"An uptown florist who advertised for a rose specialist a few days ago was bewailing his inability to find one. 'It is like advertising for good hotel help in the city when the Summer resort season opens,' he said. 'Everybody worth hiring has a job. The rose season in New York is brief, but it needs an expert to handle them while they last, if he is to supply a high-priced trade. I mean by that a business in which customers do not hesitate to pay \$1 each for fine roses. It is not every grower that can be depended upon to produce flowers radiant and rich in color, and with long, strong stems. When a florist finds a man like that he has a prize. Four thousand dollars a year is not at all a big salary for him, and for seven months of that time he has a sinecure. A man like that is paid not so much for what he does as for what he knows.' Now we know what a good man is worth for only knowing it all.

Fruit Culture Under Glass.

(Prize essay by Percy E. Hicks, read before the Monmouth County, N. J., Horticultural Society.)

Grapes.

HOUSES.—Houses most suitable for growing grapes are span-roofed houses running north and south, with ventilation both top and bottom. A lean-to house facing south is good for early grapes, as it is more sheltered. Houses are best built away from plant houses. If outside borders are needed the foundation should be built in arches about two feet wide and two feet between them.

BORDERS.—Different kinds of borders can be used—inside, outside, raised and sunk borders. Raised borders are preferable if the houses are on low ground, as they would drain better; but in the majority of cases an inside border about fifteen feet wide is best. For late grapes, it is best to have an inside and outside border, especially if the rods are intended to stay in for any length of time. A small outside border about six feet wide will be all that is necessary for quite a few years. Some means should be used to keep the roots from going astray and the roots of other trees coming in. I do not believe in large outside borders, for I think if you can keep the roots in a limited space you have a better chance of feeding and looking after them. For a sunk inside border the soil should be dug out about 3½ feet deep, the bottom should be cemented over and a proper drain made to take the water away. Put in about nine inches of drainage material; broken bricks and tiles will do. Good drainage is most important.

SOIL FOR BORDERS should be a good fibrous loam, a top spit from an old pasture. It can be cut and used right away, laying it grass downward. Put a layer of turf, then some rough bone and a little rough lime rubble; keep doing that until you get near the top. Then the soil should be chopped a little, and fine bone used. Each layer should be firmed as put on. It is not advisable to make the border too rich, as the vines will go away too rank at the start. When they do need feeding all that is necessary can be supplied from the top of the border. I think it is a good plan to make the border up a little, say, about six feet the first year, then add every year until it is filled in. I don't mean to say that this is necessary, as good results can be obtained by making the whole border at once. But with the other way it gives them new soil to work in when they are working well.

YOUNG VINES are raised from vine eyes taken from hard wood. The majority of private growers do not trouble to raise their own, but buy in canes about one or two years old for planting.

PLANTING.—Before planting, all the soil should be washed from the roots, spread the roots out well and cover with soil. Plant about three to four feet apart and about a foot from the wall. After planting, cut down to about eighteen inches from the bottom, so as to insure good strong rods from the start. When they start into growth the top shoot should be trained to the top of the house. In the Winter they should be taken down and covered over with straw to protect them from the frost and sun. In the Spring they should be uncovered and cut back to about a third of last year's growth. No hard and fast rule can be made as to how much should be cut off every year until they are established to the top of the house; it depends on the strength of the rod. But nothing is gained by bringing them up too quickly, especially if rods are intended to stay in for any length of time. If they reach the top of the house in four or five years they ought to be all right. The second year train the leading shoot to the top of the house the same as before; pinch and thin the side shoots out to about six inches apart, and tie down to the wires alternately on each side of the rod. Pinch so that they (the shoots) of each rod meet. The second year they can carry about two bunches of fruit, carrying a few more every year until the rod is at the top of the house. They should then be able to carry 12 or 14 bunches.

Details of Work for the Year.

PRUNING.—In the Winter, when the rod has had a good rest and before starting, the last season's side shoots should be cut back to one good eye. Cut with a sharp knife. It is well to put a little shellac over the cut, as this helps to keep it from bleeding.

CLEANING.—If there is any pest on the rods, bug or spider, all the loose bark should be scraped off, cleaning well around the eyes, taking care not to damage the eyes. Then wash with whale-oil soap, Gishurst Compound or some other insecticide. Go over them with wood alcohol. All loose soil must be cleaned off the border. If there are no roots near the top, an inch or two of soil could be taken off. Then thoroughly wash the house.

STARTING.—If early grapes are needed, the house should be started about the second week in December. The fruit should be ready to cut about the beginning of June. Before starting, prick the border lightly with a fork, taking care not to break the roots; give a sprinkling of crushed bone and wood ashes, and a top dressing of chopped loam and cow manure, about two parts of loam to one manure. Tie down the rods in some manner so as to stop the sap from rushing to the top of the rod at the start. Turn on heat and give the border a thorough soaking with water.

TEMPERATURE.—Start at a night temperature of forty-five degrees, raising five degrees on every dark day and ten degrees on light days with fire heat and

fifteen degrees with sun heat. Raise the temperature about five degrees every two weeks, so as to give a night temperature of sixty degrees when the buds are soft, sixty-five degrees when the shoots are growing, and seventy degrees when they are thinned; of course, raise fifteen degrees with sunheat in each instance, with plenty of air.

DISBUDDING, STOPPING AND TYING.—Take the strongest shoots and bring them down gradually to the wires. Don't be in any hurry in doing this, for if you bring them down at once they will probably snap out. As long as they do not touch the glass they will be all right. Leave enough to cover the house nicely, but do not crowd, and rub out those that are not wanted. Stop so that the shoots from each rod meet. If there are any strong shoots coming away and robbing the others, it is well to stop them about two eyes from the bunch, then let the lateral shoot come as far as you want it. If the foliage is thick at the time the grapes start to color, a little of it should be taken out so as to give them light and air. Don't take too much out at a time, or this will give them a check. Stop lateral shoots at first leaf.

FLOWERING.—When in flower syringing must be stopped so as to keep the house fairly dry. Dampen down the border and walk once a day, on bright days, about the middle of the day or when you have the most air on. The rods should have a gentle tap about the middle of the day, so as to distribute the pollen to set them. The Muscat family is rather shy to set, so it is advisable to go over them with a camel's hair brush, or to tap each individual bunch.

(To be Continued)

appear. The Blue Gum (*Eucalyptus globulus*), seen as a young plant, has leaves of quite a different form to those seen on flowering branches.

Another form of variation is due entirely to cultural conditions. I can give no better example than *Aralia Veitchii*, and its variety *gracillima*. As it is usually seen in slender, graceful plants for table decoration, it is due entirely to artificial conditions. If instead of being potted in light, peaty soil, a richer, loamy soil is used, and less heat, the plants will gradually increase in strength. I have found plants of moderate size take on the vigorous form of growth; and I have also seen plants from fifteen to twenty feet high which could hardly be identified with the slender pot plants usually seen; and I may add that when once they get into the coarser habit, they still retain it when grafted from tops or from the stem with one leaf and bud. When I first had *A. Veitchii* run out, I attributed it to *Aralia Guilfoylei*, instead of *Aralia reticulata* being used for grafting on, but though the latter is perhaps the best stock, I found the same results with this. *Aralia elegantissima*, and *Aralia leptophylla* may also be grown quite out of the light slender character.

There has been a good deal of controversy concerning *Asparagus plumosus nanus*. In one of the earliest batches of seedling plants that I handled I found some variations. Generally the seedlings under good culture form strong crowns, and each succeeding growth will be stronger and attain to a greater length; but some plants form more tufted crowns, and may be divided. These, if worked on (that is, kept for divisions), and potted in a light, peaty compost, or any ordinary soil that is not too rich, will retain the dwarf habit; and practically maintain the true character of *nanus*,

DIANTHUS FETTES MOUNT IN ROCK GARDEN, ROYAL BOTANIC GARDENS, EDINBURGH, SCOTLAND

Photo by W. H. Waite

Plant Variations.

The most remarkable instance of plant variation, or, rather, change of character, that has come under my notice, occurs with *Ficus repens*. Most readers will be familiar with this as a climbing or trailing plant, but there may be some who have not seen it with a stout stem and large, oval leaves. Some years ago I saw a fine specimen at Pendell Court. I could hardly believe it was the same plant, but on examination found both the slender small-leaved growths, and the strong erect shoots with large leaves on the same plant, or, rather, tree, and it is only on the strong erect growths that the figs are produced. In *Ficus radicans variegata* two distinct forms of growth occur in comparatively young plants, and it is worthy of note that either the form with the long, slender growths, or that with thicker stems and larger leaves, will keep to character when struck from cuttings; that is, for some time, of course; but they do run out eventually. Much the same thing occurs with the ivies. "Argus" attributes the change to the fact that it can no longer climb; and other writers suggest the same cause; yet, as a matter of fact, it is not until a strong stem has been made and the plant is of sufficient strength to become fertile (or produce seeds). It is only after this tree-like growth is made that the ivy flowers. It is, however, known that when this tree-like growth is grafted, or even from cuttings it may retain the character; but what I would convey is that the change in growth does not occur until the plant has arrived at maturity. And it is quite as natural for the ivy to change in character before flowering as it is for the *Poinsettia pulcherrima* to produce the scarlet leaves (or bracts) before the flowers

which is not applicable to most of the stock sold as such. I may add, that there is a great difference in regard to seeding. I have known the same plants to give a good crop of seed successively year after year, while others under similar conditions have failed as regularly. It is not always that when a plant flowers profusely that seed is produced. A slight irregularity in temperature, etc., may cause the whole of the flowers to drop off. I never could be quite sure of the cause, but I think a London fog would be most certain to cause failure if this came at the critical time.—Horticultural Advertiser.

Dianthus Fettes Mount.

When well grown, the hardy pinks are objects of great beauty. The accompanying illustration shows the effect of massing, which I mentioned in a previous note. This is a hybrid pink of remarkable quality. The flowers are of a pleasing pink, something like those of the Marquis carnation. Its floriferousness will be readily seen from the picture, which was not faked for the camera. Some of the hybrid pinks are difficult to keep in stock, owing to their blooming propensities—they usually flower themselves to death—but the subject of this note, while a bloomer par excellence, is also a good grower, making plenty of grass from which to propagate. It is also perfectly hardy, but I find it is best to propagate it annually, leaving the young plants in frames all Winter, and planting out as early as possible.

W. H. WAITE.

PLANTS FOR NAME.—C. Adams, Arkansas.—The name of the plant with the white flower is *Euphorbia marginata*. It would be of no use commercially. The other plant is evidently one of the sedums, but we would prefer to have it forwarded to us when in flower, so that we could identify it positively.

To Kill Poison Ivy.

(164) Is there anything that can be used to kill poison ivy? I have lots of it growing around the fences, and I cannot touch it with impunity. H. B.

—The best way to get rid of the poison ivy would be to go over the fence line carefully, and with a spade dig out every growing piece. A pair of gloves should be worn to prevent the hands from touching the leaves, though it should not be necessary to pull away the plants at all. Just dig out the roots, chop up the stems, and either burn the roots or leave them where the sun will kill them.

Sheep Manure for a Lawn.

(167) Is sheep manure a good fertilizer for a newly-seeded lawn? The ground is quite poor. Can the fertilizer be sown on top of the seed? N. F.

—Sheep manure makes a good fertilizer for the lawn, but it should have been worked into the soil before the grass seed was sown. The best thing to do now is to wait until the grass has got a good start, then mix the sheep manure with an equal part of good soil, thoroughly pulverize the whole, and spread it over the grass.

Books, Propagation of Shrubs, Etc.

(171) What literature can I get, written by a good practical man, that will inform me how to propagate and graft conifers, also deciduous stock; in fact, general all around nursery stock? What book can I get that will help me to familiarize myself with the different varieties of trees? How can I tell abies from pines? When is the best time to transplant *Larix europæus*? I am told it is hard to transplant.

Can deciduous shrubs be propagated in Summer time, or must the work be done in Winter? Should it be done in frames or in houses?

Can conifers be propagated in Summer? Do they require houses?

How should *Azalea amoenia* be propagated and handled the first year? X. Y. Z.

—“Propagation of Plants,” by Fuller, is a very good work; so is the Nursery Book, by Bailey.

“Our Native Trees,” by Keller, and “Familiar Trees and their Leaves,” by Matthews, are good.

The botanical distinctions are too intricate to describe here, but if you have large trees before you, you will find the cones of the abies are erect on the branches, while those of the picea are drooping.

Early Spring or early Autumn. Either in Summer, in greenhouse, from young wood, or in Spring, out doors, from one-year shoots.

Yes, the books above named on propagation will inform you fully.

By cuttings made in early Winter to be rooted in greenhouse. J. M.

Fertilizer for Asters.

(172) What do you consider the best fertilizer for asters? We learn that stable manure is injurious. In order to enrich the soil what had we better use? A. B.

New Jersey.

—Asters like a good rich soil, and we would prefer well decomposed stable or barnyard manure to any other fertilizer.

Water Temperature for Carnations.

(173) Would water from a well, at a temperature of about 48 degrees, be too cold for carnations? J. W. C.

Pennsylvania.

—Water at a temperature of 48 degrees will not injure carnations, either used as a spray or for watering the roots.

Caterpillars on Asparagus and Ferns.

(174) What will destroy caterpillars on *Asparagus plumosus* and Boston fern? The insects eat the young shoots of the plants. C. H. K. Texas.

—If the caterpillars are so numerous that they cannot be picked off by hand and destroyed, we would recommend the use of Hammond's Slug Shot. Dust this over the foliage with a powder distributor. One or two applications will, no doubt, clean out the caterpillars.

Thompson's Manure.

(175) Please give me the address of the manufacturers of Thompson's manure, recommended for chrysanthemums in the article by P. Griffiths in a recent issue. I have made inquiries here, but our local dealers don't know it. E. H.

Maryland.

—The manufacturer of Thompson's vine manure is Thompson, of Clovenfords, Scotland. This fertilizer can be obtained at any of the seed stores advertising in *The Florists' Exchange*. N. B.

Heating.

(176) Please let me know how many runs of 3½-inch pipe will be required to heat two houses 18 x 100, one 12 x 100, and one 10 x 100 feet, glass partitions between houses; also two feet on south sides. I have three Hitchings boilers, one No. 15, and two No. 16. H. B. McK.

—Assuming that you mean 3½-inch pipe in this case to be regular standard 4-inch outside diameter cast-iron pipe, would advise as follows: Rose house, eight runs; palm house, nine runs; carnation house, six runs; fern house, six runs. This will give you the required temperature for each house. We have not included the amount of radiation required for the office, for you do not give the dimensions of same. The maximum capacity of the three boilers you now have is 2,600 feet of 4-inch pipe, or its equivalent. We would advise, in your case, having a boiler capacity of 3,500 feet of 4-inch pipe. You will have to be very careful in laying out the mains for this work, being sure to have them of ample size to carry the houses properly. We would advise a separate flow and return main running through the palm house below grade, to properly take care of the rose and carnation houses. The various circulations should be properly valved, so that each house could be controlled. This job really requires the attention of some experienced greenhouse heating engineer. We advise this even if it is only a matter of consultation, for it will save possibly much trouble to you, if you propose to do the work yourself. U. G. SCOLLAY.

(1) How many hot water pipes would be needed to heat a house 100 feet long and 20 feet wide, 12 feet 6 inches to ridge, three-quarter span, one end for American Beauty, the other half for Bride and Bridesmaid roses? (2) How many pipes would be needed for a carnation house 100 feet long, 18 feet wide, even span, 11 feet to ridge? (3) How many pipes would be needed for a violet and mignonette house 100 feet long, 10 feet wide, 8 feet 6 inches to ridge? (4) How many pipes would be needed to heat a house 10 feet long, 10 feet to ridge, 14 feet wide, to maintain a temperature of 56 degrees in zero weather.

SUBSCRIBER.

—Answering your inquiry according to numbers of questions: (1) Presuming you will place a partition in the middle of house I would suggest the American Beauty section to have nine lines of 4-inch pipe, or 12-inch. Bride section, eight 4-inch pipes, or twelve 2-inch. (2) Providing this house has no glass on the sides, seven 4-inch, or eleven 2-inch pipes will do. (3) This house is much higher than is usual for this purpose; consequently, you have more glass to heat. I would recommend three 4-inch pipes, or five 2-inch. (4) In this house, to maintain 56 degrees, in zero weather, I would advise six 4-inch, or nine 2-inch pipes. U. G. SCOLLAY.

Growth of Tree Trunk.

(177) How much does a tree trunk grow? If the head is started, say, five feet from the ground, how much higher or longer will the trunk be in twenty years? INQUIRER.

—Tree trunks do not elongate. If a branch starts at, say, five feet from the ground, it is always at the same height, no higher nor lower. This question comes up now and again; but scientists and observers both agree that there is no elongation of the trunks of trees. J. M.

Chrysanthemums for Thanksgiving.

(178) Kindly give us full directions for making sure of a good supply of chrysanthemums at Thanksgiving. We have Ivory, Major Bonaffon, Wm. H. Chadwick, Mlle. Marie Liger and Col. Appleton. They are now growing in two-inch pots. When is the proper time to bench them? What buds shall we take, and when is the time to commence saving them? We also have cuttings now rooting in sand; would the late cuttings come later? N. & T. South Dakota.

—While the plants now growing in two-inch pots may by proper handling be made to produce good flowers for Thanksgiving, I would prefer to take the cuttings that are now rooting for this late flowering period. The kinds mentioned, namely Ivory, Major Bonaffon, W. H. Chadwick, Mlle. Marie Liger and Col. Appleton, are not all suitable for growing for late flowers, as it is difficult to hold Ivory, Liger and Appleton after November 1 to 10. A good selection for late flowering would be about as follows: White—Timothy Eaton, W. H. Chadwick and Christmas Eve. Pink—Superba, W. S. Allen and the old Maud Dean. Yellow—Major Bonaffon, Yellow Eaton, W. H. Lincoln and H. W. Rieman. These are old standard kinds, and can be bought for a song from the men who handle that line of goods.

A few notes on culture are here given: Cuttings may be rooted as late as the end of July for late flowering, the only trouble with late propagation being the fact that it is not so easy to root chrysanthemums after the hot weather sets in. A very cool shady place with lots of moisture is essential, the cuttings requiring copious spraying to keep them from wilting. When the young plants are in shape, they may be benched and should then be encouraged to continue in growth as long as possible. For this reason they should be planted in a house apart from the early and midseason varieties, so that during September and October they may be kept very cool, with lots of air on both night and day. The terminal bud only should be used, because it will show much later and also because it will develop just as well in a very cool temperature, where the crown bud will not. The aim should be to hold the flowers just as long as possible in the undeveloped stage by a little shade and a low temperature, so that they need not be kept so long after they are fully open. If the flowers are fully open before the middle of November, it would probably be best to cut them and store them in a cold cellar with the stems in a barrel of water. They may be kept for two weeks, or longer, in this manner easily enough. N. & T. know their own market best, of course; but experience has taught us that here in the East there is little call for late chrysanthemums, every one seeming thankful if they are out of the market before Thanksgiving.

CHARLES H. TOTTY.

FISHKILL-ON-HUDSON, N. Y.—Hammond's Paint and Slug Shot factory, situated on the Long Dock at Fishkill Landing, N. Y., is now surrounded by a park made by the Ramsdell estate. The factory itself has had an additional building erected; new sheds for storage are going up; and the grinding department is being refitted with larger mills. The area covered by this plant is nearly one acre. Viewed from the New York Central trains it looks much smaller than the works really are, as the grade makes the street entrance at the second floor. Last January Mr. Hammond sent out to his patrons over 2,000 daries, and in each placed an invitation to come to Fishkill and go to the top of the Incline Railway, 1,500 feet above the Hudson River.

CANADIAN NEWS

OTTAWA.—We are having very cold weather, therefore a backward Spring; so much so that plants are moving very slowly, pansies not an exception. The stock of bedding plants is extensive, the always popular geranium being grown in larger quantities than ever before. The demand for veranda boxes is increasing, and hanging baskets, “to the florists' annoyance,” are still in lively demand. The cut flower trade has been fairly good; carnations and roses are plentiful.

Carnations are all planted, i. e., those in the field, and have had plenty of moisture and cool weather, which has given them a good start. C. Scrim is early at planting roses. He has one house planted, and is going right along with the work.

It was a great pleasure, the other day, to hear J. Graham's voice over the telephone; he has had a very tough time, and, though out, is yet anything but strong.

The Ottawa Horticultural Society held its first monthly show on Tuesday; there was a very fine display of tulips and narcissus. An address by President Black and a paper on “Arrangement of Color in Bedding Plants” were both useful and entertaining.

Our Canadian florist paper seems to be quite a thing of the past. Whatever its merits were, we miss it. It is to be hoped that in the near future we shall make a third attempt and succeed. As the convention season approaches we shall miss it as a medium of convention gossip, for to get the greatest enthusiasm aroused it is necessary to keep the matter before the public so that they may the more surely persuade themselves that they have to be in attendance. And in the worry and work of Spring business it is a sort of stimulus to look forward to the pleasant rest in Montreal in August. The arrangement of the local committee to have two days devoted to straight business and two to sight-seeing, is good. Montreal is a large city, with large suburbs, and there are so many points of interest to the florists and visitors which it would be impossible to see in one day. To attempt it would possibly interfere with the attendance at the sessions, and as, in Canada, the distances between our large cities are great, this keeps the most of us from making many visits to our fellow craftsmen, so that it is well to make the most of our time when we do move.

LONDON, ONT.—There is not much life in the cut flower trade at present, but there are signs of a revival during June. Stock of all kinds is plentiful, and will continue to be so for some time. Carnations are keeping up their quality splendidly, the moderately dull and cool weather just suiting them. Outside stock is growing very slowly indeed; in fact, all the very early sown plants, both flowers and vegetables, were badly cut by frost on the nights of May 19 and 20. Early strawberries are killed, as also are early grapes; but the orchard fruit seems to have escaped. On account of the cold weather very little indeed is being done in the bedding line, but orders are plentiful and stock is good. The last week in May and the first week of June will see this work in full swing. As was expected, many more bedding plants will be used this year than usual, everyone wishing to have their grounds looking their best for a big reunion to be held in August. Palms, araucarias, etc., are now arriving; the plants have stood the journey well, and are generally in excellent condition. Young chrysanthemum plants are now demanding a good deal of attention. At Gammage & Son's, the stock intended for exhibition blooms is looking fine; this is especially noticeable in many of the new varieties. FRED BENNETT.

ST. THOMAS, ONT.—Last week some vandals tore up many of the tulip plants in front of Ralph Crocker's greenhouses, trampling down the balance. The arrest of the guilty parties is looked for. Reports of flower thieves in all parts of the city have been quite numerous of late. Criminals of this class are so mean that they even go so far as to steal flowers from the graves in the cemetery.

LOOKING FOR A BUYER

of the very finest kinds, including Cheltoni, Guy Hamilton, W. Duckham, Donald McLeod, and many others. Why not write me? I can save you money on Chrysanthemums.

Review of the Market

NEW YORK.—We see no improvement in the cut flower business yet, though in some quarters supplies have diminished and clearances have been easier accomplished, though no advance in prices has resulted. The near approach of Memorial Day has not, as yet, had any effect toward stiffening the market, and with the unusually heavy supply of outdoor flowers available, greenhouse-grown stock will be somewhat at a disadvantage, and advanced rates are hardly looked for.

So far as roses go, the variety Killarney is holding up its price better than any other kind, and as there is quite a lot of this rose being planted, we expect to see it in much heavier quantities next season. Carnations have not had to be cleared out at such low figures as obtained a week ago; that is, it has not been necessary to offer large lots at \$3 and \$4 per 1,000, in order to get rid of them; and while the prices have not changed materially, where small lots are concerned, the average returns will, no doubt, make a better showing.

The supply of lilac is shortening, but this is more than made up by other outside flowers. Iris, both blue and yellow, are plentiful, and the supply of peonies is growing larger day by day. Gladiolus are quite plentiful; and there is an abundant stock of lilies. The supply of good cornflowers is somewhat limited. Some of the sweet peas have advanced in value, more particularly the lavender-colored variety. Gardenias, at \$3 per dozen, have sold fairly well, and the demand for cattleyas has been slightly better. Lily of the valley has not moved fast enough, and prices are easier. Smilax is going very poorly, and prices have a downward tendency. The same remark applies to asparagus in bunches; we see little of this material in long strings nowadays.

BOSTON.—Quite a change has taken place in the wholesale trade from a week ago. Material is becoming scarce, or is being held back prior to the days immediately preceding the holiday. Roses have advanced in price, especially the shorter stemmed sorts which are more in demand for this occasion than any other during the year. Roses, which sold at \$1 per \$100, or even less, a week ago, readily bring twice that amount to-day. American Beauty have also stiffened somewhat, although \$3 per dozen is about the average price for long-stemmed flowers. All colored sorts seem to have the preference. Carnations have advanced, the prices ranging now being \$2, \$2.50 and \$3 per 100, or about double last week's quotations. Lilies are selling better than they were, although \$8 per 100 is about the highest price. Sweet peas are rather scarce and of inferior quality. Gladiolus are now plentiful at \$1.50 per dozen for the best grades. Candytuft of fine quality is coming in at 50c. per bunch. Lilies sell well at 50c. per bunch. Pond lilies have made their appearance, but the demand for them is not heavy. J. W. D.

CHICAGO. Trade during the past week has undergone no material change since last report. The supply of stock, in some lines, has shortened up to a great extent, while in others there has been an increase, but not sufficient to greatly affect the market. The local demand continues very light, and from appearances will remain so until after a settlement of the strike. Some of the retailers incline to the belief that trade will not divert itself into natural channels until after the Summer vacation season is ended.

American Beauty roses have shortened up in supply considerably. Medium grade stock is next to impossible to obtain in any quantities. Prices have remained firm; quotations for long-stem flowers are from \$4 to \$5 per 100; medium, \$1.50 to \$2.50 per dozen; other grades, \$2 to \$3 per 100. These quotations will not hold good for Decoration Day, when values will be somewhat higher. Bride and Bridesmaid are in sufficient quantities to meet all demands, and these have remained at the same prices as last week. Liberty has increased in quantity, and the quality is really very good; prices on these are from \$4 to \$15 per 100, the latter for extra fancy.

Carnations are coming in very freely, and while no great over-supply is noticeable, at the end of the day's business some stock is always to be found left over. A good call from out-of-town buyers helps to stimulate prices; these are softer than during the past week, ranging from \$1 to \$3 per 100, with off-grade stock going lower.

Peonies, while not moving as freely as in former years, find a fairly good demand; prices on these range from 35c. to \$1 per bunch of 12, but very few selling at the latter figure. Lilies are not so plentiful as they were; in fact, they can be said to be becoming scarce, and prices have stiffened somewhat.

Sweet peas are coming in quite freely, and values have dropped to from 40c. to \$1 per 100. Lilac is not so plentiful as last week, the home supply being nearly exhausted. R. J.

INDIANAPOLIS.—May so far has proved to be a very satisfactory month for the florists. Funeral work during the past week has been plentiful. Quite a little decorating is being done, and counter trade has been unusually heavy. The growers all seem well satisfied with the amount of planting on hand. Bedding plants are not any too plentiful this year, and a firm price is being asked for them. Window boxes are being sold in unusual numbers, many customers preferring them to flower beds or vases.

The supply of cut flower stock is equal to the demand in most lines. Select Bridesmaid, Bride and Golden Gate wholesale at \$6 to \$7 per 100. Mme. Abel Chatenay, Souvenir du President Carnot and La France are of unusual quality, and sell at \$8 to \$9 per 100 for select stock. American Beauty are below the standard, the best 36-inch stems bring \$25; 20 to 24-inch, \$150; and shorts \$5 per 100. Carnations are not so plentiful as they were, and a shortage is anticipated by Decoration Day. Fancy grades bring \$2.50; medium grades, \$1.50 to \$2 per 100. Sweet peas are plentiful, and sell well at 75c. to \$1 per 100; 25c. per bunch of fifteen is the customary retail price. Lavender and white candytuft are a great aid to the maker-up, at \$1 per 100 sprays. The local crop of peonies is being cut. A large number of them are grown here, so the supply for Memorial Day will be practically inexhaustible; \$4 to \$5 per 100 is quoted on the better grades. Yellow and purple iris are being cut, but the sale is limited.

Tomlinson Hall Market reports a very satisfactory business, both wholesale and retail. The stands there are filled to overflowing with bedding plants, and the "basket brigade," as the customers are termed, is a large one. I. B.

ST. LOUIS.—The past week our wholesalers were still struggling with the disposal of the large amount of stock coming in, and job-lot prices had to be put in force in order to unload. Not much extra business for Decoration Day is expected. This week, so far, trade seems somewhat better. This, we hope, will put a stop to the cheap prices which prevail among the downtown retailers. Report has it that a large number of weddings will take place early next month; these, with school commencements, should make June a busy month for the local craftsmen.

The roses coming in are of good quality in all varieties, especially Souvenir du President Carnot and Bridesmaid. The top price on these is \$5 per 100. American Beauty bring \$3 per dozen for extra long.

Carnations in all varieties are plentiful, white selling best at from 50c. to \$2 per 100; \$5 for fancy in 1,000 lots, and \$2.50 for common. White and pink peonies average \$2 per 100. Cape jasmine brings 75c. per 100 for the best. Sweet peas, at 35c. and 50c., sell fairly well. Enough green goods are in the market for all demands, at the usual prices. ST. PATRICK.

CINCINNATI.—Business is looking up and prices are advancing a little. American Beauty are in brisk demand, and \$3 to \$4 per dozen is now the price for the best. Shorter stem stock averages about \$1 per foot per dozen. Carnations are moving fairly well; so are tea roses. Smilax is still scarce in this market, but other green goods are plentiful. Peonies are making their appearance, and sell at 3c. to 4c., but there is no rapid demand for them. Martin Reukauf was in town recently on his way West.

W. H. Partridge has the decorations for the Commercial Club dinner. Buckeye and oak foliage will be used in some of the decorations, while magnolia blossoms will be employed in others. June weddings and commencements are now calling for certain lines of flowers—sweet peas, American Beauty roses, lily of the valley and stocks. I hope we shall have enough to fill the orders. E. G. GILLET.

WASHINGTON, D. C.—Business has been fairly good this week, the commencement season having opened, which will be the principal standby for the next few weeks. American Beauty are still coming in of a fairly good quality, selling at from \$3 to \$6 per dozen. Kaiserin Augusta Victoria, Souvenir du President Carnot, Ivory, Golden Gate, Bride and Bridesmaid, Meteor and Liberty bring from \$1 to \$1.50 per dozen. Carnations are showing the effects of the weather and are small; any of the choicer sorts can be had for 35c. to 75c. per dozen. Sweet peas sell at 15c. to 35c. per bunch; gladiolus, 75c. to \$1; peonies, \$1 to \$2 per dozen; galliardias, 25c. and Harrisli lilies, \$1.25 per dozen flowers.

The bowling team will hold its weekly meeting at the Rathskeller on Wednesday night, which will be the commencement of the training season for the convention prizes, a number of which the team hopes to capture. M. C.

CLEVELAND, O.—For the last two weeks the weather has been so unpropitious that greenhouse flowers have gone up a notch. Roses are selling at from \$8 to \$10.50; carnations, \$1.50 to \$2.50 per 100. Sweet peas are cheap and plentiful. There is a big demand for all sorts of plants this year. O. G.

NEWPORT, R. I.—Spring at last has come, and we are enjoying some delightful warm, growing days. It certainly looks now like a good season here. The Summer people are opening their houses, and already the Casino is going. Both seedsmen and florists are very busy with orders for Decoration Day. F. W.

BUSINESS DIFFICULTIES.

BUFFALO, N. Y.—The Courier of May 17 contains the following item: "Papers were filed yesterday with the County Clerk in the supplementary proceedings instituted by William F. Kasting against Joseph H. Rebstock, a Buffalo florist. On March 11 last Kasting secured a judgment against Rebstock for \$1,698, which was returned unsatisfied. Rebstock stated in the proceedings that he lives at No. 521 Lafayette avenue and works for the J. H. Rebstock Company. He also enumerated a number of small and large accounts which aggregated a considerable amount of money due him for flowers by prominent Buffalo people. The papers are part of the proceedings to have a receiver appointed for Rebstock's property."

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

GARDNER, MASS.—Charles L. Pierce will again enter the greenhouse business here.

GRAND RAPIDS, MICH.—Chadwick has opened a flower store in Monroe street.

ASBURY PARK, N. J.—M. H. Kruschka, of Elberon, N. J., will open a branch store here, on West Asbury avenue.

IERKIMER, N. Y.—Florist James Barclay, who recently purchased the Rhode Island greenhouses at Pawtucket, R. I., and moved to that city, has sold his greenhouse in this village to H. A. Maxtner, of Williamsport, Pa., who took possession Monday, May 15. A. P. Barclay, who has had charge of the greenhouse here, will join his brother at Pawtucket.

FIRMS WHO ARE BUILDING

WILMINGTON, DEL.—W. H. Vance is building a new greenhouse, 150 x 20 feet.

RHINEBECK, N. Y.—Grove Smith is erecting a violet house, 24 x 150 feet.

SILVERDALE, PA.—William Allaback is making an addition to his greenhouse plant.

PIERCETON, IND.—E. A. Knoll is doubling his present greenhouse capacity, and installing a 100-barrel steel supply water tank.

MISHAWAKA, IND.—C. Powell has been making improvements on his plant, and will soon begin the erection of a new greenhouse for carnations.

BALTIMORE, MD.—Halliday Bros. have obtained a permit to construct a greenhouse at North avenue and Pulaski street, Fred Bahr will be the builder.

COMING EXHIBITIONS.

RED BANK, N. J.—The Monmouth County Horticultural Society will hold its eighth annual exhibition in Town Hall November 1 and 2 next. The premium list has been issued. Copies can be obtained from Secretary H. A. Kettel, Fairhaven, N. J.

New York.

The Week's News.

Memorial Day, which comes on Tuesday next, will see no dearth of outdoor flowers, much to the advantage of suburban florists, who generally find that day one of, if not the busiest of the year. In this vicinity there will be an abundance of such stock as weigelas, viburnums, iris, peonies, spiraea, deutzia, etc., all of which will no doubt attract seriously the sales of roses and carnations, of which there is at present a very ample supply.

The firm of John A. Scollay, Brooklyn, are at present engaged on a contract for the city of New York, installing steam boilers having an aggregate capacity of 80,000 square feet of direct steam radiation. They are also doing extensive work in other parts of the city buildings.

The Horticultural Society of New York will hold an exhibition in the Museum Building, Botanical Garden, Bronx Park, on June 14 and 15. Prizes are offered for roses, cut flowers of trees and shrubs, peonies, iris, perennials, etc., and separate classes are provided for the professional and private grower. An exhibition of Fall fruits and flowers will be held in connection with the meeting October 11 and 12.

Notwithstanding the enormous stock of Nephrolepis Scottii, in plants running from 4-inch to large specimens in

tubs, which the introducer, John Scott, had on hand last Fall, so great has been the demand for this popular fern that he now has only stock in small sizes to offer. Not a retailer handling it but admits that Scottii possesses every point claimed for it by the introducer.

Ralph M. Ward & Co., bulb merchants, have a whole floor at their new quarters, 12 West Broadway, and are much more centrally located than when at 17 Battery place. This firm is fast building up a big business in the importing and distributing of bulbs of all kinds, being ably assisted by W. A. Prosser, who represents them on the road.

The Board of Health has forbidden the use of any flower vase or other receptacle that holds water in Greenwood Cemetery. This action has been taken on the ground that devices containing water form a breeding place for mosquitoes.

Over at Cypress Hills Cemetery, the florists, S. H. Powell, M. C. Hall and Louis Neukert, are very busy catching up with their work, which has been much delayed on account of the cool weather this month.

A. L. Miller, Jamaica avenue, Brooklyn, is developing extensive nurseries at both his home place and his Jamaica property. Standard weigelas, standard forsythias and standard deutzias are among his specialties, of which he carries a choice variety. He has also a rare strain of pansies of his own saving and selecting, and has marketed over 40,000 so far this season. Trepel & Co. is the name of a new retail firm located at Broadway and Willoughby avenue, Brooklyn. They have a nice corner store, with extensive show windows, and, as the neighborhood is a busy one, they should do a thriving business.

The greenhouses of W. L. Jones Nutley, N. J., were broken into last Sunday night, and palms and other decorative plants to the value of \$200 stolen. No trace of the thieves has been discovered as yet.

J. M. Keller, wholesale grower of Bay Ridge, Brooklyn, will retire from business on June 1, and will take a trip to Europe. Mr. Keller has turned his business over to his son-in-law Max Jordan, and to his foreman, J. Appel, who will continue it under the firm name of the J. M. Keller Company.

A very pretty sentiment was woven into the last rites over the remains of the late Kirke La Shelle, author and impresario, whose funeral occurred a few days ago at Bellport, L. I., the country home of the deceased. On the estate were three apple trees, which had been specially cared for by Mr. La Shelle, and with him the trees were great favorites. Indeed, the trees were in full blossom at the time of his death and Mrs. La Shelle had the flowers gathered and woven into a hugeasket cover. H. Hoffmeier, of Broadway and Eighty-third street, had charge of the floral work.

Daniel B. Long, Buffalo, was in the city this week. He reports a very satisfactory business along his varied lines of trade activity.

J. F. Sullivan, Detroit, Mich., was also a visitor.

The New York Bowling Club will roll at Thum's Alleys, Broadway and Thirtieth street, every Friday evening until further notice.

PAINESVILLE, O.—C. F. Lewis, lately an employee of Smith & Fetters, florists, of Cleveland, has taken charge of Hagenburger's store on North St. Clair street. Frank Riley, formerly in charge, has resigned.

Advertising is to business what good blood is to the human body. It is the life and strength of every successful institution.

News Items.

Decoration Day, from the cut flower standpoint, will without doubt see an abundance of flowers on the market. A shortage of certain kinds may exist, as is always the case at a holiday time when runs are made on particular kinds; but in general there will be plenty of stock to meet all demands. Orders from out-of-town buyers are coming in in goodly numbers, and from appearances this trade will be as good as in former years. Just how local business will develop is hard to determine at present. From reports from plantmen their trade has not suffered to such an extent as cut flowers; but, from appearances, when the end of the season comes, this branch will be found to have lost to a larger extent than a great many realize.

A strike, or lockout, by the different lumber and box manufacturers, has put a different phase on the difficulty, and without doubt all union teamsters will be called out before the end of the week, when new complications will arise.

C. W. Scott, of Vaughan's Seed Store, has returned from a prolonged Western trip.

Mrs. A. L. Glaser, of Dubuque, Ia., was calling on the trade last week, and incidentally looking up Decoration Day stock.

The funeral of Otto Kroeschell took place on Friday of last week, interment being in Graceland Cemetery.

Eugene Brennam, a landscape gardener, formerly of Evanston, has been arrested on a charge of passing a worthless check for \$120 on the cashier of Vaughan's Seed Store.

ROBERT JOHNSTONE.

New Orleans, La.

Richard Eichling, chairman; Paul Abele and M. M. Lapouyade, the committee appointed by the New Orleans Horticultural Society to take charge of its sixth annual outing reported, at the monthly meeting May 18, that they had chosen Grand Isle as the place and July 8 to 11 as the time of the outing. The recommendations of the committee were accepted by the members.

The committee on an emblem submitted a design, but action on the matter was deferred until the next meeting. A communication was received from the Louisiana division of the Sunshine Society, promising its co-operation in the chrysanthemum show to be held in this city during the month of November.

Richard Eichling, with U. J. Virgin, exhibited several specimens of Brassovola Digbyana; Harry Papworth, president of the society, also representing the Metairie Ridge Nursery, exhibited Gardenia florida grandiflora; J. A. Newsham showed Tritoma Pfizeri; G. M. Wichers, of Gretna, exhibited several fine specimens of Egyptian lotus. W. C. Wichers, Richard Eilers, and Fred Zeigler were elected members of the society.

American Rose Society.

A meeting of the executive committee of the American Rose Society will be held at Hartford, Conn., on Monday, June 19. The rose garden in Elizabeth Park will be in full glory at that date and a visit of inspection under the guidance of Superintendent Wirth and the members of the Hartford Florists' Club will form a part of the program. Important business concerning the welfare of the society will also have attention. Communications for the committee should be addressed to the secretary's office, 11 Hamilton place, Boston. W. M. J. STEWART, Secretary.

An Easy Leader in Its Class.

Find enclosed one dollar for the renewal of my subscription to The Florists' Exchange. I have certainly had a big dollar's worth the past year. The Exchange is going ahead by leaps and bounds, and is an easy leader in its class. Wishing you still greater success. Massachusetts. W. WATT.

PITTSBURG, PA.—T. P. McCormick is no longer with the Pittsburg Florists' Exchange. E. J. McCallum now being in charge.

THE STANDARD TREATISE ON GARDENING. THE GARDENERS' ASSISTANT

New Edition. UNDER THE DIRECTION AND GENERAL EDITORSHIP OF WILLIAM WATSON Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDTEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

In good variety, \$2.00 per 100. Our selection of varieties, 500 for \$8.75; 1000 for \$15.00. Send for descriptive list.

Timme's Timely Teachings. Memorial Day. Memorial day proper is but a single day of harvest for the raiser and purveyor of cut flowers, but it means a long period of profitable trafficking in all kinds of plants, especially those in bloom. The cemetery trade begins long before and lasts for weeks after the thirtieth of May. With the retailer it is a continuous, steady run of cash transactions, most of them small in volume, but totally amounting to something worth hustling for. Any and all kinds of plants, fit for planting out, suitable and otherwise, are finding ready sales. Plants in bloom of whatever description, are the chief bringers of money. Small purchases are the rule, but store and greenhouses are crowded with buyers all day long, keeping all hands busy from early morning till late at night. The greatest part of all the stock sold is carried away by the purchasers in baskets, buggies, carriages and wagons. This enables us to work our way rapidly through a lot of business turmoil.

Advice to Customers. While there are fewer questions asked as to the proper treatment of the plants bought for cemetery use than is usual when the regular bedding plant trade is in full swing, there still is a class of Decoration Day customers that is grossly ignorant as to the nature of plants, the number and kind required in each particular case and the way they should be planted. The florist, of course, is looked up to as the infallible authority in all these matters, and much of our time is taken up in giving the needed information. Here I will say, that the florist in general is not quite as infallible as he is supposed to be. While most plants, if rightly planted and afterward well taken care of, will thrive and do finely in the soil of a cemetery, this being generally a decomposed very sandy sod, a good many kinds, although having proved good growers and bloomers on our grounds, quickly fade and perish in the cemetery. Especially should we be careful in recommending plants as perfectly hardy, in particular some of the roses, daisies, box, bellis, hardy primulas, chrysanthemums and pinks and many other good things for a grave, which we have been taught to regard as hardy, but which often fail to show up the second season.

Many Ways of Decoration. No uniformity prevails, no strict rule is observed in the use of flowers and plants on graves, and this, I claim, is good, and is probably the reason why some people find our cemeteries more attractive than our parks. But the strictly formal style of bedding has, after all, found its way into cemeteries, and those who bedeck the graves of their departed with a gaudily wrought design, believe it to be proper and all right. And so it is, as far as their goodwill and benign intentions and the florists' trade are concerned. Orders for this style of planting are quite frequent. An idea how such work will look when completed is best conveyed by displaying a few designs of this kind on a bench—in extenso and en natura—life size, as it were, placing the potted plants at proper distances and in lines producing the desired color effect. Here your patrons can make their choice. This plan also works admirably with bedding plants of any kind, plainly demonstrating the effect created by various combinations, showing the comparative height and the harmony in color and habit. It saves time, brings trade and turns many of the sales, originally small, into big orders. Anything to please your customers, which at the same time is inexpensive and sure to promote trade, is justifiable.

COLEUS

To close out, fine large 2 1/2 in. stock, assorted varieties, including Verschaffeltii and Golden Bedder, \$1.50 per 100; separate varieties, \$1.75 per 100. Cash, please.

Shipping and Packing.

Many of the plants bought for Decoration Day have to be shipped to distant points; many also are delivered at a certain time and place. In the shipping and making up of orders much care must be exercised to avoid blunders, to have the plants arrive in good condition and at the time specified. Where the boxes have to be made expressly, and by hand, so as to fit the bulk of the order to be shipped, good judgment is required, but a year's experience in this line will wonderfully reduce the number of errors made in sizing up an order. To make the weight as light as possible, consistent with safe carriage and the welfare of the contents, is the great trick in packing and a duty to our patrons. The foliage of plants to be shipped must not be wet, and if the ball of earth around their roots is soaked with water, it will make bad packing, but is better than sending them in a too dry condition. Every plant coming out of a 3-inch pot, or larger, should separately be wrapped in paper, leaving most of the foliage free. At this time of the year all plants of a soft growth should be stood upright in the box, either in single or double tier, and the box should be closed with narrow boards, several inches apart, so as to admit air to the plants inside. These upper strips should be nailed down securely, for it must be borne in mind that every teamster or expressman is sure to take a hold right there in lifting the box, no matter how heavy it may be.

Watering.

In the rush of business, occasioned by Memorial Day trade, much necessary work is often neglected. This, indeed, can hardly be helped. Watering, however, should never be neglected, or done in a haphazard way, or be delayed, when the plants are showing signs of suffering for the want of this their life element. Now when the days are long, the sun's rays fierce under glass, the ventilators wide open and most of the plants in full bloom and pot bound at their roots, watering all around is no easy job. But it will not do to have some of your stock go to ruin now, after all the pains have been taken to raise it. Give your plants now all the water they want and as often as they want it. It is the principal means of keeping them in good form. Especially should the smaller retail grower, he who conducts a so-called basket trade, see to it that none of the plants sold and usually taken out of the pot is thoroughly dry at the roots when it leaves his place. A few dozen plants, being taken to the cemetery in baskets, are easily protected against a too rapid drying out by moss, or paper, and should be so protected, where long journeys to the cemetery have to be made. Last year's Decoration Day was a failure—the only one for many years. The weather was truly awful. It was a most dismal, disagreeable and forbidding day, causing a loss of thousands of dollars to the minor class of florists. It is to be fervently hoped that the day to be observed as Decoration Day this year will turn out to be as balmy and fine as usual, for the sake of all and everyone.

 CUT FLOWERS AT WHOLESALE

Boston.
News of the Week.
 E. Sutermeister, of Hyde Park, met with a rather serious accident one day last week. While delivering a load of plants in Taunton, his horse got frightened at an automobile, and Mr. Sutermeister was thrown from his seat, sustaining two ribs broken and other bruises. It is to be hoped that at this busy season he will have a speedy recovery.

The forthcoming ball game at the picnic of the flower markets is causing considerable excitement among devotees of the sport. Charles Evans is manager and E. Crowley captain of the Park street market team, and James Rough is manager and Thomas Mathews captain of the Music Hall market team.

Joseph Galvin, manager of Galvin's Back Bay store, whose illness was noted several weeks ago, is, we are pleased to hear, able to get down to the store for a short time daily.

The executive committee of the American Rose Society has been invited by Superintendent Theodore Wirth, of the Hartford parks, to visit his rose garden in Elizabeth Park, on June 19 next. It is quite probable that Boston will have a good representation.

Galvin's Back Bay store had the decorations for the luncheon of De Molay Commandery and dinner of Grand Commandery Knights Templar, both at the Somerset, on Wednesday.

John K. M. L. Farquhar has been confined to his home for several days with a severe cold.

J. W. DUNCAN. Philadelphia.

News Notes.
 With an abundance of flowers coming in and only a fair business going on, there is not a great deal to say about cut flower business. The already crowded market is being added to daily by outdoor stock. Peonies are now arriving in quantity; there will be lots of them for Memorial Day.

All the Spring plant growers are very busy, and stock is clearing up well. Geraniums in flower are scarce this week; all those who sold below \$8 per 100 are cleaned out, and growers who held for \$8 and \$10 per 100 have very few left.

Jacob Becker reports a very good season in pot roses. He has sold everything that was in shape, and has realized good prices. Some time ago he turned one house into a retail department, and has found this a great success, as the locality from Fifty-second and Market streets, west, is rapidly being built up.

J. F. Sullivan, Detroit, was a visitor this week. He is a native of Chester county, this State, and was summoned to Avondale, Pa., a few days ago, his father, who is 82 years of age, being very ill. The old gentleman has surprised everyone, and is now about again.

DAVID RUST. Indianapolis.

Flower Show Preparations.

Preparations for a large flower show this Fall are going steadily on. Subscriptions are being received in large numbers, and nothing, it is stated by the management, will be left undone to make the show of Indianapolis second to none in the country. This exhibition is to be extensively advertised, and a liberal guaranteed premium list is offered. Address, Irwin Bertermann, Indianapolis, Ind., secretary.

INDIANAPOLIS, IND.—The wholesale seed house of W. S. Gilbreath is having a big run on sorghum cane seed. The growing of sorghum cane is an important industry in some parts of Indiana and in the middle Western States. The Gilbreath people are filling orders for Illinois, Missouri and other Western States. The demand for seed corn continues fairly active. The busy season for seed dealers has passed, trade in clover and timothy seed having been cared for, and the rush of wholesale trade in seed corn is over. They are still selling some millet.

Full of Information.

Enclosed find one dollar to pay for The Florists' Exchange for another year. Your paper is always full of information, and I would not like to be without it.

 Mention the Florists' Exchange when writing.

St. Louis.

News Notes.

E. W. Guy and Dr. A. S. Halsted, of Belleville, called the past week; they report a good plant trade this Spring.

Otto Koelg has gone to St. Joseph, Mo., for a few days on fraternal business.

John Kalish will leave next week for a four weeks' trip West. The Portland Exposition is the main object of his trip.

H. Loyat has opened a flower branch in Judge & Dolph's drug store at 515 Olive street.

Fred H. Weber had two of his delivery wagons smashed a week ago by careless driving.

Max Herzog has sold his place to the St. Louis & San Francisco Railroad. The deal had hung fire for the past 13 months. He is now offering the glass and plants for sale.

Frank Ellis has been elected first vice-president of the American Chocolate Culture Company. The company has plantations in Panama, and 2,000 acres have already been planted.

C. Young & Sons Company report a heavy plant, seed and bulb trade so far this Spring.

Another week will about wind up the planting season, which the growers report has been a very busy one.

The Henry Shaw medal, which the board of trustees of the Missouri Botanical Garden founded in 1893, valued at \$25, will be offered this year again at the Fall flower show; also \$475 in premiums, making \$500 in all. These will be known as the Shaw premiums, all of which have been accepted by the executive committee of the club.

At the funeral of Peter Busch, son of Adolph Busch, the millionaire brewer, a number of very fine and large funeral designs were seen.

Fred Foster is again sporting a fine horse, which took first prize at the horse show in East St. Louis last week.

The florist bowlers divided into two teams, rolling four games on Monday night. The team captained by Beneke won the match by 14 pins. The following scores were made, in total: Beneke, 677; Miller, 571; F. Meinhardt, 534; Ed. Gerlach, 562; total, 2,344. Kuehn, 664; Beyer, 503; R. Meinhardt, 660; Henry Lohrenz, 503; total, 2,330. F. C. Weber was present, but was unable to roll, owing to a bad foot, and Frank Ellis came in too late to take part in the games.

News Items.

Quiescent is the word descriptive of what florists say of the business status this third week of May. A good Memorial Day trade is predicted.

At this week's meeting of the California State Floral Society preparatory plans for exhibitions the coming year were discussed and committees appointed.

F. A. Miller, proprietor of Hayes Valley Nursery, held an auction sale of plants May 18. Next day Mr. Miller left for the Springs on a health-recreating trip. He has been under a physician's treatment the last three months.

Schwerin Bros., prominent San Francisco flower growers, brought suit this week against the National Ice Company for \$4,966.61, the appraised value of 116,600 lily of the valley pips which, it is alleged, were placed with the company for storage and not properly kept.

During the last nine years Miss Rose Mann has been a prominent factor as a decorative artist in connection with the flower store of her brother, Alex Mann, Jr. She has now opened a floral store in the block next to that in which Mr. Mann is located. ALVIN.

Milwaukee.

News Items.

At a special meeting of the Milwaukee Florist Club, held May 16, it was decided to hold a Fall flower show. The club will put in \$500 toward the premium list, and a guarantee fund of \$1,000 will be backed up by the members.

Business has not been encouraging mainly due to the unfavorable weather. There is an abundance of Spring plants in the market, but it is impossible to do any outdoor planting owing to frequent heavy rains.

The Greeks seem to control the business on the principal streets just now, there being several stands in every block; and carnations are offered at pretty low prices. C. C. P.

LAPEER, MICH.—Florist Watson, who was recently appointed on the Park Board, proposes to give \$100 worth of plants each year to beautify the city.

Clipper The MOWER
Lawn Mower Co. DIXON ILL.
that will Kill all the Weeds in your Lawn. If you keep the weeds out so they do not go to seed and cut your grass without breaking the small feeders of roots, the grass will become thick and the weeds will disappear.

The Clipper will do it. Ask your dealer for them. If they have not got them, below is the price: No. 1—12-in. Mower, \$5.00; No. 2—16-in. Mower, \$6; No. 3—18-in. Mower, \$7; No. 4—21-in. Mower, \$8. Send draft, money order or reg. letter.

GROWERS!

YOU want to have the reputation for PERFECT BLOOMS. YOU want your TRADE TO INCREASE and your REPUTATION to spread. You can secure all this by using NICOTICIDE in your houses, either as a fumigant or spray. It will clean out the pests, no doubt of that, and the experience of users through many years shows it is SAFE. The cost per can is not so low as some other preparations, but the WORK DONE is so great—THAT'S THE POINT! Send along your address and we will see if we cannot make you one of our customers.

The name of OUR preparation is NICOTICIDE.

Plate 100

ABIES (PICEA) NORDMANNIANA

One of the most deservedly popular Evergreens in this country. A native of the Crimea, snows and frosts have no terrors for it; and no matter how cold our Winters are, never a one has any effect whatever in abating in the slightest degree the lustrous green of its foliage. The specimen shown in the illustration is growing on the grounds at Mt. Vernon, the home of the illustrious Washington.

Vol. XIX. No. 22

NEW YORK, JUNE 3, 1905

One Dollar Per Year

NEPHROLEPIS PIERSONI ELEGANTISSIMA

(The Tarrytown Fern)

We have a grand lot of this in 6-inch and 8-inch pots—fine specimens, for which we have a splendid demand. Retail florists find this one of the best selling plants ever handled, even at the present novelty prices. We can supply 6-inch plants at \$2.00 each, and 8-inch at \$3.00 each. Now is the time to obtain a supply of this in small plants and grow it on for retail trade. We have a splendid lot of very strong, heavy established plants in 2½-inch pots, which, if shifted at once, will make grand stock for fall. Price, \$50.00 per 100. These are not light rooted runners from bench, but are strong established plants from 2½-inch pots.

We also offer a lot of

PIERSON FERNS In large sizes for immediate sale for summer decoration. 6-inch at 50c. each; 8-inch at \$1.00 each; 10-inch at \$1.50 to \$2.00 each.

NEPHROLEPIS SCOTTII Fine plants, 6-inch pots. \$1.00 each; 8-inch, \$2.00 each.

ADIANTUM CROWEANUM Extra fine plants, 6-inch pots, extra fine for immediate use or for growing on, \$6.00 per dozen.

KENTIAS FOR DECORATING We have a nice stock of large plants which have been grown in a very low temperature all winter, and consequently are hardy and splendid for decorating, as they will stand a good deal of knocking around. Florists who need large stock for decorating or for hotels, piazzas, etc., in exposed places will find this stock unusually satisfactory. We offer various sizes from \$6.00 to \$15.00 each, according to size.

EXTRA LARGE FICUS FOR DECORATING We have some very large plants, grown in tubs, several plants in a tub, and in consequence are very well furnished, and very bushy, ranging in height from five to ten feet. Splendid for hotels, piazzas, etc., and useful for decorating. \$5.00 to \$10.00 each.

DRACAENA INDIVISA Fine stock in 6-inch pots, the most useful size for florists' use. 50c. each.

ENGLISH IVY Strong plants, 3½-inch pots, \$12.00 per 100.

GERANIUMS Double General Grant, La Favorite, Duc de Montmart, Paunpeck, etc. strong plants, 3½-inch pots, \$8.00 per 100.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

A good opportunity to engage in the seed business in the West is offered on page 737 under heading "Fine Business Opportunity."—Adv.

HAMILTON, ONT.—Thomas Mitchell Bruce, of the firm of John A. Bruce & Co., seed merchants, died at his home May 12 of heart disease. Deceased was the son of Frank C. Bruce, ex-member of Parliament, and was born in this city. He was 34 years of age.

FRENCH BULB CROPS.—The crop of Narcissus Paper White grandiflora will be abundant. The bulbs have not suffered from dryness and the plants in all the gardens are looking healthy. On account of the sharp frosts during December and January, the leaves of Roman hyacinths were more or less injured. A superabundance of rainfall has also rotted many of the bulbs; still, there will be a sufficient supply of good stock to meet all demands. Trumpet major is looking quite fresh, and there will be a satisfactory supply of these bulbs. The freesia crop is a failure; the demand exceeds the quantity produced for sale. Prices will be considerably higher. Alliums are satisfactory.

ATE GOVERNMENT BULBS.—Even the thriftiest member of Congress no longer sells his supply of seeds from the Department of Agriculture to dealers, and once more the farmers and truck gardeners get a share, and experiment with strange plantings. The city representative has no easy task in arranging for the distribution of his allowance, as he cannot take the trouble to learn who among his constituents has a garden. To a German supporter Representative Ryan, of New York, sent a supply of flower bulbs—tulips and the like—and the result was sudden sickness in the family. The recipient supposed the bulbs were Bermuda onions, and they served his table as soup, with nearly fatal results.—Brooklyn (N. Y.) Eagle.

Degrees of Hardiness in Peonies

Editor Florists' Exchange:
People often complain that their peonies do not bloom when a close inspection will show that the flowers have been nipped in the bud by late frosts. The buds of most of the tree peonies are almost invariably killed in this way. There are some very choice varieties, like Lady Curzon, which I notice are full of dead buds. Many of Kelway's fine ones are very sensitive. On the other hand, two of Rosenfield's famous ones, Floral Treasure and Golden Harvest, seem to "glory in tribulation." Two years ago, my peonies, when 13 inches tall, were frozen solid in sleet for two days. When they thawed out they were in a sad plight, looking water-soaked and dead. Some seemed so grieved by this treatment they never gave a bloom. Festiva maxima resented it, and gave no flowers. Many of our hardy sorts stopped right there, and were covered with dead buds, but the two above-named went right on and did their very best. Floral Treasure was a hemisphere of glory, 6 inches across, and Golden Harvest was enveloped in a flood of bloom. The former had such immense double flowers it bore no seed. Last season was very favorable, but the flowers were not so large, and I gathered quite a lot of seed from them and have now quite a lot of promising plants.

I think we should note this fact very carefully. Calls for peonies come in from Montana and Wyoming. There is a complaint of their not blooming. Especial attention should be paid to the selection of those that can resist the late frosts, and when we come down to the matter some of our choicest ones must take a back seat, because they are not hardy enough to give us flowers every year. Full and continuous bloomers that can be depended on are what we need. C. S. HARRISON.
York, Neb.

LOS ANGELES, CAL.—Horticulturists and florists, local and visitors, were the guests of J. C. Vaughan, president of the Society of American Florists, at a dinner at Union League May 18. The meeting was held for the purpose of enabling those present to learn something of the object and scope of the national organization, and in that way interest them in a society which will soon be perfected here. Delegates from the horticultural centers of the State were present. A number of prominent florists of San Francisco were at the dinner and read addresses on subjects of interest to those in attendance. Another meeting will be held soon, at which organization of the local society will be perfected. The speakers were: J. C. Vaughan, H. Platt, of San Francisco; Capt. F. Edward Gray, Henry Albers, Frank Pelicano, Ernest Braunton, and Superintendent Morley of the City Park Department. The members of the committee who made arrangements for the dinner were: Morris Goldenson, Captain Gray, O. C. Saakes, A. F. Borden, and Thomas Wright.

FIRES.

CONCORDVILLE, PA.—On May 26 a fire in the greenhouses of Pennock E. Sharpless, did damage to the extent of \$10,000.

NEW LONDON, CONN.—In the store of Pratt & Giger, on May 25; damage \$14,600.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

SPRINGFIELD, MASS.—Messrs. Adams & Co., nurserymen, this year filled a large order for mountain laurel from an estate in Scotland.

Situation for the Laburnum.

Visitors to Europe, especially those who reach the British Isles in Spring, return with tales of the wondrous beauty of the laburnum, and often do they express the wish that this shrub, or small tree, would thrive here. Many think it is not hardy, but so far as the Middle States are concerned this is an error. In Pennsylvania it is perfectly hardy. The reason it is not seen oftener is that it dislikes our hot sun and dry climate; that is, dry alongside that of England. The subject was brought to mind to-day by seeing two lovely specimens in full flower. They had been planted between other shrubs and to the east of several tall growing shrubs and trees, so that they were fairly well screened from the sun, and, being in grass as well, the roots were cool. The specimens were very good; and, had the situation been a rather damp one, which it was not, they would have been better still. They were in perfection of bloom May 15. An ideal place for the laburnum would be the eastern side of a building, or some similar object, where the sun would reach it but a few hours of a morning, and the soil should be of a moist nature. In such a place charming specimens and flowers could be looked for.

The greater number of the readers of The Florists' Exchange know all about the laburnum anyway, but these notes may serve to call attention to the fact that it need not be the uncommon plant in collections it is. And they all know how easily it is raised from seeds, and how quickly the plants grow and become of a flowering size when growing where suited.

This good old subject is almost universally known as Cytisus Laburnum, but authorities say it should be Laburnum vulgare. There are many varieties of it—golden leaved, curled leaved, and some with longer racemes than common; but to the majority of us the old kind is more endearing.

Rhododendron Catawbiense.

Among the many hardy hybrid rhododendrons our collections contain, a great many are indebted to the native one, *R. catawbiense*, for their beautiful foliage and hardy character. *Catawbiense* is good enough for cultivation just as it is from its wild state, and the wonder is that it is not oftener found in collections than it is. Its flowers are of a pink or bluish purple, just as good as those of many of the hybrids which are met with in collections. And it is among the hardiest of all rhododendrons, coming from the highest summits of the Alleghenies, in Virginia and North Carolina. Also, what is a considerable merit, some will consider, is the fact that, as it flowers at the same time as the majority of the hybrids, it can take its place in a bed of them.

The hybridizing of *R. catawbiense* and *R. maximum* with the foreign sorts *R. indicum*, *arboreum* and *poncticum*, is what has given us the beautiful sorts we have in our collections of to-day. And it is the hardy blood of our own species, incorporated in the more tender sorts, that makes possible the growing of the beautiful hardy collection that can now be possessed.

R. maximum, the other hardy species referred to with *R. catawbiense*, is a late flowering one, not blooming until July. This makes it desirable for forming groups by itself, as no other one flowers with it, not even any of the hybrids that appear in collections. There is some diversity of color in this one, even in its wild state; some are light pink, others white, and there are still other slight differences in the flowers. It is no wonder that collectors find such a demand for large plants of these two hardy species.

Pavia Rubra and Varieties.

What old botanics listed as *Aesculus Pavia* and later ones as *Pavia rubra*, is a native shrub, rarely met with in collections. It is a beautiful shrub and one which, were it better known, would be in great demand, as in addition to its merits as a flowering shrub, it is of a character no other Spring-blooming shrub approaches. It flowers when the horse chestnut tree does, in early Spring, and being but a small shrub it is very ornamental.

The normal color of its flowers is red; but it is a singular thing that a bushel of seeds obtained from Kentucky some years ago gave plants varying greatly in color from red to greenish white. The seeds were supposed to have come from wild bushes, and, if so, the seedlings indicate a great variation in color of those in a natural state. The foliage, too, as well as the flowers, differs, some being much more glabrous than others. There is a great difference, also, in the appearance of the panicles in the arrangement of the flowers. While a few have the blooms much scattered, like the figure in Nicholson's Dictionary, the most of them have densely crowded panicles, the flowers touching one another. There should be something in

this dwarf pavia for our nurserymen, and some of the Kentucky or Tennessee seedsmen should be able to supply the seeds. The only other dwarf horse chestnut we have is the one called *parviflora—alba*, properly—and this one flowers in Midsummer; *rubra* blooms in May.

Huckleberries and Cranberries.

Last Summer when visiting a friend's grounds a wood was passed through from which nearly all the underbrush had been cleared away, leaving but a few huckleberries here and there. These had done so well and had borne so much fruit that the owner suggested the procuring of some seeds and sowing them in patches here and there, to get more plants of them. I advised him that he would be far better satisfied to get several hundred plants and set them where he wanted them, instead of trying seeds. Out of the wood, along its border, the same party had a bog, swampy enough in fact that sphagnum moss flourished in it. In this bog he thought to sow cranberry seed, and again I advised him to set plants instead.

VIEWS IN GOLDEN GATE PARK, SAN FRANCISCO, CAL.

To the expert nurserymen there is no great art in raising the cranberry and the huckleberry from seed; but there are certain conditions required to gain success which one not a nurseryman would not understand or be able to fill. The seeds are sown in damp, mossy soil, in closed frames, and require the closest kind of watching from the time of sowing until the seedlings are well above ground, to be sure that the moisture, air, shade and other conditions are just right. To sow such seeds broadcast would be to have a few plants spring up here and there, for the fruit of which one might wait a dozen years. Better by far get plants from some nurseryman. If huckleberries are not grown, they can be dug up in some wood, and if cut down half way to the base, they will grow very well, and be the better for the cutting back. To the nurseryman who has not a supply of these fruits it would be to his profit to get a lot in stock. The tall growing one, *Vaccinium corymbosum*, is not only good for fruit, but also for its pretty flowers in Spring and its lovely crimson foliage in Autumn.

Abies Arizona.

A reader of The Florists' Exchange writes to me as under:

Whenever The Florists' Exchange comes in I always look at your articles first, no matter how busy I am. And this time I was very much pleased with what you say of *Abies arizonica*. We got a plant of it, also, some years ago, and we find it perfectly hardy here, and a very beautiful little specimen it has grown to be. But the growth is not more than three inches a year. The introducers claim it to be a more rapid grower, and we sent there (Pinehurst Nurseries) this Spring for it, but judging from the two plants received we should say there is no more growth in them. We have tried it from seed, and found it very difficult to get them to grow, but believe it can be propagated by grafting, and then wait many years to get a small specimen.

WM. F. JEFFREY.

It is pleasant to get letters like this from readers of The Exchange, and this one is much appreciated.

Regarding the slowness of growth, it must be remembered that all recently transplanted firs are slow of recovery. Add this to the *Abies arizonica* coming from the mountains of Arizona, and a rapid growth could not be looked for. The growth will be more rapid as the young trees gain strength, no doubt; but that it has grown slowly in Arizona is apparent from the fact that the little block, mentioned in my former notes on this fir, though but three inches in diameter, has over twenty rings of growth showing in it.

Propagating Hardy Shrubbery.

David A. Robinson, Everett, Mass., writes: "Kindly advise me the best method of propagating all kinds of hardy shrubbery." The propagation of shrubs is something of great interest to all nurserymen and florists, and this leads the writer to give hints on the subject in almost every issue of The Florists' Exchange. At the present time preparations for layering are going on in almost all nurseries. As soon as the new shoots are of sufficient length to layer, the work should proceed, as the sooner they are in the ground the better they root. Almost all shrubs can be increased by layers, but some root much easier than others. Every day shrubs, such as snowballs, hydrangeas, spiraeas, weigelas, and the like are easily layer rooted. Layering may be continued until Midsummer, but in the case of sorts which do not root readily the work should be done early.

In addition to layering, green wood cuttings, in a greenhouse, offer a way of getting up a stock. Half-ripened wood is used; and all florists and nurserymen know how to proceed to root cuttings indoors. Light boxes are best to use for receiving the cuttings, as they can be shipped about as desired. The same can be said of cuttings as of layers; some root much easier than others. Trials will teach which they are, while space will not permit of particularizing them here.

Next to layering and soft wood cuttings the hard wood cuttings are the most particular. These are made in the Winter season from well-ripened shoots of the Summer passed. Every kind of shrub may be tried, and nearly all will succeed. The cuttings are made into lengths of about six to seven inches, labeled, tied in bundles, and buried in sand, in a cool cellar, there to remain until Spring, when they are set out in nursery rows the first day suitable for the work.

Seed sowing, inarching and grafting are all methods to be employed at times. Seed sowing requires experience to be very successful in raising seedlings; when well understood, nurserymen raise their supplies of many sorts nearly altogether by seeds, sown either in Fall or Spring. Inarching of rare maples, stuartias, and shrubs hard to increase in other ways, is sometimes employed.

It is hoped these hints will help this correspondent. There is nothing like a little practice to gain experience, but much of use could be gleaned by the perusal of a work on propagation, say Fuller's "Propagation of Plants," [which can be obtained from The Florists' Exchange, price \$1.50.—Ed.]

JOSEPH MEEHAN.

Golden Gate Park, San Francisco.

To visit San Francisco without visiting Golden Gate Park would be like visiting France without making a stop in Paris. Golden Gate Park is conceded by experts to be one of the leading parks of the world, and the development of this magnificent specimen of landscape work is but in its infancy, for the plans which are made for the completion of a park system have been carried out only in part. This park now comprises 1,040 acres of land and will be much larger when the plans of the Park Commissioners have been culminated.

It is situated at the great entrance to the western part of the United States, and the natural advantages which come from climate and surroundings are very great. Some thirty odd years ago it was practically one big sand hill, and to-day it stands as a marvel of landscape gardening; and there is perhaps no more interesting spot in California for the lover of plants and shrubs.

The absence of frost and the fact that the park is always, at any season, a spot of beauty and a mass of growing shrubs and flowers, adds to its usefulness. The immense playgrounds for the children and the walks and drives make it the center of attraction at all times.

Connected with the park is the Memorial Museum with a valuable as well as an instructive collection of artistic and also historical specimens. The statuary about the grounds are objects of beauty, and the list of these is growing rapidly.

In the conservatory there is a very large collection of plants, too numerous to name, and many very valuable. This large conservatory is used for nothing but the collection of plants, and the ferns are, perhaps, the more numerous. Orchids also receive a great deal of attention and the specimens are numerous and varied.

One must see such a park as this to appreciate it, and such a park can be seen only where there is a climate which will permit of the handling of plants and shrubs as they are handled here. A large century plant, coming into bloom, will soon be an added interest. I am sending a photograph of a section of the park as I saw it in midwinter, and to the person from the colder regions of the East it is a revelation.

The oiled road is a feature of California, and here there are miles of drives between beautiful trees and flowers over roads that are smooth and without dust, and at the same time less expensive and easier on the horses than the noisy macadam with which the East is so familiar.

W. R. PIERSON.

ROSE STOCK CHRYSANTHEMUM STOCK

GRAFTED KILLARNEY

I had ordered material for the erection of several new rose houses this Spring. Recent unavoidable events have caused me to change my plans. This leaves me with several thousand very desirable grafted roses on hand which I now offer for sale at a bargain. This lot includes **KILLARNEY, METEOR** and **BRIDESMAID** in 3 in. pots, first-class stock, intended for my own use. These roses are ready for immediate planting, and of healthy and vigorous growth. Also ready for immediate shipment, grafted **Bride, Chatenay, Ivory, Golden Gate, La Detroit, Testout** and **Morgan**. I have in own-root stock **American Beauty, Chatenay, Bridesmaid, Bride, Meteor, Golden Gate, Ivory** and **Uncle John**. Several thousand home-grown Killarney to offer this Fall.

Rooted Cuttings

The following choice varieties of **CHRYSANTHEMUMS**, rooted cuttings, are now ready; healthy, vigorous, well-rooted plants:

Enguehard, Duckham, Marie Liger, Ethelyn, Alice Byron, Polly Rose, Willow Brook, Wanamaker, Robinson, MacArthur, Chadwick, Glory of Pacific, Pink Ivory, J. K. Shaw, Adela, Maud Dean, Lavender Queen, Harriott, Monrovia, J. E. Lager, Georgiana Pitcher, Appleton, Golden Gate, Bonnaffon, Trenor L. Park, Cullingfordii and Kate Broomhead.

Chrysanthemums.

(179) Kindly inform me what the enclosed 'mum leaves are affected with. I planted them in the benches May 12 and the plants have only received two applications of water; therefore I don't think the trouble arises from over-watering. Most of my plants are affected in this way. They seemed to be all right until a few days ago, when the leaves began to get yellow around the edges. Then, when the sun hits them, they seem to burn up, where the yellow part shows. I would be very thankful if you would tell me what the trouble is and how to cure it. F. A.

The chrysanthemum leaves show no disease excepting that which arises from overwatering, too much shade, or bad drainage. Keep them well on the dry side for a time, give plenty of air, and they will no doubt grow out of the trouble.

San Francisco.

A New Society to be Organized.

Including Mr. Sanborn, florist and grower of Oakland, the following San Franciscans returned this week from what they enthusiastically report a perfectly delightful five days' visit with the splendid fellows of the trade in Los Angeles: P. H. Plath, Frank Pelicano and Pete Ferrari. The following committeemen of the Los Angeles trade won their hearts completely while automobiling and steamboating in taking in the show places of their attractive city and charming Catalina Islands: Steve Wolfskill, Captain Gray, Tom Wright, Morris Goldenson, J. Dieterich, Charles Winsel, and C. A. Brazee.

About all the horticulturists in and around San Francisco had received timely notices from the Chicago office of President J. C. Vaughan of the S. A. F. O. H., to assemble in Los Angeles, but growers were so busy it was left to four, Vice-President P. H. Plath, of the S. A. F. O. H., and three others, to go down to the Southern California city as their representatives. At the trying place in Los Angeles, 96 were present at the elegant banquet. The object was to jolly up the trade south of Tehachapi to organize a horticultural society. The representatives from San Francisco and Oakland were called on to speak of the advantages found in having a horticultural society. President Vaughan has become a Midwinter and Midsummer resident of South California, and is taking great interest in the formation of a horticultural society there; and from the spirit that was manifest, it is only a matter of a few days until the talked-of organization will be a reality, and that J. C. Vaughan will be successfully insisted upon for president.

A New Calla.

Luther Burbank has obtained a new yellow calla, the product from crossing Richardia Pentlandi and R. Elliottiana, with our native hardy dwarf calla, increasing the richness of the yellow coloring. Mr. Burbank declares that these yellow callas are now hardy enough to be grown as easily as potatoes. ALVIN.

LOOKING FOR A BUYER

Hail News.

LEAVENWORTH, KAN.—A paragraph in a local paper states that, during a hail storm here on May 11, "every greenhouse in the vicinity was destroyed."

KEWANEE, ILL.—The following item appears in the local newspaper of May 23: "Hamilton & Plummer, florists, have just received the insurance on the loss sustained by them in the recent hail storm which visited the city. The firm, it will be remembered, lost six thousand panes of glass in its greenhouses. The payment for the loss was made within a week after proof of loss was submitted. The insurance was carried in the Florists' Hall Association, with headquarters at Saddle River, New Jersey."

The F. H. A. is a business concern, operated by men who know how business should be conducted; hence, its success.

SYRACUSE, N. Y.—Robert Dunn, foreman for P. R. Quinlan Company, has resigned his position, and will grow for the New York market. J. B. B.

He Will Come Again.

The little advertisement in your paper has proven a paying investment, and I will take more of the same next year. ASA WRIGHT, Texas.

FOR THE RETAIL FLORIST.

June Wedding Decorations.

In the majority of countries June is considered the ideal month for weddings, and in consequence and for the reason that these United States represent all peoples and climates, the month of roses is a most important time for florists. The days of *carte blanche* orders have gone, and for ever, and even those orders reaching to the thousand dollar mark are few and far between. Nowadays (unless in extremely rare cases, where lives absolute confidence), the people demand estimates, designs and detailed descriptions for the smallest of decorations, and particularly in this month, when flowers can be seen in parks and gardens, there is an unreasonable undervaluation and a consequent demand for abundance. It is imperative, then, to carefully consider how to make our work pay and give pleasure to all.

For some unaccountable reason "green and white" effects are demanded in the majority of church weddings. There is not a particle of reason attached to this fad, except that of imitation, and we regret the custom is being encouraged by those who can and yet are afraid to change it. There are hundreds of aspiring growers throughout the country who seem to ignore the value of a hedge of flowering shrubs, roses or a border of hardy flowers, until they are suddenly called upon to supply blooms for some event in their own locality. It is not too late to prepare for Autumn.

Decorating the Church.

For the church wedding in city or country we need greens. A load or two of cut leaved oak branches, which is pre-eminently the best of greenery, and just for variety sake only we gather a bundle or two of catalpa, maple, sumac or such. Wild smilax, or other vines, are to be had near you. Some tall reed grass or eulalias; then where necessary your pot plants or asparagus vine. We want the largest of white flowers—lots of deutzias, spiræas, hydrangeas, roses, phlox, peonies, iris or any such. All this material is gathered in the morning and not when the sun is hottest.

Of necessity in almost all such work our decorations must be more or less spectacular; they must look well from all sides; but, above all, the best from the front entrance; therefore, we must arrange everything consistently high, and where it will show to best advantage. Our first and best endeavor is on the altar. There we solidly panel the wall, and arch with oak branches, placing a group of palms or a young oak or maple tree at each side and half way to the communion rail. Remember, oak branches to look best must face upward. Our work when finished, while being solid, should not be clumsily so. The idea is to have the altar impressive from the front door. Circumstances demand separate treatment. There are the pillars. These in no case should be covered, but at the top of each arrange a crown of oak, alternating with catalpa or sumac, and from such have long pendants of vines. There is an unlimited field for ingenuity of construction and artistic ability in the treatment of church pillars and archways. In the majority of cases overhanging effects look best, and are most appreciated. To create these we select long branches, or tie short ones and vines on bamboo canes or stout wire. Such can be done before they are placed in position. A connecting garland; that is, a garland attached to whatever constitutes the crown or head-piece, entwined gracefully about the pillar, is connected with the pew-end cluster. Under no circumstances should a pillar, or column, be bound by a clumsy rope-garland as if it were being kept from falling down or running away. Roping a column denotes ignorance of art. Very little material is required for that flat vine-like garland we entwine once or twice 'round the pillar; we wish to suggest that it grow there. Similarity is the mother of modern unappreciativeness; therefore, in the treatment of these pillars, archways or balconies we should display as large a variety of treatment as is consistent with good taste and which emphasizes the beauty of the whole. Tall grasses, such as eulalias, look well gracefully surrounding the columns, their bottom stalks on a level with the top of the pew. Grasses should never be arranged where trees and vines are supposed to reach; they belong at or near the bottom. Tall wood ferns also look charming so placed. Now there are the side windows and wall or roof supports. These all require a lighter treatment—a cluster of foliage and pendant vine here and there to attract and please the eye. The organ loft demands solidity. Your decorations there need not consist of the choicest material, but it must stand out boldly. Very few consider the entrance lobby or the vestry, but they deserve some little consideration.

So far we have only been treating with greenery, the most of which can be done the previous night, leaving grasses or ferns till early morning. Now about flowers. The altar again is first because it is the most important. It all depends on the price, particularly where flowers are used, and, therefore, suggestions only are in order. Hydrangeas are plentiful, and groups of them look well. Lilies can be had, and vases of them are expressive. Certainly some blooms should be put on the altar, but the most of them, and the greatest effect, must occur immediately each side of and at, or over the kneeling-bench, or where the bridal party stands. All eyes are concentrated on this spot most of the time; it is the place for best work, and flowers. Other parts of the decorations can be omitted or omitted altogether, but this particular spot, memorable for a life-time, must be specially treated. A very common mistake is that of placing flowers where they

are lost to view. Put them where they stand out boldly. There can be nothing more beautiful than a vase containing one hundred, or several hundred white roses, they can be of *Bride* or *Golden Gate*, *Ivory*, *Kaiserin Augusta Victoria*, or *Madame Plantier*. Or, we hire or rig up an arbor. First green it over very thin and flat, and then cover it inside and out with branches of climbing roses, foliage showing and branches pleasing themselves in a natural way. If you can induce your customer to permit you to use a light pink, or even a red rose on this particular arbor, it will not only enhance the gowns, but will add greatly to your reputation. And what a great long list of climbing roses we can select from; really decorating now is play toward that of a few years ago. The arbor, or arbors and hedges of roses, and with tall vases attached combined or separate, look well.

Then, again, on a cheaper scale, we can use flowering shrubs, or manufacture standards of flowering shrubs or roses, which can be limited to the altar, or be arranged in unlimited number down the center aisle. From the supply houses can be hired, at very little cost, many contrivances that assist the decorator to carry out his ideas. Among these are the torches, which can be regulated to any height. Young trees are a good substitute for them. Supposing we cut this young tree of one inch, or thereabouts, caliper, pick the leaves off its branches, and in their place we tie long sprays of climbing roses, or even flowering shrubs, we have transformed the maple into a splendid specimen standard tree of roses, or a shrub; from seven to nine feet tall. These we securely fasten to the

WREATH FOR ELKS LODGE, ORANGE, N. J.

Artist, F. C. Read

end of center aisle pews, starting just with the dwarfest, or alternating tall and short. A few sprays of honeysuckle entwined about the stem will add to beauty. Tying bunches of flowers on the end of pews may be permissible in country churches, but is being discontinued in the city, for many reasons. First, the people steal them; or the flowers get entangled with and ruin dresses. We discourage the idea because, while they may look pretty in an empty church, their effect is lost among the myriads of high colored hats and dresses, and furthermore, they cannot be seen but by the few. Aim to have your work show above the heads of the people.

Hedge-row effects of *Azalea mollis*, *rhododendrons* or *hydrangeas* are splendid, but they must be so placed as to be visible when all are seated. Instead of, or in conjunction with, the light garlands of green encircling the pillars, we have roses—not roses wired on to oak foliage, but with their own in natural spray, or wired to climbing rose foliage. At a distance of a few feet you can defy expert growers even to detect a manufactured garland, or tree, if your work is properly done, and it is almost always done best when the least time is consumed. The supreme danger in floral art is studied regularity—the trowel and the chisel are not required in our work.

We have not mentioned ribbons for the good reason that they are out of place at a June wedding decoration, even to partition the reserved pews. For these we have put a loosely arranged bar of roses, with end loops to put over the ends of the pews. Then again, instead of using so much green on balconies, or columns, where we have encouragement and a chance to create something very imposing, in fact, memorably beautiful, we would go to some extensive rose grower, offer him a fair value for his house of roses, which he will soon throw away or to some nurseryman who specializes in climbing roses and get sufficient to turn the interior of the church into a veritable bower of roses or at least to have them constitute the principal feature. Nor need this necessitate such a large expenditure of money as its contemplation may seem to; it is in the waste of time, the purchasing of little trifles unnecessary and inappropriate material that collectively require more money than to go boldly for the clean cut material that "shouts" wherever 'tis put. No use to attempt economy by spreading a limited number of flowers over an extensive area; fifty flowers in one

cluster is in most cases equal to twice that number scattered, therefore, concentration means admiration. Remember when arranging roses in pillar, arbor or trellis design, the blooms and foliage should point upward, and when intended to suspend, they should point downward. A study of natural growths will direct.

Peonies can be used in various ways, but always in clusters. Tie fifty of them on the end of a stick, with finishing trimmings, and they at once form an imposing torch; twenty-five or even twelve of them make an attractive cluster, half way up a column, or as a crown-top. Where they are thus placed they should be reversible bunches—that is, some blooms facing down and finished center.

There will be numerous occasions where, in order to make the job profitable, available stock must be used and so it can be to great advantage; and while even in such cases your customers are exacting, much can be overcome by giving an assurance of a big display. In such cases, greens in plenty will mean much; and if your customers are victims of faddism, and insist on green and white, you can have the altar and center aisle so, and employ color on the sides. Thus, in the windows we may use a variety of colors in iris, using grass tips for foliage. It will not damage those azaleas or rhododendrons to carefully nip off the trusses of bloom. We can wire them on our garlands of wild laurel, or bay, and elegant they look, too. There's that lot of phlox, we can put them anywhere to great advantage (we once covered an altar with such and they talk about it now ten years afterward). Carnations are best fitted for pew-ends, or in immense clusters, just shoulder high on the columns. If you must get your stock from the wholesaler, and the market is full of good, cheap material, there is no need to exact quality at the expense of quantity. As we have previously stated, microscopic material is out of place, and is expensive in every way. If you can induce your customer to have you furnish one grand rose for every one attending the church (they can be handed out at the entrance by flower girls), you will not only further floriculture, but add unlimited pleasure to the event—a sweet souvenir and wish from the bride. Make your bouquets light; heavy ones are not only a nuisance, but are killing the custom. But these and the house decoration we shall leave until next week.

KINVARA.

TALES OF A TRAVELER.

San Antonio, Texas.

The writer had the pleasure of a visit among those of the trade in this town, and found a great deal to interest him.

There are four firms in the flower business in San Antonio, so far as I have been able to discover, and a demand for flowers far in excess of the supply which can be turned out by these several establishments. Labor is a hard problem, and good gardeners are a scarcity.

The firm doing business under the name P. D. Hauser & Son is the largest concern of its kind in this section of the State, and one of the oldest. Some 50,000 feet of glass make up the greenhouses, and a nursery of a couple of acres a few miles out from the city in addition to a nice conveniently arranged store in the heart of the city, complete the equipment. In the houses are some 3,000 rose plants and about 15,000 carnations. Besides this stock a large assortment of bedding plants, palms, and ferns fill the space.

The method of growing roses in this section is a deviation from the usual plan. Planted at least 24x24 inches, the plants are set into the ground and in Summer the roof is entirely removed. Very little staking or tying is done, and the best cutting is through the Winter months. Mr. Hauser, Sr., has charge of the greenhouses and nurseries, while his son attends to the store and the work which comes through this channel.

Situated on the corner of Tenth street are the Maverick greenhouses. Here we have an example of what a woman can do in the greenhouse line, for this place represents the labor of nearly fifteen years. Mrs. Maverick has been the leader here, and through the industry of this lady a good paying business has been developed. The greenhouses consist of about 25,000 feet of glass which, like the other houses of the vicinity, are constructed with a roof which can be removed in the warmest days of Summer, and a greater variety of stock is to be found here. Roses, carnations, palms, ferns, bedding stock, and a large assortment of bulbous stock in pans, make up the assortment from which the customer may select.

There are two other concerns in this thriving town of nearly sixty-five thousand people. The Southern Nursery Company, with Mr. Hensel as leading man, is making itself felt, and a neat store on the principal street attracts many customers; while on another street Mrs. Farrar is claiming a woman's privilege and attracting many of the flower lovers to her establishment.

San Antonio, as a whole, to me represents opportunity. The town is large, and it is growing rapidly. Chicago and St. Louis are points from which shipments are often made, but the distances are great. What the future will bring into this historic old town, which is so rapidly gaining prestige as a Winter resort, remains to be seen, and the future must decide it. A live, energetic grower, who can adapt himself to circumstances, might find here in the Southwest the opportunity which has so long eluded him; but whatever and whoever the man may be he must not wait for fortune to come to him, but take the dare of the old border heroes, and "come and take it."

W. R. PIERSON.

We have just passed through one of the wettest Mays on record in this vicinity. Until the 10th of the month, the weather was fine for planting carnations in the field. Then it began to rain, and during the next eight days it rained every day, except one; 4.4 inches of rain fell during that time; 2.2 inches falling in one night. This is just double the normal amount of rain for the month of May, in this vicinity.

Most growers were about finished planting in the field, and the plants suffered to some extent from the effects of the unusually heavy rains; the man who had his carnation field well drained was fortunate, indeed. I saw a carnation field that was partly under water for three days, when two men with a spade and a shovel could have made a ditch in one day along the end of that field and drained the water to the road, where there was a large ditch, with plenty of drop, to take the water from a field many times as large as the one mentioned. Still this man's carnations were being drowned, because the water had no way to get out of the field and because there was a few hours' work between it and the ditch, through which it would run had it had an outlet. At the present time that field looks as if it were just recovering from a severe attack of yellow fever.

In planting carnations in the field always see to it that it is well drained and that the ditches are kept open; then if it happens to be a wet season you are on the safe side, and if it be a dry one, there is no harm done. Still there is no serious damage done as yet, and if the weather continues nice, the plants will outgrow the effects of the recent heavy rains.

Keep the cultivators going, and if possible cultivate both lengthwise and crosswise, and there will be very little hoeing to be done, as the cultivator will kill all the weeds, except a few right around the plants. Some say cultivate after each rain, as soon as the soil is dry enough. I advise cultivating every week, whether it rains or not. This constant cultivating keeps the soil loose on top, and it acts as a mulch preventing the soil drying out underneath. I prefer constant cultivating (going over the field once a week), to watering in the field. The plants may not make as fast a growth as if they were watered, but it will be a good healthy, hardy growth, and they will transplant easily, recovering quicker than if the growth is soft, and they will make up for lost time as soon as planted inside.

Go over the plants once a week and top all the shoots that are beginning to run to bud. Do not wait until they are in bloom before pinching them back.

If you have your soil pile prepared for putting in the house, well and good, if not, it should be attended to at once. Have the soil piled at places where it is convenient for use. Make the piles about three feet high, and put a foot or a foot and a half of manure on top of the pile; then turn the pile over, chopping the soil and manure up fine as you turn it. In this way the soil and manure are thoroughly mixed without the trouble of layering.

The compost is ready for use any time after it is turned, although I prefer to let it lie a few weeks, if possible. Do not be afraid to use fresh manure on the soil pile, as it will not hurt the carnations and is better than old rotten manure for mixing with soil for the benches. If you use bone meal, wait until the soil is on the benches before spreading it; you will then be sure that it is spread evenly, and it

TELEGRAPH

Will be the Most Popular Geranium and Leading Standard Next Season

EVERY Florist growing bedding stock, or Christmas pot plants, should have **Telegraph** in stock. Its color (brilliant scarlet cerise), large truss and profuse blooming qualities, make it a desirable Christmas pot plant. Acknowledged the best all-around geranium on the market.

Extra strong plants, ready to plant out, \$8.00 per 100, while present stock lasts.

THOMAS DEVOY & SON, Poughkeepsie, N. Y.

Mention The Florists' Exchange when writing.

will be ready for use by the time the plants need it.

Keep the old plants shaded and feed them regularly, if you want good flowers during the Summer. Watch the watering; do not allow the plants to become so dry that the soil will be full of cracks. If you do, it will be hard to soak them up again, and a large percentage of the water intended for the plants will run through the cracks without wetting the soil thoroughly.

Do not let red spiders or thrips get the start of you; keep after them constantly. The former is easily kept down with the hose; and Nicotolide makes it decidedly uncomfortable for the latter.

G. W. FRENCH.

This week's index will be found on page 729.

News of the Week in Brief.

A list of the gladioli planted by the Department of Agriculture, at Washington, D. C., appears on page 733.

Luther Burbank has obtained a new dwarf yellow calla, with a deeper coloring than that of existing kinds.

Our obituary this week contains the names of Henry Flammer, W. S. Davis, Mrs. Joseph Meehan, and others.

The American Carnation Society will hold its annual meeting and exhibition in Boston on January 24 and 25, 1906.

There is nothing in the reported organization of New York's wholesale florists, announced last week by a contemporary.

Geraniums sold in the New York Plant Market at \$1.50 per dozen for Decoration Day; all available plants were disposed of.

Plans of the floor space available for the S. A. F. trade exhibit have been prepared by Superintendent George Cooke, Washington. Applications from intending exhibitors are coming in fast.

President J. C. Vaughan, of the S. A. F., entertained a number of California florists and gardeners at Los Angeles last week. Mr. Vaughan himself was the guest of the civic authorities and others of Long Beach, Cal., at a luncheon.

The wife of Henry Standen, a florist of Haverford, Pa., has recovered a verdict of \$15,000 from the Pennsylvania Railroad as damages for injuries received. Mr. Standen was awarded by the same jury \$10,000 to compensate him for the loss of his wife's services, and reimburse him for medical expenses.

The premium list of the second annual exhibition of the American Peony Society has been issued. The show will be held in the banquet hall, Auditorium Hotel, Chicago, June 16 and 17. J. B. Deamud, 51 and 53 Wabash avenue, is the manager. Some very enticing prizes are offered, both in the commercial and amateur classes, and a large and fine display is looked for. Interested parties can secure copies of the premium list, with which is also embodied two reports of the Nomenclature Committee, by addressing Secretary Arthur H. Fewkes, Newton Highlands, Mass. C. W. Ward, of Queens, N. Y., is president of the society.

Convention Notes.

WASHINGTON, D. C.—George Cooke, chairman of hall committee and exhibits, has the plans of the floor space available, and intending exhibitors would do well not to delay their applications for space, as the demand is growing daily.

M. C.

BOOKS RECEIVED.

THE GOLD MINE IN THE FRONT YARD, AND HOW TO WORK IT. By C. S. Harrison, York, Nebraska. Price, \$1.00.

This unique title Mr. Harrison has selected for an entertaining and instructive book in which he informs his readers, particularly those of the Western States, that something equally valuable with the yellow metal is found in the care and cultivation of a home garden, a portion of the farms of the West that is at the present time sadly neglected, he says. He enumerates and describes, in his own way, the subjects he has found most suitable for this purpose (those that will withstand the trying climate of the West) after years of experience and experiment, and gives cultural directions necessary to success. Suggestions for the layout of the garden are provided, the author preferring, as the most natural plan, the "amphitheater." Very full and useful are the remarks on the lilac, snowball, spiraea, honeysuckle, dahlia, and other plants. A large portion of the matter contained in "The Peony Manual," recently published by Mr. Harrison, he has, with some additions, incorporated in the present work, giving thereto an added value. It is somewhat unfortunate, though, that so many misspelled names of plants have been allowed to go through—not on account of ignorance of the correct orthography, evidently, as many of those wrongly spelled in places, appear with the proper designations in others; but the fault lies with the proofreader, apparently, the typographical errors having also escaped the eye of the venerable author, who is now 72 years of age. Despite this drawback, there is a host of practical information supplied, in a style that makes the volume quite readable and enjoyable. In one of his chapters the author inveighs against dogs being kept where flowers and plants are grown. He says: "I heard J. W. Manning, the leading horticulturist of Massachusetts, say to the Horticultural Society of Boston that 'dogs ruined more evergreens and choice shrubs than all other causes combined.' The dog, like death, loves a shining mark, and his peculiar system of irrigation is death. So if you are bound to cultivate dogs, you might as well give up flowers."

Copies of the book can be obtained from the author, or through The Florists' Exchange, at the price named.

President S. A. F. Vaughan in California.

On May 22 President J. C. Vaughan of the S. A. F. O. H. visited his old friend, T. J. Corbrey, formerly of Chicago, now of Long Beach, Cal., where he raises aster and pansy seed for the Eastern markets. Mr. Corbrey and a number of representatives of the city government, the Board of Trade and the newspapers met the distinguished visitor at "The Willows," going thither in automobiles. Mr. Vaughan was then taken as the guest of Mr. Corbrey and the city and entertained with a ride to Signal Hill and over the city. At noon he was taken to lunch at the Hotel Julian, and while in the city met a number of prominent citizens.

After the luncheon was over Mr. Hatch arose and requested J. A. Miller to speak very briefly of the growth of Long Beach for the benefit of the guest of honor, who was then called upon to reply. The latter gave a short talk concerning the flower industry and its growth within the past few years in the United States. Within that length of time three magazines with a considerable circulation have sprung into existence, where there had not hitherto been support for one. The organization of societies interested in these subjects has been facilitated and a wide diversity of subjects are now considered, among which is the advocacy of a plan to include within the public school system a systematic training in the care of a garden.

Mr. Vaughan said he looked upon civic improvement or beautifying a city as a subject of great importance, and particularly in such a city as Long Beach. He urged the plan of planting tropical trees and shrubs to give the tropical effect, rather than others. He believes that Southern California has a still brighter future, both in seed and bulb industry, and in the matter of cut flowers. He expressed himself of the opinion that the market for cut flowers will improve as the population increases.

Society of American Florists and Ornamental Horticulturists.

Railroad Rates to Washington.

The Southeastern Passenger Association, which controls the territory south of the Ohio and Potomac and east of the Mississippi rivers, has authorized a rate of one and one-third fare on certificate plan, in co-operation with rate announced by Trunk Line Association, for persons attending the S. A. F. convention at Washington, D. C., August 15-18, 1905.

WM. J. STEWART, Secretary.

OUR READERS' VIEWS

Fruit Under Glass.

Editor Florists' Exchange:

Surprises are in store for us all, at times. I notice in your last week's issue, Mr. Corfield is surprised. In writing fruit notes from time to time, it was never my aim to give advice to anyone farther advanced and of wider experience than myself. That would, naturally, be a waste of time. I would rather that my humble notes helped along the less fortunate; I mean those who just grow a few grapes and peaches. To grow grapes "by the ton," and peaches "by the bushel," I am aware, calls for a man well up in this line, to handle them successfully. No doubt Mr. Corfield has had wide experience in fruit-growing, both in the Channel Islands and in England; but what has that got to do with our climate here? I am inclined to believe our friend's experience in the United States is limited as regards fruit culture under glass. Don't think for one moment that what is suitable for England also applies here. I have been through the mill, and know from experience that it doesn't.

I can see plainly that Mr. Corfield does not approve of my method of culture. I don't blame him. Seventeen years ago, if I had had a chance to read an article similar to the one he refers to, I should have been apt to pass a few remarks on the same, at least mentally if not otherwise.

There are a few things in Mr. Corfield's letter that I shall endeavor to answer, as plainly as possible, which responses will be based on American experience. He is surprised that I should advocate training peaches and nectarines crosswise the house, in preference to what is known as the "fan system." What name is there for planting crosswise? This is what I claim to be a perfect, fan-trained tree. Have you tried the system here? If not, do so the first opportunity, and be convinced which is the more practical for our climate. I may state that I am not writing on theory; but giving hard facts. While now I am growing all our peaches and nectarines, planted in the border, crosswise the house, I also had seven years' American experience growing them fan-shape, up to the glass; or, to be plain, training the trees on trellis about 18 inches from the glass. Having tested the two methods thoroughly, I can say, without the question of a doubt, by all means plant crosswise the house, if you want to make the most of your space. Just to satisfy my curiosity, I figured up the square feet available in our peach houses, and I find that by the method advocated by Mr. Corfield, I would have 3,600 square feet, while by the method I advocate, and the way the trees are planted, I have a trellis space of 5,148 square feet. Each trellis is 18 feet wide, 13 feet high, giving me 234 square feet to each tree; and there are 22 trees. Those trellises are about 6 feet apart. And I still stand by my notes; this gives me a much lighter house, certainly a more attractive one, and the trees are easier to handle. Take a span roof house, such as ours, 25 feet wide; have your peaches trained up to the roof, and what have you got? A house full of emptiness. As I said, give me the crosswise system. But bear in mind, I am not writing for the Channel Islands, nor for England; my notes are intended for this climate.

Mr. Corfield says he would warn your readers against adopting this system without further investigation. I would strongly advise him to get better acquainted with the method of fruit growing here; mix a little with the growers of fruit under glass, then he will be convinced that growing crosswise is not so bad after all. I would be only too pleased to show him around here at any time; we have the trees, also the material on them. The peach trees I referred to in my notes have been planted three and a half years; they are carrying an average crop this season of 250 fruits to a tree, all well developed. Why should I condemn the system?

In regard to flavor I consider I made my views on that subject pretty clear. Give the trees all the air possible; when the temperature goes above 75 degrees keep a drier atmosphere. Never water a tree if it can be avoided after the fruit starts to ripen, and stop the spraying. Whoever follows this advice I will warrant the flavor of his fruit will surpass that of the turnip.

I think my comment on Canon Hall Muscat grape was that it is a noble grape, having the finest flavor of all the Muscat family; but, unfortunately, its poor setting qualities has killed it. That should be equivalent to saying that I did not have the secret of getting it to set freely. I wish I could say that I knew how.

As regards the bloom on the berries, until I am better enlightened on this matter, I hesitate venturing an opinion; but will say if the bloom is once removed it will require a great many discussions to replace it. It can't be done.

WM. TURNER.

Editor Florists' Exchange:

In your issue of May 27, I note that A. J. Corfield criticises William Turner and his system of training peach and nectarine trees. I have been intimately connected with fruit growers in England, Canada and the United States, and my experience with these fruits covers a period of nearly forty years, during which time I have grown them under all systems. The system at present adopted, which I consider the best, up-to-date, and which a progressive man will adopt, is fan training crosswise of the house. I heartily endorse Mr. Turner's system.

Penna. 11

WM. TRICKER.

John G. Esler Refuses the Medal Honor.

MY DEAR JOB.—I am awfully grateful to think you have placed me in the medal class; but please give my medal to Brother Rudd. He is the father of the Ananias Society, an honorable body, to which every true horticulturist, including Job, and all fishermen, are eligible to membership. JOHN G. ESLER.

John Birnie's Wish

Editor Florists' Exchange:

I am obliged to Job for placing me in the medal class; but I wish for that wooden medal he would substitute a load of bench lumber.

JOHN BIRNIE.

Obituary

Carl F. Wagner.

Carl F. Wagner, a market gardener near Louisville, Ky., died May 17 of Bright's disease after a year's illness. He was a native of Germany, but had been a resident of Jefferson County more than forty years. He is survived by his wife, seven sons and two daughters.

John Linn.

John Linn, florist, Havre, Montana, died very suddenly Sunday, May 14. He was twenty-six years of age and leaves a widow and two children. The deceased belonged to Great Falls Camp, No. 67, Woodsmen of the World.

Mrs. C. Leslie Reynolds.

It is with regret that we announce the death of Mrs. Leslie Reynolds, wife of the assistant superintendent of the Botanical Gardens, Washington, D. C., who died in the early part of last week after a lingering illness. Mr. Reynolds had the sincere sympathy of the craft. M. C.

Henry G. Flammer.

Henry G. Flammer, florist, Detroit, Mich., died Monday, May 22. He was a native of Germany, and 43 years of age. He leaves a widow and four children. Mr. Flammer was a member of several fraternal organizations, also of the S. A. F., the American Carnation Society, and the Detroit Florists' Club.

Mrs. George Weber.

The sincere sympathy of the craft is extended to George Weber, Louisville, Ky., in the loss by death of his wife, Mrs. Anna Elizabeth Weber. Some two months ago she became frightened at a vicious cow, and while running, tripped, fell, and sustained a compound fracture of the left leg below the knee. Blood poison developed, and the limb was amputated, but to no avail. Mrs. Weber was 56 years of age, and is survived by her husband, four sons and two daughters. A. R. B.

W. S. Davis.

W. S. Davis, of Purcellville, Va., a noted carnation grower and the originator of "Red Sport," died suddenly last week of heart disease. Mr. Davis was a very progressive man, and had he lived would have ranked among our leading carnation growers. He furnished the trade in Washington with their principal supply of carnations. While not a member of the Florists' Club, he had recently asked to be allowed to join so that he could help entertain our friends in August. He was of a kind and genial disposition and was liked by all who knew him. During the few years he has been in business he won the respect and confidence of all with whom he had transactions.

Mrs. Joseph Meehan.

It is our painful duty to record this week the death of the wife of our much esteemed friend and highly valued correspondent, Joseph Meehan, of Germantown, Pa., which occurred early on the morning of Saturday, May 27.

Mrs. Meehan was the daughter of the late Adam and Harriet Gaul. Her father carried on an extensive dairy farm in West Philadelphia, and her early life was spent on the farm. She was born in 1841, and married in 1868. Of a happy, companionable disposition, above board in all she did and said, and loyal in her friendships, she attracted to her an uncommon host of friends, both young and old. She never faltered in any undertaking she believed was right, meeting all difficulties with a cheerfulness which, with her untiring energy, won success. The disease with which she suffered was of a cancerous nature. An operation for it, while apparently successful, did not restore her health, and in the course of two months later the end came.

The funeral took place on Thursday, June 1. Our most sincere sympathy, and, we feel sure, that of the trade, among whom Mr. Meehan numbers his friends by the thousands, is extended to the sorrowing family in their sad affliction.

Gladioli at Washington, D. C.

Among the many instructive attractions being prepared for the visitors to the S. A. F. convention at Washington, D. C., perhaps the best will be an extensive collection of Gladioli, which E. M. Byrnes, Superintendent of Gardens and Grounds, Agricultural Department, has planted on the trial grounds adjoining the newly erected range of greenhouses at Fourteenth and B streets. It will be readily seen from the following list that not only a very choice collection but selection has been gotten together, regardless of labor or expense; and, as the plants will be grown under Mr. Byrnes' immediate supervision, a treat is insured to our friends, of whom we hope to see thousands in August next.

GROFF'S HYBRIDS.

(Purchased from Arthur Cowee, Berlin, N. Y.)
Gold Medal collection, in three sections; Silver Trophy strain, in three sections; Groff's hybrid seedlings, large bulbs; Meadowville Mixture, first size; Buffalo Mixture; Augusta.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY—Among the numerous exhibits at the last meeting roses were again a great feature. Philadelphia was well shown, several moderate sized pot plants being well flowered; but as at a previous meeting, it was suggested that it should be seen from the open ground before giving it an award, the committee did not deal with it. Messrs. W. Paul & Son's new white rambler, Waltham Bride, was well shown, the plants being covered with clusters of pure white, sweet-scented flowers. The foliage was also good, and it should make a valuable addition to this class of roses for pot work. Dorothy Perkins was exhibited in splendid condition by Messrs. H. Connell & Sons; and crimson rambler were exceptionally fine from G. Mount.

Japanese acers are now much in demand, and the collection shown by Messrs. T. Cripps & Son was much appreciated. This firm has a fine stock, especially in smaller sized plants. Messrs. Peed & Son put up a good collection. When calling at Messrs. Fomow & Sons' Chiswick Nursery recently, I found they were making the acers a specialty and had a large stock in various sizes. These grafted last Autumn were doing remarkably well. It would appear that those worked on established stocks get away much better than imported plants. Large specimens may be scarce for some years to come, but growers are working up big stocks of young plants.

CLUB AND SOCIETY DOINGS

THE DOBBS FERRY (N. Y.) HORTICULTURAL ASSOCIATION.—The regular meeting was held in Odd Fellows' Hall, Saturday evening, May 27, President Dunbar in the chair. A prize for the best collection of flowers cut from hardy shrubs was awarded to Mr. Kastberg, gardener to Miss Masters, Dobbs Ferry. T. A. Lee and F. Bradley were the judges. Messrs. Boreham and J. Knoodle, of Irvington, also staged a very fine collection. A very interesting discussion on hardy shrubs followed, also very interesting remarks on red spider. Secretary Kastberg read an article from The Gardeners' Chronicle of America, by Edwin James Day, on "The Advantages of Horticultural Societies." Mr. Coffee was elected to active membership. An essay on "Hardy Shrubs" will be read at the next meeting. J. BRADLEY.

MASSACHUSETTS HORTICULTURAL SOCIETY.—At a meeting of the board of directors of the Massachusetts Horticultural Society on Saturday, May 20, Wilfred Wheeler, of Concord, was elected chairman of the committee on fruits. Six new members were elected to the society. Dr. H. P. Walcott was elected a member of the board of directors to fill the vacancy caused by the death of Warren Fenno. A letter was read from the American Carnation Society stating that they could not hold their annual convention later than the month of January, the date being set for January 24 and 25, 1906.

The rhododendron show of the society, which occurs on Saturday and Sunday, June 3 and 4, promises well for this season. Rhododendrons, it is feared, will not be shown in such numbers as in former years, owing to the large number of plants that have been winter killed in this vicinity. Herbaceous flowers and other hardy plants will prove one of the chief attractions. J. W. DUNCAN.

Notes on the Flowering Crabs.

Among the early-flowered trees and shrubs none is more showy than the crab apples. Coming at a season just before the lilacs, when few trees or shrubs have blossomed, and when we are just assured that Spring is really with us, they are doubly attractive. There are not a great many varieties, or species, when compared with many other plants of the Rosaceæ, and only a very few are well enough known to be used for ornamental planting. They have generally been known under the generic name of *Pyrus*, but I believe will soon be better known under the more proper name of

ORIGINAL TREE OF MALUS HALLEANA

In Olmsted Park, Boston, Mass.

Malus, under which they are now classed in the Arnold Arboretum.

Malus floribunda, an excellent reproduction of a specimen of which appeared in a recent issue of *The Florists' Exchange*, is perhaps the most widely disseminated variety and it is well worthy of the place it has taken among ornamental trees. There are others, however, which will be found equally useful, and, in many instances, more attractive.

Malus Toringo is one of the best species. It is widely distributed in Japan. It flowers early, producing small white flowers borne in great profusion. The fruits are small, about the size of a pea or a little larger. It is one of the smaller sized trees among the crab apples.

Malus Halleana, or, as it has been more widely known, *Pyrus Parkmanii*, is one of the most showy varieties of Japanese origin. The flowers are borne freely, and are of a beautiful shade of pink. This variety was first sent to this country by Dr. G. R. Hall, an American physician, about 1863. The original plant was consigned to and taken care of by the late Fran-

cis Parkman, and stood until about two years ago on the Parkman estate, now part of Boston's beautiful park system, when it was removed on account of its dying condition. It has not been known to be found in its native country except this once, and is very properly named after its discoverer.

Malus Sargentii is a low-spreading shrub, rather than a tree. It was introduced from Japan by Professor Sargent in 1892. The flowers are small, of a white color, and are followed by bright red fruits, which are equally attractive.

Malus atrosanguinea is a showy crab, considered by many as a variety of *floribunda*. Be that as it may, it is of a distinctive coloring, and should have a place in every collection.

Malus Neidzwitzkyana is a Russian species, possibly from the mountainous districts. It is one of the earliest to flower, and is of a very showy, distinct rose-pink color. It is of an upright habit of growth, and flowers very freely. It is easily known from other varieties, for the bark of the small branches is of a very dark reddish color, and if cut into there will be found red veins extending through the wood as well as the bark.

Malus Schiedeckeri is one of the most showy double varieties. It is a hybrid of doubtful origin, although it is possible that it first originated in Berlin. It is later than many of the varieties, and consequently is more valuable on that account. Its color, however, is also very striking, and it will always rank among the best.

Malus baccata, the Siberian crab, has many forms, both in flower and fruit. The variety *oblonga* is one of the best, with an upright habit of growth and large, showy, pure white flowers. The true species has also white flowers. *Prunifolia* is another good form of this species, as is also *macrocarpa*.

Malus spectabilis is a Chinese species, entirely distinct. The habit is upright, and the flowers are in profusion along the stems. The double-flowered form is decidedly attractive, the blossoms being of a beautiful shade of pink. The variety *Riversii* is a decided improvement on the species, with larger, distinct, semi-double flowers.

Malus ringo is a fine spreading Japanese crab, held by some to be a variety of *spectabilis*, and by others a variety of *Toringo*. The flower-buds are bright pink, turning white as they open, like so many more of this class of plants.

The American species are, in my opinion, equally worthy of a place in collections of ornamental plantings, and compare favorably with any of the Asiatic sorts.

Malus coronaria, the Eastern species, was well described in a recent issue by Mr. Meehan, and *Malus ioensis*, which is known as the Western, or Prairie States crab, is, equally showy. The double-flowered form of the latter, which is perhaps better known as Betchel's crab, is, in my opinion, the finest of all. An excellent reproduction of the plant growing in the Arnold Arboretum appeared in the issue of July 30, 1904. The American varieties are decidedly fragrant as compared with the others, and come into bloom just as all the others have passed, thus prolonging a season of a class of very ornamental flowering trees.

News Gittings.

The news-gatherers for some trade journals are becoming past masters at the art of space filling, and it would seem that in order to get what is termed in newspaper parlance "a scoop," these writers care little as to whether they adhere to the truth or not. For instance, it was in the Chicago trade papers that we saw an item about James Mallon heading the St. Patrick's Day parade, mounted on a white horse; and a little later these same papers chronicled the marriage of a certain wholesale florist. It is needless to say that the said young man is still a bachelor; and that Mr. Mallon was busy in his Brooklyn store at the time of the parade mentioned. Then comes the Boston paper with an account of the organization of the New York wholesale florists—a matter that has been talked about for some years, but which never has got further advanced than when four or five of those gentlemen got together on one occasion and found that it was impossible to organize.

And this reminds us that, according to rumor, there is another organization which has reached further toward materialization than did that of the wholesale florists, viz., the prominent greenhouse builders.

The George M. Stumpp Employees' Association will hold its annual outing on Wednesday, July 12 at Silver Lake Park, S. I. The main features of the outing are a dinner, races, boating, dancing, and bowling. Ernest Stumpp is the treasurer of the association.

Among the creditors of Michael Rovatzos, the florist who made an assignment last week, are John I. Raynor, \$1,076; Thomas Young, \$363, and R. Dryer, \$315. The total liabilities are \$5,368, and no assets. Part of the debt was contracted as a partner in the firm of Rovatzos & Moltz in 1902 and 1903.

August Hammerstein, a driver for Charles Kumpf, a florist of Brooklyn, was run into by a trolley car on Second avenue, thrown from his wagon and rendered unconscious by the fall.

Henry Wardorf, a florist, living in Knickerbocker avenue, Brooklyn, was taken to Bellevue early Sunday morning with a fractured skull. Mr. Wardorf fell while entering the downtown subway station at Twenty-eighth street and Fourth avenue. He was found lying unconscious at the foot of the stairs by a passenger.

P. A. Keene has disposed of his interest in the nursery business of Keene & Foulk, and the Bloodgood Nurseries, Flushing, L. I., and has associated himself with the Morris Nurseries, Westchester, Pa., with an office at 1 Madison avenue, New York, where he will be glad to see his friends and customers.

Gus Stern, a former employee of M. Hansen, West Hoboken, N. J., has taken the Hillebrecht greenhouses at Secaucus, N. J.

George Darsley, president of the New

York Market Florists' Association, was run over by an automobile on Broadway a week ago and had one foot badly bruised, which confined him to the house for several days.

An authority states that tomato plants are scarce, also ageratum and the *Verschaffeltii* coleus; and that the demand for geraniums is extremely good.

J. J. Van Waveren, representing the firm of L. Van Waveren & Co., Hillegom, Holland, will sail for home on June 7.

T. James McCarty, of Charleston, S. C., was in town this week, seeking a young man for his retail store.

By postal card, daily newspaper and other means, the trade locally is being apprised of a most wonderful feat, probably never before accomplished since Adam ate the apple and was banished from Eden. It is no less than the announcement that a certain trade paper correspondent, who, while attending to his duties in his "usual" manner, has fasted for a period of, at last accounts, 45 days, barring occasional draughts of malted milk and hot lemonade. This lengthy abstention from solid food, which, it is said, proved an antidote for rheumatism, is only excelled, so far as our knowledge goes, by the compulsory fast of a sow, which for seven weeks was snowed under, and meanwhile subsisted on the superfluous fat she had put on previous to her misfortune.

Patrick O'Mara has just been elected president of the United Irish-American Societies of Hudson County, New Jersey. The societies were formed eight years ago for the purpose of having Irish history taught in the parochial schools of the Newark, N. J., diocese, and since their formation their work has spread throughout the United States.

Buffalo, N. Y.

News Items.

At a dinner given to J. J. Albright, who has donated an art gallery to the city, Palmer & Son had the decoration. Thousands of Bon Silene roses were a feature.

The portions of the city parks that are under Assistant Superintendent Braik's care, are showing numerous beds of pansies variously located, and worthy of special mention, in the colorings and quality of bloom otherwise. Though Mr. Braik had the ill fortune to be laid up with rheumatism much of the past winter, he is now very lively among the seemingly acres of cold frames and hotbeds which again hold the large complement of budding stock for this season's use, and the planting of which was begun this week. Geraniums, cannas, caladiums, and coleus naturally make up the bulk, in kinds, but the numerous other sorts in full readiness, and in such quantities, show the work of a masterly management that commands notice, if not admiration at the accomplishment.

Indianapolis.

News Notes.

The florists in the vicinity of Crown Hill Cemetery report a Decoration Day trade away beyond expectations.

The State Florists' Association of Indiana will hold its monthly meeting in the State House Horticultural Rooms, Tuesday, June 6.

Experiments with the huckleberry sprays in decorating show that they are all right, in effect, for at least 15 hours after being taken from the case. After that the leaves curl and turn to an olive green. During May and June, or while the huckleberry sprays must be used as a substitute for wild smilax, they should prove a success.

Mr. and Mrs. W. W. Coles, of Kokomo, Ind., will leave shortly for a European tour.

MALUS SPECTABILIS RIVERSII IN ARNOLD ARBORETUM, MASS.

Worcester, Mass.

Trade News.

I do not think there was ever such a Memorial Day trade as our florists had this year. Orders began to come in at Easter. Prices were a little higher than last year's. Roses sold at \$2 per dozen and carnations at 75c. and upward. Pansies in baskets gave out early in the morning of the 29th; hundreds more could have been disposed of if available. At the two stores of H. F. Littlefield nineteen clerks were kept busy almost continually from Sunday morning until Tuesday afternoon. At Mackie's, Fisher's, Denholm & McKay Co., and H. F. A. Lange's, the clerks had a hard siege of it. Stock was plentiful and of extra fine quality. The Worcester Conservatories who made their initial bow to the retail trade just before Easter, did an enormous business.

The seed stores have experienced a very large sale of vegetable plants; these stores also carried an immense stock of pansies, but not enough to supply the demand.

CAROLUS.

Louisville, Ky.

The Week's News.

Cards are out announcing the wedding of Frank George Schulz to Miss Mary Menett Spillane, of Colorado Springs, Colo., Wednesday, June 7. Mr. Schulz is the oldest son of Jacob Schulz, our well-known grower and retailer.

Adolph Koening, for some time foreman for C. W. Reimers, has accepted a position with H. Fuchs, to take charge of the growing department of his business.

Owing to the fact that the commencement exercises of the Girls' High School take place on the evening when the Kentucky Society of Florists should hold its monthly meeting, and as a majority of the members expect to be busy then, President Baumer has postponed the meeting one week. He urges all members to be present at the store of William Walker on June 13.

A. R. B.

BALTIMORE, MD.—William J. Johnston is making extensive alterations and additions at his establishment, 221-223 West Madison street.

HELPS A BEGINNER.—I would not be without The Florists' Exchange. I find it of great help to me as a beginner in the business. G. BIMSON, Maine.

HAMILTON, ONT.—Fine, warm weather now prevails, and bedding work is in full swing. There has been a noticeable demand for choice varieties, there being many orders for particular sorts for bedding, where ordinary mixtures or anything to fill the beds was usual before. The Webster Floral Company report a great increase in the local demand for roses, shrubs and perennials.

Roses and carnations are plentiful and good, with low prices ruling.

May 24, Victoria Day, is always the bedding out day in this locality, all window boxes, etc., being ordered for that day or before. This year has been an unusually busy one. BEAVER.

PEORIA, ILL.—J. T. Shoaff, the florist, of this city, is also an entomologist, and has been making a collection of insects peculiar to Peoria. He has now secured and labeled over 7,000 distinct species. He has registered each insect, mounted it upon cardboard, and placed it in its appropriate class. Some idea of the labor required can be gained when it is stated that this collection is contained in forty large cases, protected from the ravages of other insects by hermetically sealed boxes and impregnated with camphor. With Mr. Shoaff this has been a labor of love, pursued in his leisure moments. Some of the specimens are exceedingly rare, being native to this locality. The collection is particularly rich in members of the wasp family, and also in beetles and the like. Mr. Shoaff is a scientist of great ability and research, as well as a florist and botanist of recognized talent.

MACON, GA.—The Idle Hour Nurseries, recently owned and controlled by the late Robert H. Plant, have been purchased by Daniel C. Horgan, of this city. The plant is thoroughly up-to-date, comprising eight houses, each 150 feet in length, built by Weathered's Sons, New York. Mainly roses and carnations are grown, both of which do fine in this climate.

Review of the Market

NEW YORK.—There is a slight reduction in the supply of roses and, on that account, prices are somewhat firmer, though no material advances have yet occurred. There is much milder on some of the shipments received, both American Beauty and the teas, and stock thus affected is just about worthless when clean flowers are to be had. Memorial Day did not cut much of a figure in this market. There was an abundance of cut stock from flowering shrubs, and added to this there was a larger supply of roses and carnations than had ever been seen before for that holiday. Of the outside flowers available, there were robinia, lupin, weigela, iris, peonies, deutzia, viburnum, lily of the valley and polygonum, and while the major portion of such stock was cleared out on Monday, it brought very little returns compared with the amount of room it occupied. Tuesday and Wednesday were both very dull days, but with the first of June business brightened up, and we may confidently expect better things for a few days at all events, as there is sure to be a crop of June weddings.

Carnations and sweet peas are quite plentiful, and there is still a good supply of lilies coming in. Cattleyas and gardenias are plentiful enough for the demand, and of the former some of the gigas are bringing fancy figures.

At the plant market on Monday morning geraniums brought as high as \$1.50 per dozen, and all stock cleared out exceedingly well; in fact, everything was sold out so close at this market on Monday and Tuesday that no growers appeared with plants on Wednesday morning.

BOSTON.—Memorial Day is always the leader in the quantity of flowers sold in the city of Boston; that is to say, sold at wholesale. True, the retail stores will tell you that their Memorial Day trade does not nearly come up to that of Easter or other holidays, but in the wholesale market much more business is done than at any other season of the year. This year was no exception, and it is safe to say that from 25 to 50 per cent. more flowers were sold this year than on any other previous occasion. Of course, much of the business is done by out-of-town buyers. Almost everything sold at fairly good prices, especially if it was in the least colored. Roses did not go so well as carnations, yet all the available roses of the medium and smaller grades were sold out. American Beauty, of course, did not have a great demand, but that is not looked for at this season. White roses sold poorly, especially Kaiserin Augusta Victoria, which now seems to be plentiful. Carnations, except white, were cleaned out at good prices, the prevailing figures being \$3 and \$4. Lilies sold fairly well, but not a great many were in the market. Spruces were not so much in demand. A good many lilacs and deutzias were disposed of. By the way, these latter two shrubs were just right this season. Stocks sold well at \$2 and \$4. Sweet peas went very well at 50c. to \$1. Candytuft, of which some growers make a specialty for this occasion, sold very well indeed at 50c. per bunch. Lily of the valley had no demand. Smilax and asparagus and other greens went in large quantities, but with no advance in prices. J. W. D.

CINCINNATI, O.—Trade remains good, and stock on the scarce side. Memorial Day cleaned up all the flowers in the market; business being fully up to that of any former year. June weddings and commencements will uphold the trade for some time, and all good stock will fetch satisfactory prices. American Beauty roses are still the leaders. The crop now on is of very fine quality, and this market has a good supply. Long Beauty bring \$3 to \$4; other grades in proportion. Carnations realize 1c. to 2c.; Bride and Bridesmaid, 3c. to 6c.; peonies, 4c.; lily of the valley, 4c.; lilies, \$1.50 per dozen; Western ferns are now in, selling at \$1.50 per 1000. E. G. G.

SYRACUSE, N. Y.—Decoration Day is becoming more and more important to the florists of this city and vicinity. Year by year the demand for cut flowers and blooming plants is increasing, and this year, owing to the continued cool nights, there was very little outdoor stock in evidence; consequently the florists did a larger trade in cut flowers, for which there was a heavy demand. There was plenty of stock to go around, with the possible exception of carnations. Roses sold at from \$1.50 to \$3 per dozen; carnations, 75c. to \$1.25; longidorum lilies, \$2.50 per dozen; lily of valley, 50c. and 75c.; sweet peas, 50c. and \$1 per 100; peonies, \$1.60 and \$2 per dozen. J. E. B.

INDIANAPOLIS.—Owing to rainy weather and an abundance of outside flowers, Memorial Day trade was not any heavier than in former years. The prospect for a record-breaking business was very bright until it became evident that there was no relief from a series of showers. Never before was stock so plentiful. Prices were, in most cases, 25 per cent. higher earlier in the week. Peonies were supposedly sold out by Thursday at \$4 to \$6 per 100. The warm rains caused them to open so rapidly that by Monday thousands could have been had at \$2 (shipped stock) to \$4 per 100. Candytuft, lavender and white, ten-week stocks, feverfew and daisies were on the market in immense quantities. A limited number of Harrisii lilies were to be had at \$12.50 per 100. Although the supply of sweet peas was large, they were readily disposed of to retail customers at \$1.50 to \$2 per 100. Well-grown snapdragon have sold well of late at 25c. to 35c. per dozen. The anticipated shortage of carnations did not materialize; fancy grades were scarce at \$2.50 to \$3 per 100, but medium carnations were never cleaned up at \$2. Roses were preferred by many for grave decorations, and were well cleaned up by Tuesday morning. Select Bridesmaid and Bride retailed at \$1.50 to \$2 per dozen. The best Mme. Abel Chateaux, Souvenir du President Carnot and La France brought \$3 per dozen. Shorts of the same varieties were used in bouquets at \$1 per dozen. American Beauty and Liberty moved slowly; the former wholesaled at \$3 per dozen for select 36-inch; \$2 per dozen for 24 to 30-inch and \$1.50 to \$2 per dozen for 15 to 20-inch. A few Richmond are being received; although second grade stock, a ready sale is found for them at \$1.50 per dozen. Canterbury bells have proved a most useful flower for Memorial Day bouquet making; a large, pink, white or lavender spray makes a fine nucleus for a bunch of flowers. The colors are by far the most beautiful and delicate of any seasonable flower; 50c. to 75c. is the customary price for a large spray. The commission houses had a large supply of Cane Jasmine, but sales of them were poor, there being too many other preferable flowers in the market. I. B.

PITTSBURG.—Business the past few weeks was fair; plenty of good stock of all kinds was to be had at low prices. Trade for Memorial Day was very brisk in the cut flower as well as the plant line. Good prices were realized. There was not much outdoor stock; even peonies were not too plentiful. Sweet peas were in good demand. Carnations went well, as usual. The call for flowers for cemeteries on Memorial Day is increasing every year, and there is hardly a grave to be seen without them.

The bedding plant trade this year was undoubtedly better than that of last year. Good blooming plants were scarce, and brought high prices. Four-inch geraniums sold at 15c. to 20c. each, and by the dozen according to quality, at from \$1 to \$1.50 per dozen. They seem to be the leading plant. Next to them come cannas, which were in great demand and the home supply was exhausted. Hardy pot roses also sold well at from 35c. to 50c. each. Lantanas and blooming vincas were in better demand than usual, particularly the latter. Coleus and alternanthera went about as well as usual, although the cool weather held back sales somewhat; but there is generally a good market for these until the middle of June.

John Bader had the largest stock of plants ever put on the market, and he has been kept busy day and night the last few weeks; his trade is mainly wholesale and went by wagonloads. Blind Bros. also had a fine stock of blooming plants which found good sales in the Pittsburgh market. There is more room to move about in the Allegheny market, and more plants are offered for sale there. All went well, at good prices. There is yet quite a lot of planting to do, and the next few weeks will see all stock well cleaned up.

John Bader received a nice shipment of plants from abroad, some fine bay trees among them. All arrived in good shape.

L. I. Neff had considerable funeral work the past few weeks; in one order for a casket covering, made of white roses, almost 3,000 were used.

Visitors the past few weeks were W. P. Craig, of Philadelphia; A. Ringler, of Barnard & Co., Chicago; and J. A. Evans, of the Quaker City Machine Company, Richmond, Ind. Mr. Evans was showing an improved arm for his ventilating apparatus, which is a good feature.

Loew & Jones had to give up their store on Diamond street, as the building is being torn down. They have not yet succeeded in getting another place, but are still in the business.

E. C. REINEMAN.

ST. LOUIS.—The week just past trade was somewhat better in cut flower lines. Stock, too, was not nearly so plentiful, with prices a notch or two higher. The weather was quite cool, and a great many roses came in more or less mildewed. At this writing most of us are busy with work for Decoration Day, which seems to be a great deal better than usual. A great many orders have been placed ahead for June weddings; these, with school commencements, should make June a good month.

The supply of stock received at the four commission houses is considerably diminished this week. It seems that the growers got tired of paying express charges on consignments, and have pulled out their plants, making room for young stock. Carnations are still coming in of fine quality. Enchantress, Prosperity, and Mrs. Lawson are up to \$2.50 and \$3 per 100; others bring from \$1.50 to \$2. In roses fine long American Beauty realize \$3; other grades from 50c. to \$2 per dozen. Bride, Bridesmaid, Perle des Jardins, Souvenir du President Carnot, Golden Gate, and Meteor ran all the way from \$2 to \$3 per 100. Bell Miller and Canfield, of Springfield, and Ammann, of Edwardsville, continue to send in some of the best roses to this market. A few Harrisii lilies and callas are still in the market; all other bulbous stock is out, except lily of the valley, of which some fine stock is selling at \$3 and \$4 per 100. Sweet peas are very plentiful, but the demand is good, and they are generally cleaned up every morning, at from 35c. to 60c. per 100. Cape Jasmine are in great abundance at 50c. to \$1 per 100. All kinds of greens are to be had in any quantity. ST. PATRICK.

WASHINGTON, D. C.—Trade has been brisk this week, commencements being in full swing. American Beauty roses brought from \$3 to \$6 per dozen. There was an ample supply of Kaiserin Augusta Victoria and Souvenir du President Carnot, which were in demand at \$1 to \$1.50 per dozen. The supply of Crimson Rambler flowers was limited, good-sized bunches realizing from \$1.25 to \$2 per dozen. Bride, Golden Gate, and Bridesmaid are coming in quite small and sell at 50c. to 75c. per dozen. Liberty has been very scarce at \$1 to \$2 per dozen. Peonies were in demand; they seem to be popular favorites at this season, going at from \$1 to \$2 per dozen, red and pink being most called for. Gladiolus were scarce at from 75c. to \$1.50 per dozen. Gaillardias sold rapidly at 10c. to 25c. per bunch. The Centre Market, which is our principal one, was well stocked with all sorts of bedding plants in pots and hanging baskets, which sell fast. It is expected that the demand for Decoration Day will be a record-breaker. M. C.

CLEVELAND, O.—Magnificent weather is the means of the disposal of great quantities of stock. A great many salvias and geraniums were sold, as were larger potted plants such as hydrangeas, lilies and some Crimson Rambler roses.

Cut flowers sold well, there were plenty of all kinds but carnations. Considerable design work is being done. Cleveland Grays, a local military company, using 150 monogram designs.

Peonies are very scarce; none but red ones are to be had at any price, and not many of them. O. G.

NEWPORT, R. I.—Decoration Day trade was very satisfactory. The seedsmen's splendid business still continues. F. W.

Chicago.

News Notes.

John Brod, Niles Center, has disposed of his place to Matthias Mann; the latter has put his brother-in-law in charge of it.

Poehlmann Brothers are installing new boilers and remodelling their large plant.

The Desplaines Floral Company has given up its stand in the Growers' Market. The firm's products are now being handled by Percy Jones.

J. Foley is the happy father of a bouncing girl baby.

Decoration Day plant trade was exceedingly heavy, much better than usual.

Stock in cut flowers is not overplentiful, almost scarce in some lines. Memorial Day business was very satisfactory; there was a big demand for colored stock. R. JOHNSTONE.

FIRMS WHO ARE BUILDING

HIGHLAND MILLS, N. Y.—Thomas Williams is making preparations for the erection of several greenhouses.

MARSHALLTOWN, Ia.—A greenhouse, costing \$2,000, is among the improvements to be made shortly at the Iowa Soldiers' Home here.

HANCOCK, MICH.—A. M. York intends making some changes at his greenhouses at Ripley this Summer. Besides building a large addition to one of the houses there at present he intends erecting two new ones. The addition to be erected will be 23 x 100 feet in size, and one of the new buildings will be 40 x 100 feet in size; the other, 23 x 100 feet.

LIBERTYVILLE, ILL.—Land east of this town has been purchased by Wieland & Reisch Floral Company, on which they will erect an extensive range of greenhouses.

FULTON, ILL.—Hillis & McKenzie will erect two greenhouses, each 23 1/2 x 200 feet; also a boiler house 15x61 feet.

COMING EXHIBITIONS.

ANNANDALE (N. Y.) ROSE SHOW.—The fourteenth annual exhibition will be held June 14 and 15. The schedule of premiums has been issued, and copies may be obtained on application to Secretary John W. Bain, Red Hook, Dutchess County, New York. The Judges announced are: Messrs. R. V. Allen, F. L. Atkins, Leonard Barron, Patrick O'Mara, and Henry A. Siebrecht.

BOWLING.

NEW YORK—A few of the Florists' Club members met at Thum's Bowling Alleys, on Friday, May 26, and the undernotes scores resulted:

J. Fenrich	171	191	201
A. J. Guttman	160	184	185
J. A. Shaw	145	134	130
J. A. Manda	143	146	151
P. Kessler	151	133	139
H. Hoffmeyer	150	137	140

It is announced that practice games will be rolled on these alleys every Friday evening until July 23, and that the averages made will decide the make-up of the team that shall represent the club at Washington next August.

WINNIPEG, CAN.—Ueberheim & Smith, the florists, of St. James, have opened a retail store at 213 Graham, corner Main.

THE WEEK'S WORK.

Timme's Timely Teachings.

Paris Daisies.

Chrysanthemum frutescens, generally known as marguerites or Paris daisies, are grown on every florist's place. While in most establishments but a few plants are seen, there are some growers who raise marguerites by the thousands in benches every year, thus plainly demonstrating that the culture of this most prolific of blooming greenhouse plants is a paying venture. Although the flowers may not bring a high price, comparatively speaking, they nevertheless rarely miss the early morning sales at the market, and are considered an indispensable item in all the daily orders of retailers. For this reason and because they are so easily raised and never fail to produce great quantities of flowers, marguerites still lay claim to being good things to grow.

It is not at all difficult to strike the cuttings early, at a time when the propagating bed is taxed to its utmost capacity and the propagator's time most valuable. The cuttings of Paris daisies need no bottom heat and will root just as well now as at any time in the winter, and the plants will be of good size for next season, and better than those made early and then perhaps neglected in the general rush of early Spring work. Where large numbers are to be raised, field culture during the Summer will be found the better course to pursue, although, it must be said, marguerites require careful handling in the lifting and benching next Fall. The few dozen plants, usually in evidence on every place of modest pretensions, can be raised to better advantage in pots with other plants of the same category. In this case two or three shifts into larger pots from time to time will make good plants by September or October. It is worth while to give the Paris daisies good culture and care. They produce finer and faster selling flowers in a good, rich and well-prepared soil, than in an ordinary bedding plant compost, and they respond quickly, when coming into bloom, to liquid stimulants regularly applied. The cuttings should be potted up just as soon as they show roots, and the young plants pinched back a few times to encourage a bushy growth.

Stocks.

The best varieties of the ten-week stocks for forcing and general florists' use are Giant Perfection, Snowflake and Beauty of Nice. The first may be sown now in a frame outdoors, and from there transplanted into greenhouse benches, soon becoming empty. The stocks may not prove a better paying crop than good chrysanthemums, but they certainly bring more money than do asters, now so extensively grown under glass. Beauty of Nice I have not sufficiently tried to say

more about it than that it is a fine sort for pots. Snowflake is the best of border plants and surpasses Mme. Sallerol geranium, sweet alyssum and many other like plants as an edging in front or around flower beds, being of a uniform growth, a densely set, spotless white and in bloom all Summer long.

Now is the time to make sowings of the Brompton or Winter stocks. They are the sweetest scented of all this genus, and well-grown plants sell as fast in the Spring as any pot plant in the best assorted collection. The variety Empress Elizabeth and the intermediate strains are all fine for pot culture, coming into bloom much earlier than the true Brompton stock, but being inferior to it in point of fragrance and adaptability as house plants. Sow the seed in a nicely prepared bed outdoors, and prick off the little plants as soon as they offer a hold to thumb and finger. When large enough, plant into good soil in the garden. Keep the bed clean of weeds, hoe often and water sparingly. By the middle of September you will be able to distinguish the double from the single flowering plants. Pull out and throw away the latter, and carefully lift and pot up the former. Give these a stand in a frame, where they can be shaded for a week or so, and then let them have the full sun and freely circulating air until Winter sets in, when they should be removed to the greenhouse. The main point now to be observed is to keep them from growing during Midwinter. A temperature slightly above freezing and plenty of ventilation will do this. In the beginning of March is the best time to start the Brompton stock into actively, and a few weeks suffice to bring them into full bloom. The intermediate sorts cannot be held back so long, and it is best to give them free play. All these kinds of stock make excellent Easter plants.

Double English Wallflowers.

Any number of well-grown potted wallflowers can be sold in the Spring. So far there have never been enough of them raised in this country to fully test their popularity, or value, as market plants. They are so springly grown that most people of our younger generation do not know what a wallflower is like. But they regard it as one of the grandest novelties and the sweetest thing out when beholding a nicely flowered specimen and inhaling its delicious odor. To dispose of the few now grown, at good prices, is easy; neither is it difficult to raise a lot of these fine old plants.

Cuttings of the double varieties may be put in sand now and, when rooted, planted into the open ground. If old plants are not at hand for a batch of cuttings, an attempt must be made to raise them from seeds, which is quite easy to do. A goodly percentage of the seedlings may be expected to come single flowered. Still these are of some value for picking, while single stocks are not. Only the choicest strains of double wallflowers should be bought by florists for pot culture.

This is by far the best time to sow the seeds, and the best place for them—as well as for the cuttings—is the outdoor cold frame. The seeds germinate in a few days. Keep the sashes raised day and night in mild weather, and when the plants are an inch or two high, transplant to an open, sunny spot in the garden, about a foot apart. In September they are lifted and potted up. Any one-sided or unshapely plants are rejected as unworthy of a place among good pot plants. Good, well-enriched soil is to be used in potting, and the newly-potted plants must be shaded for over a week, and after that kept outdoors until hard frosts make their removal to the greenhouse necessary. Here they want a very cool place, lots of air and but little water, until the beginning of March, when a gradual increase in heat and moisture will soon bring them into bloom.

French Single Wallflowers.

I have for years raised single wallflowers for cutting purposes and have found them quite profitable and an excellent crop to follow the early chrysanthemums. The Parisian forcing variety and the one obtainable under the name of Goliath, are the kinds to be used. The flowers of the former range in color from bright canary yellow down to the various tints and shades of old gold, while those of Goliath are a true red. The flowers of either variety are quite large and emit the same peculiar sweet odor, which has

gained for the old English wallflower a place among our highly prized scented blossoms. The sprays can be cut from 18 to 24 inches long, are stout, and of a woody nature, retaining their freshness for over a week. Sow the seeds now and cultivate the plants in the field. Early in the Fall they are dug up and benched, and from that time until Spring they will produce an abundance of flowers.

Boston.
 The Week's News.
 Superintendent Pettigrew, of the Park Department, has been experimenting in one of the most infested districts in the city of Melrose with the destruction of the gypsy moths by spraying. The work is being done under the auspices of the Society for the Promotion of Agriculture, and a section of some ten acres of woodland near the Middlesex Fells selected for the purpose of these experiments. It had been asserted that spraying was ineffectual in the case of these insects, as the strongest poison used did not seem to affect them any. Arsenate of lead is being used by Mr. Pettigrew, and with the powerful machinery he uses and the systematic way of doing the work, there is no question but that these insects can be destroyed by spraying at a much less cost than by any other way. R. & J. Farquhar & Co. are making extensive changes at their greenhouse plant at Rosindale. The increase of their business demands larger packing rooms, and the erection of these will be started at once.
 James Farquhar expects to leave for Porto Rico in the near future to look after his lily plantations there.
 The Boston Globe, which has been having a series of articles on horticultural topics in its Sunday edition, contained last Sunday an article on the Langwater Gardens of the Ames' Estate at North Easton, where W. N. Craig is in charge.
 Callas of any kind never gave W. W. Tailby the happy smile he wears these days; it's a girl.
 Leonard Barron, New York, was in town this week. J. W. DUNCAN.

Philadelphia.
 Trade Items.
 Memorial Day business proved very good. All the commission houses were taxed to their full capacity, most of them working all day Sunday getting off orders for distant points. Shipping business was very brisk this year—better than for several years past.
 In the center of this city it was noticed that Memorial Day did not bring so much trade as in past years. Some ten years ago immortelle designs were very numerous. Nearly every store had three or four large ones to make, but these are not so numerous now. All the growers near the cemeteries report a big business; more geraniums could have been sold, many not in bloom being left on hand.
 Bayersdorfer & Co. report an unusual large business the past two weeks; the stock of wreaths was never so low as at present. Nearly all the samples in the show cases even are gone, owing to the urgent demand. The firm is now very busy on orders for June weddings, etc.
 L. Reuter takes possession of the establishment of Samuel J. Bunting on Thursday, having leased the place. DAVID RUST.

Gets \$15,000 Verdict.
 Mrs. Ruth Standen, wife of Harry G. Standen, a well-known florist of Haverford, recovered a verdict for \$5,000 damages against the Pennsylvania Railroad Company before Judge Beltier, in Court of Common Pleas No. 1, last week, for personal injuries received, and her husband was awarded \$10,000 damages by the same jury to compensate him for the loss of his wife's services and reimburse him for medical expenses. The accident occurred on the afternoon of August 3, 1904. Mrs. Standen was a passenger on a train from Broad street station, and when the train arrived at Haverford she started to leave the car, but as she was going down the steps the train started with a sudden jolt, which threw her backward. Two of her ribs were broken and she suffered a more serious injury to the base of her spine, which resulted in progressive paralysis.

PATERSON, N. J.—A scarcity of geraniums, coleus, etc., last Saturday led to a sharp advance in prices. Fair to good geraniums brought 15c. readily. The street market, which is usually in a state of collapse, was highly elated over the sudden turn of affairs for the better.
 David Thurston's new store on Van Houten street seems likely to be a permanent fixture. Mr. Thurston is doing a good business.

St. Louis.

The Week's News.

A banquet was tendered Fred C. Weber and Theo. Miller on Friday night by only a few of their many friends, at the Missouri Athletic Club. Of the 100 members of the St. Louis Florists' Club only nineteen attended, not out of any disrespect to Messrs. Weber and Miller, but through the bad management of the person who took charge of the affair, ignoring the heads of the local club, President Juengel and Vice-President Pilcher. The insult to these respective members was too much, and the result was that what could have been made a very enjoyable affair turned out very tame, something that was keenly felt by those present, who were ignorant of how the thing had been managed.

The regular June meeting of the Florists' Club will take place at John Steidle's place in Central, Mo., Thursday afternoon, June 8, at 2 o'clock. The members are requested to bring their ladies who will be entertained by Mrs. Steidle. Quite a number of very important matters will come up for discussion. Mr. Steidle expects every member to attend and make this the banner meeting of the year. A good time is in store for all.

George Wagner, who conducted the floral store at Maryland and Euclid avenues, formerly operated by E. H. Michel, has closed up the business.

Henry Johan, C. A. Kuehn, and Fred Ammann, paid a visit to their old friend, Max Herzog, who is selling out his stock, intending to retire from business.

Fred C. Weber and Theo. Miller left here Sunday night for New York. They sailed on the steamer Hamburg Thursday, June 1, for a two months' trip to Germany. Both will return in time to attend the S. A. F. O. H. convention at Washington in August.

The rain storm on Monday night kept many of the bowlers away from the alleys. Four braved the storm, and rolled four games, totalling as follows: Kuehn, 461; Beneke, 451; Gerlach, 384, and R. Meinhardt, 347. Next Monday night two silver match boxes will be contested for. ST. PATRICK.

Newport, R. I.

News Notes.

The executive committee of the Newport Horticultural Society held a special meeting last Saturday evening, and completed, with the special committees on advertising and exhibitions, the annual schedule of prizes for the two large shows, to be held this Summer in the Newport Casino. The first of these exhibitions will be the Rose and Strawberry Show, June 27, 28, and 29; the great exhibition of the year will be September 11, 12, and 13.

The George A. Weaver Company gave an exhibition of the workings of the Coldwell gasoline lawn mower, on the lawn of the Newport Casino on Decoration Day. This machine has a maximum cutting speed of eight miles an hour; cuts 40 inches wide, and is constructed with a powerful roller. For power an 8 horse-power gasoline motor is used.

Wadley & Smythe are busily engaged getting their establishment in the Casino ready for opening for the season early in June. Mr. Smythe himself has been over from New York for several days looking after matters.

The regular monthly meeting of the Park Commissioners was held last Tuesday afternoon, when the new member, Admiral Chadwick, was present for the first time since his appointment.

The advertisement of the Grand Army, asking the citizens of Newport to contribute flowers for Memorial Day uses, brought wonderful response in a great quantity of both outdoor and greenhouse flowers.

Ralph Armstrong is getting Messrs. Siebrecht & Sons' Bellevue avenue store in order for opening for the season. Mr. Armstrong had charge of their establishment here last Summer, and we are all glad to see him again.

James J. Mulry has been here representing Reed & Keller, of New York. They are already booking orders for Christmas bells for next December.

William B. Scott & Co. have had a splendid run on bedding plants, of which they have carried a large and well-grown stock all the season. Geraniums have led the sales at \$1 per dozen; smaller plants like asters, stocks, cosmos, and salvias, 50c. per dozen.

J. M. Thorburn & Company's Noroton Beauty potato is so far doing very well indeed with those of us who are trying this new variety. It is a very vigorous grower, and we are watching it with much interest.

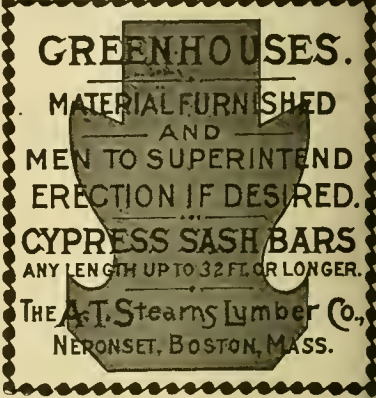

Dahlias are more popular than ever here this season: The L. K. Peacock Inc. Co., of Atco, N. J., are supplying a great many of their new cactus and Century single sorts, through their distributing agents here. F. W.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 23

NEW YORK, JUNE 10, 1905

One Dollar Per Year

NEPHROLEPIS PIERSONI ELEGANTISSIMA (The Tarrytown Fern)

We have a grand lot of this in 6-inch and 8-inch pots—fine specimens, for which we have a splendid demand. Retail florists find this one of the best selling plants ever handled, even at the present novelty prices. We can supply 6-inch plants at \$2.00 each, and 8-inch at \$3.00 each.

Now is the time to obtain a supply of this in small plants and grow it on for retail trade. We have a splendid lot of very strong, heavy established plants in 2½-inch pots, which, if shifted at once, will make grand stock for fall. Price, \$50.00 per 100. These are not light rooted runners from bench, but are strong established plants from 2½-inch pots.

We also offer a lot of

PIERSON FERNS In large sizes for immediate sale for summer decoration. 6-inch at 50c. each; 8-inch at \$1.00 each; 10-inch at \$1.50 to \$2.00 each. Larger specimens, \$3.00 each.

NEPHROLEPIS SCOTTII Fine plants, 6-inch pots. \$1.00 each; 8-inch, \$2.00 each.

ADIANTUM CROWEANUM Extra fine plants, 6-inch pots, extra fine for immediate use or for growing on, \$6.00 per dozen.

KENTIAS FOR DECORATING We have a nice stock of large plants which have been grown in a very low temperature all winter, and consequently are hardy and splendid for decorating, as they will stand a good deal of knocking around. Florists who need large stock for decorating or for hotels, piazzas, etc., in exposed places will find this stock unusually satisfactory. We offer various sizes from \$6.00 to \$15.00 each, according to size.

EXTRA LARGE FICUS FOR DECORATING We have some plants, grown in tubs, several plants in a tub, and in consequence are very well furnished, and very bushy, ranging in height from five to ten feet. Splendid for hotels, piazzas, etc., and useful for decorating. \$5.00 to \$10.00 each.

DRACAENA INDIVISA Fine stock in 6-inch pots, the most useful size for florists' use. 50c. each.

ENGLISH IVY Strong plants, 3½-inch pots, \$12.00 per 100.

GERANIUMS Double General Grant, La Favorite, Duc de Montmart, Paunpeck, etc. strong plants, 3½-inch pots, \$8.00 per 100.

SALVIA SPLENDENS (Scarlet Sage). Fine strong plants, \$4.00 per 100.

ANTIRRHINUM (Snapdragon). Separate colors, \$6.00 per 100.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

SEDALIA, MO.—L. H. Archias, of Archias' Seed Store, started May 31 for Los Angeles, Cal., as delegate to the Knights of Columbus National Council. He will be accompanied by Mrs. Archias and daughter, Edith. They will also visit at Portland and Seattle before returning. Archias' Seed Store reports the most successful season it ever had.

NEWPORT, R. I.—Henry C. Anthony, the wholesale seed grower of Portsmouth, R. I., was a visitor the past week, and reports seeds of all kinds cleaned up remarkably well this year. The Joseph Breck & Sons Corporation, of Boston, have had their Mr. Rich here for a couple of days. While this, of course, is a very dull time for wholesale seedsmen, Mr. Rich reports a very good business indeed. It has been generally understood among the trade here that after June 1 the seed stores should close every night but Saturday at 6.30 o'clock. One of our large stores was not willing to do this, and so we are all keeping open nights for the present. F. W.

THE SEED CROPS ON LONG ISLAND have reached a condition where the outlook can be stated with a certain degree of confidence. Of course, there is no certainty as to the results of any venture in the field of agriculture, until the crop is harvested. Storm is liable to destroy when the crop is ready for the harvest; blight, mildew, and rust are liable at any time to upset all calculations; so all that can be said is to give the indications at the time of writing.

Cabbage Seed Crop.—At the present time it is safe to say that present appearances indicate double the yield per acre that was promised three weeks ago. Climatic conditions have been ideal, and the fields now give promise of more than an average yield. In fact, many fields are as promising as the best in former years of great productivity. It must, however, be understood that the acreage is not more than half what was contracted for last year,

so that the yield, however good, will not be as large as the contractors desired. On the other hand, with the exception of a few varieties but little used, there is no danger of a shortage. With this seed crop the future is a most uncertain quantity. The large crops and high prices for potatoes of the past three years have stimulated the farmers to increase their acreage of these, and to abandon seed growing, which makes it impossible to contract as largely as in former years. There are, however, many of the most successful seed growers that will keep on as in years past, knowing full well the seed industry to be the most profitable as a permanent industry.

Siberian Kale.—This crop is looking well, and there is every promise of sufficient to fill all contracts.

Scotch Kale, on the other hand, is nearly a total failure. The plants started well, but soon began to drop out, which was undoubtedly due to the excessive cold weather of the past Winter.

Spinach is again a very small crop, in fact, no better than last year, when it was nearly a total failure. The very cold and backward season kept the plants back until warm weather set in, which forced the plants into flower before they had sufficient growth to produce a seed crop.

Ruta bagas are looking very well; in fact, there is every promise of a large yield; a shortage is not at all likely.

European Notes.

The somewhat severe crisis through which we have been passing is now practically over, for with a cessation of the deadly northeaster, we may reasonably expect the much-needed fall of rain. The damage done by frost and vermin to our growing crops must be considerable, and has only been mitigated by the dryness of the atmosphere. Our Spring sowings of pole and other beans have been destroyed except in a few very sheltered spots. The price of the few left on hand has nearly doubled during the past ten days, and those who were recently so eager to sell have good reason to regret the success of their efforts. How far other crops are permanently injured shall be reported later.

EUROPEAN SEEDS.

NOTES ON DUTCH BULB RAISERS.—The months March, April, and May until the 26th, were distinguished by cold winds, hail, frost, snow, and rain. Spring, and it seems that no bulbs would grow up to the standard. There is much disease in the plants; tulips have damaged foliage in consequence of frost, so that every grower feared that the crop would be a failure. No it may be said that for many growers here the prospects are not so bright.

DWARF BOX HARDY ROSES

NOTICE

To whom it may concern: RALPH M. WARD & CO., New York City, having purchased my crop of Bermuda Harrisii Bulbs for the season of 1905, have the sole right to sell them in the American and Canadian markets and to offer them as

PENISTON'S BERMUDA HARRISII

March 31, 1905. CLARENCE PENISTON, Hamilton, Bermuda.
Mention the Florists' Exchange when writing.

For three days we have had real Summer, but the hyacinth plants show how much they have suffered. On many places the leaves are limp; the bulb have no roots. The foliage in many gardens is soft yellow instead of fresh green. In the months of May and June the bulbs must attain their full size, but 80 degrees F. in the shade is too much warmth for them. A few days of such a temperature will cause hyacinths and tulips to perish, and the bulbs will not be up to their size, in that case. They will suddenly change their color and the growth has ended then.

Narcissus and crocus promise a good crop, though here and there the narcissus are infected with "fire."

The growers expect a very quick trade in tulips, with high and advancing prices. The demand for tulips has been extremely large this year, and, on the green sales, there was a very good market for them. Hyacinths, particularly those of selected size, will be scarce and expensive, as they will be in short supply. Smaller sizes, we think, will be sufficient in number to meet demands, but not abundant. Narcissus will be held at the same prices as last year, except double Von Sion selected size and Emperor. Some growers expect also that the price of Golden Spur will be higher than last year.

J. BEUMER.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

THE AMERICAN POMOLOGICAL SOCIETY will hold its next biennial meeting in Kansas City, August 8-10 next. All the horticultural societies in the Middle West are co-operating with the national organization to make the meeting a pronounced success.

WEST CHESTER, PA.—The old established business of Hoopes, Brother & Thomas will be continued by Messrs. Abner Hoopes, Wilmer W. Hoopes and Charles E. Cattell, under the same style as heretofore.

LAKE CITY, MINN.—The Jewell Bulletin, issued by the Jewell Nursery Company, in its issue of May 15, says: "One year ago was the largest shipment we ever made up to that date. Our records show that two hundred and sixty cars loaded with nursery stock left this depot. The present year shows that over three hundred cars were shipped loaded with nursery stock, besides about twenty cars or more filled with express packages. This totals an aggregate of nearly one and one-half million pounds of freight and express."

many varieties of this chestnut. In fact, many of those already in cultivation are the result of selection from seedlings, great varieties having been observed in collections. A nurseryman who procured some 300 seedlings of small size, and who set them out in nursery rows, says that fully a fourth of them fruited last year when not over two feet high. The thriftiest growers do not make large trees; on the contrary, quite small ones, when we have in mind our native and the Spanish chestnuts.

Aucuba-Leaved Ash.

Mention was made of the flowering ash, *Fraxinus ornus*, in a recent issue of *The Florists' Exchange*, and well worthy of commendation the tree is! There is another, quite as worthy, but in an entirely different way—the aucuba-leaved ash, *Fraxinus aucubifolia*. To those acquainted with the golden-leaved aucuba the resemblance of the foliage of this ash to it will strike them at once. Soon after the leaves are fairly unfolded the golden spotted appearance becomes very pronounced. This they hold through May and June, after which they lose some of the golden color and, later in Summer, there is not much of it visible. It, therefore, is to be considered as an ornamental foliaged tree for early Summer. As with all other ash trees it is readily increased by both budding or grafting. Whichever plan is adopted, the operation should be performed near the ground. With this and all handsome foliaged plants, trees and shrubs, we wish to see the foliage close to us, so that low branched ones are what we should have.

species are a long way apart, bees are so fond of visiting the flowers that in all probability mixtures would result. In view of all this, to be safe to get the pure species of any one of the wistarias, layer plants are the best to rely on.

Chinese Cork Tree.

Trees having corky bark are always interesting, and nurserymen find a steady call for all the kinds they have of this character. Some years ago a new one, as thought, was added to the list, under the name of the Chinese cork tree, *Phellodendron amurense*, but the tree sent out for it, which is presumed to be true to name, is not at all corky. In later years, the Arnold Arboretum sent out another *phellodendron*, a variety which had come from Dr. Regel, and those who have secured it find it to be of a decidedly corky character—a real cork tree, in fact, and an interesting one to look on. The older one in cultivation has borne seeds for years, and seedlings of it are plentiful. What is wanting now is for the real cork barked one to commence bearing, that a supply of its seedlings may be available, for it promises certainly to be a very desirable sort, and cork-barked trees are always in demand.

Yellow and Black Locust.

A correspondent writes me that I am incorrect in saying the yellow and the black locust are the same thing. Where he lives, in Kentucky, he says there is the true yellow locust, and it differs from the black

ALINE MEOQUERY

FRAU BERTHA DAMMAN

TRIOMPHE D'ORLEANS

LILACS IN ARNOLD ARBORETUM, BOSTON, MASS.

Picea Pungens.

This is the season of the year when the beauty of the Colorado blue spruce, *Picea pungens*, is at its height. It is when the young growth is about half formed that the blue color is so pronounced, and this is the time to call customers' attention to it. There is no other evergreen equal to it in blueness of color, provided one gets the true blue colored form. To simply ask for a *Picea pungens* does not insure a blue one, as many of them are as green as a Norway spruce. *P. Engelmanni* is of good blue color, but not as deep or as silvery as that of *P. pungens*. There appears to be all grades of color in this spruce in its wild state, from green to the brightest silvery blue.

Fruiting of Japanese Chestnut.

There is such a difference in the time required for fruiting in the Japanese chestnut that it is surprising in some cases. As a rule, the trees grow on for several years, becoming six to ten feet high before any flowers or fruit appear, but, in some cases, little seedlings of but two feet will bear, just as the chinquapin chestnut does. And this early bearing is something not looked for in seedlings, as a seedling has vigor which carries along its growth without fruiting to a longer time than a grafted or an otherwise increased one takes. There is no doubt it would seem there are

Planters may safely be advised to plant several of this and similar trees close together, to form large groups of ornamental foliage, when grounds are of dimensions to permit of it.

Variations in Wistarias.

Accepting an invitation from a friend to look at his several vines of *Wistaria sinensis*, which he said were not of the usual color, but much lighter, I visited his grounds and found it to be as he represented, the flowers being, some of them, almost white. While there is no doubt that soil, shade and other things will cause the color of flowers to change, there are other things helping toward it—hybridization, for instance, when there have been variations in the type, as the now well-known white variety and the double form attest. Then the Japanese species, *W. multijuga*, has to be considered, and remembering all these species and varieties, and that they are often grown in proximity to each other, there is no trouble in understanding how varying colors may be found in seedlings. The friend referred to did not know if his plants were layer raised or seedlings; he had obtained them from a near-by nursery.

A nurseryman having plants of the several sorts growing near each other could not depend on having seedlings true to color. And even when the different

one as much as the white oak does from the black oak. I have written him that I do not question that there may be variations in the *Robinia pseudo-acacia*, the locust in question, but that to a nurseryman, who is interested in supplying what a customer wants, the matter to understand, and which all nurserymen do understand, is that the names black locust and yellow locust are synonyms, and that what is wanted is the *Robinia pseudo-acacia*. Just now railroad companies are planting this locust extensively for the use of the timber for ties. This has awakened the interest of many persons in it, and inquiries for both seeds and seedlings are numerous, and the number of those who ask about it under the name of yellow locust is about equal to that of those who call it black. In Pennsylvania it is almost universally called yellow locust—an appropriate name, considering its yellowish white flowers.

There is no question of the hard-wooded character of this tree nor of its durability, but in some parts of this State, Pennsylvania, where it grows wild, it suffers somewhat from the attack of a borer.

It is good work on the part of companies and of individuals to set out plantations of useful trees. Some of the *Catalpa speciosa* plantations set out some years ago should soon be coming into profit. The demand for timber trees of all kinds is bound to increase, and very largely too, and in this respect, and in a general way, also, the prospects of the nurserymen look very bright.

JOSEPH MEEHAN.

Notes on the Lilacs.

There is perhaps no class of hardy shrubs that command more attention than the lilacs. Among the earlier flowering shrubs they are looked upon as the chief attraction. There are many fine hybrid varieties, but in many gardens we see only fair success with their cultivation. In many instances little attention has been paid to the preparation of the soil. Lilacs, like most shrubs, delight in a rich, deep loam, and, before planting, care should be taken that the ground has been thoroughly trenched and well enriched. The chief cause of failures, however, is the using of grafted plants. To insure a quick growth and speedy returns, as it were, grafting is resorted to as the chief means of propagation; and while grafted plants may grow flourishingly for a few years, they will soon begin to show signs of decay, and eventually die. To insure good results it will be best to start aright, and if it is not possible to secure plants on their own roots, grow them. Cuttings may be rooted in a gentle bottom heat during the Summer, and it is surprising how quickly an own-root plant will grow when once it gets a start.

In the Arnold Arboretum, where for years the lilacs have been one of the chief attractions during the season, no grafted plants are now to be found. When new varieties arrive, they are placed in nursery rows till Mr. Dawson has had an opportunity to grow own-root plants, which finally receive a location in the order. This year many people believe the lilacs were finer than they have ever been before, but it is doubt-

Mme. Briott, E. Lemoine, Gehemrath Singleman, Mme. Kreuter, Professor C. S. Sargent, La Ville de Troyes, Lemoine, President Grevy, La Tour de Avergne, President Massart, Tournafort, Condorcet, Dr. Lindley, Wm. Robinson, Louis Henry, Marechal de Bossone-pierre, etc.

Among the different species are some of the best and most interesting of the lilacs. *Syringa pubescens* is one of the best, with a decided upright habit of growth and free small light-colored flowers. *Josikee* is well known as a valuable late variety. *Villosa* is a grand lilac, coming into bloom just as most of the hybrids have passed. *Chinensis*, both light and dark colored, are good; and *persica* is so well known that it needs only to be called attention to. *Rothomagensis* is a hybrid known as the Rouen lilac, and is perhaps the most graceful of all.

Later in the season come the Chinese lilac, *Pekinesis*, valuable as a late flowering plant, and *Syringa japonica*, which is a small growing tree, and is one of the most ornamental of Japanese introductions.

JOHN W. DUNCAN.

TALES OF A TRAVELER.

El Paso, Texas.

There are but few towns in the United States situated so far from other towns of importance as El Paso, Texas. There are also few towns which have the conditions of climate as this growing border town. Directly across the Rio Grande is Juarez, Mexico, and El Paso is the gateway to a large portion of our neighboring republic. Arizona and New Mexico are close neighbors, and there is practically no city of importance for hundreds of miles. Long distances are a feature of the country here, and the florist business in a town of this character presents an interesting problem. The town is large enough to support a good florist business, as it numbers over 25,000 people, and is a center for all the neighboring towns for hundreds of miles, but

plant life of these conditions. The altitude of El Paso is about 3,600 feet above sea level, and by the testimony of those who have experimented with plants at this altitude, good growing is an impossibility, although at a higher altitude, or a lower one, they can be grown with a fair amount of success. Why this should be true I do not know, but that is what they tell me.

In 1898 an uncle of Mr. Kezer's, W. R. Goddard, came from Maine to El Paso, and they constructed two small greenhouses and undertook the growing of carnations and bedding stock. Two years they tried it, and after seeing the crops blow away after the dry wind had done its work, they gave it up, and Mr. Kezer has since confined his attentions to his store. California supplies a great deal of the stock, but Denver and even Chicago have helped supply flowers for the trade in this remote town. Good railroad facilities help matters, but 800 miles is the nearest point from which stock can be obtained. A big funeral would require that the relatives give notice of approaching death in order to enable the florist to obtain the flowers. Perhaps this is exaggerating matters a trifle, but it merely tends to show the distance of the El Paso florists from a base of supply.

The city of El Paso is growing, and being the center of so great a stretch of country, it must continue to grow. What the future will do for the commercial production of cut flowers here remains to be seen. Mr. Kezer would recommend a refrigerating plant for the Summer months, which would permit of the ventilators being kept closed and the hot winds being excluded.

W. R. PIERSON.

PRINCESS ALEXANDRA

CAROLI

GIGANTEA

LILACS IN ARNOLD ARBORETUM, BOSTON, MASS.

ful if the individual flowers were so large as last year on account of the exceptionally dry Spring. Be that as it may, it is safe to say they were never more floriferous, and were well worthy of a visit by all interested in these plants.

Among the newer hybrid varieties worthy of note *Aline Moequery* is a fine, compact grower, with purplish-red single flowers, and is one of the best. *Princess Alexandra* is not a recent introduction, but it is one of the finest white varieties. *Gigantea* is an old variety, but still holds its place favorably among all others. *Frau Bertha Damman* is a good white sort, with large panicles of flowers, and may be considered one of the best. *Caroli* is a very free bloomer, with purplish red blossoms, and is an excellent variety. *Triomphe D'Orleans* has a fine free panicle of bloom, but it is not of such a close habit of growth as some varieties; on this account it is all the more valuable. *Marie Legraye* is fairly well known as one of the best double white sorts, which, although a good grower, is not so floriferous as some others. *Alba major* is a large-flowered variety of the common white. *Azurea plena* is a good double variety. *Doyen Ketsleer* is a very large flowering sort, and a free bloomer, of a pleasing lavender color. *Souvenir de L. Spath* is one of the best, with medium dark purplish-red flowers. *Philemon* is undoubtedly the best dark-colored variety; it blooms early and keeps its color well, lasting better than many of them.

Among later introduced varieties worthy of note are *Colbert*, with large double purple flowers; *Dr. Masters*, with lilac flowers; *Rabelais*, Mme. *Casimir Perier*, and *Noisettiana*, with white flowers. Other good varieties include *President Carnot*, *Echenholm*,

not a single grower of cut flowers for commercial purposes can be found in the city. It can boast, however, of one dealer in cut flowers. On Myrtle street, H. A. Kezer has a store devoted entirely to cut flowers and florist designs, and this is the only one. Several other places in El Paso sell a few flowers occasionally, but this store is a flower store pure and simple.

I had a very interesting talk with Mr. Kezer on the situation in El Paso, and from him learned many interesting points in regard to commercial floriculture in Western Texas. He told me of his start as a florist in this section and of the work which has been carried on here in the cut flower line.

Some years ago Mr. Kezer came to Western Texas with a bunch of cattle, and things were promising for him in the cattle business. A neighbor was experimenting with nursery work, and one day approached Mr. Kezer and asked for \$10. "I don't want to borrow it," he said, "but I want it." He got the money and then said: "I'm going back into God's country again, and I guess you can get your \$10 back, for I make you a present of my nursery." He left for the land of more water, and Mr. Kezer took the nursery. A few trees sold to the government post at Fort Bliss gave back the \$10 and a start to Mr. Kezer in the business of growing plants.

The United States Government has kept a record of the evaporation in this climate, and the average for the past seven years has been 84.2 inches, and the rainfall has barely exceeded 10 inches. The hot, dry wind which blows for months will take from the plant every drop of moisture, and the barren deserts about El Paso are a tribute to the discouraging effects on

Acetylene Light as an Agent for Forcing Plants.

During the past Winter experiments have been conducted by M. J. Iorns, a graduate student in the Department of Horticulture at the forcing houses of Cornell University, having for their purpose a comparison of the influence of acetylene and electric light on plant growth under different temperatures. In a recent number of the *Acetylene Journal* a condensed statement of the gross results obtained are presented. It was found that acetylene light, approximating closely the quality of the sun's spectrum, exerted an energetic influence on plant growth. Plants grown under acetylene light vegetated much more rapidly than others not under its influence, and those grown for cut flowers reached the blooming stage considerably in advance of their competitors grown under ordinary sunlight only. Easter lilies grew twice as high and bloomed ten days to two weeks in advance of those outside of the acetylene lighted area. The growth of radish and lettuce was greatly hastened, and the yield in a given time much increased. The branches of flowering shrubs responded in a marked degree to the influence of the light. Those under acetylene light bloomed several days in advance of those in the same temperature and influenced by daylight only. It was also proved that the plants under the influence of acetylene light only would form chlorophyll, as if grown in sunlight.

Whether there is a commercial future for acetylene in the forcing of plants is a problem that awaits solution in the light of more comprehensive investigation.—The National Nurseryman.

SUBSCRIBER, Babylon, N. Y.—We cannot answer anonymous communications. If you will kindly send your name and address—not necessarily for publication, but as an evidence of good faith—your letter will receive immediate attention.

Lawn Infested With Ants.

(180) My lawn is more or less infested with ants, and the grass is thin, notwithstanding I have sown grass seed liberally upon it. Kindly inform me through the columns of your valuable paper respecting the best plan of getting rid of the ants and also the best method of improving the lawn? What commercial fertilizers would you recommend for immediate and what for more lasting effects? Will the remedy for ants in the lawn be suitable to expel them from a tulip bed? W. L. T. Wisconsin.

—To destroy ants in the lawn or tulip beds, make a mixture consisting of one-third Fowler's solution arsenic and two-thirds common sugar syrup. Scatter a few drops about and near the ants' runways. This is said to be a sure remedy and without danger. To help the grass at this time, there is nothing better than a light dressing of pulverized sheep manure. This is good also to use in larger quantity during Autumn or early Spring for permanent enriching of the soil.

Azaleas.

(181) What treatment does azaleas require after they are through blossoming? Do they want trimming and re-potting, and when? W. E. Massachusetts.

—Azaleas that are to be kept over another year should receive some attention as soon as the flowers begin to fade. If the plants were imported last Fall, they are probably in very small pots, according to their size, and should at once be repotted, giving them but a small shift, however. If the plants are unshapely, they should be cut back into shape; otherwise, no trimming is necessary. All of which needs doing right after flowering.

Taking Chrysanthemum Buds.

(182) What is meant by taking the August buds and the first or second crown buds of chrysanthemums? Massachusetts. W. E.

—The meaning of taking the August bud of chrysanthemums is to allow the bud that comes in August to develop, and to take away all the other buds that appear either before or after that time. A crown bud is always surrounded by young growths, while a terminal bud is always surrounded by other flower buds. If the first crown bud be removed, the surrounding growths will push forward and eventually another crown bud will be formed which will naturally be a second crown bud.

Sweet Peas, Mignonette, Primulas.

(183) Will sweet pea Christmas bloom for Christmas if seed is sown the middle of August?

When will mignonette bloom if seed is sown about July 15?

Will Primula obconica bloom in four months after the seed is up; that is, after the plants appear?

Will the Buttercup primula bloom at the same time as P. obconica? A. B. C.

Sweet peas sown in the middle of August should be flowering nicely at Christmas time.

Mignonette sown in the middle of July would be flowering the latter part of September, if allowed to do so. For indoor culture, where strong spikes are needed, it must be pinched back, so as to make heavy plants to furnish bloom from November on through the Winter. Primula obconica requires eight or nine months of time before it flowers from the time the seed ger-

minates. The Buttercup primula we have never grown, but should treat it the same as P. sinensis and P. obconica, and they will all flower at the same time.

English Ivy

Scarlet Sage, Clara Bedman, 3 in., \$4.00 per 100.

SCOTTII

Makes three times as many fronds as any other Nephrolepis

THE only new **NEPHROLEPIS** that has really become popular as a commercial Fern, since the introduction of the Boston. Large and small growers everywhere are planting it in preference to any other Nephrolepis. A year's trial has demonstrated that it is the hardiest, most graceful and symmetrical Nephrolepis known. Unexcelled as a house plant; first choice of the retail florist and also of his customers. The New York and Philadelphia retail store men buy no other fern when Scottii is available. Has fully justified the high opinion formed of it by the judges who awarded it the following long list of prizes:

- Philadelphia, Pa. **SILVER MEDAL**
- Newport, R. I. **SILVER MEDAL**
- Boston **SILVER MEDAL**
- New York Florists' Club **SILVER MEDAL**
- S. A. F. St. Louis **SILVER MEDAL**
- American Institute, N. Y. **SILVER MEDAL**
- New Orleans **GOLD MEDAL**
- St. Louis **SHAW GOLD MEDAL**
- World's Fair **GOLD MEDAL**

Highest Award at Chicago, Ottawa and Toronto
First Class Certificates and Testimonials from all over the country too numerous to mention

The Committee of Awards at the St. Louis World's Fair said of **Nephrolepis Scottii**: "A sturdy, Dwarf and compact form of **Nephrolepis**, very symmetrical and handsome, either in small plants or quite large ones. A great acquisition, with excellent qualities as a house plant. Worthy of Gold Medal."

Read Carefully the Best Report Ever Given by the New York Florists' Club for a New Plant:

The committee of award of the club visited the establishment of John Scott, of Flatbush, N. Y., on October 26, for the purpose of inspecting the stock of his new fern, **NEPHROLEPIS SCOTTII**. Seven members of the committee attended, also the president and vice-president of the club. The initial exhibit of this fern was made at the rooms of the club at the November meeting, 1903. The committee which examined it at that time was so favorably impressed by it that they unhesitatingly awarded it a certificate of merit, and did not ask to see it growing; a request to examine the stock was only recently sent to the club by the exhibitor. The committee made a thorough examination of the stock both in pots and on the bench, and character. It was growing in all sizes from plants in 4-inch pots up to specimen plants in tubs, and it was absolutely uniform, and were highly pleased at its condition form in all grades, the characteristics of the large specimen plants being evident in the smallest specimens on the place. The most careful scrutiny failed to discover any tendency whatsoever toward reversion, and it seems as if the character of the plant is absolutely and indelibly fixed. It is in essence a condensed form of the Boston fern, with valuable characteristics added, which are not evident in the parent. Your committee took an average plant in an 8-inch pot and found by actual count that there were 200 fronds in it, not counting the undeveloped and small ones which were in the center of the plant. The fronds of the plant in question averaged about 20 inches in length and three inches in width at the widest point; the pinnae are very closely set, so that they overlap, making a more finished frond than the parent. The plant in question had a spread of three feet. Plants in 4-inch pots showed a spread of 18 inches and a height of 10 to 12 inches. The committee was unanimously of the opinion that it is a most valuable introduction, and that it will become a plant for the florists to grow universally. It has a crispness and hardness about it which is superior to the parent, and which is one of its very valuable characteristics. It propagates very freely, and because of the fact that its character is established in the smallest size, it should find ready sale in all grades. After a thorough examination, your committee unanimously agreed that it was worthy of the highest award by the club and therefore voted that it be awarded the silver medal of the club, and herewith recommend same for your approval.

(Signed) PATRICK O'MARA, JOHN BIRNIE, ALFRED H. LANGHAHR, WM. H. SIEDRECHT, CHAS. LENKER, JOHN DOWSETT.

Scottii has received the highest awards whenever exhibited and for the past year has proven itself to be a **hardier house plant** than the Boston. **There is no comparison between this fern and any other variety for commercial use.**

Consult any grower, or retailer, who has bought Scottii, and they will tell you that it is as far ahead of the Boston as the Boston is ahead of all other introductions.

I sell plants, not apologies for plants. When you order of me, you can rest satisfied that YOUR ORDER WILL BE FILLED.

PRICES OF NEPHROLEPIS SCOTTII: 2 1/4 inch, \$2.00 per dozen; \$15.00 per 100; \$125.00 per 1000. 25 at 100 rate; 250 at 1000 rate.

This week's index will be found on page 751.

News of the Week in Brief.

More of the Buffalo department stores are establishing floral sections.

The West is still being visited by hail storms, and Secretary Esler, of the F. H. A., is working overtime.

Michael Lynch, a well-known California grower, died suddenly, May 27, of paralysis.

The exhibition of the American Peony Society takes place in Chicago next week, June 16 and 17.

Several of the craft have gone to Europe this week, among them Charles Thorley and John Birnie.

Bells perennis proved the best selling plant in Newport, R. I., with the street peddlers this year, at 5c. a plant.

Read what Secretary Stewart has to say about the Washington Convention of the S. A. F. O. H. on the opposite page.

William Joyce, an old-time gardener and successful exhibitor, of Philadelphia, was knocked down by an automobile and killed, on June 3. He was 72 years of age.

The local papers of Kansas City announce a prize of \$400 for the best 100 American Beauty roses, at the forthcoming Fall Show there. Other enticing prizes are to be offered.

The Philadelphia Florists' Club will entertain the S. A. F. O. H. delegates passing through that city en route to Washington. Good viands, a good time, and John Westcott's famous punch will be on the tapis.

The American Carnation Society's preliminary program for the Boston meeting, to be held January 24 and 25, 1906, will be issued early in July, and will contain some special features of interest to carnationists.

There is quite a contrast between the market accommodations afforded for plant and cut flower growers in London and those available to the New York plantmen. Our supplement this week shows it.

Ladies' Night and a grand exhibition of peonies at the New York Florists' Club meeting on Monday evening, June 12, are sure to bring out a large attendance. Other attractive features are on the program. The club's outing occurs Wednesday, June 28, at Glenwood, L. I. Tickets are on sale, and a most enjoyable affair is ensured.

The colored supplement to the London Garden of May 27, 1905, shows two American varieties of carnations, Enchantress and Mrs. Thomas W. Lawson; also an English sort named William Robertson. The illustrations, so far as color is concerned, are hardly "true to nature," but they demonstrate the interest taken by our English brethren in the products of our carnationists. An article, by A. Hemsley, on "Carnations in Pots" and for winter flowering accompanies the plate.

London and New York Plant Markets—A Contrast.

In our issue of March 25 last our English correspondent, A. Hemsley, gave a very full and interesting account of the workings of Covent Garden Market, London from which our readers will have learned of the great advantage, in the way of a structure suitable for marketing plants and flowers, the English growers possess over our plantmen in New York and vicinity. Mr. Hemsley supplements his previous remarks with the following:

After some difficulties I have secured some photos which I think will give your readers some idea of the interior of our flower market. Of course, each picture represents only a small portion of the building. The photos were taken before some of the stands were filled. It was through the courtesy of Mr. Asbee, the superintendent, that I was able to get them. I am also indebted to Mr. Fox, the assistant superintendent, and others of the staff.

We are now just in the busiest season, and it is surprising the quantities of stock that are dealt with. Many of the growers find it impossible to get all they want in the market, and have extra van loads outside. Much of this is transferred to the buyers without going on the stands, and some is taken as room is made.

In my previous notes I gave some idea of the working of the market, and I cannot add much more. The best proof that the market is much appreciated is the fact that it has been found necessary to make considerable additions to the accommodation from time to time. It is not long since the large hall built for the imported flowers was completed; now they are further extending the ordinary market hall. Already seven large buildings have been demolished to provide the space, and when the new addition is completed it will provide a large number of extra stands.

The great advantage of bringing all produce to one center is that buyers, who frequently have to procure a variety of things at short notice, could not, with all the telephone and other means of communication that we have, get them together so easily as is now done by going to market. It also affords all growers the very best means of bringing their produce under the eyes of the actual buyers. And where growers at a distance do not find it to pay to travel up themselves, there are the commission men to whom they can send. Also buyers at a distance can rely on getting anything they want at the shortest possible notice. Much produce is now delivered direct to the buyers from the growers, yet all find it necessary and an advantage to attend the market regularly.

In the pictorial supplement accompanying this issue, we reproduce six views of Covent Garden Market, and three views of our own city's miserable apology for a similar mart. We also give in another column a very complete history of New York's various plant market places, and of the effort made, so far, unfortunately, futile, to secure from the municipal authorities a structure adequate for the needs of the plant and flower industry in the metropolis of the United States.

In a previous issue, we spoke of the apparent hopelessness of any attempt to obtain such a building from the city. We have urged, and still urge, that the erection of a plant and flower market in New York be undertaken by private enterprise. That such an investment, with the market conducted on proper lines, would prove profitable there is not the shadow of a doubt. Plant and cut flower growers owe it to themselves to do all in their power to enlist private capital in the scheme. Without it, the present unfortunate conditions will persist—a deterrent to the full development of the business itself, a barrier to many ameliorating influences the city could otherwise enjoy.

When we contrast the provisions made in Covent Garden with those available in New York in this particular respect—a contrast that our illustrations make clearer than any word-painting possibly can—we are staggered by New York's antiquatedness; its lack of the progressive spirit and want of desire to keep abreast of the times. The flower markets of the capitals of the old world are the pride of their denizens, the joy and admiration of the stranger within their gates. There is no country where better flowers and plants are grown than those produced by the American florists. There is no people possessing a greater love of these products, or who spend more money in the enjoyment of them, than the citizens of New York, yet, as regards market accommodations for the disposal of flowers and plants, we must take a back seat to even the smallest cities in the Mexican republic.

That such a deplorable state of affairs exists, is, we believe, due to the fact that those who are in a position to provide a remedy therefor, are ignorant of the magnitude which the commercial florist industry in our locality has assumed. The total yearly wholesale value of cut flowers disposed of in the now segregated marts of New York approximates \$3,000,000, while the sales of plants, through various sources, at wholesale, will average, in a year, \$1,500,000 more.

We are convinced that, the matter properly presented, it would be possible to interest private capital and enterprise in a flower and plant market building scheme. Those most vitally concerned should have no hesitancy in making the endeavor along this line. It is a business proposition, pure and simple, and—there's money in it.

The American Peony Society.

On June 16 and 17, 1905, will occur the second annual exhibition of The American Peony Society, in the Banquet Hall, Auditorium Hotel, Chicago, Ill., and the indications are for a magnificent and comprehensive display of this now popular flower. The first show of the Society was held in the Museum Building of the New York Botanical Garden, Bronx Park, last year, but owing to untoward conditions it was hardly representative of the peony industry in the East. It is expected that the Western exhibition will thoroughly demonstrate the well-known enterprise of the growers in that locality, and, as well, the extent to which the cultivation of peonies has reached there, where the growers of this plant are, perhaps, more numerous than in the Eastern States.

The Peony Society does well, we think, to alternate the localities in which its exhibitions are held. This indicates a desire on its part to spread enthusiasm, to distribute whatever benefits may accrue from such shows, and the men in charge of its affairs are to be complimented on the broad view they take in thus conducting the Society's business.

In a recent issue of a Boston contemporary it is observed that the secretary of the so-called S. A. F. "Peony Association" inclines to give, as we see it, undue praise to that peculiar body for the increase in peony business that, it is alleged, has resulted from its work. "The other organization has helped, of course," says the sanguine secretary. By this characteristic statement we are again forcibly reminded of the Aesopian fable of the fly on the chariot wheel, and its exclamation, "What a dust I do raise." If we turn to the printed report of the S. A. F. peony committee, we find that its work has been all but abortive; it is not in favor with the peony growers who are members of the S. A. F. even. This from the report of the secretary: "How are we to get such a collection? It was thought two years ago that growers would gladly contribute samples free of charge for testing purposes. A year ago this idea was still strong amongst us, and additional appeals were sent out, but up to date the response has been so meagre that we now feel convinced that we will have to buy them." Unfortunately for the S. A. F. and for its intentions toward the peony, we believe the carrying out of the work sought to be accomplished has been placed in wrong hands. And we say this in all kindness, and with due respect to the men composing the committee appointed by ex-President Burton with so much difficulty.

On the other hand, the American Peony Society has the good will and support of the most prominent peony growers of the country. It has gotten together a fairly comprehensive and representative collection of varieties. It has established a testing ground for these varieties, under the supervision of an unbiased and competent practitioner. The Peony Society has held meetings, given exhibitions, and offered a list of premiums sufficient to beget and encourage competition at its shows. It will do more as the years pass, for it believes in work and has but little faith in talk. The men in charge of the Society's affairs are all practical peony growers, actively engaged in the cultivation of the plant, with a thorough knowledge of the subject they have in hand, and of the extent and importance of the work that must be done to put the peony on a satisfactory footing as regards nomenclature and otherwise. They have not sought to foist new names on the growers for acceptance and adoption in an arbitrary manner, but, like sensible men, have decided to await the results of proper tests and sufficient determination of identity before heralding any name as the designation they desire to be generally recognized. This accounts for the interest manifested in the work of the latter organization. To the lack of these mentioned qualities in the former body is no doubt due the reported apathy and indifference both to it and its operations.

In the same issue our contemporary makes a strong plea for the specialist, and, probably, rightly so. What holds good for the individual in specialization is equally applicable to society specialization. The present status of the American Peony Society and of the S. A. F. peony committee would tend to endorse the greater desirability of the former as against the latter method. But with all that, the S. A. F. itself will lose nothing by the thorough work of the American Peony Society. Rather will it gain; for, as stated by President Ward, when the organization of which he is the present head has completed its investigations, all the documents will be turned over to the S. A. F. for its purposes. Further effort on the part of the latter body, therefore, would seem superfluous; and, certainly, anything but a spirit of antagonism or the traits of an empty boaster should characterize any one of its officials.

To return to the Chicago show. The premium list is ready, and copies of it can be obtained on application to Secretary A. H. Fewkes, Newton Highlands, Mass.

Name Wanted.

LANCASTER, PA.—We are in receipt of one of our return envelopes enclosing one dollar bill and a blank sheet of paper. The envelope was mailed on June 5 at 3 p. m. Will our correspondent please forward his name, so that proper credit can be given him?

Mark Reeves.

Mark Reeves, for a long time past in the retail florist business on North Broad street, Philadelphia, Pa., died very suddenly on Wednesday morning last.

D. R.

Michael A. Lynch.

On Saturday night, May 27, Michael Lynch, of Menlo Park, one of California's foremost growers, died suddenly, from a paralytic stroke while cutting asparagus in one of his greenhouses. Mr. Lynch was born in Ireland 58 years ago, and in the suburbs of San Francisco during the last thirty years he had been a successful floriculturist—"the most skilled in the trade," said a local seedsman of prominence. The Memorial Day funeral of this beloved man was very largely attended by florists and growers, whose contributions of beautiful floral pieces were very numerous, especially noteworthy emblems being those from the Cox Seed Company, John H. Sievers Company and Frank Pelicano Company and other San Franciscans; also from J. C. Vaughan, president S. A. P. O. H., who is here visiting, and from Florist Evans, of Salt Lake; Martin & Forbes, Portland, and two Seattle florists, whose names could not be ascertained. The floral pieces credited to the three cities named were wired orders to the Frank Pelicano Company.

A.

William Joyce.

William Joyce was knocked down and killed by an automobile at Broad and South streets, Philadelphia, on Saturday evening, June 3. He was one of the few left of the old-time gardeners, and was 72 years of age. Mr. Joyce was famous even back in the early sixties as an expert grower of ornamental foliage plants, and was a most successful cultivator of fruit under glass in those days, being even in 1863 an exhibitor and prize-taker at the exhibitions of the Pennsylvania Horticultural Society. At that time he had charge of the famous establishment of Mr. Mathias Baldwin at Wissinoming. This place being eventually closed up, at Mr. Baldwin's death, Mr. Joyce came into Philadelphia, and up to about 1897 had charge of the famous Baldwin conservatories on Chestnut street, above Eleventh. One of the houses fronted on Chestnut street, and was kept filled at all seasons of the year with choice flowering plants, it being Miss Baldwin's wish that the public, who could not afford such a luxury, should have the pleasure of looking at these things. Miss Baldwin died about 1897; then Mr. Joyce went to take charge of the city conservatories of Colonel Brock, at 1612 Walnut street. John Joyce, a son, is in charge of the well-known establishment of Miss Gibson, at Wynnewood, Pa., a sister of Mrs. Brock. The deceased had not taken any active interest in horticultural affairs in recent years, having lived a quiet and rather retired life.

DAVID RUST.

Society of American Florists and Ornamental Horticulturists.

Preparations for the convention at Washington are being rapidly completed, and progressive reports received from all departments indicate a widespread interest and the probability of a very large attendance on this occasion.

The opening session will be held at 2 p. m. on Tuesday, August 15, when the usual opening addresses and reports will be presented. The evening of that day will be devoted to the president's reception, which will be a very enjoyable social affair. On the two following days the sessions will be in the forenoon and evening, the forenoon meetings being devoted to nominations, elections, discussions upon practical topics, etc., and the evening sessions to two lectures, one on "Work of the Bureau of Plant Industry, U. S. Department of Agriculture, in Its Relation to Floriculture and Horticulture," by B. T. Galloway, Chief of Bureau, illustrated by stereopticon slides; the other on "Work of the Bureau of Plant Industry in Encouraging Civic Improvement and the Teaching of Horticulture in the Public Schools," by Miss Susan B. Sipe, also illustrated by stereopticon slides.

Attention is called to the prizes offered by Treasurer Beatty—\$25, \$15, and \$10, for the first, second, and third best essay on "The Ideal Employer." These papers must be sent to the office of the secretary not later than July 15 without signature, but with the name of the writer accompanying same for the purpose of record, and should not exceed fifteen hundred words each.

Attention is also called to the offer of a silver medal for the best display of cut flowers to be shown in vases.

There will be a very comprehensive special exhibit by the U. S. Department of Agriculture.

The trade exhibit will be held in the National Rifles Army, and the sessions of the Society in Carrol Hall, which adjoins that building. The exhibition will be under the management of George H. Cooke, Connecticut avenue and L street, Washington, D. C., and these wishing to secure space should make prompt application to that gentleman. Contrary to the custom heretofore, the exhibition hall will remain open throughout the day without interruption.

The bowling fraternity are actively preparing for an interesting tournament between the representatives of the various cities. Information regarding this feature can be had from Phil. Hauswirth, Chicago, or John Westcott, Philadelphia.

Up to the present time reduced railroad rates on the certificate plan have been granted by the Trunk Line, New England and Southeastern Passenger Associations, covering all the territory east of Buffalo and Pittsburg, and south and east of the Ohio and Mississippi rivers, also all points in Canada east of and including Toronto. The Central and Western Passenger Associations, which control transportation west of the above-mentioned territory, have not yet been heard from, but will undoubtedly grant a similar reduction—that is, one and one-third fare for the round trip, certificate plan.

Ask your State vice-president, or the secretary of the nearest florists' club, for railroad rates and for information regarding excursions which are being arranged that will pass nearest to your home city.

Full details will appear in the preliminary program which will be sent out as usual early in July. The secretary will be glad to answer any inquiries regarding further particulars.

WM. J. STEWART, Secretary.

11 Hamilton Place, Boston.

American Carnation Society.

The next annual meeting of this society will be held at Horticultural Hall, Boston, Mass., January 24 and 25, 1906. These dates have been reserved for us; and thus early there are indications of an unusual interest being taken in the meeting and exhibition. The preliminary premium list will be issued early in July, and will be mailed to all members and any others who may apply for same. Some special features in the program will be of interest to all carnation growers. Offers of special premiums, and inquiries, should be addressed to the secretary.

ALBERT M. HERR.

Lancaster, Pa.

BOOKS RECEIVED.

MISSOURI BOTANICAL GARDEN, SIXTEENTH REPORT, 1905.—The director of the garden, Dr. Wm. Trelease, in his report, states: "No marked changes have been made in either the quantity or variety of the plants used for general decorative effects, but increased care in the selection of plants for this purpose has resulted in a notable improvement in the quality of the bedding. For the first time in the history of the Garden the entire parterre was this year used for bulbs before being planted with the customary Summer foliage plants, and those who saw it during the flowering period of the tulips witnessed an unusually beautiful display of these showy flowers, harmoniously and instructively arranged. The number and variety of dahlia, gladiolus and chrysanthemum plants grown has also been greater than ever before, and the dahlia and chrysanthemum collections in particular attracted much favorable attention." The Garden received many valuable accessions from various sources represented at the St. Louis World's Fair Exposition. The records show that 3,050 species and varieties, not represented at its beginning, were added to the Garden collections during the year. The total is now 14,207. The visitors to the Garden in 1904 numbered 316,747; and it is estimated that about one in ten of the persons who went to the Exposition also visited the Botanical Garden. It is stated that, by authority of the board, the fifteenth banquet to the gardeners of the institution and invited florists, etc., was given as a collation served in the Linnean House on the afternoon of August 19, when 465 members of the Society of American Florists were received as the guests of the Garden.

In connection with the exhibition of the World's Fair Flower Show Association twelve "Shaw medals" were offered and cash prizes to the amount of \$160. The latter were awarded by the judges and paid for worthy exhibits of flowering orchids, and three of the offered medals were awarded by the judges and issued as follows: To Vaughan's Seed Store for the Baby Rambler rose; to John Scott for Nephrolepis Scottii, and to F. R. Pierson for Nephrolepis Piersoni elegantissima. At this flower show, the Garden for the first time in its history made competitive entry, exhibiting a mass of some fifty varieties of chrysanthemums, and two large specimen plants of Rhapsis flabelliformis—for the former of which first prize was awarded. It is gratifying to note the desire of this scientific institution to help along, in a practical way, the cause of general horticulture, something, we feel sure, is greatly appreciated by the craft.

The scientific papers included in the Report embrace among others: Two new Texas Tradescantias, a Disease of Black Oaks caused by Polyporus obtusus Berk.; Disease of Cauliflower and Cabbage, caused by Sclerotinia, a Disease of Cultivated Agaves due to Colletotrichum. Illustrations of a "Strangling Fig Tree," etc. Numerous plates and other illustrations accompany the text.

The Eckford Testimonial Fund.

Editor Florists' Exchange:

We enclose a small contribution toward the Eckford Testimonial Fund. We trust there are many other lovers of this most popular and useful of flowering annuals who can add a little to the amount already collected.

If you take away the Eckford varieties of sweet peas, how poor a list we have left! Even in the Spring months they are now the most salable flowers in our markets, while in Summer none can compare with them in popularity, except it be hardy roses for a brief period. They are of such easy culture that the humblest cottager can grow them. They succeed well in practically every State in the Union. Even at Dawson City splendid ones are grown. But for the life work of this most painstaking of all sweet pea hybridists our gardens would be very much poorer to-day. Honor to whom honor is due, no matter whether he has American blood in his veins or not.

Training Peaches and Nectarines.

Editor Florists' Exchange:

We read with much interest H. J. Corfield's letter on this subject, and quite agree with Mr. Turner's reply to the same. Our fruit houses here are of the lean-to type, and therefore not adapted to the crosswise system of planting. But if we were planting a span-roofed house to-morrow it would be on the crosswise plan. We have noticed in several establishments where Mr. Turner's system has been adopted that the results are in every way satisfactory. There are more square feet for the trees; they are more easily cared for, and when it comes to keeping red spider in check, the older system is far the worst. Fruit grown under the crosswise plan is just as large and luscious as when trained up to the roof.

Fruit culture in England and America are two very different propositions, owing to our stronger sun heat; but even in the south of England the crosswise plan is found very satisfactory on some estates.

In regard to replacing bloom on berries, we have seen "artificial bloom" which came very near the real article; in fact, it would deceive any one but an expert. We understand this "doctoring" process is occasionally tried still by some of the big grape growers in England and Scotland, but we are unable to give a recipe for it.

W. N. CRAIG.

J. W. Duncan Should Get a Whole Medal.

Editor Florists' Exchange:

We would like Job to give our half of that leather medal to J. W. Duncan. He proved, on June 3, that he deserved it. He recently waxed eloquent over the delinquencies of the plant committee of the Massachusetts Horticultural Society for not judging more speedily, etc. Exhibits at our smaller shows must be in position by 11 a. m. Mr. Duncan, on June 3, decided to show the committee how he could do things, so arrived at 10.45 a. m., with a very nice collection of branches of flowering shrubs from the Boston Park department. At 12.30, half an hour after the plant committee had completed its awards, the exhibit was staged and labeled.

The committee were glad to have Mr. Duncan's exhibit, and hope to see him on many future occasions. If, however, he can get round about two hours earlier, we would appreciate it. Meantime, to show him a little needed encouragement, we want him to have the whole of that leather medal, and, if possible, give it some brass trimmings.

North Easton, Mass.

W. N. CRAIG.

They Object to His Letter.

Editor Florists' Exchange:

I am instructed to forward you a copy of the following resolution passed at the meeting of the Montreal Gardeners and Florists' Club on June 5:

Whereas, Since our last meeting, there appeared in The Florists' Exchange a letter from a florist in this city commenting on the paper, "Impressions of Canadian Horticulture," read before this club; and

Whereas, Said comments cast serious reflections on the intelligence of the members of this club; therefore, Be It Resolved, That this club is of the unanimous opinion that the comments from said florist were most emphatically uncalled-for and unjust, and that a copy of this resolution be sent to The Florists' Exchange, asking that same be published.

W. H. HOROBIN,
Secretary-Treasurer.

New York's Plant Market.

New York City, officially (or municipally) has never taken much interest in a plant and flower market, and, judging from the scant success that plant growers have met with during the last few years in their efforts to secure some recognition from the municipal authorities, it is not likely that the city will ever construct and provide a building that shall be devoted to that purpose. In spite of all the disadvantages which the market growers have had to contend against, they have kept united as a body, and but recently became incorporated, under the title of the New York Market Florists' Association, the present officers being: President, George Darsley; secretary, P. Daly; and treasurer, H. C. Steinhoff.

To give a brief history of the market we cannot do better than quote from the New York Florists' Club's Souvenir of the visit of the S. A. F. O. H. to this city in 1900, the most complete souvenir that society has ever had, which was the work of Alex. Wallace, Editor of The Florists' Exchange. Mr. Wallace says:

"The exact date when plants first began to be sold in the market places of the city is somewhat obscure. Grant Thorburn, about the beginning of the present (nineteenth) century, mentions having seen, for the first time, a man, George Inglis, selling plants in the Fly-Market. Louis Menand, in his Autobiography, tells of George Thorburn finding a then scarce plant, *Pimelea decussata*, among the stock of a woman vendor of plants in Fulton Market in the year 1840.

"One of the earliest market stands for the sale of plants was in Vesey street. An old-time florist mentions that he attended that point as far back as 1825.

erto the buyers mostly occupied stands on available street corners and around the markets, especially Center Market. The East Side seemed to be a favorable place to dispose of plants, but after the location of the market was changed, Eighth avenue and the West Side took the lead. At the present time, since the peddler appears to have monopolized the business, it is hard to say where the best plant-buying district lies. Since the advent of the peddler, too, the cultivation of plants for the New York market has narrowed down to geraniums, roses, verbenas, heliotropes, and other stock in common demand for city and suburban trade.

"In the Spring of 1891, chiefly through the efforts of Mr. John Morris, a florist of Jefferson Market, who before and after his election to the office of Alderman of the city, did everything in his power to promote the undertaking, a plant market was opened in Union Square, and was in operation there for six seasons. For one reason or other, chiefly the importunings of customers by peddlers, the market men attending this point gradually returned to Canal street, and in December, 1897, a Market Florists' Association was established for the purpose of securing the old Clinton Market Building, Canal and Washington streets, for market purposes. While not all of the market florists have yet been weaned from the open-air stand, the principal men, numbering forty, hold stall space in the Clinton Market Building—a structure, however, that is hardly in consonance with the aesthetic nature of the business; certainly one that is no credit to an opulent and prosperous city like the great American metropolis for the sale of florists' stock.

"The approximate value of the plants sold here during the season, lasting from the second week in April till the second week in June, is \$160,000. There are about 110 market florists who sell at this point, with a daily average attendance of 75 wagons. Stalls inside the Clinton Market rent at from \$1 to \$1.25 each. The market is practically 'always open' during the season.

and each year since the same provision for a market has had to be made.

This year two tents are being used, one 60 x 110 feet, the other 46 x 80 feet, in dimensions, and we illustrate the interior of each of them, and in addition give a view of the walk outside, showing some of the wagons of the growers and peddlers, and a part of the fence which encloses the grounds on which the tents stand.

But looking at the picture which contains the larger number of both plants and people, those familiar with the trade will easily recognize some of the well-known characters of the flower business in this city.

We may mention that the photographs were taken at three o'clock on the morning of Saturday, June 3.

By those who know him—and who in town does not?—the classic features of John Weir, of Brooklyn—Boss Weir, as he is more often called—will be instantly recognized. Mr. Weir is the typical early bird, and is always on the spot. Time was when an alarm clock had to be used to break his slumbers at one o'clock in the morning, but the discordant notes of that modern invention are no longer required. Whatever the season of the year, or the hour of night or day, wherever there are plants or flowers for sale in public, there we always find the genial, ever-smiling countenance of Boss Weir.

Standing next but one to Mr. Weir, on the right, is the largest Hebrew plant grower in the United States—Israel Eisenberg, with greenhouses located at Astoria, L. I. Mr. Eisenberg is just about as shrewd in driving a bargain as it is possible for a man to be, and he is always busy. Yet he will always take time to stop and tell a funny story. To the right of Mr.

Rhododendron Lucidum, Awarded a Silver Medal

Grower, Emil Johannsen

SOME OF THE EXHIBITS AT THE RECENT BOSTON FLOWER SHOW

About the time of the outbreak of the War of the Rebellion, the plant market in Vesey street was still in full swing, and some thirty or forty wagons could be seen there in the early morning during the season. The principal stocks grown by the market men in those days were roses, chiefly Louis Philippe, La Reine and Madame Plantier; a light colored fuchsia named speciosa, and the variety Rose of Castle that had just made its appearance here, although known in the old country long before. An old market florist, a Frenchman, named Louis Surgeon, who made a specialty of roses, had just commenced bringing in the now popular General Jacqueminot, a rose which took the market by storm. Louis' prices were 50 cents for a plant with one bud; 75 cents for a plant with two; and one dollar or more for a plant with three buds.

"About 1857 or 1858, the late Mr. John Henderson, of Jersey City, commenced to grow plants for market, and through his London connection was the means of introducing many new varieties, notably the dark fuchsias, one of which in particular (Prince Imperial) had a great run for a number of years—well-grown specimens selling for 50 cents and sometimes more. After roses and fuchsias came verbenas. The late Mr. Peter Henderson inaugurated the method of putting them up in baskets; one dozen varieties in each basket. This soon became the general way of marketing these plants, and they proved a profitable crop until the verberna disease struck them. Lady Washington pelargoniums, pinks and lantans were also more extensively grown than they are today.

"The market was moved about 1869 or 1870 to the small triangular space, foot of Canal street and North River; and although part of the space was occupied by cobblestones, heaps of boulders, and other rubbish, the florists felt great relief from the cramped quarters they had been used to.

"The class of customers now began to change. Hith-

"The palm, foliage, and flowering plant trade in New York City may be said to have been inaugurated by the late Mr. Wm. C. Wilson, of Astoria. Begun on a small scale, it has, in common with other branches of the industry, grown to immense proportions. The annual retail value of the stock from local growers will approximate upward of two million dollars. Easter is now the festival mostly catered to by growers, many confining themselves to specialties for that day alone. The trade in plants for this occasion has supplanted that of cut flowers, far exceeding also the volume of trade at Christmas; in fact, the Easter business in plants represents almost half the total annual value of the whole output of the plant growers."

Our illustrations show the market as it is at the present time. Several years ago the old Clinton market became so dilapidated that for the public safety it was absolutely imperative that the structure be torn down and the debris removed; it had become exceedingly dangerous to those who were doing business therein, and the city removed it.

After the building had been cleared away, in 1902, it was for some time thought that the city would erect a suitable market building on the old site, but the opposition of Commissioner Woodbury, of the Street Cleaning Department, evidently was too strong. He wanted the property as a storage place for his street cleaning vehicles, and, to a certain extent, he got it.

The Market Florists' Association has, since that year, every Spring, leased a certain portion of the ground space, paying a good rental for the same, and has erected tents, under which they hold their market. The first tent was constructed in the Spring of 1903,

Eisenberg stands Ex-Mayor of Hoboken Chas. Dietz, a much-respected citizen, and an honor to the profession. Unfortunately, his features did not come out quite clear, from no fault of his, however.

To the left of Mr. Weir, and but a few feet away, is seen that venerable lady florist, Mrs. J. Friedlander, a retailer from upper Broadway. Although nearing the four-score mark, she attends to business every day, and is a regular habitue of plant auction marts, as well as a regular attendant at this early morning market.

Further along the line, to her left, is seen the features of that calm, implacable Scot, John Birnie, the head and front of the Market Florists' Association. Always ready for an argument, a hater of anonymous scribbles, a free dispenser of Scotch whiskey (though using very little himself), a very able writer, a hard worker, a great lover of the bagpipes, a first-rate amateur violinist (note, he don't play the pipes), possessed of determination and perseverance to a remarkable degree, he is ever able to get the ward politicians interested in the scheme for a new market. And although, so far, all endeavor in that direction has hitherto been futile, when the matter has been brought before the city authorities, that fact does not in any way detract from Mr. Birnie's efforts. Further along the line we see the ever-smiling face of Bob Leach, one time secretary of the association, and a tireless worker for the cause. The priestly figure near the right of the picture, is that of the general manager, Mike Smith, the watchman of the market, and a faithful servant.

Rhododendron Show at Boston.

The rhododendron show of the Massachusetts Horticultural Society, which was held on Saturday and Sunday last, while not so extensive as those of like kind held in former years, yet was more largely attended and was more interesting than any show recently given.

Rhododendrons this year are poor in this locality, not only on account of the severity of last Winter, but also owing to an exceptionally dry Spring. For cut blooms in twelve distinct varieties, Wm. Riggs, gardener to Mr. E. A. Clark, was first, with a collection including *Album elegans*, *Guido*, *Everestianum*, *A. Damer*, *Jas. Marshall Brooks*, *Baroness Bousoler*, *Miss Milner* and *Damicum atrovirens*. For six distinct varieties, Wm. Thatcher, gardener to Mrs. J. L. Gardener, was first with *Kettledrum*, *Everestianum*, *delicatum*, *Sherwoodianum*, *Hannibal* and *Charles Dickens*. The *Blue Hills Nurseries* was second in this class and *W. J. Clemson* third. *Wm. Whitman* and *T. C. Thurlow* were the exhibitors of hardy azaleas. *Wm. Whitman* was the only exhibitor in the class for German irises, and *Wm. Thatcher* and *W. J. Clemson* exhibited pyrethrums. The *Blue Hills Nurseries* was first for the collection of herbaceous perennials and *Warren Heustis*, *E. A. Clark* and *Mrs. J. L. Gardener* exhibited flowering shrubs.

An interesting exhibit was a collection of hardy shrubs from the Boston Park Department. These were shown in large vases and were a feature of the exhibition, especially when such rare plants as *Betchel's crab*, *Symplocos cratagoides*, *Photinia villosa*, *cratægus* in many fine varieties, *loniceræ* in many forms, including the rare *Alberti* and *syringantha*, *viburnums* in many varieties, including the rare *Sargentii*.

T. D. Hatfield exhibited a fine plant of *Rhododendrum lucidum*, for which a silver medal was awarded. Two striking plants of the fine old-fashioned *Calceolaria rugosa* were exhibited by *C. Rust*, gardener to *Dr. G. C. Weld*. These received a first class and also a cultural certificate. A fine display of orchids was made by *Emil Johanssen*, gardener to *Mr. J. E. Rothwell*, who captured the *Appleton silver gilt* medal for the same. Among the varieties noticed were *Cypripedium niveum* and *Curtisii viridis*, *Odonoglossum pescatorei*, *crispum*, *hebraicum*, *Haryana*, *citrosimum*, *Miltonia vexillaria*, *lælias* in hybrid varieties, and *Masdevallia Haryana*. *E. O. Orpet* exhibited seedling orchid *Pacavia* (*L. tenebrosa* X *L. purpurata*), for which he was awarded a first-class certificate. Other exhibits included a collection of herbaceous plants from *R. & J. Farquhar & Co.*, and a collection of palms and ornamental foliage plants from *Edward Macmulkin*.

J. W. DUNCAN.

Tuberous begonias were splendidly shown by Messrs. J. Laing & Sons, the oldest firm that has done these plants well; also by Messrs. T. S. Ware, Blackmore & Langdon, L. Gwillim, and H. J. Jones, who also put up a fine lot of pelargoniums and sweet peas. Messrs. Jones & Sons, Shrewsbury, staged sweet peas in fine condition, and several others came out strong with these popular flowers.

Caladiums were a great feature; those in Messrs. Veitch & Sons' mixed group were remarkably fine. Messrs. Peed & Son, Norwood, put up a large group which included some fine new sorts. Those from Messrs. J. Laing & Sons were also very good and included all the finest varieties.

Orchids were well shown by all the leading growers, some remarkably fine varieties, which I hope to refer to later.

Sandera was grandly shown; several other exhibitors also had this in fine condition. Ferns were exhibited by Messrs. J. Hill & Son, Edmonton, and by H. B. May, who also had some good zonal pelargoniums. Messrs. Carter & Co., Holborn, made a large exhibit of calceolarias, gloxinias, begonias, verbenas, rock plants, cut carnations, etc.

Rock gardens were well arranged by several exhibitors. Tulips were not quite so numerous this year, but some fine exhibits were made, those from A. Dickson & Sons, Belfast, being very good. R. H. Bath, Wisbech, also showed.

In hardy flowers the groups from Messrs. Wallace, Colchester; Amos Perry, Winchmore Hill; Barr & Sons, M. Pritchard, Christchurch, and others, were all worthy of note. A. F. Dutton showed carnations, American varieties in fine form. Messrs. H. Gow &

Chicago's Decoration Day Cut Flower Business.

The two illustrations herewith presented serve to tell far better than any mere word description the great extent of the cut flower shipping business in Chicago for the past Memorial Day. The pictures show the consignments ready for despatch on the Sunday previous; also a number of the wholesale dealers and their workers.

The time was when New York could boast of a big out-of-town trade. This has been now largely curtailed through various causes. The points to which flowers were formerly forwarded by our dealers here have, as a general thing, their own local supply nowadays. Wholesale houses have also sprung up in cities which, a few years ago, had none. The conditions under which the Chicago wholesaler labors are yet quite different from those of his Eastern confrère, but we cannot but think that the enterprising manner in which the Western men advertise their business on all opportune occasions has a great deal to do with its development to its present extensive magnitude.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY'S GREAT SPRING SHOW at the Temple Gardens, May 30 to June 1, was the eighteenth show held in these gardens, and from its inception has been one of the most important horticultural events of the year. And this year eclipses all previous records. From early notes taken the actual results cannot be given. The first thing that impresses one is the pity that space is so limited. Yet there is a marvelous lot of grand stock. Roses are, of course, one great feature. The tall plants of the Rambler type shown by Messrs. J. Paul & Son, Cheshunt, are pictures of culture, being loaded with long drooping clusters of bloom. This is the very best way of seeing their natural beauty. Those from W. Paul & Son, Waltham Cross, were also fine examples of cultural skill. C. Turner, Slough, put up a magnificent group, Ramblers again being the feature. Messrs. R. Smith & Co., Worcester, also had some good Ramblers, among a fine group of clematis, the latter being trained in various forms, those trained up on tall sticks showing up well among perfect specimens on the ordinary globular trellises. Messrs. Cutbush & Sons had a splendid lot of tall Ramblers among a large group of carnations in pots. The latter represented *Malmaison*, *American*, and many of our best English border varieties. This firm also showed an immense rock garden in the open ground. Messrs. Ben. Cant & Sons, and Messrs. F. Cant & Co., both of Colchester, came out well with roses.

MEMORIAL DAY OUT OF TOWN SHIPMENTS FROM CHICAGO'S WHOLESALE CUT FLOWER DEALERS

Photos by Gibson Art Galleries, Chicago

Azaleas of the mollis and Ghent varieties were grandly shown by Messrs. Cuthbert, Southgate. Messrs. Sander had a splendid group of *Azalea indica* in best varieties. Rhododendrons from Messrs. J. Waterer & Sons, Bagshot, were very fine, especially *Pink Pearl*, and quite a number named after the Waterer family were worthy of note. Messrs. Sutton & Sons, of Reading, filled one end of the large tent with gloxinias, calceolarias, cinerarias, schizanthus, and other flowering plants. In Messrs. Veitch & Sons' miscellaneous group the nepenthes were specially worthy of note, also crotons and dracaenas; and in the open ground they had a grand lot of tree peonies in pots, *eremurus*, their new *Meconopsis integrifolia* and *M. punicea*, with other good things. Messrs. Bull & Sons, Chelsea, put up a good group of foliage plants in which were some good new things.

In Messrs. Sanders' miscellaneous group *Nicotiana*

Co. also had a fine lot of carnations, *Malmaisons*, and other sorts.

Hardy foliage and flowering plants in large groups on the lawn were more numerous than usual. Messrs. Fisher Son & Sibray made a fine display, variegated plants being a great feature. Messrs. Thos. Cripps & Sons' group consisted chiefly of Japanese acers, which were in fine condition and represented in large specimens. Messrs. Cheal & Sons, Crawley, had a fine group which included a good many flowering shrubs and hardy variegated trees. L. R. Russell, Richmond, made a beautiful display, clematis, *ceanothus*, and other hardy flowering plants being well shown. David Russell, Brentwood, made a similar display. Messrs. Cutbush & Sons' large display of shrubs, cut and trained in various fantastic shapes, filled a large space. Messrs. Barr & Sons, and Messrs. Carter & Co. had a large display of dwarfed Japanese trees.

Review of the Market

NEW YORK.—Far too many flowers are being received every day for the volume of business that is being done, and prices, necessarily, do not improve.

The supply of carnations, strange to say, is keeping right up, if not increasing, and the quality is fine.

Peonies are in the height of their season and are bringing from \$1 to \$4 per 100, exceptionally fetching 75c. per dozen.

CINCINNATI, O.—Prices will drop a little this week, and the quantity of stock, I am afraid, will also, as to-day (June 5) at this writing—3 p.m.—the thermometer is standing at 90 degrees in the shade.

CHICAGO.—Trads the past week has not been as good as heretofore; a season of Summer dullness prevails in all lines, and prices have at last reached the usual seasonable basis.

flowering bedding plants suitable for cemetery work and cut flowers disposed of was above the average.

Considerable quantities of outdoor garden flowers are coming in, and, in some cases, these are found to sell better than the old standbys.

INDIANAPOLIS.—The month of weddings is deserving of its name this year, the several retailers having a number

In view. Funeral work is up to the standard and stock is plentiful, so that altogether a prosperous month is anticipated.

WASHINGTON, D. C. — Decoration Day was quite a success from the florist's point of view, and the quantity of

TELEPHONE CALL, 1207 W. MURCH.

Borough of Brooklyn, N. Y., May 31, 1905

Publishers, The Florists' Exchange

Dear Sirs:—

Answering your inquiry of recent date, the large amount of advertising placed by me with The Florists' Exchange the past year--which was much in excess of that given to other trade-papers--demonstrates, I think, my faith in your paper as a profitable advertising medium.

Yours very truly,

John Scott

J. L. Loose has incorporated his firm, with Otto Bauer as manager.

PITTSBURG, PA.—Business the past week was fair, with an abundance of stock, particularly peonies, which are difficult to dispose of.

BOSTON.—All kinds of flowers are now plentiful; in fact, so much so that

there has been a decided drop in prices. Of many things there is an oversupply.

ST. LOUIS.—Decoration Day business proved a big surprise, and nearly all the trade report that the usual business on that holiday was doubled this year.

This week the market opened up rather slowly, with stock none too plentiful and prices as follows: American Beauty, fancy, \$2.50 to \$3 per dozen; \$1.50 to \$2 for medium, and 50c. for shorts.

NEW BEDFORD, MASS.—Everyone is satisfied with the business done on Decoration Day. Roses and carnations were none too plentiful; 75c. to \$1 was asked for the latter, while roses brought \$1.50 per dozen.

The city is becoming more and more involved in debt, and, as a last resort, the City Fathers have laid off most of its employees, the parks and common having shut down completely, while half the force in the cemeteries and the street department is laid off.

CHANGES IN BUSINESS.

DEADWOOD, S. D.—Andrew Danlele has started in the florist business here.

PORT HURON, MICH.—W. B. Peiksy will sell flowers here at his store on Gratzot avenue.

DU BOIS, PA.—G. L. Tyler has entered into partnership with W. C. Smith, of San Juan, Porto Rico, and will leave for that point shortly.

MARYSVILLE, KAN.—Fred Frye has purchased the Koester greenhouses, and will embark in the florist business.

FIRMS WHO ARE BUILDING

BROCKVILLE, ONT.—R. B. Heather has added a greenhouse 45x90 feet.

ROCKFORD, ILL.—H. W. Buckbee will soon begin the erection of a greenhouse 195x290 feet.

WATERLOO, IA.—Charles Sherwood intends adding to his plant one house, 20x125 feet, and one 50x21 feet.

GREENSBORO, N. C.—J. Van Lindley is enlarging the capacity of his greenhouses at Pomona to give one-third additional capacity.

BOWLING.

FLORISTS' CLUB OF PHILADELPHIA BOWLING TOURNAMENT.—The following are the averages made in 15 games in the tournament just finished.

Table with 2 columns: Name and Average. Includes Elmerman (172), Hanna (164), Kift (158), Craig (162), Baker (149), Team average (159), Robertson (165), Gibson (168), Adelberger (161), Mehorter (156), Donoghue (150).

Table with 2 columns: Name and Average. Includes Team average (150), Yates (151), McCauley (165), Holmes (155), Huttenlock (144), Merblitz (153), Team average (155).

Table with 2 columns: Name and Average. Includes Dunham (165), Westcott (161), Harris (161), Hoffman (143), Gardner (155), Team average (159).

Table with 2 columns: Name and Average. Includes Moore (169), Bonsall (155), Falck (162), Habermehl (150), Gray (144), Team average (158).

Table with 2 columns: Name and Average. Includes Connor (173), Polites (168), Dungan (147), Dadds (150), Harvey (155), Team average (162).

The tournament, to select the team to represent the club at the S. A. F. convention at Washington, will be held during July. DAVID RUST.

stemmed stock, bring 25c. to 40c. per 100; lily of the valley, \$3 and \$4; shipped in peonies, \$4 per 100. Local stock is all cut out.

A great deal of building is contemplated this Summer around St. Louis, and some of the growers are busy with alterations.

KALAMAZOO, MICH.—Decoration Day business proved a most satisfactory one, and showed an increase over that of last year.

PROVIDENCE, R. I.—We can report a very large business on Decoration Day, both plants and flowers working off to the best advantage.

New York.

News of the Week.

With the exception of one or two days, the weather in this vicinity has been unseasonably cold this week. Copious rains have fallen, and these were badly needed in some places, particularly in the nearby Jersey towns.

The next meeting of the New York Florists' Club occurs Monday evening, June 12, and this will be Ladies' Night. The house committee, in charge of J. E. Nugent, has made elaborate preparations, and the ladies who attend (and we expect a great many) will be ensured of a right royal entertainment. This is also peony night, and exhibitors who cannot come in person are requested to forward their exhibits to John Young, secretary, 51 West Twenty-eighth street, and the flowers will be properly cared for and staged. The secretary of the outing committee, J. A. Shaw, announces that the program of the outing will also be ready for distribution at this meeting, and that \$200 in advertising has been secured for the program; a similar amount of money has been donated for prizes. Among the donors of prizes are: President F. H. Traendly, Vice-President J. A. Shaw, Secretary John Young, J. B. Nugent, J. K. Allen, John Birnie, L. B. Craw, W. J. Elliott, J. G. Esler, Jos. Fenrich, Ford Bros., E. W. Holt, J. C. Vaughan, J. Millang, F. R. Pierson Co., P. Kessler, L. J. Kreshover, A. L. Miller, Lager & Hurrell, T. J. Lang, A. H. Langjahr, Patrick O'Mara, B. Suzuki, Alex. McConnell, Moore, Hentz & Nash, Chas. Schenck, J. Rochrs, Jr., W. F. Sheridan, W. H. Siebrecht, H. A. Bunyard, John Scott, J. I. Raynor, W. C. Mansfield, E. C. Horan, W. B. Du Rie, W. A. Donahue, C. B. Weathered, Louis Schmutz, and The Florists' Exchange.

The illustrations seen in this issue of the plant market at Canal street were made from photographs taken by L. S. White, 105 Fourth avenue. Any one desiring duplicates can purchase them from Mr. White, at 50c. each.

Henry Reidel, a florist employed by Hermann Warendorf, fell down the subway stairs at Twenty-eighth street and Fourth avenue the day before Memorial Day and suffered a fractured skull. It is expected that he will recover.

The Olympia Florist, a firm name used by John G. Tarkazikis, John Chigranis, and Gregory Chigranis, who have been doing business at 57 and 101 West Forty-second street, have filed a petition in bankruptcy with liabilities of \$3,012 and nominal assets of \$500, in fixtures which are mortgaged for \$500 to Michael Chigranis. All the debts were contracted between April 15 and May 15, this year.

This has been the best year for the growers who attend the plant market at Canal street every morning that has been recorded for a long time. Some of the Jersey growers who have made this their distributing point for a generation, say that not for ten or fifteen years has business averaged so good as it has this season.

At the sale of the Ditzberger Brothers greenhouses, which occurred on Thursday, June 1, all the greenhouse material and other portable property were disposed of at what were considered good figures. Very few plants were left on the premises when the auctioneer, J. P. Cleary, commenced the sale, and these were sold in one lot, fetching \$45.

The wholesale stores have been deluged with peonies this week, and there was never before a season when they were of finer quality, or when they were so numerous. John Young is receiving them in the largest quantities, getting, daily, many thousands from C. W. Ward, the Cottage Gardens, Queens, L. I.

John Birnie sailed for Scotland Wednesday, on the Oceanic, to pay his mother a long-deferred visit. While away his business will be in charge of his son, John Birnie, Jr. Chas. Thorley was also a passenger on the Oceanic on his annual trip to the other side.

The Johnston Heating Co. is the name of a new firm of steam and hot water engineers that has just opened an office in the St. James Building, corner of Broadway and Twenty-sixth street. Mr. Johnston, who was formerly with the firm of Hitchings & Co., claims that

by eliminating a number of the unnecessary preliminary expenses, heating apparatus can be installed at much lower cost than is usual.

A. J. Guttman, wholesale florist at 52 West Twenty-ninth street, has leased the store at 43 West Twenty-eighth street, and will take possession October 1 or earlier.

Phil. Kessler, who for some time has managed the sales department of the Cut Flower Exchange, left that position on Saturday last. W. Duncan, the treasurer of the company, is now in charge of that department.

James Fraser and one of his sons, of Islip, L. I., sailed for England last Saturday on board the Campania.

W. Trumppore, of J. H. Small & Sons, florists, Broadway, was seized with a serious attack of acute rheumatism while going home on Saturday last, and had to be taken to the New York Hospital.

Word has been received of the death of Mrs. J. W. Withers, on May 23, at Kingston, Surrey, England, of consumption, at the age of 35 years. She leaves a little daughter with the grandparents. Mrs. Withers was well known in local horticultural circles, having at one time acted as secretary of the horticultural department of the farmers section of the American Institute.

W. H. Donahue has taken the store at 2 West Twenty-ninth street, and will open next week as a retail florist. Mr. Donahue has for several years been in the employ of Thos. Young, Jr., 41 West Twenty-eighth street.

The wholesale stores are closing at 5 p. m. this month, and during July they will close an hour earlier than that.

Herman Kuhn, the Sixth avenue retailer, was among the passengers who sailed for Europe this week.

Newport, R. I.

News Notes.

At last it has rained, and we all sincerely hope that now we shall have some growing weather. With April cold as last Winter, and May a drought, we have had a hard time thus far. Trade with the seedsmen has slackened, but our florists are getting busier every day as Newport's Summer season approaches.

There will be a special meeting of the Newport Horticultural Society on Wednesday, when action will be taken on the delinquent members as regards unpaid dues; many other important matters will also come before the society.

A special prize for the "Rose and Strawberry Show" that has pleased the members and others interested in the Newport Horticultural Society very much has been offered by Miss Fannie Foster; namely, "for best collection of outdoor roses," three prizes, \$25, \$15 and \$10; competition limited to gardeners of Newport.

The Rhode Island College of Agriculture at Kingston has just been allotted \$31,500 by the State, to be used for a much needed greenhouse and other improvements. The horticulturists all over the State are very much pleased, as great good is being done by the college.

The best selling bedding plant, as regards retail sidewalk sales this Spring, has been the daisy (Bellis perennis); twice as many as were sold could have been disposed of if available. The going price was 5c. per plant.

Vaughan's Seed Store has been for a week represented here by William Neil Campbell. Mr. Campbell is very enthusiastic over the Baby Rambler rose, and certainly he has good reason to be. He says their new canna, King Humbert, is also becoming a great favorite.

The crop of Black Hamburg and Muscat of Alexandria grapes is a splendid one here this season with both commercial and private growers. What few have already been sold have returned a very fair price—\$1.50 and in a few cases \$2 a pound.

The following three men have been selected, as a prize committee, to make the awards at our Rose and Strawberry Show the last of this month: John P. Hammond, Andrew J. Pow, and Paul Volquardsen.

M. B. Faxon attended the rhododendron exhibition of the Massachusetts Horticultural Society in Boston last Sunday, and reports a most excellent display. The various orchids shown were especially fine. F. W.

Chicago.

News Notes.

Trade conditions here at the present time are very dull, the retailers complaining that it is worse than usual at this season of the year. This is due, in a great measure, to the protracted labor troubles.

Growers of peonies are placing more in cold storage than usual, all trying to escape the prevailing low prices. Nothing but the best varieties bring anything like a figure.

Wieter Bros. have commenced cutting from their Kaiserin Augusta Victoria roses.

C. W. McKellar is receiving consignments of fine white cattleyas, which are selling well for June weddings.

J. B. Deamud is handling considerable of the cut of peonies from the Chicago Carnation Company's place at Joliet.

August Lange contemplates a European trip in the near future; he is getting his business in shape so he will be able to leave it for two months.

The express companies, Monday, started to pick up cut flowers from the wholesale market—the first attempt since the strike was called over a month ago. Deliveries of cut flowers are being made by them from all depots.

F. Calvert & Son, of Lake Forest, had the decorations for the McCullough-Smith wedding on Tuesday, using peonies, sweet peas, lily of the valley, and campanulas in great profusion. This was one of the most aristocratic weddings that have occurred on the north shore for some time.

ROBERT JOHNSTONE.

Kansas City.

The Fall Show.

The preliminary premium list for the flower show to be held in Convention Hall the week of November 13 has been issued and copies of it are now being mailed to florists in all parts of the United States. While the list is not yet complete, the total amount of premiums offered up to date is nearly \$5,000. This sum will be increased by the addition of other classes which are contemplated, but for which arrangements have not yet been made.

The sensational feature of the show will be the offer of a prize of \$400 in the class for the best 100 American Beauty roses, the stems of which are to be at least four feet in length. This is expected to bring out a remarkable display of fine roses. Much attention will again be given to the chrysanthemums, and in nearly all the classes for this flower the prizes have been increased over those of previous years. One of the handsomest displays of chrysanthemums will be in a special class for which there is a prize of \$200 for 100 blooms of any one chrysanthemum. There is a long list of prizes for chrysanthemums in bush form, as well as many for the cut flowers.

Miscellaneous plants, such as begonias, geraniums, ferns, palms and lilies have received more than usual attention, and some fine displays of these are expected. In the class for carnations a new feature has been added by the offering of a gold medal for the best 100 blooms of any color, and this will bring the large growers into keen competition.

H. W. Buckbee, of Rockford, Ill., one of the principal exhibitors at both the shows held in Convention Hall, is so enthusiastic over the coming show that he has offered a silver sweepstakes cup for the vase of the best grown roses in the Kansas City show.

In compiling the preliminary premium list the directors of Convention Hall had the assistance of George E. Kessler, director of the show, as well as W. L. Rock, Samuel Murray and W. J. Barnes, who were appointed a committee to represent the Kansas City florists.

The premium list contains the announcement that the directors are prepared to offer suitable prizes for interesting novelties pertaining to plant life, and this is expected to bring suggestions from growers of flowers and plants in various parts of the country. —Times.

CANADIAN NEWS

MONTREAL.—The weather being very cool has delayed the planting of bedding stock, but this work is now in full swing. The demand appears to be ahead of last year's, and there will be plenty of material for all orders. Cut flower trade continues very good in all lines.

Plant thieves have been busy of late. They like George Hopton and his plants so well that they called on him three times during the last month. Hall & Robinson have also been visited.

Preparations are going on quietly for the convention in August, when we hope to have every florist in Canada, and the United States, too, with us.

Joseph Bennett will build a new greenhouse 20 by 150 feet. W. C. H.

FREDERICTON, N. B.—Frosty nights and warm days seem to be the order here. Our carnations are in full crop just now; the young stock is still in 3 and 4-inch pots in a cool house, waiting either to be benched or another shift. We purpose not planting out this year, but will try early planting. Bedding plants are beginning to sell; also vegetable plants. We made a good hit on lettuce, having had several hundred in fine shape for Easter; the demand is good yet. We are not altogether specialists here, but have to be mixed horticulturists, not having all our eggs in the one basket. Funeral designs and wedding bouquets have been in good demand since March. We hope the Summer will turn out better than the last, which was far too dry.

J. B. & S.

Hail News.

CARTHAGE, MO.—In a recent hail storm Perry Finn lost some 15,534 feet of glass. He was insured in the F. H. A.

BOONE, IA.—J. Loehrer reports that a hail storm visited this locality on June 1, but with no damage to greenhouse glass, fortunately.

FAIRBURY, ILL.—A destructive storm passed over this section May 29. Hail as large as hens' eggs fell, breaking thousands of dollars' worth of glass. Kring Bros.' greenhouses lost over 15,000 feet of glass, while A. Milne and John Milne & Son lost over 5,000 feet each. All kinds of vegetation and fruit were badly damaged.

MUNCIE, IND.—It is likely that Simon Humfeld, owner of greenhouses at Madison and Race streets, will have to install his own heating plant next Winter. For several years he has been using the exhaust steam from the city electric plant, and last week, before the Board of Works, he asked to enter into a contract for the coming year. He has been paying about \$600 yearly for the steam. Some of the members are known to oppose the plan, as it is claimed it requires quite a pressure to force the steam from the station to the greenhouses. The Board of Works is trying to cut the operating expenses of the plant, and it may be that the contract will not be renewed.

WAYNESBORO, PA.—Henry Eichholz will remove the old barn on his property and erect a new one some distance from the present location. Mr. Eichholz, in removing the old barn, will make room for the handsome new house he proposes erecting in the course of a few years.

TOLEDO, O.—Bert Oberstag, the florist, was badly cut about the face and hands last week when his wagon was struck by a Broadway car, throwing him out.

SELLERSVILLE, PA.—John Miller and daughter, of Newark, N. J., are visiting this place. Mr. Miller is a florist, and if he can secure a suitable property may locate here.

COMING EXHIBITIONS.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY will hold its exhibition of roses, strawberries and hardy flowers, in the Young Men's Lyceum, June 13. The seventh annual Chrysanthemum Show of the society will take place in Music Hall, November 1 to 3 inclusive. Copies of the schedules for both exhibits can be obtained from E. W. Neubrand, secretary.

FOR THE RETAIL FLORIST.

June Wedding Decorations. The House.

Wedding decorations in the house are of two classes—"home weddings" and "house receptions," the former usually being the most elaborate, and, in any case, the most important to the house decorator. It would require volumes to describe the innumerable designs suitable for each, and we must of necessity touch only a few generalities. The decorator who marches into a building, especially a residence, with a kit of tools and commences to hammer in big nails and destroy things, is not only ignorant, but a very great enemy to our trade. We know of one or two instances here in New York which resulted in law suits and a total prohibition of all except plants and cut flowers in the exclusive rooms. The florist is responsible in all cases, and the utmost care should be taken in regard to cleanliness and care of property. Cover the floors with sheets, and keep your materials as much as possible out of sight and way, for the majority of it looks better when arranged. Gummed parchment books, stout pins and small screw-eyes are sufficient to hold up the most extensive decorations. Nothing can make your customer more nervously disgusted than the sound of your hammering.

Sentiment and commercial floriculture may often

the main entrance, and where, in one place, we have the most of our blooms at the top, in the next we fill the vase with sprays, and the heaviest effect is at the bottom.

Fear of destruction compels the removal of costly vases. We always ask for their retention and use. There is nothing that will enhance the beauty of the flowers more than a handsome vase, be they in it or as a background to it; but a clumsy fist and a thousand dollar vase are seldom friends.

In these days of extreme endeavor in permanent interior decorations, the florist is called upon to show the highest intelligence. Your art is intended to beautify whatever other arts may be there, and suggestions or illustrations of this will be profitable to you. Here's a painting of flowers by De Longpre or some other master. Whatever the subject, you can procure living duplicates almost anywhere and at any time. Either in vase or natural cluster we arrange at one corner of the picture, and covering very little of the frame, some flowers similar to those portrayed, and instead of detracting from the painter's work, we make his and ours a commanding chef d'œuvre. If it be a landscape, then a few select wild flowers and foliage; if a Dutch subject, some mixed bulbs or the flowers beloved by or indigenous to that particular country, or whatever is depicted. It is under no circumstances permissible to cover the frame or in any way spoil the effect of a valuable painting, even by placing distracting colors close by; but above them all on the rod we may often arrange an irregular light frieze garland of greens or flowers.

it for a breakfast or luncheon decoration, or the same in nasturtiums—simple flowers, but how grand! The myriads of lovely flowers obtainable make selection difficult, except where there is a narrowness in space or price.

Next week we shall discuss schools and graduation flowers. KINVARA.

WEDDING DECORATIONS AT SYRACUSE, N. Y.—P. H. Quinlan & Co. had the decorations of the church and house for the wedding of Miss Charlotte Holden, of West Onondaga street, the past week. A very chaste and elaborate piece of work in the church reflected the skill of the decorator in no small degree, a number of new ideas being used in the main aisle and where the bridal party stood. The organ and pulpit platform were partially concealed with asparagus and palms, while the canopy was formed of asparagus attached to the chandelier above with a large shower of white baby ribbon. White peonies and white rose were used lavishly all over the background and canopy. A latticed screen and arch of asparagus and ferns, with clusters of white peonies, tied with chiffon, was erected across the rear of the auditorium, while tall palms closed the space in the balcony, giving the idea of a conservatory. Down the main aisle tall clusters of peonies and asparagus, tied with white bows and streamers, alternated every sixth seat with low clusters of white roses and ferns. The bride's bouquet was a shower of lily of the valley and gardenias.

The house was decorated throughout with asparagus, pink and American Beauty roses. The large centerpiece in the dining-room was entirely of lily of the valley.

The work was done under the supervision of Mr. Robertson, manager of the Quinlan establishment. J. B. B.

MARRIED.

DENNISON—GOULD.—At Ventura, Cal., on Monday afternoon, May 29, Miss Olive Gould was married to Heishel Dennison. The bride is the daughter of Mrs. Thomas Gould, the well-known petunia grower of this place. The floral decorations at the home of the bride, where the ceremony took place, were lavish and beautiful. In the back parlor the mantel was banked with palm branches and Easter lilies. In the north room asparagus and Easter lilies gave a fairy-like appearance. The culmination of artistic efforts were found in the front parlor. Here, in the bay window, was hung a heavy curtain of beautiful greenery banked with Easter lilies and ferns. Directly in front hung the wedding bell, of white carnations, with clapper of Easter lily. The bride carried a bouquet of white harebells. "After the ceremony," says a local report of the happy affair, "dainty refreshments were served on small tables in the north parlor. One very pretty little ceremony was the cutting of the bride's cake by the bride herself. The cake knife was tied with a bow of white ribbon which had graced the carriage of William McKinley when he visited Ventura.

"The bride, only daughter of Mr. and Mrs. Thomas Gould, comes of a historic New England family. She traces her ancestry to Governor William Bradford, of early colonist days, but she is known to Ventura as just the dear, sweet girl that she is. Her friends are many. It may be truly said, 'To know her was to love her.' The bridegroom, A. Hershel Dennison, is a son of Mr. and Mrs. H. J. Dennison, of the Ojai. He is one of those stanch, stalwart young men who are known for purity of character and loftiness of ideals.

"The happy couple left for an extended bridal tour. They took the 'Owl' at Saugus for the north, thence to Chicago, Cleveland and the Atlantic coast, returning in time to take in the Portland fair. Their future home is undecided.

"The gifts were many and costly. Among the list were several checks for a hundred dollars each. Of especial interest was a set of historic silver spoons, which had been in the family for generations. The three oldest bore the dates, respectively, 1785, 1823 and 1848. Each spoon carries its own little history. May the whole lives of these two be full of sweetness and joy."

A Plant Pathologist Wanted.

An examination will be held on June 28, by the Civil Service Commission to secure eligibles from which to make certification to fill a vacancy in the position of plant pathologist, at \$1,600 per annum, in the Bureau of Plant Industry, Department of Agriculture, and vacancies as they may occur in any branch of the service requiring similar qualifications. Applicants will not be required to appear at any place for examination. The position for which this examination is held requires a man of thorough training and experience in technical work relating to plant pathology, with special reference to rusts. The person appointed to this position must be in good health and willing to do considerable field investigation, as well as laboratory work. Age limit, twenty years or over on the date of the examination.

TOMATOES form the subject of Farmers' Bulletin No. 220, Department of Agriculture, prepared by Professor L. C. Corbett. Outdoor culture, north and south, forcing in greenhouses, the tomato as a field crop for canneries, diseases, etc., are all treated upon in a popular and interesting manner.

INTERIOR VIEW OF STORE OF CHAS. MONRO, NEW HAVEN, CONN.

disagree, but they can never be divorced, and as sentiment rules supreme over wedding decorations, it is of vast importance to find out the pet flowers of the parties concerned, and use them to best advantage. Many kinds of flowers and foliage permissible in church or hall decoration are out of place in the house, for the reason that they emit odors unpleasant when in close proximity and in a closely packed room; and remember, as is usually the case when a room is filled with standing people, the flowers in the fireplace or anywhere near the floor are not only lost, but a menace. To be sure, you must put some sort of finish on all groups, etc., but you need not waste your best there.

It is rarely that the decorations in the house are limited in color, but it is very often the case, and for the best, that each room is treated in one distinct color. Weddings being the ultra of festivities, a greater latitude is called for and extended in the way of profusion that is commensurate with art. Those mechanicalized curtains of smilax or asparagus, dotted with roses or other flowers, and parlor-window-like-tied-back-with-broad-ribbons, once upon a time were considered the very top of "high art"; now they appear silly, childish nonsense; for in their place we have an exact copy of Nature's handiwork, which is easily done by using a few green cords or wire, and tying to them our branches of roses, honeysuckle, sweet peas or whatever vine you may. Designs of studied regularity can never compare with the extreme beauty of that old rose-tree over the farmhouse porch, and how easy to reproduce it where one can forget the rigidities of the city!

At the side of that mirror we place a neutral colored vase, or jardiniere; into it put the end of one vine and carry it over but one side and the top of the frame. It is our idea by our work to insinuate that it is growing there in all its loveliness. Remember, the effect must come from the side opposite to

In the case of the "home wedding," a canopy is usually demanded, and where a reception is held, an arbor or some distinct arrangement; and while the all-devouring passion is for novelty, the same class of design will do for either reception or ceremony. You can suggest fifty different designs, and it is too frequently the case that he who proposes the use of the awful succeeds. Yet even in the case of extreme depravity of taste there is a chance to win out for the natural—the beautiful. The florist can seldom, if ever, dictate; but he can very often coax and lead. Almost anything can be used in some house decorations, for where there is a veranda, hanging baskets or suspended ferns are immense, and in hanging baskets, light petunias, primulas, geraniums, plox, verbenas or aught of that class can be used to advantage; even balls of moss, or soft vegetation studded with sprays or blooms look well. Purple is an outlawed color at weddings. Then, again, for mantle or groupings, the same sort of flowers are permissible, for if the one particularly special room is exclusively white or light pink and green, the others may range to the extreme. Carnations or roses do not grow on smilax, and it's not necessary to pretend they do.

The Breakfast Tables.

The wedding breakfast, or the general tables, deserve special treatment, and too often they are made top-heavy. With them, as with the house, we should restrain our inclination to cover up and hide everything; and 'tis often the case that the flowers themselves are smothered with unnecessary foliage. We do not wish to decry, but to encourage, and would ask for comparison between ten dollars' worth of flowers and twenty dollars worth of ribbons, irrespective of appropriateness. Suppose we use a thousand yellow or white pansies on one table. Just try

CLUB AND SOCIETY DOINGS

THE WASHINGTON (D. C.) FLORISTS' CLUB met on Tuesday night last with an excellent attendance for such a hot night, the temperature being in the eighties. Convention matters were chiefly discussed. The different chairmen of committees reported everything looking very promising, and every one seemed anxious to put their shoulders to the wheel.
M. C.

THE MILWAUKEE FLORISTS' CLUB gave a very enjoyable entertainment Tuesday evening at the Builders' Club. C. B. Whitnall delivered a lecture on California, illustrated by stereopticon. Refreshments and a dance followed. The Exposition Hall, where the S. A. F. Convention was held when it met here, was totally destroyed by fire Sunday afternoon.
C. C. P.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The May meeting of the above society, held Tuesday, the 30th, being the annual Ladies' Night, only necessary business was transacted. One honorary member and three new active members were elected, and two names proposed for membership. The occasion was graced by a large attendance of the fair sex. A good musical program was gone through, and refreshments, consisting of ice cream, cake, etc., were served. All agreed that it was a very enjoyable evening. The exhibits consisted mostly of flowers cut from hardy shrubs and herbaceous plants.

The June show of roses, strawberries, hardy flowers, etc., will be held in the Young Men's Lyceum, on the afternoon and evening of June 13. Schedules for this, and also for the November exhibition, may be had from the secretary, E. W. Neubrand.
WM. SCOTT.

PHILADELPHIA (PA.) FLORISTS' CLUB.—The meeting on Tuesday last was a very interesting one. Some consideration was given to matters pertaining to the S. A. F. O. H. convention, and a committee was appointed, with Robert Craig as chairman, to arrange for the entertainment of all delegates who may pass through this city on their way to Washington in August. The present desire is to have all delegates arrange their trip so that they can stop off here two or three hours, and be the guests of our club at Horticultural Hall, then proceed to Washington in a body. The delegates will be well fortified with good viands, supplied by that king of caterers, John Westcott. The famous punch is included in all menus here. The club meeting in July will be held on the second Tuesday, the first being the Fourth.
Alfred Dimmock was a visitor here on Wednesday.
DAVID RUST.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held June 2, President Hale in the chair. Final arrangements were made for the rose exhibition at the next meeting, June 16. A discussion took place on "Bonora," and the general opinion was that it is wonderfully quick-acting, more particularly on soft-growing plants and ferns. Mr. Kettel stated that he had used it on young grass with gratifying results. Mr. Turner experimented with it on a small scale on some half-starved ferns. The improvement was plainly shown after the first application. Mr. Butterbach had used "Bonora" on antirrhinums and cauliflowers under glass with excellent results; also on different ferns and small palms, and after one application they were much improved. In order to make our meetings more interesting, Mr. Turner suggested that at each one some exhibits be shown, and to have discussions concerning their nature and merits. A fine pair of cucumbers were exhibited by Mr. Hale, scoring 85 points. The judges were Wm. Turner and H. Griffiths. B.

THE NEW JERSEY FLORICULTURAL SOCIETY.—Ladies' night was observed by the New Jersey Floricultural Society on June 2 at its rooms in Orange, and attracted a large attendance of members and their families, with numerous visitors. In addition to a meritorious floral display were added a musical and dramatic entertainment and refreshments. Photographs of the exhibits receiving the highest marks for the last five months covered one side of the room. The exhibits for the evening consisted of *Cattleyas Mendelii*, *Mossia* and *gigas*, with *Cologyne Dayana*, from the collection of Mr. Henry Graves, grown by Edwin Thomas; *Phalenopsis grandiflora*, *Laelia elegans*, *Cyp. Lawrenceanum* and *Cattleyas gigas* and *Mossia* from the collection of Mr. William Barr, grown by Arthur Bodwell, and a collection of cut orchid blooms from Julius Roehrs, including white *C. Mossia*, *Reineckiana*, *Den. atroviolaceum*, hybrid *Laelia purpurata*, illustrating beautifully the value of these flowers in decoration. Two vases of enormous *Papaver orientalis* from Brighthurst, grown by Peter Duff; *gloxinias* in variety from Mr. William Runkle, grown by D. Kindsgrab; a vase of mixed *aquilegia* in light tints, very much admired, and *pyrethum*, many with *anemone*

centers, from the Colgates, grown by William Reid. Peonies from Mr. Stewart Hartshorne, grown by A. Caparn; *papavers* and Japanese iris from Mr. George Merck, of Llewellyn Park, grown by Max Schneider; *Pandanus Vetchii* and *Rhapis humilis*, by D. Kindsgrab, Arthur Bodwell's *Nicotiana Sanderae* were the first shown in this vicinity. The judges were Jos. A. Manda, Arthur Caparn and James Goodyear.
JOS. B. DAVIS.

PITTSBURG (PA.) FLORISTS' CLUB.—A hot, sultry night and heavy rain resulted in a poor attendance at the June meeting of the Florists' Club, which was an interesting one, with a good exhibition of cut blooms of hardy roses and other outdoor stock. H. A. Dreer, Philadelphia, sent a nice lot of blooms of many hardy plants, among them a collection of hardy pinks which were much thought of. The Pittsburg park, as usual, made a fine display of peonies, roses, digitals, *campanulas*, *pyrethrum*, *delphinium*, *dianthus*, *Dianthus barbatus*, *hemerocallis*, *penstemons*, iris, and other things. Fred Burki brought in a fine lot of peonies, and spoke of their uses, cultivation, etc. Several other lots of assorted blooms were shown, in which a large flowering clematis was very conspicuous, said to be a very free bloomer of the *Jackmannii* type. We could not ascertain its name. Thos. Fitzgerald, of Beaver, Pa., showed blooms of a new variety of carnation, a cross between *Prosperity* and *America*, a fine white, good stiff stem and perfect bloom.

Communications were read from Messrs. J. C. Vaughan and W. J. Stewart, president and secretary of the S. A. F. O. H., in regard to transportation and other matters connected with the coming convention. A committee of three on transportation was appointed: F. Burki, J. Bader, and E. C. Reineman, who will arrange as to rates, entertainment of visitors, etc. It is very likely that a good delegation will go from our city. The railroad rate will be about \$8 for the round trip, giving ample time. It was decided to drop the next meeting of the club in July, and instead have an outing. The following committee was named to make arrangements for same: Messrs. Blind, Burki, and Bader, who will decide as to place, time, etc.

The Uses of Hardy Shrubs for Forcing.

(Read by Edwin Matthews, of Thos. Meehan & Sons, before the Philadelphia Florists' Club, June 6, 1905.)

Hardy shrubs used under glass have for many years brought color and fragrance to us in the very depth of winter, but, perhaps, it is only in recent years that they have been resorted to so largely and used with so good effect as at the present time. If I may be allowed to recall reminiscences, I would like to take you in imagination to the great Spring Show of the Royal Horticultural Society of England held annually in the Temple Garden, which is situated on the Thames Embankment. Refreshing indeed is the memory of the many beautiful groups of forced and Spring flowering trees and shrubs, staged and grouped to good advantage by the leading nurserymen. Here one would come upon a large group of the different kinds representing the genus *pyrus* and *prunus*; there, a display of standard *wistarias*, their racemes of white and purple hanging in rich profusion. Again, one would be attracted to a large display of the many hybrid clematises in their varied colors, while groups of *spiraea*, *deutzias*, *viburnums*, *philadelphus*, *azaleas*, *rhododendrons*, and many others of the *ericaceous* section, would compel admiration and attention from all. Undoubtedly this show, together with the fortnightly displays of this society, have been responsible for much of their present popularity in England. Large numbers are now grown by the trade for flowering under glass, and there is a considerable trade in them between that country and Holland, as there is also large importations to this country, I believe, from the latter place, especially in *ericaceous* plants.

General Culture.

So many shrub families are available and adapted for gentle forcing into bloom before their usual time, that it is unwise, I think, to lay down hard and fast rules with regard to culture. It depends largely on the kind of plant you handle and the kind of roots the plants possess. Those which make dense fibrous masses of roots can be lifted from the open ground in autumn, potted, and will scarcely feel the check of removal. Some shrubs, however, transplant so badly that it is better and really needful to grow them entirely in pots or tubs. *Azaleas* may be taken as the type of the former; *magnolias* of the latter. Some cultivators prefer to grow a great many of their forcing plants permanently in pots, plunging them out during the summer in a good open position, and giving them special attention in the way of watering, feeding, etc. This may be regarded as a modification of pot culture and planting out. Although a few roots are passed out over the rim, and also through the hole in the bottom of the pot, this treatment has the effect of keeping the plants somewhat compact, while the check of removal when taken up is not nearly so great as would be the case had they unlimited root-room. This partial confinement also tends to promote bud

formation. In any case, where shrubs are grown for this purpose, whether confined to pots or planted in the field, they should be afforded a position where air and sunshine can freely reach them, strictly avoiding overcrowding, as this tends to leaves instead of flowers, while they should never be allowed to suffer through drought. The returns for careful and liberal treatment at this juncture will be seen at flowering time.

If the plants are being grown in the open ground—that is to say, not confined to pots—the best time to lift them, with few exceptions, is as soon as possible after the leaves have fallen in autumn. When done at this time the young roots have a chance to recover from the check and get a hold on the new soil before flowering time. The advantage gained by early potting is clearly shown in the case of *azaleas*. The flowers of those early potted remain nearly twice as long in beauty as those produced by plants not potted till late. After potting they should be plunged in ashes, or any other material, to keep them in an even condition of moisture until taken inside. Whether the plants be wanted for early forcing or later, it is best to place them, first, only in a cool temperature, submitting them to greater heat by degrees. The lower the temperature, however (say, from 55 to 60 degrees), the more beautiful the flower coloring; while if they are only required to bloom a little in advance of their natural season, more protection from frosts is only necessary.

The cultural requirements during the forcing period are simple, and may be summed up in the following items, namely: a humid atmosphere, yet not a stuffy one for air must be admitted when the conditions outside warrant it; copious supplies of water to the roots, and frequent spraying overhead. The higher the temperature the more moisture will the plants require, and vice-versa; while a cooler and dryer atmosphere should be given them as soon as they come into flower, as the chief object at this point is to prolong as much as possible their flowering period.

After Treatment.

Generally speaking, those plants which have been forced hard to get them into bloom early cannot be depended on to give satisfactory results the second year, no matter how carefully they may have been treated. These, however, which have been only gently forced will undergo the same ordeal the following season, providing they are treated well. Too often when the flowers are over, the plants are thrust away in some corner, and their existence forgotten, the result being injured leaves and general dilapidation. Now, plants that have been forced in any degree are invalid, and should be treated as such. Shrubs that have finished blooming under glass before the time of frost and cold winds is over, should be carefully protected and gradually hardened off before committing them outside; while those things which are grown in pots permanently would be greatly benefited by occasional doses of liquid manure during their growing season.

Their Use to the Florist.

The florist who, while winter still lingers, displays in his store some few bright colors in the forced shrub line acts wisely, I think, for this, as other things, such as fruit and vegetables out of season, appeals to many people in a most fascinating way and especially to those who can well afford to be a little prodigal in this direction; and this, of course, should be fostered by all means.

Without in any way disparaging the two present favorites—the rose and carnation—which certainly have the hearts of the people, I cannot help but think that there should be more variety; for is there not some truth in the old proverbial saying, "variety is the spice of life?" Let us then give variety.

The large list of shrubs adaptable for forcing must, of course, be greatly minimized for the florist, as many of them, though beautiful and useful in some capacities, would not bring the best returns for the labor bestowed on them. The following are some of the best for furnishing material for the florist; *Azaleas*, both the mollis and those known as the Ghent *azaleas*, are among the most useful classes of shrubs that we have, and quite as valuable for hard forcing as for flowering later. Although the formation of the roots is dense and wig-like, they are, as already stated, all the better for being potted early. Especially is this so if they are wanted for early forcing. Among the most beautiful in the mollis section are *Alphonse Lavalle*, bright orange; *Anthony Koster*, deep yellow; *Hugo Koster*, salmon red, and *J. J. de Vink*, soft rose. The seed pods should be removed directly after flowering, as these are a drain on the plants' strength.

Rhododendrons are among the most gorgeous of shrubs, and, owing to the root formation, are most suitable for being flowered in pots or tubs. Going by the stock imported from Europe, they flower when quite small, plants not more than one and a half feet high bearing half a dozen large trusses of flowers, while the wide range of coloring in the *rhododendron* family affords opportunity for getting almost any shade desired. Hard forcing for the *rhododendron* must be avoided. Liberal supplies of water overhead are essential, when it is remembered that moist conditions are their natural requirements.

(To be Continued.)

ASTER PLANTS Queen of the Mar... Bot. Semple's Branching, fine plants, 40 cts. per 100; 800 for \$1.00; \$2.50 per 1000. J. C. SCHMIDT CO., Bristol, Pa. Mention the Florists' Exchange when writing.

Milwaukee.

Trade News. Memorial Day trade was better than in any previous year. Everything was cleaned up, but the demand for carnations in preference to other stock was surprising; they averaged up in price better than the general run of roses. Many heavy orders came in calling for carnations exclusively. With this exception there was about enough stock in all lines to meet the demand, and prices in general were satisfactory. The retailers had their troubles, for 50c. per dozen signs were numerous up to a few days previous to Memorial Day, when the price of carnations jumped to 50c. and 60c. Many purchasers complained of being held up.

The plant trade was very satisfactory. The unfavorable weather earlier in the month caused a heavy rush of business up to the last moment. Much of the plant trade is, however, diverting to the grocerymen, who get large supplies in nearly all varieties of plants from the market gardeners. Even the commission men handling garden truck were soliciting consignments of plants from all available sources. Geraniums are still the most popular of all bedding plants, and the supply of good blooming stock was soon exhausted. The call for varieties of the S. A. Nutt type is away ahead of all others. Vincas, coleus and salvias follow next in order; although the latter were more plentiful than last year, the call was not as large. Lily of the valley, tulips and lilac came in just at the right time, but peonies were retarded on account of the cool nights, and are about a week late. C. C. P.

Kalamazoo, Mich.

News Items. Mr. Meyers has taken possession of John Calder's place, and Mr. Calder retires to a fruit farm a short distance from the city.

Van Bochove & Bro. are busy planting roses in their new range of houses on Portage street. The firm has built a very fine block of houses and expects to be in a position to handle a large cut next season.

Miss Laura Dunkley will continue the business of the Dunkley Floral Co., having been appointed administratrix of the estate.

W. Cook is busily engaged laying out an estate on the outskirts of the city which calls for considerable skill, it being one of the finest residences in this part of the State.

The Central Nursery Co. is still busy removing its plant, but will soon have a part ready to plant roses. The new location is said to be a most desirable one for a greenhouse plant. The offices of the company are already moved to the same place. The store downtown will be run as usual, on Main street. S. B.

CASH WITH ORDER.

CHRISTIAN LAWRIETZ, Box 262, Rhinebeck-on-Hudson, N. Y. Mention the Florists' Exchange when writing.

St. Louis.

News Notes. The Missouri Botanical Garden, better known the world over as Shaw's Garden, had its first Sunday opening of the year June 4. Nearly 15,000 persons took advantage of the beautiful day, and looked over all of the available spots in the Garden. Professor William Trelease is attending the International Botanical Congress at Vienna, also visiting all the principal botanical gardens in Europe, and in his absence Superintendent H. C. Irish is in charge; he and a number of students and employees of the Garden attended to all the wants of the visitors. The Garden as a whole never looked better than on Sunday last. After seeing the sights at the Garden many of the visitors strolled over to Tower Grove Park, where a large band of music was in attendance. That grand old man, James Gurney, is in charge of this park.

Harry Balsley, Detroit, paid us his annual visit. Harry never fails to take away the best wishes of his many friends in the trade. Martin Reukauf, of H. Bayersdorfer & Company, Philadelphia, was also a recent visitor. He is whooping up the S. A. F. O. H. convention.

A number of local nurserymen will attend the annual convention of the American Association of Nurserymen, which occurs next Wednesday and Thursday at West Baden Springs, Ind. Quite a few seedsmen contemplate attending the convention of the American Seed Trade at Alexandria Bay, N. Y., this month.

Frank M. Ellis, one of our wholesalers, had the honor of being elected vice-president of the American Chocolate and Banana Culture Company, which have large plantations in Panama.

John Connon, of Webster Groves, Mo., will build two new houses this Summer for roses and carnations. Mr. Thompson has the contract.

The bowling club will make arrangements on Monday night to make their long-delayed visit to De Soto to roll a friendly game with Florist Hippard's team at that place. Ed Gerlach, at Kuehn's, has charge of the affair.

Miss Schnell, who does business in East St. Louis, reports that since moving to her new location her trade has doubled. Decoration Day business was better than ever before.

Bowling. Harry Balsley and six local bowlers spent a very pleasant evening on Monday at the bowling alleys. Harry, with his fancy screw ball, had the boys going in some of the games, but the surprise of the evening was a 93 game made by our best bowler, Charlie Kuehn. Beneke, in the same game, made 114, and Carl Beyer 104. The night was very hot, and from now on the boys will only bowl on cool nights. From the looks of things now the convention team will be made up as follows: Beneke, Kuehn, Meinhardt, Weber, Miller, and Ellis. The totals in the six games referred to were: Beneke, 848; Kuehn, 815; Beyer, 736; Gerlach, 609; Meinhardt, 537; Lorenz, 324, and Balsley, 621. ST. PATRICK.

Cyclamen Plants Seed of only selected flowers and well built stock. None better. Once transplanted, \$2.00 per 100; \$18.00 per 1000. Twice transplanted, \$3.00 per 100; \$25.00 per 1000. C. WINTERICH, DEFIANCE, OHIO. Mention the Florists' Exchange when writing.

San Francisco.

News Notes. Memorial Day business was not equal to that of former years. There was an overabundance of stock, consequently low prices prevailed. The Wickstrom Floral Company not only reports this Memorial season's San Francisco business about 12 1/2 per cent. better than last year, but 30 per cent. increase in its shipping trade. This company has developed within the past year a growing business feature that is already of much appreciated importance. It consists of quarterly contracts for daily bouquet supplies for doctors' waiting-room apartments and for substantial saloon men's sideboard decorations. Adjoining the Stappenbeck store, on Post street, a new incorporation, entitled Citizens' National Bank, is having a banking house erected, and because this new building is rising less rapidly than was expected, and in order to keep faith with the public and open for banking as had been advertised, temporary arrangements were made to use part of the florist's store. So now Florist Stappenbeck's counter patrons, through a glazed partition that has been constructed, may longingly gaze at trays full of white silver coin and yellow gold. ALVIN.

Pittsburg.

News of the Week. W. F. Lauch is preparing to move his greenhouses from the present place on which they are erected, which is sold, and will go about forty miles from the city to New Galilee, where a farm has been purchased and a company formed to grow cut flowers. Among the visitors last week were B. Eschner, of Rice & Co., Philadelphia; J. Ringier, of Stump & Walter Co., New York, and H. Kallen, of Aug. Rhotert, New York; Mr. Langhans, Wheeling, and Mr. Huscroft, of Steubenville, O. E. C. R.

DAYTON, O.—The engagement of Miss Helen B. Costello and Nicholas Metz has been announced. Both are in the employ of J. R. Heiss, florist.

ROSE STOCK

GRAFTED KILLARNEY

I had ordered material for the erection of several new rose houses this Spring. Recent unavoidable events have caused me to change my plans. This leaves me with several thousand very desirable grafted roses on hand which I now offer for sale at a bargain. This lot includes **KILLARNEY, METEOR** and **BRIDESMAID** in 3 in. pots, first-class stock, intended for my own use. These roses are ready for immediate planting, and of healthy and vigorous growth. Also ready for immediate shipment, grafted **Bride, Chatenay, Ivory, Golden Gate, La Detroit, Testout** and **Morgan**. I have in own-root stock **American Beauty, Chatenay, Bridesmaid, Bride, Meteor, Golden Gate, Ivory** and **Uncle John**. Several thousand home-grown, dormant **Killarney** to offer this Fall.

ROSES

FOR IMMEDIATE EFFECT

Haven't you in your trade a call for large, strong Rose plants, such as will give immediate results? We have prepared for June planting a stock of strong, two-year-old plants, all on own roots, except where noted, and while they last will close them out at the extremely low price of

\$15.00 per 100; 25 or more at 100 rates. No charge for packing

These Roses can be placed in the open ground during this month and will give a profusion of flowers throughout the entire growing season. They are worth just twice as much as we are asking for them, and they can be depended upon to produce the goods. They are well foliaged, have strong working roots and are now in 4 in. and 5 in. pots. The collection includes a wide range of varieties and colors, Teas and Hybrid Teas, such as Meteor, Henry M. Stanley, Kaiserin Augusta Victoria, Marie Guillot, White Maman Cochet, Coquette de Lyon, Pink Souper, Clothilde Souper, Golden Gate, White Golden Gate, The Queen, Ma Fillette, Helena Gambler, Yellow Souper, Mme. Jolez Grolez, Striped La France, Yellow La France, Bridesmaid, The Bride, Mme. Welche, Duchess of Albany, Mme. Abel Chatenay, Marie Lambert.

CLIMBERS—Crimson Rambler, Yellow Rambler, Climbing Clothilde Souper and Cherokee.

HYBRID PERPETUALS—Coquette des Blanches, Perle des Blanches, Perfection des Blanches, Mme. Gabriel Luizet, Merveille de Lyon, Margaret Dickson, budded, 5 inch pot plants, \$25.00 per 100
Soleil d'Or, budded, 5 inch pot plants, \$25.00 per 100.

BABY RAMBLER Ever-blooming Dwarf Crimson Rambler. A gem among Roses. Always in bloom. Every florist in the land should have it. 2 1/2 inch pot plants, now ready for delivery, \$2.50 per dozen; \$15.00 per 100; \$125.00 per 1000.

New advertisers are apt to feel that the publications they use are on trial, whereas it is their business methods and conditions which are being tested. Neither the advertising idea nor the standard publication is an experiment. They are a known quantity, and have an established reputation and influence. If an advertising campaign fails it is probably not the fault of the publications. The success or failure of the advertising rests upon the advertiser. —The Publisher and Advertiser.

After the first week in June most growers start replanting their houses, still where the old plants are clean and one is cutting nice stock from them, it would be well to delay the work for a few weeks, providing the young plants are not suffering.

After the old plants are thrown out, the house should be cleaned thoroughly, and all litter under the benches removed. The benches should then be washed out with the hose, and given a coating of hot lime wash to which a quantity of cement has been added. This will prolong the life of the benches a number of years. Some growers allow their houses to stand idle two or three days, for the benches to dry out, but while this may be of some benefit, it shortens the life of the benches considerably.

The soil, before being brought in, should be fairly well pulverized and have some bone meal mixed through it, at the rate of 100 pounds to a 150 x 20 foot house. Care should be taken to have the soil, when placed in benches, properly leveled, and well packed on the side.

A bench 3 feet 6 inches wide will take four rows of plants; about 14 to 16 inches apart in the rows is right for most varieties, with the exception, possibly, of American Beauty, which should have at least 18 inches. Before planting, the plants should receive a good soaking, as it is folly to plant dry plants. After planting, soak the whole bed, to settle the soil, after which only the ball of the plant should be watered until the plants are well established.

The plants should all be clean and healthy, as poor stock means a poor start. It will more than pay to buy good stock, from a reliable firm, than to use your own if for some reason it is not up to the standard.

It is hoped that growers will try a few plants of some of the newer roses, for, as has been mentioned in these notes before, this would work wonders for the advancement of the rose and its culture. PENN.

The American Seed Trade Association.

Word has just reached me that special round trip tourists rates have been made to Alexandria Bay, New York, from various parts of the country. Full particulars can be obtained by enquiring of the local ticket agents at all important points, and are contained in the "Summer Tourists Sheets."

Alexandria Bay is not on any railway but is reached by steamer from Clayton, New York, or, if preferred, by a longer lake trip from Charlotte, New York, Toronto or Kingston, Ontario, via the Richelieu & Ontario Navigation Co.'s elegant steamers.

Special excursion rates have also been made to conventions held at about the same time at Toronto and Watertown, New York, to which points rates may be found more favorable from some places. 1 1/2 fare for round trip.

Please be sure and make your arrangements to be present and I assure you of a good time. Many consider the "Thousand Islands" the finest piece of scenery in all America, and some who have traveled all over Europe say that there is nothing there that compares with it.

Matters of great importance to every seed dealer in America will be presented at the convention, and I am sure that you will afterwards look back to the three days spent there as among the most pleasant and profitable in your experience.

CHAS. N. PAGE, PRESIDENT.

The Crossmont House hotel rates are \$3.00 to \$4.50 per day, according to location and length of stay.

CUT FLOWERS AT WHOLESALE

Boston.
The Week's News.
The next meeting of the Gardeners and Florists' Club, which, by the way, is the last meeting till Fall and which will be held on the evening of the 20th inst., promises to be one of the most interesting of the season. M. H. Walsh, Woods Hole, will be present and talk on roses; and there will be numerous other attractions, including refreshments and music.

Preparations are going on for the club's picnic, which will be held during July. The club will hold an outing at the establishment of Wm. Sim, at Cliff-tondale, most likely on the 24th of this month.

The Board of Directors of the Massachusetts Horticultural Society, on Monday afternoon, visited the Arnold Arboretum and the home estate of Professor Sargent, at Brookline.

The peony show of the Massachusetts Horticultural Society has been postponed one week on account of the lateness of the season. It will now occur on Saturday, June 17.

The picnic of the two flower markets was very successfully held at Natick on Saturday last. The ball game between two picked teams of the markets was the chief attraction; the score stood 13 to 12 in favor of the Music Hall team.

W. E. Glidden, salesman for the J. A. Budlong & Son Co., and Ethel Corey, of Newtonville, were married June 1. The young couple have the best wishes of a host of friends throughout the city.

The Waban Rose Conservatories are planting a large lot of their new rose Wellesley. They have just begun to cut from their Summer house of American Beauty, which contains some very fine blooms.

In town, E. Koplitz, Chicago.
J. W. DUNCAN.

Cincinnati.

News Notes.
Business during the past week has held up well, and it is to be hoped the smart set, who are entertaining Miss Alice Roosevelt, will need something more than field daisies and other outdoor flowers before the social season has ended. School graduations and weddings are giving our retail stores something to do.

The gardeners in the Jabez Elliott Flower Market have all had a fine Spring business in the plant line, and most of them have cleaned out. Geraniums especially have sold well.

President Ben George informs me that it is the intention of George & Allan and D. Rusconi to join hands and entertain the florists of Cincinnati and vicinity to a big outdoor banquet with all the social features, which go with an affair of this kind, at a very early date, which will be announced later.

In August, the Hamilton County Agricultural Society will hold its annual fair at the Oakley race course. Special efforts are being put forth to make the floral display the attraction. The society itself will offer several hundred dollars in premiums, and outside subscriptions are being solicited to swell this amount. Unfortunately, the August dates of this show are the same as those of the S. A. F. O. H. Convention, which will keep several members of our national society from going to Washington.

J. B. O'Neil, of Chicago, representing Vaughan's Seed Store, was a caller this week. By the way, I see our worthy president of the S. A. F. O. H. was the recipient of many attentions during his recent visit to the Pacific Coast, and as he will visit Portland, which is claimed by many to be the paradise of America, he will possibly give the society an interesting talk on The Lewis and Clark Exposition and the future for the young and middle-aged man in the great Northwest.

That was a very fine picture of J. F. Sullivan, of Detroit, in one of your contemporaries. Does it mean something in the near future?

A. R. Johnston is the name of a new florist in Bellevue, Ky. He is a very bright and energetic young man, and we wish him success.

E. G. GILLETT.

News Items.

The cut flower trade is but moderate just now, with, however, some modest wedding orders lending good influence. Flowers are in fair supply for needs, with American Beauty roses and peonies in almost gluts. The weather has been a bit too wet of late to suit the plantmen, in its hindering order filling.

Archbishop Simon's visiting his diocese here on Sunday last, as representative envoy of the Pope of Rome, made occasion for the Polish constituents to call for flowers freely for his reception. The number of bunches turned out by Mrs. Schoenbut, on William street, was only limited to ability of the working force of the establishment, and made a pleasing clean-up of stock.

John G. Pickelman, of Washington street, seems to hold a perennial claim on the annual orders for fitting out the Northwest and Northland lake passenger steamers with their Summer trimmings of palms, baskets, etc., and is this week in the metropolis looking up needed material.

Rumor is frequent about the department stores here entering actively in the conducting of floral departments. It is now given out authoritatively that F. Albert, formerly of Rochester, N. Y., has arranged for the opening of such, with the Hengerer Company, on the basis of a percentage going to the store. The effort is to be a bit pretentious in its class, starting with a twenty-foot length space of counters.

Arthur Beyer, manager of Palmer's up-town store, has been confined to his home with rheumatism for the past two weeks.

S. J. Rebstock has returned from the South for the Summer, and is now handling the plant business for his sister, Rachel M. Rebstock.

Recent visitors included E. B. Sage, of Red Rock, Pa., who, though an owner of many oil wells, still gives active attention to running his range of rose houses, the output of which is commonly handled by J. H. Rebstock Company, of this city; also S. S. Skidelsky and J. T. McHutchison. VIDI.

Announcement

Realizing the fact that Steam and Hot Water Heating Apparatus can be installed at a much lower cost by eliminating a number of the usual though unnecessary expenses, W. H. JOHNSTON (formerly with Hitchings & Co.) begs to announce that he has formed a Company to furnish and install heating apparatus in greenhouses and other buildings.

We propose to do strictly first-class work at prices that will be of interest to you, and ask to be favored with your inquiries for anything in the heating line.

Estimates will be cheerfully furnished.

JOHNSTON HEATING CO.

CROWERS

YOU want to have the reputation for PERFECT BLOOMS. YOU want your TRADE TO INCREASE and your REPUTATION to spread. You can secure all this by using NICOTICIDE in your houses, either as a fumigant or spray. It will clean out the pests, no doubt of that, and the experience of years through many years shows it is SAFE. The cost per can is not so low as some other preparations, but the WORK DONE is so great—THAT'S THE POINT! Send along your address and we will see if we cannot make you one of our customers.

The name of OUR preparation is NICOTICIDE.

THE FLORISTS' EXCHANGE

G. F. Stone
Match Exp. Sta.
1906

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 24

NEW YORK, JUNE 17, 1905

One Dollar Per Year

NEPHROLEPIS PIERSONI ELEGANTISSIMA (The Tarrytown Fern)

We have a grand lot of this in 6-inch and 8-inch pots—fine specimens, for which we have a splendid demand. Retail florists find this one of the best selling plants ever handled, even at the present novelty prices. We can supply 6-inch plants at \$2.00 each, and 8-inch at \$3.00 each. Now is the time to obtain a supply of this in small plants and grow it on for retail trade. We have a splendid lot of very strong, heavy established plants in 2½-inch pots, which, if shifted at once, will make grand stock for 1906. Price, \$50.00 per 100. These are not light rooted runners from bench, but are strong established plants from 2½-inch pots.

- We also offer a lot of**
- PIERSON FERNS** In large sizes for immediate sale for summer decoration. 6-inch at 50c. each; 8-inch at \$1.00 each; 10-inch at \$1.50 to \$2.00 each. Larger specimens, \$3.00 each.
 - NEPHROLEPIS SCOTTII** Fine plants, 6-inch pots. \$1.00 each; 8-inch, \$2.00 each.
 - ADIANTUM CROWEANUM** Extra fine plants, 5-inch pots, extra fine for immediate use or for growing on, \$6.00 per dozen.
 - KENTIAS FOR DECORATING** We have a nice stock of large plants which have been grown in a very low temperature all winter, and consequently are hardy and splendid for decorating, as they will stand a good deal of knocking around. Florists who need large stock for decorating or for hotels, piazzas, etc., in exposed places will find this stock unusually satisfactory. We offer various sizes from \$6.00 to \$15.00 each, according to size.
 - EXTRA LARGE FICUS FOR DECORATING** We have some very large plants, grown in tubs, several plants in a tub, and in consequence are very well furnished, and very bushy, ranging in height from five to ten feet. Splendid for hotels, piazzas, etc., and useful for decorating. \$5.00 to \$10.00 each.
 - DRACAENA INDIVISA** Fine stock in 6-inch pots, the most useful size for florists' use. 50c. each.
 - ENGLISH IVY** Strong plants, 3½-inch pots, \$12.00 per 100.
 - GERANIUMS** Double General Grant, La Favorite, Duc de Montmart, Paunpeck, etc. strong plants, 3½-inch pots, \$8.00 per 100.
 - SALVIA SPLENDENS** (Scarlet Sage). Fine strong plants, \$4.00 per 100.
 - ANTIRRHINUM** (Snapdragon). Separate colors, \$6.00 per 100.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Plerrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

The American Seed Trade Association meets next week, June 20-22, at Alexandria Bay, N. Y. A large attendance is expected.

A circular of the Department of Agriculture contains the information that the hair worm or "cabbage snake" has been found, after experiments, to be non-poisonous.

NEWPORT, R. I.—Beginning June 12 all the seedsmen, except the George A. Weaver Company, ceased working evenings, and for the present will observe the following store hours: 6.30 a. m. to 6.30 p. m., except Friday and Saturday, when every line of business here keeps open the year around till 9 and 10 o'clock respectively.

ROCKFORD, ILL.—A local newspaper, in a recent issue, contained the following item: "Florist H. W. Buckbee announces he has purchased a wild horse from a Mexican horseman, and the animal is expected to arrive in this city in a few days.

SHEBOYGAN, WIS.—The John H. Allan Seed Company report June 12 as follows: "Regarding present conditions and prospect for pea crop, seeding generally was accomplished under favorable conditions, and although the rainfall in this portion of Wisconsin during the month of May was the heaviest for the last twelve or fourteen years, it was distributed throughout the month, and with cool weather no damage was done until the 4th to 6th of June, when the heaviest rainfall for many years made raging torrents of all streams, carrying away culverts, dams and bridges, and causing great damage and loss.

Clover Seed in the United Kingdom.

The United Kingdom is the largest single market of American clover seed, absorbing about one-third of the total exports. Of this quantity the largest portion is taken in England, but there is a good market for the seed in Belfast, from which point the farmers of northern Ireland are supplied.

IMPORTANT

We are growing 500,000 Roses of the best leading varieties of Hybrid Perpetuals, Hybrid Teas and Climbers in 2 inch pots. Prices low if orders are given now for next Spring delivery.

Mention the Florists' Exchange when writing.

dier, and is thought to produce the best plant. Chilean seed is regarded by the more advanced farmers as equal to the English, but it contains seeds of dock and dodder. The dodder does not germinate here, but the dock does. Canadian seed is held in high esteem, but the supply is generally small. In fact, Canada imports largely from the United States. German seed is regarded as inferior to English, but is in demand when the price is low. The ordinary French seed is the poorest of all, although some fine qualities are often available. In the estimation of British farmers, clover seed from the United States is better than that from France, but inferior to others. New Zealand seed ranks high, but the supply is small. The American seed is invariably so clean that it is highly esteemed, although small in size, and it finds a ready market.

As matters stand at present, the United States export trade in clover seed has most to fear in the British market from the Chilean product. The farmers of Chile, alive to the profitable nature of clover-seed culture, have ordered special cleaning machinery, constructed in Great Britain, in the hope of getting rid of dock seed, and thus overcoming the main objection to their product. The Chilean exports are steadily growing in volume. A few years ago Great Britain took only 3,000 bags, but this increased to about 12,000 bags in 1903, and 17,000 bags in 1904.

A Belfast seed merchant who has imported large quantities of clover seed, states that American shippers should be careful to observe the "even-weight" system. Many simply fill the bags compactly without weighing. It would be far more satisfactory to consignees in the United Kingdom were all the exporters to follow the example of a Chicago company, which puts, by actual weight, 168 pounds in each bag. This seed is sold here by the hundredweight of 112 pounds, and each bag therefore contains 1½ hundredweight.

The same authority reminds American shippers of clover seed that, while all may be graded as "prime," separate lots will differ in color and in size of grain. British importers, as a rule, buy by sample. It is complained that American shippers are not careful to make shipments and samples agree. For example, some farmers have a preference for a purple seed, while others prefer a lighter color. Knowing these preferences, the importer buys to meet them, and if the shipment does not agree in color or size of grain with sample, he has rightful cause to find fault, even though the shipment be entirely equal in quality to the sample.

This gentleman also expresses the opinion that American dealers do not pay enough attention to the foreign trade, but think too much of the home market. This is all very well when the supply is small and the home demand large, but not when the conditions are reversed.

There must be a systematic and energetic effort to promote the export business or Chilean seed will supplant the American in the British markets. This is too serious a matter for American dealers to pass over lightly. The rapid increase of Chilean exports proves this conclusively. British farmers say that American seed is not as hardy as English and Chilean, but this is probably a prejudice. A leading American shipper made a number of experiments which convinced many British dealers that American seed is quite as hardy as the English, but farmers here still adhere to their old belief.—S. S. Knabenshue, Consul, Belfast, Ireland, in Consular Report.

Continental Seed Report.

We are now very busy with the sowing of annual varieties and transplanting of bi-annual varieties of seeds. Leeks, onions, radishes and lettuces were sown some time ago under very good conditions, and most of them are doing well now. Only those kinds of radishes which were sown a bit late have suffered on account of heavy rains which we had lately, and made the soil very rough and hard.

I may also mention the difficulty which we had in placing our contracts for radishes this season. The big prices obtained last season in growing more encouraged our growers in growing more mangolds this year than usual, so that radishes have been somewhat set aside.

If it was not for the large quantity of radish seeds carried over from these last years by most firms, no doubt such a thing would have affected prices for next season.

Radishes and lettuces are now being transplanted under most favorable weather conditions.

Bi-annual plants have suffered a little from the very cold weather we had for a few days last winter, and we lately feared that cabbages, turnips, swedes, etc., would be but a poor crop. However, the conditions of these have improved these last few weeks, so that a better crop is expected.

A great point with us is the tremendous difficulty we again find in growing dwarf and runner beans. I have already mentioned in this paper that on account of the bad seasons we had these last years for beans, growers will not touch them any more at any price. Well, this year we find the same evil again, and I believe I am not wrong in saying that beans will fetch high prices next season again. Butter beans especially we find impossible to grow, and as these varieties were already very dear last year, no doubt they will stand very high again next season. As I already said in my last report, a great cause of anxiety for the seed growers and merchants will be the onions and leeks. These varieties reached last year such a high price as had not been heard of for years. Now on account of big prices also obtained by the dry onions, a very few have been put in earth for seeds; under such circumstances, our friends will easily realize what the market will be next season.

To give you an idea of prices, I lately saw here a big grower of onion seeds, who assured me he had lately refused a large order of White Spanish onion seeds at the price of 3s. per pound for 1905 crop.

Our friends will have to look sharp at the stocks of onions offered now at low prices, as no doubt they are mostly old seeds. Last year's seeds were very good growth, but it was shocking to see the poor stocks sent out by many a firm, who took a large profit in mixing up the new seeds with the tremendous quantity of old onion seeds left over for a few years. I feel certain the same trick will be repeated again next season, but on a smaller scale, as most of the old stocks were sold out last season.

Mangolds, namely, half sugar varieties, sold very well last season; up to present time prospects for next crop are not bad, and prices might fall down very much on account of the tremendous acreage planted.

In my next report I hope to be able to give an idea of the prospect of harvest, 1905. Let us hope it will be a pretty good one.—French Seeds, in Horticultural Advertiser.

May 25, 1905.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

FRUIT PLANTS.—By a recent ruling of the Board of General Appraisers, certain plants, consisting of *Carissa carandas* and *Dillenia speciosa*, were held to be free of duty under paragraph 560, tariff act of 1897, as tropical or semi-tropical fruit plants for purposes of propagation or cultivation.

SCIENTIFIC HORTICULTURE.—I have long wished for a movement toward the more scientific propagation of fruit trees, and let me suggest to my good horticultural friends that money put into the scientific growing of nursery trees would bring far greater results than money used in the introduction of new species and varieties. In fact, more money has been lost in the planting of poor or non-typical trees of standard varieties than has been squandered in planting poor varieties, or unfit kinds for the soil and climate. I am aware of such examples as this on the other hand; one orchard under my observation was planted to lemons, budded over to grape fruit, then to Malta Blood oranges, and at last to Valencia Lates, and is now bearing well to that variety. But there are thousands of orchards with individual trees that do not pay for their irrigation alone. What makes one doubly sure that we need more common-sense propagation of nursery trees is the fact that we find occasionally an orchard in which every tree is doing its full part in bearing uniform crops of typical fruit.—Correspondent Los Angeles (Cal.) Times.

Destroying Currant Worms.

This is the time to watch the currant and gooseberry bushes for the currant worm, which makes its appearance when the fruit is about half formed, about the first week of June with us.

Powdered hellebore dusted over the leaves, from an old fashioned pepper box or a similar contrivance, which can be had from any tin store, is a sure thing to preserve the leaves. Almost the first bite of a leaf that has been dusted ends the life of the worm, and I have often watched them eat and have seen them fall. One dusting will kill every worm on a bush, if a rain does not wash off the dust in a day or so. Hellebore is cheap, and a few cents will buy enough for a good row of bushes and the bushes may safely be dusted with it even when fruit is almost ripe, as it loses its poisonous properties after being exposed a short time to the air. Its cost is so small that it seems hardly necessary to consider a way to save expenses on it, but if desired it can be mixed with flour and be effective enough for all purposes.

Privets from Cuttings.

When the demand for the California privet first sprung up, for its use for hedging, there was a time when it could not be propagated fast enough from hard wood cuttings, and here and there a few parties who thought of rooting them from green wood cuttings in Summer in a greenhouse realized a good profit. The demand for this shrub continues unabated. More plants are required yearly and more and more are produced. Hard wood cuttings set out in Spring is still the method employed to raise the greater number of plants required, but there may be those who will be glad to have their attention called to the green wood cuttings. It is now time to make such cuttings, using the half-ripened wood for the purpose. Practically every one will root, just as is the case with those of hard wood.

While on the subject of soft wood cuttings let me mention that there are many other shrubs now with wood sufficiently mature to make cuttings from. In many cases cuttings of them, rooted now and potted on as they require it, will be good sized plants by Fall, ready for selling in many cases.

Red Birch.

As the seeds of the red birch are ripe now and should be sown at once, when there will be nice plants result by Fall, it is opportune to call attention to this tree. It is the one which grows along river banks, and which is noticeable because of its shaggy red bark. It is the red bark which gives it its character, and makes appropriate its name—red birch. In one way the name is misleading. More than one nurseryman's customers have bought this tree, believing from its name they were getting a red-leaved tree. There are so many blood-leaved trees called red that the mistake is excusable. Botanically, it is *Betula rubra*; some works have it *B. nigra*. It is abundant along the river and creek banks in many parts of Pennsylvania, and beautifies many streams by its branches bending over them and by its shaggy red bark.

It is the only birch of the many native sorts which ripens its seed in Spring. All the others perfect theirs in late Summer. As stated, seeds of the red birch sown as soon as ripe, give nice plants the same season, as do the early ripening elms and maples.

FLOWERS OF CORNUS KOUSA (JAPANESE DOGWOOD)

Photo by John F. Johnston

Magnolia Varieties.

Reference has been made before in this department to the similarity in color of many of the magnolias sold under the names of *Soulangeana*, *speciosa*, *Alexandrina* and others. And to add to this is the fact that, what is one nurseryman's *speciosa* is another one's *Soulangeana*. The fact is that there is no well defined type of any of these excepting the old original *Soulangeana*. This magnolia itself is a hybrid, and when raised from seeds, as it often is, it cannot be depended on to come exactly as it was, and in this way we get all manner of light variations in color and in shape and size of flower. So far as representatives of the various sorts mentioned have come under my notice, there has been no marked difference; no difference calling for another name than *M. Soulangeana*. On a gentleman's grounds near here there is a tree of large size, which must have been planted many years ago, the flowers of which are almost white; so nearly are they without color that it could be considered one of the Chinese white at a little distance. And there are other large trees about of a distinct color from *M. Soulangeana*, for which they were planted.

As mentioned above, the whole of the named magnolias that have come before me of this type could be passed as *Soulangeana*, there being nothing of moment to merit a separate naming. The large tree, nearly white, as aforesaid, would make a distinct one, and one worth propagating.

As magnolias flower in the course of a few years, the raising of seedlings in the hope of getting new sorts is most interesting. *M. Soulangeana* growing near a Lenni should give seeds of value for the purpose. If a *Soulangeana* in flower but a later bloomer, to escape the late frosts, could be obtained, it would be a prize.

Handsome Flowered Thorns.

Despite a too common opinion that hawthorns do not succeed well here, wherever planted, the results prove just the opposite, and now that they are in bloom there are beautiful sights before those who possess the bushes. It is with this thorn and its varieties, much as it is with the *laburnum*. In its native home it does not meet with the heat and Summer dryness it does here. Given coolness and moisture, or as nearly as possible, there is no trouble in growing hawthorns. Some of the best of those in these parts are found planted in partly shaded places, where it is cooler both overhead and at the roots than it is in open places. There is on all establishments a situation more shaded than common, and this will be the spot for a hawthorn.

Hawthorns of the pink and the scarlet type are preferred for display, and they are, indeed, beautiful. The single and the double-flowered pink, the scarlet in both the common and the Paul's, are considered most handsome. For old association sake, as well as for its pure white flowers, the common wild hawthorn of Europe, *Crataegus oxyacantha*, is valued. The *oxyacantha*, as well as all the species, are increased by seeds and by cuttings, but the varietal forms must be budded. Fortunately, they bud readily, and there is no trouble in getting a supply of them. It has been customary to use the common *C. oxyacantha* stock for all its varieties, but as in some situations it has been subject to the attacks of a borer, the use of the stocks of our native sorts instead has been suggested. These are borer proof, but whether the buds of *C. oxyacantha* varieties would be as well suited on those stocks remains to be seen. In all probability, they would. JOSEPH MEEHAN.

Japanese Dogwood (*Cornus Kousa*).

If for no other reason than that this small tree flowers during the latter part of June, when shrubs in bloom are getting scarce, it should be extensively planted—much more so than it is. The chief reason, however, for its recommendation lies in its great beauty when in blossom. *Cornus kousa* is the Japanese representative of our well-known native dogwood (*C. florida*), and a good companion it forms. Much of the beauty of either would probably be lost if they blossomed at the same time, but the Japanese dogwood resigns the position of priority to our native species, and expands its floral envelopes soon after the other has ceased to flower, so that no rivalry exists.

What are usually termed the flowers are botanically involucre. The same remark likewise applies to *C. florida* and some others. They are produced in large numbers, of a creamy white color, with four bracts, which are longer and sharper pointed than those of *C. florida*. Blossoming when the leaves are fully expanded, the beauty of this tree is considerably enhanced, as the flowers show up vividly in their setting of lustrous green foliage.

It is quite hardy as far north as Massachusetts, and it seems strange that a plant of such beauty should be so seldom seen in cultivation. This plant is sometimes known under the name of *Ben-*

thamia japonica.

JOHN F. JOHNSTON.

FRUIT UNDER GLASS.

Grapes—The Late House.

Probably after the early graperies the next most important is the late house. Take, for instance, early and midseason fruit; no matter how good the finish is, it is a difficult matter to keep the fruit hanging in good condition any great length of time after it is thoroughly ripe. This can easily be understood when we consider the extreme temperatures to be contended with. I often look back and picture to myself the magnificent collections of grapes gotten together on the other side of the Atlantic, particularly at the September exhibitions. I think one of the finest displays of grapes I ever had the pleasure of witnessing was in Edinburgh, Scotland. But in their moderate climate there, fruit can be kept in fine condition a long time after being ripe; in fact, it is their midseason fruit that they depend on to a great degree for the exhibition boards in the Fall. Here, with us, our late fruit will be making rapid headway now.

There are two or three things that might be considered at this time. Of course, in this climate, late grapes are produced with little fire heat—practically none after about the first week in June, as a rule, until Fall. I have found, after dropping the fires, one thing must be watched closely; that is, mildew. If that once gets into a graperie it will spread very rapidly, especially where the fruit houses are any way low. Also, in some sections, mildew is more prevalent than in others. When one anticipates being troubled with mildew, it is best to apply a remedy before the evil starts. I have found placing a few tins, say a foot square, along the pipes, and keeping a little sulphur on them, is a good preventive against this disease. In a week or ten days the sulphur will have lost its strength somewhat; replace it afresh. This is a simple remedy, but a good one, against mildew.

Grapes that are intended to hang long in the Fall should be fairly well thinned; otherwise the moisture is apt to lodge on them and decay will follow. As a rule, the late graperie border will need lots of water, but having air on both top and bottom during hot weather is the cause of this.

Assuming the border is full of roots, with a heavy crop on, feeding will be in order. Cow manure made into a liquid is good; in fact, one of the best fertilizers with which to water the border. However, I do not approve of using that material wholly; a change of food is beneficial. Thomson's vine manure or ichthemic guano, applied now and then, will afford a change. There is something about ichthemic guano that the plants like. I never saw roots travel after anything more rapidly than they do after this fertilizer. A top dressing of this guano means a network of roots to the surface in a week or ten days after being applied, a proof that there is something in this fertilizer the plants or vines are after. One more thing may be mentioned in regard to the late graperie: When there is no fire heat, I am a firm believer in leaving on a crack of air. Never close the ventilators tight when there is no artificial heat on, or there will be too much condensation.

WM. TURNER.

ROSE STOCK

GRAFTED KILLARNEY

I had ordered material for the erection of several new rose houses this Spring. Recent unavoidable events have caused me to change my plans. This leaves me with several thousand very desirable grafted roses on hand which I now offer for sale at a bargain. This lot includes **KILLARNEY, METEOR** and **BRIDESMAID** in 3 in. pots, first-class stock, intended for my own use. These roses are ready for immediate planting, and of healthy and vigorous growth. Also ready for immediate shipment, grafted **Bride, Chatenay, Ivory, Golden Gate, La Detroit, Testout** and **Morgan**. I have in own-root stock **American Beauty, Chatenay, Bridesmaid, Bride, Meteor, Golden Gate, Ivory** and **Uncle John**. Several thousand home-grown, dormant Killarney to offer this Fall.

American Association of Nurserymen.

The thirtieth annual meeting of the American Association of Nurserymen was held at West Baden, Ind., June 14, 15 and 16. About 200 members attended the opening session. President E. W. Kirkpatrick, in his annual address, urged the necessity for harmonious action and a spirit of fraternity among nurserymen, and spoke in terms of praise of editors and reporters who are doing much to upbuild the great agriculture of the country, saying: "We ought to encourage every man that has anything to do with any kind of journal that is intended to forward our work; we ought to encourage them with our patronage and by responding to their calls upon us, and I think we will do so in the future more than we have in the past."

The treasurer's report showed a balance on hand of over \$2,500.

A motion was passed that a committee be appointed to confer with the American Seed Trade Association regarding revision of postal laws.

Harry L. Bird, of Michigan, read a paper on "The Cost of a Tree," showing methods by which such cost can be arrived at, taking all items into consideration, from cultivation of ground and planting to final carting away. In discussion, several members advocated the adoption of such a system. Charles Maloy read a paper on "Low Prices of Ornamental Stock." Discussion was participated in by Mr. Kerr, of Texas, urging associated effort to raise the price of nursery stock; also by Professor John Craig, of Cornell, who stated it was first necessary to arrive at cost of raising stock before price could be reasonably fixed. G. L. Taber, of Florida, contributed a paper on "Best Methods of Improving Standards in Trees and Fruits," saying that while theoretically a range of specifications might be adopted applying to each grade, practical results would show different interpretations by individuals, and each grower should set his own standard as high as possible.

T. V. Munson, of Texas, presented a paper on grape growing, illustrating his methods of trellising vines. Wednesday evening was devoted to stereopticon lectures by J. Horace McFarland on "A Tree Garden to Last a Thousand Years," and by Dr. George T. Moore, United States Department of Agriculture, on "Soil Inoculation." E. J. West Baden, Ind.

GOVERNMENT STARTS NURSERIES.—As a part of its scientific system for reclaiming the vast arid regions of the West, the United States Bureau of Forestry has recently started five gigantic nurseries for the propagation of trees suitable, principally, to the barren mountain sides surrounding those regions. Thousands of small trees are being planted in these nurseries, later to be transplanted in the more arid regions, where it is hoped through their agency to coax rain where rain is almost unknown. By this system it is hoped also to relieve the stress of constant cutting in the more densely wooded districts of the country, where progress has already wiped out many of the finer trees and reduced them into the finished product for the market. Sooner or later what is now wooded land will become an arid region unless scientific control steps in and keeps enough timber standing to attract rain.—Chicago Daily News.

Uses of Hardy Shrubs for Forcing.

(Concluded from page 761.)

Among the prunuses that are worthy of individual note are *Prunus triloba flora plena* and *Prunus pseudo-cerasus*. The former is certainly one of the most handsome of the plum section, and much more distinct than its near ally, *P. Amygdalus nanus*; its large double flowers are produced so profusely that hardly a leaf is discernible. It should only be pruned immediately after flowering, the growth resulting from this being allowed to develop, as this is the wood that will produce flowers the following season. *P. pseudo-cerasus* is a glorious cherry, indeed one of the most beautiful introductions we have had from Japan, the land of flowers. The varieties Anthony Waterer and J. H. Veitch are the best, and flower very freely when at quite a small size, which is an important point.

The lilac is unquestionably one of the most popular of shrubs for forcing and may be had in bloom early in January, its fragrant blossoms being welcome from then until they appear naturally and are sold on the street for 10c. a bunch.

The spiraeas are an extensive family and a selection for the florist is easily made; the most popular, I think, are *S. confusa*, *S. arguta*, *S. Van Houttei*, and *S. prunifolia*, fl. pl., all bearing graceful racemes of white flowers admirably suited for wreath or bouquet work.

Another shrub which I think, the florist could make use of is *Forsythia suspensa*. It blooms early in the year anyhow, and, subjected to a little heat, could be had much earlier. When in the form of a standard it makes a striking picture, with its lateral shoots hanging around the main stem and forming quite a fountain of yellow flowers.

The kerrias, in both the single and double forms, are well worth including, as they take up so little room. A plant which makes a suitable companion for the foregoing, and which could be well called the "white kerria," is *Rhodotyus kerrioides*.

There are two species of chionanthus that are highly commendable for gentle forcing, viz., the North American species *virginica*, and the Japanese representative *retusus*. The fringe trees, as they are called, are

very charming when in pots. The American species is, I think, the better of the two.

The presence of the following two hardy heaths in winter would attract attention, especially among the Scotch fraternity; though they will hardly compete with the Cape heaths. *Erica-carnea* and *E. mediterranea* make pretty subjects for pot work. When lifted from the open ground they should be potted very firm and well watered, placing them in a cool temperature, as they require little forcing to get them to flower in February and March.

Among the things that are best grown permanently in pots the following would prove useful in March and April, viz.: *Magnollas stellata* and *purpurea*, *Loropetalum chinense*, a plant bearing resemblance to the fringe tree, but belonging to the hamamelis family. Nice medium-sized plants of these brought gradually by gentle heat into bloom would surely make attractive features. Some of the tree peonies, *Moutan* and the many varieties that have appeared in recent years, would readily secure admirers and buyers.

Some of the little Japanese maples brought along in a little heat would be of great ornamental value, with their beautiful and graceful foliage, giving with some of the best of stove plants. The red cut-leaf maple, *Acer polymorphum dissectum atropurpureum* and *dissectum*, green, are truly a worthy pair.

FLOWERING BRANCH OF XANTHOCERAS SORBIFLORA

Their Use in Public Conservatories.

In conclusion, I would like to comment on the worthy use of hardy shrubs for public conservatories. Here, at least, there need be no restriction as to what will give the greatest delight to the public taste. During my stay at the Botanic Gardens, Kew, I had the opportunity of seeing what could be done in this direction, and I can here say that the display made by the many forced things in the shrub line drew the masses from the metropolis in no uncertain way, and year by year it was looked forward to with expectation. The same thing might be said of this city's public conservatories. But to speak frankly, in order that the public fully realize what can be done in this respect, the ratio of excellence will need to be raised higher in every sense, for although it may be a color scheme to harmony, even the uninitiated tire of seeing dirty green pots and plants that do not do justice to the species. If horticulture is anything, it is a moral educator, and if the public is to gain any higher, purer motives from this source, let there be seen the fundamental principle—cleanliness—for it is often quoted this is next to godliness. What an inducement it would be to the public to invest a nickel on a car fare to pay frequent visits to the city's conservatory while Winter has still a firm hold on the outside world if groups of the aforesaid plants were on view!

Of late years, the various forms of clematis, especially the Jackmanni hybrids, have been grown largely under glass for early flowering, not only in the shape of large specimens but plants in only 5-inch pots bearing several large showy flowers. A group of these in March and April would certainly speak for themselves, while magnolias and tree peonies, pyruses and prunuses, rhododendrons and wistarias would form scenes of loveliness which would call forth admiration and praise from all, and would do much to raise horticulture in the eyes of the masses and infuse a sense of gratitude for the many charming creations the floral world dispenses in the hand of the horticulturist whose position is to work with and aid nature. The art itself is nature.

AMONG THE GROWERS.

Henry A. Dreer, Inc., Nurseries, Riverton, N. J.

There are always a great many things to interest the visitor to this large establishment, and at this season of the year, when everything outside is in full growth, one can spend a whole day and go away well repaid. The perennial department is very interesting at this time, the most noticeable being the portion set apart for trials. Here are seen beds containing short rows of new things on trial, and rows of standard sorts, all arranged in species, with many varieties of that species growing side by side. Thus one is able to select those most desirable and make a comparison, which cannot be done so well in the field.

In full bloom just now are *Lychnis chalcedonica*, *Delphinium belladonna*, *Dianthus Napoleon III.*, many varieties of *œnotheras*; also a good collection of hardy pinks. The planting out of perennials is still going on. We noticed blocks of 110,000 delphiniums in several varieties, a block of 150,000 phlox in all the leading kinds, and many other species. Following the custom of this firm, this stock will all be lifted and potted in the Fall—a system which has met with great success and found much favor with planters. The increase of this hardy plant department has been so great, that recently a 10-acre additional piece of ground had to be acquired. This is planted with peonies, hollyhocks and hardy roses, and now, to get more room, another piece of woodland is being broken up.

Under glass now the order is to move plants and effect the general Summer clean-up. The range of short-span houses, that were filled with roses in Spring, now contain a grand lot of kentias. First we see a block of 1,800 *K. Fosteriana* in 7-inch tubs, three plants to a tub. These are a grand lot, the plants ranging 30 inches and upward in height, in fine condition—a grand assortment for decorative work. Next to these is a very large block of *K. Belmoreana*, specimen plants in 7 and 8-inch pots. It would indeed be difficult to duplicate this lot. Then come fine larger plants, both single and made up. All the smaller commercial sizes are in splendid condition; in fact, the palms never before showed to better advantage. Of the quantity, one can form an idea when is seen a block of 57,000 cocos just potted up, small kentias in even larger blocks, and seed just sprouting in pots and flats all around.

In the fern departments the small plants are just now being put out in frames for the Summer. These are to be seen by the millions. A very large stock of *Nephrolepis Scottii* is being worked up, one bench alone having produced 38,000 runners since January. Of this fern there is a block now in 6-inch pots that will make splendid plants in two months. The new *Nephrolepis Barrowsii* is well thought of, and a good stock of it is being worked up for Fall trade.

The aquatic department has done a wonderful business this season: in fact, the tender varieties are yet being shipped.

Orders are still so numerous that the packing benches are filled every day with a large variety of stock. DAVID RUST.

THE NETHERLANDS SOCIETY OF HORTICULTURE AND BOTANY.—At the May meeting of this society, held at Amsterdam, Holland, the following awards were made: First-class certificate to *Iris X Juno*, a new plant obtained from seed by P. W. Voet, horticulturist, Overveen. Flowers gray, tinted violet, veined with brownish purple; excellent form. *Iris X Pollux*, seedling from the same exhibitor; flowers violet, with a mixture of gray and black, of excellent form; very floriferous. *Cineraria hybrida nana alba*, from Sluis & Groot, seedsmen, Enkhuizen; flowers pure white, of good substance, plant dwarf and compact. *Cineraria hybrida* (cactus formed), from the same house; flowers of divers colors, petals narrow and prettily curled; plant dwarf and decorative. *Rhododendron hybridum Aalsmeers Roem*, a new plant, shown by M. K. Maarse, Dzn. Jr., horticulturist, Aalsmeer; flowers deep rose; very floriferous, and very hardy. *Trollius Fire Globe*, a new plant obtained from seed by M. H. J. de Lang, horticulturist, Oegstgeest. *Lælia purpurata maxima*, exhibited by M. J. G. Ballego, horticulturist, Leyden; an excellent variety, with flowers larger than those of the type.

A silver gilt medal was awarded to Messrs. Sluis & Groot for a collection of *Cineraria hybrida* of various diverse forms. Honorable mention to M. J. G. Ballego for a collection of flowers of *Odontoglossum crispum*. A. J. VAN LAREN, Secretary.

Flowering Branch of Xanthoceras Sorbifolia.

Without a doubt this is one of the most charming of flowering shrubs, oftentimes during May plants being literally covered with a wealth of delicate white blossoms, on short, slender stalks, arranged in racemes, and with each petal bearing at its base a blotch of deep yellowish red. The leaves are odd or alternate pinnate.

Occasional reference has been made to this rare Chinese shrub in the columns of *The Florists' Exchange* (see issue of March 26, 1904), but being such a beautiful shrub when in flower, it ought to receive much more attention than it does.

PLANT FOR NAME, H. C.—This is the common laburnum, for notes concerning which see "Situation for the Laburnum" in the Nursery Department, June 3 issue.

(184) How many feet of 2-inch pipe will it require to heat a mushroom house 35 feet long, 11 feet wide and 10½ feet high, surrounded by 1 foot brick wall? I prefer to use hot water. Six shelves each 4 feet wide and 1 foot deep will be the space required for the crop. Can you recommend a furnace that would do well for this house? Penna. C. H. A.

—I would advise a hot-water system. Put in nine lines of 2-inch pipe on the 35-foot run. These can be divided into three coils of three pipes each, each coil to be so arranged that there will be one flow and two returns. Place a full opening 2-inch gate valve on each flow to control the temperature. Allow the pipes a good rise, say, at least, in this case, of one inch in 8 feet. Get any good reliable greenhouse boiler of 300 feet 4-inch pipe capacity, and easy firing, and economy of fuel will result. All the various boiler-makers advertising in The Florists' Exchange make boilers that will suit your purpose. U. G. SCOLLAY.

Storing Cut Fern Fronds.

(185) Would fancy and dagger ferns, gathered during July and August, keep well in cold storage till Midwinter? W. H. H.

—The ferns would be too green in July or August for picking and putting in cold storage; better wait until later in the Fall before gathering them.

Fertilizer for Heliotrope.

(186) What kind of fertilizer is good for heliotrope? The soil is rather poor. Are Canada hard wood ashes good? N. P.

—Pulverized sheep manure will be preferable to hard-wood ashes. Make a weak liquid from the manure and apply twice a week, or put a mulch of the manure on the soil.

Snapdragons.

(187) Kindly give the proper temperature day and night for snapdragons in Winter. C. M. W.

—The Winter temperature for snapdragons, presuming they are in growth, should range from 50 at night to 10 or 12 degrees higher through the day.

Please tell me how to grow antirrhinum (snapdragon). They were started March 25 and pricked out once; then planted outside. The plants are doing well and are from 5 to 7 inches high. I should like to have them for Thanksgiving or Christmas. When should I head back the plants in order to have them come along just right, and should I bench them now? The house in which I will put them is run at from 58 to 68 or 70 degrees in the Fall or Winter. H. P.

—This subject has been most thoroughly covered in these columns by Mr. Timme. Below we give an extract from one of his letters which will no doubt afford all the desired information:

"The plants will attain quite a size during the Summer, but the office of this first growth is only to fully develop the plant and prepare it for a vigorous second growth, which starts in the form of very stout shoots from the base of the stem, or, rather, the crown of the roots. It is this second growth which we depend upon as the bringer of money in the growing of snapdragons for profit, and only plants pretty far advanced, as these will be at the end of Summer, send up from their base the right kind of sturdy shoots which, under glass, will develop into those superb spikes of bright-hued flowers on strong stems, 5 and 6 feet long. If they are wanted as early as

Christmas, the plants must be benched early in August. Any fairly good soil in the bench will do. They should be planted rather deep, at distances of 12 or 14 inches each way. When the second, a much stronger growth, is about 6 inches high, the first, or Summer growth, is cut away clean, as are also all straggling side branches and undergrowth appearing later.

"As the plants advance in their growth plenty of water must be given, and the temperature for this holiday crop should not sink much below that which was provided by nature in September and October, when the start was made. Some of the now rapidly growing stems may need stakes; all of them must be kept growing as straight as poplars. This Christmas crop, although fine and good property, indeed, will, in point of quality, be surpassed by snapdragons kept in frames until late in the Fall, then benched and kept until February in a temperature just above freezing point, after which a gradual rise up to not higher than 50 degrees is given, by which course the warmer days of Spring will be reached and further firing discontinued. As the days become warmer, frequent watering and ample ventilation will be necessary."

Remedy for Rose Bugs.

(188) Will you kindly advise me the best remedy for the rose bugs. This year they came by the hundreds, and in a few days ate all the roses and all my grapes. A. A. A.

—If this is the true rose bug the only remedy that can be relied upon to do the business is to collect the bugs every day and destroy them. A pail of hot water is a handy place in which to drop them after they are gathered from the bushes.

Mignonette for Christmas.

(189) How early should mignonette seed be sown to have the plants in bloom at Christmas? What soil and temperature should be afforded? BEGINNER.

—Sow the mignonette seed early in July and keep the house as cool as possible all Summer. The best soil is a well enriched, heavy loam.

Lilacs During Summer.

(190) I have forcing lilac (Charles X. and Marie Legraye) left over from last Easter. What treatment do they require during the Summer months? BEGINNER.

—Plant the lilacs outdoors, and see that they are well supplied with water during dry weather. They should have two years' growth outdoors (three years is better) before being forced again.

The Boston Globe of June 11, 1905, contains an article on the Waban Conservatories, Natick, Mass., presided over by President Alexander Montgomery of the American Rose Society. At this establishment there are upward of 30 houses devoted to rose-growing, three of them being 700 feet in length. One of the latter houses, 40 feet wide, is given up to the cultivation of American Beauty.

Asked if there was a probability of the rose ever being supplanted in popular favor, Mr. Montgomery said: "No; there is no danger of that. The carnation has forged its way ahead wonderfully in the last few years, but nothing can ever displace the rose permanently. Of course, new varieties, shades and colors are attractive to flower buyers, and we may have rested too long satisfied with existing sorts, but the American hybridizer is now at work to produce something applicable to the wants of the American people in both outdoor and forcing varieties.

"There is a great deal more being done in this direction than ever before and there are to-day in America tens of thousands of seedlings from which great results are anticipated. New varieties, with the good or improved qualities of the old, are a great help to the business.

"When fault is found with the keeping qualities of a rose it is generally owing to the growing, cooling or the treatment it receives after reaching the hands of the retail customer.

"Many roses if properly treated will outlast carnations, but care should be taken to keep them cool, give them fresh water and to cut off the ends of the stems.

"There may be a limit to the market for roses, but there seems no danger of our reaching it, as the sale and use of flowers is so constantly on the increase. The sales from our houses have increased wonderfully, until now we market annually in excess of one million and a half roses.

"The growing of them is becoming much more of a science than formerly, and I might add that the successful rose grower to-day should take chemistry as an important foundation stone in his curriculum."

ROSES

FOR IMMEDIATE EFFECT

Haven't you in your trade a call for large, strong Rose plants, such as will give immediate results? We have prepared for June planting a stock of strong, two-year-old plants, all on own roots, except where noted, and while they last will close them out at the extremely low price of

\$15.00 per 100; 25 or more at 100 rates. No charge for packing

These Roses can be placed in the open ground during this month and will give a profusion of flowers throughout the entire growing season. They are worth just twice as much as we are asking for them, and they can be depended upon to produce the goods. They are well foliaged, have strong working roots and are now in 4 in. and 5 in. pots. The collection includes a wide range of varieties and colors, Teas and Hybrid Teas, such as Meteor, Henry M. Stanley, Kaiserin Augusta Victoria, Marie Guillot, White Maman Cochet, Coquette de Lyon, Pink Soupert, Clothilde Soupert, Golden Gate, White Golden Gate, The Queen, Ma Fillette, Helena Gambler, Yellow Soupert, Mme. Jules Grolez, Striped La France, Yellow La France, Bridesmaid, The Bride, Mme. Welche, Duchesse of Albany, Mme. Abel Chateau, Marie Lambert.

CLIMBERS—Crimson Rambler, Yellow Rambler, Climbing Clothilde Soupert and Cherokee.

HYBRID PERPETUALS—Coquette des Blanches, Perle des Blanches, Perfection des Blanches, Mme. Gabriel Luizet, Merveille de Lyon.
Margaret Dickson, budded, 5 inch pot plants \$25.00 per 100
Soleil d'Or, budded, 5 inch pot plants, \$25.00 per 100.

BABY RAMBLER Ever-blooming Dwarf Crimson Rambler. A gem among Roses. Always in bloom. Every florist in the land should have it. 2 1/2 inch pot plants, now ready for delivery, \$2.50 per dozen; \$15.00 per 100; \$125.00 per 1000.

CLUB AND SOCIETY DOINGS

KENTUCKY SOCIETY OF FLORISTS.—The June meeting was held at the store of Wm. Walker, with a goodly attendance of members. While only routine business was transacted, a lively interest was manifested. The July meeting will be in the nature of an outing, and through the courtesy of Anders Rasmussen will be held at his place in New Albany, Ind. Our members will kindly remember the date—Tuesday, July 11—and bring their families with them.

A. R. B.

PROVIDENCE (R. I.) FLORISTS' CLUB.—One of the most enjoyable sessions was held last Thursday evening, at which time there was served by the entertainment committee, through the courtesy of Mr. Sweeney, a collation of sandwiches and coffee. Several members came in late, barely missing the extempore talk of Mr. Wilson upon "Plant Life in the Holy Land," a treat of the first order. The gentleman was the guest of Mr. Chappell, who is to be congratulated upon securing such valuable talent, and the club voted a round robin of thanks to the gentlemen who furnished the evening's pleasure.

C. S. M.

THE CINCINNATI FLORISTS' SOCIETY held its regular meeting at the club rooms in the Jabez Elliott Flower Market, Saturday evening last. There was a fair attendance. Nominations for officers were made and other preliminary business transacted. The annual outing was discussed, and it was brought to light that four florists, one a member of the society, had taken it upon themselves to give a "florists' outing" and had signed a contract with the Coney Island people and selected the date, July 20, or the third Thursday of that month, which date has, for a number of years, been the regular date chosen by the Cincinnati Florists' Society on which to hold its annual outing. As the four, comprising a committee, had not consulted the Cincinnati Florists' Society, and had selected the date which they well knew had been the regular date of the society's annual outing, their proceedings were not looked upon as regular, and the society laid the matter of its annual outing upon the table for further consideration. The society instructed its secretary to notify the trade papers that the members would have nothing whatever to do with the outing spoken of, and also to notify the Coney Island Company that the Cincinnati Florists' Society would not be responsible, in any manner or form, for the outing booked for July 20.

The reception to be given by D. Rusconi and George & Allan will be held near the residences of Mr. George and Mr. Allan at Norwood Inn Park, commencing at 2 p. m. Thursday, June 29. At 3 p. m. the annual meeting of the Cincinnati Florists' Society will be held, officers for the ensuing year elected, and all other necessary business transacted. At 6 p. m. the banquet will be served, and a good social time will follow. All florists are invited.

C. E. Dudley and brother, of Parkersburg, W. Va., were callers Saturday.

Commencing July 1, the writer will close his place of business at 5 o'clock.

E. G. GILLET.

Editor Florists' Exchange:

Please insert the following in your issue of this week:

At a meeting of the Cincinnati Florists' Society, held June 10, a motion was made and unanimously carried, that the Cincinnati Florists' Society will not be in any way responsible for the outing to be held at Coney Island, Thursday, July 20, said outing being entirely independent of the Cincinnati Florists' Society.

GEO. MURPHY,
Secretary.

HARTFORD (CONN.) FLORISTS' CLUB.—The regular meeting of this club took place on Friday evening, 9th inst., and there was a large attendance of members. Mr. Wirth, chairman of the committee on window-boxes, which was recently appointed by President Huss, submitted an able and instructive report on this subject. The report (which appears in another column) shows how thoroughly the committee performed its task and the committee was awarded a unanimous vote of thanks. It was the sense of the meeting that, if a matter so important were thoroughly taken up by the florists' clubs and horticultural societies of the country as a whole, a permanent impetus would be given to this most important subject. Window, porch and veranda gardening would become an established fact all over our broad land, and, incidentally, the commercial man would annually add many shekels to his bank account. "Tis a great and good subject, gentlemen; push it along."

Our "club poet," who has the happy faculty of adding a dash of color to every important club event with a flash of his own peculiar genius, was particularly in evidence at this meeting. The following effusion is his contribution to the window-box question, and he hopes it will have the effect of fixing a great subject firmly in "the public eye":

"O, golden years, advance, advance,
O, years of regal work and thought,
Until the all-pervading window box
To every Hartford home be brought.

The "poet" carefully explained that he did not wish to infer that Hartford should go it alone in this matter, but, as the acknowledged gem of Eastern cities, she should be content to be the leader in this great movement and simply show them the way.

Secretary Ruedlinger read an interesting paper on "Insect Enemies and Their Antidotes Which Interested Our Forefathers." The secretary is a recognized authority on all fungi and insect pests, and he easily added to his reputation when he described in detail the various brands of bugs and their preventives which have been in vogue from 250 years ago down to the present day. He received a hearty vote of thanks and the assurance of the meeting that his own "bug destructors" were vastly superior to the old formulas. Arrangements were made for the reception of the executive committee of the American Rose Society, which meets in Hartford on June 19. Among recent visitors was George C. Watson, of Philadelphia. On account of the impending vacation season, the club adjourned as a body until the first Friday in September.

A. C.

THE ST. LOUIS FLORISTS' CLUB held its June meeting in Central, Mo., at John Steidel's place. It was one of the largest attended meetings of the year. The ladies were also out in full force, 19 of them and 33 men attending. The entire gathering voted that they never spent a more pleasant afternoon than on last Thursday. The ladies were attended to by Mrs. Steidel, who knows how to entertain, and her husband took care of the members in good style. The ladies who were present included Mrs. Chas. Juengel, Mrs. Emil Schray, Mrs. F. H. Meinhardt, Mrs. J. J. Bencke, Mrs. A. G. Bentzen, Mrs. F. H. Weber, Mrs. Scott, Mrs. E. W. Guy, Mrs. Otto Koenig, Mrs. A. Jablonsky, Mrs. A. G. Fehr, Mrs. H. Berning, Mrs. F. Fillmore, Mrs. Klockenkemper, Miss L. Meinhardt, Miss M. Meinhardt and Miss Clara Felmauch.

President Juengel opened the meeting at 2:30 p. m. All committees reported. Five new members were added to the rolls by electing Henry Lorenze, George Augermuller, Edward Hicks, Jr., Henry Aul and W. H. Foreman. This gives the club a membership of 105, which is the largest we ever had. J. J. Bencke was appointed a committee of one to look after transportation to the S. A. F. O. H. convention, at Washington, D. C., in August. The trustees were instructed to make preparations for the club's outing, to be held the latter part of July. The trustees now are: E. W. Guy, J. F. Ammann and Frank Fillmore. Any suggestion that will add to the attraction of the outing should be sent to any one of these gentlemen.

The question of incorporating the club brought out a lengthy discussion. The matter was finally left to a committee composed of Fred Ammann and James W. Dunford, to report at the July meeting.

State Vice President Fillmore, of the S. A. F. O. H., was present with blank applications for membership in the national society, and, I believe, he captured a few.

The meeting adjourning, the members joined their ladies and sat down to a fine repast spread on the lawn. After lunch, the president and John Steidel called on the members to drink to the health of Messrs. Weber and Miller, who are now sailing on to the Fatherland.

The members then repaired to Mr. Jablonsky's new place, a short distance away, to inspect the new range, which contains 25,000 feet of glass, being erected by Mr. Thompson. Foreman Brown was on hand to receive the delegation. Wolf Bros., of Dayton, Ohio, have at this place their new improved cable ventilating apparatus, which was voted a good thing. After viewing a fine lot of carnations and roses, we returned to Steidel's place and started for home, with three cheers for our hosts.

The next outdoor meeting will take place in September at H. Weber and Son's nursery, in Garden-ville, Mo. The next club meeting will be held on Thursday afternoon, July 13, when the nomination of officers for the ensuing year will take place. A large attendance is looked for.

ST. PATRICK.

NEW YORK FLORISTS' CLUB.—The ladies turned out in force Monday night, June 12, and thoroughly enjoyed the pleasant entertainment provided for them by Chairman John B. Nugent, Jr., and his committee. There were recitations, vocal and instrumental music, "mint julep" of a kind suited to the palates of the fair ones, ice cream, strawberries, sandwiches, cake and coffee. The sterner sex were not in evidence in such large numbers as has been the case at previous occasions of the kind. Whether this was owing to the fact that no bagpipes were there Monday evening, or the dread of their being on hand, we cannot say. Piano solos and songs were rendered by Mr. Hoopwood. Mr. Nugent was in fine voice and gave an excellent display of his vocal talent. Songs were also rendered by Miss Shaw and Alex. Wallace, and recitations by J. Austin Shaw and J. W. Pepper. Dancing was indulged in toward the close of the entertainment, which terminated at 11:30 p. m.

The business meeting of the club was brief. President Traendly occupied the chair. Mr. Shaw reported everything in readiness for the outing which occurs at Glenwood, L. I., on Wednesday, June 28. An ex-

cellent and varied program has been gotten up, and the prizes are numerous and inviting. The best outing yet can be easily anticipated. It was especially urged that all who intend participating in this enjoyable affair secure tickets, remitting therefor at once, so that the necessary arrangements for the comfort of all can be made by the committee.

The transportation committee, through Secretary Young, reported progress. As soon as the necessary work is completed, circulars will be distributed, announcing rates, route, etc., to the Washington convention in August next.

A letter was read by Mr. Langjahr from Commissioner Kennedy, of the Brooklyn Park Department, stating that, since the club had brought to his attention the fact that children under 14 unaccompanied by parents or guardians were not permitted to enter the Prospect Park greenhouses—the first he was aware of—it had given instructions rescinding that order. The secretary was instructed to convey the club's thanks to the commissioner for his sensible decision.

A. Kakuda and A. J. Fellouris were proposed for membership. J. C. Gowing, formerly with the Cottage Gardens Company, Queens, N. Y., resigned from the club, he being no longer connected with horticultural interests.

A magnificent display of peonies, under number, came from the Cottage Gardens Company, one variety of a charming pink color being greatly admired. Charles Lenker, Freeport, L. I., had a vase of Japanese peonies, the curious forms of which attracted attention. Carnation Victory was exhibited in fine shape by Guttman & Weber, New York. Mr. O'Mara, chairman of the committee of awards, made a few complimentary remarks on the excellence of the flowers shown, and a vote of thanks was tendered the exhibitors. The blooms were afterwards distributed among the ladies present.

The meeting adjourned for the Summer recess, to reconvene the second Monday in September.

PACIFIC COAST HORTICULTURAL SOCIETY.—The feature of the current month's meeting of this society, held June 3, was an address by President J. C. Vaughan, of the S. A. F. O. H. It won heartiest applause.

Among other things, Mr. Vaughan said: "In the present day of quickstep advancement in our country's onward march generally, there is something for us to learn all the time, and each of our trade's class papers is serving a feast every week. When I ponder the fact, which is patent to all, that many of the great daily newspapers of our country are every Saturday evening or Sunday morning devoting from a half to a full page to flowers and horticulture, evidence indisputable that there is a demand for this sort of reading, I take it as an admonishing fact that the general public is reading up along our lines, and that it should serve us as a strong incentive to never let up in nourishing our understanding with all the floricultural and horticultural pabulum we can find to devour. If we do not this, what will be the inevitable result? Will not the general public, who are, in these intellectual days of advancement, reading up along our lines as never before, soon be abreast or in advance of us in trade knowledge? And do we want it that way? Wouldn't it be humiliating? And shouldn't we be as tenacious of such a point as is the great fear of Russia that Japan will exact settlement terms that will be humiliating to the Czar as the head of a powerful nation?"

Of course, these remarks do not apply to the San Francisco trade. The few days I have been here have revealed to me not anything suggestive of shortsightedness on your part, or remedial thoughts for your consideration. It has been half a score of years since my last visit to San Francisco, and since in the interval I have been at most every place elsewhere it will be no more than fair and natural for you to assume that the basis of that I have spoken is in impressions gathered elsewhere than here; and as you all know with what marvelous facility the pollen is blown from place to place, perhaps my cautionary utterances will at least be as intended, not only harmless, but profitable.

"Contrariwise, I will say I very much like all I have seen within the few days I have been in your midst. I believe you are zealously devoted to your calling, and not of the sophomoric opinion that further trade schooling would be a waste of time. Notably have I already been very favorably impressed by the cleanliness and tidiness observed in and around your greenhouses and outdoor gardens, and in the many artistically adorned florists' stores in your great city. I believe in forever 'tidying up' in our places of business; that it is a trade attraction of very material worth. Who would have believed, ten years ago, when I was last here and your foremost florists were paying monthly rentals of from \$125 to \$175, that ten years later flower consumers would warrant the paying of from \$400 to \$500? But you know quite a number of your cut flower merchants are doing this, and doing it ungrudgingly. And what does it all mean? Surely that prosperity is with you San Franciscans, and with you to remain evermore is my sincere wish. The Lord be with you till we meet again."

Two days subsequent to the time of the address given in brief above, Mr. Vaughan was again seen at the Pellicano store, receiving callers. Mrs. J. R. Martin was there, and to the writer she said, officially, as chairman and general director of the exhibition committee of the California State Floral Society: "Our society is this week notifying all flower growers in the State that in the latter part of October, exact dates and particulars to be given later, a great Fall show will be held in the grand nave of the ferry building. The committee in charge invites the co-operation of every member of the society, and all growers and dealers in the State. This show will include roses, chrysanthemums, dahlias and carnations, both field and under glass grown; also all other flowers of the season. The society's gold and silver medals, and special cash awards, will be offered as premiums."

Columbus, O.

A Joint Meeting. An all-day joint session of the State Forestry Society and the Columbus Horticultural Society was held in Townshend Hall at the State University grounds Saturday, June 10, with a large attendance. The very elaborate program was well carried out, with the exception that, on account of the busy season, some of the prominent nurserymen and florists from different parts of the State who were present for papers were unable to be charged this year.

done in the line of progressive horticulture in the greenhouses and gardens. Prizes were awarded to P. F. Ver-gon of Delaware County for display of apples; to the Franklin Park Floral Co. and Mr. Charles for roses, and to Mrs. Sharp, of Westerville, for cut flowers.

HOLYOKE, MASS.—The Holyoke Horticultural Society has, through its special committee, appointed the 20th as the date for the annual rose show. It will be held at the Unitarian Church lecture room, and all roses must be in place at 11 o'clock the morning of the show. No admittance fee will be charged this year.

CARTHAGE, MO.—The elements this year have been somewhat severe on P. Finn & Son, of the Carthage Greenhouses. Damage by hail and fire to the extent of \$6,000 has been sustained so far. The firm is now busy repairing houses in which a large quantity of glass was broken recently by hail, and Mr. Finn will miss his usual Summer vacation this year.

Hail News.

AUSTIN, MINN.—In a recent hail storm, about 200 panes of glass were broken in the greenhouses of the N. Kinsman. He was insured in the F. H. A.

JOLIET, ILL.—On June 5, a hail and wind storm swept over this locality. Fortunately the large greenhouse establishments were not directly in the storm's path. The J. D. Thompson Carnation company sustained a loss of \$10 through broken greenhouse glass. Joseph Labos' place suffered severely. He was insured in F. H. A. At their retail store the Chicago Carnation Company suffered a loss of about \$200 but little at the greenhouse plant. C. E. Carter's place is a total wreck. The peonies of the Chicago Peony Farm were heavily damaged by this storm and a previous one.

FOR THE RETAIL FLORIST.

Flowers for School Commencement.

The presentation of flowers at school graduation is being discouraged by the powers that be; nevertheless, and despite this senseless antipathy, a great many flowers are sent, even though they are relegated to the anteroom.

In considering the fitness of things, the fact that any flower is better than no flower should rule, but when flowers are sent to a public function, such as school exercises, they should not be confined to or hid away in a box. Have them so as they can be seen, for their sweet influence constitutes the very refinement of education.

Time was when incongruous and inappropriate designs, such as horseshoes, baskets, etc., were sent. Nowadays, the loose bunch is the most popular form. And here let us say that ribbons, and plenty of them, are distinctly appropriate. Care should be taken to have them of the exact class or school colors. The feminine heart is very partial to ribbons, and the ribbon on the bunch of flowers sent at school graduation is apt to be long treasured as a memento of the glad days. To make these ribbons more valuable, the name of the recipient, and date, can be painted on the end of them. This can easily be done with small stub or brush and liquid gilt. By using a little diplomacy and proper representation, we can inaugurate many pretty customs. Every girl graduate could wear a rose in her hair, and every boy a flower in his jacket, and though such may seem a small and insignificant part of trade, anything that conduces to the use of flowers is important.

Care should be used in not having bouquets or bunches too heavy or cumbersome. Size need not be responsible; it is usually the sort and quantity of greens used for packing. Smilax, especially with heavy wires, is about the worst thing. Asparagus or ferns are the best. No matter what kind of flowers are used, they should be arranged very loose and irregular; the set or formal style of bouquet is not suitable for these occasions. Of course, it is necessary to use wires on some flowers, but none should be employed where it is not absolutely required.

Roses are the most suitable flowers, and American Beauty rightly heads the list. The thorns should be removed, for they are disagreeable to transparently covered arms. Next to roses, carnations are best adapted, and in torrid weather, where it is a matter of long waits, they may be recommended even before roses.

Although there are preferences, almost any color or flower is allowable for school affairs; and while to the city florist, where there is unlimited material to choose from, the most refined should be selected, yet the country florist need not but use properly whatever is available.

We would like to see the day arrive when presents of flowers will be more generally sent to the homes of the graduates, thus avoiding any red-tape bound jealousies. And much could be done to encourage this, by arranging and exhibiting specially attractive designs, with ribbons attached, on the same lines as we prepare for Christmas or Easter. Juvenility is less exacting and easier molded, and almost always demands the plentiful. Smallness in ribbon or flower only meets second favor. The time long since arrived when it is necessary to go out and captured trade, and, unlike the detestable "crepe-pulling," soliciting school flower business is not only honorable, but resultant in great good to all.

Next week we shall speak of steamer flowers.

KINVARA.

Flowers by Mail.

Perhaps few postoffices handle any more flowers than the local postoffice, says the Atlantic City (N. J.) Gazette. There are hundreds of girls in the hotels who have one or more admirers who remember them when they are separated by space through the mails. Letters come by the score, told by the neatness with which they are written and the envelopes in which they are encased. Then come the flowers. Pasteboard boxes are used. The clerks handle the live tokens with tenderness, while they put them in mail bags, but the men who handle the mail bags don't know of the boxes, and they smash them about in a reckless style. When the flowers emerge, as a rule, they are flattened and crushed and the lady love gets them, perhaps, with a pout and a frown, but she seems satisfied with the indication that she is not forgotten while absent. Hundreds of dollars are spent for flowers sent here which deprive local florists of just so much patronage. It is a risky thing to send flowers by mail.

WINDOW GLASS.—Prices of glass have ranged from 90 and 25 to 90 and 40 per cent. discount for the first three brackets, while larger sizes of better quality have been quoted from 90 and 15 to 90 and 17½ per cent. discount. Local business is fair, and quotations in this market are 90 and 10 per cent. discount on all sizes single and double, with the exception of the first two brackets of single strength B, which are 90 and 10 per cent. discount.—The Metal Worker.

Earthenware Jardinieres and Pedestals for Lawn Use

The following decision has been rendered by the Board of General Appraisers in the matter of a protest of L. Strauss & Sons against the assessment of duty by the Collector of Customs at the Port of New York. Opinion by Sharretts, General Appraiser:

"The articles in question are jardinières of large size and pedestals intended for use on lawns. They are invoiced as 'coupes' and 'colonnes' and are composed of a superior quality of clay glazed, a single color having been added to the glaze. Duty was assessed on the merchandise at 60 per cent. ad valorem under the provision of paragraph 96 for earthenware ornamented or decorated. The importers claim classification and duty at 55 per cent. ad valorem under the same paragraph.

"The jardinières in dispute have been elaborately embellished with floral designs in the process of molding, but contain no super-added ornamentation or decoration, unless a single color glaze can be so designated, and we do not think it can be regarded as such.

"Paragraph 95 of the tariff act of 1897 imposes duty at 55 per cent. ad valorem on plain white earthenware (glazed) if not ornamented or decorated, and a single color added to the glaze involving an inappreciable outlay for labor or material, does not, in our opinion, amount to a decoration or ornamentation. The language of paragraph 100 relative to articles of glass colored or otherwise ornamented or decorated is similar to the provision contained in paragraph 95 for earthenware colored, etc.

"On the authority of *Koschek v. United States* and *Bader v. United States*, the board has held that the higher rate of duty imposed on glass colored applies only in cases where the color amounts to an ornamentation or decoration, and that a single color is not included in such classification. See G. A. 5162 (T. D. 23794) and G. A. 5367 (T. D. 24547). By a parity of reasoning a single-colored glaze applied to articles of earthenware does not bring them within the term earthenware ornamented or decorated. See G. A. 5961 (T. D. 26116).

"In G. A. 5336 (T. D. 24424) the board included mer-

DELPHINIUM (LARKSPUR)

Photo by J. F. Johnston

chandise similar to that now before us in class 2, and held it to be dutiable at 55 per cent. ad valorem, on the authority of which we sustain the protest and reverse the collector's decision.

Delphiniums (Larkspur).

A testimonial to the delphinium need comprise but a single word—e. g., indispensable. They can not be done without if our gardens are to contain all that is lovely, all that is beautiful, in the way of flowers. They are a clear-marked group of hardy perennials and annuals, but more imposing, striking and stately are the perennial varieties. When well grown and taken care of, they look so majestic and dignified, with their clusters of erect flowering spikes reaching under good treatment and according to varieties anywhere from 3 to 4 feet in height. When June arrives, the flowers begin to come, continuing in great display throughout July, August and well into September. So vast is the aggregate of bloom and so rich and varied the different shades of blue, that a colony in full flower is a sight not soon, if ever, to be forgotten.

The culture of the larkspur is very simple, so much so that one is apt to marvel at the results obtained; but let me here state that what little is contained in the culture recipe every bit of it is of vital importance. The soil should be a rich, friable loam, deeply tilled and rather moist. Delphiniums are far from being lovers of hot, dry soils. Add plenty of well-decomposed manure. When the flowering spikes

appear, all weakly ones should be weeded out and those remaining well attended to in the way of support against storms.

The illustration represents only the side shoots which proceed from the main spike.

Long Island,

JOHN F. JOHNSTON.

About Seeds.

Much might be written on this subject. I cannot believe that localities have any particular influence, but more depends upon the system of saving and ripening seeds. As an instance, I may mention mignonette seed. When I grew it in large quantities, I found it best to keep each saving of seed separate, for when several different lots were put together the seed did not germinate so evenly; and once, when wanting some to sow, I had to use some which had not long been collected, with the result that it was very slow to germinate, and came up unevenly. This is contrary to the general rule, as immature seeds usually germinate quicker than those thoroughly ripened. As an example of this I may refer to cannas. When thoroughly ripened, it takes a long time for the hard shell to split, and it is recommended to file them to assist the bursting, but if seeds are sown before they are quite ripened off, they will germinate in a short time, and require no assistance to burst their shells. In these there does not appear to be any loss in vigor from sowing immature seeds. I am not prepared to state from actual observation, but it is supposed that with tomatoes unripe seed will germinate quickly, and plants will be weak; but if they can be got over the early stages of growth, they will crop earlier, and the crop may be heavier, though not such large fruits individually. I can say that I have had remarkably good results from seeds five and six years old. I have also grown cockscombs from seed seven years old, and the plants appear to form the combs earlier than those from new seed. It used to be a theory that stocks would produce a larger percentage of doubles from old seed. I have proved that it may be kept for several years, but cannot vouch for the fact that it is likely to produce more doubles. There is one thing, however, that I fully believe; that is, that a much larger percentage of double flowers is obtained from seed saved from the main stems only, and these topped when they have attained to a fair length.

I remember when balsams were grown for exhibition, a most successful exhibitor always saved his seed from the main stems only, and he attributed his success to the fact of having carefully selected the seed, but I think culture also had something to do with his success.

There are many seeds which under natural conditions are subject to a long period of drying, and which no amount of drying seems to injure; but there are others which never do get thoroughly dried. Taking cyclamen seed as an example, this should never be subject to much drying; from the time it is collected until it is sown it should be kept in a cool place. Shut up in a tin box it will keep firm and plump, but when over dried it does not germinate so readily, and the seedlings are weaker. All primula seed is easily perished by over drying. I remember losing seed of some choice varieties of *P. sinensis* through accidentally having it on a shelf, exposed to the sun, a few days too long. The seed of this has often given trouble, and I believe the cause may be traced to over drying. I might here add that when sowing any of the cyclamen, primula, etc., a covering of finely chopped sphagnum moss, which will retain moisture, will be much better than any other covering; and when this is used, if the pots are stood in a shady position where they are otherwise exposed to the light, the seeds will germinate, and not be so liable to damp off as when the pots are covered with glass or closely shaded. It is now about the time for the seed of *Aralia Sieboldi* to arrive, and this is an example of perishable seed. It will lose its vitality in a few days if allowed to get dry. I have kept it several months, shut up in a tin box, and kept in a cool place; but sown as soon as received, it will germinate more satisfactorily, and the young plants will come stronger. Some seeds may be all the better for being kept a considerable time; yet others, which under natural conditions germinate as soon as they fall from the plants, perish quickly and vitality may be destroyed by over drying. Seeds may be perfectly good when received from a seedsman, but their vitality may soon be destroyed by keeping them in a dry, warm place. We hear of fern spores keeping good for an indefinite period, and some may be under suitable conditions, yet under ordinary treatment I have proved that many will perish within a year.—Metropolitan, in Horticultural Advertiser, Eng.

A large business has been worked up by Arizonians in the gathering and sale of cactus and desert plants, for which there seems to be an ever-increasing demand in the Eastern States and in Europe, says a Phenix (Ariz.) correspondent of the Denver News. Near Phenix is a large nursery devoted solely to the care and sale of prickly plants. Two German horticultural gardens have expeditions in the field in Arizona gathering and shipping rare specimens without reference to size. Fairmount Park, Philadelphia, is to have an Arizona garden, for which Gardener Smith, of the Arizona capital grounds, is engaged in gathering choice specimens of desert flora.

2-8 Duane Street, NEW YORK

AUCTION SALE

I will sell at public auction on the premises, run of shine, Thursday, July 6, at 12 o'clock noon, the Humphrey Greenhouse in the City of Rome, N. Y. Has 15,000 square feet of glass, located on lot consisting of 165-foot frontage and 150 feet deep, with ten moderate, well-equipped greenhouses, all stocked with palms, ferns, roses, carnations and general bedding stock. Houses are all heated with steam, are also an 11-room dwelling, with modern improvements, and a natural gas well, which is centrally located and doing a fine business. plies the property with light.

Reasons for selling, sickness. For further information call or address

A Few Good Things You Want

A nice lot of made-up KENTIA PALMS to 8 in. and 9 in. pots at \$3.00 to \$5.00 each. Splendid plants for decoration.

Dracaena Indivisa, 3, 4 and 5 in., \$5.00, \$10.00 and \$25.00 per 100.

Asparagus Plumosus, 3 in., \$6.00 per 100.

Asparagus Sprengeri, 2 and 3 in., \$3.00 and \$6.00 per 100.

Geraniums, S. A. Natt, Castellans, John Doyle, Perkins, Mms. Sallerol, Single and Double Gen. Grant, La Favorita, 2 in. pots, \$2.50 per 100; 3 in. pots, \$5.00 per 100.

Vinca Var., 2 in., \$2.00 per 100.

Scarlet Sage, Lobelia, Verbena, Vinca Var., Heliotrope, Double and Single Petunia, Coleus, red and yellow; Ageratum, blue-Alternanthera, red and yellow; Cigar Plant, 2 in. pots, \$2.00 per 100.

Rev. Begonia, nice plants, 2 and 2 1/2 in., \$5.00 per 100.

Cannas, red and yellow, and var., 3 in. pots, \$5.00 per 100.

Vinca Var., 3 in., \$4.00 per 100.

Boston Ferns, 5 in., 30c. each. Cash with order

GEO. M. EMMANS, Newton, N. J.

Decoration Day is now over.

BE WIDE AWAKE

Fill your empty houses with something that will yield you 200 per cent. profit on your investment.

GODFREY ASCHMANN'S

ARAUCARIA EXCELSA

will do it.

The last shipment for the summer, per steamer Oxonia, arrived in Philadelphia, May 30, from Belgium. Grown there expressly for me, under contract, by an Araucaria specialist. 5000 of the choicest plants, better and shapelier than ever before, are now growing in my greenhouses. I herewith quote you special prices on them. Just look.

10 to 12 ins. high, 2-yr. old, 3 tiers.....\$0.50
12 to 14 ins. high, 3 to 4 tiers..... .50
14 to 16 ins. high, 3-yr., 3 to 4 tiers..... .75
18 to 20 ins., 4-yr., 4 to 5 tiers..... 1.00

Araucaria Compacta Robusta, unusually large, very beautiful, from \$1.25 to \$1.50 each. Glauca, 75c. to \$1.00 each.

Kentia Forsteriana, 30 to 36 in. high, 4-yr. old, \$1.00; 4-yr. old, 25 to 30 in. high, 75c. Belmoreana, 4-yr. old, 25 to 30 in. high, \$1.00 each. Above are the sizes entered in the Philadelphia Customs House.

Ficus Elastica, imported, 4-in. pots, 25c.; ready June 1st.

BEDDING PLANTS

Geraniums, 4 in. white and mixed varieties, \$7.00 per 100.

Cannas, best sorts, 4-in. pots, \$7.00 per 100.

Scarlet Sage, Clara Bedman, and Begonia Vernon, red and pink, 4 in., \$7.00 per 100.

Heliotrope, blue, 4 in., \$6.00 per 100.

All goods must travel at purchaser's risk. Cash with order, please.

This week's index will be found on page 783.

News of the Week in Brief.

Luther Burbank is now devoting his attention to improving the rubber plant.

Southern huckleberry branches are in great favor in Boston for Summer decorations.

A Japanese and a Greek have been nominated for membership in the New York Florists' Club.

Floods in the pea-growing districts of Wisconsin have done much damage to the crops there.

A hail storm struck Joliet, Ill., on June 6, doing much damage to the greenhouses in that locality.

Lightning damaged the establishment of J. Kletzley, at Oakmont, Pa., this week to the extent of \$1,000.

The season around Boston is much later this year. Outdoor roses and peonies are just commencing to bloom.

The Chicago wholesalers are endeavoring to form a permanent organization among themselves for mutual protection.

President J. C. Vaughan, S. A. F. O. H., delivered a pithy address before the Pacific Coast Horticultural Society on June 3.

The Carthage Greenhouses, Carthage, Mo., have this year, so far, sustained damage to the extent of \$6,000 from hail and fire.

Among the new corporations recorded this week is the Burnham-Hitchings-Pierson Company, greenhouse builders, with a capital of \$2,000,000.

Through the efforts of J. C. Vaughan, the Southern California Horticultural Association has been formed, with Captain F. Edward Gray as president.

The sum of \$25,000 has been donated to establish and equip a botanical garden in connection with the Brooklyn (N. Y.) Institute of Arts and Sciences.

The American Association of Nurserymen will join forces with the American Seed Trade Association in an endeavor to have the postal laws relating to mailing of catalogues revised.

The nurserymen, at their annual meeting at West Baden, Ind., this week, discussed the low prices on ornamental stock. An opinion was expressed that united effort should be made to advance the price of this class of stock.

The New York Florists' Club has adjourned for the Summer recess, to reconvene the second Monday in September. Ladies' night, last Monday evening, was a great success. The outing takes place at Glenwood, L. I., on Wednesday, June 28. Remittances for tickets should be made at once.

State Vice President S. A. F. O. A. Frank Fillmore, of St. Louis, is a hustler after new members. He takes blank applications for membership in the national society to the meetings of his local club, and generally is successful in capturing a few new adherents. This is an excellent plan, worthy of emulation by all the state vice presidents of the national society.

Opportunities in Agriculture.

In the yearbook of the Department of Agriculture for 1904, just issued, Dr. B. T. Galloway, chief of the Bureau of Plant Industry, discusses the subject of opportunities in growing crops under glass. Plant, cut flower and vegetable growing are all dealt with. Under the caption of "The Man First," Dr. Galloway says:

In such intensive work as must necessarily be carried on in connection with the growing of plants under glass it is essential that the man who is proposing to undertake it should be in the prime of life. It is not work for men beyond middle age, nor is it work for men with weak constitutions. While the work is not necessarily heavy, it is of such a nature as to require strict attention, and while it is for the most part in the open air, and, therefore, not as likely to bring on certain diseases as in the case of other more confining occupations, it frequently happens that exposure is required, and such exposure can only be borne by men of comparatively strong constitutions.

In addition to the foregoing, those who are contemplating work of this nature must or should have a thorough business training. More failures result from lack of good business capacity in this field than from all other reasons combined. It frequently happens that a man may be successful in growing crops and in getting them into good condition for marketing, but through lack of knowledge or lack of ability to appreciate the main facts with reference to the commercial handling of his products he fails.

As a further necessity in this work, it should be pointed out that some experience is required—the more experience, of course, the better. It is not always practicable for a man contemplating entering a field of this nature to have had experience in intensive lines of horticultural work. If he cannot get it by direct practice, he should spare no effort to find out all he can as to what others are doing; visit those who are engaged in the business; secure the various works that have been published on the subject; consult the experiment station reports; and familiarize himself in every way with what the world is doing in this field. If he will do this, and if he is a man of keen perception and observation, he will soon be able in a measure to manage his own affairs.

So much, therefore, for the man. The fields that are open may be considered under several heads: General plant growing; special fields, as vegetable growing and flower growing; and then the ultraspecial fields, as specialization with certain crops, such as roses, carnations or violets.

General Plant Growing.

The field of general plant growing probably offers more opportunities than any of the others; that is, opportunities for a greater number of people. In the vicinity of every town or city having a population of from 3,000 to 10,000 there may be found in most cases good openings for the ambitious and progressive young man who desires to supply a home market with general crops which may be grown partly under glass and partly in a very intensive way out of doors. The demand in towns and cities of this size, of course, is not for any great quantity of any one thing; hence, the necessity for producing a variety, as ornamental plants for use in home yards, plants for cut flowers, vegetables, etc.—a general miscellaneous stock.

In work of this nature it is essential that the location selected be within easy reach of the business limits of the city, for the grower will have to depend largely for his trade on those who may visit his establishment. Such being the case, land must be secured, if practicable, within easy access of those who may wish to visit the place as prospective buyers.

For an ordinary establishment of this nature half an acre of ground is sufficient for a small start. An acre would be better. Due attention must be given to the location, with respect to soil, water facilities, and opportunities for securing fuel and other essential things required in general work. In most cases half an acre of ground under such circumstances can be bought for \$500. To equip properly a small greenhouse would require another \$500. For miscellaneous equipment, including tools, out-buildings, and stock, \$200 would be necessary for a start. Thus, there would be invested in the neighborhood of \$1,200. If the man himself wished to live at the place, as he should do, it would probably require from \$500 to \$1,000 for a home. In producing a variety of crops, as indicated above, the gross income from such a place should be at least \$1,200 per annum. Practically, all the work on such a place could be done by the owner, with some little assistance from time to time in Spring and Fall.

The crops handled should be a general assortment of bedding plants, a small collection of ornamentals—such as palms, ferns, etc., which could be sold as pot plants—and carnations, roses, chrysanthemums, etc., for cut flowers during the winter. A considerable portion of this work can be done out of doors, the plants being to have the outdoor crops grown in such a way as to harmonize with the plans for inside work. Of course, a definite system must be followed, and this system will in a measure depend on local conditions. A few hotbeds and cold frames will add materially to the possibilities of such an establishment, and will allow the owner to increase his stock considerably, especially of Spring bedding plants, which may be started earlier in the greenhouse and then moved to the frames outside as the season advances.

Cut Flower Growing.

Cut flower growing is the most profitable field in the growing of plants under glass. It is most profitable for the reason that there is a greater demand for cut flowers than for vegetables, and while the risks in some cases are greater, the profits are correspondingly large. The work in this field may be of two kinds—the growing of mixed crops, or specialization with one crop alone.

By mixed crops is meant the growing of three or more crops of flowers, such as roses, carnations, violets and chrysanthemums. In this field the best openings are to be found near cities with a population of from 10,000 to 50,000. There is always a demand in cities of this size for cut flowers, and this demand is frequently increased if there are any special institutions in or near such cities, such as colleges, universities, etc.

The grower here may either handle his own products, or sell direct to dealers in the cities. It is more profitable, if capital can be secured, to handle one's own products. A store in the town or city eliminates the middleman and enables the grower to take not only the profits from the growing of his crops, but the commissions which

must be paid for selling the flowers as well. These usually represent about 100 per cent. In other words, the crops which the grower sells to the retailer in the city are sold by the latter at about 100 per cent. advance over the prices paid to the grower. Considering the extra expense of store rent, clerk hire, etc., a considerable portion of this profit may just as well be secured by the grower, if he has the business capacity and can manage the details connected with both the city department and the producing department.

Moreover, this field offers opportunities for those who for various reasons cannot obtain sufficient ground very near to a city. In other words, flowers such as have been mentioned, grown under glass, may be shipped with perfect safety from 50 to 300 miles, thus broadening the field of the prospective grower. This makes it practicable to secure land at very reasonable prices; but in addition to this must be considered the extra expense of express and freight rates, both in the transportation of the crops produced, and in the transportation of the material actually required for the work, such as fuel, manure, etc. Ordinarily, however, many choice locations can be found in the vicinity of a city where half an acre or an acre of ground can be secured at a price of from \$50 to \$500 per acre. It is not always practicable, however, to secure land as reasonably as this; more often, half an acre of such land will cost \$500.

Starting with such an area of land, three houses may be constructed, each at a cost of \$1,000. In these may be grown roses, carnations, and violets. In this connection it is necessary to emphasize the fact that these crops cannot be successfully grown all in the same house. Each requires a special temperature and special treatment, and hence the necessity for division of labor. With the land costing \$500, three houses, \$3,000; general equipment, \$500; and a home for the grower costing at least \$1,000, we have an investment of \$5,000. The gross income from such a place should be at least from \$3,000 to \$3,500 annually, and the net income from \$1,800 to \$2,000.

If such an establishment is rightly planned in the beginning, it may be extended until the entire half acre is covered with glass. In such an event, of course, the grower will have to depend entirely on the outside for his soil and manure, but this is not a difficult problem in the vicinity of a city. The gross income from such an establishment should be from \$10,000 to \$12,000, and the net income from \$3,500 to \$4,000.

Specialization in this field will be conducted in about the same manner as already described, except that the grower will limit himself to one crop, such as roses, carnations, or violets. There are some advantages in this and some disadvantages. The advantages arise chiefly from the fact that it seldom happens that all three crops fail in one season, while it sometimes occurs that one crop, for reasons which cannot well be controlled, either fails off materially or else fails completely. A complete failure, however, is or should be very infrequent, unless through bad management or lack of knowledge on the part of the grower. Specialization offers opportunities for growing crops of the highest quality and for competing in the market for the very best prices. The cost of such work is practically about the same as for general flower growing, already described. The opportunities, however, are more restricted, for the reason that to compete in this field one must grow the very best material. In other words, to be a specialist means the growing of the very best of crops. To be a specialist, furthermore, means certain knowledge and a certain temperament, which are difficult to find. The general gardener, or one who has been trained in the growing of a number of crops, very frequently fails when he attempts to specialize, because he knows too much about too many things to make a good specialist. Some of the best specialists in violet growing are men who have known little or nothing about growing any other crops, and have gone into the business from the workshop or from the farm. Going into business in this way, the prospective grower has no preconceived ideas or notions about how the crops ought to be handled; his whole mind is centered on one thing, and he is not carried away by suggestions coming to him as the result of former experience in producing other crops. What is stated here in regard to the owner is applicable, of course, to the men whom the owner must secure for his help. Given a bright, quick-witted young man, with no prejudiced views as to the growing of crops, he will, in most cases, make a better specialist than one who has had considerable training in general gardening work.

Plant Growing as a Specialty.

The growing of bedding and ornamental plants as a specialty is a field which is comparatively limited. The great improvement in transportation facilities has made it practicable to ship plants long distances; hence these plants are now turned out very cheaply and by the million in large establishments remote from the points where they are to be sold. Such being the case, the opportunities for the small specialist are few and are growing fewer. If the field is entered at all, it should be considered mainly from the standpoint of getting into touch with some already existing large establishment with a view to obtaining experience, and with the ultimate view of pushing the business to such a point that large shipping facilities may be developed.

BOOKS RECEIVED.

A LITTLE GARDEN CALENDAR. By Albert Bigelow Paine. Publishers, Henry Altemus Company, Philadelphia, Pa.

This is a delightful and entertaining little volume. The author's intention was to write something in simple language concerning the wonders of plant life, to set down certain easy methods of observation, including planting, tending and gathering the harvests from month to month, etc., and he has succeeded admirably in his task. Intergoven with the more prosaic portion of the story—the whole being written in narrative style—are fairy tales, traditions and the like, all relating to plant life and origin. The book is intended for the instruction of boys and girls, a purpose it will well serve, but many adults, too, will pass a pleasant hour in following the hopes, failures and successes of little Davy and Prue, in their gardening work, carried on under the supervision and guidance of the chief gardener—their papa. The style adopted by Mr. Paine is a unique and happy one, and the instruction he furnishes is wonderfully correct, as well as practical. Forty-six illustrations accompany the text, and a handsome cover adds to the attractiveness of the volume.

OUR READERS' VIEWS

The Boston Parks Display at Horticultural Hall.

Editor Florists' Exchange:

I note with regret in your issue of June 10 an undeserved criticism by a correspondent concerning the collection of flowering shrubs exhibited by the Boston Park Department at the exhibition of the Massachusetts Horticultural Society, held June 3 and 4. For the information of your correspondent, allow me to state that J. W. Duncan, who had charge of the display, stated to the committee on exhibitions in advance that, on account of other important duties on the morning of the exhibition, it would be quite impossible for him to arrange the collection in accordance with the schedule time, and asked an extension. His request was granted, as is often done on occasions when the delay is not due to the negligence of the exhibitor, and in this particular case censorious criticism was wholly uncalled for.

WM. P. RICH, Secretary Mass. Hort. Society.

Foreign and Home Born Peonies.

Editor Florists' Exchange:

Now, June 6, the peony season is on. When you see 50,000 in 400 varieties in bloom, you don't know whether you are on the edge of Paradise or in it; a section of glory seems let down on earth showing what we can do if we try to gladden this somber old world of ours. Seen at a distance the peony field is one blend of color, woven into carpets of transcendent beauty. No other flower can make such a show; while, over all, hang billows of fragrance.

I find many of the English sorts have been overpraised, and it needs more than printer's ink and electros to sustain them. Some sorts are not hardy, some like delicate little Purity seem too pure for this earth, and vanish away entirely.

I have been studying closely the cause of some peonies not blooming. For instance, we hardly ever get a flower from the tree peony. The trouble is the severe Spring frost; we had a good many this Spring and many kinds could not stand it. Even Festiva maxima was affected and blooms but slightly, and then the flowers are not up to the usual standard. Most of Kelway's varieties did not flower; they were nipped in the bud.

For several years I have been comparing closely the home and foreign born, and, in the main, I give preference to our own. For years I have had the famous Agnes Mary Kelway, but it bears no comparison with several of Terry's, and I never have found among the 80 varieties of his, which I have, anything that compares with Rosenfield's Golden Harvest. As an all around flower, it is hard to beat; it always blooms. One year, when nearly ready to blossom, it was frozen solid, in a sleet storm, 48 hours, and then covered itself with garments of beauty. Terry's General Grant is simply a glory, a solid mass of crimson splendor. I have Kelway's "Bunch of Perfume," but it is left away behind in form and fragrance by Red Jacket, a new American sort; while Shabona rises imposing and grand on stems nearly four feet tall, and looks down on many of the foreigners with contempt.

I have thousands of seedlings on the way, and from 35 pounds of seed sown last Fall, which should give 40,000 or 50,000 plants, perhaps we can get a dozen or so which will make us shout for America.

I am impressed with one thing. In pushing peonies to the front we must regard the five points of excellence: fragrance, beauty of form, robustness, readiness of propagation with the faculty for resisting the late frosts so as to give us perpetual bloomers. Many of the choicest importations have never yet flowered; I had great hopes of them this Spring, but find them full of dead buds.

York, Neb. C. S. HARRISON.

Bonora.

Editor Florists' Exchange:

Quite a number, myself included, have been experimenting on a small scale with this new liquid fertilizer, and the wonderful quick-acting results, naturally, have got us somewhat interested. I presume Bonora is not widely known as yet, but I predict that before another season goes by it will be much better known than it is to-day. I must admit that at first I was somewhat sceptical about it. This liquid, being almost odorless, and nearly the color of clear water, one naturally can hardly realize the fertilizing elements contained in such a small volume. However, anyone desiring to satisfy himself should take a lump of unslaked lime; pour enough Bonora on this lime to moisten it, when the lime will be found to throw off a powerful odor for an hour at least.

One thing is certain, Bonora can be used anywhere in the dwelling house, for instance, or around the residence where other fertilizers afforded to plants would be offensive. At the same time, I would not wholly recommend this substance for growing plants or fruits. All plant life is benefited by a change of food. My first experience with Bonora was with a batch of strawberries in pots, this Spring, compared with hatches grown with other well-known fertilizers. But here I have to give the preference to Clay's manure and ichthemic guano. It being my first experiment, however, probably I used Bonora too freely. The plants received four applications, whereas I think two would have been better. However, the berries were good in each case. But it was the foliage on the Bonora stimulated plants that attracted my atten-

tion, and led me to try it on some other plants. So, having a batch of miserable ferns, yellow half-starved subjects and thinking this would be a good test to either kill or cure them, I gave them an application of Bonora, and to my surprise, in a week after they received the first watering there was a decided change. The color returned, and the plants started to grow vigorously. I have given them two waterings, and they are now in splendid condition. I am convinced Bonora is a capital thing for all foliage plants.

I also saw fine results from its use this Spring on frame cauliflower, at Mr. C. N. Bliss' estate, where N. Butterbach is superintendent. Bonora was used on a half dozen plants, and they could be singled out from all the others by their dark, glossy foliage, having more substance and vigor. But the most marked difference was in the heads, which were much deeper and heavier than those of the other plants; in fact, the experiment brought about a remarkable distinction in favor of Bonora.

Mr. Kettel, superintendent for the Loeb estate, on the Rumson road, at Oceanic, N. J., has had very gratifying results with his palms by the use of Bonora. It puts that deep green into the foliage that makes the palm beautiful and admired by all. He also tells me that on account of making changes he had to sow down a part of his lawn this Spring, near the house, and being anxious to have it green as soon as possible, after the seed came up he gave one watering of Bonora. He is more than pleased with the results.

This substance is easily applied. One gallon of Bonora to one hundred gallons of water is the strength to use it. It is manufactured by the Bonora Company, with a laboratory and factory at Kearny, N. J.

WM. TURNER.

The following suggestions for using Bonora liquid fertilizer are supplied by the manufacturers:

"Use 10 parts of water to 1 of Bonora, for all plant life, vegetables, strawberries, grasses, palms, hothouse plants, etc.; that is, one gallon of Bonora makes 100 gallons. It should be put in a wooden vessel and kept where animals cannot drink it. Sprinkle it on the plant that it may reach the roots, using a sufficient quantity to soak through the ground. Do this twice, one week apart, the third application ten days afterward. You can judge for yourself whether another application is necessary after you have seen the results from the second and third waterings. The object is to have the fertilizer reach the roots.

"For trees of all kinds, peach, apple, pear, shade, etc., it must be diluted 75 parts of water to 1 of Bonora. Gravel or loosen the dirt around the roots, in order that the diluted liquid may soak well into the roots. Where this is done the results brought about are simply wonderful. The great quantity of compound nitrogen in this article creates a healthy, vigorous growth, giving new life to the plant or tree, and matures a crop two or three weeks earlier, and produces a long and lasting fruit-bearing plant or tree.

"Use a two-gallon double reinforced galvanized iron sprinkler. Where it is possible, have the end of the sprinkler pierced with about ten small holes, the surface in the center not larger than the size of a half dollar. By doing this you save a great quantity of liquid, as a sufficient spray comes out of the ten holes to reach the roots. Please report results directly to the New York office, 584 Broadway."

Glass Making Machinery Invented in Belgium.

United States Consul Roosevelt, of Brussels, Belgium, transmits the following from the London Daily Mail, relative to the manufacture of window-glass in Belgium by machinery invented by Emile Fourcault, honorary engineer of the mines at Lodelsart, near Charleroi:

The Fourcault machine turns out continuously sheets of glass 39½ inches wide, of any desired length and of a uniform thickness, varying from 1-15 to 5-16 of an inch. This glass can be obtained as rough glass for making extra thin glass, as horticultural glass, and as window-glass for certain export markets.

The machine is described as a box of fire-brick material floating on a "springing fountain" of glass. In the bottom of this box is a slit called the stretcher, and through this stretcher a sheet of plate glass is introduced into the molten mass. The molten glass adheres to this plate. When the plate is pulled up vertically, it is followed by a mass of molten material that wells up without effort. Once started, the molten glass continues to flow out in a sheet without the plate being dipped in the stretcher again.

The "springing fountain" in which the stretcher floats is a kind of pit, the walls of which are heated by the heat of the glass, and on the top of the pit is an apparatus for dragging the glass up and for annealing. This apparatus is simply a chimney to draw off the heat, in which there are about 17 pairs of rollers. The glass is lifted through these rollers by adhesion, and by the time it reaches the top of the chimney it is sufficiently cool to be cut with a diamond into desired lengths while still attached to the machine.

The operation of annealing—depriving glass of brittleness by allowing it to cool slowly—is at once difficult and capricious. The greatest importance of annealing in all branches of window-glass making lay in the fact that the plastic glass had to be manipulated by tools which were colder than the glass. It was and is by the older method a very delicate operation. The Fourcault machine does away with all this. Annealing is no more a necessity. The glass coming out from the "delivery box" cools and congeals gradually, and at a certain point has lost its heat. It is then that it comes in contact with the first lifting rollers, which are at the same temperature as the glass itself. Hence the glass appears at the top of the chimney perfectly flat, and possesses unequalled brightness on both sides.

As the Fourcault machine is particularly recom-

mended for its simplicity and for the saving of time and material it effects, it will no doubt become of great importance to glass manufacturers.

Society of American Florists and Ornamental Horticulturists.

Railroad Rates to Convention.

The Central Passenger Association, which controls the territory east of and including Chicago and St. Louis, has authorized a rate of one and one-third fare on certificate plan, in co-operation with rate announced by Trunk Line Association, for persons attending the S. A. F. convention at Washington, D. C., August 15-18, 1905.

Department of Plant Registration.

The Conard & Jones Company, West Grove, Pa., submit for registration Rose American Pillar. Described as plant of climbing habit; growth most vigorous; foliage very large and glossy; flower, clear, rosy pink, single, three inches in diameter, produced in enormous clusters and great abundance; very durable and fragrant.

Also, Rose Birdie Blye. Helene X Bon Silene. Described as an ever-blooming climber, producing clusters of blooms during the whole growing season; flowers, large, very double; color, beautiful rosy carmine and of delightful fragrance.

WM. J. STEWART, Secretary.

Michael Lynch.

As announced last week, Michael Lynch, of Menlo Park, Cal., died suddenly on May 27, 1905. Mr. Lynch's death was a severe shock to his family and friends. No man in that community was more highly esteemed and respected than he.

Deceased had an eventful and varied career. He was born in the historic County of Meath, Ireland, 58 years ago. As a mere lad he struck out to make his own way in the world, having no assistance but a strong will and determination to accomplish the task, and this he did with superior energy and hard work, gaining more than ordinary success. He went to London and entered the Royal Botanical Gardens, there to study botany. For four years he pursued his studies diligently. From there he went to the Botanical Gardens of Liverpool. Mr. Lynch also spent a few years at Kew Gardens, London.

With 52 guineas in his pocket, the amount he had received in prize money for his fine displays of chrysanthemums at a London Flower Show, he set sail for America. For nearly four years he was employed in the large gardens in New York, Jersey City, Philadelphia and Syracuse. While in New York, in 1875, he was married, and on his wedding day started for California. That year saw him in charge of the beautiful gardens of Major Rathbone at Menlo Park. The major was in the heyday of his success at that time, and his handsomely kept grounds were the admiration of all. He formed a strong attachment for Mr. Lynch that grew stronger with years, and ripened into warm friendship.

In 1880 James Flood, the bonanza king, had laid out his magnificent grounds and needed an expert landscape gardener to take charge. He selected Mr. Lynch for the work. Mr. Lynch did his best work there, and the grounds as originally laid out by him will always remain a monument to his memory.

In 1886 Mr. Lynch took charge of the Sherwood Hall Nurseries, owned by Timothy Hopkins. He with his usual energy raised the concern from small beginnings to a business of large proportions, so that when he retired the nursery was furnishing San Francisco with one-third of its floral supply.

About fourteen years ago Mr. Lynch began business on his own account and threw his whole soul into the project. Beginning in a small way he gradually developed it until he had one of the largest nurseries and the best paying business in the State.

During his life time Mr. Lynch drew about him many warm friends who loved him for his goodness of heart, finding in him one who was always ready with a helping hand to assist in some worthy beneficence. The funeral took place Tuesday morning, May 30, 1905, from his late residence, and was escorted to the Church of the Nativity by the Menlo Park Horticultural Society of fifty members. The cortege was one of the largest ever seen in Menlo Park. Over one hundred carriages followed the remains to their last resting place in Holy Cross Cemetery. The floral pieces were costly and many, showing the high esteem in which the deceased was held. The following old-time friends acted as pallbearers: Sydney Clack, Daniel Regan, James R. Doyle, David Tuttle, Thomas McIntyre and Matthew Crowe. A widow and nine children—four sons and five daughters—remain to mourn his loss.

A correspondent to whom we are indebted for the foregoing particulars writes: "Mr. Lynch was one of my best friends; every inch a man."

Window-Box, Porch and Veranda Gardening.

(Report of Committee of Hartford Florists' Club.)

Window-box, porch and veranda gardening, it would seem at present, is within the threshold of a successful era in this country, and it seems strange that this effective and comparatively inexpensive method of beautifying houses, especially in cities, has not been long ago more universally adopted and advanced, considering the long standing of this art of gardening in European cities, which are annually visited by thousands of American tourists. True, our climate here is not as favorable to such gardening as it is in London, for instance, where window-boxes are in evidence the year round, receiving from three to four different fillings as the seasons call for the different varieties of plants; but cutting out the Winter season, which with us is too severe to admit of the use of such plants as aucubas, euonymus and choice conifers as they are so effectively employed in England, there is no reason why our windows should not be adorned with beautiful foliage and flowers in almost inexhaustible varieties from the time when the crocuses and tulips break the ground, when pansies, forget-me-nots and daisies respond to the warmth of the welcome Spring sun, to the time when Jack Frost, the unmerciful, bereaves our fields, parks and gardens of the endless combinations of bright colors produced by plant life.

It may truly be said of most of our attractive cities that the creation and development of park systems all over the country has had a very far-reaching, beneficial influence upon the beautifying of home grounds through the residential districts of these cities, and it is quite natural that it should be so. Indeed, it would be a strange, unresponsive, cold people that would not take its lesson so easily learned

a way open and it should be taken advantage of to bring the gardening which we admire so much in the outer districts of our city to all parts of the city, through our business streets, to the homes of our less fortunate fellow-citizens, the homes of those of our fellow-beings that have to live in the crowded tenement districts.

We have spoken of the influence that parks have in any city on the public in general; now let us consider what the influence will be by the introduction of window, porch and roof gardening into the busy, monotonous life of a city. Imagine window and veranda-boxes loaded with foliage and flowers on our school-houses, municipal and business buildings and residences, vines growing over windows and hanging down over window sills and balustrades. What a beautiful sight, worthy of a beautiful, progressive city! Imagine window-boxes in all their glory of Spring and Summer flowering plants, not only screening the unsightliness of rows of tenement windows, but giving them from the inside and outside the cheerful, cozy appearance, which plant life alone can produce. Imagine the pleasure and joy of those under whose painstaking care the seeds are germinating to a seedling, the seedling to a full-grown plant, the plant producing the flowers; and imagine the pleasure those flowers give to all, and the feelings and sentiments they will in their turn germinate and bring into life among those people who in the pursuit of their daily hard labor are not so fortunate as to know of the pleasures of those who have their garden and yards. Imagine the good seed that will be sown into the hearts of the children of those crowded tenement districts, a seed that is bound to take root; for the soil in all human hearts is more or less alike and it depends upon the cultivation whether the seed entrusted to said soil will grow to be a useful plant!

Wishing to practice what we want to teach, the following plain instructions and information for the people who may wish to make a trial in window, porch and roof gardening may be of use:

Window-boxes are easily constructed and can be made at a small expense. Taking ordinary spruce or pine boards for the construction, the box should be made the length of the window's width, 6 to 8 inches wide and as deep. A box $3\frac{1}{2}$ feet long would therefore take about 12 feet of lumber, which would cost about 35c. The cost of labor, nails and two coats of paint should not be more than that much again, and the result would be a very plain but well constructed, durable box at a cost of 70c. The box should have six $\frac{3}{4}$ -inch holes in the bottom, which should be covered with broken pots, stones or some thing that will prevent the falling out of the soil, but still provide drainage. It will take about one bushel of good composted soil to fill the box, which could be delivered by any florist for 50c. The soil should be rich, composed in the main of rotted turf mixed with well-decomposed cow-manure, leaf-mold and a little sand. Now the box is ready for planting. Suppose the box was already on hand in the Fall, it could be planted, say, in December, with tulips, hyacinths and crocuses; planting the bulbs about 3 inches deep and keeping the box in a cool room, or cellar, with a fairly good light. Where the proper locality is not available, however, it will be rather difficult to obtain good results, as the bulbs are apt to grow too quickly, stretching toward the light and coming into bloom before they could be safely put outdoors. The box could, however, be placed at the inside of the window, and you would have your bulb display indoors; as the bulbs will not require too much watering, same could be given without damage to floors or furniture; besides, a tin or zinc box outside of the wooden box would take care of that.

A box of the size herein described would take 15 tulips, for the back row, 10 hyacinths for the middle row, and about 50 crocuses for the front and side rows, and the total cost of good bulbs would be from \$1 to \$1.50. Daffodils, jonquils, snowdrops, etc., could, of course, be grown in such boxes.

After the bulb display is over the bulbs can be taken up, and pansies, forget-me-nots and daisies can be planted. A good effect would be to have the forget-me-nots in the back toward the window, the pansies in front of them and a border of daisies in same position in which we had the crocuses. Ten forget-me-nots, 14 pansies and 20 daisies will fill the box nicely, and they should not cost more than \$1 for the lot.

By about June 1 it is time to establish the Summer planting, and for that purpose we have an almost inexhaustible variety of plants, and effects are obtainable by a proper selection to suit all tastes.

The following planting lists for window-boxes may be of use:

1. Cost of plants for one box, \$2.25. Two *Penisetum Ruppelianum*, 3 *heliotropes*, 2 *calendulas*, 4 sweet alyssums, 4 geraniums, 2 *Cobaea scandens*, 2 *maurandyas*, 2 *Centaureas gymnocarpa* and 2 fuchsias.

2. Cost of plants for one box, \$3. Plants: One *Dracæna indivisa*, 6 geraniums, 4 petunias, 4 *Vinca major variegata*, 4 German ivy, 2 fuchsias, 2 coleus, 2 verbenas, 6 *Begonia Vernon*, 2 marguerites, 2 nasturtiums and 2 lobelias.

3. Cost of plants for one box, \$5. Plants: Two *Phoenix canariensis*, 4 crotons, 2 geraniums, 2 fuchsias, 4 *Abutilon Savitzii*, 6 fancy begonias, 4 *Vinca major variegata*, 4 German ivy and 2 *Abutilon Eclipse*.

Other plants besides those mentioned in these three planting lists are, salvias, ageratum, hydrangeas, achyranthes, mignonette, dwarf cannas, gladiolus, tuberoses, zinnias, marigolds, stocks, etc. The same plants are, of course, also suitable for vases, baskets and tubs. This means well-filled boxes giving immediate effect. Planting thinner means a saving and a good, complete effect later in the season.

The boxes herein described are such as would naturally require the planting material to be furnished by the gardener or florist, and as plain as they are constructed, and as reasonable as are the prices considering the class of planting material used, they are above the means of the poorer classes of people living in the crowded tenement districts. Just as well, however, as boxes can be made more elaborate both in construction and in planting for people of larger means, so can also much cheaper boxes be made and planted, bringing them within the means of even the very poor. Where there is a will there is a way. The man or woman proud of their home can nail a box together of almost any kind of lumber, fill it with loam from a garden, or the fields, and fill same with annuals by planting seeds. Not counting the cost of self-provided labor, such a box can be made and filled with soil for 25c. or less, and the seed itself will be still less expensive.

Such seed boxes can be sown outdoors, beginning first week in April, and the following seeds can be used: Petunias, nasturtiums, zinnias, *Phlox Drummondii*, balsams, portulaca, scabiosa, marigolds, morning glories, asters, candytuft, cockscombs, godetias, poppies, snapdragon, violas, etc.

Each seed package gives information as to height, of plant, color of flowers, time of blooming and instructions for sowing, so that it will be an easy matter for anyone to form proper combinations of plants. A box can be planted with one showy variety alone, or with a combination of suitable varieties, and the cost of seeds for one box of one variety will be 5c. and for five varieties 25c., but the five packages in the latter case will furnish enough seeds for five boxes. Therefore window gardening is within the reach of all.

FIELD OF LILIUM DOEHL ON GROUNDS OF STEPHENS BROS., PAGET, EAST, BERMUDA

and within the reach of all; and the very fact that those lessons given have been so fruitful, bringing additional happiness and attractiveness to so many homes, should lead us on to further efforts to extend the cultivation of flowers at all seasons of the year at the homes of all.

The fact that the wind will blow the seeds of grass, of a shrub or even of a tree into the smallest crevice of a stone pavement, a stone wall or any almost inconceivable space, often too small to be noticed by the superficial eye, and that said seed will germinate, produce a plant which will live its term, should teach us that there is hardly a space, or location, which will refuse all conditions necessary to plant life, but that, on the contrary, with the help of painstaking care, adverse conditions can be overcome and plant life can be introduced and maintained everywhere where barrenness otherwise rules supreme.

We see now here and there well-filled window-boxes and vases on porches and verandas along residential streets, on houses, the front yards and often the back yards of which are already in themselves beautiful and attractive, and they are certainly becoming to the houses which they adorn, as tasteful and handsome as the architectural appearance and the surroundings of those residences may already be. Now, if those floral ornamentations are well placed here, and help to still more enhance the beauty of the already beautiful, how much more valuable must the same methods of beautifying and making more homelike the homes of all be in those parts of a city where there are no attractive front yards, lawns, flower-beds, shrubbery and trees, where there are the barren, formal brick walls, or where even the elaborate creations of modern architecture are unable to overcome the monotonous and tiresome impression which prevails in all the business and tenement streets of our cities? In other words, there is

Everything that can be done to create healthy, joyful life for the human race should be advanced through continued and united efforts of all citizens of a community.

We horticulturists florists and gardeners, following a time-honored profession, should look upon our calling not only from a pecuniary, commercial point of view, but we should take pride in the well-proven fact that our accomplishments and our labors of progress in our noble profession are bringing more universal and wholesome enjoyment to the human race in general than almost any other profession, and we should do everything within our power to further the good work which is within our reach.

The cultivation of taste, understanding and love for plants and flowers means the advancement of the people to a full appreciation of our achievements, and with said appreciation will come the commercial remuneration which we are deserving by following such principles.

The method of bringing those desirable conditions about are surely not as difficult as they may appear to be. In fact, we believe that the florists are mostly to blame that window-box, porch and veranda gardening is not further advanced than it is to-day. We believe that if the commercial florists would have completed window-boxes for sale, from the least expensive up to the most elaborate, there would be a ready sale for them within a very few years. We believe that if the professional organizations all over the country would publish, through the public press, articles giving plain instructions and descriptions how to proceed in this and other lines of horticultural and floricultural advancement, a general awakening to those desirable improvements would soon show itself, to the benefit of the community in general and the business interests of the florists in the end.

To our brother florists and gardeners, especially the commercial men, we would earnestly make the following recommendations:

First. To keep up to the times by growing and introducing such plants as are well adapted for such work, giving due recognition to all deserving varieties and novelties.

Second. To encourage this line of gardening by having some window-boxes tastefully planted on exhibition in front of their stores, ready for sale.

Third. To set the price for those plants at as low a basis as possible, so as to bring them within the reach of all.

Combined efforts along these lines will, we believe, result in a general adoption of window gardening, will bring happiness to numberless homes, and help to beautify our city in no small degree, and all will be to the ultimate benefit and satisfaction of the florists' business.

The whole respectfully submitted,
 THEODORE WIRTH,
 PETER A. ZUGER,
 CARL PETERSON,
 JOSEPH F. COOMBS,
 FRANK ROULIER, } Committee.

Lilium Doeii.

Our illustration represents a field of *Lilium Doeii*, on the plantation of Stephens Brothers, Paget, East, Bermuda. The evenness of growth of the plants will be seen at a glance. For that quality, Mr. Stephens says, he would strongly recommend the variety named, and *Lilium Harrisii* for earliness.

Notes from China.

After such a long silence it will, I hope, not be a disagreeable surprise to you to have a letter from me, this time from China. You may know that I have been delegated to start the new departure of L. Boehmer & Co. here at Shanghai. So far I have been very busy, and have succeeded in laying the foundation of a promising business.

Greenhouses and nurseries are no new things at Shanghai, the metropolis of foreign trade in China. We have a public (municipal) establishment here, which has done much to introduce the favorites from Europe and America, and which has been a kind of nursery also to the Chinese gardeners, who have learned to cultivate exotic plants under glass, and to adopt certain foreign ideas as to arrangement of plants and flowers. Nearly every residence here has a conservatory, which yields enough flowers for table and garden adornment. The English taste prevails, and we find geraniums, pelargoniums and a lot of hardy herbaceous plants, as well as masses of Paris daisies, primulas, cinerarias, callas, freesias and tuberose among the list, especially chrysanthemums in quantity, and in very fine form.

The native flora of China is, of course, very much the same as the Japanese. In fact, the latter may be regarded as coming from China. Gardeners—or let me use the misnomer so dear to your readers, "ornamental horticulturists"—are very few here. Every little piece of land is cultivated to yield some useful crop. Around Shanghai broad beans and cotton, barley, wheat, rice, cabbages, turnips, kohlrabi (quantities), a peculiar trefoil, which is used as a salad, spinach, bamboo (the young shoots being eaten), etc., but very little fruit of any kinds are cultivated. As the teachers of the Japanese, the Chinese farmers are cultivating their land very rationally. Everything is done by hand, and the manuring (human excrement) is keeping up a fertility which is really surprising.

Frugal as the Chinaman is, we find that he has plenty of leisure besides his garden work; and most of the coolies hereabout can till their garden after the hours they work outside for 25c. (12½c. United States money) a day. The natural effect of the farming industry is the disappearance of all tree-growth, with the exception of that in the temple yards and on graves, and in a very few gardens which are kept and planted by rich mandarins, and, of course, in those mountainous parts where gardening is impossible or very difficult. The scarcity of fuel during the rather cold Winters often drives the poor people into the country, where they gather a few branches from the wild growth of trees, and even dig out the roots of the grass, which they dry and burn. Further north I have seen the female portion of the families out on the bare hills, working eagerly to gather a little basketful of these roots to cheer their house, or, rather, hut, and to cook their frugal meals.

The climate and soil certainly tend to provide a most luxurious growth of plants. If it were only protected for a few years, many a bare-looking hillside would be green, and the reaction on the climate would no doubt much enhance the conditions of this country.

In Shantung, where I had occasion to visit some of the more desert parts, I found a natural growth of pines up to the very top of the stony mountains, but with all except the leading branch torn off. At the time of my visit, early May, I could only guess at the variety of plant life which is met with everywhere, but I was delighted with a few very pretty plants which might become very desirable ornamental subjects for our gardens. To mention only a few which would strike every florist or nurseryman as useful, I found a most lovely, single yellow rose, which I regret I cannot name. It looks like the single form of the pretty Persian yellow. It grows much like the *Rosa multiflora*, is very sweet-scented and most abundantly covered with flowers. Another novelty is a very pretty daphne species which grows among the rocks in the drier hills, rooting very deep. At first sight I took it for a dwarfed lilac. It has flowers exactly like those of the Persian lilac, is very fragrant, like the other daphnes,

MARECHAL NIEL ROSE IN 10 INCH POT IN THE GARDEN OF THE TONG TAOTAI, SHANGHAI, CHINA

and blooms the earliest of all shrubs. This whole country is full of lilies of many genera—*hemerocallis*, *lilium*, *nerine*, *narcissus*, *pardanthus*, etc., are met with everywhere in the meadows and hills. Of trees we have a remarkable variety, all of which are known in our gardens at home—*Pterocarya caucasica* (much planted in the foreign gardens; I fail to remember having seen any of wild growth), *salisburia*, lovely masses of *cunninghamia*, *Larix Kämpferi*, a most stately tree, with the straightest possible stems and regular top; *Quercus castaneaefolia* (so very easy to transplant), *Ulmus keyaki*, *juglans* of various species, *Magnolia conspicua* and *grandifolia* (the latter brought north from Canton), *persimmons*, *gleditschias*, *robinias*, *acacia*, *mulberries* (cultivated in masses for the silk worm); a very pretty *Sophora pendula*, masses of *lagerstræmia*, *punica*, *gardenias*, *azaleas* (in the mountains), a *Viburnum macrocephalum* (?), with immense heads of flowers; bamboos, etc. Of course, this list is what happens to come to my mind as I write, and gives an idea only of the pretty things which abound here. Later I shall point out those which seem of special interest.

About Peking and Tientsin, even, where the Winter is very cold and nearly without snow; where storms prevail and the dust storms certainly cannot favor plant growth, we find some remarkable things, some of which may interest planters of the United States. There is a bamboo which seems to disregard the climate

rigors, and pomegranates are favorites in the gardens. We find here again that the adversities of the climate have trained the gardener to more attentive cultivation, and on several visits I could admire their skill. For instance, in January I saw a cold frame made of mud and straw with a south window of paper, practically closed hermetically, full of the most perfect cauliflower. The structure is about two feet high, built of a bamboo frame, with mud and straw (mixed while wet) put on in thick layers. At night straw mats cover this greenhouse, and it is only opened from time to time to allow of watering, and to collect the fine heads.

At Tientsin I also saw a most successful culture of *Marechal Niel* roses. They seem to be the favorites and have been for many years. Every gardener has a few hundred pots. I enclose a photograph showing a specimen of a two-year-old plant in a 10-inch pot. The photo was taken in the garden of the Tong Taotai, one of the most influential mandarins at Tientsin, who is a genial gentleman with a great love for the garden. He is a thorough scholar and lived for some years in Washington. The little boy seen in the picture is his son, and the girl the amah who attends the boy. I also send you a photo of a part of Tong Taotai's new garden, although I am afraid it is too dark for reproduction. [Sorry this is so.—Ed.] The photo shows the Taotai, with some friends on the top of an artificial hill, which is always a feature in the Chinese garden. Another photo, showing a *Marmalade* rose growing in the open, is also too dull for reproduction, but may give you an idea of the fine growth roses make under careful treatment about Tientsin, although the soil there has the reputation of being almost sterile, owing to an excess of alkali.

Another curiosity of the Tientsin gardens are the most excellent chrysanthemums. I have not seen them in bloom, but every foreigner residing there claims the Tientsin chrysanthemums superior to those in other lands. The Tientsin gardeners graft all their chrysanthemums on a wild plant, which to me looked like the wild vermuth, but which I have not been able to identify correctly, owing to lack of time and specimen. On a visit in June, I found in the little fields of the "garden men" many a bed planted with this wild plant, and the grafts just newly fastened; and as the wind was rather dry, both hanging as if they were sure to die. But the garden men told me that there was no danger of losing any one of the grafts. These grafts are cultivated much like June cuttings in America to bear one, two or three fine flowers. It is remarkable, Mr. Editor, how varied are the methods by which cultivators obtain identical results, and from these older, if more primitive, gardeners we can learn much useful knowledge.

Since February we have had a pretty variety of blossoming trees, partly cultivated in pots for Chinese New Year, and mostly out-of-doors—*Calycanthus præcox* in January and later, the large peach blossoms, white, pink, variegated, and the dark, blood-colored ones were very effective. *Magnolia conspicua* is just through (April 29), and the trees about here were laden with snow-white tulips. We are now going into the peony season. Last year I missed this very interesting sight, but hope to be able to see some of the best gardens about Shanghai this year. I am told by Chinese amateurs that the Chinese collections are much finer than the Japanese, and am anxious to verify the statement. The Chinese pay much attention to peonies, and I have seen a few plants forced into bloom in pots as early as January. As far as I can judge from the little I have seen, the varieties are more like the very large Moutan sorts which are found in the fine collections in Europe, the double ones being preferred, while the Japanese are mostly single, though gorgeous in color.

New York.

News Notes.

The fifth annual outing of the New York Florists' Club, which will take place on Wednesday, June 28, at Glenwood on the Sound, gives promise of being one of the most enjoyable affairs the club has ever had. President F. H. Traendly, with the outing committee, is sparing no efforts toward making the occasion a memorable one in the history of the club's social affairs, and everything possible is being done to ensure both young and old a pleasant day's fun. The sail will be about twice as long in duration as the journey to Witzel's Point, and this feature will no doubt be the means of drawing a larger crowd even than we have had in previous years, as, after all, the sail on the water, while listening to the strains of the orchestral music, is the most delightful part of the day's enjoyment. Those who have not remitted for their tickets should do so to Charles Schenck, the treasurer of the committee, immediately, so that the necessary arrangements can be made as to dinner, etc.

In view of the insinuation directed at us by our esteemed Boston contemporary's editor, we beg to assure him that we ken nothing in his alleged advocacy of a credit limitation in the cut flower trade that we did not like, excepting the one glaring fact that the inopportune exploitation of the movement gave it its death blow, which was doubtless the intention, notwithstanding the seeming support afforded.

The sum of \$25,000 has been subscribed by some friends of the Brooklyn Institute of Arts and Sciences for the equipment of a botanic garden, for the purpose, primarily, of affording instruction in botany to the students of public and private schools. The garden is to be adjacent to the museum building, on the lands reserved by the city for a botanic garden and arboretum. A special committee, headed by former Mayor Charles A. Schieren, has been appointed on plan and scope of the proposed garden.

H. A. Molatsch & Son, who for many years have had greenhouses at Sixty-eighth street, Brooklyn, and who have been removing their plant gradually, have got located at their new home, Nanuet, N. Y., where they will continue the growing of plants and cut flowers for the New York trade.

Joseph Lubbert, a newly arrived florist, who is working for Francis Manker, Gravesend avenue, Brooklyn, came to town to see the sights last Sunday, and, listening to the wiles of two strangers he met at the Bridge entrance, was persuaded to look over the Bowery, landing in a saloon and being relieved of his watch and \$15 in cash—all he had. The thieves were arrested and are held in \$1,000 bail. Lubbert went home, minus his cash and watch, but with plenty of experience.

Emil Leuly, the Hoboken florist, who is noted for his long bicycle rides, has started on his wheel for California. He left the City Hall on Sunday, June 11, at 7.20 a. m., and reached Tannersville, N. Y., the same day, making a distance of 106 miles. On Monday, owing to bad roads, he did not do so well, the distance covered on that day being 66 miles. Mr. Leuly has usually attended the S. A. F. O. H. convention, traveling on his wheel. He made the Buffalo trip in that way, also the Asheville, N. C., the Milwaukee and the St. Louis trips. He certainly has a good method for taking a pleasant vacation.

James Weir's Sons, the prominent florists of Brooklyn, have just sold the lease of their Fulton street store, which is located at the corner of Elm place. The owner of the property is the purchaser of the lease, and the price paid is \$14,500. The Weirs have another large store on Fulton street, further downtown.

C. W. Ward, president of the Cottage Gardens Co., Queens, L. I., left on Wednesday forenoon for Chicago, to attend the annual meeting and exhibition of the American Peony Society.

Mrs. R. B. Holmes, proprietor of the Holmdale Greenhouses, a rose growing establishment at Madison, N. J., died at her home there last week. The interment took place Monday, June 12.

A souvenir postal card from Germany informs us that W. S. Lee, formerly florist and decorator at Sherry's, and later at the Hotel St. Regis, has, with his family, made a safe passage on the steamship Pretoria. We under-

stand that, upon his return in the Autumn, Mr. Lee will open a first-class retail store in New York.

The Burnham-Hitchings-Pierson Co. is among the new incorporations, with a capital of \$2,000,000, to manufacture and operate greenhouses. The incorporators are W. A. Burnham, Irvington, N. Y.; Lyman B. Crow, New York City; Henry F. Ford and Andrew Elder, Irvington, N. Y.; Chas. Armitage, Chas. G. Hall and E. W. Hitchings, Montclair, N. J.; Paul M. Pierson, Ossining, N. Y.; William Sefton, Jersey City, N. J., and Lincoln Pierson, Madison, N. J. We hope to give further particulars regarding the new concern in a future issue.

Robert Demcker, of Bogota, N. J., will sail for Europe on June 20. The trip is taken chiefly on account of his health.

William Todd Ludlow, who was well known on Long Island as a plant and tree salesman, was buried last Sunday afternoon from the Classon Avenue Presbyterian Church, the interment being in Greenwood Cemetery. The deceased was born in 1842 and leaves a widow, one daughter and two sons.

Asa L. Brown, of Kearny, N. J., a grower who attends the Clinton Market almost daily, had a birthday last Saturday, and the boys prepared a great surprise for him in the form of a layout and decorations around his own plant stand. Unfortunately, Mr. Brown did not attend that morning, and the efforts of his friends to surprise him were wasted.

The assignee of George Purdue, Orange, N. J., has sent out a statement which shows Purdue's liabilities to be \$5,694.84. Among the creditors are many well-known growers and wholesale florists.

Wm. Elliott & Sons will hold their third annual trade sale on Tuesday, June 27, at their auction rooms, 54-56 Dey street. This does not mean that they have been selling at auction for only three years; they have been having sales there for two generations or more. It only means that this is a particular sale, inaugurated two years ago, to give growers a chance to secure young decorative stock for growing on through the Summer months. Every grower who wants to utilize his greenhouse space profitably for the next few months will find it to his advantage to attend the sale.

John Scott is building six new greenhouses on his Flatbush property, each 100 feet long, and in all probability an additional six houses will be erected during the Summer.

Richard S. Sayer, treasurer of the Rider-Erierson Engine Company, and his wife were killed at Goshen, N. Y., on Wednesday while automobiling. They were passing over the Erie Railroad tracks and were struck by a fast train. Two young sons, who were with them, were both injured, perhaps mortally. The colored chauffeur escaped unhurt.

Mr. and Mrs. Geo. M. Stumpff left Wednesday for Europe and will spend the Summer at their country home on the borders of the Black Forest, Germany.

Seth Miller, of Dallas, Texas, was a visitor this week, and attended the club meeting on Monday evening.

The wife of S. S. Butterfield, of the staff of this paper, underwent a serious surgical operation in the Long Island College Hospital, Brooklyn, on Tuesday last. Mrs. Butterfield, we are glad to state, is progressing favorably.

Jeanie Birnie, the youngest daughter of John Birnie, whose Scotch dancing has been so much enjoyed on several occasions by the Florists' Club members, was a prize-winner last Saturday at the annual games of Clan McLeod, in Jersey City, being first for broad sword dance, and third for Highland fling.

J. S. Fenrich, one of our youngest wholesale florists, and Miss M. Le Mout, daughter of the veteran Bowery retail florist, were married on Thursday, June 8, at the home of the bride, in Tremont. The honeymoon will be taken next month. The young couple have the hearty good wishes of the trade.

Boston.

News Gittings.

The season this year is much later than last. At present such flowers as peonies are just beginning to bloom, while last year at this date they had all passed. Lilacs this year

were much later than a year ago, but as a florist's flower they were not nearly so much in demand. A year ago they were used extensively for wedding and other decorations, while this year they have had little call for such purposes. Outdoor roses are just commencing to bloom, the first outdoor General Jacquemot having made their appearance in the market. Bedding plants have been extensively grown and used this year. It is safe to say that this has been by far the best season that plant growers have ever seen. Geraniums have been greatly in demand; in fact, those sold at auction have brought much larger prices than expected.

Edward Macmullin is renovating his greenhouses at Norfolk Downs. He has plans out for the building of two more houses in the near future.

Southern huckleberry branches have been much used for decoration purposes. Henry M. Robinson & Co. say their sales of this material have been much larger than expected. This firm is also handling large quantities of hardy cut ferns.

Samuel Beck, the popular salesman at the Park street market for James Tulis, met with a rather painful accident while taking part in a ball game Saturday afternoon. The disappearance of some of his front teeth did not prevent him being on hand Monday morning as usual.

Jas. Farquhar expects to sail for Porto Rico to-day (Saturday).

The Gardeners' and Florists' Club hope to hold their picnic at Randolph's Grove on July 23.

N. Butterbach, Oceanic, N. J., is a visitor this week.

J. W. DUNCAN.

Chicago.

The Week's News.

A meeting of the wholesalers was called for Wednesday, to try and form a permanent organization, it being the belief that from such great benefit would accrue, as has been shown the past few weeks during the strike.

The Peony Society will open its annual show in the banquet hall of the Auditorium Hotel Friday, and continue over Saturday. The Society will hold both afternoon and evening sessions. From what can be learned, a large number of entries have been made.

Benjamin E. Gage, of Peterson's nurseries, is in attendance at the Nurserymen's convention this week.

Herman Schau is remodeling and enlarging his glass area.

Stollery Bros. have a sport from Mchet mignonette which they consider finer than anything on the market.

The meeting of the Florists' Club was not as well attended as expected. The report of the transportation committee was held over until a future date.

R. JOHNSTONE.

Pittsburg.

The Week's News.

Lightning caused damage of \$1,000 last week at J. Kletzley's place, in Oakmont; the barn was struck and destroyed.

Wm. P. Snyder, representing Edwards & Docker Co., of Philadelphia, paper box manufacturers, was in the city the past week.

The committee in charge of the outing of the Florists' Club next month is hard at work and promises to give the members a good time. Instead of going to the grounds where the picnic has been generally held, the affair will likely take the form of a boat ride up the Monongahela River to a pretty place to spend the day, with sports of all kinds, offering prizes, etc. The date of the outing has not yet been fixed, but announcement will be made a few weeks in advance; it will likely be about the middle of July.

E. C. REINEMAN.

St. Louis.

News Notes.

Carl Beyer met with a painful accident, running a rusty nail into his left hand.

Max Rotter was severely bitten by his large dog last week. The limb is greatly swollen. The dog was shot.

George Waldhart was visiting last week at Nick and John Himmer's place at Merrimac Highlands. Mr. Waldhart's place, at Clayton, is in fine shape this Summer. He was contem-

plating a trip to Europe, but will now content himself with the Washington, D. C., trip.

Wm. Ellison and his son Arthur returned from their Southern trip the past week. Both enjoyed themselves greatly. They brought back quite a collection of ferns.

James W. Dunford and W. J. Pilcher visited Fred Ammann at Edwardsville recently. They found him busy making alterations.

John Hudson and John W. Kunz, two prominent local florists at one time, called the past week on their friends in the trade. Both are looking fine and doing well in other businesses. Kunz carries the mail for Uncle Sam, and Hudson is in the mineral water business for himself.

George Ostertag is the proud father of a big baby girl.

Mrs. Wm. Ellison and daughter will spend the Summer among the Northern lakes.

Ed. Buechel and wife, of the Riessen Floral Co., will leave soon for a six weeks' stay up North, on a fishing trip.

Charles Young, with C. Young & Sons Co., will spend two months in New York this Summer after the Washington convention.

The picnic committee will most likely select Mollenbrock Grove, at Horseshoe Lake, on the east side. This, they say, is one of the best places for a private outing. Everything is there, including bowling alleys, plenty of fishing and room for all kinds of sports.

Bowling.

The florist bowlers rolled a few games on Monday night. The cool evening brought out seven members. Of these, Bencke rolled six games, making 1,115; Kuehn, 919, and Getlach 855. Lohrenz rolled five games making 691; Meinhardt, four, 531; Ellis, three, 423, and Adels, three, 374.

ST. PATRICK.

Indianapolis.

An Outing.

Tuesday, June 2, was spent in a most enjoyable manner by about fifteen Indianapolis florists as guests of their Richmond, Ind., brothers. The interurban limited was met at E. C. Graves' establishment by Fred Lemon, John A. Evans, E. Graves and others. Mr. Graves' place, with its large range of carnation and rose houses, made a most favorable impression. After the party had been decorated with an equal number of large American flags by Mr. Evans, they were invited to Cedar Grove Club house for luncheon.

Immediately after the State Florists' Association was called to order by President Lemon, but as the day was promised to be filled with enjoyable events, business was immediately disposed of. A large part of the afternoon was spent in bowling and watching an interesting shooting contest.

E. G. Hill's place, with its great variety of stock, was visited later in the afternoon. Dinner was partaken of at the hotel, bringing to a climax the mirth and humor prevalent with the party during their stay. The writer has been asked time and again to express through The Florists' Exchange the appreciated efforts of the Richmond florists.

The premium list for the Fall flower show is to be much heavier than the preliminary list indicated. Subscriptions for the show are exceeding all expectations for so early a date, therefore its success, from a financial standpoint, is assured. Backed by such growers as E. G. Hill, of Richmond; W. and M. S. Vesey, of Fort Wayne; F. Dorner & Sons Co., of Fayette, Ind.; Gunner Theilman, of Marion; Stuart & Haugh, of Anderson, and many other growers in the surrounding states, Indianapolis will be certain to surpass her former efforts in this line.

John Bertermann and daughter Emma have returned from their European tour.

Visitors: Mr. and Mrs. Chas. A. Riegan, Connerville, Ind.; B. H. Klus, Anderson, Md., and W. Rolker, New York.

I. B.

ROCKFORD, ILL.—The Garland Company, of Chicago, has been awarded the contract for the structural iron work on the big greenhouse to be erected by the Buckbee Seed Company on Buckbee street.

Review of the Market

NEW YORK.—Business in cut flowers has failed to improve any, and prices all around have a downward trend. Judging from past years, we confidently expected that a better market would have prevailed this week; but the supply of stock has kept in advance of the demand, and a general weakening in values is the result. Peonies are not nearly so plentiful as they were last week, but there are enough, and low prices rule. Carnations continue to be both abundant and good, and averages will be lower than those of a week ago. There is more than a full supply of roses; and, while there are plenty on hand that are mildewed, there is also an ample stock of good, clean flowers to fill all requirements. Lily of the valley has not met with the call it did last week, and, as a consequence, the price has gone down considerably.

Cattleyas move with just enough vigor to keep the prices stationary. Lots of lilies are coming in, and the crop of sweet peas seems to be growing heavier, much to their detriment. Of cornflowers, iris, coreopsis, gladiolus and spiraea, there is a regular abundance, but no fixed prices rule with this stock. Asparagus and smilax are not selling so well, no doubt owing chiefly to the prevailing style of using oak leaves and other outdoor material for garnishing purposes.

BOSTON.—There has been practically no change the past week in market conditions; some days a lively business would be done, while the following morning would see goods hard to move at any price. Bride and Bridesmaid roses are poor in quality, and bring small figures, while a good many fine Souvenir du President Carnot and Kaiserin Augusta Victoria are in from houses that have kept cold during winter. These command a fairly good price, \$6 to \$8 being the average for the best stock. A very good size of Liberty are also plentiful, and are much sought after, and likely to take the place formerly held by General Jacqueminot.

Carnations are very good, considering the season; especially fine are some of the Mrs. Patten and Fair Maid varieties. They do not realize large prices, however, for good stock can be bought at 300 for \$1. White carnations are a glut at the present time. Peonies are beginning to get plentiful, and sell fairly well. Some good lilies are yet in the market, but there is not a great demand for them. Sweet peas have dropped in price, although the quality is somewhat improved. Lily of the valley remains about the same as a week ago. Many other flowers, such as candytuft, stocks, etc., are brought in in quantity, but there is little demand at this season for that class of stock. Decorative greens have been selling well, having been in demand for wedding decorations during the month. J. W. D.

CHICAGO.—Trade during the past week has been more erratic than is usual at this season. The local demand has been unprecedentedly light, more so than is usually experienced during the month of June. All the principal retailers are complaining of the lack of trade. This can be traced to the effects of the labor troubles, and there is no possible chance for business to regain its normal condition during the present season, as, from indications, the labor difficulties will continue through the Summer. Shipping trade has held up fairly well; if it were not for this part of the business, the situation would be considerably worse than it is.

The supply of American Beauty roses has shortened up considerably, and the quality has deteriorated greatly the past few days; a further shortage is looked for before the regular Summer crop commences to be cut. Prices range from \$3 to \$32 per 100, according to quality. Bride and Bridesmaid roses are not arriving in such large quantities; those of any quality at all bring a good price. Bride have suffered most from the effects of the warm weather. There has been a good demand for Perle des Jardins, at good prices. Meteor has sold fairly well. Liberty has been in demand, at from \$3 to \$16 per 100. Kaiserin Augusta Victoria is now coming in in fine condition, meeting with ready sale at from \$3 to \$8 per 100.

Carnations are showing the effects of the warm weather; the flowers are coming in freely, in fact, a heavy supply has prevailed for the past week or two, with the demand not over brisk, except for shipping and street trade.

Lilies have not been much in evidence lately. Sweet peas are in abundance, with but a light call for them. Peonies from outside are nearly over; those now coming in are from cold storage, selling at from 35c. to 75c. per dozen. R. J.

CINCINNATI, O.—Business remains good and stock, excepting tea roses, is coming in very nicely. American Beauty still stands in the lead; carnations, second, and peonies third. Stocks are now coming in, selling at 2c. to 3c. per spike. Fancy Western ferns bring \$1.50 per thousand. E. G. G.

INDIANAPOLIS.—An unusual quiet prevailed in the business last week, but this one, so far, has been as busy as the other was quiet. Though none of them are large, there are a number of wedding decorations on hand. Funeral work is exceedingly heavy, and good stock is scarce. The local supply is not nearly equal to the demand, so that many carnations and roses are being shipped in. Flowers such as feverfew, candytuft and lilies, which were plentiful last week, are entirely off the market, so that about the only reliable stock available are sweet peas, lily of the valley and roses. Large quantities of the latter are being used this week for graduation purposes. Select Bridesmaid and Bride are conspicuous by their almost entire absence; the few sold bring \$5 to \$6 per 100. Kaiserin Augusta Victoria, of good quality, are being received, selling at \$7 a hundred. Mme. Abel Chatenay, with some growers, is proving a worthy rose, excelling all others in quality at this season. The best bring \$3 to \$10 a hundred. Souvenir du President Carnot is off crop. Select La France sell at \$3 a hundred. The demand for American Beauty and Liberty is unusually heavy, the former sell at \$5 to \$25 a hundred, the latter \$6 to \$10.

The so termed "fancy carnations" are scarce at \$2.50 a hundred, with the exception of white; medium grades may be had in quantities at \$2. Field-grown sweet peas sell well at 50c. Many field daisies are brought to Tomlinson Hall Market and wholesaled at 20c. a hundred. I. B.

ST. LOUIS.—Trade the past week has been fairly active, school closings, weddings and funerals consuming a large percentage of the stock received. After this week business will not be so lovely. The weather is becoming too warm.

At the wholesale houses about the only scarcity at present is in white roses and extra fancy long American Beauty, which command \$3 to \$4 per dozen. There seems to be plenty of Bridesmaid, Meteor, Liberty, Golden Gate and Souvenir du President Carnot, which run as high as \$6 per 100 for the best. Carnations are becoming small, with abundance for the demand, at 2c. for choice; second grade bring \$1, and common 75c. per 100. Sweet peas are a glut; good, choice stock goes for \$2 per 1,000. Lily of the valley has been selling well at \$4 per 100 for choice. Candidum lilies, cornflowers and daisies make up the daily supply. Smilax is selling well; fancy ferns are a little scarce; most of the florists use dagger ferns at present, at 15c. per 100. ST. PATRICK.

WASHINGTON, D. C.—There has been considerable business this week, the funeral of General Boynton, chairman of the Associated Press, and that of Bereah Wilkins, of the Washington Post, making the florists unusually busy. There were also several weddings, which helped out considerably. The supply of outdoor flowers has had a tendency to lower the price of indoor stock. Very good American Beauty could be had for \$2 to \$4; Bride, Bridesmaid, Golden Gate, Ivory, Meteor and Liberty bring from 75c. to \$1.25 per dozen, while Kaiserin Augusta Victoria and Souvenir du President Carnot realize from \$1 to \$1.50. The best carnations sell at from 25c. to 50c.; peonies, 75c. to \$1.25 per dozen; sweet peas, 10c. to 25c. per bunch; coreopsis, 25c. per bunch, and gladiolus, 75c. to \$1.25 per dozen. There is little or no demand for plants in pots. M. C.

FIRMS WHO ARE BUILDING.

MINNEAPOLIS, MINN.—John Monson is building a greenhouse 100x150 feet.

NORTH BEVERLY, MASS.—George W. Glines has begun the erection of another greenhouse.

MILTON, IND.—Oliver Moore is putting up a new greenhouse here. He will grow vegetable plants.

ALLENTOWN, PA.—Al Griesemer, 24 North Fourteenth street, contemplates the erection of greenhouses on his lots at Twenty-first and Linden streets.

CATALOGUES RECEIVED.

J. M. THORBURN & CO., New York.—Wholesale Price List of Turnip and Other Vegetable Seeds, Mushroom Spawn, etc.

THEODOSIA B. SHEPARD COMPANY, Ventura, Cal.—Descriptive Price List of Everbearing Crimson Winter Rhubarb, also giving full cultural information.

ANDRE LEROY'S NURSERIES, Brault & Son, Directors (Andre L. Causse, New York City, Agent), Angers, France.—Price List of Fruit, Rose and Forest Tree Stocks, Ornamentals, Magnolias, etc.

CHANGES IN BUSINESS.

TRAVERSE CITY, MICH.—Fritz Carter has sold his business to F. M. Paine.

KANSAS CITY, MO.—The Harvey Floral Company has opened a flower store here under the personal supervision of Mrs. Lena Harvey.

HAVRE, MONT.—L. F. Foster has bought a half interest in the Havre Floral Company. Two greenhouses, 18 x 100, are now being constructed.

HAVERHILL, MASS.—The Emerson floral store at the corner of Winter and Pleasant streets, has been closed, and the fixtures transferred to the new store on Merrimack street.

BOSTON, MASS.—The Halifax Flower Company has been incorporated; capital, \$5,000. President, Julian P. Dunn, No. 35 Rutland Square, Boston; treasurer and clerk, Thomas L. Kelley, No. 187 Highland street, Roxbury, Mass.

SPRINGFIELD, MASS.—M. S. Donoghue, of St. Johnsbury, Vt., has bought of the estate of the late E. H. Howland, through the administrator, the Howland property, located at the corner of Oak and Appleton streets, comprising a considerable area of land, together with the good-will, etc. The sale price was \$23,000. Mr. Donoghue is an expert florist and has been successful in his work in Vermont. The Howland stand has been in existence many years and has a well-established trade.

MACON, GA.—The Idle Hour Nurseries have been reorganized, with D. C. Horgan in active charge of the business. Mr. Horgan has been identified with Maccon's interests for a number of years, and is well known to the people of the city as a capable and industrious gentleman. It is his intention to establish and maintain for the nurseries the reputation for the foremost of its kind in the Southern country. Mr. Grimshaw is retained as decorator, designer and manager of the city headquarters, 109 Cotton avenue. The "Woman's Exchange" will continue to co-operate with the nurseries in serving the public.

CANADIAN NEWS

LONDON, ONT.—Store trade is now confined to June weddings, and is about equal to that of former years. Flowers of all kinds are very plentiful and good; the continued absence of any very hot or dry weather no doubt having a great deal to do with the fine quality. The demand for bedding plants continues excellent, and some stock, noticeably S. A. Nutt geraniums, are reported getting low. As regards the varieties in favor, as usual, geraniums are leaders, and of these probably more could be sold of S. A. Nutt than of all other kinds combined. Other varieties in favor are Trego, John Doyle, Marquis de Castellane, (scarlet), Jean Viaud (pink), Beaute de Poitvine (salmon), Mme. Buchner (white). A few singles are grown, but the demand for them is extremely limited; in fact, it seems as if this latter class could be eliminated. Nothing is done in the fancy leaved varieties, in the scented, or in the miniature sections. Mme. Sallerol, for use as a border plant, is very popular. Prices are holding firm; for good 4 1/2-inch plants, \$1.50 per dozen, retail; \$10 per 100, wholesale.

Coleus, as foliage plants, are the leaders, and of these Verschaffeltii and Golden Bedder are the two most popular varieties, being mostly used in conjunction, and edged with Mme. Sallerol geraniums. A few more standard varieties of coleus are grown, but many sorts have been discarded, not having proved successful in the open. The most popular size seems to be about 3 1/2 or 4-inch. Cannas still are favorites with many, but a decided preference is shown for the solid colored, dwarf, bright kinds, such as Express and Alphonse Bouvier. The former, by the way, will, when better known, be a general favorite. Dahlias hitherto rather neglected, seem to be rapidly regaining a place in public favor, probably through the efforts of the local horticultural society. Salvias, the dwarf varieties for preference, are being more used than formerly, care being taken to discourage, wherever possible, their use in shady or wet situations. Alternantheras, and such like fancy bedding plants, seem to have passed the height of their popularity, and, except in isolated cases, are rarely called for.

A general summary of the whole situation is, that the demand runs along

very narrow lines. Only one or two of the best varieties or colors of each sort are absolutely necessary, but these, to sell, must be in the best of condition, dwarf and bushy. These conditions fulfilled, very little complaint is heard of the prices.

Window boxes and hanging baskets are being used in largely increased numbers this year, and many excellent displays are seen. Wherever possible, the system of buying the plants and filling the boxes, etc., at home, is discouraged, as tending to injure this line of trade. Very few people seem to have any idea as to how these matters should be done, although quick enough to detect any mistake in the greenhouse filled article.

The city has been passing through one of the fiercest and most bitter political campaigns in the history of the country. Happily, this terminated today, and will no doubt have a steady effect on trade. FRED. BENNETT.

TORONTO.—Business in plants this Spring has been very good. The season for bedding plants started very late, and the weather has been changeable, with rainy days coming often. This has made bedding out work somewhat unpleasant, but has been generally good for stock planted. Nearly all classes of bedding plants have brought better prices this Spring than usual, but some of them are still unremunerative. There is still considerable stock in sight, but most of it is not first class.

The demand for cut flowers has been also very good, but the cold, wet weather has had a bad effect on a good many of the roses, a quantity of the stock coming in being spoiled by mildew. Carnations are generally good. Large quantities of outside flowers have been used. Lilac, especially white, has been in great demand. Peonies this season are rather late; they have been often called for, and so far only the red ones have been seen. In some shady places tulips are still in bloom. Carnations planted out are growing rapidly. THOS. MANTON.

MONTREAL.—A special committee of the Gardeners' and Florists' Club is busily engaged now in arranging for the reception of the Canadian Horticultural Association, which will meet here in convention in August. It was decided at the last meeting of the club that its annual picnic will be held at Otterburn Park, on Wednesday, July 19. A resolution of sympathy with the family of the late James Cochrane was passed. Mr. Cochrane had been an associate member and active supporter of the club for years.

Paterson, N. J.

Wm. Thurston, the Van Houten street florist, was the lucky man this week. He had a large and remunerative order from out of town for the funeral of a popular local fireman who had succumbed to an attack of spinal meningitis. One of the many designs was an 8-foot monument of carnations and roses, which was a credit to Mr. Thurston.

GRAND RAPIDS, MICH.—On June 9 Max Goebel, a florist, was the victim of a murderous assault by two highwaymen at Reed's lake at 11 o'clock while passing through a shady grove. He was struck down with a "billy," his nose smashed and head cut open. The highwaymen relieved him of a solid gold watch and \$15.

SPRINGFIELD, O.—John M. Good, a former mayor of the city, and president of the Good & Reese Floral Company, has given the Snyder Park board 15,000 rose plants for the adornment of the park.

THE WEEK'S WORK.

Timme's Timely Teachings.

The Plant Trade.

The business in plants of all kinds has been excellent this Spring—better than in any previous year, better than we had expected. The season of greatest activity in this line of trade is now coming to a close, and most of the greenhouses, crowded to overflowing but a few weeks ago, look bare and empty, while street-fronts, private and public grounds, balconies and verandas all over town and suburban districts have been converted into a sea of verdure and blossoms. In some of the leading lines much more stock could have been sold, had we had it. Not only were more plants disposed of this season than ever before, but the average quality of the stock gave evidence of a greater skill and more care exercised in its raising. So also were the prices obtainable for the better and best grades considerably higher than in former years.

Greenhouse Building.

Whenever the demand for any commodity exceeds the supply thereof, it naturally follows that producers will strive to equalize conditions by providing additional facilities for the bringing forth of an ample output in the future. Florists are not at all slow in learning their lessons, but timidity and a lack of the speculative spirit are among the faults of some of the minor retail growers. To build or not to build? is now the question which agitates the minds of most florists, especially those at the head of the smaller and medium-sized concerns. These, in the rush of Spring trade, have had, until now, but little time to devote to the planning of new structures; in fact, are only now ready to face the question whether to build or not. At this season of the year the erection of new greenhouses is a pleasant piece of work, and there is yet plenty of time to carry to a timely finish any such undertaking.

A good many growers, situated as I am, are closed in and surrounded on all sides by stately residences—a location guaranteeing profitable business and excellent trade, but debarring them from any further expansion or enlargement of their establishment. These men, if build they must, can only do so by tearing down old structures to make room for the new, and this, indeed, becomes necessary often enough and provides ample opportunity for all-around improvement and for the gratification of the average florist's restless building impulse.

If the several letters of inquiry and matter pertaining to this subject which reached me through the mail seemed in any way to invite suggestion or expression of opinion from me, I should say there is wisdom in putting up new greenhouses where the proper room for them is not wanting and where they are badly needed to bring the business up to the exactness and requirements of a fast-growing trade. Any retail grower, fully convinced that he could profitably dispose of more stock than he now is able to raise, should add to his glass area without much delay.

The interest on the money thus invested in glass houses for the improvement of a retail establishment and the promotion of a local trade, can not so readily be estimated in dollars and cents as the earning capacity of a new range of houses erected by the wholesale grower. But while the large range of new glass is being looked upon as merely a business proposition, a more or less risky venture, the retail grower's new

structures were a necessity, a needful improvement, wisely invested capital and a telling forward move.

To build new greenhouses nowadays is not at all a laborious undertaking. The greatest part of the most particular work is done by the mill. It is easily and quickly framed and set up. It is real fun to build a new greenhouse, and a delight to conduct gardening operations in a new, well-planned house. My advice is to build large enough, while you are at it; to build plain and simple, but substantial; to avoid all frills and unnecessary ornamentation; to have your plans well and thoroughly thought out in every detail before you order the material, and to let this be of the best and most durable that can be had.

Greenhouse Benches.

I have been asked repeatedly of late what sort of a bench I consider the best, whether the one framed of wrought or cast iron, or the one solidly built up of brick, cement or concrete, or the old-fashioned wooden affair, now so much in evidence everywhere. This important question often comes up, and is ever an opportune subject for discussion. I have in my time made use of nearly every

description of greenhouse bench, table, staging or shelf, in the growing of plants of many kinds and for various purposes; I have seen all sorts of benches and beds in active service at large and small places, and I tightly cling to the opinion that the well-constructed wooden bench, from five to six inches deep and at a convenient height from the ground, most fully meets the requirements of present day horticulture under glass. It possesses the first essential and prime requisite of a bench, that of being a staging on which plants can be raised to perfection; and, besides this, it is the simplest, most convenient and best appearing contrivance for the culture and display of plants, is comparatively inexpensive and easily and quickly built and repaired.

There are no such things as indestructible greenhouses or greenhouse benches, and if there were, nobody would want to carry on the growing of plants and flowers as an occupation in a gloomy, moss-overgrown Gibraltar, in an age when the rapid advance and development of commercial horticulture makes advisable and necessary frequent changes in structural arrangement.

A well-planned and substantially-built bench of 2-inch pine, cedar, hemlock, cypress or any good lumber of whatever kind, will last without repairs from three to four years, and one or two years more under an annual overhauling. In this time it should have earned several times over the money needed for a new bench. He who builds a bench lasting twice as long and costing three times as much is not a wise economist.

Until the much-imagined ideal bench has taken actual form and shape, we can manage nicely to get along with the one in constant use all over the country, and good enough at present.

Bench Repairing.
 The repairing of old benches is an irksome job. The appearance of a bench before it is cleared and cleaned of the old soil is most deceiving and misleading. It often looks like a sound structure and good for another year's hard service, but as soon as the shovel strikes the bottom boards all its infirmity is laid bare and the pressing work of refilling and planting will have to be delayed until the bench has been put in working order. The fact that this same bench has been thoroughly repaired and fixed up last year is no reason why it should be in good condition this year. This sort of reasoning does not hold good with greenhouse benches. Just because it needed repairing last year, it will need it worse this year, would seem better logic. After a bench has stood three or four years it rapidly yields to decay. Slight repairs, such as the replacing of an unsafe bottom plank by a sound one, or the strengthening of a cross-piece here or there by nailing a strip to it, will help it along a year or two. All this costs little and is quickly done. But when, finally, a bench is in a condition which offers no sound spot for a nail to be driven, and which makes repairing a most vexations and troublesome affair, requiring a good deal of time and material, it is by all odds the best plan to tear it down and build a new one. Instead of the old, unreliable, unsightly fixed-up bench, there will then be a sound, new one, good for another term of several years, and costing no more than the everlasting round of repairing. I have seen old benches that had been fixed up and repaired and nailed to every season for eight years, until nothing of the original structure remained in sight. Two or three entirely new benches would have cost less in labor, money and time. It should be remembered that better crops can be grown in a new bench than in an old, uneven and partly decayed one; that, while bench repairing is a most disagreeable task, the building of new benches is nice work, and that an old bench makes good firewood.

A large percentage of income is from cut flowers and floral work; entire products sold retail. Receipts all right, books open. Terms easy. We are only 20 miles from Massachusetts State line, with some of N. H. fine summer resorts near us. Address Ellis Bros., Keene, N. H.

THE AMERICAN CARNATION

Price, \$3.50

A. T. DELAMARE PTG. & PUB. CO. LTD.
8 DUANE STREET, NEW YORK

European Seed Notes.

The frosts having destroyed nearly all our pole beans, vegetable marrows, and cucumbers, and, as far south as Paris cut the early potatoes down to the ground, has now departed and left us to enjoy a hot dry spell which will, if we get some rain very soon, put everything in tune again. Any injury inflicted on the main shoots of turnips will, in this case be compensated by the development of a large number of side branches. The effect on cabbages is not so beneficial, but we were already reconciled to a shortage of this article.

Radish and spinach are practically a standstill until rain appears. Sweet peas are doing exceptionally well.

EUROPEAN SEEDS.

CAMBRIDGE CITY, IND.—Improvements are being made by Thomas Peet on his greenhouse on North Front street. He is adding four new buildings, besides a large office. His father has bought a share in the business, and the firm will be known as Peet Son.

Portland, Ore.

In conjunction with the Lewis and Clark Exposition officials, the Portland Rose Association held its annual rose show in Festival Hall on June 3. The event, under the management of W. S. Simpson, far surpassed any previous effort of the association, both in its excellence and the interest taken by the members and their friends. The hall decorations and staging of exhibits designed and carried out by George Otten, were elaborate and handsome, a pergola, extending across the stage, being particularly unique. The large columns of the hall were literally a mass of roses; 20,000 were used for this setting alone, while 5,000 were staged for exhibition.

The leading local firms lent their aid by placing excellent displays, which were highly appreciated. The three medals offered were awarded to Clarke Bros., Martin & Forbes and George Otten, the award being based on general view of displays.

Designs by Martin & Forbes and George Otten showed striking originality and artistic workmanship. The judges were Herman Lowitz, Superintendent of Parks, E. C. Bronaugh and George C. Nicholson.

Pilkington has received a consignment of bays, which he is rapidly disposing of, and Pfunder a nice lot of decorative palms.

Otten will make radical changes in his establishment, owing to street improvements.

Out on the Exposition grounds much of needed improvement is noticed in landscape and floral work, although much more could be wished for. J. H.

Louisville, Ky.

News Notes.

The past week was commenced week for the Louisville public schools, and all the florists are satisfied with the business done. This week we have the Confederate Veterans with us, and they certainly have come in goodly number and brought many friends and relatives with them. While the city is rather elaborately decorated in honor of the veterans, not much of this work fell into the hands of the florists, it being mostly done in flags and bunting, arranged by the people supplying the same. We can look forward to a little extra business toward the last of the week, when several large halls and receptions will be given in honor of the sponsors and the maids of honor.

Adolph Koenig, lately with H. Fuchs, has accepted a position with Joy & Son, of Nashville, Tenn., and will shortly leave for his new home.

Mrs. E. Lang, who has long been associated with the local trade, lately with F. Walker & Co., is no longer connected with their force.

Jacob Schulz will this week begin the erection of his new store, which, when completed, will be the finest in this section of the country.

H. Kleinstarink and his family will shortly leave for a visit to Holland and Switzerland.

Once a Royal Gardener.

Under this caption the Muncie (Ind.) Star of June 4 gives a brief account of the career of Pa 1 Goebel, of Wabash, Ind., also his portrait, from which we cut the following:

"Paul Goebel, a professional florist and landscape gardener, who owns greenhouses at Wabash, Ind., and Grand Rapids, Mich., has been engaged in the business for the past fifty-eight years, learning the profession which he has followed for so long, in Germany, where he lived until 1883, when he emigrated with his family to the United States.

"Mr. Goebel was born in 1833. He came of a family of school teachers, but at the early age of 14 started in to learn the culture of flowers and landscaping. For three years he was engaged as a gardener and landscaper in the immense gardens of the emperor, serving at Berlin and Potsdam. He then embarked in business for himself and later came to America.

"Mr. Goebel has four sons, all florists. One of them, Frank, resides at Wabash, while three are at Grand Rapids. The father has an enviable reputation as a soldier also, and served in the war with Austria in 1861, as well as in the bloody Franco-Prussian War in 1871."

CUT FLOWERS AT WHOLESALE

Newport, R. I.

News Notes.
This is certainly a season of extremes; up to a week ago it had hardly rained since last Fall, but since it began to be wet, it has not stopped. These conditions, together with very cold weather, some days the glass not getting above 50 degrees, have about discouraged us all; but we may get some growing weather after this rainy period is once passed. Our florists are beginning to feel the coming of the Summer season orders, and as Newport is filling fast with visitors, they will soon be very busy with decorations for social functions of all kinds. The seedsmen after having a splendid run of trade are slacking into the usual Summer dullness.

Leikens has opened for his second Summer season, his Bellevue avenue store, and is, as last year, going to make a specialty of dinner and ball decorations. Mr. Leikens was for years manager here for Messrs. Siebrecht & Son; a year ago he established himself in the florists' trade both in New York and Newport.

The wedding of Miss Marie P. Greene to C. Bateman Swasey will take place at the home of the bride's uncle, Geo. A. Weaver, Monday, June 19. Miss Greene for many years has had charge of the office work of the George A. Weaver Company.

The commencement exercises of the Rhode Island College of Agriculture and Mechanic Arts were held at Kingston June 11, 12 and 13. The college has just closed one of the most successful years in its history, and President Butterfield should feel well satisfied with what has been accomplished.

Wadley & Smythe have their floral establishment in the Newport Casino all ready for the coming Summer season's business. Palms, bay trees, crotons and foliage plants decorate the store, and beautiful windows in a very pleasing manner.

Ziegler decorated very tastefully for the Stanhope-Bartlett wedding; palms, bay trees, Easter lilies, hydrangeas and flowering shrubs were generously used both at the church and home. The bride's bouquet was a shower of lily of the valley, and the maid of honor carried Daybreak carnations.

William Siebrecht was over from New York last week seeing that everything was in readiness for opening the Summer season at their Bellevue avenue store. Messrs. Siebrecht & Son have a very large and attractive establishment and this season the manager, Ralph Armstrong, has arranged the interior floral decorations very attractively indeed.

William B. Scott & Company have had an especially good run on geraniums, of which they had a very large number. The varieties which sold the best were Summit of Perfection, S. A. Nutt, A. Ricard, Beauty of Poitevine, La Favorite, Madame Belmont, and sold in the order named. The retail price was \$1 a dozen; wholesale, \$6 per hundred.

A. J. Rickards called upon the craft here this week, representing the Stump & Walter Co., of New York. Mr. Rickards reports a good season in all lines.

NEW BEDFORD, MASS.—Cut flower trade for the past week has been very dull. The bedding out season is still on, and those who engage in this branch of the business are reaping a rich harvest. Geraniums are going fast, and a scarcity of these plants is reported in this section. Good plants are selling for \$1.25 per dozen. S. A. Nutt is easily the leader here, and more plants of this variety are grown in this section than of any other geranium. As a sign of how things are, one of our local florists advertised carnations at 15 cents a dozen.

Tuesday, June 13, is meeting night for the Horticultural Society, when there will be a talk on peonies. C. W. Ward, of Cottage Gardens, has promised a shipment of these grand flowers.

All the gardeners of the city are laid off as a result of the city's debt.

HORTICO.
CAMDEN, N. J.—Frank Steel, a florist, of Sixth and Mount Vernon streets, has been declared insane, and will be removed to an asylum.

FOR JUNE COMMENCEMENTS AND WEDDINGS

we have SMILAX, ASPARAGUS, and the finest American Beauty Roses. Also everything else in seasonable flowers.

Los Angeles, Cal.

Permanent Organization Effected.

Permanent organization of the Southern California Horticultural Association has been effected. The new society is formed as the result of a caucus meeting, held a week ago, at the call of President J. C. Vaughan, of the S. A. F. O. H. At that time a committee of ten men was appointed to take charge of the organizing. As a result, fifty-two charter members have placed their names on the list.

The object of the association will be to promote horticulture in all its branches; to advance the social and business interests of its members, improve homes and parks in order to educate public taste. Following is a list of the officers elected:

President, Captain F. Edward Gray, Los Angeles; first vice-president, John Rodgers, Gardena; vice-president for Los Angeles County, Edward H. Rust, South Pasadena; for San Diego County, Miss K. O. Sessions, San Diego; for San Bernardino County, Sidney Hockridge, Redlands; for Orange County, Fred Rafferty, Santa Ana; for Riverside County, Charles Howard, Riverside; for Santa Barbara County, Robert Armstrong, Santa Barbara; for Ventura County, Samuel Cole, Ventura; general secretary, Ernest Brauntun, Los Angeles; recording secretary, W. J. Rodgers, Los Angeles; treasurer, Jacob Dieterich, Los Angeles; botanist, Ernest Brauntun, Los Angeles; horticultural chemist and entomologist, Dr. A. Davidson, Los Angeles; executive committee, F. H. Howard, Los Angeles, chairman; Walter Raymond, Pasadena; D. R. Woods, Wilmington; Miss Etheline Lord, Los Angeles; Miss Waite, Los Angeles.

SAN FRANCISCO, CAL.—A. B. Kretschmar has left this city and gone East to West Nyack, N. Y., where, with his brother, he will take charge of his father's greenhouse plant. Mr. Kretschmar leaves with the best wishes of his employer here—Frank Pelicano Company—for his future success.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 25

NEW YORK, JUNE 24, 1905

One Dollar Per Year

NEPHROLEPIS PIERSONI ELEGANTISSIMA (The Tarrytown Fern)

We have a grand lot of this in 6-inch and 8-inch pots—fine specimens, for which we have a splendid demand. Retail florists find this one of the best selling plants ever handled, even at the present novelty prices. We can supply 6-inch plants at \$2.00 each, and 8-inch at \$3.00 each.

Now is the time to obtain a supply of this in small plants and grow it on for retail trade. We have a splendid lot of very strong, heavy established plants in 2 1/4-inch pots, which, if shifted at once, will make grand stock for fall. Price, \$50.00 per 100. These are not light rooted runners from bench, but are strong established plants from 2 1/4-inch pots.

We also offer a lot of

PIERSON FERNS In large sizes for immediate sale for summer decoration. 6-inch at 50c. each; 8-inch at \$1.00 each; 10-inch at \$1.50 to \$2.00 each. Larger specimens, \$3.00 each.

NEPHROLEPIS SCOTTII Fine plants, 6-inch pots, \$1.00 each; 8-inch, \$2.00 each.

ADIANTUM CROWEANUM Extra fine plants, 6-inch pots, extra fine for immediate use or for growing on, \$6.00 per dozen.

KENTIAS FOR DECORATING We have a nice stock of large plants which have been grown in a very low temperature all winter, and consequently are hardy and splendid for decorating, as they will stand a good deal of knocking around. Florists who need large stock for decorating or for hotels, piazzas, etc., in exposed places will find this stock unusually satisfactory. We offer various sizes from \$6.00 to \$15.00 each, according to size.

EXTRA LARGE FICUS FOR DECORATING We have some plants, grown in tubs, several plants in a tub, and in consequence are very well furnished, and very bushy, ranging in height from five to ten feet. Splendid for hotels, piazzas, etc., and useful for decorating. \$5.00 to \$10.00 each.

DRACAENA INDIVISA Fine stock in 6-inch pots, the most useful size for florists' use. 50c. each.

ENGLISH IVY Strong plants, 3 1/2-inch pots, \$12.00 per 100.

GERANIUMS Double General Grant, La Favorite, Duc de Montmart, Paunpeck, etc. strong plants, 3 1/2-inch pots, \$8.00 per 100.

SALVIA SPLENDENS (Scarlet Sage). Fine strong plants, \$4.00 per 100.

ANTIRRHINUM (Snapdragon). Separate colors, \$6.00 per 100.

LILIUM HARRISII BERMUDA EASTER LILIES Three-Leg Brand

Our grower states that we can expect to receive our first shipment of early forcing bulbs on steamer leaving Bermuda July 14th. Our Harrisii Lily Bulbs give so much satisfaction over all other stocks; being free from disease and the true Harrisii type, they recommend themselves to all Florists requiring reliable stocks at moderate prices.

READ WHAT OUR CUSTOMERS SAY:

[Unsolicited] Dear Sirs:—We wish to inform you that the Liliium Harrisii we had from you last year were very satisfactory indeed. They were the "true" Harrisii, with very large flowers; perfectly healthy plants. They were also very early and even—so even that we cut a 100-foot hange between November 15th and January 10th—all clean, with scarcely any waste. We shall surely increase our order the coming season.
RANDOLPH, MASS., February 21, 1901.
(Signed) MANN BROTHERS.

CLUCAS & BODDINGTON CO., New York City. Dear Sirs:—We are pleased to advise you that recent consignment of Harrisii Lilies of July 30, 1903, were out on the 9th ult. and prove very satisfactory. Loss is exceedingly small and we ask you to enter an additional order for 2000 of same variety.
Pittsburg, December 1, 1904.
Truly yours, (Signed) H. L. BLIND & BROS.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

Secretary Wilson, of the Department of Agriculture, says (Yearbook, 1904): "Of the millions of lily bulbs annually imported, it is safe to say that 40 per cent. are more or less affected by disease. The eventual elimination of this trouble will be due to the work of the department."

Practically all of the vegetable seed distributed by the Department of Agriculture, says Secretary Wilson, is grown in the United States. A few years ago nearly all of the flower seed, except sweet peas, was imported. Now fully 75 per cent. is grown here through the encouragement offered by the Department in this work.

The work of handling one branch only of the Congressional Seed Distribution involves the securing of 25 carloads of special seed, and the testing, packing and mailing of this large quantity to all parts of the United States. The systematizing of all the operations has been so perfected that there is little or no friction at the present time.—Yearbook, 1904.

One of the finest opportunities existing in the country to-day for the development of a paying business, says Professor W. J. Spillman, of the Bureau of Plant Industry, is that for the production of pedigreed seeds of ordinary farm crops. There is a fine opportunity for intelligent farmers in the South in breeding varieties of cotton and corn. "The demand for high-bred seed of all classes of farm crops is practically limitless."

"CANADIAN FIELD PEAS" is the subject of Farmers' Bulletin No. 224, Department of Agriculture, prepared by Professor Thomas Shaw. The pea crop is one of the most important in Canada. In the Province of Ontario alone the average area devoted to the production of peas for the twenty years ended with 1902 was 710,498 acres. The average annual yield during the period named was 13,770,243 bushels, or an average of 19.4 bushels per acre. The greater portion of this crop is fed upon Ontario farms. In striking contrast with the magnitude of the pea crop in Canada is its insignificance in our own country. While the area devoted to peas in Ontario until quite recently was not far behind that devoted to winter wheat, the pea crop in this country is so insignificant, relatively, that it has not been given a fixed place in the Government crop reports. In Minnesota it is not mentioned in the yearbook of statistical returns, and the same seems to be true of nearly all the States in the Union. Great advances, however, have been made during recent years in growing peas in Michigan, Wisconsin, and Montana, and other mountain States.

W. & T. SMITH COMPANY, GENEVA, N. Y.

Mention The Florists' Exchange when writing.

MONTREAL, CAN.—A lot of information in the value of careful selection of seeds was given to the Committee on Agriculture recently by T. H. Clark, seed commissioner of the Department of Agriculture. He advocated the selection of seed by the farmers and said that 60 or 70 farmers in Ontario had gone into it as a business. Samples of corn which he showed indicated that corn grown in Essex had much larger kernels than that grown farther north, at Guelph or Ottawa. He believed better corn could be secured in the higher latitudes by using the best corn from more southern counties. The Canadian Seed Growers' Association makes regulations for growing selected seed, much the same as live stock associations supervised that branch of agriculture. Ontario supplies nearly all the clover seed grown in Canada, and its product is not excelled anywhere in the world. Half the products are exports, and the Toronto market usually controls the world's prices for alsike seed. Simcoe and Grey counties are probably the largest growers of red clover, and Victoria and Peterboro the best for alsike. The demand for pure seeds in Germany and Austria, for example, had resulted in improving the purity of the Canadian seeds, but much more is expected from the operation of the new seed bill.—Herald.

COWPEA SEED.—A bulletin of the Oklahoma Station calls attention to the fact that cowpea seed always commands a good price, and, in fact, that the price is often so high as to restrict the area planted. This is due to the fact that the peas are difficult and expensive to harvest and store.

The bulletin discusses two methods generally used in harvesting cowpea seed—namely, hand picking and cutting and thrashing the vines. Thorough harvesting by hand requires several pickings at different dates, and as the price of efficient farm labor is usually high this method of harvesting is expensive, it being estimated that hand-picked peas cost from 75 cents to \$1 per bushel for harvesting. Waiting until the vines are ripe and cutting and thrashing or flailing results in a considerable saving of labor and expense, but is accompanied with a considerable loss of seed.

The scythe-mower, one of the bean harvesters found on the market, or an improvised cutter may be used in harvesting the peas. Cutting with the scythe is laborious, and the ordinary mower is difficult to operate in heavy and tangled vines and wastes peas by shelling. On the whole, the best way to harvest the cowpea vines appears to be to cut off the plants just below the surface of the ground by means of a bean harvester. Where much cowpea seed is to be raised in the most economical way such a machine is considered indispensable.

After cowpea vines bearing seed have been cut, it is desirable to get them stored or thrashed as soon as possible, as the sun causes the pods to shed the seed. Usually the vines are so green and contain so many green leaves that they can not be put in a stack or mow without some curing in the field. The vines should be put in cocks at once after cutting, and after a day or so curing in the field be put in small loose stacks or in mows, where the beans that shatter out may be saved. Many times half of the seed is allowed to shatter out after the vines have been shocked by leaving them in the field too long. The greater part of the drying and curing should be done in the stack or the mow.

Cowpea seed is often greatly damaged in storage by the weevil. Such damage can be prevented by putting the seed in a close-covered bin and placing a dish of carbon bisulphid on the top of the seed. The carbon bisulphid evaporates rapidly, and the heavy fumes sink into the mass of the seed and destroy the weevils. The operation should be repeated several times during a season if the seed is to be kept free from the weevil. In small quantities the carbon bisulphid costs

15c. to 25c. a pound. As a rule, one pound of the liquid will treat 30 bushels of the seed. The liquid and the gas are very inflammable and poisonous, and all fire should be kept away from it. If the weevils are kept out and the seed is stored in a dry place it will retain its vitality two or three years.

European Notes.

The very hot wave which passed over the whole of Europe at the end of May broke up in the usual way in a thunderstorm and has been succeeded by weather so cool that one might almost imagine it was March instead of June. It does not appear, however, to do injury to the growing crops; but it very seriously retards their development. Cucumbers, melons and all the gourd and pumpkin family are as yet only in the seed leaf, and growers are devoutly hoping for a long season so that the empty stores of these seeds may be replenished. Prices for these articles have risen somewhat during the past two years, but what avails this augmentation if there be no crop?

Exception to the nonprejudicial character of the cold weather must be made in the case of leek and onion. Of the former the acreage in culture is quite insignificant; of the former there is a considerable quantity, although much below the average acreage. In the south the plants are now beginning to bloom, and the advent of the dreaded midew has brought consternation to many growers. Already several fields are quite destroyed, and as regards the others it is now too late to do anything to arrest the progress of the malady. Hot, dry weather can alone effect a partial cure.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

WILLIAM D. BURT, Dalton, N. Y.—Catalogue of Garden, Field and Flower Seeds. Illustrated.

CEDAR HILL NURSERY AND ORCHARD COMPANY, Winchester, Tenn.—Price List of Fruit and Ornamental Trees, Evergreens, etc.

THE UNITED STATES NURSERY COMPANY, RICH, MISS.—Catalogue of field grown roses, ornamental shrubs, peonies and Japanese iris. The officers of this firm are: John M. Good, president; Edwin S. Houck, secretary; and S. W. Crowell, manager.

COLORED SEED BAGS

HIGH-GRADE WORK ; LOW PRICES

We manufacture a full line of colored seed bags, for the trade. Send us a list of your requirements and let us quote you prices.

Catalog and Sample Bags upon request

HERNDON, LESTER & IVEY CO. (Inc.)

RICHMOND, VA.

Mention the Florists' Exchange when writing.

RAWSON'S

Arlington Tested Seeds for Florists. Catalogue mailed free.

W. W. RAWSON & CO.

Seedsmen,
12 Faneuil Hall Square,
BOSTON, MASS.

FREESIAS

GRAND DUCHESS OXALIS, Bermuda Buttercups, Amaryllis Johnsonii and Belladonna, Chlidanthus, etc.

Now digging; ready to deliver end of June and July. Prices for quantities on application.

Rees & Compere, R. D. No. 1, Long Beach, Cal.
Mention the Florists' Exchange when writing.

American Seed Trade Association

Twenty-third Annual Convention

at Alexandria Bay, N. Y., June 20-22, 1905

The twenty-third annual convention of the American Seed Trade Association was held at Alexandria Bay, N. Y., June 20-22, 1905, with a gratifying attendance, drawn thither by the excellent program provided, and the natural scenic beauty of the meeting place. President Charles N. Page, of Des Moines, Ia., occupied the chair.

The following firms were elected members of the association: Darch & Hunter, London, Ont.; Hogg & Lytle, Mariposa, Ont.; O. H. Dickinson, Springfield, Mass.; W. A. Dennison, Ellisburg, N. Y.; and F. Williams, Belleville, N. Y.

President Page, in his annual address, dealt with the objects of the organization and its growth from small beginnings, 23 years ago. Its membership now numbers about 100, including almost all the prominent seedsmen in America. Speaking of what the association had accomplished, Mr. Page said that it was due to its direct influence that the postage on seeds, bulbs and plants had been reduced from 16c. to 8c. per pound. The association also secured special concessions in rates from the express companies on seeds, plants and bulbs, and it was a result of its efforts that the central system was adopted. The legislative committee of the association has secured the adoption of certain favorable laws and has defeated other proposed legislation which would have proved unfavorable to the trade.

He made a touching reference to the members deceased during the year—Messrs. J. S. Reynolds, Kansas City; J. N. Kimberlin, Santa Clara, Cal.; and Frank Burkhardt, Crown Point.

The secretary-treasurer's report showed the affairs of the association to be in a very satisfactory state.

The mayor of Alexandria Bay, Mr. Delaney, extended a hearty welcome to the visiting members on behalf of the town.

Major J. H. Dunham, of Cape Vincent, N. Y., made a very able address on "The Points of Interest at the Thousand Islands." He gave a historical sketch of the different towns and places, and dwelt on the beauties of the district. Having lived here for forty years, the Major is in a position to know what he is talking about. The Major is 84 years of age, but bears his years remarkably well.

The afternoon was very pleasantly spent in a trip through the Islands on the new steamer Island Wanderer. This entertainment was provided by W. H. Grenell, Pierpont Manor, N. Y.

The evening session was convened at 8.30, with the president in the chair.

The secretary read a paper by Lester L. Morse, of Santa Clara, Cal., on "Seed Growing in California." Mr. Morse himself was unavoidably absent.

C. L. Allen, Floral Park, N. Y., who never misses a convention, then read an able paper on "Good Seeds Which Do Not Grow." He was followed by Harry L. Holmes, Harrisburg, Pa., with a paper on "Trials and Pleasures of the Seed Trade." Owing to the absence of W. H. Maule, of Philadelphia, his paper on "Methods of Advertising" was read by J. Dungan.

The election of officers resulted as follows: President, W. H. Grenell, Pierpont Manor, N. Y.; first vice-president, L. L. May, St. Paul, Minn.; second vice-president, G. B. McVay; executive committee, Messrs. C. N. Page, S. F. Willard, G. B. McVay, M. H. Duryea, F. W. Bolgiano; membership committee, Albert McCullough, W. L. Woodruff, Alfred J. Brown; secretary-treasurer, A. C. Kendel, Cleveland, O.; assistant secretary, F. H. Funk, Bloomington, Ill.

M. E. Templin, of Calla, O., read a paper on "The Modern Seed Catalogue;" followed by Professor Piper of the Department of Agriculture with an address on "New and Desirable Forage Plants."

The third session was called to order by Pres. Page at 9:30 a. m., Wednesday. Reports were read from the following committees: Committee on Government Seed Distribution, Committee on Weights and Measures, and Committee on Seed Legislation.

Professor Duval of the Department of Agriculture, Washington, D. C., read a paper on "Seed Adulteration," dealing with the evil and the means adopted for its suppression, expressing the hope that the Seed Trade Association would co-operate with the Department in the effort to stamp out the practice. On motion of Mr. Ebeling, a committee of six, with power to add to its number, was appointed to consider the question and report at a later session. The committee was named by the chair as follows: W. P. Stokes, C. S. Green, M. H. Duryea, F. H. Ebeling, C. S. Burge, and Albert McCullough.

The committee on Tariff, Customs, and Express presented its report. On report of the Membership Committee the following three new members were added to the list: Wm. Ewing & Co., Montreal; H. C. Basler, Waterloo, Neb.; The Planters' Seed Co., Springfield, Mo.

R. U. Conger, Manager of Sheldon's School of Scientific Salesmanship, New York City, presented a very able address on "The Science of Business Building" which was so much appreciated by the members present that it was decided to publish it in pamphlet form, for distribution among the members. The afternoon

was devoted to a trip on the "New Island Wanderer" to Brockville, Ont., and return leaving Alex Bay at 1.30 and returning at 6.30. Sufficient stay was made at Brockville to enable the excursionists to see the place.

The banquet took place on Wednesday evening, and was a most enjoyable affair.

Those Present.

Among the members present were: C. L. Allen, W. H. Barret, F. W. Bolgiano, R. Bolgiano, F. Brill, A. J. Brown, W. F. Jones, Churchill & Co., H. H. Pease, R. Millham, S. F. Willard, L. J. Connell, C. W. Crossman, O. H. Dickinson, A. C. Johnston, F. Emerson, S. W. Ewing, C. S. Burge, J. H. Ford, F. H. Funk, J. B. Davis, T. Griswold & Co., W. H. Grenell, H. L. Holmes, P. Hollenbach, C. N. Page, S. Misbell & Co., W. P. Stokes, C. N. Keeney, A. C. Kendel, S. F. Leonard, J. M. Lupton, E. E. Dungan, L. L. May, Albert McCullough, J. Chas. McCullough, G. B. McVay, M. H. Duryea, E. L. Page, P. A. Phillips, J. B. Rice, W. D. Ross, H. M. Schisler, W. D. Steele, S. E. Briggs, W. J. Templin, N. M. Bossinger, R. L. Burge, J. C. Vaughan, O. H. Will, S. D. Woodruff, J. L. Young, F. Williams, W. H. Denison, A. N. Clarke, F. S. Platt, R. W. Wood, A. F. Trumble, W. T. Phillips, T. N. Griswold, C. P. Braslan, F. B. King, W. T. Fonda, J. T. Buckbee, J. K.

Good Seeds That Fail to Grow.

(Read by C. L. Allen, Floral Park, before the American Seed Trade Association at Alexandria Bay, N. Y.)

The general impression is, among both dealers and planters, that when seeds are put into the earth and fail to produce plants for the reproduction of the species, variety or type, as the case may be, it is because they have lost their vitality; and from no other cause whatever. But there are other causes, vital ones—these should never be charged up against the seeds, neither the seedsman, who is, in very many cases, the innocent victim. Some forty years ago, when I thought my head contained nearly all that was worth knowing about plants and their reproduction, and I hung out my sign as a bulb dealer, with results following, I had many interesting experiences.

One day a customer wrote me from Greenwich, N. Y., asking for the best manure for a lily bed, as well as a lot of other questions regarding bulbs and their cultivation and propagation. All of which I answered to the best of my ability, in their numerical order, and, I think, satisfactorily. To the manure query, which was No. 1, I used the monosyllable—Brains.

In due time an order came for bulbs, with thanks for cultural instructions, which was repeated from time to time in years after. Some ten years after our dealings ceased, I happened through that village on my way to Cambridge, and chanced to see the sign of my customer, who was an M. D., and I made a call, which at the start was anything but pleasant. Upon presentation of my card he asked many questions in way of identity. After which he said, some ten years before I had most grossly insulted him, which was a surprise, as I had not the slightest idea that such a thing was or could be possible, having quite forgotten the manure query. Of course, an explanation was demanded, and it came by his stating the question and answer. While saying those few words, his face bore every evidence of cold anger.

His wife was present at the time and suffering intensely from rheumatic neuralgia. As I was in for it an apology was due. I said: "My dear sir, your charges are just, and from which there is no appeal, but truly had I ever seen you the answer would have been different, having too much sense to ask a man to apply that which he had not got, as Horace Greely said, when sued by J. Fenimore Cooper for libel, 'If a man has not brains, he is not obliged to use them in this free country.'"

The poor rheumatic sufferer shook with laughter, and she said: "Dr., you have got your just dues for that practical joke," and her laughter continued until perspiration relieved her sufferings. And the M. D. has now brains for crest and shield, and they are his companions in all his garden walks.

We all know that seeds lose their vitality, and it can never be restored, and it is a fact equally well known that the germ in seeds is often destroyed because brains are not used in their sowing.

Let us now take up the subject in detail.

Vegetable Reproduction.

All vegetable forms, but more particularly those in which this association is interested, are the direct results of seed germination. It is therefore pertinent to this time and place to get all the information possible, bearing upon the causes of failure so frequent in seed germination, which is the active principle of reproduction. In fact, the vital cause of plant growth is buried, or hidden in the seed or bud, to be developed when it may be required to act in harmony with other creations, the union of which forms the chain of creation.

While it is the seed that the seedsman is more particularly interested in, we wish to call your attention to the fact that the bud of a tree has in it

the same principle and power of reproduction as the seed, and that the tree is not an individual plant or growth, but a community of individuals having a common interest in the tree, its home. When the year's growth is completed, and the leaves, crimson and gold, drop into their graves, the parent bud, like the grain of wheat, has completed its work and new buds are formed, the parents of future generations. Thus is the tree's life predestined.

That reproduction in which such seeds as are common to the trade, however, is the topic of the hour, and the only one to which reference will be made, and the remark regarding the relation between seed and bud was only by way of analogy.

In order that seeds should retain their vitality for the longest period possible, it is of the utmost importance they should have attained perfect maturity before the harvest, and that every possible precaution should be taken to preserve vitality by keeping the seeds in perfectly dry, cool and well-ventilated rooms. Neither heat nor cold will materially weaken the power of germination in most seeds, particularly those of any oily nature, as long as they are kept dry. It is moisture that excites germination, hence the importance of keeping all seeds in dry rooms, well ventilated.

Seed which has not reached maturity may, if it is true, possess the power of germinating, for one season, but it always retains a disposition to disease and weakness. It is true, it may overcome this lack of vitality by a coincidence of favorable auspices, and by a soil and temperature peculiarly adapted to the nature of the plant; and, that imperfect seeds do occasionally produce vigorous and healthy plants; but there is always great danger of the crops failing. To that end, it is far better to carry as small a stock of seed, which has been grown under unfavorable circumstances, as possible, and the best possible investment to carry a sufficient stock, for two or more years, of seeds grown when all the conditions of growth were the most favorable.

The seeds of most vegetables keep good for a considerable period. I have not been able to perceive any deterioration in the seeds of any of the Brassica family, even when eight or ten years old, providing they are fully ripened, and kept dry and cool; while others, on the contrary, lose vitality quickly, and can hardly retain it for a year.

But the question propounded to me was supposed to be why seeds, known to be of high vitality, fail to grow, and that is the one we shall consider, and here may be seen the spirit of the context—Brains. Our observation shows most conclusively that in a majority of cases, failure in germination is directly due either to carelessness or a want of knowledge on the part of the farmer, gardener or florist.

One of the great mistakes made in the reproduction of any given vegetable form, consists in compounding the active principle of germination with growth, and the failure of the latter is almost invariably attributed to the farmer. Instances as common as the day have shown us where germination was most satisfactory, but the growth following was a close approach to total failure. These facts show conclusively that in the brain department of those most interested was a fearful vacuum.

Seed Beds.

The seed bed is the cradle in which the young plant is nourished, strengthened and prepared for its place in nature. Its importance is too well known to require a word regarding its necessity. But a few words pertaining to its preparation are essential, as success or failure in the production of many crops is almost wholly due to the conditions for the growth of the young plants being favorable or unfavorable.

Too much pains cannot be taken in the preparation of the seed bed, although many crops are injured beyond recovery by taking too much pains. The mistake comes from having the soil too rich for the young plants' power of assimilation. As well might the young mother feed her sucking babe beefsteak as to give the young plant highly concentrated food until after the seed-leaves (cotyledons), which are the young plants' true mother, have exhausted their supply.

The seed bed is the mother of the garden, and, in its preparation, no pains should be spared. Whatever the character of the soil may be, it should be made as fine as the finest of sand, and in an open, airy part of the garden or farm, far from the hedge-rows, where rodents and insects abound.

If, at the time of sowing, the ground is dry, it should be thoroughly rolled and made as fine as possible. After sowing, go over the rows with a roller to press the earth firmly around the seeds. If a roller is not at hand, go over the ground with the feet, which is the better, because the most convenient, plan for small sowings. It is always better to sow the seed when the ground is dry, because it will pack too hard if rolled, or tread when wet.

The general impression is that a seed must grow if planted, no matter when, how or where. Life in the seed form is persistent and will manifest itself under great difficulties, but it cannot surmount all obstacles that oppose it. There are many reasons why seeds fail to germinate, or to grow after germinating; these are but little understood, and because they are not, failures are frequent, and the loss is attributed to poor seed when it should be charged to a want of knowledge of the requirements of plant life.

(To be continued)

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. Albertson, Bridgeport, Ind., president; Orlando Harrison, Berlin, Md., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

THE AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS, formerly the New England Association of Park Superintendents, will hold its eighth annual convention at Buffalo, N. Y., June 28, 29 and 30, 1905, the first meeting since the change of name and broadening of scope of the organization. Headquarters will be at the Lenox Hotel, North street. An interesting and enjoyable program has been prepared, including trips through the Buffalo park system, Niagara Falls reservation, the Queen Victoria Park on the Canadian side, the Buffalo Botanical Gardens, etc. On Saturday, July 1 (in the program the date is given June 31, and so printed by one or two of our contemporaries!), if desired, the parks of Rochester, N. Y., will be visited by the delegates.

Peterson's Peonies.

Our illustration shows a field of peony Model of Perfection, and others, at the Peterson Nurseries, Chicago, Ill. This variety has a very fine pink color,

relied on, we subjoin an extract from a West Indian agricultural paper concerning a "Supple Jack" of Barbados:

"This is a climbing shrub, the stems of which were used as switches and riding whips. Formerly, it was, no doubt, common, but at present it is confined to comparatively few localities. A specimen in fruit was received a few days ago from Miss Burton, of Staple Grove, Christ Church. This was loaded with dense clusters of bright-red capsules, and presented a very attractive appearance. We commend the Barbados supple jack (*Paullinia barbadensis*) as an interesting ornamental climber for verandas and trellis work. It appears to be found nowhere else except at Barbados."

If this goes on, "Supple Jack" will be as confusing as the Wahoo now is, as the latter is applied to an elm, a eunymus and dear knows what besides.

Good Soil for Heaths.

Because the heather and other heaths are often found growing in bleak places and on hills scantily clothed with vegetation, it has led to the belief, often heard expressed, that they thrive in poor, dry, sandy soil. That they exist in such situations at times is true, but this is different from thriving in them. Then, too, the tops of hills are not often bare of good soil. It may be thin, but if vegetation of any kind grows there, a soil accumulates in time, of slight depth, but sufficient to supply the needs of such shallow rooting plants as heaths. As to the common Scotch heather, *Calluna vulgaris*, I have seen it growing on the plains of England as well as on the hills, and the plants there were of fine growth, thrifty and strong.

Heaths are not alone in approving of good food for

adopt the plan of rooting the young runners under glass, there being runners enough and to spare. It is a great labor-saver.

Rhus Succedanea

The Japanese have given us lots of beautiful trees and shrubs, but if this rhus is poisonous, as Professor Bailey says it is, and as it has all the earmarks of being, we can get along without it. A large specimen of it, flowering here now, closely resembles in appearance the *Rhus venenata* of our swamps, known as the most poisonous of all the poisonous ones, though how it can be worse than the common poison vine, *Rhus radicans*, it is hard to conceive. These poisonous rhus are a puzzle to many. There are degrees of susceptibility in persons. Some—myself, for one—are poisoned by the lightest touch of a leaf; others take poison less readily, and there are still others who can handle the vine without harm. So far as I know, the three poisonous rhus are *radicans*, *venenata* and this Japanese one, *succedanea*. If what Professor Bailey says of the latter is correct. The ones common in cultivation, *cotinus*, *aromatica*, *glabra*, *typhina*, *copallina* and *Osbeckii*, are quite harmless. *R. succedanea* flowers with the perfecting of its leaves, in early June. The panicles are not in a close head, like those of the *glabra* and *typhina*, but are spread out between the new leaves, a spray here and one there from the axils of the leaves, forming an extremely loose-looking panicle, and of no beauty. I do not think we want this poisonous fellow.

Pterostyrax Hispidum.

Those who do not stock up on the *Pterostyrax hispidum* will surely miss it when its merits become more widely known. Without question it is a tree that everyone will want who has room for a few trees. It will take its introduction into gardens here and there that those in different parts of the country may see it in flower before its popularity is assured. It is just going out of flower at this writing, June 10. As mentioned in previous references to it, the flowers are like racemes of white wistarias; not quite as many inches in length as those of the wistaria. The leaves are almost as large as one's hand, and the tree a fine spreading one, giving a good view of its flowers. It will make a nice shade tree, having the habit of a Norway maple to some extent. The tree blooms and seeds freely, so that when it commences to flower, which it does in about six years from seed, its propagation is easy, as the seeds are found to germinate freely.

A tree should be obtained and set out in a conspicuous place where it will grow freely and without restrictions. As soon as it flowers, orders for it will come in; and with the seed to start with, there should soon be a good supply of young trees.

Peach Yellows.

The question whether peach stones from peach trees suspected of having the yellows are safe to sow for stocks has been asked more than once. I can but say that I would not advise the use of such stones. It is generally conceded that the yellows is of fungous origin, and it seems highly probable that seeds from such trees would not produce healthy seedlings. In fact, nurserymen go to a great deal of trouble to procure stones for the raising of seedlings, getting them from districts where no yellows is known to exist, even to sending to the mountain districts of Tennessee, where orchards of natural trees are known to be.

The yellows is so much to be feared in an orchard that too great pains to secure clean stock cannot be taken. The disease may be suspected when the fruit on a tree ripens before its time, and red spots, extending to the pit, are on the fruit. Then, when the next season arrives, the growth on the limbs comes out in clusters, thin shoots and many of them, which bear small, yellow-colored leaves. In two or three years the tree is dead. But they should not be left for three or four years. When the clusters of thin shoots appear, there need be no hesitation in rooting out the trees. Take them out as quickly as possible and burn them, root and branch, for the disease spreads from tree to tree, destroying whole orchards if not attended to.

The yellows is such a troublesome disease that every care is called for that it be not introduced into blocks of trees, either in the way of seedlings from suspicious stones or in any other form.

JOSEPH MEEHAN.

Handsome Flowering Thorns.

Editor Florists' Exchange:

I heartily endorse Mr. Meehan's article on "Handsome Flowered Thorns," in your issue of June 17. I don't think there is any shrub in the months of May and June more beautiful than the hawthorn. I planted *Crataegus candida pleno* (double white flowering) and *Crataegus coccinea fl. pl. Paullii* (crimson) twelve years ago. They are now about eighteen feet high and about sixteen feet in diameter. They are planted between two white elms (*Ulmus americana*) and are shaded from about 10 o'clock in the morning until 3 o'clock in the afternoon. They apparently do better when partly shaded, and the flowers also last longer. Another private place, just opposite, planted a half dozen about five years ago, in the full sun, and they do not seem to do nearly as well as ours. B.

FIELD OF PEONIES AT PETERSON'S NURSERIES, CHICAGO MODELE DE PERFECTION IN FOREGROUND.

elegant form and is an excellent keeper. It is a first-rate market sort, coming into bloom a little later than *Festiva maxima*.

A visit to these nurseries in the peony season is a great treat, and hundreds of persons daily take advantage of it. A very large collection of peonies is grown here, the fine, large blooms obtained being the result of planting in rich, well-tilled ground. Many seedlings are raised, some of which are exceedingly promising, but nothing, either standard or new, is retained unless it possesses superior qualities. Other good sorts noticed at the time of our visit were *Festiva maxima*, *Edulis superba*, *Mme. Dupont*, *Golden Harvest*, etc.

Mr. Peterson was a large exhibitor at the annual show of the American Peony Society, held in Chicago last week, capturing several premiums.

Supple Jack.

The "Supple Jack" of our country is the *Berchemia volubilis*, a vine belonging to the rhamnaceae, which, though a native of the Southern States, is hardy at Philadelphia. The stems are very supple and tough, climbing 10 to 20 feet, and clothed with bright shining leaves.

As showing how little common names are to be

rooting in, notwithstanding they may grow in poor soil. Ferns, for instance, though growing on rocks, or where hardly any soil is to be seen, are improved in appearance by being given good soil, even to weak manure water.

There is no disputing that heaths are sometimes found in poor soil, but it must not be inferred that this is from preference.

Strawberry Runners.

When a strawberry is of a new kind and every plant that can be increased from it is an object, there is an excuse for placing pots around it, sunk into the ground, to receive the runners as they grow. But when plants are plentiful, and the saving of every one is not our object, it is much more satisfactory to cut off a number of young runners, trim away part of their leaves, pot them and place them in a close, shaded frame for a few days. It takes but a week or so for them to root, and then the plants are ready, with less than half the trouble the plunging of the pots around the parent plants entails. With new or scarce kinds, this plan would not answer, as, when in the open ground, a runner makes two, three or four plants, which would all be lost but one were the indoor propagating adopted. In the case of ordinary strawberries, many of those who propagate the plants

American Association of Nurserymen.

(Continuation of Report).

H. W. Stringfellow, of Texas, addressed the meeting on the subject of his theory of root pruning known as the "Stringfellow Method," illustrating his manner of pruning a peach tree by whittling off all lateral roots, cutting off the tap root so as to leave about six inches, and cutting down the top to within eight inches above ground.

Professor John Craig, of Cornell University, read a paper entitled "Quality vs. Quantity," giving it as his opinion that the demand for high-grade fruit products will strengthen as luxury and culture progress, and efforts should be made toward obtaining highest excellence in texture and aroma of fruits.

The president appointed a committee, consisting of Messrs. Thomas B. Meehan, C. L. Watrous and Harlan P. Kelsey, to meet with the American Seed Trade Association and the Society of American Florists to confer regarding express, freight and postal matters; they were also given power to act in regard to commissions paid to private gardeners—a custom which has grown up among eastern dealers, and which should be condemned.

Willet M. Hays, of the U. S. Department of Agriculture, gave an illustrated talk on how varieties can be improved so as to produce a greater yield of field and orchard products.

Thos. B. Meehan contributed a paper on "Office Management." Wm. P. Stark, of Missouri, gave a paper on "The Fruit Exhibit at the World's Fair." George G. Hedgcock, U. S. Department of Agriculture, delivered a lecture, illustrated by stereopticon views, on "Crown Gall and Root Knot," and James McHutchinson, New York, contributed a paper on "The Evolution of Importing."

The following officers were elected for the ensuing year: President, E. Albertson, Bridgeport, Ind.; vice president, Orlando Harrison, Berlin, Md.; secretary, Geo. C. Seager, Rochester, N. Y.; treasurer, C. L. Yates, Rochester, N. Y. Executive committee: Thos. B. Meehan, Pennsylvania; Theo. J. Smith, New York; J. H. Dayton, Ohio.

Dallas, Texas, was chosen as the next meeting place. West Baden, Ind. E. J.

Entertainment.

On Tuesday evening, June 13, a large ball was given by the Hon. Thomas Taggart at the French Lick Springs Hotel. The occasion was a very enjoyable one, large shipments of fruit which had been previously sent in were liberally dispensed, and there was a profusion of flowers from different sections of the country adorning the banquet tables and ballroom. A smoker was also given for the members after the dance.

On Friday evening, June 16, the banquet took place, when choice fruits and wines, contributed by members of the organization, and other edibles and liquids were partaken of. J. H. Hale acted as toastmaster.

On Saturday, June 17, some of the members visited the Mammoth Cave, Kentucky.

Much credit is due to Harlan P. Kelsey, of Boston, chairman of the committee on arrangements, and his fellow-workers, for the admirable and smooth running manner in which the program was carried out.

President-Elect E. Albertson.

The president-elect of the American Association of Nurserymen, Emory Albertson, of Bridgeport, Marion County, Ind., is the son of Oliver Albertson, who established, in 1845, the first nursery in Washington County, in that State, that is still in existence. The young man remained at the old homestead until 1875, when he removed to his present location, starting in the nursery business with about five acres. Soon after he was joined by Mr. Hobbs, and the present firm of Albertson & Hobbs formed. The establishment now embraces over 300 acres, being the largest as also the oldest in Indiana. Some 80 men are employed during the packing season.

Mr. Albertson has always taken an active part in the work of the American Association of Nurserymen and has served on several of its important committees. It was chiefly through his instrumentality that the organization selected West Baden, Ind., as its meeting place this year. He is an energetic worker, throwing his whole soul into whatever he undertakes, and during his term of office the business of the association will be well looked after.

Vice-Pres.-Elect Orlando Harrison.

The vice president-elect of the association, Orlando Harrison, is a member of the large nursery firm of J. G. Harrison & Sons, Berlin, Md. He, too, is a hard worker in the interests of the national organization, as well as those of other horticultural bodies, having been president of the Peninsula Horticultural Society.

Treasurer Yates and Secretary Seager, both re-elected, are well known in nursery circles, and their election to their respective offices testifies to the high esteem in which they are held by the craft, as well as to the efficient manner in which their several duties are performed.

The Price of Nursery Stock.

(Paper read by Chas. J. Maloy, of Ellwanger & Barry, Rochester, N. Y., before the American Association of Nurserymen.)

I have been assigned the topic, "The Low Price of Ornamental Stock." I would like to make it broader and entitle it, "The Low Prices of Nursery Stock in General."

I wonder if nurserymen ever stop to consider what they receive for the labor and expense incurred in

E. ALBERTSON
President-Elect American Association of Nurserymen

growing their stock; whether an actual profit is made, and, if so, are they satisfied with the results of their labors?

I think the majority of us, about this time of year, are apt to look back on the season's business just closed and ask ourselves the question why it is that we have sold our goods at such low prices? As a general rule, most nurserymen find themselves short of many staple varieties before the season is over. This leads us to believe that very much higher prices might have been obtained if we but had the courage to ask them. It would seem that there is the constant fear of losing an order, and the determination to secure it at whatever cost and at any price.

I am sure that in many instances, goods are sold at much less than it costs to produce them. Why then the necessity for this ruinous competition, because ruinous it certainly is, as all will agree who have been engaged in it?

I believe the nurserymen can get a reasonable price for his stock if he will ask it.

What would be the result if the nurserymen of this country were to limit their plantings, so that there would be only a certain amount of salable stock to offer each season, and in addition to this establish a

ORLANDO HARRISON
Vice-President-Elect American Association of Nurserymen

fair, uniform price? Would people buy even if required to pay a dollar apiece for trees, and fifty cents for shrubs? I think they would, and consider them cheap at that, for what does the average person know about the price of nursery stock or what it costs to grow it? When you think of it, a dollar means very little to ask for a tree when you have spent at least two years in growing it; taking your chances of drouth, frost, hail, insects; with no in-

surance for loss of your stock from any of these disasters. Look at the length of time it takes to grow a good Norway maple, or a fine American elm—at least five years—and then be obliged to sell it for 25 or 30 cents. Then, too, the cost of growing has increased. Higher wages are demanded with shorter hours for labor; land rentals have advanced; the land requires to be underdrained and manured. With all this additional expense, we are called upon to sell our trees at lower prices than ever before, and with hardly any regard for a standard of value, the idea with many nurserymen being to sell the stock for whatever they can get without regard to a market price.

One of the principal reasons for low prices is the tendency to overplant, creating a surplus which must be moved, always to the detriment of the following year's business. In making up planting lists, care should be taken to provide for the things for which there is likely to be a demand; not to plunge as some do on some one article, without regard as to whether there will be a market for it when grown. All do not have a demand for the same thing, or in the same quantity. I will cite an example which came under my notice a few years ago. A small nurseryman near us planted 15,000 birch stocks and budded them all to cut-leaved. He had splendid success with his budding, as nearly all grew, and were as fine a lot of trees as you would wish to see, but when they were ready for sale there was no market for them. Every one else had them; the market was glutted. He could not get 8 cents for handsome trees 6 to 7 and 8 feet high. He made the mistake of planting too heavily in a falling market, and very many more than his trade demanded.

Another reason for the present low prices is the keen competition which I think exists to a greater degree in the nursery business than in any other. Our experience has been that this competition is not a healthy one, and I know of others who feel the same. We must, of course, expect competition in whatever business we engage, but a business cannot live when goods are constantly being sold at less than what it costs to produce them.

To establish and maintain higher prices is something which I am not prepared to say can be accomplished at present; it seems to me that now is an opportune time for the nurserymen of this country to adopt some plan whereby they may arrive at the desired result.

In order to ask a higher price for your goods you must give your patrons a good article; you must grow your trees well, dig and grade them, and pack them well; and, by all means, sell them what they buy, that is, true to name. By doing this you will acquire a reputation; your customers will be pleased and have confidence in you, and will return to you year after year.

You all know that the nursery business is, or has been, with many people the synonym for all that is dishonest. And why? Because of the dishonest practices of so many who have taken advantage of their patrons and sold them stock which has proved worthless after waiting years for it to come into bearing! Nurserymen and jobbers, or dealers, who have practiced this have all come to grief, but they have left a stain which is not easily eradicated. It is only another instance of the "survival of the fittest," and so it shall always be.

Why not assert ourselves and demand what we should justly receive for our labors?

The nursery business is not one easily learned. A man may devote his life time to it and always find something to learn. There are not many who will engage in it, as it requires considerable capital and experience. I mean in the actual growing of the stock.

People in all ages and in all climes have demanded trees, shrubs and plants, and will continue to demand them, no matter what they may cost.

Rose Show at Orange, N. J.

The annual rose show of the New Jersey Floricultural Society took place on Wednesday, June 14, in the society's rooms in Orange. The exhibits were tastefully arranged under the direction of President D. Kindsgrab. Two classes were provided—for best 24 roses, in six varieties, and for best 12 roses, in three varieties. The first prize in each instance was won by D. Kindsgrab, gardener to William Runkle, Esq., with Countess of Oxford, Alfred Colomb, Margaret Dickson, Fisher Holmes, John Hopper, General Jacqueminot, Ulrich Brunner, Mrs. John Laing and Mme. Gabriel Luizet. The second by Peter Duff, gardener to John Crosby Brown, Esq., with Countess of Oxford, Mrs. R. G. Sharman-Crawford, Prince Camille de Rohan, Captain Hayward, Baroness Rothschild, Ulrich Brunner, Mme. Caroline Testout, Alfred Colomb and Mrs. John Laing.

Among those entered, not for competition, and rewarded with certificates, were: Treadwell Cleveland, Esq., Roland Ruddoch, gardener, for nine vases of roses, eleven varieties, delphiniums, sweet williams, first class certificate. O. D. Munn, Esq., John Hayes, gardener, three vases of moss roses, certificate and highly commended. A. C. Van Gaasbeck, Esq., William Bennett, gardener, vase of rose Mme. Caroline Testout, and vase of mixed carnations, certificate, highly commended. Messrs. Sidney and Austin Colgate, William Reid, gardener, vase of mixed carnations and two vases of roses, certificate of merit. Mr. Stewart Hartshorne, Arthur T. Caparn, gardener, vase of white iris, a first class certificate; vase of delphiniums, certificate of merit, and cherries and strawberries. The judges were Malcolm MacRorie, Arthur T. Caparn and John Rolley, superintendent of Prospect Park, Brooklyn. The show was open free to the public. J. B. D.

CLUB AND SOCIETY DOINGS

THE MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY.—The June meeting of the society was held in the rooms, Madison, on the 14th. It was well attended. The monthly exhibit of flowers, fruits and vegetables was of a high order. A Herrington showed three vases of roses, two of sweet william, two of sweet peas and a magnificent collection of digitalis, securing a certificate of merit. J. Heeremans, gardener to A. R. Whitney, Esq., exhibited a fine dish of Gradus peas and a dish of strawberries of Sharpless type, but more rounded, large and thoroughly colored. A culture certificate was worthily awarded; Robert McMullen, gardener to Mrs. G. F. Stone, staged a grand collection of hybrid roses, and a vase of each of the crimson, white and yellow Rambler. A culture certificate was awarded. Messrs. Duckham, Totty and Vince acted as judges.

President Heeremans, by request, read his paper on the culture of the herbaceous calceolaria. It was well received; questions were asked and answered. A hearty vote of thanks was accorded the author. Three new members were elected. The new schedule for our Fall flower show was in evidence. Nearly \$500 are slated in the prize list, which is considerably in advance of last year. There will be no meeting in July and August, which will give the boys time to grow the stuff to get the money. E. R.

P. S.—The flowers went to the hospitals, but Totty took the peas and strawberries.

society has voted that a committee of its own members award the prizes, and the following prominent head gardeners have been selected: Andrew J. Pow, John P. Hammond and Paul Volquardsen. William G. Postings is chairman of the committee of arrangements, and the president and vice-presidents constitute a reception committee. Schedules and other information have been published for general distribution. F. W.

BOSTON GARDENERS' AND FLORISTS' CLUB.

The last meeting of the season was one of the best attended in the history of this organization. About seventy members were present, all of the officers being in their respective positions. After the regular business routine in opening the meeting it was voted to dispense with the business of the evening until after the lecture; consequently President Wheeler introduced the speaker, M. H. Walsh, of Woods Hole, who gave a very interesting paper on roses, which called forth a lengthy discussion on the different methods of propagation, the hardness of certain varieties, the best insect preventives and kindred subjects. On the exhibition tables were a fine display of cut roses and a pot of Lady Gay from M. H. Walsh; cut roses from J. O. Kristenson, gardener to Mr. W. J. Clemson, Spanish lilies and aquilegias from W. N. Craig, North Easton; aquilgias and peonies from R. & J. Farquhar & Co., and seedling roses from F. J. Rea and The Boston Park Department. Votes of thanks were passed to the exhibitors.

Nine new members were elected and the high water-

which time arrangements were made for the Fall meeting in Boston. At 5.30 a start was made for an automobile ride around the city, and through the parks. On invitation of President Huss the first stop was made at his place. Mr. Huss received many compliments for the way in which his grounds were kept. The next place visited was Pope Park, then Goodwin Park, ending up with Bushnell Park. As the time was limited the visit to Keney and Riverside parks had to be abandoned. The automobile ride was very successful, nothing happening to mar the pleasure of the trip, excepting near the finish when one of the tires on one of the automobiles blew up; luckily it happened directly in front of The Heublein Hotel. A new tire was immediately put on and during the operation the whole party went into the hotel. Some thought the tire was put on in a remarkably short time, others that it did not take half long enough. The latter were not sitting in the parlor. The party then preceded to the Hartford Club where the banquet took place. Preceding the banquet a reception was held in the library on the top floor, where the members of the club, who were not able to be present during the afternoon, had the opportunity of meeting their guests. Shortly after eight o'clock the party went down to the banquet rooms which were decorated for the occasion on a magnificent scale, the most elaborate ever seen at the palatial Hartford Club. Roses predominated, and they were arranged in splendid profusion, all around the banquet chambers where flowers could be placed. At either end of the long tables miniature mountains of the queen of flowers were artistically arranged, and festoons of smilax suspended from the ceiling, swinging gracefully across the rooms. On the wall near the head of the table, were hung in bold floral letters, H. F. C. (Hartford Florists' Club) while at the opposite end were the characters, A. R. S. (American Rose Society.) The table decorations were prettily enhanced by the skilful introduction of tiny electric lights arranged all over the tables among the flowers, creating a beautiful effect. In the corners of the rooms, and near the doors, fine groups of specimen palms and other foliage plants were effectively arranged en masse, giving the finishing touch to a rare exhibition of the florists' skill. Altogether the floral display was superb and the committee on decorations, which was composed of P. Zuger, J. F. Coombs and F. Roulier, received unstinted praise for their splendid work.

After the viands and liquids had been partaken of, and cigars were lighted, President Huss welcomed the visiting guests and introduced A. C. Sternberg as toastmaster for the evening. The toastmaster first called upon President Alex. Montgomery, who complimented the rose garden at Elizabeth Park. He said it was a garden that any city might well be proud of. In closing, he thanked the members of the Hartford Florists' Club for the way he had been entertained.

Secretary W. J. Stewart was next introduced. He told of some amusing incidents in connection with the office of secretary. He congratulated Hartford on having such a rose garden; he thought there should be no further doubt that roses could be grown in this country. At the opposite end of the table, where the letters "A. R. S." were on the wall, he said the men seated there were very appropriately placed, as they were "All Round Sports," as the letters indicated.

F. R. Pierson was introduced as the "million dollar" florist. He said he was delighted to have the opportunity to visit Hartford. He had no idea that such a rose garden as he had seen to-day existed in the United States. He thought Elizabeth Park was the handsomest he had ever seen.

Robert Simpson was next called on. He said he felt more than repaid for coming to Hartford. He wished he might have a rose garden of his own, just as good as he had seen to-day, but did not think it possible. He referred to the grounds of President Huss as "The Garden of Eden."

The toastmaster next introduced A. Farenwald as the "Liberty man," who always took the medals for Liberty roses wherever they were exhibited. Mr. Farenwald said he was pleased to be with the Florists' Club on this occasion. He appealed to the members of the club to join the Rose Society. He thought it would be a great benefit to us all. He did not know of any society in the East that could furnish better material for membership than the Hartford Florists' Club.

Robert Montgomery, the next speaker, said the rose gardens at Elizabeth Park were worth coming miles to see. He was very grateful to the club for the entertainment furnished.

R. D. Dean, of New York, was next called on, followed by Vice-President J. F. Coombs, who said he was pleased to have the executive board of the A. R. S. as guests of the club, and regretted his inability to be with them during the visit to the rose gardens and on the automobile ride.

Park Superintendent Wirth was greeted with "He's a Jolly Good Fellow." He said he was pleased that the officers of the American Rose Society could meet in Hartford. He told how the rose gardens were started at Elizabeth Park, about six years ago, with about thirty varieties; they kept adding from year to year, and the more they added brought larger crowds to the park. Much credit was due to the Board of Park Commissioners, as they coincided with whatever Mr. Wirth suggested. He said he had heard it called the best rose garden in the Eastern States. He thought every park system should have a rose garden, as it helped to educate the people, and was of benefit to the commercial florists.

Other speakers were Robert Scrivener, superintendent of Cedar Hill Cemetery; Hugh Chesney, of Farmington, Conn.; J. Vildbourn and C. U. Pohn.

At the close of the banquet President Alex. Montgomery, on behalf of the Rose Society, thanked the members of the home club for the way in which the executive board was entertained. J. F. COOMBS.

DECORATIONS OF BANQUET ROOM AND TABLE FOR DINNER

Given to Executive Board of American Rose Society by Hartford (Conn.) Florists' Club at the Hartford Club, June 19, 1905. P. Zuger, J. F. Coombs and F. Roulier, Decorators

THE NEWPORT HORTICULTURAL SOCIETY at its regular June meeting attended to many important matters connected with its welfare. There was a good attendance. President Sullivan, as well as Vice-Presidents McLellan and Butterton, also Secretary McIntosh, were present. Action was taken on delinquent members as regards payment of dues. It appeared that some \$350 was due the society from this source, and a committee was appointed to collect, if possible, this money. Sixteen very delinquent members were dropped from the rolls. Dr. Alexander Anderson was elected an active member. The interest of the evening centered in the forthcoming rose and strawberry show, which takes place June 27, 28 and 29 in the Newport Casino. As it is a long time since a floral exhibition was held in the Casino, and as a large outlay is involved in this venture to give Newport still another fashionable function in the Summer season, every effort is being put forth to make this exhibition a grand success. That the Summer people themselves are interested in the society's work is evidenced by the following special prizes which were announced by the secretary: Miss Alice Keteitas, for gateway decoration, offers a silver cup, value \$50; A. G. Vanderbilt gives \$25 for the best group of palms and foliage plants; William Watts Sherman offers \$25 for the best group of palms, ferns and flowering plants; for decorative foliage plants suitable for a table, Mrs. Perry Belmont offers a silver cup. These and the very liberal prizes offered by the society, together with all the hard work that has been done, ought to insure a splendid exhibition next week. The mark of 200 is likely to be reached ere the end of the

mark of 200 is likely to be reached ere the end of the year.

The entertainment committee had rather a surprise for many of the members in a nice layout, in which the luscious strawberry played a prominent part.

It was announced that the date of the outing at Wm. Sim's place, Cliftondale, had been changed to July 1, and that the date of the picnic had been fixed for July 25. A good attendance is looked for at each of these outings.

Then next meeting of the club will be held September 19. J. W. DUNCAN.

American Rose Society Officers at Hartford, Conn.

The June meeting of the executive board of the American Rose Society was held in Hartford, Conn., Monday, June 19. During their stay the visitors were entertained by the Hartford Florists' Club. The officers present were President Alex. Montgomery, of Natick; and Secretary W. J. Stewart, of Boston, Mass. H. A. Siebrecht, New Rochelle, N. Y.; and Robt. Simpson, Clifton, N. J. The club also had as their guests, Robert Montgomery, Natick, Mass.; A. Farenwald, Hillside, Pa.; F. R. Pierson, Tarrytown, N. Y.; and A. Hans, Stamford, Conn.

The visitors arrived about noon and were met at the railroad station by a committee from the Florists' Club. They were at once taken to Elizabeth Park where a substantial lunch was partaken of, after which two hours were spent in viewing the rose gardens at the Park. At 3.30 p. m., the visitors went into executive session in Superintendent Wirth's office, at

SUMMER SHOWS.

Peony Show at Boston.

The annual peony show of the Massachusetts Horticultural Society, which was held on Saturday, June 17, contained the best collection and was by far the largest exhibition of its kind ever held in Boston. Formerly the lecture hall has provided ample room for this show, but this year the entire floor of the main hall was completely filled. There were a few other exhibits besides peonies, notably a collection of 100 bottles of rhododendrons, from T. D. Hatfield, gardener to Walter Hunnewell, Esq.; a collection of herbaceous perennials from the Blue Hills Nurseries, and a collection of trees and shrubs from W. Heustis & Son.

Among the peonies very noticeable were the large vases containing a lot of blooms arranged for effect. Wm. Thatcher was first in this class, The Blue Hills Nurseries second, and E. L. Lewis third. The H. A. Stevens Co., secured the Kelway Silver Gilt Medal, and Miss M. A. Means the bronze medal. T. C. Thurlow, of West Newbury, was first for the collection of thirty varieties, for the specimen bloom and for the collection of single flowered sorts. Other winners in the prize classes were O. B. Hadwen, Dr. C. S. Minot, George Hollis.

T. C. Thurlow had a very fine display, including many fine varieties. E. J. Shaylor, of Wellesley Hills, had a large exhibit of many different varieties and was awarded a first-class certificate for the varieties Germain Bigot and Mme. Theyerau, and an honorable mention for the variety M. Martin Cahuzac. T. C. Thurlow received a first-class certificate for the variety White Lady. R. & J. Farquhar & Co. made a display of *Festiva maxima*, of which they make a specialty. Wm. Nicholson exhibited three vases of the variety Lady Bramwell which is of a very distinct pink shade. A very fine variety was Charles Sedgwick Minot, of which a large vase was noticed in the collection of Dr. Minot. Owing to the holiday, (Bunker Hill Day) the attendance was not so large as expected; but the quality and quantity of the flowers in the hall showed that the peony is every year gaining in popularity. J. W. DUNCAN.

We have been favored with a copy of Mr. Walsh's excellent paper on "Rose Growing," which is unavoidably held over till next week.—Ed.

Monmouth County (N. J.) Horticultural Society.

On account of the rose show, this society held only a short business meeting on Friday, June 16. The president announced the semi-monthly meetings closed for the season, and that regular meetings will be held on the first Friday of each month.

The rose show was a great success. The hall was filled to overflowing with roses. It was a little too early for sweet peas, but several very nice vases of them were shown. The prizes were distributed as follows:

Collection of hybrid teas, Hale, Butterbach; collection of hybrids, Hale, Kettel; twelve varieties hybrids, Wm. Dowlen, Hale; six varieties of teas, Butterbach; collection of sweet peas, Hale, W. W. Kennedy; vase of sweet peas, James Kennedy, H. A. Kettel; collection of strawberries, Hale, Wm. Dowlen; three varieties strawberries, Hale, Brunton. Certificates were awarded as follows: Wm. Dowlen, for collection of poppies; James Kennedy, for collection of vegetables; Longstreet and Butterbach, for roses; James Dowlen for cauliflower; Strohmenger, for collection of lettuce; Wm. Turner, for general display of hardy flowers and for collection of carnations; James Dowlen, for display of rose seedlings; Hale and Butterbach each for collection of digitalis; Hale for poppies; Kettel for mignonette.

The display of fruit and vegetables was the finest ever exhibited in these parts. Some one suggested auctioning off his exhibits for the benefit of the society. I will quote a few of the prices received for the goods. Some of the strawberries brought \$1.10 per plate; the lowest sold at 60c. per plate. Some of the lettuce brought 35c. and 40c. per head; the lowest, 25c.; one head of Trianon Cos. brought 88c. Onions in bunches, three in a bunch, were sold at 25c. per bunch; digitalis, 75c.; sweet peas, 4c.; poppies, 35c.; sweet williams, 45c.; carnations, \$1.50 per vase. B.

Tarrytown (N. Y.) Rose Show.

The sixth annual June exhibition of the Tarrytown Horticultural Society was held in the Lyceum building on the 13th inst. In spite of the excessive dry season, the exhibits were quite up to the high standard of former years, which showed that the growers had been keeping the hose going pretty freely. The show was under the able management of David McFarlane and was very tastefully arranged. The attendance, always good, was even better than in former years, the hall being well filled in the afternoon and crowded in the evening. Following is a list of the principal prize winners: In the rose classes, Mrs. George Lewis (James Ballantyne, gardener.) won out for the best vase, for the best 25 blooms and for the best display of climbing roses. Mrs. J. B. Trevor (Howard Nichols, gardener.) for the best collection and for the best six varieties, six of each. For the best three varieties, six of each, the first prize was won by the

Misses Masters (Henry Kastbert, gardener.) and for the best 12 blooms any one variety, Mrs. Ogden Codman (Frank Luckenbacher, gardener.) was first.

In hardy perennials, Mr. Wm. Rockefeller (George Middleton, gardener.) was first, and Mrs. O. Codman second for the best collection. In strawberries, Mrs. Trevor was first for the best three quarts and the best quart, while Mr. Howard Willets (A. Weisenberger, gardener.) was first for the best two quarts.

Mr. Samuel Untermeyer (John Featherstone, gardener.) won out with a splendid collection of hardy shrubs. Mrs. George Lewis was first for a collection of sweet peas, and first for a collection of antirrhinums. Samuel Untermeyer exhibited a beautiful table of fancy-leaved caladiums, also a nice collection of greenhouse fruit, including grapes, peaches, nectarines, figs and melons. A fine vase of Spanish iris and a splendid vase of sweet peas were exhibited by Mrs. John H. Hall (Francis Gibson, gardener.) to which special prizes were awarded.

F. R. Pierson Co.'s exhibit, which added greatly to the beauty of the show, included shrubs and herbaceous plants, Marguerite, Queen Alexandra, new Rambler rose, Leuchtenstern, and their beautiful Tarrytown fern. WM. SCOTT.

FIELD OF PANSIES GROWN FOR SEED BY
PETER BROWN, LANCASTER, PA.

Annandale (N. Y.) Rose Show.

The Fourteenth Annandale Rose Show was held on the college grounds on June 14 and 15. The exhibition surpassed any of former years. For the best group of stove and greenhouse plants arranged for effect, Mr. J. J. Astor, Horace Deal, gardener, was awarded first prize; Hon. L. P. Morton, second. Mr. Archibald Rogers took first prize for a collection of vegetables, 24 varieties; Mr. Douglas Merrit, second. Mr. Rogers also took first for a collection of 12 varieties of vegetables; L. P. Morton, second. Warren Delano showed a nice clean collection of gooseberries consisting of three varieties, Triumph, Industry and Columbia. Miss Chandler, of Barrytown, took first for dish of strawberries, with Marshall. Miss Cruger was first for collection of three varieties of strawberries. Mr. Douglas Merrit, of Seacote, Rhinebeck, exhibited a very creditable lot of roses and peonies; Gordon Asher is the gardener and that gentleman deserves great credit for the fine collection of 24 varieties of vegetables put up, which had been grown in cold frames.

F. R. Pierson Co. showed two vases of Variegated Lawson, which, for the time of the year, were very fine. Weigela Eva Rathke was also on exhibition. Levi P. Morton took first for specimen flowering plant with *Hydrangea Hortensia*; also first for cauliflower. Archibald Rogers was first for a collection of herbaceous plants; L. P. Morton second. Warren Delano exhibited a fine collection of twelve varieties of sweet peas, and Miss Chandler a nice collection of poppies. Miss Cruger won the silver cup for 12 varieties of roses. For vase of Gabriel Luizet roses, Mr. Irving Grinnell was first; J. J. Astor, second. The prize for 24 varieties of roses on boards, 3 of each, was won by Archibald Rogers, Thomas Connors, gardener; that for 12 varieties of roses on boards, 3 of each, by Miss Catherine C. Cruger. The prize for 12 ferns was won by J. J. Astor; also for specimen fern. Mr. Thaddeus W. Bates, of Rhinebeck, exhibited over 50 varieties of roses; that gentleman possesses one of the best kept little places and has an admirable collection of roses. T. L. TALBOT.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—At the meeting on May 23 tulips were the great feature. The exhibits from trade growers were very numerous and good, but only a few specialists could admire the exhibits of the National Tulip Society. In these, some of the individual blooms may have been perfect, and also the markings in the striped varieties, but single blooms stuck up with the shortest bit of stem do not appeal to the present day ideas of what is beautiful, and it is quite time that these old-fashioned practices should be abolished. In the trade exhibits we had some remarkably fine Darwin varieties, also those of the Gesneriana type and other old kinds. Several of the newer varieties secured certificates of merit here, and also at the Royal Botanic the previous week. Among the new plants shown was *Clematis montana rubens*; this time the flowers were of a better shade of pink. A first-class certificate was given, the award of merit, previously recorded, not being considered a sufficient recognition of the merits of this new, hardy climbing plant. *Lobelia tenior rosea*, which came from Messrs. Veitch & Sons, gained an award of merit. It is of a pretty shade of pink, but hardly suitable for decorative purposes. Some interesting new species of primulas from Western China were also shown; these, as seen, would not be quite suitable for decorative purposes. Messrs. Sutton & Sons, Reading, had some showy varieties of *Primula japonica*, the colors varying from creamy white to deep crimson. These were a great attraction.

On the occasion of the Princess of Wales' birthday, which was celebrated on May 26, Marlborough House was loaded with flowers. The floral offerings sent to the Princess were numerous and varied. The pink Malmesbury carnation, which is named after Her Royal Highness, was sent in splendid blooms, on long stems. A large bouquet of May blossom was an appropriate offering. From America came a case of American Beauty roses packed in ice; these are said to have come out in good condition after crossing the Atlantic. *Clematis*, Rambler roses, lilies, violets and other choice flowers were among the offerings.

For staircase decorations the long Rambler roses are quite the thing; the crimson and Dorothy Perkins are the most appreciated, but others are also used.

THE MARKET.—Growers have suffered considerably from changes of weather. Frost has recurred several times, but the worst was on the early morning of May 23. Those who grow strawberries are the greatest sufferers, but much damage has also been done to flowers. Double white pyrethrums, which are extensively grown for Covent Garden Market, have been quite spoiled in some districts; one grower brought me buds and blooms which were quite black. His loss on this variety would be over £50, and a large grower close by will lose some hundreds of pounds. The cold spells have also stopped trade considerably, but now we seem past further trouble and trade is very brisk. No sensational prices are made, but most things move well at fair figures. The ivy-leaved pelargoniums are more than ever in demand, yet supplies are equal. They have long been used extensively for window boxes and, to some extent, for bedding, but lately they have been much more in demand for this purpose. And Galliee, the beautiful pink variety, is used extensively for decorations. At some of the most fashionable dinners and balls recently, large banks of this free flowering variety were employed. *Verbena* Miss Willmott becomes more and more a favorite, and is now grown by most market men. The plants seen have been a perfect mass of soft pink bloom. Pink and white are much used, both for decorations and bedding. White zonal pelargoniums sold badly last year, but this season they are much in demand, especially the single varieties. Albion is the favorite sort with most growers. Immense quantities of white marguerites are still used, yet some seem to be tiring of them and are looking for something fresh. For bedding they overgrow other things, and it is on this account that the white zonals are wanted. In scarlets Paul Crampel is one of the finest we have; the crimson, H. Jacoby, remains a favorite. In salmon, Mrs. H. Cannell now takes the place of the old favorite, Lady Chesterfield. The semi-double, King of Denmark, has a dangerous rival in Mrs. Lawrence, though some buyers are yet cautious in taking up with this. From all I have seen of it, I feel sure it has come to stay. I may add that this is a sport from *Herminie*, the best semi-double white we have. Mrs. Lawrence is a clear shade of salmon, and among the large numbers I have seen there has been no variation.

CHRYSANTHEMUM CORONARIUM.—The double and single varieties of this are now grown extensively for market, and to a great extent, take the place of the yellow marguerites, as they can be produced at a smaller cost. They go out at about 9s. per dozen, while good yellow marguerites cannot be bought for less than 18s. a dozen, and there is only a limited supply at this price. There has been a considerable slump in *Lilium longiflorum* since Easter, and prices have been very low. When we see large quantities in the baskets of street hawkers, we know things are bad. The supplies of roses have been well maintained, but growers have stood out for fair prices, and carnations, though over plentiful, have kept up in price; Malmesbury top the list, making 12s. per dozen blooms for best English grown. We get some from the Channel Islands, which are sold for less.

SALVIA SPLENDENS

News Items.

The State Floral Society has endorsed the action of the Forestry Section of the California Club with regard to the project of foresting the military reservation at Fort Baker. It is proposed to plant an abundance of forest trees on the reservation to ornament the Golden Gate entrance to the harbor, a project that has won the hearty approval of General Fred Funston, commanding the U. S. Military Division of California. The meeting was attended by California's vice president of the Society of American Florists, H. Plath, and Florist Frank Pelicano. These two growers were present in the capacity of committeemen from the Pacific Coast Horticultural Society to discuss with the State Floral Society united efforts on the part of both associations regarding the next flower show, which the State Society had announced for October, but which at this joint conference was changed to November 9, 10 and 11. Also at this meeting of the State Society and the Pacific Coast Society's committee it was agreed that both societies make common cause for the success of the November show, which they dated a little later than was wished for in order to be in the show field with the first of the season's chrysanthemum stock, but deferred to the dates because the San Mateo Society had selected to hold its show November 2, 3 and 4, and on November 6 will be held San Francisco's municipal election, and the 7th and 8th had been bespoken for the Menlo Park flower show. For the November 9, 10 and 11 show Mrs. J. R. Martin, of the State Floral Society, has been placed in charge of all arrangements, with the following committees: Floral Society—Mrs. O. D. Wheeler, Mrs. J. Brannin, John Hinkel, John Vallance. Horticultural Society—H. Plath, M. Munro, Frank Pelicano, E. Ferrari, J. W. Bage and Niels Peterson. ALVIN.

COMING EXHIBITIONS.

MORRIS COUNTY (N. J.) GARDENERS and FLORISTS' SOCIETY.—The tenth annual show of this society will be held in the Assembly Rooms, Madison, N. J., Thursday and Friday, October 26 and 27, 1905. ROSE STOCK

GRAFTED KILLARNEY

I had ordered material for the erection of several new rose houses this Spring. Recent unavoidable events have caused me to change my plans. This leaves me with several thousand very desirable grafted roses on hand which I now offer for sale at a bargain. This lot includes **KILLARNEY, METEOR** and **BRIDESMAID** in 3 in. pots, first-class stock, intended for my own use. These roses are ready for immediate planting, and of healthy and vigorous growth. Also ready for immediate shipment, grafted **Bride, Chatenay, Ivory, Golden Gate, La Detroit, Testout** and **Morgan**. I have in own-root stock **American Beauty, Chatenay, Bridesmaid, Bride, Meteor, Golden Gate, Ivory** and **Uncle John**. Several thousand home-grown, dormant Killarney to offer this Fall.

ROSES

FOR IMMEDIATE EFFECT

Haven't you in your trade a call for large, strong Rose plants, such as will give immediate results? We have prepared for June planting a stock of strong, two-year-old plants, all on own roots, except where noted, and while they last will close them out at the extremely low price of

\$15.00 per 100; 25 or more at 100 rates. No charge for packing

These Roses can be placed in the open ground during this month and will give a profusion of flowers throughout the entire growing season. They are worth just twice as much as we are asking for them, and they can be depended upon to produce the goods. They are well foliaged, have strong working roots and are now in 4 in. and 5 in. pots. The collection includes a wide range of varieties and colors, Teas and Hybrid Teas, such as **Meteor, Henry M. Stanley, Kaiserin Augusta Victoria, Marie Guillot, White Maman Cochet, Coquette, de Lyon, Pink Soupert, Clothilde Soupert, Golden Gate, White Golden Gate, The Queen, Ma Fillette, Helena Gambler, Yellow Soupert, Mme. Jules Grolez, Striped La France, Yellow La France, Bridesmaid, The Bride, Mme. Welche, Duchess of Albany, Mme. Abel Chateaux, Marie Lambert**.

CLIMBERS—Crimson Rambler, Yellow Rambler, Climbing Clothilde Soupert and Cherokee.

HYBRID PERPETUALS—Coquette des Blanches, Perle des Blanches, Perfection des Blanches, Mme. Gabriel Luizet, Merveille de Lyon.

Margaret Dickson, hudded, 5 inch pot plants, \$25.00 per 100.
Soleil d'Or, hudded, 5 inch pot plants, \$25.00 per 100.

BABY RAMBLER Ever-blooming Dwarf Crimson Rambler. A gem among Roses. Always in bloom. Every florist in the land should have it. 2 1/2 inch pot plants, now ready for delivery, \$2.50 per dozen; \$15.00 per 100; \$125.00 per 1000.

PEONIES

The economic question is the base of all industry and effort; critically studied, its laws respected, brings success; indifferently followed, brings failure. It is just as easy to start right and make money, as to start wrong and lose money; it is largely in the sorts one plants.

Mr. Cut-Flower Florist, you will doubtless want to plant Peonies, the kind that bring \$ \$ \$ \$. We have all kinds. Plant only the best; that is what we are doing and it is making us money. Why not you? It all depends on you.

We advise you to grow sorts that are free bloomers with stiff light stems, bright fresh colors, of large size, full double, that are hardy bud sorts. Unless they contain all these points we would not plant them largely. The off year is when most money is made; prepare for the off year.

We have quite a thousand sorts, some in very large supply, others in a small way for testing purposes. Our collection is the most representative in the world. The extra fine cut flower sorts are limited in number, but these limited kinds we have in large supply. We expect to plant a large acreage this Fall for cut flowers, but only the very best sorts especially adaptable for this purpose; every one must have the Betscher standard of excellence.

Here are the remarks of some visitors of national repute when here viewing our stocks:—"A very, very fine collection." "Your Peonies are the finest coming to our market." "I am overwhelmed at this scene—a glimpse of heaven." "I never realized the Peony to be such a fine thing; no wonder you are so enthusiastic and confident about their future." "Such Peonies as these will sell anywhere."

Our leaders are Dorchester, Grandiflora, Perfection, Rubra Superba, Festiva Maxima, Golden Harvest, Floral Treasure, Whitley, Achilles, Mme. Calot, Marie Stuart, A. Lauris, etc.

Plants from 1 to 5 years old; everything true to name; personal attention. Write us for prices and any information you may desire about the Peony.

Novelties.

A pleasant diversion, and one of the most interesting side lines to practical, everyday horticulture, is provided by the untamable readiness of every progressive gardener to annually invest a share of his hard-earned money in new, strange and rare things pertaining to his business. In this respect at least, we are fully up and in line with those in any other progressive trade or profession, who are all doing the same. Although the true spirit of advancement and progress is by no means the only spur that urges us to buying and trying novelties, this searching for things new and uncommon, nevertheless, amounts to a forward movement in the right direction.

The list of new introductions in seeds, bulbs, roots and plants, offered every year, is a long one. To go in for all of them is out of the question. The florist anxious to invest in a few good things is in a quandary what to choose. The hope of securing something superior to anything now in his possession, the desire to astonish his neighbors and competitors, and the clearing thereby of a possible handsome profit, are the supreme judges in the selection of new things to be tried.

The main object, when going in for novelties, is and should be to obtain something better than the everyday run of stock, not only something strikingly new, but also far ahead of anything existing in those points which go to make the novelty a plant desirable, useful and profitable to handle. It may now be that, in the whole long list of new and rare plants offered in any one season, there is nothing that would fulfill these hopes or would come in any way near being anything unusual; or, should there really be one or more which, if chosen, would richly repay the experimenter in novelties, he is very apt to overlook just these. He has nothing to go by or to guide him except the descriptions of the introducers and originators, who, all and everyone alike, spare no words in proclaiming their product to be the one mostly fitted to fill a long-felt want, and the one most indispensable to every

grower of plants. Then, again, assuming that all these alluring laudations are really honest coin and language based on and inspired by actual facts—and we have no reason to doubt this—will the plants that have given such amazing results in a climate and under conditions dissimilar to ours, do the same in our soil, in our locality, and under our treatment?

After saying all this, it may appear to the gardener and florist, reluctant to try his hand in the growing of novelties, that the chances for realizing on an outlay in money and time thus made, are exceedingly meagre. But, after all, this is not the case. I try some novelties every season, have done so for years, and have not only lost no money thereby, but have found this sort of sport a source of direct and indirect profit, as well as one of rare interest and genuine pleasure. My experience in this field of horticultural activity will be that of others who follow the same course in supplementing and improving their stock in trade. This searching for new things in our line of industrial life is not merely a fanciful whim; it has gradually developed into a necessary measure, resorted to in the effort to keep up our end of the trade.

As far as the chances of making money by a free use of newly introduced plants are concerned, it may safely be averred that they are greater than the risk of losing any thereby. My own experience has been that out of dozens of new things that I tried one or more seasons, but few proved at the start grand money-earners, but still fewer a total loss. A single hit in a batch of high-priced novelties more than fully makes good the shortcomings of all the others.

While the public is aware of the efforts made on all sides in the improvement of the leading cut flower products, it fails to recognize or to fully appreciate new varieties. A rose to most people is simply a rose, and a carnation a carnation. In the plant line of our business, the distinction between new and old varieties, between strangely new and well-known old plants, is much greater. Good novelties of any kind make their sharply cut, unmistakable mark everywhere in greenhouse and garden. A new plant is quickly espied and hailed with pleasure. Even any strange, unknown thing, already condemned as worthless by the grower, finds its admirers, and any really fine and exceptionally good novelty will fetch almost any price the grower deems right to ask.

But it is not this sort of business alone we should be after when investing in novelties. New forms of plant life, new types and improvements are to take the place of old, enfeebled and deteriorated varieties, of which latter only too many are yet to be found in cultivation; while, at the same time, some really good old favorites are pushed aside and into oblivion, remaining there until at some time in the future they turn up again as novelties, new to a generation of gardeners that has never seen them.

The reasons for the relegation of some good old standbys to a back seat may, after some reflection, seem obvious, but it is difficult to understand why some growers persist in filling their greenhouse benches and their customers' gardens with a lot of plants, all belonging to old, exhausted, emaciated varieties, long since out of date and superseded by better and much finer sorts, when the growing of these improved kinds would involve no more expense, require no more labor, time or bench room than the culture of the old-time rubbish, and would sell faster and bring better prices.

Any go-ahead florist, alive to the requirements of present-day business and present-day horticulture, who is not only a grower but also a lover of plants, should invest in the seeds and plants of a few novelties every year, should make a careful selection, and work up a stock of those proving valuable acquisitions. But he should not offer anything new to his customers the first season, not until it has undergone a thorough trial, and has been found to be of merit and worthy a place in house or garden.

News Jottings.
 Don't forget the outing of the Gardeners and Florists' Club, at William Sim's establishment, Cliftondale. The party will meet at Scollay Square at 2 o'clock Saturday, July 1. If you are interested and not a member of the club you will be welcome just the same, and it is to be hoped that a good delegation from both flower markets will be present.

Robert T. McGorum, the well known rose grower of Natick, sailed for a trip to Europe, June 17.

Henry M. Robinson and W. Rosenthal have returned from a week's outing in Maine.

F. R. Mathieson, Ed. Hatch and W. J. Stewart have started for the wilds of Maine, and wonderful piscatorial stories are expected on their return.

Wedding decorations have been keeping several of the stores hustling these days. Galvin's, Back Bay, have men doing a lot of these decorations. Doyle has several decorations for class days at Harvard.

The Garden Committee of the Massachusetts Horticultural Society visited T. C. Thurlow's and F. S. Museley's places at Newbury, on Wednesday.

M. M. Dawson, manager of the Eastern Nurseries, will sail for Europe July 1.

Visitors this week included Robert Scott, of Philadelphia, and Wm. R. Smith, Washington, D. C.

J. W. DUNCAN.
 Cleveland, O.

News Notes.

The extremely hot weather prevailing is very trying to greenhouse men in general. Stock is being forced at such a rate that it comes up small, crippled and of poor color. Especially is this true of roses, which, however, command fair prices from \$5 to \$8 a hundred.

Herman Hart returned Monday from a trip to Mt. Clemens with Mrs. Hart whom he has left there to take the baths. Mr. Hart has been telling about a record-breaking trip of two hours in an automobile with some prominent Michigan florists, taking in all notable places in Detroit, and arriving at boat 15 minutes before it pulled out.

Owing to the hot weather the attendance at the Florists' Club meetings is very light these days; even bowling has lost its charm.

Fred Moritz, 62 Edmund street, has bought a fine new delivery wagon. John Leuschner, of Rocky River, has finished building a house 120 by 20 feet. He intends growing roses to supply his own trade. O. G.

25,000 Nice Soft Chrysanthemums

The St. Louis bowling team was defeated at De Soto, Mo., in a friendly game, by 50 pins.

Wallace R. Pierson, of Cromwell, Conn., will join the ranks of the Benedicts on June 27. Congratulations.

The New York Florists' Club outing will be held next week—Wednesday, June 28. A splendid time is assured.

F. H. Kramer is the coach of the Washington, D. C., lady bowlers, who, under his able instruction, are making rapid progress with the wood.

The Executive Board of the American Rose Society visited Hartford, Conn., this week, and were hospitably entertained by the local craftsmen.

The Boston Gardeners' and Florists' Club will have an outing to the establishment of William Sim, at Cliffondale, Mass., on Saturday, July 1.

The Secretary of Agriculture says that 40 per cent. of the lily bulbs imported annually into the United States are more or less affected by disease.

A flower rate war at South Bend, Ind., which has been waging for some time, was brought to a close last week by the florists agreeing on a scale of retail prices.

At the opening of the Florists' Yacht Club, at Waretown, N. J., for the season, the genial John Westcott was presented with a mantel clock for the clubhouse by his guests and friends.

The Newport (R. I.) Horticultural Society holds a rose and strawberry show next week. Some handsome special prizes are offered by the wealthy residents of this noted resort.

C. W. Ward, Queens, N. Y., has been elected president of the American Peony Society for a third term. The next meeting and exhibition of this organization will be held in Boston in 1906.

The American Association of Nurserymen, at its annual meeting in West Baden, Ind., elected Emory Albertson, of Bridgeport, Ind., president. The association goes to Dallas, Tex., next year.

President Vaughan, S. A. F. O. H., entertained a party of St. Louis florists at lunch this week, including the local club officials and resident officers of the national society. A special train, to be known as "The President's Train," will convey the western members to Washington in August next, picking up delegates en route. A large crowd is anticipated.

A Correction.

In the item regarding the strength at which Bonora should be used (page 787 of last week's issue), read: "Use 100 parts of water to 1 of Bonora," etc., and not as before printed.

THIS WEEK'S SUPPLEMENT.

Wistaria Chinensis.

It would be hard to name a vine more deservedly popular than the Chinese wistaria, *Wistaria chinensis*. In early Spring, when its wealth of flowers are expanded, it is one of the sights of the season to see one such as our photograph represents. In one sense it is not a vine. What we mean is, that popularly a vine is something to give shade—a purpose to which the wistaria is rarely put. It is almost of too woody a nature for a shade vine. More often it is planted purely as an ornament, and to add to the attractions of a dwelling, just as has been the one photographed. Occasionally they are seen planted to porches and arbors, but they are not always well placed in such situations. The wistaria is naturally of strong growth and nothing suits it better than to be given assistance to reach the top of some high building or of a tall tree. A branch can be guided from one part of a building to another, or from one tree to another, and this liberty to grow still further is just what the wistaria likes. Just imagine the sight presented by a vine of this wistaria when festooned with flowers in such abundance as is the one before us! And then think of the enjoyment to the occupants of the rooms, the windows of which the sweet odor of the flowers must fill!

We have seen this wistaria used to great advantage in reclothing with life a dead tree. Planted to one dead, or dying, and guided up until it reaches some branches, the wistaria will make its way of its own accord to the very top of the tree; and when it is well established and in flower, it is one of the grandest sights imaginable. One such case we know of where the tree is entirely dead and even decayed and fallen apart at the base, but is held up by a branch or two of the wistaria, which found their way to a living tree nearby some years ago, and are now firmly fixed to it. These hold up, but in a slightly leaning position, the dead tree. The appearance of the whole vine, completely enfolding the dead tree, the portion on the live tree holding up the whole of the dead one and its weight of living wistaria, is a great curiosity in a horticultural way.

It is not alone as a vine that the wistaria is used. As a bush, or as a small standard, it is a pretty object. To form a standard, some of its long shoots must be tied to a straight stick for a few years, until strong enough to support itself, which it will be in time. Then by keeping the head pruned close for a year or two, a bushy head is formed, and the standard is there.

Besides the common form of this wistaria, to which our notes refer, there are several varieties of it—one has pure white flowers, another double ones. In addition to these, there is a Japanese one, called multi-juga, which is now common in cultivation. In color of both the type and its varieties, for there are varieties of it, too, it resembles the common Chinese, the one our notes refer to, but the racemes of the flowers are very much longer, sometimes two to three feet in length. The flowers, however, are thinly scattered along the racemes, and, all in all, we do not think as much of it as of the common one.

Mentioning as we have that the Chinese wistaria is not to be thought of so much for shading as for flowering reminds us to say that our native species, *W. frutescens*, is excellent for the purpose. So also is the one deemed a hybrid, called *W. magnifica*. Their shoots are more slender and conform to the popular idea of what a vine for shading should represent. These two flower later than *W. chinensis*, the racemes are shorter, but are numerous, and all are the delight of bees.

JOSEPH MEEHAN.

Society Activity.

This week we present reports of the conventions of three national organizations devoted to different branches of horticultural endeavor, viz.: The American Association of Nurserymen, the American Seed Trade Association, and the American Peony Society. Each of the meetings was well patronized, and much good work was accomplished by all.

The nurserymen discussed, among other things, a uniform inspection law, the low prices on ornamental stock, and appointed committees to join forces with the American Seed Trade Association and the Society of American Florists in express and freight matters; also in an effort to have the postal regulations governing the mailing of catalogues in bulk revised, or modified in some way, so that the firms issuing catalogues may be relieved of the work of affixing stamps thereto, and have the method of mailing simplified so that the work can be done expeditiously without the handicap imposed under the existing postal ruling. This combined effort should result in some tangible good.

The nurserymen are also making an endeavor in which they likewise desire the seedsmen and florists to join to eliminate the system of "graft," or commissions to private gardeners and other persons charged with the purchases of trade merchandise for those who employ them, something which it is said is assuming such proportions in these days as to be regarded as a menace to good business methods. This matter was recently discussed at considerable length in a horticultural periodical, now defunct, and, so far as our recollection goes, it was then the consensus of opinion among the best private gardeners that the practice was not at all general among them; neither did it receive their countenance. Where it

does exist, however, it seems to us that it will be difficult to uproot it, so long as both parties to the transaction—the seller and buyer—see, or profess to see, no great harm in it. No law or other regulation can be put in operation among the respective merchants that can be universally binding; and until that period of civilization has been reached when the recipient of the "tainted money" puts his manhood and self-respect above the dollar, it might be better to agree on a set discount! A recognized rate of "graft" or commissions in operation, and openly announced, will put the merchants on an equal competitive footing, so far as that particular matter is concerned, provided all stick to the arrangement made; and when it is seen, after trial, that men are willing to stand by their word of honor in one phase of the case, then there will be greater hopes of the total eradication of the evil when combined effort assails it. To us it seems too bad, though, that any member of the noble and ancient profession of gardening must be classed with the Pullman car porter or the underpaid waiter in a cheap restaurant.

The American Peony Society held a successful meeting and exhibition in Chicago, Friday and Saturday of last week. The nomenclature committee, which has been at work in an endeavor to straighten out the names of peonies, has been continued, with Professor John Craig, of Cornell, at its head. Our interested readers should peruse President Ward's address, which appears in another column, for an idea of the aims and objects of the Peony Society. His remark that all carping criticism of this special organization and its work should cease, is pertinent and to the point. There has at no time, so far as we remember, been any ground for criticism of this society in any shape or form; its work is being conducted with only one object in view—the benefit of the business; and to that end it deserves commendation and support. A pull together will be productive of far greater results than odious comparisons or uncalled for, foolish insinuations.

The American Seed Trade Association held its annual convention at Alexandria Bay, N. Y., with a large attendance. This organization now embraces in its membership almost all the prominent seedsmen of the United States.

Society of American Florists and Ornamental Horticulturists.

Railroad Rates to Washington.

The Western Passenger Association, which controls the territory westward from Chicago and St. Louis to Cheyenne, Wyo., and including all points in Colorado, has authorized a rate of one and one-third fare on certificate plan, in co-operation with rate announced by the other passenger associations, for persons attending the S. A. F. convention at Washington, D. C., August 15 to 18, 1905. This extends the concession to the whole territory from which members are likely to travel, with the exception of the Pacific Coast, which is not under the jurisdiction of any passenger association.

Full instructions as to how to purchase tickets and secure certificates entitling the passenger to reduced rates will be published in the prospectus in July, and in all the horticultural trade papers.

WM. J. STEWART, Secretary.

THE SUFFOLK COUNTY (N. Y.) HORTICULTURAL ASSOCIATION opened its first annual Summer exhibition in Islip, L. I., June 14. There was a nice display of flowers, fruits and vegetables. Notable among the exhibits was a fine lot of flowering shrubs, from the estate of Mr. Samuel T. Peters (W. McCollom, gardener), which comprised 44 varieties. There was an immense display of rhododendrons from the Lawrence estate (C. Dumper, gardener), which were the finest we have seen in a long time, considering the late date. Mrs. A. Arnold (W. Wincott, gardener) showed a fine collection of peonies; also nice strawberries and cauliflower. The vegetable display was very fine, considering the very backward season.

In the display of digitalis from the Peters estate some of the spikes were 7 feet long.

In the regular classes W. McCollom was the most successful exhibitor, carrying off eight first and six second prizes. W. Wincott succeeded in winning seven firsts and five seconds. Mr. Yzek captured eight firsts and one second. Mr. Dumper was successful in seven classes, getting three firsts and four seconds.

Other exhibitors were: Adam Patterson, gardener for Col. Wagstaff, who showed some fine peonies and good vegetables; John Rodgers, gardener for H. G. Timmerman, glaxias, also very fine carnations for this time of the year. David Ireland, Huntington, L. I., had some very fine peas, for which he was awarded a special prize.

THE TRI-CITY FLORISTS' ASSOCIATION held a meeting at the Floral Hill Gardens, Davenport, Ia., last week. One of the chief matters which came before the session was the arrangement for the annual outing of the association. This will be held early in August. A committee composed of Emil Boehn, Henry Paul, William Knees and Theodore Ewoldt was appointed to make the necessary arrangements. An illustrated lecture on the best way to raise strawberries was another feature. A strawberry supper served at the conclusion of the meeting was a fitting sequel to the talk. The association is also planning sending representatives to the S. A. F. O. H. at Washington, D. C.

OUR READERS' VIEWS

Fruit Under Glass.

Editor Florists' Exchange:

Replying to Mr. Turner's letter in your issue of June 3, it is exceedingly interesting to find that he has kept such close track of my movements during the twelve or fifteen years I have been in this country as to be able to state that my experience has only been of a limited order. He may find that I have not been so slow as he imagines. Let me inform Mr. Turner that growing fruit by the ton in the Channel Islands is not such a rare occurrence as he may think. Mr. Turner says, "don't think what applies to England applies here." Why not? The fundamental principles of fruit growing are the same the world over, subject to a few minor changed conditions in every locality, which come naturally to practical men. Will he explain where this wide difference of treatment comes in, and on what material points it differs, as I certainly cannot see any from the articles he has written, or the advice he has given from time to time on this subject? If he maintains there is a material difference, will he explain how it is that well known growers who have realized among the very highest prices that have been paid for fruit in New York City, and who were growing before Mr. Turner came to this country, and on a far more extensive scale than he has grown, have so strictly followed the advice given by the late William Thompson, that it may be said they have carried his book about by day and slept with it under their pillow at night?

I most emphatically deny that there are any great differences in the treatment as carried out by up-to-date growers in England and up-to-date growers in America. Any one who has had any experience in forcing fruit under glass in England and in this country is thoroughly well aware that in the dull, sunless, and oftentimes smoky climate of England, when the sun is not seen for weeks, and where it is almost impossible to put on a chink of air for days together, it requires far more skill and attention and is far more difficult than in the frosty nights and bright, sunny days generally prevailing here. Forcing in the United States is a perfect pleasure, a perfect picnic, compared with the same work in England, and does not require half the brains, ability or experience; neither does it in the Channel Islands.

Does Mr. Turner mean to infer, if I or any other practical man were called upon to go to Central Africa, or even the North Pole, that, with the wide experience I have gained during the past thirty years, I could not meet and overcome these minor difficulties?

He says that he can see plainly that I do not approve of "his method of culture." Why his method, when I rejected it twenty years ago, to say nothing of others who rejected it long before, not only on the fan system, but also the long and short spur, upright and diagonal? I again warn readers of The Florists' Exchange to be cautious before taking up this rehashed and warmed up old system, unless they are in a position to make experiments; then, by all means, go ahead.

Mr. Turner is correct in saying that training the trees, as he advises, at right angles, is the fan system equally as though they were trained horizontally. He goes into figures to prove what I did not dispute or even mention—the area under the supposed system which I advocate, and he has no more idea than the man in the moon what system I do advocate or believe in, for I never mentioned any. All I did say was, "training the trees fan-shaped." Perhaps Mr. Turner is not aware that there are several systems under which they may be trained. As he has gone into figures to prove the difference in area, will he also go into figures and prove under which system the most light, air and sunshine are obtained, and give the results—three most important elements in successful fruit culture under glass. He goes on to say, "take a span roof house, such as ours, 25 feet wide, and you have nothing but a houseful of emptiness." Why, there are thousands of men proving the fallacy of that assertion every day, and hundreds of others only waiting for the opportunity to do so. He says he is not writing for the Channel Islands. There is no difference in the treatment accorded in the Channel Islands from that given in England, with the exception of firing and ventilation, and boys generally do these, not practical men. He advises me to mix with practical men and get acquainted with their methods. What methods? Methods that I learned twenty-five or thirty years ago? Show me something fresh, something new, and I will be the first to jump at it, but first tell me where to find it.

Mr. Turner refers to his trees carrying 250 fruits at three and a half years. It seemingly takes but little to please Mr. Turner. Did he ever read a book on peaches, written by Mr. Simpson, of Wortley Hall, England, the matter for which, if I remember rightly, came out in the columns of the "Garden" and was afterwards published in book form some 25 or 30 years ago—the best article on the peach tree ever written in the English language? Mr. Turner will not have any trouble in getting such trees as he refers to if he will follow the advice given therein. Of course, it is a little ancient; but so is Mr. Turner's present system.

I agree that Canon Hall is a noble grape, and the fact that good bunches of it have been grown is the best proof that they can be grown again. As I pre-

viously stated, I had a house under my charge, 150 feet long, devoted to this grape, to say nothing of other and smaller experiments. Why don't Mr. Turner go ahead and fathom the mystery of growing this grape? There is no glory in doing something that every one else can do. If he will accept it, I will give him a little advice to help him on the way: Throw away those old ideas, those relics of horticultural barbarism of marching into a house when the vines are in flower, with a camel's-hair brush under one arm, a rabbit's tail under the other, to tickle the bunches, an apothecary's measuring glass to measure the spots of water to be sprinkled on the floor, a full sized lumber chain to chain the thermometer down to a decimal part of a degree. Wipe out these old institutions, and you have at least started on the way to success.

In reference to my question, Can the bloom on grapes be restored after it has once been lost? Mr. Turner says he hesitates to give an opinion until he is further enlightened on the subject; then immediately follows by saying, "it can't be done," showing him to be a man who expresses an opinion and then proves it afterwards. I say it can be done, up to a certain stage of their growth. Did Mr. Turner ever go into detail as to what is the cause of bloom on fruit, of what it consists; whence it comes? I saw the whole subject threshed out by a man who made it his particular study, and who taught me more about a vine and its fruit than all the other gardeners I ever met. [Won't you please tell us all you have learned or know about this subject?—Ed.]

I note Mr. Tricker says that he has grown fruit under all systems for forty years over an extended area. Mr. Tricker rushes to the front with the usual "I told you so." Why did he not come to his friend's assistance before, and not lie quietly slumbering, leaving Mr. Turner to resuscitate this gold brick after years of hard study, hard work and disappointments?
H. J. CORFIELD.

Editor Florists' Exchange:

Having read Mr. Turner's articles from time to time, and also having had the pleasure of seeing the goods produced to perfection by him, there is no doubt that he is correct in what he advises in his able contributions. I am looking to Mr. Corfield to give us some valuable information on the subject, for it is by the writings of such experts that we, "the small fry," benefit.

Mr. Turner struck a good keynote when he wrote of a house full of emptiness. Take a viney. What an amount of space is lost! Would Mr. Turner give us a plan to get over this? Some 16 years ago I remember seeing a house that was rather odd, but came pretty near being an ideal one so far as space was concerned. It was 11 feet wide, 18 inches high in front, with a sharp hip span of 18 inches. The vines ran lengthwise of the house instead of the usual way. The bunches were easy to get at, and presented a beautiful appearance.
W. D. R.

Elberon, N. J.

Growing and Watering Roses.

Editor Florists' Exchange:

Of all the subjects connected with horticulture that have been written about by experts and others from time immemorial, the one of watering has always been found the most difficult to treat upon, and we never remember following any writer who could give explicit instructions as to how often the watering of any plants should be done.

While perusing a recent issue of "The Garden Magazine," however, we were more than delighted to see, in an article devoted to rose growing, that the amateur was informed that "eight times a day is not too often" to water the newly planted roses in the greenhouse during the most trying period of the Summer. The writer of the article in question admits that there are great differences of opinion on the subject of watering, and that there are hardly two growers who treat their plants alike in this respect. If the advice now given be correct, this statement will no longer hold true, for the instruction imparted as to how often to water is so simple, and can be so easily applied, that the practice should become general, and all growers will then treat their plants alike, so far as giving them water goes, providing, of course, the plants live to enjoy the treatment.

The same writer also recommends that, while the house is empty, if the benches be washed with lime and sulphur, the latter substance will help keep the roses free of mildew. This should be welcome news to our commercial growers, as mildew is very troublesome sometimes! The reader is also informed that the plants must never at any time be saturated. This hardly coincides with the "eight waterings a day" principle, as it would not seem possible to water a bench eight times in one day without saturating something.

The article also contains other information regarding the soil to use, how to plant, when to plant, etc., and the further one dips into it the more he becomes convinced that the writer thereof does not impart instruction born of practical knowledge of the subject, and that the advice he gives will only mislead any reader who attempts to follow it; that it is a pity that the editors of so-called "leading horticultural magazines"—a class of papers that the country is ripe for and appreciates, which can undoubtedly do a great deal of good—do not rely more upon practical men to give advice to their readers. There is a great

field for amateur horticultural papers in America, but a mess of useless verbiage will never teach an amateur how to grow a rose or how to have a window-box look nice with ferns from the woods, or with grevilles for flowering plants; or to plant a grape vine for its flowers and shade. And if the writers of such articles persist in giving out that kind of trash, the amateur gardener will soon find that he has got beyond the limits of the magazine writer, so far as plant culture goes, and will have no further use for instructions that do not instruct. AMUSED.

An Active Association.

Editor Florists' Exchange:

In the little isolated hamlet of Oceanic, N. J., on June 16 the Monmouth County Horticultural Society gave one of the best and most interesting rose and strawberry shows we have seen for some time. Except for notices in the floricultural papers, the modesty of the promoters went to extremes. The result was, the day after it became known what a delightful time had passed by in that sleepy of the sleepyest of places, there came near being a general indignation meeting. It turned out to be the biggest kind of a surprise, not only in the quantity and quality of exhibits, but when the berries and vegetables were auctioned off, world's record prices were broken. George Burnett had to pay \$1.10 for his plate of strawberries, and none of the many plates were sold for less than 60 cents each. The few, comparatively speaking, who were in attendance, were fired with the greatest enthusiasm and were determined to capture some of the exhibits at any price. Al Ricard's must have sold the seed of some stock there; he did nobly for the cause. Longstreet, with his prompter, Harry Kettel, could make it warm for our metropolitan auctioneers. Lettuce at 45c, each isn't bad, but they were almost worth it—they were grand. The only bad bargain was a bunch of a dozen young onions for 25c. It was just the infectious spirit of the exhibits, and the treasury of the society, as well as the experience of those present, benefited much by it. It would appear to us that societies to be successful must be attractive to the younger element, though "wisdom grows in older pates, the young ones keep alive the dates." The Monmouth County Horticultural Society is to be congratulated on what it is doing for horticulture. May its garden of endeavor suit and contain all the species that go to make greater success.
J. I. DONLAN.

Remedy for Currant Worm.

Editor Florists' Exchange:

Having seen an article in The Florists' Exchange on destroying the currant worm, I would state I have been using something much cheaper than what is recommended, it at the same time being a good fertilizer. It is also the best cabbage worm destroyer that I have used so far—and I have used a good many—and it is about the only thing that will keep the striped bug from killing the cucumber vines. This is no experiment; if every one were to make a trial of it, I think they could obviate quite a lot of worry and trouble. It can be bought of J. Scott Dickey, Lancaster, Pa. It is called Pulverized Tobacco Fertilizer. It will not injure the most delicate plant. Dusted on top, it will make the little black bugs sneeze when they get a dose of the stuff. I am not in any way connected, nor have I anything to do with the firm named.
D. N. REHR.

Lehighon, Pa.

Lilium Doeii.

Editor Florists' Exchange:

Lilium Doeii is a hybrid, and as you can see by the illustration (page 788, issue of June 17.), is a very good one, very even in height and a good bloomer. We have often seen in our fields a plant, grown from a 5 to 7-inch bulb, have 25 blossoms on it. This lily is about two to three weeks later than L. Harrisii, but much more healthy than it. L. Doeii will take the place of other longiflorum lilies in time, because it is healthier, and will give more flowers than any other longiflorum.
Bermuda. STEPHENS BROS.

Mrs. George A. Knight.

The wife of George A. Knight, of Mount Tolmie Nursery, Victoria, B. C., died last week at the Jubilee Hospital in that city. Cancer of the stomach was the immediate cause of death. Mrs. Knight was a native of Birmingham, England, aged 53 years, and had resided in Victoria for upwards of 26 years. Three daughters and two sons are left to mourn her loss. The funeral was held Tuesday, June 13. The very large attendance of friends and the many beautiful floral offerings testified to the esteem in which Mrs. Knight was held.

The American Peony Society

Second Annual Meeting and Exhibition, Held at Chicago, Ill., June 16 and 17, 1905. Next Meeting at Boston. C. W. Ward Elected President for a Third Term.

The second annual meeting and exhibition of the American Peony Society was held, as previously announced, in the banquet hall of the Auditorium Hotel, Chicago, Ill., Friday and Saturday, June 16 and 17, 1905.

The exhibition was a pronounced success, and demonstrated that as effective a display can be made with peonies as with chrysanthemums. Certainly no finer showing of this now popular flower was ever before made at an exhibition. The management of the affair was in the hands of J. B. Deamud, the Chicago wholesale florist, who carried out his duties in a most satisfactory manner. There were forty-two entries, an admirable representation of peony specialists, consid-

of our society are driven to exert their utmost energies in order to properly care for the year's business, which must be done practically in the two or three months of Spring.

Nomenclature Needs Straightening Out.

One of the crying needs of such an association as ours, is the surprisingly chaotic state into which the nomenclature of the peony has been allowed to degenerate; and if this association should do nothing else than straighten out, in a passable manner, the nomenclature of the peony, striking from the list duplicate or nearly duplicate and worthless varieties and render it possible for the trade to list fifty or sixty of the best sorts under names and descriptions, that would render their identification certain and make possible extensive deals between different peony growers, insuring the buyer of getting exactly what he wants whenever he places an order, and then should disband, it will have accomplished one of the greatest benefits to floriculture in general and amply repay for all the effort put forth and expense incurred in its organization and maintenance. Realizing the importance of this question of nomenclature, a competent nomenclature committee was appointed, and has already accomplished a long step toward straightening out the tangle which has been the source of annoyance and a bane to us all who have attempted to purchase peonies. I now refer to the extensive test plot

Value of the Peony as a Cut Flower.

For some years past the value of the peony for cut flower purposes has been recognized in the larger markets, such as Chicago, New York, Boston and other large cities, but up to the present time there seems to have been no organized effort made to place the most suitable varieties on sale, and a large proportion of the blooms offered seem to have been of the more common kinds, composed mostly of undesirable shades of color, the result being that the color value of the peony has suffered somewhat in popular estimation. In a few years all this should be changed, and a sufficient number of the most attractive sorts that are best suited for cut flower purposes should be grown to supply the needs of the market; and when this occurs, the demand for peonies for cut flower purposes will be largely increased. The difficulties of accumulating a large stock of the better varieties that shall prove true to name are great indeed, because owing to the chaotic state of peony nomenclature at the present time, no one is sure of getting what he orders, unless he is able to visit the peony fields in blooming time and identify and mark the plants he desires.

Some Experiences in Buying Peonies.

A somewhat extensive experience in purchasing peonies during the past ten years has developed some curious results. For instance, in one case a grower sent two absolutely different colors under the same name. This occurred with the peony Henri Murger.

Floral Treasure

Rosea Superba

PEONIES IN THE COLLECTION OF COTTAGE GARDENS CO., QUEENS, N. Y.

Mme. de Verneville

ering that the present may be regarded as really the first exhibition given by the young society.

President C. W. Ward, of the Cottage Gardens, Queens, N. Y., occupied the chair at the business meeting of the society, and presented the following address:

President's Address.

It has now been two years since the organization of the American Peony Society, and to those who thought that there was no need of such a special society to care for the interests of the peony, the success of the present magnificent exhibition should be ample proof that the society was not only needed, but really wanted; for it is by such exhibitions as these that we who are devoted to the interests of any special class of floriculture really learn the possibilities that exist, when concentrated effort is made to develop all that may be contained in any special subject.

This is practically the first exhibition of peony flowers given under the management of our society, and what has been done here to-day can be much improved upon in future efforts, for by experience we learn, and the experience leading up to the staging of the present show has already taught us many things that will redound to our benefit in the future and will enable us to stage increasingly interesting exhibits as the years roll by.

No doubt the officers of the society will be somewhat sharply criticised for not providing essays to be read before this meeting, and while not attempting to offer excuses for such a lack, I wish in connection with an apology which we offer to members of the society, to say that, unfortunately, prior to the season at which the peony show is possible almost all of the members

at Cornell University, which has been planted with upward of a thousand varieties of peonies, all of which have been contributed by its members without one cent of expense being incurred by the society. It is a foregone conclusion that this attempt to straighten out the peony nomenclature, undertaken under the auspices of Professor John Craig, of Cornell University, whose careful and efficient work performed in other lines is ample guarantee for the thoroughness with which this work will be done, will be productive of great results and will place the entire fraternity under obligations not only to Professor Craig, but to Cornell University, and, last but not least, to the American Peony Society itself.

Peony Flowers Will Be Bought Under Name.

Fourteen years ago, when I first began growing carnations, they were usually sold upon the market under the designation of red, pink and white pinks. So far as I know very few varieties had at that period produced a sufficient impression upon the buyers to be asked for under distinctive names. However, soon after the formation of the American Carnation Society they began to be designated by special names, and, at the present time, retail buyers generally ask for the President, Enchantress, Ethel Ward or any other variety they wish to purchase, because thereby they identify those blooms which best satisfy their tastes and purposes; and it will not be long before this will be the case with the peony. At present Festiva maxima is known upon the New York market as the big white peony, and all other white varieties are simply designated as white peonies, but within a comparatively short period buyers will begin to call for Mont Blanc, Festiva maxima, Mons. Dupont, Marie Lemoine and other named varieties, because they will want to secure just the effect produced by those sorts and will be able to identify them under their proper titles.

The true Henri Murger is described as an immense bloom of the form and color of the Paul Neyron rose. The first year that the firm in question sent us Henri Murger we got a tall-growing, deep purplish crimson which as yet we have been unable to identify. The following year they sent us a very double creamy white sort which bore no resemblance either in habit, form or color to the one sent before. Neither of them resembled in any respect, either in habit, form, color or time of blooming the true Henri Murger. In another case a totally different peony in point of habit, form and date of blooming was sent, but of the same shade of color as the genuine variety ordered. The second year from the same firm came under the same name another lot which again did not resemble the true variety either in form, habit or date of blooming, but still of the same shade of color, and neither of these varieties resembled in any respect the true variety whether in form, habit or date of blooming, with the exception that the shades of color were very close to the true variety.

The Way to Work Up a Stock.

After an extensive experience in attempting to accumulate considerable stock of the specially desirable varieties, I have come to the conclusion that the only practical way to work up a true stock is to purchase a moderate quantity of the sorts from some source where you are able to identify them as true, and then, after blooming the plants three years, cut out all rogues which may develop and look after the propagating and division of the stock yourself; for I have found where you leave it to employees, they not having the same interest in keeping the stock clean that you have, will allow errors to slip in. A rogue once introduced in a stock frequently multiplies twice as rapidly as the true variety, the result being a large proportion of rogues when the stock has been con-

siderably augmented. In Holland the custom is to take up peonies and divide them every year or two, consequently the plants are never seen in bloom, and this mode of forcing the propagation is probably the reason why so many rogues are found in the general run of Holland peonies imported to this country.

The Peony in Landscape Work.

Undoubtedly our favorite flower is one of the most effective of all early flowering herbaceous plants for use in extensive landscape plantings. It not only can be used in masses, producing grand color results, effectively lighting up dark nooks and corners, but can also be interspersed among shrubbery, lending additional color to such groups. The plants when out of bloom are not very unsightly, as is the case with many other herbaceous flowers, but the deep fresh greens and bronzy greens of the peony foliage are maintained in general good condition throughout the greater portion of the season. The range of peony colors is unexcelled, comprising almost all the shades of pink from the most delicate flesh tints to the deepest shades. The same may be said of white, crimson, purple and amaranth. It is weak, however, in yellow, as we have comparatively few sorts that might be termed yellow, and these are generally light in color, the guard petals being almost invariably white, and it cannot be said that there is as yet any true solid yellow peony.

Landscape architects should learn to know the peony better, and should become acquainted with the finer and more desirable sorts, and should use them more extensively hereafter than they have in the past. I am quite certain that the peony often suffers in reputation by the use of common, undesirable colors in classes of work where good, clean complementary colors are needed and should be used; and the peony will never take its proper place in landscape work until landscapers in general become better acquainted with the more desirable sorts and learn to know them as well as to use them.

No Conflict With Other Organizations.

It is to be regretted that an unfortunate controversy arose over the formation of the American Peony Society, resulting in forming within the ranks of the Society of American Florists the S. A. F. Peony Association, or Peony Committee, as it has more recently been called, giving color to the idea that the Society of American Florists was opposed to and endeavoring to kill off our organization. I have been led to believe that it has been asserted by certain elements in the Society of American Florists that the formation of the Carnation Society, the Chrysanthemum Society, the Peony Society and other special associations would in the end destroy the Society of American Florists. This I do not believe to be true, and I cannot see any other result from the organization of such special societies than an increased general distribution of flower and plant knowledge among the general public, which in the end will result in increased accessions to the ranks of the Society of American Florists. It may be asserted with truth that the Peony Society has not now, nor will it have in the future, any conflict with any other horticultural body; but it has been formed for the purpose of accomplishing certain special work that can be done only by and with the hearty co-operation of all of those most vitally interested in the peony. Personally, I am well satisfied that our association will gladly contribute to the archives of the Society of American Florists, or to any other horticultural body that makes for the good of the florist craft in general, the results which it may accomplish in the way of straightening out peony nomenclature, or any other results which may be considered generally beneficial to the craft. Neither the Peony Society nor the S. A. F. Peony Committee has had as yet any great measurable effect upon the increase in the demand for peonies, for the reason that neither has, up to the present time, accomplished any definite advancement either in the improvement of the peony or the methods of its culture or its commercial handling. Aside from a few articles and cultural notes appearing in the press, nothing tangible has gone forth to the general public, and these articles have not, as a rule, emanated either from the Society of American Florists, or from the American Peony Society. Whatever results have been accomplished up to the present time have been largely through the work done by the peony specialists, who are giving

their time to the culture of and investing their capital in peonies.

The experimental peony plantation at Cornell University has been made possible only by the voluntary contributions of the principal peony specialists in America and Europe, who are members of the American Peony Society.

Reverting again to the unpleasant things which have been said and done in connection with the formation of our society, it may well be said that all opposition and controversy should now cease. The work of the Peony Society has been so definitely cut out and clearly defined, that the few doubting and misguided spirits within the ranks of the Society of American Florists, who have heretofore frowned upon our organization, should now cease their antagonism and bend their efforts toward forwarding a work that will in the end redound to the general welfare and benefit of the entire florist craft, as well as of the nursery fraternity.

The Secretary's Report.

The present membership of the society is 36, not including two honorary members.

Since the last meeting the president has appointed two European representatives of the nomenclature committee—Mr. A. Desseret, Chenonceaux, France, to represent that country, and Mr. August Kocemmann, of Neides-Wailuf, Germany, to represent the latter.

During the past year I have had considerable correspondence in regard to peony lists with the object of completing our preliminary list, but there are some which are still to be received before it can be published.

The publishing of the report of 1903-1904 has also been delayed for unavoidable reasons.

In the matter of the incorporation papers, Mr. Lown, the attorney, reported to me that the certificate of incorporation was filed in Albany, N. Y., July 2, 1904, and a certified copy of the same was deposited at the New York county clerk's office on July 11, thereby completing the legal incorporation of the society.

The exhibition held during the meeting at New York was a fairly good show, there being about seven exhibitors, who staged many fine flowers, but there was a great lack of names, thereby reducing the value of the show.

C. W. Ward, Queens, N. Y., showed about 200 varieties, all unnamed, but under number. Frank Gould, with John J. Morris, Esq., Compton, Chestnut Hill, Philadelphia, Pa., showed about 63 varieties, all named. Andorra Nurseries, Chestnut Hill, Philadelphia, Pa., 20 varieties, all named. Siebrecht & Son, a large display of unnamed flowers, including about 32 varieties. C. Betscher, Canal Dover, Ohio, 40 varieties, all named. C. M. Wild, Sarcoux, Mo., about 10 varieties, and F. S. Rosenberg, Walden, N. Y., about 18 vases, unnamed.

A. H. FEWKES, Secretary.

The Exhibition.

The Chicago exhibition of the American Peony Society proved a grand success, and is a thorough vindication of the organization of that society. The showing of peonies surpassed the expectations of even the most sanguine member, and amply demonstrated that as striking and effective a display of peonies can be made as any chrysanthemum exhibition. The principal exhibitors covered themselves with glory with the handsome displays which they made when one considers that this is the first experience that they have had in staging an exhibition of peonies.

That the exhibit developed some striking faults goes without saying, but these faults were less noticeable than was expected.

The most striking display of all was that staged by W. A. Peterson, proprietor of the Peterson Nursery, of Lake View, whose exceptionally large and well-selected collection was shown to great advantage, even though this was the first experience that Mr. Peterson had with a flower show.

C. W. Ward's immense collection of 2,000 blooms made a most creditable appearance, considering that the bulk of his collection had to be picked ten days before the exhibition and shipped a thousand miles to Chicago under unfavorable conditions and held in cold storage until staged.

The exhibit of J. F. Rosenfield, of West Point, Neb., which had to pass through the same unfavorable conditions as that of Mr. Ward, attracted a great deal of attention and was universally praised. Mr. Rosenfield's vase of Floral Treasure ranked with anything shown in the hall.

Vaughan's Seed Store showed a fine collection,

ARTHUR H. FEWKES
Secretary American Peony Society

C. W. WARD
Elected President American Peony Society for a Third Term

WILLIAM A. PETERSON
Vice-Pres.-Elect American Peony Society

which gave evidence of considerable care in selection. His vase of Festiva maxima was especially fine.

E. A. Reeves, of Cleveland, Ohio, staged two exhibits that passed easily as among the finest grown peonies in the hall. His Grandiflora rubra was a wonder for size, form, length of stem and color, and stamp Mr. Reeves as an expert peony grower.

Mr. Peterson's vase of Mme. Ducler, which he exhibited under the name of Modele de Perfection, created a large amount of favorable comment, as also did his vases of Delicatissima and Livingstone.

The vase of Festiva maxima, Jules Elie, Mont Blanc and La Tulipe exhibited by Mr. Ward also demonstrated that magnificent results in decorative effect can be secured with peonies, even where the blooms are shipped long distances.

The collection of 130 varieties, the winner of the first prize for the largest and most complete collection, contained many sorts that attracted attention.

It would be useless to attempt any description of many varieties, there being at least several hundred upon the floor.

Taking it all in all, the first exhibition of the American Peony Society seems to have been a new feature in flower shows; and it was the consensus of opinion of the experts that the peony will from this time onward occupy the same position in floral exhibitions for the Spring season as the chrysanthemum does in the Autumn. If the chrysanthemum is entitled to be called the Queen of Autumn, the peony no less deserves the appellation of the Queen of Springtime.

The principal exhibitors were: Peterson's Nursery, Chicago; J. F. Rosenfield, West Point, Neb.; C. W. Ward, Cottage Gardens, Queens, N. Y.; E. A. Reeves, Cleveland, O.; W. W. Barnard & Co., and Vaughan's Seed Store, Chicago; Klehm's Nursery, Arlington Heights, Ill., and Jewell Nursery Company, Lake City, Minn.

The following are the names of the best twelve varieties exhibited by the Peterson Nursery, which captured the "Country Life in America" cup: Potsii alba, Modeste Guerin, Marie Lemoine, Festiva maxima, Couronne d'Or, Delicatissima, Golden Harvest, Livingston, Modele de Perfection, Marechal Macmahon, Princess Beatrice, Purpurea Delochii.

Notes.

The attendance of the tradesmen was not large, but the general public was well represented, especially on the second day.

Boston was selected as the next meeting place.

All the flowers on exhibition were presented to the Cook County Hospital.

Wm. A. Peterson declined to serve as president and C. W. Ward was elected to that office for a third term. Mr. Peterson was chosen vice-president; Arthur H. Fewkes, Newton Highlands, Mass., secretary, and J. Howes Humphreys, Chestnut Hill, Philadelphia, Pa., treasurer. E. A. Reeves was re-elected member of the Board of Trustees. The president was instructed

to appoint a finance, a press and an exhibition committees; the names of those constituting these several committees will be announced later. The present nomenclature committee was reappointed for the coming year. The members are: Professor John Craig, Cornell University, Ithaca, N. Y., chairman; C. J. Maloy, of Ellwanger & Barry, Rochester, N. Y.;

John A. Charlton, Rochester, N. Y.; J. F. Rosenfield, West Point, Neb. and A. H. Fewkes.

Manager J. B. Deamud was voted the thanks of the society for his efficient services.

The Ionia Pottery Co., Ionia, Mich., had a display of their pots at the exhibition.

The Visitors.

Among those in attendance at the show were: F. A. Baller, Bloomington, Ill.; W. C. Barry, Rochester, N. Y.; A. H. Fewkes, Newton Highlands, Mass.; Robert George, representing Storrs & Harrison Co., Painesville, Ohio; Eli Cross, Grand Rapids, Mich.; C. S. Harrison, York, Neb.; Miss Hubbard, Queens, L. I.; Harvey E. Klidder, Ionia Pottery Co., Ionia, Mich.; Mr. and Mrs. Fred Lemon, Richmond, Ind.; C. J. Maloy, Rochester, N. Y.; E. A. Reeves, Cleveland, O.; J. F. Rosenfield, West Point, Neb.; Elmer D. Smith, Adrian, Mich.; E. S. Slye, Ionia Pottery Co., Ionia, Mich., and C. W. Ward, Queens, N. Y.

CHOICE PINK PEONIES AT CHICAGO EXHIBITION OF AMERICAN PEONY SOCIETY

was chiefly through his instrumentality that the new organization was formed. The firm's collection of peonies is a large and comprehensive one.

Vice-President Wm. A. Peterson, Chicago, Ill., is the proprietor of the Peterson Nursery, Chicago. He was born in 1876, the son of the late P. S. Peterson, at the old homestead in Jefferson, now part of Chicago. When 18 years of age, Mr. Peterson had fitted himself to enter college, but, owing to the death of his father's right hand man, it was thought best for the son to enter the business at once. In 1895 he was made a member of the firm, and since the death of his father has been at the head of the concern.

Mr. Peterson is a born student. His library numbers some four thousand volumes, including rare first editions, old manuscripts, the oldest book printed in Chicago, as well as many Latin, French, German and Scandinavian works on horticultural and other subjects. To add to his knowledge, he has also traveled extensively in European countries. His private museum contains a very large collection of stone implements, gathered from near-by Indian village sites.

The young man is of stalwart build, six feet four in height. He belongs to the Union League, Chicago Athletic, Caxton and other clubs, and last year was elected director of one of the Chicago banks. To the horticultural world he is possibly best known by his scientific work among peonies, of which the concern has an extensive collection. The making of landscape plans is also given attention.

Secretary Arthur H. Fewkes, Newton Highlands, Mass., is also well and favorably known to our readers, as is Treasurer J. H. Humphreys, of the Andorra Nurseries, Chestnut Hill, Philadelphia, Pa.

The Awards.

Largest and best collection of varieties, one flower of each—First, C. W. Ward, Cottage Gardens, Queens, N. Y.; second, Vaughan's Seed Store, Chicago.

Collection of best twelve and most distinct varieties, six flowers each—First, Peterson Nursery, Chicago; second, Vaughan's Seed Store.

Collection of varieties in various shades of rose pink, not less than three nor more than six flowers each—Peterson Nursery.

Collection of varieties, salmon and flesh-colored, not less than three nor more than six flowers each—First, Peterson Nursery, Chicago.

Collection of white varieties, not less than three nor more than six flowers each—First, Peterson Nursery.

Collection of varieties, cream white and light yellow, not less than three nor more than six flowers each—First, J. F. Rosenfield, West Point, Neb.; second, Peterson Nursery.

Collection of crimson varieties, without stamens, not less than three nor more than six flowers each—First, Peterson Nursery.

Collection of crimson varieties, with stamens, not less than three nor more than six flowers each—First, Peterson Nursery.

Collection of tricolor varieties, including flowers with guard petals, collarette and center petals of different colors, not less than three nor more than six flowers each—First, Peterson Nursery.

Twelve specimen varieties, twelve blooms of each variety. "Country Life in America" prize. Silver cup—Peterson Nursery.

One hundred blooms Festiva maxima—Vaughan's Seed Store.

One hundred blooms pink, any shade—First, Peterson Nursery, variety Livingstone; second, J. F. Rosenfield, West Point, Neb., variety Floral Treasure.

One hundred blooms crimson—First, E. A. Reeves, Cleveland, Ohio, variety Lee's Grandiflora rubra; second, J. F. Rosenfield, West Point, Neb., with Seedling No. 206.

Honorable mention, awarded to C. W. Ward, Cottage Gardens, Queens, N. Y., for extensive collection of peonies; to Klehm's Nursery, Arlington Heights, Ill., for decorative display of peony flowers; to Vaughan's Seed Store for fine collection of hardy roses and Baby Rambler roses.

CHAS. KLEHM,
E. A. KANST, } Committee.

List of varieties exhibited by Cottage Gardens Company, Queens, New York:

White and Yellow.—Couronne d'Or, Duc de Wellington, Duchesse de Nemours, Edulis Alba, Festiva, Formosa, Formosa Alba, Marie Lemoine (Calot), Sulphurea, Mont Blanc.

Creamy White.—Candidissima, Charlemagne.
Flesh White.—Alfred de Musset, Chrysanthemiflora, Mme. Forel, Mme. Loise Mere, Fragrantissima.

White.—Early White, Please White, Festiva maxima, Henri Murger, Humel Alba, La Vestale, Leon Legnay, Mme. de Verneville, Marie Jacquin, Mons. Dupont, The Bride.

Glossy Pink.—Madame de Bollemont, Mme. de Galhau, Mme. Forel, Mme. Muysart, Marc Maunoir, Ornement des Massifs, Souv. de Gaspard Calot.

Silvery Pink.—Mme. Ducel, Mme. Forel, Mme. Gessler, Mons. Jules Elie.

Salmon and Salmon Pink.—Asa Gray, Eugene Verdier, Van Dyck, Baroness Schroeder, Richardson's Dorchester, Richardson's Grandiflora.

Pink and Deep Pink.—Alexander Dumas, Alexandrina, Auguste Villame, Beranger, Buyckii, Claire Dubois, Clementine Gillot, Henri Murger, Henri Laurent, Louise d'Estrees, Mme. Benard, Mme. Camille Bancel, Mme. Chaumy, Mme. de Bollemont, Marie Deroux, Nobilissima, Pottii alba, Pres. de Montzey, Ville de Nancy, Cameron, Countess Sarah, Czarlina, Empress of China, Jenny Lind, Janice Meredith, Lady Bramwell, Peterson's No. 209, Rogue (very late dark pink), Rogue from Achillea.

Light Pink and Soft Pink.—Achillea, James Blanc, La Tulipe, Livingstone, Louise Renault, Mme. Bollet, Mme. Camille Bancel, Mme. Chaumy, Mons. Barrol, Octavie Demay, Philomele, Prince Imperial, Floral Treasure, Please No. 23, Princess Helen, Triomphe de l'Exposition de Lille, Virginie, Reine Victoria, Multicolore, Fragrantissima.

Lilac and Lilac Pink. Docteur Bretonneau, Mme. Lemoine, Mons. Boucharlataine.

Tricolor.—Alee de Jeanne, Carnea Elegans, Gloire de Charles Gombault, Jeanne d'Arc, La Tendresse, Lutea Plenissima, Paganini, Prolifera alba.

Violet and Violet Purple.—Adolph Rousseau, Atrosanguinea, Beute de Villecante, Comte de Paris, Delachei, Duchesse de Nemours, Edulis Superba, La Quintynic, Henry Demay, Lucie Malard, Mme. Forel Mlle. Renie Dessert, Mons. Paul du Ribert, Fulcherima, Rosea Magna, Souv. de l'Exposition du Mans.

Amaranth.—Clementine Mechin, Comte de Neipperg, De Candolle, Dr. Caillet, Emperor Nicholas, Mme. Bucquet, Pierre Dessert, Teniers, Meissonier.

Cherry Red and Currant.—Berthoz, Jules Calot, Mme. Lehon, Modeste Guerin, Souv. de l'Exposition universelle, Victor Hugo.

Crimson.—Atrosanguinea, Auguste Gauthier, Augustin d'Hour, Edward Andre, Etienne Mechin, Felix Crousse, Henry Murger, Modeste Guerin, Prince Imperial, Raphael, Admiral Creighton.

Peony Notes from Ohio.

Editor Florists' Exchange:

Earlier I had expected to get up a report on all sorts and have it printed for general circulation, but will hold it back until next year. In it I will describe every sort, etc., of our entire list, giving synonyms, and there seem to be many.

I expect to plant out in the latitude that will bring blooms about a week or ten days earlier, a very large area for commercial cut flower growing, planting only a few of the extra fine cut flower sorts. This with the very large orders we have on our books will absorb about all of the very best things we have and include about the list of extra good things.

I am not going to do much hybridizing, or seedling growing, because the field is very well covered with extra fine sorts now. The only room that I can see is for varieties very early or a few days later. I am going to try and get some crosses of Tenuifolia on the early sorts to get them a week earlier if I can; but that is about the limit. I see Harrison planted about 50,000 seeds; he will waste much valuable time, although he can sell the plants for mixed stock.

Owing to demandable attention, I did not make an exhibit this year at Chicago. I think next year I will make a display; although Boston is far away and some mighty good stock to go up against. But that does not alarm me in the least.

I still have some blooms, although the first were cut May 8 or 10. As to sorts, Dorchester I put at the top of the list; we had blooms of it perfect globes, 8x8 inches; Grandiflora, Perfection, Rubra superba are also very extra extra sorts, all as fine as the finest from all sources. Terry's Professor Budd is superior to Lemoine's La France; several other of his sorts can go into any company, however aristocratic.

I will add very materially to my stocks, but only the very extra ones, thus having the very best; and if there should ever be a slump, we will be equal to the position we must meet. We are following this rule with all our stocks; have unloaded all our lower quality gladioli, etc.

Canal Dover, O.

C. BETSCHER.

GENERAL VIEW OF EXHIBITION OF AMERICAN PEONY SOCIETY, HELD AT CHICAGO, ILL., JUNE 16-17, 1905

FOR THE RETAIL FLORIST.

Steamer Flowers.

New York City, among other things, has become the greatest of all transatlantic passenger depots, and in the commercial way of thinking, one might suppose that floriculture would keep step and be benefited immensely. Alas, such is not the case; in fact, and despite the enormous traffic, steamer flower trade has decreased 50 per cent. in the past fifteen years. This applies also to Boston and Philadelphia. Collectively, considering the vast throng of boats and peoples, and the tremendous increase of florists' establishments, certainly there are a great quantity of flowers used, but they are far from being commensurate with either the wealth or the number of passengers.

From a study of the number of flowers sent or ordered from the different cities to steamers sailing from New York, that city, Boston, Pittsburg, Philadelphia and Chicago lead in the order named; comparatively few, if any, come from or are ordered by the florists of the great cities South, West or Northwest. It appears to us that there are great possibilities in this line and much could be done to develop them by exhibiting special steamer baskets and boxes at the different exhibitions, and in the stores, and by an exchange of acquaintances and business short talks at the annual convention. A great many thousand of people from all parts of America periodically sail from New York who would have flowers and fruit sent to them were their relatives or friends prompted and assured that such could and would be done to the utmost satisfaction, not only in New York, but in almost any part of the world. Great good can only come from a better social and business intercourse among retail florists the world over. The day has not yet come when, the farther away, the sweeter the token of remembrance doesn't hold supreme with all peoples, and this particularly applies to Americans of the West and Northwest, and the telegraph code and quick mails and universal credit render excuse or apology futile.

As with school flowers, variety and quantity have a wide scope; even designs, too; but under certain circumstances the majority of designs are being discouraged unless where delegations are seeing some official or brother member off, in which case the society's badge, or motto, is usually made out in flowers or betimes, but becoming seldom, some design portraying the occupation or achievement of the voyager.

In the case where a delegation visits a florist and wants to order some intricate or inappropriate design, great care should be used to not scare away or divert into the winery the moneys first intended for flowers; the difficulties, or the seeming foolishness of the propositions, should not be concerns of yours. Many customers come to you with minds unchangeable; in their case, any attempt to convince them of the error of selection or a seeming exorbitant charge, either creates suspicion or entirely kills any desire for flowers even for future occasions. Such people are apt to some day change, but at times it is best to be silent and reasonable. Others come utterly indefinite except with a desire to send something; and here's where it's "all up to you," both subject and price. And though there may be temporary glee in a "soaking" price, it nowadays seldom fails ultimately to bear mighty bad fruit.

There are a great many erroneous ideas or opinions as to the disposition of flowers soon after leaving port. It is entirely unreasonable to imagine that an ocean steamer should be so-and-so to accommodate cumbersome floral designs, ill-smelling or decadent flowers, or the caprices or whims of impetuous travelers. Unlike the grave-digger, the steward has no market for old floral design frames, and over they go; but the flowers, not until they are a menace to health or their owner is too miserly to have them cared for below decks. Arrogance is intolerant anywhere, but it is above all out of place and despised—most often laughed at—on the steamer, where civility and some reasonable gratuity does much with the powers that are absolute.

As far back as 1886 we, through the courtesy of steamship officials and stewards, not only had fresh flowers served out to customers every day on the voyages over and back, but frequently sent flowers over in good condition to them in many cities in Europe. This is much more easy to do now, but, unfortunately, less done, on the quick going boats of today. There is no reason for this state of affairs; hot weather indifference on the part of the florist is mostly responsible. There will come a day, and not far distant either, when all first and second-class passengers will be given cut flowers every day on the seas, and in the Winter season American grown roses and carnations will be sold in the principal cities of Europe. A little energy and fair inducement could bring about the former innovation at once, for almost everything except this is done to please voyagers.

How to Put Up the Flowers.

In putting up flowers to be given out daily, we have found that a neat, light wooden or zinc box is best. It should be as small as possible and have slatted

partitions to better preserve the blooms. The boxes can be slightly elevated at one end, and have sufficient aperture at the bottom to permit the ice drip to escape. You need not bother about ice; a couple of dollars to the chief steward and a little instruction will attend to all that every day. Plenty of wax paper is good, and never mind tying them up in pretty and clumsy corsage bouquets. Just a rubber band at the bottom of each loose bunch; or have them entirely loose; for they may be put to several uses. Your business card, or small tag, and the date to be given out, is attached to each, and be careful to put them on the right ones.

Suitable Stock.

Sweet peas, lily of the valley, gardenias, carnations, roses, stephanotis, roses again and, lastly, orchids can be used in line, and this list can be reduced, or extended, to suit the exigencies of the case. You can arrange your flowers in small, separate pasteboard boxes and dispense with the other, but the small cost and the business-like appearance of the special box means a lot. Cattleyas or the great majority of orchids put in separate small, water-filled bottles, and lightly covered with wax paper, will travel finely over to any city. The steward should be cautioned against watering anything except the roses. Then again, where there is a party large enough to occupy a side table or a cross section of a main table in the dining saloon, the flowers could be used in a vase for the center and divided afterwards; or a dish of ferns or dwarf flowering plants could be sent for table decoration.

ILLINOIS STATE COAT OF ARMS IN FLOWERS

Artist, W. F. Gude, Washington, D. C.

A Chance for Basket Makers.

Our basket makers have an opportunity to introduce a special steamer hamper, with compartments for fruit, candy, cigars, medicine, liquors, and the top for flowers. Such may not be big and cumbersome, but concise and practical, with lock and key. The whole can be shut, or the lid may be half open with some flowers and fruit protruding. The automobile or picnic hamper improved should become a popular florists' design for steamer, dispensing with boxes and having the basket, if necessary, connected with the baggage on arrival. Combination hampers are popular with many people, but except for limes, lemons, oranges and greenhouse grapes, it is unnecessary to bother with fruit, mostly all kinds being supplied in plenty to first and second class. Candy, cigars and bottle stock are desirable, and you will capture many an otherwise exclusively fruit store order by suggesting such combination hampers, which you can supply entire.

Decorating State Rooms.

Many times comes an order to decorate some one's state room aboard. Especially is this the case in honeymoon trips. Such decorations should at all times be completed before the party's arrival. No heavy smelling or in-the-way material should be used. In all cases, such decorations are soon removed, and the simpler and richer they are, the better. Then again, flower vases are not included in the furnishings of state rooms, and here is where the steamer vase of flowers might be more generally introduced. Vases

are cheap, and some kinds of flowers can be kept in them all the way over, the room steward bringing them back in fresh water each morning.

The big, loose bunch of roses tied with broad ribbon, monogram, date and "Bon Voyage" painted on streamers, is a popular design. The ribbon is kept and brought back as a souvenir. We know of many cases where baskets have been brought back and where they are serviceable ones, such as can be used for scrap baskets—they have an increased value to many after an ocean voyage; therefore, where price permits, good, suitable, fancy baskets should be used.

There is and will be the shoddy spectacular man or woman who would rather not receive any flowers if they were not big and showy, and placed where all can see them and who, they are for, but such must be tolerated.

The vast majority of flowers to-day are sent in boxes and some comical looking boxes and tags may be seen among them. A good distinctive shipping tag is a very important thing, but a crazy covered so-called fancy box is far worse than the cheapest plain one. Almost 50 per cent. of the boxes sent to steamers have flower stems protruding from one end of the box; these flowers might almost as well be wrapped up in paper bundles. This unnecessary habit of cutting and spilling a box on the smallest pretense is ruinous to box, space—often to flowers—and at all times a menace. There is no sense in having extra long-stemmed flowers sent to the steamer, for it is a place where one likes to have no impediments, so the short or medium-stemmed flower is a better friend than the long one. The big corsage bouquet is out of date; so are ribbons on any of them. Better the loose or the bunch, no matter how small.

When to Deliver.

There are many ways to look at the delivery system. Some firms like to have their tags exhibited in the main saloon; others consider it the safest to put the flowers in the rooms. Certain it is that some flowers are exchanged or stolen, and the officials cannot be held responsible. Flowers sent in a paper box to stay all night in a warm room where they are not seen by those to receive them till next morning cannot be of much credit to anyone.

In the matter of filling orders for brother florists, plain boxes with the florists' own tag only should be sent; therefore, it is well to have a few tags always with those whom you intend to have execute your orders, be they funeral, presentation, hotel or steamer orders.

The correct time to deliver steamer orders is one half hour before time of sailing, and, where it is impossible to see the people they are intended for, the room steward is the proper person to take charge where there is no dining-room steward specially to receive them.

Develop the steamer flower trade, for it is important to all continents. The wireless telegraph may soon bring you advance orders. KINVARA.

Floral Offerings to Brides Banned from Altars.

Bishop Leonard, of the Episcopal diocese of Northern Ohio, says the New York American, has ordered printed a small pamphlet for the guidance of florists and of participants in cathedral weddings. In it the bishop prohibits the profuse use of flowers within the chancel rail and about the altar. The bishop holds that the tendency of late has been to conceal by floral decorations the solemn simplicity of the church, which is one of the most essential features of the marriage ceremony. Decorations must be confined to the walls, except those which the altar society may see fit to supply. No flowers at all will be allowed upon the altar. Even the profuse decoration of the church as a whole is discouraged.

Rev. Dr. Cyrus Townsend Brady, while he has had no official notification from Bishop Leonard with reference to the new ruling, expresses himself as being heartily in accord with it. "The sacred symbols of the church should in no wise be burdened with ornaments of flowers or decorated in any way. In my opinion, the function of the altar is holy, and nothing should be done which would interfere with this in the slightest degree. If decorations are to be used within the church at all, they should be placed upon the retable and at the sides of the altar, but never in such a way as to hide the simple vestments of the church."

[This seems sentimental rubbish. The use of flowers in any part of the church never can detract from the solemnity of a marriage ceremony. We question very much if the minds of the contracting parties or of those in attendance are just at that particular time dwelling on the "holiness" of the altar or the "solemn simplicity" of the church. They are more concerned with the future. Bishop Leonard should rescind his order. The simple message which beautiful flowers convey are more apt to lead the thoughts of those getting married from "Nature up to Nature's God" than even the reading of the ritual making the two one, or the bishop's benediction.—Ed.]

Illinois Coat of Arms in Flowers.

The design seen in the accompanying illustration was made by Wm. F. Gude, Washington, D. C., for General Logan's grave, on May 30. It represents the coat of arms of the State of Illinois, and was made principally of immortelles. It was considered quite a work of art by all who saw it. McC.

Review of the Market

NEW YORK.—The market is no longer flooded with peonies, and we could not find dozens where there were hundreds but a few days ago. It would seem but natural to expect that prices in roses and carnations would have recuperated somewhat when the peonies got scarce, but such did not happen; and we find that these flowers are running very little better than they did a week ago. Prices are not one whit improved—in fact, we do not believe that the general average will be as good as it was at that time.

Gladiolus are coming in from the South in extremely large quantities, and values have dropped right down almost to Midsummer figures.

There is a plentiful supply of candidum lilies; these, with *L. auratum* and longiflorum also in supply, make the market quite long on lilies just now.

Cattleyas are quite numerous, and prices remain fairly firm. Lily of the valley is in too big supply for the demand, and in addition to the price being weaker, the stock is accumulating in the hands of the dealers.

Sweet peas are very plentiful and, as a rule, go very slowly; there is, however, a good demand for any that are of choice color and have good long stems, such stock being by no means easy to find.

Iris is coming in in larger quantities, and there are many cornflowers, campanulas, syringas and other out door flowers being received daily. Cut sprays of Crimson Rambler roses are also a feature, and these seem to go as well as many of the indoor grown roses.

The trade in maiden-hair fern has fallen off considerably; and other green material is not moving any better than it did a week ago.

BOSTON.—Rather strenuous days these with the thermometer in the nineties; at least so sav the handler of flowers. All kinds of material are plentiful, in fact some sorts are very druzgy. Prices have reached the Midsummer figure, roses bringing anywhere from \$1 to \$6; while the best grades of American Beauty average 20 cents. General Jacqueminot are coming in plentifully from outside, and sell at from \$2 to \$6. Liberty are going fairly well and bring as high as \$2 per dozen for the best grades. Peonies are seen in abundance.

Carnations are plentiful and still of good quality; \$1 per 100 is the average price for the standard grade. Lilies are abundant; *L. candidum* being seen in goodly numbers. Sweet peas sell fairly well at 50 cents. Lily of the valley holds its own at \$2 and \$4. Green goods of all sorts remain without change. J. W. D.

ST. LOUIS.—The market was rather quiet last week; good choice stock was hard to obtain, first and seconds were too plentiful. Weddings, school closings and funerals have called for quite a quantity of white flowers. The local growers say we must have rain soon, or all outdoor stock will be cut off, especially sweet peas, which are very abundant at present, selling as low as \$1.50 per 1,000, and 20 cents in single 100 lots. Roses are coming in of rather poor quality; long American Beauty have very small flowers; \$2 to \$3 buys the best of them by the dozen. Bride and Bridesmaid, and other roses in this class run from \$4 to \$5 for choice and \$2 to \$3 for others. Lily of the valley had a big demand the past week, and buyers had no trouble to find some extra good stock in the market at \$3 to \$4 per 100. All greens are in plenty. ST. PATRICK.

WASHINGTON, D. C.—Business has been very good the past week, owing to commencement work; the prevailing prices obtained were satisfactory, considering the amount of stock on the market. American Beauty brought from \$2.50 to \$5; Bride, Bridesmaid, Golden Gate, Kaiserin Augusta, Victoria, Meteor and Liberty from \$1.25 to \$2.50 per dozen for the best. Carnations are about played out; they realize from 25 to 50 cents per dozen. Callas bring from 75 cents to \$1 per dozen. Gladioli are in demand at 50c. to 75c. per dozen. Sweet peas sell at 10c. to 25c. per bunch, and have been in demand all the season. Peonies, 75c. to \$1.25 per dozen; asparagus, \$2.50 to \$4 per 100 sprays; gallardias and coreopsis, 25c. to 50c. per bunch. M. C.

CINCINNATI, O.—The temperature is 94 in the shade, with not a glimse of a let up. Carnations are still to the front, keeping up the reputation of the flower business. American Beauty roses are off crop and will be for about ten days. No use quoting prices. There is very little good stock in the market to sell, although we have the demand, and could dispose of roses if we could get them. Sweet peas are coming in by the thousands, but the demand for them is limited. Everybody is trying to keep cool.

We had a call this week from J. B. Braidwood, a florist having 175,000 feet of glass at Colorado Springs, Col. He was not used to 94 in the shade. E. G. GILLETT.

INDIANAPOLIS.—The unusually warm weather of the past few days has caused stock to become scarce and to suffer in quality. As is customary in extreme weather, funeral work is plentiful. June weddings also are in keeping with this month, so that, all in all, the retailers are busy.

Many of the rose growers in this section have emptied their houses so that nearly all the stock is being shipped in. Much of this is unsatisfactory because of the bruises sustained by stock en route. The best of a poor grade of Bridesmaid and Bride bring \$4 to \$5 a 100. Mrs. Abel Chataway is, and there is much demand for it at \$3 per 100. A few La France and Souv. du President Carnot are in the market, at \$5 to \$8 per 100. A fair grade of Liberty is to be had, but this rose seems to open too quickly during such hot weather; the best bring \$10 per 100. American Beauty have experienced an unusual demand, at \$5 to \$25 a 100.

Field grown sweet peas are very plentiful and are a wonderful help at present; 20 cents to 25 cents a 100 is the customary wholesale price.

Good carnations are very scarce at \$2.50 per 100. A large majority of the carnations wholesale at \$1.50 to \$2 a 100.

Gladiolus are readily bought at \$5 per 100. Lillium auratum and Lillium candidum are in the market in quantities; the former bring \$15 per 100; the latter \$5. Summer flowers such as coreopsis, daisies, mignonette, forget-me-not and candytuff, because of the scarcity in other lines, have been disposed of with great satisfaction.

The National Meeting of the "Turnerbund" in the city this week has caused a heavy demand for decorative material, especially plants, some of the retailers having their entire stock out so that it is difficult to look after the regular trade properly.

Tomlinson Hall Market trade has been unsatisfactory during the past week. There is little stock left to be sold, and the market is lightly attended during such hot weather. I. B.

CHANGES IN BUSINESS.

LOOMIS, CAL.—The California Carnation Co. was sold to Messrs A. Mittig and H. McGowan on June 12.

LANCASTER, PA.—Frank A. Suter starts in the florist business here on July 1. His address is 740 Manor street.

MELROSE, CAL.—Chas. Gorman and E. Wagner have dissolved partnership. Mr. Wagner will continue the business.

HEMPSTEAD, L. I.—Alfred Funke, formerly of Evergreen, L. I., has purchased the greenhouse business of J. Sidenberg, taking charge immediately.

GENEVA, WIS.—H. A. Hanke has completed negotiations for a piece of ground here, on which he will build a greenhouse, and embark in the business.

SALT LAKE CITY, UTAH.—C. Cramer, the florist, has sold out his store fixtures and business to Miss Elizabeth N. Child, who has been his clerk for a number of years. C. Cramer Sons will continue the greenhouse business (corner Fifteenth South and Third East streets) wholesale and retail.

FIRMS WHO ARE BUILDING.

PAXTON, ILL.—W. Morgan, of Loda, has secured the Andrew Peterson greenhouse here, which will be torn down and a larger structure will be erected on the site.

FULTON, ILL.—The boiler-room and storehouse for Hill & McKenzie's new plant here are now finished. Work on the greenhouses will commence at once.

Printing.

We are outfitted to do everything in this line required by the florist, the seedsman and the nurseryman, from an envelope to the most stylish kind of a catalogue. Write us.

BOWLING.

WASHINGTON, D. C.—The bowling team was out in force, and is practicing hard for the convention. The following scores were made:

Geo. Cook	165	172	179
Geo. Shaffer	159	168	168
Sam Simmonds	158	169	178
John Barry	149	146	168
Wm. Ernst	148	155	176
Harry Lewis	139	169	162

The ladies' bowling team is putting in some good work and expects to be able to give a good account of itself. The fair ones are practicing under the instructions of F. H. Kramer, whose reputation as a tutor has been established for years. M. C.

Bowling at De Soto, Mo.

Five members of the St. Louis Bowling Club went down to De Soto, Mo., on invitation of the Hibbert Floral Co., of that city, to roll three friendly games of ten pins on the Y. M. C. A. alleys. The boys left on the 5.30 Iron Mountain train and arrived at De Soto at 7.45. They were met at the depot by Mr. Hibbert and a delegation from the Business Men's League, and were escorted to the Commercial Hotel, where the members spent a restful night after the bowling. The bowling took place at 8.30, and the De Soto boys were the victors by 50 pins. The strangers did not seem to get the hang of the alleys until the last game, when they came with a rush, too late to overcome the big lead of the first two games. After the bowling, lunch was spread in the rooms. Short talks were made by Messrs. Hibbert and Beneke. The latter invited the De Soto team to St. Louis for the big bowling night in honor of Messrs. Weher and Miller, which will take place on Monday evening, September 4. The invitation was accepted. The match scores follow:

THE HIBBERTS.				Total
Hibbert	147	142	136	425
Hinchey	187	156	147	490
Price	134	200	139	473
White	164	159	151	474
Huskey	128	179	126	433
	758	836	699	2295

ST. LOUIS.				Total
Beneke	138	146	168	452

Ellison	138	172	210	520
	728	691	826	2245

ST. PATRICK.

Florists' Yacht Club, Waretown, N. J.

Commodore John Westcott, following his custom of the past four years, invited all members and friends of the above club to Waretown on Friday last, to open the club-house for the season, when, as usual, a very delightful time was spent. The party left Philadelphia at 8.20 a. m., arriving at Waretown Junction at 10.30 a. m. On arrival at the farm house, on the Westcott estate, an inspection of the cellar was first in order; then the garden crops and live stock came in for a look-over. Afterward the party repaired to the club-house on Barnegat Bay. Here all superfluous clothes were dispensed with and everyone looked around for comfort and ease. At 12.30 the bell rang, and all repaired to the club-house. All assembled in the sitting room, Robert Craig in a very appropriate speech, and in behalf of all present, handed to Mr. Westcott a marble mantel clock for the club-house, as a token of appreciation of his genial hospitality. Mr. Westcott accepted the gift in a few well chosen words, stating the pleasure it gave him to have his friends around him. Dinner was then served and was thoroughly enjoyed by all. In the afternoon, most of the party went out sailing, others played quito, while in another direction, hearts were trumps, etc. Fishing started on Saturday, and a sensational catch of a thirty-five pound channel bass was made. The fish was hooked by A. Y. Hanna and landed with the assistance of the Commodore. Some of the party returned on Saturday evening, while others remained until Sunday evening. Those present were: John Westcott, Wm. B. Westcott, Wm. F. Gude, S. S. Pennock, H. H. Battles, Robert Craig, R. W. Lucas, George Graig, H. F. Mitchell, C. H. Ericnerman, D. C. Donoghue, Wm. Graham, Robert Kift, George Anderson, John Burton, Wm. K. Harris, J. W. Dunham, George Redford, W. F. Ward, A. Hoegerle, George C. Watson, A. Y. Hanna, A. B. Cartledge and DAVID RUST.

CHICAGO.—The Florists' Club's grand convention rally and smoker will be held June 30, at 8 p. m. There will be special talks by prominent speakers, and the transportation committee will report on the trip to Washington in August. R. J.

St. Louis.

News Notes.

President J. C. Vaughan, of the S. A. F. O. H., and Mrs. Vaughan spent Monday among the St. Louis florists to have a social talk on convention matters. Mr. Vaughan invited a few of those interested to a dinner at Lippe's; among those present, beside President Vaughan, were: President Juengel, of the local club; President Halstead, of the Growers' Club; J. J. Beneke, of Committee on Transportation; Frank Fillmore, State vice-president; R. F. Tesson, director of S. A. F. O. H.; Henry Berning, Fred H. Meinhardt and Otto Koenig. Mr. Vaughan told a great deal of his western trip of four months, and many S. A. F. O. H. matters came up for discussion. State Vice-President Fillmore reported that he was hustling for members. A plan was worked out whereby the Chicago, St. Louis, Cincinnati, Louisville, Milwaukee, Indianapolis and Cleveland delegations would travel together on a special train to Washington, which would be known as "The President's Train;" this train also to pick up delegates to the convention en route. After a general talk the party broke up wishing President Vaughan a large attendance at the coming convention.

George M. Kellogg, of Pleasant Hill, Mo., called Tuesday. He was sorry he did not get in one day ahead in order to meet Mr. Vaughan. Mr. Kellogg came to look for help, which seems hard to get in his vicinity. He will spend two weeks in the East before the convention. ST. PATRICK.

CANADIAN NEWS

OTTAWA.—Spring business is finished. It has been much ahead of last year's. The demand for veranda-boxes has been nearly double that of other years, and 75 cents per foot was the regular price. Unfortunately for the florist, when the order was given, the customer, in most cases, wanted scarlet geraniums, and as that color was also in great demand for bedding, the plants were hard to get. The general demand for geraniums was very large, and although the stock was a big one, it is very difficult to pick up a dozen now anywhere; in fact, one florist had to send to Montreal for them. All good geraniums brought \$1.50 a dozen; in fact, C. Scrib brought them in the market at \$1 per dozen and readily sold them at \$1.50. Cannas were also in great demand at \$1.50 per dozen. Next came coleus and centaurea at 75 cents per dozen. The foregoing four articles fill a big part of the bedding orders. Verbenas sold well at 60 cents a dozen, and there was an increased demand for annuals and other plants. The annuals make good profit—15 picked out, in a small basket at 25 cents each. To sum up the trade, I can say that all are sold out, and at good prices. Where the demand for boxes is large it is good economy to have lots of vines in 3½ and 4-inch pots, as these take the place of three or four smaller ones and make much more show.

Trade in cut flowers has been very good. Carnations are still in active demand; also roses, and the quality has been very good. Early peonies are selling on sight at \$1 per dozen.

Planting out roses and carnations is now under way, and stock is looking well. The heavy rains were followed by a very hot spell, the thermometer sticking to the nineties and not going down many degrees at night.

The Horticultural Society had to postpone the June show for a week owing to the backward season, the roses not being out. E.

CHARLES L. STANLEY, Plainfield, N. J. Mention the Florists' Exchange when writing.

Any person desiring information through the medium of the Question Box should send his full name and address, not necessarily for publication, but as an evidence of good faith. We pay no attention to anonymous communications.

Green Manure for Lawn.

(191) My employer has an idea that green manure from the horse stable, spread on the lawn in the Fall of the year, is beneficial to the lawn. To my way of thinking, it does more harm than good, but to satisfy him as well as myself, will you answer this question? Also state what you think is best to improve a lawn, supplied either in the Fall or Spring. R. L. M'L.

—It is not a good plan to put green manure on a lawn for the reason that where the manure lies the grass underneath is likely to be burned by the heat generated by the manure in the process of decay. Let the manure lie in a pile for a few months; and, for lawn purposes, it may be used with safety at any time of the year, though early in the Winter is the best time to spread it.

Bench Plants in Summer.

(192) I have two benches vacant from the first week in June to the middle of September. Could you suggest what I could grow on them in the line of cut flowers for the New York market? I must have the benches vacant by the middle part of September. Also give the botanical name of enclosed leaf. L. E.

—The only thing that could be recommended to fill the benches for such a short time would be decorative ferns. Buy some young stock of the new nephrolepis, grow it for all it is worth, and by the middle of September the ferns should be salable for decorative purposes.

The name of the plant the leaf of which you send is Farfingium grande.

Slant of Greenhouse Roof.

(193) Will three or four inches to the foot be slant enough for a glass roof? Sash bars will be only about seven feet in length. Also will 12-inch glass be wide enough? I want to grow pot plants and carnations in the house. W. A. P.

—Seeing that the length of the sash bars is but 7 feet, the shallow pitch mentioned will do well enough. In times of heavy snow it will no doubt be found necessary to scrape off the snow at times, but that will not be much inconvenience. Twelve-inch glass will be about the best width that could be used; with wider glass there would perhaps be trouble when the snow lay on a few hours. Pot plants and carnations will do all right under such a roof.

Greenhouse Building.

(194) Which is the best style of greenhouse for Winter cut flowers, carnations especially—3/4 span running east and west, or even span north and south; a ridge and furrow house? Would you improve connecting two 3/4 span houses as follows: the north wall, 7 feet; ridge, 12 feet; gutter plate, 5 feet; south ridge, 10 feet; south wall, about 3 feet? If so, about what pitch to the roof would you recommend? Would snow be apt to lie in the valley of such a house? How should drop circulation be arranged; I cannot go very deep with furnace pit? A SUBSCRIBER.

—I have seen first-class carnations grown in all styles of houses. A great deal depends on the best lay-out of your ground, whether you build even-span or 3/4 span. The best carnations that the writer ever saw were in an even-span house. The real question of aspect could best be settled by the grower, as that is a question more for him, and not properly the heating engineer. I hope that some of our lead-

ing growers will talk upon this question. From experience, the writer would not suggest building two houses connected in the manner described. Snow would collect in the valley; and, besides, the long span in the south house is too low. Separate your houses—that is, leave an open space of at least 8 feet. A good plan for a carnation house is even span—25 feet wide, 12 feet ridge, 5 feet at gutter or eaves. Have a running line of glass 2 feet deep along both sides. The sides inside can be used as path; that is, no benches put up against the sides. A house such as the above would contain three good-sized benches. You do not state how deep you can make the boiler pit, so I cannot give all the information desired. Heating plants of this kind require more boiler power than usual and also a greater number of heating pipes in the houses, for the circulation is less rapid. I would suggest that you determine the amount of glass you will erect, and then send us full particulars, when we can answer the question of heating fully. U. G. SCOLLAY.

Rust on Chrysanthemums.

(194) I send you a diseased chrysanthemum leaf. Please tell me what the trouble is and what remedy to apply. T. K. L.

—The chrysanthemums are affected with rust. We give below a reliable English remedy which, if used, will no doubt remove the disease:

"Spray the under part of the foliage with a dressing composed of the following ingredients: half-pound each of sulphur, soft soap, soot, and lime. The lot should be boiled for half an hour in one gallon of water; a half-pint of kerosene should then be added and the mixture allowed to simmer for a minute or so, care being taken to prevent it from boiling over. The dressing should be allowed to stand until it gets clear, and may be kept in bottles. A quarter of a pint of the dressing may be used to a gallon of water. If, however, the fungus is very bad and has obtained a hold on the plant, double the strength can be used without injuring the chrysanthemums."

ASTER PLANTS

New Bedford, Mass.

Business the past week has been very good, some large funeral orders having used up most of the stock. Roses coming into this market are of poor quality. Most of the growers have finished planting their young stock. Some good carnations are still seen. Fair Maid easily leads all of them. This is the best money-making carnation in this section, surpassing even that grand variety, Enchantress. Young carnation plants are looking fine here, good rains recently having helped them considerably. HORTICO.

Worcester, Mass.

The members of the Worcester County Horticultural Society and their friends were the guests of President O. B. Hadwen at "Magnolia," his home here, on Wednesday, June 14. The many interesting specimens on the grounds were inspected and greatly admired. At the weekly show of the society, held Thursday, June 15, E. J. Shaylor, of Wellesley Hill, Mass., exhibited between 80 and 90 varieties of peonies. George McWilliams, Whitinsville, showed a specimen of Lilium philippinense, which attracted considerable attention.

South Bend, Ind.

End of a Rate War. A flower rate war which has been in progress in South Bend for some time came to an abrupt ending to-day, June 13, says a local newspaper, when all of the florists operating in this city came to an agreement and decided upon a uniform scale of prices. Until further notice roses may be purchased at all the floral stores at the rate of \$1 per dozen. The price on carnations was fixed at 50 cents per dozen. Those entering the agreement are the South Bend Floral Company, Treanor & Rettig, August F. Beyer and Kinyon Bros. A deal was also arranged whereby Wednesday of each week will be observed by the various stores as special sale day. At these prices the flowers will not be delivered, however, or made up into designs, and no discount will be allowed. The following discounts have been agreed upon for the standard price lots: 100, 11 per cent.; 250, 15 per cent.; 500, 20 per cent.; 1,000, 25 per cent.

There has been considerable rivalry among the florists of this city lately, which culminated last Sunday in roses and carnations being offered as low as 10 cents per dozen.

Oceanic, N. J.

Recollections of a Boston Trip. The writer paid a visit to Boston last week. The Boston park system is really grand. The Public Garden is kept more like a private place, and we saw there a bed of rhododendrons, second to none.

We went through Welch Bros.' wholesale establishment, and were shown some beautiful Souvenir du President Carnot, Golden Gate and Ivory roses. There were at the time about twenty thousand carnations in the refrigerators. This firm's average receipt of carnations is thirty thousand a day. We saw very few Mrs. T. W. Lawson, as light colors are preferred. We were told that Queen is the best white for Boston; Prosperity is the best seller, but the demand cannot be supplied. We were shown some Adiantum Croweanum and Adiantum cuneatum. Where the latter sells at 75c. to \$1. Croweanum brings from \$1 to \$1.50. Mr. Welch had some lily of the valley, with 18-inch stems—the best we ever saw. A great deal of goods from this establishment are shipped to Vermont and New Hampshire.

At Thos. F. Galvin's store we saw the yellow calla, and we believe that it will be very popular before long, as it is a beautiful yellow flower. B.

Cromwell, Conn.

News Items.

F. R. Pierson, of Tarrytown, N. Y.; Alexander and Robert Montgomery, of Natick, Mass., and Mr. Robert Simpson, of Clifton, N. J., visited the greenhouses of A. N. Pierson on Tuesday of this week.

Wallace R. Pierson is to be married on Tuesday, June 27, to Miss Olive Dailey, of Decatur, Ind. The marriage will take place in Westport, Conn. Owing to the recent death of Mr. Pierson's brother, the ceremony will be very quiet and informal.

The Killarney rose is developing an added attraction with the coming of hot weather. By comparison, it still has no equal. While the Bridesmaid, as usual, succumbs to the heat, and gets smaller daily, the "Irish Beauty" is just as bright, fresh and handsome as in winter.

G. R. Ludwig returned this week from a trip to Washington and New York in the interest of A. N. Pierson.

Cincinnati.

The Coming Social.

The program for the social gathering of florists to be held at Norwood Inn, Edwards Road, Hyde Park, as the guests of D. Rusconi, and George & Allan, on Thursday, June 29, includes a ball game, Growers vs. Commission and Store Men; bowling contests, quilt pitching, foot racing, etc.

Syracuse, N. Y.

Bedding trade is now in full swing. Tuberosa begonias are very fine, and meet with ready sale, both as house plants and for massing in beds.

Archie Murray, of the Waban Conservatories, has entered upon his duties as foreman of the Valley range of greenhouses of P. R. Quinlan & Co.

USE "BURNHAM" BOILERS

AND REDUCE YOUR COAL BILL

You Want Profits
which continue to grow.

The reasons why
"BURNHAM" BOILERS

Will save coal for you are that there is a large combustion chamber, also a large active fire surface for each square foot of grate. They heat easily, quickly, efficiently. It takes but a short time to set up one of these boilers.

Write to-day to our New York Office for our Catalogue of Greenhouse Construction and Heating and Ventilating Catalogue.

GROWERS

YOU want to have the reputation for PERFECT BLOOMS. YOU want your TRADE TO INCREASE and your REPUTATION to spread. You can secure all this by using NICOTICIDE in your houses, either as a fumigant or spray. It will clean out the pests, no doubt of that, and the experience of users through many years shows it is SAFE. The cost per can is not so low as some other preparations, but the WORK DONE is so great—THAT'S THE POINT! Send along your address and we will see if we cannot make you one of our customers.

The name of OUR preparation is NICOTICIDE.

THE MAXWELL MFG. CO., Department F., LOUISVILLE, KY.

Our Gallery of Fine Specimens

Copyrighted, 1905, by A. T. De La Mare Eng. & Pub. Co. Ltd., New York

Plate 101

WISTARIA CHINENSIS

In early Spring, when its wealth of flowers are expanded, it is one of the sights of the season. Often planted as an ornament and to add to the attractions of a dwelling; as a covering of porches and arbors; it can also be used in re-clothing a dead tree with life. Grown as a bush or standard, it forms a pretty object. The flowers possess a sweet odor.
