Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

NEW YORK.—Harry A. Bunyard, the veteran traveling salesman, has taken a position with Arthur T. Boddington and will continue to meet his friends on the road.

J. M. Thorburn & Co. have been officially notified that they have been awarded the Grand Prize for the display of vegetables grown from their seeds exhibited at the Louisiana Purchase Exposition; also a Grand Prize for their collection of seeds.

ST. PAUL.—Recent visitors included C. P. Braslan, L. M. Kimberlin, J. B. Agnew and W. H. Grenell.

May & Co. will begin mailing their annual catalogue the coming week.

NEWPORT, R. I.—There has been an unusual good inquiry for lily of the valley pips; some of the seedsmen have been obliged to order several times to supply the demand.

H. L. De Blois, seedsmen, says his Christmas trade in greens was not nearly as good as last year's, one reason being the deep snow, which stopped the usual cemetery orders for wreaths. Since Christmas the seed stores here close the first four nights of the week at 6.30 p. m.; Friday at 9 p. m., and Saturday at 10 p. m.; they all open at 6.30 a. m.

ADULTERATION OF GRASS SEED.—Secretary Wilson has promulgated a circular giving the results of tests made in accordance with an act of the last Congress directing him to obtain in the open market samples of seeds of grass, clover or alfalfa, test the same, and if any such seeds of Canada blue grass are found under any other name than Canada blue grass or "Poa compressa," to publish the results of these tests with the names of the dealers selling the adulterated alfalfa seed. Samples were obtained by department agents from 742 seedsmen throughout the country and out of these there were 23 lots sold by eight seed dealers in all found to be adulterated.

AMERICAN VARIETIES OF LETTUCE.—The Bureau of Plant Industry of the Department of Agriculture, Washington, D. C., has just issued a bulletin (No. 69) of great importance to seedsmen and market gardeners, on the subject of American Varieties of Lettuce prepared for the Department by W. W. Tracy, Jr., Assistant, Variety Trials. In the preface, written by Botanist Frederick V. Coville, it is stated:

Tentative trials were made in the years 1897, 1898 and 1899 and extensive trials were conducted in each of the four years from 1900 to 1903. Altogether 2,934 samples of lettuce seeds were secured, chiefly by purchase from seedsmen, and grown in the trials. These samples represented 441 variety names recognized by American seedsmen. The trials were conducted under Mr. Tracy's direction from 1897 to 1899, at Kensington, Md., and in the succeeding years on the Potomac Flats at Washington. In addition, Mr. Tracy

If you have not received our Advance List of Flower Seeds, Bulbs, Supplies, Etc., write us for it.

Seed Growers and Importers,
HENRY F. MICHELL CO., 1018 Market St., Philadelphia, Pa.

HAVING BEEN AWARDED THE **GRAND PRIZE**

For My Exhibition at THE **GLADIOLI** AT THE **WORLD'S FAIR**

It is with increased confidence in my ability to supply superior stock that I solicit a continuance of patronage, and new customers. **Groff's Hybride** and other sorts, the best obtainable.

Write for Catalogue. **ARTHUR COWEE, Gladiolus Specialist, Meadowvale Farm, Berlin, New York**

visited the extensive trial grounds maintained by five large seed houses, as well as seven seed farms in California, where lettuce seed is grown. Mr. Tracy concludes that of the 404 varieties named in seedsmen's catalogues 107 represent really distinct varieties, while the others are merely these same varieties under different names.

The bulletin treats on varieties and their description, cultural peculiarities, varieties suited to different conditions and requirements, and gives a classification of varieties, describing those classed as distinct, besides furnishing a catalogue of variety names.

European Notes.

A sharp spell of cold weather has visited us again and filled our minds with thoughts of a good old-fashioned Christmas, but at the moment of writing there are indications that the skates will not be needed, and our hopes of a well-earned recreation are dashed to the bottom of the lake.

In England, and especially in London, the frost has been accompanied with fogs of the worst type. Railway and steamboat traffic has been almost suspended and in all cases seriously delayed, the result being that large quantities of goods intended to be shipped before Christmas have not, up to the present, reached the ship's side, and, as the steamers are despatched from points a long way from the London district, the goods have, in many cases, been left behind. This applies not only to British goods, but also to large consignments from the Continent, which have been sent to London for "combination" purposes. Up to the present the vessels containing them have not yet arrived at their respective wharves, consequently the proposed combine has fallen through. As the extremely low rates quoted by the principal transportation companies are based upon the success of the combine, somebody will have to lose money.

In cleaning up some of our later crops we find that squashes, especially the vegetable marrow type, pumpkins and gourds generally have yielded well, and seed of most varieties will be abundant. On the other hand, the hot-house melons, so highly esteemed in Britain, have produced very little seed, and some varieties are an absolute failure. If we were certain of a recurrence of the hot weather of last Summer in 1905, it might be possible to induce some of our enterprising growers to try the culture of the canteloupe melons so highly esteemed in your country. Up to the present time the specimens that have come under the notice of the writer have possessed the

flavor of a field turnip grown on heavy clay land in a cold, wet season. At the same time it must be admitted that the mammoth peaches which occasionally reach this country from California might be described in the same terms, were it not for the bitter flavor they possess in addition.

The culture of the open-air or ridge cucumber is a dead letter in Britain, mainly owing to the low price at which the frame varieties are grown at the mammoth market nurseries in the vicinity of London.

As the notes will probably appear in the first issue of The Florists' Exchange for the new year, the writer desires once again to wish to all who peruse its pages a pleasant and prosperous New Year.

CATALOGUES RECEIVED

BURPEE'S FARM ANNUAL.—One of the first of the large catalogues to reach our desk this year of 1905 was Burpee's Farm Annual—an ever-welcome visitor, as from its pages we can at all times get a pretty good line on the progress making in the seed and plant industries, the best of the novelties always being offered, together with the tried and true standard varieties. The Annual for 1905 contains some 180 pages; and among many other new things, the public's attention is being especially directed to the following five: Burpee's New Blend of the Best Giant-flowered Fancies; Burpee's Brilliant Blend for 1905 of Superb New Nameless Tom Thumb Nasturtiums; the new "Countess Spencer" strain of superb Ruffled Gigantic Orchid-flowered

Sweet Peas; Burpee's White Wax Bush Bean; and new "Howling Mob" Sweet Corn.

Some very interesting views of the great seed emporium in Philadelphia, and of the firm's trial grounds at Fordhook, Pa., add interest to the present year's annual. Then there are also beautiful colored illustrations of Burpee's Trucker's Favorite Tomato, new dwarf Perfection Parsley, thirteen varieties of the finest garden peas; four favorite annuals in celosia, salvia, marigold and verberna, and representations of several novelties in sweet peas.

Burpee & Co. were among the exhibitors at the World's Fair Exposition at St. Louis, and among the honors won by the firm individually they are able to announce the only gold medal on lawn grass, for a growing exhibit, besides other medals. In addition to this, the products of Burpee's seeds had the distinction of securing the only grand prize for vegetables won over all other States, and a gold medal for best display of vegetables raised in New York State, the growers being the Glendale Stock Farm of Glen's Falls, N. Y. This is an excellent record, and Burpee's house will but celebrate its thirtieth anniversary in 1906. Its motto, however, is vitality, purity, selection, novelty, pedigree, quality (the keystone), reliability, originality, liberality, accuracy, and promptness, a combination of qualities that cannot fail to bring success.

EVERYTHING FOR THE GARDEN, 1905.—This attractive and comprehensive catalogue of Peter Henderson & Co., New York, well maintains the high standard

of its predecessors. The numerous presentations require some 200 pages, all of which are profusely illustrated. A most unique cover design is this year presented. The removal of part of the front cover affords a partial view of a beautiful garden and lawn scene on another page (illustrative of what can be obtained from the Henderson lawn grass seed), in which appears a pretty miss holding a tennis racket and ball in her hands, the cover making a charming setting for the picture. Colored plates of the following subjects are also given: New Dwarf Early Pea Melting Marrow; new meaty tomato Tenderloin, improved ever-blooming Hollyhocks; a collection of thirty Giant-flowering Sweet Peas; Irresistible collection of Hardy Everblooming roses, including, among others, General MacArthur, Cardinal, and the dwarf Crimson Rambler; also of Henderson's Artistic Collection of Cactus Dahlias. Large lists of novelties in roses, cannas, dahlias, etc., as well as in vegetables, are enumerated, the whole forming a most interesting and valuable catalogue.

WM. ELLIOTT & SONS, New York.—Catalogue of Vegetable, Farm and Flower Seeds, Plants, Bulbs, Trees, Sundries. The list of novelties, contains among others: Nicotiana Sandera, new miniature asters Walderssee, chrysanthemum Golden Wheel, Princess Alice stock, Princess Maud glloxinia, Benthey's aster, mignonette New York Market, etc. An old mill scene, in apple blossom time, makes an attractive cover illustration. The catalogue is well printed and profusely illustrated.

Neponset Pots for Packing.

Florists and nurserymen who have the shipping of plants in pots find the Neponset pots very useful for the purpose. There are lots of plants grown in pots which have to be shipped, and the balls of which it is necessary to preserve. The ordinary pots in which they are grown are not fit for shipping. It takes too much time, care and box space to pack in such a way that both pots and plants are safe. The use of Neponset paper pots obviates all this. The plant is knocked out of the pot in which it has been growing, and is set into a Neponset pot of the same size. To tie this pot may sometimes be necessary, to keep the soil from falling out when the pot is on its side, but often tying will not be required. Packing of pot plants in this way is a great pleasure to those who have had to do with the shipping of them in the old way. The work is much quicker done than before, and the plants arrive in much better condition. This encourages further trade, and sales increase. The cost of the Neponset pots is fully set off in the saving of the old pots, which formerly were shipped away, and in the end, through so many being broken en route, because of no use to any one. The Neponset pot is a good thing for shippers of pot plants to possess.

Early Planting of Japanese Snowball.

One of the mistakes of Spring which nearly all nurserymen are liable to make is to delay planting the Japanese snowball early in the season. It is one of several Japanese shrubs that are impatient to start growth as soon as Winter is over, and, as with the lilac, the buds seem waiting the first warm days of Spring to expand. It is well to keep this in mind, and to so arrange that this snowball be transplanted among the first of shrubs set out. It is such an admirable subject for the lawn, that in nearly all orders for a half dozen or so of shrubs it is one of the number, and as some orders must, necessarily, be filled late in the season, nurserymen usually dig up early in the Spring, as many as they expect to want, and heel them in, so as to retard them. One difficulty with the successful transplanting of this shrub is that after its buds begin to push into full expansion it becomes difficult to succeed with it, even when closely pruned. This is not the case with the majority of shrubs, and it is further reason for the planting of it at an early date. Last season, a florist called on a nurseryman for a large number of this snowball. It was in Spring, and his desire was to have the plants in flower for use for Memorial Day. This, it was explained to him, was impracticable. Though the plants all lived, it was explained that the check from transplanting would cause the flowers to be very small, and so be unfit for cutting for the purpose desired. It is not with the snowball as it is with the deutzia and some other shrubs; the deutzia may be dug up in the Fall and forced for Easter and give fair satisfaction in the way of flowers; not so the snowball. It must have a year to establish itself before it can give the grand flowers it is famed for. To conclude, let me say if you have not a good supply of this shrub, get it; one rarely has too much of it.

A Shrub for Banks.

When something is wanted for the purpose of ornamenting a bank and the binding of it, to prevent washing, a good plant to recommend is the red fruited snowberry, *Symphoricarpos vulgaris*. It grows freely, spreads by underground runners, soon forming a thicket, and at this, the Fall or early Winter season, its slender branches, weighted down with red berries, are a beautiful sight.

Another shrub, valuable in the same way, but hardly as good for rooting underground and forming a dense bush thereby, is the white berried one, *S. racemosus*. The berries of this are large, snow white, and do not come in such thick clusters as those of the red one. This one may be called snowberry, from its snow white berry, but as the red-fruited one, *S. vulgaris*, is often made more beautiful by the snow which covers the ground below its branches of berries, the name snowberry is applicable to either.

When growing in masses, a condition a few shrubs will soon create by spreading, the snowberries are particularly handsome in late Autumn and early Winter; and, as mentioned, for the binding of banks or any ground liable to wash away, they are of great service.

Pruning Flowering Shrubs.

A correspondent in Massachusetts suggests that there are many readers that would be glad of a few hints on the proper pruning of shrubs. Hints on pruning have appeared in these columns several times, but there are additions to the ranks of The Florists' Exchange readers all the time, so that a few more hints on pruning will doubtless interest many. To make plain the business of pruning shrubs, it needs saying that there are two classes of them, in one of which are those that flower before Summer; in the other, those that flower in Summer

and Autumn. Each requires different treatment from the other. Those that flower in Spring are such as lilacs, weigelas, mock orange, golden bell, deutzias, snowball and flowering almonds and peaches. These, and any others that bloom early, must be pruned as soon as their flowers fade, and at no other time, unless it be a little touch with a knife here and there to shape the bushes. The pruning when the flowers fade will be in the Spring, of course, or very early Summer. There should be a pruning away of the older shoots, which will cause strong young ones to take their places, and it is these latter which will give the flowers the season following.

In addition to the cutting-out of old shoots many of the others can be shortened somewhat which will cause young shoots to spring from these shortened ones, and this fresh growth will add to the flower-producing wood.

The second class, that in which are the late bloomers, consists of many varieties. In it are the popular hardy Japanese hydrangea, the althæa, many spiræas, some roses, pepper bush and several others. These flower on wood made the same season, therefore should not be pruned in Spring, but in late Winter, or before growth starts in Spring. It will be seen from these remarks that there need be no misunderstanding in what to prune and what not to prune. Just consider whether the shrub before you is a Spring bloomer or a later one, and at once it will be known what pruning it requires.

There are among spiræas those that flower in Spring, and some that bloom later. *S. Bumalda*, *Anthony Waterer*, *Billardi*, *tomentos*, and some others seem to flower very well under either system of pruning, but *Thunbergia*, *Van Houttel arguta*, *Reevesii*, and like sorts, are distinctly Spring blooming and must be treated accordingly.

Those who desire to increase their shrubs find the shoots obtained from the Winter's pruning of great advantage to them. These are cut into lengths of 7 to 8 inches, kept in moist soil, in a cool cellar until Spring, and then set out, in rows, in the open ground, deep enough that but 2 to 3 inches only are above ground. Should it be that the late blooming ones are desired to be increased, also, the shoots must be cut in the Winter in the same way, but never forget that what you take from these is so much taken from the flowering wood of the season to come. Nurserymen do not care for flowers so much as they do the having of a large stock, and so cut these for cuttings as they do the others.

There are many shrubs, such as *Cornus florida*, *Cornus Mas*, magnolias and others that proclaim that they must be pruned at no other time than after flowering, for their flower buds are formed and are prominent in Autumn, and must be respected or no flowers will result. JOSEPH MEEHAN.

Perennials for Low Ground.

Editor Florists' Exchange:

On page 782 of your issue of December 24, 1904, A. E. Wohler advocates the planting of *Iris germanica* on low ground, that is liable to be under water for a time in the Spring. While this iris will grow almost anywhere, and adapt itself to almost any condition, such a position as the one referred to is about the most unsuitable that could be selected for it. My experience has been that all the broad-leaved irises, such as *germanica* and its varieties *palida*, *Dalmatica*, *tectorum*, *florentina*, *pumila*, etc., should be planted where the ground is well drained. They all like abundance of water while making their growth and during their flowering season, but when in a dormant condition the thick, fleshy rhizomes are liable to decay when there is too much moisture.

The narrow-leaved irises are far more suitable for swampy ground, and can safely be recommended for planting in wet places. Among these may be mentioned as being especially suitable: *Iris Kämpferi*, *pseudo-acorus*, *sibirica*, *spectabilis* and *virginica*.

Mr. Wohler also mentions the sunflowers as being suitable for the location in question. While some of the strong growing kinds may be suited in such a position, they naturally prefer a rather dry, sandy, well-drained place. The choice ones, such as *Helianthus multiflorus* and varieties *mollis* and *doronocoides*, would almost be sure to be winter-killed.

In addition to *Rudbeckia Golden Glow* and the *eulalias* may be mentioned *Eupatorium purpureum*, *Hibiscus moscheutos*, *Lobelia cardinalis*, *Lysimachia vulgaris*, *Monarda didyma*, *Rudbeckia maxima*, *Spiræa aruncus*, *S. kantschatica*, *S. palmata*, *S. ulmaria* and *Aster tataricus*. These are all more or less rather coarse-growing kinds, and the advice given on page 746, to properly drain the ground, should be followed, if a choice assortment is desired. ERNEST HEMMING.

ORIGINATOR OF PEONY FESTIVA MAXIMA.—In a most interesting and exhaustive article on John Richardson, His House and Garden, appearing in the Transactions of the Massachusetts Horticultural Society (Part I) 1904, Robert Tracy Jackson, of Cambridge, Mass., in a footnote, remarks as follows regarding this peony: "Members of the American Peony Society, who have looked into the matter, say that *Festiva maxima* originated with Mieliez. Authorities differ, however, as George Paul says: 'In Belgium an amateur, M. Buyck, about 1835, produced, amongst others, *Festiva maxima*.'" The year of introduction is generally given as 1851.

Liquidambar Styraciflua.

Editor Florists' Exchange:

In reference to the articles on this native tree, in your issues of December 24 and 31, a few remarks from this section and the writer's experience may be of interest to your readers. I have for a long time considered this one of the least used, and yet one of the most useful trees in existence for ornamental purposes. It is seldom, if ever, troubled with any insect pests, has a beautiful color of foliage from the earliest opening of its leaves until the Autumn when it turns to one of the most handsome shades of bronze-black coloring. It is a handsome and interesting tree in Winter, as mentioned in the excellent description by Mr. Meehan. It seems to be perfectly hardy in this locality, although very little of it is to be seen. A fine young specimen or two may be noticed in the Arnold Arboretum, and I have occasionally come across a nice specimen or two on some private estate, but I have not seen any larger than a height of twenty feet or so, proving that the trees were planted only a few years ago. Some five or six years ago quite a few trees were planted in Franklin Park, and while a few of them failed to survive more than a couple of years, the majority of them are in a fair way to the making of nice specimens. The cause of death among these I speak of was more from the trees coming originally from a much further south location than this. I have found the same trouble with many of our native trees, and I would always impress upon nurserymen the necessity of their securing tree seeds from as northerly a latitude as possible.

I am at present experimenting with the hardness of this tree, having had a lot of young plants collected in Western Connecticut last Spring, and these at present have every indication of proving perfectly hardy. Western Connecticut is as far north as the writer has ever found this tree in its native state, but there it may be found in large flourishing groves and makes one of the largest-growing native trees. It is known in that section of the country as *Bilstead*. It is a tree which, like several other native trees, is rather hard to transplant, and planting may most successfully be done in Spring. It makes a splendidly shaped subject, and I have often come across a tree growing in its native state, making a perfect specimen comparing favorably with the excellent specimen shown in your recent issue. JOHN W. DUNCAN.

Boston, Mass.

The Peony.

(Read by H. A. Terry, Crescent, Ia., before the Iowa State Horticultural Society.)

The peony is really the queen of flowers. There are about one thousand varieties in cultivation, but one may buy, say fifty varieties of a judicious selection and get the cream of the whole lot. Of this thousand varieties no two are just alike, though there are a good many that are so similar that it is not necessary to buy the whole lot to get a good collection.

The writer of this paper has had a good deal of experience in growing peonies, having bought his first lot over forty years ago, and has been adding foreign varieties to his collection from that day to this. In addition to this he has been growing seedlings from these foreign varieties, and has grown and tested tens of thousands of these seedlings, of which, perhaps, not more than one or two out of a hundred were worthy of cultivation. This would seem to be very poor encouragement; still the excitement and anxiety in watching a lot of these seedlings just coming into bloom pays the lovers of flowers very well.

As to color in the peony family, it ranges from the darkest crimson to the purest white, and every shade betwixt these two that one can imagine; and many varieties have several of these shades in the same flower. One of the finest, and one that is most called for, is a pure white, with a dark crimson blotch in the center, as large as a half dollar, while some of the flowers will have two or three smaller blotches. This is a foreign variety called *Festiva Maxima*.

Another very popular variety is named *Grover Cleveland*; the flowers are very large, of a dark crimson color, very double and solid, center beautifully fringed, and keeps fresh a long time after being cut from the plant. These two varieties are often called for to be planted together.

The cultivation of the peony is very simple. It should have mellow, rich ground to grow in, and not allowed to be overrun with weeds. The plants, after growing five or six years, should be taken up and divided. When left too long in one place too many stalks will be produced, and the flowers will be smaller than when the roots are divided. If not taken up and divided the plants will still continue to bloom, the writer having a plant that has stood in one place twenty-two years without moving and the last year this plant produced one hundred and fifty flowers.

The hardness of the peony is immense. They grow and bloom beautifully in Manitoba, and in an experience of nearly fifty years, I have never known one to be winter-killed.

Autumn is the proper time to divide and plant the peony, and if done early in October, good strong plants will bloom the next season. The older roots may be divided into about as many plants as there are eyes on the plant, but it is better not to divide so close, as they will bloom sooner and stronger if the roots are left larger. The plants should be so set as to have about five inches of soil over them after the ground is leveled off.

The Future of Peonies.

Editor Florists' Exchange:

It is thought by some that the present interest in this flower is only a fad that will soon pass away. It will pass when the love of flowers shall be entirely destroyed, when cannas, dahlias, roses and carnations shall lose their grip and the whole procession of beauty shall pass from the earth. The modern peony need not hide its head for any flower that blooms. In England and France there is a great revival of interest; new and beautiful kinds are being developed there all the time.

Again, interest in the peony is moving westward. Two-thirds of all raised in Iowa and Nebraska go East, but the interest awakened in the West and Northwest is simply without precedent. A number of leading farm papers having large circulations have, at the suggestion of the writer, published special peony issues with fine illustrations, calling the people's attention to the fragrance, beauty, hardness and adaptability of this plant.

The Peony Manual, published by the writer, is having a fine run. In a few months 700 out of 2,000 have been sold.

To meet the growing demand there have been importations from Europe such as were not known before, and the writer, having faith in the opening of the great Northwest, which will require millions, has this Fall planted 35 pounds of the choicest seeds that could be gathered, in the hope that among them all some of superior merit will be found.

Already some of the choicest kinds are soaring; some of superior merit will soon be out of reach. Ten dollars a root has been refused for genuine Lady Alexander Duff. The true Baroness Schroder have gone to \$5 a root and are hard to get at that; people will have them; and in 1,000 from one in ten years you lose sight of the original cost.

Peonies are at best increased by slow processes as compared with shrubs and fruit trees. You can soon get a million from one choice apple tree. A new syringa comes out and every good cutting becomes a healthy bush. We increase peonies from seed and it takes six or eight years to know what we are doing. Dividing the roots every two years checks the growth and they require the best of care; even grafting superfluous buds into the roots of other peonies does not give rapid returns. So the price of the best will be high, and new candidates for public favor will be high also.

We can look forward to lively times with this flower. The newer sorts are simply superb, and with their beauty and fragrance they will win their way.

York, Neb. C. S. HARRISON.

PACKING SHED, BUILT OF ADOBE, OF CHASE ROSE COMPANY, RIVERSIDE, CAL.

A Unique Nursery Packing Shed

In our issue of December 17, 1904, we referred to the new rose cellar and packing shed, built of adobe, of the Chase Rose Company, at Riverside, Cal. Through the courtesy of the concern named we now present our readers with an illustration of this unique structure. The Chase Company says:

"Adobe brick are generally made from material at hand, clay and sand, and dried by an arid sun. They are probably one of the oldest forms of construction material used. From the days of Nineveh their use has been constant, but we presume they have never before been employed in the construction of a nurseryman's packing house. The buildings are not practical where rainfall is large, but being cool they are desirable in dry climate, and with the aid of this one we wish to demonstrate to you that Arid-Climate rose bushes have come to stay, 'allice samee adobes.'"

Nursery Salesman Found Dead.

ROME, N. Y.—Harry Richardson, a salesman of nursery stock for N. B. Chase, of Newark, N. Y., was found dead in the City Hotel on December 26. He was 23 years of age. As he was subject to epileptic fits, the theory is that he died while suffering from one.

MT. HOLLY, N. J.—Samuel E. Rogers, who recently retired after conducting a nursery business here for many years, is seriously ill from a stroke of paralysis.

Root Pruning Large Trees.

Nurserymen find their customers constantly calling for large trees; "no matter how large, provided they will grow," is what they say. All who are at all familiar with trees know that a good, thrifty young tree will overtake a larger one, both planted at the same time; that is, when the larger one has lost many of its roots in transplanting. Even the purchaser knows this; but the large tree is not thought of in such a connection. It is wanted large for its present appearance, probably. There is a position it will fill, to make a picture of a place, perhaps, and where a small tree would not answer at all. Time and again customers are importunate to get such trees, and with an assurance from the nurseryman that the chances are in favor of growing, almost any reasonable price can be obtained. Consider the demand all the time for good-sized oaks, beech, tulip trees and other deciduous trees and for evergreens! The proper way is to root and branch prune these trees two years in advance of digging them up. What a sale there would be for large scarlet oak, say, of three inches diameter of stem, if known they had been root-pruned two years ahead and, therefore, were pretty sure to transplant well! Such specimen trees should be looked up now. If free be, the tops could be pruned during the Winter, the roots, as soon as Spring opened, or before, if the nature of the ground permitted.

An oak, or similar tree, with trunk, say, of three inches caliber at near the ground, would require to be dug around in a circle of seven feet diameter, severing all roots met with. The tree should also be dug under, to cut off what roots have pushed perpendicularly. Make a clean cut of roots, not a ragged or torn one. Fill up the trench afterwards, and if the soil thrown out is not over good, add a little manure, to entice a nice growth of roots. The branches of such trees should be headed back one half at the same time, looking out for the shapening of the tree while doing this. In two years' time such a tree would be fairly sure to live; at any rate, it could be sold, and at a good figure and with a clear conscience.

Evergreens could be treated in the same way, and then the difficulty of getting some pines of large size to live would not be such a frequent one as it is now. More judgment would need be exercised, in the pruning of the branches of evergreens. They will not break freely when cut below the green foliage, and it is better, therefore, to let the pruning be done by one of good judgment. Evergreens should not be top-pruned until Winter is over.

Twiggy Growth of English Linden.

In some cases our native linden, *Tilia americana*, is thought to be too tall a grower for a position under consideration, and when this is the case the merits of the European one, *T. platyphylla*, should be remembered. There is a deal of beauty in this linden. Compared with the native one spoken of its leaves are small, and they are of a darker green color. They are retained on the tree later in the season; the tree

is not so tall in growth and it makes a twiggy, compact growth. For street planting I would much prefer it to the native tree, because of the points mentioned, which make it more desirable. It is in use in many cases already as a sidewalk tree, and its appearance is favorably commented on.

Many years ago it was said that borers troubled this linden, but while this may be true to-day, of which I have no knowledge, it cannot be serious, as no appearance or complaint of injuries from this cause comes to notice. The well-known partiality of bees for the flowers of the linden would be thought an additional inducement to plant it by many.

The Groundsel Shrub.

Baccharis halimifolia, one of our seaside shrubs, has been well named groundsel shrub, its snow-white papus reminding one very much of the common groundsel, *Senecio vulgaris*. So few shrubs thrive in the barren, waste places where this one will, that this alone calls for its planting, but, in addition to this, there are the feathery heads it displays. In late Summer, and along until Winter comes, it keeps up its display.

This is one of a few other shrubs which often partly die back in Winter, even though natives. It does not hurt them to do this; in fact, it suggests the cutting down of the bushes every Spring, injured or not, as being the best way to treat it.

Common Names of Plants.

Showing the confusion the common names of plants causes at times, a nurseryman related to me his experience with the "Wahoo." The only "Wahoo" he knew of was the *Ulmus alata*, and on having a lot of it offered him—"Wahoo"—he engaged a quantity of it. On its arrival he was surprised and disappointed to find he had a lot of *Euonymus atropurpureus*, for which he had no use at all. Going to his library, he found no fewer than three "Wahoos," the *Ulmus alata*, *Euonymus atropurpureus* and *Tilia alba*. These names were found in two botanical works; dear knows how many more "Wahoos" other works may give.

Nurserymen endeavor to use botanical names as far as they can; and the instance related, as well as others known of, shows how mistakes are apt to occur when common names are substituted for them.

JOSEPH MEEHAN.

The Amateur Farmer's Success.

"There goes a 'book farmer' that refutes the stock joke about what failures they are."

"How is that?"

"His favorite textbook is 'Success with Small Fruits,' and he has succeeded in growing the smallest fruit I ever saw."—From Brooklyn Life.

ERIE, PA.—L. A. Spoden has removed his stock to the new greenhouse built at 23d and Parade streets.

H. A. TERRY'S NEW PEONIES

IVIES

Strong field-grown English plants, with many runners, 3 to 4 ft. 75c. doz.; \$6.00 per 100; \$60.00 per 1000.

PALISADES NURSERIES, Sparkill, N. Y. Mention the Florists' Exchange when writing.

CINERARIAS

4000, 3 in. pots, very strong, medium large flowering, \$3.50 per 100.

Asparagus Plumosus, 3 in., \$5.00 per 100.

CHRYSANTHEMUMS

Stock Plant.
Polly Rose, Willowbrook, Montmort, Pacific, Morel, Appleton, Mand Dean, Ivory, white and yellow, Bonnafton, Golden Wedding, Jerome Jones, \$5.00 per 100.

J. D. BRENNEMAN, Box 24, HARRISBURG, PA.

TO CLEAN BENCHES Chrysanthemum Stock Plants FOR EXHIBITION BLOOMS

Wm. Duckham, Dr. Enguehard, John Burton, \$1.50 per doz.; \$10.00 per 100. Bonnafton, white and yellow, Mrs. Jones, Yanoma, Gloriosa, Loveliness, 60 cts. per doz.; \$5.00 per 100.

HENRY EICHHOLZ, Waynesboro, Pa. Mention the Florists' Exchange when writing.

KENTIA BELMOREANA

Fine clean stock, in 4 in. pots, large enough for 5 in., 25c. each; 2 1/2 in., nice for center of fern dishes, etc., 10c. each, \$9.00 per 100. Latania Burbankia, 4 in., 15c. each. Asparagus Plumosus, 2 1/2 in., \$2.00 per 100. Geraniums, Mrs. Sallerol, silver leaf, 2 1/2 in., \$2.00 per 100.

H. WESTON, Hempstead, N. Y. Mention the Florists' Exchange when writing.

ASPARAGUS

SPRENGERI extra strong, field-grown
2 1/2 in. \$3.00 per 100 3 in. \$5.00 per 100

TENUISSIMUS
2 1/2 in. \$3.00 per 100 3 in. \$5.00 per 100

NATHAN SMITH & SON, ARIAN MICH. Mention the Florists' Exchange when writing.

PALMS AND FERNS

Pieris and Boston Ferns, strong runners from bench, fit for 2-1 1/2 in. and 3 in. pots, \$20.00 per 1000; 5 in., \$25.00; 6 in., \$40.00 per 100; 7 in., \$1.00 each. Larger plants from \$1.50 upwards. Ferns in variety, from 2-1 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000. Latania Burbankia, 3 in. pots, \$5.00; 4 in. \$15.00; 5 in., \$25.00; 6 in., \$35.00 per 100; 7 in., \$1.00 and \$1.50 each; large plants from \$2.50 up. Kentia Belmoreana and Belmoreana, from 2-1 1/2 in. pots, \$7.00 per 100; 3 in. pots, \$12.00; 4 in. pots, \$25.00; 5 in. pots, \$50.00. 6 in. pots, \$15.00 per doz.; from 7 in. pots and upward, at \$1.75 to \$35.00 each. Areca Lutescens, 4 in., \$20.00; 5 in., \$50.00 per 100; 6 in., \$1.00 each. Larger plants from \$1.50 up. Aracaria Excelsa, 4 in., 45c.; \$5.00 per doz.; 6 in., \$1.00. Larger plants from \$1.50 up. Aracaria Compacta, from \$1.00 to \$5.00 each. Pandanus Utilis, 8 in. pots, 50c. Dracaena Indivisa, 5 in. pots, \$15.00 per 100. Phoenix Reclinata, 5 in. pots, \$35.00 per 100; \$4.50 per doz.; 6 in. pots, \$9.00 per doz. Larger plants from \$1.00 up. Phoenix Canariensis, fine specimens, from \$3.00 to \$35.00 each. Azaleas, 10 in.-12 in., \$35.00 per 100. Larger sizes at lowest rates. Plants in fine condition.

JOHN BADER, Troy Hill, Allegheny City Pa. Mention the Florists' Exchange when writing.

FERNS Our Specialty

We have just completed a new 20,000 sq. ft. greenhouse range, especially built for the growing of Ferns, and in the future all orders, regardless of quantity, will be filled with the best stock in the market, at the lowest prices.

CIBOTIUM SCHIEDEI
The Most Magnificent Tree Fern in Cultivation.
Extra Large Specimens.
12 in. pots \$15.00 each; \$25.00 per pair
10 in. pots 5.00 each; 9.50 per pair
8 in. pots 2.75 each; 22.00 per doz.
7 in. pots 1.75 each; 20.00 per doz.
Adiantum Cuneatum, 4 in., \$15.00 per 100
Adiantum Rhodophyllum, 4 in., 20.00 per 100
Adiantum Rhodophyllum, 3 in., 12.00 per 100

ANDERSON & CHRISTENSEN, Telephone Call 14 F., Short Hills, N. J. Mention the Florists' Exchange when writing.

Club and Society Doings.

KANSAS STATE HORTICULTURAL SOCIETY.—This society, at its recent meeting, elected the following officers: President, Major F. Holsinger, Rosedale; W. F. Schell, Wichita, vice-president; Walter Wellham, Topeka, treasurer; and Wm. J. Barnes, secretary—for his sixth term of two years.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.—This society held last Wednesday evening its final meeting for 1904, Vice-President Alexander McLellan in the chair. James Bloomfield was elected an active member. Only a few members being present, much important business was left for the next meeting. The committee in charge of the annual ball reported all bills paid and a surplus of over \$50. F. W.

KENTUCKY SOCIETY OF FLORISTS held its monthly meeting on January 3 at the store of Mrs. C. B. Thompson, Louisville, Ky. As it was a very cold night, and many of our members do their own firing, the attendance was light. A preliminary premium list for a chrysanthemum show, to be held in November, was accepted and ordered printed and distributed. Any florist desiring a copy, can obtain the same by addressing our secretary, F. L. Schulz, 1325 Cherokee road. The installation of the newly elected officers then took place. Owing to illness our treasurer, C. H. Kunzman, and financial secretary, Joseph Coenen, were absent. A. R. B.

DOBBS FERRY HORTICULTURAL ASSOCIATION.—The regular meeting of this association was held in Odd Fellows Hall on Saturday evening, December 31, 1904, President Dunbar in the chair. The business of the evening was the election of officers. Joseph Dunbar was elected to fill the chair for another year; Henry Kastberg was elected secretary; Claud Wilson, treasurer; Joseph Bradley, press secretary. It was proposed to have a vice-president, and Thomas A. Lee was elected. Everyone present was highly pleased with the result of the voting. The treasurer read the report for 1904 and after all bills are (Continued on page 9)

Cyrtomium Falcatum

The Holly Fern. Fine, bushy plants in 2 1/2 inch pots, 3 1/2 cts.
Boston Ferns, Strong 5 inch plants, 20 and 25c.
Nephrolepis Fosteriana. Large plants 4 inch, 12 cts.
Primula Obconica, gr. 4 in., in full bloom, 10 cts. Cash please.
R. G. HANFORD, Norwalk, Conn.

GERANIUMS

Well rooted cuttings ready for shipment. S. A. Nutt, Grant, Bruanti, Buchner, Favorite, Montmort, Perkins, \$10.00 per 1,000. Viand, Soleil, Gervais, \$12.00 per 1,000.
Cash with Order.

PETER BROWN, Lancaster, Pa

500,000 VERBENAS

60 Finest Named Varieties
Perfectly Healthy Free From Rust
Rooted cuttings, 60c. per 100; \$5.00 per 1000.
Plants, \$2.50 per 100; \$20.00 per 1000.
Our list is the choice for millions of seedlings. Send for circulars.

J. L. DILLON, Bloomsburg, Pa. Mention the Florists' Exchange when writing.

The Only GRAND PRIZE For Vegetables AT THE GREAT 1904 ST. LOUIS EXPOSITION WAS WON BY THE PRODUCTS OF BURPEE'S SEEDS

C. W. HOLLEY, Glendale Stock Farm, Glens Falls, N. Y., Dec. 14, 1904, writes:—Now our winnings for 1904 are as follows: Washington County Fair, \$110.50; Albany County, \$89.75; Cambridge Fair, \$101.25; Saratoga County, \$45.00; Clinton County, \$35.00; Warren County, \$75.00; NEW YORK STATE FAIR, \$287.50; and WEST CHESTER COUNTY, \$325.50—making a total of \$1,069.50 each.

hibit, which was awarded a GOLD MEDAL, and also the GRAND PRIZE, all the vegetables were grown from BURPEE'S SEEDS; also the Sweet Corn, Pop Corn and Potatoes, all grown from BURPEE'S SEEDS!

The Results at the State Fairs of Iowa, Wisconsin and Kansas are announced on page 174, and of Indiana on page 19 of BURPEE'S FARM ANNUAL. Other States did equally as well, and we shall publish several more photographs of STATE FAIR EXHIBITS in our New Prize Supplement for 1905. We are justly proud of all the prizes won by our customers, as also of the Two Gold Medals and Two Silver Medals (including the only GOLD MEDAL on Lawn Grass) awarded directly to us for our own Growing Exhibits at the St. Louis Exposition. Although not yet "thirty years old," no other seeds have ever had such universal endorsement at State and County Fairs!

If you are interested to know more about the Unequaled Record made throughout America—at State and County Fairs—by the popular prize-winning products of BURPEE'S SEEDS, you have only to ask, with your order, for a copy of our PRIZE SUPPLEMENT for 1905, but first write a POSTAL CARD for

Burpee's New Farm Annual For 1905

Our complete Retail Catalogue of 178 pages, with beautiful colored plates, hundreds of illustrations and accurate descriptions. It offers some GRAND NOVELTIES, of unusual value, which cannot be had elsewhere.

Florists and Market Gardeners should ask also for

Burpee's Blue List

This is mailed only to those who "plant for profit," and is the most complete of Wholesale Catalogues. Elegantly printed with photographic illustrations, it is a BOOK OF 104 PAGES and gives practical information about all the BEST SEEDS THAT GROW! Unlike most "seedsmen," we are actual GROWERS of Seeds, having our own farms in

FRONT COVER OF BURPEE'S FARM ANNUAL

We also got the GOLD MEDAL at St. Louis World's Fair on best display of vegetables raised in New York State. Also we got the GRAND PRIZE on vegetables over all the other States and THE ONLY GRAND PRIZE won by any one on vegetables. Some other seedsmen got "a Gold Medal," but no other State or person got a GRAND PRIZE but the old and tried Glendale Stock Farm of Glens Falls, N. Y., with the reliable seeds to back them, with their fine show, of which they always win with BURPEE'S SEEDS. I think in the last five years that no other seed firm can show the winnings at any fairs like BURPEE & Co., and now the biggest honor has fallen again on Burpee & Co by having their seeds take the GOLD MEDAL and THE GRAND PRIZE of the United States.

We took the most attractive display to the World's Fair. The jury on vegetables told me that they never saw such a show anywhere as we had there. I sent you a letter describing our show there. Now I consider that we have won for you the one of the greatest honors for your seed that can be won by any one—the GRAND PRIZE and GOLD MEDAL. Of course, there were other Gold Medals won on vegetables, but no other "GRAND PRIZE" but ours! It cost us enough. To you the honor—but we knew we had the vegetables and were going to try for the big prize!

The winnings (as stated above) entitled THE GLENDALE STOCK FARM to BURPEE PREMIUMS as follows: Seven County Fairs at \$5.00 each; one State Fair, with photograph, \$21.00; and the National Extra Prize of \$100.00. In addition we sent our check also for an "honorarium" of \$100.00 in appreciation of the magnificent results that Mr. Holley, at his own expense, attained at St. Louis. Thus GLENDALE won, the past fall, a total of thirteen hundred and twenty-five dollars and fifty cents in cash prizes for the products of BURPEE'S Best "Seeds that Grow."

In Iowa, as usual, the first prize at State Fair was won by MR. L. G. CLUTE—exclusively with the products of BURPEE'S SEEDS. Mr. Clute was made Superintendent of Iowa's Agricultural Exhibit at the World's Fair. He wrote us from St. Louis, November 21, 1904, that in this great Iowa Ex-

Copy must reach this office Thursday morning to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

To Our Readers.

The contents and indices to advertisers will be found on page 22.

An Index to Volume XVIII. of The Florists' Exchange accompanies this issue.

Through the pressure on our columns last week and this, caused by the reports of the Christmas trade received from many places throughout the country, some interesting articles, as well as illustrations, are unavoidably held over for another issue.

Some New Year's Resolutions.

I will subscribe (or renew my subscription) for The Florists' Exchange now.

I will advertise in The Florists' Exchange whenever I have anything to sell, because I feel sure it will pay me well to do so.

I will let the trade know that I am enlarging my greenhouse capacity, changing my location, or the personnel of my firm, by a little note in The Florists' Exchange.

I will tell my friends and neighbors in the business what a first-class paper The Florists' Exchange is for those engaged in the florist, nursery, seed and allied trades.

I am a retailer, and will show my fellow craftsmen the high-class character of the floral designs I turn out, as well as the neat store I have, by a picture and brief description in The Florists' Exchange.

I will do my little share for the general good, by writing occasional articles for The Florists' Exchange on subjects with which I am perfectly familiar, and where my treatment of them would help my fellow florists.

I will comment, in a friendly spirit, in the columns of my favorite trade paper, on articles appearing therein when the writers' statements are not in accord with my own experience, so that the subjects discussed may be presented from every point of view.

I promise to treat everyone with whom I have dealings fairly and squarely; and will do my best to help eliminate from the business all objectionable features and objectionable practices, by exposing them. I have an honest pride in my profession, and wish to see it elevated to and maintained at its highest standard.

I will send to The Florists' Exchange a picture of these new, or well-grown plants and flowers I have raised, as well as of that fine house of carnations, roses, or other stock; also a photograph of my tasteful home grounds, truly representative of my business; not that I am vain of the results obtained, but just to show that I know what I am doing.

I will affiliate myself with my nearest florists' club; and will also become a member of the S. A. F. O. H., and the other special societies in which I am interested, because I desire to encourage them in the grand work they are doing for myself and others in the business. I will attend as many of the meetings of my local club as possible, contribute when I can to its monthly and other shows when held, and otherwise take an active part in its operations.

In short, I will try to prove myself an exemplary tradesman, in every particular, a worthy, though humble representative of the great and noble vocation in which I am engaged.

Some Trade Paper Truths.

It may be that in the hurry and bustle of everyday life, the average tradesman gives little, if any, consideration to the papers which represent his industry, so far as their serviceableness to himself is concerned; and on that account he is apt to be the loser, especially if he is an advertiser. There are certain fundamental requisites connected with the operating of a trade paper that must be present before its greatest usefulness to its subscribers and advertisers results. These were ably discussed recently in "Profitable Advertising," by men having many years of experience in the making of trade journals of various classes; and we take the liberty of presenting some of the views held, at this opportune time, confident that those engaged in horticultural and allied pursuits will profit by a perusal of same, if due consideration be given the truths so well set forth.

Henry J. Bohn, editor of the Hotel World, says:

"What place in commercialism is filled by a trade or class journal? Some trade journal publishers will answer that it is as advertising media between the wholesaler and the retailer, manufacturer and consumer. This, in the mind of the true trade journal publisher and editor, is a fundamental error. A publication pretending to represent an industry which is nothing more than a price-list or bulletin of display advertisements, with a few columns of wishy-washy trade news or items about advertisers, is not a trade journal; it is not an advertising medium; it is a 'fake' pure and simple.

"The value of a trade journal is measured by the strength of its editorial page, by the completeness and correctness of its trade news and by the number and excellence of its technical essays and discussions. These are the only things which can win the business man's admiration, respect and support; the character and value of these alone bring and hold subscribers and advertising patrons.

"Many trade journals are conducted on the principle that there must never be anything in the reading columns that runs counter to the opinion or sentiment of the persons engaged in the industry represented by the journal. I have known the editors and publishers of such publications to throw up their hands at the suggestion that an editorial page was useful or admissible in a trade journal—declaring that the editorial would kill the patronage of a trade journal! A publication conducted by such men is a milk-and-water affair that is without value to its readers or advertisers. No trade journal that has not a strong individuality, independent ideas and opinions, with the nerve to discuss the good and the bad things in the field represented with a free and independent spirit, is worth more than the paper upon which it is printed.

"It is a fundamental fact in human nature that anything is valued largely at what it costs, and a man who gets a thing for nothing places that value on it. The only man who is worth anything to the trade journal advertiser is the man who pays full rate subscription year after year and reads his trade paper as religiously every week or month as he reads his favorite literary magazine or morning paper.

"There are two different kinds of patrons of trade journals. One class unreasonably expects absolute and definite results from every dollar spent in advertising; they figure no contingent value in the general publicity in any line that an advertisement gives; they figure only the specific returns at that particular time; they do not reason that the heads of departments and other employees in any line who are to-day not purchasers, but largely readers of trade journals catering to the line in which they are employees, will in a few years be managers and proprietors in these industries, and the fact that their advertisement has been kept before these men will lead to future business. It is bread upon the waters. The other class of advertisers in trade journals is entirely without discrimination; anything and any publication that bears a name indicative of their particular line of industry, receives their consideration and likewise their patronage. These trade journal patrons are known to the veterans in the field as 'easy marks,' and are legitimate prey for every new publication that starts in any field, whether it has real value or not."

Frederick D. Hale, of the Shoe Retailer, remarks as follows:

"There are advertisers who decide at the beginning of each year how much money shall be expended in trade advertising, competent to so decide after years of costly experiment with mediums. Others there are who 'go it blindly'—the first advertising solicitor who visits them ties up their appropriation, and even if the results of their first few months' advertising do not equal their expectations, they have so committed themselves that they hesitate to change mediums and the end of the year's campaign finds them firmly convinced that 'advertising is purely an expense.'

"There is a method of estimating the value of any trade journal that is so simple that I have hesitated to use valuable space in pointing it out. Study the wants of the readers of trade journals in any field, then study the contents of the various publications which are offered them, and judge for yourself which of the prospective mediums best supplies the demands of the reader to whom you wish to introduce your product. To do this, you must, so far as may be, step out of your position, that of a manufacturer or wholesaler, and try to look at each paper through the spectacles of the subscriber for trade journals—the man into whose store the postman brings the various publications—the man whose check is drawn to pay the cost of subscription—the business man who neither pays for nor spends time in reading a paper without having a definite object in view—the man who makes the best customer.

"Of all these publications which reach the reader perhaps two come at his order—he receives the rest because their publishers are using the 'sample copy' method of increasing their circulation. These unbidden guests may well be set aside—experienced analyzers of advertising value will state, without reserve, that not one per cent. of the advertisements appearing in journals which are habitually sent to merchants free of cost bring appreciable results.

A Disgrace to Indiana.

In the Seventeenth Annual Report of the Indiana Agricultural Experiment Station (Purdue University) for the year ending June 30, 1904, and just issued, we read with regret the following statement in the Report of the Botanist, Professor J. C. Arthur:

"The numerous experiments on the cultivation of various garden and field crops, as well as Winter crops under glass, which have been carried on for many years, have been wholly abandoned for want of funds to keep the greenhouse in repair and to provide the requisite labor in handling and watering the plants."

It seems to us, in view of the most excellent work done by Professor Arthur, especially with respect to the combating of carnation rust and other diseases affecting that plant, as well as in the development and perfection of sub-watering on greenhouse benches and otherwise, that the condition mentioned in the report should not, if possible, be allowed to persist. The matter should be taken up strongly by the State Florists' Association of Indiana, backed by the trade throughout the country, and the State Legislature petitioned, so that sufficient appropriation be granted for the proper conduct of this important and necessary as well as generally serviceable portion of the station's operations. The floricultural interests of the country can ill afford to permit the abandonment of the work in their behalf of any experiment station that has proven itself worthy of support, in view of the fact that so few of these institutions render floriculture any real service.

PAMPHLETS RECEIVED.

TRANSACTIONS OF THE MASSACHUSETTS HORTICULTURAL SOCIETY FOR THE YEAR 1904. Part I.

This report is one of the most interesting of the many interesting reports issued by this society, and is particularly valuable to the florist. Considerable space is given up to a discussion of the now popular peony, a most exhaustive paper on this subject being contributed by Robert Tracy Jackson, of Cambridge, Mass. The same gentleman furnishes an exceedingly interesting account of John Richardson; His House and Garden, with accompanying illustrations. Mr. Richardson was well known as a skilful horticulturist, and especially known for the choice seedling peonies that he raised. He was born in Boston, February 19, 1798, and died in Dorchester, Mass., 1887. Mr. Jackson reviews the work, horticulturally, which Mr. Richardson accomplished, and has succeeded in providing a very instructive story.

Society of American Florists and Ornamental Horticulturists.

Department of Plant Registration.

H. D. Seele, Elkhart, Ind., submits for registration the following new cannas:

HON. W. R. HEARST, scarlet, mottled and edged with golden yellow; outside of petals almost pure yellow.

SENATOR HANNA, pure orange, tinged with golden yellow.

MRS. JOHN A. LOGAN, scarlet, with broad yellow golden border; resembles Queen Charlotte.

CARNATION MRS. W. L. LEWIS.—W. L. Lewis, Marlboro, Mass., submits for registration seedling carnation Mrs. W. L. Lewis (Flora Hill × Mary Wood); color snow white; flower three inches across, well-built, with long and stiff stem. A burst calyx has never yet been seen on it. The bloom is a good keeper.

WM. J. STEWART, Secretary.

OUR READERS' VIEWS.

(Contributions to this Column are Always Welcome.)

Handling Cut Poinsettias.

Editor Florists' Exchange:

To keep these fresh after being cut have a wax candle and let the wax drop on the stem to keep the sap in the stem. The wax will get hard and close the pores of the stems and keep them from wilting. I have always found this the best way to handle them, as they will always wilt after being grown in a very warm house; the wood is very milky.

JOHN BURFEIND.

Peony Golden Treasure (?)

Editor Florists' Exchange:

The name of the peony referred to in The Florists' Exchange, page 785, by Ernest Hemming, should, without doubt, have been "Floral Treasure," instead of "Golden Treasure." I am not aware that there is a peony by the name of "Golden Treasure." The two varieties mentioned originated here about eighteen years ago, and were first sent out in the year 1900. They are scarce varieties; the propagation of a peony is very slow at first.

West Point, Neb.

J. F. ROSENFELD.

ELIZABETH, N. J.—E. E. Rynyan, of the Elizabeth Nursery Company, sails for Cuba this Saturday, per steamer Morro Castle, to look after the interests of the Cuba and United States Fruit, Nursery and Mercantile Company, of which concern he is president. The company's property is located at Guanaja, where it already has 30,000 orange trees planted out in the nursery row.

William Falconer Replies to Job.

EASY NOW, JOB, EASY (Page 593).—You're awfully down upon the Scotchman, Job. Easy, man, easy! And you poke fun at the Highland dress and the "abominable" bagpipes! Job, Job, what blood is in your veins, anyway? Had you in your childhood days watched the Highland soldiers drill on the parade ground at Fort George or on the links at Inverness as I did, and noted that their every movement was in obedience to the soul-stirring, martial bagpipes, your revulsion would be veneration. And to dissociate the pipes from the kilt would be like porridge without salt. Still, I have neither pipe nor kilt myself. And I must candidly admit that I prefer to see men in America, no matter if they be Scotchmen, wearing breeks.

Now, Job, unwittingly you have done me a great injury; you lit a candle and hid it under a bushel. For twelve and one-half years I lived on Long Island a prey to countless myriads of mosquitoes, and all of that time assiduously cultivated the mosquito-catcher plant (*Vincetoxicum acuminatum*), but I caught only one sucker in a billion, and we rested behind closed netting, and still they "ate us alive." Why didn't you tell us then of the bagpipe antidote so that we could have John Birnie come out and give us a tune, and reap our everlasting gratitude? But better late than never. In Pittsburg we have no mosquitoes; but we have here a bagpipe band, and, maybe, that accounts for our immunity.

I don't like the way some folks poke fun at Jemima. Jemima's all right. I like her kind of picnics. And when she gets one up, you'll be there; won't you, dad? And I hope she'll invite me. Then won't we have a jolly time? You know there are no fools like old fools.

SPEAKING OF OLD FOLKS, reminds me of my very esteemed friend, Denys Zirngibel, the pausy man, of Needham, Mass. I saw his name in The Florist's Exchange the other day. What a blessing it is to have these veterans here, more especially when we reflect on their broad experience and useful and exemplary lives! Long may our dear octogenarian friend be with us!

THE CANUCKS, TOO, JOB!—Well, I never saw the Canadian Florist so far as I can remember, so only know one side of the question. But Canada is mighty uppish toward us. When the Society of American Florists was founded it covered Canada and the United States, and our northern neighbors took to it heartily. And after a few years the annual convention was held in Toronto. But the Canadians wouldn't stay with us. According to this year's (1904) report of this society, only seven men in all Canada, including Manitoba, belong to the S. A. F., and the name you mention is not one of them. But they grow magnificent flowers and apples there, and some of the finest roses in the Pittsburg market come from Canada.

THE NEW "HORTICULTURE" (Page 755).—Job, Job, you're a merciless cuss. I would not wish my greatest enemy severer punishment than to have him start a new gardening paper and live on the profits. Have some Christian spirit, man, and give the boy a boost, rather than a kick. Our weekly florist trade papers, gossip or no gossip, are the best of their kind extant. But when it comes to private or amateur gardening papers there is surely room at the top. There is now a positive need and an immense field for such a weekly; but to make it a success it must have a living editor, a live publisher, and a little more money. In years gone by I was an editor (were you one, too?), and I worked hard; but where, oh where is my baby pet to-day? You see those of us who have made the biggest failures are apt to be the ones who can dictate to others the loudest, and be the most critical as regards their honest endeavors.

DON'T GET MAD WITH ME, JOB (p. 783).—Because the chairman asked me a simple question, and I endeavored to answer in my humble way, you jump on me with both feet and tell everybody that there isn't a new idea in my whole carcass, except the "desecration of the Sabbath." Job, Job, how could you? You know it is patent to everyone that when men reach my time of life, and yours, we get worn out in mind and body, and it is pretty hard to evolve a new idea, and the youngsters are aware of this and laugh. And when we rant and rave, and find fault with everybody and everything, the young men simply look sideways at one another and smile, which being interpreted means, I suppose: "Oh, poor fellow, take no notice of him; he's past his usefulness; he is getting old and daffy."

"EVEN HELL ITSELF" you say! Don't go there, Job. I've heard that it's a bad place, "prepared for the devil and his angels." And you aren't one of them, are you?

YOU SPEAK of the dominie discoursing horticulture. Pulpit orations on horticulture may be out of place, Job, but the church is wider than the personal dominie and the Sunday pulpit. At the same time, some ministers in themselves move the world in gardening. Job, both of us have basked in the sunshine writings of S. Reynolds Hole, Ewebank, Ellacomb, Hemsley, Berkeley and other world-renowned divines, whose horticultural scope and force were international. And didn't they move you to greater enthusiasm in your calling, and a greater love for your fellowmen? Who could draw near unto them without being enthused? Yes, Job, and not one of them was a Scotchman? I refrain from mentioning a Caledonian, lest it might rile you. And let me tell you of

A BIG-HEARTED DUTCH PARSON. A few years ago the florists of Pittsburg determined to hold a public flower show at the rose and paony season, and we hunted high and low for a suitable place that would be central and easily accessible. We were about worsted when some of the boys thought of the Rev. Frederick Rouff, the pastor of the big German church, corner of Smithfield street and Sixth avenue, a most central place. At once and with all his heart the broad-minded minister let us have the school-room of his church for our flower show, with light, janitor's services and other conveniences, and all free of any charge. We gave no premiums and charged no admission fee. Ourselves and friends furnished the flowers, and everybody was invited to visit the show, and it seemed that everybody came. We were to stay one day, but so urgently did the public plead with us to keep open another day, and so pleased was the reverend gentleman to have us, that we kept open a second day. And he declared he was more pleased to have us than we were to be with him, and he warmly invited us to come back whenever again we needed a place for a flower show. Divine grace glowed on the face of every visitor to that show, and the minister saw it, noted it, and gloried in it; even the boys and girls running loose on the streets came in, and the quiet of their demeanor and sweetness of their expressions as they walked up and down alongside of the flower tables admiring the posies, were a joy to experience. And the children went out and brought in other children. Who will dare say the seeds of horticulture were not planted there? And every florist's and gardener's heart—Scotch, Irish, Switzer and American, as well as German, went out in love to that noble German minister, and neither he, nor his church officers, nor one of us thought the flower show was a desecration of the house of worship, nor that its results were other than "holiness."

WILLIAM FALCONER.

Contrastive Conditions of the Boston Market.

Editor The Florists' Exchange:

In consideration of amount invested, my subscription to your valuable and progressive trade paper has proved the most pleasant and profitable investment ever made. Through the medium of your advertising columns I have been introduced to many growers and manufacturers incidental to the trade. I believe this acquaintance has been mutually agreeable to all concerned, as I have invested a goodly sum among your advertisers throughout the year.

There is, however, I believe, another trade section to which I and others would appreciate the favor of an introduction. I refer to the section of the City of Boston from which your correspondent secures information as to the existing conditions and prices of cut flowers in their respective seasons.

Reviewing the Christmas trade, your Boston correspondent states: "In carnations there seemed to be about enough of all kinds to supply demands; in fact, in some sorts such as the white varieties, the market was druggy." "As already mentioned, white carnations did not sell and were a glut on the market." Mr. Duncan's remarks evidently explained the conditions in some section where printers' ink is not appreciated. During the entire month of December, and especially during the week preceding and the week following Christmas, I had an enormous demand for white carnations. I corresponded with every advertised wholesale florist in the City of Boston, whose name I was able to secure through the trade papers. I also wrote several large growers asking for prices and offering cash with order if they would part with a few, or a quantity, of white carnations. The wholesalers' response to my inquiries for quotations brought a reply stating the common grades of standard varieties of white carnations were worth \$4 to \$6 per hundred. Certainly, a most contrastive condition to the situation explained by your correspondent.

The growers refused to sell; stating their supply was placed. I concluded white carnations could not be obtained at a reasonable price and consequently did not buy. Had I been fortunate enough to locate the section and prices explained in your review of the market, I could have disposed of thousands and thousands of flowers. A most interesting part of the story is that I was willing to put the cash right in the wholesalers' or growers' fist before he shipped the goods; more than that, I would gladly have paid all cost of packing and delivery to express office. If white carnations are a glut on the market, it seems to me that these conditions are brought about by fabulous prices asked by dealers and not by overproduction.

It seems an injustice to the industry and its promoters that such conditions exist; no demand for the goods in a great city and only an hour away is a town filled with people with ready money to buy something that is termed a "glut," and which they cannot secure.

I sincerely trust your valued correspondent will not look upon this suggestion in an unkind light, for I certainly would be deeply grateful to find a locality where goods can be purchased at his quotations of the Boston market. I would buy 3,000 white carnations to-day (January 3) could I secure them at the ruling market price; but when the cash buyer comes "down the line" the price becomes mysteriously inflated.

A. CARNATIONIST.

The Worcester County (Mass.) Horticultural Society issues a very interesting program of subjects for discussion during January, February and March, 1905.

Our London Letter.

By A. HEMSLEY.

One of the most instructive chrysanthemum shows we have had was that for market growers, which was promoted by the National Chrysanthemum Society, and held in London on December 14, last. Here we had all the best varieties suitable for late work. In some shades of color varieties were numerous, and it would be difficult to say which were really the best, yet from a careful scrutiny, I should say that in whites, Mlle. Therese Panconcki took first honors; Snowdrift, Purity, Heston White, Winter Queen, Princess Victoria and Western King. The last named has been one of the best seen in the market for some time. Yellows were numerous, Nagoya being one of the best. W. R. Reiman, Allman's yellow, Francois Pilan and Mabel Morgan (pale yellow). In bronze, Tuxedo and Lord Brooke were the best seen. There were several good pink varieties shown. Ethel Perry, one of the newest, was very good; Framfield Pink, Lady Nina Balfour, and the new French variety Mlle. Louis Charnet was particularly good. Of crimsons, Lady Beaumont and Mathew Hodgson were the best. In novelties, Golden Standard, a bright yellow sport from Tuxedo, took first honors, securing a first-class certificate, and also the society's medal for the best novelty. Boxes packed for market were shown, and some remarkably well-grown pot plants; the old favorite W. H. Lincoln dwarf plants in five-inch pots with about 18 well-developed flowers, and Framfield Plnk, Lady Nina Balfour, Guy Hamilton and others were equally good.

Pot chrysanthemums have been unusually good in market this season, and the best plants have made up to 3s. 6d. each, and a good many have sold at 30s. per dozen.

Poinsettias are very good this season; they were in earlier than usual. The earliest is a distinct variety, not quite so intense in color, but forms fine heads of bracts and stands exposure well. Although close on Christmas, they do not make quite such good prices as usual; some very good stock has been selling at 9s. per dozen.

Begonia Gloire de Lorraine is now grown extensively and they must be something extra good to make over 9s. per dozen in 5-inch pots. Some extra fine specimens in 6-inch pots were realizing 2s. 6d. each. The white variety, Turnford Hall, is also very good, and is now down to the same price as Lorraine.

Lily of the valley has been very abundant both in pots and cut, and prices have been low; but it seems likely that, later on, there may be a shortage, as best forcing crowns are getting a little scarce, and prices for these are certainly advancing.

Lilium longiflorum blooms have been very plentiful all through the season, and even now at Christmas time there is but little advance in prices. Lilium auratum has been very plentiful for some weeks past.

In carnations the American varieties make top prices; Enchantress go up to 6s. per dozen blooms.

We now get quite a large supply of orchid bloom, Odontoglossum crispum, Cattleya labiata, and cypripediums of various sorts being the leading kinds. The cattleyas make from 6s. to 10s. per dozen blooms, and the others about an average of 2s. 6d. per dozen blooms.

THE WEEK'S DEATH LIST.

C. B. Derthick.

Chas. B. Derthick, of Ionia, Mich., died suddenly on December 23, 1904. Death was due to a stroke of paralysis. Mr. Derthick was born in Akron, O., November 28, 1855. At the time of his death he was engaged in the insurance business, and was also associated with Messrs. Amphlett and Sanderson in the sale of Akron stoneware. In 1897 he bought a controlling interest in the Ionia Pottery Company, and was elected successively director, secretary, and treasurer and general manager of that concern. He was a most zealous and efficient manager of all interests intrusted to him. The deceased gentleman was a member of the S. A. F. O. H., and was well acquainted with many florists, from his being a regular attendant at the society's conventions. A widow and one daughter survive him.

Patrick G. Quinn.

Patrick G. Quinn, a well-known florist on Arlington avenue, St. Louis, was killed the past week while out driving near his home through a teamster neglecting to conform to the right of way of the road. He was for twenty-five years foreman for J. M. Jordan in the days of William Newett and Frank Brill. The funeral took place Monday and was attended by the tradesmen, who knew Pat well. A widow, three children and two brothers are left to mourn his loss. The family has the sympathy of all in the trade.

ST. PATRICK.

John Fallon.

John Fallon, of Richmond, Va., died at his residence there, on December 27, 1904, aged about seventy-two, after a few days' illness with pneumonia. Mr. Fallon had been the leading florist in this section for over forty years, and was one of Staunton's most substantial business men. He is survived by three sons and three daughters. He had been a member of the Hibernians for many years.

Notes on Current Comment.

BY WILLIAM FALCONER.

MODESTY IN NEW JERSEY.—In The Critic, page 116, August last, we read "The School Board of New Brunswick, New Jersey, is said to have excluded the teaching of botany in schools 'On account of the polygamous habits of flowers.'" Isn't the modesty of that Board angelic?

THE GARDEN AT BURNS' COTTAGE, WORLD'S FAIR, ST. LOUIS.—In a recent Florists' Exchange I wrote something about it that evidently didn't please the folks out there. And now in a New York Scottish periodical the "Press Agent for the Burns' Cottage Association" takes me to task about it. The "Press Agent" says I "omit to mention the homely Scotch flowers that are growing in the 'bed.'" Neither does the "Press Agent," and no doubt for the same reasons that I didn't. Further, the "Press Agent" writes: "The Burns' Cottage Association considered it a matter of regret that it was not possible to secure the services of Mr. Falconer himself in arranging the outside environment of the Burns' Cottage. He was asked a number of times to take some interest in what every Scotchman in the United States ought to consider a matter of personal pride, but did not accede." Great heavens, what a whopper! Aside from a contribution, which I gave immediately and cheerfully, I never was asked to do anything, hence never refused.

PAY YOUR DUES.—In the Pittsburg and Allegheny Florists' Club we have 147 members, prompt and right good fellows, and we have fine, big monthly meetings, but nothing like such big ones as when we have a smoker. That takes most everybody out, even the delinquents. At our last smoker the committee ruled that no delinquent members would be admitted. Well, you'd a-pitied the poor secretary; he couldn't have any fun at all. His whole evening was occupied receiving and receipting for dues.

YOUR PRIVET HEDGE.—Last Winter was very hard on our hedges; many pieces were killed outright, other parts to the ground, and in more sheltered parts, while not all dead, a good deal of the twiggy wood was dead. With a heavy mulching of tree leaves or rotten manure over the roots, close up to the plants, along both sides of the row, no matter what becomes of the tops, we can save the bottoms to the snow line anyway. To the plants in nursery rows throw up a furrow of earth on both sides.

NEWLY PLANTED TREES OR SHRUBS.—In the case of newly planted trees, where the roots are moist and the ground well-firmed, it is a good plan to heap up the dirt over the roots in Winter to above the ground level, to hold the tree well in place, to prevent the frost from raising it, and to shed off an excess of moisture. In Spring, though, this heap of dirt should be leveled off, and towards Summer an indentation rather than a mound made to catch the water.

CLEMATIS PANICULATA.—The vines are perfectly hardy and live over to their tips year after year, but don't treat them that way; cut them right down to the ground every Winter as you would a phlox or a delphinium. They will grow up again next Spring as vigorously as or more so than ever; attain as thick a body and as great a height as those left uncut, and blossom as full, and they will have the advantage of being clean throughout and branchy to the ground.

THE GARDENER'S ASSISTANT.—It is with great pleasure I note you advertise this book. It was first gotten up by the late Robert Thompson, superintendent of the Royal Horticultural Society's Gardens at Chiswick, London. Mr. Thompson was then one of the best and most experienced all-around gardeners in Europe, if not the very best, and his field of observation, practice and experiment was greater than that of any other man then living. It was the first book on gardening I ever owned. About 38 years ago I subscribed for it in monthly parts, 2s. 6d. a part. My wages was only 6s. a week. It was complete in 12 parts and then I had it bound, and that old and well-thumbed and blackened volume has a place of honor in my library to-day. It was my textbook for many a year. But the same Gardener's Assistant to-day is a new book, increased immensely in size, modernized in every particular, and that, too, by the Curator of the Royal Botanical Gardens at Kew, London, a man who has the best opportunities of any man on earth for knowing what is newest among plants and most modern in gardening.

CHRYSANTHEMUMS WITH FOLIAGE TO THE GROUND.—It has always been the rule with plants grown at the Phipps Conservatories that if a plant has not got perfect foliage from the ground up, no matter how promising its top may be, its proper place is the rot pile. All of their plants are grown in pots. And it would do your heart good to see how John Jones will smile when his neighbor rivals come around and tell it is flowers they are after and not foliage. But John excels with both. Somewhat late propagation, indoor cultivation throughout, never allowing a plant to become pot-bound until it gets into its flowering pot, rich select soil, hard potting, careful watering, cool treatment, free ventilation, sheep manure and an avoidance of chemicals, frequent fumigating, and timely staking, are his chief points. But John is very generous in allowing to others every credit that's due them. He went up to Philadelphia and New York at the time of their chrysanthemum shows, and on his return he told me: "Oh, Lord, man, you ought to have seen their flowers; some of them were the grandest blooms I ever saw. There was nothing anywhere in Pittsburg to touch them. I tell

you, it takes the conceit out of a fellow when he goes around and sees what other folks are doing. But their pot-plants couldn't touch ours for bottom foliage." And still one of John's blooms this year, by actual measurement at the last Florists' Club meeting, was 14 inches in diameter!

PETER BISSET, WASHINGTON.—Don't get mad about your climate, Peter; you can't help that. Unless something unforeseen happens, hot or no hot, you'll have one of the biggest delegations of florists and gardeners from Pittsburg to see you next August that have ever visited Twin Oaks. I have been telling them about your magnificent woods and your beautiful and extravagant pond lilies, and the fine varieties of aquatics that you have raised, and how you grow the Victorias out-of-doors.

The Tales of a Traveler.

BY WALLACE R. PIERSON.

Once upon a time there lived a certain Yankee, back in New England, and it came to pass that he had a chance to make a trip of a few days' duration. To him this meant a great deal. He had no idea of the extent of his native land and the trip was a revelation to him. On his return he was asked, "Where did you go, Bill?" and he replied: "All over creation, and some parts of New York State."

We of the East are very apt to think that all there is to know can be learned within the limits of our Eastern States, but the florist has also gone westward, and there is much to be learned from our brethren in the West. It has been the good fortune of the writer to take a trip through some of the Western States this Winter, and floriculture as it

NEW SEEDLING ROSE
(Mme. Abel Chateau x Liberty)
Originator Peter Bisset, Washington, D. C.

appears to him in the various places is very interesting and also very instructive. New conditions are met with, and the various changes in climate and soils vary the conditions of growth, and these often prove perplexing problems to the grower from the East, who knows and understands only those conditions which are to be found at lower altitudes.

Joliet, Ill.

On December 17 last the writer had the pleasure of an afternoon with the growers in Joliet. These two prominent carnation firms have been so well written up for the horticultural press that the writer can add very little to what has already been said. Fiancee, at the Chicago Carnation Company's establishment, is without a doubt the center of interest, as the variety has been so widely shown and so thoroughly advertised. To all appearances it is an improved Cressbrook—larger bloom and better plants than Cressbrook ever has produced, but still it resembles the variety very strongly. On the afternoon of my visit a box had been opened which had been packed for nine days, to test the keeping and shipping quality of the blooms, and these flowers, which had been so long in the box, were a notable example of power to withstand the hardship of close confinement, as they were taken from the box in excellent condition. The striking feature of the Chicago Carnation Company's place is the number of cuttings which this concern is handling. Orders for Fiancee have been so large that only a few plants are left to show what the variety can do as a bloomer.

At the J. D. Thompson Carnation Company's establishment Robert Craig is seen, and it gives promise of being a leader among the scarlet carnations. Gib-

son Beauty is a disappointment; and while there certainly could not be a more healthy batch of plants, the ability to throw bloom was lacking, and the withdrawal of this variety is a wise move for those who are most deeply concerned.

Taking these two concerns as a whole, we find good progressive carnation culture, and the neat manner in which the houses are kept is but a testimonial to the axiom, "cleanliness is the basis of good growing."

Denver, Colo.

It is just before Christmas and a busy time for the florists everywhere, and Denver is no exception. The store windows are a mass of color—poinsettias, cyclamens, begonias, and other pot plants. To one who knows the climate of New England it seemed strange to talk Christmas trade to a florist brother with the boys on the street playing marbles on the sidewalk, and the weather as mild as a day in May in the vicinity of New York. No matter how cold the night, it always becomes warm when the sun makes its appearance; and this climate is noted for its abundance of bright, sunny days. The poinsettia especially seems to thrive under these conditions, and it is to be found here as we seldom see it in the East.

THE PARK FLORAL COMPANY.—This concern may, perhaps, be given the first place among the Denver florists. Their establishment has in all nearly thirty-five houses, comprising about 75,000 square feet of glass. About 10,000 roses are planted, embracing the following varieties: Bride, Bridesmaid, American Beauty, Liberty and Mme. Abel Chateau. The climate of Colorado allows the growing with good success of hybrids. These are planted out in good, rich soil and with no protection in Winter except a slight covering of litter. This is removed in the Spring, and the sash are put into place and the plants protected while in bloom. This firm makes a specialty of Begonia Gloire de Lorraine. Tens of thousands are sold from small pots annually. A bench of Adiantum Croweanum is very interesting. In this climate ferns do not thrive, and this new adiantum has shown itself superior to all others. It has been grown here some three years and is by far the most satisfactory of the adiantums. Nephrolepis Piersonii, bostoniensis, and Scottii are also to be found; the last-named is a favorite here.

About 15,000 carnations are benched. White Lawson, Governor Wolcott, Lorna, Mrs. T. W. Lawson, Enchantress and Flamingo being grown. There are also a number of the firm's own seedlings. The amount of pink which the blooms of White Lawson show is very noticeable, and if it shows this amount of pink in the sunshine of Colorado it certainly cannot all be blamed on dark weather in the East.

J. E. Valentine is the owner of this concern and he has an able assistant in Mr. Sked, who is his foreman.

THE COLFAX AVENUE FLORAL COMPANY.—This firm is situated very near the Park Floral Company and has about the same amount of glass. Roses and carnations are here the principal crops; and some 8,000 of the former are benched, while 16,000 will cover the carnations planted. The roses are confined to Bride, Bridesmaid and American Beauty; and the carnations are made up principally of Mrs. T. W. Lawson, Queen Louise, G. H. Crane, Enchantress, Fair Maid and Harlowarden. A very fine stock of bedding plants is carried by this firm, and here, as elsewhere, the flaming poinsettia is in its glory. Mr. Beers, the owner of the concern, reports an exceptionally fine Christmas trade.

N. A. BENSON.—About 35,000 feet of glass in the southern part of the city makes up the place of which N. A. Benson is proprietor; and his friends in the city give him the honor of being the best carnation grower in the vicinity. A well-kept, clean place and good stock are to be seen here—not up to our Eastern standard perhaps in some respects, but very fine, when the adverse conditions are taken into consideration. Three houses of roses, with Bride, Bridesmaid, Liberty, Mme. Abel Chateau, and American Beauty occupying the space, are seen. Four houses are devoted to carnations; Mrs. T. W. Lawson, Enchantress, Harlowarden, Flamingo, Lorna, The Marquis, Mrs. Potter Palmer, Adonis, Prosperity and Norway making up the list of varieties. The two last named are at present looking the best, but a white Enchantress, which is being worked for stock, and White Lawson, will be counted on for white the coming season.

Comments.

The roses in Denver are hardly up to the roses of the East and prove the hardest to grow here of all the greenhouse stock. The soil of Colorado does not suit the rose, but here potted plants are done exceedingly well. The American Beauty is nearer to the standard than the tea roses; and where the soil can be secured which Beauty demands, it is well grown.

It was not possible for me to see all the florists of this city; but there may be something in these notes of interest to those whose good fortune it has not been to pay this section a visit.

A New Seedling Rose.

The illustration herewith represents a new rose raised by Peter Bisset, Twin Oaks, Washington, D. C., who describes the variety as being the result of a cross between Mme. Abel Chateau and Liberty. The color is a pink deeper than that of Bridesmaid, with the reverse of the petals several shades deeper than the face. The growth is very free, and healthy; flowering freely, and on good stems. The blooms, when fully open, resemble those of La France somewhat.

FERN FOR NAME—O. J. R.—The fern sent for name is *Nephrolepis davalloides*.

Paris Green for Thrips Outdoors.

(160) We note in *The Florists' Exchange* in W. R. Pierson's notes on carnations that he advises the use of Paris green outside for thrips. Will you kindly advise us as to the manner of using it, also the quantity required and number of times or intervals between time necessary to apply it? R. & B.

—In answer to the foregoing inquiry I would say that there is very little use in using Paris green during wet weather. Thrips thrive when the weather is warm and dry, and are to be found in quantity when the grass begins to head up and set seed. At this time of the year and during July and August especially, we give the spaces between the houses a light dusting of Paris green, using the same machine employed by farmers to dust the poison on potato vines to kill the potato bug. A very light dusting is all that is needed, but the exact amount of the material used will vary with the width of the space between the different houses. As a rule, one pound of Paris green will go the both sides of a 300-foot house. In applying this poison, make sure that it leaves the machine as a very fine dust, and that it settles evenly over the grass. We try to apply this in the early morning when there is sufficient dew on the grass to hold the Paris green. This applied after a rain will be effective until the next rain as a general rule, and it is unnecessary to apply the insecticide during a spell of rainy weather. Thrips do not thrive when there is an abundance of moisture. These insects get their food from the outer portion of the leaves, or petals of the blooms, as the case may be, and this makes a dusting of the grass on which they are living very effective. Keeping down the grass and preventing it from going to seed is also beneficial, and if this is done and the spaces dusted with Paris green the danger of thrips from this source is greatly lessened. W. R. PIERSON.

Plants and Flowers for Easter.

(161) I have just completed a greenhouse and wish to grow some stock for Easter. Kindly tell me through the columns of your paper some good flowers to grow, both for pot plants and cut flowers. Please classify those which may yet be started from seed, and state when is the proper time to sow seed of same. SUBSCRIBER.

—There would not be much demand at Easter time for such stock as could be grown from seed started at this date, and we would suggest the purchasing of young plants of such kinds as heliotrope, fuchsias, geraniums and pelargoniums of the fancy kinds. These could be had quite reasonable in price at this time, and, if grown on carefully, would make you a fair profit. For bedding plants, to be sold after Easter, it would be time enough to sow in January, or even later, for a good many kinds. By watching the reading and advertising columns of *The Florists' Exchange*, full information regarding the sowing and the raising of the different flowering plants will be ascertained.

Soft Coal Soot for Carnations.

(162) Can I use soft coal soot in the cultivation of carnations to advantage; if so, what is the best method of application and to what extent, etc.? J. W. P.

—Soft coal soot is a good fertilizer and can be used to advantage on carnations, adding color to both foliage and flowers, besides helping to keep the soil sweet and free from slugs. To apply the soot, give just a thin dusting over the surface, repeating as often as it is seen the soot has been washed into the soil.

The Rathbun Blackberry.

(1) Can you inform us who introduced the Rathbun blackberry? A SUBSCRIBER.

—Fruit authorities say this blackberry was sent out by A. F. Rathbun, Smith's Mills, N. Y. J. J. M.

Sedum for Bedding Purposes, Etc.

(2) Please let me know which variety of sedum is best to use for carpet bedding? When can I sow the seed to have nice plants by June 1? Also when can I sow *Stellaria graminea aurea* and *Stevia variegata*?

—The sedums most suitable for carpet bedding are *S. acre*, *S. acre aureum*, *S. corsicanum*, and *S. glaucum*. If seeds can be obtained they should be sown as early as possible. The general mode of propagation is by division, either in early Spring or in the Autumn.

The *Stellaria graminea aurea* should be sown the first week in March; and the *stevia* at the same time.

Moving Trees in Winter.

(3) We want to move about ten miles. Would you advise to take some apple, magnolia and chestnut trees, with frost ball, moving them during frosty weather, and plant them again? Also, which is the proper time to spray trees for scale? C. H.

—It will be perfectly safe to move the trees while the ball of roots is frozen; but the roots must be well protected from frost while out of the ground. The best time to spray the trees is in the early Spring before the leaves burst out; at that time every part of the trunk and branches can be covered much better than after the trees are in full leaf.

To Keep Pipes from Freezing.

(4) Kindly advise me the best way to keep a 2-inch pipe, 30 feet long, from freezing. The pipe runs from the ground to a tank, with no building around it. SUBSCRIBER.

—The pipe should first be wrapped with several thicknesses of felt building paper and then inclosed in a box 1 foot square inside. This should have double wooden walls, with two or three thicknesses of building paper between, and the box should then be packed with sawdust or some other non-conductor of heat. In extremely cold weather a slight movement of the water in the pipe should be provided for. Of course, this is with the understanding that the tank is so located that steam or hot water heat cannot be provided. L. R. TAFT.

Regarding Pressure.

(5) I desire information regarding pressure on a hot-water coil boiler. I have a city pressure of 65 lbs.; if I turn the city pressure of 65 lbs. on my boiler, run the gauge to 65 lbs., then turn the city pressure off, will I still have the 65 lbs. pressure, or will I have to keep the city pressure on my boiler to maintain the 65 lbs. pressure? Also, if my boiler makes one pound pressure above the city pressure, will it back the city pressure into the city main? Also, is that a high pressure for a coil boiler made from 2-inch pipe? Is 65 lbs. water pressure as great as 65 lbs. steam pressure? F. H. S.

—While the pressure would be the same after as before the city water was shut off, it would vary with the temperature of the water in the pipes, increasing as the temperature rises and the water expands, and becoming less as it cools. However, if the system is to be worked under pressure from the city mains, they should be left with the valve open. The connection however, should be such that the water could not run out from the system in case of a break in the pipes, and there should be a safety valve to prevent an explosion in case the main is shut off. If the pressure in the system becomes higher than that of the water pressure, a small amount of water would be forced out of the heating pipes. A good boiler would be safe with 65 pounds pressure. L. R. TAFT.

A Carnation Cut.

(6) I have a carnation house, 60 feet deep, 5 feet wide; side bench, 60x2 feet. The varieties are: Prosperity, Enchantress Governor Roosevelt, Mrs. Lawson and others. I have cut from October 1 to December 31 5,726 blooms. I would like to know if any one has produced as many flowers from such a small space. I had some with disease, but have found a remedy that will destroy all germs on carnations. It all lies in the soil. I am now trying an experiment on violets which I think

will also be a success and will write if it should prove so.

J. R. BURFEIND.

—The cut of carnations is certainly a heavy one from such a limited amount of bench space. We would like to hear more about the cure for disease in carnations.

Sweet Peas Not Blooming.

(7) What is the matter that Blanche Ferry sweet peas do not bloom? They were planted in about first of September; the vines are now 3 x 4 feet high, but give no flowers. Mount Blanc, planted at the same time, has been flowering for two or three weeks. K. BROS.

—The sweet peas have made a good growth and, perhaps, if they are kept a little on the dry side for a time, they will commence to flower. It often happens, through too heavy feeding, that the peas will make excessive growth in vines and produce but few flowers until the feeding has been stopped.

Cold Storage Lily of the Valley Pips.

(8) Kindly inform me as to the best treatment to give to cold storage lily of the valley pips that have just finished blossoming? How soon will they bear flowers again? F. K. J.

—Lily of the valley pips that have been kept in cold storage for some time, and then forced into flower are not worth much for future blooming. The best thing to do with them is to throw them away and purchase new ones for next season.

Hollyhocks.

(9) Can I grow hollyhocks in pots and bloom them for Spring trade? If so, when shall I sow the seed? F. H. S.

—We do not believe that hollyhocks could be successfully had in bloom for Spring trade. Their time of flowering is in late Summer, and they do not do their best until the second year from sowing the seed.

Candytuft, Pansies, for Decoration Day.

(10) I would like to know what time candytuft should be sown so as to have plants in bloom by Decoration Day? Also, if pansy seed were sown now, would the plants bloom by Decoration Day? S. J. C.

—Pansies and candytuft, if sown at this time, will be in flower nicely for Memorial Day.

Rose Crimson Rambler for Easter.

(11) When should Crimson Rambler roses for Easter blooming be started? VIRIDIS.

—Easter comes quite late this year—April 23; and the roses need not be started until the first of February.

Violet Scald.

(12) I am sending under separate cover some leaves from my violet house to see if you can kindly tell me the cause of the edges being affected in the way the sample shows. It spreads quite rapidly through the house, although I try to keep the affected leaves picked off. The plants have made a luxuriant growth and seem to be very healthy. A. J. D.

—Professor Galloway, in his book on Violet Culture, calls this disease scald, or edge burn, and says: "The trouble may be brought on by a number of causes. It is often the result of using strong liquid manure, either organic or in the form of chemical fertilizers. Such liquids, when applied to the soil and roots, seem to temporarily check the latter to such an extent that they cannot take up the water or food, and when the sun is warm the young leaves have not sufficient moisture to serve for growth. The disease may also be brought about by allowing the soil to get too cold. By attending to the conditions mentioned, looking carefully after the watering, and seeing that the soil is not too heavy, little trouble need be feared from this disease."

Lime Refuse from Acetylene Gas Plant as Fertilizer.

(13) Please tell me if the lime refuse from an acetylene gas plant is of any value to land? E. H.

—It is claimed to be an excellent fertilizer. Write to the Acetylene Journal of Chicago for full information on this subject, or to your State Experiment Station.

Heating Problems.

(14) I have two greenhouses which I piped as follows for steam: I have a 12 horse-power boiler; from it the 2-inch flow rises 10 feet above the bottom of the boiler and falls 1 inch in 15 feet to the other end of the house, where it falls 3 feet 4 inches into the coils which are on each wall plate, with five 1 1/4-inch pipe in each, and back falling 1 inch in 15 feet, where four coils are run into one 1 1/2-inch pipe and into the boiler at the bottom. Now, I wish to use hot water but the water does not circulate more than half-way back in the coils. What can I do to help it? I have an expansion tank above the highest point and an inch pipe out through. Would a 1 1/2-inch gate valve on the return, close to the boiler, help it? The houses are 60 feet long, 16 feet wide (two), open in center. C. E. S.

—From the description given it would appear that there is one 2-inch flow pipe and one 1 1/4-inch returns in each of the 60x16-foot houses. If to be used for hot water there should certainly be an expansion tank connected with the highest point of the system, with air valves, whenever necessary, for letting out the air. While it is not clear, it is possible that the trouble referred to is that there is no way for the escape of the air from the system except through the air cocks in the system used for steam. This would account for the trouble as described. With this difficulty corrected, it would not be possible to obtain satisfactory results with the system as now arranged. In the first place, there should be about 420 square feet of radiation in a 60x16-foot house to heat it to 60 degrees in zero weather, and such a system should be connected with the boiler through two 2-inch flows or one 2 1/2-inch, with the returns of the same size. From the description given it would appear that there is but one 2-inch flow in each house and that a 1 1/2-inch return serves for both houses. In mild weather it might be possible to get fairly satisfactory results with the one flow in each house, but there should also be a return of the same size; or a 2 1/2-inch return would answer as a common return for the two houses. With two 2-inch flows in each house, the ten 1 1/4-inch returns on the coils should be sufficient to maintain a temperature of 60 degrees in zero weather. L. R. TAFT.

Reply to Chas. H. Zundel, who submits a plan of houses.—From the plan, it is evident that the old house was heated by two 2-inch flows running 115 feet to the farther end of the house, where they entered a header, from which three returns led back to the boiler. From the flow end of the header connection is made with the coil in the new house, from which the return connects with the return end of the header. It is not at all strange that no circulation in the new house can be secured with this arrangement unless, as is hardly probable, the coil is several feet above the header. The best way out of the difficulty would be to place in the new house a coil similar in construction to that in the old house. One of the flow pipes now in the old house could be disconnected from the coil and used to supply the coil in the new house. In the same way one of the present return pipes could be used to serve as a return from the new house. L. R. TAFT.

Please let me know what size radiator for hot water or steam I will require in a room 15 by 15 feet; there are three windows, 2 feet 6 inches by 5 feet, exposed to the north and west. F. C. S.

—If hot water is to be used for heating from 60 to 65 feet of radiation, according to the height of the room, will be required. For steam radiation, the amount should be from 35 to 40 square feet. L. R. TAFT.

Please advise as to the amount of radiation, in steam, will be supplied to put on the following sizes of flow pipe: 150 feet long, 4 inches, 3 inches, 2 1/2 inches and 2 inches, to work under low pressure, gravity system. S. BROS.

—A good deal will depend upon the size of the pipes used in the coils, as a flow pipe of a given size will supply a larger number of feet of radiation

when 1-inch pipe is used for the coils than of 1½-inch pipe. In a general way it can be said that a 4-inch main, using low pressure, will supply 4,000 to 6,000 feet; a 3-inch will suffice for 2,000 to 3,000; a 2½-inch, from 1,000 to 1,500, and a 2-inch main, from 600 to 800 square feet of radiation. By increasing the pressure a considerable increase in the amount of radiation can be secured, especially in the case of the larger sizes.

I built three new greenhouses last season and put in a pipe boiler which had twenty-four rows of 1-inch one way by 18-inch the other; 4-inch pipe is connected to the boiler, both flow and return, and sixteen rows of 1½-inch pipe in two outside houses with twelve pipes in the middle one. Will this be enough to give me 60 degrees in very hard weather? Also, I have a fourth house coming right across the ends of the third. Cannot the return be brought out of each outside house, around the north and east ends, and into the boiler again to give me 40 degrees? The three houses are 50 feet; the end one 53 feet. W. G. W.

—The correspondent does not mention the length of the coils in the boiler and no idea of its capacity can be obtained from the description given. However, in a general way, it can be said that coil boilers are not especially desirable, except from the standpoint of a low first cost, and that if they are to be used, it will be better to have the coils constructed of pipe larger than 1 inch. It will also be impossible to give a definite answer to the remaining portion of the letter, as the width of the houses is not stated. It can be said, however, that at most, with a boiler of ample size and properly constructed, the number of pipes given would not maintain a temperature of 60 degrees in zero weather if the outside houses are more than 15 and the middle one more than 12 or 13 feet in width. If the pipes in the coils were 2-inch, it would be feasible to carry them around through the end house and secure a considerable heat from them, but anything of the kind would have a tendency to check the circulation in the small pipes, which at best cannot be any too good. While small pipes may be used in closed systems, or when the houses are short and the boiler is well below the level of the returns, it will generally be better not to use pipe smaller than 1½-inch for the returns, and 2-inch will be better in houses more than 50 feet in length.

L. R. TAFT.

CANADIAN NEWS

MONTREAL.—Business has been very good since Christmas. The weather moderated considerably on New Year's eve, so there were no frozen plants to replace on January 3. New Year's trade was very good, a number of orders for funeral designs helping to swell the day's receipts. Cut flowers are plentiful, but are wholesaled at high prices, thus checking the demand somewhat. Violets were slow sale. Daffodils have made their appearance, but are short-stemmed.

The Florists' Club will hold a carnation show during the latter part of February. W. C. H.

TORONTO.—Business since Christmas has been rather slow; the wholesale prices of stock kept up, but the first part of the week being somewhat cold and dull and everything cut so close for Christmas, was the cause of this, not the demand; in fact, on Saturday there was more than enough in hand to supply the call there was at the holiday prices, and, in many cases, values had to come down. Violets are coming in more plentifully now and they are generally of good quality. Carnations, also, are very good and are also arriving freely. There appears to be a fair supply of good American Beauty offered.

Edward Hoskins and James Rossitter have both given up their stands on St. Lawrence Flower Market, Mr. Hoskins through ill-health. Mr. Rossitter can make as good prices for his stock at wholesale as on the market without so much loss of time.

Frank Duffort has his wife and four of his family down with diphtheria, some of them in a serious condition. Both of his sons are down, which leaves him very short-handed. We hope they may soon recover.

THOS. MANTON.

OTTAWA. — Christmas weather showed 13 below zero; New Year's, 40 to 50 above. The thaw came in very handy, as, owing to the snow, sleet and hard freezing, the cooler houses were covered with a sheet of ice which was hard to remove; but the past forty-eight hours has removed it.

C. Scrim had a fine bed of Mrs. T. W. Lawson carnation—1,200 planted in all Summer, and they have been most prolific since Fall. On December 1 they looked so full of bud and flower, I decided to see how many were cut during the month. A faithful tally showed 4,087—a nice lot, but quite deceiving, only 3½ to a plant, which seems a small score by the plant. But 1,400 were cut Christmas Eve and morn, which filled quite a gap. E.

THE WEEK'S WORK.

Timme's Timely Teachings.

Propagating.

From now on the propagation of nearly all the leading kinds of greenhouse plants from seeds and by cuttings, will demand the principal portion of our time, forethought and attention. To obviate a too frequent repetition, when dealing separately with the various kinds of plants, a brief description of ways and methods, as here given, will serve the purpose.

In buying seeds, get the fresh article, and select the best strain obtainable. The difference in price is made up tenfold by the better product. This is true, in the present status of trade, more than ever before. In taking cuttings, select the healthiest and strongest, and in potting them up after they are rooted, reject every cripple or diseased one. If done at that juncture, instead of later, much labor, time and room are saved. Bottom heat accelerates propagation, and this is the time of the year when it can be provided in a measure regular and reliable. This is also the time when atmospheric conditions under glass are easiest controlled. Good cuttings will root in sand of any color or texture, if it is clean; while cuttings, too hard, too sappy or otherwise unfit to be taken, will not properly do so in the finest silver sand, washed, sterilized or doctored. A layer of three inches on a tile bottom is sufficient in the bench for cuttings, unless too great a bottom heat prevails, when a heavier layer will have to be employed. Firm the sand solid before the cuttings are inserted; these also should stand firm and so, that some effort is required to pull them.

One inch of sand on the tiles, evenly spread, forms a bed on which the seed boxes are placed. These should be of one size and so made as to width or length that they just fit into the bench, and when filled are not too heavy to handle for one person. A clear inside depth of two inches, or a little more, is about right; while plants to be transferred or pricked off from these flats into others require a depth of three or four inches.

Old, stale soil out of benches, in which stock has been growing, should not be used for filling seed pans or boxes; let it be a mixture of good, fresh, sandy loam or porous compost, sifted and reasonably moist. In sowing see to it that the seeds are not over-thickly scattered on the box, but evenly distributed over the surface. Press them into the soil with a heavy but smooth piece of plank or board, and now carefully, before covering the seeds, water. Large seeds may now be covered with a thin layer of loose soil, leaf-mold or finely broken up moss; however, the seeds of most kinds of greenhouse and bedding plants require no covering—none but boards or paper, laid over the boxes—until growth shows, when full light is admitted. Some practice and the exercise of care are required in providing the necessary degree of moisture for cuttings in the sand and seedlings in the boxes.

Not enough or too much is equally fatal to feeble, new-born plant life. Here experience and good judgment are of value. Thousands of seedlings may damp off in one night for the want of pure air, or on account of being over-watered, or because the soil is too highly fertilized or soured. In such a case, a speedy transplanting into other boxes or into small pots will save them, if done in time, though, in most instances, the trouble is discovered too late; and the little plants, so treated, will continue to perish right along, although they may brighten up and grow on for a time. In the case of some kinds of the more common bedding plants this timely shift is a sure cure, while with others it is a total loss of labor and plants. Marguerite carnations, Begonia Vernon, Two-week stocks, and a few

other things will start to grow at once and become fine plants, if a shift is given in time. On the other hand, if cinerarias, snapdragons, salvias and especially asters once begin to show signs of damping off in the seed boxes, it is not worth while making any effort to save them, or to cut down the death-rate by a transfer into other boxes or pots. Such plants in nearly all cases are doomed, and the work of sowing the seeds may as well be done over again. The main cause of all this trouble is traceable to fungoid impurities in the soil used, and, therefore, a thorough-going propagator does not think of sowing seeds into a soil that has been lying in the greenhouse or shed for any length of time, but draws his supply directly from soil in the open air. If this is brought in a day or two before it is to be used, it will be in good condition.

Seedlings, when first potted off, should be planted rather deep; put to their first leaves is none too deep for most of them. All newly potted young stock needs a protection against bright sunshine for a day or two. Nothing so far, in the line of shading material, has proved handier or more convenient than the light, movable lath-frames, on which muslin is nailed. They are quickly placed and removed, and from early in the afternoon until the sun gets high next morning, the plants receive the full light, as also on dark days. All this great benefit to young plants would be cut off by employing lime-wash or a permanent paint shading, which here is a detriment to the welfare of the stock, while, as a shading for large areas of flowering crops during Summer, it is the proper thing.

Gloxinias.

As soon as the fresh seeds of gloxinia can be obtained, they should be sown. I prefer to do this in the first weeks of the new year rather than much later. Instead of wooden flats, earthenware seed pans should be used for gloxinias. Fill these nearly half full with the turf-like pieces of semi-decayed, well-liberated sod soil, and on this spread the final layer of finely broken up leaf-mold about a year old, thoroughly intermixed with sand. On this the seeds are sown. A temperature of 65 degrees with bottom heat somewhat higher will result in a stand of fine little plantlets in two or three weeks. Now more light and air is given to wean them to conditions more apt to promote health and vigor. Still, the temperature should not be lowered much, nor should the young plants be deprived of bottom heat, if available, until the plants are of good size and benefited by the warm days of approaching Summer. In repotting, always use a light, porous and sandy soil, and shade on sunny days. Heat and a moist atmosphere are essentials in gloxinia culture.

One-year-old bulbs of gloxinias may be wintered over, if kept in their pots, in a warm and dry place till February, then taken out and potted into new earth. Give them a warm stand, but no water until the new growth begins to push, and then sparingly, for this is the critical point in the starting of old gloxinia bulbs, when lurking decay is ever ready to take advantage of proper conditions for speedy attack, brought about by ill treatment. If a good portion of drainage has been provided in the pots, and when finally the plants attain size and vigor, the danger from over-watering is not great, and these plants will now grow into good-sized specimens and bloom a trifle earlier than the seedling gloxinias, but are in no other respect superior to these. I prefer to grow them from seeds every year. A plant, exceptionally fine, discovered in a batch of flowering gloxinias, may easily be multiplied by leaf propagation. Little bulbets soon appear on a layer of warm sand, which, under proper treatment, grow rapidly into plants of good size, often blooming the same season.

Floriculture in bygone years made good use of this beautiful genus, of which gloxinia seems the only one nowadays worth considering, while the once so highly prized sinningias, gesnerias and achimenes have had their day. Their culture is, in the main, the same as that given for gloxinias, and should be encouraged, for, like gloxinias, they help to make a greenhouse most attractive and are by no means wholly unprofitable to grow.

Primula Obconica.

I am aware that many growers do not think of sowing *Primula obconica* before March or April, but I have found that, by sowing the seeds of this most useful plant in January, I obtain a set of plants easier to manage during Summer and early Fall, and I believe in every way superior to the later started and less forward portion of the annual output. The seeds should be sown on a sandy, well-decomposed sod soil, or meadow-mold, and started in a hothouse temperature where they will quickly germinate. After the young plants have been once pricked off and again have attained good size, they are potted up and later on, planted at reasonable distances into a moderately warm frame outdoors. As Summer advances, plenty of air is given, and, although they require a shading on bright days all through the Summer, this should not be too dense, and should be so arranged that it can be removed on cloudy days and at night. Watering must

not be neglected, but should be given in moderation. Any straggling buds, prematurely formed, are cut out. In August the plants are potted up, but remain outdoors until real cold weather sets in, when they are removed to the house. Frost must not touch them, but a pretty cool stand suits them. A few weeks later, a course of gentle forcing will bring them out.

This *primula* possesses all the requisites which go to make an ideal market plant—not over-difficult to grow, demanding, owing to its fine habit of growth, but a moderate space on our benches, strikingly beautiful in form and bloom, within reach as to price of the great majority of buyers, and satisfactory after it is bought.

Last year some cases, none serious, of poisoning by contact with *Primula obconica* were reported. It cannot be denied that the plant is possessed of properties which make a careful handling of the branches and foliage, especially when moist, advisable. The upper surface of tender-skinned hands is most easily affected, but the irritation is soon subdued by an application of ordinary soap, or linseed oil. It is not nearly as bad or painful as a poison oak or sumach poisoning, as has been stated, and it is unlikely that this somewhat magnified attribute of *Primula obconica* will ever be able to appreciably diminish the great popularity the plant so rapidly gained and justly merits.

As the presence of harmful poisonous matter in many plants, largely cultivated, becomes better known, a less frequent indulgence in the pernicious and vulgar habit of wearing flowers in the mouth and chewing their stems will be the result; and that is something to be thankful for.

Sweet Peas.

A small bench of sweet peas, or a few vines on post, back wall or pillar, lend a cheerful look to any place where home trade means everything, and the growing of nearly everything makes home trade. Here a few hundred vines of sweet peas add considerably to a much-needed variety of material for cutting, as also to the attractiveness of the place, if neatly trained up and kept clean of insects and dying foliage. On such a place sowings should be made repeatedly so as to keep up a succession of fresh vines and long-stemmed blooms.

Quite another thing, and to be considered from a different viewpoint, is the raising of sweet peas for the wholesale market. If well handled, this phase of outflowing growing swells the receipts of an establishment considerably. It pays, if sufficient room suitable for this culture can be spared; otherwise, it does not. "Go in deep or not at all" is a good advice in this case, and is not likely to fall into discredit, if due consideration is given quality as well as quantity. I have found that a continuous crop of good flowers, picked and marketed from early Spring until the outside grown article comes in, pays best. To this end the seeds should be put in now, and not later than the middle of February.

There was a time when carnations, brought in from the field in September, furnished an immense crop of blooms for the holidays, and were then thrown out, to invariably make room for sweet peas, and these in turn for potted stock or early flowering chrysanthemums later on. This plan worked admirably, at least at that time, and not the least profitable crop in the chain of succession was the sweet peas. Now different methods prevail, and sweet peas are made to succeed chrysanthemums directly, and these are gone. In so doing the same soil may be utilized just as it is for the peas, which therein will do very well if liquid stimulants are not withheld later on, after the buds appear.

Cannas.

After having placed the large clumps of canna roots under a bench last Fall, we turn our backs, satisfied that with cannas at least we are plentifully supplied for the coming Spring. But sometimes it turns out quite differently. Instead of plump, bright roots we find a mass of worthless, struggling plant life, or, perhaps, heaps of mouldy decay. Since canna roots are always good property in the Spring and easily turned into cash, it pays to examine them occasionally during times of hard firing, or spells of zero weather. Sometimes a timely removal to more congenial quarters, or merely from the bare ground on to boards, or a covering with paper as a protection against drip, too great a heat from nearby pipes or the possible inroads of frost, will save them.

However, cannas are easily grown from seeds. If sown now, a fine stand of good four-inch plants may be secured for Spring trade, and many of them in bloom at that. If the seed boxes are kept moist, and in a pretty warm place, the hard-shelled seeds will break willingly and send up the little plants in a short time. Some of them may hang fire, but the majority come or two and then a careful peeling helps to hasten them. A frequent shift into pots a size larger, plenty of heat and moisture, will speed them along nicely. FRED. W. TIMME.

Review of the Market

NEW YORK.—Stock was not over-plentiful and all lines cleared out fairly well. Prices were somewhat lower than those obtained at Christmas, as the demand was not brisk enough to warrant holding out for those figures. Violets were probably cut more than any other flowers, as these alone showed a marked increase in the supply.

Since Monday business has fallen away considerably. The severe blizzard that struck the city on Tuesday evening, lasting over Wednesday, had the effect of curtailing what retail trade there was, and the end of the week found the market in anything but a satisfactory condition. Many consignments were delayed in transit on Wednesday, owing to the railroads in places being snow-bound. Particularly was this the case with the Long Island shippers. Boxes that should have arrived in the early morning did not reach their destinations until well into the afternoon, all of which helped to put the market into quite a congested condition on Thursday, when that day's consignments had arrived. Carnations are particularly plentiful, considering what little demand there is, and prices have gone down all along the line. Roses not being so very abundant, are clearing out better than carnations, though the prices have been reduced since Sunday. Violets have experienced the severest cut of all, and flowers one day old are freely offered at three bunches for a dollar. Lilies also have taken a great drop; while orchids and lily of the valley remain about the same as last recorded. White and red single tulips have appeared, the former being offered at \$2 per 100 and the red ones at \$3. There does not seem to be any great call for them as yet, however. Paper narcissus and Roman hyacinths are in heavy supply, with only a slow demand for such white material. Considering the unpleasant weather that has prevailed during the week, we are not surprised at the sudden drop in values of some of the staple flowers. Supplies are not over-abundant, however, and should pleasant weather come, we shall no doubt see business quickly take a turn for the better.

BOSTON.—Business has been fairly brisk the past week, the demand for nearly all kinds of cut flowers being equal to the supply. In roses American Beauty are inclined to be scarce, although the call is not nearly equal to what it was three weeks ago. They maintain equally as good prices as they did a week ago. Queen of Edgely and other fancy varieties are not appearing in such quantities as they have been. Bride and Bridesmaid are in abundance, but prices have kept up fairly well, the best grades of these bringing \$8 and \$10. Carnations are plentiful and first-class blooms, too; never were better. Enchantress seen than those that are in the market these days. All colored varieties sell readily, but white sorts are still druggery. Violets are again plentiful; the last few bright days having brought them into crop and prices have accordingly fallen off from those a week ago. Lily of the valley continues without much change, the supply being sufficient; prices have not varied. Lilies are not appearing in great quantities, and no change has been made in values. Bulbous stock is coming in more plentifully; in fact, too much so, and the demand is so small that the market is overstocked. J. W. D.

ST. LOUIS.—Our florists have enjoyed an era of prosperity, and a bright future is predicted for the new year. Business the past week was a little quiet, and New Year's Day occasioned but little increase for wholesaler or retailer; but from the reports of the uptown retailers a very good day's trade was experienced. The market is fairly well supplied with stock. Carnations are moving better than expected; values have gone down on all grades, and eight-cent stock of the past week is now selling at 6c, including Enchantress, Mrs. T. W. Lawson and Prosperity. Good stock in other varieties bring 4c; common, 3c. White is in great demand.

American Beauty roses are still selling well at \$8 and \$9 per dozen for long, fancy stock, which is in limited supply; the medium grades bring \$3 and \$4, and are the best sellers, clearing up each day. Best grades of Bride and Bridesmaid, also Liberty and Meteor, bring \$8 per 100; other grades from \$4 to \$6 per 100; this stock is quite plentiful at present.

Violets have taken quite a slump. They have increased in quantity this week; prices Tuesday were 75c to \$1 per 100 for best California. Bulbous stock is beginning to be more plentiful, as the demand is not so good, and prices will drop accordingly. Roman hyacinths and Paper White narcissus are now at \$2 to \$3 per 100; lily of the valley, fancy, brings \$4, and from that down to \$2 for poor stock.

Callas and Harris lilies realize \$1.80 per dozen; stevia, fancy, \$1.50 per 100; sweet peas, \$1 and \$2. Smilax and asparagus are good sellers at usual prices. The weather for New Year's Day was warm and bright; to-day (Tuesday) we are having snow. ST. PATRICK.

CHICAGO, ILL.—New Year's business showed no great demand, and at closing time Monday a considerable quantity of stock was still on hand. On the opening of the week's business on Tuesday prices were lower than they had been in some time. The weather was inclement, and not much buying was being done. In American Beauty the supply is equal to all demands at the present time, quality is good, long-stemmed stock selling at from \$5 to \$6 per dozen; medium grades, \$2.50 to \$4 per dozen; shorts and other grades from 50c. to \$2 per dozen. Bride and Bridesmaid are in good supply, and several growers are cutting some extra fancy stock which is selling at \$15 per 100, other grades bringing from \$2 to \$12. Meteor are in good demand, at from \$4 to \$15 per 100. Liberty, in fair supply, is selling at from \$4 to \$25 per 100; Golden Gate at \$15; Perle des Jardins at from \$3 to \$10; Mme. Abel Chateau is in good supply and the demand for the better grades is good; the price is \$12 to \$15, a few extra select going above the latter figures, down to \$4 to \$10 per 100. Sunrise brings \$3 to \$12 per 100.

Carnations are in ample supply and are not moving as freely as could be desired. The quality is good. Whites of extra size are seen in some of the houses; Mrs. Thomas W. Lawson also is at its best, as is Enchantress. The pick of these is sold at from \$5 to \$6 per 100; other grades at from \$2.50 to \$4 per 100; ordinary and inferior stock at \$1.50 to \$2 per 100.

Violets do not seem to be wanted here at any price, buyers not caring to handle them. They realize 50c. to \$1.50 per 100. Lilies are not over plentiful at from \$1.50 to \$2.50 per dozen. Callas are seen in larger quantities than heretofore at \$1.50 to \$2 per dozen. Roman hyacinths and Paper White narcissus are in large supply with light demand, at \$1.50 to \$3 per dozen. Single tulips have begun to appear in several of the houses, bringing from \$2 to \$4 per 100. Daffodils realize \$4, and freesias, \$4 to \$5 per 100. Sweet peas, \$1 to \$1.50; lily of the valley, \$2 to \$4; smilax, \$12 to \$15; asparagus, \$25 to \$50; A. Sprenger, \$25 to \$50 per 100. R. J.

INDIANAPOLIS, IND.—Holiday week did not demand the flowers and decorations for social affairs that it usually does, so that, with the exception of a quantity of funeral work, business was not as brisk as expected. The demand for New Year's is not nearly what it used to be, and might almost be taken off the florists' calendar.

Stock is quite plentiful at present and prices have decreased perceptibly. With the exception of a few roses and carnations, no stock is being shipped in. Thirty-six inch American Beauty roses have decreased in price from \$12 to \$8 per dozen; 24 to 30-inch sell at \$4 to \$5, and 12 to 14-inch at \$1 per dozen. Select Bridesmaid and Bride, stems 18 to 24 inches in length, bring \$8 per 100. No. 1 Bridesmaid and Bride, \$6 per 100. Mme. Abel Chateau, of poor quality, are being received; the best sell at \$10 per 100. Select Liberty may be had at \$12 to \$15 per 100. The customary retail price for good Bridesmaid and Bride is \$2 to \$3 per dozen. Violets are again plentiful, any quantity of Marie Louise can be had at \$150 per 100. While no poinsettias are to be had at wholesale in this market, there are quantities of them disposed of at retail from \$2 to \$6 per dozen. Bulbous stock is very plentiful; Roman hyacinths, Paper White narcissus, jonquils and lily of the valley wholesale at \$3 to \$4 per 100. The few decorations on hand consume the remainder of holiday plants; never before was this line of stock been cleaned up so well.

Tomlinson Hall Market reports a very satisfactory business. I. E.

PITTSBURG, PA.—Trade after Christmas was somewhat slow, but New Year's business was better than it has been in years. Cash sales with a few retailers were almost equal to those of Christmas. At present business is satisfactory; society affairs, receptions, etc., are numerous. Prices remained high until after New Year's, when a slight change was made. Some fine carnations are coming in, being quoted at from 3c. up. Violets are down to \$.50, selling fairly well, excepting singles, which are in little demand. Paper White narcissus and Roman hyacinths are difficult to sell at any price, particularly the latter, which are little wanted. Tulips are scarce yet. The weather is again too wintry for plant sales, being very cold, with snow; not much is selling excepting ferns. E. C. R.

KALAMAZOO, MICH.—New Year's trade continued along the lines of the Christmas business, keeping well up to the average of previous years. Stocks, excepting violets, were sufficient for all demands at prices rather lower than the Christmas ones. The prospects for the immediate future seem to be good, and while the weather keeps moderate, compared with previous years, the plant trade is especially active. As before noted, there are numbers of flowering plants now on the market offered at reasonable prices, and the sales of such plants as cyclamen, primulas and begonias are quite brisk. Palms and ferns move rather slowly. S. B.

Philadelphia.

News Notes.

There has been quite a lull in the flower business the past week. New Year's trade did not figure up so large as in the past two years. Some of the retail stores did very well on Saturday, but, generally, not so much stock was disposed of. We are still hearing a great deal about carnations and violets at Christmas that were not good stock; there have been many complaints, both in wholesale and retail circles, and several cases in which stock was returned. The chief trouble seems to be that many carnations and violets were left on the plants too long, and were really unfit for sale when picked. There has also been much talk about the high prices at Christmas, and this year more than usual from the flower buyers. One very large purchaser of flowers, "one of our richest men in this city," in conversation with the writer this week, stated that he was in Baltimore at Christmas and had to pay \$30 for one dozen American Beauty. This was on the 24th; on the 28th he was in New York and bought a dozen Beauty for \$3.80 at the Flower Market Company's store. Just as good blooms, probably fresher, than those he purchased in Baltimore. Now, it is only natural to infer that this customer would not feel well disposed toward the florists, and such incidents are not good for the business, as both sales quoted are extremes—one too high, the other too low.

Carnations at Florists' Club.

The meeting, on Tuesday last, was a very poor one; no doubt the weather was the chief depressing factor, as a snowstorm, with a 30-mile gale was raging that night. C. W. Ward was present and brought a good exhibit of new carnations; there were fifty blooms of Robert Craig, with flowers 3 to 3½ inches in diameter, and stems 24 to 30 inches in length—a very fine exhibit. There was one vase that attracted considerable attention. It contained white seedlings; some of the flowers were 4 inches in diameter, with perfect stems. One vase contained a pink seedling, of good promise; another vase was filled with a collection of seedlings of various colors. J. L. Dillon, Bloomsburg, Pa., staged a vase of new carnation Crisis, a good commercial variety, and looks like an every-day seller, being a fine scarlet in color, above medium size and with good stem. A discussion took place regarding the keeping qualities of Enchantress carnations; the general opinion seemed to be that, as the flower is of the soft petal kind, it should be grown somewhat cooler, and cut when about half developed.

DAVID RUST.

Chicago.

News Notes.

A meeting of the shareholders of the Flower Growers' Market was held on Tuesday afternoon for the election of officers and a board of directors for the ensuing year and to transact other business. The following officers were elected: President, Emil Buettner; vice-president, Walter Tonner; treasurer, Fred R. Hills; recording secretary, Alex. Henderson; financial secretary and manager, Percy Jones. All interested are highly pleased with the success of the undertaking and look forward to the time when it will be the greatest market of its kind in the country. The ranks are gathering in force from year to year; buyers are becoming more numerous under the efficient management of Percy Jones. They have secured a five years' lease on the present building.

The George Wittbold Company will erect three new greenhouses at Edgebrook the coming Spring, these to be devoted to the raising of cut flowers for their retail stores.

George W. Scott, of E. F. Winterson Company, is again at his duties after a week's siege with the grip.

Louis Coatsworth was visiting in Indiana the past week at New Castle and Richmond. At the E. G. Hill Company's place he inspected the new rose Richmond and thinks it is the coming red rose.

Manny Pieser is absent from his duties, suffering from a severe attack of the grip. C. M. Dickinson is also on the sick list.

T. D. Mosconotes was the recipient of an unexpected present during the holidays, the clerk, who departed with the receipts and keys, returning all by mail.

Robert Symmons, formerly in the employ of the George Wittbold Company, has opened a retail store at Morris, Ill.

The committee in charge of the entertainment of the members of the American Carnation Society report good progress, their plans being nearly completed for the entertainment of the visitors during the last two days of the week.

The next meeting of the Florists' Club occurs January 12. A good attendance is assured, as business of importance will be considered. A long list of new members will be voted upon and a report from all new committees appointed.

The Chicago Record-Herald of December 24 devoted a full page to this city being the largest cut flower market in the world, giving figures to substantiate the statement and the amount of glass in square feet on some of the larger places. The number of tons of coal consumed was said to be from 5,000 to 7,000 annually.

The Chicago Tribune of December 30, in its resume of the year's business in wholesale lines has the following in regard to the cut flower trade: "The wholesale florists of Chicago—eighteen such concerns grouped together in one quarter—sold during the year about \$1,500,000, or about 20 per cent. less than in 1903. Chicago supplies flowers to Pittsburg, Denver, St. Paul and hundreds of smaller cities. New Orleans is the best customer regardless of distance or location, as the 'Sunny South' is not a flower producer commercially. Flower production and flower handling for 1904 exceed all other years except 1903. Prices of flowers for the year have been much lower because the demand has been less. Early in the year the city trade became dull following the Iroquois disaster. Sales—1904, \$1,500,000; 1903, \$1,800,000; decrease, 20 per cent."

The family of Wm. W. Fuller, of 1265 W. Ravenswood Park, were nearly asphyxiated by coal gas from a heating stove, and it was nearly noon before any were fully recovered, Mrs. Fuller suffering most.

Oscar Janitschke lost his wife last week. Mr. Muelder also mourns the loss of his wife, mother-in-law, sister-in-law and niece, their deaths all occurring within two weeks.

Dinstel Bros., of Galewood, have taken space in the Flower Growers' Market, commencing the first of the year.

Fred Sperry, of Vaughan & Sperry, is confined to the house with a severe attack of the grip, which is very prevalent here at the present time.

J. C. Craig reports a brisk demand for funeral work during holiday week.

ROBERT JOHNSTONE.

FIRES.

CLARKSVILLE, TENN.—On December 28, 1904, in one of the Evergreen Lodge Greenhouses; very little damage was done to the buildings, but the flowers were considerably injured by smoke.

CANTON, O.—Fire destroyed plants valued at \$2,000 belonging to Chas. Lindacher Thursday morning, December 29, 1904. Lindacher refused money to a tramp the day previous and thinks the tramp set fire to the greenhouse.

Further Christmas Trade Reports, 1904.

ST. PAUL, MINN.—Holiday business in this city has been fully up to the average of former years. Weather conditions were most favorable to both growers and store men. For Christmas trade the weather was ideal and complaints of frozen stock were few and far between. Greens sold very well, indeed. Holly was all cleaned up and more could have been disposed of. It was in all grades, from extra fancy to very poor; but on account of its scarcity everything went. Holly wreaths were in good demand. The market seemed to be flooded with mistletoe of good quality. There was a good call for wild smilax. This valuable decorative material seems to grow in favor as its artistic possibilities become better known. Red immortelle Christmas bells sold very quickly, but all other kinds went slowly. Even the beautiful new set of chimes met with but slight favor. An innovation in wreaths—statice, cedar and holly combined in one—was received with favor by the best buyers.

Some things in the plant line sold exceedingly well, while others, which heretofore were favorites, went but slowly. Dwarf poinsettias in pans were the general favorites with everyone and sold at well. A great many more would have been disposed of had they been available. Well grown pepper plants also sold very quickly. Anything in the prevailing Christmas color went readily. Simon Mardner azaleas were in good favor and sold very freely, but any other color went slowly. Good red cyclamen were also good sellers. There was an abundance of primroses, P. obconica and other small plants, which went very slowly. Buyers seemed to have plenty of money and wanted good stock. Ribbon was used quite freely in wreaths and on plants, hampers, baskets, etc.

In cut flowers, red was the favorite color and roses the favorite flower, but good carnations were also in demand. American Beauty sold exceedingly well, but violets were not quite as popular as usual. Retail prices ranged as follows: American Beauty, \$8 to \$18 per dozen; Mme. Abel Chateau and Liberty, \$4 to \$5; other roses, \$3; carnations, \$1 to \$2.50; Roman hyacinths and Paper White narcissus, 75c.; lily of the valley, 75c. to \$1; violets, \$4 per 100; poinsettias, 50c. to \$1 each.

All of the stores had special displays, the most notable being those of Swanson Floral Co., Holm & Olson and L. L. May & Co. Shipping trade surpassed all previous records. May & Co. had a very handsome decoration a few days before Christmas, in which wild smilax was used very largely. This firm was also favored with a very large Masonic funeral order, consisting of eighteen large pieces for a prominent member's funeral in Dakota. New Year's trade brought some increase in business, but is becoming perceptibly less each year. American Beauty and violets seem to be the general favorites for the occasion.

In reviewing the holiday trade we cannot refrain from again remarking about the weather. Fewer cloudy days in December were never before noted in this section. The growers nearly all had full crops of roses, carnations and violets. Two days after Christmas the great storm struck us, but it was of short duration and not nearly as severe as in most sections. The weather at this writing is balmy and Springlike.

OMAHA, NEB.—We had a very fine Christmas trade. The weather conditions were ideal, both for the grower and storeman. While no great crop of cut blooms was harvested, there was just enough to

go around and this applies to the small miscellaneous stock as well as to the standard roses and carnations. Plants sold in great numbers; there has been for the last few years a gradual tendency toward the pot plant for Christmas, as against the high-priced cut flowers. We in the West are now experiencing what those in the East experienced a few short years ago. Begonia Gloire de Lorraine, for the first time in Omaha, in quantity, was surely a winner. People went almost wild over the great bunches of bloom on top of a comparatively small pot and the plants were eagerly bought. Holly had a good run, probably because the "stuff" received by the commission houses was so poor, and those who had supplied themselves with the true Delaware holly had a good demand for it at good prices. S. B. Stewart said his trade was better than last year by 30 per cent., indicating a fine business. He did well on Christmas bells, hanging vases and birch bark boxes filled, and sold lots of palms and ferns. Mr. Ross, of Mr. Stewart's force, was kept at home during the Christmas rush by a painful fall at his house. Alfred Donaghue, Jr., reports a very satisfactory gain over the year previous and sold lots of blooming plants and ferns. Violets were an important item here and good prices were obtained. Lewis Henderson reports a 25 per cent. increase over last year. Azaleas were late with Mr. Henderson, as with every other florist in this vicinity. Primroses and Roman hyacinths, made up into pans, sold well, besides ferns. Peterson Bros.' trade showed an increase over last year's; the most notable thing here was the backwardness of their azaleas. J. W. and E. E. Arnold had their usual large Christmas trade, but owing to their small salesroom few plants, comparatively, were disposed of. Alfred Donaghue's specialty was Gloire de Lorraine begonia, of which he had a grand lot, and they went very well indeed. Boston ferns had a big call also. Smaller plants, such as Primula obconica, Primula sinensis, cyclamens and eimerarias sold very well. Hess & Swoboda enjoyed a great rush in plants and cut flowers, their store appearing quite denuded after the busy period was over.

RICHMOND, VA.—Christmas trade compared favorably with the previous year's, and undoubtedly would have been much greater in volume had the weather been more favorable. A rainy Saturday kept many persons indoors, and both stores and markets missed the usual crowds, particularly the latter. The cloudy weather preceding Saturday kept the local cut flowers in short supply and all available stock was sold out on Friday. American Beauty brought \$3 to \$9 per dozen; pink and white roses, \$2 to \$3; carnations, 75c. to \$1.50 (a higher general average than ever recorded here); lily of the valley, \$1 per dozen. Cyclamen, hyacinths, narcissus, palms, ferns and other plants selling from 25 cents to \$1 were popular, although pines, azaleas, etc., from \$1 to \$10 had a good demand. Violets, as usual, were not much in evidence, and the high price asked made many avoid them; they brought \$2 and \$3 Saturday, but those sold for the account of the express company—running into thousands Sunday and Monday after Christmas could be had for much, very much less. On account of the high quotations from northern wholesale houses the orders from here were less than last year; indeed it is doubtful if any shipment of consequence came this way. Greens and wreaths sold as well as usual.

and no good stock was left over. Bells sold at the 5 and 10-cent stores for 10 cents, and interfered some with florists' higher priced goods. I would say, in dollars and cents, the trade is better off than a year ago. M. A. WHITTY.

GRAND RAPIDS.—The clerk of the weather handed out a queer mess for a holiday week, starting in with severe snow flurries, then rain, then a couple of days with the thermometer at 50 to 60 degrees; then, Friday, it turned cold, down as low as zero, warming up somewhat on Saturday and being really a fine Winter's day. Plants had to be carefully wrapped and occasionally a frozen one would be reported. The store windows were well filled with flowering plants and Christmas bells arranged with pretty effects.

While the supply of cut flowers was large, it was inadequate to meet the heavy demands, carnations especially being short. Those wanting red carnations had to be content with a substitute in color. Roses were more plentiful, with red scarce. Violets were plentiful, not as fine as in former seasons, yet they sold freely at 35c. per dozen. Lilies were in evidence, and plenty of Roman hyacinths and Paper White narcissus. In plants, poinsettias led; they ranged in price from 25c. to \$1.50; azaleas, \$1 to \$3; primroses, 25c.; peppers, 25c.

Prices for cut carnations were 75c. to \$1; roses, \$1.50 to \$2; lilies, \$2 to \$3 per dozen, and violets, 35c.

While it is difficult to draw a comparison between the volume of business this and last Christmas on account of the large trade enjoyed by the new stores, yet it is safe to say the increase over last year is easily 10 per cent.

Immense quantities of holly were sold. Mistletoe was fine, but little of it sold. Green wreathing was not as freely used as last year; at the present rate of decrease, it will soon go out of date.

CANANDAIGUA, N. Y.—Christmas trade here was much the same as formerly. With five florists to supply the requirements of about 7,000 people in this place, the individual sales are not large. Palms were not in demand, and but a small business in ferns resulted. Begonias and cyclamen were seen in numbers, but did not go well; neither did primulas. The call was for carnations, violets and roses and the supply was sufficient at no fancy prices. Holly was in quantities and of all grades, several of the grocers offering it at 15c. per pound, not worth the small sum asked, but it depresses the value of real good goods. However, it did not affect the writer's sales, because our orders were all in long before Christmas and filled promptly on time with the best to be had. We made a quantity of boxwood roping, also some wreaths, which were so superior to laurel or ground pine in its construction, durability and general appearance, that our orders are now for so many yards of box roping. If the roping makers would put enough green in to cover wire and string they would advance their own as well as our interests.

UTICA, N. Y.—The holiday trade this year was far ahead of any former years, especially at Christmas. It is difficult to say what sold best. Perhaps carnations took the lead in cut flowers; everything was cleaned up and more could have been sold. They brought from \$1 to \$2 per dozen; reds were almost out of the question. J. C. Spencer had a fine cut of his new red seedling, which was in good crop; it is a fine carnation for the holidays. Violets were short and brought from \$3 to \$4 per 100. Roses were in fair supply and of good quality. Prices were

about the same as last year's. Flowering plants sold well, also pans of mixed plants and azaleas. No novelties of any account were shown; the weather was very cold on Christmas Day and everything required an extra cover. Gloire de Lorraine begonia sold splendidly, as it always does. There have been quite a number of parties and some weddings during the week from Christmas to New Year, which have kept the stock cut short. The trade for New Year's was also better than in former years, but the weather was a great deal warmer.

FREDERICTON, N. B.—Christmas trade in cut flowers was all we could wish for; we had just enough to go around. The weather was extremely cold, 26 degrees below zero Christmas morning, but we made provision for it by wrapping warm, and have heard no complaints as yet. In plants we had a good supply of ericas, azaleas, cyclamen, Primulas, sinensis and obconica, cinerarias, etc. Of palms, Boston and Pierson ferns a limited number were sold, but the supply exceeded the demand, no doubt owing to the cold weather. Lily was in good demand, which seems to be increasing each year. Prices of cut flowers were: American Beauty, \$3 for No. 2; Bride, Eridesmaid and Meteor, \$2 per dozen; carnations, mixed, including Enchantress and Mrs. T. W. Lawson, \$1 per dozen; lily of the valley, 75c.; violets, \$3 per 100; Paper White narcissus, first quality, 75c.; callas, 20c. each.

The business people claim that trade at Christmas was not up to the average. J. B. & S.

TOLEDO, O.—Christmas was very brisk, carnations being one of the principal sellers, but they did not bring as good a price here as East and West, some people nearly fainting at the counter when asked \$1 per dozen for good Mrs. Lawson. Roses, Jonquils and poinsettias were in good demand; not so violets. Ready-made baskets and trimmed, flowering plants were in great favor. One thing in Toledo that handicaps the florist is the street peddler and Cheap John places, where they sell second-hand flowers at an absurdly cheap price; another thing, some of our wholesale growers will sell the retail trade, any one who comes, half a dozen carnations and charge them the same as they do the retail growers. Such methods ought to be abolished. E. S.

SAVANNAH, GA.—The Christmas holidays are over and Fourth of July weather still keeps up; 75 to 80 in the shade. What a glorious sight it was to see open wagon after wagon going out with a display of flowering plants such as azaleas, poinsettias, Gloire de Lorraine, begonia, callas, hyacinth and berried plants with decorative plants of every description and boxes of cut flowers; half a dozen delivery boys on bicycles chasing one after another, loaded with boxes! That's a brief account of our Christmas trade this year, which has beaten the record of any previous one, notwithstanding plenty of flowers were blooming outside. Prices were satisfactory on both cut flowers and plants. O. G.

DALLAS, TEX.—Christmas trade was about 25 per cent. better than last year's and lovely weather made business very brisk, all the florists clearing out their entire stock. Carnations were the leaders in cut flowers; many more could have been sold, while the supply of roses was about the same as at last Christmas. Carnations brought from \$1.50 to \$2; roses, \$2.50 to \$3.50; American Beauty, \$10 to \$15; narcissus, \$1 to \$1.25; hyacinths, \$1; violets, \$1 per 100; poinsettias, \$6; Harris lilies, \$6. Blooming plants were somewhat scarce and sold at very good prices. Only one florist had azaleas, which he disposed of at double the price of last year. Callas in pots sold readily. The supply of holly was very short. F. W. B.

WATERBURY, CONN.—Christmas trade here was the largest we have ever had. There was an increased demand for pot plants. Poinsettias were good sellers; Boston ferns, in varieties, seemed to take the lead. Berried and flowering plants sold well. Begonia Gloire de Lorraine taking the lead. Chinese and other primroses were also popular. Palms sold in limited numbers. Holly and holly wreaths were in strong demand. Cut flowers were in good supply, carnations and violets leading in favor. There was a small demand for bulbous stock. Prices on cut flowers were about as in former years.

A. DALLAS. BAY CITY, MICH.—As a whole, Christmas trade was quite satisfactory, and the total sales were fully up to last year's. We had a good supply of roses, carnations, violets, also cyclamen, begonias, hyacinths and Boston ferns, and all went well. The Boston fern is still in good demand. A large quantity of holly was cleaned up, so that there was not a sprig left. Wishing you success and a prosperous New Year.

BOHRINGER BROS. GENEVA, N. Y.—We had large sales of holly, good holly is in increasing demand every year. Roses, carnations, violets and bulb stock had about the usual call. Plant sales were considerably larger than last year's. Asparagus plumosus leading. Christmas bells were a novelty in Geneva and were greatly admired and quickly cleaned out; the demand will be very heavy another year. SMITH & GANNETT.

"THERE IS ONLY ONE"

The Fumigating Kind Tobacco Powder

What a Few Say, All That Use It Say

<p>PURCELLVILLE, VA. We have given The Fumigating Kind Tobacco Powder a thorough trial on Carnations, and we are well pleased with the result. We are able to keep the plants entirely clean. A. B. DAVIS & SON.</p>	<p>MT. STERLING, KY. I received the sample of your Fumigating Kind Tobacco Powder, but as I did not use but one-half the amount as directed I did not obtain the best results but am satisfied that if used according to direction it will kill everything it is intended for, as at least 90 per cent. of Thrip and Aphis were destroyed this morning. Send me 200 lbs. as quick as you can. EMIL FRIEDRICH.</p>	<p>WEST WHITELAND, P. O. We have tried many fumigants but have found nothing in the market so effectual and easily used as The Fumigating Kind Tobacco Powder. Your prices are reasonable for so good an article. J. LERMAN MAULL, Pres.</p>	<p>WAYNESBORO, PA. We have not only found The Fumigating Kind Tobacco Powder the most valuable greenfly destroyer, but we also use it to kill snails by sprinkling it on the ground. Sure death; they look in the morning like small oysters rolled in cracker dust. H. EICHENBOLZ.</p>
--	---	--	---

A FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

S. S. PENNOCK
THE Wholesale Florist of Philadelphia

BUSINESS DIFFICULTIES.

YELLOW SPRINGS, O.—Wallace W. Carr, a nurseryman, of this place, filed a petition in bankruptcy December 31, 1904. He acknowledges debts to the amount of \$30,749.64, but declares that his assets consist solely of personal clothing.

Meeting of Craig & Son Creditors.

A meeting of the creditors of Robert Craig & Son will be held at 49th and Market streets, Philadelphia, Pa., Thursday, January 12, at 3 p. m., at which time a proposition for the settlement of the firm's affairs will be made.

Louisville, Ky.

News Items.
Jacob Schulz has a new wagon and horse, which were used the first time during the holiday rush.

C. M. Sundberg, who some years since was in business on West Walnut street, but who for the last few years has not been connected with the local trade, has again opened a retail store at 2411 Maple street. The location is entirely out of the retail district of the city and his venture will be watched with interest.

The sincere sympathy of the craft is extended to Miss Anna Sheedy, of Jacob Schulz's staff, who has lost, by death, an only brother. A. R. B.

PROSPECTOR

RED SPORT FROM MACEO

Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.

It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.

Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.

We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

BUSINESS OPPORTUNITIES

A Rare Opportunity

One of our customers, after 31 years of work, wishes to sell his Florist business, consisting of eight greenhouses (13,000 sq. ft.) well stocked with pot plants, etc., suitable for retail trade in a Canadian town of 75,000.

Excellent local trade; store and dwelling house adjoining. Owner is retiring and if necessary will lease house and lot. \$8,000 cash required for greenhouses, stock, horse, wagon, etc.

This is an unusual chance for any energetic, capable Florist. The business is now paying from \$5,000 to \$6,000 annually over operating expenses, and is capable of considerable increase.

Those meaning business and having available funds apply to McHUTCHISON & CO., 218 Fulton St., New York City. Mention the Florists' Exchange when writing.

MISCELLANEOUS

WANTED TO PURCHASE, GREENHOUSES TO BE TORN DOWN. MENTION PARTICULARS AND PRICE. ADDRESS A. Z., CARE FLORISTS' EXCHANGE.

WANT to rent 3 or 4 greenhouses; some ground attached; not more than 50 miles from New York. Address J. O., care Mrs. Galvin, 418 West 56th Street, New York City.

RESPONSIBLE party wants to buy, or lease for short time, with privilege of buying, up-to-date place, 6,000 to 10,000 feet of glass, suitable for roses or carnations; vicinity of Philadelphia or New York preferred. Address A. G., care Florists' Exchange.

WANTED TO BUY greenhouses to be torn down. Mention price when writing. Address X. Y., care Florists' Exchange. Mention the Florists' Exchange when writing.

Propagating.

Establishments where roses are forced in large numbers, or those making a specialty of selling young rose plants, have started propagating in December, but on medium-sized places this part of the work is not taken up till January, which is really early enough, unless the plants are to be benched very early in the Summer. It was the custom a few years ago, and is still on some places, to take any kind of wood for cuttings, especially so with such varieties as Bride, Bridesmaid, Meteor, etc. but the successful and up-to-date growers are beginning to realize that it pays to select wood of uniform ripeness and quality. Some have even gone so far as to use nothing but flowering wood, thus hoping to increase the blooming tendency of their stock. This last-mentioned practice may prove very beneficial with some classes of stock, but we have, after several years' close observation, come to the conclusion that it does not pay to cut up flowering shoots, or to use flowering wood for cuttings. Such varieties as Bride, Meteor, Perle des Jardins, etc., it will be found, throw short spurs, or blind shoots, from each of which one, two or sometimes more cuttings can be made; and if chosen when properly ripened, these will make ideal cuttings. Avoid, however, the real blind plants, a few of which can be found in almost every rose house; these produce, apparently, fine strong shoots, but when the bud forms it immediately turns brown and a new shoot starts which, in turn, will act in a similar manner. Sometimes no bud will form at all. The plant retains a fine color, and just grows. Should cuttings be taken from such plants, the result will be that you will have plenty of wood but no flowers.

There is one strange thing about these blind plants, as we call them—they are almost thornless, and the foliage is invariably of a fine dark-green color. In selecting American Beauty wood avoid that which is hard or that which is too soft. The former will lose its leaves before the cuttings are well rooted, and the latter is very apt to decay. Use the medium-sized, fairly well ripened shoots. Two eye cuttings we have found to be the best, and if given proper care, these will make the best plants. After the cuttings are made, keep them in water, as, if left dry for very long, the heels get dry and do not take up the moisture so readily after being placed in the sand.

Before putting in the cuttings the sand should be well watered and packed. A great many of the failures in rooting roses are due entirely to this important first step being overlooked. Go over the sand with a brick several times; the firmer it is packed the better. When a batch is put in, water them at once, so as to settle the sand firmly about the base of the cuttings. From now on, all draughts should be guarded against, and if much air has to be put on to reduce the temperature, spray the cuttings lightly three or four times a day, and damp down the walks to keep the air moist, as a dry atmosphere is detrimental to cuttings of any kind. Maintain an even temperature overhead—about 52 or 54 degrees is right, and 64 degrees in the sand. With this treatment American Beauty will root in five, and the tea roses in four weeks. The sun, of course, must never be permitted to strike the cuttings. Where it is not advisable to paint or whitewash the glass, use cheese cloth; this does not cost much, and is to be preferred to paper. Let it be placed about a foot or more above the propagating bench, as, if merely laid on the cuttings, as is the case with paper, it has to be removed when watering becomes necessary; many of the cuttings are thus disturbed, and these invariably die.

The New Rose WELLESLEY

is a welcome addition to the list of forcing roses.

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

CARNATIONS

Rooted Cuttings Now Ready

Eclipse Our 1905 introduction. A pink carnation, lighter in color than Lawson and of a more even and bright shade of pink. No objectionable shading or bleaching. A strong free growth, large flowers on long stiff stems and early and continuous flowering.

Fiancee A most pleasing shade of medium pink. No carnation has ever equaled the number of awards received by this variety.

Cardinal Brilliant scarlet. A great improvement over Estelle.

F. Burki Pure white.

The above four varieties,
\$12.00 per 100; \$100.00 per 1000.

Richmond Gem Scarlet, \$10.00 per 100; \$75.00 per 1000.

In addition to the above we can supply twenty-five of the best standard sorts, varieties that are profitable to grow. Our preliminary Price List will be sent upon application. We are pioneers in the carnation line and our facilities for rooting and handling cuttings are nearly perfect, due to our long experience.

F. DORNER & SONS CO., LA FAYETTE, INDIANA

Lady Bountiful and the Belle

The two best commercial white carnations of the present day. Both have received honors over competitors at the Fall exhibitions. We have large stocks of these two varieties which are already in great demand. Do not delay in placing your order for early delivery. \$6.00 per 100; \$50.00 per 1000; \$112.50 per 2500.

White Lawson \$7.00 per 100; \$60.00 per 1000.

RED SPORT (Of Maceo) The NEW "BREAD and BUTTER" Brilliant Red Commercial Carnation

WHAT SOME OTHER PEOPLE SAY ABOUT IT:

WASHINGTON, D. C., December 19, 1904,
1214 F Street N. W.

A. B. DAVIS & SON, Purcellville, Va.
GENTLEMEN:—Please make our order for rooted cuttings of RED SPORT 2,000 instead of 1,000.

The bloom you sent in today were certainly very fine. We have been watching this promising new red for three years and the more we see of it and the longer we sell it over the counter the better we like it.

We do not make a practice of going in very strong on the new varieties the first year they are sent out, but after seeing RED SPORT growing and blooming at your place last Tuesday, we are convinced it is a great Christmas carnation, and an all around money maker, and we wish to increase our order as stated above.
Yours very truly,
A. GUDE & BRO.

CHICAGO, February 8, 1904.

A. B. DAVIS & SON, Purcellville, Va.
GENTLEMEN:—Your letter and RED SPORT of Maceo came to hand Friday. We waited to see how carnations would keep before writing you. The color and keeping qualities are the best, and if it blooms as freely as Maceo it is a good one.
Very respectfully yours,
BASSETT & WASHBURN.

KENNETT SQUARE, Pa., October 14, 1904.

A. B. DAVIS & SON, Purcellville, Va.
DEAR SIR:—Yours 12th at hand and I will be glad to include your RED SPORT of Maceo in our list and believe it will meet with good sale. You may book my order for 2,500 of them to start with. I think you have a good thing and I congratulate you.
Very truly,
WM. SWAYNE.

WHAT WE HAVE TO SAY ABOUT RED SPORT:

THIS New "Bread and Butter" commercial brilliant Red Carnation, now in its fourth year, has the hardy constitution of Gen. Maceo, with a stronger, heavier growth, longer and stiffer stem and larger flower. Growing under the same conditions and in the same house with Flamingo and Estelle, it has produced four times as many flowers as the former and twice as many as the latter. The color is as good as Estelle and the bloom brings as much as does Estelle at its best. Every flower is of a uniform, brilliant red, perfectly double, with an ideal calyx; in fact, we have never seen a split one.

RED SPORT is perfectly healthy, an easy variety to grow, an early and continuous bloomer, throwing its heaviest cuts around the Christmas holidays and during the winter months, when red is in demand. RED SPORT will keep longer and travel farther than any other red carnation, and will prove a bonanza to growers doing a shipping business. If the scarcity of reds in the market that now exists continues, RED SPORT will pay better to the square foot of bench room than any other variety of any color to date.

Every florist who has seen RED SPORT growing has placed an order for rooted cuttings, which tells the tale. All our rooted cuttings are sold until January 5. Orders filled in strict rotation from above date on. Prices, 12 for \$1.50; 25 for \$2.50; 50 for \$4.00, postpaid. \$6.00 per 100; \$50.00 per 1000, by express. We guarantee cuttings to be well rooted and to arrive in good condition.

QUEEN LOUISE Still the standard white. We offer clean, healthy stock, \$1.25, postpaid; \$10.00, by express.

A. B. DAVIS & SON, Carnation Specialists, Purcellville, Va.

New York.
News Notes.
The New York Florists' Club will hold its first meeting of the year in the club's rooms, Grand Opera House Building, on Monday evening, January 9. The installation of officers will take place at this meeting, and the various committees for the ensuing year will be announced by President F. H. Traendly. The year 1904 has been one of the most prosperous and progressive the club has ever experienced and there is no shadow of a doubt that, with Mr. Traendly at the helm for a second term, the club will increase in popularity and strength and make a still brighter record for 1905.
W. F. Sheridan, chairman of the Dinner Committee of the club, informs us that all arrangements for the annual dinner have been completed and that the event will occur at the St. Denis Hotel, Saturday, February 4, and that tickets will be on sale at the club meeting on Monday night, January 9. A large number of tickets have already been sold. The affair promises to excel all its predecessors. Good music, and a clean entertainment otherwise, will help digestion.
A business meeting of the New York Florists' Bowling Club will be held on Monday, January 9, at the alleys, Thirtieth street, near Eighth avenue, at 3 p. m. Every member should make a special effort to be present, as busi-ness of great importance is to come before the meeting. Bowling will also take place the same afternoon. Present indications point to the playing of the return match with the Hoboken, N. J. team on their alleys on Saturday evening, January 14, though this has not yet been definitely settled. Every member should come to the alleys on Monday and get into form, as we do not wish to see a repetition of the Madison catastrophe.
George A. Burnett, who for thirteen years has been with the seed house of Weeber & Don, leaves their employ to-day (Saturday) and will immediately commence in the seed and bulb business for himself at 1951 Boulevard, Jersey City.
On Tuesday afternoon quite a little excitement was caused in Alex. Warendorff's store, 1193 Broadway, by some liquid metal polish becoming ignited through some cause or other. The liquid went off in a puff of flame and customers who were in the store ran out into the street. The blaze itself did not amount to much, but some one turned in a fire alarm, and in a few minutes the fire engines drove up; the clanging of the bells disturbed the audience in Proctor's Theatre, which is next door, and it had to be announced from the stage that it was a false alarm. No damage was done to the store, and the show in the theatre went on without further interrup-tion.
At a New Year's party of a prominent citizen in Uniontown, Pa., on December 31, the elaborate floral decorations were done by The Rosary Flower Company, of New York. Orchids, sweet peas and American Beauty roses were used chiefly, every room in the house being lavishly decorated.

The many friends in the trade of John N. May, Summit, N. J., will hear with regret that he was taken quite ill last week while transacting business in the Summit Bank.
August Ellwood has opened a retail store in the Hoffman Arms, 640 Madison avenue, with greenhouses at Southampton, L. I.

Cincinnati.
The Week's News.
New Year's Day here was Spring-like—the birds were singing and the thermometer registered 53 degrees. This kind of weather stayed with us a day and a half; then the winds commenced blowing, rain set in, then sleet, finally ending with snow, and this we still have with us. The thermometer stands at 22 degrees.
Business for New Year's was not large—it never is—but was up to the average of other years. Taking the last three months of the old year as a criterion, I believe that the florists throughout the United States will agree with me when I say that the average business was not up to that of former years. The start 1905 has made seems more encouraging, and I trust from now on stock will be more plentiful and business as a whole much better. Every year we have the same old complaint from the retailers (and I'm rather inclined to believe it is a just one) that, owing to the very sharp advance in prices for cut flowers, many of their best customers are driven to shelter, there to wait till things get down to moderation, when they will commence buying again. Plants are coming more and more into favor at Christmas time from this cause only. The people will not stand for exorbitant prices, it matters not how badly they may want the goods.
Our next holiday is President McKinley's birthday. Carnations alone are used upon this occasion, not one special color, but all colors of carnations, so, Mr. Grower, look to your carnations, and see that you have both quantity and quality for that day. It matters not how many you have, you cannot possibly produce enough for this occasion. From now on, carnations will undoubtedly lead, with roses a close second.
It is to be hoped that the weather man will be kind to us all from now on, for to him we must look for flowers. Then, we hope he will not send his blizzard to greet us when we arrive in Chicago the last of this month, when the greatest show of carnations this earth has ever seen will be staged. To Phil. Hauswirth we look to have all things right, and our president, who comes from the city of "stripes," will no doubt be busy.
Hugh B. Howard was a caller during the week. He says Chicago will extend, as she always does, a very hearty welcome to all visiting members of the American Carnation Society.
I am pleased to say that my assistant, C. J. Ohmer, after a week in bed, is once more at his post. W. J. Gray is quite sick. W. Gear and family are all sick, and several others—not serious, though.
I wish all a Happy and Prosperous New Year.
E. G. GILLETTE.

RETAIL TRADE.

WASHINGTON, D. C.—The Leiter wedding was one of the events of the past week which called for very elaborate decorations. The different rooms were tastefully adorned with tropical plants and American Beauty roses. The breakfast table had for a centerpiece Gloire de Lorraine begonia. This decoration was let out to two parties, each having his own part to decorate. George Cook and Small & Sons had the work, which was simply superb.

Small & Sons had a large decoration for Mr. J. R. McLean. The ceiling in the dining-room was completely covered with red paper bells; the rapper of each bell being a miniature electric light.

George Shaffer had several decorations at which he used Liberty and Meteor extensively, particularly of the latter variety.

The President held his New Year's reception, which is considered to be the official opening of the season. Mrs. Roosevelt carried a bouquet of white carnations, while the cabinet ladies, who were in line, carried bouquets of Roman hyacinths and violet Princess of Wales, some of President Carnot roses and others of Enchantress carnations. The house throughout was decorated with crotons, dracenas, Farleyense ferns and other choice tropical plants.

The Christmas and New Year's trade has exceeded all expectations; and the prospect seems bright for the ensuing season. M. C.

SYRACUSE, N. Y.—Wheadon & Henck had the table decorations for the Automobile Club banquet, held at the Yates Hotel, Tuesday, January 3. The table decorations were of Enchantress carnations. The centerpiece was a miniature automobile, 3 feet long, made on the exact lines of a Franklin touring car. The body of the car was composed of pink roses, pink carnations and sweet alyssum; the hood of pink roses; seats, wheels and steering gear and steps, of violets; horn and lamps, of yellow chenille, the whole of the details being very skilfully and faithfully worked out, creating a very striking and beautiful effect. J. B. B.

CALENDARS.

Beautiful wall calendars for 1905 have been received at this office from The Leo Nissen Co., Philadelphia; George E. Dickinson, Broadway, New York. The very serviceable desk calendar of the Pope Manufacturing Co., of Hartford, Conn., has also reached us, with its numerous testimonials as to the healthfulness of bicycle riding. Theodore A. Ball, Westfield Nurseries, Mountainside, N. J., also sends us a calendar.

News Notes.

Fred Foster has the sympathy of the trade, he having lost his eight-year-old daughter by death from convulsions on December 29. A number in the trade paid their respects by calling the day of the funeral, which occurred on Friday from the family residence.

H. R. Stocke, who was chief florist at the greenhouse of the World's Fair, has resigned his position to accept a similar one with the United States Government at Washington, D. C. Mr. Stocke will leave St. Louis at once.

The Palace of Horticulture, in which the World's Fair Flower Show was held, has been turned over to the wreckers. This is the first of the exhibition structures to be razed. The Palace of Agriculture, adjoining, will follow next, after which the duties of Chief Taylor and Superintendent Hadkinson will end. Their work in these departments has been much commended by the officials and the press throughout the land.

Frank Fillmore reports a big trade during the holidays, with more funeral work than usual. He is making preparations to take the trip to Chicago, as his Christmas presents were such that he is in duty bound to go. His father is at present enjoying a visit to Chicago and will remain until Frank arrives.

President Charles Juengel, of the Florists' Club, has entirely recovered from his sickness, which prevented him from attending the last club meeting. He will be on hand next Thursday afternoon and hopes for a large attendance. The committee on transportation reports that they have twelve names of members on their list who will attend the Carnation Society meeting in Chicago this month. The trustees are also expected to bring in their list of essays for the coming season.

The bowling club will meet next week and commence their weekly rolling again at the Palace Alleys. All the old members are expected to attend. Fred C. Weber, who is president of the bowling club, will send each member a postal card announcing when the meeting will take place. Messrs. Beneke, Kuehn, Beyer and Ellison, who are bowling with the City League, are expected to join when its season closes, and an effort will be made to take a good team from St. Louis to Washington next August.

Boston.

The Week's News. I notice that in the program of lectures of the Massachusetts Horticultural Society, just issued, only one or two lectures are devoted to plants or flowers, while three in succession are to be devoted to fruit.

W. B. Arnold, of Rockland, has sold the entire output of his new Variegated Lawson carnation to the F. R. Pierson Company of Tarrytown, N. Y.

C. L. Allen, the veteran seed grower of Floral Park, N. Y., has been in town this week trying to dispose of his horticultural library, which is one of the finest of its kind in existence.

William Molloy, salesman for the J. A. Budlong & Sons' Company, has been laid up for the past three weeks with an abscess in the ear.

James Denning, who was assistant salesman for the J. A. Budlong & Sons' Company, met with an untimely death on Saturday last.

The Waban Rose Conservatories have decided to introduce their new rose Wellesley this Spring.

W. W. Wyman, of the Bay State Nurseries, left Monday for a two months' trip through Europe.

Visitors the past week have included F. R. Pierson and J. R. Fotheringham, Tarrytown, N. Y.; Edward Kirk, Bar Harbor, Me., and Carl U. Fohn, Hartford, Conn.

Newport, R. I.

With Christmas over, the craft has a chance to see how well the holiday business did turn out, and the census of opinion is, as reported, that only a fair trade was done.

News Notes.

Gibson Brothers were very busy over the holidays, as, besides their usual large Christmas business, they had many important funeral orders at the same time.

Thomas Galvin has a very fine stock of rubber plants in the medium sizes; he always finds a good market for these, especially since all the seedsmen handle so many.

There has been quite a demand for Christmas trees the past week for festivals of various kinds; but as none of

the dealers had any, the only way this need could be supplied was by taking trees back from customers that were used at Christmas.

Hodgson has received from their New York store a number of golden baskets that will be filled with roses and electric lights and used as decorations for the Newport County Club ball.

There was a special meeting of the Newport Horticultural Society on Sunday, Christmas day, to attend the funeral of William S. Lawton, an active member of the society.

Joseph Gibson recently celebrated his birthday with a card party at the greenhouse.

William G. Postings sailed for Europe on the White Star liner Cedric, Friday, January 6; he will be gone about two months.

M. B. Faxon, the seedsman to the George A. Weaver Company, and wife were in Boston over the double Christmas holiday.

Some very artistic rustic stands for Christmas trees were sold here for the holiday, made by D. P. Van Gorden, of Orange, N. J.

St. Paul.

William Speth, with May & Co. for the past year, has resigned and gone to New York City.

G. Colberg was the recipient of a beautiful gold watch for Christmas.

Several big events are announced for the new year, so that the business outlook is good for some time to come.

VERITAS.

THOMPSONVILLE, CONN.—Chester F. Brainard, who for the past six years has been in the employ of his brother, D. Wm. Brainard, here, has purchased from F. N. Allen a tract of about ten acres of land known as the J. B. Allen Farm.

News Items.
 Quiet business and low prices prevail after the holidays and there is nothing new to report in the market. Olney Williams is sick and his brother, Larned, is attending to the greenhouse management in the meanwhile.
 Budlong is building another house. Special mention is due Wm. Hay for his splendid La France violets.
 The officials of Kingston Experiment Station held a special meeting at the State house on Saturday, to which the florists generally were invited to take part in the discussion as to what is most needed in the way of greenhouses. The opinion was that \$15,000 would be required for the purpose, and the board signified their intention of petitioning the Spring session of the Legislature for that amount. After the meeting the gentlemen were entertained at dinner at the Wellington.
 C. S. MACNAIR.

San Francisco.
News Notes.
 Charles Shellgrain, one of the Sievers-Boland Company's salesmen, who hails from the East, is in hospital suffering from an attack of pleuropneumonia.
 G. B. Antonini, vice-president of the Art Floral Company, has entered into copartnership with Mr. Culligan, and will operate the old stand of the concern named, having succeeded G. B. Jones & Co. The title of the new concern is Culligan & Co. Mr. Jones, who was reported recently as having purchased the Art Floral Company stand, will, it is said, retire from the business. He was the longest established florist in this city.

Items of Trade Interest.

Van Bochove & Bro. will commence at once, if the weather stays favorable, to erect sheds, etc., to prepare the material for their new range so as to be ready for operations at the earliest possible moment. They seem to be impressed with the business possibilities of this section.

The snow scene at the Central Nursery's store made quite a pretty effect and was most creditable to Mr. Cook, the designer. The company is well satisfied with the Christmas business.

Thousands of violets could have been disposed of through the holidays if available at a reasonable price; but our people are not willing to give 75c. for a bunch of violets when they can buy a dozen good carnations for the same figure. S. B.

BRANDYWINE, DEL.—Nelson L. Talley has just completed the erection of five greenhouses, one 120 x 28 feet, the other four 75 x 28 feet each. He has two houses of carnations; Mrs. Frances Joost is the main sort grown and are in fine thriving condition. Queen Louise, Queen, May Naylor, G. H. Crane, Governor Roosevelt and Glacier are also to be found, along with a part house of roses and smilax. Callas, lilies, and a general line of pot plants, are also grown under the care of Henry A. Fitzgerald. Two houses of lettuce are under the special care of Mr. Talley and in fine condition. The Grand Rapids variety is grown with paying results.

JACKSON, 50 Third Ave., Albany, N. Y.

ROUND TILE

Mention the Florists' Exchange when writing.

Inside view of Dietsch patent short roof house.

ADVANTAGES NOT POSSESSED BY ANY OTHER STYLE

- 1st—Largest bench room obtainable; all benches equally good.
- 2d—Safe construction; roof a perfect truss; no high peaks.
- 3d—Best ventilation; a run of ventilators to every two benches.
- 4th—Least shade possible with any method of roof and wall construction.
- 5th—Ease of construction; greatest durability at minimum of expense.
- 6th—Every requirement of modern construction fully provided for.

This style of construction has the endorsement of many prominent growers. Let us give you an estimate; the figures will be so low and the work so good, that you will be pleased.

Ask for our NEW CATALOGUE. It will interest you.

THE PERFECTION FORCING CUCUMBER Greenhouse Grown Seed

Pronounced by critical Market Gardeners and the Commission Merchants of Boston and its vicinity as the finest forcing cucumber entering their markets. They attain good marketable size and color, closely resemble the popular WHITE SPINE and possess unsurpassed quality. We have procured the seed of this valuable strain direct from the originator who has arranged with us to dispose of his entire stock by introducing it to the thousands of private and market gardeners who are interested in forcing Cucumbers under glass. In order to give this wide distribution, the seeds will be sold in packages as follows: What a prominent Boston firm says of the PERFECTION FORCING CUCUMBER: "It is with great pleasure that we compliment you as raising the BEST QUALITY of Cucumbers coming into this market, and we think that if all growers of hot-house Cucumbers could have the seed that you use, they would be greatly benefited in the EXTRA PRICE they could obtain for their Cucumbers raised from such seed."—LOWELL BROS. & BAILEY.

ASPARAGUS PLUMOSUS NANUS

THE HOLLAND BULB TRADE. 1904.—Now that the bulb trade of 1904 is at an end, we can say more bulbs were exported than in other years. Notwithstanding this, the growers planted more than in 1903; so you can judge that, on an average, we must have had a very good crop last Summer.

The weather is now very unpropitious for the bulbs in the fields—soft weather in Autumn, and soft in Winter so far.

Hyacinths and tulips are putting their tops above ground into the reed-covering, so that the latter will soon be partly taken off the hyacinths. If frosty weather comes later we run the risk of having in Spring bulbs with frozen tops and damaged foliage. If the frost comes very soon, then all danger will have passed.

The Society for Bulb Culture has concluded to hold its usual five-yearly show at Haarlem in March next. At that show we expect to see the best flowers that every kind of bulb can produce. Many foreigners visit the exhibition and those interested from England, Germany, Belgium, France, etc., who try to find out the best for their trade. J. B.

NEW HYDE PARK, L. I.—The seed trade is quite as lively among those that furnish the truckers on this part of Long Island as usual. Last year was, to use their expression, "a fairly good one," and there seems to be a general inclination to plant about the same as in former years. As the potato crop has been a very profitable one the past two years, the truckers are buying stock seed with a liberal hand. The cabbage crop at the west end of Long Island is a back number; it is no longer profitable. The land appears to be cabbage tired and refuses to yield a remunerative crop. Beans will be planted freely, while peas will receive but little attention. Trucking in this section is fast dying out, as the land is being taken up for speculative and residential purposes.

P. J. Christ, the local seedsman, speaks very encouragingly of trade. He reports largely increased business, and that the farmers who own, or can acquire land will increase, rather than decrease their acreage.

WOODS, STUBBS & CO., Louisville, Ky., writing under date January 9, say: The seed business, owing to inclement weather since the first of January, has not opened up as yet, but we are anticipating a large trade from recent inquiries. Onion sets have not moved much as yet. This is due to the very cold freezing weather since the first of January, and few sets have come in. We are anticipating lower prices a little later, as everybody is holding back their sets, and when movement does begin, there will be quite a large number of sets to offer.

It appears to us that the market on the line and orchard grass will remain firm. All the seed of blue grass has been moved out of producers' hands and is now held by cleaners, who have advanced their prices considerably. A few scattering lots of orchard grass, held by farmers, have nearly all been bought up, and there is not any large surplus stock in dealers' hands, hence prices are inclined to advance. Timothy and Red Top remain about unchanged; they are low enough, and we think prices have reached bottom on these items. There is considerable demand for cow peas and millet, and both of these items will, no doubt, be sold at good prices this season. We are having considerable demand for Winter rye and Spring oats for sowing, and they are rapidly becoming an important variety of oats for sowing in the Spring, as the yield is considerably larger than ordinary Spring oats.

The garden seed business promises to be very fair this season, though, as a great many items are in surplus rather than short this year, we are not anticipating high prices, except on beans. From indications and reports we have received, the low price of cotton in the South will induce Southern farmers to go more into diversified farming, and more of the various grasses, clovers, and general farming crops will be sown, as well as considerably more land put out in truck crops.

CATALOGUES RECEIVED

DREER'S GARDEN BOOK, 1905, Henry A. Dreer, Philadelphia.—A comprehensive and valuable catalogue of seeds, plants, bulbs, supplies, etc., charmingly and profusely illustrated. An idea of the extent of this well-known firm's offerings may be gleaned when we state that the catalogue contains of new and rare plants an enumeration filling nine pages; the aquatic department requires ten pages; the garden and greenhouse plants and bulbs, thirty-four pages; roses, ten pages; hardy perennials or old-fashioned hardy garden flowers, thirty-two pages, probably the largest and most complete in the country; and hardy shrubs, climbers and small fruits, twelve pages. The firm has this year selected for its embossed cover illustrations representations of Cactus Dahlia Kriemhilde and Dreer's Giant snapdragons. There are also incorporated in the catalogue attractive colored plates of a collection of the concern's newer vegetables, improved large-flowering scabiosa, Killarney, the new ever-blooming Irish rose, and various Japanese anemones. We would especially direct attention to the list of novelties in plants, which is a most interesting one. This firm was an extensive exhibitor at the Louisiana Purchase Exposition, at St. Louis, its various displays occupying a space of 175,000 square feet, and among the awards it received, as chronicled in the catalogue before us, are the following: Grand prize for water lilies and aquatics, which the board of jurors characterized as "the finest feature in the ornamental gardening department," gold medal for exhibit as a whole; silver medals each for displays of caladiums, Salvia Bonfire, Zinnia Jacqueminot, crimson fountain grass, Tritoma Pfäzleri, petunias and phloxes and ornamental grasses. Other exhibits made at the Exposition by Henry A. Dreer included two beds of cannas of the varieties President Meyer, Jean Tissot and Rubin; two beds of S. A. Nutt geranium; two beds of Stokesia cyanea; one bed of Lantana Craigi, orange scarlet in color; one bed of Dianthus Napoleon III.; one bed of Celosia plumosa Triomphe de l'Exposition, its feathery crimson plumes and bronzy foliage making a rich combination. There is a host of very valuable information in this catalogue. We observe that in its offerings of Japanese irises and tree peonies, the firm adheres to the Oriental nomenclature.

We have also received Dreer's Wholesale Price List (Winter edition) for 1905 of Flower Seeds, Decorative, Hardy, Garden, Greenhouse and Other Plants, Bulbs, Vegetable Seeds, Etc.

J. M. THORBURN & CO., New York.—General Catalogue for 1905.—This firm has this year made a radical departure in the matter of its catalogue covers. In place of the plain, but tasteful, covers of former years, we have the most chaste designs imaginable, formed by an artistic floral tracery for the front and handsomely colored representations of Nicotiana Sanderæ, petunia, and cosmos for the back cover. A colored plate is incorporated of the firm's new potato "Noroton Beauty," with the many favorable opinions on this variety; besides several full-page half-tone illustrations of various vegetables and flowering plants. Some of the novelties offered are: Aquilegia long-spurred, double-flowering hybrids; Campanula amabilis, tuberous-rooted begonia The Bride; several new things in dianthus and calceolaria; the Australian Star flower; single, black-leaved Dahlia Lucifer; new sweet pea, Gladys Unwin; the red Perennial Sunflower; Impatiens Holstii; new Salvia splendens, golden blotched foliage; new star primula, new yellow-flowered spotted leaf calla, a cross between A. Adami and A. Elliottiana, flowers pure bright yellow, with black-purple blotch at base. The catalogue has been most carefully prepared. Especially valuable are the tables of plants, showing time of flowering, hardiness and duration, color, height, etc., with information as to methods of culture. The list of Insecticides and Remedies for Plant Diseases is also very serviceable. As recently announced in these columns, J. M. Thorburn & Co. were awarded two Grand Prizes at the Louisiana Purchase Exposition at St. Louis—one for seeds and another for vegetables grown from the firm's seeds.

IOWA SEED COMPANY, Des Moines, Ia.—Annual Catalogue, 1905, being the thirty-fifth year of issue. A colored plate is given of the firm's Big Four that "make Iowa the leading corn State"—Golden West, Iowa, Silver Mine and Farmers' Reliance. The McKinley Day Collection of carnations, including Improved American Flag, Prosperity, McKinley, Gold Standard and Governor Roosevelt has been selected as a front cover illustration, while representations of various vegetables and fruits, including Majestic Tomato, Golden Nugget Tomato, etc., form the back cover. A long list of novelties in farm, flower and vegetable seeds is furnished.

F. A. MILLER, San Francisco.—Wholesale list of Tree and Shrub Seeds, Conifers, Palms, etc.

A. N. PIERSON, Cromwell, Conn.—Wholesale Trade List of Roses, Carnations, Chrysanthemums, Palms, Ferns, Easter Plants, Lily of the Valley, Etc. Illustrated.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Clematis Coccinea.

When the scarlet clematis first came to the notice of the public it was greatly prized on account of its color, a scarlet one of this popular class of climbers being unknown and unthought of before. It is now in many collections, but in not nearly as many as it should be; it is so attractive when in flower. This clematis is one of the herbaceous species, and it is good for it that it is, for being a native of Texas it is improbable it would be hardy in the Northern States if of a woody nature. As it is, it dies to the ground in Autumn, reappearing with the return of Spring, just as *Passiflora incarnata* and other southern plants do. And every year adds to the vigor of the vines.

The seeds of this clematis are not hard to procure from southern nurserymen. Sown in late Winter, in boxes, and kept in a shady place, in a greenhouse, they vegetate in a few weeks, and in this way a good supply is soon secured. When the vine is planted outdoors, it becomes very vigorous as the years pass, making shoots ten feet in length, which its scarlet flowers greatly adorn.

Shade for Evergreens.

These notes are being written January 5, and already the sun sets 10 minutes later than it did a few weeks ago; from now on it will lengthen its minutes every day. It is from this time on we have to look to our evergreens, to see they are shaded as well as possible, for it is the sun and the glaring light that do the harm in Winter. What seemed to me an ideal contrivance for protecting evergreens was seen a few days ago. A gardener had utilized some packing cases he had received from a nursery. These cases were about seven feet in length by two feet in width. The covers were thrown aside and one end had been taken out of each. A box was then set on end to enclose an evergreen, the end of the box from which the end piece was removed being on the ground. In this way the evergreen was enclosed on three sides and on top, with one side open. The open side faced north. The whole object was to keep the sunlight out, not the cold or the wind particularly. The contrivance seemed to me an excellent one. The evidence to be met with every year of the loss of evergreens in sunny places and the safety of the same species when in the shade, is warrant for believing that this gardener has hit on the right way. Some may think that he might as well have boxed up the whole plant by nailing on the cover, but he thinks not, that too close boxing or bundling up in straw makes the leaves tender; and, in fact, he simply believes that shade is all that is required, and I agree with him.

The application of this belief in the providing of some shade from the sun to all evergreens liable to suffer, will be in order on the part of all those who have faith in it. All broad-leaved evergreens suffer at times. It is not a question of hardness as much as of exposure. The native rhododendrons and kalmias of our mountain valleys lose their foliage just as foreign sorts do when away from the shade, shelter and moisture they meet with in their natural homes. Yews and Arbor vitas suffer, so do euonymus, skimmias, evergreen privet and like plants. The one who has the greenest foliage, and therefore the most salable plants in the Spring, will be he who keeps the foliage in the shade and who helps to retain moisture in the soil by mulching the ground with straw or with forest leaves.

Golden Irish Yew Cuttings.

This season of the year, its first month, finds those who propagate the various evergreens busy putting in cuttings. Among the first to be made should be those of the various yews, as these take more time to root than do those of the nature of retinisporas. The yews are among the first propagators touch, as they root slowly and are not fast growing. But put in now, that three months or more of Winter, or greenhouse management, is before them, they should root nicely by Spring. If not crowded too thickly in the cutting boxes, the rooted plants can remain in these a whole season, and this is the more practicable if when the cutting boxes are being filled a little good soil be first put in, to be followed by the sand to receive the cuttings. Should the cuttings be well rooted by Spring many consider it good policy to pot them singly, in small pots, summering them plunged in sand in an open frame, as they become stronger than if undisturbed in their cutting boxes. This applies to all evergreens propagated in this way.

The golden Irish yew is a particularly handsome variety. As a matter of taste, I do not think anything surpasses in beauty the dark green of the type, but there are many who become enraptured over the beauty of the golden tinted variety, and of all golden ones. And, without question, when their young growth is nearing perfection in Spring the gold and green contrast is charming. It is so beautiful that on many large estates whole beds of these golden evergreens are set out, each bed forming a picture as

greatly admired as many a one of flowering plants would be.

Yews sometimes lose their foliage in their southern sides in Winter, but are rarely hurt further; and there are many fine specimens of them on the grounds of our older residences.

Growing Small Nursery Stock.

The question is often asked one nurseryman of another whether it is not possible to grow small nursery stock from cuttings and from seed, as cheaply in our own country as it is in Europe. As none of us like to say we cannot do a thing as well as anyone else, the answer is generally that we can do so. Yet in spite of all that is said and done, done by Congress in the way of duties, too, it is beyond question that we do not produce here anything like the quantity we need, and the inference is, that the imported stock is a good deal cheaper than our own would be were we to raise it. Many of the European countries are largely interested in the growing of this class of stock for our market. Take the case of shrubs, for instance. The cuttings are set out in narrow rows, and are all hand hoed and tended by hand, not harrowed and cultivated by horse power as here, as I am informed. The cost of labor is so little in Europe compared with ours that with all the manual labor placed on the production of such stock the cost is far below what it is here, hence it is to be supposed that there will remain for some years the large field for foreign nurserymen in this country that there is to-day. Were one really desirous of trying the growing of such stock here he could not hope for successful competition growing them in narrow rows and tending them by hand labor. Labor is too high, costing a good deal more to cultivate per row than were the rows set further apart and horse power used. The plan almost all nurseries adopt, is to have the rows wide enough for a horse to pull a harrow through. Following the harrowing are men with hoes to take out weeds between the plants, which the harrow could

NEW BULB WAREHOUSE OF ARTHUR COWEE, BERLIN, N. Y.

not reach. Land is cheap here, far cheaper than it is in Europe, and it is solely a question of the cost of labor. That this cost to the European nurseryman must be very little is shown by the fact, that even with all the extra time and care which hand labor entails over the use of horses he is still able to sell his stock here, to a good profit, or he would not do it. Instances are occurring every day of a nurseryman dropping the growing of this or that article, not always because it does not pay, but because he can import it cheaper than he can raise it, and can devote his time to growing something that will pay him better.

There are certain lines of stock which the European nurserymen can grow to good advantage under their system of cheap labor and economical ways of working. It is better they should continue doing so rather than that wages should be lowered here. The American wants to live and dress on a plane low wages wont permit of, and we all want him to live so. Let us pay good wages, even if it does mean that the European can beat us in producing some stock. There is room enough for all. JOSEPH MEEHAN.

THE HAMILTON TREES IN NEW YORK CITY.—Major General Alexander Hamilton, of Tarrytown, N. Y., writes to the New York Herald as follows concerning these historic trees: "There need be no question as to the thirteen trees planted on the Grange, late residence of Alexander Hamilton. I, the eldest grandson, made the Grange the home of my leisure hours when a boy and young man. My grandmother told me that the trees were brought by my illustrious grandsire from Mount Vernon—little whips tied under his girdle—upon his last visit to General Washington, and planted by him southeast of the house."

DANSVILLE, N. Y.—George W. Whitney, for many years associated with the George A. Sweet Nursery Company and the C. W. Whitney Company, two of the largest nurseries of Dansville, has decided to sever his connection with the Dansville firms and move to Chicago. As president of one of these firms and vice-president and general manager of the other, Mr Whitney has been prominent in the business interests of Dansville during his stay here of fifteen years.

VEGETABLES UNDER GLASS.

We have passed through the most critical period as regards the forcing of Winter vegetables. After the turn of the season everything seems to grow away more freely; and whoever has made a success of Winter-forcing up to this date can congratulate himself, and be reasonably assured of a continued success to the end of the season.

Every up-to-date grower will have a notebook and make notes of the different varieties which have done best with him. It does not matter how much we knew last season; we can still improve on our knowledge, as each year comes around.

Tomatoes.

Everyone must admit that vegetable forcing is interesting work. What is more effective than a fine house of tomatoes, say at Christmas time; and, I may ask, more profitable, providing they are solid, high-colored fruits? Several varieties have been recommended for forcing purposes, but I have decided, after testing the majority of them, to secure a good strain of seed of the old standby Lorillard, which, I consider, stands pre-eminently at the head for forcing purposes. I well admit Stirling Castle, for instance, will produce quite a number more fruits in the same space; but when it comes down to a basket of Lorillard for the market against a basket of any of the others, my preference is decidedly in favor of Lorillard.

A house of tomatoes, planted now, when there is a demand in the Spring, should make a paying crop. The vines from now on will grow fairly quickly, and, having more sun and light, it firms them up, putting them in a condition for a heavy crop. However, we must not neglect to keep on a crack of air after the temperature goes above 65 degrees.

Cauliflower.

I do not know of any vegetable that is more improved by being grown under glass than the cauliflower, more especially when cultivated in solid beds. Cauliflower, when grown on raised benches, is apt to come under-sized, or often what we term "buttons," which are comparatively useless. But with solid beds we do not experience this trouble, that is, providing, of course, the plants have not received a check at any time during their growth. Probably one of the principal factors in producing good cauliflower heads is water. Assuming the beds have good drainage, which they should have, cauliflower should have a liberal supply of water at all times. Never allow the plants to suffer for the want of moisture from the time the seed is sown until matured. Everyone who has grown this crop is aware that it takes a fairly rich soil to produce good heads; and, without a question, when growing in good soil, nitrate of soda two or three times is a wonderful help, not only to increase the size, but also to hasten maturity—certainly a point that should not be lost sight of. I have been growing here principally First and Best, a splendid variety for forcing, with heavier heads than those of Snowball, and taking about the same space. True, in growing this crop, unless one has plants in 4 or 5 inch pots ready to set as the others go off, there would be some time to wait for another cut; but keeping up a succession in this manner is a great help.

Lettuce.

From now on, for anyone who needs an extra fine heading lettuce Big Boston will fill the bill; but for the short days I prefer Boston Market, and in the glass-house, of course, Big Boston will need more room, although for Spring use it is hard to improve on Big Boston.

Beans.

Each year I generally try something different from the preceding one in the line of forced vegetables; still, usually, on a small scale; then if it is a failure there is not much lost. On the other hand, if a success, so much valuable information has been gained. I have to thank Weeber & Don, New York, for the valuable information gained this Winter as to a variety of bean for forcing, viz., Black Valentine—remarkable for its quick maturity; also heavy cropping qualities. I would advise anyone, another season, who does anything in the line of forcing beans, to give Black Valentine a trial, feeling sure they will be more than pleased with it. It has a round green pod, is solid and meaty, also keeps cropping for some time. I think highly of it as a forced bean, and it strikes me as being equally valuable for outdoors. However, I can tell better about that after this coming season is over. WM. TURNER.

Arthur Cowee's New Bulb House.

Our illustration shows the new bulb house which Arthur Cowee, of Berlin, N. Y., has just completed, having storage capacity of 18,000 bushels. This, together with his houses numbers one and two, furnishes him with a total storage capacity of 26,000 bushels.

TO ESTABLISH NURSERIES IN CUBA.—The Griffing Bros., of MacLenny, Fla., contemplate establishing a nursery in Cuba. The land lies near the Palm Grove plantation, and they have a private wharf which will greatly help the shipping facilities.

The Retail Trade

Chicago Holiday Business.

A summing up of the trade here for the two weeks embracing Christmas and New Year's, shows, without doubt, the largest volume of trade ever done in retail lines during that period. More stock of all kinds was handled, with the exception of trees. Holly was in brisk demand, and if more of it could have been obtained toward the last, at a price at which the store men could have seen some profit in handling it, a greater quantity would have been sold, as several stores were short the Saturday afternoon. But at \$10 per case, outlying stores could not make any profit after paying an express charge several times—the usual sum asked for delivery. All stores experienced a heavy call for holly.

Plants have cut into the cut flower business to a great extent during the past few years, and more were sold this year than in former ones. With but few exceptions, all lines of flowering plants were cleaned up at good prices, which left a fair margin of profit for the store men. They were disposed of in different ways—made-up baskets, hampers and singly. There was nothing in the novelty line offered here; but from what was seen at the different growers' places the average quality was superior to that of former years. Flowering plants included azaleas, poinsettias, primulas, tulips, cyclamen, heaths, hyacinths, narcissus, Gloire de Lorraine begonias and Baby Rambler rose, which could be called a novelty, as this year it made its debut in trade. Among berryed plants were celestial pepper, holly trees, ardisias and aucubas. Prices realized on these were the same as in former years.

ORNAMENTAL GRAINS—BLEACHED WHEAT.—In the protests of M. Rice & Co., against the assessment of duty by the collector of customs at the port of Philadelphia, one of which relates to sheaves of wheat classified as manufactures of grass under paragraph 449, Tariff Act of 1897, which were claimed by the importers to be free of duty under paragraph 566 or 617, relating to crude grasses and other vegetable substances, General Appraiser McClelland renders the following decision:—" * * * Samples of the wheat are before us, and an examination thereof bears out the collector's report that it has been bleached by chemical process; but we are not satisfied that the collector's classification was warranted. On the contrary, we are satisfied that it was erroneous. That the wheat was submitted to a process of manufacture is not open to question, but that such process made it either a manufacture of grass or a manufacture of wheat will not, we think, be seriously contended. The stalk of the wheat is in the exact form in which it was cut; even the kernels remain as they were formed by nature, the only change being in the color.

"Paragraph 449 under which classification was made contemplates articles manufactured of or from bone, chip, grass, etc., whereas the most that may be said of the wheat in question is that it is an article manufactured.

"We are without evidence in these cases as to the use to which the wheat involved is applied, but it is similar to that which in other cases before the board has been shown to be intended for decoration at funerals, and therefore think that it should have been classified under the provision in paragraph 425 of said act for 'artificial or ornamental feathers, fruits, grains, leaves, flowers and stems or parts thereof, of whatever material composed, not specially provided for.' The protests are therefore overruled in all respects without affirming the action of the collector."

Work in the Herbaceous Department.

With the ground covered with snow and freezing weather, there is apparently not much to be done among the hardy perennials, yet, to a certain extent, the success of next season depends a good deal on the preparations and plans made now.

The snow came rather suddenly, possibly before all the covering had been done; if so, this work should be completed as soon as the snow melts. So far the plants are quite safe, as the snow is equally as good, if not better than a covering of manure in preventing the detrimental action of the frost. Most of the damage is done in February and early March when the plants are subjected to alternate freezings and thawings.

If it has not already been done, advantage should be taken of the first mild spell in the weather to lift those plants it is intended to propagate by root cuttings. They should be kept in a cool place where it does not freeze until such times as they are wanted. If the roots are exposed very long to a dry atmosphere they lose a certain amount of their vitality. Phlox, Japanese anemones and gallardias are among the most important things that do well propagated in this manner. If there is sufficient stock to allow of it, pieces of root, with an eye, or growing point, make plants much quicker than blind pieces of root, although the latter will form eyes and grow; but it takes a little longer. If care is taken to keep all the root cuttings the right end up, a much more even lot of plants will be the result, than if they be dibbled in haphazard, although a piece of root will form an eye from any portion of the surface. Root cuttings of an inch or an inch and a half will be found to be the best size, and about right for potting into two-inch pots when ready. Set them in the sand so that the top of the cutting will come flush with the surface of the sand.

UNIQUE CHRISTMAS DESIGNS EXECUTED BY WM GRAHAM, PHILADELPHIA

In cut flowers a heavy call was experienced in the down-town districts. There was a greater call for Bride than is usual at this period. Bridesmaid were sold in considerable numbers, they being of an unusually high quality. As is the case at this season, colored stock of all kinds was in greatest favor. Poinsettias went well when of good quality. Liberty roses were in brisk demand at very good prices. Carnations, in colored stock, met with good sales at prices, in most cases, very satisfactory to the store men, ranging from \$1.50 per dozen up, according to quality. Violets had not the call usual at this time, the public preferring something more showy for the same amount of money. The high price charged wholesale, no doubt, deterred the store men from buying violets.

In closing, it can be said that the past holiday trade has proved, in general, entirely satisfactory; and all hope to be entering upon a new year of unprecedented prosperity. R. JOHNSTONE.

A UNIQUE FLORAL DESIGN.—One of the most elaborate floral designs ever exhibited in the Senate chamber at Washington, surmounted the desk of Mr. Burrows, of Michigan, when the Senate convened on January 5. It was a map in flowers of the entire State of Michigan, and was a testimonial from admiring friends as a compliment upon the Senator's re-nomination for the Senate. The body of the state was shown in immortelles and the lakes by mirrors. These were surrounded by a border of roses, orchids and carnations, the whole design being surmounted by the words, "All yours."

English Holly.

Editor The Florists' Exchange:

The imported English holly is becoming quite a factor as a Christmas decorative plant. There is an increasing demand, and for well-berryed plants with good foliage good prices can be obtained.

Unfortunately, the importations do not always arrive in the best of condition, and even if they do get here in good shape, the florist who deals in them runs considerable risk, as it is not an uncommon occurrence for them to lose their leaves prematurely before Christmas, which makes them worthless for decorative purposes for the time being and so entails considerable loss.

The proper time for the English holly to shed its leaves is April and May, when it makes its new growth, so that it ought to be possible to ship and handle it in good shape until long after the holidays.

The opinions of importers and others who have had experience in shipping and handling it would be of value to the trade at large if expressed in The Florists' Exchange. No doubt the consensus of opinion would point out the best way to handle this holly so as to be able to deliver it to customers in good condition. RETAILER.

Christmas Designs.

The illustrations shown herewith represent Christmas designs executed by the Wm. Graham Co., 108 South Thirteenth street, Philadelphia. They were designed by Wm. Graham, the well known artistic decorator, who decorates for all the large balls and social functions in Philadelphia. DAVID RUST.

With the help of an inventory of stock on hand a list of shorts should be made out, then it will be readily seen what seed will be wanted to keep the stock up to the mark. Seed should be purchased now while there is time to attend to it properly; if left until rush of work begins, something will be neglected.

The different seed catalogues that have so far come to hand have not revealed anything very new or striking among the hardy perennials for the coming season; but for all that there are many old and well-known plants that would be new to the best collections, and they are worth trying. A few should be tried yearly, in addition to the standard kinds such as digitalis, campanulas, hollyhocks, alyssums, aquilegias, delphiniums, poppies, lupines, primulas, heucheras, lychnis and such sorts as are usually raised from seed, and that are already on hand.

It is always advisable to sow the majority of perennials as early as possible, so as to get them pricked off into flats ready to harden off in the frames before the pressure of Spring work begins, and preparation toward this end should be made in the way of having soil under cover and flats, or boxes, made in sufficient numbers. This latter are very essential, as nothing causes greater loss of time than to have to go and hunt up a box every time you want to sow a few seeds. A serviceable size of box is one sixteen by eighteen by three inches deep. Three inches should be the maximum depth; if deeper, the seedlings are liable to damp off if over-watered, or during a spell of dull weather. If two strips are nailed on the bottom of the boxes at each end to raise them off the bench, or wherever they may be placed, it will add materially to the lasting qualities of the boxes as well as insure better drainage. ERNEST HEMMING.

THIS WEEK'S SUPPLEMENT.

Abies (Picea) Nobilis.

For many years, finding that the firs and other evergreens of the Pacific did not appear in many collections, it came to be the opinion that these desirable evergreens were not sufficiently hardy for the Eastern States. This view does not hold at the present time. In its place exists a belief that it is more owing to an unsuitableness of climate in other respects, and not that our Winters are too severe. At any rate, the subject of our notes is quite hardy; it does not get injured in Winter in the Middle States. Our illustration is of a specimen growing in the public grounds of Washington, D. C., in the Agricultural grounds. There are many fair-sized specimens in the vicinity of New York and of Philadelphia, and these have proved their ability to stand our worst Winters.

Those who have seen this fir in its wild state describe it as being of great beauty and of lofty growth, attaining a height of 200 to 300 feet; and an evergreen of perfect shape, and of such a height would be a grand sight to a lover of trees.

All admirers of trees will desire to cultivate this fir and the many other grand Pacific species, there may be more satisfaction in growing the Abies concolor and its varieties from Colorado. There is no question of the adaptability of these to our climate, as the many beautiful specimens to be seen testify. Both the firs and the pines from Colorado are among the best of evergreens for northern use, as are the junipers and spruce from the same region.

When good roots are secured the planting of firs may be done either in Spring or Fall. If in the Fall, do it early, to have the best success. Late plantings of evergreens are not advisable; trees do not settle well before the severity of Winter overtakes them. When planted in the Autumn, early, a thorough watering is a great help toward success. It carries the fine soil around the roots, solidifying the whole, which is what successful transplanting demands.

JOSEPH MEEHAN.

Society of American Florists and Ornamental Horticulturists.

Department of Plant Registration.

ROSE GARDEN'S GLORY.—Conard & Jones Co., West Grove, Pa., submit for registration, pillar rose, Garden's Glory (pink Mme. Plantier), a seedling from Dawson crossed with Clothilde Soupert. Flowers large, double, rose pink, fragrant, in large clusters; plant, strong grower, hardy, almost thornless. Resembles Mme. Plantier in habit and abundance of bloom.

WM. J. STEWART, Sec'y.

John Seden, V.M.H., the famous English hybridist, has retired from the firm of James Veitch & Sons, with which he had been associated since 1861. Mr Seden has a distinguished record, having many new things in orchids, caladiums, gloxinias, tuberous and other begonias, etc., to his credit.

American Carnation Society.

On Wednesday and Thursday, January 25 and 26, the American Carnation Society will hold in Chicago, Ill., its fourteenth annual exhibition and convention. All indications point to a record-breaking gathering. From the great hold which the carnation has taken in the West, the excellence of the flowers there produced, the extensive areas devoted to the cultivation of the plant, and last, but by no means least, the numerous fine novelties that claim the Western States as their place of origin, an unsurpassed show is sure to materialize, which will, of course, be re-enforced by meritorious contributions from the east and elsewhere.

The exhibition and meeting will be held in the Auditorium Hotel, the quarters provided in which, for show purposes, afford an excellent setting for the flowers. The manager of the exhibition, P. J. Hauswirth, in whose care all shipments should be addressed to the Auditorium Hotel, has had large experience in show matters, is a hard worker and efficient in every particular, and we confidently look forward to his share of the labor being most satisfactorily carried out. He will, we doubt not, be ably assisted in his arduous task, which exhibitors, by conforming to the various rules and regulations set forth in the premium list, will assuredly render less irksome.

Coming at a much earlier date than usual, the result of the exhibition will, as we have before stated, be watched with keenest interest by the carnation men of the country. It is to be hoped that propitious weather will attend the occasion. Secretary Herr has distributed the supplementary premium list, which announces the following additional special prizes: Silver cup to value of \$25.00 offered by Vaughan's Seed Store, Chicago, Ill., for the best fifty blooms of an undissemated variegated carnation—any color. \$5.00 in cash offered by A. Dietsch & Co., Chicago, Ill., for the best undissemated seedling carnation from the State of Illinois, not less than twelve blooms to a vase. \$10.00 cash offered by Baur & Smith, Indianapolis, Ind., for the best fifty blooms of carnation Indianapolis—this vase not to be in Class B. John C. Moninger Co., Chicago, Ill., offer as follows: Fifty crimson—First prize, \$5.00; second prize, \$3.00. Fifty yellow—First prize, \$5.00; second prize, \$3.00. These vases not to be exhibited in Class B. Silver cup to value of \$25.00 offered by The Foley Manufacturing Company, Chicago, Ill., for the best vase of 100 blooms, arranged for effect; foliage of any kind allowed, but no flowers excepting carnations. Open only to retail florists.

The literary part of the program has been well looked after. The papers to be presented and discussed include: "Carnation Diseases," by Professor Hasselbring, of the University of Chicago; "Carnations from a Retailer's Point of View," illustrated with a practical demonstration of effects possible with carnations, by George Wienhoeber, Chicago; "Exhibition Carnations," showing methods of cutting, packing and staging, by Fred Lemon, Richmond, Ind.; and "Cutting, Packing, and Shipping Carnations for Long and Short Distance Shipments," illustrated by practical demonstrations, by C. L. Washburn, Chicago. The question box will doubtless elicit other valuable information.

All in all every member in attendance will as usual be well repaid; and the carnation industry throughout the country greatly benefited by the efforts to be put forth.

It may not be inopportune to call the attention of carnation growers generally to the great and good work which this progressive organization is doing on their behalf—a work that can only be accomplished by men having the best interests of their industry at heart, who freely and unselfishly give of their knowledge and experience for the general good. Endeavor of this character is worthy of, and should receive, the undivided support of every florist who grows or sells carnations. The annual dues are only \$2, and the larger the membership list, the better the work done.

The officers of the society this year are: President, James Hartshorne, Joliet, Ill.; vice-president, Wm. Gammage, London, Ont.; secretary, Albert M. Herr, Lancaster, Pa.; and treasurer, Fred Dorner, Jr., Lafayette, Ind.

The Chicago Florists' Club, the exertions of whose members will contribute largely to the success of the affair, as well as to the delectation of the visiting brethren, is officered by: President, W. N. Rudd; vice-president, J. P. Risch; secretary, Robert Johnstone; treasurer, Edgar Sanders; financial secretary, George Asmus.

An excellent suggestion comes to us from Eugene Dalledouze, of Flatbush, N. Y., that an endeavor be made, as far as possible, to have all the delegates from Eastern points to the forthcoming convention and exhibition of the American Carnation Society, at Chicago, January 25 and 26, travel together en route. If intending delegates from this section will kindly inform us of their preference as to a railroad, the one in greatest favor can be ascertained and made public.

No doubt the interested eastern growers will visit Richmond, Ind., either going or returning, to see the novelties there; and a route that would admit of this being done, might appeal to the majority. Let us hear from you on the subject.

American Carnation Society.

Varieties Registered.

By W. L. Lewis, Marlboro, Mass.

MRS. W. L. LEWIS, color pure snow white; flower well built, on a long stiff stem, and will produce more flowers per square foot than any other white in existence to-day. The flowers measure three inches, are good keepers and shippers, and a burst calyx is something that has never been seen to exist since its origin.

By Baur and Smith, Indianapolis, Ind.

BEATRICE.—In registering this variety last week the color was described as lighter than Daybreak; it should have read "brighter than Daybreak."

Notice to Exhibitors.

Messrs H. Weber & Sons, of Oakland, Md., desire to have it announced that the premiums they offer in the premium list of the Carnation Society for the vase each of Norway, Governor Lowndes and Genevieve Lord scoring the highest number of points, will be awarded to a vase in any of the classes calling for fifty blooms or more, and need not be made a separate entry.

ALBERT M. HERR, Secretary.

Carnation Day.

Sunday, January 29, 1905, is McKinley Day; also known throughout the country as "Carnation Day." It is suggested by the trustees of the Carnation League of America that the day be observed by the churches, the Y. M. C. A., and other religious and patriotic organizations, by having at least a portion of their services on that day appropriate to this memorial. As in former years, there will no doubt be a large call for carnation flowers on this occasion, for which the trade should be prepared. Have you sent your contribution to the McKinley Memorial Fund? H. M. Altick, of Dayton, O., will give you all particulars concerning the fund.

OBITUARY

Carl Miller.

Carl Miller, known widely as the oldest florist in Philadelphia, died on Friday, January 6, 1905, at his home, Sixty-fifth street and Elmwood avenue, aged 91 years. For nearly three-quarters of a century he had been actively engaged in raising flowers for the market, and few men were better known in the trade. He was an Odd Fellow and an old member of St. James' P. E. Church. Four sons and two daughters survive him.

J. M. Kimberlin.

On December 26, 1904, J. M. Kimberlin, seed grower, died at his home in Santa Clara, Cal. Two years ago he had a stroke of paralysis, from the effects of which he finally succumbed. He was born in Virginia in 1828. He was at one time professor of ancient and modern languages in the University of the Pacific, from which position he resigned owing to ill health. Lately he turned his attention to seed growing, building up an extensive business. Seven children survive him, his son L. M. being identified with the Kimberlin Seed Company, one of the largest concerns of its kind on the Pacific Coast.

A Stricken Florist Family.

Fritz Obermeyer, the little son of Gus Obermeyer, florist, Parkersburg, W. Va., died of diphtheria on Thursday, January 5. The circumstances attendant upon the child's death are most distressing. Two other children are ill and only recently the eldest son of Mr. and Mrs. Obermeyer succumbed to the ravages of diphtheria. To make matters worse, a penniless stranger, whom the family kindly offered a home, died Friday, January 6, after a brief illness with typhoid fever. His name was Paul Hannaman, a native of Germany, and a graduate from one of its universities. The sympathy of the community goes out to the stricken people who are necessarily almost isolated from their friends by reason of their residence being quarantined.

California Carnation Cuttings.

Editor Florists' Exchange:

I purchased 1000, of different varieties, with which I had an experience similar to that of C. B., mentioned in a recent issue of your paper. The cuttings were too hard, in my opinion, and as a result, only about 25 per cent. of them grew, whereas, of a batch of my greenhouse-grown cuttings, made at the same time, at least 95 per cent. grew. C. WINTERICH. Ohio.

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

Winter-Flowering Begonias.

Editor Florists' Exchange:

As one who greatly admires the remarkable brilliance of Veitch's Winter-flowering fibrous-rooted begonias, I am eager to support the testimonial recently written in their favor by Mr W. Tricker (page 754 of The Florists' Exchange). Your correspondent observes that they are creating a sensation in England. That requires to be qualified. These charmingly decorative, bushy, free-flowering plants are gaining ground each season. Messrs Veitch, of Chelsea, exhibit them consistently for months at the Royal Horticultural Society's shows in Westminster. The warm crimson glow of the flowers in the dull days causes them to be the cynosure for every visitor. So far I have not seen them used in the florists' shops; but there is time enough for that. For decorative work they will be found to be as indispensable as Gloire de Lorraine. Their blossoms, however, are, in the double varieties, more like the well-known bedder, La Fayette, only bigger. The plants approximate in general habit to ordinary bedding tuberous begonias. It was from this section, crossed with B. socotrana, that they indeed came. No one can do wrong in inquiring after them, and up-to-date men will be well advised in procuring a stock speedily. They are mostly grown in 5 in. and 6 in. pots from cuttings raised in gentle warmth. They enjoy almost the same treatment as that accorded Begonia Gloire de Lorraine. Care must specially be exercised to keep them dwarf and stocky. In long-continued, dull Autumn weather, such as we often have, this is not easy; and they are apt to become a little drawn. There are at least six distinct good sorts, and my favorites are Mrs. Heal, single, brilliant rose-carmine; Winter Cheer, semi-double, rich glowing crimson-carmine; and Julius, semi-double, colored rose-pink.

J. HARRISON DICK.

Contrastive Conditions of the Boston Market.

Editor Florists' Exchange:

I notice on page 11, of the last issue of your paper, an article headed "Contrastive Conditions of the Boston market. I would be pleased to be put into communication with the author of that article, and would state that I could, no doubt, make him an interesting offer in the way of white carnations. I grow Queen, which is very fine with me.

L. COUSINS, JR.

Concord Junction, Mass.

Editor Florists' Exchange:

Your correspondent, "A Carnationist," in your issue of January 7, rather severely criticizes my review of the market during the Christmas week and tries to insinuate that my reports are not to be relied upon. It may be interesting to "A Carnationist" and also to more of your readers to know that my quotations were made after a very careful comparison and study of the prevailing prices in all the different markets and wholesale commission houses, and that my statements, as quoted by your correspondent, are just exactly as I found matters on the day preceding Christmas. It is doubtful if ever before so many white carnations were left over on a day preceding a holiday in this city. Was not, then, the market "druggy"? Were not white carnations a "glut on the market"?

I do not for a moment doubt the statements of your correspondent when he says he "corresponded with every wholesale florist in the city of Boston" and "also wrote to several large growers," etc. Anyone familiar with the wholesale flower trade in a large city will at once notice the ignorance of your correspondent on how that business is conducted. Did he expect the wholesalers to supply him with the prices of flowers before they saw what quantity they had, or knew the conditions of the market? Is he not aware that many of the large growers do have their products "placed" and "will not even part with a few "to a casual cash buyer who may happen to 'come down the line'? Had your correspondent, who was only an hour's distance away from Boston, sent his buyer to the city on any of the days preceding Christmas, he would have had no difficulty in securing all the white carnations he required, for they were to be seen by the thousand in every market and wholesale house in the city.

On reading the article by "A Carnationist" I concluded that he must be in need of white carnations; and as it is ever my aim to help anyone along in their business if I can, I at once took steps to notify him where he could secure white carnations by the thousand lots at a price less than quoted by me for first-class stock; and, although that is several days ago, up to the hour of going to press his order has failed to materialize.

JOHN W. DUNCAN.

New England Representative Florists' Exchange.

CLUB AND SOCIETY DOINGS

Society for Horticultural Science.

The Society for Horticultural Science met at Philadelphia, Pa., during the annual meeting of the American Association for the Advancement of Science on December 27, last, and had a very successful gathering. There was a good proportion of the membership present, and several important papers were presented, of which abstracts are given below. One of the sessions took the form of a union meeting with the Society for Promoting Agricultural Science, and the addresses of the two presidents were listened to by the combined audiences.

Dr. Frear, for the visiting society, made a comprehensive sketch of the development of agriculture in its relation to biology and chemistry.

The President's Address.

Dr. L. H. Bailey, dean of the College of Agriculture at Cornell, in his address discussed the problem, "What is Horticulture?" He took up the question of the growth of horticulture as a specialized subject. It had originally begun as an offshoot from botany. It was a growing interest and would, in the future, become more and more subdivided. Horticulture joins hands with the plant biologists on the one hand, and with affairs on the other. Horticulture is contributing greatly to our national wealth; it supplies important foods. He felt that the work in the future would be not to develop so much something we can name as something that we can measure. To make better plants and to enable cultivators to improve the plants they grow. Then there was the art side of the subject, covering the whole ground of rural improvement and home adornment. The day must come when each home would have its plant room, not necessarily indoors, just as it now had its library. In the teaching of horticulture in the colleges there must be greater segmentation and the subject would break up differently in different parts of the country, according to the condition of affairs. There were many commercial sides, each of which needed a specialist. Botany has declined to extend its sphere to subjects that come too near to real human affairs, and has left a larger part of its domain uncultivated. Horticulture has seized this territory; it should hold it.

Mendel's Law as Applied to Carnations.

Jesse B. Norton, of the Department of Agriculture, told of some recent experiments that are being carried on there in the breeding of carnations, and exhibited a number of seedling flowers to illustrate his deductions on the application of Mendel's law to the breeding of such. He classified the seedling flowers into three groups as single, semi-double, and double. What he calls semi-double are the typical florists' flowers; the doubles embracing the split calyx, and monster flowers, which an investigation showed, have all the stamens transformed into petals. In the semi-doubles they are not so modified, hence do not burst the calyx. In the seedlings of one capsule all these types are represented in a seemingly regular proportion. Thus the following figures were given as actual records:

double 6	} total 23	double 74	} total 273
semi-double 15		semi-double 147	
single 7		single 52	

Other characters also coincided with these figures as, for instance, the matter of odor. According to the law we should expect to have the progeny of a hybrid separate into the dominant and recessive types in the proportions of 1, 2, 1. This, we find, very nearly approximated by the figures given above. As a suggestion to the practical florist he asks, would it not be well to cross the single and the extreme double types, rather than always selecting both parents from the standard types; as by that method there should be a greater proportion of true florists' type produced; that is, if Mendel's law holds? The work has only just commenced at Washington, and these suggestions were but the inferences drawn from an examination of the results so far obtained.

Breeding Potatoes.

H. J. Enstace, of the New York station, reported some successful results in the breeding of potatoes for increased yield. He showed the possibility of enormously increasing the potato crop of the country by breeding stock for seed. In a field of one variety the yield per hill varied enormously—from 16 to 53 ounces. From 100 hills the 25 heaviest and 25 lightest were selected. The process was continued until 125 hills of each were had. These were duly planted and given good ordinary care and attention. The crops gathered were uniformly in accord with the ancestry. The average yield from the 10 rows heavy seed hills was 362 bushels 15 lbs per acre; that from the light seed hills (5 rows), 339 bushels 10 lbs. per acre—a gain of 23 bushels 5 lbs. per acre of marketable tubers.

Election of officers resulted as follows: President, L. H. Bailey; secretary-treasurer, V. A. Clark; assistant secretary, U. P. Hedrick. W. R. Lazenby is made chairman of the executive committee.

L. BARRON.

(To be Continued.)

THE HORTICULTURAL SOCIETY OF NEW YORK met in the rooms of the American Institute on Wednesday night, January 11, to listen to a most instructive address by Dr. D. T. Macdougall on the subject of "The Origin of Species by Sports and Mutations." There was good attendance, but an extraordinary absence of those who are practically interested in the business of plant production. Dr. Macdougall has followed up the work of Professor De Vries, of Amsterdam, who originated the theory of the mutation of species, and on Wednesday night he told the audience just what it meant, how it was to be observed, and pointed out the practical value in the production of new plants.

It was in 1590 that, in a garden at Heidelberg, a sport of the celandine occurred which had cut leaves and otherwise differed from the ordinary plant. This plant had never been known to appear again except as a seedling from the original one. It was something quite distinct and quite permanent, coming true from seed. That was the first record of the mutation of species. Darwin had his attention attracted to the interesting phenomena of the sporting of plants, and wondered whether in some way that was not connected with the production of new species. He was put off the track of this idea by the persuasions of his friends, especially by Wallace; and further investigation was abandoned along these lines. It was about 1865 that Mendel made public the results of his work on the peas. Then followed the pan-genesis theory of Darwin that each organ on the plant, as it would finally develop, was represented in the seed by a special cell, or rather a gemmule—each leaf, each twig, each separate part was the product of a certain special division of the seed. The speaker paid a high tribute to the methods and to the honest investigations of Darwin. So great was the interest in Darwin and his work that, from that time, until recently, people ceased to study the problems of organic evolution and discussed Darwinism itself. They wrote books about Darwin and later other books on the books about Darwin. It was in 1880 to 1890 that De Vries became interested in the problems that were before the world. He reasoned that the principle of natural selection was too slow to account for the development of new species. His first step was to take 100 plants, native and cultivated, and watch to see what happened. Out of these it was observed that *Oenothera Lamarckiana* did not come true from seed. In 1887 he saw some plants of this in a potato field—thousands of them—some of which were unlike their parents. He gathered seed and sowed it so the next year he had 50,000 seedlings, out of which 334 did not agree with the parents and even differed among themselves. They belonged to ten or twelve types, however, and continuing the work he had some sixteen types after three or four years. By a reference to the plants which Dr. Macdougall had brought with him he illustrated the appearance of 14 distinct types in his own seedlings raised at the New York Botanical Garden. These were very distinct and varied in form of leaf, in size, and otherwise. Some of these had been identified as species.

There were no gradations among them. They did not show connecting links. Out of 100 seedlings, three to five were mutants. The essential points of the mutation were these: That they come off without any connecting types; that they are, so to speak, side steps, and not progressive developments from the parent. The third point—and it was a puzzle to the botanists—were the mutants going to exterminate the parent? It was hardly likely, if we considered the small proportion of new forms. Ninety-five per cent. came true. Figure that the species grows on year by year. *O. Lamarckiana* would yield, say 200,000 seeds. Only 5 per cent. are of new forms, and they may not be adapted to the conditions. So it must take the new plant a very long time to get ahead. That species were developed by this sudden method was pretty clear if we thought of the age of the earth. It is not old enough to have allowed the development of all the species now found upon it by the slow method of natural selection. But natural selection accompanied the saltatory origin of species. New forms were developed, but only such as best fitted the situations survived. The others die off.

One must not think that *Oenothera* is the only plant showing mutations. Discontinuous variation appeared elsewhere as in monstrous flowers, also the doubling of florists' flowers and the singling of those that were double offered evidence of discontinuous variation. If it were wanted to see if a plant were mutating, get a pure species, get pure soil—he used steam sterilized soil—and grow the seedlings where they can remain undisturbed. Look carefully at the young plants and preserve every "unlike" forms; weed out duplicates only, to avoid the charge of destroying the connecting links. This is, of course, the exact reverse of the garden culture practices.

Dr. Macdougall exhibited also a mutant form of the native evening primrose (*O. hiennis*); he had recognized one out of several thousand seedlings saved from the wild plants in the garden—but then, perhaps, he was not keen enough to recognize all the variations. The mutants vary in succeeding generations, but do not vary towards the parent, and the variation is greater in them than in the old species.

In reply to a question the lecturer stated most positively that no permanent alteration in a plant had ever been brought about by conditions of cultivation. That new developments under cultivation were mutant forms and must be so accorded.

LEONARD BARRON.

NEW YORK FLORISTS' CLUB.—The first meeting of the new year, held Monday evening, January 9, augured well for another successful season of club work, there being a large attendance present, and great interest exhibited in the proceedings, which consisted chiefly of the installation of officers, the reading and discussion of various official documents, and the outlining of a plan of campaign for the year. Vice-President Butterfield opened the meeting by re-introducing President-elect Frank H. Traendly, who made a neat and suggestive address. After thanking the members for re-electing him to the office, Mr. Traendly said:

Well-attended meetings, a liberal response to our invitations to all who might have something to show on the nights set apart for special exhibits, good work by the different committees—all these have contributed to make the past year successful. That the same favorable conditions may be with us during the year to come is my earnest hope. The club is in a flourishing condition, and the treasurer's report will show a growing surplus, as the following extract proves: Cash balance, January 1, 1904, \$911.63; January 1, 1905, \$1,226.52.

The membership is at present about 200, of which 147 are in good standing, 32 owe one year's dues and 18 have received a final notice to make good their indebtedness at once. These figures may seem to compare unfavorably with last year's report, but the list of delinquents has been gone over by the Board of Trustees and a good deal of dead wood dropped from the roll. It is proper at this time to say to proposers of new members that the initiation fee of \$3 must be handed in to the secretary with every proposition before a name can be presented to the club.

I recommend a repetition of last year's program to arrange for special exhibitions on stated nights during the year, beginning with carnations at the February meeting. It would tend to increase interest and make these nights still more attractive if we could have a paper read by a specialist on the principal exhibit of the evening.

I hesitate to refer to a revision of the rules governing the committee on award, but I have heard suggestions that the rules might be improved. I think, however, that matter may safely be left with the committee, and if it sees fit to make recommendations, the club will consider them.

The House Committee seems to have made itself indispensable, and a fair appropriation for this year is advisable. I recommend that the committee make arrangements for Ladies' Night for the February meeting and provide proper entertainment. If agreeable to the club, I would suggest that we entertain the ladies again toward the close of the year. One or two illustrated lectures might be arranged for by the Essay and Entertainment Committee during the year.

After some advice to the outing and bowling committees, Mr. Traendly continued: Concluding, I want to testify to the warm support given me by the officers of the club during the past year. The secretary has done his good share, and how much that amounts to is not generally appreciated by the majority of members. His work has been most valuable toward the club's welfare. The treasurer has seen to it that the club's funds have not been idle and the fact that all but a couple of hundred dollars are drawing interest—which amounts to enough to pay two-thirds of our rent—shows with what zeal he cares for our interest. With the continued assistance of these, the other officers, committees and members, I hope to be able to serve you acceptably during the coming year.

Vice-President Shaw was next introduced, and read his "message," quoting from the poets, urging each member to add others to the membership list, advising the use of the question box, and suggesting a night of song, addresses, and recitations by the members. He also said that the New York Florists' Club should go to Washington in August next, there to make no divided or uncertain sound for a wholesale commission man as president of the national society. Secretary Young, Treasurer Weathered, Trustees John Scott, Alex. Burns, and W. F. Sheridan also made appropriate remarks, promising their best endeavor for the club.

On behalf of the Dinner Committee, Mr. Sheridan announced that the popular annual feast would take place at the St. Denis Hotel, Saturday evening, February 4. A competent staff of entertainers in music, song and story, had been secured. Over 40 tickets have already been sold, and the affair promises to be a record-breaker—in keeping with the past year's administration.

Chairman Nugent made a report for the House Committee. The "canteen" had cost but \$33.85 for the year. The committee received a vote of thanks for its economic and excellent service.

The following gentlemen were elected to membership: Robert Simpson, C. H. Totty, John S. Zschorna, Marius Matheron, George Darsley and James Hart, Jr. Proposals for membership were: C. Albert Small, Frank M'Mahon, J. F. Marshall, W. J. Miller, and Clarence Saltford.

Secretary Young read a letter from Professor W. G. Johnson expressing appreciation of the club's endorsement of that gentleman's candidate for the office of Assistant Secretary of Agriculture at Washington; and intimating the Professor's willingness and anxiety to assist in whatever way he could the floricultural interests of the country.

Mr. Young's annual report showed that at the ten regular meetings held the average attendance had been 78.

The house committee received an appropriation of \$50 for "canteen purposes," after which Wm. Duckham extended an invitation to the officers and members to be present at the annual "smoker" of the Morris County Gardeners' and Florists' Club, on Wednesday evening, January 11.

A communication regarding the Hearst Bill dealing with the regulation of Interstate Freight matters was referred to the Board of Trustees.

The resignations of Thomas Young, Jr. and H. Holbrook were received with regret.

It was decided to continue the annual outing; also

to have two ladies' nights as suggested by the president, the first of the latter to occur at the February meeting, which will also be carnation night, when, it is expected, an expert carnationist will be present to address the assemblage.

The report of the Board of Trustees was read by Alex. Wallace, testifying to the correctness of the treasurer's accounts, commending the careful manner in which these had been prepared; urging the enforcement of the by-law regarding the proposition fee of three dollars accompanying all applications for membership, and suggesting, on recommendation of the treasurer, a change in the by-laws whereby all bills for dues will in future be sent out by the secretary. All money for same he received by him, in turn transmitting them to the treasurer, who will grant his receipt therefor. Notice was given of a motion to that effect, the change to date from July 1 next, to be presented by Mr. Butterfield at the February meeting.

President Traendly announced the following committees: Outing—Messrs. W. J. Elliott, H. A. Bunyard, J. Austin Shaw, L. Schmutz, Jr., John Birnie, J. Riemels, C. Schenck, L. B. Craw, and A. H. Langjahr. Legislative—John May, Patrick O'Mara, and Chas. H. Allen. Essay and Entertainment—J. B. Nugent, J. A. Manda, and Robert Kuhne. Awards—Patrick O'Mara, C. Lenker, W. H. Siebrecht, A. L. Miller, John Birnie, Wm. Duckham, and C. H. Totty. Mr. O'Mara desired to decline, owing to business matters engaging his time, but yielded to the pressure of his co-appointees, and will serve another year.

Mr. Wallace called attention to the forthcoming meeting and exhibition of the American Carnation Society, to be held at Chicago, January 25 and 26, which promised to be the best the society has yet held. He said it had been suggested that the Eastern delegates should arrange to travel together if possible; and he would be glad to be notified, by all intending to make the trip, as to their preference for a railroad route.

The meeting adjourned at 11 p.m.

THE TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY held its sixth annual dinner in the Florence Hotel Wednesday evening, January 11, nearly 70 persons participating in the sumptuous repast provided. The room was tastefully decorated for the occasion; among the cut flowers gracing the tables being a fine vase of Victory carnations brought up from New York by Alex. J. Guttman. President Gibson, of the society, opened the post-prandial proceedings by introducing the Hon. George C. Andrews, District Attorney of Westchester County, as toastmaster, that gentleman officiating in a most acceptable manner. The Tarrytown banquet is "strictly temperance," and the honorable toastmaster made some good-natured references to the quantity of water consumed by the diners, and Tarrytown's ability to supply it, all of which were received with much merriment. Sprited addresses were made by Major Bright, ex-Senator McClellan; the latter speaker dealt with "Horticulture," and among other things mentioned that just a century ago the first book devoted to the cult was published, and within the one hundred years intervening some 600 others on the same subject had appeared. Dr. Ely, of Tarrytown, also made a felicitous address, advocating the establishment of a park in the village, and at once, J. Austin Shaw waxed eloquent on Tarrytown's historic renown, its many contributions, through Mr. Pierson, to horticultural advancement, and read the usual poem—this time an old one.

The catching of a train prevented, with regret, further participation in a most enjoyable affair. Secretary E. Neubrand was master of ceremonies and was ably assisted by Messrs. David McFarlane, William Scott, James Smith and others of the members. Several were present from outside societies.

THE MONMOUTH COUNTY HORTICULTURAL SOCIETY held its regular meeting, January 6, when the new officers were installed. Charles Wengert and James Barron were elected to membership. H. A. Kettel exhibited three vases of tulips, which received 90 points; also one vase of freezias, scoring 90; and one vase of lily of the valley scoring 90. George Kuhn exhibited some violets, which received 80 points. Geo. H. Hale had a vase of Euphorbia jacquiniiflora, which scored 95 points. Mr. Hale grows it at the end of a rose house, in a bench, treating it the same as the roses. Its beautiful sprays, with the stems, can be cut six feet long, which makes it useful to the florist for decorative purposes. It is seldom seen in this country, but it is grown extensively on the other side. Wm. Turner showed some very fine cauliflower, which received 95 points. W. N. Campbell, of Vaughan's Seed Store, was a visitor, and made some flattering remarks about the society. Other remarks were made by the retiring president, Wm. Turner; President Hale, Vice-President Williams, Financial Secretary Kuhn and N. Butterbach. The judges of the evening were A. J. Williams, John A. Kennedy, and John Yeomans.

WASHINGTON (D. C.) FLORISTS' CLUB.—The meeting of the Florists' Club last Tuesday, was very poorly attended on account of the very inclement weather; consequently all business was postponed until the next meeting, when it is to be hoped the elements will be more favorable and the attendance much larger.

UTICA (N. Y.) FLORISTS' CLUB.—The regular monthly meeting was held January 5, 1905, in the Maennerchor rehearsal rooms, and was largely attended. It was a musical meeting, and was very much enjoyed. The program included fine selections on the graphophone and singing by Harry Narton, who rendered "Violets" and "Dear Old Girl." John Murphy also gave selections. Among the out-of-town members present were Seward Hakes, Theo. Schesch and Mr. Fries, of Iliou, N. Y.; Mr. Barclay, of Herkimer. Three new members were elected, and three more proposed. At the conclusion of the musical program refreshments were served, and a pleasant social time enjoyed until a late hour. The next meeting, in February, will probably be the largest ever held by the club. It will be the annual carnation exhibition, at which there will be staged all the new varieties of this popular flower, and the latest carnation information will be presented and discussed. One of the most successful and well known carnation specialists is expected to attend and address the florists. The meeting will be open, by invitation, to the ladies and friends of the members. At the close a banquet will be held. With the exception of the annual clambake, this will probably be the most important event of the club year.

QUIZ.

THE MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY held its annual smoker on Wednesday evening, January 11, in the club room, and the event was a very pleasant one indeed. As is well known, this society instead of having an informal dinner for its annual celebration, gives what it terms "a smoker," and provides first-class vaudeville talent to furnish entertainment while the cigars, punch and sandwiches are being enjoyed.

At the opening of the meeting A. Herrington introduced the newly elected president of the society, F. R. Heremans, who immediately announced that, aside from the reading of the treasurer's annual report, the regular business session would be omitted. William Charlton, treasurer, made his report, which showed the society to be in excellent financial standing, with a balance in the bank of \$238.31. The entertainers for the occasion were then introduced and a merry time was spent until a rush for the trains had to be made. Haley and Bond furnished dialogues and musical selections, and T. Thompson treated his hearers to monologues and songs. The entertainment was of the highest order, and was thoroughly enjoyed by everyone present. The celebrated Madison punch also came in for a good share of commendation.

E. G. Hill, Richmond, Ind., sent on a bunch each of his new roses, Richmond and Rosalind Orr English, and the Chicago Carnation Co. sent a bunch of the new carnation Fiancee. E. Brandt also contributed a vase of Liberty roses, all of which helped materially to interest the members. Those who attended from New York were William Neil Campbell, J. B. Nugent, Jr., and S. S. Butterfield.

NEW JERSEY FLORICULTURAL.—The installation of officers took place on the stormy night of the 6th instant—Jos. A. Manda officiating. It was found necessary to order twelve silver cups to fill the awards of last season, and these were promised to be ready for presentation at the next meeting, at which the inauguration dinner will also take place. The society, after discussion, decided to give but four cups as prizes next season for the highest number of marks in any or all departments, instead of dividing into classes for flowers, fruits, and vegetables, as last year, the contest opening with the February meeting. Wallace Warner, of the Willowmead Orchid Houses, was proposed for membership. A demonstration was made by Dr. J. M. W. Kitchen of his "Torrdoor" fuel and heat-saving appliance. Some exceptionally fine white sweet peas were shown by Charles Ashmead.—J. B. D.

THE NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY held the second of its regular monthly meetings on Wednesday, January 4, on the premises of Felix Mense, florist, Glen Cove, N. Y., who has generously granted this as a place of meeting till a permanent one be decided upon. Notwithstanding the inclement weather there was a good attendance, which would seem to augur well for a successful career to this newly organized society. President Harrison occupied the chair. The chief business of the meeting was the adoption of by-laws submitted by the Executive Committee. Some lively discussion followed.—J. F. JOHNSTON.

THE WORCESTER COUNTY (MASS.) HORTICULTURAL SOCIETY.—Secretary Adin A. Hixon has distributed the schedule of premiums offered by the Worcester County Horticultural Society for 1905. It shows that \$1,000 has been appropriated for premiums on flowers and plants, \$350 for fruits, \$650 for vegetables. Vases and other dishes will be provided free to exhibitors. The judges are George McWilliams of Whitinsville, on plants, flowers, etc.; Henry E. Rich, of fruits; Charles Greenwood, of vegetables. Exhibitions will be held on Thursday, March 2, 9, April 13, and May 11. Commencing June 1 there will be exhibitions every Thursday until and including September 28 and October 12 and November 9, 1905.

Asparagus for Name.

(15) HORTUS.—The spray of asparagus sent is of the plumosus nanus variety, and differs much from the culinary asparagus.

Lilies for Easter.

(16) What size should *L. Harrisii* be at this date to be ready for Easter; also *L. longiflorum*. The latter are about three inches high; the temperature at night is fifty degrees. *L. Harrisii* are one foot high. Can they be kept back for Easter. They have started very quickly this year and often have not had over a 40-degree temperature at night.
HORTUS.

—*Lilium Harrisii* that has made two or three inches of growth would be considered just about right at this date to be in for Easter. The night temperature should bring *L. longiflorum* in about right; but it will be a rather difficult matter to hold back for Easter those *L. Harrisii* that are a foot high at the present time.

White Carnation for Summer Flowers.

(17) Which is the best white carnation for Summer flowers? I have Mrs. Fisher, but it is not very good.
HORTUS.

—Flora Hill is considered a good variety for outdoor work, but the best plan would be to procure several sorts and give them a trial, as those that will do well in one section of the country might prove a failure in another.

Chrysanthemums.

(18) Which are the best white chrysanthemums for pots and cut flowers, suitable for funeral work, early and late?
HORTUS.

—The best all round chrysanthemums for the purpose mentioned are Ivory and White Bonnaillon.

Summer Flowers for Funeral Work.

(19) Name some white-flowered hardy perennials and annuals, suitable for funeral work in Summer?
HORTUS.

—Suitable annuals would be stocks, asters, candytuft and Phlox Drummondii, for hardy and perennials, phlox, antirrhinum, veronicas, delphiniums and Shasta daisy.

Tritoma Pfitzeri.

(20) Please inform me how to handle *Tritoma Pfitzeri* roots through Winter; also how to start them in Spring, whether in boxes or open ground.
A. W.

—To keep the tritomas through the Winter, all that is needed is a frost-proof cellar. Pack the tubers in dry sand, and let them remain there until Spring when they can be planted direct into the open ground.

Grafted Roses Dropping Their Leaves.

(21) I have two benches of Bride and Bridesmaid roses planted last June in good fresh top soil, with not much sod, it was not stacked the following Fall, but mixed at planting time with about one-fourth of rotten manure and a goodly portion of bone, and blood and bone mixed. Soil was rather sandy. From the day I planted, about twelfth of June, the plants seemed to have had an excessive dropping of leaves, these turning a mottled yellow and then dropping, even up to this date. I am confident it is not red spider; and I have been very careful with watering. I have seen the same thing happening in other localities where I know the greatest care has been taken to have every detail strictly attended to; and this is not the first time it has happened with me. I think if someone could give a real intelligent explanation of this trouble it would be of great service to many others as well as myself.
J. S.

—Roses will drop their leaves, to a certain extent, all through the Winter, whether the plants happen to be graft-

ed or not; and so long as it is only the older leaves that fall, those that are turning yellow with age, no harm comes to the plants from the loss of them; for it must be remembered that the rose is not an evergreen shrub, and the leaves naturally wither and drop when their usefulness is ended, provided, of course, they are not injured in the meantime by injudicious feeding or ventilating, or by severe attacks of mildew. If the roses referred to in the question are dropping all their leaves, irrespective of age or color, we would recommend that an examination of the roots be made, as such a state of affairs would point to an attack of eel worm, for which there is as yet no real cure, though a very free use of lime will hold it in check, if the roots have not become too badly affected.

A Violet Trouble.

(22) We have double violets in frames. The plants were bought in the North. The leaves soon curled up, and all rotted off in a short time. One-third of the plants are dead. We thought they received all the attention they required, as we have grown violets for years, both in frames and in the house.
E. J. B.

any excessive richness in the soil, and produce better results in the crop of lettuce.

A Rose Trouble.

(24) I mail a box containing roots and leaves of my Bridesmaid roses. Please let me know, if possible, the cause of their acting as they do. I have run the plants on the dry side all Winter; they were quite dry at times. The bed is full of roots. The house is run at 70 degrees in the daytime, and from 55 to 60 at night.
C. A.

—We fail to find any disease on the rose plant, and the only reason we can assign its poor condition to is the evident fact that not enough care has been given to the watering. While it is all right to run roses on the dry side during dull or very cold weather, it must be remembered that at least enough water must be supplied to keep the plants in a healthy and a growing condition, which does not seem to have been done in this instance.

Carnations Dying Off.

(25) I have been growing a white carnation of my own, a seedling, for three years with great success. I had

would also suggest, if another piece of ground could possibly be made available, not to plant the asters on the same spot two years in succession, as there is so much more likelihood of dry rot attacking the plants when that system is practiced.

Carnations.

(27) Can we grow the following carnations in one house with the same temperature; Mrs. Lawson, Queen Louise, or the Queen, Prosperity, Enchantress and Estelle? We have Queen Louise growing now in a house with Mrs. Frances Joost and Prosperity at 52-53 degrees, but it splits very badly with us, and we thought if we put it in with Mrs. Lawson and run the house at 54-55 degrees, it may do better. What is the right temperature for Enchantress, Queen, Estelle, Queen Louise? About how many blooms ought we to cut from 1,600 plants from October 1 to January 1?
A. B. C.

You cannot grow Queen Louise, Enchantress, the Queen, Estelle or Prosperity in the same house with Mrs. Lawson, as the latter should be kept at 56 degrees at night, and ten degrees higher during bright days; and to grow the above varieties at this temperature you would have a soft growth and small flowers on weak stems. But you state that you are growing Queen Louise, Prosperity and Mrs. Joost at 52-53 degrees, and they split badly. Try growing them as near 54 degrees as you can; this will not make them soft, if watered properly, and will keep them from bursting so badly and will be all right for all the varieties except Enchantress and the Queen. These two sorts should be kept at 50-52 degrees. This will give better keeping qualities in your Enchantress and better stems and flowers on the Queen as well.

From your letter I cannot help but feel that your trouble does not come from your temperature alone; it seems as if you have allowed the soil to get too dry before watering, or when watering the soil you did not give it enough to reach the bottom of the bench. Examine the soil with a trowel to make sure of this. Or you might have caused the plants to receive a chill by letting the temperature get too low before starting your fires, or giving too much air at time of raising ventilators. Watch this closely, and I think your trouble will decrease. You ought to be able to cut 12,000 blooms from October 1 to January 1, if the plants have been topped back properly and are not neglected in any way.
C. KNOPP.

Mixing Hen and Cow Manure.

(28) Will mixing cow manure with hen manure cause any of the fertilizing elements of the mixture to escape with the air, such as is claimed to be the case when mixing wood ashes with bone meal? We were about to mix the above-mentioned manures for a mulch, when a neighboring farmer informed us that he had had poor results from making such a mixture, stating that the chemical action resulting caused a large proportion of the plant food therein contained, particularly nitrogen, to escape into the air.
J. F. E.

—While we have no data on the results of mixing cow and poultry manure, we think that it would be an unwise thing to do, and would recommend the mixing with the poultry manure three times its bulk of fresh soil before using as a mulch. The cow manure can always be used alone with perfect safety.

Carnations Daybreak and Eldorado.

(31) J. F. E.—The originator of carnation Eldorado was W. R. Shelmire, Avondale, Pa.; and of carnation Daybreak, W. P. Simmons, Geneva, O.

Sweet Pea Seed.

(32) Kindly give me authoritative information as to whether sweet pea seed grown in Southeastern Pennsylvania is as valuable for planting as California-grown stock.
C. M. W.

—We have no information at hand regarding the quality of Pennsylvania-grown sweet peas in comparison with the California-grown seed. E. A. Higgins, Avoca, N. Y., after carefully testing eastern and western-grown seeds in 1902, says: "The western seeds have, in all respects, and especially in vigor and vine, fully equaled their competitors in the race, and some of them they have far surpassed."

BEGONIA GLOIRE DE LORRAINE

5 ft. 4 in. across, in 6 inch pot. Grower, David McFarlane

(See page 42.)

—The trouble with the violets has no doubt been brought about by improper soil conditions, bad drainage, too extravagant a use of manure, or planting in the same soil that was used last year would tend to the cause. We do not believe, from the description given, that the violets are affected with any one of the well-known diseases of violets, and we think that if the soil conditions are examined thoroughly the trouble can be located and corrected.

Lettuce.

(23) I send you some lettuce plants which are diseased, and I would like to know what the trouble is, its cause and cure. We grow lettuce on the ground, and I sometimes think we put on too much manure. I do not think the trouble arises from not enough ventilation, or too much water, as I have watched those things particularly. The soil in our house is new and has never been used for any other purpose, and it never had a plough in it before.
A. J. R.

—When the lettuce plants arrived here they were very much decayed, but that seemed to be caused by their being packed in an airtight box. We were unable to discover any disease, other than the decay mentioned. From the letter of inquiry, however, we believe that the trouble on the lettuce benches comes from too much manure. Seeing the soil used was virgin ground, the manure could very well have been omitted, or, at least, a very little would have sufficed. We would try now to correct the matter by applying a liberal dusting of air-slacked lime over the surface of the soil, repeating the dusting whenever the lime has become absorbed. This will tend to qualify

7000 this year planted out, and these were in good condition, but as soon as the hot weather came they died off very rapidly, and by the first of September I had only 800 left. These I put in the house, but all went back except fifty plants. The ground where I planted them was sod. I took the sod off and covered the soil with mushroom manure and plowed it under, and on top put old greenhouse soil, and in this I planted the carnations.
M. B.

—While it was a great mistake to take old greenhouse soil and spread it on the land, and then plant young carnations into it, especially if the greenhouse soil had been used previously for carnations, it would appear that the variety is just losing its vitality, and giving out. A number of seedling carnations have gone the same way after three or four years' trial, and there seems to be no satisfactory explanation of this.

Soil.

(26) Will you kindly tell me if it is considered necessary to change the soil in greenhouse benches each year; the chief crop is mignonette. Also, on a strip of land used last year for asters, will it do to use both lime and hen manure for this year's asters?
S. E. B.

—While some florists do occasionally use the soil in the benches more than one year, it is considered poor policy to do so; and wherever fresh soil can be procured, the old should be replaced with new every year, then there is no chance of transmitting any disease from the old crop to the new. Instead of using lime with the hen manure, we would mix the manure with three times its own bulk of fresh soil before spreading it on the land. We

THE WEEK'S WORK.

Timme's Timely Teachings.

Bougainvilleas.

Well-grown and flowered bougainvilleas, especially the Sanderiana variety, are good things for Easter. To grow them well is not over-difficult, but to have them well set with bloom is less easy. The chief requisite here, as well as with all other plants shrubby or hard-wooded, for a liberal yield of flowers, is thoroughly ripened wood. For this reason bougainvilleas are given a good rest from about October until January or February by withholding water and reducing the temperature to as low as 45 or 50 degrees. Although at that time the plants are unsightly things and by no means ornamental, this forced period of semi-ornamentality is necessary if later on a good stand of bloom is wanted and plants then good enough for a king to behold.

The last week of January, or the first part of February, is the proper time to start them into active growth again. The temperature should be gradually raised to 65 degrees and may go higher if the development seems too slow for a right hit at Easter. This, however, need hardly be feared this year, since that holiday is late, and 65 degrees of heat, or even a little less, assures a prettier stand of bloom than may be expected on plants developing their flowers in a higher temperature. Not only will the buds open more fully and evenly, but the fine bracts will also hold their beauty much longer, for many weeks, either on the plant or after being cut. From the time the new growth has fairly started until the flowers are fully out, the plants require a great deal of water and several times daily a syringing, as also the full light and all the sunshine within our power to grant.

Very large plants that have become too bulky and inconvenient for pots or tubs may now be permanently planted into a hothouse or warm conservatory border, where they will year after year produce great quantities of high-grade decorative cut material. Bougainvilleas are propagated from cuttings. If these are taken from the first new wood in winter, placed in a pretty warm propagating bench, kept moist and are properly cared for, over half of them will be well rooted in from fifteen to twenty days. If the old wood is to be used, summer propagation in an outdoor hotbed will give best results.

Mignonette.

Nice 4-inch pots of mignonette always sell well and are often called for at Easter and Memorial Day. Sow the seeds of a good strain now and at once into 4 or 5 inch pots, five or six seeds in the center, of which, if they all come, one or two of the finest plants only are allowed to grow on. When sowing let the pots be not quite full of soil, so that there may be room enough for a little more compost to be filled in after the plants are an inch or two high. Do not be too liberal with water at first, but give the plants all they want when forming buds. The timely pinching in of too forward shoots, and the cutting away of straggling growth, will give form and shape and the plants will stand willingly all the pruning found to be helpful in an effort to obtain plants of a high standard.

If, for the purpose of cutting, a bench of mignonette is wanted, the seeds may then be sown into the soil in the bench, or the bed may be stocked with the small pot-grown plants. The hills should be from 9 to 12 inches apart, and one, two or three strong plants to a hill. Main shoots only are allowed to grow up and all the weak growth at the base of the plants is cut away. For mignonette the soil should be a good, heavy clay, well enriched, and, before sowing the seeds, made as solid and firm as pounding down, or walking all over it, will make it. Give just sufficient water to keep the young plants growing, but use it rather freely when the strong shoots begin to show the first buds, and from then on raise the normal temperature 50 to 65 degrees to at least 60 degrees at night and as high as the full sunshine at early Spring will raise it, kept somewhat in check by an abundance of fresh air through the ventilators.

Stocks and Candytuft.

Both Ten-week stock of the Cut-and-Come-Again varieties as well as candytuft, The Empress, will furnish a good grade of cut flowers, and plenty of them, all through the Spring months, if the seeds are sown now. Sow into boxes and transplant to where they are wanted; or they could first go into 2-inch pots and out of these into the bench. Plant close, say, 4 or 5 inches apart. This is just right for the candytuft and will also do for stocks after the single-flowering plants have been pulled out, which are worthless. I have known old gardeners who could distinguish the single from the double flowering plants when they were only an inch or two high and still in the seed boxes. I cannot do that, and although I tried hard to master the trick and have raised many thousands of Ten-week stocks in my time, I have to wait until the buds, just form-

ing, can be felt before I can positively know which plants to remove and which to leave standing. The usual percentage of singles in most varieties and strains of this good old standby is from twenty-five to forty in every hundred, and growers who raise them in great quantities for their flowers every season always figure on 30 per cent. to be single-flowered and plant accordingly. There is no difficulty in disposing of the crop of blooms at excellent prices if they are well grown. Candytuft is also a good seller, but brings less money. An incredible number of flowers, however, can be cut from a bench for weeks. Neither of the two requires any extra or special attention as to soil or culture, but both are lovers of fresh air.

Smilax and Asparagus.

The seeds of asparagus should now be sown, both of A. Sprengeri as well as of A. plumosus. Fresh seeds can now be obtained. Give the seeds and young plants about 60 degrees of heat and the full light when growing. This is also the best time to sow smilax seed, unless the grower has more confidence in old stock. I prefer to sow every year, and if done now good 2½ or 3 inch plants can be had for stocking the beds in June or July.

Dracaena Indivisa.

Great numbers of Dracaena indivisa are raised and disposed of every year, and, although by no means the handsomest of the tribe, it certainly is a most useful member of this imposing genus of decorative plants. It is the easiest to grow from the seed, quickly attains size and does not greatly mind untoward conditions, caused by ill-treatment or adverse weather. It is, therefore, largely used in the filling of vases, veranda boxes, urns and outdoor groupings of many kinds during the Summer, where its grass-like but graceful foliage lends variety, form and finish to any such open-air arrangements.

This is a good time to start the seeds of this good old plant. If duly attended to as to heat, moisture and potting off, nice little plants will be ready in May or June to be planted into the field. If the land is in an ordinary good condition, the plants will have made good growth by the middle or end of September, when they should all be potted up and removed to the greenhouse. Four and five inch pots will be needed, and the plants, being now of usable and salable size, should, from now on, receive no further shift; none but those remaining on the grower's hands after the season's main plant business is over. They may be wintered over in any cool greenhouse, even in nicely placed single rows under a bench, but should never stand too closely packed. A few extra fine and well-advanced specimens may be selected and placed where they can be seen and a well-done Dracaena indivisa is, indeed, a fine enough subject for any bracket or jardiniere.

Dracaena Terminalis.

There never was a time in the dealings of a diversified plant trade when Dracaena terminalis did not prove one of the most attractive and withal most useful of decorative plants or could not, in some way or form, be made to harmoniously enter into any plant arrangement. Not only the finished, stately specimen, unsurpassed as a jardiniere or parlor plant, always finding favor in the eyes of our most fastidious patron, but also great numbers of the yet small-sized young stock, are utilized by decorator and plantsman in all sorts of plant combinations and never fail to enhance their beauty. Of the innumerable varieties of dracaenas there are a few of more recent introduction, grand and majestic subjects for the conservatory, which, as such, are valuable acquisitions, but do not come up to D. terminalis as plants commercially useful, tractable or profitable.

This dracaena more readily admits of rapid propagation, grows faster, is less troubled by insects, and the variation of its foliage is less bold and yet, with the delicate blending of the rich tints in the coloration, is of a character strikingly beautiful and never out of place; always creating a pleasing effect.

From now on until the end of February, when we have a steady fire heat at our command, is a good time to work up a stock of this, as well as of all those dracaenas belonging to the finer class. Where this is done on a large scale, great quantities of southern-grown dracaena canes will be cut up for that purpose. The best article in this line is grown and shipped here from the West Indies. There is a vast difference in the quality of the canes, a difference discovered mostly too late by the grower. He can tell when they are too hard or too sappy and long-jointed, thus diminishing the percentage of the resulting output, but he cannot know, until long after propagation, the true character of the stock. While the canes may be all of true D. terminalis growth, he may have struck a strain, which, do what he may, will never show any great or decided variegation in the leaves, a goodly number of plants remaining green; or his propagation may result in a lot of exceptionally fine plants, highly colored and brought to a state of perfection with the least cultural effort. Here is a case where we have to rely on good luck.

The canes are cut into short pieces, each one consisting of one or several joints or nodes. These pieces leaving the upper end just visible are placed into the propagating sand. Sawdust or half of that and sand, the other half well intermixed, will give better results than sand alone. In from twelve to fifteen days roots will be sent forth from dormant eyes, and soon top growth will start. After this is far enough advanced, the new plant is carefully cut out, or pulled away from the old stem, and potted up; or the old piece of stem may remain on the young growth and will gradually decay. Any old and lanky specimens of dracaenas or bare-stemmed and disfigured plants can be used for propagation. The top, however, as a cutting is very rarely a success, more often surer to rot than to root; but the stem, as shown above, and especially every piece of healthy root, will help to increase the grower's stock. Dracaenas will live in a comparatively low temperature, but a liberal measure of heat, assisted by a moist atmosphere, are more likely to result in a stand of plants of a high standard. FRED. W. TIMME.

Begonia Gloire de Lorraine.

There is no plant that I know of more valuable for house decoration during the Winter months than the Begonia Gloire de Lorraine, whether it be grown in a hanging basket, 6-inch pot or pots, or pans of larger dimension for specimen plants. The general cry that this plant is hard to grow may be well-founded, providing it is placed alongside other begonias, or even stovehouse plants, and receive treatment which the others will readily respond to; but with a little special care, later," which (is endorsed by me as "cultural heat, Gloire de Lorraine begonia can be grown to a great size.

The plant that is best adapted to our use is the one in the 8-inch pot, with an average size of 24 inches high and 30 inches through. It is almost impossible with the heat at my command to get them in larger pots than 24 inches the first of July, when taken from cuttings, but I find that this is quite early enough, as I have no trouble in getting the plants to the size desired by November.

I place the leaf in the propagating bench some time in January and pot on in thumb pots when rooted; these will throw up vigorous shoots in May, from which I take my cuttings.

When the weather gets warm enough in June they are transferred to the cold frame and placed as near to the glass as possible, being sure that the frame is tight. I shade them from the sunlight and give very little air even in the warmer days of Summer. The sash is never tilted higher than 2 inches at the back. The frame is closed down early in the afternoon, and the shading removed when condensation has gathered thick enough on the glass to prevent burning. When the nights get cool in September, I remove the plants to the warmest house I have, and again place them near the glass, and try to keep the temperature as near 70 degrees as possible at nights until the second week in October, when it is gradually lowered, and they are removed early in November to a temperature of 50 degrees or less.

The first potting is made in a compost of leaf mold, sand, charcoal, and a little loam. As the pots increase in size leaf mold is entirely dispensed with, and cow slips from the pasture lot substituted, increasing the proportion of loam; charcoal can be used in a much rougher state than when potting in the earlier stages. I take care that the ammonia has leaked away from the manure before it is gathered. I consider temperature, humidity, and careful watering stronger factors in the culture of this plant than the composition of soils.

The specimen plant illustrated, measuring 5 feet 4 inches across, was flowered in a 6-inch pot last year and was shaken out and cut back the latter part of May; it was given the same treatment as the rest, and is now in a 16-inch pan. D. McFARLANE.

NEWPORT, R. I.—Mr. and Mrs. V. A. Vanicek sailed on the 11th inst. on steamer Statendam, of the Holland-American line, for Boulogne-sur-Mer. Mr. Vanicek goes, as usual, to purchase nursery stock in France, Holland and Germany. Mr. and Mrs. Vanicek will also spend some time visiting the former's parents and other relatives in Prague and Vienna, returning home about March 1.

Cromwell, Conn.

It is doubtful if any rose, of recent introduction, has become more popular, in the same length of time, than Killarney. Unlike many others, its beauty increases as it opens; each stage of development adds some new charm, and it can be watched for days with increasing pleasure until it is full blown. It has already established a place for itself among lovers of roses and is eagerly sought for wherever known.

Three members of the Pierson family are now established in the florist business in Cromwell, namely: A. N. Pierson, his son, Frank A. Pierson, and his brother, Magnus. The former is, of course, known throughout the country as one of the leading wholesale growers of flowers, palms and ferns. F. A. Pierson has been in business for himself for several years, and has already established a good reputation as a grower of bedding stock, begonias, cyclamen, etc. He has one house, 400 by 28 feet, and will soon begin the erection of another of the same size. He was elected to the State Legislature at the recent November election and now divides his time between the Capitol at Hartford and his greenhouse in Cromwell.

Magnus Pierson, who for many years, was foreman for his brother, built a house for himself the past Summer, 300 by 34 feet, on his place, about half a mile west of the center of the town. He intends doing a general greenhouse business, and marketed a fine lot of chrysanthemums last Fall. He grows carnations, sweet peas, stevia, Asparagus plumosus nanus; and for the Spring will have bedding and vegetable plants.

Wallace R. Pierson, whose contributions to the carnation department of The Florists' Exchange, have made him well known to its readers, is now making an extended western trip, having reached California. He will remain there for some time, then return by the southern route, reaching home some time in April.

Louis Barton, of Stratford, Conn., has accepted a position as accountant and assistant bookkeeper in the office of A. N. Pierson. H.

Buffalo.

News Notes.

From a limited inquiring of retailers, it would seem that the recent holiday trade altogether reached an extent fully up to that of other recent years, perhaps gaining some. At any rate, all generally express satisfaction over the outcome. A good run was experienced at New Year's Day, and the many social affairs continuing freely for some days after gave a nice impetus to business. Of late the calls for flowers for funeral occasions has run lighter than common.

Wm. F. Kasting was in Erie, Pa., on Tuesday of this week.

S. A. Anderson is having an attractive window display of Proserpine tulips; while at their downtown store, Palmer & Son are displaying cut blooms of their Red Lawson carnation in a liberal and telling effect, and in brilliancy most radiant.

C. E. Foss, of the Central Park district, mentions a pleasing trade this Winter, which was augmented materially in orders for plant stocking of newly built private conservatories in his neighborhood.

A call is out for a club meeting for Friday of this week.

Wm. Scott passed through a serious illness during the past two months, but has so far recovered as to saunter outdoors. His recovery is a matter of hearty felicitation hereabouts. VIDIL.

San Francisco.

New Year's trade was very satisfactory, and but slightly inferior to that at Christmas. Since the beginning of the year business has kept up; but prices are now fully 50 per cent. lower than Christmas quotations. The Alex. Mann, Jr., Company made no mistake in providing beyond all other dealers in red bell stock. I saw their invoices for five thousand of these paper bells, and they said: "We have not one left and wish we had duplicated our order."

English Horticultural Notes.

A YEAR OF PROGRESS.—At this period of each successive year it is the custom of most of us to look back upon the actions, the achievements, the pitfalls and the failures (happy those who have none) of the time that has gone, never to be recalled. So far as one examines British horticulture, the keynote throughout is "progress." I have just passed the annual reports of the National Rose Society, the National Potato Society and the National Sweet Pea Society, through my hands, for their annual general meetings all fall in one week. These "English Horticultural Notes" have kept the readers of The Florists' Exchange sufficiently informed on the main actions in the United Kingdom to save any introductory explanations regarding these societies now. The National Rose Society has its prototype in your American Rose Society, and with reference to our doings I would briefly state that in succession to the late revered Dean Hole, who was president, Mr. C. E. Shea, a well-to-do retired legal gentleman, has been elected. Mr. Shea is highly respected, is an enthusiast, is also president of the National Chrysanthemum Society (a unique distinction to be president of two such societies), and was lately upon the council of our great Royal Horticultural Society. The N. R. S. sustained another loss to its renowned membership in the death of the Rev. A. Foster-Melliar, who was author of the well-known practical "Book of the Rose" (Macmillan). Mr. Edward Mawley, another leisured gentleman of refined predilections, is the honorary secretary, and the members of the society have just presented him with an address and a cheque for 150 guineas as a token of their appreciation of his long and loyal service. The Summer exhibition has been held for three years or more in the world-renowned Temple Gardens, London (almost in the heart of the metropolis), but for certain reasons a change has had to be made to the more lovely, though not so quite get-at-able gardens of the Royal Botanic Society at Regent's Park. The change will in no way diminish the great success of the show. The N. R. S. this year held its first Autumn Rose Show, September 20, and this was so conspicuously successful that it may be regarded as established.

THE NATIONAL POTATO SOCIETY deserves to have taken the pride of place in these notes, since our British potato industry is so very valuable to our nation. I recently contributed figures to show our acreage and our annual output, together with receipts. As you know, there has been an unrivaled potato boom in the United Kingdom. At present there is a lull; perhaps the ghosts of ancient bulb speculators have troubled the minds of British potato seed growers! But out of a desire to put a halter on the wild and rife speculation in new seedling varieties with great reputations as croppers and as disease resisters, the National Potato Society arose. It has been astonishingly successful, and all, or nearly all, the renowned growers in Scotland, England and Ireland have come into its ranks, so that now it is exceedingly strong both in money and members. The chief point to notice is that the county and district committees that test the novelties in their various soils and positions all over the country and send carefully prepared reports thereupon, have again been renewed and extended. By having these numerous trial stations it is sought to furnish buyers with data that will guarantee the real merits of the variety. An arbitration board to which disputes can be referred, and so save much unnecessary and, at all events, costly, litigation between raisers themselves, raisers and buyers, has also been added, thus farther asserting the good offices of the society.

NATIONAL SWEET PEA SOCIETY.—After four years' existence this robust youngster is in a flourishing condition. Its finances are good and its work is developing, while an admirable tone prevails. The larger seed firms and the specialists have ably supported the movement from the first, and they must feel the good results that accrue from the extended public love of this annual. The next show in July will be held in the new hall of the R. H. S., London, and a great stimulus is expected by the conjunction of forces. Mr. Percy Waterer, an amateur, has

been elected president in succession to the veteran, Henry Eckford.

BRITISH GARDENERS' ASSOCIATION.—Without unduly boasting, it would seem to show the difference between the unhorticultural mind of the United States (am I correct?) and the exceedingly strong horticultural love that is a British national characteristic when I say that our new trades-union of gardeners (it is called by another name here!) is progressing with unmistakable advances. Deputies have held meetings in the north, south, east and west, and everywhere they have gained fresh alliances, so that before very long it is hoped that 500 members shall have been enrolled, and an executive committee, a paid secretary, and a permanent London office will have become an established fact.

J. HARRISON DICK.

St. Clare Castle—An English Residence.

The illustration accompanying these notes represents St. Clare Castle, one of the prettiest residences in one of the

building I can recall Magnolia grandiflora, Aloysia citriodora, Myrtus communis, Edwardsia microphylla; and not far away, Ilex latifolia, Cistus ladaniferus, Veronica Andersoni, and like shrubs, not all of them hardy in other parts of England.

Since those days the ownership has changed hands several times, but it has always been in a Harcourt's hands. Of late years, it has been rented at times, and more than once by an American family, among them Mr. Charles Wheeler, of Bryn Mawr, Pa.

In the old days referred to, "when the family was there," the English flag always floated from the tower. The pole still shows, and well do I remember being often deputized by the butler to go up at sundown and take down the flag.

The grounds slope much as they appear in the picture, by terrace and otherwise to the sea, facing Portsmouth, on the mainland.

It is 47 years ago since I worked there, and 45 since I left England, but I could find my way over the whole place to-day the darkest night out.

JOSEPH MEEHAN.

ST. CLARE CASTLE, ISLE OF WIGHT, ENGLAND

most beautiful estates in the Isle of Wight, England. For over 40 years the entire estate was under the charge of Edward Meehan, the writer's father. He continued in the service of his employer until old age compelled him to relinquish his position, he being then over 80 years of age, but at the earnest solicitation of his employer, Mr. Francis Vernon Harcourt, one of England's gentlemen, he remained about the place, making the grounds his home until his death a few years later. To show the esteem in which he was held, his employer, who died a year or two before him, left him a legacy of \$5,000.

Under my father, this place, St. Clare, is where I got my first horticultural knowledge, being under him from the time of leaving school until about 16 years of age. Looking at the picture before me I can recall many a plant and tree which stood there. Commencing at the bottom, I remember the callas and Nymphaea cerulea, both of which grew in the fountain Winter and Summer. Just above the fountain we used to have, in Summer, in vases, two Humea elegans, most graceful Summer plants. The banks of the terrace above them contained a hedge of the hardy fuchsia, Riccartoni, nearly six feet high, a most lovely sight when in flower. The walk supporting the terrace near the castle was almost hidden by the scolopendrium fern, wallflowers, snapdragons and other adventitious plants. On the left were fine specimens of Cupressus sempervirens and C. torulosa. On the right, near where the two ponds are crouching, were some camellia plants, hardy, of course, and near by a fine specimen of Pinus insignis, one of our rapid growing Pacific Coast species. Not quite in sight, but not far from the camellias, was a fine old specimen of Yucca gloriosa, its ponderous limbs propped up by supports. Close to the

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

ROCKFORD, ILL.—H. O. Hinkley, the florist, is planning to engage in other business as soon as he can dispose of his greenhouse.

WHITE PLAINS, N. Y.—C. T. Snedeker is now operating the greenhouse establishment of his mother, Mrs. Jane S. Snedeker, who died December 2, 1904.

MORGANTON, N. C.—The name of the new concern established here recently, mention of which was made in our issue of December 31 last, page 813, is "Riverside Park Gardens," and not as previously printed.

SLINGERLANDS, N. Y.—Fred Goldring, who has conducted a florist's establishment here for several years, has purchased a place at Ballston Spa, N. Y., to which place he will remove and engage in the business.

LE ROY, N. Y.—The long-established Baxter greenhouses have been purchased by Mrs. Mary B. Morgan, who will carry on the business. Mr. Baxter, who is still suffering from the effects of a frozen foot, sustained at the Lampson house fire, will go to a hospital in Buffalo.

SPRINGFIELD, O.—The Callander Cactus Company has been incorporated for the purpose of propagating and dealing in all kinds and varieties of cacti, orchids and plant novelties. Incorporators are: J. H. Callander, H. L. Callander, William M. Mumm, C. M. Kleinman, L. Bradford. Capital, \$5,000.

FIRMS WHO ARE BUILDING.

DAYTON, O.—J. M. Benzing has bought four acres of land near this city and has erected on it a greenhouse 20x84 feet.

VANDERGRIFT, PA.—J. W. Crisswell has purchased ground and is erecting a greenhouse, which he expects to have under cover in a few weeks.

CANADIAN NEWS

TORONTO.—Business since Christmas has been rather slow, and last week considerable stock accumulated and prices fell toward the end of the week, especially on inferior grades; No. 1 stock held its own fairly well; roses appeared to suffer the most. A good many of the latter are coming in now rather weak-stemmed and not good enough to sell over the counter. The better varieties of carnations are more able to hold up their heads. There is but little demand for plants, but I fancy another week will set things rolling in a much better fashion. Tulips are coming in quite freely, but so far there is but little demand for them. Lily of the valley and violets are both plentiful, the departmental stores being often able to sell them at less than quoted wholesale prices. We have no Greeks here, so I don't know what some of our grovers would do without the departmentals; they appear to be able to dispose of unlimited quantities of stock, if it is only cheap enough.

The annual Toronto carnation show will be held next month and it promises to be the best we have ever had. The cup now held by President Harts-horne, of the American Carnation Society, will be in competition, and as both E. G. Hill and J. H. Dunlop have a claim on it, the fight for it will be interesting. No one has yet held it for two years in succession. The judging will be done by Arthur Ewing, secretary of the C. H. A., so all can be assured of fair play and no favoritism.

The Gardeners and Florists' Association will hold an "at home" next Tuesday, and expect to have a lively meeting. THOS. MANTON.

WAYNESBORO, PA.—Christmas trade was, to some extent, better than last year's, cut flowers selling in preference to plants. Henry Eichholz had a fine lot of Enchantress, Mrs. Lawson and The Queen carnations, also a quantity of Gloire de Lorraine hegonia which sold at sight at a good figure.

Butterbaugh & Sprengle have dissolved the partnership they formed not quite a year ago, the latter going back to his trade as machinist.

Henry Eichholz is working up a large stock of young chrysanthemum plants, having an order for 10,000 from one firm. His pink Enchantress and scarlet Lawson sports are going to occupy his carnation space next year. The Queen is the most profitable white carnation grown here.

MOBILE, ALA.—Holiday trade was exceptionally good, carnations and roses leading in demand for cut flowers. Bride, Bridesmaid, Perle des Jardins and Golden Gate were in sufficient supply, selling at good prices. Not enough reds were to be had. The locally grown stock was far superior to that shipped in, the roses of one local grower being so fine as to receive a ready market in New Orleans. There was a good trade for plants, especially ferns. The use of southern smilax, mistletoe, holly and other Christmas greens has been very extensive. The material was of the best quality, as fine as could be seen anywhere. We feel that we could supply the world with these things. At the New Year's receptions (a local Mobile custom so far as I know) these greens were used in great profusion, as were roses and carnations. The carnations have been, as a rule, the poorest ever seen here. JOEL W. GOLDSBY.

BALTIMORE.—The first week of the new year was quite unsatisfactory, so much dark weather causing both short supply and demand. With the light call by the end of the week considerable stock had accumulated, enough to force the prices down and yet all could not be moved at the reduced price. This week business braced up a little, and up to this writing (Wednesday) stock has moved better at prices quoted. The funeral of ex-Governor Lowndes, which took place to-day, caused quite a stir in the trade for the better grade of stock. J. J. P.

PLYMOUTH, IND.—We had a fair Christmas trade. Our sales of plants were not quite what we had hoped for. The Boston fern is as popular as ever in spite of the falling off in other lines. We sold the usual number of Christmas trees, holly, cut flowers, etc., besides gold fish, with which we made a very attractive window display. F. A. FORBES.

New York.

News of the Week.

At the magnificent ball given by Mrs. Astor, on Monday evening, in her Fifth avenue residence, the entire decorations, with the exception of two or three vases of American Beauty roses, were placed by the J. M. Hodgson Co., of Fifty-sixth street and Fifth avenue. The rooms in this residence are so large that no attempt at any particular color scheme for each room was made, and the decorations consisted chiefly of arranging masses of separate colors in different parts of the drawing rooms and in the ball room. A great many flowering plants were used, consisting chiefly of poinsettias and azaleas. In cut flowers, of which a great many were used, lilies stood predominant; these were employed in lavish numbers, which seems to be rather an odd mode of decorating for this time of the year, when we consider that the lilies used were what are commonly known as Easter lilies. There were also employed a great many American Beauty roses, as well as Bride and Bridesmaid, these constituting the only kinds of flowers for the occasion.

On Monday evening, at the dinner in the St. Regis, given by Harry Lehr, the table decorations, which were probably the most lavish of any that New York society has had this season, were put in place by J. Leikens, 7 East Thirty-third street. The table was round, and large enough to seat eighty-five people; in the centre of it stood a tall glass vase measuring over seven feet high, and filled entirely with white roses; the rest of the table was adorned solely with white roses and it took many thousands of these flowers to complete the effect. What little green was necessary on the table to harmonize with the whiteness of the flowers was composed of Adiantum Farleyense. The ladies' corsage bouquets were of gardenias, as were also the boutonnières for the gentlemen. Arranged about the room, in vases, were large bunches of American Beauty roses, and when we consider that this immense dining room is finished in white and gold, one can realize how artistically decorated the room must have appeared with its table of white flowers and the red roses placed here and there in the room. Mr. Leikens is to be complimented upon getting this, the first real elaborate decoration that has been done in the St. Regis, the swellest hotel in New York.

The Flower Market Company, New York, has become incorporated, with a capital stock of \$50,000. The directors are Herman Warendorf, and Joseph Fleischman, of New York, and B. B. Van Der Veer, of Jersey City.

The bowling teams of Hoboken and New York will meet to-night (Saturday) on the alleys of the former mentioned club, to play the second series of match games. The first series was played on the New York alleys a few weeks ago, and the Hoboken men were defeated. Those Jersey giants, under the coaching of Mr. Birnie, threaten to turn the tables on the New Yorkers to-night. The return match between the Madison (N. J.) team and the New York team, has been fixed to take place on the New York alleys, on Friday evening, January 27.

Clarence Salford has been on the sick list for a week with an attack of laryngitis, but is now improving rapidly.

The Weir estate disposed of a piece of their property in Brooklyn on Tuesday; the price realized was \$60,000. F. W. O. Schmitz, of Staten Island, has been granted a judgment for \$593.69, with costs amounting to \$34.56, against Otto Grundeman, Secaucus, N. J. The claim was based on a number of notes given by the defendant in a business transaction, and payment had been resisted on the ground that the amount was \$100 in excess of what he had agreed to pay.

Among the newly incorporated firms in the city is the Shelly Floral Co., capital \$5,000. The incorporators are Eva Shelly, Ida M. Forster and E. V. Forster.

Our much-esteemed friend, James Dean, has been re-elected for the fourth time president of the Freeport (L. I.) Club.

A. Cowee, the gladiolus specialist, of Berlin, N. Y., was in town Wednesday. Carl Jurgens, Jr., of Newport, R. I., stopped here for a day on his way home from Washington and Philadelphia.

F. W. Kelsey, who has been suing George Gould for \$900, the cost of three carloads of rhododendrons, supplied to the latter gentleman's estate at Lakewood, N. J., won his case on Wednesday, after a three-days' trial before a jury. Mr. Kelsey receiving a verdict for the full amount. The defense set up the plea that the goods had never been ordered. Wm. Duckham and A. Harrington, of Madison, N. J., were both retained as witnesses for the plaintiff, and attended the trial during the three days.

Conrad Hugo Dietz, son of William Dietz, florist, of Hoboken, N. J., died on Saturday last at his home, 4,069 Hudson Boulevard, after a week's illness with spinal meningitis. The deceased was well-known among the craft. He was 23 years old and leaves a widow to mourn his loss. The interment took place on Tuesday in the Weehawken Cemetery.

William Quinn, a florist, employed by Frederick Cook, Thirty-ninth street and Ninth avenue, Brooklyn, died suddenly while at work on Saturday, January 7.

Chicago.

News Jottings.

Regular old-fashioned Winter weather prevails here at present, the mercury taking a drop Monday from nearly 40 degrees to below zero Tuesday. With bright days this will have a beneficial influence on stock.

The regular meeting of the Florists' Club was held on Thursday night, several new members being installed.

The committee in charge of the entertainment of the American Carnation Society have their plans well under way; a good time can be looked for by all who attend, a banquet being scheduled for one of the nights.

E. G. Hill, of Richmond, Ind., had an exceedingly fine vase of his new rose Richmond on exhibition one day last week at the wholesale house of the Bentley-Coatsworth Co., which was much admired by all who saw it. This rose will, without any doubt, supersede Liberty, being a larger flower, and the plants having no disposition to rest in Midwinter, as the latter does. Mr. Hill was well pleased with the results of his visit, he securing orders for a considerable quantity of stock as a result.

Poehlmann Bros. Co.'s sales during the past week exceeded those of the same period last year, which was considered the best week in the history of the business.

Bentley & Co. contemplate the erection at New Castle, of a greenhouse, 36x450 feet, with 8-foot walls, for the growing of the new rose Richmond, they having secured a large quantity of stock.

Peter Reinberg was another heavy buyer of stock from Mr. Hill; he is a firm believer in the future of this rose.

At the meeting of the creditors of August Dressel, January 5, it was found that little remains in the way of assets but the real estate, which it was not thought advisable to place on the market at present.

Frederick Thom, 1257 Milwaukee avenue, died January 5. He leaves a widow and children.

The employees of Vaughan's Seed Store have organized a club known as the Picus Club, which gave its first reception and dance at a local hall on the West Side, Tuesday night.

Michael Winandy, the florist at Rogers Park, has been adjudged a bankrupt, with liabilities so far placed at \$1,000.

Visitors in town included: G. F. Crabb and H. Smith, Grand Rapids, Mich.; W. Hagemann, C. Schwake and C. W. Ward, of New York.

ROBERT JOHNSTONE.

Washington, D. C.

Trade Jottings.

President and Mrs. Roosevelt gave their first official dinner to the members of the Cabinet on the 5th inst. The dinner table was decorated with Bridesmaid roses and Farleyense ferns, which produced a very handsome effect. The rooms and corridors throughout the entire house were suitably decorated with roses, other flowers and choice tropical plants of endless variety.

J. R. Freeman is bringing in some very fine lilac from his Georgetown place, for which there is a big demand. Chris. Shelhorn's Bride and Bridesmaid roses are coming in very fine. J. L. Loose has been very busy decorating; he is bringing in some fine carnations and roses from his place in Alexandria, Va. Mayberry & Hoover have been doing a rushing business since Christmas. Ley Brothers are doing well at their store on Ninth street, and report having a good demand for Adiantum hybridum. Z. D. Blackstone has had his share of the dinner and wedding decorations. John Robertson has had several dinners on this week. Henry Pfister has also had several decorations.

M. C.

Philadelphia.

Trade Items.

The slump in business, which has been prevalent since Christmas, with the exception of a little spurt at New Year's, is still on; the demand for all flowers is away below the usual average at this time of year, and, as a result, it is estimated that fully 50,000 carnations were in the hands of the street men on Market street Saturday, the 7th inst. This continued lull in business is the topic, no matter where you go. Many of the retailers claim it is due to the excessive prices charged at Christmas; but the commission men and the growers put the blame on the retailer; so there you are; and one cannot arrive at a genuine conclusion. The commission men and growers say that at ordinary times the prices of flowers are too low; and yet the retailer tries to buy cheaper by crying poor business and scaring the wholesale salesman. The retailer tells you that plants are taking the place of cut flowers at Christmas; but the commission man and the cut-flower growers say no; that the sales of plants have increased 100 per cent, at that time during the past 10 years. The cut flower men say the demand for their products has increased far more than that figure; and if one stops to think it over no doubt they are right. Now the happy ending of all this would be a higher price for cut flowers at all seasons; then not such a jump at Christmas. But how can this be accomplished, as there is no means of coming to a uniform price understanding for Christmas? Four commission men tell me they could have sold more American Beauty roses at Christmas at \$15 per dozen, yet on the 24th, at 4 p. m., a grower sold to a store three dozen Beauty at \$12 per dozen.

The floral decorators are all busy. J. J. Habermehl's Sons had the Assembly ball decoration on Friday at the Bellevue-Stratford, which was a brilliant affair of 900 guests. This firm has also been busy with many smaller affairs at the above hotel.

The Wm. Graham Co. are very busy with balls and dinners; the last large ball was out at Wynnewood at Miss Gibson's. This firm has several large orders on hand for Horticultural Hall.

Pennsylvania Horticultural Society.

At the meeting of the Pennsylvania Horticultural Society next Tuesday John G. Gardner will make an address on the "Multiflora as a Stock for Grafting Roses for Outdoor Planting." Mr. Gardner is an expert on this work, and this address is one of great interest to the trade. There will be specimen plants and photos, to show work done along these lines.

Craig & Son Matters.

A meeting of the creditors of Robert Craig & Son was held at Forty-ninth and Market streets on Thursday

afternoon. This was not a meeting called by the assignee, but a meeting in response to two propositions sent out by Robert Craig & Son, the first agreeing to pay 50 cents on the \$1 by June 15; the second to form a company, the creditors to transfer their claims for stock in the company.

There was a large attendance of the creditors who recommended acceptance of fifty per cent. on or before June 15. Of the total claims, reaching \$71,000, not counting mortgages, a representation of over \$40,000 already signed to accept this proposition.

Review of the Market

NEW YORK.—The weather has been changeable and disagreeable this week, and the cut flower business seems to be very much affected thereby. One usually looks for a fairly stiff market at this time of the year, but just now there is anything but snap in the demand for any kind of stock. It cannot be said that any large quantities of roses are coming in, compared with other times, still surpluses will accumulate, and these can only be cleared out at bargain prices, all of which tends to reduce, in a great measure, the averages, for there has been no material change in the asking prices for good stock. Among American Beauty, the greatest trouble is found among the short-stemmed grades; the buds are so inferior to their usual quality, that the buyers can hardly be persuaded to take them at any price.

Bulbous stock is beginning to push itself to the front, so far as quantity goes. Jongials have made their appearance, and dealers are asking \$4 per hundred; but in the majority of cases are taking \$3, the demand being very slow. Some yellow tulips are also in, and endeavors to realize \$3 and \$4 per hundred are being made. White tulips are quite plentiful, and so are Paper White narcissus and Roman hyacinths, and they can, any of them, be had at prices ranging from \$1 to \$1.50 per hundred.

Lilies are in heavy supply, and prices are unchanged; supplies of L. auratum are in, and are offered at \$2 per dozen; L. rubrum are obtainable also at 10c. each. Lily of the valley of various grades is in the market, and can be had at from \$1 to \$3 per hundred, some special grades going at times as high as \$4; though the demand for any grade is not brisk enough to keep the supply cleaned up.

Lilac is becoming more plentiful and when sold brings 75c. per bunch.

Carnations are one of the worst propositions on the market, and prices for ordinary stock have decreased in a marked degree. There are plenty of carnations coming in, and \$1 per hundred has become common for many of them. The top figure for Enchantress is 6c., and other fancy blooms have dropped in proportion.

Violets are almost a drug, and an extravagant cut in prices has developed; 75c. is an outside figure for specials, and for ordinary bunches, 35c. and 40c. are ruling figures; to which should also be added, that surplus stock is cleared out to peddlers at lower figures still, when favorable weather prevails.

BOSTON.—There has been very little change in business conditions the past week, a fairly good demand prevailing for all kinds of stock, and most kinds have been pretty well cleared out, although several kinds of the white brand still savor of being "dragsy." American Beauty roses are more plentiful and prices have dropped somewhat, but not to any extent for the first-class goods. Queen of Edgely rose is not so plentiful as it was; in fact, very little has been seen of this rose recently. Liberty is one of the most popular of roses, but the size and quality vary to such an extent that great differences are noticed in prices.

Carnations, of colored and fancy sorts, have a fairly brisk demand, Enchantress being one of the most popular varieties at this season. White varieties are selling better than they have been, but are far too plentiful yet for all the call there is

for them. Bulbous stock is now coming in better than it has been, consequently is selling better than formerly. Lily of the valley has not had such a demand as it did. Violets are very plentiful and prices have dropped accordingly. J. W. D.

CHICAGO.—The usual after-holiday dullness came as all expected. During the past week prices on all classes of stock have gone lower from day to day until they got to the usual quotations of former years. Stock of all kinds is becoming more abundant and at no time could the market be said to be short on anything. Local retail trade has been very slow, nothing doing to speak of but funeral work and not a great deal of that. Shipping trade is at its lowest ebb, and at present writing no improvement is noticeable. With the advent of a cold wave hopes are entertained that supplies will diminish to a considerable extent, which will have a tendency to help prices. American Beauty is in excess of the demand and considerable quantities are sold at a sacrifice, prices on extra long being from \$5 to \$6 per dozen, according to grade and the quantity on hand, the latter having more to do with the price than quality. Other grades bring from \$4 to \$20 per hundred. Bride and Bridesmaid of the extra grades are not overplentiful, especially of the former, local retailers being willing to pay the prices asked if the stock warrants it. Other grades drag a little. Prices are from \$2.50 to \$12 per hundred. Meteor of the better grades move at fair figures, but not a great quantity is being received. Liberty is not moving as freely as formerly.

Carnations are a drug on the market. The poorest grades seemingly are not wanted at any price. The fancy grades are moved at what can be called satisfactory values at this time of the year; these are not in any oversupply.

Violets are a glut, at prices away below the normal. Lilies are not overplentiful, both callas and Harrisii moving at from \$8 to \$15 per hundred, according to quality. Lily of the valley brings \$1 to \$4 per hundred. Roman hyacinths and narcissus supply their quota to help the present depression, there being not much, if any, call for them. Narcissus in the majority of cases never was as hard to move nor as unsatisfactory stock for the wholesaler to handle as during the present season. Tulips are becoming more plentiful and are of better quality, some very good ones being now seen at prices ranging from \$2 to \$4 per hundred. R. J.

ST. LOUIS.—The cut flower trade the past week has been going along moderately with here and there something doing in the social way; quite a batch of funeral work was turned out last week, and that was about all that kept us from getting rusty. Stock is all that can be wished for, and the only scarcity is in fancy roses in all varieties. Fancy long-stemmed American Beauty are moving along nicely with not too many for the demand; these are at present quoted at \$5 to \$6 per dozen; other grades in the \$2 and \$3 class have quite a call; shorts at \$2 to \$6 per hundred are in big supply. Bride are selling much better than usual, with fancy stock limited; there are plenty of Bridesmaid, Meteor, Liberty, Golden Gate and Perle des Jardins to be had; fancies are quoted at from \$6 to \$8; firsts, \$4 to \$5, and seconds, \$2 and \$3 per hundred.

Carnations are arriving in larger quantities each day and the prices are not so firm as heretofore; although there is a good demand for the best stock, it does not clean up so well, there being too many firsts and seconds in the common varieties in the market. Quotations for fancies are \$4 to \$5; in this class are Enchantress, Prosperity, Mrs. T. W. Lawson and Boston Market; in the \$2 and \$3 stock are Flora Hill, Mrs. Frances Joost, Mrs. E. A. Nelson, G. H. Crane and Guardian Angel. Short and common stock is selling as low as \$1 per hundred.

Bulbous stock is very plentiful at present, also in fair demand, and prices lower; \$1.50 to \$2 for Roman hyacinths, \$2 to \$3 for Paper White narcissus; callas and Lilium Harrisii bring \$1.50 per dozen; Lily of the valley, \$3 to \$4 per hundred. Good stevia sells at \$1.50; sweet peas, \$1 to \$2 per hundred. Asparagus, smilax, adiantum and galax are in sufficient supplies for the demand, going at regular prices.

Since the cold weather has set in for good, the plant trade is reported somewhat slow among the uptown retailers, who handle a big stock of these in their show houses; some extra fancy blooming stock can be seen at these places.

ST. PATRICK.

INDIANAPOLIS.—Regular counter trade has fallen off perceptibly the past few days; a quantity of funeral work now and then is all that keeps the market from being overstocked. Indiana is in the throes of a blizzard at present, and it is only with great difficulty that plants are transferred; many shipments of cut flowers arrive in a frozen condition. Roses have again declined in price; 36-inch American Beauty sell at \$4 to \$5 per dozen; 20 to 30-inch, at \$3 per dozen, and 10 to 15-inch, \$1 to \$1.25 per dozen. At retail the best American Beauty bring \$9 a dozen. Select Bridesmaid and Bride wholesale at \$8 per hundred; seconds, at \$7 per hundred. The best Liberty sell at \$10 per hundred; Mme. Abel Chatenay is of poor quality at present; the best sell at \$7 per hundred.

Carnations, especially colored ones, may be had in any quantity; a few fancy Enchantress sell at \$4 per hundred; good varieties, such as Mrs. T. W. Lawson, can be had at \$3 per hundred.

Another cut in violets has been announced; Marie Louise sell at \$1 per hundred; 50c. per bunch of twenty-five is the customary retail price.

There are many pot plants on the market now, but few are sold; a few potted tulips and Dutch hyacinths are to be had. I. B.

CINCINNATI.—Owing to the extreme cold weather and the quietness of the market it is hard to establish any set prices on stock. American Beauty roses are in good supply, and long-stemmed flowers can be had at \$4, \$5 and \$6 per dozen; shorter stems at shorter prices governed entirely by the quality of the goods. Bride and Bridesmaid bring \$6 as the average price, with second and third grades going much lower, especially those with weak stems. Fancy carnations can be had at \$3 to \$4 per hundred, and good stock at \$2; Lily of the valley realizes \$4; Roman hyacinths and narcissus, \$2 to \$3; Harrisii lilies, \$1.50 to \$1.80 per dozen; callas, \$1.50. Violets bring \$1 to \$1.50 per hundred and no rush for them at that. Baby Primrose sells at 60c. per hundred; smilax, 12½c. to 15c.; Asparagus Sprenger, 35c. per bunch; A. plumosus nanus, 50c. per string or bunch; Leucotoche sprays, 50c. per hundred; fancy ferns, 20c.; galax, \$1 per thousand. E. G. G.

WASHINGTON D. C.—The social season is now in full swing and likely to continue until the 4th of March. Business has been very good this week—dinners, weddings and receptions being numerous, which caused a good demand for flowers. American Beauty brought from \$5 to \$10 per dozen. Good Liberty, which are scarce, realized \$3 to \$5 per dozen. There has been a good demand for Kaiserin, Augusta Victoria and Souvenir du President Carnot, which brought from \$2 to \$4 per dozen. Bride, Bridesmaid, Meteor and Ivory fetched \$2 to \$3 per dozen. Carnations are scarce, especially good reds. Flamingo, which is by far the finest red grown in this section, and is in great demand, also Enchantress, which is another great favorite, brought from \$2 to \$2.50; the older varieties from \$1.25 to \$2 per dozen. New York grown violets realized \$1.50 to \$3 per hundred, while home-grown stock went at \$1 to \$1.50 per hundred. The former are of much better color. Lily of the valley is coming in very fine and sells at \$1.50 to \$2 per dozen. There is a good demand for lilac, which has brought from \$2.50 to \$4 per dozen. Gardenias go at 35c. to 75c. each and are very much called for; Mignonette, 75c. to \$1 per dozen; Roman hyacinths and narcissus (Paper White) brought 50c. to 75c. per dozen; sweet peas, both pink and white, find ready sale at 50c. to 75c. per dozen; Adiantum cuneatum fronds, \$1 to \$1.50 per hundred; sprays of Asparagus plumosus nanus, \$2 to \$5 per hundred, and smilax, 15c. to 25c. per string.

Begonia Gloire de Lorraine have been going rather slowly this week; plants in 5 and 6 inch pots brought from \$1.50 to \$3 each. Azaleas are selling at \$1.50 to \$3 each. Combination pans of Dracaena terminalis and Boston ferns found ready sale at from \$2 to \$5 each. M. C.

NEWARK, N. J.—The Christmas and New Year's trade was in every way satisfactory. Prices were about the same as last year, but the increase in sales of both plants and flowers proved the ever-widening popularity of the florist's commodities as Christmas presents. The quantity of holly, laurel and mistletoe disposed of was at least 25 per cent. greater than a year ago and many florists found themselves unable to meet the demand. Red Christmas bells were very popular and sold well, as also did the immortelle wreaths and crosses. Galax wreaths for grave decoration were also in great demand. The retail prices for cut flowers prevailing Christmas week were: Roses—Bride and Bridesmaid, \$2.50 to \$5 per dozen; American Beauty, \$6 to \$24 per dozen, the higher grades selling better than ever before. Carnations, \$1 to \$3 per dozen; violets, \$3 and \$4 per hundred; Lily of the valley, 75c. per dozen; hyacinths, 75c. per dozen; chrysanthemums, in limited supply, brought 50c. each. Retail prices of plants: Azaleas, which sold more readily than most other flowering plants, \$1.25 to \$7; Begonia Gloire de Lorraine, from 50c. up to \$10 for made-up bell-shaped hanging baskets; oranges, \$2.50 to \$5; ericas, \$2; poinsettias, 75c. to \$4; ardisias, \$1.50 to \$3. Made-up collections, composed of fancy foliage plants, begonias and ferns, sold readily at from \$1 to \$10. Fern dishes, filled with assortments of small ferns, also met with ready sales. Boston ferns keep their place as the favorite of all plants for the house, and a great number of both small and large specimens, including a good many of the Pierson variety, found buyers.

August Egerow says his business was the largest he ever did. His window decoration, consisting of a canopy of holly, dotted with small red electric lights, and a choice collection of plants, was one of the prettiest in town. Baskets and fancy jardinières of mixed plants very tastefully arranged, were among his specialties and a large number were disposed of. Mr. Egerow is issuing to his customers an exceedingly pretty calendar. It consists of three leaflets tied with ribbon and on each is a reproduction of a rose study by Paul de Longpre.

Phillip Brothers were highly satisfied with their holiday trade. They exhibited a handsome lot of plants, jardinières, and fancy baskets, and a superb collection of imported vases. A consignment of camellia plants readily found purchasers at \$4 each. A fine plant of lilac, the only one we saw, sold for \$8. They disposed of fifty cases of holly, and were cleaned out. Boston ferns from the establishment of John R. Johnson, of Pasaic, are a feature with this firm, and better grown plants it would be difficult to find.

Mr. Strobell declared that, as in previous years, they had all the Christmas business they could possibly handle.

Holtzman & Wolfinger did a large business. Christmas bells were shown in large quantities and practically all were sold. They also got rid of a large number of made-up and other plants.

McDonoughs did a very satisfactory volume of trade and were well pleased.

George Penek had an extra staff of clerks and an extensive business in green goods was done. Unusual briskness was also the order in the cut flower and plant departments. G. W. P.

"THERE IS ONLY ONE"

The Fumigating Kind Tobacco Powder

What a Few Say, All That Use It Say

TRON, N. Y.
Enclosed please find Two Dollars; ship at once 100 lbs. The Fumigating Kind Tobacco Powder.
It was a pleasure the freedom we enjoyed last season from insects through the use of your powder.
JOHN H. DUKE.

WALLINGFORD, CONN.
Please send me by freight 100 lbs. The Fumigating Kind Tobacco Powder. I find nothing better. I have used it for four years and find no injury to blooms.
GEO. H. ROWDEN.

MONTCLAIR, N. J.
I think you The Fumigating Kind Tobacco Powder is by far the most effective and satisfactory Fumigator on the market, not only as regards its results but also in the methods of using, and I have gladly recommended it to my friends. The sprinkling Kind Tobacco Powder equally good and effective.
H. BRADLEY.

MARION, IND.
Your Fumigating Kind Tobacco Powder has given me more satisfaction than any other kind of insecticide. I have used it now for two years and think it is the safest, cheapest and easiest to handle on the market.
GUNNAR TEILMANN.

FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

PROSPECTOR RED SPORT FROM MACEO

Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.
It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.
Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.
We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

COME AND SEE THE STOCK GROWING
H. W. FIELD, Northampton, Mass.
Mention the Florists' Exchange when writing.

The Best Method to Follow.

Every grower ought to know by this time whether the plants grown in the house all Summer are superior to the field plants. No doubt a variety has been found to do better under indoor culture; but I prefer field-grown plants for three reasons: First, I think the plants will be in better health; second, they are easier handled; third, more flowers will be obtained if plants have been properly topped. One can have a heavy crop for the holidays, and the plants will not be off-crop even after these heavy crops have been harvested. Of course, this comes about by topping at intervals.
To get back to indoor stock, if one has had success with indoor culture, and it pays better than the field-grown stock, then that is the way to grow them. But to insure success the grower should get his cuttings in the sand, without delay, following the same method in taking cuttings, as given in my last notes.

Mulching and Feeding.

If plants were mulched early and only given a light mulch, have made a rapid growth and the soil and mulch are full of small roots, the plants are in good condition to receive their second mulch. Use good rotten cow or horse manure and put it on about two inches thick. If not enough manure is available to do this mulching, the plants can be fed with manure water once a week, if the soil gets dry enough to stand it that often; the soil should be in such shape that it will pulverize nicely. Use the manure water in a weak state the first two weeks; and when watering make the soil wet to the bottom of the benches. Of course, if the soil does not dry out in a week, then wait until it gets in that state and then afford the watering.

The Carnation Grower's Opportunity.

Every grower of carnations should, by all means, go to the Carnation Society's show at Chicago, January 25 and 26, as he will be able to see there an exhibition that will surpass any that has ever been given before. Not only will the number of blooms be larger, but better qualities will be shown. He will see how some of our experts grow the standard varieties, and something in the new ones that will open his eyes. Not only can a grower see flowers, but he will learn something at the exhibition that he cannot learn otherwise; for when a grower sees another show fine stock and knows that it is far better than his own, he is determined, upon going home, to grow stock like that observed at the show. This alone makes one's work a pleasure. So make your plans to attend this exhibition, which is to be the grandest ever given, and get acquainted with growers, and you will never miss a like show hereafter.
CHAS. KNOPF.

RED SPORT

(OF MACEO)

This New "Bread and Butter" commercial brilliant "Orange" Red Carnation, now in its fourth year, has the hardy constitution of Gen. Maceo, with a stronger, heavier growth, longer and stiffer stem and larger flower.

Growing under the same conditions and in the same house with Flamingo and Estelle, it has produced four times as many flowers as the former and twice as many as the latter. The color is as good as Estelle and the bloom brings as much as does Estelle at its best. Every flower is of a uniform, brilliant red, perfectly double, with an ideal calyx; in fact, we have never seen a split one.

RED SPORT is perfectly healthy, an easy variety to grow, an early and continuous bloomer, throwing its heaviest cuts around the Christmas holidays and during the winter months, when red is in demand.

RED SPORT will keep longer and travel farther than any other red carnation, and will prove a bonanza to growers doing a shipping business.

If the scarcity of reds in the market that now exists continues, **RED SPORT** will pay better to the square foot of bench room than any other variety of any color to date.

Every florist who has seen **RED SPORT** growing has placed an order for rooted cuttings, which tells the tale.

All our rooted cuttings are sold until after Jan. 25. Orders filled in strict rotation from above date on.

Price, 12 for \$1.50; 25 for \$2.50, 50 for \$4.00, postpaid. \$6.00 per 100; \$50.00 per 1000, by express.

We guarantee cuttings to be well rooted and to arrive in good condition.

QUEEN LOUISE—the standard white, \$1.25 per 100 postpaid; \$10.00 per 1000 by express.

CARNATIONS

Rooted Cuttings Now Ready

Eclipse Our 1905 introduction. A pink carnation, lighter in color than Lawson and of a more even and bright shade of pink. No objectionable shading or bleachings. A strong free growth, large flowers on long stiff stems and early and continuous flowering.

Fiancee A most pleasing shade of medium pink. No carnation has ever equaled the number of awards received by this variety.

Cardinal Brilliant scarlet. A great improvement over Estelle.
F. Burki Pure white.

The above four varieties,
\$12.00 per 100; \$100.00 per 1000.

Richmond Gem Scarlet, \$10.00 per 100; \$75.00 per 1000.

In addition to the above we can supply twenty-five of the best standard sorts, varieties that are profitable to grow. Our preliminary Price List will be sent upon application. We are pioneers in the carnation line and our facilities for rooting and handling cuttings are nearly perfect, due to our long experience.

F. DORNER & SONS CO., LA FAYETTE, INDIANA

St. Louis.

The Week's News.
George M. Kellogg, of Pleasant Hill, Mo., called Sunday; Mr. Kellogg will attend the inauguration of Governor Folk, at Jefferson City, Mo., today (Monday). Judge W. J. Vesey, of Fort Wayne, Ind., spent Monday in St. Louis, calling on the trade; the judge reports everything satisfactory in Fort Wayne.
Riessen Floral Co. report a busy week in decorations and funeral work. Mr. Buechel, the manager, is still confined to bed, with his broken leg; reports say that he will not be able to look after the firm's interests until Spring.

The Koenig Floral Co. and F. H. Meinhardt, up near the cemeteries, report a heavy trade in greens during the holidays. The weather being so fine a number of plants were also sold to their patrons for cemetery decorations.

Henry Ostertag, of Ostertag Bros., called to say that wedding decorations have been their specialty since the holidays; a few large orders ahead will keep them quite busy the balance of this month. Henry was elected Democratic central committeeman of his ward last week.

C. C. Sanders has bought the Temple Inn building in the World's Fair Grounds, the material of which he will use to build his new residence at his place on Henley road. His son, Walter, who has been visiting in California, will return by the end of the month, when preparations will be made for a big Spring trade.

Charles Schoele is making a collection for the family of the late Pat Quinn, who, we understand, are in need. He says any of the wholesale houses will take subscriptions.

J. J. Beneke furnished the decorations for the big Legion of Honor banquet at the Jefferson Hotel the past week; also for the Knights of Pythias banquet at the Silver Grill, one of the swell restaurants downtown.

E. W. Guy and Henry Edmunds of Belleville, Ill., were recent callers, and report a heavy holiday trade in cut flowers. Henry Johan, of Collinsville, was also a recent caller. Mr. Johan sold part of his place, that is not used for his florist business, to a coal company to be used for coal mining.
ST. PATRICK.

QUAKERTOWN, PA.—E. I. Rawlings is adding to his heating capacity. Last Winter it was insufficient for the hard test then imposed, and Mr. Rawlings intends to be prepared for any emergency this year. His business continues in a most satisfactory condition.

WESTCHESTER, N. Y.—Charles Uhlik, formerly of this place, is now located at Zion City, Ill.

Worcester, Mass.

Horticultural Society.

On January 5 was held the first of the Winter meetings. The opening address was made by President O. B. Hadwen, J. W. Stockwell, of Sutton, spoke on "A Trip to St. Louis." Some very able speakers have been engaged for this Winter's series of meetings; among them are: W. W. Rawson, of Boston; Edmund A. Engler, president of the Worcester Polytechnic Institute; George H. Moses, of Concord, N. H., Forestry Commissioner of the State of New Hampshire, and others. Secretary Hixon announces a new departure for 1905: \$50 has been appropriated for prizes for children. They will be encouraged to raise vegetables, as they always have been to raise flowers.

Jottings.

L. D. Bryant, of A. H. Hews & Co., was a late caller.

H. F. Littlefield is preparing to erect a new house, 256x31 feet, for carnations and roses. The contract has not been awarded, but a representative from Lord & Burnham has been over the field. CAROLUS.

Spencer, Mass.

Charles H. Green, who met a severe loss by fire December 15, is rapidly rebuilding. The fire could not have come at a more inopportune time. He had just stocked up with novelties, etc., for the Christmas trade, and these, together with his desk and all his papers, the accumulation of years, were destroyed in the office and potting house. The ends of two houses that abutted against the office contained a lot of roots and palms. All of these were lost. Mr. Green also feels keenly the loss of some very choice seed he had grown himself. There was no insurance. YENDOR.

Grafton, Mass.

Herbert J. Stone, who bought the greenhouse of Fisher & Son, is doing well for a beginner. His house is 175x25 feet, with a propagating house 50x10 feet. He is picking nearly a thousand carnations weekly. From 250 sweet pea plants he is cutting 1000 blossoms weekly.

Lord & Burnham Company have lately completed for Norcross & Stratton two houses 150x30 feet and 100x30 feet. A crop of radish will be followed by one of cucumbers, and then the houses will be devoted to carnations. RODNEY.

Boston.

News Notes. In the absence of the new president, Arthur F. Estabrook, who is in Porto Rico, Vice-President Walter Hunnewell presided at the meeting of the Massachusetts Horticultural Society on Saturday last.

Indianapolis.

News of the Week. Baur & Smith, the Smith & Young Co. and Bertermann Bros. Co. have taken advantage of the glass prices and have laid in a large quantity to be used during the coming Summer.

New Orleans, La.

A new firm, to be known as the Metairie Ridge Nursery Company, with Harry Papworth as its president, will be formed here soon. The company will purchase a tract of land containing 200 acres on Metairie Ridge, land especially well adapted for the purposes intended.

John O'Brien, who has been manager in Carbone's flower store for the past eight years, has resigned his position.

Over two hundred dollars has been collected by the various salesmen in the two flower markets for the family of the late James Denning, whose untimely death was recorded in last week's notes.

William McAlpin and William Glidden are now salesmen for the J. A. Budlong & Sons Co.; the former has been with William H. Elliott for several years.

W. L. Lewis, of Marlboro, has been exhibiting his new white carnation Mrs. W. L. Lewis, in Welch Bros.' Flower Market the past week.

The next meeting of the Gardeners & Florists' Club will be held Tuesday evening, 17th inst. The meeting, which is the first of the year, promises to be of unusual interest.

Macmulkin has a very unique window decoration this week, the whole being laid out artistically as a southern home scene.

John Yeager, for the past two years with Peter Fisher at Ellis, has resigned his position and accepted one with the J. D. Thompson Carnation Co., Joliet, Ill.

George Buxton, of Nashua, N. H., one of the leading growers for the Boston market, came nearly being flooded out with the excessive rains of last Saturday.

The many friends of Wm. Molloy are glad to see him back again in the Market.

A great many of the local growers are reported on the sick list, suffering from severe colds, or attacks of la grippe. The list includes E. Allan Peirce, John J. Fee, E. Sutermeister, H. A. Budlong, the local representative of the J. A. Budlong & Sons Co., and Al. Hudson, salesman for W. H. Elliott.

Robert Cameron, of the Harvard Botanical Gardens, has been confined to his home for several days with an attack of the grip.

The wagon of Hoffmann, the Back Bay florist, met with a bad accident on Monday evening. While driving down Commonwealth avenue the wagon was struck by an electric car and made a total wreck.

UTICA, N. Y.—David Dean, of A. T. Boddington Co., New York, was calling on the trade on Thursday. Business is good all along the line; a great many parties are on now. QUIZ.

News of the Week.
At the club meeting, held last Monday night, the question of a chrysanthemum show came up again, and it was once more decided that there be no show next Fall. There seems to be some doubt among the majority of the members of making a show successful.

The Florists' Exchange held its annual stockholders' meeting on Monday. The following directors were elected: E. A. Seidewitz, I. H. Moss, Edward Akehurst, F. C. Bauer, J. M. Rider, William G. Lehr and Fred G. Burger. The directors elected the following officers: J. M. Rider, president; F. C. Bauer, vice-president; Edward Akehurst, secretary; W. G. Lehr, treasurer. The yearly report of the management of the Exchange showed an increase in business over the preceding year of about 35 per cent., which is considered a remarkable showing, when our great loss by fire during the year is considered.

William B. Sands, of Lake Roland, Md., one of our largest and most successful rose growers, has been elected chairman of the Committee on Schools of Arts and Designs of the Maryland Institute of this city, in which capacity he has general oversight of the forty teachers and thirteen hundred pupils, which are included in the popular and useful technical school. The institute, which had its property destroyed in the great fire of last February, has recently received about half a million dollars to re-establish it—\$175,000 from the State, and over \$300,000 from Andrew Carnegie and other liberal friends of education. Judge Sands (as familiarly known) has been a member of the Board of Managers for about ten years.

George Eberle, who for many years was in the employ of G. C. Personette, has started in business on his own account on Canton avenue.

Messrs. Hess & Wolf, of So. Charles street, and Messrs. Kennedy Bros., of Fremont street, have discontinued the store business. JOHN J. PERRY.

Cincinnati.

News Greetings.
The thermometer this (Tuesday) morning was 6 below, with a promise of several days of zero weather, plenty of snow, and now plenty of coal and with plenty of money to buy it, why should we mortals complain? Looking over the Christmas reports from nearly all over the country, they show an increase of business over former years; and the former years were thought to be great. At this steady increase from year to year the florists will soon all be millionaires.

Julius Baer has rented the two stores on Fourth street, only a few doors from his present location. He will furnish same nicely, and will have the largest retail store in this part of the country.

Hardesty & Co. report that their branch store in Lexington, Ky., is doing a fine business. Lexington is, and always has been, one of the best flower cities in Kentucky.

Miss Shanahan, of Avondale, had a fine lot of Japanese plants blooming for Christmas; these she imported direct. They sold fairly well.

I do not hear of many florists from this section going to attend the Carnation Society's meeting; but as the time draws near more enthusiasm may be shown. The C. H. & D. R. R. seems to be the florists' road out of Cincinnati; and we shall probably all go by that route. The rates are a fare and one-third on the certificate plan. We shall leave this city on the evening of the 24th. All in this vicinity who intend making the trip are cordially invited to join us. E. G. GILLETT.

Orange, N. J.

News Notes.
Christmas trade was slightly in advance of last year's. Preference was shown for bright colors. Potted plants sold well, only a few cyclamens being left over. Primulas, poinsettias and solanums were closed out early; and the bells and wreaths were disposed of before the competition of the department stores made itself felt. One of the best strikes was made by Hales, with sweet peas, planted in September in a solid bed with drainage of cinders, over which boards were placed and then five inches of soil. They were grown cool and came out on time. Flowers have graced most of the social events of the season. Several dinners at the Country Club have been in the hands of George Smith, as was also the work for the funeral of Mr. Douglas, of R. G. Dun & Co. Burns & Floringer have gone out of business at East Orange. J. B. D.

SCHENECTADY, N. Y.—J. E. Felt-housen reports that plant trade this season is far ahead of that of previous years; and that prices are better than those obtained in the past ten years, owing to the early frost last Fall. So many got caught then, that orders have been doubled in many cases.

GREENHOUSE LUMBER

Now is the Time

TO SEND FOR OUR ESTIMATES and decide on your contemplated building work. An early order is early delivered, and early deliveries afford you much more time for painting and careful erecting. If you wait until later, there will be "others" who have waited too long, and everyone then wants their work "at once."

Our New Construction Sheet Mailed on Application. Plans and Estimates Freely Furnished on Request.

Use Lord & Burnham Co.'s

Cast Iron Gutters

For your Greenhouses. They are straight, durable, and easily set in place. Being exposed to the inside heat of the house, they readily free themselves from snow and ice. Our gutters are provided with grooves to catch drip from roof, and patent iron clasps for fastening sash bars, also fittings to fasten the posts underneath. These gutters can be used with any style of house.

PRICES UPON APPLICATION

Catalogues of Greenhouse Construction, Heating and Ventilating will be mailed on request. Address New York Office.

COAL BILLS REDUCED 1/3

The TORRIDOOR BLUE FLAME COMBUSTION REGULATOR will do it. Can be attached to any boiler or heater at any time. Far exceeds all other devices in saving fuel and maintaining all night even temperature. Prevents escape of gases. Has completely effective adjustability for quickly starting and shutting off fires without banking. Has all the advantages of competitors and none of their serious defects. Endorsed by the best experts in the trade.

A HUNDRED PER CENT. INVESTMENT.

If you buy a boiler and it is not a TORRIDOOR, insist that the maker furnish you a TORRIDOOR REGULATOR. It will cost him little and save you much. Send for valuable "Hints on Heating" to

Pierson Boilers

For Steam and Water
 are unsurpassed for efficiency
 and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 5, 1904. The two
 Pierson sectional hot water boilers installed for our new houses one year ago gave excep-
 tional satisfaction during the past winter, the most severe for many years, easily fulfilling
 what was expected of them, at the same time proving to be economical.
 We found them very easy to manage, that they responded promptly and heated the
 water in short time, thus giving splendid control of temperature in houses when sudden
 drop took place outside."

This is only One of Many
WE ALSO MANUFACTURE AND SUPPLY
FITTINGS, VALVES, PIPE AND EVERYTHING FOR HEATING

NICOTICIDE KILLS

Green Fly

Mr. J. A. Budlong, Chicago,
 March 11, 1904, says:

"We have been using Nicoticide
 on our whole place now for some
 time and find it the most satisfac-
 tory fumigant we have ever used.
 We heat entirely by steam, and paint
 it on the pipes when hot. This
 application works well and is cer-
 tainly very effectual."

Seed Trade Report.**AMERICAN SEED TRADE ASSOCIATION.**

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

The general appraisers have decided that the duty of 40 cents per bushel imposed by paragraph 249, tariff act of 1897, upon onions is to be assessed upon the basis of 57 pounds to the bushel, that being the practice in the custom house which has been long continued, and is not shown by satisfactory evidence to be erroneous.

The Chicago and Northwestern Railway is planning a "pure seed special" train, which will traverse the company lines in South Dakota, Minnesota and other states this Winter. Stops will be made at every village and way station, and four agricultural experts will give free instruction to farmers on the cure and use of seed grain and the production of larger and better crops.

ST. JOSEPH, MO.—A. G. Samuel, president and manager of the Missouri Valley Seed Company, has resigned. J. Good, temporary trustee, will act as general manager of the company. The United States court takes this action on the petition of bankruptcy recently filed.

CLARINDA, Ia.—The A. A. Berry Seed Company, which from a humble beginning five years ago has grown to an immense business, has been incorporated with a paid up capital of \$75,000, with the following officers: A. A. Berry, president; M. R. Ausbach, vice-president; W. C. Affeld, secretary, and A. F. Galloway, treasurer.

NEWPORT, R. I.—Frank A. Rich, representing Joseph Breck & Sons' Corporation of Boston, Mass.; John P. A. Guerineau, of the Schlegel & Fottler Company, Boston, Mass.; Leggett & Bro., of New York, had their Mr. Clapp here this week; M. Rice & Co., of Philadelphia, Pa., were represented by Arthur Zirkman; Mr. Grey, of Thomas J. Grey & Co., of Boston, Mass., was also here. Every one of these gentlemen report trade as very satisfactory indeed. F. W.

BOSTON.—W. W. Rawson & Co. have been exhibiting nests of the brown tail and gypsy moths in their windows the past week with a view to calling attention to the different insecticides handled by them.

Joseph Breck & Sons, Inc., are busy mailing their catalogue this week.

Spring orders are already reported to be coming in at least a month ahead of last year.

John Beaton, of Farquhars, is in Lenox this week.

Visitors the past week have been Alfred J. Brown, of the Alfred J. Brown Seed Co., Grand Rapids, Mich.; Henry McCullough, of J. M. McCullough, Cincinnati, O.; George S. Green, of the Illinois Seed Co., Chicago, and Mr. Sanderson representing J. M. Thorburn & Co., New York.

J. W. D.

NEW HAVEN, CONN.—The Frank S. Platt Company has purchased the four-story brick front property at 54 State street. The purchase price is reported to be about \$50,000. The property has a frontage of 50 feet and extends 30 feet to the rear. The new premises will be used on the upper floors by the Platt concern, which will put in an elevator, for the display of poultry supplies, seeds and farm machinery of various kinds. The increase of the out-of-town business of this firm has rendered such an improvement a positive necessity. The growth of the Platt firm has been constant. In 1877 the senior members of the firm purchased the seed department from the R. B. Bradley Co., which was founded in 1848. In 1901 the firm was incorporated under its present style. Since then this firm has been continually enlarging its warehousing capacity, and its latest acquisition will give it still better facilities for the taking care of the wants of its various patrons.

A TURN IN THE TIDE.—At last the effort to purchase cheap seeds, seems, in one case at least, to have ceased, for the Government purchasing agent of one Western State sends in to a certain seed house many separate orders for the various institutions that State having kitchen or ornamental gardens, saying: "Fill the orders with the best seeds, and at fair prices. We are tired of the quality, or rather, the want of quality of seeds, obtained by us in the past under the system of competitive prices. We are done getting seeds under that plan."

LIMA BEANS FOR MARKET.—Lima-bean raising, as a commercial industry, is confined to a limited section in Southern California. In these valleys some sixty thousand acres are annually seeded and produce practically the world's supply of limas.

Three-fourths of the land planted to these nitrogenous legumes lies in the fertile Santa Clara valley of the south, in Ventura county, and here is situated the largest lima bean farm in the world, the famous Dixie Thompson ranch, of nearly three thousand acres. In favorable seasons in the best soils, twenty-five eight-pound sacks per acre are produced; but 1,500 pounds per acre average is considered a very good crop.

Lima bean growers state that this crop cannot be produced at a profit a' less than \$2.50 per cental, with fair crop returns every year. They often sell as low as \$2, but some years of short rainfall have brought them up to \$4 per hundredweight.—Ex.

Appeals Pending in Customs Cases.

In a list of appeals pending in customs cases, issued January 3, 1905, by the Treasury Department, the following of more or less interest to the trade are included:

FLOWER BULBS.—J. M. Thorburn & Co. v. United States. This application relates to an unpublished decision of December 10, 1890, which affirmed the assessment of duty on certain flower bulbs, under the provision in paragraph 405, tariff act of 1883, for "bulbs and bulbous roots, not medicinal, and not specially enumerated or provided for," against the importers' contention that the merchandise was free of duty under the provision in paragraph 636 for "bulbs, and bulbous roots, which are not edible and are in a crude state, and not specially enumerated or provided for."

PRESERVED PALMS.—G. W. Sheldon & Co. v. United States. The decision under review was rendered January 3, 1902, and on the authority of G. A. 4560 (T. D. 21625) held that certain pieces of palm leaves and stems that had been

Propagating *Caryopteris Mastacanthus*.

This is the time to get an old plant or two of *Caryopteris mastacanthus* under cover, pot them and start them to grow, looking to the increase of them from soft wood cuttings. Nothing strikes easier than the green wood of this plant, and a single plant propagated from, early in the season, would be the parent of a thousand by Fall, were the propagation kept up the season through. And treated as a pot plant it is a pretty object when in bloom, the heads of blue flowers showing off to better advantage than when the plant is in the open ground. Its common name, verberna shrub, seems an appropriate one, as it belongs to the same natural order that the verberna does.

Forcing Japanese Snowballs.

Japanese snowballs intended for forcing should be some that have been grown in tubs for a year in advance. Those dug last Fall, potted then, and now brought on for forcing, may give small flowers, but not as good ones as would have been obtained had the plants been better established. There is a great demand for the flowers of this snowball for uses on Memorial Day, but there is no need to force for that occasion, as in ordinary seasons bushes of this plant are in flower outdoors. In the neighborhood of New York the snowball is one of the first shrubs to show its awakening when Spring comes. Its buds push almost as soon as those of the larch. The date is about the 10th of April. Then, as a rule, the flowers are in perfection at the close of May—the time the great demand for them is on. This makes about six to seven weeks in all, and from what it does outside, valuable hints may be obtained for its indoor management, to bring it into flower at the proper time. There must be but little pruning of its shoots, as this means a loss of flowers. If roots are but few and apparently not sufficient to sustain all the shoots, it will be better to cut some of them away entirely, leaving the remainder of full length.

Budded Lilacs.

With the ever increasing demand for lilacs, nurserymen hardly see their way to get up stock quick enough without recourse to hudding on the privet. As a fact, the greater number see nothing but merit in having them on the privet stock, as it means stocky plants in a short time, early flowering ones and numbers of them. The use of the stock is objectionable where the opposite of what it produces is desired. A stocky plant is usually all right always; so are early flowering ones, but the dwarfness which follows the use of the privet stock, as well as the privet suckers which often show from them, are not so acceptable. To overcome the suckering of the privet—which is not really suckering but a pushing from the stock below the graft—the buds should be cut out carefully before the lilac is planted, in the way careful men treat roses budded on some other stock.

Were it known how easily the lilac can be raised from seeds, more would be done in that way, and an ample supply of stocks for budding obtained. The clusters of seeds, which follow the flowers can be rubbed apart and sown as they are, there being no need to separate the seeds from their pods. They should be sown early in Spring, when seedlings may be looked for the first season. This would give stock for the budding on of the many new and valuable sorts now in cultivation. It would lessen the mingling of stock and clone, and it would give lilacs of natural height instead of the rather dwarf ones which result from the use of the privet.

What are known in nurseries as Hungarian lilacs are the *Josi Koa villosa*. Emodi and Dr. Brightschneider. These seem much dwarfed when on the privet, but they then flower well, perhaps better than when on their own roots.

Before closing let me say that in *Syringa oblata*, a new lilac from China, there is the earliest lilac to flower of any known. And it is a true, old-fashioned lilac, as well.

Notes on Liquidambar.

Mr. Duncan's notes on the sweet gum, particularly those in which he points out the desirability of getting the supply of trees from its furthest northern point of growth, I fully endorse. Many years ago I mentioned in the horticultural press some experiments with seedlings of this tree, raised from seeds obtained from Georgia. From the first the seedlings were tender, and were partly winter-killed. What interested me greatly, was the noting of the difference in the behavior of the bed of these and another bed

of plants raised from seeds gathered from native trees growing nearby. Those of the latter finished their growth and dropped their leaves before freezing weather came. The southern ones did not, but were still growing when the freezing came, and so were, of course, much injured.

To return to the behavior of the southern seedlings. They were hurt every Winter, but less every year, and, little by little, crept up to be trees, and in the end became quite hardy, not suffering at all. They seemed to acquire the habit of ripening early, giving them riper wood with which to meet the foe. The late ripening habit may be witnessed in all trees from the far South.

Mr. Duncan's experiment with the Connecticut trees will, no doubt, prove successful. There are groves of this tree here, some within the boundary of the city of Philadelphia, and some in Delaware County, just across the Philadelphia line. Our neighboring nurserymen raise all their trees from seeds secured from these groves. Taken when young and transplanted and pruned often, they transplant very well; and even when of a size six to eight feet and not often transplanted the work may be successfully done if pruned almost to bare poles.

No situation delights this tree as does deep damp ground, but if any doubt of hardiness exists, don't plant it there, as it will make a rank growth which will not ripen well before Winter comes. Better plant it on higher ground.

SPRAY OF TEXAS MISTLETOE
Distributor, Wm. Anderson, Brownwood, Tex.

Mahonia Aquifolia, *M. Repens* and *Ilex Crenata*.

Edwin Sexton, Elsemere, N. Y., writes as follows: "I read your contributions to *The Florists' Exchange* with much interest, and have just noticed in the last issue, what your correspondent of Edgeworth, Pa., says concerning *Mahonia aquifolia*. I saw the plant he describes, in the year 1889, growing on the dry foothills, on the east side of the Rocky Mountains, fifteen miles west of Denver, and at the time did not know its name. On referring to Professor John M. Coulter's "Manual of the Botany of the Rocky Mountain Region, from New Mexico to the British Boundary," I find this description of the plant: *Berberis repens*; a low shrub less than a foot high; leaflets, 3 to 7, ovate, acute; racemes few, terminating the stems.—Throughout the Rocky Mountains. This is the *B. aquifolia* of Flora Colorado and the various Western Reports. *B. aquifolia* ranges farther West, especially in Oregon and Washington, and is a much larger shrub, with clusters of racemes. On referring to Nicholson's Dictionary of Gardening for *Mahonia aquifolia* I find: Included under *Berberis*; and on referring to *Berberis*, I find *aquifolia* described as three to six feet; and *repens* one to two feet, both natives of North America.

"While writing you I wish to say a word about the hardness of *Ilex crenata*. I have but one plant of it, about a foot high, growing in light sandy soil in a very exposed situation. Last Winter it stood 30 degrees below zero; it was uncovered and unharmed and made a healthy growth the past Summer."

Mr. Sexton's notes show, that the understanding of our nurserymen that the *Mahonia repens* is a dwarf from the *M. aquifolia* is correct. As it is, the common *M. aquifolia* being such a slow grower meets all requirements without having the *M. repens*. The latter is very dwarf, as it grows here; but it is a pretty evergreen, and useful for many purposes for which landscape gardeners want a low growing evergreen.

It is interesting to know that the *Ilex crenata* will stand 30 degrees below zero. It must be a real ironclad holly. We get it down to zero a few times through the Winter, and were pleased to find this holly did not mind that, but had not thought it would stand 30 degrees below zero.

JOSEPH MEEHAN.

Mahonia Aquifolia.

Editor Florists' Exchange:

The articles lately appearing in the Nursery Department of the Florists' Exchange, in regard to *Mahonia aquifolia*, have encouraged me to add some matter to a very interesting subject.

Here, in the Bitter Root Valley, and, in fact, throughout the whole of the mountain region of Montana, *Mahonia aquifolia* grows in profusion. On sun-baked, gravelly flats, on open sunny hillsides, hanging to the edge of the precipice, seeking out the cool depths of the thickets of quaking ash and fir, is found this most wonderful of Rocky Mountain evergreens. I know of no plant in this region that has its range and adaptability to environment. From sea level to timber-line; from arid plain to the brink of the shady pool, it grows in profusion and thrives in every situation. That it will readily respond to good treatment is easily seen by the difference in the plants growing in the dry flats—only three or four inches high—and those growing in a partly shaded situation where moisture abounds, whose sprays of leaves frequently measure a foot in length.

The plants in this region have the same dwarf, creeping habit as the Black Hills variety described by Mr. McCready in *The Florists' Exchange* of December 31, 1904, but the time of blooming is very different. Here they are the first to bloom, coming in advance of the buttercup, and are often found in flower in February under the shelter of some projecting rock on an open, sunny hillside. This difference, however, may be explained by the difference of altitude, as the mean height of this valley is only about 3,500 feet.

Blind, indeed, would be the plant lover who failed to recognize at once the great decorative value of *Mahonia aquifolia*. The dark red of the sun-kissed leaves contrasted with the brilliant green of those grown in the shade, makes a Christmas decoration that is not surpassed even by the universal holly. Although the grape-like clusters of fruit, of a dark purple color, thickly covered with "bloom," add greatly to the attractiveness of the plant, they are not persistent enough to be of any value as a holiday decoration, as they are so fully matured by September as to shatter at the slightest touch.

For several years we have used the mahonia alone in decorating the house for the holidays; but this year we used the holly, too, our own judgment and that of our friends being that the mahonia made much the finer effect.

As to the commercial possibilities of the plant, hinted at by Mr. Meehan, it is evident that there is already a demand for it. I once sent some leaves to an Eastern horticultural paper with a request for an opinion as to their value for florists' use. The editor turned them over to a wholesale florist who asked for a consignment of 10,000 sprays. Having neither the time nor the inclination to collect them I let the matter drop. However, I believe the time will come when great numbers of them will be shipped from here for the holiday trade. I enclose you a spray of each color, from which you can get a fairly good idea of their beauty.

W. E. McMURRY.
Hamilton, Mont.

Texas Mistletoe.

Around Christmas time we were favored with a sample of the mistletoe which Wm. Anderson, of Brownwood, Texas, was advertising in our columns. Our illustration shows the character of the goods Mr. Anderson handled at that time. Mr. Anderson adds:—"I am highly pleased with the results obtained from the advertisement placed with you; I have received a great many repeating orders."

In our issue of December 24 last Joseph Meehan contributes some valuable information relative to the propagation of mistletoe, which will be found useful by those desirous of essaying that work.

PARK ROADS AND WALKS.—The latest bulletin issued by that progressive body, the American Association of Park Superintendents, is a "Special Roads and Walks Number," and is replete with most valuable information on the important subject of park road-making. John W. Duncan, of Boston, in telling of his experience with oiled roads, says: "The odor, especially night and morning, was very objectionable, and a great difference in the growth of the shrubbery, especially roses, immediately along the side of the driveway, was noticeable; whether from the oil or other causes, the Summer growth was not so strong and healthy as on other sections of the parkway."

Greenhouses Wrecked by Dynamite Explosion.

An explosion of 2000 pounds of dynamite occurred January 5 near Atglen, Pa. The shock was felt at several distant points, including Christiana, Pa.: the greenhouses of W. P. Brinton located there are a total wreck; and those of W. P. Phillips have been damaged to the extent of \$500.

Ben. Hammond, the "Slug Shot" man, of Fishkill Landing, N. Y., is distributing a serviceable memorandum book, containing calendar, etc. The Exchange acknowledges receipt of a sample.

Contents.

CARNATIONS

Rooted Cuttings Now Ready

Eclipse Our 1905 introduction. A pink carnation, lighter in color than Lawson and of a more even and bright shade of pink. No objectionable shading or bleachings. A strong free growth, large flowers on long stiff stems and early and continuous flowering.

Fiancee A most pleasing shade of medium pink. No carnation has ever equaled the number of awards received by this variety.

Cardinal Brilliant scarlet. A great improvement over Estelle.

F. Burki Pure white.

The above four varieties,
 \$12.00 per 100; \$100.00 per 1000.

Richmond Gem Scarlet, \$10.00 per 100; \$75.00 per 1000.

In addition to the above we can supply twenty-five of the best standard sorts, varieties that are profitable to grow. Our preliminary Price List will be sent upon application. We are pioneers in the carnation line and our facilities for rooting and handling cuttings are nearly perfect, due to our long experience.

ADVERTISING RATES.

One-half inch, 75c.; ¾ inch, \$1.00; 1 inch, \$1.25. Special positions extra. Send for Rate Card, showing discount of 10c., 15c., 25c. or 35c. per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office Thursday morning to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

New Gardening Periodical.

THE GARDEN MAGAZINE, edited by Wilhelm Miller. Publishers, Doubleday, Page & Co., 133-137 East Sixteenth street, New York.

It is fitting that, with the demise of one American periodical devoted to gardening matters, another should spring up to take the place of the defunct journal. The Garden Magazine is said to be "a monthly magazine on practical gardening," and, we are told, is "the logical working out of the growing interest in the garden not merely as a means of livelihood (though we expect to see more and more people turning to it as a life work), but as a delight and pursuit for the busy people in the world who find a new fascination in the things of the soil." From the articles appearing in the first number of the new magazine, it would seem as if the majority of the "practical gardeners" in America who dole out instruction were females; which is, indeed, a pleasing sign of the times. We cannot discover the signature of a single "practical" male gardener known to us in the whole of the number. But that may or may not be a serious drawback. The new journal is certainly comprehensive in the number and character of its contributions. It is profusely and aptly illustrated and will, no doubt, do its share in maintaining that interest in gardening matters which is so manifest throughout the country just now.

McKinley Day, January 29, 1905.

Subscribe to the Florists' McKinley Memorial Fund. Hang your certificate of subscription in a conspicuous place. Spread the fact that President McKinley had no particular choice of color. He wore from white to the deepest scarlet. This is authentic.

Cater to the children. High prices will force the use of a tissue paper substitute, in many cases.

Do not overcharge. Ask a moderate price, thereby showing your participation in the day.

If you feel unable to subscribe now, set apart a fraction of a cent on each carnation sold on McKinley Day, or a percentage of your day's receipts, and send to the committee on The Florists' McKinley Memorial Fund, H. M. Altick, Chairman, Dayton, Ohio.

F. R. Pierson, of Tarrytown, N. Y., is receiving considerable publicity in the daily newspapers these days on account of his purchase of the variegated Lawson carnation from W. B. Arnold, of Rockland, Mass. It is announced that \$20,000 was paid for the stock. Mr. Pierson is being styled a millionaire resident of Tarrytown, and his deal is characterized as "Frenzled Floriculture," all of which has its good effects in a certain direction.

Fifteen new violet houses will be added to Rhinebeck's (N. Y.) city of glass the coming season.

Postal Reforms Needed.

The Postal Reform League, which recently opened headquarters at 500 Fifth avenue, New York, is making a commendable endeavor to bring to the attention of the American people, the disadvantage under which both merchants and purchasers labor on account of the untoward existing postal conditions in this country. In a communication to the New York Sun, Immanuel Pfeiffer, general manager of the League, draws a comparison between the German postal facilities and those of the United States, very much to the disadvantage, as well as the discredit, of the home arrangements. He says, among other pertinent things:

"Our Government charges 6,000 per cent. more for delivering parcels than the German Government. Five or 10 per cent. is an immense difference in business expenses. Then think at what a disadvantage our merchants are placed in comparison with those of Germany."

"Merchandise sent through the mail in America must be limited to four-pound packages, reckoned as fourth-class matter. For this four-pound package the sender must pay 64 cents for any distance, even in the same city."

"A German can send a 110-pound package of merchandise from one end of Germany to the other for 30 cents, or he can even send it to the confines of Austro-Hungary for the same sum."

"The American pays 16 cents a pound. The German pays one-fourth of a cent a pound. Is there any reason in that?"

"The German Government will deliver the 110-pound parcel at the address to which it is consigned. For from 2 to 6 cents extra the Government will insure this package, while we must pay 8 cents to register a half-ounce letter."

"There is apparent throughout Europe a great desire to serve the people through their postal system which is entirely lacking in our Government. Even little Denmark recently appointed a commission to examine into the postal systems of all countries and report on improvements. As one result Denmark has recently established a national automobile system to deliver the parcels post at the door of the consumer."

"The International Parcels Post was established in 1880. It carries 11-pound parcels to any one of the thirty-three countries represented for 10 cents, land transportation, with additional fees running up to 60 cents for maritime transportation."

"Why are we kept out of this union? Why do not our business men have the advantage of that rate in dealing with the 500,000,000 inhabitants of those countries? Ask the President. He has the power, together with the Postmaster-General, of fixing postal rates."

We would recommend that every florists' club, special and national society, devoted to our industry, get in touch with the Postal Reform League, and render it substantial, practical aid, in its efforts to eradicate antiquated post office methods and practices, which but clog the wheels of commerce, detrimental alike to the buyer and seller of those commodities which come within the scope of parcel post operations.

The American Carnation Society.

The meeting and exhibition of this society will be held in the Auditorium Hotel, Chicago, Ill., January 25 and 26.

Every one interested in carnations is invited to come and meet with us. Special rates of a fare and one-third, on the certificate plan, (which will be explained to you by any ticket agent) have been granted from all points east of, and including Denver.

The small sum of \$2 makes you a member of the society, and pays one year's dues. This entitles you to exhibit any new, or old, carnation you may have to show.

The Auditorium Hotel can take care of fully 200 members at reasonable rates, and especially so when two will occupy the same room. This puts all under one roof—lodging, the meeting and exhibition, and weather need not be taken into account.

Special Notes.

There are so many sports of Mrs. Thomas W. Lawson coming into the field that this society would like, for the sake of uniformity, and to avoid the introduction of the same variety under different names, to have every carnation grower who has a sport from Lawson, of any color, to exhibit the same at this meeting; and especially so if he intends placing it on the market.

Where the grower does not accompany the box containing his flowers, it should be marked as follows: "The American Carnation Society, Chicago, Ill., care of P. J. Hauswirth, Auditorium Hotel." (Prepaid).

Registration.

By Patten & Co., Tewkesbury, Mass.

MIKADO.—Color white overlaid with crimson, a seedling of 1902; cross of Governor Roosevelt and Prosperity; style of growth like that of Governor Roosevelt; size of blooms three to three and one-half inches.

PINK PATTEN.—Color clear dark pink, a sport from Mrs. M. A. Patten.

ALBERT M. HERR, Secretary.

Lancaster, Pa.

Sir Joseph Hooker has retired from the editorship of the Botanical Magazine, England. For a continuous period of seventy-seven years botanists and gardeners have been indebted to him and his father, Sir Wm. Hooker, for the illustration and exact description in that periodical of rare and interesting plants.

American Carnation Society Notes.

As the time approaches for the annual exhibition of the above society, those most interested are wondering what kind of weather we are to have. Until last year we have generally been unfortunate in a blizzard coming up just about the time the distant exhibitors had started their exhibits on the journey. After so many sad experiences of this nature, it was the consensus of opinion that if the date of meeting was changed to March instead of February, we would be more likely to miss the blizzards and strike a time when trains would be running on time, hence the change of date of last year's meeting, it being put off to March, which worked all right, except that it was too late for practical purposes. It was pointed out that florists who buy new carnations had already made up their minds what varieties were the best and had placed their orders a month or two in advance of the show, only to be disappointed, in some cases, when they saw these varieties on exhibition but declared they could not wait until the middle of March before placing their orders, for it would be April, or May, before they could get their goods. Therefore, all looked back to the old date, and, upon reflection, noted that we had experienced the same bad weather conditions that year and thought best to try January 25 and 26 as an experiment.

So here we are; regardless of weather there will be an exhibition. There are enough carnation growers from Ohio, Indiana, Michigan, and Illinois to make one of the grandest exhibitions we have ever had; but what we want is a show from the whole of the United States and we'll have it, weather permitting. It however, behooves every exhibitor to ship on time—rather twelve hours ahead than twenty minutes late on arrival. One of the most successful exhibits the writer made, was at the Philadelphia meeting. I arrived there with my blooms at 8 p. m. the day before the show, in a terrible snow storm and at that, several hours late.

I listened to the advice of several old hands, and did not unpack my flowers, as I had intended doing but left them in the boxes all night. That made fifty-two hours for them out of water until the time of judging. Some growers not more than one hundred or two hundred miles from Philadelphia never get their flowers judged at all, owing to their being several hours late.

It is the rule now to bar every exhibitor from competition who does not have his flowers staged promptly on time. That rule is enforced to the letter and the time is, this year, 1 p. m., January 25. This rule does not apply to varieties entered for the certificate of merit; nor does it interfere with bloom staged and labeled "not for competition." Everyone having the interest of the exhibition at heart hope to see all exhibitors on time and no one disappointed.

If you have not received the premium list, send to Secretary Albert M. Herr, Lancaster, Pa. He will forward you a copy by return mail. You will find many classes that will interest you. There is a chance for everyone to win a prize of some sort; a variety can compete in the hundreds. Varieties introduced prior to July 1, 1903, can compete in fifties and varieties introduced prior to same date in 1902, can compete in the twenty-fives. Then there are the usual number of special prizes.

These few remarks are intended for the new exhibitors, and as a reminder only for those who are already aware of the facts stated. You do not necessarily have to be a member of the society in order to exhibit; but I believe the entry fee charged for exhibits amounts to more than the membership which is \$2.

I regret to report that owing to the illness of George Wienhoeber, who has been in the hospital for many weeks, we shall not have the pleasure of his paper on "Carnations From a Retailer's Point of View," with practical demonstrations of arrangements. Those who heard this progressive young gentleman's paper at Asheville, will realize what we shall miss.

JAS. HARTSHORNE,
President.

Substantial Aid to McKinley Memorial Fund.

At the meeting of the Chicago Florists' Club, held Thursday evening, January 12, those present signed an agreement to contribute to the McKinley Memorial Fund, from the proceeds of their McKinley Day carnation sales, as follows: Retailers, twenty-five per cent.; growers, fifteen per cent.; wholesalers, five per cent. This is an example worthy of emulation throughout the entire country; and the contribution made would but form a fitting token of appreciation not only of the martyred President's love of the divine flower, but also of the great impetus to the carnation industry which the beautiful commemoration of his birthday has been instrumental in bringing about.

All interested in swelling the fund, and that should mean every man and woman in America who handle carnations, should address H. M. Altick, Dayton, Ohio, on the subject; who, upon their pledge to devote their per cent. to the fund, will mail a handsome placard for display, not only advertising McKinley Day, but also showing the action of the florist in taking a substantial part in this popular and worthy movement.

The fund is to be known as the "Florists' McKinley Memorial Fund," and is to be applied to the improvement and care of the national McKinley monument and its surroundings at Canton, Ohio.

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

Chrysanthemum Dorothy Faust.

Editor Florists' Exchange:

I saw in a recent issue of The Florists' Exchange that the New York committee of the C. S. A., through Eugene Dailedouze, chairman, in passing upon the merits of a chrysanthemum sent to them as Dorothy Faust, decreed that it was a known variety, Mrs. Robert McArthur. In justice to myself, I feel that I should make some statement, and ask a few questions. If it is McArthur, how did I get it? I never had, and I do not think any one else around Philadelphia, had a Mrs. Robert McArthur, else it could have been recognized.

Four years ago I had a batch of Major Bonnaffon chrysanthemums, in three-inch pots, and wishing to increase my supply I took the tops out of each one, and when I planted, I planted all of the original three-inch lot, and all the plants produced from the top cuttings. When they bloomed, among the later I noticed this white one, an unusually clean, fine flower, and I had bought no chrysanthemums at all that year from any one, and the year before only a bit of Wm. H. Chadwick from Robert Craig. Among the original batch of three-inch Major Bonnaffon I speak of there was no trace of a white.

I carefully lifted this stranger among my Bonnaffon, and the following year had about twenty-five plants, showing it to everyone that came in; and the next year had quite a bench full. Mr. Craig saw it; so did Mr. Harris. Neither of them knew it; and at Mr. Craig's suggestion I sent it to E. G. Hill, of Richmond, Ind. He said it was an unusually fine white, but could not help me in naming it. I also sent a flower to Elmer D. Smith, and he could not place it. So I wonder, and still the wonder grows, how this could be Mrs. Robert McArthur? How did it get among my plants? Could it be possible for two flowers to be so much alike as to be mistaken one for the other?

If it really is McArthur I am glad to find the name for it; the only difference it will make to me is I shall not sell any of the stock, and those who wish to grow it can buy Mrs. Robert McArthur, and shall grow my own stock.

HARRY J. FAUST.

Merion, Penna.

Mr. Falconer and the "Canucks."

Editor Florists' Exchange:

Just a line or two in reply to Mr. Falconer's remarks (page 11). He evidently has not given much thought or attention to the present situation, and forgets that things move in Canada as well as in other places. Canadians are not "uppish" towards their brother florists in the United States or anywhere else, in the sense that Mr. Falconer uses the word. They are "uppish" in the sense a boy is who is growing up to be a man. They have a national society of their own now, and have had for the last seven years—the Canadian Horticultural Association. They have a trade paper of their own, too; but they are not too "uppish" to read and correspond with United States trade papers. They acknowledge that the meeting of the S. C. F. in Toronto, 1891, fulfilled its mission in opening their eyes to the possibilities of the trade—and they do so with gratitude; but if Mr. Falconer will give the subject a little thought he will see that it was necessary as time went on for them to do a little mission work on their own account, in their own country, which was growing up to be a nation. They had their own Governments to move, their own wires to pull. That is all there is to it. But there need be, there should be no national feeling enter into the realm of horticulture. We are all (the world over) striving for its advancement in our own way, and in doing so, for our own individual advancement. Flora knows no imaginary lines or boundaries, nor should her followers.

A. H. EWING.

Do It Now.

The Florists' McKinley Memorial Fund committee would respectfully call the attention of the trade to the near presence of January 29, 1905, popularly known as "Carnation Day," or "McKinley Day," set apart for the observance of a memorial to our late President.

The committee has, at different times and divers places, detailed the objects of The Carnation League of America, and the benefits already derived and to be derived from the popular movement by our profession and it now feels that the time has come for prompt attention.

The committee has expended considerable effort to place this question before the trade; a fair number have subscribed to the fund; a greater number have pledged themselves; but the greatest number have failed to respond.

To those who have paid, the committee heartily gives thanks; to those who have subscribed, but not paid, the committee would urge prompt payment so that they

may receive their certificate before January 29; and to the great number who have failed to respond, either through carelessness, neglect or indifference, the committee would urge prompt action.

The grower and the wholesaler are equally interested and benefited with the retailer, they must depend each upon the other; the more successful the retailer, the greater the demand upon the grower and the wholesaler, therefore it behooves all, from the grower to the proprietor, to have a part in a general movement that will bring manifold good to our profession.

A generous response will easily attain our object, and obtain for our profession a fund for the National McKinley Memorial that will prove a lasting monument to the florist's profession, and that will bring back to us many times the amount invested.

Any donation (the committee terms it, "investment") of \$1 or more entitles the member to a handsome steel engraved certificate, fit to be framed, and when displayed in your place of business, it will prove a lasting appeal to the sentiment and patriotism of your customers, and an indication of your own loyalty to, and your interest in, our Great Republic.

"Do it now" and send your remittance to the undersigned.

H. M. ALTICK, Chairman.

Dayton, Ohio.

The Originator of the Carnation League.

The accompanying portrait is a likeness of Mr. Lewis G. Reynolds, of Dayton, Ohio, who, prompted by the patriotism and sentiment, so common in the citizens of this great republic, instituted that "great memorial of sentiment," McKinley Day.

LEWIS G. REYNOLDS

Originator of Carnation League of America

The Carnation League of America, with its three millions of devoted followers, will observe this coming January 29 in a befitting manner, and in addition to each member wearing a carnation on that day, all over this broad land, will be held, memorial services, in honor of our illustrious dead.

Mr. Reynolds, by his happy suggestion, has not only conferred upon the florists of this country an incalculable financial benefit, but has founded an educational institution that will instill into the hearts of millions of our youth, the love and appreciation for the products of the florists' profession.

It is greatly to the interest of our calling, not only to give this popular movement our moral support, but whenever and wherever the opportunity offers to most substantially demonstrate that we are endowed with some of the same spirit of sentiment and appreciation that caused the foundation of The Carnation League of America, and that has made a grand success of it.

We refer to the laudable effort to raise a Florists' Fund for the McKinley Monument.

A Correction.

The caption under Begonia Gloire de Lorraine, pictured on page 41 of last week's issue, should have read that the plant was in a 16-inch pan, and not in a 6-inch pot, as printed.

OBITUARY

John F. Derby.

John F. Derby, a retail florist of 334 Bedford avenue, Brooklyn, N. Y., died of pneumonia at his home there, on Jan. 9, 1905. He was born on Broadway, near Bedford avenue, June 1, 1870, and was the son of the late John J. Derby, who for many years was a well-known florist of Williamsburg. The business was established in 1869, and was carried on by the deceased at the address mentioned. Deceased was unmarried.

W. F. Will.

W. F. Will, sixty-three years of age, foreman of the floral department of the Nunnally company, of Atlanta, Ga., was discovered dead on Friday afternoon, January 6. Death was due to heart failure. Mr. Will served during the civil war as a lieutenant in a New York regiment.

W. W. Hammond.

W. W. Hammond, an old resident of Bement, Ill., and well known as a nurseryman, died suddenly from a stroke of apoplexy, Sunday morning, January 15, in that village.

Mr. Hammond was born in Pennfield, N. Y., March 29, 1832. He went to Bement in 1869. He had always been a nurseryman, establishing a nursery at Bement in 1870. He was supervisor of Bement township for six years, and had filled the office of justice of the peace for several terms. He was a member of the Presbyterian Church of Bement and a regular attendant at its services. He leaves a widow and seven children.

GEORGIA STATE HORTICULTURAL.—We acknowledge receipt, with thanks, of a copy of the proceedings of the twenty-eighth annual meeting of this society, held at Tallulah Falls, Ga., August 4th and 5th, 1904. It is an interesting document, not the least valuable part of which is the catalogue of fruits furnished, of those which are successfully cultivated in Georgia.

The officers of the society are: President, P. J. Berekmans, Augusta; secretary, Chas. T. Smith, Concord; treasurer, Louis A. Berekmans, Augusta.

THE GARDENER'S ASSISTANT.—It is

with great pleasure I note you advertise this book. It was first gotten up by the late Robert Thompson, superintendent of the Royal Horticultural Society's Gardens at Chiswick, London. Mr. Thompson was then one of the best and most experienced all-around gardeners in Europe, if not the very best, and his field of observation, practice and experiment was greater than that of any other man then living. It was the first book on gardening I ever owned. About 38 years ago I subscribed for it in monthly parts, 2s. 6d. a part. My wages was only 6s. a week. It was complete in 12 parts and then I had it bound, and that old and well-thumbed and blackened volume has a place of honor in my library to-day. It was my text-book for many a year. But the same Gardener's Assistant to-day is a new book, increased immensely in size, modernized in every particular, and that, too, by the Curator of the Royal Botanical Gardens at Kew, London, a man who has the best opportunities of any man on earth for knowing what is newest among plants and most modern in gardening.

The foregoing commendation, which appeared in THE FLORISTS' EXCHANGE, issue of January 7, 1905, was written by Mr. William Falconer, one of the very foremost practical horticultural experts in America. Mr. Falconer is a graduate of Kew Gardens; was Curator of Harvard Botanical Garden; Head Gardener for C. A. Dana, Esq.; then became Superintendent of Schenley Park, Pittsburg, and is now Superintendent of Allegheny Cemetery; he was also the first editor of "Gardening."

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each. Send for Prospectus.

A. T. DE LA MARE PTG. & PUB. CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE

THE BUSINESS OUTLOOK, 1905.

We publish herewith the views of some of the prominent firms in the trade, relative to the business outlook for 1905, showing, as far as present indications point, the various staples that are in demand, as well as in short supply. We hope to submit others, in subsequent issues, and solicit, for publication, similar information from our readers:

The Seed Trade.

We think the prospects for the year's business of the seed trade are fully as good as they were a year ago, and on the whole planters will probably arrange for a larger acreage.

While we were able to harvest a fine crop of sweet corn, yet it is not impossible for a shortage to develop in corn if this unsettled state of the weather has had a bad effect on the curing of same.

Bush beans, as you are probably aware, are in very short supply, and before planting season comes we fear many planters will be disappointed in not being able to procure all they will require.

There are a few varieties of peas that are short, but we do not think that this will interfere very much. Other seeds are in a fairly plentiful supply and are of good quality. W. ATLEE BURPEE & CO. Philadelphia.

We beg to advise you as far as we have reports about the various bulb crops. Liliun Harrisii: We are informed, that, although the crop of 1904 was not as large as that of past years, the prices will be about 20 per cent. lower than in 1904.

Japan longiflorum, as well as other Japan bulbs, such as auratum, album, rubrum, will be about the same price as in 1904. So far no shortage of crop is

SILVER RIBBON GRASS

Introducers, James Vick's Sons, Rochester, N. Y.

to be feared. Deliveries are expected to be more regular, unless the war conditions would influence transports as they have the past season.

Dutch Bulbs.—Reports from Holland indicate a lower price for hyacinths, and a slight decline in those of tulips. Prices for all sorts of narcissus will maintain about the same figures as heretofore.

French Bulbs.—Roman hyacinths are reported to be quoted fully 15 to 20 per cent. lower than in 1904.

Paper White grandiflora, however, will be higher priced than ever. Bulbs over thirteen centimetres will not be only very high, but there will be a considerable shortage. There will be a large crop of the twelve centimetre size, which will probably be lower in price.

Calla Ethiopica, California grown; while smaller sizes will be plentiful, larger sizes will be scarcer than ever. Prices will be somewhat higher on the sizes over 5-inch circumference.

Freestias, both from Bermuda and California, will be about the same price as in past seasons. The French stock will be somewhat higher priced. Freestias have been very scarce in France.

Kentia seed will rise in price after January first. The Australian government has strictly forbidden, under penalty, to export any seed for auction to Europe.

The outlook for business in 1905 has never before been better, the inquiries for Spring catalogues and advance prices having been more numerous than in any other year. H. H. BERGER & CO. New York.

The business outlook in the seed trade is good. The stock in greatest demand are naturally those of which the crops are short. Beans, particularly the wax sorts, are very scarce and are quoted higher than normal prices. The same applies to a few unimportant lines. J. M. THORBURN & CO. New York.

We hardly have time to give you an extended report of the seed crops and conditions. We can, however, mention the following:

Gradus peas are again in very limited supply on account of the very great shortage. This also applies to Dwarf Telephone or Daisy peas, which are almost a total failure. We are advised, however, that the European growers are filling these varieties in full to their customers. Fortunately, we placed a contract abroad for these varieties as well. Most all other varieties of peas are coming in full supply.

Spinach and radish crops are reported considerably short, especially in Holland, due to the excessive wet weather which they had abroad.

Grass Seed, such as Fancy Blue, Red Top and Meadow Fescue, as well as White Dutch clover, are very much lower in price than they have been for a long number of years. The quality seems to be unusually good, which is usually the case where a good crop is obtained. We are advised, however, by the grass growers in the West, that the prices are likely to advance on account of the drought which is existing in Kentucky, Indiana and other surrounding States, which makes it necessary to do a large amount of re-seeding, which will hold back considerable seed for that purpose. The Fancy Red Top market is also inclined to advance, owing to the extremely low price at which this seed was sold after harvest. The meadows are being plowed up, which will make it more scarce this year. Red clover is advancing considerably, and it looks as if the price would reach \$9 per bushel before long.

Asparagus plumosus seed seems to be an exceptionally good crop, probably better than for years past. This is what our growers report to us. The sales of Asparagus plumosus, however, seem to be constantly on the increase on account of the many uses that these plants are now put to. For instance, planted in small two and a half or three-inch pots, there seems to be a decided growing demand. Great quantities are also used for fern dishes.

Flower seeds seem to be in general a good crop, with the exception of some asters. Several types suffered considerably last Summer, and there is not enough seed of these types to go around.

Sorry that we have not time enough to give you more information, as orders are coming in very rapidly, which must naturally have immediate and prompt attention.

Philadelphia. HENRY F. MICHELL CO.

We anticipate a good year. In vegetable seeds the short items on beans, cucumbers and melons will be in good demand; and while it is a little early to state definitely, the indications are that the cabbage and celery plantings will be about normal.

The sweet corn crop in Monroe county is better than was anticipated, and while the majority of farmers are a little slow to believe that there is no chance of \$10 Evergreen, some are accepting the situation and offerings are being made at \$2 for nice stock. JAMES VICK'S SONS.

Rochester, N. Y.

The Nursery Trade.

Among the wholesale nurserymen the prevailing reports are that fruit trees are not as plentiful as they have been for several years. Large numbers of nurserymen throughout the country suffered by last Winter's severe freezing, and many varieties of plum, pear and cherry were killed, in certain sections. In the ornamental classes, trees seem to have been pretty well cleaned out of the market. There is a fair supply of shrubs; but it is not thought that there will be more than the trade will clean up. Home-grown roses are generally scarce, and although Holland roses have been coming into the country in considerable quantity, we believe that the supply will not be found any more than equal to the demand. It is generally conceded that the plantings for the coming year will be about the same in proportion to those for the past five or six years. W. & T. SMITH CO.

Geneva, N. Y.

The demand for nursery stock is increasing, and the outlook for sales in that department is especially bright. There is also a strong demand for peonies, and so many of the sorts will be short in supply that it is useless to enumerate them. There seems to be an increasing demand for larger and better grown specimens in ornamental nursery stock. Not being posted as to the stocks in question, I could form no idea of what might be short in the market. C. W. WARD.

Queens, N. Y.

The Plant Trade.

The outlook for business during the year 1905, so far as the Cottage Gardens is concerned, is as bright as we have had it heretofore. While I have not posted myself particularly as to what class of goods will be in the greatest demand, we find that all of our first-class carnations are meeting with an increased sale. The orders for Robert Craig, Lieutenant Peary, Ethel Ward, Enchantress, the President, Octoroon, Mrs. M. A. Patten, are coming in in fine shape, and the prospects are that all of the stock of the best varieties which we have to offer, with the exception of Robert Craig, will be covered by orders early in the season. C. W. WARD.

Queens, N. Y.

We grow nothing but carnations, and all our cut is consumed in Washington city. The demand for a good grade of bloom has been excellent ever since Thanksgiving, with prices averaging 25 per cent. higher than last season. Money is easy and an air of confidence as to continued prosperity at the capital prevails among business men generally. We are having large sales of rooted cuttings of our "Red Sport" carnation; and, as a whole, business was never better with us than at the present time. Purcellville, Va. A. B. DAVIS & SON.

Silver Ribbon Grass.

This is a new, hardy perennial, which grows from twelve to fifteen inches high, the striping very fine and delicate—green and creamy white running lengthwise of the leaf. Its greatest advantage lies in the fact that it holds its beautiful colors and markings during the entire Summer and does not run to seed. Owing to this fact it is especially desirable for borders, edgings, etc., or for massing. It is also valuable for florists' use in filling window boxes or lawn vases. For this work clumps of roots can be lifted in the Fall and stored under benches or in a cellar until wanted for dividing and potting or growing in flats ready for early Spring use. It also succeeds admirably as a pot plant for indoor decoration. JAMES VICK'S SONS.

Rochester, N. Y.

AMONG THE CHICAGO GROWERS.

Vaughan's Greenhouses.

This interesting establishment is situated sixteen miles from Chicago, on the Burlington and Quincy Railroad, at Western Springs. A visitor here can find all the latest improvements in greenhouse construction, as well as in heating apparatuses. Gutters of all styles are tried, and having been used in the houses recently erected their merits can readily be determined when seen in actual use.

On entering the place one is struck by the spacious office space, as well as its neatness in every detail. Manager James S. Wilson has a hearty welcome for all. Passing through the office one enters the packing shed, fitted with all modern improvements for the expeditious handling of large numbers of plants in as short a time as possible. Located on either side of this shed are the greenhouses, which at the time of our visit were filled to overflowing with flowering, berried and decorative plants for Christmas sales; the stock, especially the former, being a revelation. The house of Begonia Gloire de Lorraine was one mass of blooms, each plant being as good as its neighbor. All were sold, and more could have been disposed of if available. Large numbers are being propagated in anticipation of a great demand next season. The house of Christmas pepper was in fine form, plants in ten-inch pans were well-berried, all being of equal size. The demand for these was heavier than in former years. Poinsettias were also in grand shape; these were all grown in pans, from three to five in a pan, and from one to two feet high, each individual plant having good sized bracts. They found ready buyers at good prices. Azaleas are also grown in quantity for the holiday season; these were of extra quality this year, and, as always, are good sellers. The new Baby Rambler rose is being grown in large quantities, and from appearances as seen here, it will be a good Christmas plant. Being comparatively new, but a small number was used this season for the firm's Christmas trade. Those seen were in first-class condition. In another year this rose should prove a better seller at Christmas than ever Crimson Rambler has done for Easter, its dwarf habit and numerous trusses of crimson flowers being just what are wanted at that time. It is claimed that it is as hardy as Crimson Rambler, flourishing under similar conditions. It will appeal to the majority of buyers from the fact that it can be kept in the house until Spring and then planted in the open ground, where it will grow and continue to bloom until late Fall. Its greatest use will be found in its being suitable for made-up basket work of all kinds.

Orchids in late years have become quite a feature here, and large numbers were seen growing in good condition in several of the leading varieties. Palms are cultivated extensively, and all show a good, thrifty growth. Pandanus Veitchii is found a good seller; the stock of these was never better. Boston ferns were observed in larger stock than in former years. The demand has been very heavy for this old favorite. A small lot of Nephrolepis Piersoni was noticed in fine condition. The call for these had been heavier than anticipated, and they sold better than formerly. The firm ascribed the increased demand to the plant's wants being better understood by the average grower; that if grown in the right temperature and soil it will prove a better house plant than at first experienced. A batch of N. Scottii, as seen growing here, bespeaks a good future for this fern; it will no doubt prove a good house subject. A few of the new Tarrytown fern were also noticed.

Bedding plants of all kinds replace the flowering and decorative stock grown earlier in the season, the former being used mainly for catalogue trade. A large cold storage cellar has been built in recent years for the storage of dormant plants and roots of all kinds, and fruit and shade trees. R. J.

Begonia Gloire de Lorraine.

As a popular plant for the Christmas trade few, if any, equal Begonia Gloire de Lorraine. It was unquestionably one of the leaders in Boston this season, the demand being for plants grown in six, seven and eight-inch pots or pans. The illustration shows a house, grown for the Christmas trade, by R. & J. Farquhar & Co., Roslindale, Mass., and which was entirely cleared out for that holiday. The majority of these plants were in seven-inch pots, having been shifted into the flowering size during August.

To grow this begonia successfully is to start aright, and the wintering over of the plants to propagate from is a very important item. They may be best wintered in a moderate temperature, say 55 degrees. Pinch off all flowers, and keep the plants moderately dry until about the middle of March. About this time the temperature may be raised to about 75 degrees and water given more freely; but careful watering is one of the most important matters at all times in growing these begonias. Cut off all old, useless wood, also any flowering wood that may appear. The shoots that start from the base of the plants will make the best cuttings. These may be put in from April till June, or even later. During Summer, the house should be shaded slightly; and a slight syringing may be occasionally given the plants. They may be potted on from two and a half inch to four and seven-inch pots, as they require; and pinching may be done as necessary to form well-shaped plants. In bringing the plants into bloom, take off all shading, and before selling, harden off by reducing to a temperature of 50 degrees. A rich light soil, composed of loam, leaf mold, or well-rotted manure and sand, is best for the growing of these plants. J. W. DUNCAN.

Winter-Flowering Begonias.

The genus Begonia affords a rich store of wealth to horticulture, and especially welcomed are those which reserve their pleasing colors till the dark days of Winter when flowers are flowers. Among those which do this verily, B. Gloire de Lorraine has easily won the premier place. Since the time of its introduction, by M. Lemoine, it has rapidly gained favor and prominence, and from being a unit among a collection of plants it is now handled by the thousand by the trade.

Since the discovery of the little winter-flowering species, Begonia socotrana, which has furnished for the hybridist such a good parent plant, quite a number of hybrids have been evolved, and apart from Gloire de Lorraine, which finds its parentage in B. socotrana, there are others which though not equal perhaps to Lorraine are well worthy of consideration from horticulturists. I refer to the race of hybrids raised and sent out by Messrs. Veitch, of Chelsea, England, in recent years, which are still comparatively little known, or at least little grown.

This race of plants was the result of crossing B. socotrana and some of the summer-flowering tuberous-rooted varieties of the Andean species.

The first of this class was named after the raiser, John Heal, who is still with the firm of Veitch, and is a successful hybridist. Other varieties followed in the train of this, until we have now quite a group of these plants.

The best and most distinct are the following: Winter Gem, a rich crimson-scarlet; Ensign, a large double-pink; Mrs. Heal, bright rosy-carmine flowers three inches in diameter; Myra, carmine-rose flowers; Julius, a plant of compact growth, with pleasing double-pink flowers, and Winter Cheer, a plant well worthy of its name, bearing pretty semi-double flowers of rosy-carmine color.

To see a group of these plants flowering profusely in Winter is truly a telling sight, and if such results are obtained in and around London, where the fogs of Winter play havoc among flowering plants, what good results we could reasonably look for in this country where the atmosphere is so much drier and clearer!

The culture of these plants is much the same as that of Gloire de Lorraine. After the plants have finished flowering they are cut down and encouraged to break from the bottom; and if cuttings are taken in March and kept growing in a temperature of fifty-five to seventy degrees, good, strong, sturdy plants in six-inch pots will be the result by October.

They require a fairly rich open soil, and should not be potted very firmly. A careful use of the waterpot is needed, as, if too much water is given, the plant is very liable to go off at the collar. Much failure is often brought about by indiscriminate watering. A little lower temperature at flowering time will greatly aid in retaining the bloom for a longer period.

A plant of exceptional merit is Begonia Gloire de Socaux, which also has its origin in B. socotrana. This plant is an ornament for its fine metallic leaves alone, and when crowned with its panicles of charming pink blossoms is indeed a pleasing sight. Well grown specimens attain a height of two and one-half feet. Like Begonia Gloire de Lorraine it is a profuse bloomer, and has a remarkable way of flowering a second time after the first lot of blossoms have gone off. The same thing is very noticeable with Gloire de Lorraine. To procure good cuttings of this plant, it should be cut back below where it has flowered to induce it to make lateral shoots, and dur-

ing its growing season this begonia will do with a little higher temperature than most of the others.

Another winter-flowering begonia which is rarely seen in cultivation is B. polyantha, a species from Mexico. Perhaps the color of the flower is not all that may be desired, being a bluish-white, yet its great blooming propensities will speak volumes for the plant. I think the flower would assume a deeper shade if grown in a position where all available light would reach it in Winter. It is a rampant grower, and will need thinning out during the growing season, leaving only three to four of the strongest main shoots, which will be about three feet high at flowering time. The most forward will commence to bloom early in November and with a batch of plants a display may be kept up till January.

Although this begonia will, if treated liberally, continue to flourish and do well a second season, yet cuttings, rooted every Spring, will make dwarfer plants, and the flowers will be altogether better.

EDWIN MATTHEWS.

HOUSE OF BEGONIA GLOIRE DE LORRAINE
Growers, R. & J. Farquhar & Co., Roslindale, Mass.

Hollyhocks.

There are no hardy herbaceous perennials more useful, and were they not so subject to the attacks of a fungus disease, none would be more popular than the hollyhocks. Unfortunately, the attacks of the fungus make the raising of hollyhocks very difficult, and a rather uncertain crop. A good stock of healthy plants find ready sale, as the supply is never equal to the demand.

At one time nurserymen catalogued named collections of these stately old-fashioned flowers when they ranked very high in popular favor and were much in evidence at the exhibitions. It is very doubtful now if there is a named collection in America.

The propagation of named kinds necessitated striking of cuttings, which were made from the side shoots; these rooted very readily with a little bottom heat. This method is rarely practiced now, as plants raised from seed are much more vigorous and disease resisting.

By raising plants every year from seed it is still possible to have a good display of bloom; this will be found more profitable than attempting to flower the plants a second year.

Seed sown in the open ground in April, as soon as the ground is in condition to work, will produce fine strong plants by the Fall. A very small percentage of these will flower the first Summer, but these are hardly worth taking into consideration. To produce strong flowering stems it is necessary to have good heavy plants, as they are somewhat of a biennial in their habit, storing up food in their thick, fleshy roots to enable them to throw up good heavy flowering stems.

Some growers sow the seed as soon as ripe in the Fall, usually about September, with equally good results as compared with that sown in April, but the roots of course are not so large for the Spring sales.

By sowing seed in the greenhouse in early March and growing the plants on in pots until such times as the weather is suitable to plant them out in the open ground, a goodly portion of them will usually flower the following Summer, but they will be rather later than those sown the year previous and will not throw up such strong stems.

Although meeting with good success on the whole, I do not remember raising a crop of seedlings that were absolutely free from the fungus, even when sown on new ground and under conditions that should have made contamination impossible. The spores of the disease are evidently with the seed, and experiments treating it before sowing may be productive of good results.

Light, well-drained soil is the most suitable for hollyhocks, and if it is deeply worked and fairly rich, so much the better. Although they are liable to the attacks of fungus grown under almost any condition, good treatment enables them to overcome it better than all the fungicides that can be used, when the plants are set in a position that does not meet with their requirements. This has been impressed upon me on several occasions. One lot of plants which were remarkably free from the disease, except at one point where the ground was rather poor owing to the presence of a large oak tree. On other occasions I have noted in a large field of hollyhocks certain spots where the ground was not well drained, the disease was much more in evidence.

ERNEST HEMMING.

CLUB AND SOCIETY DOINGS

THE WESTERN NEW YORK HORTICULTURAL SOCIETY will hold its annual meeting in the common council chamber in the City Hall, Rochester, N. Y., on the 25th and 26th of this month. The meeting marks the fiftieth anniversary of the society. It is expected that the attendance will be very large and that the exhibition of fruit will be larger and more interesting than ever before. It is announced that the awards of the Ellwanger cash prizes will be made at the meeting and that there is a competition for the Barry gold medal for a new fruit, ornamental tree or shrub, flowering plant or vegetable. Papers will be read at the meeting as follows:

"Progress of Fifty Years," Dr. L. H. Bailey, director, College of Agriculture, Cornell University. "Some Insect Problems and Experiences" (illustrated with lantern slides), Professor M. V. Slingerland, assistant professor economic entomology, Cornell University. "Stray Thoughts," Hon. J. H. Hale, South Glastonbury, Conn. "New York Apples," Professor S. A. Beach, horticulturist, New York Experiment Station. "The Future of the Plum," Charles M. Day, Geneva, N. Y. "Sulphur Sprays for Orchard Treatment," Professor P. J. Parrott, entomologist, New York Agricultural Experiment Station. "Blackberry Culture," Simeon Stace, Charlotte, N. Y. "Report of Committee on Botany and Plant Diseases," Professor F. C. Stewart, botanist, New York Agricultural Experiment Station. "The Composition of Commercial Soaps in Relation to Spraying," Dr. L. L. Van Slyke, chemist, New York Agricultural Experiment Station. "Results of the Orchard Survey in Wayne and Monroe Counties," Professor John Craig, professor of horticulture, College of Agriculture, Cornell University. "Some Pear, Peach and Apple Notes," Abram Cole, Greece, N. Y. "The Western New York Horticultural Society" (historical), P. C. Reynolds, a former secretary of the society, Rochester. "The Experiment Station as a Horticultural Factor," Dr. W. H. Jordan, director New York Agricultural Experiment Station. "The Relationship of Plants in the Orchard," (illustrated with lantern slides), Professor U. P. Hedrick, Michigan Agricultural College, Lansing, Mich. "The Higher Standard in American Horticulture," George T. Powell, Ghent, N. Y. Many interesting questions will also be answered through the Question Box.

PROVIDENCE FLORISTS' CLUB.—The ninth annual banquet of the Florists' Club was given at the "Newman" on Thursday evening, the 12th, at which time the newly elected officers were installed and dined. The menu was a credit to the committee of arrangements, which included T. J. Johnston, C. S. Macnair and William Hill, who had arranged with Proprietor Mansfield for a special dinner at a low figure, and many of the guests proclaimed it as the best spread ever served to the club. W. E. Chappell served as toastmaster and announced the following officers for this year: J. Schellinger, president; T. J. Johnston, vice-president; W. E. Chappell, secretary; and A. Rennie, treasurer. These new officers are well appointed, and considerable thanks are due Messrs. Chappell and Rennie for their constant and never-failing attendance, and the faithful manner of the conduct of the club business, which is quite a little at times. The following invited guests were present: Mr. Bryant, of A. H. Hews Company, with his specimen of the improved Pierson fern; C. W. Smith, of the Rhode Island Horticultural Society; W. J. Stewart, of Boston, who made the speech of the evening, and Professors Wheeler and Card, of the Kingston College. Altogether it was the banner meeting of the club.

C. S. MACNAIR.

CHICAGO HORTICULTURAL.—The annual meeting of the Horticultural Society of Chicago was held January 10 at the Auditorium Annex, and in the absence of President Uihlein, J. C. Vaughan presided. Reports of officers were read, that of Treasurer Rudd showing a very satisfactory balance in the treasury. Adjournment was made subject to call of the committee on the nomination of officers, said committee to be appointed by the presiding officer, he to be one of them.
R. J.

CHICAGO FLORISTS' CLUB.—The regular meeting of this club was held Thursday night, January 12. A large attendance was present, twelve new members were elected, and four names presented for membership. The report of the financial committee showed this club to be in good standing. The committee on entertainment of the American Carnation Society reported progress in the work undertaken, a banquet being scheduled for Thursday evening at the Auditorium Hotel.

An address by H. M. Altick, of Dayton, O., in relation to the Florists' McKinley Memorial Fund, created considerable enthusiasm, which resulted in the wholesalers, growers and retailers present deciding to contribute to the memorial fund from the proceeds of their carnation sales on January 28, 5 per cent., 15 per cent. and 25 per cent. respectively, those present signing an agreement to that effect before leaving the hall. A committee was appointed to attend to this matter, consisting of George Asmus, Leonard Kill and E. C. Amling, they to draft a suitable resolution to be sent to all florists, asking them to attach their signatures, agreeing either to give the above percentage or a certain sum of money; also to see that appropriate signs are placed in every retail store in the city, calling the public's attention to the sale on that day, and to get the public press to give suitable notices through the daily papers a few days in advance of the event. In the discussion that followed it was brought out that growers of the leading novelties had already placed orders for over a quarter of a million flowers for that date, and that one local wholesale house had sold \$3,700 worth of carnation blooms in the South last month. The prevailing opinion is that a considerable sum of money will be raised in this way, which will give the trade great prestige in years to come. It can also be brought to the attention of the general public that the late President McKinley had no choice as regards color in the carnation, being as will to wear a white as a pink carnation, so buyers, in placing orders for that day, need not be afraid to purchase white, as well as colored stock, as whatever is available will be worn, regardless of color. This is from good authority, the family of the late President McKinley having given it out that, as regards color, he had no choice, and wishing to correct the public impression that red was his favorite color and that no other should be worn on that day.

R. JOHNSTONE.

PENNSYLVANIA HORTICULTURAL SOCIETY.—The regular monthly meeting, on Tuesday last, was well attended. Many rose growers came to hear John G. Gardner's paper on the "Multiflora Stock for Grafting Roses for Outdoor Planting." In answer to a question as to the practicability of this stock for indoor roses, he said, he had tried Liberty and Bride on this stock with success. By planting the newly grafted stock outdoors as soon as admissible in Spring, lifting the plants in June, planting in boxes and growing along under glass, he cut flowers with perfect stems all winter, getting more flowers than from own root stock, and at a lower temperature. The multiflora will grow better at a lower temperature than other roses. For instance, newly grafted stock will start to grow at from 40 to 45 degrees, while the manetti stands still in such a temperature. For outdoor work, he says, find out what roses of the hybrid tea class will stand our winters; put them on the multiflora and grand results will be obtained. The new rose Killarney is the greatest acquisition in this class in recent years, in his opinion, and good results are sure to come from its use.

The exhibits at this meeting were: Flowering begonias, Mr. C. B. Newbold (Samuel Batchelor, gardener), took first; Mr. Samuel B. Brown (Jas. Crouthers, gardener), second. *Primula sinensis*, Mrs. Charles Wheeler (Wm. Fowler, gardener), first; the Misses Vanuxen (James Bell, gardener), second. These prizes were offered by Mr. Samuel T. Bodine. The Henry F. Michell Company offered the following prizes: Mushrooms and tomatoes, hot-house, captured by Mrs. R. J. C. Walker (John McCleary, gardener), first; cucumbers, Mr. James W. Paul, Jr. (Joseph Hurley, gardener), first; and cyclamen, Mr. P. A. B. Widener (William Kleinheinz, gardener).

The dates for the Spring show were selected for March 28, 29 and 30; and for the Chrysanthemum Show November 7 to 11, inclusive.

Arrangements are being perfected to hold the meetings of February and March in the afternoon in place of evening.

John Kuhn exhibited a seedling carnation of pleasing pink color, good stem and flower—seedling No. 99 × Prosperity—which looks like a good one. It will come before the committee on new flowers next month.
DAVID RUST.

ST. LOUIS FLORISTS' CLUB.—The first meeting of the Florists' Club in the new year was held last Thursday afternoon in the Odd Fellows' Hall. Twenty members braved the bad weather. President Juengel occupied the chair, with all the other officers present except vice-president Pilcher. Chairman Beneke, of the transportation committee, reported that the round trip fare to Chicago, for the Carnation Society's meeting, January 25 and 26, would be \$10; and it was voted that each member intending going should report to Mr. Beneke on or before January 20, so as all could travel in a body in a special sleeper provided by the Wabash Railroad.

All members who are in arrears with their yearly dues, will be dropped from the roll if dues are not paid by next meeting.

A motion was adopted to revise the club's constitution and by-laws. The matter was referred to a committee of three, consisting of Otto Koenig, Emil Schray and Fred Meinhardt.

The matter of holding a chrysanthemum show this Fall was referred to the trustees, who are to report at the next meeting the best possible plan for holding a paying exhibition. A vote of the members will then be taken on the subject.

On motion of Mr. Fillmore the club decided to have a carnation show at the next meeting; and \$50 in prizes will be offered. Messrs. Beneke, Schray and Meinhardt were appointed a committee to take charge of this exhibition, which will be held on Thursday afternoon, February 9, at 2 o'clock in Odd Fellows' Hall, corner Ninth and Olive streets, eighth floor.

Just before adjourning Mr. A. Jablonsky created quite a sensation by making a motion that the club should appoint a committee to look into the advisability of building a club house, with bowling alleys, for the use of the St. Louis Florist Club, to hold therein meetings, entertainments, and exhibitions for the benefit of the club members generally. The president did not take Mr. Jablonsky's motion seriously, and refused to put it before the members; but the members insisted, and the motion was adopted. So Messrs. Jablonsky, Ammann and Steidle will report on this at the next meeting; and we may some day have a club house of our own.

ST. PATRICK.

THE STATE FLORISTS' ASSOCIATION OF INDIANA at its yearly meeting in Indianapolis, January 17, elected the following officers: President, Fred Lemon, Richmond, Ind.; vice-president, Herman Junge; second vice-president, John Rieman; secretary, Fred Huckleide; treasurer, John Heidenreich. J. A. E. Haugh, Anderson, Ind.; A. Baur, Gunnar Tielmann, Marion, Ind.; John Evans, Richmond, Ind., and E. A. Nelson, were elected on the executive committee. The meeting was well attended. Several of the members took advantage of the occasion to exhibit roses and carnations, among them Stuart & Haugh, Anderson, Ind., who staged two vases of fine Mrs. Lawson and Enchantress carnations. Baur & Smith brought two vases of fine carnations, one of Indiana Market, another of mixed seedlings. John Hartje exhibited a vase of mixed seedlings, as did E. T. Grave, of Richmond, Ind. M. Schreiber, of Bertermann Bros. Co., had two vases of variegated carnations (seedlings) which were greatly admired; E. Done, of Broad Ripple, Ind., was on hand with a large bunch of calla. Gunnar Tielmann's vase of G. H. Crane carnation was very worthy. A committee, composed of Fred Lemon, John Rieman and John Hartje, was selected to pass upon the above exhibits. All were awarded honorable mention. Bertermann Bros. Company received a certificate of merit for their new carnation No. 340; this variety has the coloring of Armazindy, but its qualities are far superior.

The question of a Spring exhibition was brought up in a long discussion. John Rieman, A. Baur and William Billingsley were finally named as a committee to attend to the arrangements for a Spring show. A communication from the Indiana Floral Festival Association in regard to a large chrysanthemum show next Fall was favorably received.

The question box brought forth many subjects; some of the topics discussed were: Wooden gutters vs. iron gutters; Grafted roses vs. Own root roses, and the Growing of Gloire de Lorraine begonias.

A committee, consisting of E. G. Hill, J. A. E. Haugh, and H. Rieman, was named to inquire into the needs of the experiment station at Purdue University, as set forth by Professor Arthur. This committee was instructed to see what could be done in regard to furnishing the station financial help, through the Legislature, or otherwise.

The fragrance of the many flowers exhibited was wafted through the corridors of Indiana State building, until our newly seated Governor Hanley was attracted to the rooms; after a few words of praise for the association he retired, fairly loaded down with flowers.

The yearly meeting of 1905 ended with an elaborate banquet served at the St. Dennis Cafe.
I. B.

MASSACHUSETTS HORTICULTURAL.—The first lecture of the season of the Massachusetts Horticultural Society was given on Saturday, when Professor M. L. Fernald talked on weeds. About a hundred members were present and greatly enjoyed the description and history as told by the speaker of many of the weeds now common in New England.
J. W. D.

BOSTON GARDENERS AND FLORISTS' CLUB.—The first meeting of the year of the Gardeners and Florists' Club was by far the best of any ever held. Nearly a hundred gentlemen were present, some of them coming from quite a distance. The retiring president, Mr. Pettigrew, in opening the meeting and turning over the gavel to his successor in office, gracefully thanked the members for the grand support he had received during his term of office, and said it had been a pleasure to him to see such enthusiasm among the members as had been displayed recently. The new president, Mr. Wheeler, in taking up the reins, said in part: "Gentlemen, you have honored me by giving me the highest honor of this club. I thank you. If I can fill the position half as well as our retiring president I shall have done well. The club had got into a condition where we could hardly call it a club, but we felt, some of us, that there was need of such a club in Boston, and the members did wisely when they elected Mr. Pettigrew as their president, for he rallied what forces were left and brought in new recruits and by his faithfulness and perseverance he brought the club up to its present high standard. I know I express the sentiments of this club when I say we have not only learned to trust and respect him, but to love him, and we all feel indebted to him for what he has done. As I look forward to the future there seems to be the promise of a very prosperous year. There is a very wide and useful field for us to work in if we all stand together and fulfil the object of our charter. We each want to feel that the future prosperity of this club rests upon our own individual efforts. If you wish to know anything about our profession, ask; and if you know, tell it. We want to increase the funds of our treasury; we can do that by bringing in a new member and by paying our own dues promptly. We want to make our meetings so interesting and attractive that no florist or gardener, or anyone interested in horticulture, can afford to miss one of them. I feel that in making awards for exhibits we should have different forms from those used by the Massachusetts Horticultural Society, so that growers would desire the awards of both. We should make them so valuable that they will be sought after by all. I ask the hearty co-operation of every member, that we may all work together and make this the banner year of our club."

The report of the treasurer showed a slight deficit for the year, although the fund in the treasury remains practically the same as a year ago. An interesting discussion, introduced by Mr. Farquhar, took place on the form of the awards that should be made. Messrs. Fewkes, Orpet, Stewart, Craig, Finlayson, Anderson and others spoke on the subject, and it was finally agreed to lay the matter over till next meeting.

There were many fine exhibits on the tables, among which may be mentioned vases of carnations Robert Craig, Lieutenant Peary, The President, Ethel Ward, Christmas Eve and Octoroon, from the Cottage Gardens, Queens, N. Y.; carnations Victory, Prosperity, White Lawson and Enchantress from Guttman & Weber, New York. Carnation Red Lawson, from W. J. Palmer & Son, Buffalo, N. Y.; carnation Variegated Lawson, from the H. A. Stevens Company, Dedham; seedling orchids, from E. O. Orpet, South Lancaster, Mass.; sweet peas, variety Mont Blanc, from Wm. Sim, Cliftondale, Mass.; and Begonia Tunford Hall, from Charles Sander, Brookline, Mass., who called attention to its good qualities and cited it as a fit companion to Gloire de Lorraine. Mr. Hamilton, of the Cottage Gardens, spoke for their exhibit, describing the varieties, and regretting the fact that Mr. Ward had been unable to be present in person. Alex Guttman spoke for their new carnation Victory and gave a brief history of its origin, and good qualities. He said it was now in its third year, and so far had not shown any sign of bursting calyxes. Mr. Sim spoke of his sweet peas, mentioning the fact that these were planted last July and were in solid beds and kept at a temperature of 50 degrees.

It was unanimously voted to unite with the Massachusetts Horticultural Society in extending an invitation to the American Carnation Society to hold its next convention and exhibition in Boston.

An interesting talk was given by J. Woodward Manning on "The Gardener and Landscape Gardening." He spoke of the many opportunities lost in the proper planting of grounds, etc., and gave some lantern views to illustrate his talk. Unfortunately the lateness of the hour prevented any discussion on his very interesting talk.

Refreshments were served at the end of the meeting, and all those present were thoroughly satisfied that they would have to be present next meeting, which will be held on February 21.
J. W. DUNCAN.

Society of American Florists and Ornamental Horticulturists.

Department of Plant Registration.

Patten & Co., Tewksbury, Mass., submit for registration the following carnations:

MIKADO, a variegated seedling of 1902 (Governor Roosevelt × Prosperity); style of growth similar to that of Governor Roosevelt; color, white overlaid with crimson; size of bloom, 3-3½ inches.

PINK PATTEN, a sport from Mrs. M. A. Patten; color, clear, dark pink. WM. J. STEWART, Secretary.

CANADIAN NEWS

LONDON, ONT.—Until the last week trade since Christmas has been above the average; but we are now experiencing the depression that is so general at this season. Cut flower stock of all kinds is plentiful, and of splendid quality. White is being used in funeral work, but much colored stock is being left on hand. In plants there is practically no movement, although plenty of fine stock, both foliage and flowering, is seen. *Lilium Harrisii* has been in some time; there is, however, very little demand for the flowers.

Mr. Mitchell, of Innerkip, Ont., the Canadian pelargonium specialist, has sold his entire stock, consisting of about 7,500 plants, mostly of new and undiscovered varieties, to Messrs. Gammage & Son, of this city. Mr. Mitchell has removed to London, and will take charge of the department that has been devoted to this specialty. Before taking up the pelargonium as a specialty Mr. Mitchell did some very successful work hybridizing tuberous begonias, and no doubt many of the members of the S. A. F. O. H., who attended the convention of that society at Toronto, will remember the fine exhibit of seedling tuberous begonias made there by Mr. Mitchell.

Gammage & Son's new range of 40,000 feet, built last year for carnations, is now in splendid condition, and shows no signs of the late planting that was so detrimental early in the season. Speaking of the varieties, the grower, William Hickson, says, as a fancy white *White Lawson* is easily ahead. Only about one-third of the plants of this variety are used for cut flowers; the balance are grown for cuttings only, as this variety will be extensively planted here next season. For a general purpose white, *Queen Louise* is the best. For quantity of bloom for such purpose as funeral work, *Glacier* easily leads. *Enchantress* and *Mrs. Lawson* are the best pinks. *Governor Bliss* is the best red. *Harlowarden* is the best crimson, and *Marshall Field* leads in variegated. In general varieties note may be made of *The Marquis*, which is much above the average; the stems are excellent. *E. A. Nelson* is very fine and is proving an excellent keeper. *Golden Beauty* is also fine, but not free flowering enough. *G. H. Crane* is giving abundance of good flowers. *Estelle* has a splendid color but, as usual, the stems are short. *Peru* and *Murphy's White* are both excellent. *Stella* is a mass of buds. Propagating is progressing rapidly and successfully; as an indication of the stock being produced already over 15,000 of *Mrs. Lawson* alone have been taken from the sand.

FRED BENNETT.

OTTAWA.—Since my last letter we have had a big snow fall. On Friday and Saturday, January 6 and 7, we had a big blizzard and a snow fall of 21 inches. The greenhouses were literally snowed under, entrance doors having to be dug out to their full height from drifts; all hands were kept busy all day scraping off the roofs which, in some cases, were pretty shaky with the weight. On some roofs the drifts were three feet, and as it became wet from sleet and rain following the storm, it had to be cleared at once. Unfortunately, in this operation, a lot of glass gets broken. Our houses are all detached from two to six feet, but in a climate like this, a distance between of eight or ten feet is the most sensible. *Graham Bros.* report great trouble with their snow gutters, and want no more attached houses, as it is impossible to clean the snow away. In the middle of the week another heavy snow fall came and filled up any odd corner, so that now we are banked in solid, and will have great trouble should another storm visit us.

Trade has been good this week with the opening of Parliament, and the large number of visitors in the city. The drawing room reception in the Senate chambers was the most imposing that has ever taken place, the dresses and bouquets being the greatest features. All the florists were kept busy until 8 o'clock, bouquets being the features. *Roses*, *Lily* of the valley, *carnations* and *violets* were mostly used. But by all accounts there was such an attendance and jam that the bouquets were soon

crushed and dragged to pieces. The stock was good, carnations were plentiful. *Roses* had to be brought from outside (Toronto and Brampton), and the stock sent in was very fine. *American Beauty* were not to be had in sufficient quantities. The home-grown stock of *violets* was plentiful, and of good quality. *Lily* of the valley was also plentiful.

The Ottawa Horticultural Society held its annual meeting and election on Wednesday. The reports read showed a good balance in the treasury and increased attendance and more exhibitors and exhibits. Many city improvement matters were discussed, such as pruning of shade trees, decorations of public places and the best way of inducing private people to continue the great improvements already made in grounds and lawns that have done so much to make Ottawa the beautiful city it is getting to be. *Alderman N. G. Black* was elected president; *Mayor Ellis*, first vice-president; *R. B. Whyte*, second vice-president; *J. Watson*, secretary-treasurer; *J. Graham*, *E. I. Mepsted*, *W. McCann*, *W. H. Snelling*, *P. J. Keyes*, *G. A. White*, *S. Short*, directors.

HAMILTON, ONT.—The Webster Floral Company had an unfortunate break in a steam main on January 10. A bright day and careful management of the small available steam pressure saved things till repairs were completed. They will no doubt add to their boiler capacity as soon as possible to avoid a recurrence of the experience.

A small bench of sweet peas here are coming along very nicely. The firm says that prospects for Spring shipping business were never better.

John Morgan is cutting some grand carnations. His *Princess of Wales* *violets* are keeping up to the high standard seen in the early part of the season. In carnations, *Fair Maid* and *Harlowarden* are giving great satisfaction. A good quantity of *Glacier* is also grown and found quite profitable. *Mr. Morgan* has a heavy call for rooted cuttings.

Frank Morgan is working the place owned by the late *John Fox*. He is a brother of the above-named gentleman. It is one of the best paying stands in the city.

Walter Holt has lately put in a steam boiler and done away with most of his hot-water coil boilers. A considerable saving of labor in firing is effected. *Mr. Holt* has a plant which would interest some novelty seekers. It is a heavy and evenly variegated form of *Asparagus Sprengeri*. Each leaf division is variegated. Its constancy has been proven, as the plant is two or three years old.

BEAVER.

New York.

News of the Week.

At the annual meeting of the Long Island Farmers' Club, held at Mineola, on Tuesday evening, the principal feature was an address given by *C. W. Ward*, of Queens, L. I. *Mr. Ward*, in the course of his remarks, warned the club that unless there was concerted action, and a demand made upon the agricultural department of the State, Long Island farmers need expect but little from the Board of Directors of the Geneva station. *San Jose* scale is playing havoc with the fruit trees on Long Island, and to the end that something be done by the State Experiment Station toward combating the pest, a committee of three was appointed to make arrangements for a farmers' institute to be held some time next month.

On the morning of January 6 the greenhouses of *A. L. Thorne*, Flushing, N. Y., were broken into; damage to plants to the extent of \$400 was done and some clothing belonging to *Mr. Thorne* was stolen. Detectives were put on the case, with the result that *Charles Tracy*, 47 years old, 18 Juniper street, Flushing, was arrested, having the stolen clothing in his possession. In the police court *Tracy* pleaded not guilty, and is held in \$1,000 bail. He went to jail, not being able to procure a bondsman.

William Nesbit Crane, a florist, of Rhinebeck, N. Y., and *Miss Evelyn Almira Schaffer*, of the same place, were married in this city last week.

The elaborate Winter window box planting that has been done at the prominent hotels, and at many of the large apartment houses, was the subject of an illustrated article in the *New York Herald* on Sunday last. This kind of advertising should be very beneficial to the florists of the city who cater to that line of business.

A. N. Pierson, Cromwell, Conn., has commenced making daily shipments of roses to this market through his agents, the *W. S. Allen Co.*

So far as we have been able to learn, there will not be a very large delegation from this city to the annual meeting of the American Carnation Society, which takes place in Chicago next week. *Mr. and Mrs. Eugene Daille-douze* will go, and on their return journey will stop at Richmond, Ind., to see their son, *John*, who is studying at the establishment of *E. G. Hill Company*.

A. J. Guttman will also visit Chicago, and will take along some flowers of the new carnation *Victory*.

That great annual event, the *Arion Ball*, takes place this year on February 10, in the Madison Square Garden. In place of the usual procession of masqueraders a new feature will be introduced in the form of an automobile flower parade, with the throwing of confetti, after the Italian and Spanish fashions.

There seems to be a great revival in the bowling interests in this city, and one would think by the vigorous practice work that is being done, and the frequent matches that are occurring, that *New York* should be right in line by the time the national tournament takes place next August.

Thursday a match was on with *Flat-bush*; on Friday, January 27, *Madison* has to be met and conquered. Last Saturday *Hoboken* was defeated, and they are talking about having another try. Truly these are strenuous times for the bowlers.

The Florists' Club dinner, which occurs Saturday evening, February 4, in the *St. Denis Hotel*, is going to be a larger affair than for some years past. The acceptances, so far, have been many, and all who intend going should notify the chairman of the committee, *Walter F. Sheridan*, at the earliest possible moment.

J. A. Budlong and son, Providence, R. I., and *J. F. Huss*, Hartford, Conn., were in town this week.

Saving Fuel.

By J. M. W. KITCHEN.

(Concluded from page 784.)

One defect in the heating appliances in general use is that the ignited fuel and burning gases in the combustion chamber are brought into contact with heat absorbing surfaces before the process of combustion is complete; the result being that there is a reduction of the heat of the burning gases, while a quite high heat is necessary to secure perfect combustion. Furthermore, it requires a considerable time to secure an admixture of air and the volatilized gases before the combustion occurs; and this requirement is scarcely ever provided for in heating apparatuses before heat is absorbed from the gases. This is another source of loss. In most old style and in many new style furnaces, an entirely inadequate area of heat absorbing surface is provided in the apparatus in proportion to the grate surface. In this particular it is fair to say, that some manufacturers have partly awakened to the deficiency. Many heaters allow of a too quick transit of the heating gases over the heat absorbing surfaces so that time enough is not given to secure absorption of the heat generated. This is particularly the case where the gases pass progressively from a low level upward with a final exit at a high level of the absorbing surfaces. One universal defect in old time boiler construction in the correction of which "The Torridor" inventions take a radical and unique departure, is that the water in a boiler is kept at too uniform temperature throughout the boiler, thus failing in furnishing an absorbing recipient for large volumes of low degrees of heat.

Another new and important principle introduced in "The Torridor" inventions is to make the first application of the heat generated at the highest level

of the heat absorbing surfaces of the heater; to make further applications to those surfaces at progressively lower levels of progressively lower temperatures; with a final application at the lowest level of the absorbing surfaces of the lowest degree of temperature. The application of this principle secures added quickness of circulation of the water or air over the heat radiating surfaces of the heater, and a complete absorption of all the heat generated from a relatively small expanse of heat absorbing and heat radiating surfaces. In "The Torridor" heaters the combustion chamber proper is separated from the heat absorbing cavities; and no contact of heat with the heat absorbing surfaces is permitted until after combustion is perfected. The power of gravity is ingeniously and effectively applied in all "The Torridor" appliances to retain the gases of combustion in the apparatus proper, preventing the escape of coal gas and to apply varying degrees of heat to appropriate levels in the apparatus.

Whether the writer will profit much through his invention remains to be proved. It is one thing to invent; it is entirely another thing to make money out of an invention. Certain it is, that we have saved one-third in coal for heating during the past four years by a very imperfect application of the principles referred to in this article. In proportion as a knowledge of the principles are spread abroad and applied, just so far will those who suffer from heavy costs of fuel be benefited.

I want here to write one word of caution as to the action of "The Torridor Blue Flame Combustion Regulator," which is endorsed by me as a valuable attachment of all styles of heaters already installed. This attachment remedies some of the defects of boilers and heaters now in use. It does not make good a deficient area of heat absorbing surface. It will produce more heat from the coal burned and gives a remarkable control of the draft regulation; being especially useful to carry an even temperature all through the night. Now, many boilers that are too small to secure sufficient heat have to be run at a very intense uneconomical rate of combustion, especially during blizzard weather; and in such boilers the appliance cannot be used to the best advantage during such occasions; but in no case observed by me has there not been a sufficient saving effected in even such defectively small heaters during moderate weather to warrant the application of the device as an economical measure. In those cases where there is a sufficiently large heat absorbing area of surface provided and a combination of the desirable features here named, the application of the attachment will astonish and delight its user. All these matters and many other points of great interest are treated of in the pamphlet "Hints on Heating," owned by the Willowmead Co., which should be carefully read by everyone interested in the economical use of coal and successful heater management.

Chrysanthemum Novelties

Meretham Yellow, White Coombes, Emily Mileham, Valerie Greenham, Mrs. H. A. Allen, and all other novelties 50c. each; \$5.00 per doz. Mrs. W. Duckham, the cup winner, 75c. each; \$7.50 per dozen. Send for list.

CHARLES H. TOTTY, MADISON, N. J.

PARIS DAISY

Giant white, 2 in. \$2.50 per 100.

Asparagus Plumosus Nana, Extra heavy, 2 in. 20, 3 in. very fine, 4c.; *Sprengeri*, \$1.75 per 100. *Abutilon*, 4 vars., 2½ in., 3c. *Umbrella Plants*, 2 in., 2½c., *Hardy Pinks*, field clumps, 5 kinds, 5c.

LIST BELOW, ROOTED CUTTINGS, prepared per 100; *Ageratum*, *Gurney*, *Faulstich*, 50c. *Salvia Splendens*, *Bonfire*, *Silveropop*, 90c. *Fuchsias*, 5 best vars., \$1.25; *Heliotrope*, \$1.00; *Double Petunias*, 10 finest, \$1.00; *Hardy Pinks*, 7 sorts, some everblooming, 75c., \$7.00 per 1000; *Rex Begonias*, R. C. 15 sorts, mixed, \$1.10; *Alternanthera*, red, yellow, R. C. 50c. \$1.50 per 1000; *Vlnca*, variegated, 90c.; *Ever-blooming Forget-me-not*, \$1.00; *Tradescantia*, 2 kinds, 75c.

CASH. BYER BROS., Chambersburg, Pa. Mention the Florists' Exchange when writing.

Primrose Buttercup.

(33) What is the origin, best way of propagating, and cultural methods of the primrose called "New Primrose Buttercup" or "Yellow Christmas Primrose"?

—There is some doubt as to the origin of *Primula Buttercup*, but there is no doubt of its relationship to *P. floribunda*. It was thought that the variety was *P. Keenensis*, but the corolla tube of *Buttercup* was found to differ very much from that variety, being much shorter, in fact. *Primula Buttercup* comes readily from seed, and needs but the same cultural treatment as is given other commercial primulas. Sow the seed in early March, and as soon as the young plants are large enough to handle, pot them in 2 1/4-inch pots. Give them a shift into larger pots as soon as necessary, and keep them moving right along. A partially shaded cold frame is the best place for them during the hot weather; though early in the Fall, they will need to be put in a light position in the greenhouse.

Treatment of Azaleas.

(34) Should the new growth around the azalea buds be pinched off at once, as it appears; if not, what effect will it have on the flowers? Also, what temperature should azaleas be kept in now, the plants not having advanced much, to insure bloom by Easter? Should any fertilizer be used? INQUIRER.

—The growths surrounding the flower buds of the azaleas should be pinched out, because they spoil the appearance of the plant when it is in flower. The right temperature for azaleas at the present time, and until the last week in February, is about 45 degrees, and lower than that would be preferable, rather than a higher temperature.

Spiraeas for Easter Blooming.

(35) When should spiraeas be potted up, and about what temperature will bring them in for Easter? NOVICE.

—The spiraeas should be potted up at once, and placed under the benches in a rose or carnation house, where they can remain for about four weeks, after which time they should be given full light in a house where the night temperature runs about 58 degrees.

Greenhouse Plants for Summer Use.

(36) Kindly give me the names of some plants that can be raised for profit in the greenhouse during the Summer months. H. K. J.

—Tuberous begonias, gloxinias, and fancy-leaved caladiums are all plants that can be grown under glass during Summer, and would be profitable providing there is a demand for that class of stock. They would all require to be started at this time, however, to have them in good, salable condition during the Summer. If one could use the greenhouses until November, chrysanthemums could be grown to advantage, but, of course, it would not do to plant these if the houses had to be given over to some other crop before that time. Some growers utilize empty houses during the Summer by procuring young palms in the Spring and growing them for all they are worth during the hot months, and then disposing of them at wholesale in the early Fall. A good grower can use his houses very profitably that way.

Number of Flowers Thrown by Sweet Pea Plant.

(37) About how many blossoms does a healthy sweet pea plant throw during its season? H. K. J.

—Just how many flowers a sweet pea vine would produce we are unable to say, never having taken the trouble to keep a record. Perhaps some reader who has kept records will kindly answer this question.

Remedy for Carnation Rust.

(38) Please give a good remedy for carnation rust. We have the rust very badly on two end benches—one of *Enchantress* and the other of *Prosperity*. SUBSCRIBER.

—Carnation rust is no longer considered a deadly disease, as experience has proved that the plants will outgrow the trouble if ordinary care be taken. Pick off all affected leaves; give plenty of ventilation when the weather is favorable, and be sure to have the foliage good and dry during the night; in fact, all spraying should be discontinued for a time. Given good, healthy surroundings, the plants will outgrow the disease in a short time.

Watercress in the Greenhouse.

(39) Kindly inform me if watercress taken from the swamp will grow in greenhouse; also what soil and temperature are required. A. J. B.

—Watercress from the wild can be grown in almost any ordinary soil, in a greenhouse where the temperature runs from 54 to 70 degrees. We may remark, however, that watercress when grown in soil is very bitter, and scarcely acceptable as a salad.

California Carnation Cuttings.

(40) I would like to know what success Eastern growers of carnations have had with California cuttings. I received several thousand, and, with the best attention, could not make them grow. Cuttings of my own, put in the same sand and with the same temperature, all rooted. Is it the long distance, being packed so long, that takes the vitality out of the California stock? C. W. C.

—One or two Eastern growers of these cuttings have already narrated their experience with them. See page 38 of our January 14 issue. We shall be pleased to hear from others.

Asters in Old Ground.

(41) I would like to hear from some one as to how to grow asters successfully on old ground, on which they have been grown before. Almost any one knows about new ground, good drainage, and all that; but if no new ground is available, what then? The fact is, things have been growing continually worse, season after season, until it is of no use to plant that useful flower. Good asters were hard to find in this section last year. G. M. R.

—The question of growing good asters on the same piece of ground year after year is one that has confronted a good many florists whose land was of limited extent. If it were possible to instill into the minds of the average florist the necessity of treating our soils with more respect, considering the returns we expect the soil to yield us, we should hear fewer complaints of failures of crops, stem rot, dry rot and a host of other troubles usually set down as coming from poor seed, diseased stock, etc. Rotation of crops is always advisable, no matter how large or how limited the space for cultivation may be. Some crops exhaust the soil more than others, and for that reason chiefly is a change of crops most desirable. Presuming, however, that asters are the only crop that can be grown with profit, and that only one piece of ground is available, that ground, if treated rightly, can be made to produce good results. In the first place, unless there is good natural drainage, the land should be properly drained, so that neither in the Spring nor Fall will water be found covering the surface. In the Fall, after the dead plants and rubbish have been carefully cleaned off, the ground should be dug right down to the subsoil, or gravel. Bring the bottom spit up on to the surface, and turn the top spit down to the bottom. It may require the opening of a trench to do this, but it should be done. Leave the surface as rough as possible when finished, so that the Winter's frosts will have full effect on the soil. In the early Spring put on a good dressing of barnyard manure and dig it under; then when the weather becomes warm enough, the soil is fit to plant asters or any other annual, and a good crop of flowers is assured, providing ordinary care be taken in the cultural details after planting. By trenching the soil every three years, and digging deeply in other years, together with cleaning out the old plants carefully every year, there is no reason why, in a limited space, asters cannot be grown successfully year after year on the same piece of ground.

Insurance on Plants.

(42) Kindly let me know what fire insurance company will insure plants? WM. BELL.

—To secure a line on contents of greenhouses Mr. Bell would have to consult local agents or brokers. If they cannot place it for him, insurance cannot be obtained.

JOHN G. ESLER.

Easter Lilies.

(43) I have just moved my Easter lilies from a night temperature of 50 degrees to one of 60 degrees. The plants are about six inches above the pots. Shall I move the plants back to 50 degrees, or leave them in 60 degrees, night temperature? Longiflorum lilies, also moved to 60 degrees, are one inch above the pot. All are wanted for Easter. E. J. H.

—The lilies that are six inches high will come in too soon, if kept in a night temperature of 60 degrees. Put them where the house is kept at 55 degrees. The *L. longiflorum* should have 58 degrees from now on; and if the buds show before the first of March, a few degrees cooler will answer the purpose afterward.

Rats Eating Carnations.

(44) Beginner.—The trouble complained of is evidently the work of rats, as they are capable of pulling down the stems and chewing wherever they like best. Either a few rat traps, or a good cat, will remove the pests.

American Flag in Bedding Design.

(45) Kindly advise me which kind of carpet-bedding plants are the best to use for a United States flag? Will it do to take *Centaurea candidissima* for white; *Coleus Verschaffeltii* for red, and the dwarf blue *ageratum* for the stars? Please let me know which variety of plants, either foliage or flowering, are the best, as I intend to do an extra good job. C. M.

—If the bed is to be of large size, the plants mentioned will serve to carry out the design very well, if the *coleus* is kept at the desired height by careful and judicious pinching at least once a week. If the bed is limited in size, however, we would recommend *Alternanthera*, *P. major*, for red, *Echeveria secundata glauca*, for white, and the dwarf blue *ageratum* for blue.

Geraniums.

(46) Will March 1 be too late to plant rooted geranium cuttings in hot beds to make blooming plants about May 1? Are plants from 2-inch pots much superior to rooted cuttings? E. S.

—Geraniums grown in a hot bed for two months would give but poor satisfaction anyway. This plant cannot be forced over bottom heat and flower freely enough to please either the grower or the customer who purchases the plant finally. Planted in a hot bed with the roots unconfined, a rampant growth would result which would nearly all of it die back if the plants are lifted and potted, or transplanted even. Procure rooted cuttings now, and with care and attention, good 4-inch pot plants may be had during the month of May, and they will be far better than any that can be grown in a hot bed.

A two-inch pot plant is several weeks older than a rooted cutting, and is, therefore, just that much ahead. So far as being superior in any way, that would depend upon circumstances. If size were the main object, the 2-inch pot plant is superior every time.

National Association of Gardeners.

(42) Would you kindly give us your views of this National Association of Gardeners through The Florists' Exchange. I have asked a number of gardeners about this matter but everyone is in the dark. Could you enlighten us on the subject? A GARDENER.

—We regret we have little information on this subject to impart. The matter of establishing some sort of an association of gardeners, similar to the one recently organized in Great Britain, was exploited considerably last year in the columns of the now defunct *American Gardening*; and, from daily paper reports, we understand a temporary organization was perfected during the American Institute show in November

last, with a Mr. Maynard, of Rutherford, N. J., as secretary. We are ignorant of the aims and objects of the proposed association, and cannot, therefore, give our views thereon. Any gardener, however, desirous of being in good progressive company, cannot do better than affiliate with the Society of American Florists and Ornamental Horticulturists, the doors of which are open to him, and its work right in line with the development and improvement of his own vocation. Full particulars as to membership, etc., can be obtained from the secretary, William J. Stewart, 11 Hamilton place, Boston, Mass.

CATALOGUES RECEIVED.

JOHNSON & STOKES, Philadelphia, Pa.—Garden and Farm Annual, 1905, being a Catalogue of nearly 100 pages of field, Garden and Flower Seeds, Supplies, etc., profusely illustrated. This firm was the first among seedsmen to trust entirely to photographic reproduction in the illustration of its catalogue, so that the various subjects pictured in the Annual are seen just as they appear naturally.

The list of novelties and specialties in vegetables is an extensive and valuable one, including Spark's Earliana and Santa Rosa tomatoes, the Lannier Beets, New Klondike Cucumber, New Early Black Beauty Egg Plant, besides several new things in Onion, Radish and Squash. In flower and plant novelties are offered *Nicotiana Sanderae*, new carnation Giants of Nice, *Primula obconica Vesuvius*, bright earner, also novelties in Pinks and Panstles. Johnson & Stokes will distribute, in 1905, \$200 in cash prizes, for best photographs of the products of the firm's seeds.

WEEBER & DON, New York.—Catalogue of Garden Seeds and Tools, 1905. A well printed and profusely illustrated catalogue. The firm's list of novelties and specialties in vegetables includes among others, Beans Black Valentine, Bountiful, Mammoth Stringless Green Pod, Longfellow, Triumph of the Frames, and others; Cauliflower First and Best, excellent for forcing. In flower seeds we notice the new Record Asters—*Hortensia rose* and lilac; *Chrysanthemum maximum King*; Edward VII; new things in *Dianthus*, *Pansy American Show*, *Salvia splendens Maroon Prince*. Winter stocks Beauty of Nice and Queen Alexandra; and the new pink sweet pea, Gladys Unwin. The general lists of seeds are of the reliable sorts, for the sale of which this firm is well known; they are very comprehensive.

FARQUHAR'S GARDEN ANNUAL, SPRING, 1905. R. & J. Farquhar & Co., Boston, Mass., a profusely illustrated Catalogue of 160 pages of Vegetable and Flower Seeds, Supplies, etc. This firm's novelty and specialty list includes *Asters* Debutante, white; *Enchantress*, flesh pink; *General Jacqueminot*, crimson; *Lady Washington*, pale rose; *Blue Prince*, dark blue; *Impatiens Holstii*; *Lobelia tenuior*, cobalt blue, with white eye; *Evans' Boston Giant Mignonette* and others. Very attractive embossed cover illustrations are formed by several flowers of *Asters* and *Hardy Hybrid Perpetual Roses*.

JOHN LEWIS CHILDS, Floral Park, N. Y., illustrated Spring Catalogue of Seeds, Bulbs and Plants. The present is the thirtieth edition of this firm's Catalogue. The business, we are informed, started thirty years ago in a small way, "has built up an entire village, . . . here the world comes for its supply of *Gladidius* bulbs, and, to a lesser extent, other bulbs and seeds." Comprehensive lists of novelties and specialties are presented; the front cover being devoted to pink and yellow callas, *Rhemann* and *Elliottiana*.

R. VINCENT, JR. & SON, White Marsh, Md.—Wholesale Trade List of Vegetable, Greenhouse and Bedding Plants. This firm is one of the largest growers of vegetable plants in the United States, having over two and a half acres under glass for the special purpose of growing plants for the Winter and Spring trade; also about thirty-five acres for growing plants in the field. Their lists of *Chrysanthemums*, especially hardy pompon varieties, *dahlia*s, *geraniums*, etc., are also most extensive.

ARTHUR COWEE, Berlin, N. Y.—Illustrated Catalogue of Groff's New Hybrid *Gладиол*, and other varieties of domestic and foreign origin of acknowledged merit. Groff's *Gладиол*, which formed such an attractive feature of the Louisiana Purchase Exposition, at which Mr. Cowee kept up an exhibit during the entire blooming season, were awarded the Grand Prize. The catalogue contains many interesting hints on the culture of Mr. Cowee's specialty.

ARTHUR T. BODDINGTON, New York.—Illustrated Catalogue of Seeds, Bulbs, and Plants; also wholesale catalogue. The large number of the offerings presented demonstrate the progressiveness of this young but enterprising firm. ALBERT SCHENKEL, Hamburg, Germany.—Illustrated Catalogue of Plants and Seeds. Printed in German.

Review of the Market

NEW YORK.—There has been a general decrease in the rose supply, and the market is cleaning up much better than has been apparent for several weeks. The lower grades are firmer in price, but values of special blooms remain unchanged.

Carnations continue to be plentiful, and there has been no change in prices since last week. Tulips are coming in in heavier supply. La Reine, and Yellow Prince are both in ample supply and they are not selling so well, prices averaging quite low. Among the narcissus, Golden Spur has begun to arrive, and brings higher prices than any of the other narcissus arriving. Paper White are not much in demand; neither are Roman hyacinths nor lily of the valley. Violets are most unsatisfactory; there seems to be a big supply coming from up the river, in spite of the reports that many of the growers are consigning their stock to Chicago.

Lilac is getting plentiful; some of it has foliage, others have none, and prices run from 50c. to \$1 per bunch, according to quality. Sweet peas are in continuous supply, and from \$1 to \$1.50 per dozen bunches is the asking price, though they do not move very fast. Freesias, also, are coming in regularly, and are fetching 25c. per bunch. Mignonette has dropped a little within the last few days owing to the increase in quantity. Smilax and asparagus are selling fairly well, but strings of the latter are difficult to handle in quantity, the bunches having the best call. Cattleyas are moderately plentiful and for C. Percivaliana, low prices have been the rule. White orchids are only in fair demand.

BOSTON.—Business has been fairly good all the past week, and everything has been fairly well cleaned out. Some kinds of stock begins to show a scarcity, and prices have advanced very little. American Beauty roses are more plentiful than they have been, but there has been no variation in prices. Bride and Bridesmaid are inclined to be scarce and first-class blooms are now coming in, too, which has advanced prices a little over those of a week ago. Liberty are plentiful at present, but continues to be in good demand.

Carnations of all kinds are in abundance, and have a fairly brisk call. Lily of the Valley is plentiful. Lilies are also plentiful enough to supply all demands. Violets, which generally have had a good demand, are at present very plentiful, and prices have dropped accordingly.

J. W. D.

PHILADELPHIA.—Business conditions are better here this week. While there does not appear to be any rush of business at the retail stores, yet the wholesale houses have not as much stock on hand after trading is over for the day.

D. R.

CINCINNATI.—During the past week stock has rolled into this market. American Beauty was hard to move for more than \$3 per dozen. Carnations took hard pushing to move at all, such was the state of the market then. But the prospects are much brighter for the coming week. American Beauty have jumped to \$4 and \$5 per dozen for the best, and good teas to 6c., 8c. and 10c., while seconds and thirds sell at 2c. and 3c. Violets are hard to move. Princess of Wales are selling at 50c. to 75c. and \$1 per 100; New York doubles, 75c. to \$1; lily of the valley, \$4; Baby primrose, 50c. per 100. Carnations go at 1/2c., 2c., 3c., 4c., and plenty to go round. Last week, carnation shipped in, and not sold the same day were closed up tight by morning. This happened with the writer in two or three instances, and the grower, of course, wonders why he gets nothing for his shipment. The goods undoubtedly were all right when they left him; why they sleep, or close up, over night no one knows.

E. G. GILLET.

PITTSBURG.—Cold weather the past few weeks has had some effect on cut-flower trade, and if it had not been for considerable funeral work business would have been rather quiet. There is plenty of good stock at hand, yet prices hold their own. Good roses go at from 10c. to 15c.; carnations at from \$2 to \$5 per 100, some fine stock coming in. Lilies are more plentiful. Tulips are coming in of better quality; Paper White narcissus and Roman hyacinths are rather too abundant.

Plant decorations for funerals are more called for than ever before; they seem as necessary for cut flowers and floral pieces and those who do considerable of this work say it pays far better than decorations for social purposes. There is very little life in the plant trade, but the seed business is starting up.

E. C. R.

ST. LOUIS.—Trade continues dull in all lines of the florist's trade, except funeral work, which some days is quite plentiful. The wholesalers report that the production of cut flowers is beyond the demand. It cannot be said that there is any great overstock of the fancy grades. Prices, too, have gone down so that this fancy stock can be bought as cheap as common in the times of scarcity. The growers at present are not in the best of humor. The very disagreeable weather for the past week killed what little chance the downtown florist had in transient trade.

It is not an easy task to quote prices, and have them correct, as the wholesaler's first question is, when you ask the price, how many flowers can you use. American Beauty, both long and short, are in good supply, with fancy long as low as \$3 and \$4 per dozen; \$1.50 to \$2 for next choice; shorts \$5 to \$8 per 100. Bride and Bridesmaid, fancy, bring \$6; firsts and seconds, \$3 to \$5 per 100; other roses in this class are quoted at the same figures.

Carnations are in abundance in all grades and varieties; fancy stock in the leading sorts sell at \$4 and \$5 per 100. Good No. 1 carnations can be had at \$2 and \$3 per 100, with common at \$1 to \$1.50 in 100 lots. Whites are selling better than any other; Enchantress and Prosperity come next, then Mrs. T. W. Lawson, very few, if any, of this class are left over.

In bulbous stock everything is plentiful and demand slow. Roman hyacinths, freesias, Paper White narcissus and even Lily of the valley can be bought at your own price. Violets, both California and double, are suffering with the other stock in demand and price. Harrisii lilies and callas are more plentiful, at from \$10 to \$12.50 per 100. All greens are going slow, at usual prices.

ST. PATRICK.

CHICAGO.—Trade during the past week has been anything but satisfactory, there being little call for stock from any source. With almost impassable streets in some parts of the city, local trade has been very slow. The last two days, and the opening days of this week, stock moved a little more freely, a better demand from out-of-town buyers being noticeable. Some lines, especially white stock, are in very short supply, and hard work is experienced in filling all orders.

American Beauty are in excess of the demand, the call seeming to be smaller than in former years. The quality in general is very good. Prices on extra fancy are \$3 per dozen, with not much call for them. Other grades go at from \$4 to \$20 per 100, and some sales have been made below those figures to clean up. In Bride and Bridesmaid, the condition is the reverse, there being a scarcity. A heavy call for Bride has been experienced, and anything like good stock brings a good price—fancy at \$12 to \$15; other grades \$6 to \$10 per 100.

Of carnations, in colored stock there is an over-supply, those being hard to move at any price, while for white the call is beyond the supply, good white being held at \$2.50, extra stock at from \$3 to \$5 per 100. Colored stock brings \$1 to \$3 per 100, with clean-up sales at lower than the former figure.

The market is flooded with violets, wholesalers being unable to dispose of them at any price, and a considerable quantity going to waste. Extra good ones may bring \$1.25 per 100, but the majority are sold at from \$25c. to 75c. per 100.

Lilies of all kinds are in fair demand; there is a good call for callas which are not over plentiful, at from \$12 to \$15 per 100.

R. J.

INDIANAPOLIS.—Quiet has prevailed in the florist business during the past week; there is very little decorative, and not much funeral work. Stock of all kinds is very plentiful. Prices in many lines have decreased during the past few days, this is especially true of carnations, as some of the better grades may now be had at \$2.50 to \$3 per 100. Enchantress continues to outsell all other varieties, and brings \$4 per 100. At retail, carnations are usually sold at 75c. per dozen. Department stores are selling small stock at 25c. to 35c. per dozen. Roses are more than equal to the demand; 36-inch American Beauty at \$25 to \$30 per 100; shorts as low as \$5 a 100. Select Bridesmaid, Bride and Mme. Abel Chatenay wholesale at \$7 to \$8 per 100; the best Liberty bring \$12 a 100. Callas and Harrisii lilies are plentiful, at wholesale they bring \$1.50 per dozen; at retail, \$3 a dozen. Bulbous stock, such as hyacinths, narcissus, and lily of the valley, wholesale at \$4 a 100.

Plants, cyclamen, azaleas, begonias, and lilies are in the market in large numbers, but there is little sale for them. I. E.

PROVIDENCE, R. I.—We notice an improvement in business the past week with an increase of design work, which has consumed a goodly proportion of roses and carnations. Violets have been in the ascendancy at low prices for good stock. Princess of Wales and La France being quoted at 50c., and good California at 25c. per hundred; the latter violet produced some friction on Saturday by its being offered at the department stores at lower prices than the trade thought consistent, although the florists could have met the cut if they had deemed it wise. At the best we must figure the department store as a disturbing element among a lot of hardworking and poorly paid growers. Roses were a trifle short at times, but there has been no advance in prices, which stand at 3c. to 10c. each. Carnations hold firm at \$1.50 to \$3 per hundred, for good stock. Narcissus is quoted at \$1.50; Roman hyacinths at \$2 and white tulips at \$2 per 100. Maidenhair fern is somewhat scarce, but enough for immediate requirements. Fancy ferns have advanced a notch in price.

C. S. MACNAIR.

WASHINGTON, D. C.—Business this week has been very good; nearly all kinds of cut flowers have been equal to the demands. American Beauty brought from \$4 to \$10 per dozen; Tom Field, the new rose, which will be disseminated by George Field brings from \$6 to \$9 per dozen; Liberty, from \$4 to \$6; Bride, Bridesmaid, Meteor, Ivory, Souvenir du President Carnot, and Kaiserin Augusta Victoria, from \$2.50 to \$4 per dozen. Carnations are plentiful but somewhat poor in quality; prime stock realizes from \$1.50 to \$3; second quality from 75c. to \$1.25 per dozen. The stock of local violets is very limited, selling at \$1 to \$1.50, while the New York violets bring from \$2 to \$3 per 100, and are in demand. Sweet peas fetch 35c. to 75c. per bunch; lilaes, \$2 to \$3 per dozen sprays; Roman hyacinths, 50c. to 75c.; narcissus and mignonette, 35c. to 50c.; poinsettias, \$2 to \$3 per dozen.

Plants of azaleas of the smaller size have sold well at \$1 to \$2 each. Cyclamen are in demand at 75c. to \$1.25 each. Primulas chinensis and obconica, 50c. to \$1 each. The call for primulas is somewhat limited.

M. C.

LOUISVILLE, KY.—Business during last week was rather quiet, but a large demand for funeral work, at the opening of this week, makes prospects much brighter. Stock, of the various grades about equals the demand. Prices, continue to hold well. Retail prices received, are American Beauty, \$3 to \$6; other roses, \$1.50 to \$2.50; carnations, 75c. to \$1.50; lilies, \$3; narcissus, 50c. to 75c.; Roman hyacinths, 75c.; lily of the valley, \$1 to \$1.25, all per dozen; violets, \$1 to \$3 per 100.

A. R. B.

St. Paul.

Business Bits.

Trade for ten days past has been very quiet. Even the call for funeral flowers has diminished perceptibly. Bright weather has brought out an abundance of blooms until there is a surplus of good stock, besides a vast quantity of second and third grades. Violets are especially fine and plentiful. E. F. Lemke is picking some of the finest long stemmed blooms of Princess of Wales ever grown in the Northwest. Holm & Olson are handling La Detroit roses. It is a very pleasing variety and meets with ready sale. L. L. May & Co. are cutting choice Mme. Abel Chatenay, which are certainly wonders in size and beauty. This firm had a fine design for the Governor's inaugural in the way of a life-size picture of His Excellency framed in roses, lily of the valley, carnations, etc. It was the work of J. P. Jorgenson, who has lately assumed charge of the firm's retail store and reflected great credit on his ability as a designer.

L. G. Venzke and Mrs. E. F. Lemke have the sympathy of the trade in the death of their venerable father, who passed away at the age of 88 years while visiting a daughter in Reedsburg, Wis.

William Hagemann, of New York, was a recent caller. Also the representative of E. H. Hunt, Chicago.

VERITAS.

KANSAS CITY, MO.—We have had the best business we ever had, since Christmas until now, having had the largest decoration ever given in our city, and using 550 select long-stemmed American Beauty, 800 extra select Bridesmaid, and 26 table pieces of extra fine Gloire de Lorraine begonias. Our Christmas trade was most satisfactory. Plants and cut flowers were of the very best quality, and sold well at good prices. Baskets of azaleas, begonias and poinsettias went exceedingly well, and at good prices. The greatest increase was in plant sales.

S. MURRAY.

HOBOKEN VS. NEW YORK.—On Saturday evening, January 14, these two rival clubs came together on the Hoboken alleys and played three games, to decide which team was really the better of the two. There has been a lot of good-natured banter going on for the last two or three weeks, and John Birnie had become so thoroughly convinced that his team would be victorious, that when he had fully decided on the night to hold the match, he politely invited the New York boys to come to Hoboken and get beaten. Well, we went over and when the totals of the three games played were added together, New York was 105 pins ahead; this makes the second victory for New York against the Hoboken men this season. The latter are not entirely satisfied, however, and we look for another match before the season is over.

The Hoboken club treated the visitors in a right royal manner; a bountiful dinner had been prepared, and at the close of the match it was done full justice to. Every one had a hearty appetite, and it was sometime after midnight before Auld Lang Syne was sung and the meeting adjourned. The individual scores follow:

HOBOKEN.

P. Fischer.....	109	92	152
M. Hansen.....	150	140	127
C. Dietz.....	109	157	104
H. Mende.....	121	115	113

	843	806	904
Total of three games.....	2553		

J. Austin Shaw offered a silk umbrella to the bowler making the highest score, and W. Otte captured the prize with 195.

A GALA NIGHT AT FLATBUSH, N. Y.—On Thursday evening, January 12, the members of the Flatbush club held their annual prize bowling contest. The third game played was designated as the prize game, and those making the highest scores had the first choice of the packages displayed. Every member and visiting friend brought a prize; but as the wrappings of the packages were all placed with a view to mislead, there was no advantage in having first choice, the last man having just as good a chance as the first one. The prizes when opened all proved to be very substantial ones indeed, and every one was remarkably well pleased with his choice. P. Riley, with a score of 196 was first, and drew a magnificent smoking set, finished in natural stag hoofs, etc. Louis Schmultz, with 188, took second choice which proved to be three bottles of wine. D. Y. Mellis, with 180, had third choice, and drew a beautiful silver smoking set. John Scott, with 175, captured a fine hardwood smoking set. Henry Dailedouze, with 165, got a beautiful stein; W. H. Siebrecht, with 159, a fine briarwood pipe; Paul Dailedouze, who also made 159, drew a silver-mounted stein; S. S. Butterfield, with 157, a box of cigars; Clemens Wocker, with 133, an ornamented glass flower vase; J. Austin Shaw, with 126, chose a bottle of spirits of frument; Alfred Zeller, with 123, drew a black silk scarf and a beautiful pin cushion in the form of a ballet dancer's best recommendation; George Bennet, with 110, selected a box of cigars; and Alex. Morrison, with a score of 77, a cherry and ivory finished smoking set. The scores made in the two previous games were as under:

D. Y. Mellis.....	169	189
Paul Dailedouze.....	136	98
A. Zeller.....	115	146
W. H. Siebrecht.....	164	145

J. A. Shaw.....	150	110
S. S. Butterfield.....	117	128

WASHINGTON, D. C.—The florists' bowling team was out in force last Wednesday evening, and put in a good night's work. The following are the scores:

M. C.

THE WEEK'S WORK.

Timme's Timely Teachings.

Stock Plants.

Heliotropes, double petunias, fuchsias, salvias, lemon verbenas, ageratums, stevias, swainsonas, lantanas, acalyphas, flowering begonias, pyrethrums, abutians and several other good things, usually kept over from last year as stock plants and expected to furnish all the material for propagation needed in these lines for the coming season, should now be given a light and sunny place, on a warm bench, and plenty of room to each plant, so that the supply of cuttings produced may be of a fine quality—strong, stout shoots, instead of a lot of spindling, lanky growth. Most of the kinds are only wanted for the production of one or of several crops of cuttings and are then thrown away. These, if yet in their pots, need no transplanting, while those worth keeping and growing into large specimens, after having furnished a number of good cuttings, ought now to be transplanted into new soil and into pots, not necessarily much larger and, in some cases, even smaller than those they were in. A severe pruning down to shapely size, called for in the case of some of these varieties, should also now be done, before the plants start into new growth, as long as this operation does not too greatly lessen the number of cuttings wanted. While a few of the kinds may thus be kept over and grown into stately plants, easily sold in the Spring and often called for, the greater number of them will have to make room for the more vigorous new stock.

The plants, after their rest, must receive a thorough watering once, and after that no more until they start to grow. After all the first new growth has been taken off clean for propagation, as in the case of salvias, coleus, heliotropes, etc., a second crop, nearly as good as the first, may be had by again withholding water until renewed foliage and growth demand it. Over-watering stock plants results in a worthless, sickly growth, really unfit for propagation.

Lantanas, begonias, coleus, heliotropes, salvias as also fuchsias require a rather warm place and will there produce a great number of good cuttings every week or two, while the old clumps of stevia, feverfew and chrysanthemums are content on the coolest end of a bench in a cool greenhouse, where they should receive no more watering than what will just keep them from wholly drying up. These latter need not be propagated until March, or even April; nor is it advisable to root poinsettias, coleus, Impatiens Sultana and achyranthes before that time; but cuttings of most of the others named should now, or soon, go into the sand, if good-sized salable stock is wanted in time for a creditable Spring trade. It is not difficult to work up a fine lot of plants of all the leading sorts; but it is a great trick to have them in their most presentable trim just at the right time.

Plants of poinsettias, unsold or partly cut down, should be stored under a warm bench and kept perfectly dry until April, or later. Those in pots can remain in these until then, while those out of a bench should be placed in boxes with dry earth between and over their roots.

Geraniums.

It is never too early, or too late, for the propagation of the zonal geraniums; nor is there any great danger of ever becoming overstocked in that line. It is here not needful to dwell on the great popularity of the geranium as a bedding plant, or to point out at length the reasons why it is the most useful, and probably most profitable greenhouse plant under cultivation. When judging plants as to their commercial value, the geranium is entitled to a blue ribbon, and the fact that the prices for geraniums have advanced in the last few years certainly deserves honorable mention.

This increase in price has been brought about by a steadily growing demand for exceptionally well grown plants, and by the progressive dealers' anxiety to furnish such stock. To grow extra good four-inch geraniums, which will easily retail at \$1.50 and \$2 a dozen, does not call out a high grade of cultural talent, only demanding a trifle more attention, a little more labor and a great deal more bench room, than is usually accorded the American-grown geranium as an article of commerce. Now, two dollars per dozen for extra good geraniums in four-inch pots may not seem a price unusually high, but it must be remembered, that it is at least double the price realized for the same goods a few years ago, and it must be admitted that the plants can be grown for that with profit to grower and dealer.

If the slipshod grower could only be persuaded to raise only the best varieties, and these only in such numbers as his bench space could accommodate, instead of raising twice and thrice as many, and, by keeping them closely packed and crowded, depriving them of the much needed room, air and light, he would cease to wonder why his more prudent neighbor is able to sell out clean at highly remunerative figures long before his own stock has been half disposed of at prices barely covering expenditure for coal. The public has been educated up to the point where a buyer invariably will rather take a dozen of the high-priced well grown plants, than two dozen of the cheaper but poorer grade, and the plant-buying, better class of people has learned and nowadays perfectly understands that exceptionally fine plants cannot be produced cheaply.

It should, however, be the aim of growers in the bedding-plant line to provide a grade of geraniums, which, while reflecting credit and assuring profit, yet could be offered at a price within reach of that large class of buyers, who, although imbued with a true love for flowers and plants, can only afford to invest a limited amount of their earnings for the embellishment of their homes. Good grown three-inch geraniums will conveniently meet this demand. Sturdy cuttings, taken from old stock plants, or the tops of shortened in young stock, may, to this end, now be placed in sand or at once into two-inch pots, filled with sandy soil. These will soon root, if some bottom heat is given, and by March or April they will be ready for the three-inch pots. A timely pinching, just once, before they go into the three-inch pots, will make them nice, bushy plants, with two, three or four flowering shoots, and certainly better material for bedding in May or June than the scraggy, scrubby and dejected looking four-inch "Queen of the West" offered by the enterprising street hawker at 60c. or 75c. per dozen and mostly let go for 50c. I try to have several sizes in geraniums

now all the year around and experience no difficulty in disposing of all at fair figures, and, therefore, I say, it is never too early or too late for the rooting of good cuttings, or the shifting of those plants that require it. Well balanced five and six-inch plants, studded with bud and bloom, never fail to attract buyers at any time of the year, if the grower take some pains in selecting varieties especially suitable for this purpose. The more unshapely of these sizes come very handy in the filling of large boxes and vases. Such plants have given me two or three crops of fine cuttings before they are allowed to bloom. Thus I keep the rank growth in check, and give them shape and form. In a month or two after that these plants will flower profusely, and will continue to do so for any length of time.

The stock, propagated last Fall, should now be in three-inch pots. If still in the two-inch pots, the work of repotting them, clearing, pinching and resetting should not be delayed any longer, if it is expected to have a prime lot of market plants in May or June. The graduate from the new school of plant industry, who practices the long shift from the two-inch to the four-inch pot, should at least go over his small plants from time to time, remove a few from where they are most crowded, stop the single-stemmed and provide all the light possible, to assure an all-around good break and healthy foliage.

Any good and somewhat heavy soil will do for geraniums, and in the matter of watering a good allowance is needful when they are in full vigor and bloom; while some care should be exercised during the Winter months, so as not to over-water. Of more importance is solid planting; the soil should be well firm around the plants in potting and repotting. The most weighty point, however, in geranium culture is the one most overlooked and least heeded—the full exposure of the plants to light and sunshine. This and a most liberal supply of fresh air, whenever it can be given, are the most telling factors in maintaining the health of the plants, in making them break evenly, after being stopped, and in imparting substance and brilliancy to the flowers.

Begonias.

BEGONIA VERNON is a poor affair, if grown from cuttings, but one of our best dwarf bedding-plants, when grown from seeds. All the varieties of this charming begonia are good and easily worked up to salable plants by May or June. Sow the seeds now.

REX BEGONIAS are best propagated in the middle of Winter; in fact, can only be propagated to advantage at this time. Take well-ripened, but sound, healthy leaves, hack with a sharp knife the midrib and the strong side-ribs, inflicting cuts about one-third through and half an inch or so apart; then lay the leaves, face up, on the sand of a pretty warm propagating bed, weighting them down with a little sand here and there. Or the leaves may be cut into four or more pieces and these placed on the sand. In either case, a number of little plants will soon break through the surface of the old leaf. These plantlets are then lifted, freed of the old leaf remnants, potted up and kept growing in the warmest place of the house. By the end of May these plants should be bright, nice salable stock in four-inch pots. Rex begonias, by right, require to be grown in a house by themselves, and where they are raised in large numbers,

a separate and well-heated house should be given over to the culture of this interesting and, of late, greatly improved class of plants. They do not care to live in a house frequently ventilated and seem not to be especially fond of fresh air. Certain it is, that in a close atmosphere they thrive best, and there their greatest charm—the coloring of their leaves—becomes most pronounced and intense. They also call out the cultivator's skill and special care in the matter of watering. Very little, but regularly applied, is wanted, to keep these plants in vigor and good shape, and even, when at their best, but little water should be given them at a time. Allowing them plenty of room and a great amount of drainage material in their pots, will make the work of watering and caring for a lot of rex begonias less time-consuming and less irksome.

FLOWERING BEGONIAS, of the common, well known varieties, can now be propagated, whenever from a vigorous new growth cuttings can be had. Some of the numerous new forms and types, recently introduced, are most beautiful and worthy of trial.

BEGONIA GLOIRE DE LORRAINE, the far-famed beauty, will now be nearing the end of its glory for this season. Pinch off the dead and dying blooms, and remove the plants to a light bench in a house, holding about 50 degrees of heat. Here they remain until May, when the new growth from the root-crown offers material for propagation.

FRED W. TIMME.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

FORT COLLINS, COL.—Mrs. E. B. Davis has sold the Pansy place greenhouses to Mr. Hannawalt, of Denver, who has taken possession of same. Mr. Hannawalt was for some years in the employ of the Colfax Avenue Florist Company, Denver.

ELMIRA, N. Y.—Fred S. La France has purchased the business of Thomas J. Leyden, at 117 West Water street, and will conduct this store in connection with his own greenhouses on Miller street. Mr. La France contemplates increasing his greenhouse capacity.

A. H. Hews & Co. (Inc.) Entertains Employees.

Still another evidence of the thoughtfulness for the welfare and pleasure of the employees of A. H. Hews & Co., Incorporated, of Cambridge, Mass., and the peculiarly family-like bond of co-operate interest existing between employers and employed at this establishment, the largest of its kind in the country, if not in the world, was shown at the banquet and entertainment given to the employees Saturday evening, January 14, by Mrs. Albert H. Hews, widow of the former owner, in commemoration of Mr. Hews' birthday.

The banquet room, with the wives and children of the one hundred and thirty attending, presented in appearance a huge family gathering, perfectly at home, one with the other, and this spirit was augmented by the excellently performed volunteer service as waitresses of the wives of the officers of the corporation, and the ladies of the office.

At the close of the banquet the gathering was addressed by George H. McKee, president, and Philip Cabot, treasurer of the present corporation, the latter speaking directly for Mrs. Hews, who was unable to be present, and expressing her deep desire to continue that interest always maintained by Mr. Hews in the employees, individually and collectively, many of whom have been continuously in the service for over a generation, and who by their competent and faithful service in their respective positions had been of such material assistance to him in building to its present magnitude the establishment which to-day stands as a monument to his honorable dealings with all men and to his business ability.

The remarks of the speakers were followed by a two hours' musical and humorous entertainment given by excellent talent.

It is worthy of note here that, contrary to the usual policy in such instances, no changes have been made in the personnel of the employes by the incorporation of this business, except, of course, the addition of new hands in the different departments to care for the rapidly increasing demands of the trade.

"THERE IS ONLY ONE"

The Fumigating Kind Tobacco Powder

What a Few Say, All That Use It Say

MAMARONECK, N. Y.
I tried the 5-lb. trial package of The Fumigating Kind Tobacco Powder in two of my houses one night, and the following night I gave a 60-foot house a thorough smoking. Result, I would like you to send me 100 lbs. of the Fumigating Kind.

W. H. DANIELS.

KANSAS CITY.
We consider The Fumigating Kind Tobacco Powder good; it is cheap and effective. We have with 25 cents worth of your Fumigating Kind Tobacco Powder smoked as much space and done the work as well as some other kinds of Fumigating that cost us \$2.50 for same space; and the Black Stuff Fine for sprinkling is all right too; gets them every time. Send us another 1000 lbs. of The Fumigating Kind Tobacco Powder.

ROBT. S. BROWN & SON.

KANSAS CITY, MO.
I have used The Fumigating Kind Tobacco Powder now for two years, and find it the best and cheapest article on the market to kill Thrip and Green Fly. I would not be without it.

A. F. BARRE.

TAMAQUA, PA.
Until three years ago I was always hunting for something better to kill the green fly, with out injury to bloom and foliage. Then I started to use The Fumigating Kind Tobacco Powder. I have used it ever since; it is good enough for me.

NELS NELSEN.

FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

The New Rose WELLESLEY

is a welcome addition to the list of forcing roses.

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

Boston.
News Notes.
 In my notes of last week read that those going from Boston to the Carnation Society's convention in Chicago will go on the certificate plan, fare for the round trip \$27.50 and not \$2.50 which a typographical error made it.

Galvin had five large decorations on Wednesday, including the Metzler-Phillips wedding at the Hotel Somerset, and the Taunton-Hemingway wedding on Beacon street.
 Some of the finest Bride and Bridesmaid roses seen in Boston this Winter are coming from the Newtonville avenue greenhouses.
 Henry M. Robinson & Co. are handling large quantities of Southern wild smilax and have just received a fresh shipment.

William Sim, of Cliftondale, lost a shipment of some fifteen hundred violet blooms the other day by their being misplaced at the depot on their arrival in Boston and the severe freezing weather had them destroyed when they were located.

A unique table decoration was gotten up on Tuesday for the Merchants' Club dinner at the Algonquin. The subject of the evening was the tropics; and Macmullin, who had the matter in hand, made the decorations accordingly, using only tropical plants and fruits for the purpose.

Visitors this week included Frank Hamilton, Queens, N. Y., and Alex J. Guttman, New York.
 J. W. DUNCAN.

Worcester, Mass.
 On January 1 H. H. Cook, of Shrewsbury, Mass., entered into a partnership with his son, Maurice. The business will be carried on under the firm name of H. H. Cook & Son. They have about 25,000 feet of glass devoted entirely to carnations with the exception of a small violet house. Boston is their principal market.

The second Winter meeting of the Horticultural Society was well attended. Miss Fannie C. Morse, of Worcester, lectured on a "Trip to the Far East."
 CAROLUS.

Cromwell, Conn.
 C. Loechner, representing the firm of Suzuki and Iida, of New York, was here this week.
 The grafting house is a busy place these days at A. N. Pierson's. About 100,000 manetti is being used up as rapidly as possible and converted into Bride, Bridesmaid, Killarney, Mme. Abel Chatenay and other choice varieties. The young stock is looking remarkably well.

GREENWICH, CONN.—Alexander Mead, of the firm of Alexander Mead & Son, who has been a great sufferer from nervous asthma for the past year, has been very low since New Year's. He is now slowly improving, although still confined to his room.

On January 24 the Cincinnati contingent will leave here for Chicago. Last week I stated they would travel via C. H. & D.; this week it is the Big Four, so visitors out of the city, who will pass through Cincinnati, had better see me before making arrangements.

Kalamazoo, Mich.

Trade conditions since New Year's have not held up to expectations and are reported poor all round. Stormy weather all week has not helped matters either, and prices, like business, have sagged.

At the annual meeting of the stockholders of the Central Nursery Company the old board of directors was re-elected, and the management therefore remains as heretofore.

Chicago.

The Week's News. A Dietsch Co. have found it necessary to add a new building to their factory, to enable them to take proper care of their increasing trade.

C. J. Strombach has been dangerously ill with pneumonia; at one time his life was despaired of. At last report he is convalescing nicely.

George W. Wienhoeber is confined to his bed with stomach trouble; his many friends in the trade hope for a speedy recovery.

Emil Buettner, of Park Ridge, is sending in white lilac of exceptionally good quality to the A. L. Randall Co.; it is wholesaling at \$1.50 per bunch.

Wietor Bros. are cutting Enchantress carnations of extra quality from plants in solid beds.

Peter Reinberg is in with a heavy cut of American Beauty roses.

John Degnan, of the E. F. Winterson Co., was on the sick list the latter part of last week.

P. J. Hauswirth had a very busy week, having considerable work for banquets given in the Auditorium Hotel.

C. W. McKellar has enlarged his office space.

The George Wittbold Co. had the decorations for the annual Charity Ball at the Auditorium last week.

Real estate transfers of the past week record the transfer of 80 acres on the southwest corner of California and Peterson avenues by Mrs. Mary A. Peterson to W. A. Peterson, for \$120,000, his being a part of the Peterson nurseries.

J. D. Thompson was in town last week with a fine lot of blooms of carnation Robert Craig, displaying them or the benefit of prospective buyers of cuttings. Orders for many thousands of these have already been booked.

The Lincoln Park greenhouses have added to their already large collection of orchids.

Visitors in town: W. Heckenpamp, Quincy, Ill.; H. M. Altick, Dayton, O. ROBERT JOHNSTONE.

Portland, Oregon.

The writer spent part of a day in the nud, which is a part of the building of all expositions, in quest of a few andscape gardening, no distinct denotes of interest to Florists' Exchange leaders regarding the Lewis & Clark Exposition. It is very improbable that any effective work is to be accomplished in ornamental horticulture or artment being at present organized for other branch. Henry E. Dosch, director of exhibits, a well-known horticulturist, and author of "Horticulture in Oregon," when called upon, was very enthusiastic, but there is a decided lack of interest on the part of local florists, who complain of the action of the directors in omitting the time-honored custom of giving the home craft "a fair how." A call on Director of Works Eskar Huber elicited the statement we'll grow cabbages, etc., and give hem away to visitors. The landscape work is virtually completed. It is to be regretted that, thus far, no preparation has been made to adequately represent the trade to visitors, except by abbage heads, etc.

Despite the dark days which are experienced here for several Winter months, some extra fine roses and carnations are seen in the stores of Clarke Bros., Martin & Forbes and Pfunder. iolets from California are a staple article just now, but from the extent of growers' establishments the home product is handled wholly later on. rices range well on all lines of first-class stock and the fakir is unknown. ortland is truly the "Rose city," judging by the number planted outside, though much more beauty could be attained by better cultivation. J. H.

Pittsburg.

The Week's News. The Botanical Society of Western Pennsylvania had an interesting meeting last week. The various growths and habits of cacti were discussed and exhibited to those present. President

Falconer explained the habits of the cacti indigenous to the temperate zone. Mrs. Burbank showed specimens from the alkali deserts of the southwest. Specimens used for food by native Mexicans were described by Mrs. A. Nichols, of Laredo, Tex.; and a rare specimen grown at Oneco, near Tampa, Fla., was shown by E. A. Reasoner.

If anyone is going to Chicago, to the Carnation Society's meeting, he should notify Mr. Langhans, who is trying to get the party together; but do so at once as the members may leave a day earlier and stop at Richmond, Ind., to see the new roses at the Hill place. How many are going is uncertain, but there will be a few, from present indications.

W. Edlefson, Milwaukee, spent several weeks here on a visit to his daughter, J. Walker, of Youngstown, O.; J. Murchie, of Sharon, Pa., visited some of the places around the city; and A. J. Rickarts, representing Stump & Walter Co., of New York, was also looking up the trade.

E. C. REINEMAN.

Syracuse, N. Y.

Trade News.

Trade has been very dull here, but the rush of funeral work the past week has helped out very materially. These orders seemed to be about evenly divided. One especially beautiful wreath made by Manager Robertson, of P. R. Quinlan & Co., is worthy of mention. It was 30 inches in diameter and made of Liberty roses, lily of the valley with adiantum, combined with the new peris fern originated at their greenhouses something more than a year ago. This fern has very narrow graceful fronds beautifully crested at the tips of segments, of fine substance and altogether a very desirable acquisition that doubtless will be quickly taken up when disseminated.

Henry Morris had a tastefully arranged window the past week that attracted a good deal of attention—a bank of very nicely grown cyclamen backed by vases of carnations in variety. Carnations are by far the best selling flower at present; one florist disposed of 2,000 blooms on Saturday. Some very fine tulips are now to be seen in the stores. Prices of cut flowers remain the same. J. B. B. J. B.

ST. PETERSBURG, FLA.—The St. Petersburg Midwinter fair opened January 16, and will continue until February 15. The object of this fair, of a local character, is to show especially what is being done in the way of fruit, vegetable, nursery stock and plant growing, together with manufactured articles in wood, shell work, and ladies' fancy work, and exhibitions of work performed by the pupils of the public school, etc. The admission is free, except evenings, when there is a musical entertainment, when a fee of 10 cents is charged, to help pay expenses. News Items.
 At the last meeting of the Gardeners' Club it was decided to have a carnation show, Monday, February 27, at the Royal Arcanum building, free to the public. There will doubtless be a fine exhibition, as carnations are now beginning to come in of good quality. Lehr Bros. have Genevieve Lord and Enchantress very fine. C. Akehurst & Son also have them very good. Mrs. Lawson are coming in with better flowers, but the stems of most of them are a little short.

A number of the craft will leave here Saturday to visit the Messrs. Weher & Sons, at Oakland, Md. An enjoyable trip is anticipated. A number of the carnation men are anxious to see the new variety My Maryland growing.

We are now having very good weather—plenty of sunshine—which will doubtless improve cut stock. Having had such a long spell of dark weather, something like ten days of sunshine in more than six weeks, had caused many bursted carnations and short, weak-stemmed roses. Violets are now coming in a little more plentifully and of better quality. Good American Beauty roses is about the scarcest thing here now. Monday, stock of all kinds was very short; but to-day (Wednesday) there is a good supply with a demand for nearly all the good stock.
 JOHN J. PERRY.

St. Louis.

News Notes.
 E. H. Michel, E. G. Eggeling, Jr., William Winter and F. W. Ude, Jr., have issued a circular calling on growers to attend a meeting at Louisiana Hall on Thursday night, January 19, for the purpose of organizing a Growers' Club; and it is understood by the circular that none but growers need attend. Retailers and wholesalers are not wanted as members of this club. This opposition will hardly hurt the old club any.

Visitors recently were J. O'Neil, representing Vanghan's Seed Store, of Chicago; Charles F. Meyer, and Joe Rölker, of New York. All report a splendid business in their line.

Frank M. Ellis, who in company with John Burk was on a hunting trip in the Ozark Mountains the past week, has returned with plenty of game of all kinds.

John Hanzel makes a very pretty display in his new store, which he recently opened on Taylor avenue, near Olive street. He was formerly with Alex Waldbart. ST. PATRICK.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 4

NEW YORK, JANUARY 28, 1905

One Dollar Per Year

TARRYTOWN FERN

(*Nephrolepis Piersoni elegantissima*)

NOW READY FOR DELIVERY. THE BEST RECORD OF ANY NEW INTRODUCTION
The much coveted \$50 Prize from the Horticultural Society of New York.
FOR THE BEST NEW PLANT OF THE YEAR

There is nothing in the fern line that is as handsome as this beautiful fern when well grown. It is a wonderful improvement over *Nephrolepis Piersoni* in every respect, both in regard to beauty and habit of growth. It is a sport from the Pierson Fern (*Nephrolepis Piersoni*), but it is very much more beautiful and of greater commercial value. It is as different from the Pierson Fern as that is from the Boston. The small side pinnae are again subdivided, producing an exquisite and beautiful effect, changing the entire character of the fronds, which measure less than half the length and about twice the breadth of the fronds of the Pierson Fern. The fronds also assume an entirely different form, the side pinnae standing at right angles to the mid-rib of the frond, on edge rather than flat, as is usual, making both sides of the frond equally beautiful—entirely different from any other fern.

The plant is very dwarf, only about half the height of the Pierson Fern, and of very much more compact habit. Taking it altogether, it makes one of the most exquisite plants and one of the most valuable for table and house decoration that has ever been introduced.

The cut fronds, on account of their beauty, will be in great demand for table decoration, design work, and for use in boxes of loose flowers. Well-grown plants make most magnificent specimens. We think there is nothing in the fern line that is so handsome as this beautiful fern when well grown. It is a wonderful improvement over *Nephrolepis Piersoni* in every respect, both in regard to beauty and habit of growth.

PRICES:—2 1/4-inch pots, \$9.00 per doz.; 50 plants at 60c. each, 100 at 50c. each, 500 at 45c. each, 1000 at 40c. each. LARGE PLANTS—5-inch pots, \$18.00 per dozen; 8-inch pots, \$24.00 per dozen; 8-inch pots, \$38.00 per dozen; 10-inch pots, \$60.00 per dozen.

Seed Trade Report.

OMAHA, NEB.—W. Hagemann and Ralph Ward, of New York, were looking up bulb buyers here last week.

L. G. COLYN, representative of Van der Gugten & Colyn, bulb growers, Holland, will leave soon for his annual trip to the United States. He succeeds Gerard A. Scheepers, who died August 14, 1904. His address, from February 1 till May 15, will be care of Maltus & Ware, 136 Water street, New York.

BOSTON.—Arthur Holland, of Farquhar's, is leaving this week to take a position with Weeber & Don, New York. Everett Wheaton, for the past ten years with the firm of Jos. Breck & Son, died Saturday of pneumonia. The funeral took place Monday. G. R. Milham, of the Cleveland Seed Co., Rochester, N. Y., has been here this week in the interests of his firm; also Mr. Heath, of the Albert Dickinson Co., Chicago. Mr. Rogers, of Rogers Bros., Chaumont, N. Y., has also been a visitor. Thos. J. Grey is in Lenox this week looking after the business of his firm.

HAARLEM, HOLLAND.—In one of our recent numbers, we mentioned the quinquennial exhibition of the Royal Dutch Bulb Growers' Society, to be held from March 17-21, in Haarlem. By glancing through the schedule, we find that this show bids fair to be of special interest to all engaged in bulb culture. As of old, the Dutch look upon it chiefly as a home school; they keep it national, but their decision to invite also English members of horticultural circles, to act as judges, may be looked upon as a proof that they do not shut their eyes to what is going on elsewhere. We are informed that visitors from this and other countries will be much appreciated; no doubt they will be welcomed, and a sort of reception in the Ghent style is talked of.

European Notes.

Although the sharp frost that ushered in the New Year was of short duration in the north of Europe, in the South it was more prolonged and of greater severity while it lasted. All along the shores of the Mediterranean and north of the Basses Alpes the thermometer fell for four consecutive days to from 15 to 17 degrees Fahrenheit. All through the Riviera the destruction has been very great, as the florists are in full swing just now supplying the local demand (which is now at its best) and shipping a very large surplus to northern markets.

While this will benefit the northern florists, who need all the help they can get in these dull times, its principal interest to the seedsmen consists in the effect the frost must have upon the development of Roman hyacinths. Paper White and other varieties of narcissus, and the whole host of miscellaneous bulbs and flowering roots which the south of France has been in the habit of supplying to the world.

Near Naples the frost has been more severe than the "oldest people" can remember. Several plants, such as Nicotiana colossea, Musa ensete and many varieties of ipomea are quite lost.

How much it has damaged the cauliflower cultures cannot yet be judged, but they have suffered severely. The same is true of onions, and as the acreage planted is much smaller than the average, a sharp rise in prices is certain in the near future.

It is a singular fact that the thermometer stood 30 degrees higher in the Shetland Islands than in the Riviera. The fashionable butterflies who make the latter district their winter playground would have been much better off at home.

Here, in the north, conditions are improving, and business is consequently very brisk. Already the shortages are beginning to pinch, but we have one comfort in that we are all in the

same boat. The drier weather is helping the nasturtiums along nicely, and orders for such varieties as have not completely perished can now be filled.

A new seed firm starts in London to-day, two of the employes of Jacob Wrench & Sons, Limited, having opened a store exactly opposite the old establishment in King William street. EUROPEAN SEEDS.

The Southern Seed Trade.

But few are aware of the immense amount of seeds used in the South, more particularly on the east coast, from Norfolk to Miami. The truckers, as a whole, do not regard the seed used as a serious matter, excepting when it fails to germinate, or is not true to name or description. When such is the case, it is the seed merchant that is the sufferer. It matters not what the cause may be, it is the result that is considered. If the seed disappoints, no apology will be accepted; the seedsmen is considered unreliable, and future orders will go elsewhere.

The amount of seed used by those truckers is astounding. For instance, one farmer, or trucker, on Young's Island makes the growing of cabbage plants for the trade a specialty and has thirty-five acres of young plants now growing, to produce which he sowed 1,200 pounds. Another farmer near by planted 1,000 pounds of cucumber seed, and the writer heard him say to the dealer, "Get me 1,000 pounds of seed, the same kind as I had last year. If it costs me ten dollars per pound, I must have it." Of course he would prefer paying the usual price, but the cost of seed was not for a moment to be considered, and woe to him that furnishes an inferior article. These truckers do not sow the seed; they simply pour it in the trenches. More than that, they make three sowings. The first one is almost always killed by frost; not one year in five will it survive; when it does the extra price the cucumbers bring doubly pays for the cost of seed and labor in putting it in. The second sowing, within two or three inches of the first, very rarely fails. To be secure, however, a third sowing is made, which is not required once in ten years; but in case the two first sowings fail they do not lose a crop. Although many truckers continue it, this practice is not as common as formerly, as the crop from the extreme southern point is rarely lost and is started so early that but little risk is taken.

Spinach is sown with a lavish hand. Some truckers grow as much as 200 acres and use fully four times as much as they should, at an enormous expense. The writer saw on one farm 300 acres of cabbage, the grower using 500 pounds, when 100 would have been ample.

The potato is the only crop grown without double the amount of seed being used that is necessary. This industry, as carried on near Charleston, is sufficient to enrich the whole country. For example: There are ten farmers in this section who in the past year made a clear profit of from \$5,000 to \$35,000 each. One, who cleared the latter sum, had potatoes as one of his crops; he had 250 acres of these and sent to New York an average of 75 barrels per acre, which sold at from \$3 to \$6 per barrel. Had the crop been as large as in previous years, at the same price, his profits would have been fully \$100,000. The man that grew cabbage plants made \$12,000 from a crop of fifteen acres.

This is the seedmen's land of promise; but to reach it he must have the best only—poor seed will impoverish both himself and the trucker.

RICHMOND, VA.—T. W. Wood & Sons, the pioneers of the seed trade in the South, have just completed their four-story warehouse for grass and grain seeds; it is one of the most complete, as well as the largest, in this country. From a small beginning, at the close of the war, they are now among the largest dealers in the trade.

They were the first to introduce the crimson clover, starting with but a few pounds, and have just laid in a million pounds for the coming season's trade. They report trade very brisk and anticipate a larger business this year than ever.

The Diggs & Beadles Co., who cater to the truckers' trade, are very busy and have their new store well filled with seeds adapted to their needs.

T. J. King & Co., who started to build up a business on an entirely new plan, have succeeded beyond their expectations. Their trade is chiefly in seeds for the home garden, both vegetable and flower. They speak well of their past trade and the prospects of the coming season.

ATLANTA, GA.—H. G. Hastings & Co., who started a small business a few years ago in Interlachen, Fla., have made a most wonderful success. They cater to all classes of trade in which there is a profit, and wholly ignore the wholesale trade. The Southern truckers are the ones they most earnestly seek, and that trade is simply immense. The Bermuda onion growers and their competitors in Florida are great buyers, and this firm claims to have more than the lion's share of the trade. They have just sent out 220,000 catalogues and are preparing to build a very large warehouse for their increasing business, which is largely a mail and express one. In the future they expect to do all their own printing, and to have their whole plant in one building.

CHARLESTON, S. C.—In this city, as in nearly all the cities south of the Potomac, a seed store as such is not to be found. This comes from the fact that but few varieties of vegetables are grown in any great quantities. Such as are to be found are grown for the New York markets. Consequently, the seeds sold are by the produce dealers. Among these, the Southern Fruit Company stands prominent. This house does a successful business in the few lines handled. Combined, the various kinds amount to as much of a business, based upon values, as some of the regular seed houses throughout the North. The members of this concern are pleased with the outlook and are shipping carload lots of seed potatoes and large quantities of peas, beans and other specialties. Of seed potatoes they say the Southern growers' second crop of the various kinds give decidedly the best satisfaction; they make stronger vines and are more productive and uniform in time of ripening.

JACKSONVILLE, FLA.—Burton K. Barr & Son are doing a fair trade along certain lines. They are quite prominent in the Bermuda onion seed trade and report an increasing business.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Tart Cherries.

It is the experience of nurserymen that the purchaser of a single tree of cherries always wants a pie cherry represented. If it is but a single tree, oftener than not the common Early Richmond is the one taken. The reason for this is that this good old pie cherry is one of the most reliable of all for annual bearing of crops; it is, too, a cherry that commences to bear when quite young, and it produces enormous crops. Then, too, sour though it be, it is not too sour to be eaten and enjoyed when fully ripe. And, further, its tartness is some protection against the robin, a bird which prefers to wait a while and take some of the sweeter sorts, which ripen after the pie cherry.

The Early Richmond is the favorite pie cherry, but there are other quite tart ones. Among these the best known are the Kentish, English and Montmorency, all real tart varieties. The English is very tart and ripens later than the others, and its exceeding tartness makes it keep well. When first interested in cherries, many years ago, I was told that the English Morello was not suited to our climate, the fruit rotting. Two trees, which I grew myself for many years, perfected their fruit all right, showing no signs of rotting.

There are other quite tart cherries, and besides those named, the Duke cherries are in this section, although they are between the sweet and the sour in flavor, so that whether for eating out of hand or for pies or preserving they are much esteemed.

A word about the planting of cherries will be timely, as Spring is approaching. Plant them early. If deferred until the buds are well advanced, they do not flourish as they would do were they planted earlier, even if well pruned back. It is almost useless to set them if in leaf.

San Jose Scale.

Dr. George G. Groff, of Lewisburg, Pa., writes me disagreeing with me that the San José scale is carried from tree to tree on the feet of birds. Among other things, he says of it: "I have found it to travel with exceeding slowness, and, practically, it cannot get from one farm to another. It selects its habitations. My lot of four acres is closely planted. I have more than fifty cherry trees. It has never infested but two of these trees, and then it walked to them from infested Ben Davis apple trees. It has never gone to a cherry tree on a sparrow's feet. Then, again, I have numerous Kieffer pear trees. Never has one of these been infested. It likes fruit, currants, barks, Japan quince, seedling apple trees, Sickel pear, Ben Davis apple, etc."

The general belief is that its spread is nearly altogether owing to the aid it gets from birds' feet. The owners of trees that are situated far away from any other fruit trees and whose trees yet become infested with scale, will be slow to accept the Doctor's theory that the scale has crawled to the tree, or has reached it in some other way than by the aid of birds. He has written me twice, and seems convinced that the birds have but little to do with it. The many instances of isolated trees and orchards becoming infested and the reasonableness of the supposition that the young insects would become attached to the feet of a bird and in that way be taken from tree to tree, gives cause for just suspicion that birds are blameable in these cases. I have knowledge myself of such cases of isolated trees becoming attacked, and there appearing no possible way of accounting for it excepting that birds had been the agents. Dr. Groff's experience as to the preferred shrubs or trees is very interesting. It will be noticed he places the currant bush first. But when he says, "Practically it cannot get from one farm to another," I fear the facts are against him, much as I wish it were otherwise. It is sure it does so get to them and not by its own volition.

Protecting Seedlings.

From February to March is the most trying time on trees of the whole Winter. So far, up to the close of January, no great harm is ever done to nursery stock. At least, this is true of Pennsylvania. After January the increased strength of the sun is felt, and this is when the injury to stock is done. Already, at this writing, January 20, the sun sets twenty-five minutes later than it did a month ago, and by February 1 the difference between what it is and what it was will be still more distinctly noticed. In the way of protection, it is not so much good-sized trees and shrubs that are thought of, as it is those of the small and seedling sizes. Deciduous stock as well as evergreen, if without covering of some kind, will get heaved out by the freezing and thawing going on, and it is to prevent this that covering is thought of. What is required is shade, produced by some rough litter—anything that will prevent the alternate freezing and

thawing which occurs when the sun has full play on the stock. When snow is about all Winter, that is entirely sufficient; but in the Middle States we cannot rely on it, and must use straw, long manure or something of like character to effect the purpose.

But few nurserymen in the colder States set out young stock in the Fall, unless well rooted. Where not well rooted this is the sort of stock that gets heaved out lying on top of the ground when Spring comes, and to prevent which the mulching must be applied. It applies, of course, to florists' stock, herbaceous, and all small, poorly rooted stock or stock with but a single stem root with no fibrous ones to hold them in the ground.

The Proper Planting of Trees.

An employee of a nursery writes me, inquiring as to the recognized way of planting trees, inasmuch as relates to the packing or tramping in of the soil. He says that he has noticed that many gardeners fill in the soil about a tree by throwing it in loosely, while others go to a good deal of trouble in tramping the soil in as it is thrown in spadeful by spadeful. This question is one that often comes up, and seems never settled, because many trees planted in each way grow. But there is a certain requirement the roots must have attended to approach a successful transplanting, and this is, that the soil must firmly surround them. This is possible to occur under each plan. Soil thrown in loosely, if of a light, sandy nature, will be apt to pretty well surround the roots, especially so if a good watering, natural or artificial, follows. But

FRANK HAMILTON

Manager Cottage Gardens Co.'s Nursery and Landscape Departments, Queens, N. Y.

when the soil is tramped in it is fairly inferred the roots are well encased, particularly if the first few spadefuls are gotten in under and around the roots by hand. In my own practice, no matter how small the tree or shrub I plant, I always tramp in the soil. A help, and a far greater one than many think it, is to pour water into the hole when the soil has been filled in and tramped until the hole is three parts filled. No matter if the soil is already pretty wet, it is not poured in for the purpose of affording moisture to the plant, but to settle the soil about the roots. This it does, compacting it as nothing else will do as well. A hint of how it compacts it may be gathered from noticing plumbers who tear up a street to lay pipes. After the work of filling the trench is completed, or as it proceeds, a hose is attached to a plug, the water turned on and the soil flooded; in this way solidifying the soil almost as it was before. If this was done with all trees, large or small, when planted, but few would die.

It has often been remarked how rarely trees die that are heeled in in nurserymen's sand heaps, even when hurriedly set in. This is accounted for by the fact that the fine sand soon finds its way around the roots, compacting them as well as the best of care often does.

JOSEPH MEEHAN.

Failure of Seeds to Grow.

That the raising of seedlings of trees and shrubs requires more than ordinary care, is becoming better understood every year. By more than ordinary care is meant more than is required to raise successfully flowers and vegetables from seeds. But few, if any, seeds of the latter carried in stock by seedsmen require any particular care to insure vitality, but it

would not answer to keep tree seeds in the same way. Many of the kinds quickly lose their germinative power if kept in a dry state. The greater number of deciduous sorts do. For this reason all kinds, excepting those of a coniferous nature, should be procured as soon as possible in Autumn, and then be either sown at once or mixed with damp soil for the Winter, and then sown as soon as possible in Spring. A correspondent wrote me last week asking what would be his chances with sugar maple and American white ash, sown in Spring, which had been kept in a dry shed since gathered in September. It is not probable the ash would grow for a year; the sugar maple would not be likely to grow at all. Maples soon lose vitality. The proper way is to sow in Fall, but the seed will grow sown in Spring, if it has been kept moist all Winter. Ash will not lose its growing quality by being dry for a while, but it will be a year in the ground to "pay up for it"; whereas, had it been sown as soon as gathered, it would have grown the Spring following.

Those who deal in tree seeds find it difficult to conduct a paying trade. As mentioned, to be in the best condition for Spring planting, seeds should be kept moist all Winter. To do this would require a great amount of labor and care in the mixing with sand, moss, or like material, and then there would need to be considered the extra expense putting up and mailing or expressing them. The cost would be increased on every article. Then would come the competition of the neighbor, one who had not troubled to preserve his seeds, and could sell for a low figure. He would get the order, unless from one who knew what was what, and so would pay for the superior article. It is, as said, but few who understand what such seeds require. They buy flower and vegetable seeds in Spring and receive them in a dry state, and do not see why tree seeds should be any different. The best way of all is to study out in the Summer what seeds will be required, and then secure and sow them as soon as they ripen. Next to this procure them as soon as possible, and keep them in a cool place until Spring, first mixing them with fine soil or placing them in boxes between layers of damp moss. Coniferous seeds keep very well just as they are procured, in a dry state.

Frank Hamilton.

We present herewith an excellent portrait of Frank Hamilton, who has become associated with the Cottage Gardens Company, of Queens, N. Y., as manager of the firm's increasing nursery department.

Mr. Hamilton is a native of New York City, where he was born thirty-seven years ago. He received his education in the schools of Tarrytown, N. Y., and on Staten Island, and at the age of eighteen years entered the employ of F. R. Pierson, of Tarrytown, N. Y., in which establishment he acted severally in the capacity of propagator, and for three years as traveling representative, finally being in charge of the nursery department of that concern. Leaving the Pierson plant, Mr. Hamilton was for a time in charge of the greenhouses of Central Park, New York, at the same time supervising some of the outside features of the Park, particularly the Ramble, and for the past three years he had been head gardener at the Bronx Park, where he planned and carried out many telling improvements.

Mr. Hamilton goes to the Cottage Gardens Company with the highest recommendations, and with the best wishes of those with whom he has been associated. He is a painstaking, conscientious, hard-working fellow, and doubtless his services will prove as acceptable and valuable to his new employers as they have done to others whom he has served. At the recent meeting of the Cottage Gardens Company Mr. Hamilton was elected vice-president of the firm.

SAN FRANCISCO.—This month of all the year in San Francisco is notable for its many annual dinner parties, at flower-decked tables. Undoubtedly the most picturesque table decoration effect thus far in the current month was incidental to a dinner given on the 11th instant by Mrs. Jane Lathrop Stanford, of Leland Stanford, Jr., University fame, at her California street home. It was the annual entertainment to the president and trustees of the university, and the table decoration, by Alex. Mann, Jr., including the reception and drawing rooms, consisted exclusively of maidenhair ferns and sixty dozen selected, 30-inch stemmed Liberty and American Beauty roses displayed in Mrs. Stanford's magnificent service of golden urns and vases.

Also, in this second week of the New Year, the above named florist built a bower of smilax and asparagus, studded with white roses, a bell of white carnations being suspended from the inner center, beneath which, holding a shower bouquet of white hyacinths, stood his sister, Mildred Mann, supported by her betrothed, Abe Reinhertz, and thus the two became man and wife.

ALVIN.

DAVENPORT, IA.—Otto Klingbeil, 304 Brady street, has filed papers in bankruptcy. These will be forwarded to Des Moines, where they will come into the hands of Referee in Bankruptcy Helmick.

HUNTSVILLE, ALA.—Gustave Hoffman, who has been engaged in business in this city for over a year, has not been heard from in two weeks, at which time he took a train for Decatur, stating he was going to buy some pipe. The business, which has grown to be quite extensive, was left in the hands of an assistant, and is in good shape.

The New Rose WELLESLEY

is a welcome addition to the list of forcing roses.

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

Grafting.

Perhaps the bulk of the roses grown under glass, for cut flowers, are on their own roots, as most growers seem to believe that the grafted plants do not produce any more flowers.

It would be interesting if each grower would try a few plants, and keep a record of blooms cut, counting quality as well as quantity. On most places, where a small number of grafted plants have been tried, the number of buds they produce is never noted, and unless they have made a remarkable growth, they are discarded as of no special value. It is, of course, more difficult to procure good grafted stock, and where only a few are used, it is best to purchase them from some reputable firm.

The manetti is considered the best stock, though a number of other vigorous growers have been tried by some of our foremost exponents of grafted plants. The stocks can readily be grown here, but can be procured cheaper from Europe. When they arrive in the Fall they should be heeled in, in a cool place, where there is no danger of frost and still remain dormant. When wanted they are potted in two and a quarter or two and a half inch pots and placed in a temperature of 40 to 45 degrees till fairly well rooted, when they are ready for use. After potting, it is needless to say, they require a small amount of water, until the roots have started.

It is well to have the stock and the cion of an uniform size as possible; and the operation of grafting should be carefully done, as the more perfect the union the better the future welfare of the plant. The manetti should be cut back as close to the pot as it is convenient to work, by making a slanting cut, at least three-quarters of an inch long, and the cion cut to suit; and if smaller than the stock place it to one side, so that the bark of one fits closely with the other. Tie securely with raffia, as string will cut and injure the graft. The cion should not be in water very long, as if the wood absorbs much water it prevents a good union.

The frame which is to receive the plants should be almost airtight, and so constructed that a temperature of 80 degrees may be easily maintained. The woodwork should first receive a coating of good whitewash, then pack about an inch of moss on the bench. On this place screened ashes, or the moss can be dispensed with and nothing but ashes used. These should be well watered before the plants are put in, so that it will not be necessary to do any watering for three or four days. Keep the frame close, and if the temperature is steadily maintained at from 80 to 82 degrees, they will "take" in a little over two weeks. They should be gradually hardened off by raising the sash which forms the top of the frame about an inch, after five or six days giving more air, until the union is complete, when the plants can be taken out, and placed in a house, staked and tied, to prevent breaking, and receive much the same treatment as other young plants.

CARNATIONS

Novelties of the Season

Variegated Lawson

This variety, introduced by us this season, is sure to meet with popular favor. It is a sport from **Mrs. Thos. W. Lawson**, pure ivory white, with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, states that he believes this will outbloom the favorite, **Mrs. M. A. Patten**, two to one. For some reason or other, the stem seems to be longer than that of **Mrs. Thos. W. Lawson**, and the flowers are less inclined to burst. It is a beautiful variegated variety, and one that is sure to be in demand on account of its delicate pencilings. It is superb in every respect. Our exclusive purchase of this variety has created a sensation in the daily press of the country.

\$12.00 per 100; \$100.00 per 1000

Fiancee

The Queen of Pink Carnations. In a class by itself. Magnificent flowers. Strictly fancy in every respect.

\$12.00 per 100; \$100.00 per 1000

Cardinal

Bright cardinal, or crimson-scarlet.

\$12.00 per 100; \$100.00 per 1000

Fred Burki

Recommended as an extra free-blooming white variety and a claimant for popular favor.

\$12.00 per 100; \$100.00 per 1000

The Best of Last Season's Novelties and Older Standard Sorts White Lawson

We consider this variety, which we introduced last season, the finest white carnation ever sent out. It has given great satisfaction. When left on the plants until fully developed, the flowers are much larger than **Mrs. Thos. W. Lawson**. Nothing excels it for freedom of bloom, fine keeping qualities and general all-round value. We believe that this will occupy among white carnations the same place that **Mrs. Thos. W. Lawson** does among pinks. **Remember that we are headquarters for it.** Splendid stock ready for immediate delivery.

\$7.00 per 100; \$60.00 per 1000

Daheim

A fine crimson, introduced by us last year, with the style and habit of **Mrs. Thos. W. Lawson**; might be called a **Crimson Lawson**, as it has all the characteristics of that variety as far as

freedom of flowering, habit of growth, etc., are concerned. It has grand, stiff stems, calyx never bursts, and it is a free and abundant bloomer, developing very quickly. We believe this to be the best all-round crimson carnation.

\$6.00 per 100; \$50.00 per 1000

Mrs. M. A. Patten

This grand variegated carnation has given splendid satisfaction.

\$6.00 per 100; \$50.00 per 1000

Lady Bountiful

A magnificent white of last season's introduction.

\$6.00 per 100; \$50.00 per 1000

Enchantress

This magnificent carnation is unequalled for size, beautiful color—light, silvery pink—and freedom of bloom. It brings the very highest market prices and is in great demand.

\$4.00 per 100; \$35.00 per 1000

Mrs. Thos. W. Lawson

The standard dark pink.

\$3.00 per 100; \$25.00 per 1000

Prosperity

A magnificent fancy sort, entirely distinct from others. A sterling variety.

\$3.00 per 100; \$25.00 per 1000

We are also pleased to announce that we have been appointed distributing agent for the sale of

Victory

and that all orders for this variety should be sent direct to us. We are now prepared to book orders for this variety for **delivery Spring, 1906.**

We have watched this carnation for some time, and believe that it is the best scarlet ever offered, with good stems, flowers of the largest size; a magnificent keeper and shipper and an exceedingly free and early bloomer. While the flowers of this variety are of the largest size, and it will rank in the fancy class, its freedom of bloom and general good qualities will make it a bread-and-butter scarlet. There is a great demand for a good scarlet at the holiday time, and the flowers of this variety brought 25 cents each last Christmas, which is an indication of its popularity.

Strong rooted cuttings, delivery next season,
\$12.00 per 100; \$100.00 per 1000

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

CARNATIONS

Rooted Cuttings Now Ready

Eclipse Our 1905 introduction. A pink carnation, lighter in color than Lawson and of a more even and bright shade of pink. No objectionable shading or bleachings. A strong free growth, large flowers on long stiff stems and early and continuous flowering.

Fiancee A most pleasing shade of medium pink. No carnation has ever equaled the number of awards received by this variety.

Cardinal Brilliant scarlet. A great improvement over Estelle.

F. Burki Pure white.

The above four varieties,
\$12.00 per 100; \$100.00 per 1000.

Richmond Gem Scarlet, \$10.00 per 100; \$75.00 per 1000.

In addition to the above we can supply twenty-five of the best standard sorts, varieties that are profitable to grow. Our preliminary Price List will be sent upon application. We are pioneers in the carnation line and our facilities for rooting and handling cuttings are nearly perfect, due to our long experience.

CARNATIONS.

Looking After Rooted Cuttings.

Just as soon as the cuttings have roots that are about one-half inch long they will want to be transferred to the bench or potted off, whichever way you follow. The bench, I think, is better, providing the soil you use comes up in a nice ball. You, of course, should have had your soil in shape some time ago; if not, be sure the frost is all out before planting, and also be sure the soil is moist, but not so wet as to make it lumpy. This holds good with potting soil as well. It will pay you to always have your soil in a place where it will be free from heavy rains and can be handled at any time. Do not use any manure in the soil for young stock. When preparing soil for bench planting you should tramp it somewhat, so as to have it firm, but don't overdo it. Of course, some soil cannot stand this treatment; but you must take into consideration that the object is to have a slow, hard growth.

When you are planting in benches do not rush this work through carelessly, but do it right from the start. You won't need a line to plant the cuttings by, as one ought to be able to make a fairly straight row without. Make a hole in the soil large enough, so as not to squeeze the roots all in a lump. When putting the cuttings in and before placing the soil around the roots shake them slightly, so as to have them spread out as much as possible, and be sure you give them enough room each way, so they will not be crowded. After the breaks have made a good growth, figure on at least two weeks longer than planting out time, as one can never tell when he will be able to plant in the field, and in potting the cuttings you have to be just as careful as when planting in the bench, and press the soil in firm around the cuttings so that they will stand up after being watered in. Of course, you want to plant them firm in the bench as well. Fumigate once a week, and in case they have a slight start, fumigate every night until you are rid of aphids, for, from now on, as the days get brighter the pest will increase. Syringe your cuttings once a week if the soil is dry enough for spiders, but by all means keep them down, for when you put a plant in the field with either of the above pests on it you will be sure to have a bad, unhealthy plant at benching time. Now, a word about insecticides. I have received a sample can of Nico Fumil, and I find that it does everything that the manufacturers claim for it, and find it one of the easiest papers to handle; so if you have a bad case of green fly get a sample of Nico Fumil. It will rid you of them in a short while.

PROSPECTOR
 RED SPORT FROM MACEO

Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.

It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.

Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.
 We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

RED SPORT (OF MACEO) The NEW "BREAD AND BUTTER" Brilliant Red Commercial Carnation

WHAT SOME OTHER PEOPLE SAY ABOUT IT: Washington, D. C., December 19, 1904. 1214 F Street, N. W.

A. B. Davis & Son, Purcellville, Va.
 Gentlemen:—Please make our order for rooted cuttings of **RED SPORT** 2,000 instead of 1,000.

The blooms you sent in to-day were certainly very fine. We have been watching this promising new red for three years, and the more we see of it and the longer we sell it over the counter the better we like it.

We do not make a practice of going in very strong on the new varieties the first year they are sent out, but after seeing **RED SPORT** growing and blooming at your place last Tuesday, we are convinced it is a great Christmas carnation, and an all-around money maker, and we wish to increase our order as stated above.

Yours very truly, A. GUDE & BRO.

A. B. Davis & Son, Purcellville, Va.
 Gentlemen:—Your letter and **RED SPORT** of Maceo came to hand Friday. We waited to see how carnations would keep before writing you.

The color and keeping qualities are the best, and if it blooms as freely as Maceo it is a good one. Very respectfully yours,
 BASSETT & WASHBURN.

Kennett Square, Pa., October 14, 1904.

A. B. Davis & Son, Purcellville, Va.
 Dear Sirs:—Yours 12th at hand and I will be glad to include your **RED SPORT** of Maceo in our list, and believe it will meet with good sale. You may book my order for 2,600 of them to start with. I think you have a good thing and I congratulate you.
 Very truly, WM. SWAYNE.

WHAT WE HAVE TO SAY ABOUT RED SPORT:

THIS New "Bread and Butter" commercial brilliant Red Carnation, now in its fourth year, has the hardy constitution of Gen. Maceo, with a stronger, heavier growth, longer and stiffer stem and larger flower. Growing under the same conditions and in the same house with Flamingo and Estelle, it has produced four times as many flowers as the former and twice as many as the latter. The color is as good as Estelle and the bloom brings as much as does Estelle at its best.

Every flower is of a uniform, brilliant red, perfectly double, with an ideal calyx; in fact, we have never seen a split one. **RED SPORT** is perfectly healthy, an easy variety to grow, an early and continuous bloomer, throwing its heaviest cut and during the Christmas holidays and during the winter months, when red is in demand. **RED SPORT** will keep longer and travel farther than any other red carnation, and will prove a bonanza to growers doing a shipping business. If the scarcity of reds in the market that now exists continues, **RED SPORT** will pay better to the square foot of bench room than any other variety of any color to date.

Every florist who has seen **RED SPORT** growing has placed an order for rooted cuttings, which tells the tale. All our rooted cuttings are sold until January 25. Orders filled in strict rotation from above date on. Prices, 12 for \$1.50; 25 for \$2.50; 50 for \$4.00, postpaid. \$5.00 per 100; \$50.00 per 1000 by express. We guarantee cuttings to be well rooted and to arrive in good condition.

QUEEN LOUISE, the Standard White, \$1.25 per 100, postpaid; or \$10.00 per 1000 by express.

The Retail Trade

DOINGS OF WASHINGTON (D. C.) FLORISTS.—

The President and Mrs. Roosevelt gave a reception to the diplomatic corps on the twelfth inst., when the White House was decorated with azaleas, ferns and camellias. Mrs. Roosevelt carried a bouquet of the Killarney rose; the bouquets carried by the Cabinet ladies were of lily of the valley, Roman hyacinths and violets, Enchantress carnations and Souvenir du President Carnot roses.

Gude Brothers had a large dinner decoration at the Arlington Hotel, given in honor of the architects who have held their annual meeting in Washington this year. They used 2000 white carnations, 2000 pink carnations, 4000 lily of the valley, 400 cypripediums and 400 American Beauty roses; the dinner was given at seven tables to seat twelve each and five tables seating twenty each. The centerpieces were made of carnations, lily of the valley and cypripediums. The room was elaborately decorated with Southern smilax and American Beauty roses. No plants were used. The decoration was one of the finest that has ever been done at this celebrated hotel.

J. H. Small & Sons had the decoration for the Bachelor's Ball, at the New Willard. The ballroom and reception rooms were decorated with palms,

(See Page 36, Issue of January 14, 1905.)

ferns and Southern smilax. The floral feature, which consisted of the choicest flowers, was a sight worth going a long way to see. This firm also had a large decoration at Towns's Mansion, on Thursday evening, when American Beauty, lilacs and orchids were prominent features.

George Shaffer has had a decoration each day during the week, which kept him very busy.

Mayberry & Hoover had several decorations on which called for a large number of roses, especially Bridesmaid.

Z. D. Blackstone seems to have a monopoly on the wedding decorations. He had several on last week; some of them called for elaborate decorations at the church. Lily of the valley and violets were used for the bridal bouquets and Bride roses for the Bridesmaid.

F. H. Kramer has been very busy with funeral work.

J. L. Loosé has a fine display of azaleas and cyclamen in his store windows.

J. R. Freeman is sending in some fine lilacs and violets from his Brightwood place.

N. Studer has a fine lot of small palms, pandanus and dracenas ready for the trade; he also has a large stock of roses and bedding plants, which will be ready for delivery in the early Spring.

The excavations for the new buildings of the Agricultural Department are progressing as rapidly as the weather will permit, and from present prospects building will be ready to be commenced as soon as the severe weather shows signs of breaking.

Customs House Decisions.

Chip Baskets.—In the protests of N. F. McCarthy & Co. against the assessment of duty by the Collector of Customs at the port of Boston, heard before Board 1, January 16, 1905, the following opinion was rendered by McClelland, G. A.: Three items of baskets, classified as manufactures of willow under paragraph 206, tariff act of 1897, were held, on the authority of Abstract 149, to be dutiable as manufactures of chip under paragraph 449, as claimed by the importers.

Preserved Leaves—Dyed Moss.—In the protests of Carl Netschert against the assessment of duty by the Collector of Customs at the port of Chicago, heard before Board 1, January 12, 1905, the following opinion was rendered by McClelland, G. A. Certain leaves preserved in their natural state by dipping in a chemical solution were held, on authority of G. A. 5800, to have been properly classified under paragraph 425, tariff act of 1897, as ornamental leaves. Certain dyed moss was held, on authority of Abstract 2889, to have been properly classified as an unenumerated manufactured article under section 6 of said act.

Seizure and Fine for Fraudulent Entry—Duty.—Where goods are seized for fraudulent or false entry under section 9, act of June 10, 1890, and released upon the payment of a fine equal to the amount of the duty, the importers are not thereby relieved from the payment of the duty. The fine is a penalty incurred by reason of a violation of a law. The duty accrues under the law by the act of importation. They are separate and distinct and bear no relation to each other.

Value Upon Which Ad Valorem Duty Should Be Assessed.—It is the final action of a duly authorized appraising officer which fixes the dutiable value of imported merchandise. The collector is as much bound by this action as are the importers. In liquidating an entry of merchandise subject to ad valorem duty, the collector must ascertain the amount of duty by applying the rate which the law provides to the value as stated in the invoice, unless the same is raised upon entry or by an appraising officer and then to the value as stated in the entry or in the final appraisalment.

The United States Circuit Court, Southern District of New York, December 22, 1904, decided as follows:

Illegal Reappraisal—Failure to Examine Merchandise.—In a reappraisal of imported merchandise by a single general appraiser or a board of three general appraisers, under section 13, customs administrative act of June 10, 1890, it is not enough to inspect the examination packages covered by section 2901, Revised Statutes, which requires that at least one package of every invoice and one package at least of every ten packages of the merchandise shall be sent to the public stores for examination and appraisalment. Unless all of the goods under reappraisal, or samples representing every variety thereof, are present before the general appraisers in such proceedings the reappraisalment is invalid.

Same—Dutiable Value.—Where a reappraisalment by a general appraiser or a board of three general appraisers is invalidated by failure of the general appraiser or of the board to have produced before them and to examine all the different varieties of the merchandise in question, or samples thereof, duty should be collected on the basis of the value stated by the importer on entry, and not on that found by the local appraiser, even though the appraisalment by that officer were valid, if it appears that during the pendency of the reappraisalment proceedings the importers sought and were denied permission to produce evidence equivalent to the presence of the actual samples, though neither the merchandise itself nor actual samples therefrom could have been produced.

GRAPES UNDER GLASS.

There are many varieties of grapes adapted to growing under glass, but the best, and those that will find the readiest sale are to be found in the Muscat family. Every one who is acquainted with the Muscat grape will understand why the demand is brisk; the quality is far superior. Some may say the Muscat family are a little more difficult to bring up to the high finish necessary to make them appreciated; I would say that a poorly finished bunch of Muscats is not far in advance of the Sweetwater varieties.

What is the cause of so many poor Muscats? In going around the different fruit-growing establishments you will generally notice Muscat grapes under the same roof with other varieties. I have seen good Muscats produced in this way, but to make a success they certainly should have a house to themselves. Take, for instance, a house of Muscat of Alexandria, which is the most satisfactory of them all—it is worthy of a compartment by itself, and I am sure the results will then be satisfactory, providing the necessary details are attended to. Supposing we plant Muscat of Alexandria with Black Hamburg, what is the result? The Muscat will come into blossom just as the other variety is set; to then treat one variety as it should be is a damage to the other to a certain extent. Muscat of Alexandria is the most profitable of this family, but not the finest in flavor by any means.

I cannot help say a word for a noble grape. I refer to Canon Hall Muscat; for size of berry and richness of flavor, to my mind it has no equal. Its poor setting qualities, however, kill it. If we could but find

an approved method of setting this variety, what a grape it would be for appearance on the dinner table, as well as for its agreeableness to the palate!

In regard to Muscats setting, there is just as much damage done in keeping the atmosphere too dry as there is in keeping it too moist. Judgment must be used in this respect. Some years ago, or when I first started to grow grapes in this climate, our Muscats did not set satisfactorily. The following season I kept more moisture in the house, with the result that I obtained a good set of fruit. I presume quite a number who handle forcing fruits here received their first lessons on the other side of the Atlantic. The atmosphere there is more moist, yet it would be a mistake to damp a grapery when in bloom if the vents were closed. Every bright day, when there is air on, damp down once a day, say about 10 to 11 a. m.; this is beneficial rather than injurious. Muscat grapes, after they are fairly started, will enjoy five degrees higher temperature than other varieties. Right here is sufficient reason for growing them alone.

Each and every one knows best when his fruit is most in demand, but when there is call for a continuous supply if one house is started the middle of December, a good time to start a second would be the first of February; these latter would follow the early house nicely. It is not necessary for me to go into details here as to topdressing borders, etc., as what was good for the early house also holds good for others; still, in starting up a fruit house be sure the borders get a thorough soaking. Naturally, during the winter, the borders get fairly dry, and it takes considerable water to thoroughly wet them through. It is not always advisable to trust to guesswork, and the borders, after being watered, should be examined to make sure they have been thoroughly moistened. I am confident there have been more failures in fruit growing through not giving enough water than through having given too much. There is not much danger of overwatering a fruit border

FLORAL SHIP OF STATE

Presented to Mayor Schoenthal of Orange, N. J.

Artist, Hale; Photo by John McGowan

when properly supplied with a good drainage. It is not my intention at this time to go into the construction of borders; later I hope to give my views on the subject. Without question, it is a very important item in fruit growing.

Speaking of Muscat grapes, another variety comes to mind worthy of mention, namely, Madresfield Court Black Muscat. I have grown this variety for the past ten years fairly successfully in a late grapery, but just at the period of coloring, or as they begin to ripen, no moisture must lodge on the benches, or the berries will be sure to split; carefulness at that period will overcome the difficulty. WM. TURNER.

[Note. A fine illustration of Muscat of Alexandria, grown by Wm. Turner, was printed in The Florists' Exchange, issue of Dec. 17, page 745.]

Ship of State in Flowers.

The floral ship illustrated was made up in a few hours, at short notice, by Hale, florist, Orange, N. J. It was filled with Bridesmaid roses, while the base was composed of stevia and carnations, and was presented to the new Mayor, Isaac Schoenthal, at his inauguration on January 2. There were horse-shoes and baskets without number, but the ship pictured received the most attention for its novelty and appropriate symbolism, as well as beauty. For the photograph, from which our illustration was made, we are indebted to John McGowan, Orange, N. J.

Fourteenth Annual Meeting A. C. S.

The proceedings of this meeting will be found spread out in very complete detail on pages 102 to 110 of this issue. That it was as successful as any of its predecessors, perhaps even more so, is self-evident. The meeting was largely attended by representative growers, the contest for prize awards was keen, the proceedings were lively, and with hotel, hall and exhibition all under one roof, nothing had been left undone by those most hospitable of hosts, the Chicago Florists' Club, to insure absolute success.

Without doubt this society, so triumphant in its onward march, so progressive, and, above all, so intelligently enthusiastic, has been the means of placing hundreds of thousands of dollars in the pockets of our carnation growers since the inception of its well-directed career, and its future seems well assured.

That kindred societies may, out of the history of the A. C. S., take lessons for the future, receive courage of heart and resolve henceforth to go out and conquer, each in their own specialized field, is the sincere and hearty wish of The Florists' Exchange.

Judicious Advertising.

Probably at no other period since the beginning of the horticultural industry in America has the trade been subjected to greater importunity for advertising business than it is to-day. This, of course, is the natural outcome of the increase in the number of periodicals devoted to the interests of the craft. That it is having its influence—a detrimental one, alas!—is apparent. Several firms having come to the conclusion that they cannot afford to patronize the whole list of horticultural periodicals, have decided to withdraw their business from all, for "fear of giving offence" to others should only one or two be selected in which to advertise. This kind of action will inevitably prove more harmful to the advertiser himself than to the papers ostracised.

And, at the same time, it is an erroneous view to take of the matter. While all the trade journals now published must, of necessity, seek their clientele in the same field, there are those the circulation of which must be larger than the others, the returns secured from which are better than from the others. This fact can easily be ascertained by a fair test.

It certainly is not good judgment to advertise at a loss. Neither is it a good business principle to allow sentiment to enter into any part of our commercial dealings, and it shows a poor appreciation of the moral stamina of the publishers of our trade papers

when any advertiser is influenced by the belief—a purely imaginary one, we feel sure—that either an advertiser or his wares would be "knocked" by a paper with which he did not consider it profitable to place his business.

THIS WEEK'S SUPPLEMENT.

Acer Polymorphum—Common Japanese Maple.

Every year sees an increased interest taken in the many lovely forms of Japanese maples, the blood-leaved, golden, variegated, and the several cut-leaved kinds, some of the latter being of the blood-leaved variety. Before us, in the illustration, is the parent of many of these beauties. It is the typical form of polymorphum. The average customer of a nurseryman will desire the sorts with colored foliage, but if any of them should read this, and to the nurseryman himself, I would say, do not overlook the polymorphum. The foliage, handsomely divided, is attractive all Summer long, and when the last weeks of Autumn come it is of more gorgeous color than any of the others have shown all the season through. With the advent of cold nights and the ending of the functions of the leaves, there comes to them a vivid scarlet, which is kept up until the leaves drop. The blood-leaved variety does this, too, to some extent, but for Autumn effect, plant the Acer polymorphum.

There is a great difference in the appearance of this maple as seen in different positions. The illustration represents a beauty, growing at Chestnut Hill, Pa. It may have been pruned, but we do not think so, but believe it to be its natural growth. At first sight these Japanese maples impress one as resembling the English field maple, campestre, and they do in a general way, but the leaves of the Japanese are more finely divided, smoother, and the divisions more pointed.

This is the maple used as a stock for the various beautiful varieties spoken of. They are both grafted and inarched on it. Grafting is done in early Spring and inarching through the Summer months. The stocks themselves, the polymorphum, are increased by seeds, but as there are not many seeds in the market from trees here, the custom is to buy them; and their long journey here from Japan is too much for them when sent in a way not to preserve them moist, and such seeds rarely grow, nor will any maple seeds when let dry out. It is, therefore, better practice to buy the stocks which importers offer. These various Japanese maples are rarely seen in our country above a bush size, but in time larger ones will be seen, as in their native land they become small trees, and the one illustrated promises to make a good height.

JOSEPH MEEHAN.

OUR ILLUSTRATIONS THIS WEEK

Illustrations of the subjects herewith described will be found on pages 101 to 108

Carnation Lieut. Peary.

This variety is a pure snow white, highly fragrant, well built up in the center, and of fine form. The flowers average three inches in diameter and are carried on long, stout stems. It is an excellent keeper and the plants are strong and vigorous, commencing to flower early in Autumn and continuing throughout the season. Originated by C. W. Ward, Cottage Gardens, Queens, N. Y.

Awarded Certificate of Merit, with 88 points, at Chicago, this week.

Robert Craig.

This is an ideal Christmas carnation, a scarlet of the same shade of the holly berry and an easy grower. The flowers come on extremely long stems and are carried perfectly upright. It is a good keeper, excellent in form, and is classed as the largest and best fancy commercial scarlet variety ever before introduced. Originated by C. W. Ward, Cottage Gardens, Queens, N. Y.

Awarded Certificate of Merit, with 88 points, at Chicago, this week.

Victory.

A brilliant scarlet variety, easy to grow, and a free bloomer; flowers average three inches or more, and are borne on long stems. The plants have a vigorous habit, and produce freely all through the season. Originated by J. Sakowich, and disseminated by Guttman & Weber.

The distributing agency for Victory has, we understand, been secured by F. R. Pierson Co., of Tarrytown.

Mrs. W. L. Lewis.

This is a pure white flower, three inches in diameter, and carried on a long, stiff stem; it is a good keeper, a great producer, and does not burst the calyx. Originated by W. L. Lewis, Marlboro, Mass.

Phyllis

This is a new light pink carnation, a true Daybreak color, which originated with W. N. Rudd, of Mount Greenwood, Ill. It is described as being a free bloomer and a good keeper. The Committee of Award of the

New York Florists' Club, after inspecting the variety growing at Summit, N. J., recommended that the club grant its certificate of merit therefor. Phyllis is being introduced by John N. May, Summit, N. J.

Flamingo

The accompanying photograph of a bench of the scarlet carnation Flamingo, photographed January 5, 1905, illustrates the productiveness of this variety. This same center bench produced a heavy cut for Christmas and again for New Year's, and five days later was again a mass of bloom. L. E. Marquisee, of Syracuse, N. Y., the introducer of Flamingo, has not given the plants any feeding to date, so the results obtained are not the outcome of any special treatment.

J. B. B.

Variegated Lawson

(Photographs and description by F. R. Pierson Co., Tarrytown, N. Y.)

Variegated Lawson is a sport from Mrs. Thos. W. Lawson. It is pure ivory white, with delicate carmine pencillings, almost the exact shade of Mrs. M. A. Patten, with the true Lawson habit. From what we have seen of it, we consider the stem of Variegated Lawson considerably longer than that of Lawson, for some reason or other. The flower is not so much inclined to burst as the true Lawson.

John E. Haines

The John E. Haines carnation has been grown four years. It is an early, free and continuous bloomer, flowering from October to July, keeping its good color and size of flower—3½ inches and over. The stems are stiff and long; in the month of March they attain a length of three feet. The stalks produce no extra grass. All shoots will make flowers. The carnation will be disseminated in 1906. The John E. Haines carnation has received the following awards: A certificate of merit, from American Carnation Society at Detroit; diploma at Lenox, Mass.; certificate of merits each at Madison, N. J.; Red Bank, N. J.; Bay Shore, L. I.; Orange, N. J.; New York, N. Y. The seedling was raised by John E. Haines, Bethlehem, Pa.

White Lawson

(Photographs and descriptions by F. R. Pierson Co., Tarrytown, N. Y.)

Nothing need be said in praise of White Lawson except to state that it is a true sport of Mrs. Thomas W. Lawson and as good as that variety in every respect, and has all its remarkably free-blooming qualities, but is pure white. No extended description is necessary; its value will appeal at once to every carnation grower. This originated with Mr. Charles H. Allen, Floral Park, N. Y., one of our most expert growers, and recognizing at once its great value, we purchased his entire stock.

Imperial

The Imperial carnation is now being grown in its fourth year, and is a fancy and also a commercial variety. It is a strong grower and a continual producer of flowers, average size, 3½ inches, with stems in November 3 feet long, and in Spring as much as 4 feet long. The color is a very delicate pink, variegated with Lawson Pink. The growth is on the Lawson type, but stronger.

The Imperial carnation received the following awards in the Fall of 1904: Diploma at Lenox, Mass.; certificates of merit each at Madison, N. J.; Red Bank, N. J.; Bay Shore, L. I.; Orange, N. J.; New York, N. Y.; Providence, R. I.

This seedling was raised by John E. Haines, Bethlehem, Pa., to whom we are indebted for photographs and descriptions.

Daheim

(Photographs and descriptions by F. R. Pierson Co., Tarrytown, N. Y.)

Daheim was raised by W. C. Russell, superintendent for C. F. Dieterich, Esq., Millbrook, N. Y., from whom we purchased the entire stock. The flowers are of mammoth size, averaging fully three and one-half inches in diameter, of splendid shape, compact, well built up in the centre, and possessing magnificent keeping qualities. It never shows the slightest tendency to go to sleep. The color is that desirable shade of crimson called the Harvard color—crimson, slightly shaded with maroon—wonderfully brilliant in the sunlight or artificial light. The flowers are also very fragrant, having a decidedly strong clove fragrance. The habit of the plant, foliage, freedom of bloom, stem, etc., are after the style of Mrs. Thomas W. Lawson; in fact, it might be called a crimson Lawson, as it has all the characteristics of that variety as far as freedom of flowering, habit of growth, foliage, etc., are concerned. It has a grand stiff stem, holding the flowers perfectly erect, the calyx never bursts, it is a very free and abundant bloomer and develops very quickly.

Begonia Tunford Hall

The accompanying photographs represent a house of Tunford Hall begonia and a specimen plant of same at J. A. Peterson's, of Cincinnati. For the benefit of those who have never seen this begonia, I will say that the color is that of a crab-apple blossom. Mr. Peterson is an expert grower of Begonia Gloire de Lorraine, and he now has in the sand 56,000 cuttings of both that variety and Tunford Hall. These plants Mr. Peterson has sold in all the large cities of the United States, for Christmas, and he also sells the leaf-cuttings to some of the largest growers in the trade.

secretaryship, or more work might be done, easily, within the year. It has always seemed to me, in the case of the S. A. F., unwise to turn a good man out of office, and ask him to make suggestions, in his annual address, for some other fellow to develop and consummate or not, as he felt inclined. Then, too, the S. A. F. O. II. might do more of this necessary work at its conventions by weeding out the president's reception, the bowling day—which could be changed to night—and other accessories that are prodigal of time—when there is so much that is necessary to be done.

But why should Mr. Vaughan seek to place the supervision of plant nomenclature in the hands of a national council? For he says: "It is well known that the Society of American Florists, through its nomenclature committee, acted as a great check to the reckless seedsmen or plantsmen, who some years ago were sending out varieties under false names. Some such action in a national way is now needed." I had always understood that the work of the S. A. F. along nomenclature lines was not circumscribed, but national; and if the society was capable of doing effective and efficient service in the past, why not again? Re-establish your nomenclature committee, Mr. President, and see to it that they work—as hard as the peony committee, for instance? The S. A. F. should be the Ultima Thule of all horticultural interests in America. We need no council to supervise us, as long as we have a good executive committee, and other working committees, provided, of course, the appointments on these are made on account of worth and capability, and are not merely complimentary.

JOB.

will not be grown again. The same may be said of Governor Wolcott; and Queen will be discarded on account of its having too many second-class, or imperfect flowers. By far the best white in the whole establishment is the new seedling, Mrs. W. L. Lewis, which has just been brought to public notice for the first time. It is a cross between Mary Wood and Flora Hill. The illustration shows a bench as it appeared at New Year's and represents fairly well what sort of a variety it is for the Midwinter or short day season. So far as the writer could see, there was not the slightest appearance of bursting calyces, something that may be said of few whites at this season. Its color is pure white, and its habit of growth and form of flower are good, and there is every reason for its becoming one of the leading white carnations. It might be mentioned that the approximate cut from 1,200 plants for the two weeks just ended was 1,800 blooms—not very bad for the dull days of the year.

Mr. Lewis owes much of his success not only to his able management as a grower, but to the shrewd advertising of his business. He is continually distributing among his customers small souvenirs which contain cuts of different views of his place: now it will be his delivery wagon (which, by the way, is one of the best up to date we have seen); next it will be a partial view of his greenhouses; then again it will be a view of a house of carnations, and so on. In addition to this, Mr. Lewis says the best advertising medium he has found is The Florists' Exchange.

Mr. Lewis disposes of his wholesale products (cut blooms) through Welch Bros.' Market, Boston.

J. W. DUNCAN.

Reflections on Current Topics.

MR. EDITOR: At this period, when "Dread Winter spreads his latest glooms, And reigns tremendous o'er the conquered year," it feels particularly comfortable to a patriarch like myself to have so many bouquets thrown at him. My friend and co-scribbler, Arthur H. Ewing, of Canada, says he finds that my reflections contain "horse" sense—some times, and afford him amusement at others. Does that now take me out of the "donkey" class to which your contemporary and John Birnie have so ruthlessly consigned me? But why, oh, why, do my critics continue to class me in the equine category?

Mr. Ewing also asks if I have ever run a trade paper on small capital? Never; nor would I. Had I brains enough to start and operate a horticultural trade paper, I should go out among and solicit the optimistic horticultural capitalists—and run the paper on their capital.

Then, William Falconer insinuates that I am a gardening-paper-editor failure—like himself, too. An erroneous deduction. He should not, though, class himself with the failures among horticultural paper editors. He was, in my humble opinion, a genuine success as such; but he evidently operated before his time, for now, he thinks, there is "room at the top and an immense field" for such a publication; notwithstanding the fact that our gardening papers continue to go out of business. And his pet? Poor "Gardening;" it is now but the shadow of its once illuminative self, and the replica of a periodical that begins to show the earmarks of advancing age. Never mind: I am sure every intelligent gardener and florist eagerly reads Mr. Falconer's comments in The Florists' Exchange. They demonstrate that his practiced hand has lost none of its cunning, even though he may at times disagree with myself; and they continue to swell the "gossip" columns of your interesting paper which help make it the "best of its kind extant."

Now, as to the newcomer. Far be it from me to "kick" anyone for honest endeavor. But here, again, I seem to have put my foot in it, in trying to keep the horticultural (paper) world straight. Just my luck. I thought the new editor might profit by the suggestions he himself had published; and merely called his attention to something that he seemed to have overlooked.

However, we are indebted to him for having had unearthed the fact that the "ornamental horticulturist" existed long before the Scotchman began to wear kilts. He has shown in his journal that gardening had its origin in Egypt—before Adam knew what a spade was—and that the Egyptian practitioners were clothed mostly in smiles. So that history but repeats itself, in the appearance of our modern "ornamental horticulturist," in abbreviated skirts, and John Birnie's medal will not be forthcoming.

* * *

I have been following, with much interest, the remarks of the various speakers at the recent Horticultural Congress held in St. Louis. I notice that President Vaughan, of the S. A. F. O. H., says: "The officials of many of our national societies, such as those of seedsmen, florists, nurserymen, pomologists, etc., have long recognized the fact that the annual reunion is altogether too small for the proper carrying forward of the yearly work of their organizations, and have felt, when giving up office after having served for a year, that the work had not been carried on or developed as it could and should have been." Well, it seems to me, that evil could be remedied by giving these officials "an extension of time," say, ten years as president, and a lifetime as regards the

HOUSE OF BEGONIA TUNFORD HALL. GROWER J. A. PETERSON, CINCINNATI, OHIO

AMONG THE GROWERS.

The Lewis Conservatories, Marlboro, Mass.

In the younger class of growers for the Boston market one of the most up-to-date is W. L. Lewis, of Marlboro, Mass. His establishment is one of the best-kept we have seen, and he has perfected a system of general management by which he keeps himself posted from day to day on all the conditions of his business. By that I mean he knows just how many blooms a certain number of plants, or a certain variety, has produced and what he has realized from them, etc. The whole establishment comprises nearly 60,000 feet of glass, the latest addition being a house 150x110 feet, on the ridge and furrow style, built two years ago by the Lord & Burnham Co. Two large Lord & Burnham boilers heat the whole place, and Mr. Lewis feels perfectly satisfied that it is one of the best equipped extant. For fumigating purposes Mr. Lewis uses Hunt's Tobacco, which, he says, is far superior to the old way of fumigation; besides, it costs less than one-third.

The establishment is entirely devoted to carnations, although a large retail as well as wholesale trade is carried on. Not so many varieties are grown as at some places, but there are few failures to be seen. Mrs. Thomas W. Lawson is well grown for a dark pink variety. Enchantress and Fair Maid are both grown in quantity, but the former is the variety that is best liked. Mrs. M. A. Patten is exceedingly well grown and is considered the best variety of its class. Estelle has been grown this season, but will be discarded, because it throws too many single or semi-double blooms. J. H. Manley is considered good of its color.

A house of Queen Louise looks well, and although it is one of the best whites that has been tried, it

Krick's Factory, Brooklyn, N. Y.

Retail florists throughout the country are all familiar with Krick's florists' letters, Krick's pot hangers, and Krick's Christmas tree holders; in fact, the name of Krick has become more widely known than any other name connected with the retail flower business, owing to the various labor-saving devices that he has introduced to the trade during the last fifteen or sixteen years.

W. C. Krick is now located in a commodious factory at 1164-1166 Greene avenue, Brooklyn, N. Y., and a visit to his factory reveals many things of interest, particularly should the visitor happen to be an admirer of mechanical genius.

That Mr. Krick is a genius, his many self-made and patented machines give ample evidence of. His florists' letters are all made by machinery. Hard maple planks, three inches thick and ten inches wide, are cut up into block letters with a speed that is astonishing. The making of the pot hangers is also a marvelous piece of work. The wire from the coil is run through one machine and becomes perfectly straightened, then the wire is cut into even lengths, according to the size of the pot hanger to be made. These short lengths are then placed in another machine; two handles are pulled simultaneously and the pot hanger is half made. Another piece of wire is placed on a machine, and two turns of the fingers complete the other half; the two halves are joined together in a second, and the pot hanger is complete.

Mr. Krick has invented his own machinery, and has what one might term a "lead pipe cinch" in the industry. His products are growing more and more in demand every year. He is ably assisted in his factory by his son, George, who acts as general manager. The superintendent of the engines and machinery is an ex-Mayor of Idlewild, N. Y., Jerome Weinig; while the bookkeeping department is under the careful supervision of Miss Sturgiss.

SCALE OF POINTS

This scale shall be employed in judging all seedlings for Certificate of Merit, or for any special prize, and in all classes where competition is close. It shall be used to arrive at a decision:

American Carnation Society

FOURTEENTH ANNUAL MEETING CHICAGO, JANUARY 25 & 26, 1905

Full Report of the Proceedings and Exhibition

OFFICERS FOR 1905

President
JAMES HARTSHORNE, Joliet, Ill.
Vice-President
WM. GAMMAGE, London, Ont.
Secretary
ALBERT M. HERR, Lancaster, Pa.
Treasurer
FRED. DORNER, JR.,
Lafayette, Ind.

DIRECTORS

James Hartshorne, Wm. Gammage, Albert M. Herr, Fred. Dörner, Jr., Wm. Weber, E. G. Gillett, J. S. Wilson, J. F. Wilcox, Eugene Dailledouze.

PRESIDENT JAMES HARTSHORNE.

Wednesday, January 25.

(Special Telegram to The Florists' Exchange.)

The inevitable snowstorm which Dame Nature seems to have willed shall be the portion of the American Carnation Society for its annual meeting and exhibition was not wanting in this year of nineteen hundred and five. When the New York delegates arrived in Chicago, two hours late, Tuesday night, a keen northwest wind was blowing, with a temperature of ten degrees below zero.

Wednesday morning a miniature blizzard raged, but the degree of cold had modified somewhat. Many trains were from two to four hours late. Only one shipment arrived frozen. Some were late in getting to the exhibition hall, among them that of Richard Witterstetter, owing to a wreck on the road. Notwithstanding these untoward conditions, a grand exhibition and a most gratifying attendance materialized.

The show was held in the ninth floor dining hall of the Auditorium Hotel, the mural decorations of which, with numerous electric lights, provided an elegant setting for the flowers. The quality of the stock shown, generally, was in advance of that presented in previous years.

There was keen competition in several of the classes, and in but few of them were there no entries. In class A alone, there were fifty-five entries. Cardinal and Robert Craig were the winners, in the order named. Victory, on account of its long journey, did not show up so well here as at other exhibitions where it has been staged. Fiancee was shown in splendid shape, again capturing the Lawson gold medal, while Robert Craig took the silver Lawson medal. My Maryland taking the bronze Lawson medal. The winners in the other classes will be found in the prize list.

C. W. Ward had his flowers packed in fine shape, in a felt-lined trunk, all reaching their destination in fit condition to be staged. The attendance included trade representatives from Denver, Colo., east to New York.

A preliminary meeting was held at 10 a. m. to select a substitute judge in place of William Scott, who was unable to be present, on account of sickness. Mr. Eugene Dailledouze was unanimously chosen.

The management of the exhibition was in charge of Phil Hauswirth, who had everything systematically arranged, so that the judging was done in an extremely expeditious manner; even so it took four hours to accomplish this work.

The judges were Messrs. W. N. Rudd, William Nicholson and Eugene Dailledouze.

On Tuesday evening the World's Fair Flower Show Association presented Phil Hauswirth with a beautiful

gold watch, engraved with his initials, Mr. J. C. Vaughan making the presentation, and the recipient replying fitly. This was a well-merited reward for the work which had been done last November at St. Louis by Mr. Hauswirth.

Evening Session, 8 P. M.

Mr. Willis N. Rudd introduced Mr. Taylor, prosecuting attorney of the City Law Department, who on behalf of Mayor Harrison welcomed the society to the city of Chicago. That gentleman said he was not alarmed by the congress of carnationists, and no extra police protection had been taken, as he did not fear a riot; he thought that when the carnation men went away they would take with them nothing but the hearts of the people of Chicago. He then spoke of the prodigious advances in the culture of the carnation, humorously stating that he had discovered something in regard to the hybridizing of the carnation since visiting the exhibition, namely, that it took a "daisy" to produce the kind of flowers shown. (Laughter and applause.) The carnation men were pursuing their own grail—the four-inch carnation; to illustrate, he narrated a Bill Nye story, showing the result of tenacity of purpose. He said that the Chicago florists would take good care of the visitors and that the veteran J. C. Vaughan would escort them to all the places in the town that they ought to visit. (Laughter and applause.)

Mr. E. G. Hill responded in a felicitous manner. Chicago's hospitality, he said, was known to the world over. He regretted that that city was sending all its good fertilizing material to St. Louis, and that if their florists whipped the Chicago florists the sanitary department of the latter's would be responsible for the defeat. Chicago's new version of the Lord's Prayer was: "Do others, or others will do you." Growing more serious, Mr. Hill said that he thought the four-inch carnation was not far off, and, further, believed that John Thorpe's six-inch flower would materialize in the near future. He closed his remarks by expressing appreciation of the hearty welcome extended by Mayor Harrison's representative, believing that the florists' prayer to Vaughan should be "Lead us not into temptation." (Applause.)

The next speaker was Mr. Rudd, who expressed great pleasure at having the Carnation Society meet here for the second time, which pleasure was enhanced by the fact that the presiding officer on the present occasion was a Chicago man. He then introduced President James Hartshorne, who read his address, as follows:

President Hartshorne's Address.

What little I wish to say to you must be fragmentary, owing to my desire to avoid boring you with a long address. We meet to-day in our fourteenth annual convention. My predecessor has said, did he believe in signs and omens he would be fearful of the success of his thirteenth annual meeting. Now, I would say were I a believer in them I would be fearful of what was going to happen to me, as I have the honor of being your thirteenth president; but if I may judge from the many old-time faces before me and such a goodly sprinkling of enthusiastic new ones, the welfare of our society and the success of this meeting are not going to suffer on that account. Some of you have come a thousand miles or more to pay homage to (dare I say the "Queen"?)—well, to many of us the queen of flowers—the carnation.

The Work of the Society.

This society has done a great work since its organization in promoting these exhibitions, offering prizes and certificates for new as well as old carnations, thus making our hybridists work harder than ever before to keep pace and meet the ideals of our judges. Without this society I am afraid we would still be plodding along in a marking-time fashion, as we were doing fifteen to twenty years ago. It is just fourteen years ago since the dissemination of that once great carnation Daybreak, which really marked a new era in carnationdom. While several good varieties made a bid for our favor in the following year, it was nine years before Mr. Fisher gave us the Mrs. Thomas W. Lawson, the real next sensation. After that came Prosperity, a variety that is still in a class by itself on account of its distinctiveness. Then

came Enchantress and now Lady Bountiful and Fiancee. Therefore, it looks to me, from now on, that it is reasonable to expect a new wonder about every year.

While we cannot all raise a wonder, each individual member of this society can take some share of the credit for what has been done in advancing the carnation in general. For you support the society, and the society enthuses and stimulates the hybridizer to keep pegging away. That gentleman is now having some valuable help from the sportive tendency of what were at one time his seedlings, but now good standard varieties. The Mrs. Lawson, for instance has given us the White Lawson. There is no question but what this variety, now thoroughly fixed will become a valuable standard. It originated in two or three different establishments, and, I believe each one of them is conceded to be identical with the other. It was a good thing for the trade when the owners of these several sports got together and agreed on one name for all of them.

There are several other sports which, I believe, are identical in every respect with each other, now being registered with the society under different names. This should be stopped, as it only causes confusion to the trade in general.

Judging Seedlings—An All-American Flower Show

A matter that has been discussed pro and con in our past conventions is one relative to judging seedlings at various seasons, and another one regarding the best month in which to hold our annual exhibition, both of which are worthy of our further consideration. I wish to offer a few suggestions along these lines: I would like to have the society go on record as favoring an "Annual All-American Flower Show," to be held in November, and in a different city each year. I believe the time is ripe for it. Perhaps the Society of American Florists, or the World's Fair Flower Show Association, could be induced to take up the matter. If there were such an exhibitor it would enable us to see the new carnations in the Fall, as well as at our own grand show later in the season, without any extra expense to the American

WILLIS N. RUDD,
President Chicago Florists' Club.

GEORGE ASMUS

Financial Secretary Chicago Florists' Club

Carnation Society. We could offer our certificates there, which might be termed "Fall certificates," and also collect an entry fee, the same as usual. This, in a measure, would cover the part relative to judging seedlings at different seasons, and be a great benefit to introducer and buyer alike of a new variety, as well as to the trade in general. And then, we need not be so particular as to the date of our own exhibition.

Committees to Judge Seedlings.

Here is another suggestion: If a certain grower has a new carnation for distribution to the trade, give him the chance of receiving our endorsement, or otherwise, of its commercial value, by applying to our president for a committee of judges, or practical growers, to visit his establishment and inspect the variety growing, say two or three times during the season. The committee could consist of three good men, living in his, the grower's, vicinity. I believe this plan is followed by the New York Florists' Club. It would be just as easy to get the committees for this purpose, as it is for the Chrysanthemum Society of America to secure its several committees, to meet every Saturday for two or three months.

Health of Standard Sorts.

One feature of the carnation plant we can congratulate ourselves upon more than any other, I believe, is the healthiness of the acknowledged present day standard varieties. We do not hear so much about stem rot, bacteria, rust, etc., as we did four or five years ago. The reason for this I lay to the fact that the hybridist has refrained from using for crossing purposes varieties that are subject to those diseases, and, again, to our semi-indoor mode of culture, early planting, which I recommended in my essay at the Buffalo meeting.

About Prices.

The prices obtained for carnation blooms the past few years have hardly kept pace with the improvement and the quality of the flowers. When we held our convention in this city seven years ago, fancy carnations were bringing eight cents at the holidays, and occasionally higher prices were heard of. The best varieties at that time were Jubilee, Mayor Pingree, Mrs. McBurney, and Mrs. Geo. M. Bradt. The same prices were realized this season for improved varieties that were better grown, but the years between rarely saw the top figures, and yet the cost of production is much higher. The reason for this state of affairs is no doubt due to over-production; but when you take into consideration that there are a million more plants grown in this vicinity alone, producing about fourteen million more blooms a year for this, the Chicago market, we can hardly be surprised at the non-advancement of the price. Still, I doubt if we have much reason to complain, for during that period we have had no panic in the business world, and no serious slump in flowerdom, and the prospects for the future, I think, are encouraging. Personally, I think we are on the eve of an unusually prosperous era, and I trust the carnationists will reap their share of the benefits.

Where to Meet.

Since we last met in Chicago, we have been to Philadelphia, Buffalo and Baltimore, each one of these cities, approximately a thousand miles from the Western carnation belt, making it very difficult for growers in that vicinity to make creditable showings. In the years following the convention mentioned, we went to Indianapolis, Brooklyn, Detroit and, now, Chicago. This is as it should be. Now let us go East again, the Middle East, or even enter new fields, as I believe great benefits are derived by our society in spreading the knowledge of our work, and showing the products of our skill in any city within a reasonable shipping distance of a carnation center.

The Carnation League.

The growth of the carnation's popularity among all classes of people should be very gratifying to us, and still I believe it to be only in its infancy. One thing more than all others that will, I am sure, increase this popularity in the future, is that grand body, The Carnation League of America, with 3,000,000 members, each wearing a carnation on each January 29, as a tribute to the memory of our beloved President McKinley.

A Little Advice.

We shall soon hear the report of the judges of the present exhibition. Some of us will be disappointed; others will experience those thrills of joy which victory brings. If you are a new exhibitor and are beaten, do not be discouraged. Take your defeat with good grace; find out if possible the weak points of your exhibit, and return home with a determination to overcome them next year.

Before concluding, I beg of you, one and all, to attend the sessions, and stay until each one is over; help us to get through with what business we have, and make this convention what it ought to be—the greatest yet. After the sessions are over there will be plenty of time to explode your otherwise pent-up enthusiasm. That your Chicago friends will be with you, and stay with you to the end, is a foregone conclusion. Now to business.

J. P. RISCH

Vice-President Chicago Florists' Club

The report of the judges was then read by Secretary Albert M. Herr. (This report will be found in full in another column.)

Mr. Rudd called attention to a slight error in the list, the Foley Cup not having been awarded, the exhibit not meriting same.

Secretary Herr then read his report:

Secretary's Report.

Your secretary reports having issued the regular printed matter of this society during the past year and mailing the same to all the members of the society.

The attempt was made of issuing the full premium

list early in the Fall and mailing the same at two different times, once in October and again in January. The idea was to give the advertisers in this list the advantage of a double circulation. The attempt can hardly be called a success, as it was almost impossible to get advertising and specials together in September; they were received so slowly that it came to be a rush job, and an error or two in the copy was the result. These were corrected in the issue sent out in January, and a few additions made to the list in the form of a supplement.

We are as yet without a permanent stenographer (that is, the same stenographer for every meeting), and until we get one, our reports are bound to be incomplete in some respect. We were fortunate in securing at the last meeting and for this one stenographers who have had some experience in horticultural matters; but to give us a complete report such as this society should have, requires a stenographer who will be with us year after year, get acquainted with us, know our names, our voices and the meaning of all the terms we use.

There were during the year the usual number of complaints as to mail matter not reaching the members, in several instances four pieces having been sent the same party. In justice to myself I want to say that all regular matter, such as circulars, premium lists, etc., are sent out addressed by a machine that makes it a mechanical impossibility to miss any one.

While we are not by any means in financial straits yet, there are so many things the society could do with ample funds back of it that we should use every endeavor to increase our permanent fund, and our membership, as well. For the latter I would suggest a display advertisement, gotten up with a cut of the front cover of our annual report, and inserted in the trade papers the week the report is sent out, at a cost not to exceed \$5 for each paper used, and one insertion only. With the papers presented for this meeting our report ought to be a good one, and a strong, pictured, good-sized advertisement ought to pay well in the increase of our membership.

Any member who has either criticism or new ideas for the advancement of this society can have the same brought before the Board of Directors promptly by sending them in writing to the secretary, either at this meeting or at any time during the year. There is no stop to the development of the carnation; there can be none to this, its patron society; but we need the assistance of every member, as well as the Board of Directors and other officers.

Mr. Herr's statement was followed by the report of Treasurer F. E. Dorner, from which we extract the following:

Permanent fund, February 20, 1904: Balance, \$1,910.21; cash received to this fund, \$86; total on hand, \$1,996.21. Working fund: Balance on hand, February 20, 1904, \$253.36; cash received to this fund, \$912.41; total, \$1,165.77; expenses during the year, \$752.64; leaving a cash balance on hand of \$413.13.

Both above reports were received as read.

H. M. Altick reported for the Committee on the McKinley Memorial Fund that some twenty thousand pieces of mail matter had been distributed throughout the country and the committee had counteracted to a great extent the erroneous idea as to the late President having favored a special color of carnation. About \$500 had been received in cash, with pledges for \$500 more.

Mr. Altick pointed out the great stimulus given to the sale of flowers on McKinley Day, and added that if each florist would contribute but one dollar, some twelve thousand dollars would be added to the fund. He spoke of the action of the Chicago club mentioned in last week's Exchange. Mr. Ward stated that he was willing to donate two per cent. of his sales made for McKinley Day, and that a similar donation from every florist would simply be a small commission on a large amount of business the trade had already received.

The subject was further discussed by Messrs. Gillett and Asmus, who pointed out the success attending the efforts of the Chicago Florists' Club. Mr. Cushman alluded to the effect the wearing of a carnation

HOUSE OF VARIEGATED LAWSON—GROWN BY F. R. PIERSON CO., TARRYTOWN, N. Y.

ROBERT CRAIG (Ward)
As grown at Cottage Gardens, Queens, N. Y.

By Indianapolis Flower & Plant Co., Indianapolis, Ind., Coral, Allspice and Candace.

By W. A. Harkett, Dubuque, Iowa, Maid of Honor.

By Robert C. Pye, Nyack, N. Y., Senator Crane.

By D. C. Noble, Columbia City, Ind., Uncle Peter.

There has been some complaint about the name Senator Crane from the members of this committee, lest it be confounded with the variety, G. H. Crane. The secretary took up this matter with Mr. Pye, and he replied that it was named because the flower was associated with the Crane family, and that by the time it was likely to be introduced the older variety Crane would no longer be grown, so he refused to change the name.

The variety Uncle Peter is similar in description to Melody, and we hope, at this show, to have the two varieties together for comparison, the variety Melody having priority of registration.

Prof. Hasselbring, of the University of Chicago, then read his paper, entitled:

Carnation Diseases.

With the extended cultivation and amelioration of the carnation, new diseases and disorders have made their appearance. Are these troubles the result of cultivation? Has the continued high culture predisposed the plants to certain forms of disease? What are the diseases that threaten the carnation to-day and how can they be prevented? These are questions of ever-increasing importance to the florist. Their importance will increase with every extension of the cultivation of the carnation. In no other branch of horticulture is the investment and risk so great as in floriculture; no other branch of agriculture and all the related pursuits expends so large a proportion of the returns for labor. A failure means a corresponding loss. Every factor that is likely to cause failure should be thoroughly understood.

The whole question has received far from sufficient attention. Our Experiment Stations, while they have vastly furthered the interests of other branches of agriculture and horticulture, have left the whole field of florists' problems almost untouched. In this State (Illinois), containing the largest greenhouse industry in the world, our Experiment Station cannot legally take up any question relating to the culture of plants under glass. The florist must stand on his own feet. In the absence of sufficient experimental investigation, it will be possible to touch only the main features of the question of diseases, and point out the possible future of the carnation in relation to them.

In the main, the troubles with which the florist has to deal may be classed under three categories: Insect enemies, physiological disorders and fungous diseases. Fortunately, the carnation has but few insect enemies, and those are so well understood that I will not take up the time to speak of them. The others are not so well understood. Physiological diseases result from the disturbances of the functions of a plant from any cause whatever. Less than three-quarters of a century ago it was the common view that all cultivated plants must be regarded as diseased because they were not growing under natural conditions. Therefore, their functions must be disturbed. We no longer follow this mode of thinking. There is no reason to believe that plants are weakened or impaired in vitality by continued cultivation. It is true that we cannot define what we mean by "vitality" in a plant, but if its vitality was impaired by continuous cultivation we should finally expect it to die. This has not been our experience. Wheat has been in cultivation for thousands of years, and the plants are more vigorous and give greater yields to-day than 1,000 years ago. You will perhaps mention the "running out" of varieties. I do not think varieties have run out. They have been superseded by better ones, and by comparison the older variety has appeared to

"run out." We have no record but our judgment to show that any variety has "run out." It is true, certainly, that all plants vary under cultivation, and the

SINGLE BLOOM OF WHITE LAWSON
F. R. Pierson Co., Tarrytown, N. Y.

on that day would have on the development of trade generally. Mr. Rudd spoke on the sentimental side of the question and urged the giving of flowers to children unable to pay for them. He then moved the following resolution: "That a suitable offering of carnation blooms be sent by this society to be placed on the tomb of the late President McKinley on the day of the anniversary of his birth, which occurs in a few days." Carried. Messrs. Vaughan and Valentine also spoke on the subject. Finally a motion was made by James G. Hancock that the report of the committee be accepted, the committee continued and that the society indorse the methods of said committee in distributing circulars asking pledges of a certain percentage, by States, of carnations on the day in question.

The report of the Nomenclature Committee was then read by Secretary Herr, and ordered placed on file.

Report of the Nomenclature Committee.

There were registered during the year the following carnations:

By W. L. Lewis, Marlboro, Mass., Mrs. W. L. Lewis.
By Baur & Smith, Indianapolis, Ind., Flambeau and Beatrice.

By W. B. Arnold, Rockland, Mass., Variegated Lawson.

By F. A. Blake, Rochdale, Mass., Harvard Crimson.
By H. Weber & Son, Oakland, Md., My Maryland.
By L. F. Marquisee, Syracuse, N. Y., White Enchantress.

By F. R. Thornton, Streator, Ill., Melody.
By Guttman & Weber, New York, N. Y., Victory.

BENCH OF NEW CARNATION MRS. W. L. LEWIS, GROWN AT THE LEWIS' CONSERVATORIES, MARLBORO, MASS.

same seedpod may give some offsprings of a weak and some of a vigorous habit, but this is incident to cultivation and not caused thereby. The cause lies in the unknown factors governing the variation of plants.

As physiological troubles, we may mention the "sleeping" of flowers, and bursting of the calyx. The cause of those troubles rests to a great extent in the nature of the variety, but to some extent also in outer conditions. The very fact that the calyx of certain varieties bursts with some growers, but not with others, shows that this trouble is greatly influenced by outer conditions and can be solved by experimentation. As yet, as I have said, these subjects have never been scientifically investigated. It is to be hoped that some time these questions will receive their proper share of attention by our Experiment Stations.

In considering fungous diseases, we must keep in mind distinctly one thing: These diseases are caused by distinct parasitic organisms. A fungus is an individual organism just as much as the carnation plant is. It has a vegetative period and finally produces spores, which again reproduce the same fungus. Its whole development can be followed with the same certainty with which the development of any plant can be followed from seed to maturity. Parasitic fungi live in the tissues of other plants, spreading in the same manner as roots in the soil. In this way fungi produce diseases by destroying the tissues of the plants upon which they feed. Diseases of this nature are often attributed to some sort of unfavorable conditions, such as lack of ventilation, too much water, deep planting and the like. This is an error. While certain conditions favor the growth of fungi and thus cause disease to appear more abundantly, it is, nevertheless, true that such diseases would not appear if the fungi were absent. The fungi are in every instance the prime cause of disease—not the conditions.

There are at the present time but two fungous diseases of the carnation which we need to discuss—the rust and the stem-rot. The rust was a prevalent disease about ten years ago. At that time it was feared as the worst enemy of the carnation, as its frequent discussion in the horticultural literature of that time indicates. It still appears spasmodically here and there on some varieties, but it is no longer the dreaded enemy of the carnation. We will come back to the causes of this again. The stem rot is a far more serious disease and one which will be difficult to control. It is caused by a fungus of the genus fusarium. While the name of the fungus may not carry with it any special significance, we shall see presently that this is one of a great group of fungi which have received considerable attention of late, and that the study of this group has been the chief means of developing a new method for controlling diseases. These fungi are the causes of the now well-known "wilt diseases" of many plants. The wilt diseases of the cotton, cowpea, watermelon, flax and aster are caused by species of fusarium. These diseases have been carefully investigated and from the knowledge gained from them we can fill out, tentatively at least, such points as are still unknown in the life of the carnation fusarium.

The stem rot, which is not primarily a rotting of the stem, but a wilt disease first manifesting itself by a wilting of the leaves of some shoots. Very often only the leaves on one side of a shoot wilt, and in nearly all cases only a part of the plant is affected. This is more especially true during the early stages of the disease. It will frequently be found that the branches on one side of the plant are affected, and sometimes only those arising low down on the main stem. The disease always progresses upward. The

CARNATION PBYLLIS

Grower, John N. May, Summit, N. J.

nounced by many as a sure winner was Aristocrat, many varieties seem to be free from the disease. These are especially the strong growing varieties, such as Harlowarden, Enchantress, those of the Lawson type and Lady Bountiful. I have seen America planted where Crane died of stem-rot, yet the former variety was not affected. Some varieties seem to outgrow the disease even when affected. This seems to be true of Bradt and Lord. These observations are as yet of limited extent, but they point to one conclusion. Some varieties of carnations are immune from stem-rot.

The problem for the future will be the production and selection of immune varieties. It should be the aim of the originator to produce resistant varieties and only such varieties should be put upon the market. This plan is not impossible, for it has been successfully followed in the case of cotton. Through the work of the Department of Agriculture several varieties of cotton have been produced which are resistant to the wilt. Those can be planted in infected fields, where other varieties have been exterminated, without being attacked by the disease. I am convinced that we have a similar example in the carnation rust. Almost imperceptibly the discussion of this disease has dropped from horticultural literature. Why? If we examine the older catalogues we find many varieties advertised as "rust-proof." Those may or may not have proved as represented, but the fact shows the tendency of the time to produce rust-proof carnations. Only the varieties that actually proved rust-proof finally were extensively cultivated, and to-day the rust has practically disappeared from our greenhouses. I have no doubt that we will have a similar experience with the carnation stem-rot. We have already indications of the lines to follow, and experience has shown that they can be followed successfully.

Mr. Rudd in the ensuing discussion took exception to the statement that varieties do not run out. They certainly do. Lawson was cited as a case in point; it did not give either the quality or the quantity of two years ago. The speaker was not prepared to say it was in the nature of the variety, but thought it was practically the result of the present-day methods of treatment and the high-pressure system of growing. He remembered reading a paper by some one, attributing running-out to overfeeding, which caused chemical and physiological changes, reducing the quantity of the product and vigor of growth, which defects were transmitted to offspring. Some growers have old-time varieties in fine shape yet, but these men are not adopting the high-pressure system of cultivation. He mentioned the susceptibility of some varieties to stem rot; no question at all but this disease was carried over in the cuttings, and advised that carnations attacked with it be not used for propagation purposes. As regards rust, it was being combated by present growing methods, syringing less often and keeping the foliage as dry as possible.

C. W. Ward attributed the reduction of the seriousness of disease to proper cultivation; the plants are not more resistant to attacks now than they were before. Mr. Ward sterilizes his propagating sand, also his potting soil, and uses plants for propagation that are free from fungus of all kinds. Employs his fertilizing material very much weaker and less often. His ordinary compost consists of cow manure to a much greater extent and chemical fertilizers not used so often. Temperature formerly carried at 56 degrees now reduced to 48, 50 and 52 degrees. Used to run Lawson at 56 degrees, now at 52 degrees, preventing bursting. Rust had been combated greatly by the increased vitality of the stock now grown; affected seedling plants if treated properly will outgrow it in fourth year.

This matter was further discussed by Messrs. Haselbring, Fisher, Dailedouze, Valentine, Bauer and

LIEUTENANT PEARY (Ward)

As grown at Cottage Gardens, Queens, N. Y.

Weber. Mr. Fisher's experience was that stem rot proceeded from checks to plants and cited case where too dry soil had caused it. Mr. Ward corroborated this statement. Plants outdoors often suffered from droughts or excessive rains and when planted in the bench received a check from which disease resulted. William Weber believed that stem rot was nature's way of disposing of decaying matter. Good ventilation and absence of extremes in watering will do away with nearly all stem rot.

A vote of thanks was then awarded Professor Haselbring.

Boston in 1906.

Boston was selected as the next place of meeting. Toronto also gave an invitation, but later withdrew. That city expects to get the convention in 1907.

Nomination of Officers.

For president, Peter Fisher was nominated by Eugene Dailedouze, seconded by W. N. Rudd.

For vice-president, John Dunlop, of Toronto, nominated by Kasting and seconded by several. For secretary, Albert M. Herr, nominated by C. W. Ward, and seconded by several. For treasurer, F. E. Dörner was nominated by E. G. Hill and seconded by Wm. Nicholson. William Weber as a director was nominated by Mr. Kasting. Mr. Nicholson as judge for three years was nominated by Mr. Hill, seconded by Mr. Dailedouze.

Committee on the President's Address—Messrs. Rudd, Witterstetter and Lemon.

Meeting adjourned at 11.30 p. m.

The Exhibition.

Chicago said that it would give to the members of the Carnation Society the best show in the Association's history, and it did. The hall was light, roomy and airy. The quality of stock was good throughout, all the blooms having fine substance; not one of the vases staged appeared as they did in Detroit last March. Fiancee again came out victorious in every class in which it was entered. One variety which attracted much attention and which was pro-

leaves on the affected branches soon die and turn to a pale color without dropping. The upper leaves on these branches may be wilted, but still grow until the whole branch finally dies. The calyx lobes, or flower stems, usually turn yellow at the tips before the upper leaves begin to die. The root systems of these plants appear healthy externally with the exception of one or two roots. These are completely decayed, so that only a remnant of them is left. Yet, if the diseased plants are carefully examined after the roots have been washed, these decayed roots can always be found. Here is evidence that the fungus has entered the plant from the soil through the roots.

The cause of the fungus in the plant and the reason for the peculiar damage it causes can be easily seen by cutting microscopical sections at different parts in the diseased stem and branches. The fungus grows from the infected roots into the water-conducting channels of the stem and branches. When the disease is severe these can be seen to be literally plugged up with a mass of the mycelium of the fungus. It is then impossible for the plant to obtain sufficient water, and wilting and death are the results. Sometimes the fungus invades only the ducts on one side of the stem, and then the leaves and branches on this side wilt. Later, when the plant is dying, the other tissues are also invaded, first the pith and then the cortex. The fungus produces innumerable spores on the dead stems and on the lower portions of the leaves.

So much for the effect of the fungus on the carnation plant. Questions of more practical importance are: How does this disease get into the carnation beds, and how can it be prevented? The fusariums are a group of soil fungi. They are found nearly everywhere on decaying organic matter in the soil. I have been unable to collect evidence showing that the stem rot reappears in the same soil year after year, this being due to the fact that carnation growers change their soil annually. We know, however, that the plants are attacked from the soil, and this in connection with the fact that the fusariums are found almost everywhere, and can grow freely on dead matter in the soil, leaves scarcely any room for doubt that the soil is the source of infection. It has been definitely shown that the wilt fungus of the cotton, watermelon, cowpea and flax remain indefinitely in soils once infected. In fact, it has been found impossible to eradicate them. The same is probably true for the carnation wilt or stem-rot.

The most important question is, how to prevent the disease. Since it remains in the soil, it is, beyond the reach of the usual fungicides. It attacks the plants beneath the soil so that direct preventive measures are practically excluded. What hope have we then of ever controlling the disease? I think the solution of the question will come from a study of varieties. If we look over the different varieties now generally cultivated we find that some are badly affected, others less, and some seem not to suffer from the disease at all. It is somewhat difficult to collect exact data on this, but it seems to be everywhere conceded that such varieties as Crane, Morning Glory and Flora Hill are most subject to the disease; many growers have thrown these varieties out entirely. Flamingo, Apollo and White Cloud seem to suffer as much as those just mentioned. On the other hand,

grown and exhibited by Richard Witterstatter. Unfortunately, this grower's flowers arrived too late for competition. The color of Aristocrat is about the same shade as Lawson, clear to the edge of the petals. J. A. Valentine, another of Mr. Witterstatter's varieties, is a beautiful flower, a shade darker than Enchantress. His Lady Bountiful was also shown in grand form, being the best vase of white in the hall. Cardinal and Robert Craig were the attractions in the red class. Victory had been out of water for forty-eight hours and, naturally, had lost some of its brilliancy; still, it made a creditable showing. My Maryland, grown and exhibited by Weber & Sons, Oakland, Md., is a grand white, and if it can be grown as well generally as the introducers do it, it will push Lady Bountiful for first place. The flowers of Governor Wolcott, exhibited by Emil Buettner, showed that around Chicago this variety well holds its own. Lawson was generally good in all the exhibits. Enchantress, also, was of fine color.

The Richmond rose was a great attraction. A few flowers exhibited at Detroit, on January 18, were put up at Chicago a week later and were still in excellent condition, proving the superb keeping qualities of this new variety.

C. KNOPF.

Award of Certificates of Merit.

W. N. Rudd, Mount Greenwood, Ill., with Lady Margaret, 85 points.

M. A. Patten Co., Tewksbury, Mass., with Mikado, 88 points.

C. W. Ward, Cottage Gardens Co., Queens, N. Y., with Robert Craig, 88 points; Lieutenant Peary, 88 points.

H. Weber & Sons, Oakland, Md., with My Maryland, 88 points.

Award of Preliminary Certificates.

C. W. Ward, Queens, N. Y.: No. 569, pink, 93 points; No. 234, crimson, 86 points; No. 211, crimson scarlet, 91 points; Alma Ward, white, 88 points; No. 2528, deep pink, 85 points; No. 2653, white, 86 points.

E. G. Hill Co.: No. 12, white, 85 points.
S. J. Goddard, Framingham, Mass.: Helen Goddard, 85 points.

Other exhibitions besides carnations were roses, Richmond and Rosalind Orr English, from the E. G. Hill Co.; Tarrytown Fern, from the F. H. Pierson Co.; Tarrytown, N. Y.; begonia, Tunford Hall, from J. A. Peterson Co., Cincinnati; rose, General McArthur, from J. M. Gasser Co., Cleveland; rose, La Detroit, and white, yellow and pink snapdragons, from J. Breitmeyer's Sons; Nephrolepis Scottii, from Vaughan's Greenhouses, Western Springs, Ill.; Boston fern, from Davis Bros., Geneva, Ill.; wooden gutter and iron supports, from A. Dietsch Co., Chicago; Everlasting greenhouse bench, from Cleveland Cut Flower Company; carnations supports, from the Eagle Machine Works, Richmond, Ind.

General Premium Awards.

CLASS A.

Open to all varieties, seedlings or standard sorts.
100 blooms white, E. G. Hill Co. first with Lady Bountiful; W. J. & M. S. Vesey second with same variety.

100 blooms Daybreak shade of pink, Chicago Carnation Co. first with Enchantress; E. G. Hill Co. second with same variety.

100 blooms Lawson shade of pink, Chicago Carnation Co. first with Lawson; Emil Buettner second with same variety.

100 blooms Scott shade of pink, Chicago Carnation Co. first with Fiancee.

100 blooms scarlet, Chicago Carnation Co. first with Cardinal; J. D. Thompson Co. second with Robert Craig.

100 blooms crimson, Chicago Carnation Co. first with Harlowarden; C. W. Ward second with The President.

100 blooms yellow variegated, Chicago Carnation Co. first with Dorothy Whitney.

100 blooms white variegated, J. D. Thompson Co. first with Mrs. M. A. Patten; W. J. & M. S. Vesey second with Glendale.

100 blooms any other color, Poehlmann Bros. Co. first with Prosperity.

The sweepstake in Class A, \$15 in cash to best vase, was won by Chicago Carnation Co. with Fiancee.

CLASS B.

Open to all varieties disseminated prior to July 1, 1903.

50 blooms white, Emil Buettner first with Governor Wolcott; E. G. Hill Co. second with Lady Bountiful.

50 blooms Daybreak shade of pink, E. G. Hill Co. first with Enchantress; Chicago Carnation Co. second with same variety.

50 blooms Lawson shade of pink, Emil Buettner first with Lawson; Poehlmann Bros. Co. second with same variety.

50 blooms Scott shade of pink, J. D. Thompson Co. first with Mrs. E. A. Nelson; H. Weber & Sons second with Genevieve Lord.

50 blooms scarlet, J. D. Thompson Co. first with Estelle; 50 blooms crimson, C. W. Ward first with The President; C. W. Ward second with Octoroon.

50 blooms yellow variegated, Chicago Carnation Co. first with Dorothy Whitney; F. Dorner & Sons Co. second with same variety.

50 blooms white variegated, Chicago Carnation Co. first with Mrs. M. A. Patten; E. G. Hill Co. second with same variety.

50 blooms any other color, Chicago Carnation Co. first with Prosperity; the second prize was divided between Poehlmann Bros. Co. and W. J. & M. S. Vesey, with same variety.

Sweepstake in Class B, \$10 in cash to best vase, was won by E. G. Hill Co., with Enchantress.

CLASS C.

Open to all varieties disseminated prior to July 1, 1902.

25 blooms white, Emil Buettner first with Governor Wolcott; J. D. Thompson Co. second with same variety.

25 blooms Daybreak shade of pink, Emil Buettner first with Morning Glory; Chicago Carnation Co. second with Fair Maid.

25 blooms Lawson shade of pink, Emil Buettner first with Lawson; Chicago Carnation Co. second with same variety.

25 blooms Scott shade of pink, J. D. Thompson Co. first with Mrs. E. C. Nelson; H. Weber & Sons second with Genevieve Lord.

25 blooms scarlet, H. Weber & Sons first with Estelle;

VASE OF WHITE LAWSON
F. R. Pierson Co., Tarrytown, N. Y.

J. D. Thompson & Co. second with same variety.
25 blooms yellow variegated, Chicago Carnation Co. first with Dorothy Whitney.
25 Blooms any other color, Guttman & Weber first with Prosperity; Vesey Co. second with same variety.

CLASS D.

Wm. Scott prize, for collection of 50 blooms scarlet, no more, none less, all varieties admissible that have not been disseminated prior to November 4, 1904. First prize of \$15 cash went to E. G. Hill Co. with Cardinal; second prize, \$10, was won by Guttman & Weber with Victory.

CLASS E.

E. G. Gillett prize for best vase of 50 blooms in the hall, prize \$5 cash, won by E. G. Hill Co. with Cardinal.

CLASS G.

H. Weber & Sons prize, vase of Gov. Lowndes scoring the highest number of points, \$10 cash, won by E. G. Hill Co.; vase of Genevieve Lord, scoring highest number of points, \$10 cash, won by Guttman & Weber.

CLASS H.

James Hartshorne prize, best vase of 50 blooms Crusader, \$10 cash, won by J. Breitmeyer's Sons.

CLASS I.

The Lawson Medals.

Gold medal for the best vase of 100 blooms, any variety, any color, was captured by Chicago Carnation Co. with Fiancee.

The silver medal for second best vase of 100 blooms, any variety, any color, was awarded to C. W. Ward with Robert Craig.

The bronze medal for the third best vase of 100 blooms, any variety, any color, was won by H. Weber & Sons with My Maryland.

CLASS J.

Special medals of the Society of American Florists. A silver medal awarded by the society, for the best vase of 50 blooms of carnations not yet disseminated, went to J. D. Thompson Co. with Robert Craig.

A bronze medal given for the second best vase of 50 blooms of carnations not yet disseminated, was awarded to H. Weber & Sons with My Maryland.

CLASS K.

Vaughan's Seed Store, Chicago.—Prize, a silver cup, value of \$25, for the best 50 blooms of an undisseeded variegated carnation, any color, was awarded to H. W. Buckbee, Rockford, Ill., with No. 38.

CLASS L.

A. Dietsch & Co., Chicago.—Prize, \$5 in cash, for the best undisseeded seedling carnation from the State of Illinois, not less than 12 blooms to a vase, was taken by J. D. Thompson Co. with Robert Craig.

CLASS M.

Baur & Smith, Indianapolis, Ind., prize \$10 in cash, for the best 50 blooms of carnation Indianapolis, was won by Emil Buettner.

CLASS N.

The J. C. Moninger Co., Chicago, Ill. prize offers were awarded as follows: 50 crimson, first and second prizes were divided between Poehlmann Bros. Co. and the Chicago Carnation Co., each showing Harlowarden; 50 yellow, first prize \$5 went to Chicago Carnation Co. with Dorothy Whitney.

CLASS O.

Foley Mfg. Co., Chicago.—Prize, a silver cup to value of \$25, offered for the best vase of 100 blooms, arranged for effect; foliage of any kind allowed, but no flowers excepting carnations. Open only to retail florists. Captured by Joseph M. Smely, Aurora, Ill.

CARNATION VICTORY—WEBER & GUTTMAN, LYNBROOK, N. Y., GROWERS

VASE OF BLOOMS OF VARIEGATED LAWSON
Grown by F. R. Pierson Co., January, 1905

The manner of handling these blooms, as adopted by most of the larger growers, is as follows:

The cutting of the flowers must be attended to with considerable judgment as regards the weather. If the weather is very cold the flower should be allowed to open a little more than usual, as if cut too close in very cold weather they soon go to sleep. Again, if there is a warm wave with lots of moisture in the atmosphere the flowers will be soft and must be cut pretty close; also during these warm spells the flowers should be kept in a little cooler temperature than usual to make the blooms as firm as possible. After the flowers are cut and tied in bunches of twenty-five each, they should be placed in bunches of soon as possible. This is best accomplished by having pails of fresh water standing handy to the benches, so that as soon as a bunch is tied up it can be placed in the water at once. This is very necessary, as it helps prolong the life of the flower. If the blooms are left out of water until the cutting is all finished a number of them will have wilted a little and the sap in the stem hardens up to such an extent that the flower will not suck up water freely.

After the cutting and bunching is finished the flowers should be placed in water in a closet or room where the temperature remains steady at about fifty-five degrees, and where no drafts of air will strike them. When packing to send them to the commission man or wholesale store, use a few sheets of newspaper between each layer of bunches, and keep the ends of the stems from touching any of the flowers. Two layers of bunches are enough to put in any package, as too many heads get broken when packed in too solid. The wholesale or commission house should put the flowers in water as soon as received.

Now, for short distances, where the flowers can be shipped on trains that will arrive early enough for the flowers to be delivered that same day the stock sent is usually that cut the night before; but for flowers that will have to remain packed in the boxes over night and for all long distance shipments the stock taken is always cut in the morning, and, after standing in water from three to six hours, is sent into the market and shipped away the same day. The old idea that a carnation keeps best if allowed to stand in water twelve to twenty-four hours before sending into market has been disproved by actual experience, and of the carnation blooms received by the wholesale growers at least two-thirds the stock is cut in the morning and shipped into their wholesale stores in the early afternoon to send away the same day. These flowers will arrive in better shape and last longer every time than if cut the day before.

After carnations have been kept eighteen or twenty hours in water they seem to get kind of soggy and do not ship well.

The boxes used for shipping carnations are made of thin wood, half-inch ends and quarter-inch tops, bottoms and sides, with two half-inch cleats to fasten the stems down and hold the ice securely. These boxes are usually twelve inches wide and four to eight inches deep and thirty-six to forty-six inches long. The boxes may appear too long at first, but they are better too long than too short. Line the boxes first with four to eight thicknesses of newspapers, depending on the weather. Then a single thickness of soft wax paper all around. Commence and put in a row of carnations, usually about six flowers to a row, and between each row of heads place a strip of wax paper about three inches wide and as long as the box is wide; about four rows of flowers in each end will constitute a layer, and between each layer place a sheet of wax paper the width of the box and long enough to cover all the heads in that layer; keep on until the box is completed.

It will be found that, with the extra long stems now being grown, four or five rows in each end of the box will be all that can be put in a layer, as by that time the stems will be within six inches of the opposite row of flower heads. The number of layers of flowers should not go over four or six, which will allow of from two hundred to three hundred carnations in

VASE OF DAHEIM
F. R. Pierson Co., Tarrytown, N. Y.

Thursday, January 26.

Morning Session.

Thursday morning session opened at 11 o'clock. President Hartsborne appointed as a committee on final resolutions, Messrs. Rackham, Patten and C. W. Johnson. The committee on the president's address, through Mr. Ward, who substituted for W. N. Rudd, took up the question of naming similar sports occurring in different localities from the same varieties. The matter was referred to the nomenclature committee. It was explained by Mr. Lemon that the committee was of the opinion that the first sport reported to the secretary, and named for registration, should have priority of name.

Considerable discussion ensued on the matter of holding an all-American flower show. The committee recommended for greater educational purposes and also to afford better opportunities of exhibition, that a standing committee of three, selected from widely separated sections of the country, be appointed with power to each and every member of that committee to confer with local associations in the principal cities for the purpose of holding a seedling carnation show under the auspices of the American Carnation Society in co-operation with the local chrysanthemum shows in the Fall, or other appropriate seasons. The recommendation was adopted, the appointment of a committee being left with the president. This committee will submit a selection of cities in which shows will be held to the board of directors for final choice.

Mr. C. L. Washburn, of Chicago, then read his paper, giving practical demonstration of packing flowers for shipment; he incidentally remarked that after considerable experimenting he preferred during warm periods to ship blooms in a kind of wilted condition without first having been placed in water.

Cutting, Packing and Shipping Carnations for Long and Short Distance Shipments.

The development of the shipping business has been the cause of the remarkable increase in the growing of carnations in this market. Ten years ago a very few of the blooms then being grown would do to ship, while the quantity raised was not over ten or twenty per cent. of the present output. The demand from outside points was very heavy and the problem to solve was how to ship the carnations so they would arrive in good condition. This brought about a close study of the methods of handling the flowers and also the constant trial of new varieties. As soon as the growers began to improve their stock and their system of handling the flowers there was an immense increase in the demand for the goods. This vast increase has taken place mostly in the last six or seven years, and every year has shown a larger amount of carnations planted and handled than the previous year. It is now almost impossible to get the exact amount of carnation blooms received each season, but a conservative opinion would place the number at about fifty thousand blooms per day during October and November, and then a gradual increase to one hundred thousand per day by Midwinter, and continued at this rate to the end of the season. At least seventy-five or eighty per cent. of this amount is shipped away from the city, and in the ability to deliver these flowers at their destination in first-class condition lies the successful conduct of the business.

one box. In the centre of the box, where the stems meet, there should be placed at least eight or ten thicknesses of well-saturated newspapers. These newspapers should be kept in a pail of water, so that they will have absorbed all the water they possibly can before being placed on the stems. After putting this wet paper on the stems, place the two cleats on and fasten them down securely with nails. Be careful in placing the cleats to put them only on the double rows of stems, and not beyond, and also see there is plenty of wet newspapers under them, so there will be no danger of breaking the stems by pushing the cleats too far down.

The subject of icing a box is a debatable point, but for long distance shipments our experience is that a small piece of ice, well wrapped with newspapers, helps to preserve the flowers from heat and also keeps the newspapers over the stems moist. For varieties that have brittle stems, like Lawson, care must be taken not to fasten the cleats down too tight or too near the neck of the flower, or the stems will be broken in handling the package. It is also well to put a few sheets of tissue paper well crumpled up between the cleats and the flower heads. This will absorb any damp cold air from the ice and will also serve as a cushion to protect the flowers from shaking up and down in the box by rough handling.

In order to dispose of our product to advantage it is absolutely necessary to continue to improve our methods of handling carnations intended for shipment. They must be grown stronger, more air given and great care taken in feeding. The effect of the warm Spring rains must be overcome in some way, as during such periods it is almost impossible to ship carnations any distance and not have them arrive fast asleep.

HOUSE OF FLAMINGO, AT L. E. MARQUISEE'S, SYRACUSE, N. Y.

SINGLE FLOWER OF CARNATION DAHEIM
F. R. Pierson Co., Tarrytown, N. Y.

Mr. C. L. Washburn, of Chicago, followed, with his paper on

All the little details of cutting, placing in water and shipping should be attended to with the greatest fidelity, and as we improve our methods of handling and our varieties of stock so shall we increase our volume of business. The advisability of devoting a certain amount of glass to growing plants for Spring and early Summer blooming is a point that should be considered. There are some varieties that are at their best during these periods, and there is no doubt that carnations always ship best when in full crop. If the creators of new varieties would give more attention to the keeping and shipping qualities of their new flowers instead of trying to increase the size so much they would be working along lines that are susceptible of considerable improvement. No matter how large a flower or how fragrant or brilliantly colored it is, if it will not keep well and ship well it cannot be grown extensively. The immense number of railroads centering here and reaching out in every direction, with frequent trains and quick express service, gives us a field to be supplied that reaches as far east as New York State or Pennsylvania, south to Florida, New Orleans, Galveston and various Texas points, while west we can reach all Colorado towns and some points in Montana, and then on north to Winnipeg. This vast scope of country makes Chicago the central flower market of the United States and has built up the immense greenhouse business of this vicinity.

E. G. Gillett, in the ensuing discussion, commended packing in layers when flowers were intended for retail buyers, but growers shipping to commission houses should buy their flowers in twenty-fives, adding one or two more in case of breakage. This saved much time. He condemned the carelessness in packing too often practiced by small growers. Flowers are oftentimes placed too close to ends of boxes,

many blooms being thereby bruised, especially when packed in layers. A vote of thanks was then passed to Mr. Washburn.

Secretary Herr then read the supplementary report of the judges on general and late exhibits:

F. R. Pierson Co., Tarrytown, N. Y.: Tarrytown fern; very fine.

Waban Conservatories, Natick, Mass.: Pink rose Wellesley; very fine.

Gasser Company, Cleveland, Ohio: Red rose General MacArthur; a very fine, fragrant, pretty flower.

Indianapolis Flower & Plant Co., and John Hartje, Indianapolis: Carnations Candace, a very pretty pink; Coral, promising; Daybreak, shale; Allspice, variegated, very good.

Swan Peterson Floral Co., Gibson City, Ill.: White Swan carnation, nice commercial white; the Belle and a nice display of other varieties.

J. Breitmeyer's Sons: Rose La Detroit and a fine display of antirrhinums; an excellent exhibit.

Eli Cross, Grand Rapids, Mich.: A good display of violets, single and double.

Robert Klagge, Mt. Clemens, Mich.: An interesting lot of seedling carnations.

B. K. & B. Floral Co., Richmond, Ind.: Display of carnation Richmond Gem.

J. A. Peterson, Cincinnati, Ohio: Begonia Tunford Hall; very interesting.

E. G. Hill Co., Richmond, Ind.: New rose Richmond, a magnificent rose, beautifully staged; Rosalind Orr English, a beautiful pink rose.

Nathan Smith & Son, Adrian, Mich.: Chrysanthemum John Burton, remarkably good for so late a date.

Richard Witterstatter, a fine exhibit, received too late for competition: Afterglow, Aristocrat, 1021 and B-1 among the new varieties not disseminated, were of unusual excellence; also an unusually well done Lady Bountiful.

F. Dornier & Sons Co., Lafayette, Ind.: A striking collection of many unnamed seedlings, in several vases, a very interesting display.

F. R. Pierson Co.: A good display of White Lawson.

Cottage Gardens Co.: A large display of Ethel Ward and unnamed seedlings.

Among the varieties showing up well on the second day were the following: Lady Bountiful, My Maryland, White Lawson, Governor Wolcott, Enchantress, Fiancee, Lawson, Mrs. M. A. Patten, Octeroon, The President, Cardinal, Robert Craig, Victory, Afterglow, Aristocrat, Morning Glory and Candace. In general, the flowers kept better than in Detroit.

Afternoon Session.

Thursday afternoon's session opened at 3 o'clock. Mr. Fred Lemon read his paper, entitled:

Exhibition Carnations.

In approaching the subject of "Exhibition Carnations," the first inclination is to seek a definition for the term. What are exhibition carnations, and who are the growers of exhibition carnations?

What Is an Exhibition Carnation?

When we speak of exhibition chrysanthemums there immediately arises before us a vision of immense reflexing or incurving Japanese blooms of various shades of color, some light, some dark, some gaudy, some dull, all beautiful, but scarcely any practicable for the purely commercial grower. We find these in the hands of a special class of growers—First, the large growers, importers and introducers of new chrysanthemums, whose aim in exhibiting the marvelous creations of the hybridizer is to arouse the interest of prospective buyers. Second, the private

CARNATION MRS. W. L. LEWIS
Grown by Lewis Conservatories, Malboro, Mass.

gardener, that true horticultural enthusiast, whose time and skill are devoted to perfecting the magnificent blooms, mainly to satisfy a love of the beautiful in Nature. When we turn to the carnation, however, and examine the exhibition and the exhibitor, we find a magnificently large collection of the very same varieties which are daily seen by thousands in the wholesale houses of the country, flowers a little better than the best in the market, perhaps (because more carefully handled), and exhibited by the very mer whose vast ranges supply the markets. This is the carnation distinctively the business man's flower, and an exhibition of carnations a most practical demonstration of what can be accomplished by care and attention in growing flowers for the market.

Selection and Cutting.

A consideration, therefore, of the subject now before us, must of necessity encroach, to a certain extent, upon the daily task of cutting, packing, and shipping carnations, because the very methods which result in putting flowers into the market in the best possible condition, must form a foundation for our plans and methods of putting our blooms into the exhibition hall, in perfect condition.

Granted then that we have flowers which we think are good enough to exhibit, (and we might say right here that they must be rather good in this day and age), the first question is the selection of blooms, and time and method of cutting. Just here a study of the scale of points for judging will be of great benefit. This shows us that color must be the first consideration, with stem and size counted equally for second place. Great care should be used to obtain a very evenly-colored lot of blooms even at the expense of other points. With this end in view, it is best when possible to cut all the flowers for one class about the same time, for there will surely be variations in color if some of the blooms have been kept in water sixty hours, and some only six hours.

Use a sharp knife to cut the blooms, and take every inch of stem you can get, without going into the hard wood. The proper condition of a bloom to be cut for exhibition, depends largely upon the variety, but may be generally stated as—just before that bloom reaches a state of perfection. Here is where the judgment of the operator is put to the test; here the point where many prizes are lost. Such a variety as Enchantress for instance, is in perfection when the flower is young and failure greets the man who allows his Enchantress to develop too fully before cutting; while that erstwhile grand variety Flora Hill only reaches a state of perfection for exhibition after having stood upon the plants for many days, and being allowed to develop very fully before cutting.

Between these two extremes are many gradations, and, as before stated, must call upon the best judgment and broadest experience at command.

In cutting for exhibition, cut each class complete, and keep that class to itself from this time until it is staged, only changing blooms to strengthen the class you are most desirous of winning in.

Blooms should not lie out of water long after cutting, and it is a good plan to make a fresh cut on the stems after you reach the storing room and before putting them into water.

Storing the Flowers.

Much has been written on the subject of a storing room for blooms, but I believe that any room, or cellar, which meets the following requirements, will be satisfactory: The air must be kept pure and sweet, and moderately dry, though a little continuously evaporating moisture is not injurious. It must not be totally dark. The temperature must be kept a few degrees lower than the night temperature of your greenhouse. In such a place the flowers should stand at least six hours, and may stand several days before packing. When kept more than twenty-four hours, the water should be freshened, and the stems recut every morning.

In handling blooms at all stages, especially with

CARNATION JOHN E. HAINES. GROWN BY JOHN E. HAINES, BETHLEHEM, PA.

varieties of intense color, such as Adonis, great care should be exercised to avoid bruising. This is a matter of great importance, as varieties of high color are especially easily bruised immediately after cutting, and if blooms are laid down on a rough board, or cement bench, or carelessly knocked together while carrying from the house to the cooling room, they will surely show the effect later, and on the observation of these minor points often hangs success.

All flowers which have an inclination to droop or hang their heads in the slightest degree, should be supported in a rigidly upright position. There are several methods of accomplishing this end. A wire ring, like an ordinary carnation support, may be attached to the jar in such a manner that it will act as a support for the blooms, and some people go to the trouble of tying a wire to each stem. Whatever method is used, the flowers must be supported from the very time they are cut, for the first two or three hours in water is the time when most of the stiffening and hardening takes place, and if the stems harden in a bent or curved position, subsequent supporting will be useless.

Packing and Shpping.

Like all other essential steps in the task of placing blooms in the exhibition hall, packing the flowers for shipment is an operation of the utmost importance. The aim being to get the blooms through in the most perfect condition, any extra attention which can be given to this work is certainly time well spent. The most important point is to prevent the blooms from becoming crushed, or mashed out of shape. This should be very carefully avoided, for if the broad bottom, or ray, petals become bent or pressed down, it is almost certain that they will not regain their proper form when set up for exhibition.

One of the simplest methods of accomplishing this

FRED. H. LEMON, ESSAYIST

end and one that is fairly efficacious, is to place the blooms upon pillows, or small rolls of paper, as long as the width of the box, and about 1½ inches thick. A more thorough method is to cut circular pastboard discs, the size of the blooms, with a hole in the center, large enough to slip over the stem and calyx, so that the disc will press against the back of the flower, holding the ray petals in a perfectly horizontal position. These must be used in connection with the pillows, and they keep the blooms in perfect shape—indeed, in many cases, improving the form of irregular blooms.

As to packing the blooms, there are as many different methods as there are exhibitors. If the shipment is a long one, we have found it a good plan to lay the ends of the stems upon wet tissue paper, and place a layer of wet tissue over every layer of stems, so that the ends of the stems, freshly recut, are all surrounded by moisture. The flowers should be packed with their heads all one way, and a cleat pressed firmly down near the lower end of the stems every fifth or sixth row.

For our Midwinter shows, very careful lining of boxes is necessary, so some expedient must be adopted to prevent the heavy layers of paper, which are turned over the top from resting on the blooms, as this will certainly press them out of shape.

If there are several boxes it is a good plan to mark the contents by classes on the outside of each.

If the discussion of this paper brings out a recipe for the safe and expeditious handling of the boxes by the express companies the writer will be devoutly thankful. The only rule we know is—"Give your boxes to the company and join the 'Don't Worry Club.'"

If your exhibit is small, however, an excellent method is to buy a cheap trunk; make three trays to fit in it, pack your flowers very firmly; fill your upper vest-pocket with cigars with bands around them, your lower pockets with quarters, and take it through as baggage. If you use this method you must not expect to "experunce the comforts of thravel," (to

quote Mr. Dooley), because it is necessary to follow the example of the elephant and stay close to your trunk.

Staging the Blooms.

Now, do not think because your blooms are fine, have been well packed, and have arrived in time, that the prize is won. It is impossible to over-estimate the value of staging the blooms properly. It is safe to assert that where there are a number of entries of almost equal merit, the blooms which are most perfectly staged have five points' advantage. This is mainly the result of "first impression on the judges." Judges are human and the most impartial man in the world cannot possibly avoid being influenced, to a certain extent, by his first impression, formed unconsciously the very instant his eyes take in the various entries.

The standard for an artistic parlor arrangement will not fit the exhibition. The aim here is to show every bloom in such a manner that it will emphasize the salient points of the scale for judging.

The blooms should be arranged evenly, if possible, not allowing any bloom to touch its neighbor. Every inch of stem possible should show above the vase; and the stems should be held very tightly at the bottom, in order to spread the blooms properly. It is frequently a good plan to use a smaller vase than the one supplied for the class, to accomplish this end.

When you begin unpacking, make a fresh cut on the ends of the stems as they are taken from the box; give the bloom a gentle downward rub with the hand to overcome any slight sleepy appearance, and lay them down on the table spread out so that each bloom may be examined. When one class is unpacked, carefully select and count out the exact number of blooms required for the class. Keep the scale of points in mind—evenness of color first, stem second, and size a close third. In arranging the blooms, select the longest stems first; take them up one at a time, and hold them by the extreme end of the stem, with the flower hanging down. Use the longest, strongest and straightest stems for a central bunch, placing the blooms exactly even. Work the blooms around this central bunch in circles, (if that expression may be used), turning the bunch in the hand, and adding blooms equally on all sides. Place the outer rows of blooms so that they will stand a little lower than the central bunch. When complete, place the whole bunch in a vase that will hold the stems as tightly as they have been held by the hand, and do not shove them too far down.

Study Color Effect.

After the blooms are arranged, a study of color effect in placing the vase is important. A light scarlet carnation may be fine, and deserve to win, but if placed next to a variety the color of Adonis, it will lose much of its effectiveness.

Fundamentally, of course, intrinsic merit in the flowers themselves, should win, but deep down in the heart of the florist who becomes the judge, is the artistic instinct which will not be denied, and in this day of close competition, a recognition of this fact, if combined with high grade stock, will aid materially in reaching the goal—first place against strong competition.

In summing up the points to be considered, one rule may be deducted—"if you want to win, nothing is too much trouble."

In the discussion which followed, Eugene Daille-douze said he used in packing flowers small strips of tissue paper soaked in water, with a swab, also wet, on the end of each stem, and flowers so treated required no recutting; he recommended as little handling of the blooms as possible. Every time a flower is handled, it is detrimental to it. A room with a temperature of from 40 to 45 degrees will be cool enough, provided there are not too many flowers to maintain them properly. He had had flowers keep ten days. To grow exhibition blooms one must start right, take good strong cuttings about March, pot them off, repot them and plant them under glass as early as possible, 12 by 12. Keep them pinched back, according to variety, and get the main crop in in time for exhibition. Mr. Witterstæter had kept flowers in good condition three weeks, and the water was only changed twice in that time; the temperature was 40, sometimes 38 degrees. A few drops of aqua ammonia proved beneficial in developing flowers. He cuts his blooms a little bit before fully developed, perhaps two or three days. The temperature he prefers is as near 45 as possible; 40 is too low, and 48 is a little too warm. A vote of thanks was passed to Mr. Lemon and other participants in the discussion.

The matter of a suitable floral offering to be placed on the late President McKinley's tomb was left in the hands of the directors.

The president appointed on the committee to arrange for shows of seedlings in the Fall, when the society's preliminary certificate will be awarded to meritorious varieties, Messrs. Ward, Lemon and Witterstæter.

A communication from the American Breeders' Association, asking the society as a body to become a member of same, was laid on the table.

The election of officers, a director and a judge, resulted in the nominees of the previous night being chosen, Messrs. Fisher, Herr and Dorner made suitable remarks, the former asking the co-operation of the members in the endeavor to make the Boston gathering a grand success.

Mr. Stuart, of Anderson, Ind., called attention to the financial needs of the experiment station of Purdue University in order to carry on its work under glass, explaining the action taken by the State Flor-

ists' Association of Indiana to petition the State Legislature for suitable appropriation, and asking the indorsement of the Carnation Society. This matter was discussed by Messrs. Ward and Valentine, it being pointed out that Purdue was among the few experiment stations that had evidenced any practical desire to assist the florists' trade and carnation growers in particular. A motion was passed authorizing the secretary to correspond with the Indiana State Florists' Association as to the form of indorsement desired to best secure the object aimed at.

Mr. Valentine moved that the society express sympathy with William Scott, of Buffalo, in his illness, hoping for a speedy recovery; this was unanimously carried.

On motion of J. A. Valentine, the secretary was instructed to convey to the family of the late E. H. Peirce, of Waltham, Mass., its sense of the loss of that gentleman.

The judges made an additional report on the vase of Red Lawson shown by Palmer & Son, an one of Variegated Lawson, exhibited by F. R. Pierson Co. Both were fine and worthy of special mention.

Mr. Stuart mentioned that Professor Arthur was willing to analyze soil or make other experiments for florists, even though not residents of Indiana.

The meeting adjourned at 4 o'clock, to reassemble in Boston at the same time of the year in 1906.

Peter Fisher,

(President-Elect American Carnation Society.)

Peter Fisher, of Ellis, Mass., was born November 4, 1857, at St. Colmes farm, parish of Dowally, Perthshire, Scotland, the home farm of the Duke of Athol, to whom his father was land steward for a period of

PETER FISHER
President-elect A. C. S.

nineteen years, and until his death, in September, 1861. Mr. Fisher received his early education in the parish schools of Dunkeld, Perthshire, Scotland, and at the age of fifteen years began to serve an apprenticeship of three years in the Dunkeld Gardens, the seat of the Dowager Duchess of Athol. There he remained for seven years, subsequently removing to London, England, where he was employed in the nurseries of B. S. Williams, Upper Holloway, and, later, in private establishments in the south and north of England.

Mr. Fisher came to America in 1884, landing in New York on June 22 of that year. He was first employed on the Payson estate, in Belmont, Mass., and, subsequently, at Oakley, Mass., on the estate of Robert M. Pratt, Esq. In company with his brother he started in business in a commercial way in September, 1886, under the firm name of Fisher Bros. & Co. Having sold out his interest in that concern, Mr. Fisher moved to Ellis, Mass., on May 31, 1899. Here he became actively interested in the carnation, in 1892.

In 1893, he raised the varieties Edith Foster and Freedom, both white varieties, crosses of Lizzie McGowan and Silver Spray. Edith Foster was disseminated in 1896 and Freedom in 1897. The now famous Mrs. Thomas W. Lawson carnation, cerise, was disseminated in 1900. The price at which this carnation was sold was \$11,500, the highest figure ever obtained for one variety of carnation up to that time. The Mrs. Thomas W. Lawson carnation was raised from Daybreak, crossed with Van Leewen, the former variety being the seed bearer, the latter the pollen parent, in color, cerise, resembling the variety, Tidal Wave. The seed was sown April 2, 1894, and the first flowers were obtained in September of the same year. The variety Mrs. Lawson has won five silver cups, two silver medals, a gold medal at the American Carnation Society meeting, held at Baltimore in 1901, and numerous other certificates of merit.

Another of Mr. Fisher's productions is the variety Governor Wolcott, white, which was disseminated in 1902. It was obtained from Flora Hill, white, crossed

with Mrs. Thomas W. Lawson, cerise, the former being the seed bearer. The seed of this variety was sown in March, 1898, and the plants bloomed the following September. It has been awarded numerous certificates of merit.

Enchantress, another of Mr. Fisher's productions, was raised from Mrs. George M. Bradt, crossed with Mrs. Thomas W. Lawson, in 1899. The seed was sown in March of that year; the variety first bloomed in the following August. Enchantress was introduced to the trade by the J. D. Thompson Carnation Company, of Joliet, Ill., to whom Mr. Fisher sold all the stock, less 3,000 plants for his own use, for the sum of \$7,000.

JOHN H. DUNLOP
Vice-President Elect, A. C. S.

John H. Dunlop,

Vice-President-Elect American Carnation Society.

Mr. John H. Dunlop, the newly-elected vice-president of the American Carnation Society, was born in New York City, January 7, 1855.

Moving to Toronto while very young, he there received a public school education, and later learned the trade of carpenter. After following that occupation for some time, he took up the florist business, and built his first greenhouse when he was twenty-five years of age. To-day Mr. Dunlop is one of the most enthusiastic men in the trade; as a producer of high-grade roses he has obtained a national reputation, both in the United States and Canada. His greenhouse establishment embraces over 100,000 square feet of glass, and he also conducts two up-to-date retail stores in the city of Toronto. He is a strong Horticultural Society man and a member of all the leading organizations in that line both in the United States and Canada.

The Banquet.

The banquet given by the Chicago Florists' Club and allied trades to the American Carnation Society occurred Thursday night in the auditorium. Fully two hundred were present and thoroughly enjoyed the excellent menu provided by this famous Chicago hostelry. Pres. W. N. Rudd, of the local club, presided, also acting as toastmaster, and acquitted himself in his usual acceptable way. Tables were beautifully decorated by Phil. Hauswirth. He welcomed the guests in a neat speech. The toasts included The American Carnation Society, responded to by Pres.-elect Fisher, who referred to the work of the society and to the fine flowers grown in Chicago. A pull together, unity of interest, would raise the standard of the flower and keep it at the front; he promised all a good time in Boston. Pres. Rudd stated that pulling together had won out for the society.

Frenzied Floriculture was replied to by E. G. Hill, who considered it a mistake to over-exploit anything, and thought florists suffered by it; reaction following misstatements. The public are inclined to look upon the trade as prevaricators; to a certain extent a truthful statement in regard to purchase price of a carnation should be made if necessary to be made at all. Judgment should be used in the matter of producing varieties and markets should be studied. The trade has been frenzied in regard to heating greenhouses; instead of getting the judgment of a heating expert, thousands of dollars had been spent in self-experimenting.

Mr. J. C. Vaughan, president Society of American Florists, responded to Conventions and Flower Shows. All should try to bring their friends to the conventions and explain to them the reason why they should go. Floriculture and horticulture are more in the public eye to-day and because of that attendance at conventions is necessary to plan to meet public demands.

The press is always ready to publish matter on horticultural topics, but the trade is not responsible for yellow journalism and its exaggerated statements. Mr. Vaughan spoke of the success of the St. Louis show and the influence of the press reports of that exhibition on the development of business. Conventions are for the good of every one in the trade, and he called for a record-breaking delegation to Washington next August.

The Good Old Times was responded to by Mr. Miller, of Beacondale, Ont., in an eloquent speech. C. W. Ward spoke on What About the Future; he said the improvement of the carnation, so far as size is concerned, is first begun; the four-inch carnation is already here; he believed we can get carnations six inches in diameter and expected to fulfill that prophecy during the next ten years. Improvement will be all along the line; better stores and better men will come in the next decade; profiting by present experience, the young generation will impress the business with their personality and have advantages greater than their forefathers commanded. Conventions will continue to remove jealousies, existing between tradesmen, and every member of each society will hold his own association in high esteem, while recognizing merit in all. The Florist has made his way, not only in the elevation of his business, but also in the elevation of himself. In fact, there are those among them who have reached that high state of culture where they can ask questions of a professor (laughter). He spoke of his grand reception in France by horticulturists. The florist calling is hound to improve the American nation, for the profession is one of the greatest educators we have. He advised giving floriculture our best endeavor and to pursue the flower while it wends its way onward and upward. (Applause.)

W. J. Lawrence, Toronto, treated the audience to a beautiful song; he is possessed of a fine tenor voice, and his rendition so pleased the audience that they demanded an encore.

The Lawson gold medal, awarded to Fiancee, was presented by Mr. Rudd to James Hartshorne in a pleasant speech, to which the recipient fittingly replied. The silver Lawson medal was presented to C. W. Ward for Robert Craig, and the bronze medal to Weber & Sons for My Maryland. Fred. Dörner, Jr., told of the great interest yet taken by his father in all carnation matters and expressed regret that he was not present on this occasion.

Mr. F. R. Pierson referred to the recent story of the \$20,000 carnation sale, but thought no harm was done by it; such reports added greatly to the profession and gave people an idea of the value of a carnation; the Lawson received a greater impetus from the \$30,000 story than it otherwise would have done. He spoke of the National Council of Horticulture, organized at St. Louis, and the good work that may be done by it in spreading useful information, settling intricate questions, and otherwise.

Other speakers were Lewis Ullrich, of Tiffin, O., who urged support of the McKinley fund, and Phil. Hauswirth, who hoped the West would go to Boston and make as good a showing there as the Middle States had done at Chicago. The proceedings were closed by Geo. A. Rackham with the reading of final resolutions and thanks by Mr. Rudd, on behalf of the Chicago florists, for the fine exhibits presented at the show.

The visiting ladies were treated to a supper in the auditorium annex on Thursday evening, afterward attending in a body the Studebaker Theater. The dinner tables were decorated with Palmer's Red Lawson carnation. The directors of the American Carnation Society have decided to offer at Boston, next year, a prize, amounting to one hundred dollars in cash divided as follows: Fifty dollars for first, thirty for second, and twenty for third, for best display of ten varieties, fifty blooms in a vase. The constitution and by-laws will also be revised.

Mr. Ward has come to the conclusion, after careful investigation and examination of the variety Victory shown at Chicago, that this carnation is not one of his seedlings, and except that for a short time he had some plants on trial last Summer he has never had Victory on his place.

So endeth in a blaze of success the Fourteenth Chapter of the History of the American Carnation Society.

List of Delegates.

Altick, H. M., Dayton, O.; Baer, H., Peoria, Ill.; Bartholomew, G., Dayton, O.; Bate, G. E., Cleveland, O.; Baur, A. F. J., Indianapolis, Ind.; Bertermann, E., Indianapolis, Ind.; Bertermann, J., Indianapolis, Ind.; Boehring, G., Bay City, Mich.; Buckbee, H. W., Rockford, Ill.; Buerlein, Peter, Elmhurst, L. I.; Bunyard, H. A., New York; Burkl, F., Allegheny, Pa.

Clark, W. A., Pittsburg, Pa.; Clelland, Jos., Grove City, Pa.; Cohn, Mrs. L. G., Manistee, Mich.; Coles, W. W., Kokomo, Ind.; Cushman, E. H., Sylvania, O.

Dörner, F. E., La Fayette, Ind.; Dew, A. H., Albion, Mich.; Dilger, Wm., Detroit, Mich.; Dudley, C. P., Parkersburg, W. Va.; Dunlop, J. H., Toronto, Ont.; Evans, J. A., Richmond, Ind.; Fisher, Peter, Ellis, Mass.; Foster, E. A., Cincinnati, O.; Frothingham, J. R., Tarrytown, N. Y.

The Canna.

By L. H. READ, Fruitdale, Ala.

This beautiful plant is one of our favorites; therefore we have devoted considerable space to its cultivation, as well as much time to its study.

It is but a few short years since the improved large-flowered types came into cultivation. We can remember when only the old small-flowered Indian shot varieties were available. But the last few years have brought out a multitude of new sorts, many of which are very fine, either as single specimens or as a help to make out a collection.

We have bought and grown many of the newer sorts of recent introduction, as well as those known as standard varieties, and although we admire them all, yet we can see defects in many varieties. And the object of this series of articles upon this plant is two-fold: First, to create a greater interest in the canna, and, secondly, to show the grower the defects as well as the good points of the many varieties in cultivation.

With the constant improvement that is going on and that will continue to go on for years to come, we should never say, as some dealers do say, "that we have a dozen of the standard sorts, and that is enough!" Although several of the first among the large-flowered, or Crozy type, are still among the popular favorites, it is but a question of time when these first favorites will all be superseded by those that are better.

We do not, however, advocate the entire suppression of the older sorts, for we think that for those who have the room to grow them a collection of as many varieties as possible is one of the most interesting displays that one can make.

We have been growing about one hundred named sorts, besides our own new seedlings, and wish to add at least as many more varieties to our list this season. Quite a few of them will be among the older varieties, as we wish to be able to show to every visitor the great advancement that has been made in the cultivation of this beautiful flower.

We have a criticism to make of the propagators of new sorts: They have worked toward the production of a larger blossom without regard to the beauty of the plant. We believe this is a great mistake. A plant with beautiful foliage is just as desirable as one with a large blossom. Of late there has been great effort put forth to produce varieties with bronze foliage and large blooms, and in making the combination they secured the large flower, but, in most cases, did not retain the beautiful form and coloring of the foliage. We know of but two varieties that one can say were a pronounced advance in both flower and foliage over older sorts of the bronze foliage kinds; these are Brandywine and King Humbert. But we would like both of these varieties better if they were taller.

We think another mistake has been made in trying to see how dwarf a plant can be produced. Such varieties as Express and Philadelphia would be far better, in our opinion, if they were taller. The canna is a plant of tropical appearance, and a bed of plants, 5 to 8 feet high, has far greater beauty, we think, than a dwarf one that is only 2 feet high. If one wants a low bed, why not use geraniums or phlox? The effect will be better. But when we plant a tropical plant, select one that has a look of massive beauty, with its broad leaves of green or bronze.

We aim at the production of the best foliage possible in our production of new varieties, combined with as wide a range of colors and combination of colors as we can get.

(To be continued.)

The Florists' Club, of Columbus, Ohio, had a smoker Tuesday of last week. A program of music and impersonations afforded the members several hours of enjoyment at the club rooms, on South High street. Paul Moore impersonated a Dutch comedian, and one of the hits of the evening was made by T. J. Ludwig in a German recitation.

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

More Lawson Sports.

Editor Florists' Exchange:

We have a light pink sport of Lawson that promises well and which we intended exhibiting at Chicago this week; but we cut it back hard in December to increase our stock, and although we have a fine crop of blooms coming on, they will be a few days late for the show. We expect to send this variety out in 1906, if it keeps up its present reputation. We hope later to be able to furnish you some interesting pictures, especially of the Lawson, as we have three of them—white, light pink and dark pink—growing at our place.

F. R. THORNTON.

Streator, Ill.

The Tales of a Traveler.

First Impressions of California.

After crossing the almost desert plains of New Mexico and Arizona, one finds oneself as if by magic transferred to a different world. The wonderful growth of vegetation and the beauties of California are all the more striking when compared with the arid plains and the treeless hills which are passed before this land of sunshine and flowers appears to the eye of the traveler. The most striking feature of it all is the growth which all plants seem to make so rapidly in this climate, and the immense size which the palms and the flowering plants attain in such short spaces of time. In direct contrast are the dry plains between the various towns; for here, as in all the localities where the rainfall is slight, irrigation is depended upon, and without water nothing can be grown with profit. We do, however, see extensive vineyards which are not irrigated, but the citrus fruits, on which the business of this part of the State depends, must have abundant irrigation. The enterprise of the East has made this what it is, and the many towns are made beautiful by the homes of people of wealth from our Eastern States, who spend the Winter in this part of California, and who have, by good cultivation and a knowledge of landscape work, taken advantage of the possibilities of plant growth to build up and adorn these many beautiful spots, which, without water, would be forbidding deserts.

The fact that the climate favors rapid growth is taken advantage of by many firms who are interested in nursery work, and returns are very quick. Stock can be produced in one season which will equal in size that grown in the East for two seasons. The long growing period here will in one season yield more wood than any two New England Summers could produce.

It was my good fortune to have a little time in that beautiful town, Riverside. Here we see the orange grown to perfection, but the better paying crop of tourists can be more depended upon, and the town can boast of the finest hotel in all California with which to extract the needful from them.

Eastern industry has here shown the possibilities of the section and the business of growing roses in California for the Eastern trade is carried on by the Chase Rose Company, on a very large scale. The noticeable feature of this business is the absence of expense. The place consists of several low greenhouses, a large number of hotbeds and perhaps twenty acres of nurseries. In these hotbeds the cuttings are rooted. Sand comes from the river bottom. A layer of manure in the bottom of the bed gives enough heat, and the cuttings are placed in the beds, much as a cutting is put into the bench in the East. They root slowly, but a good percentage do root, and the crop is then potted off and allowed to stand for some time in the low greenhouses. When well rooted in pots they go into the field. Very little stock is allowed to get over one year old, and these same plants give the wood for the next year's crop. Cuttings are taken in October and make sizeable plants for the next Fall sales. About 500,000 plants are grown yearly at this establishment, and while the largest percentage are hybrids, there are many teas. The tea roses are mostly sold in this State, but the hardy varieties supply the East with their roses for outdoor planting. This firm is a connection of Chase Brothers, of Rochester, N. Y., which accounts for their knowledge of business industry and thrift.

Some little heat is required during an occasional chilly night in the houses, and water heated by an oil burner gives them the heat required. Here again they have an advantage, for crude oil is produced in California in such quantities that it is a very slight expense.

Civilization moves Westward, and allowing for a decent space of time the tourist follows, and with this class comes the florist, for the native of the State does not need to buy flowers. The Winter population of the State is very large, and on the Winter residents the so-called florists must depend. Strolling up the main street of Riverside I stopped to visit one of its florists, whose greenhouses were along the street, and the crude methods of the place were an eye-opener to me. A house of laths and only a small house, which was filled with hot air and emptiness, made up the establishment, and yet in this lath house there was considerable business being done. Asparagus Sprengeri and plumosus, palms, etc., were the principal items, and these were moving along to their Winter homes in a very lively manner and at good

prices. "Where do you get your Sprengeri?" I asked, and he of the lath house replied, "Oh, it comes up around the sides where the seeds happen to fall." I was satisfied, and could only think how fortunate some people are. Tin cans were in many cases the receptacles which held the plants, but still they sold, and one can but wonder what the same people who bought them would say of the same stock and the same methods on their native heath.

W. R. PIERSON.

Contrastive Conditions of the Boston Market

Editor Florists' Exchange:

While I cherish no desire to monopolize the columns of your valuable medium, by promoting a lengthy controversy, still I cannot refrain from expressing the amusement and interest afforded me while reading your correspondent's response to my communication which appeared in the previous issue of the Exchange.

His efforts to belittle my remarks are worthy of more than passing note, for, instead of imparting to me the information I had sought in a kindly and intentionally friendly way, your correspondent retaliates by indulgence in the "art" of mud slinging, accusing me of being evidently ignorant of the business ways and customs incidental to floral business in a great city. To the reader versed in both sides of this argument it will readily appear that this remark is wholly uncalled for, inasmuch as my inability to understand market quotations in comparison with the market conditions as I had found them throughout the Winter, was the object of my inquiry.

Among the expressions selected at random by your correspondent, and subjected to ridicule, is the fact that I asked for quotations on cut flowers from growers. Could this be reasonably termed another instance of gross ignorance when the words "Cut Flowers at Wholesale and Retail," or an announcement to that effect, greeted the eye upon the letterheads, and in many instances upon the gateposts of every party with whom I communicated? And, again, all Winter long I had read in your correspondent's reports that white carnations were plentiful and in little demand; so being in want of these goods I thought I might be able to find the same among the growers, and, being aware of the comparatively high prices which wholesalers had quoted me at weekly intervals, I knew I could not deal with them (the dealers) to mutual advantage.

The growers seemingly appreciated my inquiries, thanking me for the same, and expressing regret at their inability to supply me. Again, your correspondent used language wholly unnecessary when he would have your readers infer that I placed the dealers in the role of a forecaster, by asking for quotations long before they knew what the demands and conditions of the trade would be. Here, too, has your correspondent drawn a wrong conclusion; for I was in communication with the wholesalers at frequent intervals and on each and every occasion was their prices fully \$1 per hundred in advance of your correspondent's quotations of same date.

In December 31 issue of the Exchange, Boston market reports for December 27 were: \$1.50 to \$2 for common stock in white; \$2 to \$3 for fancy grades of white. The house to which your correspondent in his self-styled spirit to "help anyone along" referred me, as contained in the last paragraph of his letter, charged me (and I paid them) \$4 per hundred for the common grade white carnations, on December 27; the variety was Queen Louise; cash accompanied order.

Elsewhere, in Boston, \$4 to \$6 per 100 was the wholesale price quoted direct to me on December 27; therefore, if white carnations of any grade could have been bought at \$1.50 to \$3, common sense arises with me when I venture to ask, where?

Nor is December 27 the one and only date, when I found these conditions apparent. I could, if necessary, produce correspondence (from Boston) sent me weekly, during several weeks previous, which, when brought into comparison with the Boston market reports, will substantiate every statement I have made.

Your correspondent's efforts to "help along" and enlighten me consisted of a postal stating "If you are good for what you say in your letter in the Exchange, _____ of Boston, will supply you at a lower price than I quote for first-class stock." The place to which he referred me was one where I had found conditions as previously explained in this controversy, and because I did not see fit to immediately rush on an order, your correspondent, who, by the way, seems to be deeply concerned in this particular house, would have your readers form conclusions and believe me an impostor; that I am ignorant; that I never did nor never will buy a carnation. These are the impressions he presents in response to a business inquiry, substituting personality for business policy and leaving the situation as problematical as before.

In view of these impressions, it may interest those directly and indirectly concerned, to learn that since October 1, 1904, I have dropped over \$2,200 in "long green" into the pockets of New England florists, whose products were the direct inspiration of pleasure which hundreds of individuals found at church, society, private and public enterprises and functions.

Not for a moment do I question the fact that white carnations are, or have been, a drug on the market; but, despite these conditions, my experience prompts me to question the ability of any man to buy at Boston market quotations. I have cast no insinuations as to the right or wrong of any one; no intentional malice has by me been extended to any one; I have visited the market and have been unable to find conditions as your correspondent portrayed. I have openly expressed the facts as revealed to me; in conse-

quence, I am placed by him in the class of the ignorant. Others may have become financially "wise" through my experience, but I am certainly still ignorant, and free to admit it, and as my ignorance was the inspiration of this controversy I am perfectly contented to rest the same and enlist the subject and cause of "Contrastive Conditions of the Boston Market" in the vocabulary of mysterious things that cannot be explained.

A CARNATIONIST.

A Subscriber's Suggestions.

Editor Florists' Exchange:

Herewith another big dollar; and while I have to use the pen and spend 2c. for postage I might as well make the letter carry its full weight.

Now, Mr. Editor, the cut flower growers, especially, can't kick because they don't get enough valuable information from the pages of your paper, for not only are the proper methods of culture thoroughly described by experienced growers, but also the novelties are given a free discussion; while those who are anxious or forced to build or rebuild can find the necessary points thoroughly explained, if they would only take the time to read it. And the unlucky whose plants are so sadly troubled with lice and diseases always seem to find you willing to put the important questions before your readers and publish the answers in a following issue, even if these same questions were answered and published perhaps two or three weeks ago. A question box always contains some valuable information and should not only be read, but studied carefully for future use and reference. A question box often invites a general discussion, is the one cheap and reliable attorney for advice when in doubt or trouble and should be used by a much larger number in the trade—employees as well as employers. But let us look over a few back numbers to see if, practically, the same question has not been answered shortly before, thus saving trouble and expense.

Timme's Timely Teachings provide a free course of horticultural education, and the young fellow who reads The Florists' Exchange and a woman's magazine, full of love stories, should have just enough love left for Flora to read Timme's first.

I like to read Mr. Meehan's articles on the various kinds of trees, shrubs, vines, evergreens, etc., and especially since I have moved to my Summer and Winter resort of the lovely Northwest, where our mild climate drops its temperature sometimes to 40 or 50 degrees below zero. But I am sorry to say that Mr. Meehan and the other able writers on hardy nursery stock, and also hardy perennials, do not always give the lowest temperature, as far as is known, that those hardy plants have stood. If this could be given, or the furthest point north they are known to be hardy, this would be a valuable addition, indeed. And this is where our catalogue men are missing it, for many vines, shrubs, trees, perennials, etc., are simply called hardy, and do not even stand the Winters in Central New York State, or Ohio. And, although we cannot grow here a liquidambar or a Japanese iris and many other beautiful trees, shrubs, vines and perennials, yet we have the beautiful hydrangea paniculata grandiflora, peony, and hundreds of other things that are beautiful and admired by our prosperous wheat-growing farmers; while the cut-leaved birch, elm, mountain ash and linden play an important part for shade and ornamental purposes.

The year 1904, with all its glory and prosperity, saw many improvements; but the wage scale is still among our unfinished business. We are but poorly paid for our many years of study and experience, compared with other trades, and this is undoubtedly one of the causes of scarcity of good experienced help and "the failure to encourage the young men to learn the greenhouse or nursery trade."

Another very weak point in our trade is the fact that some very good young men are held down for several reasons without any good cause. It is true that in some establishments the foreman occasionally gets his "throat cut" by some "sucker," but it is also true that some foremen are too anxious to keep their jobs and do not give the young, industrious and attentive man the credit he deserves. One of several of these cases I have in mind is at a place where 80,000 rose cuttings were put in, and the foreman looked after them himself until the nineteenth day, when he had to go away for two days, and he gave another man orders to look after them, telling him just how and what to do. The entire batch was a failure, only about 7,000 being rooted, and the foreman blamed the other fellow for not attending to them as he was ordered. Now, any one acquainted with Summer propagation of everblooming roses in hotbeds will agree with me that when such cuttings have been in the beds eighteen days they are long past the danger mark, as I have often found them well rooted and potted up when twenty-one days in the bed. The foreman had this man discharged, but, as it happened, the proprietor looked into this case a little deeper than usual and put the man back in his former place. Where a man is in charge and shows his ability by the success he has made, he need not fear a "sucker," as they never last, any way; but the young man who is trying his best and is interested in his work should be given full credit for what he does.

Now, in conclusion: Job, you are a crank and an everlasting never-satisfied kicker, worse than one of Buffalo Bill's wild ponies. But go on, old man; am pleased we have at least one nifty old soldier in our large army. And when Job gets tired, let us hope and wish that his young (?) daughter will take up her pen and finish the part that her papa left undone.

Minnesota.

DUTCHY.

CLUB AND SOCIETY DOINGS

New York Botanical Garden.

The annual meeting of the Board of Managers of the New York Botanical Garden occurred January 9. The report of the director, Dr. N. L. Britton, showed that 12,053 species of plants were represented in the collections during the year, an increase of 451 over 1903. A large number of specimens have been replaced by better ones of the same species, and the number of individual plants cultivated in the conservatories has been somewhat reduced by the elimination of imperfect specimens or of duplicates, many of which have been sent to other institutions in exchange. The director recommends that plans be prepared for the construction of another range of greenhouses, the present capacity of the public conservatories for the housing of plants having nearly been reached. With the intention of building an additional range of glass, the present range was designed essentially for tropical plants of large or of considerable size, deferring the construction of smaller houses to the future. This proposed new structure, says Dr. Britton, should have a floor area at least as great as the present range, and, "even with this development we would not have as much glass as has been found necessary at the Royal Gardens at Kew, England, where a very much milder climate permits the cultivation of many more species out of doors.

"It seems desirable from the present development of the Garden, that this proposed new greenhouse should be built east of the Bronx river, in order to establish it at a considerable distance from the present conservatories and from the Museum building, and to provide a prominent feature on the east side of the grounds, which will probably soon become easily accessible from the south by the extension of the rapid transit system. It will be desirable to design this proposed new structure in such a way that it may be built in sections, necessitating no very heavy expenditure during any one year, and to include in it space for considerable floral display."

The past year Dr. Arthur, of Purdue University, Indiana, spent a month at the Garden, during which time he made some critical studies of the Uredineæ (rusts) for the purpose of completing his investigations of the polymorphism of these interesting parasites, which spend portions of their life-cycle on different species of plants.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.—President Vaughan has appointed Messrs. E. V. Hallock, of Queens, N. Y., and W. H. Elliott, of Brighton, Mass., to serve as directors for the three-year term beginning January 1, 1905; also the following gentlemen to serve as State vice-presidents for the year 1905:

Alabama, Hugh Seale, Birmingham; California, Hans Plath, San Francisco; Colorado, J. A. Valentine, Denver; Connecticut, John Coombs, Hartford; Florida, C. D. Mills, Jacksonville; Georgia, A. C. Oelschig, Savannah; Southern Illinois, John Willis, Danville; Illinois, P. J. Hauswirth, Chicago; Indiana, Irwin C. Bertermann, Indianapolis; Iowa, Theo. Ewaldt, Davenport; Kansas, C. P. Mueller, Wichita; Louisiana, Harry Papworth, New Orleans; Maryland, R. Vincent, Jr., White Marsh; Massachusetts, W. W. Edgar, Waverly, and Thos. Collins, Hinsdale; Michigan, Henry Smith, Grand Rapids, and R. G. Boehring, Bay City; Minnesota, O. J. Olsen, St. Paul; Missouri, W. J. Billmore, St. Louis; Western Missouri, Albert Baibe, Kansas City; New Jersey, C. W. Turley, Haddonfield; Eastern New York, F. H. Traendly, New York City; Western New York, George W. McClure, Buffalo; North Carolina, James M. Lamb, Fayetteville; Northern Ohio, James Eadie, Cleveland; Southern Ohio, H. M. Altick, Dayton; Eastern Pennsylvania, H. H. Battles, 108 S. 12th street, Philadelphia; Rhode Island, Arthur Griffin, Newport; South Carolina, C. A. Moss, Spartauburg; Texas, H. Kaden, Gainesville; Virginia, C. Ponnet, Alexandria; Wisconsin, W. A. Kennedy, Milwaukee, and Geo. Vatter, Marinette; Ontario, T. W. Dugan, Brampton.

WM. J. STEWART, Secretary.

MASSACHUSETTS HORTICULTURAL SOCIETY, BOSTON.—Theodore F. Borst was the speaker at the weekly meeting of the Massachusetts Horticultural Society on Saturday last. The subject was, "Forest Planting for Profit in Massachusetts," and by using stereopticon views the lecturer made his subject all the more interesting to the audience. After briefly referring to the importance of forests and how indiscriminate cutting in the past had reduced the supply, the speaker took up the problem of how forests should be planted, how seedling trees are raised and how a plantation should be properly made and cared for with profitable results. A very interesting part of his subject was his showing how tree seeds were collected and cared for in the nursery. Mr. Borst spoke of the many thousands of acres of land in Massachusetts that could be profitably planted to forest trees, at comparatively slight expense, and gave data to show the actual cost per acre. He recommended white pine, chestnut, hickory, ash, oak, maple and tamarack as the most suitable trees for planting in this State, but said that under certain conditions

Mr. Borst strongly commended the planting of waste lands that are now bringing no returns, and his lecture throughout showed strongly that timber planting could be profitably carried on in this State.

J. W. D.

THE AMERICAN BREEDERS' ASSOCIATION.—The second annual meeting of the American Breeders' Association will be held at the College of Agriculture, Champaign, Ill., February 1, 2 and 3, 1905; the meeting convenes Wednesday, the first day, at 1.30 p. m. The Wednesday and Thursday afternoon sessions will be entirely devoted to the plant section.

Wednesday afternoon the following papers will be read: "Breeding Nitrogen Fixing Clover Bacteria," Dr. George T. Moore, U. S. Department of Agriculture; "Breeding Grapes," Mr. T. V. Munson, Denison, Tex.; "Improvement of the Strawberry by Selection," F. E. Beatty, Three Rivers, Mich.; "Carnation Breeding" (lantern slides), C. W. Ward, Queens, N. Y.

The program for the Thursday afternoon is as follows: "The Breeding of Disease Resistant Plants," W. A. Orton, U. S. Department of Agriculture; "Breeding Wilt Resistant Flax," Prof. H. L. Bolley, Experiment Station, Fargo, N. D.; "Breeding Mildew Resistant Sand Cherries," Prof. N. E. Hansen, Experiment Station, Brookings, S. D.; "The Breeding of a Hardy Alfalfa," Prof. W. M. Hays, Assistant Secretary of Agriculture; "Breeding New Cotton Varieties for Boll-Weevil Infected Regions," A. W. Edson, Department of Agriculture; "Cotton Breeding for Earliness and Productiveness," Prof. R. L. Bennett, Texas Agricultural College; "Plant Improvement by Hybridization," H. H. Groff, Simeco, Ont.

Among papers for Friday morning are: "Heridity," Luther Burbank, Santa Rosa, Cal.; "Explanation of Mendel's Law," Dr. H. J. Webber, Washington, D. C. Friday afternoon: "Inbreeding Plants" (moving pictures), Prof. W. M. Hays, Washington, D. C., will be read among other papers.

In all, a most interesting program has been arranged, one that will undoubtedly arouse the enthusiasm of all interested in breeding, whether it be plants or live stock. Railway tickets may be had on the certificate plan.

ANNUAL MEETING OF STATE ASSOCIATION OF INDIANA.—The State Florists' Association of Indiana held its annual meeting at the Commercial Club, Indianapolis, January 17, and later gave a show of carnations at the State House. The organization will give its support to the show of flowers to be held next Fall in Indianapolis by the Indiana Floral Festival Association. The following officers were elected: President, Fred Lemon, Richmond; vice-president, Herman Junge, Indianapolis; second vice-president, John Rieman, Indianapolis; secretary, Fred Hukreide, Indianapolis; treasurer, John Heidenreich, Indianapolis. Executive Committee—J. E. Haugh, Anderson; Gunnar Teilmann, Marion; J. A. Evans, Richmond, and E. A. Nelson and Adolph Baur, Indianapolis.

It was reported that the floral experiment station at Purdue University may be forced to close from lack of funds. A committee of florists was named to investigate the report, and if it is found to be true the State association will ask the Legislature to give financial aid to the station.

The Bertermann Bros. Co. won a certificate of merit with a new seedling carnation at the State House.

BOSTON GARDENERS' AND FLORISTS' CLUB.—At the meeting of the Gardeners' and Florists' Club, January 17, which was reported last week, the following recommendations for awards were made by the Committee on Exhibits: Certificate of superior merit to Guttman & Weber, for carnation Victory; certificate of superior merit to E. O. Orpet, for cattleya + Susanne (C. Skinner + C. Warner); certificates of merit to Cottage Gardens, for carnations Ethel Ward, Robert Craig and President; to Charles Sander, for begonia Tunford Hall, and to Palmer & Son, for carnation Red Lawson. A seedling carnation (white) from Ernest Wild was highly commended and requested to be exhibited again. Vote of thanks was passed to E. O. Orpet, for seedling orchids; to Wm. Sim, for sweet pea Mont Blanc; to Alex. Ogg, for Lillium Harrisii; to Jas. Wheeler, for begonia Vesuvius; to H. A. Stevens & Co., for carnations; to Thos. Waldie, for seedling carnations; to Baeker & Co., for carnations.

J. W. D.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.—The Executive Committee met in Springfield, January 18. The principal business transacted was the selection of a place for holding the annual convention, Buffalo, N. Y., was the city selected, the meeting days being June 28, 29, 30. It was also decided to print the bulletins of the association, which are becoming more and more valuable as the membership of the association increases. A very enjoyable day was spent in Springfield visiting the very pretty park which that city possesses. Unfortunately, three of the members were unable to be present, on account of sickness. Those attending were: J. F. Cowell, Buffalo; W. S. Egerton, Albany; Byron Worthen, Manchester, N. H.; Jas. Draper, Worcester, Mass.; J. A. Pettigrew, and J. W. Dunean, Boston; Theo. Wirth and G. A. Parker, Hartford, Conn.; G. X. Amrhy, New Haven, Conn.; C. E. Keith, Bridgeport, Conn.

J. W. D.

MONMOUTH COUNTY HORTICULTURAL.—The semi-monthly meeting of this society was held at Oceanic, N. J., January 20; our visitors were Mrs. Charles H. Totty, Madison, N. J.; Alfred Richart, New York; Anton Bauers and John Schackla, Deal Beach, N. J. G. H. Hale exhibited some *Primula obconica grandiflora* and *Grandiflora rubra*, for which he received 90 points. Mr. Turner showed some very fine carnations, Harlowarden, Enchantress and Governor Wolcott, which scored 85 points. Mr. Kettel was asked how he raised such fine tulips at such an early date as December 15. They had stems 9 inches and over in length. He explained that when they are boxed he just leaves them outside without any covering whatever for about three or four weeks; then he puts them in a cool cellar and covers them with about one foot of salt hay. When he puts them in the house he covers them with an empty box to draw them.

The society decided to hold the annual ball on February 10. Remarks were made by Charles H. Totty, Alfred Richarts, H. A. Kettel, N. Butterbach, A. G. Williams and others. The judges of the evening were W. W. Kennedy, A. G. Williams and Percy Hicks.

B.

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY held its regular meeting for the month last Wednesday, with a very good attendance, President James J. Sullivan in the chair. The matter of the prize schedule for 1905 came up for discussion, and quite a difference of opinion developed regarding the number of large public exhibitions to be held by the society during the coming year. Several of our best members wish to do away with the rose and strawberry show of June and have one very elaborate exhibition, say in August, to take the place of both the June show and the annual exhibition, which for some years has been held the latter part of September. There has been a feeling for some time that a fine exhibition, held in the Casino, or equally fashionable quarter, when society is here in full force, in August, could be made an annual function with the "Four Hundred" the same as our horse and dog shows are now. Such an exhibition once "the thing," the financial part would be assured. It is no easy matter to decide just what is best to do under all the circumstances. There is to be in Rhode Island a Federation of Agricultural and Horticultural Societies, and our treasurer, Andrew K. McMahon we have chosen as a delegate thereto. We have also selected a Building Committee of five members to advance the "ways and means" to the end that we have a home of our own as soon as we can possibly compass it. This committee consists of Andrew K. McMahon, James J. Sullivan, Andrew S. Meikle, John Mahan and David McIntosh. It has been recommended by the Executive Committee, and approved by the society, that "no money be expended from our building fund without a two-thirds vote of all the active members of the society." It appears that by mistake sixteen members were chosen on the Executive Committee at the annual meeting, in December last, instead of fifteen, as called for in our by-laws. In order to simplify matters, M. B. Faxon resigned from this committee. The society has hired an upright piano for the use of its members. John Robert Clarke, the seedsman to the George A. Weaver Co., was proposed for active membership. Mr. H. B. Odell, of Weeber & Don, New York, was with us at this meeting, and we were very glad to see him. Our next meeting will be held Wednesday, February 1, when Professor Barlow, of the State Agricultural College, will deliver his lecture on "Economic Insects and Bird-Life."

F. W.

Show Chrysanthemums in England.

In the issue of the Gardeners' Chronicle, London, for December 24, 1904, a correspondent contributes the subjoined information regarding prize-winning varieties of chrysanthemums exhibited at the English shows the past season: "The following twenty-four varieties of Japanese chrysanthemums have proved themselves to be the most generally good this season. Their names have been taken from the winning prize stands of thirty-six of the principal shows in the country. I have given them in their order, with the number of times shown. It will doubtless be helpful to those just making a collection for exhibition purposes, and interesting to practised exhibitors. Included are the best six novelties of last season (according to the exhibits)—a guide for those requiring up-to-date varieties:

Position.	Name.	Times Shown.	Position.	Name.	Times Shown.
1.	F. S. Vallis	92	13.	Madame Gustave Henry	21
2.	Bessie Godfrey	79	14.	Madame Carnot	20
3.	Madame P. Radaell	58	15.	Miss Mildred Ware	19
4.	Mrs. F. W. Vallis	49	16.	M. V. Venosta	19
5.	W. R. Church	46	16.	M. A. M. Nagel-machers	19
6.	Mrs. Barkley	38	18.	M. Louis Remy	19

The King of All Scarlet Carnations

THE NEW SCARLET SEEDLING

ROBERT CRAIG

C. W. WARD, Originator

IT HAS BEEN AWARDED THE FOLLOWING HONORS

- Preliminary Certificate**
American Carnation Society. 92 points.
- Special Diploma**
American Institute of New York.
- First Class Certificates of Merit**
Massachusetts Horticultural Society.
Pennsylvania Horticultural Society.
New York Florists' Club. 89 points.
Confirmatory Judgment (1904)
New York Florists' Club. 93 points.
- First Class Certificate of Merit and Special Prize, Morris Co. (N. J.) Gardeners and Florists' Society.**
- Craig Cup, for Best Undisseminated Seedling, Philadelphia, 1904.**
- G. Hartman Kuhn, Special Prize for Best Undisseminated Seedling, Philadelphia, 1904.**
- First Prize for Best 100 Blooms Scarlet, Chicago, 1904.**
- First Prize for Best Scarlet Seedling, Chicago, 1904.**

WILL BE READY FOR DELIVERY ON DECEMBER 1st, 1905

No Cuttings Will Be Delivered Before That Date

THE IDEAL CHRISTMAS CARNATION

An enormous bloom on an ideal stem; same habit as the well-known J. H. Manley, but much stronger and more vigorous from every point of view, and will prove as free a bloomer. May well be termed **A SCARLET LAWSON**. An authentic descendant of the **Lawson**, which was the pollen parent. A grand $3\frac{1}{4}$ to $3\frac{1}{2}$ inch bloom, grand form, perfect calyx, fine fragrance, and just the color of the **Holly Berry**. There is **no doubt** about **ROBERT CRAIG**. It has no stem rot; no disease of any kind. It is an easy doer. **Anybody can grow it.** It combines size, strength of stem, perfect constitution and vigor, form, perfect calyx, ideal color and fragrance, with grand shipping and keeping qualities. Is anything more needed? There will be benched, in all, between 40,000 and 50,000 plants for growing the season of 1905 and 1906. This will give ample stock from which to propagate only selected cuttings and will insure early deliveries as well.

PRICES For Selected Cuttings, for delivery commencing December 1, 1905:	}	\$12.00 per 100.	\$100.00 per 1000	A DISCOUNT Of 5 per cent. when cash is sent with the order.
		2,500 at \$95.00 per 1000		
		5,000 at \$90.00 per 1000		
		10,000 at \$80.00 per 1000		

Orders will be entered now, subject to cancellation any time prior to December 1, 1905, if upon inspection the variety does not prove satisfactory

WILL BE INTRODUCED JOINTLY BY

The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants; also of Greenhouses, Land, Second-Hand Materials, etc., For Sale or Rent.
Our charge is 10 cts. per line (7 words to the line), set sold, without display.
Display advertisements in these columns 15 cents per line; count 14 lines to the inch.
No advertisement taken for less than 50 cents (35 words), except Situations Wanted.
[If replies to Help Wanted, Situations Wanted, or other advertisements are to be addressed care of this office, add 10 cents to cover expense of forwarding.]

STOCK FOR SALE

MRS. T. W. LAWSON, 3000 rooted cuttings from selected stock, \$1.75 per 100; \$15.00 per 1000; sample 10c. T. J. Oppermans, Camphill, Pa.
CARNATIONS—Unrooted cuttings. All the leading bread-and-butter kinds. Write for varieties and prices; they are all right. Paul Thomson, Florist, West Hartford, Conn.

Announcement

ALFRED E. WHEELER wishes to announce to the trade that he has purchased the interest of C. H. Penn in the firm of W. E. Marshall & Co., dealers in seeds, plants and bulbs, the said firm now being composed solely of W. E. Marshall and Alfred E. Wheeler, with store and offices at 146 West 23d Street, New York.

SITUATIONS WANTED

GERMAN florist, sober, references, wishes position for general greenhouse work, \$10 per week. Address, D. C., care Florists' Exchange.
YOUNG LADY wishes position as maker-up and saleslady; seven years' experience; best of references. Address, D. D., care Florists' Exchange.
YOUNG man, 11 years in the trade, wants position with grower of general stock; good references. State wages. Address, D. D., care Florists' Exchange.
SITUATION wanted by a boy 15 years of age, strong and willing to learn the florist and nursery business; private or commercial. Address C. J., care Florists' Exchange.
GARDENER, florist, 29, single; strictly sober, life experience in all branches, best of references, wants steady position; please state wages. Address Florist, 527 Courtland avenue, New York City.
GARDENER, florist, married, competent in all branches of floriculture and horticulture; 23 years' experience, wishes engagement as head gardener; four years in last position; highly recommended. P. O. Box 435, Tarrytown, N. Y.
POSITION wanted by a young man, 28 years old, as foreman in a commercial place; used to handling men; good references from old country, as well as from this. Specialist in carnations, bedding and Easter stock. Address, D. K., care Florists' Exchange.
POSITION wanted, by young American, 30, in general gardening, greenhouses, mushrooms, etc. Have had practical experience in all in Germany, France and America; also one year special course in American agricultural college. Steady, temperate; references, Robert L. Golms, care Mr. Place, Franklin Savings Bank, Boston, Mass.

HELP WANTED

WANTED—An assistant on carnations and bedding plants; rapid potter. Wages, \$10.00 per week. John Reck & Son, Bridgeport, Conn.
WANTED—Man for private place; must have good habits. Send reference and place where last employed. State wages expected. Box 54, Springfield, Mass.
WANTED—Steady man to assist in greenhouses; one having some experience with roses preferred; must have good references. Wages, \$40 per month and room to start. Address, D. H., care Florists' Exchange.
WANTED—Fireman for night firing, one with experience as such, and having good references; steady place; \$12 per week. Hession, Florist, Clarkson St., near Utica ave., Flatbush, Brooklyn, N. Y. Take Reid Ave. car.

WANTED, two practical, experienced rose growers; single men preferred. Apply with references. Wm. Plumb, Bedford Station, N. Y.

EVERY GROWER SHOULD USE THIS TAG

ROCHDALE, MASS.

NOTE SPECIAL ADVANTAGES: Light, Neat, Attractive Waterproof, Adaptable to Any Stock, Easily Put On, and an Advertisement for you wherever your goods are seen.

- 1,000 Tags, - \$2 00
- 2,000 Tags, - 3 50
- 3,000 Tags, - 4 50
- 5,000 Tags, - 6 00
- 10,000 Tags, - 10 00

If so desired you can have printed on the tag the name of each variety; for instance:
Carnation—Flora Hill
For each change so ordered add 10 cents to price quoted.

Please write your order carefully and legibly.
The blank (within rules) on left hand side of the tag is for any check or other mark you may wish to stamp thereon; or the name of the variety may be placed there, if you so desire.

If you wish to furnish the tags with the strings on as shown, add \$1.25 per 1000 to the prices quoted.

Printed to order only, punched, but without strings in lots of not less than 1000.

Cash must accompany all orders for these goods.

Samples forwarded on application.

A. T. De La Mare Printing & Publishing Co. Ltd., 2 Duane Street, New York

WANTED—Man with experience in rose growing, as assistant in greenhouses; one with some knowledge of American Beauty roses preferred. Good wages to right party. Address, with full particulars, D. L., care Florists' Exchange.

YOUNG MAN of temperate habits and good appearance; must be first-class make-up, good decorator and AI window dresser; permanent position; good money for right party. References, etc., in first letter. Address, D. G., care Florists' Exchange.

WANTED—Experienced man for store work; must be up in design work, and first-class decorator; sober, industrious and have best of references. Place near New York city. State age, experience and salary expected. Address, D. E., care Florists' Exchange.

A GARDENER WANTED.—The undersigned is desirous of securing the services of a first-class gardener, with experience and skill on the general lines of this work, and especially under glass, both hot and cold, for flower and fruit culture. Gardener's cottage on estate. Apply in writing, stating references, to CONYER'S MANOR, Greenwich, Conn.

WANTED, a seed traveler by an Eastern wholesale house; one but fully experienced man need take the trouble to apply, as no one will be considered who cannot furnish unquestionably good references as to success in the past and as to diligence, sobriety and acquaintances with seed buyers in the South, Southwest and Middle West; six months on the road and six months in seed house. Address B. D., care FLORISTS' EXCHANGE.

OPEN of the best known Florist Supply Houses with well established and extensive trade has opening for partner to increase business. Applications must state full particulars as to present occupation, experience, capital ready for investment, or no notice. Address D. A., care Florists' Exchange.

WANTED

Order clerk and store salesman; one with a good knowledge of Flower Seeds and Plants preferred. Apply, stating age, experience, etc., to

HENRY A. DREER,
214 Chestnut Street, Philadelphia, Pa.

BUSINESS OPPORTUNITIES

FOR SALE, to settle estate, triple greenhouses, 5,000 feet of glass, well stocked, doing a fine retail jobbing trade. Enquire H. C. PICKHARDT, Meriden, Conn.

FOR SALE—Seven acres of ground, good house and barn with three greenhouses; also 140 cypress sash, 75 boxes, 11x12, double thick glass, and oil engine. Address Box 61, Wyckoff, N. J.

FOR SALE—The greenhouses, dwellings, and land is offered for sale in part or whole, at a sacrifice, to close the estate of the late Grove P. Rawson, Elmira, N. Y. Address, Eva J. Rawson, Administratrix.

IF YOU have five to ten thousand dollars that you want to put into a first-class business with or without your own services, according to amount invested, correspond at once with C. H., care Florists' Exchange.

SACRIFICE SALE—Who wants to buy my United States patent and valuable moulds for manufacture of the best plant syringes ever invented for amateur's use? Good reason for selling. If you are interested, write for particulars to Reel, F. Hill, 118 Main street, Astoria, L. I. C., N. Y.

MISCELLANEOUS

WANTED TO PURCHASE, GREENHOUSES TO BE TORN DOWN. MENTION PARTICULARS AND PRICE. ADDRESS A. Z., CARE FLORISTS' EXCHANGE.

WANTED to rent near Philadelphia, three or four acres of ground (good rose soil), with 10,000 to 15,000 feet of modern glass; suitable for growing roses for Philadelphia market; possession April 1st. Address B. F., care FLORISTS' EXCHANGE.

WANTED TO BUY greenhouses to be torn down. Mention price when writing. Address X. Y., care Florists' Exchange.

SECOND-HAND BOILERS

One nine section Howatt boiler, capacity 2-400 ft. 4 in. cast iron pipe.
One Weathered double dome No. 6, capacity 1,500 ft.
Three Hitchings boilers, Nos. 17, 16, 15. The above boilers are complete in every way and tested before leaving my shop. Wm. H. Luton, Heating and Ventilating, West Side Station, Jersey City, N. J.

FOR SALE

Greenhouse Material
Milled strictly of Louisiana Cypress. Will cut and splice to order. Hot Bed Sash a specialty. Try V. E. Reich's Oxford Putty, specially made for greenhouse purposes. Estimates freely furnished for greenhouse and hot bed glass.
V. E. REICH, 1429 Metropolitan Brooklyn, N. Y. Avenue.
Mention the Florists' Exchange when writing.

For Sale NO. 12 FURMAN STEAM BOILER

as good as new; has only been fired for two weeks. Cost \$600. Price \$200.

THE WEEK'S WORK.

Timme's Timely Teachings.

Lily of the Valley.

From now on the new importations of lily of the valley pips, received last Fall, may be forced successfully. If they are safely stored in outside frames a certain number, as needed, is brought in from time to time, and, if frozen, thawed out by degrees. A dipping of the roots in cold water will help drive the frost out. A little of the roots, about half an inch, is cut off before the pips go into the sand bed, the pots or the boxes, in whichever way the grower prefers to force them. They are planted in pots or pans, if wanted for the plant trade; while, as a cut-flower crop, the boxes, or a bench, are the proper places. Any boxes, six inches deep, filled with sand and placed on a hot bottom, sometimes directly on the pipes, will do for the forcing of the pips. These boxes are removed to a cool place after the flowers are fully developed.

This is one way of doing the work, and it will serve all purposes, where only small quantities are to be handled; but on places where several thousands are forced weekly, a bench especially constructed or arranged gives better satisfaction. This bench, about fourteen inches high, or deep, and wide enough to allow of being covered by a set of well-fitting sashes, or shutters, is filled to the height of six or seven inches with sand, which should at all times be heated up to an even 85 degrees, while the atmospheric or surface temperature should never be much over 50 degrees. In this bed, then, the pips are planted, at distances of two inches or even less between the plants. The long roots, after being shortened in a little with a sharp knife, as advised above, should be straight up and down in the sand, and the pips, or crowns, just above the level of the sand. Some growers cover the crowns with finely chopped moss an inch or more, but this is not absolutely necessary, and only called for where the bed is not fully up to requirements, defective or ill constructed, or where the temperature of the house is apt to drop too low occasionally. After being planted and the bed thoroughly watered down, the additional sash is let down over them, and on these heavy paper or boards are placed in order to darken the bed. After a forcing of two weeks the light is admitted, still using a light shading, however, for a few days, and only, when the flowers begin to open, all covering is removed and light, as well as some air given.

Of course, all this time heavy watering is necessary, which may be applied overhead every day until the spikes are well up and the bloom begins to show color, after which no water must touch the flowers, and only the sand is kept moist by a more careful watering. It takes just about three full weeks to force the pips into bloom. By subjecting the plants to a course of forcing under ordinary greenhouse heat and conditions, only a poor product will result, instead of a finer grade, as may be supposed. In this respect the lily of the valley differs greatly from all other thoroughly hardy outdoor plants, requiring the most extreme measure of bottom heat and rapid forcing to bring it out to perfection. Treating the forcing pips to regular rotations of liquid manure, as I have seen done, will probably do no harm, nor will it do any good whatever. Clear water, and lots of it, is all this charming little fairy drinks.

Peonies.

Peonies hardly ever are a great success as Easter plants, but may be had in bloom quite early in May. They object to any kind of severe forcing, and it is, therefore, time to gradually set them aging now, so that they may have plenty of time in an intermediate heat to produce faultless flowers in early Spring. Three or four-year-old clumps, especially selected and grown outdoors for this work, are taken up carefully in October and planted into a bench, or in pots, if only a limited number is wanted. All early flowering sorts, as those of the officinals group, the single and double *Paeonia tenuifolia* and some of the earliest varieties of the Japanese arborea or Moutan sorts, give fullest satisfaction, if previously prepared by a three-year course of outdoor culture, as alluded to above.

On private estates and for the decoration of the conservatories in public parks, the forcing of a few peonies every year is looked upon merely as a playful experiment, and the cost of labor and possibility of loss of plants are not deemed weighty enough to deserve consideration, when the question of success is discussed. But, commercially, we are beyond the first experimental stage in peony forcing, and the grower in this line figures on a reasonable profit. If he selects those kinds named for a future venture, and, when ready, subjects them to a mild and gentle heat and an ordinary good treatment, he would not be likely to lose any of the plants, and his returns for the marketed flowers could be counted upon as being sufficiently high to render this feature of flower growing quite profit-

able, for they would just come in when most wanted.

Those peonies which are found to be suitable for pot culture should have been potted up in the Fall, kept growing and allowed to become fully established in their pots during the following Summer. Such roots are in a better condition to be forced than those newly potted up, although the flowers may be somewhat smaller. The best variety for this purpose and, indeed, a grand subject for pots is *Paeonia tenuifolia*, and the single-flowered variety is quite as good as the double sort. Both are strikingly effective with their flowers of a deep, glowing red and their feathery, airy foliage. Such plants are eagerly bought, not only because they are exceedingly beautiful, but mainly because the people know what to do with them after they have done blooming, and when planted out into their gardens this peony never fails to ultimately fully come up to expectations.

Otaheite Oranges.

Nice, shapely specimens of Otaheite orange, well set with fruit and flowers,

we must have it. Small pieces of good clover sod, the robust red, as well as the little white clover, are placed on the soil, or regularly planted into it, and kept watered. Any empty space in a bench will do. If they are started now, quite a profusion of fine, suitable material will be ready at the right date. Common clover, under greenhouse culture, loses all its coarseness and assumes quite an air of importance and respectability. Although this may not be shamrock, and you do not claim it to be, it is in great demand all the same, as being the next thing to it. Therefore no deception need be practiced.

The florist, booking orders for the decoration of the banquet hall and banquet tables on St. Patrick's Day, should bear in mind that no two Irishmen agree on what shamrock really is, or what particular plant should be held as entitled to that great honor. Even learned sages of high authority declare that the question of what species of plant should be regarded as the true shamrock is still a much disputed matter. Some hold that it is *Trifolium pratense*, others say that none other but *Trifolium repens* is the

line Schmitt. In order to encourage these sorts to do their best and to grow quickly into something worthy of a place in any collection of highly finished pot plants, it becomes a matter of necessity to grow them in a moist hothouse temperature, and to give them a shift into new soil and a larger pot before they become thoroughly potbound and their roots hard and inactive. There never is a lack of buyers for nicely raised plants of this kind.

Of the white-leaved varieties, generally used for an edging in bedding, Mountain of Snow is the slowest grower, and cannot be relied upon as growing into an even border-line outdoors. This sort should now be propagated, but cuttings from its sister variety, the fast growing Madame Salleron, need not go into the sand until the end of February. Any little piece of this variety will root and quickly grow into nice three-inch plants, the size most suitable for immediate planting out. Ivy-leaved geraniums need not be propagated before March, or a bare and lanky lot of these most valuable plants will disfigure your benches.

Fuchsias.

The cuttings of fuchsias, now put into a warm corner of the propagating bed, will root in a few days, and if then potted up and repotted, whenever needed, will grow into plants of enormous size by the time the general pot-plant trade is in full swing. Some of the tall sorts may be grown into standards with a two-foot stem and a crown nearly as much across, by taking away the lower branches as soon as formed, until the desired height of stem is attained. Whether it pays or not to practice these fancy touches and cultural tricks of old I am not prepared to say, not finding sufficient time to do much of the kind nowadays, but I know that once more it pays to grow good fuchsias, that they are again in favor, and good selling market plants, if well done, and that to do them well is the easiest thing in the art of growing plants. A warm and moist place, lots of room, a shading later on at the brightest hours of the day, frequent transplanting when small, and a good, rich soil are the essential points in the culture of fuchsias.

Pansies.

In early Spring, the cut flowers from good strains of pansies are often called for and generally bring \$1 per 100 blooms. At this price the grower should consider himself generously compensated for the little extra labor and small share of bench room given over to a thousand or two of pansies. Plants that were started last August from seed and now in frames outdoors, may be brought in and planted at distances of six inches each way into a bench. They require the same treatment as violets, and will yield a continuous crop of very long-stemmed flowers way into late Spring, after which, of course, their career as useful stock is ended.

Carnations.

You have been told repeatedly that January is by far the best time to put in your main crop of cuttings, and in your anxiety to faithfully obey this fixed and rigid dictum you may be led to indiscriminately rob the plants of anything and everything rootable and unrootable. This should not be. Do not let your impatience outrun your judgment. While January indeed is a good month in which to strike carnation cuttings, it is not the set time, when the plants have the entire season's cuttings ready for the propagator. A cutting should be just right, and such cuttings are furnished by most of our present varieties right along from one end of the season to the other. A cutting which was just right for propagation in November and December has become unfit by this time, and one which would be excellent material for propagation in March is yet too soft to be risked as a cutting.

Where the grower aims to work up only sufficient stock for the coming season, as needed on his place, a few cuttings, taken now and then from each plant, will result in better plants than if taken off all at one time, even if rooted before or after January. It is also true that the plants grown from cuttings thus selected from time to time prove far superior in every way to those derived from mass propagation, the product of plants made to produce two and three heavy crops of cuttings, and especially set to work in this direction. A carnation, no matter what variety which is made to produce nothing but cuttings, and is denuded of all its healthy foliage several times in a few months, often enough is the root of all evil points seen in new carnations. F. W. TIMME.

TEWKSBURY, MASS.—Mr. M. A. Patten left with the Boston party Monday evening; destination, Chicago; objective, the meeting of the American Carnation Society. Mr. Patten will exhibit "Mikado," illustrations of which will be found in another column.

IXORA MACROTHYRSA AS GROWN IN ENGLAND

IXORA MACROTHYRSA.—The *Ixora* are not quite so popular as they were a few years ago, yet anyone in search of novelties should appreciate this fine species. It has immense heads of bright scarlet flowers, and rather long oval leaves, of a bright fresh green. Some fine examples were shown at a recent meeting of the Royal Horticultural Society. They came from

the gardens of Sir Trevor Lawrence, and were much admired. The illustration gives some idea of the fine clusters of bloom; they measured fully 18 inches in diameter. The plant was introduced from Strong Island, in 1878, and a first-class certificate was awarded it by the Royal Horticultural Society on October 6, 1891, when it was first exhibited by Sir Trevor Lawrence. It is sometimes named *Ixora Duffi*.

are the best selling plants I know of. Unfortunately, this variety of citrus is also the most difficult of plants to handle, and is not likely to be grown extensively in any place in the future, unless it can be made to behave better than it is doing now. Were it not such a fast selling and most attractive plant, when well done, hardly any would be in cultivation now. Mealy bug, scale and other insect enemies combine with blight and rot to render the raising of a respectable lot of Otaheite oranges almost an impossibility. I have of late been led to the belief that this truly tropical plant has, as a rule, been probably grown in houses too cool and airy for its nature, and that in a true hothouse temperature and a more moist atmosphere it would perhaps have deteriorated less rapidly. We should give it another chance.

Shamrock.

Shamrock, or something very much like it, plays an important part in the various kinds of decorative work, ordered and in order for St. Patrick's Day, which comes on the 17th of March. Any amount of it is called for and usually well paid for nearly every year for the occasion. So

true Irish shamrock, while there is still another faction putting forward *Oxalis acetosella* as the only plant meant by the term shamrock. It seems there is not sufficient evidence to determine the point, and the question is still open for unlimited debate. But since all agree that the plant cannot be grown out of Ireland we are justified in providing a pretty substitute.

Fancy Geraniums.

The latter end of January, or the beginning of February, cuttings of all the varieties of variegated, fancy and scented geraniums should go into the propagating bed. They will now root quickly and grow into nice salable stock by May. The old stock plants of these kinds, after having furnished the desired supply of cuttings, will not amount to very much and you may then as well make room for something more valuable. The new set of young, thrifty plants will be much finer stock, will grow faster, and the colors in foliage and flowers will be more distinct and much brighter in all their fine markings. This is especially true of such varieties as Prince Bismarck, Happy Thought, Mrs. Pollock and Caro-

New York.

News Notes.

This city was visited with a blizzard on Wednesday, the like of which has not occurred before in the last sixteen years. The railroads were tied up on Wednesday and Thursday, a genuine cold wave followed the fierce gales and drifting snow, and the flower business in general is paralyzed.

At the Cut Flower Exchange on Wednesday morning but five growers put in an appearance, while on the following morning not a single grower attended, consequently not a flower arrived at that market. The wholesale commission men's district was little better off, however, as not a single consignment was received on Thursday morning, and such a dearth of flowers was never before experienced.

The retail business throughout the city is about at a standstill, and the fact of the supply being cut off is causing no little uneasiness in that quarter.

On Wednesday, during the storm, the horse and wagon belonging to Charles Lustgarten, of Elmhurst, N. Y., which had been left standing in front of the Cut Flower Exchange Building, could not be found when the driver returned, and after a search of many hours the outfit, minus the blankets, was found at the corner of 68th street and Broadway. The overland express, which conveys the products of the Madison, N. J., rose growers to the New York market, has just completed its second year of service. It is worthy of note that since its commencement, two years ago, the express has arrived on time every morning, with its load of precious flowers, whatever kind of weather prevailed, through fierce snowstorms or fog; Winter and Summer, the wagon has never missed a single trip, neither has there been any damage done to the flowers in transit, either by frost or heat since this service was instituted. Growers who send their flowers by this express find it a great convenience; the consignments are called for at the greenhouse, and the empty boxes from the previous day are left at the same time. By this method the grower saves himself the cost of taking his flowers to the station, and has the satisfaction of seeing them at once sheltered from the cold.

The severe storm this week proved too much for the overland, however, and on Thursday morning those who receive shipments by this route were informed by telephone that, owing to the impassable condition of the roads, the wagon could not be started on its journey.

Wm. H. Johnson, who had charge of the greenhouses at Sing Sing Prison, died on Friday, January 20, aged 54 years. Paralysis was the immediate cause of his death.

Mr. J. H. Pepper, the eastern representative of the American Florist, was waylaid and robbed while returning home from the bowling club on Monday evening. Mr. Pepper was beaten quite severely by the thugs, who held him up.

On Friday, January 20, Mrs. Edward Bourque died very suddenly from heart disease at her home in Yonkers, N. Y. Her husband, Edward Bourque, is the well-known salesman for Charles Dards, and the sympathy of the craft will go out to him in his sad bereavement.

The outing committee of the New York Florists' Club met and organized on Saturday afternoon last. Wm. J. Elliott is chairman; Chas. Schenck, treasurer; J. A. Shaw, secretary.

Next Saturday, February 4, the annual dinner of the Florists' Club takes place at the St. Denis Hotel. Any members or friends of the club who wish to donate flowers for the decoration of the tables will confer a great favor on the dinner committee if they will forward such flowers to the secretary of the club, Mr. John Young, 51 West 28th street, on the day of the dinner.

The American Society of Landscape Architects held their annual dinner in the Hotel Astor recently, and elected the following officers for the ensuing year: President, J. C. Olmsted; vice-president, Samuel Parsons, Jr.; treasurer, C. N. Lowrie; secretary, Downing Yaux; member of executive committee, Prof. Greenleaf.

Among the New Yorkers who attended the annual meeting of the American Carnation Society in Chicago this week were Alex. Wallace, editor of The Flor-

ists' Exchange; Mr. and Mrs. Eugene Dailedouze, Mr. and Mrs. Ludwig, parents of Mrs. Dailedouze, John Reimels, J. A. Shaw, A. J. Guttman and C. W. Ward.

Alfred E. Wheeler has purchased the interest of C. H. Renn, of the firm of M. E. Marshall & Co., seed and bulb merchants, 146 West 23d street, and has become an active member of that firm.

Philadelphia.

The florists' business lacks the vim that is usual at this time of the year. While there are plenty of social affairs going on, it is apparent that not so many flowers are being used. Some will say overproduction; that is true to a certain extent, but personally the writer has seen four decorations this past week, one of which, five years ago, used twenty thousand carnations and several hundred strings of smilax; this year two hundred roses and five hundred Von Sion narcissus was the cut flower total. Southern smilax was used largely with Japanese draperies, etc., to give color effect.

Roses, that is, fancy grades, have been scarce, but we still have an overabundance of carnations, as others have expressed it, "every grower has a good crop;" even with so many in the market, extra choice is yet recognized. This week Wm. J. Baker has the call; he is receiving some grand flowers of Enchantress; while practically only half open, they are then as large as they are usually seen at their full.

Plant growers are complaining of poor business around here; palms appear to be the worst assets just now; in fact, some say palms have not paid for the past four years.

The Canadian convention is on, and, as usual, with it comes a blizzard. Wednesday morning here there was ten inches of snow on the ground; temperature, 20 degrees, still snowing, and a strong northwest wind blowing. By afternoon, shipments of flowers from growers were from one to two hours late.

Samuel S. Pennock, Edward A. Stroud and William Swayne have gone West to view new carnations at the convention. DAVID RUST.

It will be carnation night at the Florists' Club on Tuesday, February 7, when it is hoped and expected that all the meritorious varieties, whether new or old, will be on exhibition. If they cannot be brought to the meeting they may be sent prepaid, by express, in care of David Rust, Horticultural Hall, Broad street, Philadelphia, Pa.

EDWIN LONSDALE,
Secretary.

Newport, R. I.

Trade Conditions.

There is little to say, except that it is very quiet with the seedsmen, as expected at this season; the florists' trade has been fair the past week. The weather has been the best of the Winter thus far, we having had a good spell of clear, beautiful days. It is seldom that a finer collection of funeral flowers is seen than those sent last Friday to the Island Cemetery at the burial of Mrs. Lewis Cass Ledyard. There were some sixty beautiful pieces, and Thorley's representative, who had charge of the flowers, stated that two hundred pieces were left behind in New York. The local paper has had several articles within the past few days with illustrated plans of the George A. Weaver Company's Agricultural Emporium on Broadway, showing how the structure could be enlarged and adapted for a hotel. It is reported that a stock company may be formed to reconstruct and fit out this property for that purpose.

George A. Weaver, of the George A. Weaver Company, has gone to Hot Springs, Ark., for the benefit of his health. It is announced that in April Carl Jurgens, Jr., will be married to Miss Florida Hubbard, of Washington. Mr. and Mrs. Robert Hunnack will celebrate their silver wedding January 30. Hodgson supplied a lot of very choice roses and other cut flowers for Mrs. John Jacob Astor's "Small Dance" at the New York mansion last Monday.

Visitors the past week were H. R. Odell, of Weber & Don, New York, and David S. F. Adam, representing J. M. Thorburn Co. F. W.

Oakland, Md.

A number of the Baltimore craft visited Messrs. H. Weber & Sons at Oakland, Md., last Sunday. When we left Baltimore Saturday night the weather was clear and fine; when we arrived early the next morning at Oakland it was snowing hard; this, however, did not mar the pleasure of the trip. We were met at the depot and taken to the hotel for breakfast, after which we took a delightful sleigh ride of about a mile to the objective point. Messrs. Wm. and John Weber took us through and explained all points of interest, of which there were many. On leaving the office the door of a house 35x240 feet was opened, and we found ourselves in this large house filled entirely with the great My Maryland carnation. Many blooms were standing there on large, long, stiff stems, and not a bursted calyx to be seen. They have some 40,000 cuttings of this variety now in the sand, and are still putting in more. It was originally intended to send it out this year, but the firm has since decided not to disseminate it until 1906.

The firm has more than 100,000 square feet of glass in all, mostly devoted to carnations; several houses were filled with seedlings only, many of which will doubtless find their way to the markets in the near future and prove valuable additions to the carnation family.

There are six boys in the family, all actively engaged in the business, each carefully and energetically looking after their respective duties. Two of the sons, Henry and William, are married and have their residences on the estate (which is more than 500 acres). All the hay, grain, etc., raised on the place is consumed by the fifty head of horses and cattle, giving all the manure needed. Mr. Weber informed us that during the coming Summer they will rebuild one block of about an acre and erect an additional new block for chrysanthemums.

There are two water systems throughout the houses, one for liquid manure, the other for fresh water, which is supplied from a 40,000 gallon tank. The place is equipped with a sawmill and box factory for the exclusive use of their large business. They also have a large cut-flower vault. The major part of their products are disposed of at wholesale, the quality being such as to command the best prices. Just two miles east of their place is Mountain Lake Park, which is a great religious summering place. Three miles farther east is the popular and fashionable Deer Park; these two resorts are heavy retail buyers during the summer season. The residence is very large and handsome, with all modern improvements, built on a hilltop overlooking a beautiful valley to the mountain beyond.

Baltimore.

We are in the grasp of a severe snowstorm approaching a blizzard; it began to snow Tuesday and has kept it up steadily to the present writing. Business was nearly at a standstill today in consequence. Roses are a little scarce; all other stock is in supply equal to the demand, and a little left over.

The Gardeners' Club had a poor attendance Monday night. A committee was appointed to suggest some appropriate reward to the member bringing the largest amount of new members into the club during the year.

The committee on carnation show is hard at work arranging for a successful exhibition for Monday, February 27.

Messrs. Hammond Bros. have dissolved partnership and discontinued the business, at least temporarily.

JOHN J. PERRY.

Boston.

A new flower store has been opened at 388 Boylston street, with the title of the Arboretum Flower Shop. The proprietors are John J. O'Brien and Minnie J. Wren, both of whom have been with Carbone for several years and are well known among the local florists. They have the well wishes of a large host of friends.

Alexander McKay has purchased a ten-acre farm at Ashland, and will at once start the erection of a range of greenhouses, growing material for the Boston market. Mr. McKay has been

known as one of Boston's most successful private gardeners, having been one of the leading exhibitors of chrysanthemums a few years ago. His fine specimen plants and exhibits of large blooms are well remembered, and that he may be successful in his new enterprise is the wish of his many friends in this vicinity.

Galvin is having a large call for orchids, gardenias and other choice flowers. He is receiving some very fine blooms of each of the former from Julius Roehrs, Rutherford, N. J., and also some fine gardenias from Wild, of Jersey City.

Single English primroses are a choice flower at Macmulkin's.

Robert Cameron has a fine display of primroses at the Harvard Botanical Gardens; some very fine types of *P. obconica* are seen.

W. J. Stewart has been confined to his home for several days with an attack of the grippe.

S. J. Reuter, of Westerly, R. I., one of the largest shippers of cut flowers to Boston, sailed for Europe on the 19th inst.

The Horticultural Club met Thursday evening, with A. Leuthy in the chair. J. W. D.

Cincinnati.

By this time next week we shall know who did not attend the American Carnation meeting and who did not get premiums and gold medals. I believe Cincinnati will win some of the prizes, as R. Witterstetter never had his place in better shape. The writer was there Friday, and some of his exhibition stock was cut and in water, and they were certainly fine. His place, with the exception of one bench of Enchantress, is devoted to the growing of his own seedlings, and he certainly has some good ones. Last year he was producing pink colors; this year it is all white. E. G. Hill was in the city Saturday and was out at Mr. Witterstetter's; evidently he has his weather eye on some one of these newcomers.

Will Murphy is busy putting two new tubes in his boiler, which blew out Sunday night; always something doing to keep a grower busy.

A. J. Peterson, Alfred Forder, Sunderbruch and R. Witterstetter are the "big four" that left here over the "Big Four" for Chicago Tuesday evening. E. G. GILLETT.

Barneveld, N. Y.

With Mr. Harry Mathews your scribe recently visited Barneveld, seventeen miles north of Utica, to see Mr. Nicholson's place, where nothing but carnations find a home. We were met by Mr. A. O. Grassl, who took great pains in showing us through the plant. Last Summer was added two new houses, each 200 feet, making now six in all, 20x200 feet; and also a new propagating house, 6x200 feet. A new boiler of 80 horse power, set on the level of the houses, with the condensed steam pumped back to boiler, has been installed. They like it very well, indeed. In fact, it works perfectly. All overhead pipes are being done away with. Everything here is on benches. One house of Lawson was in grand condition; one of Queen looked more like a wheat field just headed out; one house of Enchantress was hard to beat—grand, good flowers, and any amount of them; we also saw Flamingo, Sun Bird and Albatross. Flamingo and Albatross will be given another trial next year; Mr. Grassl thinks that Flamingo can stand more heat than any other kind; say about 56 degrees. Mr. Grassl showed us some very promising new seedlings, a fine pink the color of Marquis; also a fine white large flower looks as if it would be a comer; he also has several other seedlings which are good.

Their propagating house is one of the finest I have seen. Mr. Grassl is rooting every thing in sifted ashes; he says there is no danger of fungus in that way, and cuttings root just as well with less attention.

FIRMS WHO ARE BUILDING.

WHEELING, W. VA.—Jacob Sneider is erecting a large greenhouse on Twelfth street.

PHILADELPHIA, PA.—William Didden has secured a permit to build a new greenhouse, 20x64 feet.

The FLORISTS' EXCHANGE is subscribed for by the live men of the Trade.

The FLORISTS' EXCHANGE is a Trade Journal, and published on behalf of the Trade only. There is no paper published that more zealously guards the interest of its patrons.

The FLORISTS' EXCHANGE furnishes every item of news and information necessary for the successful conduct of your business, whether you be seedsman, nurseryman or florist, two in one, or all three combined; therefore, the FLORISTS' EXCHANGE is deserving of your most hearty support.

The columns of the FLORISTS' EXCHANGE contain more real, live and instructive reading matter, more news, and more helpful Trade information, than can be found in any other journal.

The average trade paper is happy with a circulation representing 20 per cent. of the industry it covers; the weekly circulation of the FLORISTS' EXCHANGE covers over 60 per cent. of its available clientele—and all to paid subscribers.

Strict application to business methods and courteous attention to all have placed the FLORISTS' EXCHANGE at the top and it intends to stick there.

WHY WE SOLICIT YOUR BUSINESS

NOT BECAUSE Our advertising rates are cheaper than those of other similar journals!

NOT BECAUSE We advance the unproven statement that our circulation is larger than that of the other trade journals!

NOT BECAUSE We make the claim that our journal is paid for and read!

BUT BECAUSE THE FLORISTS' EXCHANGE pays its Advertisers better than any other journal in the trade.

This claim is substantiated by the self-evident fact that THE FLORISTS' EXCHANGE, though charging more per inch for advertising than any other like journal, still has The Largest Paid Advertising Patronage of All

PROVING

That the wide-awake tradesman does not seek cheap mediums in which to advertise his goods. That he knows cheap articles of any kind are often dear at any price. That he gets value for value when he advertises in **The Florists' Exchange**. That the florist is more of a business man than some publishers would give him credit for being. That foolish fancies, palaver and contradictory claims have no weight with him.

WE REPEAT:

We do not insert advertising FREE; we do not claim to charge the cheapest rate. Your business is solicited on the ground, that as IT PAYS OTHERS to advertise in THE FLORISTS' EXCHANGE, it follows IT WILL ALSO PAY YOU. TRY IT!

THE FLORISTS' EXCHANGE P. O. Box 1697 N.Y. 2 DUANE ST., NEW YORK

Sweet Peas in England.

Henry Eckford's New Departure.

The appearance of Henry Eckford's catalogue for 1905 sets at rest a good many rumors that have been floating round regarding the veteran's intentions, and, to the surprise of many it consists in turning his own children out of doors. To quote his own words: "Kindly note that in the following pages a good many sweet peas are marked 'discarded.' I still grow and can supply seed of these, but it is my intention to eventually exclude them from the list, as other and better varieties in similar colors have taken their place."

In the ranks of the discarded will be found Crown Jewel, Coquette, Maid of Honor, Boreation, Orange Prince, Katherine Tracy, Mrs. Sankey, Emily Henderson and some twenty-three other varieties, partly raised by Eckford and partly from other sources. Against this sweeping reduction in the list are set the following novelties:

Romolo Piazzani—Color almost a true violet blue self; flower slightly hooded.

Black Michael—A bright, shining reddish maroon, with slightly paler wings.

David R. Williamson—Standards of bright indigo blue, wings a slightly paler shade.

Not a very startling trio.

Some such step as the foregoing has been inevitable ever since the Sweet Pea Society commenced its work. The lovers of sweet peas have had their minds enlightened and their taste cultivated, and already many of the larger dealers, who had become heartily sick of the unwieldy list of varieties, differing in many instances by only the shadow of a shade, had struck out all, or nearly all, of the list now sacrificed by Eckford. He does well to follow their good example.

One other most important effect of the operations of the Sweet Pea Society has been the development of wholesome competition. For many years, with the almost solitary exception of Laxton, Eckford had absolute sway. To-day the work of Breadmore, Cole, Dobbie, Molyneux, Unwin and a host of others (to say nothing of the grand work done in America) is beginning to make itself felt, and Eckford has done wisely in deleting from his list varieties that have had their day, but are now not worth cultivating.

The Sweet Pea Society continues to make most satisfactory progress. In addition to a very liberal prize list, which embraces among its donors the names of C. C. Morse & Co., Santa Clara; Archibald Smith, late of Boston, and all the best firms in England, Sutton & Sons are offering a silver challenge cup, value 15 guineas (\$80), for the best exhibit in the special audit class, and the society also offers a gold medal to the winner as a permanent memento of his success.

Only favorable weather is needed to ensure a magnificent display on July 4.

S. B. DICKS, F. R. H. S.

NEW SEEDLING CHRYSANTHEMUM, Color, Lemon Yellow Raiser, Alfred Bellamy, Syracuse, N. Y.

A New Seedling Chrysanthemum.

The accompanying picture is that of a seedling chrysanthemum raised in 1902 by Alfred Bellamy, who has charge of the conservatories in Oakwood Cemetery, Syracuse, N. Y.

As the picture shows, it is a very fine incurved variety; is a lemon yellow, midseason, of firm, strong stem and leathery foliage, and altogether is a fine commercial variety, as it is an easy doer. J. B. B.

A German Trade Directory.

Thalacker's Address Book for the Year 1905, published by Bernhard Thalacker, Leipsiz-Gohlis, Ger-

many. This book contains the names and addresses of all the horticultural establishments in Germany, arranged geographically, with distinguishing marks showing exactly in what branch of the trade each firm is engaged. Addresses of 26,000 establishments in over 6,000 different places are given. Since the last edition, we understand that 1,500 firms have gone out of business, but that 3,000 new ones have started up, showing the necessity for issuing a new edition yearly. The book is of handy pocket size, particularly advantageous to commercial travelers, and contains besides the directory much other interesting information, such as legal advice, postal, railroad and steamship information, as well as a diary for the year. The book includes a number of advertisements of enterprising German firms.

Greenhouse Materials.

WROUGHT IRON PIPE.—Conditions in the pipe trade have continued satisfactory and business has been good since the first of the year. The market is exceedingly firm and some in the trade believe that prices will again be advanced before long.

WINDOW GLASS.—At a meeting of the Executive Committee of the Manufacturers' and Jobbers' Window Glass Company, held last week, an advance in the minimum price at which manufacturers may sell to jobbers was made. New York jobbers are quoting without change, as follows: First two brackets, single, 90 and 15 per cent. discount; larger sizes and all double strength, 90 and 5 per cent. discount, from jobbers' list of October 1, 1903. The demand is active for the season.—Metal Worker.

California Carnation Cuttings.

Editor Florists' Exchange:

Through the columns of your paper I begin to see that others have had trouble with California carnation cuttings besides myself. Last Spring I received cuttings from there, of which only 7 per cent. lived. I said nothing about it at the time, thinking that the trouble was probably with me, although I gave them good care and attention, but now I have reason to think otherwise. They were on the road four days, and arrived apparently in good shape, but seemed to be hard and woody; these as well as those spoken of in your paper were unrooted cuttings. I think were they rooted there, they would be more satisfactory.

New York.

SMITH.

CLEVELAND, O.—Reports received by the Home Gardening Association, in the form of letters from pupils in the public schools of Cleveland, show that at the lowest calculation 30,000 children are engaged in the growing of plants. Last April 181,000 packets of flower seeds were distributed by the association and prizes were offered to the school in which the largest per cent. of the scholars reported as having planted the seed.

Nitrate of Soda for Ferns.

(48) Kindly advise me how many pounds of nitrate of soda I should use for a kerosene barrel full of water, for watering ferns, etc., in want of feeding.

—For the watering of tender plants one-half ounce of nitrate of soda to one gallon of water is sufficient, and we would not advise that for use on ferns even, unless they are very strong growing varieties. For tender stove ferns it would not be safe at all. If feeding of the ferns is contemplated, it will be far safer to make a liquid from barnyard manure, and use that in a very weak state.

Branching Cyclamen.

(49) I have this year among my cyclamen several that have thrown up leaf stalks that have branched, throwing out new leaves and buds at the point where it branched. Is this a common occurrence, and would seed saved from these plants be likely to produce plants with the same characteristics?

—From the description given of the leaf stem of the cyclamen, branching and throwing both flowers and leaves, we should pronounce the freak a very uncommon one, indeed, but whether that peculiar trait will be transmitted to the next generation or not can only be learned by actual experiment.

Plants for Spring Sales.

(50) When shall I sow the following to have nice stocky plants for Spring sales for outdoor planting: Asters, verbenas, heliotrope, pansy, salvia, forget-me-not?

—The verberna, heliotrope, pansy, salvia and forget-me-not should be sown at once; the asters need not be sown until early in March.

Nicotiana Sanderae.

(51) Will Nicotiana Sanderae bloom in a carnation house if seed is sown in pots now?

—The nicotiana, sown now, would not bloom early enough for Spring trade, but could be planted outdoors, where it would flower during the Summer.

Chrysanthemums.

(52) Can I get as good chrysanthemum stock from cuttings taken now, and then cuttings taken from those, as I could from stock plants? How late will it do to take cuttings of early and midseason varieties? I have no chrysanthemum stock, but know where I can get cuttings. What do you consider the best book on chrysanthemum culture?

—There is no choice between the two methods suggested; first-class stock can be grown either way. The middle of April is as late as one should take the cuttings to have really good blooms. Smith's Chrysanthemum Manual is the latest work on this subject, and can be safely recommended. It can be obtained from this office; price, 25c.

White Fly on Hibiscus.

(53) I enclose three leaves of hibiscus, the under part of which is covered with insects which are not old enough to fly. When they are fully developed they dart about like tiny white flies. Please tell me what they are and how to eradicate them. They came to me last year on rooted cuttings of pelargonium, multiplied rapidly, and during the Summer were as destructive out of doors as in the greenhouses.

—The leaves are infested with the common white fly, *Alysiodes*, and it is a difficult pest to eradicate. The best remedy is pyrethrum powder. Get this and apply it with a bellows, dusting every part of the plants that are infested.

Grafting Grape Vines.

(54) Please inform me whether it would be possible for me to graft or bud Muscat-Hamburg grapes on to

Gros Colman and Gros Maroc vines? We have all three growing side by side but the two last named are of undesirable flavor. If practicable, how would I proceed? Would they fruit the same year?

—Grape vines can be grafted, budded or inarched; I prefer the latter method. But suppose we are to graft a grapevine, owing to the nature of the vine and the liability of bleeding, which would destroy the graft, it would be well to wait until the vines had started into growth. By this means, the surplus sap is carried into the young growth. If I were to graft a vine, I should leave three or four inches of last season's wood at the base, or wherever I intended to put the graft. However, on whatever part the graft is set, leave a growing shoot in front of the graft for a time, to help carry off the surplus sap. Whip grafting is a good method. It would be well to have the cion in a warm place for a time, or the eyes, at almost the point of breaking. After the graft is put on and tied, a cover of grafting wax completes the operation. Still inarching is the best and quickest way of renewing, but this would mean buying as many pot vines as were desired to be inarched, starting up the pot vines at the same time as the vines in the house intended to be inarched. When the young shoots are, say, a foot long, or the young wood just firm enough to handle, then inarch, which is a simple process. Bring the young wood of the pot vine against the young wood of the permanent vine, cutting the young wood of each, where the two meet; then tie them with raffia. In a short time they will unite and grow away rapidly. The following season the old cane can be cut away. If they have made good canes, they would be in condition to carry a couple of bunches the following season. Gros Colman and Gros Marde should make good stock for Muscat Hamburg.

W. TURNER.

Wood Alcohol for Mealy Bug on Grapes.

(55) What is the method of applying wood alcohol for the destruction of mealy bug on grapes?

—Wood alcohol should be applied when the vines are dormant, or, say, after the vines have been cleaned in the usual manner. Take a paint brush and paint the canes all over, just enough to wet them. It will do no harm whatever to the vines; but certainly will make short work of the bugs.

WM. TURNER.

Wanted—A Filler for an Idle Bench

(56) Having a lot of idle bench space, which I will not need until June in a house I can keep from 50 to 60 degrees. I will be much obliged if you could kindly suggest something I could grow, perhaps from seed, for Spring trade with a reasonable hope of clearing same out at a margin. I have a lot of fresh home-grown browallia seed; would it be likely to have a ready sale from 2 1/4-in. pots? No local demand.

J.

—If we knew better what kind of a demand there is for plants in your locality, we could answer such a question more intelligently. Stocks, asters, verbenas, petunias and a host of other annuals could be sown now, and marketed before the first of June. If it is necessary to find a market elsewhere, however we would suggest purchasing young stock of geraniums and growing them on to flowering size; these, if well grown, can be sold and shipped easily to any point. We do not believe there could be much of a market found for the browallia.

Carnations.

(57) I have a house of carnations. I grow Queen Louise, Lawson pink and Mrs. Potter Palmer. In your judgment, what would be the best three kinds to grow in a house 50 to 56 degrees? White, pink and scarlet Mrs. Lawson and Queen Louise burst.

—The three varieties of carnations we would recommend for such a house would be: White; The Queen; pink, Enchantress; scarlet, J. H. Manley.

Carnations Sleeping on Plants.

(58) Can you tell me what is the cause of carnations going to sleep on the plants? I have a house of Wm. Scott, Mrs. Frances Joost, Queen Louise, Flora Hill, and other varieties. This house was planted only November 15, from the field, as the house was not finished before; and, of course, the stock is not what it should be. The other day I had to water the house, although it was a dark and cold day, but I couldn't wait longer. The same night I smoked the house quite heavily, and kept it a little warmer (60; usual 50-55) to help the plants to dry off, and the next morning I found all the open and half-open flowers asleep. What was the cause of that? I have never had it happen before in my 15 years' experience with carnations. I kept the house all along a little warmer than carnations are ordinarily kept, for the reason that they were planted so late.

—From the foregoing communication we would gather that the plants were very much on the dry side, or the watering would not have been done during such unsatisfactory weather conditions. The plants were evidently in a semi-wilted state for several days; and the fumigating, together with an excessively high temperature through the night, was the cause of the flowers going to sleep.

Hlon, N. Y.

Visits were made here recently on Theo. Schish, on West Hill, and Hakes & Son. The cut on flowers at Schish's had been cut very close, but everything was looking good. A grand bench of callas and plenty of them was seen at Seward Hakes's. Carnations here were good. Mr. Hakes grows a large number of bedding plants, thousands of geraniums, a big lot of vincas.

BOWLING.

FLATBUSH VS NEW YORK.—On Thursday evening, January 19, nine picked men from the New York Club went over to Flatbush to play a return match with that suburban club. The Flatbush bowlers have the best ventilated and most commodious alleys of any club that we know, and it is always a pleasure to meet that team on their own stamping ground. Four alleys were used in the match, so that it did not take long to decide who the winners were, even though there were nine men on each side. When the totals of the two games were counted, New York was 406 pins ahead.

After the match both teams sat down to an excellent dinner, provided by the Flatbush Club, and it was midnight nearly when that interesting session was brought to a finish. One more friendly game was enjoyed after the dinner, then Patrick O'Mara proposed three cheers for Flatbush, which were heartily given and brought to a close one of the most enjoyable bowling events of the season. The individual scores follow:

FLATBUSH.	
D. Y. Mellis	124
L. Schmitz	191
E. Dailleouze	136
W. H. Siebrecht	158
H. Dailleouze	129
P. Riley	166
C. Wocker	110
J. Scott	135
A. Zeller	130
Totals	1279

NEW YORK.	
F. H. Traendly	147
P. Kessler	197
A. S. Burns	176
J. Fenrich	139
J. A. Manda	153
S. S. Butterfield	128
J. A. Shaw	101
F. C. Holt	203
P. O'Mara	205
Totals	1454

Mr. O'Mara was awarded a miniature loving cup for making the highest score, 205.

WEST HOBOKEN, N. J.—The North Hudson Florists' Bowling Club has commenced to have weekly practice at their alleys in West Hoboken, and the following scores were made on Monday evening:

M. Hansen	153
L. Hansen	126
P. Fischer	125
O. Grundemann	128
E. Tschupp	108
H. Eicke	99
J. Birnie	111
W. Otte	133
H. C. Steinhoff	125
E. Bachler	117
H. Stern	132
— Bauman	90
— Helms	97

WASHINGTON, D. C.—The florists' bowling team made a good record last Wednesday night. The following are the scores:

Geo. Cooke	154
Geo. Schaffer	178
S. Simmonds	149
John Barry	127
Robt. McLennan	155

"THERE IS ONLY ONE"

The Fumigating Kind Tobacco Powder

What a Few Say, All That Use It Say

<p>NEW LONDON, CONN. "No, all flower growers are not liars." Your Fumigating Kind Tobacco Powder fits the bill. Clean, quick and efficacious. No dirty tobacco stems to litter up the pots, and taint the carnation flowers with an offensive odor that never leaves them. E. W. CLARK.</p>	<p>ST. CLOUD, MINN. Kindly send at once 50 lbs. The Fumigating Kind Tobacco Powder; best thing we ever used; cannot get same good results with any other preparation. THE KINDLER FLORAL CO.</p>	<p>NEW CASTLE, PA. Duplicating so often the past two years our order for The Fumigating Kind Tobacco Powder is a sure indication that it has no equal in our estimation; as an effective insecticide it does the work well. BUTZ BROS.</p>	<p>WEST WHITELAND, P. O. We have tried many fumigants but have found nothing in the market so effectual and easily used as The Fumigating Kind Tobacco Powder. Your prices are reasonable for so good an article. J. LEHMAN MAULL, Pres.</p>
---	--	--	--

A FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with. All aphids killed in one night—our booklet tells of it; we mail one on request.

Salvia, dwarf and tall	1.00

CASH with order, please.

GEORGE J. HUGHES, Berlin, N. J. Mention the Florists' Exchange when writing.

CANADIAN NEWS

TORONTO.—The event of last week was the open meeting of the Gardeners and Florists' Association held Tuesday night, January 17; about ninety members and friends attended. President George Douglas and the executive committee were all on deck to help move things along. J. H. Dunlop was asked to take the chair, and served with his usual ability. E. G. Hill, of Richmond, Ind., who, luckily, was in the city with a fine vase of his beautiful new rose Richmond, was called to a seat on the platform, as was R. J. Scoor, who was president of the late show here. A splendid program was rendered by Miss Crawford, J. Milne, W. J. Lawrence, Mrs. Houle and Miss Lawrence. The Foresters' Cup, won by Mr. Lawrence at the late show, was presented to him by Mr. Scoor. Mr. Hill gave a short, but very pleasing address. Mr. Hill says gardeners are poor talkers, but we think that he, for one, can touch responsive chords without much trouble. His new rose was much admired, and I fancy he must have booked some good orders for stock of it. Refreshments were served, and a very pleasant evening spent. It is safe to say that when we have an open night again we shall be obliged to have a considerably larger room.

The annual meeting of the Toronto Horticultural Society was held Tuesday, January 10. The evening was very stormy and only about thirty-five members were present. The election of officers resulted as follows: President, H. R. Frankland; vice-president, W. Rook; directors, H. Simmers, Wm. Jay, Wm. Foord, George Douglas, Geo. Mills, Wm. Tyrrell, Ross and Manton. The delegates to the exhibition are: H. R. Frankland and Wm. Rook. T. M.

MONTREAL.—Our Florists' Club will hold a Carnation Show on February 23 in Scroggie's departmental store. We expect that this will be the best exhibition of its kind held in this city. A silver cup will be offered for new varieties. Intending exhibitors should communicate with Mr. Horobin, 23 Closse street, Montreal.

The club dinner took place Monday night, January 16, in the club rooms. About fifty sat down and did justice to a fine bill of fare. The tables were beautifully decorated by Mr. Wilshire and Mr. Bennett.

B. Graves has a fine stock of freesias and other bulbous stock in store.

Geo. A. Robinson, of Hall & Robinson, has been elected a member of the Town Council of Outremont.

W. C. H.

ROCKFORD, ILL.—H. O. Hinkley writes us that the item which appeared in our issue of the 14th inst. is not exactly correct. He has already engaged in other business, but does not expect to dispose of his greenhouses. His intention is to continue to run them and dispose of the product at wholesale. He is simply quitting the retail business after this Winter.

PANSIES

THE JENNINGS STRAIN. Fine stock, choice colors. Large plants, in bud and bloom, \$1.00 per 100. Smaller sizes, from cold frames, \$3.50 per 1,000, by express. Small plants, by mail, 75 cts. per 100. Seed, \$1.00 per pkt.; \$5.00 per oz. Cash with order.

E. B. JENNINGS, Lock Box 254, Southport, Conn. Grower of the Finest Pansies.

Mention the Florists' Exchange when writing.

GERANIUMS

In pots, soil easily shaken off to ship. Thirty young plants. Best double bedders, \$15.00 per 1000. Send for full list, etc. New Doubles, La Croix, intense scarlet; M. Roly, clear pink, first-class every way, \$4.00 per 100.

COLEUS R. C., Red, Yellow and other distinct colors, \$6.00 per 1000. Fancy, all bright colors, an extra choice selection, \$5.00 per 1000. Giant, large velvety leaves, over 20 varieties, grand colors, \$1.00 per 100.

DANIEL K. HERR, LANCASTER, PA. Mention the Florists' Exchange when writing.

SMITH'S CHRYSANTHEMUM MANUAL A Book That Every Grower Should Possess

PRICE 25 CENTS A. T. DE LA MARE PTG. AND PUB. CO. Ltd. 2-8 Duane Street, NEW YORK Mention the Florists' Exchange when writing.

Flatbush, N. Y.

A recent visit to the establishment of Dailedouze Bros., Flatbush, N. Y., reveals these eminent carnationists in the midst of heavy crops of superfine blooms. Nearly all the varieties cultivated have done exceedingly well this season; there are upward of 65,000 plants benched, and anyone conversant with carnation culture can imagine the amount of bloom produced by this number of plants, cultivated to the nicest point of perfection, as is done under the ever watchful eyes of the three Dailedouze Brothers.

Just as soon as a variety begins to show signs of deterioration its days are numbered at this establishment, no matter whether it is a pet seedling of their own or a highly commended sort from some other raiser, and we find on inquiry that the present season will be the last one here for a few varieties that have hitherto been held in the highest esteem. Mrs. M. A. Patten is proving to be the best variegated carnation ever introduced; it is very free, comes on long stems, the markings are such as do not preclude it from any kind of work in floral make-up, and it is a grand keeper. As grown here, it is exceedingly floriferous, and every bench in the house is a mass of buds and flowers. Several sports have occurred, all tending toward the Mrs. T. W. Lawson shade of color.

The variety Mrs. T. W. Lawson occupies three houses, all planted in solid beds, and all are producing enormously.

Of the several white seedlings that originated here, No. 144 stands at the head of the list; this is a strictly fancy bloom, the immense size of which has been previously mentioned in these columns. We are unable to say whether this big white variety will ever be disseminated or not, but we do know that the flowers have been bringing a fancy price in the New York market all Winter.

The Queen is planted largely and has proved herself to be a very profitable white. Fair Maid has hardly kept up to her usual vigor, but White Lawson, Enchantress and Lady Bountiful are all giving splendid results, the latter mentioned sort being very fine since the beginning of December.

Eldorado as seen here is a yellow field, and cannot be beat as a producer. Prosperity is as good to-day as it ever was and is still the highest priced commercial carnation in the market.

Genevieve Lord and Fragrance still hold their own in the light pink section, and are producing heavily. Flamingo looks fine just now, but for scarlet next year a seedling of home raising will be relied upon mostly to fill the bill. Here is also a crimson seedling that will take the place of other varieties, planted in the same house with Harry Fenn and Octoroon; it has them both beat for floriferousness and commercial purposes generally.

Among the seedlings being tried for the second and third year are several that look very promising, both in scarlets and in light pinks. One curiously blotched cardinal and white variety, as yet unnamed, but known among the men as "Chinaman," has a very fetching color effect, and, without a doubt, would prove a good commercial sort were it ever produced.

Indianapolis.

Notes.

Henry Rieman, A. Baur, Herman Junge, John Bertermann, Jno. Rieman and Mr. and Mrs. Edward Bertermann are attending the C. S. A. at Chicago this week. George Wiegand, who has been at St. Vincent's Hospital for the past two weeks, is again able to be about. The Smith & Young Co. is preparing to erect two rose houses, 30 x 400 feet, at their new Cumberland place. Clarence Thomas, of Bertermann Bros. Co., lost his father this week. The trade wishes to extend its sympathies.

F. B.

CROMWELL, CONN.—Mr. W. R. Pierson is at present sojourning in California. He was at San Francisco January 21, and from thence was going to Los Angeles (Hotel Lexington), to remain until February 15. From that city he will travel on into Mexico. As he expresses it: "Am feeling very well, indeed, and trying to see all there is here."

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticultural Subjects. Write us for a Catalogue.

St. Louis.

A meeting was held on Thursday night at Louisiana Hall by some nineteen growers from St. Louis and Kirkwood for the purpose of organizing a Growers' Club. The writer was not present for reasons known only to himself, but this is what he heard: F. W. Ude, Jr., of Kirkwood, elected president; E. H. Michel, secretary. James W. Dunford, one of the ex-presidents of the St. Louis Florists' Club, made an eloquent speech. It is understood the name of this new club will be the St. Louis Plant Growers and Flower Association. A committee was appointed to draft by-laws and constitution; we did not learn the names of the committee. Henry Berning acted as door-keeper. No wholesalers or retailers were admitted.

The St. Louis party left for the American Carnation Society meeting last Tuesday night, via Wabash, at 9.15 p. m., in a special sleeper; the party included (as near as could be learned) Fred J. Ammann, John Steidel, Otto Koenig, Fred H. Meinhardt, A. Jablonsky, John Connon, Frank Fillmore, George M. Kellogg, Fred C. Weber, Wm. Winter, E. W. Guy and a few others. Most of these will stop off, coming back, at Fort Wayne, Lafayette, Richmond and Cincinnati.

The committee who have charge of the coming carnation exhibition at the St. Louis Florists' Club met at J. J. Beneke's store, in order to get up a list of the prizes; \$25 was set aside for outside growers and \$25 for the local growers, in four classes of fifty blooms each of white, pink, red and any other color for the outside growers, and four classes in white, pink, red and a mixed vase of fifty blooms for local growers and club members. This list is now in the hands of the printer and will be mailed by the end of the week to all carnation growers and club members.

Ellison Floral Co. are making preparations for moving their store across the way from their old location at Grand and Olive streets.

Ralph Ward was in town this week selling bulbs; he reports a heavy trade this season. Mr. Ward left Tuesday night with the St. Louis party for Chicago. ST. PATRICK.

Cleveland.

The florists are rejoicing over this comparatively mild Winter. Only a little more than half the coal has been consumed to double the quantity used last Winter in the same length of time, and good living prices prevail for all cut flowers, a great many being used for funeral work. Luncheons, parties and weddings are all over now until February brings St. Valentine's Day, when there will be a renewal of festivities and an increased sale of cut flowers for decorations. Mr. A. L. Brown, president of Cleveland Florist Club, informs us of a carnation exhibit to be held at the rooms of the club on Monday evening, February 13, after which a feast and a general good time will be indulged in. A visit to the greenhouses of the J. M. Gosser Co. and Herman Hart show those places to be up to the standard in good stock.

Miss Anna L. Westman, of Westman & Getz, has been home for the past week suffering from the grip and poisoning from Primula obconica; she is much improved.

James Willson, of Glenville, or rather of Cleveland since the annexation, is cutting some very fine Lawsons and Enchantress.

William Brinker's stock of seeds are about complete; he expects a few more shipments.

Chas. Guelph, of Jerome B. Rice Seed Co., was a visitor last week. O. G.

Review of the Market

NEW YORK.—Extremes of weather always have a bad effect on the flower business; it does not matter whether it is an extremely hot spell or a severely cold one, the result is the same so far as the buying and selling of cut flowers are concerned. We were just beginning the gay season, and hopes of a run of busy times were high, when the blizzard that struck us on Tuesday night called a sudden halt, and since then the flower business has remained decidedly inactive. Consignments have failed to arrive since Wednesday morning; still there is a scattering of stock on hand, left over from Tuesday's shipments. What the effect will be when trains begin to reach the city again, we can hardly surmise. Violets from up the Hudson are, no doubt, plentiful in the express cars on the trains, and will get here some time later, but what can be done with them when they reach here is a question that is bothering the dealers. Roses and carnations also will pile in when the trains get to moving again, and without a doubt there will be a lot of frozen stock landed in the market.

Previous to the storm, business was running along smoothly, special American Beauty roses had reached 75c. each, and all other roses were holding well at the advanced prices which we noted last week. All other flowers were clearing out fairly, though there had been no advance in values. The supply of narcissus had been further augmented by shipments of *N. poeticus*, which sold at figures ranging from \$1 to \$2 per 100. Some large pink tulips have also been received in limited quantities, for which as high as 75c. per dozen have been realized. Lily of the valley is a drug, and is offered quite cheap. There is some lilac on hand, and quite a few lilies, and with a moderation of the weather we may confidently look to a resuming of the business on fairly brisk lines, as the social whirl promises to be lively between now and the beginning of Lent.

CHICAGO.—During the past week, up to Saturday morning, the market was very quiet—a dullness that is unusual at this season. Trade had a certain quietness, which had never been known before. Saturday a feeling of briskness was noticeable, and has continued up to the present time. Wednesday morning prices had an upward tendency; some material gain has been noticed, yet not beyond the usual prices which generally prevail at this season, other conditions being taken into consideration, that is the scarcity of stock in some lines, especially tea roses, which are very scarce. Never have they been so scarce as at the present, and from what can be learned, there is but small prospects of any change for some time. American Beauty roses are not so plentiful as last writing, yet enough to fill all demands. Prices are about the same, namely \$2.50 to \$3 per dozen for the best grades; other grades from \$15 to \$4 per 100, according to quality.

Bride and Bridesmaid are a scarce article on this market just now, any good stock bringing a good price. Shippers find it hard to get enough to fill all orders, and local buyers are willing to pay a higher price than formerly if they can procure the stock. From growers it is learned that this condition will prevail for some little time. Prices range from \$4 to \$15 per 100, according to quality.

Golden Gate is in short supply, at from \$4 to \$15 per 100. Perle, from \$4 to \$10 per 100; Meteor, from \$4 to \$12 per 100, and not in great demand.

Mme. Abel Chatenay is not in such abundance as was anticipated, the demand being very good for them at the present time, and are selling at from \$4 to \$15 per 100, with a few extra select going higher than the latter price.

Liberty is in good demand, with the supply rather short, and prices nearly as high as at the holiday season, from \$4 to \$25 per 100.

Carnations are in short supply, with a good demand prevailing at the present writing. Shipping has picked up in the past few days and local trade has been good for the past few days, prices being from \$1 to \$5 per 100; a few extra fancies going beyond the latter figures, and some poor stock selling lower than the former price.

Violets are not as plentiful as heretofore, with prices ruling not much better, there being but little demand for them in local circles. Prices range from 25c. to \$1.25 per 100.

Lilies are seen in larger quantities than for some time, and the demand is not over heavy. Callas are appearing in quantities at prices from \$10 to \$15 per 100; Harrisii, \$12 to \$15 per 100; Romans, at \$2 to \$3 per 100.

from \$4 to \$10 per 100. Adiantum at 50c. to \$1 per 100. Smilax at \$12 to \$15 per 100. Asparagus at \$35 to \$50 per 100. Lily of the Valley at \$3 to \$4 per 100. R. J.

BALTIMORE.—Prices of stock as reported January 25, are as follows, quoted per 100:

Roses, American Beauty, fancy special, \$50; extra, \$35 to \$40; No. 1, \$25 to \$30; culls and ordinary, \$5 to \$15. Bride and Bridesmaid, fancy special, \$10; extra, \$8; No. 1, \$6; No. 2, \$4 to \$5; Golden Gate, \$5 to \$10; K. Augusta Victoria, \$5 to \$8; La France, \$5 to \$8; Papa Gontier, \$3 to \$4; Perle, \$4 to \$6.

Carnations, inferior grades, all colors, \$1 to \$1.25; standard varieties, white, \$2 to \$2.50; pink, red, yellow and variegated, \$2 to \$2.50; fancy varieties, white, pink, red, yellow and variegated, \$2.50 to \$3. Novelties, \$4 to \$5.

Adiantum, ordinary, \$1. Asparagus, plum, and ten., \$25 to \$50; sprengeri, \$25 to \$50.

Callas, \$6 to \$10. Freesia, 75c. to \$1.50. Galax leaves, 10c. Hyacinths, \$2 to \$3. Harrisii, \$10 to \$15; Mignonette, \$3 to \$4. Narcissus, \$2 to \$3. Smilax, \$15 to \$25. Sweet peas, \$1. Tulips, \$3. Violets, ordinary, 50c. to 60c.; extra, 75c. per 100.

ST. LOUIS.—The cold dull weather of the past week had a great deal to do with the dull business that was reported by the trade throughout the city. Demand for cut flowers continues very light, and the supplies in all kinds of flowers have shown a decided increase, and prices are very much lower than they have been; even prime stock, which generally sells well, was left over the past week.

This week the market opened up somewhat better, and Monday the wholesale houses cleaned up pretty well all their consignments, especially white stock, as plenty of funeral work was reported by the leading retailers; they report trade slow in decorations for social affairs.

Carnations are abundant in the colored varieties, though there is hardly a surplus of white. Prices run from \$4 to \$5 for extra fancy; \$2 to \$3 for good firsts, and \$1 to \$1.50 for common stock. Some extra preparations are being made for this flower for McKinley Day, the 29th.

Roses, fancy grades, are not over plentiful; light colored stock has the call. American Beauty are not having a big demand, the smaller roses selling much better. Prices on Bride, Bridesmaid, Golden Gate, Ivory, and for fancy, \$5 to \$8; firsts, \$3 to \$4; seconds, \$2 to \$2.50 per 100. Same prices control Meteor, Liberty and Perle. American Beauty, fancy, long, \$3 to \$4 per dozen; prices lower according to length of stem.

Bulbous flowers are very plentiful, especially so in Roman hyacinths and Paper White narcissus. There is also enough lily of the valley, plenty being left over for reserve stock for later in the day calls. Prices same as quoted last week. Harrisii and callas have some call and there are enough for all in the market. Violets have been very plentiful; the street men sold them last week at two bunches for 25c. Californias this week bring 40 to 75 cents per 100, according to grade. Smilax is plentiful at 15c. per string. Other greens equal the demand. ST. PATRICK.

CINCINNATI.—Quite an improvement was manifested in the demand for cut flowers during the past week and prices were a little firmer towards the end. At this writing stock of all kinds is scarce and in good demand. Bride and Bridesmaid are unusually scarce, very few coming into this market, and good stock readily fetches \$8 to \$10 per 100. American Beauty sells at fair prices; if they were more perfect in the bud, instead of so many ball heads, they would fetch more money. Green goods are plentiful, except Asparagus Sprengeri and plumosus; of these we could use more. Smilax is too soft. Tulips are now coming into the market, and sell at \$4 per 100; narcissus, \$3; lily of the valley, select, 5c.; medium, 4c.; seconds, 2c. to 3c. Violets are looking up a little for the better grades and 75c. to \$1 is now the selling price, with plenty to fill all orders. Lilies, \$1.50 to \$1.80 per dozen, and moving slow. E. G. GILLETT.

NEWPORT, R. I.—Outside of quite a good volume of funeral work, business with all the florists alike has been only fairly active the past week. Carnations still drag, and when \$2.00 a hundred is the top price the growers are able to get very little encouragement. At retail the price sticks at 50c. a doz. to the regular Winter trade; roses, \$1.50 to \$2.00 a doz.; lily of the valley, 75c. a doz. On the avenue, top prices for good stock are always obtained, but, of course, at this season very little is doing; now and again there will occur an important funeral, like the Ledyard burial this past week, when a large number of costly pieces will be ordered. F. W.

WASHINGTON, D. C.—There has been a good demand this week for good stock, the supply of which has been equal to the demand. American Beauty roses were very much in demand. At nearly every social event they were the prominent feature. They brought from \$5 to \$10 per dozen; Tom Fields, from \$5 to \$7 per dozen; Liberty, from \$3 to \$5 per dozen; Kaiserin Augusta Victoria, from \$2.50 to \$4 per dozen; Bride, Bridesmaid, Ivory, Meteor, Madame Abel Chatenay, from \$2 to \$3 per dozen. There is quite a demand for carnations, the best pink and red sorts bringing from \$2 to \$3 per dozen, and the other sorts from \$1 to \$1.75. Lily of the valley, which is coming in very fine, brought from \$1.50 to \$2 per dozen. The demand for violets has fallen off considerably this week; choice stock brought from \$1.50 to \$3 per 100. Lilies are selling well at \$3 per dozen. Liliura Harrisii, not much called for, brought \$2 per dozen. Jonquils are commencing to come in and sell readily at 75c. per 100. Sweet peas realize 50c. per bunch; mignonette, 75c. per bunch; narcissus and tulips, 75c. per dozen; Adiantum cuneatum fronds, from \$1 to \$1.50 per 100; Asparagus plumosus nanus and Sprengeri, from \$2 to \$3 per 100 sprays and strings. M. C.

INDIANAPOLIS, IND.—Some improvement has been noticed in business this week. The regular counter trade is heavier than at any time since the holidays. Funeral work, too, is plentiful; so no stock is going to waste, as during the previous two weeks. Large quantities of plants are on the market, but the demand for them is poor. Roses, with the exception of select Bride, are plentiful. Select Bridesmaid, Bride, Golden Gate and Mme. Abel Chatenay wholesale at \$7 to \$8 per 100; firsts sell at \$6 per 100, and seconds bring \$2 to \$3 per 100. Liberty is showing better color; the best of them sell at \$12 per 100; 36-inch Beauty brings \$3 per dozen, and 15-inch to 24-inch call at \$15 to \$20 per 100; shorts bring \$4 to \$8 per 100. Bulbous flowers are very plentiful. Narcissus, Roman hyacinths, lily of the valley and jonquils sell at \$3 to \$4 per 100 wholesale, and 60c. to 75c. per dozen, retail. Carnations are showing the effects of warm, rainy weather, complaints having been heard from the customers. Retailers have lost many of them the past week. Fancy varieties, such as Enchantress, bring \$4 to \$5, and good grades \$3 to \$3.50 per 100. The customary retail price is 75c. a dozen. Fair Marie Louise violets were plentiful at \$1 per 100. Tomlinson Hall Market business has been very quiet during the past week. F. B.

BOSTON.—Better grades of roses are seen at this season than have been noticed this winter. Especially is this so of Bride and Bridesmaid. The demand is good, and quick sales are the consequence. Prices are a little better than a week ago. Carnations are very plentiful, especially so of second grades, and whites are just as "druggy" as ever. Bulbous stock is now plentiful. Lilies are more plentiful than they have been, they being 8c. to 12c. Lily of the valley is plentiful, but is in fairly good demand. Violets are very abundant, in fact, are hard to move. J. W. D.

OMAHA, NEB.—No very bad effects were to be noticed as we emerged from our season of zero weather. The cold snap did not put a quietus on business for several days, and since then funeral work has been the main thing. Prices are steady, but stock is plentiful, though not over-abundant. B.

FIRMS WHO ARE BUILDING.

BRISTOL, R. I.—Samuel Kinder is erecting four large new greenhouses upon land which he recently purchased.

PORTCHESTER, N. Y.—Emil Leonard, the florist, will soon have a commodious and up-to-date greenhouse at the rear of his store on Liberty square.

LOCKPORT, N. Y.—Leo McCarthy, youngest son of Daniel F. McCarthy, the nurseryman, has begun work on two immense greenhouses on Summit street and by Spring will be prepared to supply his customers. The plant promises to be the largest in Lockport.

FIRES.

OMAHA, NEB.—On January 8, in the store of A. Donaghue, Jr., 1607 Farnam street. Damage will not exceed \$50.

NEW FIRMS.

Palm Fibre Flower Company, of New York; capital, \$50,000. Directors—Louis Group of Philadelphia, O. P. Van Tuyl and J. J. Sullivan, of New York.

SPRINGFIELD, O.—The Callander Cactus Company, of this city, has been incorporated in Columbus, with a capital stock of \$5,000, by J. H. Callander, H. L. Callander, W. W. Mumma, C. M. Kleinman and Leman Bradford.

FORT COLLINS, COL.—Mrs. E. P. Davis has disposed of the Pansy Place greenhouse. Mr. Hannawalt, of Denver, is the buyer.

CEDAR RAPIDS, IA.—The flower store at 411 Second avenue, formerly H. R. Morgan, has been purchased by the Cedar Rapids Floral Company, with Wilfred T. Emmons as manager.

DAVENPORT, IA.—H. E. Campbell has leased his greenhouses, for five years, to Lawrence Fortman and William F. Behring, of Rock Island, and will retire from the business.

COUNCIL BLUFFS, IA.—Articles of incorporation of the Reams-Lianson greenhouse have been filed for record. The incorporators are: L. H. Reams and F. L. Lainson. The capital stock is \$10,000.

UTICA, N. Y.—J. C. Spencer, the well known florist, and Henry G. Martin have formed a copartnership and will open a first-class flower store at 221 Genesee street, on or about February 1, 1905. It is a fine location and they should succeed. GOLD.

CALENDARS RECEIVED.

THE C. C. POLLWORTH CO., Milwaukee, Wis.—A serviceable wall calendar.

ELKHART, IND.—W. H. Troyer has moved his florist business to 403 South Main street.

Chicago.

News of the Week.

Zero weather struck us Tuesday afternoon, which will again cause trade to slacken up.

Carnationists from different sections of the country began to arrive on Tuesday morning. The advance guard came in early, so as to be able to visit some of the local men before the Convention opened up on Wednesday.

P. J. Hauswirth has been busy during the first of the week getting the hall in shape for the Convention, giving his personal attention to every detail. Vaughan's Seed Store is undergoing a thorough cleaning and painting prior to the opening up of Spring business.

E. A. Asmus & Co. have sold the stock of greenhouse plants and fixtures of the store at Evanston and Kenmore avenues and rented the same to Leopold Koropp, 252 West Ravenswood Park, the latter taking immediate possession. He intends incorporating the business under the name of the Sheridan Park Floral Co.

Stollery Bros. are cutting a fine crop of Loraine tulips, which are selling at \$4.00 to \$5.00 per 100, and in great demand at those prices.

Married at the residence of the bride's parents, Mr. and Mrs. B. Daniels, 523 Otto street, Miss Jennie G. Daniels and Edwin C. Benty, January 25. The groom is a son of Mr. F. F. Benty, the well-known wholesale florist at 85 Randolph street, and also a member of the firm of The Benty-Coatsworth Co. The bride was identified with the trade for some time, having been book-keeper for Weiland & Risch a few years ago. Their many friends in the trade, as well as the writer, wish them a long, happy and prosperous life together.

L. Coatsworth was a New Castle visitor last week superintending repairs at the greenhouses, returning in time for the Convention.

ROBERT JOHNSTONE.

BURNETT, CAL.—The Wolfskill Nurseries are to open two retail flower stores in Los Angeles. This firm has twelve large 250-foot greenhouses, modern in every respect, filled with fine carnations, roses and ferns.

Outdoor grown carnations still hold a firm place in the market there being about 40,000 blooms a day handled in Los Angeles during the Winter season. Violets are plentiful, about 1,000 bunches of 100 blooms each being handled daily. The wholesale price is 7½c. per bunch; retail, 25c. The variety is Princess of Wales.

Asparagus plumosus has about superseded smilax. Both of these plants are grown here in lath, or lattice, houses. E. R. Meserve, Long Beach, has the largest houses in Southern California; one house of 16,000 strings A. plumosus and one of 12,000 smilax. He is now duplicating the asparagus house, the latter being 14 feet high, in order to give 12-foot strings. Mr. Meserve expects to ship Asparagus plumosus to Western and Middle States.

The boys on the streets sell more carnations and violets than the regular stores; reasonable prices make ready sales. ST. E.

San Francisco.

SAN FRANCISCO, CAL.—In many of the city's homes it seems as though the holidays were not yet over, for they are still blooming with holly berries and the cheery reminders of Christmas time. And the prevailing voice of the cut flower trade is that this post-holiday season is remarkable for its continued good run of choice blooms and red berry selling.

One of the uppermost questions just now in trade circles has reference to whether or not the primal flower trade feature of New Year's Day is to be transferred to Christmas time. The Jewish people are many in San Francisco and their homes rank with the best; as flower buyers they are second to none in this city and the florists value their trade highly, their home floral adornment on New Year's Day always being superb. Is this trade to be absorbed at Christmas' time is the question? Certain Jewish ladies here argue that the celebration of Christmas should be a universal one, claiming that while the season of Christmas seemed to belong exclusively to the Christians, the origin of the festival went back to Norse times, and hence it was distinctly of Christian origin. Because the season stood for peace on earth and good will to men, they held that it could be indorsed and recognized by the Jewish people.

FERNS Our Specialty

We have just completed a new 20,000 sq. ft. greenhouse range, especially built for the growing of Ferns, and in the future all orders, regardless of quantity, will be filled with the best stock in the market, at the lowest prices.

Syracuse, N. Y.

At P. R. Quinlan & Co.'s new place in the Onondaga Valley can be seen one of the most up-to-date establishments in the country. Mr. Robert Dunn, successor to Mr. Bard, met us very cordially; he was formerly with Mr. Montgomery. The six 200-foot carnation houses were in fine shape. Some of the varieties grown here are Lawson, Wolcott, Governor Lowndes, Glacier, Fenn, Queen, Queen Louise, Enchantress, Lady Bountiful, Vespers, a few Flamingo, Harlowarden, Fair Maid, Estelle and Marquis. I do not think Vespers is a new variety, but it was to me, and it certainly is a grand flower. In the rose houses are grown Bride, Bridesmaid, Hoste, Golden Gate, Ivory, Wellesley, American Beauty. A fine sport was seen, pink in color. Mr. Dunn is getting along all right in his new position. This firm has recently put in two new boilers, one of 80 and one of 60 horse power, but are using only one at present. They have also erected one new house for hardy plants.

At L. E. Marquise's establishment Flamingo was found doing well, and he says he is having no trouble this year in rooting it; it is a fine flower as seen here. We also saw a house of Enchantress and Albatross in good condition; a large house of seedlings consisted of extra good flowers, and I suppose will be heard from later on; they are of all colors.

At Wheadon & Hinckle's, 329 South Warren street, who opened a new store last August, business was reported very good, far better than expected. Mr. Wheadon was formerly with P. R. Quinlan & Co.

We called at P. R. Quinlan's store, on South Salina street. Mr. Quinlan was out of town, but after a pleasant chat with Mr. Robinson, we left for Bard & Davis's, corner Wilbur and Bryant avenues. Here they were busy getting carnation cuttings ready. Since I was here last a fine new house has been erected, which will be filled with plants for the Spring. A house of Lady Bountiful was in extra fine condition, as was also Enchantress. Roses, as in most places just now, were a little off crop, but a bunch of Hoste was all right. They have room for several more houses and intend building in the Spring.

At P. R. Quinlan's old place was found everything but roses and carnations, all looking good—a big house of azaleas, one of lilies, one of mignonette, one of cyclamen and primroses, two of palms, one each of smilax and asparagus. A new sport in a fern, a grand thing, not yet on the market, was noticed. They are now rooting thousands of Lorraine. Mr. Quinlan said this plant had been the best thing for the holidays with him.

Henry Morris had a fine display of cyclamen, primroses and carnations in his window and some fine roses in his cooler. Trade reported very good here.

UTICA.—Everything pertaining to our carnation meeting is pointing to a big time, and it will probably be the largest one of the year. The Committee on Entertainment are working like beavers.

Washington, D. C.

President and Mrs. Roosevelt gave a dinner to the Diplomatic Corps last Thursday. The dinner table decorations were of cattleyas, cypripediums, lily of the valley and Farleyense ferns. The effect was very fine; the authorities considered it the finest table decoration that has ever been seen in the White House. The pieces were all oval and circular baskets. The vases, which usually are such a prominent feature, were entirely omitted, and this seemed to be a great improvement. The corsage bouquets were of cattleyas, and the boutonnières of cypripedium, lily of the valley and Farleyense ferns. The house was tastefully decorated with azaleas, camellias, Glory of Wellesley begonia and ferns.

Henry Small & Sons had a large decoration for a masquerade ball, when groups of American Beauty roses were displayed in every available place. The supper table was decorated with Gloire de Lorraine and Farleyense ferns. This firm has secured the decorations of the Pension Office for the Inaugural Ball. J. R. Freeman had two large decorations on Thursday and Friday. Lilies and ferns were used in the groups. The table decorations were of American Beauty roses and red carnations. J. H. Kramer is bringing in some extra fine American Beauty roses and azalea plants from his Anacostia place.

Z. D. Blackstone has just executed a wedding order. The church was tastefully decorated with Southern smilax and poinsettias. The bride's bouquet was composed of lily of the valley and violets; those of the bridesmaids of Bridesmaid roses. George Shaffer and George Cook have both been very busy with dinner decorations this week. Minder Brothers are bringing on some fine azaleas. The Ley Brothers report having done a good business. J. L. Loosé is having a big run on azalea plants in five-inch pots. W. Clark is bringing in some extra fine Kaiserin and President Carnot roses. The American Rose Company report doing a rushing shipping trade. George Field's cattleyas, vandas and cypripediums are in fine shape; he has a large demand for orchids, both at home and out of town. Gude Brothers have secured the contract for large quantities of wreathing for the Inauguration. M. C.

CANANDAIGUA, N. Y.—R. H. McKerr and A. C. Cappon each had his usual fine display of plants and flowers at Christmas. Azaleas, begonias, cyclamen and primulas had a splendid call, also the ever-popular Boston fern; Cappon having some very well grown plants of the same. Mr. McKerr, as usual, led in the cut flower business, his cut of carnations during Christmas being over three thousand, which were readily disposed of at good prices. Flamingo here is grand, and a house of Enchantress is certainly a wonder. Holly sold very well; and where a man wants to pay a good fair price for fine roping he can readily obtain the same, and both string and wire will be covered all right.

The business done Christmas week was 50 per cent. ahead of last year's. SUBSCRIBER.

THE PIERSON-SEFTON CO. Horticultural Architects and Builders West Side Ave., So. JERSEY CITY, N. J. Pierson Boilers For Steam and Water are unsurpassed for efficiency and economy Messrs. Righter & Barton, Madison, N. J., write: 'August 5, 1904. The two 'Pierson' sectional hot water boilers installed for our new houses one year ago gave exceptional satisfaction during the past winter, the most severe for many years, easily fulfilling what was expected of them, at the same time proving to be economical. We found them very easy to manage, that they responded promptly and heated the water in short time, thus giving splendid control of temperature in houses when sudden drop took place outside.' A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 5

NEW YORK, FEBRUARY 4, 1905

One Dollar Per Year

TARRYTOWN FERN

(*Nephrolepis Piersoni elegantissima*)

NOW READY FOR DELIVERY. THE BEST RECORD OF ANY NEW INTRODUCTION
The much coveted \$50 Prize from the Horticultural Society of New York.
FOR THE BEST NEW PLANT OF THE YEAR

There is nothing in the fern line that is as handsome as this beautiful fern when well grown. It is a wonderful improvement over *Nephrolepis Piersoni* in every respect, both in regard to beauty and habit of growth. It is a sport from the Pierson Fern (*Nephrolepis Piersoni*), but it is very much more beautiful and of greater commercial value. It is as different from the Pierson Fern as that is from the Boston. The small side pinnae are again subdivided, producing an exquisite and beautiful effect, changing the entire character of the fronds, which measure less than half the length and about twice the breadth of the fronds of the Pierson Fern. The fronds also assume an entirely different form, the side pinnae standing at right angles to the mid-rib of the frond, on edge rather than flat, as is usual, making both sides of the frond equally beautiful—entirely different from any other fern.

The plant is very dwarf, only about half the height of the Pierson Fern, and of very much more compact habit. Taking it altogether, it makes one of the most exquisite plants and one of the most valuable for table and house decoration that has ever been introduced. The cut fronds, on account of their beauty, will be in great demand for table decoration, design work, and for use in boxes of loose flowers. Well-grown plants make most magnificent specimens. We think there is nothing in the fern line that is as handsome as this beautiful fern when well grown. It is a wonderful improvement over *Nephrolepis Piersoni*, in every respect, both in regard to beauty and habit of growth.

PRICES:—2¼-inch pots, \$9.00 per doz.; 50 plants at 60c. each, 100 at 50c. each, 600 at 45c. each, 1000 at 40c. each. LARGE PLANT—5-inch pots, \$18.00 per dozen; 8-inch pots, \$24.00 per dozen; 8-inch pots, \$6.00 per dozen; 10-inch pots, \$9.00 per dozen.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

CANARY SEED.—The Board of Appraisers at New York has ruled that canary seed is held not to be free of duty as grass seed under paragraph 656, tariff act of 1897.

WORCESTER, MASS.—Firms lately represented here were: The Braslan Seed Company, of San Jose, Cal., by Chas. P. Braslan; the Albert Dickinson Company, Chicago, by Mr. Heath; Comstock, Ferre & Co., Wethersfield, Conn., by S. F. Willard; the Cleveland Seed Company, Rochester, N. Y., by C. R. Millhaus. **CAROLUS.**

PARIS, ILL.—Fire of unknown origin totally destroyed the warehouse and office of the Levings Brothers' Seed Company at 812-814 West Madison street at an early hour on January 24. The owners, C. C. Clinton and J. N. Darnall, estimate their loss as being between \$6,000 and \$8,000 while they carried insurance to the amount of only \$2,500.

W. W. RAWSON & CO., Boston, Mass., recommend that growers purchase their seed as early as possible to insure obtaining the superior strains of many varieties which always go early in the season; this is of more importance than the florists realize. Crops with this firm have been generally very good, and the seed is of excellent germination. Orders seem to be coming in much larger and more plentiful than usual for this time of the year; everything points to an exceptionally good season.

WARD'S
HIGH GRADE
Bulbs & Plants
RALPH M. WARD & CO.
17 Battery Pl., NEW YORK

Mention the Florists' Exchange when writing.

MONTGOMERY, ALA.—The State Board of Horticulture, at its recent meeting, adopted the following resolution, "That no cotton seed, seed cotton, hulls, seed cotton and cotton see sacks (which have been used), cotton pickers' sacks, corn in the shuck, unsacked corn, unsacked oats, unsacked wheat and unsacked cow peas shall any time be brought into the State of Alabama from the infested counties of Texas or parishes of Louisiana."

NEWPORT, R. I.—William B. Scott & Co. will add to their business a seed department which will be in charge of M. B. Faxon, seedsmen. Mr. Faxon for two years, has been with the Geo. A. Weaver Co. Mr. Scott, of the first named firm, was for twenty-five year manager of the Weaver Co.

With the seedmen things have improved quite a little as regards early orders. Wax beans are again very short, but outside of that it looks as if there would be enough seed to get around. **F. W.**

BOSTON.—Few, if any, of the Boston seed stores took advantage of the new ruling of the postoffice department regarding the mailing of their catalogues; the leading firms preferring the old system of affixing postage stamps.

The many friends of John Clark will still find him at Rawson's; he has neither gone to Newport nor New York nor has he any intention of locating in either of those cities.

Dutch bulb men have commenced their siege on the handlers of their goods in this city. Von Sion narcissus are reported to be in short supply and likely to rule higher in price.

Visitors this week have been W. J. Buurman, representing J. Schielpzan & Sons, and W. Taat, representing W. Van Waveren & Sons, all of Hillegon Holland. **J. W. D.**

Southern Seed Trade.

BIRMINGHAM, ALA.—This city is a marvel of progress and industry, and has no equal in our country for applied energy along the lines of business industry. The seed trade has kept pace with all others in the race for success. The Amzi-Godden Company have an enormous trade in garden and field seeds, and are jobbers as well as retailers. They are also manufacturer of high-grade fertilizers, which they distribute throughout the South and West. They report a fast growing trade, which is due to the energy put forth no less than to a complete knowledge of the goods they sell.

AUGUSTA, GA.—The Alexander Seed Company are sharp competitors along many lines, and are making themselves known by an aggressive policy. They are not satisfied in having trade come to them, but go for it with a determination to win. They report a good trade along all lines.

The N. L. Willett Drug Company—This firm, while not strictly seedsmen, are handling immense quantities of seeds grown in that State, as well as kinds sown there by the truckers and gardeners. They are growers, jobbers and retailers; in Georgia grow seeds they are leaders in the South.

LOUISVILLE, KY.—Wood, Stubbs & Co. have been a surprise to themselves and an astonishment to their friends, in the building up of a trade which is a credit to their State and an honor to themselves. While they are dealers in all seeds required for the farm and garden, they are growers as well of onion sets and second crop potatoes which are in great demand for seed purposes both North and South. The season has not fairly opened, but they regard the prospects as highly favorable.

The Southern Seed Company is an annex to a most extensive fertilizer company, and is uniting the two industries to the benefit of both. While general seedsmen, in a retail way, they do a large trade in second crop potatoes, onion sets and field and sweet corn. Louisville is the congenial home for onion sets; not only is a good crop produced, but of superior quality.

More than half-a-million copies of the BURPEE CATALOGUES FOR 1905 have been mailed already. Have YOU received one? If not, it will pay you to write TO-DAY! A postal card will do. Simply address

BURPEE'S SEEDS, Philadelphia, Pa.
and you will receive by return mail BURPEE'S FARM ANNUAL,—so long recognized as the "Leading American Seed Catalogue." It is a handsome book of 178 pages, with elegant colored plates, and tells the plain truth about all the

Best Seeds that Grow!
If you garden for profit or are a florist you should also have BURPEE'S "BLUE LIST," or WHOLESALE PRICE LIST FOR MARKET GARDENERS AND FLORISTS.

HENRY A. DREER, Philadelphia, Pa.
Mention the Florists' Exchange when writing.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

W. F. Heikes, of Huntsville, Ala., has been re-elected president of the Alabama State Horticultural Society.

FLUSHING, N. Y.—The Bloodgood Nurseries have been incorporated, capital \$50,000. Directors: B. A. Keene, A. J. Amend, and Hamilton Anderson, New York.

PULASKI, TENN.—The Giles County Nursery Company, of Lynnville, has purchased something like 55 acres of ground, and will run a branch business here. It is thought that the headquarters of the company will shortly be removed to this point.

MONTGOMERY, ALA.—The State Board of Horticulture, at a meeting held Monday, January 23, adopted the following resolution: "All shipments of nursery stock received without proper tags attached shall not be delivered until the State horticulturist has given his permission to deliver the same. All tags used in the State of Alabama shall be printed under the direction of the State horticulturist."

Meehan's Golden Arbor Vitae.

What is known as Meehan's golden Arbor vitae is a golden-tipped variety, found in a bed of seedlings, many years ago. The extreme tips of the shoots are golden. On the whole, it is not as good a golden color as that of the George Peabody, another golden form of this Arbor vitae. But it differs in this, that whereas the George Peabody has the same upright habit of growth that the typical one has, the Meehan's golden is of a far more bushy character. It is much broader in proportion to its height than is the Peabody.

These golden forms are particularly beautiful at all seasons of the year. Reference has been made before to their beauty in early Summer, when the new growth is well advanced. Even now, in the depth of Winter, their golden yellow foliage is very pleasing; and were I asked, I would advise those who are contemplating the planting of evergreens the coming Spring, not to overlook the setting out of some golden Arbor vitae, golden yews, and other golden-tinted evergreens.

The propagation of these evergreens is by cuttings, made now, and placed in boxes of sand, in a warm greenhouse. After being in the cutting boxes a month or more, a little more heat can be given them, and they should be well rooted by Spring.

The Fruit of Magnolia Kobus.

In *Magnolia kobus*, a Japanese species now fairly well known in collections, there is not much, if any, gain over what kinds were common in collections before it. The foliage and habit of growth are different, but its white flowers are not as large as those of the old Chinese white, *M. conspicua*, and those acquainted with both would unhesitatingly choose the latter if limited to but one of the two, as both flower at the same time, practically. But in the way of fruit pods, which are produced in great abundance by *M. Kobus*, there is something of uncommon interest, as, in addition to their carmine color, one peculiar to the seed pods of all when ripe, the pods themselves are of the most grotesque shapes imaginable, although nearly all of them are of the forms of newly hatched birds. It is such an interesting sight that visitors are always attracted by it, and for this alone this magnolia is worth room on one's grounds; and, of course, when a collection of magnolias is wanted, this one will have to be included in it.

Some who grow this magnolia say it is apt to die back partly at times, and instances of this have been noted. This occurs to other Japanese trees and shrubs, but it never seems to hurt them to their destruction.

Further Notes on Mahonia Aquifolia.

My notes on *Mahonia aquifolia*, which appeared in *The Florists' Exchange* a short time ago, have attracted much attention. In addition to what other correspondents have said, J. Hetherington, Portland, Ore., now writes:

"You are doubtless aware that large quantities of *Mahonia aquifolia* grow wild in these parts. If there is anything you should wish to know as to its habits, etc., in western Oregon, I should be pleased to inform you. It is a beautiful thing at this time of the year, and is almost universally used at Christmas for decorative purposes. Do you consider it would stand the climate of the East?"

As I have before said, this evergreen shrub does very well here, and is much valued; and it is worth all the good words these correspondents have to say for it. When in a sheltered place its bronze-colored leaves of Winter remain uninjured all through our Winters, but when exposed to much sun and wind the leaves become brown and disfigured. But the wood is seldom injured, no matter how low the thermometer registers. In many of our public grounds and our private places large numbers of it are used, often in masses; and when in flower, in early Spring, the show of yellow is greatly admired.

As already mentioned by correspondents and by myself, *Mahonia aquifolia* is very useful for Christmas work by florists; and this suggests the making a note of those who can furnish it, for reference when the proper time comes. And it should serve, too, to remind those who can sell the sprays, to advertise the fact when next Winter approaches. Many florists would be glad to get hold of a lot of it then.

Southern Oaks in England.

One of our nurserymen recently received an order for a collection of oaks for England, coupled with the request that Southern sorts were not to be included, it being feared they would not live outdoors there. The fact is that probably every one of the strictly Southern oaks would live there, for all but two or three of them get through the Winter at Philadelphia. There come to mind only these that are not hardy in that city: *Virens*, *laurifolia*, *Catesbæi* and *cinerea*. Others which, if not strictly Southern or more so than they are Northern, and which do well throughout the Middle States, are: *Lyrata*, *aquatica*, *Phellos*, and *falcata*. The *Phellos* and *falcata* approach North to Philadelphia, both growing within the city limits, and both ending there, so far as I know. Two or three *falcata* exist in a wild state within the boundary of Fairmount Park.

Coming back to the request of the party for such oaks only as would grow in England, there would be little risk in sending every kind indigenous to our country. The greater number of species of oaks we have grow both North and South. The white, pin, scarlet, red, black, mossy cup, chestnut, post black jack, and others are, some of them, to be found almost from the limit of both North and South, while others are in the border States. There is one thing connected with this subject which must not be forgotten, namely, that although a certain tree may grow from far North to far South, the seedlings from the Southern trees will not be hardy in the North. It is meant, of course, those from far South. There seems no question that a tree in time fits itself to its surroundings. Hardly in a perceptible way, perhaps, in one's lifetime, but everything points the way to believing that it does occur. Oaks, hickories, and other trees which are found in our Northern woods grow, many of them, in Southern woods as well, but it is of no use sowing seeds of the latter in the North; the seedlings will not prove hardy, having in mind those from far South.

A Chapter on Nyssas.

There seems less appreciation of the merits of the sour gums than there should be. A more beautiful tree than a young, thrifty specimen of the one native of the North, *Nyssa multiflora*, could not be found. It is clothed all Summer long with its lustrous green leaves, and these leaves become of a rich scarlet color in Autumn, perhaps a richer scarlet than the foliage of any other native tree assumes. Besides this, there is its crop of berries, black when ripe, and not unattractive, and affording a treat for birds.

One reason why the tree is not oftener seen in collections may be assumed to be the difficulty of transplanting it. It is, without doubt, one of the hardest of trees to handle in this respect. But to overcome this planters know what to do. Transplant often, and prune back hard. The whole class of trees difficult to handle can be moved successfully in this way. There must be several transplantings before the trees are six feet high; and it should be started when the seedlings are two years old.

For horticultural purposes there is but the one species of sour gum in the North, the *multiflora*. Getting South, the *Nyssa aquatica* takes the place of the Northern one, and in appearance and in its seeds it differs but little from *multiflora*. Experts can tell the seeds apart; those of the Northern one being less flattened than those of the Southern species.

Besides these two, there are two others in the South, *Nyssa capitata* and *Nyssa uniflora*; and in foliage and fruit these differ very much from the others. The leaves are large, and the fruit of both is as large as a small plum; that of *N. uniflora* particularly looks like it. Both of these are swamp-loving trees; and for the matter of that, our Northern one, already mentioned, delights in low ground.

The way to propagate these sour gums is to procure the seeds in Autumn, clean them of pulp and sow them outdoors at once. Failing this, preserve them over Winter in damp soil, sowing them early in Spring. There is a weeping form of the Northern *N. multiflora*, which is increased by budding.

JOSEPH MEEHAN.

Society for Horticultural Science.

(Continued from page 39.)

Co-ordinated Variety Tests.

The importance of co-ordinated variety tests, a subject that received the serious attention of the society at the St. Louis meeting, was again brought up in the two papers of Professor L. C. Corbett and Professor W. W. Tracy, both of the Department of Agriculture. The first named described a system of variety record blanks, which had been devised and had been in use for two years, and the further use of which he felt would tend to properly classify garden varieties in vegetables, and make the introduction of spurious novelties less likely to occur. The great need at present was to arrive at a definite understanding of what really constituted a horticultural variety, as the general trade descriptions, in many cases, dealt with generalities and, in some cases, could actually be reversed. The descriptions of two tomatoes, Stone and Success, were cited. It is evident that neither seed growers nor the producers of exhibition plants have any fixed notion regarding varieties. This shows the necessity of carefully executed descriptive records. It was stated that the stocks used for these co-ordinated variety tests should have a common origin and be grown under the same environment long enough to have been properly fixed.

Professor Tracy, in his paper, emphasized the necessity of having a distinct varietal type to adhere to in seed growing. He told of many confusing cases as one in which there were two types of melon in the introduction of a new variety; one grower had selected his stock to the green type, another to the white rind type. The importance of minute distinctions from the practical standpoint was great as in lettuce, where a difference in texture of leaf meant a better forcing variety, but grown outside there was no difference discernible. There were three distinct types of Refugee wax bean in the American seed trade today. The same thing was true in other vegetables. This instability of type has led to substitution being looked upon lightly in the seed trade. Horticulturists should demand from the introducer of a new variety a distinct and accurate description of what he considers the type to which it should be grown, and this should be rigidly adhered to in the growing of seed to be sold under that name.

A committee of the society was appointed to make an investigation of this whole subject, to report at the next meeting of the society, the two presenters of the papers being named with power to add to their number.

Electric Light in Plant Growing.

Professor C. P. Close detailed recent experiments in the growing of plants in the new Cooper-Iffewett mercury-vapor electric light, which had been made at the Delaware station. The 4-H patten lamps were used. The rays have no red in them and looked at through a red glass no light can be seen. The candle-power of each lamp is about 650, and the expense per candle is about one-eighth that of the candle-power of the incandescent light and about three-fourths that of the arc light. Grand Rapids and Boston Market lettuces were used in the experiment; seed sown December 14. These were put into a chamber from which daylight was excluded, after they had made four to six leaves, all of which were removed. Plants from a sowing on January 25 were also put in at the same time. These had four small leaves and they were left on. The cultural conditions were not of the best as regards ventilation and heat during the growing or lighted part of the 24 hours; it was at night that the light was on. Of the first setting all were lost by disease except a dozen immediately beneath the light. Radishes were also grown. From a commercial view the experiment was not a success. Chlorophyll was formed, but the plants made a very spindly growth. The object in view was the utilization of basement barns, and under more favorable circumstances the results must be better.

In the course of a discussion it was the feeling that the light might be used as a supplement to natural daylight in forcing salad plants during the "dark days" of Midwinter.

Value of an Orchard Survey.

Prof. John Craig, Cornell, discussed the value of an orchard survey, the purpose being to ascertain the causes underlying failure or success, aside from the personal question involved. In other words, to ascertain the underlying fundamental principles of orchard management by an actual analysis of practical conditions. The conclusions often arrived at by the investigator did not carry the weight they deserved, very often because the volume of facts dealt with was too small to make an impression on the practical grower. He felt that if these facts could be gathered from the field and orchard on a larger scale—take an entire county, for instance, and map its orchards—they would have a much better reception from the practical man.

L. BARRON.

(To be continued.)

The New Rose WELLESLEY

is a welcome addition to the list of forcing roses.

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

The plants from now on can receive more liberal treatment in the way of feeding and watering, as the days are getting longer, and the plants show an increased growth. A mulch of but partly decomposed cow manure is the proper material to use; but if this is not available, green manure mixed with some good soil will answer. Put it on the benches on a clear day so that a fair amount of air can be left on the houses for some time, and water thoroughly. Green manure contains a large amount of ammonia, and unless used as stated is liable to ruin the plants by burning the foliage, an instance of this kind being noted where the plants were entirely stripped of their foliage.

Examine the beds carefully each day, for after a mulch has been applied the surface of the benches often appears sufficiently moist, while the soil in the bottom, especially where the heating pipes are near the benches, will be as dry as powder. Such a condition results after syringing, or a few cloudy days, and causes the wood to become hard; the eyes break slowly and the plants are apt to lose a large number of their leaves. Needless to say, the buds also come malformed and have no substance.

Watch carefully for red spider, especially in corners not easy to get at it, and remember it is not the quantity of water used that will dislodge the pest, but the manner in which the water is applied.

A great deal of our attention from now on will be devoted to young plants. Cuttings put in the sand the second week in January will soon be ready to pot. It is a good plan to screen the soil, and have it in the potting shed some time beforehand. The pots should be nice and clean; for, if covered with green scum, they soon sour the soil placed in them and the young plants have to suffer; 2 1/2-inch pots are mostly used for the first potting. Have the soil in a fairly moist condition, so as to pack nicely. Before taking the cuttings from the propagating bed, give the sand a good soaking, and then take only a few cuttings at a time, for the roots should not be exposed to the air any longer than necessary. Pot firmly, being careful not to break the little rootlets, which at this time are very brittle. It is best to water every flatful, as they are put on the bench; this should be done thoroughly so that the soil is all wet. Shade will have to be provided for a few days until the roots start or take hold of the soil. Meanwhile use water sparingly.

The plants should be put where they can get plenty of sunshine. Do not stand the pots on the old soil; remove that, and fill the bench with ashes. This means more labor, but it pays. The temperature should never go over 70 or 72 degrees on clear days; 58 to 60 degrees nights. PENN.

sprays with bloom almost as fully as a white spraea. The California privet gets rusty in Winter and in some Winters loses its leaves. The japonicum is well worth trying north, for its compact habit would make it valuable for a low hedge.

Here, in Raleigh, the oleander sometimes comes through the Winter, but is generally cut back by the frost. But down in the coast country there are great clumps of white oleander that even passed the last hard Winter and bloomed like snow banks.

On Smith's Island at the mouth of Cape Fear River, the forest growth is live oak, rosemary pine and cabbage palm, Sabal palmetto. It seems to be the rule in nature that trees reach their finest development on the northern limit of their growth.

E. G. Hill Co., Richmond, Ind.

Conventionists inspecting "Fiancee" Cuttings at Chicago Carnation Co., Joliet, Ills.

Talk About Prizes!

SIXTY PRIZES won this season is proof enough of the superiority of our plants and varieties.

If you have strong, healthy plants, and the Best Varieties, you can Win also.

NOTE:—Here is our record made at the Chicago Convention last week:

	Rooted Cuttings,	
	Per 100	1000
First Prize, best 100 flesh pink, with Enchantress.....	\$ 4.00	\$ 30.00
First Prize, best 100 dark pink, with Lawson	2.00	15.00
First Prize, 100 Scott pink, with "Fiancee"	12.00	100.00
First Prize, best 100 scarlet, with "Cardinal".....	12.00	100.00
First Prize, best 100 crimson, with Harlowarden	2.50	20.00
First Prize, best 100 yellow, with Dorothy Whitney	4.00	30.00
First Prize in Sweepstakes, with "Fiancee"	12.00	100.00
First Prize, 50 any other color, with Prosperity	2.50	20.00
First Prize, 50 white variegated, with Mrs. M. A. Patten	5.00	40.00
First Prize, 25 yellow. First Prize, 50 yellow.		
First, J. C. Moninger Prize, with 50 Whitney.		
First Prize, 50 crimson, with Harlowarden; Moninger Prize.		
Second Prize, 25 Fair Maid; Second, 25 Lawson; Second, 25 Enchantress		

"FIANCEE" won the LAWSON GOLD MEDAL

The only Carnation and we the only Firm to win it twice.

We sell rooted cuttings 250 at 1000 rate. We have the largest and best stock of WHITE LAWSON. Rooted cuttings of this grand variety, ready for immediate delivery, \$7.00 per 100; \$60.00 per 1000. From 2-inch pots, \$8.00 per 100; \$75.00 per 1000.

The American Carnation Society.

If the weather man does persist in denying the American Carnation Society congenial temperatures for its annual meeting and exhibition, no matter whether these occur in January, February, or March, that fact has no dampening influence on the energy, enthusiasm, and progressiveness of the membership—elements which have combined to make every succeeding convention and show a magnificent success. Chicago's was no exception. Flowers of better quality than ever before were staged, and in an exhibition hall which for elegance, roominess, and airiness has not been surpassed; a large attendance that embraced representatives from Denver to New York; sessions replete with lively discussion on practical trade topics, is the record of the 1905 gathering.

All this will have been learned from our special telegraphic report of the affair, appearing in last week's issue, a report which, on comparison, will be found to eclipse that of any other journal making the effort, in completeness of detail, notwithstanding that we labored under the disadvantage of being almost a thousand miles from home, while some of our esteemed contemporaries were right on their native heath, within a stone's throw of where all that took place occurred. We merely mention this in passing to demonstrate that the enterprise of The Florists' Exchange is not limited by distance; that no expense or effort is spared by us when our readers' interests are concerned.

To resume. The change of date of the exhibition to the latter part of January appears to have given entire satisfaction. It was the opinion of such expert growers as Eugene Dalledouze and Richard Witterstaetter that the date chosen for this year's show was the hardest time of the year to exhibit a carnation. Many varieties will be good in March that are not fit for the exhibition table at this time. The size of the blooms displayed was, of course, a little smaller than what would be seen later in the season, but the quality, generally, was good for the time of year.

It was noticeable, too, that the keeping qualities of the flowers in general were much better than at Detroit. A considerable number, of course, went back the second day, including some of the prize winners—a fact which led to the remark that the best time to judge the varieties, for final decision, would be the second day of the show. Then would a better idea be obtained of one of the most important requisites in a good carnation—its staying powers.

Recognizing the enhancing exhibition value of such a display, and probably with the view of providing greater variety, the directors of the society have concluded to offer at the Boston show prizes to the extent of \$100 in cash. Fifty dollars for first, thirty for second, and twenty for third—for best ten varieties, 50 blooms in a vase. This should, in a measure, meet the wants of the commercial growers, some of whom are under the impression that specimens of flowers that are sold every day to customers should also have a place in the society's show along with purely exhibition sorts, and that provision for the former should likewise be made in the prize list.

President Hartshorne's suggestions regarding the society endorsing the holding of an "All-American Flower Show"; also the oft-mooted question of the appointment of judges in different localities to inspect seedlings, were very thoroughly discussed. As regards a flower show, it was decided to co-operate with the promoters of exhibitions in the Fall, in different sections of the country, looking to a display of seedling carnations at each, when the preliminary certificate of the society will be awarded to meritorious new varieties. The matter of the appointment of committees of judges, on the plan followed by the Chrysanthemum Society of America, was again unfavorably received. This was to be expected. Such inspections could only demonstrate what the introducer himself was capable of doing with the new variety inspected—information that he at all times is willing to truthfully impart when asked; and would be no greater guarantee of general well-doing to investors in novelties than that already available. The oft-repeated advice to go slow on new varieties, while trying a few of all, still holds good, and cannot be superseded.

The interest taken by the members in the McKinley Memorial Fund is especially commendable. The establishment of McKinley Day or Carnation Day—in commemoration of the late President's birthday—is an institution that is working, and will continue to work, great good to the carnation industry. As was pointed out, a donation of a percentage of the carnation sales on that day, by everyone handling the flowers, is but a small commission for goods already delivered. Swell the McKinley Fund to an extent commensurate with the well-known generosity and gratitude of the craft.

All the papers presented at the meeting were of an intensely practical and valuable nature. The discussion which ensued on Professor Hasselbring's essay on "Carnation Diseases" served but to further deepen the mystery of the origin of the ills the plants are heir to. We are now pretty well informed of the pathological diagnoses of the different diseases; what they are like, how and in what manner they attack the plants. The cause, particularly that of stem rot, is still an unsolved problem. Mr. Fisher, a careful grower and keen observer, believes this disease proceeds from a check given to the plants; from cuttings being left too long in the sand in the cutting bed, or being delayed in transit from grower to buyer. Instances were cited where cuttings taken from the tops of plants, healthy to all appearances, would have no stem rot, while the original plants themselves would afterward be attacked by the disease. It was believed that indoor planting would prove beneficial in combating the trouble, as when carnations are planted out in the field they are subjected to checks, caused by extremes of weather conditions, from which the rot is supposed to more directly proceed. Professor Hasselbring asserts that the stem rot spores cannot live in sterilized soil—that is, soil that has been heated to 220 degrees; yet Mr. Ward mentioned a case where cuttings of Flamingo were rooted in sterilized sand, potted and planted in sterilized soil, and 50 per cent. of them died of stem rot. It was explained by the professor that the disease in this case may have been spread by the cuttings themselves. The fungus need not necessarily be in the soil itself. The spores are ever present on decaying vegetable matter, are easily carried, and always ready to attack a plant that offers a foothold, a broken root, or a disintegration of the tissue affording an opening for it. Ordinarily, fungi grow luxuriantly in a moist atmosphere. A soggy carnation bed is sure to have more fungi and stem rot than a drier bed. Mr. Valentine, of Denver, had seen the fungus occur in his State from a dry condition. There everything has to be irrigated, yet he could raise one of the most beautiful crops of rust imaginable.

The discussion, while evolving nothing particularly new, emphasized the fact that careful cultivation, selecting healthy cuttings for propagating purposes, avoiding those from plants that had at any time been attacked by disease, would insure greater immunity from the ravages of rot and other troubles than carelessness in points essential to the maintenance of health in carnations. And in this particular the remarks of Mr. Weber, of Oakland, Md., are worthy of recapitulation. He said:

"Good ventilation; absence of extremes in watering, and so on, will do away with nearly all of this stem rot. In the cutting bench, particularly, we have been quite successful in keeping it down. Our sand is never sterilized. It is not a sharp, clean sand, free from vegetable matter. It contains considerable lime, dead leaves, little twigs, and so on. We start with good, healthy cuttings, and are very careful not to have the temperature too high, and always ventilate. Stem rot, or the spores that cause it, will never start, unless that condition has been brought about when nature steps in to remove that plant by a process of decay."

The society has made an excellent choice of a presiding officer for 1906. No man stands higher in the

ranks of practical carnation growers to-day; no has done better work for the flower, or has brought it, indirectly, into greater prominence than Pet Fisher. Modest, unassuming, sound of principle, skilful and painstaking practitioner, he is worthy of the premier honor which the American Carnation Society has, unsolicited, conferred upon him. With Mr. Fish directing affairs and the usual co-operation of every member, we look for a grand show, as well as a most successful meeting at Boston next year.

Convention Echoes.

Chicago's unbounded hospitality remains unpaired.

For a hard-working, even-tempered manager, Pl Hauswirth has few equals.

The usual carnation show weather was with us. A special dispensation of Providence, it seems.

Some of the fancy blooms wilted on the second day. Evidently they were timed to the minute.

Pity Dick Witterstaetter's flowers were late; they were beauties. Better luck next year, we hope.

We all were on our good behavior, having not repeated the words: "Lead us not into temptation."

Four hours' judging is an exacting task. Why not have a division of labor? Time and energy both would thereby be saved.

These conventions are generators of good-fellowship, manly friendships, and of information worth having. Every carnation grower should attend them.

The youngest member of the society is Dan Irwin Herr, aged 3½ years, son of the well-beloved secretary of the association. He joined at Chicago.

The orator from Canada made the speech of the evening at the banquet. He reminded the gentlemen from Indiana that "every Richmond has had his fall."

We all missed the genial, gifted Scott, of Buffalo. The motion to send him an expression of sympathy in his illness was thoughtful, well-timed, and well deserved.

President Hartshorne came out of the meeting-pla wrangle with flying colors. Those parliamentarian fellows, like Kasting, Rudd and others, are trying to the nerves of the inexperienced. Moral: Study a Cushing, Mr. Fisher.

The visit to Boston in 1906 will be the second one made by the society to the Hub. The first left very pleasant recollections; the second will emphasize these. Boston has since become a great carnation center, and its carnationists are the most genial gentlemen.

It was something unusual, after a place of meeting had been chosen by the audience and directors, for said spot to withdraw. Yet Toronto graciously did so—for the good of the society. In 1907 Canada will have a larger representation on the membership list than it is expected. The choice of Toronto, in the first place, shows that the American Carnation Society knows no boundary line, and as well evidences the broad-mindedness of its members.

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

Water Cress.

Editor Florists' Exchange:

In your issue of January 21, page 72, A. J. B. ask whether water cress, taken from the swamp, will grow in the greenhouse. Having had no experience in treating water cress in this manner, I cannot say whether or not that method would prove successful, but I fancy that if the plants lifted from the swamp were not too large they would thrive all right. Unless, however, the cress were wanted in only very small quantities, this process would prove too slow and expensive for commercial purposes.

The writer first saw water cress growing under glass in 1885 near Philadelphia, and I think we have been growing it more or less for ten or twelve years.

The soil that will produce lettuce or radish will also grow water cress. As the seed is extremely fine, and the plants therefore very small when they first break through the soil, we deem it best to sow in flats; and as soon as the plants are large enough to prick out into other flats. From the latter we transplant to the bed or bench in rows four inches apart each way. The temperature of the lettuce house suits it nicely, but if given a somewhat higher temperature it will grow much faster. It should be needless to say that it requires copious watering. In all these years we never had a complaint from anyone about its being too bitter. The only difficulty experienced, so far, is that we have never been able to keep the supply up to the demand.

We consider water cress, both for the local trade and for shipping, about as profitable as lettuce. We take a number of cuttings from each plot of ground before it is turned under, but where desired it can be cleaned off with one cutting.

The list of vegetables that lend themselves to profitable cultivation under glass is none too large, and I therefore take pleasure in recommending water cress as a money-making greenhouse crop.

H. L. JANZEN.

Berlin, Ont.

OBITUARY

Charles A. Keyes.

Charles A. Keyes, nearly fifty years a resident of Worcester, Mass., and one of the most widely known florists in the city, died January 27, at his home, 64 North Ashland street, after five days' sickness with congestion of the kidneys and pneumonia, aged 75 years.

Mr. Keyes was widely known in Worcester and has many friends, being popular with his associates in business, customers and those who had an opportunity to make his acquaintance outside of business hours. Right for the sake of right was his only religion, and he lived according to this principle throughout his life.

Charles A. Keyes was born in Northboro. He got his early education and remained in the town of his birth until 16 years of age, when he left home to teach writing. As a writing teacher, he worked in many cities and towns in New York, following this calling several years. Later he devoted his energies to the study of painting and graining, at which he became an expert. He followed that business until 75, in which year he started his present floral business on Highland street.

More than forty years ago Mr. Keyes began to raise tomato plants and cultivated many thousands of them annually. He was the originator of a small but very prolific variety, which he called "Keyes early," for the seed of which he received \$1,800.

Mr. Keyes was married when 26 years old to Miss Clara Chandler, who predeceased him eleven years ago. He leaves five children.

Although Mr. Keyes did not profess to be a society public man, he was interested in all branches of agriculture and horticulture, and for this reason was an active worker in the interests of the Worcester Agricultural and Worcester Horticultural societies. The funeral was very largely attended January 30. The oral tributes were numerous. It has not been decided what disposition will be made of the business.

Dan Newsham.

On Sunday, January 15, after a sickness of but four days, Dan Newsham died at the Touro Infirmary, at New Orleans, La. At the time of his death, Mr. Newsham was in the prime of life, being 35 years of age and hale and hearty up to a few days before. He was a native of Lancashire, England, and came to New Orleans about nine years ago, where he worked for a while with his brother, James Newsham, in the nursery business. Later on he accepted a private place, which he ably attended to until a little over a year ago. Since then he was engaged in collecting plants for the Louisiana exhibit at the St. Louis exhibition, and took care of them during the fair. Since his close he had been in New Orleans with his brother in the nursery business up to the time of his demise.

Mr. Newsham was for several years secretary of the New Orleans Horticultural Society, and as such made lots of friends among the local horticulturists, as well as private parties, and his loss is keenly felt.

H. P.

[The publication of the foregoing has been unavoidably delayed.]

George Young

George Young, a violet grower of Tallmans, N. Y., died suddenly at his home on January 28, from what was supposed to be ptomaine poisoning, resulting from the eating of a cream puff in New York City on the day of his death. He leaves a widow and five small children to mourn his loss.

Our London Letter.

BY A. HEMSLEY.

COVENT GARDEN FLOWER MARKET continues to be well supplied with almost all seasonable flowers. Just now roses are rather scarce. In red, Liberty is the greatest favorite, but the old General Jacqueminot is still grown extensively. Madame Abel Chateaufort is a good, useful variety and comes next to the reds for prices. Kaiserin Augusta Victoria make good prices. Bridesmaid is also much in demand. Chrysanthemums have held out well; and, taking the season through, growers should not have much to complain of. Poinsettias have been unusually good and plentiful, but they are now nearly past. We see very few of the double (plenissima), which is so useful for late work.

Heath growers have had a better time of it, but the E. hyemalis are now getting over; good gracilis are quite past, and melantha is getting short.

Good palms are sold at lower prices than formerly, and most growers seem overstocked with them. Kentias and latanias are the most plentiful. Cocos and geonomas make better prices. While speaking of

palms I may mention that seeds seem likely to be plentiful this season. Those of Cocos Weddeliana are already being offered at auction; they have gone up to 2s. per thousand. Kentia seeds go very cheap.

Liliums hardly reach such good prices as they did last season. Best crowns of lily of the valley seem likely to run short, and advanced prices are asked; bloom, however, continues plentiful, and much of it seen in the market is very fine. Growers say that the very large variety (Fortin's Giant) does not force well. Imperial is a better sort for Winter work. The old Spirea japonica still holds its own as the best for Winter work. One grower, who had some fine plants of S. astilboides floribunda, tells me that it does not stand well, and that he will not grow it again for early work.

Violets have been making big prices this season—Princess of Wales, large blue (English grown), moderate-sized bunches, 6s. per dozen. And the best from the south of France have gone up to 4s. per dozen bunches. Parmas have also made big prices. With all the large supplies we now get from various sources, anything specially good commands high figures.

Daffodils are coming in; just at present high prices are made, but a few warm days would bring them down. The large trumpet sorts of the Golden Spur type make best values.

American carnations are more appreciated than ever; the greatest favorite is Enchantress. This variety has been re-christened, Fascination being the new

The Gardener and Landscape Gardener.

(Abstract of paper read by J. Woodward Manning before the Boston Gardeners and Florists' Club.)

Mr. Manning, after explaining the relationship that should exist between the landscape architect and the gardener, went on to give the following valuable advice:

Many gardeners feel that their duties are altogether too varied now, and their present efforts are not sufficiently appreciated as it is. It cannot be denied that this may be so; but may this not be due to yourself, largely? This may or may not be possible according to opportunities; do you make the most of such whenever they occur? Is not your greatest opportunity in so broadening your knowledge and applying it that your worth may have greater recognition? If your duties are so numerous and varied that gardening must of necessity be a minor matter, you may still broaden your knowledge as far as possible; but look to it that as soon as may be you obtain a situation elsewhere that your gardening propensities may be better appreciated and encouraged. The broadening public interest in gardening that is being produced by the numerous horticultural books and papers, now existing or promised, is but a forerunner of what is to follow. I believe it indisputable that New England will eventually become a center of as intense interest in gardening on the part of the householder as well as the gardener, as is now the case in old England, with the result at least that the gardener will, on many estates, be given the opportunity to apply his exclusive attention to his profession; hence the importance to broaden your knowledge to meet the demand.

Don't fall into the common error of following a rut of work, planting only what you have planted in the past, repeating the same treatment in the most perfunctory manner. Don't feel that you should necessarily be directed by the owner without taking the initiative when opportunity presents; this may be unavoidable, perhaps the fault is yours.

The solving of the problem of opportunity I consider of the highest importance for the gardener in showing his worth, and this problem is that fundamental basis of landscape gardening that I am advising you to practice where you study to make the most of what you have to work with rather than to follow the lead of some rival, particularly when conditions may be so different as to make such an attempt ludicrous. First study the place as a whole and convince yourself at the outset as to what the limitations must be. The natural conditions ought to solve the problem largely; if a bare open area, then you must produce the future picture; if possessing rugged or picturesque features, arrive at an early decision as to whether such conditions are not the forerunner of the policy you ought to pursue; and if so, use every precaution to preserve what nature may be abundantly supplying. An old tree may be favorably placed to give emphasis to a view; the study of how to add a bit of planting to aid the effect and complete the picture or to improve by a little judicious thinning with due regard to the preservation of the best will be interesting. Perhaps you can save an outcropping ledge that might ordinarily be considered an encumbrance when it may be the opportunity to form an interesting feature of itself; or, with proper planting form the nucleus of something of harmonious interest. The use of the greatest discretion in clearing underbrush in a bit of woods, with a careful discernment as to whether the native growth does not of itself have ornamental value in better harmony and attractiveness than could be produced artificially; even a mass of clinging poison ivy clambering over a sturdy tree trunk may perhaps be preserved, provided you supply planting at the base of an impenetrable nature to preclude any danger.

Recognize and study the value of our common native plants, our ferns, native roses, our own wild asters and columbines, witch hazels and many other that the landscape architect has had sufficient discernment to take advantage of. Many of these plants are adapted to shady or sterile situations where effort to establish exotic plants would be disappointing. This by no means, however, precludes the use of the exotics wherever their proper place may be. You can get lots of good points from nature on the grouping and combination of plants that will work to advantage under varied conditions.

Carefully study the adaptability of plants; don't place rhododendron and azalea beds in sunny unprotected, dry situations, where annual expense will be required to provide the needed protection artificially, and which can only partially produce the desired results and eventually discourage your employer in such expenses.

(To be continued)

THE LATE CHARLES A. KEYES

name under which it has been sold, but most growers stick to the old name. Mrs. T. W. Lawson is much appreciated. One grower has adopted the American system of planting them out on benches, which has proved a great success.

When calling at Messrs. Wills & Segar's a few days ago, I found they were making a great show in the new extension of their cut flower department. This is a lofty structure, and the stands are adapted to the height. Stout bamboos, standing 8 feet high, filled from base to top with poinsettias, made a great show. Long racemes of Odontoglossum crispum show well on these tall stands. Chrysanthemums are also well displayed. The square baskets, with colored chipmats, and ribbon appendages, are still much in fashion. Instead of mixing the flowers, each subject is shown in bold bunches. This creates a much finer effect than the old mixed medley system. Mauve and pink continue to be the favorite colors.

Choice collections of stove and greenhouse plants seem to have quite gone out of demand. When at Messrs. Veitch & Sons, recently, I noted that large patches of useful plants seemed to be taking the spaces formerly occupied by collections of miscellaneous ones.

Advertising in THE FLORISTS' EXCHANGE means circulation among the best buyers of all classes of stock, the kind of advertising that brings RESULTS.

The Retail Trade

PHILADELPHIA.—The principal event of this week was the Founders' Day celebration at the Union League, on Monday last, at which President Roosevelt was present. The decorations were done by the Wm. Graham Company, who had a large force of men at work all day Sunday, all night, and again all day Monday. The café on the main floor was transformed into a reception room. At one end, where the President stood, flags were draped overhead and a background of palms and flowering plants made. In the center of the large room a decoration of rockwork, with fountain playing, was carried out; ferns in pots and colored electric lights were worked in between the rockwork. This made a very pretty effect. Around this, on the floor of the room, a garden scene was created. This consisted of beds of azaleas in several colors, other beds of lilies, cinerarias, narcissus and tulips. The walks between these beds all led to the receiving stand at the end of the room. The decorations in the banquet room were very elaborate. Overhead was festooned with smilax and colored lights, the walls being hung with wild smilax in which wall pockets of flowers were suspended. The head table was decorated with American Beauty roses; each of the other tables was decorated in a different color with shades on the electroliers to match the color of the flowers used. Instead of the tables being designated alphabetically the word "Roosevelt" was substituted, one letter to each table, this being so arranged that it caught the eye the first thing as one entered the room. Back of the head table, on the platform, were large vases of American Beauty roses. The entire building received some attention from the decorator. The rooms set aside for the President's private use were decorated with palms and vases of American Beauty. The whole work was well executed, and the house committee of the Union League have complimented Mr. Graham for his effective services. The President was greatly pleased. In his own words to Mr. E. T. Stotesbury, he said: "Previous to this the best decoration in my honor was the banquet tendered me in San Francisco; that was a garden of flowers, but this is a paradise." DAVID RUST.

DECORATING FOR McKINLEY DAY.—For Carnation Day, January 29, the Central Michigan Nursery Company, of Kalamazoo, made a handsome display. In the center of the show window was a fine portrait of the late President McKinley, and upon a broad white silk ribbon was the legend in purple letters, "President McKinley's Favorite Flower." In the background was draped a large American flag, and before and all about the picture were potted carnations of every variety and shade. The blending of pink, white, dark red and green with the birch bark and flag background, made an artistic color scheme. The company further celebrated the day by presenting a carnation to every conductor and motorman of the Michigan Traction Company in the city, on Saturday.

FROST ON GLASS.—To remedy this evil it seems that some German has discovered a means of keeping the glass clear. According to "The Pharmaceutische Zeitung," a mixture of 55 grammes of glycerine dissolved in 1½ pints of 62 per cent. alcohol may be used for rubbing over the inner surface of the glass. This is claimed to prevent the formation of frost and moisture from condensing on the glass. If objection is taken to the smell, some oil of amber may be put into the mixture.

The Milwaukee (Wis.) Sentinel devoted a full page of its magazine section, Sunday, January 29, to a portrait of the late President McKinley, bordered by red carnations. This was of great benefit to the local trade. The Carnation League of America and its work was the subject of a leading article in the same newspaper.

A. C. S. Wreath for McKinley's Tomb.

At the annual meeting of the American Carnation Society, held in Chicago last week, the society decided to send a suitable floral offering to the tomb of the late President McKinley, at Canton, O., on January 29, the anniversary of the deceased President's birth. The work was entrusted to Phil. J. Hauswirth, of Chicago, and the accompanying illustration represents the design sent. The wreath was composed of Mrs. Thomas W. Lawson carnations, and Asparagus Sprengeri. R. J.

Realism in Japanese Flower Shows.

Those desirous of introducing innovations at our chrysanthemum shows may find a few hints in the methods employed by the Japanese at their exhibitions, as described in a recent issue of Harper's Weekly, by William Dinwoodie, special correspondent in the Far East, who writes as follows:

"Japan has gone war mad. Her latest craze is her Winter Flower Shows which depict every conceivable phase of the tremendous struggle with Russia in huge staged pieces of chrysanthemums.

"On entering you pass through winding walks, banked high on either side to a depth of six feet with chrysanthemums in endless varieties of form and color. The delight and admiration of the clusters of sight-seeing Japanese, as they critically discuss the merits of certain flowers,

interest the visiting foreigner even more than the blossoms themselves, for, after all, while the flowers are very beautiful and the color, shape, texture and size wonderfully varied, our florists at home have, by scientific culture and crossing, succeeded in forcing the chrysanthemum to a point of even greater perfection than has yet been attained by the Japanese.

"Upon turning a corner of the flower-walled passageway, one runs full into the Er-lung-shan Fort at Port Arthur. A desperate assault is on. The Japanese attacking party are scaling the massive green walls (made of bamboo splints and covered closely with small-leaved green vines). On the ramparts, Japanese and Russians are clinched in mortal combat, with real swords in full swing in the air and real guns clubbed ready to dash out papier-mâché brains, while real bayonets are thrust into straw and bamboo vitals of soldiers brilliantly uniformed in close-set chrysanthemums.

"In spite of the highly artificial character of the scene, it is very striking and realistic, and a subdued light tends to heighten the illusion. The portrayed action and poses of the life-size figures are usually excellent; men fall headlong from the walls, cruelly wounded; they run crouched with fixed bayonets, suggesting every ounce of strength reserved for the final thrust in their contracted arms; they stagger and reel backward from shell and gunshot wounds, or fall limply forward on their faces as they run.

"Possibly what adds more to the graphic effect than anything else is the excellence of the head masks and hands, executed in straw-plaster and modelling plaster by the skillful Japanese artists. Every phase and shade of human emotion is exhibited on these startlingly realistic faces. The agony of a frightful wound; the grim ferocity of a perspiring man, struggling to kill his enemy; the enthusiasm of the charge; the fear of the defeated—all these are moulded into physiognomies made lifelike by accurate coloring and real eyebrows, eyelashes, mustaches, beards and hair.

"The heads and hands of these dummy figures cost from five to eight dollars in gold, if they are not intended to be an exact likeness of some prominent man. One may

Wreath of Carnations sent by A. C. S. to President McKinley's Tomb.
Artist, Phil. Hauswirth, Chicago.

have an exact replica of any person made from a photograph as a guide—or, better still, from sittings of the actual subject—for a hundred dollars in gold.

"The revolving stage is the favorite method of displaying these war scenes in flowers to the interested public. A circular stage, thirty feet in diameter, carries two tableaux, back to back, separated by painted backgrounds. On the one side, for example, there may be a group of Russian Cossacks and Japanese cavalry, fiercely fighting on a hilltop of red, yellow and white chrysanthemums, while, in the distance of painted background, a Japanese squadron is pounding forward, full tilt, to the relief of their purple-chrysanthemum comrades, waging a fight with drawn sabres against a superior force of red-chrysanthemum-coated Russian lancers. The horses are all of flowers, often bizarre in color.

"On the other side of the stage, which slowly revolves upon the signal of two resonant sticks struck together several times by the voluble lecturer, before the eyes of the crowd of standing spectators, is the stirring scene of gallant Commander Hirose's daring attempt to sink a transport in the channel of Port Arthur. Hirose was the naval officer who three times went below decks on the sinking transport in a vain attempt to find a missing warrant officer. The vessel had been hit a dozen times by shells from the Russian land batteries, and, in a blaze of searchlights, shells were bursting around it by the hundreds. With the ship sinking under his feet, he clambered into the small boat alongside, and almost with his order to give way, came the messenger of death which ended his life.

"The mechanical devices of these fixed pieces are simple and crude. The stage revolves on a central axle, like the wheel of a cart set sideways. The motive power is half a dozen men. In some of the tableaux the small boats filled with sailors rock in the billowy sea of flowers, and the derelict, battle-scarred ships sink creakingly, while jacksies, overboard, strangled in the sprays of white blossoms, swim manfully up and down in the same spot. In some of the cavalry charges, horses and riders rise to the summits of flower-crested hills, to sink out of sight again as the scene is shifted. It is no unusual thing for the supers to come walking out of the setting from behind a great wave and jump off the stage to mingle with the visitors.

"These chrysanthemum shows last two months, and from first to last the blossoming lay figures of men and horses look quite fresh. It is well known that the Jap-

anese can keep a vase of cut flowers in fresh condition longer than any other people in the world, but it puzzles the writer greatly to see how it was possible to keep thousands and thousands of solidly set chrysanthemum blossoms on the bamboo mannikins in almost their pristine beauty for two months, unless they sat up nights replacing them.

"The kindly manager of one show solved the problem for us, by disclosing the interior construction of a figure. Each plant, with its leaves and roots, is put on the figure entire. The flower heads and buds come through the bamboo splints, which are a quarter the thickness of a lead pencil, and are tied in place with rice straw. In side the figure straw is placed, and the plant roots, with out any earth, are woven among it. The leaves of the plant do the best they can in a semi-twilight behind the flowers and between the outer framework and the center straw-core. Every evening the entire exhibit receives thorough watering.

"With no more attention than this the chrysanthemum continue to exist for two months, and the florists say that this treatment retards all growth for the time being and leaves the plant in a condition where it goes neither backward nor forward, but retains all its beauty for many weeks.

"The construction of one flower horse requires the services of fifteen men for one day, at a cost of fifty cents in gold per man. A staged scene, with six or eight figures, painted backgrounds, canvas ship and boats, cost approximately two hundred dollars in gold.

"Some of the florists of Danso-zaka go in for Lilliputian shows, or, as one manager has it displayed on a sign in English, "The real new and mould dolls of the War-Japan-Russia in Manchuria."

"We are going to America next year," one manager informed me, "and I understand you have a great flower show in New York every year. It is there we desire to go first, for it is a great city, and the people of America have had great sympathy for us during our war."

AMONG THE GROWERS.

P. R. Quinlan & Co., Syracuse, N. Y.

A visit to the new establishment of P. R. Quinlan & Co., at Onondaga Valley recently, proved a treat. Under the able management of Robert Dunn, formerly of the Waban Rose Conservatories, Natick, Mass., the stock is looking very thrifty and perfectly clean, with abundance of growth promising a heavy crop of carnations later. Here are grown a large number of the leading varieties of carnations, looking equally well and particularly healthy. The houses are all in one block and of the open plan, light and airy.

In the rose houses, of the same plan and extent, as seen American Beauty growing with Liberty, Bride Bridesmaid, Mme. Hoste, Perle des Jardins, Sunrise, Sunrise, Ivory, Golden Gate and Mme. Abel Chatena. The latter rose, remarked Mr. Dunn, is the best money-maker of the whole, being in constant demand and wonderfully prolific, throwing finely colored flowers with good stems and foliage. This variety will be grown much more extensively by the firm another year, as Mr. Dunn says it has never been out of crop since he had taken over the management of the plant. Sunrise, he remarked, would never see the world on fire, in his opinion, though a very hard some rose. Golden Gate and its white sport Ivory are now making a very fine showing, with abundance of strong canes right from the base, many being from four to five feet high, with superb buds developing. The only drawback to these otherwise grand roses is the sparsity of foliage, particularly on the long cane so characteristic of this variety. Some very fine blooms of Liberty are to be seen, but in limited quantity, and as the grower states the plants had gone dormant early in the season prior to his taking charge, he has as yet been unable to produce bloom in the perfection he has hitherto been accustomed to do. Bride and Bridesmaid have been a little off color in the plants, but he is now rounding them in shape and expects to very soon cut some extra good stock.

This firm has recently erected a propagating house 200 feet long, heated by hot water, with independent boiler, enabling them to handle the temperature to nicety. The past week 32,000 carnation cuttings have been put in. In another house, also lately erected were seen as good a lot of violets as could possibly be wished. A perfect sheet of purple, thousand upon thousands of perfect flowers on good long stems. Here also were large numbers of manetti stocks in pots, in preparation for grafting; large numbers of Crimson Ramblers in pots, together with hybrid rose for Easter forcing, which, with azaleas, bulbous stock, etc., grown at the old plant on West Geneva street, gives some idea of the large business handled by the firm in their downtown store on Salina street. The firm contemplate the erection of a large house for American Beauty in the near future. J. R. B.

Manures for Chrysanthemums.

M. George Truffaut's researches show that while there are differences in constitution as regards varieties, yet as a whole it may be said that if it is desired to grow dwarf, robust plants with firm, regularly distributed foliage and brightly colored flowers, the following facts must be borne in mind: Phosphoric acid assists in the formation of woody tissue and chlorophyll, hastens the production of flowers, and specially heightens the brilliancy of their colors. Without potash the leaves are flaccid, the stems hollow, the flowers of bad shape, and their development retarded. Excess of nitrogenous manure is singularly injurious to the chrysanthemum. Details of M. Truffaut's investigations are given in the "Chrysantheme."—Gardener's Chronicle.

CARNATIONS.

Statement Regarding Fiancee Cuttings.

TO THE TRADE:

We beg to inform all florists who have orders placed for carnation Fiancee, that we have been somewhat disappointed in its refusing to produce enough cuttings for January deliveries owing to its superb habit of producing long flowering stems only. These stems have been pinched back from 30,000 plants, and there is now an abundance of excellent cuttings coming along. We are putting in the sand large batches every week and expect by the latter end of March that all orders now on our books will have been filled. There is an average of 20 cuttings to the plant now in sight, making a total of 600,000 available cuttings for Spring deliveries.

Fiancee has no disease of any kind; it makes fine strong plants by Fall, even from May struck cuttings; in fact, it is the strongest grower of any carnation.

We further wish to state that we intend everyone shall be satisfied with the quality of the cuttings received; we would rather be the losers ourselves than otherwise.

Those who visited our greenhouses after the Carnation Society's convention can vouch for the reliability of this statement as a whole, and especially as to quality and quantity of cuttings obtainable.

We ask everyone to be patient, and in the end all will come right.

CHICAGO CARNATION CO.
James Hartshorne, Mgr.

Full Particulars of Carnation Phyllis.

Phyllis was raised by W. N. Rudd, of Mt. Greenwood, Ill. It is the result of a cross between two unknown seedlings in 1900. It is a light pink, not quite as bright as Enchantress; flowers average about 3 inches in diameter and are borne on long, erect stems. The great merit of it is its productiveness, from early in the season until the end. This variety can be easily grown with a number of others in the same house, but will do best at a temperature of about 52 degrees at night. In any soil it will do well, but, preferably, in a light loamy one, when it will take lots of feeding. For a man wanting a good, profitable commercial light pink carnation, he will find it in Phyllis. Phyllis has received a certificate from the Horticultural Society of Chicago and a certificate and first cash prize from the Chicago Florists' Club. It has also received a certificate at Tarrytown and New York, and won second prize at Philadelphia last Fall in the C. Hartman Kuehn competition.

Carnation Show at St. Louis.

A grand carnation exhibition will be held at the St. Louis Florists' Club meeting rooms on February 9, at 2 o'clock, p. m., in Odd Fellows' Building, southeast corner Ninth and Olive streets, eighth floor, Hall No. 2. The club has offered \$50.00 in prizes; \$25.00 for outside growers, and \$25.00 for local growers. Blooms are to be judged by points, according to the rules of the American Carnation Society. Growers of new varieties are requested to send exhibition flowers. Stock should be sent prepaid to any of our wholesalers: C. A. Kuehn, 1122 Pine street; F. M. Ellis, 1316 Pine street; or H. G. Berning, 1402 Pine street.

Exhibitors should advise the secretary what disposal is to be made of blooms not taking a prize, also of those sent for exhibition only.

Carnation Senator Crane.

This carnation was originated by Edward Dolby, gardener to Zenas Crane, Esq., Dalton, Mass. The flowers are of a pleasing light pink shade, with strong fragrance, making it, with its other good qualities, a variety of sterling merit. The accompanying illustration nearly life size, the flower photographed measuring 3 3/4 inches in diameter. It is in its third year. Stock will be worked up and disseminated by Robert C. Pye, Nyack, N. Y.

Carnation Night at Philadelphia.

All growers of new or choice carnations have been invited to send some of their flowers to the Florists' Club's meeting on Tuesday next, February 7, so a good display is looked for.

DAVID RUST.

Tales of a Traveler.

Del Monte and Its Attractions.

On the Pacific Coast, about one hundred and twenty-five miles below San Francisco, is situated the Hotel Del Monte, which is a resort for tourists from all over the world. The grounds of this hotel are magnificent beyond description, and are an example of what modern science in landscape work can do when combined with the climate which permits of semi-tropical plants being grown as well as the more

GENERAL VIEW OF EXHIBITION OF AMERICAN CARNATION SOCIETY AT CHICAGO, JANUARY 25 and 26, 1905

hardy trees and shrubs, throughout the entire year, with little danger of their being injured by frost.

It was my good fortune to meet Thomas Lee, who has charge of these extensive grounds, and a great deal of credit is due Mr. Lee for his work here. The hotel accommodates about seven hundred guests, and flowers on the tables throughout the year necessitate the growth of considerable stock under glass; the greenhouses, which are a part of this extensive place, show the work which is necessary and its character to keep up the standard which has been set. Several houses of carnations are grown and the varieties are almost without exception of Eastern origin, Mrs. Lawson, Enchantress, Governor Wolcott and Estelle being in the lead. In the Summer there are a large number of carnation plants in the gardens, which produce blooms for the tables, and at no time are carnations a minus quantity. Roses, also, are to be found, but they are not grown in quantity under glass. The American Beauty is a leader for quality. Orchids are represented by a large collection; and flowering plants, such as primulas and begonias, come in for their share of attention. Palms and ferns for house decoration receive considerable space, but the houses devoted to the growing of bedding plants are the more important.

The grounds which this concern devotes to orna-

mental planting cover one hundred and twenty-six acres, and the numerous beds planted to geraniums, coleus, etc., during the Summer would cover acres.

The house devoted to mushrooms is very interesting, and the immense quantity required necessitates that the space devoted to them produces to its limit.

One of the features of the grounds is the Arizona garden. The cacti grown here are very fascinating as well as instructive. The so-called "maze," which is but a system of walks among the shrubbery, is another feature which the visitor should not miss, and from the standpoint of the landscape gardener it would well repay study.

Well-grown trees of all descriptions cover the grounds, and among them are many which would take a place in the "Gallery of Fine Specimens" and which show the care with which they are grown.

Taking Del Monte as a whole, it is an interesting subject for study if one loves nature, and it shows what can be done by taking advantage of the climate and the natural resources of the country. The Eastern man who is a student of ornamental gardening should not fail to see this place in his travels, and the native gardener in the State of eternal Summer can learn much from those who have made Del Monte what so many call it, "The beauty spot of the Californian coast."

WINNERS OF LAWSON MEDALS AT CHICAGO EXHIBITION, A. C. S.

CLUB AND SOCIETY DOINGS

THE AMERICAN ROSE SOCIETY.—The schedule of prizes offered by the American Rose Society for the exhibition to be held in Boston, Mass., in conjunction with the Spring show of the Massachusetts Horticultural Society in March next, is now in the printer's hands and will be distributed shortly. From an advance copy, kindly forwarded by Secretary pro tem., Wm. J. Stewart, 11 Hamilton Place, Boston, we take the following particulars:

In classes of 25 cut blooms, open to all, of the leading commercial varieties of roses, first and second prizes of \$10 and \$5, respectively, are offered, those for American Beauty and Queen of Edgely being \$10 and \$7. In the 12-bloom classes premiums of \$5 and \$3 will be given. For 12 cut blooms of hybrid perpetuals prizes of \$10 and \$3 are offered.

The special prizes for cut blooms include the following: For display of cut blooms of roses not less than five varieties and not less than twenty-five blooms of any one variety, to be competed for by growers outside of a radius of 150 miles of Boston, as measured by railroad time tables (prize presented by Benjamin Dorrance), silver cup, value \$100.

Twenty-five blooms of any red rose not disseminated previous to 1903 (offered by John B. Nugent, Jr.), \$25, \$15.

Twenty-five blooms of any pink rose not disseminated previous to 1903 (offered by John B. Nugent, Jr.), \$25, \$15.

Twenty-five blooms of any American seedling rose introduced in or since 1901 (offered by President Alexander Montgomery), \$25.

Fifty blooms of Killamey, grown within 250 miles of Boston (offered by Siebrecht & Sons), \$25.

Fifty blooms of La Detroit (offered by John Breitmeyer's Sons), \$50, \$30, \$20.

Display of blooms, not less than ten varieties, in a space of fifty square feet—20 points allowed for effect (offered by Treasurer John N. May), \$50.

Fifty blooms of American Beauty rose (the Executive Committee prizes), \$50, \$25.

The Lord & Burnham trophy, valued at \$250, presented by the Lord & Burnham Co., will be awarded in conjunction with the first (cash) prize for fifty American Beauty roses in this class, and will become the property of the competitor winning it twice hereafter, consecutively or otherwise.

Fifty blooms of any other variety (exhibitors may use their own vases), \$20, \$15.

Six blooms of any variety introduced in 1901, or subsequently, \$5, \$3.

Twenty-five blooms of any rose of American origin, not yet in commerce, either tea or hybrid tea, seedling or sport, silver cup, value \$50.

For Private Gardeners Only. Twenty-five blooms of H. P. roses, not less than six varieties (offered by E. A. Clark), silver cup, value \$25, or cash if preferred.

Pot Plants (open to all).—Twenty-five H. P. roses, in pots, not less than ten varieties (presented by Col. Chas. Pfaff), silver cup, value \$50.

Twelve H. P. roses, in pots, not less than five varieties (offered by M. H. Walsh), \$25.

Six plants, any one variety (not climbers), in not larger than 8-inch pots, \$8, \$5.

Note:—Prizes may be awarded for each variety shown, at the discretion of the Judges, and entries in this class are unlimited.

Specimen plant in pot (not climber), \$10, \$5.

Climbing Roses, in Pots.—Specimen plant, trained or not, in tub or pot (not less than 12-inch), \$12, \$8.

Crimson Rambler, six plants, \$12, \$8.

Six plants, distinct varieties, in not exceeding 7-inch pots, \$12, \$8.

Display of Rambler and climbing roses, in pots, covering not less than fifty square feet (special prize offered by F. R. Newbold), \$25.

Specimen Wichuriana hybrid, any variety (offered by Benjamin Hammond), \$15.

American Rose Society's Medals for Novelties.—Gold medal for the best new rose not yet disseminated, whether of domestic or foreign origin. Exhibits to be judged by the official scale of the American Rose Society, and no

gold medal to be awarded to any rose scoring less than 95 points.

Silver medal is offered at the same time and under the same conditions for a novelty scoring not less than 85 points.

It is further ordered that the complete scores of all entries in the competition be filed with the secretary of the American Rose Society before the award of any medal is confirmed. No duplicate medals will be awarded. It is understood that though the award of the gold or silver medal may be made to the same variety from one exhibitor exhibited in different centers, only one medal will be delivered to the exhibitor.

The Executive Committee of the American Rose Society reserves to itself the right of selection of the judges who shall pass upon the exhibits in the competition for these medals.

THE WESTERN NEW YORK HORTICULTURAL SOCIETY.—This society celebrated its fiftieth anniversary with a very successful meeting at Rochester, N. Y., January 25 and 26. Its first president, in 1855, was John J. Thomas, author of "The American Fruit Cultivist." H. E. Hooker and James Vick were other presidents of the association; Patrick Barry was pres-

M. A. PATTEN, TEWKSBURY, MASS.

ident from 1870 until his death; and his son, Wm. C. Barry, of Ellwanger & Barry, has been president continuously for fifteen years. The present secretary, John Hall, has occupied that position since 1890. The society has now 580 members.

The report of the secretary, John Hall, showed an income of \$1,288.42 and a bank balance of \$132.78. For the permanent fund, William C. Barry, trustee, reported a balance in the bank of \$3,055.10.

The display of fruits in Fitzhugh Hall included an

SINGLE BLOOM, MIKADO
Patten & Co., Tewksbury, Mass.

attractive exhibit by the Mt. Hope nurseries of Ellwanger & Barry. This consisted of 102 varieties of apples, 37 varieties of grapes and 40 of pears. Also six varieties of pears shown by William C. Barry. An exhibit of apples from the New York State Experimental Station in Geneva consisted of 175 varieties, also a display of onions, carrots, turnips and grapes. G. H. and D. D. Stone, of Lansing, Oswego County, also had an attractive apple exhibit. The entire building was circled by spraying apparatus, engines, pumps, orchard ladders, barrels, etc. A new feature was seen in the small engines mounted on spraying trucks, which may be driven into the orchards. They do away with the strenuous work of pumping by hand.

The committee of award for the Ellwanger cash prizes reported first prize to A. G. Eighme, of Lockport, and the second to W. H. Pillow, of Canandaigua.

A comprehensive and interesting program was gone through. President Barry asked increased endeavor in the securing of membership. He desired to be relieved of the presidency.

George T. Powell, of Ghent, N. Y., brought before the growers the advantages of community spraying. The plan includes the purchase by the growers of a community of the best and most powerful spraying apparatus known, and its use on all of the trees of the community.

A resolution asking Governor Higgins to reappoint Charles A. Weiting State Commissioner of Agriculture at the expiration of his term, was passed by the members, as was also one asking for an appropriation from the Government with which to fight the gypsy moth.

Before adjournment the committee on nominations reported the following ticket: President, William C. Barry, Rochester; vice-presidents, S. D. Willard, Geneva; J. S. Woodward, Lockport; Albert Wood, Carlton Station; Grant G. Hitchings, Syracuse; secretary-treasurer, John Hall, Rochester, N. Y.

In spite of the protest of President Barry, the ticket as reported by the nominating committee was adopted by a unanimous vote, the secretary being instructed to cast a single ballot for the ticket.

The following committees were also nominated by the committee, and appointed by vote of the members:

Executive Committee—C. M. Hooker, Rochester; Duane Bogue, Medina; Henry L. White, Brockport; I. H. Dewey, Rochester; W. Hopkins, Youngstown.

Botany and Plant Diseases—Prof. F. C. Stewart, Geneva; Dr. L. H. Bailey, Ithaca; Albert Perkins, Rochester; C. H. Stuart, Newark; Willis T. Mann, Barker; A. G. Eustace, Geneva.

Chemistry—Dr. L. L. Van Slyke, Geneva; Dr. S. A. Lattimore, Rochester; Prof. I. P. Roberts, Ithaca.

Entomology—Lewis Hooker, Rochester; J. E. Rose, South Byron; Prof. F. J. Parrott, Geneva, chairman; C. H. Stuart, Newark; J. Jay Barden, Stanley; Prof. E. P. Felt, Albany; Dr. G. T. Howard, Rochester.

Foreign Fruits—George Ellwanger and Irving Rouse, Rochester; I. H. Babcock, Lockport; Frank E. Rupert, Seneca; John Charlton, Rochester; George H. Moody, Lockport; H. J. Peck, Brighton; D. Rhind, Canandaigua.

Flowers and Bedding Plants—C. W. Seelye, Rochester; Charles J. Maloy and John A. Charlton, Rochester.

Garden Vegetables—O. M. Taylor, Geneva; L. D. Welch, Pittsford; Abram Franke, Irondequoit; Edw. H. Munt, Le Roy.

Grapes and Small Fruits—Edward H. Pratt and George S. Josselyn, Fredonia; Laurence J. Farmer, Pulaski; Delos Tenny, Hilton.

Native Fruits—W. C. Barry, Rochester; Dr. L. H. Bailey, Ithaca; Prof. S. A. Beach, Geneva; C. H. Perkins, Newark; A. E. Babcock, Brighton; L. Wolverton, Grimsby; Ont.; D. K. Bell, Brighton.

Nomenclature—Prof. S. A. Beach and S. D. Willard, Geneva; W. J. Edmunds, Brockport; William C. Barry, Rochester; Prof. John Craig, Ithaca.

Ornamental Trees and Shrubs—C. C. Laney, Rochester; Nelson Bogue, Batavia; Theo. J. Smith, Geneva; Charles J. Maloy and John Dunbar, Rochester.

WORCESTER (MASS.) HORTICULTURAL SOCIETY.—The meeting of this society, January 26, was not well attended. The speaker, Frank L. Johnson, superintendent of the Truant School at Oakdale, Mass., described their training for boys, especially in the line of gardening. CAROLUS,

BENCH OF THE NEW SEEDLING CARNATION, MIKADO
Growers, Patten & Co., Tewksbury, Mass.

FIRST PRIZE 100 WHITE—LADY BOUNTIFUL
E. G. Hill Company Exhibitors

NATIONAL ASSOCIATION OF RETAIL NURSERYMEN.—The members of this association, which was organized a little over a year ago, enjoyed a banquet in the Masonic Club, Rochester, N. Y., January 24. William Pitkin presided, and among the principal speakers were Professor John Craig, of Cornell University, and John B. Morey, Jr., of Dansville.

Among the Rochester concerns represented were: Allen Nursery Company, four; American Fruits; Brown Bros. Company, eight; H. J. Bowden; E. G. Bowden; P. W. Butler; E. Brown Company; John Charlton & Sons; Charlton Nursery Company, three; Chase Brothers' Company, seventeen; Gilbert Costich, two; Ellwanger & Barry, two; Glenn Brothers, two; F. E. Grover & Company; Graham Nursery Company, two; Gillies Lithograph Company, two; Hawks Nursery Company, three; Hooker Wyman & Company, six; George Jenny; J. B. Kiley; R. D. Leitchford; W. H. Mead; George Moulson & Company; Oliver Brothers; C. H. Peck; H. C. Peck; H. D. Pratt; Rochester Lithograph Company; Irving Rouse; D. A. Skuse; Rochester Nursery Company; W. W. Steele; Taylor Nursery Company, four; Western New York Nursery Company, two; Allen L. Wood; C. L. Yates, two; James Vick's Sons, two; Vick & Hill, two; Vredenburg & Company, two.

The out-of-town firms represented were: Nelson Bogue, Batavia; R. G. Chase Company, Geneva, two; Clark Nursery Company, Waterloo; George Brothers, East Penfield; Hill Brothers, Irondequoit; F. M. Hartman, Dansville; Jackson & Perkins Company, Newark; George Josselyn, Jacksonia, two; Maloney & Son, Dansville, two; Morey & Son, Dansville, two; J. Frank Morris, Brighton; Peirson Brothers, Waterloo; W. & T. Smith Company, Newark, five; Storrs & Harrison, Painesville, O.; J. H. Dayton, representing the last named company, was the only person present from other than New York State.

The dinner committee was composed of B. F. Allen, H. S. Taylor and W. W. Wyman.

MASSACHUSETTS HORTICULTURAL SOCIETY.—A general discussion on "Fruit" was the subject of the weekly meeting at Horticultural Hall on Sat-

urday. The subject was introduced by E. W. Wood, of West Newton, who for a quarter of a century served on the fruit committee of the society. According to Mr. Wood the two leading fruits of New England are the apple and the pear. Of the former the Baldwin is the best commercial variety, and of the latter, Bartlett, Sheldon, Clairgeau, Dana's Hovey, Anjou, Seckel and Bose are the leaders. Mr. Wood told of the many farms in New England that could be profitably turned into well-paying orchards, and touched on the importance of the proper grading of fruit for the market. He also spoke of peaches as a fruit crop, but claimed they were too uncertain for this locality, although good success had been made by the Connecticut growers from the methods they pursue. An interesting discussion on the points raised followed, participated in by several of the members present. The next lecture before the society will also be on fruit, when Professor John Craig, of Ithaca, will talk on "Findings of an Orchard Survey in Western New York."
J. W. D.

AMERICAN ASSOCIATION OF NURSERYMEN.—In connection with his duties as chairman of the transportation committee of the American Nurserymen's Association, which is to meet at West Baden, Ind., in June, E. Albertson, of Bridgeport, Ind., has

FIRST PRIZE 100 CRIMSON HARLOWARDEN
Chicago Carnation Company

lutions on the death of Dan Newsham. A committee on the official badge was also appointed.

THE EASTERN NURSERYMEN'S ASSOCIATION. at its meeting in Rochester, N. Y., on January 25, elected the following officers: President, W. C. Barry; vice-president, C. H. Hawks; secretary, William Pitkin; executive committee, Irving Rouse, Rochester; George A. Sweet, Dansville; O. G. Chase, Geneva; Charles J. Brown, Rochester; C. A. Stuart, Newark. The president was authorized to appoint a committee to act with the transportation committee of the American Association of Nurserymen in the matter of freight rates with a view to securing a less prohibitive classification of nursery stock.

THE NEW LONDON AND GROTON HORTICULTURAL SOCIETY held its annual meeting Monday, January 23, President Thomas Head in the chair. A motion to change the name of the organization to the Eastern Connecticut Horticultural Society was voted upon favorably. President Head spoke of the possibility of having one or two shows in Norwich, Conn., the same number to be held in New London, and stated that a committee was at work on the same. A committee of four, they to select a fifth, was appointed by the president to consider a date for ladies' night, and John Maloney and Frank Gledhill, of New London, and Otto Ernst and Rev. N. P. Carey, of Norwich, were named.

HELENA, MONT.—The State Horticultural Society held its annual meeting January 19, 20 and 21. There was a very large attendance. Officers elected were: President, C. F. Dallman, Missoula, and W. Spurgeon, secretary. Missoula was selected as next place of meeting.

DANIEL IRWIN HERR, Age 3½ Years
Youngest Member of the American Carnation Society. He joined at Chicago

just completed a tour of Texas in the interest of the meeting, which promises to be one of the most profitable in the history of the association. Mr. Albertson was met at Sherman by C. C. Mayhew, manager Texas Nursery Company, and John S. Kerr, secretary Texas Nurserymen's Association and member program committee American Association; and at Denison by T. V. Munson, of the Denison Nurseries. President Kilpatrick, of McKinney, has expressed a great desire that his native Lone Star State should be well represented and hopes that out of the 150 nurserymen in Texas, there will be a delegation of at least twenty members in attendance, and southwestern nurserymen should remember the date, June 14, and the place, West Baden, Ind. Nurserymen have enjoyed a prosperous trade the past Fall and prospects are fine for the Winter and Spring trade, and they can do no better than take a week off in June and meet with the leading spirits in their craft, which can but be fraught with pleasure and profit.

NEW ORLEANS HORTICULTURAL SOCIETY.—This association met on January 20, President Papworth in the chair. Among the matters discussed was the holding of a Fall flower show. No flower show has been given in three years, because the society lost money on the last one. Secretary Panter proposed that the show, if given, be given for the benefit of the society. A committee was appointed to handle the subject. C. W. Eichling recommended earnestly that a movement be started for the inauguration of a course in horticulture in the public schools. After his talk a resolution was adopted favoring the project. The secretary's report showed \$123 balance on hand. A committee was appointed to draw up reso-

FIRST PRIZE 100 SCARLET—CARDINAL
Chicago Carnation Co.

CARNATION DISPLAY OF C. W. WARD,
At Chicago Show

Euphorbia Fulgens (Jacquiniaeflora).

During the last month we have heard the praises of the poinsettia (*Euphorbia pulcherrima*) sung in no uncertain tones, and rightly, too, for most assuredly it is a plant which gives the right color at the right time of the year. During Winter, and especially at Christmas, there is always a hearty welcome extended to a warm red color, and in the brilliant bracts of the poinsettia we have it. But a plant of the same genus which ought to be grown, I think, in conjunction with the above, is *Euphorbia jacquiniaeflora*, a subject which deserves a larger share of attention from growers than it has at present.

In Europe, and especially in the Channel Isles (Guernsey), it was and still is, as far as I know, largely grown by nurserymen for the market. The plan adopted there was to plant it out in a shallow border, trained to a wire trellis.

Particularly striking is this plant when grown without any pinching or stopping, when it will make wreath-like shoots 2 to 3 feet long, thickly studded with growing scarlet flowers. Such examples, when grown in pots, are highly effective for arranging among palms and ferns; and for table decoration it can hardly be excelled.

The plant hails from Mexico, and therefore requires an intermediate temperature, say, from 50 to 70 degrees. When grown in pots it is very impatient to large shifts, and therefore should not be overburdened with a large body of soil. What it wants is a nice free and open soil consisting of peat, loam and sand in equal parts, with an addition of rough charcoal. A specimen of this plant which comes to my mind, and which had bloom on it nine months out of twelve, was growing in a large pan of cypripediums, having been there from a seedling, I presume; and its roots had found their way out at the bottom of the pan and had a firm hold of the sand on the bench.

NEW CARNATION THE ARISTOCRAT
R. Witterstaetter Originator

Carnation Mikado.

One of the new carnations which looks very promising at the present time is Mikado, a 1902 seedling, the result of a cross between Governor Roosevelt and Prosperity, originated by Patten & Co., Tewksbury, Mass. The flower is a pleasing combination—white ground overlaid with crimson, is of good form, with large petals, the blooms averaging 3 to 3½ inches in diameter, with a long, stiff stem. The growth is very similar to that of Governor Roosevelt, with no surplus glass. Mikado has an ideal calyx which never bursts. The habit of the plant is strong and erect, blooming continuously throughout the season. The flower is a good keeper, and the variety is classed as a free-blooming fancy carnation.

Witterstaetter's New Carnations.

(Descriptions by Originator.)

J. A. VALENTINE, a beautiful shade of Daybreak pink, considerably deeper than Enchantress.

10221B A large flower, 3½ to 4 inches across, after the style of Fiancee in color.

AFTERGLOW. Color between those of Mrs. Lawson and Fiancee, a vigorous grower, with long, stiff stems; flower 3 to 3½ inches.

THE ARISTOCRAT is a greatly improved Mrs. Lawson, a glowing cerise overlaid with scarlet, extra long stiff stem; an elegant grower and bloomer.

ROBERT C. PYE, Nyack, N. Y., favored this office with a box of nice carnations and Marguerites this week.

CARNATION SENATOR CRANE
Grower, R. C. Pye, Nyack, N. Y

CARNATION J. A. VALENTINE
Grower, R. Witterstaetter

It is an easy subject to propagate. Cuttings of the young wood in Spring, if inserted five or six around the side of a 4-inch pot in sandy soil and placed in the propagating frame, will root readily. Most of the whole genus *Euphorbia* revel in plenty of sunshine; and this plant is no exception to the rule; so to get it to bloom well, give it a sunny position.
EDWIN MATTHEWS.

Frenzied Floriculture.

At the banquet given by the Chicago Florists' Club and Allied Trades to the American Carnation Society last week, "Frenzied Floriculture" was one of the toasts, and was discussed from different viewpoints. Mr. Hill, who replied to the toast, believed such reports as have recently appeared regarding certain carnation purchases were detrimental to the business, giving the impression to the public that the trade were prevaricators to a certain extent. Others held the view that these stories would introduce competition by more millionaire investors, seeking an outlet for their surplus capital. Mr. Pierson, on the other hand, while disclaiming responsibility for the origin of the latest story, thought these reports did the carnation industry lots of good, in the valuable advertising obtained gratis, and otherwise. Another side of the question is presented by the San Francisco Chronicle, which, in a recent editorial comments, among other things, as follows:

SEEDLING CARNATION NO. 1021B
Grower, R. Witterstaetter

"That any one should pay \$20,000 for a carnation seems, at first glance, a waste of good money for a fad. A wealthy resident of Tarrytown-on-the-Hudson is reported by telegraph to have paid this big sum, however, for a new flower developed by a Rockland, Mass., florist. But Thomas W. Lawson, the vigorous Boston writer on 'frenzied finance,' paid \$30,000 several years ago for the world-famous pink carnation which bears his wife's name, and last October Harlow N. Higinbotham, of Chicago, who vainly endeavored to get possession of the Lawson pink, paid \$10,000 to a Lafayette, Ind., florist for a flower of the same kind, which is said to rival Lawson's in beauty.

It is a mistake to suppose that these extraordinary investments in a single rare flowering plant constitute a dead loss to the purchaser or a clear profit to the seller. Each one of these rare plants doubtless represents to the producer years of intelligent and patient labor and experimentation. Thousands of failures are recorded against one successful result, and hundreds of florists work in vain where one scores a triumph. But the buyer of the costly prize invariably turns it to commercial account sooner or later, and more than likely gets back the principal with good interest in the long run. The newly-developed \$20,000 carnation is an eccentric production found in a bed of Lawson, which proves that the flower for which the Boston millionaire paid \$30,000 has been made an extensive article of commerce since he made the investment."

This is a clear case of "many men, many minds," but one thing is certain, that the carnation, on account of these extraordinary alleged purchases and sales, has gained more notoriety through the public prints than has ever before been accorded any other flower. And, surely, such publicity increases trade to an extent that counterbalances the evil which men do in spreading such stories, and which, like all other evil, supposed and real, is interred with their bones, the good alone remaining.

NEW CARNATION AFTERGLOW
R. Witterstaetter Originator

Seeds of Ligustrum Iboata and Citrus Trifoliata.

(59) Please let me know how to handle these seeds, to grow the plants for hedges. Of course I can increase L. Iboata by cuttings, too, but I have not enough of them. E. R.

—Both the ligustrum and the citrus seeds should be kept in slightly moist sand from the time they are ripe, to be sure of getting them to grow. If kept in a dry state until Spring, they do but little good. It has been said that if the citrus seeds are kept in a dry state they will not grow at all. I have not tried this, but it may be a mistake to say they would not grow, as the osage orange seed will grow very well when so kept, and, although it has no relation to the Citrus trifoliata, the seeds are very much of the same nature. J. M.

Heating.

(60) Subscriber.—If a temperature of 60 degrees is desired, a house 20 by 50 feet with two walls without glass five feet high, will require 450 feet of radiation where the outside temperature is ten below zero. For three houses and a corridor, 1,500 to 1,600 feet will be required according to the size of the corridor. If, as stated, the houses are to be extended to a range of 100 feet, a boiler with a rating of about 4,000 square feet of hot water radiation will be desirable. About one-half this amount will answer for steam. For heating the houses, three 2½-inch flows and ten or eleven 2-inch returns will be required, according to the amount of the exposure. L. R. TAFT.

What is the best plan to heat three houses with steam, houses running north and south, each 50 feet long, 22 feet wide, 10 feet to ridge; sides built of wood 3½ feet high. The two outside houses will be heated to 52 degrees, zero weather; middle house, 58 degrees. Boiler cellar is 7½ feet deep on southeast end of houses. The north end is protected. Also give size of sectional boiler required. The houses are to be connected together; iron gutters to be used. ACHESON.

—For the outside houses in which a temperature of 52 degrees is desired, one 2-inch flow pipe and six 1¼-inch returns will give satisfactory results. For the inner house, 22x50 feet, in which a temperature of 58 degrees is desired, one or two extra returns will be required. The three houses will require about 600 feet of radiation, but it will be well to select a boiler rated for 800 or 900 square feet of steam radiation. L. R. TAFT.

Kindly advise heating capacity for hot water of upright tubular boiler rated at 35 horse-power. Dimensions are as follows: Circumference, 14 feet 3 inches; diameter of firepot, 4 feet, inside; height between top of grate and crown sheet, 22 inches; has 170 tubes, 1¼ inches inside diameter, and 4 feet 6 inches long. Is rating correct? Also how much glass will boiler carry, with soft coal, easily; also how large flanges should be put on the boiler, 6 inches or 8 inches? In estimating amount of glass the boiler will carry I should want to heat to 60 degrees easily. Houses are now piped for carrying 60 to 70 degrees. Also state size of stack required and freight of same. F. H. K.

—A boiler such as described should heat 4,000 square feet of radiation, and will require a chimney 18 or 20 inches in diameter and 35 feet high. If a temperature of 60 degrees is desired, it can be estimated that one foot of radiating surface in the coils will suffice for three square feet of glass. The size of the flow pipe should be governed somewhat by its length. If it is only a short distance from the boiler to the coils, a 6-inch flow pipe will answer; but for long runs, with the boiler but little below the coils, it will be better to have it one size larger. L. R. TAFT.

How many feet of 2-inch pipe is necessary to heat to 60 degrees, night temperature, a greenhouse 24x100 feet.

Side walls, 4 feet; ridge, 11 feet high; 16-inch glass on sides; one glass gable; weather occasionally 10 degrees below zero? J. W. C.

—To heat a house 24x100 feet, built as described, to 60 degrees, six 2-inch flows and twelve 2-inch returns will be desirable. Two flows and two returns can be upon each of the walls and the others under the benches. The flows for the middle coils can, if desired, be placed overhead. L. R. TAFT.

How much glass will a 48 horse-power tubular boiler heat to 60 degrees; temperature goes below zero quite often? P. BROS.

—It is generally customary to estimate that for each 100 feet of steam radiation, one-horse power in the boiler will be required. Estimating in this way, a 48 horse-power boiler will suffice for 4,800 square feet of radiation, but it will be more economical not to put on more than 3,500 to 4,000 feet of radiation for a boiler of this size. As each square foot of radiation will suffice for six square feet of glass when a temperature of 60 degrees is desired, from 21,000 to 24,000 square feet of glass can be heated with a 48 horse-power boiler. The foregoing is a fair estimate for a zero temperature. When it drops as much as ten or fifteen degrees below zero, a reduction of twenty-five per cent. should be made in the estimate. L. R. TAFT.

In our carnation house of 20x170 feet we have one 2-inch flow and one 2-inch return under each of the three benches. Would a No. 15 Hitchings corrugated firebox boiler be sufficient to maintain a proper carnation temperature with the thermometer outside at 26 degrees (that is the lowest temperature we have in our vicinity)? Our house has been piped with a gradual rise from the boiler to farther end of the house. We use distillate oil for fuel. X.

—For a carnation house 20x170 feet, with an outside temperature of 26 degrees, about 700 feet of radiation will be desirable. While three 2-inch flows would give fairly good results, four would be better, and the same number of returns would be desirable. When the temperature is 30 degrees, or above, three flows and three returns would suffice. If, as I remember it, a No. 15 Hitchings boiler is rated for 1,000 feet of radiation, this would answer very well for heating the house. The system of piping as described should give good results. L. R. TAFT.

The Aster Disease.

(61) Can any of your correspondents inform your readers concerning the cause and prevention of the aster disease, which is fast rendering useless and unprofitable the culture of this beautiful flower? A few years ago everyone grew asters in perfection, without special effort or skill; now the plants appear healthy until near maturity, set all their buds in profusion, and then much of the foliage turns to a whitish color, the flowers become one-sided and do not color up, and the whole development of plant and color ceases, the plant being ruined. Is this through fault of culture, or through the lack of something that can be supplied; and does the seed, as sown, contain the germ of the disease? We planted last season (both seed bed and permanent position) in entirely new ground, with seed purchased from one of our best seedsmen, but the result was that more than one-half of the plants were ruined. If the evil comes from infected seed, is there not a seed-growing locality where the disease does not exist, and where seed can be obtained which will produce healthy plants? SUNNYFIELD NURSERY CO.

—The inquiry of one of your readers relating to the Yellow Disease of asters is answered fairly well in a bulletin by the writer (Bulletin 73, Massachusetts Experiment Station) on the aster disease, in 1902. Copies of this bulletin can undoubtedly still be obtained from the station at Amherst, Mass. The disease referred to has come to be the greatest, and a very severe obstacle in growing this popular flower. It is characterized by the production of yellow, abnormal shoots, and one-sided deformed flowers of the same color, and occurs probably all over the country, having been observed the past Summer in California. As described in the bulletin referred to, this disease is not caused by any insect, fungus or germ, but is what may be called a case of

indigestion in the plant; that is, the plant food materials are not properly digested or assimilated, from some obscure, unknown cause, and an unhealthy growth results.

Asters were grown at Amherst on a large scale for two years and every influence which could be thought of as affecting the diseases was thoroughly tested. In the trial of all the varieties obtainable, over 300 in all, from seed grown in Massachusetts, New York, California, Germany, England and France, no difference was found in the extent of the disease. Seed taken from badly diseased plants gave no worse results than that from the most healthy. The application of various fertilizers, use of different kinds of soil, etc., made no difference with the disease. Other results of interest to aster growers are given in Bulletin 79.

It is the writer's observation that this trouble varies from year to year with the season and is influenced by something in the weather conditions. Experience, both in the East and in California, suggests connection between the rainfall or watering of the plants and the disease. This does not refer particularly to the amount of water furnished, but rather to the manner of application. With regard to rain, it has appeared that sudden, violent showers produce the disease more than steady, gradual rains. The fact that asters grown in pots, boxes or greenhouse benches are very little affected, as seems to be true everywhere, is also connected, apparently, with the difference in drainage or water absorption under such circumstances. The rainless California Summer affords excellent opportunity for the investigation of this disease, and the writer hopes to obtain further information concerning it in the near future.

RALPH E. SMITH.
University of California,
Berkeley, Cal.

Carnation Fair Maid.

(62) Can you tell me if the carnation Fair Maid can be grown in the same temperature as Enchantress?

L. C. P.

—It can.

Carnations in Violet Houses.

(63) Will you please give the name of a good pink, a good white and a good scarlet carnation, to be grown in low violet houses, solid benches? I want good bloomers, which don't grow so very tall, and which are not inclined to bust the calyx. I don't care for very fancy carnations. I would like to hear from some growers who have grown carnations in solid benches. What about Estelle for scarlet? G. T. S.

—The varieties of carnations we would recommend to grow in violet houses would be White Lawson, Mrs. Thos. W. Lawson and the red sport of Maceo. None of these is tall-growing; and while Mrs. Lawson bursts the calyx somewhat, it is, nevertheless, a good one to grow. Estelle would, we think, grow too tall.

Kalamazoo, Mich.

News of the Trade.

John Calder, the east side florist, proposes to retire from active business after the Spring trade and will then offer his place for sale or rent. Mr. Calder, who is getting on in years, will then probably retire to a small farm and take life somewhat easier. He says his florist business ventures have been both successful and satisfactory. He has the good wishes of the local florists wherever he may be.

The Carnation Society's convention at Chicago was attended by John R. Van Bochovs, of this city.

Cinerarians seem to be a leader this year in pot plants, the store windows being well filled with shapely and well bloomed plants which, I am told, are good sellers.

The local papers had quite a long article descriptive of the new greenhouse plant that the Van Bochovs have begun work on, and from the account given no expense will be spared to make them equal to anything in the West. S. B.

ELMIRA, N. Y.—U. S. Marshal William R. Compton has been elected president of the U. S. Cut Flower Company.

Washington, D. C.

News Notes.

One of the finest decorations seen in Washington for some time was done at the New Willard by Small & Sons last Saturday for the Gridiron Club's twentieth anniversary dinner.

David Bisset, the Garret Park violet grower, had the misfortune to have a boiler burst on Wednesday. His violet house was frozen; and on Friday his water tank and windmill were destroyed. Mr. Bisset has had nothing but hard luck these last two years; he has the sympathy of the craft.

W. F. Gude has been elected secretary of the Business Men's Club.

John W. Langdale, assistant parking superintendent, was run over by a wagon while on his way to work on Monday morning; his right leg was broken. M. C.

Indianapolis.

News Notes.

St. Valentine's Day last year was an exceptionally heavy one for florists and many were not prepared for it. A large business is again anticipated this year.

The Indianapolis florists who visited Chicago last week were highly pleased with the A. C. S. exhibition and the hospitality shown them by the local craft.

Representatives of Holland bulb firms have been numerous in this city this week.

Tomlinson Hall Market business has been heavier than at any time since the holidays; all flowers brought there are sold out early in the day.

Sidney Smith, of Baur & Smith, is in Texas visiting his brother. Sidney is in poor health and hopes to be benefited by spending the Winter there. Walter Bertermann is visiting in New York. I. B.

Newport, R. I.

News Items.

The Rhode Island Agricultural College is again making every effort to obtain from the State an appropriation for a greenhouse. At least \$15,000 is needed for this purpose, and it is earnestly hoped by all friends of the institution that this glass will be forthcoming.

A large number of the craft attended the annual celebration in Masonic Hall, observing the birthday of Scotland's poet, Robert Burns.

The Geo. A. Weaver Company are advertising that: "Regardless of reports they will still continue to carry on their business at the big store." Last week it was town talk that their store would be remodeled into a hotel.

Florist Hass visited New York for a few days.

Mr. Hay has been here a week or so representing Henry A. Dreer, of Philadelphia. Ernest Schoepke, booking nursery stock orders, was also here. F. W.

Syracuse, N. Y.

Trade Jottings.

L. E. Marquisee is cutting fine Lady Bountiful and Flamingo carnations, and reports a very fine deep pink sport of Enchantress; also two plants of Flamingo that have sported flowers of a clear salmon.

Bard & Davis have a fine showing of carnations and roses at their establishment on Wilbur avenue. Lady Bountiful and Enchantress being their leaders in carnations.

Bartholomew reports trade as very good, and his stock is all in fine condition.

Peter Kay is sending in very good stock, and expects to be "right there with the goods" right along.

Theodore Miller, of Janesville, reports business as good and is now busy preparing stock for the Spring bedding season.

Thomas Quigley, of Malcolm street, reports good trade; his stock is clean and vigorous, and yielding well.

Wheaton & Hencle are receiving fine pots of Paper White narcissus that are good sellers; also La Touraine tulips in pots and pans from Bard & Davis.

Henry Morris will renovate his store in the near future, putting in a tile window and all the improvements to bring it right up to date. J. B. B.

Books for Wide-Awake Florists

Our Own Publications

Specially written for the benefit of our readers.

THE HEATHER, in Lore, Lyric and Lay. By Alexander Wallace, Editor Florists' Exchange. Price, cloth, 280 pages, freely illustrated, \$1.50, postpaid.

THE AMERICAN CARNATION; How to Grow It. A Standard Work Written by Request of the Publishers of The Florists' Exchange by C. W. Ward. Quarto, cloth. Price, \$3.50, postpaid.

COMMERCIAL VIOLET CULTURE. A Treatise on the Growing and Marketing of Violets for Profit. By Dr. B. T. Galloway, Chief of Bureau of Plant Industry, United States Department of Agriculture. Second edition, revised. 224 pages. Price, \$1.50 by mail, postpaid.

PLANT CULTURE. By George W. Oliver, of the Bureau of Plant Industry, United States Department of Agriculture. Late Propagator to the United States Botanic Garden, Washington, D. C., and the Royal Botanic Garden, Edinburgh. Cloth, strongly bound to stand rough handling and plenty of it. Price, \$1.00 by mail, postpaid.

SUCCESS WITH HOUSE PLANTS. By Lizzie Page Hillhouse. Just the book to interest your customers in. 12mo., 232 pp.; profusely illustrated, with complete and ready-reference index to all plants enumerated. Price, cloth, \$1.00; paper, 50 cents, postpaid. Thousands sold.

THE WATER GARDEN. By William Tricker. Printed on heavy enameled paper, elegantly bound, large octavo; cloth. Price, \$2.00, postpaid.

RESIDENTIAL SITES AND ENVIRONMENTS. By Joseph Forsyth Johnson, F. R. H. S., Consulting Landscape Gardener and Garden Architect. Superbly printed, in new, clear type, on the finest wood-cut paper; cloth. Price, \$2.50, by mail, postpaid.

ARNOLD'S TELEGRAPH CODE, for Florists, Nurserymen and Allied Industries. A Time and Money Saver.

This Telegraph Code has been compiled expressly for the use of Florists, Nurserymen and Allied Industries, and completely covers every phase of telegraphic communication required by either wholesaler or retailer.

Remit us the price (\$2.50) and we will send you a copy on examination. If not found suitable (an unlikely contingency), return book in good condition and we will return you your money.

We have the exclusive American rights for the

GARDENER'S ASSISTANT. Edited by William Watson, Curator, Royal Gardens, Kew. Profusely illustrated. Two handsome imperial octavo volumes, leather backs, cloth sides, 1,300 pages, \$15.00, express paid.

This is a brand new edition, the work of some of the greatest recognized experts of the day. The first portion of the work deals with general principles; the second portion is devoted to directions for the cultivation of decorative plants of all kinds—stove, greenhouse and hardy trees, shrubs and herbaceous plants; the third portion treats upon fruit cultivation in all its branches, both under glass and outside; and the fourth portion upon the growth and management of vegetables and herbs.

We recommend this work as being entirely distinct in character and arrangement from any other gardening book. Send for free prospectus.

All above books are described in our complete Catalogue. Send for a copy, free.

Other Leaders

ADIANTUM FARLEYENSE, THE CULTURE OF. By Julius Lindstrom, formerly Farleyense grower at the Kent Place Nurseries, Summit, N. J. 50c.

BEGONIA CULTURE. By B. C. Ravenscroft. A general treatise. Illustrated, 50c.

BULB CULTURE, HENDERSON'S. By Peter Henderson. 25c. Contains special cultural directions for over 200 varieties of bulbs.

BULBS AND TUBEROUS-ROOTED PLANTS. By C. L. Allen. \$1.50.

A complete history, description, methods of propagation and full directions for the successful culture of bulbs in the garden, dwelling or greenhouse. The cultural directions are plainly stated, practical and to the point.

CHRYSANTHEMUM MANUAL. By Elmer D. Smith. Illustrated. 5 x 7 inches. 80 pages. Paper, 25c.

This little book is so full of valuable information that every grower of chrysanthemums should possess a copy.

CYCLOPEDIA OF AMERICAN HORTICULTURE. By L. H. Bailey. Comprehensive directions for the cultivation of horticultural crops, and original descriptions of all the species of fruits, vegetables, flowers and ornamental plants known to be in the market in the United States and Canada.

A monumental work, the greatest of its kind, the importance becoming better realized with use. Complete in four handsome quarto volumes, embracing about two thousand pages, with many more than that number of original illustrations. Orders will be accepted for the full set only. \$20.00.

DAHLIA, THE. By Lawrence K. Peacock. 30c.

A practical treatise on the habits, characteristics, cultivation and history of the dahlia.

FARMERS' CYCLOPEDIA OF AGRICULTURE. By E. V. Wilcox, Ph.D., and C. B. Smith, M.S., Assistant Editors in the Office of Experiment Stations, U. S. Dept. of Agr. Price, Cloth, \$3.50; Half Morocco, \$4.50.

This is a new, practical, concise and complete presentation of the whole subject of agriculture in its broadest sense, including field crops, garden vegetables, fruits, nuts and other economic plants, and also all farm animals, dairy farming and poultry. Other farm subjects, such as manures, fertilizers, principles of feeding, soils, drainage, irrigation, spraying, veterinary medicines, etc., are thoroughly discussed. Every bit of this vast mass of new and useful information is authoritative, practical and easily found. An important part of the book is its very complete and elaborate index, with cross-references under both scientific and common names, so that any information wanted can be found at once. There are between 5,000 and 7,000 topics covered in these references, making a most perfect index to agriculture. It contains about 700 royal octavo pages (9 1/2 x 7 inches) and nearly 500 half-tone and other original illustrations.

FLORICULTURE, PRACTICAL. By Peter Henderson. Illustrated. \$1.50.

A guide to the successful propagation and cultivation of florists' plants. Nothing has been left unsaid that bears on the subject.

FLORISTS' MANUAL. By Wm. Soott. \$5.00.

This book treats of over 200 subjects of importance to the commercial grower, and is freely illustrated with fine half-tone engravings. It is a book that you need in your business just as you need any other useful labor and money saving implement or device.

FLOWER GARDEN, ENGLISH. By W. Robinson. 751 pages; 450 illustrations. \$6.00.

A treatise on the style, position and arrangement, with hints as to color effect and general design, with illustrations of well-known gardens and plants. Also a dictionary of hardy plants for the flower garden, including a few trees, shrubs and evergreens, together with cultural directions.

FORCING BOOK, THE. By Prof. L. H. Bailey. \$1.00.

In this work the author has compiled in handy form the cream of all the available information on the subject of forcing vegetables under glass.

FUMIGATION METHODS. By Willis J. Johnson, formerly State Entomologist of Maryland. Profusely illustrated. 5 x 7 inches. 250 pages. Cloth, \$1.00.

A practical treatise upon new cheap, simple and effective means of exterminating insect pests and various other vermin in field, orchard, nursery, greenhouse, mill, granary, elevator, car, ship and other enclosures. A timely work for fruit growers, nurserymen, gardeners, florists, college and experiment station workers. The book should be in the hands of every horticulturist, florist, and nurseryman in the country.

FRUIT HARVESTING, STORING, MARKETING. By F. A. Waugh. Illustrated, 6 x 7 inches. 250 pages. Cloth, \$1.00.

A practical guide to the picking, storing, shipping and marketing of fruit.

GARDEN BOOK, THE PRACTICAL. Containing the Simplest Directions for the Growing of the Commonest Things about the House and Garden. By C. E. Huna, Gardener to the Horticultural Department of Cornell University, and L. H. Bailey. Second edition, 250 pages. Many marginal cuts, \$1.00.

GARDENER'S DICTIONARY, JOHN'SON'S. Handsomely bound in one volume. \$4.00.

The habitat of each variety is given, along with the date of its introduction. The cultural directions are brief and to the point. Insect foes, diseases and their remedies are fully described.

GARDENS, PICTURESQUE, HENDERSON'S. 160 pages, 9 1/2 x 12 inches, 340 illustrations. Handsomely bound. \$2.50.

GREENHOUSE CONSTRUCTION. By Prof. L. B. Taft. Cloth, 12mo. \$1.50.

A complete treatise on Greenhouse structures and arrangements of the various forms and styles of Plant Houses for professional florists as well as amateurs. All the best and most approved structures are so fully and clearly described that anyone who desires to build a greenhouse will have no difficulty in determining the kind best suited to his purpose.

GREENHOUSE HEATING, BEST METHODS OF. 10c.

A pamphlet containing a reprint of thirteen essays on Greenhouse Heating, with diagrams. These essays, which are all written by practical flower growers, discuss all systems, each competitor advocating that best known to himself.

GREENHOUSE HEATING, DEAN'S SYSTEM OF. By Mark Dean. Handsomely bound. \$2.00.

Tells how to determine the area of any greenhouse; to ascertain the amount of radiation necessary to heat the same; to place the heating pipes to best advantage; to figure what the pipes and fittings will cost; to set up a boiler.

GREENHOUSE MANAGEMENT. By L. B. Taft. Illustrated. Cloth, 12mo. \$1.50.

This book forms an almost indispensable companion volume to Greenhouse Construction. In it the author gives the results of his many years' experience, together with that of the most successful florists and gardeners, in the management of growing plants under glass.

HOW TO MAKE THE GARDEN PAY. By T. Greiner. \$2.00.

This work, written by one of the most experienced and skillful horticulturists in the country, embodies a vast amount of practical and useful information, all original matter.

LANDSCAPE GARDENING. By Samuel T. Maynard. 12mo. 338 pages, 168 figures, including many full-page half-tones. Cloth, \$1.50.

LANDSCAPE GARDENING. By Samuel Parsons, Jr., ex-Superintendent of Parks, New York City. Fancy cloth, illustrated, large 8vo. \$3.50.

Practical hints on lawns, the laying out and arrangement of large and small parks, cemetery plots and railway station lawns; also on the subjects suitable for planting.

MARKET GARDENING, SUCCESS IN. By W. W. Rawson. Illustrated. \$1.00.

This work is written by one of the most successful market gardeners in New England, who gives here the results of his life-long experience in the growing of vegetables out-of-doors and under glass, with special adaptation to the climate of New England.

MUSHROOMS, HOW TO GROW. 10c.

A valuable little pamphlet.

MUSHROOMS, HOW TO GROW THEM. By Wm. Falconer. Cloth, \$1.00.

This is the most practical work on the subject ever written in America. The author describes how he grows mushrooms, and how they are grown for profit by the leading market gardeners, and for home use by the most successful private growers.

NURSERY BOOK, THE. By Prof. L. H. Bailey. \$1.00. Paper, 50c.

This is a complete hand-book of propagation of plants treating on scedage, separation and division, layerage, cutting, graftage, including grafting, budding, inarching, etc. It tells plainly and briefly what everyone who sows a seed, makes a cutting, sets a graft, or wants to know.

ORCHID CULTIVATORS' GUIDE BOOK, THE AMATEUR. By H. A. Burberry. Illustrated. Cloth, 8vo. \$2.50.

In plain, concise words the author gives easily understood instructions on all the important points belonging to every-day work in the culture and management of orchids.

PEONY MANUAL, THE. By C. S. Harrison. Illustrated. 6 x 9 inches. 64 pages. Paper, 30c.

A manual on the propagation and the cultivation of the Peony. The first work on this popular plant in the English language. The author has had many years' experience and is reckoned one of the most successful growers of the Peony in America.

PLANT BREEDING. By L. H. Bailey, Professor of Horticulture in the Cornell University, N. Y. 293 pages. Cloth, 12mo. \$1.00.

PRUNING BOOK, THE. By L. H. Bailey. Illustrated. Cloth, 8vo. 530 pages. \$1.50.

The author takes particular pains to explain the principles of each operation in every detail. Specific advice is given on the pruning of the various kinds of fruit and ornamental trees, shrubs and hedges.

ROSE, BOOK OF THE. By A. Foster-Mellar. Illustrated. 5 x 7 inches. 352 pages. Cloth, \$1.75.

In this new, thoroughly revised and enlarged edition, the author, who is recognized as one of the most successful rose growers of England, gives here full details of practical rose culture.

ROSES IN POTS, THE CULTIVATION OF. By Wm. Paul, F.L.S., F.R.H.S. 75c.

SOIL, THE: ITS NATURE, RELATIONS AND FUNDAMENTAL PRINCIPLES OF MANAGEMENT. By Franklin H. King. Crown 8vo. 303 pages. Cloth, 75c.

The book is clear, instructive and accurate. It will richly repay everyone interested in soils to get this book and read it.

SHRUBS, ORNAMENTAL. By Lucius D. Davis. For Garden, Lawn, and Park Planning, with an Account of the Origin, Capabilities and Adaptations of the numerous Species and Varieties, Native and Foreign, and especially of the New and Rare Sorts, Suited to Cultivation in the United States. Large 8vo, fully illustrated. \$3.50.

SPRAYING OF PLANTS, THE. By E. G. Lodeman, Instructor in Horticulture in the Cornell University. \$1.00.

SWEET PEAS UP TO DATE. Written and compiled by the eminent specialist, Rev. W. T. Hutchins. Illustrated. 10c.

A handy booklet containing the latest information on the sweet pea, as regards cultivation, varieties, etc.

TOMATO CULTURE. By J. W. Day, D. Cummings and A. I. Root. 150 pages. Illustrated. Paper, 35c.

A valuable treatise, embracing field culture, forcing under glass, and raising plants for market.

VEGETABLES, OPEN-AIR. By Henry A. Dreer. 25c.

A small book for busy people, giving latest methods of best gardeners, when to begin work, how to treat the soil, how and when to sow seeds, how to manage growing crops, how to treat insect and fungus enemies, etc.

VEGETABLES UNDER GLASS. By Henry A. Dreer. 25c.

This is an up-to-date review of money-making winter work; work within the reach of everybody, everywhere. It quotes the words and ways of successful market gardeners, especially at Philadelphia and Boston, and gives pictures (from photographs) of frames, forcing houses and various horticultural devices.

VINES AND VINE CULTURE. Considered the best book on Grapes. By Archibald F. Barron, ex-Superintendent of Royal Horticultural Society's Garden, Chiswick; Secretary of the Fruit Committee. Demy 8vo, handsomely bound in cloth. \$1.50.

VIOLETS, HOW TO MAKE MONEY GROWING. By W. Salford. Paper, 25c.

Hundreds of Other Books Described in Our Complete Horticultural Catalogue. Send for Free Copy

New York.

The Week's News.

While an occasional big job in decorative lines crops up, it cannot be said that the retail branch of the business is really what one would expect to find it at this time of the year. It would seem that the largest demand is caused by funeral work, but as the social season will be longer this year on account of the lateness of Easter, many florists are of the opinion that there will be a good busy season yet. At the funeral of Frank Croker, on Friday, the casket cover was composed entirely of violets and gardenias from the store of L. Hart, Madison avenue.

A new wholesale florist firm is opening at 56 West Twenty-sixth street, opposite the Coogan Building. The firm consists of J. Seligman and G. Trippel, both former employees of A. J. Gutman.

Arthur Herrington, of Florham Farms, Madison, N. J., is recuperating from a severe cold which confined him to the house for several days. Mr. Herrington is now busily engaged preparing the matter for his new book on "The Chrysanthemum," which the Or-

The Otto Grundmann Company, of Secaucus, N. J., has been incorporated, to operate a general nursery business. Capital, \$20,000. Incorporators: Hermann Grunderman and Wilhelm Reusch, New York City, and Otto Grundmann, Secaucus, N. J.

J. A. Foley, bookkeeper for N. Leckes & Co., was married on Sunday, January 22, to Miss Butternael, of Newark, N. J. The ceremony was performed in the Church of the Epiphany, this city.

Charles Dards and family left on Tuesday for the South; St. Augustine, Fla., and other noted southern resorts will be visited by the party.

The effort that has been made to have cigar and flower stands on the subway station platforms is evidently going to fall through. The Rapid Transit commission has directed that all such stands be removed, and that nothing shall be sold at these stations excepting newspapers.

U. G. Scollay, of the well-known firm of John A. Scollay, horticultural engineers, Brooklyn, N. Y., has just been re-elected treasurer of the American Society of Heating and Ventilating Engineers at its annual meeting in this

Buffalo.

The Week's News.

J. H. Rebstock, now owner of the former S. B. Smiley place at Lancaster, N. Y., had a damaging fire in the boiler room of the houses on Sunday last, practically ruining the stock for this season and which he has since cared for elsewhere.

The Scott Floral Co., at Cold Springs, the growing houses of which are under the direct handling of Wm. B. Scott, find the various sorts of nephrolepis easily continue to be important with them in plant lines. *Primula obconica* is growing here, for Easter sales, worked up into goodly sized plants, that command a remunerative price. Dutch bulbs, in tulips and hyacinths, are of satisfactory quality as regards forcing, this season.

C. D. Zimmerman has recently accomplished some big tree moving. One specimen, moved over half a mile, included the transportation of its accompanying ball of earth, twelve feet in diameter, and all approximating a weight of over ten tons. He is provided

Cleveland.

News Notes.

It was expected Carnation Day would be prolific of much gain, by both wholesaler and retailer. So far as the former was concerned, it was a success; but, on the other hand, the date falling as it did, on Sunday, put a damper on the retail sales. It was confidently hoped that no discrimination would be made as to the various colors used, and that as proportionately large sales on white and light pink would result, as on dark pink and red; but again there was disappointment and more Lawson colored carnations sold than did all the rest. Monday, however, being a nice bright day, better sales were reported.

On the 26th City Forester Horvath submitted his annual report for 1904, to the Board of Public Service. Mr. Horvath says he has prepared planting plans for Edgewater parkway, and also revised some other plans for Edgewater Park. The much-needed thinning out of the forests in the different parks throughout the park system has been carried on quite vigorously, he says, with most satisfactory results. Planting, he says, was carried on quite extensively, there having been planted about 12,000 hardy trees, shrubs, evergreens and vines; 2,400 bedding plants and 32,000 tulip bulbs. The tulip bulbs and about 5,000 of the hardy trees were purchased, the balance being raised in the city nurseries. About 10,000 trees and plants remain available for planting. The report then deals with details of the work pursued in each of the various parks of the city.

Mrs. Casper Aul, of Lee avenue and Doan street, is very ill.

John Merkel, of C. Merkel & Son, Mentor, O., was in town Monday; he is cutting some good roses and carnations.

Several Cleveland growers were at the Carnation Society's convention; all express themselves as delighted with the trip.

The Dutch are invading our shores again. Valdehysen van Zanten was among the first to reach our city.

O. G.

Louisville, Ky.

News Items.

Our visitors to the Carnation Society's show, were: Jacob Schulz, C. H. Kunzman, David Weller, George Schulz, Mrs. C. B. Thompson and niece. They left Louisville the coldest night we have had for a long time, the thermometer registering several degrees below zero; but as they have returned and give a most glorious report of the pleasures and benefits derived, it was well that they did not let the cold interfere with their trip. Mr. Fuchs had made every arrangement to go, but that evening a plug blew out of his boiler and he would not leave the boiler until it was again in working order and then it was too late for the same train.

The property, which has for so many years been occupied by Nanz & Neuner, as a store, recently changed hands, and at the expiration of their present lease Nanz & Neuner will be compelled to seek new quarters, as the present owners desire to occupy the premises.

McKinley Day was observed to a very limited extent, but the weather conditions were very much against it, Saturday being cold and raw, and Sunday it blew a blizzard. Monday was more favorable, but too cold. Several of the local firms pushed the day somewhat, and with better weather we should have felt the effects.

The employees of the Customs House observed the day best of all.

Jacob Schulz is spending several days in Connorsville, Ind. A. R. B.

FIRES.

LANCASTER, N. Y.—On January 29 the greenhouses of J. H. Rebstock. Loss, \$3,000. It originated under over-heated boiler.

JACKSON, MISS.—On January 26, the greenhouse of W. J. Brown. Loss about \$1,500.

FORT SMITH, ARK.—Fire in the greenhouse of A. Pantet, on Wednesday, January 25, did damage to the extent of \$500.

Fern Bank with Begonia Gloire de Lorraine.

Editor Florists' Exchange:

The fern bank—the subject of the accompanying illustration—was put up in the latter part of July. The begonias were planted on the seventh of August from thumb pots, and although very small and not over-well rooted, they took hold immediately and seemed to fairly revel in their rather novel quarters. While the warm weather lasted the bank was syringed every day, and the begonias stood it with immunity. Owing to the lateness of the season when they were planted they have not had time to develop into large plants, but they are now, and have been for a month, a mass of bloom. The photograph does not begin to do justice to the beauty of the bank. The clusters of bloom of this queen of begonias intermixed with adiantum pteris (several varieties), selaginella, etc., with a perfect mat of lycopodium for a background, can be better imagined than described.

WILLIAM WATT.

FERN BANK WITH BEGONIA GLOIRE DE LORRAINE.

Photographed Dec. 2, 1904

ange Judd Company will publish the coming Spring.

Wm. Elliott & Sons, who for the last twenty-five years have been located at 54 Dey street, contemplate moving on May 1 to 201 Fulton street, a large and roomy store, fully equipped with electric elevators and all other modern improvements.

W. J. McNeff is on the road as salesman for Wm. Elliott & Sons in the place of H. Odell, who is no longer a representative of that house.

William Elliott & Sons, Dey street, have won the suit brought against them by a party who while passing the store recently stepped on a nail which pierced his foot. He claimed \$500 damages. Judge Finn, before whom the case was tried Wednesday last, ruled that the firm was not responsible for the accident, as it had not been shown that they were criminally negligent in looking after the sidewalk.

The Gardeners' Chronicle of America is the name of a new paper to be published in the near future. We understand that the journal will be devoted to private gardeners' interests only, and that Leonard Barron, formerly editor of American Gardening, will be the editor, with offices at corner of Seventeenth street and Fourth avenue.

city. The Engineering Review reproduced a portrait of Mr. Scollay in its January issue.

The florists in and about West Hoboken, N. J., have for some months back been troubled a great deal by thieves. Greenhouses have been broken into and plants and cut flowers carried away time and again. Some of the stolen plants were located recently in a Third avenue store, the proprietor of which admitted having purchased them from a stranger. The growers have organized and the police are giving what assistance they can, and it is hoped that the actual thieves will be caught in the near future. In the meantime it will be well for growers whose greenhouses are at all isolated to keep a strict watch on their premises.

The New Jersey Floricultural Society held its tenth annual dinner in Elks' Hall, Orange, N. J., on Friday evening.

The eighteenth annual dinner of the New York Florists' Club occurs tonight (Saturday) in the St. Denis Hotel. Present indications point to a good attendance and a pleasant evening's enjoyment is assured, as Chairman W. F. Sheridan, of the dinner committee, has spared no pains in arranging for this annual event.

with special heavy truck and akin devices for this work.

W. F. Kasting and W. J. Palmer, the latter accompanied by Mrs. Palmer, were the only local attendants at the Carnation Society's meeting last week, in Chicago.

Mr. Kasting now announces the coming into his control of the growing place and store recently conducted by the E. A. Baur Floral Co., at Erie, Pa., which he expects to continue the conduct of, under a manager there resident.

At a recent meeting of the Florists' Club, the matter of the schedule for the coming Spring show, to be given by a department store here, the Sweeney Co., under the auspices and management of the club, was acted upon as final. The show will occur April 11-14 at the Sweeney store. Prizes amounting to over \$1,200 have been attached to such classes as should be in ample show and supply at these dates, and in which Easter lines of articles are given a leading prominence.

Daniel B. Long was made a committee of one, to act in promoting interest regarding the McKinley Monument Fund for caring for the grounds surrounding the monument, as being conducted from general lines by H. M. Altick, of Dayton, O. VIDI.

Review of the Market

NEW YORK.—Although the demand for roses is such that prices are being maintained at fairly stiff figures, this is more owing to a general shortage of these flowers than to any increased activity in trade.

Bulbous stock of various kinds is now flooding the market, tulips and narcissus being in the majority. If we could only get a spell of warmer weather, so that the street peddlers could ply their vocation, a good outlet would be found for a lot of the cheaper grades of violets and narcissus;

Carnations are very plentiful and going slower, with a tendency to lower prices. If, as some claim the comments in the daily press about the big prices paid for new carnations tend to help the trade in these particular flowers, how is it that we see the prices going down just at this time?

Lilies and lilac are in good supply, with no change in values. We can safely say that roses are the only flowers that are moving satisfactorily, owing entirely to the limited supply at present.

BOSTON.—During the past week little change has taken place in general trade conditions. A very severe snowstorm during the early half of the week prevented either a great demand or allowed a great surplus to get to the city. Roses of all kinds are shortening up in supply. American Beauty, especially, are in demand, and prices, accordingly, have advanced, \$50 to \$60 being quotations for the highest grades. Bride and Bridesmaid, of which some exceptionally fine stock has appeared recently, have also shortened up in supply. Liberty and other fancy varieties are more in demand, but the supply of most of the varieties, like Liberty, or Mme. Abel Chatenay, has always been limited.

Carnations, although still plentiful, have stiffened in price somewhat, \$3, \$4 and \$5 being the general run, although Mrs. Thomas W. Lawson, of which large quantities are now seen, may be had at less.

Violets are nearly a drug; singles were never so plentiful as these days. Bulbous stock of all kinds is rapidly increasing in supply; large quantities of yellow and Paper White narcissus are coming in. Tulips are also much more plentiful. Lilies are abundant, and lily of the valley can be had in any quantity.

PHILADELPHIA.—Roses of choice grades are scarce, but there appears to be an abundance of poor quality around. Carnations are down in price; some of the choice varieties are selling well, but general stock is lower. The top price for violets is 75c. per 100. The commission men, generally, say business is quiet. The fact is there are so many flowers coming to this market that two quiet days cause a large accumulation.

S. S. Pennock is very busy with out-of-town shipments. E. Bernheimer is moving a fair amount of stock. His specialties just now are lilac, white sweet peas and Golden Gate roses. Edward Reid is doing a good shipping business with roses and carnations.

PITTSBURG.—The cold weather the past few weeks has hurt the cut flower trade to some extent, and also had the effect of holding up prices. Roses bring from \$10 to \$15 for good stock; carnations from 3c. up. Bulbous stock is about all that is low in price. The thermometer has been registering around zero for almost a week, with no relief in sight. Carnation sales for McKinley Day were not great, but it was noticeable that red were asked for more than any other color. The Pittsburg Cut Flower Company sent a nice card with President McKinley's picture and a spray of carnations thereon to all of its customers, who placed them on their stands and in their windows. B. L. Elliott, of Chaswick, Pa., is cutting some extra fine roses lately, and his carnations are also first class.

NEWPORT, R. I.—The blizzard of last Wednesday and several small snowstorms have again turned things into real winter. Trade is very good in all lines, considering the deep snow, which renders getting around, either on foot or with team, very slow work. Cut flowers have picked up a little in retail values.

CHICAGO.—Trade in general the past week was not up to expectations, especially as regards McKinley Day. A great deal of stock had been held back for that occasion in anticipation of a brisk demand, at advanced prices; but these failed to materialize; consequently, when business opened up on Monday morning quantities of stock were still in hand which had to be disposed of at a lower price than would have been obtained for it had it come in the regular way. The local retail trade was, generally speaking, not up to that of an ordinary Saturday, and the demand on Sunday was also disappointing.

American Beauty roses are beginning to show the effects of the heavy cuts of the past few weeks, and the supply has shortened up considerably, while there has been no extra heavy demand at any time. Bride and Bridesmaid are not over-plentiful, with prices much the same as previously quoted. Mme. Abel Chatenay is in fair supply. Uncle John is proving a fine favorite here. Liberty with most of the growers is off crop, and the flowers received are not of as fancy a grade as were arriving some time ago.

In carnations, white are not plentiful, while colored stock is equal to the demand; the flowers are of extra quality.

The supply of violets has diminished, while the call has never been sufficient to clear the market for some considerable time.

Lilies are becoming more numerous and are in fair demand. Roman hyacinths and narcissus are not so plentiful as heretofore. Tulips are beginning to arrive in quantity and some extra fine stock is being received, such as La Reine, Proserpine and others; they bring from \$2 to \$5 per 100. Green goods are more plentiful, especially snijlax.

ST. LOUIS.—The market revived somewhat the past week, and, in some flowers, stock became real scarce, the price going up a cent or two. Bulbous stock and violets were in excess of the demand. Business was not any too good, as the extreme cold weather kept customers indoors. Those who had plant decorations to make found it a difficult matter to keep the frost out of their wagons.

Saturday and Sunday, McKinley, or Carnation Day, made big profits to the local trade, both retail and wholesale. Prices at wholesale were \$4, \$5 and \$6, and everybody was looking for pinks. The retail prices were from 75c. to \$2 per dozen, according to location and who the buyer was. The day will have to go on record as one of the busy ones for the florists all over the country.

White roses became rather scarce last week; in fact, all roses seem off crop. American Beauty, fancy, long, are bringing from \$4 to \$6 per dozen; the second and third grades sell best. Shorts go at from \$5 to \$8 per 100. Bride and Bridesmaid are selling at from \$6 to \$8 per 100 for fancy, \$4 and \$5 for firsts, and \$2 and \$3 for seconds. Meteor, Liberty, Golden Gate, Souvenir du President Carnot and Perle des Jardins run about the same as last reported. Violets are selling at 50c. for the best California and 75c. to \$1 for doubles. There are plenty of both kinds in the market.

Bulbous stock keeps piling up each day; prices are difficult to quote on Roman hyacinths and Paper White narcissus. Extra fancy lily of the valley has an estab-

lished price of \$1 per 100; seconds, with poor foliage, bring \$2 and \$3 per 100. Harrisii lilies go at \$10 and \$12.50; callas, at the same price. The demand for this stock is quite good. A few extra fancy tulips are in the market, at \$5 per 100. Freesia, for extra quality, bring \$3 per 100, with the demand much better than for any other bulbous stock. Sweet peas, when good, with long stems, have a brisk sale, at from 75c. to \$1 per 100. Of greens, the St. Louis market has had a good supply since the holidays.

Blooming plants are selling better with the West End florists. Some extra fine lilacs, azaleas, Dutch hyacinths and lilies are seen in the show houses.

INDIANAPOLIS.—Funeral work, decorations and regular counter trade have kept up well during the past week. Stock of all kinds is well used up, and many roses and carnations are received from outside towns. All roses are scarce, particularly Bridesmaid, which are of poor quality. It is almost impossible to obtain more than one or two dozen select at one time. The best Bridesmaid, Bride, Mme. Abel Chatenay and Golden Gate wholesale at \$10 per 100, and retail at \$2 to \$3 a dozen. Liberty are very scarce, at \$10 to \$15 per 100. No trouble is experienced in buying enough American Beauty; 36-inch stems wholesale at \$3 a dozen; 24-inch stems, at \$2 a dozen, and 10 to 16-inch stems, \$1 a dozen.

Carnations, with the exception of white, meet the demand. Fancies, such as Enchantress and Prosperity, bring \$5 per 100. Good grades, such as Mrs. Lawson, sell at \$3 per 100; 75c. to \$1 a dozen is the customary retail price.

While the demand for blooming plants has been poor, the flowers have helped greatly in giving variety to funeral work. Lilacs, primroses, azaleas and rhododendrons have been used in quantity of late in this manner. Growers of bulbous stock readily dispose of it. Daffodils, jonquills, narcissus, Roman hyacinths, lily of the valley and tulips sell at \$3 to \$4 per 100.

Not many extra carnations were disposed of on McKinley Day; although several retailers were heavily supplied with flowers, a large business was not anticipated by many.

Marie Louise violets are to be had in any quantity, at \$1 per 100.

KALAMAZOO, MICH.—We are pleased to note an improvement in trade these past two weeks, business sometimes taking on quite a brisk movement. Last week two weddings of considerable local importance took place, and used up quite a quantity of all kinds of flowers. American Beauty roses, carnations, violets, etc., are quite plentiful, but good tea roses are rather short in supply and have been for a few weeks past. Callas are plentiful and seem to have slow sales. McKinley Day is being well advertised by the local stores, most all showing cards (necrotical) calling the public's attention to the day and date. Considerable numbers of flowers are being worn on the street, which speaks well for the sales.

LOUISVILLE, KY.—The demand for funeral work continues brisk. Weather conditions are much against the production of cut flowers, for it has been very cold, snowy and dark for some time now. By the aid of shipped in stock, the supply of good flowers equals the demand. Prices continue very firm. Bulbous stock is making its appearance slowly, and is quite welcome.

WASHINGTON, D. C.—Business has been exceptionally good this week. The

blizzard which visited us in the early part of the week interfered with the out-of-town supply of cut flowers—in fact, for twenty-four hours railroad traffic was paralyzed; consequently, prices stiffened considerably until the outside supply came in. The demand for American Beauty roses has been heavy and the supply of good stock limited; they brought from \$5 to \$10 per dozen; Liberty brought \$4 to \$6 per dozen. The supply of this rose has never been equal to the demand. Bride, Bridesmaid, Meteor, Ivory, Souvenir du President Carnot and Kaiserrin Augusta Victoria realized from \$2.50 to \$4 per dozen. The supply of carnations has fallen off this week. For the choicest varieties \$2 to \$4 per dozen has been asked, while the general run brought 75c. to \$1.50. There has been a good demand for violets, local stock bringing \$1 to \$1.50; New York stock, \$2 to \$3 per 100. Sweet peas are plentiful, at 35c. to 50c. per bunch. Lilac is coming in, with plenty of foliage, and brings from \$2.50 to \$3 per dozen. Lily of the valley is in demand, at \$1.50 to \$2 per dozen. Tulips bring 75c.; jonquills, from 75c. to \$1 per dozen; gardenias, from 50c. to 75c. each; narcissus, Paper White, and majonnette, 50c. to 75c. per dozen. Polinesias realize from \$2 to \$3 per dozen. All kinds of greenery are getting scarce. Adiantum cuneatum fronds bring from \$1.25 to \$1.50 per 100; Asparagus plumosus, \$2 to \$3 per 100. Dutch hyacinths in pans are not selling well, at 25c. to 50c. each. Azaleas are in demand, at \$2 to \$5; cyclamen, 50c. to 75c., and Chinese primulas, 35c. to 75c. each.

BUFFALO, N. Y.—Trade in general has about held its own of late. Compared to past seasons, "Carnation Day" received much advance speculative interest, it being hard to plan on which day the business would be done and the wearing of the blooms he observed. Some of the prominent-located Main street florists bid for business freely in appropriate window displays as early as Saturday, on which day some trade pertaining to McKinley Day was ushered in. It remained, though, for Sunday to be customers' day, and in spite of quite cold wintry conditions and absence of the business element from the thoroughfares on that day, a general summing up seems to tally quite favorably in extent of work done. The retailers kept their places open clear through the day, and while all demands were supplied, stocks were generally cleaned up. The wholesale supply was generally moved. Prices to the consumer were 10c. each, as a rule, some also selling by the dozen for \$1, while a few fancy kinds went at 15c. each. Some retailers now incline almost to enthusiasm in expecting interest of a voluntary character to pervade the public sufficiently that the carnation-wearing custom on this day will further establish and add to itself, while others are sceptical on this point.

CINCINNATI.—Stock is scarce and prices are holding steady. The demand for carnations on Saturday was active and all stock held by the wholesalers sold. The retail trade sold many carnations, but still have many left. Had our late President's birthday been on any day but Sunday, we should have had a different report to make. Bride and Bridesmaid roses are very scarce and sell the best. Green goods are selling well, at the usual prices.

WORCESTER, MASS.—Our florists complain somewhat of poor business since the holidays, but during the last two weeks there has been a brightening up. Several large funerals and banquets have raised their drooping spirits.

"THERE IS ONLY ONE"

What a Few Say, All That Use It Say

Testimonials from Mt. Sterling, Ky., Wallingford, Conn., Montclair, N. J., and Marion, Ind. regarding the effectiveness of Fumigating Kind Tobacco Powder.

FREE trial five-pound bag will cost you nothing more than the express charges on it. The trial bag will prove our assertion that it is the most effective, cleanest and quickest, as well as the cheapest (10 cents per 100-foot house) article to fumigate with.

WM. PENN
READY NOW. NO WAITING.
A pleasing shade of pink, on a stiff, wiry stem. Growth clear and upright, no useless foliage. Flowers large enough for all ordinary purposes. Will produce more flowers per square foot than any Carnation now grown.
Worth growing by the thousand, but rather than have you miss trying it, I will mail, free of charge, 25 rooted cuttings for \$2.50.
\$10.00 per 100; \$75.00 per 1000; 250 for \$18.75
Send for List of Other Varieties.

PROSPECTOR
RED SPORT FROM MACEO

Color equal to Estella, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.

It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.
Easy grower, free from diseases, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.
We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an unintroduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 45 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

St. Louis.
News Notes.
 Recent visitors were: Arnold Ringier, who represents W. W. Barnard & Co., Chicago; W. Hageman, New York, who reports a good bulb trade; and J. Stern, Philadelphia, selling florists' supplies.

The local trade extended to Robert Beyer their sympathy on the loss of his youngest son, Robert, who was burned to death as a result of playing with matches found in his father's greenhouse. Mr. Beyer himself was severely burned about the hands, trying to save his child. The funeral took place on Saturday from the family residence, 3619 So. Grand avenue. A number of the craft attended.

Joseph Houser, Webster Groves, lost his greenhouse the past week by fire. Mr. Houser is a member of the local club. Henry Berning, to whom he consigned his stock, is making a collection among the trade to help Joe out so as he can rebuild this Spring.

Theo. Miller, Fred C. Weber and John Cannon were the first to return from the Carnation Society's meeting in Chicago. They report a good time and a fine show. The remainder of the St. Louis delegation will stop over at Fort Wayne, New Castle, Richmond and other places in Indiana; they were expected home Tuesday. What they saw will be related at the club meeting next Thursday afternoon.

President Juengel, of the Florists' Club, expects a large attendance at the club meeting next Thursday. Business of importance will be transacted. There will also be a big display of new carnations from both local and outside growers. Fred Meinhardt, one of the committee who attended the Chicago show, has been promised a large display from outside sources. Chairman Beneke, of this committee, tells me that a number of questions have been sent him to be answered at the meeting. Among those are: "What should be the requirements of a new carnation to entitle it to a certificate of merit from our club?" "Which was the best pink, white, or red carnation for commercial purposes seen at the Chicago show?" "Which of the new varieties at the Chicago show is the best for our local growers to buy?" "The exhibition in general, from a retailer's standpoint, for the benefit of the growers." The committee has assigned these questions to J. F. Ammann, John Stiedel, A. Jablonsky and Fred C. Weber to answer.

Edward Troy, who was F. W. Taylor's chief clerk in the departments of agriculture and horticulture at the World's Fair, has accepted a position as chief clerk in the Bureau of Plant Industry, at Washington, D. C. Mr. Troy will leave St. Louis February 15 with his family to begin his new duties.

H. Weber & Sons at Nursery Station, St. Louis Co., are about to let contracts for two new greenhouses, each 25x250 feet. Mr. Weber states that the firm will grow roses next season for the local trade.
 ST. PATRICK.

PORTLAND, ORE.—George Garrecht, formerly of Jersey City, N. J., is now foreman of W. S. Sibson's Rose Nursery here.

The Week's News.

McKinley Day made little or no impression in this city, and many of the stores that had expected a larger sale of carnations on that day were disappointed.

The partnership between Warren H. Manning and J. Woodward Manning has been dissolved, and the landscape business heretofore carried on by them will be continued by Warren H. Manning under the title of landscape designer.

J. Woodward Manning has purchased the goodwill, all rights, title and stock of the Reading Nursery, which was established in 1854 by his father, the late Jacob Manning. The business will be continued under the style of the Reading Nurseries and will cater to both the wholesale and retail trade.

Messrs. Sim, Patten and Fisher returned from Chicago Monday highly pleased with their trip and the success of the Carnation Society's convention generally. Messrs. Nicholson and Peirce extended their trip by way of Richmond, Lafayette, Cincinnati and New York.

W. W. Rawson will be the speaker at the next meeting of the Gardeners and Florists' Club February 21. The subject will be: "Vegetables Under Glass."

Winifred Rolker, New York, was a visitor this week. J. W. D.

 News of the Week.
 The past week has been a strenuous one for the growers in this section. Will Murphy had fourteen tubes to replace in one of his boilers which kept him from attending the Carnation Society's convention. I have heard of no other accidents; but on Tuesday night, January 24, the fireman was kept very busy shoveling coal.
 Quite a number of the craft who attended the Chicago convention are here looking over R. Witterstaetter's place, especially. The St. Louis delegation arrived Sunday, and Eugene Daille-douze and wife; Fritz Breitmeyer, of Detroit; Chas. Frueh & Son, Bay City, and R. G. Boehringer, of Saginaw, Mich., were here Monday morning. The writer returned home Friday evening, and E. Foster, of A. Sunderbruch's Sons, arrived Saturday morning. The trip to Joliet must have been a very enjoyable one, from the report given by the Cincinnati boys who were with the party.
 The Chicago banquet was a grand success; Rudd is an ideal toastmaster, but Phil Hauswirth leads him as a sleight-of-hand performer. For singing and after-dinner oratory, we must all tip our hats to our brethren from Canada. Jimmie Hartshorne was a little nervous, but he got there just the same. C. W. Ward and E. G. Hill, always good, but not up to their standard; they were both tired. J. C. Vaughan came nearer to filling the bill, Frank R. Pierson was sick, but did admirably under the circumstances. Put give Lewis Ulrich a chance and he will raise the roof. The Chicago Florists' Club and Allied Trades are certainly past masters as entertainers. Please tell Phil Hauswirth that Boston, not Toronto, is the next meeting place; Phil didn't know.
 C. W. Crouch, Knoxville, Tenn.; T. Joy, Nashville, Tenn.; Mr. Oberling, Georgetown, Ky.; J. T. Herdegen, Aurora, Ind., were also visitors.
 E. G. GILLET.

JERSEY CITY, N. J.—Wm. Lutton has secured the following heating contracts: J. D. Cockerott, Northport, N. Y., four houses, 33 x 175 feet, to be erected by J. C. Muninger Company, Chicago; five houses, iron construction, 26 x 125 feet, to be erected at Bloomfield, N. J., for Jacob Hauck, by Phillips Manufacturing Company; four houses, 26 x 125 feet, iron construction, for J. J. Brozat, East Orange, N. J., erected by the Weathered Company.

Sphagnum Moss and Cedar Poles
 Moss, 5-barrel hallet fresh and clean, \$1.25; 3 hales, \$3.25; 5 hales, \$5.00. Poles, 2 in. to 5 in. at butt, any length required.
H. E. AKERS, CBATSWORTH, N. J.
 Mention the Florists' Exchange when writing.

75,000 SQUARE FEET GLASS SURFACE

The above figures represent commercial heating contracts already signed for the season of 1906. An opportunity to estimate on your proposed heating work will be to your interest. Select any good make of boiler you prefer and I will base my estimate accordingly.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 6

NEW YORK, FEBRUARY 11, 1905

One Dollar Per Year

CARNATIONS STRONG ROOTED CUTTINGS

WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white, with delicate carmine peucillings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will out-bloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

LADY BOUNTIFUL A magnificent white of last season's introduction. \$6.00 per 100; \$50.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices in great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

We are now prepared to book orders for 1905 for
THE COMING SCARLET CARNATION
VICTORY
This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker.
Orders will be filled in rotation, as received. Delivery beginning December next.
\$12.00 per 100; \$100.00 per 1000.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an un-introduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

SALEM, MASS.—On January 30, Harlan P. Kelsey, of Boston, who is a resident of this town, lectured in Essex Hall on the subject: "Is Salem in Need of Civic Improvement?" illustrated with lantern views.

LYNNVILLE, TENN.—At the annual meeting of the stockholders of the Giles County Nursery Company, located at Waco, the following officers were elected: President, F. G. McCord; vice president, F. D. Towner; general manager, R. O. Lamar. An annual 7 per cent. dividend was declared. The company has contracted for ten traveling salesmen for the Spring trade and reports a thriving business. The capital stock of the concern is \$10,000.

DURANT, I. T.—There has been organized the Durant Nursery Co. with a capital stock of \$5,000. The list of officers are as follows: C. C. Mayhew, president; A. Frank Ross, vice president; W. R. Collins, secretary and general manager, and E. F. Rines, treasurer. Directors: C. C. Mayhew, W. R. Collins, E. F. Rines, A. Frank Ross, James L. Shuler and Edward Rines. The new company absorbs the nursery and interests of the Texas Nursery Co. at this place and has made application for incorporation. The nursery will cover nearly one hundred acres of ground and over a million trees and plants will be put out this year.

TREES AND SHRUBS FOR WISCONSIN.—A recent bulletin (108) of the University of Wisconsin, Agricultural Experiment Station, prepared by F. Cranefield, gives some instructive information concerning trees and shrubs for shade and ornament, and supplies useful appendices enumerating the subjects that have and have not been found satisfactory after test on the station grounds. We reproduce these lists herewith for the benefit of our subscribers resident in the locality named:

DECIDUOUS TREES FOUND SATISFACTORY.—*Acer glabrum*, *Acer negundo*, *Acer platanoides*, *Acer rubrum*, *Acer saccharinum*, *Acer saccharum*, *Acer tartaricum*, *Betula alba* var., *Celtis occidentalis*, *Fraxinus americana*, *Fraxinus lanceolata*, *Gleditsia triacanthos*, *Gymnocladus canadensis*, *Juglans nigra*, *Larix decidua*, *Morus alba* var., *Populus deltoides* var., *Prunus serotina*, *Pyrus aucuparia*, *Quercus alba*, *Quercus cocinea*, *Salix babylonica* var., *Tilia americana*, and *Ulmus americana*.

EVERGREEN TREES FOUND SATISFACTORY.—*Abies balsamea*, *Abies concolor*, *Abies nordmanniana*, *Juniperus communis*, *Juniperus sabina*, *Juniperus virginiana*, *Picea alba*, *Picea engelmannii*, *Picea excelsa*, *Picea pungens*, *Pinus laricio* var., *Pinus montana* var., *Pinus strobus*, *Pinus sylvestris*, *Pseudotsuga Douglasii*, and *Thuja occidentalis*.

SHRUBS FOUND SATISFACTORY.—*Berberis vulgaris*, *Berberis vulgaris* var. *atropurpurea*, *Berberis thunbergii*, *Caragana arborescens*, *Caragana frutescens*, *Cornus mas*, *Crataegus monogyna* var. *Pauli*, *Corylus maxima* var. *purpurea*, *Diervilla florida*, *Diervilla candida*, *Diervilla hybrida* var. *Desboisii*, *Elaeagnus argentea*, *Eunonymus europaeus*, *Hibiscus syriacus*, *Hippophae rhamnoides*, *Hydrangea paniculata grandiflora*, *Lonicera caerulea*, *Lonicera ruprechtiana*, *Lonicera spinosa*, *Lonicera tatarica*, *Ligustrum vulgare*, *Ligustrum amurense*, *Lonicera tatarica* var. *alba*, *Lonicera tatarica* var. *parviflora*, *Lonicera xylosteum*, *Morus alba* var. *Philadelphus coronarius*, *Philadelphus coronarius* var. *aurea*, *Philadelphus inodorus*, *Potentilla fruticosa*, *Prunus nana*, *Rhodotypos kerrioides*, *Rhus cotinus*, *Ribes aureum*, *Robinia hispida*, *Rosa rugosa*, *Sambucus nigra* var. *aurea*, *Sorbaria sorbifolia*, *Spiraea bumalda*, *Spiraea bumalda* var., *Spiraea billardii*, *Spiraea Douglasii*, *Spiraea hypericifolia*, *Spiraea japonica*, *Spiraea prunifolia* fl. pl., *Spiraea salicifolia*, *Spiraea trilobata*, *Spiraea Van Houttei*, *Syringa japonica*, *Syringa josikaea*, *Syringa Persica*, *Syringa villosa*, *Syringa vulgaris*, *Tamarix palasiensis* Desv. (*Tamarix amurensis* Hort.), and *Viburnum opulus* var. *sterilis*.

SHRUBS FOUND UNSATISFACTORY—BLACK LIST.—*Azalea arborescens*, *Azalea viscosa*, *Azalea nudiflora*, *Azalea mollis*, *Calycanthus floridus*, *Caryopteris mastacanthus*, *Chionanthus virginica*, *Clethra alnifolia*, *Colutea arborescens*, *Cornus florida*, *Cydonia japonica*, *Daphne enoneum*, *Daphne mezereum*, *Deutzia gracilis*, *Elaeagnus longipes*, *Exochorda grandiflora*, *Forsythia suspensa*, *Halesia tetrapetala*, *Itea virginica*, *Kerria japonica*, *Ligustrum vulgare*, *Paulownia imperialis*, *Prunus cerasifera* var. (*Prunus pissardi* Hort.), *Prunus japonica*, *Prunus triloba*, *Spiraea arguta*, *Spiraea thunbergii*, and *Viburnum opulus* var.

The plants of certain of the above named varieties have made a good growth each year, but have not blossomed unless given thorough winter protection. In this class are bladder snail, flowering almond, flowering plum and golden bell. The Japanese quince is hardy of bush, but has not borne flowers except when given winter protection. The gouni will only bear fruit when protected in winter. The double-flowered almond will blossom freely if given thorough winter protection, otherwise it will kick back severely. The double-flowered plum grows well, and after a mild winter will bear its pink-colored rosette-like flowers for in advance of the leaves; unreliable, however, four years out of five, if unprotected. The others of this list have either died outright or else barely survived.

Original Tree of Teas' Weeping Mulberry and Its Originator.

Teas' weeping mulberry, the original tree of which, together with J. C. Teas, the originator, are shown in the accompanying photograph, was an accidental seedling discovered in the Summer of 1883 in a block of Russian mulberry trees which he was then growing to supply the great demand for trees for "timber claims" in Western Kansas. Although the tree was then small, its individuality was distinctly marked and its merits recognized by the originator, whose familiarity with rare and beautiful trees during a lifetime of work among them, enabled him to foresee in it one of the most important additions to the list of hardy weeping trees. Its vigorous habit of growth, extreme hardiness and great endurance and adaptability to soils and climates, enable it to flourish even in poor soils and trying situations, sometimes where care is lacking and scarcely any other weeping tree would grow.

The beauty and grace of well-grown specimens grafted standard height may be seen in well-kept lawns and public grounds throughout this and other countries. Occasionally very fine specimens are seen that have been trained up to a stake 20 feet or more in height. Examples of this are found in Fairmount Park, Philadelphia.

largely distributed into almost every State and territory in the Union, as well as to various foreign lands.

Up to about 1878 there was utter confusion and uncertainty among tree men in regard to the different kinds of catalpa trees. With the assistance of the late E. E. Barney, Mr. Teas carefully examined these trees over a large area of the territory where they grow, traveling many thousands of miles. In this way he discovered and made known the native habitat of the "Hardy Western" catalpa, which was named "speciosa" by Dr. Warder, and Mr. Teas was the first to publish that name and send out trees under it.

Mr. Teas was one of the founders and charter members of the Indiana State Horticultural Society, and when he left that State was made an honorary member.

To his skill, energy and life-long devotion to the business are due important additions in trees, fruits and flowers, notable among which are Teas' weeping mulberry, Japan hybrid catalpa, and last, but not least, Teas' white red bud (*Cercis canadensis alba*), a new variety of this well-known, valuable tree, with abundant snow-white bloom, of which he is now growing a large stock, intending to put it on the market in the Fall of 1905.

Japanese Prickly Ash.

The prickly ash, as the *zanthoxylum* is called, exists in two species in our own country, americanum being the northern and carolinianum the southern species.

ORIGINAL TREE OF TEAS' WEEPING MULBERRY.
Mr. Teas is Seen in the Left of the Picture.

John C. Teas, of Carthage, Mo., the originator of the weeping mulberry that bears his name, is well known among the veteran nurserymen of the country, especially those of the generation now almost past. In his earlier years he was intimately associated with Charles Downing, John J. Thomas, Dr. John A. Warder, Andrew S. Fuller and many other prominent workers in the advancement of horticulture; and in several of their works on fruits, his name is given as having assisted in their preparation.

He was born in Indiana in 1827, and began his life-work in childhood, his first achievement being a bed of *Sanguinaria canadensis* and a plant of white clover. His early school days were spent in a log schoolhouse in the "big woods" of the Hoosier State; and his first trees were small seedlings collected in an orchard through which he passed returning from school, and carried home in his dinner pail. The lack of advantages in those early days was not the only obstacle to be overcome by a young man whose ambition was horticulture. The wise ones were free to give the advice that when the trees already planted should come into bearing the fruit could not be consumed or sold—and, of course, people would not buy and plant more trees. And it did look pretty reasonable, as the best apples could hardly be sold at 10 cents a bushel, and trees of best sorts were 3 to 5 cents. Nothing daunted by opposition and discouragement, the boy went on with his chosen work. In 1850 he went to Rochester, N. Y., and worked for Ellwanger & Barry, to learn more of the business. He had to go 100 miles to the nearest railroad station—on foot and the old stage coach; then a ride on the cars and across Lake Erie on steamboat.

He conducted an extensive nursery in Indiana until 1869, when he moved to Carthage, Mo., where he has since continued the business. He brought from Indiana a very extensive collection of choicest varieties of both fruits and ornamentals, which have since been

Neither is often seen in collections, although, as the bark of the americanum is said to be "bitter, aromatic and a stimulant used for rheumatism and toothache," it would be supposed to be a favorite with gardeners, who, many of them, are too well acquainted with rheumatism. *Z. americanum* is but a large shrub, while the southern one becomes a large tree.

But in the Japanese one, *Z. piperitum*, we have one much more ornamental than our one of the North. The foliage itself is attractive. The bunches of small white flowers do not make much display, but the berries which follow are highly ornamental. The fruit is small, and of a shining black color, and is usually thickly clustered on the branches, the whole forming a highly attractive feature. The name of *Z. piperitum* means pepper-like, and this refers to its fruit, which is called Japan pepper.

Before the fruit is dead ripe, it has a decidedly aromatic odor, and this is true also of the northern species mentioned, which has, in addition, an oily, agreeable fragrance.

Transplanting Red Cedars.

That there is a growing appreciation of our beautiful red cedar by our planters is apparent from what nurserymen say of the increased call for it. It has long been an evergreen greatly valued abroad, where it is found, grown and catalogued by nearly all the leading nurserymen. Because of its making but few roots, it transplants badly; still, with transplantings when young as it as well as all evergreens should have, it is not more difficult than many others are. It will bear a good clipping when transplanted, which helps toward the success of the work.

A friend in Michigan wrote me recently, asking if it were possible to transplant wildlings of this cedar. I advised him to attempt first the getting of a ball of earth with the little trees. This is often possible when

the seedlings are not large. Those of about two feet would be a proper size, and there should be but little risk with them. A spade sunk around them on four sides should secure a ball of roots, sufficient of them to make the work almost an assured success. If the ball can be set in its new position without being broken, and a good pruning of the seedlings performed at the same time, but few of them would be lost.

In addition to the demand for the red cedar in Europe for ornamental purposes, foresters there have a high opinion of its merits. Great numbers of its seeds are sown, being gathered there, and a large supply going to them from this country. I do not know their process of sowing the seeds, but our nurserymen find it best to treat it as they do the holly. Mix it with sand, or soil, at this time of the year, and let it lie in a heap for a whole season, sowing it in a year's time. In favorable seasons, some have had the seeds to grow when sown as soon as ripe in Autumn, the seedlings appearing the following Spring; but the plan is uncertain, and the first mentioned method is the better one.

There are so many evergreens going under the head of cedar, that it seems necessary to say the tree referred to is *Juniperus virginiana*.

Hardiness of Trees and Shrubs.

Under the heading "A Subscriber's Suggestions," in a recent number of *The Florists' Exchange*, your correspondent, "Dutchy," expresses himself to the point when he says that writers, myself among the number, when speaking of hardy trees and shrubs, would do well to say how far North the subjects mentioned are known to be hardy. I have often wished I had information from, to me, far off places like where Dutchy writes from, Minnesota, as to what trees and shrubs are hardy there. Now, will not our friend Dutchy mark a catalogue for me of all the trees and shrubs in it that he knows are hardy in Minnesota? I will gladly forward him a catalogue for the purpose, with necessary postage, and would be greatly indebted to him as well. And, since he has put the thought in my mind, I am going to try a few more friends in the same way, some of those who live in far-away cold States.

It is, as Dutchy says, something catalogue men should know and make known, as well as writers; it would be a great help to would-be purchasers; and I hope my good friend will come to my rescue and send me word that I may send him a catalogue for him to mark for me.

Grafting the Grape.

The proper place to graft grape vines is just below the surface of the ground—a few inches below—and the best time to do the work is in the Fall, or before the sap starts to run in Spring. Fall is to be preferred, for then there is no trouble with flowing sap, and if the cion and all be mounded up with earth, as a protection from frost, the cion is kept alive, and is almost certain to unite. When done at that time, or at any time when under ground, there need be no waxing of the parts. If well tied with raffia, or bass it is sufficient, as the soil will keep out the air. When it is not possible to do the grafting at the time stated, some have succeeded when they have waited until the buds are just bursting. This relieves the bleeding from cut parts and gives the cion a chance to unite.

Grapes can be had at such a low price, and they grow and fruit so quickly, that there is but little need to graft any. Still, it does happen at times that it is desirable, hence these hints on the way to graft them. Sometimes a piece of wood of a new kind comes to hand, and, if successfully grafted, it gives results quicker than in any other way.

JOSEPH MEEHAN.

Ours the Ideal Trade Journal.

It gives me great pleasure to enclose P. O. order to the amount of one dollar for another year's subscription to your excellent paper. In my humble opinion you are printing the ideal trade journal, the reading (and buying) subscribers being taken care of, as well as the advertising ones, to the satisfaction of both. While it would be hard to make distinction among so many good contributions to your paper, yet I must say that the department so ably conducted by Joseph Meehan appeals mostly to me, and has been a source of most profitable information as well as enjoyment.

Connecticut.

J. H. MURRAY.

Four-Leaf Shamrock Easily Obtained.

PARIS.—Great possibilities are held out in a paper which was read before the Academy of Science relative to plants. By making an incision in the stems of young plants four-leaved shamrocks are easily obtained, the only difficulty being to prevent five or even six leaves. By the same method it is asserted that normal flowers can be altered beyond recognition, and the same plant bear two or more distinct growths.

Grafting Baby Rambler Rose.

P. Lambert, Germany's famous rosarian, suggests in a note to *Rosen-Zeltung* the practicality of working the Baby Rambler (Mme. Norbert Levavasseur) on to the original Crimson Rambler rose. He believes that any attempt in this direction in the way of grafting or budding would be followed by certain success. Most climbing roses of the multiflora class, he thinks, could thus be made to flower continually, or, at least, repeatedly during a season.

FRUITS UNDER GLASS.

Peaches and Nectarines.

The early peach house, started the first of January, should now be in full bloom. The trees at this stage delight in a fairly dry, bracing atmosphere, with a crack of air given at every available opportunity during the day. With such treatment the blossoms should be strong. I have found that strong, healthy flowers are easily set; while, on the other hand, trees that are in a close atmosphere are more liable to go wrong. Take, for instance, when nature has its course. The peach tree will come into flower in a comparatively low temperature, which should be a guide for us when growing the fruit under glass, to a certain extent. I claim 50 degrees at night, artificial heat, is all that is necessary until the fruit is set. After a good set, increase the night temperature gradually to 60 degrees, with from 70 to 75 degrees in the daytime. The fruit then will make rapid progress. To some this may seem a slow method, but I have seen so much damage done through starting up the fruit houses in too high a temperature, that I feel compelled to advocate the safe side. However, the strange part is, there will not be much difference in the time of ripening of the fruit; that is, if a good growing temperature is kept in the house from the time the fruit is set until nearly ripe; if any one gathers fruit, say, from the 10th to the middle of May, in a house started the first of January, he is doing well. Of course, in the case of fruit trees that are in blossom now, there are no trees around to set them. Supposing we get good, bright weather when our house is in bloom, a gentle tapping of the branches may be all right; but I prefer to take no chances, going over the blossoms lightly with a camel's hair brush. This operation does not take long, and is certainly safer.

Another important point for the future welfare of the trees is disbudding, taking off all the surplus shoots. This should be done gradually, otherwise a check will be sustained. We all know that peaches grown under glass have a tendency to rank growth; this can be overcome somewhat by careful disbudding, leaving the growth for next season's fruit under the old wood if possible, rubbing off the top shoots. The trees should be disbudded so that the foliage is not crowded at all. Wood that has been crowded is of little or no use for the following season.

The Grapery.

Each day now the sun's rays are increasing in strength, and the young vine foliage is subjected to burning. The best plan to avoid this is, as soon as the temperature begins to rise in the morning, if bright weather, put on a crack of air. This will carry off the surplus moisture from the foliage and prevent burning. Disfigured foliage in a grapery seems to spoil the whole house. The vine is different from the peach; after grapes are started into growth they must be kept in a growing temperature, say 65 degrees at night; 75 degrees day, or 80 degrees with sun beat. The shoots being so tender, too cold an atmosphere would chill them. Vines, when they once start growing, make rapid headway, which means there is work to be done every day or so.

As regards bringing the shoots down to the trellis, this must be done by degrees, or the shoots are easily snapped off. We usually pinch, or stop, the shoots a couple of leaves beyond the bunches; still, this work depends to a certain extent on the space the vines have to cover. One should aim to have the foliage cover the whole trellis, but avoid crowding. After the early house is set, feeding will have to be attended to in some form. Drainings from the cow barn form a capital fertilizer, providing the liquid is not used too strong, and, outside of that, Thompson's Vine Manure is as good as anything I know of. This should be watered in as soon as applied. It is also well to use it light and oftener rather than too heavy—say a twelve-inch pot full to 18 or 20 vines. Such a quantity could be used every time the border is watered.

Strawberries.

The strawberry as a forced fruit is very fine. I have read quite a little about having strawberries for Christmas, etc. I will admit I have had strawberries in Midwinter—in name, minus the flavor. I have come to the conclusion, if I get ripe strawberries by the first of March, then they are worthy of the name of strawberries. Also by aiming to have fruit at that date, one can reasonably expect a good crop, whether grown in pots, boxes or in any other way. I have had best results from six and seven-inch pot stock, but to have good fruit the plants must be near the glass. Strawberries can be grown as a catch crop; in other words, grown in a house where they would not interfere with the growing crop. Shelves could be suspended from the roof which would bring the pots within fifteen inches of the glass. In such a position they do splendidly, with no danger of the fruit damping. I have tried different varieties for forcing, but still go back to the old stand-bys—Marshall and Sharpless—and, for late Spring work, Nick Ohmer. Clay's Fertilizer, applied after the fruit is set, is beneficial; also a watering now and then with nitrate of

soda, will help swell the fruit and hasten maturity. The strawberry is not particular as to temperature, but if it can be brought along in about a carnation house temperature till the fruit is set, then 5 degrees higher would hasten it. Still I have grown fine strawberries in a carnation house temperature.

WM. TURNER.

Tales of a Traveler.

San Francisco and Its Florists.

To write up properly the florists of New York and its vicinity would be the work of some years, and to write up such a town as San Francisco after spending but a week among the flower growers and galesmen is not an easy undertaking, for there are many firms whose acquaintances I have not made and whose establishments deserve more than a passing mention. Understand me, then; I do not call this article a treatise on the florists of this great city, but merely a collection of impressions of what I have been able to see has made upon my mind.

The first thing which the traveler strikes in the city is the man with the violet; and "the message of the violet" will continue to sound long after the present crop of tourists take their departure; for the people of San Francisco use a great number of violets and the streets are often a mass of them at every corner. There is a reason for this, and it is not a wonder that so many are used, for we must consider that all humanity loves the violet, and when we can get the flowers anywhere and everywhere for less than 25 cents per hundred the fact is accounted for.

Picture for yourself acres of violets and cheap labor to pick them and tie them up, for they don't count and bunch them here. The climate permits the cultivation of violets in the surrounding towns by the acre, and the cost of raising them is very slight. Princess of Wales is the only variety grown in quantity, and aside from a few bunches of a white violet, I saw but one small bunch of double violets in San Francisco. The violet is the people's flower here, and the price puts it within the reach of all; and in return they buy them, and the violet is everywhere.

One of the nicest of the San Francisco stores is owned by the firm of Podesta & Balocchi and is situated on Sutter street. These gentlemen are Italians, and yet sunny Italy, as we see so often in the East, is not found here. Clean, thrifty and businesslike and with a class of trade that would be a credit to any firm.

In the Palace Hotel is the store of Thomas L. Stevenson, and here again we find high-grade blooms, and practically no cheap stock. His bronze and brass vases, which are used to display his flowers, are very artistic and unique.

Strolling around among the flower men as a whole one can see a great similarity in the stock to that handled by the firms in the East. Some cut poinsettias, which are not so plentiful there; and I saw also a bunch of chrysanthemums, which at January 27 I considered a rarity. I saw some American Beauty roses of good quality, and upon inquiry I found that they were grown by a Japanese firm at Fruitvale, by name Domoto Brothers. This firm handles a large quantity of stock, and some very fine carnations also were in their shipment. Prosperity in this lot were very highly colored and their Mrs. Lawson and Enchantress were topnotchers for this market. In roses the same stock is seen as in the East, but not without exception, for I have yet to see a Golden Gate in the town from which it derives its name. Bridesmaid is in abundance; Liberty also, and of a good quality.

One of the dainty little flowers seen here in quantity is the English snowdrop, and it certainly has a place and many admirers.

What would a big city be without a green goods man or two? San Francisco has them, and they come in every day with ferns from the creek bottoms in the nearby hills—a type of fern that resembles *Adiantum Williamsii* and one that I think is itself an *Adiantum*. Growing wild in the creek bottoms, it affords a source of revenue to the fern gatherers and is a cheap, useful green for the city florists. Five bunches for half a dollar is the price it sells for, no count taken, but good sizable bunches. The fronds are not long, but it is so cheap that it can be used freely. The day will come when it will not be so plentiful in the immediate vicinity, but the supply, according to report, is good for a lifetime yet. Some *Adiantum* are grown for pot plants throughout the city, but this fern is so good in quality that for cutting purposes *A. cuneatum* is far too valuable.

W. R. PIERSON.

(To be continued.)

Greenhouse Materials.

WINDOW GLASS.—The demand for window glass continues active, with the expectation of an early advance in prices. New York quotations are: First two brackets, single, 90 and 15 per cent. discount; larger sizes, single, and all double strength, 90 and 5 per cent. discount from jobbers' list of October 1, 1903.

WROUGHT IRON PIPE.—Under date of February 1 the leading interest issued new discounts on wrought iron pipe one-half point lower on all sizes, which is equivalent to an advance of about \$1 a ton. The independent makers have also put into effect the higher prices announced by the National Tube Company. Business has been very active in anticipation of higher prices, and the market is firm at the advance.—Metal Worker.

The New Rose WELLESLEY

is a welcome addition to the list of forcing roses.

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

PRICES

PROSPECTOR

RED SPORT FROM MACEO. Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market. It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz. Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower. We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

Seedling Carnations.

Because it is a most fascinating line of work, full of interest and pregnant with possibilities, the raising of seedlings is now undertaken on nearly every place where carnations are grown. All the details of cross-fertilization are now fairly well understood, as also the essential points which count in the judging of a carnation and in the selection of parents for a progeny, which, it is fervently hoped will bring with it at least one, possibly several, brand-new prize-winners. All this is very nice and proper and should not be set down as merely a profitless waste of time and labor. It begets and fosters a deeper knowledge of plant life, creates an interest in nature's hidden workings, inspires hope and gives pleasure, and is more likely to advance than to retard floriculture. Therefore, let us rest content and not deal out discouragement to those anxious to grow seedling carnations.

Although the manual part of cross fertilization in the case of indoor carnations may to good advantage be carried on at any time during the entire winter, the months of November and December have been found to be the best time to take this, the first and most important step toward the raising of a good batch of seedlings. Another essential point is to sow the seeds early, if possible not later than February. If the crossing in November resulted in successful fecundation, the seeds should now be ripe. Occasionally, if not taken off in time, the seedling will sprout while still in the pod, especially if the house is kept rather moist. More often the seeds rot, if not gathered in when ripe. For this reason alone, it is advisable to keep a close watch. When the pods have lost their crisp green color and appear to be drying up, turning to a brownish-yellow in spots, they should be cut off, placed in a dish or on a sheet of paper, left to become entirely dry in the sun or near a warm place for a day or two, when they may be broken up and the seeds sown without farther delay. Those seeds that have sprouted while yet in the pod, must be carefully handled and sown at once. The subsequent care and treatment of the seedlings does in no way differ from that of other plants of the same nature.

This is also the proper time to start the seeds of the various kinds of marguerite and other types of bedding carnations. If nice plants are wanted for early planting, they all are good for the garden and useful as a chance pick flower. All of the marguerite section will flower the first season, and, if the seeds are sown early, will produce any amount of picking material the entire summer, after which their usefulness is ended. To this class belong the really fine varieties of the Chabaud and Guillaud strains, raised in France, and a marked improvement on the old time, straggling and small-flowered marguerite carnation. These are worthy of the choicest place in any garden. The plants are sturdy, growing into dense bushes and producing great numbers of very large, fragrant flowers on long, stiff and upright stems. The colors are bright and of every shade to be looked for in carnations, including every tint in yellow, selfs and variegated.

Those excellent old favorites, the dwarf Vienna and the Grenadin carnations, the latter in three or four fine varieties, should be started from seeds in the first part of March, so that strong plants may be had by October, when they should be potted up and given cool winter quarters. They flower the second season.

Rooted Cuttings.

One of the most important features of this country's plant trade to-day is the traffic in rooted cuttings. From a small beginning some twenty years ago, it has developed into an industry of immense proportions and far-reaching consequence. It has, in a great measure, simplified and made less expensive and more convenient the intertrade dealings in most of the leading kinds of bedding plants and greenhouse forcing stock. This mode of plant distribution offers an excellent opportunity to all such florists, whose stock is deficient in any of the leading or some of the coveted new varieties, to complete their stock. In the packing and shipping of rooted cuttings, as practiced now, a

great improvement is noticeable over the careless methods in vogue not many years ago, and buyers find little cause for complaint on this score. It must also be admitted that the quality of rooted cuttings received from any quarter of the country at these times is far superior to that of the diseased, shriveled and rootless rooted cuttings, so often found in shipments delivered in former years. If, as this trade is conducted now, the cuttings received are true to color or name, as ordered, a failure of the new arrivals to come up to anticipations must then be laid to the shortcomings of the variety, or those to be found in the cultural methods of the buyer.

Much depends on how rooted cuttings are handled and cared for when received, and even the soil used in potting them off frequently becomes a fertile ground for the seeds of future trouble. The packages should never be torn or pulled in a ruthless fashion from out the box, but taken out carefully, following the packer's courses by reversing the order and starting with that package which was the last one in packing. Unless sufficient help is taking part in the work of unpacking and taking care of the contents of the new shipment, no more should be taken out and unwrapped than can be handled at a time. The less rooted cuttings of any kind are handled after their journey, the fewer roots and the less moisture at their roots will be lost.

Some people put great faith in a dipping of the roots in water before potting; especially is this thought to be necessary when plants arrive in a shriveled or dry condition, as is often enough the case. I do not approve of this plan, unless for the lack of time the immediate potting up or planting has to be postponed for an indefinite time. If the planting is done at once, as it should be, it can be accomplished in a quicker and more proper way with plants, not dripping wet, and a thorough watering after planting, or potting, will reach the roots just as well and will save them, too, unless they were beyond salvation before they were potted up, and in that case no dipping would have saved them or brought dead plants to life.

The grower, anxious to get his new acquisition into pots, should beware of old, stale, soil out of the next best bench. The freshest and sweetest soil on the place, with little or no manure in it, should be used for the new-comers, if they are considered of value at all, and sufficient of such soil should be ready and at hand at the time the cuttings are expected. Should these not be just what the order called for, or in a condition which justifies non-acceptance, the sender should be notified without delay. Meantime, air should be allowed to reach the plants by removing the upper tiers, if there are more than one, to a safe and shady place, and keeping the entire consignment in good shape, until the arrival of final directions from the firm that sent the cuttings. No good florist should fail in this.

There is one kind of rooted cutting I detest, although it is welcomed by most of the inexperienced growers. This is the early-struck, over-grown, lanky cutting with a green crown and an ossified stem. In the case of new and high-priced carnations, the sending out of a lot of Fall-rooted cuttings in February is nothing unusual, and the unwise buyer, who insists upon having his order filled early, is most likely to get these pickled cuttings. In nearly every case he cuts them in two, tries to root the upper half and nurses the inert, lifeless lower part, until all doubts as to its fitness for the purpose have vanished. In the hope of obtaining double value for his money, he runs the risk of losing all of it. Even should he succeed in re-rooting the top ends and in saving most of the stumps, the outcome will be a lot of plants, entirely unqualified to demonstrate the good points vested in the new, and perhaps most excellent, variety. It is safer to simply pinch, or pull, out the extreme tops of such cuttings when received, or pot them up first and stop them a week or two later. No halving of lanky cuttings should be practiced, unless they are very long, well rooted and provided with fresh, healthy foliage clear down the stem, and even then it would seem a wiser proceeding to just nip away the soft top of cuttings so good, and give them a chance to do their best. Cuttings arriving in a frozen condition must be gradually thawed out, before they are unwrapped, and will then show the extent of the damage done, if any.

FRED W. TIMME.

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; $\frac{3}{4}$ inch, \$1.00; 1 inch, \$1.25. Special positions extra. Send for Rate Card, showing discount of 10c., 15c., 25c. or 35c. per inch on continuous advertising. For rates on Warrants, etc., see column for Classified Advertisements.

Copy must reach this office Thursday morning to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

The Week's News in Brief.

The Lutey Brothers, of Houghton, Mich., are in financial difficulties; liabilities, \$13,000.

The demand for window glass continues active, with the expectation of an early advance in prices.

The American Institute, New York, will hold its Winter exhibition of fruits and vegetables February 15 and 16.

Numerous fires have occurred this week in different parts of the country. Moral: Keep an eye on the boiler room.

The Utica (N. Y.) Florists' Club will have a carnation night on Thursday, February 16. A banquet will follow the meeting.

The carnation meeting of the Cincinnati Florists' Society occurs on March 11. Exhibits are invited from all carnation growers.

The Philadelphia Flower Market will make another assessment on the stock, of 25 per cent. The market is doing an excellent business.

At the Montreal (Que.) Carnation show, February 23, silver cups will be awarded for best 100 blooms, any variety, and for best exhibit.

Our Question Box this week is, as always, replete with valuable information to seekers after instruction. It is open to all. Make use of it.

Cincinnati, the first regular meeting place of the S. A. F. O. H., will invite the society to again meet there in 1909, on the occasion of its twenty-fifth anniversary.

A correspondent makes a suggestion that florists and others interest themselves in a revision of the freight classification of bulbs and flowering roots. This is worthy of consideration.

The meeting and exhibition of the American Rose Society occur March 23-26, in conjunction with the Spring show of the Massachusetts Horticultural Society, in Horticultural Hall, Boston, Mass.

Ladies' night at the New York Florists' Club, as well as a carnation exhibition, will be held Monday evening, February 13, Lincoln's Birthday. A good show of flowers and an enjoyable time are promised.

At a recent meeting of coal mine owners and operators, doing business in Ohio and West Virginia, held in Columbus, O., a reduction in prices of coal, all along the line, to the extent of about 20 per cent. was agreed on.

The Florists' Club, of Pittsburg, Pa., at its February meeting, presented the retiring president, Wm. Falconer, with a sterling silver coffee service, as a mark of appreciation of his excellent work on behalf of the association.

A scientific test of the Willowmead Company's (East Orange, N. J.) Terridor fuel-saving appliance will be in progress at the establishment of Hitchings & Co., 233 Mercer St., New York, next week. Traders interested should not miss this opportunity to be present. It is something that concerns all greenhouse men.

THIS WEEK'S SUPPLEMENT.

Pueraria Thunbergiana (Kudzu Vine).

The Japan bean, or Kudzu vine (*Pueraria Thunbergiana*), is a native of China. Its unequalled vigor is shown in the photograph, which was taken in August of the second year after planting. In another instance it was trained on the fence, the entire distance around a residence lot 50 by 120 feet, being arched over the gateways, and made this growth in two seasons. Many other instances show it to be without a parallel in its vigorous growth. The leaves are large and handsome, of a light green color, and the flowers, which appear in August and September, resemble those of the wistaria, but are delightfully fragrant, possessing the perfume of ripe grapes.

It is a valuable addition to the list of hardy vines, as it makes as much growth and foliage in a few months as many vines would make in five years. It is valuable where dense shade is desired, fine for covering porches, screens, fences, rockeries, old trees, buildings, etc., covering everything it touches with leafy loveliness.

In many catalogues this vine is listed under the name of *Dolichos japonicus*, which is the name it was first distributed under. It is a remarkably fast grower. The statement that some catalogues contain, that it grows a foot a day, is correct. It has been tested more than once, and found correct. It takes a strong, well-established vine to do this.

Regarding the hardness of this vine, it probably can be grown a good way north of Indiana. It behaves in this way about Philadelphia: The vine may run, say, 50 feet during a season. This growth dies back to a few feet above the ground. Whether this loss is from its nature, or from lack of entire hardness, we do not know; but think it is the latter. But this dying back is of no importance at all, as, owing to the vine's rapid growth, it more than covers all the space desired before the season is over. Probably in much colder States than Pennsylvania it would survive, and be none the worse for being frozen back to the ground every winter, as in all cases where it has come under observation it is the young growth which is looked to for covering purposes.

The flowers are of a rosy pink color; but the vine must be three or four years old before blossoms are produced.

So far as known the kudzu vine has not perfected seeds in the North, but at the Southern Floral Nurseries, Fruitdale, Ala., it seeds every year. The pods are about $2\frac{1}{2}$ inches in length and not unlike those of the rose acacia, *Rohinia hispida*, even in the hairy appearance of the pods.

JOSEPH MEEHAN.

Florists' Clubs and Societies Should Own Their Homes.

At the annual dinner of the New York Florists' Club, held Saturday evening, February 4 last, Wm. J. Stewart, of Boston, one of the post-prandial speakers, gave the members present some well-meant advice relative to the organization owning its meeting and exhibition hall, pointing out that such a desire is now prevalent in some horticultural bodies, among them that of Newport, R. I., which institution had established a building fund for the purpose. In fact, every florists' club and horticultural society in the country should become imbued with a similar desire, Mr. Stewart said. The great success of the Massachusetts Horticultural Society was cited as an example of what might be expected to result from such ownership.

Buildings suitable for this purpose, or sites on which to erect such structures, and their creation, in New York City at least, are so costly as to kill the proposition aborting; and when one realizes that the funds in our local club's treasury amount to but something over \$1,200, after eighteen years of existence, the time seems far remote when the New York Florists' Club, as an individual body, will be able to own its home. Add to this the fact that the membership is composed principally of hardworking representatives of the craft, none of whom has reached the millionaire status, though all may have ambitions in that direction, and our hopes along the lines mentioned receive a severe shock. Still, it is something worth working for; and we can never begin sooner active preparations for its materialization, even though we may only be laying the foundation for that which will benefit the fourth or fifth florist generation hence. Such things have been done.

There is, however, great need of a building of the kind referred to in New York City. The impeding of the development of the local industry, caused by the lack of such structure, we have time and again touched upon. We have in the midst of us horticultural organizations that do include in their membership citizens of wealth. Their affiliation with these bodies leads to the thought that anything tending to horticultural advancement would find favor with them. A horticultural hall has undoubtedly such a tendency. Their sympathies in this connection should therefore be enlisted, and in this work the New York Florists' Club could render substantial aid. A joint meeting of committees from all the interested existing institutions in New York might be productive of initial steps being taken looking to the culmina-

tion of the project in view. We would advise that such a meeting be arranged for at as early a date as possible.

Then, too, the S. A. F. O. H. might also find a useful hint in the suggestion of its secretary, that "every horticultural association should own its home."

The American Rose Society.

In last week's issue we published a summary of the prize list of the American Rose Society for its annual meeting and exhibition at Boston. These occur March 23-26, 1905, and will be held in conjunction with the Spring show of the Massachusetts Horticultural Society, in Horticultural Hall. The combination promises an unusual treat in the matter of an exhibition, that will be well worth seeing.

The American Rose Society seems to have taken on a new lease of life. With one of the best rosarians in America at its head, Alex. Montgomery, of Natick, Mass., it is making endeavors to raise its status to a position among special organizations, compatible with that occupied by the flower it champions, among the flower-loving public; to bring together an exhibition representative of the high standard which rose growing under glass has reached in the United States. In this effort it should be heartily supported, and that support should not be sectional, but should emanate from every part of this great country.

There is no reason that we can see why the annual meeting and exhibition of the Rose Society, or, for that matter, the C. S. A., and other special societies, cannot be made as beneficial to interested parties as those of that progressive body, the American Carnation Society, are to its membership. There are many subjects that men, banded together for a common purpose, can consider for the benefit of all, and those attaching to the rose form no exception, if it be so willed by those most vitally concerned. We are not informed as to what shape the proceedings of the Boston meeting of rosarians will assume, but we hazard the assertion it will be such as to warrant a large attendance.

As to the exhibition, the schedule makes ample provision for a comprehensive and varied display. This will no doubt be forthcoming. Boston, or its vicinity, contains one of, if not the largest, rose-growing plants in the Eastern United States, and the enthusiasm of Mr. Montgomery ensures a representative exhibit from that quarter. Then there is M. Walsh, a local grower, whose efforts in producing new varieties of roses have been signally successful. He, too, will be an exhibitor; to say nothing of the exhibitors than can and no doubt will come from other commercial growers and private gardeners in the neighborhood. These augmented, as they should and will be, by displays from other sections of the country, should conduce to one of the best shows of indoor roses ever given in America.

The American Rose Society is endeavoring to encourage the raising of new seedling roses by offering its medals for meritorious varieties, but does not confine such awards to American efforts, varieties of foreign origin being also eligible for these premiums. Other substantial prizes are also to be given for comparatively new sorts, and success having crowned the painstaking work of several of our growers along this line, we look for an interesting display of what, to the commercial grower at least, constitutes the backbone and drawing magnet of all exhibitions—novelties.

It is announced that exhibits sent from a distance should be addressed to John K. M. L. Farquhar, Horticultural Hall, Boston, and express charges must be prepaid.

A correspondent of the New York Times writes that that journal February 7, urging that "farmers and gardeners show their love of country by sending in at once petitions to Congress to add to the naval appropriation the annual amount that is appropriated for the distribution of seed, and reduce the appropriation to the Agricultural Department by this amount. The farmers and gardeners can do without the seed, and will be the means of adding another of the largest size of battle-ships to the navy."

No, siree! The sons of the soil are no longer the embattled bodies of over a century ago. They are peaceable people, who delight to bask in the blessings of free seed which a beneficent paternal Government continues to bestow, and now live in the hope that the time is not far distant when swords shall be beaten into ploughshares and spears into pruning hooks; when corn shall be of more benefit to the country than cannon, and salads more to the taste of its citizens than ships of war. Meantime let the free seed "humbag" persist. Seeds bring more votes to needy Congressmen than oceans full of navies, or seething seas of sanguinary symbols.

Cincinnati (O.) will make a bid for the convention of the Society of American Florists and Ornamental Horticulturists for 1909. In that year the S. A. F. will celebrate its quarter century anniversary. Cincinnati was the first regular meeting place of the society, where it was practically launched on its progressive and helpful career, August 12-14, 1885, with John Thorpe as president and E. G. Hill occupying the secretary's chair. The membership roll in 1885 showed a total of almost 400. This figure should be quadrupled by 1909. The Cincinnatians think it would be fit and proper that the association again assemble in their city on the society's twenty-fifth birthday, and E. G. Gillett is already interesting the Business Men's League and other organizations, as well as the local craftsmen, in the movement.

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

A Word of Commendation.

Editor Florists' Exchange:

We wish to congratulate you upon your efficient work in displaying the map of Michigan in the issue of your paper, January 28. It was certainly well done, and worthy of commendation. A. GUDE & BRO., Washington, D. C.

California Carnation Cuttings.

Editor Florists' Exchange:

I have been reading with interest the various communications in The Florists' Exchange on California carnation cuttings. I bought four thousand unrooted cuttings last December, and am having a similar experience as your other correspondents. I ordered six or eight varieties, and of some will not get one per cent., while others will give ten per cent. of rooted cuttings. A good many of the cuttings had dark spots on the leaves when received, and these are all dead now. This I suppose to be leaf spot. My own cuttings, struck at nearly the same time, have rooted nicely. READER.

Dracaena Terminalis Canes.

Editor Florists' Exchange:

I notice in Fred W. Timme's Timely Teachings in your issue of January 14, 1905, a statement that *Dracaena terminalis* canes can not always be depended upon. I would like to observe that the right kind can be depended upon, but not always the shipper in the tropics. We have here two distinct varieties of *D. terminalis*—one the true rosea, and the other the bastard or common red kind. These two varieties, when small, can scarcely be told apart, except by an expert, but when large enough to produce canes are very distinct. These varieties do not cross, or one revert to the other.

As a large grower of the true variety, I volunteer the foregoing information in defense of this valuable and attractive *dracaena*, as well as to correct what I think is an involuntary mistake on Mr. Timme's part. Manati, P. R. WM. H. HILL.

Classification of Bulbs, Etc.

Editor Florists' Exchange:

The Florists' Exchange has published much in the past on the freight classification of bulbs and flowering roots, and many improvements have been made along the lines suggested, but the official classification is yet far from right, or just. Japan lilies and lily of the valley should be classed much lower than they are at the present time. These are packed in sand, or damp moss, completely boxed, and are not injured by exposure to the cold or the ordinary delays of freight traffic. They can be easily travelled and placed one on another to the top of a car. The same is true of spiraea and other hardy flowering roots that are now classed with tender plants that require careful handling and are ruined by delay. These matters are adjusted by the Official Classification Committee, of which Mr. C. E. Gill is chairman, whose office is at 143 Liberty street, New York. I wish florists would take this matter up with Mr. Gill and make such suggestions to him as they consider advisable. It is a matter that they are all interested in, to a greater or less extent, and good results would no doubt follow a movement in this direction. Connecticut. W. H.

English Hollies.

Editor Florists' Exchange:

In reference to the remark regarding English hollies losing their leaves before the proper time (see page 36 of your edition of January 14 last), as shippers of large quantities of hollies, with and without berries, to your country, we commence in the Fall (Autumn), say, early in October, and then again in the Spring, early in March. In order that the hollies should keep their leaves, it is necessary that they have a good ball of earth to the roots, which, when packed in sackcloth, keeps the plants in perfect health and condition for four weeks and even longer. On arrival at their destination, they can be lifted out of the cases and planted out in the state in which they arrive, viz.: sackcloth and all attached; this gives the plants the benefit of being surrounded with the ball of earth they have been accustomed to.

In general, it is a wrong system of many shippers to cut or shake off too much of the ball of earth from the roots of the plants. This is, of course, unwisely done to save freight. We prefer to give the plants, especially hollies, the benefit of a good ball of earth, the size of such being according to the size of the plants. Our system is never to send out specimen hollies that will not carry a good ball of earth to their roots. The purchaser, on arrival of the hollies, receives by this system the benefit of the plants keeping their leaves till the usual time of changing comes round.

We think, in publishing the above, it will be of value to the trade. H. DEN OUDEN & SON, Boskoop, Holland.

A Job's Comforter.

Editor Florists' Exchange:

The plaintive cry of Job, "But why, oh why, do my critics continue to class me in the equine category?" must surely enlist the sympathy of the entire trade. We all like him, in spite of his kicking propensities, and I, for one, hasten to assure him of my deepest and sincerest condolences. Certainly, when on a former occasion I thoughtlessly referred to his "horse sense," I had no intention of hurting his feelings. But on reading his complaint it struck me that there must be some cause for this constant reference to the equine race by his critics, so I set about looking for it, and now think that, perhaps, I may have found it. If Job will allow his memory to run back a few thousand years, he will remember that at one time he was a large owner of live stock of the species mentioned above, and it is just possible that an occurrence recorded to have taken place somewhere about that period might only have been a repetition of a circumstance in Job's life. It is written: "He said unto them, saddle me the ass; and they saddled him," and it would now appear that he has been in harness ever since. It is much to be regretted that this solution does not let Job out of the "donkey class," but, as Darwin did not hesitate to tell us that the genus homo was evolved from the ape, so we must not hesitate in this case.

There is a way by which Job might stop these ribald and unseemly jests concerning himself, and that is by giving up his "nom de plume" and writing over his nineteenth century name. But I am not sure but what he can do more good by sticking to his patriarchal name, and I guess he can "stand the racket." A. H. EWING.

A Fuel-Saving Test.

Editor Florists' Exchange:

At the instance of the Willowmead Company, of East Orange, N. J., we are subjecting to a critical test the fuel-saving device manufactured by that company. This test we expect will scientifically demonstrate the exact gain in economy in burning fuel, through using the indirect downward draft, in comparison with the upward draft through the fuel. In the down draft most of the air for combustion is applied to the top of the fuel. The Torridor Blue Flame

Combustion Regulator is claimed to be the best means of securing this method of air introduction in furnaces already installed, and will be used in this test. The accompanying cut illustrates and explains the arrangements made for conducting the test. In short, we propose demonstrating just how much water can be evaporated by burning a certain number of pounds of fuel by using the Torridor, in comparison with burning the same amount of coal in the old way by introducing the air for combustion under the grate.

Florists and all others interested in a scientific demonstration of this nature are cordially invited to attend at our store, No. 233 Mercer street, New York, and witness the working of the test which is now in progress. HITCHINGS & CO.

Proposes a Floral Board.

Alderman Joseph Weston, of Kansas City, Mo., is preparing a resolution which he will introduce shortly creating a board of florist commissioners to be composed of either three or five women. The members of the board would be named by the city forester and be directed by him. Mr. Weston obtained his idea from California, where such a board has been created in many cities and found to be of great value in improving the appearance of residence districts. The duties of the women composing the board would not be onerous. They would have to spend their leisure time in influencing property owners to beautify their grounds by cultivation of plants and flowers. Those who could not afford to buy the seeds would have them furnished free by the board.

DANIEL B. LONG, of Buffalo, who is acting locally as a committee of one, in promoting interest regarding the McKinley Memorial Fund, writes to say that features pertaining to "Carnation Day" are of importance specially vital to trade interests. If the bringing into popularity the flower-wearing observance, as something standard to be followed each year, can be accomplished, the influential good to the business in a general way is quite beyond present-day measure. Mr. Long deprecates the lack of enthusiasm in the matter that seems to exist in some localities, and thinks the trade at large are not inclined to push their interests as justified.

Reflections on Current Topics.

MR. EDITOR: It is a pleasure to read of the enthusiasm of the members of the American Carnation Society, who, in the face of bad spells of weather, continue to convene in large numbers and to stage extensive exhibitions. The value of these gatherings to the man growing carnations is, I think, well exemplified by the report of the appearance at the Chicago meeting of parties from far away Denver and from New York. Journeys like these are expensive, yet they must pay, when undertaken.

I have often wondered what was the contributing cause of this society's phenomenal success. I think my friend Rudd has struck it—viz., the pulling together of the members. Unity of purpose and harmonious effort accomplish a great deal; and here is where such organizations as the American Rose Society, the C. S. A. and others could take a profitable leaf out of the book of their sister society.

Rudd's words, too, show the sometime soundness and value of after-dinner oratory. What would a banquet be without its "flow of soul"—and poem? At Chicago, I observe the sage of Richmond had his post-prandial fling at "trenzied floriculture." Florists, as a rule, are credited with making money easy. Why deny them the comfort of participating with the public in the belief that they are good spenders also? Twenty thousand or so for a carnation is neither here nor there. Such expenditures surely dignify the profession, placing the spenders in the millionaire class. And ain't that worth something, even counterbalancing the losing of a man's religion? I would suggest, though, that the Ananias Society get after those alleged high-price purchasers; they would no doubt prove worthy acquisitions to a very worthy body.

In connection with the Chicago meeting, I want to say just one word of commendation, Mr. Editor. To give such a comprehensive account of an event happening a thousand miles away, necessitating a report by telegraph of all that occurred, represents enterprise, ability and thoughtfulness of readers' interests of no mean order. We, who read these reports seldom, if ever, take into consideration the trouble and expense necessary to present them, and therefore don't appreciate them to the full extent. It is just such work as this, however, that places your paper where it stands to-day—at the top. More power to your arm!

True, The Exchange does not indulge in frills, in the way of fancy front-page covers. This may or may not be a drawback to a business paper. Have you no good-looking young women available? I showed the recent attempt in this line of one of your contemporaries to *Jemima*, thinking it might stimulate her to "sit" for that promised picture. She sneered. "Pose in my ch-m-se, with a rope of beads round my head. Never, sir!" was her resentful response. My hopes of furnishing you something for your Easter number, a *la Cleopatra*, or *Mary Ann Twynetty*, en deshabille, are, therefore, deterred—for the time being.

I notice that the usually placid and poetic "Phil" has suddenly been seized with a disputatious delirium. It is often difficult to discover just what Phil is driving at; but this time it cannot be mistaken. He is after George Watson's scalp. He should pause and reflect as to whether the game is worth the candle.

Then, too, Phil appears to be mightily pleased with the progressiveness of the paper "which he has the honor to represent." Most of its progress seems to lie in Phil himself. It takes a mind beyond the ordinary to ask and answer questions, to suggest such useless departments as "in the shops," not to speak of the elaborate discourses on how Phil sometimes reaches his destination. But, with it all, Phil still remains a poet—and he is evidently a well-meaning harmless kind of a fellow; at least, that is how he appears to JOB.

The American Carnation Society.

Varieties Registered.

By M. Wimandy, Chicago, Ill.
LIZZIE M'KEY.—Color, scarlet red; size, three inches in diameter; length of stem, eighteen to twenty inches; strong and erect.

By The Indianapolis Flower & Plant Co., Indianapolis, Ind.

CORAL.—Color, peach blossom; very bright and showy; size, three and one-half inches, slightly fringed; very full with good strong calyx; vigorous growth and continuous bloomer.

ALLSPICE.—Color, white, heavily striped with red, and petals edged with red; size, three and one-half inches; very full, heavily built and unusually fragrant; very prolific; strong, quick, continuous growth.

CANDACE.—Color, pink, shade lighter than that of Mrs. Lawson; size, three and one quarter inches; very round, well formed flower; an early and extremely heavy producer throughout the season; quick grower. ALBERT M. HERR, Secretary.

AMONG THE GROWERS.

H. A. Stevens Co., Dedham, Mass.

The cultivation of mushrooms by a firm of florists is rarely met with; but the enterprising firm of H. A. Stevens Co., which, by the way, is a young firm in this locality, makes mushrooms a specialty. A few hints regarding their cultivation, which we gathered from Mr. Stevens, may be of interest. This firm began the growing of mushrooms some three years ago in a large barn cellar, which is convenient enough to their boiler room to allow of enough steam pipes being placed for keeping up the proper temperature. When they first started, says Mr. Stevens, they met with more or less success, mostly less, for the first season. They had been using English spawn, but they had heard of American Pure Culture spawn, and resolved to give it a trial. They were the first growers of mushrooms from this spawn in Massachusetts. They at first procured a few bricks of this spawn and planted it along with five other brands, each being kept entirely separate from the other. The result was that more mushrooms were picked from the Pure Culture spawn than from all the five others combined, so that Pure Culture spawn is now entirely used. Mr. Stevens says that as it becomes known, it will revolutionize the cultivation of mushrooms, and bring them within the reach of all.

The illustration shows a section of the bed, which is about 40x40 feet and from which 118 pounds were picked in nine days recently. These mushrooms grow to an extra large size, some of them weighing a half-pound, yet they are solid and of exceptional quality. The bed is prepared the same as for imported spawn, using one part good loam to three parts manure; but, instead of having a depth of 18 inches, the beds averaged ten inches in depth. If the surrounding conditions are right, the best temperature is 58 degrees. The committee of the Massachusetts Horticultural Society visited this establishment last Fall and awarded a prize to H. A. Stevens Co. for their exceptional cultivation of mushrooms.

It is not mushrooms alone, however, that will keep a hustler like Mr. Stevens busy, and we find he has an establishment of five or six large houses devoted to carnations. Among these we noted Fair Maid occupied all of one house and is considered one of the best of its color. A house of Mrs. M. A. Patten looked very well, and it is considered one of the best variegated sorts, although Mr. Stevens says his Variegated Lawson, which, by the way, is entirely different from any of the other variegated sports of this variety, will try hard to make Patten take a back seat. A house of Mrs. Thos. W. Lawson looked remarkably well. Harry Fenn is considered the best crimson, and J. H. Manley is the leading scarlet, although Flamingo has been receiving a good trial. Boston Market is largely grown for white, and Governor Wolcott and Queen each receive their share of attention.

Like all other carnation enthusiasts, Mr. Stevens is trying a lot of seedlings, and some promising varieties were noticed that bid fair to be heard from in the future.

J. W. DUNCAN.

The Cannas.

(Continued from page 110.)

In the raising of seedling cannas one has a grand chance to study breeding, provided one grows his own seed. No one should ever grow seedlings of any named sort, and then sell them as that named variety, even though they very closely resemble the parent, for there will be a great range of vigor and prolificacy in the offspring, even though they may in coloring closely resemble the plant. The product of each seed is a distinct variety, and in some one or more particulars will differ from the others.

We grew in 1903 about 80 named varieties in close proximity, and saved seed from all that produced seed. Having been grown closely together, there was a good chance for natural crossing, and the results from this stock of seed show equal to those produced by the most careful hand fertilizing.

In the list of varieties from which seed are saved we would make two types, or grand divisions. First, the Crozy type, and, second, the bronze foliage type, which are represented by Robusta and President Carnot.

About one-fourth of the Robusta seedlings come with green foliage, all of which, with two exceptions, were worthless, showing a reversion to very small flowers, some of which, however, were beautifully colored. Of the two exceptions, Admiral Togo is a fine yellow, we think much better than Coronet. The other we have called Mikado; it is a profuse bloomer, with medium sized red and yellow finely mottled flowers, and grows 5 to 6 feet high.

We have named several other seedlings of Robusta, among them Zulu, much darker foliage than its parent; Ruby, very rich, dark foliage, with bright red bloom; Prosperity, very fine leaf, medium tall, rose bloom; Imperial, another rose-colored bloom, very handsome foliage; Champion, a semi-dwarf, 3 to 4 feet, pink blossom; very fine.

In this family of seedlings, there is not only a wide range in the breadth of leaf and height of plant, but a great difference in the colors of blooms, and in the

SECTION OF MUSHROOM BED OF H. A. STEVENS CO., DEDHAM, MASS.

root growth, some being much shorter than others, while a few shoot out very long root stalks.

The same variations are found, however, in all the types. In the seedlings from President Carnot, we have but two that are of much merit. Royal Neighbor, a ruffled edged leaf, much better than Black Beauty, 7 to 8 feet high, did not bloom, but its foliage is so grand that it will make a place for itself as soon as its beauty can be seen. Flashlight is one of the handsomest and most magnificent green foliage sorts we have ever seen, grows 8 feet high, and although the blooms are small, they are produced in a large cluster and are of such a bright, glowing flame color that they are attractive in spite of their small size, and as they are carried so high up above such broad, bright green leaves, we know of but few sorts that can compare with it when a fine tropical display is wanted.

In planting the large growing varieties we would recommend that they be given plenty of room. Many in setting out the plants in the Spring want quick effect, and so crowd the plants too close together. A much better method, to get quick results, is to fertilize heavily and water plentifully, giving the plants plenty of room; the growth will be rapid and the added size and magnificence will soon be appreciated.

A large, strong clump can soon be produced from a single plant of most varieties. In the South, where they can be left in the ground the year around, growers often make a mistake by leaving a large clump for the second year. This should never be done, as the roots become crowded and send up small, spind-

ling stalks that but little resemble the grand display that could have been made if but one plant had been left in a place.

Among our seedlings of the Crozy type, the parent plants of many of them are Mount Blanc, Niagara, Chautauqua, Coronet and Buttercup, and many other varieties, the seeds of which we are sorry to say were gathered and planted together, so we cannot tell the parentage. There were none of the seedlings of Buttercup that were the equal of that variety, all being of varying shades of yellow. All of them will be discarded.

Mont Blanc produced three fine varieties: Mount Washington, an improved Mont Blanc; Mount Zion, a dwarf red and yellow, after the style of Niagara, and Moonlight, a very strong, rapid growing plant, 4 to 5 feet high, with medium sized, straw-colored blooms that do not fade to white, as so many yellow kinds do.

Among the Coronet seedlings we have two with beautiful bronze foliage, one of which we have named Bronze King. The bloom is a salmon-red shade, and we think this variety will make a fine sort for general cultivation. The other seedlings of this parentage are mostly of varying shades of yellow, from orange to light straw color; several of them, we think, are quite promising.

The best of all our seedlings was one of six, from Chautauqua. The bloom is of the same brilliant scarlet color as its parent, but one fourth larger, a very rapid grower, with broad, bright green leaves. It grows 5 to 6 feet high, and the clump is always full of foliage around the base. The greatest fault with Chautauqua lies in a lack of foliage at the base of the clump, making the plants seem tall and leggy. This variety we call Queen of Beauty, and it is well worthy of the name, for it is not only a great improvement over its parent, but was the finest plant on our grounds, standing easily ahead of even such fine sorts as Papa Nardy, Mons. Jarry Deslozes, Beauty des Marches, Chautauqua and many others. It is not only unexcelled as a plant, but it produces such a quantity of strong, heavy roots as will commend it to the commercial grower.

There is a great difference in the production of roots of different varieties, and yet the city dealer wants the commercial grower to raise all sorts at a flat or uniform rate. The grower can afford to grow 500 Robusta or President Carnot for less money than he can 100 Black Beauty, and the same is true of many other varieties. Will some one please tell us why we should be asked to grow all at a uniform price?

Among those seedlings that we do not know the parentage of are several of our best ones. Our second best we have named Royal Bronze, which stands as far ahead of all the bronze sorts we have ever grown as does our Queen of Beauty above the green-leaved sorts, standing 7 to 8 feet high, with large, broad leaves of a rich purple color seldom seen in any plant, and with good sized blooms borne well above the foliage, and of the darkest purple shade we ever saw in a canna.

We consider this and Royal Neighbor the two best bronze foliage cannas in existence, and we expect them to become leaders among new and popular sorts.

So far we have only mentioned a few of the most promising of our taller varieties, together with two or three dwarf sorts. We have also many dwarf kinds of merit, but they must be spoken of in a future article, and we expect it will be hard to convince many growers of the great superiority of the taller sorts until they have seen some of our magnificent varieties growing in all their splendor. A good center of either green or bronze in a 7 to 9 foot bed, with the outside set with a dwarf variety of the other color, makes a beautiful bed, and we would recommend that the center plant be never less than a 6-foot variety; the outer variety 2 to 3 feet shorter than the center will then give a good chance to display the beauty of both. Besides good varieties, three things are essential for success—deep spading, heavy fertilizing and frequent watering.

L. H. READ.

Fruitvale, Ala.

(To be continued.)

Carnation Red Sport.

Editor Florists' Exchange:

We are forwarding you by express to-day, prepaid, sample blooms of our red Sport (of Maceo), which we trust will arrive in good shape. (Illustrated herewith.)

Every grower who saw Red Sport growing here last December was carried away with its possibilities as a source of future supply of Christmas red. Everybody is impressed with its great productiveness, vigor and health. There is no choice in the blooms; they are all of a uniform size and color. There are probably 50,000 buds and blooms in various stages of development showing at this time, and there is not a split or off color flower in the lot. During the glut the first part of this month we were only able to get 4c. for fancy Lawson, but we sold every Red Sport bloom we had for 5c. each. A good bright red is always in demand at a paying price during the winter months, and Red Sport can be depended on to give a heavy cut during the winter.

Every grower who has been here to see Red Sport has placed an order for rooted cuttings. We will plant 20,000 of it, for blooms, the coming season, and every flower we can cut is already engaged by two Washington retailers.

MUSHROOMS GROWN FROM PURE CULTURE SPAWN BY H. A. STEVENS CO., DEDHAM, MASS.

CLUB AND SOCIETY DOINGS

THE BOSTON GARDENERS AND FLORISTS' CLUB will hold its next meeting on February 21. A subject of special importance will be the decision of what form the certificates offered by the club will take. Anyone wishing to show any novelty may do so by sending the same addressed to Horticultural Hall and marked for Gardeners and Florists' Club.
J. W. DUNCAN.

AMERICAN INSTITUTE WINTER EXHIBITION.—The seventy-fourth fair and Winter exhibition of the American Institute occurs Wednesday and Thursday, February 15 and 16, at 19 West 4th street, New York. Prizes are offered for apples, pears and potatoes. Meetings will be held under the combined cooperation of the American Institute Farmers' Club and Horticultural Section, the New York State Fruit Growers' Association, the New York State Bureau of Farmers' Institutes, the Horticultural Society of New York, the Connecticut Pomological Society, the New Jersey State Horticultural Society, and kindred organizations, when addresses will be delivered by such prominent horticulturists as S. D. Willard, Professor Bailey, Professor Hall, Dr. W. H. Jordan, J. H. Hale, Dr. Britton, James Wood, Professor Johnson, George T. Powell, C. L. Allen and others. Arrangements have been made for reduced railroad rates from all points in the State of New York, on the fare and one-third certificate plan.

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY.—This society held its regular meeting last week Wednesday, and more members turned out than for a long time. A goodly number of guests were also present to enjoy Professor Barlow's very instructive address on "Economic Insects." The San Jose scale and elm beetle came in for a lengthy discussion after the professor had finished; and so interested did the members and guests become in these subjects that the hour of adjournment arrived without any regular society business receiving attention.

Our next meeting takes place Wednesday evening, February 15, when the executive committee will report its schedule of premiums for the coming year, also advise the society in regard to the exhibitions to be held. Quite a little interest has been taken in the rose and strawberry show, which has always taken place the latter part of June. Some wish to do away with it, as it is contended that it comes at the busiest time of the whole year for our gardeners. One plan suggested is to hold our annual Fall show in the month of August and make it a society function the same as the horse and dog shows are now; this would do away with both the June and September exhibitions.
F. W.

THE NEW JERSEY FLORICULTURAL SOCIETY held its tenth annual dinner on Friday evening, February 3, in Elks' Hall, Main street, Orange, N. J. The affair was one of the most successful the society has ever had. In conjunction with the dinner, the annual meeting was also held, a notable feature of which was an address given by Mr. Runkle, a wealthy citizen of Orange, and an employer of gardeners. The society has been holding exhibitions at its meetings during the past year, when everything shown has been judged and awarded points; and to the growers having the largest number of points to their credit at the end of the year suitable prizes were awarded. Twelve silver cups had been provided for the prize winners, and these were handed over at the close of the dinner. Secretary W. J. Bennett read his annual report, as also did Treasurer Malcolm McRorie; the latter showing the society to be in excellent condition financially.

The dinner was heartily enjoyed, and it was at a late hour when the last course was served. The tables were profusely decorated with flowers and plants, among the donors of these being John Hayes, C. Diedrich, D. Kindsgrab, G. Van Qualen, A. W. Bodwell, Peter Duff and Guttman & Weber.

THE TARRYTOWN HORTICULTURAL SOCIETY held the first meeting of the year on Tuesday, January 31. The newly elected president, Francis Gibson, occupied the chair and conducted the meeting in a pleasant and masterful manner. The prize of the evening, a pair of handsome sleeve links (given by L. A. Martin), was for the best plant suitable for table decoration. Several foliage plants and several flowering plants were placed in competition. The judges, Messrs. Mooney, Hastings and Nichols, after considerable deliberation, awarded the prize to William Scott, his exhibit being a plant of *Croton superba*. A very interesting discussion was brought out regarding the relative merits of flowering versus foliage plants for table decoration, the consensus of opinion seeming to lean to the plant in flower. The F. R. Pierson Co. exhibited several vases of carnations and were awarded a certificate of merit for Variegated Lawson; also honorable mention for vases of Flamingo and White Lawson. The secretary announced that he had the offer of two special prizes for the next November show—one from Mrs. J. B. Trevor, Glenview, Yonkers, of \$25 for the best twelve blooms of *Glenview chrysanthemum*, and a silver cup from F. R. Pierson for fifty blooms of Variegated Lawson. Both prizes were accepted and votes of thanks tendered to the donors. The next regular meeting of the society takes place on February 23.
WILLIAM SCOTT.

MASSACHUSETTS HORTICULTURAL SOCIETY.—Professor John Craig, of Ithaca, N. Y., was the speaker at Horticultural Hall on Saturday. The subject was: "Findings of an Orchard Survey in Western New York." There was a large and appreciative audience. This survey was made chiefly among apple orchards under the auspices of the Agricultural Department of Cornell University. Professor Craig said that the five leading apple-growing States are California, Ohio, Illinois, Pennsylvania and New York. He touched on the age of trees, methods of pruning and the general cultivation. Some statistics on spraying were given, and he emphasized the necessity of spraying as a protection against insects and diseases, giving data to show the comparative value of fruit from sprayed and unsprayed orchards.

At the meeting of the Board of Trustees ten new members were elected.

Some fine flowers of seedling amaryllis and *Gardenia florida* were exhibited by Alex. Ogg, gardener to Mr. J. Montgomery Sears.

The first show of the year will be held Saturday next when carnations will be the feature. A number of special prizes are offered by both flower markets, and there is indication of a very fine exhibition.

The garden committee is planning another spraying demonstration, to take place about the end of April, with a view to the encouragement of the destruction of brown-tail and gypsy moths. An important duty of the garden committee is the examination during the season of the various gardens, greenhouses, plant and vegetable houses that enter for competition in the prizes offered by the society. Anyone wishing to compete in these classes, or growing any special

CARNATION RED SPORT
Growers A. B. Davis & Son, Purcellville, Va.

subject that would be worthy of the consideration of this committee, should procure a schedule, or get full particulars from the secretary of the society, Wm. P. Rich, 300 Massachusetts avenue.

J. W. DUNCAN.

PHILADELPHIA FLORISTS' CLUB.—Tuesday evening last was carnation night at the club; a very good attendance was on hand, there being many members present who had not attended for some time. The exhibition of new carnations and the paper by Edw. Stroud were the attractions. The exhibits were as follows: Strafford Flower Farms (Edw. A. Stroud), a vase of 50 blooms each of Mrs. Lawson, Harry Fenn, Prosperity, Flamingo, Judge Hindsdale, Enchantress and Mrs. M. A. Patten, all perfect flowers, of fancy grade—a most creditable display; John E. Haines, Bethlehem, Pa., staged a vase of his red carnation John E. Haines, one of his new yellow Star of Bethlehem, a vase of Imperial, and a vase of mixed seedlings. H. Weber & Sons, Oakland, Md., sent a vase of their grand white My Maryland, which was the admiration of all present; Guttman & Weber, New York, had a vase of their new carnation Victory; this variety, while seen in this city before, is making more friends each time it comes before us; Joseph Black & Son staged some flowers of a new white seedling carnation (Scott × Enchantress), a large flower of good promise; Davis Bros., Bloomsburg, Pa., had a vase of Crisis, a vase of new white, Mary Albert, and a pink seedling, all apparently of good commercial value. Emil Leiker, Lansdowne, Pa., staged a vase of a crimson seedling; John Kuhn, of this city, three vases of seedlings, one that looks like something of good value, a perfect flower of a rose-pink shade and with good stem.

The paper on carnations by Edward Stroud was an interesting one and will appear in our next issue. In addition to his paper he gave a review of the recent exhibition in Chicago, which was much appreciated.
DAVID RUST.

NEW YORK FLORISTS' CLUB.—The eighteenth annual dinner of this club took place at the St. Denis Hotel, Broadway and Eleventh street, New York, Saturday night, February 4, and was a pronounced success. Some 63 gentlemen sat down to the excellent menu provided. To aid the appetite the dinner committee—Messrs. Sheridan, Hafner and Craw—had arranged that music be supplied while the guests were busy disposing of the various viands and liquids. An enjoyable program of vocal and instrumental music was furnished by the favorite entertainer, Tommy Baker, and his assistants. Mr. Baker had printed the choruses of his various songs, each diner receiving a copy, and all joined lustily in the singing at the proper time. Tom Ballantine was also on hand with his side-splitting stories; and, taken as a whole, the entertainment was most thoroughly enjoyed.

Mr. Sheridan acted as toastmaster, and demonstrated the truth of the axiom, that "practice makes perfect;" seldom, if ever, was the genial gentleman in better form. There was no set toast list. The speakers called upon those their own texts. Brief addresses were made by President Traendly; Vice-President J. Austin Shaw, Messrs. O'Mara, Stewart, Esler, Weathered, Totty, Burns, Wallace, Berry and Birnie. The theme of most of the speakers was the progress making by the club, its effective work for the cause of horticulture, and the efficiency of the present president, whose candidature for the position of chief executive of the national society is receiving considerable attention from his many friends both East and West. Mr. Stewart urged that the club acquire property and build its own hall; in fact, every club and horticultural society, he said, should own its own rooms, in which meetings and exhibitions could be held. Mr. Burns commented on the representative character of the gathering, which embraced every branch of the trade.

The tables were charmingly decorated, among the donors of stock being John N. May, of Summit, N. J., rose Wellesley, John E. Haines, Bethlehem, Pa.; carnations, John E. Haines and Star of Bethlehem; The Cottage Gardens, Queens, N. Y., vases of seedlings and Ethel Ward carnations; Guttman & Weber, New York, carnation Victory; miscellaneous cut flowers from Traendly & Schenck, Walter F. Sheridan, John I. Raynor and John Young, wholesale commission florists, New York, and a vase of orchids from Lager & Hurrell, Summit, N. J. Votes of thanks to the donors and to the dinner committee, with the singing of "Auld Lang Syne," closed the proceedings a little before the midnight hour. It was a great night.

PITTSBURG AND ALLEGHENY FLORISTS' CLUB.—The February meeting of the Florists' Club, held last week, was so well attended that there was hardly room enough to seat all the members; almost 60 were present. The election of officers resulted as follows: T. P. Langhans, president; E. C. Reineman, vice-president; T. Joslin, secretary; F. Burkl, treasurer; E. C. Ludwig, assistant secretary; executive committee, J. Bader, P. Randolph and F. Burkl. Two new members were proposed and four elected, making almost 160. The subject for discussion was carnations and a good display of blooms was on hand. H. Weber & Sons, Oakland, Md., showed their prize winner, which received the bronze medal at Chicago, My Maryland; it was highly thought of and pronounced a splendid white. F. R. Pierson Co., Tarrytown, N. Y., staged White Lawson and Variegated Lawson, very fine blooms. There is very little demand in our city for any variegated sorts. A. J. Guttman, New York, had Victory, a fine red, one of the best keepers at the show in Chicago. John E. Haines, Bethlehem, Pa., had his new red sort, John E. Haines, a good variegated Imperial, yellow Star of Bethlehem, and a white seedling No. 337. A. B. Davis & Son, Purcellville, Va., showed Red Sport, which was very good. J. L. Dillon, Bloomsburg, Pa., sent his new scarlet Crisis, good blooms. The Washington Floral Co., of Washington, Pa., had the good old red variety, G. H. Crane, and A. Lorch, of De Haven, Pa., one of our young local growers, showed a good collection of flowers. The Pittsburg Cut Flower Company staged Lady Bountiful, Fred Burkl, Mrs. M. A. Patten, Mrs. George M. Bradt, Indianapolis, Dorothy, Mrs. Lawson and Flamingo. These flowers came from various growers, some from A. Herr, Lancaster, and from the Bakerstown Rose Farm. Flamingo is considered by Mr. Burkl the best red to-day. Mr. Jenkinson, gardener at Peacock's private place, showed a fine bunch of flowers.

Some blooms were expected from E. G. Hill and C. W. Ward, but did not arrive in time.

In discussing the Mrs. Lawson as a pink, it was thought by the dealers that a better pink color was very desirable, but as the grower finds the Lawson to be a good bloomer with good stem, and large flower, it is the most profitable to grow. W. Clark said it was too bad that the Lawson was found, for it is not really a pink, and a very stiff flower, and being a good producer it keeps other pinks from being cultivated. There is still room for a good pink. We have very good whites and reds, but as yet nothing in a good pink equal to them. The president appointed W. Clark, E. C. Ludwig and J. Wyland a committee to pass on the blooms exhibited.

Wm. Falconer, who declined the presidency for another term, was presented with a sterling silver coffee service from the members of the club. Presi-

dent-elect Langhans, secretary of the Pittsburg Cut Flower Co., in presenting it to Mr. Falconer, in behalf of the club, and in accepting the presidency, spoke in part, as follows:

"The club has been highly successful, whether viewed from an educational, commercial, or social standpoint. We have come together and frankly told each other what we knew, or thought we knew, about our art and our business; we have made exhibits of flowers, plants, florists' and gardeners' material, interesting in themselves and of great educational value to our profession. I am certain that no one who has attended our meetings can truthfully say he has learned nothing at them, and received no benefit from them. Let us continue to conduct the club just as we have been doing, with the same frank discussions and the same interesting exhibitions. Our efforts to make the club a success will surely rebound to the individual advancement and profit of each member. The club enters the year under favorable and encouraging circumstances. Our secretary's report shows an enrollment of 153 members, and the finances are in good condition.

"The club's present flourishing condition and its well-attended meetings are largely due to the untiring efforts of the retiring president. He won our respect and admiration when he presided at our meetings, and kept alive the interest in them; but even more did we respect and admire him when as an earnest club member and enthusiast in his chosen life's calling he gave us the benefit of his deep learning and acquirements, and his extensive experience. We have learned to appreciate his excellent qualities of head and heart.

"Mr. Falconer, I know I voice the sentiment of every member when I express the gratitude we feel toward you and our regret to have you vacate the chair. The members desire me to thank you for your valuable services to the club; and to show their appreciation in tangible form have delegated me to present to you this sterling silver coffee service, and thus have you constantly drinking to our health and the success of this society. Accept it as coming from your sincere friends, with their best wishes for your future happiness and well-being."

Mr. Falconer was greatly taken by surprise. He thanked the members for the gift; he hoped they would come to see him and drink a cup of coffee with him. Several other members spoke of Mr. Falconer's untiring efforts in bringing the club up to its present high standard and hoped that he would still be a leading hand in continuing it so, which he promised to do. The next meeting in March roses will be discussed and exhibited. E. C. R.

THE KENTUCKY SOCIETY OF FLORISTS held its February meeting at the home of Joseph Wettle, Louisville, Ky. After the business of the society had been transacted, Mr. Wettle invited them to partake of refreshments. During the repast, incidents and jokes of the late Carnation Society's convention were told by those fortunate enough to have been there. The next meeting of the society, on Tuesday, March 7, has been designated Rose and Carnation Night, and we, who for various reasons could not attend the late convention, would like to see some of the good new things. Anyone desiring to exhibit can send flowers to our secretary, F. L. Schulz.

Charles Bechstedt.

Charles Bechstedt, florist, Oswego, N. Y., died February 3, after an illness of several months. He was a member of the Oswego Lodge of Elks, Aeonian Lodge, F. & A. M., Ancient Order of United Workmen and the G. A. R. He is survived by his widow, one son, Carl, and one daughter, Miss Carrie Bechstedt.

P. W. Gillette.

Preston Wilson Gillette died at Portland, Oregon, January 28, 1905. Mr. Gillette was descended from French Huguenot ancestry. He was born in Lawrence County, Ohio, June 2, 1825. His father was a nurseryman, and after his school education was completed young Gillette learned the nursery business. During the Pacific Coast gold craze he left for that section of the country, finally locating in Oregon, where he conducted a nursery business. With possibly one exception, he was the first to introduce into that locality cultivated strawberries—Hovey's seedlings—and the red and yellow Antwerp raspberries. It is believed he brought the first collection of ornamental plants to Oregon, such as lilacs, honeysuckles, etc. Aside from the Mission rose, there was but one other cultivated rose in Oregon prior to the stock he secured from the East via the Isthmus, early in 1853.

Mr. Gillette was a member of the Legislature from Clatsop County in the sessions of 1862-64, and also of the special session when the fourteenth amendment was adopted. He was an ardent Republican in political faith, and was a frequent contributor to the press on matters relating to pioneer days. For many years he was a member of the Oregon Pioneer Association, and became an enthusiastic member of the Oregon Historical Society during the first month of its existence in 1899.

Plant Improvement by Hybridization.

(Address by H. H. Groff, Simeoe, Ont., delivered before the American Breeders' Association at Champaign, Ill., February, 1905).

At the last meeting of your association, held at St. Louis in December, 1903, I presented a brief address on the general advantages to be gained by breeding from "tame," versus "wild" species.

In presenting these advanced views, which were the result of years of personal observation and practical experience in such system of plant breeding, I took it for granted that the primary point, as to the actual possibility of creating domestic species by hybridization, had been generally admitted; in fact, some two years ago I recorded my contention on this point through the New York horticultural press.

It was, therefore, with some surprise that I saw the recent references made by Professor de Vries, of Holland, in his address at St. Louis, last September, reported as a "discovery." If there is such a discovery in connection with this important result of scientific plant breeding, and if my original public reference to

STANDING WREATH

Artist, F. C. Read, Orange, N. J.

Photo by J. B. Davis

the fact antedates that of Professor de Vries, I desire to claim the honor for America.

The Darwinian theory as to the natural creation of species is none the less true, but that such theory was intended to be accepted as an insuperable barrier to the results of scientific effort could never have been thought of. It stated what we know to be perfectly true in nature—that the creation of wild species requires ages of time. But as I have recently expressed it: "The unfettered mind of man has bridged the ages, and in hastening evolution by hybridization has rushed into the eons of the future, and laid their treasures at our feet."

It would not be possible in a paper like this to detail the many points and features of this important aspect, resulting in my experience from my recognition of domestic species among my advanced creations, during years of constant and critical observation in the field, from several hundred thousand new seedlings of the gladiolus, as such detail is capable of limitless elaboration as to its actual and possible application in scientific and economic plant breeding.

You will appreciate my statement when I say that, although endowed with a fertile imagination and optimistic temperament, with the added advantages of a life of business training to perfect my mental balance, I confess to a feeling of helplessness at the immensity of the visible field for practical, valuable and useful results arising from my limited application of the system of plant breeding advocated by me.

I used the word "limited" advisedly, for the reason that my use of parents bred from various wild species has been with the object of meeting existing

commercial and popular demands, and consequently I have only attempted a few of the many lines of possible use at my disposal. You will, therefore, understand me when I claim the limitless possibilities opened up by the few lines so selected, as compared with an attempt to compass the immensity of the whole of the visible field.

Here again the visible field is found to be but a border of the limitless reaches of eternal possibilities, and can you wonder that if the human mind falls at the prospect opened up by a fraction of its revelations, how may we hope to grapple comprehensively with its immensity, were even a portion of the remainder effectively availed of. Then, further experiments in a fraction of a section of the visible field have proved to me that even here the development of new forms and types promises to multiply indefinitely in the sub-section so chosen for elaboration; so that specialization becomes imperative, and having chosen the best lines apparent to our restricted perception, it would not be wise—if it were possible—to return to the center, and radiate indefinitely in aimless experiment.

The practical and general application of my system may be outlined as follows: In order to secure the benefits of existing material, make crosses between every available type, regardless of apparent objectionable characteristics. Select sires from these and use on every wild species obtainable, on special and general lines—crossing and recrossing until desirable types are produced. Then bring the selected offspring of all wild species together in intercrossing on special lines, as each wild species will prove more useful than another in some individual feature valued by us, for, as already indicated by me, specialization becomes imperative.

The result of the foregoing will be the creation of new domestic specific types, valuable as sires for use in revitalizing crosses on existing varieties of merit, and the production of new forms and types of unexpected quality and value.

The following article, contributed by me at the request of the editor of Horticulture, Boston, last December, will further explain and make clear what I have just referred to in brief:

"The system of plant improvement referred to in issue of December, 1904, is of such a primary character, and so comparatively barren of results, that in this day of valuable time I can hardly reconcile such dallying on the border of a field of limitless possibilities as consistent with our boasted twentieth century progressiveness.

"Selection of varieties and raising naturally fertilized seedlings from such selections, is only a short step toward an infinitesimal fraction of the possible satisfaction open to all plant breeders, who must be considered as advancing, more or less slowly, toward the ever-rising—but never to be fully risen—sum of scientific horticultural achievement.

"The first step should be hybridization or cross breeding between such selected varieties—irrespective of color or race—to the limit of variation and stability, with a contemporaneous systematic effort to develop domestic specific types from every obtainable wild species, by using pollen from these advanced selections. These efforts should be conducted on many lines, with the hope of rendering the possibilities of each species controllable for the definite use planned by the operator.

"For example: If the desire is to produce a white section, every effort should be made to originate such colors and shades from every known wild species, without regard to their colors. When fixed types of a desirable character have been so produced these should be used as sires on selections from existing varieties as mothers, for the creation of new and valuable economic types.

"While the foregoing operation is progressing for the production of commercial types, crosses should be made between all of these sires on individuals prepared for use as mothers by removal of the anthers before ripening of the pollen, with the object of creating new and distinct domestic specific types to be used as the progenitors of new forms and races, as well as for the revitalization of strains possessing valuable characteristics worthy of perpetuation and elaboration.

"The results to be obtained from blending vital forces that have been isolated for ages in the natural production of wild species gives unbounded satisfaction, and the pleasant surprises are only limited by the activity of the worker.

"In my work on the gladiolus, some of the most beautiful red shades come from crosses between light types that had been revitalized by a dash of choice red blood from new species. The effect of working through the light section added most materially to the substance of the flower.

"My highest satisfaction, however, is from a series of new forms with large, round, cup-shaped flowers, like the tulip or nymphaea. Many of these are self colors, ranging from pure white to lilac and pink, with intermediate shades of the most delicate shell pink and flesh tints.

"Multiplicity of the floral pieces, as in semi-doubles, is now quite frequent. Infusions of such blood induce twinning from the seed so produced, a point that proved most interesting to Professor Bateson, of England, at the International Plant Breeders' Conference, New York, 1902.

"Valuable and interesting variations like the above are among the side lines of limitless possibility yearly made apparent to the ardent worker, and selections made by me from over a half million of my new creations give promise of endless satisfaction, as well as increased opportunities for greater and more rapid progress in the future."

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the **standard treatise** on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a **complete remodeling, revision and extension** as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a **complete encyclopedia** of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of **illustrations**. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with **GENERAL PRINCIPLES**; THE SECOND PORTION is devoted to directions for the **CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS**—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon **FRUIT CULTIVATION** in all its branches, both under glass and outside; and THE FOURTH PORTION upon the **GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS**.

THE GARDENER'S ASSISTANT has been made the **SOUNDDEST** and **MOST PRACTICAL**, as it is unquestionably the **NEWEST** and **MOST UP-TO-DATE**, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticultural Subjects. Write us for a Catalogue.

THE WEEK'S WORK.

Timme's Timely Teachings.

Snapdragons.

The blooms of *Antirrhinum majus*, produced under greenhouse culture, can be sold at excellent prices and in large quantities from early Fall until the following Summer at any place where flowers are sold and bought—a fact our growers have been slow to discover. What the most of our florists know of snapdragon, if anything at all, is based on what they have seen of it in the gardens, either as a sort of mediocre border plant, of a cut flower makeshift during the Summer months. But the very best outdoor snapdragon, although raised from seeds out of the very same package, is but a weed when compared with that which is skillfully cultivated and flowered under glass. One can grow pretty good roses and carnation blooms out in the field, but good snapdragon flowers can only be raised in a glass house, and they are there at their best from March until June; and at that time they are truly one of the grandest sights and best money-earning crops under our fingers, not excepting either roses, carnations or chrysanthemums.

To produce the A. No. 1 article, that sells at sight and brings the high price, may require some experience, which, after all, is the best teacher. On a few places where the snapdragon as a money-maker had been given a more or less thorough trial, the growers met with partial or total failure, and all because some minor details in its culture were not considered of sufficient importance to deserve attention. Any grower of cut flowers who can spare a bench or two for snapdragons the coming season should now provide the necessary stock. This is a splendid time to make a start. Cuttings, of which every one roots in a week, can now be had from older plants, if they are at hand and in full vigor. If not, the seeds of the separate colors—white, yellow, pink and red—will have to be sown now. The snapdragon comes fairly true from seed, but seedling plants are more vigorous than those from cuttings, and, therefore, and because they develop in growth more unevenly, they are not as easily managed as the stock derived from carefully selected cuttings. The beginner, starting with seedlings, will, however, be enabled to work up a fine and choice stock the second year.

Seedlings, as well as cuttings, when rooted are potted off into little pots, given a carnation house temperature, re-potted into 4-inch pots in March or April and then placed into frames outdoors, where unless hit by hard frosts occur no covering of any kind will be required. The plants are not stopped or cut back, but all flower buds should be pinched out and the plants afforded just enough water to keep them from wilting all during the Summer. If the plants send their roots through the bottom of the pot into the underlying soil, which most of them will, no harm is done, as long as these roots need not be sacrificed at the time of benching.

The plants will attain quite a size during the Summer, but the office of this first growth is only to fully develop the plant and prepare it for a vigorous second growth, which starts in the form of very stout shoots from the base of the stem, or rather, the crown of the roots. It is this second growth which we depend upon as the bringer of money in the growing of snapdragons for profit, and only plants pretty far advanced, as these 4-inch plants will be at the end of Summer, send up from their base the right kind of sturdy shoots which under glass will develop into those superb spikes of bright-hued flowers on strong stems, 5 and 6 feet long. If they are wanted as early as Christmas, the plants must be benched early in August. Any fairly good soil in the bench will do. They should be planted rather deep, at distances of 12 or 14 inches each way. When the second, a much stronger growth, is about 6 inches high, the first or Summer growth, is cut away clean, as are also all straggling side branches and undergrowth appearing later.

As the plants advance in their growth plenty of water must be given and the temperature for this holiday crop should not sink much below that which was provided by nature in September and October when the start was made. Some of the now rapidly growing stems may need stakes; all of them must be kept growing as straight as poplars. This Christmas crop, although fine and good property, indeed, will, in point of quality be surpassed by snapdragons kept in frames until late in the Fall, then benched and kept until February in a temperature just above freezing point, after which a gradual rise up to not higher than 50 degrees is given, by which course the warmer days of Spring will be reached and further firing discontinued. As the days become warmer frequent watering and ample ventilation will be necessary.

FRED. W. TIMME.

CANADIAN NEWS

MONTREAL.—The visit of the Governor General, Earl Grey, to our city gave a decided impetus to business. The decorations at the public reception to the Governor at the City Hall were arranged by Mr. Pinoteau, the city gardener, who excelled himself in decorating the very large halls and stairways. Mr. Bain decorated the Board of Trade's immense hall with laurel and palms. McKenna & Son put up very fine table decorations for the Canada Club dinner. Mr. Bain also had a share of this order.

At the carnation show on Feb. 23, a silver cup will be offered for the best hundred blooms, any variety, and another silver cup for the best exhibit. Certificates of merit will be awarded, if worthy, to the best in each class of 25 light pink, 25 dark pink, 25 medium pink, 25 scarlet, 25 white, and 25 variegated. W. C. H.

HAMILTON, ONT.—We are having some good cut flower weather. The temperature, has been steady and cold, but the bright days run the heat up well and ease up the strain on the coal bin. Carnations are coming rather in over-supply. Violets, too, are very plentiful; both Mr. Morgan and the Webster Floral Company are sending in large cuts of Princess of Wales. Von Sion narcissus are now in good supply, but there is no overstock here.

A call on Sones & Sons showed their place to be in its usual trim, tidy shape. As evidence that the boys learned the art of using the hose, with a man who knew how to water, I saw large bunches of young Spring stock, in 2-inch pots, and not a dead plant. Such benches of stock might be called finger-posts to prosperity. Their new carnation houses are giving satisfaction. Glacier is their favorite white. Flamingo is well thought of, and Mrs. George M. Bradt is still grown here very successfully. A large batch of *Primula sinensis* was in as robust growth as any I have ever seen. Alfred Bailey had a section of his hot-water boiler blown out recently; by making some impromptu heating devices frost was kept out, but it was an awkward break.

J. F. Lindner, representing William Rennie, of Toronto, made his maiden trip through this section a short time ago. BEAVER.

Stem Rot in Cabbage.

Editor Florists' Exchange:

I have just written the enclosed in answer to a letter. Similar ones are as common as the day. It has occurred to me that the information it contains might be of benefit to your readers; therefore I enclose it. C. L. ALLEN.

The sad experience that your growers are having is common to all parts of the country. Doctors differ as to the cause. My impression is, and ever has been, that it is the effect of insect depredation rather than a disease of the tissues. I may be tight in this matter, possibly wrong. In our section the growers are all having the same difficulty. There is, however, the very best evidence that I am correct in my first statement. My reason is this: One of our largest farmers, or truckers, whose farm covers 250 acres in Greater New York, has grown cabbage to the extent of one hundred acres annually, and never has a particle of trouble from rot. His method is as follows: Around every plant, when he sets them in the Spring, he puts a small handful of shell lime, and does not let it come within an inch of the stem. This, he says, is to kill insects, and his purpose is accomplished. We have known others to adopt the same lines, and their cabbage is invariably sound and healthy, while their neighbors, who do not use the lime, are having the stem rot the same as that of which your farmers complain.

In some parts of New York State, where cabbage is grown largely for Winter shipment, they are beginning to be troubled in precisely the same way. So serious is the disease, or the difficulty, as to cause apprehension of discontinuing the cultivation. In confirmation of this let me say, it matters not what the crop may be, unless there is a regular rotation, either insect or disease is sure to come to destroy and to compel the farmers to adopt methods that nature always employs in her productions. Further than this I am unable to render you any assistance.

Review of the Market

NEW YORK.—The cut flower trade has fallen very flat this week, and there is no doubt whatever that the continued cold weather has been in a great measure responsible for the lack of business.

BOSTON.—There has been less activity in the calls for all kinds of material than in the previous week, partly on account of exceptionally cold and stormy weather and partly because of an increase of all kinds of stock.

PHILADELPHIA.—Better conditions are prevailing in the cut-flower trade this week. The supply of roses is not up to the demand in choice grades, and prices are stiffer.

BALTIMORE.—Business is fairly good, but there is too much stock to get rid of all, except good roses and Spring flowers, which are not too plentiful.

A new firm, Messrs. Christie & Richmond, has opened a store at Howard and Madison streets.

WASHINGTON, D. C.—The severe weather which we had all week interfered very much with business. A great many plants that were used for decorating suffered severely, and the transient trade fell off considerably.

CHICAGO.—Weather, where the thermometer stands at 20 degrees below zero, cannot be expected to liven up business. Sunday and Monday a severe snowstorm kept the buyers from investing in stock to any great extent.

CHICAGO.—Weather, where the thermometer stands at 20 degrees below zero, cannot be expected to liven up business. Sunday and Monday a severe snowstorm kept the buyers from investing in stock to any great extent.

Carnations are in large supply; the local demand has not been very heavy during the past few days. On Monday several houses had considerable stock left on hand at closing-up time.

Violets are not as plentiful as during the month of January, still they are seen in large quantities in some houses, ranging in price from 40c. to \$1.25 per 100.

INDIANAPOLIS.—A very satisfactory business has characterized the past week. Stock of all kinds is very plentiful and the demand is strong enough to keep any from going to waste.

ST. LOUIS.—Business, owing to the unusual cold weather, is very quiet. The ground hog made good his word; the biggest snowstorm of the season occurred Sunday.

Bulbous stock has increased in quantity in all grades. Von Sion narcissus bring \$5 per 100; Roman hyacinths and Paper White narcissus are very plentiful at \$2 and \$3 per 100.

American Beauty roses are fairly plentiful for all demands in all grades; extra fancy bring \$4 to \$6 per dozen; those at \$2 and \$3 per dozen are the best sellers.

In carnations the market is well supplied with all varieties and grades. Whites have the call; there is more colored stock just now than the demand calls for.

CINCINNATI.—Business, owing to the extreme cold weather, has not been brisk, but, at the same time, stock is very scarce and sells readily when received.

PROVIDENCE, R. I.—Carnations are plentiful at \$1.50 to \$3 per 100, and in good condition. Roses seem to be a little short at 3c. to 10c. each, but enough to go around.

CHANGES IN BUSINESS.

(Items for this column are respectfully collected from readers.)

MARSHALLTOWN, IOWA.—J. H. Wright has opened a cut flower store here at 204 East Main street.

YORK, PA.—Shireman Miller, a young farmer of Fairview Township, will start a fern farm and grow for market.

HONEYOYE FALLS, N. Y.—Anthony Carey has purchased a farm here and will engage in the nursery business.

SPRINGFIELD, O.—The Aldrich Flower Store, under the proprietorship of Baldwin McGrew, has been established at 25 East High street.

NORTH GLENNOVA, W. VA.—Mr. and Mrs. Klugas, of Caldwell's Run, have moved to North Glennova, where they will embark in the gardening business.

GENEVA, ILL.—John Leitzau has purchased the greenhouse business of Jacob Duer and will conduct the business in the future.

COLUMBUS, O.—The Fifth Avenue Floral Company, \$20,000 capital, has been incorporated by Claude K. Seibert, Martha Seibert, Guy W. Woodrow, Bessie S. Woodrow, Muris D. Seibert, and Nora A. Seibert.

BOWLING.

Table with 3 columns: Name, Score 1, Score 2. Includes names like A. S. Burns, W. H. Siebrecht, F. C. Holt, A. J. Guttman, J. A. Shaw, J. Fenrich, T. J. Lang, J. Hart.

THE NORTH HUDSON FLORISTS' BOWLING CLUB, at its weekly roll, made the following scores:

Table with 3 columns: Name, Score 1, Score 2. Includes names like Steinhoff, M. Hansen, Stern, Helms, Garreau, Birnie, Baumann, Tochup.

BUSINESS DIFFICULTIES.

HOUGHTON, MICH.—Lutey Bros., florists of Houghton and Calumet, have gone into bankruptcy, the amount of the firm's liabilities being in the neighborhood of \$13,000.

A FEW TESTIMONIALS.

Everybody Says So.

The Florists' Exchange is too good a paper for any one to give it up. Ohio. JOHN MICHELSEN.

It Is the Trade's Tutor.

The Florists' Exchange has always been the tutor of the trade. Oregon. GEO. GARRECHT.

Well Worth the Money.

The Florists' Exchange is a good dollar's worth of reading. Rhode Island. ALBERT A. BOONE.

A Young Man's Opinion.

Being a young man, with plenty to learn, The Florists' Exchange is a great help to me from week to week. New Jersey. CHAS. W. O. JONES.

Wants It Oftener.

The Florists' Exchange I count BY ALL ODDS THE FLORISTS' BEST PAPER, either for information on trade topics or for advertising. The only thing is, it is not issued often enough. Pennsylvania. C. C. YOST.

He Will Come Again.

The two insertions of my advertisement in The Florists' Exchange accomplished the result I desired; i. e., to reduce my stock of small ferns. I am well satisfied and will have some other plants to offer later on. New Jersey. HAROLD OTTER.

Advertisement for 'The Fumigating Kunk Powder' featuring a large illustration of the product and text: 'All That Use It Say "There Is Only One" FREE trial five-pound bag will cost you nothing more than the express charges on it.'

AT HALF PRICE

READ THE REASONS GIVEN

Natural Business Laws justify higher prices on Novelties than stock in normal demand and supply can command

An event unusual is that of a meritorious novelty—such as appeals sensibly to all growers of judgment—offered below half its normal price.

Nevertheless, as the full time and attention of the introducer are now fully demanded with other lines of his business, in planning to directly close out the limited balance of the originally grown stock of

Adiantum Croweanum

it is now on sale at less than half price.

As a standard novelty the sterling values of this fern develop more and more daily, hence this offering is no reflection on its true merits.

The following prices tell their own story:

Strong plants from 3-inch pots, \$2.50 per dozen; \$15.00 per 100; \$125.00 per 1000. 25 plants at 100 rate; 250 at 1000 rate. \$100.00 per thousand in 5,000 lots.

In order to ensure orders being filled, would-be buyers need to speak quickly.

LET NO ONE HESITATE NOW!

Philadelphia.

The Week's News.

Pennock Bros.' window contains a display with ideas for Valentine's Day—heart-shape boxes in various colors, fancy baskets of flowers, etc., which are all very attractive.

Samuel S. Pennock has commenced shipping daily to the Florida resorts. Reports from there indicate a very good season.

The Flower Market has decided to call another 25 per cent. assessment on the stock. So far, 50 per cent. has been paid in. This new assessment will be payable May 1. The market is doing a good business, and has wiped out an indebtedness incurred last year, closing the year with a profit. But it is doing a business of fifty thousand a year on a capital of \$6,700, which greatly handicaps it in making prompt payments to stall renters and consignors.

John Burton will build three houses, each 22x230 feet, this season, in place of old houses to be torn down, using Lord & Burnham material, including iron gutters.

Some of our growers report that they have used more coal this Winter than they did during the same time in the Winter of 1902-3. DAVID RUST.

Louisville, Ky.

News Notes.

The bowling experts must now look to their laurels; Louisville has entered the field, and Kentuckians never acknowledge defeat until it has been proven them.

Leo Zoeller, our new carnationist, is to be congratulated. It is a boy.

The weather conditions here have been unusually severe on the florists this Winter; for weeks it has nearly been impossible to deliver plants in quantity. A. R. B.

Cleveland.

News Notes.

The Cleveland Market Gardeners' Association held its regular meeting February 4 to change the constitution, whereby it can meet annually, instead of monthly, as the constitution now

reads, the reasons given—the inability of the gardeners attending, owing to the long journeys, the work on the farm, and the lack of produce to bring to the city. A permanent committee was appointed to look after the needs and take up various complaints of members and look after the general business of the association.

Many gardeners who have glass are venturing into the realm of flora, and are growing salvias, geraniums, coleus, petunias, cannas, etc., with more or less success and profit.

The recent cold snap of four days' duration, really the coldest we've had this Winter, has appreciably increased the cost of cut flowers, and reduced the supply. The quality of stock coming into the market, however, is fine.

Kirchners', Quincy street, reports good business.

Mrs. Adam Graham and son are visiting Hot Springs, Ark. O. G.

A SEEDSMAN INTERVIEWED.—

"Three warehouse fires in Michigan and California are responsible for a scarcity in seed beans," said S. Shawvan, the veteran seedsman of Janesville, at the Republican House in Milwaukee. "Last year's crop was none too large, and the result is that salesmen are having difficulty in getting enough seed beans to go the rounds of their customers. Seed peas are also scarce, owing to the great quantities which are used by the canning factories. It is no unusual matter for a salesman to dispose of \$6,000 to \$10,000 worth of seed peas to a single factory. There are a number of canning factories throughout Wisconsin which take as large a quantity as that mentioned. As the canning business is increasing rapidly, it has been a little difficult for the seed houses to keep up with their heavy demands.

"In a general way there is a strong demand for all kinds of seeds this year, and the business promises to foot up beyond the average. The houses are better stocked in other lines than in peas and beans, and no shortage is expected otherwise."

MISSOULA, MONT.—The Missoula Nursery Company reports business very good; this concern doubled its glass capacity last Summer, and still the demand exceeds the supply.

Why Do I Advertise?

BECAUSE it is a business necessity; in other words, I advertise that I and my family may be provided with a living—and something over.

Why Should I Advertise?

BECAUSE it is imperative that I let the trade know I am in business, and have goods to sell that they are in search of.

What Should I Advertise?

EVERYTHING I have to sell. That is what I grow my stock for.

When Should I Advertise?

AT ALL TIMES, making sure that my goods offered are reasonable.

Where Should I Advertise?

IN THE TRADE PAPER in which advertising is most profitable—something easily discovered. Profitless advertising is money wasted.

There is no sentiment in business.

The good advertising medium is known by the returns it brings to the advertiser. Advertising in THE FLORISTS' EXCHANGE always brings returns.

Chicago.

The Week's News. Sunday and Monday a severe snowstorm struck us, impeding traffic to a great extent...

The bowlers again took up work Tuesday night to get in trim for the contest at Washington, D. C.

Bassett & Washburn report shipping trade very good, this branch of the business taking nearly all their stock...

Thursday morning of last week a fire originated in the store of John Jangel, from crossed electric wires. The damage was estimated at \$400...

Wm. Niemann, of Norwood Park, will erect three new houses for carnations the coming Summer.

George Piepgras is again at his duties after a week's absence caused by a fall from a street car.

Singler Bros., at Morgan Park, will rebuild part of their range of glass the coming season, using modern construction.

Construction men report an active demand for greenhouse material for use the coming season, both for new and rebuilding operations.

Peter Reinberg will do considerable building, having already placed an order for 6,000 feet of cast iron gutter.

John Phearson has the sympathy of his many friends in the trade over his recent loss of an infant child.

Fred Sperry, of Vaughan & Sperry, has been confined to the house by an attack of la grippe.

ROBERT JOHNSTONE.

St. Louis.

The Growers' Club is to meet at Louisiana Hall on Thursday night, February 9, at 8 o'clock. Postals have been mailed to all who are eligible.

Fred Ammann, John Stiedel, A. Jablonsky, E. W. Guy and Frank Fillmore have returned from the Chicago convention, and their inspection trip through the carnation belt.

The Ellison Floral Company will, this week, finish moving to its new location. After everything is in order the firm will have one of the neatest stores in the city.

J. W. Pilcher, Kirkwood, is cutting a fine lot of California violets, and the best Enchantress carnations that come to this market.

Geo. E. McClure, at the Missouri Botanical Garden, has the orchid flowers in grand shape. The "devil's tongue plant" is in bloom at the Garden this week.

Pittsburg.

Business the past week was fair. The weather is decidedly cold, around zero for days. Funeral work was the best part of the trade...

Visitors have been numerous: B. Eschner, of Rice & Co., and M. Reukauf, of Bayersdorfer & Co., both of Philadelphia...

Wm. Falconer has been confined to the house with a bad cold for ten days, but is able to be about again.

E. C. REINEMAN.

Indianapolis.

The State Florists' Association held its monthly meeting Tuesday evening, February 7, at the Commercial Club rooms.

The retailers are showing bright-colored windows of Spring flowers. A. Weigand & Sons, a nice lot of jonquils and tulips...

Messrs. Walter and Herbert Bertermann have returned from New York. Visitors: Frank M. Bartram, Philadelphia; Wm. Hagemann, J. A. E. Haugh, Anderson, Ind.; Messrs. Van Zanten and Beerhorst, Holland.

Syracuse, N. Y.

News Notes.
The past week has been a busy one for the florists, and with table decorations, funeral work, etc., stock has been kept cleared up. Good roses are not quite so plentiful at present, but the demand is also light. Carnations seem to be holding their own. Ford Bros., North Syracuse, have the past season, erected the largest greenhouse plant for vegetable forcing in Central New York. A great deal of the product raised is shipped to New York city.

Visitors in town were: Dr. Rowlands, of Whitesboro, and Mr. Norton, of Mills Bros., Rose Hill Nurseries. Quite a number of the florists from this city will attend the Utica Florists' Club's annual carnation meeting, to be held February 16, when the new rose Wellesley, from the Waban Conservatories, will be on exhibition.
J. E. B.

Newport, R. I.

News Notes.
We are having the worst weather of the season thus far; mercury near zero for many days and in addition, snow, rain and hail—hard weather certainly to do business in. The seeds-men's catalogues are being distributed this week and it will not be long before the season is on.

Fadden has had more than the usual amount of funeral decorations to do the past week; Harrisii lilies, carnations and violets were largely used. Mr. and Mrs. Robert Hunnuck celebrated their silver wedding Monday evening of last week with a gathering of personal friends in the hall of the Merchants' Exchange building, Ziegler decorated for the occasion, and a general good time was enjoyed by all.

The gardeners are much interested in a new remedy for the San Jose scale that is being given a trial at the Rhode Island Agricultural College. It is a mixture of kerosene, limoid and water. The result of the trial it is hoped will be satisfactory.

Pierson Boilers

For Steam and Water are unsurpassed for efficiency and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 6, 1904. The two 'Pierson' sectional hot water boilers installed for our new houses one year ago gave exceptional satisfaction during the past winter, the most severe for many years, easily fulfilling what was expected of them, at the same time proving to be economical. We found them very easy to manage, that they responded promptly and heated the water in short time, thus giving splendid control of temperature in houses when sudden drop took place outside."

This is only One of Many WE ALSO MANUFACTURE AND SUPPLY FITTINGS, VALVES, PIPE AND EVERYTHING FOR HEATING

Plate 93

PUERARIA THUNBERGIANA (KUDZU VINE); also catalogued as DOLICHOS JAPONICUS

A valuable addition to the list of Hardy Vines, on account of its rapid growth. The leaves are large and handsome, of a light green color. The flowers, which appear in August and September, resemble those of the Wistaria, and are delightfully fragrant, possessing the perfume of ripe grapes, but the vine must be three or four years old before blossoms are produced. We are indebted to Mr. Edward Teas, Joplin, Mo., for the photograph herewith reproduced.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 7

NEW YORK, FEBRUARY 18, 1905

One Dollar Per Year

CARNATIONS

STRONG ROOTED CUTTINGS

WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white, with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

LADY BOUNTIFUL A magnificent white of last season's introduction. \$6.00 per 100; \$50.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices. In great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

Mention the Florists' Exchange when writing.

We are now prepared to book orders for 1906 for

THE COMING SCARLET CARNATION

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flower of the largest size, commanding the very highest price. This is going to be a money-maker.

Orders will be filled in rotation, as received. Delivery beginning December next. \$12.00 per 100; \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

A commercial estimate puts the 1904 bean crop of Michigan at about 4,000,000 bushels, 16 per cent. of which is unsound and fit only for feed for livestock.

DES MOINES, IA.—George A. Taylor and Charles E. Rogers have opened up a seed and feed store at 416 East Locust street. They will do a general gardening and seed business, carrying farm, garden and flower seeds in stock.

ANGERS, FRANCE.—Mr. Samson, well known in the foreign trade, he having traveled abroad the past eight years, has severed his connection with Messrs. Peignaux & Lorin, and has entered into partnership with Mr. Fillon, also in the seed trade. The new firm will be styled Samson & Fillon, and will make a specialty of growing seeds on contract. The capital is \$8,000.

TRAVERSE CITY, MICH.—Over 1,000 acres of seed peas have been contracted for with farmers of Leelanau County from one firm alone. This section of the State is one of the best for raising seed peas and beans, many thousand acres being contracted for annually.

CAPE VINCENT, N. Y.—The Cleveland Seed Company has been on the verge of going to Avon, N. Y., for some time past. It owns about 20 acres of land there, and the new building, the erection of which will probably cost in

the neighborhood of \$20,000, will be located on this land, and work will be commenced as soon as the frost leaves the ground. The company has made application to be exempt from the corporation tax of Livingston County for a period of ten years, the decision regarding which will influence the proposed removal.

TESTING CORN FOR SEED.—Bulletin (No. 96) issued by the University of Illinois Agricultural Experiment Station, is devoted to this subject. Several methods of testing are described and illustrated. It is stated that:

"The low vitality of seed corn the past season was no doubt caused very largely by freezing weather while the corn was either still in the field or not sufficiently cured to withstand the low temperature. It is to be hoped that the Fall of 1903 was an exceptional one in this respect, and that our recent experience may not be repeated. There is no way to guard against such falling temperatures, however. Moreover, if a season comes when our seed corn is frozen before it is put into storage, there is no way to correct the disastrous effects even with the most modern means of storage, unless we have some method of sorting out the ears which are unfit for seed."

COLUMBUS, O.—The joint convention of Eastern and Western canners and allied interests was in session in this city for four days of last week. One of the ideas most prominently brought before the convention was that there had been a heavy "overpack" in 1904, and it was generally conceded that this season steps must be taken to call a halt and limit production; also to try to develop the foreign markets more extensively.

As the canning companies are in the habit of buying seeds in large quantities and distributing them among the growers with whom they have contracts, so as to maintain uniform and reliable standard grades and varieties, they are naturally considered good customers by the seed firms. Accordingly the latter were out in force, with fine sample lines of sweet corn, peas, beans,

tomatoes, etc. Those represented at the Auditorium exhibit and the hotel where the proceedings were held were The Livingston Seed Co., of this city; the Cleveland Seed Co., Goodwin-Harris Co.; D. M. Ferry Co., Everett B. Clark Co., Milford, Conn.; Jerome B. Rice Seed Co., Cambridge, N. Y.; S. D. Woodruff & Sons, Orange, Conn. B.

TREE, GRASS, CLOVER AND AGRICULTURAL SEEDS.—Conrad Appel, Darmstadt, reports: Quercus robur crop not so good as that of Quercus pedunculata (both, however, fair), Quercus rubra, on the other hand, is reported to have yielded very little, and Fagua sylvatica failed altogether. Acer platanoides and Acer pseudo-platanus, Alnus glutinosa and Alnus incana, Betula alba, Carpinus betulus, Fraxinus excelsior, have been secured in sufficient quantities. Picea excelsa has been doing well in some districts. The yield of Larix europaea is satisfactory and prices are cheap. Abies pectinata yielded an average crop, good quality. Pinus strobus, only in some isolated cases could average quantities be gathered on this side. The crop of Pinus cembra turned out very small, whereas Pinus maritima and Pinus montana, also Pinus corsica, are satisfactory in quantity and quality. Of Pinus austriaca little has been harvested and good quality is much in request.

The various kinds of grass seeds have already been dealt with in my crop report last August; it will be remembered that the crop had been declared very satisfactory, on the whole, and prices as being lower than what had been seen for years. Concerning the market of the American grass seeds it will be found that the very cheap price of Agrostis capillaris has practically undergone no change since Autumn, and it now actually calls for speculation. Festuca pratensis and Poa pratensis advanced a few shillings in price during the last month owing to some large contracts, which have been made, the prices are nevertheless unusually low, but the upward movement continues.

Red clover, it appears that the western district including the Palatinat will produce very little more, if anything, whereas the crop of Wurtemberg is now arriving on the market. It is, however, not expected that it will influence prices in any way, as the seed is rapidly bought up by dealers. White clover is exceptionally cheap and of excellent quality. Alsike yielded only an average crop in Germany, likewise in Canada, so that markets are higher than last year. Yellow trefoil is equally high in price owing to a short crop, and crimson clover has arrived at almost prohibitive prices, nearly all the stocks being cleared.—Horticultural Trade Journal, England.

European Notes.

Weather conditions just now a simply ideal so far as the preparation of the land for Spring sowings is concerned. Fine, bright days and light frosts at nights have turned our best land into a perfect seed bed, a helped to destroy some of the mass vermin which had accumulated during the mild Winters which have preceded the present.

The growers, however, are not in complainant and amiable a mood, the clerk of the weather. Planting onions, say they, when they will realize at market as much as \$80 per ton, is wasting money. Radish is low in price that it hardly pays to thresh yet, and the heavy surplus 1903 seed in Germany prevents a hope of an immediate rise. Further the orders from your side are mainly confined to more delicate and forced varieties, which, even in a good season barely cover cost of production, that it is no wonder that growers decline the trade.

In Germany the position is aggravated by the steady and persistent rise in the price of sugar, which has caused the roots of sugar beet to rise from 40 to 60 per cent. in value, a set the farmers all alive for growth these in preference to seed crops of other season. A general rise of price both for annual and biennial crops therefore inevitable, and one can honestly say that the demand is just.

As regards our plants for biennial crops, conditions are not so promising as we could wish. So long as the seed had practically no power they did appear to suffer from the frosts which have on several occasions been very severe; but with the lengthening of the days, and seven to eight hours bright sunshine, the plants of some of the smaller varieties of turnips, after being frozen at night, are drawn out of the ground by the thaw during the day, and many have consequent dried up. This, of course, principally affects those planted on our strongest and best land, but even on the light sandy lands much harm has been done. Rutabagas, being planted somewhat deeper, have not suffered to the same extent so far as we are able to judge at present. Beets and some of the mangel are still in the pits; parsnips, carrots and parsley do not show any signs of injury, and the same is true of brassicas up to now.

Shrubs Propagated from Mature Wood

(76) I should like to ask through the columns of The Florists' Exchange the best methods of growing shrubs; Hydrangea p. g., Eleagnus longip. hardy roses and other shrubs some what difficult of propagation from mature wood. I have planted quantities of these above named for several years past and only succeeded in getting a small proportion of them to grow, although they were well calloused and planted in good order.

E. T.

—My experience has been altogether with layering the growing shoots of this hydrangea, and then rooting from green cuttings under glass in Summer. I have read of those who have claimed to root them from hardwood cuttings. Eleagnus longipes can be propagated by layering, inarching or from seeds. I have not tried hardwood cuttings. Probably, if you made your rose cuttings in late Fall and had them buried in sand in a cool cellar in Winter, they would callous well by Spring, and would then be more likely to grow when planted out. They rarely root well when made and set up in an unprepared condition.

J. M.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

SIoux CITY, IA.—John L. Elder has removed his flower store to temporary quarters at 409 Fifth street.

ANOka, MINN.—Dr. Ford has sold his interest in the Pratt-Ford greenhouses to M. L. Fisch, of Windom, Minn. It is understood Dr. Ford intends moving to California.

GIRARD, O.—John Geddes has sold his greenhouses to William Gerke, an experienced florist of Cincinnati, who has taken charge.

ROCK ISLAND, ILL.—The Rock Island Flower Store was recently opened at 331 Twelfth street. It is under the management of H. H. Hensley.

KALAMAZOO, MICH.—W. C. Cook late manager floral and ornamental department of the Central Michigan Nursery, has resigned from that company and embarked in a general nursery, florist landscape and decorative business for himself. His address at present is 621 Mabel street. He will open a downtown office in the near future.

American Institute, New York	SILVER MEDAL
New Orleans	GOLD MEDAL
St. Louis Show	GOLD MEDAL
World's Fair	GOLD MEDAL

Highest Award at Chicago, Ottawa and Toronto

First Class Certificates and Testimonials from all over the
country too numerous to mention

House of Scottii at my Flatbush Establishment

The COMMITTEE OF AWARDS at the St. Louis World's Fair said of NEPHROLEPIS SCOTTII: "A sturdy, Dwarf and compact form of NEPHROLEPIS, very symmetrical and handsome, either in small plants or quite large large ones. A great acquisition, with excellent qualities as a house plant. Worthy of Gold Medal."

Read carefully the best report ever given by New York Florists' Club
for a new plant.

The committee of award of the club visited the establishment of John Scott, of Flatbush, N. Y., on October 26, for the purpose of inspecting the stock of his new fern, NEPHROLEPIS SCOTTII. Seven members of the committee attended, also the president and vice-president of the club. The initial exhibit of this fern was made at the rooms of the club at the November meeting, 1903. The committee which examined it at that time was so favorably impressed by it that they unhesitatingly awarded it a certificate of merit, and did not ask to see it growing; a request to examine the stock was only recently sent to the club by the exhibitor. The committee made a thorough examination of the stock both in pots and on the bench, and character. It was growing in all sizes from plants in 4-inch pots up to specimen plants in tubs, and it was absolutely uniform, and were highly pleased at its condition form in all grades, the characteristics of the large specimen plants being evident in the smallest specimens on the place. **The most careful scrutiny failed to discover any tendency whatsoever toward reversion, and it seems as if the character of the plant is absolutely and indelibly fixed.** It is in essence a condensed form of the Boston fern, with valuable characteristics added, which are not evident in the parent. Your committee took an average plant in an 8-inch pot and found by actual count that there were 200 fronds in it, not counting the undeveloped and small ones which were in the center of the plant. The fronds of the plant in question averaged about 20 inches in length and three inches in width at the widest point; the pinnae are very closely set, so that they overlap, making a more finished frond than the parent. The plant in question had a spread of three feet. Plants in 4-inch pots showed a spread of 18 inches and a height of 10 to 12 inches. The committee was unanimously of the opinion that it is a most valuable introduction, and that it will become a plant for the florists to grow universally. It has a crispness and hardness about it which is superior to the parent, and which is one of its very valuable characteristics. It propagates very freely, and because of the fact that its character is established in the smallest size, it should find ready sale in all grades. After a thorough examination, your committee unanimously agreed that it was worthy of the highest award by the club and therefore voted that it be awarded the silver medal of the club, and herewith recommend same for your approval. (Signed) PATRICK O'MAHA, JOHN BIRNIE, ALFRED H. LANOJAHR, WM. H. SIEBRECHT, CHAS. LENKER, JOHN DEWBETT.

Scottii has received the highest awards whenever exhibited and for the past season has proven itself to be a **hardier house plant** than the Boston. There is no comparison between this fern and any other variety for commercial use.

Consult any grower, or retailer, who has bought Scottii, and they will tell you that it is as far ahead of the Boston as the Boston is ahead of all other introductions.

PRICES OF NEPHROLEPIS SCOTTII (March Delivery). All orders filled in rotation
2 1/4 inch, \$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000. 6 inch, \$15.00 per doz.; \$100.00 per 100
25 at 100 rate; 250 at 1000 rate.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

EVERGREEN CULTIVATION IN HOLLAND.—Writing of his impressions of European nurseries, in the National Nurseryman for February, 1905, C. W. Ward, of Cottage Gardens, Queens, N. Y., has the following to say of the evergreens cultivated in Holland:

"There was but one criticism from my standpoint against the Holland nursery, and this was that stock, as a rule, was grown too close together and not given sufficient air space. This results in a very close heading in of the plants in order to keep them down and from interfering with each other. This sharp cutting and the lack of circulation of air and sunlight around the base of the plants produces, in many evergreens, a thinness at the bottom of the plant which deteriorates its value, and this could be obviated by giving the stock a little more room. However, there is some excuse for the Holland nurseryman crowding his land in the manner in which he does, and that is the high rental cost of the land used for nursery purposes. I found that the average rental land in the most favored nursery districts of Holland exceeded, in some instances, the purchase price of land within rifle shot of the Cottage Gardens."

Spiraea Prunifolia.

Japan has given us more valuable trees and shrubs than any other country, we think. This is certainly true as regards shrubs. The one we have before us, *Spiraea prunifolia*, is from that country, having been introduced from there in 1844, about the time the popular *Weigela rosea* came to us from the same part of the globe. *Spiraea prunifolia* always was popular, as it is to-day. Dozens of spiræas have been introduced since, and very many of them have become indispensable, but none of them is of the character of *S. prunifolia*. It, as the picture shows, makes long, slender, although stiff shoots, strong enough that even its flowers do not weigh them down, of any account. Then it is one of the earliest to bloom in Spring, and the color of the flowers is a clear white. The illustration represents the double form, which is the one the longer known. The single blooming sort, is in cultivation, but the double form is preferred.

The style of growth of the bush photographed is the natural one, but by pruning, it could be made quite different. We took this one as representing its character, but had it been pruned back almost to the ground when it had finished flowering the year before, it would have produced shoots which would have blossomed from the ground to the top of their growth. This sort of pruning all spiræas need; that is, a fair cutting back. We say "almost to the ground," referring to this one, because it represents a neglected specimen in the way of pruning; it appears to have had none for some years.

Planted near an evergreen, or some other dark looking object, white flowered shrubs appear to so much better advantage.

JOSEPH MEEHAN.

SAN FRANCISCO.—A distinguished arrival this first week in February is Mr. George Compere, Government Entomologist of Western Australia, and discoverer of the parasite which feeds upon the larvæ of the codling moth. He came direct from Spain, where he discovered the parasite, and is already busy at the headquarters of the California Commissioner of Horticulture, propagating the insect for shipment to the various counties of the State. Already nine counties have been supplied with the destroyer, and the tenth jar goes forward to-day, February 4. "Outside of Australia," Mr. Compere remarked, "California is the only State in America that has thus far shown any material interest in co-operative work with Australia in this important matter, and the result is, we now have here a parasite that will add millions to the pockets of the fruit-growers of California by combating the deadly work of the codling moth among the apple and pear trees."

ALVIN.

Crimson Weigelas.

There is no better selling shrub in the whole list than the weigela. It is one of the good old stand-bys all florists and nurserymen want, and which customers will ask for so long as a knowledge of what a good shrub is exists. Every season sees additions made to the already full list of varieties. Among many others those with crimson flowers are greatly admired. Almost, or quite, the first of these to be generally cultivated was one called *W. floribunda*. To this has been added others, *Voltaire* and *Eva Rathke* among them. The last named is the most popular at the present time, being of rather bushier habit and more floriferous than the others.

Mentioning bushiness; is there among all the weigelas a bushier or more worthy one than the first of all introduced, *W. rosea*? If there is, I have not seen it. It is my choice of all, new or old. *W. amabilis*, and its variegated-leaved variety, are good, but all the rest, while possessing features of merit and being sorts we would not like to dispense with, are either tall growers or straggling ones, not of the regular, bushy growth of *rosea*.

Florists find a great call for weigelas for Memorial Day uses, and for this purpose all are more or less valuable. To get them with long branches, such as the customer desires them to be, the bushes should be cut down close to the ground soon after flowering, or a good many of the shoots cut down to get the strong branches for next year's flowering.

Mentioning strong shoots, these are the ones to use now for cuttings, where increase of stock is desired. Get them at once; cut them into lengths of about seven inches; tie in bundles and store away in a cool cellar, in sand or soil, and plant them out the first thing in Spring. Weigelas grow readily from seeds,

Rock Roses.

My impression is that among the rock roses grown in England the *Cistus laurifolius* and *Cistus ladaniferus* are considered the hardiest, and that of these two the *ladaniferus* leads in hardness. Several of the hardiest sorts were tried in Philadelphia some years ago, and of all of them, *C. laurifolius* was the only one hardy, and it was perfectly hardy, growing partly under some large deciduous trees. There was but one mishap of it. It grew to be four to five feet high in time. This one, and to some extent all, have a gummy surface of the under leaf, the gum being of a pleasant odor, and this it is presumed is the reason the common name is gum cistus, as well as rock rose. As these species of *cistus* are not considered very hardy in England, it was a surprise and a pleasure to find that *C. laurifolius* would stand our cold climate, where it met zero almost every Winter. The flowers of this *cistus* are handsome. They are white, with a yellow mark at the base of each petal. Unfortunately, the blossoms soon fall, lasting but a day or two, but then the bush continues producing them for a month or more.

This *cistus* is a native of Southwestern Europe. Being an evergreen adds to its value with us, where we have none too many broad-leaved, hardy evergreens. Those who wish to plant this shrub should set it in a protected place, and let it be one where its wood will be well ripened by the time Winter comes. It would not be apt to succeed where damp soil caused a late growth. With a good strong plant in one's possession an increase could soon be had, using green cuttings, and rooting them indoors.

I do not think there are any of the *cistus* native of our country, but there are of its near ally, the *helianthemum*, ten or more growing wild in our Northern States, and these are sometimes called rock roses here.

Trees or Shrubs to Hold River Bank.

A Tennessee correspondent asks me to name some trees or shrubs which will hold river banks, and he suggests that those having low branches would be desirable, to stem the rush of water and so prevent less washing. Among trees there are none better than willows. They are surface rooters to a great extent, and then their growth, if not bushy naturally, can be easily made so by pruning. Red birch, ash-leaved maple and hornbeam are also good to use. All can be made of bushy growth, and in the matter of surface rooting it must not be forgotten that all trees become of that character when in wet ground. But the willows are, certainly, the best of all trees for the purposes named. In the way of shrubs, the red snowberry is a capital one to use. Its underground shoots, as well as its roots, are binding, holding the soil well; and then its branches are so tangled and so close growing that the water is held in check by them. Common berry is another good shrub; so is the bush honeysuckle, and even the California privet answers well. The value of vines is well known. Honeysuckles and wild grapes might be used, and these would be the more effective if planted in connection with some shrubs, as all would mass together above ground. Good stock should be planted, to give it a chance to get good hold before a flood came.

The same correspondent suggested some evergreens as being suitable, and desired some be named. But evergreens would not do at all. Floods would deposit all sorts of rubbish on their foliage on low branches. These branches would be covered up with sand and rubbish, and would be killed thereby. And without this reason for their rejection there is another, in the fact that they would not thrive in such a situation.

Pruning Rhododendrons.

When rhododendrons are exposed to severe Winters without protection being given them, they often suffer badly; in some cases, not only are the leaves killed, but part of the branches as well. When this is the case, do not hesitate to cut them back well. It is a mistake to try to save them without the pruning when their wood is injured, evidently. It calls for the same treatment when the plants become straggling, and bushier shaped ones are desired. Cut them down as you would a deciduous shrub; they will break freely, and by the following Autumn their appearance will have become greatly improved.

Last Winter, though not a severe one, tested the hardness of many rhododendrons. In my own case, two supposed entirely hardy were badly hurt. I refer to *Minnie* and *Purpureum elegans*. When their condition was noticed in Spring they were cut down, as afore recommended, and by Autumn both had made nice bushes, as only some inches of the top were hurt.

JOSEPH MEEHAN.

Vassar Girl State Horticulturist.

NEW BRUNSWICK, N. J.—Miss Jean Voorhees, daughter of Director Edward Voorhees, of the State Agricultural Experiment Station, is filling the position of horticulturist at the station, formerly held by Professor Alvah Jordan, who resigned. She will probably get the official appointment. She is a graduate of Vassar, class of 1904.

SPIRÆA PRUNIFOLIA

and where the seeds are saved from sorts growing close together, great variation from types will occur, many of them worthy of propagation.

Roses as Ramblers.

Many of the climbing roses could be set out to grow at will as bushes, with little or no attempt at pruning them. When so grown they form large clumps of great beauty. Last season some large clumps of the wild prairie rose, *R. setigera*, and of the Japanese, *R. multiflora*, grown in this way, were objects of great attraction when in flower. These and similar climbing roses may be set out on banks, in a half wild state, and let ramble at will. Both the *setigera* and *multiflora* planted this way make a profuse display of flowers. The *Wichuraiana*, known as the memorial rose, is often planted in like positions, but its habit of lying almost prostrate on the ground fits it for uses other than the half wild one the others suit so well. The *setigera* and *multiflora* will, when the plants are strong, make shoots ten to twelve feet in length, and these shoots produce a mass of flowers the season following. Our landscape gardeners have found how useful these and similar roses are for massing purposes.

The *setigera* is usually one of those planted, both because of its beautiful single pink flowers and that it blooms later than the others.

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the **standard treatise** on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a **complete remodeling, revision and extension** as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a **complete encyclopedia** of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of **illustrations**. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with **GENERAL PRINCIPLES**; THE SECOND PORTION is devoted to directions for the **CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS**—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon **FRUIT CULTIVATION** in all its branches, both under glass and outside; and THE FOURTH PORTION upon the **GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS**.

THE GARDENER'S ASSISTANT has been made the **SOUNDDEST and MOST PRACTICAL**, as it is unquestionably the **NEWEST and MOST UP-TO-DATE**, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticultural Subjects. Write us for a Catalogue.

THE WEEK'S WORK.

Timme's Timely Teachings.

Potted Roses.

A shapely rose in a clean pot, showing a goodly number of buds and some open flowers, is a fast selling plant at any time, but especially so at Easter, or on Decoration Day. Easter is late this year, but it is now time to slowly start the plants into renewed activity to have them come on time, if wanted for that holiday. They will likely be backward in root formation, if potted up last November, since plants in their dormant state cannot be expected to do much in the making of new fibers. But now, when started in a temperature of 45 or 50 degrees, the deficiency in active roots will soon be made up, and in a few weeks the temperature may safely be raised to 55 degrees, and later, if found to be necessary, to 60.

Favorite varieties of the hybrid perpetual and hybrid tea classes and a few of the so-called monthlies can all be grown into attractive and fast selling specimens, by observing the simple rules which govern the raising of pot plants of a hardy, woody and more or less deciduous nature. These are: Strong, thrifty plants to start with, good soil, firm potting, thoroughly ripened wood, judicious and timely pruning during and after the first season's growth, an adequate period of rest, followed by a final growing season as close to natural conditions as is possible and consistent with gentle forcing.

The night temperature, when starting the hybrid remontant varieties, should not exceed 50 degrees in the first three weeks, to assure, above all, an even, plump and healthy break of growth. After this a little more heat is beneficial; but extreme forcing will not reward the grower with a stand of plants showing as healthy a foliage, or blooms as finely colored and of such firm texture, as those grown and flowered in a temperature between 55 and 58 degrees. A greater heat may be employed in the forcing of roses that are fully pot-established, such as were carried through the preceding Summer in their pots, having received their final shift in the Spring. While this old and approved mode of culture may entail a trifle more labor and care, it is by all odds yet the best, safest and most successful way of raising pot roses. The wood of plants, so treated, ripens earlier and more thoroughly, and is followed by a more even break all around, and the plants can be forced into bloom quite early, if this should be considered an advantage. Plants, pot grown, are not so robust and vigorous, it is true, as those from the field, but with most of the best hybrid perpetual roses even this may be regarded as a point of merit rather than a defect in the pot culture of strong growing roses. This method, as being the most reliable, has long since been adopted by the retail grower with limited bench room, who raises a few hundreds of the choicest and well-tried varieties of hardy hybrid roses in pots from year to year, not merely for his plant trade alone, but chiefly as stock furnishing him with a fine supply of cut roses from the middle of March until June. Such plants will do good service for several years in succession, if they are in the hands of an experienced grower.

The application of liquid manure before flowering, one yearly shift right after they have done blooming, and a sunny exposure all Summer outdoors well watered and sprinkled, and the pots sunk up to their rims into the ground, prepares them for another round of productiveness. If well managed, some of the varieties will ripen their wood early enough to enable the gardener, after having given them a good rest, to force them into full bloom by Christmas, as we used to do some twenty years ago with the variety, General Jacqueminot, and whenever the experiment proved a success, the profits were great.

Nice, thrifty roses of the hardy sorts are now most called for, when, not long ago, almost any kind of rose was

acceptable, if only in bloom. Every buyer of a rose in a pot must first be satisfied as to its hardiness, and then cares little whether all the flowers are out or not, as long as the color can be determined.

In forcing roses, the aphid, red spider and black spot are kept down by regular fumigation, frequent sprinkling and abundant ventilation, but drafts of cold air must not directly strike the plants, or the worst disfigurement to roses—a mildewed foliage—will be the consequence.

Where potted roses are grown mainly for a supply of choice cut blooms for early Spring, the grafted or budded stock can be relied upon as giving good results and throwing an abundance of flowering wood. But the plants need close attention and do not recover from a term of hard forcing to the full extent of becoming good forcing material for a following season. For this reason most growers, working on these lines, prefer roses on own roots, and for the pot-plant trade, grafted roses are hardly ever used, since they would have to be watched all Summer while growing in the field, make good potting a difficult job, and eventually cause trouble or disappointment to our patrons, when roses on their own roots if planted out and of the hardy class would give entire satisfaction.

Bedding Roses.

Any amount of young rose stock is purchased every Spring, especially for Summer bedding. Growers, lacking the proper article, often sell some of their 3 and 4-inch indoor rose stock, so as not to lose this particular kind of trade. Sometimes even the old plants done and worthless, are sold out of the bench for this purpose. This should not be, and the difficulty of raising good roses in our gardens should not be made greater than it already is. There are a few varieties of the so-called ever blooming class, and one or two from the hardier hybrid sections which do fairly well in the open during our Summers, and have given ample, if not entire, satisfaction. The best of these are: President Carnot, Maman Cochet, both the pink and white variety, Douglas, La France, Clothilde Soupert, Dinsmore and Kaiserin Augusta Victoria. These will make a rose bed look somewhat respectable, and will produce flowers worth picking.

Good stock in this line is such that has been obtained by last Summer's propagation, and should be ready for its last shift into 4-inch pots in about two weeks from now. A higher priced but much better class of plants is provided in the stock raised in the field last Summer, potted up in the Fall, kept in a place cool enough to let in slight frosts occasionally, and now placed on a light bench in a cool house, where the plants may remain until warm Spring weather furnishes all the heat wanted for their development into fine plants for bedding purposes. The best selling sizes are the 4-inch plants which also have proved to be the most profitable to handle.

CHRYSANTHEMUMS

Standard Large-Flowering Varieties

40c. per doz.; \$2.00 per 100; \$17.50 per 1000.

Bonnaffon. Clear golden yellow.
Col. D. Appleton. Large, globular yellow.
Black Hawk. Dark crimson.
Glory of the Pacific. Early, deep pink.
Golden Wedding. Grand, golden yellow.
Ivory. An old favorite white.
Mrs. Henry Robinson. Fine, early white.

Maud Dean. Large incurved pink, of fine form.
Mrs. J. Jones. Beautiful, waxy white.
Mrs. O. P. Bassett. Light, clear yellow.
Minerva. Large, incurved golden yellow.
Rose Owen. Early; light pink.
Timothy Eaton. Large, white, incurved.

HARDY CHRYSANTHEMUMS, Large-Flowering or Aster Varieties, the best for Decorating or Bunching

50c. per doz.; \$3.00 per 100; \$20.00 per 1000.

Allentown. Beautiful silver bronze.
Allice Carey. Crimson-salmon; very dwarf.
Ashbury. Sulphur-white.
Blenheim. Magnificent silver pink.
Bohemia. Fine, pure yellow.
Cerise Queen. Beautiful cerise pink.
Constance. Large; large pink, open center.
Cowenton. Fine; scarlet-bronze.
Daybreak. Daybreak pink.
Duluth. Pleasing shade of pink.
Ethel. Exquisite; violet-red, long sprays.
Fred J. Red-orange.
Gloire de France. Silver pink.
Hester. Pearl white, shaded white.
Hijos. Beautiful primrose pink.
Henrietta. Bright bronze.
Joppa. Violet-crimson.
Lady de Vaul. Violet-pink.

Mrs. Vincent. Deep red violet.
Montclair. Red-orange, open center.
Peto. Terra cotta red.
Prince of Wales. Best pure white.
Queen of Bul. Violet-rose.
Ruby Queen. Dark, ruby red.
Salem. Clear rose-pink, white disc, open center.
Sir Michael. Lemon-yellow, open center.
Sir Walter Raleigh. Large terra cotta, open center.
Sis Hopkins. Silver bronze.
Sœur Melaine. Dwarf, pure white.
St. Anselm. Pure white, open center.
Stratagem. Dark red-orange.
Sunset. Scarlet bronze, golden center.
Tisri. Dwarf; violet-red.
Winfred. Beautiful soft pink.

SINGLE VARIETIES. 50c. per doz.; \$3.00 per 100.

Aaron. Bronze scarlet.
Leo Niessen. Scarlet-salmon.
Miss Marguerite. Bright scarlet, yellow disc.
Othello. Bronze orange.
Princess of Thule. Red-orange.

Providence. Large; snow-white.
Romeo. Salmon-pink.
Rosy Florn. Silver pink.
Wallis. Beautiful, clear golden pink.

SMALL-FLOWERED OR BUTTON VARIETIES. The Best for Bedding or Planting in Borders.

40c. per doz.; \$2.00 per 100; \$17.50 per 1000.

Anna Mary. Creamy white, tipped pink.
Anne Arundel. Orange, tipped scarlet.
Captivation. Rose pink, yellow shading.
Dawn. Daybreak pink.
Dinizulu. Violet-pink; fine for long sprays.
Dundee. Scarlet-maroon.
Edna. Beautiful, glowing violet-red.
Emotion. Silver pink.
Erminie. Bright orange-scarlet.
Fashion. Malze-yellow.
Golden Pheasant. Deep orange-yellow.
Jack. Violet-rose.

Goldfinch. Golden yellow, shaded crimson.
James Boon. Pure white.
Leo. Pure golden yellow.
Nellie Rainsford. Dwarf, bronze-pink.
Norwood. Pearl white, open center.
Paragon. Pure white, open center.
President. Rich, violet-red.
Princess Louise. Yellow and tawny red.
Rhoda. Pink, shaded white.
Rosinantes. Dwarf; blush, sulphur shading.
Rosy Sun. Crimson-maroon.
Tennyson. Pure yellow.

Our Collection of HARDY POMPON CHRYSANTHEMUMS is acknowledged as second to none in the country. It won the American Institute Diploma at the New York Show last Fall, besides numerous Certificates of Merit and First Prizes at different Shows.

VEGETABLE PLANTS

CABBAGE Succession, L. I. Second Early, Drumhead, Jersey Wakefield, etc., 25 cts. per 100; \$1.00 per 1000; \$8.50 per 10,000.

Copy must reach this office Thursday morning to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

The Week's News in Brief.

J. A. Pettigrew, superintendent of parks, Boston, is on the sick list, threatened with pneumonia.

The Wellesley rose was the principal feature at a dinner decoration in Boston the past week.

St. Valentine's Day created an increased demand for violets, carnations and sweet peas in some cities.

Numerous barges containing coal were crushed by the ice and sunk in the Ohio river at Cincinnati the past week.

George Purdue, florist, East Orange, N. J., has failed in business; liabilities, \$14,000; assets, half that amount.

A carnation show will be held by the Gardeners' Club, of Baltimore, Md., Monday, February 27. Exhibits are solicited.

In recent decorations in Horticultural Hall, Philadelphia, flowering plants have been more extensively used than cut flowers.

B. L. Elliott, of Pittsburg, Pa., has sold his greenhouses, and will visit California. On his return he may enter some other business.

The St. Louis Flower and Plant Growers' Club has been organized. It excludes wholesale cut flower men and retailers from its membership.

P. Randolph, Pittsburg, a lover and very successful grower of ferns, thinks Nephrolepis Scottii the best for commercial uses, and is growing it in quantities.

The next meeting of the Pennsylvania Horticultural Society will be held on the afternoon of Tuesday, instead of the evening as heretofore; the hour is 3-30.

F. R. Pierson refused a shipment of belated exhibition carnation flowers at Boston, from the express company. The blooms were afterward sold by a commission house, realizing good prices.

A successful carnation show was held by the Massachusetts Horticultural Society Saturday last, at which the two flower markets donated prizes. The variety Victory was awarded the society's silver medal.

Pittsburg florists, who depend on natural gas for greenhouse heating, have experienced some trouble on account of short supply during this severe weather. Other fuel was substituted, and no loss or damage resulted.

Peter Murray, Fairhaven, Mass., has sold the entire stock of his new light pink carnation Winsor to the F. R. Pierson Co., of Tarrytown, N. Y. The variety was certificated on Saturday last by the Massachusetts Horticultural Society.

The Washington (D. C.) Florists' Club is to take steps to combat the soft coal ordinance, as well as the master builders' bill, about to be introduced to Congress. Should the latter bill become law it would prevent anyone in the trade, locally, from erecting his own greenhouses or making repairs without the services of a master builder.

The Horticulturist as an Advertiser.

Despite its importance, advertising is a subject that rarely engages the attention of our horticultural societies, for the reason that it is very seldom presented to them for consideration and discussion. It is, therefore, with pleasure that we note that "The Horticulturist as an Advertiser," formed the theme of one of the essayists, W. N. Scarff, at the recent meeting of the Miami (O.) Horticultural Society. Mr. Scarff is a firm believer in advertising. It matters not what our vocation, he says, it is necessary to advertise it and to let the public know what we do and what we have for sale, and, among other things, the following sound advice is given:

"A strong point in advertising is persistency. Keep everlastingly at it. Every day, every week, every year. The majority of advertisers fail from this one cause; they become enthusiastic about some business, make one attempt at advertising, and expect one effort to be sufficient for them, and to create a business equal to that which others have worked a lifetime to establish. The successful advertisers and the successful business firms of the land are not the product of a year, but have grown from small beginnings that have often been handed down from generation to generation, and developed strength from year to year by honest, upright dealings, until they are what you see to-day. Another mistake often made by young advertisers is in not having the goods to deliver that they advertise. It costs practically the same to advertise a few dollars' worth of stock as it does to advertise thousands of dollars' worth. The first thing, then, to do, is to produce the goods and afterward advertise them. Never advertise that which you do not have or cannot furnish, as nothing throws cold water on business so quickly as to fail to do what you agree. People must have confidence in your ability before they will trade with you. The small things in an advertising career are what need careful study, and the details and minor points are the keys that unlock many difficulties in a business of this kind, and one must be willing to give his best efforts to his business, his entire time, and bend every energy toward making it a success. If he is not willing to do this he must be content with being classed along with the average."

We are firmly of the opinion that it would be to the advantage of members of others of our organizations to take up and discuss the very important business essential—advertising. There is no man more competent to speak on the subject, to set forth its advantages or drawbacks (if any of the latter exist), than he who has gained his knowledge by experience, and in every association are to be found men qualified along this line. It may be said that the only way to learn whether or not advertising is profitable is to advertise. But there is a possibility of haphazard, indiscriminate advertising proving anything but profitable. For instance, to advertise at random in all the publications devoted to the industry in which one is engaged, may be profitable as a first venture, only for its educational value; but to continue such advertising, that has been found of the non-paying sort, is a clear waste of money.

We think much help could be rendered the craft generally by a full discussion of the advertising question at our conventions and meetings; and such discussion will certainly be beneficial if it serve no other useful purpose than to bring about a closer investigation by the tradesman into the subject of his advertising outlays, and how from these his best paying returns may result.

John Thorpe, writing in the Chicago Tribune on the subject of the florists' business and its development in America, says among other things:

"As a business investment, floriculture stands on equally as good a basis as do other well established occupations. It is a business requiring strict and constant attention, because the subject dealt with is life, and that brooks no slight without injury. It is a business of detail and requires twenty-four hours' attention each and every day. The man or boy who selects the florist's business for an occupation should be sure that he will not only like it, but love it. With that and due industry I think there is no profession which affords as much pleasure as does the florist's in its many and ever changing phases. There is no net scale of wages, but the wages average as good or better than is to be had in any other trade of like caliber. Men with good knowledge get \$15 to \$18 per week or more. Good foremen command \$22, \$25 to \$30 per week, and, like every other calling, there is always room at the top. The work is of the pleasantest kind and is not laborious, though the hours are sometimes long."

OUR READERS' VIEWS

(Contributions to this Column are Always Welcome.)

Taking Carnation Cuttings.

Editor Florists' Exchange:

I do not agree with Mr. Knopf when, in his note on taking cuttings, he says the base cutting will make just as good a plant as any cutting will make. The California men think the same; but you'll find the best growers don't use base cuttings. I think using base cuttings has spoiled many a good variety and one for example, is Gibson Beauty. Ask Mr. J. D. Thompson, and I think, he'll say the same. W. R. PIERSON.

[Will Mr. Thompson kindly favor The Florists' Exchange readers with his views on this subject. We should like, also, to hear from other carnation growers.]

Gladiolus in Greenhouses.

Editor Florists' Exchange:

In your issue of February 4 I observe that Fred W. Timme makes the statement in regard to planting gladiolus corms in the greenhouse bench, to "press the corms into the soil just out of sight." Mr. Timme's instructions are hardly in consonance with modern methods of indoor culture for the gladiolus.

Outdoors, gladiolus, if planted near the surface, especially on account of the winds, by the time the plants began to produce bloom, they would be flat on the ground. Not only that, but the new bulbs formed would be exposed to weather conditions—sun, and, if planted late, early frosts—both of which would damage the new bulb. Indoors, of course, we have not the wind to contend with, but there are still the sun conditions, which would affect the bulbs. It is well known the new bulb, formed on top of the old one, throws out roots after it becomes established. These roots must be protected by the soil, and exposure of them would even be brought about in shallow planting, by slight watering. Then, too, there would not be sufficient strength in the roots to hold the plant erect for blooming, if not planted deeper in the bench than Mr. Timme recommends. If growers of gladiolus were to follow Mr. Timme's suggestion, and plant no deeper than he advises, they would find the sale of their flower spikes unprofitable by reason of there being no demand for such crooked stalks as certainly would be formed by the stems tipping over, which could not be prevented without tying, and no one wants to go to the expense and trouble of that work.

I would advise that the corms be planted no less than two inches, and preferably three inches deep, rather than near the surface of the soil.

Berlin, N. Y.

ARTHUR COWEE.

George V. Thielmann.

George V. Thielmann, the retail florist, 323 Division street, Chicago, died February 3, at Sierra Madre Cal. The deceased had been ailing for the past two years and went to California last Fall in the hope of regaining his health. He was 42 years of age, and leaves a wife and five children. The family has the sympathy of his many friends in the trade in their bereavement. The funeral was held February 13, interment being at St. Boniface Cemetery. R. J.

Our London Letter.

BY A. HEMSLEY.

THERE IS a proposition afloat to hold a market exhibition of chrysanthemums and flowering subjects, also all other market plants, and to utilize the Covent Garden Flower Market for the purpose, the show to be held about a week or so before Christmas. If this can be properly carried out, it should be one of the most important horticultural events of the year, and as popular as the great Christmas Fat Stock Show.

THE ROYAL HORTICULTURAL SOCIETY failing to secure the grounds at Holland House, have arranged to hold the Summer show in the grounds of Chelsea Hospital; this will occur on July 11, 12 and 13. The usual Spring show will be held in the Temple Gardens on May 30-31, and June 1. Other meetings follow regularly at the new hall every fortnight from February 14 (the annual meeting). The shows at the hall grow in importance, and no visitors interested in horticulture should fail to look in if they happen to be in London when a meeting is on. Not only new and rare plants are now to be seen at these meetings, but we get extensive displays of all the most useful plants in season, and there are often some rare old introductions which have been almost lost to cultivation. The hall is a grand structure, and very different to what was expected from the plans and illustrations first seen. And now that we have so much better accommodation we may expect to get exhibitors from all parts; no one who has a novelty, or new plant, should miss sending it to these meetings. It will pay to do so, even if it is from America.

CHRYSANTHEMUMS, LATE SORTS.—We are getting some good additions to those which keep well through January; and of these Winter Cheer, a deep mauve pink, a sport from Mme. Felix Perrin, is one of the best. Messrs. Low & Co., of Uxbridge, who introduced it, have been bringing it to market in fine condition, and the first week in February it was as good as when first seen some weeks previously. It is a general favorite with florists, and realizes top prices. Market Gold, from H. J. Jones, is a fine deep golden yellow; the flowers seen at the end of January were very bright and fresh. It will be surprising if this does not prove the best yellow for late market work. Mme. Louis Charnet, which Mr. Henderson, of Chestnut, did so well a year ago, has been equally good with him this season, but some growers have failed to get it to color well. It is, however, a valuable late variety. Godfrey's Winter Queen is a

fine late white, with long twisted florets, fresh blooms of which are still seen in the market; and I understand it will last for some time yet. Up to the middle of January Allman's Yellow was very fine; this is a deep yellow of medium size, with drooping florets and a full center. Wm. J. Thompson, though not new, is worth mentioning as being one of the best whites seen since Christmas. The best late crimson I have seen is Lady Violet Beaumont. In bronze we have nothing better than Tuxedo and Lord Brooke. Ethel Perry is a most promising pink of bright shade. The above are named as useful for market work, and not as exhibition blooms.

FRENCH FLOWERS.—We hear a good deal about the severe frosts which occurred some weeks ago, cutting off the supplies of flowers from the south of France, but really this is no loss to the ordinary florist, but rather a gain; for most of the French produce is sold on the streets to the detriment of the florist who has to pay rent, rates and taxes. It is also some advantage to the English growers, and though we sympathize with the growers in the south of France in their great loss, we cannot say that the English trade will be losers by it. Those who do cheap decorations may find it inconvenient not to be able to procure flowers quite so cheap.

Dwarf Fruit Trees.

Professor F. A. Waugh, horticulturist of the Massachusetts Agricultural College, was the speaker February 11, in the Horticultural Hall course, Boston, Mass. Professor Waugh's subject was "Dwarf Fruit Trees: Their Use, Propagation and Management," and he spoke in part as follows:

"There used to be considerable interest in dwarf fruit trees, 50 to 75 years ago. They nearly always were mentioned in the pomological discussions, and all the text books of that time made extended reference to their use and propagation. This was partly due to the fact that American horticulture at that time had not broken entirely away from the horticulture of Europe. Dwarf fruit trees always had been grown in the old country, and the European books gave a liberal attention to them.

"There was still another reason for the attention given to them, however, in the fact that they were considerably grown. At that time the great commercial interests of the present day had not come to the front. But during the last few years these commercial enterprises have monopolized our attention, and we have largely forgotten about the old-fashioned amateur horticulture to which the growing of dwarf fruit trees belongs. At the present time there are many indications that we are coming back to some of the old-fashioned ideas, especially as regards fruit growing. There is a lively renewal of interest in small grounds and gardens. These circumstances, along with others, are bringing dwarf fruit trees back to notice. In all probability they will come back into vogue to a certain extent.

"First of all, it may be proper to tell what a dwarf fruit tree is. A dwarf fruit tree is a simple one which is made to grow in smaller stature than the same variety reaches under ordinary conditions of treatment. There are three principal ways by which this dwarfing is secured. These are (1) propagation, (2) pruning, (3) training. The first method is by much the most important. A dwarf tree is nearly always propagated by budding or grafting on some kind of a root which grows slowly, and thus the slow-growing root checks the growth of the top to such an extent that the top is dwarfed. The commonest and most striking example is the propagation of dwarf pear trees. These are grown by budding ordinary varieties, such as Bartlett, Duchess or Anjou, on quince roots. Pruning has also been referred to as one of the means of dwarfing trees. Many trees are kept back to their small stature largely by this means. In a somewhat similar manner trees are retained in their small forms by training them; that is, by tying them upon a trellis or against a wall or to stakes, and preventing their growth beyond prescribed limits.

"The first question which comes up in presenting such a subject as this is that of its practical utility. Almost everyone will ask at once 'What is the value of dwarf fruit trees?' We may as well say at once that dwarf fruit trees are not very promising from a commercial point of view. They will not in any way rival standard trees for large orchards. I am inclined to believe that certain fine dessert varieties can be grown on dwarf trees for fancy trade where large prices may be secured.

"Dwarf trees are of value for interplanting in an orchard of standard trees. They come into bearing much earlier than standard trees and can be cut out at any time when the large trees require the entire space. Anyone who wishes to keep a large collection of apples, pears or plums, or who wishes to test new varieties, will find dwarf trees very desirable. They occupy much less ground and they bring the new varieties into bearing at a much earlier time. Anyone who wishes to grow a fine specimen for exhibition will find dwarf trees even more useful. As a rule, to which I do not know any exceptions, the finest specimens of apples, pears, peaches and plums can be grown on dwarf fruit trees. The greatest value of dwarf fruit trees, however, lies in their adaptability to the needs of small landowners. A large and increasing proportion of our population now live a suburban life. They are neither on the farms nor yet in the city. Such persons have only small grounds under cultivation and cannot grow many large trees.

"Dwarf trees are propagated by the usual methods of budding and grafting. They are more commonly

budded than grafted, although whip grafting, side grafting or veneer grafting may be successfully practiced with apples, or even with pears. In either case it is largely a matter of convenience. There is no difference in the tree after it has grown. A budded tree is just as good as a grafted tree and vice versa. The principal problem in the propagation of dwarf fruit trees is the choice of suitable stocks. Apples are usually dwarfed by propagating them on Paradise stock. Paradise is simply a very dwarf apple which is largely grown from layers. The young trees are cut off near the ground and are encouraged to throw up sprouts. These are covered over with earth, and when one or two years old the stools are taken up and divided. These Paradise stocks come from France, where this work is done chiefly. The Doucin stock also is used to some extent for dwarfing apples. It produces a tree midway between the very dwarf on Paradise and the ordinary standard form. Doucin stocks come also from France and are grown in the same way as Paradise stocks.

"Pears are practically always budded on quince stocks for dwarfing. The quince most used for this is Angers, which comes from France. A few varieties of pears will not form good unions on quince roots. Such varieties are 'double-worked.' The process of double-working is as follows: The quince root is budded with some variety, as Anjou, which grows

BEAUMONTIA GRANDIFLORA

Photo by W. H. Waite

well upon it. After this pear cion has grown one year the refractory variety, say Seckel or Dana's Hovey, is budded on the Anjou, upon which it makes a good union. The completed tree as it is planted in the orchard, then consists of three parts—the pear top of the desired variety, the quince root and the very short section of some other pear whose sole office is to unite the two uncongenial neighbors.

"Peaches and nectarines are dwarfed by working them on plum roots. They will grow fairly well on almost any good plum root. The Myrobalan plum, which is one of the easiest of all stocks to be worked, has been largely used. The peach also may be easily propagated on the dwarf sand cherry, which gives a good dwarf peach tree of specially small stature. The old rule for dwarfing plums was to work them on Myrobalan plum roots. A fairly small plum tree can be produced in this way, provided it is kept vigorously headed back. It is obvious that some still slower growing stock must be found if the requirements of the situation are to be fully met. In Iowa, Minnesota and the neighboring States, plums are very largely grafted on American roots; that is, on some of the seedlings of *Prunus americana*. These stocks produce a tree considerably dwarfed than those grown on the Myrobalan plums. Moreover, this stock is hardy, vigorous, healthy, and in all respects satisfactory. Another plum stock which has been extensively used in an experimental way, which offers special promise as a dwarfing stock for plums, is the sand cherry. This plant is native to Massachusetts, and, in fact, in some of its forms, to practically all the Northern States as far west as the Rocky Mountains.

"Dwarfed cherries are sometimes spoken of, but, for the most part, the so-called dwarfed cherries are merely such varieties as Morello, Vladimir and other North European sour cherries which never make a large tree. No really satisfactory dwarfing stock for the cherry is in commercial use.

"Dwarf trees are planted the same way as are standard trees, with two exceptions. First, they are usually planted shallower, for the reason that when deeply planted they sometimes take root from cions and cease to be dwarf trees. The second exception lies in the fact that they may be planted much more closely together. While thirty-five feet is looked upon as being proper spacing for standard trees, dwarfs may be planted eight or nine feet apart and, indeed,

can be well managed for a number of years at a distance of four to six feet.

"Dwarf trees usually are trained in some particular form. This training is not absolutely essential, but more or less of it is desirable in order to get the best results. There are almost infinite ways in which trees may be trained. Some of these ways are merely fantastic and only comparatively few of them are really useful. All the really practical ways can be easily reduced to eight, as shown in the following table:

"A. Trained in tree-like form; a. Pyramid, b. Bush. B. Trained with several branches in one vertical plane; a. Espalier, b. Fan espalier, c. Palmette-Verrier. C. Trained to single stems—Cordons; a. Upright, b. Inclined, c. Horizontal.

"The pruning of dwarf fruit trees, especially those trained in particular forms, is a somewhat complicated subject. Elaborate directions can be found in any of the European fruit books, but nothing has been written in detail on this subject in America. The general management of the tree can be best understood by referring to one of the simplest forms, say the vertical cordon. This tree is composed of a single stem along the sides of which fruit spurs are formed and fruit is borne. Each year this cordon is encouraged to throw up strong growing shoots or leaders at the top, and at the same time is prevented from making any strong wood growth along the sides of the stem. The strong shoots at the top feed the tree, or, as we sometimes say, 'they pump up the sap.' As fast as shoots start from the sides of the main stem they are pinched back. This pinching may be required six or eight times, possibly even more in the course of a Summer. This constant checking of the vegetative growth from the side buds on the stem tends to encourage the formation of fruit spurs and fruit buds in this region, which is, indeed, the fundamental object of the whole scheme of pruning. At the beginning of the succeeding year, the leading shoots at the top of the cordon are cut back almost or quite to the point where they began the previous year's growth. New shoots arise there, year after year, from almost the same point, to be annually sacrificed in the same way.

"Considerable skill and experience is required in pinching back the side shoots so as to encourage the formation of fruit spurs and buds. Different species require different treatment in this respect, since the fruit spurs form differently on different kinds of trees. Roughly, it may be said that with most fruit trees these side shoots should be pinched back as soon as they have made six leaves or earlier. They should be headed back to not more than four buds (or leaves). Many of them will promptly start again. This second growth should be headed back somewhat sooner. It should also be headed back more closely. If the shoot starts a third or fourth time as sometimes it does, it should be repeatedly pinched back, each time earlier and each time more severely.

"When fruit spurs become old and weak, as they will commonly do on the apple and pear after about five years, they should be cut out altogether or headed back to within an inch or so of the main stem. Sometimes a new growth will be secured from the base of the spur and this new growth can be promptly developed by a system of repression, outlined above, into a new fruit spur. In some cases where the fruit spurs die or have to be removed, it is even necessary and practicable to bud or graft in new shoots or new fruit spurs. This looks like a good deal of work to be given to a tree, but it is not more difficult or exacting than many things that we already do in our garden work.

"In conclusion, I wish to reiterate the statement that the growing of dwarf fruit trees is not urged upon the public. It is not recommended to everybody, and especially it is not claimed to be commercially practicable. On the other hand, it will bear serious consideration by all that large class of people who have small grounds of their own and who wish to grow a limited quantity of fine fruit for their own use. The large number of trees which can be put on a small area, and the comparatively early age at which they may be brought into bearing are considerations of prime importance in the eyes of all small landowners."

Beaumontia Grandiflora.

The subject of this note is a greenhouse climber with flowers of remarkable beauty, and very rarely seen in bloom, no doubt owing to its usually not having sufficient room to develop. It does best trained to the roof in a high house, where it can obtain plenty of light. Pot culture is not suited to this plant, and it should be planted in good, strong, fibrous loam.

THE FLORISTS' EXCHANGE

The Retail Trade

FLORAL DOINGS AT WASHINGTON, D. C.—President and Mrs. Roosevelt gave a dinner, followed by a musical on Saturday last, it being Miss Alice Roosevelt's birthday. The centerpieces and vases were filled with freesia, and the corsage bouquets and boutonnières were made of Princess of Wales violets. The house was decorated with Azalea mollis, cinerarias, cyclamens and ferns.

Gude Brothers did the decoration for a dinner given by Speaker Cannon. The table was decorated with Liberty roses and the corsage bouquets were of lily of the valley and sweet peas. The vases in the parlors were filled with American Beauty roses, while groups of Harrisii lilies, azaleas and ferns were placed in every available space. This firm had a fine display of azaleas in the store window for St. Valentine's Day, arranged in the form of a heart.

George Shaffer had a large decoration on at Mrs. Talmage's. Bunches of 4-foot American Beauty and Lilium Harrisii were distributed throughout the house, southern smilax adorned the ceilings, and portieres of smilax were used on the doorways, with bunches of

the decorations for J. R. Whipple & Co., of Parker's, Young's and the Touraine.

JOHN W. DUNCAN.

The Boston Flower Show.

The first exhibition of the season of the Massachusetts Horticultural Society was successfully held on Saturday, February 11, and proved one of the best the society has ever held at this season of the year. The main hall, of course, contained all the exhibits, but it was well filled. It was practically a carnation show, more so on account of the two flower markets offering a list of special prizes for these flowers. There was a lively competition among the carnationists, and many fine vases of blooms were staged. It was to be regretted that the exhibition was so soon over; it closed at 4 o'clock, and it is to be hoped that new rules will soon be adopted by the exhibition committee, for to hold back the awards from the public until within an hour of closing time is rather unfair to both the visitors and to the exhibitors, especially when the latter are composed of the hard-working commercial men. The system of naming exhibits, judging, and again naming the successful exhibits by the committee of the Massachusetts Horticultural Society exhibitions is peculiar to itself, and is so anti-

was first; Patten & Co., second, and Peter Fisher, third. For the best vase of 25 blooms yellow, Patten & Co., were first, with Dorothy Whitney; Backer & Co., second, with the same variety, and the same firm, third, with Eldorado.

The special prizes and awards offered by the Boston Co-operative Flower Growers' Association were as follows: Carnations—Best vase 50 blooms, white, first, Peter Fisher, with Lady Bountiful; second, Patten & Co., with the same variety. Best vase 50 blooms light pink, first, Peter Fisher, with Enchantress; second, S. J. Reuter, with same sort. Best vase 50 blooms dark pink, first, Peter Fisher, with Nelson Fisher; second, S. J. Reuter, with Mrs. Thomas W. Lawson. Best vase 50 blooms scarlet, first, Peter Fisher, with Flamingo. Best vase 50 blooms crimson, first, Peter Fisher with seedling No. 113; second, S. J. Reuter, with Harlowarden. Best vase 50 blooms variegated, first, Patten & Co., with Mrs. M. A. Patten; second, Peter Fisher, with the same variety. Best vase 50 blooms yellow, first Patten & Co., with Dorothy Whitney. For best vase of not less than 100 blooms and not less than six varieties the prize was awarded to Wm. Nicholson.

The special prizes and awards offered by the Boston Co-operative Flower Market were as follows: Carnations: Best 50 blooms Fair Maid, first, H. A. Stevens Co.; second, A. Roper. Best 50 blooms of any white, first, C. E. Dickerman with White Lawson; second, L. E. Small, with seedling No. 3. Violets: Best 100 blooms Princess of Wales, first, Harry F. Woods; second, Wm. Sim. Best 100 blooms Lady Hume Campbell, first, Harry F. Woods; second, L. E. Small. Roses, best 25 blooms, first, Waban Rose Conservatories, with Wellesley. Mignonette: Best 25 spikes, first, Wm. Nicholson; second, A. H. Fewkes. Sweet Peas: Best 100 spikes, first, Wm. Sim; second, Malcolm Orr. The special prize offered by "Horticulture" for vase of 100 blooms of carnations was awarded to Patten & Co.

For the society prizes for violets the following awards were made: Best 100 blooms double, first, Malcolm Orr; second, L. E. Small; third, A. F. Coolidge. Best 100 blooms single, first, Wm. Sim; second, James Wheeler; third, M. B. Dallachie.

JOHN W. DUNCAN.

Tales of a Traveler.

The San Francisco Florists.

J. H. SIEVERS & COMPANY.—The most modern place which it has been my good fortune to see is to be found on Chestnut street, San Francisco, and is the property of J. H. Sievers & Company. The glass which makes up this place is only about 50,000 feet, divided into some fifteen houses, and a great variety of stock is grown.

Carnations have been and are still the major crop with this firm, and some 20,000 plants are cultivated. It will be remembered that both Ethel Crocker and California Gold were produced here, and both varieties were grown in the East with marked success by some growers. The first house, which N. Peterson, foreman of this leading California firm, showed me, was one of the carnation, Hanna-Hobart. This variety is of the same parent stock as Ethel Crocker and is very similar in color, but with a larger bloom and better stem. The flower is built up more in the center, and is, when perfect, very hard to better; but, owing to the size of the flower and the number of petals, there is a tendency to burst. This drawback is not so strong as to render the variety unprofitable, but with the colder weather of the East, this tendency would be stronger and the variety a doubtful one under eastern conditions. The variety looks well here, however, and although when I saw it flowers were a bit shy, it shows that it has and will produce blooms in paying quantities.

A house of Mrs. Thomas W. Lawson was the next attraction, and the interest centered in a batch of a sport which is almost identical in color with Enchantress and which, like all the other Lawson sports, has the characteristics of the parent. I do not know what carnation our good friend, F. R. Pierson, has been purchasing, but the San Francisco Chronicle on January 13 gives W. B. Arnold of Rockland, Mass., the honor of selling a Lawson sport to this well-known firm for \$20,000. If it is a shell pink, I merely wish to say that there are other sports on the pike to-day. Enchantress, Mrs. Patten and Prosperity filled the next house and were looking well. A house made up of Hanna-Hobart and a scarlet sport were next in order and a scarlet variety called A. B. Spreckles, one of the firm's originations, filled the following house.

One of the odd colored varieties is named John Carbone, and a house of this sort is grown, the demand being heavy here for odd colors. It is a bronze flower with pink for variegation; somewhat on the style of Admiral Cervera, which Long Island is needed to produce as it should be grown.

The only house of roses grown here is one of Ulrich Brunner, which are being grown in pots, and just at present are being forced for late winter and spring bloom.

Sievers & Boland is the name above the door on Post street, and here is perhaps the finest flower store in California. Mr. Boland is a partner of Mr. Sievers, but in order to avoid confusion the two places are operated under these distinct names. This firm caters to the best trade of San Francisco, and the quality of the blooms in their store and windows compares very favorably with that seen in the stores in the eastern cities. It was in this store that I saw the white violet used as a commercial flower, and while I could not consider it an improvement on the blue, it was certainly odd.

W. R. PIERSON.

(To be continued.)

A BOSTON DINNER TABLE DECORATION, NEW ROSE WELLESLEY THE PROMINENT FEATURE

American Beauty to hold them back. George Cook had a large dinner decoration on at Senator Depew's. The table was decorated with carnation Prosperity, and the corsage bouquets were of the same flowers. Henry Pfister has had a good deal of funeral work, the greater part of it being for the funeral of Admiral Crosby. J. L. Loose has been doing a good business this week; he has a fine bulbous display in his store. He is bringing in some nice roses and carnations from his greenhouses in Alexandria. Z. D. Blackstone has a window display of bark with Florida moss hanging from the ceiling, which is drawing the crowds. F. H. Kramer is handling Primula obconica in 3-inch pots, which are selling fast. Chris Shelborne is cutting some fine Bride and Bridesmaid roses.

M. C.

A Fine Table Decoration.

The accompanying illustration shows a well-arranged table decoration at a recent dinner at the Parker House, Boston, given by a committee of the members of the Ancient and Honorable Artillery Company to a few of their friends, members of the famous Ancient and Honorable Artillery Company of London. The Wellesley rose was used exclusively, and this is the first table decoration at which this fine new rose has taken the most prominent part. Altogether, one thousand blooms were used, the vase in the center of the table being filled with fifty of the most superb obtainable. The whole arrangement was the work of Henry M. Collins, and shows the artistic taste of this young man, who has charge of all

quoted that it cannot hold pace with the up-to-date methods of twentieth century horticulture. To return to the carnations. The most noticeable variety in the hall was Victory, from Guttman & Weber, New York, which received the coveted silver medal. First-class certificates of merit were awarded to S. J. Goddard for seedling carnation Helen Goddard; to Wm. J. Palmer, Buffalo, for carnation Red Lawson; to F. R. Pierson Co., for seedling carnation Winsor; and to R. Witterstaetter, Sedamsville, O., for seedling carnations Afterglow and the Aristocrat. These last two varieties arrived about 3:30 from Cincinnati, but showed up well after their long journey. Honorable mention was awarded to E. N. Peirce & Son for seedling scarlet carnation and to Patten & Co. for seedling carnation Mikado.

In the society prizes for the best vase of 25 white Peter Fisher was first with a magnificent lot of Lady Bountiful; Patten & Co., second, with Belle, and H. A. Stevens Co., third, with Governor Wolcott. For the best vase 25 blooms scarlet, Backer & Co. were first with Flamingo, and C. E. Dickerman second with the same variety. For the best vase 25 blooms light pink, Patten & Co. took first with Enchantress, which is yet far ahead of anything of its color. S. J. Goddard was second, and H. A. Stevens Co., third, with Enchantress. For the best 25 blooms dark pink, Wm. Nicholson was first with Mrs. Thos. W. Lawson; L. E. Small, second, with the same variety, and Patten & Co., third, with Nelson Fisher. For the best vase of 25 blooms crimson, Harry Penn was the only variety exhibited; Wm. Nicholson was first; Patten & Co., second, and Backer & Co., third. For the best vase of 25 blooms variegated Mrs. M. A. Patten was the only variety shown; Wm. Nicholson

Burbank's Fadeless Flower.

When I heard that there was a new flower that was sure to hold its color, not to wilt or decay, the picture came before me of a flower on the poinsettia style. I pictured to myself, looking at the humorous side of it, say, a million homes in New England which would have, instead of the case of wax bloom, a million of "Burbank's fadeless," and these would be kept to show on special occasions. There would be no more object in producing flowers, for, with the everlasting flower in each home, there would be no desire to grow others; the people would all be supplied in a short time and the flower market killed. Rather a dismal outlook for the grower, but a bright one for those who are lovers of flowers, for, like the traditions of our old New England families, would be the family flower, and on special occasions it would be brought forth to embellish the old New England parlor and the wax flowers in their case would sink into insignificance beside the beauty of the flower which never fades.

Fact and fiction sometimes go together, and so in this case. I have told you my impression of the flower which was based on sensational newspaper articles which were written without consent of Mr. Burbank, and by those who knew as much of flowers and their uses as a cow does of gunpowder and snipe shooting.

On January 26 I had the pleasure of a very interesting visit to the Burbank home at Santa Rosa, Cal., and from him personally I learned the truth concerning this interesting flower, and I am, with his consent, writing the facts as they really are in regard to it.

Cephalipterum Drummondii is the name of the plant and so far as I know there is no common name. This rare plant was discovered in 1902 in Northwestern Australia, and seeds of it were sent to Mr. Burbank from there. It has been grown by him and improved on, and is now producing flowers three times the size of the blooms produced by the original type. Thus we see that it was not an origination of Mr. Burbank's, and it is therefore a production of nature, and nature alone is responsible for the species. The seed which Mr. Burbank first received produced flowers about one-half inch in diameter, light pink in color and borne in clusters on a stem some eight inches in length. The foliage of the plant is a light green, judging from the flower which Mr. Burbank presented me, and not heavy in texture. There are ten blooms and buds on this spike, and the flower has eleven petals in every instance. This specimen has now been picked over a year and a half, and, according to Mr. Burbank, it has its natural color to-day, and the form of the flower is the same to-day as when picked a year and a half ago. The bloom is not easily broken judging from its present condition and the treatment it has received since it came into my possession.

By nature the plant is a half hardy annual and it will do best in a dry climate and with a dry soil. Environment has had a great deal to do with producing such a plant, but it seems to do well under conditions of greater moisture.

What the value of such a plant will be is a question which can only be answered when the plant has been grown more generally. Judging from what I have

CEPHALIPTERUM DRUMMONDI (BURBANK) SINGLE PLANT, IMPROVED TYPE, 1904

seen of it, the chief value would lie in its being used as a border plant, or for use in bedding. The enormous quantity of blooms, and the fact that they retain color and form would make it such, if combined with rapidity of growth and strong qualities of germination of the seed.

Some seed of the original type of *cephalipterum* has been disseminated, but no seed of the improved type will be allowed to leave Mr. Burbank's place until 1907 or later, and not then unless he is satisfied that it is of value and has completed his work of improvement.

The photographs here presented show the plant as it was, and a single specimen of the improved variety which Mr. Burbank is now working on.

San Francisco papers have published sensational reports of this plant and give a great deal of space to it from the standpoint of the milliner, representing that it will outclass the artificial flowers for millinery purposes, but how much of this is substantial remains to be proven. As I have said before, as a use-

ful bedding plant and as a floricultural novelty it has a place and is deserving of interest and study.

I forwarded Mr. Burbank for his approval and correction the above article, and I take the liberty of quoting from his letter in reference to it: "Your description of the Burbank's fadeless flower is exceedingly valuable and correct, and I thank you heartily for this authorized description." In regard to the value of the *cephalipterum* in millinery work he says in this letter: "As to the millinery part of the business, the largest millinery establishment in the world has, after examining the flower with great care, desired me to hold it for him without regard to price. This being an old and established firm, fixes forever its value for millinery uses, so you may rest assured on that matter, for it is fixed for all time by this decision coming in this way from the most extensive dealers in existence." One thing which can be depended on is the honesty of Mr. Burbank, and this quotation from his letter will show the value of this most interesting novelty. W. R. PIERSON.

The Causes of Doubling in Flowers.

The botanists find the doubling of flowers a somewhat hard nut to crack. There are several forms of doubling, one of the most common being found in the multiplication of petals. But when the inducing causes of doubling are considered, there is ample opportunity for speculation. In a general manner, the causes assigned by physiologists, or the plans proposed by cultivators, are reducible to three heads—namely, plethora, starvation and sterility. As Dr. Masters stated many years ago, these three seem inconsistent one with the other, but are not so much so as they appear at first sight to be. The advocates of the plethora theory have much in their favor; for instance, the greater frequency of double flowers among cultivated plants than among wild ones. Dr. Seemann brought out the facts of the great preponderance of double flowers in plants derived from the northern hemisphere, when contrasted with those from the southern. Cases have been known of debility or starvation having the effect of changing flowers to the double form; but then it has had a contrary effect also, as a case has been mentioned of a double-flowered thorn producing single blossoms from this cause. Mr. Darwin makes mention of a state of things which brings about sterility or imperfect formation of the flower, leading to a consequent increase of the petaline element, either in the form of an increased number of bracts, petals, etc., or in the substitution of petals for stamens and pistils.

It is said that the way in which double stocks are produced in Erfurt is by giving the plants a minimum supply of water. This much appears to be certain, that when once the disposition to form double flowers is established from any cause, that tendency becomes hereditary; there are races of stocks in which out of hundreds of plants, scarcely one double flowered form is met with; this is particularly the case with the Giant Brompton, and especially so in the case of the White Giant; on the other hand, where the tendency is set up, single flowers become the exception.—R. Dean in Horticultural Trade Journal, Eng.

CEPHALIPTERUM DRUMMONDI (UNIMPROVED)

AMONG THE GROWERS.

At New Castle, Ind.

The Benthay-Coatsworth Company's greenhouses, located at New Castle, Ind., are situated some distance from the center of the city, on a tract of land recently purchased by the firm, on which they built greenhouses comprising nearly 75,000 square feet of glass. These houses are devoted entirely to the cultivation of roses for cut flowers for the Chicago market, the concern having its own wholesale house there, where the entire product is disposed of. The varieties principally grown are Bride, Bridesmaid, Liberty and American Beauty, the last named not in such large quantities this year as heretofore, as it has been found that tea roses pay more per square foot of bench space than American Beauty, and this firm thinks of giving up the culture of the latter altogether and devoting the entire range to teas.

The stock at the present time presents a uniform healthy growth. Their cut from a week before Thanksgiving has been of an exceedingly high grade, and as satisfactory as they have ever been able to obtain from the place.

In the past year the establishment has been noted as the home of the Benthay aster, as here all the seed that is now being distributed all over the country was produced, under the direct supervision of Otto Benthay, who is in charge of the whole plant. He is a thorough, practical grower, of many years' experience in all kinds of greenhouse work. He has had entire charge of the growing end of the business ever since it was established, and his strict attention to details has had a great deal to do with the firm's success. The wholesaling of the cut has been in charge of F. F. Benthay, one of the oldest members of the craft in Chicago, the senior partner of the firm. L. Coatsworth, the other member, has taken care of the correspondence, and has given a considerable part of his time to needed improvements at the greenhouses, personally supervising the same. The houses are heated by low pressure steam, which has been found very economical.

SOUTH PARK FLORAL CO.—HELLER BROS.—

This firm is also located at this point, being but a few blocks distant from the foregoing concern. Their establishment is not given over wholly to the cultivation of roses, carnations being raised here extensively, and will be gone into more heavily the coming year. Their range of glass comprises nearly 200,000 square feet, some of which has been up for a number of years. The stock is all in fine condition, and a good cut is being taken from the place; it is shipped direct to retailers, in most cases, some also being sent to commission houses in different cities—St. Louis, Cincinnati, Pittsburg and Chicago.

Besides cut flowers, they do an extensive mail-order business, although no plants are sent by mail, they finding it gives better satisfaction to send all goods by express. In this way the plants arrive in better condition.

The growing end of the business is in charge of Herbert Heller, who gives his entire attention to it. A great many of the smaller florists in the neighborhood send in orders by telephone, when in need of stock on short notice, and in this way the firm is able to dispose of large quantities. They contemplate remodeling part of the range the coming Summer, using the latest improvements in construction; when completed, this will give them as fine a range of glass as can be found in this vicinity. Being in close proximity to the railroad, shipping facilities in all directions are very good.

A. ROVER.

A Modern Bulb Forcing Establishment.

Wm. H. Siebrecht, Astoria, Long Island, probably forces more bulbs for cut-flower purposes than any other grower in America. Some time ago we drew attention to the elaborate cold-storage system installed by Mr. Siebrecht on his premises; we propose at this time to say a few words about his methods of handling the bulbs and the varieties considered by him best suited for cut-flower purposes.

To give some idea of the immensity of the industry as carried on here, we may observe that over half a million Holland grown bulbs are forced each year, besides one and three-quarter million lily of the valley pips and countless thousands of Japan and Bermuda lilies. It is the tulips, narcissus and hyacinths chiefly that we are interested in at the present time, as this is the season of their popularity and the time when they should be bringing in the most profitable returns to the grower.

When the bulbs arrive in the Autumn, they are immediately planted in shallow boxes and stored away. For the better convenience of handling them in the Winter time, large store sheds have been erected with racks along the sides and through the center, and reaching clear up to the roof. On these racks or shelves, as they really are, the boxes of the newly planted bulbs are placed, and there they remain, without further handling, until they are put into the greenhouse and brought into flower. Such is the number of bulbs grown, however, that recourse has to be made to the older method of burying many boxes outdoors; and, although it is a much more disagreeable task to handle this outdoor stock, particularly in such weather as has been the rule so far this year, when brought in the stock is equally as fine and reliable as to bloom as are the more tenderly cared for bulbs

kept in the storage house, for it must be understood that bulbs kept in a storehouse must not be allowed to get too dry, or poor results will follow.

The greenhouses are at present filled with an almost innumerable supply of bulbous plants, with their varicolored flowers, and in all stages of growth. Some of them have just been brought in from the sheds; others are just about matured, with the flowers ready for cutting, and between these two extremes of growth thousands are seen in every stage of progress, as it is the rule to bring in a fresh batch every day so as to provide a regular daily supply of cut blossoms.

When the boxes are first brought into the greenhouse, they are placed underneath the benches, where the growth becomes "drawn" to a certain extent, and a reasonable length of stem is thus assured, and this applies to the narcissus and tulips particularly, that are to be brought into flower any time before the middle of February; for it must be borne in mind that either of these flowers, when brought in early, is of little value commercially unless they have good, long stems. After a few days under the benches, the boxes are placed in the full light, where they come to perfection in from 21 to 24 days from the date of their being brought in from the shed. The flowers are then cut, in the early morning preferably. Tulips must be cut while they are closed, or they do not last long. After cutting, the bulbs are thrown out and the space immediately occupied with an incoming crop.

Mr. Siebrecht does not advocate the forcing of the Dutch hyacinths earlier than the beginning of February, for if any attempt at forcing is made before that time, the spikes are apt to be short and stumpy, and they present anything but an attractive flowering plant, unless they are of a reasonable height and possessed of nice foliage.

Roman hyacinths and Paper White narcissus are brought into flower continuously through the season, commencing with the first batch about the beginning of November. Many of the first named, owing to a scarcity of the larger sized bulbs last Summer, have had to be produced from small sized stock, and the percentage of first-class flowers from this grade of bulbs has not been large enough to make them very profitable at the prices which have prevailed throughout the season.

It is surprising with what precision bulbs can be brought in and made to yield up their blossoms at stated times, and it is only under the care and supervision of a past master like Mr. Siebrecht, who knows every variety and its peculiarities, that such uniformly good results can be obtained.

While Mr. Siebrecht tries all the new kinds that are introduced, he does not believe in growing too many varieties. Of tulips the following are his chief reliable sorts that are grown in quantity: Salvator Rosa, pink; Rosa Mundi, pink; La Reine, white and pink; Keiserskroon, red and yellow; Montrosier, yellow; Yellow Prince, Vermilion Brilliant, red; Rose Grisdelin, pink; Morello, pink; Cottage Maid, pink; Colour of Cardinal, red, and Coroune d'Or, orange. The Dutch hyacinths most suitable for forcing purposes are: L'Innocent, white; Gertrude, pink, and Grand Maître, blue.

We may also mention that a great deal of space is devoted to lilies, and many types are to be seen in various stages of development, as the crop is made a continuous one. Of the several kinds of Japanese stock the multiflorum is considered the best. The foliage is narrower than that of the others; the bulb responds quicker to our mode of culture, and it takes a shorter time to bring it into flower; in fact, Mr. Siebrecht has become convinced that this variety can be flowered in as short a period as can Lillium Harrisii. The black-stemmed L. giganteum is also considered a very good one, next in order to L. multiflorum, these two being without a doubt the best two varieties of the Japanese longiflorums.

A son of Mr. Siebrecht, who has spent several years at a Boston technical college, is building a 40-horsepower motor car on the premises, and it is expected to have this car in service within the next few weeks. It will be used for conveying plants and flowers to New York every morning and for hauling freight. The car will be invaluable. An automobile, built by the young man last Summer, has been the means of Mr. Siebrecht and his family having many enjoyable tours over Long Island—all of which goes to make the lot of this prosperous florist a most happy one.

H. J. Jones, Rycroft Nursery, England.

The accompanying illustration is that of a section of Rycroft Nursery, Lewisham, S. E., London, England. H. J. Jones, probably the most noted and successful chrysanthemum grower in England, if not in Europe, is the sole proprietor, and his writings on the subject, as well as his work in originating and disseminating new varieties, place him easily at the very top round of his profession. It was the privilege of the writer to visit this place, admire the admirable chrysanthemums and tuberous rooted begonias, of which the illustration affords but a glimpse, so to speak, of the whole. Mr. Jones enjoys the reputation of the kindest feeling to the contemporary chrysanthemum lover of America, and evinces the fact by showering all manner of courtesies and hospitality on his American guest, producing evidences of his successes at the London and other flower shows by exhibiting gold and silver medals won by him, which, if melted into coin, would reach nearly \$4,000 value.

It is doubtful if any other grower in the old world has captured quite so many honors in prizes, and Mr. Jones continues to show his combativeness in floral warfare by a good-natured fight with his fellow

florists all over Europe, with no other artillery than his massive vases of the most perfect cut blooms.

It is interesting to listen to his discussion of American and English comparisons in chrysanthemums. To sum it all up, it would appear that he believes chiefly in English varieties for England and American varieties for America—however, not without occasional exceptions. He says "some of the varieties you people over there praise so highly as your best often turn out to be very ordinary over here; while some of the varieties you do not claim so much for turn out to be much better with us. We have not made a success of it, as a whole, by taking American varieties, expecting better, or an improvement on what we have already. But we have some Australian and French varieties which we can adopt to better advantage." He claims that acclimating may have something to do with adopting foreign sorts, but gives special praise to Western King as an American variety that has gone over to England and stood the test well, as one of the very best and most popular.

It is the opinion of the writer that the American has nothing to learn from his English cousin in the art of chrysanthemum culture, the Englishman appearing a little too much of a theorist proportionate to his practice. The system, modified by a few changes on account of personal views or preferences, is about the same in each country, and these differences appear to be occasioned more by the difference in climatic conditions than any new practices. As will be seen in the illustration, our friends on the other side, adhering more closely than Americans to time-worn customs, appear almost incapacitated for work unless sleeves are rolled up to the elbow, and white shirts invariably the rule.

In tuberous begonias the English florist is most happy, as well as in his fondness for pelargoniums and rhododendrons, which there reach the greatest perfection. Any American going to London should not fail to share the hospitality of Mr. Jones, always most handsomely extended, and to see the many interesting features about Rycroft that he has to show.

Houston, Texas. S. J. MITCHELL.

Sowing Herbaceous Perennial Seeds.

Where there is greenhouse accommodation hardy perennial seeds may be sown at any time now. A light, airy house, where a temperature of from 55 to 60 degrees can be maintained at night, will be found best suited to the purpose.

As mentioned in a previous article the boxes used should not exceed three inches in depth, and should be well drained. I have found that it is immaterial what kind of compost is employed, providing it is of an open, porous nature. If the soil is at all stiff or clayey, it should be well mixed with sand and well rotted manure, rubbed through a sieve. Of course, it is essential to have the soil very fine and in a fairly dry condition; if it is at all wet and sticky, it will become very hard when it gets dry, and the seedlings will be correspondingly poor and difficult to handle.

One of the greatest dangers to be avoided in sowing fine seed is covering them too deep. It is better not to cover at all than run the risk of covering too much. Something in the shape of a flour sifter will be found extremely useful where any quantity of seed is to be sown. A safe rule to go by is to cover the finer seeds about their own depth.

Seeds vary considerably in the time it takes them to germinate. New seed will come up much more promptly than old seed of the same kind. The following list will give an idea of the varying periods required for the different kinds to germinate, sown under favorable conditions in early January, the approximate number of days being given in each instance: Anthemis campaniana, 2; A. Kelwayi, 4; Alyssum saxatile compactum, 9; Aquilegia colerulea, 20; A. flabellata nana alba, 20; A. vulgaris fl. pl., 20; Armeria plantaginea, 9; Asclepias tuberosa, 11; Bellis perennis, 3; Campanula carpatica, 12; C. carpatica alba, 12; C. grandis, 9; C. media, 12; C. persicifolia, 14; C. persicifolia Moorheimi, 9; Centaurea montana, 9; Centaurea dealbata, 9; Chelone barbata, 12; Delphinium formosum, 9; Delphinium chinense, 11; Digitalis grandiflora, 14; Digitalis purpurea, 12; Gaillardia grandiflora, 8; Gypsophila paniculata, 6; Gnaphalium leontopodium, 12; Heuchera brizoides, 20; Heliosis Pitcheriana, 9; Lychnis flos-cuculi, 9; Papaver orientale, 9; Platycodon Mariessii, 14; Scabiosa caucasica, 13; Lychnis viscaria splendens, 8; Iberis sempervirens, 8; Lupinus polyphyllus, 8; Statice latifolia, 20.

After the seed germinates there follows a period varying from two to three weeks before the seedlings are ready to handle; as a general rule, it will be found that the sooner this can be done the better.

It is customary to wait until the character leaf is developed; but this is not at all necessary. If the seedlings show a tendency to damp off, pricking off will very likely save them, even though they are only in a cotyledonous state. After the seedlings have been pricked off, their growth is usually very rapid, and they will soon be ready to put into two and three-inch pots, preparatory to going outside.

ERNEST HEMMING.

A Correction.

J. M. Hammer & Sons, Washington, D. C., write to say that the item appearing in our issue of February 11 last, to the effect that their greenhouses had been frozen up is incorrect. We congratulate Messrs. Hammer on that fact, and gladly make the necessary correction.

CARNATIONS.

Stem Rot.

(Read by Wm. Weber, Oakland, Md., before the New York Florists' Club, Monday evening, February 13, 1905.)

In attempting to discuss the subject of cutting bench fungus or stem rot, it is not my intention or wish to lock horns with any of our brethren who are studying these subjects from a scientific standpoint. We need the aid of the experiment stations and scientific men; we have been benefited much as a result of their labors and we still look forward to aid in disposing of the various vexing problems which are constantly besetting us, but I believe that our friends, the professors, being only human, are apt to err, just as we ordinary growers are apt to do.

Professor Hasselbring, in his paper read recently in Chicago, stated that fungi in every instance are the

night, and a wilting ensues. This process is equivalent to exercise in the animal family; but we don't expect infants to take strong nourishment and vigorous exercise, and we must act accordingly with our cuttings. When we give heat and light in sufficient quantities to cause this wilting process, evaporation takes place out of all proportion to the cutting's vitality and ability to withstand the drain. One good experience like this will start the ball rolling. Cuttings here and there, or whole batches, have a shriveled appearance, and refuse to thoroughly freshen up; it will not be long then before an examination will disclose the presence of fungus around the stems, which will kill the cuttings quickly, or slowly, according to the temperature maintained.

We advocate the north-side propagating house because of its easier management. The direct rays of the sun are kept out during the most of the propagating season, but sufficient light is admitted for all purposes. The only time we experience difficulty at all is when the high south partition, or wall, no longer excludes the sun's rays, when greater vigilance is necessary. However, even then the sun's rays strike the glass at a very extreme angle, and we do not suffer in proportion as we used to before we adopted the north side.

or pot up. This drying process we find necessary to counteract the absence of sunlight.

I do not wish to infer that good results are not obtainable in a propagating house admitting the direct rays of the sun, but the point I would make is that the chances for unfavorable conditions to arise are much greater as compared with the north side house.

Any check sustained by the plants after being removed from the cutting bench, such as getting extremely dry in flats or pots, will result in producing that hard, woody condition in the base of the plant, and every grower knows how plants so treated will at best die a lingering death. Many plants, more or less affected in this way, find their way into the field, which is responsible for much of the stem rot found there. Deep planting and imperfect drainage are also large contributors to stem rot.

A couple of years ago, we began our field planting, as is our custom, about May 15. The soil was quite dry, but there were indications of rain; the rain did not come, and on the third day we were obliged to water the plants by hand. The bright sun and a strong wind, however, had already sapped all of the moisture the plants could muster; consequently, quite a few never revived, some only partially revived, and others

PARTIAL VIEW OF RYECROFT NURSERIES OF H. J JONES, LEWISHAM, LONDON, S.E., ENGLAND

Tuberous Begonias and Chrysanthemums. (See page 208).

prime causes of disease; not the condition. Now, I before the American Carnation Society in session at doubt if any successful grower, who has given the subject any serious consideration, will corroborate Professor Hasselbring's statement. If he had told us that typhoid, smallpox, etc., were first causes and not the result of conditions, he would be arguing along the same lines; but let us see how his theory stands when compared with what I believe are the actual facts in the case.

We will start at the cutting bench, say with a full bench of sound, healthy cuttings, recently placed in new sand. I maintain that during the rooting process cuttings not only do not require direct sunlight, but even strong light, such as will penetrate ordinary newspaper with the sun shining directly upon it, is far from beneficial. You will see at a glance, then, that I am an ardent adherent of the north-side propagating house for carnations.

But to illustrate why fungus appears, let us imagine our bench of cuttings is in a house admitting the sun's rays at all hours, but especially during mid-day. During cloudy weather it is not difficult to maintain an even temperature of about 50 to 60 degrees, but during bright weather it is not so easy. Of course, the glass may be shaded, but much heat will generate just the same, and it is quite easy for the temperature to go above the danger point, which is 60 to 65 degrees, depending somewhat upon the conditions.

Under the influence of strong light and added heat, plants throw off the moisture collected during the

We have found it unnecessary to have clear, sharp sand; in fact, we consider that a distinct drawback. The inability to secure sharp sand in our section soon taught us this lesson. We all know that for the first few weeks the cutting is obliged to subsist upon its own vitality, and while the process of rooting is going on a gradual hardening of the stem takes place, and if cuttings are allowed to remain in sharp sand long after they become rooted, we say they are woody. This is a frequent cause for stem rot developing in the plants later on, and, usually, produces the slow process of rotting unless conditions very favorable to the growth of fungi exist, when wholesale dying will result. This does not occur with cuttings rooted in sand containing some loam, decayed leaves, twigs, etc., such as we find along the banks of any small stream which overflows at various times of the year, depositing the sand, leaves, twigs, etc., mixed with some of the fat of the land, a very fine loam.

The nourishment contained in sand of this kind, while very mild, is very nourishing to young cuttings just putting out their first tiny rootlets, and from this moment on they begin to stop hardening at the stem, and grow, instead of getting woody and laying the foundation for various stages of stem rot to crop out later on.

With our system of propagation, it takes about six weeks during Midwinter to thoroughly root a batch of cuttings, and during this time they are watered about six times, four times during the first two weeks; after they are calloused they are kept increasingly drier until they are quite dry when ready to plant in soil

kept dying from time to time throughout the Summer, and even after they were housed. Perhaps a week later we had plenty of rain, but those planted in the dry ground without being watered until the third day, kept on dying just the same, while those planted after the rain, and those watered as they were planted, did not suffer.

Just a word concerning the theory advanced by Professor Hasselbring that the fungus enters the plants through the roots. I have never yet been led to believe this could be the case, and, instead, I have invariably noticed that the fungus operates upon the surface of the sand, or soil, and any dead roots are the result of curtailed breathing of the plant through a loss of foliage. The same thing happens if we use the pruning shears too freely upon our roses or other growing plants. A portion of the roots die through a lack of something to do.

We have all noticed young plants, and even old plants, carried off by quick rot just at the surface of the soil, and some time later see numerous small new growths coming out of the old stem, indicating that the old root is still alive, and doing away with the idea that the disease enters the plant by way of the roots. The slow form of stem rot would, indeed, give this impression, but knowing the facts as already stated, I believe this view to be erroneous. Cutting bench fungus and stem rot will cease when the conditions favoring its growth cease, and not before.

It is true that some varieties are carried off much quicker than others, but this does not indicate that we may hope for varieties which will remain immune

under conditions favorable to the growth of fungi, but rather that those varieties of a rather soft or fleshy nature, such as Daybreak, Uncle John, Flora Hill, Enchantress and others similarly constituted, need special care. As a rule, such varieties must be kept a little dryer than others of a more firm and solid growth.

While there is no hope of ridding a plant of the disease when once attacked, I know that in the case of valuable plants, such as first year seedlings, cuttings may be taken with entire safety, providing the disease has not progressed too far. We can cite many illustrations of this kind. We have also noticed that plants partially affected with stem rot have lived for months, and, in the meantime, produced a partial crop of good blooms. We do not attribute this entirely to the resistant power of the plant to the disease, but rather to the absence of favorable conditions for the growth of the fungus.

I am willing to go on record as differing with Professor Hasselbring that the fungi are the prime causes of disease. In my humble opinion, they are the effect; and conditions unfavorable to plant life and favorable to the rapid growth of the fungi are the immediate causes. In other words, the fungi bear the same relation to vegetable matter that the green bottle fly and its larvæ do to carrion—nature's method of disposing of dead matter where sufficient moisture and heat exist to make the growth of these organisms possible.

CHRYSANTHEMUMS

The New Chrysanthemums for 1905.

(Read by C. H. Totty, Madison, N. J., before the Morris County Gardeners and Florists' Society, February 8, 1905).

I do not propose this evening to go into cultural details in general, since you have heard me on this subject several times already, but I will describe such of the new varieties as I am personally acquainted with, their possible place in the exhibition stands, and their colors and periods of flowering.

The variety that is being most inquired about is Mrs. W. Duckham, which is, of course, natural enough, since it was shown in splendid shape at Boston, where it won the C. S. A. silver cup for the best ten flowers of any variety. I was sceptical when the raiser stated that it would beat Chelton, but events last Fall proved that he was right. While greatly resembling Chelton in shape, it is deeper in color and some two weeks later, being at its best November 1. The habit of Mrs. W. Duckham is ideal, with short jointed growth and fine stem, and in height it will not run over 4 feet. As a 6-inch pot plant, this variety did exceedingly well, and cuttings rooted in May and early June for this purpose made splendid little plants.

As a cut flower Mrs. W. Duckham is one of the best keepers either on or off the plant. As an instance of this I may say that the flowers of this variety sent from England to Boston traveled perfectly and kept in excellent condition throughout the show, yet they had been cut for fifteen days.

The only other yellow that I have seen or handled of the new ones is Merstham Yellow, and as this is so early, it is no use for the exhibitor; but the commercial grower has marked it for his own, and the supply is entirely inadequate for the demand so far. Merstham Yellow was written about considerably last Fall and you are all doubtless more or less familiar with it, but I will remark in passing that if it lives up to its record next year it will be the most widely grown of the early yellow flowering varieties. Those of you who have use for many flowers just when the frost outside has nipped the dahlias and other stock, will find a good stand-by in Merstham Yellow.

The white section is well enriched this year by the addition of several sterling novelties, Emily Mileham, Mrs. D. V. West, Mrs. Swinburne and White Combes being kinds that I am personally acquainted with, and Mlle. Jeannie Nonin and Clementine Tousef, two French varieties, both certificated by the C. S. A. last Fall. White Combes you all saw growing with Mr. Herrington, where it originated, and I need say nothing in its favor, as it spoke for itself. Mrs. D. V. West is a grand and beautiful white. The petals twist and curl in a graceful ostrich plume fashion and remind one of a variety that we all went crazy over some seven years ago, namely, Frank Hardy, which has some time ago passed to the great beyond. Mrs. D. V. West is a taller grower than the average, and is at its best the first week in November. I would recommend April propagation, which should give a second crown bud well on in August, when it will be safe to take.

Emily Mileham is also a beautiful white, refined and neat, with a very dwarf habit and stiff stem. It will be a fine variety for side benches and also pot culture, and should enjoy a large measure of popularity. While it does not make a thick, solid flower like Merza, it has a daintiness all its own. Crown buds secured the last week in August produced better flowers than buds taken earlier. Mlle. Jeannie Nonin will most likely take the place of Timothy Eaton, as it gives a large flower without the coarseness of the latter, and is at its best the middle of November. I am very favorably impressed with this variety, for it was one of the best sorts to show before the New York committee this year. Clementine Tousef I consider purely a commercial variety; a poor white, but a big early flower and as such will find its place. Pinks are not nearly so largely represented as last

season, nor to my mind do they show any advance over last year's, for it will, in my opinion, be some time before Wm. Duckham and Leila Filkins are surpassed. Valerie Greenham is quite distinct, and very full, though the petal is quite narrow. I must confess to a weakness for a broad, massive petaled flower. Mrs. H. A. Allen is much broader in the petal, has a good color and will find its level in the exhibition varieties. It is a very dwarf grower with a grand stem and foliage, and well worth trying.

The two largest varieties of the year are Mrs. A. J. Miller and J. H. Doyle, and they are both truly enormous when caught right, on the crown bud. The first named gave a flower 7 by 7 inches in a 6-inch pot, with practically no feeding. The color of Miller is a terra cotta shading to brown, not so striking, but its immense size makes it of great value in a collection of varieties. It needs no staking really, for it is one of the strongest growers I ever saw. J. H. Doyle is also very dwarf and strong, and makes a splendid pot plant. The color of this variety is a warm terra cotta shading towards a Lawson pink color on later buds. Another year, with this variety widely distributed, we can tell better as to its future, but I believe it will become a standard among the exhibition kinds. A peculiarity of this variety is the fact that the foliage is pale when the plant is in the early stages of growth, but this disappears as the plant gathers strength, and does not by any means indicate a delicate constitution.

Dora Stevens is a lovely color, old rose perhaps expresses it best. This variety makes immense solid foliage, like cabbage leaves, and I would recommend pot culture to check its exuberance in this direction. Dora Stevens will grow with any one in any place. Varieties of this character should not be fed too highly with nitrogenous food, or the resulting growth is too soft and sappy.

Reds are represented in the novelties by Merstham Red, J. H. Silsbury and Henry Perkins, neither of which shows specially noteworthy characteristics. Merstham Red is closely approaching to red. What are commonly called reds are, of course, strictly speaking, crimson, the red chrysanthemum not having yet put in its appearance. Merstham Red is very dwarf, and though it will not compare in size with Maynell or Wright, it shows up for all that it is worth with a broad reflexing petal. Silsbury and Perkins both show more or less bronze in their make-up when taken on the crown bud, and the late flowers, while wonderfully bright, do not have the necessary size for exhibition.

These constitute the best of the new varieties so far as I have seen them. I would include Brighthurst in the pinks, one of Elmer D. Smith's seedlings, and very well shown at our last Fall exhibition by Peter Duff. It escaped my mind when reviewing the pinks a moment ago. It has a good dwarf habit, and every flower comes good.

Some of the pessimists seem to think that we are not showing the progress in new types in the chrysanthemum that is shown in other flowers. They are greatly mistaken, since actual measurements show a large increase in size during the past ten years, and most assuredly the graceful Japanese section as seen to-day never presented such diversity of form and color even five years ago. But even if we were merely holding our own in regard to size and color, new varieties are all the time necessary, because the old ones will run out; even the peerless Wm. Duckham will have his day, and then pass out as the cycle moves along. A variety newly introduced, while full of the seedling vigor, may by very careful handling be held in good shape for some years, but eventually the inevitable decay comes and the plant passes out. The man, the tree, the flower, all have their periods of growth, manhood, old age and oblivion. The future holds much in store for the chrysanthemum, and the interest of the world in general in our Autumn Queen is increasing by leaps and bounds. Last year there were more exhibitions held than ever before, and many of them were financial successes for the first time in their existence. The chrysanthemum has come to stay, fellow craftsmen, and I for one propose to stay right with it.

The National Chrysanthemum Society of England has instituted a department of plant registration. Raisers, importers and distributors of new varieties, (whether members of the society or not) are requested to send to the Registrar appointed by the society, on or before the 31st of December, in every year, a list of all new varieties they intend to send out in the ensuing year. Such list to contain name and description of variety, name of raiser and distributor, and section to which the new variety belongs, on forms that will be provided upon application to the Registrar. It is requested, if it be possible, to submit any such new varieties previously to the Floral Committee for classification. The information thus obtained will then be inserted in the Annual Report and Schedules of Prizes every year, and thus the society's official catalogue will practically be kept up to date. The Registrar at present is: Mr. C. Harman Payne, 141, Wellmeadow Road, Catford, S. E.

WASHINGTON, PA.—A meeting of the stockholders of the Washington Floral Company was held on Monday, January 30, at which directors were elected for 1905. The following compose the directorate: W. J. Warrick, A. J. Culbertson, Edward Culbertson, John Salmon, J. M. Dickson and William Christman. The directors effected the following organization: President, J. M. Dickson; treasurer, W. J. Warrick; secretary, Ella Culbertson.

CLUB AND SOCIETY DOINGS

THE HUNTINGTON (L. I.) HORTICULTURAL AND AGRICULTURAL SOCIETY will hold an exhibition of carnations, roses, violets, flowering and foliage plants in the Court Room, Huntington, Tuesday evening, February 21. Admission free. Diplomas, certificates and prize cards will be awarded as premiums.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.—President J. C. Vaughan has appointed the following gentlemen State vice-presidents, in addition to the list previously published: District of Columbia, Geo. H. Cooke, Washington; Kentucky, Fred Louis Schulz, Louisville; Pennsylvania, West, Fred Burki, Bellevue. WM. J. STEWART, Secretary.

THE PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.—At the regular monthly meeting of the Pittsburg and Allegheny Florists' and Gardeners' Club, held on the 7th inst., the following officers were elected to serve for the ensuing year: T. P. Langhans, president; E. C. Reine-man, vice-president; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; Fred Burki, treasurer; P. S. Randolph, John Bader and Fred Burki, executive committee. The meetings of the club are held on the first Tuesday of each month. Place of meeting, 422 Sixth avenue, Pittsburg, Pa. Secretary's address is Ben Avon, Allegheny, Pa.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY held its ninth annual ball February 10 at Red Men's Hall, Oceanic, N. J. Over a hundred couples were in the grand march. The hall was beautifully decorated, and the music, by Wyman's Orchestra, was splendid. The stage was very tastefully decorated with cut flowers and decorative plants by Mr. Turner. Corsage bouquets of white roses and lily of the valley were furnished by the society for the ladies, and carnation buttonholes for the gentlemen. An elaborate dinner was served at 12 o'clock. The entertainment committee deserves great credit, as the success of the ball depended mostly on its efforts. I have just heard that most of the dancers reached home before sunrise.

There was a short business meeting before the ball, when William Ritchie and Frank Jenkins were elected active members. B.

THE DUTCHESS COUNTY (N. Y.) HORTICULTURAL SOCIETY held its annual dinner in the Nelson House, Poughkeepsie, N. Y., on Thursday evening, February 9. The tables were beautifully decorated. After the cigars were lighted Mr. E. Lyman Brown, president of the society, made a speech in which he reviewed the affairs of the organization and made an earnest plea for at least 100 new members. President Brown was heartily applauded as he told of the good and elevating purposes of the society. He referred to the fact that there was a deficit in consequence of the flower show, but the enthusiasm which he aroused foreshadowed a quick demolition of the deficit. Eloquent speeches were made by Hon. Martin W. Heermance, who talked on "Flowers and Their Friends;" the Rev. Patrick Daly; Lewis S. Chanler, who created much merriment by his reference to practicing law for bouquets; Patrick O'Mara, Frank B. Lown and others.

CINCINNATI FLORISTS' SOCIETY.—Saturday afternoon occurred the exhibition of roses given under the auspices of the Cincinnati Florists' Society, and, taken as a whole, it was the best rose show ever held at the club rooms. Peter Reinberg, Chicago, exhibited Uncle John for the S. A. F. medal, but the judge was not inclined to award it same. Theo. Bock acted as judge. The awards were as follows: American Beauty, George & Allan, second prize; Bridesmaid, best 25 blooms, W. K. Partridge, first; Albert Sunderbruch, second, and George & Allan, third. Bride, A. Sunderbruch, first; George & Allan, second; Peter Weiland, third. Meteor, 25 blooms, George & Allan, first; W. K. Partridge, second. Perle des Jardins, George & Allan, first. Golden Gate, Ivory and Liberty, W. K. Partridge first on all three. J. W. Rodgers received second for display of violet Princess of Wales. For best general display W. K. Partridge captured the prize.

The principal discussion of the evening was the advisability of holding a large chrysanthemum show next Fall, but nothing definite was done. Many were looking for the new rose, Richmond, but it did not materialize.

On March 11 will occur the carnation exhibition, and we want to see every new comer staged, especially Fiancee, Robert Craig, Lieut. Perry and My Maryland; good prizes are offered. If you have not received a schedule, write to our secretary, Geo. Murphy, Station F, Cincinnati, Ohio. We shall also be much pleased to see as many of the craft as possible at the show. Don't forget the date, March 11.

E. G. GILLET,.

THE MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY held its regular meeting on Wednesday, February 8, in Masonic Hall, Madison, N. J. The event of the evening was the reading of an essay on "The New Varieties of the Chrysanthemum," by C. H. Totty. They were treated from descriptive and commentary points of view, rather than cultural. The paper was much enjoyed by those present. It was supplemented by Mr. Herrington, with a comparison of European and Australian varieties grown in America, which was very interesting. Three new members were elected.

Our next meeting promises also to be interesting. E. W. Holt, of New York, has presented the club with a pair of gum boots to be bowled for. After a short business session we are to adjourn to the bowling alley, and prove our mettle. A committee composed of Messrs. Duckham, Totty and Herrington is to arrange the handicaps, so that every member will have a chance at the boots, and most of us need them just now. We hope to send you a few record-breaking scores. We have a month to get in form. E. R.

THE WASHINGTON (D. C.) FLORISTS' CLUB met last Tuesday evening, President Gude in the chair. After the usual business had been transacted, the District Smoke Law was discussed. This law, as it stands at present, is very arbitrary, and entirely prevents the use of soft coal, which adds considerably to the expense of heating. The bill about to be introduced to Congress by the commissioners for the purpose of allowing none but master builders to erect any buildings whatsoever was also discussed. Should this bill become a law, it would prevent anyone in the trade erecting their own greenhouses or making repairs without the services of a master builder, which would practically paralyze greenhouse building. It was agreed to wait upon the commissioners and try to have the smoke law modified and to prevent the master builders' bill from being presented to Congress.

Secretary Bisset exhibited a vase of his new rose, a cross between Liberty and Mme. Abel Chatenay. It has a fine stout stem, flowers as freely as Chatenay, and is of a fine, deep pink color. It was conceded that Mr. Bisset had succeeded in obtaining a fine rose, which no doubt will play a conspicuous part in future decorations. M. C.

THE ST. LOUIS FLOWER AND PLANT GROWERS' CLUB met on Thursday night, February 9, at Louisiana Hall and formed an organization under that name. This association admits only growers of plants and cut flowers, excluding wholesalers and store men, although most of the members admitted sell at retail. The membership is said to be limited to 75, from within a radius of 500 miles of St. Louis in Missouri and Illinois. The officers elected were: Dr. Alex. A. Halstedt, Belleville, Ill., president; James W. Dunford, Clayton, vice-president; E. H. Michel, secretary, and Gus. Egging, treasurer. The trade is still at a loss to know the objects of this new association, when the St. Louis Florists' Club, with 100 members, gives the growers all and more benefits than this new association can possibly give them. As was seen by the attendance, the largest growers in St. Louis were not present, and will not attend, they say. ST. PATRICK.

CHICAGO FLORISTS' CLUB.—There was a good attendance at the club meeting Thursday night, February 9. Four new members were elected, as follows: E. Korowski, N. J. Rupp, Paul Holbrook and Fred Lautenschlager. The committee in charge of the entertainment of the American Carnation Society read its report, which was adopted, and a vote of thanks extended the committee. Vaughan's Seed Store exhibited a vase of John E. Haines carnation, which scored 85 points. R. J.

ST. LOUIS FLORISTS' CLUB.—The February meeting of the club, Thursday afternoon, 9th inst., proved one of the best the club has ever held. It was also very instructive to carnation growers, who were out in full force; by the opening of the meeting fully 50 were present, and 70 before the close. The exhibit of carnations was one of the finest the club has ever held. Among the local growers who staged flowers were John Stiedel, J. F. Ammann, A. Jablonsky and Nick Himmer, and the stock they showed compared favorably with any of the outside exhibits. Exhibitors from a distance included the J. D. Thompson Carnation Co., of Joliet, Ill., with a grand vase of Robert Craig; Guttman & Weber, New York, sent Victory, which came in bad condition; H. Weber & Sons, of Oakland, Md., had their grand white, My Maryland; John E. Haines, Bethlehem, Pa., his new scarlet John E. Haines; Thomas Salvesson & Son, of Petersburg, Ill., showed Mrs. Thomas W. Lawson, Norway and Prosperity; E. G. Hill Co., of Richmond, Ind., sent Mrs. M. A. Patten, Lady Bountiful and Cardinal; The Chicago Carnation Co., Joliet, Ill., had the largest exhibit of blooms, which included Mrs. T. W. Lawson, Enchantress, Cardinal, Harlowarden, Lady Bountiful, White Lawson and Prosperity; W. J. Palmer & Son, Buffalo, sent 50 extra fine Red Lawson; unfortunately they came a day late for the exhibition.

Lady visitors at the show were Mrs. M. M. Ayers and Mrs. H. G. Berning. From out of town those who attended were: Mr. Canfield, of Springfield, Ill., James

Hartsborne and J. D. Thompson, of Joliet, Ill.; S. S. Skidelsky, of Philadelphia; and G. M. Kellogg, Pleasant Hill, Mo.

The meeting was called to order by President Juengel with all the officers present. All committees made full reports, except the building committee, who wished to be relieved, as they had not the time to attend to the work outlined properly, and asked the chair to appoint Fred C. Weber, C. A. Kuehn and Otto Koenig in their places, which was done. The committee on revising the constitution and by-laws read the report for the first time; this will require two more readings before adoption. Four members were dropped for non-payment of dues. J. J. Beneke, George Windler and F. J. Windt were appointed a press committee.

Frank J. Fillmore read a very interesting paper on the trip of the St. Louis delegates to and from Chicago, while attending the American Carnation Society's convention. The president called on each of the visitors for a few remarks, to which they responded. The president appointed as judges of exhibits: Messrs. Thompson, Hartsborne and Canfield, to pass on the local exhibits, and Messrs. Steidel, Ammann and Jablonsky for the outside exhibits. Awards for local exhibits were as follows:

Fifty White—John Stiedel, first, with Governor Wolcott; A. Jablonsky, second, with Lady Bountiful; J. F. Ammann, third, with White Cloud. Fifty pink—John Stiedel, first with Enchantress; J. F. Ammann, second, and A. Jablonsky, third, both with same variety. Fifty red—John Stiedel, first, with Adonis; A. Jablonsky, second with G. H. Crane and Flamingo. Fifty mixed varieties—John Stiedel, first; A. Jablonsky, second, and J. F. Ammann, third.

Judging on the outside exhibits resulted as follows: Fifty white—Chicago Carnation Company, first and second, with Lady Bountiful and White Lawson; E. G. Hill Co., third, with Lady Bountiful. Fifty pink—Chicago Carnation Company, first and second with Enchantress and Mrs. Thomas W. Lawson; Thomas Salvesson & Son, third, with Mrs. Thomas W. Lawson. Fifty red—Chicago Carnation Company, first, with Cardinal; J. D. Thompson Carnation Co., second, with Robert Craig; E. G. Hill Co., third, with Cardinal. Fifty any other color—Chicago Carnation Company, first and second, with Prosperity and Harlowarden; E. G. Hill Company, third, with Mrs. M. A. Patten. The varieties John E. Haines and Victory were too far gone to be judged, but apparently are good reds. My Maryland, a grand vase of blooms, scored 88 points, and was awarded the club's certificate of merit.

The next meeting on March 9 will be just as large and interesting. It will be our annual rose meeting; \$50 in prizes will be offered for both new and old varieties. Messrs. Koenig, Meinhardt and Beneke will have charge of the exhibition. ST. PATRICK.

NEW YORK FLORISTS' CLUB.—Ladies' night at the club on Monday evening, February 13, was again a grand success, as was also the carnation display. There was a large attendance of the fair sex, wives, daughters, sweethearts, cousins and aunts all being present, while the male representation was also satisfactory, many faces being seen that are generally missing from the other meetings throughout the season. President Traendly, still suffering from hoarseness, presided. The outing committee reported a visit of inspection to, and unanimous recommendation of, Glenwood, a Summer resort on Hempstead Bay. 2½ hours' sail from the city, with ample accommodations for games of all sorts, a dining room capable of seating 300, and the further inducement that the proprietors would donate twelve bottles of Rhine wine as bowling prizes. This was merely a report of progress, no final decision being made on the committee's recommendation.

Mr. Sheridan reported that the receipts from the recent annual dinner covered all expenses, a slight margin remaining. The committee was discharged with thanks.

Mr. O'Mara, chairman of the committee of awards, submitted new rules governing awards to exhibits made before the club. These rules will be considered seriatim at next meeting. In the matter of roses and carnations proposed additional scales, covering points relative to growth, condition, floriferousness, etc., were recommended, and other important changes suggested, the object being to make the club's awards as valuable as possible. The highest award for novelties will be a silver medal, followed, in order of merit, by certificate, highly commended, and honorable mention. In the case of worthy disseminated varieties, graded awards for culture will be bestowed.

Messrs. Frank McMahon, C. Albert Small, J. F. Marsden, Clarence Saltford and Wm. G. Miller were elected members. Nominations for membership were: Messrs. J. McHutchison, D. Wittmann, H. Suzuki, Wm. Weber, R. C. Pye, E. J. Wade and R. M. Schultz.

Action on the proposed amendment to the by-laws dealing with the secretary's duties was deferred till next meeting.

Wm. Weber, of Oakland, Md., then read his paper treating, principally, upon stem rot in carnations. Mr. Weber took exception to some of Professor Hasselbring's statements made at the recent convention of the American Carnation Society at Chicago. His paper will be found in full in another column.

In the ensuing discussion Mr. O'Mara directed attention to the mystery surrounding the origin of disease. It revived, he said, the question that had baffled scientists and philosophers as to whether the

hen or the egg came first. Good sanitation is the first principle of health, and this fact the essayist had well brought out in his very clean cut exposition of the essentials of good carnation growing.

F. R. Pierson was of the opinion that Professor Hasselbring had mixed up cause and effect as regards these diseases. The cause removed, the effect is prevented, and the close observer who can find out the cause of these troubles is the successful carnation grower. He cited cases demonstrating the susceptibility of some varieties to disease, while others in close proximity remained immune from its attacks; and also stated that the majority of the present day carnation diseases created less apprehension in the minds of growers than was the case a few years ago. He believed with Mr. Weber that anything that affects the condition of the plant, causing a hardening of the stem or other unnatural tendency, rendered the plant more liable to attack.

Speaking of his firm's new seedling white carnation, My Maryland, which was on exhibition, Mr. Weber said it was a cross of Norway and Mrs. Thomas W. Lawson, the former being the seed-bearing parent. In habit and character it is an invigorated Lawson, blooming earlier than that variety, and producing larger flowers on longer stems. The foliage is rather sparse, and he was inclined to think the energy of the plant centers largely in the production of flowers. With him, the variety was a freer bloomer than the Lawson.

Alex. J. Guttman told of Victory's good keeping qualities at the Chicago show. A vote of thanks was passed to Mr. Weber.

The entertainment part of the program was then proceeded with, J. B. Nugent, Jr., chairman of the house committee, acting as M. C. It consisted of songs by Messrs. Black, Nugent and Professor Ryan, highland dancing by Misses Annie and Jeannie Birnie and Jessie Cameron, a feature thoroughly and appreciatively enjoyed; violin solos by Miss Butters, and bagpipe music by William Cameron of New York.

Refreshments were served to the ladies and gentlemen, and everybody was well pleased with the evening's fun. There came from the question box an inquiry signed by Mr. O'Mara, asking which was the most valuable characteristic in a rose, a carnation, a chrysanthemum and a fern. The question, in its various parts, was assigned to Messrs. Harry O. May, John Birnie, William Duckham and John Scott, respectively, for response at next meeting.

After reading of the report of the committee of awards by Mr. O'Mara, adjournment was made at a late hour. The exhibits were numerous, and, with the exception of two or three, all were novelties not yet disseminated. Peter Bisset, Washington, D. C., showed a dozen flowers of a seedling rose, an offspring from Liberty and Mme. Abel Chatenay, and as yet unnamed. The flower is very full and double, of good size, somewhat like Chatenay in form, and of a pleasing, though indescribable shade of color somewhat after the coloring of Rosalind Orr English.

Young & Nugent exhibited a vase of fine gardenias, and with these two exceptions the tables were filled with carnations only.

H. Weber & Sons, Oakland, Md., made two nice exhibits, a white variegated variety, numbered 63, and a beautiful bunch of their new sort, My Maryland. Ferd. Boulon, Seaciff, N. Y., sent a few blooms of his pink Lawson, but they did not do the variety justice. John Reimels, Woodbaven, N. Y., showed pink seedling No. 31, almost the color of William Scott, but larger and better in every way; and Variegated Lawson, larger flowers than the parent and very prettily marked. F. R. Pierson Co., Tarrytown, N. Y., who are now devoting much greenhouse space to new carnations, made a comprehensive exhibit, included in which were Dabem, a large crimson that has become quite well and favorably known; Variegated Lawson; Mrs. M. A. Patten; Flamingo, the well known scarlet; White Lawson; Enchantress, and a brand new one named Winsor, a Mrs. T. W. Lawson seedling. We believe this is the first time Winsor has been seen in New York. It is a very soft shade of pink, a large and full flower borne on excellent stems, and looks like a winner. Palmer & Son, Buffalo, N. Y., sent on a bunch of their red Lawson, and J. L. Dillon, Bloomsburg, Pa., blooms of his new red variety, Crisis. C. W. Ward, Queens, N. Y., staged many very fine blooms, particularly in the vases of mixed seedlings, among which were both white and pink flowers that measured over four inches in diameter. One, a white and numbered 2621, was a perfectly formed bloom, clear in its color and with perfect calyx, no signs of bursting and an average size of over 4 inches. There were also a few flowers of a variety just as large and perfect in every way, of a pure pink color. These two kinds, with their three foot long stems and immense blooms, seem more like the forerunners of a new type of carnations than any of the members of the present day race and generation. Mr. Ward also showed two new crimson, The President, and No. 222, both large and excellent in every particular; Lieut. Peary, Robert Craig and a new white variegated variety. Guttman & Weber had a vase of Victory, which were in splendid shape. Mr. Guttman informed us that these blooms were to grace the dinner table at the Hungarian Club, where President Roosevelt would dine on Tuesday evening. John E. Haines, Bethlehem, Pa., was present with a splendid bunch of his red variety, John E. Haines, and, as it showed up there, this variety has no superior in color. The flower is also well formed. M. A. Patten, Tewksbury, Mass., sent a nice bunch of the crimson flaked novelty, Mikado. John N. May, Summit, N. J., exhibited a nice vase of Phyllis; Wm. Duckham a beautiful bunch of Enchantress, and Robert C. Pye, Nyack, N. Y., a fine vase of a light sport of Enchantress.

Review of the Market

NEW YORK.—The thermometer has been registering zero weather almost for a number of days, and business in cut flowers is extremely quiet.

Carnations are going quite slowly; they are very plentiful, particularly the variety Mrs. T. W. Lawson.

Tulips, narcissus, hyacinths and lily of the valley are all very plentiful, and there is no change in the values of these this week.

Lilies have become more plentiful and a drop in prices has resulted. Sweet peas and freesia are hard to dispose of; it is worthy of note that these two subjects were favorites a year ago and sold much better.

Cattleyas have been a little scarce, and stiffer prices are being asked. Lilac does not clear out so well as it might, and bargain prices rule occasionally.

BOSTON.—St. Valentine's Day was very cold, one of the coldest of the season; as is generally the case, however, it caused a brisk demand for many kinds of cut flowers.

NEWPORT, R. I.—We have had a much better market lately at both wholesale and retail. Carnations have improved both in quality and price.

BALTIMORE.—Business is satisfactory, so far as the demand is concerned, but the supply is somewhat different from a week ago, at which time there was too much stock, excepting good roses.

SAN FRANCISCO.—American Beauty and other red roses, though somewhat scarce, are in ample supply for all requirements.

ST. LOUIS. The market started out the past week as though stock of all kinds was to be scarce, but the latter part of the week flowers again piled up at all

the commission houses. The bad weather played havoc with the retail trade all over the city. It was 20 below zero Monday morning, and the weather man says there's no telling when the let-up may come.

The supply of carnations is increasing very considerably; the fancy grades are all selling fairly well, but first and common stock in particular are being held over in numbers each day.

Violets have sold very cheaply; the market has been over-supplied with both single and double. Extra fancy California realized 40c. per 100; \$3 in 1,000 lots; double as low as 50c. per 100.

While American Beauty roses in the special fancy grades are far from being plentiful, yet there are enough to supply all demands at from \$4 to \$5 per dozen. Other grades in this variety are also quite ample, at \$1.50 to \$2 per dozen; shorts are down to \$5 and \$6 per 100.

Bulbous stock is in abundance, almost being a drug. Freesia sells fairly well, but prices on this stock are much lower than at any time before this season.

INDIANAPOLIS.—With more favorable weather, St. Valentine's Day would have been an unusually heavy one. Despite the extreme temperature, 12 degrees below zero, business equaled, if not surpassed, that of last year.

Fancy carnations, such as Prosperity and Enchantress, wholesale at \$4 per 100; good grades, such as Mrs. Lawson, at \$3 per 100.

75c. to \$1 per 100. Potted plants have sold well during the past week; flat pots containing six to ten Dutch hyacinths or Jonquils are strong favorites.

CHICAGO.—With the severest weather in the record of the weather bureau for the past six years, and nearly a foot of snow on the ground, impeding traffic of all kinds, business has been at a very low ebb for some time.

American Beauty of the better grades are short in supply and prices have advanced somewhat, the flowers bringing from \$4 to \$6 per dozen; others from \$4 to \$4 per 100, according to grade.

The supply of carnations has increased somewhat, but the call has diminished. White are more plentiful. Prices are not as firm as they have been some time previous.

The supply of violets has also fallen off, still there are enough to meet all calls; but very few from the East are being received, local stock substituting to a considerable extent, and bringing from 50c. to \$1.25 per 100.

R. J.

KALAMAZOO, MICH.—Stormy and very cold weather for the past two weeks added nothing to the volume of business done, which for the past, or, rather, passing season, has hardly kept up to expectations.

CINCINNATI.—Business is good; stock is scarce. This tells the story in six words. Prices are as follows: American Beauty, \$6 per dozen; other grades in proportion.

WASHINGTON, D. C.—While the continued cold and cloudy weather has been

hard on the growers and has made the supply of stock somewhat limited, it has not interfered in the least with the social program; consequently, the florists have been kept busy. There has been a good demand for prime stock, at fairly good prices.

BOWLING.

BUSINESS DIFFICULTIES.

EAST ORANGE, N. J.—George Purdue, florist, has made an assignment for the benefit of his creditors. His place was located on Main street, and on this site his father, Richard Purdue, now retired, started the business in 1861.

Stoothoff Company, Tobacco Powder Hobbyists, 116, 117, 118 West Street, New York.

CANADIAN NEWS

HAMILTON, ONT.—This week's Ontario Gazette announces the incorporation of the Webster Floral Company, Limited, of this city. The incorporators are Charles Masson Webster, Wilford Mortimer Clendening, Charles Robert McCullough and Robert A. Robertson, all of Hamilton, and Chas. Harris Stickle, of Toronto, and the capital is \$40,000, in 400 shares of \$100 each. The company is authorized to carry on a general nursery, florist and seed business and to deal in supplies incidental thereto, and to acquire the business of Webster Brothers. The provisional directors are Messrs. Chas. Webster, W. M. Clendening and C. R. McCullough.

LONDON, ONT.—There has been somewhat of a revival in trade during the past couple of weeks, but the continuance of the very cold weather limits everything to the smallest possible proportion. Flowers of all kinds are of excellent quality, and while the general quantity is not very large, there are sufficient for all demands. Flowering plants are plentiful, but move very slowly; wholesale shipping trade, by reason of the cold, is almost at a standstill. Easter stock is progressing favorably; by reason of the lateness of the festival this year, there should be no lack of material of all kinds. The weather conditions are unusually severe—20 below zero is a common occurrence, but, fortunately, we are favored with plenty of snow. Railway travel is paralyzed.

FRED. BENNETT.

TORONTO.—Business continues good with all flowers, but good roses are plentiful. Bulbous stock has been in such quantity that much of it has been sold at very low prices, and only the big growers who buy their bulbs at very close prices have been able to make any money on it. Carnations have also been very plentiful and only the best have made good prices. The weather has been very cold this month, so the demand for plants has been light. But the call for cut stock is likely to be lively, as several big social events are slated.

The annual carnation meeting will be held this week, and a fine show is expected.

The regular army of Dutchmen have visited nearly all in the trade this season, and with them have come four or five fresh ones; they are eager for orders, and if they don't get some it will not be from the want of trying.

THOS. MANTON.

FIRES.

TOPEKA, KAN.—The greenhouse owned by Jacob Blair a mile and a half west of town, was burned to the ground February 6. The origin of the fire is unknown. The loss is approximately \$1,500.

Some Notes on Carnation Growing.

(Abstract of Paper read by Edward A. Stroud before the Florists' Club of Philadelphia, February 7, 1905.)

There has been some advancement made in the culture of the carnation, due to the introduction of Mrs. T. W. Lawson, by Peter Fisher, which, to my mind, marks the dividing line between the old and the new. The carnation industry may be classed under three heads: first, the growing of the flower for the public; second, the production for cuttings for the trade, and, third, the raising of seedlings. With us it would be impossible to handle the three together, and we think each grower should decide for himself which branch he and his place are best suited to and which will bring him the best results. We have taken up the cut-flower production, and our experience has been a practical one. As far as we can see, there is no great secret connected with producing the flowers; we have tried to follow Nature's laws, using common sense—close attention to details—cleanliness and houses well ventilated. One of the most essential points, undoubtedly, is to have good stock to start with, for if the young stock is unhealthy there is little hope of ever obtaining first-class blooms. We select our stock carefully, from flowering stems as much as possible; of course, on some of the new varieties we buy we are compelled to cut closer in order to get sufficient stock. We put in the sand first those that take the longest time to make plants, such as Prosperity, Mrs. Lawson and Flamingo, following with those that we get more quickly. When rooted we pot them in 2-inch pots, then into 3-inch, and, if necessary, into 4-inch. We take great care in watering, not allowing the young plants to suffer at any time for want of it; this insures us a clean, kind growth. From the propagating house we remove them into the field or into the bench, the latter method being adopted by most of our modern growers.

Our slight experience with indoor culture has not been a decided success over field culture, and we think that in our climate, situated as we are, a compromise between the two is much the better. We have adopted the plan of early propagating, planting in the field as soon as the weather permits and lifting the middle of July. These measures have given us the best results, although we feel that, to make a fair test, planting in the house should be made the same time as in the field and not early in June, as we heretofore have done. The objection to indoor culture might be the throwing out of our plants before Decoration Day and the poor prices obtainable during the chrysanthemum season. We throw out our old plants in July, take out the soil, whitewash the benches, and then give a thorough fumigation, after which the soil is replaced as quickly as possible, extra labor being hired for this purpose. Last year our houses (of which there are three, each 308 by 30 feet) were emptied on the 17th of July and planted with new stock by the 3d of August; this we consider very important, as it would be

RED SPORT (Of Maceo.)

Red Sport has proved the greatest money-maker we ever grew, producing more good blooms to the square foot of bench room than any other variety on the place. During the glut the first part of January we could only get four cents for fancy Lawson and sold every Red Sport we had at five cents. Every grower who was here in December was carried away with its possibilities, as a future supply of a "holly berry red" for Xmas. There is no pick in the blooms. They are all a uniform size and color. There are 40,000 or 50,000 buds showing in different stages of development at this time and there is not a split or off color bloom in the lot and every plant is the picture of health. We will plant 20,000 plants of Red Sport for next season's bloom and the cut is already engaged by two of Washington's leading retailers. Red Sport is an easy doer and everyone can grow it as successfully as we can. Price for Feb. 23th delivery—12 for \$1.50; 25 for \$2.50; 50 for \$4.00 post-paid; \$8.00 per 100; \$50.00 per 1000.

QUEEN LOUISE, still the greatest money-maker of any white; our stock is very vigorous and healthy. \$1.25 per 100 post-paid; \$10.00 per 1000. We guarantee stock to arrive in good condition and be well rooted.

very poor economy to let the work drag along.

We make a compost heap every Fall, consisting of one part cow manure to three parts of soil, adding some air-slacked lime to sweeten things up a bit. We turn the pile once in the Spring and again before it is wheeled into the houses. There is one point in regard to soil which we consider very important, that we term its mechanical condition, which means a soil which will drain water freely, and at the same time distribute food to the roots—this is particularly important after planting from the field.

The bewildering subject of stem rot and its causes is, to my mind, due to impaired root action and a drowning process of watering. This can occur in the propagating bench, the pot, the flats or the fields, and a check of some sort is generally responsible for it.

It is well to be progressive, but we would advise the man with limited glass not to attempt too many, three or four, in the various colors, which require the same treatment, is best. By keeping careful records we find that those that produce the greatest number of flowers are not necessarily the most profitable.

Our experience proves that it pays to work together with our commission man, keeping him posted as to what we will have and when we will ship. This gives him an opportunity to make sales which he might otherwise lose. We advise frequent visits to the wholesaler, not necessarily to see the proprietor, but to examine goods there, see how they are keeping, and compare with the product of other growers.

Valuable lessons may be learned in this way. It is hardly necessary to call your attention to careful bunching and packing. In conclusion, I would quote Fred Lemon, when he said at the Chicago carnation convention: "If you wish to succeed, nothing is too much trouble."

PROSPECTOR RED SPOT FROM MACEO

Color equal to Estelle, but producing at least four times as many blooms as that variety, and without doubt the best money-making scarlet ever put on the market, producing more blooms to the square foot than any variety now grown.

It is at its best for Thanksgiving and the Christmas Holidays, when bright colors are most in demand, easily bringing 75c. to \$1.00 per doz.

Easy grower, free from disease, and, like its parent, can be planted close, as there is no surplus green, every shoot producing a flower.

We have a large stock of this variety, and all cuttings will be guaranteed free from disease, well rooted, carefully packed, and orders will be filled strictly in rotation. Price, 12 for \$1.25; 25 for \$2.00; 50 for \$3.50; 100 for \$5.00; 1000 for \$45.00; 5000 for \$200.00.

Rambler Roses.

Much that has been said as to the treatment of potted hybrid perpetual roses applies also to pot-grown Crimson Rambler roses. This is the rose that more than any other shows the advantages of a Summer treatment in pots over field culture. Those that were potted up last Spring, instead of last November, are better plants in all respects, and easier managed. But this need not discourage any grower who depends for his Easter Ramblers on field grown and Fall planted stock alone, as most growers do. Good selling and presentable plants for that date can be made of these, if only rightly handled. Those that were started a week or two ago in a temperature of 45 degrees at night and 50 in the daytime, should now have a few degrees more heat, while those still in their Winter quarters must be started without much delay, if wanted for Easter, while, if wanted for a trade after Easter, they could still remain dormant for a time and would then require but little real forcing to have them in fine form in May. To bring Crimson Rambler into bloom starts from two to three months, all depending on the ripeness and plump condition of the canes, on how well the plants are established in their pots and on the measure of heat employed in forcing them out. But, in any case, the night temperature should not be higher than 45 degrees to start with.

The long canes, before the plants are placed on the bench, are neatly arranged in spirals around stout stakes and firmly tied; or they may be trained into any other form, promising to be effective when the plants are at their best. Every weak shoot or straggling growth is cut away. Water is given in moderation at first, but frequent sprinkling will be found helpful in the securing of an even all around break of every eye along the wood; on this, success largely depends. After the new growth is beyond all danger of becoming "stuck," or remaining "blind," the temperature may safely be raised to 50 degrees, in another 8 or 10 days to 55, and finally to 60 degrees, after which all depends on the nearness of Easter and on how far the plants have advanced in the development of their flower trusses. The grower, however, should bear in mind that, although the Rambler roses may be safely subjected to a heat of over 70 degrees, if need be, his output will be much finer, if grown and bloomed in a much lower temperature.

All through this stage in their forcing, water is given freely and the daily sprinkling continued. Fumigation must also be attended to regularly, at least once a week. Crimson Rambler roses that were pot-grown all Summer, need feeding in liquid form twice a week until the color of the trusses shows. The plants should be as near the glass as possible, and they will be all the better for being turned occasionally. Fresh air, especially towards Spring, must not be withheld, but ought to be supplied under the guidance of experience, or at least good judgment, where a lot of these roses are handled. Mildew is their arch enemy and ever ready for an attack. If, through oversight or forgetfulness, the temperature has been allowed to run up unusually high without any ventilation, heavy wetting down and sprinkling must be resorted to, and the ventilators either not opened for the time being, or very gradually, and by inches. A rush of cool air into an over-heated rose house is at all times the surest means of ruining the tender foliage and shriveling the sappy top growth of any growing rose, but none resents this cruel treatment more than the Crimson Rambler. Nor should the ventilators be thrown wide open immediately after fumigation, if this took place in the forenoon, and, again, after the plants have been forced into bloom in a high temperature, it will do them no good to be at once placed into a cool house or shed, as is done with azaleas, lilies, etc., without detriment to these plants. Roses of all kinds will keep in better shape if not thus "weaned" and will look less shop-worn and shabby.

 CUT FLOWERS AT WHOLESALE
 Mention the Florists' Exchange when writing.

Newport, R. I.

News Notes.
 Even with the zero weather we continue to have, both florists and seedsmen are well pleased with the orders received for so early in the season. A trip among the retail florists reveals the fact that stock is not overplentiful, and has been well cleaned up every day. There has been considerable funeral work for some time past, and this has, with a good demand for cut flowers, made things good for all. Just as soon as the weather breaks and the snow goes we all look for a good Spring rush.

You never would have recognized our friend Jack Butler, as the Duke of Plaza-Toro in Gilbert & Sullivan's opera, "The Gondollers," which was given by local talent for the benefit of the Young Men's Christian Association. Florist Butler did himself proud, both in singing and acting.
 Mr. Weaver, of the George A. Weaver Company, has made the public statement "that his company will continue in business in some desirable location if the proposed plan is carried out of reconstructing the Weaver Company's present store into a hotel."

Scott is busy with early orders for seeds, and is also selling onion sets very freely. Carl Jurgens is cutting lots of narcissus in all the best sorts. W. O. Parmenter is here, seeing the customers of Ross Brothers, of Worcester, Mass. Reed & Keller, of New York, have been looking after their florists' supply business here this past week. Henry C. Anthony, the seed-grower of Portsmouth, R. I., was a recent visitor. Harry L. De Blols is, as usual, agent here for J. M. Thorburn & Co.'s seeds. F. W.

Kalamazoo, Mich.

Trade Items.
 The local papers announce that W. Cook, late store manager of the Central Nursery Co., has severed his connection with the company and will commence on his own account as landscape architect and horticultural adviser; also will take charge of wedding and other decorations at public or private occasions. Mr. Cook says he already has several good contracts ahead, so it seems there is an opening here for such a business.

The Central Nursery Company had an appropriate window display for St. Valentine's Day, which attracted much attention from passers-by. This is getting to be quite a flower day here, violets and carnations leading in popular choice. Mr. Smith, of this company, has a house of Mrs. Lawson carnations that is a proof to the contrary that this grand flower is running out, as a finer lot of plants and flowers the writer has not seen for many a day. Certainly Lawson is alone in its class, and not to be dropped yet awhile. S. B.

SEATTLE, WASH.—Mrs. Jennie Johnson, a florist, committed suicide February 2, by swallowing strychnine. She was 42 years of age and leaves a valuable estate.

News Notes.

Pursuant to an amendment to its by-laws, passed at the December meeting, the Pennsylvania Horticultural Society will hold its next monthly meeting on Tuesday next, in the afternoon, instead of the evening.

Horace S. Dumont has withdrawn from the Philadelphia Carnation Co. The business will be continued by Harry Crawford, the other member of the firm.

Edward Stroud will give up his retail establishment at Overbrook, devoting all his attention to the carnation plant at Strafford.

Edwin Lonsdale is still under the doctor's care, but expects to be around the end of this week.

Pennock Bros. did a large business on St. Valentine's Day; they had special heart-shaped baskets and boxes made up, which sold well.

J. J. Hahermehl's Sons had the decoration for the Harrison ball at Horticultural Hall on Friday last. It was very elaborate. The windows were draped with strings of smilax, Bigonia venusta flowers, etc.

My friend "Phil" feels somewhat badly to think Job accuses him of making up those questions which are published in the Review; and to prove that the questions are genuine he called upon me the other day and handed to me some of the letters containing the questions submitted, asking me to square him with Job.

Boston.

News Notes.

Peter Murray, who has had charge of the greenhouses and grounds of W. P. Winsor at Fairhaven for nearly fifteen years, and is one of the best gardeners and orchid growers in this vicinity, has leased the greenhouses from Mr. Winsor and will start as a general grower, commercially, for the home trade, for which there is a good opening where he is located. Mr. Murray has our best wishes for a successful business career. He has been a successful exhibitor for the last decade at many of the Boston shows, and like all other successful gardeners has ever been alert to the raising of novelties, his latest achievement being the new seedling carnation Winsor, which received a first-class certificate of merit on Saturday from the Massachusetts Horticultural Society, and of which he has sold the entire stock to the F. R. Pierson Company, Tarrytown, N. Y.

A young man in the employment of Welch Bros. has been fleecing his employers of flowers and florists' supplies and disposing of them to street fakirs. In court Tuesday morning he was placed on probation.

Morse & Gompers is the name of a new firm that has opened a flower store on Tremont street, near to Keith's Theater.

The G. A. Sutherland Company has added a wire-working department, and is now prepared to fill orders with a full line of cut flowers and florists' supplies of all kinds.

Wm. Nisbet & Co. have given up their location at 54 Pemberton square.

At a dinner given by members of the Ancient and Honorable Artillery Company to some visiting British friends at the Parker House recently, the Wellesley rose was used entirely for decoration.

Morris Hambroe and George Solomon have opened a flower stand in Houghton & Dutton's.

F. R. Pierson refused to accept a shipment of carnation blooms which were intended for exhibition on Saturday at Horticultural Hall, on the ground that they had been delayed by the express company, and were too late for the exhibition. The express company turned the goods over to a local commission house which realized good prices for them.

Walter Holden, seedsman for L. E. Small, of Tewksbury, in the Music Hall Market, has been confined to his home for several days.

J. A. Pettigrew is on the sick list, suffering from a severe cold, threatening pneumonia.

The executive committee of the American Rose Society held a meeting in Boston Tuesday, making arrangements for the coming exhibition in March.

Alex. J. Gutman, New York, and F. R. Pierson and James T. Scott, Tarrytown, were visitors at the show of the Massachusetts Horticultural Society on Saturday last. J. W. DUNCAN.

W. C. KRICK, 1164-68, Brooklyn, N. Y. Mention the Florists' Exchange when writing.

Cincinnati.

The Week's News.

The weather forces us once more to make remarks. This Monday morning the air is clear as a bell; the wind is blowing moderately and the thermometer registered 4 degrees below at 5 a. m., and at 10 a. m. only 2 above. The Ohio River has been frozen over for nearly a week. On Friday and Saturday the temperature was much warmer, and the ice commenced breaking up with much loss to the craft in the harbor, but to-day all is again frozen; thousands and thousands of dollars' worth of barges, loaded with coal, have gone to the bottom and many steamers have been crushed.

Many of the craft in this section are sick with bad colds and la grippe, but so far no fatalities have occurred. E. G. GILLETT.

Columbus, O.

The Fifth Avenue Floral Co. recently incorporated here, with a capital stock of \$20,000, is a continuation of the partnership carried on under the same name by Messrs. Seibert & Woodrow. They have been very successful, especially in supplying the downtown stores with roses, carnations, etc., and have found their business growing so as to crowd them for room. The wholesale department, which has been conducted from Seventh avenue, will be removed to the suburbs, when new and larger greenhouses will be built and many improvements made. The officers of the new organization are: C. K. Seibert, president; I. D. Seibert, general manager; G. H. Woodrow, secretary. B.

YOUNGSTOWN, O.—Walker & McLean have enlarged their store and are preparing for a big seed trade this Spring. J. T. C.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 8

NEW YORK, FEBRUARY 25, 1905

One Dollar Per Year

CARNATIONS STRONG ROOTED CUTTINGS

WE OFFER FIRST-CLASS STOCK OF THE FINEST VARIETIES

VARIEGATED LAWSON This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white, with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will out-bloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. \$12.00 per 100; \$100.00 per 1000.

RED LAWSON A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. \$10.00 per 100; \$75.00 per 1000.

CARDINAL Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations, any color, first prize for best 50 scarlet seedlings, Chicago. \$12.00 per 100; \$100.00 per 1000.

FIANCEE The Queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. \$12.00 per 100; \$100.00 per 1000.

FRED. BURKI Recommended as an extra free-blooming white variety and a claimant for popular favor. \$12.00 per 100; \$100.00 per 1000.

WHITE LAWSON We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock, ready for immediate delivery. \$7.00 per 100; \$60.00 per 1000.

LADY BOUNTIFUL A magnificent white of last season's introduction. \$6.00 per 100; \$50.00 per 1000.

DAHEIM Dark crimson; grand stiff stem; Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. \$6.00 per 100; \$50.00 per 1000.

MRS. M. A. PATTEN This grand variegated carnation has given splendid satisfaction. \$6.00 per 100; \$50.00 per 1000.

ENCHANTRESS Freest blooming, bringing highest market prices in great demand. \$4.00 per 100; \$30.00 per 1000.

MRS. THOS. W. LAWSON \$3.00 per 100; \$20.00 per 1000.

PROSPERITY A magnificent fancy carnation. \$3.00 per 100; \$20.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.
Mention the Florists' Exchange when writing.

We are now prepared to book orders for 1906 for

THE COMING SCARLET CARNATION

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker.

Orders will be filled in rotation, as received. Delivery beginning December next.

\$12.00 per 100; \$100.00 per 1000.

GRAFTED ROSE STOCK

Now is the Time to Order for Summer Flowering

KAISERIN AND CARNOT } 2 1/4-inch pots,
\$15.00 per 100

LOUISIANA
The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an unintroduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

JAMES VICK'S SONS

ROCHESTER, N. Y.

Mention the Florists' Exchange when writing.

SEATTLE, WASH.—W. J. Good has purchased a tract of land near the southern part of this city, where he intends to install a bulb farm.

NEWPORT, R. I.—William B. Scott & Company report the past week as the best of the season thus far as regards orders for seeds; onion sets and seed potatoes are also moving well. F. W.

LITTLE ROCK, ARK.—Leifer Bros. Co. was incorporated February 1 to succeed the firm of John Leifer & Co., wholesale and retail dealers in seeds and farm implements. The officers are George, John and Charles Leifer.

INDIANAPOLIS, IND.—It is reported that J. A. Everitt, seedsman, has recently secured an option on a large tract of choice land on the Gulf of Mexico, which will be operated as an experimental station and model farming community.—Agricultural Advertising.

SEED PACKING.—Writing on this subject to The Gardeners' Chronicle, W. Watson, of Kew, says: "I can strongly recommend damp cocoanut fibre and wooden boxes for all seeds that perish easily and can be conveniently packed in them. For seeds generally, I know of nothing better than paper packets and calico bags, and the more moisture there is in the seeds themselves when thus packed the better. Hermetically sealed tins, or bottles, should never be used."

IN HOLLAND.—A writer in the Horticultural Trade Journal, England, February 8, remarks as follows: "Seedsmen are now at their busiest in filling the rapidly coming in of the orders for early Spring sowing, and up to the present the run has been quite up to the average, but indications are there already that many sorts of beans will be short for the demand. In the bulb lines for Spring planting, the demand is quite as brisk as last year, and gladiolus of any kind will clear out completely, notwithstanding the very good crop that has been harvested."

On February 9, arguments were heard by Justice Anderson, of the District Supreme Court, Washington, D. C., in the case of the Brown Bag Filling Machine Company against James L. Drohen on a motion for a preliminary injunction. Drohen has the contract for the Congressional seed distribution for the present year, and the complainant alleges that in assembling the seed in packages for distribution Drohen is using an apparatus which infringes a patent belonging to the complainant. In his answer, and in a number of affidavits filed by Drohen, he denied the validity of the complainant's patent, and denied also that the apparatus used by him was an infringement. If any injunction is granted at this time it was pointed out, such injunction would delay the present year's distribution of seeds by the Government. The case was taken under consideration by the Court, and will be decided later.

European Notes.

The ravages of the Winter are being manifested by the mild weather at present prevailing in Europe, and from all sides come reports of failures of many of our most valuable round seed crops. This is more particularly the case with those produced from stock seed grown in warm climates. Full details are not yet to hand, but already we know that early broccolis, cabbages and savoys have gone under by wholesale. Biennial flower seeds, such as Winter stocks and wall flowers, have followed suit; forget-me-nots and

DREER'S ROYAL EXHIBITION PANSIES

We offer a fine lot of September-sown seedlings, which were transplanted in cold frames during October, and while not extra large they are sturdy, stocky plants, which will respond quickly in Spring and give better returns than larger but softer greenhouse-grown plants.

Price, 75 cents per 100; \$5.00 per 1000.
SEED of above, 50 cts. per trade pkt.; \$1.25 per 1/4 oz.; \$3.00 per oz.

Myosotis Palustris Semperflorens (THE EVER-BLOOMING FORGET-ME-NOT)

A good lot of cold frame-grown plants suitable for potting into four-inch pots, which, if brought into a cool greenhouse, will furnish readily saleable plants for retailing, or will produce quickly a profitable crop of flowers for cutting.

50 cents per dozen; \$3.00 per 100.
SEED of above, 30 cts. per trade pkt.; \$1.50 per oz.

Primula Cortusoides Sieboldi.

These beautiful rich-colored Primroses are almost unknown to the American trade. They are used extensively as pot plants in many European cities where they meet with ready sale, and we believe that they will meet with even greater favor here when once they become known.

We offer good strong germs, which, if potted up and placed in a carterion house temperature, will be in full bloom in about five weeks' time. All are very large-flowered and of bright, pleasing colors. We recommend them for trial, feeling certain that you will be pleased with the result.

ALBA MAGNIFICA. Large, pure white fringed.
ARTHUR. Beautiful salmon-rose.
MAIDEN'S BLUSH. Soft, delicate pink, finely fringed.
SIRIUS. Rich crimson-rose, with white eye.
Price, \$1.25 per dozen; \$10.00 per 100.

variety Alaska is, of the three, the most vigorous, producing also the largest pure white flowers; that Westralia is a fine branching variety, growing into an immense, spreading bush, covered the entire season with countless very large, creamy white blooms; and that California throws the largest flowers, but of a clear, pleasing lemon color, which, in the course of a few days, changes to a delicate creamy white.

It should be borne in mind that Shasta daisies are entirely hardy and may stay out in the open for several years, when they will grow to such a size that division and a resetting becomes necessary.

sweet williams look very sickly, but may yet recover, assuming that our Winter is over.

The before mentioned mild weather has opened up business in fine style, and orders are tumbling in thick as leaves in Vallambrosa. Unfortunately, seedsmen are ill prepared for an exceptionally heavy demand, and "sold out" appears far too frequently for us to be happy. "Man never is, but always to be blest."

H. T. Huggins, managing director of Cooper, Taber & Co., London, has been in the grip of la grippe fiend for the past ten days, but is now nearly convalescent. An annual visitor to the States for nine consecutive years in the 70's and 80's of last century, Mr. Huggins was well known to the seedsmen, who made history in those very stirring times.

Referring to a recent announcement in this column respecting J. Wrench & Sons, Limited, a petition for winding

up the company was filed in the High Court of Justice, London, on January 31. Dippe Brothers, of Quedlinburg, Germany, and W. H. Filmer, of Sittingbourne, England, are the petitioning creditors. EUROPEAN SEEDS.

Shasta Daisies.

Somewhat over a year ago, in The Florists' Exchange, I pointed out the merits of the Shasta daisy as a plant for the commercial florist, adding a few hints on how to grow it to best advantage, as far as my own experience enabled me to do, trusting that such information would prove of benefit to the readers. I have not been mistaken, neither in the possibilities of the plant, nor in the willingness of our florists to give it a fair trial.

Now, after another year's experimentation with the Shasta daisy as first introduced some years ago, as also with the newer, greatly improved forms sent out last season, I find that all that was ever said in praise of the Shasta daisy is fully merited and has, to my entire satisfac-

tion, been substantiated by the plant's behavior last season. It is, and, no doubt, will be for many years to come, one of the most valuable plants for the commercial florist, be he retailer or wholesale grower.

The Shasta daisy is a hardy herbaceous perennial, therefore chiefly an outdoor plant. It is a healthy, robust and rapid grower, and a tireless producer of innumerable blooms on long, stiff stems throughout the entire season. The flowers are of immense size, snowy or creamy white, faultless in form, texture and lasting quality. They have, so far, always been scarce on the market, and also always called for, bringing the same price as first grade carnations. Two hundred high class blooms from a single plant during the Summer is nothing unusual. The flowers, cut when just fully developed, and kept properly, will, after two or even three weeks, be as perfect and salable as the day they were cut.

The plants in the open seem to require no special soil, care or culture, and have done well with me in all kinds of ordinary good garden land; but, I believe had extra pains been taken in giving them a very rich, sandy piece of ground, the most sunny situation and liberal waterings during the hottest part of Summer, all this would have been followed by still greater success.

The strains of seed, as now offered, are much superior to those obtainable a year or two ago, and will, wherever purchased, take good care of the reputation of the Shasta daisy and its originator. The initial cost of the seeds will be generously made good by the returns from the sale of flowers the first season. If the seeds are sown the latter end of February, or the first week in March, three-inch plants will be had by the first of May, ready to be planted into the field. These should be planted a foot or 14 inches apart in the row and two feet between rows. This is far enough apart the first season. In the Fall, the finest plants are dug up, divided into ten or twenty pieces and reset at distances of 18 or 20 inches in the row, in a well prepared field. All the plants from seedlings, started now, will give a fair crop of flowers in the latter part of Summer.

Plants to be grown in the greenhouse for their flowers during Winter and early Spring are best raised from seeds started in May or June, and such seedlings will be found better for that purpose than plants derived from divisions.

The three new varieties sent out by Mr. Burbank last year year can, of course, only be procured in the form of root divisions, either in a dormant state or pot-grown. No garden and no gardener should be without these masterpieces of skillful plant breeding. They have all been fully described in our trade journals, and I will here only add, that the

Trade Notes.

St. Valentine's Day business was very satisfactory and showed a nice increase. While, naturally, violets and red flowers were mostly demanded, all kinds were used, as were also prettily decorated blooming plants. Those of the local stores who depended upon Chicago for a supply were badly handicapped in handling their trade, as the trains, which usually arrive at 7 a. m., did not reach here until noon.

The next meeting of the Kentucky Society of Florists will be held Tuesday evening, March 7, and has been designated here as Carnation Night. We expect a nice display, and cordially invite all florists who can possibly meet with us to come. Any grower desiring to make an exhibit and not able to come with it can send the same to our secretary, F. L. Schulz, 644 Fourth avenue.

The sincere sympathy of the craft is extended to Joseph Coenen in the loss by death, of a brother. A. R. B.

FIRES.

CARTHAGE MO.—On February 4, fire broke out in Perry Finn's greenhouse plant; damage to stock and structures, \$4,000. No insurance.

CAL. PRIVET, one, two and three years; also cuttings, any reasonable offer will be accepted on lots of 5,000 to carloads.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

STEPHEN HOYT, of New Canaan, has been elected one of the county vice-presidents of the Connecticut Pomological Society, which has a membership of 581.

FLUSHING, N. Y.—Messrs. Keene & Foulk, who have conducted the Bloodgood Nurseries for a number of years, have dissolved partnership. Mr. Keene has organized a company which will continue the business, and will add another branch to his business, that of landscape gardening. The new company will be known as the Bloodgood Nurseries, incorporated. The capital stock is \$50,000. A new site will have to be obtained for the business, as the property which they at present occupy on Broadway, Flushing, was sold to a New York syndicate not long ago. But the privilege was given the sellers of the property to remain until June, 1906. Theodore Foulk, who retires from the business, will, it is said, engage in the same line of business in the neighborhood of Flushing.

Hardiness of Viburnum Opulus.

In bulletin 108 of the University of Wisconsin, extracts from which appeared in a recent issue of The Florists' Exchange, is a list of satisfactory and of unsatisfactory shrubs for that State. Among the satisfactory ones is our old friend the common snowball Viburnum opulus sterilis, and in the unsatisfactory one, Viburnum opulus var. Just what is meant by "var." is uncertain. As a rule, there are but three sorts in nurseries, the type, Viburnum opulus; the snowball, V. o. sterilis, and the dwarf variety, V. o. nanus. It cannot be the typical one, V. opulus, for this is a native of Wisconsin, growing plentifully in many parts of the State, where it is called high bush cranberry, and is sometimes listed under its old name Viburnum oxycoccus. Will some of our Wisconsin friends tell us what is meant by Viburnum opulus var.?

While on this topic it is singular that varieties are often tender when the type is not. Take, for instance, the Japanese snowball. This is not as hardy as V. tomentosum, yet it is said to be a variety of it. Again, there is Viburnum rotundifolium, also said to be a variety of V. tomentosum, and it is not quite as hardy as V. plicatum. Still, there would seem to be no more reason why a variety should not differ in degrees of hardiness as well as in other respects, when once it commences to disagree with its parent.

Raising Witch Hazel From Seed.

A party living in New York writes me asking how to increase the witch hazel. Presuming he means the native one, it is raised from seeds. The shrub flowers in October and November, and the seed pods form then, but do not ripen until the next August or September. The pods are to be gathered then, when one or two by bursting open show the time has come for it. These pods are placed in a tray and set in the sun, that they may open at once. But they must have a sieve set over them, as when the pods open they eject the seeds at the same time, sometimes to quite a distance. This is not known to all who attempt to secure the seeds, and many are disappointed in finding themselves short of the seeds they expected. Seeds sown in Spring, and covered lightly, usually grow very well. Because of the shooting character of the seeds this shrub should be called the revolver shrub, the name artillery plant being pre-empted by the Pilea muscosa, which also projects its seeds.

The Japanese witch hazel has not been among us years enough that large bushes are to be had from which seeds might be looked for, so we have to increase it by grafting it on the wild one. It takes very well so treated. This Japanese one has yellow flowers, much like those of our own, but there are some small crimson dots at the base of the petals, if my recollection serves me right; and instead of its blooming the last thing in Autumn it does so early in Spring. Because of this, it is a welcome addition to our list of shrubs.

Germination of Seeds.

To know the value of covering up tree seeds when sown, one has but to think of the thousands of seeds that fall to the ground from a single forest tree, from which not one grows. The greater part are lost because of not having the necessary shade and moisture, which a slight covering of soil gives; and besides the covering referred to, there must be many other conditions necessary—warmth, continued moisture, and not too much heat at the commencement of sprouting.

There are failures with seeds continually occurring, against which it is almost impossible to provide. It is greatly in favor of germination that the seeds be

care, the elements may be against success. Lack of proper moisture in Spring; too great a heat before the seeds have sprouted, and other matters, sometimes destroy a sowing. A curious experience was that of one of our Philadelphia seedsmen. It related to a watched from the time of ripening until sowing, to see that they do not dry out. Even with the best of certain lot of evergreen seeds he sold to four customers. Three of them complained so badly that it seemed they had made a complete failure, while the fourth, with some of the same seed, sent word that he had a fine stand of seeds; and all were from the same lot. The fourth letter was a surprise to the seedsman. It came to hand some time after the others, quite unexpectedly. The condemnation by the others had been so unanimous that the seedsman had come to believe there must have been something amiss with the seed, and would still be thinking so had he not received the fourth letter, praising the seed.

Seeds should be secured as soon as ripe, sown then, or kept in good condition through the Winter and sown the very first thing in Spring; they should be properly covered and shaded in some way until they germinate. One may then expect success, but it cannot be assured.

English Hollies.

Editor Florists' Exchange:

In reference to the article on English hollies, Messrs. H. den Ouden & Son are quite right when they say "it is necessary that they have a good ball of earth to the roots." But this earth ball should be a natural root ball and not simply loose earth packed around the roots and then nicely sewed up in burlap in a nice ball shape, as is so often the case.

The holly requires frequent transplanting to make the plant form solid root balls, and this is not always properly attended to, for the simple reason that such plants are naturally of slower growth; hence give slower returns. It is of great benefit to the plants if a little wet moss be packed around the root balls and then sewn up solid in burlap. If the root balls appear to be a little dry when the plants arrive, they should have a good watering, and be placed in a cool, shady greenhouse. If placed in the shed, see that the doors are kept closed and the plants not allowed to suffer for water.

These plants, when unpacked, are sometimes placed in any old corner of a potting shed where the draft strikes them and dries them out too much. When our European brethren will send us the natural root balls, packed as above stated, and the American florists will give the plants a little better treatment in general, better results will be obtained.

DUTCHY.

FRUITS UNDER GLASS.

Pot Fruit Trees.

The cultivation of pot fruit trees is interesting work, and, aside from that, it is surprising the quantity of fruit that can be gathered from such trees, providing they are in a vigorous, healthy condition, brought about by good treatment.

Where space is valuable during Fall and early Winter, this method of fruit culture is to be commended. When the fruit is gathered, the trees are benefited by standing outside in the open, at least, till severe freezing; then they can be stowed away in a cool house where they would not occupy much space, as they can be set close together.

I have started these notes as referring to pot fruit; but supposing we change off to tubs. Take, for instance, two trees on a hot Summer day—have one in a tub and another in a pot; the former will surely have the better of the argument. The roots will be kept cooler in the tub, which will also hold moisture longer after watering. I have tried different methods of producing fruit in pots and tubs. Some years ago I had an experience in plunging the pots, but have come to the conclusion to use tubs, and above ground, to get best results.

Watering plays an important part as regards success or failure in fruit growing. We all know that fruit trees, when growing, delight in plenty of moisture both in the atmosphere and at the roots; at the same time they must not be watered to the extent of souring the soil.

There is something fascinating in those little trees loaded down with large handsome fruit; also in the variety of fruit that can be produced in this way. Probably the pear, grown in this manner, is one of the most beautiful sights of all, a single fruit of some varieties weighing from one pound to one pound and a quarter. To get best results, a good, light house is essential. It is immaterial whether the house run north and south, or east and west, providing it be light, with double vents, also ventilation at the bottom. No first-class fruit can be produced unless free ventilation is afforded, especially when the fruit commences to ripen.

Some may say, what is the use in growing fruit trees in tubs when good fruit can be produced in other ways? I will admit, to any one who has never handled fruit in this way, it appears an expensive method of growing it; but the labor attached to this branch is small compared to that necessary in other branches; the only work, outside of watering, etc., that amounts to anything, is the retubbing, which should be attended to once a year. The best time for this work is in the Fall, just as the trees begin to drop their foliage, or not later than when half the foliage has fallen. Of course, retubbing every season does not mean that they shall have a larger tub each year. It is one of the greatest mistakes to increase the root space too rapidly. Often the balls can be reduced and go back in the same size tub; but the new soil seems to give the plants fresh vigor. By repotting in the early Fall, the trees will make some new roots into the fresh soil, whereas if left till early Spring, the trees will not start up so readily. Trees grown in a confined space naturally require a fairly rich soil. A sod, similar to what one would cut for rose growing, would be ideal for fruit growing; but use manure, thoroughly decayed, say, one part of manure to three of soil, with a sprinkling of ground bone. This should make a good compost for pot fruit. The trees like perfect drainage and firm potting.

What a variety of fruit can be grown in this manner! Although, of course, some of it will be much better than others. I shall weed out the poor and undesirable sorts. First of all, I cannot recommend apples. While they are beautiful to look upon, they remind one somewhat of the California peaches—they would be perfect if the flavor were of a higher order. Apricots come small and undersized, while the flavor is A-1; but being small, I must set them down as undesirable. Cherries are adapted to this work, but even these are not satisfactory, they so easily throw their fruit. I have a few now under my charge and the fruit buds are all that could be desired; for all that, I look upon them with suspicion and doubt. In fact, I have known cherries look promising up to their stoning period, with the result that the fruit would turn yellow and drop—and this condition is unaccountable.

As pot fruits, peaches and nectarines head the list as the most valuable. All the varieties listed are adapted for pots or tubs. Next in order I would class the pear. Some wonderful fruit of these can be produced in this way, and of good quality. Some of the varieties are much better than others for the purpose. I will take the responsibility of recommending half a dozen sorts that I call top-notch for the work, viz., Conference, Magnet, Princess, Mme. Treyve, Souv. de Congress, Pitmaston Duchess, Durondeau or de Tongers, Fondante d'Automne, and Beurre Hardy.

Plums can also be included, but they cannot be recommended so strongly as the others. Although a few are fine, such as Golden Esperene, Deniston Superb, Oullin's Golden, Grand Duke, and Mallard.

It is possible to prolong the fruiting of pot fruits by selecting the early and late varieties

WM. TURNER.

CHRYSANTHEMUMS

Standard Large-Flowering Varieties

40c. per doz.; \$2.00 per 100; \$17.50 per 1000.

Bonnaffon. Clear golden yellow.
Col. D. Appleton. Large, globular yellow.
Black Hawk. Dark crimson.
Glory of the Pacific. Early, deep pink.
Golden Wedding. Grand, golden yellow.
Ivory. An old favorite white.
Mrs. Henry Robinson. Fine, early white.

Maud Dean. Large incurved pink, of fine form.
Mrs. J. Jones. Beautiful, waxy white.
Mrs. O. P. Bassett. Light, clear yellow.
Minerva. Large, incurved golden yellow.
Rose Owen. Early; light pink.
Timothy Eaton. Large, white, incurved.

HARDY CHRYSANTHEMUMS, Large-Flowering or Aster Varieties, the best for Decorating or Bunching

50c. per doz.; \$3.00 per 100; \$20.00 per 1000.

Allentown. Beautiful silver bronze.
Alice Carey. Crimson-salmon; very dwarf.
Ashbury. Sulphur-white.
Blenheim. Magnificent silver pink.
Bohemia. Fine, pure yellow.
Cerise Queen. Beautiful cerise pink.
Constance. Large; large pink, open center.
Cowenton. Fine; scarlet-bronze.
Daybreak. Daybreak pink.
Duluth. Pleasing shade of pink.
Ethel. Exquisite; violet-red, long sprays.
Fred J. Red-orange.
Gloire de France. Silver pink.
Hester. Pearl white, shaded white.
Hijos. Beautiful primrose pink.
Henrietta. Bright bronze.
Joppa. Violet-crimson.
Lady de Vau. Violet-pink.

Mrs. Vincent. Deep red violet.
Montclair. Red-orange, open center.
Peto. Terra cotta red.
Prince of Wales. Best pure white.
Queen of Bul. Violet-rose.
Ruby Queen. Dark, ruby red.
Salem. Clear rose-pink, white disc, open center.
Sir Michael. Lemon-yellow, open center.
Sir Walter Raleigh. Large terra cotta, open center.
Sis Hopkins. Silver bronze.
Soeur Melaine. Dwarf, pure white.
St. Anselom. Pure white, open center.
Stratagem. Dark red-orange.
Sunset. Scarlet bronze, golden center.
Tisri. Dwarf; violet-red.
Winfred. Beautiful soft pink.

SINGLE VARIETIES. 50c. per doz.; \$3.00 per 100.

Aaron. Bronze scarlet.
Leo Niessen. Scarlet-salmon.
Miss Marguerite. Bright scarlet, yellow disc.
Othello. Bronze orange.
Princess of Thule. Red-orange.
Providence. Large; snow-white.
Romeo. Salmon-pink.
Rosy Horn. Silver pink.
Wallis. Beautiful, clear golden pink.

SMALL-FLOWERED OR BUTTON VARIETIES. The Best for Bedding or Planting in Borders.

40c. per doz.; \$2.00 per 100; \$17.50 per 1000.

Anna Mary. Creamy white, tipped pink.
Anne Arundel. Orange, tipped scarlet.
Captivation. Rose pink, yellow shading.
Dawn. Daybreak pink.
Dinizulu. Violet-pink; fine for long sprays.
Dundee. Scarlet-maroon.
Edna. Beautiful, glowing violet-red.
Emotion. Silver pink.
Erminie. Bright orange-scarlet.
Fashion. Malze-yellow.
Golden Pheasant. Deep orange-yellow.
Jack. Violet-rose.
Goldfinch. Golden yellow, shaded crimson.
James Boon. Pure white.
Leo. Pure golden yellow.
Nellie Rainsford. Dwarf, bronze-pink.
Norwood. Pearl white, open center.
Paragon. Pure white, open center.
President. Rich, violet-red.
Princess Louise. Yellow and tawny red.
Rhoda. Pink, shaded white.
Rosinantes. Dwarf; blush, sulphur shading.
Rosy Sun. Crimson-maroon.
Tennyson. Pure yellow.

R. VINCENT, JR. & SON, White Marsh, Md.

Coal.

(77) Will you kindly tell me what would be the proper amount of coal to be used in a little rose house, 20x35 feet, heated by hot water, during a season?
O. E.
—About three tons of coal should keep such a house warm through the season.

Time to Pot Cannas.

(78) Kindly inform me the proper time to pot cannas.
G. B. W.
—To have good well started plants ready for outdoors by the middle of May, the roots should be potted and put in the light the last week in March.

A Rose Trouble.

(79) I send by mail a diseased Perle des Jardins rose from a solid bed late planted. The temperature was lower than it should have been, and the edge of the bed was a little shaded in the morning; but I fear the trouble is caused by the nematodes or eel worms, or something, requiring throwing the plants out and renewing the soil. Some other sorts are affected, but not so badly.
E. T.
—The rose plant sent for inspection appears to be simply a sickly one, suffering from uncongential conditions. Planted in a solid bed late, and with a low temperature, Perle des Jardins roses will never do well; they should have 60 degrees at night, and all the light and sunshine possible to be a success. We see no signs of eel worms in the roots of the plant sent.

Lily of the Valley.

(80) Last Spring I set out several thousand lily of the valley pips. I had tried to force these pips the previous December, but as they had not been dormant long enough, they failed to grow under heat. I buried them until April, when I put them out. Nearly every one of them bloomed, and have made a good root growth. Will I be able to force them next Winter? Do pips, after they are three years old, bloom every year if allowed to remain in the ground? Is a pip at its best for forcing at three years old? I have been told that a pip five or six years old will produce better blooms than one three years old. Which is the best time to set out 2-year-old pips—Spring or Fall? What can I do with the small pips (about one inch long) that I will find on the roots of the 3-year-old pips when I dig them?
SUBSCRIBER.

Carnations.

(81) I have about 15,000 carnations that were struck early in the season, and at this date are ready for a shift. Now I have a house of carnations which have done poorly all Winter, and some of them have stem rot. Would it be better to leave my young stock in 2½-inch pots or plant them right in the soil that is in the carnation house?
A. B. C.

Carnations.

(82) I send sample of violet stems; hundreds of our violets come like these without flower. Kindly inform me as to cause. The plants are in a very healthy condition, grown in a house, night temperature 40 degrees, and as near to that as we can keep them in the daytime. I wish to keep them back for Easter. What means would you advise?
FLORIST.
—The cause of the violet stems coming blind is no doubt lack of heat and light, and they will improve as the season advances. Easter is very late this year, and we know of nothing better to keep the violets back than to have them in a good healthy condition; keep them growing, but as cool as is possible consistent with other conditions.

Carnations—Adiantum Croweanum.

(83) I have been trying to root carnation cuttings in my carnation house. I have a bench filled with washed open sand with good drainage. I keep the temperature at 48 to 50 degrees at night, ventilate to keep it down in the daytime, and do not let the sun shine on the plants. I am growing good blooms in the same house and getting a good yield.
Do you know where I can find true Adiantum Croweanum spores?
D. H.
—We believe that the failure to root the carnation cuttings in this case arises from a too free circulation of air, and we would advise screening off the cutting bench by fixing a piece of muslin cloth all around the sides of it. By doing this, we have no doubt the cuttings will root readily.
Adiantum Croweanum does not seed. You will have to purchase young plants; they can be had through W. F. Kasting, Buffalo, N. Y.

Fertilizer for City Yard.

(84) In the case of a city yard containing several beds of hardy herbaceous plants, where spading or working the soil would damage the roots of the plants, and where well-rotted barnyard manure is not easily obtainable, would you recommend sprinkling the surface of the beds with a commercial fertilizer in order to obtain good results? In supplying necessary food to the plants, what kind of fertilizer would be most suitable, and when is best time to apply it?
W. F. B.
—We would recommend the purchasing of a bag of pulverized sheep manure, and giving the plants a good mulch with that. Very early in the Spring will be the best time to apply the fertilizer.

Boxes for Shipping Violets.

(85) Can you inform me where I can procure suitable boxes for shipping violets, such as are described in Dr. Galloway's "Violet Culture"?
J. F. C.
—We know of no firm who makes the boxes mentioned. Have your local carpenter make them.

Tritoma Pfitzeri.

(86) How should bulbs of Tritoma Pfitzeri be treated, to have good, advanced plants for Spring bedding?
L. H.
—The tritomas may be potted and started the same as is done with cannas; or the tubers may be planted direct in the ground as soon as danger from frost is over. Starting them under glass will, of course, make them earlier.

Tuberous Begonias.

(87) Is it a good plan to put tuberous rooted begonias in a bench, with about 60 degrees bottom heat, and after they have started to grow to pot them up in 4-inch pots?
L. H.
—It will be better to pot the begonias. There will then be less danger of their succering from too much water. A temperature anywhere between 55 and 60 degrees will answer very well.

Farfugium Grande.

(90) Can you give botanical name of Farfugium grande; the natural order it belongs to, etc.?
T. U. W.
—Farfugium grande belongs to the compositae order; tribe, Senecionidae; its correct name is Senecio Kämpferi.

Roses Dropping Their Leaves.

(91) Please give remedy and name of disease on my roses. Small spots form on the leaves (dark brown or black); they show on both sides, but plainer

Violets.
(82) I send sample of violet stems; hundreds of our violets come like these without flower. Kindly inform me as to cause. The plants are in a very healthy condition, grown in a house, night temperature 40 degrees, and as near to that as we can keep them in the daytime. I wish to keep them back for Easter. What means would you advise?
FLORIST.
—The cause of the violet stems coming blind is no doubt lack of heat and light, and they will improve as the season advances. Easter is very late this year, and we know of nothing better to keep the violets back than to have them in a good healthy condition; keep them growing, but as cool as is possible consistent with other conditions.

Carnations—Adiantum Croweanum.
(83) I have been trying to root carnation cuttings in my carnation house. I have a bench filled with washed open sand with good drainage. I keep the temperature at 48 to 50 degrees at night, ventilate to keep it down in the daytime, and do not let the sun shine on the plants. I am growing good blooms in the same house and getting a good yield.
Do you know where I can find true Adiantum Croweanum spores?
D. H.
—We believe that the failure to root the carnation cuttings in this case arises from a too free circulation of air, and we would advise screening off the cutting bench by fixing a piece of muslin cloth all around the sides of it. By doing this, we have no doubt the cuttings will root readily.
Adiantum Croweanum does not seed. You will have to purchase young plants; they can be had through W. F. Kasting, Buffalo, N. Y.

Fertilizer for City Yard.
(84) In the case of a city yard containing several beds of hardy herbaceous plants, where spading or working the soil would damage the roots of the plants, and where well-rotted barnyard manure is not easily obtainable, would you recommend sprinkling the surface of the beds with a commercial fertilizer in order to obtain good results? In supplying necessary food to the plants, what kind of fertilizer would be most suitable, and when is best time to apply it?
W. F. B.
—We would recommend the purchasing of a bag of pulverized sheep manure, and giving the plants a good mulch with that. Very early in the Spring will be the best time to apply the fertilizer.

Boxes for Shipping Violets.

(85) Can you inform me where I can procure suitable boxes for shipping violets, such as are described in Dr. Galloway's "Violet Culture"?
J. F. C.
—We know of no firm who makes the boxes mentioned. Have your local carpenter make them.

Tritoma Pfitzeri.

(86) How should bulbs of Tritoma Pfitzeri be treated, to have good, advanced plants for Spring bedding?
L. H.
—The tritomas may be potted and started the same as is done with cannas; or the tubers may be planted direct in the ground as soon as danger from frost is over. Starting them under glass will, of course, make them earlier.

Tuberous Begonias.

(87) Is it a good plan to put tuberous rooted begonias in a bench, with about 60 degrees bottom heat, and after they have started to grow to pot them up in 4-inch pots?
L. H.
—It will be better to pot the begonias. There will then be less danger of their succering from too much water. A temperature anywhere between 55 and 60 degrees will answer very well.

Farfugium Grande.

(90) Can you give botanical name of Farfugium grande; the natural order it belongs to, etc.?
T. U. W.
—Farfugium grande belongs to the compositae order; tribe, Senecionidae; its correct name is Senecio Kämpferi.

Roses Dropping Their Leaves.

(91) Please give remedy and name of disease on my roses. Small spots form on the leaves (dark brown or black); they show on both sides, but plainer

CHRYSANTHEMUMS

The most recent introductions, both foreign and American; also the largest list of the best standard varieties in the country.

WRITE FOR PRICES

JOHN N. MAY, Summit, N. J.

Mention the Florists' Exchange when writing.

on top. The leaflets drop from the main leaf-stem while quite green, sometimes yellow. Young plants, rooted last Summer in open ground, have lost all their leaves. The wood seems to be perfectly healthy.
S. S.
—Will inquirer please tell us what varieties of roses he refers to, and if they are grown under glass or outdoors? If under glass, what treatment have they been subjected to? From the first part of his question, we would gather that the trouble is black spot; and from the latter part, it would seem that the varieties grown are h. p. varieties, which were simply taking a natural rest.

Disease on Geraniums.

(99) We send a leaf or two of geraniums affected with a disease. Can you tell us the cause and remedy to check same? The varieties mostly affected are John Doyle and Le Soleil. We have the S. A. Nutt, Beaute Poitevine, and some other varieties which as yet do not show any signs of the disease. All are grown in the same house, and have been treated exactly alike. We might add that these houses have not been fumigated since last Fall.
GERANIUM.
—We do not believe that the geraniums are suffering from any disease; but that the turning in color of the edges of the leaves is due to some local cause, perhaps getting too dry at the roots, and being sprinkled overhead instead of being watered thoroughly.

VINCA

NATICK, MASS.

JOHN N. MAY, Summit, N. J.

Mention the Florists' Exchange when writing.

With the care of our young stock to absorb our attention, the old plants should not be slighted, and rather than neglect them it will pay to secure, if possible, a little extra help.

Green fly will from now on prove troublesome, and the old proverb, "an ounce of prevention," etc., should be borne in mind. It seems that there are still a few growers who cannot get rid of this pest, as a number of queries have come to my hand asking what to do for it.

No one but an experienced man should be permitted to look after the young plants, and the growth of these should not be checked in any way; for if stunted in its early growth, the plant is left weak, in a measure, and is more liable to a check later on.

If more cuttings are to be put in the sand, no time should now be lost, as from now on roses are more difficult to root, the temperature not being so easily controlled.

The Week's News in Brief.

High prices for glass are still talked of.

A bulb farm is to be established near Seattle, Washington State.

The fire record among greenhouses is still an extensive one.

Reports of failures of many of the round seed crops in Europe are prevalent.

A valuable article on cutting, packing and shipping roses (illustrated) will be found on page 242.

John Spalding, the veteran florist, of New London, Conn., is dead at the age of 91 years.

Ferdinand Mangold, Jay Gould's gardener for many years, is dead. He was 77 years of age.

William Elliott & Sons, New York, will begin the auction season the second week in March.

A great international exhibition of chrysanthemums will be held in Paris, France, May 20 to 28 next.

The next meeting of the Philadelphia Florists' Club, March 7, will be rose night. Exhibits are solicited.

J. J. Comley, a florist of Newburyport, Mass., has suffered quite a loss from gas escaping in his greenhouses.

Wallace R. Pierson tells our readers something about carnation cuttings, as seen by him in California. See pages 238-9.

A fire next door to Clucas & Boddington Company, New York, this week, fortunately did no damage to that firm's warehouse. It was a close shave.

John Bader, florist, has been elected to the Council of Allegheny City, Pa. W. Clark, of the Pittsburg Cut Flower Company, has been elected school director in his home town.

Some flowers of carnation Cardinal, from E. G. Hill Company, Richmond, Ind., arrived too late for judging at the Toronto Flower Show. The blooms were considered the best on exhibition there.

Secretary Stewart, of the S. A. F. O. H., asks introducers of new varieties of plants, home grown and foreign, to send him a list of same, for inclusion in the society's forthcoming annual report.

The Chicago Carnation Company, Joliet, Ill., again won the challenge cup for carnations at the Toronto show this week. The cup has now been captured twice by this firm. Another winning, and the trophy becomes Mr. Hartshorne's property.

Twenty thousand Scotch broom plants are to be used along the sides of the boulevard in Washington Park, Seattle, Wash.

NATIONAL HORTICULTURAL SOCIETY OF FRANCE.—This society has organized a great international exhibition to be held from May 20th to 28th, 1905. Exhibitors from foreign lands are invited to take part. The program of the show and of the horticultural congress which is also to be held can be obtained from the address of the society, 84, Rue de Grenelle, Paris.

THIS WEEK'S SUPPLEMENT.

Pseudo-larix Kaempferi—Japanese Golden Larch.

One of the commonest trees of our lawns and parks is the European larch, *Larix europæa*, everywhere admired for the symmetry of its growth and the early putting forth of its vivid green foliage in Spring. No other larch does just the same. Our native one, *L. americana*, does not make such a compact growth, though its outline is regular.

The one our notes concern, chiefly, the Japanese golden larch, as it is called, has a character of its own. At a little distance away one can hardly determine if it is a larch or a cedrus. Many, in fact, believe it to be *Cedrus atlantica* until a closer inspection undeceives them. It will be noticed what a loose style of growth it has compared with the European larch. In addition to this distinction, there is that of the foliage, which appears more flatly arranged than that of other larches. And in the Autumn the color of the foliage becomes of a golden yellow, a beautiful feature, and one from which the tree takes its name—golden larch.

It remains to be said of this tree that in a botanical way it has been removed from the true larches and made into a distinct genus, under the name of *Pseudo-larix*, becoming *P. Kaempferi*. The main distinction between the two is that in the case of the common larch the cones are persistent, hanging on the tree all Winter, while those of the pseudo-larix are of a deciduous nature, falling away when ripe, as do those of firs. When the cones are seen in the Summer, when well grown, they are larger and appear rounder than those of the true larches. Altogether, it is a distinct and valuable tree.

The large tree on the left is the sour gum, *Nyssa multiflora*, not so shapely as when it is a young tree, but gorgeous in attire when it takes on its vivid crimson foliage in Autumn.

Still to the left is a bed of the *Hydrangea paniculata grandiflora*, while to the right are glimpses of *retinisporas*, *cephalotaxus* and other evergreens, the whole view being one in Fairmount Park, Philadelphia.

Before closing, we should state that planters say to set larch in early Fall or very early Spring. Planted after the buds burst in Spring, the results are rarely satisfactory. JOSEPH MEEHAN.

Activity of Our Florists' Clubs.

It is to us, as it must be to all interested in the welfare of the business generally, a source of great gratification to observe from their doings, as these are recorded from week to week in our columns, the prevalent activity of the florists' clubs throughout the country. And that the worth of the work of these organizations is becoming more and more apparent to the local tradesmen is evidenced by the increase in membership, which is everywhere disclosing itself.

The value of this work, however, is not circumscribed or sectional, but is widespread and general, for despite the fact that there are in the ranks of the members of some organizations one or two men—for whom we have the most sincere pity—who are narrow-minded enough to seek to confine club effort to those "who pay for it," this selfish and un-American spirit has never been—and never will be—able to prevail over the altruistic liberality which shares with the trade, as a whole, the good accruing from individual club endeavor, whether in the matter of papers read, awards given or otherwise.

The true mission of a florists' club is well set forth by President-elect Langhans, of the Pittsburg and Allegheny organization in his inaugural remarks published in our issue of February 11. He said: "We have come together and frankly told each other what we knew, or thought we knew, about our art and our business; we have made exhibits of flowers, plants, florists' and gardeners' material, interesting in themselves and of great educational value to our profession"—and, continues Mr. Langhans, "I am certain that no one who has attended our meetings can truthfully say he has learned nothing at them, and received no benefit from them."

The association we have just cited is an example of the progress that can be accomplished by sincere, real work. Not so many years ago, it was hardly possible to get a quorum to attend its monthly meeting. Now we read that standing room is sometimes at a discount. The club members have been generous enough—and no doubt rightly so—to attribute very much of this change in conditions to the untiring efforts of William Falconer, the retiring president. And

in this fact, other similar institutions may find a useful hint. Put men in office who will work; men whose heart is in their work, and the whole membership will very soon become leavened with a spirit like unto that of the workers, with attendant satisfactory results.

And Pittsburg does not stand alone in this respect. We have before had, and are now having, in our own club here in New York a similar experience, and there are others.

Active presiding and other officers, active committeemen will maintain interest in any organization. It is the club that works, and where that work is just tintured with enough of the social element to mitigate the irksomeness of the task, that wins members; that is worthy of support, and that does far more for the benefit of the business than associations that exist in name only, and the labor of whose paid officials lies for the most part in the strenuous exercise connected with the drawing of their salaries.

We hope to see this commendable club activity continue, and would urge that every florist, who seeks to progress in his business, join his local florists' club, affiliate with his up-to-date brethren, and thus tangibly demonstrate his appreciation of their endeavor to furnish him with that which the payment of the annual dues is far from being an equivalent.

BOOKS RECEIVED.

SUCCESSFUL FRUIT CULTURE, by Samuel T. Maynard, formerly professor of horticulture at the Massachusetts Agricultural College. Illustrated, 5x7 inches, 265 pages, cloth. Publishers, Orange Judd Company, New York.

This book is written from the standpoint of the practical fruit grower, who is striving to make his business profitable by growing the best fruit possible at the least cost. It is up-to-date in every particular, and covers the entire practice of fruit culture. It gives in plain, practical language, descriptions of such varieties as are most in demand in our markets, and the methods practiced by the most successful cultivators of many sections of the country. Separate chapters are devoted to the apple, pear, peach, apricot, and nectarine; plum, cherry, quince, mulberry, grape, blackberry, raspberry, cranberry, blueberry, huckleberry, subtropical fruits, propagation of fruit trees and plants, fruit growing under glass, insect pests, and fungous diseases. The chapter on the apple is particularly comprehensive and complete. The chapter on forcing peaches, grapes, strawberries, and other fruits, describes the most modern and successful methods of the present day.

Copies of the book can be obtained from The Florists' Exchange; price, postpaid, \$1.

FARM GRASSES OF THE UNITED STATES, by W. J. Spillman, agronomist United States Department of Agriculture. Illustrated, 5x7 inches, 248 pages, cloth. Publishers, Orange Judd Company.

Professor Spillman has given us in this volume an intensely practical discussion of the farm grasses of the United States of America. The book is essentially a resume of the experience of farmers in the United States with grasses. While the grasses have heretofore played an important part in the agriculture of the northeastern part of the country only, Professor Spillman has given very careful consideration to grass problems in other sections as well, particularly in the cotton-growing States, where grass culture has been neglected. When we consider the broad field encompassed it is safe to say that no other work on grasses has covered the ground so thoroughly. No attempt has been made to give a connected account of all the grasses known in this country, but the aim has been rather to give just the information which a farmer wants about all those grasses that have an actual standing on American farms. The whole subject is considered entirely from the standpoint of the farmer. One of the most valuable features of the book is the maps showing, at a glance, the distribution of every important grass in the United States; and the reasons for the peculiarities in this distribution are fully brought out. This book can be obtained from the publishers of The Florists' Exchange; price, postpaid, \$1.

Society of American Florists and Ornamental Horticulturists.

Department of Plant Registration.

A. E. Mauff, Denver, Colo., submits for registration *Nephrolepis Bostoniensis* Mauffii; a sport from *Nephrolepis Bostoniensis*. Described as a stronger grower, the fronds arching and forming a double curve; pinnae strikingly undulating.

New Plants.

Introducers of new varieties of plants, home-raised or imported, whether members of the society or not, are earnestly requested to send to the secretary a list giving name, origin and description of such new plants, to be disseminated during 1905, for the purpose of record in the annual report of the society.

WM. J. STEWART, Secretary.
11 Hamilton Place, Boston, Mass.

Obituary

Clarence Hitchcock.

Clarence Hitchcock died at Blythedale, Md., on the 14th inst., in his 23d year, after a lingering illness. Mr. Hitchcock had for two years past been conducting the Blythedale Seed Laboratory.

Ferdinand Mangold.

Ferdinand Mangold, for thirty-eight years the superintendent of Lyndhurst, near Irvington, N. Y., the estate of Jay Gould, was buried in Sleepy Hollow Cemetery, Tarrytown, N. Y., on Tuesday, February 21. Many flowers were sent by the Gould family. Mr. Mangold was a favorite with Jay Gould, and it was under his supervision that the large conservatories at Lyndhurst were built. Mr. Mangold was born in Germany 77 years ago, came to this country when a young man, and spent most of his life at Lyndhurst. He celebrated his golden wedding last Fall.

John Spalding.

John Spalding died at his home in New London, Conn., February 17, at the advanced age of 91 years. Mr. Spalding had been in failing health for several weeks and passed away peacefully. In his death New London has lost one of her oldest citizens and one whose business extends farthest back in age. He started in business over forty years ago, and during all that time he was held in respect and admiration by all who came in contact with him, as he was strictly honorable in all his dealings, willing to keep his word, even at personal loss, and always to be depended upon when anything requiring intelligence and good judgment was under discussion. For many years Mr. Spalding was the leading florist in Connecticut, and was known all over the country. During the early years of the S. A. F. he was an active member of that body, being vice-president for Connecticut and always attending the conventions.

Mr. Spalding was born on Christmas Day, 1813, at Woodside, Perthshire, Scotland. His father, Thomas Spalding, was a famous gardener of that region, and, like his son, lived to the ripe old age of 91 years. The family originally came from the town of Spalding in Lincolnshire, and were undoubtedly Anglo-Saxons or Flemings, the physical characteristics of the race being faithfully perpetuated from generation to generation, and the name giving credence to this view. The family from which John Spalding comes was that of Andrew Spalding, of Berwick-on-Tweed, who must have been of Scottish mixture or sympathies, for he admitted into the fortress Robert Bruce in the war with Edward, and was rewarded by the lands of Ashantilly, Perthshire, where the Spaldings are numerous and are noted for their long, pure lives and love of nature.

John Spalding received his early training from his father, but started out for himself early in life, going first to Ireland, where he remained some years. Afterward, he went to England, but subsequently returned to Ireland to take a position in the famous Botanical Gardens at Dublin. He had worked on such estates as that of the Marquis of Anglesey, Sir Robert Shaw, Lord Dunsany and Lord Wharmliffe. When in Ireland he married Miss Page, a daughter of an English gardener. After some fifteen years spent in Ireland, Mr. Spalding, with his wife, came to America and located in Poughkeepsie, N. Y., later removing to Saybrook, Conn., to take charge of the estate of Mr. Allyn, a well known man at the time. Mr. Spalding decided to start in business for himself, so he removed to New London, Conn., and bought the Starr greenhouses on the Neck, but later purchased the property on Main street, where the establishment now stands. In those days trade was slight and only the wealthy could indulge in flowers, but Mr. Spalding, by his grit and perseverance, built up a good business and his greenhouses soon became famous. His worst blow while struggling along was the death of his wife, unexpectedly, when she was his best helpmate and counsellor. Personal sickness next assailed him, but he stuck steadfast in a bitter fight, and conquered. As time went on Mr. Spalding extended his business, adding more glass from time to time, but never extending into a modern wholesale establishment. His business was purely a local retail trade. Among his pupils are W. H. Elliott, of Brighton, Mass., well known all over the country as the largest asparagus grower and one of the largest rose growers, and Edward W. Clark, a nephew of his first wife, who conducts a florist business in New London.

Mr. Spalding never took a prominent part in politics or city affairs, although he was active in the welfare of his adopted city. He never cared for wealth, and he always had the best in amusement, sustenance and reading, and took many pleasure trips with his wife, whom he married about thirty years ago, and who was a Miss Schofield of Poughkeepsie. He was very fond of reading, and his mind was a literal storehouse of information, history, poetry, science, botany, geology and entomology. About four years ago Mr.

Spalding was struck with falling eyesight and retired from active business, his establishment being rented to S. J. Reuter, of Westerly, R. I., who operates it to-day. Some two years ago Mr. Spalding became totally blind, but he resigned himself to his fate and no word of complaint escaped him. He was bright and cheerful, fond of jest and story, keenly interested up to the day before his death in all the events of the world. Cared for by his wife, gentle and true as himself, his hope was that together they might enter the Kingdom. He wished no one to mourn him, for he felt no fear, and we can feel assured he has received the reward of the true man he had always lived.

J. W. D.

OUR READERS' VIEWS

California Carnation Cuttings.

Editor Florists' Exchange:

I have noticed several times of late, in the different trade papers, that people have had trouble with carnation cuttings bought in California. Two years ago I bought about 1,000 cuttings of different varieties, but did not have good luck with them. They seemed to have been taken from too hard wood, and from the tops of the flowering shoots, for they would throw up a bud-stalk, and when it was cut off the plant would not do anything at all. I did not have such results from plants bought nearer home.

WILL AUSTIN.

THE LATE JOHN SPALDING

Stem Rot in Carnations.
