegetation and are used in the soil to check the growth of grass crops or rather to prevent the stocks from becoming too rank or too soft or to make the soil recharged with nitrogenous matter. Muriate of potash closely resembles muriate of sodium in its action on the soil.

Sodium salts are, however, not characteristic of vegetable life in the same sense that potassium salts are; thus, the action of potassium salts is present in larger quantities in certain organs of the plant than in others, and plants rapidly take up potassium salts, and diffuse throughout the whole organism. It is also a remarkable fact that the alkalis are insoluble in water, as they combine with the phosphates of the soil to form an insoluble compound. For this reason the presence of sodium compounds has been considered as a disadvantage.

It is a well-established chemical action of the alkaline carbonates (potash and soda) to react with the organic matter to render it more soluble and thereby cause it to be more speedily and effectually absorbed by the plant. Organic matter to the state fit to be taken up by the roots of plants and enable them to be more completely assimilated. They may be said to prepare the food of plants, forming readily soluble compounds with the humic acids and the organic substances existing in the soil.

Under the influence of the alkaline carbonates (not sulphates or muriates) the organic matter disappears more rapidly than it would otherwise do, and after it has thus disappeared, fresh additions of the carbonates produce no further good effects. Fertilizer which is used in a direct way in the soil, richer in organic matter, is mixed with enough alkali in the soil to cause it to be taken up and is then left moist in a warm place.

It is known that acid and acid salts hinder putrefaction. The presence of the alkali favors the growth of the micro-organisms and the organic acid hinders it. The real significance of the alkali carbonates, added to the soil, is to make the organic matter fit to be assimilated besides neutralizing its natural sourness. It favors to a remarkable degree the growth of the micro-organisms and the organic acids.

A trace of alkalinity in the soil and air, murens, warms, carbonaceous food, and ammonium compounds constitute favorable conditions for nitrification. In an acid soil most crops, and especially grass crops, are subject to disease and root crops are apt to fall altogether on such land even if it has been liberally supplied with dung.

Up to a certain stage, grain and root crops grown on such conditions appear to thrive well, but as the season advances they receive a check and at the end of the year would a miserable return. It is impossible to doubt that carbonate of potash is the best fertilizer for the soil. Carbonate of potash has hitherto been considered too high in price to admit of its being applied to the culture of the land. This reason, however, does not apply to the carbonate of soda which is much cheaper in price than that of its being applied with advantage un-

der many circumstances. In the case of grass lands which are overrun with moss or such as abound largely in vegetable matter, it may be expected to produce good results.

It may be applied in a fine powder as a top dressing and generally it is applied in the same way. It greatly hastens the growth and increases the produce of the soil. It is applied in the soil generally early in the Spring. Many experiments have shown that both of these alkali carbonates are equally beneficial, and that the advantage of growing crops, in reference to their mode of action, it may be said that the alkali carbonates, the two to be beneficial to our cultivated crops, inasmuch as the ash of those plants which are rich in potash is generally much richer in potash than in soda. This arises from the more abundant presence of potassium in the soil generally; it has been demonstrated that soda may take the place of potash in the plant without materially affecting its growth.

It is stated in Page's March Manual, fifth edition, page 66, "The inorganic elements of plants exist in combination chiefly with organic or vegetable acids. Each plant forms acids in definite quantities, proportionate to the size, age, and part of the plants; the acid being considered as the saturate then will be equally constant."

A beautiful chemical law governs this substitution of acids. It is the law of substitution, analogous in part to the law of isomorphism or the law of substitution. The law is connected with that, so that the elements of isomorphism groups can only be substituted for each other, and this substitution is that the body replacing another must be, not an equal, but an equivalent. In the case of potash, by a proportion containing an equal amount of oxygen.

It is a well-established fact that the plants growing on soil containing a due mixture of earthy ingredients always take up the proportion of each according to their functions; yet if to such soil an excess of either of the alkalis or of the acids is present, the potash, soda, or magnesia may be taken up by the plant, to the exclusion of the proportion of another. Hence it may be established as the seventh principle in agricultural chemistry, that the alkali may be substituted for another in equivalent proportion.

It is an important law in the agricultural relations of the inorganic parts of soil, whatever may be the office of the alkali, it is to be substituted, and none is of higher value than this, that they may be thus substituted, the effect of the potash, soda, or magnesia is not to be lost, but to be preserved intact. Its value will be perceived when it is considered that in the case of the alkalis, if all the elements essential to a crop become exhausted or, yet another may be substituted, which combining with the organic acid of the plant enables this to perform and perfect all its functions."

Looking Backward and Forward.

The year of grace 1897 is fast drawing to a close and every one of us will profit, if we have a few moments, in the rest, after the Christmas harvest, to examine our harvest, so to speak, and look over our methods of business, methods and see if there are not some weak places that should be attended to, before we enter upon the year of 1908.

There are far too many who believe in procrastination; especially in this time of year. It is a well-known fact that this fault is not confined to small establishments, for, I have frequently found it in the largest ones. In such cases, orders are not shipped as promptly as they should be, and the customer is not so well looked after. Some seem to think that as long as they have the order the customer will not be so particular, and that which will soon manifest itself. I have always believed that the late Peter Henrich was right in his correspondence and orders were attended to; and am firmly convinced that the same is true of any firm that will guarantee to forward all orders the same day as received. Some say that it is not so easy to do that; very well, get more; surely if you can sell your stock quicker it will be easier to do that.

How many ever think it is worth while to let their help see the EXCHANGE? I have seen many a man who has the help never see a paper. This is radically wrong, for every employer must know that the best of his help is the most valuable must be to him. I have in-

mind a florist who reads the paper carefully himself and sees that his help has a chance to read it as well, and at the meeting he brings up, by exhibiting some article he has read. Would it not be more profitable to you, that your customer should read your words the papers, rather than playing cards all the time in the boiler room or workshop, at night?

As the year '98 is close at hand I would earnestly suggest that every employer begin to try by subscribing for a sufficient number of copies of the EXCHANGE, so that every man in his employ may have a chance to read the paper; one copy for every three men ought to go round; and I feel assured it will prove money well invested. H. Y.

Carnations in Boxes.

Least some of your readers should be misled by the statement of a Washington writer, we hasten to caution anyone adopting the plan of growing carnations in boxes, to look out for chink root. Carnation roots do not like to be confined. Roses, however, can be grown in boxes with a fair measure of success. This, however, is a very old method, and one which many of our best growers continue to use.

We have succeeded this year in getting good results from carnations grown in glass in the benches, all summer long. AMERICAN ROSE COMPANY, (FORMERLY C. STRAUSS & CO.)

New Waterproof Mat.

The R. T. Palmer Company, 113 North Sixth St., Newark, N. J., has just put on the market two new styles, one covered with check cloth and another covered with oil cloth. These are filled with a combination of wool the same as the bar mat and quilted with seams three inches apart.

Mr. Palmer states that the demand for the mats is very great, and his customers he has received evidences of satisfaction from those who try them.

Calendars Received.

Handsome calendars have been received at this office from Saml. S. Penock, Philadelphia; Texas Seed and Floral Co., Dallas, Texas; and the Pennsylvania Co., Allegheny, Pa., also from the Pope Manufacturing Company, Hartford, Conn. They are for the year 1908, and the publishers, containing much information about the Columbia bicycle.

Seasonable Specialties.

Harlan P. Kelsey, Boston, Mass., sends us samples of his seasonable specialties—green and bronze glass leaves and leucothoe sprays.

Dorchester, Mass.

Lawrence Cotter will be in the avium with roses at Christmas; his stock is in excellent shape with promise of an enormous season.

Warren Ewell will have a big lot of bulbous stock which only can be produced at this season.

A. Leathy will be on hand with a pretty lot of ferneries filled, especially in this season. He makes this a specialty, and does it well.

James (Julin) has a prime stock for his retail trade. To demand for Adiantum Farleyense and oranges is better this season than ever.

M. E. Emker is a good Thanksgiving business. It is as much as he can do to keep his two stores supplied to meet the demand just now. Violets are scarce and bringing good prices. W. M.

When Writing Mention Florists' Exchange

## QUESTION BOX.

OPEN TO ALL . . . FREE TO ALL  
Answers Solicited From Those Who Know.

(172) **Plant for Name**—*Sedum sarmentosum variegatum*.

(173) **Black Spot on Roses**—The leaves seem to be affected by black spot, a bare account of which and the treatment for the same you will find on page 917 of the *Florists' Exchange*, issue of October 5, of this year.

(174) **Gloire de Dijon Rose under glass for summer blooming**—W. S. W.—Commercially *Gloire de Dijon* rose would be a most unsatisfactory one indoors. For private use and greenhouses it sometimes makes a fair pot plant.

(175) **Colons, Begonias, etc.**—**Dropping their Leaves**—G. H. Johnson—At this season of the year it is natural for the plants named to drop their leaves, or for the foliage to turn yellow; unless they are young plants that have been prepared for Winter culture. If the plants are not coming from the flue, which should be snipped occasionally to avoid dry, stiff straggling, during the growing season will soon be around again.

(178) **Greenhouse Heating**—I, an building a new greenhouse 20x43 feet and 12 ft to my present house. The rafters are 12 feet long, the walls 4 feet and the ridge 10 feet high. I now shall arrange the piping for cucumbers. How large a main flow pipe shall I use and how I connect with the boiler, or can I take it off from the overhead 4-inch main in the other house? What will be the probable cost of the pipe for the new house?—K., New Hampshire.

—One method of piping the house will be to run out 2-inch overhead flow pipes and six-inch 2-inch returns. If the flow pipes are carried on the rafters and at the rafters will aid in holding the snow and ice upon the roof and will prevent cold drafts upon the plants. A 3½-inch flow will answer, and this can be taken from the flow in the other house if it is not more than 100 feet long, although it may be easier to run back to the boiler. It will depend upon the price you have to pay for the pipe, but the cost of the material, including pipe and all fittings, should not be more than one hundred dollars and may be as low as seventy-five dollars.—L. K. TAPP.

(179) **Hot Water Heating**—I have 21 greenhouses, with 10 arranged upon one side and 11 on the other side of a cross house, 20 feet wide, and wish to heat them with hot water; length of main flow pipe, 100 feet; length of return at ridge 1½ feet, rear wall ¾ feet, front wall ¾ feet. I want to order 65

pipe on hand it will be better to use three 3½-inch flows and twelve 2-inch returns, and even then, for houses 155 feet long, you will have the water return ten so that it can be closed, at least in severe weather.

(180) **40-horse power boilers**. If they can be yoked so as to form two batteries of three boilers each, it will permit of a larger steam capacity than necessary. Have valves upon both flows and returns to each boiler, so that it can be cut out if necessary.

(e) It will answer if the top of the boilers are level with the walks, if the main supply and return be level, but if not they should be a foot or so lower.—L. K. TAPP.

(180) **Water Proofing Cloth**—Hantsville, Ala.—Waterproof woolen cloth, take 4 ounces of powdered alum, 4½ ounces sugar of lead, dissolved in 3 gallons of water, stirred twice a day for 42 days. When perfect subsidence has taken place, pour off the clear liquid only, and add to it two drachms of langshan, previously dissolved in warm water, then mix thoroughly. Steep the cloth in the water, wring it out, and which hang up to drain and dry; do not wring. For linen or calico, stretch the cloth in the water, wring it out, and rub well on one surface of the linen or calico. It will take long to do and should be hung in the winded place you can find. Summer is the best time. A month will see it very much order. It will be supple and perfectly water proof. After wearing a few times a second coat would be advisable, done in the same way. This will dry in half the time. For sackcloth or canvas, this can be made as impervious to moisture as leather by steeping it in a decoction of 1 pound of oak bark with 14 pounds of boiling water. This quantity is sufficient for eight yards of stuff. The cloth has to soak for 24 hours, when it is taken out, passed through clean water, and hung up to dry. The flax and hemp fibres, in absorbing the tannin, are, after a short time, better adapted to resist wear.—G. M. STRATTON in American Gardening.

## Foreign Notes of Interest.

**Area of Glass in the United Kingdom**—A writer in *Gardening World* remarks that there are about 32,000,000 square feet of glass in the whole of the United Kingdom, covering an area of 735 acres. This means that there is sufficient glass to form a continuous chain of glass house 15 feet wide, 400 miles long.

**Disease in Japanese Lily Bulbs**—Referring to the lily disease (*Rhizopus necans*) recently described in the *Kew Bulletin*, (an extract from the article appeared in our special Fall edition of October 1907, pp. 925-6), a correspondent is writing from Japan to the *English Trade Press* says:

This disease has been known as long as lily bulbs have been exported from here, and the results have been sometimes very disheartening for the consignees, as well as for the shippers. I imagine that the great loss is probably the result of some Japanese or other speculators, in order to catch best and fancy prices, shipping at the wrong time of the year. The climate of Japan is such, that during and after the hot summer season, in July, August, and September, during which we have from 85 to 95° degrees Fahrenheit, the lily bulbs are sent to which produces—easily imaginable—a real hot-house temperature, the air being saturated with moisture, and the bulbs left for growing, but not for harvesting field products. The moisture is so great, that the lily bulbs are not only affected by fungoid formations, but even in our houses—closets, hooks, shoes, etc., are so much affected that they are daily use.

For the growers, easily imaginable that during such a season, bulbs taken out of the field and imperfectly ripened, if packed in boxes and sent to the tropics to Europe, must be affected by fungi, which have during a two months' voyage on board a steamer,

sometimes close to boilers, sufficient time to rot their deadly work. The danger would not be so great if the bulbs could be long enough to have the water return without injury. This seems, however, impossible. Even with the greatest care, such a return is not to be had of the whole bulb. However after this autumn weather the autumn season sets in during October, and the lily bulbs during the daytime, but brisk and refreshing during the night. The earth gets cool, the season for harvesting being regulated by Nature itself. The lily bulbs are now perfectly ripe and dry, and the bulbs which are not yet ripe, are now perfectly ripe and cool, any bruises the bulbs may receive during the handling will dry off and heal quickly and satisfactory consignments will be the result. There are also a few very tender varieties which even the most careful treatment will not protect against the hardships of a long voyage through such different climates as the route over India, the Red Sea, and the Suez Canal. These, taken, however, as a rule, the results will be satisfactory as I can prove by hundreds of letters and testimonials, which I have received from customers.

I therefore claim that unsatisfactory results are not to be expected if the bulbs possess when they are shipped, but simply the result of several factors which will be sufficient to insure a success of these lovely plants. I recommend, therefore, the following remedy: First, place your plants in a cool, airy place, in which knows the business; second, do not give instructions, if possible, regarding any shipments, but leave that to the shippers, who will guard your interest and will know best the time the plants are to be packed for packing and shipping; third, try to induce the steamship owners of Eastern lines to provide a few steers during the principal export season, with cold storage arrangement to get the shipments through the winter months, and I will guarantee that the bulbs will always arrive in the best of condition and not injured by disease.

## PLANTERS.

**Rose Golden Gate**—I send you fair samples of what a good rose has been spoken by an inappropriate name, viz., "Golden Gate." The rose is O. K., and steadily growing in popularity; a free grower, tree bloomer, with fine-shaped, big flowers that keep and ship to perfection, and good the whole year through, as well as for cutting. It isn't at all yellow, as some you expect, from its name; but a creamy white, tinted pink, deeper than in Carnot, and a superior rose in several points. If its name was not Golden Gate, but a name such as "John Smith," it would be much better for the rose grower.

JOHN P. RAWSON.  
[The flowers were well-grown specimens—a credit to the grower. The ladies in the Exchange office pronounced the buds "just beautiful." We extend thanks to Mr. Rawson.—Ed. F. E.]

## Is it the Pink Calla?

Send you a flower and leaf of what we believe to be *Richardia Rehmanni*, advertised in Europe as the pink *Richardia* or pink calla. I have found this name used for a golden calla (*R. Pontlandii*) recently received from South Africa. It certainly has a decided shade of pink, which color is said to be intensified under a warmer temperature. You will notice that the texture of the flower is very beautiful, and the whole, in flower, very pretty. It is a very free bloomer, flowering when the bulb is quite small; the leaves are also very distinct.

A. BLANC.  
[The bloom sent shows a delicate pink suffusion, the coloration being more pronounced at the back of the spathe.—Ed.]

View in Boston Public Garden.

(176) **Propagating and Growing Crotons**—What is the proper soil for crotons to insure good coloring? How are they propagated and when is the proper time?—W. S. W.

—Crotons thrive in good rich loam with the assistance of a little sharp sand. The pots need to be well drained. Coloring is a question of heat, light, and moisture. They enjoy a stove temperature with frequent overhead syringing. Propagate from half-ripened tips in a sharp sand mixture, and stick bottom heat and a close atmosphere.

(177) **New Chrysanthemum Frank Hardy**—A good many chrysanthemum fanciers hereabout are wondering wherein the English variety Frank Hardy differs from Fuji Snow, introduced from the Yokohama Exposition, 1885, as a sport from Good Gracious. We note that Frank Hardy is said to be a provisional name, used for the purpose only?—E. G. GILBERT, Cincinnati.

—Frank Hardy is a pure white sport from Good Gracious and originated in England; at least, that is what the man who sent it out says. That is my side of the question, there is any question at all, which I don't vary much. Your correspondent has raised the doubt, he can also furnish the proof if he buys Frank Hardy and grows it.—A. HENNINGTON.

decrees in zero weather and expect to use 2-inch flows and 1½-inch returns in November.

(a) What will be best method of conveying water to houses?  
(b) How many main flow pipes and returns be in cross house?

(c) What number of flows and returns will be required in each house?  
(d) What size and number of return the tubular boilers, having about 24 square feet of surface each, will be required to heat 4,000 running feet of pipe, 20 feet wide as above?

(e) How much water surface of land will be required; in other words, how deep should cellar be?—BENJAMIN

—(a) Run the main flow pipes along either side of the cross house at the height at which the flow pipes in the houses are to start, and bring the returns back underneath just below the level of the walls. If necessary the flows return to be carried just above the returns.  
(b) Use a 4-inch supply for each house. Rather than start from the boilers with a main for each house, a 4-inch main can be used to supply two houses and reduced to 4-inch after one house has been supplied. Under this pressure the flow may be 4½-inch and 3½-inch respectively.

(c) If 2-inch pipe is to be used for flows and 1½-inch for returns, it will be desirable to run the system under pressure, with four flows and sixteen returns. Five flows and twenty returns will be required in an open system. Unless the

## THE MEN WE MEET.

No. 5—GEORGE WITTBOLD.

It so happens that the early florists of Chicago, as well as their descendants, have nearly all passed away, or engaged in other occupations, leaving to us the honor of conducting what must now be called the colossal florist industry of this city. It is surprising to find men known in the heyday of olden times.

The subject of this week's sketch, George Wittbold, is now a young man, still remaining. At the age of twenty-four years he came to the United States from Germany, bringing with him a few plants remaining. At the age of twenty-four years he came to the United States from Germany, bringing with him a few plants remaining. At the age of twenty-four years he came to the United States from Germany, bringing with him a few plants remaining.

The writer, coming to Chicago about the same time, early made the acquaintance of Mr. Wittbold, who was then occupying the position of gardener to Ebenezer Peck, Esq. Through lack of knowledge of the language of his adopted country Mr. Wittbold agreed to work one year for \$300 and board; and yet out of this figure it was a common remark at the time that the shrewd young man managed to save a little money. From here he engaged as gardener to E. J. McCagg, Esq., a far more pretentious place. After five years residence in the country, and with a slight knowledge of the language, in 1862 he entered into partnership with A. T. Williams, florist, at the corner of North Avenue and N. Clark street, very shortly thereafter buying out his partner's share.

If in all these years Mr. Wittbold's success has not been sudden and phenomenal, it has been steady and constant. Two or three years prior to Chicago's big fire he bought five acres of land at the corner of North Avenue and N. Clark street, two miles farther north, placing his aged father (who meantime had joined his sons) in charge of this place, now known as 1702 N. Halsted street, two of these acres are yet covered with trees.

As an example of how most of us old ones looked upon the name "florist" as meaning card I may be mentioning that George christened his place "The Hybrid Nursery." Though trees and shrubs are small in amount, but in the business, the name "nursery" was supposed to provide an added dignity to the name.

In 1864 Mr. Wittbold became a Benedict marrying Miss Emma Fricke daughter of a well-to-do merchant settler. Fricke, who is still living. His family consists of five sons and three daughters. The five sons are all hard-working young men true to their father's calling; and all are now in business with their father.

Each of the boys has a special work assigned to him. Henry, the eldest, is outside in charge of the business, and in orders for decorative and other work; Frederick attends to the decorating; Gustav is in charge of the large retail store at 512 N. Clark street; Louis attends to the office, acting as bookkeeper; and Otto is in charge of the packing and shipping at the home place, also assisting his father in its management. It is interesting to find that class of "men we meet" who practically is always busy at his greenhouse. For many years he has been an order-taking merchant. The owner always entertained a penchant against the cut flower trade, and in selling plants he bought the latter were once the best payers.

To his plodding perseverance can be ascribed the success of his business in carrying an immense stock of what we here care to try—palms and ornamental plants, well selected and priced. In such stock as laurels, bayes, anthuras, etc., but finds in this class of plants little profit, and in fact, a loss. In the year 1886, he started his first retail store, and in the year 1890 he started a separate venture. Four or five years ago he increased his facilities for a home place, by building a new and larger greenhouse, the John C. Moninger greenhouse that was exhibited at the World's Fair, Chicago, the latest in the business, the wholesale growing and shipping of palms, ferns, orchids, rubber and other tropical plants, and in the building of dwellings, etc. To show his resources in stock suitable for this purpose it may be mentioned that the florist of the city to show in this city, this Fall, he furnished 30 loads of plants, another 10 loads being employed at other places on one and

the same time, each load averaging 25 plants.

Some 12 years ago Mr. Wittbold began the growing of palms in quantity for export, obtaining his seeds from Erlurt, Germany, in London. His first shipments consisted of latanas and corypha. The latter has now been abandoned. Chamaerops was also tried, but in little used these days. For Western trade Latania Borbonica has the call in sales; then comes Kentia Belouana, and C. Forsteriana. Areca lutescens is largely grown, and there is always a demand for Phacelia rotunda and P. caudata, Pandanus and rubber plants also find ready sale. There is now in process of germination, including young plants, 40,000 kentias, 5,000 phoenix, 10,000 latanas, and 10,000 arecas.

Mr. Wittbold was at one time a large grower for the trade of aluminum fountains; now he goes in more for young ferns. Of the ferns grown here the principal kinds are Adiantum pubescens,

which takes place whenever the roots show well through the soil. It is always better, when the plants reach a selling size, to grow them in as small pots as safety will permit. An over-potted palm is far more likely to fall when subjected to windy growth, than if the plant is in a comparatively small pot.

## Useful Ferns—Pteris.

*Pteris tremula* is one of the quickest growing species of this well-known genus and one of the easiest to raise from spores. It thrives all right in an intermediate house in Winter, that is, one where the temperature falls not lower than 45 degrees Fahrenheit. Some crested forms of this species were sent out a few years ago, but they do not seem to have become very popular.

*Pteris cretica albo-lineata*, like the above, can always be depended on to reproduce itself from spores. The prin-

*Pteris Walllichiana*, although growing to a large size when liberally treated, can be raised in small pots as to be of a useful size, by division of the crowns. In general appearance it is a little like the *Pteris cretica*, but the leaves, however, are broader and of a brighter green.

*Pteris granifolia* is probably the only species of the *Doryopteris* section which can be raised with little trouble to be of service to young starters. The fronds are finely cut after the manner of those of the *roses granifolia*. Spores will germinate in a week or two after being sown.

*Pteris argyrea*, a variety of the species known as *quadricolor*, is only a part of the frond on each side of the middle rib being a different color. In small plants it is very attractive. Old plants, as a rule, become unwholly with only a few long-stalked leaves. It is grown quickly from spores.

*Pteris internata* is a neat, cool house species which can be increased rapidly enough by division. I have never tried to raise it from spores, but probably it can be raised readily enough.

All of the above, with the exception of *P. argyrea*, may be grown in ordinary greenhouse temperatures. There is nothing difficult in their cultivation. To raise young plants for use in the Fall, the spores should be gathered in Spring. Use wide seed pans for the purpose, taking great care to avoid sowing the seeds, as most of the species will germinate well.

G. W. O.

## Some Business Maxims.

Would it not pay me better to be in the front part of my store and mingle with my customers, instead of shutting myself up in the back office among my books?

Is not quality remembered long after the price is forgotten?

Was it Christian in me to keep a customer waiting around all day when I could have disposed of him in 15 minutes?

Can I continue to pay my bills promptly, and require prompt payment from my customers?

Wouldn't it be a good idea for me to put in goods to sell every season of the year so I could get a regular business?

Will the profit I lost on goods I was "out of" ever come back?

Would it not be just a little bit suspicious if all jobbers' prices were the same on everything?

Ninety per cent. of all the failures in this country are caused by "credit," particularly indefinite credit.

"Slow collections" is the usual ordinary affliction of a failure in business.

Buy what you need and nothing else, and in quantities to suit.

Go after trade and don't wait for it to come after you.

Always get your money before you spend it.

Who is most slow in making a promise is most faithful in keeping it.

When you order an extra large quantity underscore the quantity.

Violation of trust to-day, lack of standing to-morrow.

To live with your own incomes happily, others miserably.

Don't kick first. Ask questions. Your impression may be wrong.

A group of the hand and a pleasant smile often sell a bill of goods.

Always promise—they are thin led and dangerous.

Is it better for me to buy a small variety in large quantities, or a large variety in small quantities?

Some people buy everything on credit, but sell all they produce for cash—"green heads."

Energy is an absolute requisite for business success.

Do your work, every day—don't put off. Procrastination is the thief of time.

Don't keep your good nature down in your boots. Hang it outside where people can see it and be happy for it.—Metal Worker.

*Nephtrolepis exilata hostoniensis* and *N. cretica albo-lineata*, and *P. palmata*.

Mr. Wittbold finds from experience that his plants will give greater satisfaction which are in demand by retail florists are the sizes grown up to and including 5 to 7 inch pots. Of the latter size never has enough. For the smallest sizes there is not much demand. After being in 4's every plant adds 25c. to the plant's value, and from these comes the money to the grower who can carry stock long enough to get them there.

Mr. Wittbold does not favor rapid growth by extra forcing, believing that his plants will give greater satisfaction and stand rougher treatment without injury, than plants hastened by a less natural growth.

The growing of palms from seed is somewhat of a lottery; that is, very much depends upon the condition of the seed on arrival. His method of growing is as follows: A front stage of a greenhouse is enclosed by boards, with enough hot water pipes underneath the bench to insure a temperature of 90 to 100 degrees water heat. Four inches of soil is placed in the bed in which the seed is put, almost covering the ground. Some frames enclose these, on the top, and watering is all the care required until germination takes place. As soon as the nuts have sprouted enough to bear handling, they are lifted and potted into thumb pots. From this on the shifting

epical attraction in this plant lies in the undulating foliage, the fronds are never truncate; the fertile ones are long, upright, and narrow. For using in a small state to mix with others for baskets and pans it is one of the best of the variegated sorts.

*Pteris adiantoides* in many establishments comes up everywhere from self-sown spores, on likely places which are left undisturbed for any length of time. In any sized pots up to six inch it is hard. The color of the foliage is dark green, but a surprising amount of door culture in Summer, young potted plants plunged in a frame for the Summer, put on a surprising amount of growth. Thrips and red spider are exceedingly common in this species, but only when the plants are sick. They are never the original cause of the plants becoming sickly.

*Pteris gigantea* is a species with quite large fronds of a dark green color not unlike the slange of the species known as *P. ulmifolia*, but has more substance to it and will thrive with less heat. It is likely to become a popular fern, as it easily increased either from spores or by division.

*Pteris serrulata* is the old standby for all kinds of pan and basket work. It can stand as low a temperature as any indoor fern; and is equally at home in the warmest house. The many crested forms are exceedingly ornamental in a young state.

FOUNDED IN 1888.

YEAR 1897, THE	1178

For the Busy Man.

Two Chicago florists were among the victims of that city's recent "hold-up" epidemic. A. R. Whitney, of Franklin, Ill., for many years treasurer of the American Association of Nurserymen, is dead.

From reports received it is anticipated that another Christmas will be a short supply and prices high in consequence; in some instances phenomenonally so.

Florists should read our New Year report this week for information regarding the doings of the large dry goods emporiums of this city. They are instructive.

Christmas Mantel Decoration.

The illustration on page 1174 shows a very dry and effective mantel decoration, and to what good purpose the decorative material supplied by Caldwell the Woodsman, can be put by those possessed of artistic taste. We are indebted to Mr. Caldwell for the use of the cut.

Our Prospectus FOR 1898

Includes everything progressive under the sun, obtainable for our columns, that will be of value to our readers.

The cream of the best things of the past continued, with many valuable additions.

The Year 1897.

The year the closing days of which are now upon us, has been a most peculiar one in many respects. While the stagnated condition of business noticeable at the advent of 1897 has been partially relieved, the stringency in ready money, then also noted, has been a constant depressing factor throughout the whole of the twelve months. Probably not in several years has there been so much to be noted as the consequent inability of the trade to take advantage of cash discounts greater than during 1897. It would seem as though our trade, one of the last to feel the effects of the panic of 1893, was also destined to be among the last to fully recover from that setback.

In more than common, therefore, with other industries, the florist business has suffered therefrom; a fact, which has offset the appreciable increase in the volume of trade done; for it is generally admitted that business, as a whole, has compared favorably with that of other years, in certain respects, being in advance. This anomalous condition has been further augmented by the fact that although "the cut" is more especially of recent years, the average returns have been smaller.

A continued tendency to enlarge glass areas, in order to throw more blooms and plants on the market, so as to keep up the same amount of revenue by increased production at lower prices, is still noticeable. It is in evidence and of peculiar pleasure to bear witness that high-grade stock, of every description, is always disposed of at remunerative figures. Thus, clearly enough, there is "room at the top," if the bottom is crowded.

This note, however, made, has also been assailed by "curtailment of the season," which is becoming more aggravated with each passing year; and the mitating influence of which, is in many quarters, severely felt. To the variability of the climatic conditions this latter contingency is attributed, business opening up later in the Fall, and closing sooner in the early Summer months.

It is most gratifying to note, that notwithstanding all these untoward factors, comparatively few failures have been recorded in this florist trade. The fact that those who did succumb, were several of them, forced to do so through undue pressure.

Undoubtedly, the department stores have become leading factors in creating a new class of buyers, and present indications are that it will be largely through their agency that a solution of the disposal of stock of almost every description, at times now almost immovable, will find its outlet at profitable prices. And of supreme interest to the retail trade is the fact that it is being noted that the buyers who patronize these huge stores are seldom of the class that would first buy from florists' stores proper.

In the way of progress, generally, the year 1897, while it has not been a phenomenal one, has held its own. The

work of improving the canna goes on apace, several very valuable additions having been made to that family by American growers. In Europe the orchid-flowered class has also been added to, and it is to be hoped the later acquisition of new and satisfactory plants will have their forerunners. As worthy of mention, it may be stated that an important agent in the improvement of the canna in America has been temporarily removed in the withdrawal from business of Mr. James Deas, who has departed in this direction very successful.

The Carnation Society continues its good work, bestowing its approval by means of certificates, only on varieties that, to obtain this distinction, are subjected to a most crucial test. Out of the large number of seedlings, grown for three seasons, presented at its annual meeting this year, only three met the Society's requirements. And while in some instances adverse criticism has been showered on this body's methods, such criticism being by some considered justifiable, and by others entirely unwarranted, there can be no question of the Society's honesty of purpose to act as a safeguard for the buyers of new varieties of carnations; its readiness of its executive to entertain and put in operation practical suggestions for the accomplishment of this object, pointing such assertion; it, the carnation culture a race of plants, prolific in their nature, and capable of producing a high grade of bloom, is now in evidence and will prove a very welcome and valuable addition. The interest in the cultivation and production of the divine flower remains undiminished, as it is likely to do for many years to come.

The falling off in the number of new seedlings and sports in the chrysanthemum this year, has but recently been noted by these columns. The number of certificates of merit in 1897 reached 28. The greatest diminution in the number presented before the committee was observable in New York, and this is accounted for by the fact that a large grower of seedling chrysanthemums in that locality, has now ceased operations.

The sport recently given to the dahlia continues unabated. This year, extra efforts to popularize the flower by means of exhibitions have been very successfully resorted to.

New things in roses have been coming in this direction for some time now promises to be more prolific.

The violet supply in the early part of the year averaged well, the crop being heavy, and prices remunerative to the grower. This Fall, however, it has been somewhat of a conundrum; the uncertainty of the crop proving a source of great disappointment and inconvenience. The single varieties continue to give good satisfaction in many localities; several additions to this family, said to be valuable, have just been made.

It is to be noted that the demand for decorative purposes has exceeded the most sanguine expectations; and it is likely to continue.

Among other events of the year that may be noted are the unsatisfactory financial results attended the majority of the chrysanthemum shows throughout the country, the cause of which it is somewhat hard to determine. Doubtless the condition of the money market before referred to is more or less responsible for the unappreciated but worthy trade in this direction.

The show given by the American Institute at New York may be classed in the front rank of object lessons in this direction, not only as demonstrating the possibility of a continuous display for a lengthened period, but also the advance-

ment made in the earliness of the production of chrysanthemums for exhibition purposes.

The establishment of a Mutual Fire Insurance Company for florists, after years of patient waiting, has been a notable achievement of the year. In trade circles, that it will prove of as great utility as its older sister the Hall association, a work of which (of which continues) is doubted by none.

The inauguration of a Market Florists' Association in this vicinity of New York, for the purpose of establishing a plant market permanently open to the trade, is a most commendable and United endeavor will certainly bring about the end desired.

The mortality among the trade during 1897 has, we are sorry to say, been very great; the names of some of our brightest men recorded on its death roll. The Florists' trade mourns the calling away of Harry L. Sanderbruch, Robert J. Murphy, William Mitchell, E. S. Nixon, David Fisher, John Saul, William C. Wilson and others not so well known; the names of those who have departed, William Elliott, Frank Ford, Oliver Landrett, Samuel Wilson, and F. E. McCallister, of the gardening profession, there have gone from our midst such ornaments as William Grey and Henry McCrowe, William G. H. Hill, and H. J. Hill, and Edward M. Bueshel; the retail trade has lost John N. Hauser, and the nursery and landscape gardening world, the name of the veteran Robert Douglas; the leading trade journals the demise of Edward J. Woodruff. In our own view, we hold in loving memory the name of our departed friends, who have been an exponent of the art of horticulture, William A. Stiles, is forever etched in our landscape gardening weeps for Charles Elliot.

The government free seed distribution continues in its usual manner. The majority of seedsmen—but many of the largest concerns are not yet averse to receiving their seeds at a discount to put in their bids for same.

The Society of American Florists this year has published its title the words "and Ornamental Horticulturists." This, it is said, will enable florists to identify themselves with those of which is not exactly clear to a great many. At its meeting at Providence the Society has elected a new president, as far as Omaha, Neb., in 1898, thus to a large extent demonstrating a desire to uphold their national flag.

The sweet pea remains as popular as ever, and in the obtaining of new and interesting varieties, the interest seems well to the front. The list of varieties continues to swell enormously.

Congress has placed a tariff on imported florists' and nursery stock, as well as on imported cut flowers. Lily growers are looking with interest at the action of the Bermuda cut flower competition in consequence.

Number of books treating on subjects of interest to the trade has, as usual, been issued, among these being "The Fruit-growing part" of Macmillan's Rural Science Series; "The House Plant" and "How to Succeed with Them"; and "The Water Garden," both from The American Florist and Nurseryman Publishing Company. The reports of the S. A. F. and American Carnation Society are also given in these additions. A new trade paper has been established; and the EXCHANGE has, as formerly, issued several of its most appreciable special editions, one on Orchids and other matters; the other on Plant Culture.

We are glad to observe a revival of interest in the work of the Florists' clubs and societies, and in the fruit of usefulness of these bodies has not been reached by any means. Much yet remains to be done, and our attention in the objects for which they were established, by whatever worthy means effected, is our earnest wish.

In concluding this brief epitome of the events of 1897, the EXCHANGE begs to state to its readers that it is in the lead chronicle the most important happenings of the future. It is a most reliable and valuable necessary cultural information, and it is to be noted that the trade is interested. The good of the craft, by all fair means, is ever our desire; they are ever our friends, and we wish all a Merry Christmas and a happy and prosperous New Year.

SITUATIONS WANTED.

Wanted 10 seats as a live flower merchant. Cash with this. Rate applies only to those who are willing to sell when sold, without display. When letters are addressed in full and in care of the advertiser...

YOUNG man, 25, wants situation as grocer. Address E. Henge, No. 100, 2nd St., N. Y. City.

SITUATION wanted by young man, thoroughly competent in greenhouse work; good references; no inducements.

SITUATION wanted; gardener, married, no children, well up in all branches, desire position. Address W. Weber, 2, 102 St. 102.

SITUATION wanted; gardener, single, 26 years, with experience from five continents; private or commercial. Address J. L. G. 230 St. 102, N. Y. City.

A GOOD, all-round man; sober, reliable; desires position commercial place as assistant. References. Address J. C. Clark, Erie Platte, N. Y. Exchange.

SITUATION wanted as second man; gardener; florist or fresher in commercial or private place. State wages. Address John Fischer, 325 Adelphi Ave., West Hoboken, N. J.

A YOUNG man wants a situation on a private place to work in greenhouses and out in the garden and around. Address C. Schmitt, 24 Winthrop Street, Flatbush, L. I.

FOREMAN, married, seeks position as rose grower or propagator to take charge of general rose work; best of references can be furnished. Address J. J. D. Rose, 20 West 21st Ave., Jersey City, N. J.

SITUATION wanted, by married man, as first man in charge of general rose work, and general greenhouse plants; first-class references. State wages. Address L. E. Cure of Florida's Exchange.

HELP WANTED.

WANTED

A first-class gardener to take full charge of good paying business Greater New York, Ed. Houghton, 107 Broadway, New York, N. Y. Address: J. H. A. 155, 107 Chilton Place, New York.

AGENTS WANTED.

Capable and energetic men wanted to sell nursery stock; a good and permanent employment; good salaries and commissions. Address: KEENE & FOULK, Blooming Nursery, Flushing, N. Y.

FOREMAN.

With an Alred, who can grow Al American and West End, (all other work done as well as apply), will find a permanent, profitable situation by addressing:

BEAUTIES, care of Florida's Exchange, Location 100 miles from New York City.

WANTED

An experienced young man in Peru District, who is fully conversant with the business of the grower and the buying of the market to service and grow plants into marketable shape. Apply with reference, stating full particulars as to experience, etc., to:

HENRY A. DREEK, Inc. Box 1618, Philadelphia, Pa.

MISCELLANEOUS WANTS

HOT-HOUSE TOMATOES

AND MUSHROOMS WANTED.

BRADLEY REDFIELD, Commission Merchant, 121 Rock Street, PHILADELPHIA, PA. Market prices and prompt returns guaranteed. Write for cards and quotations.

WANTED.

A grower who can ship me for the rest of the half century 200 good plants and 100 to 200 Maiden Fern fronds per week, for \$5.00, to guarantee the best market prices. Answer at once.

G. E. BRADSHAW, Wholesale Florist, 125 West 30th St., N. Y. City.

WANTED.

To Buy or Rent a greenhouse establishment or dwelling house and ground, suitable to build a shop in a healthy location near New York City. Address: Writing Mention Florists' Exchange, Responsible, care of this paper.

WANTED

To lease established commercial place. No half private but half commercial place. Houses must be in good condition. State exact details particularly, or I will accept a location where a thorough business can be done. Manager is wanted. Best of references. Address: A. Lock Box 26, 608, Atlantic City, Ga.

When Writing Mention Florists' Exchange

BUSINESS OPPORTUNITIES

FOR SALE.

Greenhouse with stock, hot water system; perfect order; near main gate of old Calvary Cemetery. Inquire at 169 Greenpoint Av., Blissville, L. I. (City)

TO LET.

A convenient store in good position for wholesale or retail florist. Inquire at 115 East 23d St., N. Y. City.

FOR SALE.

Greenhouse, in one of the best cities in Wisconsin, with stock, hot water, a money maker for a huster. Owner must retire on account of poor health; for particulars, write to: ELLIS & POLLWORTH, MILWAUKEE, Wis.

FOR RENT.

NEW BRUNSWICK, N. J. Florida style, consisting of about two acres of land, two story frame building, about 12,000 feet of hot water pipe, 18x24 feet; two glass houses, 12x6 feet each; potting house 10x22 feet, heated by hot water; fruit water connections. Well located in city of New Brunswick, near railway. Good railroad and water transportation to New York. Good opportunity for right man. Apply to: FREDMAN WOODBRIDGE, Attorney at Law, 41 Paterson St., NEW BRUNSWICK, N. J.

FOKSALE—Plants, single covered wagon, two light cars, 1000 good roses, 4 to 20, with 1000 fancy at \$3 to \$4; 100 dozen beauty roses scarce, and \$10 and \$12 per dozen. YAGONS'S SEED STORE, Box 88, Chicago.

LEGAL NOTICES.

A. T. DELA MARE PRINTING AND PUBLISHING COMPANY, LIMITED—The annual meeting of the stockholders of this company, No. 2 to Duane street (Kilbuckers Building), in the City of New York, on the thirtieth day of January, 1888, at 12 o'clock noon, for the election of a Board of Directors and two Inspectors. J. H. GRIFFITH, A. T. DELA MARE, Secretary. President.

A. T. DELA MARE PRINTING AND PUBLISHING COMPANY, LIMITED—The annual meeting of the stockholders of the above named company, No. 2 to Duane street (Kilbuckers Building), in the City of New York, on the thirtieth day of January, 1888, at 12 o'clock noon. A. T. DELA MARE, Treasurer. President.

Toronto

Christmas Prices to be High. The very dark, dull weather of this month and the extra demand for blooms this season has made flowers very scarce, and Christmas prices will be high. Nearly all the stock on hand has already been sold, and in most cases more of it is promised than can be supplied. The only blooms offered that are not directly picked up is paper white narcissus and Roman hyacinths, and if the weather be favorable, these flowers will soon be all taken up. No. Zealand, of which there are more in evidence than ever before, at this season, are taken up as soon as offered; in fact, I think they also will be short.

Holly and general decorative stock is being sold very fast. In larger quantities it is sold formerly. Nearly all stock seen in the windows is of high quality. Roses this week range in price from 4c. to 25c. for tea; Beauty, 25c. to 50c.; carnations from 2c. to 4c.; violets 15c. to 25c.; valley 4c.; Nornans 2c. to 3c.; mignonette 15c. to 25c.; anemones and asparagus are fairly plentiful.

THOS. MANTON.

Boston.

Bright Christmas Outlook. At this writing (Thursday) it may be said that prospects were never brighter for a large and satisfactory Christmas business with the Boston florists. The fact is, however, that the retailers that orders have come in earlier this year than heretofore, and all signs point to an immense trade in stock goods.

The holiday green business has been fairly well cleaned out, the retail practically cleaned out of holly as early as Wednesday evening. Other greens have had proportionately less success. The florists report a good trade all round in this line.

Business opened up well in all quarters, though plants generally do not seem to be up to the standard of previous years. This is owing to the fact New York has been drawn on extensively by some of the retailers, but part of the goods arrived in good quantities. The market has furnished azaleas, primroses, cyclamen, poinsettias, Roman hyacinths, and oranges have been shipped here in considerable quantities. The local market has furnished azaleas, primroses, cyclamen, poinsettias, Roman hyacinths, and oranges are very attractive, were largely furnished in good quantities. The market has furnished azaleas, primroses, cyclamen, poinsettias, Roman hyacinths, and oranges are very attractive, were largely furnished in good quantities.

Cut flower trade looks encouraging and stock is readily secured. The retail when the price is not too exorbitant. Carnations of good quality move freely at an average grade of 4c. to 10c. The standard grades at 4c. and even higher with the hopes of a shortage by Friday. The market has furnished azaleas, primroses, cyclamen, poinsettias, Roman hyacinths, and oranges have been shipped here in considerable quantities.

Roses are moving at a better pace than usual with prices about the same as last year, ordinary stock bringing \$8 to \$10 per 100; good roses at \$12 to \$20, with fancy at \$3 to \$4; 100 dozen beauty roses scarce, and \$10 and \$12 per dozen. The violet outlook is more or less uncertain. Some of the holders are talking about selling for 100 to 150 cents a dozen, as high as has been reached, and it seems that the history of the past four or five years, when violets have brought up to four-fifths before Christmas, is liable to be repeated this year.

The Stores.

Norton Bros. included some fine crotons in their attractive display. Houghton & Clark's store contained a desirable assortment, poinsettias and ardisia being specialties.

W. E. Doyle offered his usual complete collection of good stock, one of the most complete of the kind in the city. He has grown Cypripedium insigne, in six and eight inch plants.

John & Son have for several years made a specialty of their plant offerings on Christmas and Easter, and this year was no exception.

T. F. Galvin handled a great many azaleas, and his new Back Bay store gave him a good opportunity to display his large assortment of Christmas goods. Warren Ewell got in one lot of tulips for Christmas, which found ready sale.

Notings.

The sale of the Whidden estate in Dorchester, including a fine range of stock, was reported as a few weeks ago. About to occur, it has never commenced, and it is now said that a suit was filed. The selling purchaser deposited a cash bond for the sale, and endeavored to recover this bond.

L. H. Foster is still enthusiastic over the success of his plant business. He has shipped with success to all sections, and this Boston favorite seems to meet with a ready sale. His extensive stock is looking particularly well and promises good returns.

L. O. Long was at Julius Zinn's on Beacon street. The F. R. Person Co., are expected to receive a fine lot of plants for Christmas trade.

A fine oil portrait of John Galvin, by Wm. W. Chase, is hanging in the present place in the Tremont street store. Cohen has leased an upstairs room in

the building where his store is located, and uses it as a plant room.

Thursday labor. The prospects are still looking up and prices are showing a tendency to stiffen. L. I. K. Y.

Philadelphia.

Good Christmas Business Expected. At the present time everything looks well for a good Christmas business.

The stores have done a fairly good trade of late, owing to the fact that orders for Christmas were coming in freely from present indications there will be a good business. The market has furnished azaleas, primroses, cyclamen, poinsettias, Roman hyacinths, and oranges have been shipped here in considerable quantities.

Business opened up well in all quarters, though plants generally do not seem to be up to the standard of previous years. This is owing to the fact New York has been drawn on extensively by some of the retailers, but part of the goods arrived in good quantities.

Among The Stores.

The retail stores all appear to be doing a good plant trade. Houghton & Clark's store contained a desirable assortment, poinsettias and ardisia being specialties.

W. E. Doyle offered his usual complete collection of good stock, one of the most complete of the kind in the city. He has grown Cypripedium insigne, in six and eight inch plants.

John & Son have for several years made a specialty of their plant offerings on Christmas and Easter, and this year was no exception.

T. F. Galvin handled a great many azaleas, and his new Back Bay store gave him a good opportunity to display his large assortment of Christmas goods. Warren Ewell got in one lot of tulips for Christmas, which found ready sale.

The News.

C. S. Loder, Secretary of the National Florists' Board of Trade, was in this city on Wednesday last. He met the members of the Society and subscribers to the board from the city and vicinity at the Windsor Hotel, and will be in the city for several days.

The Board is in a flourishing condition, and its membership is increasing fast. The annual meeting, which was held in the city on Wednesday last, was a success, and the members of the board were treated to a dinner on Wednesday last.

Philadelphia Horticultural Society.

The regular monthly meeting of the Philadelphia Horticultural Society was held on Tuesday last, and was well attended. The election of officers took place, and the following were elected: Clarence H. Clark, vice-president, Robert Gray, Charles W. Miller, Dr. Goebel, and S. W. Trevelyan, secretary.

The Committee for 1898 reported a schedule for the year, and the following were elected: Clarence H. Clark, vice-president, Robert Gray, Charles W. Miller, Dr. Goebel, and S. W. Trevelyan, secretary.

At this meeting there was a very good exhibit of orchids from Henry T. Clinkenberg, and a fine collection of cut flowers from the Philadelphia Horticultural Society. The exhibition was held at the Philadelphia Horticultural Society, and was a success.

Chas. Dieck, exhibitor of plants at the Philadelphia Horticultural Society, was well received. He exhibited a fine collection of cut flowers, and was well received. He exhibited a fine collection of cut flowers, and was well received.

## New York.

## Department Stores.

The question as to whether these emporiums have made or ever will make a profit, the regular florist and the store trade still remains unsettled. Considerable time has been spent during the past year in discussing these matters more for the purpose of finding out who and what class of people patronize the colored departments of the stores, and to candid, not 5 per cent, purchasing were made up of what is known in New York as "lower buyers," and in other cases, these stores may be welcomed, for they have created a new class of buyers. The customers are believed that these luxuries (flowers) are down to their price. Whether they are benefited by these stores, and those interested must accept the fact that flower, plant, bulb, and seed selling in these vast emporiums is now a regular feature, and the department is with us to stay. There was a time, and that not long ago, when a certain firm was credited with being guilty of selling to these department stores and a great outcry was raised. Watching deliveries during the Christmas season, it was observable that no one house had the run, but that growers from every quarter around New York were sending flowers here. The firm that received a large share of patronage. From one house sold to, at least, a check for \$100,000 in the interval, was given, and this for deliveries of 50, 100, or 1,000 lots. In this way many growers are being introduced to retail plant and their coal bills seced.

Wanamaker this week only makes a few more orders, and noticeable cut in prices was apparent, excepting perhaps in large araucas, and in the case of cyclamen, was observed at figures varying from \$7.50 to \$12.50. Smaller sizes and other plants are in plentiful supply to the buyer. All their plants stood in fancy dishes or jardinières, and in the interval, a check of both was given in plain figures. A strange feature noted was that their sale prices were greater than that of the plants themselves.

Hammingdale Bros. have been in this business longer than any of the others, so that it is not to be wondered at that they are the one who holds the name of the trade. Under the management of W. W. Burnham, who has now full control, there is a noticeable change for the better in the condition of the stock in the greenhouses and on the shelves from day to day. The amount of business done here this week is simply enormous—500 figures in the average. The average of this stock alone, in fine dishes about 100 per day, and other plants in proportion. No cut in prices was noticed. Small ferns are marked 10c. each; palms 75c. to \$1.60 each, all proper figures. Greater demand is being met, and in most pushed, being supposed to give greater satisfaction to buyers. Araucarias are marked 90c. to \$1.50; cyclamen, 50c. to \$2.00; anemones, 40c. to \$1.00; ranunculus, \$1.50 to \$2.00; Pandanus Vetchelii, \$2.00 to \$7.50; F. mollis, 90c. to \$2.00; azaleas, 40c. to \$1.00; and many other plants were stocked in quantity and were selling readily.

Cut flowers are in prices was in Ficus elastica; these are advertised in the daily papers at 40c. each up to 1 P. M.; after which the price is raised to 90c. with morning and afternoon sales about equal. These plants were of exceptional quality and the price was high.

Cut flowers are sold in quantity; for instance, 5,000 valley is ordered for Friday and Saturday, and the same quantity; also roses, carnations, etc. in like proportions.

Christmas green is being sold in great quantity. One smart novelty is presented in sprays of hollow well beaded, and in the case of a large bird's nest settled on the spray; it is priced at \$2. The bird's nest sells, and the price is raised to \$3.50. Two growers are employed exclusively for the decorative, and one of these is extra order, being added during rush hours. The Flower Paper Co. makes but an indifferent showing in their conservatories, and sales apparently were not heavy. They have a few plants and some flowers, and need to run more into luxuries and fancy centers in pots and tubs. These were marked at 25c. each. At the latter part of the stand there seemed but little doing, and at the cut flower stand on the main floor trade was very light.

## Christmas Green.

Trade in this material during the week has been unusually heavy, and there seems a possible chance of a general sale of the regular stock. About 1,000 sacks and barrels of holly arrived in the city, and is nearly all sold. About 200,000 plants of the same variety, but these provoyetno many and low prices were taken to effect clearances. Retail sales are being made in small quantities, and a bundle for 50c. This would consist of one large tree, or two about 3 feet in height, and 200,000 plants of holly, or Bouquet green has had an enormous sale—just how large it is impossible to estimate. The price on this stock varies from 2c. to 1c. per pound, a little higher on the 10c. and 75c. per lb. altogether. The price on this stock varies from 2c. to 1c. per pound, a little higher on the 10c. and 75c. per lb. altogether.

The boom in imported mistletoe has continued; 30 cases arrived on the S. S. Hibernia, Friday, and 75 cases on the S. S. Paris, all of which came in fair condition, but owing to the precariousness of the shipments, and last week's figures then obtainable continued, and the new shipments realized \$7.50 to \$15 per case, a fancy mark, packed in boxes, realizing \$20 to \$25 per case. The total for the week amounted to 200,000 cases. Of Southern or American mistletoe we have no record.

There has been a big demand in huge quantities and found a poor market; the bulk of it got into peddlars' hands and is being sold for 200,000 plants, and cash carts at 10c. each, or two for 15c. Many of these gentlemen found it difficult to get a good price, and some of them to sell, for several were seen so located in the uptown districts.

## Plant Trade.

This promises well to be the best yet. It is to be expected that it will closely approach the Easter trade in volume. There is an unusually heavy supply and the market is being cleared up extremely plentiful and well flowered. Julius Roehrs alone sent in the entire lot of his plants, and he was marketed in all sizes are everywhere. Cyclamen are more plentiful and better than in previous years, and are being marketed by leaps and bounds and are also better than ever seen before; the kinds most in demand are C. hibernicum, C. persianum, C. persianum, and C. hibernicum, also a few E. autumnalis and E. splendens. These were observed. Olathe oranges, as usual, were much in demand, and were being marketed in large quantities. Ardisia crenata in quantity. Polonaises were in popular demand and a large variety of plants are being marketed at high 50c. per brace to the grower, and in the case of two smaller bracts to the retailer. Many large growers were displayed, mostly cattleyas and cycpeidiums. Palms, araucarias and ferns were in the usual quantities.

Ribbon in some way or other was extensively used, but there is an evident decline in the employment of frills or crepe paper; instead of this material wicker covers or jardinières were used, and the plants were being marketed in made of stiff paper and printed to represent feltware. For cheap work the plants were being marketed in many expatite baskets of mixed plants were made up and these, together with other plants, were being marketed in fancy flowers by stockpilers, customers taking readily there to.

Many of the plants and the extra efforts made by everyone to have the largest display possible, and in quantity of all. His store is replete with the choice of everything in season. Among novelties, a large quantity of plants, or to be more hard in description, ferneries under cover. Another novelty is the use of wreaths and in baskets to good advantage. Some of the plants are being marketed in wicker, Cypridium insignis, etc. Some charming bird's nest, dark colored leucosia sprays and Cypridium insignis were the leading feature. Erans were also in demand to advantage.

Christmas in his new store, corner 58th street, is doing a good business, and a good showing. This ranks among one of the most handsome establishments in the city, and is under the management of Owen A. McDonald.

Peter Bogart engaged an extra place for the display of plants, and his own regular store was replete with a full line of decorative plants. He reports satisfactory business.

Hermann Kuhn reports good trade in plants and Christmas greens. In this store, a large quantity of small trailing plant of lauristinus covered with flowers; the head of this fine plant was fully 40 inches in diameter.

W. Burns seemed jubilant over the plant trade, and was justly proud of a catch as big as any in the city. In the course of conversation this gentleman said that many individual stores to-day carry as many flowering plants all the time as could have been found in the whole city at Christmas only a few years ago.

W. P. Sears was simply crowded out with the best of plants, and shows with pleasure a novelty for this season—a small bell and clapper made of immortelle, and a small greenery. These are put in small boxes and called Christmas carols, selling at 50c. each.

There is a great demand for plant displays in the city, and for artistic get-up is not one whit behind any other variety. The demand for plant trade are extremely rocky.

J. M. Hodgson carries an enormous stock of plants, and is well known.

Charles Dards makes a display which for magnificence would be hard to beat, but in the line of price, but in the greenhouse at the rear. Erans, Marzouques, and cyclamen are in the lead, one of the best of the season, and developed blossoms and was really a grand subject.

Mr. Dards was not over enthusiastic in the recent plant trade, however, there seemed a big rush in his store. The recent enlargement of the well-known store of Siebrecht & Sons shows to advantage at this time, and in many ways, and is well known. In this respect it is one of the best furnished in the city, and in the miniature greenhouses or small cases, are also very well in evidence.

The quality of stock sent in, and business done during the early part of the week were very light. Supply and demand were in line, and in the normal order. Buyers tried to buy in a reserve stock, but the market was against them in many ways. Wednesday prices began to move upward on all stock, especially in the case of many growers. There was a general advance, and Christmas prices were in operation. No. 1 extras were being marketed at 10c. to 15c. The shipments were extremely light, and a shortage of roses and carnations was being felt. Many large growers were at once placed for the above grades for Friday and Saturday morning deliveries. Many large growers were at once cleaned out in this manner, and by Thursday noon, further orders were being thrown in daily to get them. Long-stemmed Beauty were in demand, and prices jumped to \$1 each for 100, and \$2.50 for 25, and a special \$1.50 each; and at these figures there was not enough to go around.

Metor roses are at \$15, \$20, \$25 and \$30 per 100; Bride and Bridehead, 10c. to 15c. per 100; and many other grades of these were quoted at \$4, \$5 and \$6 per 100. Carnations reached \$2 per 100, and many other grades of extras and novelties \$5 to \$10, and a few being set at \$2 per dozen.

Orders were placed on order at \$4, \$4.50 and \$5 per 100; but in the evening it was plainly evident that there would be a shortage of plants, and shipments arrived in excess of the demand, and a slump is inevitable.

Lilies are in the same hot, and while prices at time of going to press are held at \$15 and \$16 per 100, it is safe to say that \$12.50 will be the taking figures finally.

Violets are more difficult to get a line upon for probable values. On Thursday, the market was very light, and in the evening they are the last to arrive in the city, and are being marketed in large quantities. Existing quotations are \$2, \$2.25, \$2.50, \$2.75 per 100; but quantity and quality are the determining factors, while he actually gets on the market, so that a forecast as to whether these figures will be maintained, and in the evening, now there are indications that they will not, for one order for 25,000 in already been placed.

Cattleyas are good property, but cycpeidiums are dragging. Other stock is being marketed in large quantities, at least such as the early indications, but it will be midnight before much will be done in this line. Spallias is improving slightly, and adiantum fronds are also being held firm. Asparagus remains the same as ordinary times.

## Cut Flower Exchange, Thirty-Fourth Street.

Friday morning, the attendance of buyers here was large and stock plentiful. The market opened still, especially on carnations, which were held at \$4, \$5, and \$6; but these figures were not maintained, and the market was very light. The prices broke to \$3 and \$4. Lilies boomed and sold out clean at \$15, some times at \$20. The market of the two previous mornings was excellent.

## The Market, Friday, 1230 P. M.

Stock was flat to arrive, and a good deal of it got caught by the same and carried over to Saturday. The supply amounted to half that of last year, and in the evening, the market was being cleaned out of all kinds of flowers, although much of the stock is of very inferior quality. Roses and species of roses are even lighter than anticipated, and prices so far are maintained, but not in the case of carnations, and other subjects. Buyers are shy, the market being against them. Violets will hold up to the end of the season, and in the case of flowers previously given. Lilies will do better than expected. Carnations are holding firm, possibly a little higher, and will probably sell out clean; red kinds are at a premium.

John C. Merson has rented a store at 18 Chapman place, Boston, at which this firm will dispose of a large quantity of plants, and in the miniature beauty roses. They propose to display their cut between the two cities.

John E. White, formerly with N. T. Kneass, Esq., Milton, Mass., has been engaged as chrysanthemum grower for the F. R. Pierson Co.

T. Galvin, Boston; W. F. Kastig, Watford; and C. A. Braslan, Chicago.

## Buffalo.

## Christmas Trade Prospects Bright.

Christmas and New Year prospects are fairly bright as far as business goes. Greens seem to be going off well, with prospects of a good business. The market is very light.

The outlook for cut flowers is not so bright as regards extent of supply, especially in the case of carnations. It will bring here report off crops to a great extent.

The locally grown supply of carnations will no doubt, be reliable for quantity in otherwise helping out, while violets will be in demand. The market is very light. The store men seem fairly stocked with palms, poinsettias, leguminas, etc., with plants in quantity. Some of the plants were placed without firm advertising in a sharp practice business. The market is very light, and in the case of carnations and violets as seldom is seen. The market is very light, and in the case of carnations and violets as seldom is seen. The market is very light, and in the case of carnations and violets as seldom is seen.

A few minutes run through Ford B. Lewis showed a clean growing stock of carnations and violets as seldom is seen. The market is very light, and in the case of carnations and violets as seldom is seen. The market is very light, and in the case of carnations and violets as seldom is seen. The market is very light, and in the case of carnations and violets as seldom is seen.

At Thomas Manderson's, in the same town, was seen a good quantity of carnations in bloom that are selling well.

### Simplicity in Greenhouse Construction.

During our long experience we have not only made many improvements in greenhouses, but we have so simplified the construction that building a greenhouse is no longer a matter so full of complications as to tax the patience and the ingenuity of even the most intelligent mechanic. Our

## Clear Cypress Building Material

is worked out in the best manner ready to be put up, and we furnish our customers such complete detail drawings that any workman of only ordinary capabilities can put it up correctly.

When Writing Mention Florists' Exchange

Christmas green was a drug on the market and sold at any price offered. Mistake was scarce, but this market has not as yet made much of a call for this material. Holly was sent here in large quantities and every grocer, vegetable man, street vendor and corner store had it on sale at cut rates that almost precluded the handling of it by florists. It was in far better condition than usual. Some southern smilax and pines were also in good supply.  
Club Notes.  
The regular monthly meeting of the Florists and Gardeners' Club was held last Friday evening instead of this week on account of Christmas. There was but little business transacted, the time being mostly devoted to the discussion of ladies' night which will occur on January 28.  
A large delegation of the club members made a visit to the greenhouses of S. J. Reuter at Westcott on Friday and enjoyed a most profitable day.  
Jettings.  
Dr. Wheeler, of the Rhode Island Experiment Station at the Rhine Agricultural College, has discovered a way of making an analysis of some of the products and soil of the college lands, the presence of magnesium in quite a large quantity.

**St. Joseph, Mo.**  
The mercury stood at 40 degrees at 4 P. M., and at 20 degrees at 6 o'clock, 13th and 14th, and the following morning. Such changes in the temperature, with the wind blowing a gale, make it difficult to get a correct idea, but from all reports no serious damage was done.  
"Violets, violets, who has violets?" is the cry. They seem to be a thing of the past.  
Romans and narcissi are in, equal to the demand.  
Beauty is scarce. Teas are plentiful and the quality is very good. The supply of carnations is not large, but equal to demand. There have been more calls for anthurus this season than usual.  
A few home weddings of late have created a demand for decorative flowers for the parlors and bedrooms. If weather stays bright there will be a fair supply of flowers for Christmas, but if cold and cloudy, as at present, some one will be short when the rush comes.  
Last season the market was flooded with Christmas trees and greens, but from present indications the supply will not be so large this year.

**Chicago.**  
Condition of Stock and Market.  
We are now into Christmas week, and a pretty good estimate can be formed as to the condition of stock and prices in this market. That, however, are going to be scarce and high is now a positive fact; for the home-grown stock of the last days did not materialize, and at this writing, even if they do come, they will be too late to help matters for the holidays. There is not a wholesale house doing a shipping business but what is refusing orders. This is hard lines when prices are high and something can be made from sales. The principal difficulty appears to be uncertainty of the supply and as distant shipping time is here, and no show of stock on hand, lots of outsiders look for to be disappointed. Every variety list shows high prices. Teas range from \$8 to \$18 per 100, some excellent long-stemmed La France at Beutler's this week bidding stiff at \$25, but they are grand; and what a rose this is when it is in bud. Beauty will be very scarce; medians and shorts are not in good condition, owing to dry days.  
Of carnations we expect at the last moment to see something more of a crop found, but even these are apt to be all wanted. The following is a list of prices, - something phenomenal for this city: Mayor Figure, \$8 to \$10; Jubilee and Mrs. Anthony, 50 to 75; Argyle and Flora Hill, \$6 to \$8; select ordinary varieties, \$4 to \$10; good stock, \$4 to \$6. This shows that fancy varieties are making their mark, but there are not many here who grow them so far.  
Lycopodium very plentiful and cheap. J. C. Vaughan, W. W. Barnard, Vaughan, Whitson & McKinnon at Hunt each have a little army making up wreaths, and all say they can hardly fill orders at the best. Prices are very scarce; as low as \$1.50 per 100 pounds; \$2.50 to \$3 being a top price. Made up light-weight plants are sold in lots of 100 to 100 yards in 500-yard lots, heavy going at \$8.  
Lily is now in much better condition and fairly well berried; there is an immense quantity around, but likely not more than the market requires.  
As to pot plants there is no great choice and no large stock of anything. Cheap primulas are sold in a variety, and also a few cyclamen. It looks as though there is an opening for pot grown plants. Few azaleas are around.

**Chicago.**  
"Hold-Up" Epidemic.  
A. Neuner, formerly of the firm of Nauz & Neuner, Louisville, Ky., now at Vaughan's place of flowers, was assaulted, stabbed, and robbed on the night of the 11th. He will be out again this week. Harry Kelly, proprietor Brook Co., was held up and relieved of his change (\$90c) on going to his home.  
Fred Hills, senior, in some splendid mimicon which brings \$1.50 per dozen. It is of the Myg strain.  
EDGAR SANDERS.

**St. Louis.**  
Dull Weather Shortens Supply.  
Continued dull weather, raining when it wasn't snowing, and cloudy at all times for the past ten days has shortened out the supply of flowers. Advance Christmas prices are higher than they have been in this city for several years. Very little stock remaining in us growers are saving every thing for the 24th. It is impossible to predict what prices will be when the stock is dumped into the commission houses on the last day, and an attempt is made to dispose of it.  
If present rates are maintained the general public will be obliged to content itself with diamonds, Joultou pottery and other trifles, leaving the purchase of such expensive articles as flowers to the fortunate possessors of abundant wealth.  
Bride, Bridesmaid, Kaiserin, and \$1.00 of that class that sold last week at \$1.50 to \$2 per 100, are said to be worth just ten times as much for Christmas delivery. Beauty are not plentiful and are offered at \$9 to \$12 per dozen for the best. Meteor are scarce, but wholesalers say they will be worth \$25 per 100.  
Six and even eight dollars per 100 is asked for the best carnations; but it is probable that this price will thaw out by the evening of December 24. Second quality sell for \$2 to \$2 per 100.  
Hyacinths, valley, and narcissus receive much enhanced at 4c to 6c; mignonette is plentiful at 8c to 10c; anilux is of poor quality and has advanced to 15c. California and double violets are held at \$3 per 100; common single and Southern stock 50c to 70c per 100.

The retailers have very few flowering plants to offer, but there is a good variety of palms and other decorative plants. The demand for fern dishes less than for former years. Christmas greens are going fairly well. Holly is plentiful and cheaper than it has ever been. Mistletoe scarce, the best selling at 25c per pound.  
Notes.  
Jordan Ford Co., had the only stock of poinsettias in this market, and they were of good quality they sold readily at good prices.  
Fred Osterling has returned to this city and will have a flower store on Vandeventer avenue near Morgan street.  
Wm. Huckle, formerly of Belleville, Ill., will shortly fit up a handsome flower store with a nursery attached, at the corner of Grand avenue and Shenandoah street.  
CHAS. YOUNG.

Cut Strings, 8 to 10 feet long 50 cts. each.  
Shipped to any part of the country.

**A Fire.**  
Fire broke out at 2 A. M., on the 18th, in one of George Reiberg's boiler sheds, burning off the ends of two Meteor houses and a similar house. The heating apparatus was uninjured and total damage was not great; it would have been even less had not the lunging of the iron beam on arrival.  
**Grower.**  
Kahons Bros. Avondale, this city, have some finely grown cyclamen in 6, 7, and 8-inch pots, shown November, 1896. Some of the 8-inch have foliage 1 1/2 inches across. They have also a few plants of two and three years' growth, the latter fully grown and all in perfect health. They have grown their own seed for three years past, the stock originally from Vaughan.  
The sturdy growth may be attributed to the fact that the plants are occupied in a front bench close to the glass or the bench of a small house.

**Chicago - "Hold-Up" Epidemic.**

## PETER HENDERSON & CO.'S

## IMPORTANT ANNOUNCEMENT

# :: NEW DEPARTMENT FOR 1898.

*Henderson's Seeds are Genuine Only When Supplied by Them Direct to the Planter.*

**WHILE** we have withdrawn from the Wholesale Jobbing Seed Trade we respectfully announce that **WE WILL STILL CONTINUE TO SUPPLY FLORISTS AND MARKET GARDENERS...**

with our Superior Seeds, Plants and Bulbs, for their **OWN** planting, at our lowest wholesale prices as heretofore. Our Wholesale Catalogues will be mailed to our customers as soon as ready, early in January, and to others on application.

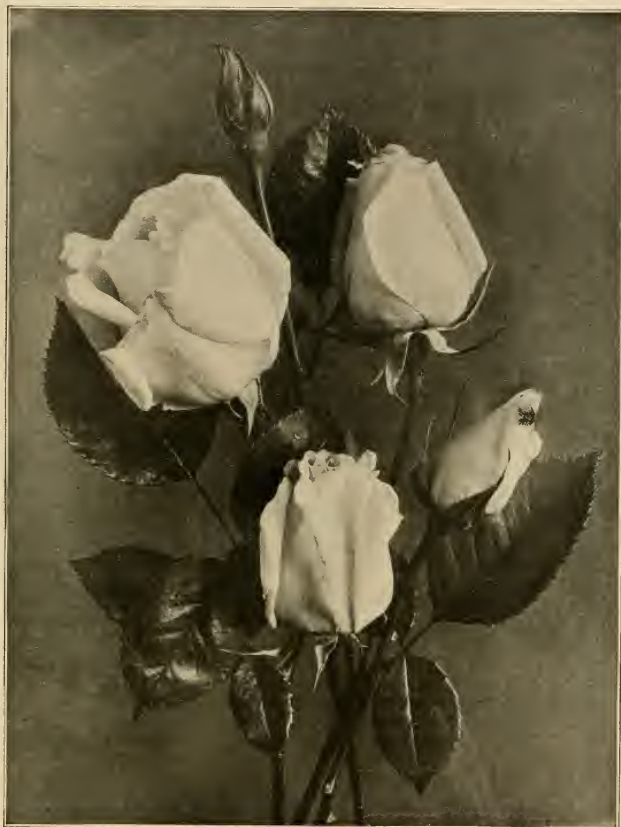

The only branch of the seed business that we are discontinuing is the supplying of seeds to storekeepers and others to sell again.

# PETER HENDERSON & CO. 35 and 37 CORTLANDT ST. NEW YORK.

# The Florists' Exchange Novelty Supplement.

NEW YORK, JANUARY 30, 1897.

THE NOVELTIES represented in this Supplement are reproduced from the catalogues for 1897, and the accompanying letter-press descriptions are those of the originators, introducers or disseminators.

NEW HYBRID TEA ROSE SOUVENIR DU PRESIDENT CARNOT.

This rose has attracted a great deal of attention as well as being the winner of highest honors wherever shown. The following description appears in the EXCHANGE of October 31 last: "Such stems and foliage are rarely seen on any rose. The buds are of great size. To describe the flower it would be well to have a comparison, but we know of none. The foliage is darker and larger, and perhaps more abundant than that of Kaiserin Augusta Victoria; the stems is also thicker, more rigid and the spine stronger. The build and make-up of the flower is a good deal like that of the above named variety, and unfolds in pretty much in the same manner, but being longer in the petal it makes a longer bud. In color we know of none resembling it.

The first petals to unfold are white; these are followed by others with a delicate pink tint, while the centers is made up with a vivid salmon, the reflection of which when cast through the entire flower produces that most desirable of all shades, from a commercial standpoint—the Daybreak color. Of course, it is not a solid color like that of the carnation, but to help the fancy we borrow the simile. Its keeping qualities also prove to be A No. 1." The introducers say it is "a hybrid tea, a strong free grower, very free in bloom, throws up st. ong, stiff canes, has handsome foliage; produces a large pointed bud; petals thick and wax-like."

This rose is being introduced by several well-known American firms.

## NEW HARDY WATER LILIES.

**Nymphaea superba.**—A garden hybrid, originating with a most enthusiastic fish culturist. Both foliage and flowers are the largest of all hardy nymphaeas, the leaves not uncommonly growing 23 inches in diameter, while we have often measured flowers that were 12 inches from tip to tip. The petals are long, narrow and pointed, of the purest snow white, and open well back, displaying with striking effect the myriads of long, golden-yellow stamens which dance around the center of the flower. As age advances, the stamens change to brown, and finally almost black, giving the flower quite a different appearance from those just opening. The leaves on the upper side are rich tan green, and underneath, light maroon. When they float on the water their edges turn up, after the manner of the Victorias, but where the plants are allowed to assume a natural growth, becoming somewhat crowded, both leaves and flowers rise up on stiff, rank stalks a foot or more above the water. This unique habit adds wonderfully to the majestic appearance of the plant, and pre-eminently characterizes it from all other water lilies. In vigor, it excels all other varieties in cultivation. It is amphibious, so to speak, luxuriating regardless of drouth or floods. The past summer we had some plants growing in a tank where, during the drouth of June and July, the water became very low, in places exposing the roots. The first of August, a heavy rain filled the tank, completely submerging the lilies under six feet of water, and to our great surprise, in less than three days both leaves and flowers were on the surface, fresh and vigorous as ever. It does fairly well in tubs, but is pre-eminently a pond plant.

**Nymphaea candidissima rosea.**—This is a new hybrid hardy pink water lily. It is a hybrid of *N. odorata* rosen and *N. candidissima*, and in size, form and habit is intermediate between the two. The foliage is dark green above and light red underneath. The flowers are 6 to 8 inches in diameter, highly fragrant, and very freely produced, while the blooming season almost equals in length that of the *candidissima*. The first morning the flower opens it is a deep, rosy pink, even darker than *N. odorata* rosen. The second morning it is several shades lighter, being light rose. The third morning it is still fainter, and the fourth almost white. A single plant often represents every shade of color, from deep pink to pure white, at one time.

**Nymphaea erecta.**—This new erect-growing hardy water lily is supposed to be a cross between *N. odorata* and *N. alba candidissima*. In outline and habit the foliage is intermediate between its parents. The upper side is a dark reddish green, and the under side a bright maroon. The flowers eddily stand up nearly a foot above the leaves, on stiff, erect stems, in a most graceful manner, quite unlike any other hardy water lily. The flowers are of a good double, and have a fragrance equal to that of *odorata*. The petals are broad, wax white and somewhat "cupped," though not enough so to conceal the stamens. The plant is hardy, vigorous and healthy, and a clump of it is never without blooms from May to October.

These are from the Catalogue of G. B. Maulder, Smith's Grove, Ky.

**CHRYSANTHEMUM Miss Lottie D. Berry.**

This variety was certificated under the name of Garret A. Hobart. It is a large, pure white incurved Japanese; very full and double, borne on a good, strong, stiff stem, well furnished with foliage up to the flower; blooms in mid season, and is

a first-class keeper. It secured the certificate of the Chrysanthemum Society of America, November 7, 1896. Our illustration shows the character and symmetry of the flower to perfection.

*From Catalogue of Pitcher & Mandi, Inc., Short Hills, N. J.*

**New Hardy Mammoth-Flowering HOLLYHOCKS.**

These exquisitely beautiful hollyhocks are an entire break from the old-style formal flowering ones. The flowers of this new Mammoth-flowering type measure up to 3½ inches in diameter, or over 15 inches in circumference—but their great merits lie in the

wondrous delicacy of coloring and texture; the semi-double flowers are gracefully composed of fringed and crinkled petals, resembling rosettes of daintiest crushed satin. The colors are shell pink, rose and ruby red. The plants are hardy and large robust growers; the flowers are not closely bunched up, like other hollyhocks, but gracefully and carelessly placed among the large leafy branches which exactly suits the airy style of the flowers, showing them off to the best advantage; every bud, clear to the top, develops into a flower, thereby considerably extending the flowering period, and as the flowers mature they drop from the stem, so that the plants are always

objects of beauty. We regret that our illustration does not do justice in these peerless New Mammoth-Flowering Hollyhocks.

*From the Catalogue of Peter Henderson & Co., New York.*

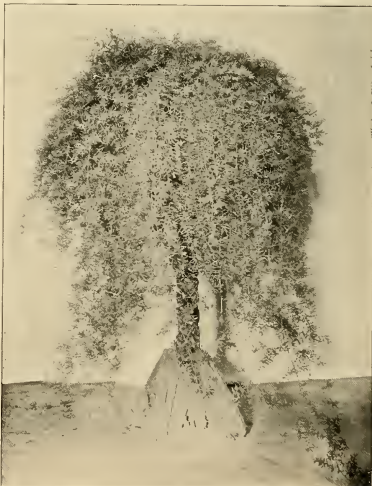

**NEW CHRYSANTHEMUM EVANGELINE.**

The type and form of this variety can be quickly described by simply calling it a white Kloto. Its size is 12 inches over, measuring from stem to stem, a solid mass of petals, in color almost paper white, individual petals measure ¼ inches, and intertwine into each other in such a manner that it makes one of the most exquisite chrysanthemums ever put up. And its good points do not end with the flower, for the stem

and foliage are well high perfect. This variety can be grown much closer than most others, as its clean, erect habit and stiff, straight stems, which average 2½ to 3 feet admit it. It was certificated at New York, Chicago and Philadelphia by the Chrysanthemum Society of America, and at the Philadelphia and Orange flower shows.

*Originated and introduced by John N. May, Summit, N. J.*

**ASPARAGUS SPRENGERI.**

The more this valuable new decorative green is seen, the more it is appreciated. Introduced by us only about a year ago, it is already grown by the thousands. Indeed, one enterprising Philadelphia florist recently bought 7,000 plants of us.

Our illustration hardly conveys a perfect idea of this beautiful plant. Its gracefulness and bright color always elicit exclamations of wonder. When well grown, it forms immense specimens in a couple of years, that will produce cut sprays 6 to 8 feet long. These remain fresh for much longer than any other green; in many instances for six weeks. As the roots are tuberous, the plant is able to stand heated atmosphere with greater impunity than can palms, ferns, etc.

*From the Catalogue of A. Blanc & Co., Philadelphia.*

### Chrysanthem Mrs. Robert Douglas.

This variety has a very large incurved bloom, and as a bronze should be a valuable acquisition, superseding Col. B. Smith. The color is a rich yellow, but the older petals on the inside become a good

### New Dahlia Grand Duke Alexis.

Without exception, the most unique dahlia, and the grandest ever introduced. We have frequently seen it 18 inches in circumference, most beautiful in form; some finer, color ivory white with pink in center; the petals, which are tubular in form, being just sufficiently opened at their extremity to show a faint shade of bluish or peach color, greatly enhancing the whole effect. A most admirable flower for cutting, as it remains fresh much longer than any dahlia we know of. The plant is elegant and robust-grower, with large, dark foliage, and bloomed freely for us during the past dry season, when nearly all other dahlias failed. It has been certified in France and England whenever exhibited.

From the Catalogue of A. Blanc & Co.

### NEW YELLOW CANNA BURBANK.

At last we have not only a clear, beautiful, yellow-flowered canna, but also a flower magnificent in size—fully twice as large as Mme. Crozy and similar kinds. This splendid plant has been produced from seed by the well-known horticulturist, Mr. Luther Burbank, of Sonoma Co., Cal. We made our first trial of the plant in our greenhouses last winter, hardly believing it possible that a flower of such size had been secured, or that it could be such a grand and almost pure yellow as described. But when it flowered with us, we found that it more than justified Mr. Burbank's claims. The flowers are truly gigantic in size, the three upper petals spreading fully 7 inches, and the form is really semi-double; toward the inner part the lower petals show fine crimson spots; all the rest of the flower is of a most beautiful rich canary yellow. The plant is a very strong grower, five to six feet high, with rich green leaves, very wide almost to the tips; its leaves are much thicker than those of the ordinary cannas, with a texture not unlike the rubber plant. Remembering that a growing clump of the Burbank often produces 15 to 20 flower spikes, its lovely and striking appearance can be imagined. This canna would take a prominent place as a decorative plant, even if its grand fringes of everblooming flowers were lacking. As a specimen decorative as well as a flowering plant for the greenhouse or private conservatory, it is the finest novelty in recent years. It makes a brilliant and constant show, flowers quickly and freely. The plants are easily produced in a short time and at such trifling cost that they can be lavishly used for house decorations at times when similar effects with expensive plants would mean a great loss.

From the Catalogue of J. C. Vaughan, New York and Chicago.

### New Carnation HARRISON'S WHITE.

This variety has excited a great deal of interest among carnationists, the announcement that it is a pure white sport from Scott being in the main responsible. Sports from Scott are by no means uncommon, but the most of them are only variations in shade, being either darker or lighter pinks. All such have been of little importance so far. Three years ago this white sport appeared on a Scott plant. Mr. Harrison took up at care of the cuttings, and succeeded in obtaining fine plants. These were well-cared for, and the result is to-day 150 healthy plants, bearing large, well-formed flowers in great profusion, of great

deal, so, for that reason it cannot be classed as a yellow. The florets are identical in form and texture with those of Major Bonaparte, the blooms measured fully 12 inches over, yet these were carried erect by stems furnished with balance right up to the flower. The variety scored 92 points before the New York committee of the Chrysanthemum Society of America.

T. H. Spaulding, Orange, N. J., is the originator and introducer.

### Gold Medal Rose "Jubilee."

This grand rose was raised in 1892 by Mr. M. H. Walsh, gardener to Jos. S. Fay, Esq., Woods Hill, Mass., and is a pedigree seedling—Prince Camille de Rohan x Louis Van Houtte. It was first exhibited before the Massachusetts Horticultural Society, July 1, 1893, and even at that early stage of its development it was deemed so meritorious that it received a "first class certificate of merit." Exhibited the following year, June 20, 1894, it sustained all that had been expected of it, but the special committee decided to subject it to another year's trial before passing upon it, for a rose that may win the "gold medal" must prove its worth by every test before the award is made. It was exhibited again on June 19, 1895, and commanded unbounded admiration. A special committee of experts visited Woods Hill to inspect it growing in the ground, and so, after three years of probation, it was triumphantly and deservedly awarded the Society's gold medal.

A technical description of the "Jubilee" rose is as follows: It is a true hybrid remontant rose, perfectly hardy, blooming in the Fall as well as in the early Summer, very vigorous, large, dark green foliage, one of its distinguishing features; short-stemmed flowers, as well as the stems, are freely, bloom most abundantly, three flowers and over on each shoot, the deal buds for the hardy garden rose. The flowers are very large, reaching six inches across under good culture; outer petals partially rolled and recurved when the flowers are mature, the center petals upright and very gracefully disposed, giving grace and finish without showing the center; they last a long time when cut. The buds are long and rounded, the petals falling away gracefully, revealing the rich velvety texture and grand coloring. The fragrance is strong, delightfully rich and very lasting.

The rich coloring and soft velvety sheen are beyond description, and must be seen to be understood and appreciated. A pure red in its deepest tone, shading to deep crimson red and velvety maroon red in the depths of the petals. "The coloring is alive," as one expressed it. "It fairly glows in its rich warmth of coloring," another said. The rich velvety finish to the petals is all its own, and is not even approached by any other rose yet introduced. It is admirable, unique, and, as Mr. F. Schuyler Matthews, the celebrated artist, said: "This rose contains the finest color, combined with pure color, of which nature is capable." It required careful study of the skill of the world's artists to produce this peerless rose, perfect in all its attributes, peerless in its magnificence, and it is to be assumed that nature will again require the centuries to produce its equal. It is ever produced—of nature is not prolific in reproduction.

From the Catalogue of Peter Henderson & Co.

THREE BLOOMS OF CARNATION HARRISON'S WHITE.

The shading shows the shape of the petals.

purity in color; and despite the fact that the plants are being largely used to supply cuttings, the flowers maintain their size to a marked degree. Much has been said about the character of the bloom and its similarity to the parent, also the nature of the growths. Experts have examined these with the result that the flower is pronounced similar to that of the parent. However, on Mr. Harrison's plants, there is this distinction, it is much more robust than his regular Scott in other houses, but when the pips, stems, grass, leads and breaks are all compared with those of Scott, they are none other than the same thing. The flower stem and the calyx are absolutely identical with the parent, but the petalage, in some instances, varies, being slightly flatter and broader, and the serrations are not so finely toothed or cut, yet many blooms can also be found with the same build, form and contour, this being more apparent now than in the early season. These slight variations in petalage are of no consequence, but rather help the flower than otherwise, giving it a larger spread and better appearance than the variety from which it has sprung. The plants are singularly healthy and propagate well.

John Harrison, Jersey City, N. J., originator and introducer.

**CHRYSANTHEMUM SYMPHONIA.**

The color of this chrysanthemum is a very beautiful shade of carmine pink, reverse soft silvery pink; it is an incurved and very compact well built flower, with the

ray petals drooping making it a very artistic and attractive bloom of medium size. As a bench variety this will prove very valuable as it only grows 18 to 24 inches high, with extra stout stem and handsome foliage. In season Nov. 6th to 20th, but can be kept a long time on the plant without damaging its qualities; crown or terminal buds. Gained 80 points at New York; 81 at Chicago.

From the Catalogue of John N. May, Summit, N. J.

**DWARF COCCOLOBA OR SEA GRAPE.**

This splendid foliage plant was pronounced by Chas. Kingsley, the noted author, "to be without exception the most beautiful broad-leaved plant" which he had ever seen. And he was right, for there is no other foliage plant so distinctly beautiful as this. The leaves are as large as a man's hand, almost round, thick and rigid, as if moulded out of wax, shining like dark velvet with a crimson mid-rib down each. The new growth is of the richest golden bronze. The foliage is exceedingly persistent, and a plant never becomes bare. This is a plant which the amateur cannot kill, unless he allows it to freeze, or burns it up. I have seen the plants remain in pots for weeks without water and seemingly without injury.

Description furnished by the Rose Valley Nurseries, Dengola, Ill.

**Rudbeckia Golden Glow.**

This is a form of Rudbeckia laciniata with perfectly double flowers from 3 to 4 inches in diameter and of a rich golden-yellow color. The plant is a hardy herbaceous perennial, and once planted will continue to grow and bloom indefinitely without further attention.

**Nasturtium Variegata.**

This is offered for the first time. The leaves are beautifully variegated deep green and pure white, giving the plant something the appearance of Nespeta glaberrima. It can be used for the same purposes as the nepeta, is more easily propagated and bears showy flowers in profusion.

From the Catalogue of John Lewis Childs, Floral Park, N. Y.

**Violet PRINCESSE DE GALLES (Princess of Wales).**

Though not a novelty in the strict sense of the word, this beautiful violet, which is comparatively new, we consider worthy of a place in our Novelty Supplement, the aim being to bring it more prominently before the trade, which it certainly deserves. Princess of Wales, as we have seen it grown, is probably the best single violet on the market to-day. It is of a vigorous growth, a very profuse bloomer, the stems being often over a foot in length. The flowers, as seen by the picture herewith presented, are

Single Violet Princess de Galles (Princess of Wales.)

very symmetrical, very large in size, one and a half inches in diameter not being uncommon, and have an extremely delicious fragrance. It is being introduced by several houses.

**New Geranium MARS.**

Mr. Eichholz, Waynesboro, Pa., the introducer, has the following to say of it:

"Mars is a seedling obtained from a lot of seeds bought of a New York firm by the late J. Nitterhouse. He thought a great deal of it, but his death made it impossible for him to put it on the market. We have given it a thorough trial in beds, in the open field and under glass. The flower is single, deep salmon center and distinct white edge, a most pleasing and new color combination in geraniums. As a market or home seller, we claim it to be a rival to such good sorts as Beauty of Poitevine, Paul Bruant, etc. It is perfectly sunproof, and produces a quantity of flowers—completely hiding the foliage which is of a deep green color with dark brown zone, making a grand contrast to the white and salmon of the flower. It will prove one of the finest border plants on account of its dwarfness, a great market geranium, a great Christmas and Easter plant when grown with a little care. It loves a cool temperature, that of a carnation house suits it best. It requires to be kept on dry side during Winter, like all geraniums, but avoid syringing when in bloom as the flowers are not waterproof. With a little extra attention the finest specimen plants can be grown."

**CHRYSANTHEMUM WESTERN KING.**

A large white, center incurving, outer florets reflexing. It is in perfection November 5 to 10; attains four feet in height when planted June 10. Parentage, Niveus and Eli. Hatch. It received first-class certificates at from the National Chrysanthemum Society of England, on October 28, and has been awarded certificates in the following cities: Philadelphia, Cleveland, Indianapolis, Chicago, Louisville, Syracuse, Worcester, and Providence, in fact, wherever shown.

In 1895 this variety was placed before the five committees of the Chrysanthemum Society of America, and scored as follows: New York, 85; Chicago, 87; Philadelphia, 95; Boston, 100; Cincinnati, 88—an average of 91 points. It was also the winner of the silver vase at Butte, Mont., as best seedling.

Nathan Smith & Son, Adrian Mich., are the originators and introducers.

**New Carnation, MRS. GEORGE M. BRADT.**

This variety is a seedling of 1896, raised by Fred. Dorner & Son, Lafayette, Ind. The color is clear white, heavily edged and striped with bright scarlet, giving it a very bright and cheerful appearance. Flowers large and full, with center petals standing

erect, giving the bloom a well-rounded form. Calyx resembling that of Mme. Albertini; habit strong and vigorous. This variety is now in its fourth year, and has proven the most even and constant bloomer from early to late. It was awarded a gold medal at Atlanta, being certificated at same place and at Chicago.

From Catalogue of Cottage Gardens (C. W. Ward, Manager), Queens, N. Y.

**NEW ROSE "CARMINE PILLAR."**

A charming plecture and a charming rose. This unique effect might be more often seen in gardens, did the owner but think of it. It can easily be grafted on the rose—a splendid rose with single flowers 12 to 15 inches in circumference—of the brightest rosy carmine, and produced so abundantly that last year's shoots, some 10 to 12 feet in length of growth, were covered from base to top with bunches

of flowers from each eye or bud, the flowers on the bunches opening in succession. The display was thus kept up for nearly six weeks, during which it was seen by many leading amateurs and others, and pronounced novel and most decorative. Award of merit by Royal Horticultural Society and certificate of merit by Royal Botanical Society. Those who have seen the rose at Kew when in bloom pronounce it a magnificent sight. From the Catalogue of A. Blanc & Co., Philadelphia.

**The New Seedling Variegated Leaf Canna**

**JOHN WHITE.**

In the Fall of 1894 this novelty in cannas originated in a batch of seed taken from Emile Leclerc. Since that time it has been severally tested both under glass and in the open with most satisfactory results, retaining its color under all tests and standing the sun exceptionally well, making it very valuable as a decorative bedding plant for outside work, as well as exceedingly valuable as a pot plant for conservatory and greenhouse decoration. The leaves when young are of a pale yellow, with narrow margins of dark red, the yellow surface being dashed and spotted with green. They retain this color until they gradually mature by losing the yellow and gaining a deep suffusion of pink, with an admixture of green, later becoming green and yellow. The plant in this condition is decidedly striking and novel, and arrests the attention of plant lovers the moment they come in contact with it. It reproduces itself perfectly

from seed. It is of dwarf habit, attaining a height of about 3 feet, and growing strong and vigorous. The flower is a bright scarlet, and although small compared with the large varieties, it has a peculiar value of its own in that it shows such a contrasting decorative effect among the light and beautiful foliage. Without doubt it is a variety that progressive florists cannot afford to be without.

From Price List of John White, Elizabeth, N. J.

**LYGODIUM JAPONICUM.**

This pretty and elegant fern is a native of Japan and China, and the most popular member of the whole genus. It is but very little known among florists, although considering its usefulness, it should be grown quite as much as aspidistra, in substitution of which it readily can be used.

It is very easily grown, and climbs at once around any support given. The shoots grow 8 to 10 feet long, forming light festoons, which are exceedingly graceful for table or other decorations. The leaflets are from 2 inches upwards in length, nearly as broad, and the shape triangular. The primary petiole is very short, and the secondary from a half inch upwards in length. Terminal segments are halberd shaped, whereas the lateral ones are unequal and not articulated at the base. These are found two to three on each side.

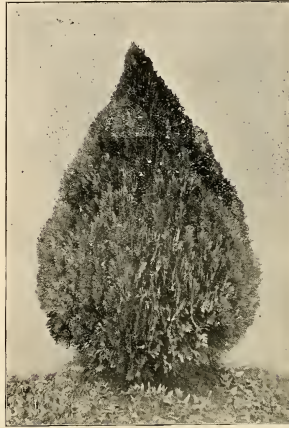

The leaves are of a papery texture, a most beautiful pale green color, if grown very near the light, whereas if grown in darker places the color will be a delicate pale yellow. (This latter is considered at present quite a novelty on the other side of the Atlantic, and the Lygodium is in unprecedented demand for florists' use.) This species is particularly grown to advantage in baskets. These baskets should be of a size not smaller than 12 to 14 inches in diameter. Three plants put in one, between each chain, will fit a remarkably short time make an elegant specimen, while some of the largest shoots are trained upwards around the chains; those of medium growth remain in the center of the basket, and allowed to hang all around the sides, the whole being soon covered completely.

From Catalogue of H. H. Berger & Co., San Francisco.

### Double, Large-Flowering CYCLAMEN.

Cyclamens are among the most beautiful Winter and Spring flowering plants for the window and greenhouse. Not only are the flowers of striking beauty, but the foliage is also highly ornamental. This new double-flowering strain is even more beautiful, each flower having usually eight to ten petals, often twelve to fifteen, which are more spreading than in single varieties. There is the same range of colors, crimson, pink, white, spotted, etc., and, like all double flowers, they remain much crisper. The strain is not yet quite fixed, but produces a sufficient proportion of doubles to justify us in offering it this season.

### BIOTA Aurea Nana.

This is a seedling of *Biota semper aurea* and originated ten years ago in our grounds. The original plant measures only 36 inches in height, is of most perfect form, and surpasses all the other varieties of *Biota aurea* so far introduced. During Fall and Winter the foliage assumes a beautiful golden color, and in Summer is of bright green. It has also the merit of being perfectly hardy in the latitude of New York. Nothing is more desirable in the way of a dwarf conifer. It has also proven valuable as a pot plant.

From the Catalogue of P. J. Berckmans, Fruitland Nurseries, Augusta, Ga.

From the Catalogue of Peter Henderson & Co.

### NEW HYBRID WICHURAIANA ROSES.

The habit of these new roses is the same as that of the *Rosa Wichuraiana*, or Memorial Rose. The growth is creeping, and the plants, therefore, can be used to cover the ground, stems of trees, pillars, posts, trellises, or any other purpose desired. They are also suited to pot culture. They are the hardiest roses I know of, and will stand any climate or exposure. They thrive well in the poorest soil or on a gravel bank. The foliage is finely cut, thick of a leathery substance bright green, shining as if varnished, not subject to mildew or any insect, but keeps its full beauty until almost Christmas. The flowers are produced in the greatest profusion, so that a two or three year old plant will bear several thousand most exquisite blossoms, which are deliciously fragrant and last a long time in perfection.

**MANDA'S TRIUMPH.**—This rose is of free growth, luxuriant foliage, and produces large clusters of double pure white flowers, two inches in diameter, beautifully imbricated and well formed, very sweet scented.

**UNIVERSAL FAVORITE.**—This is the most vigorous plant of the set. The long branching shoots are covered with dense bright green foliage. The double flowers are over two inches in diameter, and of a beautiful rose color, similar to the Bridesmaid, and deliciously fragrant. A great variety for any purpose.

**SOUTH ORANGE PERFECTION.**—This is a gem, growing freely close to the ground, and having multitudes of the most perfectly formed double flowers, about one and a half inches in diameter, soft bluish pink at the tips, changing to white. It lasts a long time in perfection.

**PINK ROAMER.**—This is without question a hybrid between the Sweetbrier and *R. Wichuraiana*, and carries these characteristics in bloom, while the growth, which is very rampant, and the luxurious foliage, partake more of the latter. The single flowers, which are produced in close heads, are nearly two inches in diameter, bright rich pink, with almost a white center, which lightens up the orange-red stamens, producing an effect which, combined with fragrance, makes it one of the most valuable roses in cultivation.

The following awards to these new roses have been made: Manda's Triumph, silver medal from the New York Florists' Club; certificate from the New York Gardeners' Society; honorable mention from the Massachusetts Horticultural Society.

Universal Favorite.—Certificate of Merit from the New York Florists' Club.

Pink Roamer and South Orange Perfection were also awarded a certificate by the same Society.

From the Catalogue of W. A. Manda, South Orange, N. J.

**CHRYSANTHEMUM LEONIDAS.**

This variety is of an amaranth, shaded maroon color, very large flower, with straight flat forets forming a bold imposing reflexed bloom, with good stem and

foliage. As an exhibition flower this will prove a very distinct and valuable variety. Best on terminal buds, but larger on crown. Season end of Oct. to 30th Nov.; height 3 feet. Certificate Chrysanthemum Society of America at Philadelphia.

From the Catalogue of John N. May, Summit, N.

**New Decorative Cactus Dahlia Clifford W. Bruton.**

The grandest yellow dahlia ever produced, and the greatest acquisition since the introduction of Nympha. The flowers are very large, 5 to 6 inches being the average size; perfectly full to the center, while the outer petals reflex to the stem. The color is a pure solid yellow of the clearest, richest shade. Unlike most varieties there is no green center at any time, not even when the buds are first expanding. The immense flowers are borne on long stems, two to three feet and, as exhibited at Philadelphia and New York, were a short distance away mistaken for large yellow chrysanthemums. Although exhibited in the prize collection only it was awarded a special diploma by the American Institute at Madison Square Garden exhibition, New York.

W. P. Peacock, Atco, N. J., originator and introducer.

**Double White Fringed Poppy.**

This splendid flower is the outcome of the labors of an enthusiastic flower lover who has been skillfully and patiently at work on it for years. Starting with the old Double White Carnation Poppy, he has increased the number and length of the petals and their purity of color, at the same time diminishing their width until he has produced an immense, dazzling white flower, so double and yet so finely divided that it resembles a ball of silk floss. It is rare to find a plant coming so absolutely free from variation as this does, and it is evident that there has been great care used in its development. It is a most distinct and evident improvement on any form of Carnation Poppy in cultivation, and will be welcomed by all flower lovers, particularly those who still remember lovingly the flowers that mother used to have in the garden at home, and it is so delicately beautiful that it will bear comparison with the finest production of the greenhouse.

Introduced by D. M. Ferry & Co., Detroit, Mich.

**New Chrysanthemum-Flowered HELIANTHUS.**

The new chrysanthemum-flowered helianthus has an entirely different appearance from the old helianthus that has been so popular for many years as a garden plant; the

blooms do not have that appearance of the common sunflower, the flowers opening from the center with a long narrow petal, similar to the chrysanthemum, and keeping this resemblance until fully opened. The petals are long enough to completely hide the small, green foliage on back of bloom, which makes it not unlike the "Lincoln chrysanthemum," only the color is a clear orange. The photograph was taken of one plant grown from seed planted in May. This helianthus was awarded a certificate of merit by Massachusetts Horticultural Society.

From the Catalogue of W. W. Rawson, Boston, Mass.

**NEW POMPON or BOUQUET DAHLIAS.**

This class is an especial favorite with a great many on account of the beautiful form and brilliant colors. The accompanying illustration, representing a bouquet of new pompon dahlias shows the beautiful forms, but the rich shades and delicate tints must be seen to be fully appreciated. The following varieties are represented; they embrace every shade from pure white to almost black, and have won highest honors everywhere, including cash prizes and medals: Allie Mourey, Beauty Inconstant, Daybreak, Elegance, Fairy Queen, Le Petit Jean, Little Bessie, Little Cactus, Little Diavolo, Miss Lou, Kramer, Prince Charming, Red Piper, Snoweald, Sprig.

From the Catalogue of W. P. Peacock, Atco, N. J.

THREE NEW ROSES.

The undermentioned three new roses proposed to be great acquisitions. They are companion roses, "half sisters" in fact, by blood relationship. They were originated by the well-known German rosarian, Peter Lambert, who has produced several other roses of exceptional value. **AGLIA**, or **YELLOW RAMBLER**, is a seedling from *Rosa polyantha Sarmientosa*, Siebold's Reve d'Or. This variety has been mentioned in our columns once before, and will probably be the most popular of the three, since it is said to be the first and only yellow climbing rose which has any appreciable degree of hardiness. The introducers say *Aglia* has withstood, unprotected and without injury, a continued temperature from zero to 2 degrees below, and with slight protection in the Winter it should do well anywhere that other roses succeed. It is therefore a great acquisition to our northern gardens. The color is a clear, decided yellow. The blossoms are of moderate size, cup-shaped, nearly full, of very pretty form, very sweetly scented, and last three to four weeks without fading.

**EUPHROSYNE** or **PINK RAMBLER**, a seedling from *Rosa polyantha Sarmientosa*, Siebold's *Mignone*. Color a clear light red, with numerous golden anthers. A very profuse bloomer and vigorous grower. Similar to *Aglia* in nearly all respects save color.

**PUALA** or **WHITE RAMBLER**, a seedling from *Rosa polyantha Sarmientosa*, Siebold's *Paquerette*; pure white. In other characteristics it is very similar to *Aglia*.

The following information is furnished by the introducers:

"These three roses have in common the following characteristics: they are all very strong, rapid growers, making shoots from 8 to 10 feet high in a season. They all bloom in immense pyramidal clusters after the manner of *Crimson Rambler*. Upon *Aglia* have often been counted as many as 150 blossoms in a bunch. And here it is interesting to note the strong probability of blood relationship between these three roses and the now well known *Crimson Rambler*. The *polyantha Sarmientosa*, which, as will have been noted, was the seed parent of the 'Three Graces' was brought by Siebold from Japan, from which country also comes the *Crimson Rambler*. The *Crimson Rambler* has a great many characteristics which tend to show that it was a chance seedling from this *Rosa polyantha Sarmientosa*, and if this is the case, it would complete the connection between *Crimson Rambler* and the 'Three Graces.' This supposed relationship is rendered still more probable by the very considerable similarity between them in wood, foliage, habit of growth and manner of blooming."

Messrs. Jackson & Perkins Co., of Newark, N. Y., are propagating and introducing these roses in this country, as the representatives of the originator, under an arrangement they have effected with Mr. Lambert.

MAMMOTH FRINGED HOLLY-HOCK, "ALLEGHENY."

An entirely new departure in this grand old garden favorite which has much to commend it. The mammoth flowers are wonderfully formed of loosely arranged fringed petals, which look as if made from the finest China silk, and when out are hardly recognizable as a holly-hock, having none of the formality of the ordinary type. The color varies from the palest shiraz-pink to deep red. The plants are of majestic growth, sending up spikes 6 to 7 feet high, and are of a strong constitution, not being troubled with the disease so prevalent among holly-hocks. In free and persistent flowering, it is quite distinct from the old type, coming into bloom in June and lasting until frost, every bud opening and the plant looking well at all times.

From catalogue of Henry A. Dreer, Inc.

NEW MARGUERITE.—"Giant Pearl."

This new variety is superior in size and habit to any in cultivation. It is truly a giant in size, the individual flowers often measuring 3 inches and over in diameter. The snowy white petals are arranged in two rows around a dazzling yellow center, and are of good substance. Habit of the plant is very compact, being much more symmetrical in growth than some of the older varieties now in cultivation. The introducer writes that he has in his garden every variety of *Marguerite* in cultivation, but none of them approach in size or beauty the *Giant Pearl*.

From Catalogue of Pitcher & Mando, Inc., Short Hills, N. J.

NEW DWARF EARLY FLOWERING COSMOS "DAWN."

This new variety of *Cosmos* comes into full bloom in July and continues a mass of bloom until cut down by severe frost. This feature alone is sufficient to stamp it as a novelty of the first class and will make their successful cultivation possible in the most northerly states and Canada; but added to this, it is of dwarf, compact growth, growing only 4½ feet high, while the old variety, growing alongside, towers up nearly 7 feet, a victim to the first strong wind. The flowers are fully as large as in the best selections of the old type, the color is a beautiful white, relieved by a delicate tint of rose at the base of the petals, altogether the finest novelty introduced in many years. The originator, who resides in Northern New York, writes about it as follows: "Originated from seed purchased from your firm (H. A. Dreer) four years ago. We got only one plant out of the lot and saved the little seed therefrom to try another season. All the plants raised from this seed began flowering in July, and none of them reverted to the original late flowering type; it has acted in this way ever since, and is certainly a great improvement on the original for our northern country, as we rarely can flower the common kind, they being cut down by frost before fairly in bloom. Plants of the new variety grow no higher than 4 feet 6 inches, while the late flowering kind is more than 7 feet. It grows more compact and bushy. The flowers are as large as in the old variety, the petal being rather broader, which makes the flowers appear rounder; it is a very free bloomer, color pure white, with a tinge of rose. Begins to bloom in July and lasts until frosts cut it down; it is always loaded with flowers, and is not apt to be blown over by the wind, as the old tall variety."

From the catalogue of Henry A. Dreer, Inc., Phila

**New Carnation**

**MRS. CHAS. H. DUHME.**

This is a seedling of 1892, raised by Fred. Dornier & Son, Lafayette, Ind. The color is a lively pink; large flower, fragrant, with good calyx, on strong, stiff stem. Plant vigorous, erect grower, a very early, free, and constant bloomer, much more so than any of the light pink varieties, rivaling Scot in productive ness, promises to be the best of the light pink commercial varieties. It was certified at Indianapolis and Philadelphia.

*From the Catalogue of Cottage Gardens (C. W. Ward, Manager), Queens, N. Y.*

**New Carnation**

**C. A. Dana.**

This variety is a cross of Scott on Uncle John, originating with Fred. Dornier & Son, Lafayette, Ind. The color is a delicate shell pink; plant is a vigorous, wiry grower, of erect habit, and a very good bloomer; medium to large flower on stiff, wiry stems; color very soft and exceptionally pleasing; flower a splendid keeper; one of the most attractive pink carnations.

*From the Catalogue of Cottage Gardens (C. W. Ward, Manager), Queens, N. Y.*

New Carnation C. A. Dana.

New Carnation Mrs. C. H. Duhme.

**DWARF PAPAYA (CARICA PAPAYA.)**

A magnificent bedding plant for the north, of the easiest culture, as easy to grow as a ricinus. It forms a branchless palm-like trunk, crowned with a magnificent head of the grandest leaves, each 2 to 3 feet in diameter, deeply cut and divided, and on petioles 3 or 4 feet long. The leaves are of a rich, dark green color, with white midribs and veins, forming a beautiful contrast. The male flowers are produced on long racemes, are pale yellow and waxlike, somewhat resembling in size and shape those of the Catalonian jessamine, and are most exquisitely fragrant. The female flowers are much larger, are produced in small clusters at the base of the petioles, and are succeeded by most curious and odd melon-like fruits. The male plants are the most beautiful, and the flowers are produced in such extreme

abundance, that a good sized plant will have thousands of flowers and buds on it at once, and so fragrant as to perfume the air for yards. Each raceme continues to produce flowers until the end of the season. They are splendid for cutting, lasting for days.

Not only is this one of the grandest of all bedding plants, but it is also a very valuable decorative plant, somewhat resembling a palm, and quite as beautiful, attaining a large size in a short time. No plant is easier grown bedded out.

We have spoken of its merits as an ornamental plant only; it also has its uses, producing a beautiful large orange colored fruit, large as a musk melon, exceedingly rich and spicy, and sometimes called "vegetable papain," from the fact that the fruit is a remedy for indigestion. It also has many other important properties; as, easily fruited in a greenhouse as tomatos.

*Description furnished by The Rose Valley Nurseries, Dongola, Ill.*

**New Carnation MAYOR PINGREE.**

The color of this carnation is a clear lemon yellow, lightly marked with pink and occasionally splashed with white. The plant is a very strong, robust grower, continu-

House of New Yellow Carnation Mayor Pingree, grown by J. Britmeyer & Sons, Detroit.

ous bloomer, and not a cropper; blooms measure 2 1/2 to 3 inches and over in diameter. Stems extraordinarily stiff, and from 18 to 30 inches long as the season advances. It is an excellent keeper and very productive. Cuttings strike readily. The variety promises to be a splendid yellow commercial carnation. It has been certified wherever shown.

Our photograph shows a house of Mayor Pingree carnation as grown by the originators and introducers,

*John Britmeyer & Sons, Detroit, Mich.*

**CHRYSANTHEMUM Mrs. John J. Glessner**

This is a massive bloom, first opening light bronzy yellow, whirled in form. When fully developed the color is a light yellow; the bloom is of irregular outline, the florets turning and twisting in every direction. It is a rival to Mayflower in size, but more globular in form. It was shown only before Chicago and Cincinnati committees, where it scored 90 and 86 points respectively. The parentage is Ed. Hatch and Mrs. Jerome Jones.

*The originators and introducers are Nathan Smith & Son, Adrian, Mich.*

**NEW CARNATION MORELLO.**

This red seedling carnation is a cross between President Garfield and a crimson seedling, originated five years ago. The originators have grown it during that time for cut flowers, and the blooms sold well. The flowers have been uniformly excellent, color very taking; blooms large, of good form, fragrant and borne on long, stout, wiry stems. The flowers have regularly commanded the highest price of any carnation in the Chicago market, and the growers have found it healthy and vigorous. One grower in Michigan says of it: "We have seen Morello growing in four different soils and under different conditions of temperature, also in leaches and solid beds, and under every condition it has far surpassed any other scarlet carnation we have ever seen. The

House of Carnation Morello.

plants are of strong, robust and upright growth; the foliage covered with a heavy bluish lustre, and the flowers borne on very long and strong stems. The blooms are produced very freely for such large flowers, which are three inches or over in diameter. In color it is a bright scarlet when first open, becoming slightly darker with age. It lasts well either on the plants or after being cut. Altogether we believe it to be a decided improvement over anything now on the market, and the scarlet carnation of the future." Morello was certified at Milwaukee, Chicago and Cleveland Flower Shows.

*The originators and introducers are Hopp and Lemke, East Grand Rapids, Mich.*

### PHYSALIS FRANCHETII.

So called from physa or bladder, alluding to the inflated calyx; ground or Winter cherry, Ord. Solanaceae. This particular variety of the species is a native of Japan and China, and has only lately attracted attention. It is in every way superior to any other variety known, the flowers being a pure white, the leaves large, of a beautiful light green, very ornamental. The flowers are solitary in the axils of the branches. The inflated calyx forms around the blossom as the seed or berry ripens, growing larger and of a more brilliant red on reaching maturity. The color is of the most intense and brilliant scarlet, and as the time of its fruiting falls in the Winter or Christmas holidays, its growing in greenhouses could not fail to be of value to every florist. Another point to recommend it to the grower is its easy propagation, and its adaptability to any common soil. Propagation is effected by seeds or division. The calyx, if left on the plant, will in due course become skeletonized, affording another pretty change in the appearance of the plant. The physalis is a half hardy perennial.

FRUITING BRANCH OF PHYSALIS FRANCHETII.

The great beauty of the calyx is lost in the picture, as the superb coloring which constitutes its chief beauty cannot be shown.

From H. H. Berger & Co., San Francisco, and other introducers.

[A very handsome colored plate of this Winter cherry appeared in the London Garden, of March 28, 1896. A writer in that magazine says: "The fruits of both this and the familiar *P. Alkekengi* are utilized in the native cookery much as we use the nearly related *Lycopersium* or tomato, but, of course, it is for the splendor of the calyxes that we value these perennials. *P. Franchetii* should have a strong soil, deep sandy, and thoroughly well dug, to provide ample space for the underground roots to develop. Plant it in a bold group to get the full richness of fine coloring, and this will provide material for the house. Few things last so well when gathered as the physalis. I have stems of it still bright that have been cut for over a year, those of *P. Franchetii* among the number. Associate them with the Silvery Honesty, graceful dried grasses, and the Sea Hollies, delightful things to compose Winter decorations."—Ed.]

### NEW GIANT FLOWERING ANTIRRHINUMS.

These handsome and profuse flowering plants have long been favorites in our gardens. They are of very easy culture, even in rather dry locations, growing steadily and producing quantities of flowers throughout the summer and autumn, from spring-wood double, although, strictly speaking, they are perennials. The New Giant Flowering Antirrhinums represent the highest types yet attained. The flowers are not only nearly double the size of the older sorts, but are closely set on the stems; the colors are also clear and more brilliant. The plants are compact and bushy, about one foot high, and are literally ablaze with bloom for months, rendering them of exceptional value for garden ornamentation.

From the Catalogue of Peter Henderson & Co.

### New Imperial Japanese Morning Glories.

These grand new morning glories from Japan are remarkable for the large size and exquisite new colors of the flowers, with magnificent foliage, often beautifully blotched. Of strong, robust growth, the vines grow quickly to a height of 12 to 20 feet.

They are of all shades of red, from the most delicate pink to the most brilliant crimson and maroon, and innumerable shades of blue, from pale lavender to richest indigo and royal purple; also white, yellow, gray, slate, copper color, brown, bronze, almost black, and many other odd shades not found in any other flower. Many varieties have a distinct marginal band of a different color from the rest of the flower, and some are as elegantly spotted with pink, crimson, blue, brown, etc., as the finest glorioxias; others are striped, blotched, mottled, rayed, and shaded in an indescribable manner, often having seven or eight colors and tints in one flower. Many are of very odd and singular forms; some have the petals separate and distinct clear to the base, others have the tube of the flower bent down on itself at a sharp angle, and then bent back again."

From the Catalogue of W. Atlee Burpee & Co., Philadelphia.

### THE NEW GIANT CALIFORNIAN DAISY.

(*Chrysanthemum Frutescens Gigantum*.)

This is one of the best Californian novelties of recent introduction, and is truly a giant in size and in every way superior to all the older varieties now in cultivation. The habit of the plant is very compact and symmetrical. The individual flowers are gigantic in size, measuring fully  $4\frac{1}{2}$  inches in diameter. The petals are of good substance and are arranged in two rows around a bright yellow center. It is a very free flowering variety and the flowers last a long time in perfection. Was awarded a first class certificate by the New Jersey Floricultural Society, November 10, 1896.

From the Catalogue of Garrett & Rose, Jersey City, N. J.

### Cyclamen.

Our illustrations are reproduced from photographs kindly sent us by Professor John F. Cowell, of Buffalo (N. Y.), Botanic Garden. In an accompanying note the Professor says: "We have now growing in the garden, six species of cyclamen; but at this time, the principal interest centers in *C. persicum* and its varieties, to which we devote, for a time, one house 20x65 feet. The seed was sown in October, 1895, and they are now, probably, at their best, the 7-inch pot plants, of which there are about four hundred, run from forty to eighty open flowers, and the 6-inch from thirty to sixty. We have about fifteen distinct varieties, including the so-called double and the zonal-leaved. The photographs will show the habit of the plants and the amount of flower they carried at Christmas."

He also furnishes his method of culture, as under, which will prove interesting to our readers:

The culture of cyclamen is very simple, and there is no secret in getting good results. It only means strict attention to details on the part of the grower—I mean the attention of a trained gardener. Our methods of growing may differ from that of some other successful growers, and, as you request, I will give it, hoping that it will be of interest to some of your readers.

For flowering at Christmas, we like to sow the seed about the first of October. For Easter bloom probably February is early enough, as the seedlings come along faster when they feel the warm sun of Spring. As a rule, however, it takes about fifteen months to get them into their best condition. The seed, which should be but lightly covered with leaf mould, is best germinated in a temperature of about 70 degrees Fahr., and this temperature, by fire heat, will suit the young plants admirably, until they are ready to go out for the summer.

When the seedlings show the second leaf, prick into thumb pots, using a mixture of virgin loam and leaf mould; place in the sun near the glass and syringe frequently in bright weather.

If your loam is stiff, see that you incorporate enough shara sand to render drainage easy and sure, for the plants will require watering often, and if the soil does not dry out, it will become sour, and the plants will damp off. See that your ventilation is good. Avoid a stagnant atmosphere—keep it moist and moving.

By the middle of March, October sown plants should be sufficiently rooted to hold the ball, and will need shifting into 3 or

Plants of *Cyclamen Persicum*, Grown at Buffalo Botanic Garden.

2½ inch pots, using in addition to the former compost a little fine manure and a sprinkle of bone meal. Replace near the glass and syringe freely. By the first of June preparations should be made for removing them to their Summer quarters.

For this we use a shallow frame without sides, and with a rail at front and back to carry shades or sash, as may be needed. Shift the plants into 3½ inch pots and plunge in coal ashes. Select a position where full sun and air can be had. Shading will not be needed except during the middle of the brightest days. For this purpose we use the lightest quality of "Plant-bed cloth." No covering will be needed at night, except to exclude heavy rain, until Fall. When the cool dewy nights of August come cyclamen begin to grow rapidly, and should be shifted as they need it into five.

It is surprising how fast they will grow now, and in four or five weeks many will cover a 7-inch pot. If hard frosts are due, cover at night with sash, but leave the shades open as long as possible. Use no shades after October 1, but let the sun pour down on them with all its force. In early November remove them to an airy

house and keep them cool. Remember that they now need very different treatment from that pursued in the earlier stages of their growth. Keep them rather dry as regards atmosphere, for they will now be showing flower freely, and there is danger if the buds damping off if cold water settles on the crowded crowns.

If troubled with aphid, syringe with or dip in a solution of "Rose Leaf Extract" of tobacco in the proportion of about one part extract to sixty of water. The plants treated as above will be at their best about the middle of January.

Bear in mind that though enormous plants can be grown in the shade, yet if you want bloom and short vigorous growth, the plants must be grown and ripened in the sun.

Our own plants, which are partially shown in the accompanying illustrations, are in various sized pots ranging from 5's to 9's. The photographs were taken before the holidays, and do not quite do the plants justice. The 5-inch pot plants now (January 31) carry from 20 to 30 open

blooms; the 6-inch, from 30 to 50; and the 7-inch, from 40 to 70. Some of the 9-inch carry many more, but while their foliage is magnificent, they do not show a proportionate increase in the number of blooms. As I write this, there stand on the window ledge in my office three plants which I consider models in many respects for market plants, and they may be briefly described as follows: A plant in a 5-inch pot measures 11 inches through the foliage, and has 28 expanded flowers and over 30 buds in sight; a 6-inch pot contains a plant which is 15 inches in diameter, with 39 open flowers and lots of buds to come; a 7-inch is 20 inches through, and is crowded with 63 open blooms and buds too numerous to mention—or at least to count with any accuracy.

These plants have been grown under the immediate care of Mr. Thos. Fitzgerald, and reflect great credit on his skill as a gardener.

JOHN F. COWELL.

Buffalo Botanic Garden,

January 31, 1897.

### THE NEW BEGONIA VULCAN.

(This will be botanically known as *Begonia Sempervlorens Atrococcineum*.)

This new variety originated at FORDHOOK FAIRM. It is a seedling of the well-known *BEGONIA VERNON*, which is so popular all over the world as the best variety for bedding on account of profusion of bloom, beautiful foliage, and hardy growth.

The many good qualities of *Vernon* are intensified in the *Vulcan*, which might be called appropriately the new scarlet *Vernon* *Begonia*. Plants raised by side the *Vulcan* is similar in growth and free-flowering character, while it completely eclipses the *Vernon* in the rich brilliancy of its flowers. Each plant is covered with flowers, which are of the most intense fiery carlet color, even the stamens being tipped with bright red. The entire plant is so brilliant that our head-gardener says, "It looks like a mass of burning coals." *BEGONIA VULCAN* comes perfectly true from seed and stands the most intense heat of summer, growing vigorously, without wilting, even in hot weather.

From the Catalogue of W. Atlee Burpee & Co.

Specimen *Cyclamen Persicum*, Grown at Buffalo Botanic Gardens.

Bouquet of Semple's Asters.

Bouquet of Semple's Asters.

## SEMPLÉ'S ASTERS.

A long the names of those who have devoted time and attention (which, of course, includes money) to the improvement of the aster, none is so familiar to your readers, perhaps, as that of James Semple, Bellevue, Pa., and a great deal of the improvement now seen in this flower has been due to his untiring efforts. Mr. Semple has been growing asters for forty years, and has made a speciality of them for twenty years, and in that time he has introduced three of the best varieties now grown.

Last Fall I prevailed upon him to furnish me with a few facts regarding his method of culture for the benefit of the readers of the EXCHANGE, and these I give herewith. The accompanying illustrations will show the high state of perfection to which the aster has attained under Mr. Semple's treatment.

The asters on his place are generally grown on the same ground, five or six years in succession, and he claims that by his mode of cultivation they can be grown on the same ground continuously. His soil is of a light loamy nature, and the aster seems to be indigenous to it, as no fewer than eight distinct wild varieties are growing on his ground. But a black walnut soil, in his estimation, is best suited to asters, it requiring very little fertilizing. He has used various fertilizers with moderate success, but the most beneficial, and which he uses now almost exclusively, is crushed lime. This he puts on the field before plowing at the rate of about 25 to 30 bushels to the acre, for a light loamy soil. A little cow manure is also good, but no horse manure should ever be used; he can tell at once whenever the latter has been applied. The seed for the main crop should be sown about the first of April, in small drills, and the plants pulled in the fields from the 15th of May on. When in full bloom the latter part of August or beginning of September the plants attain a height of about 5 feet, are well branched, with flowers on stems 30 inches in length,

thus making very desirable cut flowers. Some of your readers will no doubt remember the flowers exhibited at the S. A. F. Convention, held in our city, which were greatly admired.

Mr. Semple requires from two to three acres of ground for his stock to supply his demand for cut blooms and his seed trade, and it is a grand sight to see these fields when the plants are in their prime.

It readily can be imagined from the immense growth of his stock that he is not troubled with the disease of which one hears so much all over the country. He believes in the old saying, that "an ounce of prevention is worth a pound of cure," claiming that the application of crushed lime is a certain preventive against all diseases, as the gases from it kill all germs, and he has never been troubled thereby.

During the season, his cut blooms are always in great demand, as they are the best in the market, and his seed trade has increased yearly since he put the seed on the market. He has sold seed to growers and others in every state in the Union, excepting Georgia and Florida.

Mr. Semple only grows three varieties which he produced some years ago; they are—Semple's White, Miss M. J. Semple, pink; and a lavender shade which is not named. As the latter had such a delicate color, he thought it useless as a commercial flower, but in this he was certainly mistaken, for it is now very good here, and extremely so in California.

James Semple was born near Strathaven, Lanarkshire, Scotland, about sixty years ago. He came to America at the age of twelve, and has had almost a half century's experience in the business of gardening. He has been highly honored in the past by being chosen burgess of Avalon for a good many years, and still holds the position. He is an active and successful business man, honored and trusted everywhere, and it is through his untiring energy and innate ability that he has accomplished so much in the culture of asters. E. C. R.

Field of Asters Grown by James Semple, Bellevue, Pa.
