Given, a carnation plant in the field, attacked with stem rot, I find that in my soil the fungus will slowly, sometimes very slowly, but always surely, creep from plant to plant, the first plant attacked being at the center of infection. Planting a row of potatoes in the stiff soil of Staten Island with barnyard manure, and right alongside a row with wood ashes, the manured row will surely produce a splendid crop of scab, while in the ashed row every tuber will be bright and without blemish. Now, why should not wood ashes have a similar effect; that is, checking stem rot, in my soil? Are the fungi of the potato, and the fungi of stem rot, of the same family; first cousins, perhaps? Or, may it be that the calcium and potash will destroy the vitality of the spores in either case? Or, may it be the alkali lime, producing a copious supply of soluble silicic acid, enables the plants to put on a heavy armor of quartz, impregnable to the attack of the spores? (Vide, Mr. C. L. Allen, re lime and the stem rot of cabbage, also a very noticeable stiffening of carnation stems, after an application of lime to the soil.) Qu'en s'abe?

All I know, Mr. Editor, is that lime and potash, in combination, have knocked out stem rot in my soil these last three years, and said soil is a very light sandy loam, from 1½ to 3 feet in depth, underlaid with clean sand and deficient in lime (Government report), and in potash, shown by the poor growth of deciduous trees, and their quick response to potash. Nevertheless, it suits Dianthus caryophyllus, and with this soil, in the hands of an expert grower, 4-inch Prosperity and 3-inch Mrs. Lawson should be the rule and not the exception.

Long Island.

Hollyhocks.

Editor Florists' Exchange:

In No. 3 of The Florists' Exchange I notice an article on hollyhocks. I beg to say that I grow hollyhocks very extensively for seed, and can endorse what your correspondent says in his article. But I am greatly surprised that he does not mention anything about the new type of hollyhocks, offered some years ago by Messrs. Peter Henderson & Co. I dare say this new type will create a revolution in the cultivation of hollyhocks. It is not necessary to trouble with two years' cultivation to have a fine display of hollyhocks; but this new strain, named "Hybrid Everblooming Hollyhocks," can really be treated like other annuals. When the seeds are sown by the end of March, in a warm or hot bed, the young plants planted out in the open ground about the beginning of May, they will commence to bloom about the end of July. It is a fact worthy of mention that there was not a single plant among my thousands of plants of hollyhocks that was not in bloom by the end of August.

I have given great care and attention to this valuable strain of hollyhocks, to improve it in every way, so that I trust that this new type will in a short time be just as grand in form, size and doubleness of the flowers as the very best of the older biennial strain. The rapid growth of the plants will prove to be the very best antidote against the hollyhock fungus.

Germany.

FREDERICK ROEMER.

The Boston Flower Show.

Editor Florists' Exchange:

Your usually amiable Boston correspondent must have been feeling decidedly out of sorts when he penned the introductory paragraph of his report of the late Boston show. While we sympathize with some of the sentiments, more especially his regret that the show lasted so short a time, some of his remarks fall so wide of the mark that we question if he really intended us to believe that they were more than an effort to make the committee referred to smile.

The principal reason the show closed so early was to allow commercial exhibitors to remove their flowers, and in some cases dispose of them ere going home; also to allow the exhibitors of plants—who were all private persons and whose exhibits we see Mr. Duncan did not even mention. [He did, but they were omitted for want of space.—Ed.]—get their plants home in decent season. Another year, no doubt, it would be a capital idea to keep this show open until Sunday night.

Readers would infer from "for to hold back awards from the public until within an hour of closing time is rather unfair to both the visitors and the exhibitors," that the committee on awards purposely kept back the premium cards. As a matter of fact, some exhibits were not ready at 11 o'clock, and in courtesy to some of these commercial exhibitors judging was a little late in starting. As soon as it was completed, the premium cards were written out and placed on the successful exhibits. We would remind your correspondent that the committee on awards had considerable work to do outside of carnations, as he would have found out had he served as one of its members.

We next read "that the system of naming exhibits, judging and again naming the successful exhibits by the committee of the Massachusetts Horticultural Society is peculiar to itself." Will he, pray, tell us what is "peculiar" about the correct naming of exhibits? Does he prefer them nameless? What is wrong and "peculiar" with the system of judging? What does he find objectionable about the premium cards? Would he prefer to have a little gum shn-plaster pasted on the exhibitors' cards a la cattle shows? If we did so, would it not more than warrant his closing assertion, one worthy of "Job" himself, that the system is "so antiquated that it cannot hold pace with the up-to-date methods of twentieth century horticulture."

Come, Brother Duncan, you must have been badly rattled when you wrote this string of denunciatory adjectives. The exhibition and flower committees are trying in their humble way to be up-to-date; they naturally expect more kicks than bouquets. They want your suggestions, and those of any other in or out of the society, and will welcome such at all times. Do not be too carried away with the growly remarks of one of the "hard-working commercial men." Remember that the private growers work just as hard and contribute at least nine-tenths of the flowers and plants seen at our Boston shows, and are just as worthy of your consideration. Please tell us where the thoroughly "up-to-date twentieth century" horticultural society is to be found; we want to study it up. When any vacancy occurs on our prize or exhibition committee we will take pleasure in presenting your name for favorable consideration, as a slight token of our high estimation of your laudable efforts to keep us "up-to-date," and showing up our delinquencies.

W. N. CRAIG.

P. J. Lynch, secretary and treasurer of the Dingee & Conard Co., West Grove, Pa., will deliver a paper on "Some Notes on the Newer Roses," at the meeting of the Florists' Club of Philadelphia, to be held Tuesday evening, March 7, 1905.

EDWIN LONSDALE, Secretary.

AMONG THE GROWERS.

John J. Fee, Jamaica Plain, Mass.

The present season has been one of the best, so far, ever known in the neighborhood of Boston, among growers of all kinds of bulbous stock. There are not many growers hereabouts who devote their whole establishments to bulb growing, but of those who do it is surprising to see what an enormous quantity of material can be taken out of a small space. This is accomplished by the comparatively short time it takes to force a crop of blooms. One of the most successful growers of bulbous stock is John J. Fee, of Jamaica Plain, who has a few small houses that would be lost if they were all placed inside a modern 100-foot house. Mr. Fee, nevertheless, has a unique establishment, and forces annually some 300,000 bulbs. While a few are grown to sell as pot plants, or in pans, the majority are cultivated for cutting purposes. At the time of our visit one of these small houses was a mass of bloom, it being just prime with the first crop of tulips of the season. The variety was La Reine, which is one of the finest and most popular kinds for forcing. Other varieties grown in quantity are Le Matelas, Vermillion Brilliant, Keizerskroon, Rose Luisante and Coleur de Cardinal. Narcissus this year have come along more slowly than formerly, perhaps on account of the condition of the bulbs when ripened. The varieties mostly grown by Mr. Fee are Golden Spur and Von Sion, although Sir Watkin, Sulphur Phoenix, Horsfieldi and a few others are grown in smaller quantities. All these bulbs for cutting are grown in flats, and it is surprising to see how space can be utilized while these plants are in their different stages of growth. *Lilium longiflorum* are grown in limited quantities, not enough space being available for them; and Spanish irises are grown in moderate lots. A pit covered with leaves is yet largely filled with unstarted bulbs, so that there are many to draw from until the coming of the outdoor crops.

During the Summer season Mr. Fee fills up his houses with chrysanthemums, and gets a good crop of these blooms until his space is again required for his first batch of bulbs.

E. Sutermeister, Readville, Mass.

Out of the city a few miles, on the Canton & Stoughton Electric Railway, at the foot almost of the Blue Hills, is the establishment of E. Sutermeister, another establishment unique for its size and the enormous quantity of material that is carried to market from it. At this place a great deal, in fact the largest part of the products, is grown in pans or pots. Some idea may be gained of the extent of the business when it is said that the number of pans of one variety is 1,500 and many others are grown in like proportion. There are a great many flats grown for

cutting of such varieties of narcissus as Emperor, Golden Spur and Double Von Sion. Miniature hyacinths are cultivated extensively in 4 and 5-inch pots. *L'Innocence* is considered the best early white, and *Mme. Van der Hoop* for a late variety. Mr. Sutermeister forces annually some 400,000 bulbs, which, when it is taken into consideration that a large proportion of these are sold as pot plants, will demonstrate that there is a great deal of work to be done before they reach the buyer in the florist's store. *Astilbes* are quite largely grown in one house, both for cut flowers and for pot plants. The varieties *Japonica* and *compacta* are mostly used for pot plants, while *astilboides floribunda* and *superba* are considered the best for cutting purposes. A specialty

NARCISSUS DOUBLE VON SION
Grower, John J. Fee, Jamaica Plain, Mass.

with Mr. Sutermeister is the hardy English primrose. Perhaps we are partial to this dear old plant, but we have often wondered why it is not more largely grown. It is not difficult to handle, and the blooms realize good prices.

As soon as the bulb-forcing season is over, Mr. Sutermeister fills up his houses with a general assortment of bedding plants and seedlings of all kinds for Summer planting. A large business is done in such Spring plants as double daisies and forget-me-nots, and later on in the season chrysanthemums are grown for the Fall trade, and such plants as Jerusalem cherries for the Christmas season.

J. W. DUNCAN.

HOUSE OF NARCISSUS.
Grower, John J. Fee, Jamaica Plain, Mass.

Tales of a Traveler.

The Carnation in California.

The article which it is my intention to write on the subject of the carnation in California is, perhaps, a matter of opinion and might more properly be termed, "An Impression Which the California Carnation Makes on an Eastern Grower." But, not desiring to string the title out, and disliking the California idea of stringing things generally, I refrain. Now, in the first place, I trust those who read this will give me credit of bearing malice toward none, for I have been cordially treated by those of the trade here in the land beyond the West, with whom I have come in contact; and I desire to injure no one, but merely wish to present to the readers of *The Florists' Exchange* the carnation situation in California as I have seen it, and to draw a few conclusions from what I have observed regarding the carnation generally, as it has been my fortune to see it on the Western coast, without reference to any individual grower.

There are two classes of people in California—those who can get back East, and those who cannot get back to the land that gave them birth. These classes are distinct, and the way you look at California depends on which of these classes you belong to. We may again subdivide these, and among those who can get back we find the pleasure-seeking tourist, and those who cater to the tourist; for if the tourist have not unlimited means, in a short time he descends to the class that cannot get back, and becomes a native. The one who caters to the tourist can always get back, for he gets whatever of the currency of the realm the tourist may have had about him when he landed here. There are also two classes of people among those who cannot get back, and here we find the hard working, industrious farmer, who owns his farm and is content; for here on his farm is his all and he must stay with it. Again, there is the man who, under the impression that the orange business meant easy wealth invested his all in his grove, and he now has become a fixture. Of these people I have nothing to say, but wish to draw your attention to the class who are the making of the State, or, rather, of the southern part of California, namely, the tourist.

We find under the head of tourist a little of everything, and the view which the tourist takes of things is, as a general rule, far from correct. It was my good fortune to glide over the marine gardens of Catalina in the glass bottom boats which money will provide, when the water was far from clear, and the garden was largely imaginative. So the tourist in his glass bottom boat, but with clouded glass, passes over this country. They see and yet they imagine more. The carnations in the stores appeal to them, and because they see some very good blooms and because they see the fields of carnations, they imagine that the flowers are the result of the beautiful California climate, and that nature will do here what expert cultivation will do in the East. No thoughts of the greenhouses beyond the hill enter their mind; for will not anything grow in California?

That is, I believe, the tourist idea of carnation culture in this section. They write home of the wonderful carnations grown in the fields about Los Angeles, where the earth is one garden; but beneath the surface and hidden from them is the hard working gardener who tells a different story. Back of the tourist to make good his story is the real-estate man, with his corner on the market and a new town to sell out to those who believe in these wonders and the superficial yarns of those who never understood conditions in their native State, and who cannot, therefore, be expected to understand them here.

There are acres of carnations in the State being grown in the open, and in proportion to the acreage is the number of poor, inferior quality bloom in the market. The picture which those who do not know receive from those who never did know is a beautiful one, but the facts are not in keeping with the reality.

Go through California where you may at the present time and you will find that any carnation which would be able to stand in competition in any markets east of the Rockies, is grown under glass and grown much as the carnation is grown in the East. From the standpoint of a lover of the carnation and an eastern grower, I must characterize the story which we so commonly hear of the beauties of the field carnation as a modern fable.

Consider for a moment the market to which Southern California growers cater. Every one who lives here for any length of time has plenty of flowers at home. That is, except in the cities, and the cities of Southern California are limited in number. A recent newspaper article, in speaking of the heavy rainfall which has come to the section, makes the statement that it will do the country almost as much good as the tourist crop. This is a clear statement of the facts, and there is no crop so good and no crop more reliable than the tourist crop. They are catered to by all, and the motto, which should be well known, for it is fulfilled everywhere, "Do them to-day, for they will be gone to-morrow," is carried out conscientiously. As a rule, then, the trade is transient and the prices are well up when we consider what is offered to the public. That same imagination is at work all the time. They have entered a land of flowers and they must have them.

There are several varieties which are grown heavily

cut-of-doors, and among these a white variety, Los Angeles, so-called, seems to be a leader, but only in the quantity which we see brought in. A brick red called Red Los Angeles also fills space; and a light pink, Corbett, shares the humiliation with them. Contrasting the conditions of the carnations in the greenhouses, you will find that practically every variety of merit which is well grown in the greenhouse here is of eastern origin, Enchantress, Mrs. Thomas W. Lawson, Mrs. Patten, Prosperity, Estelle, Harlowarden, Governor Wolcott, Queen Louise, White Lawson, Harry Penn and Governor Roosevelt being most generally grown. And these varieties do well here. At present there have been heavy rains, and the outdoor flowers are poorer than usual, but, generally speaking, the outdoor stock sells at one dollar per dozen, while the indoor is more than abundant, at 25 cents per twelve, for specimens.

I have made the matter perhaps more plain than I could have done, but I do not wish to be misunderstood. It takes capital to go into business anywhere, and conditions here require it even as elsewhere, if not more so. But good carnations are appreciated, and those who buy flowers in Los Angeles and vicinity appreciate good stock, even if they do imagine things. The tendency is to grow better flowers, and in the future will find more good carnations and fewer poor ones than there are to-day. But the man who grows them here must come here expecting to meet just such difficulties as he would elsewhere, and come with a determination to grow stock as it should be grown, and not expecting to reap the harvest after nature has done the work for him. As we go northward we find, as a rule, better carnations; and in San Francisco the carnation of commerce differs from the carnation as we know it east of very little. We find the same varieties, and these are grown much as they are grown east. Some of the varieties are of California origin, but only a few, and among these are notably those which J. H. Sieners & Company have brought into prominence. The carnation has its lovers here as elsewhere, and L. J. Anton, of San Francisco, has done and is doing some good work in cross-breeding. I saw a very fine crimson seedling, which measured nearly five inches, one of his originations. He is not a florist by profession, however, and his work has been with him a pastime or the love of the divine flower.

Taking into consideration all the carnations which have been seen in the State, there is a difference in the plant growth when we compare them with what is produced east. They remind me of hot weather carnations in New England, when the plants throw very few side cuttings, and build up a large base. The growth is harder and more wiry.

This brings me to a consideration of the California carnation cuttings for the eastern trade, and as I have read so much regarding them in the trade papers of late, I will enlarge on this subject a trifle. The cutting which a carnation makes in this climate I consider far from the ideal one from which to grow a good plant. In the first place, a base cutting I do not believe will produce as good a plant, nor will the plant from it produce as many blooms, as will be apparent from a plant grown from a cutting taken from the side of a flowering stem. The tendency of the base cutting is toward grass, and, as I have said, the carnation in California produces few good side cuttings. Then, again, they are bony and root slowly, and are a long time starting in to make growth. The growing season for field stock here could be all the year round if a good sizeable plant cannot be reduced in a shorter time, while a few months must suffice in the East. Therefore, East we must have stock which will keep moving; stock that is not hard, and cuttings in which the sap runs freely. Such cuttings as are needed in the East I have not found here, although they may be here. Then, once again, there are too many old plants here, where the carnation will live in the field for a couple of years and produce cuttings, and the cuttings from an old plant are sadly lacking in vitality and would require a different treatment. Right here I believe we have the cause of so much trouble which those who have had carnation cuttings from this State have experienced. To be healthy, the sap must flow and the cutting must not become hard and bony. When the cutting becomes hard, it is weakened in vitality, and loses its power to withstand disease. The climate alone is responsible for the hardness of the cuttings, and when in this condition they are apt to be a disappointment to those who count on them for good plants the following year. The upbuilding of the carnation depends on the elimination of those varieties which have constitutional diseases, such as dry rot, and also on the elimination of those conditions which tend to weaken and render susceptible to disease the varieties which would otherwise be immune to the attacks of fungus. Summing up the carnation of California we find that the best carnations are of eastern origin. That the carnation cutting produced here is lacking in many essential points, and the true situation in regard to what is produced is known only to those who have made a study of conditions here, and this condition is sadly misunderstood by the general public.

To the eastern grower I would say, buy where you know stock is good, and the nearer home you buy it, no matter what the price, the better the result will be.

W. R. PIERSOON.

Greenhouse Stock Frozen.

BATTLE CREEK, MICH.—On February 14 the thermometer registered 22 degrees below zero here. Burt's greenhouses suffered a loss of from \$1,500 to \$2,000, all the valuable plants having frozen beyond recovery. Fire recently destroyed half of Burt's greenhouses, making the loss more keenly felt.

Dicentras.

Although *Dicentra spectabilis*, bleeding heart, or Dutchman's breeches, as it is variously called, is extremely popular, it does not seem to have made much headway with the florists in America as a forcing plant. It would be hard to find a more graceful subject as a cut flower. There is some little difficulty in connection with the forcing, and perhaps this has counted against the plant being used for this purpose more extensively. Judging from a trial lot potted up and forced last year, there does not appear to be any difficulty that would not be soon overcome by those interested enough to make the attempt. The one essential seems to be that it must be done slowly,

TULIP LA REINE
Grower, John J. Fee, Jamaica Plain, Mass.

in a very light greenhouse, with the plants placed as near the glass as possible, or a percentage of the shoots will become blind.

As a border plant the dicentra needs no recommendation, being such a general favorite, and, like most introductions from Japan, it makes a satisfactory garden plant. Loose, deep, rather sandy soil is the most suitable; and if partial shade can be given during the hot Summer months, so much the better. Unfortunately, when planted in some positions, while the plants may be all right the first year, they are weaker the second, and eventually vanish. This is especially true of imported plants. This condition is most likely to arise from one or the other of two causes—the ground being too wet and heavy, or too dry. If the former, the plant fails to make any additional roots, and the tops are made at the expense of the ones the plants already have, which so weakens the plant that it will very likely succumb the following Winter. If the ground is too dry, the tops, which are of a very soft texture, will be burned up by the sun before they have fulfilled their functions

and helped to produce the thick fleshy roots in which the food supply is stored for the plant to draw from when producing its flowers the following season.

While the roots are very brittle and the whole plant is of rather a succulent texture, the actual cold does not seem to injure them in the least, providing they are not actually exposed to the weather. Out of many hundreds of imported roots, planted as soon as they arrive in the Fall, none have been lost from the cold, although frozen solid in the ground. They were, however, always planted in well-drained, sandy soil and mulched with manure.

There are several native sorts of dicentra; the best is *D. eximia*, which is an excellent subject for a shady moist position. *D. cucullaria* and *canadensis* are found growing in the moist, rich woods, but are too delicate and frail to be of much value as garden plants.

Adlumia ciliata, while not a dicentra, is very closely allied, and can hardly be classed with the herbaceous perennials, as it is more biennial in its nature; but it is well worthy of note, as it is one of the daintiest little vines in existence. It is a wonder this plant has not found its way into the florist's favor, it is so graceful and pretty both in foliage and flower. Rather a moist situation is best suited to it, and if protected from the winds so much the better. There are very often positions in small yards, such as are common in towns, that are just suited to it, and where it will thrive and quickly cover a low fence with a delicate tracery of green. Seed sown in Spring will flower the first year.

ERNEST HEMMING.

The Retail Trade

Doings of Washington (D. C.) Florists.

President and Mrs. Roosevelt held their last official reception Thursday, which was given to the Army and Navy. The bouquets carried by the receiving party were made of Bride and Bridesmaid roses, Enchantress carnations, lily of the valley and Roman hyacinths, mixed with Princess of Wales violets. The tables were decorated with individual plants of *Cineraria stellata*. Mayberry & Hoover had a large wedding decoration this week. The parlors were profusely decorated with palms and *Lilium Harrisii*. The pieces on the breakfast table were made of Bridesmaid roses, with pink ribbons attached from the centerpieces to each of the plates; with the names of the parties, on cards, who were to occupy the seats opposite. This firm has had quite a run on small palms, having disposed of 3,500 Kentias and 1,500 *Areca lutescens* in 3-inch pots this week. George Cook had the decoration for the dinner given by Senator Depew last Friday, when Bridesmaid roses, white lily, and *Adiantum Farleyense* were used extensively. He also had the decoration at the Slater's mansion; the seven centerpieces, which were each 4 ft. by 2 ft. oval, were filled with azalea plants and *Farleyense* fern. Gude Brothers had two club dinners on this week, when they made a fine display of their home-grown American Beauty. Small & Sons have commenced to decorate the Pension Office building for the inaugural ball; they are endeavoring to surpass all their previous efforts in this direction. F. H. Kramer had quite a run on St. Valentine's day; he made a specialty of violets, at a low price, and succeeded in disposing of 5,000. This was done as an advertisement, and, judging from the crowds, it was a grand success. George Field is cutting some extra fine blooms from his Thomas Field rose, just now. This variety is quite a success in Washington.

STOCK WANTED

WANTED—10,000 two-year strong Colossal asparagus roots. Address H. Y., care Florists' Exchange.
WANTED, 2,000 variegated Vinca, and 500 green Vinca, field-grown, not potted. Quote lowest price for cash. Alexander Mead & Son, 349 Lake Ave., Greenwich, Conn.
WANTED—Experienced maker-up and salesman; good references and city experience required; good pay and steady position to right man. Le Mout, 436 Fourth Ave., New York City.

SITUATIONS WANTED

SITUATION wanted by young man for general greenhouse work. Address H. K., care Florists' Exchange.
YOUNG MAN, 11 years in the trade, wants position with grower of general stock; good references. State wages. Address D. B., care Florists' Exchange.
STEADY, sober, young man, 20, wants steady position, 5 years' experience general greenhouse work. Address Witefeld Frasse, 268 Market St., Newark, N. J.
YOUNG LADY wishes steady position; seven years' experience; good designer; city reference; Eastern states preferred. Address H. A., care Florists' Exchange.
POSITION wanted by young man as assistant, experienced in greenhouses as well as outdoors; strictly sober and willing; private place preferred. Address H. G., care Florists' Exchange.
POSITION wanted as working foreman as grower of good violets and pot plants; years of experience and good references. State terms. Address H. H., care Florists' Exchange.
SITUATION wanted as head gardener on a good private place by Scandinavian; age 23, single; life experience in Sweden, Germany, England and America. Address H. Z., care Florists' Exchange.
SITUATION wanted by Englishman as gardener or foreman, on private place; experienced in grapes, carnations and general line; nothing but first-class place wanted. Address H. J., care Florists' Exchange.
WANTED—By American, steady position as gardener and florist, 20 years' experience; one and one-half years in charge of present place; good references. Address H. E., care Florists' Exchange.

SITUATIONS WANTED

SITUATION wanted as rose grower, 12 years' first-class experience growing roses and carnations. Refer to Alex. Montgomery, Webon Conservatories, Natick, Mass. Address H. D., care Florists' Exchange.
SITUATION wanted by German (33) in retail florist store, life experience, decorator, designer, etc.; able to take charge; best references (last position 3 years). Address E. B., Box 245, Spencer, Mass.
GARDENER (36) married, 22 years' experience in all branches; up-to-date under glass and outdoors, wishes position on gentleman's place. Best references. Fraok, care Samuel Untermyer, Esq., Yonkers, N. Y.
GARDENER, married, no children, age 41; experienced in all greenhouse work, forcing of fruits and vegetables; all outside departments on private place. References. Address Cameron, Seagutuck, Conn.
GARDENER, florist, single young man, strictly sober; life experience in all branches, wants steady position on place where good stock is grown; best of references. Please state wages. Florist, 527 Courtland Ave., New York.
GARDENER, Scotch, married, wants position; capable of taking charge of gentleman's place; life experience with fruits, flowers and vegetables; under glass and outside; good references. Address G. A., care Florists' Exchange.
SITUATION wanted by practical florist, with ten years' experience in American Beauty and tea roses; carnation, chrysanthemums, violets, palms, ferns and general stock. Good references. Address F. P., care Florists' Exchange.
SITUATION wanted as working foreman on commercial place where roses are grown principally; have had 18 years' experience; I am confident of giving satisfaction to anyone who may need same. A. R. Sampson, West Summit, N. J.
GARDENER, florist, foreman, 25 years' experience in all branches; greenhouses, hot beds, landscape, vegetables; can manage gentleman's place; handle men; widower, 43. Swiss-French. Address Gardner, 136 West 26th St., New York.
GARDENER-FLORIST, 33, married (one child), wants steady position; thoroughly understands all branches of gardening; 15 years' practical experience; good orchid grower, well recommended. Address Leabey, 37 East Liberty St., Waterbury, Conn.
POSITION wanted, Swed, 33, married, one child; strictly sober, life experience, roses, carnations, and general stock; good propagator and care of young stock; best of reference. Please state wages. Address H. C., care Florists' Exchange.
COMPETENT landscape gardener, good hand on rocky and rustic work, used to handling large gang of men; wants position with contractor, to take charge of contract; sober and reliable; state wages. Address F. M., care Keilly, 320 East 82d St., New York.
GARDENER, 40, with 24 years' practical experience in growing cut flowers, decorative and bedding plants, desires permanent position, or would rent small place 5 to 10 greenhouses near New York. Address with full particulars, Gardner, 70 Lott St., Flatbush, L. I., N. Y.
GARDENER and florist, 33, married, with 23 years' practical experience and highly recommended, desires situation on private place with greenhouses; four years as head gardener in last position. P. G. Box 435, Tarrytown, N. Y.
FIRST CLASS gardener and florist, German, married, age 31, wishes position as head gardener on private place with glass; 17 years' experience in all branches of horticulture and horticulture; five years in charge of present place; highest references. Address C. F. Hess, Danby, Vt.
STEADY position wanted as head gardener or working foreman on gentleman's or commercial place, by German, sober and reliable; 35, married, 2 children; 20 years' experience as grower of cut flowers, pot plants, vegetables, fruits, landscape gardening and hybridizing. Address H. F., care Florists' Exchange.
SITUATION wanted by German, 26 years of age; married, no family; on gentleman's private place; 10 years' experience with landscape work, pruning fruit trees, vegetables, greenhouse, cut flowers. Will be ready to take private place by March or April. Address M. Relpen, care James P. McQuaid, Upper Nyack, N. Y.
WANTED—By March 15, position with first-class commercial firm making a specialty of carnations and roses in vicinity of New York or Boston. Twenty years at the florist business; good private place would be accepted; best of references from present employer and others; state wages given. Address H. B., care Florists' Exchange.
AGENCY wanted. An office manager of several years' experience in Illinois, now permanently located in Florida, desires agency for Florida, east coast, for any article suitable to this climate and territory. Correspondence invited from any manufacturer who wishes to extend his trade in this direction. W. H. Lambert, 513 Magnolia St., Jacksonville, Fla.
SITUATION wanted. Gardener, 30 years' experience, married, no children; desires position; capable of taking charge of gentleman's place. Landscape gardening, fruit, vegetable, outside and under glass. Best references. Salary \$75 and cottage. Disengaged March 1st. Address C. N. H., care Dummet & Wagner, Mt. Vernon, N. Y.

HELP WANTED

WANTED—Two single men for general greenhouse work, cool experience necessary. Apply Chas. L. Stanley, Plainfield, N. J.
WANTED, at once, a rose grower; only those with experience need apply. E. G. Asmus Son, Closter, N. J.
MAN wanted in a small commercial place, one who understands general greenhouse work; single man preferred. Address Box 55, Port Jervis, N. Y.
WANTED—Two men for rapid pottling; must come prepared for work February 27; good wages right people. I. H. Eisenberg, 440 Alhert St., Long Island City.
WANTED—Young man for general greenhouse work; must have some experience; state experience and wages wanted. Address P. C. Co., Ltd., 504 Liberty Ave., Pittsburg, Pa.
WANTED, a man to take charge of planting and must be thoroughly experienced and capable of handling men. Address G. E., care Florists' Exchange.
WANTED—Specialist, to grow pot roses to perfection for the wholesale trade; there are 50,000 of best varieties in 4 to 7-inch pots. Unquestionable testimonials required. N. Studer, Wholesale Plant Grower, Washington, D. C.

WANTED—A bright single young man to work in a nursery; one who has had some experience; steady employment and good pay. Answer by letter only. F. Von Hoffmann, St. James Building, Broadway and 26th St., New York City.

ROSES

Cutting—Shipping—Marketing.

In order that the rose grower may have the very best results from his labor, it is imperative that the marketing end of the business be treated with the same care and supervision as is given the growing end, for however skillful he may be in the production of choice flowers, if they are not put on the market in as fine condition as when they are cut from the plants, the grower's efforts all go for naught.

After all possible care has been taken to grow good roses, their market value will be further enhanced if they are delivered into the hands of the wholesale dealer, or commission man, in the most perfect condition possible, and to neglect this feature in any way only tends to place the stock at a disadvantage in the market, and result in a monetary loss to the producer.

The cutting of the flowers is a very important matter, and should not be left to the care of boys or inexperienced men. The buds should be cut just as the petals begin to unfold, when the tip of the bud is ready for bursting and the outside petals have reached their color stage. If cut before that stage has been reached, they will not develop perfectly afterward; and if allowed to mature much further than that on the plants, they will continue to open after being cut and packed in the boxes so that they are not fit for much after they reach the dealer. It will thus be understood that there is a certain stage of the bud's growth at which it can be cut and its development arrested for the time being, and afterward, when it has been put in water and placed in a warm temperature, it will proceed in its growth until it reaches its full size, retaining its fragrance and freshness just as perfectly as if it had been allowed to remain on the plant until its growth was finished.

The cutting should be done in the early morning, and each bud should be cut with as long a stem as possible, without any cutting back of the old wood, though at least two eyes of the new wood must be spared, as this is necessary in order to keep the plants in vigorous health. Immediately after cutting, the flowers should be placed in deep water jars, where a goodly portion of the stems will be submerged, and the jars kept in a cool room—a room where the temperature remains anywhere between 40 and 45 degrees—and here they should remain until they are graded and packed ready for shipping, which will be done either in the evening or very early the following morning, according to the distance which they have to travel.

Before packing the flowers they must, of course, be sorted and graded, and to do this conveniently and according to the established rules for grading, a suitable bench or table must be provided in the packing room. The grading table must be covered with cloth or paper to prevent the flowers from getting bruised; and a scale of measurements should be marked on the table so that the grade to which each flower belongs can be told instantly by laying it over the measured distances. It should be remembered that the measurements do not include the flower, but the stem only; that the flower must be good to class it

Box No. 2—Containing 226 Roses, Showing the Ideal Method of Packing.

in any grade above a number two, and that, however long a stem any flower may have, if the head is not good, it might as well be cut shorter and put in with the number twos, as a long stem will never make a poor flower into a good one. The measuring marks on the table then, for all varieties excepting American Beauty, should be as follows, which is the standard adopted by Moore, Hentz & Nash, dealers, of New York. Make one at 6 inches, the next at 7 inches, the next at 10 inches, next at 16 inches, next at 18 inches, and the last one at 24 inches. Flowers with stems reaching over the furthest mark are specials; those 18 inches or over are fancies; those 16 inches or over are extras, those 10 or over are No. 1, those of 7 inches or over No. 2, and any under the 6-inch mark are No. 3. The measurements for American Beauty are: Specials 36 inches and over, fancies 25 to 35 inches, extras 20 to 24 inches, No. 1 15 to 19 inches, No. 2 10 to 14 inches, No. 3 5 to 9 inches, No. 4 anything shorter than 5 inches. These grades can be safely followed when shipping to any market, as they are a recognized standard.

The style of box used for shipping will have to depend a good deal upon the distance to be traveled, though in all cases the flowers should be in stout wooden boxes so that bruising or crushing will not result to the contents; and, although some growers use cardboard boxes for packing, such boxes are finally put, several together, into a stout wooden one, so that no damage from crushing can take place. We have had photographed two boxes of flowers, taken just after arrival at the warehouse of Moore, Hentz & Nash, New York, and these illustrations will serve to show how the flowers arrive in the market when properly packed. The boxes here shown are both of the same length—50 inches, and about 6 inches deep. One is 14 inches wide, while the other is 16 inches wide. These boxes are such as are generally used for all roses, excepting American Beauty, boxes for which have to be made longer on account of the greater length of stem they have to accommodate, though the methods of packing are the same.

With the roses all graded, the packing is then commenced. The box is first lined with paper. Newspapers are the best and the cheapest. A roll or wad of paper is laid across one end; the wad is for the purpose of laying the heads of the first row of flowers on, and requires to be no more than two or three inches wide and about two inches high. Special or fancy blooms are first put in; the heads are laid evenly and close together across the end in a straight row; this is followed by a second row, close up and between the flowers in the first row, but never on top of these; and so row after row is placed until the stems begin to touch the other end of the box. Then a piece of oiled paper is laid on, and the packing of next shorter grade commenced, continuing in this manner until the box is filled, the number three being the last put in, as they require but a few inches of room for the stems.

It will thus be seen that we have utilized every inch of space in the box, and each grade contained has ample room for the stems to lie straight. We

may observe here that if the boxes have a long distance to travel and are likely to be handled roughly and thrown on their ends, it is a good plan to let the first few rows of flowers put in be of the shortest grades; then if any are bruised by being jammed against the end of the box, the loss would be smaller than if the specials were bruised.

To give an idea of the quantity carried in such boxes as we are describing, we may say that box No. 1 held 10 fancies, 18 extras, 23 No. 1, 20 No. 2, and 300 No. 3, a total of 376. This box had been shipped at 2 p.m. on Tuesday and was photographed at 8 a.m. the following morning, and the flowers were perfectly fresh. Box No. 2 contained 43 fancies, 73 extras, 49 No. 1, 17 No. 2, and 44 No. 3, a total of 226 flowers. It had traveled all night in the overland express from Madison, N. J., and the flowers were all in perfect condition.

In each box is enclosed a slip of paper, stating just what the contents are. For the convenience of both grower and dealer a printed form like the following is used and filled in properly by the packer:

To MOORE, HENTZ & NASH,

From

THIS BOX CONTAINS

Roses	Special	Fancy	Extra	1	2	3	Carnations
American Beauties							
Brides							
Maids							
Gates							
Liberty							

During the Winter months no icing or sprinkling of the flowers is needed before shipping, but in the warm weather a slight sprinkling of the stems is necessary and, if the journey to market lasts over five or six hours, chipped ice should be freely scattered among the stems, which helps to keep the flowers cool and fresh for a long time.

In conclusion, we would say that every grower should visit his commission dealer occasionally, be there in the morning when his own stock arrives, and see for himself the condition in which the flowers are after their journey. This will help him to improve on his packing methods, if possible to do so, and will also be a favorable opportunity for him to compare his stock with that produced by other growers who are more or less experienced than himself.

American Carnation Society.

Varieties Registered.

By F. H. Kramer, Washington, D. C.

F. H. KRAMER, a cross between Mrs. Thomas W. Lawson and The Marquis; color a shade brighter than that of Lawson; flower a trifle larger, with no short stems in the Fall, and does not burst. In growth it is stronger than any carnation we have grown; and is entirely free from disease. A continuous bloomer and stems stand without support.

ALBERT M. HERR, Secretary.

Box No. 1.—Containing 376 Roses Packed from Each End of the Box; a Method that can Only be Followed When the Flowers are Short-Stemmed

WINDOW GLASS—Higher prices are still talked of, but none has yet been announced as far as can be learned, says The Metal Worker. With some factories hampered for want of fuel and the output of others reduced by various causes it is estimated that the total output of glass will not greatly exceed demand up to the time factories resume operations in the Fall. New York quotations are as follows: First two brackets, single, 90 and 15 per cent. discount; larger sizes single and all double strength, 90 and 5 per cent. discount; all from jobbers' list of October 1st, 1903.

The Musa or Banana Tree.

This beautiful plant is unsurpassed for producing tropical effects. The accompanying illustration shows a row of musa alongside a walk leading from the veranda to the veranda at the home of Frank Cummings, Meridian, Miss. There is also a row on the opposite side of the walk; and in Summer the great wide leaves arch overhead, the effect produced being that of an avenue of palms in the tropics.

All through the South one sees large clumps and single specimens of the musa, and where a little extra attention is given them they are very beautiful, often growing to be 20 feet high and 8 to 10 inches in diameter. The leaves are often two feet wide and eight feet long. They will stand the hardest storms, never breaking, except that the leaves will be torn into fringe hanging from their ribs, which is quite as pretty as the perfect leaf.

Very few persons realize how easily this grand plant can be grown, even as far North as New York. Take a strong root, or bulb, and start it in a large pot, or tub, in very rich earth, keep in a temperature as near 5 to 80 degrees as possible, and when all danger of frost is over plunge the tub in the ground, in the sunniest location possible. Give plenty of water and liquid manure, as they are gross feeders, and one will be surprised at the wonderful growth the plants will make. Be sure to have the tub large enough for plenty of root growth. When frost has killed the foliage in the Fall, remove the tub to a frostproof cellar, and in the Spring select the strongest sprout—not the old stump—and start over as before. They increase from the roots, but all of the sprouts should be kept down until late in the Summer, so that the main plant may get all of the nourishment. After the plant has passed the fast-growing stage the sprouts may be allowed to grow in order to get strong roots for the next year. The roots of the musa are hardy with a little protection as far north as Tennessee.

There are many varieties of the musa; we find *Musa orientum*, one of the fastest growing sorts, the *Musa paradisiaca*, or Orinoco banana, the largest and hardiest. Anyone who tries the musa will be well repaid. W. W. C.

Salvias.

Considering the size of this genus of plants, it is not very well represented in the hardy herbaceous collections. The different species, as a rule, are somewhat coarse-growing, and while the flowers are interesting and pretty the proportion of bloom to the quantity of foliage they produce is not sufficient to make them very showy. While this is characteristic of the hardy herbaceous kinds, it is not so with the tender ones, as evidenced by the *Salvia splendens* or scarlet sage, and *Salvia patens*. Owing to the great number of species and the range of color to be found in the family, it should be a good field for the hybridist and plant breeder.

In the case of the *Salvia argentea*, the foliage is much more attractive than the flowers, so that a good vigorous growth is an advantage. The large, wedge-shaped leaves are very thickly covered with wool, like silvery hairs, making the plant a very striking object that never fails to attract attention. In the vicinity of Philadelphia it has proved itself well able to stand the Winters, but from all accounts it is not so reliable farther north. The first year from seed it is, perhaps, at its best as a foliage plant, because as soon as the flower stem appears the leaves lose their tomentose condition. The plants bloom the second year from seed, about June. The inflorescence is a huge panicle, but the flowers being white, they do not contrast very well with the foliage. The flowers not being so desirable they should be pinched out as soon as they begin to make their appearance, which will have a tendency to lengthen the season of attractive foliage.

Salvia pratensis is, perhaps, the best known among the hardy sorts. It has violet-colored flowers; there are also rose and white varieties.

Salvia nutans is not spoken of very highly in Bailey's Cyclopedia as a garden plant; with the writer it is a favorite and equal to any of the hardy kinds. Its habit is excellent, and it does not have the coarse appearance of some of the others. The basal leaves stay close to the ground; and the flower stems are thrown up to the height of about three feet, so that the lavender blue flowers, forming the nodding inflorescence, from which it takes its name, is well in evidence.

Salvia glutinosa is rather a coarse growing subject, that has not very much to recommend it except the color of its flowers, which are yellow. As the name indicates, the plants are rather sticky, prohibiting its use as a cut flower.

Perhaps the best of all the hardy salvias is *azura grandiflora*. From one point of view this plant lacks what the others have too much of, as the foliage is extremely sparse. The plant is straggling in habit, so should always be staked and tied up, or the flowering stems, that are usually about five feet high, will sprawl all over the place and look very untidy. ERNEST HEMMING.

CLUB AND SOCIETY DOINGS

THE TRI-CITY FLORISTS' ASSOCIATION held a meeting Feb. 12, at the home of Wm. Knees, Davenport, Ia. The session was devoted to the nomination of officers for the next election, which takes place at Odd Fellows' Hall in Davenport, March 13. The members spent the remainder of the evening in a social way, and were pleasantly entertained by Mr. Knees.

LENOX (MASS.) HORTICULTURAL SOCIETY held its annual ball on February 14, about 250 guests participating. A fine buffet luncheon was served by Harry Peters. The committees in charge of the ball were: Reception, R. A. Schmid, A. J. Loveless, E. Jenkins, G. H. Thompson, A. McConnachie, E. J. Norman; floor, W. G. Clifford, Ralph Gorham, C. J. Russell, J. Bosworth, Frank Howard; arrangements, William Woods, S. Carlquist, A. J. Loveless, F. Butler, F. Hermans.

The regular meeting of the Society was held February 18, President R. A. Schmid in the chair. The Housatonic Agricultural Society held an institute with this Society, and introduced Professor George E. Stone, of Amherst, Mass., who gave a public lecture on "The Relation of Science to Agriculture." Professor Stone dealt chiefly with the experiments making at Amherst. His talk was very interesting. G. F.

MUSA ENSETE.

On Grounds of W. W. Cummings, Meridian, Mass.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY had a very lively meeting on February 7 at Oceanic. The ball committee reported all bills paid and over \$50 surplus on hand. President George H. Hale had some very fine violets on exhibition. Several members of the Society have offered prizes for an essay on "Rose Culture Under Glass." The assistant gardeners only can compete for these prizes. The papers must be sent in before March 3 to the secretary, H. A. Kettel, Fair Haven, N. J. Several other subjects will be taken in, at consecutive meetings, and prizes awarded for best papers on same. The judges on these papers are: H. A. Kettel, N. Butterbach, William Turner, George H. Hale, and W. W. Kennedy. Different committees appointed by the president are: Investigating committee, William Turner, N. Butterbach, and H. A. Kettel; executive committee, C. H. Walling, T. S. Barkuloo, H. Longstreet, John Yeomans, and P. Hicks; exhibition committee, H. McCarron, W. W. Kennedy, H. A. Kettel, and William Turner.

RHODE ISLAND HORTICULTURAL.—The annual meeting of the Rhode Island Horticultural Society was held in Providence January 18. There was a good attendance and the meeting was an interesting one. The society has about 300 members in all. The report of the secretary, Charles W. Smith, showed that ten meetings had been held during the year, with an average attendance of 65. The secretary deplored the lack of a building for a home of the society, and suggested that the interest of the society would be better maintained if the annual meetings could be made more important events, with an all-day session and a banquet in the evening. Samples of a new medal to be used in cases of special awards at the exhibitions were shown at the meeting. The medal bears a likeness of the new Rhode Island State house in bold relief on the face, and on the reverse a wreath, with the seal of the State and a blank for suitable inscriptions. The election of officers resulted as follows: President, Marcus M. Burdick; secretary and treasurer, Charles W. Smith. The society appropriated \$25 for the purpose of providing refreshments at the regular meetings.

THE UTICA (N. Y.) FLORISTS' CLUB held its third annual carnation meeting and banquet (the ladies included) at Hotel Martha, February 16. There was a very large attendance, and the floral display was fine. Among those present from out of town were: Seward Hakes and wife, Theo. Schesch and wife, Jacob Friis, Iilon, N. Y.; A. Grassl, Barneveld; Messrs. Barclay, Herkimer, N. Y.; J. O. Graham, Little Falls; M. Powers, Canajoharie, N. Y.; John Humphrey, Mr. and Mrs. Byam, Rome, N. Y.; P. R. Quinlan, J. Robertson and Robert Dunne, Syracuse, N. Y.; Mr. Kilbourn, Clinton, N. Y.; John Auld and wife, New Hartford; Mr. and Mrs. Owen and Mr. and Mrs. W. A. Rowlands, Whitesboro, N. Y.; Mr. and Mrs. George Benedict, Yorkville, N. Y.

The exhibition, which was held in several upper rooms of the hotel, included new varieties in carnations and some roses which are to be sent out this year. C. F. Seitzer, Utica, showed *Enchantress*, a sport of the same variety in deep pink, and a 1904 seedling, which was a novelty or freak. Frank McGowan, Utica, had sweet peas *Mont Blanc* on stems 10 inches long, very fine; also *Blanche Ferry*, equally good; *Flamingo* carnations and violets. Wm. P. Pfeifer, Utica, showed a fine vase of *Enchantress* and Mrs. Lawson carnations. Wm. Mathews, Utica, had a large and very attractive bouquet of white lilac and Mrs. Lawson carnations. Robert Boyce, Utica, exhibited a fine vase of *Enchantress* carnations; Donald MacLane, Utica, had an excellent display of carnations in variety. W. A. Rowlands, Whitesboro, showed two vases of the Red and White Lawson carnation; excellent. J. J. Williams, Utica, displayed a large rhododendron in bloom; also cypas leaves, wheat sheaves, immortelles and other florists' supplies. J. O. Graham, Little Falls, had fine *Enchantress* carnations. John Murchie, Sharon, Pa., sent a white seedling carnation No. 23; it has extra large and heavy stem—a very fine flower, bound to win. H. Weber & Sons, Oakland, Md., exhibited *My Maryland*, a very handsome white carnation. Davis Bros., Bloomsburg, Pa., showed three varieties of pink seedling carnations, all very promising; also *Crisis*, a very bright scarlet, and *Mary Albert*, white. W. J. Palmer & Son, Buffalo, had a large display of the Red Lawson, 65 blooms, all fine specimens. This was one of the most attractive vases in the show. F. A. Blake, Rochdale, Mass., sent a red seedling of great promise, with fine heavy stem and of good color. E. A. Nelson, Indianapolis, Ind., exhibited the improved Nelson, a fine flower, color of *The Marquis*. John E. Haines, Bethlehem, Pa., showed his new red seedling, *John E. Haines*, to be sent out in 1906. It surely is a grand flower, good in every way as it was seen here. P. R. Quinlan & Co., Syracuse, N. Y., had a large and fine display; it included, in carnations, *The Queen*, *Vesper*, *Lady Bountiful*, all fine specimens, and *The Marquis*, as good as ever; also *Flamingo*. In roses, Quinlan & Co. had a large display, which included *Mme. Abel Chatenay*, *Ivory*, *Bridesmaid*, and *Golden Gate*, all done well. The florists took special interest in a new rose called *Wellesley*, grown by Alex. Montgomery, Natick, Mass., and not yet on the market: It is a beautiful pink rose, and was greatly admired by every lady and gentleman present.

The florists, their wives and lady friends enjoyed an inspection of the flowers from 8 o'clock until 10, when all were invited into the large dining room of the hotel, where a fine dinner was served. Professor George C. Hodges acted as toastmaster. The first toast was "Floriculture, Past and Present," responded to by Wm. Mathews, who has been a florist for 36 years. He is the "grand old man" of the Florists' Club. Mr. Mathews was received with applause. Thirty years ago, he said, there were but few florists in Utica, and there was less work and worry among them than there is to-day. The speaker named some of the florists who were then in business here, and some of the flowers that were then popular. It was a pretty poor day when they did not sell all the way from \$15 to \$50 worth of flowers. Prices were better then than now, and many flowers brought a dollar per blossom; even flowers which to-day would be thought commonplace realized \$2 per dozen. The cost of production was then less.

Frank J. Baker, president of the Florists' Club, replied to the toast, "Posies and Politics." He said he knew a little of posies and he had friends who could tell him about politics. The names applied to our business will sometimes be appropriate in politics. When you look at a bunch of cuttings, and find them well rooted, you say "That's a good strike"; and among a certain class of politicians there are said to be strikes, especially when there is a corporation around. You prune a shrub and say it is well trimmed. Many candidates know to their sorrow the meaning of the phrase "well trimmed." Occasionally we unite a weak scion on a strong graft; and there is a set of politicians who thrive on graft. Further researches might be dangerous to the friends of posies.

"The Ladies" was responded to by Seward Hakes of Iilon, vice-president of the club, the toastmaster saying that the Utica members had enjoyed the hospitality of Mr. Hakes' home extended by the ladies of his family. Mr. Hakes said the theme is one nearest and dearest to the hearts of all. He referred to the trouble which Eve made for the gardener in Eden, and ever since she has had something to say about the conduct of the garden. The florist's is one of the few lines of business in which the whole family can engage, and the good taste and good sense of the ladies contribute much to its success. In certain districts of New York the ladies have become sep-

arated from the business, and there has been trouble in consequence.

"Our Guests" was responded to by Mr. Roberts of Syracuse. He hoped that that city would have a similar organization some day, and spoke of the value of sociability among the members as an advantage to all.

It was about midnight when the company broke up after having spent a most delightful evening.

For the success of the entertainment the toastmaster returned thanks to the committee in charge, which consisted of William E. Hermant, Henry G. Martin, S. A. Pinkstone, Henry Seitzer, Wm. Harness, Frank McGowan, James Toney, assisted by the secretary, J. C. Spencer. One hundred sat down to the well-spread tables. The next regular meeting will be held March 2.

QUIZ.

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY held its regular meeting last Wednesday evening. President James J. Sullivan in the chair. The prize schedule for the coming year was discussed and arranged. So many matters were introduced in regard to the prizes and exhibitions to be held that it will take another meeting before a full report can be given out as final. The executive committee advised the society to ask the State Legislature to grant a public hearing in regard to erecting a greenhouse at the Agricultural College at Kingston, R. I.; this the society was only too pleased to do, as the good work being done by the college is everywhere acknowledged. The president spoke in regard to Bulletin 100, issued by the R. I. College, which contains many valuable formulas and notes on spraying trees and plants. John Robert Clark, seedsman for the George A. Weaver Company, and J. B. Parsonage were both elected active members. The next meeting occurs on Wednesday, March 1.

F. W.

PENNSYLVANIA HORTICULTURAL SOCIETY.—The regular monthly meeting of this society was held at Horticultural Hall on Tuesday afternoon, and was very well attended. The lecture was an illustrated one by Mr. R. F. Powell, superintendent of the Philadelphia Vacant Lots Cultivation Society, and was descriptive of the work doing by that society in giving employment to poor and unemployed people. The most interesting part of the lecture to city residents was that relating to the school gardens established in various parts of the city, the taking of vacant lots all of which were usually eyesores to the neighborhood and turning them into vegetable and flower gardens, all the work being done by school children under supervision of the teachers from instructions received from those designated by The Vacant Lots Society. In all these cases the society supplies seeds, tools and fertilizers and plows the ground. The vegetables grown are the property of those who work the ground. This society is doing a very good work, and not only is providing for the poor people, but also improving their health by open-air exercise.

The schedule of prizes for the chrysanthemum show of the Pennsylvania Horticultural Society was reported by the Committee on Establishing Premiums. Some changes were made, most noticeable being the increase of value of some of the cut flower prizes, in view of the visit here next November of the Chrysanthemum Society of America.

The exhibits at this meeting were cyclamen, of which Mr. P. A. B. Widener (Wm. Kleinbeinz, gardener) had the best, his pair being one a crimson, the other a crimson shading to rose pink. Mr. J. Vaughan Merrick (F. Ibbotson, gardener) came next, with a red shading to pink and a fine plant with nearly white flowers. There were some very good exhibits of *Primula obconica*. Mr. C. B. Newbold (Samuel Batchler, gardener) had two of the finest plants seen here for some time—one a pink, the other light red; but, unfortunately, they were frozen in coming in. The prizes were taken by plants with pink flowers from Mr. Louis Burk (Samuel Irvine, gardener), and Mr. John W. Pepper (Wm. Robertson, gardener). This exhibitor also staged two vases of carnations *Enchantress* and *Prosperity*, both fancy flowers. John Kuhn, Fifth and Tabor streets, this city, exhibited three of his seedling carnations, No. 13, seedling 99, and *Prosperity*, a light pink, which shows promise of becoming a good commercial variety; Nos. 15 and 16, seedling 99, and Mrs. Lawson; both of these are like Mrs. Lawson in type, but differ a little in color, and apparently are longer in stem. All three seedlings have a very good calyx.

DAVID RUST.

BOSTON GARDENERS' AND FLORISTS' CLUB.—The regular monthly meeting of this club was held in Horticultural Hall, Tuesday evening, with an attendance of about fifty. President Wheeler called the meeting to order. A communication was read from Mr. Pettigrew, resigning his presidency of the entertainment committee. It was not accepted, however, and a committee was appointed to wait on Mr. Pettigrew, asking him to reconsider his action, which he finally did, to the eminent satisfaction of the club.

A lively discussion took place on the form of certificates to be issued by the club, and it was finally agreed to appoint a committee to draw up forms of certificates and report at next meeting. The president appointed on this committee: Messrs. Farquhar,

Craig, Morton, Fisher and Stewart. A motion to amend the by-laws so that the executive committee should be appointed by the chair, instead of elected, was lost after a lively discussion.

There were on the exhibition tables a few good things, including a vase of the new rose, *Rosalind Orr* English, and carnation *Cardinal* from the E. G. Hill Company, of Richmond, Ind. The former was awarded a certificate of the second class, and the latter honorable mention. A. Roper, of Tevksbury, Mass., exhibited a fine vase of his seedling variegated carnation, *Chester Roper*, for which an honorable mention certificate was awarded. Votes of thanks were passed to Alex. Ogg, for a display of amaryllis; to Thos. Westwood for canna *Admiral Dorey*; to H. A. Stevens Co. for carnation *Flamingo*, and to George Anderson for seedling carnations and display of cineraria blooms.

The speaker of the evening was W. W. Rawson, of Arlington, and he gave a very able address on the advancement of the growing of vegetables under glass in the last twenty-five years.

Mr. Rawson said in part: "In looking back over a period of twenty-five years, we can see many changes that have taken place, not only in business, but in the growing of crops and the quantity grown; also in the manner of selling them. The idea has been, and is growing more so, of concentration; that is, growing more and larger crops on smaller areas. In order to do so the use of greenhouses has become more and more extended, and to-day no one in the vicinity of large markets can afford to be without a number of houses. There are fully twenty times as many houses as there were twenty-five years ago; then I had three; to-day I have thirty-six. Not only has the number increased, but also the knowledge of the management of them has become more universal. In most houses today three crops are grown, sometimes four; the first is lettuce, the second either lettuce or radishes, and the fourth cucumbers. When four are grown, three are lettuce, and the fourth cucumbers; but the crop is somewhat later than when only two crops of lettuce are grown; that is, the first crop of lettuce is pulled for market about November 1, the second about the middle of January; then the cucumber plants are set out, and they will begin to bear about March 1. When three crops of lettuce are grown, the first cucumbers will not be picked before the 10th of April. When there are but few houses, two crops of lettuce is the best plan; but if there are a number of houses, both ways are adopted."

Mr. Rawson then spoke of the consumption of the various vegetables and continuing, said: "It is very difficult to grow good headed lettuce in the months of December and January, because of the cold and stormy weather and long dark nights. We have tried to offset some of this by the use of electric light, but it is not quite equal to the sun. The crop will grow as much in one day in March as in two days in December and January. Owing to their requiring a higher temperature, few houses are run to cucumbers in December and January. The difference between lettuce and cucumbers is like that between carnations and roses, only the cucumber is much more tender and more difficult to grow."

Speaking of construction of houses, Mr. Rawson said that the modern houses were so much superior that they lasted much longer, and it was more profitable to have them, although the houses he first built, twenty-five years ago, lasted twenty years. For size of house he preferred one 4 feet high in front, 6 feet at back, and 18 feet in center and 30 feet wide, and said that his houses of that size grew the best crops. The crops get more light and a better circulation of air. The requirements to grow a perfect crop are air, light, heat, moisture and the necessary fertilizers that the crop requires; and if the grower understands the crop he can grow a perfect crop under glass with all the necessary materials. The soil acts as the machine, and the materials to be used put into the soil, or machine, properly managed, will produce a crop the same as putting into any machinery the proper materials to produce a manufactured product. The better the materials used the better the product will be. It is a well-known fact that nearly every plant has some injurious insect that seems to delight in devouring the plants, and therefore, some means must be resorted to to destroy them. We are obliged to fumigate in various ways and also to spray with different materials, most of which are very effective. Sterilization of the soil eradicates them as thoroughly as any one thing. They cannot live in a temperature of 212 degrees, and all germs and insects are completely removed from the soil, and they do not appear until new ones are formed. This method of sterilizing the soil renews it so that it is like virgin soil, and will produce much better crops than before the process was applied. It is done to a large extent, and the result has been wonderful, in most cases. After the soil has grown three or four crops the process is repeated. It not only destroys all insects, but all weed seeds, and none will grow for some time after the soil is sterilized. It works as well with potting plants as otherwise.

Mr. Rawson then explained at length the manner in which he first experimented with sterilization, and the method he adopts to-day.

The speaker then said a few words on the various crops that are grown, speaking of parsley, lettuce, cucumbers, tomatoes, beets, rhubarb, asparagus, radishes, beans, spinach, melons and mushrooms.

Mr. Rawson said that a good plan to follow was the advice often given by the late E. N. Peirce. If you are to start in the greenhouse business, build first the chimney, and make it large enough; next add the boiler house and boilers, and finally the greenhouses; but, by all means, have the former five or ten times the size of what will be at first required.

Mr. Rawson's talk called forth a lively discussion. Mr. Montgomery agreeing with him in some things he had said about heating, but stated that the modern idea was not to build a chimney but install a blower. He also called attention to the fact that acetylene gas was a better light than electric for producing a quick growth on crops.

To a question from Mr. Fisher as to the cost of sterilizing soil, Mr. Rawson said that half an acre could be done for \$150. Others taking part in the discussion were Messrs. Finlayson, Cowles, Craig, Anderson and Duncan. A hearty vote of thanks was given to Mr. Rawson, after which he invited the club to visit his Arlington establishment on their next field day, which will be March 11.

The meeting broke up at a late hour, and it is to be hoped that some of our Western craftsmen will be present at the next meeting, March 21, two days before the meeting of the American Rose Society. J. W. D.

CHRYSANTHEMUMS,

As Grown in New Orleans, La.

In a recent number of the *Picayune*, of New Orleans, La., C. W. Eichling, florist, gives the following practical information on the subject of growing the chrysanthemum in that section of the South, where Mr. Eichling believes, the plants can be cultivated a profit.

Chrysanthemums are best propagated from cuttings. Florists do not set out the suckers or side shoots, as often done by amateurs. These suckers or divisions appear very early in the Spring, and if not planted out immediately they become hard on the old stock, and even if planted early, the period of growth is too long for them to remain soft, and a hard, woody stem on a chrysanthemum has never yet produced a good flower. Cuttings root easily on a warm bed in a few inches of coarse clean sand. Use only strong, soft cuttings, water well after planting them in the sand, and keep them shaded against the sun, but give plenty of light otherwise.

They root in about ten days; then they are taken up with all the fibrous roots, and planted into two-inch pots, using fairly good soil that permits of easy drainage. In the cutting, or propagating bed, the young plant has to subsist on a water diet alone. It would, therefore, be risky to shift it immediately into a very rich soil. Many of the plants would die. As soon as the young plants are rooted through the small pot they get a shift into a three-inch pot with much richer soil, to induce a healthy growth and prepare the plants for the open ground into which they go about the end of April. The cuttings are made from January until March, according to the early and late blooming varieties. Some that are wanted for Christmas flowers may be propagated in the open ground, under a slatted shed or canvas, as early as July and August. In New Orleans our most valuable crop is taken off on All Saints' Day, November 1, price for fancy flowers ranging from \$3 to \$6 per dozen retail, and second and third-class as low as \$5 per hundred.

The beds on which chrysanthemums are to be grown should be made of rich soil, high and well drained, a heavy loam, with a liberal mixture of cow manure or bonemeal, suits them better than high, sandy soil. The plants are set out in beds, in rows one foot apart, and six inches between the plants. As we do not desire more than two flowers per plant, this distance will allow the flowers to attain six inches in diameter without rubbing each other. We allow three feet between the beds to permit of free passage and easy cultivation. After planting, give a good watering. As the plants are set out from pots they require no shading, taking hold of the soil immediately. When the plants are about one foot high we pinch the tops off the strongest growing one, which causes them to make several shoots, of which we allow the strongest to grow. The selection of these top shoots must be made as soon as they are an inch or two long so as to avoid a loss of growth in unnecessary shoots. The weaker plants are never topped with intention to grow one single flower on them. The question whether it pays to grow one large flower per plant or three or more of smaller size, depends largely on the demand in different localities. Some people prefer to pay 50 cents for a single, extra choice flower of six to eight inches across to the bunch of smaller ones.

The only insect enemy the chrysanthemum has is the green and black fly, which can easily be kept down by a liberal application of tobacco dust and stems.

It is now time to stake or tie the plants as they grow taller, in order to protect them against injury by wind and to keep the branches perfectly straight. We drive a stake at each end of a row and stretch No. 16 wire the first about a foot from the ground, the second about two feet, and a third to tie the stems as near to the flower as possible. The plants are set out until the flowers are cut, the chrysanthemums must not be allowed to get dry, and as long as drainage is perfect there is little danger of overwatering, except during the last stages of perfecting the flower, when water should be given rather sparingly. The soil was well prepared and enriched before planting, additional fertilizing or feeding is unnecessary until the buds are formed and selected.

There are two kinds of buds on chrysanthemums. The first, or crown bud, appears about the beginning of August, and stands single in contrast to the terminal or final bud, which nearly always comes in a cluster of from three to six, and perfects the best flower. The crown bud is imperfect, and should not be allowed to grow. Only under very favorable circumstances, such as cool, moist days and nights, do early crown buds ever amount to anything. The terminal bud on early varieties appears at the end of August and early in September. As soon as the cluster of buds separates and the bud stand on their stems, the cluster buds are of the size of large pin heads, the best, or largest one of them is selected for the flower, and all the rest pinched off. The plant is now nearing the end of its growth. No more new leaves are formed, with the exception of the little side shoots, which will appear from each leaf axil, and which must be diligently rubbed out with the thumb nail so as to concentrate the entire energy and sap on the forming bud.

It is supposed that by this time the plant, which is a very gross feeder, has exhausted the plant food contained in the soil, and in order to obtain as large a flower as possible, we give the plants twice a week a watering with cow manure, applied in the consistency of strong tea. Toward the end of September the early varieties will show color. From this time on feeding must be stopped, only clear water given, and the quantity gradually reduced until the flower is perfected. The opening petals are very delicate and waxy; all contact with each other must be avoided. For this purpose we build a shelter over them and cover with canvas; or, still better, with glass, to keep the rain and dew from falling on them and to protect them against the hot sun rays, which easily burn them.

THE ST. LOUIS FLORISTS' CLUB will hold a regular meeting on March 9, at which cash prizes will be offered. All exhibits should be sent, prepaid, to either C. A. Kuehn, 1122 Pine street; H. G. Berning, 1402 Pine street, or F. M. Ellis, 1316 Pine street. The scale of points of the American Rose Society will be used in judging.

Review of the Market

NEW YORK.—With an increase of stock of all kinds, the cut flower market is in a most unsatisfactory condition.

Lilies are unduly plentiful, and one wonders where the Eastern supply is going to come from, as every grower seems to be cutting heavily just now.

Narcissus of all varieties are in abundance, as also are tulips and lily of the valley, with but a meager demand for any of them.

Smilax and asparagus are in fair demand, but taking into consideration how near we are to the beginning of Lent.

BOSTON.—The past week has been one of the best seen in the markets this winter.

ST. LOUIS.—Trade among our retailers the past week was not of a rushing kind, still there seems to be enough doing to keep the help fairly busy.

INDIANAPOLIS.—Since the extreme cold weather set in, business has grown better, but it is not equal to that of February, 1904.

ROSEBURY, N. H.—Our florists have had a very good business, considering the extreme cold weather.

CHICAGO.—Trade conditions have an upward trend, while, on the other hand, there is a considerable decline on prices on almost every kind of stock.

WASHINGTON, D. C.—In consequence of a great many visitors having arrived for the inauguration of President Roosevelt, and this being the height of the social season, the florists have been kept very busy with numerous dinners and receptions.

WASHINGTON, D. C.—In consequence of a great many visitors having arrived for the inauguration of President Roosevelt, and this being the height of the social season, the florists have been kept very busy with numerous dinners and receptions.

WASHINGTON, D. C.—In consequence of a great many visitors having arrived for the inauguration of President Roosevelt, and this being the height of the social season, the florists have been kept very busy with numerous dinners and receptions.

WASHINGTON, D. C.—In consequence of a great many visitors having arrived for the inauguration of President Roosevelt, and this being the height of the social season, the florists have been kept very busy with numerous dinners and receptions.

BALTIMORE.—Business is moving along very nicely, most all stock being used up daily.

NEWPORT, R. I.—Our florists have had a very good business, considering the extreme cold weather.

CINCINNATI, O.—St. Valentine's Day cut quite a figure in business.

LOUISVILLE, KY.—Business, considering all things, is of a satisfactory nature; stock continues to daily improve in quality.

PROVIDENCE, R. I.—There has been no change in prices the past week, everything being plentiful.

LIMA, O.—N. R. Swan will open a flower store here about March 1.

LOOMIS, CAL.—The California Carnation Company was sold on February 11 by Mitting & McGowan to Johnson & Taylor, of Sacramento.

The Fumigating Kind Tobacco Powder. All That Use It Say "There Is Only One". FREE trial five-pound bag will cost you nothing more than the express charges on it. THE H. A. STOOHOFF COMPANY, Tobacco Powder Hobbyists, 116, 117, 118 West Street, New York.

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the **standard treatise** on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a **complete remodeling, revision and extension** as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a **complete encyclopedia** of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of **illustrations**. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with **GENERAL PRINCIPLES**; THE SECOND PORTION is devoted to directions for the **CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS**—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon **FRUIT CULTIVATION** in all its branches, both under glass and outside; and THE FOURTH PORTION upon the **GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS**.

THE GARDENER'S ASSISTANT has been made the **SOUNDDEST** and **MOST PRACTICAL**, as it is unquestionably the **NEWEST** and **MOST UP-TO-DATE**, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticultural Subjects. Write us for a Catalogue.

Philadelphia.

News of the Week.

The celebration of Washington's Birthday brought lots of work to the retail florists, as it seems everyone of high social standing had some kind of entertainment going on. Habermehls Sons were very busy at the Bellevue-Stratford Hotel with table decorations and bouquets for theater parties, Wm. Graham Company had seven affairs to look after; the luncheon of the City Troop to President Roosevelt, 120 covers; the Jewelers' Club dinner, Horticultural Hall, 510 covers; three dinners at the Union League, one of 150 covers and two of 30 covers each; a dinner at the University Club of 120 covers, and a dance at the Manheim Cricket grounds, Germantown.

The Florists' Club celebrated the holiday Wednesday by holding a bowling handicap and having open house as to refreshments, from 2.30 until 11 p. m.; it was well attended.

DAVID RUST.

Rose Night at Philadelphia.

It has been decided by the committee having the matter in charge that the next meeting of the Florists' Club of Philadelphia, to be held Tuesday, March 7, will be rose night. The members of the Florists' Club are anxious to see all the novelties among rose that are likely to become popular. All those having such are invited to bring them to this meeting, or if it is impossible to do so, kindly forward same by express, prepaid, in care of David Rust, Horticultural Hall, Broad street, Philadelphia, Pa.

EDWIN LONSDALE, Secretary.

New York.

The Week's News.

The retail windows are beginning to put forth a very Spring-like appearance, with displays of pussy-willows, Dutch hyacinths, cinerarias, pansies, etc. The weather outside, however, is far from being in unison with these efforts of the florists to convey the impression that Spring is here, for although we have had one or two reasonably mild days, it is still quite Wintry, and the lack of sunshine is most persistent and unusual for this locality.

The general holiday that occurred on Wednesday, the anniversary of the birth of the immortal Father of his Country, did not create any unusual stir in the flower trade. A few dinners and other social events came off, of course, but as regards any extraordinary displays of floral work, there was nothing doing.

Early on Thursday morning a serious fire broke out in the business block located next door to the premises of Clucas & Boddington Co., seedsmen, corner of Jane and Greenwich streets. While the fire proved a disastrous one, it did not, fortunately, spread to the store and warehouse of Clucas & Boddington Co., and, aside from the glass being broken in their front entrance doors, no damage was sustained by them—a lucky escape, indeed.

Paul Benschall, a florist, who for the past four or five years had been in the employ of Siebrecht & Son, died suddenly while attending a ball on Tuesday evening.

J. Walter Reimels, Woodhaven, N. Y., who officiates as a salesman for his father, met with a severe fall last Sunday and has since been unable to leave his home. Moore, Hentz & Nash are, in the meantime, handling his carnations every day.

The proposed city plant market has not yet materialized, and as the season is almost here when the New York Florists' Market Association requires market space, efforts are being made to secure the old location at Canal and Clinton streets, and again erect the tents under which the early morning market can be held.

Ferdinand Mangold, who for 38 years was head gardener at Lyndhurst, the Gould estate at Tarrytown, N. Y., died at the age of 77 years recently, and was interred in the Sleepy Hollow Cemetery, Tarrytown, on Tuesday, February 21.

Wm. Elliott & Sons have just received a consignment of hardy roses, rhododendrons and conifers from Hol-

land. The auction season will be started about the second week of March.

Castor Socclaris and James M. King, florists, got into an argument in the Coogan Building, where the early flower market is held, last Saturday morning, and as a result, Socclaris either has to pay a fine of \$500 or spend six months in prison. King had him arrested for biting him in the cheek.

C. W. Ward is home from a visit to the West.

YORK, PA.—Charles E. Smith, the Jefferson avenue florist, has placed a new delivery wagon on the street. It presents a fine appearance and was built especially for his business.

BIRMINGHAM, ALA.—Hugh Seales, who two years ago purchased the Magic City Floral Co. plant, writes that he now has 22,500 feet of glass devoted to cut-flower growing; roses and carnations being specialties.

ROCKFORD, ILL.—Fred D. Johnston, the florist, who has been sick the past four weeks with heart trouble, is improving. Mr. Johnston contemplates the incorporation of a stock company to exploit the greenhouse business covering the growing of fancy carnations. Probably \$10,000 will be expended in stock in this undertaking.

FIRES.

WASHINGTON, D. C.—In the greenhouse of Frank L. Schulz, February 11. Estimated damage, \$40.

MARIETTA, PA.—On February 11, in the greenhouse of Adam Deppeller; hundreds of growing plants were destroyed.

OKLAHOMA CITY, OKLA.—Fire in Walker's seed store, February 13, damaged the building to the amount of \$100; that to the seed stock was merely nominal.

Finds It Indispensable.

The Florists' Exchange

THE WEEK'S WORK.

Timme's Timely Teachings.

Hydrangeas.

The increasing demand for well-grown plants from year to year has also brought the hydrangea to the front again.

Inexperience often leads some growers to cut back some of the long branches when potting up the Hydrangea Hortensia, in September; the consequence is a lot of fine plants without bloom.

Plants intended for Easter stock should, by this time, be showing their flower trusses plainly, plain enough to be easily distinguished as such.

While developing their heavy foliage and bloom a resetting of the plants from time to time will be found necessary.

Now, that is, from the end of January to the beginning of March, is one of the two periods in the course of hydrangea culture when propagation should take place.

But while these medium-sized hydrangeas, grown from February struck cuttings and forced into bloom a year later, are a most desirable kind of stock to carry, generally throwing from eight to twelve large trusses on stout, upright stems, the fact remains that a class of buyers is always in search of big hydrangeas.

Ardiasias.

Where fresh seeds of Ardisia crenulata can now be obtained, a sowing at this time of the year holds out a promise of greater success than one attempted in the Summer or late Spring.

time warm weather sets in, when no extra effort, or unusual care, will be required to keep them in active growth and in good health.

However, these plants will prove more profitable if carried over a year or two and allowed to become of the right size, so much called for now.

Fancy Caladiums.

Another plant requiring heat at all times, but especially when awakened from its sleep and being coaxed into new activity, is the fancy-leaved caladium.

Great and sudden changes of temperature must be avoided, or a sorry-looking lot of fancy caladiums will be the final outcome.

English Ivy.

The glorious old "ivy green" as a plant for the living room, office, store or shop window tries hard to eke out a decent living.

New uses, however, have been found for the various varieties of the English ivy. The large-leaved, as well as the small-leaved, the green as well as the spotted and streaked, have all been pressed into service as bedding plants.

Florists would find it to their profit to work up a quantity of nice three or four-inch plants for these purposes.

S. S. SKIDELSKY, 824 North 24th Street, Philadelphia, Pa.

Mention the Florists' Exchange when writing.

RED SPORT (Of Maceo.)

Red Sport has proved the greatest money-maker we ever grew, producing more good blooms to the square foot of bench room than any other variety on the place. During the first part of January we could only get four cents for fancy Lawson and sold every Red Sport we had at five cents. Every grower who was here in December was carried away with its possibilities, as a future supply of a "holly berry red" for Xmas. There is no pick in the blooms. They are all a uniform size and color. There are 40,000 or 50,000 buds showing in different stages of development at this time and there is not a split or off color bloom in the lot and every plant is the picture of health. We will plant 20,000 plants of Red Sport for next season's bloom and the cut is already engaged by two of Washington's leading retailers. Red Sport is an easy doer and everyone can grow it as successfully as we can. Price for Feb. 20th delivery—12 for \$1.50; 25 for \$2.50; 50 for \$4.00 post-paid; \$5.00 per 100; \$50.00 per 1000.

QUEEN LOUISE, still the greatest money-maker of any white; our stock is very vigorous and healthy, \$1.25 per 100 post-paid; \$10.00 per 1000. We guarantee stock to arrive in good condition and be well rooted.

CANADIAN NEWS

TORONTO.—The Toronto annual carnation show was held in St George's Hall on Thursday last, the 16th inst. The day was quite cold, as had been the preceding days also, and on account of the snow many trains were delayed, and some of the best exhibits were late in arriving. The hall was not so well filled as usual, still there was a fine exhibit; the show, however, was not well patronized by the public and the extreme cold kept many of our growers at home. The competition for the challenge cup was very close, and Wm. Scott, of Buffalo (whom we are always glad to see here, and who is able again to be about), had quite a job judging the exhibits. The cup was again won by the Chicago Carnation Company, with a fine vase of Lady Bountiful. They also staged fine vases of Enchantress, and Cardinal, which were very good, but were run very close by the Cottage Gardens Company, with vases of Robert Craig and Lieutenant Peary, and by John E. Haines, with his namesake. Charles Turp, of Toronto, also put up a fine vase of Lady Bountiful; E. G. Hill Co., of Richmond, sent a vase of Lady Bountiful, and also one of Cardinal; they did not arrive until late in the evening, long after the stock had been judged. This was unfortunate for Mr. Hill, for the cup would have gone to Richmond; Mr. Scott, on being brought back to the hall, scored Lady Bountiful equal to the prize winner and the Cardinal one point better; then, Mr. Hill has won the cup once. All agreed his vase of Cardinal was the best in the hall. An exhibit of My Maryland did not arrive at the show at all. The prize for a collection of carnations was taken by John H. Dunlop with a very nice exhibit, among which were Flamingo, Lady Bountiful, Harlowarden, Enchantress and Mrs. Lawson, all very fine. The second was taken by the Chicago Carnation Company, with a smaller exhibit of very good flowers among which were fine Fiancee, Wm. Fendley, of Brampton, came third with a good lot.

The first prize for a general collection of cut flowers was won by John H. Dunlop, with a very nicely displayed exhibit. Wm. Fendley, of Brampton, took second in this lot. There was a fine show of violets, both double and single, some of the singles being shown with leaves, and had exceptionally long stems. The groups of plants were hardly up to the usual standard here, as the

weather was too cold to risk moving many of them. Manton Bros. took first and John H. Dunlop second. The plants shown were azaleas, rhododendrons, hyacinths, Harrisii lilies, ericas and ferns. J. Bennett, of Montreal, sent a few very fine Pierson and Boston ferns; they were very favorably commented on by the trade here, as we seldom see such fine stock grown in such small pots.

Wm. Friedling, who came along with the Chicago Carnation Co.'s stock, made many friends here.

The Dale Estate were not represented at the show and were greatly missed; we always expect some of them down at our exhibitions. C. Webster, of Hamilton, was present; Charlie always likes to see what is up-to-date.

Geo. Mills, our superintendent, and Ernst Collins, our secretary, worked very hard and did all they could to keep things going.

Mr. Friedling brought our cup over for us to look at it and took it away with him again; they have now two claims on it, but they must mind next year, as it came very near going to Richmond this time.

Our president, George Douglas, worked like a beaver both on the day of the show and the day after, so that, although the exhibition was not up to that of former years, we are satisfied it was a good one.

Business continues active, with nearly all stock, except roses, both good and plentiful. The plant trade has been very dull owing mostly to the very cold weather, but just now there appears to be a break, so we may expect an improvement soon.

Chas. Tidy, of King street, has been getting some nice cattleyas from the Dale Estate; he says they are going into orchids extensively again. They have got a considerable quantity of cattleyas and are getting, he says, a car load of lilies.

The trade got somewhat of a setback this week by the postponement of several important functions that were to be given in honor of the new Governor-General, though illness of his family; his visit will be delayed some weeks.

THOS. MANTON.

Cleveland.

News Items.

Monday evening was clear and crisp, with a temperature 10 degrees below zero, but that fact did not deter the valiant ones from attending the Florists' Club carnation exhibit. It was truly a fine display of carnations, roses and sweet peas. The exhibitors were Bate Bros., G. M. Nauman, C. Hagenburger, and C. Merkel & Son, of Mentor, Essex Greenhouses, H. A. Hart, Gasser Company, J. D. Thompson Carnation Company, and W. J. Palmer & Son. Certificates of merit were awarded to J. D. Thompson Carnation Company, Joliet, Ill., for Robert Craig; W. J. Palmer & Son for Red Lawson; and to J. M. Gasser Company for General MacArthur rose. The Essex Greenhouses received two certificates, one for roses and one for sweet peas. Others received first and second premiums. The judges were J. S. Wilson, Chicago; E. George, Painesville, and Adam Graham.

A recent trip to the greenhouses of the Cleveland State Hospital at Newburg showed them to be in splendid shape; plenty of fine primulas, cinerarias, roses and carnations, and a large assortment of decorative plants filled the central house. Two houses are utilized for propagating, a great many plants being used in bedding. G. Lundy, the florist, is an enthusiastic exponent of carpet bedding in the Summer.

George Jacques, gardener for William Comins, has just arrived home from an extended tour through England.

Roman Wasco, of Glenville, is sending in beautiful violets with long stems, fine color and delightful odor. G. M. Nauman is cutting exceedingly fine lily of the valley.

This city is very short on small ferns.

Mrs. Ella Grant Wilson has returned from Palm Beach, Fla. Frank Piggot, who has been quite sick, is convalescent now.

Wm. Hageman and John Scheepers were in Cleveland last week. O. G.

Chicago.
News Notes.
The past week the trade has gone through a variety of weather, from 24 degrees below to 45 degrees above zero; as a consequence, business has suffered considerably. At the present writing, the weather is all that one could expect at this time of the year, and if such should continue trade should take on a general Spring impetus. Plantsmen have been complaining bitterly during the cold weather, finding it impossible to move any of their stock. The shipping of rooted cuttings has also been interfered with to a great extent, dealers in these not caring to take any chances on forwarding them, as the express companies would not guarantee any deliveries. Shipping trade in cut flowers has also suffered.

Peter Reinberg is getting in a good supply of long-stemmed American Beauty; his other roses are also in fair shape, with a good crop from now until the end of the season.
Wiator Bros. are cutting extra fancy carnations, their Enchantress being as good as any ever seen on exhibition.
John Muno at Rogers Park has discarded nearly all roses with the exception of American Beauty and Mme. Abel Chatenay, and is growing carnations. He has had better returns from the latter than he had from roses.

Sinner Bros. will rebuild part of their range of glass the coming Summer. Their Bride and Bridesmaid roses are in fine shape.
Jacob Philipp, Sr., a vegetable grower on Tonhy and Western avenues, will build five houses, each 26x150 feet, this year, to be planted to carnations. He is one of the oldest vegetable growers in that section, and this will be his first venture in growing cut flowers.
G. Svenson, of Elmhurst, will discard the growing of double violets on account of the disease having taken nearly all of his present stock.
Joseph Wolniewicz, of 1146 School street, heard vandals destroying the glass on his greenhouse Sunday night, and replied with a shotgun, wounding one of them. The others were also captured.

The Florists' Club had a stereopticon lecture by E. G. Rutzahn Thursday night, February 23. A good attendance. The subject was "How to Make Chicago Beautiful," with special reference to the florist's relation to this subject, as a means of advancing the business interests of the club.

News Notes.
Henry Ostertag on Monday announced that he was a candidate for House of Delegates at the Spring election from his ward, the big Twenty-second.
F. H. Meinhardt left Sunday night for Fort Wayne, Ind., to attend the funeral of Judge Vesey's brother, who died suddenly from lockjaw.
Arthur Ellison will be the only florist bowler representative at Milwaukee this week from St. Louis attending the National Bowling Congress meeting.
John A. Rau has been admitted into partnership as the junior member of the St. Louis Seed Co. William F. Nichol, the senior member, has been elected president and general manager.
Mrs. Frank M. Ellis accompanied a party of lady bowlers to Milwaukee on Sunday night. Mrs. Ellis has become quite an expert at bowling, and often beats her husband on the alleys.
Mr. and Mrs. Fred C. Weber will visit Germany this Summer. They will leave for company Theo. Miller. They leave here June 1, and say they will be back for the S. A. F. O. H. convention in August.

1220 Filbert Street, PHILADELPHIA
Mention the Florists' Exchange when writing.

At the big banquet given to Dr. Lewald, German Commissioner to the World's Fair, by the German-American citizens, at the Mercantile Club, the decorations were furnished by Ostertag Bros. They were greatly admired.
Carl Beyer and Wm. Schray have a fine stock of plants, which will come in just right for the Easter trade.
It is rumored that the St. Clair Floral Company at Belleville will open a retail store in East St. Louis, under the management of Kester Halstedt.
C. W. Wors, the correspondent for The American Florist, also one of the leading street corner merchants, reports that violets are selling well on the street corners.
ST. PATRICK.
BRATTLEBORO, VT.—Roland H. Messenger of Barre, Mass., succeeds Alexander E. Whitley as florist at the Bradley greenhouses on Tyler street.
CALL ON EUGENE BERNHEIMER FOR PROMPT DELIVERY ON
Carnations, Roses, Valley 11 South 16th Street, PHILADELPHIA
Mention the Florists' Exchange when writing.

Boston.

News Notes.

J. J. Comley, of Newburyport, sustained quite a loss from escaping gas in his houses the past week. Edward Hatch, as is his custom, entertained a few of his friends at the "Windmill," his country place at Wenham, on Washington's Birthday. W. H. Elliott returned Saturday from a trip to Jamaica, Cuba and Porto Rico. J. A. Pettigrew will read a paper at the meeting of the North Shore Horticultural Society, Manchester, Mass., March 17, on "Village and Wayside Improvement." Oscar L. Dorr, of Sharon Heights, is sending in some of the best double violets ever seen in Boston to the Park street market. The Horticultural Club met Thursday evening with Robert Montgomery in the chair. J. W. DUNCAN.

Newport, R. I.

News Notes.

Samuel Speers and his sister have gone to Pittsburg, Pa., to attend the funeral of their uncle, Arthur Kenivill. Street Commissioner Hamilton has recovered somewhat from his recent illness and returned to his Winter home in Portsmouth, R. I. The "Bonnie Brae" Nurseries, of New Rochelle, N. Y., through A. H. Folger, have been looking after their trade here the past week. Mr. Folger secured a goodly volume of business. Florist Hass is having his Thames street store painted and renovated in anticipation of a good Summer season's trade. Brandt's lease of his present Thames street quarters expiring shortly; many of us hope that he may select a new florist's location in the Broadway district among the rest of the craft. F. W.

Buffalo.

News Notes.

When taking in consideration the very inclement weather, of severity unusual in steadiness for some weeks, the business done recently may be called good. Flowers, while not scarce at all, have naturally not become burdensome in any way. E. J. Buxton, of 1103 Niagara street, retires from the business after many years of success locally, having, we understand, made a sale of his property. Joe Sangster, who has long held a leading position with Anderson in his retail store, has left us to fill a position with Edward Seery, of Paterson, N. J. W. W. Wells, formerly from Chicago, and for several years manager of C. D. Zimmerman's Chippewa street store, is about making a change; it is reported that he intends to engage in business on his own account. A meeting of the club is announced for Wednesday afternoon of this week, at Kasting's store. Nomination of candidates to compete for election honors at the annual March meeting is on the program. A grower's exhibit of new carnations is also announced.

VIDI.

BELVIDERE, ILL.—Alderman John W. Lyon, of the Lyon & Co. greenhouses, is announced as a candidate for mayor of this town.

National Florists' Board of Trade

NEW MANAGEMENT. Tel. Call, 655 John. HARRIS H. HAYDEN (Late Manager of the Napers Chemical Company), President EDWARD MCK. WHITING, Vice-Pres. and Counsel JOHN E. WALKER, Secretary and Treasurer

SWEET PEAS

Pure white and pink and white. MARIE LOUISE VIOLETS Can make regular shipments. FRANK MCGOWAN, Utica, N. Y. Mention the Florists' Exchange when writing.

Pittsburg

The Week's News.

At last there is a change in the weather with the temperature above the freezing point, which is quite a relief, for the growers are anxious to get some outside work with hot beds, etc. It will help trade, which has been rather slow the past week. There is plenty of good stock on the market, and prices have not changed any. Politics kept some of the boys busy last week and resulted in landing two of them. J. Bader was elected to council in Allegheny City by a majority close to 300, and W. Clark, of the Pittsburg Cut Flower Company, was elected school director in his town. Both are good men, and it is a pity we have not a few more like them—honest and fearless. J. W. Ludwig expects to go to the inauguration of the President in Washington with the Tariff Club of Pittsburg. J. B. Murdoch & Co. expect to add greatly to their plant this year for the growing of cut flowers exclusively. R. J. Irwin, representing Vaughan's Seed Store, was a visitor during the week. E. C. REINEMAN.

Worcester, Mass.

News of the Week.

F. E. Keyes, son of the late C. A. Keyes, has purchased from the heirs the florist business of his father, and took possession February 20. Mr. Keyes was associated with his father many years. He will make a few changes, but has not decided the full course he will follow. One important change will soon take place on Main street. A large grocery store has taken in an adjoining store, and one of the new windows, with quite a number of feet of floor space, will be occupied as a branch store by H. F. Littlefield. Mr. Littlefield expects to take possession about March 1. CAROLUS.

Hammond's Slug Shot for House Plants

This picture shows the tin, perforated, screw-top Canister filled with Slug Shot for use on plants in pots or in the garden; it is easily filled, when empty, from larger packages; it can be mailed at rate of one cent an ounce postage. It is sold by many seedsmen, and is an article which Retail Florists may find of service to customers. Slug Shot is put up in these tin canisters, perforated-top paper cartons, 5 and 10 lb. bags, 125 lb. kegs, 250 lb. barrels, and loose for garden or greenhouse use. Send for pamphlet on "Bugs and Blights." Our goods are sold by Seed Dealers the country over, and so continuously advertised to the general public. For mildew and blight: "Grape Dust," "Solution of Copper," and "True Blue Bordeaux Mixture." For "San Jose Scale": "Horian" Concentrated Lime, Sulphate and Salt. "Thrip Juice" for all scale.

Twemlow's Old English Liquid Putty, and
"Greenhouse White Paint."

**Pierson
Boilers**

For Steam and Water
are unsurpassed for efficiency
and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 5, 1904. The two
"Pierson" sectional hot water boilers installed for our new houses one year ago gave excep-
tional satisfaction during the past winter, the most severe for many years, easily fulfilling
what was expected of them, at the same time proving to be economical.
We found them very easy to manage, that they responded promptly and heated the
water in short time, thus giving splendid control of temperature in houses when sudden
drop took place outside."

Plate 94

PSEUDO-LARIX KOEMPFERI—Japanese Golden Larch

Notice its loose style of growth as compared with that of the European Larch. The foliage appears more flatly arranged than that of other Larches; and in the Autumn its color becomes of a golden yellow—a beautiful feature, and one from which it takes its name. Altogether, it is a distinct and valuable tree.

DREER'S ROYAL EXHIBITION PANSIES

We offer a fine lot of September-sown seedlings, which were transplanted in cold frame during October, and while not extra large they are sturdy, stocky plants, which will respond quickly in Spring and give better returns than larger but softer greenhouse-grown plants.
Price, 75 cents per 100; \$5.00 per 1000,
SEED of above, 60 cts. per trade pkt.; \$1.25 per 1/4 oz.; \$3.00 per oz.

Myosotis Palustris Semperflorens (THE EVER-BLOOMING FORGET-ME-NOT)

A good lot of cold frame-grown plants suitable for potting into four-inch pots, which, if brought into a cool greenhouse, will furnish readily salable plants for retailing, or will produce quickly a profitable crop of flowers for cutting.
50 cents per dozen; \$3.00 per 100.
SEED of above, 30 cts. per trade pkt.; \$1.50 per oz.

Primula Cortusoides Sieboldi.

These beautiful rich-colored Primroses are almost unknown to the American trade. They are used extensively as pot plants in many European cities where they meet with ready sale, and we believe that they will meet with even greater favor here when once they become known.
We offer good strong corne, which, if potted up and placed in a carnation house temperature, will be in full bloom in about five weeks' time. All are very large-flowered and of bright, pleasing colors. We recommend them for trial, feeling certain that you will be pleased with the result.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Pa.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

BLACK RIVER, WIS.—Benson & Olson will add the handling of clover and grass seeds to their business.

STOCKS OF CLOVER SEED in the country tributary to Indianapolis, Ind., have been well cleaned up.

The San Francisco Chronicle, in its edition of Sunday, February 5 last, gave an interesting illustrated account of the work of Mrs. Theodosia B. Shepherd, of Ventura-by-the-Sea, Cal., particularly as regards the obtaining of new varieties of begonias and cosmos.

WORCESTER, MASS.—The seed store of F. A. Lincoln & Co. has been thoroughly renovated inside and out. Although this firm does not cater especially to the mail business, they issue a very neat catalogue of seeds and agricultural implements.

ST. PAUL, MINN.—Jesse E. Northrup has gone to the hospital to undergo an operation for appendicitis. He has suffered from this disease more or less for two or three years. His many friends in the trade will wish him a speedy recovery.

E. M. Parmelee of the John H. Allan Seed Co., Sheboygan, Wis., was a recent caller.

Joseph Rölker, of August Rölker & Sons, New York, was also a recent visitor.

Catalogue orders are now coming in more freely. VERITAS.

THE WORCESTER COUNTY (MASS.) MARKET GARDENERS' ASSOCIATION recently spent a day at Boston and Arlington. As guests at the meeting of the Massachusetts Horticultural Society they listened to a lecture and discussion on "Flowers and their Seasons," by J. Woodward Manning. At the close of his remarks the subject was opened to discussion. A. A. Hixon, of Worcester, said, in his opinion, the soil conditions ruled what was best for a person to plant to get satisfactory results, and stated that a sure and cheap cure for plant pests is soap and water, and plenty of it. E. O. Orpet, South Lancaster, advocated annuals in preference to perennials. Single asters were favored by Mr. Orpet. Mr. Hatfield told of the need of shade and shelter for the successful cultivation of rhododendrons.

After the meeting the party visited the plant of W. W. Rawson, at Arlington, where there are 30 greenhouses devoted to vegetable forcing. Stable manures are considered by Mr. Rawson preferable to commercial fertilizers, and he believes that this manure should be worked over several times before it is used. To facilitate this working over, he employs the noses of pigs to a large extent. A meeting of the Boston Market Gardeners' Association was held on the premises, at which Mr. Rawson read a paper on "Some Ounts in Market Gardening." He said a fair return should be expected from lettuce if it was sold at 50 cents a dozen, and root crops ought at least bring 50 cents a bushel to insure a profit. Cucumbers are a hard crop to estimate the cost of, as is celery. After the meeting, Mr. Rawson invited all to the lower floor, where a caterer served a substantial lunch.

AN IMPORTANT DECISION ON SEED CONTRACTS.—A decision by Judge Sutton relative to seed contracts, which is of immense interest to the farmers of this State, says a Nebraska newspaper has just been affirmed by the Supreme Court. The case arises out of a suit brought by J. C. Robinson & Co., seed dealers, of

Waterloo, Neb., against a farmer named Strickland, to enforce a contract. By the terms of the contract Strickland was furnished with a quantity of seed and agreed that the crop of corn which should be raised, should be sold to the seed company at the rate of \$1.25 per 100 pounds. By the time the crop matured the price of seed corn had jumped from \$1.25 to \$7.00. Strickland sold the corn to another dealer for \$7.00, and the seed company carried the matter into court. Judge Sutton held that the seed contract was void because the crop did not exist at the time the contract was made. The Supreme Court also took this view. Thousands of farmers in Nebraska who hold seed contracts are affected by this decision.

OVERPRODUCTION.—That there is a large surplus of the leading kinds of vegetable seeds in the country is daily becoming apparent. The short supply of the last two years along many lines was an incentive for large contracts on the part of the dealers, and a liberal acreage on the part of the grower. Sweet corn will be a drug, although the trade will not suffer; having made the contracts and their prices as well, the profit will be about as usual. But the jobbers and the farmers that grow on their own account will be the ones who will suffer, and, at the same time, learn a valuable lesson. Seeds that will retain their vitality for two or more years will remain firm in price and the jobber and grower will grow and contract according to necessity. Some varieties of peas and beans there is a shortage; but sufficient of other to make up, which will to a great extent equalize supply and demand. There is every prospect of a surplus of seeds in the growers' and jobber hands that do not long retain vitality. The legitimate trade will not mourn this loss, as it will prove a check on the adventurers that crowd the market, which is always an injury to conservative business.

THE SEED BUSINESS IN AMERICA.—There has been a wonderfully great development in the seed business since the close of the war, says President Charles N. Page, of the American Seed Trade Association, in the Des Moines (Ia.) News, and the farmers have learned that it does not pay to grow their own seeds, but that had much better be left to a specialist who is well posted as to the purity of various stocks, who knows what seed should be and has machinery for properly handling the crop. These specialists grow seeds for all the leading seed dealers. In one locality in Nebraska it is estimated that over 5,000 acres are devoted to growing melon and squash and cucumber seed, as the soil and climate there is especially well adapted to these crops. One seed dealer has contracted 200 acres of one variety of watermelon seed in Kansas and Oklahoma. In 1878 it was estimated that there were 7,000 acres in the United States devoted to growing garden seeds, while the census in 1890 (12 years later) showed that there were 59 seed farms containing 169,850 acres. About half of these seed farms were started during the previous ten years. The main business of the country is now in the hands of about 150 firms, who devote their attention to improving the various kinds of vegetable, flower and farm seeds. As the country has been developed, sections have been found to be especially adapted to growing various crops. For instance, beans are grown almost exclusively in New York, Wisconsin and Michigan. Cabbage is grown mainly on Long Island. Sweet corn, cucumbers, melon and squash are grown in Iowa, Nebraska and Kansas. Onions, lettuce, carrot and celery in California, tomato in Iowa, New Jersey and Michigan. A large acreage is devoted to growing flower seeds in California, although still a considerable portion of the stock is imported from Holland, England and France.

THE CONDITION OF TRADE.—When asked the condition of trade whether wholesale or retail, in vegetable or flower seeds, bulbs or plants, mail or counter trade, it matters not what the locality may be, north, south, east or west, there comes but one answer, though clothed in the language of each: "Nothing doing; we never saw anything like it. The long continued cold of extreme tenacity all over the country has simply paralyzed business." This is, to a great extent, true, very true; but its effect is not as seri-

BERMUDA HARRISII BULBS

 HAMILTON, BERMUDA

Mention the Florists' Exchange when writing.

ous as thought and stated; serious enough, however, for grave apprehensions along many lines, while in others no great loss will be felt. The market gardeners' trade will not suffer a particle; orders may be late in coming in, but they will come. In the environs of New York active preparations for planting have already commenced, and on as elaborate a scale as in former years. The same amount of potatoes, peas, beans, corn and cabbage will be planted as usual, and the harvest will be as early as though the ice king had not held carnival.

The mail trade is now suffering, and will continue to suffer. February is usually a busy month, and the index finger that indicates success or failure of the Spring trade. If business is good this month, the season will be a profitable one; otherwise, the reverse. The writer called on one of the largest firms in this line for information regarding the situation, and the report was, "the worst ever known." In vegetable seeds the falling off has not been as serious as might have been expected, and trade in these will probably be fairly good. But the plant trade is a dead failure, not one-fifth as large as the same month last year. This branch will suffer severely, as the losses are never made up; the customers will simply defer buying until another year, and the stocks that have been growing for this trade will go into the rubbish heap, and become plant food for another year's crop.

The box trade is the one that will reap the harvest, as is usually the case in backward seasons. No one will buy seeds for the home garden when the soil is covered with ice, and if planting is long deferred they will rush to the country store when the supply is needed.

BOLGIANO & SON, BALTIMORE.—I. Bolgiano & Son, wholesale and retail seed growers and merchants, are now permanently established at the northeast corner of Light and Pratt streets, the prominent corner which his old established firm has selected for its modern new store and warehouse, says the Sun, is one of the best locations in the Greater Baltimore, with Light street, 120 feet wide, and Pratt street, 90 feet wide; the Light street wharves at the door and the great modern piers which the city is going to erect within a square. A gentleman, in speaking of the firm, said:

"Few Baltimoreans realize what a great seed center Baltimore has become. J. Bolgiano & Son annually market the products of more than 10,000 acres of ground, situated in Canada, New York, Michigan, Kentucky, California, Colorado, the New England States, Ohio, Maine and Maryland, besides Holland, France, Germany, England and the Canary Islands. The firm's trade of more than 50,000 customers extends to every State and Territory in the United States, Cuba, and a number of foreign countries, even China. It employs in the store and on the road between 40 and 50 clerks and salesmen, besides hundreds of farmers who grow seeds.

"The firm was established in 1818 by the great-grandfather of the present members. John Bolgiano, Sr., was the head of the firm from about 1825 until he retired in 1883. He was also treasurer of the Baltimore City Passenger Railway Company for many years, and died in 1892.

"Joseph A. Bolgiano was head of the firm from 1883 until he retired in 1899. He is now a director in the Fidelity and Deposit Company of Maryland, National Toward Bank, Colonial Trust Company, Security Storage and Trust Company, and has many other large interests identified with Baltimore. He is also a director of the Free Summer Excursion Society. Roland Bolgiano and Charles J. Bolgiano constitute the present firm."

BOSTON.—Nicotiana Sanderae has proved a quick selling novelty at W. W. Rawson's. A large number of packages of seeds have been disposed of, although the season is only just started. It is said that the seeds do not germinate very regularly, although they will all grow if given proper conditions and sufficient time.

The members of the bowling league, employees of the various seed stores, held a banquet in honor of the champions at the American House, February 21, and a very pleasant evening was spent. W. E. Cahill acted as toastmaster, about thirty-five being present. Songs were rendered by Frank McDermott and Maurice Field the latter having composed a song especially for the occasion. The champion team, which was "The Farquhars," is composed of Harry Jenner, captain; Wm. Davy, An-

drew Castle, James Hardman, Frank McDermott, and George Porter. It was proposed to form a baseball club for the Summer season, and the following were appointed a committee of arrangements: Wm. Davy, of Farquhar's; J. Guerincau, of Schlegel & Fottler's; L. Gleason, of Breck's, and H. Rawson, of W. W. Rawson's. J. W. D.

FRENCH BULBS.—As already announced in these columns the Winter in Europe has been of a very singular character. France, particularly, has gone through an untoward period. The Mediterranean coast, always liked for its mild climate during the cold season, has experienced a spell of sharp frost. All along the flower-growing region (the Riviera) there have been heavy losses. Though the quantity of flowers necessary for the market supply of Northern Europe always can be considered rather abundant, this year, several times, there was a sensible shortage of stock. At more than one place the cold was so intense that glass covered with thick reed mats was insufficient to keep out the frost.

As regards Roman hyacinths, Paper White narcissus, etc., these bulbs are exclusively grown in the open without any protection. Just beginning the month of December the first attack of frost was felt, and all plants not covered suffered considerably. Fortunately, we had a dry temperature all the time; rainfall has been very rare the whole Winter. The gardens close to the foot of the hills, and most protected from cutting winds, suffered least. The high gardens, on the hill slopes, suffered nearly every night, as the thermometer went under the freezing point.

Bulbs frozen in the ground were found on only very few places. Hyacinths, touched in their foliage, have been seen in some gardens. J. B.

European Notes.

So mild is the weather prevailing in Northern Europe that even in England the market gardeners have already sown their carrot, onion, parsnip and Brussels sprouts, while those who make a specialty of pea growing have all the early varieties planted; in many cases, the young plants are showing above the ground. Many thousands of acres of potatoes are also planted, although it is only the middle of February, and, if present signs are to be trusted, we shall have a very early season.

The alternate frosts and sunshine have converted our fallow lands into an ideal seed bed, and already the growers have sown their stock seeds of spinach, radish and cress, under the most favorable conditions. Onions and leeks, for 1906 harvest, will be sown next week, a few light showers having rendered the land sufficiently moist to insure rapid germination.

The before-mentioned sunshine has cheered the hearts of the growers of florists' flower seeds, and enabled the plants to overcome the deadly effects of the November and December frosts.

The displays of *Primula sinensis* made by Cannell, Carter and Sutton in the Royal Horticultural Hall, on February 14, were the finest that have been seen for many years. And, as the light in the new hall was exceptionally good, they appeared to the best advantage. The mammoth flowered varieties in Cannell's strain were simply splendid, while the plants were grown in a style that was faultless. Exception may, perhaps, be taken to the so-called "improved" strain of *P. stellata*, the flowers in several cases being indistinguishable from those of *P. sinensis*; but the habit of the plant is not so graceful.

A batch of *P. sinensis* The Czar (Sutton), an intensely dark blue, attracted considerable attention; but the only novelty to gain an award was a new double white, from the same firm, named His Majesty. In reality, it should be described as semi-double, as the doubleness consists in a wavy, twisted petal in the center, a large finely formed single white flower of exceptionally good substance. A batch of Duchess hybrids, also from Sutton,

contained some beautiful breaks, which, if they prove constant, will be very acceptable. Large batches of both single and double forms of the Duchess were also exhibited, but the general effect was not pleasing to the eye, and it is hardly likely that they will ever become very popular. If present conditions continue, there should be a good crop of good seed harvested this season.

On one branch of the seed trade the fine weather appears to have no effect whatever, and that is the clover seed department. Trade is simply stagnant, and as some of the larger houses are carrying very heavy stocks, especially of red clover, they begin to feel rather blue. Matters are even worse in Germany than in Western Europe, and no one is able to suggest a remedy.

EUROPEAN SEEDS.

Pole Lima Beans.

Editor Florists' Exchange:

It is always very interesting to observe the effect of long continued environment on vegetable growth, sometimes resulting in an entire change of form, at other times of color or other habits, and not less interesting, and possibly more directly practical in a commercial view, to notice the first departures from established forms, consequent upon a few years of peculiar surroundings and conditions. These changes in character are very noticeable in the case of the growth of lima bean vines from seeds grown in California. The pole lima has been recognized everywhere as one which should possess a very free climbing habit, but unfortunately some strains of late years which have reached the hands of the seed trade have not been so marked in this character. I do not make the broad statement that California lima beans lose their running or climbing habit, provided they are not more than two or three seasons from eastern stocks, or provided they be grown from California stocks which have been regularly trained to poles; but I do say that a stock bred from parent stocks which have been grown for a number of successive seasons, lying flat on the earth, as they are grown in California, exhibits a decided tendency to lose the climbing habit; the stems do not possess that twining character, and force of retentive grasp, which a lima should exhibit. One or even two years of prostrate growth does not make any practical difference, but in strains grown under such a system covering many years, degenerate results are clearly observable, and any student of vegetable nature will realize at once that this is a natural consequence.

BURNET LANDRETH.

THE BROWN BAG FILLING COMPANY, Fitchburg, Mass., wires us, Thursday afternoon, March 2, that Judge Anderson has granted an injunction for infringement on the patented machinery, in Congressional seed distribution case.

CATALOGUES RECEIVED.

RIVOIRE PERE ET FILS, Lyon, France.—List of Novelties in Chrysanthemums, Carnations, Dahlias, Violets and other plants. Illustrated.

A. TILTON & SON, Cleveland, O.—Wholesale Catalogue of Seeds, Bulbs, Implements and Supplies for Market Gardeners and Florists. Illustrated.

C. S. HARRISON, York, Neb.—Price List of Fruit, Shade and Ornamental Trees, Shrubs, Evergreens, etc. Illustrated. Lilacs and Peonies, specialties.

ARCHIAS SEED STORE, Sedalia, Mo.—Illustrated Catalogue of Garden and Farm Seeds, Plants, Poultry and Beekeepers' Supplies. Also Price List of Nitro-Culture.

PETER HENDERSON & COMPANY, New York.—American Farmers' Manual, describing and illustrating Superior Seeds of Grasses, Clovers, Cereals, Forage Plants, Root Crops, etc.

W. ATLEE BURPEE & CO., Philadelphia, Pa.—Prize Supplement for 1905, giving a list of exhibitions at which the products of Burpee's seeds have been successful as prize winners.

F. GILMAN TAYLOR, Glendale, Cal.—Catalogue of California Flower and Vegetable Seeds, Bulbs, Plants, etc. Special attention is directed to the new ever-bearing Rhubarb Crimson Winter.

SANDER & SONS, St. Albans, England and Bruges, Belgium.—Special Offer of Hybrid Orchids in Cattleya seedlings, Cattleyas and Laelias, Laelias and Cattleyas, Laelio-Cattleya Hybrids and Brassavola Hybrids.

L. K. PEACOCK, INC., Atco, N. J.—Descriptive Catalogue of Dahlias, including Novelties and best Standard Sorts in all the types. Profusely illustrated. A valuable catalogue for the dahlia grower and lover. Also Wholesale Price List of Dahlias for 1905.

VAN HEININGEN BROTHERS AND COMPANY, Boskoop, Holland.—Catalogue of Hardy and Ornamental Nursery Stock; specialties, Standard and Low-budded Roses, Azaleas, Rhododendrons, etc. Branch office: J. C. Van Heiningen, care of Maltus & Ware, 136 Water street, New York.

NATHAN SMITH & SON, Adrian, Mich.—Illustrated Descriptive Catalogue of Latest Novelties in Chrysanthemums. A valuable, comprehensive and interesting list also of new and standard sorts of Carnations, Geraniums, Violets, Hardy Perennials, etc. This firm was awarded a silver medal at the World's Fair, St. Louis, for new Geranium Snow Queen, a seedling from Mme. Buchner X L'Aube.

LIVINGSTON SEED COMPANY, Columbus, O.—Illustrated Catalogue of Flower and Vegetable Seeds, Plants, Hardy Ornamental Shrubs, etc. This firm's specialty is tomatoes; among the newer varieties offered this year are Livingston's Globe, a colored illustration of which forms the front cover of the catalogue, and Livingston's new Dwarf Stone. A colored plate of novelties in sweet peas is included.

VICK'S GARDEN AND FLORAL GUIDE (James Vick's Sons), Rochester, N. Y.—Illustrated Catalogue of Vegetable and Flower Seeds, Plants, Supplies, etc. Asters are a leading specialty with this firm. Among the novelties listed are the Perfection Currant, which was awarded the Barry gold medal of the Western New York Horticultural Society; the new Ornamental Silver Ribbon grass and others. A field of Groff's New Hybrid Gladiolus, in color, has been selected as a cover design.

CLUCAS & BODDINGTON COMPANY, New York.—Wholesale Catalogue of Seeds, Bulbs, Plants, Sundries, etc. Very comprehensive List of Dahlias, including all the best novelties and standard sorts are presented; also of Gladiolus, Cannas, Chrysanthemums, etc. The nursery department includes choice collections of Conifers, Deciduous Flowering Shrubs, Small Fruits and Vegetable Plants. A large, interesting and varied assortment of Hardy Perennial Plants, such as Peonies, Phloxes, Hollyhocks, Irises, etc., is offered. The catalogue is well printed and profusely illustrated.

HARDY PLANTS WORTH HAVING.—This is the title of the 1905 catalogue of Thomas Meacham & Sons, Inc., Germantown, Philadelphia. "A book full of information and value to everyone who admires hardy trees and shrubs." The firm has broken away from the conventional style of presenting its offerings, and uses such catchy headings as these: Its Handsome Foliage Sells It; Rare and Choice Oddities; Most Interesting Tree in America; Roses Like These are Scarce; Extremely Popular Hardy Chrysanthemums, etc. Excellent advice is given on "Making an Old-Fashioned Garden." The lists of Deciduous Trees and Shrubs, Hardy Evergreens, Hardy Herbaceous Perennials, etc., are all extensive and interesting. The catalogue is beautifully illustrated.

ELLWANGER & BARRY, Rochester, N. Y.—The catalogue of this long established and well-known firm is always a welcome visitor, both for its completeness, correctness of nomenclature, and the attractiveness of its make-up. As usual, it is replete with offerings of Fruit and Ornamental Trees, Evergreens, Hardy Roses, Hardy Herbaceous Flowering Plants, Climbing Vines, etc. The illustrations are numerous and beautiful in roses, attention is directed to the new varieties, Etoile de France, Philadelphia and Frau Karl Druschki, Leuchstern and Rubin, the latter resembling Crimson Rambler, having larger flowers of a deep red or ruby color. A separate pamphlet contains a list of the firm's novelties and specialties, including Lemoine's new Hybrid Deutzias and new Philadelphia, also an interesting list of new lilacs, roses, etc. Ellwanger & Barry's exhibit of nursery stock at the World's Fair, St. Louis, was awarded the gold medal.

Out of Sight, Out of Mind.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an untried seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

BARRYTOWN, N. Y.—John T. Withers is now manager of the Shatemuc Nurseries here.

THE EASTERN NURSERIES, M. M. Dawson, manager, Jamaica Plain, Mass., are distributing a neat hand-painted calendar, the subject selected for illustration being the rhododendron, one of this firm's specialties. The Exchange acknowledges receipt of one of the calendars, with thanks.

NEW YORK.—The contract for furnishing trees and shrubs to the Department of Parks was last week awarded to Frederick W. Kelsey, 150 Broadway, this city. Four bids were received, of which Mr. Kelsey's was the most favorable. The contract is for a general assortment of trees, conifers and hardy shrubs, to be delivered during the planting season of 1905. The amount of security required was \$3,000.

BERLIN, MD.—The nurseries of J. G. Harrison & Sons, of Berlin, Worcester County, have been damaged to the extent of at least \$300 by rabbits within the last week. The field in which young fruit trees have been attacked lies close to the woods, and the protracted cold weather has driven the rabbits to foraging for food. The season now is closed and there is a fine of \$5 for each rabbit killed. It is suggested that the best thing to be done for the rabbits is to feed them as the birds are being fed.

Ironclad Trees and Shrubs.

The list of ironclad trees and shrubs, as given in a recent issue of a contemporary, tested in the Northwest, through Professor William Saunders, is an extremely interesting one. But what a light list it is compared with what we are accustomed to use in our plantings here! And when we look through it and see but one oak, *Quercus macrocarpa*, how blessed we feel in having the two dozen or more species which are hardy here. It seems singular that this one oak alone will stand there. It is, of course, a very hardy sort, when taken from its northern limits. I have

still, these two trees have a wide range of growth in Europe, and it may be that the trees experimented with were obtained from seeds gathered in Northern Europe.

The list presents another curious feature in this, that in the case of some of the trees which succeed there, notably the birches of this country, the lenta and papyracea, there are other trees associated with them in a wild state which have, evidently, been found wanting in their ability to stand as much cold.

The Winter protection of the roots, by mulching where snow is not assured, which the report emphasizes as essential, will be indorsed by every one of experience. When unprotected and the ground is dry, should the frost penetrate deeply, it will kill out native trees. It has done so here. Rhododendrons and other broad-leaved evergreens suffer greatly under such trials. The present Winter, snow has covered the ground well, and in spite of the lasting cold of the season, it is confidently expected that the injury to nursery stock will be but little.

Altogether, the report of Professor Saunders and his co-laborers on the hardy trees of the Northwest is one of great value to nurserymen.

Tree Althæas.

The tree althæas which Samuel C. Moon mentions suggests the use of many other shrubs in the way of standards. There is room on many a place for a diversified collection of shrubs, and this change from shrub shape to tree shape often fits in a planting plan to advantage. We already have in the trade tree spiræas, tree mock oranges, tree hydrangeas and the like, and, besides the addition of the althæa, there are other shrubs that could be treated in a similar way to swell the list to advantage. Very often these tree forms come in nicely for placing one on each side of a walk. In this shape (the tree form) they are just as good for planting in the positions named as are the Catalpa Bungei, *Cerasus pumila* and other sorts with simply dwarf rounded heads, not weeping. Some of the shrubs named, such as the mock orange, deutzia and spiræa, can be pruned to be almost of the same shape. The althæa, flowering from new wood, needs pruning closely in Winter.

It hardly need be said that the production of the standard shrub is merely the cutting away of all but a central, strong shoot, which is headed at about 5 to 6 feet. If no central shoot is there, cut to the ground a plant, that such a shoot may be produced.

Tulip Poplar Seeds.

In a private letter before me a correspondent mentions having received from a seedsman a lot of seeds of the tulip poplar, which, he says, were the most trashy lot he ever saw, no more than half of a great number he cut open being sound; the other half "were entirely hollow." He asks what redress he would have from one sending him such seeds. I have told my friend that he has no redress for that those familiar with the seeds of the tulip poplar would be well satisfied with one half of them good in a quantity. In fact, one half good is first-class seeds. There

are always many hollow ones, and if no more than one half are bad, it is a good sample.

There are many seeds which never perfect all they bear. Take the sugar maple, for example. The seeds are borne in pairs, and of each pair one is nearly always hollow. If both are good, which is occasionally the case, the sample is a very superior one. There are many other instances where it is the rule that a certain number of the seeds are always hollow; besides that, other causes, such as peculiarities of season, for instance, tend to lessen the number of perfect seeds. And, as in the cases of the tulip poplar, maple and similar seeds, there is no way to separate the good from the bad. Buyers have to understand what the seeds are before purchasing. To enable them to do this many seedsmen name some of the most prominent of this class of seed, and I well remember one who particularly mentions the tulip poplar, the one kind my friend referred to as "the most trashy lot he ever saw."

The Climbing Hydrangea.

S. W. Fitzherbert has the following notes on the climbing hydrangea in Gardening Illustrated:

"I note that Mr. Joseph Meehan, in The Florists' Exchange, vide page 475, attributes the statement that 'the Kew authorities hold that *Hydrangea scandens*, *H. petiolaris*, and *Schizopragma hydrangeoides* are one and the same' to me. In this he is in error. The statement was made in a short article which accompanied an illustration of the climbing hydrangea (page 307), in which occurs the sentence, 'This (*Hydrangea petiolaris*) is, according to the Kew Hand List, the correct name of the plant sometimes met with as *Hydrangea volubilis*, *Hydrangea scandens*, and *Schizopragma hydrangeoides*.' In my note on page 345 I drew attention to this statement, and pointed out that in Nicholson's 'Dictionary of Gardening' *Schizopragma hydrangeoides* is said to be a very different plant from *Hydrangea petiolaris* or *scandens*, and that Mr. W. J. Bean, in an article in The Garden of August 15, 1896, describes the two as quite distinct. Now, Mr. Meehan says that, as grown in America, the two plants are certainly not the same. I have undoubtedly met with a plant grown under the name of *Schizopragma hydrangeoides* in Cornwall that was identical with what I have seen at Kew labeled *Hydrangea scandens*. Neither Mr. Nicholson, Mr. Bean, nor Mr. Meehan, though stating that the plants are distinct, mention wherein the difference lies. I am particularly interested in this question, and should much like to know if the statement on page 307, that these plants are at Kew considered one and the same, is correct or the reverse."

I can but repeat that the two are quite distinct, representing two different germs, just as Nicholson says. We have both growing here; and if Mr. Fitzherbert will give me his address it will be a pleasure to me to send him leaves of both when new ones are made. Then, should it be that the true hydrangea is the one he has not, I will mail him a small plant of it, if he will accept it. I could not promise him a *schizopragma* for certain. My stock is low, but I might secure a small one for him. The difference in foliage is thus: The leaves of the hydrangea are larger and finely serrated; those of *schizopragma*, besides being much smaller, are sharply dentate and the margins further apart. Then there is the generic difference. The sterile flowers of *schizopragma* are composed of a single bract; those of hydrangea are of four bracts. Be assured, every one, that the two kinds exist.

I am not positive, but think the true hydrangea was disseminated here by the late Peter Henderson, and that the *schizopragma* was sent out by Parsons & Sons' nursery.

Seeds of the Camphor Tree.

The advertisement in The Florists' Exchange of fresh camphor tree seed by one of your Florida patrons affords a chance to get good germinating seeds of this tree. When seeds of it are imported it is only by exercising great care in the packing that their vitality can be assured. In Florida the tree seeds freely, and advertisements of them have appeared in other years from that State.

The camphor tree will stand several degrees of frost without injury. In the south of England it takes the 10 to 15 degrees it meets with every Winter without harm; but it might not endure as much cold as that here under the changed conditions of climate in Winter.

The large, shining green leaves of the camphor make the tree a distinguished one on a lawn, and would it not make an excellent decorative shrub in a tub on a lawn in the North? Those familiar with it know that even the bruised leaves emit an agreeable camphor odor, and in the broken twigs this is still more evident. If nice plants were in pots, and its properties explained to visitors, florists might sell many a plant of it.

JOSEPH MEEHAN.

Syringa Japonica.

When in flower, *Syringa japonica*, the Japanese lilac, might be readily mistaken, upon first sight, for some species of privet. However, it is a lilac, and a most desirable one. It is the only tree-like member of the family, attaining a height of from 20 to 30 feet. During the early part of July it produces its numerous large clusters of creamy white blossoms, arranged in large panicles. The individual flower is small, but the aggregate forms a beautiful truss. This tree is quite hardy North, and on account of its flowering in July should be extensively planted, as trees and shrubs in blossom at that time are none too numerous.

seen in its wild state about Chicago, and, no doubt, it runs farther West than that, and there are other oaks growing as far north as it does.

In the report referred to, it is said: "Some trees, including the maples, were hardy if grown from seed ripened in the Northwest Territories; otherwise not." Too much emphasis cannot be placed on this. Taking the *Quercus macrocarpa*, for instance, it grows, as mentioned, about Chicago, and it can be had in Ken-

CANNAS Dwarf French or Crozy and Italian Sorts

Mention the Florists' Exchange when writing.

RED SPORT (Of Maceo.)

Red Sport has proved the greatest money-maker we ever grow, producing more good blooms to the square foot of bench room than any other variety on the place. During the glut the first part of January we could only get four cents for fancy Lawson and sold every Red Sport we had at five cents. Every grower who was here in December was carried away with its possibilities, as a future supply of a "hilly berry red" for Xmas. There is no pick in the blooms. They are all a uniform size and color. There are 40,000 or 50,000 buds showing in different stages of development at this time and there is not a split or off color bloom in the lot and every plant is the picture of health. We will plant 20,000 plants of Red Sport for next season's bloom and the cut is already engaged by two of Washington's leading retailers. Red Sport is an easy doer and everyone can grow it as successfully as we can. Price for Feb. 20th delivery—12 for \$1.50; 25 for \$2.50; 50 for \$4.00 post-paid; \$6.00 per 100; \$50.00 per 1000.

QUEEN LOUISE, still the greatest money-maker of any white; our stock is very vigorous and healthy. \$1.25 per 100 post-paid; \$10.00 per 1000. We guarantee stock to arrive in good condition and be well rooted.

A. B. DAVIS & SON, Carnation Specialists, PURCELLVILLE, VA.

Mention the Florists' Exchange when writing.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.

2, 4, 6 and 8 Duane St., New York.

P. O. Box 1697.

Telephone, 3765 John

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

YEARLY SUBSCRIPTIONS.

United States, Canada and Mexico, \$1.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter.

The date on the address label indicates when subscription expires.

REGISTERED CABLE ADDRESS:

Florex, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾ inch, \$1.00; 1 inch, \$1.25. Special positions extra. Send for Rate Card, showing discount of 10c., 15c., 25c. or 35c. per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office THURSDAY MORNING to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

The Week's News in Brief.

The American Peony Society meet in Chicago in June next.

Farquhar Macrae, a prominent Providence (R. I.) florist, is dead. He was 62 years of age.

The efficacy of the apprenticeship system is being discussed by English horticultural papers.

Interested parties should read Burnet Landreth's article on Pole Lima beans in Seed Trade Report this week.

Jesse E. Northrup, the Minneapolis seedsman, has gone to a hospital to undergo an operation for appendicitis.

The Washington (D. C.) Florists' Club will hold a carnation show, Tuesday evening, March 7. Exhibits from outside growers and dealers are solicited.

P. T. Huddart, a prominent florist of Salt Lake City, Utah, died suddenly of heart failure, on Monday afternoon, February 20. He was 41 years of age.

The American Rose Society's show at Boston, March 23-26 next, promises to be a most interesting one. See Secretary Stewart's remarks anent shipments in this issue.

A bill has been introduced into the Illinois State Legislature asking for an appropriation of \$30,000 for two years' experimental work with plants under glass and ornamental stock by the University of Illinois.

A Denver (Col.) firm of dry goods merchants has offered \$1,000 as prizes to be given to the owners of vacant lots who do the most to improve their property. Seed dealers and florists will be asked to take a hand in the work.

THE MARCH NUMBER of Country Life in America is the "Gardening Manual" of this beautiful publication, and is an exceedingly attractive issue. One of the most valuable articles contained in this number is that on "Hardy Roses for the Garden," by Dr. Robert Huey, of Philadelphia. The illustrations are superb and numerous.

THE GREEN CARNATION.—Nearly two hundred years ago a London fruit and flower grower, named Richard Bradley, wrote a treatise upon field husbandry and garden culture, and in it he tells of a green carnation which "a certayn fryar" produced by grafting a carnation upon a fennel stalk. The flowers were green for several years, then Nature overcame decad. nt art.—Old Time Gardens.

THE KENTUCKY SOCIETY OF FLORISTS extends a most cordial invitation to all florists who can possibly do so to attend the next meeting, which will be held at the store of Nanz & Neuner, Louisville, Ky., Tuesday evening, March 7. We shall have an excellent display of roses and carnations. A. R. B.

Apprenticeship.

The apprenticeship system, in its relation to the profession of horticulture in this country, has often been discussed and as often considered as un-American, and not in accord with the tastes of the American youth.

On the other hand, in England and other European countries, apprenticeship to the gardening profession has been, from time immemorial, a sine qua non to success. It seems, however, that among the English gardening craft, views on this matter are undergoing a change; for we read in a recent issue of The Gardening World, the following from one of that periodical's contributors:

Is it advisable for the youth who desires to follow the profession of horticulture to serve a term of apprenticeship? In other words, has the lad who is apprenticed for a specified term in a good establishment (private or trade) any substantial advantage over the lad who enters a situation merely as a "lad" to make himself useful, pick up what knowledge he can, and improve his position as he is able? This is a question worthy of discussion, for among the readers of this paper there are doubtless many parents whose sons will in course of time enter the field of horticulture in search of a livelihood, and who, desiring to give the lads the best possible start in their career, will have to decide whether or not apprenticeship is desirable or necessary. My own reply is in the negative, nor even do I concede that apprenticeship is conducive to future success. Among the many men and youths I have worked beside in various parts of the country, I cannot call to mind one who, having served apprenticeship, has made a better or more successful gardener than numbers who had started as crotch-boys and pot-washers to work their own way from bottom to top.

On the other hand, I have known several who at the end of their term have advanced but little in knowledge or ability. Even those who make the best of their time find their apprenticeship of but little advantage when they have to turn out and work in strange places.

Too often the apprentice considers he has a right of exemption from all menial and laborious tasks and must only be put to the lighter and pleasant work, consequently he shuns much that every gardener should undergo, if only that he may become qualified to superintend the work of others later on. I do not know whether the newly formed British Gardeners' Association gives preference to those candidates for membership who produce indentures of apprenticeship, but I sincerely trust they do not look upon such indentures as necessary, for thereby many who are really worthy would be debarred the advantages the society should be able to afford to all qualified gardeners, and, to my mind, membership in that society should be of far greater import and advantage to a gardener than the possession of apprenticeship indentures.

Carnation Mrs. Ida McKinley.

Editor Florists' Exchange:

This is a sport from the well-known Enchantress, found in our establishment at Canton, Ohio. The growth, size of flower, and freedom of blooming are equal to those of its parent. The distinction from the parent is in the color and a strong clove fragrance, which is claimed to be a strong point in its favor. The flower is of a delicate pink, a shade lighter than Mrs. Frances Joost. The bases of petals are dark, blending to a lighter pink toward the tips when fully expanded. We have taken the liberty of naming this carnation Mrs. Ida McKinley, for the widow of our late President. The flower has been shown to and admired by her, it being her favorite color.

BROWN FLORAL CO.

Register

your new plants. As soon as you have ascertained that a seedling has the requisite merit to entitle it to a permanent existence and have given it a name, register name and description with the secretary of the national society. The record will then be published and your plant will be protected in its right to the exclusive use of the name you have bestowed on it. For registration blanks and all information write to the secretary.

WM. J. STEWART,
11 Hamilton Place, Boston.

PROFESSOR A. J. PIETERS, of the Department of Agriculture, in charge of plant and seed distribution, was a caller at the office of the Florists' Exchange on Friday of last week. Mr. Pieters was in search of information regarding the extent of the lily of the valley importations. The Government may make some experiments in this country, looking to the ascertaining of points in the United States where the lily may be profitably raised commercially. The professor states that a special agent of the department has been dispatched to China to collect new and rare economic plants and ornamentals in Manchuria. A walnut is known to exist in that section which it is believed can be grown successfully in New England. The Government is particularly desirous of assisting dealers in ornamental tree and shrub stock, and Mr. Pieters will welcome any suggestions toward that end. It is proposed to plant a collection of gladioli, showing the different types together, on the department's grounds at Washington, where the flowers can be seen by the visiting delegates to the forthcoming S. A. F. O. H. convention in August next.

George E. Levings, of Paris, Ill., died at his home on February 16, after an eight days' illness with pneumonia. He was a native of Lancaster, N. H., and was 70 years of age. Mr. Levings was a director of the Edgar County National Bank, a trustee in the First M. E. Church and one of the wealthiest and most influential citizens of Paris. He founded the Levings Brothers' Seed Company and established the gas works there. He leaves a widow and five children.

Parcels Post to Great Britain.

A parcel-post convention having been concluded between the United States and the United Kingdom of Great Britain and Ireland, to take effect April 1, 1905, parcel-post packages for destinations in Great Britain and Ireland will be admitted on and after that date to the mails for Great Britain and Ireland made up in and dispatched from this country.

"Parcels" exchanged between the United States and the United Kingdom must not exceed \$50 in value, weigh more than four (4) pounds six (6) ounces (or 1 kilogram), nor measure more than three (3) feet six (6) inches in length, and six (6) feet in length and girth combined.

Parcels which do not conform to these conditions, or which contain "prohibited" articles will be treated according to the customs regulations of the country of destination.

Postage must be prepaid in full at the following rates, viz.:

In the United States, on parcels for Great Britain and Ireland, 12 cents for each pound or fraction of a pound; and, in Great Britain and Ireland, on parcels for the United States, two shillings for each parcel, whatever its weight.

A delivery charge not exceeding 5 cents in the United States or 2½ pence in the United Kingdom may be collected of the addressee of each parcel.

Except as above noted, and that no provision has been made for registration, the parcels-post regulations on pages 1101-1105 of the United States Official Postal Guide for January, 1905, apply to "parcels" for the United Kingdom.

Parcel-post mails for Great Britain will be made up at the postoffices of New York, Boston and Philadelphia.

OUR READERS' VIEWS

Rock Roses.

Editor Florists' Exchange:

With reference to Mr. Joseph Meehan's notes on the above in last week's issue, my experience with *Cistus laudaniferus* and *laurifolius*, as grown in England leads me to say that the former is by no means considered the hardier of the two. As a matter of fact it is only in the more favored parts of England, such as the south and southwest, and some mild portions of Scotland, that it can be grown with anything like success, the severe weather that visits other parts of the country making it an uncertain subject to plant. *C. laurifolius*, however, has proved itself to be more strongly constituted, consequently is more often seen in good form throughout the country.

It is unfortunate that the *Cistus* stand so near the dividing line of hardy and tender plants, as this beautiful class of plants would be a good addition to our dwarf growing shrubs. EDWIN MATTHEWS.

Snails—A Remedy.

Editor Florists' Exchange:

I am constantly seeing in your columns inquiries for some way of getting rid of the common garden snail. In fact, I asked for help myself. I have had so much of help and inspiration from you on other subjects that it will be a pleasure to give my experience upon the one subject where the ideas given failed me.

A large frame of pansies was in its prime for cutting purposes, but when I went to them one morning I found that nearly every flower had a large hole eaten in one or more of the petals; they were absolutely ruined. Lime, or ashes, were simply out of the question, as the dust upon the flowers rendered them quite unfit for the market as did the snails. Picking the snails may be a sure cure, but it would require a night watchman. The pest goes too far underground by day to be easily found. I had on hand a little "Bug Death," and, having found that it was death to the snail, I proceeded to experiment, to learn if it were also death to the plant. The plants tested continued to grow and thrive, so my question was solved and all the rest plain sailing. A solution was made, using one heaping mixing spoonful of the "Bug Death" to one gallon of water. The plants were watered as generously as when using clear water. For a week not a flower was eaten. Then seeing an occasional one, the solution was again applied, and that ended the trouble for the entire season.

I see no reason why the remedy might not be just as effective in the case of other underground workers.

S. E. BOYDEN.

Ferdinand Mangold—An Appreciation.

Editor Florists' Exchange:

'Neath two splendid white oaks, on a snow-covered eminence, commanding a magnificent view of the lordly Hudson, and in the beautiful and historic cemetery of Sleepy Hollow, there was laid to rest on Tuesday of last week, one more of the too fastly diminishing "Old Guard," the builders and the pillars of modern American horticulture. Ferdinand Mangold was one of the oldest and most respected private gardeners in America, and many will regret his passing away. 'Tis true, his was not the spasmodic

attering, commercial type of endeavor or enthusiasm, it his love of all pertaining to horticulture was the ready light that guided an army of young men on the way to that success which to-day they command in many parts of the country. He was careful in the selection of friend and plant, and steadfast in his affection for both. Through his friendship for Mr. James Dean, he gave the World's Fair of 1893 its largest and most interesting plants, for which he was awarded the highest to be given; and we ourselves have never failed to obtain his contribution to the any shows of years ago.

In the grand collection of plants he gathered together for the Gould family are numerous gems—children of his own deep interest, which, if offered to commerce, would make fame and fortune. But he shunned publicity; there was nothing attached to what he grew but love. For almost half a century he lived in and helped beautify that loveliest of spots—Irvington to Tarrytown—and the large number of people that attended the funeral services at the church at Irvington, and followed the remains to the grave at Tarrytown but told part of the story of his many deeds of kindness. The Tarrytown Horticultural Society was largely represented. Miss Helen Gould (who sent a large wreath of brown galax and lilyas) and many others from distances, attended.

J. IVERA DONLAN.

The Boston Flower Show.

Editor Florists' Exchange:

I was very much interested, as I have no doubt were more of your readers in this section, in the letter of your correspondent, W. N. Craig, page 237 of issue of February 25. I cannot quite understand your correspondent, however, when he says that some of my remarks fall so wide of the mark," etc. Mr. Craig knows perfectly well that those remarks, in my "introductory paragraph," which, by the way, was written when I was in the best of humor and not at all "out of sorts," were intended to help the committee. It is not necessary for your correspondent to make an excuse for the show closing so early. It is a well-known fact that the Saturday shows of the Massachusetts Horticultural Society all close at 4 o'clock, and, I believe, the show in question was no exception to the rule. I agree with Mr. Craig that it "would be a capital idea to keep this show" (and perhaps others) open until Sunday night."

I cannot change my opinion that it was unfair to the public and also to the exhibitors to keep back the awards until within an hour of closing time. I do not say that the committee kept those awards back purposely, but I do say that their methods of doing their work at the exhibitions are by no means up-to-date. That those methods are antiquated, and would be tolerated in no other first-class exhibition hall, is well-known fact.

Regarding Mr. Craig's questions about "the system of having exhibits," etc., perhaps in my notes in question I should have been a little more plain (although cannot for a moment doubt that Mr. Craig was fully aware of my meaning), and said "naming the exhibitors" instead of exhibits. Does any society, except the Massachusetts Horticultural Society, allow the exhibitors to place their names on their exhibits, open to the public and judges before the judging is done? Is it necessary for the committee to retire after the judging is done and take an hour or two, as the case may be, to write a set of cards for the awards that have been made to the different exhibits? No; Mr. Craig is as much aware as I am that the system is wrong; that a radical change is needed; that the system is "peculiar" to the committee of the Massachusetts Horticultural Society. Give us your "gum hipplaster" if nothing better can be found; but do not keep us waiting when the judges have given their opinions, especially if they are a little late in starting, and the exhibition closes at 4 o'clock.

I sincerely thank Mr. Craig for his comparison. I consider it quite an honor to be the author of a statement worthy of "Job;" and I also thank Mr. Craig for his appreciation of my efforts in trying to keep the committee up-to-date. But I prefer to have my name left off from consideration for any of the committees. I have no ax to grind in that direction; but the foregoing will perhaps help to show that some one has to get up and "git" if Boston is to have a society and exhibitions that are to be considered up-to-date, twentieth century.

JOHN W. DUNCAN.

Carolina Garden Notes.

Editor Florists' Exchange:

The Winter, which we hope is now nearly over, has been such as is seldom seen in the Sunny South. Not only has the cold been of greater intensity than usual, but it has been continuously cold, with hardly a let-up since the middle of January. What the damage has been to half-hardy plants it is yet too soon to estimate. Prunus caroliniana, which is usually in bloom at this date (February 21), is not only still dormant, but has had its foliage badly scorched, and in places exposed to the morning sun the Magnolia grandiflora shows much scorching of the foliage. And yet, strange to say, my gardenias look all right, standing on the north side of the dwelling where the morning sun has not struck them, for with all of our broad-leaved evergreens the morning sun does more damage than the particular degree of cold. But the coming of warmer weather may show that more damage has been done than is now apparent.

Here the last week in February, when early pota-

atoes should be in the ground, no outdoor gardening has been done. We have not even gotten our garden peas planted, nor the sweet peas, both of which we usually plant in January, though we prefer to plant the sweet peas in the Fall. A florist friend told me a few days ago that his sweet peas planted in the Fall are still all right, and he will be in ahead of us. In this climate sweet peas are at a decided disadvantage if not started very early in Spring or in the Fall, as the hot weather cuts the crop short. I notice that some volunteer sweet peas from seed that dropped last Summer have wintered very well, and I will let them grow for the earliest, and hereafter will always try to get the planting done in the Fall.

Our large truck growers in the eastern part of the State have been sadly delayed in getting their early crops in the ground. The frames lettuce crop, which is very largely grown under the protection of cotton cloth, has been seriously damaged, and very little has yet been shipped from this State, except by a few who have steam pipes running through their frames. Down near Wilmington a windstorm that preceded a severe cold wave, tore the cloth covers into ribbons, leaving the lettuce beds exposed to the coldest weather of the season, and, of course, serious damage resulted.

The extreme hardness of the Groff gladioli is well shown by the fact that I noticed a few days ago that the little corianders left in the ground in digging the corms last Fall, are up nearly a foot high, and do not seem to mind the cold.

Heavy rains still keep us out of the garden, though there is now no frost in the ground, and we are simply waiting for the sun to dry the soil, and are anxious to get to work. I have over fifty varieties

THE LATE FARQUHAR MACRAE

of sweet peas sent me for trial, and fear that the result will not be as good as I hoped, because of late planting. But I suppose that a month or two later we will have forgotten all about the worry of the hard Winter, and it may be that it will prove of advantage in the destruction of some insect pests.

In speaking of broad-leaved evergreens I should have mentioned that a number of varieties of the European laurocerasus have not lost a leaf; the evergreen eleagnus is all right, as well as the golden-leaved variety. Osmanthus fragrans is badly scorched and will lose some shoots, while Chinese azaleas are entirely unharmed, apparently. The Amoor River privet, and a broader-leaved one which we have been calling japonicum, but which Mr. Meehan says is lucidum, are still green, while the California privet has about lost all its leaves. Lucidum is as evergreen as a holly, and judging from what it has endured this Winter, I would suppose that it would stand much further North. At any rate, it is worth testing there. Our commercial florists here have had a very good season and are not complaining.

W. F. MASSEY.
N. C. Experiment Station.

The Ideal Advertising Man.

I believe that the men who are most valuable to the advertising business are those who work without the dependence of good fellowship and conviviality, and those who have studied general trade conditions and merchandising thoroughly, and who simply convince their prospective customers with good sound logical arguments. I believe that friendship should be a result of good business dealing, rather than business dealing a result of friendship. Combine this idea with earnest and persistent work, and you have my impression of the real mission of an advertising man.

—Richard Wood, of the Metropolitan.

Peter T. Huddart.

Peter T. Huddart, manager of the Huddart Floral Company, Salt Lake City, Utah, died suddenly on Monday afternoon, February 20. Heart failure was the cause of death.

Mr. Huddart was born in England in 1864. His father was a florist, and from his youth the deceased worked in greenhouses. He came to America while a young man and worked in New York City for two or three years in the florist business. Later his family moved to Denver, where his brother, John Huddart, an architect, and a sister are still living. He was engaged there in the florist business. About nine years ago he moved to Salt Lake City and went into the business there. He married about six years ago, and leaves a widow and one daughter, Isabel, who is four years of age. Last year he sold out the retail department of his business to L. M. Law, and since that time had been operating the greenhouses. He was well known in Salt Lake City, and was a member of the Commercial Club, Elks, Eagles and A. O. U. W.

Wm. E. McAllister.

William Edward McAllister died at Passaic, N. J., Tuesday, February 21, after a long and painful illness from cancer of the stomach. He was born in Jersey City, 1874, but since his fourth year had his home in Passaic with his parents. After having acquainted himself with the culture of roses at the Young establishment, Clifton, N. J., he formed the company bearing his name and started the retail business on Main avenue, Passaic. With his death, a most brilliant career has been cut off. His honest and square dealing with growers and wholesalers made him respected by all and brought him many friends in the trade. He was probably the most popular young man in his home city among all classes, not alone for his bravery as fireman in the volunteer fire department, but also through his big heart and kindness for the poor and unfortunate. Deceased was a member of the First Reformed Church. Sincere, heartfelt sympathy is extended to his parents and dear ones in their great sorrow and bereavement.

The business will be continued as heretofore under the able management of B. Machelwin, a near and warm friend of deceased.

F. H.

Farquhar Macrae.

Farquhar Macrae died at his home, 1133 Smith street, Providence, R. I., on Tuesday, February 21. He was in his 62d year. Death was unexpected, Mr. Macrae having been sick for two days only. Peritonitis was the cause.

Farquhar Macrae was born in Rosshire, Scotland, in 1843. He served his time in Conon Gardens, on the estate of Sir Kenneth McKenzie, where he worked for four years, afterward following his profession on several prominent places in England and Scotland before coming to this country. He sailed for the United States about 35 years ago, going to Providence on July 4, 1870. The first nine or ten years of his career there were spent as expert grape grower on Willard Whitcomb's place. The products of the Whitcomb place, raised by his hands, became famous in the New York market, where they were in demand for several years, and commanded the highest prices.

About the year 1880 he embarked in the wholesale florist business, locating on the old G. W. Chapin place at Fruit Hill. He made a success of it from the start and in a few years he purchased a piece of land on Smith street. Here he built a modern greenhouse plant, growing carnations, roses, chrysanthemums and violets for the wholesale market of Providence and vicinity. The business succeeded to such an extent that he soon outgrew his plant, and, disposing of the same to his brother, John A. Macrae, he purchased a tract of 20 acres in the immediate vicinity, where he established the plant which he conducted up to the time of his death. It is estimated that the latter includes 100,000 square feet of glass.

Mr. Macrae took a great interest in the Society of American Florists, holding the office of vice-president in that organization, and being mainly instrumental in securing the annual convention for Providence in 1897. He took a prominent part in organizing the Rhode Island Florists' and Gardeners' Club, in which he held office at various times, being its president when the S. A. F. met in his home city.

Mr. Macrae was one of the prominent members of the Rhode Island Horticultural Society, and his exhibits at the annual displays under the auspices of this organization were a feature. He was especially successful in the cultivation of chrysanthemums. He was a typical Scot, having all the meritorious traits of that nationality; few, if any, of its failings, and was held in high esteem by all who knew him.

Besides his brother and a sister, Mr. Macrae leaves a widow and eight children—three sons, Alexander, Walter and Arthur, and five daughters. The funeral was held Friday, February 24; interment in Swan Point Cemetery.

Dahlia Kaiserin Augusta, Victoria.

I have tried this dahlia for two years and am convinced that it is the best white dahlia in existence. I grow mostly white dahlias for cut flowers, and, after having tried all the so-called best white sorts, have not found any to equal Kaiserin Augusta Victoria. It is of the decorative type; flowers of the purest white; size, 4 to 5 inches diameter; double. The plant grows 3 to 3½ feet high, is of sturdy and compact habit, and does not require staking. The profusion of blooms is remarkable, exceeding any other sort in the field. The flowers can be cut with stems 12 to 18 inches long. The plants grown from cuttings will make the best plants and produce the largest, finest and longest stemmed flowers.

Kaiserin Augusta Victoria was awarded special premium by the American Institute, New York, at its dahlia exhibition in October, 1904. The awards committee of the New York Florists' Club, who visited my place and saw the plants growing, reported to the club, October 10, 1904, as follows: "It is unquestionably a valuable addition to the race, and where white Summer flowers are wanted will prove of great value." Brooklyn, N. Y. A. L. MILLER.

Cannas With White Flowers.

A writer in the Revue Horticole, in speaking of the efforts of hybridists to obtain a canna with pure white flowers, mentions the following sorts that have been offered in the trade as belonging to that section: Alba rosea grandiflora, white, dull rose; Ideal, rose white; Candeur, same color; Rosalba, white, lightly spotted rose; Apollon, straw, passing to pure white; Mlle. Fray, cream white; Alsace, greenish white; Seduisant, white, lightly spotted rose.

More recent varieties include: Mlle. Meriem Lombard, almost pure white; Albatros, straw, passing to white; Mme. H. Coufourier, white spotted rose; Poëte, straw, passing to white; Jeanne d'Arc, straw, passing to pure white; Miss Annyker, pretty cream, almost pure white; Mlle. Ant. Cresp, almost pure white; Flocon Neigeux, greenish white, passing to pure white; Boule de Neige, straw, passing to white; Frau Maria Nagel, almost pure white; Valentine Delalande, pure white, with light rose center; Le Lys, a dwarf plant, flower white, lightly striped with rose.

Says the same writer: "We hope that some day a truly pure white-flowered canna will be obtained with beautiful green foliage, or, what is better, purple black foliage. From a decorative point of view the latter would be ideal."

Hardy Perennial Seedlings.

There is no more interesting work than the growing of hardy perennials from seed. To the man who handles a great number of different kinds it becomes very absorbing. To the untrained eye, with seedlings in the cotyledonous state, one kind is very much like another, yet to the expert they are as easy to distinguish as the plants when in a more advanced stage.

Many peculiarities may be observed during the germination of different kinds of seed. *Iberis sempervirens* gives off a very disagreeable odor, not unlike that of boiled cabbage in an intensified form, which gradually disappears as the seedlings appear above the ground. *Pentstemon Digitalis*, along with some of the other species, has a peculiar and distinctive odor which is very pronounced at the time of germination. It is no doubt caused by a chemical change taking place at that time similar to that which takes place when barley is malted, and leads to the thought, how many unknown products are there still to be discovered that may be of value?

With delphinium seed, there is always a mold that makes its appearance during germination on the top of the soil before the seedlings push through the ground. At first this used to cause me annoyance, as it was thought to be a fungus in the soil, but from close observation and many experiments, it is proved to be always present with the germination of the seed, and is not necessarily detrimental.

The majority of seedlings rapidly push up the seed leaves, or cotyledons, clear of the soil and spread them out horizontally, while others remain very close, barely forming any stem. The *galliardia* is a good illustration of this. The seedlings seem to have barely enough strength to push through the soil. Perhaps the hot, dry winds of the western plains, where they are native, have taught them not to be too previous. There is some natural cause for every variation, even though we pass the matter by, thinking it their nature so to be.

The actual pricking out of the various kinds of seedlings is a very simple matter, but at the same time it pays to do it right. The boxes should always have sufficient crevices to insure good drainage. If tightly made, when the wood becomes wet it swells and will often make the boxes watertight. If such is the case, holes should be bored in the bottom. The soil should be fairly dry and have a good proportion of sand mixed with it. If about one inch of well rotted manure, such as that from a spent mushroom bed, be spread over the bottom of the box, it will help maintain an even moisture in the soil and prevent the fine soil from washing through the crevices, besides being good for the plants.

In filling the boxes, press the soil down evenly round the sides so that an even surface will be maintained after it has been watered. Pricking out is rather a tedious job, especially if the seedlings are very small; but with practice a boy soon becomes expert. Keep the plants in rows, even if only planting an inch apart, as it may be necessary to surface the soil if it should become baked or green, and it will make the weeding of them much easier. Weeds

are never too small to pull out; if left too long, this cannot be done without uprooting the plants.

ERNEST HEMMING.

A Plea for the Hardy Border.

By Herbert Greensmith.

(All questions relating to Mr. Greensmith's articles in these columns should be addressed to this office, when they shall have immediate attention.)

It would scarcely seem necessary to call attention at this early season of the year to hardy perennials; they are so beautifully tucked away, in many cases, deep under the snow, needing no thought or care of ours; but the time of the singing of birds is at hand, and the glorious long looked for Spring resurrection is rapidly drawing nigh. Are we ready for it? What about that show or sample bed of hardy plants which we can invite our prospective customers to look at? There is much more satisfaction in buying when one can see what he is getting than in purchasing from a catalogue of bewildering names. Have we decided to plant that unsightly corner, which is perfect in its adaptability to many hardy plants, and to make it a thing of beauty by a judicious embellishment with these ever-increasing popular plants? There is a

WHITE DAHLIA KAISERIN AUGUSTA VICTORIA
Grower A. L. Miller, Brooklyn, N. Y.

great campaign of educational work to be done along the line of growing herbaceous plants; who is to do it? The opportunity lies at the door of every progressive American florist. He can and must be the instructor.

Many wide-awake florists are already entering the field, and others are in search of information, inquiring what is the best and most feasible way to get at it. I would emphasize the suggestion made above—have a bed or a corner of some kind neatly and decently laid out, containing, if nothing more, a few of the choicest kinds: *Rudbeckia Golden Glow*, *Helianthus multiflorus*, always useful, but well known. Day lilies and the more common kinds I would exclude if room is at a premium, because they are well known, and as occasion requires, are cheaply and readily secured. But where space is available, plant them by all means, as they are among the most salable stock.

Isolated forms of many herbaceous plants make but a poor impression; therefore, bold grouping is necessary to be effective. *Lychnis stokesias*, *arabis*, *candytufts*, isolated plants of the dwarf *phloxes* and others of similar nature and habits are never so effective or impressive as when massed. Of course, the taller and more robust growers, such as *boltonias*, *heleniums*, some forms of *asters*, *rudbeckias*, *cheirones*, etc., are all right in fair sized clumps; but even some of these show up to better advantage and produce both larger heads of bloom and larger individual flowers by yearly division. Both *asters* and *heleniums* profit by it, and I am persuaded I get more satisfaction out of a single crown of *Helenium autumnale* superbum than I would out of a large clump, a foot across. With some varieties of *helenium*, the reverse is the case, as, for instance, *H. Bolanderi* and *H. pumilum*; both are apt to be dwarfer and not so floriferous if closely divided every year, and, in many cases, if allowed to stay over two seasons in one place they are likely to be entirely swept away by fungus.

Speaking of *heleniums*, which we are very liable to associate with Fall flowers, I should like to call particular attention to *H. Hoopesii*. I think this is one of the prettiest and deepest colored sorts that grow, and, quite contrary to its congeners, it blooms in early June, and in good soil has flowers two to three

inches across, of a lovely orange-yellow shade. Very often it will produce a second crop of bloom toward Fall. The great beauty of this plant is that it can be so easily raised from seed, which, if sown inside in January or February, will produce some bloom the first year in very late Fall. But the plant will not be at its best till its second season. It grows about two feet high, and being of such a bushy habit, can be planted close. It is also very useful for cutting, and this is a factor which should not be overlooked, especially where room is limited, for a double purpose is thus gained.

One great obstacle to overcome is, how best to serve this double purpose, for so many hardy plants are not good subjects for cut flowers, and, again, so many people believe that all or nearly all of this class of plants bloom in a bunch toward the Autumn. A greater mistake never was made, for they are the first flowers to come into bloom, not in early Spring, but even in Winter. In favored locations now in our snow-bound North, the *Eranthis hyemalis*, or Winter aconite, is in flower; as is also *Petasites fragrans* in the western part of New York. This plant used to bloom with me in February, but the flowers got damaged by heavy frosts. With the protection of a frame, however, this difficulty could be overcome. The chief beauty of the plant lies in its sweet, delicious, hellebore-like fragrance, which is very pronounced, and lasts well long after the flower is cut.

I am not quite sure but a great many of us would be delightfully surprised if we were to go out and dig down under the snow and leaves even now, and there find signs of life already at hand. We would see that the plants are getting ready for their Spring work. Where the ground is not frozen too hard, they are actually making root and pushing up their leaves, buds and flowers. Last year the Japanese coltsfoot (*Petasites japonica gigantea*) actually worked up its flower heads through the frozen ground and ice, and flowered early in March. On the 26th of February, two years ago, the Japanese Joss flower, *Adonis davurica*, without any protection, came into bloom while the ground was still hard frozen. Last Winter being more severe, it opened its blooms on the 11th of March, with a slight covering of snow still on the frozen ground. I have seen *Symplocarpus fetida*, common in our meadows and swamps, do the same thing. Of course, the flowers of these are not of much real value to the average florist, but these remarks only go to show that hardy plants, by judicious selection, may be had in bloom every month in the year.

To say just what should or should not be planted in a sample bed or border would depend very much upon the space and situation. The border might be alongside a fence, a wall, or building; then, of course, select tall-growing, showy, useful plants for the back of the border, and the more dwarf ones for the front and intermediary rows. Neither would the writer, even in a limited space, confine himself strictly to those varieties exclusively useful for cutting, as, for instance, the early flowering *phloxes* or moss pinks, the *arabises*, the *cerastiums*, *armerias*, dwarf *lychnis*, *epimediums* and the beautiful little *houstonias*, always quaint and much admired, even prettier than a forget-me-not. The early flowering *anemones*, the *Alpine asters*, various *iberis* (*candytufts*), *Omphalodes verna*, some of the dwarf *veronicas*, etc., are all very useful, showy, neat and attractive, and among the most desirable of our early Spring flowering plants. All are suitable for the border, for edging of beds or planting on the rockery.

The open border could be somewhat varied in planting, the subjects being studied as to height, which is generally given in the various catalogues, and period of blooming, and so placed or grouped in the bed that it would have the appearance of always having something in flower. The taller and more robust forms could be placed in or toward the center, but some varieties, such as *delphiniums*, *salvias*, *gypsophillas*, *valerians*, *lychnis* and other plants of a similar nature, which only have the appearance of being tall when in bloom, could be placed with good effect almost on the outer edge. As soon as their flowers commence to fall cut down the plants, and you will again be rewarded with a later crop of blooms. This would also break up any set or formal method; but the arrangement of planting will work itself out only by years of patient toil. While the plants are in bloom, their habits and positions can be best studied and their proper places determined by the aesthetic taste of the grower. No hard and fast lines can thus be set, for when we think our border perfect something always crops up whereby we may again improve it by some slight changes.

Bare spots in the best arranged border will occasionally occur. They occur in nature. Have you not noticed how quickly some of our native plants respond to the first warm, genial rays of Spring? For instance, the *trilliums*, or wake robins, the delicate *American cowslip* (*Mertensia virginica*), *saxifrages*, *Dutchman's breeches* (*Dicentra cucullata*), *Anemone thalictroides*, *A. patens utahana*, the blood root (*Sanguinaria canadensis*); and where is there a more chaste or delicate Spring flower, white as the driven snow? Why is it not more seen? Many others might be enumerated, but the above will suffice to illustrate how quickly they come and how rapidly they disappear.

When their flowering period wanes, and they begin to show signs of going to rest, have a few hardy annuals coming on, in pots, or in a separate border. If in the border, have them transplanted a few times to make them stocky and give them more roots. It is a well known fact that many annuals, like trees, are apt, if not transplanted, to grow to one single root; these can then be dropped at will into the border and thus fill up any vacancy and add brightness and cheer to the otherwise vacant spots.

In conclusion, I would like to call the reader's attention to the value and utility of these plants by referring him to a short article in Henderson's Handbook of Plants, page 186, on herbaceous plants, by Wm. Robinson. The list of plants appended to this article is by no means complete, or fully representative; but it is a very good one. Many varieties have been introduced, or have become better known since that list was made out, and can be added as taste dictates from various trade catalogues.

Phlox Drummondii.

Where a selection of twelve of the most desirable hardy annuals is requested, Phlox Drummondii should always be given a prominent place therein. Few, if any, annuals can furnish more brilliant displays of coloring than are to be supplied by the many off-springs of this plant. In common with most hardy annuals, their culture is simple; nevertheless, to obtain highly satisfactory results, give them some good rich material to grow in. Successive flowerings can be had by sowing the seed indoors and transplanting the young seedlings, giving thus early results, or by sowings in the open ground, when all danger from frosts is past, for later. JOHN F. JOHNSTON.
Glen Cove, L. I.

Tales of a Traveler. Los Angeles, California.

Los Angeles is the gateway for Southern California; all roads lead to it. The city is a combination of the East and typical Southern California, and the business of the flower men in Los Angeles is to supply the Eastern element with what they want, and the tourist in California, having been thoroughly coached upon the beautiful flowers of California must buy them here even if they never invested in flowers when at home in colder climates. The florist here caters to the tourist trade, and to those who have means who make their home here in order to enjoy what the climate of Southern California affords.

A first impression of the flowers in Los Angeles is a strange one; different from San Francisco and different from any city I have seen. The range of prices and the difference in the quality of the flowers which are ever before one is very great. Side by side in all the stores are the carnations which are so typical of California, and, to tell the truth, they look hard. They look the more hard because of the season of the year, for the rains have come and the typical carnation of California is grown in the open with no protection. And when it does rain in Southern California, it rains. Nature is not moderate at all about this matter, and the streets become rivers in a short space of time after the downpour commences. On the carnation in the field this has a bad effect, and the market is full of poor flowers as a consequence, which sell for "two bits" a dozen. They hardly know the meaning of our Eastern "25 cents," but they delight in gathering in the Eastern "quarters" just the same. The violet, which is so abundant in San Francisco, appears here, but not in such numbers, and still the same prices buy violets and seldom over 20 cents per hundred is asked for them. On the streets callas, at six for 10 cents, are plentiful, for they, too, grow here if allowed to. The roses so common on the streets are nearly all out-of-door stock, and they are, as a rule, poor in quality and cheap in proportion.

If one takes a stroll about the city to look over the stores and to see what the flower vendors on the corners are selling to the passerby, he will find a great variety of stock and more variation than one would suppose it possible to have. In the stores the variation is noticeable, but it is not as marked, for here the stock is partially grown under glass, and better quality prevails. Some things come cheap, but, as a rule, stock is the opposite of cheap. Out-of-door daffodils are now coming in plentifully, and centaureas are sharing the windows with them. These are grown in two colors, purple and white, and sell for 25 cents per dozen. Sweet peas are just being brought in, and stocks also; both of these fill up considerable space. The native huckleberry, with its abundance of foliage, is used largely for greens, and this, as it is in San Francisco, is found everywhere.

In roses, the most interesting, to me, is the small pink Cecil Brunner which is just taking its place in the stores, and which is very useful in making up and very pretty in bunches. Some good American Beauty are seen, but these are grown under glass; and, then, any quantity of other roses, which grow out-of-doors, and which look the worse for mildew and stormy weather. Some very good Liberty I saw that were grown in a lath house. These blooms were small, and yet the color was superb; the foliage was clean and free from mildew. The tendency is, however, toward the indoor stock, and side by side with the outdoor flowers we find roses that are really good. Grown by eastern growers, however, and grown as roses are grown in the East, they are blooms which compare favorably with those seen in the East. The people are beginning to realize the superiority of this class of stock and are learning to pay the difference.

If one wanders far enough he may meet one of the so-called "tin-can" nurseries for which California is famous, and this will, indeed, be a treat. If you want to see things done in the rough, you must visit California, for here they know how to grow stock in tin cans, and will argue it out, from the economical basis, that a can is a saving proposition; for, as one of the "tin-can" magnates told me, "a can costs but a cent, and a pot costs three, and, therefore, I save two cents

on that plant which will only bring \$2, and they'll buy it just as quickly in a can as in a pot." So it goes; and it all depends on how you look at it. In these "can" establishments, with roof of lath and sunshine (when it doesn't rain), you will find everything that will live in a tin can, and they tell me that the can prevents evaporation a great deal better than the clay pot, which is for them a thing of the future.

The bougainvilleas and salvia in bloom about the houses in the residential sections make a very pretty picture, and combined with the giant palms and the beds of callas in full flower, render the homes very attractive.

W. R. PIERSON.

(To be continued.)

AMONG THE GROWERS.

F. R. Pierson Co., Tarrytown, N. Y.

What a number of good things (horticultural) have been sent out from this little, but wealthy town that overlooks the Hudson River! It is from here that many of the finest commercial novelties in chrysanthemums, cannas, carnations and ferns have been distributed, and the name of F. R. Pierson Company has come to be recognized as a guarantee of the sterling merit of any plant or flower they take hold of and introduce to the trade. Of late, Mr. Pierson has been going largely into carnations, and he has been most fortunate in securing varieties of the Lawson family. The White Lawson that he introduced

The latest addition to Mr. Pierson's novelties is the variety Winsor. This is one that has only been secured very recently, and will not be introduced to the trade until 1907. It is a beautiful light pink sort, well above the average size, and will no doubt make a name for itself at the exhibitions between now and the time of its dissemination.

In the cultivation of carnations Mr. Pierson has decided opinions of his own, and there are some features at his establishment which are worth going to see. We refer particularly to his method of planting. A great deal has been said of late about the style of bench best suited to the culture of carnations; there has also been much talk on sterilization of soil and other expensive modes of preparing beds for indoor cultivation. Mr. Pierson is growing his carnations in a house 300 feet long and 60 feet wide; they are planted directly on the floor in beds about 3 feet wide, with very narrow pathways, and simply a board, about 5 inches in width, to mark off these pathways. No special efforts have been directed toward the making of these beds, the plants being set in the ground, just the same as one would do if planting in the garden outdoors. It will be seen that by this method there is a great saving in material and labor, as no benches have been built, and it will also be plainly apparent to anybody who will visit the greenhouse that the carnations are doing just as well as those grown on benches. There is not a sign of any disease, red spider, or other affliction. The plants are a mass of flowers and buds, and are just as easily cared for, so far as watering and syringing go. The method in general is a pronounced success from every standpoint. The plants in this house were

PHLOX DRUMMONDII, PINK

Photo by John F. Johnston

last year has become a universal favorite, from its purity of color, its freedom of flowering both early and late, and continuously, and, above all, by its easy culture; it being strictly a variety that will grow well anywhere. His latest addition to this Lawson strain is the Variegated Lawson, of the fabulous price supposed to have been paid for which the daily press has said so much about. Whatever figure changed hands, of course, only Mr. Pierson and the man who sold the carnation knows; but there is no doubt much truth in Mr. Pierson's remark, that he paid as near to \$20,000 for the variety as did Mr. Thos. W. Lawson his \$30,000 for Mrs. Thos. W. Lawson. That the Variegated Lawson is a wonder all will admit who visit the greenhouses and see how the plants are doing at this time. The productiveness of the parent plant is well known to every carnation grower in the country, and we have no hesitancy in saying that this variegated sport is just as free in every particular, with stems probably longer than the parent, and the flowers a trifle larger. It is perfectly free from disease of any description, and whoever can grow the Mrs. Thos. W. Lawson is sure to have success with this variegated variety.

The crimson variety, Daheim, is making a splendid record; in fact, it is proving one of the most floriferous carnations that was ever introduced, and while it is but a small percentage of crimson that a carnation grower needs in his collection, Daheim, being so easy to grow, and so floriferous, is sure to fill the bill. It is an exceedingly fragrant variety, and it does not have that too common tendency of turning black after it has been cut a few hours, but is an excellent keeper.

not put in until rather late in the season and were very small stock plants at that, and it was the opinion of several experts who visited the house about that time that the plants would be a total failure and produce no flowers, or cuttings either, to any extent. One can thus see that an elaborate carnation bench is not a great necessity after all; of course, the height and width of the house, in this instance, may have something to do with the success of this method. The house is probably 20 feet high at the ridge, and admits of plenty of ventilation at all times.

During our visit on Monday afternoon last, stock was being lifted from the cutting bench preparatory to being shipped, as the orders for some of these novelties are being filled quite extensively at this time. The plants are rooted in common bank sand, and we can safely say that those who receive cuttings, such as we saw lifted from the bench, will have no cause of complaint about them not being rooted; they were simply a mass of fibrous roots attached to the base of each cutting, and these, when packed with moss around them, would safely travel any distance and arrive at their journey's end in perfect shape.

In the houses devoted to miscellaneous plants there is an ample stock of choice flowering plants coming on for Easter. The Baby Rambler rose is grown extensively, as are azaleas and lilies. There are also several houses filled with young stock of geraniums and chrysanthemums.

As is well known, the immense American Beauty growing establishment is also located at Scarborough, and we had the opportunity of going through the

range of glass put up last Summer, which consists of three houses, each 28 feet wide by 300 feet long, built on the ridge and turrell system, and all open in the inside. The construction is of iron, the work of the Pierson-Sefton Company, and is both light and durable. The gutters between the houses are but ten inches wide, and there is no shadow. The same system in planting has been employed here as is done with the carnations. The roses are planted on the floor, with small narrow boards to define the edges of the beds. That this method has been a success is plainly evident at this time. The plants have borne magnificently all through the season, and while they are a little off crop just now, there is abundance of bloom in sight, the great majority of which will be of special grade. The older range of rose houses at this place are in the best possible condition; buds are showing plentifully all through, and the foreman says that this Winter has been one of the best on record for the American Beauty crops; the plants have done well ever since planted last Summer, and at the present time the outlook for a magnificent crop of special blooms is all that could be desired.

A new departure has been made in the boiler system, and it would seem that in the saving of fuel perfection has almost been reached. The boilers have been fitted with extremely fine grates, and a blower has been installed. With the aid of this device, the culm, or slack, from the mines can be burned with perfect success. Steam can be obtained from this fire just as easily and as quickly as it can be produced from lump coal, and the cost of this culm or slack is \$1.50 per ton. Here is something that every greenhouse owner should investigate. The heating question is one of the greatest importance that we have to deal with, and any contrivance that will create a saving in fuel is worthy of the most careful consideration. So far as we are able to describe the principle above mentioned, we may say it resembles a blacksmith's forge on a large scale. A small engine is utilized to run the blast, or blower, and that, together with the fine grate, is all that is required. The fires need no more attention than is necessary for ordinary coal; and the grate is cleaned only once in 24 hours. It will pay all interested to go and see the system working, for it is convincing proof that it is not necessary to use the highest priced grade of coal for greenhouse boilers.

Robert T. McGorum, Natick, Mass.

Among the rose growers for the Boston trade, Robert T. McGorum, Natick, Mass., is one of the most successful. His establishment, which is composed of five or six modern houses, is situated only a short distance from the famous Wabash conservatories. He devotes his whole space to roses, using entirely grafted stock. Bride and Bridesmaid are the principal varieties grown. His Bridesmaid are especially fine; looking over his whole establishment it will be hard to find a more evenly matched lot of plants. And the blooms, too; talk about rigid stems! Every plant seemed to be throwing them up.

Mr. McGorum is one of those men who have been taking off a continuous crop the whole Winter, and flowers, with him, were as plentiful a month ago as they are to-day. There was one bed of Bridesmaid that commanded our special attention. The plants looked perfection, being very even throughout, with many fine buds in course of development. These were two-year-old plants, which, after having been grown one year in the beds, were lifted last May and heeled outdoors to ripen. About the middle of June they were taken and cut down to about six inches, potted into 5-inch pots, the dirt being entirely shaken off the roots, which were also severely pruned. They were planted into the bed about the middle of July, were in crop soon after, and have been doing as well as any young or second-year plants ever since. One house is filled with Souvenir du President Carnot, which are just beginning to show their first crop of buds, having been rested during the short days of Winter.

Mr. McGorum sells his whole product through Welch Bros.' market. He has been a frequent exhibitor in his class at the Boston shows, and at the coming rose exhibition it is hoped he will again carry off some laurels. The heating plant is up-to-date, two large steam boilers being placed side by side, although only one is used the most of the time. A third boiler is arranged for the working of a pump from the manure tank, and also for driving a blower with which the fire boxes are arranged. This has not been used, however, this season, as when the price of coal is normal it does not pay for the extra cost of operation.

Robert Montgomery, Natick, Mass.

Another compact Natick (Mass.) establishment is that of Robert Montgomery on Worcester street, on the Boston & Worcester Trolley Air Line, and of easy access to Boston. Mr. Montgomery built this plant about seven years ago. It is a modern establishment of some 25,000 feet of glass, and is entirely devoted to the growing of roses. Bride and Bridesmaid are the chief features of the place, although several other varieties are grown in small numbers. Grafted plants are entirely used, and a lot of young stock, recently grafted, looks very well indeed. The place all over showed a remarkable sameness among all the plants, and it was evident that both Bride and Bridesmaid are grown to perfection. Mrs. Oliver Ames is grown in the front beds and is done very well. One house is devoted to American Beauty for Spring and Summer use, and as they have just recently been started they are beginning to show remarkable growth, and give the appearance of a fine lot of large blooms in the future. J. W. DUNCAN.

CLUB AND SOCIETY DOINGS

THE AMERICAN PEONY SOCIETY will hold its next meeting in Chicago in June, 1905.

THE NEW HAVEN (CONN.) HORTICULTURAL SOCIETY held a carnation meeting on Tuesday, February 21. F. Kimberley delivered an essay on the subject of carnation culture. The society is in a flourishing condition, having now over 100 members, and more being added at every meeting.

THE WASHINGTON (D. C.) FLORISTS' CLUB will hold a meeting on Tuesday, March 7, at 516 Ninth street, N. W. There will be an exhibition of carnations which promises to be very fine. The club cordially extends an invitation to all interested in carnations to attend this meeting. Out-of-town growers who wish to send flowers will please address them to Secretary Bisset, Twin Oaks, D. C., carriage prepaid. Mr. Bisset will give his personal attention to them and see that they are accorded a good position at the meeting. They should be shipped so that they will arrive on Tuesday morning, March 7. M. C.

AMERICAN ROSE SOCIETY.—Complete schedules for the approaching rose exhibition at Horticultural Hall, Boston, have been mailed to all members of the American Rose Society, and inclosed with each schedule an entry card. All others not members of the society can have copies on application to the secretary. The number of special premiums is large, and an exhibition of unprecedented diversity and beauty is assured. M. H. Walsh's display of Rambler roses alone will be worth crossing the continent to see, and every one interested in the rose, commercially or otherwise, should take advantage of this opportunity to see a superb exhibition and meet the foremost rosarians of America. Come yourself and bring an exhibit with you.

Exhibits may be sent, prepaid, care of William Nicholson, Horticultural Hall, Boston. For the convenience of exhibitors at a distance, Messrs. Welch Bros., 15 Province street, Boston, have generously placed their refrigerators and other conveniences of their establishment at the disposal of exhibitors who may, if they so desire, ship their boxes in advance to Welch Bros.' care, giving explicit instructions by mail as to what disposition they wish made of them; whether the boxes are to be kept unopened, or whether the flowers are to be taken out and placed in jars of water until required. All instructions will be carefully complied with. WM. J. STEWART, Secretary, 11 Hamilton Place, Boston.

THE PLANT AND CUT FLOWER GROWERS' ASSOCIATION OF ST. LOUIS, MO., was duly organized on a permanent basis on February 9. Its object is to benefit in every way possible the growers of plants and cut flowers. Those who have originated this movement have already been amply repaid by the interest manifested. We are desirous of enlisting the support and co-operation of every grower in the vicinity of the St. Louis market. We are determined to use whatever revenue we may acquire in the preparation of instructive entertainment for those who attend our meetings.

We desire to have it definitely understood that the object of this association is not in conflict with the St. Louis Florists' Club. We do not intend to supplant the older organization, but believe that the growers' time can be more profitably spent in discussing matters pertaining directly to their business.

It was decided at the meeting to keep the charter list open until the first day of April. The dues are to be \$3.00 per year. We will charge an admission fee of \$2.00 to all who join. But for those who come in on the charter list before April 1 we have agreed to waive the admission fee. Thus all who will send \$3 to pay dues until December 31, 1905, will become charter members of the association. Send all remittances and applications to the secretary.

Our membership is not to be limited to owners and managers. We want the employees to come in and reap the benefit of the organization.

E. H. MICHEL, Secretary, A. S. HALSTEAD, President, 4253 Magnolia Ave.

THE NEW ORLEANS HORTICULTURAL SOCIETY held its regular meeting on February 16, President Papworth in the chair. It was decided to hold a flower show in November next, and a committee, consisting of J. A. Newsham, Paul Abele, C. Eble, E. Baker, C. W. Eichling, P. A. Chopin, II, Papworth, R. Steckler and C. R. Panter was appointed to further the matter. A committee, consisting of Paul Abele and E. Baker, submitted resolutions upon the death of Dan Newsham, which were ordered spread upon the minutes. The secretary's report showed a cash balance on hand of \$751.75. The secretary also reported having received from Allen McGregor an express money order of \$15 to be used as a prize when the gardens of the city are judged. There will be upwards of \$100 worth of plants offered in addition. The question as to what damage was done by the recent freeze and cold weather was brought up for discussion. Mr. Eichling stated that soft bedding plants were all killed. The pansies in bloom were injured, but the plants stood the cold perfectly. Two varieties of palms most used in this city suffered. The Washingtonia robusta showed more signs of the cold than the Washingtonia filifera, while the hardy palms

did not suffer at all. The damage to the plants in general brought up a discussion as to the best methods of protecting palms from the cold. It was the unanimous opinion that packing the palms with hay and the like brought excellent results when the weather was good, but if packed after a wet spell and allowed to freeze when wet, it would simply bind the heart of the plant with ice, and nine times out of ten kill the palm. One of the most important things connected with a freeze is to prevent a sudden thawing after the cold. Plants should be made to become warm gradually.

MASSACHUSETTS HORTICULTURAL SOCIETY.—Instead of a lecture at Horticultural Hall on Saturday last, there was general discussion on hardy flowers. An unusually large attendance was present; in fact, this season the course has been very successful, and every meeting so far has had a good appreciative attendance. The subject on Saturday was introduced by J. Woodward Manning, who gave a general passing list of the more common trees, shrubs, and hardy perennials that are used for ornamental purposes. He commenced with the earliest plants, such as the red maple, spice bush, Cornelian cherry and shad bush, and gave an exhaustive list for all the months of the season, ending with such late bloomers as the hardy chrysanthemums and witch hazels. Those taking part in the discussion included A. A. Hixon, secretary of the Worcester Horticultural Society; E. O. Orpet, of South Lancaster; T. D. Hatfield, of Wellesley; W. N. Craig, of North Easton; Duncan Finlayson and Kenneth Finlayson, of Brookline, and Robert Cameron, of Cambridge. Mr. Hixon, in speaking of insect pests on plants, said that a very good insecticide was plain soap and water. Mr. Orpet recommended Ivory soap, which, being made of vegetable oils, was not so injurious to plants and yet much more effective as a lice destroyer. A lively tilt took place as to the cultivation of rhododendrons. Mr. Hixon said that they would not thrive in sandy soil. On a question from Mr. Cameron as to the twelve best trees, twelve best shrubs, and twelve best herbaceous perennials to be named by Mr. Manning, that gentleman gave the following: Trees, *Virgilia lutea*, which he considered one of the most beautiful of all; Weir's cut leaf maple, American horse chestnut, River's purple beech, *Magnolia Soulangiana*, *Pyrus florihunda*, catalpa, American elm, Norway maple, pin oak, tulip tree, and the Japan varnish tree, *Kalmia latifolia*. For the twelve best shrubs he named *Prunus triloba*, *Forsythia Fortunei*, *Spiraea Van Houttei*, *Philadelphus coronarius* or *speciosissimus*, *Viburnum plicatum*, dwarf horse chestnut (*Pavia macrostachya*), *Lonicera Morrowi*, *Rosa rugosa*, *Hydrangea paniculata*, *Berberis Thunbergii*, *Deutzia gracilis*, and *Syringa rothomagensis*. For twelve hardy perennials, Mr. Manning gave *Primula officinalis*, *Veronica amethystina*, with its perfect sheets of blue flowers; lily of the valley, *Iris germanica florentina*, *Hemerocallis flava*, *delphinium phlox*, *Peonia officinalis* for red and *festiva maxima* for white, *Lupinus polyphyllus*, *Gaillardia grandiflora*, *Aster Lady Trevelyn* and *Veronica longifolia subsessilis*. Mr. Manning said as there were some three thousand hardy plants catalogued by nurserymen, it was a hard matter to pick out a small number, and in such as he had selected he had tried to give a list of succession of bloom and plants that would generally do well in almost any location. J. W. D.

HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY.—The annual carnation exhibition of this organization took place February 21. There was a very fine exhibit, and a large attendance. In the competitive classes awards were made as follows: Twenty-five Lawson shade of pink—F. Boulon & Son, first with Mrs. Lawson; Walter Shaw certificate for same variety. Twenty-five Enchantress or light pink—Robert T. Hillock, first, with Enchantress; F. Boulon & Son, second, with same variety; John N. May, third, with Phyllis. Twenty-five white—F. R. Pierson Co., first, with White Lawson; H. T. & A. H. Funnell, second, with Queen Louise; John N. May, third, with The Bride. Twenty-five scarlet—F. R. Pierson Co., first, with Flamingo; J. D. Cockcroft, second, with same variety. Twenty-five crimson—F. R. Pierson Co., first, with Dahelm; H. T. & A. H. Funnell, second, with Harlowarden. Twenty-five any other variety—Thomas Eccles, first, with Prosperity; F. Boulon & Son, second, with Mrs. M. A. Patten; F. R. Pierson Co., third, with variegated Lawson.

For roses, Walter Shaw took first for 12 Bridesmaid and first for 12 Liberty. One hundred double violets, H. T. & A. H. Funnell, first; William O'Hara, second. One hundred single violet—F. Boulon & Son, first, Walter Shaw, second.

Certificates were awarded to the Cottage Gardens for new white carnation, Lieutenant Peary, and for Robert Craig, the new scarlet; also specials for Octoroon, Ethel Ward and Enchantress. Certificate was awarded to James D. Cockcroft for seedling crimson, an immense flower, of fine form, on a good stem.

A vase of White Lawson, not for competition, was exhibited by Charles H. Allen; it attracted much notice.

The committee very much regretted that, probably through an error, the Cottage Gardens vases contained but 20 flowers instead of 25, as called for by the schedule, and so were disqualified from competition. They were very fine specimens. Lieutenant Peary, a most beautiful white, and Robert Craig, a splendid dazzling scarlet are evidently leaders. It was also regretted that John N. May's exhibit suffered a little in shipping, so The Bride did not show its full beauty.

Other exhibitors who received awards were: Fred Keiffer, for mignonette; George Ashworth, for roses, carnations and antirrhinum; Robert T. Hillock, for daffodils; F. Boulon & Son, certificate for tree form violet plants; William O'Hara, for pot plants; H. T. & A. H. Funnell, for specimens Phoenix palm and Anna Foster fern.

The committee was gratified by the generous response to its invitation to exhibit by outside growers. A. H. FUNNELL, Secretary.

BUFFALO (N. Y.) FLORISTS' CLUB.—The club meeting held on the afternoon of February 22, in Kasting's "Saturn Hall" building, included a show of novelties in carnations, as President Scott explained, to "give the locals a chance to see the new things without incurring travelling costs." The assortment shown was fully up to, or rather ahead of, expectations, and the display room was the center of active interest for some hours. It was deemed proper to pass on the strictly new sorts as shown, and Messrs. Wm. Scott, H. J. Wise and Chas. T. Guenther acted as judges. The exhibitors, with varieties shown, and points scored on those passed upon included: Victory, bright red, Guttman & Weber, New York City, scored 87 points; F. R. Pierson Co., Tarrytown, N. Y., White Lawson, Daheim, crimson, scoring 84; Variegated Lawson scoring 89, and Enchantress, R. Witterstaetter, Sedamsville, O., a fine pink sort listed as "1021 B." Afterglow, rose colored, scored 88; The Aristocrat, fine cerise, scoring 94. J. A. Valentine, a shell pink, scored 87 points. Weber & Sons, Oakland, Md., a fine white; My Maryland, score not obtained. J. D. Thompson Company, Joliet, Ill., Robert Craig, red, scored 93 points. Lake View Rose Gardens, Jamestown, N. Y., Gladys a beautiful firm white, scored 87 points. Patten & Co., Tewksbury, Mass., Mikado, after style of Prosperity, scored 87 points; also a pink sport of Mrs. M. A. Patten. John Murchie, Sharon, Pa., Fred Burki, white, scored 85 points, and a red seedling, very full petaled. Cottage Gardens, Queens, N. Y., Lieutenant Peary, white, scored 89 points.

Wm. Scott Floral Co., of this city, showed Harlowarden in fine shape. Palmer & Son had an exhibit of Red Lawson from their Lancaster houses, and Fred G. Lewis, of Lockport, N. Y., who also lays claim to a Red Lawson sport, was on hand with a vase of fine blooms. An exhibit from the Chicago Carnation Co., Joliet, Ill., unfortunately, was delayed en route, not arriving till late at night. Our local amateur enthusiast, G. Urban, of Pine Ridge, was on hand in person with a collection of thirty-five (by actual count) named varieties of cut carnation blooms. Such a variety naturally included both standard and new sorts, and proved of unusual interest.

Craftsmen from outside the city who graced the occasion with their presence included H. J. Wise, East Aurora, N. Y.; Alex. J. Guttman, New York City; Barney Myers, Lancaster, N. Y.; R. O. King, of the King Construction Co., and C. J. Pult, of North Tonawanda, N. Y.; Thos. Mansfield, Fred B. Lewis and Fred G. Lewis, of Lockport, N. Y.; Chas. T. Guenther, Hamburg, N. Y.; R. C. Reyniers, Oil City, Pa.; David Scott, Corfu, N. Y.; C. F. Christiansen and Chas. Christensen, Eggertsville, N. Y.; C. H. Roney, Jamestown, N. Y.

A business meeting of the club followed. Routine business being disposed of Chas. Keitsch commented favorably on prospects anent the coming Sweeny Company Spring flower show, to be held in April, as heretofore announced. The present exhibition, and the good influences resulting from such were discussed, and brief remarks were made by Messrs. A. J. Guttman, C. H. Roney and R. O. King.

Nomination of candidates for officers for the coming year, the election for which is to be held at the regular March meeting, was entered into, in a make-up of the following tickets: President, Louis H. Neubeck; vice-president, Chas. T. Guenther; secretary, Daniel B. Long and C. H. Peck; membership secretary, E. Bruecher; treasurer, Chas. H. Keitsch. **VIDI.**

CHICAGO FLORISTS' CLUB.—The meeting of the club on Thursday night, February 23, was very well attended, a good many ladies being present to listen to the lecture by E. G. Rutzahn. A regular meeting was held after the lecture, F. F. Bentley presiding in the absence of President Rudd. This meeting was called in order that the club take some action on the bill just introduced into the State Legislature asking for an appropriation of \$30,000 for the erection of greenhouses at the State Experimental Station at Urbana, to carry on experimental work on diseases of plants raised under glass, and any other that may come within the scope of the station in relation to floriculture. A committee had been appointed some time ago in relation to this work, but owing to the enforced absence of the chairman, no other member seemed willing to take the full responsibility. A motion was passed that three members be added to the committee, and a meeting called for Saturday, February 25, at the office of the Bentley-Coatsworth Company to appoint a legislative committee to go to Springfield and work for the passage of the bill. The members thus appointed are W. N. Rudd, James Hartshorne, Leonard Kill, and Philip J. Foley. Wednesday of this week was the day set for this bill to come up before the appropriation committee. From what can be learned there seems to be a good chance of the florists of Illinois getting help from the State. The bill was given to Representative McKinley, who resides in the same section of the city as Alderman Peter Reinberg; the latter thought it best to give the bill to one of his colleagues to introduce, thereby giv-

ing himself a better chance to work for its passage. The bill was introduced by Dennis E. Gibbons, of Lake County. If this enactment pass the appropriation committee at Springfield, it will then behoove every florist residing in the State to write his representative to support the bill, which should also be endorsed by every florists' club in Illinois. The bill, as introduced, also provides that all experimental work shall be under the supervision of a committee of five florists, appointed by the florists of the State, these to be known as an advisory committee, who shall have full charge of the work and suggest what experimenting shall be carried on by the station. **ROBERT JOHNSTONE.**

THE BALTIMORE (MD.) GARDENERS' CLUB held its carnation show last Monday, and it was a great success. The show was not confined strictly to carnations, as there were also exhibited violets, lily of the valley, roses and sweet peas. H. Weber & Sons, Oakland, staged their white seedling, My Maryland, for which the club awarded a certificate of merit. C. M. Wagner has a deep pink seedling, Lady Edna, for which he received a certificate of merit. John Cook received a certificate of merit for a Lawson seedling. J. E. Haines, Bethlehem, Pa., exhibited a vase of his red carnation, J. E. Haines; it is the finest red carnation ever seen here, being large, fragrant, with long stem, and no bursted calyx. A certificate of merit was awarded it. Mr. Haines also exhibited Imperial, which was considered good. Mrs. F. Harrison Garrett's collection consisted of roses, carnations, lily of the valley, and violets; I. H. Moss, carnations; P. B. Welsh, sweet peas; F. C. Bauer, carnations; T. J. McCormick, pink seedling carnation; Lehr Bros., carnations; John A. Nuth, carnations; J. M. Rider, carnations and violets; Wm. Madsen, roses; C. R. Diefenderfer (C. M. Wagner, gardener), carnations and violets. F. C. Bauer was awarded a certificate of merit for his seedling white carnation. John Cook sent his white seedling rose, also Cardinal; Stevenson Bros., a collection of roses; Wm. Lanahan (J. H. Keplinger, gardener), violets; Luke F. Lacy (patentee of the Oriole carnation support), carnation plants, with his supports. The show was well attended, the hall being filled with people from 2 to 10 p.m. There was no charge for admission, cards being distributed by the club members and the trade. The committee in charge was F. C. Bauer, James W. Boone, Wm. G. Lehr, J. M. Rider, and C. L. Seybold. The judges were C. M. Wagner, Edward Woodfall, and J. J. Perry. **J. J. P.**

No Duty on Shamrock Seed.

Board No. 3 of the United States General Appraisers have announced a decision regarding the status of shamrock seed under the tariff. The collector at Philadelphia assessed a duty of 30 per cent. ad valorem under the provisions for seeds not specially provided for in paragraph 254 of the Tariff act. The importer, William A. Harris, protested, claiming that the seed should come in free, as grass seed. Judge Waite, who writes the opinion of the Board, cites various authorities as to the botanical classification of the shamrock. It is not absolutely certain, it is said, just which plant is the true shamrock, especially the one which, according to tradition, was used by St. Patrick to illustrate the meaning of the Trinity. The Board concludes, however, that, in spite of some uncertainties in this matter, the shamrock is a variety of clover. The Board has repeatedly, in past decisions, held that clover seed should be classed as grass seed, and the protest is therefore sustained.

The Retail Trade

WASHINGTON, D. C.—J. H. Small & Sons had an elaborate decoration at the New Willard for the Bachelors' cotillion. The immense ballroom was draped with southern smilax on a white background, interspersed with American Beauty roses. The large buffet table was decorated with vases of Liberty roses. The favors consisted of small baskets of pink carnations, trimmed with Asparagus plumosus nanus. The corsage bouquets were made of sweet peas. This firm has got everything in readiness for decorating the Pension Office for the Inaugural Ball, a full description of which we hope to be able to give in next week's issue. George Shaffer has a large dinner decoration this week. The table was all in Liberty roses, while in the rooms throughout the house were placed American Beauty roses. Gude Brothers have been very busy and report trade as very satisfactory; they are sending on from their Anacostia establishment some fine American Beauty and a good lot of Cardinal and Enchanter roses. J. L. Loosé has a fine display of Dutch hyacinths and tulips in his store; he is also handling some extra fine azaleas, all of which are grown at his Alexandria place. N. Studer has got a large stock of young rose plants of all the leading sorts; also a big assortment of palms and other tropical plants ready to ship at a moment's notice. This establishment also has thousands of miscellaneous bedding plants in anticipation of the Spring trade. F. H. Kramer is cutting a grand lot of Bride and Bridesmaid roses from his place at Anacostia. J. R. Freeman's Mrs. Lawson and Estelle carnations, which he is bringing in from his Brightwood greenhouses, are extra fine. Clark Brothers, who have been cutting some fine Souvenir du President Carnot and Kaiserin Augusta Victoria, are now cutting the plants back, so as to have them in for Spring and early Summer flowering. George Bowdler is bringing on a fine lot of cinerarias. **M. C.**

Our London Letter.

BY A. HE CSELEY.

THE HEATHER.—Several growers are now giving special attention to the hardy ericas. When at Mr. Russell's Brentwood Nursery in the Autumn, I found he had quite a large stock, which included several distinct varieties, and very pretty they were. It was about the beginning of October that I saw them. Some were over, but many were still well in flower. Messrs. Robert Veitch & Son, of Exeter, are also giving these plants special attention. On January 24 they secured an award of merit at the Royal Horticultural Society's meeting for *Erica mediterranea hybrida*, said to be a cross between *E. cernea* and *E. mediterranea*, and raised by Messrs. Smith, of Darley Dale. On February 14 the same firm showed other varieties, among them *Erica Veitchii*, a hybrid between *E. arborea* and *E. codonodes*; a large bushy plant about three feet high was well covered with tiny white flowers. This should make a useful plant. In a chat with J. D. Troy, of New York, when he was here in August last, I found he was particularly interested in the hardy heaths, and was anxious to secure some to try the experiment of establishing them in the United States. Seeing that they will stand any amount of sun, and are also perfectly hardy, there should be no difficulty.

We have not been overdone with new things in flowering plants during the past season, unless it is in orchids. Varieties of cypripediums, cattleyas, odontoglossums, and dendrobiums are getting too numerous. Among the various things seen there were few that were likely to prove useful for general florists' work. I was favorably impressed with *Tamarisk hispida aestivalis*; the slender branches, covered with pale pink blossoms, were very pretty, and if it would flower freely enough it would pay to grow in large quantities for market. This was shown last Autumn by H. Turner, of Slough. Among old plants which have been revived is *Leonotis leonurus*, which came from the Cape of Good Hope in 1812, and is a remarkably pretty flowering plant. The terminal whorls of bright orange flowers are very distinct and showy. Messrs. Veitch & Sons, Chelsea, grew this well, and, I believe, it would make a good commercial plant if properly looked after. Now that we have better accommodation for growing them, I believe there are many of the old introductions which would be worth looking after.

ROSE PRINCE DE BULGARIE, from Messrs. G. Paul & Son, Cheshunt, which gained an award of merit from the Royal Horticultural Society on February 14 is a promising rose for early work. The color a clear pink, with outer petals nearly white, reminding one of the old favorite *Devoniensis*; but it appears to be of vigorous growth. The blooms shown were on long stems, and stood up well.

At the same meeting Messrs. Sutton, of Reading, secured an award of merit for *Primula sinensis* His Majesty, a pure white semi-double variety. The leaves and leaf-stalks were of a dark shade; the flowers large and of good substance. *Primulas* were quite an important feature at the meeting. In Messrs. Sutton's lot, those with the dark zone round the eye were most attractive. The Czar, considered the best blue, was good; but some good blue cinerarias, in close proximity, dispelled the idea that we have yet got a true blue Chinese *primula*. Messrs. H. Cannell's mammoth strain carried large heads of large flowers, and the various colors were very decided. Messrs. Carter & Co., Holborn, also showed a fine strain; the plants were rather weak, but all the various colors were very good.

The stellata varieties of *Primula sinensis* have not proved a success for market work. They look pretty at home, but after traveling, the flower stems being slender, the flowers drop over and do not show up well.

I find market growers have not attempted the stellata varieties of cinerarias, but have kept to the good old type, with compact heads of brightly colored flowers, and as they save their own seed, selecting the very best from the large quantities grown, the strain is naturally improved from year to year.

THE ROYAL HORTICULTURAL SOCIETY'S ONE HUNDRED AND FIRST ANNUAL MEETING.—The president, Sir Trevor Lawrence, had a pleasant duty to perform in presenting the annual report. The number of fellowships is on the increase, over 900 new fellows having joined during the past year, and the total number now reaches 8,360. The new hall, which is the great event of the season, far exceeds all expectations. The interior fittings are not yet complete, but when properly finished off it will be all that could be desired. There remains a debt on the building fund, but the subscriptions already received (£25,178 ss. 8d.) is no mean sum, and it is hoped that the total cost (£40,000) will be cleared off at no distant date. The loss of Chiswick is regretted by some of the old fellows, yet the new gardens, at Wisley, offer far greater facilities for carrying on the various trials. And it is in many other ways a beautiful site, the only drawback being the difficulty of access, the garden being rather too far from London, and a good distance from the railway station. The council have already erected a nice block of greenhouses and pits, also dwellings for the superintendent and the foremen. Considering the various expenses incidental to changing, the financial condition of the society may be considered highly satisfactory, there being a good balance on the annual income, after paying all ordinary working expenses.

CANADIAN NEWS

LONDON, ONT.—The revival in business noted previously continues; and, as then, is general in all lines. Roses are in good supply, of high quality, and are being all used. Carnations are very plentiful, with the possible exception of white; very large quantities are being disposed of. Single violets are still very good, indeed, and are much more popular than the double sorts, which have begun to show signs of passing. Bulbous stock is, if anything, in oversupply; but very little indeed of the best grades go to waste. In tulips, white and yellow are the popular colors, and in narcissus, the double Von Sion. Paper White are mostly over, but one noticeable exception is a lot of Italian grown bulbs at Gammage & Sons that are decidedly later than the ordinary variety, and valley is still plentiful; it is little used outside of design work. In plants, bulbs of various kinds are most in favor. Azaleas are plentiful and good, but the demand is limited. Some very fine *Primula obconica* are seen, and seem to sell readily. Gammage & Sons are cutting a quantity of very fine sweet peas, white and pink. The plants are grown on the single stem principle, and flower stems 12 to 16 inches in length are not at all uncommon; the spikes average four flowers each, the individual flowers being in proportion to the size of the spike.

The present outlook for Easter stock is excellent, and although the unusual lateness may be detrimental to a few small lines, the main varieties, such as lilies, etc., will be very plentiful. The weather is quite moderate, and there are indications of an early Spring.

FRED. BENNETT.

OTTAWA.—I have just returned from the executive meeting of the C. H. A. at Montreal. There was a fairly good attendance, Ottawa and Toronto being well represented. We were received and welcomed in the same hearty way as of old, taken round to see the principal greenhouses and some private ones. We were dined at Lachine and had supper at Mr. Pinatou's of the City Gardens, and right royally he treated us. The meeting was held here, and good and complete arrangements were made for the annual convention, which will take place on August 8, 9 and 10. Interesting papers on subjects relating to all branches of the business were selected, and from what the Montreal men let drop, two days after the business of the convention is over will be devoted to seeing all the pleasant places in and around that city, which will mean a grand Summer outing to all who attend. The details of the business part you will learn from your Montreal correspondent. Everyone we came in contact with was an enthusiastic worker for the convention. Snow banks five and six feet high in the streets were common. To us from Ottawa it seemed home-like, but to the Toronto members it was not so. A trip, in sleighs, to the Forest and Stream Club, some miles out of Montreal, was enjoyable. At the clubhouse was seen a small range of glass which was simply perfection. The main conservatory was filled with magnificent plants of poinsettias in all sizes, and some of the grandest plants and baskets of *Gloire de Lorraine* begonia that I have ever seen. Azaleas, primroses, amaryllis, cyclamen, begonias and many stove plants in flower, all in the

one house in the one temperature, and many out of season, yet each perfect, showed the skillful work of Thos. McHugh, the gardener, who treated us very hospitably. At another private greenhouse (I have forgotten the name), P. Smith, gardener, we saw some grand orchids, but one of the most interesting places we were taken to was the lettuce establishments. One of these covered three acres and was a grand sight; one house was 400x50 feet one span. The whole ground was covered, not a foot wasted, and not one bad plant seen. They told us at this establishment that they planted 55,000 dozen three times in the season; so there is something else besides carnations.

As advertised, there was to have been a carnation show on February 23 at one of the largest department stores here, but as the responses from exhibitors from the other side were not encouraging, it was thought best to postpone the show until March. Fortunately for us and I hope not unfortunately for the Chicago Carnation

MONTREAL.—The weather leaves nothing to be desired—bright, sunny days with cool nights help the sale of stock. All kinds of bulbous flowers are selling well, but their sale does not affect roses or carnations in the least. The only drawback to the sale of roses is the high wholesale price (\$15) at which they are held. Speaking about bulbs, I must say that Harris & Hopton grow these to perfection. Their hyacinths in pans are beautifully finished, every bulb coming up to flower in good style. Golden Spur daffodils and tulips in all colors are grown in quantity and nicely finished. Needless to say, this class of stock meets with a ready sale. Carnations are of good quality, but we do hope to get a good red variety out of this year's introductions, a variety that will give flowers early in the season. Flamingo is not a commercial success here.

The executive committee of the Canadian Horticultural Association met here on Thursday, February 23. The committeemen from outside points were:

lasting qualities. Lady Bountiful, beautiful, well finished, 3½-in. flowers. Cardinal, a grand scarlet color, just right, stiff stems, good calyx, 3¼-in. flowers, in excellent condition in Montreal, all the way from Chicago. Seedling No. 326, white, was highly thought of; stem perfect; good calyx, high-bull flower after Lawson pattern; awarded a certificate of merit. Enchantress, in splendid condition, and such stems Illinois, a very bright, splendid scarlet. Mrs. Patten, grand flowers; Prosperity, with unusually good stems; Dorothy Whitney, fine color and stems; Harlowarden, fine stems, but a little sleepy. Crusader, sleepy. Moonlight, good white, medium-sized flower, fine stem. Mrs. Lawson were fine; certainly this variety, and its sports, are grand shippers, and seem to improve with old age.

The Montreal florists are certainly greatly indebted to Mr. Hartshorne for this exhibit. Considering the long distance traveled, the flowers were wonderfully fresh, and they kept fresh.

W. C. H.

NEPHEROLEPIS PIERSONI ELEGANTISSIMA, THE TARRYTOWN VARIETY

Company, they sent an enormous exhibit, I should say 600 or 700 grand flowers. I have never before seen such a uniformly fine lot from one establishment. Vases of 100 Lady Bountiful were grand; Enchantress the same. White Lawson, to me, was the gem after, of course, Fiancee, which all said was perfect. Moonlight was another fine white. Another white that seemed to be a grand one, by number, I think, 426, proved a good keeper. Then a magnificent 100 Cardinal was a sight, and took everybody by its color, stem, etc. Harlowarden was in poor condition when it arrived. Mrs. Lawson was there with its usual size, stem and color. Illinois was another fine variety, and one or two more, which, if they had not been in such high company, would have been great. These had a long journey, which tested their keeping or shipping qualities. On the next day the two Lawsons did not show any signs of travel; Lady Bountiful, Cardinal, Enchantress and the seedling unnamed came next; Fiancee and the others began to look tired. But the fine flowers and really grand stems on all was a sight to us small carnation men. If the show had been on, it would have taken a grand 100 to beat these. E.

J. H. Dunlop and H. Simmers, Toronto; A. H. Ewing, Woodstock; E. I. Mepsted and R. Wright, Ottawa. The principal business was deciding the dates of the annual meeting, which will be August 9, 10 and 11 next. Program and all information can be obtained from the secretary, A. H. Ewing, Woodstock, Ont. Certificates and honorable mention awards will be given all exhibits, if worthy. The committee decided to hold a dinner, under their own auspices, rather than allow the local club to do so. This was deemed necessary, so that when the association meets in a small place the local florists will not feel obliged to entertain such a large number of members.

Our carnation show, at the last minute, was postponed to March 6. All growers were notified, but the Chicago Carnation Company sent along an immense and splendid display, which would certainly have won the cup if competition had been held. The flowers were of the finest quality I ever saw, and the stems, well, they were more like bamboo stakes. The following varieties were sent: Fiancee, 3¼ inches in diameter, perfect in form, color and stem. We all hope we will get our cuttings soon, White Lawson, undoubtedly the finest white, of wonderful

SPRING VALLEY, N. Y.—A. A. Newberry is producing fine violets which he is shipping to one of the swell uptown florists of New York City

Syracuse, N. Y.

News Jottings.

All of the florists' stores are now bright with an abundance of bulbous stock. Wheadon & Bencke have as their specialty hybrid roses in pots very well done; while Henry Morris is handling some very choice sweet peas. He is heavily stocked with potted hyacinths and tulips in variety which meet with a ready sale. P. R. Quinlan & Co. have an abundance of very choice stock in all lines, but the most striking is their Flamingo carnations, which are truly superb.

Roses bring \$1.50 to \$3; carnations 50c. to \$1.25; tulips, \$1; daffodils, \$1; violets, \$1.50 to \$2 per 100; sweet peas 25c. per dozen.

P. R. Quinlan has taken a trip to Cuba to look after his paving interests; he has secured large contracts for street paving there.

L. E. Marquisee is again confined to the house with la grippe.

Mr. Gannett, of Geneva, N. Y., was in town the past week. J. R. B.

Review of the Market

NEW YORK.—There has been a slight increase in the supply of Bride and Bridesmaid roses this week, and a general tendency toward lower prices has resulted. Special stock is more frequently sold at 10c. than at a higher figure, though occasional sales at 12c. have been recorded. Next to the special grades number two are meeting with the readiest market, but extra and number one are not clearing out so readily; neither will they average up so well in proportion to their value. Special American Beauty were advanced to 75c. in the early part of the week, owing to their scarcity, and, perhaps, to an impression that the inauguration ceremonies in Washington would create an extraordinary demand. But by Thursday the 60c. price was again ruling, and there were enough specials to fill all demands. With American Beauty it is the short-stemmed grades that provide the problem, though they do clear out at some price or other.

Carnations are not doing as well as they did last week; especially is this noticeable among the fancy varieties. Enchantress has been cut to \$2 and \$3 per 100, and unless Prosperity is well colored, that variety is doing no better. Ordinary carnations are freely offered at \$1 per 100, and there is an immense supply of them.

Violets are now coming in with their usual Spring abundance, and prices are right down to the Spring values. If the weather were only a little warmer, perhaps they would clear out better; but even with low values they accumulate from day to day.

Lilies have experienced a cut, and \$4 per 100 for some of them, has ruled on some days. Of course, the blooms sold at that figure were not of the best, but they were fresh and answered the purpose for decorating, just as well as the best. Lilies are extremely plentiful just now, as are callas, which also have been offered cheaper this week.

Tulips are now offered at from \$1 upwards, and narcissus in variety, excepting the double yellow, have been cleared out in job lots at 50c. per 100. The supply of this class of materials is away above the demand. Sweet peas get more plentiful every day, and sell but slowly. Smilax, when good, goes quite well, and an advance in price is noted.

BOSTON.—Flowers of all kinds are getting more plentiful. Roses are more numerous than for several weeks past; new crops seem to be at hand of American Beauty, Bride and Bridesmaid. Liberty is yet inclined to be scarce. Ulrich Brunner have just made their appearance. Queen of Edgely, which has not been seen much in Boston recently, has again made its appearance in first-class shape and sells at good prices. Carnations are also increasing in quantity; the quality is all that could be desired; in fact the best blooms are now coming in of any seen this Winter. Lilies, both Harrisii and longiflorum, are becoming plentiful, and prices are not so good as they have been. Callas are in supply. Violets are, as formerly, plentiful, and do not bring so good a price as they did a week ago.

J. W. D.

PHILADELPHIA.—While there is not any rush of business in cut flowers, there is a fair amount of work going on. The only stock at all scarce just now is American Beauty roses. The price is now \$7.50 per dozen. Of all other flowers the supply is slightly in excess of the demand. Gardenias are now selling at \$1.50 per dozen, and are likely to go lower, as several growers around here are now cutting. Carnations are very plentiful. The choice flowers are going well.

The Philadelphia Cut Flower Company is well satisfied with business. This firm is handling a large quantity of choice roses, carnations and bulbous stock.

Eugene Bernheimer is doing a nice business in sweet peas, and handles some choice Bridesmaid roses.

William J. Baker, as usual has a fine lot of carnations, also some choice narcissus and double tulips. His specialties now are daisies, white and yellow.

William J. Moore has had a very good season; he is doing very well with carnations and general stock.

At the Flower Market business is going along nicely; they are handling some choice carnations and a very choice lot of antirrhinums.

Samuel S. Pennock is, as usual, doing a good shipping trade, and is handling a large quantity of choice stock. His southern business is using up a large supply of choice carnations and lily of the valley.

DAVID RUST.

LOUISVILLE, KY.—Business continues satisfactory, especially brisk being the demand for funeral work. Weather conditions have been more favorable, and stock shows the effect of this. Violets, which have been very scarce all Winter, are now coming in more plentifully, but as yet there has been no surplus. Pink carnations, one of the Mrs. Joost and Mrs. Nelson grade, seem to be a little larger in supply than the demand. Prices are the same as last quoted.

A. R. B.

CHICAGO.—With more Springlike weather prevailing, business in all lines has livened up considerably. Stock in general has increased and the quality is better. Shipping trade has improved. Local business has also taken on a fresh spurt, but is not so good as in former years at this time. American Beauty roses are in supply ample enough to meet all demands, and prices remain firm. The quantity of Bride and Bridesmaid is increasing, with a good call, although values on fancy grades are not so high as heretofore. The supply of Liberty is not over-plentiful, but some very good stock is being received. A few Mme. Cusin roses are arriving and are being used mostly for funeral work, selling at \$3 per 100.

Carnations have been coming in more freely, with an active demand, especially for shipping orders. There does not seem to be any over-supply of this stock at any time; in fact, on some days there is a scarcity. Prices, however, have declined somewhat since last report.

Violets are selling at lower values than for some time past, the better grades not fetching above \$1 per 100. Large quantities of bulbous stock are on the market, tulips in the majority; as a consequence, prices are lower. Single tulips sell at from \$2 to \$4; doubles at from \$4 to \$5.

Lilies are becoming more numerous, Harrisii being now seen in almost every commission house; they sell at \$15 per 100. Callas have been a drug on the market the past week, and it is hard to dispose of them at anything like remunerative prices.

R. J.

INDIANAPOLIS.—The retailers have been busy with funeral work. This came at an opportune time, as large quantities of stock would have gone to waste had the demand for bouquets and large designs been normal. With the warm, bright weather prevailing, it will be impossible to dispose of all the stock during the coming week. Roses have increased in price. Select Bridesmaid, Bride, Golden Gate and Mme. Abel Chateau wholesalers at \$6 to \$7; firsts at \$1 to \$5, and seconds at \$2 to \$3 per 100; \$1.50 and \$2 a dozen are customarily asked for the foregoing varieties at retail. Select Liberty wholesale at \$10 to \$12 per 100. American Beauty remain at \$6 per dozen for 36-inch stem stock; \$2 to \$3 per dozen for 24 to 30-inch stems, and \$1 per dozen for 12-inch.

The supply of carnations has exceeded the demand. Many calls are being received from growers, offering fancy grades at \$3.50 per 100; medium grades, such as Lawson, at \$3 per 100, and small grades \$1.50 to \$2 per 100; 75c. a dozen is asked for carnations at retail. Quantities of white lilies are in the market at \$1 a dozen sprays.

Rhododendrons of exceptional quality are being forced in this section; not many of them are sold, but they are not to be surpassed for store ornamentation or for large decorative work. Azalea mollis outsells the other varieties by a wide margin. Pans, or flat pots, containing five to eight hyacinths, or tulips, arranged with an inexpensive pot cover, sell well. Violets and fancy plants, arranged in small handle baskets, are favored by many.

I. B.

NEWPORT, R. I.—Our florists have had a very good week, as there has been an unusual number of funerals, and counter trade has increased quite a little. As regards prices, at both wholesale and retail, there is very little change, except that violets have been very plentiful and consequently cheap.

F. W.

ST. LOUIS.—The condition of the cut flower market improved somewhat the past week in all departments of trade. The consignments of cut stock at the wholesale house are very heavy, and one seeing all the stock that is left over every morning at these places would think business in St. Louis was very dull. It is almost impossible for the wholesaler to dispose of the big surplus existing.

Quite a number of wedding orders have been reported for this and next week; these have been placed in the hands of the West End florists who do most of this kind of work. Of funeral work, the trade has had plenty, especially the downtown florists, also those in the southern part of the city. Roses have cleared out fairly well; that is, the light colored stock. A few special American Beauty were sold at \$5 per dozen, but the bulk went at \$4. Flowers with medium stems, are scarce; but shorts are very plentiful at \$6 per 100. Special Bride and Bridesmaid bring \$6 per 100. Specials in other varieties remain as last quoted. Bride continues in demand, while other varieties have very light calls.

The supply of carnations has not as yet diminished. Nice fancy stock, in the leading kinds price, is down to \$1 per 100; extra good flowers can be had at \$2 to \$3 per 100, and common as low as 75c.

Violets are being received in enormous quantities; one of our wholesalers cleaned up nearly 60,000 in one day the past week at \$2 per 100; in single 1000 lots, they are held at 30c. per 100. These are all California, of the best quality; very few double are sold in this market.

Great quantities of bulbous stock are still piled up at the wholesale houses, and obtainable almost at your own price. Among this stock some extra fine lily of the valley, Roman hyacinths, Paper White narcissus, Dutch hyacinths, Von Sion narcissus, freesias, tulips Harrisii lilies and callas are going to waste for want of demand. Prices on any of the foregoing would be hard to quote correctly. Everything in greens is in big supply and fair demand.

ST. PATRICK.

ST. PAUL, MINN.—Trade has been variable, good one day and poor the next; but, on the whole, better than last year. Our cold spell lasted from December 27 to February 16 but we were spared the blizzards and snows of less favored sections. We have had a Winter of sunshine, and coal hills have been lighter than last year. The warm weather of the past ten days has brought out an abundance of good blooms, and all stock has bloomed shyly all Winter, are now producing full crops. Roses, which have been somewhat scarce, are now in full crop, and there is an abundant supply for all demands. Violets are also coming in more freely, and under the influence of the bright weather have improved in quality. All bulbous stock is plentiful, daffodils, lily of the valley, tulips, hyacinths, Paper White narcissus, freesias, alliums, etc., all contributing their quota.

There have been but few weddings and only a limited number of receptions, so that the decorator's skill has been called into use but very little. For funeral work there has been a constant demand. Country trade shows a healthy tone, and altogether business conditions are good and prospects excellent. St. Valentine's Day showed a slight increase in trade and Washington's natal day a very pronounced one.

The traveling fraternity has been arriving and departing for two months past. Our latest callers were: M. Reukauf, representing H. Bayersdorfer & Co.; B. Eschner, of M. Rice & Co.; M. Spero, of Linn & Co., and the representative of Veldhuyzen, Van Zanten & Co.

VERITAS.

WASHINGTON, D. C.—Business has been up to the usual standard of the past few weeks, and the prospects seem bright for some time to come. While there has not been anything of importance going on at the White House, there has been a good deal of entertaining outside. The mild weather of the past few days has improved the transient trade very considerably, and the demand has been about equal to the supply. American Beauty brought from \$7 to \$12; Liberty, \$5 to \$3 per dozen. The supply of this latter rose has not been equal to the demand. Meteor, Bridesmaid, Ivory and Golden Gate have realized from \$2.50 to \$4 per dozen.

Of Kaiserin Augusta Victoria and Souvenir du President Carnot, the supply has been short, at from \$3 to \$5 per dozen. Violets from New York brought \$1.50 to \$2 per 100; the market at present is overstocked. Lilac sell at from \$3 to \$4 per dozen; the stock is extra good and goes readily. Sweet peas are in demand at 50c. to \$1 per bunch; freesia, 75c. to \$1 per dozen; mignonette, 50c. to 75c. per dozen. Narcissus, Roman hyacinths and tulips realize 50c. to 75c. per dozen. Dutch hyacinths are moving slowly at 75c. to \$1 per dozen. Asparagus Sprengeri sells at \$2.50 to \$3 per 100 sprays; Adiantum cuneatum and hybridum fronds, at \$1.50 to \$2 per 100.

Since the break in the severe weather trade has shown a decided improvement along plant lines. Kentias and arecas in 6-inch and 8-inch pots, have been in demand at \$1.50 to \$2.50 each. Nephrolepis bostoniensis and Piersoni, in 6-inch pans, brought \$1.50 each; adiantum, 50c. to \$1 each; lilies, in 9-inch pots, \$4 to \$7 each; azaleas in 6-inch pots, from \$1.50 to \$2.50 each; azaleas, in 4-inch pots, are in great demand at \$1 each. Cinerarias, nice plants, bring 75c. to \$1 each; Primula sinensis, 50c. to 75c. each.

BALTIMORE.—Business is not as satisfactory as a week ago. Roses are not too plentiful; hardly enough of the better grades to go around, with a few of the poorer grades held over. Carnations are nothing short of a glut; it is impossible at this writing, to move them at even low prices. Temporarily, there is no fixed price on them, most anything in reason being accepted to move them. Violets are short one day, the next too abundant. Bulbous stock is moving fairly well, with too many callas. The scarcest thing is asparagus, with smilax not too plentiful.

J. J. P.

KALAMAZOO, MICH.—For the past two weeks business is reported as being very good by all in the city, both the shipping trade and retail being quite brisk. Finer weather now prevails after a spell of fierce, stormy weather, during which the thermometer dropped to 20 below, taxing the heating systems to their full capacity. No particular damage is reported as a result, although at times the situation was pretty close to the danger point. All kinds of stock are in abundance except long-stemmed American Beauty roses and perhaps a few more teas could also be used to advantage.

S. B.

CINCINNATI, O.—General business is not rushing. Funeral work is plentiful, and white stock of all kinds, barring Roman hyacinths, moves lively. White roses and white carnations are at a premium. White tulips sell fairly well, but at low prices. Princess of Wales violets are in fair demand at 50c. to 75c. a 100. American Beauty roses form good stock when the flowers are good, but the greater percentage of them are bullheads; they are fetching 50c. to \$5 and \$6 per dozen.

E. G. G.

YORKVILLE, N. Y.—George H. Benedict is planning to add 20,000 feet of glass to his already large plant. He will also install a new 150 horse-power boiler.

The Fumigating Kind Tobacco Powder

All That Use It Say "There Is Only One"

Troy, N. Y.
Enclosed please find two dollars; ship at once 100 pounds The Fumigating Kind Tobacco Powder. It was a pleasure the freedom we enjoyed last season from insects through the use of your powder.

Purcellville, Va.
We have given The Fumigating Kind Tobacco Powder a thorough trial on Carnations, and we are well pleased with the result. We are able to keep the plants entirely clean.

A. B. DAVIS & SON.

A FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

THE H. A. STOOHOFF COMPANY, Tobacco Powder Hobbyists, 116, 117, 118 West Street, New York

An advertising opportunity that should not be neglected.
Purchasers waiting for your offers.

An issue that will be read from cover to cover, and distributed
from the Atlantic to the Pacific.

Our Sixteenth Annual Special Spring ..and.. Easter Trade Edition

THIS Special appears at the most opportune time of year for hundreds of advertisers. Spring Surpluses, Easter Stock, and the usual run of planting-out material, will be largely in demand, as will also be the many seasonable offers of the Seedsmen and Nurserymen.

The object of this Spring Special is to give our advertisers the opportunity of the year to secure their share of the business and the profits which are at this time available.

DATE OF ISSUE

Saturday, March 25

We therefore solicit your special advertising for this edition, confident in the belief that you will find your outlay well rewarded.

Extra features of interest in both reading matter and illustrations will greatly enhance the value of this Special Edition.

Write your advertisement now. Make it bold and prominent. Tell your story in an interesting way. THE FLORISTS' EXCHANGE will do the rest. The earlier we receive your "copy" the more time we will have in which to make it attractive. Send it in to reach us by the 20th of March, if possible.

Handling Cuttings of Shrubs.

(88) I have about 400 to 6,000 shrubs, rooted, Summer cuttings. These were struck in flats, in soil, close together, and are well rooted, standing under a greenhouse bench. They are beginning to sprout out, bud and bloom. The kinds are weigellas, Philadelphus, anemone, deutzias, forsythia, Japan snowball, spiraea, spice wood, ribes, Azalea amona, berberis, Prunus Pissardi, etc. Can I leave them in the boxes where they are until April or May and then plant them out in nursery rows? I am crowded up with bedding plants and have not much room. Is it necessary to pot them? W. S. H.

—It is a pity you had not found a place for the flats of cuttings outside where they would have been dormant until Spring. Then you could have set them out in nursery rows when April came. As the plants have now sprouted you must, of course, continue them in heat through the Winter. When Spring comes, you may be able to separate the plants carefully with some ball of earth attached, and set them out in rows. You would need to water them well and to shade them for a few days, when they would probably live. Potting now, or transplanting into other boxes, to give them more room, would be better; but this you cannot do. Next year set the boxes outdoors for the Winter, covering them completely with forest leaves. J. M.

Transplanting Wild Kalmia.

(89) In this vicinity (Essex, Conn.), the hills and fields are covered with sheep laurel, or wild rhododendron. Those who have tried to transplant them have met with failure. Please inform me the proper time to transplant them, and general directions. F. S.

—There must be something wrong in your mode of transplanting the sheep laurel (kalmia) and rhododendrons. It is difficult to get a good ball of roots with a wild sheep laurel, and for this reason nurserymen are accustomed to cutting the plants back severely when taken from the woods. Get as much of a ball as you can; prune the plants well and you ought to lose but a few. In the care of rhododendrons, if dug up carefully, they thrive very well without being cut back. They make a mass of roots naturally, so that it must be careful digging that does not secure sufficient roots to assure a successful transplanting. Plant both the sheep laurel and the rhododendron early in Spring. Thousands and thousands of such rhododendrons are planted successfully every year. J. M.

Eel Worms on Roses.

(90) I am sending under another cover by mail two diseased rose plants; will you please state the cause of the trouble? D. R. H.

—The roses are very badly afflicted with root galls, caused by eel worm, and the trouble is so far advanced that we fear nothing will check it. The best thing to do now would be to throw out the entire crop, together with the soil, and use the bench space for something else.

Street Sweepings as Manure.

(91) I have about 25 loads of soil piled up. It consists of leaves, sand, manure, etc., sweepings of the streets by the City Street Cleaning Department. It has been lying for almost a year now. Would this compost, mixed with soil and cow manure, make good ground for carnations and chrysanthemums? E. M.

—Where land is heavy and of a clayey nature, the street sweepings might be used to advantage, as the large amount of gravel contained in them would help lighten such a soil and made it more porous. On no other soil would we attempt to use the sweepings for carnations or chrysanthemums.

Cannas and Dahlias.

(92) I have a lot of cannas and dahlias in a fairly light cellar, that

I can heat by stove. Having no other place to starve them, could they be started with good results in the cellar, and when, for June planting? B. A.

—Do not start the roots in the cellar, but about the first of April start them in the greenhouse. Under a bench will do for a few days; but they must be in the full light as soon as growth commences, or they will not make good stock for planting out.

Shell Lime—Tobacco Dust.

(93) C. L. Allen's letter on stem rot in cabbage, in your issue of February 11, page 178, has caused me to inquire among dealers in Philadelphia, but I have not been able to find any one who has shell lime, nor can any of them tell me where it can be obtained. I appeal to your readers for information. If I cannot procure the shell lime, will any other lime produce the same results? I contemplate using tobacco dust very freely this Spring, when setting young plants in the ground, by putting a small handful into each hole before setting the plants. Will there be any danger in so doing?

SUBSCRIBER.

—Perhaps some reader will give the information desired.

Asparagus Sprengerii.

(94) I have a bed of Asparagus Sprengerii, about 100 feet long and 3 feet wide. This is its second year, and it is not doing well. The sprays grow almost any length, some as long as 6 feet. The foliage is very sparse; in fact, it is almost all stem and no foliage. The bed was prepared with horse manure which was about one year old before using. I used plenty of it, and now think I may have used too much. What little foliage is on the stem is a yellowish green, making the product unsalable. Can you tell wherein the fault is? FLORIST.

—The trouble is not with the soil; it is with the plants. They are too old and will produce long strings instead of short sprays. Throw them out and plant young stock.

Carnations for Outdoor Culture.

(95) What carnations are best to grow in the flower garden for cut flowers? I can sell lots of flowers, as I live near a cemetery, but I don't know much about the carnation, and what age plants should I set out for the purpose named? A SUBSCRIBER.

—Carnations for blooming outdoors should be from 4-inch pots and have been propagated in the December previous. Good varieties for that purpose are Queen Louise and Glacier for white, Mrs. Frances Joost and Mrs. T. W. Lawson for pink, and J. H. Manley for red.

Lily of the Valley.

(96) Kindly tell me if lily of the valley potted up in pans last November and buried outdoors will bloom this Spring. The plants were taken up out of a bed in the garden, where they had been for several years. Also, can I still take up the balance and make use of them in the same manner for the plant trade? H. C. O.

—If the lily of the valley pips are not forced, but allowed to come along naturally, they will flower all right, providing they are of flowering size. The balance of the pips can be taken up and potted, and the majority of them will flower, if they are not forced in any way.

Heating.

(97) Please let me have your advice on heating my two houses so as to hold the temperature at 60 degrees in zero weather. The thermometer here rarely falls lower than 6 or 8 degrees above zero. I will use 3-inch pipes and an Ideal boiler. C. P. W.

—The plan shows one house 14 by 45 feet with a 4-foot brick wall on one side, and on the other side a 13 by 33 foot house, with an exposed frame wall containing 2½ feet of glass. This house has a small addition 6 by 6 feet at the southeast corner. If three-inch pipe is to be used, it will be well to have about five runs in each house. This will require one flow and two returns along the exposed walls, and one flow with one return along the center wall in each house. In the house with the 6 by 6 foot addition, it will be well to carry the pipes around the corners, so as to reach the exposed corners of this portion. It will be desirable to have

the top of the boiler as low or lower than the returns. Arranged in this way the flow pipes should have a slight rise and the returns should have a similar fall. If in an exposed location, or if there is danger of zero weather of long duration, an additional return in each house will be desirable. L. R. TAFT.

I am building a new house and I want to heat it with 2-inch pipe for flow and 1½-inch return. I have a lot of 1½-inch pipe I want to use up. Please let me know how much pipe I should use for a house 100 feet long, 20 feet wide, 11 feet to ridge, one glass gable end, toward the west, south side wall 4 feet high, 2 feet of boards and 2 feet of glass; north side wall 4 feet high, all boards. I would like to heat the house to 55 degrees in zero weather. Would an old style Scollay No. 5 hot water boiler do the work? F. B.

—While only about 800 square feet of radiating surface will be required for heating the house described, it will be well to have a boiler rated for about 1,000 square feet. If the Scollay boiler referred to has this rating, it will probably answer. Although 1½-inch pipe is rather small for use with hot water for a house 100 feet in length, it will give fair results if the top of the boiler is three or four feet below the returns. To heat the house, four 2-inch flows and twelve 1½-inch returns will be desirable. In case the boiler can be five or six feet below the coils, only ten returns will be needed.

L. R. TAFT.

I would like to have some information on our hot water heating. The water boils in the boiler before it warms the house at the south end. The houses are 100 feet long.

WANDERING JEW.

—The boiling, of course, is due to the fact that, owing to some faulty construction of the system, the water cannot circulate. It may be that there is a pocket in the pipes in which the air collects, or that the boiler is too high to give a good circulation. The return pipe should always have a light fall, and the flow may run either up or down. Provision should be made in some way for the escape of the air from the highest point. L. R. TAFT.

Millers on Tomato Plants.

(98) Please let me know the best way to destroy millers on tomato plants. I have some nice plants coming into fruit, but the little millers are all over the foliage. I have fumigated with tobacco stems a number of times, but find that unavailing. W. H. K.

—Pyrethrum powder, applied to the plants with a bellows, will destroy the white fly.

Time to Cut Down Privet Hedge.

(99) What is the proper time to cut down a hedge of privet planted about eight years ago. I would like to cut it down to about 8 inches from the ground. The hedge is poor at the bottom, but all right on top. L. W.

—The present time is just right for cutting back a privet hedge.

Rhododendron Maximum.

(100) I would like to hear some experienced nurseryman's opinion as to the hardness of collected Rhododendron maximum? Should same be planted in Spring or Fall? Is it necessary to shade them the first Winter after planting? If not shaded, will the leaves turn brown from the effect of the sun, and, if so, why should they not be shaded every year? The plants in question are planted in a partly shaded place. I. L.

—There is no rhododendron harder than the maximum. If collected with good roots, as can easily be done with care, every one should grow. Plant them in Spring only. The leaves are greenest when in the shade; they do not turn brown when in the sun in Summer, but they often do when in the sun in Winter. They do much better when in partial shade, just as all other rhododendrons do. If not planted in the shade, shade them in Winter by evergreen boughs or something else, as all good gardeners do with all rhododendrons. It is not necessary to shade in Winter where hard freezings do not occur. J. M.

PLANT FOR NAME.—J. Brusandean
—The leaf sent for name is that of the common fig tree, Ficus Carica. Southernwood is a sweet-smelling plant, with finely cut leaves; its proper name is Artemisia abrotanum.

Carnations in Violet House.

(101) We have a violet house that did not do very well this Winter; it has solid beds, and we think of putting in carnations next Summer. It is only 18 inches at the eaves from the bed to the glass on the south side, and we thought of planting some freesias now. The bed is 3 feet wide, 100 feet long. How many bulbs can I plant in that space? I see that the catalogues say freesias will bloom in four months from seed. Is that so? If so, would it be better to buy seed or bulbs? When should the bulbs be planted, and how long before they will bloom? Will they grow all right in a carnation temperature?

X. Y. Z.

—We have never grown freesias from seed but, presuming that they did bloom in the time stated, we do not believe that the flowers would amount to much compared with those grown from good-sized bulbs. However, it would not pay to plant bulbs even at this time (supposing that one could get them), as they would be flowering in July, when there would be no demand for them. To plant such a bed, it would require 2,000 bulbs. This would allow them to be put in rows across the bed six inches apart, and the bulbs three inches apart in the row. The best time to plant freesias is in August, or September. A carnation temperature is very suitable for them, and they will flower in from 14 to 16

San Francisco.

News Items.

The Pouyal Flower Stand celebrated its thirty-fifth year in business on Washington's Birthday. Alfred Pouyal, the manager, is representative of the second generation of his family operating the store, which was founded by John Pouyal, recently deceased.

T. Thomson, of Santa Cruz, made his last shipment for the season of narcissus—some 20,000 blooms—on Thursday, February 23. He has shipped in all some 150,000 flowers. They sell at \$1.25 to \$1.50 per 100, wholesale.

Violets are bringing \$4 per 100 bunches. Lilium longiflorum is in demand, at \$1.25 to \$1.50 per dozen. Carnations are in good supply, the retail price being from 2c. to 5c. A seedling, yet unnamed, in size and color very like Fiancee, is being propagated in Gallo-way's glass houses near Elmhurst.

Fick & Taber, prominent carnation growers at San Mateo, are out of pocket about \$200, a loss incidental to recent wet weather that caused the caving in of an embankment that buried the firm's boiler and damaged piping, and the consequent loss of many blooms from lack of heat while repairs were being made.

The Morning Call, one of the front rank daily newspapers of this city, is vigorously pushing a scheme for securing subscriptions and small advertisements by offering to each patron a premium consisting of a choice of rose plants of varieties indorsed by floriculturists. The appeal is for general adornment of the city. Among the many prominent San Franciscans commending the idea, the Call publishes the names of the Outdoor Art League, Thomas H. Stevenson, Palace Hotel florist, and John McLaren, superintendent of Golden Gate Park. ALVIN.

DENVER, COL.—In order to stimulate efforts to make Denver a city of flowers, A. T. Lewis, of the A. T. Lewis & Son Dry Goods Company, has announced a prize of \$1,000 to be given to the owners of vacant lots who do the most to improve their property along this line. It is not decided yet whether the \$1,000 will be given as one prize, or whether it will be divided. The only condition attached is that a concession be obtained from the Denver Union Water Company to furnish water to irrigate the flower beds. Seed dealers and florists will be asked to take a hand in the work, and it is expected that other premiums for beautifying Denver will be offered by public-spirited citizens.

PASSAIC, N. J.—A casket cover of violets and orchids at the funeral of W. E. McAllister was one of the finest ever seen in this section. Mr. McAllister was one of the most popular men in this town. He was a member of the Royal Arcanum, the local lodge of Elks, the Eagles and also of Reserve Engine Company.

THE WEEK'S WORK.

Timme's Timely Teachings.

Plants for Easter.

Plants that have until now been kept in dormant condition, or partially inactive, should be aroused from their sleep and set to work, if they are wanted for Easter...

There are a number of plants of various kinds besides those spoken of in previous articles, that must now be placed into bed, beginning with 45 or 50 degrees, and as they develop their foliage and form buds, gradually increasing the temperature to a point deemed high enough...

It seems, therefore, advisable, after these plants have made a nice start in comparatively cool house, to raise the temperature but slightly and very gradually up to the beginning of April...

Some of the common greenhouse plants - geraniums, begonias, Brompton stocks, ligustrum, cyclamen, callas, primulas and many others of like character may now be worked into shape for the Easter trade...

Not much heat will be needed to force yacynth, daffodils, tulips, lily of the valley in pans and other bulbous plants to bloom for Easter. The boxes, pots or pans, stocked with these bulbs, unless on-growth has advanced to a point where rodding back becomes difficult, need not be brought forward until the last week in March...

Decorative Foliage Plants.

In the beginning of March sufficient time can generally be found to make possible a thorough going over, cleaning, re-potting and resetting of the larger ornamental foliage plants. Large leaved specimens are greatly benefited by a good pruned, and where scale is found, a more thorough cleaning with brush and soap, followed by a good hosing, is necessary...

All thrifty, fast-growing plants of the larger sizes, badly needing it, should now be repotted, this being for most varieties the best time of the year for this operation, although there are some, especially if grown under conditions commer-

cially correct and justifiable, which never grant them a moment's rest, that may, with good results, be transplanted at almost any time of the year. However, over-potting should not be practiced, and it is gratifying to know that most wholesale growers, adjusting their scale of prices according to the size of the pots, are, at present, giving buyers less cause for complaint on this score than formerly

Swainsona.

Cuttings of Swainsona galegifolia root in ten or twelve days, with bottom heat. Any side shoot, from three to four inches long, taken from growing, thrifty plants, by pulling it sideways out of the axil, formed by leaf and main stem, is a good cutting and needs no further trimming. These cuttings must not be allowed to wilt, neither before nor after they go into the sand. If regularly attended to as to watering, potting and repotting, they will make good four-inch flowering plants by Decoration Day, suitable for cemetery planting...

As with the cuttings, so with the sprays or single blooms; they must never once be caught in a wilting condition, or they are worthless. A few cuttings at a time and taken care of, before more are gathered, are sure to root; and twenty-five or fifty sprays, picked and put in water before the picking is continued, are sure to last for a week. From a bench, or ground bed, stocked with a few hundred plants of the white variety of swainsona, great numbers of flowers may be cut every two days for at least six months.

FRED W. TIMME.

DAYTON, OHIO.—The Miami Floral Company has increased its capital stock from \$15,000 to \$30,000.

Every Young Gardener Should Have It.

THE GARDENER'S ASSISTANT came to hand safely, and from the glance I have given it I think it a grand work, and should be in the hands of every young American gardener.

PROSPECTOR

RED SPORT FROM MACEO

Colorful to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown. It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz. Easy grower, free from disease, and like its parent, can be planted close, as there is no surprise green, every shoot producing a flower. We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

New York.

The Week's News.

Lent begins next Wednesday, and the social season is practically over for this year. Whether the flower business will suffer much on that account remains to be seen...

Indianapolis.

The State Florists' Association, of Indiana, will hold its monthly meeting Tuesday evening, March 7, at the State House.

The E. G. Hill Company is shipping to Indianapolis, Rosalind Orr English roses with 3-foot stems.

The debut of Newton Booth Tarkington's new play, "The Gentleman from Indiana," at English's Opera House, created such a large demand for flowers...

A. L. Miller has contracted with Lord & Burnham Company to build two more houses, each 16 1/2 x 100 feet long...

Edgar McConnell, florist, Sharon, Pa., was in town this week. Mr. McConnell informs us he has disposed of his business...

Ford Bros., wholesale florists, 111 West Thirtieth street, have leased the store at 48 West Twenty-eighth street...

At the next meeting of the New York Florists' Club, which will take place on Monday, March 13, roses will be the chief attraction.

A petition in bankruptcy has been filed against Sigmund Geller, dealer in florists' supplies at 103 West Twenty-eighth street...

Louis Gudinchet, a French landscape gardener, attempted suicide by shooting himself last Friday at the Ivy Leaf Hotel...

CHANGES IN BUSINESS.

ALBANY, N. Y.—The firm of Whittle & Riggs has been incorporated, capital, \$2,000.

EGG HARBOR CITY, N. J.—The Egg Harbor City Cut Flower Company, Lewis K. Nagy, manager, has started in business here.

PAXTON, ILL.—Andrew Peterson has sold his establishment to Messrs. Addams, Morgan & Co. of Loda, who will take possession June 1.

MILWAUKEE, WIS.—The store of P. G. Lambros is in possession of the sheriff to satisfy a judgment of John Lambros of Chicago for \$1000.

Chrysanthemums

EAST ORANGE, N. J. Mention the Florists' Exchange when writing.

business; capital, \$125,000. Incorporators: Wm. H. Carey, E. S. Cowles, C. C. Carrick, Jersey City.

Carl Jurgens, Jr., Newport, R. I., was in town Wednesday.

Herman Lips, of the Shady Hill Nursery Company, Boston, Mass., was also a visitor this week.

A thirty thousand gallon water tank will be built at the Asinus greenhouses, Closter, N. J., by Stevens & Sherman.

The Webster Floral Company seem to have a particularly fine lot of two-year-old tea and hybrid tea roses.

They say a ready sale for these is found when in bud and bloom. The rose seems never to go out of fashion.

Large stocks of colens, geraniums, and all other leading plants are now coming along. Their collection of geraniums is, as usual, complete; nearly all the new sorts are tried each year, and the result is a pretty complete collection.

Some nice Princess of Wales violets are now being out.

Thos. Kilvington has been cutting some fine carnations, and roses have been doing nicely during the past few weeks.

Mr. Kilvington has a select plant trade. He has handled a large number of azaleas already. Azaleas will not be in evidence around here at Easter, none of the growers running a house sufficiently cool.

City Gardener Duncan is at present superintending tree pruning operations throughout the city. Hamilton has well-planted streets and the care of so many trees is a matter of responsibility.

The Horticultural Society is making an effort to get the Provincial Fruit and Honey Show here next Fall: it is the intention to incorporate flowers with it, the same as was done at Toronto the past Fall.

GREENVILLE, O.—The seed store of Mace & Mansfield was damaged in a general conflagration here last Sunday night, which destroyed property to the amount of about \$125,000.

Chicago.

Weather conditions prevailing are very Spring-like and have made a marked improvement on trade, both local and shipping.

The new firm of Jensen & Deloma reports stock in fine condition. This firm will do a general cut flower business, and will handle considerable quantities of rooted cuttings.

C. M. Dickinson, manager of E. H. Hunt's, has been absent from his office for several weeks on account of sickness. Richard Mansfield, the actor, has rented the bachelor apartments of George W. Wienhoeber, at 413 Elm street, for a term of three years.

E. A. Asmus, formerly manager of E. A. Asmus Company, 1680 Evanson avenue, has accepted a position in Vaughan's Seed Store.

Mrs. Fred Stollery has been confined to the house for the past week; her place on the market has been in care of her sister, Miss Folsom.

St. Louis.

J. Barnett, representing Reed & Keller, New York, and Martin Reutkauf, of H. Bayersdorfer & Co., Philadelphia, are making the rounds of the trade this week.

Governor Folk, of Missouri, has held up the report of the World's Fair Commission, complaining that too much money was spent for American Beauty roses and other cut flower decorations.

The local florists' club will hold its regular monthly meeting next Thursday afternoon in the rooms in Odd Fellows' Building, at 2 o'clock.

Six of the florist bowlers began the season on Monday night. Meinhardt was high with 445; Miller, second, and Fred Weber third.

ST. PATRICK.

SADDLE RIVER, N. J.—Secretary Esler, of the Florists' Hail Association had one of his annual misadventures a few days ago. A ladder slipped and let him down eight feet into a lot of boxes, sleighs, wagon wheels, etc.

Double Pink PETUNIA Fringed Berkshire

Strong grower, very free bloomer and a beautiful shade of pink—color of Bridemaid rose. I guarantee this Petunia to be as represented.

Cleveland.

Stock is selling slowly, bulbous flowers being especially hard to dispose of. In lieu of social functions, the auto show, which has held the attention of the lovers of the "whiz buggy" for the past week, has been no small factor in the disposal of cut flowers as souvenirs, many being bought for that purpose.

Preliminary plans for the organization of the forestry division of the Department of Parks were discussed at a recent meeting of the Board of Public Service. Later on, the division will be extended and enlarged.

Planting will begin as soon as the weather will permit. After this is started the council will be asked to pass ordinances regulating the planting of trees.

ST. PAUL, MINN.—Dr. R. Schiffman, the orchid specialist of this city, contemplates removing to Pasadena, Cal. The doctor will pay another visit to China this Winter.

Philadelphia.

News of the Week.
With higher temperature and more sunshine the faces of those in the trade look brighter; and while we may yet be a long way from real Spring weather, everyone is more hopeful; consequently, business goes better.

The largest ball of the season, the City Troop hall, was held Wednesday night. The Wm. Graham Company had the decorations. The colors, being in white, yellow and brown, all flowers and lights were in unison. There were many dinners given before the ball, which gave lots of work to the retail stores.

The second assembly ball took place at the Bellevue-Stratford Hotel on Friday. The decorations were done by Habermehl's Sons, and were, as usual, very effective, in foliage and flowering plants, with a large quantity of cut flowers on the supper tables.

Wm. K. Harris was taken ill on February 22; he has a bad attack of la grippe and some stomach trouble with it. He was slightly better Wednesday.

Edwin Lonsdale has recovered from his recent illness, and is on duty again. The Florists' Club will have exhibits of new roses at the meeting on Tuesday next; a good attendance is looked for.
DAVID RUST.

Cincinnati.

News Notes.
We have another "green carnation" man in the field—Fred Gear, the leading florist "over the Rhine," assisted by his understudy, George Tromey. The green stuff they use will do the business for St. Patrick's Day all right. So you need not be afraid to buy from either Edwards or Gear. Edwards sells the powder; Gear, the liquid.

Last week Herman H. Ritter, of Dayton, O., and Wm. Reeser, of Urbana, O., were in the city attending the annual reunion of the Scottish Rite Masons. But business was so good that Mr. Ritter was called home before the Shrine meeting took place.

The weather is moderating, and all eyes are centered on the Ohio River, where the ice is momentarily expected to let go. Much fear is yet felt for all shipping interests.

Don't forget the carnation meeting of the Cincinnati Florists' Society, which occurs March 11 at 2 p. m., at the club rooms in the Jabez Elliott Flower Market. Come yourself, if you can; but, if you can't, be sure and send an exhibit of carnations.
E. G. GILLETT.

AURORA, ILL.—The Aurora Greenhouse Company has secured the contract to decorate the new electric park of the Joliet & Aurora road at Plainfield. The plan of decoration is most elaborate, and will require not less than 5,000 bedding plants, including 2,000 geraniums.

Luther Burbank—An Impression.

To the horticulturist in general, the name "Burbank" has a great deal of meaning, but to one who knows Mr. Burbank, and knows the story of his life, and his work, and is in addition a lover of Nature, having an appreciation of the power which this man exerts over plant life, the name makes a deeper impression and carries an added respect and admiration.

It was my good fortune to meet Mr. Burbank, and my visit to Santa Rosa and his home I look back upon as the most interesting day of my trip to the State of California, and, as a lover of plant life, the most interesting day I have ever spent.

January is, perhaps, not the ideal month to visit such a place as the Burbank establishment, but even so there is so much to be seen that is new and interesting, and so much to be learned that the most unfavorable day in the year would be bright.

A great deal has been written by competent men on the subject of Burbank and his work, yet the half has not been told, and never could be told, unless volumes were published, dealing exclusively with the work which he has carried on. The diversity of subjects and the magnitude of his experiments are beyond the comprehension of the ordinary individual, and to only a few is it given to really know the man and the motives which underlie his life work.

Luther Burbank was born on March 7, 1849, in Lancaster, Worcester County, Mass., and, as a boy, his start in life was not auspicious.

By nature he was frail, and his circumstances obliged him to earn his own living while still a boy. The Ames plow factory gave him employment, and while in the employ of this concern, at the nominal wage of 50 cents per day, he showed the inventive spirit which he has used throughout his entire career in his work on plant life. The invention of a wood-turning machine made an opening for him, and yet he chose the life among plants, which he loved, rather than the indoor life and confinement, which an acceptance of the position offered him would have necessitated.

While working in this factory, as a boy, he carried on his early work on potatoes, his mother's garden being the scene of operations. From seedlings of the Early Rose variety came the potato which gave prominence to the originator; but California appealed to him, and he went West with his fortune, in the shape of ten Burbank potatoes. These he had reserved when he disposed of the variety to James J. H. Gregory, of Marblehead, Mass., for the sum of \$125. It is of interest to note that statistics show that the variety has produced crops to the value of \$20,000,000 since that time.

Hard work, physically, was an impossibility to Mr.

Burbank, owing to his frail constitution, and his first venture in Santa Rosa was selling trees. This gave him the sum of \$15, and he then rented a small piece of land in the vicinity. The trees were blue gum trees and they are to-day standing on McDonald avenue in Santa Rosa.

While working this small piece of land, a gentleman by the name of Marshall became interested in him and in the work he was doing, and loaned Mr. Bur-

LUTHER BURBANK.

bank the sum of \$200, which was used to increase the acreage of his farm, and to aid in his experimental work. For a short time, Mr. Burbank was employed in writing seedsmen's catalogues, and this work, in connection with collecting seeds of many of the native California plants, added to his income. The seeds which he collected were for shipment to Europe, where a large number of California native flowers were being grown.

The real start of Burbank's nursery came suddenly. Mr. Warren Dutton, a wealthy fruit man, came to

Mr. Burbank with a proposition. He wanted 20,000 prune trees within a year. To get these by ordinary methods in this space of time was an impossibility. The inventive power of the man came to the rescue, and after considering the matter over night he took the contract. By buying up all the almond stock in the market, and grafting on the prunes, he filled the order, which gave him his real start in the nursery business. The process of grafting the prune on to the almond stock was new, and entirely original with Mr. Burbank, and this showed the power of the man, who would dare attempt such a step without previous experiment. This daring to attempt new things has been the leading feature of his undertakings, and to it is due the success he has achieved.

A visitor, well pleased with the Burbank nursery, brought to him the New Zealand trade, and through Cecil Rhodes the fruits of Mr. Burbank's origination have found their way into South Africa, where the Burbank plum is widely grown for the London and other European markets. Through Mr. Burbank, then, American horticulture has invaded these distant countries, and the success in South Africa and New Zealand of the Burbank plum has been very marked.

Which line of Mr. Burbank's work has brought him the most prominence is hard to say. In the East, one would say the potato, but in this State the fruit industry owes more to him than it can ever repay. Potatoes were his early study, and he is still working on them. The feature of his potato experiments is the growing of seedlings in the greenhouse during the Winter, thus saving a year's time in every instance. New subjects in the potato line, of South American origin, are being used in his crosses, to infuse new vigor and to upbuild what might be called the food of the nations. The future will bring forth, from this base, potatoes which will be a decided improvement on anything which Mr. Burbank has yet produced. He is, however, not yet ready to place before the people these varieties, believing, as he does, that they are subject to still greater improvements, and that they have not yet reached the perfection which he believes to be possible. Inquiries as to these new varieties Mr. Burbank does not desire. The field of experiment is too wide, and the answering of the inquiries would entail so much work that it would needlessly interfere with that which he is carrying on.

Then, in the fruit line, the work which he is doing is of incalculable value. Plums, prunes, apricots, pears, quinces and the new cross between the plum and the apricot, which is called the "plumcot," divide honors, and he is working wonders with them all. He dares to take liberties with Nature, and the results are often new species, as in the case of the plumcot where we have something like both parents, and yet distinct from either, and we have a new fruit which possesses commercial possibility, which will, in the future, add to the revenue of the greatest fruit-growing district of the world.

The best paying crop in Southern California is, according to general opinion, the English walnut, and this has received a merited share of Mr. Burbank's attention. The result of this study and experiment is a hybrid walnut, showing an improvement in the size and the character of the nut produced, and a nut that is superior in texture and flavor, and one with practically no color to the meat, and no tannin to detract from its value as a food. The very growers of this nut in California do not know that their favorite crop has been a subject of study, and those who are the first to learn of it and take advantage of the im-

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX, No. 10

NEW YORK, MARCH 11, 1905

One Dollar Per Year

Chrysanthemums

We have a fine stock of Chrysanthemums, now ready for delivery, of the following:

NOVELTIES OF LAST SEASON

DR. ENGUEHARD. This new pink chrysanthemum, offered by us last year, is the grandest commercial pink ever sent out. It is a large globular pink, an easy grower, good shipper, and unequalled by any other pink in its season.

WM. DUCKHAM. A mammoth incurved pink.

HENRY BARNES. Deep crimson-maroon.

LEILA FILKINS. A greatly improved Vivid and Morel. A grand commercial sort.

BEN WELLS. A monster drooping Japanese white.

F. A. COBBOLD. Deep pink. Very distinct.

CHELTONI. A yellow sport of Nellie Pockett.

S. T. WRIGHT. Deep velvety crimson. An enormous bloom.

GEN. HUTTON. Yellow. Magnificent for exhibition.

DONALD McLEOD. Bronze. Chief prize winner in this class.

W. R. CHURCH. A grand incurved crimson. A fine commercial variety.

Price of all the above sorts, \$8.00 per 100

Also other Leading Commercial

Monrovia. The best extra early yellow chrysanthemum. A money-maker. Ten to fifteen days earlier than Soleil d'Octobre.

Mrs. R. McArthur. A grand late white.

Alice Byron. A magnificent white. Extra in every respect.

A. J. Halfour. A grand pink. Always gives satisfaction.

Varieties, as follows:

Mrs. Coombes. An extra fine very early pink.

Convention Hall. Pure white. Late.

Timothy Eaton. White.

Mrs. E. Thirkell. An exceedingly large, bright yellow.

F. S. Valtis. A greatly improved G. J. Warren or Yellow Carnot.

Price of all the above sorts, \$4.00 per 100

Polly Rose. A very early white.

Mrs. Jerome Jones. A fine late white.

Glory of the Pacific. A very early pink.

Mrs. Henry Robinson. Pure white.

Col. D. Appleton. A grand midseason yellow.

Yellow Timothy Eaton.

Soleil d'Octobre. An early yellow, following Monrovia.

Price of all the above sorts, \$3.00 per 100

We have large stocks of some of these varieties offered at the higher prices. If customers desiring a good selection of chrysanthemums will leave selection to us, we will furnish 100 in from 10 to 20, as may be desired, best sorts, for only \$5.00, and will include many of the newer and higher priced sorts offered above.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

Lily of the Valley for Easter

We have in cold storage in PERFECT CONDITION for immediate forcing a limited quantity of selected high-grades LILY OF THE VALLEY.

There is sure to be a demand and ready sale for this at Easter, especially in flower in pots. We offer as follows:

Dreer's 'Peerless' Pips The very highest quality, in cases of 1000 each, \$12.00 per case.

Dreer's 'Berlin' Pips A strictly high-grade, in cases of 1000 each, \$11.00 per case.

Dreer's 'Hamburg' Pips A fine quality, in cases of 1000 each, \$10.00 per case. Also in cases of 2500 pips, \$24.00 per case.

NOTE—On account of the pips being frozen we cannot break cases. It takes from 21 to 25 days to force pips into flower.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an unintroducted seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

The total value of all seeds exported from the United States, for the year ending June 30, 1904, shows a decrease of almost \$7,000,000, as compared with the same period of 1903, while the imports show an increase of \$756,190.

CHICAGO.—J. C. Vaughan is on a trip to California. He passed through San Antonio, Tex., on March 1.

DAYTON, O.—Proceedings in bankruptcy have been instituted against Thomas and James T. Carney, in business as the Carney Seed Company.

ATLANTA, GA.—The L. D. McMillan Seed Company announces the opening of a new seed store at 23 South Broad street. The McMillan Seed Company has been in the same business in Georgia for forty years. A. H. McMillan will personally manage the new place.

NO DUTY ON SHAMROCK SEED.—In last week's issue, page 273, we referred to this matter. The following is the full text of the decision of the General Appraisers, which will also show the plants generally regarded as the true shamrock:

In the matter of protest of William K. Harris against the assessment of duty by the collector of customs at the port of Philadelphia before Board 3 (Walte, Somerville and Hay, general appraisers, opinion by Walte, General Appraiser: The importation consists of shamrock seeds, assessed for duty as seeds not specially provided for at 30 per cent. ad valorem under paragraph 254 of the tariff act of 1897, and claimed to be free as grass seeds under paragraph 656. The shamrock appears to be a species of clover. The Century Dictionary says: "According to recent authority (Britten and Holland, 'English Plant Names') the plant at the present day most in repute as the true shamrock is one of the hop-clovers, Trifolium minus, a slender trailing species with small yellow heads, perhaps a variety of T. procumbens. It is in use in many counties of Ireland, and forms a great part of the shamrock sold in London on St. Patrick's day. The black medic, Medicago lupulina is also thus used; but the white clover, T. repens, is widely understood to be the common shamrock. The identity of the original shamrock, which, according to tradition, St. Patrick used to illustrate the doctrine of the Trinity, is uncertain. It has been variously supposed to be the common white clover, T. repens (which, however, is believed to be of late introduction in Ireland); the red clover T. pratense; the wood sorrel, Oxalis acetosella (locally called shamrock in England), and even the watercress (though its leaves are not trifoliate)." Nicholson's Dictionary of Gardening states that:

"In some districts of Ireland, this name (shamrock) is applied to one or more species of clover; in England, the wood-sorrel is generally supposed to be the shamrock." Paxton's Botanical Dictionary, under the caption "Shamrock," refers to Tri-

folium repens (white clover) and Oxalis acetosella (Wood-sorrel). The shamrock seeds in question are invoiced by a firm of seedsmen in Belfast, Ireland which tends to indicate that they are clover rather than wood-sorrel. That they are clover seeds seems to be conceded by the reports of the customs officers. This board has always held clover seed to be free as grass seed. In re Nungesser, G. A., 2442 (T. D. 14720); id., G. A., 2597 (T. D. 15020); In re Thorne, G. A., 646 (T. D. 11263); T. D. 18257. Upon the authority of these rulings, the protest is sustained and the collector's decision reversed.

European Notes.

A bleak and biting northeast wind during the present week has severely tested both the stamina of plants and their growers, and effectually checked the aspirations of some precocious seedlings which had been unable to resist the attractions of a February sun. A few snow and sleet showers have been sandwiched between the gales, so that very little harm has been done. The week closes in a misty drizzle, just enough to make everything and everybody wet and uncomfortable, but of no service to our dried-up water courses.

The drought is already beginning to assume serious proportions, as the rainfall for the past three months is not more than one-half of an average, and "February fill dyke" has been by far the worst of the three. Rutabagas and turnips need rain badly, and, in view of the short crops of the latter, prices are hardening or advancing all round. A largely diminished acreage of rutabagas was sown in Europe last year, mainly as a result of the drought; this added to the stock left on hand, and caused a drop in prices. But as the same conditions are not likely to prevail this year, a rise in the choicest strains is inevitable, and has already begun.

But it is in mangel wurzel that the effect of the drought is most apparent. As this seed is not required in northern Europe before the middle of March, much of it is left in the stacks until February, as by this means the seed can be more readily separated from the stalks; it is more completely matured. The product is generally of a superior quality (this, by the way, is true of all root seeds), and the germination of the

seed is of a more even character. To the consternation of the grower, the seed now being threshed is yielding 500 pounds where 2,000 was expected. Part of this deficiency is due to the attacks of aphid, which are, of course, more abundant in hot dry seasons. As a result prices of mangel seed of all kinds have gone up with a jump from 15 per cent. to 60 per cent., and with an average demand, seed of the Mammoth Longred, Golden Tankard, and choice yellow intermediate varieties will easily fetch double the price for which they could have been bought in August last. David L. Keith, of Toronto, sailed for home on the steamship Bavarian on February 22.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYRIMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

In Mr. Meehan's notes on the climbing hydrangea, page 264 of issue of March 4, the words two different germs should read two different "genera."

The total value of nursery stock (plants, trees, shrubs, vines, etc.) imported into the United States for year ending June 30, 1904, shows an increase of \$123,229, compared with the same period of 1903.

NEWARK, N. Y.—The Quaker Hill Nursery has been incorporated; capital, \$5,000. Incorporators, F. M. Phelps, J. M. Perkins, Jr., and Charles H. Stuart, all of Newark, N. Y.

NEWPORT, R. I.—Mr. and Mrs. V. A. Vanicek, of the Rhode Island Nurseries, have returned to their home after several weeks' sojourn in a few of the principal cities of Europe.

Deutzia Crenata.

There are two distinct sections of deutzias, as recognized by those familiar with them—the taller growing, late flowering ones, and those of lesser growth and early blooming. The one photographed is a good representative of the taller growers; and the one florists are better acquainted with, *D. gracilis*, represents those of lesser growth and earlier flowering. The pretty sprays of white blooms and its dwarf growth, together with the ease with which it can be forced, makes *Deutzia gracilis* very popular.

But none the less popular are those of which our picture is a representation, for there is no collection of shrubs thought to be complete without one or more varieties of deutzias in it. *D. crenata* is one of the best known of all, having been in cultivation in this country from a very early date. It goes under many names, such as *scabra*, *Fortunei* and others, and there are many distinct varieties of it, such as pink-colored and double-flowered ones of both colors. Of late years, many varieties have been sent out from European collections, and one could select a half dozen sorts of tolerably distinct kinds.

Deutzia gracilis flowers in May, and is of dwarf growth, as stated. *D. crenata* and its companions flower in June, and this late flowering is the more valued as the greater number of Spring-blooming shrubs are out of flower at that time. *D. crenata* in its typical form, with the pink-flowered one, are two to be recommended for general planting.

Our illustration shows a handsome bush, and yet it is not altogether a natural one. It has been improved on, and to its advantage, by pruning and other causes. Naturally, it grows taller in proportion to width than this one is. Another thing in its favor is, that it is growing at the base of a hill and has large trees at no great distance in its rear, and this has given the bush a desire to face the way it is seen, and to the advantage of its appearance. JOSEPH MEEHAN.

Potting Stock for Inarching.

During the Summer season there are many plants in a nursery which may be increased by inarching, and this is the time to pot the stock for the purpose. There is hardly a tree, or shrub, which could not be increased in this way; and the main thing to be done now is to get stocks potted. Beech, birch, maple, larch and various evergreens are often increased in this way, whenever desirable varieties of them cannot easily be increased in any other way. When stocks are to be used in this way, it is better that they be well established in pots some time in advance. It is better to pot now rather than not have the stocks at all, but it would be still better to have them potted a year in advance.

In addition to what inarching may call for, there is to be thought of what will be required for next Winter's grafting indoors, and this stock it will be much better to pot now than in Autumn, for it will be so much better established. Much of Winter grafting will be lost to those who defer potting their stocks until Fall, the stocks not all being in the vigorous condition required.

Chilopsis Linearis.

This shrub, called the flowering willow, which is much prized in some of our Southern States and in Europe, has not proved able to withstand the cold of Philadelphia. It has been tried here more than once, and even when well protected it did not endure the cold it met. But as it is a native of Texas, the warmer part at that, it can hardly be expected to endure our climate. It is a pity it will not thrive, for where it does it is esteemed for its flowers, which are lilac, and which are produced almost continuously throughout the Summer. The Messrs. Berckmans, of Augusta, find it does very well in Georgia, but it certainly will not do well here. Many trees and shrubs raised from seeds from Texas do fairly well in Philadelphia. *Sapindus marginatus* and *Ungnadia speciosa* come to mind as two of these.

The Use of Sand in Planting.

In the Southern States, with the incoming of the new year, planting time is not far off. At any rate, be the time now or later on it will be opportune to call attention to the great value of sand in transplanting trees and shrubs. The losses of many of these subjects, because that the soil does not closely surround the roots, are well known to all who have had to do with the transplanting of trees. It is especially hard to get the soil closely compacted around the roots when it is wet. Nothing meets the requirements of the situation like sand, and were its use more general there would be little heard of the loss of trees in transplanting. The way to use the sand is this: Immediately the tree is set in place, fill in sand about it until all its roots are covered and all the cavities under the roots are filled. Sand will find its way under and around the roots where soil would not, and, as the close covering of the roots of a tree

DEUTZIA CRENATA

is half the battle for success, the losses are greatly minimized when it is used. Sand, too, is well known as the best material of all for enticing out new roots, so that there are several good reasons for its use. It is not necessary to use more sand than what is sufficient to well fill in about the roots. After this is done the natural soil should be shoveled in and be well tramped down.

The importance of having the roots fully covered with soil of some kind is appreciated fully only by those who have had a great deal to do with tree planting. Some years ago the writer saw a short hedge of hemlocks renewed. The plants in the hedge were about four feet, and had been nice, bushy plants, but were nearly dead. On digging them out, it was displayed that the soil had never been gotten in around the roots. It had been thrown in in a lumpy state, and much of it had never reached the cavities under the roots, although three years had passed away since the planting. This was what had prevented the plants from flourishing. Had sand been used, every space would have been filled, and there would have been no loss of the hedge.

For heeling in purposes the use of sand is well known and appreciated by nurserymen, and large heaps of it are at convenient points where stock may be placed in a short time. Now is the time to see that a supply is secured.

Sowing Red Cedar Seed.

Referring to what has been said of the sowing of red cedar seed, *Juniperus virginiana*, a correspondent, Dutchy, writes us: "Regarding the red cedar, I always had the best

of success when seeds were planted in the Fall, twelve months after being gathered. When planted in early Spring, eighteen months after being gathered, there always seemed to be a big loss. I have for three years in succession sowed one part in Fall and the other part in early Spring. The seeds were all the same and all stratified in the same manner, but the Fall sown were always far the better." In the main, this agrees with what is known of juniper, holly and other seeds in what refers to its taking a year for the seeds to be in the ground before germinating, but the point that it is better to sow in the Autumn rather than in Spring is not well known, and this will be of value to those who have such seeds to sow.

The best plan to follow is to procure the seeds as soon as ripe, mix them with fine soil and place outdoors, letting them remain until the following Autumn. Then separate the seeds from the soil, if possible; if not, sow all as it is. The next Spring should see the seedlings appear. There is no use in sowing at once as soon as gathered, as some do. This means a wait of a year for the seedlings, and, in the meantime, the waste of the ground for a year and the loss of time in keeping the bed free from weeds has to be considered. JOSEPH MEEHAN.

FRUIT UNDER GLASS.

The Grapery.

Thinning will soon be in order in the early grapery. A poorly thinned bunch of grapes will naturally take points from it; the expert fruit men lay great stress on this, and justly so. But, in my judgment, nothing but experience and practice can teach anyone how this work should be done. The majority, when first starting to thin grapes, will leave the berries too thickly, with the result that the fruit will not have the room to develop to its full size, also giving the bunch an unattractive appearance. The same holds good when the fruit is thinned too severely. The aim should be to take out enough berries, so that when the bunch is cut and laid on the dish or other receptacle, it still holds its shape, with every berry fully developed. Some bunches are inclined to have bare shoulders, or, I may say, the berries do not close up to the stem, something that should be avoided if possible. Where the shoulders have a tendency to this defect, it can be helped considerably by leaving the berries thickly on top; this would tend to press them toward the stem.

A man with wide experience in this line can take out enough berries at one thinning, while it would be a difficult matter for the beginner to do so.

Another important point is never to handle the bunch; use a small stick to lift up the shoulders while thinning. Some varieties need more severe thinning than others. The short stem sorts do not have a chance to make much room for themselves, while the long, stemmed ones can make considerable room. Take *Barbarossa*, for example; if that variety is thinned any way severely, the fruit never will fill out; while *Gros Maroc*, *Gros Colman* and *Alicante* must be thinned fairly well, as they cannot make so much room for themselves.

The Peach House.

As I have before stated, where there is a demand for peaches and nectarines for a long season, it is advisable to retard them as long as possible. However, when the buds begin to swell, it is useless to hold them back any longer. As a rule, it is advisable to start the late house about the middle of March, even to hold it back till that date. The house must be kept very cold during the Winter months, and up to the date of starting. Naturally, when the buds show signs of moving, the trees are benefited by an even growing temperature. Make sure before starting that the border receives a good watering. If a border is allowed to get very dry while the trees are resting, it is surprising the amount of water required to thoroughly soak the soil again. Still, I think it a mistake to allow the border to get so dry. For my own part, I would not hesitate to water a fruit border when the trees were dormant rather than allow them to get so dry. I have seen fruit borders with large cracks in the soil through the drying process. I do not approve of this. Extreme drying is injurious to all fruit trees. I prefer to have my fruit border just moist—not wet or dry. Under these conditions the roots are healthy and vigorous, and the soil in just nice shape to take water when needed for starting. If the trees are thoroughly established a liberal top dressing of good rich manure and soil, cow manure preferred, should be given. It is surprising the amount of food trees will take after once they are full grown. Not only a top dressing when starting them up, but after the fruit is set feeding in some form will again be in order. This especially holds good with inside borders, more so than where the roots are allowed to go outside. Of course, good fruit can be grown when the drainings from the farm barn are applied, and, I may say, the man who has not got this facility, is at a disadvantage to a certain extent. But whoever relies upon this feeding altogether makes a mistake, I think. The trees certainly appreciate a change of diet, but each grower must use good judgment in this respect. The better plan is to apply lightly and often, rather than too heavy at one time. WM. TURNER.

SCOTTII

THE MOST GRACEFUL AND SYMMETRICAL NEPHROLEPIS KNOWN;
UNEXCELLED AS A HOUSE PLANT

WHY keep on growing the old Boston Fern when Scottii is admitted by all Judges, Growers and Retailers to be the best commercial Nephrolepis in existence? See my advertisement in issue of February 18, for the best report ever given for a new plant by the New York Florists' Club.

The Committee of Awards at the St. Louis World's Fair said of NEPHROLEPIS SCOTTII: "A sturdy, dwarf and compact form of Nephrolepis, very symmetrical and handsome, either in small plants or quite large ones. A great acquisition, with excellent qualities as a house plant. Worthy of Gold Medal."

Scottii has received the highest awards whenever exhibited and for the past season has proved itself to be a hardier house plant than the Boston. There is no comparison between this fern and any other variety for commercial use. Consult any grower, or retailer, who has bought Scottii, and they will tell you that it is as far ahead of the Boston as the Boston is ahead of all other introductions.

Prices of NEPHROLEPIS SCOTTII (March Delivery). All orders filled in rotation
2 1/4 inch, \$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000. 6 inch, \$15.00 per doz.; \$100.00 per 100
25 at 100 rate; 250 at 1000 rate.

Narcissus for Easter.

(102) Can you give me any help on my Von Sion, as Easter is late this year. I purchased of an honorable firm some surplus hyacinths and Von Sion narcissus. I potted them November 26. The hyacinths I put in a cool cellar and they have made roots in good shape. I had no room indoors for the Von Sion; they were potted and left out-of-doors. They had good drainage. I covered them with six inches of straw horse manure. A few days after they were covered with snow, and I put six inches of manure on top of the snow, so they were covered with snow and manure three feet deep. I looked at them yesterday (March 1); the bulbs appeared clean and bright, perfectly healthy, but the roots were not over one quarter of an inch in length. What was the matter, and what can I do with them for Easter? Or shall I put them in the ice house for Decoration Day?

—Evidently the bulbs were potted too late to make roots out-of-doors. They would have done better if kept in the same kind of a place as the hyacinths were. We would advise putting them under a bench in the greenhouse, making a perfectly dark place for them, and let them remain there until the last week in March. Then put them in full light and bring them into flower for Easter, rather than take the risk of holding them back for Memorial Day.

Moon Vines.

(103) Will moon vines bear transplanting, or must they be started in pots? About what time should they be started to make vines about one foot high by the middle of May? Do the white seeded ones bloom more freely than the crossbred variety? E. S.

—Moon vines can be transplanted with safety while very young, but it is best to put them direct from the seed box into small pots, shifting them when necessary, as they do not transplant well, only from pots after they get well started. The seed should be sown by the middle of this month. We cannot tell which variety of seed will produce the most flowers. Why not try both and make a note of the results?

Sulphur for White Fly.

(104) Please inform me if burning sulphur will injure tomato plants, and will it kill the white flies. M. T.

—The fumes from burning sulphur will kill the foliage of tomatoes or any other living plants. To get rid of the white fly, try dusting the plants with pyrethrum powder, putting it on with an ordinary powder bellows.

Dry Manure for Carnations, Etc.

(105) What is the best thing to feed carnations, dry, in the house? Is sheep manure and woodashes good, or is there something better? What is the proper way to get a piece of good sod ready to grow carnations in the field? How deep should the soil be plowed? Should the manure be plowed down or harrowed in on top? Should any fertilizer be used, and how much per acre? COOL.

—The best mulch for carnations on the benches is sheep manure. Get the pure article and use it alone. To prepare a piece of sod ground for carnations, first spread about two inches of barnyard manure over the surface, then plow deep enough to bury the sod well, so that it will decay thoroughly. This should have been done in the Fall. With sod ground and manure plowed in, no commercial fertilizers should be used; the land will be rich enough.

Bulbous Flowers for Easter in Frames

(106) Can I bloom hyacinths, daffodils and tulips for Easter in a cold frame on the north side of a board fence, where they will get the sun from 9 o'clock until 1 p. m.? I have no better location, and the greenhouse will be crowded. If you think it can be done, kindly tell me if it will be best to put

them in earlier than usual. They are buried outdoors and are well rooted.
H. C. O.

—It will depend altogether upon the weather. If April happens to be a nice warm month, the bulbs would stand a fair chance of coming into flower in the frame. We would advise placing the bulbs in the frame about the 20th of this month, and take a chance.

Plants for Table Decoration.

(107) Kindly inform me the names of some varieties of potted plants that would be suitable for table decoration. I am located near a small hotel and would like to raise some plants next Winter that would be hardy enough to transfer from the greenhouse and would still continue to grow and blossom on a hotel table.
H. K. J.

—There are no flowering plants that can be transferred from the greenhouse to the hotel table and continue to grow and blossom. Where flowering plants are used for such purposes, the plants have to be brought into bloom, then used on the tables, and, as soon as the flowers begin to show signs of wilting, they must be replaced with new plants. For such purposes, chrysanthemums, primulas, azaleas, Dutch bulbs, geraniums, ericas, genistas and acacias are the best, and by having sufficient stock, a continuous supply of flowering plants could be maintained through the Winter and Spring.

Coal.

(108) I read in The Florists' Exchange of February 25, 1905, where some one was asking how much coal it would take to heat a house 20x35 feet, in a season, and you stated about three tons. I would like to know what kind of a hot water boiler to get to do this.
G. S.

—The house referred to in the February 25 issue is located in Washington, D. C., where the climate is much milder than in Massachusetts. For full information regarding small boilers that would be suitable for a house 20x35 feet, we would recommend writing to the boiler manufacturers, whose advertisements are found in The Florists' Exchange.

Swanley White Violets.

(109) Can you give me the address of anyone growing Swanley White violets?
E. S. DRAKE,
Hartford, Conn.

—We believe some of the Grand Rapids, Mich., violet growers raise this variety. Try the Stover Floral Company or Eli Cross. If stock is wanted, why not advertise for it in The Florists' Exchange.

Temperature for Carnation House.

(110) What is the proper temperature for a carnation house in the daytime at this time of the year, providing it is a bright sunny day?
SUBSCRIBER.

—There is no way of defining what the exact temperature of a carnation house should be when the sun is shining. While it is a rule to keep the temperature at such times as near 70 degrees as possible, we know that the houses often get much warmer than that without any injurious effect on the plants, so that there can be no hard and fast limit set down for a rising temperature during strong sunshine.

A Putty Trouble.

(111) Can any one, who has had experience in the matter, give cause, also suggest remedy, for new putty, which has been used in inside repair work in greenhouses, breaking out? In repairing we clean out the old putty under the glass very carefully and refill with fresh putty before painting.
SUBSCRIBER.

—Your correspondent has evidently bought the ordinary commercial putty sold in paint and glass stores. The trouble is in the oil and whitening that is made from. If he will buy, for instance, our guaranteed putty, he will not have that trouble. The user of the putty must clean out the old putty, which your inquirer says he did. He must also be careful that there should be no moisture there before applying the putty. This putty will not stick when the wood is wet.

S. JACOBS & SONS.

Dreer's Select List of HARDY PERENNIALS

We offer here only the most Showy and Decorative Sorts, including varieties suited for CUT FLOWER purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field lumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Table listing various Hardy Perennials with columns for plant name, size, and price per dozen and per 100. Includes plants like Anemone, Delphinium, and various species of Rosa and Geranium.

PROSPECTOR RED SPORT FROM MACEO

Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.
It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.
Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.
We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

CARNATIONS.

Keep a Close Watch.

As the days are getting longer and the sun much stronger, the young plants, as well as the old ones, will begin to make more rapid growth, and in order to prevent them experiencing any check, care must be exercised in the watering. Examine the benches that contain the old plants every day, and see that at no time do they suffer for the want of water. The south side of the benches will almost always dry out first, and the space closest to the side board of the bench will have to be watered two or three times in order to keep it moist any length of time and to have moisture clear to the bottom of the bench. From the nature of the weather we have just passed through, being dark and cloudy, with the sun weak in its rays, the plants cannot help being somewhat soft in growth. Then if dry at the roots when Spring sets in, it will check their growth, and what growth they do make will not have the required substance.

If the soil is well filled with roots and the growth is strong and healthy it would be a good time to apply a mulch of rotted cow or horse manure put on about two inches thick. But let the soil get good and dry, or just wet enough to keep the plants from wilting; then water thoroughly.

Keep a close watch on young stock for next year. Go over the plants three times a day and see that they are not dry and still not too wet. Keep the soil moist to the bottom of the pot, not muddy. By watering carelessly and repeatedly those that do not need it disease is encouraged. If the plants are making nice growth and are in good shape to report, do the work at once. It is best not to put any manure in the soil unless the soil is very poor, and then be careful not to put in too much fertilizer. It is not necessary to have a large plant at this date. My ideal plant is one that has been growing in a temperature of 60 degrees, in soil without any manure and at this date having been topped back once.

Topping Young Stock.

Allow the plants to grow tall enough so that there is quite a space between joints, say about one inch. Don't wait until the bud is set, as this draws the plant out too much and takes too much away from it. Don't top the cuttings by pulling out the heart, as this leaves a pocket for the water. Besides, the plants have to make the required growth before they will begin to break, so leave them grow on until there is the required space between the leaves.

As to topping varieties, high or low, there is quite a difference in some of the sorts. Take White Cloud, Indianapolis, Harry Fenn, Governor Lowndes, Richmond Gem and The Queen; these should always be topped down to two eyes that you are sure will break. In the case of Mrs. Lawson, Enchantress, Lady Bountiful, The Belle and Variegated Lawson, you can leave three or four eyes, but you should not top again until the new growth has obtained the required length.

News of the Week in Brief.

J. I. Gurney, a florist of Dorchester, Mass., is in financial difficulties.

Fred Burki, of Pittsburg, fell into a pit last week, breaking several of his ribs.

Nurserymen are discussing the subject of a uniform system of grading nursery stock.

William Elliott & Sons, New York, will begin their auction sales of the season on Tuesday, March 14.

William Sim, of Cliftondale, Mass., disposed of some 25,000 violets this week, the product of a day's gathering.

The Pittsburg Florists' Club has forbidden smoking during its sessions. And the smoky city is the home of the "stogy."

John Walsh, the popular manager of the Park Street Flower Market, Boston, is still confined to his home through illness.

Charles T. Slebert, a well-known florist of Pittsburg, Pa., and inventor of a popular glazing point, is dead. He was 53 years of age.

The Chicago Carnation Company, of Joliet, Ill., is shipping large numbers of plants to Great Britain and other European countries.

Spectal prizes are already being donated for the coming show of the Chrysanthemum Society of America, to be held in Philadelphia next Fall.

Cards are out for the marriage of J. McHutchison, the well-known importer of New York, to Miss Grace Elizabeth, daughter of W. W. Edgar, Waverly, Mass.

Several valuable additional prizes have been offered to the list of The American Rose Society for the exhibition to be held March 23-26 next. A grand show is now assured.

It will be Rose Night at the New York Florists' Club Monday evening, March 13. A fine exhibition, and a paper on "The Rose in Decorative Art," by Robert Kiff, of Philadelphia, will be the features.

W. Atlee Burpee & Co., seedsmen, Philadelphia, have purchased an 86-acre tract in New Jersey for experimental and trial grounds. This is in addition to the already large Doylestown (Pa.) farm.

The holding of a Scotch concert in Newport, R. I., last week was the cause of the postponement of the monthly meeting of the local horticultural society. What charms the music of the Land of the Heather must have for Newport horticulturists.

A State Florists' Association of Illinois is in contemplation. If organized, it will bend its energies toward securing the passage of the measure before the State Legislature, asking for an appropriation of \$30,000 for State experimental work in horticulture, with particular reference to greenhouse culture.

THIS WEEK'S SUPPLEMENT.

Thicket of Magnolia Grandiflora.

It is not surprising that the Europeans think so highly of our Magnolia grandiflora, for it ranks high among the many varieties of broad-leaved evergreens. Here, in the Northern States, the rhododendron holds first place, but this is because it will survive our coldest Winter, which the evergreen magnolia will not. Where it will, as in many parts of Europe and in our Southern States, there is absolutely no evergreen to be compared with it. Even as far up from the South as Philadelphia we get along with it by planting it in sheltered, well-drained places, where it will ripen its wood thoroughly before Winter comes. When in deep, damp ground it will continue its annual growth almost until frost sets in, and its unripened wood is then sure to be partly Winter-killed. Several we know of about Philadelphia are in such unsuitable positions, and they are partly killed back every Winter. Others on high ground, and more exposed, are not injured, and there are several large specimens of it in that city. Just across the Pennsylvania line, at Claymont, Del., there are nice trees of it, and at Wilmington, in the same State, they begin to feel at home, and can be planted wherever one will.

How this magnolia thrives at Washington, D. C., can be seen by noting the fine group our illustration represents, growing close to the Capitol Buildings there. It is intended as a magnolia group, although English hollies, aucubas and small shrubs, such as Abella rupestris, are at the base of the magnolias. We think all will concede that no other broad-leaved evergreen would have answered as well, where these magnolias are. The large growth and large, lustrous leaves are just what were wanted to front such a building as these do.

It was the close of June when the photograph reproduced was taken, and the trees were then in flower. Some of the large white blossoms have been caught by the camera, but one has to see them in their natural state to know how beautiful they really are. In many places near this building there are grand specimens of this magnolia. They get shelter, especially on the southeast side. To prove that it is more temperate there than may be thought, it may be said that, growing on a wall below this magnolia group is the Picus repens, which all our readers know is not hardy enough to do the same anywhere north of Washington.

JOSEPH MEEHAN.

A Valuable New Book.

SPECIES AND VARIETIES, THEIR ORIGIN BY MUTATION. By Hugo de Vries, Professor of Botany in the University of Amsterdam, Holland, Edited by Daniel Trembly MacDougal, Assistant Director of the New York Botanical Garden. Publishers, The Open Court Publishing Company, Chicago. 8mo, xviii + 847 pp.

The volume before us, one of the most valuable that has appeared on the subject of the origin of species since Darwin gave to the world his great work with that title, is composed of a series of 28 lectures delivered by Professor de Vries at the University of California last year. In his preface, the author informs us that comparative studies have contributed all the evidence hitherto adduced for the support of the Darwinian theory of descent, and given us some general ideas about the main lines of the pedigree of the vegetable kingdom, but the way in which one species originates from another has not been adequately explained. The current belief assumes that species are slowly changed into new types. In contradiction to this conception, the theory of mutation assumes that new species and varieties are produced from existing forms by sudden leaps. The parent type itself remains unchanged throughout this process, and may repeatedly give birth to new forms. These may arise simultaneously and in groups, or separately, at more or less widely distant periods. The theory of Professor de Vries is confirmed by his own observation and experiments in the case of the large evening primrose, from purely fertilized seeds of which mutants, both feral and cultivated, arose so different from the type as to constitute new species. Dr. MacDougal, by his cultures of the mutative species of this primrose in the New York Botanical Garden (see February, 1905, Journal), has contributed additional proof to the validity of de Vries's views. Dr. de Vries's discovery places the method of origin of species within the range of experimental investigation, and it is with the view to secure a more general appreciation of this kind of work that his lectures were delivered and published.

The author furnishes the following definition of species: "Species are considered as the true units of nature by the vast majority of biologists. They have gained this high rank in our estimation principally through the influence of Linnæus. They have supplanted the genera which were the accepted units before Linnæus. They are now to be replaced, in their turn, by smaller types, for reasons which do not rest upon comparative studies, but upon direct experimental evidence. Further on he states elementary species are of equal rank and together build up the collective or systematic ideal species. Varieties, on the other hand, are derived from a real and commonly still existing type. There is a general belief among gardeners that varieties are distinguished, as such, from species by their inconstancy. It must be conceded to be a fact, says the author, that varieties as

a rule revert to their species under the ordinary circumstances of commercial culture. And I cannot see any reason why this fact should not be considered as stating a principal difference between varieties and species, since true species never sport into one another. According to my view, nearly all these ordinary reversions are due to crosses. Varieties by means of such spontaneous intercrossing sport into one another, while species either do not cross, or, when crossing, produce hybrids that are otherwise constituted and do not give the impression of atavistic reversion.

The professor's first lecture is devoted to the Theories of Evolution, those of Lamarck, Linnæus, Darwin, Wallace and others being discussed. "One of the greatest objections to the Darwinian theory of descent arose from the length of time it would require if all evolution was to be explained on the ground of slow and nearly invisible changes. This difficulty is at once met and fully surmounted by the hypothesis of periodical, but sudden, and quite noticeable steps. This assumption requires only a limited number of mutative periods, which might well occur within the time allowed by physicists and geologists for the existence of animal and vegetable life on the earth." The second lecture deals with the elementary species in Nature, followed by one on elementary species of cultivated plants, in which the subject of variability of plants under cultivation is considered. The subject of selection of elementary species is next treated on.

Every region and locality has its own conditions of climate and soil. Any ordinary mixed race will contain some elementary forms which are better adapted for a given district, while others are more suitable to divergent conditions. Hence it can readily be inferred that the choice cannot be the same for different regions. Every region should select its own type from among the various forms, and variety-testing, therefore, becomes a task which everyone must undertake under his own conditions. Some varieties will prove, after isolation, to be profitable for large districts, and perhaps for whole states. Others will be found to be of more local value, but in such localities to excel all others.

The next lecture is devoted to Retrograde Varieties. This is followed by a most interesting chapter on Stability and Real Atavism. In the discussion of this question the author has excluded such plants as roses, hyacinths, tulips and chrysanthemums, which always have furnished the largest contributions to the demonstrations of bud variations. "They have been crossed so often that doubt as to the purity of any single form may recur, and may destroy the usefulness of their many recorded cases of bud-variation for the demonstration of real atavism." So with azaleas, camellias, carnations and some other subjects. On the other hand, there is a larger group of cases of reversion by buds, which is probably not of hybrid nature, nor due to innate inconstancy of the variety, but must be considered as pure atavism—viz., bud variations of so many of our cultivated trees and shrubs. Professor de Vries points out that there is a wide field open for investigation as to whether the plants from seeds secured from these atavistic branches (such of them as flower) will keep true to the reverted character or return to the characters of the plant which bears the retrograde branch. He says:

The possibility is always to be considered that the tendency to bud reversions may be a special feature of some individuals and may not be met with in others of the same variety. For the practical student it indicates that a specimen, once observed to produce atavistic buds, may be expected to do the same thing again. And then there is a very good chance that by combining this view with the idea that dormant buds are more apt to revert than young ones, we may get a method for further investigation. If we recur to the practice of pruning. By cutting away the young twigs in the vicinity of dormant buds, we may incite these to action. Evidently we are not to expect that in so doing they will all become atavistic. For this result is not at all assured; on the contrary, all that we might hope to attain would be the possibility of some of them being induced to sport in the desired direction.

False atavism or "vicinism" is then dealt with, the latter term being derived from the Latin "vicinus," or neighbor, as indicating the sporting of a variety under the influence of others in its vicinity.

Space will not permit of a reference to all the chapters in this most instructive book. It may be worthy of mention, however, that in his lecture dealing with the production of double flowers, the author states that he has never been able to ascertain the grounds on which the conviction rests that varieties are improved by continued culture. Double varieties, as a rule, are exactly the same now as they were at the time of their first introduction. If this were otherwise, one would expect that young double varieties should in the main display only slight grades of the anomaly, and that they would require centuries to reach their full development. Nothing of the kind is on record. On the contrary, the newest double sorts are said to be not only equal to their predecessors, but to excel them. As a rule, such claims are exaggerated, but not to any great extent.

The following particulars regarding the improvement of the canna are of great interest. They are found in the lecture on Fluctuations; Multiplication of Extremes:

About the year 1889 Crozy exhibited at Paris the first beautifully flowering form which he named after his wife, "Madame Crozy." Since that time he and many others have improved the flowers in the shape and size, as well as in color and its patterns. In the main these ameliorations have been due to the discovery and introduction of new wild species possessing the required characters. This is illustrated by the following incident: In the year 1892 I visited Mr. Crozy at Lyons. He showed me his nursery and numerous acquisitions, those of former years as well as those that were quite new, and which were in process of rapid multiplication previous to being given to the trade. I wondered and asked why no pure white variety was present. His answer was: "Because no white species had been found up to the present time, and there is no other means of producing white

varieties than by crossing existing forms with a new white type."

Lemoine's work on the double lilacs is also referred to. In the main, they owe their origin to the crossing and recrossing of a single plant of the old double variety with the numerous existing single-flowered sorts.

And of the amaryllis and gladiolus it is stated: "Eight or ten, or even more, species have been combined into one large and multiform strain, each bringing its peculiar qualities into the mixed mass. Every hybrid variety is one individual, being propagated by bulbs only. Colors and color-patterns, shape of petals and other marks, have been derived from the wild ancestors. But the large size of many of the best varieties is probably due to the selection of the extremes of fluctuating variability."

We shall close this reference to Dr. De Vries's admirable work by quoting part of what he has to say regarding improvement by selection.

Continuous or even prolonged improvement of a cultivated race is not the result of frequently repeated selection, but of the improvement of the standard of appreciation. Nature, as we know changes her standard only from time to time in consequence of the migration of the species, or of local changes of climate. Afterwards the new standard remains unchanged for centuries. Selection, according to a constant standard, reaches its results in few generations. The experience of Van Mons and other breeders of apples shows how soon the limit of size and lusciousness may be attained. Vilmorin's experiments with wild carrots, and those of Carrière with radishes lead to the same conclusion as regards roots. Improvements of flowers in size and color are usually easy and rapid in the beginning, but an impassable limit is soon reached.

Those striving for the six-inch carnation, and those fearful lest it should be attained, would do well to note these remarks. They may give consolation to both parties.

We commend this work to every one interested in the study of this, the most important phase of plant life. Copies of the book can be obtained from the publishers of The Florists' Exchange.

OUR READERS' VIEWS

The Brown Company Granted Injunction.

Editor Florists' Exchange:

We are advised that Judge Anderson rendered a decision to-day (March 2) in the United States Federal Court at Washington, granting an injunction in the suit recently brought by us in that court to restrain the infringement of our patents by the Department of Agriculture and their contractor in putting up the Congressional seeds for distribution the present year. This is the case in which the Secretary of Agriculture asked the Attorney General to intervene on behalf of the United States on the ground that the granting of the injunction would be a great public calamity and would paralyze the distribution of seeds for the remainder of the current year.

BROWN BAG FILLING MACHINE CO.

Fitchburgh, Mass.

The Boston Flower Show

Editor Florists' Exchange:

A few more words on this subject and we are done. We are glad to learn Mr. Duncan was in good humor when he penned his remarks in a previous issue and was burning with a desire to aid the committee in their labors, for which I feel sure the members are deeply grateful and will gladly reciprocate when a suitable occasion offers itself.

Mr. Duncan proceeds to state that "he cannot change his opinion" on some aspects of the situation and trots out the words "unfair," "antiquated," "by no means up to date" and so forth, to give expression to the depth of his feelings. We agree with him that "it is not necessary for the committee to retire after the judging is done and take an hour or two, as the case may be, to write a set of cards for the awards." It took exactly twenty minutes to write the cards on the last occasion, and place them on the exhibits. When has it taken from one to two hours?

We are not especially concerned with the fact that some other societies, which hold one, or, at most, two exhibitions a year, go to the trouble of numbering the exhibits and placing the names in sealed envelopes. Perhaps Mr. Duncan is unaware of the fact that the Massachusetts Horticultural Society tried this plan for one year, not very long ago; it increased the labors of the committee, with no compensating benefits. It caused more growling from exhibitors and visitors than appeared in Mr. Duncan's report of the late show. We have never found that leaving exhibitors' names on caused dissatisfaction or any partiality in judging, and we follow the Boston shows closely for a decade ere our good friend and critic made the Hub his stamping ground.

Perhaps to some others, as well as to Mr. Duncan, the committee's work of the Massachusetts Horticultural Society may seem "peculiar" and not "up to date, 20th century." We can assure such that these committees are composed of wide-awake, practical men, who are leaving no stone unturned to further the society's interests, and that whenever they are satisfied that they can make innovations likely to be of great benefit, they won't hesitate to adopt them.

While we do not imagine for one moment that Mr.

Duncan was serious in some of his statements, which we knew were meant to make the members of the flower committee scratch their heads and smile, we are glad he has not attacked them previously in The Florists' Exchange. They will now endeavor to walk more circumspectly, act more speedily, strive to be "up to date and 20th century" boys, and, mayhap, merit in the future some words of commendation from his pen.

W. N. CRAIG.

Packing Seeds for Transportation.

Editor Florists' Exchange:

In The Florists' Exchange February 25, 1905, page 228, there appeared a brief abstract of a short article by Mr. W. Watson, of Kew, on "Seed Packing," which appeared in the Gardeners' Chronicle for February 11, 1905, page 90.

Mr. Watson says: "I can strongly recommend damp cocoanut fibre and wooden boxes for all seeds that perish easily and can be conveniently packed in them." There are many seeds in which the power of germination is destroyed if they are allowed to become thoroughly air-dried. In order to transport this class of seeds successfully, they must be packed in some moist material to prevent drying out. The use of moist cocoanut fibre and wooden boxes as recommended by Mr. Watson is undoubtedly as good, if not better, than sphagnum or charcoal, which are so generally used.

Continuing the article of Mr. Watson's we read: "For seeds generally, I know nothing better than paper packets and calico bags, and the more moisture there is in the seeds themselves when thus packed, the better. Hermetically sealed tins or cans should never be used."

It is quite unfortunate for the seed trade that Mr. Watson made these last two statements. Carefully conducted experiments have shown that just the opposite treatment should be given to seeds generally—that is, agricultural and garden seeds as we know them in the temperate regions. It is possible that seeds, even though they contain a high percentage of moisture, may be put up in paper packets or cloth bags and still retain their vitality, if kept in a dry climate, so that the seeds will have an opportunity to dry out ultimately. But vitality is much better preserved and the resulting seedlings more vigorous, the more thoroughly the seeds are dried before putting into packages.

The greatest factor in destroying the vitality of seeds generally is moisture. In all cases, excepting the special kinds of seeds which lose their power of germination on becoming dry, the best results are obtained when the seeds are carefully dried and packed in hermetically sealed containers. Seeds put up in this way will remain germinable equally well in all countries. However, if seeds are to be packed in hermetically sealed containers, it is necessary that they be dried at a temperature slightly higher than any degree of heat to which they will be afterward subjected. If this precaution is not taken, the seeds will be confined in a humid atmosphere, and vitality will be destroyed in a comparatively short period.

Many seedsmen now use the hermetically sealed containers for the transportation of seeds to tropical and sub-tropical countries. Sutton Brothers, of England, have an exceptionally large export trade because they have adopted the method of packing seeds in this way.

In order to show the increased value in seeds when carefully dried and put up in air-tight containers to guard against the entrance of any moisture, I give the following data, taken from Bulletin 58, Bureau of Plant Industry, U. S. Department of Agriculture—"The Vitality and Germination of Seeds." This seed was stored at Mobile, Alabama, from December 20, 1901, to April 30, 1902, 131 days.

Cabbage seed from paper packages germinated 60 per cent.
Cabbage seed from sealed bottles germinated 84 per cent.
Onion seed from paper packages germinated 19.5 per cent.
Onion seed from sealed bottles germinated 86 per cent.

At present we have seed stored in paper packages and sealed bottles at sixty different places to show the effect of climatic conditions on vitality. Unpublished data of seeds from some of these places are as follows: Onion seed from paper packages, after being stored one year in Kingston, Jamaica, germinated only 4 per cent., while seed from sealed bottles germinated 87 per cent. Puerto Principe, Cuba, 0 per cent. and 82 per cent., respectively. Key West, Florida, 3 per cent. and 83 per cent. Lettuce seed stored one year in Manila, Philippine Islands, germinated 0 per cent. and 95 per cent. from the paper packages and bottles, respectively. Bridgetown, Barbadoes, 0 per cent. and 94 per cent. San Juan, Porto Rico, 0 per cent. and 96.7 per cent. Seeds stored in dry climates remained viable equally well in the envelopes and bottles.

The secret of keeping our common garden and field seeds is to dry them thoroughly and keep them dry. U. S. Department of Agriculture, J. W. T. DUVEL. Washington, D. C.

BENJAMIN HAMMOND, of Fishkill Landing, N. Y., the "Slug Shot" manufacturer, has donated to the Board of Education of his home town a sum of money, the annual interest from which shall be used in perpetuity as prizes for boys and girls in competitions in orthography and penmanship.

Charles T. Siebert.

Charles T. Siebert, the well-known florist and grower, of Pittsburg, Pa., died March 7, after an illness of some five years or more, at the age of fifty-three years. Mr. Siebert was born in Pittsburg. In his young days he took a fancy to the florist trade, going to Peter Henderson's establishment in Jersey City, to learn it, and from there to several places in the New England States. In 1876 he returned to his native city and shortly afterward engaged in the business, first in a small way at his old home, then at his present place, one of the largest in Pittsburg. Mr. Siebert was a practical florist and understood the building of greenhouses thoroughly. The new glazing point he put on the market is said by prominent builders to be the best for all purposes and has been sold by tons. He was a good grower of carnations, and of late years devoted considerable space to the cultivation of plants to furnish his market stand and new store. The latter, just about completed, is one of the finest in the city, being located in the East End. It is in charge of Mr. Ziegers.

Mr. Siebert was a member of the Florists' Club from its beginning, and as long as he was able attended the meetings regularly. He was also a member of the S. A. F. O. H. and rarely missed any of the annual gatherings until the last few years, when sickness prevented him. He was conscientious and good natured always. Everybody liked him. His widow and three children are left to mourn his loss. The funeral was well attended by his many florist friends; the Florists' Club sent a handsome floral offering.

E. C. R.

Mrs. Charles Eickholt.

Mrs. Charles Eickholt, a florist of Galveston, Tex., died at her home on Wednesday, March 1, after a lingering illness. Mrs. Eickholt was among the sufferers by the Galveston flood.

Reflections on Current Topics.

MR. EDITOR: From the reports of the recent meeting of the New York Florists' Club I observe the members, and their ladies, were again treated to "soul-stirring Scottish songs" with bagpipe music thrown in; and that two worthy Scots—mentioned particularly—were "giving signs of exaltation (this statement is vague) before the music of the bagpipes ceased." I presume the remainder of the audience, not exalted, were in the position of the man whose imagination compared the sounds emanating from the instrument in question to those of the eternally tormented, or what Hudibras says of it:

"Bagpipes of the loudest drones
With snuffing, broken-winded tones,
Made a viler noise than swine
In windy weather when they whine."

The New York Florists' Club members have my most sincere sympathy, when, from choice or compulsion, they complacently listen to the bagpipes—one of the few remaining barbarisms of Scotland. The instrument may, as my friend Wm. Falconer says, give grace to the movements of Highlanders on a bill far removed from the haunts of man, and, methinks, these are the only people such sounds could possibly make graceful, but for a parlor or club room performance—the dulcet strains of the Jew's harp for mine, accompanying songs of the New Jerusalem.

I notice, from David Rust's remarks in a late issue that the amende honorable is due to "Phil." It is cheerfully and willingly made. When I think of it, the answers to the questions in question are enough for one person to be held responsible for.

The return of our good friend and counsellor, William Scott, to the scribbling arena, is a source of much thankfulness to us all, I am sure. But what is this I read from the facile pen of William? "There are no foolish sports injected into the meetings to disturb the business of the convention and attract the light-brained brigade away from what they came to see and hear." Thus writes he of the annual convention of the American Carnation Society. Is this an instance of a wise man changing his mind? Not so long ago, the same writer, if I mistake not, was accused of making foolish remarks regarding the great usefulness of bowling to a certain society, and the uselessness of the men to anybody or anything who attended conventions only to talk "shop." Do more of the "light-brained brigade" belong to the S. A. F. than to the Carnation Society, so that provision has perforce to be made by the former for their follies; or was Scott merely playing to the galleries again? Is an egotistic enough to believe, however, that his mind has been changed regarding this "foolish sports" matter, by reading the views thereon of Jimmie and JOB.

ROSES

Roses, the New and Promising Varieties.

(Read by P. J. Lynch, Secretary-Treasurer of The Duges & Conard Company, before the Philadelphia Florists' Club, Tuesday evening, March 7, 1905.)

Your club has ever been in the front rank in furthering the popularity of the rose, while the fame of your growers did, a bunch of that beautiful rose of Philadelphia origin, Queen of Edgely, savored of a pace rather difficult to overtake. Then, too, while the origin of the ever popular American Beauty (or, as has been claimed, Mme. Ferdinand Jamin) is somewhat obscure, yet it first attained prominence as a commercial variety through the foresight of a Philadelphia grower. Liberty, now so thoroughly established as a forcing variety, came into prominence through the efforts of a Philadelphia grower. Even

bodes well for the future of the rose, and should prove a stimulus to American hybridizers, who may feel assured if their creations have merit that the rose-loving public will be quick to give them deserving recognition.

It seems fitting that I recommend at the outset that sensational new rose, Mme. Norbert Levavasseur, or Baby Rambler. This vivacious French debutante is the rose that blooms every day in the year.

Growing in its full vigor 20 inches high, with finely polished dark green foliage, with which it is abundantly supplied, it forms a compact bush, which with ordinary care is a mass of shining crimson beauty. For every purpose from the florists' standpoint it possesses the highest value, and for the amateur it is equally valuable. It is, indeed, a perpetual blooming, dwarf Crimson Rambler.

In the Rambler class may be also mentioned a variety that does not seem to gain the recognition it deserves as a rose of splendid worth—Dorothy Perkins. It is a true Rambler, particularly valuable for Christmas work, and equally as valuable in the open ground; thoroughly hardy, bearing in large clusters beautiful, clear, shell-pink flowers, of excellent substance. Philadelphia Rambler, a recent introduction, bears out all that is claimed for it, and in some respects is an improvement over the old reliable Crimson Rambler.

One of the most unique and valuable of the newer

as free blooming; immense, bright, clear pink flowers. We cannot omit Winnie Davis, one of the fairest of the newer hybrid tea roses; very free blooming, of good habit of growth, with immense, long, heavy buds, splendidly formed, developing into unusually large flowers; color, bright apricot-pink, shading flesh tint at the base of petals.

Right here I wish to compliment our American rose growers upon the splendid results achieved in producing new roses of merit. Fully conscious of what our brothers across the sea have done for the rose, for which we are indebted to them, I would say naught against the magnificent work they have done, and are doing. Unlike our American growers, however, who hesitate to offer a rose unless it be of pronounced merit, from my own personal experience, each year hundreds of varieties are produced in Europe, many of which have little or no merit to commend them. I know of nothing that is so fraught with pleasure, as well as disappointment, as the trying out of new roses, and it has been the practice of our company up until recent years to try out the new roses of Europe as they have been introduced, and I can say that the large majority of these new varieties of foreign origin have been disappointing. Therefore our American growers are to be not only congratulated, but also commended, upon the work they are doing, and the precaution shown in introducing any and every seedling they originate.

I need not call attention to Mr. Hill's splendid new rose, Richmond. It has spoken for itself, and, as a candidate for popular favor in the class of red forcing roses, it seems to be a decided improvement over any we have at this time. Rosalind Orr English is another promising hybrid tea. John Cook, to whom we doff our hats as one of the veteran introducers of meritorious new roses, contributes Cardinal, a beautiful crimson hybrid tea, and Enchanter, an extremely free blooming variety, with large, clear, bright pink flowers. Mr. Cook selects this variety as the best of over 500 seedlings. Let me recommend Souvenir de Pierre Notting as one of the best roses for all around purposes introduced in many years. It will take front rank, if not surpass from every standpoint, white and pink Maman Cochet, the best roses for Summer flowering in the open ground. This new variety is a splendid grower, throwing up beautiful flowers on long, stiff, erect stems. The bloom is large and double, opens easily and possesses unusual substance. Difficult to describe, apricot yellow, tinged with golden, mixed with orange yellow, while the edge of the petals are shaded carmine. Every florist who has a foot of ground for Summer roses should have this one. Mme. Derepas-Matrat has established itself as a companion to the Cochet roses, which it resembles in every particular, except that the color is deep yellow.

The following varieties are also among the most promising of the newer sorts: Canadian Queen is an improvement over Mrs. J. Pierpont Morgan, Mme. Cusin and Mrs. Oliver Ames, the latter of which it resembles in color; General MacArthur, a vivid crimson hybrid tea; Red Chatenay, deeper in color than the parent; Uncle John, more pronounced in color than Golden Gate; Beauty of Rosemawr, rich carmine red, valuable for outdoor purposes; La Detroit, distinct and valuable, shell pink, good for forcing; Saxonia, worth trying as an improvement over Golden Gate; Mrs. B. R. Cant, unusually valuable for amateur cultivation, better than Papa Gontier; Aurora, an improvement over Hermosa; Franz Deegen, an immense deep, double yellow rose, alike in habit and growth with Kaiserin Augusta Victoria, and far superior to Perle von Godesburg, sent out as Yellow Kaiserin; Florence Pemberton, a strong growing hybrid tea, large shell-pink flowers, good for open ground work. Maddalena Scalarandis will rank with the Cochet roses outdoors; color rich, dark pink, on yellow ground. Ideal ranks with Bridesmaid and La France, pink in color. As an example of an exceedingly rare rose, I mention the variety York and Lancaster, which dates back to the War of the Roses between the royal houses of York and Lancaster, said to have originated when these warring factions became united, its colors representing the white of the Yorkists and the red of the Lancastrians, the flower being a combination of red and white, blotched and striped. Magnafano is a free blooming hybrid tea, with large, double pink flowers. Wellesley is a remarkably free flowering forcing variety. The color is bright pink; a good keeper. For greenhouse men doing a local trade there is always a demand for a hardy ever-blooming climbing rose. To meet this demand there is no better variety than Climbing Clothilde Souper.

The list of the newer and promising varieties could be extended to considerable length, but I feel that I have already encroached too far upon the patience of you gentlemen, and in thanking you for your kind attention I wish to express the hope that I may have said something of value to growers, as well as helped deserving roses to greater popularity.

Carnation Crisis.

Editor Florists' Exchange:

We send you a photograph (reproduced) of our new carnation Crisis; also twenty-five flowers, which we hope will reach you in good order to show you the quality of the variety. As you will notice, the color is of the finest scarlet, and we feel positive that this carnation will make one of the popular varieties.

Bloomsburg, Pa. J. L. DILLON.
[The flowers arrived in perfect condition. The color is all that is claimed for the variety. Evidently, Crisis will make a good commercial carnation.—Ed.]

SCARLET CARNATION CRISIS. Grower J. L. Dillon, Blomsburg, Pa.

that much discussed variety that to-day, for amateur cultivation, is perhaps the leading rose of its color, achieved notoriety through one of your local growers. Though gallantry was at stake as to whether it should be named for the bishop or the lady, the bishop won. I refer to Balduin—Helen Gould. I might mention a host of now famous varieties, such as Wm. Francis Bennett, Souvenir de Wootton, Golden Gate, Princess Bonnie, Pink Souper, Marion Dingee and many others, whose rise to fame and popularity came through the intelligent efforts of growers of Philadelphia and its environs. With these facts in mind, I approach the subject with considerable apprehension.

I am conscious of the fact that in the brief limitations of this paper it will be impossible to cover the subject completely and accurately. I shall, therefore, give you my observations as they have occurred to me in the daily contact with over a thousand different varieties of roses, coming, as they have, from all parts of the world. I shall speak only of roses now in commerce, and while some varieties may be mentioned that are not entirely new, so far as recent origin is concerned, yet it is to be borne in mind that there are a great many roses "born to blush unseen and waste their sweetness on the desert air;" many for years remained unnoticed with their latent beauty undeveloped, until through sheer force of worth they rose to fame and glory. We have notable instances of this fact in Golden Gate and, more lately, that Irish beauty, Killarney. I shall also give equal prominence to varieties that are undoubtedly valuable, not only for forcing purposes, but those varieties appealing to amateur growers, whose ranks are constantly increasing. Of this class, for whom I feel better fitted to speak than from a strictly professional standpoint, I can say that it is a gratifying indication of the rapidly increasing love for the queen of flowers, that the average amateur enthusiast—and there are thousands of them in all sections of the land—is keenly alert to the improvements of the rose, and not infrequently has a knowledge of varieties as accurate as that of the professional grower. This growing interest of the masses

roses is Soleil d'Or, the first of a new race, a cross between Persian Yellow and Antoine Ducher. It forms a strong, sturdy bush, very robust in habit, with foliage that emits the true sweetbriar fragrance. The flowers are sunset yellow or reddish gold, and are highly fragrant; hardy everywhere; splendid for single specimens or for hedges. In this same class of hardy roses of the rugosa and sweetbriar type may be mentioned Sir Thomas Lipton, a rugosa rose. The flowers are large, very double, pure white and fragrant. It is freer blooming than any other rugosa, and will prove a splendid variety for hedging purposes. From Germany comes another great new hardy rose. Frau Karl Druschki. The flowers are almost as large as those of American Beauty, deliciously fragrant, full, deep and double. This variety may be called a free blooming hybrid perpetual, being a cross between Merveille de Lyon and Mme. Caroline Testout. The color is snow-white. Apart from Margaret Dickson we do not have a really great white rose in this class, and this variety may be considered one of the best, if not the best hardy hybrid perpetual rose of its color.

Among the newer hybrid teas of prominence and merit we have Bessy Brown, a really wonderful rose, with large, double, deep flowers, borne on strong erect stems, after the style of Souvenir du President Carnot, which it resembles in growth and somewhat in flower, but is distinct enough to deserve a place at the head of the list. We hear but little of the rose that bears the honored name of Admiral Schley, which as a pot plant possesses rare value. The color is rich, glowing, velvety crimson. The flowers have unusual substance, a valuable point, are delightfully fragrant and borne in great abundance. A clean, healthy dwarf grower, with splendid foliage. Since Killarney has become recognized as a rose of more than ordinary merit, such roses as Mme. Jules Grolez, its counterpart in color and almost equal in flower, remains unnoticed; a splendid grower, and with proper management, it should prove a strong competitor of Killarney. The list is incomplete without Lady Joy, a cross between American Beauty and Bell Siebrecht, a royal parentage; flowers large, cup-shaped, almost double, with enormous shell-like petals of good substance, highly fragrant; the color is new—lively crimson. Mrs. Robert Garrett is of the same type, but not

What Constitutes a Herbaceous Plant?

When pot plants are offered for sale, and the size of the pot is given, it conveys a very fair idea to the intending purchaser as to what to expect. The same might be said in regard to trees, shrubs and evergreens; either the height or caliper is usually given, so that there has become a recognized standard, and variations from it are very easily described, which are recognized by the initiated.

With herbaceous plants it is different. Owing to the fact that so many different plants, of such varying habits of growth, are classed under this heading, it is somewhat difficult to fix a standard. A glance at the different advertisements and lists will reveal a great variation in price; at the same time, if the higher priced stock could be examined, it would very likely prove cheaper than the lower priced stock.

Many kinds of herbaceous plants are what they are made when dug. They can be divided into any size and still be called plants, although a microscope may be necessary to count them. In ordering, it is often specified that the plants shall be strong clumps. This is a very vague term, and can be made to suit ideas at considerable variance. In addition to the lack of a fixed standard as to just what constitutes a herba-

helenium, helianthus, physostegia, golden glow, etc., should be transplanted every year to insure good, sturdy, salable plants. If left to grow into a mat of roots, it is almost impossible to dig good plants, as they break into little pieces.

A safe rule is to send out plants that have been grown one year in the nursery rows since being transplanted, whether they are from cuttings, seed or divisions.

ERNEST HEMMING.

New Transplanting Truck.

INVENTOR, PETER BISSET, WASHINGTON, D. C.

This is an entirely new departure in the line of transplanting trucks, as the illustrations show. It has a flat bed, having one end tapered to an edge, anti-friction rollers, the journals of which are on the bed below the upper surface thereof; a pair of wheels, on which the truck is supported intermediate its ends, permitting the truck to be tilted so that the uppermost plane of the bed may meet the ground, and a windlass mounted at that end of the bed opposite the tapered end, and in close proximity to the surface of the bed, effecting a pull in a direction approximately parallel to the upper plane of the bed; a band adapted to pass around the ball of the plant to be transplanted,

Home-Made Soap for Spraying.

The New York Experiment Station at Geneva, N. Y., has been giving attention to the securing of a reliable soap that can be used as an efficacious insecticide, and now recommends the subjoined formula. No elaborate equipment is required, not even a soap kettle or a fire, since boiling is not necessary.

The formula to be used in making forty pounds of soap, containing 60 per cent. of actual soap, is this:

Formula for 40-lbs. Fish Oil Soap.
 Caustic soda 6 lbs.
 Water 1½ gals.
 Fish oil 22 lbs.

In making the soap, the caustic soda is completely dissolved in the given amount of water and the fish oil is then added gradually under constant and vigorous stirring. The combination occurs readily at ordinary Summer temperatures and the operation is soon completed. The mixing may be done in any receptacle sufficiently large to contain the whole amount of material. It would probably not be desirable to attempt to make more than twenty to forty pounds at a time, since the difficulty of thoroughly stirring a larger mass would tend to make a complete combination less sure, thus rendering liable the presence of too much free alkali. Complete and thorough stirring is essential to success. Caustic soda should be handled with precaution, since in concentrated form it easily injures the skin.

In experiments on willow foliage, badly affected with plant lice, this soap was used in a strength of one pound to seven gallons of water, and completely destroyed the insects.

There could, therefore, be no question as to insecticidal

Unloading a Large Tree

Loading a Large Palm]

THE BISSET TRANSPLANTING TRUCK IN OPERATION

ceous plant, the varying habits and sizes of the different plants make it still more difficult. For instance, a strong clump of Iris verna, or pumila, would differ greatly from a strong clump of Iris pallida Dalmatica or florentina, yet the former, although comparatively very small, may be more entitled to the term than the latter varieties. The large growers are, however, gradually fixing a standard on those kinds that are cultivated in quantity and in good demand, and as the stock becomes better known and more generally grown, it will be necessary for all the growers to have their stock a certain size to give satisfaction.

The general run of herbaceous plants are in the best condition for the market when one and two years old, according to the kind. Phlox, dianthus, iberis, lavandula, and, in fact, all those kinds that are grown from cuttings in the early Spring, are in the best condition for the retail market the following Fall or Spring after they have been growing in the nursery rows for one season. They should then be nice sized plants and in condition to give the purchaser the very best immediate results—much better than divisions of large plants, or the large plants themselves. If a large clump is wanted, three of these one-year-old, field-grown plants, set in a triangular shape, about a foot apart, will produce it much better than a large clump that has not been transplanted for several years. Plants raised from seeds, such as hollyhocks, columbines, foxgloves, Canterbury bells and such plants of a more biennial nature, should also be grown one year in the open ground, as they are at their best the second year; after that, they usually deteriorate.

Many of the choicer sorts are being handled in pots. This is an excellent way, especially if the plants have no body to them, but merely consist of a few delicate roots without much else, as so many of them do in the early Spring. Three to five growing points make a very suitable sized plant of iris, and could truthfully be called strong clumps. Peonies should have three to five eyes, unless it be some choice variety, when the name is purchased rather than the plant. Plants that spread with underground stolons, such as

and winding connections between the ends of the band and the windlass. This truck has been in operation for almost a year, and has proved in every way satisfactory in transplanting trees and evergreens, for moving large palms in tubs, tree stumps and heavy stones; in fact, the truck can be used to move anything that is too heavy or too large for men to carry, doing the work better, quicker, and with fewer men than by any of the older methods.

In transplanting, the tree is dug around in the usual way, and the ball undermined as much as possible; then the side of the trench is cut away the width of the truck, so as to form a runway for the truck to get under the ball. The tapered end of the truck is placed under the ball, and the belt that encircles the ball put in place. This belt is then attached to a chain from the windlass, and the whole is wound up on the truck. The truck balances by the tree resting over the wheels, and then assumes a level position, when it can be pulled out of the hole and transported to the hole already prepared for the reception of the tree. To unload, the operation is just reversed, and the tree is allowed to slide slowly into its place.

With this truck a tree can be moved without fear of loss, if ordinary care be exercised to see that a proper proportion of roots is saved. The inventor moved some very valuable trees on this truck last Spring that came through the past Summer so successfully that no one could tell that they had been recently moved; they were moved with such good balls that no pruning or shortening of the wood was required. The truck can be made of various sizes to answer all purposes, from moving small shrubs up to large trees; in the larger sizes the truck has four wheels instead of two, as in the one illustrated. With this truck a tree is moved in an upright position and is moved and planted without breaking the ball, and with such ease that few men are required, and the work being done very rapidly, the roots that are exposed have little chance to dry up. The truck is fully covered by patent rights.

PETER BISSET.

power; but was it sufficiently free from uncombined alkali to be safe for use on tender foliage? In making two lots of soap by this formula the soda was taken from a package that had been on hand some time; and the soaps showed, on analysis, less than one per cent. of free alkali. In making another lot of soap, using soda from a freshly opened package, the percentage of free alkali ran considerably higher, approaching five per cent.; and in still another lot, made after a second formula, more soda and less fish oil were used, giving a soap with 11.5 per cent. of free alkali. Solutions were made from soaps of this character and also from soap made by the first formula with free alkali added in varying amounts up to as high as twenty per cent. Each solution was made by dissolving one pound of soap in seven gallons of water. These solutions were tested upon apple, pear, plum and cherry foliage, by dipping the leaves into the solutions; and no injury resulted except when the percentage of free alkali in the soap was ten per cent. or more.

It is clear that the home-made soap is both reliable and safe. It is also somewhat less expensive than the purchased article.

Caustic soda of good commercial quality can be obtained from the Penn Chemical Co., 1322 Washington avenue, Philadelphia, Pa., at about four cents a pound, f. o. b., put up in 50-lb. cans; which with freight to New York State points should make the soda cost not more than four and one-half cents a pound. It can be obtained from druggists at six cents a pound.

Fish oil will be sold in barrel lots by Nehemiah B. Cook, 148 Front street, New York city, or by Swan & Finch Co., 161 Malden Lane New York city. The refined oil costs 29 cents a gallon (about 7 1-3 lbs.) by the barrel, the crude oil, which answers the purpose very satisfactorily, 25 cents a gallon.

The wholesale price for soda, then, is about four and one-half cents a pound, and for fish oil four cents a pound; from which we can easily compute the cost of soap, as follows:

6 pounds caustic soda at 4½ c. a pound.....	\$0.27
22 pounds fish oil at 4c. a pound.....	0.88
Total cost of materials used in making 40	
pounds of soap.....	1.15
Cost of one pound of soap.....	2.9c

Commercial whale oil soap costs at retail, in small quantities 10 cents a pound; in larger quantities, 6 cents a pound; or in barrel lots in New York city, 4½ cents a pound, with fish oil soap 3½ cents a pound.

CLUB AND SOCIETY DOINGS

Chrysanthemum Society of America.

Announcement of Special Prizes.

The following special prizes have been offered, to be competed for at the next annual meeting of the C. S. A., to be held in Philadelphia.

F. R. Pierson offers silver cup for 36 blooms, 6 blooms each of 6 varieties introduced here in 1904 and 1905.

W. Wells & Co., Earlswood, Surrey, England, offer a gold medal, a silver-gilt, and a silver medal for six flowers of chrysanthemum Mrs. Wm. Duckham. Richmond, Ind. FRED H. LEMON, Secretary.

NEW LONDON (CONN.) HORTICULTURAL SOCIETY.—A meeting of the show committee of this society was held Wednesday, March 1, to make plans for the rose show which will be held in Norwich in June. It is hoped to interest school children in the show. The committee is composed of Louis A. Giger, John Archer, Edward Clark, Albert Lawson, Otto F. Ernst of Norwich, and David Gideon. It was decided to offer two prizes in each class.

THE NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY held its regular meeting at Glen Cove March 1. One new member was elected. H. F. Meyer, gardener to Mr. George R. Sheldon, read a very interesting paper on growing mushrooms. The society held its first exhibition, carnations. Some very fine flowers were shown. Special mention was given to W. Willisen for a sport of Enchantress, much darker in color than the latter, measuring 3 3/4 inches, with good stem and calyx and very fragrant. Also to F. Boulon & Son, Sea Cliff, N. Y., for a sport of Mrs. Lawson. Many others were represented in the exhibition, including F. Mense, with his beautiful white seedling, *Dosoris*. S. J. TREPESS, Secretary.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—At the meeting of this society March 3, Frank Brunton was elected to membership. The secretary reported that eight essays had been sent in by the assistant gardeners in the prize contest. The names of the winners will be announced at our next meeting March 17, when the prize papers will be read and discussed. The subject of the essays to be sent in before April 7 is "Fruit Culture in General Under Glass." These essays will also be written by the assistant gardeners and prizes will be given for the best two. President Hale exhibited Mrs. Pierpont Morgan roses, which received 85 points. The discussion of the evening was "The Value of the Gardeners' Union." The judges were: W. W. Kennedy, H. Griffiths and William Ritchie. B.

THE TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The February meeting of this society being the quarterly social meeting, little business was transacted. The dates for the chrysanthemum show were decided upon; they are October 31 and November 1 and 2. The prize of the evening, for the best vase of assorted roses, was awarded to John Featherstone, Greystone, Yonkers. L. A. Martin, of Irvington, gave him a hard run. The latter's roses, however, were slightly lacking in stem. Mr. Featherstone also exhibited some fine plants of cyclamen and *Cineraria Feltham Beauty*. This is the result of a cross between *C. cruenta* and *C. stellata*, being a considerable improvement over the latter variety. In color, the varieties of this cross run mostly to pink. Secretary E. W. Neubrand was presented by his fellow members with a gold locket, suitably engraved, as a token of respect and appreciation of his valuable services in the interests of the society. Light refreshments were served and, with the songs, recitations, etc., a very pleasant evening was spent. WM. SCOTT.

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held March 4, 1905, President R. A. Schmid in the chair. Mr. Schmid read a very instructive paper on carnations, on which there arose a lengthy discussion. It was carnation night, and a very good display of flowers was on hand. F. R. Pierson Company, of Tarrytown, N. Y., exhibited some of their new varieties. They were awarded first class certificates for *Victory*, *White Lawson* and *Variegated Lawson*, and a vote of thanks for *Daheim*, which variety had already received a first-class certificate from this society. The principal exhibitors in the schedule classes were A. J. Loveless, J. Dallas and Elm Court Farm. E. J. Norman was awarded a diploma for a very well-flowered piece of *Cypripedium venustum* spectabile. G. F.

PHILADELPHIA (PA.) FLORISTS' CLUB.—A large crowd turned out on Tuesday last to attend the rose meeting of the club, but, unfortunately, were disappointed at not having any exhibits to look at. All the growers of new roses who had been invited to be present replied that their plants were off crop, or all cut down for stock. The only exhibit staged was a seedling rose from Myers & Samtner (American Beauty X Safrano). It is a nice flower of the Beauty type, double, but rather flat, of light shade, even

lighter than *Queen of Edgely*. P. J. Lynch, of Dingee & Conard Company, in his paper on the newer roses, gave a very good review and description of varieties, mostly from an outdoor cultural view, but the paper was also full of information for florists.

It is proposed at the April meeting to have a discussion on coal—Anthracite vs. Soft Coal. For the past two Winters many of our growers have been using soft coal, and some of these will be present with figures to prove the correctness of their preference. DAVID RUST.

MASSACHUSETTS HORTICULTURAL SOCIETY.

—There was a good-sized audience in the lecture hall on Saturday to listen to A. Herrington, of Madison, N. J., whose subject was "Some Aspects of Hardy Flower Culture." (Mr. Herrington's paper will appear in a future issue.)

In the exhibition hall Peter Murray, of Fairhaven, Mass., exhibited some forty plants in twenty-five varieties of dendrobiums, which was as fine a collection as may be seen. He was awarded the society's silver-gilt medal for the collection and certificates of merit for the varieties, *Venus*, *Murrhinicum* and *Almsworthii* roseum, and honorable mention for the varieties *Euryalus* and *Nobile Domanil*. The collection contained besides such varieties as *virginialis*, *Rolfiae*, *Dominianum*, *Ballianum*, *Victoria Regina*, *Burfurdensis*, *Cassiope*, *Cooksonii*, *Sibyl*, *albiflore*, *Sanderæ* and *splendidissimum*. W. N. Craig, for the F. L. Ames Estate, North Easton, exhibited some very fine plants of *Phalaenopsis Schilleriana* and the variety *Curnowiana*, P. *Stuartiana*, *Odontoglossum Wilckeianum* albens, with a very fine spike of bloom; *Cattleya Trianae* alba and *Miltonia Bleuana virginialis*. He was awarded a cultural certificate for the collection and a first-class certificate for the *Miltonia*.

The Garden Committee of the society visited the greenhouses of Geo. F. Fahyan, Brookline, where James Stuart is gardener. Mr. Stuart is known as one of the best growers of cinerarias, cyclamens and such plants in this locality, and the committee found his stock equal, if not superior, to that seen in former years. The greenhouses were neatness throughout, and showed that exceptional care was given all the different plants grown. J. W. D.

THE PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

—The March meeting, held last week, was unusually well attended considering the inclement weather, between forty and fifty members being present. There was a fine exhibit of roses, etc. Two new members were elected and five proposed. It was decided to prohibit smoking in the meeting room during the session. Just think of it! The home of the "toby" and a poor fellow who works hard all day and then goes to meeting to have a good talk and smoke, not allowed to do any more fumigating among the posies! A new feature was also introduced—the question box. It was well used the first time.

The exhibit of roses pleased every one; magnificent blooms were shown by all. Breitmeier's Sons, Detroit, Mich., sent a fine bunch of *La Detroit*, the finest of that variety ever seen here; they showed the value of this new rose. A fine lot of *antirrhinum* was also exhibited by the same firm. Peter Reinberg, Chicago, Ill., had some elegant *Bridesmaid* and *Mme. Abel Chatenay* well grown and fine straight stems. The Washington Floral Company, of Washington, Pa., a comparatively new concern, showed through Mr. Salmon some well-grown *Bride*, *Bridesmaid*, *Ivory* and *Golden Gate*. L. I. Neff had some fine *Bridesmaid* from his new place in Cheswick, Pa. Blind Bros. staged *Bride*, *Bridesmaid* and *Killarney*, and J. W. Wyland, *Bride*, *Bridesmaid* and *Mme. Abel Chatenay*. The Bakerstown Rose and Carnation Company had a large exhibit of *Bride*, *Bridesmaid*, *Perle des Jardins*, *Mme. Chatenay* and *Mme. Cuslin*. G. & J. W. Ludwig showed *Bride*, *Bridesmaid* and the *Canadian Queen*; the latter is in good demand, being a fine keeper. David Fraser, gardener at Frick's conservatories, and Mr. Jenkinson, at Peacock's place, both showed some varieties of roses grown right in the city; they were fine blooms. John Jones, foreman of the Schenley Park conservatories, exhibited a nice lot of reasonable blooms, such as *cinerarias*, *cyclamen*, *Primula Forbesii*, *camellias*, *tulips*, *narcissus*, *hyacinths*, etc. J. F. Zimmerman, of Dixmont, Pa., had *The Marquis carnations*. Some well-grown plants of *Primula obconica* were shown by Messrs. Fraser and Jenkinson, also *Cineraria stellata* and the blue flowering *coleus*. Mr. Price, gardener at Laughlin's conservatories, exhibited fine cut blooms of *amaryllis* and plants of *primulas*. E. C. REINEMAN.

THE NEW JERSEY FLORICULTURAL SOCIETY.

—Fruits under glass engaged the attention of the New Jersey Floricultural Society, with William Turner, ex-president of the Monmouth Horticultural Society and superintendent of the estate of M. C. Borden at Oceanic, N. J., as essayist at the meeting on March 3 at Orange, N. J. Mr. Turner discoursed under the following heads: Grapes, peaches and nectarines, pineapples, border cultivation inside and out, giving as his preference the former, particularly in hard soils, and pot cultivation. He held that fruit raised under glass was so superior in color, form and flavor that when fully comprehended there would be more of it grown; and that while the pineapple was stringy and hard as ordinarily purchased in the market, from the glass house "it could be eaten with the spoon," that it was far more easily cultivated in America than in England, where it has been so long esteemed grown

under glass, owing to better climatic conditions here and far superior to those imported from the West Indies.

The discussion which followed was general, the majority of the members and visitors taking part. Among the latter were William Duckham and C. H. Totty, of Madison. Peter Duff acknowledged the debt which he owed to Mr. Turner for advice when he was about to launch out in this department of horticulture, particularly as to varieties, and heartily endorsed Mr. Turner's recommendations as to treatment and cultivation. It was stated that pot cultivation could frequently be employed where it was necessary to observe strict economy of space; nor was it necessary to change to a larger pot at the time of shifting. Altogether those present were satisfied with the profitable evening spent, and a hearty vote of thanks was accorded the speaker.

The Vilmorin letter from Professor Sargent was read and laid upon the table. Thomas Jones and James Lang were placed in nomination; Alex. Smith and Otto Manetz were elected to membership. Upon motion of Walter Gray a special dahlia show was decided upon and the matter given to the executive committee with power.

The floral exhibit consisted of a display of high-grade roses and carnations from Peter Duff, William Reid and M. Hornacker and a fine hybrid *cattleya* and a specimen *dendrobium nobile*, with 124 flowers, grown in a five-inch basket, from Edwin Thomas, gardener to Mr. Henry Graves; *Cattleyas Harrisonæ* and *Trianae* from Arthur Bodwell, gardener to Mr. William Barr, of Llewellyn Park. The judges were: Jos. A. Manda, Arthur T. Caparn and H. Hilbig. J. B. D.

THE KENTUCKY SOCIETY OF FLORISTS.

Weather conditions were most unfavorable for a representative gathering of the members of the society Tuesday evening, March 7. But the carnations and roses on exhibition proved a magnet which drew members to attend that had not been present for months. Next to attending a meeting of the American Carnation Society this show was all that could be desired. The flowers were fine, the varieties numerous and the new sorts many and excellent. Outside exhibitors were most liberal in their displays and deserve much credit for our successful meeting. Among these were the following firms: J. D. Thompson Carnation Company, Joliet, Ill., with Mrs. M. A. Patten, Nelson Fisher, Enchantress and *The Belle*, all well done and in magnificent shape. But the cream of their exhibit was *Robert Craig*, and with this variety every other red was compared. R. Witterstaetter, Cincinnati, O., had *Afterglow*, a most beautiful, large and very double pink carnation, and *The Aristocrat*, a fine pink appropriately named. Chicago Carnation Company, Joliet, Ill., with Dorothy Whitney, *Enchantress*, *Prosperity*, *Harlowarden*, Mrs. T. W. Lawson, *White Lawson* and a most excellent lot of that grand red, *The Cardinal*, as well as the beautiful white, *Lady Bountiful*. H. Weber & Sons, Oakland, Md., exhibited *My Maryland*, a very full and fine white. F. R. Pierson Company, Tarrytown-on-Hudson, N. Y., had *Victory*, a fine red; *Variegated Lawson*, *White Lawson* and *Daheim*, a crimson. John N. May, Summit, N. J., sent *The Bride*. This variety, which last year arrived in such good condition, and created such a good impression, did not reach us in very good shape this time. Baur & Smith, Indianapolis, Ind., had *Indianapolis*, a pink, and *Flambeau*, red, that look like bread winners. The Indianapolis Flower and Plant Company and John Hartje, Indianapolis, Ind., sent *Candace*, a beautiful pink. W. J. Palmer & Son, Lancaster, N. Y., the Red Lawson, a worthy member of the Lawson family. Anders Rasmussen, New Albany, Ind., some fine Mrs. Lawson, *Enchantress* and *Hoosier Maid*, the latter a white, which with him is most profitable. Nanz & Neuner, Louisville, Ky., staged *Perle des Jardins* and *Ivory* roses of most excellent quality, carnations *Enchantress* and *Morning Glory*, daisies, *forget-me-not*, *mignonette*, all showing the result of good culture. Chas. W. Reimers, Louisville, had Mrs. T. W. Lawson, *White Lawson*, *Enchantress*, *Flamingo*, *The Queen*, *Prosperity*, *Daheim* carnations, of a quality that would travel in any company; *forget-me-not* and spikes of *Allen's Defiance* *mignonette*, beautiful to behold. Jacob Schulz, Louisville, staged a vase of assorted seedlings, some of decided merit. Leo Zoeller, Louisville, had *Enchantress*, Mrs. Frances Joost, Mrs. E. A. Nelson carnations, that would hold their own anywhere. The exhibition was most conveniently arranged in the showhouse of Nanz & Neuner.

Independence in Trade Journals.

The trade journal that pursues an independent policy, permitting no dictation from those who use its advertising columns, and considering the reader's interests solely, is immeasurably superior to the other kinds as an advertising medium. Advertisers use a journal because of its standing with its readers. Therefore the journal that places its standing with its readers ahead of every other consideration is the journal that will give advertisers the best service.

It will be found in almost every instance that when a medium is so anxious to secure advertising as to make any concession to advertisers, its value is low. In fact, the probability is that it has no value whatever, and the advertisers are justified in refusing to consider it.

Independent journalism has a value of its own—it appeals to readers, and, therefore, it ought to appeal to discerning advertisers.—Profitable Advertising.

Review of the Market

NEW YORK.—The commencement of Lent finds business very dull indeed. Stock of all kinds has become more plentiful and it does not seem to matter at all what prices are asked, there is not enough demand to clean up the market. Violets are probably suffering more than any other flowers, and many that have been kept over night, are freely offered at \$1 per 1000, while good, fresh stock is obtainable at 20c. per hundred. Carnations are not much better off; while roses of all kinds have dropped to almost half the price they were bringing a week ago. Bulbous flowers of most kinds are down to 50c. per 100; and lilies can be had in quantity at \$3 and \$4 per 100. Lily of the valley and sweet peas are almost a glut, and fixed prices are out of the question.

Between the unfavorable weather we are having, and the strikes on the subway and elevated lines, business has gone all to pieces; but it is to be hoped that a speedy change for the better will follow.

BOSTON.—As was expected, there has been quite a slump the past few days in all kinds of stock, and appearances are that these conditions are likely to prevail for some time. All kinds of flowers are becoming very plentiful, with the exception of long stemmed American Beauty, which have been scarce, and there is little betterment so far, although there is a large surplus of cuttings and ordinary flowers. A few Meteor are being received. Bride and Bridesmaid are plentiful, some exceptionally fine blooms being seen, although the specials have little or no call.

Carnations have dropped in price, and it has been hard to move some varieties. White have sold fairly well, as have a few fancy sorts, like Enchantress and Prosperity.

Violets were never more plentiful than they are at present. Lilies are seen in large quantity, but do not sell very readily. Bulbous stock of all kinds is nearly at a standstill. Double daffodils sell best. Paper White narcissus and Roman hyacinths have little demand. Sweet peas are now plentiful, of excellent quality. Lily of the valley has not changed. Adiantum is scarce. J. W. D.

CHICAGO.—The market the past week has been erratic and prices have dropped considerably since last report. Stock of all kinds has increased in volume. Flowers have not been so low priced in this market for some time; nearly every wholesale house has felt the depression. The Mardi Gras festival at New Orleans this year did not occasion such large shipments as in former years. Shipping trade in general is not as good as usual at this period, and local trade has slackened up considerably. No glut, however, has taken place as yet.

American Beauty are not coming in very freely, and a market is readily found for all available good stock. For short and inferior grades, the price is what the buyer is willing to pay, these flowers being sold in most cases, to the Greek near the close of the day's business. Bride and Bridesmaid are being received in large quantities; the better grades are in demand at from \$8 to \$15. Liberty is in short supply at from \$4 to \$15 per 100, according to grade.

Carnations are being received in large supplies, and the prices have declined considerably; inferior stock is hard to move at any price.

The street man is now active, and from the signs displayed on the stalls must be buying stock at exceptionally low figures.

Violets are very plentiful; one wholesaler states that probably 100,000 violets were sold last Saturday. Prices on these range from 35c. to \$1.

Lilies are more abundant, ranging from \$10 to \$12. The supply of callas has shortened up, although they are yet in quantity, at \$8 to \$12, according to quality. Roman hyacinths are nearly out of the market. R. J.

CINCINNATI, O.—Carnations last week came near being a glut. What the coming week or weeks will bring forth is hard to figure on. Plenty of all kinds of stock is coming to market, and the demand is slow. It is not worth while to quote prices, as twelve hours' time might change all calculations. Lilies are plentiful and sell fairly well. Of violets and bulbous stock, there is no end, and Lent nearly here. Funeral work continues fairly active, using up considerable stock. Long American Beauty still command a good price. E. G. G.

SYRACUSE, N. Y.—There has been a marked improvement in trade conditions during February, and with the advent of longer and brighter days, stock is improving in quality. There is a large amount of bulbous stock in all the stores, which meets with a ready sale. Our florists report plenty to do in decorative and funeral work. Single violets are about gone, while the doubles do not meet with as ready a sale as formerly. Prices on all lines of stock remain as previously quoted. J. B. B.

ST. LOUIS.—Since last report, the wholesale market has experienced a considerable change. The weather has been fine, clear and bright, and cut stock is in great abundance. Prices have taken a decided drop in all grades. Lent has stopped nearly all social work. The street corner merchants are in their glory, selling violets, which are coming in by the tens of thousands. The downtown florists have made war on the street men by having the police run them in.

Carnations are of extra fine quality; the price on fancy stock is away down; \$3 per 100 buys extra select Mrs. Lawson, Governor Wolcott, Enchantress and Prosperity. Other varieties go at from \$1 to \$2 per 100. Common grades are left over and find no sale. Extra select American Beauty are down to \$4 per dozen, with more shorts at \$5 per 100 than can be sold. Bride and Ivory are in demand, and these sell out clean; but Meteor, Perle des Jardins and Liberty have little call, at prices ranging from \$3 to \$8 per 100.

Violets are a glut, and have been for the past two weeks. Although many of them are cleaned up at low prices—all the way from 15c. to 20c. per 100, in thousand lots—the trade is unable to handle all the stock that comes in. Callas are in great abundance at \$1 per dozen; Harrisii are not so plentiful. Other bulbous stock is still a drug on the market, and almost any price will buy it. Smilax is being cut pretty close as the demand has been rather heavy; in fact, all greens are selling well. ST. PATRICK.

INDIANAPOLIS.—The beginning of March has brought with it a very satisfactory business. Wedding decorations have been numerous of late, all of the retailers receiving a share of them. Funeral work remains heavy, and it is owing chiefly to this that a large amount of stock is kept from going to waste. With seasonable weather, stock is abundant. The extremely warm, bright days during the past week made the production tremendous, so that much goes to waste; this is especially true of bulbous stock which is moving very slowly.

Carnations are cheaper than at last report. Fancy grades may be had at \$3 per 100; medium grades, such as Mrs. Lawson, at \$2.50, and common ones at \$1.50 to \$2 per 100; 75c. per dozen is the customary retail price for them.

The supply of roses equals the demand and few are being shipped in. Select Bridesmaid, Bride, Golden Gate and Mme. Abel Chatenay bring \$7 to \$8 per 100; the best Liberty \$10 to \$12. Select 36-inch American Beauty wholesale at \$1.50; 24-inch at \$2.50, and 12-inch at \$1 a dozen. Marie Louise Violets wholesale at 20c. to 35c. per 100; extra fine single bring 75c.

The supply of plants is inexhaustible, but the demand for them hardly warrants the forcing at this time. Tomlinson Hall Market reports very encouraging business, both in the wholesale and retail departments. Nearly all the growers attend with heavy supplies. I. B.

WASHINGTON, D. C.—Business has been quite brisk this week, particularly so with the downtown stores. While there has been going on a great deal of entertaining of visitors to the inauguration, there has also been a good transient trade. The center market, which is our principal market, was well supplied with good stock which was readily disposed of. American Beauty brought from \$12 to \$18; Tom Field, \$7 to \$10; Liberty, which is always in demand, \$5 to \$8; Meteor, Souv. du President Carnot, Kaiserin Augusta Victoria and Bridesmaid were in demand at \$3 to \$5 per dozen, while Ivory, Golden Gate, Madame Abel Chatenay and Bride brought from \$2 to \$3.50 per dozen. There has been a heavy call for lilac at \$3 to \$5 per dozen. Violets realized \$1.50 to \$3 per 100. Carnations have been quite plentiful; such sorts as Enchantress and Flamingo brought \$3, the older varieties \$1.50 to \$2 per dozen.

Sweet peas are in demand at 50c. to \$1 per bunch. Gardenias have been called for at \$1 to \$1.50 each. Lily of the valley brings \$2 to \$3. Roman hyacinths, 50c. to 75c. per dozen. There has been a demand for red and yellow tulips at 50c. to 75c. per dozen. The supply of daffodils has not been equal to the demand, at 50c. to 75c. per dozen. Plants in pots have sold well; azaleas at from \$2.50 to \$5; cinerarias, 75c. to \$1.50; Chinese primulas, 50c. to \$1; lilacs in 10-inch pots, \$4 to \$6 each; tulips in 6-inch pans, 50c. to 75c. each. M. C.

PITTSBURG.—The cut flower trade the past few weeks has been fair. In the seed and plant trade the unfavorable weather is holding things back; a few nice days will soon alter this. In cut flowers, good stock is being handled and prices are satisfactory. E. C. R.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

LIMA, O.—N. R. Swan, of Findlay, O., contemplates opening a branch store in this town.

FORT WAYNE, IND.—W. C. Puckett, R. F. D. No. 8, is starting in the greenhouse and nursery business here.

WEST CHESTER, PA.—John Herbeck, who disposed of his greenhouses here, has gone to Boston, where he will locate.

PENDLETON, ORE.—S. H. Forshaw, florist, will open a seed store here, handling also cut flowers and nursery stock.

SOUTH OMAHA, NEB.—A. Delaney is removing his store to the new Bergquist Building, near Twenty-fourth and L streets.

HACKENSACK, N. J.—Mrs. T. Gulliksen, now located opposite the Public Library, has rented the store on the downtown side.

SLATINGTON, PA.—John F. Horn & Bro., of Allentown, Pa. recently opened a branch store here, with Charles W. Hummel in charge.

SOUTH BEND, IND.—August Beyer, who has been located at 122 North Michigan street, has moved to No. 129. The new quarters have been handsomely decorated and fitted up with every convenience.

FIRMS WHO ARE BUILDING.

WEST UNION, MD.—William Coss has about completed a new greenhouse.

SOUTH WILSON, N. Y.—Frank Culver's new greenhouse is nearing completion.

WEST MILAN, N. Y.—Allen Traver will build an additional violet house, making three in all.

PLAINFIELD, N. J.—The Belleview Nursery will build a new greenhouse for carnation culture.

BRAMPTON, ONT.—William Fendley will build four greenhouses, each 200x21 feet, opening into one another. The King Construction Company, of Toronto, has the contract.

BUSINESS DIFFICULTIES.

DORCHESTER, MASS.—J. I. Gurney is in bankruptcy; liabilities, \$1,768; no assets.

Worth the Money.

I beg to acknowledge safe arrival of THE GARDENER'S ASSISTANT, and am more than pleased with the volumes. They certainly are worth the money. GEORGE MASON. N. J.

The Old Story.

Responses from advertisements of February 4 and 11 were very satisfactory. Enclosed find copy to run until further notice. D. WM. BRAINARD. Connecticut.

BOWLING.

NEW YORK VS. NORTH HUDSON.—On Saturday evening, March 4, teams of the New York Florists' and the North Hudson Florists' Bowling Clubs met in a friendly match on the alleys of the latter in Hoboken, N. J., and played three match games which resulted in a tie, each of the teams totalling 2,530 pins in the three games. A return match will be played on the New York alleys Monday evening, March 20. The individual scores follow:

Table with columns for New York and North Hudson players and scores. Includes names like J. Kessler, J. A. Manda, W. H. Siebrecht, F. C. Holt, J. Fenrich, T. J. Lang, P. Fischer, H. C. Steinhoff, C. Dietz, H. Mende, M. Hansen, W. Otte.

Table with columns for North Hudson players and scores. Includes names like P. Fischer, H. C. Steinhoff, C. Dietz, H. Mende, M. Hansen, W. Otte.

Table with columns for New York players and scores. Includes names like J. A. Shaw, Schreiner, W. Ford, A. J. Guttman, J. Fenrich.

A Cure Prescribed.

THE MODERN SAIRY GAMP: Lack-a-mussy, sir, ever since I first put that chile, young Haughty Kultoor, in its crib, with its feet where its head should 'a been, it has tho't it was at top o' things, when it shorely is at the bottom, where it frantically squirms in a futile attempt to ape its elders higher up.

DR. DELA-VAN-GRANT: That's all right, nurse; give the infant, while it is nursing, three drops weekly from our Large Circulation that Circulates bottle; then when the "daffy" season is over, increase the dose to six drops, keeping this up till it get its wisdom teeth. It will then probably know and see things as they are; show its own originality and prove itself something more than a "base imitator."

SAN FRANCISCO, CAL.—In the death of Mrs. Leland-Stanford, California loses one of its most liberal flower buyers, the blossoms being used by her principally to cheer the rooms of the sick and poor.

Miss Hilda M. Fecheimer, 1150 Sutter street, who was married recently, has abandoned her flower store. ALVIN.

JOLIET, ILL.—The Chicago Carnation Company, on March 3, shipped seventeen boxes of plants to Great Britain. The shipments included Pincee and other standard varieties handled by the firm.

HOLYOKE, MASS.—M. H. Walsh, Wood's Hole, Mass., recently delivered a lecture on "The Care and Cultivation of the Hardy Rose" before the Holyoke Horticultural Society.

ELIZABETH, N. J.—Mr. Saunders, who met with an accident by the bursting of a steam pipe at the Elizabeth Nursery Company's plant, is improving, and he expects to be able to resume his duties in a few days.

Advertisement for The Hummingbird Kind Tobacco Powder. Includes a large illustration of a hummingbird and the text: 'All That Use It Say "There Is Only One"'. Also mentions 'FREE trial five-pound bag' and 'THE H. A. STOOHOFF COMPANY, Tobacco Powder Hobbyists, 116, 117, 118 West Street, New York'.

The Retail Trade

Decorations for Inaugural Ball.

Henry Small & Sons, Washington, D. C., eclipsed all their former efforts at decorating the Pension Office Building for the Inaugural Ball on March 4. While the Pension Office Building is not famed for its architectural beauty, yet, when Smalls got through with it on the early morn of the 4th, it had been transformed into a veritable paradise. In the center of the ground floor was a large fountain, around which were placed vases filled with dracenas, genistas and Astilbe japonica. The rock work which forms the walls of the fountain were studded with plants of Cibotium Schiedel, with a base of callas, the effect of which was simply superb. Hanging between the archways of the first, second and third floors were baskets filled with rhododendrons, azaleas and cinerarias, with Southern smilax for vines. On the two upper balconies were rows of evergreens, about 15 feet high, placed at suitable distances, which enhanced the appearance very much. At the sides of the orchestra were placed two immense groups of palms about 40 feet high, composed of Oreodoxa regia from Porto Rico, which made a very imposing group.

The President's reception room called for some extra fine work. On the walls were Asparagus plumosus and on one side of the room was an immense shield of orchids; on the mantels were groups of Adiantum Farleyense and orchids. This room was so rich that it won the admiration of both the President and Mrs. Roosevelt.

The reviewing stand where the Presidential party sat during the ball was draped in blue muslin and Southern smilax, and bunches of American Beauty, directly in front of the President an immense bunch of long-stemmed American Beauty overhung the balcony rails, creating a fine effect from the floor.

The banquet room was decorated with Southern smilax and wreaths of roses. The pieces on the table were made of Bridesmaid roses and Farleyense fern. The electrical display was a very fine feature, and many floral designs were worked out. The lamps were partly shaded with smilax, which prevented that glaring appearance that so often spoils the effect. This part of the decorations also came partly under the Smalls' supervision, who were heartily congratulated for their magnificent work. M. C.

WASHINGTON, D. C.—The President and Mrs. Roosevelt entertained a large party at dinner on March 4. The table was handsomely decorated with rhododendrons and Liliun Harrisii, the different rooms being decorated with palms, ferns, rhododendrons, cinerarias, Azalea mollis and Harrisii lilies. This was the most elaborate plant decoration that has been done in the White House since its present occupants have been located there.

George Cook decorated for a dinner given by Senator Depew. Liberty and Harrisii lilies were used on the table with groups in the parlors of lilies, Astilbe japonica and daffodils. Henry Pfister supplied 100 corsage bouquets of sweet peas and 100 boutonnières of violets for a dinner at the British Embassy. Geo. Shaffer had several dinner decorations this week. At one of them white lilac, Liberty and American Beauty roses were used quite lavishly. Mayberry & Hoover decorated Woodward & Lothrop's department store with palms and Liliun Harrisii for their Spring opening.

SYRACUSE, N. Y.—Mr. Robertson, of P. R. Quinlan & Co., had this week a novel arrangement for a wooden wedding, consisting of a tub filled with La Reine tulips with a wide pink ribbon tied in a handsome bow around the center of the tub.

At the "At Home" given by Miss Jessie Kennedy, of West Genesee street, the firm of Wheadon & Hencle had what the local papers described as the swellest decoration of this season. Palms and ferns were used lavishly. A whiplash curtain of smilax, studded with pink carnations, screened the musicians. Leading to the dining room was a wicket gate of smilax and The Marquis carnation, where a little lady, dressed in colors to match, admitted the guests to the dining room. The table decorations here were of pink tulips, those of the room of Enchantress carnations. Another room had Bridesmaid roses and smilax, and still another was beautified by an immense basket of lily of the valley. As she received, the hostess carried a bouquet of Bridesmaid roses tied with pink ribbon.

The gardeners of Lake Geneva, Ill., have decided to form themselves into an association. The object of the association will be to promote a better and more general acquaintance with the latest and up-to-date methods of the art by mutual conference and discussion, and to encourage a greater enthusiasm for giving Lake Geneva the finest country seats to be found in the western country. It seems now quite certain that the association will start out with a membership of between 40 and 50 members. One of the undertakings of the association when organized will be to have an annual chrysanthemum show in Lake Geneva.

Shirley Poppies.

A colony of these poppies in flower is certainly a sight worth seeing; in fact, it is difficult to convey on paper the effect produced by such a gorgeous display of color. Not only are the colors diverse and charming, but the texture of the flowers, or, rather, the petals, themselves is highly refined, resembling finely crimped satin.

Some specially selected strains of this poppy are now on the market, so that when placing your order for hardy annuals—and make a point to have it in early—by no means fail to insert therein at least one of these brands. When you get these embryos of floral beauty, be good to them and have in readiness a sunny spot previously well tilled and filled with plenty of good, rich, well-decomposed barnyard manure. There is nothing like it. Such kindness will afterward be found to more than repay all trouble.

Sow the seed early. This is of primary importance to success with hardy annuals. Now, in the case of small seeds, and that of the poppy is one, there is always a great tendency to sow too thickly and irregularly, wasting thus a lot of seed. A simple device will obviate this. Mix the seed with about four times its own bulk of dry sand and then scatter this mixture. Thin out the plants where growing too thickly, and observe that during a spell of dry weather they suffer not from drought. Give a good watering when needed, and let the word good be emphasized. Mere sprinkling is of no use whatever; it will prove more detrimental than beneficial. Adherence to these few cultural directions will bring good results.

Japanese Economic Plants.

Among the many plants that come to us from Japan are several that are of great economic value. Included in these are the gun bean, one of the Japanese Soy beans, which is principally used to make the famous Soyn-sauce. Zingiber officinale, the rhizomes of which are generally preserved, reddened with plum vinegar and are made up as relishes. Panax ginseng is a drug very popular with the Orientals. Boehmeria nivea is a nettle which furnishes the famous China grass or ramie fiber, also used in the paper industry. Pueraria Thunbergii, the kudzu vine, is used as a fodder plant, and its fibre is also valuable. Juncus effusus is a rush much used in Japan to make the matting. Lespedeza cyrtobotryta is valuable as a fodder plant. Broussonetia papyrifera is considered the most important paper plant, its bark being used in the manufacture of bark paper. Edgeworthia papyrifera is the paper bast plant of Japan and China. The mucilaginous roots of Hibiscus Manihot are used to make cement in paper manufacture. It is a pretty plant, bearing large, light yellow blossoms. Cinnamomum Camphora is a giant and beautiful tree, which, as is well known, furnishes the camphor of commerce.

For the foregoing interesting particulars we are indebted to the wholesale catalogue of L. Boehmer & Co., Yokohama.

THE LENOX (MASS.) HORTICULTURAL SOCIETY has issued schedules of premiums for the shows to be held June 22 and August 24 next, respectively; also the preliminary prize list for the 1905 chrysanthemum exhibition. R. A. Schmid is secretary.

Can Sporting in Plants be Induced?

The sporting of plants, as we term the vegetative variations which occur during the life of the individual, is only a special form of variation. Variation we know is the natural tendency of plants and animals. The direction and extent of such variation is frequently predetermined by external circumstances—environment—or by inherent tendencies of the individual or species.

In fact, fixity of type, either in nature or under cultivation, is a very difficult thing to attain, as all seedsmen and plantmen well know. The fixity which appears to exist in nature and which is responsible for the existence of so-called species, is the result of certain limiting forces working in conjunction through countless generations. Break up this dead-lock and the species almost invariably throws off varieties—a convenient term for indicating a departure from the parent type.

From what has been said it will be evident that I consider a sport simply a marked variety or variation, which may appear as a distinct individual, or as a part of an individual during its period of existence, in which case, for purposes of distinction, we are pleased to call the latter a bud sport or variety.

Sporting, then, may be encouraged by extreme conditions. Either extreme feeding or extreme poverty may induce plants to sport. Severe changes in climate or soil conditions may result in decided changes in stature, habits of growth and fruitfulness, which are as marked attributes of a sport as are changes in the color of foliage or fruit.

Burpee dwarf lima bean is a good example of a sport where the habit of the plant was markedly changed. The white and fancy sports of the Lawson carnation are good illustrations of changes in color.

Just here I wish to note that in a bed of Mrs. Lawson and upon a plant with otherwise normal flowers, one shoot produced a blossom, one-half of which was pure white, while the other half was of the normal pink of the Lawson. These sports in the Lawson are exceedingly interesting, for they clearly indicate that the Lawson is composed of two parts, pink and white, in which the pink is the predominant. Under favorable conditions, however, the white asserts itself and we have the sports above spoken of. This frequent breaking out of a recessive character is all the more interesting in the case of the Lawson carnation on account of the fact that neither of its immediate parents were white, the Lawson being the result of a cross of Daybreak, pink, with Van Leeuwen, cerise. The facilities now at hand do not allow me to analyze the composition of either Daybreak or Van Leeuwen, but I suspect from the behavior of Lawson sports that one of these parents, and perhaps both of them, have a strong white strain of blood in them.

From what has been said it is evident that cross-pollination is believed to be one of the most important means through which the sporting or variation of plants can be induced. The wonderful results obtained by Burbank in his work with fruits has been based almost entirely upon the practice of cross-pollination. In connection with this work there seem to be two pretty well established theories. They may be stated somewhat as follows: When working with species the more violent the cross that can be secured the more variable will be the hybrids in the second generation and the more likelihood there is of securing distinct forms of monstrosities. Second, that when working with plants which are themselves of crossbred or hybrid origin the peculiar attributes of the particular plants used for breeding purposes cannot be counted upon to appear in the mongrel offspring, except in so far as these characters form important dominant or recessive characters in the breeding of the parent plants.

The marvelous results achieved by some of our moderate plant breeders seem to lie in their wonderful skill as manipulators of plants. Crosses have been successfully made by these men, and fertile seeds obtained from plants which have been considered incompatible and so entirely distinct, that it was considered heresy to seriously consider the question of making such a cross. I am free to confess that with ninety-nine persons out of every hundred engaging in such work I believe the results would be "nil." The success of the one proves his superior skill and ability to discern the conditions essential for success.

The factors, then, which may be considered as contributing to the sporting of plants are: Extreme conditions in the environment, such as marked changes in latitude, altitude, soil conditions, as from alluvial to desert, increased food supply, the results of an excessive use of plant foods or of cultivation, and violent or continuous cross-breeding.—L. C. CORBETT before the American Institute, New York.

American Rose Society.

Additional Prizes.

Additional special prizes are offered for competition at the annual exhibition to be held in Boston, March 23 to 26, as follows:

Pelerson-Sefton Company, Jersey City, N. J., a \$50 silver cup for the best vase of fifty blooms of teas or hybrids, not less than three varieties.

Welch Bros., Boston, a \$25 silver cup for the best vase of roses in the show.

Peter Crowe, Utica, N. Y., a gold, silver and bronze medal for the best, second best and third best pair of vases containing twenty-five Bride and twenty-five Bridesmaid. WM. J. STEWART, Secretary.

THE WEEK'S WORK.

Timme's Timely Teachings.

It Is Time to Provide.

While there is a sufficiency of cut material, often amounting to an overflow on our markets at nearly all times of the year, not excepting the great holidays, there is one period, short though it is, when a dearth in cut flowers is keenly felt. And, strange, as it may seem, this period is one of all others when one would expect flowers of all kinds to be most abundant; yes, the very season of flowers—from the beginning of June until the latter part of July. This has been the case now for three or four years. Wholesalers at that time are kept regretfully busy refusing orders and sending out calls to their growers advising them to "bring in anything you can pick, no matter what; good money waiting."

It is not unlikely that the general replenishing and replanting of the leading cut flower stock, now also including carnations, all just taking place at that season, may, to some extent, be responsible for the scarcity in these lines at a time when June weddings, school commencements and numerous social affairs create quite a demand for cut flowers. The proper thing, then to do, would be to provide in time and, if necessary, create a supply to meet that demand. This should not be difficult to do, if an effort in that direction were made right now. Roses and carnations should not all at once be thrown out. Some of the least exhausted and most promising at that time might be allowed to remain in the houses a month or two longer. This could all be planned now better than later. Of the common flowering plants, annual and greenhouse varieties suitable for the purpose, quite a number would thus prove useful, furnishing a source of income usually not reckoned upon in our estimation of their value. This is a good time to make a start in this direction.

Cinerarias.

There are few plants more suitable for Easter than cinerarias. Those raised especially for that holiday trade should have had their last shift in December or January. From that time until now but little real growing should be encouraged. The best place for them up until now is one cool and light, a temperature very close to freezing, but never dropping down to it; in fact, a place hard to find in any establishment. Frost must never touch them. A cold frame outdoors in late Fall and in early Spring for those wanted after Easter offers a good place for cinerarias. From now on the Easter plants need a little more heat, unless they are very far advanced. They should have a light bench, plenty of room and stand on a thick and fresh layer of tobacco stems. Mild, but frequent fumigation and sprinkling with tobacco water now and then will also help to keep down the aphids.

When the flowers begin to show color, a dose or two of liquid manure will impart a deep luster to the darker shades. Fumigation should then be discontinued. Plants with exceptionally fine bloom should be set aside for seed bearing. Cinerarias can also be propagated from cuttings. March is the best time to start them. The short, sturdy shoots, found at the lower part of the main stem, are broken off and inserted in sand, like other soft cuttings, but must have the coolest end of the bed. They may be rooted in trays or seed pans. Potted off in time and placed into a frame outdoors as soon as safe they will then require the same treatment as the plants raised from

Tuberous Begonias.

In many parts of Europe it is reported the tuberous-rooted begonia has almost driven the zonal geranium from the field, or rather out of the garden. It is unlikely that these begonias will here ever gain a firm foothold as bedding plants, unless someone succeeds in working up a strain, or an entirely new race suitable for our peculiar climate. Last Summer, however, as also the year before, I noticed some exceptionally fine beds of tuberous begonias. They were greatly admired by every passerby and commented upon as something far ahead of the usual run of plants in the bedding line. These beds were partially protected from the hottest rays of the sun by high trees, some twenty feet or so away, affording a light, airy, shifting shade from about 10 a. m. to 3 o'clock in the afternoon. But then, not everyone has such an admirable spot to set aside for these begonias. Any attempt to flower them in places exposed to drying winds and scorching sun will end in failure; nor will they be a complete success if bedded out under trees directly, or on the north side of a building. And, again, large plants in full bloom, such as we offer to the public as pot plants in June, are entirely unfit for bedding out, and the sales of such plants for that purpose will result in the certain loss of the plants' bloom and beauty and the probable loss of a customer. Plants, intended for borders in the open, should be started in the latter part of April, and come out of three

or four-inch pots in June. These may, if all other conditions are favorable, prove a decided success.

Tuberous-rooted begonias are profitable to grow where they are mainly wanted for interior decoration, where a brisk trade in medium-sized, very showy and effective pot plants is carried on; and, indeed, few plants will give greater satisfaction as house plants, or for a conservatory, than these. For this trade it pays to have them early. The bulbs, or corms, started in the middle of March, will grow into salable, blooming plants by the first of June. Starting the bulbs at once in pots is not as good a plan as starting them in flats, three or four inches deep, and of any convenient size. A light, sandy, porous soil, or leaf-mold with one-fifth of it well decayed manure, is good for this culture. On the surface of these boxes a little moss may be spread after the bulbs are in. The bulbs are planted a few inches apart and just deep enough so the top is visible. After a good watering, they are given a place on a warm bench and but little water is afforded after this until top growth shows. When they have made three or four leaves, they are potted up into four-inch pots and, later on, into their selling sizes. From that time on they will need great quantities of water, an abundance of fresh air and a light shading on very hot days.

Chrysanthemums.

For general stock, chrysanthemums may be propagated at any time during Spring up until June, but for the production of high grade flowers and for exhibition plants and blooms, early propagation is to be relied upon. Good cuttings can only be had from old stock plants, that occupied a light bench and have been well taken care of. Stout, straight growths, coming direct from the ball of roots, furnish better cuttings than are to be found in the side shoots on the old stump. A temperature of 50 degrees is high enough for the cuttings to root in. They should not remain too long in the sand, but be potted off as soon as rooted. Ordinary good soil is all they want at present. The shifting into larger pots should not be delayed too long in the case of exhibition plants, and some of those, propagated very early, will need it soon. A vigorous and rapid growth should, as much as possible, be encouraged, so that fine plants may be had for benching in early June.

Cannas.

Potted cannas, showing a well-developed, clean foliage and a spike or two of bloom, are good selling plants in May and June, although such plants are not any better for the open border than dry roots just starting into life. Some of the clumps, wintered over, should now be divided, and the pieces plunged into earth, sand or moss on a warm bench; or, as some do, they could at once be planted into four-inch pots and these placed on a bench in a warm house. In either case they will soon form roots and top growth. A better plan, at least a more economical one, is to remove the clumps from their winter quarters to a warm and fairly light place; let them there start their tops, and then divide with a sharp knife into as many pieces as there are green crowns. These are then potted up, and if kept in a warm and moist atmosphere and given all the light possible will be fine, stately plants in the Spring, quite effective in greenhouse and conservatory and even good enough for indoor decorative purposes. Among the newer introductions are some cannas that seem especially fitted for pot culture; they are dwarf and very free and the flowers of good substance and lasting quality. These should be chosen for such work. Cannas, started early, need little in the way of transplanting, and will bloom earlier if allowed to become thoroughly potbound.

FRED W. TIMME.

Pittsburg.

The Week's News.

J. W. Ludwig, P. Demas, and L. Niggel attended the inauguration of President Roosevelt in Washington. H. B. Beatty, treasurer of the S. A. F. O. H., wife and family, were also there. W. C. Beekert and G. and J. W. Ludwig got the Allegheny City contract for florists' supplies, seeds, etc., for the year.

Fire in the Allegheny market house threatened to wipe out the florists, but it was checked in time, and the only loss to the boys were a few soaked paper boxes.

Ed. Thiel, who formerly had a florist store on Federal street, Allegheny, is now in the employ of G. & J. W. Ludwig.

The Dutchmen have come to town, and there is no use trying to escape from them, for they'll stay here till they get an order.

Fred Burki met with a painful accident last week by falling into a pit which was carelessly left uncovered by workmen. Some of his ribs were broken. E. C. REINEMAN.

Newport, R. I.

News Notes.

It still keeps very cold, consequently there is very little counter trade as yet with the seedsmen. There is anywhere from ten to thirty inches of frost in the ground, and everything now points to a late Spring.

Mr. Weaver, of the George A. Weaver Company, has returned from Hot Springs, Ark., where he had been sojourning for some weeks to benefit his health.

John Robert Clark, the seedsman of the George A. Weaver Company, has resigned his position and returned to Boston, Mass.

The New York, New Haven & Hartford Railroad Company has added a heated car to the Thursday afternoon freight train from Boston, for fruit and vegetables for the local dealers here. The continued cold weather made this a necessity.

The regular meeting of the month of our Horticultural Society should have taken place last week Wednesday, but owing to a special Scotch concert given by the Jessie A. MacLachlan Scottish Concert Company, it was voted put over to March 15.

Carl Jurgens has been shipping to Welch Brothers, at Boston, Mass., some very elegant bulbous stock in large quantities. Mr. Jurgens' lily of the valley has been especially fine this Winter.

Mr. Smith, of the T. W. Emerson Company, Boston, Mass., has been here recently and reports business in all horticultural lines as picking up with all his New England customers.

Henry E. Anthony, the seed grower, of Portsmouth, R. I., was also a visitor.

F. W.

Boston.

News Items.

The following prizes have just been announced by Mr. Montgomery for the rose show of the American Rose Society. The Pierson-Sefton Company offer a silver cup, value \$50, for the best fifty blooms of roses, teas or hybrid teas, not over three varieties. Welch Bros. offer a prize of \$25 for the best vase of rose blooms in the hall, in addition to any other prize it may win. These are two valuable prizes, and although offered at a rather late date it is to be hoped there will be keen competition for them.

The Massachusetts Horticultural Society have sent out a circular asking that intending exhibitors at the Spring exhibition and annual show of the American Rose Society file their entries at least one week prior to the opening of the exhibition. It is to be hoped this request will be complied with as far as possible, as it will greatly facilitate matters concerning the arrangements for space in the various halls.

The entertainment committee of the Gardeners and Florists' Club met on Monday evening for the purpose of making arrangements for the entertainment of the visiting members of the American Rose Society during their convention.

Violets were the popular flower at the Boston College ball on Monday night, and these flowers were more in demand in consequence. William Sim, one of the largest growers of violets here, disposed of something like 25,000, and Oscar Dorr, another large grower, about half as many. These are considered pretty good cuts for one day.

The J. C. Budlong & Sons Company, of Auburn, R. I., are shipping daily to this market large quantities of roses and carnations of exceptionally fine quality.

Cards are out for the wedding of Grace Elizabeth, daughter of W. W. Edgar, of Waverly, to James McHutchison, New York, on Wednesday, March 15.

John Walsh, of the Park Street Flower Market, is still confined to his home through sickness.

The many friends of William E. Glidden, the popular salesman for the J. A. Budlong & Sons Company, are sorry to hear of his illness with typhoid fever. Invitations had been out for the wedding of Mr. Glidden to Miss May Maud Coy on March 8, but now the ceremony has been postponed to April 12. J. W. DUNCAN.

As Usual.

Orders are coming in at a satisfactory rate. HENRY FEDDER, New York.

St. Louis.

News of the Week.

Ed. Buechel, manager of the Riesens Floral Company, has now been confined to his room fourteen weeks with a broken limb. He says four more weeks and he will be out again.

C. Young & Sons Company are very busy this early with Spring mail orders. They report plenty of shipping and local plant orders the past week.

Ostertag Bros. had two large wedding decorations last week, which used up considerable stock. Henry Ostertag was defeated last Saturday for the office in the House of Delegates.

W. H. Kruse reports lots of work in tree planting, with plenty of outdoor work booked ahead.

George Augermuller has left the employ of C. A. Kuehn. He says he will probably open a wholesale commission house in St. Louis.

J. Slater & Co. will open the store on St. Louis avenue recently vacated by Adolph Brix. The latter's lease has expired, and Mr. Slater, who owns the building, will continue the business. Mr. Brix will open up two blocks away.

George M. Kellogg, of Pleasant Hill, Mo., spent a day here last week.

Fred. Ammann, who visited Springfield, Ill., last week, met quite a number of the Chicago florists at the State Capitol.

Mrs. Ellison, of the Ellison Floral Company, reports quite a busy week for the windup of the social season. Their new location is very attractive.

C. C. Sanders is building a new residence at his place, on the Henley road. At the Delmar avenue establishment everybody is busy with early planting.

Miss Rosa Arata has opened a branch store on Washington avenue, near Broadway.

The florist bowlers met on Monday night at the Palace alleys. Only seven members showed up. Four games were rolled. The high men were: Kuehn, 651; Beneke, 617; Miller, 617; Beyer, 593; Meinhardt, 571; Gerlach, 549, and Ellis, 475. Next Monday they will meet again. ST. PATRICK.

Philadelphia.

The Week's News.

The market has been rather dull this week, but this condition is not expected to keep up. The last two or three years Lent has not been felt like it used to be; with bright weather, no doubt business will move much better.

W. Atlee Burpee & Co. have purchased 86 acres of land in New Jersey. This will be used for experimental and trial grounds, in addition to their already large farm at Doylestown. The business of this firm has increased very much; this season two additional buildings, acquired last Fall, are being used, these adjoining the concern's seed warehouse and offices.

Albert M. Herr came down from Lancaster to attend the club meeting; he had been absent many meetings.

The decorations for the second assembly ball last week, by Habermehl's Sons, were very elaborate. In the ballroom, in addition to foliage plants, white and yellow flowering plants were used; and in the foyer, where the guests were received, a bank of foliage plants intermixed with Bougainvillea Sanderiana in full bloom. The supper tables were very elaborately decorated with flowers, each table being distinct from its neighbor.

William Graham Company have the decorations for the Purim ball next week, at Mercantile Hall. DAVID RUST.

FREDERICK, MD.—Edward H. Sharp, who conducts a greenhouse plant in the eastern suburbs of Frederick, has filed, through his attorney, a suit against the Mayor and Aldermen of Frederick for \$5,000 damages for losses alleged to have been sustained by Mr. Sharp by the failure of the water supply at his greenhouse. This is the second time the suit has been brought by Mr. Sharp, his previous suit, tried at the present term of court, having been nonprossed because of the failure to establish proof of a contract with the city to furnish him with water for his greenhouse.

WASHINGTON, D. C.—Roy Wilcox, of Council Bluffs, Iowa, was in town during the inauguration and rode on the staff of the Citizens' Committee in the parade, with the rank of colonel. M. C.

New York.
News of the Week.

It will be "Rose Night" at t
meeting of the New York Floris
Club Monday evening, March 13,
7:30 o'clock in the Grand Opera Hou
Building, corner of Twenty-third str
and Eighth avenue. The Bowling Cl
will meet on the same day at 3 p. m
at the alleys in the Puritan Cafe, We
Thirtieth street.

At the Florists' Club meeting, Robe
Kift, Philadelphia, will read a pap
entitled "The Rose in Decorative Ar
which will no doubt be of much i
terest, as Mr. Kift is a well-know
speaker and a recognized authority
all matters pertaining to the decorat
side of the business. Importa
changes in the by-laws will come
for final consideration, and every me
ber should endeavor to be present.

Since the coming of Ash Wednesda
there has been a decided quietness
flower circles, but it is not expect
that this dullness will prevail for mo
than a few days, as usually, after t
first few days of Lent, business aga
assumes its normal condition.

James McHutchison, importer, a
Miss Grace Elizabeth, daughter of
W. Edgar, Waverly, Mass., will
united in marriage on Wednesday
March 15.

Mr. Walter, of the firm of Stumpp
Walter, seedsmen, has been at home
for several days, but is now on t
road to recovery.

At the meeting of the American I
stitute, horticultural section, on We
nesday evening, March 8, Professor
C. Corbett, of the Department of Agri
culture, Washington, D. C., and Patri
O'Mara, New York, were to be th
speakers on the subjects, "Can Spor
ing in Plants be Induced?" and "Spor
from a Florists' View." The weath
was so inclement that there was but
very sparse attendance, and no mee
ing occurred.

William Elliott & Sons will hold the
first auction sale of the season on Tue
day, March 14, when they will dispos
of a choice lot of rhododendrons, hard
roses and conifers, roots, etc.

Hitchings & Co., horticultural buil
ders, will in the near future remov
their New York offices further uptown.
For a number of years they have bee
located at 233 Mercer street. The fir
was established during the first half
of the last century, and their factories a
located in Jersey City. Just where th
new offices will be situated we are ye
unable to say.

Chicago.

News Notes.

The committee appointed by th
Florists' Club to appear before th
legislative appropriation committee a
Springfield, with other prominent flor
ists from the State, report that goo
progress was made in their efforts t
get the Legislature to appropriat
\$30,000 for State experimental work.

The organization of a State Florists
Association is under contemplation by
several prominent men identified wit
the trade. If this is formed, it wil
assist in the endeavor to have the fore-
going bill passed.

The Howe & Taylor Manufacturing
Company have leased a large space of
the Growers' Market, and put in a
stock of wire designs. These they wil
also manufacture there.

ROBERT JOHNSTONE.

Asters.

Those believing the item of asters and the raising of this common garden annual of little importance and hardly worth considering, will probably modify their opinion when they learn that now hundreds of acres are set aside for this culture annually, and that, two years ago, a thousand dollars as the net returns from an acre of asters, or several hundred dollars from an ordinary garden-patch, was nothing unusual. Although not nearly as profitable as a few years ago, the raising of asters for their cut flowers still pays handsomely, where the grower sticks to the very best in asters obtainable, and where he succeeds in fighting his way clear of bugs, yellows, stem rot and all the many other evils that beset the plants.

The aster specialist of the present time has to be on the watch for trouble from early till late, and when it comes, which it is sure to do, he has his hands full. Some ten or fifteen years ago we could raise the very finest asters with both eyes shut; that was when nobody cared for them. Now, when we want them so badly, their culture has become a bitter and vexatious harassment. But supposing he succeeds in overcoming all these obstacles in their culture, the grower will encounter a fresh lot of drawbacks in the marketing of his product. His very finest asters, that should bring from 2c. to 4c. apiece, will just be ready for cutting when the market is overstocked with millions of the very same grade, hard to move and averaging figures, disheartening to grower and wholesaler alike, when, could they have been had a few weeks earlier, they would have brought fancy prices. Those who started asters early in January, expecting to reap an early crop of flowers, if these asters are of the early sorts, they will bloom in July, and if of the late varieties they will commence to flower in August; and so will all those asters sown now and as late as the beginning of May. It does not seem to matter much how soon the China asters are started, they will all bloom at their proper time. The only difference noticeable is, that those early sown will be somewhat taller and more subject to disease than those started late. March and April, I hold, is the best time to sow the seeds of all kinds of asters for the general bedding plant trade and for the florist's own use, excepting those wanted very late, which may be sown as late as July. These hardly ever pay, being short and stunted and having to compete with chrysanthemums. The seeds should be sown in the purest and freshest of soil, to which, if not nat-

urally sandy, a quantity of clean sand might be added, but no fertilizer of any kind. A rather cool place, say 55 degrees, is better for the seed boxes than one very warm. The seedlings should be transplanted either into other boxes, into frames or into small pots, before they are much over an inch high. Soil a little richer might then be used, and, later on a well-enriched piece of ground may be chosen for their culture, that being preferable to poor soil and not at all to be held responsible for stem rot and the many other hold-ups in aster culture. The little plants in seed box, bench or pots, need watching. A wilting of them, for the lack of water, followed by a spell of overwatering, is the very best form of an invitation extended to all sorts of trouble, and is invariably accepted. The plants should be hardened off quite early and, as soon as the weather permits, planted out in the field. The seeds, sown now, will result in good-sized plants for the bedding trade, and it pays to grow such plants in small pots.

F. W. TIMME.

NEXT SATURDAY WEEK

An advertising opportunity that should not be neglected.
Purchasers waiting for your offers.

An issue that will be read from cover to cover, and distributed
from the Atlantic to the Pacific.

Our Sixteenth Annual Special Spring ..and.. Easter Trade Edition

THIS Special appears at the most opportune time of year for hundreds of advertisers. Spring Surpluses, Easter Stock, and the usual run of planting-out material, will be largely in demand, as will also be the many seasonable offers of the Seedsmen and Nurserymen.

The object of this Spring Special is to give our advertisers the opportunity of the year to secure their share of the business and the profits which are at this time available.

DATE OF ISSUE

Saturday, March 25

We therefore solicit your special advertising for this edition, confident in the belief that you will find your outlay well rewarded.

Extra features of interest in both reading matter and illustrations will greatly enhance the value of this Special Edition.

Write your advertisement now. Make it bold and prominent. Tell your story in an interesting way. THE FLORISTS' EXCHANGE will do the rest. The earlier we receive your "copy" the more time we will have in which to make it attractive. Send it in to reach us by the 20th of March, if possible.

Providence, R. I.
 he Week's News.
 William Butcher has decided to retire and has sold his plant to a Philadelphia party. This is one of the oldest established businesses in town, and has been especially well known for the quality of its landscape and gardening work.

M. J. Leach, of Pawtucket, recently celebrated his sixtieth birthday, and is now contemplating a visit from the Florists' Club at a near date.
 The Rhode Island greenhouses have a great line of hydrangeas for Easter. W. Edgar, of Waverly, Mass., inspected them recently and would like to buy the entire lot.
 Frank Sullivan, of Westminster, is reporting the largest line of funeral work locally.
 Macnair spent most of last week in New York and Boston looking around for Easter novelties.
 Business is reported good, with fair prices, and plenty of stock in sight.
 C. S. MACNAIR.

Cincinnati.
 News Items.
 Martin Reukanf was in the city Saturday on his way to the sunny South.

W. E. Hall, Clyde, O., sent the writer a few blooms of his new scarlet carnation, parentage Prosperity and a crimson. The stems are three feet in length, strong and wiry, calyx splendid; four-inch blooms. Mr. Hall says he has been growing this variety since 1902. It is an easy doer and very productive. The flower is of good substance and fine form, and the color is good. It looks to me as though there was a place for it.
 Next week I hope to tell you all about the carnations at our annual show, to be held Saturday. E. G. GILLET.

Milwaukee.
 News Notes.
 The Florists' Club intends having a carnation night at its next meeting. Plans are also on the way for holding a Spring exhibition open to the public.
 There is a heavy stock on the market now in nearly all lines of seasonable flowers. There seems to be an over supply of bulbous stock; violets are also moving slowly. There are enough carnations and roses to go around, and fancy grades find a ready market. There is also a large variety of blooming plants in the market, but growers complain of poor sales. RASTUS.

KANSAS CITY, MO.—Plans for holding a flower show in Kansas City this Fall are being considered. W. L. Rock received a letter recently from the directors of Convention Hall asking him to get the florists together for the purpose of considering the feasibility of the show.

Cleveland.

News Notes. The unfortunate accident which occurred March 3 on the Pittsburg & Fort Wayne Railroad was instrumental in promoting a healthy movement in the disposal of cut stock. Good roses and carnations, white plentiful, command the maximum price. Bulbous stock moves slowly. The craft extends its sympathy to James Wilson and brothers, who buried their mother on Friday, March 3. Mrs. Wilson had five sons, four of whom are florists. Miss Anna L. Westman has just recovered from an attack of inflammatory rheumatism. Smith & Fetters will remove to their new store at 169 Euclid avenue, April 1. Mrs. Caspar Aul is still very ill. O. G.

Cromwell, Conn.

Mr. and Mrs. Frank A. Pierson have returned from Washington, where they were as the guests of Congressman Lilly, of Waterbury, to attend the inaugural ceremonies. Wallace R. Pierson reached home this week from Southern California, where he spent the winter. Returning by the Southern route he stopped in Texas, and also made a short trip into Mexico, of which the readers of The Florists' Exchange will hear more later. H.

WORCESTER, MASS.—Fisher, formerly Fisher & Son, report that outside of holiday season they never had as much business as they are doing at the present time. There was some talk of closing up their branch store, but there also trade picked up, and the store is still continued. George E. Fisher, of this firm, has severed his connection with his father, and about February 1 assumed the management of the store of Patten, the florist, at Lowell, Mass.

Inaugural Day here was celebrated by H. F. Littlefield in the opening of his branch store. A. J. Maher and Miss Annie Berglund will run the new branch. Miss Elizabeth Wilson, who has been associated with her father, J. Wilson, Burlington, Vt., for many years, has entered the employ of Mr. Littlefield.

The Massachusetts Fruit Growers' Association met here March 8 and 9. March 8 occurred the annual banquet of the Horticultural Society, followed by a ball in the evening. About 375 attended the banquet and more in the evening. March 9 the society held its weekly exhibition, consisting principally of fruit and vegetables.

CAROLUS.

LOUISVILLE, KY.—Joseph Coenen announces the sale of his interest in the firm of Coenen & Bohman to his partner, John Bohman, the sale to take effect July 1. Mr. Coenen intends going West, but has not decided positively where he will locate. Adam Heitz is putting up two new houses, each 22x145 feet, one of which will be devoted to roses, the other to carnations. A. R. B.

SYRACUSE, N. Y.—The Oakwood Cemetery Association has broken ground for a new addition to its conservatories. The house will be 150x18 feet, devoted to carnations.

P. R. Quinlan & Co. have also commenced the erection of two large rose houses at Onondaga Valley. J. B. B.

The above figures represent commercial heating contracts already signed for the season of 1905.

A SAMPLE COPY OF SOME OF THE LETTERS ON FILE AT MY OFFICE:

LYONS FAAMA, N. J., Feb. 1st, 1905.
Ma. Wm. LUTTON. Dear Sir:—I wish to state that I am well pleased with the heating of the two new carnation houses, that you installed for me last summer, the boiler works splendid, and is all that it is represented to be, I shall take great pleasure in recommending you to any persons contemplating heating work.
Yours very truly,
WM. G. MULLEN.

Pierson Boilers

For Steam and Water
 are unsurpassed for efficiency
 and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 5, 1904. The two
 'Pierson' sectional hot water boilers installed for our new houses one year ago gave excep-
 tional satisfaction during the past winter, the most severe for many years, easily fulfilling
 what was expected of them, at the same time proving to be economical.
 "We found them very easy to manage, that they responded promptly and heated the
 water in short time, thus giving splendid control of temperature in houses when sudden
 drop took place outside."

NICOTICIDE KILLS

Green Fly Thrips

Mr. J. A. Budlong, Chicago,
 March 11, 1904, says:
 "We have been using Nicoticide
 on our whole place now for some
 time and find it the most satisfac-
 tory fumigant we have ever used.
 We heat entirely by steam, and paint
 it on the pipes when hot. This
 application works well and is cer-
 tainly very effectual."

Our Gallery of Fine Specimens

Copyrighted, 1905, by A. T. De La Mare Ptg. & Pub. Co. Ltd., New York

THICKET OF MAGNOLIA GRANDIFLORA

Growing close to the Capitol Buildings at Washington, D. C. No other broad-leaved Evergreen would have answered as well in such a position for such a grouping as these Magnolias do. The photograph was taken at the close of June, and the trees were then in flower. Some of the large, white blossoms have been caught by the camera, but one has to see them in their natural state to know how beautiful they are.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 11

NEW YORK, MARCH 18, 1905

One Dollar Per Year

CARNATIONS **STRONG ROOTED CUTTINGS**

READY FOR IMMEDIATE DELIVERY except where noted
WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety, which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white, with delicate carmine pencillings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE (April delivery.) The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outdo any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices. In great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

We are now prepared to book orders for 1906 for
THE COMING SCARLET CARNATION
VICTORY
This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker.
Orders will be filled in rotation, as received. Delivery beginning December next.
\$12.00 per 100; \$100.00 per 1000.

NEW EVER-BLOOMING ASTER, "IDEAL"

Best Early Variety.
This new Aster produces, perhaps, more salable cut flowers to a plant than any other kind. The plants grow from 18 to 18 inches high and are in bloom from the beginning of August to the end of September almost uninterruptedly. In shape the flowers resemble the Victoria type, except that the petals are looser so as to give the flowers a very graceful appearance. White, light blue, dark blue, crimson; each, trade pkt., 15c.; 1/4 oz., 30c.; oz., \$1.00.

THE NEW CACTUS ASTER PATRICK HENRY

This is one of the best white Asters to cut. The plants grow about 18 inches high; the flowers are pure white, measure about 4 1/2 inches across and are double to the center. The petals are twisted or rather rolled like those of a Cactus Dahlia, hence its name. The plants bloom early, about with the Giant Comet Aster. Pkt., 25c.; 1/4 oz., \$1.00.

Vaughan's Aster "The Carlson."

Asparagus Plumosus Nanus

Northern Greenhouse-Grown Seed. Per 100 seeds, 50c.; 250 seeds, \$1.15; 1000 seeds, \$4.00. Price for larger lots on application.
Southern Outdoor-Grown Seed. Per 1000 seeds, \$3.00, 5000 seeds, \$12.50.
ASPARAGUS PLUMOSUS ROBUSTUS.
NEW. 100 seeds, \$1.00; 1000 seeds, \$9.00.

ASPARAGUS DECUMBENS. Fine for Cut. 100 seeds, 50c.; 1000 seeds, \$1.00.
COMORENSIS. Like Plumosus, but grows taller and quicker and is darker in color; sold for cut. 100 seeds, \$1.00; 1000 seeds, \$7.50.
TENUSSIMUS. 100 seeds, \$1.25; 250 seeds, \$2.65.
COBEA SCANDENS. Trade pkt., 10c.; oz., 40c.; lb., \$1.00.

Lily of the Valley for Easter

We have in cold storage in **PERFECT CONDITION** for immediate forcing a limited quantity of selected high-grades **LILY OF THE VALLEY**. There is sure to be a demand and ready sale for this at Easter, especially in flower in pots. We offer as follows:

- Dreer's "Peerless" Pips** The very highest quality, in cases of 1000 each, \$12.00 per case.
- Dreer's "Berlin" Pips** A strictly high-grade, in cases of 1000 each, \$11.00 per case.
- Dreer's "Hamburg" Pips** A fine quality, in cases of 1000 each, \$10.00 per case. Also in cases of 2500 pips, \$24.00 per case.

NOTE—On account of the pips being frozen we cannot break cases. It takes from 21 to 25 days to force pips into flower.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

An effort to have pumpkin seeds classified as drugs has been unsuccessful.

In a recent decision of the General Appraisers certain peas classified on the basis of 118 pounds to the case were held to be dutiable on the basis of 114.35 pounds to the case, as claimed by the importers.

NEW YORK.—Vaughan's Seed Store handed this week a carload each of onion sets and Kentucky blue grass.

THE CROSS FERTILIZATION OF PEAS.—The late Mr. Thomas Laxton, who may be said to have followed Thomas A. Knight and Dr. Laxton in the work of the scientific cross fertilization of culinary peas, has left on record a few conclusions he came to in reference to the work. He found that the results of experiments in crossing peas tended to show that the color of the immediate offspring, or second generation sometimes follows that of the seed-bearing parent, is sometimes intermediate between that and the pollen-bearing parent, and is sometimes distinct from both; and although at times the seed partakes of the color of the pollen parent, it was not ascertained by Mr. Laxton ever to follow the exact color of that of the pollen parent. In shape the seed was frequently found to assume an intermediate character, but also followed that of either parent. In the second generation, in a single pod, the result of a cross made between peas differing in shape and color, the seeds were sometimes all intermediate, sometimes they represented either or both parents in shape or color, and sometimes both colors and characters, with their intermediates, appeared. The results also seemed to show that the third generation, that is

to say, seed produced from the second generation or the immediate offspring of a cross, frequently varied from its parents in a limited manner—usually in one direction only, but the fourth generation was found to produce more numerous and wider variations, the seed often reverting partly to the color and character of its ancestors of the first generations, partly partaking of the various intermediate colors and characters, and partly sporting quite away from any of its ancestry. These sports appeared to become fixed and permanent in the next and succeeding generations; and the tendency to revert and sport thenceforth seems to become checked, if not absolutely stopped. These experiments further tended to show that the height of growth is singularly influenced by crossing. A cross between two dwarf peas commonly produced some dwarf and some tall; but, on the other hand, a cross made between two tall peas did not exhibit a tendency to any diminution in height. Further, no perceptible difference appeared to result from reversing the parents; the influence of the pollen of each parent at the climax of the fourth generation producing similar results. The moral of all this appears to be that in the case of seedling peas from cross-fertilized varieties no fixity of character can be assured until the fourth or fifth generation.—Argus, in Horticultural Advertiser.

popularize the growing of giant cinerarias in separate colors. The white, blue, white and blue, and red and white varieties are well worthy of cultivation; the pink (a beautiful shade of "old rose") may please lovers of tints, but will fail to satisfy the popular taste. The habit of all the above is faultless. As regards primulas, it is evident that the new, large-flowered, semi-double forms are driving the old-fashioned, small-flowered double varieties out of cultivation. The former can be had in all the principal colors, and the seed being more easily obtained, is not so costly, and in general of stronger growth and very reliable, the trade in it is bound to increase. At the same time, the old varieties are more useful for bouquets and buttonholes. In the stellata selection, a rich deep crimson variety which has passed into one of the leading retail houses for distribution next season is the only novelty worth noting; the semi-double forms are valueless. EUROPEAN SEEDS.

FREDERICK ROEMER, Quädlinburg, Germany.—Novelties in Flower Seeds for 1905. These include Helianthus cucumerifolius, Lilliput (compactus procumbens), Begonia semperflorens, Fairy Queen, Double Hybrid Everblooming Holylocks, and a number of interesting new things in asters.

Notes from Holland.

The Winter of 1904-1905 was a remarkably soft one here, with only a few cold days. The reed covering has been lifted from the hyacinths, and they seem to be healthy and strong. The most early varieties, viz., La Neige, Maria Cornelia, Emilia, Norma, etc., are showing their buds. Tulips are as strong as the hyacinths, but it will be some time yet before we can see their buds. Crocus and snowdrops are in bloom now. Some varieties of narcissus are very premature; single and double Von Sion will be in bloom after a few sunny days. Just now big snowflakes are whirling through the air, but they will not do any harm, as the temperature is mild. We hope no frosty days and nights will come this Spring, because the bulbs are too far advanced to stand these, without being damaged.

Trade prospects are very favorable. It is strange, but very true, that countries having heretofore always soft winters, experienced a very severe one in 1904-1905. In Italy and the south of France outdoor cut flowers were frozen. American and Canadian florists should note that Europe will want considerably more bulbs from our country on account of the failure of the French outdoor cut flowers, and the good market for our products in 1905.

J. B.

European Notes.

Business with the wholesale houses has been a little easier during the past week, but a fair number of filling up orders indicate that trade generally is in full swing. The drought last year made the growing of peas for the markets unremunerative and, as a consequence, the demand for these is much lighter; on the other hand, beans, especially the pole varieties, simply coined money for the lucky growers, and today everybody is anxious to be in the swim next season. But bad crops and short supplies render this a costly and difficult undertaking.

The continuance of fine, bright weather is bringing primulas and cinerarias on with great rapidity. Sutton & Sons are making a great effort to

Large Shrubs

VIBURNUM TOMENTOSUM, fine bushes, \$25.00 per 100.
DEUTZIA and HALEZIA, 6 to 8 ft., \$20.00 per 100.
CRIMSON BARK DOGWOOD, 4 to 5 ft., \$16.00 per 100.
TREE ALTHEAS, 7 to 9 ft., \$6.00 per dozen.
Large Assortment of Trees and Shrubs.

SAMUEL C. MOON, MORRISVILLE, PA.

Mention the Florists' Exchange when writing.

LARGE TREES

Maple, Norway, fine Straight Stock, 2-2 1/2, 2 1/2-3, 3-4 in. diameter. Maple, Silver, 2-2 1/2, 2 1/2-3, 3-4 in. diameter. Maple, Negundo, 2-2 1/2. Linden, American, 2 1/2-3, 3-4 in. diameter. Argentea, 1 1/2-2, 2-2 1/2, 2 1/2-3. European, 1 1/2-2, 2-2 1/2. Poplar, Carolina 1 1/2-2, 2-2 1/2, 2 1/2-3. Lombardy, 1 1/2-2, 2-2 1/2. Bolleana, 1 1/2-2, 2-2 1/2.
Besides the above we have large stock of Plane, Ash, Birch, Willows in strong stock.
Evergreens in large sizes and great variety.
Flowering Shrubs in large variety.
California Privet, 2 years, 2-3 ft., very low in price. The above stock is all in very fine condition and will please. Get our prices.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

GRADING OF NURSERY STOCK.—The subject of a uniform system of grading nursery stock is a matter which should be looked into, says L. A. Berckmans in the National Nurseryman, and the nurserymen from the different sections of the country should practice more uniformity of grade. At the next meeting of the American Association of Nurserymen we think it would be well that a committee should be appointed to thoroughly investigate this matter and establish a schedule of rules for grading different classes of nursery stock. If this could be accomplished it would save an immense amount of dissatisfaction and sometimes litigation between the nurserymen and the purchaser. Some nurserymen caliper at the ground line, others at the junction of bud with stock, and others

the caliper governs, but it is customary to give the approximate heights, measured from the ground."

Pruning Trees.

When large fruit and other trees are headed back closely, as they often are from necessity, there will form a crop of many small shoots to repair the loss of tops. These young shoots are nearly always too numerous, and need attention at once, just as a young tree does, the character of which is being formed. There is no use in leaving the whole crop. One will, in time, starve to death the others, and better therefore to remove the superfluous number at once, that the support they would take be given to those left. If a half dozen shoots spring out to take the place of one large one sawed off, very likely if two are left it will be sufficient.

Old trees are often cut back unnecessarily severe. Fruit trees, especially, if headed back entirely at one time lose several years, while the young shoots are growing to a bearing size. It is often practicable to prune in such a way that new growth is assured, while all the bearing, older branches, have not been sacrificed.

With shade trees, as well as with fruit trees, it is often possible to prune without a too great cutting away of the branches at one time. Sometimes storms break a limb or two, and then the whole tree is cut back to conform to the remaining length of the broken

planted stock which is reset is the better for such pruning, unless it is very much desired that the branches should be from the ground up. Even in this case the side branches should be shortened in to within an inch or two of the main stem. But do not cut off the main shoot. Oaks do not like heading back, and when so treated, they are sometimes a long while in making a new leader.

It is a great help toward success to set out oaks early. In fact, the oak should be one of the first things planted. Where Winters are not severe, it is a good plan to set them out in Autumn, and in the Southern States Fall planting is recommended. It seems that oaks do not like disturbance after the sap becomes active. It must be but a small and a well rooted tree that will be successful if transplanted after buds have swelled preparatory to making leaf.

Nurserymen find two oaks, the bicolor and the palustris, to transplant much better than others, and perhaps it is this that has helped along their popularity. Both make more small roots than do other sorts. The bicolor, or meadow white oak, as it is called, makes a massive tree. The palustris, pin oak, is admired for its pyramidal habit, pretty foliage and half drooping lower limbs.

Environment Changing Character of Trees.

Mr. Burnet Landreth's observations on the change in character of the lima bean from a climbing vine to one not so free to climb when grown without poles, accords with instances known to gardeners and others interested in plant life. Plants accommodate themselves to their surroundings, without doubt. Among the instances that come to mind as I write, there is that of the wistaria. As a vine, how it does grow and what a length of rope-like shoots it makes in a year! Treat it as a standard and the lengths of 25 feet or more it made as a vine are represented by some of from three to four feet only. The poison vine is another. As a vine, it ascends very tall trees. When it has no support, or but a stump of a tree to which to attach itself, it is but a weak shrub. In former times, before the changing of plants to suit environments was well understood, the changed appearance of this poison vine gave rise to the belief that the two were distinct species, and to the climber was given the name of *Rhus radicans* and to the shrub form, *R. toxicodendron*. Place the latter near some support to-day, and it will climb fast enough.

I have before called attention to the fact that of trees that grow both North and South, say the willow oak, for it is wild here at Philadelphia, seedlings from seed obtained far south continue growing much later in Autumn than our own, and for this reason are less hardy, the wood not ripening well. And this is true of all seedlings from seed from the South. The trees of the South have not to hasten to ripen their wood as ours have, and the character of later growing is partly fixed. I say partly, because after the seedlings have grown North a few years they lose their late growing habit and fall in with Northern ways.

I remember John Fraser, of Huntsville, Ala., telling me some years ago of a difference he had found in the pushing into growth of some plum stocks of a certain kind, one lot grown North, the other South. I think it was the Southern grown ones which he said pushed growth earlier than the others.

Quite recently Mr. Saunders and others, who have been experimenting with trees and shrubs in the Northwest Provinces of Canada, have found that seeds from trees as far north as possible are more likely to thrive than those from the same species farther south, and this many others have found to be true.

JOSEPH MEEHAN.

Azalea Amoena.

Whether planted as isolated specimens or arranged in groups, this favorite azalea never fails to excite admiration. The illustration represents this plant serving the purpose of an ornamental hedge, and right well does it adapt itself to such. Usually, one is accustomed to see single specimen plants or small groups, but a hedge of such, from 200 to 250 feet long, is rather uncommon. Around the middle of May *Azalea amoena* comes into flower, and at that time this hedge is a sight well worth seeing. When one pauses to consider that individual plants produce flowers in such great numbers as to envelop the whole plant in a claret colored cloak, some idea can be formed of the dazzling beauty of this hedge. The hedge illustrated grows upon the estate of Dosoris, Glen Cove, L. I. *Azalea amoena* proves itself perfectly hardy, having survived the rigors of the past Winter. The leaves are small and evergreen. This azalea should certainly be more extensively used in landscape work and results from it will not prove disappointing.

JOHN F. JOHNSTON.

Glen Cove, L. I.

NURSERYMEN

Will find it a profitable business proposition to place their advertising with THE FLORISTS' EXCHANGE. We issue a Spring Edition, next week, March 25.

PART OF 200-FOOT HEDGE OF AZALEA AMOENA AT DOSORIS, L. I., IN FLOWER MAY 18, 1904

Photo by John F. Johnston

at various other places. We think the caliper should be taken about four inches above the junction of bud with stock. This would be well above the swelling and would be fair for all parties. Grafted stock, of course, should be calipered at the ground line. Again, some nurserymen will bud certain trees, such as pecans, chestnuts, etc., from one to three feet above the ground, but in quoting this stock give the height from the ground and omit to state that the trees are top worked at so many feet (giving distance from the ground), and also fail to state the growth of the bud or graft. We think it would be well to bring this matter before the nurserymen previous to the meeting, as it is high time that the matter of grading be carefully considered, and, if possible, permanently settled.

Another important item suggests itself to me. It is well enough to apply the sixteenths of an inch rule to seedlings and small stock for grafting or lining out, but when it comes to the regular grades of trees I think the sixteenths of an inch should be eliminated, and nothing but the eighths of an inch used.

In the same periodical, W. F. Helkes, who introduced the caliper in grading trees 45 years ago, says: "It has been my practice, and I believe it has been pretty generally accepted that the proper place to caliper a tree in case of a bud inserted near the ground, is three inches above the point of union; in the case of a root grafted tree, it should be calipered three inches above the ground. Seedlings sold as such for grafting, for transplanting or for budding should be calipered at the collar; rooted cuttings at the ground. In the case of top worked trees the caliper should be used three inches above the ground and a description of the top be given. In describing a grade by caliper,

ones, perhaps rendering the whole tree less valuable than it was, when a little thought would have made it of good appearance without such a general cutting back.

Much of successful pruning depends on the knowledge of the pruner. Good taste must be his property and a good knowledge of the peculiarities of growth of the trees he prunes. When branches are but twigs, they are given but little attention; but when of larger size they make much work, which would have been saved had they been cut away when a pocket knife would have done it.

In nurseries not many trees remain until of a large size, so that the art of pruning is not so much of a necessity as it is to the professional pruners found near all large cities. But even moderately sized trees can be greatly increased in value when of good appearance, and now is the time when some profitable work in that line could be done.

Transplanting Oaks.

To say the oak is a difficult tree to transplant is but telling what every one almost knows already. Small sizes may be set out with but little loss, having in mind seedlings and transplanted stock of not more than three to four feet high. It is often the case that nurserymen let beds of seedlings go until the plants are three to four feet high. While the work would be safer with plants of less size, these three to four foot ones will do very well, if dug carefully and well pruned and set out early. Seedlings of this size will have but few side shoots, but those they have should be cut away entirely, and even trans-

Dreer's Select List of HARDY PERENNIALS

We offer here only the most **Showy and Decorative Sorts**, including varieties suited for **CUT FLOWER** purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Cleveland, O.

News Notes.

There is quite a demand for sham-rock; the sale is in excess of last year's. Everything goes—oxalis, white clover, and true shamrock.

The appraisers for the Cleveland Floral Company, Messrs. Ed. Kendel, Fred Moritz and D. Charlesworth, have estimated the value of the greenhouses, stock, etc., at \$27.

G. Standley has given up the store at Woodland avenue and Wilson street, and gone into the real estate business.

Chas. H. Wilson has taken over the Jennings avenue greenhouses, formerly controlled by the Cleveland Floral Company.

H. R. Carlton, of Willoughby, has opened a flower store in connection with his greenhouses; he will handle a few seeds, also.

Caspar Aul, who has greenhouses on Lee avenue and Doan street, is building an apartment house on a portion of his property. O. G.

Newport, R. I.

Trade Conditions.

Cold nights with the mercury 20 degrees or lower continue, and while it gets quite warm in the middle of the day, very little frost is coming out of the ground. All signs point to a late Spring. The seedsmen are not nearly as busy as they were a week ago; it has been so very cold.

Potatoes to be used for seed purposes are being fast disposed of, but at low rates—\$2.50 to \$3.25 per barrel.

Mr. and Mrs. William J. Matsen are entertaining Miss Hall, of London, at their home on Harrison avenue.

St. Patrick's Day here is a half-holiday, and it looks now like a good business day for our florists. F. W.

NEWPORT, R. I.—John A. Scollay, the Brooklyn (N. Y.) hot water and steam engineer, has just replaced a Scollay boiler in the estate of W. H. Maher, that has been in service 29 years, with one of the firm's improved Scollay boilers. This is certainly a good record for the Scollay boiler.

POMONA, N. C.—The J. Van Lindley Nursery Co. are preparing to build two more new greenhouses to meet their ever increasing demand—one, 30x100 feet, for asparagus and smilax, and one, 24x212 feet, for violets. Among carnations we find the greatest demand for Enchantress and Mrs. T. W. Lawson. Flamingo has proved to be a good variety with us; we shall increase our planting of it the coming season; also a bright red sport of our own, which we have tested for the past two years and find very satisfactory. Funeral work has been brisk lately, helping us up all surplus stock. F. J. McS.

Finds It Helpful.

I read your paper with much interest each week and find the articles very helpful. RUSSELL S. BENNETT, Mass.

THE HARDY ANNUAL OF THE CENTURY

Nicotiana Sanderæ

Seeds in original packets at 25c. each.

Wholesale Agents for the United States: H. A. DUBER, Philadelphia, Pa.; J. M. THORBURN & Co., Corlandt St., New York; VAUGHAN'S SEED STORE, Chicago and New York. Mention the Florists' Exchange when writing.

SCOTTII

The Most Graceful Nephrolepis Known.

Retailers who have handled this fern are unanimous in proclaiming it the best Fern ever introduced.

Consult any grower who has bought Scottii and he will tell you that it is as far ahead of the Boston as that variety is ahead of all other introductions. See my ad. on page 295 of last week's FLORESTA'S EXCHANGE for full particulars.

This week's Index will be found on page 331.

News of the Week in Brief.

There is some talk of establishing a flower market in Pittsburg, Pa.

R. G. Lambros, a retail florist, of Milwaukee, was forced into bankruptcy the past week.

George C. Watson, seedsman, Philadelphia, has made an assignment for the benefit of his creditors.

E. D. Adams, the secretary and treasurer of Comstock, Ferris & Co., seed growers, Wethersfield, Conn., is dead.

The Pittsburg florists are to form a bowling club so as to take part in the S. A. F. O. H. contest at Washington.

Some fears are entertained that the present weather will force Easter stock prematurely, and that a shortage in some lines may be expected.

According to Printers' Ink the number of persons engaged as gardeners, florists, nurserymen, seedsman, etc., in the United States is 62,418.

The Providence (R. I.) florists are being sorely tried by the methods employed by the "rape chaser," and are considering ways and means of obtaining relief therefrom.

Luther Burbank has been presented with the first semi-centennial gold medal of the California Academy of Sciences, for meritorious work in developing new forms of flower, fruit and plant life.

The annual show and convention of the American Rose Society occurs in Boston next week, March 23 to 26 inclusive. Another special prize—a silver cup, value \$25—has been donated. A grand exhibition is promised.

A new by-law of the city of Montreal, Quebec, requires that all florists' stores there must close on Wednesday and Thursday evenings at 7 o'clock. A vigorous protest is being made by the craft to have this objectionable stricture repealed.

The Chicago Florists' Club is considering the advisability of instituting a life-membership in that organization. The intention is to use the moneys derived from such membership in the securing of a permanent home for the club, with bowling alleys and all other necessary equipment.

Richard Witterstaetter's new carnation Aristocrat, scoring 93 points, was awarded the S. A. F. O. H. silver medal by the Cincinnati Florists' Society at its recent exhibition. H. Weber & Sons' My Maryland captured the S. A. F. O. H. bronze medal; the variety scored 91 points.

The New York Florists' Club, at its meeting Monday last, discussed the most valuable characteristic in the rose, carnation, chrysanthemum and fern. The discussion was most interesting. See report in this issue. At next meeting the club will tackle the question, Why are carnation growers more progressive than rose growers?

Our Special Edition Next Week.

Next Saturday, March 25, we shall issue our sixteenth Annual Spring Edition. It will well maintain, in every particular, the high standard of its predecessors which have been so successful, from the standpoints of the advertiser, the reader and the publisher.

There is no trade paper devoted to the interest of the florist, nurseryman and seedsman that is so widely read, both at home and abroad; none from whose pages more extracts are made by other similar periodicals than The Florists' Exchange. This is an evidence, and a most conclusive one, of the great intrinsic merit, the high character and serviceableness of its reading matter.

It is, of course, natural that where a paper presents material from which its readers benefit, its clientele should be a large one. As a corollary, the paper that circulates among the largest number engaged in this business, is the best paper in which to advertise. The Florists' Exchange is that paper.

Our Spring editions, in the issuance of which others have emulated us, were inaugurated to afford to the trade in general an opportunity to make a drive in the advertising line at a period when big returns were an unfulfilling result. Our endeavor has been to make these special editions worthy of the occasion. Hence their popularity. This has not been secured by meaningless pictorial effects, but by substantial, timely and appropriate literature.

Our wideawake advertisers have long since learned that The Florists' Exchange stands second to none in its class as a paying advertising medium. Their continued confidence in its business-drawing powers is exemplified by the large number of advertisements that have already reached us. Others of our tradesmen desirous of securing their share of the going business should lose no time in placing their "copy" in our hands.

Remember, it is circulation among readers that insures returns. We have the circulation; our readers are the best buyers in this business. You should get close to them, and this you can only do by advertising in The Florists' Exchange.

Next week, March 25, we shall issue our Sixteenth Annual Special Edition.

Past successes, present popularity, paying results to patrons win for us a big advertising patronage and for our advertisers a large share of the Spring trade.

State Aid Sought for Illinois Florists.

The florists of the State of Illinois, supported by the State Florists' Association and the Chicago Florists' Club, are endeavoring to secure from their Legislature an appropriation of \$10,000 for the erection of glass structures in which can be conducted, under the direction of an advisory committee of the association, experimental greenhouse work relative to the combating of insect and fungus pests, and other problems that confront florists in their daily operations. We present, in another column, some statistics, showing the magnitude of the florist industry in Illinois, which will be a revelation to those who have given the subject little or no consideration. The amount of money invested in floricultural pursuits in that State, according to the 1900 census report, was \$4,648,056, a figure which has been greatly augmented since that time. The State has been quite liberal in its appropriations for experimental work connected with agriculture, and for orchard investigations, etc.; and, it is asserted, "the only reason the florists have not had similar appropriations is because they have not asked for an appropriation for experimental work." The florists have now concluded to ask aid in the direction indicated. They are entitled to it, and should get it. Not only is such experimental work necessary for the florist industry of the State, per se, but as a precautionary measure in protecting both agricultural and other horticultural interests in the State as well, for several diseases and insect pests that occur in greenhouses are likewise troublesome outdoors, and vice versa, and the prevention of their spread is imperative.

We trust the Illinois State Legislature will, in its wisdom, see the great benefit sure to accrue from the granting of the appropriation asked, and its application as indicated. This, that honorable body and its individual members, will be more likely to grasp if the matter be presented to them intelligently by every florist in the State, who should urge its need, its advantage, and the deservedness of its most favorable consideration and concession.

The experiments which the Illinois florists desire that their State Experiment Station shall conduct will not be locally beneficial, but generally advantageous to the florists throughout the country. Therefore, the efforts of the Illinois tradesmen along the lines mentioned, should be supported by the craft as a whole, and backed by each and every national, State, and local organization of florists in the United States.

OUR READERS' VIEWS

Pole Lima Beans.

Editor Florists' Exchange:

By the way Mr. Burnet Landreth concludes his article on "Pole Lima Beans," I judge that he would not be offended if I should venture to disagree with him. I cannot believe that simply because lima beans are allowed to lie on the ground without being afforded poles to climb, that they will in a few years lose their inherent tendency. If such is the law, then it ought to work both ways; and thus, by supporting carnations in an upright position, we ought in time to have a plant able to stand alone; or by disbudding, or allowing only the center bud to remain, we might reasonably expect to get a race of flowers with stiff stems and single buds. Now, I do not say that this will not some day be an accomplished fact, but it will come about in another way. Some conditions of environment, presumably climate and soil, will have a certain effect on the plant as to change in time its structure, and so make the variation the plant breeder is on the lookout for; this change, as it suits his ideal, he will endeavor to isolate and fix.

It seems to me, then, that the failure of beans to climb well after being grown in the climate of California a few years is caused by the plants undergoing a change; and, if as is probably the case, the plants are not "rogued" so as to take out all that become dwarfed, and, on the other hand, only those that show the proper vigor of growth saved for stock, then the product would certainly deteriorate. In fact, I feel safe in saying that this would happen even if the plants were carefully trained to poles.

All garden peas have tendrils and will climb brush if it be placed for them, but where is any garden pea seed grown on brush? Again, take the cowpeas; some varieties are dwarfed and show little or no desire to climb; yet others climb and twist around one another in great confusion. There is no doubt but that the dry climate of California is liable to produce many undesirable variations in plants that naturally require humid conditions. That these should be weeded out is in the interest of the seed grower.

College Park, Md.

THOS. H. WHITE.

The Boston Flower Show.

Editor Florists' Exchange:

Your correspondent, W. N. Craig, in his letter in your issue of March 11, tries to lead your readers so far away from the facts of the subject under discussion that I am again compelled to crave a portion of your valuable space for a few more remarks.

Mr. Craig states that "we are not especially concerned with the fact that some other societies, which hold one or at most two exhibitions a year, go to the trouble of numbering the exhibits and placing the names in sealed envelopes." Now, if the committee is composed of "wide-awake, practical men," as Mr. Craig asserts it is, the members of it would be much concerned in the workings of other societies and would watch their every action so that they might be better able to improve their own, as the times demand.

I am perfectly well aware that methods different from the one now employed by the committee in question were tried a few years ago, and I am also well aware of the facts of the case as to why the scheme was not successful. The chairman of the committee on prizes at that time foresaw that a change was necessary, and worked hard to adopt a system which would be more satisfactory, not only to the committee itself, but to the exhibitors and the public at large. I am also well aware that the chairman received no support from his compeers, who were so much in favor of the antiquated methods used today and were so unbending and certain there was no need of a change; but believed that what had been good enough for their forefathers was also good enough for them. This was why the scheme was a failure—not that it increased the labors of the committee. It lessened them.

I do not agree with Mr. Craig that placing the names of exhibitors on the exhibits before the judging was done has never caused dissatisfaction. From time immemorial there has been more or less dissatisfaction with the doings of this committee. Perhaps Mr. Craig has forgotten that in the year 1902, in his correspondence of the Boston news in American Gardening in the issue of August 2, in his report of the exhibition of July 26, he wrote: "Hardy herbaceous plants in thirty varieties brought out three good collections. W. J. Clemson (E. Powell, gardener) and Carl Blomberg winning in the order named. In our opinion, Mr. Blomberg's display was much the best, however, as it contained a better variety of plants than the collection which received the first prize, and they were beautifully staged, the colors being harmoniously arranged and all the specimens correctly named, the Latin and popular titles, natural order and habitat being given, all of which made the exhibit quite educational. Julius Heurlin's unplaced collection should have been given second place. Several plants were incorrectly named in the first prize collection, and we think the committee should take this matter into consideration at future shows."

In the issue of September 13 from his pen came: "At large exhibitions it would be infinitely better to

have one or two expert judges from outside the society. Another needed change is to exclude all exhibitors and the general public from shows until the judging is completed. Other cities enforce this rule, and so should Boston. It is perfectly absurd to see exhibitors following the committee around and even giving them their opinions, or objecting to their awards, as we have seen in Boston."

Again, in the issue of October 11, speaking of the same committee, he wrote: "We hope in another year to find some radical changes made in this and other directions to keep the society abreast of the times."

Again, on November 15, in his report of the chrysanthemum show, Mr. Craig wrote: "We thought Mr. Barr's flowers better, but Mr. Newell's plants had rather better foliage and were of a little better form."

Now, these and other writings of Mr. Craig's in the journal from which these were taken, go to show that there was dissatisfaction then as now, and that as times change so also must the workings of the society and its committees change. Why should the present committee hang on to these medievalisms?

Mr. Craig again tries very hard to take your readers off the main issue when he says that "my statements were meant to make the members of the committee scratch their heads and smile." I never was more serious in any of my writings, and no criticisms would have been made if they were not justly deserved. I am thankful to note, however, that the committee "will endeavor to walk more circumspectly," etc., and, if they do, I shall take great pleasure in giving them the commendations they will have earned, and be justly entitled to.

JOHN W. DUNCAN.

The Freesia and Its Improvement.

Editor Florists' Exchange:

From time to time there have appeared in several trade papers questions on the subject of freesia cultivation, from which I conclude that it is very little understood. It has been advised by some to plant freesia bulbs at different times to get a succession of bloom. Now, this is wrong; for in all the years I have grown freesia, which is over twenty, I have found that no matter when they are planted, be it July or October, if grown in the same temperature they will bloom at the same time; but with this difference—the early planted bulbs will produce fine flowers with nearly two feet of stem, while the late planted ones will produce inferior blooms with not more than six inches of stem. And there will be a great difference in size of bulbs in favor of the early planted ones, when lifted. I don't wish to be understood to say that freesia cannot be made to bloom at different times, for it certainly can; but only by being grown in different temperatures. I grow from 75,000 to 80,000 bulbs a year; they are all planted at once, very early in August, and those on the warm ends of the benches commence to bloom early in January and are all cut off before the bulbs on the cool ends commence to flower; and they, in turn, are gone before those planted in still cooler houses commence. I cut freesia from early in January until late in April. The cooler freesia is grown, the finer the flowers will be, and the stiffer the stems.

I have been a large grower of freesia for many years. I think I was one of the first, if not the first, to grow it commercially in North America. About twenty-two or twenty-three years ago, when a boy, I came from Germany, and commenced to work for a florist in Douglaston, L. I., a friend of my father, the late Albert Benz. Shortly after I came to him he received from Germany a package of very small freesia bulbs, about a handful. He told me they were a new discovery, and had been sent to him by the discoverer (who had found them in South America) for him to try. [The freesia is a native of South Africa.—Ed.] He planted them very carefully himself. He took the few flowers he got to a dealer in New York, who bought them with his other flowers; but it was a long time after that before freesia cut much of a figure. It is only within the last ten or twelve years that freesia has had any prominence, and during that time it has made rapid strides in favor.

The freesia, as generally grown, is of a very inferior sort. No one seems to think of improving the mixture; much less have they thought of getting out new kinds by fertilization. Now, I know that the freesia is capable of vast improvement, and it won't be many years before the mixture now grown will have to be given up; for there is no reason why time and space should be taken up with poor stock that can only be used for design work, when, for the same time and space, we might have a flower that would rank with the carnation for decorative purposes. Every other flower in turn has been taken up for improvement; why not the freesia, since it is capable of wonderful improvement, which I have already proved to my entire satisfaction? I have obtained a freesia that is as superior to *F. refracta alba* as Mrs. T. W. Lawson carnation is to Wm. Scott, and I expect to get a freesia with bells like young Easter lilies. I am sure that with careful fertilization we would get a freesia of immense size that will take its place among the foremost flowers when in season. If this proves of any interest, I will give my method of culture for the benefit of those concerned. [Please do.—Ed.]

R. FISCHER.

Long Island.

Thuja Gigantea.

The following interesting notes on the Thuja gigantea come from one of our friends in Victoria, British Columbia—G. A. Knight, and for which he has our best thanks:

This magnificent tree grows very abundantly in British Columbia, and undoubtedly is the most useful; but not the most valuable tree here; its uses are many. Our greenhouse post and sash, also our labels are of cedar. The Indians built their houses with split cedar in days gone by and made their canoes out of solid logs. It is wonderful how they did it with only stone and bone tools, but I am told that they used fire to a great extent. These canoes run from very small to very large, seating from one to seventy Indians. Sash and doors, shingles, telegraph and telephone poles, etc., are also made of cedar. Our shingle export trade is very heavy to the Northwest. The wood is very light and resists decay when in contact with the ground more than any other wood that we have growing here. I have found it dipping its graceful branches in the salt water at high tide; at an elevation of four thousand feet, and probably it grows much higher. It grows most abundant in rich, moist bottoms, and attains great size; some have a butt diameter of fifteen to seventeen feet, and run from one hundred to one hundred and fifty feet high. The largest trees are nearly all hollow, and they taper very rapidly, so do not cut so much lumber as one would be inclined to think. Although such a giant, I have employed it very successfully for the last fifteen years as a stock for the *Blota aurea* and elegantissima.

As evidence of how the same common name will be given to many trees, notice how red cedar is given this tree, *Thuja gigantea*, in British Columbia. The original red cedar is *Juniperus virginiana*; but this

THE LATE CHARLES T. SIEBERT.
(See Obituary, page 301, last week's issue.)

common name as well as cedar is applied to many trees nowadays.

The use of the Thuja gigantea as a stock for the Chinese section, the biola, is not generally known. But the typical Chinese one, *orientalis*, is so easily obtained that its use as a stock is almost universal. JOSEPH MEEHAN.

BOOKS RECEIVED.

ANOTHER HARDY GARDEN BOOK. By Helena Rutherford Ely. Publishers, The Macmillan Company, New York. Illustrated.

The mission of this book is set forth by the author as follows: "It is not intended to be a treatise upon any of the subjects referred to, or in any way to take the place of the many admirable books upon gardening. It is a brief statement of simple methods of conducting gardening operations, particularly in the small home garden." Mrs. Ely has succeeded in the culmination of her humble pretensions in producing a readable, instructive volume. She talks in an entertaining way on the vegetable garden, giving, occasionally, cooking recipes, on fruits, trees, perennials, lilies, work in the flower garden, etc., and for the most part her cultural directions could be safely followed by the average amateur gardener, for whom, of course, she writes. It is unfortunate, however, that so many lapses occur in the orthography of the plant nomenclature, due largely to carelessness in the proof reading, as the names are at times correctly spelled, at other times misspelled. We believe that where a plant is recommended by an author, he or she should first of all ascertain what it is they are really talking about, and that, as far as possible, correct varietal or specific names should be given as leading to an easier acquisition by readers of the plants suggested for various purposes. Defects of this character are not uncommon in Mrs. Ely's otherwise very serviceable book.

Ellis D. Adams.

Ellis D. Adams, secretary and treasurer of Comstock, Ferre & Co., Wethersfield, Conn., died on the 10th inst., after an illness of about one month. He had been in rather feeble health for the past two years, but his death was hastened by an attack of acute Bright's disease. Mr. Adams had been connected with this firm, in the seed business, for nearly thirty-five years, commencing in 1870 when he was 23 years of age. He was born in the town of Wethersfield, and had always lived there. He was a man respected and held in high esteem by all who knew him. He leaves a widow and two children.

Gathered and Gleaned.

"I am a gatherer and compiler of other people's stuff."

Recently I overheard a conversation between two worthy representatives of prominent firms concerning the Baby Rambler rose. Both agreed that this dwarf rose makes a pretty plant, but that for an Easter subject it would never, in their opinion, supplant its climbing confrère. On the other hand, it would prove an acquisition at Christmas if properly treated. Another feature for this rose was said to be that, after being sold at Easter as a window plant, it can be planted out in the garden, where it will continue to bloom for a long period.

Said a prominent New York grower and importer to me, the other day: "We growers are considering the advisability of starting a growers' association, admitting to membership only those who cultivate and sell plants. We believe an organization of this kind, where prices can be discussed with a view to some sort of standard values being maintained, has become an absolute necessity. Our present national and local associations cannot, by force of circumstances, discuss that and other questions of equal importance; and there is certainly a great need of prices being regulated, so that at least a modest living can be made by the man who grows the stock." I understand the matter has been under advisement for some time, and that the initiatory steps, looking to organization, will soon be taken.

A very interesting question was recently broached by a worthy member of the commission house fraternity, viz.: What is the most valuable characteristic in a trade paper man? That some of these individuals believe, and no doubt rightly so, that they have valuable characteristics is a foregone conclusion. To determine which is the most valuable attribute might be a difficult matter, all depending upon the point of view of the man attempting it. The newspaper representative may perhaps believe that his most valuable characteristic is that said to be possessed by one of the fraternity, in influencing growers in the matter of consigning their shipments with the consequent belief that he can "make or mar" the wholesale man. Another might think that to tell the truth in his paper every week was the most valuable characteristic in himself and for all concerned. Yet another may be under the impression that his most valuable attribute is knowing how to use good judgment as to what is fit to print, and what is of no value to anybody after it is printed. A not very erroneous belief would be that the most valuable characteristic in a trade paper man is his ability to serve his employers in the best manner possible, to state things as they are without fear or favor, so that all concerned may be benefited by his work, and no one harmed thereby.

I was much amused to learn from a metropolitan wholesale commission man of the tactics adopted by a certain scribe for a horticultural trade paper, to ingratiate himself into the good graces of the female bookkeepers now employed by some commission houses. This party—a benedict, too—buys for each lady clerk, at Christmas, a box of candy, which is presented in proper form, with all the suavity and politeness of a Chesterfield. The best of the joke is that the candy supplied did not suit the high epicurean tastes of the recipients, and was unceremoniously turned over by the fair ones to their sterner co-workers, for munching and disposal. One wonders what remunerative influence the females afford for the outlay.

THE GATHERER.

THE MILWAUKEE (WIS.) FLORISTS' CLUB has decided to hold a flower show in May.

AMONG THE GROWERS.

Henry A. Dreer, Inc., Riverton, N. J.

There is a great amount of pleasure to be derived from a visit to this immense establishment at this time of the year, in seeing the vast array of stock, all prepared ready for the general rush of orders when the season opens up. But, no matter when one goes to Riverton, the benches in the packing shed are always full. Here comes one order clerk with a wheelbarrow full of cocos, another with a load of dormant roses; yet another is seen with a flat full of hardy pinks in pots on one shoulder, and a pick on the other shoulder (the pick was what he dug out the order with); from another direction comes a lot of privet for a Southern order.

It has been usual to see a lot of azaleas on hand at this time of year, but owing to Easter, 1905, coming so late, a change in policy had to be made this year. It has been usual to hold azaleas and deliver as customers wished them, up to within a few weeks of Easter; but, this season, all orders were booked for delivery not later than January. This firm sold more azaleas than ever before; their customers, on having the situation explained to them, gladly accepted the terms for Fall and Winter delivery, as they clearly saw how these plants would handicap the proper filling of Spring orders, if not gotten out of the way early. So with azaleas out of the way, the facilities for the convenient arrangement of stock have

among these are *Kentia Sanderi*, and some grand specimens of *Phoenix Roebelini*. There is at present a block of 300 plants of *Dracæna Goldæana* in 4-inch pots, perfect plants, a credit to the establishment, as they certainly could not be duplicated in quantity or quality to-day.

The firm is also very strong on *pandanus*, a fine stock of both *Sanderi* and *Veitchii* in good commercial sizes being on hand.

Ferns.

This department, which has assumed such large proportions, is, as usual, busy in pushing along the small ferns for the Summer and Fall orders. Two houses are entirely taken up as seed houses, with thousands of 6-inch pots. Here we see ferns in all stages, from spores just planted up to seedlings so far developed that they were, on the day of our visit, being transplanted into flats by men who do scarcely anything else the year around, and thereby have become expert in handling these minute plants. Two houses, each 25x150 feet, were filled with flats containing these small ferns. There are 200 ferns pricked off into each flat, and 1,200 flats to a house, making a total of 480,000 ferns in the two houses, in various stages of development. From here they are potted into small pots and are seen by the million in the other houses. At the present time there is a very large stock of the common form of *Adiantum cuneatum* in 4, 5 and 6-inch pots. In commenting on this, we were informed the books showed that during the four weeks preceding each Easter, there are more plants of this variety

young plants of the tender *nymphæas*, as well as the *Victoria Regia*. The season for these plants opens after the middle of April.

Platycterium (Stag Horn Fern.)

In a house near the aquatics is a grand collection of these plants, from small ones in 5-inch pots up to specimens in 14-inch pans. All the choice varieties are represented. These plants are, to a large extent, overlooked by the average florist. A prominent retail store in Philadelphia always keeps a few plants on hand and sells a good many every year.

Palms.

The two immense blocks of glass of over one acre each are still devoted to palms and contain a grand stock of clean, healthy plants with deep green foliage. *Kentias*, as may be expected, predominate, and it would be impossible to find a better or larger number of such big plants as are seen here, in tubs and large pots—some single plants, others made up, all very suitable for decorative work. Every plant is labeled with the price. These prices appeared to the writer to be very reasonable. Mr. Eisele explained that they were fixed in November last, and therefore anyone buying now has the advantage of the Winter's growth, which is very important, as *kentias* make most growth during the Winter months. Of *arcæas* we saw a large stock. While the demand for very large specimens of these has fallen off, there is yet a strong call for 5 and 6-inch plants, both made up and single, and a large stock is yet grown. The stock of *kentias* in commercial sizes is an enormous one; the 5, 6 and 7-inch plants are a grand lot, stocky and clean and of good value. *Latantias* are still grown, there being a steady demand for some each year. The stock of *cocos* is a very large one, consisting of good, healthy plants in the various sizes. In *phœnix* we noticed a grand lot of plants, 3½ to 4 feet high, in small tubs, splendid for decorative work or for use later on for lawn or porch adornment. These plants are of splendid growth, stocky and of very healthy colored foliage.

Palm seed is seen all around, in pots and flats, also under benches covered with peat; 75 bushels of *kentia* seed were used at one planting.

The Bulb Room.

Here we saw an immense stock of the various Summer-flowering bulbs all stored in compartments ready for the filling of orders—*begonias*, *gladiolus*, *glaxinias*, *dahlias*, *tuberoses*, *cannas*, etc. The *dahlias* are prepared in a very careful manner; each root has a printed label attached and the name of variety and the class to which it belongs is on the label. We noticed a large stock of the new pink cut flower *dahlia Kriemhilde*. This variety is illustrated in color on the retail catalogue of this firm this season, and is evidently very popular, as nearly every retail order contains a demand for one or more roots. The trade is also ordering it for cut flower supply during Summer. The list of *dahlias* includes all the best of both home and foreign introduction, every variety being tested by this firm as soon as offered. We noticed a very good stock of *hay trees* in all shapes and sizes, including the new styles, the dwarf standard and the standard pyramid, or imperial. Also a good stock of *box trees*, standard and pyramid. A large importation of *rhododendrons* was being unpacked—a fine lot of well-budded plants.

A houseful of *Dracæna indivisa* in 2½ to 9-inch pots was an attraction. Bedding plants, including all standard *geraniums*, *coleus* and *alternanthera*, etc., in many varieties were seen. Two houses full of dormant *canna* roots covered with sphagnum just starting in growth were observed. The demand for dormant roots has fallen off the past two years, but has increased for started plants in pots. These roots are now being started to supply the demands for the planting out as that season comes along.

Some Novelties.

Of the newer plants there were the new double *Paris daisy*, *Queen Alexandra*; new crimson fountain grass, a grand acquisition for bedding purposes; the new white hybrid perpetual rose, *Frau Karl Druschki*, of German introduction, and sent over with good recommendations; giant snapdragons, *Antirrhinum majus*, unequalled as a plant for Summer cut flowers; *Asparagus plumosus compactus*, for which there is an increasing demand for ferneries, etc. Everblooming hardy crimson pink, *Napoleon III.*; this is a good acquisition and will be in demand. *Ficus lutescens*, with a leaf resembling that of the mistletoe, bearing orange colored berries, is a pretty plant. In addition, there are several new ferns, aquatic plants, *geraniums*, etc.

Perennials.

This is an immense establishment by itself. Hardy perennials have been a specialty with this firm for many years, and much space is devoted to their cultivation. A great deal of care and thought has been given to this department, in order to produce plants that will give the best possible results to the planter. A large number of frames have been devoted to their storage. These frames are each 6x125 feet; there are about 170 of them, each one numbered, so that it is easy to fill orders, a list being handy with the contents of each frame. The bulk of the stock in the frames is field grown, but has been potted up during the Fall and early Winter months into 3, 4 and 6-inch

HOUSES CONTAINING 110,000 ROSE PLANTS IN 5 AND 6 INCH POTS, AT DREER'S NURSERIES, RIVERTON, N. J.

been greatly increased; therefore, there will be no congestion in the order and shipping department, as usually takes place in April and May, and customers will receive prompt service in the filling of their orders.

Pot Roses.

The illustration given herewith shows the block of short span houses filled with dormant pot roses. There are in this lot 110,000 plants in 5 and 6-inch pots. In the list are included all the best varieties for outdoor planting, in hybrid perpetuals, hybrid teas, teas and climbing roses. In addition, many frames are filled with some hardier varieties. The illustration shows these roses stored cold, buds are just swelling out. Each plant, it will be noticed, is staked, and on each is a printed label. The roses as a whole are an exceptionally fine lot. There is a grand lot of climbing roses that will produce immediate effect. It was a surprise to see such a large block of the *Baby Rambler* as this firm has on hand. This rose is selling well both to wholesale and retail customers.

Ornamental Foliage Plants.

This firm always has a good stock of these plants, but they are stronger than ever this season, as the demand is found to be on the increase. There are 30 varieties of *marantas*, without a doubt the largest assortment to be found to-day in a commercial establishment. Of other stove plants seen were a good assortment of *alocasias*, *anthuriums*, *diefenbachias*, *aglaonemas* and *aralias*. Hanging in this same house were a thrifty looking lot of young *nepenthes*; also some nice plants of *philodendrons* and *phyllotæniums*. There is also here a nice block of the rarer palms,

sold than at any other period during the year. We noticed also a fine lot of Boston ferns in 6-inch pots, compact, bushy plants, ready for immediate sales; and thousands of young plants in 2½-inch pots. But on this place *Nephrolepis Scottii* is being pushed forward for supremacy in this class. Many thousands of this variety are planted out in benches for stock; the runners are taken off and planted in other benches, whence, when properly started, they are potted. Thousands of them are already potted up. Mr. Eisele is a firm believer in the Scott fern. While the trade is yet rather skeptical about the displacement of the Boston fern, he feels convinced as to the future of the two varieties.

There are three new varieties of *nephrolepis* of English origin now under trial here, but as yet they are not sufficiently developed to enable one to form an idea of their merits. They look promising, and no doubt will be heard from later.

Water Lilies and other Aquatic Plants.

In answer to the question, "Does this department continue to increase?" Mr. Eisele said: "Yes, we have a more extensive stock than ever before. There is an increasing demand, and we find that our orders from Europe are much larger than in former years. England took up *nymphæa* growing some years ago, and the taste is spreading; while in Germany the display of aquatics at the Dusseldorf Horticultural Exhibition last Summer has created more taste and demand. The result of our display at the St. Louis Exposition has been very satisfactory; we have had correspondence, not only from all over our own country but from all parts of the world. People are now realizing how cheaply aquatics can be grown, as, after the tank, or pond, is made, the subsequent cost is less than for any kind of bedding plants." It was noticed that the tanks in the houses were filled with

pots, according to variety, the size being decided upon with a view to give the best immediate returns after planting; while many sorts, such as gaillardias, achilleas, eupatoriums and similar plants with running roots, of which it is impossible to dig a plant in good shape, are entirely pot-grown, each plant's ball of earth being a mass of working roots and eyes ready to start as soon as planted out. In answer to our question as to how the public in general appreciate this pot-grown stock, Mr. Eisele said: "We had difficulty in convincing some planters of the superiority of this stock, but they are now commencing to appreciate the difference." "What led you to go to all this trouble?" "Well, take for instance the Oriental poppies. If dug here after April 10, shipped to some distant point, and planted they would simply not grow, but gradually get smaller. Now, we can ship established plants that were dug last August, when dormant, potted up, and are now firmly established in pots; these we can ship anywhere as late as June 1, and they will go right along and give satisfaction. This same treatment applies to almost all the perennials." "But how do you get repaid for all this extra outlay?" "Well, it does cost considerable in labor to do all this extra work, but we make no additional charge, and the increased demand is amply repaying us for our extra outlay, and has proven to us that our system is appreciated."

We were next shown three houses filled with Japanese anemones, most of them one-year-old; they were in 3-inch pots. "Are these pot-grown?" we asked. "No; they are field-grown, and you will notice they are all in active growth. We tried several ways to carry these plants over Winter. When stored in cold frames one-half were Winter-killed; stored in a cellar they lost vitality from drying out, so that the season was half over before any result was obtained. Now these pot-grown plants, being, as you see, full of working roots, will go right ahead and flower early in August."

"What about the cheaper kinds of perennials?" "We grow them in the same way. Rudbeckia Golden Glow, coreopsis, sweet williams, wallflowers, etc. These are all cheap, and we aim to have them all in the best possible condition to go along with the higher priced plants, and thus supply a complete line of perennials that will give immediate effect. No doubt you have noticed how our list has enlarged in the past few years. In this increase we do not give consideration to botanical specimens, but confine ourselves to such species as will prove of service to our customers."

"Have you many new things in perennials this season?"

"Yes, there are a number of good novelties. The principal ones are *Astilbe Davidii*, *Gypsophila paniculata* fl. pl.; *Helenium cuprum*, *Heliopsis Pitcherianum* semi-pl.; and *Iris pallida folia variegata*." This novelty we particularly noticed; it is a superb introduction, the variegation being a pure gold and very beautiful. All of the foregoing Mr. Eisele said he had seen growing, and felt sure there would be a place for them in this country. "But we feel," he said, "that there are better things among the old plants; in fact, practically forgotten plants which, to the average buyer, are new. For instance, take some we have recently offered: *Dianthus*, *Napoleon III.*, *Campanula persifolia gigantea Moorheimi*, *Hemerocallis florham*, *Delphinium belladonna*, *Astrantea major*, *Cimicifuga simplex*, *Clematis recta*, *Erodium mawscavi*, *Penstemon grandiflorum*, *Primula cortusoides* Sieboldi, *Senecio pulcher*, and the various varieties of *saxifraga*—all plants that succeed under the most ordinary culture, and which were introduced years ago, many of them practically unknown to the average planter. These are only a few, but many more can readily be found. We are now trying some that we saw growing in Europe last year, and will list them as their merits appeal to us."

Next we came to a frame which Mr. Eisele said contained 300 varieties of perennial plants, old sorts with which they were not yet familiar and some new introductions for trial this season.

We noticed several houses devoted to young seedling perennials, either young plants just germinating or that had been transplanted into flats, ready to move into cold frames as soon as the weather permits. The object in growing these in the houses is to get all this work out of the way before the outdoor work begins. This not only gets the young plants under way earlier, but greatly facilitates the other work.

Thus ended a very pleasant visit to this grand establishment. Now, to those who may read this, I say: "Are you going to the S. A. F. convention in Washington in August? If so, leave home a day earlier, and spend a day at Riverton. You will be amply repaid for your trouble, and will see many things probably that you have forgotten. And a look at the methodical way in which the place is kept, and the vast stock of plants handled, will send you home a wiser and happier man." DAVID RUST.

Wellesley, Mass.

D. CARMICHAEL is well known among the carnation growers for the Boston market. He has a compact establishment of nearly twenty thousand feet of glass. A great many of the standard varieties are grown and done well, too. Fair Maid is considered one of the best of its color, although Enchantress is also grown. One house of the former is particularly good at present. Mrs. Thos. W. Lawson is grown quite extensively, and a variety which is done well here and considered one of the best of its color is Mrs. E. A. Nelson. It is rather hard to root, and the plants are somewhat difficult to establish after it is rooted, yet when once started it is a good grower, and as a

producer will beat Mrs. Thos. W. Lawson by one-third. Eldorado is grown quite extensively for a yellow sort; two benches in one house were looking very fine indeed. Queen is considered the best white for general purposes. Boston Market has been grown a good deal, but will be discarded this year. Harry Fenn is considered the best dark crimson variety and is grown quite extensively. As a scarlet, a seedling raised by Mr. Carmichael is grown, and while not a large flower, it has done so well this season that it will be grown quite extensively next year, and if it continues in favor it will be heard more about. Like all other carnation enthusiasts, Mr. Carmichael has a number of seedlings that he is trying, and several of them he hopes to bring to the notice of the public later on.

The establishment of W. R. MORRIS is one of the youngest in the neighborhood, having been started only last Spring. It is composed of only one modern house, 250 x 30 feet, and is entirely devoted to the growing of roses. Bride and Bridesmaid are the only varieties grown, about equal numbers of each. Grafted stock is used entirely and grown in benches, which Mr. Morris believes superior to solid beds. Mr. Morris is master of his profession without question, for we have seldom seen such an even appearing lot of plants in one house, and the flowers, which are of good size, are well formed. The Bridesmaid are of as high a color as could be desired. With the success that has attended this young grower during the first year of his business, we look forward soon to the enlarging of his establishment.

Dictamnus Fraxinella.

The dictamnus, or gas plant, has always had more or less of a reputation as a noteworthy subject, owing to its peculiar property of giving off an inflammable gas when in bloom. I recollect an enterprising reporter on one of the London papers writing it up as the identical kind of plant that Moses saw on Mount Horeh when the Lord appeared unto him, and went on to say the bush was to be seen in flower in the New Gardens.

Most of the members of the natural order Rutaceæ, to which the dictamnus belongs, seem to abound with a pungent volatile oil, although it may not be given off in an inflammable form as in the dictamnus. To those who have never seen the phenomenon, the best time to make the experiment is just after the sun has gone down on a warm day, while the plants are in bloom. By holding a lighted match close to the flowers, the gas will be seen to ignite quite distinctly. Apart from this peculiar feature, it is one of the most desirable of hardy plants and well worth a place in every flower garden. It has a sturdy, upright habit, and grows from one to two feet in height; the rosy purple or white flowers are in racemes and are borne well above the foliage. Compared with other hardy perennials it is of very slow growth and much longer lived; if established in a suitable position it will con-

SNAPDRAGON AND SWEET ALYSSUM

Photo by John F. Johnston

W. S. WILSON'S place comprises some 25,000 feet of glass and is one of the rose-growing establishments that have been known for several years. Bride and Bridesmaid are the principal varieties grown, although several others receive attention. They are all raised in solid beds, grafted stock being used, and renewals made in planting every third year. Many fine blooms were seen, and as some of the houses are just coming into crop, there is appearance yet of a large cutting. A variety which is grown very little in this locality has been receiving attention here. This is Mme. Abel Chatenay. One house is partially filled with it; and although it has not done very well during the most of the Winter, it is now growing finely and showing appearance of many fine flowers on very rigid stems. Mr. Wilson has high hopes for it. Two houses are devoted to the growing of Kaiserin Augusta Victoria and Souvenir du President Carnot for Summer blooming; these have just been started up after resting during the Winter and have begun to break nicely. J. W. DUNCAN.

Snapdragons and Sweet Alyssum.

These two hardy annuals are prime favorites with lovers of hardy flowers. The mere mentioning of the name sweet alyssum seems always to recall thoughts of sweet perfume and honey bees; also, how vivid the snowy white edgings that can be formed by this plant with little more labor than the work of sowing the seed.

Snapdragons, or antirrhinums, alike well known, prove grand subjects for supplying ample cut flower material; they bloom so continuously. Glen Cove, L. I. JOHN F. JOHNSTON.

tinue to thrive for a generation or more. Dictamnus may be propagated by division, but this is necessarily a slow process. The better way is to raise the plants from seed, which should be sown as soon as ripe in the open ground. A well drained position is the most suitable for the plant. ERNEST HEMMING.

A New Species of Dahlia.

A. J. Pieters, botanist, in charge of the Seed and Plant Introduction of the Department of Agriculture, Washington, D. C., has in the greenhouses under his charge twelve plants of a wild species of Mexican dahlia, which was introduced last year. He has not as yet been able to find any published description of this species. Dr. Rose, chief of the herbarium, has kindly undertaken to assist him in this matter, when, no doubt, it will be determined shortly. The foliage of this species is entirely different from the dahlia of commerce, and it is not until it throws up its scarlet flowers that the dahlia becomes evident. Mr. Pieters has succeeded in making crosses with the best and latest varieties in commerce, using the Mexican species as the seed parent, and from which he has obtained at least fifteen distinct looking varieties—Judging from their foliage and the flowers of the few that have so far appeared, they promise to take a prominent position among the dahlias of the future. Mr. Pieters hopes to have them in prime condition about the time of the convention of the S. A. F. O. H., and anyone, whether interested in dahlias or not, will do well to pay him a visit at the Department, where an intellectual treat is in store for them. M. C.

CANADIAN NEWS

MONTREAL.—The weather continues cold, but very bright. Cut flowers are plentiful and good. Violets sell well, especially the singles. Bulbous stock is rather slow of sale. Shamrocks were in good demand for St. Patrick's Day. White carnations colored green were advertised by some florists. Smilax is scarce.

Florists' stores, according to a new city by-law, must close on Wednesday and Thursday evenings of each week at 7 o'clock. Grocers, dry goods stores, etc., come under this new by-law, but saloons, tobacconists and confectioners do not. It is probable that the obnoxious regulation will be repealed, as a vigorous protest is being worked up against it.

At the club meeting Monday night it was decided to award the Chicago Carnation Co. a silver cup for its exhibit of carnations made here some days ago. Thos. Pewtress read a paper on hardy roses which was well received.

Alf. Wilshire has been serving his country faithfully for the past two weeks on the jury. Jos. Bennett will do likewise this week.

Jas. McKenna, who has been laid up for two weeks with the grip, is out again.

W. C. H.

TORONTO.—Business the past week has been very good, with stock plentiful. All flowers, except extra roses and orchids, are generally in over supply and often are offered very cheaply. Carnations have been coming in in great numbers; they are seen everywhere. The death of a very prominent citizen, on Friday last, used up a large quantity of stock, but there appears to be any quantity left on hand. Bulbous stock and lily of the valley is plentiful and generally good. Plants are selling more freely now, and there is a fair demand for nice flowering stock and well-grown ferns. There does not seem to be much demand for palms at present. All our seed stores are very busy now.

John Dunlop's houses just now are well worth a visit by anyone in the trade interested in carnation stock; he has thousands of young plants, in nearly all the best varieties, in fine condition. I have never before seen propagating beds look better than his do; every cutting rooted without a miss. The roses have been doing well and promise a grand cut. The new variety, General MacArthur, is well liked. Franz Deegen also is doing well and will be more extensively grown. Mr. Dunlop was at Richmond, Ind., lately and was much impressed with the Hill Company's rose, Richmond; he will grow it largely for next season. American Beauty is looking very well; the young stock of this variety is, like the young carnations, very fine.

Mr. Dunlop was at the meeting of the Executive Committee of the C. H. A. at Montreal, and states that arrangements have been made by the boys down there for an exceptionally good convention in August. He reports a splendid meeting of the committee, and hopes we may have many of our friends from across the border with us this year.

The Toronto Horticultural Society held an "at home" at its room in St. George's Hall on the 8th inst.

Wholesale prices this week are: Roses, No. 1, \$30 to \$35 per 100; culls and ordinary, \$5 to \$10; Bride and Bridesmaid, \$12; No. 1, \$8 to \$10; No. 2, \$2 to \$8. Mme. Cusin, \$2 to \$12. Liberty, Meteor, Mrs. Pierpont Morgan, same price. Perle des Jardins, \$2 to \$10. Orchids, cattleyas, 35c. each; cypripediums, 12c. to 15c. each. Carnations, inferior grades, all colors, 75c. per 100; standard varieties, \$1 to \$4 per 100. Adiantum, ordinary, \$1. Asparagus, \$5 to \$75; A. Sprenger, \$2 to \$3. Callas, \$8 to \$10; daffodils, \$1 to \$2; daisies, \$1; freesias, \$2 to \$3; galax leaves, 10c. to 15c. per 100. Lillum Harrisii, \$10 to \$12.50; lily of the valley, \$1 to \$3; mignonette, ordinary, \$1 to \$3; fancy, \$3 to \$5; nareissus, \$1 to \$4; sweet peas, \$1.50 to \$2.50; tulips, single, \$1.50 to \$2; double, \$2 to \$4; violets, ordinary, 50c. to 60c.; extra, 75c. to \$1.50 per 100.

THOS. MANTON.

New York.

The Week's News.

Potted plants of shamrock have been called for quite extensively this week in some portions of the city, and so far as we have been able to learn, the supply gave out early in the week. For the past two or three years, shamrocks were grown in quite large numbers in anticipation of St. Patrick's Day big demand, but it has been the rule that they did not clear out very satisfactorily, and that fact is no doubt responsible for the short supply this year. While on the subject of shamrocks, it is worthy of note that anything in the clover line seems to pass muster for this historical plant, and one sees both large and small-leaved varieties of trifolium sold as the genuine article, and the public at large is satisfied.

Green carnations have also been in demand, and, thanks to the scientific knowledge of chemistry of some of our florists, the divine flower in green has been supplied on short notice to all who wished, at slightly advanced rates over the ordinary colors.

Next Monday evening, March 20, the New York and the North Hudson County bowling clubs meet in a return match on the alleys of the former. A strenuous time is expected. The last match between these two rival teams resulted in a tie, hence the intense interest taken in the forthcoming games.

Henry Molatsch, who for many years has conducted a growing establishment at Bay Ridge, Brooklyn, N. Y., has built a range of greenhouses at Nanuet, N. Y., and moved his business there.

In spite of the low prices that have prevailed for violets this Winter, it is evident that the growing of these flowers has been quite profitable, for it is stated on good authority that 50 new greenhouses will be erected in Rhinebeck, N. Y., this Spring, and all of them are to be used solely for violets. There has also been recently organized a company called the Rhinebeck Violet Association, which will construct the largest establishment in that town for the cultivation of violets, it is said. Land has been acquired, and building will commence just as soon as the weather will permit.

On Tuesday the auction season of Wm. Elliott & Sons commenced, and from now until the last part of June sales will be held regularly twice a week—on Tuesday and Friday.

John Allen, who has been a gardener in the Vanderbilt family for over 25 years, has been pensioned for life, with full salary, in recognition of his long and faithful service.

Mr. and Mrs. Anton Schultheis, florists of Scranton, Pa., have been spending a few days with their cousin, Anton Schultheis, College Point, N. Y.

Lord & Burnham, of New York and Irvington, N. Y., have in course of construction a conservatory designed for the use of a wealthy Chinaman of Hong Kong. In order to assure the proper assembling of the parts on its arrival at its destination, the whole building will be put together in the factory, each section marked, and then taken apart and shipped.

James J. Mulroy, formerly representing Sigmund Geller on the road, is now traveling in the interests of Reed & Keller and Lion & Wertheimer.

A. Dimmock, who represents Sander & Sons, England, will arrive in New York on the S. S. Lucania to-day (Saturday).

John A. Scollay, hot-water and steam engineer, 72-74 Myrtle avenue, Brooklyn, N. Y., is making six different styles of his new line of boilers, and 70 different sizes. Business is unusually brisk, and the factory is kept running to its fullest capacity.

Indianapolis.

News Items.

A new girl baby arrived at the home of Mr. and Mrs. Clarence Green. The department stores are well supplied with stock and are advertising American Beauty at 50c. a dozen and carnations at 35c. a dozen.

John Bertermann and daughter Irma are arranging for a trip to Europe in the near future.

The Smith & Young Company will start to build its new range of houses during the coming week. I. B.

Boston.

The Coming Rose Show.

The coming exhibition in connection with the meeting of the American Rose Society promises to surpass any show ever held in Boston at this season of the year. A leading feature of the exhibition will be the fine display of Rambler roses by M. H. Walsh. This will be a far superior lot to those exhibited last year, and will contain several fine varieties which have never before been shown to the public. Another exhibitor will make an immense display of hybrid roses in pots. Another novelty to be shown will be the new fern "Dorchester," from Daniel Sullivan, manager of the L. H. Foster estate. This fern is a sport from the Anna Foster, raised several years ago by the late L. H. Foster. It is quite distinct, and is in every way superior to the older variety.

The entertainment committee of the Gardeners and Florists' Club has arranged for a banquet in honor of the visiting members of the American Rose Society, on the evening of Friday, the 24th inst., at the Thorndyke Hotel.

News Gittings.

Mrs. Fred R. Mathieson died at her home in Waltham, on Wednesday, March 8. She had been a sufferer for years, although her illness did not take a serious turn until a few days previous to her death. The funeral was held Saturday afternoon, and was largely attended by gardeners and florists in this locality. The outing of the Gardeners and Florists' Club, which was to have taken place Saturday afternoon, was postponed one week on account of the funeral.

M. H. Walsh, of Wood's Hole, has sold all of his stock that he has been growing for the Easter trade of his new Rambler rose, Wedding Bells, to Wadley & Smythe, New York. This is one of the finest pink roses we have seen, and we predicted, when we saw it on exhibition a year ago, that it would make a splendid plant for the Easter trade. This fact has been demonstrated by the enterprise of this well-known New York firm.

The Sunday Globe had quite an article on the carnation, having interviewed the well-known specialist, Peter Fisher, of Ellis. The article quotes Mr. Fisher as saying that "of the 30,000 plants that he grows annually a fair average production is 20 to 25 blooms per plant, although some varieties do better than that."

Mrs. G. A. Sutherland has sold out her business on Bromfield street to Hoffmann, the Back Bay florist. Mr. Hoffmann will carry on the business as a branch store, will renovate the whole interior, and will open up in a few days for business.

Welch Bros. are handling some extra fine Queen of Edgely roses from the Floral Exchange, Edgely, Pa.

Daniel Sullivan, of the L. H. Foster estate, Dorchester, reports an unprecedented demand for Boston ferns.

MacMulkin has done quite a business in combination baskets of fruit and flowers recently. These were much used as gifts to passengers on the Romanic, which left this port Saturday for the Mediterranean.

W. H. Elliott, of Brighton, will be the speaker at the meeting of the Gardeners and Florists' Club on Tuesday next. He will talk on his recent trip to Jamaica, Porto Rico and Cuba.

J. W. DUNCAN.

Chicago.

News Notes.

Green carnations and shamrock have begun to arrive in anticipation of the 17th of March. The shamrock seen so far has been oxalis.

James Hartshorne and James S. Wilson attended the meeting of the St. Louis Florists' Club, March 9, the former making an exhibit of carnations and the latter a display of Baby Rambler rose.

The greenhouse construction people report a greater activity in the building line than for several seasons. This is caused, to a great extent, by several of the larger firms rebuilding some of their glass.

John Thorpe has been regularly employed by the Chicago Tribune to write a series of articles on gardening touching on the best methods that should be employed by the general public.

Carl Cropp, of Vaughan's Seed Store, in an interview with a reporter for the

Evening Journal, gave a very interesting account of mushroom culture from the new spawn which they have been selling and exhibiting in their store window recently.

George Weston, formerly salesman in Vaughan's Seed Store, is now in charge of the seed department of Sears, Roebuck & Co., a large mail order house of this city, seeds being a new feature with them.

Vaughan & Sperry report a good supply of wild smilax on hand, and are able to fill all orders. Some other houses report a shortage of this stock.

A. L. Randall is again at the office after a short siege of sickness. The A. L. Randall Company are handling an exceedingly high grade of Bride and Bridesmaid roses. Their eastern violets find a ready sale.

Karna Pehrson, wife of John Pehrson, manager of the Clark street store of the George Wittbold Company, died March 3. The funeral was held Sunday, March 5; interment in Graceland Cemetery. His many friends in the trade extend their heartfelt sympathy to Mr. Pehrson in his sad bereavement.

C. W. McKellar is handling a fine line of gardenias, as well as orchids. Both of these he finds a steady call for from the local trade.

The park employees have organized a society for mutual benefit and will send a delegate to Springfield to work in favor of a bill before the State Legislature which will exempt them from discharge by incoming different political parties.

P. J. Hauswirth has been on the sick list for the past week.

H. E. Phillpott, of Winnipeg, Manitoba, Canada, was a visitor this week.

ROBERT JOHNSTONE.

Baltimore.

An Outing.

Thursday, March 9, a number of the local florists, by invitation, spent a most pleasant afternoon and evening with Wm. B. Sands, at Lake Roland. An inspection of the place was made. The roses are just off crop, but the plants are showing up well, and a heavy crop will be on about Easter. A house of Harrisii lilies will be in just about right. We noted a very few diseased plants. Lily of the valley was seen about as good as can be had. Mr. Sands makes a specialty of roses, of which he has seven houses. His other houses are taken up with asparagus, Harrisii lilies, callas, bedding plants, and bulbous stock. The place is heated by steam, supplied by one immense boiler. After the greenhouses were looked over, we were invited to the house, and there all did justice to many good things to eat and drink.

Business Notes.

Business is moving along satisfactorily this week; most all stock is pretty well used up, of which there was a good supply. There was considerable loss last week, which, I think, was largely due to the continued rain during the week. Prices naturally have a downward tendency; they are fairly steady.

JOHN J. PERRY.

Louisville, Ky.

Additional Report on Exhibits.

To get my report of the meeting and exhibits of the Kentucky Society of Florists in last week's issue, it was necessary that I write it the same night as the meeting. As we did not leave the exhibition hall until the "wee sma'" hours, I was much hurried in making out the report; and in my hurry I accidentally lost a sheet of my manuscript with my notes, and by so doing, deprived the following exhibitors of the credit of making displays: John Breitmeyer's Sons, Detroit, Mich., exhibited their beautiful rose La Detroit, and a vase of extra fine snapdragon. Peter Reinberg, Chicago, Ill., had a vase each of Sunrise and Uncle John, his improved Golden Gate. Charles Rayner, Anchorage, Ky., staged some magnificent flowers of Ivory Golden Gate, The Bride, Bridesmaid roses. John E. Haines, Bethlehem, Pa., John E. Haines, a grand red carnation, and the Star of Bethlehem, a deep yellow. Davis Bros. Company, Bloomsburg, Pa., sent Crisis, another good scarlet carnation, and Mary Albert, white. Patten & Co., Tewksbury, Mass., exhibited Mikado, a carnation of the Prosperity type, at the same time very distinct; also the Pink Patten.

A. R. B.

Yellows in Peaches.

A correspondent writes me for advice concerning his orchard of peach trees, which, he says, is showing signs of the yellows. He adds he has been told to dig out and burn all affected trees, but he has faith in Bordeaux mixture, and asks my advice. I answered him privately, as it was not intended as a communication for our columns, but it has been suggested to me that a few words here on the topic would be of general interest. My reply to him was to follow the advice he had received and root out the trees, and as quickly as he could, burning them at once. This is the recognized way, and it is believed to be the only way to act. The yellows is a disease the exact nature of which seems undetermined. Were it simply one of fungus origin connected with the foliage, spraying with Bordeaux mixture would be in order, but the disease, whatever it is, cannot be controlled by sprayings so far attempted.

It has been claimed by some that yellow foliaged evergreens have been brought back to their normal green by applying sulphur to the soil about them, and this is quite probable if fungus in the soil are doing the harm, but peach yellows is not believed to come from this cause.

JOSEPH MEEHAN.

Primula Sinensis var. Stellata.

Unquestionably, this is one of the most beautiful and graceful of primulas for greenhouse or conservatory work. It is a horticultural variety of the Chinese primrose, *P. sinensis*. As a Winter-blooming plant it is a great acquisition, carrying its neat flowers in good condition for some considerable time. The flowers are star-like, arranged in successive whorls radiating from the main flower stalk, giving thus to this starchy primrose quite a lengthened flowering period somewhat similar to that found in the baby primrose, *P. Forbesi*. Other colors than white can now be had in this primula. The foliage is striking, being strong, clean and healthy. This is certainly a most desirable Winter flowering plant.

Glen Cove, L. I.

JOHN F. JOHNSTON.

CLUB AND SOCIETY DOINGS

HARTFORD (CONN.) FLORISTS' CLUB.—The annual meeting of the Florists' Club was held Friday night, March 10, at which time the following officers were elected for the ensuing year: President, J. F. Huss; vice-president, J. F. Coombs; secretary, C. N. Ruedlinger; treasurer, Robert Scrivener. The committee appointed to revise the by-laws made a report, and the by-laws were accepted as revised. Three new members were elected. J. F. COOMBS.

HOUSE OF CYCLAMEN,
Growers, Van Bechove & Bro., Kalamazoo, Mich.

THE PROVIDENCE (R. I.) FLORISTS' CLUB held its regular monthly meeting Thursday of last week. Part of the evening was spent in eulogizing the late Farquhar Macrae, with special remarks by Messrs. Chappell and Macnair. Mr. Hockey, of Pawtucket, was prominent in his opposition to the club lending any help to the proposed greenhouse at the State Experiment Station at Kingstown, deeming it inexpedient for us to mix up in this matter. Messrs. Canning and Macnair touched upon the growing nuisance of "crepe chasing," and it was the sense of

PRIMULA STELLATA.

Photo by John F. Johnston.

the gentlemen present that such conduct by any reputable florist was to be deplored, and it was suggested that some means be sought to protect those florists who were being annoyed by the false pretences of the prominent "chasers." This is a line of business that has especially flourished the past Winter on account of the trade offering no opposition to the offenders, who have therefore grown bold in their pursuit and use any means to corral the business within reach. C. S. MACNAIR.

THE BALTIMORE (MD.) GARDENERS' CLUB held its regular meeting Monday night; it was the largest meeting the club has had for some years. It was also the annual election of officers, with a banquet to follow. But the real thing that brought out so many members was the hot competition between two of the most prominent members for the presidency—P. B. Welsh and F. C. Bauer being the candidates. All the other candidates for the various offices were elected without opposition. The following is the list: President, Philip B. Welsh; vice-president, F. C. Bauer; recording secretary, John J. Perry; financial secretary, George Talbott; treasurer, F. G. Burger; librarian, C. M. Wagner. A number of new members were elected. After the election, T. H. Patterson, chairman of the banquet committee, led the way to the large hall just opposite the meeting room, and there we found an elaborate spread. The toastmaster was E. A. Seidewitz. Speechmaking was indulged in until a late hour. Some of the oldest members of the club pronounced it the most successful evening the organization has ever had. Let the good work go on. If every member will do his part we cannot help having a most satisfactory year. J. J. PERRY.

CHICAGO FLORISTS' CLUB.—The regular meeting of the club was held on Thursday night, March 9. The committee had provided a smoker, which drew a large number of members, and a very enjoyable time was had. A mandolin band and a negro singer rendered a number of fine selections of instrumental and vocal music. The Florists' Club quartette gave several of their usual fine renditions. Humorous stories were told by John P. Degan, W. N. Rudd, and one of the musicians, which were well received. The Lincoln Park greenhouses had on exhibition some fine specimen plants of *Cineraria stellata*; *C. hybrida*, and a cross between these two. The judges awarded the plants honorable mention. The Chicago Carnation Company showed two fine vases of White Lawson and Cardinal, also awarded honorable mention. The judges were E. A. Kanst, W. H. Kidwell, and A. H. Schneider. Very interesting remarks were made by F. F. Bentley and W. N. Rudd on the appropriation bill now before the State Legislature. Mr. Rudd was one of the delegates in attendance at Springfield. He said they had great hopes of the passage of the bill. A motion was passed that a life membership in the club be created, and a committee of three was appointed to consider the matter. It is the intention of the club to use the money derived from the life membership fund in securing a permanent home for its members, including bowling alleys, which shall be kept open at all times where visiting florists can be suitably entertained. About thirty members have signified their intention of joining as life members. All club members are also urged to join the State Florists' Association. It was announced that an exhibition of Easter stock will be held on the evening of March 23. Exhibitors will not be restricted from making sales of stock during the time of the show. Growers will be asked from all parts of the country to display any goods they may have in preparation for Easter sales. R. J.

NEW BEDFORD (MASS.) HORTICULTURAL SOCIETY held its annual dinner on the evening of March 1 at the Mansion House. Among the post-prandial speakers were President William Keith, Thomas J. Gray and John K. M. L. Farquhar, of Boston, John Duff, George A. Hough and Gideon H. Allen. Frank C. Barrows acted as toastmaster. Mr. Keith said the society had doubled its membership the past year. Mr. Gray alluded to the work of several prominent gardeners in the section, and told, with a vein of humor, some stories of horticulturists. Mr. Farquhar's talk was in the line of encouraging gardeners to regain the place they held 50 or 75 years ago in England as outdoor gardeners. He said that Massachusetts is far in advance of other States in horticulture, due largely to the pioneer work of the Massachusetts Horticultural Society. The only awards recognized abroad, he said, are those of that society. What we want to do in Massachusetts is to retain our position, and it is by the interest shown by members of horticultural societies that that can be done.

The change of the fine farms along the coast into beautiful estates by men of wealth is going to have its influence, Mr. Farquhar said. Gardeners are devoting too much time and attention to the greenhouse end of their work and too little to the outdoor work. Gardeners will have to get back to the open ground for their supply of flowers. Landscape architects, engineers who have studied balances of color, lights and shadows, neutral effects and such problems are taking places that the gardeners should be able to fill. Many of them furnish a plan, and when it is worked out the plants will not grow or thrive where the architect has placed them to make up his scheme. The gardener would know from his practical experience with plants where they will grow and where they will not, he knows it by intuition, while the architect produces something on paper that amounts to nothing. The gardener would not plant a willow on a knoll of dry land nor a pine tree in a swamp. These men are taking the best end of the gardener's work out of his hands and the latter should be anxious to get back to his rightful position.

Mr. Hough said: There is one question that has often perplexed me. Why is it that the most successful gardeners in the world are Scotchmen? Undoubtedly it is true that men of other races succeed in the development of plant life, but, within the range of my observation, the sought-for gardeners are Scotchmen. We may find the equals of the Farquhars, the Keiths or of Mr. Murray, or of Mr. Garthley, but we cannot find their superiors. You gardeners are wonderful fellows and now that you have at last produced green carnations I am quite ready to believe of several of you here to-night, as it has been said of Luther Burbank, that, given a strawberry plant and a milk weed you would grow strawberries and cream on one vine.

William F. Turner, of the entertainment committee, announced that on Tuesday evening, March 14, Edward Howe Forbush, who is an ornithologist of the State Board of Agriculture, would give an illustrated lecture on "Birds in Their Relation to Agriculture."

At the April meeting Peter Murray, of Fairhaven, will give a talk on the culture of begonias. Mr. Turner said that questions for the question box should be sent to Mr. Swift. The entertainment committee which had charge of the arrangements for the dinner, consisted of William F. Turner, Frank C. Barrows, Reuben E. Swift, Charles L. Paine and Robert Greenhalge. The table decorations were furnished by Mr. Garthley, Mr. Murray, Mr. Keith and Mr. Woodhouse.

American Carnation Society. Varieties Registered.

By the Lakeview Rose Gardens, Jamestown, N. Y.:
GLADYS, a fine white, with blooms three inches and over, and stem twenty to thirty inches in length. It has never been off crop this season, and scored 87 points at the Buffalo Florists' Club February 22.
ALBERT M. HERR, Secretary.

American Rose Society. Another Special Prize.

An additional special prize is offered for award at the Boston exhibition, March 23 to 26, by A. H. Hews & Co., Incorporated, North Cambridge, Mass., of a silver cup, value \$25, for the best specimen pot-grown rose in the exhibition, ramblers and climbers excluded.
WM. J. STEWART,
Secretary.

NEW YORK FLORISTS' CLUB.—The March meeting of the club held on Monday, the 13th, was, as usual, a very successful one. It was "rose night," but not many exhibits of these flowers were on hand. President Traendly occupied the chair.

Resolutions were read on the death of the mother of Henry Hentz, of Madison, N. J., expressing the club's sympathy, and a copy ordered sent to the bereaved family. J. Austin Shaw, for the outing committee, reported that Glenwood, a Summer resort, had been secured. The date selected for the outing was Wednesday, June 28. The steambot "Isabel" had again been selected. Responses were already generous toward prizes, and advertisements in the program. Everything indicated a successful outing. Mr. O'Mara reported for the committee of awards mentioning the exhibits staged. A vote of thanks was tendered the exhibitors. The following gentlemen were elected members: Daniel Wittpen, Jas. Hutchison, H. Suzuki, R. M. Schuitz, R. C. Pye, Wm. Weber. Prof. W. G. Johnson was proposed for membership.

Mr. O'Mara read the proposed new rules governing exhibits made before the club. These rules were considered seriatim and adopted as a whole. Copies will be printed and distributed to the members at an early date.

The Most Valuable Characteristic IN A ROSE.

The various questions assigned at last meeting, relative to the most valuable characteristic in the rose, the carnation, the chrysanthemum and fern, were replied to. Harry O. May, speaking for the rose, said that he did not think there was any one characteristic in the rose valuable above another. Other things being equal, however, he considered form the most valuable characteristic, but, if the variety was not prolific, it was not profitable for the average man to grow. Other things being equal, the commission man considered the chief characteristic of the rose was its stem. With an exhibition variety, of course, it was different; Beauty was the first characteristic. Dean Hole had said in judging a rose the first requisite was form, petals abundant, good in substance, regularly and gracefully disposed, even, in a circular and symmetrical outline. Next to that came color. The American Rose Society lays great stress on color, giving it 20 points and 15 for form. The stem had a great deal to do with the make-up or a rose. One of the most beautiful roses we have ever had, Mr. May said, had no stem at all, namely, Marechal Niel. Bride and Bridesmaid, notwithstanding their good stem and productiveness, if they did not have form they would not be the popular roses they are to-day.

Robert Simpson, being called on, thought the American Rose Society was about right. He referred to the seedling rose from Mr. Bisset of Washington, an exhibition, which, he said, had good foliage, stem and a fair form, but it lacked color, and to him it would be almost worthless because of that defect. If it had the color of Liberty, say, then it would be a beautiful thing. Liberty was almost predominant in red roses because of its bright, dazzling color. He endorsed the remarks of Mr. May as to the value of form in Bride and Bridesmaid.

Mr. O'Mara, who had propounded the question, said that there was no one characteristic which could be determined for all purposes as the most valuable; if a rose had splendid color and lacked constitution it was not worth anything. Roses that are good for forcing are practically of no service for outdoor work, and vice versa. He cited the case of American Beauty as one of these. He was of the opinion that the most valuable characteristic of a rose, or any other plant, was its constitution, which covered health, robustness of growth, and, in a great sense, productiveness. With the average planter of outdoor roses, if a variety would grow and produce flowers of some kind, that was the quality desired by them. Hermosa, for instance, was no earthly use for indoors, but it was a rose at one time par excellence for the open ground, because it was healthy and produced abundantly. C. P. Strassheim, a comparatively new introduction, was valuable to the average planter, being perfectly healthy and free from insect pests, flowering all the time, practically; it was of great value because of its good constitution. The Baby Rambler rose would be widely planted, because it will grow under the most adverse conditions and produce flowers, all of which was due to its constitution. From that standpoint, constitution, he believed,

the most valuable thing in a rose, valuable to the disseminator because he is able to propagate the variety readily, and is able to sell it cheaply.

Harry May thought these remarks might apply to outdoor roses; but the buyer of flowers in a florist's store did not care a darn about constitution. The color, form and fragrance, as well as length of stem, was what appealed to the average purchaser of a rose bloom.

IN A CARNATION.

John Birnie replied to the question as to the carnation. He spoke in part as follows:

The question put to me is, "What is the most valuable characteristic of the carnation?" I say without hesitation, its keeping or lasting qualities. For of what value is all its other characteristics—color, fragrance, etc., if it go to sleep a few hours after leaving the grower's establishment? That is the specific answer to the question. But I do not consider that the answer would be complete without touching briefly on the cause, or causes, of the carnation going to sleep.

Much has been said, and much has been published in the trade press on this subject, so that it is pretty hard to say anything new; however, the fact remains that some carnations go to sleep, and it is up to those who grow, and those who handle the carnation to find out the cause and apply the remedy.

That the grower himself is responsible, in some cases, cannot be denied. Overfeeding, especially with chemical manures, will put the carnation to sleep, even on the plants. I have seen instances of this. Heavy fumigating has the same effect; allowing inexperienced help to pick the flowers; improper ventilation, keeping the houses too hot, either night or day, and injudicious watering, are some of the causes that the grower is responsible for. Of the causes above mentioned, I think overfeeding is the most common. The keeping qualities are sacrificed in the attempt to get large flowers. Next comes overheating. I read in one of the papers lately that Enchantress gave the best results at 56 or 57 degrees, night temperature. I am sure carnations grown under those conditions must suffer both in strength of stem and keeping qualities. Picking the flowers is also an important matter; some varieties can be left on the plants until fully developed, while others are better when picked before they are quite open. This the grower finds out by studying the varieties he grows. Flowers in which the female organs are abnormal developed are more apt to go to sleep than those without that peculiarity, more especially in Fall and Spring when considerable ventilation is necessary, and the pollen is carried round by the wind, or by insects.

But all the trouble does not rest with the grower, by any means. The commission man has to take his share of the blame. A visit to the average commission store in the morning rush hours will give the grower a jar. There he will see the flowers that he has watched over and cared for for months to the best of his ability, handled in no gentle manner; the flowers that he picked and made haste to get into water, packed as carefully as he could, put the boxes on the express wagon as if they were full of eggs, told the express man that he must be extremely careful, are, in some stores, lying on the counters and under the counters in heaps. Sometimes they may be for hours. If eventually they are put in water, so many are placed in a vase that the flower has no chance to develop; the limit is reached only when the vase will hold no more stems.

That the carnation will recuperate and improve after being taken from the shipping box goes without saying. A case in point happened in our own club some years ago when we met in Elks' Hall. A carnation was sent from near Boston to be judged by our award committee. It was unpacked in the anteroom, taken into the club room and received 85 points. About an hour later one of the committee called the attention of his colleagues to the fact that the flowers were better than when they were passed upon. The committee therefore re-examined the variety and awarded it 87 points. This happening before the advent of the canteen, due weight can be given to the circumstance.

One important matter which does not seem to be fully recognized either by the grower or commission man, is the fact that some carnations are more delicate than others and require far more care, both in packing and in handling. Enchantress is one of these. I believe if flowers of this variety are properly picked, packed and handled, they will stay awake as long as the average carnation bloom. I have kept it in my own sitting room for ten days in good shape. The Marquis was another good flower that had to succumb to rough handling.

The carnation is, no doubt, the most popular flower in commerce at the present time, and will certainly retain that popularity if due care be given to the handling of it. The grower is constantly improving his methods at great expense to himself, as is shown by the improvement in the carnation in the last 15 years. Is the distributor improving his methods at the same rate? Is he as particular about ventilating his store as the grower is about ventilating his greenhouse or flower room? Does he put flowers consigned to him into water as soon as he can after receiving them? Does he pay any attention at all to the temperature of his store? Does he understand that all carnations; in fact, all flowers, require gentle handling? Does he see that his employees handle the flowers as they should be handled? In short, does the average distributor give the same care to the flower as the average grower? Are we still looking, as Mr. Simpson said last "rose night," for some "Moses to lead us out of the land of Egypt?"

IN A FERN.

John Scott answered for the fern. He said:

Before giving an answer to the question, I beg to say that there are so many kinds of ferns that it is impossible to cover the subject in an offhand way. We all know that there are a great many ferns suitable for private collections only; the todays, for instance, that require specially built structures in which to grow them; the adiantums which are too tender for house plants; but there are also many other ferns equally beautiful, such as the gymnogonum and davallias, but they are not adapted for commercial purposes. It is to the commercial fern that I shall confine my answer. To my mind, the most valuable characteristic in a fern is its adaptability to house adornment, which includes its lasting qualities when transferred from the greenhouse to the home. From the grower's and retailer's standpoint, the most valuable characteristic in a fern is its money-making qualities; to be a money-maker it must be a free grower and a free seller, and to be a free seller it must be graceful, symmetrical and a hardy house plant. In fact, it must

have most of the good points of a fern, such as Nephrolepis Scottii has been pronounced to possess by the leading growers and retailers all over this country, and also by the committee of awards of this club.

IN A CHRYSANTHEMUM.

Wm. Duckham was to have replied for the chrysanthemum, but, being absent, Mr. Totty substituted, stating that, to his mind, the most valuable characteristic in the chrysanthemum was its general adaptability; it was everybody's flower, and could be grown equally well under glass as in the open ground. A flower show in New York could not be held without the chrysanthemum, at which exhibition the carnation and rose were only side lines. Mr. May took exception to this statement, claiming that the chrysanthemum was only available for a short period in the year, whereas the rose and carnation were with us practically at all times. Mr. Totty retorted the rose and carnation during chrysanthemum season had to take a back seat. John Birnie characterized the chrysanthemum as a nuisance; its presence in its season was apt to send the carnation and rose grower to the poor house. Mr. O'Mara also had a good word to say for the chrysanthemum, and endorsed Mr. Totty's view that its adaptability formed its chief characteristic. The ability to produce flowers under any condition was also part of that adaptability. He said that probably more church debts had been raised by the chrysanthemum than in any other way; each little town having its own show toward that end.

Robert Kift, of Philadelphia, then read his paper entitled "The Rose in Decorative Art," which was listened to with rapt attention by the members, and a vote of thanks passed to the essayist.

Questions to be answered at the next meeting are: Why are carnation growers more progressive than rose growers? Is floriculture in the United States as far advanced as in Europe? Both being propounded by Mr. O'Mara.

The meeting adjourned at a late hour.

After adjournment a brief social time was indulged in, during which Messrs. Alfred Bunyard, J. B. Nugent and Alex. Wallace rendered songs, which were well received. Professor Breining presided at the piano. Refreshments were served by Mr. Nugent and his committee.

The Exhibition.

The exhibits included a vase of well-grown andribrinum, and a bunch of La Detroit rose from John Breitmeyer's Sons, Detroit, Mich.; a group of Nephrolepis Scottii plants, in five sizes, from John Scott, Brooklyn; a few flowers of the new pink rose of Peter Bisset, Washington, D. C.; and from F. R. Pierson Company, Tarrytown, N. Y., a plant of the new fern Nephrolepis Piersonii elegantissima, and several vases of carnations, among which were Daheim, Variegated Lawson, White Lawson, two nice plants of the rose Mme. Norbert Levasseur, and a vase of blooms of the rose Killarney.

ILLINOIS STATE FLORISTS' ASSOCIATION—

The prospect of securing a State appropriation for experiment work for floriculture under the direction of an advisory committee of the Illinois State Florists' Association, has awakened great enthusiasm in that organization. At a meeting of the Chicago Florists' Club on March 9 thirty new names were added to the already long list of members of the State society. Application to incorporate has been filed. In the endeavor to secure favorable consideration by the State Legislature, the committee in charge has been surprised at the lack of realization of the importance of the greenhouse industry in Illinois. For educational purposes it has issued the following open letter:

By an act approved March 2, 1887, the national government appropriated \$15,000 per annum to each State for the purpose of establishing and maintaining an agricultural experiment station, "to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture and to promote scientific investigation and experiment respecting the principles and applications of agricultural science."

The Agricultural Experiment Station of Illinois was placed under the direction of the trustees of the State University as a part of the university. From 1887 to 1901 the station was maintained upon the United States fund of \$15,000. Its sphere and its activities were necessarily limited, because the above sum had to be used for salaries, printing four bulletins a year, as required by law, labor supplies, etc. When divided among four or five departments representing great agricultural interests, such as agronomy, animal husbandry, horticulture, dairying together with the necessary investigation in botany, entomology and chemistry relating to these industries, it is a matter of wonder that the stations have done the great work they have. According to the provisions of the law, none of the money can be used for buildings, as it was supposed the States would make the necessary appropriations for them.

Four years ago the various agricultural organizations of the State, realizing that the appropriations received from the Government were inadequate, sought and obtained appropriations. The past two years appropriations were made as follows: Twenty-five thousand dollars for live stock investigations; 25,000 for the soil survey of the State; \$15,000 for dairy investigations; \$10,000 for corn investigations; and \$10,000 for orchard investigations. Each of these appropriations was expended under the direction of an advisory committee of five from each of the following associations: The Illinois Live Stock Breeders' Association, Illinois Farmers' Institute, Illinois Corn Growers' and Illinois Corn Breeders' Associations, Illinois Dairymen's Association and the Illinois State Horticulture Society.

The sums mentioned are specifically appropriated for certain investigations and have been so used. The only reason the florists have not had similar appropriations is because they have not asked for an appropriation for experimental work.

According to the census figures for 1900 there was invested in floriculture in Illinois the sum of \$4,648,056. Of this amount, \$2,095,952 was represented by buildings and \$2,439,163 in land. The wholesale value of the flowers and plants sold in 1899 was \$1,867,855. There was 8,414,641 square feet of glass. In addition to the above figures, which relate to the commercial florists, or those who derive the principal part of their income from the sale of flowers and plants, we find 1,199 gardeners using a total area of 8,744,020 square feet in growing plants.

Greenhouse building firms estimate the amount of greenhouse building material, including structural work, glass, and pipe and heating apparatus, at \$2,000,000 per annum of sales in the city of Chicago alone. Information obtained by builders, through the trade press, from wholesale plantmen and estimates from leading members of the trade, make it certain that the value of investment and the amount of annual output are now 50 per cent. greater than the above quoted figures for 1900. Conservative estimates place the coal consumption of the greenhouses of Illinois at 150,000 tons per annum.

In Cook County we find the glass area of the florists to be 5,855,612 square feet; in Du Page County, 532,680 square feet; Kane, 195,563; Sangamon, 184,240; McLean, 150,265; Will, 110,456; Morgan, 96,000; St. Clair, 95,330; Peoria, 85,509; Lake, 73,487, etc. With few exceptions there is in every county of the State some glass devoted to floriculture, and if we include the glass used in market gardening, the industry is practically universal, so far as the State is concerned. Indeed, no other State has so universal an interest in floriculture as Illinois. The industry is common to the whole State, and if we remember that a portion of the appropriation asked for should be used for experimentation on the home grounds of the State, the fact is established that floriculture is an interest that affects every person who possesses even a few feet of land. From the foregoing it will be seen that the results of investigations will be far reaching.

New York, the only State which equals or surpasses Illinois in commercial floriculture, has provided greenhouses at its two experiment stations at Geneva and Cornell. Many experiments have been carried on for the benefit of this industry, particularly with vegetables under glass. In Illinois, with her great floricultural interests, not a dollar has been specifically appropriated for experimental work along this particular line, while other agricultural interests have been cared for and florists have paid their part of the State taxes without any direct benefit in return.

In Rhode Island an asking has been made of the Legislature for the sum of \$15,000 for greenhouses. They will get it because the florists and gardeners are supporting it. In Illinois there are single establishments with a greater glass area than there was in the whole State of Rhode Island in the census year.

The State of New Hampshire has to-day perhaps the most compact and servicable little range of glass of any State agricultural college and experiment station, costing \$7,000 and built under a State appropriation. Compared with the floricultural industry in Illinois, New Hampshire has not as much glass as Du Page County, to say nothing of Cook County, which surpasses every State in glass area except New York, Pennsylvania, New Jersey and Massachusetts. Is \$10,000 too great a sum for Illinois to put into glass structures?

The lines of work under glass which most likely will be taken up are methods of combating insect and fungus diseases and investigations in the use of commercial fertilizers. This work will be undertaken by the Illinois State Florists' Association, and this committee will certainly see to it that only such problems are investigated as are of the most vital interest to the whole State. The law contemplates a fund of \$10,000 a year to pay all operating expenses, labor, coal, supplies, printing, etc., as well as co-operative experiments carried on away from the experiment station. If an insect or fungus pest appears on ornamental plants anywhere in the State which cannot be readily determined, an investigator should be put to work at it to the end that it may be brought under control for the common good of all the trade. Under the law for orchard investigations almost all the work has been carried on away from the university. No one knows at the present time what this co-operative work will be, but there will necessarily be some such work done, and the appropriation must cover all possible contingencies, especially since there can be no profit in maintaining a range of glass for experimental work, as the work will be largely with diseased plants.

The movement for appropriations is favored by the Illinois State Florists' Association, the Chicago Florists' Club and many other prominent florists of the State, but every florist in the State should co-operate, and this can best be done by urging your Representatives and Senators to vote for the bill. Interview them when they are at home, if possible; otherwise, write them a strong letter. J. C. Vaughan, President Society of American Florists, Chicago.

James Hartshorne, President of the American Carnation Society, Joliet, Ill.
P. J. Hauswirth, State Vice-President (north) Society of American Florists, Chicago.
John Willis, State Vice-President (south) Society of American Florists, Danville, Ill.
The Chicago Florists' Club, by resolution; attest, Robert Johnstone, Secretary.
The Illinois State Florists' Association, W. N. Rudd, chairman pro tem.
George Kuhl, Pekin, Ill.; J. F. Ammann, Edwardsville, Ill.; A. C. Canfield, Springfield, Ill., and many others.

CINCINNATI (O.) FLORISTS' SOCIETY.—Saturday, March 11, was carnation day, and the show was the best ever. The national exhibition at Chicago was larger, but the quality of the flowers shown here was superior. From the Chicago Carnation Company came a wagon load of boxes. The E. G. Hill Company was very much in evidence, with the head of the institution here in person to stage his blooms. From Maryland came My Maryland under the care of John Wilson Weber. Ed. Ruch, of Richmond, Ind., came in with fifty blooms of as handsome Adonis as I have seen in many days. The writer received a couple of boxes of blooms for exhibition, one from W. E. Hall, of Clyde, O., containing forty flowers of his new carnation, named E. G. Gillett, parentage; Prosperity X General Maceo. The color is not brilliant, but is a soft, pretty shade that lights up beautifully, and the stem, foliage, calyx, form, size, substance, etc., are all that can be desired. This variety, in one of the closest contests of seedlings seen in many a day,

scored 85 points. J. E. Haines, of Bethlehem, Pa., sent his new scarlet which looks well; it scored 89 points. This is a smaller flower than Hall's but with a stem like a cane stalk; in fact, I think too stiff to be graceful. Candace, shown by the Indianapolis Flower & Plant Company, is a very pleasing shade of pink, but, I am afraid, is trotting in too fast company. It scored 81 points. My Maryland scored 91 points and captured the S. A. F. bronze medal and the certificate of our society. We require that all seedlings must be shown twice, Fall and Spring, and be judged before they can be certificated. My Maryland, having complied with the rule, was the only seedling carnation that received the society's certificate. And it well deserved the honor. Jessica, a variegated sort, was shown here by Weber & Sons, Oakland, Md., for the first time; it was given 87 points. And now we come to the "Only of Onlys," Witterstaetter's genus. I am not blowing my horn so loudly simply because Richard is a Cincinnati man, but because, without doubt, he has the finest lot of seedling carnations in the United States to-day. You see, I am making this assertion broad; I am covering an immense territory. But he has the goods, and, if necessary, can convince the most skeptical. Aristocrat scored 93 points, receiving the silver medal of the S. A. F. O. H. This variety is pink in color, larger and more beautiful than Mrs. T. W. Lawson ever was, handsomer than Fiancee, and can also be bought for ten or fifteen thousand dollars. Afterglow is another pink; it scored 91 points; "could have had more and not hurt." Dick didn't want me to say this, as you all know how shy he is; but I won't tell you the price on this sort. J. A. Valentine has been named for the gentleman from Denver. This variety is pink also, and scored 87 points. The color is a shade on the order of Enchantress. While on this subject, I want to tell you what my customers think of Enchantress. I sell them one lot, and I tackle them to sell them the second lot. "Oh, no; not that; it won't keep over night for me." Another will say: "Not any; it bruises too much for me and goes to sleep too easily." Another: "You couldn't give me that carnation. I lost one of my best customers by sending a box of Enchantress." And so it goes. It's too bad, for the variety is certainly a fine grower and a beautiful flower; but if you can't sell it—you know the rest.

The following were the prize winners:

Fifty white—First, R. Witterstaetter, with Lady Bountiful; second, Weber & Sons, with My Maryland; third, Chicago Carnation Co., with Lady Bountiful.

Fifty light pink—First, R. Witterstaetter; second, Honaker; third, The E. G. Hill Co., all with Enchantress.

Fifty dark pink—First, R. Witterstaetter, with Aristocrat; second, Chicago Carnation Co., with Mrs. Lawson; third, Honaker, same variety.

Fifty red—First, the E. G. Hill Co.; second, R. Witterstaetter, both with Cardinal; third, Ed. Ruch, with Adonis.

Fifty variegated—First, the E. G. Hill Co.; second, Chicago Carnation Co., both with Mrs. M. A. Patten.

One hundred assorted varieties—First, the E. G. Hill Co.; second, Chicago Carnation Co.; third, J. W. Rodgers.

Best general display—R. Witterstaetter.

Twenty-five seedlings—First, second and third, R. Witterstaetter, with Aristocrat, Afterglow and J. A. Valentine, respectively.

Honaker comes from Lexington, Ky., and from the stock he displayed at the show, you will probably hear from him again. C. C. Murphy had a few seedlings, some of which were quite good. J. A. Peterson made a nice showing of his specialties, begonias, ferns, etc. We did not have as many visitors as we expected. Those present included E. G. Hill, John A. Evans and Ed. Ruch, Richmond, Ind.; D. Honaker, Lexington, Ky.; J. Wilson Weber, Oakland, Md.; Theo. Bock (who was judge), Hamilton, O. Mr. Bock will be presented with a fine pipe and cigar holder by the Cincinnati Florist Society for his services. President George was highly elated over the success of the show.

And, by the way, the Cincinnati Florists' Society voted unanimously to invite the S. A. F. O. H. to hold its twenty-fifth anniversary in Cincinnati; so other cities please sidestep for 1909. E. G. GILLETT.

ST. LOUIS FLORISTS' CLUB.—Our annual rose show was by far one of the finest the club has yet held. The meeting was largely attended by the local florists. Our visitors were: Mr. Brown, of Springfield, Ill., and James S. Wilson, of Vaughan Greenhouses, Western Springs, Ill. Among those who made exhibits were: J. F. Ammann, Edwardsville, Ill., with Mme. Abel Chatenay, Bride, Ivory, Golden Gate and Perle des Jardins. J. F. Wilcox, Council Bluffs, Ia., showed American Beauty, Bride, Bridesmaid, Ivory, Meteor and Mme. Abel Chatenay. A. C. Canfield, Springfield, Ill., had a fine lot of General MacArthur. Peter Reinberg, Chicago, sent Uncle John, Bride, Bridesmaid and Mme. Abel Chatenay. John Breitmeyer's Sons, Detroit, Mich., a fine vase of La Detroit, and a vase of their extra fine snapdragon. W. J. & M. S. Vesey, Fort Wayne, Ind., had Bride, Golden Gate, Bridesmaid, and a nice lot of their new carnation Glendale. E. G. Hill Co., Richmond, Ind., exhibited the new rose Richmond, which attracted the attention of all the rose growers present. Heller Bros. sent two fine vases of Bridesmaid and Bride; these were not for competition. Vaughan's Seed Store, Chicago, had an exhibit of the Baby Rambler in full bloom, in four-inch pots, also a large bunch of the blooms cut. John Hartje, Indianapolis, Ind., showed the fine new pink carnation Candace.

The president appointed James S. Wilson, E. W. Guy, and Frank Fillmore as judges. They made the following report: Twelve American Beauty, first, J. F. Wilcox, he being the only exhibitor in this class.

Twenty-five Bride or Kaiserin Augusta Victoria—J. F. Ammann, first, with The Bride; Messrs. Vesey, second, with same variety. Twenty-five Bridesmaid—Vesey, first; Wilcox, second. Twenty-five Mme. Abel Chatenay—Ammann, first; Wilcox, second. Golden Gate or Ivory—Vesey first with Golden Gate; Wilcox, second, with Ivory. Twenty-five General MacArthur, Liberty or Meteor—A. C. Canfield, second, with MacArthur. First was withheld. Any variety not previously mentioned—Peter Reinberg, first, with Uncle John; John Breitmeyer's Sons, second, with La Detroit.

Exhibits not for competition included: Richmond rose from E. G. Hill Co., very fine, worthy of the club's certificate. Glendale carnation from Vesey, a beautiful variegated variety on the order of Mrs. George M. Bradt; club's certificate. Vaughan's Seed Store, certificate for Baby Rambler rose. The judges voted this one of the finest novelties of the season.

Special mention was made of J. F. Ammann's vase of mixed roses: Heller's Bros.' vase of Bride and Bridesmaid; Breitmeyer's Sons' snapdragon, and John Hartje's carnation Candace.

The club meeting opened promptly at 2 o'clock. The board of trustees submitted a resolution to the effect that the club hold a flower show, which was adopted by full vote.

After adjournment, the members repaired to the Missouri Athletic Club rooms where a lunch had been prepared by the committee. The tables were beautifully decorated with roses and carnations from the show. Fred Ammann acted as toastmaster and called on the following for a few remarks: Otto Koenig, J. J. Eneke, J. S. Wilson, Frank J. Fillmore and Frank Weber. Mr. Ammann read a paper on his recent trip to Chicago. The visitors were shown through the elegant club rooms, and everybody voted this the most pleasant gathering ever held by the Florists' Club.

The next meeting of the club will occur Thursday, April 13; all the members should be present, as the new by-laws and constitution will be adopted. Otto Koenig came in late and reported that an American Beauty had been brought to his home by the stork. Congratulations are in order.

Dr. A. S. Halstead of Belleville, who is president of the new Growers' Club, was a visitor at the meeting for the first time since he left the club a year ago. Frank Weber, in his remarks at the banquet, invited the club to hold one of its Summer outings at his place in Gardenville; by that time the range of new houses will be finished. The invitation was accepted.

Mr. Brown, of Springfield, Ill., who attended the club meeting, was on his way home from Mexico, where he had been spending several weeks looking after big mining interests. ST. PATRICK.

WASHINGTON (D. C.) FLORISTS' CLUB.—The annual meeting of the Florists' Club on the 7th inst. was the most successful one held since the club's organization. The following officers were elected for the ensuing year: President, William F. Gude; vice-president, Charles Henlock; secretary, Peter Bisset; treasurer, Wm. H. Ernst. A good deal of business was transacted, principally pertaining to convention matters. It was decided to encourage amateur gardening among the school children, either by co-operating with the society already organized for that purpose, or independently. There were excellent exhibits of carnations, which were highly appreciated by the members of the club. It was considered as only just to the exhibitors that the public should have an opportunity to see the flowers. President Gude very generously offered one of his store windows for two days, which was accepted, and, from the number of people who called to see them, and the questions they asked, it was quite evident that the notice of the exhibition in the daily papers had been read. The following is a list of the growers who sent the exhibits: F. R. Pierson Co., Tarrytown, N. Y., a vase of each of the following varieties: Variegated Lawson, Dahnheim, White Lawson; John N. May, Summit, N. J., The Bride; J. L. Dillon, Bloomsburg, Pa., Crisis; H. Weber & Sons, Oakland, Md., My Maryland; Guttman & Weber, New York, Victory; W. J. Palmer & Son, Lancaster, N. Y., Red Lawton; A. B. Davis & Son, Purcellville, Va., Red Sport; John E. Haines, Bethlehem, Pa., J. E. Haines and Bethlehem; The Cottage Gardens Company, Queens, N. Y., Robert Craig, Lieut. Peary, Octoroon, Ethel Ward; J. R. Freeman, Washington, D. C., Mrs. Thos. W. Lawson; Alex. B. Garden, Washington, D. C., Enchantress, Mrs. Thos. W. Lawson and Flamingo; F. H. Kramer, Washington, D. C., F. H. Kramer. The secretary was requested to thank the exhibitors and to send to those out of town the newspaper clippings.

The annual banquet to be given in the near future promises to be a great success. At the conclusion of business President Gude, in a few choice words, presented Secretary Bisset with a handsome bread tray, suitably inscribed, as a token of good will and of the esteem in which he is held by all the members of the club. M. C.

THE MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY held its regular meeting in Madison, N. J., March 8. The president appointed a committee to go over the schedule in anticipation of our next flower show, and draft a set of improvement-suggestions for consideration at next meeting. It was decided that our next meeting should be a rose and carnation night. It looks like a success. We are promised quite a number of novelties in both; in addition, the boys are to stage something in the way of specials. Our treasurer, William Chariton, has been ill for the past six weeks; we miss him very much, and hope he will be around in a few days. E. R.

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDTEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

CUT FOLIAGE.—There may be no really new departure in regard to the use of foliage for florists' work, says a writer in Horticultural Advertiser, England, yet there is no doubt that it has come more generally in use than formerly, and those who know what to grow and can do it successfully find it remunerative. I may further add that there are some things on which no value is placed, and find their way to the rubbish heap, which might be turned to profitable account. It is well known to many that when the fronds of Davallia Mariesi (or bullata) ripen off they change to a bronzy yellow; taken just at the right time I have known these to make a shilling per dozen, or a penny for each frond. It is not all the fronds which ripen off well, but if they did it would be more profitable than selling the imported fern balls while they have green fronds. Among the latest things I have seen is the use of stephanotis leaves; when ripening off, these change to a bright yellow, and in February, when there is no ordinary Autumnal tinted foliage, they are very acceptable. Between flowers on a groundwork of Mahonia aquifolia, of the dark bronzy shade, they give a good relief. The colored vine leaves have long been used for dessert dishes, etc. During the last season I saw these used as a groundwork for wreaths and other floral arrangements. Croton leaves are now extensively used. For table decorations they

The Rose in Decorative Art.

(Read by Robert Kite, Philadelphia, Pa., before the New York Florists' Club, Monday Evening, March 13, 1905.)

When Dame Nature stirs in the early Spring and arouses into life the snowdrops and crocuses, which in turn are followed by their more pretentious kinsmen, the gaudy tulips, the daffodils and stately hyacinths, she pauses awhile to admire, and then actively and vigorously her work goes on, until the whole landscape is pictured with her beautiful art. But still she presses forward, not satisfied, until at last the crowning glory of her work appears—the rose, the queen of flowers.

It is her masterpiece. She has endowed it with every virtue; it is most beautiful in form; it has almost all the colors of the rainbow, while its fragrance is most delightful. She guards it carefully, providing even an armor of thorns to protect it.

"Tis sweet to dare the tangled fence,
To cull the timid floweret thence."

Such is a brief description of the flower we honor to-night.

Almost the entire history of the roses of commerce, as we know them to-day, covers but the short period since 1870. Prior to that time, the camellia was the favored flower, and choice blossoms brought fabulous prices.

As soon, however, as the rose made its appearance the camellia was doomed. Bon Silene, Safrano, Mare-

blossoms, the styles have changed; the close, formal designs have been succeeded by the more graceful and natural arrangements that display the beauty of stem and foliage, as well as flower.

In the garden Dame Nature arranges her flowers in the most beautiful manner conceivable. The branches of the climbers bend over gracefully with their wealth of bloom, all, even the smallest blossom, uniting into a perfect whole; while the bush varieties throw up their single buds, or clusters, that stand from out their wealth of foliage in perfect symmetry. Such effects can be produced in the ballroom or elaborate house functions, the growing roses being simulated and made to climb in any direction, and when covered with blossoms making a capital counterfeit and beautiful decoration.

For the wedding, that most joyful time of life, there is no flower that more fittingly graces the occasion than the rose. In the church, the altar, the chancel, the windows, the pew ends; in fact, at every available point, there should be seen this most beautiful flower. The bride and her maids should carry them, and under a bower, surrounded on every hand by beautiful roses, she should stand to receive the good wishes of her guests.

The beautiful custom of greeting the debutante upon her entrance into society with the choicest flowers has grown into prominence the past decade, and offers great opportunities for the artist. Probably no other occasion brings together such an assortment of flowers as are to be found among the hundreds of clusters that grace the receptions of the popular young buds. The rose is also found in the front ranks here, as 75 per cent. of the bouquets are sure to be our favorite flower.

The arrangement of flowers for the dining table is an art in itself, and the rose easily leads in popularity for this purpose. The formal plateau, or mound, has given place to the more graceful arrangement in low bowls, below, or high receptacles that carry the flowers above the line of vision. When loosely arranged in such vases all the beauty and grace of the flower is brought out. They should not be so crowded as to lose their individuality, but enough should be used to get the color effect, and their quality and freshness should always be such as to leave nothing to be desired.

Tall vases of long-stemmed American Beauty are still very popular, and certainly the most effective of all roses, whether used in groups of palms, on the banquet table, or in other of the many places that seem ideal for them, and for which there seems to be almost no substitute.

The use of flowers to carry the voice of condolence to bereaved ones is a beautiful custom, and one, let us hope, that will never die out. It can hardly be classed as decorative art, yet for those who have the final disposition of flowers as they are placed before the public to-day, it is a very important branch of the business, and as much care and attention must be given, and as skillful treatment in the arrangement, as for any other occasion. Here, as elsewhere, simplicity has asserted itself, and the cluster of long-stemmed roses and the wreath, the least formal of all designs, are fast growing in popularity.

If we can believe the accounts of the extravagant use of roses thousands of years ago, and they appear to be authentic, our most extensive decorations are as nothing when compared to these elaborate displays, as much as \$100,000 having been spent by Nero for roses for one entertainment. What they sold for by the dozen may be conjectured from the following, copied from Mr. Parsons' book on "The Rose," published in 1847.

"If the Egyptians cultivated roses for transportation to Rome during the Winter, they must have had very extensive plantations for the purpose.

"The exportation could not have been of loose flowers or they would have been withered long before the termination of the voyage. Neither could it have been of rooted plants in a dormant state, as nurserymen now send them to every part of the world, because the Romans had at that time no means of causing them to vegetate and bloom in Winter. On the contrary the cultivators at Alexandria and Memphis must of necessity have sent them away in the vases and boxes in which they had planted them with that object and when they were just beginning to break from the bud, in order that they might arrive in Rome at the moment they commenced expanding.

"At that remote period, when navigation was far behind its present state of perfection, the voyage from the mouth of the Nile to the coast of Italy occupied more than twenty days. When this long voyage is considered, and also the quantity of roses required by the Romans to enwreath their crowns and garlands, to cover their tables and couches and the pavements of their festive halls, and to surround the urns which contained the ashes of their dead, it is evident that the Egyptians, who traded in roses in order to satisfy the prodigality of the Romans, would be compelled to keep in readiness a certain number of vessels to be laden with boxes or vases of rose plants so prepared as not to bloom before their delivery at Rome.

"The cost of roses thus delivered in Rome must have been immense, but we do not find a single passage in ancient authors which can give any light on this point; they only tell us that nothing for the gratification of luxury was considered too costly for the wealthy Roman citizen."

What would rose bushes in bud, such as we know them to-day, look like after a three weeks' journey by sea? They must have been impregnated with the same blood as Burbank's fadeless flower; in fact, we are led to wonder if the roses of that day were roses at all, or at least such as we know them now.

It appears to have been the custom at that period to use flowers most lavishly, and particularly for dinners, and all social occasions, and for the dead. In addition to the decorations for the table the couches upon which the guests reclined were elaborately decked with roses, as were also the floors of the rooms Cleopatra covered the floors of her dining rooms with

DECORATION FOR LUNCHEON GIVEN TO PRINCE FUSHIMI, AT BELLEVUE-STRATFORD HOTEL, PHILADELPHIA

Work of the William Graham Co., Philadelphia

have now been in use for many years, particularly by those who have grown them, and have them at command when flowers are scarce. They are now in more general demand, and best samples of highly colored leaves make good prices in market. The broad leaves are often used for the foundations of various funeral designs. Chaplets made of these, with a cluster of white flowers at the base, may be given as an example; and when well made they are very effective. While about croton foliage, I may say that I have seen perfect plants cut off close to the pots to be used in floral arrangements when tops from older plants would have served the purpose equally well. This has seemed rather extravagant. There are some sorts, such as Laingii, elegantissimus, angustifolius, and other narrow-leaved sorts which make terminal growths, which are almost devoid of green, and these tops may be cut, and used most effectively for table decorations. I have used the narrow-leaved golden tops for bouquets with good effect. Of course it is only for special work that these tops can be used, and to send them to market for chance trade would be a mistake.

I might add that the galax, which the Americans have found so useful, was introduced into this country (England) over 100 years ago.

Cut Ferns Are Not Keeping Well.

HINSDALE, MASS.—The fern dealers in town, says a local daily, are complaining that the past Winter has been a hard one for the keeping of the ferns, large numbers of them which have been kept in cold storage having spoiled. Whether the fault lies in the condition of the stock when picked or in the conditions existing during the Summer's growth is not known.

chal Niel and Lamarque, small and insignificant as, with the exception of the Marechal Niel, they appeared, they soon relegated the old favorite to the background, and finally to oblivion.

How I remember the weary hunt in the early '80s from one greenhouse to another over the Hoboken hills, gathering in a few Bon Silene and Safrano here and there, and possibly a few "Jacks," which were then being forced in small quantities, but which soon took the lead as the most popular rose. Two or three hundred buds was then considered a large stock, and well worth the one or two days' journey necessary to get them.

The decorative features of the flower did not count for much until the long-stemmed hybrids made their appearance. The advent of Ernst Asmus's "Glory of Paris" (Anna de Diesbach) made a great sensation; this was followed by the Ulrich Brunner and Mrs. John Laing. Then came the new teas, the Catherine Mermet, followed by the Bride and Bridesmaid.

It was, however, that queen of roses, the American Beauty, introduced to the public by the Field Bros. of Washington, that placed the rose in the van as a decorative flower. Now no important decoration appears complete without a liberal representation of this variety to add dignity to the occasion.

To a certain degree, Dame Fashion must be reckoned with in floral art, as there are fashions in flowers and floral devices, the same as in dress.

Peter Henderson's book on the art of bouquet making and the general arrangement of cut flowers was the recognized authority of his period. The close, compact form presenting solid masses of flowers without foliage was then the fashion, and the details of arrangement are minutely described in this work. Since then, with the great strides made in the cultivation of flowers and the production of long-stemmed

rose leaves to a considerable depth, and over them placed a fine net, so that her guests might tread the floral carpet without inconvenience. It was the custom to cover the beds of the guests with roses, and some who slept under layers of rose petals were annoyed beyond measure if any of them should start to curl, indicating they were not fresh. I fear that some of their descendants are among our patrons of to-day.

The rose has many rivals as a decorative flower. The chrysanthemum, the carnation, the lily, and even that butterfly of fashion, the orchid, are all in the race for popularity. But the rose, endowed with so many points of excellence, is still the one great favorite.

One thing more may be said of the rose that can hardly apply to any other flower, and that is, its changing beauty. As a bud we admire it, and as it slowly develops until half blown, it grows more and more beautiful, until finally, when fully expanded, it takes another form and gradually fades away.

"Oh, there is nought in nature bright,
Where roses do not shed their light!
And when, at length, with pale decline
Its florid beauties fade and pine,
Sweet as in youth, its balmy breath
Diffuses odors e'en in death."

An Impression of the Inaugural Ball Decorations.

In speaking of the recent inaugural ball, at which he was present as a guest, Frederick W. Kelsey, nurseryman, New York, says:

"The description of the decorations for the inaugural ball in last week's Florists' Exchange was well expressed, but no word picture could convey the artistic beauty of those decorations as they appeared during the festivities that evening. The beautiful effects produced were a constant delight to the thousands of guests present, and called forth frequent commendation. Both in arrangement and detail the decorations bore evidence of a master hand in charge, and it is doubtful if a more artistic and effective floral embellishment on so large a scale has ever before been accomplished in this country. The difficulties to overcome in producing this result were the better appreciated by those who had previously seen the interior of that "barracks of a building" known as the Pension Office. It has been described as an architectural monstrosity, 400 feet long, "and about 400 feet high." Although this large and unattractive room is said to have been planned of that size for the purpose of providing a room sufficiently large to accommodate the ten or twelve thousand persons attending the inaugural ball, a more barn-like unattractive place for such a function, before taken in hand by the decorators, could hardly be imagined.

"The transformation accomplished by the Messrs. Small was therefore all the more noticeable, and adds another object lesson in proof of the position in high art now attained in the florists' decorative profession.

"The charm of the floral and foliage effects was accentuated by the brilliant electric illumination, making the vast space from floor to ceiling and in front of the balconies resplendent with light, and thus bringing into bold relief the large evergreens and palms; and the colored muslin, so effective, as the background.

"When I entered the room with friends about 9 o'clock, just prior to the grand march, the scene both from the floor and the balcony impressed me as being one of the most beautiful in harmonious decorative effect that I had ever seen, and this was frequently remarked by many during the evening. The sight of such a bower of beauty is not only 'a joy forever' to those who witnessed it, but reflects the greatest credit upon the authors and upon the craft and profession generally as well."

Tales of a Traveler. Southern California.

JOSEPH WOLFSKILL—THE GRACE HILL NURSERIES.—These are situated a couple of miles out from the business section of the city and have now been in existence only about three years. The visitor to this concern will find a very modern place, and one which will compare favorably with the places of colder climates. He will find a place substantially built and one that is run much as an eastern place is handled. "Never do to-day what can be put off until to-morrow," is the general motto of the grower in California; but here the motto is reversed and the work is kept up. The place is clean and orderly and "cleanliness is the first principle of good growing" is the rule which applies here, as it should apply everywhere. The firm is very fortunate in having H. W. Turner, who was formerly with the Gasser Company, of Cleveland, Ohio, as its foreman, and to Mr. Turner is due a great deal of credit. The place comprises, as a whole, about 60,000 feet of glass and is divided into thirteen different houses. Carnations are the main crop, although roses and other stock get their share of attention. The place was built some two years ago, and Mr. Turner personally had charge of the construction. California redwood has been used largely for building material, and the houses are constructed substantially, iron being used largely in construction. Large glass, with redwood sash bars, makes up the roof, and for ventilators Hippard's Standard is the machine which does the work. The heating is done by two boilers made by the Pennsylvania Boiler Works, and crude oil, which is both abundant and cheap, is the fuel.

About 25,000 carnations are grown, and nearly all the varieties are of eastern production, Mrs.

Thomas W. Lawson, Enchantress, Harlowarden, Nelson Fisher, Mrs. Patten, Lady Bountiful, The Belle, White Lawson, Estelle, Queen Louise and Governor Roosevelt being planted as leading varieties; Flamingo, Lillian Pond, Governor Hinsdale, Indianapolis, Apollo and Prosperity ending up with those who also ran. Nelson Fisher and Mrs. Patten are both very well liked, and these will be more heavily planted, while Enchantress, which does so well all through the State, will retain its place as the leading light pink. A batch of red Lawson has been grown from a sport which came here, and here, as elsewhere, it is lacking the color which a really good scarlet carnation should have.

In the rose section American Beauty are by far the best, and they are very well grown, indeed, but Mme. Abel Chatenay is also very popular, and it will be more extensively grown. Bride, Bridesmaid, Perle des Jardins and Golden Gate complete the list of roses. Two new houses are now under way which will be planted to American Beauty the coming season.

A nice lot of Harrisii lilies and a house of ferns were looking well. Adiantum Croweanum is a bit dark in color to be popular here, and A. cuneatum is very well grown and is relied upon for cut fronds. Some Boston ferns and a few Personi make up the list, but Nephrolepis Scottii is to be added. There is a fern sold here in Los Angeles under the name Nephrolepis philippinense, or the Philippine fern, which resembles Scottii somewhat, but has not the qualities which make Scottii a leader among the new ones.

The lath house planted to Asparagus plumosus is a very interesting one, and the plant does well with this treatment. The house is neatly kept and the stringing is carefully attended to, and in all respects the plant is grown as it is in the East, aside from the fact that it has no heat beyond that which nature supplies, and is protected from the sun by lath. The firm intends opening shortly a very fine store at 210 West Second street, which will be run as an eastern store is, and here Mr. Wolfskill will sell his own product. The quality of the stock produced by this firm, in comparison with the one-side stock which all the growers handle, should make this, in the near future, the best florist store of Southern California.

W. R. PIERSON.

Vagaries of Some Hardy Plants.

By HERBERT GREENSMITH

To thoroughly understand the vagaries of some plants is quite an art. One must be pretty well versed in his subject to overcome them, and the best of us may and do make failures, and often very carelessly too. I think, sometimes, plants have their whims or peculiarities somewhat like individuals, and are very sensitive to touch, or are very particular when they are touched, and thus resent the kindly influence of many an ardent and enthusiastic plant or flower lover in an effort to move them around to more congenial surroundings, or to establish them in more permanent positions. No matter how careful and painstaking we may be, our efforts, apparently, result in disastrous failure. I say apparently. Some years ago, toward Autumn, I was being shown over a collection of hardy plants, and coming in our wanderings across a blank space, with no other signs but a written label to indicate where a batch of nice plants should have been growing and showing promise of coming beauty by large, prominent, elder-like foliage, and by their rather tall ascending flower spikes, I was told by my host and guide a very sympathetic story as to how he had imported half a dozen or a dozen plants, I don't just remember which at present, of a beautiful Japanese plant, and how beautiful and healthy it grew in pots, how careful he was of them and how nicely he had planted and nurtured them, giving them every care and attention he knew or thought of—and, alas, they had died—and allow me to say here, my host was one of the most intelligent plantmen I know of. But in his anxiety to perpetuate his plants, two important points after planting, if not before planting, had been overlooked, viz, shade and moisture. Many a choice plant is nourished with great care until planting out season arrives, and is then put out in the open, regardless of its nature to shift for itself, and so it proved in this case. The Spring and Summer months had not been over-productive of moisture, otherwise the plants would have made some growth unless planted exceedingly late; but the hot Summer sun would have scorched or burned the foliage. All around these plants, in luxuriant growth and freely flowering, were asters, boltonias, sunflowers, heleniums, rudbeckias and other Fall flowers. But the foliage of these plants had gradually died off, and the plants accounted dead. I stooped down, drew away with my hands the dirt from where the plants had been put, and, to the delight of my surprised host, exposed the fleshy tubers and roots of his plants, quietly resting and awaiting a succeeding favorable Spring season to restore them to life and beauty, which it did, but in a more favorable situation. They had raised their protest; their wants had been studied, and, given a more favorable situation, they rewarded in an amazing manner their owner the following season.

I think sometimes a little more explicit information regarding new plants as to habitat and natural surroundings in their native haunts would be of great help to a planter, for with many people a plant is a plant; and how many plants are ruthlessly destroyed by being torn away from their native haunts and planted in garden or border irrespective of location, position or soil! Whether they grow out in the open pastures or the shady woodland, they get no differen-

tiation in planting; are gathered at any season, and all must go into the open nursery row, bed or open border. I was called away last Fall to examine a hardy border. The complainant said her plants were all dying. On arrival I found she had been out collecting, and had brought in hundreds of *Gentiana crinita*, *Lobelia cardinalis* and several other Fall flowers, and in order to make room for them, they were so beautiful, nearly everything else had to be moved. Consequently, a mass of dead and dying flower stems met my gaze. Plants will not stand this treatment, and the plants in question, as well as the ones previously mentioned, the *acteas* and *cimicifugas*, will resent this treatment nearly every time. In nature, or in a wild state, they are found growing mostly in shady or partly shaded places, and in such they reach the acme, shall I say, of perfection. No; for, if properly treated, they improve with cultivation. But the best two patches of *Lobelia cardinalis* I ever saw were growing, one on the borders or outskirts of a bush lot, and the other in a semi-open spot in the deep woods, and in both instances the plants had been covered over by a running stream of water during the Winter and Spring months. And what a delightful treat to suddenly come upon such a blaze of color. In one instance, the plants could be counted by the hundreds. The *cimicifugas* don't take kindly to fully exposed situations, while the *lobelias* make admirable plants.

Another good early Spring-flowering plant, which is always eagerly sought for, and yet never seen to perfection outside of its boggy or muddy haunts, is *Caltha palustris*. It will live in a somewhat clayey soil and make a fair showing in Spring. But a very near neighbor to it, *Oenothera fruticosa*, makes one of our best and most desirable hardy plants, and for a long season is a veritable shower of golden yellow. And, rather strange to say, it can be moved with impunity at almost any time with but slight precautions.

Anemoneopsis grandiflora, a very rare plant in this country, but exceedingly pretty when in bloom, very similar in appearance to the anemone, but with a rather purplish lilac tinge running through its pearly white, stiff flower petals, which are almost purple on the under side, is another plant which delights in a rather shady position and a deep, rich soil. With me it always seemed to resent removal, and its large, rich, thick, shining leaves always burned if exposed during the middle of the day to the hot rays of our burning Summer sun. But, given a right position, it is a very delightful plant, both in foliage and flower.

Romneya Coulteri has proved a conundrum to many very good gardeners, and my first effort with it also was a failure. But failure only makes me more determined to succeed with a plant, and this one I can now handle with ease. Its requirements are simple. It is not what we might call a good, hardy plant for the masses; neither do I think it would prove hardy much beyond Philadelphia, and not always there without protection. But I have pulled it through with good protection, and had it flower profusely, while the following Winter, with only a sash over it, it succumbed. So it is best to be on the safe side, and just before hard freezing comes, dig it up and pot and store it in a cool house during Winter. In digging, many short pieces of root will be broken off, which, if properly taken care of, and cut up into pieces two or three inches in length, and laid into a pan in a mixture of peat and sandy soil, will soon come up and make plants suitable for three-inch pots by the end or middle of May. But don't try to rush them, as they resist heat in the early stages. The roots on the older plant may also be shortened up for this purpose. The plant can also be raised from seed. If sown in the Fall, if the seed is fresh, it may come the next Spring, or it may not come till the second Spring. Patience is a virtue in raising *Romneya Coulteri*, or California poppy from seed. Propagation by root cuttings is by far the cheaper and easier method.

Many other hardy plants have their similar vagaries and wants which must be studied. *Mertensia virginiana*, or our native Virginia cowslip (why it should get such a name is beyond my comprehension) is one of our most beautiful native plants, universally admired for its lovely, large, bluish-grey foliage and its handsome clusters of sky-blue flowers, turning to rose with age. It is seldom sent for from the nursery until it has commenced to throw out its leaves and push up its flower stems; the result is it soon dies down and often disappears entirely. On account of its early, rapid Spring growth and flowering season, it ought to be planted in the Fall, or, at least, as early in the Spring as it can be got into the ground. The same rule applies to *Papaver orientale*. How much disappointment would be avoided if we could only induce people to plant this flaming colored flower in the Fall instead! A large number of the plants sent out by nurserymen in the late Spring, although pot grown, prove a failure and disappointment. In many cases the check suffered by the late removal sends the plant to its period of rest and, many people believe, its death. But this is a mistake. The oriental poppy has two periods or growing seasons—the early Spring and the early and late Fall months—with a period of rest during July and August, and, as they commence to make their growth again in September, this time on is the best for their removal. Oriental poppies may be easily raised from seed sown in the open ground in very early Spring, and allowed to remain in their seed rows without disturbance until Fall, when they may be dug and potted up at will. By this time the majority, with good cultivation, will be suitable for three-inch pots. Choice, new and rare varieties, though, must be raised by division and by root cuttings, the smallest pieces of which will quickly grow and make plants. I usually use pieces from two to three inches in length, and either insert them in sandy soil or pot up at once into 2 or 2½-inch pots.

Review of the Market

NEW YORK. While there has been a general weakening in prices of nearly all kinds of flowers, it has been somewhat easier to clear out from day to day than it was last week, owing chiefly to the milder weather, which has brought out the street men in full force. Values on roses of all varieties have taken a decided drop; these flowers are increasing in numbers every day, and the call for the best grades is the weakest.

Fancy carnations are quite plentiful, and they are now going at such low figures that the ordinary grades are a somewhat difficult proposition; one dollar a hundred is considered a good average. The supply of bulbous stock has shortened up a little, still there is enough to fill all requirements, and with the exception of Golden Spur and Von Sion narcissus, all is going below the \$1 mark. Lilies are coming in very heavily, and while good long-stemmed blooms command a fair price, the short-stemmed stock is realizing \$2 and \$3 per 100.

Lily of the valley goes very slowly, and violets still remain at last week's figures, with occasional drops to \$1 per 1,000 in order to make a clearance.

Smilax, asparagus and adiantum, when of good quality, are finding a fairly good call, but poor stock is hard to move.

BOSTON.—During the first few days of the Lenten season flowers of all kinds were at a standstill, but Friday and Saturday prices dropped and there was a general clearance. Saturday everything was cleaned up pretty well. Perhaps roses have shown the biggest slump of any, from \$1 to \$3 now being the average price for the general run. American Beauty have remained at a fairly good figure, the best grades yet bringing \$6 per dozen. Liberty bring fairly good prices; and a few Meteor are seen.

Carnations have also dropped in price, running now from \$1 to \$3; extra fancies bring about \$4 to \$5.

Bulbous stock remains practically about the same. Lilies are very plentiful. Violets are druggly, 300 for \$1 being the average for the best grades. Adiantum is scarce. Sweet peas are plentiful; and lily of the valley remains unchanged.

J. W. D.

CHICAGO.—Business since the advent of the Lenten season has been dull, and large quantities of stock are left over each day. Prices are considerably weaker. Some fears are entertained that the present weather will force out stock too early for Easter, causing a shortage in some lines at that time. American Beauty are now in ample supply, the demand not being very heavy locally. Inferior grades are not moving as freely as could be desired. Bride and Bridesmaid are becoming more plentiful each week, and, in some instances, the quality has deteriorated somewhat. Prices have dropped a little. Fancy grades can be bought for the same figures that medium stock was bringing a few days ago. The supply of carnations is accumulating, and, in some instances, sales are made on hold-over flowers at what might be called Summer prices. Shipping trade has been very good this week, and it is hoped that the market will shortly take an upward turn. Violets do not seem so abundant as a week ago; a great many inferior flowers are seen around, selling for little or nothing.

Harrisii lilies are also becoming more plentiful as the season advances; the demand for them at present is not very heavy. Callas have been in over supply for the past six weeks, selling at low figures. Tulips are abundant, and the demand holds firm; prices are about the same as last week.

R. J.

INDIANAPOLIS.—Early last week local florists were facing a huge amount of stock, and fears were entertained that much would go to waste. Heavy funeral work for nearly a week turned the market in the opposite direction, so that the week ended with no surplus on hand. Out-of-town retail trade has been unusually brisk for March; a number of decorations have helped the retailers rid themselves of plants.

Select roses are not plentiful, though there seems to be an over-supply of seconds. The best Bridesmaid, Bride and Golden Gate wholesale at \$8 per 100; seconds, \$4 per 100. Mme. Abel Chateaux, of unusual quality, are being received; some of them with three-foot stems bring \$2 per 100. Select 36-inch American Beauty realize \$4.50; 24 to 30-inch, \$3; 10 to 12-inch, \$1 per dozen.

Carnations are not so plentiful as they were last week, but no change in price is noted. Many of the inferior grades are used for openings in the surrounding towns.

Tulips, jonquils, narcissus and Roman hyacinths sell at \$3 to \$4 per 100, and may be had in any quantity. Sweet peas are readily bought by the retailer at \$1 a 100. Harrisii lilies and callas are very plentiful at \$1.25 to \$1.75 a dozen. Marie Louise violets are abundant at 35c. to 75c.; Lady Hume Campbell (hot-bed grown) sell at 20c. to 30c. per 100; Princess of Wales, extra quality bring 75c. per 100.

I. E.

WASHINGTON, D. C.—The advent of Lent has not so far made any material difference to business; on the contrary, it has been quite brisk, and the call for both cut flowers and plants has been above the average. American Beauty sell at from \$7 to \$15; Liberty, \$4 to \$7; Kaiserin Augusta Victoria, Souvenir du President Carnot, Bride, Ivory and Golden Gate, \$2 to \$3; Meteor and Bridesmaid, \$2.50 to \$4 per dozen; Ilac, \$3 to \$5 per dozen sprays. Carnations are quite plentiful; the best stock brings from \$1.25 to \$2.50 per dozen. Lily of the valley is selling well at \$1.50 to \$2.50 per dozen. New York violets bring \$1.50 to \$2 and singles from \$1 to \$1.50 per 100. Sweet peas sell readily at 75c. to \$1 per bunch, white and pink being the favorite colors. Mignonette, 50c. to 75c.; pansies, 25c. to 35c. per dozen. There is a good demand for cut tulips and Dutch hyacinths, which bring 50c. to \$1 per dozen; narcissus goes at 75c. to \$1 and Roman hyacinths, 50c. to 75c. per dozen.

The sale of plants has increased considerably this week. Azaleas in 6 to 7-inch pots brought \$2 to \$3.50 each; those in 4-inch pots, \$1 each. There is a demand for genistas at \$1.50 to \$2.50 each. Pougainvilleas, in 5 and 6-inch pots, sell well at \$2 to \$4 each. The demand for Nephrolepis bostonensis and Piersoni has been heavy. Dutch hyacinth in 6-inch pans, bring 50c. to 75c. each; pansies, in pans, 2c. to 50c.; and violets, in pans, 50c. to \$1 each.

M. C.

ST. LOUIS.—The cut flower trade has been rather dull since Lent began. As stock in all lines is very cheap, the retailers are making fine window displays. The growers are all busy preparing for Easter. Some are afraid that stock intended for that festival will come in ahead of time, especially Harrisii lilies, which are coming on quite fast. The past week the commission houses were again crowded with extra fine quality carnations, roses, violets, and bulbous stock. Prices are down on all first-class flowers. Extra choice stock in carnations, such as Enchantress, Mrs. T. W. Lawson, Prosperity, and Governor Wolcott, went for \$3 per 100; next choice, \$2; and common stock from \$1 to 75c. per 100. Violets are still coming in in quantities, and all the retailers lay in a big supply each morning. The price is 30c. in 100 lots; 20c. and 25c. per 100 in 1,000 lots for the finest quality; short-stemmed stock goes as low as 15c. per 100.

Bulbous flowers are not so plentiful this week, although in ample supply for the demand. Sweet peas are good sellers, at 60c. per 100 for short stems and 75c. for long. On all greens the prices are as quoted last week, with plenty of everything for the demand. Smilax sells well, while other stock goes slow.

ST. PATRICK.

PITTSBURG.—The first week in Lent has checked out flower trade somewhat, and there has not been any too much funeral work to make things lively. The weather is also against the plant and seed trade, being more like Winter than Spring, the thermometer down to 20 degrees. Prices remain pretty stiff, although the Lenten season is on. Good roses bring from 10c. up. American Beauty at from \$6 to \$8 per dozen, for the best, are in fair demand. Carnations bring \$3 for good ones. Tulips and daffodils realize \$3. Callas are coming in strong; 10c. is the price. Harrisii bring about the same. In the plant line, shipping trade is fair, but home trade is rather slow.

E. C. R.

CINCINNATI.—Cold Spring weather is now with us; and stock will undoubtedly pile up somewhat. Business remains fair; prices being as reported last week.

E. E. G.

MILWAUKEE.—The advent of Lent has not as yet had any noticeable effect on business. The past week it was exceptionally brisk; stock in nearly all varieties moving at profitable figures. The only superfluous items are callas and Lilium longiflorum. They move slowly, even at very low figures. Good tulips and daffodils are scarce just now, as most growers are holding them back for Easter. The quality of roses and carnations is exceptionally fine, and the demand keeps pace with the supply. Violets are plentiful and but few are left over, except those of inferior quality.

The outlook for the Easter supply is bright. There will be plenty of all seasonable stock.

RASTUS.

BUFFALO, N. Y.—Last week the opening of a new theater called for some effects, and an automobile exhibition induced some demand. With several Spring store openings this week, an otherwise Lenten stagnation is somewhat held off. In instances, some forcing of sales in certain articles is attempted.

VIDI.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

NEW ROCHELLE, N. Y.—Robert Patterson has opened a branch store on Main street.

LOWELL, MASS.—Arthur Mellor formerly with Patten, and George Saunders will open a florist store at 30 Prescott street.

WHITE PLAINS, N. Y.—Miss Annie Conroy, of Fall River, Mass., will open a retail flower store in the Rehill Building, 52 Railroad avenue.

COLORADO CITY, COL.—Edwin P. Pierce, formerly gardener at the Printers' Home, has engaged in the florist business, commercially, at 209 North Eighth street.

BUFFALO, N. Y.—The J. H. Rebstock Co., florists, has been incorporated; capital, \$10,000. Incorporators: J. H. Rebstock, E. G. Rebstock and A. W. Hickman, all of Buffalo, N. Y.

PALMER, MASS.—C. A. & L. A. Royce have bought the Randall place on North Main street, and will erect greenhouses on the property. They have for some time conducted a similar business on Maple street, but have been cramped for room. Their new purchase will give them ample area for the extension of their business, which has been very successful.

EAST ORANGE, N. J.—The Purdue flower and seed business at 373 Main street has been purchased by Henry J. Reichy and George Simpson, who will continue it at the old stand under the firm name of Reichy & Simpson. Mr. Reichy has been an employe of the establishment for the past twenty-five or thirty years. Mr. Simpson was employed by George Purdue for a number of years. Miss Lewis, who has been connected with the establishment as office manager for ten years past, will remain with the new firm.

McKEESPORT, PA.—Application has been made by J. H. Orth, John Hodgson, Joseph M. Johnston, and Chas. T. Moore, for the incorporation of the McKeesport Floral Company under the laws of the State of Pennsylvania, to operate greenhouses, etc. The capital is \$50,000. The interests of J. H. Orth, who has been in the business in this city for a number of years, are taken over. The greenhouses located at Versailles will be removed to the Seitz farm on the State road, where a large tract has been purchased. New and larger houses will be constructed. The store now conducted by Mr. Orth on Fifth avenue will be continued and Mr. Orth will be in charge.

BOWLING.

NEW YORK.—On Monday afternoon the undernoted scores were rolled:

J. A. Manda	163	128	142
W. H. Siebrecht	169	179	125
P. Kessler	172	131	164
S. S. Butterfield	131	100	100
A. J. Guttman	138	155	179
J. A. Shaw	154	142	102
T. J. Lang	154	114	...
F. C. Holt	114	151	...
J. Donaldson	136
J. T. Scott	146
C. Lenker	81
J. Pepper	96

MADISON, N. J.—Our great bowling event for the pair of boots donated by E. W. Holt came off March 8. Among out-of-town visitors were E. W. Holt, R. W. Lucas and nephew. Excitement ran high. Most of the boys had sandals and some brought special balls from home. Much of this paraphernalia was left in the alley in disgust when the result became known. Some even hinted that the scores had been tampered with. The most serenely happy man I saw was C. H. Totty, he having rolled the highest score. He said it was one of the most satisfactory games he ever played.

Below is the score. Individual count:

Totty	178	201-379
Reagan	101	71-172
Frazier	148	203-351
Lucas	167	191-358
Stein	90	71-161
Schultz	180	163-342
Duckham	120	116-236
Heermans	160	184-344
Koch	181	139-320
Jones	146	193-339
J. Lucas	178	132-301
Shannon	182	171-353
Herrington	119	114-233

Totty got the boots, and Stein got the booby prize, a pair of miniature boots. He declares he would not trade with Totty. In a test of individual scores, Herrington lost to Duckham, and he had to blow the crowd to a box of cigars.

EDW. REAGAN, Secretary.

FIRMS WHO ARE BUILDING.

PLAINFIELD, N. J.—W. H. Forristel, Bellview Avenue Nursery, is building a carnation house, 21x50 feet.

McKEESPORT, PA.—The McKeesport Floral Company will build two new greenhouses, each 25x300 feet, for roses and carnations.

BUSINESS DIFFICULTIES.

PHILADELPHIA, PA.—The creditors of William L. Rementer have filed a petition to have him adjudged an involuntary bankrupt. The claims set out in the petition were: Henry F. Michell Company, \$75.64; George C. Watson, \$61.60; Keller Pottery Company, \$73.50.

ORANGE, N. J.—Robert McArthur, formerly with Eugene Delano on Orange Mountain, has been engaged by Colonel Daniel S. Lamont, Milbrook, N. Y., and has removed there.

Wm. Rennie, who has returned from California, was the guest of Peter Duff at Brighthurst for a day or two last week.

J. B. D.

RICHMOND, IND.—E. Gurney Hill talked to the students of Earlham College in chapel on March 8 on the profession and work of the florist. He illustrated his speech by different specimens of roses and carnations.

All That Use It Say "There Is Only One"

McGEE, GEARY & CO., of Salem, Mass. write:—"Send a bag of the Fumigating Kind; inquired in Boston for it; found they did not keep it. Said theirs was better, but yours has been recommended to us. Right it."
WE SAY:—"Now, don't let them fool you—buy direct; you are jobber, retailer and consumer with us; there is no middle profit man on our line. Seedmen don't like us over much."

A FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

THE WEEK'S WORK.

Timme's Timely Teachings.

Cold Frames.

No greenhouse establishment, large or small, should work without cold frame. The larger the place, the more your stock will there be needing a treatment only made possible by the use of outdoor frames. The smaller the place, the more need is there for cold frames to afford room for the overflow of the under-size and overworked greenhouses. Cold frame need not necessarily be hidden away or kept out of sight and made to do duty in some unhandy, far away corner of the backyard. They should at all times be as cleanly kept, neat and trim a feature of the place, and as interesting and attractive to visitors and patrons as any of the greenhouses, and by no means a disfigurement to a well-appointed florist establishment.

A substantially constructed wood frame, made out of two-inch planking will serve for a number of years, will cost little, may be moved about, lowered or raised as the growing plants require it, and is, for various other reasons, to be preferred to frames built of brick or cement. Heating outdoor frames by steam or hot-water pipes from a greenhouse makes away with its usefulness as a cold frame, and does not bring it up to that of a greenhouse. The idea, therefore, does not hurt the eye by its brilliancy. If one has the heat, the pipes and the sashes, one might as well go it a few dollars more and build a sash house, which is less trying on the spinal column and easier to manage than a steam-heated pit. It is the cold frame pure and simple, which pays a high percentage on the money invested in its construction, than any other floriculture edifice.

The Use of Cold Frames.

A well regulated cold frame can be made to do good service at all seasons of the year, and its uses are manifold. It is a fit place for all kinds of bedding plants and also for young cut flower stock in the early Spring. Here, as in no other place, can the plants be properly hardened off and weaned to conditions peculiar to open air culture. There is no better place for young carnation in pots, and similar plants, awaiting their turn to be benched. All plants, requiring special treatment and protection against a scorching sun, drenching rain and dry or cold winds, can conveniently be taken care of and carried safely through the Summer in cold frames and still be given the great benefit of an open air existence. Plants, having been raised in the field and potted up in early Fall for the greenhouse, will be all the better if going first through a preparatory course in the cold frame. Hardy and half hardy deciduous and evergreen plants, wanted for forcing in Midwinter and early Spring, will fare better in a cold frame than in any other place; and many of our perennials and biennials intended for the plant trade in Spring such as hollyhocks, daisies, pansies, etc. are best carried through the Winter in such frames. And for starting the seeds of many of the best half-hardy annuals in April, no place will give better results than the seed bed under the glass of a cold frame.

Hotbeds.

It seems the old, primitive way of constructing a hotbed and heating it by fermentation offers little chance for any genius bent on improvement to try his hand. In fact, instead of being improved upon, the average hotbed to be seen nowadays is far behind those in use fifty years ago. They are neither as substantially built, nor as cleanly and neatly kept. That is because hotbeds are now only temporary makeshifts, while the hotbed of years gone by was in most cases a permanent fixture and, indeed, an institution of vast importance. Although a great many of us to-day manage nicely without hotbeds at all, there is probably none ready to deny that plants can be grown in them to perfection, that some kinds of seeds that give us any amount of trouble in the greenhouse, germinate and grow like the very weeds in hotbeds, and that any difficult, risky and obstinate tuber, root or plant, too good to throw away, often readily yields to hotbed conditions, which frequently proved the means of salvation to many a high-priced specimen.

Now, the nearer we approach Spring, the more room we need for our stock, daily being added to and rapidly filling every space available. The retail grower need not be reminded of this fact. If he is one of many, he will shove his plants closer and tighter together, build shelves over them and try to raise plants under the benches—all in an effort to create room. If he is wise, he will start a row of hotbeds. They will at once relieve the congestion in the houses. This is the time to start them.

The Making of a Hotbed.

If hotbed sashes of the standard size, three feet wide and six long, are used, four of these sashes to one frame will be found to be most convenient. They can be easily handled and moved about. A foot and a half of fresh horse manure, intermixed with leaves from the trees, if they can be had, will, from now on, furnish all the heat needed. If the beds are to be made on a hillside, or on a piece of sloping ground, well drained, an excavation a foot deep could be made for the manure. If this cannot be done, the bed of manure will have to be built up on the surface of the ground. In such a case the heat generated from the manure will not last as long or be felt as uniformly in the frame as if the lay of the land would permit the bed to be sunk a foot or more below the surface. Horse manure, fresh and not burned, but just beginning to heat, is to be used. If it is very coarse and strawy, a little more will have to be taken. It will then be all the better; the heat will be less intense, but longer lasting. Tree leaves mixed in with the manure have the same effect, and, where they are easily obtained, may be used all alone without any manure, if a bed only moderately warmed, but lasting for months, is wanted. Horse manure, new and fresh from the stables, should first be piled up into a conical heap, allowed to spend its greatest heat, and be forked over once before it is built up for the hotbed. An even layer, 18 to 20 inches high and a foot or so longer and wider than the frame, will be sufficient at this time of the year. After this bed of manure is well trodden down and made firm, and the surface made even and level, the frame is placed on top of it, banked up all around on its outer sides with manure or soil, and the bed is now closed by placing the sashes on the frame. Of course, the sashes should fit the frame exactly, should rest on crossbars and be given plenty of play room, to render the opening and shutting of the bed rapid and easy work. In a day or two after the bed has been set up the temperature in the manure will begin to rise again, when the bed should be opened a few inches to allow the first rank heat to escape; but as soon as the temperature has fallen to 75 or 80 degrees, remaining stationary at about that point for a day or longer, the soil may go in. A layer of three or four inches of good, mellow garden soil nicely sifted and firmed down, after being evenly spread and leveled, will make a good bed for the starting of seeds, better for most of those kinds which have now to be sown than any place to be found in the most modern and costliest glass house.

Taking Care of Hotbeds.

Instead of sowing the various kinds of seeds broadcast over squares marked off in the hotbed, it will be found more convenient to sow them in drills, running from the lower to the upper side of the bed, or parallel with the length of the sashes. If the drills are a few inches apart and correctly labeled, the cleaning and weeding and the taking out of the seedlings, ready for being potted up, becomes an easy matter. Seed boxes and trays with bulbs and roots may also find a place in the hotbed, as also plants in pots needing encouragement or a moist and steady bottom heat. The temperature in the frame is regulated by raising or sliding down the sashes, little in cold

weather, more on nice days, but every day some, if only for an hour, as long as the fermentation of the manure supplies heat. Fresh air must be admitted when the seedlings are above ground, every day and, should the weather permit it, also all night. In very cold and rough weather the warmest part of the day must be chosen for any work requiring the opening of the beds, such as the sowing of seeds, taking out plants, weeding or watering.

A hotbed in full operation needs watching, and it will be found to be a good plan, and a much safer one, to entrust the management of a row of hotbeds to one reliable and level-headed person on the place than to let every one of the entire crew have a hand in it; one depending on the other for an early opening of the hotbeds on bright, sunny days, or the closing of them, when the wind has suddenly shifted to an icy norther, or a cold night sets in before anyone remembers the wide open sashes. Few growers can afford to run a risk of this kind, because such a neglect would probably mean the loss of thousands of plants, and sometimes the total ruin of most valuable stock. When the days and nights become warm and Spring is with us, the danger from this source is greatly lessened. Sashes may be opened wide early in the morning, and, perhaps, even left open all night. Later on the sashes can be taken off entirely, the bed by that time being a cold frame rather than a hotbed. The sashes are now only needed occasionally as a protection against too heavy rains.

Annuals for Florists.

Some of the annuals and biennials suitable for the bedding plant trade, can best be sold when in full bloom, and must, therefore, be started quite early. If the seeds of lobelias, torenias, begonias, pansies, daisies, salvias, snapdragons, verbenas and a few others were sown in the beginning of the new year, as advised at the time, the plants should be beyond their first transplanting and soon ready for their final shift. Some of these may be large enough to be worked up for a four-inch pot culture. It pays to have that kind of stock when the plant trade is on; if well grown, bushy and compact and in full bloom, any number of the plants can be sold at good prices. Suitable for this purpose are dwarf snapdragons, petunias, daisies, begonias, salvias and Phlox Drummondii nana compacta. They yield a larger profit than any of the more expensive regular greenhouse plants.

Many varieties of the common garden annuals and biennials are valuable for the florists' own flower trade, furnishing any quantity of desirable material for cutting during the Summer months. The best of these are mignonette, candytuft, alyssum, wallflower, stocks, asters, galliardia, centaurea, snapdragons, carnations and single dahlias. The first sowings of these should now be made, to be followed by others in May and June. Cosmos, also coming under this head, need not be sown until the last week of April, or even later.

All the varieties of bedding annuals, profitable to handle by florists, should now be started, if not already in boxes or pots. The last week of March and the first part of April is the right time to sow the seeds of nicotiana, single dahlias, ageratum, petunia, aster, browallia, celosia, marguerite carnations and Chi-

nese pinks. For the grower's own use, all these will do just as well, if coming out of flats at planting time; but not so with our customers. Most of these are inexperienced, and to some of them the work of planting out is something new—the first attempts in an effort to embellish the grounds of a newly acquired own home. Plants coming out of pots will invariably give better satisfaction, and, then, there are two reasons why we should sell all bedding plants out of pots rather than flats, both of them more weighty than the foregoing: twice as many plants can be sold out of pots (and they bring double the price) than plants out of flats. Pansies are sold in clumps out of frames. This is the leading kind in all this class, and enormous numbers are handled every Spring. Next to pansies come asters, salvias, lobelias and petunias, great numbers of these finding their way into the gardens of the people. The other varieties are of minor importance. FRED W. TIMME.

Milwaukee.

News Notes.
Carnation night brought out a very large attendance at our last Florists' Club meeting. There was a fine display of Enchantress, Mrs. Lawson, Flamingo, Lady Bountiful, the new Red Lawson and Robert Craig. Lunch and refreshments were served.
B. G. Lambros was forced into bankruptcy the past week. The store was recently closed by the sheriff to satisfy a judgment of John Lambros of Chicago, but several of the creditors petitioned the court to appoint a receiver before the stock was sold to satisfy the former judgment. Mr. Lambros conducted one of the finest stores in the city. Heavy expenses in fitting it up and lack of capital to successfully continue the business were the principal causes of the failure. As the store is excellently located, some arrangements may be made to continue it as a florist's establishment.
Spring openings in the millinery and department stores are consuming large quantities of stock, and some heavy orders are being placed.
Active preparations are now making for the supply of Spring bedding stock and most growers in this line are busy shifting and putting up. The usual number of Dutch bulb men have called, several of them passing through last week.
C. C. P.

Kalamazoo, Mich.

Trade Items.
Business continues very fair, with quite a good amount of funeral work; shipping orders are also reported as quite lively. There is an abundance of good stock and wholesale quotations are shaded as conditions require.
Van Boehoves display a nice collection of cut flowers and plants in their downtown windows, while the Central Nursery Company makes an elegant display of violets which, I am told, are good sellers. Mr. Cook reports business very good with him, and feels encouraged to persevere with his venture. Grovert & De Smit are so well satisfied with the season's business that they are planning further extensions for the Summer. They also intend to plant roses as well as carnations this year, and their alterations are being made to their requirements.
S. B.

Every Florist Should Have It.
I like The Florists' Exchange very much and think it should be in the hands of every florist. Not a single number comes to hand that does not give the trade full value for the year's subscription.

St. Louis.

Crews of the Week.

J. F. Windt has been laid up with very sore hand for the past two weeks. It has been reported that blood poisoning has set in, and that serious trouble is looked for unless a change or the better comes soon.

Carew Sanders pleased his many friends in the trade by calling on them Monday, looking in the best of health. Mr. Sanders has been confined to his room nearly all Winter with a bad case of rheumatism. He claims he passed Dr. Osler's chloroforming age eighteen ears ago.

The Plant and Cut Flower Growers' association will hold its first regular meeting on next Wednesday afternoon, March 22, at 3 o'clock. President Halstead says that he looks for a big attendance, as a number of important matters are to be discussed.

The Fall chrysanthemum show, to be held by the Florists' Club, will be, from reports of the executive committee, one of the largest ever given by the club. The management is in good hands; and if all the members will lend assistance here will, no doubt, be a successful how. A few special prizes have already been placed, and the Shaw prizes await the return of Professor Trelease, of the Missouri Botanical Garden. These prizes amount to \$500, and the members have guaranteed \$500, making \$1,000 in all already in the hands of the executive committee.

Henry Emmons, of Belleville, Ill., reports that he will plant 50,000 ever-blooming tuberose this Spring, also the same number of gladiolus. Cut flower trade has been good up to Lent.

Miss Schnell, of East St. Louis, Ill., who buys her stock on this side, says that her trade has been fine right along, and Lent don't seem to cut any figure with her.

James S. Wilson, Western Springs, Ill., who was with us last week, was made an honorary member of the St. Louis Florists' Club, also of the bowling club. He is now eligible to roll with the St. Louis team at Washington, in case we are short a man. Stranger things have happened than this.

J. D. Thompson, of the J. D. Thompson Carnation Company, of Joliet, Ill., spent Monday in St. Louis calling on the trade. ST. PATRICK.

Philadelphia.

News Notes.

A musicale will be given under the auspices of the Florists' Club on Thursday, March 30, at Griffith Hall, 1420 Chestnut street, at 8:15 p.m. This has been arranged by one of the associate members of the club; and it is hoped the trade will show their appreciation by attending. Tickets are on sale at the retail stores. The talent is the best amateur talent that it is possible to secure in this city.

As usual at the beginning of Lent business has been quiet this week, and flowers are accumulating at the wholesale establishments. Some of the plant growers report that orders are commencing to come in, so as the weather improves business will show a large increase.

Godfrey Aschmann has a new delivery wagon out this week. On each side is painted three plants in pots—an azalea, an areca and an araucaria. The work is well done.

George C. Watson, seedsman, Juniper street, below Locust, has made an assignment for the benefit of creditors. The assignee is Wm. J. Graham, an attorney. DAVID RUST.

Buffalo.

The Week's News.

Incidental to the auto show last week, some stores made special window displays. Anderson had a regular machine trimmed up with bloom with the conventional wax figure female chauffeur duly installed. Palmer's up-town store, Arthur Bey gave up the wide window to a full sized model of a "Tonneau" entire constructed on a wire moss-filled for the paneled parts being covered with bronzed galax leaves in flat layer style, while the lines and working part were outlined in foliage and red carnations. The finished effect was good, and the whole deemed a success as an advertisement.

W. W. Wells, formerly with C. J. Zimmerman, has become the proprietor of the retail place for a long while conducted by E. J. Buxton, at 11 Niagara street, having taken occupancy some ten days ago.

J. H. Rebstock's business has recently been incorporated into a stock company, capitalized for \$10,000.

Stuart Lansing, of this city, and Chester Harris, of Rochester, N. Y. have both entered the employ of S. Anderson in his Main street store.

Otto Gielles has taken an office position of responsibility with W. F. Kasling, wholesaler. V.I.D.

Pittsburg.

News Notes.

B. L. Elliott, who sold his place a short time ago to L. I. Neff, has left for California.

A flower market in Pittsburg is being talked about by some of our florists but nothing definite has materialized far.

The McKeesport Floral Company capital \$50,000, was formed lately. The promoters are the well-known florist of McKeesport, John H. Orth, and J. Hodgson, J. M. Johnston and Charles T. Moore.

Visitors during last week were: C. Baartman, the bulb grower, of Saanheim, Holland and B. Eschner, M. Rice & Co., Philadelphia.

The bowlers among the florists are talking about forming a club, so they shall be ready to enter the contest at Washington this Summer. Any one who desires to play, please notify T. Langhans, of the Pittsburg Cutflow Company.

The Botanical Society held its monthly meeting last week, which was very well attended. Dr. J. A. Shafer, formerly secretary of the society, now residing in New York made an address on "Botany Lessons from the New York Botanical Gardens," illustrated with 100 lantern slides. Dr. Shafer, an interesting talker, and his remarks were enjoyed by all.

E. C. REINEMAN.

Glad to Hear It.

Must say I am very pleased with the Exchange. HENRY HALBIG.

BURPEE'S
"Fordhook Finest" Lawn Grass
AT ST. LOUIS WORLD'S FAIR

The Only Gold Medal for Lawn Grass at St. Louis World's Fair

was awarded to us for the lawns produced from BURPEE'S "FORDHOOK FINEST" LAWN GRASS. This is the highest award possible. The seed from which these lawns were produced was exactly the same "prescription" and quality as supplied regularly to our trade. If you would have the best lawn it is possible to produce you should order this unequalled "GOLD MEDAL" MIXTURE. 35 cts. per lb. box, postpaid. By express or freight, 20 cts. per lb.; 25 lbs. or more, at 18 cts. per lb. It is the cleanest and heaviest seed on the market; weighs 25 to 27 lbs. per measured bushel.

A GRAND PRIZE for Vegetables at ST. LOUIS was won by the products of Burpee's "Seeds that Grow."

If you garden you want THE BEST, and we shall be pleased to mail you Burpee's Farm Annual for 1905—an elegant new book of 178 pages, which tells the plain truth, with hundreds of illustrations, beautiful colored plates and describes Superb Novelties of unusual merit. Write to-day! A postal card will do, while it is sufficient to address simply

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

FLORAL PARK, N. Y.—John Lewis Childs seedsman and florist, has been visiting California for a number of weeks. A Brooklyn (N. Y.) paper says Mr. Childs has purchased a \$12,000 tract at Pasadena, Cal., and will form a branch establishment there. He will also, it is said, build a fine residence there, making that city his Winter home.

MINNEAPOLIS, MINN.—The Minnesota Seed Company has been organized with a capital stock of \$50,000. The following have been elected officers: Dr. J. L. Schoch, president; F. Crone, vice-president; M. Meyer, secretary and manager, and Jacob Klossman, Jr., treasurer. It is the object of the organization to make a specialty of seed corn, and finally branch into the garden-seed industry. A large warehouse will be built at Minnesota and Center streets.

Gladioli Bulbs

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an untried seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

the speculators will breathe a sigh of relief. In the meantime, their efforts to look pleasant are painful to witness.

A movement is on foot to present a testimonial to the veteran sweet pea specialist, Henry Eckford. Although his age is over four score years, he is still hale and hearty, and would no doubt be gratified to receive some public recognition of the work to which he has devoted the best years of his life.

THE BRITISH SEED TRADE.—In a comprehensive article on this subject by S. B. Dicks, of London, appearing in the March 9 issue of the Journal of Horticulture, he says:

The sphere of operations of the British Seed Trade is bounded only by the "girdle of the earth." British emigrants are to be found in every part of the world, and, as they carry their home tastes with them, the home land is called upon to provide the means of their gratification.

One very gratifying evidence of the progress made by the British Seed Trade is to be found in the large continental business done by some of our most enterprising firms. Catalogues in the different languages, in which are quoted in the weights and currency of the different countries, the varieties most serviceable, and which can be grown and offered to the best advantage, prove that the British seedman is not behind his continental rival either in ability or enterprise. Here

it may not be out of place to say a few words respecting the seedsman's catalogue.

In these days of rush and hurry, everything has to be made easy to everybody. The seedsman has, however, not only to provide the seed, but also to advise as to how it can best be grown, and this is mainly done by means of his catalogue.

The history of the British Seed Trade during the past two centuries is one long record of solid, useful work, carried on in the face of great natural difficulties and discouragements, seldom sufficiently appreciated and never adequately remunerated.

As regards novelties, it is possibly true that Britain has not sent out so great a number as some continental countries, but those introduced have been of a more valuable and lasting character. Take, for example, broccoli and peas. In John Mason's catalogue for 1793 ten sorts of peas, all of inferior quality and productiveness, and two sorts of broccoli—the Italian white and purple—are all that were quoted.

matto; while in flower seeds the lists of calcolaria, cineraria, candytuft, godetia, nasturtium, primulas, sweet peas, and wallflowers bear eloquent testimony to the ability and intelligence of the men by whose efforts they have been produced.

CANADIAN NEWS

TORONTO.—Business is now rather dull, with stock extra plentiful and good. Outside of funeral work and a medium demand for flowering plants there is little doing.

The March meeting of the Gardeners and Florists' Association was held March 22 at St. George's Hall and was devoted mostly to carnations. F. K. Pierson Company, Tarrytown, N. Y., sent several fine lots of its new introductions. Siebrecht & Son sent a vase of their growing, of that fine rose, Killarney. George Hollis read a paper on producing new varieties of carnations. I will send a copy of the paper next week, as well as a copy of the judges' report. Weber & Sons, Oakland, Md., sent a fine vase of My Maryland, and George Hollis exhibited a few flowers of a fine white seedling. THOS. MANTON.

LONDON, ONT.—Local trade has been but little affected by the Lenten season. Flowers are of excellent quality, but the unusually cold weather prevailing has effectually prevented anything like a surplus in any line. Roses of all varieties are meeting ready sale. Carnations are probably more popular this year than formerly. Single violets, which continue exceptionally fine, are very much in demand; the doubles are showing signs of passing. Bulbous stock, as usual, is plentiful. The cold spell has necessitated some forcing of Easter lilies; but stock will be in on time and in excellent condition. The plants that are not utterly worthless of the longiflorum type, will be very fine; but, again, unfortunately there is the usual large percentage of the trash that is good for nothing but the dump. It seems to me to be getting time some action was taken to prevent this form of Japanese smartness.

The local horticultural society is beginning to get into shape for its Summer work. One innovation it has announced will be \$100 in three prizes for flower beds around the Horticultural Building at the Western Fair. The beds can be planted at any time up to the opening day of the Fair.

The greenhouses lately operated by the London Floral Company are closed down.

From advices received it appears that the Canadian Florist has changed hands; the initial issue under new management will come out on April 1.
FRED. BENNETT.

Grand Rapids, Mich.

News Items.

Nick Freyling is very sick with cancer in the stomach. William Cunningham is much improved from his last operation.

There is already talk of more building for this year; the growers have clubbed together and bought a carload of glass for immediate delivery.

Prices the past week were: Roses, \$1 to \$1.50; American Beauty, \$1.50 to \$5 per dozen; carnations, 40c. to 75c. per dozen; callas, \$2; lilies, \$2 to \$3 per dozen; violets, 10c to 20c per bunch of 25; narcissus, 75c. per dozen; Roman hyacinths, 50c.; lily of the valley, 50c. per dozen.

THE PIN OAK AS A STREET TREE

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Nursery Prospects for Spring.

Previous to the closing of Winter the prospects were but fair in both the wholesale and the retail line, but within the past few weeks the calls for stock are much better, indicating a business perhaps equal to that of last Spring, which was very good. The continuance of rather cold weather at this date, March 16, precludes the chances of an early start with shipping, which will mean a rushed and a short season. But lots of snow has kept the ground unfrozen nearly everywhere in the North, so that, with the disappearance of the snow, digging can commence.

As to the supply itself, in the wholesale line, taking first fruit seeds; excepting natural peach stones, of which there was a shortage, there seemed enough seeds to meet the demand, but none to spare. Should the season be favorable for the germination of the seeds and growth of the stocks, there should be the usual supply of home-grown seedlings in the Fall.

Of tree seed, that of the hemlock spruce was almost

maples, cut-leaved birch, Teas' mulberry, Catalpa Bungei, hemlock spruce, and even good Norway spruce and American Arbor vitae in large sizes. Good Norway maples and Catalpa Bungei are quite scarce, with high prices attached to what is available.

As nurserymen about completely filled up their vacant ground last season, the indications are that there will be hardly as much planting done by them this Spring unless very large orders clean the ground of what it now contains.

Myrobolan Hedges.

For many years past the gardeners of England have been using the myrobolan plum as a hedge plant, and from the reports of it from time to time which appear in their papers it makes a most satisfactory hedge. The nurserymen there advertise it as a defensive hedge plant, and this claim is no doubt correct, from the way it grows here. This subject is referred to now to call attention to the possibility of this plum being used in this country in a similar way to advantage. From the habit of its growth, by proper pruning it could, certainly, be made into such a thicket as would deter an ordinary animal from breaking through it. There are not many hedges of a defensive character used now-a-days. Wire has taken their places, and where it has not, the osage orange and honey locust are not always desirable, their tree-like habits calling for such heavy pruning. The myrobolan plum is but of plum tree height, so that when used in hedge shape it is easily kept under control. To those looking for a hedge of a different character from what we now have, the plum in question is recommended for trial. It is a "shrub" which

man sends the trees at his own risk, and if the customer is not satisfied it is the sender's loss, not his. Nurserymen can be found who have tried both ways, and they say one is about on a level with the other. The customer may keep the tree sent, though not approving of it, rather than raise an objection, and if no substitution is made where it would have created no difference, he may not approve of that. I believe that it is better not to have a rule, but to be guided by one's knowledge of his customer. Usually, if the customer's interest be kept in mind, as well as one's own, there will be no trouble from a substitution made with a full understanding of all the conditions, and the acceptance of the substitution to be at the pleasure of the buyer.

In the case of farmers and fruit growers, among whom the Practical Farmer largely circulates, it would be a risky business to substitute without permission first obtained. These folks buy fruits largely, and they want certain kinds often wholly for market purposes, and another pear, apple or peach than the one named, though it be nearly the same thing, might not suit at all. It is, as aforesaid, a matter admitting of no rule, but in all cases if loss there be from substitution, it is for the nurseryman to bear it!

Palms and Cacti for Fairmount Park, Philadelphia.

Under the heading, "Europe's Plants Come Here," the Philadelphia Public Ledger contains the following: "Europe's nurserymen are to contribute to the beautification of Fairmount Park and the value of the collection in Horticultural Hall as the result of a successful trip abroad made by Oglesby Paul, on money provided by residents of this city who do not care to have their names appear in the matter."

"Among the new things to be placed in the hall are palms from the collection of 507 varieties in the Kew Gardens, near London; there are now about 100 varieties in the hall. Work will soon begin, Mr. Paul said, on the reconstruction of the southwest room of the hall, for which purpose \$10,000 was recently appropriated by Councils. A new collection of cacti is to be placed in the room when finished. Daniel Newhall, of the Pennsylvania Railroad, has been of great assistance in the work of obtaining this new collection, much of which comes from Arizona."

Those acquainted with the park referred to and the collection of plants in its hall will hardly agree that the value of the collection of plants in the hall will be added to by including more palms among the 100 varieties now there. A great many visitors are of the opinion that there are now far too many palms and flowerless plants in the collection. The main structure contains almost wholly palms and foliage plants, and one wing of the building is given up to ferns. What the public most desires is a collection of flowering plants, in which line the hall is quite deficient. Those who visit the hall often will find the greatest crowd always in the wing of the building, where the few flowering plants are.

The collection of plants in the hall has no claim to being a scientific one. It is supposed to be for the gratification of the public; and the desire of everyone to visit and admire the flowering plants shows in which line additions should be made. And it is questionable whether a collection of cacti from Arizona will be of much interest in Winter, the season when indoor enjoyment is looked for. And are not many of these plants from that State hardy, requiring no room such as they are to receive?

The fact is, if there were fewer palms and ferns and cacti and more plants in flower in the Winter season, the public would feel they were getting better worth of the taxes they pay. Superintendents of all our public parks know that it is beautiful flowers that attract the visitors.

Mulberries for Stocks.

The short supply of Teas' weeping mulberry this season would suggest the time opportune to sow a lot of seeds of the *Morus alba* for stocks, as well as the making of hard wood cuttings of the same species to get up a supply of stock. Mulberry seeds sown in Spring, as soon as the ground is in a workable condition, are pretty sure to grow, and will give nice seedlings by Fall. But it will be a year or two from that time before they are fit for stocks. The aim should be to have the stocks straight, and this is best secured by cutting the young plants down almost to the ground when they are of a size almost fit to graft. This will result in strong shoots forming, strong enough and tall enough for budding, and straight, too.

Hard wood cuttings of the common sorts of mulberries root fairly well from cuttings, but Downing's will not; and these, grown for a year or two and then cut down, as recommended the seedlings should be, will give nice, straight stocks. The everbearing mulberries are raised both by budding and by grafting, budding preferred, but the Teas' weeping mulberry must be grafted on stocks 5 to 6 feet high, and this is to be done in early Spring, on the *Morus alba*, as already mentioned.

It is very likely the Japanese mulberry, *M. japonica*, would make a good stock for grafting. The impression prevails that it is of rather stronger growth than the white mulberry. JOSEPH MEEHAN.

Rhododendron Præcox.

The early flowering rhododendron has not the large blossoms of most of its compeers, and which most people would expect in a rhododendron; yet it is no less beautiful. It is of garden origin, supposed to be a hybrid between *R. dahuricum*, and *R. ciliatum*, both very pretty early flowering species. It blooms in March, or early in April, frequently so early that the flowers get blighted. It makes a good companion plant for the now deservedly popular *Azalea amena*. It is also a good plant for greenhouse decoration. W. H. WAITE.

Photo by W. H. Waite

RHODODENDRON PRÆCOX

a complete failure, so was that of sugar maple, American beech, many leading oaks and hickories and of the Douglas spruce. Of white pine, which is getting in great demand for forestry purposes, and of yellow locust and *Catalpa speciosa* desirable for the same purpose, the supply has been sufficient.

In the line of fruit stocks, there appeared to have been sufficient except in the way of Mahaleb cherry, which was short. And some late calls for pear from those who appeared to desire more than they had already engaged were not met in full. Although manetti stocks are not fruits, I may say here, that there seemed an insufficient supply; at least some importers could not meet the calls received for them.

Importers of nursery stock in the way of ornamentals have not imported nearly as much as in former years, not more than one-half, perhaps. But this does not indicate that less selling is anticipated. Last Spring importations were greatly overdone. The stock received then was first class, as a rule, and what was not sold is in prime order to-day, so that there should be enough to supply a good demand. Stock comes here in much better condition than it used to. Many nurserymen go across the water and personally select the stock and specify how it is to be packed.

In fruit trees, the wholesale trade may have their supplies; but in the retail trade, where much larger trees are desired, the stock wanted is not abundant.

Growers of herbaceous plants think the demand will be good and the supply fair. But few plants have been hurt; there has been such a good covering of snow, that but little heaving out of plants has occurred. Stock is good, and so are prospective sales. Thousands of these plants are sold now where dozens used to be.

Among evident shortages may be mentioned Norway

can usually be had at small cost, and in quantities, both from home raised and imported plants. This is the plum which is the most esteemed of all kinds for stocks by our nurserymen. Some years ago the mirabelle was used to some extent, but it proved such a terrible fellow in the way of suckering that it has been totally discarded. The marianna is valued by many, but more of the myrobolan is used than of any other, and now were it to come into demand for hedging, it would be still further valued.

Substituting Trees in Nurseries.

The Practical Farmer, of Philadelphia, asks its readers, I see, to give their views on the substitution of one tree for another by nurserymen, which, as the inquiry implies, is sometimes done. There are different rules in nurseries to meet this question when it arises. Some proprietors have a rule never to substitute without permission; others have no set rule, but are governed by circumstances. But none who aims to do a fair business makes a substitution without acquainting the purchaser of the fact. My own opinion is that, in many cases, a customer would prefer to have a substitution made, and to know when he has such a customer's order before him is where the experience and judgment of the nurseryman comes into play. If a new place is being laid out requiring certain trees in certain positions, a substitution is certainly risky. The same if a customer possesses a certain number of various kinds of fruit trees and makes out a list of others to add to the number of varieties. He then wants no substitutes. But if trees for certain uses on a lawn, or a collection of fruit trees, simply are wanted, very often the customer is more than satisfied when told of the changes made. The customer is not hurt in any case. The nursery-

A superior type, of healthy, robust growth, producing long-stemmed flowers of immense size and perfect form

THE latest and highest achievement in China Asters, a superior race in every way. The plants are of very healthy, robust, branching growth, about two feet high, producing, on long stems, massive, peony-formed flowers of perfect form and exceedingly double. They are the most beautifully formed of all large Asters. The petals are of thick and durable substance, and, in consequence, the flowers last long in perfection. These Asters are wonderfully prolific and continuous bloomers. When grown in masses in garden borders, or beds, their decorative effect is unapproachably gay. When well grown the flowers of Henderson's Invincible Asters average 3 1/2 inches across; 4-inch flowers are quite common, and if grown especially for cut flowers, the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem, their size will then be enormous, measuring 4 1/2 and 5 inches across. These magnificent blossoms, being gracefully poised on strong, well-leaved stems 15 to 18 inches long, resemble good-sized Chrysanthemums, and are unsurpassed as cut flowers for vases, etc.

"My Asters from your Invincible strain were the best at our flower show; fine blooms of the lavender were the best I ever saw, and I have grown Asters for 60 years."

Are You Taking Advantage of Your Opportunity?

THIS present issue of THE FLORISTS' EXCHANGE presents a typical illustration of the trade advertising spirit of the day. No attempt has been made by the publishers to cajole any person or firm into representation in these columns whose advertising line was not seasonable, and therefore thought likely to prove unprofitable. There is not a "deadhead" advertisement, not a "faked" advertisement, nor a "special price" advertisement, nor an advertisement inserted on speculation, nor any advertisement that we do not expect to be paid for, from the first one on our first page right through the paper to the last one on our last page.

From past experience we would say that of the thousands in the business—put it at 15,000—but a small percentage is in a position to advertise largely, steadily and profitably every week in the year—scarcely more than 1 ½ per cent. (and the large majority of these do recognize their advantage and use the trade mediums), although there are fully 3 per cent. who would find it advantageous to maintain at least a card announcement weekly. Of those with "seasons" varying from one week to six months, from 6 per cent. to 7 per cent. recognize their opportunity and take advantage of it.

When it is considered that until twenty years ago (1885), there was no trade paper existing for Florists, the present conditions make very encouraging showing. If the advertising did not pay, the advertiser would not be represented; therefore, those who do make a practice of advertising evidently receive sufficient encouragement to induce them to continue the practice.

That the percentage of "transient" advertisers could be largely increased, to the benefit of themselves as well as of the trade generally, is clearly evident to the publishers. THE FLORISTS' EXCHANGE represents an industry turning out what may, in all fairness, be classed as staples, yet staples that vary widely from nearly all other recognized staples in the fact that they are more perishable—"They live, move and have their being," then quickly pass away—and, when they start to move, as a rule they have to be moved quickly or they perish.

Right here in this one fact may be grasped the keynote showing the uses of and necessity for acquiring the "advertising habit" by those progressive spirits whose desire it is to better their financial condition and increase their standing among their fellow-men.

If it is unwise to advertise when you have nothing to offer, it is equally unwise to refrain from advertising when you do have something to offer, be it only \$50 worth; if it's good, some one needs it, and would be glad to buy it, too. Again, it often pays to advertise for something you want but don't know who can supply it. If you advertise for it, and it's in the country, you will surely get it.

Just now, and for the next six to eight weeks, is the season to advertise surpluses of all Spring stocks. THE FLORISTS' EXCHANGE has room for all such announcements, and you couldn't find a better medium in which to place this business. Make your prices right, see that your goods are right, pack well, ship promptly, answer all communications without delay, and you will then find yourself fairly launched on the advertising sea.

SUPPOSE YOU GIVE IT A TRIAL

The Mixed Herbaceous Border.

A Few Notes on Its Planting and Management.

By W. H. WARE.

Now that the planting of hardy herbaceous plants is becoming more popular, a few notes on the subject may not be out of place. It is a pleasing sign to lovers of hardy plants to see the increasing popularity that these old, and some of them new-fashioned, flowers are attaining. We are told by some that it is history but repeating itself; that may be so, but I am of the opinion that history in this case will do more than repeat itself. In a few years from now there will be more hardy herbaceous plants grown than ever were grown before, even when they were in the height of popularity. We have now specialists in these plants who are at work hybridizing, selecting and searching for new varieties of merit and introducing them in numbers every year. The adoption of the mixed border in gardens is a thing to be commended, as with a judicious selection something of interest can be had throughout the greater part of the year.

It is not my aim to give advice as to how to plant on any definite plan, as that is a difficult thing to put on paper. One of the fundamental principles, and one that should never be overlooked, is that the plants should be so arranged that the border may be of interest from all the main points of view and at all times as far as possible, if not by bloom, at least by foliage.

In order to best bring about this result it will readily be seen that an intimate knowledge of the plants and of their habits of growth is an asset of utmost importance to the planter. Taste and skill in arrangement must also be employed, discarding any attempt at formality, freedom and grace being two important points to be considered. There must also be some order and harmony. Too often we see borders planted in a haphazard sort of manner without the slightest regard for harmony. The plants ought to be graded from back to front in an easy and graceful manner, and the colors of the contiguous plants should blend as far as possible.

What to Plant.

It is not to be supposed for one moment that we recommend for the mixed border only those plants that are perennial. It would be almost impossible to make the border showy at all seasons were we confined to perennials alone. There are many beautiful annual and biennial plants which will even find a home there; but in forming the border, the perennial plants should be looked upon as the primary, while the annuals and biennials might be called the secondary plants. All plants that bloom in Spring, belonging to the class of which we write, are more or less of a dwarf habit, and thus by reason of this habit are usually relegated, with great care, to the front margin of the border; and for the first few months of the year the border presents a fringed appearance and there is nothing of interest except at the edge of the border. Now this is not at all necessary. These Spring-flowering plants which include nearly all the hardy hulse, myosotis, bellis, pansies, arabis, aubretias, saxifragas, etc., can be planted judiciously throughout the border in between plants that are much taller in habit, but are also much later in starting into growth and not thus even interfering with the ripening of the foliage of the earliest Spring bulbous plants.

Soil.

The soil for the border should be what might be called a good general garden soil; a soil that will grow

GENERAL VIEW OF HERBACEOUS BORDER IN PROSPECT PARK, BROOKLYN, N. Y.

a good crop of vegetables will give good results with these plants. Before planting it is to be remembered that these perennials are to have a permanent home, and possibly stay for many years; hence the ground should be well trenched and a liberal application made of rotted manure.

Very often we see a border flanked on the back with a hedge of privet or some other hedge plant, and the plants closest to the hedge show; by their poor condition, that they do not have the same amount of nourishment that the other plants obtain, caused, no doubt, by the roots of the hedge robbing them of it. On visiting a place of some note not long ago the careful and skillful gardener in charge pointed out to me what he had done in this respect. About three feet from the base of the privet hedge he had a concrete wall six inches broad and two feet deep entirely underground, thus preventing the roots of the privet from robbing the border.

Time to Plant.

The proper time to plant a herbaceous border depends on various circumstances, such as the varieties of plants, soil, situation, etc. I have planted them in Spring and in Fall with good results in both cases. But of the two seasons, I think for our climate that the Spring is the best time, just when the plants are beginning to start. The bulbous and tuberous plants may be planted any time after they are thoroughly

ripened, but should be planted before they commence to grow. The after-management of borders does involve much hard work, but if the best results desired a certain amount of care should be given the Such plants as delphiniums, phloxes and all stronger growers, are much improved if a moderate thinning of their stems be done early in the season.

Tall growing plants, if found too high for any space may be cut down after they have made a growth three or four feet; the shoots that will result will sprout, but the plants will be dwarfer. Phloxes, pinched before they show their flower buds, will develop other flower heads, and, of course, be later, thus prolonging the period of flowering of any individual variety.

Staking and Tying.

Timely attention must be given to staking and tying. In this connection the old adage, "A stitch in time saves nine" is very applicable. Not only will nine stitches be saved, but a much neater appearance can be had if time be taken by the forelock. Too much stress cannot be laid on the question of staking. People who have not yet become interested in plants as individuals, but only interested in the finished effect, and there are many such, nothing is more sure to sound the death knell of the employment of these plants than the careless and slipshod method of tying and staking so commonly seen. The reason usually given is: "Oh, we haven't time to give them attention." Far better then would it be to curtail the quantity, not necessarily the quantity of species, a large collection of plants is very often a mere repetition of a few varieties. The plants that are easiest grown are usually given the most attention, when the reverse ought to be the case. For instance, in the average herbaceous border to-day about 80 per cent. of the plants are Rudbeckia, Golden Glow. Now what is that is a very desirable plant if used with discretion it is also one of the most objectionable if allowed to run riot.

But to return to the staking; too often we see nothing but one stake to the plant, no matter be it hollyhock, delphinium, phlox or golden glow, the finished result being a facsimile of a heather broom swaying to and fro in every breeze. If stakes are to be used on the bushy class of plants, three stakes at the least should be employed, and the plant not bunched, but allowed to grow as naturally as possible. Hollyhocks and delphiniums should have one stake to each flowering shoot; nothing is more ugly than to see five or more large hollyhock stems all bunched together. In a large collection of herbaceous plants of which I had one charge, and where neatness was a necessity, I used with great satisfaction a system of iron support made after the style of the Igoe carnation support. These were made in different sizes and of a height to suit the different plants. Put on before the plant had attained their full growth, nothing of the support was noticed when growth was finished.

The timely removal of all weeds and decaying foliage will improve the looks of the border. On the more choice subjects, and these are often the weakest growers, a watchful eye should be kept, as they may soon be obliterated by some stronger growing species. A neat label ought to be affixed to each plant, especially if the collection is in anyway extensive, as the memory is apt to fail, very often at a critical moment; the labels will also be a guide to the plants in Winter and early Spring when the plants are less conspicuous and only known to those who are intimate with them.

THE WEEK'S WORK.

Timme's Timely Teachings.

Lilies for Easter.

Now, when the days, as well as the lilies, are growing longer, the green trouble will not be so great or the combat as ineffective as in the shorter day of the year; and the buds, now being above the foliage, can be reached by mill but frequent and regular fumigation. The buds of Liliun longiflorum, destined to be in perfection for the Easter trade, should by this time stand out plain in good form, but should not yet show the white color, or they will be a little ahead of time. But if this should be the case; that is, if all or most of the buds are fully developed and some of them are turning white, then the plants may be safely removed to a cooler place—even light shed where they can take more time for the final finish. Those lilies, however, not so far advanced, not yet showing their color, should stay in a temperature about 55 degrees at night and, if possible, not very much higher in the daytime until their buds appear white, which, with some of them, may not be any too soon for Easter, while others would probably gain for themselves a few days or week of hardening off in a cool and air place just before sales commence. Keeping lilies that are far advanced, as those less forward, in batches by themselves, and regulating the heat according to their respective needs, is a good plan and simplifies matters greatly.

The lily bulbs that have furnished flowers in a cut state, as well as all such plants that remain unsold and the flower of which go to ruin, may be planted or in the open in the latter end of April or in May. Some of them will bloom in the Fall, while others will be good for next Winter's forcing.

Azaleas.

Next to lilies as Easter plants come azaleas. This year it is not easy to thr azaleas aright and to a nicety. It is easy enough to tender the advice: Keep cool but on most places it will be found difficult to follow it. How can one keep plants cool when the longer days of April and the stronger rays of the Spring sun heat up the coolest house to a degree which makes it anything but cool? One cannot now deprive Easter azaleas of the full light, or stow them away in a shed cellar or basement. Then, too, there are so many varieties, all more or less differing in their behavior and consequent requirements, that to bring them all under one hat, or to subject them all to the same treatment, would hardly land them all in blemishless perfection at the Easter altar. It is to be regretted that our principal holidays are not spread over a period of several weeks, like those of the Jews or Chinese. However, a few azaleas can always be sold, and many originally intended only for Easter will be profitably disposed of before that date just as those having come too late for Christmas found willing buyers later on all through the Winter months.

There will hardly be any trouble with such varieties as Paul Weber, Bernhard Andreas alba, Professor Walters, Mme Van der Cruyssen, Empress of India, Dr Moore or Emmeror of Brazil, while some others, such as Niobe and many of those left over from last year and summere over in this country, will probably come several weeks too soon unless kept in a low temperature as 35 or 40 degrees, if that can be made possible without robbing them of the much-needed light, air and moisture. On the other hand, it should be remembered that azaleas will stand any amount of extreme frosts without being harmed, so that any apparently backward could be pushed

ahead and brought into full bloom in the very last few weeks before Easter. There will be little trouble with the belated few.

All azaleas should now have plenty of room and light. Some will need a shading on very hot and bright days. An abundance of water at their roots is needful from now on. One thorough watering each day may seem sufficient, but may, after all, not be enough on some days. Azaleas must not be caught wilting, and it pays to watch them. A sprinkling several times a day until the color of the bloom is fully out is a means of keeping them healthy, clean and bright.

Some of the varieties of those imported last Fall persist in starting the next year's growth before the present season's work is fully finished. On such plants all the leaves, or better still, the leaf buds, before they unfold, should be carefully rubbed off or pulled away all around the expanding flowers, or they will gain the better of them, and the flowers will perish all too soon for the grower. Then again, one or the other plant may show no signs of bud formation, may come entirely blind, or partly so; may be one-sided as to the distribution of bloom, or bring a few, thinly scattered here and there. Such plants should at once be trimmed into form, if not well balanced, and started into growth. Given a sunny place out-of-doors through the Summer, they will prove fine plants for next season's early forcing.

Many people prefer an azalea which has been allowed to grow at will and to branch out naturally to one clipped short and worked into the usual stiff form and graceless rotundity, as practiced in the Belgian nurseries. Plants left on our hands might be made to grow out of this stiffness in shape and form. If however, most of a grower's cash customers go into ecstasy over this formal style of trimming, then, by all means, let most of his azaleas be trimmed to suit. No plant stands cutting back severely and close pruning better than Azalea indica; but it must be done, to secure a crop of bloom for the ensuing season, before the new growth starts.

Schizanthus.

A perfect beauty, most easily raised, equally good for the house, the garden, the conservatory or the greenhouse, and never failing to arouse admiration or to give entire satisfaction, is the schizanthus. It seems strange that a plant so attractive, marketable and useful is hardly ever seen at any of our retail plant growing concerns. Is it because the seeds of schizanthus are exceedingly cheap, and the grower, making up his list, fights shy of it on that account? Or does its popular name, "the poor man's orchid," deter the plant from recognition? Then why not make use of its other aliases, "fringe flower," or, better still, "floral butterfly"? Surely any one of these two should be catchy enough.

Those who have never raised any of these charming plants should try a package of seeds. A sowing may be made in the beginning of April. On a moderately warm place the plants will be up in three or four days, and will need pricking off a few weeks later. Or they could remain in the seed box a week or two longer and then be planted singly or in twos and threes into small pots and later on re-potted into larger sizes. Plants from April sowings will be of the right size for the bedding plant business. But if carried a little farther and given another shift in time, a lot of exceptionally fine pot plants will be the result.

Ordinary good soil of almost any kind a light and sunny bench, and the usual amount of air and moisture, as accorded other plants is all they ask in the way of cultural treatment. Schizanthus may also be had in fine order and full bloom at any time during the Winter. They are well worth raising especially for that purpose. To that end the seeds should be sown in August and again in October in the house. A pinching back of the young plants induces them to branch out. Strong heads may be utilized as cuttings; they will root readily with bottom heat.

Reminders.

GERANIUMS should now go into 4-inch pots, if belonging to the Fall propagated set and still in 3-inch pots. They want room now and an abundance of ventilation on bright days. Right after repotting water should be given sparingly. Firm planting into soil, not sifted or over-fertilized, makes good geraniums. Fast growing sorts should be kept in bounds by another stopping.

PANSIES in outdoor frames now need attention. The sashes must be opened on every bright day and watering and sprinkling should not be neglected. Should they bloom before the bedding plant trade opens, then the flowers should be cut off. Very cold spells of weather will, from now on, do more harm than at any time previous should the plants be caught suddenly after a few weeks of fine weather. The sashes and some additional protection should therefore be kept in readiness at all times up till May.

YOUNG PLANTS should not be deprived of a much needed warm place on the bench, even if room is ever so scarce. Let older plants and such that are of slow growth, or have done their duty, make room for the fast-growing young stock, which, unless kept growing, will, at this time of year, become stunted and hard to manage. Many a promising lot of plants is spoiled in this way.

SHADING is more necessary when, after a dreary Winter, a period of unexpected bright weather ushers in a much-welcomed Spring, than at any other time of the season. The young growth of the plants, being mostly made in a semi-dark season, full of sap and soft in texture, is easier harmed and burned by the sun's rays now than in Midsummer. Most of palms and other decorative plants that we see almost ruined by sunburn caught in early Spring after a prolonged spell of dark weather.

Easter Plants

Now is the time to place your orders. I solicit your esteemed patronage, and am prepared to fill your orders to entire satisfaction. Below I have listed my principal offerings of Blooming and Foliage Plants, specially grown for the Easter Trade. You will find them all of equally high grade.

ERICAS—Always in the front rank of Easter favorites, \$1.50 to \$3.50 each. Small Ericas in 3 in. and 3 1/2 in. pots, in varieties, \$2.00 per doz.

RAMBLER ROSES—Bushes, \$1.50 to \$4.00 each. Baskets, \$2.00 to \$8.00 each. **Crowns**, \$10.00 to \$15.00 each. **Smaller Crowns and Globes**, \$4.00 to \$8.00 each. **Pyramids**, \$5.00 to \$10.00 each. **Standards**, 3-foot stem, \$2.50 to \$3.00 each; 8-foot stem, planted around with flowering Crimson Rambler, \$5.00 to \$6.00 each.

MOSS ROSES—\$1.00, \$2.00, \$3.00, \$3.00 each.

BABY RAMBLER—The new everblooming Rose, 5 in. and 5 1/2 in. pots, in bloom, \$15.00 to \$18.00 per dozen; 3 1/2 in. pots, young grafted stock, \$3.00 to \$4.00 per doz.

BOUGAINVILLEA SANDERIANA—Bushes, from \$1.00 up to \$20.00 each. **Baskets**, \$10.00 to \$15.00 each.

HYDRANGEAS—Plak, 75c. to \$5.00 each. Sky blue, new fine variety, 75c. to \$8.00 each.

AZALEAS—Red, pink, white, variegated, from 50c. to \$8.00 each.

LILAC—White and purple, \$1.00, \$1.50, \$2.00 each.

DAISIES—White, 50c. to 75c. each; Yellow, \$1.50 to \$2.50 each.

RHODODENDRONS—In variety; colors very fine, \$1.00, \$1.50, \$2.00 each.

GENISTAS—\$1.50, \$2.00, \$3.00, \$4.00 each.

WALLFLOWERS—New English, very fine; bright carmine colored, \$1.00, \$1.50, \$2.00 each.

BORONIA ELEANOR—Pink flowers, \$1.50, \$2.00, \$3.00 each.

BULBOUS STOCK

TULIPS—In pans, at 35c., 50c., 75c., \$1.00 each. In flats at \$2.00 and \$2.50 each. Fifty in a flat.

HYACINTHS—In pots, \$2.00 per doz. **DAFFODILS**—Single and double, 75c. to \$1.00 a pan.

HYACINTHS—In pans, from 50c. to \$2.00.

LILIES—Finest stock in market, \$12.00 per 100 flowers.

LILY OF THE VALLEY—In pans, 50c. to \$1.00 each.

PLANTS

COCOS WEDDELIANA—Small plants for Fern dishes, \$1.50 to \$2.00 per doz.

PANDANUS VEITCHII—75c. up to \$3.00 each.

DRACENA TERMINALIS—\$6.00 to \$9.00 per doz. Combination plants, \$1.00 to \$3.00 each.

FERN BALLS—50c. to 75c. each.

PYRAMIDS OF BOXWOOD

In painted wooden tubs, \$4.00 to \$5.00 a pair.

After Easter I will be able to offer a new imported lot of splendid Bay Trees, Phoenix, large specimen Kentias, Acacia, Rubber Plants, etc., from Europe's best growers.

Introduction 1905

There is nothing in the fern line that is as handsome as this beautiful fern when well grown. It is a wonderful improvement over Nephrolepis Piersoni in every respect, both in regard to beauty and habit of growth. It is a sport from the Pierson Fern (Nephrolepis Piersoni), but it is very much more beautiful and of greater value. It is as different from the Pierson Fern as that is from the Boston. The small side pinnæ are again subdivided, producing an exquisite and beautiful effect, changing the entire character of the fronds, which measure less than half the length and about twice the breadth of the fronds of the Pierson Fern. The fronds also assume an entirely different form, the side pinnæ standing at right angles to the mid-rib of the frond, on edge rather than flat, as is usual, making both sides of the frond equally beautiful—entirely different from any other fern.

The plant is very dwarf, only about half the height of the Pierson Fern, and of very much more compact habit. Taking it altogether it makes one of the most exquisite plants and one of the most valuable for table and house decoration that has ever been introduced. The cut fronds, on account of their beauty, will be in great demand for table decoration. Well-grown plants make most magnificent specimens.

NOW READY FOR DELIVERY

PRICE—Small plants, 2 1/4-inch pots, \$9.00 per dozen. Fine large specimen plants, 5-inch pots, \$18.00 per dozen; 6-inch pots, \$24.00 per dozen; 8-inch pots, \$36.00 per dozen; 10-inch pots, \$60.00 per dozen. 50 plants at 60c. each; 100 plants at 50c. each; 500 plants at 45c. each; 1000 plants at 40c. each.

Headquarters for Easter Plants

Blooming Easter Week, or before if desired. Now ready for immediate shipment. I am noted and have a reputation for the past fifteen years for raising and shipping Choice Easter Plants throughout the land. Nine houses and ever so many hot-beds crowded with them, in better condition than ever before.

Azalea Indian. My specialty; 3 benches full of my own importation, the cream of Ghent productions. We sell none in the Fall; therefore they are not picked out for the Fall trade. Mme. Van der Cruyssen, the people's choice the best of all pink varieties. Plants covered with buds, as round as an apple. 60c., 75c., \$1.00, \$1.25, \$1.50 to \$2.00 each. Other best varieties, all shades. Niche, double white; Bernhard Andreae Alba, white; Empress of India, Professor Walters, Ilustre, Paul Weber, Joseph Vermoer, and many others, 60c., 75c., \$1.00, \$1.25 to \$1.50 each.

Lilium Hurrial and Japnu Multicolorum. H. F. Michell's special bulbs: 6 in. pots, 5 to 8 buds to a plant, 10c. per bud. Under 5 buds, 12c. a bud.

Cineraria Hybrida. Best strain, all shades, 6 in. pots, \$2.00, \$3.00, \$4.00, \$5.00 per doz.

Hydrangea Otaka. pink (a fine white including), 5 in. to 7 in. pots, \$1.00, \$5.00, \$6.00, \$9.00 to \$12.00 per doz.

Spiraea. Two houses full. Floribunda, Japonica and Blondine, 6 in. pots, large bushes, \$3.00, \$4.00, \$5.00 per doz. Compacta, \$2.00 to \$3.00 per doz. Gladstone, unusually fine this year, full of buds, perfect jewels, \$6.00, \$7.00, \$9.00 per doz.

Roses. American Beauty, 6 in. pots, bushy, 25 to 30 in. high, 60c. to 75c. each; Hardy Roses, including Hermosa, 5 in. to 5 1/2 in. pots, \$3.00 \$4.00 to \$5.00 per doz.

Begonia. President Carnot, Flambeau, three varieties in all, 6 in. pots, \$3.00 to \$4.00 per doz.; 4 in. pots, \$1.80 per doz.

White Daisies. 6 in., \$3.00 per doz.

Hyacinths. Raised from first-size bulbs. Grand Maitre, blue; Gertrude, pink; King of the Blues and La Grandee, white; \$12.00 per 100.

Double Narcissus or Von Slon. Double Nozed Daffodils, 3 bulbs in a 5 1/2 to 6 in. pot, \$2.00 per doz. pots. Tournesol, best selling double Tulip, 3 in a 4 in. pot, \$1.50 per doz. pots.

Araucaria Excelsa. 25 to 34 in. high, 4, 5, to 6 tiers, 7 in. pots, \$1.50 each.

Ficus Elastica (Rubbers). 6 to 7 in. pots, 25 to 35 in. high, \$6.00, \$9.00 to \$12.00 per doz.

Moon Vine. A. W. Smith's Hybrid, \$5.00 per 100.

STUDER OFFERS

POT-GROWN ROSES. Over 50,000 of over a hundred of the best varieties of Hybrids, Monthlies, Moss, Polyanthas and climbing Roses, all on own roots, cool grown, ready for planting, from 4 in., 5 in. and 6 in. pots, 8c. to 25c. each, according to size and variety. Field-grown and still dormant: Agrippina, Bon Silene, Bride, Mermet, Bridesmaid, Ivory, Golden Gate, and some Moss and Climbers; or from 3 in. pots, 5c. each. Philadelphia Ramblers, strong, 3 in. and 4 in. pots, 8c. and 15c. each.

PALMS. 3 in. to 5 in. pot size Kentias, Latanas, Phoenix, Caryota Urens, and Chamerops Excelsa, 10c. to 25c. each.

FERNS. 2 in. pots, strong Pteris and Adiantum Cuneatum, 4c. Young plants of Ageratum, Chrysanthemums, Coleus, Petunia, Heliotrope Sweet Alyssum, Lobelia, Nasturtium, Sage, Thunbergia, Maurandya, Verbenas, 2c. Also of Hardy Plants, such as: Phlox, Coreopsis, Gaillardia, Rudbeckia, Helianthus, Sweet William, Wallflower, Campanula, Aquilegia, etc., 2c. each.

No Catalogue. Write what you need and I will make prices right, or send \$1.00 for samples.

N. STUDER, Anacostia, D. C.
Mention the Florists' Exchange when writing.

The plants in the benches should from now on, never be permitted to get too dry, especially on bright days it being often necessary to water the ends and front edges of the beds twice a day to keep the soil in good condition. Give the houses all the air possible and have them a little cooler both night and day. This will help keep the buds from getting smaller, for as the quantity increases only the best stock realizes fair prices; therefore, no effort should be spared to keep the stock in good condition.

Red spider is a pest that is very troublesome at this time of the year especially where the plants have been bunched up by being tied improperly. Nothing but thorough syringing will dislodge this mite. But do it in time it is too late when the plants have lost half of their foliage.

Keep the plants tied well, for if the young shoots are allowed to remain near the glass they will get scorched and become worthless. Feed liberally where the plants are healthy, and if a little off color, a liberal coating of wood ashes will greatly improve them.

If the sod heaps for next season have been neglected last Fall they should be put up as soon as the ground can be worked. Use nothing but fresh cow manure with the sod, as old manure, can be utilized for this purpose. Get good soil; even if it costs more it is a good investment, as upon it, to a large extent, depends next season's success.

Watch the young stock carefully and do not overwater. When shifting from 2 or 2 1/2 into 3 or 4-inch pots good drainage should be afforded, charcoal cinders or pieces of potsherd will answer, or, still better, screen the soil and the coarse matter, which will not readily pass through the sieve, consisting mostly of pieces of sod and manure can be utilized for this purpose. Syringe the young stock on every favorable occasion, and fumigate at least twice a week with tobacco stems, to keep off green fly. Should the surface of the pots become green, in other words, covered with scum or moss, the same should be removed. A handy tool for this purpose can easily be made from a piece of hoop iron; the edge can be made quite sharp, and will then cut off any weeds.

OXFORD, PA.—A recent local paper contains an appreciative account of the greenhouses of J. H. A. Hutchison, the florist. He has twenty varieties of carnations, his leaders being Enchantress, Lady Bountiful, Mrs. M. A. Patten, Dorothy Whitney, Boston Market and Flamingo. Some of these blooms measure over three inches in diameter.

ROSES

2 1/2 in. pots, strong plants, **Iridesmaid, Bride, White Cochet,** \$2.50 per 100; \$20.00 per 1000. **Golden Gate and Ivory,** 3 in. pots, \$5.00 per 100; \$40.00 per 1000. **American Beauty,** 2 1/2 in. pots, \$5.00 per 100; \$40.00 per 1000; 3 in. pot plants, \$6.00 per 100; \$50.00 per 1000.

Strong two-year-old, 6 in. pot **American Beauty,** good for Easter, \$25.00 per 100. **Cochet,** pink and white, 4 in. pots, \$15.00 per 100. **Bridesmaid and Bride,** 4 1/2 in. pots, strong, bushy plants, \$17.00 per 100.

Sample 2 1/2-inch American Beauty

Dreer's Select List of HARDY PERENNIALS

We offer here only the most Showy and Decorative Sorts, including varieties suited for CUT FLOWER purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List. This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Table listing various Hardy Perennials with columns for plant name, size/pot, price per dozen, and price per 100. Includes entries like Acanthus Mollis, Achillea Millefolium, and many others.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

IN AND ABOUT THE PLANT HOUSES.

BY WILLIAM H. TAPLIN.

So severe a Winter as the one we have just passed through makes rather a trying period for both the plant grower and also the producer of cut flowers, for apart from the shrunken appearance of the coal pile and the correspondingly large cost of the same, there has been the continued difficulty of making shipments of stock to any distance. Of course, the cut-flower man is also likely to remark that the many cloudy and snowy days have greatly reduced his output for the season, but there is also the crumb of consolation for him in the fact that a shortage in stock means a prompt increase in price in most instances, whereas the broker in the plant trade may have the stock, but, owing to the severity of the weather, can neither sell nor deliver the goods.

But for all these various disadvantages the members of the trade are mostly optimistic, and we shall doubtless hear of more or less building and rebuilding this Summer just as though the season had been lovely in all its aspects, and all are looking forward with hope to such a successful Easter that past trials may be forgotten. The experience of the past Winter seems to have shown a rather smaller demand for large, decorative plants, such as large palms, though well grown plants of medium size have sold well in most of the larger markets of the country, the buyers being more critical and not so ready to pick up over-

made up plants of cocos, consisting of three or four nice stocky plants put together in a three-inch pot were more in favor than single plants. This method is not a highly profitable one to follow with cocos, however, unless one can get a sufficiently high price to cover the additional cost.

Phoenix are little called for, hardy as they are, and most of those having any quantity of them are quite ready to offer some inducements to prospective buyers, as are also the European growers. But some of the gardens of the South and Southwest have probably suffered from frost this Winter, and these localities use quite a large number of phoenix for outdoor decoration and may thus readily relieve the market of any surplus of these palms.

In the present state of public opinion a good advertiser might possibly stir up a greater demand for rhaps by calling them Japanese palms, the leaves of these plants being frequently drawn upon Japanese works of art; but, otherwise, there is not a strong demand for rhaps, even though they are such admirable decorative plants, and endure rough handling so well, one of the greatest objections being found in their slow growth.

Ferns.

The Boston fern seems to occupy the niche in the floral hall of fame that was once filled by *Ficus elastica*, though there is an occasional rebound in public opinion, and from time to time someone tires of everybody's fern and again yearns for the rubber plant of their earlier years, and it does seem as though

those who have had an opportunity to observe it say that this plant is a good keeper in a store, or room, its large, leathery leaves being apparently but little affected by the dry air of such an exposure. As a small plant this *ficus* may not be sufficiently symmetrical to attract the retail buyer, but in a large specimen it may easily find a place for porch decoration or in the conservatory, and may also prove valuable in outdoor beds of foliage plants.

Bougainvillea Sanderiana, at Christmas, does not seem an unalloyed success; not because it was not well grown, but more likely on account of there being too much purple in the pink of its bracts, this color being less attractive at that season than that of a poinsettia or a red azalea.

Other forced flowering plants are and have been in good supply and fair demand, and among them are rhododendrons, that seem to be rather better set with buds than usual.

Easter stock looks promising and plentiful at this writing, but the all-important question in regard to this stock is what kind of weather shall we have in April? If it should turn out as warm as some seasons we remember, there may be large losses from over-ripe flowers.

Horticulture in Jersey, Channel Islands.

Editor Florists' Exchange:

I was much interested in perusing your paper, and got thereby some good ideas as to how a florist business is conducted in the Northern States of the U. S.

NEW CACTUS DAHLIA KRIEMHILDE

NEW SEEDLING SINGLE DAHLIAS

grown and unshapely stock simply because of its size. There may have been a little unwise plunging in large imported stock of this character, too, for some of the apparent bargains that are offered by importing agents do sometimes fall short of the description, many of the plants in question being injured more or less in transit, or else were just a little below par when they started.

Palms.

No special change in the public taste in regard to palms has been shown this season, and kentias are still well to the front, the majority of these in the medium and large sizes being compound or bush plants, with several plants potted together, this being especially the case with *Kentia Forsteriana*. The shorter stems and more compact habit of *K. Belmoreana* provide a more effective single specimen than the former variety, though *K. Belmoreana* is also sold in large numbers in the bush form.

Small latanias seem to have been over plentiful, judging by the plants that have been retailed for ten cents each, or even less, by some of the department stores; but it must also be admitted that many of the plants thus disposed of were well sold, if one took into consideration the number of insects some of them supported, and the cost of the labor it would have taken to clean them.

Good plants of *Livistona rotundifolia* have not been seen in great quantity this season, and possibly the Winter may have had something to do with it, for cold drip and icy water with which to syringe form a combination somewhat detrimental to this plant, both the roots and foliage being somewhat tender.

Fashions in table ferneries do not change very frequently, the plants with which they are filled depending very much on the stock the filler has on hand; but if any special change may be noted, it is in a less use of *Cocos Weddeliana* for this purpose, though

the wide-awake grower should turn out some well-fished stock of both these excellent subjects for the window garden.

It is admitted that the Boston fern is an easy subject to grow, but there are many of these ferns that are sold at a very low price when the space they occupy is taken into consideration, for this plant requires a great deal of space if one purposes the production of first-class stock. And, apart from its beauty, the more compact habit of *Nephrolepis Scottii* is a card in its favor from the grower's standpoint, as it may enable him to grow a slightly larger number of plants in a given space than could be done with the old variety.

Small ferns for ferneries have been a rather scarce article during this Winter, at least, in several Eastern cities, and good stock would have readily found purchasers.

Very low prices have prevailed for some years past in this line, and possibly some of those who formerly grew ferns have dropped out of the race for this reason, thus making the shortage more marked; and, in addition to this, there is the natural increase in the demand as the trade extends from year to year.

Plants for Baskets and Ferneries.

There is also to be noted some inquiry for various compact-growing small plants of other species that may be used either for ferneries, or for small plant baskets; and it may be that in another year or so a much better opening may be found for nice little peperomias, rex begonias, the dwarf Japanese flag (*Acorus Jap. var.*), variegated phyllanthus, and others besides the small *Dracaenas*, *Sanderiana* and *Godseffiana* and young asparagus that are now so much used in work of this character.

The new *Ficus pandurata* has not yet been offered in sufficient quantity to test the market, but some of

A., which in practice is somewhat different to what is commonly done in England. The principles of action are similar if not the same.

There is not nearly so much culture under glass in Jersey as in Guernsey; Baskford's, at St. Luke's, is our largest. At this place there are about two miles of glass houses, averaging in width 35 feet, and some of the houses are two hundred yards in length by 43 feet in width. They are all heated with hot water pipes. Early and late grapes, for the English market, are extensively grown. Forcing begins in December, and the late vines are allowed to start without the aid of heat, but ripening is aided by heat in November and December. To see a house 200 yards long and 30 feet wide in full crop of Muscat of Alexandria grapes is a sight a horticulturist is not likely to forget. The crop of this house is from eight to ten tons of prime grapes per annum, ripe in July and August. Black Hamburg and Black Colman and Alicante grapes are all grown extensively. A good deal is also done in early melons and cucumbers, climbing beans, French beans, and sometimes peas. Early potatoes are largely grown in these big houses. The value of this crop in some seasons amounts to £1,700 to £2,000. The tubers are dug in March and April, and tomatoes are immediately planted in their place. As you know, the Jersey climate is so mild that, in some seasons, no heat is required in the houses to keep out frost. The outdoor crop is mostly of pears, and from 7,000 to 8,000 trees are grown, principally of Williams, Bon Chretien—your Baldwin—Doyenne de Comice, and some Chaumontel. They are all "bush trees" worked on quince stock. The crop I should think runs according to good and bad seasons, from 10 to 20 tons of Williams, from 15 to 30 tons of Doyennes and five or six tons of other sorts. Jersey pears are A1 in quality, and better than French ones.

St. Clement's.

JOHN HORNE.

AT HALF PRICE

READ THE REASONS GIVEN

Natural Business Laws justify higher Prices on Novelties than stock in normal demand and supply can command

An event unusual is that of a meritorious novelty—such as appeals sensibly to all growers of judgment—offered below half its normal price.

Nevertheless, as the full time and attention of the introducer are now fully demanded with other lines of his business, in planning to directly close out the limited balance of the originally grown stock of

Adiantum Croweanum

it is now on sale at less than half price.

As a standard novelty the sterling values of this fern develop more and more daily, hence this offering is no reflection on its true merits.

The following prices tell their own story

Strong plants from 3-inch pots, \$2.50 per dozen; \$15.00 per 100; \$125.00 per 1000.

25 plants at 100 rate; 250 at 1000 rate. \$100.00 per thousand in 5,000 lots.

In order to insure orders being filled, would-be buyers need to speak quickly.

LET NO ONE HESITATE NOW!

New Dahlias.

By L. K. PEACOCK, Atco, N. J.

In the general order of events changes occur; new things are brought forward and new developments made in all lines. The people want a change; they want something new. Nowhere, however, is the continuous and persistent effort to secure something new and distinct so clearly seen as in the production of flower novelties. We never get tired of a tool, implement or any object used for a material purpose; but, on the other hand become attached to it and the way of using it only changing when something markedly superior is forced upon us. But the florist must at all times produce something to appeal to the artistic taste of the observer. It is not necessary that this should be better or even that it should be an improvement but that it be a change; something to appeal to our fancy—a change, a novelty, anything that will appeal to the casual observer especially if it gives an artistic effect much more strongly than if it is simply an improvement on a given type in the way of color, size, or general contour. Failing this, the utmost efforts of the grower are in vain.

little Fairy is just the extreme opposite. While the Pink Century will grow 6 feet high, with flowers 8 inches across, and stems 3 feet long, the Fairy grows about 2½ to 3 feet high. Its flowers, being produced in almost myriad profusion, about 2½ to 3 inches in diameter, but of exquisite semi-cactus form, can be cut in sprays and, no matter how arranged, present a most beautiful and artistic appearance. Between these two types we have innumerable others in the same shades. Now, in getting the full range of colors, in the full range of sizes, and, again, in types, some idea of the immense possibilities of the single dahlias can be had.

Taking the matter up specifically, we would touch upon the Century dahlias. Harvard, a far more vivid crimson than Alphonse Bouvier canna, many times 8 inches in diameter; a plant growing 5 to 6 feet high, with long stems; a companion in every way to the noble Pink Century mentioned above. Then we have the white and scarlet Centuries, both with flowers running 6 to 7 inches in diameter, the same long, 3-foot stems. Gorgeous is a great improvement over Scarlet Century, with but a single drawback—an occasional single white petal. This is a drawback with some, but as it is only an occasional flower in which the variation occurs, the bloom can be removed and at the same time the objection. At other times, the occasional white petal is received with great favor. Then we have the Blush Century. Nothing could be more chase or lovely; the coloring is delicate in the extreme. The Lavender Century, large, delicate lavender

by itself. Mars occupies the same place among the new scarlets. Purity is another exquisite new white. Floradora is considered by many the best crimson scarlet; Brunhilde outclasses all other purples; as does Rosine among deep rose.

Among the French collarettes, Mme. Viger, a new American seedling, has all the good qualities of President Viger, but is lighter and brighter in color, making a magnificent pair.

Of the large double dahlias, Mrs. Roosevelt, delicate pink; Cuban Giant, crimson maroon; Gettysburg brightest scarlet, occupy a class by themselves.

Among the new fancy dahlias, Progress, soft rose lake, penciled and spotted crimson; Admiral Schley crimson tipped white, an improvement over American Flag; Eloise, crimson maroon, striped white; and Olympia, an immense flower 7 inches across, with full high center, color deep rose striped and penciled crimson, are the most striking.

Other new decorative dahlias are Sylvia, a larger and heavier form of Nymphaea; in fact, to give the best impression, it is about half-way between Nymphaea and a show dahlia, being larger and fuller with heavier stem, and it is a better keeper. In bright red, Catherine Duer has been attracting considerable attention, especially at Newport, R. I., where it is considered the only red. Eureka, tipped rose, is a cross between A. D. Livoni and Grand Duke Alexis and Mrs. Winters is pure white.

Of the new show dahlias, White Dandy—a pure white sport of Pink Dandy, stands head and shoulders above

NEW SINGLE DAHLIA GAILLARDIA

NEW BLUSH PINK DECORATIVE DAHLIA MRS. ROOSEVELT

Hundreds of visitors at our place have passed by single dahlias without a thought, yet the striking appearance of the New Century dahlias was such as to call forth the greatest enthusiasm and admiration. I recall particularly a block of the purple foliaged dahlia Ami Barrillet, with its deep rich garnet blooms. Really, I do not believe I ever saw a finer sight—a block of four rows making a band 600 feet long and 16 feet wide. The plants were bushy, the foliage meeting across the passageway. Many who said they could see no beauty in a single dahlia stopped before this block.

We are all creatures of moods, likes and dislikes. We may think we do not like a certain class of plants, yet if we see an unusually fine specimen, we cannot but admire it.

In the new departure with dahlias, all attention seems to be given to the cactus types; but to the true artistic temperament, the flower lover, there is a subtle charm about the single varieties, not only in dahlias, but in any flower, that cannot be found in the double species. Believing firmly in this, I have given my greatest attention to the development of the single types, as I am convinced it would be a great loss not to keep all the types up to the same standard of perfection.

We will take, for instance, the two singles, Pink Century and The Fairy. The colors are practically the same. Pink Century, with its immense blooms, the most beautifully and artistically shaped petals, appeals to us by the grandeur of its appearance; the

ender, with a deeper shaded band around the center; and Crimson Century, color deep glowing crimson, shaded darker, tipped rose with rose disc. Twentieth Century and Leone, the two beautiful original Centuries, are too well known to need more than mention, while last, but not least, comes the wonderful Record. This, unlike the others, grows to a height of only 3 to 4 feet, branching out with the same fern-like foliage, only finer. The flowers are of immense size, the purest yellow ground color, with a heavy band, or blotch, of the richest and brightest scarlet. This combination of yellow and scarlet is most striking. Toward evening the petals inclose, when they give every appearance of an immense tulip. The stems are very slender; wiry and graceful. The plant is probably the freest blooming of the entire lot, making a magnificent showing. The Record, however, has one drawback; it does not make salable roots, and can be handled in plants only to give entire satisfaction.

Taking up other new singles, Ami Downie is an improved Ami Barrillet, being a purple foliaged single, with much larger flowers. Alba Superba is the grandest single white of the full round-formed flower, the same general form as shown in the Gaillardia in the accompanying illustration. The Raven, dark maroon shaded black; Gracie, probably most delicate of the white suffused blush, with the possible exception of Blush Century.

In cactus dahlias, nothing is finer in pink than Kriemhilde; yellow, Volker; white, Siegfried and Winsome; while in the fancy type, a new departure in cactus dahlias, Mrs. H. J. Jones, is entirely in a class

anything else of its class. It is the only pure white show dahlia that combines stem, vigor of plant, and free blooming qualities. Every other white show dahlia to date lacks at least one of these qualities.

There is nothing of special merit in new pompon dahlias, the old collection covers the field so thoroughly that there is little else to be had.

Before closing I would call attention to the beautiful effect to be had by planting dahlias in mass for borders and for general effect; for parks, cemeteries and large estates. Most effective for this purpose are the single dahlias planted either in mixture or under color. While mixed flowers, as a rule, do not look well, yet a border of the highest grade new single dahlias, in mixture, is like a row of sweet peas—in perfect harmony with themselves and any neighbors.

BURBANK'S FADELESS FLOWER.—The Horticultural Advertiser (England), commenting on Wallace R. Pierson's article on this subject, which appeared in a recent issue of The Florists' Exchange, remarks as follows: "The point for growers on this side to make sure of is, whether this plant will succeed in our climate, bearing in mind the wide difference in Summer rainfall between England and California, and still more between our own country and Australia. However, we know that many California annuals succeed admirably here, so that a fair trial is what is needed. If the disseminators could arrange for an advance trial in this country before distributing, it might add very largely to the initial demand."

H. WEBER & SONS announce the completion of arrangements whereby they will, beginning in January, 1906, disseminate jointly with THE E. G. HILL CO.

THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for it a robustness of constitution quite unequaled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway X Lawson) seems united and improved upon in this variety.

In **JESSICA** we have, in the red and white variegated class, what **My Maryland** will prove amongst white. It is descended through several generations of variegated seedlings of Helen Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than **My Maryland** and just Lawson height. Aside from these differences and the color, the description of **My Maryland** applies to **Jessica**. Under favorable conditions four-inch blooms are not uncommon. We pick **Jessica** to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score,

We have already hooked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety up to the time the cuttings are received.

PRICE: \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000.

ROSES

Hardy Roses for Canada.

(Read by Thos. Powtress at March meeting of the Montreal Gardeners' and Florists' Club.)

The subject that most appeals to my mind at the present time is that of the rose for outdoor cultivation, or what we may call hardy roses. By hardy I mean those varieties that I consider will stand the climate of Canada in the Province of Quebec, and come through the Winter to bloom as only the rose can bloom in the month of June.

I consider the Rosa canina, or dog rose, the best stock for hardy roses; much better than the seedling briar or manetti.

The species that interests us most is Rosa centifolia, or the old cabbage rose, from which has sprung so many beautiful varieties, and while on that subject I may say that I am of the opinion that a class of roses could be raised from the wild Canadian rose crossed with the Rosa spinosissima, or Scotch rose (which is very hardy), and by again crossing with any hardy h. p., always using the native rose as seed-bearer, a hybrid may be raised that would not require protection in Winter; but this subject would have to be taken up and worked out by men with means and time, which the florist and gardener of today have not to spare for it.

I will now pass on to the hybrids with which we are familiar. First in point of numbers comes the hybrid perpetual flowering, but I should not put that

Hybrid China—Laurette Messimy, Mme. Eugene Re-sal.

Polyantha Ramblers—Thalia, Helene, Euphrosine, Crimson, Aglaja, Dorothy Perkins.

Polyantha Dwarf—Anne Marie de Montravel, Cecile Brunner, Gloire des Polyantha, Mignonette, Perle D'Or, Paquerette.

Moss roses—Blanche Moreau, Crested Moss, Old Pink.

Rosa Rugosa—Crimson and White, Striped Provence, York and Lancaster.

The new single roses of Messrs. Dickson are a class by themselves, being single teas, very free flowering, including Irish Beauty, Irish Modesty, Irish Pride, Brightness, Star and Glory; also the beautiful sweetbriars of Lord Penzance.

I know I have omitted a great many good things, but the foregoing varieties would make up a very choice collection.

As regards culture. I consider roses should have a garden to themselves in any place, large or small. They want a sheltered spot, but not under trees. Any situation that has a windbreak will suit them. They like plenty of air, but will not stand the full force of a west wind blowing on them and bruising their young shoots.

The soil is a very important item in rose culture. If the natural soil is very light, I would suggest some very heavy clay loam to be well mixed with it; if the light soil can be removed altogether, so much the better, and a compost of loam and rotten manure made to take its place. The ground should be trenched 2½ feet deep, and cow manure mixed with the sub-soil; then eighteen inches of the compost put over the surface. The Autumn is the best time to prepare the ground, and the Spring to plant.

to earth up the plants with six or eight inches of soil taken from between the rows, then peg down the shoots in a row, or tie the first one to a stake, and tie each rose to its neighbor afterwards, then put on a heavy mulch of manure, with the droppings well shaken out of it—this to prevent heating should the weather turn mild afterward. It is better to uncover as early as possible after the snow goes. Roses will bear fifteen to twenty degrees of frost.

FRUIT UNDER GLASS.

Making the Border.

Borders play a prominent part in securing quality in the fruit produced. Of course, good fruit has been produced in the natural soil with no preparation made as to digging out, etc.; but this is what I term taking chances. The aim should be, in growing fruit under glass, to bring it to the highest perfection possible; therefore, it is necessary for the fruit man to know the conditions of his border, and whether the drainage is perfect. While all fruit trees are moisture-loving subjects, especially when in active growth, anything of a stagnant nature must be guarded against.

In building fruit houses, conditions may not always be as desired. One should avoid, if possible, having the houses on low ground; they should be fairly well elevated. To my mind, fruit houses running north and south, even span, cannot be improved upon. A curvilinear house, I must admit, is effective, especially from an outside appearance, but for a practical house a straight roof is preferable. The bunches will always hang clear of the foliage in a straight-roof house, whereas in a curvilinear structure, especially at the sharpest bend, the bunches hang among the foliage. Whoever has thinned in the two styles of houses knows full well which is the handier to get at.

The first thing to be considered in making a fruit border is perfect drainage, which, I am thoroughly convinced, is the foundation of fruit growing under glass. We may take all the pains we choose as to airing, watering, feeding, etc., but if the drainage be imperfect then we are seriously handicapped in getting the desired results. Years ago the majority of the fruit produced under glass, both vines and peaches, was grown in outside and inside borders. Now-a-days the tendency is to restrict the roots to inside borders only. I am satisfied, however, that good fruit can be procured either way, providing enough leaves are placed on the outside border in the Fall to keep out frost. Leaves are the best protection that I know of.

I shall confine my remarks to the inside border. In the first place, dig out the ground so that there is room for two and a half or three feet of soil in the border; this means going down four or four and a half feet. Lay a tile drain down the center of the house, or houses, three or four-inch drains preferred, making sure they have a fall to carry off the water freely. In laying this drain through the whole length of the houses, we first figure how many openings are necessary to carry off the drainage. There should be openings into the main about every twenty feet or so. When this is complete, and every necessary connection made, test the drain with a good supply of water. Rough concrete in the bottom will be all right, having the center 6 inches lower than the sides. This allows all the water to run off into the drains. The concrete should be low enough to allow one foot of drainage in the center, tapering off to six inches to the side. It is immaterial what kind of drainage is used. Brickbats make a good job, with a thin layer of oyster shells on top, if they are to be had. From the top of this drainage to the surface should be from two and one-half to three feet, the aim being to keep this drainage as free from soil as possible. Of course, sod can be cut and put in, grass side down, but before doing that even, as a preventive I would put on a thin layer, such as comes from the stable, shaking out all the loose manure.

The next question is soil. I have read about preparing soil for fruit borders that it is necessary to cut the sod, pile it up, turn it over a few times, add the bone and whatever ingredients were necessary. This is an expensive operation. I would recommend plowing up some good sod land, similar to what we would call good rose soil, cart it into the border as soon as plowed, no matter how rough it is—the rougher the better, providing it is packed as firmly as possible. As the soil is put in in layers, a careful man can add the bone—rough bone at the bottom, say, for the first foot of soil, gradually decreasing the size to half an inch; in fact, for the top, even finer might be used. Or for the top surface blood and bone would be all right. I do not believe in using any farmyard manure in making a fruit border, nor in making a border for young vines to have it any way rich. It is an easy matter to add where it would be difficult to take away. Take wood ashes and bone combined; I would not use more than one to fifty of soil, for grape vines; and for peaches and nectarines, one to seventy-five.

While here I am not recommending rich borders, after the fruit trees and vines get thoroughly established, and are carrying heavy crops, feeding must be attended to. As I have stated, these remarks apply to inside borders only. One thing is certain, such borders take lots of feeding when once the soil is filled with roots; also when the fruit is swelling rapidly, a liberal amount of water. There is not much fear of the soil becoming sour if perfect drainage has been afforded.

WM. TURNER.

ROSA WICHURAIANA IN PROSPECT PARK, BROOKLYN, N. Y.

first in importance, as I consider the new hybrid teas are the roses of the future. For freedom of flowering and beauty of flower, they combine the h. p. and teas, and I consider them an improvement on both, having the broad petals of the h. p. and the long bud of the tea. They open out well in water when cut in the bud state in the morning. This is much in their favor, as roses do not stand the burning heat of a clear Canadian Summer day very well.

In addition to the h. p. and h. t., there are hybrid China, hybrid Bourbon, hybrid Polyantha, hybrid Rugosa and last, but not least, the hybrid Sweetbriars, handed down to us by Lord Penzance.

Of the hybrid Perpetual, I consider the following the best for this place, having proved them for two years, and some have been here for ten years, and are strong and healthy now, and throw off some very fine flowers, viz.: Alfred Colomb, Augustine Guinois-seau, Duke of Edinburgh, General Jacqueminot, Heinrich Schultheis, Jules Margottin, John Hopper, La France, La France de '89, Frau Karl Druschki, Margaret Dickson, Marie Baumann, Marquis de Castellane, Mrs. John Laing, Prince Camille de Rohan, Reynolds Hole, Ulrich Brunner and Victor Hugo.

Hybrid Teas—Bell Siebrecht, Bessie Brown, Kaiserin Augusta Victoria, Mme. Abel Chatenay, Mme. Caroline Testout, Souvenir du President Carnot, Duchess of Portland, Mildred Grant, Lady Moyra Beauclerc, Antoine Rivoire, Lady Battersea and Marquise Lita.

Hardy teas and Noisette—Anna Olivier, Catherine Mermet, Francis Kruger, Hon. Edith Gifford, Jean Ducher, Mme. Hoste, Maman Cochet, Marie Van Houtte, Mrs. Mawley, White Maman Cochet, L'Ideale, Mme. Pierre Cochet.

Hybrid Bourbon—Mme. Isaac Pierre.

While planting have at hand a barrowful of soil, well pulverized; make a hole for each plant and use the soil to plant in, taking care the roots do not come into contact with any manure. Many failures result from this cause, as when the plant throws out young roots, they strike the manure instead of soil, and the manure being too strong for them, they just die away again.

Deep planting should be avoided; this often causes failure. It is better too light than too deep. As far as I have been able to judge, the union of the plant should be about an inch below the surface of the soil. Of course, I am speaking of roses on seedling briar, or briar cutting stock, which I consider the best to use. The roots should be cut back with a sharp knife to about nine inches, and bruised or broken roots removed altogether. After planting, the ground round the plants should be made as firm as possible by treading, if at all practicable.

Now for pruning; this again requires care and judgment. If the plant is not pruned hard enough, there will be too many blind shoots, robbing the plant and doing no good. If the plant be at all weakly, it will require harder pruning, but a vigorous, strong plant would possibly do best with lighter treatment. I think pruning should be done as early as possible, that is, as soon as the plants can possibly be uncovered. If the sap has risen too much, the plant will bleed badly and weaken itself. It is impossible to say exactly when to uncover the roses, but the end of March, or a fortnight earlier or later, according to season.

I will not deal with insect pests, as you are all familiar with them and their remedies.

Our mode of covering for the Winter has been first

BABY RAMBLER

(Mme. Norbert Levavasseur)

This sensational new French Rose is beyond doubt the most valuable acquisition ever introduced. It is in a class distinctly its own, has no competitors and is destined to become the best selling Rose in existence. It is the result of a cross between **Crimson Rambler** and **Gloire des Polyanthus**. It preserves the prolific flowering quality of the latter and has the color of **Crimson Rambler**, clear, brilliant, ruby-rose. When fully developed it reaches a height of only 20 inches. It has the foliage and hardness of **Crimson Rambler**, but is absolutely free from mildew. Small plants from 2 1/2 inch pots bloom profusely; indeed, it is impossible to keep this great Rose from flowering. It is indeed a perpetual blooming, dwarf **Crimson Rambler**. What a gem for edging, what a gem for the window garden and conservatory, what a beauty for the small Rose bed, what a magnificent thing for a dozen purposes! Every Florist should have a large stock of this Rose. The greatest bread and butter variety yet introduced. We will fill orders in the rotation in which they are received, and notwithstanding our stock comprises many thousand plants the demand promises to exceed the supply.

Price, 2 1/2 inch pot plants, April 15th delivery, \$2.50 per dozen; \$17.50 per 100; \$150.00 per 1000

We have also in stock upward of 1,000 different varieties of Roses of various sizes, including all the new and popular varieties, as well as old standbys. Send to-day for **Our New Guide to Rose Culture for 1905**. This handsome catalogue is replete with half-tone illustrations and lithographs, and describes this great collection of Roses, as well as a complete list of Hardy Shrubs, Vines, Perennials, Violets, Chrysanthemums, Carnations, Cannas, Miscellaneous Bedding Plants, Geraniums, Lilies, Flowering Bulbs, Fruits, Flower and Vegetable Seeds. Send us your list for quotations.

NEW YORK

Covent Garden Market, London.

An Interesting Account of the Workings of the Largest Mart for Horticultural Products in the World.

By A. HEMSLEY.

Our central market for all horticultural produce is situated in the very heart of the great metropolis, and if not quite all that might be desired, it is certainly the most important horticultural market in the world and one of the oldest. Originally the ground now occupied by the market was the garden of a convent, hence its name. Being in such a central position, the space at command is somewhat restricted, yet the best possible use is made of the area available. I have met people from all parts of the globe, and though some suggest that there are more commodious markets, it is generally conceded that Covent Garden is the busiest market in the world.

The fruit and vegetable market comes under the same control as that for the plants and flowers, but they are kept entirely separate. The whole of the area occupied by the markets belongs to the Duke of Bedford, and is under the control of his agents. Yet, though practically a private concern, everything that is possible is done to keep up with the times, and to provide for the ever-increasing demand made on their resources, the latest addition being the large hall built for the accommodation of imported flowers, the trade in which has grown so enormously. This was done chiefly to relieve the ordinary flower market, the English growers having complained that the foreign produce interfered with their trade.

The large hall, which was built just over thirty years ago, has since been enlarged, and is now a most commodious building. But previous to the erection of this, the accommodation for the flower trade was very poor. The building, which is still known as the "new" flower market, has 370 stands, which are about 6 feet long, with a width of about 5 feet on the ground, and three shelves above, the bottom one about 3½ feet wide, and the two upper ones about 2 feet wide, with a depth of 2 feet between each. This gives sufficient space for most flowering plants, and larger ones can stand on the top or on the ground. Growers occupy from one to six stands, according to the space they require, or rather the space they can secure, for there is a big demand for stands, and it may be a long time before a new grower can secure even one stand. The stands are let at a yearly rental of from £10 to £13, the commission men having to pay £2 per annum more than growers. And when there are stands to let, growers are supposed to have first choice; but I find there are now a good many commission men holding stands.

Although the stands are let at an annual rental, the market authorities reserve the right of subletting any that are not actually occupied after a certain hour. And any grower coming in late may find his stand occupied, and must look for further accommodation and pay for it, too. Of course, it is generally known who are likely to be coming in, and it is seldom that any stand holder is put to the inconvenience. In addition to the annual rental there are various tolls to pay, and anyone not holding a stand is charged 1s. 6d. per morning for any stand that may be available.

The market is open for plant trade every morning from the first of April until the end of July, and during the other portion of the year three days only (Tuesday, Thursday and Saturday), a portion only of the market being open on what are termed bye-days for the sale of cut bloom alone, when an extra charge of 1s. 6d. per stand is made, even to regular stand holders.

The market is open for unloading at 8 p. m. the previous evening; and for trade from 4 a. m. to 9 a. m. during May and June, and 6 a. m. is the earliest at other times. Plants not cleared out may remain on the stands until the

next market, but if on a stand only held for the morning they may get removed to another stand before the next market. Cut flowers and plants are sold on the same stands on ordinary market mornings.

Most plants are unloaded in the evening and the stands left ready for trade in the morning. The growers, or their salesmen, sleep near the market. Porters are provided for helping with the unloading, and most convenient barrows are furnished. Women do most of the carrying out in the mornings; the baskets, which hold upward of a dozen pots, are handled with the greatest ease by most of the women.

dispose of their own stock have gone back to the commission men again.

All imported produce is sold by commission men, but this is received and sold under quite different terms and conditions from those which govern our English produce. There is an arrangement between the agents by which the growers are insured of a certain return for their produce, the agent taking some of the risk. But with English produce, sent on commission, if it fails to sell at a price to cover all expenses the grower, besides getting no return, may be called upon to pay out to cover expenses.

From the middle of April until the middle of June is the busiest time in the Covent Garden flower market; during this period every available space is occupied, and much of the stock of ordinary bedding plants is sold outside the ordinary flower market. The new hall for foreign flowers is built on pillars and the space beneath is already (April 15) pretty well filled up with stands for the Spring trade, the stands being temporary arrangements fitted

and grandfather were in the same business before him, the firm having been first established considerably over a century ago. Mr. Garcia speaks of the time when the area which is now so well covered was an open piece of ground, with rows of small wooden structures for market stalls. It was in 1835, when some of the most important building was done.

Most of the commission salesmen have large warehouses adjoining the market, where a good deal of trade is done after the flower market is closed; and some of the large growers are following the example. Messrs. T. Rochford & Sons have a large warehouse where they usually have an extensive assortment of plants, also cut bloom, which can be procured at almost any time of the day.

In regard to the sales, or disposal of produce, there is no union or regulation among growers, each disposing of his own to the best advantage; consequently, it is very difficult to give even approximate prices. Of course, the variation in quality makes it most difficult to make any uniform arrangement. Most salesmen try for the highest possible prices early in the morning, when the best buyers are in (that is, the leading florists), and those who must have best material, and some refuse to lower prices much even though they may have a lot of perishable stock on hand at the close of the market. But there are others who will clear out if possible at any price; and this is one of the worst features of our market, for hawkers buy at very much reduced prices, and are able to sell at lower values than the regular florists paid early in the morning. And I have heard florists complain that this has been done in front of their own shops. Most salesmen are ready to take advantage when there is an extra demand, or shortage, in any particular line. There are some who arrange with customers for a regular supply at fixed prices through the season, and this enables the florists concerned to book orders without much regard to market fluctuations.

The commission salesmen dispose of a good deal of imported cut bloom by auction, but after the first lot is knocked down, large quantities may be cleared at the same price without further bidding.

Hardy Orchids and Their Cultivation.

For those who have already acquired an interest in hardy plants, the hardy orchids form one of the most interesting classes. Out of the forty or more species indigenous to the Northeastern States, there are many that are well worth a place in gardens. Without doubt the most showy genus of the family is the cypripedium (lady's slipper), and the largest and finest is *C. spectabile*. This is no doubt a showy plant when in flower and one well worthy of a place in every garden. It grows to about two feet in height; the stems clothed with broad, handsome foliage. The flowers are composed of a large inflated lip, pinkish in color, and the sepals and petals are pure white. Although an American plant, it is much more common in European gardens than in the gardens here. Few gardens in Europe, where hardy plants are given any consideration, are without good examples of this hardy lady's slipper.

It is of comparatively easy culture if a little pains be taken with it, especially in the selection of soil and situation. It requires a good, deep, moist soil, but not stagnant moisture, a spot that will be shaded from the sun's rays at noon and the soil rich in humus. These conditions well favor the growth of all the hardy orchids, with a few exceptions. Plenty of water in Summer, but not much in Winter, nor when the foliage begins to ripen, is what most of them require.

If a good start be made with this cypripedium, such as a good strong clump planted under the right conditions, there will not be much difficulty afterward, and the plant will continue to thrive and increase from year to year.

I have seen this plant grown as a pot plant with very good results, and it made a good showing in the Spring months. Outdoors it flowers in June.

CYPRIPEDIUM PUBESCENS

Photo by W. H. Waite

Almost all pot plants are sold by the growers, or their own salesmen, and a large proportion of the English-grown cut bloom is also disposed of in the same way; but growers living further away in the country send their produce to commission men. There are now a good many well-established firms who can do better than if growers came or sent with their own produce. The commission men also do a large trade in dispatching to provincial florists. The commission men who confine themselves to the English growers may vary a little in regard to their terms, but 10 per cent. is about the usual commission charged growers who send regularly. The commission men are not always looked upon with favor; they certainly have a difficult task to make satisfactory returns for some of the produce received, and there may be those who do not do their best for their clients, yet there are many who are reliable, and growers who have tried to

up to make the most of the space by those who bring in the stock. Most of the material seen in this outer market is from those who only grow plants for Spring trade and fill their houses with tomatoes and cucumbers as soon as the plants can be cleared out.

The Grand Row, Covent Garden.

This is a broad covered-in thoroughfare with shops, or stores, on either side, and was originally confined to retail flower and fruit trade. And there are still some who do retail trade only; some combine wholesale and retail, and others are now entirely wholesale depots. In the flower trade, Mr. Garcia always keeps up a splendid display of the best material procurable. "No second quality stuff is of any use to me," says Mr. Garcia. Some very interesting information may be gained from this gentleman, if you get him in the right mood for talking. He has been 62 years in the trade, and his father

Other species of the cypripedium which are also desirable are acule, pubescens, and parviflora. Mention must also be made of the beautiful C. calceolus, the only British representative of the genus. This is a very rare plant now, especially in its wild state. It used to be found in Yorkshire, England, and at another station in Cumberland; but it is now almost extinct. It is a large growing plant, the leaves resembling those of C. spectabile. The flowers are usually solitary, although I have seen them in twos. The labellum is clear yellow; and the sepals and petals of a deep rich brown.

Orchis spectabilis, which is found in the woods of New England, is also a good plant for the garden, but somewhat difficult to establish. The soil recommended for the cypripediums I have found very suitable. O. mascula, O. latifolia are common plants in Britain and are also desirable. The best of the orchids is O. foliosa. I have not tried this outside in this country, but think it would do well. It is a native of Madeira, and makes a splendid pot plant, having large leafy spikes of deep purple flowers.

Among the habernarias there are four which are natives of the Eastern States that are desirable. H. ambriata, with purple flowers, which blooms in June. H. psychodes, also purple, flowering from July to August. H. ciliaris, the yellow-fringed orchis, is also a beautiful plant. I have found the latter in large quantities growing on the light soil of Hempstead Heath, L. I., in the full blaze of the sun. The soil was moist, but not stagnant. That is one mistake that is frequently made in the cultivation of these plants; the natural habitat is often found to be a wet place and one is apt to take it for a bog; and likewise the plant is planted in an artificial bog, very often where there is no drainage whatever. A closer examination of the places where many of the wild orchids are found will prove that while the moisture is abundant, it is never in any way stagnant. There are, of course, some species of orchids that are found in bogs, and the fourth species of habernaria native to the Eastern States is one of these—H. dilatata—a beautiful species having white flowers and very fragrant.

Of the European species that I have tried I have found H. bifolia the best. I shall never forget the first time I saw this plant growing on its native heath; it was in Perthshire, Scotland, in a field at the foot of one of the big bays, yet a little on the slope was literally white with its beautiful flowers, and no one interested in hardy plants but would be impressed with the scene. It is commonly called the butterfly orchid. The flowers are creamy white, with tips of spur and lip greenish; the flower spikes rise to a height of from twelve to twenty inches. The flowers are very fragrant, especially in the evenings. It blooms in June. Any good, deep, loamy, moist soil will suit this species.

Goodyera pubescens, or the rattlesnake plantain, is one of the most difficult to cultivate. It is valued more for its beautiful foliage, which is of a dark green, with white veins, than for its small white flowers. The leaves are evergreen and are very conspicuous in early Spring. It requires shade and a loose soil. It is found growing in pine woods, hence pine needles mixed with the soil are often of an advantage. It must on no account have any stagnant moisture.

All the hardy orchids should be given a little more than ordinary attention, and any extra care will be fully repaid when they are established. They ought to be protected with a slight covering of leaves in Winter, but should not be covered with manure. A mulch of some loose material should also be given in Summer to prevent excessive evaporation. We must not forget that in nature they are found growing among, and mixing with, other plants, in many cases sedges and grasses. These all prevent evaporation from the surface of the soil. The best way to start in the cultivation of these interesting hardy plants is to resort to their native haunts and procure sound and vigorous specimens. They can be lifted when in full flower and should be taken up with as large a ball as possible. They may also all be cultivated in pots, by plunging the pots in a cool bed of ashes, where they can have the best aspect suitable to the individual species.

W. H. WAITE.

WE ARE HEADQUARTERS FOR ORCHIDS

We have them in all stages of development and from all parts of the world where Orchids grow.

We do not sell the cheapest plants but we sell the BEST that can be produced.

If you are in the market for small or large quantities we respectfully solicit your order and we guarantee entire satisfaction.

Floral Story of the Year.

Mr. A. Herrington, of Madison, N. J., was a recent speaker at the weekly lecture of the Massachusetts Horticultural Society. His subject was "Some Aspects of Hardy Flower Culture." He spoke in part as follows:

Notwithstanding all that has been written in the past about style and design, there is no garden so beautiful as that untrammelled by the application of needless geometry to its plan and planting. A certain formality may be necessary and right about the house, but those who tell us the garden as a whole should be a thing of formal design are enemies to true gardening. They are perhaps not so through willful intention, but from lack of knowledge or inability to see and appreciate how their much-vaunted formality circumscribes or prohibits the possibility of good gardening by limiting us to the use of a few forms and types of vegetation adapted to the formal scheme.

Getting Near to Nature.

The flower garden that is here advocated goes beyond the prim beds and borders, although admitting the propriety and necessity of these in their places. It advocates getting as near to Nature as the garden will permit, or, in other words, doing in many ways what Nature does, with a tolerable certainty of good results. It will give us flowers on the hillside, flowers in the valley, flowers in the open sunlight or in the shade, in the grass or in the woodland; in short, it will enable us to have flowers in hundreds of places that surround the home, heretofore only devoid of them by reason of our neglect to plant; and, which is perhaps of great importance to many, at a minimum

simple matter of lifting the sod and underlying soil, dropping in the bulbs and replacing the sod, taking care to plant the groups in a natural or irregular way.

Something About Tulips.

A word concerning tulips. The familiar type is that of the garden varieties, of which there are hundreds—important Spring flowers, too—but scattered through Europe and Asia are a score or more of beautiful and most variable species that can be semi-naturalized about the shrubbery and plantations and bring to the gardens new forms and types of tulip beauty. There is the sweet-scented yellow *Tulipa sylvestris* of Great Britain, a charming variety to naturalize; others with branched stems bearing several flowers, novel in appearance to those who have seen only the solitary flowered, ordinary tulip. *Tulipa præstans*, from Bokhara is a fine species with sometimes as many as five flowers of a bright orange red on a stem twelve to fifteen inches high, and *Tulipa persica*, from Persia, is another branching tulip, with brilliant yellow, bronze-marked flowers. In all the tulip family, wild or cultivated forms, few can compare in gorgeous beauty to *Tulipa Greigii*. Besides these there are many others, and if you would take the species and make a tulip garden of them you would wonder why you had so long been contented with the ordinary garden tulip.

The continuing of the floral procession brings next to view the taller plants, with larger flowers and a veritable host is at our command. The massing of a collection of hardy herbaceous plants in a long mixed border is at its best a mere collection of units, yet collections more or less in number mainly represent the extent of hardy flower culture. The collection has its place, but it cannot be made a strong feature of the garden. If our aim is to create pictures in the gar-

gather an assemblage of pretty, easily grown plants and make a Spring garden of exceeding beauty. Here are some of the important families: Alyssum, arabis, phlox, sedum, saxifrage, sempervivum, Iberis, epimedium, silene, pulmonaria, primula, armeria and many others. To see and enjoy these to the fullest measure, we must not be content with them as units; we should have them in hundreds and thousands, if room permit. Some of them are admirable for planting in broad masses as a fringe or margin to shrub plantations; they may even be used as carpet plants where choice shrubs stand widely apart, but beyond this they justify the making of a special feature, especially where the topography or geological formations permit.

An Iris Garden.

Suppose we decide to make an iris garden. Here is a family worthy of ten times the attention it gets in the ordinary garden, and no matter how much space you have at command you can plant half an acre or more if the space justifies so extensive a planting, and yet show difference of variety in every square rod with fitness of association throughout the whole arrangement. Instead of a mixed medley of everything that flowers at iris time, consider irises only and see what the family has available for such planting. Do you know that you can have an iris garden that will give you profuse and unbroken succession of loveliness from April well on into July? and that, too, without using the family in its entirety, as some types like the cushion irises and the bulbous class need separate special treatment. An appropriate setting to and background for an iris garden is a belt or plantation of shrubs, planting the irises in bold groups in well-prepared soil in the foreground. The dwarf growers are the early bloomers and height of growth and time of flowering are in such perfect harmony that there need be nothing incongruous in the arrangement.

A Peony and Lily Combination.

Peonies and lilies, happy in appropriate association, replete in variety, may be suggested for another special extensive planting, a garden of them, in fact. The peony needs no eulogium here, as it is one of the hardiest and best appreciated of hardy garden flowers—something you can plant and leave alone for a number of years. There is an unlimited choice from which to plant. A careful selection of the best should be made, not, however, forgetting some of the species like the Chinese albiflora, with its great, single, white flowers as large as a plate, and varieties in other colors that have been raised from it. Other single flowered species, natives of Europe, and their varieties are important, too. The peony season is not a long one. While peonies are not averse to the open sunlight, it should be borne in mind that they do remarkably well in the shade, even quite near to large trees, so that a peony garden might be made a great success in a position where an iris garden, if attempted, would be a failure.

With the passing of the peony bloom, nought remains for the balance of the year but their own great tufts of luxuriant leafage, hence the suggestion to plant lilies with the peonies. To give ample room for development, it is essential that we plant our peonies at least a yard apart, as by the time they attain full growth they will completely hide the ground, yet there will be much unoccupied ground beneath or between the great spreading leaves. This is just the condition desired by many lilies. They raise their heads of glorious blossom high in the air, much higher than the peony grows, while the peony foliage, over-spreading and shading the ground, furnishes comfort, shelter and protection from the burning sun to the lily roots. In this association of peony and lily we have practical adaptability, as well as artistic fitness, and the lily family suffices to continue the flowering interest in the garden almost to the end of the year.

Other Plants Worthy of Attention.

Numerous other groups of flowers have strong claims for consideration. Suppose you have a good, deep, fertile soil that will grow good delphiniums, why not plant a group of a hundred or more? In all Flora's fair family there are none more stately, and what a range of color they present in every conceivable shade of blue! Perhaps your ground is poor and shallow; then take the yuccas, filimentosa and flaccida, and plant these in bold, broad masses. In New Jersey, and, doubtless, elsewhere, there are by the country roadsides great groups of the tawny day lily, *Hemerocallis fulva*, apparently wild, and gorgeous they look with thousands of flowers open at one time on a July day. Does not this suggest a similar free use of the other species of *Hemerocallis* in our gardens, in association with tree and shrub in a wild, free way? *Bocconia*, *crambe*, *ferula*, *echinops* and *polygonyum* are names that to those who know the plants that bear them recall those of great size and striking character, too coarse, perhaps, for the choice collection, but, given a place in the tree and shrub plantations, they will give the garden another aspect of beautiful, hardy vegetation.

As Summer verges into Autumn other great groups continue the floral story of the year. In short, hardy flower culture presents so many aspects, provides us with material suitable to every kind of soil, condition and environment, with flowers for Spring, Summer and Fall in unlimited variety, as to make utterly inexcusable the generally prevalent monotony of so-called flower gardening. Instead of universal imitateness in the display of tender Summer flowers, we want original, adaptive plantings of those that are hardy and permanent, and this we must do with the knowledge that no garden can do justice to them all.

POOL IN COLONIAL GARDEN, VAN CORTLANDT PARK, NEW YORK, CONTAINING HARDY WATER LILIES, BAMBOOS, EULALIA GRACILLIMA, ETC.

Frank Hamilton, Planter and Photographer

cost of future care and keeping after the original outlay.

Most of the Spring bulbous flowers need no cultivation at all, in the sense in which we understand or apply that word. They are children of Nature, wild species, abounding still in grassy meadows or leafy woods. We, too, can plant them under conditions of similarity. Snowdrop and crocus, scillas and dog-tooth violets are perfectly happy and infinitely more at home planted in association with trees and shrubs. They often perish from disease, if not killed by disturbance in the deeply dug, manured border, yet associated with trees and shrubs and left undisturbed they will go on from year to year increasing and multiplying in numbers and beauty.

As these early harbingers of Spring fade away, the floral procession is continued with flowers of greater stature and more striking beauty. Of these there is the great group of daffodils. It is essentially a European family, but they need not be strangers to our gardens. The home of the daffodil is in the grass; in fact, some of the prettiest species refuse to live more than a year or two in cultivated ground, yet in the same garden planted in the grass, continue from year to year with proportionate increase. All that you require is a grassy spot that need not be mown until midsummer. The smallest nook can be prettily adorned, and if you have an acre or two to devote to the purpose, the possibilities are immense. Planting is a

den landscape, effects of color, distinctive features in different parts, selections, not collections must be the rule. As soon as we depart from the collective method and take up the selective, the availability of hardy flowers for garden decoration is enormously increased. For example, take some special class of plants suited to a chosen spot, both from the cultural standpoint and with relation to effect in the garden landscape. Thoroughly prepare the soil and plant it and you can create a flower feature that will stand from five to ten years with only the ordinary care of keeping free from weeds.

Alpine Beauties.

The bulbs, numerous as they are, comprise only a part of Spring's contribution to the floral gaiety of the earth. Another type of vegetation, of perennial characteristics, offers to the garden a wealth of beautiful material. Alpine flowers, we used to call them, and a rockery, or rock garden, was considered an essential adjunct, in fact a necessity, before attempting their cultivation. Too often they perished from drought or starvation, when planted on ill-constructed rockeries. Many of these gems from the high mountain ranges of the world are just as happy if suitably planted and cared for upon the level ground such as the garden affords. Because they are indigenous to high altitudes, it does not follow they must be strangers to gardens. From these lowly types of high mountain life we can

Luther Burbank—An Impression.

To the horticulturist in general, the name "Burbank" has a great deal of meaning, but to one who knows Mr. Burbank, and knows the story of his life, and his work, and is in addition a lover of Nature, having an appreciation of the power which this man exerts over plant life, the name makes a deeper impression and carries an added respect and admiration.

It was my good fortune to meet Mr. Burbank, and my visit to Santa Rosa and his home I look back upon as the most interesting day of my trip to the State of California, and, as a lover of plant life, the most interesting day I have ever spent.

January is, perhaps, not the ideal month to visit such a place as the Burbank establishment, but even so there is so much to be seen that is new and interesting, and so much to be learned that the most unfavorable day in the year would be bright.

A great deal has been written by competent men on the subject of Burbank and his work, yet the half has not been told, and never could be told, unless volumes were published, dealing exclusively with the work which he has carried on. The diversity of subjects and the magnitude of his experiments are beyond the comprehension of the ordinary individual, and to only a few is it given to really know the man and the motives which underlie his life work.

Luther Burbank was born on March 7, 1849, in Lancaster, Worcester County, Mass., and, as a boy, his start in life was not auspicious.

By nature he was frail, and his circumstances obliged him to earn his own living while still a boy. The Ames plow factory gave him employment, and while in the employ of this concern, at the nominal wage of 50 cents per day, he showed the inventive spirit which he has used throughout his entire career in his work on plant life. The invention of a wood-turning machine made an opening for him, and yet he chose the life among plants, which he loved, rather than the indoor life and confinement, which an acceptance of the position offered him would have necessitated.

While working in this factory, as a boy, he carried on his early work on potatoes, his mother's garden being the scene of operations. From seedlings of the Early Rose variety came the potato which gave prominence to the originator; but California appealed to him, and he went West with his fortune, in the shape of ten Burbank potatoes. These he had reserved when he disposed of the variety to James J. H. Gregory, of Marblehead, Mass., for the sum of \$125. It is of interest to note that statistics show that the variety has produced crops to the value of \$20,000,000 since that time.

Hard work, physically, was an impossibility to Mr.

Burbank, owing to his frail constitution, and his first venture in Santa Rosa was selling trees. This gave him the sum of \$15, and he then rented a small piece of land in the vicinity. The trees were blue gum trees and they are to-day standing on McDonald avenue in Santa Rosa.

While working this small piece of land, a gentleman by the name of Marshall became interested in him and in the work he was doing, and loaned Mr. Bur-

LUTHER BURBANK.

bank the sum of \$200, which was used to increase the acreage of his farm, and to aid in his experimental work. For a short time, Mr. Burbank was employed in writing seedsmen's catalogues, and this work, in connection with collecting seeds of many of the native California plants, added to his income. The seeds which he collected were for shipment to Europe, where a large number of California native flowers were being grown.

The real start of Burbank's nursery came suddenly. Mr. Warren Dutton, a wealthy fruit man, came to

Mr. Burbank with a proposition. He wanted 20,000 prune trees within a year. To get these by ordinary methods in this space of time was an impossibility. The inventive power of the man came to the rescue, and after considering the matter over night he took the contract. By buying up all the almond stock in the market, and grafting on the prunes, he filled the order, which gave him his real start in the nursery business. The process of grafting the prune on to the almond stock was new, and entirely original with Mr. Burbank, and this showed the power of the man, who would dare attempt such a step without previous experiment. This daring to attempt new things has been the leading feature of his undertakings, and to it is due the success he has achieved.

A visitor, well pleased with the Burbank nursery, brought to him the New Zealand trade, and through Cecil Rhodes the fruits of Mr. Burbank's origination have found their way into South Africa, where the Burbank plum is widely grown for the London and other European markets. Through Mr. Burbank, then, American horticulture has invaded these distant countries, and the success in South Africa and New Zealand of the Burbank plum has been very marked.

Which line of Mr. Burbank's work has brought him the most prominence is hard to say. In the East, one would say the potato, but in this State the fruit industry owes more to him than it can ever repay. Potatoes were his early study, and he is still working on them. The feature of his potato experiments is the growing of seedlings in the greenhouse during the winter, thus saving a year's time in every instance. New subjects in the potato line, of South American origin, are being used in his crosses, to infuse new vigor and to upbuild what might be called the food of the nations. The future will bring forth, from this base, potatoes which will be a decided improvement on anything which Mr. Burbank has yet produced. He is, however, not yet ready to place before the people these varieties, believing, as he does, that they are subject to still greater improvements, and that they have not yet reached the perfection which he believes to be possible. Inquiries as to these new varieties Mr. Burbank does not desire. The field of experiment is too wide, and the answering of the inquiries would entail so much work that it would needlessly interfere with that which he is carrying on.

Then, in the fruit line, the work which he is doing is of incalculable value. Plums, prunes, apricots, pears, quinces and the new cross between the plum and the apricot, which is called the "plumcot," divide honors, and he is working wonders with them all. He dares to take liberties with Nature, and the results are often new species, as in the case of the plumcot, where we have something like both parents, and yet distinct from either, and we have a new fruit which possesses commercial possibility, which will, in the future, add to the revenue of the greatest fruit-growing district of the world.

The best paying crop in Southern California is, according to general opinion, the English walnut, and this has received a merited share of Mr. Burbank's attention. The result of this study and experiment is a hybrid walnut, showing an improvement in the size and the character of the nut produced, and a nut that is superior in texture and flavor, and one with practically no color to the meat, and no tannin to detract from its value as a food. The very growers of this nut in California do not know that their favorite crop has been a subject of study, and those who are the first to learn of it and take advantage of the im-

provement will be the ones who will profit by their knowledge.

The far-famed Logan berry was an accidental cross between the Cuthbert raspberry and the native dew-berry of California. This berry was discovered by Judge Logan, of Santa Cruz California, in his garden. Recognizing that there were possibilities here, and knowing the value of selection, Mr. Burbank has, from the same cross, produced a berry which he has named Phenomenal, surpassing the Logan berry in flavor, and which is, aside from being a more palatable berry, in an uncooked state, an enormous yielder.

The sugar prunes can trace their origin to the Burbank experimental grounds, and we have now to look forward to the stoneless fruits, on which the originator is doing a wonderful work. Consider for a moment that last season 160,000 different varieties of plums alone were grown and tested, and you will begin to realize what his work includes. Selection is the basis of his work, and on the number of individuals he bases his claim for improvement and variation of existing types.

For the botanist there is much to study. Over 2,000 distinct species of plants are to be found here, and collectors all over the known world are sending in new species and new varieties for experiment. The fadeless flower is one of these which came from Australia to the gardens at Santa Rosa, and after being developed and improved, as it has been, the future for it is as bright as the history of this peculiar flower is interesting.

Rare specimens of plant life, and peculiarities of Nature, are met with at every turn, and I merely mention, in this connection, a few of these, which this most interesting man pointed out to me as we walked about among them.

The heuchera, of two varieties, viz., sanguinea and micrantha, are plants which especially interest Mr. Burbank at present, and these are producing a beautifully crested foliage, which would be an ornament to any park or flower garden for a border, or for bedding purposes, it has a place; and the plants are, considering them as individuals, exceedingly beautiful.

Then the tuberous grape, a herbaceous type, which was discovered in a remote section of Mexico. In flavor, the fruit is like the Muscat, and is produced in much the same manner, but the plant dies down to a tuber when dormant. Solanum quitense, with its fruit similar to an orange, but in flavor like the melon pear, is an interesting subject, claiming Quito in Peru as its native home.

The yellow calla and the hybrid lilies, which are one of Mr. Burbank's specialties; the poppy in its improved state, as well as clematis and amaryllis, interest the visitor. Sweet peas and verbenas come in also for a share of attention, and one can almost wonder where the experimenter draws the line.

Among the interesting hybrids, a tomato-potato is a study for the botanist, and that such a cross were possible one would be inclined to doubt, but it is found here.

The thornless cactus is in itself a subject for a treatise, but the work is but in its infancy. Thornless cacti were grown and shown some years ago, and the question of their economic value must be settled before this type of plant life can be fully written up.

The reclamation of the deserts of the world depend on some such plant. Given the necessary water for the stock, and a thornless cactus, on which sheep can feed, and which contains sufficient nutrition for their existence, consider the possibilities of such states as arid New Mexico and Arizona. Among Mr. Burbank's specimens of thornless cacti, there is one plant now three years old, which will weigh in the neighborhood of 800 pounds, perfectly thornless, and the substance of which, according to those who are well informed, is

CRINUMS AT BURBANK'S EXPERIMENT GROUNDS

nutritious and edible, and which sheep will eat without hesitation. A cross breeding of this thornless cactus, with the cacti of Alaska, as it is now being carried on, it is hoped will bring about a hardy variety

BURBANK'S DWARF AND GIANT CALLA

BURBANK AMARYLLIS

of arid countries will depend on the result of the effort and experiment.

I have given you a mere outline of the work which Mr. Burbank is doing, and as I saw it on the occasion of my visit; but to me it has been the subject of considerable thought, and it has been a pleasure to study these subjects. I have said one should know Mr. Burbank personally to understand the principle which underlies it all. He is a very busy man, and his work is all the burden that he is able to carry. His aim is not wealth; he is actuated merely by a love of plant life and a desire to help and uplift humanity, by improving the vegetable life, which is back of, and a part of, a prosperous nation. The value of this work can never be measured in dollars and cents. It is beyond that, and the personality and perseverance of the man alone make these results, which he has obtained, possible. To his mother, who shares his home, and to his work, the man is devoted, because he loves them, and is happy with them. The visitor, who is fortunate enough to have a personal acquaintance with Mr. Burbank, meets a man of the kindest possible disposition, a man who never advances his own theories to contradict a friend, and yet a man whom one cannot meet without being impressed and without realizing that he has met a man who is truly great, and who is worthy of the deepest admiration and the greatest respect.

"Ask no questions which you think can be answered elsewhere" is the motto which greets the stranger, and five minutes is the time allotted to the casual visitor. A favored few, however, break through these restrictions, and meet the man whose personality is the backbone of the work. It is on the unerring judgment of one man, whose long experience and whose intuition render him capable, that success has de-

of cactus, which will live anywhere, and which will be able to withstand freezing. Thousands of cacti are being experimented on here, but, as I have said, the future must solve the problem, and the future of the

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

pendent and to him should be extended the praise and thanks of the nation. As yet, California fails to appreciate him fully; and the world at large does not know and understand him. Above his desk, beside a painting presented to Mr. Burbank by the flower artist of California, M. Paul de Longpre, is a quotation from Emerson, which is appropriate: "If a man write a better book, preach a better sermon, make a better mouse-trap than his neighbor, though he build his house in the woods, the world will make a beaten path to his door." He has done none of these things, and yet where perhaps the Burbank potato or plum is unknown, the Shasta daisy is admired, and the lover of Nature seeks for the man who has made such a creation possible. Ten thousand visitors, during the previous year, is a testimonial to the truth of this quotation; and the new feature of charging an admission fee of \$10 per hour at the experimental farm is made only to deter those who enter for mere curiosity, and who, by their number, seriously interfere with the work. All would be welcome, and there is nothing which would not be open for inspection, but for the fact that experiments are interfered with by an over-supply of visitors and valuable time is lost.

Hugo DeVries, professor of botany in the University of Amsterdam, and a man who is looked up to and considered the leading botanist of the world, visited California recently and on his return to Europe delivered a lecture on the State of California, taking as his title "California Fruits; A Visit to California." This lecture, by the leading botanist of the world, has attracted a great deal of attention in Europe, and a copy of the lecture was sent to Mr. Burbank. This has been translated by a Mr. Vanderlyden, and the translation will be published shortly. To Mr. Burbank, the essayist and lecturer has given unstinted praise, and friends of our leading plant breeder unite with this world-famous botanist in giving Mr. Burbank the credit he so richly deserves.

WALLACE R. PIERSON.

Our London Letter.

BY A. HEMSLEY.

HARDY DECIDUOUS FLOWERING SHRUBS were a great feature at the last meeting of the Royal Horticultural Society, and the group staged by Messrs. Cuthbert, of Southgate, was one of the finest displays we have seen. It gained the society's gold medal. Azaleas, mollis, sinensis and hybrid varieties, were in grand condition. Magnolia Lennel, shown in large, well-flowered plants, the large, rich, purple flowers had a telling effect. Wistaria sinensis and its white variety, on tall stems, and other standard trees were well flowered. Spiræa Thunbergi, densely covered with pure white flowers should make a good plant for the florist. Messrs. Cuthbert & Sons, Highgate, had an equally interesting, if not such a showy, exhibit. Some large plants of Amelanchier canadensis, which is also known as Pyrus botryapium, had long branches well covered with pure white flowers. If the flowers would stand, it would be valuable for cut bloom. Though introduced from Canada as far back as 1746, it does not appear to be very well known. Spiræa confusa,

ceras sorbifolia, which came from China in 1870, is in well flowered plants, was conspicuous. Xantho-a grand plant for forcing, as shown. Some good hardy cytisus were also included in the group. Messrs. G. Paul & Son, Cheshunt, in a miscellaneous group, had some fine double lilacs; these improved varieties are valuable additions to our shrubs for early forcing. Clematis are now much in favor for early flowering. H. B. May put up a good collection chiefly of the older sorts. Nellie Moser was included, but this sort does not come so good in color when forced. Miss Bateman and Mrs. Quilter, both white, are the most useful of all. Primula kewensis has been well shown by several exhibitors. This is one of the best things of recent introduction. Eupatorium petiolare, shown by Messrs. Cannell & Sons, Swanley, is a useful subject; large, well flowered plants in very small pots attracted a good deal of attention. Some very fine varieties of lachenallas came from private growers, two of them, Brilliant and Jean Rogers, gained awards of merit. Cinerarias from Messrs. Sutton & Sons, Reading, were good. Quite a distinct type with self-colored flowers, the various shades of pink and the deep blues were most attractive.

MARKET NOTES.—We are promised a considerable extension to the Covent Garden Flower Market. Already some of the adjacent property is vacated, ready for operations. I understand the extension will take the whole corner from the Gardeners' Chronicle office in Wellington street and round a good distance

in Russell street. This will be much more appreciated than the new upstairs hall, which was recently opened for the French and other imported flowers. This, though a most commodious hall, is not appreciated on account of having to go upstairs to it. And, as foreign produce is still allowed to be sold in the ordinary flower market, those upstairs lose most of the best buyers.

POT PLANT TRADE.—Never was the market better supplied than at the present time. Cinerarias continue in favor and have been very fine. Cyclamen have been good. The strain now grown is much better than we had a few years ago. It is chiefly selected from the giganteum varieties. The large flowers stand well above the foliage. We already have mignonette, the plants of which are dwarf, with large heads of bloom. Machel is the only variety now appreciated, and most growers make special selections from the large quantities grown, and save their own seed. And it would be difficult to make much further improvement on what we now see. A little neglect, however, would be disastrous, for there is nothing that degenerates quicker than mignonette. One of our old favorites, Primula sinensis flore pleno, seems to have quite gone out of favor, neither plants nor cut blooms being any longer in demand, the cause being that we are so well supplied with better material. The retarding process has much to do with this and other old favorites going out of demand.

IMPORTATIONS FROM JAPAN.—The lillium bulbs are coming over in the usual good condition this season and in large quantities. It was thought that the war would affect our supplies from Japan, but at present it does not appear to have done so. I find the importers are quoting at about the usual prices, and we are having large quantities offered at the auction rooms. These, while clearing out at fairly good prices, do not go beyond the figures paid in previous years. The Davallia bullata, made up into balls and various designs, are considerably cheaper this season. The balls, well covered with fronds, are offered in the market at 18s. per dozen, and those in a dormant state may be procured at about 50s. to 60s. per 100. Last season prices ran considerably above these for doubtful quality sold in bulk at the auction rooms.

POTATOES.—Growing new varieties for seed purposes has been a profitable venture for many, and there is no doubt that there is still money to be made. Yet there is now a great slump in the market, especially in sorts which created such a sensation and went up to such high prices a year ago. Those who are doing a retail business will do very well with them this season. I find H. J. Jones is doing quite a good trade. It is those who have large stocks and depend upon selling in bulk who find that trade moves slowly. The ordinary crops have been good this season, but even for best quality prices are low on the market, and this is not encouraging for growers to make new ventures. While on the subject of potatoes I would say that it will pay to make the most of the seed of any potato that is really good. I have advocated the practice of propagating from cuttings, but this was condemned by some experts last season. I now find that some who were most against it are inclined to favor it. My contention has been, that to propagate from cuttings taken from the very best samples of tubers, is far more likely to keep up the quality of any variety than is the old system of taking the small tubers from the ordinary crop from year to year; for this must inevitably bring about degeneration. Some years ago, I remember, we grew the old Ash-leaf Kidney for seed purposes only, and each year all the smaller tubers were sold, and we had to use the large ones for our own planting. The consequence was that our seed was always much in demand.

SCOTTII

The Most Graceful and Symmetrical Nephrolepis Known;
Unexcelled as a House Plant

Why keep on growing the old Boston Fern when Scottii is admitted by all Judges, Growers and Retailers to be the best commercial Nephrolepis in existence.

Awards Received by Nephrolepis Scottii:

Philadelphia, Pa.	SILVER MEDAL
Newport, R. I.	SILVER MEDAL
Boston	SILVER MEDAL
N. Y. Florists' Club	SILVER MEDAL
S. A. F. St. Louis	SILVER MEDAL
American Institute, N Y.	SILVER MEDAL
New Orleans	GOLD MEDAL
St. Louis	SHAW GOLD MEDAL
World's Fair	GOLD MEDAL

Highest Award at Chicago, Ottawa and Toronto
First Class Certificates and Testimonials from all over the country too numerous to mention

The COMMITTEE OF AWARDS at the St. Louis World's Fair said of NEPHROLEPIS SCOTTII: "A sturdy, Dwarf and compact form of NEPHROLEPIS, very symmetrical and handsome, either in small plants or quite large ones. A great acquisition, with excellent qualities as a house plant. Worthy of Gold Medal."

Read carefully the best report ever given by New York Florists' Club for a new plant.

The committee of award of the club visited the establishment of John Scott, of Flatbush, N. Y., on October 26, for the purpose of inspecting the stock of his new fern, NEPHROLEPIS SCOTTII. Seven members of the committee attended, also the president and vice-president of the club. The initial exhibit of this fern was made at the rooms of the club at the November meeting, 1903. The committee which examined it at that time was so favorably impressed by it that they unhesitatingly awarded it a certificate of merit, and did not ask to see it growing; a request to examine the stock was only recently sent to the club by the exhibitor. The committee made a thorough examination of the stock both in pots and on the bench, and character. It was growing in all sizes from plants in 4-inch pots up to specimen plants in tubs, and it was absolutely uniform, and were highly pleased at its condition form in all grades, the characteristics of the large specimen plants being evident in the smallest specimens on the place. **The most careful scrutiny failed to discover any tendency whatsoever toward reversion, and it seems as if the character of the plant is absolutely and indelibly fixed.** It is in essence a condensed form of the Boston fern, with valuable characteristics added, which are not evident in the parent. Your committee took an average plant in an 8-inch pot and found by actual count that there were 200 fronds in it, not counting the undeveloped and small ones which were in the center of the plant. The fronds of the plant in question averaged about 20 inches in length and three inches in width at the widest point; the pinnae are very closely set, so that they overlap, making a more finished frond than the parent. The plant in question had a spread of three feet. Plants in 4-inch pots showed a spread of 18 inches and a height of 10 to 12 inches. The committee was unanimously of the opinion that it is a most valuable introduction, and that it will become a plant for the florists to grow universally. It has a crispness and hardness about it which is superior to the parent, and which is one of its very valuable characteristics. It propagates very freely, and because of the fact that its character is established in the smallest size, it should find ready sale in all grades. After a thorough examination, your committee unanimously agreed that it was worthy of the highest award by the club and therefore voted that it be awarded the silver medal of the club, and herewith recommend same for your approval.
(Signed) PATRICK O'MARA, JOHN BIRNIE, ALFRED H. LANGFARR, WM. H. SIEBRECHT, CHAS. LENKER, JOHN DOWSETT.

Scottii has received the highest awards whenever exhibited and for the past season has proven itself to be a **hardier house plant** than the Boston. There is no comparison between this fern and any other variety for commercial use.

Consult any grower, or retailer, who has bought Scottii, and they will tell you that it is as far ahead of the Boston as the Boston is ahead of all other introductions

PRICES OF NEPHROLEPIS SCOTTII. All orders filled in rotation

American Carnation Society. Carnation Sports.

Prior to the advent of Mrs. Thomas W. Lawson carnation sports were of such rare occurrence that when one did appear it could be named and claimed by the grower with whom it occurred as his origination, or, at least, his exclusive stock. Since Lawson and its descendants have come into existence, all claims to exclusiveness in the ownership of a sport must be laid aside, as it no longer exists. Sufficient evidences of this fact could be cited to fill this edition of The Florists' Exchange, but it is not necessary to go beyond the White Lawson. With how many growers did this appear in one year? Answer this for yourself, and you will have the reply to all of the others. To-day we are having the same thing in Enchantress and Mrs. M. A. Patten.

The three Lawson sports being sold commercially are, through the wisdom of the men introducing them, being sold exactly for what they are: White Lawson, Red Lawson and Variegated Lawson.

There are true pink sports of Lawson and light pink Lawsons and Enchantress sports and Patten sports galore to come, and it is to be hoped that the growers will consult their own interests and avoid confusion by leaving off all special names and selling them for "Pure Pink Lawson" and "Light Pink Lawson," following with a description of their color, etc.

Two of these light pink Lawsons have been registered through an oversight of the writer, and several more are claiming recognition, so that there would be endless confusion in this color alone if they were given independent names by each grower with whom they occur; and on the strength of these facts this society cannot in the future register any sports, excepting under a descriptive and uniform name.

The three Lawson sports being offered commercially, have also been shown at the meetings of this society and at various club shows. This is not only commercial wisdom on the part of the owners, but the only way in which the varieties can be properly disseminated. To show them before this society is the one and only way in which to get them before all of the best carnation growers at one time; next to that, in order to reach a still greater number, the various club shows can be used.

As an illustration if Smith shows his "Light Pink Lawson" at Boston next meeting, and it strikes me as a good thing, I would buy my cuttings from Smith, no matter if Jones, who claimed to have the same thing, but did not show it, would offer it at half the price asked by Smith.

ALBERT M. HERR,
Sec'y American Carnation Society.

Preparing to Plant in the Field.

The time is drawing near when planting in the field will be in order. Bear one thing in mind: If your plants did not do well in the space they were planted in, change to a piece of ground that has never had any carnations in it. It is better not to grow carnation plants in the same place more than three years.

Soil.

If the soil has been piled up for this season's use, turn it over and mix it well some time before using it. And in case it has not enough manure in it to make good soil, work sufficient into it at once, so that when the

benches are ready to be filled it will not be necessary to mix the soil. In this work can be done at an early date, say, this month, it will give the manure a chance to rot well.
Manure intended to be used the whole of next season for mulching should be turned over. Then there will be a more even richness throughout the pile.
CHAS. KNOFF.

Peter Fisher—An Appreciation

I was pleased to see that my old friend, Peter Fisher, is still alive and doing well. He came to me from the Duchess of Athol's gardener in July 1880, and he stayed with me till November, 1882. He was the most persevering and painstaking young man I have ever met in over fifty years' experience. These were the days of flower shows, and I advised him to go into some large place in the country, where he would see vegetables and hardy fruit well grown in abundance. He was sent to Mr. Pease, of Hutton Hall, Yorkshire, where he stayed about two years; he then returned to me, having the wish to go to America, and I persuaded him to do so. He obtained a situation at Mount Auburn, near Boston, where he stayed a few years. He used to write to me to get him seeds of different things, but he was most anxious about amaryllis, carnations and cyclamen, which we had at St. Dunstons. I gave him of my best. He then opened the Mount Vale Nurseries at Boston, U. S., called Fisher Brothers and used to send to me to procure him large quantities of seeds of cyclamen carnation and primula, and several years after he wrote to say he had sold his share in the Mount Vale Nurseries and was opening one at Ellis, near Boston, as a carnation specialist. Two and a half years ago he paid me a visit of some duration and brought his wife and family, Mrs. Fisher having formerly lived in St. John's Wood. He was very careful to carry back with him some of the standard carnations and amaryllis of twenty years ago. Therefore, not only the men, but some of the best seeds have gone to America from London.—RICHARD BUTLER, gardener to Lord Aldenham, St. Dunstons, Regent's Park, in Gardeners' Chronicle.

HOW DO I DO IT?

My Man in Japan is a Great Help to Me. Three years ago, with the idea of informing our growers in Japan of the kind of Lilies we did not want in this country, we sent in a Warden case by quickest possible transit, growing samples of the two useless kinds of Lilies, the large percentage of which has proven such a NUISANCE IN ALMOST ALL SHIPMENTS FROM JAPAN.

Own Selected Stock of Lilium Multiflorum and Lilium Giganteum.

All orders received and accepted by us prior to May 1st, will be carefully selected, packed and marked for said consignee, and sent direct from the Custom House via our New York office, 17 West Forty-second Street, and if you give your order to me you may rest assured that you will receive as good stock as it is possible to supply. We also feel safe in recommending our selected stock of Lilium Harrisii and Doell for early forcing.

News of the Week in Brief.

William Charles Hill, florist, Streator, Ill., is dead at the age of 62.

James W. Newman, a Boston (Mass.) florist, is in financial difficulties.

The store of Thomas Ullam & Co., Pittsburg, Pa., has been closed by the firm's creditors.

A movement is on foot in England to present a testimonial to Henry Eckford, the veteran sweet pea specialist.

The flooding of the Ohio and Susquehanna rivers inundated the cellar of W. C. Beckert, seedsman, Allegheny, Pa., the past week.

The Monmouth County (N. J.) Horticultural Society is encouraging its young gardener members by offering prizes for the best written essays on prescribed subjects.

The final report of the World's Fair Flower Show Association has been issued. A copy appears in this week's issue. A dividend of 20 per cent. has been paid to the guarantors.

Frank H. Beard, a well-known florist of Detroit, Mich., who took a prominent part in the annual shooting contests of the S. A. F. O. H., is dead. He was 43 years of age.

Our esteemed antipodean contemporary, The Australian Gardener, does The Florists' Exchange an exceeding great honor by publishing in one issue five separate articles which have appeared in our columns. This is, indeed, cause for much gratification; but the joy is allowed; not a bit of credit is given us in either case. Shame!

THE JOURNAL OF HORTICULTURE, London, England, has a very interesting special number in its issue of March 9. Among the various articles presented is one by our S. S. Butterfield, on the subject of "Carnation Culture in the United States." S. B. Dicks, well known in the seed trade here, contributes an interesting communication on "The British Seed Trade." A special feature is made of a history of Kew Gardens, illustrated.

WINDOW GLASS. The output of the factories has exceeded the demand for the past six weeks, says the Metal Worker, during the cessation of building operations owing to the extreme cold weather. Prices have also settled a little as a result of these conditions, but the demand is likely to show improvement from this time forward. New York quotations are as follows: First two brackets, single, 90 to 90 and 15 per cent. discount, larger sizes, both single and double strength, 90 to 90 and 10 per cent. discount.

Our Spring Edition.

This, the Sixteenth Annual Spring number to be issued by the publishers, must be judged, as to value of reading contents, by our subscribers; as to the splendid demonstration of the continued confidence shown in The Florists' Exchange as a trade bringer, by our advertisers, we may be allowed to express our gratification and to return our hearty thanks.

The present issue is an excellent exemplification of the business acumen that characterizes the florists, seedsmen, nurserymen and allied trades of America. It is also an eloquent expression of the high standing of these lines in the world of commerce. In forty years giant strides have been made, yet we can safely prophesy that we are but at the entrance gate, and that horticultural pursuits are bound to be classified, before many years, as among the most important of the country's industries.

We would urge all intending buyers, into whose hands this edition shall fall, to give their best consideration to the offerings of the firms herein presented. Trade dealings with each and all of our advertisers will prove entirely satisfactory. They are all alert, wide-awake business men, a fact shown by their wise selection of The Florists' Exchange as an advertising medium.

Representative American Horticultural Catalogue Covers.

Bound into this issue of The Florists' Exchange will be found a sheet containing a photo-engraved reduction of some sixty catalogue covers of the representative seedsmen, nurserymen and florists of this country.

Had time permitted us to execute this presentation in the original colors shown by the originators, our plate would have been doubtless more interesting and instructive; yet, withal, as shown in the one color, relieved and separated one from the other by a distinctive tint ink, these covers as assembled and grouped together will, we believe, afford all interested in catalogues, all students of catalogue making, and catalogue makers themselves, some material for thought, much opportunity for contrast, and possibly some suggestions for lines of future development.

It is not the intention of this article to attempt an analysis of values so far as relates to the distinctiveness of the covers herein shown toward the ends sought to be effected; namely, the interesting of the public and, in some cases, of the trade; neither for obvious reasons shall we attempt a criticism as to the artistic value of the designs and the illustrations shown, the color scheme, nor the wording.

In the many discussions on catalogue making which have appeared in the various advertising agency publications, the writers have exploited the field voluminously; eminent catalogue makers have also given their views and experiences; yet the field is still fertile, and quite likely to remain so.

Catalogue covers, like the human face, should reveal the spirit unseen; that is, should serve as an index as to the character of the contents, and tempt the reader to go further and "inquire within."

Should an illustrated design be representative or emblematic of the business? Judging from the samples before us one is compelled to acknowledge (if the majority rule) that the verdict is overwhelmingly in favor of keeping the illustration within horticultural lines. Accepting this testimony as conclusive, it remains to embellish the subject selected, invoking the aid of the finest reproductive treatment possible; to furnish a setting that will be chaste, rich and harmonious in color, yet free from gaudiness; to select a color and quality of cover paper in full sympathetic tone with the inks to be used, in order that the work may give forth in its fullness the effect sought to be interpreted; so that the completed cover may be eloquent in expression and a first revelation of all the good things stored within its confines.

Unfortunately, perhaps (and perhaps not, for there would then remain no vivid contrast), all catalogue makers are not possessed of the wealth which is required and necessary to put forth these allurements in high art and expensive material, especially when same have to be distributed free gratis; hence, possibly, more from necessity than from choice, we have the two distinctive classes of catalogue covers. The first one, representative of skill, enterprise, liberality, and the command of wealth; the second, of the exercise of skill, enterprise, and liberality, without the wealth, being the output of equally worthy firms and having just as much in the "physical form" to admire or to condemn. As shown on our plate, the contrast is well developed between the two classes. Some of the plainly simple yet artistically arranged covers are made suggestive and forceful through the typographic expression of the wording, and possess dignity and attractiveness through correct manipulation of the three units, type, paper, and ink.

Covers, above all other considerations, should be distinctive; designs should never be duplicated from one year to the next. Artists travel along beaten paths much like other men; to secure originality from year to year calls for the pencil of a new artist, or, at least, suggestions from fresh mentalities.

So far the catalogue and its cover has escaped the fate which sooner or later seems to overtake so many of our industries, namely, that of standardizing; getting down to one size, so many inches long and so many inches wide. Standards are all right in their

place among certain of the manufactures of the country, in weights and measurements, and in many other ways; but deliver us from the pest of standard furniture, standard children, and standard catalogues. While we are spending our thousands in the search for novelties, pro bono publico; let us retain a few hundreds to aid us to secure originality for our catalogue covers. Do not let the size of your competitor's cover govern the size of your own; let it, on the contrary, bear the hall mark of your own originality. When you have adopted your size, stick to it.

We regret that our group lacks many familiar names. When the time came to make our plate we were still short of several covers desired to make the typical representation perfect.

While we are on the subject we reproduce a few paragraphs from an article on "Catalogues and Catalogue Making," written by Mr. J. H. Griffith, for our Spring edition of March, 1895.

The contrast between primitive pamphlets of this sort (the writer had been describing the early productions of Grant Thorburn & Son and Peter Henderson) and the marvelous specimens of the art of printing, engraving and photography issued by the seedsmen and nurserymen of to-day is very great, and it would be interesting to note the processes of the evolution of the beautifully illustrated annual from the double sheet of 80 years ago. Suffice it to say that the catalogue has kept pace with the development of the kindred arts of photography, engraving and printing.

For years catalogues were issued without illustrations; then the crudest form of wood cuts were introduced and used, until E. Bliss and others revolutionized the catalogue and the retail mail seed trade by the introduction of brightly colored and often rather exaggerated chromos of flowers, fruits and vegetables. Fortunately, these glaring, inartistic "pictures" are being superseded by half-tone and good lithographic illustrations.

The catalogues of the nurseryman, florist or seedsman differ essentially from all other forms of catalogues in that they describe not only the articles offered for sale, but the latest or future possibilities of the articles advertised therein. Unlike the average manufacturer or merchant, a horticulturist cannot photograph the article he offers for sale; place the half-tone engravings in a catalogue, and grieve to duplicate it at a given price. An illustration of a packet of seeds, a slip, or newly budded shrub, or tree, would be meaningless, and would not make a customer. It is the perfectly developed vegetable, flower, or fruit, which must be shown. It is this fact that makes the art of illustrating a seedsman's catalogue an exceedingly difficult one.

An ideal catalogue is one that contains a list of seeds, plants, or trees, arranged methodically. The novelties are more conspicuous, if illustrated on tinted paper and placed at the beginning of the book. The illustrations, preferably photo-engravings in half-tone, or colored, should show, as nearly as possible, a perfect specimen of the vegetable, flower, or fruit. If it is a photo engraving, it cannot exaggerate the specimen, which should, of course, be the finest obtainable. Having shown the perfect specimen, the catalogue should tell in plain language, not omitting the minutest detail how the specimen was produced, and how it may be duplicated.

In making a retail catalogue, one important fact must be borne in mind; the average customer forgets from year to year the most commonplace facts regarding the season of planting, and methods of culture. Judiciously assorted collections are always attractive and popular. The average amateur gardener will purchase his ordinary supply of staple varieties, but beyond that is willing and anxious to try the latest and newest.

Mechanically, a catalogue should be printed on good paper, with attractive covers, large type, and prominent headings. Original cuts should be used, as far as possible. It is better to use no cuts at all than to use poor ones.

The future catalogue will be a plain statement of names and prices, illustrated by all the art which can be brought to bear, showing actual possibilities under most favorable conditions.

The work of compilation on the modern catalogue is thorough and exhaustive, calling for vast knowledge of every branch of trade and an intimate acquaintance with a fluctuating market. The arrangements for a thorough supply of the stock to be advertised, the ability called into play to gauge what all his rivals are going to push, and the prices they will charge, marshaling order out of chaos, writing and telegraphing to every corner of the globe, watching the work on the illustrations, and scores of minor details to be regulated call into play faculties of superior order.

Parcels-Post Convention With Belgium.

The Treasury Department, under date of March 8, 1905, has issued the following instructions to collectors and other officers of the customs: "The Department is advised by the Postmaster-General of the conclusion of a parcels-post convention between the United States and Belgium, effective February 1, 1905, the terms of which are similar to those of the convention between the United States and Japan, and the regulations concerning the latter, promulgated in T. D. 25455, July 22, 1904, are hereby made applicable to the convention with Belgium. Customs officers are enjoined to strictly observe the provisions of these conventions relating to value, size and weight of packages exchanged thereunder."

A Device for Measuring Blooms.

KROESCHELL BROTHERS COMPANY, the well known manufacturers of greenhouse boilers, Chicago, Ill., have gotten up a handy device for measuring cut blooms. It consists of a disc, with necessary aperture to admit the flower stem, showing measurements from 1½ to 4 inches. The device is made of the very best waterproof card, and the firm will be pleased to forward a sample to all interested, on receipt of a 2c stamp to cover postage. The address is 55 East Erie Street, Chicago.

THIS WEEK'S SUPPLEMENT.

Zizyphus Vulgaris.

It was with much pleasure we obtained a photograph of this tree, for though not unknown in collections, it is by no means common. There are many priding themselves on possessing a rare collection of trees, who have not this one. There are two reasons for this: but few nurserymen keep it, and many suppose it to be not hardy.

The species *Z. vulgaris* is the one the fruit of which is the jujube of commerce, and in Southern Europe it is eaten in both its fresh and dried state. There are trees in Philadelphia which bear fruit every year. The fruit is like marbles in size, of a dull red color when ripe. But, however the people of Southern Europe may value it, it is not thought worth eating by folks in this country. There is really but "skin and bone" to it, and just enough of fleshy substance to give a taste. Then the hard seed. The taste reminds one of that of the barberry or of the *Cornus Mas*, astringent, though sweet.

The tree photographed is standing on the Capitol grounds, Washington, D. C., and it is not the only one there. It will be noticed that it is in a slightly leaning position. It happens that almost all the trees known to us lean more or less, and, in one case, we know of a large one which has to be held up by props. This comes about by the great weight of the branches and the small number of roots the tree makes, and, further, its roots are nearly always on but one side of the tree and near the surface of the ground. No doubt if when planted some attention were given to pruning the roots and giving them a downward direction, different results would follow.

The leaves of this zizyphus are of a shining green, rendering the tree quite attractive. But its strong spines are by no means attractive; in fact, its branches are such a terror that it is a wonder the tree has never been thought of as a hedge plant in countries where it is abundant.

There are quite a number of species of zizyphus. One of them, *Spina-Christi*, more often called *Paliurus spina-christi*, is supposed by some to be the species from which the crown of thorns was made with which the Saviour was crowned. Another one, the *Z. Jujube* is the one from which the jujube paste of commerce is made.

In the old Bartram Botanic Garden, now Bartram Park, Philadelphia, there is an old tree of the *Z. vulgaris*, planted close to the mansion. What was the old tree is dead, the stump only remaining, but there are younger, live branches which have sprung up from the roots. And this reminds us to say that, besides the propagation of it from seeds, root cuttings afford another means. Sometimes in nurseries when a tree of it is dug up there will, in time, small plants appear from pieces of root left behind.

As an ornamental tree and as a curiosity, *Zizyphus vulgaris* is worthy of a place in all collections.

JOSEPH MEEHAN.

OUR READERS' VIEWS

Freesia Purity.

Editor Florists' Exchange:

I received some blooms of the above from R. Fischer, Great Neck, L. I., N. Y., that were the finest I ever saw—stems two feet in length, with three and four side shoots of eight buds each. The flowers were white, fine and large. I understand this is a creation of Mr. Fischer's, which he intends to put on the market; and no doubt it will be a great acquisition.

Hightstown, N. J. CHAS. BLACK.

Treatment of Carnation Red Sport.

Editor Florists' Exchange:

We have had numerous inquiries from parties who have purchased rooted cuttings of Red Sport (of Maceo) and from others interested in this variety, as to the best method of culture for this carnation to bring it into full crop for Christmas, which we should be pleased to answer through your valued paper.

Fair success can be had with this variety from field-grown plants if housed by July 25, but the plants take good cultivation in the field to make large plants by housing time.

Red Sport is the ideal carnation for all house culture as it makes no superfluous grass, and all through the Summer it makes a strong, healthy, upright growth, and is perfectly free from disease.

Plant on the bench from pots in May or June in a moderately enriched compost, and as soon as the plants begin a good root action, mulch with half inch of leaf mold or well-rotted manure. Keep well stopped back until the 1st of September, by which time the plants will have made 15 to 25 strong leads, that will bloom around the Christmas holidays and during the Winter months. We grow it in a night temperature of 52 degrees. The plants require 36 inches of head room, and can be planted 8 x 10 inches on the bench.

Purcellville, Va. A. B. DAVIS & SON.

The Boston Flower Show.

Editor Florists' Exchange:

At the risk of being considered a bore, will you allow us a few more lines on this subject? We had not intended writing further, but your versatile Boston correspondent will persist in dragging red herrings over the track, and flies off at tangents in a manner peculiar to himself.

We would like to keep him strictly to the subject at issue, but he now dives into ancient history, and in an endeavor to bolster up his case proceeds to make garbled quotations from some of our writings of several years ago. What on earth has a critical review of the work of committees in 1902 to do with that of 1905? We have not hitherto been considering the judging itself, but rather the fact that exhibitors' names were not concealed and that the committee took "an hour or two" to write out their awards. There may have been grievances in 1902, just as there always will be in this and every other society, but it is a curious fact that it took Mr. Duncan a whole year to discover them; or, at least, until he had the courage to express his views on the subject.

Now, no one knows better than your Boston correspondent that exhibitors and the public were excluded from exhibitions all last year, except it may have been a fractional part of the larger shows. Did he not chafe himself because he could not get into some of the Saturday shows earlier? Have you already forgotten these things, Mr. Duncan? If things were so

THE LATE FRANK H. BEARD.

bad last year why had you not the courage to say so earlier?

We much regret the necessity you felt to wander through copies of a defunct horticultural journal. We have not time to grope in the misty past; we are thinking of the future, in which all our hopes are centered. We see Mr. Duncan, with a delightful disregard for facts, persists in speaking of the "medievalisms," "antiquated methods," and so forth, of the committee he seeks to reform. We have asked him to tell us where a "twentieth century, up-to-date" horticultural society is to be found. We have visited quite a number, but all fall away below his ideals.

We still have more than a lurking suspicion that Mr. Duncan is the reverse of serious in his charges, and is merely trying to "jolly" the committee, to use common parlance. Can you not induce him, Mr. Editor, to write you a special article for your next double number on "J. W. Duncan's Idea of the Up-to-date, Twentieth Century Horticultural Society." It will put Job, Timme, Greensmith, etc., away up in a corner and be as startling, horticulturally, as Lawson's "Frenzied Finance" is financially. Adieu! Mr. Editor, no more at present. W. N. CRAIG.

A Growers' Association.

Editor Florists' Exchange:

I gather from "The Gatherer" that some "growers are considering the advisability of starting a growers' association, admitting to membership only those who cultivate and sell plants." I beg to inform those growers that such an organization is already in existence. The New York Market Florists' Association was or-

ganized some years ago, and was incorporated in 1904, exactly on the lines advocated, except that our by-laws read "Plants, Flowers and Nursery Stock," instead of plants alone. Now, I am of the opinion that the right thing for those growers to do is to join the organization already in existence, instead of starting another. More can be done by one large association than by two small ones. Combined effort is what we need, and if all growers would combine and pull together, the marketing of what they produce could be done in a far more satisfactory manner than it is at present. We have tried hard to get the city to build a market, but without result; consequently we are ready now to proceed on our own hook, if we can get the remainder of our stock subscribed for, and some more energetic members to help those already in the harness do the work. I am glad to learn that the need of such an organization is becoming more widely felt, and hope that every grower within a radius of 50 miles of New York will join, put his shoulder to the wheel, and do what he can for his own protection.

JOHN BIRNIE.

[A communication from Mr. Birnie, in reply to Job's remarks on the Scotch bagpipes, is held over till another issue.—Ed.]

Frank H. Beard.

Frank H. Beard, of the firm of Beard Bros., florists, West Fort street, Woodmere, Mich., died at St. Mary's Hospital, Monday, March 13, 1905, following an operation for appendicitis. Deceased was 43 years of age, and is survived by a widow and three children, besides several brothers and sisters.

Mr. Beard had an attack of appendicitis about six weeks ago, from which he recovered. However, on the advice of his physician, he decided to have an operation, and went to the hospital two weeks ago Wednesday. The operation took place next day, and the surgeons found conditions much worse than anticipated, so much so that the patient gradually sank.

The deceased had been a resident of Woodmere since childhood and always took an active interest in the affairs of the village, having been a member of the first council. He served on the School Board for seventeen years, and enjoyed a large circle of friends. He was a member of the First Congregational Church, a charter member of the Detroit Florists' Club, a member of the S. A. F. O. H., at the shooting contests of which he took a prominent part, and a member of the K. O. T. M.

Mr. Beard had a genial, kindly disposition, and was highly esteemed by all who knew him. A special meeting of the Detroit Florists' Club was called, at which resolutions of condolence with the bereaved family were passed. The club sent a beautiful floral piece to the funeral, which was held on Wednesday, March 15, and attended by a large number of sorrowing friends and relatives.

William Charles Hill.

William Charles Hill, florist, Streator, Ill., died Saturday evening March 11, 1905, at his residence on Riverside of cancer of the stomach, from which he had been a sufferer during the past year. He was the son of William D. and Eliza C. Hill, of Putnam county, Illinois, and was born November 16, 1843 at St. Louis, Mo. He served all through the Civil War, enlisting in September 1862, as a private in Company H, 20th Illinois Infantry. He took part in the battle of Thompson's Hill, was at Raymond, Miss., and the siege of Vicksburg, and accompanied Sherman on his famous march to the sea. He was made a corporal near the end of the war. After the war Mr. Hill returned to Putnam county, where in 1868 he married a Miss Emily Tompkins. There were two children by the marriage, both now being dead. From 1870 to 1876 he resided in Kansas and followed the occupation of a farmer. Afterward he went to Streator, and in 1884 entered the florist business. He was a member of the Good Will church and also of the G. A. R.

Jeremiah J. Harrigan.

Jeremiah J. Harrigan died at his home at East Foxboro, Mass., March 17. He had been suffering from cancer for some time, and his end was not altogether unexpected, although it came rather suddenly, and was a shock to his many friends in the locality. Mr. Harrigan moved from Newton to Foxboro about thirty years ago, locating on the farm which has been his home ever since. He was well known as a grower of carnations and violets for the Boston market, the latter flower being one of his specialties for years. The deceased was 68 years of age and is survived by two sons, one in business in Newton, and Daniel S., who for several years past has been manager of Edward Macmulkin's greenhouses at Norfolk Downs, Mass. J. W. D.

American Rose Society

Sixth Annual Meeting and Exhibition

HELD AT

BOSTON, MASS., MARCH 23 TO 26, 1905

(Special Telegram to The Florists' Exchange.)

The sixth annual meeting of the American Rose Society was held in Horticultural Hall, Boston, Mass., on Friday, March 24. President Alexander Montgomery was in the chair. There was a large attendance of interested rosarians, brought to Boston by the magnificent exhibition which was held in conjunction with the Spring show of the Massachusetts Horticultural Society.

President's Address.

We have met again to take note of our progress and do homage to our queen, and, although we have hardly made the progress that the Rose Society is entitled to, considering the vast amount of capital invested in the business and the number of able men who make the cultivation of the rose their life work, yet I think that we are beginning to see light ahead. There have been suggested various reasons to account for the slow progress which this society has made. It has been charged against us that we are not national, in that we have failed to cover the principal cities of the country; but, with patience on the part of our critics and with the co-operation of those to whom this society has a right to look for its support, we will yet visit them all. The few pioneers who have done so much to nurse this society along are entitled to our gratitude for work done, and when the time comes for the Rose Society to start on its peregrinations I think I do not err in saying that it will have the hearty co-operation of those who have stood by it thus far. Distance will not diminish their interest in the flower of flowers, nor in the society which stands for its advancement.

The rose has not lacked for enthusiasts any more than the carnation, but it has missed that incentive to bring rose men together that the carnation men have had, namely, something new. The shows have had but little variety; practically the same few varieties were forthcoming year after year, a little larger or smaller, as we happen to carry them in our minds, or whether they happened to be our own or the other fellow's flowers; but evidence is not wanting that this will all be changed in the near future, and we expect to again hear the cry go forth as it did in '61, but this time, thank God! it is not the soldier, but the enthusiastic rosarian who raises the cry, "On to Richmond!"

The American rose grower has at last awakened to the fact that if a race of roses adapted to his needs is to be forthcoming, it must be done by himself. He has paid in the past thousands of dollars for European varieties that were seldom suited to his requirements, notwithstanding they might be all that the raiser claimed for them when growing under their own conditions. This applies in large measure to roses for outdoor cultivation as well as to those grown under glass. I am inclined to think that the former is the larger field for the hybridist, and with a reasonable amount of encouragement, I predict that the near future will see commendable progress made in a truly American type of roses adapted to the climatic conditions found here. It should be the duty of this society to encourage in every way possible the rose hybridist, as in large measure the future of the Rose Society will depend on him for the stimulating interest created by having something new. The commercial man ought to be alive to the fact that if the rose is to hold the place of honor and profit, he must have something to keep the buying public from becoming tired of seeing only the few familiar old varieties, however meritorious they may be.

A proceeding that I think would be of especial benefit to the introducer and buyer of new roses would be for this society to appoint local committees at the large centers, after the method of the Chrysanthemum Society, to whom flowers could be sent to be judged according to the scale of the American Rose Society. For convenience this could be done at the various

HOUSE OF NEW ROSE WELLESLEY, AT WABAN CONSERVATORIES, NATICK, MASS.

Fall shows, and being judged by the official scale would be of value to all. The same committees could visit the new claimants in their home quarters and report on their Winter qualities. These judges could be appointed by the executive committee, and the chairmen of these committees, or as many of them as were required, could be the judges at the annual show.

Now, a word about the show itself. The schedule needs to be practically rewritten and adapted to the particular section of the country to which the show is to go the following year. A preliminary schedule should be sent out in the Fall, otherwise the growers of pot roses are largely eliminated, and it will be in evidence at the Boston show that this can be made

invitation to take part in these proceedings, and I with their young and progressive ideas they can show us wherein a part of the machinery of this society has worn out, or become obsolete, I promise them that to the best of my ability I will assist them to have it replaced by more modern works. Progress should be the hailing sign of this society, for the only place the American rosarian can afford to sit in is the very prow of the vessel, even at the risk of an occasional wave splashing over him.

M. H. Walsh, Wood's Hole, Mass., read a paper on climbing roses.

Election of Officers.

The following officers were elected for the ensuing year: President, Alex. Montgomery, Natick, Mass. (re-elected); vice-president, Robert Simpson, Clifton, N. J.; treasurer, Harry C. May, Summit, N. J.; secretary, William J. Stewart, Boston, Mass.; executive committee, M. H. Walsh, Wood's Hole, Mass.; A. Farenwald, Roslyn, Pa.; W. N. Craig, Boston.

Boston Next Year Again.

Boston was again chosen as the meeting place for 1906.

The Exhibition.

The show of the American Rose Society is unquestionably the finest ever gotten up by this association. While the exhibition held several years ago in New York brought out a larger lot of some varieties like American Beauty, still never has the collection of fine blooms of other roses been equaled. There is not a large display of pot plants, the collections from W. W. Edgar and M. H. Walsh being very fine nevertheless. Mr. Edgar captured the A. H. Hews prize for best specimen pot-grown rose, and also the Walsh prize for twelve h. p. roses in pots.

The Waban Rose Conservatories were first for fifty American Beauty, capturing the Lord & Burnham trophy. This firm also won the Crowe gold medal for twenty-five Bride and Bridesmaid, the Pierson-Sefton prize for best fifty teas; and their new variety Wellesley carried off the silver cup.

The Dorrance silver cup went to Brant Brothers Utica, N. Y., for display of blooms, to be competed for by growers outside of a radius of 150 miles of Boston. The flowers shown were a fine lot.

John Breitmeyer's Sons, Detroit, captured the Montgomery prize for twenty-five flowers of any American seedling introduced in or since 1901, with La Detroit. The Nugent prize, for twenty-five blooms of a pink rose, not disseminated previous to 1903, was also won by this firm. The Siebrecht & Sons' prize for fifty blooms Killarney was captured by M. Fitzpatrick, New Rochelle, N. Y.

The Floral Exchange, Edgely, Pa., had a fine vase of Queen of Edgely, receiving first prize for same. W. H. Elliott, Brighton, Mass., is an extensive exhibitor capturing several first prizes. John N. May, Summit, N. J., has several exhibits and captured one of the Nugent prizes with General MacArthur. Other prominent exhibitors are: Robert Simpson, Clifton, N. J.; A. Farenwald, Philadelphia; Robert McGorum, John McFarland and the Montrose Greenhouses.

M. H. Walsh was first for the specimen climbing rose with a fine plant of Lady Gay. He also captured all the prizes for the collection of Rambler; and the F. R. Newbold prize.

JOHN W. DUNCAN.

(The balance of the prize list will appear next week.)

PANKOK & SCHUMACHER, of Whitestone, N. Y., have a very generous assortment of stock coming along for Easter. About 3,000 pots of lilies are budded just right for the holiday; and their stocks of azaleas and ericas are also coming in flower nicely. Rambler roses are grown in moderate numbers, and there is also a well-developed batch of the pink and white varieties of Maman Cochet, budding out quite freely.

ALEXANDER MONTGOMERY, PRESIDENT AMERICAN ROSE SOCIETY

both an interesting and educational section of our shows. If possible, a meeting of the executive committee should be held during the convention of the Society of American Florists, otherwise it will be almost impossible to get a majority of them together later in the season, as they are, and should be, men from wide-apart sections of the country who find it difficult to leave their business later on.

In conclusion, I would ask one and all to stay and take part in this meeting, and if they can offer anything for the good of this society it is their duty to do so. To the young men I would extend a pressing

by the illustration, which is a view of the house of this rose as grown at the Waban Conservatories and is a fair representation of its appearance for many weeks past.
J. W. DUNCAN.

Boston Spring Show.

The annual Spring show of the Massachusetts Horticultural Society and the exhibition of the American Rose Society, which opened at Horticultural Hall on Thursday, is in every way in keeping with the high standard of the exhibitions which have recently been held in Boston. The display exceeds that of last year, and a finer lot of plants never were seen at Horticultural Hall before. The main hall is devoted entirely to flowering and foliage plants, and presents a very pretty effect as one looks down from the loggia. On the right of the main hall R. & J. Farquhar & Co. have a very fine display of bulbous and flowering plants, backed with a variety of palms and other foliage plants. On the opposite side of the hall, and immediately under the balcony, the Harvard Botanical Gardens have put up an immense display of foliage and flowering plants. The arrangement is very fine indeed, and shows the artistic ideas of Mr. Cameron. Among these plants very noticeable was the collection of palms, which included such varieties as *Arenga Wrightii*, *Carludovica atrovirens*, *Caryota urens*, *Acanthorhiza aculeata*, *Cocos Romanoffiana*, *flexuosa* and *botryphora*, *Martinezia simplex* and *Chamaedora elegans*. Among plants in bloom were: *Raphiolepis japonica*, *Polygala myrtifolia*, *Vriesea psittacina*, *Caraguata Zahni* and *Geistina angustifolia*. The center of the hall is devoted to cyclamen, cinerarias and such flowering plants. A fine collection of forced shrubs is on exhibition from the Bussey Institute. These include such as *Deutzia gracilis* and *Lemoinei*, *Staphylea colchica*, *Andromeda floribunda* rhododendrons, azaleas, etc.

In the further end of the hall is displayed the magnificent collection of Rambler roses from M. H. Walsh. This includes excellent plants of such fine varieties as *Lady Gay*, *Sweetheart*, *Wedding Bells*, *Hiawatha* and *Arcadia*. F. R. Pierson Company exhibits *Tarrytown* fern. Two fern novelties are *Nephrolepis Barrowsi* from Henry S. Barrows & Sons, *Whitman*, and "*Dorchester*," a fine improvement on the *Foster* variety, from the L. H. Foster Estate. Julius Roehrs exhibits a fine collection of orchids and foliage plants, and Lager & Hurrell also have a fine display of orchids. There is also a fine showing of bulbous plants.

The lecture hall is entirely filled with carnations and cut roses. Of the former R. Witterstaetter, Cincinnati, exhibits *Aristocrat* and *Afterglow*; Guttman & Weber, New York, *Victory*; Weber & Sons, Oakland, My Maryland; and Gladys from the Lake View Gardens, Jamestown, N. Y. J. W. D.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—At the last meeting of this society the winners of the essays on "Rose Culture Under Glass," written by the assistant gardeners, were announced. First prize was awarded to Charles Wengert, son of the late Adam Wengert, one time gardener at Selmar Hess' estate. Charles Wengert is at present employed at the C. N. Bliss estate,

Rose Mrs R. Sharman-Crawford
Copyright M. H. Walsh, 1905

Oceanic, N. Butterbach, superintendent. Mr. Wengert is the youngest gardener in the society, being only eighteen years old. Joseph Kennedy received the second prize. He served his apprenticeship of four years at C. N. Bliss' place, under Mr. Butterbach, and is at present employed by Wm. Turner, superintendent of M. C. D. Borden's estate. Wm. Dowlen was elected vice-president in place of A. G. Williams, who has resigned. He will take charge of Mr. Bodine's place, Villa Nova, Pa.

The Wellesley Rose.

That this new rose will prove a favorite of the future there is no question. Its pleasing color and fine form of bud and flower will always find a place for it. During the past Winter it has proved a great favorite with flower buyers of Boston, and has been used several times exclusively for decoration purposes. It is unlike many of the hybrid tea roses, which have the habit of coming in crops only. It is a continuous grower, making good strong growths, as will be seen

SOME OF THE EXHIBITS OF M. H. WALSH, WOOD'S HOLE, MASS., AT AMERICAN ROSE SOCIETY'S SHOW, BOSTON, MASS.

New, and Rare Hardy Plants.

By HERBERT GREENSMITH.

The past two years have not been very productive of many startling novelties in hardy plants. This may seem very strange in view of the reports we have had from time to time from parties both in our own country and in Europe, who have spent much time exploring along the Transcaucasian Railway and returned with such glowing accounts of both the Flora and Sylva of that marvelous country. We have been told that some thousands of species have been collected, and surely something good ought to appear out of this abundance.

Campanulas.

It cannot be said, though, that our hardy plantmen have been idle, for in looking over their lists some are very lengthy. Campanulas, of the persicifolia type, seem to have come in for a very large share of attention, and many varieties have been put on the market; but the only one that seems to have gained favor in the American trade is *C. per. Moerheimi* or *gigantea*, and this is certainly well worthy of any attention bestowed upon it. The only other varieties that I have seen worthy of any extra distinction are *C. persicifolia alba coronata*, with a large wide collar at the base of each bell after the fashion of the cup and saucer varieties of *Campanula Media*; and "Die Fee," a very large blooming sky-blue flowered variety. But from all accounts two very good ones should be added to our list the coming season, viz., *C. persicifolia multiflora*, described as bearing enormous large bell-shaped evenly set panicles of brilliant blue flowers, very closely set on the stems, with the additional advantage of being abundantly clothed with foliage, making it far superior to anything yet introduced in this class of plants either for cut flowers or decorative purposes in the borders; while *C. persicifolia lilacina grandiflora* has large bell-shaped flowers pure white, shaded around the bell with pale blue or lilac, making it exceedingly attractive.

Anemones.

Many and wonderful are the varieties of the Japanese anemones now being offered, but only a few seem to do well in our climate. Lord and Lady Ardilaun were decided improvements both in growth and flower over the type or variety *alba*, so long grown; but these must all give place to the new giant flowered variety *Geante Blanche*. While it is not such a profuse bloomer, the enormous size of the flower more than compensates for this defect, especially where fancy flowers are wanted. It is also a very robust grower, the foliage and stems being much larger, stronger and taller in growth. The substance of the large pure pearly white flowers has also been greatly increased. But where a mass of anemones is wanted for cut flowers *Lady Ardilaun* still leads. The type has always appealed to all lovers of hardy plants on account of its colors and freedom of bloom; but even this must not give place to the new aspirant *Prince Heinrich*, a novelty of sterling merit, which should be grown as a companion to the above in color. I think it decidedly brighter than *japonica* and even more floriferous, and it has longer and better stems—a very desirable feature. While the anemones are not very long-lived as cut flowers, we could ill spare them, for they certainly do fill up a very important and indispensable niche in the Fall months, both as a cut flower and as the most showy of border plants.

Anemone japonica Mont Rose, a semi-dwarf, very large double rose-colored form, is also very good, and where variety is wanted is strongly to be commended, but will not fill the bill so completely as that remarkable semi-double queenly form, *Queen Charlotte*, which is without doubt the most chaste and beautiful anemone grown and will repay for the most lavish care and attention given it.

A Plant for St. Patrick's Day.

One of the earliest flowers to bloom in Spring is *Adonis davurica*, to which I have on several occasions called attention, and which will bear repetition. The double-flowered form is especially fine, both in foliage and flower, and is very showy and cheerful for several weeks in Spring. If grown in frames, this plant would make a fine thing for buttonhole bouquets for St. Patrick's Day.

A Double Alyssum.

Alyssum Saxatile fl. pl., a double-flowered form of this useful Spring flowering plant, with spikes of

ALYSSUM SAXATILE COMPACTUM FL. PL.

Courtesy Henry A. Dreer, Inc.

golden yellow flowers when grown in large clumps, makes one of the most attractive plants for bed or border; it also makes a most attractive pot plant, requiring but little heat to bring it to perfection. As it can only be raised by divisions and cuttings, it will not be overplentiful for some time to come.

Gypsophila Pan. Flore-pleno.

Gypsophila paniculata flore pleno is considered by some to be the best novelty raised in years. I have never yet seen it in flower, but am told by those who have seen it in Europe it is a good thing. The usefulness of the old variety is well known, and if this is pure white, as described, it should be a good thing. Good strong blooming plants should be procured at once and given a fair trial. Being double and producing roots somewhat like the root of a vegetable oyster plant, there is no chance of growing it from division, so the only method of propagation is by layers and cuttings.

Popples.

The Welsh poppy has not found much favor as yet in American gardens, as it is considered a biennial; but if given a favorable location, it does fairly well.

Should the double-flowered form, which is now being introduced, do well, we may hope to see more of them treated as biennials, though, in the near future.

In orientals however, a great advance toward a larger diversity of colors has been made. We have now varieties offered in all shades of color, from the dark flaming scarlet of orientales to the dull brick red of *Papaver pilosum* with intermediate shades of salmon rose blush lilac and flaked colors. In *Papaver n. Mahoney*, we are now offered one of the darkest colored forms of carmine imaginable bordering on to dark mahogany; and from a dried flower seen by the writer this is no myth. Some years ago Mrs. Marsh was sent out as a striking novelty, rich scarlet, with large, irregular blotches of white on each petal running through the flower to the very edge. Plants were ordered from living specimen flowers which turned out, whether from mistake or otherwise, after three years' thorough trial, to be nothing but *bracteatum*. But I am fully convinced, though, that the true thing exists. In this, as in many other things, nature will only respond and reproduce itself in a given way which, I think, must have been trespassed upon, and the plants in question raised from seed instead of cuttings thus accounting for a reversion. Now that stock is becoming more plentiful, there is no reason why we should not have the true thing, which is certainly quite a striking feature in oriental poppies. The variety *Rembrandt* is remarkable for its enormous distinct orange salmon colored flowers.

Meconopsis is well worthy of a place among the hardy plants, especially the variety *Wallichii*.

Dianthus Napoleon III.

I am glad to see an old favorite plant of my boyhood days coming into public favor again. It is over thirty years ago since I first saw it growing in my father's garden, where it had special favors shown it. It seems to have had two serious drawbacks to its culture here; one is, it is apt to be covered with purple spot, but where a vigorous growth is stimulated this is no serious drawback, as it goes right on flowering from June till frost cuts it off in late Fall. It is one of the most bright and cheerful pinks grown, and its only business from Spring to Fall, no matter how frequently it is cut, is to flower, flower, flower. Its second fault lies in its being considered difficult to propagate. Given the proper treatment, it is one of the easiest of the *Dianthus* tribe that I know of. You can take a plant in late Fall and pull it apart, and every pip down to the hardened stem, with care and a cool position, will grow; but it dislikes heat. A cool pit with just the frost excluded till toward Spring, seems to satisfy it. The tops will sometimes turn brown and dead looking, but have patience; when the sun gets up a little higher it will come out all right. Then give it a little warmer position; pot as soon as it shows signs of rooting. I generally put my cuttings in trays of sand with a little coarse material in the bottom of the trays for drainage, as they are then easier to handle and can be better manipulated, any light, airy place suiting them. The plant referred to is *Dianthus Napoleon III*. It is generally known as a mule pink. Here it is now classed with several others raised by your humble scribe under the fascinating caption of "everblooming pinks;" and I think the title well applied for until a few years ago we had only pink in May or June.

A New Helenium.

A short time ago I wrote an article on the sporting proclivities of *helenium*. Now we have a grand acquisition from Europe in the form of *Helenium grandiphthalmum cupreum* with large coppery red flowers nearly two inches across; and I am hoping next year we shall see another very striking addition from the group just hinted at above.

Aquilegias.

Columbines always meet favor, whether in large masses in the border, the few solitary plants in the cottage garden, or as seen growing wild in their native haunts. For some years past search and skill have been greatly taxed to produce extra long spurred varieties. Now we are to have a race of spurless or clematis-flowered sorts. *Aquilegia clematide hybrida* is offered as a spurless variety by the renowned horticultural wizard, Luther Burbank. This same thing was offered in Europe two or three years ago, and is to be had in various shades of color. *Aquilegia ecalcarata*, a species from Japan, and *A. stellata* are also both spurless varieties, and interesting only from a botanical or hybridizer's point of view. I am very anxiously awaiting this Spring to see a batch of columbines named *Aquilegia cerulea hybrida rosea* come into bloom. The raiser says they are especially fine, and if true, will make nice companions for the blue and the white form of this lovely Rocky Mountain species.

Delphiniums.

It is quite interesting to see the immense interest that is just now being taken in delphiniums; and they are worthy of it. New varieties are constantly being offered but all seem to meet the same dreaded foe, fungus, around the collar of the plant near the ground, to which they succumb. I consider the best way to raise delphiniums is to buy a liberal amount of seed from the best growers, sow early and cull out close for a year or two, saving your own seed from the best varieties, and thus raising them annually by this method a very fine collection can be got together in a few years. With but one exception, they all produce seed very freely; that exception, I believe, is one of the most lovely delphiniums that grows, and must be raised from cuttings and divisions. *Delphinium Belladonna* will produce more flowers than any other variety I know of. It produces no seed.

CLEMATIS MONTANA GRANDIFLORA.

Courtesy Henry A. Dreer, Inc.

GYPSOPHILA PANICULTATA FL. PL.

Courtesy Henry A. Dreer, Inc.

Heliopsis.

Heliopsis Pitcheniana semiplenus seems to be a good thing spoiled. While it is of a semiplena nature, there are hardly enough florets in it to make it attractive or more useful than the original.

Asters.

New varieties of hardy asters are constantly appearing, and are being brought more into public favor; but with the possible exception of the rose-colored forms, many of our native ones are just as brilliant and as effective as the newer foreign varieties. Of course, there are some very lovely unique forms, such as Thomsoni from the Himalayan Mountains, a perfect gem, and one that should be found in every collection, and A. Trinevis from China, an exceedingly late flower, coming into bloom later than our magnificent A. grandiflorus. A few others find deserved favor. One comes to us this Spring from Germany with the captious title of "Blutenregen," which interpreted means "rain of blossoms," of which we may hear later.

Miscellaneous Novelties.

Some four years ago I selected a dwarf form of Boltonia latiscuama out from among a collection, and it was a grand thing, too. A few plants got transferred to Long Island, but both lots seem to have perished. Now I see it has again been resurrected in New Jersey and put on the market; and for those who object to the tall form, here is its counterpart in every way, but with only half the height.

There are many other interesting rare and recent introductions that are well worth a trial. Clematis montana grandiflora is an exceptionally good and scarce thing as yet, which seems to get lost sight of, coming into flower as it does during our rush and bustle of Spring work. It is an exceedingly strong, healthy grower, as tough and as hardy as Clematis virginiana and seems to stand as much abuse. Its flowers are exceedingly large, nearly 2 inches across, pure white, and almost cover the plant. And for a curiosity, C. flammula rubra marginata should be grown; the purple-edged crimson flowers make it quite unique and showy.

Tritomas are again to the front in several new varieties, but for freedom of bloom and intensity of color T. Pfitzeri is not yet surpassed. May Queen (Saundersi) is said to bloom earlier; but this has yet to be proved here. I believe several other interesting things may be found by reference to the various catalogues, of which I have heard, but not yet seen. A trial of all is necessary to prove their merits.

Use Hardy Flowers.

By WILLIAM FALCONER.

The florists who do jobbing gardening and have a local general trade will, I believe, profit by a free use of hardy plants in their garden work. But don't get the esthetic craze except in big jobs. You know that hardy perennials, like annuals, are very beautiful in their season, and not infrequently very ugly when done blooming; and if you are dealing with people who don't know a hollyhock from a China aster, be very particular to give them something that is sure to grow and is quite hardy and showy when in bloom. Talk is all right as long as you are speaking, but seeing is the only thing that appeals to many of us. We don't know names and can't be bothered remembering them; all we want is flowers—plants that will grow and bloom and look pretty themselves without any care or trouble on our part. And that's why we plant geraniums and cannas—they last the whole Summer long, and when the frost kills them in October, the garden season is over and Winter is upon us, so then what does it matter anyway? This is the way many amateurs argue.

Now what shall we do about it?

Plant pansies, daisies and forget-me-nots in Spring, and tell the folks that these must be replaced with geraniums or cannas, or a bed of tea roses later on.

Never forget the roses; everybody is crazy on roses. While we can't get much show out of newly-planted H. P. roses the first year, we can plant teas, hybrid teas, noisettes, and other novelties, and get a fine crop of flowers in late Summer and till frost; and while the roses are young, if we plant verbenas or sweet alyssum in the bed, these will cover the ground, and it will never look bare or bleak.

Now, for other parts of the garden, say in the mixed border, in their shrubby beds, or elsewhere available, have a succession of neat, pretty and showy perennials. For an edging, or carpet, or mass, use moss pinks, hardy pinks, creeping speedwell, and dwarf iris. Be sure to have a few clumps of big peonias, some long-spurred yellow and the Colorado blue columbines, a lot of single pyrethrum, German irises, and to succeed them, the big 6-petaled Japanese Kämpfer's irises, bleeding heart, coreopsis, gaillardia, the dwarf sunflowers, herbaceous spiræas, and the like; and for later blooming the pink Sedum spectabile, tritomas and Japanese anemones. The tritomas may not be quite hardy, but they can be lifted with balls of earth to them in November and saved in a cool cellar until next April, when they again should be planted out.

Really we don't use enough of these fiery poker plants. They bloom from Midsummer until hard frost, and they are mighty striking in the garden. Plant them in clumps or masses to have good effect.

And they are so bold, profuse and lasting! Try them.

And don't forget some vines. Clematis paniculata and Hall's honeysuckle never fail to please. And the Crimson Rambler rose makes a fine vine effect if you tie it up. Did you ever try the Rambler as a carpet plant? Instead of letting its long branches, or wands, arise and bend over in arches, peg them down flat on the ground, and see the effect. There was a bed like this at the St. Louis Fair last year that caught my eye, and now I am doing the same thing myself.

Then some shrubs. Use a few choice sorts rather than a wide selection. Forsythia Fortunei, Deutzia gracilis, Spiræa Van Houttei, and Spiræa Reevesii. Rosa rugosa, Azalea mollis, Japanese snowball (V. plicatum), Syringa villosa, Weigela rosea and Eva Rathke, single pure white althea and Hydrangea paniculata grandiflora are a few common but good hardy shrubs. Yes, yes, there are oceans more, you'll get them in the catalogues, and they are good, too. I have mentioned a very few.

That picture of the lovely Azalea amena at Doris (p. 326, issue of March 18) is enough to make your mouth water. But a hedge like that takes time; it is over 20 years old. The mollis azalea is hardier and stronger in growth. "Refined" folks get enthused over the "single" Japan snowball (V. tomentosum) and the "single" form of Hydrangea paniculata; but if you are dealing with the plain people who don't know much about flowers, you'd better give them the old-fashioned "double" forms; if you don't, the chances are they'll declare you swindled them. Rosa rugosa is used as a shrub and not as a "rose." In getting the red blooming one, why don't you plant the variety Agnes Emily Carman? It is vastly brighter than the typical red.

Packing Herbaceous Plants.

The art of packing herbaceous plants, so that they may be shipped several days' journey and arrive in good condition, can only be acquired by practice. No set rules can be laid down to insure success owing to the varying degrees of moisture, temperature and the condition and kinds of plants themselves. At the same time, there are general rules governing the operation that may be reduced to writing, which are likely to be of service to those having occasion to ship this class of plants.

One of the first essentials is to see that all the plants are carefully labeled. However well known the plants are to the shipper and apparently unnecessary the label may appear, they are liable to be unpacked by some one that knows absolutely nothing about them, and who depends entirely on the label.

In very early Spring, before the plants have made any growth to speak of, the operation is comparatively easy, as there is little danger of the plants heating in transit even if of considerable bulk. At this stage, pack as dry as possible. If the plants are wet when dug, a liberal use of dry sphagnum moss will absorb the superfluous moisture. In most cases it is advisable to wrap each plant separately, especially if they are from pots or plants that are likely to fall apart. In the case of peonies and plants with good strong roots or clumps, it is not necessary. Where an assortment is being shipped, tie the different kinds in bundles, with the label on the outside, which will enable the recipient of the shipment to see just what he has got without undoing each bundle, making it much easier to plant and avoiding the accompanying danger of long exposure while waiting to be planted.

After the different bundles and plants have been wrapped firmly with a liberal use of sphagnum, they should be packed firmly in the box, so that they will not shift around during the rough usage they are likely to meet with. It is never advisable to use too large a case. Two or three small ones are to be preferred to a large one, so as to avoid too large a bulk. Old newspapers, while not very attractive looking, are about the most serviceable, as they stand the moisture much better than straw paper.

As the season advances and the plants are making their growth, packing becomes more difficult, as a certain amount of air and moisture is necessary to keep the plants in good condition. For limited quantities to be shipped short journeys, shallow open boxes and baskets are the best. The plants should have moist sphagnum moss at the roots, and be wrapped in paper and then stood upright. Shipped in this manner the plants can hardly fail to arrive in good condition. For large quantities this method would be too expensive. The same principle, however, may be followed; and after the plants are wrapped and tied in bundles, with the tops sticking out, they may be packed in rather shallower boxes than what would be used had the plants not started into growth. By laying the bundles all one way, in a reclining position, they can be packed firmly enough to prevent shifting about, yet at the same time so as to allow a little air to get in to prevent heating or decay. Fill any vacant places with imperial shavings, or like material; and nail slats on the box in place of a tight cover, just close enough together to prevent any of the bundles falling out.

When the plants are properly wrapped and packed in a tight box, there is practically no evaporation, so that there is considerably less danger of them suffering for want of moisture than with too much of it. The rule should be to pack on the dry side. In open crates and baskets, especially as the season advances, the rule should be reversed, and provision made to keep the roots moist, as the packages are liable to stand in the sun and dry winds before they reach their destination.

ERNEST HEMMING.

AMONG THE GROWERS.

Anton Schultheis, College Point, N. Y.

This well-known grower has a nice collection of Easter stock, of which he feels justly proud. He has a novelty in the new German wallflower that will undoubtedly prove a most profitable one. The plants are in 6-inch and 7-inch pots, and carry numerous flower stems, covered with large velvety crimson blossoms, and emitting the delightful fragrance of the wallflower, the deliciousness of which the odor of no other flower can equal. This strain of wallflower is a great improvement over the type, and must be seen to be appreciated. The size of the individual flowers is more than double that of the older form, and the colors, which run in scarlets and crimsons, are particularly rich and brilliant. In addition, the plants are free and abundant in flowering, and will make one of the most desirable Easter subjects it is possible to get. Another comparatively new plant is the Hydrangea azurea. A few of these blue hydrangeas were put on the market last year and they were a pronounced success. Mr. Schultheis has a house of them this year, and they will be in just right for Easter. They vary in size from plants with two or three flower heads to those carrying twelve to fifteen, and are in the pink of condition. There is also a grand stock of Hydrangea otaksa, and of the pink variety, H. rosea. We never saw the roses at this place better than they are this season. Crimson Rambler and Dorothy Perkins are both grown in quantity, some to bush form, some as standards, others trained to form basket shapes and again others to pyramids, wreaths, etc. All are budded to perfection, with not a sign of fly or mildew on the lot. The variety Dorothy Perkins proved such a great favorite last year that it is now being grown in much larger quantities. The manner in which it has budded and made such magnificent plants, leaves no room to doubt its excellent qualities as a forcing rose; and for Easter purposes it is no doubt destined to become as great a favorite as the Crimson Rambler, if not more so, on account of its beautiful pink colored flowers.

Several houses are filled with lilies and they will be in prime condition for Easter. Hyacinths, tulips, lily of the valley, and narcissus are grown in pansy by the thousands, and among them are all the choicest varieties obtainable.

The stock of azaleas occupies five or six houses; they are timed to be just right for Easter, and embrace all the commercial sizes. Genistas, camellias, and bougainvilleas help make up a varied collection of flowering plants that would be hard to beat anywhere, while the stock of ericas, among which the white, pink, and yellow are all represented, is in the best possible condition.

John Scott, Keap St., Brooklyn, and Flatbush, N. Y.

At the Flatbush establishment of Mr. Scott, lilies are again a central figure, as they were last Easter. The larger-sized bulbs only are grown, and the wisdom of selecting this grade for forcing purposes is plainly evidenced by the unusual large average of buds per bulb showing at this time. These 9-10 sized bulbs cost no more to grow than the 5-7 bulbs; they take up no more room on the greenhouse bench, and yet the number of flowers they will produce is at least twice as many as can be grown from the smaller bulbs. Mr. Scott has about 10,000 pots of lilies coming along, and they are timed just right for Easter.

Nephrolepis Scottii has met with a grand reception since being introduced to the trade, and the stock of large and medium sized plants that filled the whole Flatbush establishment but a short time ago is so depleted that it is now contained in one house. There will be no dearth of stock of this fern for some time to come, however, for, with the exception of two houses, the whole of the Keap street establishment is devoted to N. Scottii, and the demand keeps pace with the supply. Ground has been broken, and three new greenhouses will be erected immediately on the Flatbush property. Mr. Scott is also negotiating for the purchase of a 3-story house, which is within a few hundred feet of the greenhouses, and expects to take up his residence there in the very near future.

The Hinode Florist Co., Whitestone, N. Y.

This Japanese firm has several well-equipped greenhouses, and is bringing in for Easter a stock of lilies, hydrangeas and roses. The lilies are nice, thrifty stock, and they will be a good crop for the festival. The hydrangeas are budded nicely, as also are the roses. Many of the latter are big specimen plants, and are in the two-handled boxes so often seen in connection with large-sized plants cultivated by Japanese gardeners. These boxes are certainly easier to handle than are pots of the size necessary to carry large plants, and it would seem that the adoption of such boxes by other growers would be a step forward in greenhouse management.

The Los Angeles Examiner says: "It is estimated that the Japanese have more than \$1,000,000 invested in market flower gardens in Alameda County alone. On this side of the bay they are extensive growers in the neighborhood of Colma."

CLUB AND SOCIETY DOINGS

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY held its meeting for March last Wednesday evening, with President Sullivan in the chair, and some thirty members present, the largest turnout for a very long time. Every member present evinced the greatest interest in the discussion of the schedule of prizes for the coming year. Eight names were proposed for active membership. William Neil Campbell was a visitor. At the hour for home going the looking over of the prize schedule was not completed, so the meeting adjourned until Wednesday evening, April 5. F. W.

TRI-CITY (IA.) FLORISTS' ASSOCIATION held a meeting March 16, 1905, at the Bills greenhouse, and elected officers for the ensuing year as follows: President, J. T. Temple, Davenport; vice-presidents, Henry Pauli, Davenport; John Staack, Moline, and Henry Gaethje, Jr., Rock Island; recording secretary, Henry Meyer, Rock Island; financial secretary, Theo. Ewoldt, Davenport; treasurer, Rudolph Arp, Davenport; executive committee: Harry Bills, Davenport; William Kneese, Moline, and Henry Gaethje, Sr., Rock Island. The association is arranging for a picnic to be held some time in August and a committee will be appointed to take the matter in charge. An interesting paper was read by Wm. Kneese on the poinsettia.

THE GRAND RAPIDS (MICH.) FLORISTS' CLUB held a meeting Friday night, March 17, at the Board of Trade rooms. An attempt is making to get up a chrysanthemum show for next Fall, but it fails to receive the hearty support necessary to make such an undertaking a proper success, and may be abandoned. In its place may be substituted an exhibit of chrysanthemums and other seasonable stock in the Board of Trade rooms, the public to be invited to have a look at the flowers. It is thought such an exhibition might prove beneficial in a general way, as each could put up anything he might have suitable to show.

An attempt is also making to regulate the prices of bedding stock. It is thought, for instance, that geraniums should bring \$1.25 per dozen and other plants a proportionate price. Some difficulty is being experienced in getting all to sign such a price list, as lack of faith in some, jealousies in others, and a desire in still others to be free to cut prices when necessary to get a job, makes certain ones reluctant to sign away their rights. However, an effort is being made to get the conflicting elements together and arrive at some satisfactory understanding agreeable to a majority, if not all. The greatest obstacle to such an agreement is, the peddlers, both with push carts and wagons, during the season, and they always cut on

ROSE KILLARNEY

Copyright, M. H. Walsh, 1905

price. Again, one may have plants in 4-inch pots, listed at \$1.25 per dozen and worth the money; while his neighbor has the same size pots but smaller, poorer plants, for which he cannot get the listed price. A list to meet all contingencies is hard to formulate. G. F. C.

BUFFALO FLORISTS' CLUB.—At the formal business meeting held in Kasting's Saturn Hall, on Elliott street, on Tuesday evening, March 21, the following candidates for election to serve for the coming year duly won out: Louis H. Neubeck, president; Chas. T. Guenther, vice-president; Chas. H. Peake, general secretary; Emil Bruecher, financial and membership secretary; Chas. H. Keitsch, treasurer. Executive committee: Wm. Scott, Wm. F. Kasting, Geo. Urban, Jr. Adjournment was made to an upper hall in the building, where the endeavors of Kasting, Keitsch and Bruecher, the special banquet committee, showed a well-laden table of ample size, lavishly bedecked with American Beauty and Bridesmaid roses and Prosperity carnations. Over thirty craftsmen surrounded the board. Mr. Kasting announced Wm. Scott as toastmaster. Mr. Scott entertained in his "illimitable" style as introductory to the toast list. The newly elected president, Louis H. Neubeck, accepted his trust in a spirit denoting an intent at progressiveness in club interests during the next year. Geo. Urban, Jr., our local active amateur, whose name in our membership we are more than proud of, rehearsed his versions of the extravagances going with the amateur in a vein highly amusing. He extended an invitation to the club to meet at his country place at Pine Ridge. C. H. Roney, Jamestown, N. Y., manager of the Lake View Rose Gardens, who carries the responsibility of eight acres of glass on his shoulders, talked on kindred topics only as a well-versed man can. Daniel B. Long appealed to a development of a higher trend among the craft in general, but most particularly in working methods and practices. Mr. Holmes, Chester Harris and W. W. Wells, all newcomers to this town, behaved admirably along speechmaking lines. Wm. F. Kasting, in his hearty style, felicitated the members on what the club has accomplished, and exhorted to further efforts. Chas. H. Keitsch was in humorous fettle, and gave his hearers plenty to laugh about. The affair lasted till somewhat after midnight. Dignity and decorum betokened a commingling of spirits in good accomplishment and boding much good to follow this annual affair. VIDI.

BOSTON GARDENERS AND FLORISTS' CLUB.—About thirty members attended the outing at the establishment of W. W. Rawson at Arlington on Saturday afternoon. It was the first Spring-like day of the season, and although under foot was rather damp in many places, it was a fine outing and was much enjoyed by all. The place contains many acres, some thirty-six large houses, mostly filled with such vegetables as lettuce, radishes and cucumbers. One range of houses is devoted to the florist end of the business, and many thousands of seedling plants and cuttings were examined as they are grown for the Spring trade. In addition to these houses Mr. Rawson conducts a general retail store trade, and the whole plant shows the push and enterprise of one of the pioneer vegetable growers for the Boston market.

The regular monthly meeting of the club was held Tuesday evening, with Vice-President M. A. Patten in the chair. President Wheeler was unavoidably detained at home on account of sickness in his family. Notwithstanding a small blizzard was raging during the evening, there was an attendance of about sixty, many of the members coming from quite a dis-

tance out of the city. There was only one exhibit on the tables, the boisterous weather being against the bringing in of plants or flowers. This exhibit was a vase of mignonette from Patten & Co., Tewksbury, the variety being Fottler's Eclipse; and while it was not as large as some of the spikes we have seen, yet it possessed a fragrance and delicate finish which would always commend it. Several new members were elected, and as this is now a looked-for occurrence, there is no question but that the club is full of life and vigor.

The committee on awards reported on the certificate question, which has had an airing at every meeting recently; but as they had yet reached no final decision they were granted another month, when it is to be hoped the matter will be brought up for final arguments and settled.

NEW FERN DORCHESTER

Originators, L. H. Foster Estate, Dorchester, Mass.

Exhibited at Boston Show

The speaker of the evening was Wm. H. Elliott, of Brighton, who talked on his recent visit to the islands of Cuba, Porto Rico and Jamaica. He was listened to very attentively while he described the many different features and the luxuriant vegetation for which some of these islands are famous. The meeting broke up at a late hour, every one present having enjoyed the off-hand talk of Mr. Elliott, which was quite a departure from the more technical papers which are generally brought before the club.

J. W. DUNCAN.

LENOX (MASS.) HORTICULTURAL SOCIETY held its regular meeting on March 18, 1905, President R. A. Schmid in the chair. The members were addressed by W. H. Wyman, of North Arlington, Mass. His topic was "Landscape Art and Architecture in General," which was very interesting, and led to a great deal of discussion. CHAS. O. DUNCAN, Asst. Sec'y.

Review of the Market

NEW YORK.—The market does not present that overstocked condition so apparent a week ago; but this is more due to the decrease in the supply of Dutch bulbous stock than to any other cause. We have been having some nice Spring weather, and the street flower dealers are again working full time—a feature which is always good for the wholesale business.

American Beauty roses are becoming more plentiful, and prices still have a downward tendency, much to the disadvantage of the fine shipments of Ulrich Brunner reaching this market every day. Special Bride and Bridesmaid are keeping up fairly well, chiefly owing to their limited numbers; but the lower grades are in a most unsatisfactory condition, so far as any fixed prices go. Violets are clearing out much steadier than they were, though the prices received have not varied materially from those quoted a week ago.

The preponderance of fancy grades among the carnations is making it very difficult to dispose of ordinary stock at any figure. Perhaps this feature would not be noticeable in good business times, yet it would seem there is no room any more for the smaller or weak-stemmed carnations, and their culture will hardly prove profitable much longer.

Tulips are not nearly so plentiful, and are realizing better values. The same is also true of the various kinds of narcissus. Sweet peas are not selling so well; neither is lilac nor lily of the valley. Lilies are not so much in evidence as they were a week ago, and prices will average slightly better. Easter quotations for lilies are already in the air—10c. for cut blooms, and 12c. for plants in pots. How firmly these figures will hold, one cannot tell at this time. Mignonette is a slow seller, and the market is well supplied at all times. There has evidently been too much of this stock grown this Winter. Smilax continues in good demand; and other green material fairly so, with prices unchanged.

CHICAGO.—Inclement weather has militated against business the past week, causing considerable fluctuation in prices, and trouble in disposing of stock. On St. Patrick's Day there was a heavy call for flowers in almost all lines, green carnations, however, being the leaders; nearly every house had some of these on hand, and they brought more than twice the ordinary values. In the plant line, genuine shamrock proved a good seller; most of these plants were put up in green pots. Tulips in an undeveloped stage were also called for, but few of them were available. All seem to agree that St. Patrick's Day is becoming a good one for the trade.

American Beauty are now in ample supply, the demand for first grade stock not being as heavy as usual. Medium and short grade flowers are moving freely. Bride and Bridesmaid are too plentiful, and large quantities go at very low prices considering the quality. There does not seem to be the call for Golden Gate that once existed for this popular rose, consequently prices have declined considerably, unless for extra fancy stock in small quantities. Liberty is in greater supply than for some time.

Carnations are being received in large numbers, and have been moving slowly the past few days. Local demand has not been particularly active, consequently prices have dropped somewhat.

Lilies are becoming more numerous, with a fair demand, at from \$6 to \$12. Callas are in abundance, and, in many cases, of poor quality. Violets are very plentiful, and the weather has affected the sales of these. Sweet peas are coming in more freely, and selling well. Daisies are also seen in quantities. Smilax is more plentiful than for some time, at from \$3 to \$12 per 100. R. J.

BOSTON.—There still continues a drop in prices of all kinds of cut flowers; and the supply is fast increasing. Peas, which only a few weeks ago were very scarce, are now very plentiful; in fact, so much so, that some days they are very druggery. American Beauty, which have been scarce since Christmas, are now abundant and of splendid quality. Some very fine long-stemmed blooms are seen. They have dropped in price, however; the best grades fetching anywhere from \$20 to \$35 per 100. Queen of Edgely is getting more popular; some extra fine blooms are seen this week. Killarney is another variety which is gaining in favor. Bride and Bridesmaid are very plentiful; are a drug, in fact, and can be bought at from \$1 to \$3 per 100.

Carnations have been rather steady; no variations in prices to speak of; the quality is of the best. Bulbous stock of all kinds is plentiful, but prices of the better grades have been firm. Lily of the valley remains without change. Violets are very abundant, more so than at any time before this season. While they can be bought at almost any price, \$30 for \$1 is about the figure for the best grades. J. W. D.

ST. LOUIS.—It's an old saying that everybody has his day, but St. Patrick had three of them—Friday, Saturday, and Sunday—which were quite busy ones for the florists, especially in disposing of green carnations, which sold like hot cakes. The trade had great help from the daily papers, which spoke about the new green carnation that could be had at all the florists' stores for St. Patrick's Day. Sales of these flowers began Friday, and Sunday, during the parade, everybody was decorated with a carnation of patriotic Irish color. Trade during the week just past is generally reported as dull; even funeral work was not any too plentiful. Stock piled up at the wholesale houses, and fancy flowers of all kinds have sold very cheap. Never before at this season was there such a glut in violets and colored carnations. Roses, too, were very plentiful. Bride, Ivory and Kaiserin Augusta Victoria were the only ones in demand; colored stock in nearly all varieties went begging. Extra fancy grades are selling at 6c., and down as low as 1c. for bulbs. American Beauty are also going slow at \$3 and \$4 per dozen for fancy long. Medium stems and shorts are in plenty at from \$1.50 to 60c. per dozen.

Carnations were slaughtered in price, in big lots, going as low as \$8 per 1000 for the colored sorts. White held their own at \$1.50 to \$3 per 100. Extra fancy Enchantress and Mrs. T. W. Lawson brought \$3 per 100. Harrisii lilies and callas are in great abundance. Other bulbous stock is not overplentiful except tulips and lily of the valley.

Smilax sells well at \$12.50 per 100 strings. Common ferns are becoming scarce, and the price has been raised to \$2 per 1,000.

At this writing, Tuesday, prices are somewhat better, and supplies not quite so heavy; still more than the trade can use. Prospects from now on until Easter, for better business, are not very bright. ST. PATRICK.

INDIANAPOLIS.—The heavy trade of last week has not continued. As a result, stock is accumulating in quantities. Bulbous flowers are unusually plentiful. Prices remain about the same—\$3.50 to \$4 per 100, as growers realize the stock can not be sold for less without sacrificing it. The supply of home-grown carnations now more than meets the demand; many of them are retailed at Tomlinson Hall Market for 50c. per dozen. Select carnations, such as Enchantress, bring \$3 per 100; medium grades, \$2 per 100. Select roses are more plentiful now than at any time before this year; the best Bridesmaid, Bride and Golden Gate sell at \$7 per 100. Good Liberty are being shipped in for \$10 per 100. Select 36-inch American Beauty may be had in quantity at \$40 per 100.

Sweet peas are in fair demand and have supplanted violets to a large degree. Long-stemmed sweet peas are customarily wholesaled \$1 per 100.

Plant trade is fair, but it is an impossibility to keep much of the stock from going to waste. The warm, bright weather of the past week has taken many from the control of the growers, and fine azaleas, rhododendrons, etc., are being received, which were intended for the market two or three weeks hence.

Tomlinson Hall Market reports a very satisfactory week. Much stock is being received now, and, although business is not what it is sometimes, the large quantities of flowers there at this season give the market a very prosperous air. I. B.

WASHINGTON, D. C.—Business has been comparatively quiet this week. The spell of warm weather has produced an overabundance of all kinds of flowers, thus making a very material difference in the prices. Prime stock of American Beauty roses only brought from \$4 to \$8; Bride, Bridesmaid, Kaiserin Augusta Victoria, Souvenir du President Carnot, Meteor, Ivory and Golden Gate, \$1.50 to \$2.50; Liberty, \$2 to \$3 per dozen; Ilac, \$3 per dozen; Lilium Harrisii, 15c. per bloom. Violets are not much in demand in the stores; they realize 50c. to \$1 per 100. Lily of the valley sells at \$1 to \$1.25 per dozen; mignonette, 50c. to 75c. per bunch; sweet peas, 35c. to 50c. per bunch; Jonquils, 35c. to 75c. per dozen. The supply of the latter is commencing to arrive from the South. Dutch hyacinths bring 50c. and tulips 35c. to 75c. per dozen.

Plants of azaleas in 6-inch pots sell at from \$1 to \$1.25; lilac, \$4 to \$5; Primula obconica, 35c. to 75c.; cyclamen, 50c. to 75c.; Astilbe japonica, 50c. to \$1; Japanese fern balls, 50c. each. Shamrock in pans brought 75c. each on St. Patrick's day. Carnations and violets are being sold by all the street vendors, especially the commoner sorts of the former. M. C.

NEWPORT, R. I.—Not a very good week for the florists, as it has been cold and rainy. Prices are a little better on the whole, and, while counter trade has been light, there has been a call for funeral work. Some very elegant American Beauty roses were noticed this week, cut with 72-inch stems. F. W.

GRAND RAPIDS, MICH.—We have lately been blessed with an abundance of sunshine, which is bringing flowers out too fast. Carnations are plentiful; roses are inclined to be scarce in red and crimson, with enough of the pink and white sorts for all purposes. Lilies are none too plentiful, being kept well cleaned up; in fact, the supply of lilies for Easter will be none too large, a few have some that will be in just right, others will have them pretty well over. Violets are a drug. The dry goods stores, groceries, etc., sell violets at 5c. per bunch of a dozen. Special sales are made by one dry goods firm, and last Saturday the sign read: "Carnations 16c. per dozen." Little need be said about their quality. Violets are so cheap and common that it is lessening their popularity. The violet as a popular and profitable flower to raise in large quantities for shipping purposes, has seen its best and palmiest days.

Bulbous stock is very quiet; it is selling slow and spasmodically. Roman hyacinths of all bulbous stock seem to be the most useful, being indispensable for choice funeral work. Lily of the valley is much used, particularly for weddings. G. F. C.

BALTIMORE.—Business and the weather are both bad this week. A thunderstorm occurred last Sunday, and it has been rainy and cloudy from then up to the present writing. There is plenty of almost everything—too much of some stock. Violets are selling extremely slow, as is bulbous stock. The better grades of roses and carnations are moving fairly well, but no fancy prices are to be had for anything. American Beauty are coming in more freely. Smilax is the only thing that is really scarce. Southern jonquils are expected daily; then the local greenhouse stock will suffer still more. F. T. Covey, of Newport News and Fredericksburg, Va., was in town this week buying plants for Easter. J. J. P.

CLEVELAND, O.—The exceptionally fine weather is forcing bulbous stock very rapidly; it is coming in so fast that it is a glut on the market. Some splendid Murillo tulips are seen, and other later ones, such as Prosperpine. Most of the florists fear they will not have stock enough for Easter. Roses and carnations are good, but cheap. Violets hold prices well. Narcissus and Roman hyacinths are used extensively in funeral work. O. G.

NEW BEDFORD, MASS.—Trade the past week has been very quiet, with an occasional spurt of funeral work. There was no marked demand for St. Patrick's Day. Roses, carnations and violets are in plentiful supply. Bulbous stock is moving very slowly. The average prices are: Carnations, 50c. dozen; roses, \$1.50; violets, \$1 per 100. Bulbous stock brings about 50c. per dozen blooms. W. L.

CINCINNATI, O.—The past week business has been a little on the quiet side, yet all good stock has moved off nicely, very little of any kind going to waste. American Beauty are the best sellers; long stem flowers bringing \$4 and \$5 per dozen, according to quality. The outlook for Easter is very good, and I assure you that Cincinnati will be right along with the other large centers when Easter arrives. E. G. G.

PITTSBURG.—Business the past week was rather dull and prices have come down considerably. Carnations go at \$10 and \$15 per 1,000 for good stock. Violets are in fair demand at 50c. per bunch and better. Sweet peas are selling well. Bulbous stock is a little slow. There was a good demand for green-deyed carnations on St. Patrick's Day. Shamrocks were also much in evidence. E. C. R.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

ROME, GA.—Mrs. H. C. Norton has discontinued her florist business here.

ELWOOD, IND.—A. Deubendorfer has purchased ground here, and will build another greenhouse.

MINNEAPOLIS, MINN.—Pathey & Thompson have started a new flower store at 11 Seventh street.

HOUSTON HEIGHTS, TEXAS.—W. A. Hawkins, of Galveston, will establish a greenhouse plant on Arlington street.

SHELBYVILLE, IND.—W. F. Law has sold his greenhouse and property in Maplewood to L. S. Limpus and Jonathan Tennant, the consideration being \$7,000.

CALLA, O.—The Calla Cut Flower Company has been incorporated, with \$6,000 capital stock, by M. E. Templin, N. M. Bassinger, Frank Rogers, J. M. Bogner and E. E. Forney.

MCKEESPORT, PA.—Geyer & Smith have purchased the Crump greenhouses in Dravosburg. N. J. Ribsam is in charge. The firm is a new one, having only recently entered the business. It is meeting with much success.

BUSINESS DIFFICULTIES.

BOSTON, MASS.—James W. Newman, florist, living in Belmont, doing business at 27 Washington street, has filed a bankruptcy petition. His liabilities are \$7,619.60. Assets are \$7,000, represented in encumbered real estate.

BOWLING.

NEW YORK VS. NORTH HUDSON COUNTY.—The much-talked-of match between these two rival teams came off on Monday night, March 20, on the New York alleys and resulted in a complete victory for the home team, they being 462 pins ahead at the close of the third game. Theodore Lang was high man of the evening with 234, and for that distinction he was presented with a Waterman fountain pen, donated by P. Kessler. Patrick O'Mara made the presentation speech, at the same time giving the recipient much fatherly advice.

The bowling capabilities of the Hoboken florists are perhaps not so well developed as those of their New York opponents. They have now been beaten twice and under a different name each time. When it comes to musical talent, however, the Hoboken boys are a century ahead of New York, and while seated at the dinner, served immediately after the match, they rendered a few solos and choruses of German composers with such soul-stirring fervor that the feeble attempts at hilarity of the New Yorkers over their victory were at once hushed into complete silence, and they listened with rapt attention and amazement, lost in admiration at the remarkable geniality and good-nature of these hardy toilers from North Hudson county. West Hoboken, N. J., while smarting under the lash of a recent defeat. The individual scores follow:

NORTH HUDSON.			
M. Hansen	148	142	126
P. Fischer	105	125	106
C. Dietz	154	133	143
H. Mende	108	123	136
H. C. Steinhoff	120	92	74
W. Otte	177	169	157
	812	784	742

NEW YORK.			
P. O'Mara	122	167	163
P. Kessler	152	179	173
W. H. Siebrecht	149	135	135
W. Ford	155	158	129
J. Fenrich	126	149	128
T. J. Lang	150	234	198
	854	1020	926

Total—New York... 2800.
Hoboken... 2338.

Alex. Burns, Woodside, N. Y., the dean of bowling in New York, was the referee, and his decisions were rendered in that prompt and decisive manner that only a long experience and a perfect familiarity with the game assure.

The concluding match of the series between the bowling teams of Madison, N. J., and New York, is scheduled to take place on Friday night, March 24, on the Tuxedo alleys at Newark, N. J. Apropos of bowling, there is a desire among the members of the New York Bowling Club to arrange for a match among its own members. It is remarked that the team of so-called experts that has been posing in the limelight at the many matches that have been played this Winter are not the only crack bowlers the club possesses; in fact, some members assert that a team can be chosen from within the club's ranks that can beat the team that was pitted against the Hoboken Club last Monday night. If this is so, let a match be arranged at once; it would at least be an exciting game, and would provide plenty of amusement for these quiet Lenten days.

GREAT NECK, N. Y.—George Matthews is completing a range of three houses, each 180 feet long and 17 feet wide. In these houses there is being used an extremely small ridge and iron frame ventilator sash. The King Construction Company, of North Tonawanda, N. Y., has furnished the material and designs.

The Retail Trade

A Store Opening.

CINCINNATI. Monday, March 20, Julius Baer moved into his Palace Flower Store, on Fourth near Main street. His window display was of violets and violet baskets, cords and tassels; the north section was of daffodils, ferns, and genistas. To the right, as you enter the store, is his illuminated ice chest, and in the rear of this is a commodious cozy corner, fitted in fret-work and upholstered in leather. A little to the left is a very cute and pretty writing desk, with cards especially for the use of the ladies. Stretched upon the floor immediately in front of the cozy corner is an immense skin of a grizzly bear, with life-size head. To the right of this cozy corner is another ice-box and more fret-work clear to the ceiling, breaking the view of the back part of the room, and his office. The left side of the store, as you enter, is all looking glass, with palms and bay trees standing in the rear. Out of sight is his work room, where the money is made, and where the dirt is never in sight of the customer. As a souvenir Mr. Baer gave away "Beauties of Spring," the picture of a beautiful maiden with right hand resting on a rustic railing, while in her left hand she holds a branch of Spring blossoms. This is, without doubt, the handsomest flower store in the West. E. G. GILLET.

IMPROVED REVOLVING FOUNTAIN FLOWER STAND.—The Eclipse Novelty Works, C. C. Boyd, manager, of Pulaski, Pa., is putting on the market an improved revolving fountain flower stand, which seems to be a serviceable device. The stand can be taken apart, and its component parts packed into small space for storage and transportation.

The inventor furnishes the following particulars: "The stand is constructed, having a hollow tube run clear through the center, to which a hose may be attached. This tube extends about fifteen inches above the topmost plants, and is provided with a suitable sprinkler, which, as the water is forced through, causes it to fall in a beautiful shower over all the plants held in the stand. The stand is nicely constructed of iron and steel, neatly curved and bent in an artistic manner, and although only weighing about forty pounds, will carry a weight of 500 pounds, if necessary. The height of the stand is five feet, the width at the widest part is 36 inches. It holds 24 pots, varying in sizes from 4½ to 7 inches. An extra pot ring is also put on top when the spray is taken off, making the stand hold 25 pots. The stand is mounted on casters, so as to be easy to move about the house or porch, and is nicely painted in bright colors. The pot holders being made in the form of rings, it is impossible for the pots to blow or be knocked off, no matter how hard the wind blows or how top heavy the plants may be." All the brackets and arms can be revolved around the main stem at will.

CARNATION MELODY (DAYBREAK LAWSON)
Originated and Grown by W. C. Hill Co., Streator, Ill.

THREE-YEAR-OLD PLANT OF VIOLET PRINCESS OF WALES IN STANDARD FORM

Photo by W. H. Waite

STATICE.—In the protest of Reed & Keller against the assessment of duty by the collector of customs at the port of New York the general appraisers have issued the following opinion: "Certain statice was held to have been properly classified under paragraph 51, tariff act of 1897, relating to flowers suitable for decorative purposes."

Carnation Melody.

Editor Florists' Exchange:

We send a photograph (reproduced herewith) of Melody, our Daybreak sport from Mrs. Lawson. It originated at our place in 1903 and has shown no tendency to revert to the Lawson type in color. In habit of growth and freedom of bloom it is identical with Mrs. Lawson excepting that the stems come longer earlier in the season and flowers are larger. We cut blooms in November measuring 3¼ inches, with stems 15 to 18 inches in length. The color is the ideal Daybreak. The flower is a good traveler and a splendid keeper, and holds its color well. It is rather a strange fact, but one conceded by other growers of the Lawson sports, that they do not split as does the parent variety. It is so with Melody. Up to the present time, March 15, we have had no splits, and during the past severe Winter the temperature was more often 50 to 52 degrees instead of 54 degrees, the usual Lawson temperature.

Mrs. Lawson is not running out with us, and we will grow three of them next year, namely, Melody, White Lawson and the dark pink Lawson. Melody will be introduced to the trade in 1906 jointly by the W. C. Hill Floral Company, of Streator, Ill., and the J. D. Thompson Carnation Company, of Joliet, Ill.
W. C. HILL FLORAL COMPANY,
Per F. R. Thornton, Manager.

World's Fair Flower Show Association. Report of Chairman of Executive Committee.

This association, whose organization began Saturday, October 15, 1904, at a called meeting at the Sherman House, of this city, was completed within about ten days from that date, seventy members having joined during that time and having subscribed a sum total of \$7,210. (Only those paying promptly the 20 per cent. levied are included in these figures.)

The preparation of copy for premium lists was practically made the first day of the organization excepting a few additional classes. The printing of the same was completed four days thereafter, one day being necessary to arrange for its final certification by Chief Taylor of the Department of Agriculture, Louisiana Purchase Exposition.

Final premium list showed a profit of something like \$150 received from advertising. The cash handled in premiums, expenses, assessments, dividends, etc., is all detailed in your treasurer's report.

The objects of the association were briefly:

First—To secure for growers of cut flowers and blooming plants, all official awards possible at the St. Louis World's Fair.

Second—By offering cash prizes which the Exposition

Company did not provide to enable the growers of the above to compete for the awards without serious financial loss.

Third—To take this opportunity for a chrysanthemum show where the large attendance of this World's Fair was available, to advertise, uplift and carry forward floriculture and horticulture in the public eye.

Fourth—To do this without financial loss to the guarantors and if possible with a profit.

That the above objects have all been accomplished with reasonable success I believe all of our members will agree, having knowledge of same through personal attendance at the show or through accounts in the public press.

While your executive committee has carried the work to completion at no little cost in time and labor and while probably none of them are anxious to do their work over, I feel safe in saying that none of them regret having done their share, which it seemed the best interest of floriculture then demanded.

Personally I have to thank every one officially connected with the show for the most cordial and hearty support at all times and under all conditions.

I feel that no enterprise could have been carried on with greater unity of purpose, and to that I attribute our success.
J. C. VAUGHAN, Chairman.
Chicago.

Committee.

BUNCH OF VIOLET PRINCESS OF WALES
Photo by W. H. Waite

Standard Violet, Princess of Wales.

The accompanying illustration of a standard violet is more of a novelty in violets than as a good salable florist's plant. It makes a very pretty subject in the greenhouse, but I am told, on good authority, that the flowers last but a few days when exposed to store treatment. The plant illustrated is three years old, and at the time it posed for its picture had over 50 expanded flowers and numerous buds.

W. H. WAITE.

DANIEL B. LONG, Buffalo, N. Y., has originated a very pretty "Easter greeting" design card—a bunch of lilies in natural tints on a shaded background. Mr. Long informs us this card has been favorably received by the craft generally. It is chaste and quite attractive.

Gardenia Florida.

(112) Kindly inform me through the columns of your best papers, The Florists' Exchange, how to treat Gardenia Florida after flowering, to get the best plants for forcing another year. Also how to get the young cuttings, with treatment of the same through the Summer. Are they kept partially dormant until Fall or growing all Summer.

A. B. R.

—After the gardenia has flowered, cut the plants back, but not into the old wood, and start them growing again in a good warm house. In late Summer, or Fall, after a clean, stocky growth has been made, give them a partial rest for six or eight weeks, when they can again be forced into flower. Cuttings are best made from the half-ripened young wood, and need a strong bottom heat in a close case on the propagating bench to root satisfactorily. After they are rooted, grow them on in a warm house, potting them as becomes necessary, and using always a rich and very open soil. These young plants make the best subjects for flowering if grown right along without any rest; then they can be cut back, started again, and will provide cuttings for the following season's supply of plants. The old plants always require a resting or ripening period, but with the young plants that is not necessary.

Value of Pigeon Manure.

(113) I have about 300 pounds pigeon manure in good condition. Please tell me what it is worth.

P. S. T.

—We have no means of placing a current estimate of value on the pigeon manure, but would recommend the owner of the manure to advertise it for sale, offering it to the highest bidder.

Plants to Follow Violets.

(114) One bench of single violets holding about 500 plants will be vacant by March 15. Will it then be too late to fill that bench with something yielding cut flowers for Easter, or pot plants? I prefer cut flowers.

L. D.

—The limited time between March 15 and Easter, which is on April 23, will not allow of producing another crop on the vacant space.

Orange Leaves Affected.

(115) The leaves have been examined by the mycologist, who reports that the tree is evidently suffering from the disease called "Wither Tip," which is caused by the fungus *Colletotrichum gloeosporioides* Penz. The fungus may be best controlled by pruning out diseased twigs and spraying the tree with Bordeaux mixture. By careful cultivation and fertilization the fungus may be prevented from becoming established in an orchard, as the chances of infection are greatly reduced when trees are in the best physical condition.

A. F. WOODS,
Chief Pathologist and Physiologist.

Carnation Blooms Not Keeping.

(116) I have been troubled a good deal in keeping carnations, and I have recently moved my store to a more modern building partly on account of that. The store I occupy at present is lighted by electric lights and I have steam heat and plenty of air, and use it freely. I also have a large, airy cellar that I can give most any temperature desired, and the flowers do not seem to keep there. I have been experimenting in different ways trying to keep them, but with no success. I grow my own carnations, and they are from good healthy plants. The varieties that seem to close up worst are Enchantress and Mrs. Lawson. I would like to hear from some one else who has been troubled in a similar manner. The same carnations I can keep cut in a shed at the greenhouses and have them look nice at a week old.

A. D. C.

—The going to sleep of carnations has been discussed many times in The Florists' Exchange, and it has become a well known fact that the variety En-

chantress is a most unsatisfactory keeper under the best of conditions. In the present case, where the flowers are home grown, and they keep well in the shed at the greenhouses, why would it not be a good plan to take note of the conditions of temperature, moisture, light, etc., in the shed referred to, and duplicate those conditions in the store cellar as nearly as possible.

Heating.

(121) Kindly advise the best way to heat five houses, each 17 x 100 feet, with hot water, to 40 degrees in zero weather. The houses are even span, running east and west, sides 2½ feet high, south side glass, 16 inches wide. The boiler is 2 feet in ground. I cannot have it deeper on account of poor drainage. Boiler has a 6-inch flow; also two 3-inch flows and four 4-inch returns. The houses are 8 feet to ridge; beds solid. I have 3-inch and 2-inch pipe, and would like to use it. I would like water at boiler about 160 degrees in zero weather, so as to have easy firing. The boiler is plenty large enough.

W. C. P.

—The boiler must have a capacity of about 3,000 square feet of heating surface. Assuming that you have sufficient 2-inch pipe to do this work, and also 3-inch which can all be utilized for heating surface in the greenhouse, we would advise using 3-inch overhead flow mains, placed on a column under the ridge, and run these to the far end of each house, using in each house eight 2-inch wrought-iron pipes, as follows: These can be distributed on each side and one on each side of the center bench, making eight in all. As we face the houses from the boiler, we will let house No. 1 be on the extreme left and Nos. 2, 3, 4 and 5 following to the right. The boiler will be placed in the end of house No. 4; and we would advise overhead mains from the boiler of 6-inch size; reduce to 5-inch to house No. 3 and to 4-inch to house No. 4 and to 3-inch to house No. 1. From the 6-inch main to house No. 5, 3-inch mains will do. Returns to be run the same sizes and proportions. Place stop valves on the far end of each circulation, a 2-inch full opening gate is the best. A steel expansion tank, 16 x 48 inches, placed as high above the mains as possible and connected to the returns, will do. By piping the houses on the above plan, you will maintain the temperature desired, with the water at about 160 degrees. There is always a disadvantage in heating houses where the boiler pit is so shallow, and practice demands that the increased surface be put in to allow for the slow circulation in consequence. For this reason we have also allowed the mains to be large, as best results will be obtained. It is of the utmost importance in a job of this kind that boiler power of sufficient capacity be put in.

U. G. SCOLLAY.

REPLY TO L. McLAUGHLIN.—Especially if the benches are too near the glass it will be well to move them out as proposed, and place the coils on the wall. If a temperature for carnations is desired, it will answer to use two 2½ inch flows on each wall, with two 2-inch returns for each. Place the flows as high as possible, with a fall of not more than ten inches. Give the returns a similar fall, but be sure to keep them as high as you can. The four returns on each side should be collected into one 3-inch return. There should be an air valve in the highest point of each flow. While butted glass answers fairly well if well laid, on roofs that are on a slope of 35 degrees, the lapped glass is generally preferred under all conditions for the roofs of greenhouses.

L. R. TAFT.

How much 2-inch pipe will be required and how should it be arranged for a small greenhouse, 20 feet wide by 30 feet long, 9 feet to ridge, house running east and west, ¾ span, long span to south? South wall 3 feet out of ground with no glass. North side to be connected to present greenhouse by gutter (wood). West end will have one door with no glass. East end to be connected to potting shed, which will be heated from the boiler room and smoke pipe; building to be of wood construction, papered between posts and siding and between siding and coping. House to be heated to 55 degrees at 30 below zero outside, hot-water system. Boiler to be located on northeast corner of potting shed.

F. B. P.

—It will be well to use two 2½-inch flow pipes, either overhead or under the side benches, as will be most convenient, with two coils of five 2-inch pipes as returns. These should extend part way across the west end of the house, if it is much exposed.

L. R. TAFT.

I propose to install a 20-horsepower return tubular boiler in cellar, where space is limited and must be economized to the last foot of room. The side walls are of cement and banked against the ground outside and about 5 feet deep. Can I use the wall for an outside wall on the one side of the boiler without serious disadvantage? Would a cement wall be satisfactory from the foundation up to the top of ash-pit level with the grate bars? Will two outlets be better than one from the boiler, where the flows take different directions? If not, what size would you advise to supply two 2-inch flows?

S. B.

—The cellar wall can be used, but it should have a lining of firebrick. A cement wall for the ash-pit will answer. There may be either one or two outlets, as will be most convenient. To supply two 2-inch flows the main should be 3-inch if there is more than 800 square feet of radiation in the coils, while 2½ will answer if there is less.

L. R. TAFT.

I am to build two greenhouses, 25x 300 feet, east and west, long span to south, both ends glass; 3 feet of glass on the south wall, 2 feet on the north wall. The houses are to be connected and a partition between them 12 feet to ridge. I want to grow roses and carnations. How should I pipe these houses? Will have boiler 24 feet long 42 inches in diameter, with two 14-inch flues. Will heat with steam.

J. H. O.

—For the rose house, it will be well to use one 2½-inch flow and ten 1¼-inch returns. Most of the return pipes should be on the side walls, but it will be well to have them distributed across the house if raised beds are used. For the carnation house one flow and eight returns should suffice.

L. R. TAFT.

We are heating three houses, each 200 feet long. Our boilers are set 10 feet from the middle of houses in boiler shed. Our mains from boilers run directly across the middle of all houses. To get the best results, which way should the taps, or outlets, point on these mains? To the top or from the sides?

W. W.

—If the mains are sufficiently large and the boiler is of ample capacity, there should be no trouble in getting an even circulation by arranging the pipes in either way; but it will be surest to connect both flows and returns upon the top of the mains.

L. R. TAFT.

I have a large brick chimney 25 feet high from the ground, from the bottom of cellar 3 feet more, flue measures inside 28 inches square. I want to put in two boilers (return tubular steam boilers). What size can I put in? If I should add 10 feet more to the chimney, can I increase the size of the boilers? If so, how much?

D.

—A good deal will depend upon the surroundings when the effectiveness of a chimney is concerned. As a rule, it is advisable to have it extend 35 or 40 feet above the level of the boiler. The capacity varies with the height and also with the area of its cross-section. With favorable surroundings, the present height would probably answer for two boilers of 35 to 40 horse-power each. The addition of 10 feet to the height of the chimney would certainly adapt it for two boilers of 50 horse-power each. With low chimneys, especially if the air currents are broken in any way, the setting of two boilers sometimes complicates things.

L. R. TAFT.

How many lines of 2-inch hot water pipe will it take to heat a house 30 x 16 feet facing south and north, to 50 degrees in zero weather? The house is 9 feet high to ridge, side walls 4 feet high, no glass in sides. I can put my boiler down only about level with return hole in boiler. I would like to pipe the house without putting an overhead pipe in. Could I put a 3-inch pipe up straight, 4 feet high, from boiler, and then run it level 4 feet and then drop it to go under the bench? If so, I can carry the pipe all the way around under the bench and return it back to boiler?

G. S.

—The proposed plan for running the

flow pipe should prove satisfactory. After reaching the inside of the house, connect the flow with a coil composed of three 2-inch pipes, and carry this around the three exposed sides of the house; then connect with the boiler with a 3-inch pipe. Keep the returns as high as possible, giving the coils a slope of about 1 inch in 10 to 15 feet. The expansion tank should be connected with the highest part of the system.

L. R. TAFT.

I have a range of five houses, 18 x 50 feet 4-foot side walls, no glass in walls, 11 feet to ridge. Houses run north and south; potting shed on north end of the range, into which all the houses open and under which are the boiler and coal bins. Each house has a run of five 1-inch steam pipes along the side walls, each run fed overhead by a 1½-inch steam pipe, which is supplied from a main running the length of potting shed. My dwelling house is also connected with the potting shed and has 300 feet of radiation. I would like to have your opinion as to the size of boiler that would be best suited to do the heating most economically, giving at the same time the size of the grate bars and the probable consumption of coal to do the work, hard coal being the fuel used. Night temperature required is 45 to 50 degrees. I forgot to state that the pipes extend on the south end of each house about 6 feet on each side, thereby making the run on each side about 56 feet long.

A. M.

—A boiler with a rating of about 20 horse-power and a grate containing in the neighborhood of 12 square feet of surface should heat the five greenhouses and the dwelling. The fuel consumed will vary from 300 to 500 pounds per day.

L. R. TAFT.

To Stop Leak in Elbow.

(127) I have a 4-inch elbow which has got cracked by some means—probably was packed too tight—and it is leaking very badly. It is an awkward place to get at to put a new one in. What is the best thing to do to stop it?

K. A. G.

—A good deal depends upon the character and extent of the break. Sometimes the leak can be stopped by placing an iron clamp around the elbow. This can be drawn down upon the elbow by means of a bolt so as to close the crack. If there is still a small leak, it can often be stopped by means of litharge. Another way is to wrap the cracked portion with two or three thicknesses of canvas that has been smeared with white lead, and then bind it with stout twine or a small rope.

L. R. TAFT.

Starting Bulbs.

(122) What is the best way to start oxalis, gladiolus, gloxinias and tuberose? The tuberose are for outdoors. Would it be best to start them in the greenhouse? Also, should these bulbs be kept under the bench until they make roots?

SUBSCRIBER.

—The oxalis and gloxinias should be started in small pots and kept on the greenhouse bench from the beginning. The tuberose and gladiolus will be all right if planted outdoors as soon as all danger from frost is over.

White Fly on Tomatoes.

(123) We have a large house of tomatoes just setting fruit, and the plants are full of little white flies. Can you tell what they are, and what will kill them without injuring the plants?

COOL.

—The white fly is what is known as aleyrodes, and a dusting of pyrethrum powder, applied with a bellows, is the best known remedy.

The Aster Beetle.

(124) What is the best way to get rid of the aster beetle? Is Paris green good, or is there something better? How should it be mixed so as not to burn the foliage?

COOL.

—The best remedy for the aster beetle is one teaspoonful of Paris green in three gallons of water, applied with a syringe. Do the syringing in the evening.

Oyster Shell Lime.

Referring to an inquiry regarding this material, appearing in a previous issue, the Haslam Lime Company, corner of Cliff and Mechanic streets, Scranton, Pa., advises us that it can supply the kind of lime mentioned.

EASTER, The Holiday of Flowers!

The joyous time of Flowers and Song approaches.

On Easter Day every one wants Flowers.

A season of profit to the Florist, if rightly worked for.

A time to favor customers with a Complimentary Souvenir, referring to the event, special stocks and facilities, etc. Such employed means promote both business and a desired prestige worth way above any mere money value.

For such purposes the undersigned offers newly designed affairs of unusual character, such as:

- CARDS, FOLDERS and BROCHURES.
- POST CARDS, Easter Lily designed, in idea new.
- TAGS for Easter week use. Elegant. Others in variety.

QUESTION BOX
(Continued from page 403.)

A Branching Tulip.

(125) We have a tulip bulb that produced two blooms; the stem was perfectly round and the second bloom branched off near the top. It was a very large and sturdy plant of the Prosperine variety, but bore no sign of the stem being made up of two grown together, as often occurs in hyacinths. Is this an unusual case? We have never seen it before and wondered if the plant would be worth while propagating.
C. C.

—We have heard something of a branching tulip that has originated in Holland, and perhaps this is a stray bulb that has got in with your Prosperine bulbs. We would save the bulb by all means.

A Stock Trouble.

(126) We planted January 10 ten week stock in light sandy soil. The seed came up very good in due time. After the plants were large enough we transplanted the seedlings into carnation soil from last year, adding a little well rotted cow manure, and they started growing nicely; then the leaves commenced to curl as per sample sent herewith. We thought it was green fly, but could not discover any. The temperature where the plants grow is, night, 45 to 48, with good ventilation daytime. We should greatly appreciate it if you could inform us what the trouble is, as it is causing quite a loss to us. We have the plants potted in same soil, 2 1/4 pots, at the present time.
A. G.

—The stock shows no signs of green fly, or any disease that we can determine, and the curling up of some of the leaves must come from some local cause or other. We would advise raising the night temperature two or three degrees, and the young plants would no doubt soon outgrow the trouble.

A Lily Question.

(129) If a grower buys a certain number of Lillium multiflorum bulbs for forcing and finds, when they start to grow, that he has several varieties among them, a small proportion of them only being of the designated variety, should the grower in that case be called upon to pay for the inferior bulbs that were substituted?
AN INTERESTED GROWER.

Coming Exhibitions.

INDIANAPOLIS, IND.—The preliminary premium list of the Indiana Floral Festival and Chrysanthemum Show, to be held in Tomlinson Hall, November 14 to 18 inclusive, has been issued. Irwin Bertermann, 241 Massachusetts avenue, is secretary.

The Week's News.
Spring is here and the seed houses are in the midst of an almost unprecedented rush of business. Lucas & Boddington Company has this season already disposed of 300,000 dormant canna roots, and the demand for tuberous rooted begonias, of which the firm is handling a strain hitherto untried on this side of the Atlantic, is reaching immense proportions.
Walter F. Sheridan, wholesale florist, is in Boston officiating as judge at the exhibition of the American Rose Society. Other New Yorkers who are attending the rose show are: F. H. Traendly, J. B. Nugent and A. J. Guttman. Harry O. May, of Summit N. J., also traveled with them to Boston.

The Rhinebeck Violet Association, mentioned last week as being formed for the growing of violets, has been incorporated with a capital of \$5,000. The incorporators are: J. F. Mulreln and M. J. Sullivan, Rhinebeck, and L. S. Sudlow, of New York City. The officers of the association are: Ernest Steenburg, president; L. S. Sudlow, vice-president; J. F. Mulreln, secretary; H. Smillie, treasurer, and M. Sullivan, manager. Six houses, each 200 feet long, will be erected this Spring.

A retail florist store has been opened on the parlor floor of the premises 343 Fifth avenue opposite the Waldorf-Astoria, by The Universal Horticultural Establishment. We understand that this is to be the outlet for the growing establishment of the concern, which is located at South Orange, N. J.
Dr. N. L. Britton, director of the New York Botanical Garden, has arrived home from his trip to the Bahama Islands, together with Mrs. Britton, Dr. Howe and Dr. Millsbaugh. Some 10,000 specimens of plants were collected during the trip, among them some hitherto unknown to science.

Florists located on Long Island will be glad to learn that the Assembly Cities Committee on Tuesday, March 21, reported Miller's bill compelling the issue by the Long Island Railroad of commutation books at the rate of half a cent a mile and prohibiting a charge of more than two cents per mile for single fares.

Wm. Elliott & Sons will offer a line of rhododendrons and hardy coniferous and deciduous shrubs at their auction sale on Tuesday, March 28.

Among the visitors in town this week were: A. Fabrenwald, Philadelphia; B. Schroeter, Detroit, Mich.; F. Houghton, of Houghton & Clark, Boston, Mass.

BIRMINGHAM, ALA.—The Smith Floral Company, on First avenue, is now under the personal supervision of Theo. Smith, who has been prominent in the business in Birmingham for the past sixteen years.

SANTA CRUZ, CAL.—A. Mitting, formerly of the California Carnation Company, Loomis, Cal., is now permanently located here, on Kennon street.

Our Gallery of Fine Specimens

Copyrighted, 1905, by A. T. De La Mare Ptg. and Pub. Co. Ltd., New York

Plate 96

ZIZYPHUS VULGARIS

A tree not commonly found in collections. Its fruit is the Jujube of commerce. The specimen illustrated is standing on the Capitol Grounds at Washington, D. C. The slightly leaning position of the tree is caused by the great weight of its branches, and the small number of its roots; the latter being nearly always on one side, and near the surface of the ground. The leaves are shining green, rendering the tree quite attractive; and from its spiny character, the wonder is that it has never been thought of as a hedge plant in countries where it is abundant.

Among the Growers.

Godfrey Aschmann has, as usual, a very large assortment of Easter stock, and, on account of having three new houses, it is in better condition than ever before. We saw about 2,500 lilies, some *Harrisii*, but the majority *longiflorum*, all in good condition. The spiræas are an exceptionally fine lot this year; there are about 1,500 plants of the following varieties: *Compacta*, *Gladstone*, *multiflora*, *floribunda*, *japonica* and a new variety, *Lemoine Blondine*, which looks like a promising one. Of azaleas there are 2,300 plants on this place; of this number 1,200 are *Mme. Van der Cruyssen*. These are all well budded and in good shape to come in at the proper time. The bulbous stock is very extensive; there are 3,500 hyacinths in 4-inch pots, of such varieties as *Grand Maître*, *Gertrude*, *King of the Blues* and *La Grandesse*. There are 1,500 pots of *Tournesol* tulips, three bulbs to a pot, and over 2,000 pots of narcissus, three bulbs to a pot. Hydrangeas are represented by 700 good plants, in 6 and 7-inch pots. Another specialty always done well on this place for Easter is cinerarias; this year Mr. Aschmann has over 1,500 plants of very well colored strains. The number of Spring plants handled on this place is surprising. As an illustration, there are 10,000 moon vines, 9,000 scarlet sage, 3,000 *Begonia Vernon*, 10,000 verbenas, 15,000 geraniums, besides numerous flowering begonias and a nice lot of both white and yellow daisies.

C. Eisele has a large stock of his novelties ready for Spring trade. As usual, he has lots of begonias in several varieties, and a large lot of Summer flowering carnations. He also has a big stock of clematis. Around his houses are seen at all times lots of oldtime plants not often met with on a commercial place, such as myrtles, various varieties of *echeverias*, *camellias*, *oleanders*, etc.

DAVID RUST.

New Bedford, Mass.

News Items.

At the last meeting of the New Bedford Florists' Club, these officers were elected: President, A. B. Hathaway; vice-president, E. H. Chamberlain; secretary, S. S. Peckham; treasurer, Richard E. Nofftz; executive board, George N. Borden, Frederick Covil and James Cleary.

S. S. Peckham has now two branch offices in the city. One of them, formerly Haskell's place, has a conservatory attached to the store, which is tastefully arranged with palms and flowering plants.

James Ricketson, of Shawmut avenue, has torn down some of his greenhouses and will devote one or two small houses to violets and bedding plants.

HORTICO.

Indianapolis.

News Items.

St. Patrick's Day and its green carnation business took many by surprise. Those not prepared with several hundred green carnations certainly had cause to regret it. To be sure an innovation like the green carnation takes only with a certain class of customers, but this class was so numerous that all the green carnations in town, about a thousand, were readily sold at 10c. straight. A few unprepared florists sought energetically to dye the flowers at the last moment, but their troubles went for naught, as it takes about three hours to color the blooms properly. Wm. Billingsley exhibited a large quantity in his window and easily disposed of 500.

I. B.

News of the Week.

By direction of President Roosevelt, the excavation work in connection with the construction of the new building for the Department of Agriculture has been temporarily suspended. This action by the President was taken pending settlement of the question that has arisen over the proper location of the structure. The matter has been placed in the hands of the consultative commission on the location and character of design of Government buildings in the District, recently appointed by the President, of which Bernard R. Green, superintendent of the Congressional Library is chairman. Until the commission submits a report, the work of excavation will be suspended.

Under the original plan, the new building was to be erected immediately in the rear of the present department building, and so situated that the main approach to the center portion could be by the driveway leading into the Mall from Thirteenth street. As the driveway has a diagonal course, the eastern wing of the building, if constructed in the position originally intended, would extend to within a few feet of the building line on Twelfth street, while the western wing would be all of 160 feet from the building line of Fourteenth street. The incongruous appearance of a structure situated at such an unequal distance from the two streets was brought to the attention of the President, and the question arose as to whether it would not be better, from an architectural point of view, to have the building stand equidistant from the two streets mentioned, even though the change necessitated the sacrifice of the handsome row of salisburia trees, along the driveway, in order to bring that means of approach in line with the new location. President Roosevelt called Secretary Wilson into consultation on the matter. The latter, it is understood, favored the construction of the building as already planned and under way, in order that the beauty of the driveway leading to the front entrance might be preserved. This consultation occurred prior to the breaking of ground, and the President, desiring to follow the wishes of Secretary Wilson, issued instructions accordingly. The excavation work was immediately begun and was almost completed for the two wings, when the importance of locating the structure at an equal distance from both streets was again urged upon the President. As a result, he issued the order instructing the contractors to stop operations and placed the matter in the hands of the consultative commission for final decision, as stated above. To locate the structure squarely between the two streets would entail only a comparatively small amount of excavating on the Fourteenth street side.

St. Patrick's Day brought a good deal of business in the sales of shamrocks, which were disposed of in almost every style of receptacle. Gude Brothers hit upon quite an original idea; it was a clay pipe filled with shamrock and a harp in gold gilt on the bowl, tied with a piece of green ribbon. This proved to be quite an attraction, and, judging from the number sold, was very much appreciated by the members of the A. O. H. Geo. Cook had a window, the base of which was filled with shamrock with a harp standing above it. This seemed to appeal to the sentiments of the fashionable element on Connecticut avenue, who lay claim to being descendants of that ancient and historic race which has played such a prominent part in the history of nations.

There was a very elaborate decoration on at Rancher's this week at the fair for the benefit of the Newsboys' Home. Booths representing all nations were presided over by many of the prominent society people and members of the diplomatic corps. Most of the florists contributed gratis their quota of plants and cut flowers, which no doubt assisted in making the fair a success. M. C.

News Notes.

The next meeting of the Florists' Club will be an important one. Talks on Easter stock, report of the executive committee and the adoption of the new by-laws are included in the program. President Juengel expects every member to be present.

The executive committee for the Fall Flower Show met at Miller's place on Monday last to prepare a preliminary list.

A. Krug, florist, Alton, Ill., has been appointed by the Civic Improvement League to superintend the work of making Alton beautiful floriculturally. Every vacant spot in the city will be laid out with plants of some kind.

Slater & Co. have opened up their new place at 14th street and St. Louis avenue. This store was recently vacated by Adolph Brix.

Theo. Miller reports that he is very busy now with outdoor work of all kind.

Fred. Meinhardt reports busy times now in cemetery work, which is one of his specialties.

C. C. Sanders has been very busy of late with planting of trees, shrubs and other hardy outdoor stock.

Visitors last week were: Jos. Roelker of New York, and Charles Ford, of Philadelphia.

C. Foreman, a prominent wholesale and retail grower of cut flowers from Louisiana, Mo., made the rounds of the trade on Tuesday.

The florist bowlers rolled three games on Monday night. Beneke was high man, with 548; Fred. Weber, second, 446. The others were in poor form. Otto Koenig was a visitor and rolled with the team. ST. PATRICK.

Cleveland, O.

News of the Week.

St. Patrick's Day was a winner here. The day was a fine one; and almost every one had a green carnation as a boutonniere. A number of amusing rumors were afloat as to how the color was obtained, one being that the seed was soaked in some chemical. The little Medicago lupulina was greatly in evidence.

Fred Moritz has purchased the stock of Arthur Doeble, 62 Edmunds street. Mrs. Doeble will retain the lease of the greenhouses until the Fall of 1906. Mr. Moritz will take possession April 1.

The value put on the stock, etc., of the Cleveland Floral Company, by the appraisers, was \$2,700, not \$27, as printed formerly.

Miss Jane Eadie is sojourning in St. Augustine, Fla.; she will return in a couple of weeks.

Wm. Gaffney, who formerly worked for W. H. Beaumont, and later was in business in the Lennox Building, has gone into business with Wm. A. Nun, 2505 Superior street. It is rather a unique partnership, Mr. Gaffney being a florist and Mr. Nun an undertaker. O. G.

Pittsburg.

News of the Week.

The weather was fine on St. Patrick's Day, which helped the sale of flowers. Since then it has been raining almost continuously. Our rivers are running over their banks, causing considerable damage to many industries. W. C. Beckert, the Allegheny seedsman, had his cellar filled with water and had to remove all his stock to upper floors, just at his busiest time of the year. Mr. Beckert is absent from home; not being in the best of health, he took a trip to Bermuda.

A new flower store will be opened up in the Arcade and will soon be completed.

Thos. Ulam & Co.'s store on Fifth avenue has been closed by his creditors. Mr. Ulam has the sympathy of his many friends, and no doubt will soon be on his feet again.

E. C. REINEMAN.

Iron Greenhouses

THE DUPLEX GUTTER and the DUPLEX EAVES have solved the question of how to build up-to-date greenhouses as durable as the iron frame houses at high prices, and nearly as cheap as wooden houses. See the cut that represents the DUPLEX EAVES, the most durable, strongest and easiest to erect. Any common laborer can set them as perfect as an expert mechanic. It is perfection in construction. No ice or snow to darken your houses when light means money. Positively no shade from the Duplex Eaves. Costs only about \$2.00 per foot for a 20-foot house, including Duplex Gutters and Eaves, gutter posts, purlines with posts, tees, and floor plates, center posts, with plates and bases, Standard Ventilating machines, complete with double strong pipe, Cypress sash bars and ventilating sash. Investigate the proposition, and convince yourself.

Also note the Simplest Return Steam Trap Made. Just what a Florist needs and a coal dealer condemns.

News Items.
Regarding the item in last week's issue relating to the purchase by Rossi Bros. of the violet gardens owned for years by Mr. Frank, of the Frank & Parodi Company, the name of P. Rosaia of Rosaia & Fregosi Company, should be substituted for that of Mr. Frank.

Miss Lucille Wollenberg, who for several years in this city has done some notably tasty floral decorative work for swell occasions, has opened as a florist and decorator at 1150 Geary street, the stand conducted heretofore for several years, until the first of this month, by Miss Hilda Fechelmer.

Julius Eppstein, proprietor of the Geary street store, that trades in the name of "The California Florist," has crossed the street, directly opposite his store, to the St. Francis Hotel, and within this "Waldorf-Astoria" of San Francisco has opened a branch of his main business.

There is missed from the local trade the pleasing personality of J. W. Shanahan, head of the Shanahan Florist Company. He has fallen heir to a lucrative rooming house business in Sacramento, where he is now located. His florist business in San Francisco is being conducted by Mrs. Shanahan, her chief of staff being T. J. Thomson, a practical florist, recently from his father's gardens in Santa Cruz.

No Spring flower show will be held this year by the Pacific Coast Horticultural Society. Also, at the current month's meeting, held this week, of the California State Floral Society, it was voted not to have the usual annual Spring flower show, owing to difficulty in getting a manager for the occasion. It was unanimously resolved, however, that the society give an outing in the near future to Redwood Canyon, in Marin County. The following ticket, to which there is no opposition, was nominated, and the election will be held next month: President, Professor Emory Smith; first and second vice-presidents, Mrs. L. D. Hodgkins and Mrs. W. S. Chandler; recording secretary, Mrs. Henry P. Tricou; corresponding secretary, Miss E. S. Ryder; treasurer and poetess, Mrs. Grace Hibbard. ALVIN.

STOCKTON, CAL.—The Gardeners' Association which is composed of Italians in this vicinity, have purchased over a quarter of a block on Weber Point, and will at once establish a free market where all of the members can dispose of their produce from 1 o'clock a. m. until 7 o'clock a. m., when the remainder will be turned over to the representatives in the stalls and offered for sale. For two years the gardeners have been making an effort to build a market here to conduct their business on new lines, but for a time there was quite an opposition to this movement. This property cost \$19,000, and it is estimated that the market, inclusive of the land, will reach about \$50,000.

ZANESVILLE, O.—John D. Imlay will erect a new three-story building, with greenhouse in the rear. The first floor will be employed as a salesroom by Mr. Imlay.

A SAMPLE COPY OF SOME OF THE LETTERS ON FILE AT MY OFFICE:

LYONS FARMS, N. J., Feb. 1st, 1905.
Mr. Wm. Lutton. Dear Sir:—I wish to state that I am well pleased with the heating of the two new carnation houses, that you installed for me last summer, the boiler works splendid, and is all that it is represented to be, I shall take great pleasure in recommending you to any persons contemplating heating work.
Yours very truly,
Wm. G. MULLER.

An opportunity to estimate on your proposed heating or repair work will be to your interest.

WM. H. LUTTON, Telephone 174 J. Bergen, West Side Ave. Station, Jersey City, N. J.

TWO REASONS

for the excellence of

CALDWELL TANKS AND TOWERS

are: The tanks are constructed solely of selected Red Gulf Cypress and will not leak, twist or expand. The towers are built by expert workmen using the best materials only, and there is no danger of collapse. The water service rendered to florists by these outfits is unsurpassed. Can you afford to be without it?

Our illustrated catalogue and price list give other reasons.

Boston.

News Items.

There was a general discussion on vegetables at the meeting of the Massachusetts Horticultural Society on Saturday. The subject was introduced by W. W. Rawson, of Arlington, and many of the leading vegetable growers in this locality took part.

Wm. K. Wood, of Newton, is the writer of the interesting articles on floriculture which have recently appeared in the Sunday Globe. Last week's issue gave a brief history and description of the meeting of the American Rose Society.

The Lord & Burnham Company and Col. Charles Pfaff silver cups, special prizes at the rose show, are on exhibition in the window of Galvin's Tremont Street Store.

Henry M. Robinson & Co. are doing a large business in fancy and dagger ferns; they have shipped several large orders to the West this week.

Wm. T. Good, father of William Good, of Galvins, died March 18.

J. W. Newman, who formerly conducted a florist business on Washington street, has made an assignment.

Welch Bros. will handle a large number of Easter lilies put up in cases of twenty-five plants each.

Henry M. Robinson and F. H. Houghton were in New York this week.
J. W. DUNCAN.

Newport, R. I.

Trade Conditions.

Every weather condition has been against business; the last four days have seen a steady rain, and before that it was steadily cold. Little or no trade has been the result. The rain is doing much good, however, in taking the ice from the streets and the frost from the ground; just as I send these notes to you it has turned to snow and the ground is covered thickly.

James J. Mulry, New York, was here the past week representing two firms, Messrs. Reed & Keller and Lion & Wertheimer. Mr. Bryant, of A. H. Hews & Co., North Cambridge, Mass., called upon the trade here last week.

John Robert Clarke, recently seedman for The George A. Weaver Company here, has opened an office at 33 Dale street, Roxbury (Boston), Mass., where Mr. Clarke will give his attention to landscape gardening.

The seedmen in past years have, at the beginning of the season, established among themselves a minimum price for grass seeds; but this season they have decided that each man make his own figures.

Vaughan's Seed Store has been represented here for some days past by William Neil Campbell. Their three novelties are very popular, namely: Baby Rambler rose, King Humbert canna and Gladiolus Princeps.

Henry C. Anthony, seed grower of Portsmouth, R. I., was in the city the past week and reports trade as very good in a wholesale way and starting well among the large market gardeners.
F. W.

Baltimore.

News Notes.

C. E. Smith & Co., 121 N. Liberty street, have finished improvements in their store, having put in an entire new front and a fine conservatory in the rear connecting with the store.

G. V. Smith has sold his property at Baltimore and Lloyd streets and will discontinue business at said place about July 1.

Utica.
News Items.
Frank McGowan is cutting some of the finest sweet peas that have ever been grown here; also violets. These two flowers are the only ones he grows. He is getting ready to occupy the greenhouses formerly owned by F. E. Shaw, having bought them. He will make extensive repairs and grow a general stock, but the leaders will be chrysanthemums and sweet peas, he surely does well. His location is good and we predict he will do a big business.
W. A. Rowlands, of Whitesboro, is bringing in fine Mrs. Lawson carnations. He says that he does not see that Lawson is going back any with him, but seems better, if anything. He will grow a big lot of White Lawson and also Variegated Lawson next year. He has a big block of Red Lawson, and likes it very well.
There has been a good lot of funeral work for the past two weeks. Trade in general is very good, sweet peas and violets taking the lead. Roses and carnations are plentiful. Bulbous stock does not move very fast. The Dutchmen are on the warpath, and oh! how they do stick, but I am afraid they do not all land a sale.
Robert Boyce has been on the sick list; but, I think, is better. His place is looking well.
S. Hakes, of Ilion, was in town last week looking for flowers. He had a big lot of funeral work. Mr. Schesch, of Ilion, was also a visitor.
Peter Crowe is cutting 5,000 Adiantum Croweanum fronds every day now, and says he could sell twice that number. He leaves on March 22 for Boston to act as judge at the rose show there. He will take his good wife along. We wish them a pleasant journey. I think he intends to call on the New York florists, and will be gone about two weeks.

At the next meeting of the Utica Florists' Club nominations of officers for next year will take place. The meeting will be held April 6. There will be also some kind of an entertainment and a lunch.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND TRADE IN GENERAL

Vol. XIX. No. 13

NEW YORK, APRIL 1, 1905

One Dollar Per Year

CARNATIONS STRONG ROOTED CUTTINGS

READY FOR IMMEDIATE DELIVERY except where noted
WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety, which we are introducing this season we are sure will prove to be the very best variegated sort. Pure Ivory white, with delicate carmine penciling. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE (April delivery.) The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices. In great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an un-introduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandyvine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

FRENCH BULB CROPS.—For a great part of the past Winter the bulbous plants in the south of France suffered from lack of rain, but now we have experienced a downpour of four days' and four nights' duration, and the crops are saved. We can now wait till the end of April for another rain, which will bring about good crops. Prospects are bright.

NEWPORT, R. I.—There is a new seedsman at the George A. Weaver Company—Mr. Sommers, of Sharon, Mass.

Several carloads of seed potatoes were received here frozen, which caused trouble and delay.

Onion sets and seed potatoes are being offered somewhat cheaper than a week ago. Red and yellow sets at \$3.75 a bushel and white at \$4.25; seed potatoes in all the standard varieties at \$2.75 per barrel bag. F. W.

The Bureau of Plant Industry Department of Agriculture has issued a bulletin (No. 73) giving in detail the results of experiments with single-germ beet seeds. As soon as a sufficient quantity of single-germ seed has been produced comparative experiments with single and multiple-germ seeds will be conducted in different localities to determine the influence of soil and climate upon beet production from single-germ seed and to test the practicability of using single-germ beet seed on a commercial scale, reports of which will be published from time to time.

CONTINENTAL SEED NOTES.—The season being now over for the wholesale seed trade, we have to look forward and prepare for next season, and contract orders for 1905 and 1906 crops are now being placed.

Onions for 1906 crop have already been sown for a few days and let us hope for a better crop, for onions seeds are getting very scarce all over, and some varieties have fetched a higher price than we have been used to for years. Besides a good many firms taking opportunity of the scarcity of seeds, have sent away old stocks with new seeds, so that there is very little onion seed left over now. Then, on account of the onion bulbs having kept a big price the whole season through, the growers preferred selling them to putting same into earth for seeds, making sure of getting money instead of risking to get more or less by harvesting onion seeds. Under such circumstances, I believe I am not mistaken in telling your readers that onion seeds will reach a very high figure next season, the more so, that not one grower will now accept a contract for next crop at any price. Of course, this is a very good thing for growers, for it was really not worth while growing onion seeds at the low price we have been accustomed to these last few years.

Leeks do not look very well now, a lot of plants have suffered through the Winter, and as this article became a hit scarce last season, there is no reason why the seeds should not keep up next season.

Cabbages have passed the Winter with us badly, a good many plants having been

destroyed through sharp frosts, and I hear the same applies to the plantations in the South of France.

Mangels, which sold at low prices these last years, fetched a good price last season, namely, the long red Mammoth, which sold even better than Vauriac and Barres or Yellow Globe; it is to be hoped it will also keep up next season, for the benefit of the growers.

Plants of carrots look pretty well, but there is such a lot of seed left over from last season that it is to be hoped there will be as little as possible planted, so that prices do not come down any more. Up to lately, we had very dry weather here, and we all thought next season would be a dry one again, but, happily, we are now enjoying beautiful rain, which will do any amount of good, and will prepare the soil for Spring sowing.

We shall only want a little warm weather, after this, and plantations will be made under very good conditions.

We are now looking forward for a good season for beans. These last four or five years' crops of these have been so awfully bad, that our country people will not grow any more at any price, namely, the runner varieties, which we find most difficult to place. Of course, only one good crop would put the matter right again and encourage our people to grow beans on a large scale, as they did before.

I remember that last year, about this time, I reported you about floods along the Loire Valley; I may say it is just the reverse now, the bottom of the river is so dry that one would hardly believe there is a river running through the land now.

I understand that plantations in the South of France badly suffered from the few days of severe frost we had this last Winter. No doubt within a short time, we shall know more about the damages thus done to the biennial plants.

—French Seeds, in Horticultural Advertiser, Eng.

European Notes.

In taking upon itself the duties usually fulfilled by February, March has displayed the excess of zeal which usually distinguishes new converts. The result is that we are nearly washed out of house and home, and our strong clay lands are beaten down as hard as a macadam roadway. In Western Europe the average rainfall has now been more than made up, but in the east, particularly in Essex County, England, there is still a considerable deficiency. At any rate, we are not likely now to suffer from drought before June. The weather in Northern Europe is exceptionally mild, and vegetation is already from two to three weeks ahead of last year.

From Southern Europe the reports are not so favorable, and the florists, as well as the seed growers, are having a very bad time. To such an extent have the florists of the Riviera suffered, that a public subscription is being raised, on the initiative of the Mayor

of Nice, to save them from absolute ruin. The crop of choice flower seeds, usually saved in this district, will this season be practically nil. It is, however, in Southern Italy that the damage has been greatest, a greater intensity of cold having been experienced than any within the memory of man. The following summary has just been circulated by one of the Neapolitan firms, but the facts have been made known to the readers of this column as they have occurred: "Since the middle of November we have had frosts without almost any interruption, which, owing to their unusual severity during the past month, have caused great damages even to the less delicate plants.

"Cauliflower.—These plants have specially suffered, and we do not expect that more than one-fourth of the plants will yield seed.

"Onion.—The crop will be absolutely short and equally so that of garden beans.

"Flower seeds have also severely suffered."

As regards the onion seed crop, another very large grower reports that, on account of the great scarcity of onions, many of the poor people are pulling up the bulbs planted for seed and cutting off the green shoots to flavor their food. With an average demand for this seed next season, there will be some difficulty in filling orders. **EUROPEAN SEEDS.**

railroad rate of fare and one third for the round trip, certificate plan, has been granted for the meeting of the American Association of Nurserymen at West Helen, Ind., June 14 to 16. The B. & O. informs us that its rate from New York to the place of meeting is \$20.10, and one-third returning, tickets on sale June 10 to 13, good to return up to June 20.

A very useful bulletin (Farmers' No. 213) on the subject of Raspberries, prepared by Professor L. C. Cobett, horticulturist, Bureau of Plant Industry, has just been issued by the U. S. Department of Agriculture, Washington, D. C. The pamphlet, which is illustrated, deals with cultivation, pruning, harvesting, curing and varieties adapted to each fruit district of the country.

MILWAUKEE, WIS.—After running several blocks to catch a train on the Milwaukee road on March 21, Albert Fancher, aged 59, one of the pioneers of the county and a well known nurseryman, fell back in a seat, and when Franksville was reached he died. The over-exertion brought on heart trouble.

ALBANY, N. Y.—According to several of the dealers in nursery stock, the sales this Winter have been all up with other years and the Spring shipments from here will be as large this year as any year in the past, the only possible difference being that more of the trees will be handled by wholesale and less by retail methods.

PROHIBITING THE IMPORTATION OF INSECT PESTS.

The recent Act of Congress to prohibit the importation or interstate transportation of insect pests, and the use of the U. S. mails for that purpose has been distributed as a circular by the Treasury Department to collectors and other officers of customs. The act provides, among other things:

That no railroad, steamboat, express, stage or other transportation company shall knowingly transport from any State or Territory into any other State or Territory, from the District of Columbia into a State or Territory, or from a State or Territory into the District of Columbia, or from a foreign country into the United States, the gypsy moth, brown-tail moth, leopard moth, plum curculio, hop plant-louse, boll weevil, or any of them in a live state, or other insect in a live state which is notoriously injurious to cultivated crops, including vegetables, field crops, bush fruits, orchard trees, forest trees, or shade trees; or the eggs, pupae, or larvae of any insect injurious as aforesaid, except when shipped for scientific purposes under the regulations hereinafter provided for; or shall any person remove from one State or Territory to another State or Territory, or from a foreign country to the United States, or from a State or Territory into the District of Columbia, or from the District of Columbia into any State or Territory, except for scientific purposes under the regulations hereinafter provided for, the gypsy moth, brown-tail moth, leopard moth, plum curculio, hop plant-louse, boll weevil or any of them in a live state, or other insect in a live state which is notoriously injurious to cultivated crops, including vegetables, field crops, bush fruits, orchard trees, forest trees, or shade trees; or the eggs, pupae, or larvae of any insect injurious as aforesaid.

Any letter, parcel, box or other package containing any of the aforementioned insects, whether sealed as first-class matter or not, is declared non-mailable matter except for scientific purposes.

Any person, company, or corporation who shall knowingly violate the provisions of section one of this act shall, for each offense, be fined, upon conviction thereof, not more than five thousand dollars or imprisoned at hard labor not more than five years, or both, at the discretion of the court.

Evergreens From Seeds.

Those who attempt the raising of evergreens from seeds often fail through not sowing early enough in Spring. These seeds should be in the ground the very first thing after the soil is in fit condition to work. It takes some time for seeds to swell their coats after going into the ground. Sometimes the latter part of Spring is dry and warm, and if the seeds are not sprouting by that time, often they will not come up at all. When sown early, right after Winter, it is seldom there is not moisture enough to sprout them, and when once above ground in good time the seedlings usually do well.

Another gain from early sowing is this: the seedlings become of some strength and hardness of growth to withstand the hot sun of Summer. It is this hot sun which destroys so many evergreen seedlings. Even the seedlings from early sowings are much better if a little shade can be given them in some way in Summer, and all gardeners know how much better seed sprouts when in the shade than when in the full light. Although early sowing of evergreen seeds is particularly mentioned, all kinds of tree seeds are the better for such treatment.

Hardiness of Kudzu Vine.

A correspondent, writing from Minnesota, mentioning what has been said of the kudzu by recent writers in The Florists' Exchange, says that when at Rose Hill, New York, some years ago, he left outdoors about 100 kudzu vines one Winter, and of these 40 of them survived. There was snow on the ground all Winter, from 8 to 10 inches deep, and the thermometer was as low as 18 degrees below zero.

As said in some preceding notes, when below ground many plants will sprout from the base, although killed to the ground. A large plant here, which has been in its present position for about 25 years, has met zero almost every Winter without any root protection, and it usually keeps a few feet of its wood alive in the very worst Winters, and more in moderate ones; so it is quite hardy here. And Mr. Teas' specimen, which was illustrated lately, shows how well it does in Indiana.

Grouping Hydrangeas.

Japan has sent us so many hydrangeas unlike in their habits of flowering, that some confusion exists as to their proper classification. They could be properly arranged in three divisions, as follows: Take for the first *H. paniculata* and its varieties; for the second, those of the japonica type, which are those bearing flat heads of flowers, and this will leave for the third class the *Hortensia* in its many varieties, all having globose heads of flowers. In the first division we have the hardiest ones of all, the *H. paniculata* and *H. p. grandiflora* and others. In the japonica is

PLUM, EARLY TRANSPARENT GAGE
Grown under glass, by Peter Duff, Orange, N. J.

Photo by J. B. Davis

the next hardiest, japonica, cœrulea, Imperatrice Eugenie, stellata and others, with, as mentioned, flat heads of flowers. The last division is made up of the *Hortensia* and its many varieties, such as Thomas Hogg, otaksa rosea, ramis pictus, etc. Both the japonica and *Hortensia* groups will be injured in severe Winters, but never entirely killed; the *Hortensias* suffer the most.

The japonica group is a very pretty one. Some of them have flowers of a natural blue shade; others rose color.

Propagating Yucca recurva.

A friend is anxious to know how to propagate a *Yucca recurva*. He has a large plant which flowered splendidly last Spring, after having been grown outdoors for three years, and he wants to increase it. Well, all he has to do is to dig around his plant and cut off a fleshy root or two. These roots, cut into pieces of an inch or two in length, and set in a row outdoors, an inch or so underground, will, every one almost, make a plant. It would be still better were the roots placed in a shallow box indoors, as this gives the chance of watching and helping their growth.

Yucca recurva is the most desirable of all the family, I think. The foliage is of pleasing habit, the leaves being broad and gracefully recurving. The flowers are large and so is the spike that bears them. Its early flowering is much in its favor. The plant in the garden of the friends spoken of was in bloom in May, in advance of the *Y. angustifolia*, or *glauca*, as

it is now called, which heretofore has been the first of all yuccas to bloom.

Our friend, who signs himself "Dutchy," will wish to know how far North the *Yucca recurva* is hardy. This is something I do not know. Many folks here have the plant in their conservatories, being under the impression, evidently, that it is not hardy, so that it would seem that its hardy character is not well known even here.

Although differing radically from *Y. gloriosa* in the appearance of its foliage and in its early flowering—the *gloriosa* flowering in October—it is looked on as being a variety of it.

San Jose Scale.

Although kerosene emulsion, whale oil soap and other substances are still considered effective in killing scale to some extent, the preference just now is for the lime, sulphur and salt mixture. This is known as the California remedy, but old gardeners will remember the use of lime and sulphur for similar purposes since they were boys. The present day mode of preparing the mixture is as follows: In an iron kettle bring a few pailfuls of water to nearly boiling, then add 20 pounds lime, stir it and add 15 pounds of sulphur, and boil all for 30 minutes. Then add 5 pounds salt and add to all 50 gallons water; strain it, and it is fit for use. Another way, said to be just as good, is to get a tight barrel, into which place the lime and pour in some few pailfuls of boiling water. Then add the sulphur and cover tight the barrel. When all is well slaked, add the salt, strain the whole, and add the 50 gallons of water, and it is ready for use.

The spraying is to be done just in advance of the bursting of the buds. As it is near the buds that the scales find refuge, as a rule, care must be taken that the mixture reaches every part of the twigs. The lime and sulphur are good enough alone, it has been found, but salt is added to make it adhere better.

The name San Jose scale, was given this pest because it was first observed in that city, in California, after its introduction from South America, as it is supposed. The name San Jose is variously rendered by folks, but its proper pronunciation is as if spelled "San Hozay."

Referring again to kerosene, there are those who say they have found crude petroleum better than anything else, applied just as the buds are swelling on the trees.

Transplanting English Walnuts.

A correspondent, J. J. Harden, asks advice on the sowing and transplanting of English walnuts. He has a lot of seeds which he desires to sow, the plants expected from which he intends to transport some fifty miles when they are a year old. He has had suggested to him the sowing of the nuts in pots, but there being a great number of them, he hesitates, and instead of doing that he thinks of sowing them in rich ground outdoors, but, fearing injury to tap roots in digging them, concludes to rest his case until advice reaches him. Were it not that he has a great number, pots would be the best of all plans, but there need be but little risk of either loss of plants or loss of growth from plants grown outdoors. There is one thing he ought not to do, however, viz., sow the nuts in rich ground. He should select a soil rather poor and light. The late A. S. Fuller mentioned more than once that walnuts, hickories and like nuts, when sown in light and not rich soil, formed but little taproot; instead, many fibrous ones, and of this many who have tried the plan can say the statement is quite true. Then, with these fibrous roots there is no more trouble in transplanting safely than there is with many other seedling trees. In addition to this, one-year-old walnuts, or hickories, are not difficult to get to live with or without tap roots.

Coming to the question of tap roots, and his fear that he might injure them in transplanting, there is, I think, far too much stress laid on the desirability of preserving such roots. There is not a tap root left to any tree of the millions that go out from nurseries annually, and it has yet to be proved that those trees are any the worse for it. In England, far from its being considered an injury, it is part of the Winter's work in fruit gardens to dig under many trees and sever the tap roots. True, climate makes a difference in the treatment called for, but it shows that what Nature calls for in trees is not always considered the best for the wants of man.

JOSEPH MEEHAN.

Fruit Crown Under Glass.

The Early Transparent Gage plum, shown in the picture, was brought into the house at "Brighthurst," Orange, N. J., to fruit in January. The treatment and cultivation were identical with that recommended in the able articles in The Florists' Exchange by William Turner. The plum was grown in a sixteen-inch tub and bore 133 fruits. The tree was five years old at the time the photo was taken. The temperature was started at 45 degrees and gradually increased. The photograph was taken in July. PETER DUFF.

A Good Dictionary.

In every business man's office a good dictionary is indispensable. We have therefore pleasure in calling the attention of our readers to the new and enlarged edition of Webster's International Dictionary issued by Messrs. G. & C. Merriam Company, of Springfield, Mass. This new dictionary is printed from new plates throughout, and contains a supplement of 25,000 additional words, a completely revised Gazetteer of the World, a completely revised Biographical Dictionary, etc. With a copy of "Webster" in his possession, one is equipped with facilities for acquiring a fair knowledge of nearly everything under the sun.

CANADIAN NEWS

TORONTO.—Easter stock generally looks very well, though some of the roses are rather forward. The Brampton growers have all fine stock for Easter. R. Jennings has sweet peas, carnations and daisies, while his house of single violets is a grand sight. The roses on the Dale estate are nearly all in fine condition. Some Bride and bridesmaid that have been in four seasons, are in nice shape and have been yielding good flowers all winter. Canadian Queen is doing extra well; General MacArthur has been found very satisfactory; La Detroit has not been so good; it has grown well and is now sending strong shoots from the bottom, but they have had hardly any flowers; all the other roses in the block with it are blooming freely. Carnations have been very satisfactory, but are a little off crop now, with a fine showing for the future. The house of young stock is a grand sight, all the varieties looking well. There is an extra fine bunch of mignonette; Ned Dale has been selecting this for years. The firm is going into orchids again; the stock of these is looking very well, and the gentleman who is looking after them evidently understands his business. There is also a fine stock of asparagus strings, but, it is said, the demand for sprays and enough of them cannot be obtained. The place is very large now, and a walk around it is half day's work. Wm. Fendley added a large block to his place last summer and has it nearly all planted in violets, of which he has made a specialty; he now has many thousands of good ones in sight. He also has a fine lot of carnations in his older houses. Mr. Fendley expects to build a very large place in the near future. Business has been a little flat the last few days, but there is not quite so large an oversupply of good stock as last week. Roses are coming in plentifully, and grand stock. Dunlop is sending in exceptionally fine American Beauty; he had one in his King street store with an 8-foot stem, a fine flower. The Dale Estate is sending one very fine Bride and Bridesmaid. Violets are getting over in many places, but are still quite plentiful, enough so to be cheap. Arrangements are making for a good show again November next, and we expect to hold it in Massey Hall. This is by far the best hall we have in Toronto; it is near the center of the city and is the most suitable place we have for a show now. We have never been able to get it before for the purpose, but believe satisfactory arrangements can be made this time.

Judges' Report on Exhibits—March 21 F. R. Pierson Co., Tarrytown, N. Y., exhibited White Lawson in excellent condition; stem good, 24 inches; calyx good; color good. Victory, best scarlet seen in this district this season; flowers 3 1/2 to 4 inches; good calyx and stem. Enchantress, fine flowers and well colored for season. Certificate. Dahelm, compared with Harlowarden on exhibition, did not show up as anything extra. Variegated Lawson, undoubtedly the best of its type; stem good as that of Mrs. Lawson; flower averaging 3 1/2 in. Certificate. W. J. Palmer & Son, Buffalo, N. Y., exhibited Red Lawson, and it is all that it is claimed for it by the exhibitor; color showing fine under artificial light. Certificate. White seedling of George Hollis of good form and fragrance. Weber & Sons, Oakland, Md., My Maryland, an ideal white of good size and stem; calyx and fragrance all of highest order. Certificate. J. H. Dunlop, Toronto, exhibited a vase of well-grown Harlowarden, flowered of good color, stem good. Vase of Boston Market by George Mills, claimed by the exhibitor to be the freest white he has grown. Siebrecht & Sons, New Rochelle, N. Y., staged new rose Killarney, of a pleasing shade of pink; quite distinct from any other forcing variety; fragrance very sweet; good stem and foliage. Cultural certificate. H. G. DILLEMUTH, E. E. GRAHAM, W. WILSHIRE, Judges. T. M.

ST. JOSEPH, MO.—Krumm Bros. have moved from 704 Felix to the southwest corner of Eighth and Francis.

Cleveland, O.

News Notes. The Spring season is opening up to the satisfaction of all our seedsmen; large quantities of lawn seed and fertilizers are being sold. The funeral of Mrs. Casper Aul took place March 28 at her late home on Doan street. Mrs. Aul was a pioneer florist and a great deal of her time was spent at her stand in the market house. She belonged to a number of German societies and was well remembered by them, many florists also sending flowers. The sympathies of the craft are extended to the bereaved family. O. G.

What Constitutes a Herbaceous Plant?

Editor Florists' Exchange:

It might be possible for the regular or average nurseryman to fit a standard as to the height of his trees, and to set up a standard caliper measure of girth; and these two methods will enable him to know what he is buying or selling. But for the average hardy plantsman, caliper measure, or height, is entirely out of the question. And often a very vague impression may be had by the given size of a pot, for the rooting propensities of many hardy plants are exceedingly large, according to the soil and amount of culture they get, as well as the amount of skill employed when potting by the removal, or otherwise, of a large number of these roots and the length of time plants have been in the same pots. I am also persuaded, from years of actual experience, very much doubt exists in many minds, that to grow hardy plants in a nursery row one year before sending them out to customers, undivided, would be a safe rule. It might in some soils and under some conditions, but not under all.

For instance, let us take a helenium first, as suggested in your issue of March 11, page 303. I am now going to give you facts concerning this plant, just as they have occurred with me without any partiality or criticism. Let us plant, say, a helenium of the autumnal type, of the variety *superbum*, which is the most commonly grown nowadays. Before going further, let me say there are at least three distinct types of helenium roots. *Helenium Hoopesii* differs very radically from the others, by having a more woody root growth and not producing its stolons so freely or so numerous. *H. pumilum* has a more spreading, fibrous-rooted growth, throwing out eyes all along its rooting system, which, if dug up and cut into small pieces, soon form small plants; and the more common type, *H. aut. superbum*, a variety of our native Fall flowering sneezewort; let us plant one strong single crown of this, say, about the first or second week in April, in a good, loose, well enriched, friable soil, and give it good cultivation all through the Summer, keeping the soil well stirred, and with plenty of moisture, and what do we get? It is customary to calculate the spread or growth of the roots of a tree by its tops or upper growth. This helenium, under the conditions mentioned, will have made a growth of from 4 to 6 feet in height, according to situation, and a correspondingly large growth, or head, of blooms. Cut off as soon as the flowers begin to wither, to allow the young growths which have begun to accumulate around the base of the parent plant to grow, by late Fall we have a clump nearly a foot across, with a spread of roots nearly a foot more, that will make one man grunt to dig one out, except with a spade, when he can slice it out, destroying or cutting away one-half of the roots. Not that this does any particular harm, except when done in late Fall it is apt to cause the damaged roots to rot, and if plants are divided too close at this period the same thing is very likely to occur.

Now take this same plant, and plant it on a poor piece of even friable soil; cultivate occasionally and keep down weeds, and you will undoubtedly get a good salable piece. Plant the same on a stiff, clayey soil, that is apt to bake and crack during the Summer; cultivate occasionally, keep clean, and you'll get a nurseryman's piece, according to the rule laid down in your issue of March 11. But give this last named soil a thorough good forking, or spading, thoroughly breaking up the soil into fine particles and adding plenty of good stable manure which has a tendency to keep the soil more loose, and keep the ground thor-

oughly cultivated, and you'll get as good results in roots, stolons, or spread of the plants, and larger heads of bloom, and the individual flowers will be larger and have more substance. For my own use I would never plant more than one good, strong, single crown in a place, and these would be at least one foot apart. But I don't say it would be policy only to send out to a customer one crown, as stock is plentiful and easily raised; and good strong divisions, in my opinion, with from two to four or even five good crowns, according to size and strength, would satisfy the most fastidious. One point further here. If you want a succession of these flowers in late Fall, divide late and plant as late as the end of May or even the beginning of June, giving the plants good care till they get thoroughly started, and you can stretch out the flowering period for three or four weeks.

Now let us take an *helianthus* plant of any of the rigidus type, such as *Miss Mellish*, *Daniel Dewar*, or the *Rev. Wooley Dodd*—one of the grandest of this type and deserving a place in any border for its large, beautiful foliage and flowers where space can be afforded it. But give it the conditions first mentioned for helenium, which reproduces itself by densely crowded stolons clustered around the parent plant, and it is curious, nevertheless true, that the parent plant's first object in life is to attain sufficient strength and growth to flower, reproduce itself both by seed and numerous stolons, and then succumb after one year's existence, dying, having made multitudes of seeds and surrounded by its numerous progeny. In *helianthus* the same thing occurs, except, in most cases, the cultivated forms, being hybrids, produce few or no seeds; and, unlike the helenium, instead of its growths, or reproductions, springing up close to the parent plant, they will be found coming up from one to four and even five feet away from it, and this in every direction. A single division, or plant, or put it the makings of a plant if you wish, will have an underground stem, runner or stolon, if dug up whole, from one to five feet long; and a nice task it is to dig them out whole, especially in stiff soils! These underground stolons also produce nodes anywhere from three to eight inches apart; and if cut between the joints, each one will make a plant. Given any one of the other three conditions of culture, the same thing occurs, only the stolons won't be quite as long. Yet it will be impossible to dig what is termed a clump, or send a customer a piece grown one year in a nursery row.

I have seen the woodland sunflower, *Helianthus strumosus*, with quite a different type of root, send out its stolons over three feet. Take *Helianthus multiflorus*; the flowering stems also decay or die annually; but it reproduces itself in a compact number of short tuberous stolons, all closely clustered and interwoven around its base. It is seldom sent out in whole clumps. It is almost impossible, except in very light soils, to dig them out whole; and what experienced man would want to place a whole clump in one position as a single plant? My experience, dating back quite a number of years with this plant, tells me to replant every year, using only a few of the strongest divisions and throwing or giving the rest away. I am thus assured of both finer plants and better flowers. From a nurseryman's point of view, I am persuaded that the best way to handle this plant is to grow it in nursery rows in the Summer, store it in a frame, or cellar, during Winter as it is not a very good keeper; then, if early plants are needed in March, bring some in, divide into pieces suitable for 2½ or 3-inch pots, place in a cool greenhouse, and you will soon have plants that will give the best results. If crowded for room, they may be placed under the outer edge of a bench; but must be brought up to the light as soon as they begin to push well through the soil. Or they can be placed out in a frame and protected until they can get hardened off a little. Another way, and one which I much prefer, is to pot up in early Spring into 3-inch pots, and place outside, plunging in soil, or ashes, and let them

SINGLE BLOOMS OF JAMES E. BEACH'S NEW RED SEEDLING CARNATION

remain there all Summer. The result is, in the Fall you have a solid potful of roots, or tubers, which will hold together and make a very presentable appearance and also give good results and satisfaction to the purchaser. Four-inch pots could also be used if large pieces were desired, and with this method they can be shipped much earlier in the Fall and give better satisfaction than if dug direct from the nursery. The rigidus types may be grown in like manner; being also more easily taken care of during the Winter and can be gotten together much handier during the rush of the packing season.

Of course, I know all *helianthus* have not this running root method, but the majority of them have. I remember aright, *H. Davidiana* and *H. tormentosus* are of a somewhat different nature, but the above are the ones most used, and the same method is very practical for all of them.

Now let us look at *Physostegia virginiana*. I have it growing in a nursery row, planted from single crowns a year ago, in a rather moist piece of ground. They have spread nearly two feet away from the original. While these are not so thickly clustered together as the heleniums, or spread over such a wide surface as the *helianthus*, they are very productive in suitable soil; and each plant has produced from 20 to 30 pieces fit for 3 and 4-inch pots. To dig one of these one-year-old nursery grown plants whole would be an impossibility without breaking it up; and, owing to its dense rooting propensities, many of the individual stolons would be too large for a 4-inch pot without having from one-third to one-half of its roots cut off. Therefore, three to five pieces, or crowns, of this would make a respectable piece to send to anyone. I have never tried it, but I am of opinion that for best results to a customer, if this plant were potted up in early Spring in 4-inch pots, and grown in the same manner as prescribed for *helianthus*, better results would be obtained the first year after planting; for this is one of the plants that must remain undisturbed for two years at least, before best results are obtained. It then becomes much stronger, grows taller, and produces larger spikes of bloom. *P. vir. Alba* is often recommended as a counterpart of the preceding, with the exception of its white flowers; but with me it has always been a much weaker grower. Nevertheless, both are exceedingly desirable, and can be safely classed in the front rank of our herbaceous plants. An enterprising German firm last year introduced *P. vir. cerulea*, which I am very anxious to see in bloom, as I think a good blue *physostegia* of the virginiana type would be an acquisition of great merit. We have two very closely allied forms in *Dracocephalum altense* and *D. Ruschlanum japonicum*, both blue; but these have always proved very shy bloomers with me.

HERBERT GREENSMITH.

(To be continued.)

New Red Seedling Carnation.

The accompanying illustration shows the flower of a new red seedling carnation, also a bench of same, with *Enchantress* on the higher bench, kindly forwarded by James E. Beach, Bridgeport, Conn. Mr. Beach says: "It has looked like that all Winter, never being off crop, producing flowers from 3 to 3½ inches across. The variety is a cross of Mrs. George M. Bradt and *Estelle*. The color is a bright Christmas red, like that of G. H. Crane."

Dreer's Select List of HARDY PERENNIALS

We offer here only the most Showy and Decorative Sorts, including varieties suited for CUT FLOWER purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Table listing various Hardy Perennials with columns for plant name, pot size, and price per dozen and per 100. Includes plants like Acanthus Mollis, Achillea Filipendulina, and many others.

St. Louis.

News Notes.
A. Benthey, of The Benthey-Coatsworth Company, Chicago, spent a few days with the local trade last week.

A new wholesale house will be opened this week by George Augermuller, late bookkeeper for C. A. Kuehn, the location being 1324 Pine street.

Johanne Burke, who so long was located at Grand and Finney avenues, sold out the past week to W. H. Miller, Jr. Mr. Miller is a newcomer. Mr. Burke will shortly leave the city with his family for a trip to California and may locate there, opening a flower store in one of the large cities of that State.

The Riessen Floral Company, Broadway, reports an exceptionally busy week in funeral work. Manager Buechel is again at his post after a fourteen weeks' confinement to his room with a broken limb.

Young Sons' Company are very busy now in their seed, bulb and plant departments; shipping orders in these lines are coming in heavily.

J. F. Windt's arm is improving somewhat. Blood poisoning had set in.

Robert Meinhardt, cousin to Fred Meinhardt, is now employed as bookkeeper for C. A. Kuehn.

W. R. Stocke, formerly overseer of greenhouses, and Frank Bucksah, Jr., formerly overseer of the sunken gardens, World's Fair, have formed partnership under the name of Stocke & Bucksah to do a general florist and landscape business at 3817 Lincoln avenue.

The bowling Monday night was quite lively. Ellison was high man, with 538 in the three games; Beneke, second, with 483. Nine members rolled.

ST. PATRICK.

Portland, Ore.

The Lewis and Clark Exposition.

As the building up of the Lewis and Clark Exposition progresses it becomes more evident that some effort should be made by Eastern firms for representation on the grounds. An attendance far beyond early expectations is assured—conservatively, one and one-half millions—and the greater number of visitors will come from localities well worth catering to. Mr. Henry E. Dosch, director of exhibits, and a well-known horticulturist, will gladly furnish information on the subject.

Contrary to usual climatic conditions, the past two months have been clear and with lots of sunshine. The man with the spade is busy, also the street peddler, from whose wagon can be had anything from a scaly palm to a bunch of fresh Oregon violets.

Florists have had a good season, Clarke Bros. reporting the best in years. Bulbous stock is more than plentiful, but serves a good purpose in the show windows, even if it is dumped to-morrow. Pfunder makes a pretty show of separate colors, and Martin & Forbes one of wholly yellow and red. Mr. Wilkinson, of Gladstone, has taken a partner and will extend his operations.

It is more than probable that a large wholesale plant will be erected this Summer in one of the suburban districts, land having been acquired for that purpose.

J. H.

CHESTER, PA.—M. J. Dwyer, Third and Flower streets, has just completed some extensive alterations to his place of business. His office has been repainted and enlarged and two large show windows have been put in.

News of the Week in Brief.

The Law Floral Company, of Shelbyville, Ind., is in financial difficulties.

The Killarney rose is becoming a very popular variety with some of the Boston retailers.

O. Sasse, a retired florist of Milwaukee, Wis., was last week run over by a street railway car and killed.

An effort is making to have a joint meeting of the American Carnation Society and the American Rose Society at Boston next year.

English growers of carnations are going in quite heavily for American varieties. Some consignments went from Syracuse, N. Y., last week.

A request is made that Eastern florist and nursery firms be represented by plantings on the grounds of the Lewis and Clark Exposition at Portland, Oregon.

Alexander Montgomery, of Natick, Mass., has been re-elected president of the American Rose Society. Boston was again selected as the place of meeting for 1906.

The florists and seed growers of Southern Europe are having hard times. To such an extent have those on the Riviera suffered that the Mayor of Nice has started a public subscription to save them from absolute ruin.

The American Peony Society will hold its annual exhibition and meeting in the banquet hall of the Auditorium Hotel, Chicago, Friday and Saturday, June 17 and 18. A substantial premium list is in preparation; it is expected the amount offered in prizes will be between \$700 and \$800. J. B. Deamud, 51 Wabash avenue, Chicago, will manage the show. The secretary of the American Peony Society is A. H. Fewkes, Newton Highlands, Mass.

BENJAMIN HAMMOND, the "Slug Shot" man, of Fishkill-on-Hudson, N. Y., has issued in attractive booklet form the address delivered by President J. C. Vaughan before the S. A. F. O. H., at St. Louis, last August on "The Ideal Employee." An excellent likeness of the author forms a frontispiece. Mr. Hammond also pays an eloquent tribute to his late faithful employee, "The Deacon"—Edwin R. Baldwin, whose portrait is also given in the booklet.

A Correction.

In Mr. Horne's letter on "Horticulture in Jersey, Channel Islands," page 374 of last week's issue, read, for Baldwin, "Bartlett," and Williams' Bon Chretien, not as first printed.

The American Rose Society.

A magnificent exhibition, and a very successful gathering, characterized this year's meeting of the American Rose Society at Boston. This, indeed, is most gratifying. But the trade's enthusiasm in the society and its work, although increasing, has not nearly reached the point expected or deserved. Of preachments and odious comparisons as to what should be done, and what is accomplished by other societies, we have had about enough. What is wanted, needed, and should be afforded is allegiance and real practical work on the part of every rose grower in America, who not only should affiliate with the society himself, but get every one of his interested customers to do the same. From and by this support only can the society do its best for the flower it champions and those who grow and love it.

There may be another twinge of regret among the Western brethren that the association continues to hug the East. In this we are inclined to participate. But when the society in its wisdom does decide to meet in some Western city we hope it will make its visits there as frequent as it has done to chosen Eastern points. In the meantime, let the Western rosarians lay well to heart President Montgomery's words—and live in hope. The fact that the West has not yet been selected as the seat of the society's annual operations, however, should not, in any degree, alienate the support of the occidental rosarians from the organization, for they, equally with the rose growers east, north and south, share, indirectly, in the benefits accruing from the Rose Society's labors.

From our report of the proceedings at Boston, it will be seen that the efforts of the members, in convention assembled, were more particularly directed to a discussion of the best ways and means of interesting the amateur in the growing of roses and also in the society and its work. To that end it is proposed to issue bulletins, etc., giving selections of varieties and methods of culture. This is good enough in its way; but it will have a more telling effect if the contents of such bulletins (or at least part of them) can be got before the public through the media of the amateur horticultural publications and the daily press. Doubtless, however, the committee in charge of this matter will do its work in such manner that the greatest good will spring therefrom.

The next important thing for the society to consider is the holding annually of a Summer show of outdoor-grown roses, as originally planned, on its own account, and the encouragement of similar shows, under the organization's auspices, throughout the country. The amateur rosarian is likely to become more interested in an exhibition in which he himself can take part, than in the mere admiration of exhibits displayed by men whose business it is to grow the rose to its greatest perfection under glass. The medals of the society, offered at such Summer exhibitions, to be competed for and awarded to members of the Rose Society only—for a time at least—would be a step in the direction of augmenting the membership, as well as stimulating interest in the association.

We sincerely hope that the American Rose Society will be able to demonstrate in the most practical manner that it is possible for trade and amateur interests to harmonize and be successfully catered to by a national horticultural organization. That condition will the sooner materialize if the tradesman himself will first show his own recognition of the merit of the society by becoming affiliated therewith; and, through the society's work, prove that the furtherance of the rose, and the interest of every lover thereof, is the mission sought to be fulfilled.

The society has done well to hold on to its present presiding officer. That his earnest work on behalf of the association the past year has borne good fruit was clearly in evidence at the recent meeting and exhibition. It is men imbued with a spirit like unto that of Mr. Montgomery who succeed because they do things. That his fellow-rosarians, whose utmost support he deserves and should receive, may profit by and follow his example, is our wish, for on such a consummation hangs the future welfare of the American Rose Society.

Our esteemed contemporary, The Weekly Florists' Review, of Chicago, evidently thinks there is something wrong with the wholesale florist business, for it would censure, or blame, an "accredited representative" of a trade paper for being legitimately and openly employed as a solicitor for one of those concerns. Well, well, what next?

Are "accredited representatives" of trade papers, whose full time is not employed (or remunerated) in newspaper work, to be debarred from engaging in another honorable occupation, in order to help them earn a livelihood? If our contemporary doesn't know the rights of the individual in such matters, let him get the opinion of his accredited Eastern "manager" thereon. But why he should draw the line at the wholesale florist business is beyond our comprehension! There are some good fellows in that business, both owners and employees, who are making excellent newspaper representatives—accredited and otherwise; therefore, why hold up that honorable branch of the business as one to be avoided by publishers looking for faithful and honest correspondents?

Testimonial to Henry Eckford.

In last week's issue (page 359) our valued correspondent, "European Seeds," called attention to the fact that a movement is on foot, in England, to present a testimonial to the veteran sweet pea specialist, Henry Eckford, of Wem, Shropshire.

In the furtherance of such a worthy object, we believe the American florists and gardeners would be willing and anxious to join, and to that end, The Florists' Exchange will gladly receive and acknowledge any and all subscriptions that may be forwarded to us toward the laudable end in view.

The sweet pea as a garden subject has attained a popularity in this country, as well as in England, reached by but few other flowers, and, although its improvement owes much to the work of our own hybridizers, there can be no question that they in turn have benefited greatly by the labors of Eckford, whose strains have formed the groundwork for the American plantsman's development of this charming annual.

The man whom his coworkers and admirers now seek to honor is a Scotchman. The London Garden dedicated its 1896 volume to Mr. Eckford, and from the dedicatory notice appearing in that journal at the time we take the subjoined particulars of his career, as well as the accompanying portrait:

Henry Eckford was born at Stonehouse, in the parish of Liberton, near Edinburgh, on May 17, 1823. In December, 1839, he was sent as an apprentice to the gardens of Lord Lovat, Beaufort Castle, Inverness, where he remained for three years. He returned to Edinburgh and then went to New Liston, the seat of Mr. James Hogg. He subsequently was employed as foreman in the following gardens: Fingask Castle, Perthshire; Penicuik House, Midlothian; and Oxenford Castle. In the beginning of 1847 he arrived in London with a letter of introduction from Mr. McNab, of the Edinburgh Botanic Gardens, to Mr. Hugh Low, by whom he was sent as foreman in the gardens of Colonel Baker at Salisbury, then under the management of Mr. Dodds, who will be remembered in connection with the improvement of the dahlia and other florists' flowers. He remained here for two years, afterwards serving under Mr. Fleming in the gardens at Trent-ham, and going thence to Caen Wood, Highgate. In 1854 he was appointed head gardener to the Earl of Radnor at Coleshill, Berks, where during his stay of twenty years he raised many dahlias, pelargoniums, and verbenas, which were for the most part sent out by the late Mr. Keynes, of Salisbury. In the year 1878, Dr. Sankey, who was an enthusiastic florist, invited Mr. Eckford to take charge of his gardens at Sandywell, Gloucester, with the view to raising seedlings of florists' flowers. At this time improvement in sweet peas had not been thought of, and in 1879 he obtained the best varieties of edible peas and various sweet peas. He soon set to work and raised many fine varieties of edible peas which are a gain in our kitchen gardens at the present day.

To him, as we have said, is due the great improvement that has been made in the sweet peas, these more particularly having had his special attention of late years. The sweet pea is the most valuable of all annual flowers of the present day; its delicious perfume, its diversity of lovely colors, its lengthened succession of bloom, and its value for cutting entitle it to a place in every garden. In order to obtain the best results from sweet peas, Mr. Eckford sows very thinly, with the result that each plant branches out and forms quite a bush. If gardeners would only sow their sweet peas and edible peas as well thinly in good soil, they would be astonished at the results. By thin sowing we get fine flowers and in abundance.

The work of Mr. Eckford with the sweet peas shows how much may be done with simple and often neglected things in our gardens. The sweet pea certainly was always one of the most valued of flowers, but now, with so many delicate and lovely hues, sweet peas are a garden of beauty. Who knows how many other things in our gardens may not have in them the germs of like improvement? Even some of the shrubs that now only have one aspect for us may some day show us a like variety. In any case, we owe many charming things for our open-air gardens to Mr. Eckford, and wish him many happy years more of his charming and useful work.

As we have stated, we believe we have only to bring to the attention of our readers the fact that our English brethren are preparing to show their appreciation of the veteran gardener's labors, in order that the movement receive a hearty and practical endorsement on this side of the Atlantic as well.

Freesia Purity.

Editor Florists' Exchange:

I send by mail a few sample blooms of my new freesia, Purity. The flowers with the longest stems were produced from large bulbs, and those with the short stems from bulbs not larger than a dried wax bean, showing that the size of the bulb makes scarcely any difference in size of flower, only the length of the stems.

Long Island.

R. FISCHER.

The blooms received were the longest stemmed and the largest individual flowers we ever saw, and they possessed that full fragrance so peculiar to the freesia. The stems were from 18 to 24 inches in length, and this characteristic should insure for the variety a welcome to the list of florists' flowers for winter forcing.—Ed.]

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.—The annual meeting of the executive board will be held at the New Willard Hotel, Washington, D. C., on Tuesday, April 4, 1905. Members of the society or others having suggestions to make whereby the usefulness of the organization may be increased and the good of the profession promoted in any of its branches, are cordially invited to send such suggestions in care of the secretary and they will receive careful attention. Address 11 Hamilton Place, Boston, Mass. WM. J. STEWART.

OUR READERS' VIEWS

New Species of Dahlia.

Editor Florists' Exchange:

I want to make a correction in an article I noticed in your issue of the 18th ultimo, page 337. Your correspondent, "M. C.," refers to a new species of dahlia which we have in the greenhouse, but he should have stated that the crosses were made by George W. Oliver and not by myself. A. J. PIETERS.
U. S. Dept. of Agriculture, Botanist in Charge.
Washington, D. C.

San Jose Scale.

Editor Florists' Exchange:

I was interested in the discussion in your columns some time ago regarding the spread of that terrible pest, the San Jose scale, the old theory of the spread by birds' feet being that set forth. It has always appeared to me that there must be some other way, and one suggested by a brother gardener appears to have some weight. His claim is that much of the work of dissemination is done by bees while fruit trees are in blossom, the scale being carried along with the pollen upon the legs of the bee. This theory, however, does not suggest a remedy, as the bee is necessary for the pollination of fruits.
Newport, R. I. ALEXANDER MacLELLAN.

Watering Carnations.

Editor Florists' Exchange:

In your issue of March 11 I noticed Chas. Knopf's notes about carnations. He writes: "Keep a close watch on your young stock for next year. Go over the plants three times a day and see that they are not too dry, and still not too wet."
"Go over your young plants three times a day!" Think of it! Such advice is misleading. It may be practicable on a small place, but it is unnecessary and impracticable on a large one. On many of the large commercial places, where they grow carnations in quantity, one man simply could not go over the young plants three times in one day and water only the dry ones each time. It is true that sometimes we have to go over the young plants and water the dry ones only. I think if a man has charge of young carnations, and cannot keep them watered evenly (not allowing them to suffer from extremes) without going over them three times a day, he is more fit to handle a hoe than a hose. G. W. FRENCH.
Morton Grove, Ill.

Pole Lima Beans.

Editor Florists' Exchange:

As regards the pole Lima bean manifesting a change in its nature due to the method of cultivation in California of not using poles, allow me to say that I believe that the cases in question were plants that were obtained from common grocery beans. In other words, I mean that the seed that was planted was commercial stock, shipped on by the hundreds of carloads to be sold in grocery stores for table use. Those who grow Lima beans in California for seed purposes are very careful in the selection of the seed they use. Their crops are rogued, etc., but such is not the case when the crop is destined for ordinary consumption; just so it is a Lima bean and it answers the purpose, whether there was a mixture or not in the crop. The pole Lima variety is not losing its climbing habit, any more than does the pea its tendrils when grown generation after generation by the hundreds of acres for seed without being bushed. But it behooves the seed dealers to obtain their seed Limas from regular seed growers, and not from commission men.
CALIFORNIAN.

Plants Hardy in Michigan.

Editor Florists' Exchange:

I am now making a specialty of plants suitable for formal and subtropical work, and such as I find perfectly hardy in Michigan. All the euonymus stood the last two Winters with me. There is a constant call for dwarf box; it will not survive the Michigan Winters. Euonymus is a much better green; will stand cutting as close as box and also stands the Winter. Euonymus radicans is good as a climber or trailer; it can be used for numerous purposes. The golden privet is the finest thing I ever saw—a bright golden color. It does not burn in Summer. It kept its color into January last without any protection; then it had some litter thrown over it. I now find the foliage fresh and bright, although frozen solid. I cannot propagate it as I can the Japanese green privet, of which I use large numbers, either for hedges of six inches or hedges of six feet. What is called the California privet is not hardy with me. S. TAPLIN.
Detroit, Mich.

The Hail Season Commenced.

Secretary John G. Esler, of the Florists' Hail Association, who is just recovering from a quite severe illness, arising from a complication of internal troubles, the result of an attack of grip last Winter, informs us that the hail season has commenced, several small losses being reported from Texas. The hail is working its way North, and has already got as far as East St. Louis, Ill., where a storm recently occurred also.

Job and the Bagpipes.

Editor Florists' Exchange:

I notice that Job has "got 'em again." The mere reading about our "Ladies' Night" in the trade press has upset him to such an extent that he seems to be a little "batty;" mixes his metaphors, as it were. He speaks of "listening complacently under compulsion." The idea! Then he goes on to speak of "Highlanders on a hill far removed from the haunts of man." They could not be so very far removed from the haunts of man if the Highland man was there. Falconer could never make a blunder like that; he might promise a turkey dinner, and forget to produce it, but to be paradoxical, never! I guess that milk and seltzer drink has softened Job's brain; possibly Osterizing would cure him.

The fact that the hall was crowded on ladies' night gives evidence enough that the bagpipes were the drawing card. The ladies did not go to hear a paper read on "Stem Rot," instructive and interesting as it was to the grower; neither did they go to hear the routine business of the club transacted. Those things did not interest them in the least. They went to hear the pipes, and the expression of relief, pleasure and ecstasy depicted on their features when the pipes started proved that that was what they went for. Perhaps a very few did not enjoy the "soul-stirring strains," but they are more to be pitied than condemned. However, next ladies' night those few can adjourn to the ante-room and sing "God Save the Weasel" and "Pop goes the Queen," to a jewsharp accompaniment, to their heart's content.
That two Scots gave "signs of exaltation before

Gathered and Gleaned.

"I am but a gatherer and a disposer of other men's stuff."

The so-called green carnation was much in evidence everywhere throughout the country on St. Patrick's Day, and vendors of this deception have had ascribed to them, and even have arrogated to themselves, great occult power in the alleged production of the emerald-hued flower. Quite a deal of discussion on the subject has appeared in the daily newspapers of the country, of which the following is a fair sample: "When asked how the flowers were treated to give them their green tints Mr. ——— refused to answer the question, saying that the formula was a secret, but that they had been treated with chemicals, which had been placed in the water with which they had been irrigated." These words are reported to have been uttered by a florist. They are a credit to his cupidity, not to his ignorance, for he was well aware when he spoke them that he was talking nonsense. Catch-penny tricks, like dying carnations green, and attempting to surround the artificiality with mystery, reflect no credit on the "artist." The true lover of nature—the florist who loves his profession—will never seek to mar the pristine beauty of his blossoms by daubing them over with dyes for a cent or two more profit. The genuine and patriotic Irishman, too, being anything but artificial himself, hates artificiality, and a reaction against the "green" carnation must sooner or later set in. If they must have green things, give the sons of the Ould Sod and their descendants their favorite shamrock, what is considered the real thing, or as near to it as can possibly be obtained, typical of the occasion they celebrate. Falling shamrocks, there's plenty of natural leafage available. But —dye carnations. Out on them! As a florist said to me the other day: "The man in this business who dyes carnations green and sells them as the natural product is not a florist; he's a fakir, pure and simple, one devoid of good taste and with little regard for maintaining the dignity of the noble profession in which he is engaged."

The Rural New Yorker, in a recent issue, illustrates and describes a shower-bath attachment which has been erected in a greenhouse where steam is used by a Michigan man. The subject seems one worth while bringing to the attention of The Florists' Exchange readers. The structure is described as follows: "The room is of rough boards, made tight, and the ground being sand soaks away the water. There are no fixtures to keep clean, and anyone can use it. Each has his own brush and towels, and all keep clean, as it is such a pleasure to stand under the sprinkler and turn on any temperature of water just by turning the globe valves. The coil under dressing platform is to warm the room, and has an air valve in to make the steam circulate. The floor could be made of cement with a drain. The cost of this bath, lumber and fixtures was about \$12." Workmen in greenhouses would, I think, revel in the luxury of a bath of this kind.

That paper of John Birnie's, read before the New York Florists' Club the other night, is being commented on quite considerably in local circles. It is generally believed that Mr. Birnie put forward his remarks as a "feeler" to incite discussion; yet the wonder is expressed where he got his information from about the condition of the flowers "in the average commission store in the morning rush hour" that gave him the admitted jar. It is conceded that when a man speaks from his own experience or observation his words carry some weight; when he deals with generalities they have no weight at all. Therefore, it is thought Mr. Birnie should specify "the average commission stores," where he has found to exist such conditions as he described. Burke once said: "You cannot condemn a nation for the fault of one man," or words to that effect. Neither is it right, or just, to condemn a class of merchants for the defects or incapacity of one or two of its members.

Another matter exciting quite a good deal of interest among wholesale florists in New York is the statement made by one "Phil," in The Weekly Florists' Review, a Chicago trade paper, that "there are cases of wholesalers who have retail departments, notably in New York." It seems clear that "Phil" has made this statement at random; that he knows little or nothing of what he is talking about. And as he asserts that stores or departments of this kind maintained or supported by wholesalers "might antagonize the customers" of these wholesalers, he is, by this general assertion, placing all the New York commission florists in a rather unfavorable light with their customers. A suggestion that he name in his paper those metropolitan wholesalers who have retail departments seems to be to the point, and the only way by which he now can do justice to all the New York commission florists.
THE GATHERER.

HENRY ECKFORD
The Veteran English Sweet Pea Specialist

the music of the bagpipes ceased" is nothing remarkable. Holy Writ informs us that at the coronation of King Solomon they "piped with pipes and rejoiced with great joy." Ezekiel even hints that the pipes were invented in the Garden of Eden. It is evident that pipe music caused as much exaltation in the chosen people of old as it does in the Scotchman of the present day. It was, no doubt, to the music of the pipes that David danced when he danced before the Ark of the Covenant.

But the fact that was demonstrated most forcibly that evening was the superiority of Neil Gow's compositions, both in sweetness and volume (as played on the bagpipes) over the milk-and-seltzer, sleep-inducing strains of Wagner, Beethoven, Mendelssohn, Mozart, etc., as played on the piano. The pipes were so far ahead that there was no comparison. This goes to show that with Scotch songs, Scotch music, and a little "Scotch" on the side, a very enjoyable evening can be spent.

The Exchange suggests a larger hall for next ladies' night. If the committee sees fit to act on that suggestion I will provide two pipers, and we will be sure to draw twice as big a crowd as we had last.

I will close by informing Job that the bagpipes were there by request, from the proper authorities. Job's hint at "compulsion" is out of place. I also beg to inform him that the New York Florists' Club is in no need of his "sympathy" at the present time; it is paddling its own canoe in fine shape. I would just like to suggest to Job that he would make a good piper. His "make-up" is mostly wind, and Simeon Ford says wind is all that is required, no musical talent being necessary; therefore, Job would make an ideal piper. That he gets a job as piper at the home of the S. A. F. O. H., when they get it, is the hope of
JOHN BIRNIE.

OBITUARY

O. H. Sasse.

O. H. Sasse, a well known retired florist, of Milwaukee, Wis., was instantly killed by falling under a street railway car Friday, March 24. He was 40 years of age and lived with his mother and sister. He was well to do, and since retiring from the florist trade had been engaged in the real estate and contracting business.
C. C. P.

American Rose Society

Continuation of Report of Boston Meeting
and Exhibition

MARCH 23 TO 26, 1905

The sixth annual meeting of this society, which was partially reported in last week's issue, was one that will ever be remembered as the awakening of a new life, as it were, in this society. True, there were not many present at the meeting—some fifty or sixty—but a great deal of enthusiasm was shown, and ere another year has passed the American Rose Society will have placed itself on record as one worthy of the position it ought to hold, and will be doing a grand work for the advancement and popularization of the queen of flowers.

Following the president's address, W. J. Stewart read the report of the secretary, as follows:

SECRETARY'S REPORT.

I have the honor to make the following report as secretary since the resignation of Mr. Barron last Fall:

The number of members on the list when it came to my hands was 191, of whom 36 were life members, and 155 annual members. The majority of the latter had paid no assessments for two years or more. Bills were sent to all, and the returns have been quite satisfactory, everything considered, as the treasurer's report will show. In the meantime five new life members and sixteen annual have been added.

Silver medals won two years ago, at the Annandale Rose Show by Crumwold Gardens, and at Lenox, Mass., by Girard Foster, have been struck off and sent to their owners. Through an error in the schedule, a silver cup was awarded at Poughkeepsie the same year, instead of a medal, to F. Heeremans, of Lenox. Mr. P. R. Newbold, who was president of the American Rose Society at that time, has generously provided the cup, and it has been forwarded, suitably engraved, to Mr. Heeremans.

The sentiment all over the country toward this society is extremely cordial so far as I have been able to learn, and the outlook is most encouraging for the organization and the objects for which it stands.

TREASURER'S REPORT.

This report was followed by the reading of the report of Treasurer J. N. May, who was unable to be present. The summary of Mr. May's report was as follows:

RECEIPTS.

March, 1903, balance on hand.....	\$971.12
Annual dues	442.20
Life membership	250.00
Premium R. Scott & Son.....	50.00
Premium M. H. Walsh.....	25.00
Premium refunded by B. Dorrance.....	100.00
Interest on life membership.....	96.56
	\$1,934.88

PAYMENTS.

Premiums	\$782.00
Secretary's salary	100.00
Postage, cash and stationery.....	\$2.68
Medals and engraving.....	11.25
Life membership fund.....	250.00
Balance March 23, 1905.....	709.55
	\$1,934.88

Harry O. May, speaking for the treasurer, explained that his report covered a period of two years, on account of the former secretary failing to file any returns with the treasurer in time for the last annual meeting.

Both these reports were accepted and placed on file. Robert Simpson, of Clifton, N. J., proposed that a vote of thanks be extended those who had offered special prizes for the exhibition. This motion was unanimously carried.

An excellent paper on how the society might promote and encourage the successful cultivation of hardy roses by amateur growers was presented by M. H. Walsh, of Wood's Hole. Mr. Walsh spoke as follows:

To Create Interest in Hardy Garden Roses.

(Read by M. H. Walsh before the American Rose Society at Boston, March 24, 1905.)

It is cheering to note the awakening of a new and live interest which is being manifested by amateurs and others in the growing of hardy garden roses. The increased demand for these plants for the past five years is sufficient proof of this.

About twenty years ago the National Rose Society of England was organized, the aim and object of this society being to promote and encourage the culture of the rose, and to disseminate practical information for the proper growth and cultivation of this flower. It is through the untiring efforts and the influence of this organization that the rose is so generally grown by the amateur and the cottager as well as by the wealthy class.

The American Rose Society is organized on practically the same principle, its aim and object being to promote a greater interest in the growing of the rose, and to educate in its culture those who love the flower and desire to grow it.

The American Rose Society includes in its membership men, the greater part of whose lives have been devoted largely to the growing of roses, and who by their wide experience are well qualified to give the information so many people desire in relation to rose culture. The amateur rose growers especially are seeking and anxious to receive such directions.

There are several essentials in the growing of roses. The first is the soil; this would apply in a general way. A large number who buy roses know nothing about what soil is best suited for these plants. This I know from my experience with purchasers. While they are often familiar with the varieties, they admit they know nothing whatever about preparing the ground. Hundreds of these people would be willing to become members of the American Rose

Society could they receive some practical cultural directions concerning rose growing.

It is surprising how many buy roses and continue to buy and replace them simply through lack of knowledge how to properly care for them. They buy through love of the flower for its own sake. Many know not whether the roses should be planted on the north side or in a southern exposure. They are not familiar with and know practically nothing about pruning and properly guarding against insect pests. In fact, the large majority of those who buy roses year after year have but little practical knowledge relating to the proper care and the attention these plants require for successful growth.

It seems to the writer that the Rose Society should give practical cultural directions and instructions to those seeking such, and begin and educate the masses who are interested in roses. This could be done by publishing a practical treatise on the rose for the amateur, or it could be issued in the form of a bulletin to all members of the society. When this became known I believe the membership would rapidly increase and the bulletin, if found desirable, could give information applicable to all points of this country. There are members well qualified in the different sections of the country to give the practical cultural directions treating on soil, situation, pruning, selection of varieties of hybrid teas, hybrid perpetuals, Japanese and their hybrids, climbing roses, rambler roses and their various uses.

This matter wisely followed up would make the American Rose Society the recognized authority on all matters relating to the rose. At the present time the society may not be ready to take up this matter or approve of these suggestions, but I feel sure they will receive earnest consideration.

The American Carnation Society is prosperous and the grand results in the increasing popularity of this flower, the perfection of the blooms in color, size and texture are surprising and gratifying. The Chrysanthemum Society of America is prosperous and the wonderful advance in the development of this flower is marvelous. The peony has also a society and its members are formulating plans for the classification and correct naming of the varieties. These societies are to be congratulated for the zeal and severance and for the grand and noble work they have done in their respective spheres.

The Rose Society is waking to a realization of its duties, and the officers of the society have worked zealously the last year and are entitled to the thanks and hearty cooperation of all its members. Let us hope that the interest now being manifested will stimulate our rose growers to produce new and superior varieties of American origin and better adapted to our climate.

May the good work continue and the rose always hold the honor and title of Queen of Flowers and the Garden!

H. A. Siebrecht, of New Rochelle, in proposing a vote of thanks to Mr. Walsh, said that the members ought to bring the interests of the society before the public. He did not propose to offer any excuses for the society. It had lost some valuable members, like Asmus, and others; the secretary had been handicapped before the present time but he felt now there was new life in the society that had produced something to redeem what it had left undone and would carry out the ideas expressed by the president and by Mr. Walsh. He proposed that the society issue a bulletin in some form, such as is done by the Rose Society of Great Britain. It was moved that the president appoint a publishing committee for the purpose of publishing reports and distributing general information on the rose.

Jas. Wheeler said that people had been slow in taking hold of the rose, but that everybody wanted a rose, whether it was inside in Winter or in the garden in Summer.

Robert Simpson indorsed the sentiments of Mr. Walsh, and said that it was the duty of the society to tell people how to buy and how to succeed in growing roses.

A. Farenwald said that more spirit was needed among the rose men; that they ought to follow the plan of the Carnation Society and the carnation men, and appear at every exhibition, as the carnationists did. He spoke of the fine exhibition the carnation men had put up in the hall below right in the midst of the rose men; that exhibition was much finer than the one at Philadelphia, and that it was only through

NEW ROSE URANIA.

Grown and Exhibited by M. H. Walsh at Boston Show.

push that they would succeed and make the society what it ought to be.

Frank Moore asked for a list of hardy roses for an extremely exposed situation, in six varieties.

In replying to Mr. Moore's question, Mr. Walsh explained at some length that so much depended on the situation that living and growing were different things. That the soil is the most essential. Conditions must be favorable for the roses to ripen their wood, or they would not withstand the severity of a New England Winter. Another thing to look out for was insect pests. He said it was not the wealthy people that needed instructions; they had their gardeners to look out for such things; but it was the amateur that the society should try and help. In naming six varieties of roses offhand, Mr. Walsh gave the following: hybrid perpetuals, Baroness Rothschild, Clio, Ulrich Brunner, Prince Camille de Rohan, Baron de Bonstetten and Captain Hayward. For hybrid teas he named Captain Christy, Mme. Caroline Testout, Kaiserin Augusta Victoria, La France, Maman Cochet, Mme. Abel Chatenay. He said that the latter variety had proved as hardy as any hybrid perpetual with him for the last two years. For Ramblers he named Lady Gay, Debutante, Sweetheart, Farquhar and Philadelphia Rambler. He also said that the Manda set of Ramblers were hardy and very fine. He spoke against the cheap Holland-grown roses, which he said were grown in marsh lands, consequently would not stand the strong sun of our climate, and did not grow, or last any length of time, and were dear at any price.

Mr. Wheeler said that with him Clio and Baroness Rothschild had never grown or proved satisfactory, and he was surprised that Mr. Walsh had left out General Jacqueminot and Magna Charta.

Mr. Siebrecht said he was surprised that Mr. Walsh had included Baroness Rothschild; that although it was a grand rose, it did not do well, but Clio did finely in the neighborhood of New York. He would include John Hopper, Anne de Diesbach and Paul Neyron. Magna Charta, he said, he did not like except to plant in landscape work among shrubbery. He urged that the society should try to stop the wholesale bringing into the country of a cheap stock of roses. He said that the growers raised them for about \$25 per 1,000, and that they cost here about 5c, apiece; that the department stores were the great disseminators of these roses. The stock was not adapted to this country, and it should be the duty of the Rose Society to try and stop the importation by endeavoring to have a heavier duty placed on them, thus tending to keep them out. It would be a good idea for the president to appoint a legislative committee to look into the matter.

W. N. Craig said Mr. Walsh had left out some of the best roses, and that his selection would be Mrs. John Laing, which had withstood 30 degrees below zero at North Easton, Mass.; Mme. Gabriel Luizet, John Hopper, General Jacqueminot, Ulrich Brunner, and Paul Neyron; and to the list of ramblers he would add Dorothy Perkins.

W. J. Stewart spoke for Carmine Pillar, which he said was one of the best climbing roses in existence.

Harry O. May stated that the main thing for the society was how to make it exist, and that the commercial man must get interested in it, for without his support they could not get on.

Mrs. Mary Jones said she was glad there seemed to be an awakening among the members, for she had been a member for several years, and had begun to think she had better withdraw, as she had received

VASE OF ROSE LIBERTY

Winner of First Prize for 50 Blooms Any Variety at
American Rose Society's Show
Exhibitor, A. Farenwald, Roslyn, Pa.

no benefit from belonging to the Society. Now, with the new interest that seemed to exist among the members, she hoped that something would be accomplished.

To Publish Rose Information.

Benjamin Hammond said that if Mr. Walsh would write a treatise on the cultivation of the rose, to be published in bulletin form by the society, he would pay for the publication of 10,000 copies.
A vote of thanks was given to Mr. Hammond for his generous offer.
A. Langjahr moved that the society publish an annual report, and on the motion of Mr. Elliott, reports, bulletins, etc., were ordered to be placed in the hands of the publication committee.

Place of Meeting.

The next business before the meeting was the selection of a place of meeting, and although Chicago, Utica and Syracuse were mentioned, it was decided that Boston would be the best place for the meeting of 1906.

The Next Year's Schedule.

On the motion of Mr. Walsh, it was decided that the schedule for the exhibition be issued November 1 and mailed to the members not later than November 5.

Election of Officers.

The election of officers then took place, the result being as told in last week's issue, viz.: President, Alex. Montgomery; vice-president, Robert Simpson; treasurer, Harry O. May; secretary, Wm. J. Stewart. Executive committee, for two years, M. H. Walsh; and A. Farenwald; to fill the unexpired term of Robert Simpson, W. N. Craig.
Mr. Montgomery thanked the members for the support they had given him and for the honor they had again conferred upon him, and said that he would do his best to further the interests of the society; and that although they had a fine exhibition and a splendid meeting this year, he could foresee that by another year they would have something far superior. (And so say all of us.)
There being no further business, the meeting then adjourned.

Among those present from a distance were: F. R. Newbold, Poughkeepsie; Peter Crowe, Utica; S. S. Pennock, A. B. Cartledge, Philadelphia; A. Farenwald, Roslyn, Pa.; A. H. Langjahr, A. J. Guttman, W. Marshall, J. B. Nugent, Jr., W. F. Sheridan, F. H. Traendly, C. B. Weathered, New York; H. A. Siehrecht, New Rochelle; Benjamin Hammond, Fishkill, N. Y.; Robert Simpson, Clifton, N. J.; H. O. May, Summit, N. J.; Frank Moore, Chatham, N. J.; Paul Dailedouze, Flatbush, N. Y.; J. F. Huss, C. U. Fohn, Alex. Cumming and Theodore Wirth, Hartford, Conn.; F. R. Pierson, Jas. T. Scott, Tarrytown; J. F. Struck, Summit, N. J.; Thos. Knight, Rutherford, N. J.; and Fred Breitmeyer, Detroit.

The Banquet.

The banquet tendered by the horticultural interests of Boston to the visiting members of the American Rose Society, which was held at the Thorndike Hotel, on Friday evening, March 24, was an affair long to be remembered. It was by all means a fine example of what can be done to entertain and make pleasant the few hours that visitors are among us. About 100 ladies and gentlemen were present. The decorations were very fine indeed, many hundreds of choice American Beauty and other roses being used, showing the excellent skill of the committee in charge.
President Wheeler, of the Florists' Club, in a few well-chosen remarks, introduced as toastmaster W. J. Stewart. Mr. Stewart, in accepting, thanked Mr. Wheeler for the honor he had done him, and said that the American Rose Society had made no mis-

CINERARIA STELLATA
Exhibited by William Thatcher, At Boston Show

take in re-electing a Boston man to its highest honor. He called upon Mr. Montgomery for a few remarks. Mr. Montgomery spoke of the good work that could be accomplished, and said that he would do his best to further the welfare of the society.
Mr. Traendly was called upon, and spoke for the New York Florists' Club.
Mr. Farenwald spoke for Philadelphia. He complimented the Boston men on the exhibition, not only for its fine roses, but for its fine cyclamen and cinerarias, which were as good as any he had ever seen. Mr. Fisher spoke for the carnation men, and Mr. Farquhar responded for the Massachusetts Horticultural Society. Mr. Dawson spoke for the native roses, and Professor Elson, of the Conservatory of Music, gave a very interesting talk on flower lore. Other speakers were Messrs. Nugent, Crowe, Parker, Walsh, Hammond, Siebrecht and Wirth.
During the evening the toastmaster presented the Lord & Burnham trophy and the Crowe gold medal to the winner of these prizes, Mr. Montgomery; and the A. H. Hews cup to the winner of it, W. W. Edgar, of Waverly, Mass.

The Exhibition.

The exhibition, of which a brief report was given last week, was a drawing card at Horticultural Hall. Never before in the history of the hall, in its present location, was the attendance so large, and never before has that hall held such a fine display of roses. As called for by the schedule, most of the vases were renewed on Saturday, so that up to the closing of the exhibition, on Sunday night, the flowers were in very good shape. Especially worthy of mention was the vase of Liberty, from A. Farenwald, Roslyn, Pa. Boston rosarians have never before seen such fine stems or such high-class flowers as those were. Another new rose, which did not arrive in time for the opening of the exhibition, was Richmond, from the E. G. Hill Company, of Richmond, Ind. Other noticeable new roses were La Detroit, General MacArthur and Wellesley. The full list of premiums follows:

The Awards.

TEAS AND HYBRID TEAS.
Twenty-five cut blooms (open to all).
American Beauty: Second prize, W. H. Elliott, Bride;

First, W. H. Elliott, Bridesmaid: First, W. H. Elliott; second, Montrose Greenhouses. Mme. Hoste: First, John Breitmeyer's Sons. Souvenir du President Carnot: First, R. T. McGorum; second, J. McFarland, Golden Gate; First, Floral Exchange; second, Robert Simpson. Bon Silene: First, John Breitmeyer's Sons. Mrs. Oliver Ames: First, W. H. Elliott. Ivory: First, Floral Exchange, Edgely, Pa. Safrano: First, W. H. Elliott. Liberty: First, W. H. Elliott; second, Waban Rose Conservatories. Any other named dissiminated variety: First prize "A," Mr. Fitzpatrick, Killarney; first prize "B," Robert Simpson, Uncle John; first prize "C," John Breitmeyer's Sons, La Detroit. Queen of Edgely: First, Floral Exchange, Edgely, Pa.

TWELVE CUT BLOOMS.

Open to growers having not more than 40,000 feet of glass in roses.
American Beauty: First, Briarcliff Greenhouses. Bride: First, Montrose Greenhouses; second, R. T. McGorum. Bridesmaid: First, Montrose Greenhouses; second, Robt. Montgomery. Souvenir du President Carnot: First, Robt. T. McGorum; second, J. McFarland. Mrs. Oliver Ames: Second, Robt. Montgomery.

HYBRID PERPETUALS.

Twelve cut blooms.
Ulrich Brunner: First, J. McFarland. Mrs. John Laing: First, J. McFarland.

SPECIAL PRIZES FOR CUT BLOOMS.

Special prize presented by Benjamin Dorrance for display of cut blooms of roses, not less than five varieties and not less than twenty-five blooms of any one variety, to be competed for by growers outside of a radius of 150 miles of Boston—Brant Bros., Utica, N. Y., a silver cup.
Special prize offered by John B. Nugent, Jr. for twenty-five blooms of any red rose, not disseminated previous to 1903—first, John N. May with General MacArthur.
Special prize offered by John B. Nugent, Jr.—Twenty-five blooms of any pink rose, not disseminated previous to 1903—first, John Breitmeyer's Sons with La Detroit.
Special prize offered by President Alexander Montgomery.—Twenty-five blooms of any American seedling rose introduced in or since 1901—John Breitmeyer's Sons with La Detroit.
Special prize offered by Siebrecht & Sons.—Fifty blooms of Killarney, grown within 250 miles of Boston—Mr. Fitzpatrick, New Rochelle, N. Y.
Special prize offered by Treasurer John N. May.—Display of blooms not less than ten varieties, in a space of 50 square feet—Col. Chas. Pfaff.
Executive committee's prizes.—Fifty blooms of American Beauty roses: First, Waban Rose Conservatories; second, Briarcliff Greenhouses. Fifty blooms of any other variety: First, A. Farenwald with Liberty; second, W. H. Elliott, same. Six blooms of any variety introduced in 1901 or subsequently: First, John N. May with General MacArthur. Twenty-five blooms of any roses of American origin, not yet in commerce, either tea or hybrid tea, seedling or sport—Waban Rose Conservatories with rose Wellesley, silver cup.

POT PLANTS (OPEN TO ALL).

Twenty-five hybrid perpetual roses in pots, not less than ten varieties: Miss S. B. Fay (M. H. Walsh, gardener), a silver cup presented by Col. Chas. Pfaff.
Twelve hybrid perpetual roses in pots, not less than five varieties—W. W. Edgar (offered by M. H. Walsh).
Six plants, any one variety, in not larger than 8-inch pots; F. R. Pierson Co., with Baby Rambler.
Specimen plant, in pot: First, W. W. Edgar with Mme. Eug. Verdier; second, M. H. Walsh with Urania.

CLIMBING ROSES IN POTS.

Specimen plant, trained or not, in pot or tub, not less than 12-inch: First, M. H. Walsh with Lady Gay.
Display of Rambler and Climbing roses in pots, covering not less than 50 square feet—M. H. Walsh (offered by F. R. Newbold).
Special Peter Crowe prize, for best vase of Bride and Bridesmaid—Waban Rose Conservatories, a gold medal.
Special Pierson & Sefton silver cup, for vase of fifty assorted roses, not less than three varieties—the Waban Rose Conservatories.
Special cup offered by A. H. Hews Co., for best rose plant, not a climber—W. W. Edgar.
Special prize offered by Welch Bros., for best vase of roses in the hall—Waban Rose Conservatories.
Special Lord & Burnham trophy—Waban Rose Conservatories, first prize awarded in conjunction with the first (cash) prize for fifty American Beauty roses.
The judges were: Peter Crowe, Utica, N. Y.; Walter F. Sheridan, New York; J. F. Huss, Hartford, Conn.
J. W. DUNCAN.

EXHIBIT OF R. & J. FARQUEAR & CO., AT BOSTON SHOW

MAIN HALL, BOSTON FLOWER SHOW

CLUB AND SOCIETY DOINGS

DOBBS FERRY (N. Y.) HORTICULTURAL ASSOCIATION.—The regular meeting was held in Odd Fellows' Hall Saturday evening, March 25, President Dunbar in the chair. A prize was given for the best six carnations, one variety, Claud Wilson winning it. Messrs. Kassberg, Lee, Kneifel and Boreham also staged some very fine blooms. Joseph Dunbar showed a striped sport from Mrs. Lawson. Thomas Lee also had a sport from that variety—a mauve pink, which was very much admired. It was highly commended. Mr. Boreham staged some very fine stocks. The business of the meeting was the making of the schedule for the Fall show. Last year's premium list was adopted, with some few changes. C. Wilson was elected manager and J. Dunbar treasurer. Mr. Walsh was elected to active membership. There is to be an essay and discussion on vegetables at the next meeting.

CHICAGO FLORISTS' CLUB.—A good exhibit of Easter Plants was before the club on Thursday, March 23, a large number of members attending, notwithstanding the inclement weather. Among those exhibiting were John E. Haines, Bethlehem, Pa., who had a vase of his namesake carnation; J. W. Dudley & Son, Parkersburg, West Va.; Vaughan's Greenhouses, Western Springs, roses, ferns, azaleas, dracenas and other plants suitable for Easter; John Breitmeys's Sons, Detroit, Mich., sent a fine vase of La Detroit rose with 4-foot stems and magnificent buds; also three vases of antirrhinum, pink, white and yellow, which was much admired; Garfield Park Floral Company, Chicago, a fine collection of Easter plants, consisting of candidum and Harrisii lilies, Rambler roses, hybrid perpetual roses, azaleas, ferns, and other decorative stock. H. N. Bruns had a fine collection of lily of the valley in pots and pans. Weiland & Risch, Chicago, two vases of Bride and two of Bridesmaid roses. E. F. Winterson Company, a collection of Boston ferns and florists' supplies for retail stores for that occasion. A vase of fifty carnation Lady Margaret was exhibited by Mt. Greenwood Cemetery Association, Mt. Greenwood, Ill.

The judges reported as follows on the above exhibits: A certificate of merit be awarded carnation Lady Margaret, it scoring 90 points; carnation John E. Haines, 80 points, the flowers having suffered considerably in transit. Special mention was made of all the other exhibits.

The committee reported that arrangements were making for a banquet for some Saturday evening in the near future, probably April 15.

Philadelphia Spring Show.

The Spring exhibition of the Pennsylvania Horticultural Society took place this week, and was a great success. The quality of the exhibits was very high, surpassing that seen in previous years; in fact, it is doubtful if the judges ever had a more difficult task to perform. In the hyacinth, tulip and narcissus classes the competition was very strong, and considerable time was taken up in selecting the winners. In the centre of the main hall was arranged a very choice group of plants from the public collection at Horticultural Hall, Fairmount Park. In this exhibit were rare varieties of acacias, cycads, marantas and dieffenbachias, the edge of the group con-

GENERAL VIEW OF PHILADELPHIA SPRING SHOW, 1905

sisting of spiraeas, marguerites and aspidistras. In this group every plant was labeled and was therefore of great educational value.

Cineraria stellata was, as usual, represented by some grand specimens; these plants have been specialties at the shows here for the past four years, and there has, in consequence been much demand for them at the retail florists' stores.

The new dwarf *Crimson Rambler* and the new rose *Killarney* were much admired at this show. The demand for these commercially is increasing very fast. Hyacinths were the best ever seen here. Among the prize winners the following varieties were prominent: King of the Bues, L'Innocence, Czar Peter, Koh-i-noor, La Grandesse, and Potgetter.

Narcissus Bicolor Victoria is new, and a good acquisition, the shield being of a straw color, and the cup a bright canary. The tulips were a grand lot; the following varieties were most noticeable: *Torador*, *Tournesol*, *Joost Van Vondel*, *Vermillion Brilliant*, *Kiezerskroon* and *Colour Cardinal*.

There was a large exhibit of geraniums in 8 and 10-inch pots. The best plants were of the following varieties: *Mad. Chas. Moten*, *Marquise de Castellane*, *Cyclops*, *Alphonse Riccard*, *Mary Beaton*, and *Gertrude Pearson*. *Primula obconica grandiflora* were very largely exhibited, the dark pink varieties being most prominent.

In ferns, for which the shows here have become noted, there were some grand specimens of *Gleichenia flabellata* and *Davallia Mooreana*. *Dracena Godsefiana* was represented by a plant in a 12-inch pot, and was 30 inches high. *Lilium Harrisii* were very good; one specimen plant in 7-inch pot had 11 flowers, while many had from 6 to 8 flowers.

Of the newer plants there were exhibits of *Asparagus myriocladus* and *plumosus compactus*; *Selaginella Watsoniana* and a good collection of hybrid amaryllis in bright colors.

Hydrangea Otaska was well represented by some 14 well-grown plants. The new carnation John E. Haines, exhibited by John E. Haines, Bethlehem, Pa., was awarded a certificate of merit. A certificate of merit was also awarded to John Kuhn, of this city, for his new pink carnation No. 13. Special mention was made of carnation *Crisis*, exhibited by John L. Dillon, Bloomsburg, Pa. DAVID RUST.

Boston Spring Show.

(Continuation of Report.)

The annual Spring show of the Massachusetts Horticultural Society, of which a partial report was given last week, proved in every way one of the best ever held by the society. Financially it was a success, for never before has there been so many visitors at the present hall. In the plant classes the cyclamen from George F. Fabyan (James Stuart, gardener) were exceptionally fine, many of the visitors from a distance remarking on the high standard of their cultivation. *Cinerarias*, also from the same grower, were excellent plants, and the stellata varieties from Mrs. J. L. Gardner (Wm. Thatcher, gardener), were very fine, indeed, and were an attractive feature of the main hall.

In the display of Easter plants a very fine group was put up by Mr. E. A. Clark (Wm. Riggs, gar-

dener), but it was closely followed by the collection of Edward McMulkin. The plants of acacias and other hard wooded stock commanded considerable attention. The display of bulbous plants was very good, and filled the main portion of the side hall. The Rambler roses of M. H. Walsh were the leading feature of the show, and were much admired; exceedingly fine were the plants of *Lady Gay*, *Sweetheart* and *Debutante*, photographs of which appeared in last week's issue. Another exceedingly fine group of roses from M. H. Walsh was the variety *Urania*, a seedling from American Beauty and *Suzanne de Rodocanachi*. This is unquestionably a grand variety, of a distinct bright crimson color, fine habit of growth and good foliage. Among the pot plants, also from Mr. Walsh, were noticed *Frau Karl Druschki*, the best white garden rose in cultivation, and that lovely pink variety, Mrs. R. G. Sharman-Crawford.

In cut roses, some very fine blooms were exhibited. The Mrs. Anna C. Ames prizes for the best vase of fifty blooms were won by W. H. Elliott and the Waban Rose Conservatories in the order named. The special prizes offered by the Gardeners and Florists' Club for vase of mixed roses, 25 blooms in 4 varieties, were won by Colonel Chas. Pfaff (Geo. Melvin, gardener) and W. H. Elliott.

HYACINTHES AT PHILADELPHIA SPRING SHOW, 1905

PRIMULA OBCONICA GRANDIFLORA AT PHILADELPHIA SPRING SHOW, 1905

In the hybrid perpetual class Colonel Pfaff was first, E. A. Clark second and Miss S. B. Fay third. For Ulrich Brunner, John McFarland was the only exhibitor. For American Beauty, Arthur Griffin was first, W. H. Elliott second. For 25 Bride W. H. Elliott was the only exhibitor; he was the only exhibitor in the class for Bridesmaid, for Liberty and in the class for any other variety.

In the class of 100 blooms, carnations, F. R. Pierson Company, Tarrytown, N. Y., took first; Patten & Co., Tewksbury, Mass., second, and Peter Fisher, Ellis, Mass., third. For 25 blooms fancy crimson variety Peter Fisher was first with Ruby, Wm. Nicholson second with Harry Fenn, and Patten & Co. third with same variety. For 25 blooms of any dark pink, Peter Fisher was first with Nelson Fisher; Patten & Co., second with Nelson Fisher, and Wm. Nicholson third with Mrs. Thos. W. Lawson. Enchantress was the only light pink variety entered, and the prizes were won by Wm. Nicholson, Peter Fisher and Patten & Co. in the order named. For 25 blooms of any scarlet variety, Guttman & Weber, New York, were first with Victory; Peter Fisher, second with Flamingo, and F. R. Pierson Co., third with same variety. For 25 blooms of white, Peter Fisher was first with Lady Bountiful; Patten & Co., second with the same variety, and Peter Fisher, third with Princess. For 25 blooms of any yellow, Backer & Co. won with Eldorado; Patten & Co. being second, and Backer & Co. third with the same variety. For 25 blooms of variegated, Mrs. M. A. Patten was the only variety exhibited, and Patten & Co. took first; H. A. Stevens Company, second; Peter Fisher third.

Gratuities were awarded to Edward McMulin for palms and bays; Lager & Hurrell, Summit, N. J., for display of orchids; Julius Roehrs Co., Rutherford, N. J., for display of orchids; Geo. McWilliam, for sprays of Cymbidium eburneum Lowianum; to Bussey Institution, for display of forced shrubs; E. W. Converse for display of cyclamen, etc.; Harvard Botanical Gardens, for display of primulas and palms; R. & J. Farquhar & Co., for display of Spring flowering plants; Carl Jurgens, for an exceedingly fine vase of lily of the valley; to M. H. Walsh for rose Urania; L. E. Small, Tewksbury, Mass., for seedling carnation No. 3; Guttman & Weber, for carnation Victory; Wm. Sim, for sweet peas; Patten & Co., for mignonette; the Misses Eldridge, for Bougainvillea spectabilis, and to Edward McMulin, for yellow Marguerites. E. O. Orpet was awarded a silver medal for seedling Cattleya (C. x Olivia C. intermedia x C. Trianae). First-class certificates were awarded to Henry Barrows & Son for Nephrolepis Barrowsi; F. R. Pierson Co., for Baby Rambler rose; M. F. Plant, for Phalenopsis amabilis Rimestadiana; and to Julius Roehrs Co., for Cymbidium Lowianum.

Honorable mention was awarded, to L. H. Foster Estate for Nephrolepis Dorchester; the Misses Eldridge for Bougainvillea spectabilis; Lager & Hurrell, for Cyrtopodium glaucophyllum; Bayard Thayer, for Phlox divaricata; Chicago Carnation Company, for carnation Cardinal; John E. Haines, Bethlehem, Pa., for new carnation John E. Haines; John Murchie, Sharon, Pa., for carnation Fred Burki; W. J. & M. S. Vesey, Fort Wayne, Ind., for carnation Glendale; Wm. Sim, for new sweet pea Earliest Sunbeam; M. H. Walsh, for new seedling rose, double; and Julius Roehrs Company for Ficus Cannonii.

J. W. DUNCAN.

Single Chrysanthemums.

In our eagerness at the present day to secure monstrosities in flowers, are we not apt to overlook the fact that the flower of more modest proportions and

BENCH OF NEW ROSE URANIA AS GROWN BY M. H. WALSH, WOOD'S HOLE, MASS.

Copyright, M. H. Walsh, 1905.

less striking appearance possesses in no less degree a beauty and charm which appeals to the refined taste perhaps more strongly than do the large show blooms which are annually exhibited in such perfection and profusion? If one were to form a conclusion as to the popularity of the single chrysanthemum by its appearance at our yearly exhibits, it would surely be that the modest form of the Autumn queen has but few ardent advocates; but its popularity depends not so much on exhibitors as on public taste, and it is for the florist who has to deal with the latter to bring its merits to the front. It is pleasing, however, to note that it is slowly, but surely, coming into public favor. Especially is this so in England, and in that climate where very often dampness reigns supreme during their flowering season, it is the large blooms which suffer most from that dread plague, "damping-off," while the singles come through without much fear of being affected. This in itself is no mean item, and when the lasting propensities of these graceful little blossoms are taken into account, it means much to those whose supply of cut bloom must be limited after the general rush of chrysanthemums is over.

There are, moreover, quite a few varieties which will be flowering as late as January if kept quite cool. The following are a few of the sorts which are good for late work, viz., Mrs. Baillie, Winifred Hull, Mrs. Brown Potter, Sir R. Buller, America, Lintan, Christmas Cheer, Mrs. Johnplatt and Chibran's 20th Century.

The early and intermediate varieties are very numerous and reference to a chrysanthemum specialist's catalogue will give one ample scope to choose from. The firm of W. Wells, England, has doubtless been instrumental to a large extent in bringing out the merits of the single chrysanthemum and gaining for it the position of favor it now holds. Their large list of varieties on show every year bring forth much praise and comment from all flower lovers.

The cultural requirements of the single is not near so complicated as those for the large chrysanthemum blooms, in that there is no need to worry about pinching and stopping at a certain date to secure the right bud at the right time; neither is it necessary to do but little, if any, disbudding, for they are most effective when left to develop all the flower buds which appear, the result being a spray of simple beauty. This month (March) is time enough to strike the cuttings, and all they need (speaking generally) is a good soil to grow in; pinch them when six inches high, and again when the three or four shoots (the results of the first pinching) have made a lead of five or six inches; then let them run to terminal buds, as these give by far the best color, and, what is most desirable, a more perfect single flower with only the one, or, at the most, two, rows of ray florets.

EDWIN MATTHEWS.

Lychnis Flos-cuculi Alba Plena.

Editor Florists' Exchange.

There has been considerable mention made of the beautiful double pink cuckoo flower, but never have I seen any mention of its equally beautiful companion, the double white form. This is identical in every way with the pink, with this single exception, that it is not such a continual bloomer, although when in flower it is more prolific. It is a fine, ready forcer, throwing flowers of the purest white; perfectly hardy in New England, but unless protected, the alternate freezing and thawing of some Winters is apt to kill it. Everybody that is acquainted with the pink should have its companion, the double white.

Norwood, Mass. FREDERIC J. REA.

WINDOW GLASS.—It is understood, says the Metal Worker, that window glass has been recently offered at prices which indicate a weakening tendency in the former quotations of manufacturers. Reports are to the effect that hand-blown glass has been offered by manufacturers to jobbers, in carload lots, at about 90 and 10 and 5 and 2½ per cent. discount on the first three brackets single, and at 90 and 10 and 2½ per cent. discount on all larger sizes of single and double strength. New York quotations are as follows: First two brackets, single, 90 to 90 and 15 per cent. discount; larger sizes, both single and double strength, 90 to 90 and 10 per cent. discount.

John Birnie Sends Congratulations.

Editor Florists' Exchange.

Congratulations are in order. Your Spring Number is all right. A business paper from cover to cover; no room for either ornament or foolishness. It indicates that the grower is the "leading man in the business," notwithstanding Job's assertion, when he launched that presidential boom. Is Job a commission dealer? Several would like to know besides.

JOHN BIRNIE.

The Retail Trade

A NEW RESERVOIR VASE.—A new reservoir vase has been invented and patented by J. K. Andrews, of Elgin, Ill., who is now placing the device on the market. He describes it as under: "It is a reservoir vase having an internal reservoir. The earth covers it entirely, coming down to the bottom of the bowl. The water is filled in through the tube, after which the tube is corked air tight. The water passes out under the edges of the reservoir, and comes in contact with the earth in the outer part of the bowl first, moistening that and working toward the center by capillary attraction. As the water is drawn from the reservoir a vacuum is created which draws the air down through the soil around the roots of the plants, furnishing not only fresh air to the roots of the plants, but keeping the soil more loose and fresh, and promoting a stronger, healthier growth of plants than can be obtained from anything I have ever before seen. I have used this vase several years and know well its possibilities. The reservoir is large enough to hold about 20 quarts of water, and the supply will last from ten days to two weeks, as there is no way for the water to escape by evaporation, only by coming up through the soil. The vase is patented in the United States and Canada."

The Greenhouse White Fly--*Aleyrodes vaporariorum* Westw.

By A. W. Morrill,

Special Field Agent United States Department of Agriculture.

The damage by the greenhouse white fly to tomato, cucumber, and many other plants growing under glass easily places it in the front rank of greenhouse pests. In many cases it would be impossible to grow certain crops in forcing houses without the aid of remedial measures. A specific instance is on record where, in a western Massachusetts town, the attacks of this insect resulted in the total loss of a greenhouse crop of tomatoes and cucumbers valued at \$4,000.

During the past few years many appeals for remedies have been made to the editors of our horticultural journals, to many State experiment stations, and to the United States Department of Agriculture; yet, although it is not, in reality, a difficult insect to control, the remedial methods which should be followed are far from being generally known among the many greenhouse men who suffer from its depredations.

Food Plants.

The insect under consideration is notable for its very general feeding habits, having already been recorded as breeding on over 60 different kinds of plants. Of these the following are of the most economic importance: Aster, chrysanthemum, salvia, lantana, fuchsia, coleus, ageratum, primula, geranium, heliotrope, rose, eggplant, bean, melon, lettuce, cucumber, and tomato. The two last named suffer the most serious injury from this insect, perhaps more than the other greenhouse plants together, although not infrequently there are reported serious losses in greenhouses devoted to one or more of the other plants mentioned.

Appearance of Infested Plants.

The upper leaves of a plant are preferred by the adult females for the deposition of their eggs. Thus there is a slow but continuous migration of adults upward to keep pace with the unfolding of the leaf buds. On thoroughly infested plants we find on the uppermost leaves only adults and freshly laid eggs; a little lower on the plants we find eggs in the process of hatching; and, finally, on the lowermost parts of the plants we find discolored, shriveled leaves with many pupae and emerging adults and few, if any, unhatched eggs or young larvae. The larvae and pupae secrete little globules of honeydew, so named after the material of a like nature secreted by plant lice. These globules usually either drop or are forcibly ejected, and, falling on the upper surface of leaves directly below, give them a glazed appearance. This is frequently followed by the growth of a sooty fungus which hastens in a complete destruction of the leaf.

When overcropping of the young occurs, this fungous growth finds favorable conditions for its development on the under surface of the leaf, resulting in the destruction of many of the immature insects. Owing to the interference with the respiratory processes of the leaf, both by the bodies of the insects themselves and by the fungous growths due to them, badly infested plants have a tendency to wilt when exposed to the sun's rays. In seriously infested greenhouses the leaves of the plants gradually die, the lower leaves first, and if unchecked the insects greatly impair the value and vitality of the plants, even though they do not actually cause their total destruction.

Preventives.

The importance of preventive measures in combating the white fly in greenhouses is not due to the inefficiency of properly applied remedies, but to the fact that in many cases the tiny predator is unobserved until considerable injury has been accomplished. With little trouble and expense one may, in a large measure, preclude the possibility of this and other pests appearing in the Winter in greenhouses which are unused during the Summer months. The introduction of the insect into non-infested floral establishments may be prevented by avoiding the introduction of infested plants unless first subjecting them to a fumigation in a tight fumigating box, based on the directions hereafter given for entire greenhouses. Vegetable houses, which are not used during the Summer months, allow of a practice which not only greatly reduces the chances of the white fly appearing in the house during the growing season, but may result in the house being successfully kept free from thrips and other insect pests during the whole or a considerable part of the season. The practice referred to consists in removing from the house all vegetation, even the smallest weeds, and fumigating the tightly closed greenhouse with hydrocyanic acid gas at the rate of five or more ounces per thousand cubic feet of space for a ten hours' exposure.

Remedies.

Fumigation with Hydrocyanic-Acid Gas.—This has been found to be the most successful means of controlling the white fly in greenhouses. Its success in this case is due to the susceptibility of the adults and larvae of these insects to a comparatively long exposure to a small amount

of the gas. Many experiments have been conducted with a view to determining the usefulness of this gas against the greenhouse white fly, the amount of gas to be generated, and the length of exposure necessary to produce the best results. Experiments of this kind thus far have been with tomato and cucumber plants, but as these plants are among those most liable to injury from improper fumigation with hydrocyanic acid gas, a wide range of usefulness is indicated by the success thus far obtained.

Amount of Potassium Cyanide to Use, and Length of Exposure.—Experiments and practice have shown that the white fly is destroyed in all except two stages (egg and late pupal) by an amount of potassium cyanide which is extremely small as compared with the amounts generally recommended for other insect pests. As small an amount as 0.005 gram (28.35 grams=1 ounce) per cubic foot of space or between one-fifth and one-sixth ounce per 1,000 cubic feet, for three hours' exposure, has been used with success, while as large an amount as 1 ounce per 1,000 cubic feet for an "all-night exposure," in a house containing infested tomatoes, has been reported to have given, in one instance, a like result. On the other hand, Mr. E. C. Ritue, of the Bureau of Plant Industry of the Department of Agriculture, in attempting to control the white fly infesting tomatoes in a greenhouse, on the grounds of the Department, found that 0.01 gram per cubic foot, or one-third ounce per 1,000 cubic feet, slightly injured the plants when the exposure exceeded thirty minutes. This treatment for thirty minutes destroys only the

used without the slightest danger to other plants. In most cases much larger rates of potassium cyanide per cubic foot can be used.

Time to Fumigate, Preparation of Greenhouse, and Method of Generating Gas.—Fumigation of plants with hydrocyanic acid gas should be at night and the foliage of the plants should be dry. The greenhouse to be treated should be made as tight as possible, all entrances but one closed and locked, and arrangements made to open a few ventilators from the outside at the expiration of the period of exposure. A house when fumigated should not be unnaturally tight as a result of rain or snow, otherwise the greater amount of gas confined in it under these conditions may injure the plants. The materials used for the generation of the gas are 98 per cent. potassium cyanide, commercial sulphuric acid, and water, the proportions generally used being one-half more acid (liquid measure) than potassium cyanide, and one-half more water than acid. Having determined the cubic contents of the house and the total amount of potassium cyanide, sulphuric acid, and water to be used, these should be divided into parts representing each 25 feet of length of the greenhouse. Owing to the small amounts of the acid and water, small receptacles must be used. Six or eight inches is a desirable height for the receptacles, while the diameter should be as small as possible to use, preferably not more than two and one-half inches. They should be either of earthenware or glass. In many cases, ordinary glass tumblers will be suitable, though the diluted acid should never more than one-fourth fill the receptacle; otherwise the violent chemical action which follows the introduction of the potassium cyanide might result in the loss of considerable of the material. Each lot of the potassium cyanide should be pulverized or broken up into small pieces, wrapped in thin paper, and laid beside one of the receptacles, these being placed at intervals of about 25 feet on the floor of the house. In each receptacle first pour the proper amount of water and then the acid. Beginning with the end of the house farthest from the exit, drop into each receptacle, in succession, the package of potassium cyanide, proceeding as quickly as possible toward the exit. During the few seconds the operator is in the house after the generation of the gas is started, the breath should be held to prevent even the least bad effects. Close and lock the door of the house and, after three hours, partially ventilate it by opening the ventilators, previously arranged for opening from the outside. One ventilator for every 25 or 30 feet, opened for ten or fifteen minutes, is sufficient to protect the plants from possible bad effects of overexposure to the gas. Before inhaling air in the house, however, the ventilation should be more thorough, so that no odor of the gas, which is much like that of peach pits, can be detected. The morning after the fumigation the contents of the receptacles should be buried.

Time for Subsequent Fumigations.—A single fumigation, according to the directions given above, will destroy practically all of the insects except the eggs and some of those in the late pupal stage. Although one such treatment might check the insects so that they would not cause noticeable damage for weeks, in many cases it would be the part of economy to give two more fumigations at times which a knowledge of the life history of the white fly indicates would be most advantageous. Knowing that the egg and late pupal stage of the insect are not to any great extent affected by the treatment recommended, while all the other stages may be destroyed, and knowing the duration of each stage, we can outline a plan of treatment which will practically eradicate the pest in the worst-infested greenhouses. Two subsequent fumigations, two and four weeks, respectively, after the first will subject to the gas all of the white flies in the house in stages wherein, under ordinary circumstances, they are unable to withstand its destructive effects.

Treatment When the Use of Hydrocyanic-Acid Gas is Undesirable.—Fumigation with tobacco fumes, made by burning the refuse stems and leaves, has no effect on the greenhouse white fly beyond temporarily stupefying the adults. The adults may be destroyed, however, by vaporizing in the infested house certain tobacco extracts which are sold in liquid form. To accomplish this result preliminary tests should be made, first using the amount recommended in the directions accompanying the preparation. The attempt to control the greenhouse white fly by means of tobacco extracts alone has never, to the writer's knowledge, proven successful, while many cases of failure have been reported. The frequent fumigation necessary to control the insect when once it has become abundant would be impractical and costly. However, in connection with syringing the plants with a soap solution such a treatment may sometimes be of value, although only when the use of hydrocyanic acid gas is impossible or for some reason undesirable.

Among the soaps, the best brands of whale-oil soap, used in the proportion of one to one and one-half ounces per gallon of water, have been found to destroy all of the white flies except the eggs, a small percentage of the nearly mature pupae, and from 25 to 50 per cent. of the adults which escape the spray by flying from the plants. It is not advisable to syringe tomato plants in greenhouses at any time, when avoidable, as syringing interferes with pollination and produces a damp atmosphere which promotes rot, but the injury by syringing may be as nothing compared with that which is caused daily by the insects. When the use of hydrocyanic acid gas is impractical, an all-night fumigation with a tobacco extract is recommended, followed during the next day by a syringing with a solution of whale-oil soap or its equivalent.

Comparative Cost of the Treatment.—Potassium cyanide costs from about 30 to 50 cents per pound, according to the amount purchased. Commercial sulphuric acid costs from about 2½ to 10 cents per pound. The entire cost for a single fumigation of a greenhouse containing 20,000 cubic feet is between 20 and 30 cents. The labor required is scarcely, if any, greater than for fumigation with other materials. A single fumigation with a suitable tobacco extract would cost, in a house of the same size, at least \$1.50, and the cost of labor for the syringing which is recommended to follow such fumigation would probably not be less than \$1. The soap required would cost only a few cents, though possibly as much as the materials used in a fumigation with hydrocyanic acid gas.

Caution.

Hydrocyanic acid gas is one of the deadliest poisons known, and should always be handled with the greatest care. Never hold the potassium cyanide in the bare hand when pulverizing, but wrap up the lumps in two or more thicknesses of cloth before breaking with a hammer. Dust or small pieces of potassium cyanide should not be thrown away in exposed places, but always buried as should the contents of the receptacles of the chemicals after the fumigation. Never inhale air in a greenhouse after the generation of gas has begun, and provide against anyone entering the house before it is properly ventilated.—With Circular No. 57, Bureau of Entomology, Department of Agriculture.

FLORAL TESTIMONIAL TO ALDERMAN BARRY, ORANGE, N. J.

Artist, Hale, Orange

Photo by John McGowan

adults. The greenhouse is a new one, and, judging from the great difference in the results obtained there and in other houses whose fumigation has been recorded in various publications, it is tighter and does not allow the gas to escape as readily as does the average forcing house.

This shows that the greatest difficulty attending the use of hydrocyanic acid gas, in greenhouses containing plants as susceptible to injury by it as are the cucumber and tomato, is the difference in the tightness of different greenhouses. It is consequently impossible to give specific directions which will be suitable under all circumstances. A fumigation with hydrocyanic acid gas which will kill adults only is not effective for practical use in checking the multiplication of the white flies. Rather than this, the method of control described under the heading, "Treatment when the use of hydrocyanic acid gas is undesirable," is greatly to be preferred.

In most greenhouses, probably 0.007 gram of potassium cyanide for each cubic foot of space for an exposure not exceeding three hours represents the amount which will prove most effective for treatment of the insects without injury to tomato or cucumber plants. In many cases 0.01 gram per cubic foot has been found suitable for the same exposure, but this should not be used except in loose greenhouses where, after trial, a smaller amount is found ineffective. In all greenhouses when an attempt is to be made to control the white fly with hydrocyanic acid gas, it is advisable to first use not more than 0.005 grain per cubic foot of space for a three hours' exposure. If this amount is sufficient for the house, none of the adults will recover after the fumigation, though in the course of two or three days many more will emerge from the pupa cases. The larvae, when destroyed, as they should be by the fumigation, change in two or three days from their normal glistening, greenish color to a yellowish or brownish color. When this result is not obtained by the first test, one or more further tests should be made, increasing the amount of potassium cyanide 0.001 gram per cubic foot of space for each test, with three days intervening to note results, until an amount is reached which is sufficient to destroy the larvae, or until the tender leaves of the plant show injuries as a result of the fumigation.

Tests, thus far, with other greenhouse plants likely to be attacked by the white fly, according to available records, have all been for a much shorter exposure than three hours and, with a much larger amount of potassium cyanide, but it is probable that in case plants other than the cucumber and tomato require treatment for this insect, preliminary tests in a fumigating box or in a small greenhouse will show that the amount of chemicals and length of exposure recommended for these two can be

Growing Seedlings.

(Read by George M. Hollis before Toronto Gardeners and Florists' Club.)

I grow quite a few carnation and chrysanthemum seedlings every year; so far have met with some success and hope to get higher up the ladder before I give up. I should like to see more growers take it up. We in Canada should be able to do something to hold our end up and bring out a variety that would be a credit. The raiser of seedlings must not be disappointed at not getting anything good the first, the second or even the third year, but after that he should have some success. In the first place, he must make a start and the plants raised the first year should be the foundation of the seedling stock. The color of the flower does not matter much provided the plants are strong, with stiff flower stems, and an upright growth, the flowers not very full in the petals and calyx non-bursting. Select the plants you mean to seed as above. Take the pollen from some healthy, strong-growing plants, never weak, puny ones. Nor is anything gained, I think, in getting all the new ones to work with, unless some new variety would give you some advantage in vigor, also in size of blossom. But with good judgment in selecting your seedlings, it is better to work with them.

In the dull days of Winter it is not so easy to cross the flowers as during the warm, bright weather of early Summer, as many varieties have no pollen anthers before they burst. The petals should not be cut off, and two days after the pollen can be put on the pistil, bringing it to the flower with a pair of small forceps. Do this about noon when the sun is shining and, if successful, by next day the flower will close; if not, repeat. After a few days pull out the dead petals. Some varieties will not seed, but the pollen from them, in nearly every case, is wonderfully effective.

Label your crosses and keep an account of them. When the seed pods show signs of bursting, gather and put each in a separate paper and keep in a tin box in a cool, dry place till sowing time. The best time for sowing, I think, is February. The seedlings can be grown on in pots, or flats, and planted outside in May.

Do not stop the seedlings. Let them flower; and do not be afraid to pull out the bad flowers and the poor growers, and after planting inside, you will have more to pull out. Out of five hundred you may end with twelve or less. Cross them again and sow. Select and house as before and propagate any you think worth saving. They may be good as seedlings, but when grown from cuttings they may be far from good.

The carnation, as grown for cut flowers, has practically no rest. The cutting taken cannot in a sense be called a new plant, as it is only a branch, so to speak, of the old plant, and if ever propagated and badly treated a good kind may soon be ruined. So seedlings of extreme vigor, propagated and grown with care, are what are wanted, and when put on the market they should keep in health and vigor for many years.

The last two years I have lost mostly all of my seedlings by being flooded when planted outside, and this year I have to work up a new stock. I am using some singles which, I hope, will give me some vigorous plants to seed next year. Some will say to use singles is going backward, but in my opinion this is not so. There are some grand varieties sent out this year, but there is room for something better yet, and I hope this brief paper will induce all you carnation men to try for the top.

BUYING and SELLING

THE arrival of two or three buyers in a busy New York downtown wholesale house early on a bright sunny Spring morning is hailed as an omen of good fortune that will lead up to big sales for that day.

The list of "Buyers in Town," published during the season by a leading metropolitan journal may contain two or three hundred names; getting down to railroad accommodation, one big train load, representing a hundred industries.

Allowing 250 passengers to the average train load it would require 28 trains to haul the buyers who weekly purchase from the store of good things advertised in THE FLORISTS' EXCHANGE.

Instead of having to come to town for their supplies these buyers get THE FLORISTS' EXCHANGE served up to them every Saturday "just off the press"; it's less expensive than a railroad journey, just as reliable as the personal visit to the stores, saves a lot of time, and it's all under the one roof.

When you put an advertisement in THE FLORISTS' EXCHANGE you're talking direct to 28 train loads of buyers, good buyers, too. Where can you find an equally good opportunity?

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDDEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticulture Subjects. Write us for a Catalogue.

Review of the Market

NEW YORK.—On Monday of this week business in cut flowers started off very nicely, and it looked as though we were in for a general revival. But, alas! the spurt was of but one day's duration, and what with the unseasonably warm weather and a general increase in supplies, trade has gone from bad to worse ever since. The immense shipments of narcissus coming from the South every day are being closed out at from 35c. to 50c. per 100. This stock is all of very fair quality and arrives in good condition considering the distance traveled, and it is no doubt profitable to the growers, even at the above-mentioned figures. It will easily be seen, however, that home-grown narcissus is having a decided setback for the time being, for, while the quality of the latter may be superior, the Southern product fills the bill, in most cases, and price is everything these days when it comes to bulbous flowers.

Roses are gradually going lower and lower. American Beauty can be had in quantity at 12c. for specials and there is a large supply every day. Ulrich Brunner and Liberty are not moving nearly so well as they have done, owing to the supply of General Jacqueminot, which is arriving in quantity. The latter are, in fact, commanding a higher figure than any of the other roses.

Bride and Bridesmaid there are so few of the specials called for that much cutting in prices has to be resorted to before they are finally cleared out and the averages are pulled down proportionately.

Carnations are in oversupply and no fixed prices obtain; really fine stock is to be had at \$1.50 per 100, while flowers, with rubber bands, are at the mercy of the buyers and realize very low figures indeed.

Lilies are abundant; 6c. will buy good long-stemmed flowers, and shorter and inferior blooms are worth only \$3 or \$4 per 100. Lilac is a slow seller; as also are lily of the valley, sweet peas and mignonette. Gladiolus is arriving in limited quantities, and \$1.50 per dozen is an asking price. A few iris have appeared also, but there is no special demand for it so far.

Pansies have become plentiful, as also have stocks and antirrhinum. While there was a little brisker call for violets on Monday morning, it only proved a spasm, for with the afternoon shipments of that day there came the usual oversupply, and prices on violets remain unchanged.

CHICAGO.—Trade conditions are anything but bright here at the present time; there is very little doing locally, although shipping trade remains fairly good. Stock of all kinds is arriving freely, and on Tuesday it began to accumulate in large quantities, with no opportunity to move it. Wednesday morning buyers were able to purchase flowers at nearly their own figures. Summer weather is prevailing, although we are promised relief soon. Large shipments of jonquills are being received from the South, and sell at from 10c. to 15c. per bunch of 25. Also from the same source come big consignments of lilac.

The supply of American Beauty is equal to all demands. Bride and Bridesmaid are beginning to show the effects of the excessively warm weather, both in color and size, and are being received in large quantities. The demand at no time is heavy enough to take all coming in; consequently, prices have declined all around. Meteor are also affected by the heat and are not of as good quality as heretofore. Madame Abel Chatenay are being received in exceedingly fine condition.

Carnations are also in large supply; there is difficulty in moving them at anything like remunerative figures.

Lilies are becoming more numerous as the season advances, and the demand does not seem equal to the supply. Prices range from \$6 to \$15 per 100, according to grade. The market is glutted with tulips, which bring from \$1.50 to \$5 per 100, according to quality. Dutch hyacinths are in abundance. Narcissus are difficult to move at any price. Violets are numerous, and the quality has deteriorated considerably. Smilax is scarce at \$8 to \$12.50 per 100. Sweet peas are now in larger supply; the quality is improving, and some fine stock is being received. The same may be said of daisies. R. J.

CLEVELAND, O.—The condition of the cut flower market remains unchanged with the possible exception of violets, which are now rather scarce, the growers doing all they can to keep them back. Bulbous flowers are moving slowly. Splendid carnations are being sold for more nothing and roses, especially Bride, Bridesmaid, Meteor and Kaiserin Augusta Victoria, are very plentiful. O. G.

ST. LOUIS.—As regards trade in cut flower lines the past week the news is not very encouraging, so far as the retail trade is concerned; the complaint is general that business is dull. The plantsmen and landscapers, however, report that they have all they can do preparing grounds and beds for early planting. The wholesalers are still receiving large consignments from their growers. The stock is difficult to dispose of, and that only at very low prices. Fancy flowers in all grades sell fairly well. What we see in the market is of good quality.

Violets are not so abundant, and most of the Kirkwood growers say that next week will about see the last of them in the market. The best now bring 35c. per 100, and down to as low as 20c.

With roses the market is greatly overstocked. American Beauty, both long and short, are more than enough; fancy long are down to \$3 per dozen, and shorts as low as 4c. each. Other roses, extra fancy, run to \$6 per 100, and down to 1c.

Carnations are in abundance in all colors and varieties, white not excepted; 2½c. buys fancy stock, and 50c. to 75c. per 100 the common sorts.

Callas and Harrisii lilies, single and double daffodils, are more than the trade can use at present. Paper White narcissus and Roman hyacinths are not so plentiful just now. Lily of the valley is extra fine, and plenty of it. Prices remain as last week. Smilax is selling better, with other green in plenty. ST. PATRICK.

INDIANAPOLIS.—The past three or four days business has been very satisfactory. Unseasonable weather continues to the great detriment of the trade. Rhododendrons, azaleas and bulbous stock intended for the middle of April are now on the market. With the continuation of warm weather the outlook for Easter is certainly very gloomy this year, as the choicest plants will be out of the market. Violets are small and not many, if any, will be in bloom for Easter.

Carnations are plentiful, but trouble is being experienced in keeping them; this is especially true of Enchantress, which turns dark on the edges at the end of one or two days; the output of two or three growers has been tested with the same result. Fancy grades wholesale at \$3 to \$3.50 per 100; medium grades bring \$2 to \$2.50.

The demand for roses is fully supplied. Select Bridesmaid, Bride, Golden Gate and Ivory wholesale at \$7 per 100; seconds bring \$4 and shorts \$2 to \$3 a 100. Liberty are of poor quality; selects realize \$10 per 100 and firsts \$6 to \$8. American Beauty have decreased in price; select 36-inch stem flowers may be had at \$30 per 100; 24 to 30-inch bring \$20, and 12 to 15-inch stems \$12.50 per 100.

Marie Louise violets are plentiful at 25c. per 100; fancy Princess of Wales bring 40c. to 50c. Large quantities of lily of the valley have been used for funeral work during the past week; 64 per 100 is obtained for it. Bulbous stock is disposed of with difficulty at \$3.50 to \$4 per 100. Sweet peas are about the only flowers for which there is a strong demand; the best ones sell at \$1 per 100. I. B.

WASHINGTON, D. C.—There has been an abundant supply of flowers this week and only a very limited demand. American Beauty brought from \$4 to \$6; Liberty, \$1.50 to \$2; first-class Kaiserin Augusta Victoria, Souvenir du President Carnot, Meteor, Bride, Bridesmaid, Golden Gate and Ivory, from \$1 to \$1.50 per dozen. The better sorts of carnations sell at from 50c. to 75c.; lily of the valley, 75c. to \$1 per dozen; violets, 35c. to 75c. per 100. Lilac bring \$2 to \$3 per dozen; sweet peas, 25c. to 50c. per bunch; marguerites, 25c. per dozen; daffodils, 25c. to 35c. per dozen; Lillium Harrisii, 15c. per flower; mignonette, 35c. to 50c.; tulips, 25c. to 50c., and Dutch hyacinths, 50c. to 75c. per dozen.

Owing to the very warm weather lately a great many azaleas and lilies, intended for the Easter trade, have become too far advanced. The same may be said of Dutch bulb stock. M. C.

KALAMAZOO, MICH.—Trade continues very fair, very little stock going to waste. Funeral work has been very brisk of late, some considerable orders being sent out of town. The weather all through the month has been quite mild and pleasant, the result being ample supplies and considerable transient trade. Green carnations were in large demand on St. Patrick's Day, and each store disposed of several hundred at 5c. and 10c. each. Shipping trade is reported as holding up well for this season; and thus far Lent has had no effect on business. Easter openings this week will use up some stock, so the prospects are at least fairly good till Easter week. S. B.

BOSTON.—Durling the past week there has been a fairly good demand for most kinds of stock. Roses have remained in practically the same condition all the week, although Saturday saw a slight change. American Beauty are a trifle lower in price, there being little demand for them.

Carnations have remained firm, with a slight increase in prices over last week. Bulbous stock is unchanged. Lilies are becoming very plentiful, with a decrease in price. There have been fewer violets coming in, consequently the glut of these is over for this season. All other kinds of stock remain in about the same condition as a week ago. J. W. D.

NEW BEDFORD, MASS.—The past week has been a very good one as regards trade, funeral work having cleared up all the surplus stock. Prices are about as usual. Sweet peas are now coming into the market of very good quality. Spring openings in some of the stores have helped things along, but this branch of the business does not amount to much in this section. HORTICO.

SYRACUSE, N. Y.—Trade here has been very good the past two weeks and the numerous millinery openings have kept the florists busy putting in extensive decorations. There is abundance of stock in all lines of very good quality, carnations leading the demand. There is an increasing call for potted plants in bloom. J. B. B.

OMAHA, NEB.—Trade has held up remarkably well despite the advent and reign of Lent. The extremely open and mild weather causes many inquiries for plants and seeds. Pot plants have sold very steadily all winter, and even at this season many are being disposed of. This condition has grown greatly in the last few years. J. H. B.

PITTSBURG.—Business is slow, with plenty of stock coming in. Roses and carnations are of good quality and prices very reasonable. The warm weather is bringing on bulb stock, and if it should continue for some time it will be a difficult matter to hold back flowers for the Easter holidays. E. C. R.

PROVIDENCE, R. I.—Although a full market exists, with only average prices, business continues good. Carnations fetch \$2 per 100 wholesale; roses, 3c. to 6c. each. Violets still hold at 50c. per 100, but the quality is gradually falling off. C. S. M.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

CANTON.—Jacob Handte, who has been in charge of greenhouses at Calla, O. for some years, has purchased a greenhouse plant near this city.

IOWA CITY, IA.—James Aldous, Sr., and James Aldous, Jr., are planning to build a number of greenhouses here, and start in business. Both are experienced florists.

WASHINGTON, D. C.—Wallace Kimnell, who has been employed in George Cook's store, has opened a store on his own account, at 14th street and Massachusetts avenue, N. W. M. C.

ALLIANCE, O.—The Lamborn Floral Company has been incorporated with a capital stock of \$25,000. Incorporators: C. C. Weybrecht, L. L. and Mary Lamborn, H. C. Koehler and Ruth Butge.

SUPERIOR, WIS.—Albert Otto, a florist from Antigo and Neenah, Wis., has purchased ten acres of ground here, and will embark in the business. He contemplates erecting from 15,000 to 20,000 square feet of glass.

BEAVER'S FALLS, PA.—The greenhouses near Junction Park, formerly known as the Myer's greenhouses, and lately conducted by B. F. Engle, of Rochester, changed hands at noon on March 15. The new firm will be styled the Junction Park Greenhouse and Nursery Company, and will be managed by Otto Minor.

DETROIT, MICH.—Philip Breitmeyer, Frederick and William Breitmeyer, of Mt. Clemens, and Thomas B. Barnett, of Detroit, have incorporated as John Breitmeyer's Sons, with \$75,000 capital stock, of which \$2,500 has been paid in cash and \$72,500 in other property, including the present florist's establishments at Detroit and Mt. Clemens.

BUSINESS DIFFICULTIES.

SHELBYVILLE, IND.—Willis F. Law, manager of the Law Floral Company, which has been doing business in this city for the last fifteen years, has made an assignment on account of poor trade. The liabilities are scheduled at \$832 and the assets at \$408.25.

FIRMS WHO ARE BUILDING.

LIMA, N. Y.—M. P. Allen is building a greenhouse.

PORT CHESTER, N. Y.—Emil Leonhard is building a new greenhouse 30 x 15 feet.

TOLEDO, O.—Krueger Bros. are increasing their greenhouse capacity one-third.

SHAWOMET, R. I.—Leonard L. Potter will build a greenhouse, 150 x 24 feet, for carnations.

POST FALLS, IDAHO.—W. S. Vandorn is erecting a greenhouse, 54x154 feet. He is also installing a 45-horsepower boiler.

COLDWATER, MICH.—Van Aken Bros. will build two new greenhouses, each 26 x 116 feet, for American Beauty roses and general stock. They have now fourteen greenhouses in all.

New Bedford, Mass.

News Notes.

E. H. Chamberlain had a very pretty window display last week composed of some elegant pots of Gloire de Lorraine begonias. These were grown by Peter Murray, of Fairhaven, who has leased Winsor's place. Mr. Murray is an expert in the culture of this beautiful plant.

At the next meeting of the Horticultural Society Mr. Murray will give an interesting talk on begonias, which is being eagerly looked forward to. This society is fast becoming an important factor in this section, some of its members being among the most influential people of the city. It is expected to have a fine exhibition September 14 to 16, very generous premiums having been donated for this purpose.

Violets in this section will soon be a thing of the past, and by Easter will have been thrown out to make room for bedding plants, of which a good many are grown around here. This has been a good Winter here for the florists.

At Robert H. Woodhouse's place things are being put into shape for the Spring rush. At this establishment a large number of bedding plants is grown. His carnations are in good shape, especially a bed of Fair Maid. This variety has done well with Mr. Woodhouse, it having entirely taken the place of Enchantress. He is trying a great many new varieties this year, both in carnations and chrysanthemums.

H. A. Jahn has some fine carnation seedlings; several of them seem to be very promising. HORTICO.

FORT DODGE, IA.—On March 9 a fire in the Dunscombe greenhouses did damage to the extent of \$100.

H. WEBER & SONS

announce the completion of arrangements whereby they will, beginning in January, 1906, disseminate jointly with

THE E. G. HILL CO.

THEIR TWO GRAND NEW CARNATIONS

My Maryland and Jessica

MY MARYLAND is already well known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for it a robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway X Lawson) seems united and improved upon in this variety.

In **JESSICA** we have in the red and white variegated class, what My Maryland will prove amongst white. It is descended through several generations of variegated seedlings of Helen Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than My Maryland and just Lawson height. Aside from these differences and the color, the description of My Maryland applies to Jessica. Under favorable conditions four-inch blooms are not uncommon. We pick Jessica to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score.

We have already booked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety up to the time the cuttings are received.

Chicago.

Late News. Peter Reinberg broke ground Monday for a new range of houses, 33 x 250 feet, to be devoted to roses.

On March 23 John C. Moninger lost \$4,000 through fire. This, however, will cause no delay in turning out material.

T. D. Mesconotes sold out to his brother Saturday last.

Otto Freese, formerly with George Reinberg, has accepted a position with Pochlmann Brothers.

On Tuesday last the trustees of the estate of M. Winandy sold his wholesale store, at 51 Wabash avenue, to Messrs. John Zeck and Math. The former has been in the wholesale business for a number of years; Mr. Math is a grower.

There is a veritable glut of stock; prices are very low, with no hope of betterment for some time.

FISCHER'S

GRAND FREESIA PURITY

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss, bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$1.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

R. FISCHER, Great Neck, L.I., N.Y.

Mention the Florists' Exchange when writing.

Color of Cartledge and Estelle Carnations.

(126) Kindly inform me if there is any resemblance in the color of the above mentioned carnations.

COLOR BLIND. -We have no means of comparing these two scarlet carnations at present, but if inquirer will kindly send us flowers of each variety, we will endeavor to answer his question more fully.

Carnation Compost. (130) I wish to make a compost for carnation soil, a concentration to mix with sod when filling benches.

Night Temperature for Carnations. (131) What night temperature should be afforded carnations Enchantress, Lady Bountiful and Prosperity?

Coal Ashes with Carnation Soil. (132) Kindly let me know if coal ashes mixed with heavy soil would improve it for growing carnations?

A Rambler Rose Trouble. (133) I send you a sample of my Rambler roses. They are fine, healthy plants, in 5 and 6-inch pots.

Chrysanthemums. (134) Before I received the "Chrysanthemum Manual" I had taken my cuttings out of the sand and transplanted them into boxes about 2 1/2 or 3 inches in depth.

Heating. (135) We have three greenhouses of the following dimensions: One 80x12 feet, even span, and 10 feet at ridge.

A. SCHMITT, Cleveland, O. Station H. Mention the Florists' Exchange when writing.

wood ashes and sheep manure, if any, should be added to the superphosphate and bone meal. Then, should two inches of half-decayed cow manure or inverted sod be placed on the benches before filling? SUBSCRIBER.

-To prescribe certain amounts of prepared fertilizers for a soil which we know nothing about would only be guess work at the best. If there is good sod land and cow manure, as the letter implies, we would make the compost of these two in the proportion of one part manure and four parts of the soil. When the benches were being filled, instead of putting two inches of sod, or manure, in the bottom, just cover the cracks with the rougher pieces of the sod and fill in with the compost, adding at the same time a five-inch potful of bonemeal to each wheelbarrowful of the soil.

-A suitable night temperature for the varieties mentioned would be from 50 to 52 degrees. They can be grown a few degrees warmer, but the flowers are not so good on the average.

-We would not recommend mixing coal ashes with any soil. Why not use builders' sand, or gravel, to lighten the soil?

-The roses that have not yet shown the buds will be too late for Easter, and they had better be held back rather than forced, so as to make saleable plants for Memorial Day.

-The chrysanthemums will no doubt come along all right. If four leaves have been left below where they were stopped, they will soon break away and start new leads.

-The floor of boiler room is ten feet below greenhouse floor. How much more, if any, would the boiler mentioned heat?

W. B. F. M. F.

—To properly heat the three houses 55 degrees inside, with outside temperature of 15 to 20 degrees below zero, will require about 3,300 square feet of heating surface. The capacity of the boiler mentioned, under fair conditions, will be 7,500 square feet, with a properly proportioned grate. The size of the grate mentioned, 25 square feet, will do or 3,300 square feet necessary for the greenhouses. The excess in size of boiler will result in economy of fuel, as the boiler can be run easily. This boiler can be used at low pressure, and attachments can be placed on it to regulate it. I would suggest having a good safety valve placed on the boiler, set at, say, ten pounds. After the ball is set, strap a piece of wood along the iron rod of the safety valve, so that the ball cannot be moved beyond the pressure indicated. This will absolutely insure no trifling with the safety valve, and the boiler will be under absolute control at this stated pressure.

U. G. SCOLLAY.

What size tubular boiler will be required to run 5,000 feet of 1½-inch pipe, fed by 400 feet of asbestos covered 3-inch steam pipe? What size coal will be the most economical for such a boiler? How much fuel ought it take to run that amount of pipe twenty-four hours?

H. S.

—A 40 horse-power tubular boiler will be required to do this work economically. Pea coal will be the most economical for such a boiler, assuming that you have a night man. If pea coal is used, it will take about 120 tons per season. It is a difficult matter to tell a florist how much coal a boiler will burn in twenty-four hours, as conditions of firing vary much. We find that the best way to impress a florist regarding any boiler is to let him know the amount of coal burned per season; he can then make his own calculations.

U. G. SCOLLAY.

White Fly.

(136) Kindly inform me of a good way to destroy a little white fly that attacks different plants like fuchsia heliotrope, salvia, lantana, and others. The flies are commencing to lay their eggs all over the leaves. I have fumigated with tobacco powder a number of times, but without avail.

H. M.

—See the Government expert's report on this insect in another column of this issue.

Growing Different Roses in One House.

(137) Is it right to grow the Maman Cochet and Kaiserin Augusta Victoria in the same house as Liberty, Bride, and Bridesmaid, and what is the probable cause of the leaves falling off the former while all the others are doing well? There is not a red spider in the house. My predecessor gave the plants liquid cow manure once a week; but they made a weak growth. The soil is new, clayey; and the plants are in solid beds. Upon digging up two of them I found the fine roots without any apparent life. They have been planted more than a year, and were very hard pruned back last October.

ENGLAND.

—We do not see why the Cochet roses should not do equally well with the other varieties mentioned in the same house. Probably the cause of their failure is due to the hard pruning they received last Fall. Tea roses do not require such severe cutting back as the hybrid teas.

Chicago.

News Items.
E. E. Pieser, of Kennicott Bros. Company, is of the opinion that cut flower stock will be quite plentiful, if not in oversupply, for Easter trade.
Vaughan & Sperry had on exhibition Tuesday of this week a fine vase of a seedling rose from George Hoppe, Grand Rapids, Mich.; also some fine flowers of a white Chatenay. Owing to the ill-health of Mr. Hoppe he is trying to sell all the stock of both of these roses.

Manager Wilson, of Vaughan's green-houses, is of the opinion that Easter decorative plants will be short, as all growers will not be able to keep them back until that date.
W. N. Rudd will introduce Lady Margaret carnation to the trade in 1906 with another prominent grower. This carnation has every appearance of becoming a winner in its class.

P. J. Foley has returned from a visit to his extensive holding of timber and mining property in Montana.
Leonard Kill, of Peter Reinberg, reports that they will have a fine crop of Mme. Abel Chatenay from now until after Easter. They intend to increase their planting of this favorite rose, also of Uncle John, which at present is in fine condition.

ROBT. JOHNSTONE.
Indianapolis.

The Week's News.

The State Florists' Association will have a Spring exhibition at the State House horticultural rooms, Wednesday, April 5.
One day last week 17,000 Marie Louise violets were disposed of at a department store sale. As is customary at these sales, violets were sold at the florist's cost price.
Smilax and adiantum are very scarce in this section; all used is being shipped in.
John Bertermann and daughter Irma have left for Europe to be gone two months. This is Mr. Bertermann's first visit to his old home in twenty-nine years.
John Rieman is on the sick list.
Visitor: Mr. Rolker, New York.

Pittsburg.
The Week's News.
 The late C. T. Siebert's new store in the East End, one of the finest in the city, was opened up last week. Mr. Ziegers, the manager in charge, has worked hard lately, and the arrangements and decorations show that he understands his business. The store-room is located on a very prominent corner and should do a good business. The conservatory connected with the store is filled with choice blooming and decorative plants which show up well through the plate-glass sides fronting the street. The store is artistically decorated; a nice stairway leads to the second floor, where baskets and other supplies are shown. The whole establishment is complete and worthy of a visit.
 John Bader and Mr. Koerbel, of Jeanette, Pa., spent a few days East looking up stock for the Easter holidays.
 The April meeting of the Florists' Club takes place Tuesday, the 4th. Easter flowers, plants and novelties is the subject for discussion, and a good exhibit will be made. At our last meeting the question box was introduced, and quite a lot of queries were taken from it, which will be answered at this meeting by various members to whom they were assigned. Those who are fond of howling, and intend to join a club which is being formed, should be on hand, so that a start can be made in practice games.
 The Easter flower show in the Schenley Park conservatories opens up next week; from present indications it will be one of the finest ever seen.
 Visitors during the week were: E. Reid and S. S. Skidelsky, of Philadelphia.
 E. C. REINEMAN.

MILWAUKEE, WIS.—Joseph E. Pollworth will be married April 3, to Miss Alma G. Yahr. The prospective groom is the secretary and treasurer of the C. C. Pollworth Company, and the bride is the daughter of F. G. Yahr, president of the Yahr & Lange Drug Company. Miss Yahr is well known in German society circles in this city.

BOWLING.
NEW YORK.—On Friday evening, March 24, the final game between New York and Madison was played in Newark, N. J., and resulted in a victory for Madison.

News Items.

Victor Warendorff, of New York, a member of the firm of Warendorff Bros., has been a guest at the Yates Hotel the past few days. Mr. Warendorff has been conducting negotiations for the lease of a store in the center of this city with the view of establishing a branch here.

Bard & Davis are still showing fine stock. Their Lady Bountiful carnations have given a steady supply of first-grade blooms all the season, and will still continue for some time yet, to judge by their splendid appearance. Mr. Bard considers this variety without a peer in point of quality and productiveness. The firm is very much elated over its success the past Winter and the increasing demand for cut flowers is such that the firm contemplates the erection of two more houses, 100 x 18 feet, to be devoted to the growing of roses, in which both members of the concern excel.

L. E. Marquisee is busy making shipments of the leading varieties of carnations in rooted cuttings and pot plants to growers in England, some of whom bought heavily last year. He considers Lady Bountiful a wonder, and is propagating a large stock of this variety. Many of the new varieties of carnations will be tried here the coming season. Fiancee will be grown extensively, though at present a large proportion of the cuttings received have gone off with stem rot in spite of the utmost care. A number of promising seedlings will be tested for another year; while this year's sowing, in thousands, are picked out preliminary to planting in the field. The foreman, Henry Bellamy, has been very successful the past Winter in fertilizing, and expects some very good results from a number of the crossings made. Chrysanthemums, too, will be grown extensively the coming season.

J. B. B.

Rome, N. Y.

Mr. Byam has everything looking spick and span. He has surely one of the best growers out; the gentleman has only been with him since late in the Fall, but everything shows up well. I noticed here, without any exception, the best Enchantress this Winter. His Mrs. Lawson are also good. Rambler roses will be about right for Easter. He has not had very good luck with lilies. Roses were fine. Mr. Byam intends to build two large houses this season.

John Humphrey's place is looking fine, as it always does. C. B. Humphrey is in California, but intends to return in the Spring or early Summer and close out his business, going to California to stay permanently on account of his health. I noticed here a fine lot of lilies in flower; the stock to come is also looking very well.

Boston.

May Have a Joint Show.

Now that the American Rose Society has decided to come to Boston again next year, a plan is being talked over by prominent horticulturists to hold the convention of the American Carnation Society at the same time as the Rose Society's meeting and make one large exhibition of the whole affair. The rose men would have to meet a little earlier and the carnation men a little later, which, I presume, they would be willing to do, providing we guarantee the weather man to not have their usual blizzard. It would seem that the plan could be worked out very satisfactorily and Boston would have the greatest fête ever.

News Items.

Thos. Galvin exhibited some of the prize-winning roses in his Tremont street store on Monday.

Robert Miller, well known as a rose grower in this section, has leased the E. A. Lamprey place at East Brookfield for a term of years.

Carl Jurgens is sending in some fine iris to Welch Bros.

MacMulkin is handling large quantities of yellow marguerites, of which he makes a speciality.

Killarney is one of the most popular roses at Doyle's.

J. W. DUNCAN.

Newport, R. I.

Trade Notes.

Our florists have had busy times and the seedsmen all they could do and the gardeners have had their hands full getting everything in readiness for the coming season. Plowing is commencing and already a few potatoes and sweet peas are in the ground. The weather is warmer and very pleasant. The trustees of the Island Cemetery have had their annual meeting and report the affairs of the cemetery in a most successful condition.

Brandt has moved his retail location from the center of Thames street, where he has been so long, to the lower end of the street and is now to be found at No. 19.

Carl Jurgens, Jr., will be married April 10 to Miss Florida Hubbard, of Washington, D. C. The young couple will reside with Mr. and Mrs. Carl Jurgens on Pelham street.

Frederick M. Smythe, of Wadley & Smythe, has been here from New Rochelle, N. Y., for a few days.

Crocuses and tulips are showing to a considerable height in sunny places which are protected from the north winds. The frost is now pretty well out of the ground.

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 14

NEW YORK, APRIL 8, 1905

One Dollar Per Year

CARNATIONS STRONG ROOTED CUTTINGS

READY FOR IMMEDIATE DELIVERY except where noted

WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety, which we are introducing this season we are sure will prove to be the very best variegated sort. Pure Ivory white, with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE (April delivery.) The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices in great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

We are now prepared to book orders for 1906 for

THE COMING SCARLET CARNATION

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker.

Orders will be filled in rotation, as received. Delivery beginning December next. \$12.00 per 100; \$100.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

New Scarlet Carnation Cardinal

SPECIAL OFFER

Having been very favorably impressed with this Carnation, we purchased a large stock of it, securing early delivery, with the intention of growing it for the New York Market, but we have received such a large number of orders for our new Carnation **ROBERT CRAIG** that it has become necessary for us to devote the space intended for the Cardinal to stock plants of Robert Craig for propagating purposes. Therefore, our selected stock, consisting of 3,000 plants from 2-inch pots, is now for sale. It is in especially fine condition and we are certain will prove a very profitable investment for any florist who needs a first-class fancy scarlet.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an un-introduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 35 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

CHARLESTON, S. C.—William McIntosh, seedsman and florist, expects to be out of the business in a short while.

HOLLAND CROPS.—Hyacinths, narcissus and tulips appear very strong and healthy. Last week we had two showers of hail, and some nights the fields were white with frost. But it seems the plants did not suffer, and if the fine soft weather will continue, our prospects will be favorable for next Summer. J. B.

LONG ISLAND SEED NOTES.—Contrary to all expectations, the retail trade not only recovered from the stagnation in February, but has gone far ahead of the season's trade for the last six years. At Floral Park all three establishments have been working nights, and are from one to two weeks behind in filling orders. J. L. Childs reports the best trade in years, both wholesale and retail, and to his satisfaction—it is along the lines that afford the best profits, viz., seeds and bulbs. The plant trade is good, particularly in good stock, to the growing of which he is giving particular attention. He is enthusiastic over his California investment, and intends growing on a large scale choice plants for the Eastern markets. The foreign demand for bulbs has been unprecedented—far in excess of supply.

J. Roscoe Fuller & Co. are very busy, more so than for years, and we hear the same reports from the V. H. Halllock & Son establishment.

The Cottage Gardens Co., Queens, have just received from Europe six carloads of choice evergreens and other nursery stock, a large proportion being choice specimen plants.

The seedsmen of New York have not had so good a season in years, the only complaint being they cannot keep up with the orders.

The Long Island Seed Company, Mattituck, say nothing, but are pushing business along all lines.

The spinach business is a surprise to every one. The trade is placing or-

FISCHER'S GRAND FREESIA PURITY

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Buds no larger than dried wax beans of this grand Freesia make as large a flower as the large buds, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large buds, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

R. FISCHER, Great Neck, L.I., N.Y.
 Mention the Florists' Exchange when writing.

ders with the farmers on Long Island at 15c. per pound. This is for the Bloomsdale, and that because it was a short crop last year; and there is a demand for early delivery which the foreign market cannot supply.

The seed stocks on Long Island are now being set, and the prospect is not as favorable as appearances indicated at our last report. The cabbages have kept well where they were trenched on heavy and dry grounds. On low grounds, where the water stood in the trenches, they have suffered badly—more than half rotted. A strange condition is noticeable the present season, viz., the growers who did not get their plants started early last Autumn, have had by far the best success in their keeping, while those who put nearly full-sized heads in the trenches have lost heavily.

Scotch kale has kept better than usual, particularly where the plants were set early last Summer. The indications now are for a full average crop on the acreage set, which, unfortunately, was not large. The Siberian kale is also looking well.

Rutabaga promises a good yield, the roots having kept perfectly, and are already showing signs of active growth. Turnips, which are being grown on another section of the island, are looking fine; and if climatic conditions are favorable, there will be a good yield, as the stocks were never taken out in better condition.

European Notes.

With the open-air temperature in the sixties, and from nine to eleven hours of bright sunshine every day, our plants are making rapid progress where they are strong enough to respond to such stimulating conditions. Of course, there are the usual failures in plants that have the appearance of being sound; but as soon as an effort is required of them they go under. The full extent of this shrinkage will not be apparent for another three weeks. The foregoing remarks apply only to the northern half of Europe from the Atlantic to the Russian frontier.

In the south, especially in France, the ravages of the Winter are more clearly seen. Celery, kohlrabi, radishes, Winter varieties, beets and mangels are in great part destroyed; spinach is in nearly the same condition, and carrots, particularly red varieties, are very seriously diminished.

It is somewhat remarkable that while the general demand for seeds for Spring sowing continues good, the trade in peas is almost at a standstill. As a consequence, special surplus offers are flying round in all directions at prices that mean a very heavy loss to the holders, but no one cares to buy.

The same is true of potatoes, and what with Eldorado selling for 25 cents per pound, and Northern Star realizing only \$10 per ton, it is no wonder that some of last year's speculating lunatics feel pretty bad. It is refreshing to find such good old varieties as Puritan, Early Rose and Beauty of Hebron, all of which we owe to America, still in good demand and realizing remunerative prices. Of the newer introductions Ensign Bagley has already become the standard variety of the early white kidney section, alike for appearance, quality and crop. The Carman sorts are practically played out; the tubers were too large, although of extra good quality, but the worst fault was their liability to disease.

ROSES! CLEMATIS!

To close out our surplus on these items we are making low quotations on

Strong 2 Year Dormant Plants—Crimson Rambler, White Rambler, Pink Rambler, Yellow Rambler, Mme. G. Lulzet, Magna Charta, Frau Karl Drusehiki.

W. & T. SMITH COMPANY, Geneva, N. Y.
 Mention the Florists' Exchange when writing.

The testimonial to Henry Eckford is now fairly launched, and is being warmly taken up. An address on vellum is settled upon, and any money received beyond that will be devoted to something that will act as a permanent testimony to Mr. Eckford. The fund will be a shilling one (25c.), and so far about £10 has been subscribed. Any sum can be sent and all will be acknowledged in shillings in the horticultural press. Many of our American friends will no doubt desire to contribute; will they kindly remit to the secretary, H. J. Wright, 32 Dault road, Wandsworth, London, S. W.

[We had already called the attention of our readers to this very excellent and appropriate movement. (See page 430, last week's issue)—Ed.]

Seedsmen and florists on the look out for a striking novelty should secure Van Tubergen's Carmine freesia. Visitors to the Haarlem show are loud in its praises; the mauve variety is described as a chaste and beautiful flower, but not a very effective color.

The Cedar of Lebanon.

The following interesting letter from a correspondent at New Rochelle, N. Y., will be read with interest by many:

Dear Sir: In a recent issue of *The Florist's Exchange* you have given a very instructive, as well as interesting, talk on cedars, mentioning especially the cedar of Lebanon. Curiously enough, in a few days after reading your notes, there came into my hands a copy of *Scribner's Magazine* for July, 1903, containing an illustrated article on the "Cedars of Lebanon," by one who had camped for a month in the cedar grove on what is known as the "Cedar Mountain" in Lebanon. There are only about four hundred trees left, and they are enclosed by a wall built by order of a governor of Lebanon. Some of the trunks measure more than forty feet in circumference; and on one broken bough, of thirty inches diameter, the writer of the magazine article counted, with a microscope, over seven hundred rings. It was interesting to know that there is a large tree in a cemetery in your city, and I am writing to tell you of a tree in this city. It is more than fifty feet high, at a guess, and measures over six feet around the trunk. I enclose a twig taken from it. The history of the tree, as I have heard it, is this: The property on which it stands was formerly owned by a physician, long since dead. I remember him as a man of some sixty years in my boyhood, about forty-five years ago. He had traveled in Syria and brought with him from Lebanon three little cedars. This one is the sole survivor. It has a beautiful shape, and the branches have the appearance of being arranged in layers. I am not familiar with the cedar of Lebanon, but I feel quite sure this is one; and I am sending the enclosed twig for your opinion, as, of course, you will know at a glance. Some time, if not too much trouble, will you kindly refer to the matter in your notes in *The Florists' Exchange* and tell us if it be the true *Cedrus libani*. There are a few cones on the top of the tree. I beg to apologize for addressing you directly, but a man who really loves trees, you know, will intrude himself anywhere if he can learn something about them. CEDARS.

The sprig referred to indicated the tree to be a true cedar of Lebanon, and it is interesting to know such a fine tree exists at New Rochelle, N. Y. The one referred to by myself as growing in Laurel Hill Cemetery, Philadelphia, is 7 feet 8 inches in circumference at two feet from the ground, and 7 feet 1 inch at five feet above ground, according to a measurement a few days ago. Its height is not the equal of the New Rochelle tree, being about forty feet, and it spreads about the same number of feet. There are two more trees in the Laurel Hill Cemetery, but smaller than the one described.

There is a nice young tree in Fairmount Park, Philadelphia, and others are to be met with. More would be seen, but for an opinion prevailing that the tree is not hardy. It is perfectly hardy about Philadelphia, and our correspondent's notes on the large tree at New Rochelle, N. Y., indicate its hardiness there. Nurserymen should keep a better stock of it. Many persons would be pleased to have such an historic tree represented in their collection.

"Cedars" has my thanks for his notes, and for the magazine he sent me.

Oaks for Avenue Trees.

It has taken some time to demonstrate to the public that oaks are available trees for avenues. Their fitness has never been doubted; the trouble has been that an opinion prevailed that the oak was an unsatisfactory tree to transplant. This opinion is not entertained to-day to nearly the extent it was, and for the reason that there are too many evidences of the successful planting of the oak around us. Look at the lines of oaks to be seen along some of the streets of Washington, D. C. And nearer home, in Fairmount Park, Philadelphia, are lines of these trees in splendid condition. Time was when the proper planting of trees was not understood as it should have been. Trees were rushed into holes prepared for them and left to take chances, much as willows were; expected to grow without any care. Their treatment is better known to-day, because there is a better class of planters in the midst of us.

Almost every tree has something about it to be understood to plant it properly. Some may be large and yet live; some may go unpruned and still thrive. The oak has its requirements. It must not be too large—six to eight feet is a good planting size. It must have careful digging and close pruning. Besides this, in the North it must be planted early in Spring, as soon as the state of the ground will permit. In the South Fall planting is as good as that done in Spring. The soil must be firmly rammed about its roots. Of course, there must be no digging of the roots between the digging up and replanting. Quite successful planting has been accomplished in the Fall, mounds of soil being dumped around each tree, to steady it and to keep out frost. Those who both sell trees and plant them for their customers will never hesitate to recommend the oak. The tree, when for an avenue, must have a wide one. It will be a mistake to plant it on any other. In the posi-

tions that parks afford it—usually long, wide avenues—it is one of the best of trees, and what a variety our country affords! There are a dozen or more hardy northern species, to say nothing of as many more in the South.

Cornus Mas, Cornelian Cherry.

As *Cornus Mas*, the cornelian cherry, presents itself to me in flower every Spring, it always tempts me to say what a desirable shrub it is. There is really no other shrub to compare with it in the display made at the time it blossoms. This is written March 30, and our large shrub is already cheering us with its yellow flowers many fully open, but not all yet. Many bushes flower about the same time—*Daphne Mezereum*, *Lonicera fragrantissima*, *Lindera Benzoin* come to mind as being in bloom or about to flower. The pink *Daphne Mezereum* makes a good display, but it grows slowly and is never a large bush. The *Cornus Mas* makes almost a small tree when grown to a single stem, and a large bush when in bush form. It does not flower when young, as many shrubs do; it must get a few years of age first; but when once started it is sure to flower every year. It is very hardy, too, which should recommend it to our nurserymen and florists of the far North. It is on the hardy list issued by the Wisconsin college, and as

Propagating English Walnuts.

There is no better way of increasing the English walnut than by sowing the nuts. Kept moist from the time of collecting them until Spring, they are fairly sure to grow, and they soon make a good growth. In damp deep soil the seedlings make but a long tap root, but it is claimed, and looks reasonable that in light soil there is much less tap root and more fibrous ones, and this is said to be true of all nut tree seedlings. It is worth trying, as the lack of fibres is what makes the transplanting of these seedlings so difficult. The thin shelled and other varietal forms of the English walnut cannot be relied on to come quite true when grown from nuts, and grafting has to be done to increase them. The common English is used for stocks, although it is claimed that the black walnut makes a good stock for them. The grafting is done by scraping away the soil from around the stocks and grafting them well into the crown of the plants. This would be a good time to make a trial of it, as with cions cut now and held back a week or two, it would find the sap rising in the stocks.

Transplanting Yellow Locusts.

A correspondent writes me that he has noticed I recommend the planting of yellow locust seedlings as

THE PEACH HOUSE AT BRIGHTHURST, ORANGE, N. J.

Photographed March 13, by J. B. Davis.

Peter Duff, Gardener

the *Cornus Sanguinea* is reported hardy in Minnesota, this, the *Mas*, should be equally as hardy, as it is native to some parts of Europe in which the former is found.

Unlike many other shrubs, its merits are not over with its flowers. Large berries, as large or larger than many cherries, succeed, and, when ripe, are like a red cherry. These are a great attraction. And from the seeds, seedlings are easily raised as well as plants from hard wood cuttings and from layers.

Is *Euonymus Sieboldianus* Evergreen?

A discussion between two nurserymen as to whether the *Euonymus Sieboldianus* was or was not an evergreen was heard recently. The facts in regard to its character are that it is an evergreen in the South, but not in the North, as its behavior north shows. The Winter just past gave us lots of snow, and wherever entirely snow covered, this euonymus has kept all its leaves as green and fresh as they ever were. But above the snow line every leaf is off. I presume, therefore, that it is evergreen where no hard freezings occur. There is a great impatience to grow on the part of this plant as soon as Winter is over. It takes but a few days of heat to start its buds lengthening.

As the leaves of this euonymus are large, as large as those of *E. japonicus*, but not as shining, it ought to make a good pot shrub for use for decorative purposes, in which position it would be evergreen, I think, when free from frost.

early in Spring as possible. He has not had the planting of many, he says, but his experience is, that as late as possible before the leaves expand is much the better time. The recommendation to plant early, which he refers to, was given in a general way as covering all hard-wooded trees, locust included, and it is certainly the experience of planters that trees of this nature do far better when set as soon in Spring as the season will permit. Among trees in general there are some which really appear to prefer later planting—magnolias, for example—and it may be that late planting would suit the yellow locust as well. But those who have found no difficulty in early planting will wish to continue setting them at the first opportunity. Our Spring season is so short that one might find a difficulty in deciding which part of it was early and which late. From four to six weeks covers the season. My advice is still the same—to set out the trees as early as possible. JOSEPH MEEHAN.

Peaches Under Glass.

The peach trees shown in the illustration were brought into the house at Brighthurst, Orange, N. J., in January, where the treatment was that prescribed in the articles by William Turner. Some of these trees are five years old. PETER DUFF.

THE WEEK'S WORK.

Timme's Timely Teachings. Ericas.

Climate conditions in most sections of this country make the culture of ericas difficult and a risky business. We have neither the soil in which heaths can be grown to perfection, nor the genial and humid atmosphere in which they delight. Great Britain, outside of their natural habitation, affords an ideal climate for the culture of these charming plants, and there they are seen in all their beauty. But for all this, well-bloomed heaths of all the known and most popular varieties, which now run up into the hundreds, are by no means a rare sight in the plant houses and conservatories of some of the up-to-date American growers. As a commercial venture, the handling of some of the Winter-blooming varieties has proved most profitable, although heaths are probably the most unsatisfactory living-room plants of any offered to the public as house-plants. At the same time, no plant sells faster than a well-balanced erica in flower. Almost all of the flowering sized stock is imported from Europe, is easily brought into bloom in any airy, cool greenhouse, and as easily disposed of when at its best. Best results and good profits are obtained where ericas are handled in large numbers, where one or several houses are fitted up and especially given over to the culture of heaths. It is seldom that a few plants, scattered here and there through a greenhouse filled with a miscellaneous stock, afford much pleasure or profit to the grower.

Ericas are fine Easter plants, but this year that holiday is much too late for most of the very best varieties. Some of them will be past their bloom by this time. These should be cut in just enough to give them a pleasing form and shape. Some may need transplanting. Plants that are perfectly healthy may go into a pot a size larger, while sickly and doubtful specimens, if of an especially good variety, are frequently restored to vigor by transplanting into a new pot of the same size as the one it occupied, or even a smaller one. In such a case the ball of earth is loosened with a pointed piece of wood, the outer soil shaken off and the decayed part of the ball of finely fibred roots cut away with a sharp knife. Should the inner core of the ball of roots be dry—and this is very often the case—then a dipping of several minutes into a tub or pail is necessary before potting. When the peat-soil in which the plants were grown once gets dried out, it will not take water in any other way than by immersion in a tub of water.

In potting heaths, plenty of drainage material should be placed in the bottom of the pot. The best soil for these plants, and for all those of a like nature, is in Europe, obtained from strips of land at the foot of old pine and spruce forests, where calluna, vaccinium, genista and thymus luxuriate. Since we do not have this peculiar peat here, a soil, mellow, porous and sandy, will have to do instead for the few ericas left on our hands and to be repotted. I have used various kinds of soil, but have found well-fibred, turf-like, sandy soil, six months old, roughly broken up and mixed with a goodly quantity of spent hotbed manure, to be the best mixture.

The proper watering of ericas requires judgment and some practice. They must never be allowed to get real dry, and it is just as dangerous to water them when they do not need it. It is safer to use a can than the hose in watering a house of ericas. Some of them will be found to dry out faster than others, and making a few trips with a watering can will do the work as it should be done. The oftener heaths have to be watered at their roots the poorer plants they will be, or, in other words, the slower a heath dries out at the roots and the longer it can be

Headquarters for Easter Plants

Blooming Easter Week, or before if desired. Now ready for immediate shipment. I am noted and have a reputation for the past fifteen years for raising and shipping Choice Easter Plants throughout the land. Nine houses and ever so many hot-beds crowded with them, in better condition than ever before.

FERNS Our Specialty
 We have just completed a new 20,000 sq. ft. greenhouse range, especially built for the growing of Ferns, and in the future all orders, regardless of quantity, will be filled with the best stock in the market, at the lowest prices.
CIBOTIUM SCHIEDEI
 The Most Magnificent Tree Fern in Cultivation.
 Extra Large Specimens.
 3 in. pots 2.75 each; 32.00 per doz.
 7 in. pots 1.75 each; 20.00 per doz.
Adiantum Cuneatum, 4 in. \$16.00 per 100
ANDERSON & CHRISTENSEN, Telephone Call 14 F., Short Hills, N. J.
 Mention the Florists' Exchange when writing.

ASSORTED FERNS
 4 inch, suitable for large Jardinieres and basket work, in 10 good varieties, \$15.00 per 100.
Asparagus Sprengeri, 4 in. 12.00 per 100
ASSORTED FERNS FOR JARDINIERS
 In all the best varieties, fine bushy stock, from 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000, 500 at 1000 rate.

Azalea Indica. My specialty: 3 houses full of my own importation, the cream of Ghent productions. We sell none in the Fall; therefore they are not picked out for the Fall trade. We force them only for our customers' Christmas and Easter trade. *Mme. Van der Cruyssen*, the people's choice, the best of all pink varieties. Plants covered with buds, as round as an apple, 60c., 76c., \$1.00, \$1.25, \$1.50 to \$2.00 each. Other best varieties, all shades. *Niobe*, double white; *Bernhard Andreas*, white; *Empress of India*, Professor Walters, *Ilustre*, *Paul Weher*, *Joseph Vermeer*, and many others, 60c., 75c., \$1.00 to \$1.50 each.
Lilium Harrisoni and *Japan Multiflorum*. H. F. Mitchell's special bulbs; 6 in. pots, 6 to 8 buds to a plant, 10c. per bud. Under 5 buds, 12c. a bud.
Cineraria Hybrida. Best strain, all shades, 6 in. pots, \$2.00, \$3.00, \$4.00, \$5.00 per doz.
Hydrangea Otaksa, pink (a fine white including), 6 in. to 7 in. pots, \$4.00, \$5.00, \$6.00, \$9.00 to \$12.00 per doz.
Spiraea. Two houses full. *Floribunda*, *Japonica* and *Blondine*, 6 in. pots, large bushes, \$3.00, \$4.00, \$5.00 per doz. *Compacta*, \$2.00 to \$3.00 per doz. *Gladstone*, unusually fine this year, full of buds, perfect jewels, \$6.00, \$7.00, \$9.00 per doz.
Roses. *American Beauty*, 6 in., 36c. to 40c. each; 6 in. pots, bushy, 25 to 30 in. high, 50c. to 75c. each; *Hardy Roses*, including *Hermosa*, 6 in. to 5 1/2 in. pots, \$3.00, \$4.00 to \$5.00 per doz.
Begonia. *President Carnot*, *Flambeau*, three varieties in all, 6 in. pots, \$3.00 to \$4.00 per doz.; 4 in. pots, \$1.80 per doz.
White Daisies, 6 in., \$3.00 per doz.
Hyacinths. Raised from first-size bulbs. *Grand Maître*, blue; *Gertrude*, pink; *King of the Blues* and *La Grandesse*, white; \$12.00 per 100.
Double Narcissus or *Von Sion*. *Double Nosed Daffodils*, 3 bulbs in a 5 1/2 to 6 in. pot, \$2.00 per doz. pots. *Tournefort*, best selling double *Tulip*, 3 in & 4 in. pot, \$1.50 per doz. pots.
Arancaria Excelsa. 25 to 34 in. high, 4, 6, to 6 tiers, 7 in. pots, \$1.50 each.
Ficus Elastica (Rubbers), 6 to 7 in. pots, 25 to 35 in. high, \$6.00, \$9.00 to \$12.00 per doz.
Moon Vine. A. W. Smith's Hybrid, \$5.00 per 100.

December 10, 1904
 The material ordered from you arrived in good shape. The bill has been O. K'd and sent in and will be paid shortly. Please accept my thanks for material sent gratis. **O. M. MORRIS**, Dept. of Horticulture, Oklahoma Agricultural and Mechanical College, Stillwater.

The shipment of plants ordered of you came duly to hand and I must say I am thoroughly satisfied with them. It is a great pleasure to get such stock. **W. M. LINSAY**, Linsay Floral Co., Birmingham, Ala.

March 17, 1906.
 The Azaleas you shipped me at different times during the past winter I have found to be most satisfactory plants and always ready sellers, as were also your *Arancaria Excelsa*. Am glad to know just where to look when in need of fancy stock. **GEO. P. MERRIFIELD**, Merryvale Greenhouses, Helena, Ark.

Many thanks for the prompt delivery and for the fine stock. The plants were all right and very satisfactory. **HOFFMEISTER FLORAL CO.**, Cincinnati, Ohio.

Mr. G. Aschmann has a very fine stock of Azaleas and other Easter plants. We can highly recommend Mr. Aschmann to our customers for fair and reliable business treatment. **H. F. MICHELL CO.**, 1018 Market St., Philadelphia, Pa.

To save express charges, mention if plants are to be shipped with or without pots. Cash with order, please. No references. All goods must travel at purchaser's risk. Bell telephone, Ylga 3669A. My place can be reached by trolley in twenty minutes from City Hall; take 15th or 31st St. Germantown Car.

Song of the Season.

When the gold is on the willow, and the maple buds are red,
When your feet have grown so heavy that you fear they're made of lead,
When the fever's in your system and you're lazy as the deuce,
And your ever-ready answer is a muffled "What's the use?"
Then it's time to hang the kettle and prepare for making soap,
Just beside the ash-filled hopper on the orchard's sunny slope,
Then the season's full of trouble, in the semi-southern climate,
For it brings that awful something known as "garden-makin' time."

Fallow ground with clods to crumble, paper bags of onion sets,
Rake and hoe and soil-stained garments, and a soul that sorely frets
At the prospect of exertion even of the mildest kind,
And your humping over makes you sort of dizzy like and blind.
Beets and radishes and lettuce, pease and seven breed of bean,
Poppies, marigolds and larkspurs for the walks and in between,
These the things inseparable from the days that reek with rhyme,
These the tragedies that trouble us in "garden-makin' time."
—S. W. Gillilan in Baltimore American.

What Constitute a Herbaceous Plant?

(Continued from page 424.)

Editor Florists' Exchange:

Again, we are told, "the general run of herbaceous plants are in the best condition for the market when one and two years old." Of course, this is literally true; think of phlox especially so. But where could you get the latter until these last few years? Under the old method of propagation it was almost an impossibility. Thanks to the not new, but better and quicker, method of propagation, which gives us better and stronger plants, and thousands where we used to get hundreds in much shorter time, we are enabled to give better satisfaction to our customers.

As regards dianthus, if medium sized clumps of these could be raised, they would be all right—nursery grown one year, but not so good as if grown in 4-inch pots; for if the soil is too rich for them in the nursery, it has been my experience to get big, long, lanky growths and few roots which, while they will grow, are neither so pleasing nor so satisfactory as good strong pot-grown plants. The new everblooming types, which I had the honor to raise from seed, are especially so; also nearly all of the plumaris type, and particularly some of the highly colored ones, such as Laura Wilmer, Souvenir de Sale, etc., which, to get good plants, must be pinched back occasionally through the Summer. If grown on into four-inch pots and plunged outside, they make nice

possible results, the alert grower is doing his utmost to grow plants in such shape as will give best results.

Of iberis, I have never been able to grow a plant large enough to send out in one year from seed or cutting. They naturally grow slowly, that is, the sempervirens type, and it usually takes two years to grow good-sized, salable plants by this method. With divisions it is very different. If divided in Fall or the early Spring, good salable plants are grown in one year, usually in the open ground. Iberis gibraltarica grows into a large plant from either cuttings or seed in one year; so does I. Tenoreana and I. Pruiti. But all three have proved with the writer only semi-hardy, needing much care and protection to carry them safely through the Winter. I. corrafolia is a very desirable variety to grow, and its neat evergreen foliage is always attractive. I think it is a more desirable form than I. sempervirens. The variety I. semp. superba, a strong, robust form or selection from I. sempervirens is much more desirable, both in foliage, growth and flower, than the type.

Getting back to our question, it really would be a nice thing if some sort of a standard could be set up, to know just what does constitute a hardy plant; but it will, I think, forever remain an unsolved problem; for, on account of the great diversity of growth, habit, size, etc., of the various plants, coupled with the vast differences of opinion of the various growers, it will be an exceedingly difficult thing to get men's ideas to converge on a given point and thus set up a standard. The range is so wide and the plants in so many respects are so exceedingly different and di-

eraceum aurantiacum, saponarias, and in one catalogue some twelve other varieties may be found that will spread very rapidly, quickly covering large areas of ground. Some of these plants root from each joint as they spread over the surface; some throw a strong tap-root, as it were straight and deep into the ground, as callirrhoe, Gypsophila repens monstrosa, etc., and then run over the surface, drawing their support from the one large central root. Others again spread rapidly by underground stolons on an almost horizontal plane, on or just below the surface of the ground, and if given good nursery cultivation for one year, would make such plants as would puzzle a Northern Securities trust lawyer to disentangle, much less a gardener to properly plant.

As regards those varieties marked with an asterisk, they would soon become troublesome weeds if not properly kept within bounds; and to send a person nursery-dug plants of any of the foregoing would, to my way of thinking, not be half so satisfactory as well-grown plants from 3 or 4-inch pots. Many of these mentioned quickly establish themselves in pots with but little difficulty and make good presentable subjects, that, if given a fair trial, will prove much more satisfactory and be all the more readily handled both by grower and planter.

Then, of course, there are plants, such as Gypsophila paniculata, anchusas, cephalarias, catananches, amsonias, asphodels, baptisia, and many others of a similar nature, if handled in the Fall or in very early Spring, are all right, and I prefer them nursery dug. But it is a hard matter to get men to dig these plants in the nursery with proper care. Not understanding their natural method of rooting, many of the plants are very badly bruised in digging. Then again, as soon as the warm days of Spring are upon us, it is wonderful to see the early and rapid growth some of these plants make. Many of their first efforts are to throw up their flowering stems, and if deprived of these, they will not flower again until the following Spring, which is a cause of disappointment to many buyers. Then, if for nothing more than this early growth, to say nothing of the desire of people who do their own gardening to wait until fairly warm or settled weather comes, when the bulk of Spring planting is done, many, or most of these plants, to give the best immediate satisfaction, should be thoroughly established in pots.

The question of express charges might be brought as an argument against this method, but I am thoroughly convinced that the results obtained by established pot plants versus nursery-dug plants at the season here alluded to, that is, the latter part of April and the month of May, will be more than compensated for by the early results obtained; and I feel fully assured that when a better knowledge of this class of stock obtains, the fallacy of many planters for big clumps of nursery-grown specimens of very many plants will wane.

Of course, some things, such as peonies, give more satisfaction in larger pieces, and other similar things could be mentioned, but they are in a minority. It is neither necessary nor desirable to pot all hardy plants, even for this late period, for all fibrous rooted plants, such as sweet williams, myosotis, Bellis perennis, even cionerhas and heleniums, as well as many others which time and experience will teach, can be very readily removed and transplanted with care at almost any period. And it is wonderful how some of these yield to this method of treatment, and the transformations that can be produced by shifting late, close division, and late planting. Asters, if thus treated, do not attain much more than half their usual height and bloom much later. And here is a class of plants that varies much both in their habits, periods of flowering, and method of growth, and a succession of flowers may be had from them alone that will last from May to December. Some of these plants are very close, compact growers, others are very rampant, and by means of their underground growths can soon choke out plants of a weaker nature, so their habits and methods of growth should be known in order to keep them in check. Many of these move very readily from the nursery, but others are best grown for sale in pots.

Now, in conclusion, considering all the various points and vast differences in the various methods and habits of growth of this large and interesting class of plants, I fully agree that it is, and will be, a most difficult thing to fix a standard size for any of these plants. Differences in soil, location, and methods of treatment, as well as opinion, all combine against it, and while there is a demand for a cheap class of stock, we shall also find those who will cater to it. As our friend intimates, on page 303, it will very likely prove cheap stock. But I claim, after all, that good, clean, vigorous healthy-growing stock, not necessarily grown in nursery rows a year before sale, but such as will flower the first season after purchase and reach the purchaser in good condition, whether from pots or field, is the most desirable; but no safe rule, except discretion, good judgment, and a knowledge of the plants to be sent out and the period when they are to be sent out, can be formulated.

HERBERT GREENSMITH.

Carnation Enchantress.

Editor Florists' Exchange:

I have forwarded you a photograph of a house of Enchantress carnation (reproduced) that has been in continuous crop since September 1. The picture was taken March 9. The plants were grown indoors the entire season. I would like to add that I have a very fine sport from Enchantress, much deeper in color, resembling The Marquis in that respect very much.

Canandaigua, N. Y. ROBERT H. M'KERR.

HOUSE OF ENCHANTRESS CARNATION, MARCH, 1905
Grower, Robert H. McKerr, Canandaigua, N. Y.

plants, fill the pots with roots, and you have an evenly balanced plant, with a good bunch of roots, and, as a rule, good tops, with a nice ball of soil attached that can be shipped anywhere and transplanted with safety, as the danger of so doing is thus reduced to a minimum. This is a factor by no means to be ignored. Another point is assured, that plants so grown are not so apt to suffer from careless planting, and will not look so unsightly as the long, lanky nursery-grown plants generally do.

With Lavendula vera, my experience with respect to nursery-grown and pot-grown stock has been the same. Spring or Winter struck cuttings, or seedlings, planted in the nursery do very nicely, make very beautiful plants, and if pinched once or twice, a splendid head, but very small roots in proportion to the top. When transplanted, they have not given nearly the satisfaction of pot-grown stock. The plants are much smaller in growth when the roots are confined and, in the first instance, are not so good-looking; but they more than recompense for this on transplanting into permanent quarters. Again, grown thus, they can be moved or sold, at any time, which is one great feature in thus growing many plants of this nature. Orders often reach the nursery all through the months of May and June, and nursery-dug stock at this late period is practically useless to send to most customers, very often causing disappointment to both seller and purchaser; whereas, if plants are at hand, with a good ball of earth attached, that have been previously pot-grown, they can be supplied with some degree of satisfaction to all concerned. Of course, I have previously said in one or two of my articles, that late planting should be discouraged if possible, but the anxiety to get all the business possible and the wish of the customer to have the work done while in the mood, also have their consideration and weight, both with grower and planter; and to meet this demand with the best

verse, that it is almost an impossibility so to do. Take the little quaker lady or Houstonia cœrulea, for instance. If seen on the gravelly paths of our borders, rockeries or frames in the Fall of the year, it is scarcely an inch across; but the cool days of Autumn, and the rain and snows of Winter cause it to expand, and when the warm, balmy days of Spring come, it is two or three inches or more in diameter. And it produces its pretty quaint little sky-blue flowers in such wondrous profusion as to cause the most critical-minded person to go into raptures over its delicate beauty. There are even smaller gems than this which we have no need to import from the high mountains of Europe. A glimpse at a large-sized bulb of Erythronium americanum would be a revelation to most people; and scarcely could we credit that so small a bulb would produce as large a flower. How are we to set up a standard here? It takes an erythronium from five to seven years to grow into a bulb of flowering size. Compare these with two other plants, one a native and one naturalized, viz., creeping Jenny, or Lysimachia nummularia, a plant which has a ready sale, and which will root and grow from every joint over stones, gravel, or in most any place. If planted in good soil, it is wonderful how large a space a small shoot will cover in a single season. Nepeta glechoma variegata will, in a good season, from a two and a half-inch pot, spread for three or four feet away from its original position; and both will, if in any way neglected, become a nuisance. Other plants of a similar habit, found in the catalogues to-day, and most of them desirable and useful in their proper places, are aconas, Achilleas *millefolium, ptarmica and the variety the Pearl, *ægopodium, ajugas, *alchemilla, antennarias, arenaria, arabis, Artemisia Stelleriana, cerastiums, Coronilla varia, Coreopsis senifolia, *epilobiums, *Inula britannica, Lotus corniculatus, various *lysimachias, *polygonums, *menthas, monardas, *Hi-

Dreer's Select List of HARDY PERENNIALS

We offer here only the most **Showy and Decorative Sorts**, including varieties suited for **CUT FLOWER** purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

News of the Week in Brief.

Donald Newlands, a well known florist of Buffalo, N. Y., is dead.

John Kirchgraber, Sr., the pioneer florist of Mattoon, Ill., is dead.

J. A. Valentine, of Denver, Col., has been elected president of the Colorado Society of Floriculturists.

A Chicago florist, named August Wussow, committed suicide, by shooting, in Mount Greenwood Cemetery, March 30.

The board of directors of the S. A. F. O. H. met in Washington, D. C., this week to arrange a program for the August convention in that city.

The New York Florists' Club will have a display of Easter stock at its meeting Monday evening, April 10. Other attractive features will be presented.

The New Orleans florists are protesting against the quality of the cut flowers shipped to that city. The local horticultural society has appointed a committee to endeavor to better conditions.

Professor Cowell, of the Buffalo Botanic Gardens, has returned from a plant collecting trip in Panama. The killing of an 18-foot boa constrictor was one of his adventures while there.

The Buffalo (N. Y.) Times of March 26 presents a portrait of Wm. F. Kasting, and has the following appreciative words to say of the Bison City's progressive wholesaler:

"He is a business man of marked ability and sterling integrity, who by personal attention to business has brought the immense enterprise of which he is the head, up to the high plane that it now occupies. A man of surpassing good judgment and well-founded business ability he is not only a shrewd financier and a natural commercial leader but more than that, he is a man of charming personality and great affability. He has many friends among the people of Buffalo, and he has been honored with several marks of political preference. In politics he is a Democrat, and he has done yeoman service both for the people of Buffalo and for his party. As the business men's candidate" he always has polled a surprisingly large vote. There are many honors yet in store for Mr. Kasting, and his friends hope to see him elected Mayor of Buffalo."

Our Spring Number.

Our much esteemed friend, Edgar Sanders, of Chicago, writes us concerning our recent Spring number (issue of March 25) as follows: "Your typical illustration of the trade advertising spirit of the day is a good and true exponent. It is a grand number—all meat and no frills—both in the number of advertisements and the usual great amount of information it contains. There is no mistake about it; the paper is not published for effect, but for utility. I congratulate the publishers, the editor and your able corps."

New York's Needed Plant Market.

On page 380 of our issue of March 25 we presented, from the pen of our London correspondent, Mr. A. Hemsley, an article on the workings of Covent Garden Market, written at our request. This market has, from its inception, been an unqualified success and a great source of revenue to its owner, and its popularity and worth are evidenced by the fact that increasing demands for space are continually being made by growers, necessitating additions to the market's area.

We regret that our correspondent was unable to get a line on the actual cash turnover for flowers and plants at this immense emporium, so that a comparison could be made with similar figures in New York. It is safe to say, however, that the annual revenue from flowers and plants disposed of in our metropolis, through the various and now segregated distributing agencies, will compare favorably with that of London.

The next thing that suggests itself is as to why New York is still without its "Covent Garden." The deduction is, in view of what is set forth in Mr. Hemsley's remarks, that a similar mart provided in the midst of us would be equally as well patronized, proportionately, as the great London market, prove equally as advantageous and be equally as profitable to its promoters.

The hopes of securing such a building here are, however, as remote to-day as they were a year ago, when the subject of erecting a building of this kind by the city was before the Board of Apportionment, and finally left in the hands of the Controller for investigation and report. So far as we have seen or heard, no report relative thereto has materialized. This year again the market florists selling in New York will occupy the old stand at Canal and West streets and dispose of their products once more under a sheltering tent. And we are now in the twentieth century.

As we have before stated, we do not believe that the municipal authorities will ever construct and equip New York's flower market. In fact, many good and valid reasons could be brought forward as to why the city should not do so. This necessary and much-to-be-desired institution will come, if it ever comes, as the result of private enterprise, through the energy of some far-sighted man or men who shall see in such a structure and its operation a safe and profitable investment.

The New York Market Florists' Association has, with commendable effort, endeavored to interest the city authorities in this subject for the past few years without avail. They, and all concerned, should now set to work to bring it to the attention of some investor seeking a sure and remunerative outlet for his surplus cash. That such can be found we firmly believe. And with the matter presented to him in its true light we may then see arise on some suitable spot in our great city an institution that will prove one of its greatest attractions; one of its greatest educators, a feature that will tend to the uplift, the amelioration and happiness of its denizens in a measure now unfortunately but little dreamed of or considered.

Degeneration of the Carnation.

This subject was discussed in a recent issue of The Gardeners' Chronicle, London, England, by James Douglas, a carnation grower of about fifty years' experience. Mr. Douglas advances the following causes tending to degeneration in the divine flower: Over-propagation; over-feeding, which, he says, is a fertile source of disease; it also induces for the time a strong, sappy, but unwholesome growth, which can only be maintained for a few years. Over-flowering will also weaken carnations to a greater extent than many cultivators are aware. One large double carnation flower will reduce the vitality of the plant to a greater extent than a dozen or a score of single flowers. The single bloom is of a very fugacious character; it rapidly develops and in two or three days the petals drop off; whereas the large double flowers develop slowly, and last in full beauty for ten days or more to the rapid exhaustion of the plant. The coloration of the foliage has a good deal to do with the vigor of the plant. The darker the green, the greater is the vitality.

Mr. Douglas then suggests the following as a remedy for degeneration in the carnation: Selection of vigorous, healthy varieties both as seed and pollen bearers. There should be no great hurry to get up a stock of plants, but they should be propagated in a (more or less) natural manner. Over-stimulating manures should be avoided; the plants should be grown in good garden soil, using no stimulants but decayed farm-yard manure, which should not be allowed to come in contact with the roots. Some of the plants should have a year's rest from flowering, and

layers [he is referring to the English method of propagation] should be taken from the rested plants. Wild plants do not degenerate, and if more natural conditions were allowed to prevail, cultivated carnations would be free from it.

We believe the views of Mr. Douglas, as expressed above, will find general endorsement by American carnationists. It is generally conceded that our "high pressure" method of cultivation is responsible in large part for varieties degenerating. The advice to return to more natural conditions is one worthy of attention and adoption.

In the same discussion, Mr. Douglas cites the late E. S. Dodwell, author of "The Carnation," as having stated that the average life of a variety of carnation was fifteen years. Few, if any, of the varieties cultivated in America can boast of such longevity; but that, we are inclined to think, is owing more to older varieties having been superseded in one or more of their attributes by their successors, rather than to inherent defects resulting from senility. Fashions in flowers are also responsible for older sorts being discarded to make way for those that better meet the existing popular demand. It would prove interesting to know just how long a variety would live and thrive, under good conditions of culture, in the United States, before it actually petered out, and became absolutely worthless.

BOOKS RECEIVED.

THE POTATO. Its Cultivation, Growth and Development, Sprays and Spraying, Harvesting and Storing, Production, Transportation and Marketing. By Samuel Fraser, Assistant Agronomist, Cornell University. Illustrated. 5x7 inches, 200 pages. Cloth. Publishers, Orange Judd Co., New York.

In view of its importance as an article of food, no vegetable has received more attention from our State Agricultural Stations than the potato. In the preparation of this work the author has drawn largely upon the reports and bulletins furnished by these stations during the past 15 years and upon any European data which he has felt to be of sufficient value to warrant their introduction. This, in addition to the author's wide experience in potato culture, both commercially and experimentally, in Great Britain and in this country, furnished excellent material, and he has succeeded in producing a very serviceable volume. The whole subject of potato culture is dealt with from a practical as well as a scientific standpoint, and the marketing end has not been neglected. One of the most important chapters in the book is that on varieties, in which the points going to make up a good potato are treated upon in detail. Lists of the best sorts, as determined by the various experiment stations, are also furnished.

Copies of the book can be obtained from The Florists' Exchange; price, 75c.

John Kirchgraber, Sr.

John Kirchgraber, Sr., the pioneer florist of Mattoon, Ill., died Friday morning, March 31, 1905, after a few days' illness with stomach trouble. Deceased had been suffering more or less with this malady all Winter, but had been able to be around until the last few days.

Frederick Seitz.

Frederick Seitz, for twenty-five years with the August Jahn florist establishment, on Broadway, Brooklyn, N. Y., died Sunday, March 26, of paresis, after an illness of thirteen months. He was a German by birth and was born February 22, sixty-one years ago. A widow and two daughters survive him.

Donald Newlands.

Donald Newlands died at his home in Buffalo, N. Y., on Tuesday, April 4. His mother, Mrs. Jean Newlands, a widow and a sister to the late Superintendent of Buffalo Parks, Wm. McMillan, had established a retail business some twenty years ago, located close by the Main street entrance of Forest Lawn cemetery. Several years since the firm became Newlands & Son, the mother retiring therefrom actively. Mr. Newlands exhibited an apt energy that led to developing and increasing the business on a basis both substantial in character and in sphere materially broadened. His was a nature that inspired confidence, he belonging to the class of men that seem illy spared, and with whom a reliable progressiveness stood notable as a trait. He was an active member of the local club. Despite a vigorous constitution, after months of suffering, the dreaded Bright's disease claimed him as a victim. The funeral was held on Thursday of this week. VIDI.

OUR READERS' VIEWS

The Boston Flower Show.

Editor Florists' Exchange:

Will you allow the writer a little more space on this subject in reply to the letter of W. N. Craig in your issue of March 25? I decidedly say that Mr. Craig is in error when he states that I "persist in dragging red herrings over the track and fly off at tangents peculiar to myself." I am sure your readers will agree with me that I have at all times, during this correspondence, kept strictly to the subject under discussion. Mr. Craig seems to have an aptitude for immediately forgetting the past in his "thinking of the future," and it was only to refresh his memory and to prove that dissatisfaction had been caused by the working of the committee in question time and again, that I copied some of Mr. Craig's own criticisms "from a defunct horticultural journal."

Little more need be said on the subject, except that I am very gratified to notice that a decided change for the better has been made by the committee in its methods of judging and making awards, as was witnessed at the last show. And now once more I say, let the committee take one more progressive step and insist that the names of exhibitors shall be kept concealed until after the awards have been made by the judges. This, I am sure, will be a step in the right direction, and stop the criticisms of many who may not be called upon to express their views so freely as

JOHN W. DUNCAN.

Chrysanthemum Dorothy Faust.

Editor Florists' Exchange:

Noticing in a contemporary that Wm. P. Craig is about to introduce chrysanthemum "Dorothy Faust," and in view of what has been published by the officials of the C. S. A. regarding the synonymy of that variety, would it not be well for the Chrysanthemum Society of America to take steps to prove to Mr. Faust and to Mr. Craig that "Dorothy Faust" is nothing else than Mrs. Robert McArthur, as has been stated by the C. S. A. New York Committee? We have Mrs. Robert McArthur and will furnish 50 plants, free of charge, to the society to be distributed among its members in the neighborhood of Philadelphia.

I would suggest that Mr. Faust do not sell his "Dorothy Faust" until he is sure it is not Mrs. Robert McArthur. In No. 3, Vol. XIX., of January 21, 1905, Mr. Faust says he is the sole owner of "Dorothy Faust," hence our Mrs. McArthur could prove its own case. I have forwarded plants of Mrs. Robert McArthur to Mr. Dailledouze for the Chrysanthemum Society; I have also offered the Philadelphia Florists' Club 25 plants to be grown in Philadelphia for comparison.

HENRY EICHHOLZ.

Waynesboro, Pa.

Remedies for White Fly.

Editor Florists' Exchange:

I notice hellebore is recommended for use against the white fly (*Aleyrodes vaporariorum*). Another remedy that is in every way preferable, in that it will not injure either the plants or the users, is entirely effective and is always at hand, in the plain soap-suds so successfully used by Dr. Britton of the Connecticut Experiment Station. Hellebore, whether alba or the American root, viride, may kill the fly; but either form is a poison and to many it is as dangerous to inhale it as dust or powder, as to take it into the stomach as a liquid. Neither should be used indoors. And either will only kill the fly, or adult stage, and this, except as the parent of mischief, does no harm; that is, not enough to pay for the powder, and would die of itself in a day or two. The injury to the plants is done in the scale stage, by the louse, while it is growing its wings and developing to the propagating form. One pound of common laundry soap to five gallons water is Dr. Britton's proportion for the soap solution. The creatures in their every stage are on the under side of the leaf, and usually on the fresh, succulent growth, and above that which the flies, as nymphs, sucked dry. This only needs to be sprayed, therefore, and it is the under side that must be hit. A few days after spraying with the soap, there must be a washing of clean water. Another way is to cut off and burn infested foliage; that is, that which carries living scale, the dry and dead leaves with the empty cases do no harm except as they are unsightly.

This white fly is of a large family, but seems to be the only member that is a general feeder, others keeping to a single order of plants. Its home is tropical America, and it first came under notice on plants brought therefrom to Kew and Chiswick. A pet name for it, in at least one part of England, is the holy ghost fly. Control there, I am told, is kept by the measures used against other house pests. The first appearance with us was in New England, and for a time it was not known elsewhere, but, with the dissemination of glass-grown stock and plants, the area of it has extended until it is now at home in the gardens in Summer all east of the Mississippi, and is reported in some localities even further West.

The creature has no resting stage, so cannot endure the Winter outside, hence its existence rests with the

forcing house. From this it is carried in the Spring to the garden and field on bedding plants, and there, breeding unchecked, it soon makes its presence apparent if the real cause of the harm done is not known. In the Autumn it is again carried to the houses on plants and very soon is in numbers to do bad work, which, more often than not, is attributed to other causes, the creature being so minute as to escape notice. A means of general dissemination is in the plants sold from infested houses. Last Spring I purchased it in Philadelphia on plants of lettuce, cabbage, egg-plant and tomato; and in the Summer I saw it on plants of late cabbage and celery coming from farther South. The greatest harm as yet recorded is in tomato fields in canning districts. The check for this plant infestation is to immerse each plant, before setting, in soapy water. For this I prefer whale oil soap (the pound to 8 gallons of water), to the laundry soap solution. I think the stronger wash is better for out of doors, and the plants seem to be benefited by the cruder material of which it is made. E. S. S.

Reflections on Current Topics.

MR. EDITOR.—If there is anything that would exemplify that the Scotchman's prayer, "O Lord, gie us a guid conceit o' o'ersels," (and our "pipes") has been answered, in the case of one man at least, it is John Birnie's letter in your April 1 issue. Notwithstanding the gentleman's alleged quotations from Holy Writ regarding the popularity of the pipes among the "chosen people," I am still inclined to extend my sympathy to the New York club; for I cannot believe the audience whose features depicted "relief, pleasure, and ecstasy," when the "drones were put in order," were related, either wholly or in any great part, to the lost tribes—although they do say one of these tribes did settle in the north of Scotland—despite the fact, as reported, that "many faces were seen there that night, that are generally missing from the monthly meetings."

I am obliged to Mr. Birnie for anticipating the job of S. A. F. O. H. piper for myself, on account of my "wind" capacity. Since reading your facetious correspondent's remarks, I have been pondering over the possibility of the lack of musical talent and a superabundance of "wind" being responsible for the fact that only the Scotch stick to that relic of barbarism—the bagpipes—and call it their national instrument, robbing the Jews of that honor.

* * *

I have been greatly interested in that Craig-Duncan controversy going on in your columns in regard to something or another in connection with a Boston show, which I cannot exactly get at; but as one remark has been characterized as "worthy of Job," I may be pardoned for now putting my foot in the fracas. From reading the letters of the two controversialists, it would seem both of these gentlemen agree that the methods of the Massachusetts Horticultural Society require emendation. That's nothing to squabble over, though. The Boston society does not stand alone in that respect. I read recently somewhere that there is a horticultural organization in the first city of the land that withholds announcing the winners of its prizes for a day or two after the premiums have been awarded. There's another society whose judges can tell "the best horticultural novelty in fruit, flower, and vegetable," and nobody thinks it worth while wasting time and energy in getting into a controversy about that—although one side of the argument has been presented. From Mr. Craig's reported criticisms of some of the work of the Boston judges, it would, it seems to me, be a good plan to put him on the judging board, for he evidently knows, or thinks he knows, more about the true merits of Boston exhibits than these judges themselves. But then, again, that is a failing peculiar to some people. And when Boston gets more in touch with progressive societies, like the Carnation Society for example, she'll know more of the modern methods, etc., of horticultural organizations, and, I feel sure, will leave little room for a discussion of the kind which has been running in your columns, where, like two roosters, the combatants lose sight of the merits of the case, and continue the battle because one won't give way to the other.

A remark quoted from Mr. Craig's recent writings on the Boston shows is particularly enlightening. He is reported as saying: "It is perfectly absurd to see exhibitors following the committee around and even giving them their opinions, or objecting to their awards, as we have seen in Boston." This would tend to demonstrate two things—that these exhibitors had little or no faith in the ability of the committees; and the fellow whose opinion could best convince the committee was likely to get the best award, and vice versa. Another need for the committees all being composed of "Craigs" who had opinions of their own—and the knack of sticking to them.

* * *

I was, indeed, pleased to read the views of the veteran John T. Temple on the new S. A. F. directors appointed by President Vaughan; and more than pleased to see that his honest expression of opinion has merited the appearance of his portrait in your contemporary. This, I presume, is to show what manner of man it is who thus openly declares himself. From the tone of Mr. Temple's letter I gather that we shall, by President Vaughan's selection of directors, now have advanced ideas presented to the S. A. F. that will "counteract the influence of the offshoot associations." I can easily see why there might,

perhaps, be a necessity of curbing the influence of the Ananias Society, which, from its name, is decidedly harmful I should fancy; although there is evidently room—and need—for it, as Mr. Temple states it, and others he mentions are "good enough in their place." But why counteract the influence of the bowling and shooting? Has Mr. Temple failed to read what Scott, who knows a great many things, said that "without these sports the society would not be as successful as it is, but you must think it out yourselves." Is it necessary to check that which is said to lead so strongly to the success of the society? Perhaps, though, Mr. Temple has thought it out for himself and believes with Job and not with Scott, although the last-named gentleman seems, latterly, to have gone back on the "sporting element," and has dubbed it the "light-brained brigade."

We all hope that Mr. Temple's prediction will come true; and that President Vaughan and his chosen directors (both excellent men, by the way,) will succeed in "making the S. A. F. a great power (a greater power, I should say) for the advancement of all sections of floriculture in America." I believe that has been the aim of every president and every board of directors, or executive committee, that has gone before; but that is neither here nor there. I am glad to observe we are on the eve of greater accomplishments than ever before, even though these should be brought about by knocking the bowling, shooting and Ananias Society out of business.

And while on S. A. F. matters if I remember aright, Mr. Temple was once spoken of as a candidate for presidential honors. The indorsement of the editor of your contemporary of the gentleman named, seems to me a strong point in favor of Mr. Temple having a share in carrying out, as president, the society's work that is to come about from the injection of the potent influence now to be felt—unless the S. A. F. make the presidential term ten years, as I have previously suggested, which would present the possibility of further excellent choices of new directors, and, consequently, the maintaining of the standard of advanced ideas for a decade at least. JOB.

Nephrolepis Barrowsii.

The illustration on page 469 represents the exhibit of this fern, which was awarded a first-class certificate at the recent show of the Massachusetts Horticultural Society. It is a sport from N. Piersoni, and was discovered in 1904 by Henry H. Barrows & Son, of Whitman, Mass., who describe it as follows: "Very dwarf and compact in habit, making twice as many fronds as the variety from which it is a sport; side pinnae set close together, overlapping each other, and small pinnae very finely cut; fronds only about one-half the length of those of the original variety, and mid-rib strong enough to carry the fronds gracefully. The fronds have the appearance of being very heavy, but are very light in weight. It does not revert to the type, as does the original variety."

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The monthly meeting, held March 28, was marked by a very large attendance. Three new members were elected. There was a falling off of exhibits, probably on account of everybody being too busy to trouble with them. F. R. Pierson Company was awarded a certificate of merit for Baby Rambler rose; and L. A. Martin a similar award for an excellent vase of *Antirrhinum majus*. A very interesting and instructive essay was read by L. A. Martin on "Spraying for San Jose Scale." Quite a lively discussion ensued, the consensus of opinion being that unless some concerted action is taken to check this pest, there will be few live fruit trees in this section in the course of a few years. The secretary announced several liberal donations toward the prize fund of the November show, the premium list for which is nearly completed. F. R. Pierson asked for the opinion of the members regarding the most suitable number of carnations to be staged for the cup he offers, his desire being to give the smaller growers as well as the larger ones, a chance to compete. After the members had freely expressed their opinion Mr. Pierson decided to give the cup for seventy-five blooms, being twenty-five each of the three Lawsons—pink, white and variegated, instead of fifty bloom Variegated Lawson, as originally intended.

Next month Professor Powell will deliver a lecture on trees and roses. For this lecture the school trustees have kindly granted the society the use of the lecture room in the High School, which will enable us to make the lecture open to the public. WM. SCOTT.

The bulb mite has been receiving consideration by the English Board of Agriculture. It is said this mite attacks sound bulbs as well as those which are diseased. The remedial measures recommended are: (1) To burn affected bulbs; (2) wash and spray every affected bulb with paraffin, repeating the operation after a fortnight; (3) wash the bulbs in sulphide of potassium (liver of sulphur), 1 ounce to 3 gallons of water; (4) fumigation with bisulphide of carbon, in order to do which place the bulbs in an air-tight receptacle, and on the top of the bulbs put a saucer of the bisulphide and let the bulbs remain in the vapor for 48 hours. It must be remembered that the vapor is poisonous and inflammable, so that no light of any description should be brought near the fluid.

The Haarlem (Holland) Quinquennial Bulb Exhibition.

The seventh quinquennial exhibition of the Dutch General Association for Bulb Culture was held March 17 to 22 at Haarlem, Holland. The show was opened by President Wentholt, who feelingly referred to the good work done by his predecessor, the late Mr. Krelage, and touched on the support given to the association by the royal family of Holland.

The large hall was well filled. On the left, a collection of callas in different kinds was very noticeable. This was followed by iris, which in turn was succeeded by a group of *Acer polymorphum japonicum*, shown in twenty-five distinct shapes. Nearby a new tulip, *Tulipa Fosteriana*, called forth attention; it has been recently imported; the color is a nice orange red, resembling more or less that of *Tulipa Greigii*. Another pot contained five of these tulips showing the same interior markings, but those of the first had a yellow, the latter a black ground, just like *Gesneriana*. Spireas, parrot tulips, amaryllis (*hippeastrum*), real giant flowers of deepest red to snow white, next drew our notice. A great improvement in the last named class of flowers was noticeable; a few years ago every flower was a star now they are all wheel-shape.

A very nice group was that composed of liliums, lily of the valley, lachenalias, trilliums, watsonias, tropaeolums, iris, orchids, etc. A group of 12 pots of *Cyclamen persicum papilio* had the largest number of flowers we ever have seen. C. G. van Tubergen was the exhibitor. A collection of sixty varieties of hyacinths in pots, shown by Messrs. Ant. Roozen & Son, Overveen, gained a gold medal, and deservedly so. From E. H. Krelage & Son, Haarlem, came a magnificent bed of Darwin tulips, 25 varieties, 10 of each in a pot. These comprised such fine kinds as Ouida (bright red); Feu Brillant (light scarlet), Queen Emma, Psyche, Gretchen, all soft rose, and Crepuscule (light silk gray and lilac). The firm was awarded a gold medal for its fine exhibit. C. G. van Tubergen also received a similar award (prize of honor) for 30 varieties of double tulips.

Narcissus and hyacinths were well shown; among the former were many large varieties in new sorts not yet in the trade. Van Waveren's Giant is an immense bicolor of Emperor shape; Olympia and Robert Sydenham are both immense yellow trumpets. Mina, more compact than *Horsfieldii* and Princess Mary, have also large, fine flowers. Messrs. M. van Waveren & Sons, Hillegom, got a first prize (gold medal) for this fine display.

The pride of the exhibition was the collection of hyacinths in glasses from G. van der Mey, Lisse. The trusses and individual flowers were immense, and their condition and fine appearance were the topic of conversation among the exhibitors. A group of 78 single and double sorts received an extra gold medal;

COTTAGE TULIPS, SHOWN BY C. G. VAN TUBERGEN
At Haarlem Quinquennial Bulb Exhibition

E. H. KRELAGE & SON'S DISPLAY OF DARWIN TULIPS
At Haarlem Quinquennial Bulb Exhibition

it included such varieties as Isabella, double rose; Lady Derby, single rose; General Vetter, single white; Grand Maitre, single blue. A second collection of 18 single and double varieties, 3 of each, also received a gold medal; among them were Kastenje bloem (chestnut flower), double rose; Enchantress, single blue, etc. For other exhibits G. van der Mey also got three first prizes.

An upstairs room was filled with tulips of the kinds mostly seen at exhibitions, but a collection of cottage tulips from V. G. van Tubergen was worthy of special mention; it included *Tulipa elegans*, *Virginalis*, *Picotee*, *Mrs. Moon*, *La Merveille*, and many other varieties. *Polyanthus narcissus*, *erythroniums*, orchids, *helleborus*, etc., were also shown here.

Certificates were awarded to a late flowering single tulip named Bianca, a pure white in the style of *La Reine*, but a late bloomer, exhibited by P. Pryde. Heemstede, and to a single, named Red Riding Hood, exhibited by W. J. Blom & Son, Overveen. Narcissus, Van Waveren's Giant, Narcissus Winifred, and Narcissus *Imcomparabilis* Rosy, from M. Van Waveren & Son. *Iris sindjarensis* var, *Tubergeniana*, *Iris sindjarensis* var. Alba, *Iris pur-sind* (*Iris persica purpurea* x *Iris sindjarensis*), *Iris sind-pur* (*Iris sinjarensis* x *Iris persica purpurea*), *Tulipa Fosteriana*, *Freesia Tubergen's Mauve*, and *Freesia Tubergen's Carmine*, all from G. C. Tubergen, Jr. The two *freesias* last named, seedlings from *Armstrongii*, were

generally agreed to as the novelties of the exhibition. On Saturday, the Queen Dowager paid a visit to the exhibition; and on Sunday the hall was thronged by the workmen from the different bulb establishments of Holland.

The award jury was composed of the following well-known horticulturists:

P. Rudolph Barr and Herbert J. Cutbush, London; R. Wilson Ker, Liverpool; Alfred H. Pearson, Lowdham; John Pope, Birmingham; Walter T. Ware, Bath; Fr. Benary, Erfurt; Michael Buchner, Munchen; C. Kommer, Bremen; Rudolf Seidel, Grüngräbchen; August Siebert, Frankfurt; W. Swoboda of J. C. Schmidt, Berlin; Philipp Siesmayer, Frankfurt; A. Chatenay, secretary of the National Horticultural Society of France; K. J. Kuyk, Mont St. Amand; H. Martinet, Paris; Charles Pynaert, Ghent; A. Truffaut, Versailles; Albert Viger and Philip Leveque de Vilmoren, Paris.

Sweet Peas for Cutting.

To vast numbers of garden lovers the principal recommendation of the sweet pea lies in its unqualified value for the varied purposes of home decoration. It is essentially a flower for utilization in *epergnes*, vases and other ornaments, while for dinner-table decorations it is unrivalled. Among the worshippers at the shrine of this flower are many whose sole object in growing it is to have an inexhaustible supply of flowers for cutting, and it is especially for their benefit that the subjoined list has been compiled. It comprises new and old varieties, some of which rank among those recommendable for exhibition, that are extremely floriferous, and which, if persistently cut, continue to produce blooms over a very protracted period. The first and second named claim a place by reason of their rapid progress and early flowering propensities.

SWEET PEA ANNUAL, 1905.

To Be Had for the Asking.

The Messrs. Kroeschell Bros. Co., of Chicago, are very much convinced of the utility of their little device for measuring carnation blooms, mentioned in our issue of March 25, on account of the large number of requests for the measures received from our readers. The Messrs. Kroeschell Company evidently think (and rightly so) that The Florists' Exchange is the medium through which the attention of the greatest number of interested parties desiring the firm's useful little device can be secured. We have, therefore, been asked by the concern to repeat that the carnation measure can be had for the asking, on receipt of a 2c. stamp to cover postage. Address 55 Erie street, Chicago, Ill.

Gold Medal Group of Amaryllis

Prize-Winning Hyacinths in Glasses. Shown by G. Van der Mey

SOME OF THE EXHIBITS AT QUINQUENNIAL BULB EXHIBITION, HAARLEM, HOLLAND

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—Continued prosperity seems assured to this society. Eighty new Fellows were added at the last meeting. The shows at the new hall attract large numbers of visitors, and at each meeting we get quite a fine display of interesting subjects. At the last, one of the most prominent features was a large group of platyceriums from Messrs. Hill & Son, Edmonton. I have often advocated these quaint ferns for decorations, and I feel sure that there is money in them. A gentleman in America, writing me some few years ago, told me that he found them do better in the house than any other fern that he had tried, and they were always a source of interest to those who had not previously seen them. The sorts Messrs. Hill showed were alocorne, rethiopicum, also known as straminea, Wilkincki, Veitchii, Hillii, angolense and a magnificent specimen of grande. The two first named are the most useful for general purposes, and these may be readily propagated. If fixed on blocks of peat, root bulbils are readily formed, and these soon develop into young plants which are easily detached, and will soon grow into a useful size. Hobbies, Ltd. (J. Green) showed rose Philadelphia Rambler. It was hardly up to the standard as regards culture. Yet it was evident that the individual flowers are better and the color a more pleasing shade than is Crimson Rambler. Messrs Robert Veitch & Son, Exeter, again showed their Erica Veitchii, this time a compact plant densely covered with bloom, and an award of merit was given for it.

In roses shown by Geo. Mount, Liberty and Ulrich Brunner were the best reds. Captain Hayward was also good. Mrs. Sharman-Crawford, one of the best of several pinks. Messrs. Cuthush & Sons, Highgate, showed carnation General Kuroki, a very fine scarlet variety, of habit similar to the American varieties. This gained an award of merit.

Magnolia Campbellei from a private source, was one of the finest we have seen, the large flowers being of a beautiful rosy pink on the outer, and nearly white inside. Lathyrus pubescens, a very pretty azure blue variety, with rather small flowers, and about a dozen on each stem, came from the gardens of Leopold de Rothschild. S. Mortimer, Farnham, showed a fine wallflower-leaved stock, with large double white, highly fragrant flowers. It was named "All-the-year-round," and is said to flower at any time according to the time the seed is sown. It should be useful for market. H. Langston, of Marston, Herefordshire, showed violet Princess of Wales, one of the finest blues we have; the flowers shown were of remarkable size. We also see this fine variety in the market, and there is no better, though La France may run it very close.

We are getting rather overdone with rock plants and deciduous flowering plants at the meetings. It is the same thing time after time, with but slight variations.

FLOWER FASHIONS.—All kinds of floral arrangements for funerals, etc., are now made up with a much better groundwork, and the framework, being covered with moss, keeps the flowers up much better. Maiden-hair fern is very little used. Ivy leaves, bronze tinted berberis foliage, croton leaves and other substantial foliage make a better base and last well. We cannot quite get away from the old conventional wreaths, yet generally other designs are more in favor and colored flowers are used extensively. I find that for wedding bouquets the Parma violets are much in favor. At the fashionable wedding of Marconi, the bridesmaids'

GENERAL VIEW OF QUINQUENNIAL BULB EXHIBITION, HAARLEM, HOLLAND

bouquets consisted chiefly of these violets, and I have lately seen several other wedding orders where they have been the leading feature. In fact, they seem to be taking the place of the carnation Miss Joliffe, which was so indispensable a few years ago. But this old favorite, I find has not quite died out; the other morning I saw some good blooms in the market.

Classification of Sweet Peas.

In 1902 the National Sweet Pea Society (England) organized the first public attempt to classify sweet peas under recognized color headings, and diverse as are the opinions held in regard to colors, the result, as judged by the expressions of numbers of growers, was an unqualified success. The tabulated returns were quoted on every hand, appreciations coming from America as well as from all over the United Kingdom. Seed merchants expressed their approbation and were anxious that something of the same nature should be done every year. It was, therefore, decided to conduct a second classification during 1904, and the results are subjoined.

A close perusal of the details, particularly if the original classification is used for comparison, will show remarkable evidences of stability and equally remarkable fluctuations. Several varieties that held prominent positions in 1902 are just as conspicuous now; while others have fallen substantially from their

erstwhile high estate. Then, too, some that received only a comparatively small number of votes in the earlier work have now risen considerably in public esteem. Those only have been included which received upwards of ten votes in the forty papers filled in—every one below that standard has been excluded, so that those retained may be regarded as the finest sweet peas in general cultivation. There are several others of the finest quality which are not yet, owing to comparatively recent introduction, very widely grown.

WHITE.	MAUVE.
Dorothy Eckford	Mrs. Walter Wright
Blanche Burpee	Dorothy Tennant

For the purposes of this classification, and for future exhibitions, the Committee of the National Sweet Pea Society has decided to regard the following varieties which are bracketed as synonymous.

{ Duchess of Sutherland	{ Blanche Ferry
{ Modesty	{ Earliest of All
{ Countess of Radnor	{ Dorothy Eckford
{ New Countess	{ White Swan
{ Flora Norton	{ Mrs. Geo. Higginson, Jr.
{ Memento	{ Gladys Deal

NEPHROLEPIS BARROWSII AT BOSTON SPRING SHOW

Awarded First-Class Certificate. H. H. Barrows & Son, Whitman, Mass., Originators and Exhibitors

Commercial Orchids at Orange, N. J.

The steady growth of the orchid in popular favor has led to its special cultivation commercially. In the picture of the "Willowmead Orchidry," at East Orange, N. J., is given a type of modern orchid house, with its rows of suspended pots and baskets—the Willowmead pot and basket, in this case—and its benches well filled with plants in the double pots. Its owner, Dr. J. M. W. Kitchen, has told his experience repeatedly before gatherings of the craft and regards the cultivation of

CATTLEYA CHRYSOTOXA

the orchid as a simple thing as long as a few general principles are observed. The doctor's inventive genius has directed itself also in the direction of heating, and the visitor is shown the "Torridor" fuel and heat saving appliance, which can be attached to any furnace, and which will pay for itself in a remarkably short space of time. A manual describing the appliance he sends any interested reader.

The picture represents the main house opening out of which are ten smaller ones, which are used for the cultivation of special kinds or for resting. The presiding genius of these is W. Warner, who will be remembered by the visitors of former times to the

houses of Pitcher & Manda, at Short Hills, N. J. Some of the results in the flowering of these plants are given in the pictures of the cattleyas and dendrobiums.

The great difficulty of the leading florists now is to find flowers sufficiently rare and expensive for their best patrons, who do not wish to wear such things as common folks can afford, and here and at the other establishments devoted especially to the orchid are found full gratification for this feeling. "What does the retailer get for an orchid bloom for which he pays me one or two dollars?" asked Dr. Kitchen at a gathering, where a prominent florist was present. "It depends upon just how much the fellow around the corner is asking," was the very diplomatic reply.

The expenditure of from \$3,000 to \$5,000 for flowers at fashionable weddings is not at all uncommon now, and a decided increase in the employment of the orchid in the farewell floral offering to the passenger upon our outgoing steamers because of its valuable keeping qualities is on the increase. It is the rarest of all Easter plants, the graceful poise and dove-like form of some of its species making it particularly appropriate upon this anniversary.

Orchids bearing flowers in racemes are becoming popular at the present time for table decoration, because of their graceful combination with asparagus and adiantum, and are even sold in their pots and baskets for gifts because of the continuous bloom of one plant for several weeks. Nor do all orchids resent greatly being taken from the conservatory to the drawing-room, though it frequently means to the grower the sacrifice of the next season's flower; but even this has been found an advantage, for from the enforced rest has come increased size of the next following season's bloom.

As we understand the cultivation of the orchid better, the number of flowers upon a single plant is increased through the skill of the grower. An example of this is mentioned at an exhibition at Sandown, England, where a plant of the widely known *Dendrobium nobile* was staged bearing no fewer than 1,350 blooms. The science of window-gardening, yet in its infancy in American cities, has many valuable additions in the orchid, when our dealers wake up to this fact, particularly when simple instructions for their cultivation accompany the sale of each plant. As its capability of harmonious arrangement in evening costume has so recently been discovered here, though extensively practiced abroad, our florists find in the orchid not a flower for the connoisseur alone, but for the house and all branches of decorative work. The display of a few choice photographs of these flowers, particularly if colored, materially assist the sales.

Easter Orchids at Orange, N. J.

The orchids in the collection of Mr. William Barr, Llewellyn Park, which will be in flower at Easter, are *Cattleya Mossiæ*, *Dendrobium Wardianum*, *Lælia cinnabarina* and *Phaius grandifolius*. The *Cattleya Harrisoniæ*, shown in the picture, was exhibited at the March meeting of the New Jersey Floricultural Society, where it received 90 points. It had 22 blooms. It is one of the oldest in cultivation; a native of Southern Brazil, where its time of flowering is through August and September, but here, under skillful treatment, it blooms in the Spring. This plant was started in active growth the middle of June in a house with temperature of about 70 degrees facing the North, and was grown without any shading at all. Mr. Barr has forty plants of this cattleya in his collection; twenty of these are now in bloom, and the remaining twenty were started in January in a house of 60 degrees, and while grown under different conditions will receive as little shading as possible, and but little feeding, and that little only when the flowers are seen in the sheath. By this means I have secured larger flowers, longer stems, and better color than by the treatment so commonly recommended. If the house can be kept moist when cattleyas are growing, one need give no feeding at this stage.

Cattleya Trianae received 90 points at the February meeting of the New Jersey Floricultural Society. It is a native of Colombia and undoubtedly the most useful orchid in cultivation, flowering at a time in Midwinter when

blooms are scarce and in most demand and remaining a long time in perfection. It is one of the easiest to grow if you can secure fresh bulbs. Planted during August, they will flower at Christmas. If it is possible, keep them in a house by themselves. They require a little more water in the growing season. If watering is entirely omitted, the bulbs wither and take some time to recover. Our houses are elevated, while I can ventilate from the bottom I rely entirely on top ventilation. The orchids are all planted in fresh moss and peat.

ARTHUR W. BODWELL.

The orchids for Easter flowering at the houses of Mr. Henry Graves, of Orange, are *Cattleyas Mossiæ* and *Schroedera*, *Cologyne cristata*, *Dendrobium Wardianum*, *Oncidium tigrinum* and other varieties, and the usual cypripediums. They are largely used in house and table decoration at this place.

All orchids make up well with ferns, particularly of the adiantum varieties. No flower suffers more from injudicious combinations. *Cattleyas* and Roman hyacinths make an ideal decoration. *Freesias* work in well and migronette and Roman hyacinths with *C. Schroedera*, but with none other on account of color. *Cypripedium insignis* and *freesias* harmonize and make a striking decoration by skillful association in either plateau or epergne methods. *D. Wardianum*, *C. cristata* and *C. Schroedera* make up well in mantel decoration with *Asparagus Sprengeri* or *A. plumosus*. EDWIN THOMAS.

The Retail Trade

ADVERTISING BY RETAIL FLORISTS.—Quite a number of retail florists are adopting modern business methods, and using the advertising columns, both of the trade and daily papers, advantageously. But the custom is not at all general, hence the comments upon the lack of enterprise in this direction occasionally found in media devoted to advertising subjects. The following advice from an expert, appearing in a recent number of the Advertising World, seems pertinent, particularly around Easter-tide:

The aim in advertising a florist's establishment should be to make his name widely known throughout his city, as well as in his immediate neighborhood. For aid in accomplishing this he should advertise in his local newspapers, use booklets, and make his windows worthy of admiration.

More people would purchase flowers, and many would in large quantities, if the excellence of these as gifts and their appropriateness for various occasions were duly expatiated upon in newspaper advertisements and in booklets and brochures specially prepared for the purpose. A large majority of those who fail to purchase flowers would do so if they possessed the knowledge of what was appropriate for presentation at a particular occasion. Lacking this, and not wishing to exhibit their ignorance, they allow the money to go into other channels.

Announcements written in the style indicated would harp upon flowers as dainty presents for certain holidays, and would appear on the days preceding those days. They would tell of the daintiness and appropriateness of certain florist's wares for the next day, indicate the price, and state the fact that upon receipt of notice by telephone prompt delivery would be made to any place in the vicinity.

In the booklets the subject of flowers as presents could be duly treated, perhaps under the head of the various occasions when appropriate, and perhaps reindexing the matter under the names of the flowers themselves. A mass of information of both interest and value might thus be compiled. The "language of flowers" might not inappropriately be one of the divisions of such a booklet.

The windows also could be utilized as a medium for instructing one's public. Here the teaching must be confined to the immediate neighborhood, but as that will always remain a florist's best harvest ground it should be cultivated.

Talking of the immediate locality, windows and booklets or circulars may be brought into use simultaneously. The booklets suggested in the paragraphs above naturally would be sent upon requests coming through notices of their existence in the newspaper advertisements, but there is no objection to a distribution of them in one's territory. A cheaper edition might be thought desirable for this latter purpose, or perhaps a folder embodying the principal information they contain.

THE PARK FLORAL COMPANY, Denver, Col., sends us a sample of the neat pamphlet the firm is distributing announcing its Easter offerings. Representations of daffodils and tulips, in color, make attractive cover illustrations.

H. BAYERSDORFER & CO., PHILADELPHIA.—This firm is so well known that as a rule little is written about it. No doubt this is a mistake, for when any one firm is doing a business of \$40,000 a month, it is not only a benefit to the city in which it is located, but is also a great benefit to the trade by the dissemination of its ideas and conceptions. Numbers 54 and 56 North Fourth street has been the home of this firm for many years. This is a five-story building, each floor being 22x70 feet, so that in it there are 7,700 square feet of floor space. Business increased so rapidly that four years ago the firm rented the second floor of 50 and 52 North Fourth street. Here it has a room 85x115 feet, or 9,775 square feet of floor space. This room is 18 feet from floor to ceiling. There are four rows of bins three tiers high, full of baskets of all conceivable styles and sizes, pot covers, fiber vases, etc. To the left is a large space for the storage of immortelles, crepe paper, etc. In front are shelves three feet wide and four tiers high, on which are stored cypress leaves and wreaths, wax paper in all colors, wood fiber ribbon, and on the floor tin foil in all colors. From the ceiling of this floor are suspended all kinds of fancy baskets. In the other building, 54 and 56 North Fourth street, the fourth floor front is the office. All along the south side of this floor is a glass show case from floor to ceiling. Here we see samples of Bohemian glass vases, wreaths of wax flowers, metal wreaths of all descriptions, and white doves in all desirable positions. All around this room are drawers with samples of artificial flowers, letters, tin foil, etc. In the center is a counter on which goods in season are displayed. On the back wall are shelves containing goods used every day by retail florists, and here convenient to fill quick orders. The second and third floors are utilized for fancy baskets, all kinds of vases and wicker work, such as automobiles, locomotives; also china swans, stuffed chickens, ducks, etc. The fourth and fifth floors are used as a factory, one floor alone being utilized for the manufacture of wheat sheaves, the other floor for wire designs, baskets, birch bark work, etc. Three doors up the street the firm rents a cellar containing 2,000 square feet of space, for storage, while in busy seasons, when thousands of cases are arriving every week from Europe, two other cellars are rented for two and three months at a time. Just now this firm is very busy shipping goods for Easter trade. Some six men are working steadily making up orders of fancy baskets for special orders, and the whole establishment presents an up-to-date appearance of energy and systematic business. DAVID RUST.

The Keeping Qualities of Carnation Enchantress.

Editor Florists' Exchange:

Enchantress fails to keep seems to be a general complaint, and a prominent grower recently remarked to me he would cease to grow it solely for this reason. Before hastily discarding so beautiful a carnation some effort should be made to ascertain the cause of its apparent non-keeping. Recently I cut half a dozen flowers of it and placed them in a vase in an ordinary room in my house. On the seventh day after cutting, every flower was still fresh, yet no special treatment had been given; in fact, the water was only changed once during the week. I intended photographing the six flowers, but circumstances prevented on that day. The day following three of them had faded, but the other three were still perfectly fresh, as the accompanying illustration will show. This freak photograph was not intentional, but by mistake after photographing the three flowers the best one of the three was also photographed upon the same plate.

A neighboring grower, who sells Enchantress to local customers, tells me they are always delighted with it, and come again for the same variety. Why then does it so quickly go to sleep in the wholesale and retail flower stores? There must be something wrong in the methods of handling or caring for the flowers after cutting! A. HERRINGTON.

FLOWERS OF CARNATION ENCHANTRESS
After Being Cut Seven Days

Photo by A. Herrington.

The Lasting Qualities of Cut Flowers.

In various classes of plants there may be some difference in regard to the time cut blooms will last, but in many instances it is more imaginary than real, and it is a little difficult to find the cause of some going off quickly, while others last well. Yet, in some cases, the cause is quite apparent. The first thing is that they should be cut before, or as soon as, they are fully expanded. I have seen several examples in the market this season, where, from the swollen capsules, it was quite evident that the flowers were almost passed before they were cut, and a day longer would see them quite done for. We know that in some cases it may be an advantage to hold flowers over for a certain period, but in the long run it will pay better to cut as soon as ready, and they will give much better satisfaction to the customers.

I find in carnations, any which seed freely do not keep so well as those which are abortive; for as soon as fertilization takes place, the petals wither away. This was one quality with the old favorite Miss Joffe, it never, as far as I am aware, produced seed, and consequently the flower lasted well, and this is a point worth studying by growers generally, for there is no doubt but that it is the main cause why some last better than others. The Marguerite carnations are pretty, but unless they are cut before they are fully developed, they go off quickly. It may be that the petals are not of great substance, but the chief cause will be found in the fact that they seed so freely. Begonia Gloire de Lorraine is a good example of an abortive flower lasting well. It is the one advantage in double flowers, that, being seedless, they last so much longer. The advantage of dipping the stems in water as soon as they are cut is often overlooked. Most market growers make a great point of this. Dipped in water (the stems only) and shut up in a close box, they keep fresh even longer than they would if put into water after the stems have got a little dried. Any that are inclined to bleed from the

flower stems will keep much better if dipped in hot water. The practice of immersing the flowers in water is not a good one; with few exceptions, flowers last much better if kept quite dry, and some are absolutely spoiled by being wetted. The Sweet sultan (Centaurea suaveolens) is an example of this, and it will last almost equally well without even the stems being in water. In some flowers, foliage left on the stems will absorb all moisture, and cause the flowers to fade quickly; this is the one disadvantage with chrysanthemums on long stems. But to get over this, exhibitors often strip off all the leaves from the flower stem, and use another stem with leaves only. I believe there are many who do not recognize the disadvantage of leaving the foliage on, for one often sees them in the market with all the foliage intact.

METROPOLITAN, in Horticultural Advertiser, England.

FRUIT UNDER GLASS.

Peaches and Nectarines.

Peaches and nectarines will now be making rapid headway, both in foliage and fruit; more particularly those in the early started houses. While early in the season fruit-forcing seems a little slow, at this date one can see the advance made from day to day. Probably one of the most difficult tasks for the fruit grower, especially when there is an extra heavy set of fruit, is thinning it to a fair average crop. I am aware the trees are capable of carrying a fairly heavy crop, yet many times we do not realize the quality of fruit we have left to mature until it shows color. One thing is certain, if we do carry a too heavy crop, we cannot expect such fine fruits; neither will they be so rich in flavor. One or two things are to be considered when satisfied with a fair average crop. One can reasonably be assured of a crop annually, and the trees will keep in a healthy, vigorous condition for years. To my mind, there is, therefore, nothing gained by overloading the trees. I don't mean to say it would be good policy to thin this fruit all at once; rather do it by degrees. Make the first thinning, say, when the fruit is about the size of peas, and the last when of the size of walnuts. When making the last thinning I have found it not a bad plan to give the fruit a rough count on one tree. As an illustration: here, a week or so ago, I had what I thought a tree thinned about right, but giving the remainder a rough count, which I was figuring should be somewhere around two hundred and fifty, the count proved I had over four hundred. This goes to show how easy it is to be misled.

As the fruit begins to swell, feeding will be in order. As I have before stated, the man who grows fruit to any extent should have a farm barn somewhere near by. While chemical fertilizers are all right in their place, so is manure water, that from the cow barn being preferred. In regard to feeding, no hard and fast lines can be laid down. Some soils will take more than others; therefore, the up-to-date grower will naturally find out the needs of his trees. It is far better to go on the light side than too heavy. Pages could be written on feeding, etc., but for the production of A1 peaches and nectarines we use wood ashes and bone, with a liberal amount of cow manure, both as a top-dressing and in liquid form, with now and then a sprinkling of Thompson's manure. This, in my opinion, makes a good combination for the production of choice fruit. Of course, I refer to the case of established trees.

But how about the foliage, which surely plays an important part in the perfect development of the fruit? Green fly will play havoc with it in a short time; in fact, will almost ruin the foliage in a day or so. I am a believer in the old saying, "An ounce of prevention is worth more than a pound of cure." The best remedy I know of, and one I am satisfied, whoever tries it, will use every season, green fly or no green fly, is to spray the trees once a week with whale oil soap, just enough to color the water. This surely will keep off green fly, and also put a gloss on the foliage that causes us to look and admire. This treatment seems to benefit, while fumigating is harmful to the foliage.

Melons.

Where there is any vacant space in the greenhouse, a crop of melons might be had. In producing this crop now, they can be brought along without the aid of fire heat from now on, which means melons at a comparatively small cost. However, to have a successful lot, they must be grown on without a check from the time the seed is sown till the fruit is ripe. Now that days are long, the plants will make a rapid growth, especially if planted in a fairly rough soil, so that the roots can travel through it rapidly. Probably the most successful compost for melons is chopped sod. When planting, have the plants slightly elevated, otherwise there is liable to be trouble with stem rot, although not so much danger as during the Winter months. While growing, melons delight in a moist atmosphere, but as the fruit commences to ripen, the plants should be kept a trifle drier at the root; also, a drier atmosphere will improve the flavor. Quite a variety of melons can be grown under glass. Emerald Gem is a good flavored melon, but, unfortunately, under-sized. For size and flavor combined, Sutton's A1 fills the bill. I remember some years ago growing a batch of melons, and feeding one-half with sheep manure water, the other half with cow manure. I may say there was no comparison between the two, the vines that got the cow manure being decidedly the better. WM. TURNER.

Boston.

Easter Outlook.

Easter prospects look bright and promising so far as can be learned at the time of writing. While there is no question that there will be a sufficient supply of both plants and flowers, yet there are several kinds which at present look as if the supply would be short. Azaleas, which have proved one of the best selling flowering plants all Winter, are likely to be scarce, most of the growers being already nearly all sold out. Lilies will likely be in plenty, and roses and carnations are so plentiful at the present time that there is no fear of any shortage of any of the varieties of these flowers. Violets, which last year were by all means the most popular flower of any, will this year, it is feared, be seen only in limited quantities.

News Notes.

Sidney Hoffmann, well known as one of Boston's leading florists of the younger class, was married Monday evening to Miss Fannie Freedman, of this city. The young couple have the good wishes of a host of friends in the trade. After a brief honeymoon spent in Atlantic City, they will reside in Boston.

The window decorations of MacMullin are noticeable drawing cards to this popular store. This week the decorations are all in green, which is quite a departure from the gay colors generally noticed.

The announcement of the razing of the Berkley Hotel, to be replaced by a new business block, will no doubt cause the removal from that corner of the popular firm of Houghton & Clark.

Hoffmann, who recently bought out the business of Mrs. Sutherland, on Bromfield street, is doing an immense business at that stand.

Wm. J. Stewart has gone to Washington to meet the S. A. F. directors, to make arrangements for the August meeting.

N. F. McCarthy & Co. will start their Spring auction sales of trees, shrubs and plants on Friday.

J. W. DUNCAN.

New York.

The Week's News.

It is but a few days since the snow disappeared, but such has been the change in the weather that the planting of pansies outdoors is now in full swing, and thousands are being put out every day. Particularly in the cemeteries is this work being rushed. Around Greenwood Cemetery, the planting of tulips for Spring effect has been discarded, in a great measure, so the space usually occupied by the tulips being vacant this Spring, it is causing an added impetus to the demand for pansies thus early in the season.

David Clarke & Sons, florists, 75th street and Broadway, are bringing in excellent azaleas from their greenhouses at Fordham. These plants were grown outdoors at their place last Summer, and have budded much better than does a great deal of the newly imported stock. Such excellent results are, so Mr. Clarke informed us, due to their being planted in six or eight inches of leaf soil which was placed on a ten-inch deep bed of coal ashes. This kept the roots cool and perfectly drained, and has resulted in a most luxuriant growth, with a set of buds at every tip.

The New York Florists' Club will hold its next regular meeting on Monday evening, April 10, in the Grand Opera House Building, corner of Eighth avenue and Twenty-third street. Easter stock will be on exhibition, and the question box will be opened. The three problems in the box for this month are: What is the most valuable plant introduced in the memory of any member of the club? Why are carnation growers more progressive than rose growers? and, Is floriculture in the United States as far advanced as in Europe? It would seem that such problems as these should bring out a lot of valuable information. The bowling club will meet on the alleys in the afternoon on Monday, the 10th, instead of in the evening.

Reed & Keller, florists' supply dealers, at 112 West Twenty-fifth street, have purchased the florists' supply business of Frank Netschert, and have

established a plant for the manufacture of metal designs.

H. H. Berger & Co., seed and bulb merchants, 47 Barclay street, have just completed extensive alterations in their offices. Increasing business demanded that extra office space be acquired. The whole interior has also been redecorated, which now gives this firm one of the pleasantest offices in the city.

Mr. Walter, of the firm of Stump & Walter, seedsmen, 50 Barclay street, is fully recovered from his recent indisposition, and is again attending business regularly.

The Parker-Bruen Company was incorporated on February 13 under new management, and has opened an office in the St. James Building, 1133 Broadway. The factories of this corporation are located at Harrison, N. J. The concern manufacture several specialties used by florists, notably carnation supports, pot-hangers and glazing points. In addition to these, they manufacture fire escapes and other iron work for large buildings.

Among the visitors in town this week were P. Welch and W. W. Edgar, Boston, Mass.; A. J. Cowee, Berlin, N. Y.; Carl Jurgens, Sr., and Carl Jurgens, Jr., Newport, R. I. The latter gentleman was en route to Washington, D. C., where he will be married on Monday, the 10th inst.

J. Gunther, who has been through a serious siege of typhoid fever, has recovered completely, and is again at his desk in the wholesale store of his brother, Wm. H. Gunther, 30 West Twenty-ninth street.

L. F. Van Acker, of the firm of R. & L. Van Acker Bros., Loochristy, Belgium, arrived in New York on Tuesday last.

What Job Writes About It

Flowers that sell best in the Spring Lots of money you will bring: Orders come from far and near Requesting bulbs and plants you rear; If this advice you'll receive, Sound it is, so I believe: Take this step to gain the prize— Spend a dollar and advertise.

Each business man, who rich has grown, Excelled by this one thing alone; Counting it as money gained, He never was afraid to spend A dollar on advertising space Now reaps he wisdom's fruits, I guess, Go then, reader, be as wise— Example follow and advertise.

If the initial letters of this rhyme you carefully will read, They'll spell to you the paying sheet in which to place your Ad.

Remit us the price (\$2.50) and we will send you a copy on examination. If not found suitable (an unlikely contingency), return book in good condition and we will return you your money.

We have the exclusive American rights for the

GARDENER'S ASSISTANT. Edited by William Watson, Curator, Royal Gardens, Kew. Profusely illustrated. Two handsome imperial octavo volumes, leather backs, cloth sides, 1,300 pages, \$15.00, express paid.

This is a brand new edition, the work of some of the greatest recognized experts of the day. The first portion of the work deals with general principles; the second portion is devoted to directions for the cultivation of decorative plants of all kinds—stove, greenhouse and hardy trees, shrubs and herbaceous plants; the third portion treats upon fruit cultivation in all its branches, both under glass and outside; and the fourth portion upon the growth and management of vegetables and herbs.

We recommend this work as being entirely distinct in character and arrangement from any other gardening book. Send for free prospectus.

All above books are described in our complete Catalogue. Send for a copy, free.
